Perestroika], however, will be going strong; his deeds taught in history lessons to the world's children. So where do you rendezvous with an icon? At an international hotel in... upmarket... Mayfair, central London... [He] is late. That, I suppose, is his prerogative. Eventually, I ring an aide. "Excuse me," I say, "we need Mr [Perestroika] soon. He's late... Could Mr [Perestroika] possibly get a move on?" I can't believe I'm saying this. Suddenly, he is there. The president, as he is called, is accompanied by a phalanx of menacing flunkies: a female bodyguard (serious leg muscles), a beefy security man and an interpreter ([Mr Perestroika] speaks no English)... This is the man of whom [the most famous *James Bond* actor] said: "I can't answer for women, but I find him a very attractive man's man. He has an extraordinary combination of intelligence, baldness and serenity. Almost Buddha-like." [Mr Perestroika] is a pro. Within seconds he is crooning to... our photographer, *Ochie-chorniye* or *Dark Eyes*, an old Russian love song she heard as a child. [Mr Perestroika] is working his magic. There is, however, nowhere for me to sit – all those henchmen – so I find myself cross-legged at his feet. He twinkles at me. Later I realise he had a perfect view down my shirt. "This is the way an interview with a president should be done," he says. "You should be on your knees in front of [me]." Everyone in the room laughs and he grins. I remind him his most high-profile recent appearance in the West was advertising pizza – would he do it again? "I think once was enough," he chortles. "The advert worked very well for me because I didn't say a single word and I didn't have to eat any pizza..." At this, he laughs so hard I think he might burst. "But seriously," he adds, "the best thing about the advert is that it celebrates my achievement in opening up Russia to business." But was he not worried, I ask, such a tacky undertaking would ruin his gravitas? "I agreed to do this commercial... because [my Self-named] Foundation had its building confiscated by... [Russia's current president, who ousted him]. We needed to raise money to build our own headquarters. All the royalties went towards the new building, which will house a library, archive and museum of perestroika." Although [he] is phenomenally popular in the West – the noun *Gorbymania* even appears in the *Oxford English Dictionary* – many Russians blame him for the chaos enveloping their country. He has been branded a Judas for destroying the communist system and dismantling the empire. Has he, I ask, ever considered leaving Russia... and living in the West? After all, he spends many months each year on the kind of book tours and speaking engagements so beloved of [the Iron Lady] and other members of the former leaders' club. And he has a penchant for the Mediterranean, where he often holidays with... [his] famously glamorous... wife... "Not at all. I would never leave Russia," he says, looking rather hurt by my question. "This idea I am so unpopular in Russia is generally more speculative than fact. The truth is that as a result of what I did – in our country, in Europe and indeed the world – everyone benefited. We have nuclear disarmament, we don't have the cold war, my country is open now and I know my people welcome and support these moves. But Russia is moving from one system to another and many people live in great hardship." But if the Russians welcome his reforms so much, why did he receive only 1% of the vote at the last election? "...One independent body has said I got at least 15% of the vote but was denied the true result because of vote-rigging..." So will he be standing in the presidential elections next year? "No, I will not be running," he says, a trifle regretfully... Is he, I wonder, worried the social and economic turmoil will lead Russia to seek a more tyrannical ruler? "Well," he says, looking grave. "I don't want to talk about it because I am really doing my best, everything I can, to stop that from happening. The West can help, too. The [MF] loans we expect imminently will not save Russia. They are a drop in the bucket towards reviving our economy, but every little drop is important to keep the situation under control." So what does it feel like to go from wielding great power to being a normal citizen? "It feels fine... I am not crazy about power. Had I been... I would never have made the reforms I made... Remember, I used the power I wielded as general secretary of the Communist Party to transform it into a different system." How could I – or any of us – forget?

...For the second time in four days a powerful bomb has smashed a Moscow housing block... leaving little doubt that the Russian capital is under siege by ruthless terrorists. The blast demolished an eight-storey apartment building in a residential area of southern Moscow yesterday, when most people would still be sleeping. By midday local time more than 40 bodies had been pulled from the smouldering ruin, and authorities said they expected the death toll to rise to 100 or more. [Russia's]President... summoned security chiefs to an emergency meeting in the Kremlin, and ordered them to put "tough measures" into effect within 24 hours to catch the culprits and prevent further acts of terror... He... pointed the finger at Islamic militants and battle-hardened Chechen warlords who are fighting against Russian forces in the southern republic of Dagestan. One of the rebel leaders... seemed to take responsibility for the terror wave in Moscow during a weekend interview with journalists. "From now on we will not only fight against Russian fighter jets, tanks and such... Let Russia await our explosions blasting through their cities." However, another guerrilla leader... said his people were not responsible for the Moscow attacks. Four terrorist bombings in just over two weeks have killed upwards of 200 people and radically changed the political atmosphere in Russia... After yesterday's blast, many Muscovites said they were terrified of going outside, using public transport or sending their children to school... Moscow has been rife with rumours that the Kremlin might try to exploit public fears by introducing a state of emergency... [In related news, t]here has been international condemnation of the gruesome murders of three Britons and a N[Z]er in the breakaway Russian region of Chechnya. Grozny, where they were installing a mobile phone system.[The UN] Secretary-General... expressed shock yesterday after [hearing] of the discovery of the four severed heads in a sack on a deserted road. Although kidnappings have become common in the region it was the first time foreign hostages had been murdered since the end of the 1994-96 war with Russia. This year alone, about 176 people have been kidnapped, including dozens of foreigners... Chechnya has suffered from poverty and lawlessness since... Moscow withdrew its troops two years ago.

...International outrage is growing over the barbarous deaths of [a N[Z]er... and three Britons... in Chechnya. Mr Shaw's wife... and 4-year-old daughter... left their home in Surrey, England, last week to stay with her family in Wellington after being told he would soon be free. They now face a grim wait for news of the whereabouts of the 59-year-old telecommunications worker's body. N[Z], British and Chechen authorities are working to bring the remains home to the victims' families... Mr Shaw... [also had] three adult children here... [by] his first marriage... Family say Mr Shaw knew of the risks of working in Chechnya... [-] the men were paid a basic \$NZ62,000 a year, plus \$15,500 danger money... [-] but British newspapers are claiming that in sending workers into the area, Granger Telecom was defying Foreign Office advice... Chechnya's national security chief said a suspect had been detained, but others disputed this.

...Confusion surrounds the whereabouts of the bodies... beheaded... in Chechnya last week. A relative of Mr Shaw told the N[Z] *Herald* yesterday that the family had been informed the men's bodies had been found. But news reports from the lawless Russian region, and in Britain, say the bodies... have yet to be recovered... The *Daily Telegraph* reported... that the kidnappers had asked for £1200... for each body. They have also insisted that members of their gang who have been arrested be released unharmed... He led the separatist armed resistance against an ill-fated Russian military onslaught in... 1994-96[, but k]idnapping, which has turned into a profitable business for many criminal gangs and unruly warlords in the war-devastated region... threatens [hi]s authority.

...THE bulging potato sack lay in a roadside ditch among the barren, snow-covered fields of western Chechnya. When a motorist stopped to see if it contained something for his family to eat, he found the severed heads of four bearded men... Policemen at a checkpoint 1.5km down the road summoned investigators from... Grozny, who placed the heads on a piece of grubby cloth... and photographed them. The picture was printed on the front page of Russian newspapers the next day and appalled diplomats were able to confirm[who] the victims were... Beheading is not unusual in Chechnya. During the... war for independence, the severed heads of Russian soldiers would appear in the Grozny marketplace. These four victims, however, were not soldiers... They were not trying to destroy Chechnya but to rebuild it. Although the contract was worth nearly \$600 million,

large international telecom companies turned it down when security specialists told them Chechnya was as dangerous as Algeria and Colombia. Islamic militants have turned Grozny into a new Beirut and would like to make Chechnya a new Afghanistan. About 400 people have been kidnapped in the last two years and ransom demands of up to \$1m are made for foreigners. Granger Telecom, a small British company... took on the challenge, however, and signed a contract with Chechen Telecom in August 1997. To Granger, it was a godsend. In the 15 months to December 31, 1997, it made a pre-tax loss of more than \$2m... Granger employees started going to Chechnya last spring... It was neither a comfortable nor lucrative existence... They lived behind a steel gate and barred windows and Chechen Telecom provided six bodyguards, armed with machineguns and pistols, who shadowed them around the clock. According to sources in Grozny, however, these bodyguards were not experienced fighters but relatives of... [the] head of Chechen Telecom. The four might have been safer had they registered with local authorities and also with the only other westerners in town, the diplomats at the Organisation for Security and Co-operation in Europe. But they failed to do so... [A]fter the release of... [two] British aid workers who had been held for 14 months[, the British] Foreign Office advised Granger Telecom to move its men. This was one of several official warnings. It was also the last. At 4am on Sunday, [two weeks later], 20 armed men in camouflage fatigues surrounded the house. A gun battle flared, but within minutes the gang stormed the compound. The foreigners were bundled into two cars and driven off. Soldiers from an anti-terrorist unit were located only a few doors away but failed to respond because gun battles are so frequent in Grozny. They had not been told of the presence of the four men. The engineers were taken to Urus Marten, a town in south central Chechnya where [the other two British captives] had been held. It is the stronghold of the Wahabis, fundamentalists financed from Saudi Arabia and influenced by the Afghan Taleban. A Wahabi leaflet passed around Grozny last spring declared the struggle to build an Islamic state justified the kidnapping of Westerners. The prisoners were locked in a damp room on the first floor of a five-storey block of flats on the eastern side of town... At some point their captors made them record a video that amounted to a confession of spying... "We installed a satellite aerial so all phone conversations on Chechen territory were heard by German, English and Israeli special services and the CIA,"... said... [their confession. Two months later], Chechen security forces... surrounded the five-storey block, [and] a gun battle broke out. Five gunmen and two members of the security forces were killed. In the chaos, a rescue commando team rushed up the stairwell and shot its way into the flat where the hostages had been held. But it was empty. The kidnappers had been tipped off. The four men had probably thought they were being moved to another hideout when they were woken at gunpoint in the early hours. Instead, they were led away to be killed. It is still unclear exactly how they died, but they were decapitated with a kinzhals, a traditional Chechen knife. The kidnappers seem to have decided holding on to them had become too difficult. The savagery of their deaths is a horrifying blow not just to their families but also for [the Chechen President], a moderate, Western-leaning figure by Chechen standards who knows the episode has destroyed all hopes of Western aid for years to come.

...N[Z]-born engineer Stanley Shaw... was the only [Granger engineer] to escape weeks of twice-daily beatings, says a man who shared their final days... He... was taken hostage with his son, while searching for his other son, who had also been kidnapped. "For a toilet there was one bucket for [7] of us. There was also a bucket of water for drinking. If the kidnappers had been smoking marijuana they might give us some bread and onions. We were told not to share it with the British, but we did share it. For this we were beaten." ...[the] academic and former Chechen official, spent almost one month imprisoned with the men before his family paid a ransom and he was released. Days later he learned that the four had been beheaded... [He] recalled the regular telephone conversations... Rudolf Petschi... was forced to make to Granger to plead for a ransom payment. "He said that during the conversations he was beaten with the handle of a pistol to make him ask for money. At first it was \$US10 million... then \$US8 million and then \$US6 million. The last time he spoke he seemed very sad and upset and kept silent for 1 1/2 days. He said he could not find the money to pay the ransom." [He] said the men were also forced to watch videos of other hostages being beheaded and their remains mutilated... □ Russian checkpoints and the lack of a cellphone network since the invasion of Chechnya... have curtailed the kidnap business, but an estimated 200 victims are still being held... [Russia's President has] called for tougher measures against kidnappers... said... the... Kremlin...

[The 'Kremlin has undergone a \$US823 million refurbishment. The cost was almost the same as the Russian Government owes in wages – and still it asks for overseas loans.']

...Just to keep the record straight, Moscow is not the only city with a 'kremlin'. The Russian word actually means 'citadel' and describes the defensive central fortress of many old Russian towns... As cities grew and as artillery rendered the walled fortress obsolete, these central sites began to be used for all those grand buildings that governments and churches like to show off with. As you gaze around you inside the Moscow Kremlin you'll see the Bell Tower of Ivan the Great, the Armoury with its fabulous collection of Crown Jewels, a clutch of ornate cathedrals, and a bunch of splendid palaces. Mind you, what may catch your attention more than the architecture could be two unusual objects on display. One is the biggest cannon in the world; the other is the biggest bell. I wouldn't want to quibble over these biggest-in-the-world claims. The two artefacts are colossal alright, and casting them must have been incredibly difficult. As far as I know no-one ever managed to outdo them... or wanted to. Russian guides love to point them out... and then to laugh at themselves. Typically Russian, they tell you. Make it big – too big to use! The largest cannon in the world has never fired! The biggest bell in the world has never rung! ...Oh, one other thing. Moscow... boast[s] the first McDonalds in Russia. And... wouldn't you know it? ...it seats 350 people and is apparently the largest in the world! ...It's all part of the Russian psyche. For centuries they've wanted to prove to western Europe that they're every bit as civilized and capable. It matters to Russians to be first, to have the biggest, or the wealthiest, or the most beautiful... [T]he Soviet regime took this competitive business to endless lengths. Moscow was flossied up to be the success story that the Communist bosses wanted the capitalist world to see. While the rest of Russia languished, the capital was filled with monuments on a grand scale... [- in t]he... 82 m... tall... concrete statue called The Motherland[, Russia has]... the largest full-figure statue in the world... [-] to prove that their bankrupt system was actually working. Plenty of these communist displays are just pieces of crass propaganda. I don't know how often I saw Comrade Lenin, pictured in painting or sculpture or stained glass, melodramatically pointing the way forward to an earnest band of heroic citizens. But, to be fair, other monuments make deserved claims. Moscow's grand War Memorial has huge and graphic displays of the desperate battles fought during W[W]2. They leave you horrified at the cost in human lives and destruction, when Stalin's Russia threw back the Nazi invasion. And the city has a soaring monument to the first flight in space. Yes, the Communists beat the Capitalists that time! And they proudly made sure the world knew about it. The memorial reaches to the skies, made of stainless steel covered with polished titanium... What makes me mad is how I could have got it so wrong. All my life the Russians have been the enemy, that alien country on the other side of the Iron Curtain. But now that I've been there... I've discovered they're exactly the same as other Europeans! Literally the same. There's nothing to distinguish the citizens of Moscow from those of any European or American city. They might even be better educated... And that's scary – discovering that ordinary Russians are just the same as the rest of us. All that they've suffered, all that cruelty they've endured, all those millions starved to death by Stalin and others... How could such intelligent, well-educated people be so brutalized for so long? And not just during the 70 years of communism, but under centuries of oppressive aristocratic rule as well. It's a chilling thought – just an accident of history and you or I could be living in a country where the rulers treat their citizens as rubbish. Communists, of course, succeeded in pauperizing a great country. But Moscow does revel in one unexpected operation that the Communists managed to do well – the Moscow Metro. Of course, plenty of the world's mega-cities have an underground rail system. But this one comes with 200 stations, some of which are works of art. Like mini-palaces. Marble everywhere. And stained glass. Chandeliers, murals, mosaics, roof paintings. Travelling on these trains is not just a convenience... it's an experience. Ten million people live in Moscow. Eight million of them use the Metro each day. And they're proud of their transport system. Incredibly, the carriages... platforms... stairways and escalators are spotlessly tidy. No graffiti. Only very rarely a scrap of paper on the ground.

And, believe it or not, you are nowhere safer in Moscow than down here. Muscovites are very protective of their Metro. In this city, whatever crises may occur up above, the Underground is sacred!

...A black BMW with tinted windows and a blue flashing light on the roof stops on Moscow's main Tverskaya St. "Where to?" the driver asks, and after agreeing a rouble price equivalent of \$NZ4 he whisks a journalist to work in unexpected style. It turns out to be a Government minister's car and, as is the case with virtually every other underpaid or unemployed driver in the country, furtive private use of the vehicle is a main source of income. He might make an extra \$20 or \$30 a day moonlighting between the minister's appointments, and although he suspects his boss knows exactly what's going on, nothing is said. Another man at the wheel of a clean, but ageing, Russian Volga is the personal chauffeur of a senior police officer. His boss actively encourages him to make what he can on the side. He knows full well that no one can survive on the official salary. And so on, from coaches to ambulances to hundreds of thousands more private cars choking the capital's streets. Although registered taxi drivers like to moan about the "chastniki," or cowboy cabbies who spend their spare time "bombing," as it is known, they have their own territory in the main tourist areas, at hotels, restaurants and railway stations. Along New Arbat St, in the city centre, yellow cab drivers are loath to interrupt their snooze or put down their detective novel to take a fare of less than \$8. There, at least, if someone else wants to get snarled for hours in traffic jams for less money, that's their business. Other places remain dangerously off-limits and the novice risks a barrage of obscenities, threats or worse from regulars who jealously protect their turf. An unmarked minibus belonging to the French medical relief organisation *Médecins Sans Frontières* had its tyres shot out as it pulled away from Moscow's Sheremetyevo 2 international airport with guests from overseas. This incident was simply a case of mistaken identity, since the airport's notoriously brazen taxi Mafia assumed the vehicle was poaching and decided to teach the driver a lesson. The traffic police take a more laidback view of the practice, which according to the law is punishable as unlicensed conveyance of passengers. "We don't touch them unless they break other rules in the process – everyone's got to make a living, haven't they?" said a traffic cop standing in freezing temperatures at a roadside post. (The fact that many traffic police officers themselves handsomely supplement their own meagre income by imposing "fines" without issuing receipts is not mentioned.) Since not even the city hall's threat of \$10,000 fines managed to stamp out the *chastniki* in... St Petersburg in 1997, it looks as though they are here to stay. Meanwhile, the passengers' part in the transaction is simple enough, providing they are willing to take the risk – albeit still relatively low in Moscow – of travelling with strangers: Put your arm out and get ready to haggle over the price. In fact, the greatest downside of an activity that seems to feed and clothe a hefty part of the population is that, Russia being Russia, too many drivers regard their new passenger as fair game for a 40-minute tirade about the state of the country.

...Workers in Ukraine's energy sector staged strikes at all five of the country's nuclear power plants yesterday, claiming they had not been paid in five months... [By the way, teachers in central Russia will receive their monthly salaries in vodka because the Government's coffers are empty. The 8000 educators in the Altai republic will get 15 bottles of vodka each... Officials in Altai... had previously tried to pay part of the teachers' six-month wage arrears with toilet paper and funeral accessories. The payments were refused.

...Russia seems as far as ever from sorting out its economic mess and the head of the [IMF] says it will take time before Russia gets new cash for its woes... [Furthermore,] it was now unlikely that some \$US4.3 billion... the second tranche of the \$US22.6 billion credit arranged by the IMF... would arrive before late December... [The] centrist Deputy P[M]... warned that without it Russia risks defaulting on its foreign debt.

...Russia's Acting P[M] – who was brought back by Russia's... embattled President... after his successor... was forced to devalue the rouble and default on some foreign debt last week due to a Government and banking cash drought... [–] headed back to Moscow yesterday after unexpected closed-door crisis talks with the head of the [IMF] to try to avoid more agony for his country's battered economy. The talks took place after growing signs that the Russian financial system was verging on meltdown... Across Russia many Russians continue to seek dollars, but supplies at many banks and exchange points have simply dried up. Prices have already risen through the vast import-dependent country, raising fears of widespread industrial unrest among workers who... were unable to draw their salaries as the banking system was grinding to a halt... inspiring an Opposition campaign to force [the President]... to resign... It remained unclear what [the President] planned to do today or whether he planned to show up at his Kremlin office at all. "He probably has some plans, but they haven't told us about them," a spokeswoman said... Since [last week] things have gone from bad to worse. The central bank declared yesterday it could no longer afford to intervene to support the currency and Western analysts said they feared an outright default... The rouble fell to 11.10 to the U[S] dollar, which is... 41% less... than... [it was] last... week... prompting Russia to suspend trading on the Moscow Interbank Currency Exchange.

...[the President], absent from the Russian capital for days despite deepening financial and political turmoil, was back in the Kremlin yesterday and sacked the country's debt negotiator. [The Acting P]M... is running short of time to avert the complete collapse of the Russian economy... The Russian Trading System's... shares index ended on Thursday at its lowest recorded level since its introduction... and millions of Russians besieged banks trying to swap roubles for dollars... For the second day in a row... the Russian central bank called off currency trading without setting any rate whatsoever against the U[S] dollar, leaving the entire economy in an odd sort of limbo... The market plunge[was] triggered by the Government's decision to... restructure domestic debt... default on some foreign debts... and... effectively devalue the rouble... Far more dollars than roubles are in circulation in Russia, but only roubles can be used in shops... Even at the peak of Russian post-Soviet inflation in the early 1990s, people were constantly aware of the rate, often changing prices several times a day. But now, with the rouble... in freefall, the rate is not merely lower, it is simply not there... That has left anyone with an inventory to sell, from the lowliest cigarette pedlar to the flashiest importer of luxury cars, at a loss as to just what the goods are supposed to cost... "We're not selling, but you can order," said the saleswoman at [one] furniture shop. "Next week, maybe, we can tell you what it will cost." ...Many shops, forbidden to take dollars but afraid to take roubles whose actual worth is now anybody's guess, have simply closed.

...Economists say the rouble's collapse could have wider implications for Europe... With German banks and exporters exposed to the Russian economy, some commentators have raised the spectre of a dampening of economic activity in Europe... The British pound rose to more than 2.97 marks... as a crumbling Russian rouble undermined demand for the German currency... The kiwi dollar also continued to fall, hitting a 12-year low of 48.25c against the U[S] dollar... Foreign exchange dealers said there had been strong evidence of U[S] hedge funds selling the kiwi to bank some profit in the face of their losses in Russia... Market analysts described the A[US]n dollar as one of the commodity club currencies – others are the Canadian and N[Z] dollars – which would suffer if Russia unloaded stocks of minerals and farm produce... [B]ut its exports were running pre-crisis at only \$US80 billion a year and imports at \$US60 billion. N[Z] exports about one-eighth with only one-fortieth the population... [Even so, the NZ] Treasurer... has called for an urgent report on the unfolding Russian currency crisis as N[Z] companies and markets brace for more financial fallout... The Government called for a similar report after the Asian economic crisis... The largest exporter to Russia, the Dairy Board, said it would lose sales of butter and cheese but it was too early to say how much. The board sells around \$270 million of milk products to Russia each year, about 6[%] of its business. Last year, it exported 50,000 tonnes of butter there – making it our biggest butter market after Britain... A spokesman said the board... had little debt owed by Russian firms because it extended only short-term credit... The director of the Institute of Economic Research... said that while the Russian crisis was born of its own domestic problems and not a domino effect from Asia, it added to a more unstable world picture.

...The spectre of Russia's raging economic turmoil drove Asian sharemarkets lower yesterday, with Tokyo dropping 3[%] to its lowest close in six years. The N[Z] sharemarket fell 1.66[%] while A[US]n investors suffered a 1.8[%] fall... "There is a general feeling of helplessness. The A[US]n market has been caught up in the big picture and been dragged down and there is very little we can do about it," said one broker... One investor,

newly arrived from Russia and not wanting to be named, said he was disappointed that the problems of his home country had travelled this far. "There is no way to run away from Russia... [It has] very long arms that come out and grab you, like the KGB!" ...Against the trend, Hong Kong's blue-chip Hang Seng index closed 1.13[%] higher... as its Government flexed its muscles by pumping huge amounts of money into the stock market to counter heavy selling... [During the past two weeks the] Hong Kong... Government... has spent \$US12.5 billion of its \$US96 billion of currency reserves on such intervention.

The Hong Kong Government is shredding double the usual amount of its files, including top secret police and security branch records, according to figures published yesterday. Officials deny the increase is due to the impending handover to Chinese rule...

The only way China can restore confidence in Hong Kong is to reverse its policy of unwinding democratic reforms and dismantling the elected legislature, says[the] British Foreign Secretary[who]... arrived in the midst of a bitter political quarrel over the future of democratic elections and human rights laws, which China plans to scratch after... midnight on June 30[when the]... British colony... reverts to China... Beijing argues its plan to install a provisional legislature in place of the elected legislative chamber and roll back key elements of Hong Kong's civil liberties, including part of its bill of rights, would not materially affect freedom.

...Hong Kong has seen many boat people come and go. But a boatload of refugees leaving Hong Kong harbour today is travelling first class, five-star hotel, champagne all the way. In what is perhaps a more potent symbol of the end of empire than the last Union Jack, the cruise ship Oriana is sailing from Hong Kong with more than 100 English civil servants enjoying this last perk of their pampered colonial lives... The idea of the cruise home was that civil servants, worn out by the travails of administering the natives in the tropics, needed a slow boat home to reward them for their hard work. At a cost of \$HK62,700 a berth – totalling \$9.9 million to Hong Kong taxpayers – it is certainly a reward. A flight back to London costs less than a third of the fare... A couple of years ago when the public began making noises about the luxury cruises home, the Hong Kong Government tried to end the perks. But this raised howls of fury and energetic opposition rarely seen in any civil service. The cruise stayed. While the Oriana may represent all that Hong Kong will be delighted to see the end of come handover day... there are many on board this last cruise who will find it hard to leave... For these people, many of whom have spent most of their lives here, are leaving a place they know far better than the cold, wet Britain they are returning to. Many have married and raised their children here and are taking their families from their homes to a new country because they are no longer welcome in their old one.

...Although the British and Chinese communities have lived on top of each other in this tiny corner of Asia for more than 150 years, each has hardly left an impression, beyond distrust and disdain, on the other... [A]n enduring symbol of just how little success the British have had in dislodging the... traditions from this land... is a lonely Chinese grave... of one of the Tangs, the New Territories clan which resisted invasion of their lands by the British last century... The Tang ancestor looks from his carefully chosen hillside across a vast monument to western civilisation and technology. Once upon a time he looked out at Hong Kong harbour. Now all he sees are the towers of Tsuen Wan, a new town built almost entirely on land reclaimed from the sea – not because the area lacked suitable building sites, but because there was not enough land the British could wrest from the New Territories clans without long, complex arguments about traditions and ownership. Although the British leased the New Territories for 99 years from China in 1898 (the lease of which expires at the end of this month and led to the agreement to hand back the whole territory, including Hong Kong island which was never leased), nobody asked the people of the New Territories whether they agreed with this arrangement. As it turned out they most emphatically did not, and opposed the arrival of the British in every way they could. Initially it was by... burning down police stations. Later it was by... telling the British that every time they tried to build a town, a road, a police station, that it was interfering with the forces of nature, or feng shui, believed necessary for health, fortune and harmony... [T]o avoid... confrontations and arguments... the British... let the Chinese use their own laws to police their communities, including marriage laws which allowed Chinese men to take more than one wife and property laws which prevented daughters from inheriting land. It was not until the early 70s that Hong Kong had a marriage ordinance permitting only one wife at a time. It is still ignored by many men who keep a second wife on the other side of the border with China. AS a result of this extreme form of cultural laissez faire, the New Territories is now one of the world's most precious repositories of Chinese culture. So it is overrun by anthropologists seeking to tap traditions that disappeared from the mainland years ago... On Hong Kong island, where the British first set up in 1841, the... middle- and upper-class British lived on the top and slopes of Victoria Peak... so, the locals believed, they could look down upon the Chinese who were not permitted to live there. Administration was carried out in English, often by officials who spoke little or no Chinese, even where the decisions affected locals who spoke little or no English. Official notices were sent around in English. There were few appeals against official decisions, because few people understood what had been decided. The English belonged to clubs which the Chinese, no matter how rich, could enter only as servants. Elderly Chinese still talk... of signs saying: "Dogs and Chinese not allowed." This sort has not entirely disappeared: only the groups being discriminated against have changed. Recently a luxury tower block in the heart of Hong Kong island put notices in its lifts saying Filipinas and dogs should use the service lifts. Two things helped the blatant discrimination disappear. The first was the invasion of Hong Kong during which, in less than a month, the Asian nation of Japan crushed, executed and imprisoned the seemingly invincible British forces. That changed the local acceptance of British superiority. And the post-war arrival of Shanghai's ruling merchant class, escaping the communist takeover of their city, brought a very different element to Hong Kong's Chinese community... They had money, or if they had lost it all to the communists, knew how to make money... [T]hey were used to being in charge... and... [were] able to challenge the British bourgeoisie... Now it is unquestionably the Chinese merchants who dominate Hong Kong... IT is also the Chinese merchant princes who most oppose the move toward democracy fostered by the last British governor... As far as they are concerned the British bits they have been happy to assume – like the well-run administrative and legal systems, the snooty clubs and the well-tailored suits – are quite enough. Imposing things like power-sharing with the ordinary people is an imposition of British culture that Hong Kong's British rulers never wanted or needed, argue the Chinese businessmen. And as they have done with all other bits of unwanted British culture, they are now doing their best to jettison it... Most other refugees arriving in[post-war] Hong Kong were impoverished southern Chinese escaping disease, warfare or starvation in the chaos of mainland China... Those who survived the journey to Hong Kong usually took jobs in the sweat-shops of Kowloon and spent the rest of their lives just surviving.

...[the woman], aged 40... spends her days shopping at Chanel and Cartier... and... lunching at the American Club... [L]ike all her generation, the Hong Kong-born children of mainland refugees, [she] is a hybrid... When Chinese leaders talk of the joy of reunification with Hong Kong... they think of Hong Kongers as a Chinese population just waiting to cast off the culture of their British masters and go back to being truly Chinese. But Beijing is in for a nasty shock... one China may ultimately find more difficult to swallow than that of its irritating but temporary neighbour, the British... [A] lecturer in literature at the Chinese University... says that while Hong Kong people have only recently begun to identify themselves as Hong Kongese, rather than Chinese, they now show a strong preference for that identity... [Furthermore, many] of the traditions Westerners call "Chinese" are now more accurately "Hong Kongese." On ceremonial ancestor worship days such as Ching Ming, police in Hong Kong are put on crowd control duty to make sure the hordes out to sweep grandma's grave and offer her roast piglet and oranges don't crush each other. Over the border in China, the graveyards are empty and the piglets still with their mothers because no one bothers with the rites[for keeping] ancestors' ghosts and other roaming spirits happy... [Indeed,] according to the *Workers Daily*... Chinese authorities have removed 7.4 million graves in Jiangsu province to create 80,000ha of farmland... The paper did not say what became of the bodies, but China is in the midst of a campaign to encourage cremation to preserve scarce farmland... Everything people do in Hong Kong is influenced by[superstitious] beliefs... Most of the mobile phone

numbers still available on the biggest network in Hong Kong end in four. That's because the Cantonese word for four, *sei*, sounds like death and no-one wants a number which ends in death. Equally, eight is the best number to have... because the Chinese character for eight is linked to money. If you can't get eight, something with two and three together is a good compromise because, said together, they sound like "easy life" in Cantonese. This obsession with the right numbers, the right place, the right names is more than mere superstition. It is about storing up your luck. Hong Kong Chinese... believe success comes from two things: luck and hard work. Hong Kong is a city built on optimism. And Hong Kongers put vast stores of energy into looking for that lucky break that is going to make them rich. It is no accident Hong Kong has the world's highest per capita horse race betting turnover. The punters who mass the streets outside the Happy Valley racecourse... are not there for love of horses... That overpowering optimism has made it possible for people in Hong Kong to endure living conditions that would cause despair elsewhere. More than half the population, 3.19 million, live in Government housing estates, endless tiled tower blocks in a sea of cement, where the "flats" are often little more than one room... Three-generation families of six or seven live in these flats, the children expected to top the class by studying in a corner of a stuffy room where the television is permanently turned on and mother plays mahjong with fourth aunty and her friends. "It's easy to get these children to come to school and behave," a teacher... says. "It's the only place they get any peace." Somehow the children survive, though a sadly increasing number do give up and throw themselves off the tower blocks. And they grow up to become the people who may prove to be mainland China's biggest challenge yet, the people who implicitly believe in their ability to make the Hong Kong miracle happen, with a little luck, just one more time... [Unfortunately, no one has] bothered to plan properly for the arrival of children... entitled to come to Hong Kong from July 1, even though everyone is... agreed that the last thing wanted [is] for the 65,000 children known to have the right to settle in Hong Kong to come all at once before the 16 new schools needed to educate them and thousands of flats needed to house them [have] been built.

...A "Pillar of Shame" – a copper sculpture of 50 anguished figures – took centre stage last night at what may be Hong Kong's last pro-democracy rally. The 8m high statue bears inscriptions in English and Chinese saying "The old cannot kill the young forever," a reference to the Tiananmen Square massacre eight years ago when the Chinese People's Liberation Army crushed the student-led pro-democracy movement. Last night's anniversary vigil by candlelight was expected to... go ahead despite the storms that hit the island yesterday. The territory's future leader... also tried to dampen proceedings by appealing for the Tiananmen Square "baggage" to be dropped. He said that protests "within the law" will be tolerated after the handover, an assurance that will be tested by students at Hong Kong University who have vowed to continue displaying the Pillar of Shame at their campus... Yesterday, more than 20 Nobel laureates... petitioned[the] Chinese President... demanding the release of the 1989 protest leader... and all... 303... political prisoners... [still] detained as a result of 1989 pro-democracy activities... China still denies that any citizens were killed... in the Tiananmen tragedy... [However, under] the watchful eyes of plainclothes police... families of those killed... on June 3-4... flocked to cemeteries in Beijing.

...China's disgraced Communist Party chief, who was] sacked after the 1989 student demonstrations... has been barred from receiving visitors as punishment for his appeal for a review of[the] pro-democracy protests, Chinese sources said yesterday. A weekly golf game that was one of his few privileges, offering him an occasional escape from virtual house arrest, has also been cancelled... [He] was last seen in public when he visited student protesters in Tiananmen Square on May 19[of 1989], just hours before the Government declared martial law, and begged the protesters, with tears in his eyes, to vacate the square.

...[Documents reportedly smuggled out of China by a disaffected civil servant say the Chinese leader Deng Xiaoping ordered the violent crackdown on demonstrators at Tiananmen Square out of fear they could topple the communist regime. The documents reveal deep-seated paranoia that the protests were controlled by unknown anti-communist conspirators. They also showed anxiety by the party's top leaders that the more than one million demonstrators gathered on Tiananmen Square could demand their arrest. According to the transcripts, one month into the protests Deng told other Chinese leaders: "Anarchy gets worse every day. If this continues we could even end up under house arrest." He is quoted as saying at a meeting held at the Communist Party Central Office on May 18, 1989: "After thinking long and hard about this, I've concluded that we should bring in the People's Liberation Army and declare martial law in Beijing." Two weeks later, troops using live ammunition moved in on the demonstrators, ending seven weeks of pro-democracy protests in Beijing. Two days after the violent crackdown, Deng defended the decision in a Central Politburo standing committee meeting. "If we hadn't been firm with these counter-revolutionary riots, who knows what might have happened? The People's Liberation Army has suffered a great deal; we owe them a lot, we really do." Publication of the documents follows 'an unprecedented legal action, in which a group of 105 victims' relatives and people wounded in the shooting have submitted a petition and evidence to Chinese courts demanding they conduct a criminal investigation into the deaths and prosecute those they hold responsible. Success would be "as difficult as changing China to a democracy," said the executive director of the New York-based group Human Rights in China. There has so far been no official response to the petitions and evidence. Chinese authorities maintain the decision to use military force was correct and the verdict will never be changed.'

...The release of the details of the secret debate among China's leaders before they crushed the pro-democracy protests on Tiananmen Square in 1989 don't just tell us about China's past. They also tell us a lot about its present, and even about its likely future. What comes through clearly in the documents leaked to the Washington-based journal *Foreign Affairs* is the extent of the generational split in the Chinese Communist leadership at the time. That same split also explains why the "Tiananmen papers" have been leaked now – and why China will probably get democracy, in the end, without having to go through all that again. It was always clear who decided to open fire on the students and citizens of Beijing on June 4, 1989, killing several hundred of them at least and probably many more. The nine Communist "elders" who made that choice, most of them semi-retired men in their 80s and 90s, were the original revolutionary generation who had spent their lives ordering the deaths of any Chinese who opposed them. They were outraged at this challenge to Communist rule by "those goddam bastards" on Tiananmen Square, as one elder put it on June 2, according to the leaked documents. "These kids don't know how good they've got it. When we were their age, we lived in a forest with rifles and a rain of bullets. We've got to use force or the common people will rebel. Anyone who tries to overthrow the Communist Party deserves death and no burial." It is no surprise, either, that the "senior leaders" imposed the policy of massacre by removing those among the younger generation (that is, those in their 60s and 70s) who opposed it. Their key move was the illegal replacement of the party's General Secretary, who is still under house arrest in Beijing, with the incumbent. This generational argument is still going on in China, and will determine whether the world's biggest country becomes a democracy or remains the great exception to the historical record.'

...Tiananmen Square was originally designed and built in 1651. It was enlarged to four times its original size and cemented over in 1958; it covers an area of 40.5 hectares and each flagstone is numbered for ease in assembly of parades. The square derives its name from the massive stone Tiananmen ("Gate of Heavenly Peace") – once the main gate of the former Imperial Palace – situated at its northern end. In the centre of the square, on a two-tiered marble terrace, is the Monument to the People's Heroes (completed 1958). A monumental museum complex (opened 1961) lying to the east of the square includes the Museum of the Chinese Revolution (dedicated to Chinese history since 1919) and the Museum of Chinese History (dedicated to Chinese history before 1919). To the south is the Mao Zedong Memorial Hall (completed 1977), in which the body of Mao lies in state. A well-planned site for massive gatherings, Tiananmen Square has been the rallying point for student demonstrations since 1919.'

...Some of the most dramatic events in China's history took place in 1989, most of them televised globally. Hundreds of thousands of students marked former party leader Hu Yaobang's death in mid-April by staging massive demonstrations in Tiananmen Square. The students demanded curbs on government corruption and called for improved conditions in China's overcrowded colleges. A six-week standoff took place, with the students now joined by thousands of workers, civil servants, journalists, and ordinary citizens. Similar demonstrations quickly spread to scores of other cities. Finally troops moved in. Hundreds – perhaps thousands – of demonstrators were killed or wounded. Foreign (especially Western) reaction was severe. Tourism naturally

plummeted, and in 1989 alone China lost over \$1 billion in tourist revenues. More important were other economic losses, owing to large-scale postponements of loans and diminished trade. On the domestic scene, especially in urban China, a sullen mood took hold. Notwithstanding the repression of 1989, the China of Deng Xiaoping was a far more open society than the China of Mao Zedong. Nevertheless, severe problems remained, including over 180 million illiterates, serious pollution caused by rapid industrialization, energy and transportation shortages that idled up to a fifth of all industry, and persistent unemployment. Perhaps the most difficult problem, however, concerned the enormous population, which had risen from about 540 million in 1949 to 1,133 million by 1990. Because of this growth, the government had instituted a "one child per family" policy. Conformity was generally good in urban China, but there was much noncompliance in rural areas. Iraq's invasion and annexation of Kuwait in 1990 helped bring China back into the world community. China supported sanctions against Iraq and did not block authorization of the use of force in the crisis']...

THE SHOCK of the Tiananmen Square massacre eight years ago sent more than a million Hong Kongers on to the streets in a protest march[a few weeks ago]. When Hong Kong is returned to China... Beijing will be handed vast sums of wealth in cash reserves, infrastructure and talent. Can it be trusted with Treasure Island? ...Winning back Hong Kong has made China explode with patriotism. Taking back Macau in 1999 will mean another big party. But the real prize is Taiwan. Even the "one country, two systems" formula under which Hong Kong will be allowed to run its internal affairs was worked out with Taiwan in mind. China lost the island in 1949, when the defeated Nationalist leader Chiang Kai-shek fled there with the last one million of his troops and set up his alternative government of all China. Taiwan has given up any real claim to rule China, but China is still fiercely determined to win this "rebel province" back. It isn't so much about Taiwan's huge wealth, and its population of 21 million – more than three times Hong Kong's. Or about controlling the main sea lanes to Japan and South Korea. It is more about nationalism and protecting the power of the Communist Party regime. Winning back Taiwan will finally reunify all China after 150 years of dismemberment and end the last small threat to the Chinese government's legitimacy. China still does not rule out invading democratic Taiwan, but knows a peaceful takeover – with Taiwan allowed to run itself – is its best chance. It has invited dozens of Taiwanese to witness the handover. But it knows Taiwan will be more interested to see what happens after the fireworks.

...Just as Hong Kong prepares for the biggest party of its life, drug-resistant cholera has emerged and is threatening an epidemic guaranteed to ruin the handover party. Nine people in different parts of the territory have developed cholera in the past week and all have a form resistant to tetracycline, the drug normally used to treat it... With 8000 journalists expected to converge on Hong Kong for the handover to China... and tens of thousands of tourists, returning residents and officials also expected, the stage has been set for a medical disaster of epic proportions should health authorities be unable to locate the source of the infection and control it. Hong Kong's last serious outbreak of cholera was in the summer of 1994 when it was traced to the water in live fish tanks used by seafood restaurants in Aberdeen, an industrial and fishing centre on the south side of Hong Kong island.

...Britain hands its last colony back to the Chinese next week... [However, the swapping of rulers is expected to change little in a region that will be] allowed to keep its capitalist system for the next 50 years.

...Celebrations to mark Hong Kong's first day as part of China saw a fireworks display which outshone the one put on to farewell its British colonial masters. Twenty tonnes of fireworks lit the sky, bringing oohs, aahs and applause from the crowd of... people lining both sides of the harbour. In a city not noted for understatement, the business community spent \$HK100 million... on the show.

...The last firecracker celebrating the change from British to Chinese sovereignty had barely burst before... the new Hong Kong [Government's]... first big problem began demanding attention. Parents carrying small children and babies besieged the... Immigration Department to hand them in... The children were all "illegal immigrants," children smuggled over the Hong Kong border in trucks, speed boats, cargo holds – any way possible – to get them into Hong Kong by July 1... the date on which, so the parents believed, the... new constitution... gave every mainland-born child with a Hong Kong parent the right of abode in Hong Kong... However[a]... quick decision was made to start sending them back to China. Hundreds have been... hauled off to prison to await deportation. Some of the children, including an eight-year-old who was born on the Lo Wu bridge dividing China from Hong Kong but was ruled to have been born in China not Hong Kong by the Immigration Department, have gone back underground. This means they cannot attend school, see a doctor or even play in local playgrounds without risking detection. If you see a doctor or go to school you must bring along an immigration-issued identity card or birth certificate to prove you have the right to be in Hong Kong. Doctors, hospitals, and schools are obliged to report anyone they believe has illegally entered Hong Kong. While the Immigration Department was struggling to cope[the]... Chief Executive-elect... weighed in with legislation preventing the children already in Hong Kong claiming the right to stay... [T]he Provisional Legislature rushed the legislation through... It also obligingly backdated the legislation to July 1, so none of the children whose presence was declared in Hong Kong last week could slip through the net... [In addition, the Government intends 'to abolish an asylum-seeking policy set up under the British era that made the territory a haven for would-be refugees, mainly from Vietnam, and has already agreed to overturn the policy under which Vietnamese boat people can remain while applying for status as political refugees.'] At this time of year, Hong Kong is usually winding down... [for the] summer holidays... But this week, holidays and resorts could not have been further from the minds of those with jobs in the new Hong Kong Special Administrative Government.

...[the girl's] mother died giving her life seven years ago. Now she is at the centre of a battle to prevent the Hong Kong Government strangling the rights of children like [herself] at the birth of Chinese-controlled Hong Kong. [The girl] has spent the past two years in hiding, ever since her father rescued her from her mainland village in 1995 and brought her to his home in Hong Kong. She could not go to school and has lived in constant fear of being discovered by the authorities. But she and her 58-year-old father had been waiting for a magic day... when they knew Chinese-controlled Hong Kong's new constitution, the Basic Law, would give her the right to live in Hong Kong as the child of a Hong Kong resident. As soon as the Hong Kong immigration department opened its doors after the five-day holiday to celebrate the handover to China, [the father and daughter] joined thousands of other parents and children lining up to declare their presence in Hong Kong. But the welcome was not forthcoming. The new administration, appalled at the social burden the estimated 65,000 mainland children who now qualify for residence in Hong Kong was going to impose on the territory, hastily pushed legislation through the Provisional Legislative Council making it mandatory for all such children to go through complex bureaucratic procedures. First, they must get a "Certificate of entitlement" in Hong Kong and then wait over the border in mainland China until the local authorities grant them a permit to enter Hong Kong. These permits are notoriously difficult to get unless the applicants are well-connected or willing to pay hefty "tea money" demands to expedite the paperwork. Those who simply wait in line can wait for 10 years or more, often staying with relatives or even paid babysitters. [The 7-year-old girl] spent the first five years of her life being raised by a paid baby-sitter because she had no relatives in her mother's village and her father was not able to get her in to Hong Kong. It was only when the baby-sitter abandoned her that her father had no alternative but to bring her back to Hong Kong with him and wait... until July 1, 1997, gave her the right to stay there. Far from being given permission to stay, [she]... was arrested... In scenes more reminiscent of a Stalinist state than a capitalist paradise, hundreds of children who had registered their presence in Hong Kong were rounded up by the immigration authorities and held in detention, pending, their parents feared, deportation to China. [The 7-year-old's] father and all the other parents under-estimated the Hong Kong Government's determination not to be landed with a mass of immigrant children... Not only did the Government take the unprecedented step of passing a law which alters its own constitution... [-] something which is supposed to be done after public consultation and in agreement with China's supreme legislative body, the National People's Congress[-] but it also backdated it to midnight on June 30... Here it has opened itself up to question over the validity of passing a law backdated to a time before the body which passed the law... had been legally established. It is this

validity issue[rather] than sympathy towards the plight of the children, many of whom have heart-breaking stories, that has prompted such a flurry of legal activity and has got the finest legal minds in Hong Kong lining up to represent the children for free. [The 7-year-old]’s case comes before the courts again on Monday.

...Children have returned to their classrooms for a new academic year to find history textbooks... for high schools... have relegated Taiwan to a Chinese province and that the Tiananmen Square massacre was not a massacre at all... The chairman of the Hong Kong Professional Teachers’ Union... was stunned by the changes. He also expressed concern at the raising of China’s flag at schools and the playing of the national anthem, but Pui Kiu Middle School[’s] principal... said the flag “serves as a reminder of the integrity and dignity we Chinese have always possessed.”

...*Academic’s sacking sparks row over teaching of law...* The sacking of a law professor has fuelled fears of an erosion of legal standards in Hong Kong... At the centre of the storm is a British academic... who was sacked last week by the City University for, he says, daring to criticise poor academic standards... within his faculty and for refusing to pass students whose work he considered unworthy of a pass. [The]Professor... called it the “beginning of the end of freedom of speech in Hong Kong” and said it indicated the rule of law, something Hong Kong prides itself on, was now seriously compromised. “It’s not just about academic freedom – it’s the rule of law,” he said. “What governs now is the expediency of the moment.” With Hong Kong’s legal system, which is a common law system based on British law, under siege from changes brought about by the handover to Chinese rule and fears that the widespread commercial and criminal lawlessness troubling China will spill over into Hong Kong, problems with legal teaching are the last thing Hong Kong needs.

...The Hong Kong Government is preparing itself for a state of emergency if a judgment, due out today, finds that all law ceased when the territory was handed over to China because Beijing illegally imposed its own legislature on Hong Kong... However[, the]... newly created Secretary of Justice... said the administration was “prepared to do whatever was necessary” if Hong Kong’s Appeal Court rules that the new legislature, the Provisional Legislative Council, has no legal standing. But she refused to give further details of how the administration would rule the territory without a body to debate and pass law... Hong Kong’s new Chief Executive, has remained silent on what will happen if the judges rule against his Government... Pressured or not, the judges ruling on this, billed as the most important case in Hong Kong’s legal history, have a very difficult job. The case came before the Appeal Court as a legal emergency because defence barristers in one of the first criminal cases to be heard after July 1 argued their clients... [-] three businessmen accused of criminal conspiracy... [-] had no case to answer as the laws under which they were charged were now unenforceable... The judge hearing the case recognised this argument could let every person facing criminal charges escape prosecution.

...Senior British Foreign Office officials are reportedly pressing for... the former Governor of Hong Kong... to be prosecuted under the Official Secrets Act for allegedly leaking classified documents revealing a secret deal with China over Hong Kong... MI6... has uncovered evidence that intelligence reports were passed to[a] writer and broadcaster... while [he was] writing *The Last Governor*[, although]... no direct quotations from the documents appear in[the] book...

...it will... be in Beijing’s own interest to ensure that the Hong Kong success story is not tarnished under Chinese rule. Much face will be lost if Hong Kong’s vibrant economy is allowed to falter. And there’s more than face at stake. After the handover ceremonies, [the]... Chinese President... made it clear that with Hong Kong’s return to the motherland, his next target was Taiwan, in order to bring about “the complete reunification of the country.” Taiwan’s 21.5 million may not share that goal and are better placed than Hong Kong’s 6.5 million to resist it. But if Beijing is to have any hope of recovering Taiwan, it will have to govern Hong Kong not only as well as Britain did but even better. It will be no easy task... Beijing must beware that stars are at their brightest before they start to burn out.

...The common assertion that China is emerging as a Great Power would carry more weight if it had not been made so often before... This time what is prompting the... [assertion is an astonishing level of growth. T]he Chinese economy... is on the way to [becoming... the biggest in the world – as it was until the 18th century... China has achieved in a couple of decades what it took Britain and America a century or more to achieve... Parallels are being drawn between China and other countries that have gone through rapid industrialisation. The one most often picked out is... the Germany united by Bismarck last century that shattered the balance of power in Europe. China has a long history... but it contains little militarism. In fact, the soldier was near the bottom of the traditional Chinese scale of esteem, even though several dynasties were founded by military adventures. Then and later, Asian rulers paid tribute to the Chinese Emperor because they wanted to trade with China, not because they were forced to do so... China is the biggest country in[modern] Asia, in population if not in area, and still one of the poorest: Russia is even bigger and not much better off – but few see it becoming a threat again, at least in the foreseeable future. The Chinese call their country Zhongguo, the Middle Kingdom, the centre of all that is “Under Heaven.” They are now learning how to treat others as equals and they have come a long way... Why is it then that so many people see China as a threat? ...Under Mao, China supported revolutionary movements in other countries, especially in South-east Asia. Under Deng it stopped that and these days it has good relations with all members of Asean... The most serious danger now is that China and the U[S] will come into conflict over Taiwan... Taiwan made it easier for the generals by sending its President to America... threatening the basis of the relationships between the U[S] and... China. But, contrary to the usual assumption, generals are not necessarily war-mongers. Mao was not a general: nor was Stalin or Hitler. In this century at least, wars have usually been started by ideologues rather than military men. So it is relevant to ask, what role do ideologues play in China’s policymaking at present? Most observers seem to agree that, for all practical purposes, ideology is dead in China – except the ideology of capitalism.

...[“China is still on schedule for its long-awaited, hard-earned economic soft landing, judging from its performance in the first half of the year. But the question economists are posing is what will the pilots do once the plane is docked? Retail price inflation, China’s favoured measure, came in at a comparatively miserly 7.1%, after dizzying yearly figures of 21.7% in 1994, and 14.8% last year. However, the longer-term scenario presents China’s leaders with problems requiring more baffling solutions than a clamp on credit or a freeze on prices to rein in growth and inflation. The hulking state-owned enterprises continue to show little or no signs of improvement, entrenched as they are with problems such as chronic over-staffing, crippling debt, and a lack of flexibility to adapt to a changing market because of their historical roles in China’s old planned economy. Millions of people are also tied up in the agricultural sector, preventing any sudden and obvious measures for reform because of a fear of a sudden boom in the numbers of jobless, and listless’]...

China’s media is under strict Government and Communist Party control and has guidelines to cover 70[%] positive and 30[%] negative news... In an apparent loosening of... controls on the media... China’s... Premier... urged... journalists to cover more of the “dark side” of China’s economic reforms... The casualties of China’s economic growth have been growing unemployment lines, urban poverty, worker exploitation and an end to free medical care and schooling in the cities. Rising corruption among Government officials at all levels has also become a major gripe nationwide.

...Chairman Mao Zedong swept the communists to power in 1949 on a wave of popular rage against the corruption of Nationalist Generalissimo Chiang Kai-shek and oversaw the effective elimination of the centuries-old practice of squeeze. For three decades just about everyone in China was as poor as each other. But then in 1978... Deng Xiaoping... took over the reins and launched his economic and open-door reforms that created the opportunities for ordinary Chinese to make money and for officials to abuse their position for personal gain. In the early 1980s, Mr Deng replaced Maoist egalitarianism with such slogans as “to get rich is glorious” – and many Communist Party officials took it to heart, using the lack of a legal framework and loopholes in rudimentary economic controls to make themselves, their relatives and their friends rich... Resentment against corruption was the leading grievance in the 1989 student-led demonstrations for more democracy centred in Beijing’s Tiananmen Square... By the early 1990s, corruption exploded as the economy boomed, growth soared and the race to get rich moved into high gear.

...HE WAS A VERY SMALL BOY, BUT THE VILLAGE ELDERS RE-member him distinctly because his family was descended from a mandarin, the most famous citizen of the humble settlement of Paifangcun until, well, until the very small boy came along. The eminent ancestor had passed the torturous series of civil examinations to prove he was a master of the Confucian classics and thus fit to serve the Emperor in faraway Beijing. And the boy's forefather did just that, at the every height of empire, when the Sons of Heaven, as the Emperors were called, could afford to sneer at the Western barbarians begging to trade with their Celestial Kingdom. By the time the boy was born, in 1904, the empire was moribund, preyed upon by the very foreigners it despised... [T]he boy was remembered not just because he was a good student like his ancestor but because he liked to turn somersaults. He would roll out of his family compound... and away into the countryside... then back home again, turning and turning and turning. And his life would be one of many somersaults... [until, finally, he gained] the role of emperor of a nation that could once again afford to sneer... The eldest son of the county sheriff was given a two-character name that meant "first saint," perhaps a reference to his father's Buddhist piety. Only later, in France, did Deng Xiansheng become Deng Xiaoping, the two syllables a prescient nom de guerre, literally meaning "little peace,"... In France he learned to love the game of... soccer... [-] he once pawned an overcoat to buy a ticket for a match. But Deng had landed in a France mired in a deep postwar recession, with few opportunities for a student to support himself with part-time work. He spent most of the next five years working at various menial jobs: arms-factory worker, waiter, train conductor and rubber-overshoe assembler. As a member of the proletariat, he learned something else: communism, the doctrine spreading among French industrial labourers and the Chinese students among them. In 1922 Deng joined the Communist Youth League set up by his expatriate countrymen... He earned his true credentials, however, in Moscow, where he studied Marxist-Leninist thought in 1926. Then it was back to a strife-torn China to propagate the faith. Deng's first assignment, as ideological watchdog to a Soviet-supported warlord, fell through when his patron defected to the Nationalists. Deng's next mission was even less promising: the young communist was ordered to the backcountry of Guangxi province in the far south, where he was to organize ragtag rebels to seize huge cities. Deng went loyally, even though he knew the task was impossible. The journey, however, proved to be momentous. On it he met up with Mao Zedong. The two hit it off almost at once... When Mao was denounced and demoted by pro-Russian elements of the party as an "escapist" for advocating a hit-and-run campaign of attrition, Deng was ousted along with him... Their fortunes changed after October 1934. Harassed by superior Nationalist forces, the Red Army of Jiangxi joined the arduous Long March, threading in round-about ways through the hinterland until it straggled to the caves of Yan'an in north-western Shaanxi province a year and 12,000 km later. The retreat cost the lives of more than 90,000 troops, but sheer survival, along with the self-sacrifice the soldiers displayed towards civilians en route, made heroes of the communists. Mao's guerrilla strategy had by then made him the movement's unchallenged leader... But the civil war... was soon subsumed into the bloody conflict with invading Japanese forces... After Japan's defeat in 1945, Deng was instrumental in driving a military wedge down the middle of China, forcing the Nationalists to withdraw and enabling Mao to press on to victory by October 1949. With the establishment of the People's Republic, Deng began a rapid rise. From 28th in the communist party pecking order in 1945, he became General Secretary of the party and one of Mao's 12 Deputy Premiers in 1956. That was the year Khrushchev came to power in Moscow and denounced Stalin at a secret Soviet party congress. Learning of this indictment of a "personality cult," Deng commended it to his own party – a move used to discredit him in the following decade by the Mao-worshipping Red Guards of the Cultural Revolution. In truth, Deng was still loyal to Mao. Indeed, when Mao moved against his intellectual rivals in the Anti-Rightist purge, Deng organized a merciless roundup of as many as half a million of his friend's ideological enemies. Mao appreciated the fervor... Nevertheless, one of the most devastating, man-made catastrophes of the 20th century would fray their comradeship and wound China almost mortally. AT LEAST 30 MILLION, PERHAPS 40 million, Chinese died as a result of Mao's Great Leap Forward, his campaign to overtake the per capita industrial production of Britain within 15 years. It was Mao's attempt, by sheer force of will, to march a deeply impoverished nation into the front ranks of modernity. The Leap's un-scientific agricultural practices and inane technologies turned China into an immense archipelago of unproductive communes racked by famine. No one had clean hands... Deng himself sycophantically proclaimed high expectations for grain harvests: "We can all have as much as we want." His own home county would be ravaged by hunger. Mao refused to believe reports of famine, at one point joking that "even if there's a collapse, that'll be all right. The worst that will happen is that the whole world will get a big laugh out of it." By 1961, however, not only were people dying by the millions but the state was on the verge of collapse. By then President Liu decided the time had come to make a leap in another direction – and Deng collaborated with Liu's economic reforms. During a visit to Guangzhou, Deng declared, "It doesn't matter whether the cat is black or white, as long as it catches mice." It was his way of arguing that any method could be tried as long as it meant the people could eat. The words would later be used against him. Mao continued to ordain idiotic agricultural experiments, but Liu and Deng side-tracked the policies. The strategy – a sort of bureaucratic guerrilla warfare – exasperated the Great Helmsman... Finally, even Mao recognized that China was famished and dying. He made a strategic retreat and allowed Liu and Deng to restore order to the food supply. But he never forgave them for showing him up... Mao's revenge came in 1966 with the Great Proletarian Cultural Revolution... By August 1967, with China in tumult... Deng... and Liu were put on public trial. Liu's leg was broken in the spectacle, and he later died of pneumonia in a makeshift prison in the city of Kaifeng. At the trial Red Guards decried Deng as a "capitalist roader," a "fascist" and a "traitor" and shouted, "cook the dog's head in boiling oil!" Confronted by such rantings for hours on end, Deng simply removed his hearing aid. What saved him from Liu's fate, evidently, was... [that while] Mao had always despised the patrician Liu, he remembered with some affection his wartime adventures with Deng. Thus Mao declared Liu "an enemy of the people" but defined the opposition of his old comrade as an antagonism that emerged "from among the ranks of the people." Deng and his wife were allowed to live under house arrest in Beijing for two years before being sent south to the old revolutionary base of Jiangxi. They were... required to work mornings in the tractor factory. Their greatest sorrows at this time were the death of Deng's younger brother, driven to suicide by Red Guards, and the crippling of their son... A promising student of physics at Peking University, [their son] was hounded by radicals until he fell – or was pushed – from a fourth-storey window. His spine was fractured, leaving him paraplegic. Deng spent his spare time in exile reading, pacing the grounds of his house and calculating what China needed to recover its sanity. His moment came in 1973. By then, the Red Guards were nearly a spent force, and the army had to intervene to save the nation by manning civilian posts. Mao, wary of the increasing importance of the People's Liberation Army, thought Deng, whom the military respected, would serve to check its influence. Beyond that, Premier Zhou, Deng's onetime mentor in Paris, respected his knack for down-to-earth statecraft. Summoned back to Beijing, Deng... resumed his post of Deputy Premier and within two years had helped author Zhou's Four Modernizations, the manifesto of practical reforms that launch[ed] China's rapid growth. After Zhou's death in early 1976, [the wife of Mao] and her radical Gang of Four accused Deng of orchestrating massive demonstrations of sorrow for Zhou that loudly criticized the Gang. The clique suppressed the marches in Tiananmen Square – precursors of the 1989 demonstrations – and purged Deng, who took refuge in Guangzhou. In the meantime, an ailing and indecisive Mao, unable to trust his wife and her cohort[s], anointed as his heir... a man without allies. Yet Mao would not throw Deng out of the party... Within a month after Mao's death in September 1976, the Gang of Four was under arrest. Deng staged his third and last comeback the next year. In Paifangcun there is a cactus-like plant whose hundred-year blooms are an omen. When the flowers burst forth in 1979, the village knew whose good fortune they portended. By then the greatest son of the village was firmly in control of Beijing, having outmaneuvered [Mao's anointed heir] and eased the Maoists out of power. Millions of peasants were allowed to cultivate private plots, sell surplus crops and invest in village factories. Soon Chinese peasants were not only adequately fed... but more than a few were able to... fill the[ir]... houses... with television sets, refrigerators and clothes washers. For a moment dissent was allowed to flourish in the "Beijing spring" of 1979; hundreds of the walking wounded from the Cultural Revolution plastered public spaces with denunciations of Mao and

even of Deng. Before long, that spectacle triggered Deng's deep distrust of spontaneous mass movements... The Beijing spring was cut short, and the champions of political reform were imprisoned. By 1984, economic reform was being introduced in the cities, so much so that Old Guard Marxists began to decry the "Spiritual pollution" of cosmetics and discotheques. But Deng persisted... By the late '80s, however, economic liberalisation had spilled uncontrollably into political yearnings... labor unrest and student demonstrations for greater freedom... His conservative rivals took advantage of the [Tiananmen] massacre to pull back the reforms – or at least slow their pace. And as Deng retreated into a self-critical silence, they seemed to succeed. But Deng, though increasingly frail, fought back... doggedly cl[inging] to power, despite becoming less mentally sharp [– like]... Mao before him... In February 1992, sensing that the populace was exasperated by conservative austerities, he emerged from seclusion to rout his opponents... Nearly deaf by now, he urged Chinese to "seize the opportunity" of... go-go, free-market examples. The result was an explosion of economic growth and the elevation of "Deng Xiaoping Thought" to gospel, an ironic turn for a man who shuddered at "cults of personality." But it was the final somersault he had to perform to ensure the survival of his legacy. "LEADERS ARE MEN, NOT GODS," said Deng Xiaoping. Mao Zedong, the man who would be a god, lies embalmed and displayed in his mausoleum in Tiananmen Square. Deng has asked that his eyes be donated to medicine, his ashes be cast into the sea and no monuments be built to him. Mao had resided in Zhongnanhai, the walled district of Beijing that is China's new Forbidden City; Deng chose to live... in a block-long house called Miliangku... not far away. It was there that China's unquestioned leader, its emperor without portfolio... drifted into senescence, dealing with the specters that haunt the capital and the realm. They were ghosts as hoary as the last Emperor of the Ming dynasty who hanged himself on Coal Hill, just east of Deng's home; the students gunned down outside Miliangku by a reactionary government in 1919; the many spirits of Tiananmen; the tens of millions who died of hunger in the Great Leap Forward. And finally there was that most troublesome shadow of all, Mao Zedong, Deng's friend and foe, his rival for the soul of a country so ancient it has had the misfortune both to forget its history many times over and to repeat it again and again.

...A senior Chinese official has revealed for the first time that the heirs to the late paramount leader... Deng Xiaoping, who died last week... are embroiled in a power struggle over his legacy... The ruling Communist Party elite are gathered at the seaside resort of Beidaihe for their annual round of political infighting that is set to be even bloodier than usual since it precedes a crucial five-yearly party congress to elect the 200 men who will rule China into the 21st century... The... remarks reveal... that a strong bloc of opposition exists to the capitalist-style reforms... Deng... launched in 1978... The ensuing rash of bankruptcies, dismissals and labour unrest has prompted a fierce backlash from leftists over the destruction of state control over production, and more importantly, what they see as selling out socialism... Even official reports tell of unemployment in the countryside as high as 35[%], with joblessness in some cities 20[%] or higher... Sporadic protests have been reported in many cities. Dissatisfaction runs deep. Although the ban on public dissent remains in place, many Chinese grumble in private... "To serve the people" says the red and gold placard above the entrance to the imposing grey... compound along Beidaihe's west beach... Despite the slogan, China's leaders are as removed as ever from the masses they serve.

...The man most likely to be China's next Premier[, the current]... Vice-Premier... is not modest. Last year, he told pro-China newspapers in Hong Kong that... [because he was] the man credited with engineering China's economic "soft-landing" from double-digit inflation three years ago... he deserved the Nobel Prize for economics... He is said to be the smartest thinker, the toughest manager, and the straightest arrow: qualities not necessarily considered endearing among China's chummy communist elite... An engineer who graduated from Beijing's Qinghua University, China's most prestigious technical school, [his] abilities are widely respected. He has been designated economic trouble-shooter since he was made a Vice-Premier in 1991. "If we could vote, I'd definitely vote for him," said one senior official. "He's... very capable." ...Western diplomats, analysts and Chinese with close ties to the party say that [he] is likely to get the job, despite the fact that he is 70 years old – the same age as... [the current Premier, another candidate, but one] best known overseas for his strident support for the 1989 military assault on pro-democracy protesters in Tiananmen Square... – and said to be in bad health... [However, t]here is a general consensus among Western diplomats that [the current Premier] has probably done enough to consolidate his power – in the short term at least... His most important power base is the 3.2 million-strong People's Liberation Army, where he appears to have won the loyalty of his appointees with promises of bigger budgets, better technology and a greater say in the key foreign policy areas of Taiwan and the US.

...[F]ighter jets, bombers and lumbering tankers filled the skies over Beijing's Tiananmen Square yesterday in a giant military parade to mark the anniversary of the People's Republic of China. Tiananmen became a sea of colour as half a million civilians – all carefully vetted for their party allegiance – surrounded floats carrying everything from fashion models to newly-weds. To kick off the military parade – the first in 15 years – a unit of machinegun-toting female troops in scarlet berets and black boots goose-stepped past. From the balcony of the Gate of Heavenly Peace, where Mao Zedong proclaimed the birth of the Communist state on October 1, 1949, the current President (the former Premier) – who hoped that the lavish celebrations would elevate himself to the pantheon of socialist greats alongside Mao and Deng – declared "socialism is the only way to save China." He also declared China would eventually win back control of Taiwan, to Chinese leaders the last unfinished business of Mao's revolution. Taiwan, whose history was changed irrevocably by the events on the mainland half a century ago, yesterday remained customarily silent in public, and indifferent in private. The public's disinterest has been heightened by the perceived exploitation by China of last week's devastating earthquake in which more than 2000 people were killed and 100,000 made homeless.'

...*'The anniversary that China officially forgets* Mao launched his crusade to overturn the last vestiges of capitalism and feudalism, and vanquished his rivals, in the northern spring of 1966. The chaos spun to an exhausted, devastated halt 10 years later. With his call to "hold high the great banner of the Proletarian Cultural Revolution," Mao unleashed a reign of mass terror and destruction that left at least one million people dead and sanctioned the persecution and torture of another 30 million. Today in China there is little public discussion about this upheaval that rent the fabric of one of the world's oldest civilisations. No special events were planned to commemorate the anniversary of the Cultural Revolution's start. Schools dismiss the Cultural Revolution as a "mistake" of Mao's dotage. Filmmakers and publishers are advised to avoid the subject. In private circles, though, memories are still fresh. Many Chinese feel they should stay that way. "You don't want to forget the past. To forget the past is to lose control over the future," an economist wrote last year in his book *The Cultural Revolution and Me*. A revered novelist, who was labelled a class enemy, banned from writing and forced to clean drains during the Cultural Revolution, has called for a museum similar to the Auschwitz Memorial Museum that documents Nazi atrocities. At the beginning, no one could foresee that the Cultural Revolution would spin so violently out of control. The political storm had been brewing for months. On May 16, 1966, Mao issued a call to arms against the "bourgeois" forces he accused of conspiring to overthrow the Communist Party. Anyone accused of having been associated with things feudal, old or foreign was persecuted. Doctors, teachers, artists and other intellectuals, labelled the "stinking ninth category," were ridiculed, beaten, marched through the streets wearing dunce hats. Those who survived the beatings and did not commit suicide were then exiled to the countryside, ordered to sweep streets, clean toilets or perform other menial tasks. Student Red Guards smashed their way through China's cities and temples, under orders to destroy the four "olds" – habits, ideas, customs and culture. Many Chinese believe that the Cultural Revolution was far too successful in wiping out much that was good of China's traditions: the concept of right and wrong, courtesy, filial piety, kindness.

...While millions of Chinese peasants were dying of hunger during the famine unleashed by Mao's Great Leap Forward of 1958, a British communist was busy setting up the English section of the Peking Foreign Languages Institute. He, like most people living in Chinese cities, was oblivious to the famine in the countryside and did not come up against the nasty side of Mao's perpetual revolution until the following decade. In 1967, Red Guards accused him of spying for Britain and had him incarcerated in solitary confinement for more than five years. He was never formally charged, but his revolutionary crime was to have been in British Air Force intelligence during WW2, when Britain and China were on the same side. He was eventually

released in 1973, but he resolved to stay in China, with his Canadian wife. He still keeps a picture of Mao on the wall of his apartment. "After I was released from prison I thought a lot about that picture and in the end I decided that it should stay because Mao did make very significant achievements. It is an over-simplification to condemn it all." His ambivalence towards Mao is reflected across the nation. A migrant worker from eastern Anhui province also finds difficulty in blaming Mao. She grew up with almost no relatives as eight of them died in his famine. But the question of Mao's complicity in their, and probably 30 million other deaths, is not discussed. "I don't think Chairman Mao knew about the food problems. It was the local officials who took away the grain, and let people starve." A historian saw both of his parents persecuted to death by the Red Guards in the Cultural Revolution. But in spite of his personal tragedy, he gives Mao high credit and swallows his bitterness. "From the first Opium War in 1842, China was thrown into upheavals and revolutions, one after another. The goal of each one of these was to make China strong again, but it was only Mao who succeeded. That was and still is the root of Mao's popularity." China's new leaders have unleashed economic reforms that have retreated from Marxism and created unprecedented wealth since Mao's death, after 27 years in power, in 1976. They have also disbanded communes and launched economic reforms aimed at privatising large sectors of state-owned industry. "I was not a Communist and not even a Marxist, but I was a sympathiser and I had an understanding that a revolution, a complete change, was indispensable," says a lawyer from Manhattan who came to Shanghai in 1946. Now 83, he does not like everything he sees in modern China. "I am very happy with the material gains that have been made, but there has been a backsliding. China's not becoming capitalist, it's more and more feudal." Most worrying, he says, is the rampant bureaucratic corruption and the dismantling of the all-encompassing state welfare system.')

...the *Xinhua Daily Telegraph* said yesterday... [that] China is to set up a welfare system in urban areas by the year 2000 to help workers laid off from state enterprises... [To be covered people will need to be able to guarantee that they have] a per capita income below the local minimum cost of living... The plan would be funded by local governments and apparently would not cover China's huge "floating" population of migrant workers from rural areas who have flooded the cities in search of jobs.

...“...You want go Anshun?” queried the... travel agent in the... city of Kunming. “Why? Westerners no go there.” Precisely... [My wife] and I wanted to get out of this touristy part of China, far from the madding crowd of other Westerners, of cafes and coffee bars and CNN television, of tourist touts chasing a fast buck from visitors, and seek out the small-town, backblocks China and its fascinating people that we had experienced on three previous visits to this emerging country. We knew such a China must still exist. A nation of 1.2 billion people in such a vastness of land could not turn all of itself inside out in a few short years, despite the overwhelming changes and developments in the major cities and urban areas in the east. “No go Anshun,” repeated the travel agent. “It no progress.” That settled it. He had now made Anshun and its province of Guizhou in China's central south sound even better than our guidebook declared – “one of the most backward and sparsely populated areas in China... 60-70[%] of population illiterate... 50[%] of villages not accessible by road.” ...OUR tickets for Anshun, bought at local price at the Kunming long-distance bus station, cost 80 yuan (\$NZ14.50) each; a bargain for a night's bed plus 500km of onward travel, even if the journey would last 26 hours because of the mountainous terrain and state of the road... Chinese sleeper coaches, an innovation in the field of long-distance bus travel that the rest of the world just has to copy... did not exist a year or two ago. How they evolved, and what parts of China they run in, seem to be state secrets at present... [The latest issue of Lonely Planet China guide (July 1996) briefly mentions the sleeper coaches, saying they are available on some popular routes...] ...They cater for a small portion of the long-distance local passenger traffic in Guizhou and neighbouring Yunnan province... Chinese bus-travellers are the greatest rubbish-droppers, the loudest talkers and the biggest hoickers and spitters (no matter the practice is now officially banned across the nation) this side of the Taj Mahal. If some personal behaviour came to be viewed in different lights, we all shared the need for toilet facilities. There were none on the bus, so the roadside sufficed, women to the rear, men to the front... Roads in rural China are poor by Western standards, choked with slow-moving lorries and routed through every possible hamlet and town. There is much grinding uphill in crawler gear, then racing down in “coaster,” that dangerous extra “gear” the Chinese obtain by switching the engine off and letting the vehicle run downhill, thinking they are saving fuel. Our driver was a hardy fellow, remaining behind the wheel for fully 15 hours before stopping for a 90-minute snooze, then driving on again. No one else seemed concerned about him, so [my wife] and I did our best to forget how tired – and dangerous – he must have been... ANSHUN, when reached on the afternoon of the second day, turned up trumps. It was grubby, with narrow streets and tumbledown buildings, street stalls and smiling people. It had clean little restaurants with incredibly cheap and tasty food. We could walk around all day through markets, alleys, general stores and parks, then hail a tuk-tuk... to ferry us back to our seedy hotel beside the bus station... Anshun's old men, it can be confirmed, wear Mao suits and gather daily in the park to play chess and checkers as always; street dentists still set up tables on street corners; performing monkeys dance and play on the pavement alongside dumpling cooks, fruit vendors, pancake sellers, palmists and fortune tellers; ordinary Chinese men and women laugh and joke as they go about their lives in much the same fashion that they always have. There are... no Westerners... [-] the last Europeans to have signed the visitors' book before us at the Ming Dynasty Wen Temple had been a Canadian couple, 12 months earlier... [-] no monster hotels being built, no major factories under construction, no huge joint development projects...

Hong Kong has set in motion a... \$2b... scheme designed to get the sewage out of Victoria Harbour, [a task that was] originally contracted out at \$HK1.3 billion... [In related news,] Beijing officials have announced they will carry out a \$US24 million... facelift of China's second most frequented tourist attraction... including cleaning up the often malodorous moat. All 480 sewage outlets emptying into the waterway... surrounding... China's legendary Forbidden City... would be closed and the moat dredged, yesterday's *China Daily* newspaper said. The cramped homes along the edge of the Forbidden City would also be torn down, with their residents moved out.

...authorities have sacked a relics official and ordered repairs to parts of the Great Wall of China torn down to make way for a road and a vegetable warehouse... [Incidentally, a] grab-bag of new rules for listed companies giving China's stock exchanges sweeping new powers comes into effect tomorrow. Exchanges will have the power to suspend shares when net asset value falls below par and halt trade for unusual activity which might mislead investors, the China Securities and Shanghai Securities News said. Daily price movements can also be limited to [5%].

...Losses by China's small and medium sized state companies totalled 64.5 billion yuan... in the first 9 months of the year, the State Statistics Bureau reported. [However, overall] profits were boosted by the large state-owned enterprises and were 10.3[%] up at 199.65 billion yuan.

...[since China's leaders decided] under the shade of their beach umbrellas... to promote private enterprise as the sole means to revive their sagging state sector[, cities]... once closed to foreigners due to their involvement in China's secretive strategic industries are now openly vying to attract foreign investors.

...China is likely to continue to grow at an annual rate of 10[%] a year up to 2005[, the]... executive director of the University of Auckland's School of Business and Economics told a seminar on understanding the Asian consumer market... Those wishing to sell to China had to first understand how widely spread the country is geographically and not be dazzled by the prospect of the market's 1.21 billion population. Forget rural China... he added... as disposable income there was low. Stay focused on the top-nine cities, because that is where the earning power is. These cities account for nearly all of the Chinese households earning over RMB27,000 (\$US3200) a year... If the economy grows at the most likely rate... then there will be 40 million urban households earning over RMB48,000... per annum... by 2005...

Many... are well on their way to becoming multi-millionaires in terms of Chinese yuan... On the road north from... the Yellow Sea port city of Dalian... is the \$US160,000[-a-year]... Golden Pebble Golf Club, its membership list heavy with... senior political leaders who jet down from Beijing for the weekend. The course[is] a joint venture with American and Hong Kong partners...

The morning sun bounces off the Yellow Sea as... the vice-executive general manager of the... \$US50 million... Dalian Golden Pebble Beach Golf Club... gazes across the manicured expanse... a[t] the clusters of Japanese and Korean businessmen on the greens. "This is a place for people in economic and cultural circles to meet," he said. "If they come here they will have more opportunities to discuss business and other undertakings." ...welcome to the new China. Here... golf is becoming both a symbol of wealth and a means of adding to it. In Dalian, an industrial powerhouse on the coast east of Beijing, both are pursued shamelessly in a city whose economy has grown at an average rate of 8... to 10[%] a year for the past five years. Much of that has been stimulated by the \$US2 billion that has flowed into the city from foreign investors... "I think foreign investment has changed the face of the city," said the vice-mayor... who, since a visit to N[Z] several years ago, has become an enthusiastic advocate of N[Z] food and agricultural technology, and of a proposed joint N[Z]-Dalian deep-sea fishing venture... Over a Japanese lunch at the Pebble Beach Golf Club[, the vice-executive general manager]... reflected on the role that the American-designed course has assumed in the business of his city... The club's publicity shows... [a] beaming... American... President... in the days before the scandal over Chinese money in the presidential campaign sharply closed the door of the White House to mainlanders. At home, only a handful of Chinese have yet fought their way through the[golf club's] door, but their numbers belie the weight that came with them: among the privileged are... members of the politbureau's Sanding Committee, [the Premier's]... inner ruling circle, and other members of the elite...

China without a map on the road to reform... When the leaders of China's communist revolution were faced with extinction at the hands of enemy troops 60 years ago, they embarked on the famous Long March... At the Communist Party's 15th congress... China's rulers embarked on a long, tortuous trek of their own – over-hauling much of the tottering state sector. Their path to victory may be nearly as hazardous as that taken by their revolutionary predecessors... Among the problems facing China's 370,000 state-run firms, none worries Beijing so much as the tens of millions of workers who will be thrown out of jobs if money-losing enterprises are allowed to close or downsize. Up to 30 million people, mostly in the central and north-east "rust belt" where state-run dinosaurs rule, could find themselves out of jobs, said[the] editor of the *China Journal*. "That's an enormous number, and they're concentrated in large cities, where mass unrest would make the Government very nervous indeed... The Government doesn't seem to have thought through yet what it will do," he said.

...About 1000 demonstrators have clashed with police in the central Chinese city of Zigong after a strike over wages at a state-owned factory. The... U[S]-based rights group, Human Rights in China, said... the workers were protesting against their low monthly salaries of 50 to 100 yuan (\$9.44 to \$18.87) which sometimes were not paid. They were also angry that no health insurance claims had been repaid in two years. The workers called on the local authorities to support them, but when they received no reply, they decided to take their campaign to the streets... Troubles have broken out several times in recent months in Sichuan, the most populated province in China with 100 million residents... Riot police charged crowds of... drivers... demonstrating... on Thursday over rules banning three-wheeled passenger vehicles called pedicabs from downtown Zigong... The ban threatened their livelihoods... [There had also] been clashes after the licences of some of the push-bike riders in Dujiangyan were revoked, preventing them from using their adapted vehicles to transport goods. In July, thousands of workers laid off when three Mianyang state enterprises declared bankruptcy took to the streets, charging that unemployment funds had been embezzled and demanding compensation. These reports are never mentioned in the official Chinese press, and only come to light via dissidents abroad.

...China has "silenced all public dissent," the U[S]... State Department... said in its annual report on human rights around the world. The Chinese Government in 1996 continued to commit "widespread and well-documented human rights abuses, in violation of internationally accepted norms,"... Chinese authorities were faulted for their "intolerance of dissent, fear of unrest and the continuing absence of laws protecting basic freedoms." While criticising China's human rights record, the... Secretary of State... said the US relationship with China was too important to be held hostage to human rights or any other single issue. The report... also criticised the human rights records of numerous other countries... in Asia.

...Mongolia plans to privatise 200 state-owned businesses over the next 18 months and will also take steps to privatise land ownership, [its P]M... has said. The businesses to be privatised include the... Godi Cashmere Factory, Mongolia's second biggest source of foreign exchange. [The PM] has said privatisation is one of the highest priorities of his 10-month-old reformist Government... It was unclear whether last month's upset election of [the] candidate of the former communist party, as president would affect plans. Some Western diplomats have expressed concern that the new president might slow the pace of Mongolia's market style reforms...

NINE government officials and MPs were killed in anti-Beijing unrest in China's north-western Xinjiang province and neighbouring Inner Mongolia, a Chinese-language newspaper reported in Hong Kong. They were killed after the... 15th congress... last month and before National Day celebrations on Wednesday... Sporadic disturbances in Xinjiang, mainly inhabited by Muslims of Turkish origin, have been routinely silenced by Beijing, except for a short period between 1944 and 1950, when the state of East Turkestan emerged during the Chinese civil war.

...In China's westernmost city of Kashgar hundreds of mourners filed into the Aidkad Mosque to bid farewell to Abdul Miti... aged 65, [who] had died in the night and was buried within 24 hours in accordance with Muslim law. A Government official and veteran of the 1946 "Three Districts Revolution," an uprising against the then-ruling Nationalists, Miti was guaranteed a solemn send-off. Recent uprisings in the western Xinjiang region... [by the] Turkic-speaking Uighurs... against rule from Beijing have been met with less warmth by China's communist rulers. Ringleaders and participants have been swiftly executed or jailed.

...About 1000 Chinese farmers have gone on a rampage in southern Guangdong province after accusations that the Government was underpaying them for their grain... Authorities were forced to send in several hundred paramilitary armed police to restore order and about 30 people were arrested... The latest incident began last Thursday when a farmer handing in his quota of grain for purchase by the state... claimed that the scales were inaccurate and were underweighing the grain by 30[%]. The farmer got into an argument and was beaten up by the local grain station officials. The next morning the angry farmer told colleagues arriving to sell their grain that the Government scales were inaccurate and a new quarrel broke out... Whether the scales were inaccurate will never be known because they were destroyed in the riot... [However], the local Government decided to make a 30[%] compensation to farmers who had handed in their quota of state grain.

...Riot police fired teargas to disperse angry farmers in southern China after one person died in protests over plans to remove ancestral tombs from a tourist spot... Hong Kong newspapers said the trouble started when local officials decided to take over a site allocated to villagers a decade ago, to expand tourism facilities. They said villagers were angry at the low compensation as well as the short notice given before the graves were removed. Workers brought in to clear the graves allegedly destroyed a newly-interred body... China's Communist rulers – sensitive to land shortages and disdainful of what they see as the extravagance of traditional rituals – have been promoting cremation since the 1950s with only partial success. According to official figures, 7.9 million people died in China in 1995, and their burials consumed more than 75,000ha of land.

...Like N[Z], China is facing an ageing population and a shrinking purse to pay for its retirement – but at a pace and scale that makes N[Z]'s concerns barely a blip on the anxiety meter. Simply put, the enforced reduction of Chinese families to one child has flattened the population pyramid, shrinking growth in the workforce as the nation... begins a wholesale greying... At present the elderly comprise 6[%] of the population. By 2020 this will double to 11[%]... Today's 10 people of working age for every pensioner will by 2020 become six, and by 2050 only three. The nation's ailing state-owned enterprises... provide pensions for their workers... [but] some have... already... [been] forced to stop pension payments. Outside these businesses, life is even harder for the elderly... In non-state companies, pension coverage ranges anywhere from 20... to 90[%] of workers... For most rural workers there is no pension scheme.

...In a sign that the Asian economic “flu” is taking a toll on China, the country has released inflation data clearly showing its economy is stalling... “We had zero growth in September and negative growth in October and November. This is not reasonable,” said [the] professor of economics at Beijing University. “Demand is insufficient and we are seeing investment falling off... This will arouse the concern of authorities, who will take steps to stimulate demand.” ...China [has already announced that it] will extend tariff breaks on capital goods imports for some foreign-funded businesses after a sharp drop in foreign investment... [despite] a huge trade surplus [that has swelled] foreign exchange reserves... [to] \$US134 billion... Weakness in the domestic economy is particularly worrying for Beijing at a time when its export prospects are clouded by sharp currency devaluations... which will make goods sold by countries such as Thailand and Malaysia more competitive.

...In Malaysia, the tourism minister has suggested that mass circumcisions be turned into a tourist attraction. “By charging tourists a small fee of between four riggit (\$1.18) and five riggit to watch such cultural events, the organisational costs can be covered,”... But tourism, or lack thereof, is no laughing matter [– although, the economic]... crisis has produced semi-comical side-effects. The formerly rich in Thailand – or those who like to say they were – have been snapping up T-shirts emblazoned with “Former Rich” at the market.

...Thailand has a whole generation who knew nothing but a bright future... Now, as a severe currency crisis throws the nation into recession, Thais are finally asking some hard questions. Like how could a country with an average income under \$9500 become the world’s second-largest market for Mercedes? ...Few saw the folly of trying to... [live] truly lavish lifestyles... “I think [the wealthy] are in shock,” said... [the] president of Thai Farmers Bank. “The world they are used to is no longer there... They didn’t know how poor Thailand really is.” ...For the rising ranks of the unemployed, there is... no safety net. The Government is already deeply in debt to its decade old social-security fund.

...A leading Thai politician said he will not publicly reveal the wealth of his many wives as required by the country’s new constitution because he isn’t legally married to any of them. [The f]ormer Deputy Interior Minister... said: “I have many wives, but... I have to show only one to society.”

...[“Bangkok has millions of people but they are all faceless. It’s an ‘each for himself’ society,” said a child rights advocate who hit out at passengers who did nothing to help two teenage girls who were dragged off a packed bus and forced into a house where they were gang-raped. Thais are famous for their tolerance but the open kidnapping of the girls, aged 15 and 16, while bus 134 inched its way through congested city-centre traffic has led to public outrage and a flood of irate calls to radio talkback shows. Bangkok citizens wonder if their congested city, famous for the friendliness of its people, has become another New York. The director of the Bangkok Mass Transit Authority also bemoaned the apathy shown by the driver, conductor and passengers.”]

...MAHACHAI is at the mouth of the Mae Glong... [where it] meets the Gulf of Siam... It is a fishing village familiar to Bangkok people for its fish restaurants and markets... We knew it had a temple, but the rest we would find out for ourselves... The train is a trip through Bangkok’s green suburbs, some quite affluent... Then a landscape under cultivation – buffalo and rice fields. People wave to trains here, and as you pass you wonder at something you once read about the Thai way of life, namely “saen sanuk” or making work playful and pleasurable. Reaching Mahachai you find a busy place, but not congested like Bangkok... Here people look with interest at Europeans – you are the diversion and it is plain the people enjoy it. Thais are fluent in smiles and welcoming gestures... On the jetty there is a big sea-food restaurant. You take your seat in the upper level to get the view and you look out across the peninsula, a short ferry-ride away. That is where the temple is, and we’ll go there after lunch... After the ferry ride we walk, taking photographs and talking to people we meet. There are 20,000 temples in Thailand... Wat Chong is a grand one. It sits amid green lawns, saffron robes and picnickers. A picnic is not sandwiches here. It is seafood cooked in mobile kitchens you see everywhere. For about \$1.50 you eat well... We left Wat Chong in a samlong back to the train, and found ourselves, as we rolled back through the suburbs, possessed of a new equanimity. We had had an experience we had called, in shorthand, Mahachai. And we had got a bit closer to Thailand. When I looked in my pocket, there was a hundred baht (around \$5) less than when I started. It was the best \$5 I had ever spent.

...[“A NZer on a working holiday in Thailand has been arrested in a swoop on a worldwide stock-trading scam that has cheated investors out of an estimated \$369 million, including at least \$5 million from NZ in the past six months. “And that’s just the tip of the iceberg,” said a NZ Securities Commission spokesperson. Thai Securities and Exchange Commission agents, working with AUSn federal police and the FBI, arrested 84 people in a raid on the offices of two “boiler room” investment firms in Bangkok on Thursday. The NZer was among 54 foreigners detained. The ringleaders are likely to be charged under anti-money laundering and securities legislation and face lengthy jail sentences.”]...

Thai fishermen recently freed from... Insein prison... in Burma have returned home with graphic details of life behind bars in the country’s most notorious jail... The descriptions add weight to official human rights reports of the prison conditions, described by a... reporter as “extremely harsh.” More than 100 members of Burma’s opposition National League for Democracy (NLD) remain in prison, according to a U[S] human rights report. Political prisoners’ sentences are often arbitrary, with terms of seven years for possession of “subversive” literature not uncommon. - 1997

The baleful eye of the Burmese regime has fixed itself on a quiet, middle-class home in south London. As dusk fell on the Thames and late commuters hurried home, [the home’s owner] stood at his front door... and explained why he could say no more to the press. Far away, in Rangoon’s notorious Insein Prison, his daughter... aged 28, was starting a seven-year jail sentence with hard labour imposed under tough laws to crush dissent. She... was arrested... on September 7 for tying herself to a lamppost in the Burmese capital and singing pro-democracy slogans. She infuriated the authorities by attracting a crowd of about 1000... [Her] partner for three years... says... “I’m very concerned about her... I still love her in a friendly way and am very proud of what she’s done.” Like her, [he] took sides in the forgotten civil war that has tormented Burma for years. When they set off [from Brita]in... together they were just another couple of idealists keen to see the world. Their visit to Thailand changed their lives. They met a Canadian who taught English in one of the Karen refugee camps about 6.5km from the Burmese border. These are regarded by the Burmese as hotbeds of sedition, and their soldiers intermittently attack them with random brutality. The Karen people are among the chief victims of Burma’s vicious war between the state and various ethnic minorities. The Karen fought with the British against the Japanese, and were led to believe they would be granted a free state. In the past five years at least 20,000 are thought to have been killed by the Burmese military. All this is complicated by turf wars over a lucrative trade in drugs. Until this year’s bumper Afghanistan poppy crop, Burma produced 80[%] of the world’s heroin... The struggle of Burma’s minorities has fused with the pro-democracy movement led by[a] Nobel prizewinner... under house arrest in Rangoon.

...DOWN a treeless suburban street in Glen Innes, in a state house much the same as all the others, eight men drink tea and talk about their time as revolutionary soldiers in the border jungles of Burma... [T]he men recall battle, hunger and, all too often, defeat. There are memories too of Maneeloy, the notorious Thai refugee camp where they all lived for months or years; the place that became their protection – and their prison – until last year, when N[Z] accepted them among 207 Burmese nationals as part of our annual refugee quota. Their... paramilitary action[was] against the murderous regime ruling Burma, the State Law and Order Restoration Council. Known, like a group of villains from a James Bond film, as Slorc, it is the latest incarnation of the military dictatorship that has ruled Burma for nearly 40 years... The insurgents... [and their] Karen National Union (KNU)... have been able to fight only a guerrilla war of ambushes and skirmishes against the regime. Ethnic divisions have split opposition forces into numerous fragmented armies that have increasingly struggled to get enough guns and ammunition, leaving some soldiers unarmed. Disillusion and defeat have taken their toll and many... headed across the border to Thailand for safety. Safety, but no security – Thailand has not signed the U[N] convention on refugees and considers Burmese political refugees as illegal immigrants, subject to arrest and deportation... The Thai Government’s treatment of persons of concern has hardened as it has tried to improve relations with the Burmese regime

and as Thai public sympathy for refugees has waned. The country has been inundated with refugees from all sides – Burma, Laos, Cambodia and Vietnam – since the 1970s... [However, international] sanctions are hurting even the most powerful... of Rangoon, [and]... there have been reports that a transition to democracy is on the agenda. Western governments have expressed cautious optimism. Back in Glen Innes the refugees hope... [that d]emocracy will come... to their homeland... but... they are committed to starting again in N[Z]. Their fight now is to learn English and find work as they force their way through the jungle of a new culture.

Eight years after troops gunned down hundreds of pro-democracy protesters, a new generation of Burmese is taking to the streets – and they aren't led by... the 1991 Nobel Peace Prize winner... The students express no animosity toward[s her], but they're focused on their own agenda. And that basically means more student rights rather than [the Nobel winner]'s call for broad political dialogue with the Government... The students complain their degrees are worthless due to disruptions in the academic year still felt from the three-year closure of the universities after the 1988 uprising. They also complain of lack of material and poor facilities... But one thing is the same as 1988: Rangoon resembles a city under siege.

...In an ominous warning to student protesters and other opponents of the military regime, one of Burma's top generals has vowed to annihilate anyone disrupting his Government's work... [He] is one of the four most powerful generals in the ruling junta that seized power by violently crushing the 1988 uprising[, when m]ore than 3000 civilians were gunned down by the military... The [general's] remarks... were carried by the state-run media yesterday following six days of student protests in Rangoon and Mandalay. Thousands of students... demanding an end to police brutality, the right to form a student union and other freedoms have staged the most serious show of dissent since the nationwide democracy uprising of 1988, which was also sparked by student protests. The protests have diminished to brief demonstrations during the last two days as police and intelligence agents have sealed off universities and other rallying points such as the thousand-year-old Sule Pagoda in Rangoon's city centre. Schools remained closed for a fourth straight day yesterday, and [the pro-]democracy leader... remained confined to her home by the military... Military men frequently refer to [the Nobel prizewinner] and her followers as axehandles of imperialists and claim she is a puppet of neocolonialists such as the U[S] and Great Britain. Only the military Government can prevent Burma from again being colonised by these countries, they say. Burma was a British colony from 1824 until 1947, when [the Nobel prizewinner]'s father, General Aung San, won the country's independence. Aung San, who was assassinated in 1947, began his career as a student leader, and students have been carrying his portrait in the recent protests... [Speaking of countries that gained independence from Britain in 1947, m]ore than 100,000 people in Bombay, India's commercial hub, have been made homeless by city authorities razing their shanty towns. "We have demolished 27,206 illegal structures," the deputy municipal commissioner... announced. The demolitions, the largest in recent times, were ordered to counter "criticism that we are soft on illegal structures. So we began a week-long intensive drive just before the monsoon rains hit the city." Welfare workers and activists said the demolitions were an attack on the rights of the urban poor, who were being marginalised after the country embraced pro-market policies in 1991. "This is a plan to throw out the poor from Bombay. Nobody likes to live in squalor. These people have no choice – they work here, but cannot afford apartments," said the activist. Bulldozers and armed policemen led each demolition crew as the slums were cleared often at night, residents said. Weekend papers featured stories of uprooted families left without food, water or work, stubbornly clinging to a patch of sidewalk they call home. "We have nowhere to go. We work here. I was born in a Bombay slum and cannot afford anything else," said one resident, a plumber. About 7.2 million of Bombay's 12 million citizens live in shanty towns, most of which are more than 30 years old. Promises of more housing have not eventuated. - 1996

With foreign trade under rigorous control... India was, for many years, one of the most solvent of the [Last World] countries. Its foreign debt was 19[%] of its GNP in 1988, and its debt-service payments were a manageable 25[%] of its export income. Since then, policies intended to speed development by giving a larger role to the private sector have increased those percentages closer to 25 and 30[%], respectively, and the country's balance of payments has turned negative... Poverty remains the lot of the overwhelming percentage of the Indian people... In the country's vital statistics, poverty is expressed in a life expectancy still below 60 years and an infant mortality rate of nearly 100 per 1000 live births... Simple long division of the GNP by the 800 million population gives a GNP per capita of \$270, not far below the \$300 of China. Distribution of income and wealth in India places this average income high above the median. That makes for quite different kinds of existence at the top and bottom of the scale. It is not that the distribution is so unfair; India compares favourably with just about all the other [Last World] countries. Not counted in the monetary income, moreover, is the nonmonetized product of labor and land, which constitutes most of the "income" of the very poorest. India is the home of 300 million of the world's poorest people. It can boast, on the other hand, that the number of its very rich exceeds that of France.

A group of frail, stooped figures crouch in the dust in a Delhi slum. One by one, they stand to be examined by a doctor and then wait in line for free medicine... [The group] represent a phenomenon that will soon have serious and far-reaching effects: the ageing of India. Joint pains, failing sight and heart disease are familiar and often treatable complaints in the [First World]. But India is increasingly unable to provide healthcare for this ballooning section of the population. The number of Indians over the age of 60 has increased dramatically to 70 million... from 20 million in 1948. The W[HO] predicts the number will rise to 142 million, or 11[%] of the population, by 2020. The explosion has been fuelled by population growth and a leap in the average life expectancy, which has risen to 63 years from 53 in 1978. "The numbers are absolutely mind-boggling..." says... [the] director of Helpage India, a non-governmental organisation that provides medical care for millions of elderly... "Geriatrics, the medical care of the elderly, is not taught to Indian doctors," says... a specialist in ageing at the WHO centre in New Delhi. "There are only two geriatric training programmes in the entire country." In a country where, on average, 2400 people share one doctor and where there are only 2409 hospital beds to every million people, it is hardly surprising that many elderly turn to n[go]s for medical care. Helpage India runs 27 mobile medical units that provide medical care for just two rupees (9c) a week. "These people live in pathetic circumstances," says... [someone] who helps run Helpage's Delhi unit. "They are very poor, living only because of the medicines that we give them." ...A governmental committee recently set up to look into social security for the elderly said in a report that present pension provisions cover less than 11[%] of India's workers. Of a working population of 314 million, only about 28 million are employed in the so-called organised sector. This means that about 286 million people – the real figure is probably much higher – must make do with the Government pension, which averages 200 rupees... a month. [However, one pensioner], 66, says she has not received her pension for seven months. "I am too weak to spend three days arguing at the Government offices and my son cannot go for me or he will lose his wages and we will have nothing to eat," she says.

...The manager of a tea estate in the northeastern Indian state of Assam allegedly shot dead five workers and injured 20 more yesterday when they demanded... the daily wage of 37.50 rupees... fixed by the Government compared with the 30 rupees they were getting from the Borgora garden management.

At least 60 men, women and children... were massacred in their sleep by feudal landlords in the Indian state of Bihar, officials said yesterday. The killings, the worst such incident in the state, took place on Monday night at the village of Bathe-Lakshmanpur... The United News of India said the victims were shot for being suspected sympathisers of the Communist Party of India (Marxist-Leninist), or CPI-ML... which organises the rural landless poor to fight for higher wages... A CPI-ML activist from the town of Jehanabad, some 60km from the village... said the attackers belonged to... a group... [called] the Ranbir Sena... "...the Ranbir Sena crossed the Sone river in boats and surrounded the village. They then opened

indiscriminate fire... The... aim is to spread terror among the poor who support our party... The Sena wants the poor to remain servile to the landlords of the region. They are scared of our party's growing influence. There were no police there. Now the police have reached the site."

...A court in Bhopal, India, has charged eight Indian executives of Union Carbide India Ltd with criminal negligence over a 1984 toxic gas leak that killed more than 15,000 people. If convicted they could be jailed for up to two years... [By the way, official estimates say [over] a... million child labourers live on the streets and in the slums... in the east Indian city of Calcutta... and most of them have never been to school. Non-governmental agencies put the total number of child workers in India[– where '30% of people have not heard of the US' –] at about 55 million.

...At sunrise every Friday hundreds of half-clad and sick children assemble at Dhaka's lush Suhrawardy Udyan park – not to play, but to receive the one square meal they are guaranteed each week... None has any regular source of income and finding two meals a day is a full-time occupation... Most of the children sleep rough, but the luckier ones share shacks with their parents or friends in sprawling slums in the Bangladesh capital of nine million people... The food arrives at the park in large containers and is distributed quickly. Many children save a portion of their handout to take home to their families... The meal over, the children return to their daily grind, sometimes to help in menial jobs such as breaking bricks at construction sites, or taking care of younger siblings while parents eke out meagre earnings as porters or rickshaw drivers... "Their parents are too poor to pull them out of the filth and give them a decent life," said a police officer who declined to be named... Bangladesh does not have an official estimate of the number of child workers but independent surveys say children are working in 125 types of jobs... Many children lost their jobs after Bangladesh's garment factories bowed to pressure from the International Labour Organisation (ILO) and importers, particularly the U[S], and last year fired boys and girls under 14... [Some of the children] are going to schools funded by ILO and the UN Children's Fund... [A man] who has been feeding the children for two and a half years... wants to start an education programme for the children along the lines of the voluntary Underprivileged Children's Education Programme (UCEP). "I have a dream that the children who come to me will learn to read and write," he said. "Maybe I will not be able to give them food indefinitely, but if they have education they will be able to find food for themselves." UCEP was started in 1972 and has given formal education and vocational training to 18,000 boys and girls. It has set up 30 schools exclusively for working children in a country where, according to the ILO, 6.3 million children work. While [his] education project may be a dream, the statistics are frighteningly real. The ILO says 43 million of Bangladesh's 120 million people are under 15. According to Government figures, the literacy rate is only 30[%]. Annual per capita income is just \$US240.

...[From 1857 the area known as the land of Bengal formed part of India, under British rule, until 1947 when it became (as East Pakistan) one of the two geographical units of Pakistan. In response to serious internal political problems an independent republic was proclaimed in East Pakistan in 1971, taking the name of Bangladesh, which became a member State of the Commonwealth in 1972.

...A Commonwealth State from 1948, the country known as Ceylon became an independent republic in 1972, taking the name of Sri Lanka (= resplendent island). Its political stability has been continually threatened by trouble between the Sinhalese and Tamil parts of the population.]

...Sri Lanka's Tamil Tiger rebels have thrown disabled fighters into "suicide attacks" against Government troops in the guerrillas' northern stronghold, a newspaper reported yesterday... The... suicide bombers are known as the "Black Tigers." ...The Tigers are fighting for a homeland for minority Tamils in the north and east of majority Sinhalese Sri Lanka... The north-south highway has been closed for more than 10 years due to fighting. The Tigers have accused the Government of restricting food supplies to the war zone. But the Government has said enough food is being sent to feed tens of thousands of civilians displaced by the fighting... The Defence Ministry said up to 95 guerrillas were killed and more than 200 wounded in heavy fighting the previous day, but the rebels say the military routinely exaggerates Tiger casualties... Independent confirmation... was not possible as international media have not been allowed into the war zone.

...Nearly all the 600 Tamils who "disappeared" after being arrested by Sri Lankan security forces were tortured to death, according to an Amnesty International report released yesterday... [In further news from the Asian bureau,] Vietnam's new leadership, backed by the recently elected national assembly, will face pressing economic issues, including mounting pressure to devalue the currency... The Vietnamese currency has... in recent years... been... gaining some stability at around 11,000/12,000 to the US unit. But in recent weeks the dong has appreciated some 42[%] against the Thai baht, and between 22 to 24[%] against the Philippine peso...

"Free trial period available!" "Pay on instalment!" "Guaranteed disease-free!" These are the kind of guarantees any new owner of a cute puppy would want. But they're not the advertising slogans of a pet shop, they're the proud boasts of a number of Philippines-based introduction agencies. The items on sale are women, and the buyers, all too often, are middle-aged A[US]n men. No longer is it necessary to hop on a plane to meet these women, or even wait for the delivery of a mail-order catalogue. Men can just click on and connect to their potential partner, because these women are now available on the Internet. Their ages, height, measurements and faces are there for all the world to see... [M]en can purchase their names and addresses as well... For... \$10 you can purchase the "Sweet Sixteen List" of 16 names of teenage girls from 15 to 18 years old; while \$15 will get you names of 38 "YOUNG girls 18 to 23 who are seeking older men"... They used to be called "Mail-order brides", and women from the Philippines still make up the largest proportion of women brought into A[US] as sponsored fiancées or wives – around three quarters of the 50,000 Filipino women here were sponsored by A[US]n men. While not every relationship is a sham, thousands of these women find that their... new life in A[US] turns into a nightmare of isolation, loneliness, and worse – beatings, forced sex, and even murder... A report by... the Institute of Criminology at the University of Sydney, *Violence Against Filipino Women*, has found that the murder rate of Filipino women in A[US] is six times higher than the national average, and they suffer worrying levels of sexual, emotional and physical abuse. So who *are* the men who abuse them? Researchers into the problems of Filipino women in A[US] have discovered that there is a "typical" sponsor – men who are likely to have characteristics which limit their success with A[US]n women: physical or mental disabilities; social and geographical isolation; or advanced age. The typical sponsor is 10 to 20 years older than the woman, not as well educated and often originally from a non-English speaking background. Of 20 Filipino women seeking help from South A[US]'s Riverland Women's Shelter, 19 of their partners were on disability pensions. There is also a concentration of Filipino wives in isolated A[US]n mining communities. But of more concern is the attitude prevalent among these men. According to researchers at the Centre for the Study of A[US]n-Asian Relations at Griffith University, many are seeking docile, sexually submissive women who will cook, clean and have sex with them on command. A majority of sponsors in one survey stated... that they wanted "undemanding wives"; and they listed qualities such as "being quiet" and "not being materialistic" as desirable in their wives... At the extreme end of this is the men who seek a sex slave. A 1992 report into "serial sponsors" – men who sponsor one Filipino woman after another – for the Centre of Multicultural Studies at Wollongong University, reports that some of these men have been heard to boast about obtaining a "housekeeper, cleaner, cook and sex partner for three months with the only cost being a one-way airfare"; or that obtaining a woman from the Philippines by sponsorship was "cheaper than seeing a prostitute"... The women advertised through[Philippines-based] introduction agencies are not always prostitutes, but in many cases they are prepared to use their sexuality to secure their future. Although many Filipino women are well educated and speak at least two languages, including English, their prospects are dim. Asia's economic growth spurt... bypassed the Philippines; unemployment is high and the strict Catholic society rejects divorce or single motherhood as acceptable options for women. Many Filipino women are forced to work abroad, often as domestic servants, and see marriage to a western man as their ticket out of poverty.

...In a lifetime of toil... in the sugar fields of Negros in the central Philippines[a]... 54-year-old woman... has seen the industry go from boom to bust. But her life never changed. She was poor when the sugar barons she worked for were among the wealthiest in the land. She is just as poor now when the big sugar companies are virtually on their knees... Once a top export, sugar funded the lavish lifestyles of sugar barons in the 1970s

when Ferdinand Marcos ran the country. "They lived in profligacy. They bought shiny cars and spent like there was no tomorrow," said one resident of Negros... The world changed for the barons after Mr Marcos was ousted in a popular revolt in 1986 and the new President... launched a land redistribution programme that broke up large sugar plantations. Of the 100,000 planters now cultivating the country's 370,000ha of sugar cane, 80... to 90[%] are farmers who own 10ha or less. However, this revolution has failed to uplift the lot of the poor farmers because banks do not want to finance fragmented farms, which are mostly under the control of illiterate farmers. "I know of some farms covered by the agrarian reform [programme] that have dropped production by 10[%] of what these were potentially good for," said the Governor of Negros... [Dropped production means] the country's biggest sugar mill is now almost deserted, except for guards and some workers doing off-season repair. The chief financial officer... said: "This is the first time that Victorias Milling Corp declared an off-season. In the past, it was always a 12-month operation." ...Recently, Victorias and its sugar-trading arm have sought a moratorium on debts of more than seven billion pesos. Victorias officials say the company's financial troubles are exacerbated by a slump in the sugar industry because of rising competition from imports. Analysts say they expect the local sugar industry to recover as the Government plans to provide financial support to help them develop better plant varieties, buy farm machinery and modernise the mills and refineries. The Government also temporarily shielded the industry from cheaper imports by freezing tariffs on South-east Asian sugar at 65[%] starting on July 1. It had earlier committed itself to dropping sugar tariffs to a lower rate... But while the industry may have hopes of a rebound... [the woman], her 13 children and their spouses, and 156 grandchildren[, do]... not expect... conditions to change much. She says she receives 35 pesos (\$NZ1.84) a day as well as a free room provided by the owner of the 13ha farm... Home is a rundown shack sub-divided into rooms shared with three other families. Half of the shack is used as a warehouse. After years of living in poverty, nothing seems to matter. "I have no more hope. It's enough that I can buy a meal."

...FOR a convicted felon facing 24 years in prison... the widow of Ferdinand Marcos... seemed to not have a care in the world. Dressed like a queen... still bejewelled... she laughed and chatted... [though] her name has been sullied, her fortune confiscated and her freedom gained only by... \$3000 bail... [She] is convinced that rehabilitation and vindication are within reach, if only people would embrace the same history she does... Indeed, history has the whole 21 years [of her husband's rule] wrong, she believes. Marcos wasn't a dictator but one of the world's great democrats. He wasn't a thief; he was an astute trader in precious metals... He declared martial law not to perpetuate his own rule but to prevent the Philippines from slipping into political instability and economic ruin. As for her role, she had none, other than as loving supporter... The world... [remembers] her primarily as the woman with a lavish lifestyle and 1200 pairs of shoes... In 1986, Ferdinand Marcos and his wife... fled to Hawaii [after] a "People Power" revolution... [The new] President... set up a commission to reclaim the billions of dollars... [the couple] are said to have stolen, he as president, she as an unelected quasi chief executive... Marcos died in Hawaii in 1989. After a long legal battle, [she] was allowed to return to the Philippines in 1991... [Claims] against the family estate now stand at \$70 billion. Still unresolved are the whereabouts and ownership of more than five tonnes of gold... A U[S] federal appeals court... [is currently considering] a lawsuit by human rights activists seeking hundreds of millions of dollars deposited in Swiss banks by... Marcos.

...SEVERAL Swiss bank accounts may contain... [money] hidden in trust for the widow and children of [the] former Philippine president... [A] US District Judge... has ordered eight accounts in the Union Bank of Switzerland be frozen despite vigorous objections of bank lawyers, who claim documents presented by Philippine human rights victims were forgeries. Bank officials said the accounts contained less than \$6 million and that none of the money could be linked to the family of Marcos... But... [one] of the key documents introduced by... the lawyer for nearly 10,000 Filipinos who won a \$1.9 billion judgment against Marcos' estate in 1994, says that as of June 30, 1997, there was \$12.9 billion in an account in the Union Bank... in the name of the Sandy Foundation. Soon after the Marcos family fled into exile, Philippine investigators said the Sandy Foundation, based in Vaduz, Lichtenstein, was one of several sham foundations set up to hide Marcos assets. Another document... was a letter purportedly signed by [a] Swiss lawyer... stating he had been for many years the trustee of the Sandy Foundation, which "was established in 1970 by... Ferdinand E. Marcos." The letter also says that after going into exile, Marcos signed power of attorney giving his son... and his daughter... authority over precious metal accounts at Union Bank... [The Swiss lawyer has recently] contended his signature was forged... However, [the] Judge... refused to accept any of the affidavits offered by the bank lawyers. He said [the] bank... had to first come to a US court and subject themselves to cross-examination. Bank lawyers said they will appeal the judge's rulings. - 1997

...the Philippines' President... says he is close to reaching a deal with the family to recover the late dictator's illegally hoarded billions... Since Ferdinand Marcos and his family were forced to flee the country... in February 1986, successive Administrations have tried and failed to recover the fortune... stolen during his 20-year rule... The previous two Governments filed scores of criminal and civil suits against the Marcoses but so far the only money that has been traced is \$US750 million deposited in a Swiss bank account. That money is now held in an escrow account until an agreement can be reached between the Government, the Marcos family and the 9539 Filipinos who won a class action against Marcos for human rights abuses. [The incumbent President], a Marcos loyalist during his days as a Manila mayor, has said he favoured a negotiated settlement rather than protracted legal battles so that the money could be released to support his pro-poor policies... [However, the] fortunes of the flamboyant 69-year-old former first lady have been on the rise and she has said that she would prefer to let the courts decide all her cases. Last year her corruption conviction was overturned and the present Administration has been steadily dropping cases filed against her husband's cronies... In the past, [Mrs] Marcos has pleaded poverty but she claimed last month that her family were the rightful owners of most of the country's blue-chip companies and that they could be worth 500 billion pesos...

[The f]ormer Philippine first lady... said yesterday that it was possible her late husband had accumulated billions of dollars, but it was not looted money and she was willing to share some of it with the... Government for projects to aid the poor, [although she] refused to talk about a sharing formula. "Let it come from us voluntarily... It will come from the generosity of our hearts without the spirit of guilt," she said.

...9500 plaintiffs who said they were either victims of torture or the heirs of people executed under Marcos' regime... will receive \$US150 million... under a settlement reached after 13 years of legal wrangling, say lawyers. The settlement is less than 10[%] of the \$US1.9 billion originally awarded by the US District Court in Honolulu... [Incidentally, a] fire in a Philippines orphanage yesterday killed at least 27 people, including children screaming for help from windows and babies abandoned in a nursery... Orphanage workers said some of those killed could not get out of the blazing, three-storey wooden building because exit doors were locked... Faulty electrical wiring was suspected to be the cause... [The mayor has] ordered an investigation into reports that the first fire engine did not arrive at the scene until an hour after the blaze started - although the orphanage is only 500m from the nearest fire station... The country's worst fire razed a Manila discotheque in March 1996 killing 160 people...

Ghosts hold no fear for Manila's children of the graves, who survive by living alongside the dead... Twice a week, [workers] and friends from Medecins Sans Frontieres (MSF) head to the Calocan cemetery in Manila to treat the visible wounds of about 50 abandoned children, aged between 5 and 8, who have turned the graveyard into a sprawling playground... [An MSF] nurse... said these "children of street children" represent the hard core of about 75,000 abandoned children living on Manila's streets. Most have no family. They beg in a nearby market for food and wander the streets looking for sex... Nearly every child presents with some type of STD. No testing for HIV has been done but it is presumed rampant... The Philippines... is a Catholic nation and contraception is frowned upon... Most customers... also... pay more for unprotected sex with the smaller children - who are in no position to negotiate... They let adults have sex with them for as little as 30 pesos... to support their glue habit... which will starve off the pain of hunger and abandonment every day for one month. "All of them are drugs-needs first... They use drugs to

forget they need food.” ...MSF (Doctors Without Borders) does not bring food to the cemetery, which it considers an unhealthy place. Instead, MSF workers take the children out to eat on days off work with local groups to encourage the children to leave the graveyard and go to shelters. But these children do not do well in shelters: they struggle with any discipline after the freedom of life on the streets... Treating the STD problem is a priority for MSF, but it has posed an unprecedented challenge for a n[go] dedicated to treating the victims of war. This war is one of poverty, not guns... “This has socio-economic roots. So these are problems we cannot address. These problems will have to be addressed by the Government and it needs long-term plans.” ...Meanwhile, the... Philippine President... has been... f[indin]g himself mentioned in the same breath as [the]US President... rather a lot these days... Sadly for the gaffe-prone leader, it is nothing to do with his tough talk on the country’s communist and Muslim rebels – but rather a sex scandal which has had the local press frothing at the mouth. The latest twist in the saga has seen the bequipped leader, who often boasts of his past infidelities, refusing to take a DNA test to determine paternity of a 17-year-old beauty queen who claims to be his daughter. [The President], a former matinee idol, has already acknowledged having at least 11 children with five different women – but has dug in his heels over this latest case, saying it could open the floodgates to dozens of other claims. “I might run out of blood,” he said on his radio programme... But while the National Bureau of Investigation has had a DNA testing kit at its offices for almost a year, it has not been given the necessary chemicals costing 80,000 pesos... When the scandal first broke, [the President] at first... said: “If she’s my daughter, that’s okay, because, after all, many women want to have my baby” – but said it was up to [the 17-year-old] and her mother to come up with the proof. While the President vacillates, his three legitimate children... have said they are willing to recognise [her] as part of the family. Their... long-suffering... mother... has typically maintained a dignified silence. She never comments on her husband’s flings, and did not flinch when he joked, while presenting a prize to a young beauty queen, that he would have his wife shot. [Ironically, the President] has drawn links with [his US counterpart] and the sex scandals surrounding him in the past... “He [[the US President]] gets all the scandal – and I get all the sex.” But now the tide may have turned. While most Filipinos regard infidelity as normal, if regrettable, [he] may find they are less forgiving if he fails to do the right thing...

[The o]usted Philippines President... faces a barrage of charges, including an offence punishable by death, but experts say that a weak judicial system and legal loopholes could see him stay free and even attempt a political comeback. Once at the pinnacle of stardom and power, [he] was forced to resign at the weekend, leaving behind a poignant tale of power, undying friendship, betrayal and downfall more dramatic than any of his films. Hundreds of thousands of Filipinos rose in the second “people power” uprising in [recent years, forcing the President] to grudgingly step down over corruption charges and to abandon the presidential palace through a back door to avoid angry protesters. State prosecutors are now under pressure to file criminal charges against [the ousted President], who was undergoing an impeachment trial in the Senate when the suppression of vital evidence against him triggered a five-day bloodless uprising. Aides of[the] newly installed President... [–] the former Vice-President[–] said one of the cases to be pursued against the fallen leader would be “economic plunder.” ...Under a law that has never been applied, anyone found guilty of embezzling at least 50 million pesos... can be sentenced to death... [He] allegedly amassed more than \$US60 million... in secret bank accounts... The manner in which [he] was ousted has already begun to stir legal debate. Under the constitution, the President can serve only one six-year term and is expressly barred from re-election. But the fact that [he] completed less than half of his term and never resigned was seen as a potential loophole that would allow him to run again for high office – perhaps including the presidency – unless he is convicted of corruption charges and barred from public office... The largely peaceful transition in the Philippines today raised hopes of a fresh start, and won praise elsewhere in Asia. But newspapers in Taiwan, which had its own brush with a constitutional crisis when opposition parties banded together to threaten the President with dismissal, warned against toppling leaders without holding elections.

...The death toll in the runup to today’s elections in the Philippines... [– during which m]ore than 36 million eligible voters... [will] troop to polling stations... to elect members of the Senate, the House of Representatives and thousands of local posts... [–] has risen to 64, making the campaign the bloodiest in recent years... In the 1995 elections, 42 people were killed... [An o]utgoing House of Representatives member... and an aide were gunned down... in his hometown of Taiong... [He was a member of the incumbent President]’s ruling People Power Coalition, which is competing with... [the ex-President]’s opposition party for control of Congress... A grenade ripped through a crowd of 2000 in the southern town of Sultan sa Barongis on Saturday, killing four supporters of[an] opposition mayoral candidate... In Pangutaran town, in southern Sulu province, five people were killed in fighting between armed supporters of rival mayoral candidates at the weekend. Police said the Army sent in troops and helicopter gunships to quell[the] fighting... The town centre was razed when soldiers burned thatched houses where the armed men were hiding... [In related news,] Muslim rebels who kidnapped about two dozen hostages, including three Americans... from a beach resort in the southwestern Philippines... about a month ago... dumped the beheaded bodies of two of their Filipino captives near a highway on a remote island... at the weekend... In another part of the island, police said they had found two other headless Filipino bodies on Friday... But they were unable to identify the bodies or say whether they had been held hostage. The discoveries brought to at least eight the number of decapitated bodies that have been found on Basilan island since 5000 troops started chasing several hundred members of the Abu Sayyaf rebel group and the hostages...

Muslim rebels still holding... [Western hostages] in the Philippines have been spooked by a deadly internal clash that will probably hamper early efforts to free the captives. The... leader of the Abu Sayyaf rebels... yesterday warned hostage negotiators to stay away from their jungle camp, saying it was too dangerous after a clash between rival guerrilla factions... [in which] at least one bodyguard was killed and eight others... injured.

...Philippine troops rescued 13 hostages yesterday after a gunbattle with Muslim guerrillas on the... island of Basilan. But the rebels are still holding at least 20 Americans and 19 other Filipinos. The... guerrillas[have so far] beheaded 10 of their captives...

“Manila’s finest” – the self-styled image of policemen in the Philippines sprawling capital is looking increasingly tarnished after five officers were charged with carrying out summary executions of suspects. The officers have been accused of “salvaging”... suspected thieves... because they failed to hand over protection money. The controversy came at the end of a very bad week for the Philippine National Police... Earlier this week, the country’s... Chief Superintendent... was charged with being an accessory to murder in a similar rub-out case of robbery gang members in Manila four years ago[], and follows the case of ‘a senior police officer who shot dead a fellow motorist after their cars nearly collided during one of Manila’s frequent traffic jams (the colonel claimed the businessman hurled insults at him and appeared to reach inside his car for what he thought was a gun – at that point, he shot the man twice’)]. Figures show that more than 1000 officers were reported to be involved in crimes ranging from theft to homicide [last year] and officers from the country’s “best-performing station” were implicated in the murder of a fellow officer... Prosecutions of police officers are largely unheard of. This may not be the case for the five officers, according to[the Philippine] President... “Salvaging,” while not widespread, is generally thought to have been practiced for decades. It sends a warning to other criminals that their actions will not be tolerated, said one retired officer who refused to be named. “[99%] of those salvaged were hardened criminals. No one will sue you even if you kill them. On the other hand the public will rejoice because the criminal will not bother them any more,”... [Speaking of criminals,] private detectives... ha[ve been hired] to search for the... billions of dollars stashed overseas by... the... [Indonesian President] during his... years in power[(he became leader of ‘the world’s 4th most populous country after a group of pro-communist generals assassinated and kidnapped several other top officers; himself a general, he put down the rebellion and nudged aside the charismatic nationalist president, then consolidated his power as the military swept through the country, killing an estimated 500,000 suspected communists’)]... Last month... a report in *Time* magazine... alleged [the President] and his family were sitting on a fortune worth \$US15 billion... The money was said to include a transfer under [his] name of \$US9 b... from a bank in Switzerland to a bank in Austria... last year.

...Indonesia's ailing... President... will not travel abroad for treatment, according to diplomats, because he is afraid of being arrested for crimes against humanity... In 1996, [the President] underwent treatment for high blood pressure and kidney problems at a private clinic in Germany.

Indonesia's President... has ordered[that] military-based riot alert centres[be] set up across the nation after serious outbreaks of violence... [which included t]housands of... students... attacking and burning police stations... [during protests over] police brutality... in the city of Kendari... The "Control Centres for Social Unrest" would... monitor incidents and rumours which could spark fresh trouble, [the President] said. Many observers have predicted more civil unrest is likely ahead of general elections due on May 29. The past four months have seen three major outbreaks of rioting sparked by religious and ethnic tensions with underlying anger over the wide gap between rich and poor.

...Indonesia experienced its worst riots in decades last weekend... [A] political scientist... compares Indonesia's discontent to the upheaval in the Philippines before the dictator Ferdinand Marcos was overthrown... [As a consequence of the Asian economic crisis, which has 'hit Indonesia worst', 'prices for basic foods have more than tripled, while incomes are being slashed more than 60%.' M]ost Indonesians... make the equivalent of less than \$A2.60... a day. They live in zinc-roofed shanties without running water while businessmen in [the President's] inner circle have become some of the world's richest billionaires... [The] President puts himself up for re-election every five years by an assembly filled with members either picked or approved by his ruling Golkar party. He runs unopposed each time, although in 1993 the Army nominated a general who withdrew only under intense Government pressure... [But] the former general who seized power in 1966 is... still widely regarded as the only leader capable of holding together this factious country of 13,000 islands and[204 million people from] 300 ethnic groups. In recent years, however, he has squandered his public goodwill by tolerating rampant corruption. No one... got rich faster than his children, who have become millionaires from monopolies and state contracts... [The President's] indulgence of his children reached new heights in February when officials announced that... [h]is youngest son... would get huge tax breaks to start his own car company. Underscoring their isolation, the very rich... are moving into walled, guarded suburban enclaves surrounded by the sprawling shanty towns of the millions who labour in their fields or factories.

...Indonesia's minimum legal wage will be increased by 10[%] in April – but the Government admits the new wage will still not be enough to live on... [It] would meet an average of 95.32[%] of "minimum physical requirements." ...Labour issues are seen as having the potential to explode into major unrest... Anger is simmering over the increasingly visible wealth of the beneficiaries of Indonesia's rapid economic development, many of whom have close links to the 30-year-old... regime... The lowest minimum wage was still found in... central Java, where the wage had increased from 96,000 rupiah a month (about \$NZ58) to 106,500 rupiah a month. The top wage was in the industrial zone of Batam where the minimum wage had increased from 220,500... to 235,000...

As part of national day celebrations [the]President... granted freedom to several hundred prisoners, but not to Indonesia's most famous inmate[who]... was jailed for 20 years in 1993 for commanding pro-independence guerrillas in East Timor, a former Portuguese colony invaded by Indonesia on [the President's] orders in 1975. [Another former famous inmate, the]South African President... wrote to[the Indonesian] President... last month calling for [the rebel leader's] release as the first step towards negotiating peace for the troubled territory.

...Indonesia might well consider itself an accident-prone country. Here, a Cave Creek-type disaster happens every week... Part of the problem is safety standards. Indonesia has very few. Seat belts are not worn in cars, boats are overloaded and planes are not maintained. Even basic precautions... are ignored. For example, [recently]... 123 people died in a shopping mall fire... The fire was politically motivated – clashes erupted between supporters of rival political parties and the mall was torched. But the tragedy was that fire exits were blocked and sprinkler systems didn't work properly, trapping shoppers inside the inferno. Another problem is that in Indonesia life is cheap. Its accident rate is probably average considering its population of more than 200 million. But from my own experiences of riding fully-laden public buses in central Java, I know that overtaking equally fully-laden articulated trucks on downhill blind corners is not in the best interests of passengers. But when accidents happen nobody demands an investigation. The media takes little notice as well... Disasters fail to make headlines... When the Lake Toba ferry disaster story was breaking, few newspapers had the story on Page One. Why? That spot belonged to[the country's] President... who was hosting a visit by[the] South African President...

Two grisly episodes of infanticide last week have brought the official infanticide toll in Indonesia to 48 this year... [I]n 1996... the death toll reached... 24... The incidents highlight the pressure on poor, uneducated women struggling for survival in... Jakarta[a]... city of more than 10 million inhabitants... where the gap between the haves and the have nots is continuing to grow. Cases of infanticide usually involve women from slum areas who have themselves been abandoned by their partner or rejected by their families... While more wealthy women can afford an abortion to avoid the shame attached to an unwanted or illegitimate pregnancy, women from slums have few options... Many of the women come from impoverished villages around the archipelago hoping to carve out a living in the capital, only to find they are unemployable. Cultural norms in Indonesia make it difficult for women to raise children out of wedlock... Nearly all babies are either strangled to death or simply abandoned in rubbish dumps or roadsides shortly after birth... Many of the women who resort to infanticide slip through the social welfare system because they have no permanent address... A forensic scientist at the... State Hospital... said cases of infanticide were difficult to solve because babies were found in areas far away from where their mothers probably lived. "If the baby is just born and dumped immediately, it is most likely the mother panicked and was confused." ...The latest incidents have drawn a strong reaction from city officials who have labelled the crime of infanticide a "cruel and immoral act," the *Jakarta Post* reported... However... a councillor who heads the city's commission for welfare affairs... did admit that some people were probably not prepared for the harsh realities of Jakarta. Life in the city has become tougher in recent months with a prolonged El Nino drought that is putting a strain on the water supply. The leafy suburbs in the south, home to expatriates and wealthy business people, have ample water. Further north water is becoming scarce, especially in slum areas... Residents... have begun washing in the sea, for lack of fresh water.

...A leading Indonesian Government-sponsored think-tank has recommended that the nation's armed forces (ABRI) reduce their political role to make way for greater democracy... Under Indonesia's electoral system, ABRI currently has 100 appointed seats in the 500-member House of Representatives. That figure is to be reduced to 75 seats at the general elections on May 29...

Poverty and corruption have been singled out as key issues in Indonesia's general elections... As the official election campaign entered its fourth day, the chair of the ruling Golkar party... vowed to reduce the number of Indonesians still regarded as living in poverty, a figure currently around 22 million... Meanwhile, the... Indonesian Democratic Party (PDI) also pointed to poverty and corruption as related social ills prevalent across the archipelago... [A] PDI official... told a rally that "Indonesia's high level of poverty is caused entirely by corruption and collusion which must be removed from all levels of society,"... In a recent international survey, Indonesia was rated the most corrupt nation in Asia. However, the finding was strongly rejected by the Government... Golkar is virtually certain to win an overwhelming majority of votes for 425 seats in the largely ceremonial House of Representatives. Another 75 MPs are appointed to represent the armed forces, whose members do not vote... Many observers believed a growing gap between rich and poor has been a key factor in a wave of rioting across the archipelago, especially in densely populated Java, in recent months[– 'Indonesia hasn't got rule by democracy, it's got mob rule' – although another factor could be that the]... best-known opposition leader... [i]s barred from participating in the poll and she[has] asked her supporters to boycott the campaign.

...Indonesia's President... said at the weekend that the country's election campaign rules must be altered to prevent the recurrence of violence... after an election campaign that was regarded as the most violent during the 30 years of... [his] rule. - 1997

Thai nationals... spoke of the “living hell” they had left behind as they arrived home... [from holidays in a] Jakarta turned into madness amid an orgy of looting. Adding to the stress and desperation were claims that Indonesian immigration officials extorted cash from them as they prepared to flee the country... The escape from Jakarta’s smoke-filled and vehicle-littered streets brought back dark memories of both Thailand’s own troubled past[, such as the]... October 1973 protests – when about 400 people were said to have been killed – [that] brought an end to a military dictatorship, [which]... was reversed three years later by a further bloody coup d’état... and the flight into Thailand of Cambodians escaping... their capital, Phnom Penh...

POL POT will never face a war-crimes tribunal. Richard Nixon didn’t live long enough either. That was my gut reaction as I concentrated on the Lao-accented English of... [our] hotelier and tour guide, bounty hunter, citizen – and survivor. “Sit down and I’ll tell you a story[.]” he says before proceeding to explain that]... Cambodia’s rice paddies and forests were not the only killing fields of the undeclared war in Indochina. The pockmarked, denuded hills around the Plain of Jars... [–] where you can wander among the mysterious stone jars bequeathed to us by a culture which flowered around the time of Christ... [–] also witnessed the slaughter of uncomprehending civilians. Half the people who once lived in this province, Xieng Khouang, died or fled... [I]n... Phonsavan, a dusty two-street, three-dog town... that grew up to replace the provincial capital bombed off the map by 1975... [I]ocal people are still being traumatised by chance encounters with unexploded ordnance, particularly the harmless-looking cluster bombs... [and v]enerable Volga sedans weave between potholes the size of bomb craters (which some of them are).

Pol Pot, the elusive leader of Cambodia’s Khmer Rouge guerrilla army, is still alive and playing a leading role in running the radical... group, Khmer Rouge officials said... [T]hey were amused to hear press reports that their leader was dead... Rumours that the 68-year-old... has died of malaria in a jungle guerrilla zone began circulating in Phnom Penh and along the Thai-Cambodian border this month. He has not been seen by an independent observer for more than 15 years... More than a million Cambodians are estimated to have died from execution, over-work and disease during... the Khmer Rouge... “killing fields” rule of Cambodia from April 1975 until a Vietnamese invasion in December 1978. Through the 1980s the fiercely nationalistic Khmer Rouge led a guerrilla alliance battling the Vietnamese army of occupation and the Cambodian government which Hanoi installed. The guerrillas boycotted a 1993 election and have waged a low-level war against the new coalition Government.

...Extermination was the principal industry of Pol Pot’s era according to a team of investigators studying documents in Phnom Penh... “Extermination... rivalled rice production in the intensity with which it was pursued and the attention it received from the leadership.” ...In yet another paradox the Khmer Rouge were exterminating the ethnic Chinese at home while Beijing provided the Maoist fanatics weapons, training and supplies until 1991... By the end of Khmer Rouge rule, 50[% of the]... Thai and Chinese communities... had been killed. - 1996

In the mid-1970s, Pol Pot... became a name synonymous with unspeakable atrocities... [U]p to one-quarter of Cambodia’s population[was] eliminated during his four-year reign of terror... Even[the] King... lost 14 of his children and grandchildren... But... nearly two decades after the fall of... Pol Pot’s... Government, it is still difficult to determine the exact number of people who were summarily executed, or who succumbed to forced labour, illness, torture or hunger... Once judged as excessive, the death toll of 3,314,768 people put forward in 1983 by the pro-Vietnamese Government... could prove to be close to the truth, especially after the recent discovery of thousands of new mass graves by American researchers in the country’s east. When they took over, the Khmer Rouge preached an agrarian utopia and forced two million residents in the capital – the old, infirm and children among them – to leave the city. No urban area was spared the forced exodus... Intellectuals... were slain in large numbers. “I personally participated in the executions of 5000 people,” said... a former Khmer Rouge who sought refuge in France in 1976... Another young Khmer Rouge... said he had participated in the June 1978 executions of 10,000 people who had been convicted of being pro-Vietnamese. “I drank a large glass of liquor mixed with human liver, and afterwards I fired [a gun] for the entire day,” he declared a year later. One of the more macabre relics... is the Tuol Seng prison in Phnom Penh where some... 20,000 “counter-revolutionaries” were interrogated and tortured before being put to death on a neighbouring field. Only seven prisoners survived “Interrogation Centre S-21,” the official name of Tuol Seng, which was once a school. Today, the prison is a “genocide museum” and the instruments of torture are displayed in all their horror... Unbearable photographs attest to the pain and atrocities that can be inflicted on human flesh. According to the museum guides... [victims] suffered suffocation, electrocution, amputations and were even stung by venomous insects – the last method was specially reserved for women who first underwent sexual mutilations. These abuses remain unpunished... But the final chapter of this story has yet to be written.

...Born Saloth Sar on May 19, 1928, Pol Pot led a Cambodian peasant army to victory against the U[S]-backed Lon Nol republic in 1975, or Year Zero, as the Khmer Rouge called it... Shortly after he was ousted from Phnom Penh, a smiling and healthy-looking Pol Pot told journalists that several thousand Cambodians had died “due to some mistakes” in implementing his policies, but he denied committing crimes against humanity. That was the last time Pol Pot, known to his subordinates as Brother Number One, was seen in public, but no one doubted that he remained the movement’s helmsman. He was born to a reasonably prosperous rural family... and spent part of his youth as a novice monk and student at a pagoda in Phnom Penh, where relatives worked in the royal household. As a student between 1940 and 1948 he developed nationalist ideas. Awarded a scholarship to study in France, Pol Pot became so involved in radical student politics that he returned home without completing his studies. He joined an underground movement opposed to the French colonialists and went on to teach history and geography in a private school in Phnom Penh from 1954 to 1963. Fearful that police suspected him, he fled the capital for the countryside that year. Pol Pot became party secretary in 1963 and in 1968 his guerrillas... launched their first attacks against army and police posts. They thrived on the bitterness engendered by massive U[S] bombing of the countryside. During the war, the Cambodian communists were uneasy allies of their Vietnamese comrades... Vietnamese-trained Khmer Rouge cadres, and in many cases their families, were tortured to death... [when] Pol Pot unleashed a purge of his ranks in 1977... Pol Pot still poses a threat to Cambodia’s political stability, even if news that ...he... has surrendered turns out to be true.

...Cambodians yesterday called for justice against... Pol Pot after the country’s co-prime ministers announced his capture by guerrillas who had rebelled against him... Pol Pot was being held in Anlong Veng, and moves were under way to bring him before an international tribunal for the crimes he committed... Pol Pot was sentenced to death in absentia by a Phnom Penh court soon after his overthrow... in 1979. Now 69, he is said to be very sick, having long suffered from malaria... He is (one hopes) the last of those awful 20th-century dictators whose fantastic bloodshed was inspired by the teachings of Karl Marx. Lenin – Stalin – Mao – Pol Pot. With luck, the line ends here.

...The capture of Pol Pot, announced by the co-leaders of Cambodia in a rare moment of unity, has been greeted as the end of the nation’s problems[. However, a news report from Cambodia last year said that ‘domestic violence is becoming a huge problem for this country and most of the offenders are young adults’ (i.e., people who, as children, lived through the horrors of the mid-seventies)]...

Cambodians were invited yesterday to take part in one of the world’s most unusual commemorations – National Hate Day – an outlet for people to vent their anger at Khmer Rouge atrocities... College students read poems describing the horrors of the regime and incense was burned in remembrance of the dead... May 20 is believed by many to be the birthday of[the] notorious Khmer Rouge leader... Hate Day is no longer observed as an official national holiday but during the 1980s... it was a countrywide event.

...As part of a 24-day, 340-km *peace march*, some 200 Cambodian Buddhist monks and nuns arrived in... Pailin[, the]... former stronghold of the Khmer Rouge. The pilgrims were greeted by local residents and by the leader of a splinter faction of the Khmer Rouge, which allied itself with the

Government last August. In the past, the Khmer Rouge routinely executed monks and destroyed Buddhist shrines. Approximately 3,000... Maoist guerrillas still battle Cambodian authorities.

...*War in Cambodia has created an army of lost children...* As many as 200,000 Cambodian children are fending for themselves after being orphaned or abandoned by their parents and guardians. Begging for a living or picking through piles of rubbish for anything which might bring a few cents from recycling merchants, they often fall victim to unscrupulous adults keen to make a quick profit in Cambodia's vigorous flesh trade. Recent investigations by child welfare organisations have revealed a thriving domestic and international trade in children. Cambodian children are being trafficked to the paedophiles of Europe or sold into servitude in their own country and throughout the region. "This is a tragedy of enormous proportions with profound implications for the future of this country," said [a member] of the local human rights group Licahdo. "And the problem is getting worse. More and more children are being dumped on the streets or sold into prostitution." Licahdo and other rights groups calculate that as many as 40[%] of the country's estimated 60,000 prostitutes are aged between 12 and 18. Many take to selling their bodies as a last resort while others are sold into prostitution after being tricked by intermediaries promising paid jobs... A recent seminar organised by the Norwegian children's welfare group, Red Barna, to raise awareness of the rights of children concluded that the present problem was a direct result of more than two decades of civil war. "The war has destroyed our moral and social fabric," one participant said. "We've lost the idea that children need to be cared for and protected. Often now children are seen as just another tool to ensure our own prosperity." However, she said Cambodia's mind-numbing poverty would make it difficult to change the situation and that economic necessity would continue to undermine the rights of children for years to come. Statistics from the Ministry of Planning reveal that even children who stay with their families are unlikely to have an opportunity to fully develop their potential. Those statistics show that 50[%] of Cambodian children aged between 10 and 15 are working to support their families, often as unpaid help to parents who are struggling to keep those families together... [U]nder such circumstances parents themselves were vulnerable and easily conned into entrusting custody of their children to someone else... then the children are sold... into prostitution...

Cambodia declares war on prostitution... Police have arrested 16 brothel owners in a clampdown on the sex industry and several face prison terms of up to 20 years for involvement in the sex slave trade, says the Deputy Governor of Phnom Penh... A number of Vietnamese women, many of whom have entered Cambodia illegally to work as prostitutes, face deportation... The industry is characterised by the large number of underage girls working in the industry against their will and an HIV infection rate of about 40[%]. In Phnom Penh alone there were an estimated 244 brothels before the present crackdown, and of the 60,000 commercial sex workers in Cambodia, 30[%] are believed to have been coerced or tricked into prostitution. "It is alarmingly common for young girls to be held in brothels against their will. If they try to escape they are beaten and chained to their beds," said... a Phnom Penh-based human rights group. "Intermediaries, usually friends or relatives of the family, will go to a village and say they have work for the family's daughter... They tempt the parents by offering a couple of hundred dollars as a down payment on her promised salary, but the girls are then sold into the sex industry. A virgin can be sold for as much as \$US700... but after a week or so she will be sold to a brothel for about \$US150 where she becomes a sex slave... After that they are usually too ashamed to return home and have no option but to stay with the brothel in order to eat..." Several welfare groups have criticised the crackdown as unsustainable. "It's the same old story. Crackdowns just drive the industry underground which means we can no longer monitor the girls' health and welfare... Besides, we have seen this sort of thing before – a crackdown followed by a re-emergence a few months later as police are bribed to turn a blind eye..."

A Cambodian woman was arrested yesterday... after she and [an accomplice, who] escaped... were seen slipping a drug to a 15-year-old student... Interior Ministry police said that... the woman confessed to blinding five young people in 1996 by gouging out... the[ir] eyes after they'd... been drugged... and selling them for \$US400... a pair. It was unclear if any of the victims had been killed... [P]olice said they were baffled by the case and had no idea to whom the eyes were being sold.

...*Crime syndicates descend on Cambodia...* Organised crime is having a field day in Cambodia, a country too poor to cope with it... Underfunded and overworked Cambodian police are hard-pressed to combat a growing number of international crime syndicates taking advantage of the country's lawlessness and laxity. "We have a lot of criminals wanted by Interpol here – for trafficking of weapons, humans, drugs. But our budget is very limited, we have nothing," said [the] Police General... whose work also includes overseeing the Interior Ministry's anti-drug work, [and] is paid about \$US30... per month in salary, plus less than \$US2 a day for travel allowances. The 63 other staff at the Cambodian Interpol make even less, and the dilapidated complex offices have only folding chairs for furnishings, with no phones in sight. That presents a dangerous situation given Cambodia's growing reputation as a haven for international criminals. Last year, Cambodia made the U[S]'s list of leading nations for drug trafficking... The appeal is Cambodia's inability to effectively fight crime. "This is big money, big finance, and a big organisation we are facing now... We need to join an international operation because our capability is very limited." He appealed to other nations to help Cambodia combat the problem. "I hope 1997 will be a good year to co-operate with other countries... We haven't even been able to pay our Interpol dues for three years," he said.

...[yesterday, hundreds of soldiers donned protective suits sent from neighbouring Vietnam and Singapore to clear thousands of tonnes of industrial waste from Cambodia's main port. Military officers supervising the clean-up said the soldiers would shovel the waste into plastic sacks then seal it in drums. Cambodia's Health Minister said the deaths of at least two residents and five cases of dizziness appeared linked to their involvement in earlier unprotected movements of the waste. Last weekend, protesters sacked the offices in Sihanoukville of officials blamed for allowing the waste to be imported from Taiwanese petrochemical giant Formosa Plastics. Local officials say more than 10,000 people have fled the Sihanoukville area, fearing chemical contamination. Four people died and 13 were hurt in car crashes during the exodus on Monday. Cambodian officials believe the waste, which was contained in sacks bearing skull-and-crossbones danger signs, contains hazardous materials such as lead and mercury. Formosa Plastics has said the waste has mercury traces, but had been certified by Taiwan's Environmental Protection Administration as not hazardous. Clearing the 3000 tonnes of waste could take 10 days. The clean-up supervisors said the waste would be left at the dump site, about 10km from the port, until the authorities decided whether it was possible to ship it back to Taiwan'...

Three Cambodian Government officials have been charged over the dumping of nearly 3000 tonnes of toxic waste, a newspaper reported yesterday. Two customs officials and a port inspector were accused of causing damage to life, property and the environment. They are the first Government officials to be charged over the waste. The manager of a Cambodian firm which imported the mercury-laced waste had already been charged in the case. Tests have shown that much of the waste contains very high levels of mercury. Formosa Plastics, which sent the waste to Cambodia, said two weeks ago that it would clear all of the waste within 60 days and send it to a third country or back to Taiwan. Formosa initially said the concrete-like rubble was safe for land-fill, but later acknowledged some of it might exceed safety standards. News of the dumping sparked riots in Sihanoukville in which one person was killed. A prosecutor said last month that a total of nine Government officials were expected to face charges over the waste.'

...Already heightened political tensions in Cambodia jumped a notch yesterday following the discovery of an alleged illegal weapons shipment destined for the royalist Funcinpec Party. Funcinpec troops were deployed around the military airbase in [the capital] Phnom Penh while, inside, troops and military police loyal to the rival Cambodian People's Party (CPP) surrounded the hangar housing the... shipment where officials were taking inventory... The weapons, including pistols, assault rifles, anti-tank missiles and thousands of rounds of ammunition, were seized yesterday in the southern port of Sihanoukville... Senior military officials from both sides were seen coming and going from the airfield escorted by heavily armed bodyguards... Military analysts said the situation was putting severe stress on orders for the armed forces to remain neutral in political conflicts. CPP officials claimed the weapons shipment was illegal because the 78 crates were addressed to the Funcinpec president and First Prime

Minister... instead of the Ministry of Defence. Funcinpec officials said the weapons were destined for the prince's personal bodyguard unit and were seized only because of a misunderstanding. The seizure of the arms, believed to have been bought in Poland in February, came as relations between the two parties sank to their lowest point since the 1993 UN-brokered election that brought them to power... The resulting stalemate has left Parliament paralysed and unable to meet and has also prompted widespread fears of violence.

...Cambodia's First Prime Minister... said yesterday that some people... were afraid of what captured Khmer Rouge guerrilla chief Pol Pot might reveal in court... "It appears to me that some Cambodians, and maybe some countries, are not really willing for Pol Pot to be alive and be brought to justice," the Prince said. His co-premier... said on Sunday that he had received an unconfirmed report that Pol Pot was dead... Last week the two P[M]s sent a letter to the U[N] Secretary-General asking for the world body's assistance in bringing to justice those responsible for the crimes committed during the 1975-79 regime... The Prince did not elaborate on which people or countries might be afraid of Pol Pot testifying in court but few political players in Cambodia, including the Prince himself, have not, at one time or another, been allied with Pol Pot's Khmer Rouge.

...Panic broke out in the streets of Phnom Penh yesterday after a series of unidentified explosions that sounded like artillery fire shook the already tense city... Rumours spread quickly through the city that a coup was under way... Radio stations appealed for calm, saying the explosions had come from the detonation of unexploded ordnance and mines by the Cambodian Mines Action Centre about 10km west of the city. However, the announcement came too late, as panic-stricken parents pulled screaming children from schools and anxious shopkeepers fled from their stalls, flooding the streets with motorcycle and bicycle taxis and pedestrian traffic. Traffic police were overwhelmed by the unexpected surge, which blocked main roads and side streets for kilometres. Telephone lines were unusable as a torrent of calls overloaded the networks.

...ABOUT 120 soldiers loyal to Cambodia's royalist Funcinpec party[have] surrendered and turned over their weapons after fighting troops loyal to their main political rivals... about eight kilometres from Phnom Penh's Pochentong International Airport. The US embassy issued an alert to citizens not to travel to the airport or beyond.

...Cambodia's two main political parties traded accusations of assassination attempts following a heated battle between rival bodyguard units in which at least two people were killed... [T]he two-hour battle... in the heart of Phnom Penh... [involved] automatic weapons, grenades and rockets... The... U[S] Ambassador... reported that a rocket had landed in the embassy residence about three blocks south of... the scene of the battle... blowing in the glass doors and windows... Police and soldiers were out in force, and tanks rolled into the city when the clashes died down.

...The residence of Cambodia's First P[M]... and the French Embassy were badly damaged by shelling yesterday as forces under... [the Second P]M... tightened their grip on the city... At least 12 people have been killed and more than 50 wounded since the violence began on Saturday, hospital sources and local news reports said... Thousands of people streamed out of the city yesterday as the fighting raged... near the... [prince's] party headquarters and his residence... Last night a... Funcinpec party... official... said the prince had returned to Cambodia from France... [and is accusing his co-premier] of trying to stage a coup, but a radio station controlled by [the Second PM] denied the accusations... [There were also] conflicting reports of hopes for a peaceful solution to the conflict... An estimated 45 N[Z]ers in Cambodia are reported to be safe but under orders to stay indoors... [The NZ] Embassy in Bangkok was continuing to monitor the situation, but if fighting worsened any evacuation order would come from the British Embassy in Phnom Penh, which has consular responsibility for the N[Z]ers.

...Hundreds of foreigners scrambled aboard Thai military aircraft yesterday to flee Phnom Penh, but scores were trapped by the fighting in Siem Reap, the country's main tourist town. In the capital... a night-time curfew was lifted, but not until after troops rampaged through the streets, robbing shops and homes, unleashing volleys of gunfire into the air and rounding up defeated opponents... A neighbourhood near Phnom Penh University was a wasteland of wrecked tanks, gutted cars, houses holed by rocket fire... spend bullet casings and the bodies of dead royalist troops in the streets... Cambodia, along with Burma and Laos, was scheduled to join the seven-member Asean later this month, but the collapse of the troubled coalition... has thrown this in doubt. Asean foreign ministers plan a special meeting tomorrow in Kuala Lumpur to discuss the situation... From the south of France, [the 1st PM] called on his supporters to resist and warned of widespread war, while looking for outside help bringing peace to Cambodia... He said he was going to New York tomorrow to address the U[N] Security Council... But [the 2nd PM] said yesterday the international community should keep out of Cambodia's internal affairs. "Let Cambodians solve their own problems," he said.

...[an AUS]n Defence Attache... warned that at least 250,000 gun-toting fighters were "out of control" of any command in the arms-flooded country, threatening the prospects for peace... "[A Russian grenade costs \$US5, a US grenade \$20. Handguns sell for \$200. You can buy any weapon you want.] We have a problem here. Unless somebody takes control of the weapons in this society, how can this country come out of the turmoil?"...

A[n AUS]n man released after being kidnapped in the Cambodian capital... said yesterday that he feared he would not survive... [after] he was forced to sit on a live hand grenade... [H]e was held for several hours before being released uninjured on the outskirts of the city... [The man], aged 40, who works for a private company in Phnom Penh... believed his captors were motivated by theft... of his Toyota Landcruiser... Two A[US]ns were murdered in Cambodia after being abducted by Khmer Rouge guerrillas while travelling through the countryside, David Wilson in 1994 and Kellie Wilkinson in 1995.

...[people travelling] to Cambodia will soon have the chance to test their shooting skills with more than 30 types of guns at Phnom Penh's "War Disney," thanks to [a] Taiwanese businessman... "For around \$US40 a day, people can have an exciting time. Shooting an automatic weapon is like having a multiple orgasm," the 46-year-old nightclub owner told the *Phnom Penh Post* newspaper... [H]is new \$US800,000 48-lane Marksmen Club... would cater for "Mom and Pop first-time shooters" as well as seasoned "professionals" keen to keep their skills honed while Cambodia's civil war remains confined to the north-west. Phnom Penh already has one "public" shooting range where expatriates and tourists can fire assault rifles by slipping a few dollars to the military police who run the range. But... the Marksmen Club will be better, offering... the chance to toss a grenade or fire a B-40 rocket launcher... Phnom Penh authorities have recently cracked down on gun ownership, recalling thousands of licensed weapons and setting up illegal weapons checkpoints around the city. But [the businessman] said his contacts in the military and Interior Ministry enabled him to get approval for his range for... just... \$US30,000... Now he boasts a private army of bodyguards he calls the Eagles, who, he claimed, are the best trained and armed of any in Phnom Penh.

...Teenage "boy soldiers" with no military training are being sent into battle with forces loyal to Cambodia's feuding co-prime ministers... Villagers in... Siem Reap have told U[N] human rights investigators of a surge in forced conscription in recent months where platoons of soldiers enter a village and demand either money or cannon-fodder. "Parents will be told they must contribute their son to the war effort or pay a 'war tax' of anything up to the equivalent of \$25. But these people are too poor to pay and so their sons are taken away."

...Hundreds of boys, some reportedly as young as eight years old, are... increasingly being press-ganged into... Cambodia's simmering civil war as older soldiers increasingly refuse to fight. Others, their families too poor to properly provide for them or simply accepting that for Cambodians war is a way of life, don oversized uniforms and head to the shifting front lines where malaria can pose a greater risk than gunfire or landmines... "I joined... because they said I would be looked after and be paid 60,000 riel (\$29) a month. But we are not fed enough... Sometimes I get scared... I have fired guns... but I have never killed anybody,"... said... [a] 13-year-old... [A former AUS]n defence attache who has spent the last three years trying to increase the professionalism of Cambodia's armed forces, is distressed about the growing number of boy combatants. "These are not soldiers... these are lambs to the slaughter." Military commanders reluctantly concede that boys are among the troops faced off against each other

in Cambodia's north... One maintained that most are orphans and that they rarely take part in combat, being assigned instead to support roles as bridge guards or sentries at bases in the rear.

...As politicians manoeuvred for the upper hand in Cambodia, villagers were forced to flee as a series of battles raged around the northern town of Samrong. The town has traded hands several times in the past five days... The royalists have counted on recreating an alliance with former Khmer Rouge guerrillas. They were allied with the Khmer Rouge in the 1980s against a Government led by [the man who is now 2nd PM]... But last week, about 300 former Khmer Rouge troops the royalists had considered allies... switched sides... In Phnom Penh, [the 2nd PM] has terrorised or co-opted remaining opposition members of Parliament after launching bloody purges in the wake of the coup... Warning that the U[N] may be responsible for the "death of democracy" in Cambodia, [the 1st PM]... blamed the international community for having pressured him into accepting [his former enemy] as a co-premier four years ago... In Phnom Penh, reports of political torture persist, foreigners are still leaving and businesses and many aid programmes remain at a virtual halt... The U[S], Germany, Japan and A[US] have frozen aid payments to Cambodia, and... Asean [nations may] follow suit... Many people gather in small groups outside empty Government ministries speaking in whispers of the fate of those loyal to [the 1st PM]... But no one is taking a public stand against the man human rights workers say is behind the intimidation – [the 2nd PM].

...At least 35 supporters of Cambodia's deposed First P[M] have been executed in the custody of troops loyal to the man who toppled him, informed sources said yesterday... [S]ome victims were tortured before being killed and... at least four men – bodyguards of [the 1st PM's] top military commander – had their eyes gouged out... Reports from six provinces also indicated that systematic round-ups of Funcinpec supporters and troops had been going on since the prince's supporters were vanquished last week... [The CPP] has officially confirmed that only one person – Hor Sok, one of [the deposed PM's] security chiefs – had been killed and has expressed regret that it was unable to protect him from people who were "angry with him."

...*Fear stalks Cambodia again...* Anyone who doubts the power of Cambodia's current strongman... should take a look at the country's once notoriously free-wheeling press. There is none... Following [the 2nd PM's] violent coup... earlier this month all 19 newspapers not linked to his victorious... CPP... quickly decided it best to go underground. The muzzling of the opposition press took place virtually without any intimidation from [him] – in fact he is now encouraging them to resurface and print again. But so far they are having none of it... clearly the prudent thing to do.

...[the] King... of Cambodia... said yesterday... from his residence in Beijing... that he had asked... [the person who] overthrew... the King's son... to end violence in Cambodia and work towards national reconciliation... "I am the father of all Cambodian people," the ailing... constitutional monarch... told reporters when asked if he recognised... [the] new Government... A Cambodian military court has since issued a warrant for [his son's] arrest on charges of weapons smuggling.

...Cambodia's royalist forces have pushed back troops loyal to the country's strongman... from the edges of their besieged bastion, Thai military... sources said last night... The troops – supported by tanks, heavy artillery and multiple rocket launchers – met determined resistance and reportedly pulled back to allow Government guns and rocket launchers to further pound O'Smach's system of deep trenches and bunkers... Royalists agreed they were running low on weapons and ammunition but vowed to continue to fight to hold on to O'Smach. Thai Army sources raised their estimate of the number of Cambodian civilians who fled the fighting to Thailand... to 33,500. "The continued fighting should bring more in to Thailand,"... [The strongman] vowed yesterday to seize the Khmer Rouge stronghold of Anlong Veng in December... because that was the month he had received a peace prize last year... The peace prize was awarded by a South Korean group which the South Korean Embassy said it had never heard of.

...The Hong Kong-based weekly current affairs magazine the *Far Eastern Economic Review* said yesterday that it would publish an exclusive interview this week with Cambodia's former Khmer Rouge leader, Pol Pot. The interview was conducted in Cambodia last week by [a] *Review* correspondent... who in August became the first foreign journalist to see Pol Pot in 18 years... The... [correspondent was present when] Pol Pot... was sentenced to life under house arrest at a show trial at... Anlong Veng on July 25... The... Khmer Rouge... said they would hand Pol Pot over to an international tribunal if the Cambodian S[trongman]... was also brought to justice for his alleged crimes.

...Leaders of... [the] Khmer Rouge movement will not escape prosecution for crimes against humanity by blaming the excesses of their 1975-79 Government solely on Pol Pot, according to the director of the Cambodian Genocide Project. [The director's] assertion follows an apparent attempt by the leadership to deflect attention from their role by agreeing to hand over Pol Pot for trial before an international tribunal.

...Pol Pot... is unrepentant for the death and suffering during his maoist-style revolution, according to the *Far Eastern Economic Review*... "I came to carry out the struggle, not to kill people. You can look at me: Am I a savage person? My conscience is clear." ...[However,] Pol Pot admitted to the murders... in June... [of the] Khmer Rouge... defence chief Son Sen and a dozen members of his family... but said he did not order that children be killed... The magazine said Pol Pot... looked "clearly very ill" and "perhaps near death" during the interview...

[*World in Brief*: Notorious Khmer Rouge leader dies of heart attack...]

News in Brief: Report suggests former Cambodian dictator murdered rather than death from heart attack'. *News in Detail*: Continued fighting and uncoordinated Government policy look set to undermine a plan to fight the "rampant" illegal export of timber from Cambodia, according to Government officials... The... claims came after Government troops arrested 13 Thai nationals and impounded 72 logging trucks... The... Thais were working for Thai logging companies despite a ban on the cross-border trade in logs following the signing of a protocol between Phnom Penh and Bangkok last year. "Speaking frankly, the Thais are completely involved in this, the Thais are still behind the Khmer Rouge," [a Cambodian general]... told a local newspaper, adding that the arrested men had since been released. Thailand's Ambassador to Phnom Penh... said his embassy was investigating the incident. "We closed the border last year and we intend to honour that commitment... But this problem involves remote areas where it is very difficult to implement policy made in Bangkok." ..."Forests in many provinces are being destroyed by businessmen who prevent Government inspections by the use of mercenaries,"... said... the [Cambodian] Forestry Department... deputy director... [T]he job of monitoring the loggers had become harder as a result of the Government's decision to close hundreds of checkpoints on the nation's highways... Last week a gang of armed men were intercepted in the dead of night as they attempted to smuggle a "raft" of 70 logs down the Mekong River into Vietnam. According to [a] district police chief... the men – all military policemen – were not arrested because they were acting under orders from a senior official from the province of Kampong Cham.

...[France] will continue to support Cambodia's infamous Military Police – a renegade "private army" implicated in political killings... the intimidation of judges and other senior officials... and drug running – despite a call from a top U[N] Human Rights envoy that the 5000-strong force be disbanded... The... regiment was set up in 1994... in a bid to more effectively apprehend and prosecute members of Cambodia's wayward and ill-disciplined military for crimes and human rights violations. But critics have repeatedly claimed the unit has become a law unto itself... Military Police were seen loading looted valuables from homes and foreign businesses into French-donated vehicles soon after forces loyal to [the] ousted First P[M]... were driven from Phnom Penh. French instructors returned to their duties at the Military Police headquarters and training establishments within a week of the fighting, despite a decision by other foreign Governments to suspend their military aid projects.

...[Khmer Rouge's last top lieutenants have surrendered, ending the group's 2-decade fight against the Government', and now] Cambodia's civil war has ground to a halt, with none of the cash-strapped factions capable of mounting sustained offensives because of a lack of resources... analysts say.

...Cambodia faces the "very real" prospect of economic collapse leading to further political instability... diplomats... say. Figures from the Cambodian Investment Board show foreign investment has dropped by more than 50[% since the 2nd P]M... seized power... Foreign investors had

sunk more than \$US400 million into the Cambodian economy in the first six months of this year, nearly double their commitment for the same period in 1996... Analysts warn that the Cambodian administration, which relies on foreign aid for up to 50[%] of its \$US500 m... annual budget, is essentially broke and may soon cease to function following the withdrawal of support by the World Bank and the [IMF]. The World Bank's decision to allow a subsidised loan programme to lapse at the end of last year was followed by a recent IMF decision to vacate its Phnom Penh office... An IMF official said the decision followed a move last November to suspend a \$US20 m... loan instalment because of the Government's inability to collect revenue... [from] logging... and the ad hoc granting of tax breaks in return for kickbacks to politicians and political parties.

...[the] international community's insistence that Cambodia hold elections next year has failed to recognise political reality and may even perpetuate the country's long history of violence and instability, according to some observers in Phnom Penh... In addition, nearly \$US21 million... in international funding for the election... scheduled... for May next year... hangs on the timely passage of... essential electoral legislation... including amendments setting out the composition and function of an electoral commission... The Minister of the Interior... said he was very concerned the elections would not be held then [i]f the National Assembly delays debate on the draft electoral law... He said the Assembly needed a minimum of eight months to prepare for the election... The Assembly, which has lost more than 50[%] of sitting time in its current session because of absenteeism, will remain closed into next week due to the annual Water Festival holiday.

...The Cambodian Government faces a budget shortfall of... more than 10% of the total budget – prompting the Finance Ministry to slash expenditures by 20[%]... Education and health are to have their budgets trimmed by 10[%] while other ministries have been told to reduce spending by up to 35[%]... But spending on defence, which Government critics say consumes 60[%] of public expenditure... will not be reduced... Analysts said the cuts will not be enough to stave off a financial crisis...

The HIV/Aids epidemic could cost Cambodia as much as \$US3 billion... in lost earnings and welfare costs over the next 10 years... according to the Cambodian Human Development report, a joint initiative between Cambodia's Ministry of Planning and the U[N] Development Program... Already more than 150,000 Cambodians are infected with the HIV virus... [B]y the year 2000, 40,000 Cambodians will have died from Aids-related disease... The report... also found that Cambodia had the highest infant mortality rate – 90 out of every 1000 – of any South-east Asian country, and... [over] half of Cambodian children under five were stunted or malnourished... [WHO] had previously criticised the Cambodian Government for failing to address the country's Aids problem. It said the epidemic would “run out of control,” as it had in some African countries... “In places like Uganda... it's not unusual to see a grandmother looking after as many as 20 grandchildren whose parents have died from the disease,”...

['The former Ugandan dictator IDI AMIN died at the weekend from multiple organ failure. Ugandan officials said he was 80, although others put his age at 78. He had been in a coma in King Faisal Hospital in Jeddah, Saudi Arabia, for a month after being admitted with high blood pressure, and then suffering kidney failure. He had ruled Uganda for eight years until being forced from power in 1979 by Tanzanian troops and Ugandan exiles, and was said to be responsible for the deaths of 300,000 people. The figure of 300,000 has never been corroborated. It is certain that many more Ugandans were killed by the regime that lasted from 1982 to 1985, and by the short-lived regime that followed it. What is also true is that Britain created Amin. A corporal in the King's African Rifles, he was rapidly promoted as independence neared. He loved the British and seemed not unhappy with his role as well-trained, faithful beast. In 1976 Palestinians hijacked a plane full of Israeli nationals and Jews and parked it at Entebbe airport. Amin protected the hijackers. One night Israeli commandos flew in and rescued all but one of the hostages. They blew up the airport, killing several hijackers and Ugandan soldiers. The humiliation of the spectacular raid on Entebbe drove Amin to new heights of paranoia and repression. He expelled foreigners. His security organs killed at will. His deadly wrath was limited to key individuals and their families. The dangers to ordinary people were the road blocks where soldiers raped and stole. For most Ugandans the Amin years meant a slow collapse of schools, roads and hospitals. Otherwise life went on until the price of coffee, Uganda's main export, began to fall in 1978. Amin sent his army into northwest Tanzania but its President counter-attacked and invaded Uganda. It took six months for the Tanzanians to get to the capital and even longer to take control of the north. Amin eventually fled to Libya and then Saudi Arabia. Only in 1986 did the country stabilise. The economy has slowly recovered and this year it might just match the wealth Uganda produced in 1971 – the year Amin came to power.']

...Few men have plunged an entire country into such an horrendous nightmare – or created such an astonishing farce – as a former army cook... Up to 250,000 people are believed to have been butchered by his terror squads within three years of him seizing control of Uganda in January 1971. That estimate was given to the U[N] by the International Commission of Jurists. But Amin, the illiterate son of a Nubian prostitute who dabbled in witchcraft, considered his crimes had the personal approval of God. During one of his regular chats with God, he claimed, he was told to start kicking the 50,000 Asians out of Uganda... The Asians who left Uganda at that time, although in a pitiful plight because of... thieving, were the luckier ones. In the filthy dungeons beneath Kampala's police station... others who'd been arrested, simply because their faces were the wrong colour... would never be released. They were destined to have their skulls smashed with sledgehammers. That method of execution was cheaper than using bullets... In addition to holding conversations with God, Amin had a habit of talking to the heads of murdered foes which he kept in a fridge, and he often boasted... of having eaten human flesh. “It is salty,” he would say. “Even more salty than the meat of a leopard.” His family life – five wives and more than 30 mistresses – was also extraordinary. Marriage to Amin, however, brought no guarantee of safety. He gloatingly described on TV how his second wife Kay, the daughter of a clergyman, had been killed and dismembered. And any man linked to a woman fancied by Amin was murdered almost as a matter of routine. Amin was Uganda's heavyweight boxing champion for nine years. This helped speed his climb... after independence from Britain in 1962... until being toppled in 1979... Many made the mistake, particularly in the early days of his reign, as dismissing him as an amusing buffoon. Much of his behaviour, certainly, was just that. But he will more accurately be remembered as one of the most savage and evil tyrants of the 20th century. [By the way, ‘when 150 girls were abducted this month from a school in northern Uganda by the Lords Resistance Army (LRA) – a rebel group that aims to overthrow the Ugandan government, which it has been fighting since 1987, and replace it by rule based on the Biblical Ten Commandments – they were luckier than previous targets of attack. The girls were destined to become soldiers and wives to LRA commanders. Fortunately for the girls, their headmistress tracked the rebels and offered first cash and then her life in exchange for the girls' release. The rebels agreed to free 109 girls, keeping those they considered most attractive to take to Sudan for military training. The LRA has been forcibly recruiting since its inception, but only in the past three years has it focused on children. The pattern of attacks on schools throughout the districts of Gulu and Kitgum in northern Uganda, the LRA's main area of operations, is always the same. The rebels arrive at night, order the students out of bed, tie them at the waist and lead them away. By the time the Ugandan Army (the UPDF) reaches the site, the students have disappeared into the bush. The fact that most primary schools in Gulu district have closed testifies to the fear the rebels have instilled. Thirty teachers have been killed this year alone. The fate of the abductees is grim. Some are killed in confrontations between the UPDF and the rebels. Most are taken to the LRA camp at Kit in southern Sudan and given two weeks military training. They then return to Uganda to kill their own people or take on the southern Sudanese rebel group, the SPLA, which has been fighting a 13-year war against the Sudan government.']

...At a frontier garrison... officers from the Sudan People's Liberation Army train recruits for a planned attack on Juba... the capital of south Sudan... In its first big push on the southern front for several years, the SPLA captured a string of towns... and established a base just 61km south of Juba... Hundreds of retreating Government troops were ambushed and killed south of Yei on March 14... In the process [the SPLA] captured a huge cache of ammunition, tanks and heavy weapons... Juba has never fallen to the SPLA since the modern round of the power struggle between the Arab north and the black African south began in 1983. The conflict covers vast tracts of swampy savannah across what one aid official described as “the world's least-developed piece of real estate.” ...At the start of this month frontlines were static, but the SPLA and... the National

Islamic Front Government... know military gains could easily convert to bargaining chips at peace talks due to start in the Kenyan capital on October 28. Aid officials say Khartoum's agreement to resume talks in Nairobi under the Inter-governmental Authority on Development signals its military weakness – they pulled out of the authority in 1994, refusing to negotiate a declaration that enshrines self-determination for the south. However[... estimates]... put the total number of Government troops at 250,000, with 100,000 under arms in Juba. The SPLA are believed to have up to 25,000 crack troops, with 100,000 more under arms... Khartoum has also rendered an attack on Juba more difficult by placing ethnic south Sudanese troops in the city. Sudan's position on the cusp of the Middle East and sub-Saharan Africa, and its many borders mean the civil war is of intense interest to regional powers... [A] northern Muslim... Colonel... said he still supported Khartoum after surviving the Yei ambush... Bored and underfed[... he]... languishes with about 900 other troops at a prisoner-of-war camp in Yei and relives the events leading to his capture... "We were obeying orders and we fought to suppress the rebellion, though I didn't think it was a holy war," he said... SPLA commanders and aid officials say two Iraqi soldiers fighting for Khartoum were captured and shot during the March offensive. On a second front in east Sudan, the National Democratic Alliance based in Eritrea threatens Damazin and the Roseires Dam, Khartoum's main power source. The SPLA is also fighting in Bahr el Ghazal province and in the Nuba mountains. Aid officials say the Eritrean army is training the SPLA to use artillery and SPLA fighters have been trained in Ethiopia... There was no evidence of Eritrean or other foreign troops on the ground, but the... March offensive... started at the Uganda-Sudan border post at Kaya, a series of concrete huts now riddled with bullet holes, hinting strongly of an attack from Uganda... [While SPLA soldiers wait to re-attack, malnourished] children forced to flee... Juba wait for food in a camp for displaced civilians.

...to provoke an uprising... Sudanese rebels say they are advancing on a hydro-electric station that supplies Khartoum with most of its power.

...[Rebels killed 34 northern Sudanese merchants in an attack on a convoy of commercial trucks in the southern town of Renk. The attack, 450km south of Khartoum on the Upper Nile, was the worst since 1983.]

...the 'country of the Blacks' 'has only one seaport – Port Sudan; Halfa is a large river port near the Egyptian border. The White Nile runs the length of the country; the Blue Nile enters from Ethiopia in the East, and the two intersect near the capital of Khartoum. The country's forests and most arable lands are along the rivers. The northern section, ancient Nubia, was exploited, early in the 19th cent., by Egyptian traders, who founded Khartoum. Later English military forces in Egypt's service occupied the land, but were interrupted in 1882 by the Mahdist revolt. Disturbances were ended in 1898 by the Anglo-Egyptian force under Lord Kitchener, and in 1899 an agreement between Great Britain and Egypt was signed, providing for a governor general to be appointed by Egypt with the approval of Britain. In 1953 an agreement was reached providing full home rule for the Sudan, under supervision of a British governor-general, with the provision that on Dec. 31, 1955, a plebiscite would be held to decide whether the country should remain independent or join Egypt. 1953 also saw implementation of the first constitution and the first parliamentary elections. In Dec. 1955, the parliament voted for full independence, and Sudan was proclaimed a sovereign republic, Jan. 1956, headed by a temporary Council of State. The Army took over the government in Nov. 1958, suspending the constitution, dissolving parliament and political parties, and placing supreme authority in a Council of the Armed Forces. In addition to Ethiopia and Egypt, the country is surrounded by Libya, Chad, Central African Republic, Congo, Uganda and Kenya' – where the 'President is poised to win a final five-year term in his country's flawed and chaotic general election as all unofficial counts yesterday showed him comfortably ahead of his four main challengers. The 73-year-old, one of Africa's last "Big Man" leaders, has been in office since 1978. He says he deserves a final term to consolidate national unity and crush corruption. His opponents charge that graft and mismanagement have thrived in recent years and are ruining Kenya.']

...One of the last of Africa's old guard... has ruled... with an iron fist for the past 19 years, making all the decisions himself... He held various portfolios after independence in 1963, and... [was] appointed... Vice-President in 1967. He... [succeeded the] founding President Jomo Kenyatta... when "the Old Man" died in 1978. A section of the Air Force mounted a coup attempt in 1982, declaring [his] regime corrupt, but the Army defeated the mutineers in close combat. By official count 159 people were killed; by unofficial count it was many more... The man whose motto is "peace, love and unity," once threatened to crush opponents "like rats." ...Aid donors forced him to introduce multi-party politics in 1991. He warned it would lead to tribal clashes, which duly occurred: some 2000 people were reportedly killed and 20,000 made homeless in the Rift Valley in the run-up to elections in December 1992. [He] won with 37[%] of the vote against seven opponents... More than 100 people have died in political violence this year[while he] has been active in regional politics, chairing summits trying to resolve neighbouring Sudan's 14-year-long civil war. He declared last month: "On the list of those who are wealthy, I am the last." By popular reputation, however, he is the richest man in Kenya, and his close associates are also believed to have amassed fortunes... On a continent where many leaders experimented with socialism and Marxism, [he] kept his nation with its large community of Asian traders firmly in the capitalist camp... The trademark gap in his bottom teeth is a custom of his small Kalenjin tribe – one tooth is knocked out in childhood to allow drinking through a straw in case of tetanus, which causes the jaw to lock up. [His] first purchase... was a *Bible*, bought with money he earned driving two cows 120km. He is a member of the Protestant African Inland Church.

...The most intellectually intriguing document making the rounds[in Washington] this summer may be the study by the [CIA] of the origins and causes of the collapse of nations... Population pressure, spending on arms... massive government corruption and poor political leadership are said to be leading indicators for such disasters as Somalia, Bosnia, Rwanda and other countries where Governments have evaporated or gone to war against some or all of their citizens... [You] can understand the agency's reluctance to be specific about its advice on how to spot three-star hellholes to come... But the need for more reliable indices of national stability and fragility is clear. This was underscored for me by the recent headlines out of Kenya, where [the]President... faces street protests because of his dictatorial rule, and loan cutoffs internationally because of his Government's flagrant corruption... In a departure from past practice, the [IMF] this month suspended a \$220 million loan... The World Bank has also recently delayed smaller loans... This apparently coordinated squeeze on official corruption in Kenya – and presumably elsewhere – is a welcome innovation. International Organisations have for too long averted their eyes and treated corruption as an internal matter beyond their reach. Flagrant corruption that is tolerated or assisted by national governments... is a cancer on the international system as well as on the national state... When I lived in Kenya in the early 1970s, there were two firm bits of conventional wisdom about that beautiful East African nation. One was that [the President], a politician of limited intellectual ability who hailed from a minor tribe, was a transitional figure who could not survive long... The other was that Kenya's resources, international visibility and dynamic society would enable it to overcome its crippling internal ethnic rivalries and become a great African success story. Neither prediction turned out to be true. [The President's] unshakeable hold on power for nearly 20 years has been accompanied by a steady decline in the nation's stability and prosperity. There can be little doubt now that the two factors are intimately connected. It is a measure of Kenya's intrinsic strength that it has been going downhill every year for two decades in the eyes of many of its citizens, former residents and visitors, but still works as a centre of global tourism and as a regional headquarters for business and international organisations... But [the President's] misrule is now being challenged... in the boardrooms of the world's leading international financial institutions... and... in the streets of Nairobi, where his police killed five demonstrators in one recent protest...

At least nine people were killed in Kenya as police broke up protests and clashed with thousands of demonstrators in the most violent day of protest for seven years. Riot police and elite paramilitary officers fired teargas, rubber bullets and live rounds to break up rallies. Many protesters were severely beaten, even when they surrendered and offered no resistance... Police[also] fired teargas inside Nairobi's All Saints' Cathedral... "We were in the middle of the service when they broke in... This is Kenyan justice for you. Even in God's house they beat innocent protesters," said the... moderator of the Presbyterian Church of East Africa and an organiser of the demonstrations... Police appeared to single out for particularly savage beatings leaders of the opposition-backed groups that called the rallies to press for constitutional reforms... The National

Convention Executive Committee, made up of opposition parties, human rights groups and other bodies, vowed to hold more demonstrations this week. It called for three days of mourning “for the gallant sons and daughters who were killed by the Government.”

...SABA SABA (DOUBLE SEVEN) DAY WAS named by Kenyan reformist groups who were involved in violent clashes with government forces in Nairobi on July 7, 1990. Last week, seven significant years later, Saba Saba Day was again marked not only with blood, but also with an act of sacrilege that highlighted the government’s ruthless reaction to public protests and has further inflamed opposition to the autocratic rule of [the] President... When Saba Saba Day rallies were banned last week under the draconian security laws that defiant reformists are protesting, the result was inevitable. Many rallies went ahead despite the ban... Nairobi again became a battleground between the police and demonstrators... At the day’s end the countrywide death toll was at least seven... Hundreds were wounded and scores arrested. The day was to have one lingering outrage, however... Kenya’s religious community was united in its condemnation of police brutality and the bloody storming of All Saints.[Kenya’s] Anglican Archbishop... said the police had defiled the church by the “shedding of innocent blood.” The Kenya Episcopal Conference asked: “How many Kenyans must die that we may have desperately needed reforms?” ...After three days of disturbances during which the Nairobi and Jomo Kenyatta Universities were closed down, the death count rose to at least 16. The situation prompted strong reaction from the international community including [the] U.S. Secretary of State... who deplored the “extreme response” of the government forces and said the real source of political violence was not just the government’s unacceptable strong-arm tactics but “its failure to take the essential steps to create a free and fair electoral climate.” But there was no evidence last week that... [Kenya’s] President... felt pressured to make changes. He... accused the Western world of having “double standards of democracy.” Still, many Kenyans believe that last week’s violence could be a turning point in their struggle for democracy... [A] 45-year-old opposition Member of Parliament, has... said her rural constituency of some 300,000 people represents all the ravages of [the President’s] neglect. “While my people starve, have no adequate housing, carry water on their backs for 10km, [he] spends \$60 million on a presidential jet. What is power if your people are bleeding?” After the violence, [the Anglican] Archbishop... conducted a symbolic cleansing service of the bloodied floor and pews in All Saints Cathedral. It was a gesture of both defiance and mourning and an indication that Saba Saba Day 1997, and what may flow from it, will not soon be forgotten. - 1997

A KENYAN man suspected of buying young girls as sex slaves from a woman, 70, has been arrested. The girls, bought for \$12 each, and as young as nine, were stripped, shaved and forced to drink blood, before being repeatedly assaulted, [Nairobi] police said.

...A ship carrying up to 250 child slaves... some aged as young as 4... is missing off the coast of West Africa... The children have been at sea for two weeks since leaving the port city of Cotonou, in the Benin Republic... It took its mournful cargo first to the port of Owendo, in Gabon, but the authorities rejected it after they were alerted by Interpol. Next the ship went north to Douala in Cameroon, but it was turned away from there, too. Now no one is sure where it is or how its cargo... is faring... [A]id workers fear Benin Government pledges to punish traffickers of children may put the youngsters at even more risk as the ship’s crew try to escape arrest. It is thought they could be desperate enough to endanger the lives of their young charges... [A] Unicef official in Benin, said... the captain, an unnamed Nigerian national, had “trafficked children” in the past... Despite international efforts to curb the trade, child slavery persists in West and Central Africa, from where European slave traders shipped millions of people to the Americas from the 16th to 19th centuries. Slave traders (usually women) go into the interior of each country and try to woo the poorest parents to allow them to take their youngsters into the towns to offer them “employment.” In countries where \$30 counts as a great deal of money, a down payment weakens the resistance of parents. Usually, the first payment is also the last... Thousands of children aged 9 to 12 are thought to work on plantations in the Ivory Coast, the world’s top cocoa producer. Life there is hard. Anti-child-labour campaigners say youngsters are often forced to work up to 12 hours a day and are sometimes subjected to physical and sexual abuse.

...*Child slaves feared thrown overboard* Authorities in Benin fear the worst after boarding a ship believed to be carrying child slaves to find only a few children with their mothers. “This is very strange. At first sight it is hard to tell what has happened,” said one official after a search of the Nigerian-registered MV Etireno. “There is no sign of unaccompanied children.” ...A coordinator for Unicef... said he was worried about the children... Some aid workers said that in the past, ships’ captains had been known to throw children overboard when they died or became sick. That had raised fears that the captain might try to get rid of the children... The ship was thought to be carrying up to 180 children, sold by poor families to work in oil-rich Gabon... But the captain, [a] 40-year-old Nigerian... said no child slaves had been on the ship. “I have not committed any offence that will warrant my arrest... [T]hey cannot prove... I am... into child slavery...” ...[Benin’s] Social Protection Minister... said the Etireno had been confused with a second ship, whose name and location were unknown. Both vessels had been turned away from Gabon after trying to dock with illegal immigrants on board, she said. Sources in Benin believed the children were either on board the Etireno and had been taken off somewhere else or were on a second ship. But since no one knew the ship’s name, the chances of rescuing the children looked remote...

Nigerian-led West African peacekeepers seem to have taken the old hippie motto about making love not war to heart during their... mission... in Liberia from 1990 to 1997... They left behind about 25,000 children born out of wedlock... Most fathers of these children have gone home, leaving their offspring behind. A charity has been set up to care for the children because the... mothers could not cope without financial assistance.

...WHEN soldiers ordered village men to gather in the local market, residents of Gbeji in Nigeria believed they were finally getting the protection they’d asked for after decades of bloody ethnic strife. What they and at least six other villages got was a hail of bullets that left hundreds killed... according to witnesses and local officials... State officials say the raids were in reprisal for the abduction and killing of 19 soldiers by Tiv tribal fighters this month in Benue state, where villagers have been waging a decade-long feud... But the... troops were under strict orders not to shoot unless fired upon. [Nigeria’s] President... ordered the military operation to continue until those responsible for the soldiers’ deaths were arrested.

A... bus driver set his wife on fire during an argument about her \$3.60 monthly food allowance. A paper in Lagos said the man claimed his wife was using the money for buying cosmetics and got furious when he arrived home and found no food. She was rescued from burning to death by neighbours but is now in critical condition at a hospital in Benin city... [In related news,] life is not much different from death in Nigeria’s prison[s]. The... Minister of Internal Affairs, recently made the unusual admission that there was something appallingly wrong with Nigeria’s judicial and prison system. The wheels of justice turn so slowly that two-thirds of the inmates – more than 35,000 people – are awaiting trial. Some have been held as long as 10 years. Many do not survive the violence, starving rations and disease that have led Nigeria’s Civil Liberties Organisation to call the country’s jails “tombs without tombstones.” ...[the] head of the... Organisation’s prison investigations, estimates that dozens of prisoners die in Nigerian jails each week... [One ex-prisoner], now aged 43 and begging on the streets of Lagos, admits that he was illegally hooking his shack home to overhead power cables when the police descended. He took it in his stride until he was accused not of stealing electricity but of sabotaging the power grid – an offence that carries up to life imprisonment. The police said they needed time to investigate. A judge sent [him] to Kirikiri prison, wh[ere he]... sometimes wondered if it would not have been better to be convicted. He would still have been welcomed... with a pummelling by the other inmates until his ribs cracked. And... forced to sleep with the excrement bucket spilling on him until a new prisoner arrived as the virgin of the cell... Perhaps he would have risen to be the all-powerful cell boss who makes life a kind of hell for others. As it was, [he spent 7]... years in Kirikiri and was never convicted of any crime... [He] walked free last October when a judge finally ruled... the police had no evidence against him.

...An Independence Day display of homage to... Nigeria’s military ruler... yesterday fuelled speculation that [he] will try to legitimise his power through the ballot box. The show by North Korean-trained Nigerian schoolchildren broke the tradition of military marches. Some 1500 danced

and sang [the General's] praises, while thousands more on a podium formed mammoth pictures of him, his wife and ministers... [The] Minister of Information... said... "This is a people-oriented celebration as we move more and more towards democracy." ...Nigerian opposition groups and Western Governments... remain unimpressed with the transition programme... On Monday the electoral commission announced the five parties allowed to participate in the election process, out of 15 that applied. All are from the centre and none oppose the Government... [The General's] Government is treated as a pariah by much of the international community for jailing dozens of opponents and the execution last November of nine minority rights activists... The Commonwealth of Britain and its former colonies, which suspended Nigeria after the November executions, on Sunday decided not to impose sanctions to force the pace of democracy... and human rights... Nigeria insists it will follow its own course... Since independence from Britain in 1960, Nigeria has spent less than 10 years under civilian rule... The last democratic experiment ended when a previous military Government annulled results of 1993 presidential elections. The presumed winner of that election... has been detained since 1994... [The] General... in his Independence Day speech made no mention of freeing political detainees as some had expected. - 1996

Nigeria's military rulers say they have arrested 12 coup plotters... for planning to "violently overthrow the present Administration." ...but [the rulers] have assured Nigerians a transition to civilian rule is still on course... At Nigeria's last coup trial, held in secret in 1995, more than 40 people were sentenced... Death sentences handed out at the time, the usual penalty for treason in Nigeria, were commuted to long prison terms after a wave of international pressure for clemency.

...Nigeria, Africa's most populous nation... was told it had two years to improve its human rights record and prepare for free elections, or... sanctions, which could include expulsion[from the British Commonwealth], would be applied... The only progress to date has been an announcement by Nigeria that elections will be held by October 1998. There has been virtually no improvement in human rights, access to justice or freedom for political opponents. Some nations have expressed frustration at the lack of progress... but it is clear there is a lack of will among Commonwealth members to take harsh action. Experts say only an oil embargo would hurt Nigeria, 80[%] of whose government revenue is comprised of oil receipts... Nigeria's military rulers are understood to have applied pressure to other African Commonwealth nations not to support expulsion or trade sanctions...

Nigeria, having already escaped being expelled from the Commonwealth over human rights abuses, is now set to avoid economic sanctions despite the protests of the son of a Nigerian hanged by its military rulers... along with eight others during the Commonwealth leaders' summit in Auckland two years ago... It is believed... Britain, Canada, N[Z] and Jamaica supported... sanctions... while Zimbabwe, South Africa, Ghana and Malaysia did not... But[the] British Foreign Secretary... said yesterday failure to carry through the threat did not mean the Commonwealth was losing its nerve. Officials said on Friday the Commonwealth Ministerial Action Group set up to investigate Nigeria would submit a report advising that the military government be given another year to show it was serious about introducing democracy... Others... say commercial considerations are behind... the action group's decision... [and that there] will be sham presidential elections next year.

...[Nigeria has reinforced] its military presence in the city... of Freetown... [after] Sierra Leone's coupmakers called on the population of the capital... to turn out in force wearing white shirts today as a sign that they oppose foreign intervention to end the crisis... [that began when j]unior officers toppled[the] civilian president... on May 25. [The president's] 1996 election ended four years of Army rule in... one of the world's poorest nations despite mineral wealth including diamonds. The coup has been widely condemned with Nigeria and the rest of the Organisation of African Unity demanding that [the president], who is in neighbouring Guinea, be reinstated. The question is whether by military or diplomatic means. The coup leaders[- who were alleged to have offered to 'step aside and let the elected government return for \$46 million' - officially] said they wanted a peaceful solution but... [dissident] soldiers and rebels, who took up arms in 1991 and who have flooded the city after rallying to the coup, hit back by attacking Nigerian soldiers guarding foreigners at a beach front hotel. The U[S], Britain, France and other nations have begun evacuating their nationals. Freetown was calm yesterday but police sources reported a jump in armed crime, looting and rape.

...[yesterday's] demonstration called by Sierra Leone's coup makers against foreign intervention drew little support... [Meanwhile,] Angolan troops who helped rebels take control of [Congo-Brazzaville, or the People's Republic of West Africa (PRC),] are struggling to pacify the tiny oil-producing nation after suffering heavier casualties than anticipated, military sources said... The Angolans, backing... [a former ruler, had] fanned out into the countryside and Brazzaville, the [PRC] capital, to consolidate the over-throw of[the] democratically elected President. But the sources said imposing total authority is proving to be far more difficult than the Angolans had anticipated and looting by Angolan troops and[the rebel] militia had complicated the security situation... Witnesses said the militia believed looting was part of the reward for their role in the... four-month civil war[which]... opponents say was fuelled by battle for control of oil reserves and regional political interests... Point Noire in the south is [the PRC's] oil centre and was the entry point for a 3500-strong Angolan tank-led column that invaded from the oil-rich Angolan enclave of Cabinda.

...There have been persistent reports that the Angolan Government's former civil war foes, Unita... have rallied to [the President's] cause... The conflict erupted when [the President's] troops tried to retrieve weapons from [the rebel leader's] residence before elections, due to have been held on July 27. Fighting scuttled the poll, and the unrest went on to become even bloodier than political violence in 1993 which killed 2000... [The rebel leader was] the country's military ruler for 12 years until his ousting in 1992 elections... [By the way, a member] of Italian photo bureau Agenzia Contrasto has won the 1996 World Press Photo of the Year award with his emotion-charged image of children traumatised by the Angolan civil war... [He] is the first Italian to win the... award, held for the 40th time.

...For nearly 40 years revolutionary wars, atrocity-studded misuse in the heart of Africa and brutal, reactionary white power at its tip[has] turned a region many colonialists once saw as paradise into a partially devastated and totally dysfunctional purgatory at century's end. The troubled nations of... Congo-Brazzaville, Rwanda... Uganda, Angola... [and] Burundi... at least seem to have touched bottom. - 1997

Burundi's military Government [i]s cut off from its neighbours... [now every] state in the region... ha[s] imposed sanctions following last month's coup. One after another, neighbours in East and Central Africa have shut the gates, saying they will only reopen when civilian rule returns to the landlocked country where the Tutsi-led military ousted the Hutu President on July 25. The new rulers say they seized power to prevent genocide in Burundi, where more than 150,000 people have died in three years of fighting between minority Tutsis and ethnic Hutus, who make up around 85[%] of the population. [However, 'more than 6000 people were reported killed in the first three weeks after the military coup.']

...Hutu rebels killed 22 people including a family of 12 in an attack in the strife-torn north-western province of Cibitoke, Burundi... yesterday.

...Anxious foreigners and Burundians scrambled yesterday for tickets on the last scheduled commercial flights out of the sanctions-hit Central African state... A US embassy official said the ambassador was trying to organise a large military plane to fly in from Nairobi to pick up those unable to leave on Sabena. The Sabena planes stop en route to Brussels in Entebbe, Uganda, for refuelling but airline officials said Uganda refused to allow any passengers to get off there... Burundi has been cut off from its neighbours since Zaire became the last state to impose sanctions...

The U[N] fears a refugee crisis on the scale of Rwanda's two years ago as columns of refugees fleeing violence in east Zaire head for the town of Bukavu... The latest violence is centred on the town of Uvira, 100km from... Bukavu. The... U[N] refugee agency UNHCR... was making contingency plans to receive 75,000 of the refugees in existing camps in the Bukavu area... Eastern Zaire has been gripped by unrest since the 1994 massacres and civil war in Rwanda sent more than a million Hutu refugees streaming in, stoking ethnic rivalry in the area. Fighting has widened in the past six weeks since the Zairean Army got drawn into long-running ethnic clashes between Tutsi immigrants, known as Banyamulenge, and

native Zaireans... The Banyamulenge, who migrated from Rwanda late in the 18th century, accuse Zaireans of trying to force them to leave... The U[N] is worried that the armies of neighbouring Rwanda and Burundi, both dominated by Tutsis, might be drawn in on the side of the Banyamulenge...

The town of Bukavu in east Zaire, tense in the face of a Tutsi rebel advance, spent a second night under curfew after Zairean troops pulled back from positions to the south in confusion... Earlier, [i]n... Brussels, the Zairean P[M]... accused troops from Rwanda's Tutsi-dominated Army of entering Zaire to back their kinsmen among the Banyamulenge rebels. "Rwanda must withdraw from Zaire. Zaire will defend its rights with all means at its disposition," he said. Zaire has appealed to the U[N] Security Council over what it terms "external aggression" in its eastern region. Rwanda and Burundi have denied any link with the fighting... Aid workers reported dozens of people killed.

...UN mounts rescue flight for... aid workers... [A]id workers... trapped by fighting between the Zairean Army and ethnic Tutsi rebels... were spending the night at U[NHCR] premises after an evacuation flight was cancelled and plans to drive in convoy to the Burundian capital were halted. "Right now we have 45 expatriates stuck in an extremely dangerous situation," a senior aid official... said. In Rome, the U[N] World Food Programme said Zairean authorities had cleared its charter plane to fly into Uvira... [R]eports from the U[N] refugee agency in Geneva and humanitarian sources in the region... [estimated] the size of the exodus from 12 refugee camps near Uvira... [was] up to a quarter of a million.

...The little girl's head was jerked back, seeming to stare longingly up the hill towards those who had fled without her. In the town below, young thugs pranced through the streets celebrating her brutal death. One of them had skewered the child through the throat as they hunted down people who had once been their neighbours... The principal victims of the latest pogroms are about 300,000... of Zaire's native Tutsis[who]... have taken to the hills to escape their Government's threat to expel or terminate them... Other Banyamulenge disappear into Zaire's notorious jails, emerging only for burial... Although the Government portrays them as outsiders, Tutsis first arrived in what is now Zaire some time after the 16th century. They established their settlement in the Mulenge hills and became known as the Banyamulenge. Later they fanned out to Uvira and outlying villages. The Banyamulenge, often more prosperous than their neighbours, fell victim to President Mobutu's divide and rule politics in 1981. A new law stripped them of citizenship, and with it rendered them stateless. By the time more than one million Hutu refugees fled Rwanda and Burundi in 1994, on the heels of a similar outpouring from Burundi six months earlier, Zaire's Tutsi population was more vulnerable than it had ever been... In recent weeks... Uvira's district commissioner... drew up a list of all Banyamulenge property and land, ordered Tutsis to stop building homes and told soldiers they could take over the houses of those forced to flee... fuelling a new upsurge of ethnic... fighting in eastern Zaire.

...FIGHTING in eastern Zaire has spread death, fear and misery across a vast stretch of territory in the biggest country in Central Africa. The U[N] Security Council was expected to adopt a resolution yesterday authorising a multinational force to halt what[the] Secretary-General... called "genocide by starvation"... But even if the plan is approved, there is no likelihood of early relief for about 1.2 million Rwandan and Burundian Hutu refugees trapped in some of the most inaccessible terrain... Zaire[recently] hardened its tone, stating it would no longer allow the refugees on its soil... Hundreds of thousands of Zaireans are also on the move... The UN World Food Programme warned the world of mass death in the next three weeks without humanitarian aid corridors... [after Zaire's] Information Minister... reiterated... on state television... Zaire's decision not to allow distribution of food for refugees inside its territory. All relief aid for displaced Zaireans must be landed in the capital Kinshasa... [The] head of Medecins sans Frontieres... estimated in Paris more than 13,600 refugees have died in the last three weeks, not including victims of fighting.

...Cholera has broken out at a hillside settlement of about 250,000 Rwandan Hutu refugees in eastern Zaire and could wipe out many within days, a doctor said yesterday. [The doctor], who works with the U[N]-funded agency Doctors in Catastrophic Situations, said the refugees were trapped in the village of Mwenga, 200km west of rebel-held Bukavu... Cholera killed at least 30,000 refugees within weeks after more than one million Hutus fled Rwanda into eastern Zaire in 1994... Aid workers say thousands of refugees have already died... and even if a U[N] force to bring aid came today, many more would be too sick to save.

...Up to 500 unarmed Rwandan Hutu refugees and displaced Zaireans have been killed in a massacre by Tutsi rebels at a camp in Zaire, international human rights group Amnesty International said yesterday. It called for an "immediate international presence" to investigate the killings... "These arbitrary and deliberate mass killings of defenceless civilians are a callous abuse of human rights and should be condemned by the international community. Governments and organisations which are supporting this armed group should take responsibility to ensure that the perpetrators, including their leaders who ordered these killings, are brought to justice and prevented from carrying out further violations,"...

TO OUTSIDERS, African crises seem to spring from nowhere. But the latest tragedy in central Africa has roots that go back more than 400 years. That was when a cattle-herding people called Tutsis consolidated power in what is now Rwanda and Burundi. They became dominant. The Hutus, who preceded them in the area and were the majority, stayed at the bottom of the social heap. Over the centuries, physical distinctions between the Hutus and the taller Tutsis blurred through intermarriage. But the hierarchy stayed. It was reinforced in the 19th century by Rwabugiri, the last great Tutsi king. When Germans – and after W[W]I, Belgians – colonised the region, they took up where Rwabugiri ended. A 1934 Belgian census arbitrarily classified anyone owning more than 10 cows as a Tutsi. Roman Catholic schools educated Tutsis and ignored Hutus. But after WWII, as decolonisation swept Africa, the Belgians did an abrupt about-face. After Hutu riots in 1959, they ceded Rwanda to the Hutus, who proceeded to massacre Tutsis and thousands of others[fled] into exile. In Burundi, Tutsis eventually took control and massacred Hutus. Ethnic clashes erupted periodically in both countries as governments changed hands, perpetuating a cycle of vengeance and violence. The bloodbath that set in motion present events began in 1994 after a plane crash killed the presidents of Burundi and Rwanda – both Hutus. Rwandan Hutus went on a rampage and massacred up to 1 million Tutsis. The Rwandese Patriotic Front, an exile Tutsi army based in Uganda, struck back and seized control of Rwanda. Two million Hutus, terrified of Tutsi vengeance, fled to Tanzania and Zaire. Temporary relief turned into permanent misery as the exiles refused to go home. Refugee camps became havens for Hutu militiamen, bent on taking back Rwanda and in the meantime killing Tutsis... Rwanda's Tutsi soldiers have prevented aid from crossing the border from Rwanda into Zaire... Without massive international help, and soon, aid officials estimate that as many as a million displaced Hutus face death from hunger and disease. In a worst-case scenario, the very heart of Africa could implode, sucking the 30 million people in the region at the intersection of Zaire, Uganda, Tanzania, Rwanda and Burundi into a vortex of violence. In that event, Zaire itself could be ripped apart, setting a dismal precedent on a continent whose borders, largely drawn by Europeans, ignore religious and ethnic divisions that are as indelible as any in the world.

...Rwandan refugees are emerging from the forests of eastern Zaire, saying many more are on their way. But just how many appears to be the critical factor, with the dispatch of a promised international military force to Zaire still hanging in the balance. The U[S] Army, which has been using surveillance aircraft, put the numbers roaming the region at just over 200,000 – a third of the U[N]s' estimate. In Stuttgart, Germany, Western African military leaders struggled to establish how many refugees needed help in Zaire amid signs that interest in the multinational mission was flagging. "It seems now as though more people will favour keeping the status quo and not stepping up the commitment since the situation is starting to take care of itself," one European official there said.

...The trail ran from an obscure north London travel agency, via directors with names leaped for letterheads, to a shady company registered in the Isle of Man... where taxes are modest and the names on the come-and-go register of companies outnumber the 70,000 residents... At the end lay a bus abandoned on a dusty road in Zaire last weekend by fleeing Hutu militia. Inside the bus was paperwork covering \$US5.5 million... worth of arms purchases in 1994 from a British registered company... London newspapers traced [the company] to a man from Kenya who lives in north London and has a travel agency. He apparently left town after the story broke. [Britain's] Government, embarrassed that a British-registered

company apparently brokered millions of dollars of military hardware to perpetrators of genocide, announced an inquiry into arms trafficking by British companies. Documents show the sales continued after Hutu extremists massacred 500,000 fellow Rwandans and the U[N] imposed an arms embargo in April 1994. The... operation apparently consisted of ferrying arms to Rwanda from third countries, including Eastern Europe.

...Zairean rebels surrounded the last town held by Government troops in eastern Zaire, residents and hospital workers said yesterday... Hundreds of troops fighting under the banner of the Alliance of Democratic Forces for Liberation (Congo-Zaire) headed from Beni, near the Ugandan border, to Bunia on Saturday morning. Truckloads of young fighters allied with the rebels also set out toward Bunia singing battle songs and raising clenched fists in the air. The young warriors are called *mayi-mayi* or “powerful water” in Swahili, from the potion they believe will protect them from harm. In six weeks, the rebels have overrun a strip of eastern Zaire north of Lake Tanganyika. Because of the rebel successes, Zaireans and international observers have been taking more seriously rebel leader Mr Laurent Desire Kabila’s vow to topple President Mobutu Sese Seko’s corrupt, 31-year regime. A multinational effort to help Rwandan refugees in eastern Zaire has stalled because at least 640,000 returned home to escape the fighting.

...*World fiddles over U[N] decision while Africa descends into hell...* In Zaire an important African country is disintegrating before the eyes of a disinterested world... [T]he crisis has now reached a turning point – one that would normally trigger a serious American effort to engage the international community and make sure the Zaire crisis does not spin out of control... Instead the U[S] contributed mightily to paralysing the U[N] at this crucial moment by letting its spiteful attempt to oust... the U[N]... Secretary-General... dominate the world organisation while Zaire burned... Petty does not begin to describe this tampering with a continent’s destiny to settle old scores and further personal political ambitions by setting Africans against each other. Divide-and-rule tactics seem not to have ended when colonial rule did... [But] Zaire’s problems are largely of Zaire’s making. The largest responsibility lies with its autocratic, corrupt ruler... The crisis in Zaire became more acute last week [as]... the... rebel forces allied with Rwanda’s Tutsi-led Government continued to advance along a front that now extends more than 300 miles deep into... [eastern Zaire. The rebels met little or no resistance] because... Zaire’s Army units broke and fled town after town... As the fighting eased, people of all ages took part in a looting spree, carting off what the Zairian soldiers left behind on their retreat... Although the disciplined and organised rebels tamed the Zairian Army, they could do little about the looters but occasionally fire into the air to scare them off. Asked about why they fought[, the rebels said]... they joined the Alliance of Democratic Forces for Liberation to oust President Mobutu... The rebels now control enough territory to establish a regional government, and claim they will march all the way to the capital city of Kinshasa. “Zaire confronts two possible futures now,” an African diplomat who knows the country predicts. “The least bad one is that there is de facto partition, with six distinct regions emerging... The other available future is one of a bloody power struggle at the centre and a civil war that will destabilise the entire region.” ...Either scenario – partition or war – will shake the political order of post-colonial Africa and will tempt foreign nations and business interests to resume meddling in internal African conflicts... - 1996

Zaire is a one-party republic, ruled by the Mouvement Populaire de la Revolution (MPR), which is dominated by Mobutu Sese Seko. He selects the Central Committee that makes policy for both the party and the government. Under the constitution adopted in 1978, the president... appoints a National Executive Council to function as a cabinet. There is a National Legislative Council whose 268 members are elected by universal adult suffrage from the MPR’s list of candidates... The only national institutions independent of the MPR are Catholic, Protestant, and Kimbanguist religious organisations. Zaire’s military force, which receives aid from France, Belgium, and the People’s Republic of China, has been used against Cuban-trained guerrillas opposing MPR rule... Zaire’s hydroelectric potential amounts to about one-sixth of the world’s total. Annual production of electricity was about 4,400,000,000 kW-hr in the early 1980s... Manufacturing output is almost wholly for the domestic market and is composed mainly of consumer goods... Dependence on mineral exports at the expense of agricultural products has left Zaire vulnerable to international price fluctuations... Severe malnutrition is prevalent and serious diseases such as malaria, gastroenteritis, tuberculosis, leprosy, sleeping sickness, and schistosomiasis are common. The infant mortality rate is estimated to be about 116 per 1,000 live births; life expectancy, meanwhile, is less than 50 years. Health problems are aggravated by poor sanitary conditions and a shortage of medical personnel in the rural areas.

A visitor coming back to Zaire after 30 years is plunged into a nightmare. In the summer of 1967, the president... was fighting rebels and white mercenaries – and he was winning. Kinshasa had an easy tropical charm. Poor people were merely miserable. Zaire was full of promise, flush with copper and diamond mines, plantations, factories. Elevators worked. You could make a phone call, catch a plane, drive somewhere or float comfortably down the river. Now, after decades of systematic plunder and malignant neglect[, the ailing president’s]... legacy is a moribund non-country that only great skill and fortune can revive. Back then, one zaire note was worth \$US2 dollars, and a carefree traveller could race his Triumph sports car the 240km to the port of Matadi in three hours. Now, \$US2 dollars... would cost 900 trillion original zaires. Matadi would be a three-day drive, if the Triumph could survive the road – and was not stolen at a roadblock. The impact is most dramatic in people’s faces and bodies. A large majority are frail, moving dully as if drugged by misery that defies measure... “The Congolese miracle” was once a humorous term for the myriad means that families used to make ends meet: petty trading, doing odd jobs, growing food, bartering, general hustling. Now there is nothing funny about it. The cooking pot in family compounds still fills, at least part-way, but it takes theft, begging, banditry, prostitution and luck... An outsider strolling... rutted mud streets is followed by every eye, a pocketful of money on the hoof... “I’m a mechanic, but I’ve never seen a pay cheque,” volunteered a man... His eight kids barely eat once a day and cannot afford to go to school... Once the pride of central Africa, Lovanium[University] is an overgrown ruin, kept open by unpaid professors... It seems the whole city is sick. Stinking pools of water breed malarial mosquitoes and dysentery germs. Children are deformed from polio that could have been easily prevented. Even measles kills. Mama Yemo Hospital is its own circle of the Inferno, a filthy complex of wards with many more patients than beds and almost no medicines. People die of Aids not far from the mildly ill. Government doctors, overworked and underpaid, are often bribed for attention. People complain that relatives die because they cannot raise the money to buy priority... In 1967, about 35,000 expatriates worked in Zaire. Now the total is below 4000, and many are die-hard missionaries, retired Belgians, fly-by-night diamond dealers, or hustlers after a dishonest dollar. Zaire’s corruption is unique, one veteran said. Elsewhere in Africa, public projects might cost twice as much because of bribes. Here, all the appropriated funds disappear, and nothing gets built... Senior bureaucrats collect according to the favours they can grant, on down to the lowest rung. If someone wins a court judgment, for instance, he must pay the typist who claims he has to buy a[typewriter] ribbon. Amid the misery and squalor, there are new pockets of opulence. Behind barbed wire and bougainvillea, a new moneyed class – Zairean and foreign – lives in sumptuous villas. The GB Hypermarket sells choice cuts of meat and Dom Perignon champagne, Boutiques at the Intercontinental Hotel offer Italian silk suits and \$US1300 shoes. Whatever happens elsewhere, faithful retainers roll the clay tennis courts and clip the golf greens at the Cercle de Kinshasa. A poshly appointed restaurant there serves a varied haute cuisine. In the old Belgian Quarter downtown, far seedier now with streets pocked and pitted by neglect, other new restaurants offer excellent meals at Paris prices. That is just like the good old days. But the pleasure is gone. Inside, plates are piled high with delicacies flown in that morning from France. Outside, a phalanx of pawing, pleading beggars waits to scramble for a crumpled bill. Three decades... have pushed the poles too far apart, with little left in between. The rich drive navy-blue Jaguars and top-of-the-line Mercedes. The poor cannot afford plastic shoes. Over those three intervening decades, the visitor finds what was once an exciting mix of different ways of life is now a painful abyss between two extremes that may be very hard for anyone to bridge.

...In hilltop seclusion, with an army of dissipating loyalty... President Mobutu... awaits a coming judgment. Will virulent prostate cancer cut him down before his enemy... drives him from power? ...Rebels... daily gain more of the mineral-laced east... Or will the convoluted politics of Zaire deliver some other fate entirely? ...Mr Mobutu's strength is his ability to pit factions against one another in a bitter free-for-all while he hovers above the fray. For this he needs little real power. He only has to stay alive. His rabble of an Army may not be able to defend his capital, but the jungle might. Long neglect of the interior has left Zaire with no roads between Kinshasa and the rebel's widening territory. Now a haggard 66, Mr Mobutu winces when he walks, a stark contrast to the fire-eater who inflamed followers in his early years. CIA operatives were quick to see leadership in the young colonel with hollow cheeks and hungry eyes, a former journalist. With their help, in 1965, he seized control of the chaotic Congo... In a push for authenticity, he renamed the country and its majestic river, illogically replacing the African name Congo with an old Portuguese name: Zaire. Along with everyone else's, he changed his own name... [to one which] translates to "the all-powerful warrior who, because of his endurance and inflexible will to win, will go from conquest to conquest leaving fire in his wake." ...Mr Mobutu imposed his power the old way: he betrayed friends, co-opted enemies, and made pacts he did not keep. He used white mercenaries to crush rebels and then discreet American help to quell a revolt by the mercenaries. Outside help put down repeated assaults on Katanga province (now Shaba), [the rebels'] next target. He excoriated racist South Africans with flaming rhetoric that enhanced his standing at summit meetings, but he accepted their secret support. "We must isolate them," Mr Mobutu thundered to a reporter. "Buy nothing! Sell nothing!" The journalist then noted what the President had offered him to drink: South African grape juice. After the reporter transferred from Kinshasa, he kept tabs through a courageous local editor... but, like many other Zaireans, [the editor] ended up in prison where he mysteriously died. Mobutu pardoned rebel leader Pierre Mulele and embraced him when he came home. Mulele then faced a long secret trial, with regular news bulletins on its progress. In fact, he was shot before it began. Year after year, more opponents were murdered, and the amounts diplomats said Mr Mobutu stole rose towards \$US6 billion... Yet US officials privately insisted that only he could hold together Zaire and prevent bloody madness at the heart of Africa. The answer was similar in Paris. [The French] President... welcomed... Zaire to the club of former French African colonies, even though it had been owned by Belgium. Justified or not, the pragmatism had a purpose. From independence in 1960 until Mr Mobutu ended a string of coups and rebellions – from the short reign of the martyred Patrice Lumumba to [the] Katanga war with the U[N] – Congo was a five-letter synopsis of Africa's worst nightmares. Zaire's 40 million people break down into 250 tribes spread in clusters across an area as big as Europe, with little communication among them. Vast wealth is dispersed in pockets: diamonds in Kasai, copper in Shaba, gold in the east, oil in Kongo territory near the coast. Rather than trying to detribalise Zaire, Mr Mobutu simply made sure that leaders of each power faction had a share of the riches, while he skimmed off the top. He himself is from a tiny minority. Ordinary people have fallen below any measurable poverty line... Kinshasa erupts on occasion. In 1991 and 1993, unpaid soldiers joined tumultuous mobs, and waves of looters picked the city clean. Yet again, France and Belgium sent troops to rescue their own. And, yet again, Mr Mobutu survived. He promoted commanders from different regions, whose foreign bank accounts enforced practical loyalty. He gave opponents a little rope and guarded leeway.

...[the] Zairean leader... amassed a fortune which... came mainly from "looted aid," the *Financial Times* daily said yesterday... The paper said it had been told by officials of the US Treasury and the [IMF that Mobutu's] fortune in the middle of the 1980s had been estimated at \$US4 billion... "Much of the fortune has been spent as the ailing dictator has attempted to prop up his regime," the paper said... Sources close to the President told the paper that Mobutu was continuing to draw money from secret accounts. In 1982, the IMF... was given a detailed report on Mobutu's alleged financial corruption... But in spite of the report, Western countries pressured the IMF into substantially increasing its aid to Zaire...

Switzerland said yesterday that Zairean prosecutors had filed a request for Swiss authorities to freeze the assets of Zaire's embattled President... "As is usual in such cases, this request will be reviewed by the responsible departments [Justice and Foreign Ministries]," a brief Government statement said. The Swiss Foreign Ministry has repeatedly said it would consider freezing Mr Mobutu's funds in the country only if a request came from Zairean authorities. Rebels who are marching on Zaire's capital... have already asked Switzerland to freeze Mr Mobutu's wealth... spread among secret bank accounts in Switzerland... The Federal Banking Commission, the country's top banking watchdog, promised to widen a search for the funds after saying a previous informal check among leading banks had found no trace of any money.

...Swiss banks have found 4.8 million Swiss francs (\$[NZ]4.99 million) in assets held by [the] Zairean President Mobutu Sese Seko or his family after a search ordered by the Government. The funds have been frozen.

...Zaire could have been one of the richest countries in the world. Now it's one of the poorest, thanks to President Mobutu... If Mr Mobutu is forced into involuntary retirement by the rebel forces... it will not be into penury. The President and his family own a property portfolio which includes some of the best addresses in Brussels; a Paris flat handily placed for the milliner who makes Mr Mobutu's trademark leopardskin hats; a villa in the South of France; another in Switzerland, hotels in Spain and South Africa. That might seem like a lot to some, but not to Mr Mobutu. In 1991 he told the magazine *Jeune Afrique*: "I have a flat in Paris and some small properties in France which people pompously call chateaux. I have a villa in Geneva and out of my wife's estate we have allowed ourselves to buy four or five houses in Brussels. Because we are thinking of our children's future. It is not a fortune." Fortune or not, the property is only part of the Mobutu riches. He is said to have shares in a string of European companies. There is a coffee plantation in Brazil. Beside his foreign villas, Mr Mobutu maintained a range of residences around Zaire... Eleven palaces including one with an airstrip big enough for a Concorde... One of the Zairean President's more mundane vices is a taste for wine of the same vintage as himself. In his Portuguese holiday home he has insured himself against a wine drought by amassing 14,000 bottles, no mean achievement for the President of a country where there is just one hospital bed for every 700 people. And at \$US150... a bottle the 1930 port is well over a year's salary for many Zaireans... The great unknown, however, is Mr Mobutu's cash stash. The *Financial Times* has quoted a Swiss member of Parliament who alleged that Mr Mobutu has "several billion dollars" invested in Switzerland. If that is the case and if he is forced into exile, the Swiss banking industry is likely to find itself caught up in another wrangle to rank with those of the Marcos deposits and the dormant accounts of Jews murdered during the Holocaust. Mr Mobutu's fortune appears to have been amassed by three main routes... In 1984 a Belgian report claimed that the Zairean President had siphoned off some 60 billion Belgium francs (roughly \$[NZ]2.1 billion) over 10 years from one of the state-owned natural resources concerns. In a paper for an African Studies Association conference, cited in the London-based *Africa Analysis*, Mr Mobutu and his associates are said to have diverted up to 20[%] of the state operating budget and up to half of the capital budget for their personal use. Little wonder critics claim Mr Mobutu treated Zaire "like his private property." A second route to fortune was provided by Western businessmen looking for chances to exploit Zaire's resources. Stories of corruption abound. Anecdote has it that, for example, one Western company seeking a banking licence in the country was simply informed by the President that a relative needed a "soft" loan of some \$US12 million. The company paid the money into a Swiss account but never got its banking licence. Zairean political folklore tells of a Transport Minister who protested that the \$US75 million he pocketed in one year was merely a modest 10[%] of the contracts he had signed. Those contracts include a deal for electronic equipment for more airports than Zaire possesses. A [third] source of funds for the... regime came from foreign aid of which Zaire has received some \$US8.5 billion over the past 25 years. There is little doubt that much of the money never reached the projects for which it was intended. Britain gave up providing even non-governmental aid some years ago for this reason. "Whatever you did, the money disappeared," according to a British official... Despite such institutional avarice Mr Mobutu's fortune is not what it was. His funding was hit by a collapse in copper prices. The diamond money had pretty much dried up to a few million a month even before the rebels seized the mines... Over the past decade the mounting costs of staying in power have put something of a dent in the Mobutu cash mountain but there is still plenty left, some \$US2.5

billion, according to more recent estimates... With the Government's coffers empty, Mr Mobutu has for years coughed up from his own resources to pay his 15,000-strong presidential guard. Mostly they received about \$US48 a month, a magnificent sum compared to the paltry \$US3.20 given the average soldier – if he were paid at all. The presidential guard had the added bonus of real weapons and real uniforms. His money may not have bought efficiency or fighting ability but it did buy loyalty. The Special Presidential Division is the only unit to put up anything like resistance[against the rebel advance]. Perhaps the biggest drain on Mr Mobutu's fortune has been keeping democracy at bay... The greatest cost was the creation of dozens of fake political parties to sow chaos among the opposition. No one is quite sure just how many Mr Mobutu's money backed, but it is a good slice of the 450 parties which have sprung up since 1990. A year ago, before anyone could have imagined rebels at the gates of Kinshasa, Mr Mobutu looked to have every chance of creating enough chaos and division to win a presidential election. Now one of Africa's long reigning dictators looks about to depart. He will leave behind a looted country. According to the most recent figures Zaire's foreign debt amounted to \$US9.6 billion. In recent years there has been little effort at repayment. That raises the question of why Western powers tolerated Mr Mobutu for so long. According to one old Zairean hand, the explanation is straightforward. "He simply happened to be a politically important, or considered important, person in Africa and so he was allowed to get away with it."

...Mobutu... is... one of Africa's most enduring strongmen. Western powers supported him as a Cold War bastion against Soviet communism... while... he was... plundering what is potentially one of Africa's richest countries...

NOT a lot has changed in central Africa. More than 100 years ago, Joseph Conrad came up the Congo River, as the Zaire was then called, before writing *Heart of Darkness*. Horrified by the savagery and brutality of the Belgian King Leopold's theft of colonial ivory and rubber, he described it as "the vilest scramble for loot that ever disfigured the history of human conscience." But he didn't reckon on... Mobutu, the opportunist who began his adult life by robbing a missionary library, then went on to rob an entire nation. In the heart of darkness, it's hard to find a good dentist, never mind a hairdresser. So Mobutu flew to Paris for the first and had the second pop down from New York every fortnight. And before going shopping, he'd ask the central bank to transfer up to \$30 million to his personal account... Zaire... should be one of Africa's most vibrant economies – it has enough hydro-electric and agricultural potential to power and feed all of Africa. In particular, he wrecked one of Africa's most promising mining industries – he skipped with the diamonds, one of his sons pocketed the gold and others in the clan got the cobalt. Services for his people caved in as Mobutu pushed a nation of 45 million backwards to a twilight zone. The sick don't get to hospital unless they pay up-front and schools are without teachers or books. Life expectancy is only 52 years, compared to 63 in South Africa... average earnings have gone backwards from \$275 a year in 1990 to \$156 today – which is reckoned to be the equivalent of only 6[%] of what they were getting when the Belgian colonists packed up in 1960. Inflation is berserk – 10 years ago \$1 was worth about the same as one zaire; today it is worth more than 155,000 zaires. The jungles have reclaimed 85[%] of the 136,000km of road existing when the Belgians left. Mobutu so punished the nation that a European diplomat declared: "Zaire does not exist as a State entity any more." Despot and survivor, [Mobutu] enshrined only one State institution – corruption. And he instilled only two values – greed and cynicism. Mobutu made the national treasury his own piggy bank and he boasted about his ranking as the world's fifth wealthiest man... At one stage Mobutu was having banknotes printed in Germany and airfreighted to Kinshasa's Ndjili International Airport from where they were delivered by helicopter to his luxury yacht on the Zaire River (to which he had confined himself for two years after a witchdoctor's warning that he should not set a foot on dry land). While the rest of the country went without, he drunkenly indulged his birthplace, Gbadolite, where, in the year he took control of Zaire, only 1700 people lived. Today there are 37,000, which hardly warrants an international airport. But they have one – to take the Air France Concorde when Mobutu chartered it for family outings and for the daily Boeing 737 service to Kinshasa. There is a luxury 100-room guesthouse and the best facilities for which a village could wish – water, electricity, telephones, hospitals. When a lone junior diplomat carrying one overnight bag arrived recently at Gbadolite he was met on the tarmac by eight stretch limousines... In the first 10 years of Mobutu's regime, only 41 of 212 senior officials held high office for more than five years and there were enough executions to stifle complaints. In time, all 14 officers who helped stage his 1965 coup were killed, jailed or sent into exile... If the Mobutu mix of strokes and pokes didn't get the desired result, the dictator president had brutal security agencies with names such as SNIP and SARM to terrorise the nation as they enforced his will. And, like the military, when he didn't have liquid cash to pay them, they were sent out to pillage whole towns at a time. ZAIREANS looking for somewhere to blame for the Mobutu excesses could try Washington. Paris, too. At age 25, Mobutu quit the army with the rank of sergeant-major. As a journalist he went to Europe where, in 1959, he befriended... [a CIA] operative... who would make him king... These were dangerous times. Washington and Moscow were dug in for the Cold War... Certain that Zaire was ripe for an East-West stoush, the CIA assigned [the operative] to Kinshasa. One of his early cables was alarmist: "Embassy and [CIA] station believe... anti-West forces rapidly increasing power in Congo... may be little time left... to avoid another Cuba." Washington fell for it – it made... [the operative's advice that the incumbent president,] Patrice Lumumba... be replaced an "urgent and prime objective" and [the operative] was given a \$100,000 cheque to see that it happened. Mobutu rejoined the army, from where he consolidated the power base he needed to overthrow and murder Lumumba. And so the Cold War came to Zaire where 70[%] of the non-Communist world's cobalt and a stash of other minerals were locked in the ground. Though he styled his leadership on Nicolae Ceausescu in Romania and Kim II Sung in North Korea, Mobutu became the West's main man in post-colonial Africa, which meant there was no international criticism of his excesses; ridiculous amounts of aid money were thrown at him.

...In Zaire international mining companies have begun negotiating with the rebel leadership instead of... [the Government. O]ne mining company has already signed three major agreements with the rebel force. "The rebel takeover of Zaire knows no boundaries. International businessmen are the latest targets. Deals are being done for huge sums of money. Contracts to exploit Zaire's rich mineral and metal reserves mean a stake in the emerging market for businessmen, and, for the rebels, new opportunities for the Zaireans who've welcomed their offensive... The deals being struck here aim to open up some of the richest resources in the world. Vast amounts of money will change hands but mining consortiums are confident of a return on their investments." "Any project in Africa basically is a risk. However, you've got[to] balance up the scale of the projects that we're talking... about against the extent of the risk... [W]e feel the risk is worth taking[," said a spokesperson for American Mineral Fields.] "Zaire's mining infrastructure has been eaten away by state-run corruption and neglect. Copper, zinc and highly-valued cobalt used to be extracted... in Kipushi. Production all but stopped four years ago. So much profit had been looted by the Government, the mine and its 3000 workers couldn't function. Now there's hope that things can change for the better." "In the future I hope that... guys who... come into money in Kipushi... improve this area... in order... for people... to get a good life in our town[," said the Kipushi Mine Manager.] "...It will take years to restore this mine to proper working order. Only then will one of Zaire's, and one of the world's, greatest assets begin yielding its treasure... Copper, cobalt and zinc are all around... here in Zaire's rich soil. This disused mine could soon begin producing valuable metals again if the funds promised by new investors to Zairean rebels are forthcoming..."

...Although declining in importance, Zaire remains one of the world's top 10 diamond producers... The diamond group De Beers is holding talks with the rebel forces controlling most of eastern Zaire. The company[is] heavily involved in the country's gemstone industry... The bulk of Zaire's diamond fields are now either in rebel hands or within striking range of rebel forces. A De Beers source said this week that looting by retreating members of President Mobutu's... Army was of greater concern than any possible plundering by the rebels... De Beers has an agreement to buy and market the output of the country's biggest mine, Miba... which fell to the... [rebels,] now known as the Alliance... last week. It also has an indirect 4[%] stake in the mine, which is 80[%] owned by the Zaire Government. Security personnel are thought to have fought off looters at the mine in the past week, but De Beers remains concerned for the security of all its Zairean facilities. Aside from buying Miba's production – which

accounts for about a quarter, by value, of Zaire's \$80 million-odd annual diamond earnings – its offices buy up production from independent miners, who range from “bucket and spade” operators to more professional outfits. There is also widespread illicit diamond-related activity, as there is in neighbouring Angola... [Speaking of Zaire's neighbours.] Zambia has taken another major step in the privatisation of its copper mining industry by selling two key mines representing more than half of the... country's metal output. The state mining company Zambia Consolidated Copper Mines announced it had sold its Nkana/Nchanga mining metallurgical complex... to the Kafue Consortium led by Avmin Ltd of South Africa, and]... its Chambishi mine to Ivanhoe Capital Corp.

...Zambia's opposition, angered after police were reported to have shot and wounded[their] former President... urged supporters yesterday to remain calm while they planned their next move. [The former President], aged 73, told BBC radio he was slightly wounded when riot police used teargas and then fired live ammunition at his car in the central Zambian city of Kabwe where he had planned to hold a rally... [The 73-year-old], one of Africa's elder statesmen, led what had been the former British colony of Northern Rhodesia from independence in 1964 until multi-party elections in 1991 that were won by [the current President. The current] President... a former labour union leader, barred [the statesman] from challenging him in elections last year in which he was re-elected... [The statesman]'s United National Independent Party (UNIP)... led a boycott of the poll and has embarked on a programme of civil disobedience. The campaign erupted into violence two weeks ago when UNIP supporters clashed with police in Lusaka. Both sides accused the other of starting the trouble... [Incidentally,] the Zaire Government... [- which is r]eeling from a series of battlefield losses... [-] has accepted a U[N] ceasefire proposal. But rebels, on the verge of capturing the provincial capital of Kisangani after weeks of fighting, may not be ready to put down their arms right away... In New York, U[N] diplomats who spoke on condition of anonymity said the consensus was that Zaire was desperate to stop the fighting, while the rebels would likely take Kisangani first and then decide whether there was anything to talk about... Refugees fleeing the rebel advance reported that scores of people were killed at the weekend when rebels took over... Zaire's largest refugee camp... in Tingi Tingi... Aid workers fled last week, leaving only rebel fighters to help[with the distribution] of food.

...Rebel leaders appeared determined to block a massive U[N] airlift of Rwandan refugees in Zaire, insisting yesterday that impassable Zairean roads be fixed and used instead. The U[N] refugee agency had hoped to begin Africa's biggest airlift over a week ago by starting to fly some of the 100,000 refugees from squalid camps near eastern Kisangani to the Rwandan border and then on to their homes by truck. But Zairean rebels have repeatedly delayed the effort... “You shouldn't link repatriation with rehabilitation of roads,” said a U[NHCR] spokesman... “To link the two means to postpone the repatriation for many, many months.” The rebels first complained that an airlift would spread cholera. They then commandeered U[N] jet fuel and may have sparked a food riot... on Saturday... [T]he rebels want the U[N] to airlift only the sick and exhausted, and send the majority of the refugees by road to Rwanda, more than 480km east of the camps outside Kisangani. Torrential rains have turned the narrow, dusty road from Kisangani to the border town of Bukavu into a quagmire. Before trucks could pass through, the roads would require extensive repairs, a benefit to rebel-held areas. “It's simply not feasible,” said [the UNHCR spokesman], adding that it would probably cost more than the \$US50 million airlift. He said refugees were already dying at the rate of 60 a day from malaria, dysentery, pneumonia, cholera and malnutrition... Yesterday, international aid agencies resumed food supplies to the refugees trapped by the standoff. The effort was called off on Saturday, after hundreds of Zaireans stoned three foreign aid vehicles, and held six employees for 90 minutes. None of them was injured. The 100,000 Rwandans... were among one million who fled their country in 1994... The mainly Hutu refugees had feared retribution from the new Tutsi-run Government if they returned. Exhausted by illness and worn out by a five-month march of up to 600km as they fled rebel advances, they now appear willing to go.

...The U[N] airlift of... refugees... from Zaire has passed the 30,000 mark but refugees are still dying in their dozens both in Zaire and Rwanda, aid officials said... Over 40 supposedly fit people have died at the Runda transit camp in the past five days, even though severe medical cases are flown to a hospital in Gisenyi, 70km west, where the charity Medecins Sans Frontieres... is operating... Concern remains for tens of thousands[of refugees who allegedly have disappeared] in eastern Zaire... Meanwhile, the rebels flexed their muscles before planned talks with President Mobutu Sese Seko's shaky government, grabbing another town in mineral-rich Shaba province... Rebel leader Laurent Kabila[now] controls about a quarter of Zaire... and his supporters already call him “president”. On Thursday, Kabila and Mobutu aides agreed at an African summit in Togo to hold their first negotiations in the next few days. Both sides accepted the principles of a ceasefire and negotiations, a summit statement said. But the rebels have clearly laid down their agenda: No prior ceasefire and the negotiations must be about ending Mr Mobutu's 32-year-reign.

...The U[N] was to mount another aerial search yesterday for 85,000 Rwandan refugees, missing in rebel-held Zairean territory... [The] Zairean rebel leader... arrived in Kisangani yesterday, saying he intended to resolve what he called the “little problem” of the missing Rwandans... Questioned about accusations by [the] JUN Secretary-General... that the rebels had adopted a “slow extermination” policy against wandering Rwandan refugees, opting to let them starve to death, Mr Kabila said the charges were “gratuitous.”

...A U[N] team yesterday found up to 55,000 Rwandan Hutu refugees missing from a camp in the jungle of eastern Zaire and was blocked by rebels from a wider search. Not a single Rwandan refugee – dead or alive – was to be seen at Kasese camp, 25km south of Kisangani city... Tutsi-dominated rebels sealed off the Kasese and Biaro camps... from aid workers and journalists earlier in the week, saying they were conducting a military operation. Rebels agreed to allow the U[N] mission to inspect[the camps only after [the] JUN Secretary-General... said he was “shocked and appalled by the inhumanity” of their action which, he said, was killing refugees by starvation. Aid workers had feared that many of the 80,000 Rwandan refugees south of Kisangani had fled because of fighting in the area on Wednesday between rebels, local villagers and refugees. Zairean villagers said on Thursday that[the] rebels had killed hundreds of Rwandan... refugees at Kasese and a battle between rebels and refugees accompanied the slaughter... “They killed many, many refugees – hundreds. There was lots of shooting all morning. They used a mechanical digger to bury the bodies,” a Zairean farmer told Reuter... The Hutus arrived at Kasese and Biaro in mid-March after six months trekking over volcanic rock and through thick bush and jungle in a vain attempt to flee the Tutsi-dominated rebels.

...Aid officials and journalists[say they] saw hundreds... of Rwandan Hutu refugees... with gruesome wounds at Biaro camp... after rebel soldiers and local Zaireans attacked it... [However, the rebel] leader... dismissed the reports as “total nonsense,” saying Rwandan Hutu militiamen among the refugees attacked villagers and rebels intervened to stop the fighting.

...rebels have been killing Rwandan refugees... the relief agency ...MSF... said in a report... “Large-scale killings of refugees have been taking place in the Bukavu-Shabunda region during the recent past,”... adding that the killing was continuing... “These killings do not take place in the context of combat. All refugees are considered to be enemies and therefore targeted, including women and children.” ...According to statistics of the U[N], which has also accused the rebels of massacring refugees near... Kisangani, more than 300,000 refugees from both Rwanda and Burundi are roaming Zaire or have died. But the Nairobi-based Rwandan refugee advocacy organisation said yesterday that as many as 600,000 refugees had “disappeared” in eastern Zaire, charging that widespread genocide had occurred there “to the international community's total indifference.”

...SURVIVORS of an attack on a camp in northwestern Rwanda in which 271 people were killed said Hutu rebels came at night and started chopping up their victims... 227 were wounded... mostly women and children and most bearing horrific wounds... with limbs almost severed and fingers missing, suggesting they had tried to protect their heads... One survivor, whose son was hacked to death, said: “They came very quietly while we were sleeping and we had no chance to escape...” ...The ethnic Tutsi refugees from the neighbouring Democratic Republic of the Congo were killed at Mudende camp, about 120km northwest of Kigali... The camp, set in the grounds of an abandoned university, was home to around 6000 Tutsis... The UN refugee chief... strongly condemned the attack... and a spokeswoman called the attackers merciless... Mudende's residents

had fled the former Zaire after hundreds of thousands of Rwandan Hutus arrived in the area. "The people in the camp are not Rwandans... They were chased out of the Congo because they were Tutsis. They were killed here because they were Tutsis." ... "There were also some Hutus in the camp, but they were not attacked." ... About 80 Rwandan soldiers guarding the camp were unable to do much... The insurgents had kidnapped more than 50 camp residents to use as protection as they fled back towards the Congo, said survivors... It was the second attack on Mudende since the killing of 148 people... by suspected Hutu rebels in August... [Last week, more] than 300 people were killed when a gang of Hutu rebels attacked a jail in north-western Rwanda in a bid to free hundreds of their colleagues...

Rwanda put on trial yesterday a former policeman and businessman accused of being one of the ringleaders in the 1994 genocide of the Tutsi minority masterminded by Hutu extremists... [Ironically, the policeman] was born a Tutsi but using a Rwandan custom he converted to become a member of the Hutu tribe... Rwanda has started eight trials so far, of which six have been adjourned or postponed. In Kibungo on January 3 two defendants were sentenced to death.

...[the young man] knows precisely why he is being held in a foul, densely packed room with no beds or lights deep inside the prison at Gitarama. "They say I was in a gang that was killing children," he said... "It is not true," he declared. "I stayed at home." Wherever he was, [h]e... was 15 at the time. But like the 47 other boys crammed on the floor in the dismal juvenile ward at the... prison and about 2200 youths incarcerated in other hellish jails across Rwanda, he is being charged with committing acts of genocide. Rwanda's agony as it grapples with the legacy of the 1994 ethnic slaughter and civil war thus has a new horror: For the first time in known history, children are being held accountable for mass murder. "You're not talking about small infractions," said... an official with the... UNICEF. "You're talking about children who killed 10 or more people. No child has ever been charged with crimes against humanity." ...UNICEF has built separate wards for juveniles in nine prisons to protect them from rapes, beatings and other abuses. It is a bitter first for humanitarian groups known for feeding and schooling children... But after fierce internal debate, UNICEF officials decided they had no legal or moral grounds to seek blanket amnesty for minors... [However, c]hildren who were younger than 14 during the genocide will not be held legally responsible for their crimes... UNICEF will train several dozen judges, prosecutors and investigators in juvenile justice and children's rights. It will also train and pay for defence lawyers for accused youths, as well as lawyers to represent their victims... For many youths, the choice was to kill or be killed. Some youngsters followed their parents in frenzied machete attacks on former friends and neighbours. But others led some of the savagery, hunting Tutsis in deadly packs... The young defendants invariably deny culpability or insist they forgot what happened. Countless others, the survivors of genocide, can't forget the atrocities. They are tormented day and night by searing images of pain and loss. "[98% of Rwandan children say they'] saw their parents tortured, their mothers raped, their fathers hacked to death, their sisters nailed to trees," said... [the] head of the National Trauma Centre...

Unicef officials said they would... pull out their staff[from Zaire] after... armed men wearing rebel uniforms... attacked... [f]ive aid workers at a house in Goma close to the headquarters of [the] rebel leader... leaving one hospitalised... It was unclear who was responsible for the "vicious" attack... However, the U[N and the] rebel forces, who control most of Zaire and are advancing on the capital, Kinshasa, have disagreed frequently and fiercely over the treatment of tens of thousands of Rwandan Hutu refugees... Aid agencies... fear rebels are hunting down and killing the refugees to spare the risk, expense and trouble of repatriating them to Rwanda.

...THE WEEKS OF DENIAL FOR Africa's most durable dictator... finally came to an end on Thursday, when his three top generals asked for an urgent meeting. The trio was uncharacteristically blunt. They told Mobutu they could no longer protect him or the capital from the approaching rebel army... and that if Mobutu valued his life he should flee. A commander had driven to the front east of Kinshasa that morning and concluded that government soldiers would not fight to save Mobutu's crumbling regime... [Furthermore,] U.S. intelligence sources said that throughout last week top army commanders were calling [the] rebel leader... to pledge their allegiance... After a few... hours of procrastination, Mobutu... accepted the harsh but just verdict of history... The stiffest resistance... [to the Alliance] came not from the Zairian army but from the Angolan rebel group UNITA, led by... a cold war ally of the U.S.'s and a great friend of Mobutu's... But on Friday they too bowed to the inevitable and headed home.

...As [the rebel leader] arrived... in Kinshasa to take charge after his guerrillas toppled [the] veteran dictator... gunmen in uniform killed two Frenchmen, a French diplomat said. The identities of the attackers and their motive were not clear. [However,]France was a close friend of [Mobutu, and r]esidents say there has been an undercurrent of anti-French feeling in Kinshasa in the final days of his... rule. Rebel spokesmen had sounded warnings of a plot by diehard [presidential] loyalists to start killing foreigners to provoke intervention by their Governments.

...Across Kinshasa, slowly regaining a semblance of normality after... rebels marched in at the weekend, the pattern is... a... mix of innocent celebration and more sinister score-settling. In the main market place, a suspected member of [the] once-feared Presidential Guard is beaten to death... In another corner of town, a mob strips and beats a woman accused of working for the man who dominated Africa's third largest nation for three decades. Passing rebels intervene. Elsewhere, groups of sullen young men face an uncertain fate... [R]ebel soldiers bring in one group of up to 20 Rwandan males in their 20s – from Kinshasa's main Mama Yemo hospital. They include amputees, though none has fresh wounds. They are suspected members of Rwanda's former Hutu Army, which fought alongside Mr Mobutu's soldiers. In one incident, young rebels [who 'seem barely 16'] club suspects with rifle butts and threaten them with execution. Older brothers in arms intervene and restrain them – for the time being. But for many in the city, impoverished by three decades of Mr Mobutu rule, things can only get better.

...Beaten bloody, prodded by kicks and lashes with an ammunition belt, the man closed his eyes, spread out his arms and cried, "They're going to shoot me." Seconds later, a rebel fighter pulled the trigger of his AK-47, blasting four or five bullets through the man's back and out his chest. The summary execution – quick and brutal – showed that [Zaire's] rebels are willing to set their own laws when it suits them. In addition to the execution witnessed by four journalists, another man was shot to death in a similar manner at the same time, and a stray bullet killed a boy looking on, witnesses said. Accusations of... atrocities have dogged [the] rebel... forces throughout their seven-month drive across Zaire... Confronted with yesterday's summary execution, a senior official of the rebel alliance dismissed it as propaganda at first... Told that western reporters had eyewitnessed the execution, he became defensive. "Our policy is an economy of violence. We've said it from the start and we say it again today... [90%] of the country was liberated without violence."

...THERE is a fire in the heart of darkness. And it's burning a man alive – you can see his shrivelling organs, smell his frying flesh. At the edges of the bonfire are the stones that broke his bones... [One stone-thrower says,] "We beat him and we threw stones but he wouldn't die – so we put him on the fire. These people must be punished. I'm very glad to take part in this because it's an example to the people... it's a good way to change their mentality." Liberated Kinshasa jars the senses. Plumes of acrid smoke rise from the burning car tyres that fuel the incineration of a hundred or more soldiers loyal to the runaway dictator... Only gunshots halt the mindless looting of the luxury homes of the Mobutu clique and its hangers-on. People are starving but broken jars of honey and jam dribble down the steps of the ransacked home of the army chief of staff... Around him were families who could afford neither milk nor bread, but rolling in the general's gutter are bottles of Moët & Chandon, Laurent Perrier and Chivas Regal. Like all who had their snout in Mobutu's trough, the general fled long before the rebel army... made its spectacular march into the city... Kinshasa welcomed the rebels with jubilation and relief... [The rebel leader] now is ensconced in the P[M]'s residence and dozens of his staff have taken over the Hotel Inter-Continental, which is half-owned by the Zairean Government. They are talking lots but saying little. Kinshasa loves its liberators. For now, jubilation blinds the people to any notion that there might be a dark side to the rebel force that has tramped from the jungles of far-away eastern Zaire, chanting a shallow mix of Marxism and the free market, and bringing an almost puritanical zeal to a downtrodden, lackadaisical city in which many know only corruption as the way to get ahead.

...[the] Zairean rebel leader and newly proclaimed head of state... may look like an affable family man, but his easy-going manner hides a steely determination and an unbending will to power. The stocky 56-year-old with... a perpetual smile needed only seven months to push one of Africa's mightiest dictators to the edge... His 50,000 man Alliance of Democratic Forces for the Liberation of Congo-Zaire (AFDL) form a highly motivated and disciplined army, and he is extremely popular in the "liberated areas" where he is hailed as a hero... [His] key role could hardly have been foreseen in the 1960s when he fought the then Lieutenant-Colonel Mobutu as a guerrilla leader. The Latin American revolutionary leader Che Guevara, who visited... [the guerrilla leader at the time,] described his men as "idiots" who were only interested in getting rich... However[, the rebel government has]... inherited... a \$US14 billion... external debt...

The... ideology of the [rebel alliance]... is sensible enough – anti-corruption and replacing existing... state agencies – until the alliance reveals its plans for a Chinese-style spy network across all levels of the community. A spokesman for the rebel Information Ministry... told the *Washington Post* last month that rebel groups would be installed in all areas of life: work, community, education, sport and the like. At least one person in each group would be responsible for security, that is identifying the "enemies of change" who he describes as the corrupt and the corruptible. Agents would also seek to "discover enemies within groups, survey the conduct of visitors to the group and report suspicious activity." [The rebel leader] is a charismatic – if shallow – speaker who appealed easily to the anger of Zaireans towards Mobutu... In the 1960s, he studied in France and in East Germany, and campaigned against the Mobutu regime. As a leftist militant in the 1970s, he successfully funded his operations by having a ransom paid for a group of American students he and his followers kidnapped and held for more than 60 days... He claims to have abandoned his Marxist past, but, as he won control of great swathes of Zaire on his way to Kinshasa, he banned all political activity and tightly controlled radio and newspapers. He has also argued vehemently that he will not share political power. And when a young man attending one of the Alliance re-education seminars asked why other political parties were being outlawed, the rebel answer was blunt: "We don't think these parties are working for the population." ...[a] respected Ghanaian commentator on African affairs... [says]: "The record of rebel movements shooting their way to power is deplorable. Look at Sudan, Somalia, Liberia and even Uganda. Rebel movements simply split into factions... Within six months, people... start to complain and then the rebel leaders... feel that it's unfair to be criticised and then they... start repressive measures." ['Ghana was once hailed by the World Bank as a show-case for its plans, but now Ghana's residents are worse off than ever before.'])... The Argentinian revolutionary[who] went to Africa in 1965... says: "...Nothing leads me to believe that [this rebel leader] is the man of the hour. He allows the days to go by without worrying about anything other than political in-fighting and is too addicted to drink and women..." ...So, into the heart of darkness [the rebel leader] steps... He says he has a light. Time will tell if it's a candle or a blowtorch... Detail of the conduct of [the rebel leader's] war is not known because, unlike all sides in the Gulf crisis and the recent Balkan wars, [he] steadfastly blocked news coverage. The U[N] is attempting to investigate allegations of horrendous atrocities but, so far, [he] has blocked it, too.

...An U[N] human rights investigator received information on about 134 massacres of Rwandan refugees in the former Zaire carried out by forces loyal to [the new] President... according to a report released yesterday... It also said serious human rights violations and killings continued in the new Democratic Republic of the Congo... [(DRC). By the way,] Switzerland has frozen more bank accounts belonging to... Mobutu... months after its banking watchdog declared the matter closed.

...a Johannesburg Sunday newspaper has claimed... [that] South African secret service agents helped... Mobutu... smuggle diamonds and \$58 million in cash into South Africa, and recruited mercenaries for a counter-coup against the man who toppled him.

...Mobutu Sese Seko... died in Rabat yesterday after a long battle with prostate cancer... A diplomatic source said Mobutu... a Catholic, was expected to be buried in Rabat's Christian cemetery. But a minister in... [the DRC] Government did not rule out his burial in his home country... [The Moroccan king had] allowed him into Morocco on humanitarian grounds after Mobutu quickly found after being ousted... that an ex-President with a dictator's reputation rapidly lost friends. - 1997

[A new] rebel army... composed of 19 battalions, with about 15,000 soldiers... [is] heading towards Kinshasa... The Rwanda News Agency said yesterday that the rebel leaders had repeated their demand that President Laurent Kabila stand down. "Kabila should quit, or we will capture him alive,"... a... commander... of the... Congolese Movement for Democracy... told a rally... in the eastern town of Bukavu...

President Laurent Kabila struck an uncompromising note on the eve of moves to end Congolese conflict, urging his people to prepare for a military solution against... [the] rebels... "We must prepare for a long war which should end where it started." ...The capital Kinshasa was meanwhile on the brink of a food catastrophe, with supplies for its over five million residents blocked at port and international efforts for a food airlift delayed by fears the planes might be shot down. Returning to the capital yesterday after an absence of about two weeks, Mr Kabila played down regional... efforts... to pursue... peace... with [the] rebels, who are backed by... Rwanda and Uganda... Defence ministers from seven African nations are due to meet today in the Ethiopian capital to discuss the conflict[, although]... Zimbabwe, Angola and Namibia have[already] sent troops to prop up Mr Kabila's beleaguered Army... [Mr Kabila] accuses former allies Rwanda and Uganda, who helped him to topple... Mobutu Sese Seko last year, of turning against him and invading to back rebellious ethnic Tutsis. Rwanda denies involvement this time but insists it reserves the right to intervene in the interests of its security. Uganda admits having troops in its neighbour but only in pursuit of Ugandan rebels.

...Five tourists have been killed after rebels snatched 15 from a group of gorilla watchers... The deaths occurred during an apparent rescue attempt by Ugandan armed forces, a police spokesman said... Six or seven people were rescued but at least three are feared still in rebel hands. They had been part of an international tour party of more than 30 people whose camp near Uganda's troubled border with Congo was over-run by about 100 Rwandan Hutu rebels early yesterday... A N[Z]er was rescued but it was not known early this morning if the other two Kiwis in the group were dead or alive... [O]ne of the dead is believed to be an American. As well as two other Americans and the N[Z]ers, the party was known to have included five Britons, one Canadian and an A[US]n... Just hours before news of the deaths, Uganda had pledged to begin a massive hunt in the Bwindi Impenetrable Forest National Park in the remote south-west.

...The jungle haven of the rare Ugandan mountain gorilla took on the shape of a horror movie when tourists captured by Hutu rebels were marched through the tranquillity to their deaths. During the terrifying single-file trek towards the Congo border the... women who were having trouble keeping up with the group... including... N[Z]ers Michelle Strathern, aged 26, and Rhonda Avis, 27, were... picked off and murdered. Their bodies, mutilated by machetes and clubs, were later found by survivors... "...It looked like one had been raped before being killed." ...Rhonda Avis' husband, also 27, survived the nine-hour ordeal that began when as many as 150... rebels streamed down the hillside and into campsites... on Monday. A Ugandan game warden and three rangers were shot dead when they fought to stop the rebels, who were armed with automatic rifles, machetes and spears. Despite earlier reports, there was no battle with Government troops... Messages left on the bodies by the killers read, "Americans and British, we don't want you on our land. You support our enemy." ...The survivors were freed at the Congo border and given a letter containing a chilling warning – next time no one would be left alive... As Mr Avis, who worked at a London bank, prepares to bring his wife's body home, international pressure is mounting to bring the killers to justice.

...To [a] former Aucklander... his wife Rhonda was not just a best friend and partner, but a dedicated travel companion who shared his passion for seeing the world. The couple... [who] met at the age of 16 and wed seven years ago... will fly together one last time when... [he] brings his vivacious young wife's body home... The Deputy British High Commissioner in Kampala... told the N[Z] *Herald* last night that... [the] former Glenfield man... was extremely distraught after a horrific ordeal, but was holding up well... The British High Commission was looking after him

and treating him as a British citizen. Back home the families of... the... N[Zers] killed... are trying to come to terms with the brutal murders... Rhonda's... mother... [r]ecently... asked her, 'Aren't you sick of travelling?' Her answer was, 'Never'...

Ever since Hamiltonian Doug Kear disappeared in the D[RC] in August, travellers have been told to avoid the southern and western border region of Uganda. But the trip to see the mountain gorillas in Bwindi Park was still thought safe... [The NZ] Ministry of Foreign Affairs keeps two lists of countries to warn travellers about. [However, a s]pokesman... said... travellers did not make extensive use of Foreign Affairs advice, because they did not think of it, or because so many headed for places like Africa from a base in London.

...Why do people risk their lives to go into the remote African bush in the hope of seeing gorillas? ...The jungle-clad African volcanoes on which two N[Z] women lost their lives this week are among the most difficult places in the world for western tourists to reach. My husband and I made the journey from the Kenyan border by a slow, bullet-ridden train, and by hitching rides on the back of laden trucks and utes over pot-holed dirt roads. The guards at the borders and checkpoints were often young with thong sandals on their feet but powerful weapons slung over their shoulders. Some were helpful, others were bullies who helped themselves to whatever produce vehicles were carrying. We were amazed that no one tried to rob us and tip us over the side of the road, for we would never have been found, but at the time we carried a sense of invincibility or we would never have continued towards our goal. That goal, to sit with a family of mountain gorillas, is one of the most romantic and challenging for any traveller. Only a few hundred of these breath-taking creatures remain in the Virunga rainforest, which covers a few hundred square kilometres straddling the borders of Uganda, the D[RC]... and Rwanda... but only four families will allow humans near them. Visiting times are restricted... [and i]t takes an average 30 to 45 minutes to track down one of the families. (Most of the others charge into the bush screaming upon seeing humans.) ...We spent an hour and a half with the gorillas. That might not seem long considering all the effort and expense it took to get there – and then back to civilisation... – but it was an experience that will stay with us the rest of our lives. In that short time we could see how humans are only one step away from gorillas in evolution. They are more human than... us...

People who have seen the apes speak in awe about the experience. Given this demand, there is no incentive for the Ugandan tourist industry, which charges around \$180 a person, to put people off with stories of danger... The region... is a fault line of conflict. Guerrilla groups, like the Interahamwe who are accused of carrying out this week's killings, roam its length intent on destabilising the Governments of Uganda and Rwanda... Two weeks ago... one senior military officer I met... said... "We have chased these people deep into the Congo." The "chasing" was in reality an invasion deep into neighbouring Congo launched last August by the Ugandan and Rwandan Armies. The move has set off a chain of events that had brought seven other African countries into the fight... The possibility that... the Ugandan and Rwandan [Armies]... might topple Congo's President Laurent Kabila... prompted Angola, Zimbabwe and Namibia to send military forces to Kabila's aid. Suddenly a war that was being fought over guerrillas in the border region has escalated into... the biggest in the history of Africa. The bulk of the Interahamwe and others were driven further away. But it has been almost impossible to eradicate them all... The rule of thumb is that it takes at least 10 regular soldiers to effectively control one guerrilla fighter. The Ugandan Army is too stretched to commit that number of troops... The name... Interahamwe... originally means "those who work together" – a euphemism that has come to mean kill rather than work. In 1994 the Interahamwe was behind the slaughter of around 800,000 people... in Rwanda. Its organisation of the genocide had been meticulous: killing that number in just over three months meant they needed to slaughter about 10,000 a day... An international court has been established to try those implicated. But most of the ringleaders are still at large, they show no remorse and are busy organising the next round of killings... But why target foreigners...? Simply the death of foreigners attracts the attention of the world.

...Two of the rare Rwandan gorillas have been killed by militiamen. [Our correspondent] looks at what the future holds for the endangered apes and tourism... We are at an impromptu tourism seminar at the foot of the magnificent Virunga chain of volcanoes on the border between Rwanda, Uganda and the Congo... "...I'm telling you, you have to go ape," [a]Johannesburg businessman... exclaims... I cringe and want to bury my head... Going ape is how many describe what happened... in 1994... It's a faux pas, but it's the kind of adrenalin-fuelled enthusiasm some feel after tracking a family of gorillas in the bamboo forest[, and]... it carries a clear message as well – the gorillas could save this war-torn country. But there is a lot of competition for this eco-tourist treasure... If not for the civil war, Rwanda would now be one of the world's prime tourist destinations. When the Rwandan Government drew up its Vision 2020 in 1997 for the transformation of Rwanda into a modern player in the world economy, tourism did not even feature, although this was quickly rectified with a redraft... A tourism promotion campaign should start with the gorillas, that is plain. And, in our globalised world, simple slogans are the way to go when it comes to marketing. Which is why [the businessman] might just have a point when he shouted: Go Ape!

...Ugandan troops have killed 15 Rwandan militiamen believed to be part of a rebel band which murdered eight foreign tourists... following a tipoff by local residents... The... [killing]s are just the latest bloody incident in a conflict that... has spawned a genocide in Rwanda and two wars in the neighbouring D[RC], formerly Zaire.

...An obscure mineral that looks like worthless black mud is emerging as one of the most essential ingredients in modern living – and in African warfare. After diamonds, gold and oil, "col-tan," short for columbite-tantalite – a rare ore containing tantalum, a crucial element in the manufacture of cellphones, PlayStations or any item in which a capacitor is needed to maintain the electric charge of a computer microchip – has now joined the rogue's gallery of African subsoil resources fuelling wars. Col-tan is extracted by peasants scrambling on hillsides in the eastern part of the D[RC] with shovels and plastic bags... The ore got its name 200 years ago because finding it is tantalising. But it is this ore rather than diamonds or gold, it is now becoming clear, that has kept the Rwandan war machine ticking over... Its price has rocketed in recent months as a result of rising industrial demand for tantalum... Since the Rwandan-led Rally for Congolese Democracy launched its challenge against... Laurent Kabila... tantalum's value has doubled – again and again and again. Its price stood at \$US30/lb... for years, then soared to \$US210 in December... Along with Western A[US], the eastern part of the republic has some of the richest col-tan deposits in the world, so the rebels have declared a monopoly on exports. Tantalum is only the latest treasure to come out of the former Zaire – source of the uranium that was used in the Hiroshima bomb and of "Incomparable," a 400-carat diamond that in 1988 attracted the highest price ever bid for a single gem. It is the fabled riches of the republic that explain why six foreign countries are currently engaged in war there. For their support for the Government in Kinshasa, the Kabila camp's aides – Angola, Zimbabwe and Namibia – have been granted offshore oil concessions, as well as diamond mines, cobalt and rare timber. The rebels' supporters – Rwanda and Uganda – also want... pay[ment for their services. Incidentally, at]... least 399 people drowned when an overloaded Senegalese ferryboat capsized in stormy seas off the Gambian coast. Many more were feared dead... [796] people were listed on board the ferry...

Yesterday, authorities said 1034 people were on board the ferry, including 52 crew members... Officials in Dakar tried to douse mounting anger as distressed relatives asked why the boat, designed to carry 550 passengers, was so overloaded... [The] ferry... was built for lakes, not the open sea.

...THE 100 people trapped in a capsized ferry... from the... lakeside town of Goma... in the Congo have been given up for dead... The victims were caught aboard the ferry Musaka when it capsized in Lake Kiva... Lack of oxygen in diving tanks was partly blamed for the botched rescue... [On a positive note, "n]ormal life," with its repressive realities of fear, brutality and hardship, has returned to the capital of the D[RC], stifling hopes that the assassination of President Laurent-Desire Kabila could lead to freedom, peace, safety and food on people's tables. "This is not some family empire, this is my country, Congo," said a frustrated citizen, dismayed that the killing... by an off-duty bodyguard... merely resulted in the appointment of Kabila's 32-year-old son... The Minister of Communication... confirmed that the Government would continue the "tireless pursuit

of peace and upliftment in our country,” begun by the “peace-loving” late President Kabila. The former President’s body will be laid to rest in the capital tomorrow after lying in state in Kinshasa yesterday and today. The body was displayed yesterday to invited mourners, including Kabila’s key ally, Zimbabwe[’s] President... in an elaborate gold and white coffin at a military barracks... [The minister] said the assassin’s motive was not known... The bodyguard, who had been with the President since he came to office on May 17, 1997, was killed as he fled the Marble Palace.

...Enter the offices of an African big man and look around. The first security guard you meet is a wiry fellow with suspicious eyes and a... frayed... shirt collar... The hallways are gloomy, the stairwells musty. Two giant glass partitions, shot up during the Liberian civil war, are still pocked and shattered. Yet the building maintains a perverse sense of tradition. Along the way, you pass a portrait of former Liberian President William Tolbert, who was disembowelled in this very building during a military coup in 1980. You also encounter a portrait of Tolbert’s executioner; former President Samuel K. Doe, whose ears were hacked off before he was executed by drunken rebels in 1990. The guards get a lot bigger and better dressed as you proceed. Still, you’ve got to wonder: do these tyrants ever learn? Africa is littered with Big Men who fell hard. Some were assassinated, like Laurent Kabila of Congo, who was shot in the head in January by a bodyguard pretending to whisper something in his ear. Others died in mysterious circumstances, like Nigeria’s Sani Abacha, who reportedly expired during a Viagra-fuelled orgy with prostitutes. Others were chased into ignominious exile, or cling to power against a growing clamour of criticism, like Zimbabwe’s [President]... But they still come, with their superegoes, their entourage of sycophants, their penchant for violence. They plunder the continent’s natural resources and leave little in their wake but ruin. [The current President of Liberia] is sitting at his desk, absorbed in paperwork, keeping everyone standing. When he emerges, he... answers questions in great gusts of American-accented English, his arguments peppered with familiar idioms – “Oh no, don’t... go down that road!” – and liberal references to God. [He] wants you to believe that his crazed militiamen didn’t commit atrocities during the 1990s civil war... Finally, he wants you to believe that all the current accusations against him are false. No, he hasn’t harassed and intimidated political opponents in Liberia. No, he hasn’t been trading guns to the Revolutionary United Front rebels in Sierra Leone, a force infamous for chopping the limbs off children. No, he’s never had anything to do with diamond smuggling... [However], according to a recent Amnesty International report... members of his notorious Anti-Terrorist Unit have routinely tortured and raped people suspected of aiding his opponents... So history grimly repeats itself: another traumatic round of bloodletting is under way in sub-Saharan Africa, and, at the centre of it all, another African strongman is clinging to power. If [the President was] a monstrous buffoon, he’d be easier to assess. But he’s not. He’s well educated... Bentley College is not the sort of place you’d expect a West African warlord to have received his education. Yet it was at this campus... 20 minutes outside Boston, that [he] earned his undergraduate economics degree in 1977. Still, it was during a decade in the US in the 1970s that [he] became active in exile politics. Many Liberian students were agitating against political domination by a class of people known as Americo-Liberians, freed American slaves who had founded the Republic of Liberia in 1847. The Americo-Liberians had long regarded themselves as a cut above indigenous, “uncivilised” Liberians. Although [his] father was Americo-Liberian, his mother was from the Gola tribe. Associates say that [he] has always emphasised one or the other aspect of his background, depending on which one worked to his political advantage. [His] first flirtation with national politics came with the Liberian coup of 1980, and ended in disgrace. A semiliterate master sergeant[–] Samuel K. Doe, from the Krahn tribe[–] overthrew the Americo-Liberian order and installed a repressive and corrupt regime. Through [hi]s connections with one of the coup leaders, [the current President] became head of the General Services Agency, which gave him control over lucrative government contracts. But he had a falling out with [Doe] and fled to the US, where he had allegedly stashed \$US900,000... in embezzled funds. Doe requested his extradition; FBI agents arrested [him] and put him in the Plymouth House of Corrections in Massachusetts. Sixteen months later [he] and some fellow inmates... escaped – at least that’s what’s been reported. In any event, he eventually resurfaced in Africa. [He] gathered exiles with military experience, and invited others to Libya for training. On Christmas Eve 1989, he crossed into Liberia from the Ivory Coast with about 100 fighters. The rebellion might have been easily snuffed out then. But Government troops from Doe’s Krahn tribe attacked civilians suspected of supporting the rebels. The abuses helped to swell the ranks of [the current President]’s National Patriotic Front of Liberia, and the rebels in turn hunted Krahn civilians. Fighters on all sides killed innocent people – out of ethnic hatred, or to settle personal scores, or just because they didn’t like the look of somebody. The war never really ended. It was fought to several ceasefires and stalemates, but it seemed to re-ignite every two years or so. International organisations prompted free elections in 1997, but no country was willing to properly disarm fighters ahead of the vote. [The current President] won an overwhelming majority, in part because Liberians feared that he would return to fighting if he lost. Since then, security services and other goons have intimidated critics and human rights activists, many of whom have fled the country. Many Liberians would like [him] to pay for the past. So as he considers his own fate, [the current President] has got to be... motivated by fear. Only days after Kabila was assassinated... [Liberia’s President] changed his personal security detail. “Well, one must be very careful,” [he] allows, when asked if he has security concerns... [He] supports the RUF rebels in Sierra Leone partly because of this fear. Beyond giving his associates access to diamonds, the alliance also helps to establish a “friendly” buffer along that deeply unstable border. Likewise, he may be helping rebels in Guinea because he wants to keep Liberian dissident forces based there on the defensive... “There is always someone who wants the power – that’s the trouble,” says a Monrovia newspaper editor. “Here, you don’t have a middle class. Everything is too extreme: either you’re in the Government, or you’re nowhere. We talk about change of leadership [by force]. But we’ve tried that.” Liberia[’s] Archbishop... agrees. “Doe came to redeem us and what did we get? [This President] became our redeemer – to get Doe off our backs... What did... [m]ore redeemers... get us?” Africa is mangled by war, disease, poverty. In many countries, towns have no electricity, schools lack books, hospitals have few medicines. Millions of children have been killed by malaria and orphaned by Aids in recent years. Sanctions alone won’t solve that. Nor will neglect. Nor will bursts of enthusiasm for “new” African leaders, or even fresh elections. Those countries that have moved towards greater democracy – like Nigeria, Ghana and Senegal – have a long way to go. Should strongmen like [the current Liberian President] be judged by a different, “African standard” of human rights and democracy and accepted as the only stand-in for order on a chaotic continent? Or should the international community declare [African presidents] to be outcasts if they don’t live up to more stringent norms? ...In [the current President]’s world view, the weak are devoured. To remind himself of that, all he has to do is walk the corridors of his executive mansion and examine the portraits of his predecessors. What [he] and his countrymen need is a new vision of Africa – and a belief that there is another way.

Are we applying a lower moral standard to African leaders? WHEN Black Africa sought freedom from white colonial rule, it did not expect that black neocolonialists would slaughter its people, but that is what has happened. Africa, plagued by starvation, social disintegration and debt, spends billions of dollars a year on armed forces. The weapons are used not so much to establish peace and stability as to terrorize and butcher black Africans. Many in the West feel uncomfortable about the mere mention of such tyranny. It might provide a dangerous justification for apartheid, and divert attention from the noble cause of South African blacks. This attitude suggests that they apply a lower moral standard to black African leaders than to white South Africans. Black Africans vehemently object to such thinking. To their dead compatriots, it made little difference that the finger that pulled the trigger was black. In Uganda... Nigeria... Angola, Mozambique, Somalia, the Sudan and other countries, carnage and hideous tyranny reign. One does not argue with empty-headed soldiers over civil liberties and private property rights. In 1972 in Burundi, more than 200,000 Hutus... were slaughtered in barely two months, their homes and schools destroyed by the government run by the Tutsi... August 1988 witnessed a repeat of the massacre, with some 10,000 Hutus slain, some reportedly machine-gunned from army helicopters. So far as I know, not a whiff of protest or condemnation came from the U[N] or public officials in the West. Had that many whales or African zebras

been slaughtered, the outrage and world condemnation would have been deafening... Is it morally acceptable for black tyrants to butcher black people? A [black] candidate for the US Democratic presidential nomination... lifted the hopes and aspirations of many blacks worldwide. He could not have run in South Africa – and he also could not have run in 39 of the 41 black African nations. Only... Botswana and Senegal, allow their people the right to choose their leaders. Twenty-four countries are military dictatorships. The rest are farcical “democracies” in which only one candidate, under a one-party system, runs for president, wins almost all the votes and then declares himself president for life. The principle of political power-sharing being extolled by black African leaders to South Africa is yet to be established in black Africa itself. Since 1957, there have been more than 150 African heads of state, but only six voluntarily relinquished power; the rest were assassinated or booted out in military coups... If the world won't help, perhaps it had better stay out of Africa. Application of a standard that recognizes only white-on-black tyranny is bound to aggravate the plight of all black Africans, including those in South Africa. - 1989

ANC leaders embrace free-market ideology... Some of [South Africa's] leading politicians have transformed themselves from adherents of state socialism and nationalisation to mouthpieces for the ideology of the free market... The ANC's ambitious plans to reverse the bulk of the population from poverty are most visible in a big-budget Reconstruction and Development programme of public works and housing. But to retain business and international investor confidence, the party has to reconcile a new economic orthodoxy of deregulation, competition and controlling Government spending with the wishes of trade unions which made it so strong. Going swiftly but somewhat uncertainly where others have gone before was the reason the N[Z P]M... was interviewed at length on a leading current affairs television programme on Wednesday night about the N[Z] experience... Both he and [the South African President] talk the same language; wealth must be created before it can be distributed. The question is whether enough can be created in short order so the ANC can satisfy the high expectations of its millions of patient but desperately poor supporters... [The] Premier of the country's richest province... says it is not possible to convince everyone that economic reforms are necessary... “...The trick of government is not really to share the successes with people, but to share the difficulties.” ...Things might briefly get worse before they get better. Even to make headway with South Africa's crippling unemployment rate – more than 40[%] among blacks – the economy must grow at 6[%]. That is because some 400,000 school-leavers enter the workforce each year. After two years in power, the [ANC] Government has turned around a stagnant economy to one which is now growing at 4[%]. Inflation has been tamed and now runs at 5.9[%]. But interest rates – nudged up to stabilise a struggling currency – now top 15[%]. The bottom line is that there are simply not enough new jobs. The threat that poses is as obvious as the barbed wire which tops the walls surrounding the houses on the road into Johannesburg...

Outside a war zone, South Africa is the most violent place on earth. There's a carjacking every nine minutes, an armed robbery every 11 minutes, a murder every 27 minutes and a rape every 29 minutes... South Africans go to elaborate lengths to protect themselves in their vehicles. Doors are locked all the time, windows are never down, red lights are a muggers' delight so you don't stop for them... The large houses on large sections (which once made [Johannesburg's] suburbia the envy of the western world) are liabilities in the post-apartheid era. They're hard to defend against incursion. Those houses are still there but they're protected by armed response squads, house and grounds alarms, guns, high walls, razor wire, electric fencing and bars... The fastest-growing realty area is cluster housing. Hundreds of families live cheek-by-jowl behind guarded walls, much like a more fortified version of a... retirement village... One incredible statistic is that last year, there were 28,000 more crimes committed in the commercial centres of Gauteng (Johannesburg and Pretoria) than in 1994. That's roughly an increase of 80 crimes per day. - 1996

South Africa is a country of great promise and great peril. Political killings have dropped dramatically from the thousands in 1994 to next to nothing, but criminal violence has burgeoned. In recent years, up to 52 people have been killed each day. There were 36,000 reported rapes last year, 34,000 robberies from January to August, and a car hijack, not infrequently with the killing of the driver, every three minutes... [S]ome is apartheid's legacy... One of the great fears for South Africa was that the black majority would seek bloody revenge. That hasn't happened, but there are black aspirations for a more equal share of the future and a flourishing of the old African ways as people search for wholeness after the brutality of apartheid.

...[The issue of police brutality, lingering after the end of apartheid in 1994, emerged again this year, when the BBC released videos showing white police beating handcuffed black suspects. One of the suspects later died, but it was not clear if the beating or injuries suffered during an accident caused the death. In a separate incident, a star soccer player was attacked and shot in the shoulder after police signalled him to stop his car. Police say they are under extreme pressure to combat an exploding crime wave and need to use force to protect themselves. But a total of 1472 people died from police action or in police custody in South Africa over the past two years. The person who heads the Independent Complaints Directorate, a government agency, released the figures at a seminar on a new law (that police oppose the implementation of) intended to combat excessive police violence'. ●] Motorists on one of South Africa's busiest highways were pelted with showers of stones thrown by a troop of rampaging baboons. Officials said three attacks had been reported between Cape Town and Johannesburg, where the N1 passes through the spectacular Du Toit's Kloof Pass. The *Cape Argus* newspaper reported no injuries or crashes had resulted from the sneak attacks, and police had engaged the primates in “running battles” in an attempt to drive them off.

...Like South Africans and N[Z]ers, the Welsh lived and breathed their rugby and the psyche of the whole country was affected by the way their heroes went on the footie field. But during the 80s terrible times came on both Wales, the country, and Wales, the rugby team. Once, they had coal mines, rugby, and singing. The mines closed, the rugby team collapsed and there are statistics that show even the male choir numbers are down. It's a spiral that you can see happening in South Africa today. The great strength of South African rugby was the rock solid belief of the white population that they were the best, biggest, meanest men to ever pull on a rugby jersey. They also believed they lived in a paradise that only troublemakers and communists would fail to recognise otherwise. On the back of cheap black labour the whites prospered and their rugby teams reflected that arrogance... Yes, South African rugby players were often unpleasant; yes, they were unbearable in victory; yes, they pursued racial policies that were morally repugnant, but by God, they were incredibly hard to beat. Now everything has changed, in their country and in their football. Their coach... was actually smiling after the humiliation at Eden Park... [and] last year... I saw a white woman begging on the streets of Johannesburg. With the dismantling of apartheid a white underclass is growing.

...THE thought of travelling around South Africa is a foreign concept to many N[Z]ers but a backpack, an open mind and \$17 a day may be exactly what many of us need... Backpacking in South Africa expands your perception of your own country. You simply can't avoid the squatter camps, the poverty and people trying to survive where a bunch of bananas for 33c is expensive. Nonetheless, each area has something exciting to offer and is best savoured if you aren't in a hurry... It also helps to look as inconspicuous as possible... Johannesburg is considered a city to avoid...

Johannesburg has three unenviable world records: for murder, rape and cop-killing. A lions' den was a haven of tranquillity compared with a [Johannesburg] township, I was assured on every side, by black as well as white. Violence punctuates the daily life of the thousands without jobs, without much hope... Bad news, good news. Far too much of one, tragic lack of the other... The bad news is all around, in the headlines and on the streets. Horror upon horror... Badness, madness, frustration, rage – call it what you will – prevail today.

...Three years after being raped, and forced into silence by her publicity team, Miss Soweto decided on International Women's Day on Saturday to speak out against a crime that is now rampant in South Africa. “I am a role-model for some girls and I hope they can listen to me and fight against the culture of silence,” said... [the] 20-year-old beauty queen... South Africa has more rapes per head of population than any other country

in the world, with 73.6 reported for every 100,000 people. One rape is committed every 83 seconds, according to official figures, which women's groups say under-estimate the problem. "Rape has become second nature in South Africa, if not a new national sport," one magistrate said recently at the sentencing of a father charged with raping a seven-year-old girl. "What really bothers me is that men think they can do anything they want," says [a victim]. She... occasionally runs into the man who raped her and he greets her normally. He "doesn't think he has done anything wrong." In one telling sign, a 21-year-old man accused of repeatedly raping a 17-year-old with two friends justified himself to the court by claiming he had a "three-year relationship" with the young woman... [M]any analysts believe the violent behaviour that is a legacy of past turmoil will take years to eradicate. However, in a positive sign, awareness campaigns have led to an increase in the number of rapes reported... At the same time, however, rampant crime has radicalised public attitudes to rape: women's groups are calling for rapists to be castrated and demands for the restoration of the death penalty are on the increase. Above all, police passivity has prompted ordinary citizens to take matters into their own hands. Last month a group of mothers furious at police inaction castrated a suspected rapist. In response to this growing anger, the justice ministry held an information day on women's rights yesterday at which they announced a toughening in sentences against those guilty of serious crimes, including rape.

...South African police record 36,000 rapes a year, but the real toll is closer to 1.3 million – or one in 10 of the female population, a UN Human Rights report published in Geneva said yesterday. Most of the victims are... too afraid to lodge statements with the police they associate with the former apartheid regime, said the report's female Sri Lankan author... "Gang-rapes are very often considered to be a pastime like playing cards or drinking alcohol," [she added]... In cases handled by the court of Winberg in Cape Town, 70[%] of the victims were under 18 and 40[%] of the sentenced rapists were convicted criminals younger than 20 years old. Only 5[%] of the victims were white... While urban white-dominated zones often had good rape-prevention programmes, the lack of interest and personnel to set up similar operations in black suburbs was "very disturbing," [the report's author] said. The Government was, however, preparing a new "women's affairs" office which would raise public and legislative awareness of this and other issues.

...Aids is surging in South Africa, where people end up having sex because they have no money to go to the movies or to the swimming pool, the country's Minister of Health said. "Sex is entertainment for the poor if you have nothing else to do..." ...UNAids... said 2.2 million people in South Africa, including an estimated 13[%] of its pregnant women, had the HIV virus... [O]ne of the worst-affected areas was the violence-hit KwaZulu-Natal province, where infection rates among pregnant women had reached 18[%]. "When people face death today, the risk of death from Aids in 10 years' time is a remote possibility for them," [the minister] said. UNAids said infection levels registered at South African health clinics were now higher than 20[%] compared with less than 1[%] in 1988. In related news, the US... is objecting to a South African plan to legalise the import of cheap foreign drugs in apparent breach of international patent laws, threatening to undermine millions of dollars worth of sales of US propriety medicines... The law is part of the [South African G]overnment's effort to make health care more affordable and accessible.

...The owner of a... shebeen [unlicensed liquor premises] has sliced the ears off two boys he suspected of stealing money. The boys, aged eight and nine, are making good progress in the Red Cross Children's Hospital in Cape Town after a plastic surgeon performed "reconstructive surgery." The incident happened in the Cape Flats, a vast area of shantytowns and townships... which are among the most violent places in South Africa.

...South Africa's housing crisis has turned violent as homeless squatters come up against cash-strapped local authorities... [One woman] had spent eight years in a tiny shack in the backyard of a house in Randfontein's black township, Mohlakeng... on the outskirts of Johannesburg... The local council estimates there are 8000 shacks... in the township with five or six people in each. After long negotiations with the council to find a suitable piece of land... [for the shack-dwellers broke down, they] swarmed on to... an open field... They hastily erected[new] shacks and then sat for 15 days without water and sanitation, hoping the council would provide basic services. It was an illegal invasion and the squatters knew it... It was early morning when the eviction squad came to tear down [the woman's] shack and 800 others... As the men, wearing helmets and carrying riot shields and crowbars, smashed the tin and cardboard structures and threw them on to trucks, a pitched battle broke out. Shots were fired as a shack owner slumped to the ground, dead. "I just ran away when they started to break the shacks and hit people and shoot..." said [the woman]. "I was very, very scared because I didn't think it could happen like that." Now she sits forlornly in an over-crowded tent in a council transit camp. Evicted two weeks ago, she has no idea what happened to her shack or most of her belongings. The camp is home to hundreds of evicted squatters. Those who cannot fit into the tents live outside amid their heaped belongings. In the past month Johannesburg has seen three large-scale land invasions as a flood of homeless people pour in from impoverished rural areas desperate for work and housing. Increasingly, they are being met by determined local government officials trying to impose orderly development on their fast disappearing tracts of land. "If you allow uncontrolled squatting this area will be swamped – totally and completely overrun by squatters," said... Randfontein's deputy town clerk... But why the violent eviction? "I don't know[if] you can do this with a soft touch. We gave them court orders, to remove the shacks, so they brought in 720 more," he said... The statistics of this human tide are staggering. In Gauteng province alone... an estimated 3 million people live in overcrowded squatter camps, known officially as "informal settlements." Government officials say another 20,000 people arrive each month, making urban planning a nightmare and placing an unbearable strain on public resources. There is a national housing backlog of between two and three million homes, of which 750,000 are needed in Gauteng. "If you sit down and think soberly about the problem, you won't even start to tackle it," conceded... the Minister for Housing and Land Affairs in Gauteng. The national Government, in cooperation with provincial administrations, has promised to build one million houses by 1999 but few believe that target will be reached. Government pledges do not mean much... To date the council's attempts to deal with the housing problems are a tale of woe – one which echoes the difficulties faced nationally. A private developer has not delivered the volume of houses required in Mohlakeng, other housing initiatives have been vandalised and the council is locked in seemingly endless debates with various community groups about what to do next... The homeless of Mohlakeng are part of apartheid's cruellest legacy – a vast, poor and largely illiterate black under-class. They seemingly have no chance of affordable housing. But to evict the Mohlakeng squatters and then provide them with temporary accommodation and basic services has cost the council approximately one million rand (\$[NZ]333,000). According to [the deputy town clerk], money is fast running out. As evening settles on the council camp, [the woman] sits eating a small bowl of rice flavoured with tomato sauce – the only meal available. She has no idea what the future holds.

...IT HAD BEEN a perfect summer's day in Port Elizabeth... Alison* had spent the afternoon on the beach and the evening with friends playing a board game. They had laughed and joked, Alison's carefree smile and sparkling blue-green eyes lighting up her face. When the 27-year-old insurance broker parked her yellow Renault on the street outside her block of flats it was after one in the morning of December 18, 1994. She was just about to get out when the door was wrenched open. "Move over!" snapped a man, waving a knife at her. The scruffy stranger... drove towards the city centre, speaking as if he were having an everyday conversation. "What's your name?" he asked amicably. "Susan," she replied, instinctively trying to protect herself. She thought about trying to jump out, but was afraid of injuring herself or making him turn violent. In any event, the streets were empty so there would be no-one to help her. They drew up in a seedy nightclub area, notorious for gang violence. There were many people on the footpath, but to Alison they looked more menacing than the man in her car. Suddenly, a short, stocky man... climbed into the back of the car. "I'd like you to meet my friend Susan," the abductor said. The newcomer nodded and said hello, but he was stony-faced... THE MAN behind the wheel was... [t]wenty-six years old... married and had a two-year-old son. But this hadn't stopped him from embarking on a trail of violence. Just ten months before, he had kidnapped and raped a 19-year-old student. When he was done with her, he threatened to set his friends on her if she reported the incident. Arrested shortly afterwards, he'd been released on bail. Despite an impending trial, he had teamed up with [the short man], 19, on December 4 and intercepted a 21-year-old mother as she was returning from a cafe. The men callously ignored her pleas that she

was pregnant, taking turns to rape her. They warned her that they would kill her and her child if she reported them. They were arrested hours after the attack, but the prosecutor was not aware of [the 26-year-old]'s previous record. As a result, they were both out on bail the next day. Freed to strike again. Alison was their chosen victim. At a quiet part of Noordhoek, a dangerous stretch of coastline frequented by unsavoury characters, they turned down a narrow sandy track. [The driver] stopped the car about 70 metres into the bush and politely asked Alison to help him turn off the lights. She found the switch, then asked, "Now what?" "Now for some sex," [the driver] replied matter of factly, instructing her to remove her clothes. "Are you going to fight?" "No," she replied, as calmly as she could... [The 19-year-old] got out of the car, leaving [the 26-year-old] to rape Alison in her seat... When he finished, he called [the 19-year-old] over and watched while he raped her... [When the 19-year-old was finished, he] got out of the car and sat on the bonnet. Then he took out a large hunting knife. [The 26-year-old] asked Alison if she would go to the police. "No," she lied. "I wouldn't want my parents to find out what happened." "I don't believe you," he said... "What do you think Old Nick would want us to do?" he asked [his mate]... "He'd want us to kill her." Alison realised they were talking about the devil. Still, she was shocked when [the 26-year-old] straddled her, put his hands around her throat and squeezed. "Please, don't kill me," Alison pleaded. "Sorry," [the rapist] replied, squeezing harder. Finally, she went limp. The men dragged her from the car and dumped her naked body on the dirt... Then [the 19-year-old] asked whether she was dead and [the 26-year-old] went berserk, stabbing her repeatedly in the stomach with his stiletto. When one of her legs started to twitch, [the 19-year-old] slit her throat with his hunting knife, setting off a new frenzy. Together they slashed her neck from shoulder to shoulder, again and again. Ironically, this inhuman assault saved Alison from suffocating. The strangulation had closed her windpipe, but now that her throat was open she was able to suck air into her lungs. She regained consciousness and counted the cuts, feeling no pain. When the attack was finished, she put her hand to her throat. It went inside her neck. *I won't give them the satisfaction of seeing me die*, she thought. *I must hang on until they have gone*. Alison heard them... agreeing that no-one could live through such an experience. Then they drove off. As soon as they had gone, she... [became] filled with an extraordinary sense of... determin[ation] to try to make it to the road... As she pushed herself onto her knees, her intestines came out of the gaping stomach wound. She reached for a shirt that had been flung out of the car, pressed it to her stomach with one hand, and, using the other, began to crawl. Her head flopped forward uselessly, the severed neck muscles unable to keep it upright... She crawled 15 metres towards the road before she collapsed, despairing of going any further. Lying on the path, she thought how much more terrible it would be for her mother if she were found dead there... *I'm not going to let that happen*, she thought grimly. Summoning all her energy, she staggered to her feet... Many times she blacked out and collapsed over the next 50 metres or so, but she always picked herself up again. When she eventually reached the road, she lay right across it, holding up her hand to be seen... She'd done all she could to save herself. Now she needed a good Samaritan... AT SHARK Rock Pier, seven kilometres back along the road... a 20-year-old student, was celebrating with friends at a disco. This was the last night of their holiday. [The student] had needed the break to try to sort out what he wanted out of life. An animal lover, he had just finished his first year of a veterinary science course at the Pretoria Technical College. But he had dropped out, and now was not sure what he wanted to do. At about 2.30 a.m., he rounded up his friends. "Come on, guys," he told them. "We've got a long drive ahead..." The cheerful group piled into two cars and took the road south to the resort where they were staying... [The 20-year-old tried to get] some sleep... But ...he... was... jerked forward in the backseat as the car suddenly slowed to a stop. Up ahead, he saw his friends in the lead car pull to the side of the road. Then one of them ran back to [his] car. "There's someone on the road," [the friend shouted. The 20-year-old] leapt out and ran over to the figure stretched out in the headlights. He saw immediately that the woman was terribly injured. *She can't possibly be alive!* he thought. Then he took her wrist and felt a pulse. "Were you struck by a car?" he asked. She managed a slight shake of the head and [he] realised with horror that someone must have attacked her. Acting instinctively, he put his hand inside her neck to block the bleeding. "You're going to be all right," he told her. Then he urged a friend with a mobile phone to call an ambulance... *Last October, Alison and [her Samaritan] received awards from the Rotary Foundation, hers for courage, his for humanity. [The Samaritan], now determined to help injured people instead of animals, is studying nursing. Alison is suing the government for negligence for letting her attackers out on bail. She continues to live life to the full, despite battling to cope with huge medical and legal expenses.* - 1997

Crowds of South Africans enraged by the gang rape and murder of a 14-year-old girl have demolished the house where she was attacked and protested at a heavily guarded courthouse where two suspects appeared. In a country with one of the world's highest rates of murder and rape, Valencia Farmer has come to symbolise the victim as heroine... With 42 stab wounds and her throat slashed, Valencia crawled to the door of the house where she had been left for dead on Sunday, summoning help by waving her arm. Before dying in a hospital 20 hours later, she whispered the names of two of her assailants. Her killing was so brutal and her efforts to cling to life so remarkable that it pushed her neighbours to direct action, as so many others have done in a country where police seem incapable of providing protection... Vigilante groups... have sprung up across South Africa... Police are not immune to the growing crime wave. They are 10 times more likely to be killed than police in the U[S]. Amid the police impotence in fighting crime, the Government... announced on Tuesday it was creating a criminal investigation unit similar to the FBI... An Army spokesman said yesterday that the South African Defence Force was also preparing for a role in tackling the country's crime.

...South Africa has become a magnet for international criminals... Thousands of disgruntled men, pushed out of the apartheid security forces or the former liberation armies, are idle. Millions of citizens are poor and miserable. That stew provides potential criminal recruits, drug couriers and consumers. Throw in a modern banking system, good air connections to Asia, Europe and the Americas, a long, porous border... 138,000... underpaid, underfunded, under-trained and unmotivated... police... officers... and you have a gangster's paradise... During apartheid, South Africa was too isolated and authoritarian to suit international organised crime. But since the country became free in the years before [the first black President's] election in 1994, the... new criminal presence [has had] a dramatic effect... The signs are everywhere, from a flowering of escort services and massage parlours (often run by Russian mafia) to the sudden appearance of crack cocaine in black townships... [In related news,] *BBC Reports: On The Rio Beat on...* TV at 9.35pm, Thursday, tells of [the] Major... who... has to persuade policemen who have been brought up to believe their job is to protect the elite from the masses that the masses themselves are worthy of protection. And he has to persuade them that taking a cut from drug traffickers is not the way for city employees to supplement their income... Rio de Janeiro is, after Johannesburg, the most violent city in the world. On average seven civilians and two officers are killed every week.

...A Brazilian baby girl born 15 days ago survived one week on her own in a shack after her parents were murdered... "I thought she was dead too, but then I had the big surprise of seeing that little hand move," said an aunt.

RIO DE JANEIRO – A newborn baby boy abandoned by his 15-year-old mother was found alive after spending three days without food or shelter, police said... Doctors said... [t]he baby... was in good condition in intensive care.

...Thirty-two babies died during a 20-day period in a Brazilian hospital as a result of poor hygiene, officials said. The mother of a premature baby said she was told it was normal when she complained about finding an ant in an incubator.

...[the] Brazilian Health Ministry has confirmed that bacteria caused the deaths of 34 babies in the past 24 days at a state-run maternity hospital... "Our mistake was to trust the doctors and hospital director," said [a] father of triplets born on Thursday. Two have died and the other is in critical condition. "Doctors told us everything was fine, then the next thing I knew was that two had died," he said. "Doctors lied to us."

...Brazil's annual murder toll has nearly tripled... from 11,194 in 1979 to 32,350 in 1994. Urbanisation, drug trafficking and gangs [are blamed].

...a taxi driver] feared the worst when his daughter... went missing in Rio de Janeiro last week. He had given the lanky 14-year-old money to buy a hot dog from a store near their home but she did not return when night fell. The taxi driver feared she may have been kidnapped by two men in a car seen cruising where she had walked in the working-class neighbourhood. Instead he found her lying dead – the victim of a vampire style slaying – on the pavement just two blocks from their home. Her throat had been neatly cut and according to a youth worker... her body had been carefully drained of blood. “Nothing shocks me any more – these people will do anything,” she said. Andrea Oliveyra was a casualty of Brazil’s monstrous cities, where 52 girls aged between 9 and 12 have disappeared from the streets over the past four years. Typically they are seen getting into or being dragged into a car with two men... Even younger children – the children aged 4 or 5 who beg or sell useless pieces of plastic at the city’s traffic lights – are at risk from gangs specialising in adoption to order... While young girls fall victim to paedophile or pornography rings, boys are more likely to become casualties of drug wars in the favelas or slums. They are made up of ramshackle structures which tumble down the hillsides of Rio and Sao Paulo. Of an estimated 19 million who live in Sao Paulo, the biggest city in the southern hemisphere, up to four million live in the favelas or similar substandard housing. An even higher proportion of Rio’s 10 million live in shanty towns, where sanitation is poor or absent and heavily armed cocaine lords rule... The... boys... are often used as human shields by their adult employers during drug raids in the favelas... In July... an anonymous fax detail[ed] the death of an 8-year-old boy shot in the head by a military policeman during one raid on the Myneyra slum. Tens of thousands of cases of violence, including murder, lie uninvestigated. The country’s Brasilia-based Government human rights division acknowledges the shooting of children of the favelas still occurs in spite of the indictment of four policemen and an 89-year prison sentence for one officer involved in executions in the Rio slums. “It still happens but the important thing is that the Government is taking action,”... - 1996

The number of children murdered in Rio de Janeiro increased by more than 10% to 659 in 1996, says the juvenile court. A third of those killed were under 11... [Incidentally, e]nforcers for a private bus company shot dead five impoverished youths who hadn’t paid their 50c... bus tickets... [T]wo men... forced the... boys, aged between 15 and 17... off the bus. The men told the passengers not to look out of the window, then gunshots were heard. This kind of summary execution is typical of the “death squads” hired by local businesses to rid the city of juvenile delinquents... the leading investigator on the case said yesterday.

...Right-wing gunmen dragged seven passengers, including a local Communist party chief, from a bus, shot them and tossed the corpses into a nearby river in north-west Colombia yesterday, police said. The attack in a rural area near the town of Urrao, in trouble-torn Antioquia province, came on the same day that relatives buried 12 of the 13 peasants massacred by a right-wing death squad on Saturday in a hamlet less than 60km from Bogota... Colombia’s two leading newspapers reacted angrily to the upsurge in right-wing paramilitary attacks against civilians and accused the state of complicity... Despite the Government’s publicly stated commitment to combating political violence on the left and right, the Army is rarely involved in armed confrontation with paramilitary forces... Human rights groups have accused the [Army] of organising and funding illegal paramilitary forces to wage “scorched earth” offensives against the country’s Marxist rebels and their suspected sympathisers.

...[‘Colombia was the most dangerous nation for union members again last year, with 201 killed or missing – 90% of the worldwide total, and more than 30% higher than the 153 recorded in the previous year. While the Colombian Government denies responsibility, the International Confederation of Free Trade Unions says most of the killings were “carried out by paramilitary groups which enjoy the tacit complicity of the security forces.”’]

...Colombia faced a new round of... terror yesterday after a group called The Extraditables said they kidnapped [the President’s] press secretary and a reporter... In brief remarks to reporters... the... presidential palace... said: “Whatever group it is, kidnapping isn’t the best way of making any sort of petition.” ...The Extraditables was the name of a private army formed by... [a] cartel drug lord... to wage a campaign of terror – including high-profile car bombings, assassinations and kidnappings – against extradition in the late 1980s and early 1990s. Seeking to end the violence, which took hundreds of lives, Colombia’s Constituent Assembly clamped a constitutional ban on extradition in 1991. Acting under intense pressure from Washington, Congress voted last week to lift the ban.

...Marxist rebels stormed into one of Colombia’s largest hydroelectric power stations yesterday and took at least 23 hostages. Army sources said... the hostage-takers were thought to be fighters of the Revolutionary Armed Forces of Colombia, Latin America’s oldest and largest rebel army. The smaller Cuban-inspired National Liberation Army is also known to operate in the zone... of north-west Antioquia province... Colombia’s guerrilla forces regularly attack key oil facilities but rarely target hydroelectric power. About 80[%] of Colombia’s energy comes from hydroelectric plants. “We’re extremely worried because this is one of the most important power generating plants in the country. We don’t know exactly how the subversives gained entry,” said... [the] manager of the Empresas Publicas de Medellin public utility company. - 1997

Marxist rebels have stormed a hydroelectric plant in western Colombia and were holding up to 100 people in an operation to back the first day of a general strike. In all of Colombia’s main cities, demonstrators threw rocks at police wielding truncheons and firing tear gas in running battles that led to hundreds of arrests in the capital, Bogota, alone. At least 1.5 million union workers, joined by thousands of members of peasant and grass-roots social organisations, heeded the call for a nationwide strike to protest against Government austerity measures and free-market economic policies. The strike fast threatened to become the most serious labour stoppage since [‘hundreds of soldiers and riot police backed by light tanks had to patrol the town of Facatativa, 30km west of Bogota, after violent protests against public service price hikes’ in 1996]. It comes amid one of Colombia’s worst recessions, which has sent urban unemployment soaring to a record 20[%], the highest in Latin America. In Bogota, public transport came to a virtual standstill and most downtown shops and businesses remained closed. Protesters clashed repeatedly with riot police in working-class neighbourhoods in the south of the capital. Demonstrators blocked several major highways across Colombia, including a main route through the central coffee-growing region. In a nationally televised speech, [the President who]... took office a year ago... appealed to workers to call off the strike, which could complicate talks with the I[MF] over a \$US3 billion... loan agreement. Cabinet ministers have put the cost of the strike at \$US130 million a day. The economic woes have come against the backdrop of a surge in the long-running guerrilla war, in which 35,000 people have died in the past 10 years.

...[a] Kiwi tourist feared he was going to die when a crazed South American bandit put a gun to the back of his head and made him kneel at the roadside. “I thought he was going to shoot me... I actually smiled into the gravel so that would be the way I was found.” ...The[27-year-old] Auckland graphic artist was with a group of tourists travelling through Ecuador when the bandits highjacked their bus in the night. The armed thugs terrorised the travellers – robbing them of their clothes, cash and passports... [The Kiwi] suspects the robbers could be drug gangsters forced out of neighbouring Colombia by a crackdown on the narcotics trade... [Hi]s parents... were shocked to learn of their son’s ordeal. “We hear all these stories about Kiwis being killed overseas. It could have been us having to bring [our son’s body] back...,”...

A young N[Z] woman escaped being murdered by Honduran bandits by playing dead as she lay beside her dying... Israeli... boyfriend... She was... [robbed of] about \$US500... shot four times in the stomach and left for dead, but she managed to crawl through the jungle and reach help. Her [father]... a former N[Z] bowling champion, and his wife... fly to Honduras today... Her family face a hospital bill of over \$3000... [because their daughter], who has been travelling the world for about six years, had no travel insurance... The Honduran Government has expressed condolences... and... “profoundly laments” the incident... Honduras is reported to be in the grip of a crime wave with frequent robberies and kidnappings.

EVERY day the busy port at Guayaquil unloads about \$[US]22 million in imports, such a tempting target for tax evasion and other organised hustling, that the Ecuadorian government assumes it loses 30% of the \$4 million it should be collecting in revenue by day's end. Under the disgraced and short-lived administration of [the previous president] – “the most corrupt government in history”, [a]former presidential candidate... called it – the \$7.8 billion-a-year port became an enormous cash cow for corrupt officials... [An earlier president] – known as “El Loco” (the mad one) – and his sister were mayors of the coastal city... Importers were subject to a special 15% “party tax,” which was collected at the port by members of [the previous president]’s Roldosista Party of Ecuador... With [the previous president] chased from office... Ecuadorans are discussing the legacy of his six months as president... The chambers of commerce in Guayaquil have amassed folders detailing the corruption charges, including accounts from the private companies who ran inspections and were targets of the [previous] government within days of it taking office in August. What is not known is how much may have been siphoned from Ecuador’s real gold mine, the petroleum sector. Some estimate that the level of corruption known to have existed in customs was matched in the energy sector, which was run by a close friend of [the previous president]... Ecuadorans now fear what the promised investigation into the [previous] administration will uncover. [● ‘Ecuador and Peru have called off talks because of a hostage crisis, says Ecuador’s Deputy Foreign Minister. Peruvian and Ecuadorian officials planned to meet in Brazil’s capital to resume negotiations in a longstanding border dispute that led their countries to a jungle war in 1995. The peace talks are being monitored by the US, Chile, Argentina and Brazil. In Tokyo, Japan’s PM said it may be a long time before the hostages in the Japanese ambassador’s residence in Lima were released.’]

...Diplomats spoke optimistically yesterday about a peaceful end to Peru’s two-month-old hostage crisis after long-stalled talks restarted between the Government and Tupac Amaru rebels. [The] meeting between... the... rebel leader... and... the... Government[’s] negotiator... was seen as a significant step towards the release of the 72 men held hostage in the Japanese ambassador’s mansion... In Tokyo, [the]Japanese Prime Minister... told reporters he felt relief that communication has resumed after six weeks. Many of the captives are Japanese.

...Courage, unity, pride and perseverance were the keys to survival for the Lima hostages, according to the Japanese ambassador who was host of the December cocktail party at which they were seized. [The a]mbassador... said yesterday that he was ashamed that the guests at his elegant cocktail reception in honour of the Emperor’s birthday had been put through such a nightmare. “I... want to apologise to the Japanese Government, to the Peruvian Government and the Peruvian people...,” [he] said... only hours after Peruvian security forces ended the drama... When the explosions and gunfire first shook the elegant building in the leafy San Isidro neighbourhood yesterday, [the ambassador] said he was convinced he was going to die... “But moments later I realised that many people could survive this...” ...He suffered slight injuries to his legs and hips as he escaped the house. Although the guerrillas released most of their more than 500 hostages within weeks of the start of the siege, they held those they considered their best bargaining chips to pressure [the Peruvian] President... to release more than 450 jailed guerrillas... The marxist Tupac Amaru rebels say they plan to attack military and economic targets in revenge for the storming of the Lima residence.

...Crack Peruvian commandos timed their attack on the rebel-held Japanese ambassador’s residence to coincide with an indoor soccer game and took just 36 minutes to end Latin America’s longest hostage siege. In a “surgical” operation, they freed 72 hostages amid the chaos of explosions, gunfire and smoke. But it was always too much to expect that the siege would end without loss of life. By the end, one hostage – a Supreme Court judge – two soldiers and all 14 guerrillas died in the fierce battle that ended the four-month standoff... There were early suggestions from the rebels’ camp that some guerrillas were “executed” when prepared to give up peacefully after the raid began. But that was strongly rejected by Peruvian authorities.

...Peruvian commandos executed a rebel who had just surrendered in front of some of the country’s top judges, a top-ranked hostage says... Military sources said that at least three rebels were killed as they were surrendering or just afterwards. A teenage girl was shot to death despite yelling to give herself up, according to an intelligence agent who monitored the raid through listening devices... The commando units were under orders to take no prisoners, the sources said. Each rebel was given a final “coup de grace” shot to the forehead.

...Peru’s dramatic hostage rescue has dealt a devastating blow to the Tupac Amaru guerrillas, a fading rebel group whose attempt to resuscitate itself backfired disastrously, say Peruvian analysts. But they warned the Marxist Tupac Amaru Revolutionary Movement[, or]... MRTA, whose armed members are estimated to number fewer than 200... would not vanish... Even Peru’s triumphant President[, while]... basking in the victorious end to the toughest crisis of his career, was careful to avoid appearing over-confident. “It could be that it [terrorism] is not defeated,” he said, adding that the armed forces, which had tightened security and diplomatic sites around Lima, were prepared to counter any reprisal attacks.

...A triumphant Peruvian President... yesterday displayed a replica of the Japanese ambassador’s home used by commandos to train for their assault on marxist hostage-takers this year... It even included replica MRTA flags and banners and a network of five tunnels like those constructed by Peruvian miners and used by commandos to burst into the residence when the attack began 126 days... after [the] Cuban-inspired... rebels [‘dressed as waiters bearing champagne and hors d’oeuvres’] stormed the... ambassador’s home and seized hundreds of VIPs[, minus ‘the American ambassador who left just before the attack’]. The rescue... raid, whose pinpoint accuracy and timing were compared with Israel’s famous 1976 hostage rescue at Entebbe in Uganda, won worldwide acclaim for [the President] and his military... More than 30,000 people have died in guerrilla-related violence in Peru since 1980, and damage to the nation’s economy has been estimated at \$US25 billion...

The Peruvian military is hunting a Cuban woman suspected of planning attacks by rebels marking the first anniversary of the Tupac Amaru hostage siege in Lima... Peru’s guerrilla wars unleashed by Tupac Amaru and the larger Shining Path have cost 25,000 lives and \$US30 billion... in damage in the past 17 years.

...IN *The Autumn of the Patriarch*, [a]... novel about a seemingly immortal Latin American dictator, the fictional tyrant shelters deposed military rulers from other countries in a house by the sea. The gnarled general visits his disgraced cronies to “look at himself in the instructive mirror of their misery”. As the autumn of Chile’s real-life patriarch slips into winter, [the g]eneral... sees a former dictator in the mirror who has been neither deposed nor disgraced [– even though ‘new Reconciliation and Compensation Corporation figures, which were being presented to the Government yesterday, took the number of victims of political repression under the general’s rule to 3197, of whom 2095 died and 1102 disappeared (most were left-wing opponents of the general and many were killed and tortured by the regime’s security services’)]. His recent 82nd birthday marked a landmark moment in Chile’s political evolution. It was his last as army commander-in-chief, a post he retained in 1990 after ending 17 years as a dictator to make way for an elected president. - 1997

*The arrest of [a] former Chilean President... in Britain has highlighted diplomatic immunity... Immunity given to accredited foreign representatives, in line with the Vienna Convention on Diplomatic Relations, is written into [NZ] law, which means protection from all criminal prosecutions, including murder. But in reality – and it is hard to find any international precedents – the diplomat is unlikely to escape completely. The Government of the country employing the person accused of such wrong-doing would come under great pressure, including potential trade and other sanctions, to waive immunity. If not, the diplomatic agent is almost certain to be recalled, sacked or face other penalties – possibly even criminal charges – at home. N[Z] would also invoke a convention clause declaring the accused representative *persona non grata*, forcing the foreign Government to call the envoy back or dismiss him or her. Drink-driving and the occasional sex scandal have sporadically led to immunity being claimed by diplomats in N[Z], but in most cases it has resulted in their recall, rather than their countries’ waiving immunity... The Colombian Government last year ended the posting of its Wellington ambassador who was at the centre of two indecent assault complaints... [I]n several drink-driving cases, even though the countries concerned refused to waive immunity, the diplomats involved felt morally obliged to pay a court-*

equivalent penalty, which was given to a local charity... There has been nothing on the scale of the London arrest of [the] former Chilean President... on an international Spanish warrant for crimes against humanity. Chile argues that [the g]eneral... a senator for life, was travelling on a diplomatic passport and therefore had immunity from prosecution. The British say the former dictator's passport does not convey immunity, nor is his visit to a London clinic for surgery an official visit covered by immunity. N[Z]'s Minister of Foreign Affairs and Trade said that, as a rule, visiting politicians were not protected. That would be the case only if the Minister... granted immunity in a gazetted notice to specific representatives – as for... [the] Apec summit in Auckland. The Commonwealth Heads of Government meeting in Auckland in 1995 saw... [f]ull immunity... given to 500 delegates, with 400 support staff given lower-level immunity covering offences committed while carrying out conference duties. That same year, confusion about the diplomatic immunity of the Indonesian Minister of Tourism... meant he left the country before police had a chance to talk to him about allegations of sexual assault on a male hotel employee. [The Indonesian] did not have immunity while attending the Auckland tourism conference where the alleged assault took place.

...[the f]ormer Chilean dictator... was to be told early today, his 83rd birthday, whether he enjoys immunity from arrest or faces extradition to Spain on charges of murder, torture and genocide. The House of Lords, the highest court in Britain, was to rule... this morning (NZ time) on an appeal against a High Court decision that [the general]'s arrest in a London hospital last month at the request of a Spanish judge was wrong because the charges he faces took place while he was head of state. As the countdown to the ruling entered its final hours... [m]ore than 100... Chilean exiles gathered... in a central London church... to demand that the former head of state be forced to face the murder charges... On the walls, they hung pictures of some of the victims of [the general]'s 17-year regime... Some of the victims were Spanish citizens and this is the reason the Spanish judiciary is dealing with the case... "The ruling is extremely important not only for Chile but for all of humanity," [the]... president of the main victims' group in Chile, told Reuters... [The g]eneral... was arrested... while he was recovering from surgery to his back. He has since been moved to a secluded clinic in the suburbs. Lawyers for the Spanish authorities have pressed ahead with the extradition process in case the Law Lords ruled in their favour. A lawyer representing the Spanish Government has said the general is "fit to be discharged" from hospital. Three Chilean senators who visited [the g]eneral... last weekend said he was confident he would not face extradition... Chile itself, deeply divided by feelings for the former head of state, was to have live television coverage of the decision. The British Government, keen to minimise the embarrassment of having a former head of state in detention, has been at pains to stress that [the general]'s extradition is a matter for the courts and not the Government.

...Chile is wooing "friendly countries" to lobby Britain to release[its] ex-dictator... and block a bid to extradite him to Spain... The US Government, in its most weighty comment yet on the... case, said Chile's opposition to a trial in Spain deserved "respect." The US is eyeing lucrative defence contracts in Chile, not least a possible \$US600 million... deal to renovate Chile's ageing jet fighter fleet.

...BRITAIN has closed its consulate in Chile's second largest city and cancelled a British warship visit as tensions rise over London's arrest of [Chile's] ex-dictator... The British Embassy in Chile announced the moves yesterday, citing the strained political and diplomatic climate between the two countries during [the general]'s legal battles to avoid extradition to Spain... [The general]'s arrest, which enraged Chilean rightists and the military, has cost military orders for London. Chile is the second biggest Latin American buyer of British defence goods after Brazil. Chile's navy has been contemplating buying six second-hand British frigates for \$285.8 million. To show their anger... navy commanders cancelled trips to Britain and Spain. The air force also cancelled a trip to Britain.

...Following the decision by the Law Lords... that [the g]eneral... is not immune from prosecution, [the]... Chilean Foreign Minister... has been sent to London and Madrid to try to stop the former dictator's extradition to Spain. His entreaties may be varied but are unlikely to include the word that [the g]eneral... added to the dictionary of horror. Los desaparecidos – the disappeared – still haunt the surviving victims... [T]here were about 3000 murders after th[e] day in 1973 when [the g]eneral... with brutal force brought to an end the democratically elected Salvador Allende's chaotic 3-year dash to socialism... The world watched it start on television. British-made Hawker Hunters bombed the presidential palace. Inside President Allende died. It was said he took his own life; others believe he was murdered. Thousands were herded at gunpoint into the National Stadium in Santiago and detained for weeks. Hooded informers identified "subversives." In cubicles people were tortured and murdered. Firing squads executed hundreds... Others were buried in mine shafts, in unmarked graves, in places still to be found... Tens of thousands of other Chileans fled into exile... [However, the general]'s influence did not stop at the Chilean border. Exiles were tracked down to foreign capitals and assassinated. His feared secret police, the Dina, struck in Washington on September 1976 when Orlando Letelier, former Chilean Chancellor under President Allende, and Ronni Karpen Moffitt, a U[S] citizen, were killed by a bomb planted in their car.

...A Chilean Government report says... some 125 Government critics... were... killed abroad, mostly in neighbouring Argentina... during [the general]'s 17-year rule... Meanwhile, many remain sceptical about Chilean claims that the former... dictator might be tried at home if Britain frees him. "He would rather kill himself or be killed by his guards than face the humiliation and indignity of being sent to face trial...," [the general]'s nephew... told the *Mirror*... Fourteen lawsuits brought by families of those who disappeared or were tortured during [the general]'s reign are pending in Chile.

...Today, almost 100 widows and relatives of Chilean policemen and soldiers killed in Chile in 1973 will deliver a petition to... the... British P[M]... The petition, signed by 200,000 Chileans, "asks the British Government to help protect the process of peace and reconciliation in Chile" by freeing [the general. A] Chilean member of Parliament... who helped to organise the widows' visit, said: "Every man, woman and child in Chile today wants to forgive the past and protect our democracy."

...Chile has stepped up its campaign to have [the general] returned home, suspending all official visits with Britain and Spain... and asking airlines to halt flights from Chile to the British-held Falkland (Malvinas) Islands... [In another development, the f]ormer Chilean dictator... has... described [the British P]M... as untrustworthy. Speaking to the *Sunday Mirror*, [the general]... said he was the victim of "treason" and had been invited to Britain by the Government. "Now I know all the time they were plotting behind my back to arrest me in an illegal action under international law... They have kidnapped me and are holding me illegally against my will." On Friday, the general was forced to appear at a London magistrate's court – the first step in extradition proceedings...

Chile[']s former] dictator... is resigned to dying in Britain during interminable legal arguments over whether he can be extradited to Spain... the *Sunday Telegraph* newspaper reported. Seven of Britain's most senior judges will today begin rehearing [the general]'s claim that he is immune outside Chile from prosecution on charges of murder, torture and kidnap. If they rule in his favour, a quick return to Chile looks likely. But if they rule against him, a flurry of appeals will undoubtedly follow and the 83-year-old could find himself an unwilling guest in Britain for many months to come... He is now renting a luxurious mansion for around £10,000... a month. Five judges of Britain's House of Lords ruled by three to two in November that [the general] had no immunity as a former head of state. But that decision was set aside in December after [the general]'s lawyers protested that one member of the panel... had failed to declare his connections with human rights group Amnesty International.

...A newly declassified cable has revealed that[a former US] Secretary of State... deliberately covered up atrocities in Chile and gave American support to the [general's] regime... It is among files being declassified for the Spanish prosecutor... The *Observer* newspaper reported that [the secretary assured the general that the 38th US] Administration would not punish him for violations of human rights. Instead, [the secretary] told the dictator he was a victim of communist propaganda and should not pay too much attention to US critics... "In the U[S], as you know, we are sympathetic with what you are trying to do...," said [the secretary's]... cable... "I think that the previous Government was headed towards

communism. We wish your Government well.” ...[the secretary]’s complicity in the... coup which overthrew the democratically elected President... in 1973 has always been widely suspected.

...[the] Pope... has urged Britain to block [the] former Chilean dictator[’s] extradition to Spain. The *Daily Telegraph* said the Pope has appealed in a letter to the British Government for leniency for humanitarian reasons and in the interests of national reconciliation in Chile. But he also backed the argument that [the general] should be immune from prosecution as a former head of state. The newspaper said it understood that similar representations had been made to the Spanish authorities on [the general]’s behalf.

...[the] British Home Secretary... [has] decided to allow extradition proceedings to go ahead against... [the f]ormer Chilean dictator... The decision was welcomed by human rights groups but disappointed the general’s supporters, who had hoped a dramatic reduction of Spain’s case by Britain’s top court would have allowed [the general] to go free... Britain’s Law Lords... ruled on March 24 that [the general] could face extradition proceedings only on charges of torture carried out after 1988, when Britain incorporated the UN Torture Convention into law.

...[the f]ormer Chilean dictator[’s]... chances of winning freedom grew yesterday as time and arguments began running out for opponents trying to stop him escaping a torture trial. Many lawyers believed the 15-month legal-battle over whether the 84-year-old general should be extradited to Spain was probably finished following Britain’s announcement that doctors had ruled him unfit to stand trial... Britain said it was giving Spain, Chile and other interested parties seven days to lodge representations against the doctors’ ruling before making a final decision on his fate.

...Britain has decided not to ask [the] former Chilean dictator... to undergo a second medical examination, signalling that it was ready to set him free, says the *Daily Telegraph*. The Home Office declined comment on the report, saying [the] Home Secretary... was still studying representations from Spain, Belgium, France and Switzerland... The four European countries say they disagree with a medical report drawn up by a panel of independent British doctors which found that the 84-year-old general was... brain-damaged and... unfit to stand trial.

...[the general] has duped British doctors. That’s the claim by opponents of the former Chilean dictator, who left Britain on Friday after 16 months of house arrest. Televised pictures of [the general] showed him anything but frail, walking briskly but with a cane across the tarmac after arriving in Chile. This was in stark contrast to the general’s last appearance when he arrived at a London hospital, too frail to leave his wheelchair.

...Britain faces costs of millions of dollars and bruising political, diplomatic and legal fallouts after 16 months of wrangling over whether [the general] should face a torture trial. British newspapers splashed reports that taxpayers would have to foot a bill of about £15 million... for legal costs and the around-the-clock police guard during his house arrest near London... [Britain]’s Labour Government insisted after freeing the 84-year-old general on Thursday that it had all been worthwhile as a signal to others accused of crimes against humanity that Britain was not a safe haven. But the opposition... seized on the high costs to accuse [the British PM] of wasting public money... The... Conservative leader[’s]... verdict was that it had been a “story of moral posturing, gross incompetence and international humiliation.” ...The decision to free [the general] sparked celebrations among his allies in Chile but the general’s opponents in Santiago vowed to continue their fight to have him tried... “We are going to demand justice. We do not want impunity. He is going to be put on trial in Chile...”... said... [the] president of the protest group Families of the Detained-Disappeared... A Chilean judge is probing 59 civil lawsuits alleging human rights abuses against [the general] in Chile and human rights lawyers hope the cases evolve into concrete charges.

...[the general]’s return to Chile has underlined the divisions between those who see him as a tyrant who had leftist opponents tortured and killed and those who see him as a saviour who halted a likely slide into communism... The retired general returned to a hero’s welcome from supporters... [while a]bout 1500 human rights activists demonstrated in front of the Moneda, the presidential palace [the general] bombed in his 1973 coup to oust socialist president Salvador Allende. They unravelled banners of victims of the rightist dictatorship and plan... a larger march on Santiago’s main boulevard. Chile’s government, a centre-left alliance which took over when [the general] handed the country back to democracy in 1990, condemned the... celebrations. [The current] President... who hands over the country to [a] socialist... in eight days, slipped out of Santiago... before [the general]’s arrival... to inaugurate a dam in northern Chile...

As in the rest of South America, the divide between rich and poor was huge when Allende was elected in 1971. His reforms included nationalisation of the copper mines, Chile’s most important generator of foreign currency at the time. American interests owned most of the mines and the U[S] Government set out on a deliberate destabilisation campaign of the Chilean economy. The U[S] stopped buying copper from Chile, blocked shipments of spare parts for the mining industry and began working actively to promote a military coup. Newly declassified CIA documents show that they played a pivotal role in coup preparations. The Chilean economy suffered enormously. Rationing was introduced. People were complaining. The day after the coup the shops were full. People could buy bread, meat, soap, tea. The army had stockpiled goods in their barracks for months before the coup. In 1988, the people voted “no” to [the dictator] and “yes” to democracy. [The dictator] wrote the new constitution, giving himself a permanent seat in the Senate and providing the armed forces with immunity for anything that had happened during military rule... A significant minority of Chileans... [still] revere the general for his] military coup in 1973, which they believe laid the foundation for a massive increase in prosperity.

The region of 500 million[people] stretching from the Rio Grande to Tierra de Fuego, prone to boom and bust, is now quietly consolidating on the sometimes painful and still delicate economic reforms of the last five years... Chile, where... tough economic reforms were imposed under 16 years of military rule, has during the past decade mainly prospered by opening its economy, cutting state spending and encouraging a high rate of domestic savings. Partly because of Chile’s success and the rise of a new breed of U[S]-trained economists, an economic and political sea of change across the rest of Latin America... has resulted... In Brazil, a graveyard for failed stabilisation plans, recovery is based on Plano Real, introduced in July 1994... A privatisation programme is in full swing... Foreign reserves have in the past six years leapt from \$10 billion to nearly \$100 billion... Growth is, however, predicted to fall from 4.5[%] last year to 2.5[%] this year and, in accord with Latin American tradition, the recovery of this decade is precarious. Public debt has rocketed from \$65 billion in 1990 to \$170 billion, strong sectional interests, including some of the 600 multinational companies in Brazil stymie reform, privatisation costs jobs and the country continues to be blighted by appalling disparity of income and a poor education system. Corruption in 1994 cost the public sector nearly \$50 billion, although it is slowly declining as the public sector shrinks and tax break-encouraged newspapers expose some of the worst cases. Argentina... was in 1960 among the dozen richest[nations] in the world but slipped back to 34th place in the economic chaos that followed the ousting of Argentina’s military rulers in 1983... [It], too, has... implemented profound economic reform and thrown itself open to the world trading community... But it has faltered after several years of Asian-style growth [ended with]... the Mexican crisis in 1994. A badly handled devaluation resulted in a run on the Mexican currency which spread throughout Latin America in the “tequila effect” and resulted in sudden capital flight of \$10 billion from Argentina. In spite of a privatisation binge in which around 150 enterprises – worth one-third of the total value of the economy – have been sold, the Government is still having to hike taxes to fund this year’s estimated \$9.3 billion internal deficit. Unemployment in Buenos Aires has tipped 17[%] of the workforce... And on top of 100,000 state servants who have already lost their jobs since 1990 another 45,000 will go in the next three years... while the country’s biggest-ever general strike last month showed how rich and poor continue to suffer...

Argentine police yesterday fired tear gas and rubber bullets at stone-throwing protesters in... Cordoba, where state workers demonstrated over unpaid salaries and privatisation plans... [A]t least four police officers and four demonstrators were hurt... [S]peaking in Brazil on a business trip... Cordoba’s Radical Party provincial governor... condemned the violence which he said “will not resolve our social or economic problems.” - 1996

[Yesterday the American] President... launched the last leg of his South American tour to promote... plans for freer trade between North and South America and urged nations not to be tempted to follow protectionist policies... but Argentina complained the United States had erected its own trade barriers... [The] Argentine Industry and Trade Secretary... cited as examples quotas for Argentine beef sales to the United States and high tariffs on citrus fruit imports... He... told a news conference US investments account for 34[%] of “new investments” under way or under study for 1997-2000. But he complained that the relation between imports and exports was worse for Argentina with the United States than with any other trading partner. Last year, the United States accounted for one fifth of all imports into Argentina but bought only 8[%] of Argentine exports... [The secretary also pointed out that earnings] overseas account for roughly 25[%] of the United States’ GDP. This is where the hidden strength of US corporate earnings has been... [Similarly critical were t]he Mothers of Plaza de Mayo, the human rights group of relatives of victims of Argentina’s “Dirty War” of the 1970s[(when political opponents were disposed of by various methods, including via so-called ‘death flights – that flew prisoners out to sea before they were pushed out of the aircraft minus parachutes’), which] said it was “ashamed” at [the US President’s visit] because he represented a power that oppressed the [Last World.

...the US President’s] visit to Argentina was met with violent protest yesterday when an anti-U[S] rally was hijacked by a small group of rioters throwing molotov cocktails and smashing up banks... [The riot came as the President] sought to calm regional fears that Washington’s decision to lift a two-decade ban on high-technology arms sales to Latin America could spark a local arms race. “There is nothing here designed to upset the military balance in South America,” he said... The largely symbolic decision, which could still be derailed by the Congress, would allow Argentina... access to surplus US military equipment like trucks, jeeps, boots and uniforms, but not advanced fighter planes.

...We should indeed “cry for Argentina,” in fact for all of Latin America, when the news... announce[s that the US] Administration has decided to remove long-standing restrictions on selling high-tech weapons to South American countries. Just at the moment that South America, after years of slithering and sliding, has finally got itself out of the mud of economic malaise, its spendthrift generals supposedly relegated to the outer fringes of decision making, this change in American policy could throw the balance of power between civilian and military in exactly the wrong direction. The last thing the generals need to be tempted by are expensive items of once forbidden fruit... The last time western arms salesmen were regularly satisfying every whim of South American generals... Argentina... picked a quite unnecessary fight with Britain over ownership of the off-shore Falkland/Malvinas Islands. Never mind that it was, as one astute observer of the time noted, “two bald men fighting over a comb,” it was a high-tech war, only surpassed, quite a few years later, by the Gulf War... [The Falklands] was a futile war that won Argentina nothing but shame. Its only virtue was to totally discredit Argentina’s military junta whose bloated military budget was out of proportion to other Government spending, way out of line with the country’s economic resources and one of the major contributors to rapid inflation and Government mismanagement that had been Argentina’s lot since the days of Juan and Evita Peron... The Latin American world has changed beyond all recognition the last few years. Military regimes have fallen by the wayside, although in Peru, Colombia and Chile they still wield a disproportionate influence and hold on to a dangerous degree of autonomy. Democracy is now widespread, if in many cases the institutions of government remain imperfectly formed. Economic self-discipline, after years of painful adjustment, is today producing dividends that offer the continent the chance of doing what it had long promised itself, of being as successful as east Asia. (Chile already is and it shouldn’t be forgotten that until a decade ago Brazil held number one spot as the fastest growing economy of the century, even ahead of Taiwan.) One important sign – both facilitator and consequence – of the maturing of Latin America has been the fall in military budgets. South Americans this century have more talked about war than actually practised it – Brazil, its largest country, hasn’t been to war since 1870. Now... even the need to posture is being shelved. Thus, one assumes, [the US] President must have very good reasons, outside the need to make money for the American arms industry, to upset this apple-cart. But what are they? The guerrilla insurgencies that during the Cold War provided a national security rationale for a military dominance have in the majority of cases ended. One kidnapping in Peru by a marginal group does not a mighty insurrection make. The rapid dismantling of tariff barriers and the pace of economic growth is making “hard” political boundaries rather “soft.” So why then should South America be hungry for new arms? ...[the US President] needs to ask himself on which side in the struggle between civilian sobriety and military profligacy is he actually on?

...US soldiers, supposed to be doing infrastructure and humanitarian work in Haiti, were on the streets... of the Haitian capital yesterday... with UN peacekeepers and Haitian National Police... as student demonstrations flared into a second day of general rioting... Five people were seriously injured in the previous day’s riots. Overnight, a police officer was shot six times and killed. A police employee also died, although it was not known if [the second death] could be attributed to the general rioting. The rioting was triggered late last week by student protests that began after teachers went on strike, closing schools just before final exams, because they have not been paid for 14 months... [Speaking of riots, 29 prisoners have been] hacked and stabbed to death at a remote Venezuelan maximum-security jail in a savage battle for power between rival gangs... The r[iot] followed fierce rivalry between local prisoners and a group moved from the La Sabaneta jail in western Venezuela, far from their families, as a punishment. All of the dead were from La Sabaneta... Officials said about 50 of the... El Dorado... jail’s 380 inmates took part in the fight... and order was restored by about 20 National Guardsmen... No journalists were allowed to enter the prison as authorities moved to avoid the publication of gory images from another violent episode in a Venezuelan prison. Incidents are common in the country’s overcrowded and decaying prisons, viewed as among the worst in South America by human rights groups. Drugs and guns are easily smuggled in, often by prison guards for a fee... An average of four prisoners were killed and 20 injured each week in the country’s 33 jails last year. Painfully slow legal processes mean that fewer than one in four of the 24,000 prisoners in Venezuela has been convicted.

...A gang fight in a remote Venezuelan jail in which 29 inmates were hacked to death could not have been prevented and could happen again, say prison officials and human rights groups. Seeking revenge for the murder of one of their leaders, a gang of dangerous criminals in the crumbling jungle prison broke out of their cells on Friday and launched a bloody raid on rival inmates transferred from a different prison... The killings were the worst in Venezuela’s overcrowded and decaying prisons since more than 100 inmates were hacked and burned to death at Maracaibo’s La Sabaneta prison in 1994. - 1997

The charred bodies of 30 prisoners were removed from a tense Venezuelan jail yesterday after a fire apparently caused by tear-gas canisters fired by guards, prison officers said... It was feared the death toll could be as high as 40... A photographer who entered the cramped and blackened area counted more than 20 bodies, many of them burned beyond recognition. Several prisoners had tried to escape the flames by hiding under beds. Others were fused together, clinging to one another as they died. Prison inmates insisted that the guards started the fire without cause and the Defence Minister... said he had ordered the arrest of six guards involved in the incident... [Incidentally, the] winner of Nicaragua’s presidential election will face the monumental task of rebuilding the economy of one of Latin America’s poorest countries, where more than half the population lacks a job... A U[N] study labelled Nicaragua the most underdeveloped country in Latin America after Haiti... Nicaragua was once known as the “breadbasket of Latin America” for its abundant farmland but it has fallen on hard times after a bloody left-right civil war in the 1980s, a U[S] blockade and a failed socialist economic policy... [As a consequence of these and other factors, ‘the standard of living has plummeted during the past six years.’ A recent] poll showed 77% of Nicaraguans think poverty is the most important... election issue – who can create the jobs to put food on the table of Nicaragua’s poor... Children crowd Managua’s street corners begging for change, crime and prostitution are soaring and the suicide rate is up 20% compared with 1995, police statistics show... The buying power of salaries has fallen 60[%] since 1990... Wages are miserable for those

Nicaraguans who have jobs. A doctor in a state hospital makes about \$142 a month, a nurse \$70 to \$80 a month and prostitutes get as little as \$7 a trick.

...With his presidential election win in the bag... jubilant businessmen rushed to congratulate the burly former Managua mayor, trading soared on Nicaragua's tiny stock market and prominent bankers danced at his Liberal Alliance headquarters... [The new President] has promised to make Nicaragua Central America's bread basket once again through a free-market economic policy that emphasises agriculture... and attracting foreign investment... But the business community's joy that [his main opponent], who headed Nicaragua's 1979-1990 Marxist Government, will not come back to power may be short-lived as the reality of Nicaragua's deep economic problems sink in... Nicaragua carries one of the heaviest debt burdens in relation to the size of its economy, totalling more the \$US10 billion, five times its entire gdp], according to Central Bank figures... 75[%] of the population has unsatisfied basic needs, per capita annual income is \$US454...

[*When Nicaraguan guerrilla leader General Augusto Cesar Sandino was tricked into a fatal ambush by dictator Anastasio Somoza's troops on February 21, 1934, a legend was born. Sandino is regarded as a founder of guerrilla warfare in Latin America as he and his army attacked first the invading US Marines and then the first of three Somoza family dictators in the 1920s and 1930s. The Sandinista National Liberation Front (FSLN) took his name when it was founded in 1961 and, on July 19, 1979, it finally toppled the third Somoza dictator, marching triumphantly into Managua. The Sandinistas ruled for 10 years with Soviet and Cuban support, fighting off the Contra rebel army that was funded and trained by the US until the Sandinistas were themselves defeated in a 1990 election. In a rare interview to mark the anniversary of the revolution that took his name, Sandino's daughter recalled how her famous name posed a threat to her life. She was only a baby when her father was killed on Somoza's orders – Sandino believed he was about to sign a peace accord. Fearing that the little girl would be killed by Somoza, two uncles spirited her away to the mountains north of Nicaragua. "The Guardia were sent to kill me when I was eight months old," she said. "They thought I was a boy, you see." Under direct orders from Somoza, the National Guard killed the surviving members of Sandino's family, her paternal uncles and cousins. In 1961, she left for Cuba, a haven for guerrillas and refugees from right-wing purges in Latin America. There she remained for the next 18 years, bringing up her three sons and working as a telegraphist while hoping that the Somoza dynasty would one day come to an end. As the FSLN gained strength in the next decade, she was courted by its leader, Carlos Fonseca, who was aware of the powerful symbol General Sandino's only heir could bring to the movement. The two met in Honduras but she declined an open role in the insurgency. Fonseca was killed in 1976 at the age of 40 and remains another of the revolutionary icons in Nicaragua, with an eternal flame in his memory in the Revolution Plaza where the Sandinistas will celebrate on July 19. She regards the current Sandinista leadership as far removed from the roots of the Sandinista movement. But she is unequivocal about her reaction to the overthrow of Somoza by the Sandinistas. "The 19th of July, 1979, was the happiest day of my life."*]

...Gangs rule streets now the war is over... [L]ike the capital cities of its violent... neighbours, the streets of Managua are no longer safe. Nicaragua's crime rate has soared 11.4% this year over 1995 and the number of crimes committed in Managua has doubled since 1989, according to police statistics. A crime is committed every 10 seconds in Nicaragua, population 4.2 million. One of the main reasons for the growing crime rate is a boom in youth-gang activity... Managua[']s Police Chief... said. "They've increased at a frightening rate. One year ago there were 12 such groups, now we have 66 groups on record,"... Groups such as the Salineros, the Corpse-eaters, the Medicine Men, the Russians, the Gandys, the Skinheads and the Minibrakers have graduated from petty theft to murder, armed robbery, rape, extortion and drug use... Managuans grew accustomed to political violence after a bloody eight-year civil war between US-backed Contra rebels and the left-wing Sandinista government in the 1980s left at least 30,000 dead. But until recently Nicaragua had been spared the common crime and gang violence that plagued other Latin American capitals. The civil war, military conscription and Sandinista Party control of the [suburb]s kept young people off the streets... But in the 1990s, the civil war ended and military conscription was abolished, creating a tinderbox of idle young people waiting to explode. Thousands of youths trained for war returned to their homes only to find unemployment and poverty... According to government statistics, 55% of Nicaraguans between the ages of 14 and 24 do not work or go to school. Another factor was the return of deported gang members from the U[S], a problem that has also haunted El Salvador.

...[16 'years ago this week, three American nuns and a religious volunteer were murdered in El Salvador. In 1980, the country was a Cold War battleground and by the closing months of that year, no one was immune from the slaughter. Not even Americans. Five common soldiers were eventually convicted of the murders, but the families of Ita Ford, Maura Clarke, Dorothy Kazel and Jean Donovan always suspected that the killing was ordered by higher-ranking officers. A lawyer of the Lawyers Committee for Human Rights in New York says successive US Administrations "pursued every lead except the leads that went up the chain of command." No officer with authority over the convicted soldiers was ever interrogated by Salvadorean prosecutors, or American investigators. Last March, the lawyer and a colleague interviewed four of the five convicted killers then in prison. Only the squad leader refused to talk. The other four said their sergeant had told them he was acting on higher authority when he ordered them to kill the nuns. Then the lawyers discovered two key Salvadorean generals now living in Florida. In 1980, one was commander of the Guardia Nacional, El Salvador's rural police force. All five of the convicted soldiers served under him, as did the officers who directed the initial coverup of the crime – a coverup documented in US Embassy cables. The commander has denied any responsibility whatsoever for the crime or attempts to conceal it. The other Florida exile was El Salvador's Defence Minister when the nuns were killed. He, too, has denied any responsibility. But he told the lawyers something he had once said to the US Ambassador: "When it became clear that the women had been murdered I thought immediately of the commander's first cousin." The cousin was the regional commander of the Zacatecoluca garrison, with jurisdiction over the Guardia at the international airport. Last month, the cousin met the American lawyers. He said the sergeant and his men did not report to him. There was, he said, a "Special Defence Command" in charge of the international airport. The lawyers were not convinced. The sergeant had set up a roadblock on the airport road. Eight of his men held up traffic and let only the nuns' minibus pass. The sergeant and his squad, wearing civilian clothes, then intercepted the nuns. If the cousin is telling the truth, then in a small command in rural El Salvador a lowly sergeant must have been able to deploy 14 men, disrupt traffic out of the airport, target, kidnap, rape and murder four American women, and leave behind their unburied bodies and the burned-out vehicle – all with nobody the wiser at HQ. In 1984, the sergeant and his men were convicted. At that point, US and Salvadorean officials might have started a more intense effort to discover any involvement by higher-ranking officers. For example, about an hour after the abduction, the sergeant had made at least one and possibly more phone calls from a little Guardia outpost. Who did the sergeant phone? The families' search for justice continues.']*]

...A grave containing the bodies of up to 300 Guatemalans killed in the early eighties has been found in the central Guatemalan department of Chimaltenango... Forensic doctors disinterred 25 bodies on Thursday from the grave near San Martin Jilotepeque, a 90-minute drive north-west of the capital... [T]he prosecutor... said bodies in the grave... [had] their hands tied, and... also showed signs of possible gunshot wounds. Human rights groups say thousands of Guatemalans, mostly indigenous peasants, were killed during the Army's counter-insurgency sweeps... at the height of the nation's 36-year civil war. More than 100,000 Guatemalans were killed during the war and... a further 40,000 disappeared. - 1996

SIXTEEN people were formerly charged yesterday in connection with the massacre of... 21 women, nine men, 14 children and an infant... in the southern Mexican state of Chiapas... [The] Attorney-General... said earlier in the week the conflict was solely between feuding indigenous villagers, but local accounts disagreed... Witnesses have claimed last week's massacre... which also left 25 people wounded... was carried out by paramilitary sympathisers... of the ruling Institutional Revolutionary Party (PRI)... Government-supported paramilitaries have waged a campaign of violence against people suspected of sympathising with the Zapatistas... The Zapatistas rose up on New Year's day, 1994, to demand better living conditions

for the state's impoverished Maya majority, and to fight for democratic reform. Talks with the government broke off in September 1996... [The] leader of the Zapatista National Liberation Army (EZLN), said the government had used negotiations and peace talks as a ploy while it trained villagers to fight the rebels... "This is the logic of a low-intensity war, with the army and the government against the indigenous people," said [the] co-ordinator of the... Centre for Human Rights in... Chiapas... [Supporting their comments is the fact that the] Mexican press reported... [a] Roman Catholic priest... [had called the Chiapas governor's office] with warnings as the carnage unfolded... [The governor] told reporters his office alerted police... after the first call and received assurances nothing was wrong. The slaughter, carried out with... AK-47 rifles normally supplied only to the army... went on for five hours... [In response to the press reports, the governor] said he would not step down, adding it was time to work towards reconciliation... Last week's massacre was Mexico's worst loss of life in a single act of violence since at least 140 people died in the 1994 uprising... The Mexican government yesterday defended its policies in Chiapas... [after p]rotesters held a vigil at the Angel of Independence monument in Mexico City, chanting "Killer government massacres peasants." ...[the] Interior Minister... said: "The (federal) government has taken measures toward disarming these paramilitaries and stopping conflicts in the state." ...[the deputy] chief public prosecutor... said the... [16 suspects] could face up to 80 years in prison... [A]nother 23 people were being held but no charges had been brought against them. Those held include members... of the PRI... In addition, two minors were being held in juvenile detention...

[15] heavily armed men attacked a prison on the remote border of southern Mexico yesterday, freeing 32 of the 106 prisoners. Most of the freed inmates were in jail for crimes such as murder and kidnapping.

...[hundreds of Mexican children and infants have disappeared without a trace, and the number of stolen children is on the rise. Babies are sold for adoption, some children are kidnapped to smuggle drugs across the US border and others are used for pornography, sexual abuse, or for begging and selling on the streets (there are mafias of child robbers that force younger children to beg, and even cases of youngsters being mutilated to provoke pity so they can fetch more money'). By the way, f]ive days after Hurricane Pauline whipped through the Mexican resort of Acapulco, rich tourists jet-ski... around the bay while poor residents scramble... for food and water. Wealthy visitors were soaking up the sun yesterday at the luxury high-rise hotels facing the bay, practising aerobics in freshly scrubbed swimming pools and sipping frosted margaritas. A few blocks away... from the hotel towers, which block the view of the bay for many local residents, Pauline's destruction was all too visible. Entire neighbourhoods were still covered with mud and debris, only a handful of homes had clean drinking water and the thousands of homeless people... were mourning their scores of dead, salvaging what little they could from their ruined homes... [and complaining] that they were getting little help... [while, o]n the beachfront... avenue, crews of streetsweepers and army troops were scooping up the remaining mud that had invaded the tree-lined street from the slum-filled mountains above... As the hotel guests enjoyed lavish buffets, the poor... [grabbed] rotten muddy food thrown into the street by crews clearing up the wrecked central market. "It's always the same here. The rich get taken care of first and the poor are always last," said... a 32-year-old... who lost his home... Like other locals, he... recognised the importance of cleaning up the beach-front to keep tourists happy – and badly needed dollars coming in. "But if we all starve or die of disease, who will work for the tourists?" he asked... The Government's death toll from the storm has risen to 173 dead and more than 200 missing... [In addition, t]hree cases of cholera were diagnosed yesterday... [Teams] of Government health workers[have] set up makeshift vaccine centres across the city and in smaller villages to prevent the possible spread of typhoid fever, hepatitis and cholera, which thrive in the tropics... In the hotels themselves, life was back to normal except for a warning to tourists to limit their use of water so other parts of the city could get what was left over... "When you ride in from the airport, you see the mud and ruin, then when you are in the confines of your hotel, you [don't]... It's like two worlds in one here," said... a 42-year-old executive for a mining company...

AROUND 1545 the Spanish colonists found, literally, a mountain of silver in the south of what is now Bolivia. The town was named Potosi and over the next 300 years an estimated eight million Indians died digging out the treasure which kept the kings of Spain in royal style. The Spaniards no longer rule the country, but... miners continue to work themselves to an often early death. The local Indians called Potosi the "mouth of hell" after they were hideously exploited to extract the mountain's extraordinary wealth... The mines are now run by co-operatives which extract tin and other industrial metals. People are drawn by curiosity and compassion for the incredibly primitive conditions in which the mainly Indian miners [still] work and a constant flow of tourists support several tour companies and guides. One of the most popular of these is Koala Tours, whose guide... was once a miner. First stop on the tour is at the market, where coca leaves and dynamite can be bought by miners, who earn around \$NZ10 a day... [The] miners chew vast quantities of coca leaf, which is legally cultivated in Bolivia, although the cocaine industry derived from it is not legal. The leaf, when chewed with "roca negra", a black alkali, numbs miners from hunger, thirst and pain, enabling them to work for hours without eating... Particularly popular are bottles of 95 proof white alcohol named Fiesta, of which the miners enjoy a seriously fiery tippie on Friday afternoons, in a cosy underground corner... Their union has always actively opposed the military, which looms large in Bolivian politics... Politics are generally inescapable in Latin America, and the miners are heroes to fans of Che Guevara, as in 1967 many miners were allegedly massacred by the army after helping Che's guerillas... The coppery soil of the hill which houses the mines is dusted by icy dry snow, and the black entrance of the... mine gapes menacingly in the hillside. Stooped over, about to enter... we are roughly shoved against the wall as a wagon piled with "completo" – ore containing zinc, tin and lead – shoots out, pushed on rails at speed by two boys who could not have been more than 14. As we venture further into the dark tunnel, relying on old-fashioned carbide lamps, the air becomes thicker and warmer. Later it gets hotter still, as the only fresh air comes in at the door, although the mine is four levels deep. Lack of oxygen or carbon monoxide poisoning causes several deaths a year. As we descend to the second level it becomes clear the law, which states miners must be over 18 years old, does not apply here. Kids as young as 12 are "helpers", carrying... 30kg... sacks of rocks on their backs up the steep shafts to the wagons on the first level... These carriers are known as "apiris" and are the lowliest of the hierarchy, which extends up to the "perforistas", the expert miners who decide, using... experience rather than detectors, where to drill... Deep inside the bowels of the mine lurks the devil himself – a satanic statue the outwardly Catholic miners worship... Hopeful miners ask their Lucifer for luck, mineral and protection... Today they and their sons struggle on, hoping they will strike it rich in this impoverished country. Even after... years of exploitation, the mines occasionally relinquish a rich cache of silver. As recently as five years ago[a] local miner... struck a good vein in an abandoned mine, and now runs... his own transport company. According to [the Koala Tours guide], "he drinks only Johnnie Walker." - 1997

If we as [First Worlder]s tried to imagine what an underdeveloped area looks like, we would probably conjure up a town like Potosi, Bolivia. At an altitude of 15,000 feet above sea level, Potosi is difficult to reach. The roads leading to it are bad. The native Indian people who live there eke out a meagre living from the poor soil. The only other major source of employment is a tin mine in the mountain which overlooks the town. Housing is poor, and running water and electricity are a luxury in the area. At first glance, it might seem that this town needs to be drawn out of its isolation and backwardness into the mainstream of "modern" economic development. It might seem that the town needs an injection of foreign capital and technical "know-how" to pull it out of this state of underdevelopment. However, a closer look at Potosi reveals to the traveller that it was once a part of the great Inca empire and later, a cornerstone of economic growth and political power in the Spanish empire. The ruins of this once thriving centre of development are still visible. Baroque church facades carved in stone show eroded but discernible images of splendor and abundance. In the 1600s, in the heyday of Potosi, they say that even the horses were shod with silver. At the height of its boom, the town had a population equal to that of London and larger than that of European centres like Madrid, Rome, or Paris. Potosi attracted silks and fabrics from Canada and Flanders, the latest fashions from Paris and London, diamonds from India, crystal from Venice, and perfumes from Arabia.

Something really valuable in the 17th Century was referred to commonly as being “worth a Potosi.” ...The entire economic and social life of Potosi was based on wealth from a single commodity – silver. This silver was mined by the native Indian population and shipped directly to Spain. Potosi silver financed, in large measure, the development of the Spanish empire... “Between 1503 and 1660, 185,000 kilograms of gold and 16,000,000 of silver arrived at the Spanish port of Sanlúcar de Barrameda. Silver shipped to Spain in little more than a century and a half exceeded three times the total European reserves – and it must be remembered that these official figures are not complete.” (...*The Open Veins of Latin America*) The wealth which was extracted from Potosi’s Cerro Rico – the “Rich Hill” – was shipped to the mother country rather than being accumulated in the area. Thus, the development generated by the valuable mineral occurred in Europe, rather than in Bolivia. When the silver ran out, Potosi’s boom ended and the area was left to “underdevelop.” ...The underdevelopment of Potosi, then, began with the abuse of its people and resources through the European colonial system. The Latin American economy was geared by the Europeans to meet their own needs, not those of the local people. The underdevelopment which is characteristic of this “ghost” town today, has its roots in the history of military conquests. Underdeveloped countries are full of... towns like Potosi, and nearly all were European colonies at one time. The arrival of the Europeans in Asia, Africa, and Latin America – what is known today as the [Last] World – fundamentally altered the processes of development which were taking place at the time. In some cases, these societies were more advanced than others; and all, of course, had problems to surmount. But the people in these areas were constructing societies which, although not industrialized, were often highly sophisticated and complex. They were able to meet their physical and psychological needs through their own institutions. The military conquest of [Last] World people led to the plunder and destruction of some of the world’s greatest civilizations. The reasons the Europeans ventured across the seas were largely trade and profit. They needed spices, gold, silver, land, and markets to sell their processed goods. In this relentless quest, the Europeans disrupted the development processes which were going on in the societies they conquered. It was military force – not innate superiority – which enabled the invaders to subdue the native people and destroy the basic social units of entire peoples, i.e., families, culture, and religious institutions... The example of Potosi indicates how development in Europe generated underdevelopment in the colonies... Development and underdevelopment, then, are both integral parts of the same process. The development of some areas was accomplished at the expense of others. Wealth in some areas was accumulated because it was drained from others, in the form of human, natural, and financial services. - Development and Underdevelopment: Two Sides of the Same Coin

The vast disparity of income and wealth *within* the poor countries contributes to their problem. Virtually all of the developing countries are characterized by what is called a dual economy – two populations in the same nation with entirely different patterns of living. In the Latin American countries the wealthiest 5[%] of the population garner about 30[%] of the income, whereas the poorest 20[%] receive only 3 to 4[%] of the total. In the poor countries of Asia and Africa the situation is even more extreme – the wealthiest 5[%] receive as much as 50[%] of the total income. [‘India illustrates the dilemma which so many Last World states face. Even if the poorest 60% of its population were to receive 40% of all available income, their average annual wage would remain less than \$100 per person.’] In these nations a small portion of the society is urban, industrial, and modern; the remainder of the population is either rural, existing according to traditional agricultural patterns, or urban poor, subsisting on scraps from the industrial and commercial segment. Attempts to modernize a nation’s economy usually widen the internal gap between the rich and poor.

From the widening gulf between the two worlds[– First and Last –] there came, in the early 1970s, cries for a “new international economic order.” In 1974, in the midst of the first “oil shock,” a caucus of 77 preindustrial countries secured a proclamation of the new order by the UN General Assembly. The old order, characterized by “inequity, domination, dependence, narrow self-interest and segmentation,” was to be replaced by an order based upon “equity, equality of sovereign nations, interdependence, common interest and cooperation.” The industrial countries were enjoined to cooperate in translating these protestations into “negotiable issues.” The resolution drew no interest from the industrial countries... The UN Conference on Trade and Development (UNCTAD), the “poor man’s club” organized in 1964 at the behest of the preindustrial countries, remained the monitor of the facts and figures of that inequity with no power to redress it... Now the governments and the banks of the industrial countries and the international banking institutions are attempting to negotiate a reverse flow of aid from the poor to the rich countries – that is, payment of the \$1200 billion debt that burdens the preindustrial countries. In exchange for the rescheduling of interest and amortization payments, the creditors urge and compel their debtors to adopt “stabilization” and “structural adjustment” measures designed to improve their credit ratings and to make them more attractive to private investors... About one-quarter of the debt is owed by the newly industrializing countries of Latin America. It is they that went so improvidently into the private credit market at floating interest rates. They did so at the invitation of the U.S. banks, burdened with petrodollars... If this debt is ever repaid, it will not be... by the people who negated the inflow of the borrowed money by sending their capital out of the country. It will be repaid by people who can least afford to repay it – and at interest rates that have floated upward on the mounting national debt incurred by the same U.S. government that presses deflationary austerity on their countries... The excess interest paid in that flow of funds was set by the profligate mismanagement of the U.S. economy... The countries in sub-Saharan Africa, the world’s poorest, owe \$270 billion in official debt... The official status of their debt – it being owed to public rather [than] private creditors – has not spared the African countries the deflationary counsel to balance budgets, reduce consumption, devalue currencies, and the rest of the agenda of austerity. In their state of poverty, this counsel reduces not only their present but their future growth. That is true especially of cuts in expenditures for health, nutrition, and education, which subtract from tomorrow’s human capital. The effect must be to widen the gap that has opened [between the First and Last Worlds]... Economic development requires investments that cannot meet the terms of debt financing. They cannot compete with abounding opportunities in industrial countries that set those terms... The prospects of the most deprived people... have darkened... At the end of the fourth century of industrial revolution it must be admitted that one quarter of the world population, principally in Asia, Africa, and Latin America, lives in such poverty that they cannot be sure of the survival of their children... About half of the world population, principally in Asia, has seen measurable and more or less continuous improvement in their material circumstances over the past four decades... From the lives of the remaining quarter of the world population, industrial revolution has eliminated toil and want... [The ability to eliminate *toil and want* from] all humankind... in the next half century depends in many ways upon what these fortunate people may feel disposed to do about it.

While world bankers bicker, a little girl waits... [The] nine-year-old girl... is... living in the Kabale district of southern Uganda, one of the poorest regions in one of the world’s poorest countries. She has something in common with over two million children in her country, and many millions more across the [Last World: she] is not going to primary school. In Uganda, as in much of the [Last World], shrinking Government education budgets mean that families must meet the costs of schooling out of their own pockets, and [her] mother is too poor to pay. Until last year prospects for change looked bleak. Then the Ugandan Government announced an ambitious plan to provide school places for up to four children in each family. The plan, an important element of the Government’s strategy for tackling poverty, was to be part financed by transferring funds from debt repayments to education. A large chunk of debt repayments were to be written off by a debt reduction framework agreed last September by the I[MF] and the World Bank. Along with some 30 other children in her village [the girl] was registered for a free place in primary school. Her hope for an education and a better future soared. Now they have crashed. Having promised early debt relief for Uganda, some of the world’s most powerful countries – Japan, Germany, Italy and the U[S], ably supported by the IMF mandarins – have used their influence to delay action for at

least one year... A year ago the debt reduction framework was heralded as a breakthrough in a crisis which has afflicted many of the world's highly indebted poor countries. Uganda was seen as a test case. It had met all the criteria for debt reduction. It had carried out 10 years of stringent economic reform. Its level of debt was an enormous drain on the country's finance with nearly \$293 million haemorrhaging from the country each year – a large chunk of it going directly back to the IMF. In the debt queue behind Uganda are countries which are synonymous with abject poverty and distress. The list includes Bolivia, where 90[%] of its highland population lives in poverty and where only 16[%] of the rural population has access to safe water. Debt repayments for 1997 account for three times the spending allocated for rural poverty reduction. Bolivia, like Uganda, is being made to wait at least another year for debt reduction, despite over a decade of reforms. This could cost it \$353 million – double its national health budget. In Mozambique a quarter of all children die before the age of five, many from easily preventable diseases such as malaria, diarrhoea and respiratory infection. It is a country whose debt repayments are double the combined health and education budgets. Similar appalling indicators occur in many other highly indebted poor countries. On average children born in them are 30[%] less likely to reach their first birthday than the average for all developing countries, and a mother is three times more likely to die in childbirth. It was these stark facts, and the final realisation that highly indebted poor countries could never pay their debts, that caused the IMF, World Bank and the creditor countries to come up with the debt-repayment framework. The initiative was welcomed when it was introduced a year ago, mainly because it accepted that ability to pay outweighed creditor demands... This week in Washington, when the IMF and the World Bank delayed debt relief for Uganda for a year, they kept the initiative alive. But only just. Under the plan trumpeted by the World Bank president... a year ago five or six countries should have qualified for relief by now. Instead, high-level horse-trading between the richest countries is in danger of derailing the plan. Failure to resolve this crisis, which has been festering for the past 15 years, has been tolerated for too long. Nothing surely can justify debt destroying the growing minds and bodies of young children and undermining a whole swathe of humanity.

...[a US] Nobel prize-winn[er] says the IMF... and World Bank should have been abolished years ago. The father of the Chicago School of monetary theory said both... do... more harm than good to developing nations' economies by strengthening government projects against private business.

...[the] winner of the 1991 Nobel Peace Prize[...], who is still... largely confined to her Rangoon home... [by t]he Government has... sent a message to South-east Asian leaders as they gathered for the Asean summit that their interests would be best served by an end to military rule in her country. "Without political change, I do not think there will be stability in Burma nor will there be sustainable economic development."... Asean earlier this year ignored Western objections to the poor human rights record of Burma's military Government and admitted it as a member, saying Burma could progress faster inside the group than outside... Hundreds of thousands of Burmese have crossed the border to wealthier Thailand because of poverty and human rights violations, including widespread forced labour camps and forced removal of villagers from zones where the Army is fighting ethnic rebel groups... [A]ccording to a report by Human Rights Watch/Asia... Burmese children were frequently used as unpaid porters by the Army and "all are subject to cruel, inhuman and degrading treatment,"... Forced to carry supplies for entire days, youngsters regularly died from beatings, a lack of medical care and exhaustion... Student unions were prohibited and the SLORC's policy of promoting Buddhism had led to discrimination against children of other religions.

...Over the past six weeks Burma's military Government has changed its name, abolished the former ruling council, fired some ministers and reshuffled others in an effort to clean up its image and try to revitalise the ailing economy... The State Peace and Development Council (SPDC)... was formed... in the surprise move that abolished... the State Law and Order Restoration Council... Burma, one of the world's least developed nations, is struggling to control spiralling inflation estimated at between 30 and 40[%] a year, a plunging currency and rising budget deficits caused mainly by high military spending... [Incidentally, yesterday, while s]peaking to a gathering of his South-east Asian neighbours, [the Malaysian P]M... questioned whether the new world of open markets would benefit developing nations or lead to more exploitation... "It is wonderful to know that all the huge markets of the developed countries will be open to us in exchange for our opening up of our tiny markets... But can we really gain access to these markets, or will the removal of borders cause a flow in one direction?" ...His strong comments followed the theme that South-east Asia is at the mercy of huge multinational companies that use the media, business monopolies and trade blocs to dominate the world economy.

...Last week... at the annual forum of the Association of South-east Asian Nations... the Malaysian P[M]... called for a review and possible rewrite of the U[N] Declaration on Human Rights. The declaration... "was formulated by superpowers which did not understand the needs of poor countries." ...It was a tragedy in the making, only averted by the relentless efforts of the human rights lobby... It's only a mere four years since the World Conference on Human Rights held in Vienna fought off an attempt by Malaysia, Singapore, China, Syria, Iran and Iraq to water down drastically the Universal Declaration of Human Rights, approved in 1948. The spectacular thing about the Vienna conference was that at one time, early on, they seemed to have as many as 50 nations on their side. But, one by one, they all had second thoughts and by the end of the conference there was a unanimous vote in favor of the new text that was in many ways stronger than the original... version. In 1948 the vote in favor was 57. This time it was 171, almost every country in the world. If the final tally itself was remarkable so too were some of the explanations given by countries for their vote. The Russian foreign minister observed that "when violations of individual rights and freedom are involved Russia no longer accepts that the world community does not have the right to interfere in another country's sovereignty." ...Neither [the Malaysian PM] nor any of the other Asian backwoodsmen, not least China... the country which... [went] from rags to riches in a single generation... can, if they are honest, any longer argue in their barefaced way that the precepts of human rights are a Western invention imposed upon them. They are now accepted as universal values... Unfortunately, the... vulnerabilities and uncertainties of office make... authoritarian leaders... cling to as many tools of government as they can lay their hands on. The autocrats of South Korea, the Philippines or Thailand were not shifted except after an immense popular struggle. Neither were those in Argentina and Mexico nor Rhodesia and South Africa. But the reason that autocrats do bite the dust in the end is because a powerful segment of the educated middle class and many leaders of the working class and peasant movements have realised one simple but telling point: all the world's richest countries are[politically] free, and nearly all the poorest are not.

...Imagine you own a company that manufactures trainers – a little like Nike or Adidas. It is the early 1980s and your labour costs (in America and Europe) are simply too high to earn a decent profit. Like any good capitalist you shift to Asia where labour costs are a fraction of that in the West... [such as] the equivalent of about \$3 a day. And you hop between Malaysia, Thailand, South Korea or Indonesia as markets "emerge", shamelessly exploiting the cheapest labour on Earth. The workers, freed from the rice paddies and pleased to have a little cash, start to consume, to buy Coke, razorblades, cars and, er, trainers. Then they demand more money. The nice western trainer and razorblade makers offer them \$5 a day, and soon the unit cost of labour meets the unit cost of production, and western manufacturers flee to another Pacific Rim country. But the taste of prosperity engenders a demand for western capital and produce, and the little dragon moves up the economic scale. It exploits its own low-cost labour, and sells goods abroad.

...Fiji's export policy has come under attack with allegations it is being driven by labour rights abuses... sexual discrimination and child labour... The attack is contained in a report by the International Confederation of Free Trade Unions lodged with the [WTO] on Wednesday... The report analysed Fiji's policy of massive expansion of export processing zones which employ 13[%] of the country's workforce, mostly in clothing manufacturing. The report said workers in the export zones were often forced to work long hours in poorly ventilated factories and received no overtime pay... In many cases women were paid less than men for the same work... "Management carry out random strip searches of the women, who receive just over one-third of the official poverty level of wages for a family of four... Those who try to organise for better conditions can be

dismissed and unions are excluded by companies with the help of the Government... The policies... are having very bad social consequences.” ...Fiji’s garment... sweatshops, came under trade union attack in February when it was revealed they employed at least 800 expatriate Asian workers. This week’s report said that in 1994 nearly all contract workers in the clothing industries came from China and had half their wages deducted and transferred to China as “employment agency fees.” Multinationals had shifted production from other developing countries such as the Cook Islands to Fiji to take advantage of the low wages... Although work for children under-12 was illegal, the report said there could be as many as 20,000 to 30,000 children at work, due to poverty... [P]rimary schools had a total annual dropout rate of nearly 25[%]. Motivated by the fact that Fiji ‘has about 80% unemployment among the young and no dole’, some of those dropouts will eventually become employed as sea cucumber divers. These workers earn ‘\$50 per day – five times more than most other Fijian workers. Many villages are reliant on the income from a product collected to satisfy the appetite of exotic eaters. Unfortunately, there is a lack of legislation for the industry and a lack of proper training in the handling of the air compressors used to help divers breath underwater. Many divers get the bends, which can cripple or kill them. 13 divers had been killed in the last year. However, there is no compensation, and the bosses – who are making big profits – couldn’t care less.’]

...Young Fijians diving for sea cucumbers... are suffering long-term health defects... or even death experts in Fiji say. At the same time, the trade itself is under threat as fisheries officials fear indiscriminate harvesting of “beche de mer” is seriously damaging stocks. “If current rates of harvesting are maintained, serious depletion will occur in four years,” an official from the Fisheries Department warned... In the past three years, exports of beche de mer from Fiji have more than doubled from 288,547kg... at a value of \$F2.4 million, to 630,179kg exported last year valued at \$F6.3 million... with prices paid ranging from \$F30 a kg for the premium species to \$F3 a kg for the cheaper species... Diving for beche de mer is one of the few sources of income for indigenous Fijians in the small outlying islands... The trade in... certain species of sea cucumber... is perhaps Fiji’s oldest industry, dating to the South Pacific island nation’s first contact with the outside world in the early 1800s. But it is only since the late 1980s when stocks became scarce elsewhere that the trade regained momentum in Fiji and operators began to use compressors for deep-sea diving to collect the precious commodity. Most of the operators are companies owned by locally based or overseas Chinese and supplying mainly Asian markets, predominantly in and around China... The health dangers associated with the use of compressors by villagers diving for the slugs has prompted [the] Fiji Diving Association president... to brand the trade as a criminal operation... [He] said people untrained in diving were being put in a situation where they could make high profits for risks that were too high... Unaware of the danger to their health, divers had “constantly gone to depths of 20m to 27m for up to an hour at a time... This is right off the scale.” ...The problem results from divers untrained in the use of the equipment allowing excessive amounts of nitrogen from the water to enter the body causing bubbles in the blood system – commonly known as decompression sickness, or the bends. Once the bubbles enter the brain or the spine, they can cause paralysis. “There are a whole lot of people out in the villages who are affected but can still walk. There are also a number of people in the villages who can’t stand any more.” ...Largely due to a campaign by the diving association, the Fiji Government in March put a ban on compressed air fisheries, but not before 14 men had died and hundreds were injured or maimed for life, according to official figures which critics say are conservative.

...A quarter of the world’s people still live in severe poverty, including 1.3 billion who must try to survive on less than a dollar a day, according to a [U]N... report... The U[N] designed its 1997 Human Development report as a reminder to world leaders of their responsibilities and their promise – made at the 1995 World Summit for Social Development in Copenhagen attended by 185 governments – to work towards the goal of eradicating poverty... Although South Asia is the area with the most poor people, sub-Saharan Africa has the highest proportion of poor in its population, and the fastest growth in poverty. Latin America and the Caribbean has 110 million people affected by poverty, while Eastern Europe and the former Soviet states show the human cost of the difficult transition to democracy and market economies. The report stresses that some people suffered more than others – notably children, women and the aged, in a world that still has one billion illiterate people... and 110 million children deprived of schooling... Half of the world’s people do not have access to decent toilets, increasing the likelihood of epidemics of cholera or other illnesses that kill 2.2 million children each year... The number of people lacking decent sanitation has grown from 2.6 billion in 1990 to 2.9 billion, driven by population growth, urban crowding and budget pressures in developing countries... The ratio between the richest and the poorest people on the planet has gone from 30 to one in 1960 to 78 to one in 1994... The report blames the situation on “shameful inequities and inexcusable failures of national and international policy.” ...It adds that world poverty could be effectively reduced for less than the combined wealth of the world’s seven richest people or 10[%] of the world military expenditures for 1995. “No longer inevitable, poverty should be relegated to history... along with... nuclear warfare... slavery... and... colonialism...,” ... - 1997

colonization, settlement and control by a state of an area, usually distant, that has inferior material culture or military power... has been done since ancient times, *e.g.* by the Phoenicians and Romans... The greatest era of colonization was that associated with modern imperialism... following the commercial expansion of Europe, 15th-16th cent. The Portuguese and Spanish established in Africa, the New World, India, and the East colonies which were primarily commercial and did not involve large migrations from the mother country. In the 17th and 18th cent. the English, French and Dutch established colonies in the same areas, the English colonies attracting large numbers of immigrants. Colonies were usually organized into empires and were administered for the commercial benefit of the mother country. During the 19th and 20th cent. Germany and Japan, as well as... other nations, colonized in Africa, the East, and the Pacific. The U.S., occupying a strategic geographic position, being relatively self-sufficient, and lacking excessive population, has done little colonization. With the example of Britain’s original Thirteen Colonies in America before them, colonies of other nations... have sought independence... *e.g.* India...

By 1948, with India free, other Asians... were fighting armed struggles for their own independence, but the Europeans were most determined to keep Africa. They saw no conflict between paternalism and profit. After the heavy cost of... W[W2] their African colonies seemed more valuable than ever. Europe’s needs came first. The best land was used to grow the crops they wanted for export, not food for Africans. In the Portuguese colonies 98% of Africans remained illiterate. Farmers were forced to be labourers on the big plantations for low cash wages... “We didn’t even have time to work on our own farms to grow fruit or vegetables. We were each given a plot of land to cultivate, wide and long... but they still expected us to finish working it in a day. Whoever didn’t would be whipped to speed up the work.” In British West Africa the Gold Coast produced one third of the world’s cocoa beans. African’s still ran their own farms but British companies like Cadbury’s held the real power... To keep costs low for British buyers the government fixed the cocoa price... “There were a lot of British companies in the cocoa business. They sent their agents out to buy cocoa from the villages. We didn’t have our own scales so we were really cheated by the agents. We had to accept the prices they gave us. The prices were set by the British and we had no say...” The Europeans needed the Africans for the work they could do. They were in no hurry to give them full political rights. At best the British and French thought Africans might one day run their own internal affairs but it might take 50 years. The Belgians and Portuguese couldn’t conceive of this ever. The aspirations of Africans themselves changed after the end of... W[W2], which altered everything. Colonial troops had fought alongside the British to defend other parts of the Empire. They became more aware of the world... “...Indians... were very political. We had conversations with some of them. They said why are we fighting for Britain? We said we are fighting for white freedom. So they ask us are you yourself free? We said no. They said well fight for your freedom first...” The African struggle for self-rule, which would soon spread to other parts of the continent, began in the British colony of the Gold Coast, where only 5000 Britons, mostly traders, lived alongside two million Africans. Trouble began when demonstrations led by army veterans turned into violent riots...

The protests were turned into a mass movement. In 1951 the Gold Coast voted for the first time ever for their own local Assembly... To Africans in the British colonies in East Africa there appeared to be little prospect of any sort of self-government. What made the difference was settlers... In the most fertile parts of Kenya several thousand Europeans had arrived between the wars, taking over African land. They used Africans as servants and labourers. In a healthier climate than West Africa they moved in for good, leading a life they could never afford at home. Four million acres of land were taken from the largest tribe... who led a popular movement to demand their land back and negotiate self-rule. When the British refused to give way... a secret organisation... called[the] Land and Freedom Army[was formed]. "I joined the Mau Mau because of the hardship. The main problem was that our land had been taken by the white man. Then there was education. The schools we used to go to were closed down and destroyed..." The British used the police and army to round up suspects... Planes dropped 50,000 tonnes of bombs to try and destroy the[Mau Mau] camps... In West Africa the nationalists had been allowed to take part in an election. In Kenya the Mau Mau concluded there was no alternative to violence. They used home-made weapons to terrorise European settlers, attacking isolated farmhouses and police stations... "We were a bit isolated... but we used to have our guns with us all the time..." [says one settler. Her] neighbours... two women living alone... were among the few to survive an attack... "There was a bang on the door and they opened it and this gang came rushing in and [the women] shot at these people and killed two of them, and they shot quite a number of bullets – one... [bullet] killed their dog, which, of course, was heart-breaking for them because they were devoted to it." ...80,000 suspects were detained... The Mau Mau had been defeated by 1956 but by the end the Kenyan settlers had lost, too. British officials saw they couldn't go on protecting a white minority – 1% of the population – in the face of African demands. They knew they'd have to make concessions or risk another rebellion... Europeans could no longer control the pace of change in Africa... their retreat began. The people of the Gold Coast had had their own Assembly under the British but not independence. In 1957 they became the first black Africans to get complete freedom... Leaders from East and West came... to see the hand-over. [The]Vice-President... represented the U[S]. He arrived with a delegation that included civil rights leader Martin Luther King[, who declared]... "A new order is coming into being and a old order is passing away. It seems to me that this is fit testimony to the fact that eventually the forces of justice triumph in the universe and somehow the universe itself is on the side of freedom and justice." ...Africans now got what they'd been asking for faster than anyone had expected. As the British, French and Belgians scrambled out, 25 countries celebrated their independence in three years... But the new leaders knew the real problems they faced. Unity was difficult in new countries whose borders had been drawn up to suit European commerce, enclosing different tribes and languages... Few of the nations had enough trained administrators... Once they'd achieved political freedom all Africans expected tangible improvements to their lives. They wanted economic freedom as well. In Ghana[– the former Gold Coast –] hopes were high... Like most of the new African governments, Ghana adopted a socialist system and believed central planning would bring the fastest improvement for the mass of the population... but in the rush for development mistakes were made. Ghanaians soon became victims of bad advice and greed... [Ghana's PM] was now gathering all political power into his own hands and building a cult around himself. He was the Saviour, Messiah, Redeemer. His picture was seen on shirts, dresses, coins and stamps. Streets were renamed after him... Ghana became the first of many one-party states in Africa... The economic promises weren't delivered and... socialism soon turned into autocracy. "People were afraid to speak their minds. You were spied on. Anything you said against [the PM] could be written down and they'd come and arrest you. If they arrested you they didn't ask you about what you'd said, they just sent you to prison..." ...In 1966 [the PM] was deposed by his own army. The same Ghanaians who... [once] worshipped him now turned on him. World cocoa prices had slumped; the state schemes had cost too much; foreign loans had stopped and the country was bankrupt. The hopes his people had put in him lay shattered only 10 years after independence. In some countries the hopes were shattered in far less than 10 years. In the former Belgian Congo the passage from empire into chaos was almost instant... The Belgians had hoped th[at Congo's independence] day would never come. They'd made no preparations for the hand-over[, after which all]... the expertise that had run the country departed for Brussels... Few Congolese had higher education. There were no black doctors, no engineers, no senior administrators... The army mutinied and long-suppressed tribal hatred broke out again... Ordinary Congolese had been led to believe that with independence they'd share the riches that had previously gone to Belgium. In fact, after a few months of civil war the capacity to generate wealth was destroyed... At the same speed that independence days had followed one another[across Africa] in the early '60s, military strongmen took over, usually backed by one of the superpowers... Africa's military officers claimed they were the only ones who could bring stability. Take-over followed take-over... Ghana had 14 coups, or attempted coups, in 14 years... Most of the new dictators were cruel and corrupt. For Africans, one kind of repression was replaced by another... [In the meantime,] the Portuguese clung on in a colonial timewarp. Portuguese governors still had absolute power in Mozambique and Angola. Africans still worked the farms and plantations for Portuguese owners. But even here the days when the profits of the colonies could subsidise the home country were about to end. In each of the Portuguese colonies guerrilla armies were now engaged in a violent struggle to end white rule... By 1975 the struggle had paid off. Both Angola and Mozambique had their moment of triumph. The Portuguese will to stay had collapsed. Marxist regimes took power in both countries but there was to be no relief for the people. The new states were thrown into immediate chaos as the marxists faced rebel groups backed by the West. The symbols of empire were easily removed but it would be freedom now civil war tomorrow. With the departure of the last remaining European power the imperial chapter was almost over, 20 years after the first independence. Soon... the white settlers' hold was ended in Rhodesia to form independent Zimbabwe. For most Africans the colonial legacy was a bitter one. They still had to turn freedom from colonial rule into other freedoms they'd hoped for but not yet gained: freedom from hunger, poverty and oppression.

...got to give us what we need... less freedom of death... - *Do The Right Thing*

Bill of Rights... the first 10 amendments to the constitution of the USA... spelling out individual rights that...

...guarantee freedom of worship, speech, press, and assembly; the right to petition the government to redress wrongs...

To act for the good for congress... [mean]s... making... money The right to get rich is in the constitution... We're consumed by competition... The poor are told to be contented But in this life they've no choice at all... Did you say "I've had enough... It's all so familiar... I'd like to see something new..." - *SONGS OF THE FREE*

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of God's Nature entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation – We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. – That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, – That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or abolish it, and to institute new Government, laying its foundations on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness... We, therefore, the Representatives of the United States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People

of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States... and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish commerce, and to do all other Acts and Things which Independent States may of right do – And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our Fortunes and our sacred Honour.

...scattered rebellions and discontent... [within] the 13 American colonies... fused into open revolution by 1776, [when] many of the conservative colonists joined the militant dissenters in demanding outright independence from Great Britain. The... *Declaration of Independence*... was drawn up and adopted by the Second Continental Congress at Philadelphia and officially passed on July 4, 1776 (Independence Day). The... document... [was drafted by] a committee consisting of Thomas Jefferson, Benjamin Franklin, John Adams, Robert R. Livingston, and Roger Sherman... The writing was done by Jefferson...

I am for free commerce with all nations - Thomas Jefferson

[The] seminal *Inquiry into the Nature and Causes of the Wealth of Nations*... establishing theories of labour, distribution, wages, prices, and money, and putting forward a theory of the natural liberty of trade and commerce... appeared on the actual date of the Declaration of Independence of the American rebels, and contained the prophecy 'They will be one of the foremost nations of the world'... [Its author was Adam] Smith... (1723 – 90), [the] Scottish... founder of modern political economy, whose work marks a highly significant turning-point in the breakdown of mercantilist orthodoxy and the spread of *laissez-faire* [‘a French phrase meaning “let (people) do” and designating a policy of non-interference by government; the doctrine holds that public good is best served when individual initiative has free play and the economic order is left to regulate itself’)] ideas...

One vision has been admirably formulated by [the person] who introduced the phrase of ‘Weltinnenpolitik’: world domestic policy. Important elements of such a policy were pursued by... the first President of the High Authority of the European Coal and Steel Community, and by... [the] Executive Secretary of the Economic Commission of Latin America, who was also the founding father and first Secretary-General of... U[NCTAD]. In what fields is the need for wider frameworks already understood, at least in part, by present generations of policymakers...? ...A very old field... is international trade. And we do observe a movement – albeit irritatingly slow and threatened increasingly by lobbies of weak industries – from free trade within Western Europe to free trade among Western countries, and from there to the wider area of West and South. The recent recession has threatened this wider framework with a return to protectionism being advocated by both employers’ and employees’ organizations in activities which cannot compete on the world market. Short-sightedness prevails in large sections of the general public. They see the problems of these weak industries – the relatively simple and labour-intensive ones, such as textiles, clothing, leather, shoe-making and woodworking industries. They fail to see that protecting weak industries harms the strong industries. Unless the countries of the [Last] World can export such simple products to us, they cannot buy advanced products from our strong industries... Protectionism provides a striking example of the fact that we ignore at our peril the interdependent character of our world economy. It is well established that because of prevailing linkages protectionism forfeits many more jobs than it secures; that emerging out of the fight against inflation it in the end fuels inflation itself. Few governments would dissent from this; for most, ‘free-trade’ is quintessential doctrine. Yet protectionism is on the march. Half a century after the events of the thirties it should have been self-evident that at the end of that road lies damnation; that there must be an international dimension to the battle against inflation. The World Economic Conference in 1933 – chaired in London... and attended... by sixty-four countries – came too late to arrest economic disorder. Must that history of myopia and tardiness be repeated...?

Free trade... entails a self-regulating, world-wide economy, in which one country’s output in food, raw materials, and industrial products supplements the output of the other country instead of threatening by competition that country’s economic position.

It is theoretically possible that a *self-regulating, world-wide* free trade zone could eventually remove the imbalance between the First and Last Worlds, thereby fulfilling the proclamations of some people who lobby for it. However, while the purchasing power of respective countries is unequal (e.g., due to the relative value of their currencies), it might only make the differences between the two worlds more distinct – with countries eventually being labelled as either Producers or Consumers. The Producer World would have all the factories and the majority of its workers will still manufacture products which they can’t afford to own, while the Consumer World would have no factories and the majority of its workers will either be employed as importers, shop assistants or as providers of other types of services (also at a price that the majority of Producer World workers won’t be able to afford – which means such services won’t need to be provided in the Producer World!)

In ‘free trade,’ who gets the freedom? ...Henry Ford recognised that if he did not pay his workers enough they would not be able to afford to buy his cars. Free trade separates the workforce from the market... There is growing international opposition to free trade as it is now from luminaries such as... the American consumer advocate; ...a much-published economist until recently with the World Bank; and... an Indian campaigner for the rights of indigenous peoples and their local food production and culture. Their arguments cannot be dismissed lightly. Free trade is no longer about buying from your neighbour those things you cannot make efficiently for yourself. Taken to its logical absurdity, it leads to the two ships which pass in the Pacific ocean, each loaded with thin slivers of wood. One is a Japanese ship, carrying toothpicks for the American market, made from the rainforests of Asia in the factories of Japan. It passes an American ship carrying chopsticks to the Japanese market, made from American timber in American factories. Both countries see this as a success for their export sector. Free trade is supposed to create maximum competition which will lead to greater efficiencies and so lower prices and produce a higher standard of living for everyone. That has not happened in N[Z]; a substantial proportion of our people now have a lower standard of living than before the free market reforms. The share of GDP received as wages and salaries has declined and the share received as returns on capital has increased... Deregulation of coastal shipping made it possible for firms producing in N[Z] to get the benefits of overseas low wages in their freight rates. Action on major environmental problems, especially carbon dioxide emissions, is stalled by demanding that we do not move faster than countries which might attract investment away from us. This is not just a demand to move with the mob, but a demand to be last. Europe and Japan already have much higher energy prices than N[Z], but until A[US] and the U[S] have joined them our Government is not prepared to take any action to reduce fossil fuel use. Once this starts there is no end. Governments compete with each other to see how far they can screw down living conditions for most of their citizens in order... to reduce costs for corporations... to attract capital investment without which they believe there can be no wealth and no jobs. This is why no party can retain the “open economy” and improve health and education spending and slightly raise taxes on higher incomes. The government’s investor clients simply will not let them. Not surprisingly, governments that compete to lower costs get trouble from their citizens. They need someone to blame, whose commands cannot be ignored. So they have set up the worst sort of world government – an unelected, unaccountable [WTO] (son of Gatt) through which they can force each other to do things their citizens would never allow. Under the [WTO] rules, environmental legislation can be challenged if it seems to discriminate against imports... There is no appeal unless all members of the [WTO], including the member which brought the case in

the first place, agree to overturn the decision. It has been estimated that 80[%] of all American environmental legislation is open to challenge as a non-tariff barrier, and much of it is being challenged by the European Union. At the same time the U[S] is challenging Union energy efficiency standards, safe drinking water and toxics enforcement legislation... and anti-drift net measures... World trade itself has significant environmental effects. Shipping uses as much energy as the combined economies of Brazil and Turkey... The E[U] single market is expected to increase air pollution from cross-border traffic by 30 to 50[%]... Ports destroy coastal wetlands and fish breeding areas and increase the chances of coastal oil spills. These are not arguments against trade – just against totally unnecessary trade. It is no accident that the four largest companies in the world all have as their core business oil or motor vehicles. So do 13 of the top 18, and 25 of the top 50. Maximising global transport, where shiploads of toothpicks and chopsticks pass each other... is in the interests of those who control the free trade agenda. Ultimately, free trade means getting rid of environmental, safety, worker rights and consumer protection regulations. Some of the overseas conditions we are aiming to compete with include sweatshops in South-east Asia where workers are locked in with no fire escapes... There are many groups around the world working for fair, rather than free, trade. We should be with them to make trade work for all the world's citizens, rather than a corporate elite.

...[it] may be some comfort that Freedom House records that 79 of the world's 191 countries qualify as totally free, the highest number recorded since an annual survey was launched in 1972. - 1996

N[Z] scored eight out of 10 and an A grade on an economic freedom index released last week, which ranked the country's economy the third freest in the world. N[Z] was behind Hong Kong and Singapore in a report entitled *Economic Freedom of the World 1997*, published by an international consortium of policy institutes which includes N[Z]'s Business Roundtable. The report[...], which placed the US] fourth... covers up until 1995... N[Z] was the only country in the industrialised category to rate A in the report... N[Z] also topped a "role honour" of the most improved between 1985 and 1995, rising from 60th in 1985... The index has 17 components... that measure levels of basic economic freedoms, such as freedom of exchange, freedom to keep one's earnings and freedom to own private property. Two other organisations, the Heritage Foundation and Freedom House, also publish measures of economic freedom which the report argued were poorly structured and misleading.

...Do you ever get the feeling that the people who have been running (or, rather, ruining) this country's economy long ago lost the plot? That Rogernomics... has become a very painful and expensive joke? Does it not occur to those in control of both state and private enterprise that... the time has come to concede that... this economic experiment... hasn't worked and that no matter how much longer they persist with it, it isn't ever going to work? It would seem not. Even in the face of incontrovertible evidence that it has gone glaringly wrong, things even the most economically illiterate of us can see – a "free market" so free it is spinning totally out of control – the economic ideologues are still pushing their already discredited theories... Back at the beginning we were told that Rogernomics would soon fix our overseas debt. But we still have a vast overseas debt, even though much of it has been transferred to you and me in the form of reduced benefits and pensions, educational fees, student loans, part-charges and scores of other user-pays devices which rob us blind... We were told we would have a level playing field. The trouble is that once it was flattened to suit the tactics of the Business Roundtable team and their running dogs, someone or other is always moving the goalposts.

...WHEN a politician tries to bamboozle you about level playing fields and the market... laugh... says... a campaigner against the religion of the free market who wants the citizenry to steal back the language of political debate... If we all laugh every time it happens, "one day they'll stop doing it." ...He flew into N[Z] last week – ironically, his visit coincided with the]... 16-member South Pacific [Forum's]... inaugural summit in Cairns... [where] South Pacific nations... agreed to work strongly towards free trade in the region[(t)hey plan to slash tariffs, increase budget transparency and implement sweeping reforms to boost economic growth and reduce aid dependence[] ...and suggested, cheerfully, that Western civilisation was in crisis. It has been... since the oil shock of 1973, he says – and it has utterly failed to solve it. The political crisis is linked: Our business and government elites, together with their acolytes in the universities, are in thrall to the... prevailing form of this religion [which] holds that the free market is both necessary and a virtue, and that governments must not meddle with it. Instead of a democracy of individual citizens... ours is a corporatist society, where the interlocking... bureaucrats, businesspeople and other professionals call the shots... [However, his] mission is to open our eyes rather than offer solutions...

The emerging global market has brought many benefits, but it... also raise[s] a host of questions about who helps the losers and who is in charge...

To the critics of neo-liberalism, the policies of wealthy industrial powers are called "free trade" for doctrinal reasons, but they might more accurately be described as a system of world governance with parameters defined by unregulated markets and rules administered by supranational banks and corporations... In 1994, when[the] Gatt director-general... insisted that there would be no losers from the Uruguay round, only winners, he could be confident that his words would appear in the financial sections of the [First W]orld's newspapers without serious challenge: such is[the] extent of the commitment to free trade among journalists and economic commentators. Free trade specifically, and market capitalism more generally, have... become more than simply a transient economic orthodoxy or dogma – we are talking here of a fundamentalist state religion where commitment and virtue are measured by an unquestioning "faith" in "market forces" and dissent is demonised when on rare occasions it is allowed entry into the discussion, but more often simply censored or suppressed. Among such a deafening and repetitive chorus of celebration for the virtues of free trade the recently published U[nctad] report must have struck a discordant note. The report argues that rising inequality and widening disparities of income between [First and Last World] countries... are becoming a permanent feature of the world economy and are now so stark they could "unleash a backlash against global free trade" with "menacing consequences." The Unctad report confirms earlier OECD-World Bank research which identified five countries or regions (mainly African, Caribbean and Pacific countries) which were expected to suffer real income losses from the Uruguay round and eight which could lose from full free trade, mainly as a result of a deterioration in their terms of trade. So much for [the director-general's] non-existent losers. Free trade advocates are always reluctant to speak about the negative effects of their ideas on community life and class relations. As [one commentator] points out: "The theory of free trade admits there will be sharp income-distribution changes within each participating country. Average incomes will go up with free trade, but there may be millions of losers in each country. The theory assumes that the winners will compensate the losers, so that everyone in each country has an incentive to move towards free trade, but in fact such compensation is almost never paid..." Free market policies tend to exacerbate social and economic inequalities, both within and between states... Those who advocate free trade and free capital mobility do so in the knowledge that they are simultaneously advocating the equalisation of wages, known in inter-governmental circles as the "harmonisation of standards," which invariably becomes a downward thrust... "Free trade" is highly regarded by those who expect to win the competition, having first established a "level playing field" to their incontestable advantage... In contemporary international politics the principles of "free trade" serve several useful functions for the dominant players. They prevent economic nationalism and independent economic development, particularly in subordinate societies. They can be selectively invoked to restrict social spending... They can be used to undercut commercial competitors. They will open up [Last] World societies to more efficient exploitation... By locking peripheral states into agreements which force them to lower their protective barriers, Nafta and Gatt, for example, prevent [Last] World nations from developing trade profiles which diverge from the model dictated by their so-called "comparative advantage." The IMF and World Bank on the other hand make the provision of finance (or more accurately "debt") to develop societies conditional on their unilateral acceptance of free market rules for their economies... Needless to say these conditions are rarely, if ever, applied to the [First World]. - 1997

Food is important in the exports of most African states. For the 25 poorest, it is the only source of foreign exchange. The state buys cheap from the farmer and attempts to sell dear to the world market, most of the time against a declining trend in prices. Austerity measures, imposed by creditors holding the debt that burdens every country, squeeze the farmer's price still lower. Low technology and low prices drive farming to more extensive and destructive cultivation of marginal land. The worst harmed is the land of states that have borders on the Sahara. There, drought in recent years joined economics in obliterating the boundary between the Sahara and the arid-land farming region known as the Sahal.

The Eco-Trade Program was created to make positive changes in the lives of the farmers that we trade with... Simply put, most farmers are ruled by a pricing system that they don't control: It's called the World market price. When this price is low, farmers work to produce more so that they can make a living. Of course, more production lowers the price. And it's not unusual for farmers of cacao beans (cocoa) to receive only one-fourth of the market price, while a commercial trader takes the rest. Because we pay a price premium to them... about twice the World market price... Eco-Trade Program farmers can focus on protecting the environment instead of how they'll survive day-to-day... and their families benefit from increased investment in education, health programs, and agriculture. These ideas make sense to us because they're the same kind of goals we have – and why should farmers in a rain forest be any different?

...this nation ha[s] been plagued with farm surpluses which had been bought by the Government for tens of billions of dollars, in order to support prices for the benefit of farmers, so we could pay more for our food. (That last sentence doesn't make sense, but that's the Government's fault, not mine, so I'll leave it the way it is.) - *Famine and Survival in America*

Famine in Africa The case of Africa is more ironic still. Before the famine of 1983-86, the continent had a large food surplus, yet it remained the most undernourished region in the world.

Although grain stocks were partially rebuilt in the late seventies, the global balance between the supply and demand for food remains delicate. The precariousness of this balance is illustrated by the extreme sensitivity of commodity prices to weather reports. The forecast of rain in western Kansas can send wheat-futures prices down the daily limit on the Chicago Board of Trade. A report that the Indian monsoon has started three weeks later than usual can send wheat prices up the limit. When the balance of supply and demand is so delicate, a crop shortfall in a key producing country can set off a wave of global inflation. In poor countries... rising food prices can push death rates upward...

The relation of supply and demand, so important in a free economy where supply caters to and tries to anticipate demand, is expressed in the so-called law of supply and demand, which maintains that prices vary inversely with supply and directly with demand. Monopolies and government price controls are the principal factors that interfere with normal operation of this law... Supply in the economic sense is the amount of goods offered for sale at a specific time, and demand is the market's capacity to buy those goods at the prices asked.

The free market says that productivity is what can be bought and sold – this can include such things as oil, minerals, fish and land which are not made by anybody, but merely exploited. It also includes services which someone has to pay for cooking and serving food in restaurants, teaching skills, mending machinery and so on. Organisations like the Mafia which sell “protection” understand the market very well... The market does not care about society or creating jobs... The market does not count the things people do just because they are human – bringing up children, caring for elderly, sick or handicapped people, helping friends, caring for animals... The market does not pay any attention to whether a commodity is renewable or not, whether making it damages the environment or social systems, or even whether it is actually harmful to people – the criterion for the market is whether a thing can be sold for a profit... The trouble is that the theories are not working... As long as some people have money to buy goods, [the market] can operate just as well at zero employment as at 100% because it has no social conscience... It is also obvious that the manipulators of money and the buyers and sellers of future markets can make huge profits and produce nothing useful. As long as they play by the rules of the market, they continue to be rewarded... The unemployed, the badly-paid, the badly-housed, the badly-educated, the perpetrators and the victims of violence and the starving millions are the pawns in the international game of finance.

Removing barriers to free trade might be good for N[Z] but not for the world's starving says a group of non-government organisations, which says the World Food Summit in Rome will do nothing to stop the economic forces that are hurting the world's poor. The... assumption that liberalising trade will help food security has to be re-examined, says [a spokesperson for] the Latin American Solidarity Committee... The... [LASC] and Trade Aid believe free trade will bolster inequalities and increase poverty... “All the evidence suggests it will increase misappropriation of resources and bring about more suffering and malnutrition.” The world has enough to feed itself, but an estimated 40 million people die each year from starvation or malnutrition. The U[N] Food and Agriculture Organisation (FAO) estimates that 800 million are chronically undernourished[, including]... 190 million children[who] were underweight, 230 million stunted and 50 million emaciated... [The LASC spokesperson] says structural economic reforms foisted on debt-ridden nations by the World Bank and IMF are forcing millions of people off their land, which is increasingly being used to grow crops for the developed world. Land reform has been halted in the interests of large-scale agribusiness. In Peru, the number of people living below the poverty line jumped from six million to 11 million in the wake of economic reforms in 1990... In Mexico, 1.8 million peasants were forced into cities because they could no longer survive. Their land is now used to supply foreign markets. In Brazil, people are starving while land is used to grow soya beans to feed animals in Europe... [Much] of Africa is no longer self-sufficient in food while subsidised U[S] corn dumped in Mexico has undermined communities which have grown the crop for centuries. Structural reforms disadvantage the poor even in the world's richest countries, [the LASC spokesperson] says... citing the growth of foodbanks in N[Z]. In the U[S] – the world's richest nation – 30 million people need food aid. [Furthermore, he] says that those attending the World Food Summit, including those from the poorest countries, represent a world elite who will not plead the peasants' case.

...Summit must provide the impetus in finding food for world's hungry... [H]ow much progress has been made in “feeding the hungry” over the past 25 years[? The forthcoming] World Food Summit in Rome is a marker. The last one, in 1974, was held at a time of great crisis when failed harvests in the Soviet Union, China, India and A[US], combined with a sharply diminished anchovy catch off the Peruvian coast, pushed up grain prices four fold. The future seemed exceedingly bleak. The world was in danger of running out of food and, in alarm... the U[S] Secretary of State, pushed for the food conference and came himself to Rome to pledge that “within a decade no child will go to bed hungry.” In one sense it was an empty pledge. Time and again the well-fed nations of the world are invariably slow off the mark when famine strikes. At the time of the great Ethiopian famine in 1984, it took a pop star... to shake everyone up. But an enormous amount of progress has been made in the span of a generation to feed reasonably and adequately the overwhelming majority of an exploding world population. Two decades ago, one in three people in the [Last] World, totalling about 920 million people, had inadequate access to food. Now it has been reduced to one in five. There are still about 840 million people undernourished but given that in the interim the world's population has jumped from around 4 billion to nearer 6 billion, one can see how remarkable is the progress made... The signs of success... shouldn't make us complacent. Rather, it should spur us to finish the job of

ensuring that no child will go to bed hungry... [That] pledge could be realised, later than... suggested, but certainly by the end of the first decade of the next century. If this summit fails to generate the energy, direction and resources required it will be a historic opportunity badly missed.

...next week... heads of state and government gather in Rome for a... [summit] called to shine the spot-light on the fight to end hunger. The five-day summit, over-shadowed by the immediate threat of starvation and death facing one million war refugees in Zaire, is being staged by the... [FAO]. The organisation's director-general... said... "It will be the first time in history that so many [leaders] meet in one place to talk about food security,"... [However, of] the world's richest nations, the Group of Seven... none except the host nation Italy appear to be sending their highest-profile leaders, according to government officials and diplomatic sources. The U[S] will be represented by the Agriculture Secretary...

The chief organiser of... [the] food summit has welcomed U[S] involvement in an aid mission to Zaire while reminding ordinary [USer]s that they threw food away while millions were starving... [He also] said the situation in Zaire... should never have been allowed to happen. "We should not have to wait until people are dying... to have a Robin Hood policy," he declared. "The world is not Sherwood Forest." Asked if there were three things he would like to tell ordinary [USer]s about the world food situation... [he] painted a picture of [USer]s waking up, enjoying a hearty breakfast and driving to work on a full stomach. "Then maybe they stop for pizza or get two or three hamburgers during the day then stop on the way home to get some slimming products... They should know that there are 840 million people in the world who have no access to food... This is the first thing they should know, the second thing and the third." ...The passion and bluntness of... appeals showed how much the Zaire crisis has given urgency to the... gathering. But it also served as a harsh reminder of how increasingly volatile and crowded the world has become since a bold declaration issued at a similar conference in Rome 22 years ago: eliminate world hunger. "The pessimists among us say that we've passed the point of no return," said the U[S] Agriculture Secretary... "The optimists, if you can call them that, say we've hit the fork in the road." ...The conference is not expected to produce any pledges of additional money for hunger-fighting initiatives, adding to criticism of the summit as costly and ineffective. U[N] logistic and personnel costs amount to about \$US2.1 million... for the summit. National governments paid for their delegates.

...The Italian Government is reported to have set aside 1.63 billion lire (\$[NZ]1.42 million) to help pay for staging the summit... More than 10,000 delegates, officials from n[go]s and... some 4000... journalists... are expected for the event... 10,000 police and paramilitary Carabinieri will be on duty... Around 170 VIPs will be staying in more than 70 hotels.

...The Pope yesterday called on world leaders to bridge the gulf between rich and poor... "We have to search together for solutions so that there are no longer hungry people living side by side with people living in opulence," he... [said] at the opening of the summit. "This contrast... is intolerable for humanity." The... Pope also took a swipe at those who say population control is the key to food security. "Demography alone does not explain the inadequate distribution of food resources. We must put aside the sophist view that when there are many, one is condemned to be poor." The real reasons behind food insecurity were often political instability, wars, and developing countries mired in debt.

...Pledging relief... to halve the number of undernourished people worldwide from the present figure... by the year 2015... world leaders have ended... the... World Food Summit in Rome... The... FAO... had promised that more than 100... leaders would attend the meeting. In the end, only 86 turned up – less than half the... 174 member states... of the U[N]. The summit declaration... is not legally binding but lays out suggested policies which Governments say they will follow. It says everyone has the right to food and to be free from hunger, and promises urgent international action to tackle the problem.

...World leaders unanimously decried hunger last week but... [the] food summit ended as it began – deeply divided over whether free trade is the best way to offer hope to... [the] undernourished. Like virtually all gatherings where rural incomes are at stake, the world's first food summit left images of wealthy nations at odds with developing countries and squabbling with each other over trade.

...Well over \$US10 million... was spent in connection with last week's World Food Summit... billed as a no-frills conference, according to figures from... the FAO... [In related news, riots] over... the doubling of... bread prices have spread from the south of Jordan to the teeming centre of the capital despite [the King's] threat of an "iron-fist" response... He has already dissolved the lower house of Parliament, where the [IMF]-sanctioned price rise had found little support... The King was shown on television telling soldiers in the south that the country faced a choice of order or anarchy. But clashes continued... Residents in... Amman fired shots at police who used teargas to try to disperse them... One crowd burned offices of the Education Ministry, which recently raised school fees. Banks... were again targets... It was the worst violence in Jordan since riots in 1989, also triggered by Government price rises, led to the replacement of the P[M] and the start of democratic reform.

...T[he British] Government has announced a major food safety campaign after an outbreak of bacterial infection in Scotland hit almost 200 people and left five dead. [The] Scottish Secretary... said \$[NZ]1.2 million had been put aside for... advertising... aimed at warning[consumers] of the dangers of the bacteria responsible for... the worst such crisis recorded in Britain... The move comes after he announced that a top-level inquiry... has been launched... The infection has been linked to cooked meat and pies supplied by [a butcher] who a few months ago won the accolade of Scottish Butcher of the Year. It is caused by the bacteria E. coli 0157, which is found in animal intestines and transmitted through milk, cheese and raw meat.

...A fatal strain of the E. coli bacteria blamed for food-poisoning deaths in... Scotland has surfaced in Hong Kong. The strain was found in a consignment of raw minced beef on sale in a supermarket.

...Hong Kong's maximum-security prison has been hit by an outbreak of suspected food poisoning, with six inmates in hospital and up to 100 requiring medical treatment, a Government spokesman said yesterday... "We've asked food inspectors to conduct tests... to determine whether food preparation or the food itself was responsible, and we're awaiting the results..." he said. The outbreak follows an epidemic sweeping Japan of the 0-157 colon bacillus bacteria.

...The Japanese Government warned the public yesterday not to eat raw meat as the toll grew from a summer food poisoning epidemic sweeping the nation. The Ministry of Health said more than 8000 people had been stricken with the disease since the start of summer... 6000 of them in the past 10 days in the town of Sakai.

...Shocked by two more deaths from a food poisoning epidemic, Japan yesterday accepted an offer of help from the U[S] Centres for Disease Control and Prevention. The P[M]... said he felt helpless in the face of the deaths from the... bacteria, which has killed seven people since it broke out in May... More than 6400 people, mostly schoolchildren, have come down with the germ in Sakai alone. The two-week-old outbreak there was traced to school lunches prepared by city-run kitchens, but the food carrying the bacteria has yet to be identified... 96 children are in... hospitals in Sakai... Twenty-eight are critical, including three in comas.

...Auckland is in the grip of a baffling food-poisoning epidemic which experts fear could worsen with a long, hot summer. They are staggered at the numbers of people falling ill to the stomach-cramping illness campylobacteriosis... [-] since September 24, 339 people have gone down with the illness, compared with 92 for the same period last year[-] ...and are mystified about the reason for the outbreak... Outbreaks can usually be traced to a particular venue... But this time investigators are perplexed by the lack of apparent geographical clusters of cases. Now food experts are looking for more offbeat reasons... The Auckland Healthcare food programme manager... says that in Britain an outbreak was traced to birds pecking holes in milk bottles and a salmonella outbreak in A[US] was traced to peanut butter.

...Based on numbers who visited doctors, an estimated 120,000 N[Z]ers have suffered from food poisoning this year. The Nutrition Foundation said the real figures were probably nearer 300,000 because so many people did not go to the doctor or report the illness to health authorities. In the past week there had been four major outbreaks of food poisoning, and 13 cases of campylobacter, affecting more than 100 people... Soaring

numbers of food poisoning cases have prompted new rules which mean restaurant and cafe staff will have to be trained to ensure food is safe... [T]he changes to the Food Act would place the obligation on food handlers to identify and control hazards, instead of health inspectors visiting. Independent auditors, approved by the Ministry of Health, would check businesses were meeting their approved plan... The Nutrition Foundation said a lack of knowledge about food was contributing to the rise... The chief executive... [of the] foundation... said it was believed up to 50[%] of all cases originated from home... [She] feared this would worsen because of schools not teaching about food. [Meanwhile, 'consumer confidence is hardly enhanced by warnings such as one issued yesterday that a tin of pineapple may make you ill after unacceptable levels of tin were found in some samples. Or one last month that your peanut butter may contain shards of glass. For companies, putting such matters right can take a huge effort, such as the nationwide recall by Eta of 100,000 jars of peanut butter. The coordinated campaign – which has involved about a 1000 people – has been run under the watchful eye of the Ministry of Health. How the glass got into containers took a back seat at first, as Eta hunted down the problem batches, which included those under its own label, along with Foodtown and Pam's brands. Stores were warned late on Thursday, November 19. Shelves were initially cleared of all the company's peanut butter, not just affected batches. The public warning came next, on Friday morning. That meant having 50 phone operators at the ready, with another 50 as backup, on an 0800 information line. At one stage 750 calls were taken in just one hour, with a total of 5000 calls received on the Saturday. An 0800 number with a doctor giving advice was also established. The calls are now drying up, but the 0800 number will remain for another month. An Eta spokesman is confident the majority of the problem jars have been recovered. They will be destroyed. This latest recall takes this year's product recall tally to 12. Four have been caused by the discovery of foreign material, such as glass. In 1994, Cerebos Greggs was the company at the centre of what is believed to be the country's biggest food recall. After six customers complained that they had found shards of glass – some up to 5cm long – in Cerebos Greggs' pickle, the company ordered a recall of 500,000 jars. Production was stopped for two weeks and the cost of collecting recalled product, modifying machinery and writing off stock was put at \$1.1 million. This figure did not include lost sales. The company drew praise for the up-front manner in which it handled the problem, but the company's managing director says it took a year before sales got back to former levels.']

...Eat, drink and be wary... MY daughter didn't like the crystals in her ice cream and spat them out. That was fortunate because they turned out to be particles of glass. I rang the health authorities (not as easy as it sounds: to complain about food contamination or food poisoning look up "public health services," listed under "community health services" in the "hospitals" section of the phone book). The official I talked to acted swiftly. He went straight to the Remuera dairy, found shards of glass (from a window broken by a burglar) in the bulk ice cream, and ordered the freezers emptied. For [the] health protection officer... this was another case of food spoilage. Spoilage is when bacterial, chemical or physical contamination causes noticeable deterioration in food. Glass is regularly found in food and drink – over the past two years it has been reported in fruit, mineral water, Coca-Cola and pickles and chutneys. Also reported were maggots in dried figs, shreds of plastic in animal biscuits, a pin in an Easter egg, metal threads in Vitamin C pills, and rubber particles in peanut butter. Distasteful as these incidents are, they don't represent the health hazard that food poisoning does. Last year 9457 cases were notified nationally... [and] the incidence has nearly doubled since 1990... Over summer a Papakura supermarket deli sold salmonella-contaminated luncheon sausage. Whether salmonella-positive food handlers were responsible or cross contamination from raw chicken did the damage, 11 confirmed cases of salmonella poisoning resulted. One person was admitted to hospital. The deli was closed for 10 days for a clean-up and the store now has a food-safety plan. In March a pizza bar and cafe sickened six customers with salmonella-infected tiramisu (a raw-egg dessert) and chicken pizza... Neither of these food premises was taken to court – probably because the maximum they could be fined is \$1000. But once the Food Act is amended (expected this year) anyone in breach of it will become liable to [pay] a \$100,000 fine. "That," says [the health protection officer], "will send a message to the food industry to be very careful."

...The cooked chicken comes off the supermarket shelf. In less than a minute it is eaten and the bones deposited behind the yoghurt. A brazen case of grazing – supermarket-speak for customers eating in the aisles and not paying. It is a true story, caught on video and told to staff by a trainer for the Pak 'N Save-New World Group... High-risk items for the try-but-don't-buy brigade include grapes, nuts, chocolate bars, bananas and chips. Grazers are a problem, Auckland supermarkets say, echoing reports that a Kapiti Coast supermarket may take such shoppers to court. Locally they are more likely to be combated with common sense... Most supermarkets say that asking customers to pay for food they are eating is enough, and some put signs on high risk items... "...If you say, 'Can I help you,' and they are spitting out a pile of nuts... they get really embarrassed... If a customer takes a grape or two, staff don't do anything. But... [it] comes to a lot of money... if half the customers take just one grape..." Another supermarket manager said it was not so easy to deal with teenage girls who used spray deodorant and then put it back on the shelves. And what to do with the family who brought back the chicken bones – and complained the meat was off? Grazing was just one of a number of questionable habits of shoppers reported by supermarkets, though they were quick to say they were not complaining – it was the nature of the business.

...ONE of the characteristics of real food enthusiasts is their delight not just in eating but in talking about it. As they ladle in steaming forkfuls the immediate pleasure is interrupted by golden reminiscences of previous great meals. Engaged recently in this entertaining, if slightly gross, pastime I was struck by how often people remember restaurants less by the food than by the service. The most spectacular tastes do not, for most people, transcend shonky service whereas a warm and skilled welcome will see people prepared to forgive minor deficiencies in the food. The curious thing about good service is that it is so easy and cheap to provide that you wonder how any restaurant can fail... So it was with some interest we noticed the [statistic that 'one-in-five restaurants fail within a year in Auckland'] and the announcement that the Georgie Pie chain of family restaurants has been sold to McDonald's NZ...

'DID you know the now-defunct Georgie Pie was the inspiration behind the name of a Tokyo-based band? The founder and guitarist of Georgie Pie (the band), spent a year knocking around NZ, and became addicted to the \$1 minced-meat pies. "Georgie Pie, the restaurant, has been squashed under the greasy clownshow of McDonald's, but the name lives on in Tokyo's premier blues band, a homegrown alternative to fastfood music," says the band's website.'

...McDonald's Corp said that earnings rose 10[%] in the third quarter, as profit growth at restaurants outside the U[S] more than offset weak domestic results... Outside the U[S], operating earnings grew 11[%] in the quarter as revenue rose 13[%], while... operating earnings fell 5.0[%] in the U[S]... but revenue rose... 1.0[%]... The world's largest restaurant chain said that net income rose to... \$NZ630 million... Revenues grew 8.0[%] to \$US2.77 billion... McDonald's had 11,852 restaurants, including smaller outlets, in the U[S] at September 30 – up 8.0[%] from a year earlier and 8139 in other countries – a rise of 26[%]. - 1996

Though the company continues to report record profits year-on-year – last year it posted net income of \$NZ2.3 billion... – growth has depended on an aggressive expansion programme rather than attracting new customers with tastier products... The situation is causing comment overseas where American tourists visiting N[Z] remark there seem to be more McDonald's in Auckland than in comparable American cities.

...On May 24, McDonald's opened its first outlet in the Ukrainian capital, Kiev. Exactly one week later, after five years of squabbling and six official postponements, [the] Russian President... finally came to Kiev and signed a Russian-Ukrainian friendship treaty. Mere coincidence? Not according to the Golden Arches Theory of Conflict Prevention. Serious students of international affairs have noted – tongue only partially in cheek – that no two countries with a McDonald's restaurant have ever gone to war against each other. The basis for the theory is that the presence of McDonald's means a country has achieved a level of economic maturity and consumer comfort that it would be unwilling to jeopardise by engaging in armed conflict with a neighbour. Moscow has hosted McDonald's for more than a decade. Now Kiev has two stores. Thanks to the Illinois-based fast-food giant, the world is a safer place. With stores and franchises in 102 countries, [and 'a new McDonald's opening somewhere in the world every

eight hours,']McDonald's Corp is a superpower in its own right. Recently it surpassed Coca-Cola as the planet's most recognisable brand, according to the Interbrand Group, an international consulting firm. So all-encompassing is McDonald's global clout that the *Economist* magazine produces an annual Big Mac Index pegged to the price of a Big Mac in 33 selected countries. The magazine's editors tout their index as an uncannily accurate guide to whether various currencies are overvalued or undervalued. At home, however, the company has experienced some difficulties: a US\$5c burger promotion that flopped, stiff competition from rivals Burger King and Wendy's, and marketing reports that suggest American consumers don't think the McDonald's burger tastes as good as it once did. But these problems are more than offset by gains overseas. This is powerfully evident in Ukraine, a barely tapped market of 52 million people where McDonald's is poised to launch one of the most ambitious expansion campaigns in the company's history. Ukraine's... local real estate market, the tax-system... inflation... rampant corruption and red tape have kept many Western investors at bay... From the consumers' side of the counter, manufacturing a Big Mac may look pretty simple. It isn't. And it is even tougher... in an environment like Ukraine. McDonald's understands that its success lies in delivering consistency. And in Ukraine, consistency is a scarce commodity. McDonald's attempts to buy all of its products locally. But to do this in Ukraine, it has had to build a supplier network from the ground up – literally. Soil samples were taken and tested – radioactive fallout from Chernobyl is still a concern in the Ukraine – before the company settled on a salad supplier from the Crimea and a beef herd from the distant reaches of eastern Ukraine... Plans call for seven stores to be up and running by the end of this year... "If you look at Ukraine on a 10-year pattern, you could fit 200 to 250 restaurants here," said... an Austrian who was finance director for McDonald's Central Europe before taking over the Ukrainian project... McDonald's pays... nearly four times the average... Ukraine... wage... A Big Mac at \$NZ2.35 is one of the better bargains on the continent, according to the *Economist*[, but with]... such meager disposable incomes, the question arises whether Ukraine has a consumer base that can support[so many] fast-food outlets.

...McDonald's is blaming increased costs for a decision to increase the prices of some of its burgers for the first time in more than five years. The burger chain, which has more than 130 outlets throughout N[Z] has denied the move is intended to close the gap between itself and its more expensive competitors... McDonald's managing director... described the move as an "internal matter" which was not related to the tough times McDonald's was facing in the American market... However, Kiwi consumers can console themselves with the fact that at \$3.40, a Big Mac still costs less in N[Z] than it does in the U[S, where the]... average price of a Big Mac... is... the equivalent of \$NZ4.17 based on current exchange rates.

...McDonald's, [which is]famous for putting a Scottish "Mc" in front of all its products, is putting staff in Britain into tartan. Nothing wrong with that, except the chosen tartan is... the burgundy, green and navy... of... Clan Macdonald's... lowland rival Clan Lindsay.

...[Police raided a NZ couple's home as part of a Scotland Yard investigation into threats of terrorism and blackmail against the Bank of Scotland and Coca-Cola. The Yard's organised crime group launched an inquiry into the couple's activities after copies of a 3-hour video were sent to scores of people, including the British PM, and media and commercial companies. The presenter, identified as Heather Bell, says that if the bank doesn't cease trading or halve its charges "we will sabotage it." Next, she attacks Coca-Cola. "We've informed Coca-Cola and the public that Coca-Cola will be contaminated. Only when they cut their retail price in half will we stop tainting Coke." Bell predicts hundreds of Coke drinkers will become "very sick, but not dead."

...As Coca-Cola executives lobbied to get their products back on Europe's store shelves, the EU pushed for further investigations into what caused 200 people to become ill after drinking the company's soft drinks. Atlanta-based Coca-Cola has blamed defective CO₂, used to put fizz in its drinks, for problems at its Antwerp manufacturing plant in Belgium (the Belgian Health Ministry banned all Coca-Cola products two weeks ago). The company also said the outside of cans made in Dunkirk, France, were contaminated with a wood preservative during shipping. The company said these two unrelated problems had led to similar symptoms of nausea and vomiting. A company-commissioned study suggested the health problems were in the victims' heads.')

...Coca-Cola Corporation said that profits rose 18[%] in the fourth quarter... from \$[US]648 million in the 1995 quarter... and set a record for the full year as sales of its soft drinks posted solid growth worldwide... Coca-Cola said it sold more than 13.7 billion cases of soft drinks in 1996, more than 1 billion cases more than in 1995... For all of 1996, profits rose 17[%] to \$3.49 billion... Revenues rose to \$18.55 billion.

...[the] daredevil entrepreneur, who turned Virgin Group into Britain's biggest private company, will introduce his Virgin Cola in the U[S] early next year, taking on Coca-Cola in its home territory... Leaving aside the sheer size of Coke and PepsiCo, which together control... three-quarters of the \$53 billion U[S] soft-drink market[-] ...Pepsi... sells... 32[% and Coca-Cola 43%] of all US soft drinks... [-] analysts question whether the Virgin brand can play as well in America as it has elsewhere... So far Virgin Cola has not made more than a dent against Coke and Pepsi in Britain.

...Soft drinks giant Coca-Cola... after encountering some criticism for staying in South Africa during the apartheid years... is driving deep into Africa in a move expected to entice other U[S] companies into the region... The corporation and its seven bottlers announced early this year that it was investing \$US275 million... in South Africa, Africa's economic bulwark, to strengthen its market share. Coca-Cola said it intended to double its business in South Africa as a result of the investment. Its sales there are running at around 4.8 billion rand (\$NZ1.70 billion) a year at retail value. Its aggressive investment drive in the country forced its arch-rival Pepsi to beat a hasty retreat after re-entering the market three years ago. From South Africa, Coca-Cola is striding north to Zimbabwe – the region's second-largest economy – where it is to invest \$US60 million over the next four years. Tanzania and Uganda are next in line, drawing investments of \$30 million each. The company also sees prospects for expansion in Portuguese-speaking Angola and Mozambique, which are slowly recovering from almost two decades of civil war. It is already in Botswana, Lesotho and Swaziland. "We're very positive on Africa as a whole," [the]Coca-Cola president and chief operating officer... said during a visit to southern Africa. That vote of confidence in the continent's potential is seeping through to other American corporations. Industry sources in Zimbabwe say... Coca-Cola... might soon be washed down with... McDonald's... McDonald's is already in South Africa.

...one of the world's most admired companies is in a mess. Last week the... McDONALD'S... group announced a big shake-up of its American operations and the removal of its chief executive after acknowledging the failure of a series of costly sales promotions... Although it continues to expand rapidly outside America... its share of the domestic market has shrunk to 42%. This compares with Burger King's 19%... and... Wendy's... 11%... Competition has become so fierce that some of McDonald's... American stores are said to be cannibalising each other's business. The intense competition has forced McDonald's to break away from its traditional recipes, and experiment with new menus. A low-fat sandwich, called McLean, was a disaster. An expensive Arch Delux sandwich – a cheese burger with lettuce, tomato and sauteed onion – has been only slightly more popular. In an effort to make its food tastier, McDonald's recently instructed its stores to stop microwaving lettuce and tomatoes on sandwiches, and to toast buns, instead of using a baking technique analysts say makes them soggy than the... buns of Burger King and Wendy's... McDonald's won a promotional victory last year when it persuaded Walt Disney to allow it to license its film characters and break off ties with Burger King, which chalked up record sales two years earlier when it offered toy characters based on *Toy Story*, a hit Disney film. McDonald's claims it distributed 100 million toy dogs in December in a tie-in with Disney's film *101 Dalmatians*. But the impact of such gimmicks on food sales has been limited by the fact that its rivals have also turned to movie productions. Taco Bell, for instance, has tied up with Twentieth Century Fox and just launched a *Batman* sweepstake, with a Batmobile as first prize. The new management team at McDonald's is not guaranteed success... [However, its] global 1996 sales were almost \$US32billion, compared with Burger King's \$US9billion.

...[The FBI has arrested eight people allegedly involved in a scheme that fraudulently netted more than \$US13 million worth of McDonald's game prizes. Authorities said yesterday that the criminal ring involved a company responsible for McDonald's game security. Authorities said no McDonald's employees were involved and the fast-food chain assisted the investigation. Those arrested were charged with conspiracy to commit mail fraud after fixing

the outcome of McDonald's Monopoly, Who Wants to Be a Millionaire and other McDonald's promotional games. The FBI said the scheme began as early as 1995.]

...McDonald's Corp reported a 4.2[%] rise in second-quarter profit... slightly less than expected, and said it was scaling back expansion plans for its struggling U[S] business. However, its chairman and new... chief executive... said the company could boost its earnings per share by 10%-15% a year for the next five years, assuming a stable US dollar.

...McDonald's third-quarter earnings rose just 1.9[%] as sales remained sluggish and the strong U[S] dollar hurt results overseas... The... [company] is cutting back on new restaurants[at home] as it focuses on overseas markets.

...The[NZ] burger market became a tad more competitive last week as [Kentucky Fried Chicken] positioned itself to move into more direct competition with McDonald's. The move follows N[Z]ers strengthening love affair with burgers and chips, which are now our favourite takeaway foods providing the fast food industry [(that encompasses '800 outlets in Auckland' alone)] with its highest level of growth and profitability... KFC was going to chase that growth, launching a new burger, called the Big Colonel Burger, which it hopes will pinch market share from... McDonald's... KFC has offered burgers since 1989... [and they] now accounted for about 20% of KFC's sales... which would mean it was selling about \$36.6 million worth... against the company's forecast total sales of \$183 million for this year... More than \$2.4 billion was spent on['an estimated 720 million'] restaurant and takeaway meals last year... N[Z]ers spend an average of about 24% of their total food budget on takeaways or in restaurants. The figure is rising, but it still has a long way to go to catch up to A[US], where it is 33%[, or 'the US (48%)']. However, 'Wellington – the smallest capital in the developed world – has more restaurants per head of capita than New York.'

...The US Ambassador to NZ still tips – but not on the same scale he would at home, where it can be many workers' main income. A spokesman said those lucky enough to receive a little extra from the Ambassador should expect the 15-20% of the total bill customary in the US. An Auckland waitress would be thrilled with such a gesture. The fulltime cafe worker said that on the whole tipping by NZers was pretty terrible. Waiters in NZ on average collect \$33 a week in tips, rising to \$53 in Auckland. A survey on attitudes towards tipping for service reveals 46% of people do it only for excellent service, while 44% utterly oppose the practice. Only 1.1% always tip. The chief executive of the Hospitality Association said that five years ago the number opposed would have been much higher. "That shift in culture by Kiwis is a result of travel overseas, where tipping is part of the culture, and tourists coming here are tipping." The chief executive said the industry did not encourage tipping as a matter of course – he would not like tipping to become a substitute for wages, as it is in some countries – but it was accepted as a reward for excellent service.'

...*'R.I.P Silver Service (elder sister of Fine Dining)* DINERS are swapping heavy silverware and starched linen tablecloths for lightweight crockery and tables on the sidewalk. Dead posh restaurants in main centres close while rows of cafes and brasseries casually march up every main road. Could this be the death of fine dining? Absolutely, says the AUSn-based NZer who has bought and renovated Auckland restaurant and bar Tuatara. He is also owner of Morris Corporation in AUS, a company most famous for its catering contracts in war-torn Cambodia and Somalia. The business covers everything from cafes to quality hotel restaurants to staff cafeterias and industrial catering units. "We just won a contract to do the food and beverage for a 167-room Brisbane hotel. We had the option to provide a fine dining restaurant or a cafe-style service. We chose to put in a brasserie. And really we had no choice. Why? Because otherwise we would have been limiting our market. There will always be a market for fine dining. It's just that it's much smaller in comparison." And it's economic. Customers' perceptions of good value have changed. "To have linen tablecloths and your waiters in fancy outfits costs money and diners know that. They think if they can go to a cafe, have nice food and great service, it's not necessary to pay for all the trimmings. And as a restaurateur it gives you the ability to get the food out faster and turn the tables over quickly." However, an old Auckland favourite in fine dining, Number Five, recently reopened and renamed 5 City Road, is doing very well, thank you, reports its owner, who also runs the successful Forty One restaurant in Sydney. Which is why he doesn't believe fine dining is dead. "What has died is the pretentious aspect of fine dining. What has gone are the restaurants which used to claim they were fine dining but effectively all they had were waiters dressed in tuxedos. NZers are now more aware of what makes a quality product. They want fine dining. They don't mind paying for good food and service – they just don't want to be ripped off.'"]

...The boom time for Auckland's restaurants and cafes appear to be over... Statistics N[Z] data shows consumer spending on cafes, restaurants and takeaways throughout the country increased by just 2.6[%] in the first ten months of this year compared to the same period in 96. In most months last year, the food service industry experienced double digit growth... According to the Food Service Association... increased costs and more competition will mean many in the industry will be struggling to make a profit this year... [F]ood costs have gone up by an average of 2[%] over the past year, labour costs 6[%], rents 2[%] and other operational costs 4[% – plus]... at least 50 new restaurants are included in developers' plans for the city centre over the next two years... A survey of 400 of [the association's] members shows the average profit over the past year was 3.7[%] of turnover, before tax. The figure compares to last year's average of 7.9[%]... While some restaurateurs were obviously doing well, the survey showed a lot must be losing money... Increased reluctance by diners to drink and drive also meant fewer patrons were running up large drinks bills...

It was a quiet dinner for three... city businessmen... [at an] exclusive eatery... in London... used to diners spending upwards of £100... each... but the bill came to \$35,800... While big-spending businessmen could easily splash out similar amounts at N[Z]'s top restaurants, such extravagance is rare... N[Z]'s egalitarian streak meant that such expenditure was viewed as "disgusting," said [the proprietor of an Auckland restaurant. Incidentally, 'Swansea Prison in Wales has won an award for the quality of the food it serves its inmates – at a cost of just \$4.40 a day. A council health officer said the prison had clean kitchens and a staff training programme. It provided for 10 types of diet, including selections for vegetarians']...

Burger King... a unit of United Kingdom-based Grand Metropolitan... is... escalating the fast-food wars... [by introducing] a new hamburger called Big King... [(which) will have 75[%] more beef and less bread than the Big Mac], and... putting a meat-free burger on its menu – but it may have limited appeal for vegetarians... [because the] new bean burger patties are fried in a mix of animal fat and vegetable oil, the blend used to cook its chips. The director of marketing... said the chain had no plans to stop cooking in beef shortening because it was not trying to woo vegetarians... health conscious[customers] wanting less fat in their diets were demanding an alternative to meat... When the chain was launched... it cooked its chips in vegetable oil, but soon added animal fat after market research revealed customers preferred fries cooked in beef tallow. McDonald's also reported a strong demand for beef-fat flavoured fries and its extra-thin chips are cooked totally in animal fat. Wendy's and KFC cook their fries in vegetable oil, although chicken-flavoured salt is added to the KFC product.

...[Put down those chips – while you can still see them! Doctors have long known that some fats can cause heart disease, but a study in Boston – the largest so far to look at the connection between dietary fat and eye disease – has found that fat in your diet can also lead to age-related retina macular degeneration (the leading cause of blindness in people aged 65 and over). Just as dietary fat can accumulate in the blood vessels and lead to heart disease, it can clog up the vessels going to the eyes, leading to loss of vision.' ● 'Cholesterol might be bad for arteries but a study has found it is good for learning and memory.'

...Would you like a side order of stupidity with your burger? Two Canadian scientists have found that hamburgers and cream cakes do not just clog the arteries, they clog the brain as well. The researchers claim that too much fat – from fatty foods including takeaways – during childhood and adolescence can impair memory and concentration. The fat appears to prevent the brain taking the glucose it needs for healthy performance.'

...KIWI kids are among the world's worst Teletubbies. New research shows only America and Britain are worse for childhood weight problems. NZ will be a nation of fatties in a decade due to increasing numbers of couch potato kids, dietitians warn. Almost a third of all children aged between 7 and 15 are overweight and community paediatric dietitians are fully booked. Factors blamed for the weighty crisis include: ■ The competitive fast food industry

increasing the size and quantity of high-fat products ■ Busy families relying on takeaway meals ■ Parents fearful of letting kids play in parks or walk to school ■ Passive activities like playing computer games, watching videos and TV'.] It's not just TV but all those ads that pose a health risk... At 15 minutes an hour, N[Z] has one of the highest rates in the world. We endure about twice as much advertising as British viewers... The ad breaks provide eating opportunities, especially when they feature food that tickles the taste buds... says[a] visiting American paediatrician... Back home, the... Tuft's University School of Medicine in Boston, Professor... is "still struggling to make our population aware that obesity is a problem."

...The fight against flab is to begin with hot chips, a fat-laden favourite which N[Z]ers are eating in huge amounts. The National Heart Foundation is working... on cooking guidelines in the hope of stopping soggy, oil-soaked fries getting near our stomachs.

...First the good news – hot chips may not be that bad for you after all. Well-cooked, traditional chips can have as little as 6[%] fat content, say health officials. That makes them only twice as fatty as blue-top milk... The bad news is that only chips cooked at the right temperature (180-185 degrees C) and in clean oil make the grade... Only 10[%] of the chips surveyed... [by] Auckland Healthcare... passed the temperature test. Thermostats in more than half the takeaways were not correctly set, and 17[%] used old cooking oil. But... thin chips were more unhealthy than fat chips because there was more potato surface area in each serving to hold the fat... The modern shoestring-style chips sold at most fast-food chains are at the top of the fat range, with a 16.8[%] rating for McDonald's french fries. And if you have fish in batter with your old-fashioned chips, the fat content goes right up again.

...There is ample reason for the food police targeting "greasies": a study in the latest *Consumer* magazine shows that fish and chips have the highest fat out of 13 different takeaway meals. [The 'energy from fat percentage for the sampled fish and chip meals in the study was 49 to 54%. Next highest were McDonald's Big Mac and fries plus Burger King's Whopper and fries, both on 47%, then a Wendy's burger and fries at 45%. KFC's 2-piece pack with chips measured 41%']... The figure recommended by experts is 30-33% of your overall daily diet... Another Auckland Healthcare survey, of mincemeat sold at butchers and a supermarket chain, disproved the theory that you get what you pay for... [T]he fat content ranged from 3 to 18[%], which was good. But the dearer butchers often did not provide the leanest meat – one of the highest fat-content levels came from a top-of-the-range shop in Remuera.

...The fat content of ETA Slims has come under the spotlight in a battle of the crisps in the Auckland District Court. The Commerce Commission alleges that Griffins Foods has breached the Fair Trading Act because... 27[%] of survey respondents... have the impression that Slims are healthier than other potato chips... [The commission says it will] call five witnesses... to prove that some customers believed the Slims had less fat and were better for them. The commission did not have to prove the crisps were less healthy... It did not have to prove people were misled, only that people could be misled through the company's marketing. A commission investigator... told the court that Griffins representatives said to her in an interview that Slims had been named because they were a thinly cut, flat crisp. The name did not reflect any health claims... [The] Judge... adjourned the hearing at 3pm to consider whether a Commerce Commission survey of 600 people's perception of the health value of Slims was admissible... [The] percentage of fat in Slims per 100g was between 35 and 37[%]. ETA Ripples contained the same amount, Kettle Fries were higher at 39[%] and Natural were the lowest with less than 20[%]. By the way, the commission has also been... investigating the implications of a... deal which could leave N[Z] with effectively only one sugar supplier... The upshot... is for 50[%] of... Chelsea Investments... to be acquired by the same people who own... Refined Sugars N[Z]. Chelsea owns the only sugar refinery... [in NZ while Refined] distributes sugar imported from A[US]...

Underweight pottles of potato and gravy, coleslaw and bean salad from outlets meant consumers were being overcharged \$1,634,640 a year, according to a Ministry of Consumer Affairs estimate presented in court yesterday. KFC was ordered to pay \$23,735 in fines and court costs after pleading guilty in[the] Wellington District Court to 23 charges... A lawyer for the ministry... said inspectors found 224 short-weight pottles at 10 stores between Whangarei and Christchurch in February and March. One 500g container was 22[%] underweight and those subject to prosecution were an average of 14[%] underweight. The KFC lawyer... said staff had not followed the correct weighing procedures and were not adequately monitored... The KFC chief executive[, when]... asked outside court what plans the company had to compensate customers, said that in future customers could expect KFC to err on the side of over-filling.

...A 60-year-old Japanese man taking part in a sushi-eating contest choked to death after rapidly downing the rolls of rice wrapped in seaweed... The... police spokesman... said the man began to choke after he swallowed three vinegared pieces... one after another. Each roll was 20cm in length and 2cm thick... About 50 people took part in the contest, sponsored by the[local] town and a farmers' group to promote rice consumption.

...The meat pie, arguably N[Z]'s defining cuisine, has been laid before 15 experts in the inaugural, nationwide Supreme Pie Contest. [One j]udge... of Christchurch chose to fine-tune his palate on reject offerings before judging began in Auckland yesterday. Forty years in the business attest to... [hi]s staying power – the judges face 1460 pies between them. [In related news, the '3000 cakes that were baked days ago for the NZ Bakers Trophy will be destroyed' today.]

...Hundreds of people in a poor district of Kenya's capital scrambled up a mountain of dumped maize yesterday, ignoring warnings that the... food was contaminated. Oblivious to the health risk, slum residents pulled up their trousers or skirts and waded through mud and sewage to scoop the... maize into sacks... The scramble began on Monday as news spread that lorries had dumped about 800 tonnes of spoiled maize at a quarry... Kenyan newspapers reported that the maize was from a food relief consignment and was supposed to have been burned... The maize appeared to have been partly destroyed by pests and was turning reddish from its original yellow colour. Maize is the staple food for Kenyans but its price has risen because of drought earlier this year. Nearly half of Kenya's 29 million people live below the poverty line and at least 11 million... are unemployed... Health inspectors from the Nairobi City Council visited the quarry but did not interfere with the maize collection. They also offered no comments to the media. "Go tell them that we need beans so that we can cook it together with the maize and have a complete meal," a young man joked... [Another] said he had drunk alcohol made from some of the maize and saw no immediate health risk.

...Spain's Supreme Court has blamed the state for a 1981 food poisoning disaster that killed hundreds and crippled thousands in a long-awaited ruling... The court ordered the Government to pay compensation to all victims, saying it was ultimately responsible for the toxic syndrome produced when contaminated industrial oil was sold as cooking oil. [In local news, 'West Auckland bakeries are being warned against buying unmarked cheese considered unfit for human consumption. Auckland Healthcare warns that the cheese is a scam that first surfaced 2 years ago. The man convicted last month on 14 charges under the Food Act was fined more than \$13,000. Another man earlier pleaded guilty to 14 charges under the Food Act and was fined \$7900. The investigation was sparked by a cheese processor who became suspicious when wholesale cheese was offered well below the market price. It was found the cheese was being transported in vehicles used to carry pigs and was being grated in a butcher shop, running a high risk of contamination.'

...Butchers have been warned to stop handing out free pre-cooked saveloys as treats for children. The advice comes after a Christchurch butcher's shop inadvertently infected 2 children and 6 adults with salmonella poisoning'. In international news, 'almost 1400 people, including 1000 children, are suffering from dysentery in hospitals across southern Russia, apparently after having consumed milk, cream or yoghurt from a factory in the town of Kropotkin, in the southern Krasnodar region. Production at the factory was halted.' And 'dodgy ice cream has put 150 people in hospital with food poisoning in Sri Lanka.'

...A ration of mung bean porridge provided by a state elementary school in the Indonesian province of Lampung as part of a nutrition programme has killed two pupils and poisoned 152 other children and teachers... [While on the topic of food poisoning, a] Scottish butcher has pleaded not guilty to "culpably, wilfully and recklessly" supplying... contaminated... cooked meat.

...A 17th person has died in Scotland[from] food poisoning... caused by the E. coli bacteria.

...A report on an outbreak of food poisoning in Scotland... in which 18 people died... and 500 were affected... has severely criticised the Government for failing to implement reforms to improve hygiene in the food industry because of the high costs involved.

...An elderly woman in a Scottish nursing home yesterday became the 22nd victim of a food poisoning epidemic that has ravaged parts of Scotland and England... There's also a health scare in the U[S] over a contaminated batch of frozen Mexican strawberries. Thousands of schoolchildren are lining up for a hepatitis A jab after tainted strawberries were sent to schools in 17 states. Two hundred children are ill in Michigan after eating the strawberries in a frozen dessert... [And] Melbourne's reputation for fine food and dining has been hit by another outbreak of food poisoning... the fourth... in two weeks... Authorities blame the hot weather but others blame government deregulation and the breakdown of health services.

...The number of people suffering... food poisoning after eating pork rolls from a bakery in Melbourne rose yesterday to more than 200. All suffered severe gastroenteritis with 16 hospitalised.

...Arnotts Ltd says it may be forced to lay off up to 1000 full-time workers across A[US], starting this week, in the wake of extortion threats to poison its products. [The firm's m]anaging director... said... at a press conference in Melbourne yesterday... [that] about 100 casual workers had already been laid off with fears of profit losses of up to \$A5 million... Last Friday the company ordered its products off the shelves of shops along the heavily populated east coast after [a] blackmailer threatened to plant poisoned biscuits in stores from today. Authorities have received samples of poisoned biscuits and have warned that just one could kill a child. The extortionist has demanded that police involved in a 1991 murder case take a lie detector test in an attempt to prove the innocence of a man jailed for life for the execution-style murder of a bookmaker and his girlfriend... [T]he mother of the man being sought for questioning in the blackmail bid said her son loved children and would never do anything that could hurt them... There is a long-standing warrant for [her son] over the 1991 killings, but police would not say officially if he was a suspect in the extortion... Meanwhile... Melbourne's... [latest] food poisoning... outbreak, confirmed as Salmonella typhimurium, has made 370 people sick... Health officials say poor food refrigeration is the most likely cause... with rat and mouse waste other possibilities.

...['RATS and roaches are an unwanted addition to the menu at some fast-food outlets. Pest control contractors say they are horrified at the number of food stores infested with rodents and creepy crawlies. "Some food outlets are bad and should get pest control in every three months. But they don't," an Auckland Bugs or Us contractor said. "There are outlets that don't even know they have a problem until it's too late. There are one's I wouldn't eat at.'"]

...Forget about bugging the waiter about those flies in your soup. Sticking plasters are the emerging new and unexpected taste sensation. It seems that plasters are doing everything but sticking to the hands of highly influential people: those who cook or prepare our food. At the shake of a finger, they can have you swallowing more than you bargained on. That extra chewy mouthful is unlikely to do you good. Chances are the misplaced plaster is crawling with nasties which will lump you with the food contamination blues... A dozen angry eaters got the unwanted ingredient last year – up from seven complaints the year before. There have been five complaints so far this year. Restaurants were guilty of a third of last year's tally, while bakeries and takeaway bars made up a quarter each. Butchers – the ones who still have fingers to put plasters on – made up the final 17[%]. Auckland Healthcare's food programme manager... said food staff should wear gloves over sticking plasters as a precaution. Large food-processing companies kept logs of plasters issued to staff and proof of the plaster was needed at the end of the day. Some factories even used plasters with a thin metal strip that could be picked up by a metal detector.

...['Hundreds of Aucklanders may have been exposed to hepatitis A after a staff member at a Mission Bay restaurant contracted the disease. Almost 350 diners who ate at Bluefins Restaurant and Bar on six nights in the past three weeks are being sought by the Auckland Public Health Office. Customers on the 15th or 16th would still be able to prevent the disease from taking hold if they had an injection of immune globulin before Wednesday. It was too late for the injection to have any effect on earlier patrons, but they should still contact the public health unit. Bluefins co-owner was distraught at the health scare.'

...['Chinese authorities held the boss of a fast-food restaurant for questioning last night as they investigated a food poisoning outbreak that state media said killed 41 people and put hundreds more in hospital. Locals in Tangshan, a small industrial town near Nanjing, estimated more than 100 people had died']...

'The next time you fall ill with food poisoning after eating at a restaurant, don't rush to blame dodgy hygiene in the kitchen – the culprit could be a fellow diner. A single diner who vomits can infect an entire restaurant, say British scientists, who found that vomit is astonishingly effective at spreading viruses. Public health officials were asked to probe an outbreak of food poisoning in the town of Derby where 126 people sat down to dinner at six tables in a local hotel. During the meal, a diner was sick. Hotel staff swiftly cleaned up and the meal continued. But three days later, other diners started falling ill. In all, 52 people came down with fever, nausea, vomiting or diarrhoea. A rigorous inspection of the kitchen found nothing wrong, but the real source of the infection began to emerge when the scientists looked at the seating arrangements. More than 90% of the people at the same table as the sick woman later reported food poisoning. More than 70% of the diners at an adjacent table became ill, and at a table on the other side of the restaurant, the rate was still 25%.'

...['Grim toll of food poisoning Food poisoning causes more than 23 million lost working days a year in Britain, a new report claims. Twice as many cases are being reported now than 10 years ago, says the survey by two health officers. It is of the utmost importance that everyone who handles food, or who works in a place where food is handled, should know the Food Hygiene Regulations. *Food poisoning can be prevented by:* 1 High standards of personal hygiene. 2 Attention to physical fitness. 3 Maintaining good working conditions. 4 Maintaining equipment in good repair and in clean condition. 5 Adequate provision of cleaning facilities and cleaning equipment. 6 Correct storage of foodstuffs at the right temperature.']

...Rice may be nice, but too many people are risking food poisoning by leaving it on the bench overnight, according to an Auckland Healthcare survey. The Public Health Protection survey of 1000 Aucklanders responsible for preparing household meals revealed "significant gaps" in food safety knowledge, with people in their 20s, and Pacific Islanders, scoring worst... More than half of those surveyed believed it was all right to eat rice which had cooled overnight at room temperature, confirming the perception that rice was seen as a low-risk food for food poisoning. It was, in fact, responsible for around 20[%] of 24 solved food poisoning outbreaks in Auckland. The survey also showed that just 76[%] of respondents thought the fridge was the best place to store fresh eggs, a problem blamed partly on supermarkets, which stored them unrefrigerated.

...Countdown and Foodtown supermarket chains have recalled their own brands of sorbet and gelato because they may contain fragments of glass. The recall covers all flavours... Customers[who haven't yet consumed their purchase] will receive a full refund...

Nutritionists often advocate the benefits of eating fresh green salads but a survey of... 22 major... Auckland supermarkets is making them eat their words. *Consumer* magazine reports that 40[%] of supermarket salads sold at Woolworths, Big Fresh and New World contained too much bacteria... Nearly 13[%]... contained listeria bacteria, which is a danger to pregnant women, and 8[%] had unacceptable levels of faecal coliform bacteria... an indication of poor food-handling practices... *Consumer* magazine... [also found salads] put on sale after their "best before" dates had expired[, misleading]... labelling on some salads which suggested the food was fresher than it actually was[, and]... salads displayed at too high a temperature... Staff at some supermarkets had little or no food safety training... Since the survey, Foodtown has closed its self-service salad bars.

...['the owner of a US sausage factory is charged with murdering 3 health inspectors. Their bodies, which had gunshot wounds, were found in his factory. The owner – who faces the death penalty if convicted – claimed inspectors wanted to close him down after complaints over sausage cooking temperatures.'

...‘a bun fight has erupted in Onehunga after a lunch bar owner refused to let an Auckland City Council food inspector check her premises. The owner says she took a stand because the council is putting people’s health at risk by letting bun runners get away with “blue murder”. Bun runners deliver food door-to-door instead of serving people from one location. Each year the owner pays the council \$280 so food inspectors can check her lunch bar twice a year to see she is following food and hygiene regulations. If she passes the checks she gets a food licence. If she refuses to let a food inspector back in her lunch bar, the council could revoke her licence. She says the council is not monitoring bun runners and inspectors have told her the problem is “out of control”. But the council’s environment health spokesman says the problem is not out of control, but is “difficult to control”. He says it is not easy to monitor bun runners, but there had been no reported cases of food poisoning. However, the council wants to amend the food bylaw to include bun runners’. Incidentally, the] **Queen Mother is to receive her first dinner from Meals-on-Wheels... one of 24 million delivered... each year... to help publicise Meals-on-Wheels Day.**

...[‘While Mother’s Day is usually dismissed as a commercial exercise, historians claim its origins stretch back to “Mothering Sunday” in 17th Century Britain, the fourth Sunday in Lent. Classicists prefer the ancient Greek celebration in honour of mothers in a tribute to Rhea, the Mother of the Gods. The modern version took off when Julia Ward Howe, who wrote the words to the American Battle Hymn of the Republic, pushed for a Mother’s Day in the US in 1872. In 1910, West Virginia marked the day and the rest of America followed suit until President Woodrow Wilson declared it a national day for the second Sunday of May. Flowers and breakfast in bed may be the traditional Mother’s Day gift but figures from a market research firm, which records national supermarket sales each week, indicate that many of us rely on the tried and true box of chocolates with a card. Last year in the week leading up to Mother’s Day, NZers spent \$250,000 on chocolates – compared with the average weekly spend of \$100,000. Discounted gold jewellery, makeup and perfume are perennial favourites.’

...‘Britons have become physically addicted to curries, according to research published this week. An increasing love affair with Indian food over the past 50 years has permanently changed the English palate, claimed the author of the research. The senior research fellow at Nottingham Trent University found that the mere thought of a chicken tikka masala or lamb korma could set hearts racing and blood pressure soaring. He monitored the reactions of more than 100 people to different foods. The thought of traditional British food, such as steak and kidney pie, increased people’s blood pressure by an average of 1.8 points, while the anticipation of a tikka masala raised their blood pressure by 4.9 points. A rise in heart and blood pressure are associated with arousal and natural highs – and the fact that people get excited at the mere anticipation of a curry indicates that the combination of ingredients may be addictive.’]

...IT IS meant to be the ideal social occasion. A chance to break bread with close friends in the comfort of your own home. But a new British survey has found that bread may not be the only thing broken on such occasions – a quarter of hostesses become so stressed by entertaining they resort to hurling objects around the kitchen[, or else]... the supposedly genial hosts end up rowing with their partners in front of guests. Tension over who should do the cooking accounted for 29% of all rows, with 74% of women feeling aggrieved by bearing the brunt of the work. Criticising the cooking was a major bone of contention (34%) and male partners flirting with female guests led to arguments for 35%.

...A British medical specialist... said studies showed that... [healthy] food tended to be more expensive and was out of reach for many in low socio-economic groups... A better diet was a key factor in why rich people had superior health to the poor.

...[‘THE average Kiwi family isn’t spending enough on food to stay healthy. A Christchurch health promoter and member of the Network Against Food Poverty said the average two-parent family with two pre-school kids needs to spend \$134 on food a week to have a healthy diet. “For many low-income families this is a lot more than what’s left over at the end of the week to buy food after paying other household costs.” She said fresh or frozen fruit and vegetables should make up a large part of a family’s weekly shopping. “But high-fat foods are a cheaper source of energy than fruit and vegetables,”...]

HUNGRY Kiwis are tucking into fast food because it’s better value for money. Pizzas and burgers are high in fat but they give more energy than the same amount of fresh fruit and veges – and they’re cheaper. One kilogram of apples – that’s about 5 or 6 – costs about \$2 at the supermarket and will give 1506 kilojoules of energy. One kg of hot chips costs \$3 and gives 8300kj. A McDonald’s chicken burger costs \$1.95 and has 1584kj. A fresh lettuce costs \$2.49 and has just 315kj of energy. “Apples and tomatoes are good for us but they are mostly water...”]

‘WATER. It’s the real thing. Coca-Cola Co will begin selling bottled water in the US next year. It will be called Dasani, which doesn’t mean anything in particular but is meant to convey “a clean, fresh taste”. “Suffice it to say, we think this is the right time for us to get into this market,” Coke’s spokesman said. Bottled water is hot these days with numerous brands stocking the shelves. It is outstripping soft drinks in sales growth. Pepsi-Cola Co started selling bottled water five years ago, but although the maker of the most popular soft drink sells a brand of bottled water called BonAqua overseas it has been reluctant to get into the business in the US. It has preferred instead to encourage USers to drink Coke, Sprite and other sodas. To meet increased demand among health and weight-conscious USers, Coke has begun offering sports drinks and juices. Furthermore, as recently as last month, its chairman and chief executive said Coke was leery of water. “There’s an awful lot of water sold in the world. There’s not an awful lot of money made selling water.”’

...‘It might be time to lose your bottle – a new study says drinkers of bottled water may be pouring money down the drain. Tap water in most developed countries may be of the same standard as bottled mineral water, says a report issued this week by the conservationist World Wildlife Fund International. Globally, the bottled water industry is reportedly worth \$US22 billion a year, yet the study says in many cases the only difference is that the water comes in a fancy bottle rather than through a pipe. The NZ bottled-water industry is worth about \$NZ12 million a year. The secretary of the NZ Bottled Water Association, who is also the marketing manager for Frucor Beverages, which makes NZ Natural and H2Go bottled water, rejected the report as “nonsense.”’

...‘Food costs have rocketed, right? Wrong. According to Otago University, basic food costs for an average family have increased by just \$1 a week, on a yearly basis. The Department of Human Nutrition has surveyed family food costs regularly since 1972. Adolescent boys in Auckland came in with the highest basic food cost of \$59 a week, compared with \$58 last year. To feed an adolescent girl in Auckland costs \$49 a week; a man needs \$46 and a woman \$44. A 10-year-old needs \$39; a 5-year-old, \$26; a preschooler, \$24; and a 1-year-old, \$21. Prices in the other centres are slightly lower’...

‘NEXT time your supermarket bill leaves you shaking your head in disbelief, take comfort from the fact the groceries are among the cheapest in the developed world. A “shopping basket” study of the 24 OECD countries found only Turkey and Portugal were cheaper places to shop than NZ. Shoppers here pay almost a third less for groceries than northern Europeans – the basket came to \$370 for the same products in Denmark and Norway. Those countries were followed by Switzerland and Japan, the only non-European country in the top eight. Britain was eighth on the list and the US 14th.’ In related news,] **H.J. Heinz Co yesterday reported earnings of \$US243 million... in its first quarter, up 9.9[%] from a year earlier. Heinz said the profits, equal to 65USc a share, came on sales of \$2.2 billion.**

...Watties owner HJ Heinz Co says its profits rose 6[%] to almost \$US190 million... for its second fiscal... quarter, despite one-time restructuring costs... of \$12.4 million... and lower sales. [Speaking of Watties, its ‘asparagus growers are being driven spare by green-fingered thieves. Some Hawke’s Bay producers have resorted to camping in their paddocks overnight to catch the asparagus crop rustlers. Last year, several tonnes of spears – worth up to \$15 per kg – were stolen from fields. One grower said he had been “nailed three or four times” last year. He joked that he had asked police not to arrest the thieves if they were ever caught. “I told the police I’d want to hire them as they work quicker than the pickies to get about 400 kilos in a couple of hours.”’]

...‘The “Jafa” label sticks for some out-of-Aucklanders. No wonder. Latest evidence comes from Kerikeri – my weekend base these days. A neighbour there – not surprisingly – has an orchard. He normally sells two types of oranges, but this season he’s marketing only one. Problems began when a group called to inquire about possible work picking. They were from Auckland. Told the next work in the orchard was a few weeks off, they left. A few days later, after the owners had been away, truck tyre marks were plain between the trees, and a lot more fruit than normal was on the ground. When the owners went away the next weekend, they put heavy rocks across the drive – so heavy they needed a front-end loader to move them. And they put down a board

containing more than 100 nails, points up. When they got back, the rocks had been moved, the board had disappeared and so had thousands of dollars worth of oranges. The local theory, supported by police, is that the fruit was taken for sale at south Auckland markets. Raiders also cleaned out a full crop of tomatoes from a Waimauku greenhouse a few months ago while the owners slept – 1.5 tonnes worth \$3500. Another Kumeu raid involved 40 cases of cabbages freshly picked and stored overnight in a shed with a tractor barring the doorway. Others steal empty fruit and produce crates by the hundreds. The crates involve refunds of around \$11 a crate if the raider can find a grower willing to use his account to put the crates back into circulation. Maybe some were used to carry those stolen oranges. This is not like something out of “Huckleberry Finn”, youngsters raiding neighbour’s orchards for a few apples. This is crime, robbing hardworking people of the product of their toil, their only livelihood. As one Waimauku grower said: “It’s hard enough making a living out of fruit and vegetables without parasites stealing the stuff from you.” Parasites. Sounds exactly right.’ By the way, a] **court in Seattle has ruled that a supermarket chain must pay \$US750,000... in compensation to a woman wrongly accused of shoplifting. A security guard handcuffed the woman... then emptied her handbag on the floor of the store before escorting her to the check-out. The court also sentenced the over-zealous guard, an off-duty policeman, to an additional payment of \$US2500.**

...Firebombs exploded in two Sainsbury supermarkets in London at the weekend. One person was injured...

[Terrorism isn’t a problem for NZ supermarkets, but t]erritorialism is alive and lurking in the aisles... It raised its ugly head during what would normally have been a mundane trip to a North Shore food barn. Standing in the queue reading a magazine I realised I had forgotten... [to buy] a packet of gingernuts. I sprinted from my trolley, abandoning it for all of a minute. No harm in that. The woman being served in front of me was obviously there for the long haul. However, when I returned my half-empty trolley had been shoved away from the queue. Struggling to contain myself, I approached a small woman who was standing in my place with double the amount of groceries I had. “What’s the story?” I asked. The expletives that followed could hardly be described as pleasant. The diminutive shopper was adamant she had a right to push in. After all I had broken shopping etiquette by leaving the queue... She even elicited support from fellow queuers who appeared equally staunch in their views... The more I eyeballed my tiny enemy the more I thought her face was familiar. I felt slightly sick when I realised that last time I spoke to her was several weekends before when she coaxed me into buying a lounge suite from her business in Wairau Park... Her language at the time had been sickly sweet, I recall. Utterly defeated, I moved to the back of the long queue. No longer able to concentrate on the magazine in my trolley, I moved forward to put it back. “Yeah that’s right, muck up the magazine rack,” she said.

...While it’s all the rage in Britain and A[US], frustrated shoppers have yet to go off their trolleys in N[Z] supermarkets. Across the Tasman dawdling browsers, runaway children and checkout delays have already sent some shoppers into a fury. A Sydney woman needed hospital treatment after a recent punch-up. And[the] English-born... deputy manager of the Glenfield branch of Big Fresh in Auckland, experienced regular outbursts in his homeland. “There was quite a lot of it over there. I’ve had lots of cases where people deliberately hit others with troll[ey]s. NZ]ers seem to enjoy shopping... there’s a more laidback attitude... here...,” he said. [Editor’s note: When it comes to trolleys, the main worry for NZ supermarkets is having customers remove them from their car parks. The ‘Foodtown/Countdown supermarkets marketing manager says his chain loses about 200 trolleys annually, at a cost of around \$350 each. A Foodtown supermarket on Auckland’s North Shore and one in south Auckland are likely to be the first to test a new system whereby customers pay \$2 for a trolley and are refunded when they return it. New World, Pak ’n Save, Four Square, Woolworths and Big Fresh supermarkets said they were always reviewing trolley systems but at this stage had no plans for a bond.]

...‘A SUPERMARKET chain is looking at hi-tech locking devices in a bid to stop thieves taking its shopping trolleys. Foodstuffs, the operator of Pak’N’Save and New World, plans to trial a device that automatically locks the wheels of trolleys once they leave the supermarket carpark.’ By the way, ‘6000 new food products are offered to NZ supermarkets each year; 600 make it onto the shelf, but only six remain five years later’]...

Progressive Enterprises’ \$35 million outlay on information technology during the next three years is setting the scene for a showdown between chain stores and independent supermarkets. The owners of 74 Foodtown, Countdown and 3 Guys supermarkets, plus 16... Wholesale warehouses, believe the ambitious project will produce huge cost savings and advantages for the group and for customers... The grand aim is to gain control of the entire supply chain and manage delivery of goods according to “the demand experience” at each store. Bar code information from each sale in any of Progressive’s supermarkets will be piped to a central host, which then organises the raw data by product type and manufacturer. The process enables more accurate restocking of the stores because it is based on actual movements of goods. It should also mean less “out-of-stocks,” which are estimated to cost supermarkets between 5 and 10[%] a year in lost sales. The ultimate goal, however – not yet worked out in the Progressive scheme – is to open, possibly via the Internet, parts of the host system to manufacturers. They would be able to check in periodically to see when their shelf space was emptying and move to meet demand... [W]hile such a feedback loop would be unlikely to achieve a “sell one, make one” goal, it might, for example, enable two, rather than one, fresh bread deliveries to stores each day.

...[‘Cancer scare for Asian sauces The Health Ministry is testing oyster and soy sauces produced by Amoy and Lee Kum Kee after British authorities last month condemned their use claiming they contained the cancer-causing contaminant 3-MCPD. The contaminant is produced by a chemical reaction from a food flavouring in the sauces, hydrolysed vegetable protein. Amoy sauces are available from most Asian supermarkets and used in many Asian restaurants here. Lee Kum Kee products have been sold in NZ for more than 20 years and are widely distributed and available in supermarkets. Spokesmen for both brands said their products did contain 3-MCPD but the ingredient was not harmful. Products are not being removed from shelves and they are confident health authorities will rule the products hazard-free. Lee Kum Kee’s marketing manager said the company’s products had not been banned anywhere in the world but the company was working towards reducing the levels of 3-MCPD in some products to allay customer fears.’

...‘Cancer fear stalls anti-fat drug The anti-obesity medicine Xenical is available in Britain, Europe and NZ for prescription use but not the US because the all-powerful FDA is stalling its introduction there. In the meantime, should the 3500 or so NZ women taking Xenical be concerned at the FDA’s demand for more information? Certainly not, according to the manufacturer, which produced studies showing Xenical had not caused cancer in animals. Substances that cause cancer in humans invariably do so in rats and mice. As the FDA has already noticed, 12 older women taking mostly a higher dose of the active drug developed breast tumours, compared with three taking the placebo. (A placebo is used as a control in testing new drugs.) However, re-analysis showed, among other things, that 9 of the 12 tumours had been present in early stages before the women entered the Xenical trials. That left three breast cancer cases in the active drug group that had arisen during the trial, compared with two in the placebo group. But still the FDA was not happy. It issued Xenical a “letter of approvability” which means, according to an FDA spokeswoman: “That we need more information before a drug is finally approved for marketing.” Confidentiality rules prevent her revealing what information the FDA is waiting for. Although AUS’s regulator, the Therapeutic Goods Association (TGA), will not comment on pending drug applications, Xenical’s manufacturer has confirmed that the agency has also asked more questions. The TGA takes considerable notice of the FDA. Xenical’s manufacturer says it does not expect to know until mid-1999 if it can make Xenical available to AUSns.’

...‘unsubsidised drug Xenical rang-up \$882,057 of sales in its first full month in NZ. Now, 5000 seriously overweight NZers are paying about \$6 a day for their course’ – ‘the cheapest price in the world’. NZ is also ‘the only country allowed to advertise Xenical on TV, although the US is about to become the second’]...

AS IF IT WEREN’T ALREADY HARD ENOUGH to get Americans to eat less and exercise more, an advisory panel to the U.S. Food and Drug Administration last week gave the green light to yet another weight-loss shortcut, recommending approval of a new drug, called orlistat, that prevents the body from absorbing as much as 30% of the fat it takes in. The... diet-in-a-pill... marketed as Xenical, works by disabling pancreatic enzymes that help the intestines absorb the fat in foods. The drug produces “a kind of intestinal aversion” to fat, explains... an FDA adviser...

[from] Rockefeller University... “Patients learn there are consequences to eating more.” Consequences, indeed. Fat that isn’t absorbed has to go somewhere, and orlistat users find out in a hurry just where. Among the drug’s less elegant side effects are loose stools and oily intestinal leakage. Moreover, about 20% of those who take orlistat absorb not only less fat but also fewer nutrients – particularly vitamins D and E and beta carotene... Last year the FDA approved Redux, a drug that controls appetite by boosting levels of the neurotransmitter serotonin, producing a sort of chemically induced illusion of being full. A similar medication, sibutramine, is expected to be approved soon. Both... have side effects... including fatigue and insomnia. Doctors are quick to point out that the new diet pills are intended for only the truly obese. That caveat notwithstanding... [the diet pill manufacturing] companies... can be forgiven for feeling that they have hit the pharmaceutical jackpot. About 58 million Americans already spend \$30 billion annually battling the scale. Even if the new drug doesn’t slim waist-lines, it will surely fatten someone’s bottom line.

...Acknowledging the oversized has been profitable for some time. The U[S] now has at least half a dozen speciality magazines... Behind the burgeoning power of the “fat dollar” are lobby groups like the National Association for the Advancement of Fat Americans...

More than 100 overweight [NZers] a year... think they haven’t got a job because of their body size or weight... [then] tell the Human Rights Commission they are being discriminated against... However, [the HRC]... media officer... said it was not within the commission’s jurisdiction to deal with discrimination based on weight, unless it was caused by a medical condition. “Then it could possibly come under grounds of disability... If you define the person for the job as having the right skills and qualifications, it is easy to exclude the right person because of irrelevant characteristics such as weight, or for that matter race, sex, age.” The secretary of the Council of Trade Unions... said discrimination on the basis of appearance was not unusual, considering society’s “fixation with youth and beauty.” A labour relations officer for the Employers Association... said that such discrimination was not covered by legislation, but they would advise employers to act within the spirit of the law.

...WHEN [a NZer] announced she would run for the mayoralty of Lower Hutt her weight was the last thing on her mind despite a fleeting worry that the mayoral robes might not fit. However, it soon became clear that her size 24 figure was an issue to some. She was amazed when several supporters advised her to diet to improve her mayoral chances. Last week’s... revelation that ...o[ve]r... 100 overweight people a year complain they have missed out on a job because of their size was no surprise to her. While... she doesn’t dwell on such discrimination... [she] said it’s something she’s had to deal with for most of her life and she gets tired of it. A regional councillor, she... is annoyed at the assumption that fat people are unfit and lacking energy. She recalls one job interview where she was asked if she had had a medical, which she felt meant “are you about to have a heart attack?” Her doctor has assured her she has nothing to worry about... [She] said big is both beautiful and powerful, but adds that fear about potential discrimination in jobs, was probably responsible for her being a freelance journalist, for many years. [● ‘The Government is prepared to pay an invalid’s benefit to people who are too fat to work but won’t pay for operations such’ as ‘stomach stapling – which costs \$20,000 in NZ.’]

...A DOCTOR who performs controversial new surgery that effectively removes the patient’s stomach so that it becomes unable to hold more than a few mouthfuls of food has thousands of overweight Americans queuing at his surgery door... to spend more than \$75,000 for the operation.

...[‘a controversial North Shore liposuction doctor is free to practice without disciplinary conditions after his appeals outlasted a 3-year time limit for their being imposed. The conditions were set by the former medical practitioners’ disciplinary committee in 1994 after it found the Dr guilty of professional misconduct following complaints from patients. He was also ordered to pay fines and costs of over \$64,000. The Dr appealed unsuccessfully to the High Court and the Court of Appeal. He also appealed to the Medical Council, which upheld most of the committee’s findings and found a “serious level of professional misconduct.” It said the Dr failed in some cases to do any pre-operative assessment, didn’t adequately consult patients about the procedures and failed to ensure adequate post-operative care. The Dr appealed again last year but, 3 days before the hearing was due to begin, abandoned the action. Meanwhile, Auckland’s High Court was asked to reapply the conditions for another 3 years. But in a just-released decision, a judge said the Medical Council had the power to extend the time limit, and it’d be wrong for the court to rule on it now. The Dr said that a condition preventing him from calling himself a surgeon was garbage, and resulted from a campaign against him by plastic surgeons. His insurance would cover outstanding fines and costs.’]

...More than 90[%] of women, regardless of weight, suffer from the cottage cheese thigh affliction... In part, cellulite is caused by women’s hormones – which is why men don’t get it. The female sex hormone, oestrogen, encourages our bodies to store fat and tucks it out of the way of major organs; in other words, on the thighs. But cellulite cells are no ordinary fat cells. Not only do they lock excess toxins away but they also encase the unexpelled waste in fluid... then bind the whole slimy bubble together in hardened connective tissue. Regular exercise alone will not rid your body of cellulite. Some exercise can even make the problem worse. If you want to wash the toxic sludge from your thighs, tackle your lymphatic system. This is the body’s cleaning system and the presence of cellulite is a warning that it is not working properly, leaving you drained of energy and weakening your immune system. Adjusting your diet is the first step to cleaning out our lymphatics... [E]at plenty of fruit and vegetables... drink at least two litres of water a day and cut down on tea and coffee. As diuretics, these beverages pass through the system without your body being able to make use of their water content. And, at the same time, they deposit nasty substances into your fat cells. You also need to start brushing your skin. It sounds mad, but it really helps. Brushing provides an essential stimulus to the lymph system and helps it drain the cellular waste from tissues... The cosmetics industry is always trying to cash in on cellulite and constantly devises new tortures... [In one example, the affected area is] lathered with a thermoactive gel, wrapped in clingfilm, covered with a blanket and set to roast for half an hour... The eighties saw an explosion of interest in liposuction – an invasive and gruesome method which actually damages thighs – but Nineties women want a quick-fix answer. [■ Gaining weight can be due to an underactive thyroid gland – a condition that afflicts 20% of older women, and 1-in-12 under the age of 50.]

...‘The pills are tiny, but they are being touted as bigger than Viagra – and store-owners are bracing for a stampede from eager women when the product is released in NZ next month. Cellasene is promoted as a solution to a curse that has dogged women for centuries – cellulite (the dimply, cottage-cheese-textured deposits of fat that gather on the hips, thighs and buttocks of women past their 30s). The fat-busting herbal treatment has caused mayhem in AUS, where women stripped store shelves of the latest batch from Italy. The product boasts it can dissolve cellulite within weeks. 40 tablets cost \$64. The maker recommends an 8 week course “of 2 tablets a day”. However, some women have walked away with hundreds of boxes. The woman handling the NZ launch said: “We are anticipating a similar stampede in NZ. The Italian scientists claim a 78% success rate. We just hope we have stocks to meet demand.”’

...‘A US lingerie firm says it has devised pantyhose tights that can treat cellulite. Victoria’s Secret has filed a European patent. The tights are treated with theophylline acetate, which is bonded to the nylon using an organic polymer and then “doped” with silantriol, a silica-based compound. The application says the tights were worn by 12 volunteers for 30 days, and at the end of the tests, ultrasound showed their thighs were 2 to 5cm thinner.’ Meanwhile, ‘Cellasene arrived in US drugstores last week and got lots of TV news attention. The pills’ 15 minutes of fame provides a lesson in the power and perils of hype. During Cellasene’s US debut, its promoters emphasized that drugstores in AUS sold out a limited supply of the herbal remedy. Yet experts say there’s no solid evidence that it has any effect on cellulite. But its inventor says three studies resulted in 85% of patients showing significant reductions in cellulite.’

...‘The Italian inventor – who had the brainwave for an anti-cellulite formula while judging a Miss Italy contest (its exact ingredients are a “closely guarded secret”) – is visiting NZ to dispel some of the myths that have been written about Cellasene.’

...‘Women feel cellulite pill loss only in wallets Nearly 64% of women who took a pill that claims to get rid of cellulite actually ended up putting on weight, a British survey has found. Appetites soared when women took the herbal remedy Cellasene and only about a quarter saw any reduction in the “orange peel skin” on their bottoms and thighs. The findings are set to disappoint thousands of women who bought Cellasene when it went on sale here.

An Auckland University researcher and GP said: "Unfortunately, most people who buy this kind of miracle pill do so because they are tired of taking regular exercise. These products come in waves and don't hang around for long because people soon discover the manufacturers' claims don't stack up."

...a British slimming guru... told... 300 women... that her special diet was helping them to shed kilos. But she had rigged the scales. The women were really gaining weight, one gained 7kg. After a suspicious customer caught her out... [she] was fined £11,000... in a West Midlands court for knowingly making false statements... [Incidentally, people] taking two appetite-suppressing products could be risking heart problems and should stop taking the medication, the Ministry of Health said yesterday. Fenfluramine (sold as Ponderax) and dexfenfluramine (Adifax) had been withdrawn from the world market by their distributors... Several new case reports had confirmed a significant rise in the risk of heart-valve abnormalities in patients taking either... [drug] in combination with another diet medication called phentermine for more than six months... "These medications are indicated for short-term use only and it is thought that only a small number of patients in N[Z] have been prescribed these agents,"... said the Director-General of Health... The drugs are supposed to be used only by people who are clinically obese and never in combination, but the "fen-phen" diet fad has spread rapidly in the past few years.

... "Fad diets don't work" according to a booklet launched by the Nutrition Foundation yesterday. The booklet aims to get people off diet "treadmills" and promotes healthy lifestyles.

...Cases of malnutrition similar to those seen in [Last] World countries are occurring in N[Z] because of... diet-conscious parents. Researchers have dubbed the problem the muesli syndrome... In these cases, parents had fed their infants low-fat, high-fibre diets with low energy intakes, in "a misguided effort to prevent chronic disease." The parents did not realise that strategies like limiting fat intake by feeding skimmed milk, or not allowing children to eat snacks... were inappropriate for growing children... A Massey University human nutrition lecturer... said the lack of consensus on the right age to reduce dietary fat had added to the "confusion and paranoia" surrounding diet and health.

...The Government should be teaching parents how to care for their children, instead of[relying on] free doctors' visits, says a Lower Hutt GP... [who] often saw children suffering illnesses caused by poor nutrition. She believed the standard of children's health was falling dramatically... [C]hildren were eating more junk food and fast food than before, and too much sweet food. "There is a generation of younger mothers who have not seen their own mothers preparing foods at home or buying fresh fruit and vegetables. There are a lot of very poor nutritional habits out there, particularly among pre-schoolers and pre-adolescents."

...N[Z] children are getting plumper but are missing out on vital vitamins, iron and fibre... There is little hard evidence on child nutrition, but... observations were supported by a survey of 216 children aged between 6 and 8, which found that one in three ate virtually no fruit and vegetables, and one in five ate takeaways three times a week.

...N[Z] is sitting on a "time bomb" of obesity-related health problems, says the medical director of the National Heart Foundation... [The percentage] of Aucklanders found to be obese... [went from '8.2% in 1982 to 13.9% in 1994 for males and from 9.8% to 13.0% for females'. Because NZ] was relatively small, it was easier for it than other countries to start a national action plan.

...['NZers' hip-pockets could be hit as hard as their waistlines if policymakers swallow a "fat-tax" proposal from doctors. The GPs want a tax slapped on foods containing saturated fats, to reduce the country's high death rate from heart disease – one of the worst of Western countries. British research suggests that the scheme could save an estimated 50 lives a year here. In China, a 10% rise in the price of pork led to daily fat intake falling by 11% among the poor and 5% among the rich. The Health Minister, farmers and meat processors yesterday gave the idea, floated in the *Medical Journal*, a cool reception.'

... 'Despite official exhortations to eat less and exercise more, Britons are getting fatter and fatter. The Government's annual health survey shows Britons today weigh, on average, 4.1kg more than they did in 1980. The results will be a great disappointment to the pencil-slim Minister of Health. Only recently she declared that good progress was being made in improving the nation's diet. In fact, health officials accept that there is not the slenderest hope of meeting the target set in the *Health of the Nation* strategy document published in 1992 – which was to trim the nation's waistline back to what it was in 1980. In the past 15 years, the proportion of people in England and Wales who are overweight has risen by more than one-sixth, to 54% of men and 45% of women. The number of those who are dangerously fat has doubled: 13% of men and 16% of women are now regarded as obese. People who are obese are six times more likely to suffer from high blood pressure, diabetes, high cholesterol and heart disease, according to estimates by the WHO. Britain continues to have one of the highest rates of deaths due to heart disease in western Europe. Ministers say they are concerned, but they are no less anxious, one suspects, to avoid offending the manufacturers of processed food. A report on obesity by the Nutrition Task Force (a committee set up by the Government as part of its new health strategy) was initially suppressed by the Department of Health. The Nutrition Task Force has now been wound up. The real reason for its demise, according to the scientists who served on the task force, was the refusal of food manufacturers to co-operate. It asked 16 trade associations representing parts of the food industry to help identify ways of reducing the fat in their products. One replied with the information.'

... 'British magazine *Autocar* says authorities in Greece have decided that seriously obese people should not be issued driving licences. They say fat people's reflexes are slower, thus making them a danger to other motorists.'

... 'TWO THOUSAND airline passengers will be weighed before they fly as aviation officials crack down on safety concerns that some airlines were not taking account of heavier people. "It's a fundamental part of aviation. You need to know how much load you are carrying. You can't exceed design parameters," said a Civil Aviation Authority spokesman. Airlines theoretically apply a standard weight of 77kg to each person – a figure which originated from surveys 40 years ago. However, Air NZ already applies a standard weight of 82kg to each person, including cabin bags.'

... 'Overweight girls are more likely to experience social and economic problems in adulthood than their slimmer peers. A study of obesity in adolescents, published in the *New England Journal of Medicine*, found that overweight girls were less likely to get married, tended to live below the poverty line, have lower education levels and lower incomes in later life.'

... 'The girl from Ipanema is too fat, just like many of her Latin American neighbours. Delegates at the first Latin American Conference on Health Weight in Rio de Janeiro say rising income in developing nations such as Brazil is leading to poorer eating habits and increased obesity – although, ironically, prosperous Brazilians are generally leaner than the less affluent. The president of the Brazilian Association for the Study of Obesity said about 10% of Brazil's 165 million people were obese – 6% of the men and 13.3% of the women. The conference spokeswoman said obesity was a factor in about 200,000 deaths in Latin America every year.'

...Overweight people in Brazil's capital city will soon have the right to a bit more comfort in buses and theatres... A new law, scheduled to be ratified tomorrow, obliges theatres in Brasilia to earmark 3[%] of their seats for overweight people. Buses will have to have at least one seat that is twice the size of the one now in use... [In local news, a] South Island man has been sentenced to house arrest because he is too big to be sent to prison... [A]t 305kg (48 stone)... [the man] was so big he would not have fitted into prison clothing or a prison bed.

...['A 51-year-old Swedish woman has escaped a jail term for home brewing illegal alcohol because she is too fat. The woman and her husband were sentenced to 2 1/2 months each for making and selling moonshine from their flat in Norrland. But the woman argued in a court of appeal that she should not go to prison because her weight of 158kg meant she needed help with personal hygiene and dressing. The court agreed and instead fined her 15,000 crowns'.

... 'Heaviest man: In 1978, a US citizen weighed more than 635kg (100st). ■ 'In the late sixties, an American who weighed 590kg was considered the fattest man on Earth. After one failed attempt at losing weight, he tried to commit suicide by eating himself to death' – but also failed to achieve that!]

...A Californian woman who police say allowed her 309kg daughter to eat herself to death was charged yesterday with criminal child abuse. [The daughter] was 13 when she died last November... in her mother's apartment... A medical examiner determined the cause of death to be congestive

heart failure due to morbid obesity. Police say the girl's mother... did nothing to curb [her] weight since abandoning visits to a nutritionist when the girl was seven... [The mother] said she would plead no contest to the abuse charge, even though she insisted she did not intentionally harm her child. The charge carries a maximum penalty of six years in prison. [The mother] discovered that her daughter was not breathing when she returned from the supermarket on the afternoon of November 19. Firefighters responded to a 911 call but were unable to revive the child... Police were called after firefighters reported finding... bed sores on the girl's body. [She] was lying on a dirty... carpet in the living room. The 1.6m body was unclothed... One of her thighs had a circumference of 1.37m, as big as the waist of a very heavy man. One of her calves measured 1.2m. The floor was littered with discarded food and drink containers, books and videotapes, and human waste. Her mother and brother later told police that [the girl] basically lived on the living room floor in front of the television... Her brother said he had not seen his sister stand up for a couple of months. The girl's body would not fit on the coroner's stretcher, so two coroner's deputies – with the help of four firefighters – rolled the body on to a large canvas and dragged it into the coroner's wagon. [● In recent years 'America's child obesity rates have doubled' and, today, '55% of Americans are classified as being overweight' while 'one-in-four are obese. In Britain, it's one in seven.' 'People who weigh over 10 to 20% more than they should for their height, age, and body build are obese. Obesity is an imbalance of metabolism (body chemistry). It may be caused by overeating, by malfunction of body glands, or by breakdown of the body tissues.']

...Two youngsters have provided the first direct evidence of a genetic component to human obesity, sparking hope that drugs might be able to correct the genetic flaw in grossly overweight people, say British scientists. ['If you have one fat parent, your chances of being a fat adult are 40%, and 80% if you have two fat parents' but, until now, the only clues to a link between genes and fat came from mice, bred to be obese. The rodents had a genetic defect which prevented them from producing leptin, a substance which controls appetite and the ability to burn fat. Now, a team of researchers... [at] Addenbrooke's Hospital in Cambridge, has discovered a similar defect in the two children, who are cousins... The elder child, a girl aged 8, had a normal birth weight of 3.46kg but gained weight rapidly. Now, the 137cm-tall girl weighs 86kg and has 57[%] body fat (the normal range for children is 15 to 25[%]). The girl's obesity was so serious that she developed abnormalities in the growth of her legs and underwent liposuction in her lower limbs to help to improve her mobility. Her 2-year-old cousin also was born with normal weight but gained rapidly. The 89cm-tall youngster now weighs 29kg and has 54[%] body fat... The team reports in the journal *Nature Genetics* that... the children clearly show the importance of leptin in the control of the human energy balance, the way the body matches food intake and metabolism... Earlier studies of leptin had shown that the hormone acts in the brain to blunt appetite. Rats with high levels of leptin were found to eat about half the food of normal rats... [A doctor at] the University of Texas Southwestern Medical Centre at Dallas, said laboratory rats that were genetically altered to have high levels of leptin lost all the fat in their bodies within days... An artificial form of leptin was being tested as a weight-control drug in humans, he said... In the same issue of *Nature Genetics*, the researchers also report that they have identified another genetic defect which they claim is linked to human obesity. That defect is a mutation in the gene that tells the body to produce a hormone-processing substance called PCI, or prohormone convertase, which affects the processing of insulin and other hormones which have been linked to weight control.

...*New gene link to obesity*... Scientists have discovered a gene that might help people to shed kilograms in exchange for a slightly higher body temperature. The gene appears to make people... burn off more calories rather than storing them as fat... and it might explain why some people are prone to getting fat. The hope is that researchers could find a drug to make the gene work harder... A person might be able to lose 2.3kg a year with about five one-hundreds of a degree Celsius increase in body temperature, estimated [a] researcher... of the University of California. It would take further study to see how much of a temperature increase people could safely stand, he said... Scientists had not known how people's bodies regulated their weight, steering them toward a given weight despite dieting or bingeing, [the researcher] said... Researchers already knew of another gene that prompted energy theft, and drug companies were studying drugs to make it more active. But that gene, called UCP1, was active only in brown fat, which was sparse in adults. In contrast, the newfound gene UCP2 was at work in every human tissue [the researcher] had checked... Some people could be prone to getting fat because their UCP2 was not active enough.

...[existing] diet pills that make you lose your appetite so you eat less... can have some pretty nasty side effects, like lung disease and memory loss, so scientists are trying to come up with a new generation of diet pills... [that work by boosting] your metabolism so you would burn the calories... about 10% more efficiently, and that's how you lose the weight. Efforts by drug companies and universities to develop metabolism pills are under way but in the early stages. They're testing them on animals now so it could be another 5 or 10 years before they're available, and there are concerns... One challenge is how to raise metabolism without creating side effects, like making your heart-rate go up or making you shake. If the research comes through the pills would only be recommended for truly obese people and everyone, right now, without science, without research, can still boost their metabolism – it's called exercise. [■ 'A report released this year by Washington-based research group Worldwatch Institute said that for the first time the number of overweight people in the world matched the total of its underfed – about 1.1 billion.'

... 'More and more people in the world are dying prematurely of complications from being overweight and NZ is no exception. Recently the World Health Organisation made an announcement which, a few years ago, might have sounded ridiculous – that the world's No.1 health problem is no longer starvation'...

'*World hunger far from beaten* Hunger is in steady decline, due mainly to the success in combating it in Asia, but it remains widespread in Africa and persists in the US, where an estimated 30 million people, including 12 million children, cannot afford to buy enough food to maintain good health, according to the Bread for the World Institute in its fifth annual report. The president of the organisation said that in the US hunger was a problem that could be solved, "but because of a failure of political and moral will, solutions have not been implemented." Internationally, violence and warfare inevitably led to hunger, as evidenced by the conflict in Bosnia – where nearly 3 million people are at risk of hunger – Somalia and Rwanda, the report said. Although both their number and proportion have been steadily decreasing over the past 20 years, 70% of the world's hungry still live in Asia and the Pacific region'...

The FAO launched the first global telethon yesterday to appeal for cash to help make food for all a reality. The nine-hour event, dubbed "TeleFood" and beamed live to 60 countries, featured... pleas for aid from stars of sport and entertainment... The highlight of the event was a gala concert at the Vatican... "Having enough to eat is the most basic of human rights... The fight against hunger is not an issue of charity, it is an issue of justice..." [the] FAO director-general... said[while opening] the appeal... FAO is planning a second food appeal concert, to take place simultaneously at Rome's ancient Coliseum and in the centre of Havana...

[While] launching an overall appeal for \$US200 million... to finance worldwide relief programmes... [t]he global Red Cross organisation IFRC said food rations across North Korea have dropped to a level four times lower than is normally considered essential to maintain a healthy population. An IFRC official concerned with disaster response... said there was no indication yet of famine but reduction of the ration to 100g a day would weaken resistance to disease throughout the country. "This... is quite a dramatic figure in a country where people are totally reliant on the public distribution system for their food,"... The new level had been set by the North Korean Government... earlier this month.

...A North Korean fisherman compelled by hunger crept into South Korea at the weekend across the heavily armed demilitarised zone dividing the two Koreas[crawling past]... guard posts and border barriers in a dramatic four-hour defection... The... South's Yonhap News Agency... said... that his first statement was about the dire food situation in North Korea... The last defection by land came on February 27, when a barefoot 25-year-old woman crossed the... zone... [also] complaining of hunger.

...[‘North Korean defectors find life in the South is not all it’s cracked up to be and they want something done about it’ The 37-year-old doctor of oriental medicine smiles at the memory of his arrival at Seoul’s Kimpoo International Airport after defecting from North Korea. “Our minders told us to wave and look happy for the big crowd,” he recalls. It seemed a dream start to his new life in the freedom-loving South. Those dreams were shattered when they left the airport. “The agents accompanying us suddenly turned brutal.” He says he was taken to a building and ordered to strip for a physical exam during which his minders joked about the size of his genitals. Worse was to come. “They forced me to kneel, and said, ‘You are human rubbish. You betrayed your own country.’ I could hear screams all around me. My fellow defectors were being tortured. It was like a slaughterhouse.” Nearly five years later, he finds himself in the same sorry predicament as many North Koreans in the free-wheeling capitalist South. Some defectors get so depressed they try to re-defect back home. He would never return to the North, but his high hopes for life in South Korea have not been met. Though dazed by the glitz, many defectors are too embittered by their brutal introduction to democracy to enjoy it. Also, they have trouble adjusting to a more superficial, money-based society, and cannot find jobs (unemployment is about 60% among the 950 defectors living in the South, according to human rights groups). They are tempted by the lure of money, but nonetheless find South Korea’s highly commercialised society crass and its people lacking warmth. “South Koreans aren’t genuine. They smile at you but that doesn’t reflect their true feelings. If you don’t have money you’re nothing. In North Korea everyone is poor, so money isn’t so important.” The defectors say they were promised much by South Korea’s propaganda machine, which floated balloons over North Korea packed with messages from happy defectors and promises of houses, 50 million won rewards, cars and good jobs. The balloons, laden with cigarettes, soaps, pantyhose and even photos of semi-naked women, are rigged to explode in mid-air, sending to the ground a shower of propaganda. “But it wasn’t true. South Korea is sending over false incentives.” The doctor is fighting back. From his modest unit on Seoul’s outskirts, he is masterminding a headline-grabbing court case against the South’s notorious National Intelligence Service, accusing it of needless savagery in its pursuit of spies. While the defectors acknowledge the need for vigilance against spies, they question the methods used. Unlike their homeland, there is justice in South Korea and they intend to win it. “In North Korea they would have killed us or beaten us like dogs. But we fight for our rights now because we have freedom. South Koreans have total freedom. We want it too.”]

...South Korean Army troops and police were on alert yesterday in and around Seoul after a top-level defector was shot and left brain-dead by suspected North Korean agents... Police also tightened security around key Government facilities nationwide, saying “this is a sensitive security situation.” In the South Korean capital... [t]he Government called an urgent meeting of top security officials to discuss the shooting of... a 37-year-old nephew of [the] North Korean leader[’s]... ex-wife... He defected to the South in 1982... Police said the gunmen had escaped and that the shooting was in apparent retaliation for the defection of the North’s top ideologue[(r:p172, ln10)]...

Famine has killed more than a ‘million people in North Korea, says the highest-ranked official to defect from the Stalinist state. The North’s former chief ideologue and architect of its *juche* (self-reliance) philosophy, spoke to the French daily *Le Monde* in South Korea, where he now lives after defecting through Beijing in February. The total, based partly on the Communist Party central committee’s own figures, estimated that 500,000 people died in 1995, plus about a million in 1996’]

Watching a people’s hunger being played against political ambitions is particularly distressing. And that seems to be what is happening with North Korea... So, are North Korea’s straitened conditions not being taken seriously? Or, in some quarters, is it payback time for a 44-year-old war? Just how serious is it in the North? Early last month, World Food Programme officials reported that recent inspections had found the potential for starvation “on a massive scale.” The North Korean Government told aid agencies that 134 children had died of malnutrition... However, more detailed reports are emerging from another quarter. A Los Angeles Times Service report from Tumen in far north-eastern China records the evidence of Chinese visitors returning from North Korea horrified by what they have seen, describing effects of starvation far more harrowing than western aid workers have been allowed to observe. And a Korean visitor, calling the Government’s admission of 134 children dead a “total lie,” told of passing corpses of children dead in the streets... She said North Koreans believed at least 100,000 people had died since 1995 of malnutrition, cold and lack of medicine. From Dandong, at the other end of the Chinese border with North Korea, the Washington Post Service reported that Chinese truck drivers delivering food and other aid across the Yalu River had seen dead children and people so weak they could not plant crops. The difference between this border and that in the south is that ordinary people from outside the North, many with relatives on the other side, can move back and forth, getting a far clearer impression of North Korea’s disintegration. Beyond the effect of the famine, they report factories left idle by a lack of raw materials, fuel and equipment, collapsing agriculture collectives, corruption and political disillusionment.

...A EUROPEAN diplomat has warned of an explosive situation in North Korea, blaming the Stalinist government for mass starvation... There was a “crying need for help for the elderly, and many hospitals had been forced to close as healthcare workers focused on their own survival...,” said... the European Commission’s top envoy to Seoul... On Friday, the European Union said it was sending 155,000 tonnes of food worth \$77.63 million to North Korea. The U[S] is sending \$36.48m of aid and South Korea has pledged \$16m. The European Union on Thursday agreed to join an international consortium working to dismantle North Korea’s nuclear weapons programme by supplying the country with relatively safe nuclear reactors and interim fuel supplies.

...The... executive director of the... W[F]P... said the... agency has become increasingly alarmed in recent weeks at the food shortages, caused by two years of flooding that ruined farmland in the country of 23 million people. The damage was particularly severe because trees had been cleared for firewood and agriculture... The... Pyongyang representative of the I[FRC], said last month that... [more] than 5 million North Koreans were near starvation[, including an estimated]... 800,000 children under five years of age, or 37[%] of that age group.

...The[NZ] Government is giving \$200,000 to North Korea for flood relief. The Associate Foreign Minister... said yesterday the floods had left half a million people homeless and destroyed 400,000ha of cropland.

...NORTH KOREA, battered by two years of devastating floods, has been hit by the worst heatwave in 92 years, wiping out crops and driving the Stalinist state closer to starvation.

...Famine-ravaged North Korea has missed out on 20,000 tonnes of wheat from N[Z] because the industry has no idea where the crop is stored. Poor information systems in the industry have been blamed for the collapse of a deal organised by the W[FP]. The chairman of Federated Farmers’ grain section... said the price offered would have been equivalent to that for a fair international purchase. It also would have helped N[Z] wheat growers by cutting the surplus of poor-quality grain on the market, which had contributed to falling market price... It was not possible for the federation to step in and organise the wheat shipment itself and another exporter could not be found who would carry the risk of the necessary quantity of wheat being made available for sale... Meanwhile, Japan yesterday resumed food aid... after a 15-month halt, announcing \$US27 million... worth of humanitarian aid...

Famine-stricken North Korea has just exported more than 1000 tonnes of corn to Japan, customs officials said... The Japanese Government was investigating the case even though it was a transaction between private firms... The Japanese newspaper *Sankei Shimbun* said a poultry farmer in Yokohama... ordered the grain as chicken feed... The daily said it was the first such export of unprocessed live-stock feed from North Korea since 1988... Japanese officials said they were surprised at how North Korea was able to export grain when it was receiving food aid from international organisations and various countries... On Tuesday the U[S] pledged an additional \$US27 million in food aid... bringing to \$US52 million its contribution for the year... Washington has sent more than \$US115 million in food and economic aid... since... an October 1994 framework agreement with North Korea... Under the \$US4.5 billion... deal, Washington promised the state two light-water reactors if Pyongyang would freeze and ultimately dismantle its nuclear programme.

...The Senate... unanimously voted to halt additional... economic aid... if the country again violated its armistice agreement with South Korea... North Korea on Wednesday fired artillery shells at a Southern guard post in one of the worst border clashes in recent years... “We should be outraged at North Korea’s continued belligerent actions that are clearly designed to intimidate,”... a... [senator] said. “If the North Koreans want economic assistance from the U[S] they are going to have to learn that their troops and their munitions ought to stay on their side of the border.”

...THE soldier found a grip on the limp infant’s tattered red T-shirt and carried him at arm’s length. The boy’s arms and legs dangled and swung in a carefree rhythm known only to the dead or dying. With a jerk of his arm, the soldier flipped the tiny body into the undergrowth by the side of the rusted tracks before turning away. A group of people stood nearby, listless and blank-eyed, hardly seeming to notice. As the train pulled away from the station towards sacred Mt Myohyang the group receded... In the twilight world of famine, emotion for others is a luxury. Who can spare a tear for a nameless child? ...But this is unlike any famine seen in the world... “The difference is that when we saw famine in Ethiopia and Somalia it tended to be just in pockets. We believe hunger in North Korea is spread evenly across the whole rural population,” says[the] president of the Canadian branch of the Christian relief agency World Vision... In the southern city of Kaesong... only 20[%] of the children in the local nursery were of normal height and weight for their age. All had scabies. A nutritionist from World Vision visited five of 12 provincial children’s centres and assessed... children under six. He found 85[%] had some form of malnourishment, 30[%] of whom were severe cases... International aid now provides survival care for all children under seven... But these are the photogenic sufferers, whose pinched young faces can tease dollars out of western pockets... IN Pyongyang, families receive only 350g of corn and rice a person a day, far short of the average intake of 800g relief agencies say an adult needs each day. Outside the capital, farmers are receiving just 100g a day. But even that is not guaranteed. Civil servants mutter they have to hoard scraps because some days they receive nothing. Others take to the streets to barter what few possessions they have... hoping to swap their pathetic treasures for corn or rice. The food shortages began in 1995, triggered by heavy flooding, which recurred the following year, mocking the nationwide mobilisation in the fields for which North Korea is notorious. This year it is drought, which has prevailed throughout the growing season for corn, the country’s summer crop. Last week the fields were turned an emerald green by a burst of rain. But... [the] rain came too late... the stunted plants, just 90cm or so high instead of the usual 1.8m, will yield at most a fifth of their expected bounty... There is likely to be shortfall of more than 700,000 tonnes of food grain, according to the... W[FP]. All eyes – and prayers, if they are uttered in this atheist nation – are now focused on the rice crop, due for harvesting in October before the onset of the country’s bitter five-month winter, in which nothing grows. Yet even if the rice yield is miraculously good, the problem lies with harvesting, storing and distributing it. Many railway locomotives stand rusting for lack of spare parts, trucks of the Cold War era lie abandoned by the side of the road, and in the empty warehouses the antique machines are silent, abandoned by workers too weak to tend them... “[80%] of the industry is sitting idle and the remaining 20[%] is very simple and very basic.” ...[the] economy itself is breaking down, burdened by the Stalinist system; by the end of support from China and the Soviet Union which gave some two million tonnes of subsidised food each year during the Cold War; and by the lack of currency to buy essentials abroad... Against this backdrop of need, North Korea has embarked on a game of diplomatic poker with... the U[S]... and... South Korea... with whom it remains at war despite the end of the Korean War 44 years ago... It called for a... withdrawal of the 37,000 U[S] troops stationed in... the Korean peninsula and for the South to provide food aid even before... peace negotiations proper could begin. Pyongyang has some strong cards in its hand. Even as the famine bites, it is clearly able to look after the party’s elite and the Army, the only forces that matter in North Korea.[Indeed, the North Korean leader is reported to have said that he ‘didn’t care if 70% of the population died because he believed 30% was enough to win the war.’ Luckily for him, many North Korean people say they ‘don’t mind dying for the war against capitalism’!] The sole trucks on the road belong to the military, and the only private cars – second-hand models imported from Japan – are driven by party cadres and men in uniform. At the... creche... reserved for off-spring of the party elite, the children looked healthy and well-fed and were smartly clothed. They performed rituals for visitors to celebrate the birth[s of their] “Great Leader”... “Dear Leader”... and the mother of the “Great Leader” before performing to a ditty, “Let’s Be Strong Children for the Country.” The source of the money to keep the top people happy is something of a mystery. There are suspicions of skulduggery, involving heroin production and export of top-quality counterfeit dollar bills. A western banker in Pyongyang says he can never admit the true amount of cash deposited by Government departments in his office safe... [However, that] very day, he said, an official deposited \$US500,000... in bills with his investment house. Despite the North’s slide into suffering, there seems no risk of insurrection. The population is quiescent and seems to have faith in the party... “The level of expectation is not high. These people have trust and confidence in the leadership. They think they just need two years of normal weather and this will be OK, but it’s not true. What you see right now is an unravelling of the whole system,”... The pain will worsen but, unlike previous famine alerts around, the world’s patience with North Korea is already short. There is little goodwill towards a repressive regime that has been a trouble-maker for decades... North Koreans need a permit to move out of their home district and police have set up roadblocks on roads leading out of each town and city, preventing the public from fleeing stricken areas... North Korea’s paranoia means it will not open the country up to scrutiny, a vital component of longer-term aid, which requires monitoring to ensure that food and medicines are fairly distributed... Some analysts predict the aid will dry up after the winter, possibly prompting the beleaguered regime to attack the South in a last desperate throw of the dice. That scenario is ruled out by... a Hong Kong-based expert on North Korea, who says the North’s generals know their ancient warplanes and tanks would be annihilated by South Korea and its U[S] ally. “...There is almost certainly going to be a palace coup behind the scenes and somebody or other will take charge,” he said, sounding an optimistic note for an end to Korea’s five decades of division. “They may well be able to sell unification with the South in a particular way, if it is being shown that the rest of the world is being bountiful and giving in to the North Korean people.”

...Despite the country’s Orwellian tinge, the people, including our “guides,” were remarkably friendly and, in a Korean sort of way, remarkably helpful... The International Friendship Exhibition at Mount Myohang is North Korea’s Disneyland: a 120-room fantasy world of friendship and cooperation between the Hermit Kingdom and some of the nastiest regimes in recent history. In this cavernous hall, dug out of the bowels of a sacred mountain and lined with ferro-concrete, the 61,000 gifts to the Great and Dear Leaders from dictators and sympathisers around the world are on show. It is a sublime display of Cold War kitsch... Here is a model bronze tank from the Soviet forces in East Germany, bearing the date of June 10, 1953, just a week before those same troops crushed a workers’ uprising in East Berlin. There, a tableau of Tower Bridge, its arms raised, of course, in salute to the two [leaders], from Stalinist admirers in Britain. And over there, a stuffed crocodile given by Nicaragua’s Sandinistas. The reptile is perched on its hind legs, while its forelimbs clutch a tray with wooden cocktail goblets: the perfect party ice-breaker. In the middle of the air-conditioned cavern is a life-size statue of [the Great Leader] himself... a present... from China... All visitors must bow solemnly to the wax effigy... and they are required to write up their thoughts in a commemorative book afterwards. This strange building freezes time in the 1950s, [the Great Leader’s] halcyon years, when the world was an uncomplex place full of promise... The future was a propaganda poster – a permanent golden dawn of chubby babies, rosy-cheeked girls and happy peasants hauling in the cornucopia. The future has now arrived...

60 days without rain... [cost North Korea almost 70%], or 1.5 million tonnes... of maize on which it had been relying to feed its starving people.

...Desperate North Koreans are tearing their devastated maize crop from the fields and digging trenches around rice paddies to prevent that crop from being destroyed by late summer rains, a Red Cross representative said yesterday... South Korea will provide... North Korea with additional aid worth \$US10 million... through the U[N] to help food shortages.

...It is known as the Black Hole: the forbidden mountain region of North Korea’s far north-east where, human rights experts say, the regime hides its brutal slave labour camps... where an estimated 150,000 political prisoners are held... Now a worse tragedy is unfolding as the Black Hole

takes the brunt of the famine gripping North Korea... The first outsiders to pass through the Black Hole returned last week with stories of a region barely hanging on to life: whole villages surviving on a diet of straw, grass and weeds; deprived of even the minuscule rice ration handed out to more fortunate provinces. The unheated hospitals are almost deserted. Without food and drugs they cannot function, so the starving stay at home. Elsewhere, families are afraid to bury their dead, fearful their neighbours will exhume the corpses to supplement their diet.

...Starving North Koreans are turning to cannibalism to survive and authorities... have executed people for selling human flesh... [the] *South China Morning Post* yesterday quoted a North Korean military officer who fled across the China-North Korea border with his family... "People are going insane with hunger. They even kill and eat their own infants. This kind of thing is happening in many places,"... Another ethnic Korean who frequently visits North Korea on business was also quoted by the newspaper as saying she had heard that a woman was executed in August for murdering 18 children in the western port of Hamhung.

...A typhoon-fuelled tidal wave... struck North Korea's western coast early on August 21, destroying an estimated 700,000 tonnes of corn and leaving 28,000 people homeless, said... the I[FRC]... A combination of high tides and the effects of Typhoon Winnie, which lashed eastern China the same night, appeared to have caused the tidal wave, which washed over and smashed the sea dykes designed for coastal protection. Around 20 counties had been affected... Early warnings had meant there were few immediate casualties from the tidal wave, which submerged fields in salt water, killed large numbers of livestock and washed away the kitchen gardens on which many North Koreans depend. As soon as the waters receded, authorities ordered the military to lead relief efforts.

...[the US] has told North Korea that it will not attend another round of preparatory peace talks unless Pyongyang drops demands for food aid and negotiations on the withdrawal of American troops from South Korea... Tensions are running so high on the Korean peninsula that war could break out "at any moment" the North Korean vice foreign minister said yesterday.

...North Korea has told the U[S] and South Korea it will respond next week to a proposal for peace talks amid expectations that ...famine will push it to accept the offer... But in a reminder that tension still runs high on the world's last Cold War flashpoint, a top North Korean Army official said that military buildups by South Korea and the U[S] had pushed the Korean peninsula to the "brink of war." ...North Korea has frequently issued similar warnings in the past and defence officials in Seoul said there have been no extraordinary military movements on either side. The U[S] has 37,000 troops in South Korea and... [the] US Defence Secretary... who arrived in Seoul yesterday... caused a stir this week when he said they would remain in Korea indefinitely even if the two Koreas made peace and united[– although it appears that unification isn't on the South Korean Government's agenda (last year, 'South Korean police detained about 700 radical students over illegal protests calling for reunification'; 'the world's most educated and brazen rioters claimed that while they just wanted unification their Government just wants the destruction of North Korea'). The US Defence Secretary] repeated Washington's fears that the food crisis could prompt North Korea's 1.1 million-strong military to revolt against its Government or strike out against the South in a last desperate Cold War gambit.

...North Korea has banned contraception and is encouraging women, even those over 45, to give birth in order to maintain its huge army, [Seoul] newspapers yesterday quoted a North Korean defector as saying... A South Korean Defence White Paper issued this month said North Korea's troop strength had increased 9[%] to 1,147,000 over the past year despite... widespread food shortages.

...[a] US congressman... said he saw soldiers... [in] North Korea... whose uniforms hung off their bodies, showing that even the military is not immune from the hell of severe famine... North Korea... will need more than one million metric tons of food aid in the coming year, according to the U[N because a]... series of natural disasters... [meant crops] grown this year will provide only enough food for seven months.

...The U[S] said yesterday it hoped [the Dear Leader's] election as general secretary of North Korea's ruling party would spur Korean peninsula peace talks... although one title he has had from the beginning is supreme commander of the armed forces... [The] son of North Korea's founding father, "Great Leader"... has run the Stalinist state without the formal trappings of power since his father's death in July 1994... [He] was elected... on Wednesday, completing the communist world's first dynastic succession... [His] investiture means the North has an official leader for the first time since massive food shortages began... What sort of ruler he will be... is a mystery... [He] was groomed by his late father... A propaganda barrage from North Korea's ever-loyal media over the last several weeks has depicted him as a... "Wild Bill" Hickok... The Korea Central News Agency reported that... [he] showed Army officers recently how to shoot pistols with both hands... Over the past year, he has promoted 120 younger officers to the position of general, replacing an older cadre with ones thought to be more loyal to him... His sensitive side is portrayed by the operas and poetry he has written, and from an early age he showed a bent towards scientific inquiry. "When he was a child, he found out why chickens raise their bills when they drink water and why there is no black flower," KCNA said. If North Korea's had any doubt that [his] time had come, the auspicious blooming of apricot, cherry and pear trees and other "mysterious phenomena" this autumn proved he had received "heaven's mandate" to lead the country, state media said... To the outside world, [he] has a reputation as an unstable playboy who ordered several violent attacks on South Korean targets.

...North Korea is undergoing long-awaited political change and cannot expect to resume total state control once famine abates, a U[N] official said yesterday... Aid workers, once mistrusted by the authorities, are now given wider access to one of the world's most closed societies and allowed entry in greater numbers, reflecting a growing openness... Political change was evidently afoot and state control over daily life had already diminished... [as] the authorities were turning a blind eye to the new survival tactics of the people... Bartering was now allowed in a nation that once deemed free markets to be invidious. [The UN official] said police chose not to notice when North Koreans, who need permission to travel, opted to hop on trains in pursuit of food or aid.

...A North Korean diplomat and his wife have been arrested for allegedly trying to smuggle into Nepal 100kg of gold with a market value of 62.3 million rupees (\$[NZ]1.86 million).

...N[Z] is helping to upgrade North Korean border controls as the crumbling communist stronghold prepares to embrace world trade. A Wellington-based senior customs training officer... will spend the next month in... Pyongyang, helping[local] customs officials to set up a free economic and trade zone in the north-eastern province of Rajin-Sonbong... [The officer] was looking forward to working with his North Korean counterparts... [He] will be accompanied during his visit by a "national expert" who will act as an interpreter, although the training will be in English... "It's a first for N[Z] Customs and probably for N[Z] as well. It will be a good learning experience[," he said]... Part of the assignment will include looking at possible opportunities for N[Z] business in the region... The visit follows a request by the World Customs Organisation and the U[N] Industrial Development Organisation for N[Z] specialists to help reform North Korean customs work... The posting is seen... as an indication of this country's growing reputation as a world leader in border management. N[Z] customs staff have been requested by several countries seeking to upgrade their customs procedures. They include China, which has expressed interest in a bilateral training programme... [Incidentally, a] North Korean think-tank head visiting N[Z] this week says he has never seen the body of anyone in his country who has died of hunger. The... acting director of the Institute for Disarmament and Peace in Pyongyang, easily reels off statistics about the damage done to the maize and rice harvests... But when asked about the human cost he says that he "cannot be quite accurate about exact numbers"... Technically [the acting director] is not a North Korean representative, but those behind his trip say his Institute... is "closely associated" with the Government. The visit... [by the acting director] and two of his colleagues... was arranged by the Centre for Strategic Studies in Wellington. It is an example of what is known in the trade as "track two" diplomacy, contact between academics and others outside government which can help to build bridges between countries with awkward (or in the case of N[Z] and North Korea, non-existent) official relations... Only once before, some six years ago, has there been similar

contact, when a Jakarta-based diplomat came here on an unofficial visit... [The acting director said] that the peninsula remained prone to renewed war at any time, and that only demilitarisation including the removal of American forces from the South could reduce the tension. He called for reunification of the two Koreas, pointing out that since neither the North or the South was willing to give up its own system in favour of the other, two systems would have to be preserved within the one state. Discussion at... a seminar organised by the [Centre for Strategic Studies] became focused on these ideas and somehow the central question was left to one side: can North Korea survive at all given its anachronistic political system, its isolation and its crippling economic woes? Afterwards, [the acting director] answered the missing question firmly. He said the North Korean people strongly believed in the socialist system they had chosen for themselves, and were united around their leader. "For this reason it is our clear conviction and confidence that our system will never collapse." Observers outside North Korea are less certain of this... But some acknowledge the Korean capacity to endure suffering and concede that the present regime might limp on indefinitely.

...[The great majority of Kiwi Koreans love this country and are doing their best to settle into the NZ lifestyle. But we know that no matter how much we integrate, a part of each of us is forever Korean and the troubles in our homeland produce a constant and insistent tug that we cannot escape. But if the history of Korea presents any lesson, it is that we are a proud nation and have overcome huge hurdles. Until recently, Korea was occupied territory. Japan annexed its neighbour in 1910 and for the next 36 years, dubbed the "Years of Hell," the country was a conquered nation, subservient to Japanese masters, its people forbidden to speak their language or practise their culture. The Japanese surrender brought only a brief respite before the country was divided again by grander powers.]

...[Korea had been part of the Japanese Empire for 35 years but liberation from Japanese rule in 1945 didn't bring the better life Koreans were hoping for. The country had been split into two – a communist regime in the North and an American-backed Government in the South. An isolated agricultural people, they lacked Japan's industrial inheritance and trained manpower. Then in 1950 they were swept into a civil war between North and South. While the Japanese had made money from their neighbour's war the Koreans suffered on a massive scale. 3 million were killed. As fighting raged up and down the peninsula, millions more became refugees. At the end of the war the two sides were left almost precisely where they began and much of the country had been destroyed. After the war, South Korea was one of the poorest countries in the world and the prospects for South Koreans looked worse than ever. They still faced a threat from the North and were propped up by American aid. Business and politics were corrupt, and the country lurched from crisis to crisis. In 1961 a group of military officers seized power in a coup led by General Park Chung Hee. Korea's new dictator promised a period of tough authoritarian rule which would strengthen the country against the North and restore national pride. The Black Market was closed down, profiteers and corrupt businessmen arrested, and smuggled foreign goods seized and burnt. From now on the national priority was to be high-speed economic development on the Japanese model with General Park giving the orders. But South Koreans were about to be thrown into changes far more rapid and convulsive than anything Japan had lived through. Park took close control of a series of big projects designed to give South Korea the base for a modern economy. Even more than in Japan the Government told businessmen what kind of factories were to be built and where. The pride of the new Korea was to be a huge steel works. A workforce of tens of thousands was commanded by a former general with a can do military approach. If the workmanship fell below standard he had it blown up. As part of reparations for her colonial rule Japan supplied much of the money and machinery, and sent technicians. "The Japanese were impressed. They were surprised that we could get things done so much faster (although we worked so fast that accidents were frequent) and shorten the work period. They said that we Koreans had the human qualities to create a miracle." In one leap the Koreans had gone from making no steel at all to having one of the most modern plants anywhere with a huge capacity. They used their steel to start a new ship-building industry to challenge Japan's and then to make their own cars. New schools were opened. President Park's leadership became a cult and his reforms were put through with ruthless efficiency. Koreans were exhorted to go on making sacrifices while huge sums were invested in industry for the future. Wages were kept down. Free trade unions couldn't operate. In thousands of noisy, ill-ventilated sweat-shops Korean workers toiled long hours a day making shoes, textiles or wigs for export. Park's political opponents were imprisoned and sometimes killed. He was widely hated and survived several assassination attempts. Park was finally killed by his own security chief in 1979. Though another general took over it was increasingly hard to maintain the same dictatorial grip with which the miracle had begun. Industrial workers mounted strikes, demanding huge pay rises. Students fought with police. The continuing violation of human rights brought condemnation of the South Korean Government from abroad. In 1987 military rule ended and free elections were granted. In the late 1980s South Korean workers finally got a bigger share of the nation's new wealth in their own pockets. Wages began to catch up with European levels. Real earnings doubled over 10 years. 99% of households had a television, over 50% now had washing machines. From being one of the poorest countries in the world, South Korea had now risen to be the 18th largest economy. It would go on climbing to take 12th place by 1996. The South Koreans knew the high price that had been paid for their success but their own achievements still amazed them. "It was a 180° change, from one extreme to another. I don't think there's a country in the world that has gone through such an extraordinary development in such a short time." But there was no monopoly on miracles. Others had started to experience the same explosive growth and rapid social change. They were called the Tiger Economies. The Asians themselves began to boast of Asian values. They claimed their growing success was due to discipline and hard work, their schools and strong authoritarian control.]

...[An 'article entitled "A time to reflect on human rights laws" created for me, a deep sense of foreboding, not least because the author is chief commissioner of the Human Rights Commission. It is the width of her brush, sweeping all before her, that causes me my deepest concern. Her boat carries contraband of badly stowed packages of anti-discriminatory legislation. The old tightly packaged and well-tried universal human rights of conscience, of religion, of free speech, rights of association and rights over one's own person and property have been left behind on the wharf. The commissioner wants a world in which we are all equal, and all equally free to choose from the same smorgasbord of options. She wants to create a world where all this is possible and she wants to use anti-discriminatory legislation to do it. However, a society that puts equality – in the sense of equality of outcome – ahead of freedom will end up with neither equality nor freedom. The use of force to achieve equality will destroy freedom, and the force, introduced for good purposes, will end up in the hands of people who use it to promote their own interests. Freedom is a natural result of people knowing and being able to do what they should do. It is a commonplace now in NZ in some circles to say that our legal system worries too much about rights and not enough about responsibilities. That is probably true and is good as far as it goes. But the problem is not that we are getting too many rights, without responsibilities, although we probably are, but that we are starting to have the wrong kind. The commissioner wants to use human rights legislation to actually change our perception of the good life. Socialists call it "social justice" and an American economist gives it an even better name, "cosmic justice." The capacity to contribute to production includes everybody and wealth will be distributed by means of human rights legislation. The commissioner has, it seems, discovered the socialist utopia at last. By a simple act of legislation along with its enforcing agent, the Human Rights Commission, we have a society in which human difference disappears. When the commissioner says that we must have "human right principles which accord to every human the same rights, privileges and access to resources, which underpin our economic development or it will not be sustainable," she raises choice to an absolute in a politicised conflation. And in doing so she passes over to the state that power which was once vested in human rights for our protection. For most of our history rights were concerned with the protection of the citizen from the power of the state. We used to talk about rights, morals, virtue and obligation together because they sustained an agreed and consistent social ethic. Today they do not always fit. Rights used not to trump common law standards. Rights ensured that there was something that the Government could not take away from you or could not make you do. The focus was on a limiting of Government power not increasing it. It is arrogant to assume that there is some kind of State-sponsored universal formula to solve every cultural injustice. On the one hand the commissioner demands cosmic justice and yet we also have, deep-seated in NZ society, the recognition of human autonomy sustained by the belief in the absolute of choice. The quest for cosmic justice is not about changing the minds and hearts of individuals so that we might learn to live peacefully with each other. It is about control. It is about making us do what we are told'. By the way,] yesterday... Amnesty International... issued its 35th annual

worldwide report on human rights which says serious violations were committed in Indonesia and Papua New Guinea during 1996[, while]... Burma saw the worst year for human rights since 1990... with 2000 protesters arrested and members of the opposition attacked by mobs apparently encouraged by the Government. Journalists had been attacked and abducted in India, Pakistan and Cambodia[(‘each year about 55 photo-journalists lose their lives trying to tell a story’)]... Taking as its main theme the global refugee crisis, the report accused the international community of failing to provide solutions for massive human rights violations by refusing to protect the millions of refugees who had been forced to flee their native countries. It criticised A[US]n, European and North American policies of automatic detention of asylum-seekers who arrive without permission to enter... It also criticises A[US] for the high number of Aboriginal deaths in custody... Amnesty noted that although Aborigines made up [2% of AUS]’s population, they accounted for more than 20[%] of all deaths in custody during 1996... China came under attack for a number of different reasons...

A tit-for-tat war of words over human rights between the U[S] and China continued this week with the Chinese accusing the Americans of turning a blind eye to their own problems while distorting the facts about China... In a lengthy riposte... Beijing described the U[S] as a land of guns, terrorist bomb attacks and racial discrimination. China’s angry attack... also said American-style political democracy was a game of the rich and faulted the U[S] Constitution for providing inadequate guarantees... The U[S] replied by declaring itself the world’s human rights “champion” and said it did not appreciate being lectured by “authoritarian regimes” that were “major rights violators.” The comments came from [a]State Department spokesman... [who] suggested “the best way to understand... is that we have millions of people who want to come and live here [while]... in most authoritarian countries around the world, you don’t have millions of people trying to get in. You probably have millions of people trying to get out.” [He] acknowledged that the U[S] is “an imperfect country. We do have our own problems... We have racial problems. We have problems of crime and terrorism.” But he said “we are very open about it”... The public Chinese defence comes as the U[S] and Europe are planning to co-sponsor a resolution criticising China’s record at the UN Human Rights Commission meeting that begins in Geneva later this month.

...[the US] President... and Chinese President... yesterday wrapped up a day of tough words and billion-dollar deals by reaffirming their commitment to dialogue and mutual respect between their countries[, thereby completing ‘the first summit in Washington between the US and China’]... since the 1989 Tiananmen Square crackdown... “We have begun to plan together for a future not of problems but of progress, for America, for China, for the world,” [the US President] said at a state dinner in the White House. [The Chinese President], in response... said China and the U[S] shared broad common interests and a weighty responsibility for “the future of the world.” The lavish dinner climaxed a day which included agreement on a lucrative nuclear cooperation deal... “This agreement is a win, win, win. It serves America’s national security, environmental and economic interests,” [the US President said. However, the presidents agreed]... to disagree over... human rights... [The Chinese President] did not appear to be irked by repeated raising of the human rights issue but he repeated the party line that different countries have different values. About Tiananmen... he said the Government “had to take necessary measures according to law to ensure that our country enjoys stability and that our reform and opening up could proceed smoothly.” [In reply, the US President]... said “fundamental differences over human rights and religious freedom” should not interfere with cooperation in other areas, like combating crime and protecting the environment. The U[S] recognises that on so many issues China is on the right side of history, and we welcome that, but on this[human rights] issue we believe the policy of the[Chinese] Government is on the wrong side of history.” ...[In local news, civil] libertarians say people’s basic human rights are threatened after a city council took the law into its own hands and widened police powers. The Minister of Justice... also says he is uneasy about a local body bestowing powers on police which are normally granted by Parliament... Auckland City Council passed an amendment giving police the right to demand the name and address of anyone suspected of breaching a bylaw. People refusing to comply risk arrest... Civil libertarians, local authority leaders and law academics have condemned the move... and questioned its legality. With other councils already saying they would consider adopting similar moves to control rowdy teenagers, skateboarders and glue sniffers, those opposed to the decision believed such an ad hoc extension of police powers could see innocent citizens stopped, questioned and arrested... [The minister] said that if police needed the powers they should approach the Government. “Powers to hold or detain people or inquire personal information about people are better dealt with by Parliament, not local bodies. I would be concerned if bylaws were as invasive as that.” ...An Auckland University constitutional law expert... said that under present law a person walking down the street did not have to give his or her name and address to a police officer just because they were asked. The police were not employed by councils to enforce local bylaws and it was unlikely that the move was legal. The police said it would be used only in specific situations... [and] people who believed police would abuse their extra powers “need to keep their feet on the ground. We are overwhelmed with work now, we don’t have the luxury or the time or the inclination to go off and wander down the road of the bylaws to see what powers we can use to tidy up the city.”

...a... Civil Liberties lawyer... is aghast at the [Auckland City C]ouncil’s action. “N[Z] is a free country,” he says, “in which no one is obliged to supply their names and addresses to anyone, even the police.” There are only a handful of exceptions. Anyone in a car flagged down on a road must give his or her name and address and details regarding ownership of the vehicle, under the Transport Act of 1962. A passenger may also be required to give any information they have regarding the identity of the driver. Those found drinking liquor in licensed premises after hours must provide police with their name and address and the same applies to drinkers suspected of being under-age. Suspected trespassers must provide their name and address under section 9 of the Trespass Act of 1980. And inspectors and rangers covered by the Reserves Act of 1977, the Fisheries Act of 1983 and the Historic Places Act of 1980, who carry appropriate identification, can also demand the name and address of people they suspect are committing an offence against those Acts. Refusal in all these cases, may be a punishable offence. [In international news, ‘local authorities seeking to boost their budgets resulted in Turkey counting at least 3.65 million non-existent people for the last census, said the Chief Statistician.’]

...Statistics New Zealand says 1.2[%] of the population, or 43,000 people were not counted on census night last year. This compared favourably with censuses in other countries[– ‘the last US census missed an estimated 4 million people’ –] said the Acting Government Statistician... Statistics NZ interviewed a random sample of 25,000 people in its first such survey. It estimated the under-count for the Maori population was 2.9[%]...

In last year’s census 523,374 people ticked Maori when asked their ethnic group, an increase of 20.4[%] on the... figure five years earlier. Maori now make up 14.5[%] of the population... The number who... had Maori ancestry – but did not identify with Maori as an ethnic group – dropped by 24.6[%]. A member[... of the Waipareira Trust, said it was “not cool and sexy to be a native” in the 1970s but... a “cultural renaissance”... m[ean]t more Maori were now embracing their roots. He rejected suggestions that they only wanted a slice of the Treaty of Waitangi settlement money.

...[three] members of a... group working for Maori self-determination... who refused to fill out last year’s census form are... facing prosecution by Statistics N[Z]. They... had ignored the census in protest against the racist wording of some questions... Group members had taken their concerns to the Race Relations Office, the Human Rights Commission and the Ombudsman... About 2000 N[Z]ers failed to fill census forms... but only 42 were being prosecuted... [because not] all could be identified... Five people had already been fined between \$50 and \$200 and six more had since agreed to fill out the census form... Fines could go as high as \$500.

...An Auckland radio broadcaster who gave Statistics N[Z] a “Sieg Heil Award” on air has been fined \$350 for dodging last year’s census... [The] leader of the Libertarianz Party, said he copped a fine after refusing to answer census questions for philosophical reasons. “It’s outrageous that someone from the Government can come around and demand information from you. It’s not like they’re asking nicely for it, it’s more like ‘give it or else.’ Those things happen in totalitarian states,” he said. Despite 30-odd Libertarianz members refusing to complete forms and one furnishing

“obvious absurdities,” [the broadcaster] said that he alone was prosecuted... But a veteran anti-census campaigner who took to the skies in a hot air balloon on census night was yesterday boasting of beating the bureaucrats. The McGillicuddy Serious Party leader and Laird of Hamilton... said the cut-off date for bringing a prosecution had passed and he was “off Scot-free. It’s really heart-warming to see that... you can still beat the state clobbering machine at its own game.”

...[“TO HELL with privacy,” the man announced to his startled colleagues, brandishing a document he had just picked up from his local Post Office. For months he had been pursuing several thousand dollars worth of debt through the small claims tribunal. The tribunal agreed he was owed the money but the debtor consistently failed to pay up. So, exercising his rights, our man called in the bailiff. But first he needed to be sure the car he had seen his debtor driving was indeed his and could be legally seized. Armed with nothing more than a car registration number and \$2.25, he went to the Post Office, accessed the registration files and found the name and address, satisfied his right to be paid was more important than his debtor’s right to privacy. Set that against the case of the woman who was stalked by a man who similarly got her name and address from the same database, and you have the tension between privacy and public interest. Privacy may have been declared by American scriptwriters to be “*the human rights issue of the next century,*” but we have only enjoyed private lives in the short time between urbanisation and the rise of the electronic media. In the cave and the village everyone knew everyone’s business.]

...*‘A Weekend Herald investigation shows how easy it is to uncover confidential information about ordinary people* The right to a private life is one of our most treasured freedoms. We believe that if you are not breaking the law or interfering with others, you are at liberty to run your life as you please – it is nobody else’s business. We even have an official body to protect that privacy. But there is an increasing fear that in the age of information technology those rights are being taken away from us. Details of your private life are being collected, kept and made available in more ways than ever before. Details about you that you wouldn’t dream of telling your neighbours may be held by at least 20 Government departments or agencies. You may also appear on 43 public registers. Some of that information is for sale and is passed on to commercial agencies. But that’s just the start. While central Government builds up its databases so do your local council and big businesses who buy personal information and collect huge amounts of details themselves. The *Weekend Herald* investigation was mounted to test the limits of privacy; we concluded they could be very limited indeed. With her permission, our reporters followed one NZer’s trail through databases and private files, through phone books and official records. In just a few days we discovered hundreds of details, covering pages of notes, about one remarkable, ordinary woman. We found things she did not know herself. Public officials gave us information that should have been kept private. We found people who quoted the Privacy Act then gossiped. We encountered some Government agencies and private companies that never bothered to check us when we asked for information. The ACC gave out some details of her medical conditions, the University of Otago sent us her academic record, Inland Revenue gave details of her tax. Video stores faxed records of what she had viewed, her gym confirmed her membership and gave her home address. We found her e-mail and discovered how to open it. We didn’t find everything about our volunteer. Some databases remained secure. On the whole, her bank records eluded us. But we found enough to shock the woman. “You expect there to be public information about you. But I was shocked the way people just gave out information – almost gossip – over the phone. There were times I thought ‘My God, how could they give out that?’” But people did. And they could do the same about you.

...AS YOU read this, information about you and your property garnered from a Government list is for sale for 30c on an AUSn website. Soon your tax records and benefit information could be available to foreign governments, beginning with the Dutch. And you will be tracked down through official records to make sure you do not escape from the electoral role. All of this is perfectly legal. Make no mistake: if Big Brother exists, he lives in Wellington. The biggest collection of personal information about NZers is controlled within a few square kilometres of the Beehive. Through numerous laws, and for many sound reasons, Government bureaucrats are empowered to demand, retain and pass on information about you, where you live and what you do. Some of the information is even for sale in bulk: two state-owned businesses make money by selling details of your private life to commercial companies. Departments maintain strict policies about data control to ensure it should not fall into the wrong hands, but senior officials admit that a “probability” of confidential information being misused exists. At least one major investigation into the corrupt selling of client details by employees of a Government department is under way. When it comes to selling data, though, the odd unscrupulous civil servant slipping names to rogue debt collectors is small-fry. Infinitely more information about you changes hands through legal transactions. The crown-owned company Quotable Value (QV) is able to sell the national property database information – details about property owners, previous owners, purchase price and valuation – because it is a public register and therefore publicly available. With 42 other registers available to the public through the Government and local councils the Privacy Commissioner has campaigned for access to be tightened. He wants the bulk release of public registers banned. Debate flared three years ago when the Office of the Ombudsmen ruled that QV’s predecessor, Valuation NZ, had to comply with an Official Information Act request from an AUSn direct-marketing firm. Laws controlling each of the public registers specify the extent to which they should be available.’ ● ‘ODDLY enough the only way to speak to someone at the Office of the Privacy Commissioner is to leave a message on the office answer phone – not particularly private is it?’]

...Police officers should take their names off public electoral rolls to stop violent criminals tracking them down, says the Police Association... “Criminals and their associates have in the past used the rolls to find out where police are living... With the increase in violent behaviour by criminals the association believes enrolling on the unpublished roll is a sensible option.” Applicants for the unpublished roll have to satisfy the Registrar of Electors that their safety could be prejudiced by the publication of names, addresses and occupations. Officers who want their families off the public roll would have to make a separate application for each member... [In related news, a]n Auckland company has set up shop to delve into the[NZ Police’s] Wanganui Computer for details on the... background of job-seekers. The company, Hire-Rite, has started touting for business to act as employers’ agents in checking the criminal records of people chasing jobs... as well as vet references, previous employment and provide a full credit history. Employers must provide the company with a request form signed by the job applicant authorising the release of personal information. The form also discharges Hire-Rite from any claims or liabilities arising from the release of the information... But employers who use the service are on shaky legal ground, say employment experts. The Auckland District Law Society... spokesman on employment... said employers or Hire-Rite could face legal action under the Privacy Act over the way they seek permission to obtain the Wanganui Computer information... Because employers could threaten applicants by withholding a job if they did not sign the release form, it could be argued that consent was being gained under duress... The law on the issue was a grey area and would remain so until tested in court, he said. A Department for Courts spokeswoman... said insurance companies, individuals and some employers applied for Wanganui Computer information[(during the ‘past 4 years, inquiries to the database have jumped from 13,000 to 36,500’)]. Any individual or authorised third party can apply free of charge but... companies have no private access... Neither the Human Rights Commission nor the Privacy Commissioner... would comment on the development. However, it is understood they are likely to receive a complaint about the practice and cannot be seen to hold a view before investigating a grievance.

...Privacy complaints[in NZ] are being held up for about eight months before investigation, and any further delays could eventually discredit the complaints resolution system, says the Privacy Commissioner... The delay was causing considerable dissatisfaction to complainants and respondent agencies... The delay created difficulties in investigation, extra administrative costs in managing the queue, and deprived some complainants of effective use of the Privacy Act... The office received 1200 new complaints in the 12 months to June 30, in addition to 604 still pending at the start of that period. But fewer than half of the complaints – 870 – were resolved during the period... [The commissioner] warned that if the office’s resources were not increased to match the rise in the number of complaints, he would consider declining more complaints... Apart from dealing with formal complaints, [the commissioner’s] office employed three staff who handled an average of 753 written and telephone inquiries a month. He said there were 43,000 hits on the office’s website during the 12 months.

...[the man's] problems started so innocuously – his wallet was stolen. The contents: \$4 and a couple of pieces of ID. He reported the theft to police and thought nothing more of it. But soon after he was laid off from his temporary sales job and found himself virtually unemployable. Despite... an exemplary work record, he was turned away from every job he applied for over the next four years. He heard a litany of excuses over that time but, as it turns out, he was told everything but the truth. The real reason was that the thief who stole [his] wallet in May 1990 later used the stolen ID when he was arrested for other crimes so that, in effect, [the wallet's owner] got the rap. Not only did [he] wrongfully end up with a criminal record, but the black mark spread like wildfire across the background investigation databases that employers use to check out potential employees. Now, despite his receiving a letter clearing him of any crimes from the Los Angeles Police Department (a letter police say he will have to carry with him indefinitely), [his] name continues to turn up as a convicted felon on background investigation databases around the country. His case illustrates the growing threat to privacy posed by background databases. Sensitive personal information (genuine or false) is sold over the Internet to anyone who wants[it]. The databases use increasingly sophisticated software to pull together scattered pieces of information allowing ever-more-detailed personal profiles... Several privacy bills have recently been introduced in Congress to attack the problem. Last June, the Federal Trade Commission held hearings into data collection business and the industry, hoping to avoid regulation, pledged to set guidelines to police itself. The guidelines would leave many databases off-limits to all but specified users including insurance agents, private eyes, bill collectors and journalists. But they would not carry the weight of law and companies could simply choose to defy them.

...A requirement in [NZ's] Companies Act 1993 that companies publish details of executives earning more than \$100,000 is detrimental to individual privacy, says [the] Privacy Commissioner... Section 221 says every company annual report must state the number of employees or former employees, not company directors, who received remuneration and other benefits in excess of \$100,000 for that year... In a report released yesterday, [the commissioner] said he believed section 211 of the act ought to be repealed or amended to better preserve privacy. Many [NZ]ers wished to keep their income private... But the honorary secretary of the Commonwealth Press Union... defended section 221... "I disagree totally with what [the commissioner] is saying. As an investor, I invest money in these companies and I place trust in those executives to look after my money effectively... I think it's sensible, I think it's reasonable to know what they are being paid to do that." [He] said that section 221 worked, in that media reporting of executive salaries had linked pay packages to company performance.

...He lives in the city. He is between 20 and 40 years old. He earns above the average wage – \$702 a week before tax. And he is the person most likely to owe a fine to the Department of Courts, given that 60[%] of the non-payers who owe \$158 million of outstanding penalties fit this profile. Now district court registrars want access to his bank account. If the Summary Proceedings Amendment Bill (No 3) is passed into law, the department will have the power to instruct banks to deduct unpaid fines directly from the offender's account. They will also have the power to attach court orders to property titles of people owing more than \$10,000 in fines and take the money from the proceeds of any sale. Already courts can instruct employers to deduct unpaid fines from the offender's salary... But... [the] new bill... includes safeguards so that court registrars will not be cold-heartedly snatching food from the mouths of starving children whose parents owe fines. Instead they will have the power to investigate an individual's financial situation to ensure the fine deductions do not rob them of life's necessities. Obviously this level of state intrusion into people's pay packets and bank accounts, and looking into where their money goes each week, raises privacy and civil liberty issues... The... Privacy Commissioner... had not seen the bill in its final form and declined to comment... One group guaranteed to have its say when the select committee calls for submissions is the Bankers Association. [The association's executive] director... said he[also] had not seen the bill so could not comment on its detail. But he counted 28 pieces of existing legislation allowing banks to divulge a customer's affairs to a third party. The majority of those allow statutory recovery of money from the account holder. He has noticed the list growing over the past decade, especially with the liable parent legislation and student loan scheme. In general he said banks were happy to fulfil their good corporate citizen role and assist the Crown to recover fines. But he wanted to know who would pay the estimated \$60 an hour it will cost to run the programmes necessary to comply with the court registrar's demands for money from individual accounts. If the Government didn't pay, bank customers would. The other problem was if the courts provided inaccurate information, leading the bank to debit the wrong customer. Then... the bank took the flak.

...[an] Auckland lawyer... is in hot water for taping telephone calls from the former partner of a client without her knowledge... so "her exact words and inflections" could be reproduced in full... The Privacy Commissioner... has written to [the lawyer] telling him he breached the woman's privacy... He said it was acceptable for professionals to take notes of conversations, but tape recordings were "significantly more intrusive"[, while adding that]... there were occasions when it would be desirable to have an incontrovertible record of what was said in a conversation, but... that could still be achieved with a prior warning... However, [the lawyer disagrees with the commissioner's] interpretation of the Privacy Act and the matter has been referred to the Human Rights Commission for possible legal action before the Complaints Review Tribunal... [H]e did not "collect" the information as defined under the act because the complainant initiated the contact with two unsolicited telephone calls in July 1996. He said the woman offered to withdraw a telephone harassment complaint against her former partner if he agreed to pay her a lump sum related to previous charges against him. She rang five days later seeking a response and was told that the accused had declined her offer. The woman complained to the Privacy Commissioner after [the lawyer] mentioned the tapes in court. The... [lawyer] said the Law Society's rules of professional conduct stated only that lawyers should not tape other lawyers without obtaining their specific consent. News gathering organisations are exempt from the principles of the act.

...TELEPHONE conversations between companies and customers are increasingly being recorded with [NZ's] largest health insurer recently joining the surveillance trend. Southern Cross[s] general manager... said the company had been recording conversations since October last year "for customer security"... Southern Cross had advised customers of the new recording policy in newsletters and other correspondence and he... was confident the recordings were secure. "We have very strict protocols as to what it can be used for... We use it purely to verify what was said in the instance of a disagreement..." ...He said there had been no response from the public about the recordings but staff had welcomed it... [The] Insurance Council chief executive... said he did not know how many insurance companies were recording phone calls but he believed it was widespread, particularly among firms selling policies over the phone... [T]he council was working on a code of practice on phone recordings, to be released as part of the Fair Insurance Code to companies later this year... Major banking institutions said last week they were not recording calls with individual customers, but many recorded conversations with large money dealers... [The] Privacy Commissioner... has noted a rise in verbal complaints to the commission's helpline over the recording of phone calls. He said a protocol on the practice was still months away but there seemed to be a need to warn more firms of risks in recording customers' conversations without informing them thoroughly beforehand. "I would certainly advocate a policy of openness. Sooner or later they will be found out."

...Harrod's, London's famous department store, secretly bugged unions and staff under orders from its chairman... The *Observer* newspaper has obtained access to hundreds of confidential tapes which are evidence of the store's... use of covert recordings against employees. Scores of individuals were targeted over at least six years because the chairman questioned their loyalty or actions. They include former senior directors, a solicitor, sales staff and secretaries as well as an existing executive... Conversations with customers, lawyers, family and partners were all intercepted and noted by Harrods security staff. The tapes even include conversations between the store and members of the royal household... Many tapes contain intimate conversations which were transcribed by the store's security staff and relayed to their superiors. Information gleaned from the tapes sometimes led to sackings or redundancies... Civil liberties campaigners are calling the taping a gross infringement of privacy. The revelations are certain to embarrass the Harrod's chairman, who is anxious to obtain British citizenship. The extent of the eavesdropping has been

revealed by the store's former director of security... a former major in the Royal Military Police, who left the store last year. [The former director of security] says that all bugging had to be first approved by the chairman. "...If anything of a sexual nature came up, he would ask me to play the tape to him." ...the unions were taped regularly and offices were searched at night by security staff. "I was once confronted by the union convenor and asked if their phones were being tapped. I lied and told him we didn't have the time or expertise to carry out such an operation." ...former employees who confirmed the bugging was done without their knowledge... expressed outrage that Harrods listened to their personal calls... In Britain it is legal for employers to bug their own phones, but it is frowned upon in Europe. [By the way, last year NZ's police department was 'given huge licence to secretly tape conversations while gathering evidence following Court of Appeal decisions. The rulings gave clear directions on how far the police can go in secret taping. The decisions also indicated the right to remain silent to police is not absolute. An Auckland University lecturer in evidence and criminal procedure who studied the judgments said the Court of Appeal ruled police use of a friend to tape a suspect or an accused person did not constitute a search or seizure. Earlier Court of Appeal rulings said under the Bill of Rights, the term "search" could encompass a violation of an individual's "reasonable expectation of privacy," the lecturer said. The decision removed any judicial check on police using "participant electronic monitoring" – secret taping using a friend or associate as bait. In Canada, police must apply for a search warrant to use this method of gathering evidence. On the right to remain silent the lecturer said the argument was the secret taping was a de facto interrogation by the police – "could they do through the back door what they couldn't do through the front door?" "My own belief is that the police should not be able to do this – once someone has been arrested and wanted to remain silent, this right should be respected." The sole dissenting Court of Appeal judge had said: "By putting questions to a man who had clearly indicated to the police his wish to exercise his right to silence and by having police questions put by the man's friend without disclosing that he was acting as a police agent, they were denying his right to silence. The action of the police elicited statements which would not otherwise have been made."]

... 'A law change to allow the bugging of all prisoners' phone calls will be sought next year in a bid to stop crimes being organised from behind bars. The Corrections Minister, who at the weekend visited AUSn prisons using telephone tapping technology, said criminals here were making a joke of the justice system by continuing their activities from prison. "Inmates are organising bank robberies, ordering drugs, arranging death contracts and leading gangs through misuse of the phone system," he said from Melbourne yesterday. This year four dangerous inmates used Auckland Prison's phone system to organise their escape. Prisoners are issued with a phone card that allows them to dial a maximum of 10 approved numbers. Some have been beating the system, however, by using telephone technology to get friends and family to divert their calls to other numbers. The High Court can give police the power to listen into phone conversations if there is evidence that crimes are being planned. But continuous tapping of inmates' conversations breaches the Bill of Rights, which the minister plans to change with legislation. "The irony is that removing prison phones does not breach any laws, but tapping inmates' phone calls does," he said. Importing the AUSn technology – which has prevented "hundreds of serious crimes being committed" in AUS – would see recordings kept of all prisoners' calls for six months and allow authorities to get a printout of what phone numbers had been dialled. Phone privileges would be cancelled if calls were being made for a criminal purpose. The only calls that would not be monitored would be those to the prison inspectorate, the Ombudsmen's office, or lawyers. The lawyer who heads the Howard League for Penal Reform said the minister was promoting "draconian, Big Brother" laws.]

...Beware: Big Brother is watching... and listening, and reading, and following. Fuelling the fears of paranoid people, a secret squirrel yesterday shattered any illusions that we lead private lives. Phone bugs, thumb nail-sized cameras... combined with... infrared lighting... and computer hackers are an everyday reality for every one of us, [the]Professor... told the Privacy Issues Forum in Auckland. That digital cellphone conversation you think cannot be intercepted? Bad news. "The code's been cracked." ...Carrying a cellphone was a simple way of ensuring that you could be tracked. Every few minutes, the phone sends out a pulse indicating where it is. "Those movements are being recorded and a history of those movements can be made available to whoever is willing to pay as well as law enforcement." ...Okay, but we can rely on the Internet for private chit-chat, can't we? Wrong. "It's like sending a postcard." ...Be careful with nasty notes, written and then deleted from a computer. They can easily be obtained in back-up systems... Espionage of this type was usually motivated by commercial reasons, he said. But no one was safe. "Anyone can be bugged. It does happen here in N[Z]... Moreover, it is virtually impossible to detect certain bugging devices."

...Anonymity will soon be a thing of the past, as advancing technology plants people's electronic fingerprints everywhere they go. Privacy watchdogs say people are less able to go about their business without divulging personal information. And as phone systems and business transactions embrace technology, people's privacy is increasingly eroded... Coin phones... allowed someone to make a call without leaving any traces on the phone system. But these were being overtaken by calling cards and credit-card phones... The Privacy Commission, in its review of the Privacy Act... said... "The calling card leaves a data trail through the telephone company, whereas the credit-card call also leaves a trail through the financial system. While there is presently a choice of anonymity, at some future point this option might be dropped." The commission's paper asked whether the act needed adjusting to protect the right of people to conduct their business in secret... Guardians of civil liberties have been reported as saying that the day is not far off when virtually everything we do is scrutinised and recorded by various corporations and agencies.

...The boom in wireless communications has led to a corresponding boom in wireless snooping. The community of listeners – as people who use scanning equipment to eavesdrop on various wireless devices call themselves – is startlingly large... [(up) to 20 million [in the US alone)]... Whether all their activities are ethical or even legal is highly questionable. To be sure, most scanners are harmless hobbyists hooked on the drama of raw, radio-transmitted reality; some anonymous guy who happens to like listening to plumbers and electricians, for instance, surely poses little threat to the community. Then there are the true fanatics... [who spend] hours a day monitoring police, private security and rescue squads... And a lot of folks want to... At any rate, the burden of protecting privacy... lies with [the victims]. "Is everybody entitled to a reasonable expectation of privacy?" asks... [the] publisher of the scanner journal *Monitoring Times*... "Absolutely." But that right, he says, doesn't extend to those who haven't bothered to get scrambling equipment... [Incidentally, t]he Privacy Commissioner... wants to shine more light on the shadowy secrets of the spy world. The cloak-and-dagger brigade, which enjoys statutory exemption under the Privacy Act, is under pressure to conform with codes guarding people's privacy. Watchdogs want the exemptions written into the act peeled back, forcing the Security Intelligence Service and the Government Communications Security Bureau to follow regulatory control of who they spy on and what they do with the information... Spies have only limited obligations under the act. They must give people the right to access and correct personal information... "The commissioner has... suggested that the need is made more urgent by the recent expansion of the mandate of the SIS into new areas concerning the security of N[Z]'s economic wellbeing."

...To combat theft, a bar-owner installed a hidden security camera and caught a bartender taking food without paying for it and leaving the till open between transactions. Both actions broke the bar's rules and the bartender was sacked. The ex-employee took a case to the Employment Tribunal and won a small sum of money. Another blow against employers fighting dishonesty in the workplace? As it turns out, no. According to [an]employment lawyer... in a review of the case, the Employment Court considered that the employee was entirely at fault and the employer would have won an appeal. However, the case raises the issue of the tense relationship between the increasing incidence of video surveillance and the privacy regulations. There is no law covering video surveillance. But certain principles apply, notably that of the trust inherent between employer and employee, human rights, and privacy... [H]ere are some guidelines to light the way through what looks very much like a legal minefield: • ...Employees should be told about surveillance cameras. • Covert surveillance is allowable when the employer suspects unlawful behaviour but should limit the range of cameras to the suspected area. Cameras in washrooms and toilets would almost certainly contravene these principles. • Employees should be allowed to see the tapes when they are made.

...[“THE next time you think about slipping out for an extra long lunch, watch out. You might be busted on the job. American-made *Busted on the Job 3* which screens on television tonight, features three Kiwi businesses where dishonest staff have been caught on camera. Wellington’s Morley Security & Investigation Group supplied the footage after it was approached by an American film company. “More and more companies are approaching us to install cameras so that they can detect dishonesty,” said MSIG’s managing director. “We put cameras as small as Biro tips in for a few days at a time and leave our clients to catch their staff in the act.” The Privacy Act restricts investigation companies to setting up cameras for a limited time. The director said some wires were left so the cameras could be installed again should the need arise. “In one place a company suspected a staff member who started work at 3 o’clock. By 3.20, he had his hand in the till. That’s all it took. On another tape, we caught a group of security guards playing video games for an hour when they were meant to be walking around. In a service station we caught a staff member stealing cigarettes. Then his wife came in and helped herself to a few packets, too, before she started picking her nose.” The director said *Busted on the Job 3* did not identify where the clips were filmed so it was up to viewers to pick those filmed in NZ. “I’m hoping to get my own NZ version under way shortly.”

...“TWO men were evicted from a flat after a mini surveillance video camera used to spy on their female flatmates was found hidden in a bathroom. The camera was found in a wall heater of the Christchurch flat last month, after one of the women complained the heater wasn’t working properly. Police were informed by the real estate company looking after the flat on behalf of the owner but the two women decided not to take the matter further. A security expert said the incident was part of a growing trend of hi-tech surveillance equipment abuse worrying the security industry. The problem lay in the availability of cheaper camera equipment, making it attractive for people who wanted to use it for “unprofessional” purposes, he said. However, little could be done to stop the sale of surveillance equipment to unscrupulous people. The only way was to regulate so it could be sold only to licensed security people.”]

...No one noticed [the voyeur] wandering with his video camera around shopping malls, boat shows and race meetings. Passers-by could not have known that a wire to his hand-held camera was letting him take video footage spying up the skirts... of women and girls. [The voyeur], aged 36, scanned the images into his computer and traded them around the world by e-mail, Internet and VHS tape, the Otahuhu District Court heard yesterday. In seized e-mails, he boasted he was the “numero uno hidden cam jockey in N[Z]” and had filmed under the skirts of between 2000 and 4000 girls and women, mostly since 1995. A conviction that year for offensive behaviour after he was nabbed filming did not discourage the Hamilton free-lance writer. He was caught in October last year when Internal Affairs busted an international Internet ring trading “objectionable material” and traced [the voyeur] under the nickname “New Zealand Overdrive.” ...On his Web site... he describes himself as of slim build, blue eyes, clean shaven, and tells surfers of his love of the Internet, his dislike of sport, drugs, drink and coffee. On the personal front he says he is considerate, affectionate, hates violence and knows how to “treat a lady the way she deserves.” ...On his home page he says... “I am incontrovertibly heterosexual,” and “variety is without a doubt the spice of a good sex life.” He invites surfers to view 40 “Famous Cam Girls... Some are really hot stuff while others are plain show-offs,” he says... In February a search of his business premises in Napier netted hundreds of files on his computer, 8mm film, magazines and VHS videos, including not only what he called his “up-skirt footage” but bestiality, urination, defecation, torture, snuff movies, autopsy footage and sex with children. [The voyeur], wearing thick glasses and dressed in a grey suit, pink shirt and pink tie, yesterday pleaded guilty to nine charges under the Films, Videos and Publications Classification Act 1993. He was remanded in custody for a month for sentencing and will be examined by a psychiatrist. The court heard how he perfected his covert operation by trailing a wire from his “shu-cam” up his trouser leg and along his sleeve to a video camera. The hand-held camera allowed him to blend into crowds, power the pin hole camera and view the footage as he recorded it... At one stage he varied his technique by sewing his pin hole camera into a bath mat at a youth hostel and hiding it in his female flatmate’s bedroom. A summary of facts read to the court... said that [the voyeur] launched his operation using an 8mm video camera hidden in a hand-held bag with the straps fully extended. The camera was at ground-level and angled upwards. “However, this method was found by the defendant to be less than ideal because he was not able to tell if his victims were wearing underwear.”

...The “highlights” were edited on to VHS video and sent to a friend in Florida, where it was combined with other footage and sold internationally for \$US49 per tape. Of the intended run of 200 tapes, 92 had been sold by March this year... [The judge has remanded the voyeur] in custody to “take the safe course.” There was little sentencing history of this type of offending in N[Z], he said. It carried only a \$20,000 fine or one year in prison... Prison authorities have been asked to provide protection for the self-described voyeur... from other inmates while on remand.

...A judge has recommended that... a voyeur diagnosed as a sexual deviant, be denied access to computers or cameras when he is paroled from prison... [The voyeur]’s 20-year-history as a sexual offender was discovered in October last year after Internal Affairs monitored an Internet chat line on which he was trading his “shucam” pictures. But yesterday... the... Judge... said that this offending paled into insignificance compared with the downloading of pictures from the Internet of women “who were clearly being tortured and/or killed.” She sentenced [the voyeur] to 21 months in prison... She also fined him \$7000, with court costs of \$570. The judge recommended he receive psychiatric help while in prison...

AFTER nine months of pleading for more patient privacy at Timaru Hospital’s psychiatric unit, the Mental Health Commission has finally got its foot in the door. The commission, whose brief includes reducing discrimination against psychiatric patients, urged Health South Canterbury to install a door on the unit’s public phone booth following concerns staff were listening in on conversations... “It may sound trivial but this is an example of people not listening to what patients want.”

...A Gisborne woman says her mentally ill daughter is living close to death on Hamilton streets because of civil liberty laws. The 32-year-old... profoundly deaf... and disabled woman, who has bipolar disorder (manic depressive), refuses to take her medication... [but has] an 18-year history of violent and abusive behaviour... The... daughter had been arrested in Gisborne on vagrancy charges this year, after leaving home and sleeping in toilet blocks. She was sent to Tokanui psychiatric hospital for assessment. Despite the hospital recommendation that she be kept there, she was freed by a judge... Her despairing mother said she had tried in vain to get mental health services to help, but was told her daughter had freedom of choice under the Bill of Rights and the Privacy Act. “The law is an ass when it protects people who are past making a rational choice for themselves,” the mother said... The Bill of Rights Act[also] stopped Customs detaining Japanese cars suspected of having been clocked, according to the Comptroller of Customs... [in] a memo to the former minister of customs... on May 28... In releasing the memo, [the former minister] said Customs had used the Bill of Rights as an excuse to do nothing.

...WE’VE GOT ourselves in a bind with[the] Privacy Act... Everybody who wants to keep the public from finding out something embarrassing, something awkward or insensitive, possibly actionable or criminal, now automatically intones the mantra: “Oh, no, we can’t tell you that because of the privacy legislation.” They’ve fooled themselves – they believe, wrongly – that there is a statute which gives everyone in an official or semi-official position the right to withhold information from the public arbitrarily and without giving a proper explanation. It doesn’t... The public, the voters, are the poorer for it. How can we make informed decisions at the next election if we have no idea what’s been going on...? Reporters are often criticised for prying, for intruding on private grief, for sticking their noses in. But if reporters don’t do it, if their editors don’t insist they do it, if they just sit on their backsides and wait for some flunkey, some spin doctor, some public relations wallah, some professional liar to emerge from the corridors with a piece of paper between finger and thumb containing a cunningly worded “press release”, then believe me, the public suffers in the long run. Instances of unwarranted withholding of information, against the public interest, occur almost every day. We have the census people cheerfully admitting that the forms from the 1996 census won’t be kept because they can’t risk adverse reaction by raising on the forms the issue of retention “at a time of heightened awareness of privacy issues.” We have the aeroplane drivers’ union objecting violently to police gaining access to cockpit voice recorders to establish whether a crime has been committed by crew involved in a fatal crash. It is members of

the public who fly in the aeroplanes these jumped-up drivers take off, fly and land. And it is members of the public who are entitled to know that the full weight of the law will thump down on anyone who endangers their lives. It is wrong for the pilots, through their union, to insist that possible evidence of criminal action must be kept secret, kept away from the police, from the press, from the public, but the existence of that damnable Privacy Act lends weight to their efforts to keep facts hidden, to dismiss reminders that pilots who have done nothing wrong have nothing to fear. We've got hospital administrators refusing to tell reporters how they propose to bring their skyrocketing overspending under control... We've got the Department of Social Welfare, entrusted with countless billions of mine and your tax dollars, flailing about like a wounded crocodile, trying to stop its staff talking to reporters. There have been "leaks of sensitive information" about the way our money is spent, and the DSW can't abide it. The public must not be told, the cry goes up. In no time at all the security service, the trained anti-espionage experts who heroically risk life and fingernails to keep our implacable enemies from finding out how many of our toy tanks are still serviceable, are called in to sweep the DSW offices for suspected electronic bugs, presumably planted by reporters trying to find out what's happening. With our money! An 18th Century Irish judge... once observed that the price of liberty is eternal vigilance, and servitude follows if you break the condition. It's not a bad sort of slogan to remember when some smooth-tongued lizard smiles smugly and says you're not entitled to know because of the Privacy Act.

...The Government plans to limit the reach of its privacy laws, regarded as among the most extensive in the world, as a compromise with A[US], criticised worldwide as lagging behind in privacy protection. The provision is in the transtasman Mutual Recognition Bill and is the price many N[Z]ers... will pay as the Government moves to expand the CER market in goods and services [after a] recent u-turn by the A[US]n Government on privacy protection... Misgivings about the situation were[voiced] yesterday by the Privacy Commissioner... [Incidentally,] a magistrate said yesterday... "A[US]n society would be a lot duller if people weren't allowed to say what they think." [The comment made me think of what Soren Kierkegaard wrote in *The Journals*: 'People hardly ever make use of the freedom which they have, for example, freedom of thought; instead they demand freedom of speech as compensation.']

...In 1990 Parliament explicitly gave the people of N[Z] a right they had long exercised and valued, the right to freedom of expression. This law... recognised a long tradition of free speech shared by all democratic nations... Unfortunately, the act contained no enforcement mechanism, with the result that rather than safeguarding and expanding liberties, it may have produced a climate in which those liberties... have begun to be eroded... In the U[S], Canada and A[US], judges play an important role in protection of freedom of speech. That oversight role is denied N[Z] judges under the... Act of 1990. There may be good reason to suspect judges are inappropriate protectors of civil rights, especially the right to free speech in N[Z], for there is here a tradition of judicial suppression of speech through injunctions. Judicial injunctions against the press in N[Z] are commonplace... In defamation cases in N[Z], there is no free speech defence such as exists in the U[S]... To avoid being sued for defamation in N[Z] a newspaper must not only have published a true story, it must prove that truth under the method of proofs normally applied in courts of law. It would be nice if truth, in some absolute sense, were knowable. In fact, each discipline has its own particular truth. Most of the data on which a reporter relies is hearsay and therefore not admissible in a court of law.

...A High Court judge has banned a students' meeting scheduled for this week, branding it undemocratic. [The judge] issued an injunction on Friday preventing the... Auckland University Students' Association executive... from holding a special general meeting at the university's Maidment Theatre this Thursday [after a former] student president... sought the ruling... claiming the executive chose the theatre knowing there would not be a quorum and that the motions for discussion would fail... In banning the association from holding the meeting in the Maidment, [the judge] said universities of the free world had for centuries been at the forefront of promoting freedom of expression. He found it "disappointing" the association had chosen a venue which had a history of failed meetings. He was left with the overall impression that the executive was not enthusiastic about the matters for debate... Last night the association president... said the Maidment was chosen because it was easier to count votes there... He said they had obtained legal advice that they were acting within the rules of the constitution, and denied that the decision to use the theatre was undemocratic... [In related news, the] stormy student protest outside Parliament [(r:p331, ln47), which resulted] in 74 arrests, may lead to test cases in the courts involving the rights of demonstration, a lawyer said... yesterday... [The] Wellington barrister... who was called in by the Victoria University Students Association, said the students could argue that the Bill of Rights protected their ability to assemble peacefully. Protests were a long-held democratic tradition at Parliament, [he] said. The test would be whether there was some threat to public safety from the protest which overrode those rights. The manager of parliamentary security... invoked trespass notice warnings after some of the 300 protesting students started pushing wire-mesh barriers they had been warned to stay behind. Four further trespass warnings were given before a 2pm deadline, when some of the 60 police on stand-by moved in... For the next 90 minutes there was an occasionally rowdy but non-violent procession of arrests as students were led away, photographed and put into wagons on a shuttle service to the central police station...

[The 'students arrested outside Parliament have had the charges against them thrown out after a judge said that "the police had no right to invoke trespass orders".' The students had been] **demonstrating against the Government's discussion paper on tertiary education options.**

...[the 'University of Auckland's 1600 staff have been told by the Vice-Chancellor that they will be instantly fired if caught criticising colleagues or other campus schools, prompting fears that their academic freedom is being threatened. The tough line is in response to friction between academic staff and the university's science and medicine schools and criticism of other institutions over the allocation of millions of dollars of research money.']

...The Government has muzzled school heads following strong criticism from one principals' organisation which it funds, secret papers reveal. Documents obtained by Labour show three principals' organisations had to agree to communications restrictions as part of funding contracts last year. A memorandum to the P[M] last February said the president of one group was "more outspoken on policy issues" than the contract with the Government allowed. Four months later "communications protocols" were added to annual contracts for policy advice signed with the three principals' organisations... The Labour education spokesman... said the protocols were an "obvious attempt" to gag principals and stifle criticism of the Government. The Minister of Education... said last night that the restrictions were necessary to keep incomplete policy confidential... [However, he] said there would be no need for the protocols shortly because he was "uncomfortable" with the contracts and would probably not renew them... The president of the Principals' Federation... said last night that the restrictions had "absolutely not" affected her public comments... [The] president of the Secondary Principals' Association, also strongly denied that the protocols had restricted the organisation. The Intermediate Schools Principals' Association could not be reached for comment... [By the way, v]iolent and pornographic computer games could be slipping into the hands of children because censors haven't got the technology or time to view them properly. Software manufacturers and distributors are losing patience with the Office of Film and Literature Classification and are refusing to submit contentious material because of the time it is taking the censors to classify it.

...[NZ censors] are allowing companies to sell violent adult computer and video games... apparently with the tacit approval of the Office of Film and Literature Classification... About 100 games rated adults only by overseas censors are on sale without classification... The deputy censor... says the problem is "we can't censor quick enough. It's embarrassing for us." ...The Film, Video and Publications Classification Act requires the office to view and rate any game which is subject to an age restriction overseas. Carmageddon... the road-rage video game... which rewards players who run down pedestrians... was referred to the office in July but several months later is still waiting for a classification... [T]he office does not have the people or the equipment to cope... Most video and computer games are so complex, usually having a running time in excess of 40 hours, that would-be censors can spend weeks playing without viewing all the footage. Industry sources say the people best qualified to quickly master a game are 13 and 14-year-olds, an inappropriate age for people to be viewing adult material... [T]he office sympathises with the industry, which is trying to

comply with legislation. However, [according to the deputy censor,] technology has outstripped the intentions of legislators and an amendment to the act is needed... [Unfortunately, an amendment might not be enough.] One of the biggest-selling games in the U[S], Postal, was not officially released[in NZ] because it was considered too hard-core. Instead, it has been picked up and sold by pirates... [● The] controversial computer game which awards points to players who “steal” cars could be on sale early next year. Grand Theft Auto, which can be played on Playstations or personal computers, has been released in A[US] with an MA15 restriction and is soon to be assessed by N[Z] censors. The game... caused controversy on its release in Britain because it was claimed it could encourage children to commit crimes. The game is not as explicit as others such as Carmageddon... but involves players joining a crime family... Police... will wait for the censor’s decision before independently assessing the game.

...Free-speech activists and those seeking to protect children against smut in cyberspace clashed yesterday at the U[S] Supreme Court in what was billed as “the first free-speech case of the 21st century.” The nine justices heard arguments on the constitutionality of the Communications Decency Act 1996, which makes it a crime to distribute indecent sexual material over the internet to persons under 18... The law did not target obscenity or child pornography, which already were illegal... A federal appeals court in Philadelphia... last year struck down the[new] law as unconstitutional, saying it was unenforceable... because half of the pornographic content on the internet came from sources outside the U[S]... and adding that parents should do more to screen what their children see on the internet. [However, a]Justice Department lawyer... said parents could not rely on existing screening software to guard against inappropriate material being accessed by children. But... a lawyer arguing on behalf of a coalition of libraries, publishers, the recording industry and a wide array of internet users and service providers, said the vague definition of “indecent” could hurt artistic expression.

...The U[S] Supreme Court extended free-speech rights to cyberspace in a historic ruling on Thursday... [B]y a 7-2 vote, [it]ruled that all key parts of the Communications Decency Act violate free-speech rights, amounting to illegal Government censorship... The... [US President will] study the decision... “...the right technology and rating systems... can... ensure that our children don’t end up in the red light districts of cyberspace,”...

In its first foray into cyberspace, the Supreme Court says the First Amendment applies there too ONE OF THE KEY IDEAS BEHIND the Internet was to build a computer network that could withstand a nuclear holocaust. Last week the Net proved its resilience in the face of another sort of attack. The Communications Decency Act, signed into law by[the US] President... last year, was designed to protect children by prohibiting “indecent” speech or images from being sent through cyberspace. But even before Congress passed the legislation, free-speech advocates were blasting it as an unacceptable infringement on the... First Amendment to the Constitution, which guarantees freedom of expression. Now the Supreme Court has agreed that the CDA is precisely that... It was a decisive – though not unexpected – victory for civil libertarians. Opponents of the CDA... argued that the statute was so vaguely worded and ill defined that discussions in online chat rooms about abortion or contraception could have attracted the vice squad. Says... [the] executive director of the... American Civil Liberties Union...: “It would have criminalised all sorts of speech that would never have been criminalised before.” And that, said the court, could have crippled the Internet... “Let today be the first day of a new American Revolution – a digital American Revolution!” said... [the] attorney for the Electronic Frontier Foundation, addressing a crowd of revellers in San Francisco. CDA proponents were every bit as vociferous in defeat as their counterparts were in victory. Members of the anti-porn group Enough Is Enough... demonstrated outside the Supreme Court with signs that read HONK IF YOU HATE PORN and CHILD MOLESTERS ARE LOOKING FOR VICTIMS ON THE INTERNET. Legislators seized the moment as well... [The] co-author of the CDA... said... “The court has ignored the clear will of the Executive Branch and the Congress and the clear will of the American people.” In fact, though, the court did not rule that government cannot regulate the Internet. Nor did it alter the long-standing legal prohibition against obscenity, which remains unprotected speech, both on and off the Net. It simply said that the CDA as written was fatally flawed because in trying to protect children it would also keep adults from getting material they had a legal right to see. That gives CDA forces hope that they’ll be able to revisit the issue... Vows... the recently installed president of the Christian Coalition: “We won’t accept this as the last word.”[In further news from the US, ‘the Justice Department is under gag by the court’]...

Freedom of speech and communication as an absolute right can only occur in a society that has very little sense of community.[This sentiment was clearly understood by Tolstoy, who wrote last century that: ‘The more telegraphs, telephones, books, papers and periodicals men have, the more means will there be of spreading contradictory lies and hypocrisies, and the more disunited and consequently unhappy will they become, as indeed occurs now.’] Originally “freedom of speech” was intended to enhance the governance of a community; its function was political. The extension of this provision to include material with an educational effect – having the potential to shape the character of citizens – has generally been misunderstood or intentionally confused. The issue has come to the point where, as *Time* [– ‘Only Select NZers Get It Free!’ –]magazine noted on the cover of a July issue in 1995, we must consider whether we can protect our children and our current interpretation of free speech. The latest target for the “free speakers” is the Internet... *Time* tells the story of a U[S] senator who wanted to extend the Communications Decency Act to Internet providers knowingly making hard-core pornography available to children under 18. It was finally passed 84 to 16 after senators were shown the type of material children could access. Then the Speaker of the House of Representatives... denounced the amendment as a clear violation of free speech. Refreshingly, at least one country, Germany, has not succumbed. According to a news snippet, Germany has become the first country to ban pornography, violence and neo-nazi material on the Internet and Websites. Analysis shows that “freedom of speech” within a society is always within boundaries. If this were not true libel laws would not exist and anarchy would be desirable. Free rein to the individual is always going to kill a community... Ultimately, a safe community must make more sense as a standard to be upheld than an individual’s right to freedom of expression. Just as schools often have to make decisions in which, quite properly, the rights of all pupils to an undisturbed education are placed ahead of the perceived rights of the individual, so must the community take issue with those who neglect the common good for personal gain... Unless the parents of N[Z] children decide they value their children enough to scream against the civil libertarians who feel they have a right to pollute young minds with incest, bestiality, torture and child sex, we can only ponder the society they will inherit... While freedom of speech sounds noble, speech that produces freedom is truly noble. The *Encyclopaedia Britannica* asks the question: “Cannot it be said that only they are truly free who know what they are doing and who choose to do what is right? All others are, in varying degrees, prisoners of illusions and appetites, however much they may believe themselves to be freely expressing themselves.” How much longer will we suffer the self-servers speaking...? - 1997

It’s a free country. We can all have our say, or so we’re led to believe.

McCarthyism... anti-Communist persecution, verging on public hysteria, prevalent in the USA in the decade following... W[W2. This]... witch-hunt for people suspected of Communist beliefs... resulted in the ruin of many careers and a nationwide suspicion of communism which is still apparent in the USA today.

...supporters justified [Senator McCarthy] by several cases of Communist influence that he exposed... in the State Dept. and other Federal agencies... His critics, including some Republicans, charged him with doing more damage to freedom of speech and of the press than to Communism.

speech, freedom of, right to speak one’s opinions on political, religious, economic, or social affairs, without risk of punishment or reprisal... [I]t existed with limitations in the past, as in ancient Greece and Rome... [F]reedom of speech may be limited, particularly in times of local or national

crisis. Traditionally, in modern democracies the right has been restrained only by the laws of libel, slander, obscenity, and treason or sedition. In the U.S. it is guaranteed by the Bill of Rights of the Constitution, in the 1st Amendment, and by the various state constitutions. Supreme Court interpretations of the constitutional guarantees have varied with the temper of the times and the make-up of the Court Membership... Freedom of the press, like other freedoms, has required constant defence, not only against political interference but also against all those who, for moral or other reasons, wish to control information, opinion, or entertainment offered to the public. Freedom of the press is an institution peculiar to nations in which government is subject to the will of the people.

In a surrender to Israeli diplomatic pressure, BBC officials in London have banned their staff in Britain and the Middle East from referring to Israel's policy of killing its guerrilla opponents as "assassination". BBC reporters have been told to use Israel's own euphemism, "targeted killings"... [after] Israeli diplomats... lunching with BBC officials... complain[ed] that coverage was anti-Israeli and pro-Palestinian... The Palestinian killing of Israelis, however, is[still] referred to as "murder" or "assassination"... The Israeli campaign is, in fact, far from "targeted". In the first such killings, two middle-aged Palestinian women died. After its initial report, the BBC dropped all reference to the female victims.

...a cot-death campaigner... has forced the N[Z] *Medical Journal* to delete part of a paper after threatening legal action... [The campaigner] said a defamatory paragraph had been added after he... reviewed the cot-death paper by a child health advocate... The journal's editorial board said the deletion raised concerns that freedom of scientific debate had been compromised, and set an unfortunate precedent. [The campaigner] did not accept that his actions had compromised free debate, which he said could not be stifled in a country such as N[Z]. However, he said, defamatory statements "cannot be published with impunity."

...The owners of *Truth* say a record \$675,000 defamation award to[a] musician... will not threaten the paper's future. [The musician], whose hits included *She's a Mod* in 1964, sued the weekly tabloid over an article it printed... [that claimed the musician] had billed the Auckland Rugby Football Union \$70,000 to organise 45 minutes of entertainment for a test between the All Blacks and the Springboks at Eden Park. [The musician], who was made an OBE in 1974, told the jury that the \$70,000 budget was approved by the union before the event. He delivered the event under budget at \$69,040, and his fee was just \$5000. His lawyers... argued that the story, headlined "[Musician] slugs rugby for \$70,000," implied that he was unprofessional, greedy and had ripped off the Auckland Rugby Union and would do the same to future clients... [The musician], who organised sporting and entertainment functions, told the jury that after the article appeared, the phone simply "stopped ringing" and business turnover dropped from \$350,000 a year to \$50,000... If the \$675,000 awarded... stands, it will surpass the \$650,000 awarded to... the former president of the Auckland Trotting Club, against TVNZ over two... programmes which effectively said he was doping horses and involved in financial irregularities.

...The name – and it's his real name too, he'll have you know, not some show business affectation – is synonymous with entertainment. It's also synonymous with honesty and integrity. It was, in short, the name of one of the biz's straightest dealers and most genuine guys. Then came the Tuesday... 2 1/2 years... [ago] when the billboards for the weekly scandal sheet *Truth* hit the streets... The man who had a hit with *She's a Mod* in 1964 and who, backed by his band the Invaders, played support a year later to a bunch of young Englishmen called the Rolling Stones... trembles at the memory... "That billboard was all over the country, outside every petrol station and dairy," he says. "People didn't have to buy the paper to read the story. The damage that did was huge." A jury in the High Court at Auckland agreed... and awarded the entertainer and event manager a record \$675,000. When... Independent Newspapers Ltd... announced... that it would not appeal, the judgment became the largest defamation award made here against a news organisation... The record payout is greater than his actual losses, [the musician] concedes. But what's left over will be spent developing ...h[is] business and lessening his dependence on performing. In any case, more than money was at stake.

... "The libel law here," says [NZ's] Opposition leader... "while not as tough as it used to be, is certainly stricter than in... America, [where] public figures are fair game." [However, a US judge has] ordered *Los Angeles Magazine* to pay[an] actor... a further \$US1.5 million... for running computer-generated photos of the actor in a dress and high heels. The decision brings the total damages bill over the incident to \$US3 million... A lawyer for the magazine, owned by Capital Cities ABC and its parent, The Walt Disney Company, said the ruling would be appealed... The magazine did a computer composite without [the actor]'s permission, using a still photo of him from his 1982 role of *Tootsie*, in which he played an out of work actor who gets a job disguised as a woman. The magazine pasted [hi]s face complete with makeup from that still photo on the body of a model... as part of a... fashion layout...

A British libel court has awarded "substantial" damages over "hurtful" allegations that a US millionaire actor and his wife were gay and that their marriage was a sham. The *Express on Sunday's* barrister said it unreservedly withdrew all the allegations and accepted they were "entirely false." The paper will also meet the legal costs, estimated at £150,000. The couple said they would give the libel damages to charity.

...Given the UK's draconian libel laws, it seemed... strange... for England's *Daily Mirror* to run a story with the headline "Rent-a-Liz – it's a bargain". The story, published in June 1996, alleged that the... Estee Lauder cover-girl... would go home with any man willing to pay out US\$40,000. Of course, the story was a complete sham, and... [the victim] successfully sued the tabloid for undisclosed damages and legal costs.

...A STUDY that claims oggling at breasts is good for the health is a put-up job. A worldwide media release falsely claims the study has been reported in the New England Journal of Medicine. The fictitious five-year study of 200 men – by a supposedly German scientist... – claims men live longer if they stare at busty beauties for 10 minutes a day... [Incidentally, t]wo-person television crews for NBC and CBS and a photographer for Agence France-Presse hid in bushes and snapped pictures of... [the US President and his wife] in swimsuits at a beach... on holiday in the Virgin Islands... The pictures were plastered across the front pages of [US] newspapers yesterday... When asked... if the pictures... violated his privacy, "and where should the press draw the line?" [the President said:] "The answer to the first question is yes... The answer to the second question is that's why we have a First Amendment" to the Constitution to protect the free press. "You get to decide the answer to the second question,"...

Four months after nearly losing his job in the fallout over CNN's retracted story about nerve gas use in Vietnam, [a NZ reporter]... is returning to the air. The Pulitzer Prize-winning correspondent... has not been on CNN since a follow-up report in June on Operation Tailwind. He narrated the original Tailwind story in May that alleged the deadly gas sarin was used by U[S] troops in a 1970 mission to hunt down American defectors during the Vietnam War. The story infuriated the military, and CNN concluded after an investigation that it could not be proved. [The correspondent] successfully fought for his job after arguing that his role in reporting the story was minimal. Since then, CNN has not exactly rushed to put [him] back on the air... [He] spent about a month working with lawyers preparing to defend slander cases relating to Tailwind. Then he was sent to Algeria... He spend nearly six weeks there reporting and doing work for the Committee to Protect Journalists. His hiatus was not particularly unusual, since he typically covers three or four big stories a year.

...Georgia legislators [are currently debating a] proposed law which will tax newspapers and radio and tv stations for stories on crime...

Page 24 suggests you shoot right between the eyes to guarantee an instant kill. Chapter 2 recommends firing at least a metre away from your victim so no tell-tale blood splatters your clothes. Page 90 offers advice on how much you should be paid, with an absolute minimum of \$30,000... "Any amount less would be amateurish." The book... is a step-by-step guide for the would-be professional killer... [One man] certainly made good use of the book. He studied it closely enough to follow 24 of its best ideas when he blew the brains out of [his client's wife], her disabled eight-year-old son... and the boy's nurse... [The owner of the book's publishing company] says... "I unfortunately would not – cannot – accept responsibility for

the actions of [readers].” Last week a Maryland judge agreed with him... ruling that books do not kill, people do. The First Amendment still applies, he said, even when the words used create a danger. But [an opponent] says books such as *Hit Man* should not be sheltered by the Constitution. They should be classified as criminal speech. “The framers of the First Amendment did not intend it to be a suicide pact between the people and the Government...” ...[looking at the issue from a purely fictional aspect, should] public interest abridge the freedom to create characters like... [the ones] in *Natural Born Killers*? ...[consider also the] Atlanta security guard[who] was hailed as a hero for spotting the pipe-bomb planted at Centennial Park during the Olympic Games, and then smeared as a villain when the FBI announced he was the chief suspect... His mother has tearfully asked [the]President... to clear her son’s name. She cannot take action against all the U[S] newspapers and television stations which ran “Portrait of a Killer” items about her son – that was their right under the First Amendment. [The President] is grappling with the same problem.

...The [Atlanta bombing] exposed the incompetence and banality of the American way... THREE days after the Atlanta bombing, CBS News was running a montage of the carnage as a promotional trailer, concluding with the words: “To be continued...” It was as if the unfolding events in Georgia were no different from the network’s moronic daytime soap operas. In modern America the line between soap and life is an increasingly fine one... [I]n the aftermath of the blast, the security guard... designated by the media as the hero of the “senseless tragedy” lapsed easily into cop-show clichés: “I did the job I was trained to do,” he told reporters solemnly. Ah, but that was Monday. By Tuesday, in the soapy shorthand of CBS, [the security guard] had been switched from hero to villain – the guy who found the bomb only because he’d put it there in the first place. And by Friday, to the frustration of the CBS casting director, [the security guard] seemed to have junked the script entirely: neither hero nor villain, but something murky and undefined in between... Atlanta was a peculiarly repellent Olympics. Incredibly fit people on steroids were cheered by incredibly fat people on cheeseburgers... The ads for Nike and other products offer[ed] obnoxious aggressive sportsmen opining, for example, that there’s no such thing as “winning silver”: Which simply means that you lost gold, you wimp. Indeed, in their advocacy of total war, winning at any price, the end justifying the means, the philosophy of the commercials is virtually indistinguishable from your average terrorist group’s credo. The Games organisers boasted that “for the next two weeks, Atlanta will be the safest city in the world”. Instead, the city dispatchers who answered the emergency call lost 10 crucial minutes because they didn’t know where Centennial Park was and therefore couldn’t enter the address on their computers. Atlanta contracted out just about everything to do with the Games: TV crews reporting the explosion were even prevented from filming news footage showing the Olympic flame in the background because NBC apparently ha[d] exclusive rights over that. With hindsight, it might have been an idea to contract out the security, too. Twenty years ago the Olympics were in Montreal, which, lacking the corporate assistance of Coke and co, wound up virtually bankrupt as a result. But they had real terrorist threats to deal with: Middle East groups were planning a repeat of their 1972 assault on the Israeli team; local factions from Quebec had promised to take a pop at the Queen. In the event, the Mounties, operating with a fraction of the resources of the US Federal agencies[–] ...the use of more than 30,000 police and private security guards, 10,000 military personnel, and more than 2500 FBI and Secret Service officials... reportedly[cost] Atlanta \$A227 million... [–] managed to protect both their sovereign and the visiting athletes. And they did it discreetly: They didn’t swank around boasting of their impenetrable security, thereby ensuring that someone would try to prove them wrong. [The security guard] was jailed in 1990 for impersonating a police officer and attempting to arrest a couple sharing a hot tub at an apartment complex where he worked. At the Olympics he came under suspicion because he is a white male loser security guard hung up on law enforcement. In other words, the fellows most likely to breach the police line are the ones who’d most like to be in it... After Atlanta and TWA, [the]President... is giving Federal agents more money and more powers. The evidence suggests they have more than enough of both, but that they don’t know how to use them. Forget the militia[and] the ayatollahs... the only conspiracy that fits is a conspiracy of dunces, of boneheads and losers and no-hopers... all the way back to that prototype bozo in the Dallas Book Depository three decades ago. Conspiracy theories are comforting, a form of what Americans call “denial”, a way of avoiding unpleasant truths about basic competence. That’s the humiliation of Atlanta: In front of the Russians and Chinese, the Cubans and Bosnians, they blew it, and they blew it not to professionals, but to some two-bit punk with a homemade pipe-bomb.

...The bloody attack on Centennial Olympic Park in Atlanta was the latest example of an explosive Georgia tradition – the nail-laced pipe bomb. It has a long and murderous history as a low-tech tool of mayhem favoured by white supremacists and other political extremists. The bomb is easy to build, requiring little more than gunpowder, a length of piping, an ignition device and nails or screws to cause scrapnel damage. Georgia’s most famous pipe-bomb incident before the games blast... was in 1989... [when f]our nail-studded bombs were sent through the mail. Two were detected and removed. The others killed a federal appellate judge... and a Georgia civil rights leader...

More than four months after the bombing at Atlanta’s Olympic Park, [by which]... many people... we[re injured and two] people died... the FBI has posted a \$US500,000... reward to tape of a telephone call warning of the blast in the hope that someone might recognise the man’s deep, slow voice. [The o]ne-time suspect... meanwhile, reached an undisclosed cash settlement with the NBC television network...

Chequebook journalism is here to stay, says the outgoing editor of the N[Z] *Women’s Weekly*... The 34-year-old, who... said yesterday that she was resigning[also]... said there was a market for paying for stories and it was not going to die. “It’s happening whether we want it or not. But it’s a bit of a non-issue for us because if you don’t want to pay for a story you don’t pay for it and you don’t get it. If you do really want a story you have to pay for it. It’s supply and demand really.” ...before *Women’s Day*, owned by A[US]n Consolidated Press, entered the N[Z] market in 1987 the *Women’s Weekly* had paid for only two stories in almost 60 years... [However, she] refused to discuss how much money [was involved]... The issue made headlines last month when convicted drug traffickers... signed a deal with *Women’s Day* to tell their story... - 1996

Chequebook journalism: the horrifying truth about us and, well, almost everyone else... It has been observed that the moral high ground, while easily taken, is famously difficult to maintain. This is especially so of the fractured debate on Journalists Who Come Bearing Cheques. How nice it would be, for example, to take TV3’s... cheerfully proclaimed word: “We don’t buy stories.” ...So they won’t pay for stories, but they will use stories that have been paid for... Even commentators appear to have trouble with the high ground. [A journalism lecturer who is] reliably scathing about money-for-talk deals, was reported in *North & South* last year as being the first local news executive to “facilitate the exchange of substantial amounts of cash for a story”. Confusingly, *North & South* also reported [the lecturer] to be at the time studying for an MA in media ethics... Now, before the *Listener* goes about putting all its competitors and betters to the sword, just to prove what good sports we are in this fraught arena, we shall fall very publicly on our own. Back in 1989, the *Listener* paid \$9000 for the exclusive rights to the *Rose-Noelle* story. [Our w]riter... recalls that the four castaways, having spent 119 days holed up in the capsized trimaran, were broke. They wanted to write a book. [The writer] wouldn’t oblige; he didn’t have the time. The idea of a payment was then mooted, with [the writer] negotiating on behalf of the magazine. The crew asked for \$20,000... and the haggling proceeded... [The writer] now says that he regrets the \$9000 paid to [the four castaways]... “I knew that the then-editor was willing to go a couple of grand higher, but I got them to go as low as they could. I don’t know why I did that – they were the ones on the bones of their arses.” Speaking of having been on the bones of their arses, let us return to TV3. Since nabbing [a NZ First MP] in flagrante negotio, the channel has steadfastly denied that it pays for stories, a stance that irritates [the person who is] now a field producer on the *Assignment* programme. During his three years at TV3 (he left three years ago) two instances occurred in which payments were made during stories. One was... \$10,000... for the rights to tapes of European soccer games that [he] still considers “unimportant” to the programme. On the second occasion, the channel paid... “not a large sum” towards the air ticket of a man who was pursuing legal action overseas. That seems to fit with anecdotal suggestions that TV3, although not paying in cash, is prepared to extend the confines of television’s green (or hospitality) room, supplying airfares, fridges and, in one

case, a headstone, in return for exclusivity. “No we don’t,” respond TV3[’s] director of news and[its] current affairs... and 20/20 producer... “The bottom line is that we haven’t done it.”

...Nowhere is the argument over chequebook journalism more bitter at present than between rival Sunday night current affairs shows, TVNZ’s *60 Minutes* and TV3’s *20/20*. The executive producer of *60 Minutes* says he doesn’t pay but *20/20* does. “It leads to people inflating their stories to get some money, so getting to the truth is much harder.” The *20/20* executive producer says he doesn’t pay either and has considered suing *60 Minutes* for saying so. [● *60 Minutes* is linked to the US broadcasting company CBS, which was ‘duped by an ex-heroin addict murderer into believing he was an ex-Vietnam hero. They would’ve know he wasn’t if they’d just bothered to look for his Vietnam record’!]

...the man initially questioned on the Atlanta Olympics bomb blast[has yet to reach an agreement with CBS, but NBC has confirmed that it paid the]... security guard... more than \$[NZ]715,000... to avoid a defamation lawsuit.

...LAWYERS for 17 people injured in last year’s Olympic Park bombing have filed a \$155 million lawsuit against Olympic organisers, claiming the attack, which killed one [person], could have been prevented... [because] the committee and security firms were warned a bomb was likely to be detonated. “That bomb should never have been in the park,” said[one] lawyer... “It was just a tragedy of errors.”

...a year after he was cleared as a suspect in the Atlanta Olympic bombing... the... former security guard started this week as a police officer in Luthersville, a small town about 64km south-west of Atlanta... [He had] worked for six years as a security guard and five years as a jailer before taking a job as a security guard at the Olympics... [He then] spent 88 days... under the microscope of the FBI and the world media after... the... bombing... that killed one woman and injured more than 100... “Of course we are going to have some attention, but... [anyone] that will risk their life to be a police officer for \$US8... an hour, have got to want to be a police officer,”... said... [his new boss. In local news, a NZ First MP]’s lawyer... was unfairly treated by TV3 when he tried to sell an exclusive interview, the Broadcasting Standards Authority has ruled. The Criminal Bar Association had complained that by broadcasting a confidential discussion with [the lawyer], TV3 was in “blatant and flagrant breach” of common law to increase ratings. The authority has ordered TV3 to pay \$500 costs. [The lawyer rang a] TV3 reporter to discuss an exclusive interview with [the MP] about his involvement in Aotearoa Television, in return for at least \$20,000. During the conversation, [the lawyer] said: “And you and I, I trust, are talking confidentially”. “Yeah,” the reporter said. The authority said after that assurance, [the lawyer] had reason to be less guarded than he might otherwise have been “and thus a degree of entrapment was involved”... TV3[’s] director of news and current affairs... said he[’d] asked the reporter to ring the lawyer[back and tape the conversation because he thought the offer was a hoax. If the tape had not been used “[the MP] to this day would have denied it”. TV3 had been deluged with supportive calls from the public over the decision... The station is considering an appeal.

...Journalists may have reason to be grateful for... [a] former MP’s dressing gown. It was... [his] appearance on TV3’s *National News* clad only in his night clothes which sparked a Broadcasting Standards Authority decision which is being hailed as a significant victory for the media. The regulatory body’s judgment, that public figures – particularly politicians involved in issues of public interest – are less entitled to privacy protection than other people, is a landmark decision that has struck a blow for freedom of speech, say lawyers and media commentators. Placed in context with another recent High Court decision[which]... ruled that qualified privilege applied to political commentary, some say that the tide has turned for news organisations previously under siege from litigious politicians and personalities... “Politicians have used the defamation law for so long to intimidate the media and prevent matters of public interest being fairly covered. This is really important and it’s a breakthrough for us, but it’s limited until tested in the High Court.” ...However, [the] Auckland Law Society media law spokesman... warns that a court of law will not “take much notice” of Broadcasting Standards Authority decisions. In defamation cases, what is important is what a jury thinks is relevant, he said... [There have been] a series of defamation decisions against news organisations in the 90s... In 1992, a jury awarded... a gossip columnist, \$375,000 in damages following a... magazine article. The record award was quickly eclipsed by the \$1.5 million awarded to[the] Auckland Trotting Club president... after allegations aired on... [a TV1 news] programme. Although both amounts were reduced on appeal, more recently the *Truth* and the *Independent* newspapers have fallen foul of defamation law... [The] *Independent* editor... has seen more than a few defamation suits cross his desk, and he recently opined in an editorial that the defamation laws “prevent the press from playing its role as democratic watchdog.”

...A television film crew has been censured for invasion of privacy after approaching a man in a public car park. In a decision which is seen as a blow to media rights, the Broadcasting Standards Authority has upheld a complaint against the TVNZ consumer programme *Fair Go*... The *Fair Go* crew tried to speak to... a builder... about customer dissatisfaction with a house he built, but he eventually drove off without talking about the issue. [The builder] complained to the authority that the programme’s tactics amounted to door-stepping... He was angry about the way the film crew had caught him unaware and unprepared... [The] editor and producer of *Fair Go*... said... “This is not a case where a camera crew climbed through a bedroom window or used hidden microphones. We most certainly believe we acted in the public interest.” [He] said reporters had tried to contact [the builder] three or four times before the approach in the car park, a claim [the builder] denied yesterday... In its ruling the authority said *Fair Go* had breached the Television Code of Broadcasting Practice rule dealing with treating subjects justly and fairly. Complaints about the accuracy of the programme were thrown out... Industry executives are stunned with the decision and are worried about its implications... TVNZ executives are understood to be seeking a clarification of the ruling, which producers fear will restrict their news-gathering ability.

...Newspaper industry leaders have called for balance between the rights to privacy and those to freedom of information... The wide powers of definition that Parliament has given the Privacy Commissioner are partly responsible for confusion over privacy issues, says the chairman of the Press Council... The N[Z] section chairman of the... Commonwealth Press Union... said newspaper criticism of the act often stemmed from ridiculous situations where the act had been “misused, abused, or simply misunderstood by those with control over personal information.” He cited the case of a Porirua psychiatric patient who gave birth to a baby on the street five weeks after discharging herself from hospital. [The] editor of the *Dominion*, said Television NZ reported the woman as having been “just released” from hospital, based on a family source. “The image was of a heartless health service discharging a patient to give birth on the street.” The crown health enterprise involved had refused comment to the television reporter. Only after the P[M] said the woman had left the hospital voluntarily... did the CHE confirm the details. TVNZ had done its best to get the facts, but the CHE had claimed it was complying with privacy law... [In another development, the] Newspaper Publishers Association has condemned an attempt by the Privacy Commission... to get a newspaper to reveal its sources.

...A Privacy Commission investigator wrote to the *Sunday Star-Times* last week asking it to reveal its off-the-record sources in a story revealing \$900-a-day pay rates for... a ministerial consultant. The commission is investigating a complaint by [the consultant and a NZ First MP] that bureaucrats had breached his privacy by leaking information. In an article... the... *Sunday Star-Times*... editor... said the [commission] had no right to try to interfere with the free press, and the Newspaper Publishers’ Association... said the commission’s request nullified a centuries-old tradition for the press to protect its sources. But... [the] Privacy Commissioner... says there is no way of knowing if journalists’ sources are confidential without asking... A Journalists’ Union spokesman... had recently said that confidentiality was to protect sources. “It’s in the public interest that people with information on wrongdoing or any other matters which the public ought to know about must have confidence they can reveal these matters without being exposed.” A Press Council decision on the story said consultancy fees were “squarely within the province of a free press to investigate.” ...Under the Privacy Act the Privacy Commissioner has the power to require people to give him information he thinks is relevant to an investigation[including]... the power to summons a witness and examine him or her on oath. Anyone who obstructs, hinders, resists or fails to comply with a request for information without a reasonable excuse is liable to a fine of up to \$2000. While the news media is exempt from being the subject of any complaint under the Privacy Act, it is not exempted from being called in to give evidence in relation to a complaint.

...In Britain in the early 1960s two journalists were jailed for six months for refusing to disclose their sources to a commission of inquiry investigating a spy scandal. The case... is included in media law textbooks, and makes for dramatic reading. But the fact it is so widely cited signals how rarely this happens. In N[Z], as far as experts can say, no journalist has ever been jailed for refusing to disclose a source. [However, 'in 1992 a Wellington courier and his company were threatened with jail after refusing to say who hired him to deliver a leaked Parliamentary paper. Eventually his punishment was that he has never been allowed back inside Parliament.']But recent tension between[the] Privacy Commissioner... and the *Sunday Star-Times* newspaper... highlights an undercurrent of concern, on both sides of the issue... [The] Journalists' union spokesman... said there would always be a tension between the interests of privacy and the interests of public knowledge. "There will never be an entirely right answer. There never is when two rights and interests come into conflict like that..." But [the commissioner]... believes the reaction is over the top, and while he says he understands the importance of journalists' confidential sources, he says there has to be some accountability... "One of the difficulties is knowing whether there is a source. It's all very well for journalists to say there is a source but we have to establish the facts... otherwise journalists could be interviewing their typewriters." ...He... said he had no policy which ruled out requiring journalists to reveal such sources. However, in 3000 cases he had not invoked such powers of compulsion... The law offers no direct protection for journalists' sources. But under section 35 of the Evidence Amendment Act (No. 2) 1980, the court has the discretion to excuse witnesses from answering questions where the answers would breach a special confidence. However, if a N[Z] court insists on a source being revealed and a journalist refuses, a court has the power to jail that journalist for contempt of court... [The] special projects manager for the *N[Z] Herald*... does not favour giving journalists the same legal privilege not to reveal sources as some other professionals have. "If the source had broken the law, how far should you go to protect them? That's what witness protection is all about." ...[In related news,] *Independent Newspapers*... the... Dublin-based owner of *N[Z] Herald* publisher Wilson and Horton[, has]... posted a 41[%] increase in... first half... profit... to... \$NZ67.64 million... - 1997

...in the time before Man... [an] INVESTIGATIVE REPORTER... CONFRONTS HIS EDITOR... ['EXCUSE ME... BUT WHAT HAPPENED TO MY EXPOSE ON THIS TRUMPED-UP ENERGY CRISIS?'] 'THE PUBLISHER "ASKED" ME TO HOLD OFF ON IT FOR A WHILE.' 'BUT THIS IS AN IMPORTANT STORY! HOW LONG IS "A WHILE"?' 'HMMM, LET'S SEE... THAT WOULD BE WHEN THE NEWS DIVISION IS NO LONGER CONTROLLED BY THE BEAN COUNTERS WHO ANSWER TO THE CORPORATE BOARD THAT IS OWNED BY THE CONGLOMERATE WHO HAS A VESTED INTEREST IN THE ADMINISTRATION YOU'RE INVESTIGATING.' 'WHAT HAPPENED TO FREEDOM OF THE PRESS?!']

Recall that in 1996 79 of the world's countries qualified as [being] totally free. Collectively, these countries are known as the FREE WORLD. In reality, however, no country is totally free. To begin with, there isn't much that people living in these countries can actually do for FREE – and the list is growing shorter all the time! When commentators describe countries as being FREE they generally mean that their citizens have political and economic freedom (and when politicians speak of increasing the freedom of their citizens, it generally means they intend to free up the economy – i.e., they'll make it easier for people to earn and spend money). Yet, the right to become rich is a contradiction in a world where the supply of money isn't infinite, and where one person can exercise its freedom to earn more than the average income – which effectively forces at least one other person to earn below the average.

The more money, the more freedom... [H]owever... greed for money and power is the cause of people seeking to dominate and manipulate others and, thus, to deny them their freedom.

Another reason why no so-called FREE WORLD country can be considered totally free is because they all have laws that are designed to somehow curb freedom (be it for honourable or dubious reasons). These laws aren't consistent throughout the FREE WORLD (i.e., some activities are illegal in one or more of the 79 countries but not others), and what is considered illegal can even be inconsistent within countries – be it between districts or time periods.

...a Hokitika labourer... was jailed for seven days for playing a Lotto-like game in a public bar. The judge told him it was a 'nasty game of chance' dedicated to illegal and unfair winning of other people's money. - 1878

Gambling and betting have always been pastimes of N[Z]ers. Even aboard ship[s] bound for N[Z], early immigrants ran sweepstakes on the distance their ship would travel in a day, raffled anything they could fish aboard, spun the roulette wheel, threw dice and gambled at cards; and once ashore there were opportunities aplenty. Gambling was a fashionable amusement of the times and also a distraction... in the young country. But a backlash against gaming occurred in 1907, and for most of this century N[Z]ers' choices have been limited to traditional stables such as the... Totalisator Agency Board (TAB)... lotteries and Housie. Change arrived in 1987 when Lotto was introduced. A year later, the operation of gaming machines (of which large numbers were already present) became legal under a set of regulations within the... Gaming and Lotteries Act 1977... The same year a committee of inquiry recommended the introduction of casinos... Larger games and lotteries need to be licensed, smaller ones [less 'than \$500' in prize-money] are exempt providing they meet the requirements of the... Act[, which] distinguishes between five forms of gambling: games of chance (including housie and gaming machines); bookmaking and betting (other than betting on horse racing and greyhound racing... [– these are] controlled through the Racing Act 1971 and [the TAB]...); prize competitions (pick the score competitions); lotteries (raffles); and instant games ('scratch' tickets[– introduced in 1989])... Under the... Act... gambling may only be run to benefit charities and the community.

GAMBLING in N[Z] has historically been controlled by the basic government policy that it should not be conducted for the private gain of organisers. The country's cultural roots, apart from its Polynesian base, are deeply implanted in a Protestant/Puritan past. [However, in] the pioneering days, there were many rebellious spirits who were here because of the unacceptable restraints of that ethic in Britain, and reckless gambling and excessive drinking were common... Until the 1960s, gambling in the workplace where large numbers of men were employed – especially miners, waterside workers and freezing-workers – was endemic. They all had their crown and anchor board and two-up operators and regular high-stakes card games, especially on pay days. All cities and major towns also had clandestine, high-stakes card schools. Police response would follow complaints by the families of men who had lost large sums of family support money. Many people gambled in small ways at home, mostly with "penny poker"... The original national lottery[, begun]... in 1929... was called the Art Union... [Its profits were] distributed by the Department of Internal Affairs... The art unions were drawn once a month for 30 years for a regular prize which had escalated to 10,000 pounds by 1961, when the art union was succeeded by the present, more flexible lotteries system of Golden Kiwi... [T]he government... considered the prospect of allowing legal casinos to open but... [t]wice... decided against it despite the spread of casinos in A[US]. However, a] floating casino on board a ship... operating off the coast, near Whangarei, in April 1986, [exploited] the right to ignore in international waters N[Z]'s fairly rigid laws relating to [this form of gambling – which was finally legalised 'through the Casino Control Act 1990. Initially the Act allows two casinos to be built, one in the North Island and one in the South. No other casino licenses may be granted until at least two years after the first two have opened (and not within five years if a new casino is to be built within a 100km radius of either). In November 1994, NZ's first casino opened in Christchurch. A second, larger casino, is scheduled to open in Auckland in January 1996']... Stern opposition to new forms of gambling comes from the supporters of horse racing

with its increasing expenses and declining support. Horse racing has long supported a major breeding industry which earns substantial overseas earnings.

[The] government-controlled betting agency... ([or]TAB)... was established by the Gaming Amendment Act of 1949, following a national referendum on the question of whether off-course betting on horse races should be allowed. The referendum was substantially in favour [and the TAB – ‘your chance to compete’; ‘you know the odds now beat them’ (although, unlike in most countries – where punters receive winnings plus their stake money – in NZ it is possible to win less than you bet) – ‘commenced operations in 1951’]... For many years before the establishment of the TAB, legal betting on horse races could be done only on the course, where the totalisator was run by the racing club under the auspices of the Internal Affairs Department. Private bookmaking on or off the course is illegal. However, every town in NZ had at least one illegal bookmaker. The TAB now has agencies throughout the country, takes bets on some overseas races and some other events within NZ.

[Sport]’s more exciting if you’ve got something on it - TAB

The TAB and the Lotteries Commission could be given a run for their money by other operators under a gambling shake-up proposed yesterday. Competition for race and sports betting and lotto – at present legally protected monopolies – could result from a plan to open up gaming in N[Z] to allcomers provided they meet entry tests which have not yet been specified. The proposal is part of a major gaming review by the Department of Internal Affairs which wants to replace a “mish-mash” of gaming laws with a single policy framework. The department’s proposals are far from being Government policy, let alone law, but the Minister of Internal Affairs... yesterday welcomed a single gaming framework as a positive step. The Secretary of Internal Affairs... said the general principle of opening all forms of gaming to all operators would also give N[Z] operators the chance to diversify. For example, the Lotteries Commission could move into such areas as gaming machines to expand its income base... [The] Government had the final say and could decide to restrict competition in specific areas... The department also proposes to allow all forms of gaming to operate for commercial gain. At present funds from gaming machines and housie have to go to authorised community and charitable purposes. To balance that, the department proposes a requirement for all forms of gaming to contribute to community purposes in an equitable manner. An economic study released yesterday by the department showed that the gaming industry – everything from housie to casinos – produced a \$3 billion turnover in 1995, projected to rise to \$5 billion next year. Of that total at least \$190 million was available for community distribution... The department’s proposals also argue that a more flexible and consistent regulatory environment would help N[Z] operators compete with the new technology being used overseas. Without such flexibility significant amounts of money could be lost to overseas-based gambling, for example, through “virtual” casinos already operating on the Internet.

...N[Z]ers and Cook Islanders will be banned from gambling on an “Internet casino” soon to be launched in Rarotonga, says the casino company’s lawyer... Bets would be accepted only from countries where it was legally permissible to do so... [He] declined to say how the technology would work against Cook Islanders and N[Z]ers trying to lodge bets over international computer networks... [The] opening of the casino was still a few months away... The *Cook Island News* yesterday reported that the company gained conditional Government approval to operate as far back as... October [1995] – the main condition being that Cook Island residents could not place bets or wagers of any kind with the casino... Legal technicalities are also reported to be behind the ban on N[Z]ers. Betting... was expected to come from Asia and Europe... Cook Islanders are expected to take jobs as computer technicians and staff processing bets. Other benefits will be increased revenue through the offshore financial centre. Odds for many sporting events televised in N[Z] are available from the Internet sites of British bookmakers. Credit card bets are placed by telephone but... an American bank had made significant progress in making secure payments possible directly over the Internet. Several trials have already been run in the U[S] by entrepreneurs who are hoping to bring the thrill of casino gambling to the Internet. A N[Z] Government report last week warned that punters using the Internet and other technologies to gamble overseas could eventually cost it hundreds of millions of dollars a year in lost duties, taxes and community handouts.

...Community groups... [which] risk... losing \$80 million... of... funding because Treasury could snap up lottery profits stand to lose at least a further \$25 million. The Chartered Clubs chief executive... said that at present about \$25 million a year of poker machine proceeds went to the community. But under proposed law changes licensees would be able to keep the money.

...A proposed shake-up in gambling... belonged in the rubbish bin... [because it] would leave charities and other non-profit organisations the losers, says Labour’s deputy leader... Income would be generated for commercial operators, and they would have little concern for the effects of problem gambling... “It would mean that large areas of fundraising by charities would be opened up to full commercial competition... There is no way that the large range of small organisations which, for example, run housie evenings... would be able to compete with the power of the British company... which is already investigating potential venues for use as commercial housie sites in this country.”

...The Government’s rake-off from lotto and Instant Kiwi will benefit charitable causes by \$140.6 million in the coming year. That is an increase of more than \$10 million on last year’s allocation... Of every dollar spent on lotto and Instant Kiwi the Lotteries Commission gives 20c to the Lotteries Grants Board. (Additional costs are 10c for taxes; 7c for the retailer’s commission; 7c on operational costs; and 56c on prizes)... [A total of \$1.065 billion in community grants] have been distributed since 1987 – ‘making a positive difference in our communities’. The LGB allocates money to its own committees and other bodies. They then allocate it to groups and individuals in each field. The board’s largest allocation is to an outside body – \$27 million to partly fund the... Commission for Sport, Leisure and Fitness. A further \$3.66 million will fund future Olympics athletes in the Sports 2000 fund; \$1 million for professional artists to attend a cultural olympiad, a festival to be held in each of the next four years as a build-up to the 2000 Sydney Olympics; and it has allocated \$2 million for community initiatives to celebrate the millennium. No allocations will be made for millennium grants until the Government has received a special report on the year 2000 celebrations. Creative N[Z], formerly the Arts Council, gets \$20.25 million and the Film Commission, \$8.77 million. The lottery general fund[of ‘\$20.75m’] supports outdoor safety programmes and drug and alcohol education. It has also given about \$500,000 for each of the past two years towards the treatment and prevention of compulsive gambling... [The] Minister of Internal Affairs... said he wanted the [LGB] to develop “a more strategic approach” to its allocations of profits in future[(from the remainder of the \$140.6m, ‘Welfare received \$17.6m – \$14.4m to organisations and \$3.2m to individuals; Community facilities received \$12.1m; Youth \$6.8m; Aged \$3.7m; Environment and heritage \$10.71m; Health research \$4m; Science research \$2m; and the Minister’s discretionary fund \$0.27m’)]. The 1997-1998 allocations would be based around two themes: building strong communities and strengthening national identity.

The... family have applied twice this year to the [LGB] for funds to buy a bigger and heavier van, but they have been turned down and told that they could not reapply until September 1997... In the past families could apply for... money every four years to allow them to upgrade vehicles to suit the changing needs of growing children. Now the stand-down period is six years... [The] family needed \$12,000 plus a good trade-in deal to cover the costs of a new van and for modifications, but the one-income family could not raise the money themselves. “I just can’t think what we are going to do now... Look for a fairy godmother?” A lottery board spokesman... said the rule change was forced by limited funds. Only 421 of 1117 applications last year could be approved by the individuals with disabilities

subcommittee within its budget of \$3.2 million. The board could help only about 30[%] of applicants now whereas four years ago that figure was closer to 50[%]. But the Muscular Dystrophy Association director... said... "Families should receive the money as an entitlement instead of having to go cap in hand begging for charity."

...IF ONLY... h[e']d come forward... earlier, he could[']ve claimed an \$8.4 m... fortune. The [23-year-old] from... Connecticut, bought the winning ticket to the state lottery on Friday, October 13, 1995, but showed up at a lottery office on... October 16, 1996 – [3] days too late to claim the prize.

...[*LATE LOTTO CLAIM* A Vancouver man has gone to court to have an 11-year-old winning lottery ticket dusted for fingerprints, hoping forensic tests will prove he is due the C\$10 million prize that was awarded to his neighbour more than a decade ago. The man filed a petition asking B.C. Lotteries to hand over the ticket to determine whether his fingerprints were still on it to allow him to claim the prize. He said he bought the ticket at a local 7-Eleven, placed it in his wallet along with C\$200 in cash, but lost the wallet soon afterwards. The wallet was found by a nearby gas station attendant and returned to him after the draw but the cash and the ticket were missing. A few days later, news reports identified his former neighbours – who have since moved and could not be found to comment – as the prize winners.' By the way, 'America's biggest lottery prize has been won by a millionaire']...

A \$A1.10 lotto ticket... bought in[a] Melbourne suburb... has won the buyer \$A11 million... the biggest single lottery prize ever won in A[US]...

'A small syndicate of friends from a NSW country town are the richest lottery winners in AUS's history after claiming a record \$A17.53 million powerball jackpot yesterday. One of the winners said their magnificent luck began when, while holidaying in Sydney, they were just about to board a Manly ferry and were handed a pamphlet promoting the powerball jackpot. When the ferry got to Manly, the friends rushed to Humphreys Newsagency and bought a \$A6.30 Powerball 12 ticket – which scored the winning numbers. "We are totally flabbergasted and haven't a clue how to spend it," he said.'

...a 'record jackpot of \$US295.7 million for the Indiana Powerball lottery – the biggest lotto in the history of the world – was shared by a \$130 syndicate called "the Lucky 13",' while 'the store that sold the winning ticket got a \$100,000 bonus.'

...The Consumers' Institute has fielded calls from people sent subscriptions... by mail order... inviting them to take part in El Gordo... which translates into The Fat One... [and is] promoted as "the biggest lottery in the world, with a huge billion US dollar prize pool, the best odds of winning and biggest cash prize jackpot payout of them all." For \$US149.90, gamblers buy a "gold medal" subscription claiming to offer 83,352 chances of winning \$US1.2 billion in prizes, the \$US99.90 "silver medal" subscription offers 41,676 chances to win, and the \$US69.90 "bronze medal" subscription offers 20,838 chances to win... N[Z] punters tempted to buy tickets... are taking a big risk, says[the] industry watchdog... The [Institute's] chief executive... advised anyone who received a subscription... to not "touch it with a barge-pole." ...It was... illegal for the lottery to be sold in N[Z] because it did not have approval from the Minister of Internal Affairs... Even if the lottery were subject to the same regulations as those in N[Z], there was no guarantee that the ticket or subscription agents were legitimate. Internal Affairs did not have sufficient knowledge of the Spanish lottery to comment on its reputation or integrity.

...['A Dunedin man, convinced he'd won an overseas lottery, started spending freely. When he found out the lottery was a scam he committed suicide.'

...an American] may be the unluckiest man alive, living proof that money cannot buy happiness. In 1988, he won \$US16.2 million... in the Pennsylvania Lottery. Since then, he has been convicted of assault, his sixth wife has left him, his brother was convicted of trying to kill him and his land-lady successfully sued him for one-third of the jackpot... [after claiming] she shared the ticket with him... The crumbling mansion he bought with his winnings is half-filled with paperwork from bankruptcy proceedings... The gas was shut off, and he feels lucky to have electricity and a telephone. "Money didn't change me. It changed people around me that I knew, that I thought cared a little bit about me. But they only cared about the money," says... [the] 58-year-old former carnival worker and cook... He hopes to rid himself of the lottery albatross by selling the 17 remaining instalments on his winnings, worth nearly \$5 million... He... hopes to make enough from the sale to pay off his house and... \$500,000 in debts, not counting taxes and legal fees and... have about \$700,000 left... But bad luck still dogs him. The Pennsylvania Lottery is trying to block the sale because, it says, winners are not allowed to sell future payments under state law... He... plans to spend his life as an ex-winner pursuing the lawsuits that he has filed against police, judges and lawyers who he says conspired to take his money.

...['The winners of a \$US197 million lotto jackpot in Boston last week should talk to a former winner before they do much celebrating. Just a year ago, he was the sole winner of a \$195 million Powerball jackpot. After taxes and a lump-sum-payout deduction, he took home \$67 million – a lot of clams for a retired electrician in Streamwood, Illinois. End of story, happily ever after? Flash forward to the present: some of his closest pals no longer talk to him. He's not welcome at his neighbourhood pub, and his former bartender buddies are muttering "lawsuit." The story starts at Bill's Pizza Pub on May 20, when, with the Powerball jackpot overflowing, two bartenders collected \$5 bills from several pub regulars and drove one hour to Wisconsin for tickets. The next day, they handed out sealed envelopes – one of which contained the winning ticket. Unable to read it without his glasses, the ticket-holder handed it to one of the bartenders to read. "My hands were shaking. I took a step backwards and almost fell," she remembers. "That was the first time he told us, 'I'm going to take care of you, too'." The winner quickly dashed off cheques to the bartenders for \$10,000 each. But pub regulars say that he'd promised the bartenders far more. (One bartender asked for \$3 million, and says he offered \$500,000 for them to split.) Maybe the regulars at the bar he used to call "my place" wouldn't be so hard on him if they thought he'd handled himself better. In the weeks after his win, regulars say, he often turned the pub into the court of the lotto king. He would order a round of drinks for the house, then lean over to the bartender and say, "Except him!" while pointing at someone he didn't like. Other times he would complain, "You don't know the problems that that money has brought me" – infuriating people who were struggling to pay their bills.'

... 'The road to riches for the Maine couple who won a \$US41.5 million Powerball jackpot became littered with legal papers yesterday when four people filed a lawsuit seeking a share. The four worked with one of the lottery winners and claim the winning ticket was one of 190 she bought for 19 people in an office pool. However, a lawyer for the winners said he had records of the Friday night purchase of the tickets at a Cumberland Farms convenience store just across the border in Rollinsford, New Jersey (Maine is not part of the Powerball lottery that is sold in 21 states and the District of Columbia), which show 190 tickets were bought at 7.47 pm. Two minutes later, an additional 20 tickets were bought for the buyer's family.' ■ 'A ticket-holder or syndicate in southern Italy is wisely keeping quiet. The lucky holder of the winning ticket in Super Enalotto has won \$NZ91.5 million.'

...THERE is no chance of [an Italian] becoming hooked on gambling. After picking up \$132,000 in the Scratch and Win state lottery, he splashed out on a red Ferrari and dutifully paid to redecorate his elderly mother's house. His good fortune proved jinxed. Six months later – recovering from a nervous breakdown, the Ferrari repossessed[and] his mama's new furniture at risk from angry creditors[– he] is one of hundreds of irate gamblers taking the Italian government to the European Court of Justice for refusing to pay out \$44 million in winnings. The government claims... a possible "administration error" led to a freak number of winning tickets... At first the ministry promised that "citizens who bought the tickets in good faith must be protected", raising hopes among the "winners" that their cash would be forthcoming. The ministry has now asked for legal advice from the attorney-general's office about its liability, heightening fears that it is trying to avoid paying. The mood is turning angry. More than 200 people with winning tickets have formed a pressure group and were refusing to pay their taxes until the money was paid.

...[NZ Post]'s newest promotion[is] a scratch-and-win ticket and stamp combination designed to promote the centenary of cinema in N[Z]. The company says the product is a world first... About 57,000 prizes are available, ranging from cinema tickets to a trip to Hollywood. [Incidentally, 'a woman faces child abandonment charges after leaving her 7-week-old daughter in the Sky City casino carpark to spend 3 1/2 hours gambling away \$100. The baby was seriously dehydrated when security officers found her locked inside a car at 1.20 pm yesterday. It hadn't been fed or given a drink since 8 o'clock. She was kept in the Starship hospital overnight for treatment. Child, Youth and Family Services staff will be involved once the baby is discharged.'

...‘a 19-month-old AUSn toddler remains in a critical condition in Melbourne after he suffered severe internal injuries from being left in a baking hot car on Wednesday. Police said when the boy was found in the carpark of a Ferntree Gully hotel, in Melbourne’s east, the temperature inside the car was up to 65deg. His mother was allegedly playing gaming machines in the hotel for more than two hours.’]

...*Children are tragic victims of pachinko passion...* MESMERISED by the noise, lights and motion of the pinball machines, [a woman] had forgotten her two young children playing outside. Then her five-year-old daughter staggered, bleeding, into the gambling arcade to die in her mother’s arms. She had been hit by a car. The death... has highlighted a problem largely ignored until now. [The girl] was just one of about 30 small children killed so far this year after their parents abandoned them in carparks while they indulged in the national craze for pachinko – a Japanese version of pinball. Pachinko is a \$180 billion a year industry in Japan, played in thousands of cavernous “parlours” up and down the country. Aficionados say the hypnotic motion of the balls makes them forget the drudgery of working lives. A campaign to attract more women to the game has had tragic results. Millions of mothers have flocked to the parlours. Two months ago, a woman left two sons inside a car parked on a Tokyo side street while she played pachinko a dozen metres away. The brothers, aged one and two, sat strapped in their seats as the sun beat down on the metal roof and turned the car into a furnace in which they died. One 18-month-old child drowned in a ditch outside a parlour. Another was run over by a train. A five-year-old girl, left to wander around a pachinko parlour, met a stranger. She has not been seen since. Public prosecutors are considering charges of criminal negligence against the mother of the boys left to die in the car. This could make legal history in a country where police rarely interfere in cases of child neglect. “In Japan, children are generally regarded as private property, not members of society with human rights,” said... a sociology professor. Dismayed at the bad publicity, pachinko parlours have launched an offensive to cut down on child neglect. Some have put up posters reminding parents of their responsibility.

...Target \$1 billion could be the slogan for TAB administration and staff this season. “Our goal is a billion dollar turnover and we believe it’s achievable,” the TAB’s business analyst... said. “We finished the 1995-96 season with \$921 million, a 10[%] increase from the previous year. Considering the tough competition out there, we are really pleased. It’s a brilliant result... One growth area we can see this season is in Sunday betting. We have a greater number of Sunday racedays, 41 compared with 26...” In meeting its responsibilities to discourage compulsive gambling the TAB is now displaying in all its 500-odd outlets a graphic poster about the dangers of uncontrolled betting.

...*I’m so very proud of TAB, says chief executive...* “We’re on a roll. N[Z]ers are coming back to racing.” ...[the] TAB... announced a record... turnover... while... racing... clubs who face crippling funding reductions have aimed... salvos at the TAB for not distributing more profit... But... the investment in sports betting continued... Further changes were also ahead in targeting young Kiwis – the first of a network of new-look TAB Express centres is being tested in a bookshop in Palmerston North and within the next 12 months they will spring up in malls, cinema complex centres and video parlours... [Meanwhile,] TAB phonebet workers have voted against a pay offer which would have given half of them a 30[%] rise. Their union wanted the casual workers made permanent. Management agreed to this and a big rise for about half of the 500 staff, but offered the rest only a small rise.

...The number of[NZ] women getting hooked on... gambling is rising... About 30[%] of the... people who sought help from the... Compulsive Gamblers Society... were women... Most... had lost everything.

...The number of addicted gamblers needing urgent help is rapidly rising, a confidential report reveals. The hard-hitting report, written for a Government-initiated committee on problem gambling by the northern regional health authority... has been kept strictly out of public hands. The report... was purposely being guarded because the Government and betting industry wanted to keep a lid on the problem... said... [a] *Herald* source... The report... suggests it would be fairer if the betting industry paid for treatment and prevention services – possibly through a problem gambling services tax – rather than the taxpayer or innocent family members. Alternatively, the Government could commit some of \$125 million collected in gaming duties to treatment services, rather than have it go into general coffers. “However, this approach may find less favour with the Government in that it could reduce the tax revenue available for other purposes and may be seen as acknowledging Government responsibility for funding of treatment and preventive services,” the analysis says.

...*Government playing roulette with gambling* IT HAS long been a contention of mine that governments cynically extend gambling facilities as a sop to the populace, a diversion from the realities of life where the social gaps between rich and poor seem to be opening up like a lanced boil. Once the poor turned to cheap gin as their solace. Today it seems to be the weekly Lotto draw, poker machines and scratch cards, and a flutter on the TAB or at a casino. Now we have sports betting on a growth pattern, with TV chiming in with its own weekly programme aimed at making your losses a subject of entertainment... [In] an effort really to stymie the cries of hypocrisy which might echo around my ears, I should admit I have been known to back a horse or two, even owned a couple in palmier days... Notwithstanding this, I have grave reservations about the proposals of our public servants, that gambling here should be thrown open to competition... Gambling is here, and efforts to outlaw it, or even to reduce its obese growth would tend merely to force it underground. So, it has to be controlled and the profits should not go into private pockets, but be returned to the community in various forms... In 1985, gambling turnover was less than \$1 billion, but more than doubled in the next five years following the introduction of Lotto, poker machines, [and since then] the Christchurch casino... and the Auckland one [have opened for business]. Turnover has now topped \$3 billion and is expected to reach \$5 billion by 1997. Is that inflation or simply stupidity? There is one certainly to bet on – addictive gambling problems will grow with the turnover.

...Yesterday, in Hamilton[a]... man... unemotionally and with a terrible forthrightness unwrapped the sickness in society that is compulsive gambling. For more than a decade, back in the 1970s, he was one of Hamilton’s most notorious crooks. And what he says is potent. “If compulsive gamblers don’t recognise they have a disease... there are just three options – prison, insanity or death.” He’s been there, and looked all three options in the face. “Gambling is insidious because it’s socially acceptable, not like alcoholism or drug addiction. It’s not seen as a problem. But there are thousands of compulsive gamblers in this country, men and women, young and old, right across the spectrum of society... Every bit of money I got as a teenager, legally or illegally, was spent on gambling... Like every other gambler, I was looking to the next race meeting or card game, hoping my luck would change... At 3pm every Friday I’d get a real rush of endorphins, knowing the races were about to start. One day I lost \$17,000 on two race meetings, and at the end of the day I was really depressed, not because I’d lost but because there was no more racing that day.” He turned to robbery, sold hard drugs, became involved in pornography, committed fraud, received and sold stolen goods. All the money went on gambling... He has a raft of horror stories about others at least as bad as he was. “They’re not criminals. They’re sick... and sending them to jail won’t help...”

...Promotional material for Harrah’s Sky City Casino urges punters to “come out and play” – but it has turned out to be a much wider playground than expected... [because along] with the gamblers and spectators have come sex workers, drunks, street kids, vagrants and crooks – all attracted to the glittering lights, bulging wallets and opportunities... The Auckland police commander... confirms that the casino has boosted workloads for his troops[, although]... the casino had concentrated crime in one particular area... In recent weeks police have dealt with an “erratic” punter falling to his death, cheats, assaults, abandoned children, a person carrying a pistol, drug deals, loan sharking and drunken behaviour. On top of this, the fraud squad has been landed with more than 60 cases to investigate, largely through dud cheques and stolen credit cards, totalling over \$50,000. Since the opening... central police have been called to... [make] about one arrest every second or third day... “We had to go to the site six times in one evening. Quite frankly we could do without that amount of work,”... [A d]etective... from the Asian Crime Squad, said... “The impact from the Asian crime point of view is that illegal gambling houses have closed and they are all down there at the casino.” He

said the... biggest... problem... within Harrah's walls... [was] loan sharking. A 38-year-old Thai woman was banned from Harrah's for two years after being caught loan-sharking last month. [The d]etective... said previous cases had seen gamblers borrowing money at exorbitant interest rates and getting into financial trouble. He had not heard of any serious cases at the casino, although it was early days.

...MPs at a finance select committee yesterday were shocked by evidence of escalating gambling addiction rates since the introduction of casinos. Members indicated they had doubts about the wisdom of the Wellington casino going ahead, and about the law change that made casinos possible, when they were presented with an estimate by the Compulsive Gambling Society that up to 100,000 N[Z]ers could have severe gambling problems... based on international calculations that only 2[%] of problem cases were likely to come forward. In its first year, 1993, the society's hotline had logged more than 7000 calls... During that period, more than 1000 people had sought help and, of gamblers, almost 90[%] had been rated as being highly suicidal, requiring immediate intervention. About 70[%] were involved in organised criminal activity to sustain their habit... [C]alls for help had increased 250[%] since 1993... Trends during 1996 indicated the hotline would have received about 25,000 calls, with about 2500 callers requiring direct assistance. "It is our view that problem gambling is a rapidly escalating social, economic and health problem, both in terms of treatment availability and substantial... ongoing funding to sustain those people... with advanced gambling addiction," the society's submission said... [Furthermore,] if funding provisions of the Gaming and Lotteries Amendment Bill were not passed this parliamentary session, the society would be out of money by next month... Although gambling machines remained the biggest means of addiction, the introduction of the Auckland casino alone had brought a 50[%] rise in calls... Of first-time callers to the society, 52[%] had problems with gaming machines, 27[%] with racing, and 20[%] with casinos. - 1996

The cabinet minister with responsibility for gambling says it is the most insidious form of addiction... The Auckland casino attracted a huge number of people, he said. "You'd have to be a fool not to think that at least some of them may not be in a financial position to spend that sort of money... I see hundreds and hundreds of people sitting playing on poker machines and... goodness me... I just hope the family is being fed this week." ...He was not a "wowser" and did not want to stop people from enjoying casinos. "But at the same time you can't help feeling that we really need to be sure of what the impact is from an economic point of view, from a social point of view." ...[in response,] the casino's chief executive, said... "If the Minister of Internal Affairs feels further social impact research is necessary that is his prerogative, but he should be aware that... the... casino had a positive economic impact and had... substantial community support..." [An addiction] specialist... said another social impact report was pointless. "It's really just stalling tactics. It's a bureaucratic way of not doing anything... If the casino is getting 15,000 clients a day... you are looking at 300 people a day with serious problems... It's like an epidemic at the moment."

...On Sunday, the Minister of Internal Affairs... said proposals for more casinos suggested there should be a social impact report on all gambling. Yesterday, both the Labour health spokeswoman... and the Christchurch Casino chief executive... voiced support for such a report...

The law prevents casinos banning problem gamblers from their premises, the chief executive of the Christchurch Casino... said yesterday. His company had asked the Government to give the Casino Control Authority power to ban problem gamblers, but had been told this would not happen... [He also] said the Government took 4[%] in gambling tax from casinos. It had collected \$22 million since November 1994. The money was meant to be earmarked to deal with the negative effects and problems with casinos. Not a cent had been given to address those concerns. "The Government must decide whether it is indulging in a tax-collecting exercise or is worried about gambling,"... His casino had a self-barring scheme for problem gamblers and it paid for the first consultation of anyone wanting to take part... [Last week, an] Auckland psychologist... said problem gambling was one of the country's fastest growing but most ignored social ills. Conservative estimates suggested there were at least 12,000 pathological gamblers... in N[Z].

...N[Z] has a ballooning problem of addict gamblers, many of whom are driven to suicide... The options for punters grew during 1996 with... an increase in gambling machine licences from 8000 to 15,000. Sports gambling began and the first \$5 million lotto draw was made.

...each week, hundreds of thousands of... [N]Zers gamble with Lotto], spending an average \$8.2m on what has rivalled rugby as the biggest game of the decade. When Lotto celebrates its 10th birthday... [with] a \$5 million superdraw... 119 Kiwi millionaires (as at June 28) and more than 1900 first division winners will reflect on the past 520 draws... And Lotto looks set to grow into the millennium. Although the odds of winning[the first division] are just one in 3.8 million, N[Z]ers are hooked. Producing a \$1m prize pool... and 27,650 first night winners [from the five prize divisions on its first night in] 1987, Lotto was always going to be popular – and N[Z]ers have continued to splash out on it ever since. In 1989, Instant Kiwi or "scratchies" were launched, followed by Lotto Strike in 1993, Daily Keno in 1994 and Telebingo last year. Market research conducted by the Lotteries Commission shows 70% of the adult population are regular Lotto punters[(up from '66% in 1996')], spending an average of \$7 each week. Most are women and 50% of them wait until Saturdays to buy their tickets. An average of 500,000 viewers tune in to watch each live draw [at 8pm on Saturday evenings]... Those who make big profits... are issued with a winners booklet when they pick up their cheques. It advises winners what to do with their winnings immediately and then offers a checklist for the future... It also advises on investment, paying off debt and whether to do what everyone expects you to – quit your job. ['■ Got a burning question? Write to What's Your Question, Sunday News, PO Box 1327 Auckland, and we'll try to answer it for you. Because of the large number of letters we receive we cannot promise to answer them all.' Instead, we'll try to find the question which seems most relevant. For example, this week's question was chosen because it asked: 'As I have never heard of anyone winning any major prizes in Keno, I was wondering if you could tell me how often major prizes are made?' According to the Lotteries Commission, which runs Keno, no one has won the top prize of \$1 million since the game was started in October 1994. To do that, you need to buy a \$10 ticket with 10 numbers on it and all 10 numbers need to be drawn. The biggest prize won so far has been \$500,000. To date nearly 300 people have won a prize worth more than \$10,000.']

...SUDDEN wealth and insane happiness[will] clutch the imagination today as the Lotteries Commission hypes us up for... a birthday draw. It tells us... that "all N[Z]ers have shared \$1 billion." Work that out if you can. The policy of razzle-dazzle advertising, a few big splashy prizes and chickenfeed for other lucky punters, seems to be working... Past observation says... some... bloke from the backblocks, who thought he was buying a ticket in a chook raffle, is about to be buried in banknotes. The rest of us will be feebly grateful to get anything at all.

...A sickness beneficiary who stole a man's lotto winnings has been remanded in custody... [The man, aged] 25, admitted stealing \$593 from a 53-year-old man he struck up a conversation with in a supermarket. The police prosecutor... said the [elder man told the younger man] he had just had a big lotto win. [The younger man] saw a plastic money bag in the man's pocket, grabbed it and ran off... When police spoke to [him], he said he stole the money on the spur of the moment to buy drugs.

...[A lotto millionaire wishes she had never set eyes on the money after her husband banked the winnings and offered to give his mother \$500,000. The winner, a 48-year-old mother of four, with one grandchild, did not want her mother-in-law to have the money. The Rarotongan woman, who lives in South Auckland, scooped the \$1.3 million first-division prize a week ago, but friends said she was now devastated. The family are not well off, with the winner working at the airport and her husband a sickness beneficiary. They have been married 30 years and the woman says she still loves her husband. But she has told him if he gives his mother the money he can go back and live with her. The winner went back to work last Wednesday, but was so stressed that her employer took her to a lawyer, who said a family meeting was planned to discuss the issue. A spokeswoman for the Lotteries Commission confirmed that she had received a telephone call from the woman's employer. He had asked the commission to cancel the cheque, but it could not do that. Lotto was a "bearer's ticket game," which meant anyone turning up to a Lotto outlet with a winning ticket must be paid, she said. Disputes over ticket ownership were rare and tighter regulations were unrealistic, she added. "What are we going to do? Ask everyone presenting a fifth division-winning ticket for their

driver's licence or passport?" This year, a \$1 million donation from a Lotto winner to her Mt Roskill church split the congregation. A mother-of-five won \$2 million and gave half to rebuild her local Samoan church. A police armed offenders squad was called to the church when the dispute turned nasty.'

...a 'Samoan Methodist church youth club ran an unlicensed raffle with a \$25,000 prize for the ticket number matching the last 4 of the 7 lotto numbers drawn that week from the 40 available. However, the club refused to pay out to the winner because the ticket-seller didn't pass the \$20 on to the club.' In related news, a]n Invercargill man had a sleepless night on Saturday after his winning... scratchy ticket was ripped... in an excited tussle with his flatmate... [after he'd] announced... that he had just scratched \$100,000, but didn't let go when his disbelieving flatmate grabbed for it. However, excitement turned to anxiety as the ticket was torn into three pieces. The nervous winner[, who]... also collected about \$30 in smaller prizes off other scratch tickets on the raffle board he won in a fund-raiser for the Southland under-13 soccer team... did an urgent repair job with sticky tape, and then waited until first thing yesterday when the Lotto shop reopened. "Luckily enough... we could validate the ticket," said the owner of the... Lotto agency.

...Lotto sales have fallen for the first time since the game began a decade ago, prompting fears that N[Z]ers are turning to harder forms of gambling. Gambling experts are concerned that N[Z]ers want more than just a weekly thrill on Saturday nights and are regularly playing the pokies at clubs and casinos. In the second half of last year, N[Z]ers spent \$4 million less on lotto than expected, buying \$234 million of tickets – \$63.24 for every man, woman and child here. Sales dropped \$1.3 million from the same period in 1995, the Lotteries Commission half-yearly report revealed yesterday. Instant Kiwi sales also dropped, from an expected \$60.6 million to \$57.2 million... The commission blamed "a sluggish economy" for the drop in interest in its two most popular games. This will impact on community groups bidding for grants... Lotto [i]s facing increased competition... It now had to compete with a surging number of poker machines... Last year, N[Z]ers pushed \$1.1 billion through slot machines and spent almost a billion dollars at the TAB. Auckland's casino won \$290 a day from each of its 1050 machines in the second half of the year – up from \$250 in the first six months... But the Lotteries Commission chief executive... said lotto was competing for business with the retail industry rather than the TAB and poker machines. Only 17[%] of the 1.2 million people who bought tickets each week had gone into a TAB and 4[%] – about 50,000 – went once a week. "We are targeting completely different markets. We are in the gaming industry, unlike the casinos and TABs who are in the gambling industry." ...An addiction psychologist at the Auckland School of Medicine... said N[Z]ers were getting addicted to "electronic gambling," which was more dangerous than a weekly flutter on lotto. "You get quick returns. You can make 10 bets a minute," he said. "It's a buzz and it's... difficult to stop." ...the Compulsive Gambling society, said lotto had "normalised" gambling in N[Z].

...N[Z] may be struggling through a retail downturn, but it seems there is plenty of money around for a flutter. Latest statistics show that gamblers lost \$849 million last year... Gaming machines in pubs and clubs, lotto, keno and other Lotteries Commission tickets, casinos and race horses cost the N[Z] punter dearly. What they actually invested to produce the huge deficit is anyone's guess, but the loss they took was \$174 million higher than 1995's \$675 million tally and equivalent to \$235 from the pocket of every, man, woman and child in N[Z]. The big new player in the odds game was Auckland's Sky City Casino... About 13,000 people have visited the casino each day since it opened... walking out lighter by an average of \$45... Despite being a relatively new form of gambling the casinos' income rivalled that of older forms of gambling such as the pokies and TAB betting. The high losses by casino gamblers were linked to a 66[%] increase in the number of callers to a problem gamblers' hotline.

...The Compulsive Gambling Society says the... \$849 million... figure shows gambling is a booming industry – and a ballooning social problem which must be looked at immediately. "It's now taking on juggernaut proportions. We can no longer pretend we do not have a serious gambling problem... Do we wait till it reaches the billion-dollar mark before we admit we have a serious social issue on our hands?" ...A[US]n punters lost \$9.47 billion on all gambling in the year to March 1996 – a per capita loss more than double ours. N[Z]ers aged over 18 lost the equivalent of \$326 each while A[US]n adults lost \$707 based on 1994 adult population figures in both countries... [A recent AUS]n study showed that only a quarter of the money spent on gambling in Victoria came from disposable income; half used money meant for household needs such as food, rent and power and a quarter came from savings. The situation is similar here... More people are gambling, they are spending a lot more and punters are likely to be those who can least afford to gamble – beneficiaries and the lower-paid. And problem gamblers are getting younger. Five years ago the average age of people going to the society for help was 52; now it's just 29. And women in their mid-20s, particularly Maori women, now make up 36[%] of its clients... [R]estricting advertising, tightening age restrictions and stopping addictive gambling operations would help stem the increase of addictive gamblers... In Christchurch, 107 people have barred themselves from the country's first casino because of their gambling problems – up 235[%] since September 1995 when 32 people took out self-barring orders for a specified time. "But there are many others who have not recognised their problems and will beg, borrow and steal to continue their habit,"... N[Z] has... more... poker machines... per capita than any western country, according to the Compulsive Gambling Society... Higher stakes and the "chance of that big payout" motivated gamblers on losing streaks to continue. "Gambling creates a buzz, it helps you forget other things happening elsewhere. Anything that can do that has the possibility of creating dependency. You come to rely on that effect... Gamblers remember that first win and their memory of that can be highly motivating especially if they are in a difficult and stressful home environment."

...Compulsive Gambling Society officials have gone to church in a bid to stop more Pacific Island families being "totally ruined" through gambling. The society said yesterday that more and more Pacific Island people were being forced to sell their homes and other property to meet debts incurred through gambling... "Most of them have taken out loans in order to keep gambling. The loans have become so huge that there is no other way out of it." ...A recent report on gambling prepared by North Health found that Pacific Islanders were six times more likely than Pakeha, and three times more than Maori, to become gambling addicts... The society, along with the Pacific Islands Drugs and Alcohol Services, have met Pacific Island church leaders to address the problem.

...Operators of a hotline for problem gamblers say they have been ditched for criticising the gambling industry... The Compulsive Gambling Society says it has been axed as part of a "sweetheart deal" with the industry, which wants a complacent company that will not oppose the expansion of gambling... The hotline may now be run by a private A[US]n company... The society director... said it was a nonsense to have a private company running the service and that Government was doing nothing about the victims of gambling. [He claimed the NZ] hotline was larger than anything similar in the world... and... had academic standing...

THE agency that distributes profits from Lotto... will cut a \$1m fund for science research, because more government money is now available for scientists... [T]he money had[already] fallen from \$2m... Universities will be worst hit by the scrapping of... [the] fund for science and research... [S]taff said the fund would be missed because it was the only money available for expensive equipment. Other bodies gave mainly to specific research projects... The L[GB]... is... also... cutting a... fund that hundreds of disabled people rely on to pay for their special equipment... It... spent \$3.7 million last year on vehicles, scooters and other mobility aids for 413 people who did not qualify for government assistance. It also bought fax machines and other aids to... increase independence. But with growing requests for help and stagnant Lotto profits partly due to increased competition from casinos and sports betting, the board has decided to drop the fund... The board said it had been put under extraordinary pressure by the number of disabled people seeking help. Last year it received requests for a total \$11.8m from 1149 people.

...An organisation for people with disabilities wants the Government to pick up the slack after an announcement from the L[GB] that it will no longer fund individuals with disabilities... The cuts resulted from "increased pressure" on lottery profits. But the president of the Disabled Persons Assembly... said tight Ministry of Health criteria meant grants board money was the only way some people could afford essentials, such as a

scooter. People should not miss out because they did not have the money. "This is another blow to disabled people and shows the failure of resources to meet their needs. Someone has to accept responsibility for these people."

...Diagnosed with muscular dystrophy two years ago, [a five-year-old] West Harbour boy is one of thousands of disabled people who will never receive funding from the... L[GB] for a specially modified car to get round Auckland... Now [he] will have to wait until he is 18 to apply to the regional health authority... Even then he would get the money only if he was working or in training. But [his] disease means he will probably never work[, and he]... may die before he has the chance to apply... [because] the life expectancy for people with muscular dystrophy is the late teens. Meanwhile, [his] mother... has been left wondering who will help to pay for a larger car with a wheelchair hoist, which will be needed within the next two years... Disability groups say the board's decision is annoying but understandable because the lottery money was filling an essential need that should be paid for by the Government. Government ministers are cagey about who – if anyone – will pick up the tab. The Minister of Health... says disability support services money is already fully committed... The top man at the... L[GB] yearns for the halcyon days of the late 1980s, when the board had more money to give away than it knew what to do with... [He] knows more than most how hard cuts in grants... will hit people with disabilities. [He] broke his back in a Navy accident 28 years ago and has been in a wheelchair since... [He] admitted yesterday that he did not know how the 700-odd people still demanding mobility equipment will survive... The board's own subcommittee is concerned about lack of assistance... A report written before the cuts announcement and released under the Official Information Act says many disabled people have no way of achieving mobility and independence... "These people are trapped in their homes," the report said.

...READERS of this column will know that I don't get angry very often. But I could barely contain my rage, my disgust, at news that the L[GB] has decided to whip the funding out from under disabled people... The board's priorities are staggering... when you look at the list of things it is spending money on this year. It's required to provide money for "worthy community causes", but within that brief it has a pretty free hand... What are these "worthy community causes" that are so much more important than helping the disabled? For a start, there's \$6m for what is blandly described as "marae restoration and development". This is almost double the sum stolen from the disabled, but there's no plan to whip the marae money away just because profits aren't increasing. What on earth is the justification for providing \$6m for making maraes look nice? Why can't the people who use maraes pay for prettifying them? Then there's \$27m to the... Commission for Sport, Fitness and Leisure, plus a further \$3.7m for the Sports 2000 Fund. This is money for fit, healthy, uncrippled people... who can't be bothered raising money themselves for their own recreation, for their fun times at weekends. Looked at another way, it's \$30m to help people such as footballers... run the risk of turning themselves into cripples by breaking their legs, necks and backs. That's their lookout, of course, and I wouldn't be making a fuss about \$30m being wasted on sport, or all the other more or less harmless idiocies, if the disabled were still going to get their measly \$3m.

...Criticism by members of Parliament over the \$6 million allocated for marae from the L[GB], should be ignored, says a Mana Maori Movement spokesman. [The spokesman] said the remarks... showed how little they understood the plight of Maori. He doubted there would be so much criticism if the money was going to churches or community halls.

...A controversial decision to cut lottery cash for disabled people was made to spark public debate, says the Minister of Internal Affairs... [The minister] reversed the decision yesterday...

The Federation of N[Z] Youth Organisations has condemned a \$1.8 million cut in L[GB] youth funding. The federation says the cut – from \$6.8 million... to \$5 million... – is a "kick in the teeth" for young people.

...The Government has come to the rescue of services for elderly people suffering from abuse and neglect, with \$340,000 funding for Age Concern. Funding... previously came from the L[GB], which announced earlier this year that it would no longer... support the seven programmes.

...The Lotteries Commission yesterday announced a record profit of \$134 million, achieved in what it said was a tough year.

...New Government rules governing lotto came into effect yesterday, allowing the Lotteries Commission to now award prizes to losers. The chief executive... said that under the 1986 rules, [additional]prizes could only be awarded to people who had already won a prize. Now, for example, a draw could be held from everyone who didn't win any money in the weekly draw... Instead of cash, lotto punters could now win cars, holidays or other prizes... "It is a way of dragging lotto into the second decade."

...Lotto holds its first mid-week draw tomorrow night with a \$2 million prize draw... A two-hour TV special includes... [additional prizes such as] Queensland holidays and giveaway cars.

...[A VW car, \$2000/week for a year, and a night at Auckland's Sheraton Hotel plus \$250 spending money await 6 punters who don't know how lucky they are. The bonus prizes from recent Lotto draws haven't been claimed, prompting a Lotteries Commission call for players to check ticket serial #s.]

...Someone out west is missing out on over \$100,000 in uncollected Lotto prize money. The bonus ticket entitles the person to \$2000 a month for the rest of the year. The ticket was sold at Swanson Lotto, where the co-owner says she's got all her regular customers to check their tickets so now suspects the ticket buyers could have been visiting the area. She says the shop has sold 24 second division tickets but this is the first time a major prize winner hasn't picked up a prize. However, one other Lotto incident does stick in her mind, from when the couple owned an outlet in the city. "A fellow rushed in and said he hadn't had a chance to check his tickets. He pulled out these crumpled up tickets and my husband put them through the machine." He was extremely happy to find one ticket had \$750 on it. "No, look at it again, mate," we said. The man had actually won \$750,000, and had had the ticket crumpled up in his pocket for many weeks.' □ 'Over \$6 million is unclaimed' but this weekend's Lotto draw will feature a bonus draw for 'every ticket to be in with a chance to win \$1.5m after someone failed to claim their prize within 12 months.'

...A 40-year-old man from Passaic, New Jersey, claimed a \$US23.7 million lottery win just before the ticket expired, saying he fished it out of a drawer after hearing reports about the jackpot. The winner astonished lottery officials by sending his ticket through the mail. "It wasn't even certified or insured mail," said a lottery spokeswoman. "It's amazing." By the way, a] 30-year-old Finn won 1.4 million markka (\$450,000) on the lottery – with the wrong number. A television announcer, reading out the result in a live broadcast last week, got wrong one of the 10 numbers in the winning sequence... The state-run lottery only noticed the error the following day and decided to honour... [t]he wrong sequence... Asked if he was planning to reward the announcer... the... jubilant... [winner] said: "If she ever drops by, I'll buy her a beer."

...An inquiry into a fiasco in Italy's richest lottery has recommended that a punter's contested... \$1.9 million... win should stand. During the live draw four out of 10 numbered balls got stuck in one of the machines used to select the winning tickets. Organisers pressed on regardless after failing to dislodge the balls with a primitive shove and announced that ticket U-527423 had won... Later they changed their minds and decided to give the prize to someone else. However, three magistrates... [said] the prize should go to the original winner... [In further news from Europe, a] West Yorkshire man who won almost £1 million in Britain's National Lottery from a ticket bought with his last pound said yesterday it had brought him only bad luck. The court where... the 36-year-old... former dole claimant... appeared on a drink driving charge heard the pressure of the win had forced... [him] to separate from his partner and four children.

...A jealous boss who... had refused to pay a £26 subscription to his office lottery syndicate just two weeks before the 33-member group won... a £10 million Lottery jackpot has been sacked for gross misconduct following allegations of fraud. The staff's good fortune turned... the £35,000 manager of Camden Council's homeless persons department, into a compulsive gambler, a disciplinary hearing heard. He was accused of ordering £3,000 of computer equipment without approval, then trying to sell it and pocket the cash.

...The British Government attacked the national lottery operator Camelot Group Plc on Wednesday after the consortium announced a 40[%] rise in its executive salary bill while the sums it raised for good causes fell... to £1.27 billion... in the year... from £1.42 billion 12 months earlier... Total

sales... fell 10[%] to £4.7 billion. The company's profit before tax declined [8%] to £70.8 million... The pay package of the chief executive... increased by 53[%] to £590,000. To add to the company's embarrassment, Camelot[, which is]... owned by a consortium of five British and foreign companies... was forced to release the results several days early after they were leaked to a trade magazine. The Government repeated its intention to hand the lottery over to a non-profit-making organisation when Camelot's seven-year license expires in 2001[, and]... promised legislation later this year to reform the lottery... Launched in November 1994, the lottery is played regularly by 30 million Britons who dream of getting rich quick with jackpots that can top £10 million. A winner of the jackpot this week... aged 30, has gone into hiding after collecting his cheque for £12.3 million... Neighbours... in Mossley Hill, Liverpool... were still reeling from the shock of having a multi-millionaire in their midst. Curtains in the street twitched when a 19-year-old model posed topless holding lottery tickets for press photographers outside the empty house.

...[the head of the former National Party president may be the next to roll in the Lotteries Commission pay row. Its chief executive resigned yesterday with a swipe at the PM for criticising his \$400,000-plus salary. But Opposition MPs continued to call for the resignation of the board chairman who authorised the salary package without official approval from the State Services Commission. The *NZ Herald* understands that the chairman, who is with the chief executive at a lotteries conference in Norway, is under Government pressure to quit and save National more embarrassment. Senior Government officials were last night searching for the Minister of State Services, who is also in Norway, to pass on this message.]

... 'Lotto sales for the first half of the current financial year were \$10 million down on the same period last year, while sales were 2.3% below budget – and the Lotteries Commission blames public outrage over the \$400,000-plus salary of its former boss. Added to this was criticism of commission members taking their partners on a \$95,000 taxpayer-paid trip to a lottery conference in Norway.'

... 'ACCORDING to the TV adverts Lotto is the name of our game. But for tens of thousands of Kiwis the weekly flutter is losing its attraction. Annual ticket sales have dropped by \$30m from a high of \$484m in 1994. And that decline has seen the prize pool shrink. In one recent game getting 4 winning numbers and the bonus ball netted a meagre \$20. And last week's division 1 was split 9 ways with each winner receiving just \$144,697. The Lotteries Commission is working on new strategies for the game.' It has already introduced 'LOTTO DIPS – here for just 1 reason, to make things easier for you and me'.

... 'Lotto punters are being offered the chance to win up to \$15 million in a new game. Lotto Powerball will be on sale from next Monday. It is designed to have a bigger prize that is more likely to be won by one person and not shared among many. The Lotteries Commission is trying to keep Lotto's market share from shrinking as it faces more competition. To play the new game, customers buy a Lotto ticket in the normal way but pay 50c more for another line and choose a Powerball number from 1 to 8. Lotto winners in any prize division who have also picked the correct Powerball number – a single ball drawn after the main Lotto draw – will then win the bigger prize. If Powerball is not won after nine draws, the division one jackpot will, on the tenth draw, cascade down through the divisions. The commission's new chief executive said the game was introduced after Lotto players said they wanted to have bigger prizes. Powerball lotteries are hugely popular around the world, particularly in the US. Large jackpots have prompted people to travel across the continent to buy tickets in the state-run lotteries. One of the biggest winners was a Kentucky man who won \$146.63 million.'

... 'Once upon a time a yellow ticket holder had a \$4 million Lotto win, but that's almost small change compared with what's up for grabs tonight. After nine weeks with no Powerball first division winner, the prize money has jackpotted to a guaranteed \$8 million. This weekend's Lotto Superdraw has also jackpotted, to \$4 million. The two combined prizes could give one Powerball ticket holder winnings of more than \$12 million, the largest Lotto prize to go on offer in NZ. There is one chance in 30 million of winning Powerball'...

'Someone has an \$8.2 million secret burning a hole in his or her pocket. The richest lottery prize to be won in this country – Lotto Powerball division one – went on Saturday to a ticket bought at a suburban service station in Whangarei. Speculation was rife in the neighbourhood of the lucky Lotto outlet about whether the winner lived locally. The Lotteries Commission marketing manager said the total prize – the Lotto first-division prize of \$163,044, plus the Powerball jackpot of \$8,073,917 – was easily twice the biggest single amount handed out by the commission. The winner can claim the prize by filling out a form at any Lotto outlet or going straight to the commission's office in Wellington.' Incidentally, 'the NZ Racing Industry Board has approved a recommendation by the TAB to dramatically increase the deductions from exotic bet types of trifecta, treble, Pick 6 and 6 Pack. Between \$2.5 million and \$3 million will be plucked from punters' pockets. Some of the shortfall will be offset by decreasing the deductions for win, place, quinella and doubles betting from 15.797 to 15.5 cents in the dollar. The RIB chief executive does not see the new rate of 25 cents in the dollar (up from 21.797c) for trifecta and treble betting as extreme by world standards. The NSW tote takes only 17% but "there are racing countries which take out 30 cents on exotic bet types." No one is saying where the increased take will be spent, but there is strong pressure, particularly from the likes of the NZ Trainers' Association in the galloping code, for an additional take from the betting dollar.'

...After years of many... TAB... agencies spending half their time closed... next week... agencies start opening every day... The move is partly to meet the needs of the growing number of sports bettors who want to be able to collect their winnings the day after any event, rather than waiting for agencies to open on Wednesdays... But the TAB will also give racing punters what they want – a race meeting every day of the week. On days when no N[Z] meeting is programmed the TAB plans to take betting on races from A[US. Furthermore, punters]... will be able to place bets at any time of the day or night from outlets such as garages, cinemas and supermarkets when the TAB's \$25 million Jetbet II computer system is completed... The TAB may be growing up but don't expect everybody... to be happy about it.

...THE TAB is facing a \$1 million lawsuit... over the gambling habits of a man who stole from his company to bet on horses... [He] was jailed last year for stealing \$2.9m through false GST claims. He had spent most of the money at an Invercargill TAB agency... Because of his big spending he became a preferential customer, with his own phone betting line into the TAB... Lawyers acting for South Wood Exports Ltd are preparing to go to the High Court after the TAB refused an out-of-court settlement. It will be the first time the TAB has been sued for taking bets from a punter using stolen money... [I]f successful, the case could set a precedent... [A gambling] researcher... has welcomed the court action, saying success would be a major victory in the campaign to help problem gamblers. It would put the TAB and other gambling outlets such as casinos on notice to stop gamblers letting their habits get out of control... [A] TAB spokesman... said the organisation had not settled out of court because it was confident it would successfully defend the lawsuit... "Their claim is that we should have questioned where the money was coming from and therefore were negligent in accepting it. His money was accepted in good faith. There was never anything to suggest there was anything untoward." [But the man had] spent up to \$10,000 a week over six years. During a racing carnival... he[']d spend up to \$30,000... Last year the TAB chief executive... said the board's legal advice was that the Privacy Act prevented it from reporting [him] to the police. But the Privacy Commissioner... later said the act had a section specifically allowing the disclosure of personal information where criminal activities were suspected... [In international news, 4] lucky punters were counting their winnings after one of the biggest payouts in... horse racing history... The former Auckland... who had to borrow \$HK3000 from a girlfriend seven years ago because he was broke, reportedly won \$HK40 million on a single race at the Sha Tin racecourse last year. He lived in luxury and was known not to take clothes with him as luggage on holiday.

He bought them instead. He fought a high-profile battle with the... They had been married less than a year... Police said there were no suspicious circumstances. The *South China Sunday Morning Post* reported that [the Auckland] had attempted suicide three days earlier. A police spokesman said [the Auckland] had told his wife on Friday that he was depressed... No suicide note was found.

...[a 'Wanganui trainer known to his friends in the racing world as Dummy lived up to his moniker before his horse lined up for the Waikato Hurdles at Te Rapa last week. Dummy told a *Trackside* television interviewer the conditions did not suit his horse. Translation: Punters, put your money elsewhere. What happened? His horse won by 7 1/2 lengths, whereupon Dummy owned up to the interviewer that he had not been entirely forthcoming with his pre-race comments. The track conditions weren't a problem – the horse's owner liked to bet now and again and after Dummy's comments, surprise, surprise, the horse's odds lengthened at the TAB. NZ racing authorities have launched an inquiry, expressing their concern at "the publicity that has arisen" over Dummy's dose of foot-in-the-mouth. It is possible Dummy could face heavy fines, or even loss of his training licence. To make matters worse, there is now the suggestion that this was not the first time Dummy had been doozy in front of the camera, with a couple of races earlier this month now under scrutiny.]

...[A Te Rapa trainer feels like giving racing away after two of his horses started in the wrong races at Wairoa. A member of his stable staff got Emily Jean and Minefield mixed, and inadvertently ran them under the wrong names. Tragically, Emily Jean, accepted to run in the 1850m maiden, ran in the 1100m maiden and won, paying \$34.75 for a win and \$7.25 for a place. The real Minefield, who had not previously raced beyond 1100m, stopped quickly in the 1850m race finishing last. The trainer was having his first day off in two years with his family and watched in horror from the TAB in Mt Maunganui as Emily Jean won the wrong race. He immediately phoned the stipendiary steward, who checked the brands and made an official report. All of which was too late to alter the placings on the day. Under the Rules of Racing once official dividends have been declared and payouts started, it is not possible to amend the results. The only certainty is that both horses will be disqualified from their respective races following a hearing before Waikato's racecourse inspector.]

...[RIVAL trainers and owners conceded yesterday's Classic at Matamata to classy mare Butterscotch long before she sprinted clear to win by one and three-quarter lengths. Trainers were so incensed at the lenient weighting of the crack 3-year-old that they queried the Matamata club, complained to the handicapper and lodged "please explain" calls and letters to Thoroughbred Racing NZ in the days leading up to the race. The upshot was a 5-horse procession in the \$15,000 fillies' and mares' race and a betting disaster, with No 1 rival Ete Pins – who on 53kg was just half a kilo below Butterscotch, despite having won only 5 races and \$79,475, compared to Butterscotch's 8 wins and \$157,400 – pulled out in protest and classy mare One Under mothballed for another day. The TRNZ chief executive said Hong Kong's senior handicapper had spoken about ratings-based handicapping at this year's annual conference of clubs in Wellington and TRNZ had been checking out the British system, where ratings are published regularly for every horse. The chief executive said it was important to ensure consistency between regions and to consider the implications such a system might have on Kiwi horses competing in AUS.] Editor's note: instead of adding more weight, at the trots – which have mobile starts – horses are handicapped by starting further back.

...[In a country which prides itself on its manners, trotting invokes passion that borders on hooliganism. And nowhere do those passions run deeper than at Solvalla on Elitlopp Day, which just happens to be this Sunday. To understand why one raceday turns normally conservative Swedes into raving lunatics, you have to understand how big trotting is in Sweden. It has become such a part of the national fabric that every day at lunchtime a trotting track somewhere in Sweden will open for just one race, which is always run at 12.48 pm so Swedes who need a trotting fix during their lunch breaks can have a bet. Every day that sole race turns over the equivalent of more than \$1 million. But Saturday is when the Swedes really open their wallets in support of their standardbred heroes. In NZ we are thrilled to get \$100,000 in the pool for Thursday and Friday night Pick Six. Sweden has the V75, in which punters have to pick the winners of the last seven races at a designated meeting. It attracts \$15 million in turnover every Saturday, even though the betting unit can be as small as 10c. Trotting has not one but two television channels. On Sunday, more than 300 journalists will flood the Solvalla press room, which is roughly the size of a small grandstand. That sort of interest creates real money. Trotting rules in Sweden, where thoroughbred racing is a novelty. There are 26 trotting tracks and one galloping track. Trotting accounts for 93.8% of racing turnover. Nobody knows why trotting is so huge in Sweden. It is like trying to explain why rugby is so huge in NZ. Trotting in Sweden is almost as important as soccer and actually has a higher average attendance.]

...[Gambling in Singapore will take one more step out of the seamy underground next month when the island republic becomes the first country in Asia to legalise soccer betting. When the Singapore S-league kicks off, soccer will join the legal gambling club alongside horseracing and number-guessing games 4-D and Toto. "We hope the legalisation of soccer betting will combat illegal bookies and wipe out match-fixing," said the head of corporate communications at Singapore Pools. Match-rigging has marred the game in recent years. A major bribery scandal erupted five years ago when Singapore police arrested a striker and a referee for fixing six matches in the 16-team Malaysian league. The row led to the banning of a fifth of the league's players and the withdrawal of Singapore from the league. "If you can't fight the gamblers, join them." Many punters agree with the head of corporate communications. "In society, there is a need to satisfy the human nature: prostitution for lust and gambling for greed," said a middle-aged man, while queuing to try his luck at Toto. Soccer fans will be able to pick a winner or a draw, and predict the number of goals scored.]

...[The TAB will tackle the N[Z] Rugby Football Union about early finishes in... matches after criticism from punters that... two All Black tests this season have ended before the normal 80 minutes. Investors say that they may be being short-changed in betting options such as last try, combined points total and winning spread. [The]TAB sports betting manager... said: "Like the players, we have to abide by the rule that the referee is the sole judge of time, but we will be talking to the rugby union to ensure the matches run their full duration."

...[In the space of 12 months N[Z] has become the rugby world's gambling capital. Kiwis have shown they're not scared to put their money where their mouths are to back the All Blacks, punting \$800,000 on last week's Bledisloe Cup match against A[US]. The TAB's turnover on big games is frequently boosted by pro-gamblers laying huge amounts from overseas... [The] TAB sports betting controller... says... [he's] not aware of anyone making a living from sports betting here but says "we've certainly got some good customers." The agency doesn't have an upper betting limit, but will occasionally refuse part of a large bet... Despite the attention of overseas pros and the expertise of N[Z]ers in their national game sports betting is turning a healthy profit. [The controller, who is] one of those who sets the odds... won't say how much – "commercially sensitive" – but the amount bet on sport is climbing exponentially and has topped \$35 million... The sports bettors bring new business to the TAB, [the controller] says. On average they're younger and most are not[horse] racing punters... More than 2000 people collected an \$80 payout for \$5 put on [the player] to score the first try in last Saturday's whitewash of the Aussies. The bookies have reacted to the runaway win by slashing the Blacks' odds to take the tri-series to \$1.15, with South Africa at \$6 and A[US] at \$10.

...[A string of large bets at small odds has proved a bonanza for a South Island punter, who invested a total of \$310,000 for a return of \$336,500... The largest investment was \$47,182 on Northland to beat King Country at \$1.02 for a profit of \$943. His average return is \$5300 a week, tax free... His favourite team... [for] winning bets... is... Auckland...

In what is thought to be the largest wager since sports betting became legal[in NZ], a North Island punter stands to gain about \$55,000 if the Blues win. The TAB has been offering scant odds of about \$1.08 for a Blues victory.

...[*Beating the odds* The 28-year-old has a job many men might want. He's paid to watch sport. As one of five TAB risk managers – bookies in street parlance – his brief is to set odds on cricket matches, rugby league games and the gallops. So this BA graduate from Victoria University spends his days watching television, reading sports pages, scanning the Internet for results and bookies' odds. "It's very time-consuming. And I've noticed sport annoys me more than it used to. I find myself getting irate with the tv when we've staked an opinion one team is going to win, and the other is playing well. I used to just watch sport and enjoy it. It cuts more deeply these days." He enjoys the occasional flutter, but only on the Tote. Risk managers are not allowed to bet on fixed odds because they might be in a position to influence the outcome, although "the boys doing fixed-odds have accounts with AUSn bookmakers, so they go offshore." The TAB system here is transparent and tightly audited, and risk managers paid well. All of which discourages any temptation to work the system to their advantage, he says. He and his colleagues are the subject of a Monday night documentary, *Odds Fellows* (TV1, 8.30 pm), an insight into a multi-million-dollar business at the intersection of mathematics, instinct, information and luck.' Incidentally, the punter who bet over \$50,000 last weekend 'made about \$5000' when the Auckland Blues scrapped home by one point after scoring a 3-point goal in the last seconds of the game!]

...More racing and the introduction of sports betting has resulted in the TAB reporting a record profit of \$38.7 million... Turnover for the year topped \$1 billion for the first time... The TAB's success is good news for the country's racing clubs, who share all the organisation's profits, with the Government enjoying a tax take. The trouble is, ownership of the TAB has never been legally defined, and the bigger the profits, the more urgent is a resolution of the issue.

...PUNTERS, stand by your mouses... as the first totalisator in the world embraces cyberspace... The N[SW] TAB exploded out of the barriers this week, opening betting on the Internet – and the N[Z] TAB won't be far behind, with an expected start in October... Say goodbye to the frustrations of busy telephone operators – iBet allows you to bet directly from your home computer... with no chance of being shut out... NSW TAB has had an informational web site for the last 12 months, and has been fielding 90,000 hits a week. "But people, in places from Saudi Arabia to San Francisco, were saying: 'When can I get a bet on?' And we had a lot of queries from people in Asia who own horses here, who wanted to listen to replays." ...[the NSW TAB] marketing manager... says the service has been such a "hit" with Internet users since its Monday launch, the TAB has been swamped with inquiries and e-mail from people wanting to open accounts... It took four months to develop the system, the major breakthrough coming with the discovery of how to encrypt betting transactions. "We couldn't have hackers placing hundred dollar bets and the major factor was to ensure punters had complete confidence in the security of their bets. But the beauty of iBet is you (the punter) are in control. You can set up the bet, and pop the submit button five seconds from the jump. The days of little old ladies holding everyone up putting on seven 50c bets, are gone." ...[the] NZ TAB Internet project leader... said... "At this stage we don't plan to have any audio or video replays, but we'll have the advantage over N[SW] of fixed odds betting on racing and sports, which will open up the global market." ...punters here would also have the convenience of being able to electronically transfer money between their bank and TAB accounts... [NZ TAB's] chief executive... said he appreciated how important it was for the TAB to set up its site as quickly as possible... That meant the government's cut of betting here would be eroded, as it had no means of collecting tax from on-line gambling. In the U[S], gambling through unauthorised Internet sites has been banned, but while it is now illegal to gamble over a telephone line, it has not stopped a huge flow of money going out of the country.

...[The US Government's efforts to stem illegal Internet betting activity outside its borders were boosted yesterday when a federal jury for the first time convicted a man for running an off-shore online sports gambling operation. The 33-year-old co-owner of World Sports Exchange based in Antigua was convicted by a Manhattan jury. He was the first of 22 defendants to stand trial in the Government's initial prosecutions under the federal Wire Wager Act. Ten of the defendants previously pleaded guilty in the case and seven are still fugitives. That law makes it a crime to use telephone lines in interstate or foreign commerce to place sports bets. It also outlaws the transmission of information that helps gamblers bet on sporting events and contests. The 33-year-old faces a possible maximum prison term of five years on one count of conspiracy to violate the Wire Wager Act and two years on each of seven related charges. Among those who have refused to return to the US is his business partner who said last year that the company did not believe what it was doing was illegal and that the US Government did not have jurisdiction. He said the operation took annual bets of between \$US100 million and \$200 million'...

The NZ] Red Cross has temporarily stopped promoting a form of lotto on the Internet after being warned by Internal Affairs that the game is illegal here – but, in effect, the department's action is a bluff. There's no way it can stop N[Z]ers gambling via the Internet just as there is no way to stop individuals tapping into pornography, or any other information or activity which some may consider undesirable... Until pulled up by the department, the... Red Cross... management hadn't realised it was doing anything illegal... The game... is reached by... a computer web site... in the tiny European state of Liechtenstein... and in the two months since opening has become very popular in Scandinavian and Continental countries, reaping in and paying out millions of dollars. Here, the Red Cross was hoping to earn a commission of between 18 and 23[%] on the turnover of N[Z]ers' punts. The]... Internal Affairs national licensing manager... says all games of chance are required to be authorised under the Gaming and Lotteries Act. This was to protect the public from ripoffs – not that the department is suggesting [the Red Cross game] falls into that category. But... [he] agreed there is no way to stop people doing as they pleased on the Internet – "control of it is a problem for all Governments" – and arguing over the legitimacy of what people may do is a legal nicety.

...A crackdown on illegal housie games has cost three Auckland groups their licenses. One group raising money for intellectually handicapped Samoans has had its license cancelled... after allegedly paying out prizes higher than those legally allowed, selling too many tickets and failing to keep proper records. The Te Atatu Congregational Church of Samoa and the South Auckland Seipui Trust have been suspended from running housie for the next three months for similar offences... A search warrant was used to close an Otahuhu housie game where the organisers had previously had their license cancelled by Internal Affairs. Charges will be laid. Housie is the most regulated type of gaming in N[Z]... Only 1000 tickets could be sold for each game, at 10c each, and only one big game – at \$1 a ticket – could be held each session. Prizes were limited to 70[%] of the total takings of a session... [and the] legal limit for housie prizes under the Gaming and Lotteries Act (1977) was \$100... An individual convicted of running housie without a license can be sent to prison for three months or fined \$4000. A body corporate can be fined up to \$12,000. Housie is estimated to have an annual turnover of \$45 million... [In related news, g]ambling on the Internet could decimate the local gaming industry and reduce the amount of money available to charity says the Lotteries Commission. The commission now ranks fourth in the gambling market, behind casinos... racing... and... gaming machines...

[Millions of dollars of leaks from gambling machine profits are fuelling a Lotteries Commission call for all non-casino pokies to be tracked electronically. The commission estimates that \$20.4 million was lost last year from "missed bankings." In its statement of corporate intent it said Parliament should not turn a blind eye to this theft, which had cheated the Government out of \$6.4m in taxes and community groups of \$6.8m in payouts to authorised causes.]

...Government changes to the way gaming machines operate will cost community groups \$10 million, says the Gaming Industry of N[Z]... The Government is investigating linking N[Z]'s 12,000 non-casino poker machines to a central computer system, in a bid to crack down on fraud. [By the way, 'a Whangarei woman's delight at winning \$788 at the RSA turned to despair when she was denied the cash for not signing the club's visitors' book. Large signs sited near the pokie machines stated: "These premises are for the use of members only with the exception of affiliates and invited guests

correctly signed in. No jackpots will be paid out apart from the above people.” There was also a sign at reception. The woman, who went to the club with her partner, a member, said she knew of the notices requesting visitors to sign in. She always signed in but on this occasion they were distracted.’

...‘Many North Island publicans are breaking the conditions of their poker machine licences by pressuring groups to patronise their hotels in return for grants from the pokies. This week, the Te Kuiti Hotel’s gambling machine licence was suspended for three months because of alleged advantages derived from poker machine grants. The hotel is appealing. The Internal Affairs Department’s gambling compliance manager warned gambling machine trusts in a meeting in Wellington on Thursday that he would suspend their licences automatically in future if they had to be given more than a fixed number of warnings. He said the department issued 240 warnings about non-compliance with licence conditions after auditing 180 trusts in the 10 months to the end of June. He was “surprised” at the high number of warnings required, with many trusts getting warned for two or three breaches.’]

...THE Department of Internal Affairs... estimates N[Zers wagered a total of] \$6.5 billion in... [the past year – up] from \$1.1 billion in 1987... [-] and lost \$957 million, although the turnover figure is complicated in that “the same dollar can go through the turnstiles... [many times.” The official figure of the total wagered should be known shortly. Meanwhile, the department] has launched a national investigation into gaming machines after revelations some publicans may be treating gaming machine profits as their own. The investigation comes after raids on two Christchurch premises last month which saw the Bishopdale and Parklands Taverns lose their gaming licenses. The Papanui Working Men’s Club also came under scrutiny after a three-month-long investigation by Internal Affairs... [claimed] the club had siphoned more than \$1m from its gaming machine profits into a general account. Gaming regulations stipulate gaming machines are to be run by societies and... [at least 33% of the] proceeds be made available to charitable, sporting and community groups within their area... [The] Senior Gaming Inspector... who follows up such cases, says the scale of corruption in the gaming industry could be huge... [L]icensed gaming machines... are... operated by more than 1200 societies at more than 2000 sites. Gaming machines arrived in N[Z] in the early 1980s. They collectively turnover \$1 billion a year, generating more than \$30 million in duty and \$70m in community grants... Internal Affairs wants a national distribution regime for gaming... put in place... Funds collected from gaming machines do not go to a distribution body like... the R[IB] which distributes TAB money...

Everyone wants a piece of the pokies action – meaning the appearance of machines in shopping malls should not be ruled out. In a year when revenue is tipped to rocket... players in the industry are keen to put their money on gaming machines. The TAB and the Lotteries Commission are lobbying the Government to get a slice of the action. The profitable poker machines are one way the agencies are hoping to expand to cash in on N[Zers’ increasing appetite for gambling, a trend which worries social agencies... In A[US], the Victorian TAB runs betting and poker machines in outlets separate to its betting shops... A[NZ TAB] spokeswoman... said the organisation wanted to convince the Government that it should not be blocked from moving into that sector of the gambling game... Another organisation to make a submission, the Compulsive Gambling Association, says it is alarmed at anything which makes it easier for people to bet. “Gambling is bringing an unwanted crisis into our country... As a community now, we turn people on to gambling wholesale and then major problems manifest themselves.”

...The Victorian coroner’s office may launch a retrospective investigation into suicides linked to gambling... The figures showed the number... had increased steadily... with four in 1993 and 1994, and eight in 1995, 13 last year and up to five so far this year... compared to just one in 1992, the year poker machines were introduced...

[‘It was my son’s 18th birthday and I wanted to get him something special. A present he’d want more than any other present in the world. So I did. “A car!” my son cried, with a grin like a slice of watermelon. “It’s only second-hand,” I said, but he didn’t care. It had wheels and an engine – and that was all that mattered. A few months later, I was in bed when I heard knocking at the window and a voice cry out, “Your son’s been in a crash!” I went straight to the hospital. “Your son’s damaged his spine,” the doctor told me. “I’m afraid he’s a quadriplegic.” Months passed. I spent every day at the hospital, helping to lift and bathe him and to assist with his physio. “When he gets out he’ll need 24-hour care,” the doctor said. “It’ll probably be better for him in a nursing home.” I looked the doctor in the eye. “I’m his mother,” I said firmly. “He’s coming home with me.” My son was awarded \$338,000 compensation from the Transport Accident Tribunal and we used some of the money to build a special unit for him at the back of the house. He was glad to be home and I was glad to have him, but I can’t say it was easy. He couldn’t do anything for himself and I had to give up my job to care for him. My husband kept his job as a printer and helped out when he got home. But a few months later, he was sick, too, so I insisted he went to the doctor. The news couldn’t have been worse. He had liver cancer. They had to start chemotherapy straightaway. After my husband returned home, I didn’t have a second’s respite. I began to understand why torturers have such spectacular results with sleep deprivation. My husband noticed my heavy eyes. “I’ll soon be right,” he’d tell me, but my eyes weren’t so heavy that I couldn’t see the truth. He was getting weaker, and when he got pneumonia there was nothing more anyone could do. I held his hand as he slipped away. Everything seemed 10 times more difficult without my husband. There was no-one to make me laugh any more, and though I had my son, I felt totally alone and isolated. “Try to cheer up, Mum,” my son begged with concern, but I could barely force a smile. “Here,” he said one day. “Take this.” And then he thrust \$20 into my hand. “Why don’t you get yourself out and play the pokies?” I stared at the cash. I couldn’t remember the last time I’d left the house to do something frivolous. “Well, maybe just for half an hour,” I said. At the hotel, people were chatting and laughing. It was a great sound. I sat at the pokie machine and for the first time in months, I didn’t grieve for my husband or worry about my son. When he saw how much more cheerful I was, my son encouraged another visit – and this time I won \$1000. It felt so good to have people around me – people who were clapping and cheering instead of sympathising with me and looking glum. After that, I was at the pokies every day, trying to repeat that feeling of elation. My son said he liked the space so I didn’t feel bad about it until one night I looked at the clock and realised I’d been sitting in front of the machine for three hours. Worse, I’d spent every cent of the grocery money. I had to win it back. But even though I spent all my savings as well as my carer’s allowance in trying, I never did. And then one day, I didn’t have another cent to spend – unless I took the cash card for my son’s compensation and went to the ATM. “It’s only \$100,” I reasoned. “I’ll pay him back. He’ll never even know.” An hour later I’d spent the lot. “I’ll win it back tomorrow” became my mantra every day as I ran to the bank with my son’s cash card. But of course I never did. I didn’t even know how much I’d actually withdrawn. Not until the day my son decided to check his bank balance. I stood there, frozen to the spot and watched his face as the figures were read out to him. “Can you check that again, please?” he said slowly. And then he turned to me. “How could you?” he said. “That bloody money was for my future. What did you do with \$200,000?” \$200,000. I flinched at how much I’d spent. “The pokies,” I whispered. “I couldn’t stop. I’m so sorry.” But my son didn’t want to hear my apologies. “Just get out,” he said. The next few weeks were absolute hell. Friends ignored me and most of my family disowned me. My son slammed the phone down the minute he heard my voice. He even took an injunction out against me, forbidding me to go near him or my home. I felt like a criminal – and the police confirmed that, indeed, I was one. “Your son has made a formal complaint that you’ve stolen from him,” the arresting officer told me. At Melbourne County Court, I pleaded guilty to stealing \$130,000 of my son’s accident compensation. I was given a 10-month jail sentence, with six months suspended. You might think that I deserve all my problems – and more. But I’ve been to prison, lost the trust of friends and family and destroyed my son’s love for me. Isn’t that punishment enough?]

...A man who swindled 33 people in A[US and NZ] out of more than \$3 million was a pathological gambler who dwelt in a fantasy world, a judge said yesterday. [The man], aged 31, of suburban Melbourne, told victims, including family and friends, that he was entitled to a \$250 million inheritance. Instead, he got a jail term of six years and eight months. [While on the topic of gambling crimes, in the US ‘2 Mohawks have been killed during an anti-gaming war’...

In contrast, problem and probable pathological gamblers made up between 2.1 and 3.9% of a sample of 6452 adults aged 18 and over interviewed by Statistics NZ. However, whereas adults said they gambled mainly for money, 46% of the teenagers said they gambled for fun, only 30% to win or to get rich, and 21% as a social activity. A controversial new scratch and win phone card has been cleared to go on sale next week. Sales of scratch and win cards are restricted to over 16-year-olds but the new TELEPHOTO MAGIC phone cards are available to everyone... Internal Affairs has investigated the card and says it conforms to the gambling laws... [With] the magic pre-paid call card... you've got a 1-in-4 chance to win a prize... up to \$100,000...

BP is willing to introduce an age limit on the scratch-and-win phone cards that will be launched nationally next month... But imposing an age limit on the sale of phone cards was illegal, said the chief executive of the Lotteries Commission... "[They] will find some six-year-old with a lawyer will sue..." The Minister of Internal Affairs... has called for a report on whether the game is illegal following a complaint from... [the United MP. He] wants the game halted because of fears it will turn... children under 16 who were barred by law from buying Instant Kiwi scratch cards... into gamblers... The law apparently does not apply to the new game because people have to buy a product... to win... [The MP] said... Parliament had agreed that scratch-and-win games of this type should not be played by under-16-year-olds... "If it doesn't breach legislation, then it breaches the spirit of the legislation." [The minister] said a law change might have to be considered to halt a proliferation of such games.

...A Lotteries Commission spokeswoman... said the 16-year age limit for [scratch and win cards] applied only to their sale. It was illegal for anyone under that age to be sold a ticket, but they were allowed to have a ticket in their possession, or claim a prize. Many Instant Kiwi tickets were bought by parents for their children or sent as presents. [The spokeswoman] was not aware of the age of a winner ever being an issue and winners would always receive any prize won, regardless of age... [However, underage] gamblers striking it lucky at the Sky City Casino... will not be able to claim their winnings. An 18-year-old youth who won about \$30,000 in a jackpot at the Christchurch Casino was denied his money... The youth is challenging the wording of the Casino Controls Act, which makes it an offence for anyone under the age of 20 to be in a gaming area of a casino, but not to game. [The] marketing and communications manager for Sky City... was not sure, if the court ruled in the Christchurch casino's favour, whether the youth could turn the tables on the casino and claim back the money he had lost... Although there were not large numbers of people under 20 trying to get into the casino, the problem was constant.

...[Auckland's Sky City Casino, which 'hangs photographs of winners on its walls', tried to refuse to honour a prize after a gaming machine 'mistakenly repeated its jackpot of an expensive car – awarding a second car to the person who had won the first time. He had gone home and later returned to play on the same machine'! If the casino hadn't made a '\$15.5 million profit in its first 5 months of operation', perhaps people would've been more sympathetic?]

...A year after gambling \$475 million on building the Auckland casino, Harrah's Sky City is raking in better than expected profits... Much of the front-page publicity for the casino hasn't been good – drunks, children left in cars, problem gamblers... and claims of triad loan-sharking. But those incidents have been few and far between, the gambling business seems to have settled comfortably into the city, and far bigger numbers stack up in its favour. Retailers report a trading spin-off. Nearby bars are happy that the 2500 casino workers choose to spend some of their \$1.3 million weekly wage to drink and eat off the premises after their shifts. Around 1500 Auckland businesses supply about \$2 million worth of food, drink, other goods and services to the casino/hotel/theatre complex each week. At the end of this 12-month financial period the Government and local body take in taxes is expected to top \$45 million. Shareholders, and there are more than 100,000 N[Z] residents who hold stakes in the business, will also do well this year; [the casino's]managing director... expects the company to exceed its tax-paid profit forecast of \$36 million. Even the casino's God-fearing neighbours at St Matthew's in the City and the Auckland City Mission have grown to accept life in the shadow of Auckland's biggest building... The casino operators present the business as a good corporate citizen; it's put \$400,000 in cash and kind into the restoration of St Matts, sponsored the Special Olympics team with a long-term deal, and provided Christmas dinner for the city's lost and lonely through the City Mission... But there's growing concern about those spending their money on gambling tables and, more particularly, on slot machines. Can they afford to lose? ...Churches say 52[%] of regular casino-goers are unemployed...

Fate can play an inordinate part in our fortunes. It seems to me that only fate's flip of a coin has allowed some of us to be born in countries and circumstances where we might have some chance of lifting ourselves out of the thick mire of poverty... During my few visits to the Auckland casino I have felt a sense of wonder that here perhaps like few other places we have a completely unconscious mingling of the races – all paying homage to a common goddess... An occasional evening's entertainment at the casino should be fun... Yet so few there are smiling, for their deity is very much concerned with the serious business of winning and losing money. Among these worshippers are those already feeling lost and afraid at the bottom of the socio-economic heap and unable to use initiative, now beseeching Lady Luck to lift them from their morass. She is unlikely to do so. They tempt fate because they have a dream of one day rising above the poverty line and perhaps having a late model car and house of their own, which many of us have been able to take for granted or obtain through our ability to find regular work... I have no idea where the people who each day flood the casino get their money but in my heart I know that many of them should not be risking what little they have on the tables and slot machines... People, of course, have the right to spend their spare money in any way they choose... But... a dollar going down the throat of a one-armed bandit is a dollar less going towards food in some deprived household. We should also consider whether... relax[ing]... the... dress code at the casino has more to do with luring people with only a few dollars to spend than any honourable observance of egalitarian principles.

...From tomorrow... Sky City is relaxing the dress code in its... [newest] gaming room... opened in February... which was originally intended... to attract people to the... casino who were reluctant to mix with other punters on the main floor... [Previously called the Harrah's Club, the room] will be renamed Alto Casino and Bar, as part of a rebranding the company hopes will quash any impression that the room is for members only, or just for high-rollers. Although jackets and ties will be "recommended" for men, they will no longer be essential. Jeans, shorts and active sportswear will still not be permitted... Lower revenues from tables in the Harrah's Club reduced average daily revenue from \$2800 a table to \$2700.

...[responding to recent criticism, the] managing director of Auckland's... casino... said it was bizarre to suggest that people were forgoing buying a lottery ticket so they could have a night out at the casino. His comments came as Sky City announced a bottom-line profit of \$36.1 million... Sky City... had paid out more than \$1 million over the past year through a community trust.

...The Sky City Community Trust was set up last year to give out grants twice yearly to community groups. It is funded by a 2.5[%] share of the net profits of the Sky City casino and complex. The trust secretary... said recipients would be named shortly. More than 600 groups applied for a share of... \$430,000... Thirty-three were successful. The trust is now inviting applicants for the mid-year round of grants.

...The Sky City casino is sponsoring the Symphony Under the Stars extravaganza in the Domain next month. The outdoor event had looked to be in danger of cancellation without a principal sponsor. The Auckland City Mission is to be the main beneficiary of the event, which will be renamed the Sky City Starlight Symphony.

...[the Aucklander 'was over 80 when a friend took her to the casino for the first time. Within weeks she was going every day, playing the pokies until she had lost more than \$70,000 in savings. Although she had always enjoyed a few bets on the horses or a Golden Kiwi over the years, she had never indulged in more than a mild flutter. But complicated by the early stages of Alzheimer's, gambling addiction took over her life. It stripped her of financial security and has caused irreparable damage to her family relations. She often has no recollection of being at the Auckland casino and denies to family that she has lost money gambling. Despite their best efforts to have her barred from the casino, present legislation does not sanction banning unless the gambler agrees. Sky City says it wants greater powers to exclude problem gamblers and hopes the Gaming Law Reform Bill before Parliament will provide those. But for the 80-year-old's family it will be too late. Her four children have watched her go from a doting grandmother and frugal budgeter to a woman who has no interests other than where her next bet is coming from. The family have now taken control of her finances and are supplementing her income and allocating her weekly spending money. Although she can no longer drive, her son has no doubts she is intent on finding a way back in to town to play the pokies. "It just never entered my head when they built that casino in Auckland that it would affect my family." The Compulsive Gambling Society says elderly people are vulnerable to problem gambling because they have time on their hands and are often lonely. Once they lose their savings, superannuation and homes, they have no way of earning the money to start over, because of their age.'

... 'In the year to June, we gambled an average of \$48 a week for everyone aged 18 and over. We *lost* an average of \$8.10 a week for every adult. Even after adjusting for inflation, we gambled 3.5 times as much as in 1979, and lost 2.8 times as much in real terms. Last month, the Government announced a major review of gambling policy which is expected to examine both the human and economic costs of the exploding gambling industry and the way its revenue is distributed. Some countries are already taking action. In 1994, the Netherlands cut the number of poker machines from 75,000 to 45,000 and restricted them to dedicated gambling venues where alcohol could not be sold. Spain, which has more than 450,000 gambling machines, has recently brought in legislation to reduce the number. In England, gambling by commoners was banned in the 17th century, flourished again in the 18th century and was suppressed again during the Industrial Revolution when the Protestant work ethic took hold. In the last years of the 20th century, restrictions have been removed suddenly and dramatically throughout the world, in line with the dismantling of other economic controls. As recently as 1988, casinos were illegal in every American state except Nevada and New Jersey. By 1994, they had been authorised in 23 states. In the past decade, casinos and gambling machines have spread through Europe, South America and AUS, where the machines have gradually been legalised in every state except WA. AUSns now gamble more than anyone in the world – an average loss by every adult of \$A819 a year. Hong Kong is just behind, and then there is a big gap before the next batch of gambling nations, which include the US and NZ.' 'NZ has the highest ratio of high-intensity gambling machines to people in the world after AUS – one for every 220 people.'

... 'Fancy a flutter at the casino? Odds are your visit will cost \$64. That's the average amount gamblers lose each time they step onto Sky City's gaming floor, according to company figures released yesterday. The previous figure was \$54. The company said the extra money won from each punter could be attributed to better gaming floor layout, the introduction of new 5c pokie machines, and initiatives to attract more high-rollers. The Compulsive Gambling Society's research director said the jump in average gambling loss was concerning, given that it had happened during a time of general economic stagnation. He advocated a Government-backed TV campaign similar to drink-driving advertisements as a way of warning about the "downside" of gambling.'

... 'When the stakes get too high Angela Han was the first to die. Then came her two small children, Christina and Nicholas. Six months later, they were followed by Khamphet Vong Phak Dy and Jian Huang. Three Asian women and two children brutally murdered in their Auckland homes, with their husbands and fathers now serving life terms in prison for the crimes. The killers had one thing in common – severe gambling problems that devastated their lives and relationships. In a letter to his wife, one called himself "human rubbish" and implied that he was going to kill himself to end the family's woes. Last month a jury rejected his defence of insanity. He and another of the murderers had voluntarily barred themselves from the Sky City Casino in failed bids to beat their addiction. Sky City makes people who agree to bar themselves sign a document that prohibits them from entering for a minimum of two years. If they break that, they face being arrested and charged with trespass. Photographs of each barred gambler are distributed to staff. A casino spokeswoman says: "Unfortunately we only have a couple of security guards with photographic memories. If people decide they want to get back in, we can only do our best to stop them." The five murders have highlighted the problem of Asian gambling. A counsellor with the Compulsive Gambling Society who has spent two years helping mainly Asian men with gambling problems, says it is often a symptom of other problems in their lives. "For many Asians, when they come to a new country they feel depressed, they have cultural shock. Some have no language skills and can't find a job. They have lots of time and are very unhappy. So that is why they go to casinos – to escape their problems. Obviously, afterwards their problems become worse. Normally in their own countries, access to gambling isn't so easy. There's no casino in Hong Kong, for instance. They have horseracing, but those activities aren't open 24 hours.'"

... 'The killing of Jian Huang began well before her jealous estranged husband butchered her with a kitchen knife. The young mother's soul began to die soon after her arrival in NZ from China, when she made the ultimate sacrifice for her family. Jian had worked as a doctor in a hospital after studying at a Shanghai university for six years – but her qualifications were not recognised here. So the intelligent, attractive young woman, who had arrived in NZ looking for a better life, began working as a prostitute to support her husband and their small boy. She called it her blood money. It was the start of a spiral into darkness that would end with her murder at the age of 34, her former husband serving a life sentence, and her boy, the love of her life, effectively orphaned. Jian's life and violent death opened a window on the rarely seen struggle of some immigrant families and the dark shadow domestic violence casts on some women and children. Jian left her husband in December last year because he was beating her and gambling away the money she had sold her soul to earn. She seemed to have blind faith in NZ's system of law and order, believing stoically that a protection order and the police would protect her from her increasingly erratic former husband. "I have a protection order," she proclaimed in an emotional, revealing letter to her husband sent soon after she plucked up the courage to leave him. "If you try to find your son and use him to achieve your aim of threatening me, you will have broken the law. I will call the police. You know the consequence," it read in translation. But the system did not protect Jian. The protection order was not worth the paper it was written on – and the police were unable to save her, although two officers were with her minutes before she died. On Saturday, February 26, her estranged husband had their son for the day. As they were driving along, they spotted Jian in a car with her new lover – a married Hong Kong man who had been one of her clients. This enraged her son's father. He called Jian on her cellphone and threatened to kill the boy if he did not get \$30,000 – his estimate of his share of their townhouse. He went back to the townhouse and used the boy to break in. He took a hammer with him, and lay in wait. Jian fetched the police, who followed her home to get her protection order. Instead of waiting outside as the officers had instructed, Jian entered the townhouse. With disastrous timing, her cellphone rang just as she was walking up the stairs and about to encounter her husband. It was her lover calling. Her husband exploded in a jealous rage. Jian tried to run off, and he stabbed her in the back and shoulder. When he caught up with her, he stabbed her repeatedly in the face, arms and chest. The knife sliced through her heart and lung before the police arrived. Later their son appeared at the top of the stairs and sat staring at his mother with a bewildered look. (He still lives in the same house with his uncle, aunt and grandmother, who have come from China to care for him.)'

... 'From rags to riches: but it's still a scandal At first glance, Campione d'Italia appears to be just another small Italian town, albeit one found a few kilometres across the Swiss border. It is only when its 2300 inhabitants receive their monthly salaries and pensions that it becomes clear why this lakeside community is resented and envied throughout the rest of Italy. It is the richest and most bizarre community in the country, subsidised unwillingly by the Italian taxpayer. Bulging bank balances reveal that every state employee in Campione, from the most junior council employee to the middle-ranking teacher, earns at least three times as much as his counterpart in Florence, Milan or Turin. While Italy suffers cutbacks in public spending, the Campione town council has more money than it knows what to do with. The astonishing wealth that prompted a parliamentary delegate to describe Campione as the

"Italian Kuwait" is the result of a special status for the enclave that was granted in 1933. Then Campione was an impoverished fishing village on prosperous Swiss territory. Facing the Lake of Lugano, the enclave was a historical anomaly. Its extreme poverty was a national embarrassment. With the agreement of dictator Benito Mussolini, King Vittorio Emanuele III decreed that for reasons of patriotic pride the Italian outpost should become as rich as the Swiss canton which encircled it. A profitable casino was built, taxation kept to a minimum and a special system of subsidies established. The casino made a profit of £36 million last year, £20 million of which went directly to Campione town council, which passed the money on to its employees. All salaries are paid in Swiss francs. Tax, paid in lira, is calculated using a hugely favourable exchange rate which is fixed by law. A state pension in Campione provides a retired civil servant with up to £40,000 a year. This remains untaxed, giving the pensioner an income well above the average wage in the rest of Italy. Salaries and pensions provide more than enough incentive to work in Campione. Nevertheless, the Italian state is obliged by law to offer a further sweetener. Each month, every state employee in Campione is paid between £1500 and £2500 for living there – another relic of the town's impecunious days. "It's a ridiculous situation," said the MP for nearby Como. "Campione's special status was given in a historical context which is no longer relevant." The Mayor of Campione is indifferent to criticism. "The money that we spend in Campione is our money and we are entitled to spend it as we see fit." Last year he was given a six-month suspended sentence for criminal misuse of casino takings. There is also an investigation into possible money-laundering at the gambling centre.

...Nevada's premier poker machine cheat, who has raked in millions of dollars over the past 22 years, has promised to tell gambling regulators how he and his counterparts rip off the state's casinos. Now aged 57, he was convicted in 1986 of defrauding Las Vegas casinos of \$US10 million by rigging poker machines between 1976 and 1979. He was released on parole in January 1991. He was arrested again in June this year, along with three others, in a \$US6 million poker-machine scheme. He pleaded guilty to charges of conspiracy, racketeering and money laundering. In the 1970s, he and other cheats dealt with mechanical poker machines. They adopted more sophisticated methods as the machines entered the computer age. Beginning in 1996, he could enter poker machines and use a computer-generated device that allowed him to beat the machines in just minutes. A dozen people were recruited to play the rigged machines. The crew hit six major Las Vegas casinos a total of 10 times, winning cash jackpots or cars. The ring-leader was trying to hit a \$US17 million Megabucks slot jackpot and move to France when he was arrested. Sentencing is set for March 5' next year.

... 'A high-rolling gambler convicted of cheating the Auckland casino out of more than \$100,000 has been fined \$27,000. The Tongan businessman, once considered one of Sky City's top 10 customers, plans to sell his \$400,000 Auckland home to pay the fine and a \$271,000 mortgage, then quit NZ, his lawyer told the Auckland District Court yesterday. A jury last month found the 40-year-old and his accomplice – a 31-year-old casino dealer – guilty of three counts of cheating on a baccarat table in the casino's VIP lounge last year. Sentencing the croupier to four months' periodic detention, the judge said her offending was a gross breach of her employer's trust.'

...Ten staff at Auckland's... casino have been sacked after an internal investigation revealed a scam that allegedly sucked up to \$500,000[of] bar takings... from the computerised cash register system over several months... and at least three were facing criminal charges... The... staff... siphoned off the cash by ringing up drinks under the actual value of those being served, and then pocketing the difference as tips... The investigation centred on a casino bar closely monitored by security cameras... A source said casino management would have been able to match video footage from the cameras with the sales registered on the cash register... "So they could see someone ringing up a soft drink for \$1 at 10pm, but a beer worth \$5 would be recorded on the video at the same time,"... The scam, the biggest since the casino opened... comes after... a "double-dipping" scam, involving staff who continued to claim Social Welfare benefits while they worked at the casino.

...Auckland's Sky City casino company has sacked one of its ground attendants for using the wrong toilet. [The former employee] said yesterday that he was dismayed and embarrassed by the dismissal after he tried to save time when nature called by dashing inside to a toilet on a conference room floor that was not in use... [H]e knew he was supposed to use one of the toilets reserved for staff but he was "busting," the toilet he went to was three to four minutes closer, and no members of the public were around... A Sky City spokeswoman... said a staff toilet was closer than the one [the former employee] used but "he chose to ride" four floors up to use the public toilet... The Service Workers Union intended challenging the dismissal... [A union organiser said the former employee] had had a previous warning over another matter but Sky City was too inclined to sack staff or discipline them over petty problems and minor breaches of procedure.

...Auckland's... casino has suspended four staff responsible for cash counting after they objected to working regular overtime... [The cashiers, who] were not given advance notice on their rosters of overtime as provided for in their employment contracts... were among six who had sought an urgent hearing before the Employment Tribunal to apply for a compliance order to stop the company from demanding that they work unrostered overtime. The issue came to a head on Thursday night when staff went home at midnight after being threatened with suspension if they did not work overtime... Yesterday the Service Workers Union... said the cash counters were working up to 12 hours a day... in a sealed environment that was hot, dusty and noisy... [A] union organiser... said Sky City's actions amounted to "outrageous bullying" and were a reflection of an "arrogant management style"... A Sky City spokeswoman... said the company was not prepared to discuss individual employee matters and hoped to have the cashiers' suspension resolved through mediation... The company has also threatened to sack any staff who develop claustrophobia or fear of heights while working in the soon-to-be-opened Sky Tower.

...The final 4 1/2 tonnes of concrete for the Auckland Sky Tower is due to head skywards today, bringing to an end more than two years of work... Firth Concrete says more than 12,000 truckloads or 20,000 tonnes of concrete have been delivered...

An upended sewer pipe – or a unique structure blending well with the cityscape? Every Auckland and visitor to the city has an opinion on the Sky Tower... and the decision not to paint or clad the concrete shaft has drawn mixed reactions from city architects and designers. Critics say the concrete colour makes it look dull, boring and older than it really is. It will also present a new haven for graffiti artists. Those in favour say concrete blends in well with the blue sky. It will also give the whole... complex a sense of age in the years to come... [The] project architect... said a special additive was mixed with the concrete to make the shaft harder and harder as it got older, protect it from fungus growth and... change... its... colour slightly making a dramatic landmark... [The person] who designed the tower, said a lot of research was done before the decision was made not to give the tower colour. "All the pros and cons were taken into consideration... Once you paint it, you've got on-going maintenance..." [Speaking of which, the tower (that can 'sway by a few metres' at the top) has a '150-year lifetime – but no one has yet worked out how it'll be dismantled!']

...Since the one which fell down at Babel, towers have been a rich source of fearful metaphor. Depending on where you stand in relation to them, they either inspire or threaten. They define the landscape on which they rise or crudely impose themselves on it. It is hard, it seems, to be indifferent to towers... It has been quite an experience to watch this tower emerge amongst the general brutality of the CBD skyline... Like the citizens of Paris, we are likely to have an extended honeymoon with our tower. Some of us are clearly out of love with the beast already or have allowed other considerations to conceal the reality of it... Not that there has been much in the way of criticism: A Wellington comedian in the TV3 arts programme and a page 2 column in the *Herald*... seem to be about it. The former seemed seriously disturbed by the fact the tower could be seen from a great distance off; and the latter made a negative comparison, in terms of elegance and style, with the Eiffel Tower. It's an odd choice, that last. Mr Eiffel's effort got a very bad press in 1896 and was, as a result, scheduled for demolition 10 years after. Happily public opinion changed, and 110 years later the idea of Paris without its tower is unthinkable. There is a tale, no doubt apocryphal, about a Parisian businessman who lunched every day in the tower, since it was the one spot from which he could not see it. No doubt, [the page 2 columnist] has already booked his table at the Sky City Brasserie. In fact, the Eiffel Tower is not so easy to spot around central Paris. Given the density of buildings and its site, it

emerges into view only occasionally. [By the way, another 'of Europe's most loved landmarks, the Leaning Tower of Pisa, has been brought back from the brink of collapse after a delicate programme to partially straighten its famous tilt. The 14,500-tonne, 60m tower was closed to tourists in 1992, amid dire predictions that its tilt was so pronounced it would collapse within 20 years or so. It leaned 6 degrees, or 4m, off the perpendicular on its south side. The correction has put it back 40cm towards the vertical – not enough to be seen by the naked eye but sufficient, the engineers say, to bring it back to the lean of 300 years ago. The architect of the plan was a professor of soil mechanics at London's Imperial College, who had to deal with the aftermath of many previous botched plans and soothe Italian fears about handing the fate of a national treasure to a foreigner. It was once widely believed that the unknown architect had designed the tower to lean, but this assumption has been proved false. Part of the building's site was on soft, silty soil of a former river course and subsidence began during construction. In 1838, engineers excavated at the tower's base to expose a layer of columns that had sunk far underground. That accelerated the lean and the process was brought near to disaster by the pumping of groundwater in the plain of Pisa in the 1970s, which caused the soil to dry out. The Leaning Tower, a wedding cake of seven tiers, is officially the bell tower of the cathedral of Pisa. Its construction began in 1173 and continued, with two long interruptions, over the next two centuries.']

...It's opening two weeks later than originally planned, and has ended up costing slightly more than[the] expected... \$75 million to build... but Sky City Ltd is delighted with the public's fascination with the Sky Tower. The Sparkplug, as it has become known, finally opens for business this weekend... The 180-seat revolving restaurant, called Orbit, opens on August 9 and had already received "many thousands" of bookings... Sky City is expecting more than 900,000 people to visit the tower during the next year – an average of 2500 visitors a day. Adults will pay \$15 for the privilege – children \$7.50. Restaurant guests will not have to pay the fee but there will be a minimum charge, probably around \$25... In its listing profile, the company said it expected the tower to generate revenue of \$16.3 million in its first year... Within two or three years, however, Sky City expects about half its tower net income to come from rent paid by broadcasters and telecommunications companies. About a third of the room available for such equipment has already been snapped up.

...A big clean-up yesterday followed the big bang of the Sky Tower's official opening in Auckland on Sunday night... About 6700kg of gunpowder [was] exploded... Clean-up crews scoured one of the main sites from which the fireworks were detonated, searching for unexploded gunpowder... [A] spokesman... said he was confident no dangerous debris remained there. It was extremely rare for any unexploded gunpowder to be left over after a display. However, he did not want the site revealed to prevent children from carrying out their own search... [Incidentally, t]he... casino... is considering scraping its round-the-clock nursing cover and leaving emergency care to security guards. The proposed abolition of the four full-time nursing jobs has angered the Service Workers Union, which claims the casino will not be safe for staff and customers. A union organiser... said... "The company is talking about training more people in first aid but that's not a substitute for qualified nurses." ...the casino handled frequent emergencies, from epileptic fits to heart attacks.

...Like a Christmas tree, the Sky Tower [is currently twinkling] with red and green lights in support of a fundraising campaign for a children's heart centre at the Starship hospital.

...Sky Tower, the most imposing feature of the Auckland skyline, is engaged in a... battle for hearts, minds and wallets. The odds should be stacked in favour of the soaring structure... Its spin doctors have worked hard to link the concrete and steel totem with good works and blur the reason it exists: to pull punters to [the] vast gaming halls[beneath it]. The dazzling... nightly wrap-around show is meant to help a Starship appeal... But the casino chiefs know a threat when it comes in the form of the in-your-face advertising on billboards out West. The image of Sky Tower as a junk needle causing misery for problem gamblers is as striking as the recent television campaign against drinking and driving. Predictably Sky City turned to its lawyers to blunt the attacks... because the man behind the[billboard] campaign... is rapidly assuming the mantle of a superhero... He also is a lawyer and intends fighting writ with writ, rejecting Sky City's application to[protect] the mighty tower under the Trade Marks Act.

...A group of ketchup aficionados turned their noses up when handed a bottle of Heinz Ketchup to pour on their chips at the Sky Tower's revolving restaurant... They detected plain old tomato sauce, not authentic ketchup. A disagreement ensued between the restaurant manager and the diners, lawyers were consulted and grievances aired. Subsequent inquiries revealed that a staff member mistakenly poured ordinary tomato sauce into the ketchup bottles. The storm in a ketchup bottle on Monday resulted in a visit to the restaurant yesterday from Heinz-Wattie's food service business manager... He said ketchup was made to a specific recipe and was spicier, thicker and darker than plain tomato sauce... The restaurant has agreed to reimburse the diners for their meal. Its manager... said the matter had been an oversight, not an attempt to mislead.

...[a group of Aucklanders who were trapped in a Sky Tower lift for an hour and 40 minutes are furious that the only contact they had in the first 75 minutes was a recorded message telling them that help was on the way. 14 of the 18-member group were given a free meal the same night they were trapped. The general manager said it was not possible to guarantee that all elevators would be faultless. The lift problem experienced had never happened before and it took longer than expected for a technician to fix it.]

...An Auckland firefighter eased the tension of a hair-raising rescue from the southern hemisphere's tallest building yesterday by talking about the spectacular view... [He was one of two firefighters who] received a hero's welcome after carrying out their... rescue. They were called into action after two maintenance workers became stuck in a window washing cage[on] Auckland's Sky Tower – 185m above the city. The Engineering Services workers had been outside the observation deck all afternoon carrying out routine maintenance on the computer-driven cage when a malfunction left it stuck about 5pm. It... [was] another three hours before the pair... were back on terra firma. When they finally got down the pair... were whisked away by casino security officers... Initially, the plan was to remove a pane of glass... to reach the men, but it soon became obvious that would not be possible and more extreme measures were required. [The two firefighters], who helped set up the high-angle rescue team about six months ago and who had spent a lot of time training on the tower, decided an abseil rescue would be the best way. From the tower's restaurant level they were able to lean out over safety netting and throw a line to the trapped workers. Then... [one of the rescuers] eased over the edge and dangled precariously before the workers used the line to pull him into the cage. A harness was fitted and the first worker was lowered to the ground, followed about an hour later by... the second... [The firefighter] played down the achievement. "It was just a rescue... six floors or 60 floors – it's just the same thing, isn't it?"

...[Winds gusting to over 200km/h blew roofs off houses, overturned cars and smashed windows as a storm buffeted the central North Island yesterday. The highest winds, at 212km/h, were recorded at Wairarapa Electricity's Hau Nui wind farm. The farm was in no danger of creating an electrical storm as power automatically shuts off when winds reached 120km/h. The highest speed at the site, one of the windiest spots in NZ, was 220km/h, recorded earlier this year. Yesterday's gales closed two highways near Wellington because of slips and flooding. In Dannevirke, firefighters said a glass conservatory "exploded" and they struggled to keep the roof of the Public Trust Building from disappearing. Those fearful of wind causing the country's highest building to topple can rest easy. Sky City Casino said the Sky Tower was designed to withstand winds of between 250-300km/h, and 200km/h winds could be sustained for hours. The only damage would be the loss of cladding'. The tower is also] designed to withstand... an earthquake measuring up to seven on the Richter scale.

...WEEKS of blazing sun in Britain have expanded the metalwork of Blackpool's famous tower and increased its height by an inch. So Auckland's Sky Tower could be higher than its present 328m after summer.

...the 328m Auckland landmark, has become a member of the World Federation of Great Towers. The organisation, which represents 22 towers around the world, includes... the 443m Empire State Building [in New York, which 'annually draws 3.6 million visitors (the world's most popular paying attraction – the Eiffel Tower – drew a record 5.7 million tourists in 1992')]... and... the CN Tower in Toronto – at 553m the world's tallest...

Auckland's Sky Tower may be tall, but Indonesia plans to build a tower in central Jakarta to dwarf it at a cost of \$US560 million. At 558m, the... [tower] will be the world's highest, higher than the... Moscow tower at 553.5m. The structure[... which]... would be 70[%] funded by foreign loans... will house restaurants, television stations and telecommunications operations below a 148m mast. But what is interesting about this tower is that it... will be a monument to symbolise the success of [the President's] New Order Government... The tower, designed by the East China Architecture Design Institute, is expected to open in 2001... But one wonders which will be finished first: the... tower or... [the President's] 30-year-old reign.

...The casino is not the only part of Sky City... where visitors come away with more than they brought in. About \$21,000 worth of multilingual audio guides... worth \$300 each... have been stolen from the observation deck of the Sky Tower since it opened... sources say. The infrared guides, about the size of a cellphone, give information on city sites in six languages. ...[the] Sky Tower was the biggest winner in this year's Tourism Auckland awards with the venue picking up two prizes... It won the Telecom Yellow Pages supreme award and the prize for new project development... [In related news,] Sky City... and... [t]wo churches... will battle against a proposed Hamilton casino after being given party status by the Casino Control Authority. The authority rejected claims by 14 other individuals and groups... Sky City was made a party because of the likely commercial harm to its Auckland casino should the Hamilton venture go ahead.

...Tainui... will take a quarter stake in [Hamilton's] \$46 m... casino... The move, which follows that of Rotorua tribe Ngati Whakaue to apply for a casino license... [in] partnership with a North American Indian company, Dreamcatcher Gaming Group Inc... has appalled[a prominent] Maori activist... She said it would be disastrous... "Our people are gamblers... A casino is only going to harm the Maori race for generations to come."

...[a NZ] First MP... wants to stop more casinos being built, even though his tribal trust board is promoting a 25[%] holding in a casino in Hamilton... "Generation after generation of Maori children have suffered the effects of parental drinking, smoking and drug use. Tomorrow's Maori children will be the victims of addictive gambling parents if casino growth in this country is not stopped."

...*The experiences of indigenous people overseas shows casinos can bring big economic and social benefits...* Like Maori, the Indian nations... in the U[S]... were colonised and their lands and resources taken. Their cultural and economic health has suffered similarly. Their social indicators have been – and many still are today – considerably lower than national and even local or regional averages. However, some Indian nations have succeeded with economic development projects and have turned around not only these social indicator statistics but also their pride and identity as indigenous peoples. Two prime examples are the Oneida Indian Nation (in New York state) and the Mashantucket Pequot Tribe (in Connecticut)... Fifteen years ago both people had little land and little money, were dependent on Government handouts and had low social statistics. The Oneida land base was only 13ha and their sole source of income brought in \$150 a month... The Mashantucket Pequot were, according to law, officially extinct as a tribe and in 1974 were in danger of losing their 87ha tribal reservation on the death of the last tribal member living there. Both nations... have based their economic development strategies on gambling... Both started with a bingo hall then decided to expand and invest in large casinos based on their reservations. (The Mashantucket Pequot had since also gained federal recognition as a tribe.) Both casinos now earn millions of dollars for the two nations – indeed, the Mashantucket Pequot earn an estimated \$US800 million... a year from their Foxwoods casino (not including income from the hotel and other businesses). This success has made both nations completely economically self-sufficient... Both nations have been able to establish self-government structures and facilities; infrastructure, education, health, housing and recreation programmes and facilities; and various social programmes. The Oneida have notably developed programmes to battle alcohol and drug addiction (and, incidentally, run an alcohol-free casino). The Mashantucket Pequot, because of the vast sums of money flowing in, have been able to guarantee every member free education to doctoral level and a salary of \$50,000 to \$60,000 for jobs, including those that do not usually attract such high salaries, such as cleaning. They also pay parents who care for their children at home... Importantly, the successes of both nations have enabled them to rediscover and revitalise their cultures and distinct identities... The surrounding communities have also benefited, with both nations providing valuable employment for the regions... providing taxes to the governments and making various philanthropic donations (totalling millions of dollars). The point of telling stories such as these is not to suggest that gambling provides the only path to salvation. The point is first that indigenous peoples can invest in gambling and both receive the benefits and remedy the disadvantages from it. Secondly, it illustrates that – despite various legal, political and social differences between countries – there is much overseas that is relevant to developments in N[Z].

...International corporations are eyeing N[Z] as a potential gateway for lucrative Internet casinos... Both the Auckland and Christchurch casinos confirmed last night that they had received approaches from overseas operators. So did the Casino Control Authority, which indicated enthusiasm for milking international gambling dollars, subject to finding ways of keeping local computer buffs out of temptation's way... The casino authority's chairman... acknowledged it would be difficult trying to control the activities of N[Z]ers on the Internet... If a feasible way of retaining local control could be found, he believed basing Internet casinos in N[Z] could be a hugely lucrative source of tax dollars... A possible market is... China and other Asian countries, whose gamblers might... perhaps be tempted to visit this country once exposed to casino promotions on the Internet. The Christchurch casino's chief executive... said he... would "certainly be interested" if Internet gambling could fit within N[Z] regulations. Some "second rate" gambling games were available on the Internet, usually based in obscure countries, giving punters little confidence of getting any money back... Internet operators were keen on gaining credibility through the backing of a country such as N[Z], which was seen as free of corruption and having a strong yet uncomplicated regulatory regime.

...Legislation imposing a retrospective moratorium on casino applications progressed yesterday despite concerns that it breaches people's rights. The bill, introduced last week by the Minister of Internal Affairs, blocks new casino licences for three years... [However, the] unpopular plan to build a casino... [in] Hamilton... is a done deal, the Mayor... said yesterday. A council-organised survey showed most Hamilton people did not want the \$30 million casino. Council staff recommended... that the council spend \$40,000 on independent social and economic impact reports but [the Mayor] said there was no point... as it was likely the casino would be built regardless.

...All bets are off on[casino] plans for Hamilton and Wellington, after a Government moratorium on casinos. A bill putting a three-year moratorium on casino licence applications... was passed 56 votes to 49 in a conscience decision in Parliament yesterday... Opposition MPs failed in a bid to allow businesses to recover costs... The hefty costs of seeking casino licences include \$450,000 for a site licence and \$350,000 for an operation licence... The Minister of Internal Affairs... said the costs were "a fact of life. People who invest in the gaming industry are themselves undertaking a bit of a gamble and I don't have a great deal of sympathy with those who think they should be recompensed." ...The Labour Deputy Leader... [noted that] the bill gave a free, three-year licence to existing casinos to print their own money without competition.

...Disgruntled staff of Auckland's... casino are eyeing better pay across the Tasman. Melbourne's new Crown Casino is recruiting in N[Z], offering up to 53[%] higher pay to experienced croupiers. Staff sources inside Sky City... say there is strong interest because of management turmoil, low morale and failure to boost pay rates... A spokesman for the... Service Workers' Union... said many casino staff were promised a pay review after three months, others were told four months. All were told pay would be reviewed after a year. But staff of just one department, the cashiers, were given the earlier review. Their pay went up to \$12.81 an hour. [When t]he company marked its anniversary... again only the cashiers' pay [went]... up, this time between 4 and 6[%]... Other staff were angry at the delay. Their pay rate was flat, regardless of weekend work, overtime or night shifts. Croupiers (dealers) are paid \$12.79 an hour... Crown... will [soon open AUS]'s biggest casino, employing 8000 staff[... and]... is offering between \$18.52 and \$19.66... [T]hey plan to interview applicants here next month... Crown... management in Melbourne yesterday confirmed they had about 60 N[Z] calls so far registering interest... [Sky City already has a problem with] high staff turnover. Within five

months of opening more than 600... staff had quit. The... union... estimates that figure would now be at least 1000, with turnover rates in some departments ranging from 50 to 100[%]. And it is not confined to the wage workers. Three of Sky City's top managers have left or are leaving. They came from the U[S] with the casino operator, Harrah's, which is in partnership with B[IL], the building owner.

...The share price of Auckland casino operator Sky City shot up 25c to close at \$7.20 yesterday following B[IL]'s decision to buy Harrah's... stake in the company. B[IL] said it had agreed to pay \$6.75 a share for all Harrah's 12.5 million shares. The sale, if approved by the Overseas Investment Commission and the Casino Control Authority, will leave B[IL] with a 63[%] holding and see Harrah's walk away with around \$84 million in cash. The deal follows Sky City's decision to buy-out Harrah's management contract for around \$20 million before tax. The Sky City managing director... said the company had decided it no longer wanted to pay Harrah's around \$9.5 million a year after tax in management fees. Under the terms of the contract, Harrah's will continue to oversee the casino complex... until June next year... Harrah's name will be dropped immediately from the casino's title... Harrah's originally agreed to run the Auckland casino for 15 years with the right to renew its contract for a further 10 years. It noted the casino had been a good investment. It originally invested around \$37 million as a 20[%] minority owner. It later sold down its interest to 12.5[%] for around \$30 million. It is understood to have received around \$NZ24 million in management fees and around \$NZ3.6 million in dividends since the casino opened...

Casino stocks are expected to receive a shot in the arm after Harrah's Entertainment's announcement that it will buy rival Showboat in a deal worth \$US1.2 billion... Harrah's said the deal would create the world's largest gambling company... Industry experts say... that more deals were likely... the companies most likely to be on the hunt are the powerhouse players in Las Vegas, such as MGM Grand and Mirage Resorts.

...Mirage Resorts is a year away from opening the most expensive hotel casino in Las Vegas, the \$US1.5 billion... Bellagio[, which also]... promises to be the most luxurious hotel in Las Vegas. Its design, based on an Italian village, includes a man-made lake with over a thousand fountains. Each will shoot water as high as 50m in the air during a "ballet" of synchronised lights and music... [Mirage Resorts began] with the Golden Nugget downtown, and later the Mirage, which opened in 1989, and Treasure Island on the city's famed "strip." ...opening the Mirage was a huge risk for the company because it was deep in debt and operated only two small hotels. Some investors have voiced concern about debt this time, too, because the company will borrow about \$1.6 billion to finish Bellagio and a sister hotel in Mississippi. [□ 'Modern Las Vegas was created when a gangster built the Flamingo Hotel in '46. Sadly, his employers did not let him live to witness the astonishing boom he triggered. Now, 22 million people come here every year and spend \$10 billion in the pursuit of pleasure. 90% of visitors leave as losers. The only reason this capital of polyester decadence is here is because it occurred to someone they could make lots of money, and that's exactly what they did.']

...Everyone who has been to Las Vegas knows the axiom, the bigger the better, is what makes the gambling mecca so successful. Glittering pyramids, circuses and other gimmicks have been constructed to ensure that casinos continue to coin it as people seek an escape to an adult Fantasyland. Such is the model for Melbourne. Crown, as the glitzy palace on the south bank of the Yarra is known, stretches endlessly down the river bank as hectares of gaming halls, restaurants, theatres and boutiques offer hedonistic pleasures to a town otherwise called Bleak City. It was [one man's] dream to bring a bit of Las Vegas down under. The energetic property developer and trilby-hatted racegoer wanted the best, so after outlaying \$A2 billion he has got it. But the big question is, has it cost too much? ...Expectations were that revenues in 1996-97 would come in at around \$850 million and profits at around \$80 million. If only. Revenues were \$200 million short, resulting in earnings of just \$24 million... On top of this came abnormal charges of \$187 million, comprising mostly established cost write-offs which had not been expected... Now the company is sitting on an accumulated loss of \$78 million, which will take at least a year to bring back into the black and will delay the payment of dividends by at least that time... From a peak of \$2.95 in September last year, Crown shares have fallen to the stage last week where they hit a low of just \$1.46. The plunge has wiped more than \$1 billion from the company's market capitalisation, and forced it to forego plans to raise additional equity with which to fund the casino's continued development... [P]lans for a \$25 million lyric theatre... [have just been] scrapped... also put off[is the] development of a second hotel tower block... What has befallen [the dreamer's] baby is a textbook example of how investors expect promises to be delivered upon. Sure, they can become enthused with a vision, but at the end of the day they want to see a return for their bucks. When it comes to buying casino shares, they do not want to gamble... So, Melbourne has the largest and most glamorous casino which money can buy, but the acres of marble and plush-pile carpet are yet to prove their worth for the owners... Crown has succeeded remarkably well in bringing into A[US] plenty of high-rollers from Asia... Whether this can continue is another matter. [Crown's dreamer] says that no impact has been felt from the various currency and stockmarket collapses around the Asian region, so he expects his customers still to come and spend... But he knows that once Crown's novelty wears off it will be harder to keep them returning. In just three month's time Sydney's own['\$970 million'] Star City casino opens the doors on its permanent facility and it will be competing for deep-pocketed gamblers, especially if the state Government grants long-awaited concessions on the high rollers' tax. But [Crown's dreamer] is not being put off. He is pressing into the Chinese market, urging his commission agents to seek out the many who have become fabulously wealthy under... open-market policies and who cannot resist the lure of the roulette wheel.

...RENOWNED for gambling, entertainment and nightlife, Macau was once called the Las Vegas of the East. Now the peninsula and islands of this... 9.6ha colony... have been dubbed the "Chicago of the Orient" by the press, recalling an era when gangsters... ruled [Chicago]... Triads are shooting it out for control of Macau's lucrative gambling business before the territory reverts to Chinese control in 1999... after 442 years as a Portuguese territory... China's growing business influence is one thing. But nothing has residents as worried as the gangland-style murders, bombings and arson attacks rocking the territory's quiet cobblestone streets... "Crime is getting worse by the day... People are scared for their lives," said... a Portuguese banker... Two rival triads, the 14K and the smaller Soi Fong, are competing for turf... [before the] 35-year monopoly over Macau's gambling... [by a] Hong Kong tycoon... ends. Both gangs are desperate... In the battle for supremacy, 16 people... [were] killed in the first six months of this year, compared with 21 in 1996. Macau police, despite help from Chinese law enforcement officials, have had little success curbing the violence... "The triads have made us prisoners in our own country," said... a commodities trader who carries a gun and wears a bulletproof vest. "No one can stop them, not even the Chinese government."

...Currency turmoil in South-east Asia and fears of an economic downturn for the region are harming A[US]'s big casinos as Asia's big gamblers tighten their belts. Two of A[US]'s largest casinos, the Crown... in Melbourne and Burswood... in Perth, both rely on South-east Asia's heaviest gamblers for about half their revenue... Analysts said the profit margin on Asian gamblers was thinner than for domestic customers because of the high commissions paid to agents who entice the high rollers to A[US]. The casinos also refund a percentage of high-rollers' turnover to make betting at their tables more attractive.

...A[US]n casino operator Casinos Austria International cut its first-half loss by 30[%] to \$A1.86 million... It said the outlook for the rest of the year was gloomy. Sales fell 24[%]... after some high-stakes gambling programmes at the Reef Casino were stopped after bankers cut credit to its owners, the Reef Casino Trust. Casinos Austria holds the management contract for the casino... and also owns 13[%] of the units in the trust... [In local news, s]hares in casino operator Sky City Ltd dived 30c to close at 730c yesterday after the company admitted it was unlikely to meet its profit forecast for 1998... While revenue from its gaming operations in the[past] year... was well up on the figures in the listing profile, revenue from its other operations was much lower... [T]he Sky Theatre, in particular, had been a "disaster." It lost \$3.5 million over the year, largely because the expensive shows imported from the U[S] had not caught on... Sky City is now planning to hire out the theatre to local organisations... Meanwhile, the annual report has revealed... Sky City's managing director... was paid \$350,000... However[last]... year's annual report showed he received \$175,000 for the casino's first five months of operation... 17 staff at the casino were on salaries of more than \$100,000 a year compared with

seven... last year. Staff brought from the U[S] by Harrah's are not included in the figures... [In other figures,] punters guzzled more than \$12 million worth of free food, booze and car parking in its first financial year... which equated to 5[%] of revenue... In America, casinos were used to allocating around 10[%] of their revenue to... "complimentaries"... However, N[Z] was less competitive and therefore less was spent [- although 'the Christchurch Casino puts on free buses to bring pensioners from out of town each week.'

... 'Christchurch Casino is a shareholder in the Dunedin Casino, which will go ahead following the Casino Control Authority's decision to grant a licence. Those involved with the project say it will create around 180 jobs and boost tourism to the southern city. "Dunedin lacks things for people out of town in the evenings. It will help the city in that regard," said the project's director. But opponents believe more gambling will only worsen poverty in Dunedin, and the mayor said the casino could potentially take away business going to existing cafes and bars. "I don't think you can say it will be good for the local economy." A \$5 million upgrade of the old Grand Hotel started last week and the casino is due to open in 10 months. Described as a boutique casino, it will be about a third of the size of Christchurch Casino.' By the way, 'after a public meeting with our Foreign Affairs Minister, an occasional punter thought he would stop for a quick punt on the pokies at Sky City Casino. Ten minutes later the Fijian sat back from the machine in a daze, not knowing what to do next - he had just won a little under \$2 million. The "Sky High" jackpot, from 22 linked poker machines, had just reached \$1,995,026, and the Fijian's \$3 investment was enough to get the lot, on only his third push of the button. The general manager of gaming machines at the casino said the jackpot had been building for eight months. And half of eight months' worth of punters' money that has gone into the machines will be going to a very good cause. "I told myself that I would give half of anything I won to charity," the Fijian said. So he is now setting up an education trust that will help students from Fiji come to study in NZ, using the \$1 million share and the interest it earns. The previous record win on the casino's machines was when an Auckland man won \$787,250.'

...a woman] says she "just had a feeling" about a Las Vegas poker machine which, for major prizes, is linked to 746 others. That's why she waited more than an hour to play it. And then she scooped a world record jackpot of \$18.3 million.

...[an AUSn media mogul (r:p605, ln65)]... was reported yesterday to have helped a British gaming group realise a half-year profit by losing... \$25 million... The Times said... A[US]'s richest man and the chief of Singapore City Developments... between them had lost... \$37.5 million... at the group's Crockfords casino. - 1997

[Aussie mogul] wins big and loses big because he can and he's bored... The revelation this week that... A[US]'s richest man... took a \$US20 million... bath in a Las Vegas casino only adds to... [his legend. H]is losses were accumulated in just three days of baccarat at the Bellagio hotel, which had accepted the billionaire at its tables after he was banned by a less fortunate rival. [The AUSn], worth \$A8.2 billion... through his holdings in media, financial services, telecommunications and IT, is one of... [the] "whales," the 200 or so fabulously rich high-rollers courted by casinos around the world with all-expenses-paid visits, multimillion-dollar credit lines and house rebates. But [the AUSn] is in a league almost of his own, reputedly matched only by the Sultan of Brunei and[a] Saudi arms dealer... and is believed to have closed the doors of... Aspinall's club... one of London's most exclusive casinos with a killer winning streak. He has shrugged off the theft of several million dollars worth of bullion from a company safe... and... barely winced when other international high-rollers creamed millions of dollars from his recently acquired Crown Casino in Melbourne... With his wealth growing by \$A1.8 billion last year - equal to his total worth 10 years ago - the discovery this year of a fortune in rubies on his property in the Hunter Valley was just another drop in the bucket. Even so, the marathon card session at the Bellagio was a vast lost, equivalent to 4[%] of combined baccarat earnings of about \$US500 million of all Las Vegas casinos last year. According to... a reporter with the *Las Vegas Review Journal*, [the AUSn]'s usual hit-and-run tactic of playing for several hours and leaving failed badly... The play-win-run attack also collapsed disastrously in London late last year, when [he] reportedly lost £11 million... at Crockford's casino - the biggest single loss in British gambling history. But losses that would cripple a decent-sized company have never fazed [him. His b]iographer... noted: "As one of his executives puts it, he gambles when he's bored and he gambles often because he's often bored." As far back as the late 1960s [he] was one of Sydney's biggest race-bettors, gambling \$A10,000 or so on a single race at the Harold Park trots. His bankers were cautioned in the mid-1970s against extending an overdraft because of \$A360,000 he owed to bookmakers... According to [the biographer, when the mogul] was confronted by an accountant worried by the effect on the company of his gambling losses and furious at the latest losing streak in London, the billionaire replied: "You shouldn't have left me in London over the weekend." [The mogul]'s losses over the years have been enormous, including up to \$A4 million to a single Sydney bookie in 1980-81, \$A7 million on the day of the 1987 Golden Slipper at Rosehill, \$A3 million two days later at Randwick, \$A9 million at the London Ritz later the same year, and \$US20 million at two sessions in Las Vegas in 1987 and 1991. But his wins have also been prodigious. He picked up \$US7 million when he stopped over at the Las Vegas Hilton with his polo team in 1991, won \$US10 million after catching a... concert in the Nevada gambling capital in 1995, and collected more than \$A3 million [- 'the single biggest betting plunge in AUSn racing history' - Jon Might and Power in the 1997 Melbourne Cup... And in 1995, he won a record \$US20 million at the Las Vegas MGM Grand's Monte Carlo casino by playing baccarat above house limits, betting more than \$US260,000 a hand on six hands at once... [A f]ormer MGM chairman... flew to England to tell [the AUSn] the casino wanted to reassess the terms on which he gambled there - a polite way of saying he was no longer welcome at MGM or associated casinos. One Las Vegas casino boss told the *Los Angeles Times*: "If you let him dictate the terms you're gambling like any other sucker, but for millions invested by your stockholders against a billionaire's pocket money." However, [the AUSn] has remained larger than life, handing croupiers tips of \$US25,000 in chips after winning streaks, and once cleared a waitress' mortgage with a tip of \$US125,000. In a much-retold anecdote, [he] was once accosted by a Texan oilman boasting of his wealth. "Are you really worth \$US150 million?" he asked. "Tell you what, I'll toss you for it."

...[the AUSn media mogul... [has blown] more than \$NZ70 million in Las Vegas... The... *Las Vegas Review Journal* and a British tabloid... said the 63-year-old had passed... time playing baccarat at \$US150,000... a hand at the Bellagio Casino... A[US]'s richest man[then] reportedly enraged the Bellagio dealers when he refused to tip them as a protest at leaks to the media over his previous losses at the gaming tables. The usually generous billionaire once tipped a Vegas casino cigarette girl \$US75,000... [H]is high-rolling is well documented. He once lost \$NZ40.1 million playing blackjack at the exclusive London casino Crockford's, almost wiping out an earlier \$NZ47.7 million win at the MGM Grand Casino in Vegas... [In local news, n]ew \$2 coins are being rejected by thousands of electronic gaming machines, vending machines, video games and parking meters. Coins in a new batch of three million... are slightly different from the old ones made seven... years ago. Many machines do not recognise them and will have to be modified. The Reserve Bank said yesterday that it would not consider withdrawing the South African-made coins. One million are in circulation and the rest are waiting to go out. The batch is the first since 1990... when the bank had 40 million each of \$2 and \$1 coins made by the Royal Mint in Britain... [T]he South African Mint had been chosen because it tendered the best price for the job - about 9c a coin... The manager of policy and supply in the bank's currency department... was not sure why machines were rejecting them... [He] acknowledged slight differences in the new coins but said they met specifications for weight, size and metal content[while adding that]... one noticeable variation might be a slightly thinner rim... The Auckland [casino]... had notified the bank of problems when the new coins went into circulation... [in] December... A casino spokeswoman... said more than 1000 slot machines were having to be adjusted - a job expected to take until the end of the month... [I]t could cost up to \$60 per machine to programme them to accept the new coins.

...Businesses want compensation from the Reserve Bank for expensive modifications to coin machines that reject a new batch of \$2 coins... The coins were rushed into circulation to cater for increased demand when the Auckland [casino]... changed its gaming machines to take \$2 coins only...

The Reserve Bank will decide next week whether to request a re-minting of [the] three million \$2 coins... [Incidentally, a] 7-year-old Rotorua boy who tried to steal a can of Coca-Cola from a soft-drink machine had to be freed by firefighters. The boy's arm became stuck at Rotorua Hospital Accident and Emergency, and staff tried for about 40 minutes to release him... Although the boy was not injured, his pride certainly was... [Hospital] staff tried to boost the boy's flagging spirits when he was released: they gave him a can of Coke – free.

...Hugh Wright announced its closure last week after 98 years of business. It had 19 stores nationwide... Its Queen St store was the largest menswear store in the country... Its closure has been put down to changing consumer tastes and the average male's increasingly sophisticated dress sense... West Auckland shoppers are among those surprised by the sudden closure... [– t]he company had a store at Henderson... [– b]ut few people are as shocked as [a] 101-year-old... tailor... who worked for the... “fashion Mecca” for the discerning... when she was 18... until she married at 27.

...“Oh my god, that's me!” exclaims... a 27-year-old retail worker and solo mum... [while] reading about our newest social class: the could-not-care-less “Young Pleasure Seekers.” The group is young, spends money it does not have, loves to... eat fast food – and makes up 13.5[% of NZ]ers. It could include anyone at Santos on Ponsonby Rd, a cafe popular with 20-something, casual creative types with a lot of down time to drink coffee and read specialist magazines like *Chick* (surfing for girls). “I spend money before I ever get it. I live in a very unrealistic world financially. I like nice things and I just have to have them,” says [the 27-year-old]... Her friend... backs up research by Otago University academics in their new “Consumer Lifestyle Study,” which says that these young cynical hedonists reject public transport. “I'm in love with my car,” says the 28-year-old nanny-cum-writer-cum-mother who would not dream of catching a bus... One characteristic that comes through strongly among Young Pleasure Seekers is reckless shopping habits, more often using credit, on new products and trendy labels. [Some parents could be encouraging the development of such a characteristic.]Take... a 16-year-old Sacred Hearts Girls' college pupil... who... has two cellphones, which cost about \$200 a month. Yesterday she bought a purple faceplate for \$35 on a shopping spree... in Henderson. She also spent \$25 on make-up, \$29.95 on a swede belt and \$40 on a pair of purple pants – all financed by her parents. Her friend... aged 15, bought a \$20 pre-paid phone card to top up her cellphone, which, [less than four months into] this year, has cost \$400. She also bought a new pair of jeans for \$70 and a \$30 top. [The girls] and three other Sacred Heart six formers agree they fit the characteristics [that identify them as potential] Young Pleasure Seekers. They come from households with more than one television set, do not use public transport, spend little time with their families, and do not take an interest in social issues. Their lives revolve around... text messaging, magazines, music, parties... cheap alcohol... make-up... and clothes...

This average life of supposed suburban bliss seems to be costing a packet. What's more, the latest... Statistics N[Z]... Household Economic Survey has just officially reconfirmed the only way to pay for [the] thoroughly normal family lifestyle is for both parents to work, preferably full-time. [The 'average total net weekly spend (including rent or mortgage) for a young-single person is \$478 (including \$56 for food); older-single – \$343 (\$52); young-couple – \$921 (\$120); older-couple – \$608 (\$105); sole parent with children – \$510 (\$84); couple with 1-2 children – \$864 (\$150); with 3+ children – \$920 (\$174)'. Interestingly, 'NZers spend only 1% of their household budget on furniture, whereas Europeans spend 8%'.]For the insights which it offers into the way we live, the survey is even capable of stoking the war between the sexes. For example, it proves conclusively that... women spend more on clothes than men – almost twice as much... For the record, the average household spends \$4.10 a week on mens' clothes, and \$8.10 on womens' clothes. [Editor's note: During the '1993-94 financial year, the total expenditure by households in NZ was \$48.387 billion – of which \$2.364b was spent on clothing and footwear' (when it comes to clothing, 'the British annually spend twice as much as AUSns, and Americans spend \$US9b on lingerie' alone!]

...*Shop till you drop* Retail therapy is a major stress release for the modern man and woman... Shopping is now a favourite pastime for many N[Z]ers and – since 'Saturday retail trading was legalised in 1980', followed by Sunday ('1990') – it's popularity continues to grow... [T]he sun always shines when you're shopping. But a recent British study suggests that... binge shopping may make you feel worse... “For significant numbers, dissatisfaction is now part of the shopping process,” says [one of the] analysts... that... carried out the Britain-wide study. “It's adding to the dissatisfaction that caused many people to go shopping in the first place. Shopping is offering a short-term buzz, but as a society we now recognise that and we're getting fed up with short-term emotions.” And N[Z] shrinks agree... Experts estimate about 38,000 Kiwis are compulsive shoppers.

...many [readers will know the feeling: shopping can be a nightmare... As the pressure to buy mounts, with increased consumer choice and intensive advertising, more and more people are finding the purchasing drug overpowering. One compulsive shopper describes it as “better than sex, because it lasts longer and you can take it home with you.” It is estimated that 750,000 people – 90[%] of them women – in the UK suffer an addiction to shopping. Their spending spirals out of control and many take drastic efforts to curb the compulsion. The shopaholics aren't necessarily big spenders. Shoplifting is a huge problem and there is a constant war between security staff and the light-fingered ones.

...*SCREEN stealers!* ...Celebrities are often given huge discounts at stores but for some it's not enough... [They] opt... for a... bargain at a walk away price... Just days after [an actress] was convicted of using a five-finger discount at Saks Fifth Avenue, court transcripts revealed the actress was suspected of stealing from two other ritzy stores. Even old stories have re-emerged of [her] cleaning out posh hotel rooms, packing every towel, robe, soap and ashtray into her suitcase... Of course [she']s not alone, there are many stars who have sticky fingers... ■ It's ironic – celebs have money to burn but still get huge discounts at their favourite stores. Meanwhile, the rest of us earn peanuts and usually end up paying full price.

...*Watch out, shoppers, Britain is the capital of fake*... Controls in Britain are so weak that it has become Europe's centre of counterfeiting, with a thriving black market in clothes, sneakers... and cosmetics... The Anti-Counterfeiting Group in Britain estimates the trade is costing legitimate European manufacturers, brand-owners and taxmen as much as \$200 billion a year, \$26 billion of that in Britain. By contrast, it is an offence even to possess fake goods in France, reflecting the value of haute couture to the French economy... The world's most powerful industrial nations, the G8, have convened a team, based in the US Department of Justice, to research the scope of counterfeiting. It is called the Senior Experts Group of Transitional Organised Crime – a clear indication of the kind of gangs the G8 thinks it is dealing with. Comparisons are being made with the international fight against drug barons. “Privately, every law-enforcement agency will admit it believes there are a number of Mr Bigs,” says... the Anti-Counterfeiting Group. “But it is as difficult to prove that in court as it was to prove Al Capone was a Mafia godfather.” ...British... [o]fficials say the counterfeiters are so well organised they are generally a step ahead of the law. “The question is, are we fighting ‘organised crime’ or just crime well organised,” says... [the] British representative of the European anti-counterfeiting group React... Britain introduced laws to seize proceeds of crime three years ago but they have been used only once in a trademark case. Enforcement of trademarks rests mostly with trading standards officers. This was sensible when the crooks were small-time chancers, but local government officials are unlikely to scare a criminal who smuggles fake designer gear as a lucrative and low-risk equivalent to drugs-running... The problem facing Britain was underscored by the break-up of a huge criminal gang last month in Liverpool. Its members imported up to 1.5 million fake perfume bottles from Croatia and Slovenia. They were filled with essence from Germany and labelled as brands by Chanel, Armani, Dior and Estee Lauder, to be sold at \$40 rather than \$100 to \$140 for the real thing.

Selling counterfeit goods under – or even over – the price of originals is against the law, but it isn't illegal for individuals and companies who own brands or patents to charge whatever they want (assuming the prices they decide upon are correctly entered into their computer systems)!

...I love this land, where I have the freedom to say and to think and to charge whatever I want.

Producers and merchants (be they wholesalers or retailers) may have a legal right to *charge whatever they want*, but whether anyone will pay their price is another matter. Most sellers have to compete for customers because they are offering identical products to other sellers. One method of gaining customers is to offer the lowest price. However, instead of using pricing to attract customers – or the traditional alternative of attempting to provide customers with the best service – companies are increasingly resorting to gimmicks and incentives such as: offering a specified free or discounted product with each purchase, or purchases over a certain value; entering into a prize draw everyone who purchases during a stated period of days; refunding in full the price of any product purchased on an unspecified day during the month; giving customers credits for purchases made over a period of time that can be redeemed in-store or at other retail outlets (e.g., ‘receive a credit of \$20.00 when your purchases of \$200.00 have been recorded on this card’; *Fly Buys*).

Now you can fly through your shopping... Become a Fly Buys member today and become part of N[Z]’s most exciting customer loyalty program... You’ll find hundreds of places throughout N[Z] where you can collect Fly Buys points. [Participating companies predominantly offer ‘1 point for every \$20 spent with them (for every \$15, or every \$25’, being other common deals).] **Because Fly Buys companies are some of N[Z]’s largest companies, you’re probably a customer of many of them already... In the future we hope to announce other companies joining Fly Buys, giving you even more opportunities... The sooner you join, the sooner you’ll start collecting points... Imagine how excited you’ll feel when you check in for your first free flight... Call the Fly Buys Service Centre for everything you’d like to know about Fly Buys. How many points do you need to fly between the North and South Islands or to enjoy a relaxing hotel getaway? ...Note: Your Fly Buys points have a life of three years from the time you collect each of them. After that they will be removed from your points table progressively at the end of each month. - 1996**

To celebrate its first year... Fly Buys... offered double points for all September, a promotion which inspired a burst of consumer spending... Soon after the scheme started *Consumer* magazine ran an article cautioning people against making purchases on the basis of points not price. They feared people would be lured to pay more for purchases thus losing the discount benefit of the points... [The] chief executive of Conventions and Incentives N[Z] echoes concerns of the]... Consumers Institute... After a highly successful introduction he says his information, which he adds is purely anecdotal, is that “there’s a little bit of disillusionment.” ...So far almost a million N[Z]ers have Fly Buy[s] cards, with 450,000 households tied into the programme. That’s 37[%] of all households in the country. Each week between 1500 and 2000 people join the scheme. But of those 450,000 households, only 58,000 have enough points to get a reward... [The] top third of householder members... use the card regularly[and] the nation’s top Fly Buys earner has more than 11,000 points. Of the remaining 300,000... [households,] half use their card when they remember but have not changed their buying habits significantly and the other half have either forgotten they have a card or given up altogether. At least 110,000 householders have less than 100 points. So one year on has Fly Buys been a fizzer or a winner? According to the general manager of the company which manages the programme, it depends who you are talking to... He says the scheme’s only critics are those not involved... Fly Buys was the brainchild of four companies – Foodstuffs, the Bank of New Zealand, State Insurance and Shell... The scheme was modelled on the A[US]n version, also called Fly Buys, which was launched in 1994... [I]nitially the A[US]n programme received a lot of bad publicity. Some of this was later proved to come from a company which was not in the programme... And by comparison with its A[US]n cousin, NZ]’s Fly Buys has been hugely successful. After its first year only 1500 people in A[US] had redeemed points for rewards... After three years of operation the A[US]n Fly Buys has... taken off and now gets more than 3000 redemptions a day... At the end of [the] first year, 3300 N[Z]ers had made claims. Most schemes depend on the majority of] participants] never claiming their free air-miles. In the U[S about 80%] of air-miles have yet to be redeemed... N[Z]ers have a relatively high redemption rate with only 70[%] of air-miles going astray.

...There was a time when you would hear the word “incentive” used only in the context of sales people, who needed the encouragement to meet targets. Everyone else, however, simply did “a fair day’s work for a fair day’s salary.” With competition as tough as it is nowadays, that maxim could well see you go bankrupt. The whole sales process has become so complex that everyone down the chain needs to be motivated[, which means]... “more companies than ever[are] redirecting their marketing and human resources budgets towards incentive programmes.” ...Several companies specialising in this area have sprung up in N[Z], with most of them providing some sort of travel incentive... The Fly Buy promotion is a well-known incentive involving consumers but manufacturers are also running aggressive schemes aimed at distributors.

...THE B[NZ] has made travel and rampant consumerism more attractive to its top credit card holders. Air N[Z] has joined forces with the Bank... to offer frequent flyer points to BNZ Visa Gold and MasterCard Gold holders... [-] about 60,000 people... [or] half the Visa Gold and MasterCard Gold market in N[Z] (‘100 points = \$1 travel’). Incidentally, ‘the amount of Fly Buys points required to qualify for free air travel will be increased at the end of the year, causing some shoppers to wonder if they’ll ever get free air tickets’.]

...IF THE 18th century was the Age of Enlightenment, then the 20th century will have to be the Age of Consumption. On all sides we are exhorted to buy, to choose from an imagination-numbing array of products and services. The cityscape is disfigured by signs, billboards and hoardings, competing with each other in size and garishness. Big bold red signs vie to out-Warehouse the Warehouse. Browse on the Internet and unwanted exhortations to buy sunglasses cruise across the top of the computer screen... Pick up a magazine or newspaper and an avalanche of leaflets, flyers and brochures disgorge at your feet... At home, the letterbox is packed with similar material... Settle comfortably into a chair at the end of the working day and a phone call will drag you up to take part in a fake contest aimed at selling you a timeshare...

[‘Shopping is the number one leisure activity in the country and there’s no reason for one in five NZers to miss out. More than 636,000 NZers are limited in their daily activities because of the long-term effects of disability. Now shopping will be a much easier experience at Lynnmall with the opening of its Shop Mobility service, a free customer service which provides powered scooters and wheelchairs, a special reception room and car parks. “We would like Lynnmall to be accessible for everyone to enjoy our new facilities and friendly environment,” says the mall’s marketing manager. The other big shopping mall in the west, West City, provides free wheelchairs for disabled customers but is yet to rise to Lynnmall’s challenge with a room for disabled customers.’]

...In response to increased competition due to the ‘\$40-million-dollar’ expansion of Lynnmall and the opening of Westgate, West City has announced its own multi-million-dollar expansion. However, t]he future of the \$400 million Quay Park Mall on the Auckland waterfront may be in doubt now that A[US]n mega-retailer David Jones has pulled out of the project... The planned Auckland store would have been its first overseas operation and the linchpin for the mall... The upmarket department store chain yesterday cited difficult trading conditions in A[US] as the reason for the move... The company said it was still interested in N[Z], but its immediate priority was to improve the performance of its existing stores... [Several] retailers... said they would be surprised if the mall went ahead without David Jones... The Quay Park Mall has been promoted as N[Z]’s largest shopping centre – nearly double the size of St Lukes Mall... [at] 60,000 sq m... There were to be three other major tenants and 175 specialty shops... A spokesman for the Retail Merchants Association... said he believed Auckland already had more than enough shops for its population[– with ‘over 1000 shops’ in the Downtown area alone]... One prominent Queen St retailer agreed... “Quite frankly I think there’s going to be a sigh of relief from a lot of retailers in the traditional part of Queen St.” ...he expected the decision would provide a boost to the Britomart project, as it was likely to compete with Quay Park.

...Orewa and Whangaparaoa business people and property owners are set to fight a proposed new commercial centre on their doorstep... The 6ha centre, including a supermarket, is part of [a] growth area for 9000 people planned for 400ha of farmland just north of the existing Silverdale shops... A council report says a new business centre providing 20,000 sq m of space... is needed... to cater for the expected population by 2005...

However, the retailers' group Mainstreet Orewa, Business Whangaparaoa Inc and the Orewa Ratepayers and Residents Association say a new centre is unnecessary. The Mainstreet Orewa chairman... says the Orewa and Whangaparaoa shopping centres have yet to reach half their potential... [T]he last thing the Hibiscus Coast community needs is a new retail complex which would starve traditional shopping centres.

...Store owners are resorting to science to help relieve us of our money... The \$2.6 million fit-out of Farmers St Lukes has lifted it into another dimension... Cluttered departments, jam-packed with stock, have gone. Broad cream avenues now flow around the shop. Instead of departments, the store is divided into a series of "worlds" – Womensworld, Mensworld, Childrensworld, Accessoryworld... Retailers are amazingly keen to spend big money making things easy and convenient for their increasingly fickle, and sometimes irascible, customers... An experienced band of retailers from across the Tasman is also forcing N[Z] retailers to smarten their act. Mall landlords are demanding it, too. If their tenants start looking tired and drab shoppers go elsewhere. Landlords insist on shop refits every five years – when leases come up for renewal. And that's an expensive exercise. "We wouldn't get many fit-outs for less than \$70,000..." says... an award-winning... retail... designer... "The average fit-out would cost up to \$200,000..." [That figure is chicken-feed compared to overseas ('Selfridges, one of London's most prestigious department stores, recently underwent a \$99 million upgrade').] One of the first chores for a retail design consultant is determining who a shop's customers are. Their socio-economic group... age, sex and marital status. Some facts never change. For instance, 80[%] of shoppers are women... Today's shoppers are always in a hurry. They know what they want and where to get it... "because they are more sophisticated. They know more. They've experienced more. They've seen it all on telly and trips overseas." ...They are frequently destination shoppers. And to get their attention, merchandise must be very inviting and strategically placed... Some retailers turn themselves inside out trying to provide a visual spectacle for shoppers. "The wow factor... will become more and more common." In America, where['two-thirds of the economy is a consumer economy' and] too many shops have wooed shoppers for far too long, a new kind of scientist has been invented to scrutinise shopping behaviour. Retail anthropologists complete with clipboards and video cameras trail around shops carrying out detailed investigations of shoppers' movements and body language. These boffins have reached a number of interesting conclusions. A shop entrance, for instance, is like a decompression zone. Here shoppers slow down, adjust to the lighting and refocus their eyes. The decompression zone lasts for 5 to 15 paces. Retailers should never put anything of value in this zone – because no one is going to see it... The scientists also observed that shoppers like touching, petting and fondling clothes before buying them. For this reason, some stores now place their merchandise on tables – making it easier for shoppers to go through this very necessary pre-purchase routine... [However, women] shoppers evidently bolt from the shop if their backsides are inadvertently touched while they examine the merchandise [because of crowded] aisles and insufficient space around displays... Another phenomenon is the tendency for American shoppers to turn right when they enter a shop. Some say this is because most people are right handed. Other consultants are not so sure about it. [One] believes that Kiwi shoppers actually turn left, because we drive on the left side of the road... The trick for many retailers these days is to persuade shoppers to buy more than they bargained for. Get them buying add-ons... Destination shopping items are often put at the back of a shop, forcing shoppers to pass through the entire retail space... One thing is sure. Retail designers now recognise that shoppers won't buy unless conditions are absolutely perfect... "The more comfortable and easy it is to shop the more likely they are to spend money." ...Shoppers have retailers exactly where they want them – falling over themselves to cater to every whim.

...Increased rentals from a clutch of prime shopping malls have helped boost the bottom-line profit of mall owner St Lukes Group to a record \$31.1 million for the year... The company, which either owns or part owns 10 regional shopping malls, has increased its income from the centres by 13[%]... despite only slight increases in turnover at most of the centres... A[US]'s Westfield Holdings took over commercial management of the St Lukes property portfolio earlier this year. Westfield is known as an aggressive operator in the A[US]n market and was widely predicted to crank up rents. St Lukes' new chief executive... defended the rent increases yesterday, saying many tenants had benefited from higher sales over the past few years, but had not paid corresponding rents. On average, rentals had increased by less than 10[%], he said... Increased borrowing has pushed its debt up to \$250 million (33[%] of total assets), and... it has announced plans to raise further equity through a rights issue. Existing shareholders are being offered one share and two convertible notes for every 18 shares and/or notes held... The issue is expected to raise about \$90 million and will be used to repay debt, as well as further development. The company is remaining coy about its development plans. However, it has confirmed it expects to begin redeveloping the Glenfield Mall in Auckland sometime next year. Its original plans for a \$90 million redevelopment are understood to have been scaled back by Westfield... Its attempts to sell the Downtown Shopping Centre were unsuccessful and it has since been taken off the market... [T]he company intended to keep the centre until the future of the Britomart development became clear.

...Shopping mall owner St Lukes Group is poised to sell the Downtown Shopping Centre in central Auckland... St Lukes has been trying to sell the centre for some time. Earlier this year, it said it was taking the leasehold property off the market... However, it recently bought the land from the Auckland City Council to make a potential deal more attractive. The 25-year-old centre includes 69 specialty shops and was most recently valued at \$37 million... [I]t is expected that... the sale proceeds... will help pay for redevelopment of its Glenfield mall on the Auckland North Shore... A potential buyer was now undertaking due diligence and the contract was expected to become unconditional within the next few weeks...

['This week Westfield successfully swallowed one of NZ's top-40 companies, shopping mall owner St Lukes Group, even though small shareholders made clear their disapproval. The move sees St Lukes wiped off the stock exchange and ownership of 11 prime shopping malls move across the Tasman in a \$570 million deal that creates the single largest AUSn property company, while Westfield Holdings, which manages Westfield Trust, is the world's fourth-largest retail-mall manager and developer. Controlled by a Hungarian Holocaust survivor and his three sons, Westfield is an immigrant's success story. The survivor, who has become one of the 200 richest men in the world, emigrated from Hungary to Israel in 1946, fleeing the Nazis and his home town of Filakovo. In 1952, he left Israel for AUS, where he joined another Hungarian Jewish Holocaust survivor. They formed Westfield – "west" a reference to Sydney's western suburbs where they started their development business, "field" reflecting that they were turning paddocks into residential subdivisions.'

...NZ] shopping malls will need to become much larger before retail rents begin to fall, according to the man being blamed... for pushing them up. [He is the] executive director of Westfield NZ Ltd... Complaints from retailers about rent were not new, but they have been brought into focus by the retail environment. Overall growth in retail sales was low and competition intense, putting pressure on profit margins... This placed retailers under particular pressure to control costs, and rent was one of their most significant. However when it came to shopping malls, the environment was, to put it bluntly, a land-lord's market. Shopping malls in this country have followed overseas trends and were capturing an increasing share of the household shopping budget, to the detriment of main street strips... To maximise profits, retailers had to get the maximum sales volumes per square metre of floor space, which meant concentrating activities in one location with high foot traffic, rather than spreading it around several stores with fewer customers... Mainstream retailers had to follow their customers, which meant they either took space in the big malls, or died. So much so, that demand for space now exceeded supply, even though many of the successful malls had undergone substantial expansions in recent years. And as in any business, when demand exceeded supply, the price goes up... [By the way,] Cornerstone Group... plan[s] to build a new style of storage unit... [T]he company's... director... said an extension from pure storage was the provision of packaging, including document storage boxes... The need for external storage seem[s] fairly universal. When [the director] looked at developing in this area, his accountant told him he had a whole room of documents waiting to be moved out of a high-rent office. "We've got stuff in our office that should go into storage after one year," [the director] said of the company's own premises... The company plans to install 500 boxes at first, rising to 1000... Self-storage units have

mushroomed alongside major traffic arterials, but [the director] said Cornerstone's plans for a "stage two" design increased security and put the units fully under cover.

...Stage two of National Trading Co's Botany Downs land goes on the market today, targeted at buyers willing to develop a 100,000 sq m regional shopping centre. It would dwarf the nearby Manukau City Centre and St Lukes, the country's largest shopping centres, which are both about 35,000 sq m. National Trading's property manager... said the development on 17.5ha could be worth \$700 million on completion... "Botany Downs will... impact... over a wide area. There are a number of centres of about 20,000 sq m which will have to expand or become a different type of centre..." ...Smaller centres, with up to 30 shops, would remain as local convenience centres. But centres with 30 to 45 shops were harder to get the right retail mix in, "too big for one of each and too small to be a comparative centre." ...Botany Downs... was a greenfields location in 1992, when National Trading... [-] the property-owning arm of Foodstuffs Auckland... [-] started the 17,000 sq m first stage... That stage contains a Pak 'N Save supermarket – largest in the chain at 6500 sq m until completion of its 8000 sq m store at Albany next year – ...The Warehouse... and... [a] Farmers Home Centre... The site is a key location, in the heart of a fast-growing south and east Auckland area... 540,000 people were within 20 minutes' drive... and access was improving. Botany Rd, parallel to East Tamaki Drive, is being developed into a major arterial road linking to Cavendish Drive in Manukau City... and space will be allowed for light rail... Manukau City Council land across the road from National Trading's has been zoned for bulk retail and will be linked to it... The city council has intensive housing planned for an adjoining area... and part of the National Trading land will be used for intensive housing later... 60,000 more people would be living in the slim East Tamaki corridor within 15 years.

...[Botany was put to the test this week. Getting half a month's rainfall in one afternoon might have created chaos across the city, but all was fine at the new centre in East Tamaki. "Not one leak," boasted Botany Town Centre's retail manager "even if the people at Westfield were hoping it was going to happen on opening day." She was referring to the rivalry between two AUSn financial giants who are slugging it out on the retail front here. Although they are competing for our shopping dollar, Westfield and AMP Henderson Global Investors – which also owns Lynnmall – agree on one key element: build to the max. For example, Botany's new Farmers store is 1 1/2 times the size of Eden Park. Rival Westfield has \$1 billion earmarked for the expansion of its 11 malls in NZ, as well as plans to build its 12th in Newmarket'...

'TWELVE cinemas, two supermarkets, 3000 carparks, 260 shops and eight bulk retailers in a building which will span the North Island main trunk railway line: that's the plan for Newmarket. At a whopping 65,000 sq m, the mega-mall will be twice the size of St Lukes Shopping Centre, the successful mall in Mt Albert that pulls in a customer count of more than eight million annually. At \$300 million, the building project in Newmarket will be the second-largest construction contract in NZ, and the single largest overseas commitment by a multinational corporate to NZ, according to Westfield's boss here. Construction is not due to start until 2002, when Westfield says a 3000-strong workforce will be employed on the site. A similar number of fulltime and part-time retail workers will be needed for the mall, which is so big that it will run from near the corner of Broadway and Remuera Rd up to the boundaries of the Southern Motorway.'

...DRIVING along the Southern Motorway, a spectacular view flashes past of a glittering harbour: depending on the direction you're heading, it's either hello or goodbye to Auckland. Even on a dull day the sight is breathtaking, with Rangitoto's perfect cone the focal point of the view, which includes Hobson Bay, Orakei and the Waitemata. But you can say goodbye to parts of that view if Westfield is allowed to build its mega-mall. The Auckland City Council recognises the importance of the panorama, protecting it in the Auckland City Operative Isthmus District Plan. And Westfield itself acknowledges that its mall will block the frame. Westfield is offering the council a carrot, however. In its planning application to the council, Westfield says: "The visual effects are unlikely to be adverse as long as sufficient attention to the architectural style and streetscape edge of the proposed development is made." Westfield wants to build an 11-level mall on a 4.3ha site. The mall breaks the height rules by 4.6m at the southern end. It will shade much of Broadway, casting a 9 am winter shadow over both sides of the strip and even up as far as Mortimer Pass, according to the shading assessment. The \$450 million mall will rank as the largest single construction job in NZ. Westfield, it should be noted, has not yet got planning permission for the mall. It has only applied for a private plan change, which the Auckland City Council is still considering. The public will have a right to have their say on the development when the council processes Westfield's application. Obscured views from the Newmarket Viaduct and shading are only two of many drawbacks the council will have to take into account. Traffic problems, increased noise levels and the impact on established Newmarket businesses are all issues that the council has to consider.'

...Westfield 'has gone back to the drawing board after a public outcry against the original 11-level, \$450 million mega-mall design', 'the scope of which put most other shopping centres off the radar'...

Its owners call it the eighth wonder of the world, the most comprehensive indoor recreation complex on earth, the world's only self-contained indoor city – "the mall with it all". There is the... world's biggest indoor amusement park, the world's largest water park, a controversial dolphinarium, an ice rink... what the mall claims is the world's only indoor bungee jump... a casino and bingo hall that give profits to charity... a non-miniature, miniature golf course, 110 restaurants, a chapel and four submarines (the Canadian Navy has only three) to accommodate visitors who want to dive in the... world's largest indoor lake... [or just escape the latest snow storm ('Montreal has some underground shopping centres so its businesses aren't shut down by blizzards' – the 'city has 30km of underground shops, soon to be 35km').] Shops? I nearly forgot them... There are more than 800... The entire enterprise flourishes beneath one roof. Patrons can luxuriate in a constant temperature of 22°C even when it is minus 4... outside... [F]atigue is a major hazard in a place like this.

...If you don't want to shop until you drop, hi-tech retailing is for you... THE big British grocery retailer Tesco is testing a database that knows when its customers like to shop, what's on the list and how much they are likely to spend. It also knows that three-quarters of a store's total profits comes from its top 10% of customers. Data mining – intensive analysis of statistics – is being combined with micro-marketing – targeting small groups of consumers – to cause big changes in the way we spend. In another development, the giant US retailer Wal-Mart now mails out to customers personalised weekly shopping lists with prices, together with a list of little temptations for their tastes, budget and stage of life... [The] head of computer studies at University College London said that in about six months customers would be able to arrive at supermarkets, pick up a barcode reader and wander about the shop clicking on to whatever they wanted to buy... "A member of staff will... use it to deliver the goods from the warehouse, while the customers go off for a coffee or to have their hair done,"... His most impressive news was on the subject of scanners... A customer who stands partially clothed in a small room for about 10 seconds, can have his or her physical stature mapped... with a prototype of a 3D body scanner['which measures 300,000 points all over your body with perfect precision']... The real impact[of this 'virtual changing room'] will be seen within a few years, when we are sitting at home armed with a television remote control device, flicking through the latest catalogue of offerings from a retailer. Fancy that outfit for yourself? A click of the button, and there you are, on the television screen, wearing it. Like to see it in another colour? Click. Just got to have it? Another click to call up the Internet banking connection, and you have bought and paid for it, and a courier will deliver it tomorrow... Then there are the home appliances that might be playing up. "One manufacturer – Whirlpool – already is building them with an Internet connection, so if anything goes wrong, you don't call a repairman. You plug the washing machine into the Internet connection, so the retailers can do a diagnosis from a distance." ...Tying together a personal electronic organiser and a video camera would provide almost endless possibilities. Imagine being at an airport lounge somewhere and considering a duty-free purchase of jewellery for a loved one. Jewellery is highly personal and usually a difficult sell if the intended wearer is not on hand to help make the selection. No problem. Call home on the Internet, display the jewellery on the monitor and ask the recipient which piece she likes.

...Not only are people... on the Net, many of them are already buying online. According to a recent *Business Week* poll, 42[%] of people 65-plus in the U[S] who have Internet access have bought something online, followed closely by 39[%] among people 50 to 64... It is not surprising that older folks are taking to information age technology. After all, this generation has adapted to more changes in technology than any in history. The launch of a new technology which will make it much simpler to use the Web promises to attract even more... people to the Internet. In the coming months, consumer-electronics heavyweights such as Philips Magnavox, Sega and Sony will spend millions promoting their new, inexpensive TV Web set-top box products. These are expected to bring the Web to millions of consumers, moving the Internet revolution out of its infancy. The set-top box makes the Net easier to access... The consumer is never exposed to the complexity associated with a personal computer; there is no installation process, no file systems to worry about and no settings to adjust... As online commerce grows, the budding 50-plus market segment will increasingly become the Net's most important consumer market group. The fact that this group buys more than 50[%] of new luxury cars indicates their immense buying power. Once seniors get connected, there will be no stopping them. As one man observed: "how are you going to keep them on the Home Shopping Channel after they've seen the World Wide Web?"

...*Worldwide window shopping* THERE had been enough talk about how the Internet will revolutionise shopping – it was time... I set out to do a little virtual shopping [myself]... But I almost immediately run into problems... My pursuit... makes me realise there are a lot of logistical problems with fashion shopping on the Net... Quick inspection reveals websites by Bloomingdales of New York... Levis, Esprit and a huge Nike store, among others... Finding anything specific among the hundreds of thousands of web sites is every Net surfer's lament... [Furthermore, having] previously invested an unfeasibly large portion of my weekly wage in glamorous outfits that were only ever worn in my imagination I have developed a new policy: People who delude themselves shouldn't buy until they try. Obviously this is impossible on the Internet. Most garments are described and many are pictured... But how exactly do you know whether your computer's version[of colour, for example,] is the same as the real thing? How do you judge the fabric or the quality of the manufacture? And would you buy something based on a picture in a fashion magazine? ...Several sites try to address this. If you want to try clothes on in a cyber dressing room, The Gap has an interactive dress-up doll. But this perfectly proportioned mannequin is not exactly a normal woman. Jantzen swimwear also has a Personal Fit section where you tell them what figure flaws you're worried about. Legs need lengthening? Your personal fitter suggests a range of swimsuits. It's constructive advice that might encourage you to shop with Jantzen in the real world, but unlikely to sell any virtual bikinis... By now I've spent just under four hours on the computer. My fingers hurt, my wrist feels sprained, my eyes are red and I haven't felt any of the vicarious pleasure I usually feel when I go window shopping. In fact, I'm frustrated. I've found some nice things but haven't been willing to spend any money on them, whereas if I'd seen them in the real world at least some of them would have been in my hot little hands by now... What I find at Bloomingdales' ordering department makes me cackle maniacally. The screen says: "Our electronic order form is not yet ready for use. To order, please phone this toll-free number or fax your order."

...['Here's an urban legend for our time – though in this case I happen to know that it isn't legendary, since it was told to me with chortling ruefulness by a friend. He had been checking his credit card statements one day when he saw a payment he didn't recognise. Further checks showed that the same amount had gone out the previous month. A call to the company established that the payee was located in the US and that this payment was due to continue until further notice. Then a glimmer of realisation dawned. A couple of months previously he had been browsing through pornography sites on the internet and had entered his credit card details to get to the hard stuff. And, since it wasn't tedious passages of legalistic prose he was after, he also clicked on the agreement box without reading its contents. As a result of his actions he had become a subscriber to a site he could no longer find in order to terminate the agreement. At first he was told that he would have to live with the consequences of his stupidity until death or bankruptcy intervened, no fraud being involved; in fact after a couple more payments he managed to persuade the company to suspend the monthly order, though only after the humiliation of having to explain his predicament to the young woman in customer service. It's a story that neatly feeds contemporary anxieties about the internet as a dangerous place for the unwary to venture, though in one crucial respect it isn't typical at all. This wasn't an unauthorised use of his credit card, after all, just an unwise one – and above all it is the dread of insecurity, rather than momentary folly, that afflicts most potential internet customers. Those who want to get the e-commerce juggernaut rolling desperately need to find some way to release this handbrake of consumer timidity. Last year the US Federal Trade Commission chairman claimed that 61% of people who surf the internet don't buy anything because they are frightened about the security of their private information. The truth is, though, that these anxieties tell us more about a primal fear of novelty than they do about e-commerce itself, because internet purchases are probably safer than a good many of the real-world transactions we conduct without a second thought. People who happily hand over their credit cards to a barman to guarantee the tab on a night's drinking, or read the details out over the telephone to buy a theatre ticket, decline to use systems that employ powerful cryptography. What's more, the retailers are far more vulnerable than we are.]

...The Internet's commercial future lies in its merchants being able to transact business with customers they've never met before. They already do, and credit cards have become the most popular form of facilitating trade. The problem is that neither side of the transaction has a cast-iron guarantee of the other's bona fides, or that an unscrupulous outsider won't hack into their computers and make illicit use of the credit card details... However... [e]ncryption developments making transactions on the Internet secure are on the brink of removing the greatest obstacle to the development of Internet commerce.

...*Shopping by Internet becomes more secure* The first online authorisation of credit card transactions – in a matter of seconds – via the Internet has arrived in N[Z]... The BNZ's Buy Line service built by Advantage Group[was] recently implemented at www.tickets.co.nz for ticket purchases... The BNZ's system removes the server risk because much of the transaction occurs behind the bank's firewall security and is immediately authorised and processed online – effectively removing the need for any storage of credit card information by the merchant. Such systems (BNZ is first to market but expect other banks, including ASB Bank and Countrywide, to soon have similar offerings) are about to get a whole lot safer too. Thanks to some clever server software from Microsoft called Server Gated Crypto banks, and potential buyers, will soon have 128-bit encryption. The technology manages to bypass the draconian export controls imposed by the US government on high level encryption. The advantage of 128-bit encryption is that even with a \$US100,000 array of specialised encryption-breaking hardware, it's estimated to take 2-17 years to crack just one key. The same hardware does 40-bit encryption in 2-3 seconds... But the real potential of Server Gated Crypto for N[Z] Net shoppers is yet to be realised. Although merchants can't legally use the technology themselves they could 'triangulate' with a bank (in much the same way as BNZ Buylines) to process credit card transactions entirely in 128-bit mode. Which leaves one remaining piece in the 'safe' Net shopping jigsaw to be found – SET (secure electronic transaction) – the much vaunted online solution from Visa and Mastercard. The SET protocol takes security one step further than BNZ's Buylines. It aims to bring authentication to the Net buying process – in much the same way as one signs a credit card slip or enters a personal identification number... at an eftpos terminal. To do this however requires Net shoppers to have something called a digital certificate – essential[ly] a unique digital signature which confirms who is making the purchase. The problem with the scheme is that it requires an independent third party – a certification authority (someone like NZ Post) – to issue the certificates and then a way to get the things in the hand of millions of Net shoppers. It's a daunting task. Most estimates say SET in any viable form is at least 18 months away. Meanwhile, Net shopping will continue to grow at an alarming rate.

...['Move over kids. Mum needs the computer to go shopping. Home delivery is being tried out in Auckland from a shopping list sent via the Internet to a supermarket. The service should be available publicly in February, and shoppers will also be able to purchase by "mouse" from chemists, home appliance stores and travel agents. The computer shopping mall is for all busy people who can do without the weekly supermarket visit. Instead, they will merely go to a computer mall, choose their shop, click on the department and click on the product – even choosing between firm and ripe tomatoes. By the time the

system starts, about 500 shoppers will have tested it from home. Costs have not been revealed, but there will be no membership fee. Telecom's Internet connection is based on time spent connected to the shopping mall; packing by the supermarket is likely to be about 5% of the shopping bill and the delivery about \$7.']

...Woolworths has been piloting Net shopping since August 1996 and... last week... I... tackled a weekly supermarket shop... Let me explain[that] I am no advocate for Woolworths. I shop there only because two years ago they built a store close to my home... and... yes, [Net shopping] does cost extra. But... [this] form of shopping has several advantages... When you connect... you are faced with... icons for the various departments – frozen food, deli, and so on... If I can't find what I'm looking for I type the word... in the "find" box... If I want apples... a long list of all the apples in the store appears, with prices per kilo... I hit on the apples I want and scales appear so I can alter the number of kilos I want... As each item is added, I get a running total. If cost is running away, I go back and prune the amount of each item, or delete items altogether... With my shopping list complete, I hit "checkout" and up comes the till. I specify the day I want groceries delivered (every day except Sunday), and the time, store a copy of my shopping list to use as the basis for next week and send the order... While compiling my first Net shopping list I excitedly told my wife that shopping this way you saw all the prices in front of you. They show prices in the supermarket too, she replied scornfully. Do they? I asked in disbelief. It took another visit down the road to convince me that indeed they do.

...[*How to put more weekend into your weekend* Time is precious. Particularly the time you set aside to do the things you want to do for yourself. And it may be that you have more important things to do than spend an hour or more at the supermarket. Enter Woolworths Home Shopping Service. For the first time ever you can buy all your groceries from home, using your computer and the Internet. Now you can do your shopping whenever you like. First thing in the morning, last thing at night, seven days a week – and you push a mouse around, instead of that heavy trolley.']

...NO MORE furtive weekend mornings sneaking around the local supermarket in a daggy tracksuit, praying you don't bump into someone you know. Or prowling for car space, slow queues, kiddy tantrums, dithering aisle blockers, bickering flatmates, and cheque writers... After a nine-month trial with 580 customers... [Auckland] Internet users... a[re a]ble to shop on-line for their groceries... [T]he developer of the ground-breaking technology in N[Z], Ad Pasifica... has formed an agreement with Courier Post to deliver orders from Woolworths in the Auckland area. Plans are afoot to extend coverage to Wellington and Christchurch... and also to Sydney... The contract with Woolworths is exclusive. However, Ad Pasifica is in talks with a number of retailing groups including a pharmacy chain and an appliance retail [chain]... Ad Pasifica is[also] likely to use its relationship with the multinational owner of Woolworths, Dairy Farm International, to take it further afield... Ad Pasifica clips a commission on the fee for packing and delivering the groceries. A customer will pay \$12.50 for a \$100 shop, and \$17.50 for a \$200 shop... The company's managing director[, who owns 80%]... of the company... said that the average shop time among the sample group was about 15 minutes. That compared to 86 minutes under normal circumstances... The Great N[Z] Shopping Mall, as it is to be called, offers everything on Woolworths shelves. It is also in real time, so prices change. If stock runs out it is taken off the electronic store... - 1997

Whatever the state of their health, the institutions and values devised to distribute goods in short supply fail to secure distribution of the goods that the industrial revolution produces in such generous actual or potential supply. The problem is, of course, a new one; the success at production is recent. On the topic of distribution, the science of economics has never had much to say... [I]t talks of capital and labor, but it does not mention Park Avenue and the Bronx.

Malnutrition is still rife, and every day during 1982 40,000 children died from a combination of malnutrition and infection. The Executive Director of the UN Children's Fund... has stern things to say about that.

More than 30,000 children under five die each day because they don't have good food, clean water, clean houses and the medicine they need... THEY DON'T HAVE TO DIE - World Vision

In many countries in Africa virtually one in four children will die of starvation or diseases like measles, dysentery or cholera. The real tragedy is that many of these deaths can be prevented with just a little bit of help from the outside world... [H]elp make the world a better place... you can sponsor a child... It costs... just \$1 a day to ensure that [a child] gets the proper food, education and medical attention that we take for granted... You'll not only save a child you'll help transform a whole community because World Vision introduces better farming methods, builds water wells and teaches health care to mothers[, which]... helps break the cycle of poverty so these people can become self-sufficient and give[these] children... the bright new future they never had before... So why not call now and grow your family... A child living in poverty in Africa, Asia or Latin America is simply a family member you don't know yet.

Those photographs of smiling, mostly brown or black children, those slender letters sent and received and the occasional visits to remote places by beneficent N[Z]ers – child sponsorship is still considered by some aid organisations as a meaningful way of the better-off helping the poor. But 50 years after the Save the Children Fund's first N[Z] branch was established in Canterbury, the organisation is phasing sponsorship out. The decision was made by the British office – through whom many N[Z] sponsorships were arranged – because '[sponsorship of single children led to sibling jealousy' and some people fail to maintain their sponsorship – which, 'under some programmes, can continue until the child reaches 21 (if a sponsor abandons a child, that child returns to the pool until another sponsor can be found for it)'. Another motive for the decision was] the disproportionately high administrative and translation costs involved in arranging personal contact between sponsors and their children. Instead SCF N[Z] has launched what... [it describes] as "a better use of the sponsorship dollar." - 1997

More than 2000 kind-hearted N[Z]ers are helping nearly 19,000 underprivileged children around the world through CCF.

...*The cheque's in the mail* A KIWI stamp collection has posted \$1.4 million at a British auction... The collection belonged to [a]WW2 veteran... who started ...[i]t... as a schoolboy... An envelope sent from Auckland to Yorkshire, in October 1855[,] fetched \$45,000 alone...

1855 ...Postage stamps, printed in Britain, were first issued in Auckland... 1858... The Post Office Act rationalised administration and regulations and established revised rates for prepaid and postpaid inland letters at two pence for the first half ounce. Overseas mail, all prepaid, carried a basic rate of six pence per half ounce... [(the previous British] regulations stipulated postage rates of four pence for a half ounce letter, one penny a newspaper and two pence gratuity to ships' captains for each loose letter[)]... 1891 NZ joined the Universal Postal Union, established in 1875, and accepted that organisation's lower (2 1/2 pence an ounce) overseas postage rate. 1901 [The]Postmaster-General... introduced universal one-penny postage to NZ. The British Empire, except A[US], accepted letters posted from NZ at the one-penny rate. But some countries did not accept this initially and imposed a surcharge on NZ mail. A[US] accepted the rate later... 1905... NZ's first stamp-vending machine, invented by a General Post Office's foreign mail clerk, R J Dickie, and a Wellington photographer, J H Brown, was set up outside the post office in Customhouse Quay, Wellington. Dickie held worldwide patents on the machine and these were bought by the NZ Government in 1918. Until his death in 1958, Dickie was retained by the Post Office as Stamp Vending Machine Expert... 1977... The standard letter rate was now 10 cents.

Postage stamps represent 'legal tender because they can be used to buy a service' (i.e., the labour of workers who ensure letters and parcels reach their destinations). Unfranked – or unused – stamps are worth what their face value states. Once they have been franked, however, stamps are essentially useless – yet, to many First Worlders, a used stamp is worth more than the life of a Last World child! Ironically, since the 1930s 'health stamps have been sold by the NZ Post Office in the spring of each year to raise money to support summer health camps for schoolchildren who were inadequately nourished and unfit.'

A 40c health stamp issued by mistake last month is selling for up to \$500 and is... destined to become one of the most famous rarities in modern philately. N[Z] Post withdrew the stamp – showing a teddy bear in a car with a toddler in a child restraint facing the wrong, unsafe, way – before it was due to go on sale, and replaced it with a stamp minus a bear and with the restraint the right way. But... 2000 of the stamps went out to two post shops. Nearly 500 were recovered before sale, leaving 1561 in buyers' hands. A[n A]uckland stamp dealer... obtained 24 from an ASB Bank employee who had unwittingly used on letters most of the ones the bank bought, and has sold them... The ASB Bank found it still had 88 of the errant stamps and... forwarded them to Wellington for auction... The proceeds will go to the Starship children's hospital. [A dealer] is offering five lots of single stamps, which the company estimates are worth \$250 each; three lots of blocks of four; and one lot of 70 valued at about \$16,000... About the same number of 1906 Christchurch Exhibition 1d stamps were printed in the wrong claret colour. They sell for about \$10,000 each now.

...A wrongly designed 40c health stamp, accidentally issued... is now changing hands for as much as \$3000.

...THE bigger the mistake the better for stamp collectors. And thanks to a bungle by NZ Post, more than \$60,000 has been earned for children's health[after e]lghty-seven... health stamps... were put under the hammer in Wellington yesterday... [In related news, the] world's most valuable postage stamp... a flimsy 1857 Swedish issue, has been sold at public auction in Zurich... for a record \$3.2 million. - 1996

POSTAGE stamps are one of the most fundamental staples of the collecting world, but that doesn't exempt them from the whims of fashion. With young collectors, stamps have to slug it out in the coolness stakes with the likes of phone and confectionery cards... However, stamp collecting is refusing to be relegated to nerd city. "It's been one of our aims in the last four years to improve the profile of stamps and make them more fashionable," said... N[Z] Post's general manager for stamps. "But competitive products come and go. Stamps are here for the long term." ...N[Z] Post has around 80,000 collectors on its database, with a... [1/4] of those residing overseas. Of its total [annual] sales, about \$13 m... worth are sold to collectors... And that's just new stamps. The market in old and rare stamps is... helping to push up the price of good-quality collectible stamps.

...STAMP collectors[in America (where you 'can turn tasteful photos into official personalised stamps')] are scrambling to obtain a scarce printing of one version of the Bugs Bunny stamp issued this year by the U[S] Postal Service... Collectors were offered two versions – a regular one containing 10 stamps and a die-cut variety of nine peelable stamps and one without perforations. Both sold for \$US3.20. The die-cut version was withdrawn... [after] only 118,000 copies were sold, considered a minuscule number to collectors. When word filtered through the stamp community of the small quantity printed, prices soared. At one point, \$US210... was paid... at a stamp auction on the Internet... Prices are down to about \$US100 now... [Incidentally,] in recent months... [total online] auction... revenues have swelled to an estimated \$US100 million a year.

...The founder of Personalised Plates Ltd... has been called a marketing genius. And he would have to be because... the concept on which his business is based is quite bizarre. Here is a company that sells a bit of aluminium worth \$1.50, with the letter T stamped on it, for \$525,000. And no one blinks. No one that is, except for the country's investment advisers, who tend to have a collective heart attack every time they read of the high prices being fetched... To an investment adviser, you see, the investment plate market makes no sense at all. It defies any classification, not falling into the category of an income earning investment (like bank deposits), or a capital growth investment (like shares and property) or even a collectible, like art and antiques, which are assessed by experts for their aesthetic and historical value, and a price determined by those values as well as scarcity. Personalised and investment plates are most often referred to as collectibles. However, a work of art they are not, unless you deem the act of a metal press bashing the letter T into a piece of aluminium to be an awe inspiring thing, requiring extraordinary talent. Despite all this, investment plates can claim to have provided the hottest capital gains since their inception in 1987, beating all other forms of investment. Over the past three years to the end of January 1997, their annual resale price growth rate has varied from 17[%] a year (for a four character plate...) to 49[%] a year for a plate with the number 7, which was valued at \$655,000 [in] January 1997, up from \$200,000 in January 1994. [■ 'Investment plate 1 sold for a record price of \$630,000' in 1995.

...While some people collect money, others collect stamps, bottles, campaign buttons, paperweights or any of a thousand other things. And, like saving money, collecting can be an enriching pastime or become an obsession. The difference between normal and obsessive collecting is the intensity of the desire to obtain a collectible item, the lengths one will go to in order to add to a collection, and the extent to which collecting dominates the collector's life. Fanatic collectors turn from people as a potential source of affection and security and seek gratification instead through possessing things. They are also inclined to be very competitive – at least in their struggle to have the best collection of whatever they collect. By building the world's largest collection of, say, beer cans, the competitive collector can achieve a feeling of superiority and power. Their egos are likely to become invested in the superiority of their collections and any threat to the status of their collections is perceived as a threat to their self-worth. Some things people collect, like gold coins, have an intrinsic value. Others, like matchbook covers, do not. People who collect as a hobby find a sense of satisfaction in their search and in their acquisitions. Obsessed collectors, however, are driven. Their obsession overrules every other aspect of their lives and they devote almost every waking minute to thinking and planning how to obtain the next object for their collection or how to display it. Objects ultimately become more important than people, and fanatic collectors tend to withdraw from interpersonal relationships and often do not concern themselves with everyday problems like paying bills or getting the car serviced.']

...IT WAS a long way from Tipperary for a hurling team which kept losing its way... because of the absence of road signs, which thieves are selling for as much as \$250 a time to foreign-based Irish theme pubs.

...A pocket watch that belonged to one of Britain's most notorious murderers... was sold for £10,350... yesterday, seven times its estimated price...

Watch value increasing as time goes by... Like most collectibles, the value of old clocks depended on their rarity and condition... Many people mistakenly assumed that because a clock no longer worked, it was worthless...

[A 1935 British-made HMV chrome-plated, pressed steel electric fan heater would fetch \$1000 today says an Auckland collectibles shop owner. While fire has provided warmth to man for thousands of years, it wasn't until this century that a flick of a switch could bring immediate comfort without the chore of chopping wood and lighting the flame. The first electric heaters looked like the precursors of Daleks, and you had to huddle closely to feel the rays, but an exhibition at the Otago Settlers' Museum in Dunedin shows a range of heaters which would have been state-of-the-art appliances in their day. *Hothouse* is a telling display of what was hot and what was not in the history of heating']...

Collecting antiquities – items from classical Greek, Roman and Egyptian times... before the end of the Roman Empire in the 5th century – is often assumed to be the preserve of museums or the very wealthy. Yet such objects... are surprisingly readily available and comparatively inexpensive. A... 5000-year-old pottery bowl could be bought for less than \$1000, while a... particularly nice statuette could sell for \$20,000.

...As with most collectibles, there is an active trade in... antique and porcelain dolls... with prices for older ones rarely falling below \$1000... [Last year, 'one of the world's most important collections of rare dolls sold at auction for a total of £3 million'. While on the topic of dolls, a] Los Angeles

lawyer has filed a \$36 million lawsuit against Mattel Inc... on behalf of [a girl], aged 9, whose hair was allegedly chewed to her scalp by a Cabbage Patch doll. The battery-operated doll is designed to chew plastic food.

...AFTER 30 years in the business, [our interviewee] still feels a pang of childish anticipation whenever he crosses the smog-stained broadwalk linking Manhattan's 205th street and Broadway. It's understandable. He's walking towards the New York toy fair, the biggest and brightest showcase for every infantile distraction invented since batteries were first not included. As managing director of Lincoln Playcorp – the Australasian company battling multi-nationals Mattel and Hasbro for a laser-sized slice of N[Z]'s \$140-million-a-year toy retail market [(‘worldwide the toy business is worth \$20 billion’) – he]... knows the bites he takes in the Big Apple could make or break the company. “It becomes quite frantic. You can be relaxing at a function when the whisper spreads that some company's just released a hot new line, and there'll be an instant scattering as buyers move to locate it. As far as trends go, most people don't realise this is probably a faster moving business than the clothing industry. Thousands of toy inventors around the world are constantly taking new ideas and schemes to manufacturers... In order to get the right toys, [buyers] have to make some sort of commitment to the manufacturer – put up[a] letter of credit, bring the stock in and market it. Suppliers also usually want minimum guarantees of purchases and advance payments. It can be very risky... For every winner, there's probably 10 failures... The yo-yo has been big, but it's dying now. You're lucky if a trend like that lasts a year. You've got your traditional toys, then your fad toys – some of which come and go very quickly – but the staples will always be there. Barbie just continues to grow and the Cabbage Patch Babies are a great... range. It's those toys, plus your Matchbox and Hot Wheels ranges that just keep coming up with good solid sales.”

...WATCHING bewildered parents being scolded by their children for buying the wrong toy is one of the stranger sights to be found in the shopping mall of modern life. A quick chat to... a senior lecturer in psychology at Auckland University who specialises in human lifespan development and child behaviour... may help explain why such dust-ups outside Dekka occur at all... “These days, fads and trends seem to be taking a greater effect on younger children. Labels used to be more of an adolescent phenomenon – a time when a feeling of belonging is traditionally very important – but now children are beginning to compare themselves with one another in primary school, if not before that.” The quickest way to the top of the jungle gym these days... is owning the latest toy. “Absolutely. The rewards associated with that are of a psychological kind: Feeling good about yourself, feeling as though you're part of a group. Subsequently, kids' discrimination skills as consumers have obviously sharpened. It used to be any yo-yo was okay, but now you've got to have the right sort of yo-yo. This is a major change, it seems to me, from the days when you and I were young during a fad.”

...*New toys out this season* ACTION Man has come a long way. After starting life as a lone plastic figure, whose voice and adventures were left to the imagination of his owner, he now comes with props ranging from fighter planes to speed boats. The latest model even appears to talk on its own... Action Man – Street Commander... comes with a separate transmitter into which kids can voice a message, which the doll will repeat three seconds later. It can also make six different sounds, including a burp. Parents may be grateful that Barbie is still silent, although the latest model, Work'n Out Barbie, comes with an exercise tape to which children can put her specially articulated limbs through an aerobics workout. She even has suckers on her feet to keep her in one spot. For a bit of glamour there is Blossom Barbie and Hula Hair Barbie and there's a new foldaway Barbie house. And of course, there's a full range of up-to-date fashions from Barbie's own team of fashion designers – it's not hard to believe she generates the most clothes of any doll in the world... Barbie... accounts for \$10 million of business in N[Z] alone. The... slim, blond one doesn't have a monopoly on the doll market, however. Cabbage Patch Kids will be back, although not the “eating” variety which made headlines in the States for gobbling their owners' hair... More grisly dolls come in the form of figures from the TV3 series *Beast Wars*. Touted as the new generation of transformers, the sharks, cheetahs, wolves and other creatures can be rotated and clicked into models of robots. For speed enthusiasts, there are the Hot Wheels XV Racers, which are battery-charged to whizz around at a scale speed of “800 km/h.” They come complete with their own racetracks... Despite the infuriatingly distracting electronic pets being banned by many schools, a new model is [going to be released] for Christmas.

...*Before you can recover from Christmas 96, toy stores are preparing for Christmas 97, and... they already know what kids will be clamouring to get...* Just when your bank balance shows signs of recovery from the toy purchases of last December... [m]arketing managers... return... from the annual New York toy fair armed with what's hot for kids this year... Whatever gifts parents choose to buy their kids this [year], they probably won't spend any less than they did last year, or the year before... [The] marketing manager for toy wholesaler Hasbro, says... that while segments of the toy market fluctuate in popularity, its overall worth has continued to climb steadily with inflation. “In tight times parents become more discriminating about which toys they buy and want true value for money, but they still put their kids first and don't... spend any less on them.” ...[the marketing manager also confirmed that ‘Hasbro is recalling the bungi harness accessory for its Action Man doll. The worldwide voluntary recall was sparked by children hurting themselves with a plastic grappling hook attached to an elastic string.’]

...THE joy of a new toy can quickly evaporate if it injures its young owner. An ACC booklet on toy safety says that children... aged 5 months to 7 months are... at risk of choking accidents... caused by small parts of toys. Here are some guidelines to bring youngsters only happiness, not pain: • Check package labelling to make sure a toy is suitable for your child's age group. • Check toys for loose nuts, bolts, rough edges, broken plastic or splintered wood... • For children aged under 6 months, any string on toys must not be more than 15cm... in length otherwise it could twist around a baby's neck... • Projectiles should have protective tips such as soft cork or suction cups firmly attached.

...[a doctor has defended] war toys, saying a heavy body of international research supports the view that these toys do not condition children to violence. “What I believe is... that having a variety of play, particularly for boys who like a more active type of play, is wholesome,”... [She] said parents needed to watch their children play. If games became rough or violent, or if children became obsessive about violence, they needed to talk about it. But war toys themselves were not a problem: “If you took those toys away they could still use their fingers or sticks as pretend guns...” [Meanwhile, ‘a senior health science lecturer at Massey University is urging people not to buy noisy toys for kids. He says children's ears are sensitive and any toy making a noise louder than the average voice can damage youngsters' hearing for life when used for long periods. Clackers, whistles, toy musical instruments and cap pistols are offenders’. Speaking of noisy toys, chatter rings are now selling for ‘\$4.99’ – or 75% less than this time last year]... - 1997

PARENTS can't stand it, teachers are banning it. No wonder kids love it. It's the chatter ring, the biggest craze to hit N[Z] since the Rubik's cube transfixed the youth psyche 10 years ago. Quite why chatter rings have taken a grip on seemingly everyone under 20 becomes obvious when you see an expert in action. Although the toy itself looks innocuous – a plain loop supporting five hexagonal nuts – working it takes co-ordination and skill. The aim is to get all five nuts spinning around the loop as the loop itself spins through the hands. As you improve, you can incorporate tricks into your routine. Herein lies the toy's real attraction: it's the classroom equivalent of the skateboard... “I take it everywhere with me,” says a nine-year-old. “I play it for hours.” Virtually all his friends have the toy and they practise madly to perfect throws, spins and rolls like Rollercoaster, Round the World, Walk the Dog, and Supersonic. Enthusiasm borders on the insane... [S]ince it arrived in Auckland from Hamilton and Rotorua, the chatter ring market has ballooned. Everyone seems to be stocking it. Even sports shops have jumped on the bandwagon yet demand still exceeds supply. The Warehouse chain alone... sold an incredible 45,000 chatter rings at \$19.95 each in five weeks... And there's no sign of a let-up in sales. This wouldn't be a big deal if it weren't for one factor. Noise. They're called chatter rings for a reason, after all... [T]he biggest (of several) chatter ring manufacturers in the country, can't bear them. “Our 14-year-old son... isn't allowed to wander around with them,” jokes [his mother]... Even so, the [family] must be thanking their lucky stars that [the teenager] asked his dad to try to make him one. [Dad] obliged and was suddenly swept off his feet by orders... “The way I see it... at least you know that when your kids are playing with it they're not doing anything

else. I think there's something to be said for that." ...The [manufacturers] are the first to admit they're sitting pretty on an idea that's not even their own. So whose idea was it? Curiously, no one really knows. The best theory seems to be that the chatter ring is an offshoot of the larger, more cumbersome educational toy the gyro ring, which has plastic coverings on the washers. A child picked off the plastic – and the rest is history. Now with teenagers finding the original chatter ring too easy, the race is on to entice second-time buyers.

...Chatterings Tired of old cheap designs which cut and dirty your hands? We have N[Z]'s 3 newest models... [for] \$16.90... Save \$3.05...

Chatter rings are all the rage in N[Z], and can be seen – and heard – almost wherever you go. Now, the Gyro-Ring has been introduced with its bright, multi-coloured tops that will make your child the talk of the street... We have 48 Gyro-Rings to give away, each worth \$24.95.

...K'NEX is the new kit on the block... a construction toy kitset that swept the U[S] in 1993... and which arrived in N[Z] last week with all the hype you'd expect from a new product launch... A hands-on K'nex exhibition at Auckland's Museum of Transport and Technology... [features] a six metre model of the city's Sky Tower... K'nex has grabbed huge chunks of the lucrative construction toy market, mainly at the expense of market leader Lego. If the newcomer does the same in N[Z] – where consumers... spend around \$15 million a year on construction toys, with Lego holding an estimated 75% of that market... [–] that will be one more reason for Lego to rue the day it passed up the opportunity to add K'nex to its own... stable. Described as a cross between Lego and Meccano, the toy is the brainchild of [a US] plastic moulding manufacturer... who sat out the dances at a wedding reception in 1988, and fiddled with the plastic straws in his drinking glass. With ideas in place for a... construction toy that used colour-coded components of rods and connectors, pulleys, cogs and tyres that snap together to create static or moving objects, he tried to sell his dream to the world's biggest toymakers... Hasbro, Mattel, Tyco and Lego. But, one by one, they turned him down. So [the manufacturer] and his brother invested \$US15 million in developing K'nex themselves, and it became an instant success. Now part of the Hasbro toy empire (Hasbro Inc owns 50% of K'nex International)... 1994 sales [in the US] topped \$US50 million. Launched in Britain that year, it quickly took 16% of the construction toy market there, and 28% of Lego's market share.

...[a collector] paid £34,000... for "Teddy Edward" ...the star of BBC Television's classic *Watch With Mother* series, at a British auction yesterday. [The collector also] paid a record £110,000 for "Teddy Girl," a rare 1904 cinnamon... teddy bear, in 1994.

...The steering wheel of a Grand Prix racing car... has sold for \$52,000 at an auction of motor racing memorabilia in Britain[, and some]... race overalls... sold for \$68,000... The highest price paid was \$79,000 for a white race helmet...

A mystery buyer paid \$4970 for a telegram sent by Queen Alexandra in 1913 to a Derby jockey... after he was badly injured when the King's horse... collided with and killed suffragette Emily Wilding Davison... a "brutal lunatic woman"...

A seal used to ratify the Treaty of Perth between Scotland and Norway in 1266 has been sold at auction for £19,320... - 1996

The 16th century velvet purse in which Queen Elizabeth's Great Seal of State was kept has been found stored in a trunk. The sumptuously embroidered purse that contained the symbol of the monarch's legal power is expected to fetch up to £30,000... The elderly woman whose family had owned the purse for decades had no idea of its value before she died in November... [In related news, a] 70-year-old teddy bear in pristine condition sold for... \$183,000... – just short of the world record – at auction yesterday.

...15,000... miniature soldiers... from the world's biggest... toy... army... have been sold... in New York for nearly \$US592,000... The remaining soldiers in the army of more than 60,000 will be auctioned on Thursday... [By the way, US] truck-maker... GMC... has done a deal with [a] giant toy chain... to sell its four-wheel-drive Envoy sports utility. The envoy will be touted as the "official big kid's toy" at... [the chain's] stores in the U[S].

...see try admire and buy at Big Boys Toys... Some say the only difference between men and boys is the price of their toys. With that in mind there will be some very expensive toys on show at N[Z]'s first exhibition of toys for big boys to be held in Auckland... [T]he two-day show would present products aimed at males with high discretionary income [– it 'has everything the rich would want']... More than 70 organisations had already signed up or expressed an interest... The... managing director... who has licensed the... exhibition... said there had been some opposition to the A[US]n shows from feminists who claimed they were sexist, but research showed about half the visitors... there were women... N[Z] exhibitions had struggled recently... [–] there did not seem to be enough interest here [– but he]... hoped to make the N[Z] show an annual event... "The Big Boys' Toys concept is a fresh approach, combining several shows into one..."

...Ask a male to shell out \$10 [– 'under 14 free of charge' –]to window shop in a... stuffy, hellish... warehouse fighting a million other guys to get a look at a bunch of roped-off stuff, and you will get the reverse of the sorry signal. But call the event Big Boys' Toys Expo and men will flex their muscles and flock along... Men hate shopping, and I challenge any man to say he's never made a martyr of himself on that chair in the mall. So it was not a shock to see the self-styled Big Boys of Auckland adopt the same glum look after a turn about the Expo centre's adult toytown. Not their fault though. With all the hype the boys could have been forgiven for expecting the most luxurious array of goods ever gathered in one place outside the United Arab Emirates... But what cool stuff there was on show, you couldn't touch, either because some pleb with a velcro wallet already had his mitts on it, or there was a cage around it... Men shop like they used to hunt – in for the kill, then drag the prize home. Skip the shopping, go straight to the buying. And if you're not buying, or trying, there has to be something to do instead. So some boys congregated in front of a TV vendor with enough smarts to screen the All Black match. Morale peaked when word spread that girls wearing Lycra were out there waving pom poms, and others wearing cowboy hats were dispensing whisky in plastic thimbles... And another thing. It was never expressly stated that women weren't welcome... I'd pay \$10 to see some big boys in action, or even better, have a tu-tu with some...

[The] evening gown worn by Marilyn Monroe in *How to Marry a Millionaire*... [sold for] \$83,500... at Christie's in Los Angeles, a record for any gown sold at the auction house.

...The fashion house... is associated with mannered gentility and refinement... [J]ust 2000 ladies in the world... pay a minimum of \$25,600 for an outfit... And no one mocks the frills and the tantrums, the compromises and the sophistry of the fashion industry more than... the [house's] hottest designer... himself... Famine, slavery, rape, you name it – our man's been inspired by it... "It's completely ridiculous. At the end of the day, it's just clothes – know what I mean?" ...He has a tattoo on his chest, a Japanese fish symbol... because he is a Pisces and is partial to water. As a schoolboy he... even did synchronised swimming, the only boy with 40 girls, until his mother stopped him because she was embarrassed on his behalf... He is homosexual (which is not an unusual thing to be if you're a fashion designer) and fairly unpretentious (which is). He will say for instance, that: "I hate the circles I mix in now; I really hate them. The wankers you meet; the insular people you meet. I'm a great believer in honesty and I don't think you get that in fashion."

...clients pay up to \$100,000 for a Versace gown... [even though] he once said... I don't believe in good taste... [H]is most famous quote: "Beauty will save the world." But beauty did not save Versace.

...The ultimate fashion victim GIANNI VERSACE, an Italian dressmaker's son, grew up to be founder and chief designer of a half-billion-dollar fashion empire with hundreds of outlets around the world, [plus] a line of fragrances... But can that Milan-based company continue to thrive without the 50-year-old flamboyant designer, who was shot dead last week on the streets of Miami's South Beach, which he helped make fashionable and trendy? "The Versace company... will continue to be as influential and as trend-setting as it has been..." In saying a fashion company could survive such a loss, industry analysts cited... famous fashion executive... Perry Ellis... But there was also Laura Ashley, a company where problems – and millions of dollars in losses – grew for years after the founder fell down a flight of stairs and died in 1985... And... at Perry Ellis there have been dramatic changes, as the line has become mass market and less couture since Ellis died of an Aid's-related illness in 1986.

...[the] 50-year-old singer... [appears to have been inspired by the phrase: 'Clothes are your own personal theatre.' Now the] star... whose flamboyant sense of style is almost as famous as his music, has cleared out his closets to sell a few spare threads for... his... Aids Foundation... Eager fans lined up outside the London shop that is selling 10,000 items of... clothing[– including]... Versace shirts for £25... [– which the star] said he spent £2.5 million to buy... He hopes the sale will raise one-tenth of that amount.

...Looking after \$1 million of designer dresses is stressful enough... but finding models slim enough to fit them for a charity fashion show... [to] raise money for a new heart unit at [Auckland's] Starship hospital... proved a tall order too. Even the slimmest N[Z] models have curves top European designers did not allow for... Eventually, 15 boyish-hipped figures were found...

[A disaster hangs over High St and it will be worse than the winter of 1979, an event scorched into memory – I was a child then, dressed in a plastic padded jacket with zip-out sleeves, arms chilled pink, drawn to the heater like a moth to flame – because this spring/summer the halfway houses of fashion and chain-gang have recycled a look reminiscent of gauze bandages and mosquito nets. See-through, barely-there stuff. It's the cyclic nature of fashion that what has been will, eventually, come round to being hot again. It is human nature that we don't always learn from our mistakes.]

...The fur is flying in Auckland's hippest rag-trade precinct... Several designers within a stone's throw of... a recent arrival in the High St scene... said the new kids on the block had broken an unwritten rule by making "blatant copies" of their designs. World, the most vocal critic and one of the closest neighbours, said it had been badly hit by the new arrival and copies of its window-display outfits appeared in Ricochet's window barely two weeks later... But Ricochet says the main reason the needles have been sharpened is that its clothes are half the price of other designers' in the street... "If our garments were selling for \$400 on the rack they would not care." ...copies did not affect strong businesses. "The copy is not the problem. It's the company's insecurity in the market that's the problem." However, businesses with financial clout are occasionally irked enough to take legal action. This year Barkers went to court accusing Hallensteins of ripping off a trackpants design, and... Just Jeans, which was selling copycat anoraks through its Underground Fashion stores... settled out of court with... Hero Sportswear...

The medals of a Scotsman who won the Victoria Cross during the Maori Wars have been sold for £78,000... at auction in London. [The]Major-General... won the VC after rescuing a colleague from a war party.

...IT will be the party of the... decade. The July 17 bash at the [heir to the British throne's] home... to mark [his girlfriend's] 50th birthday... "...will cost him about \$100,000, but what is being provided would cost most people more." ...After the feast... [the Prince of Wales] will declare his love... and give her a stunning [gift]...

WITH its pricetag of around \$350,000, [the]brand new Mercedes is a car fit for a queen...

[America's 'Queen of talk' 'began life in a poor shack in Mississippi. "Now, I have a really wonderful, blessed life and I have surrounded myself with beautiful things – antiques and so forth – so I do enjoy it. I'm having a good time with my money. I'm not one of those people who feels guilty about it, like I don't deserve it. I think I do."'] Always on the lookout for more outrageously extravagant ways to spend her oceans of loot, [the talkshow host – who]... is set to realise \$US14 million... from the sale of shares in King World, the distributor of her show... [–] has surpassed all her efforts so far by splashing out a cool \$100,000 on wall-to-wall white cashmere carpeting in her Chicago apartment... Just to keep [her lover's interest blooming, she also] spent an amazing \$10,000 filling her house with exotic flowers.

...[Florists' fingers are worked to a standstill on Valentine's Day, but for most of them it's worth it. Consider this: a dozen red roses can double in price on the special day, and cost a starry-eyed lover up to \$120.] Incidentally, the 'Melbourne flower market does around \$350 million of sales annually'...

'In Amsterdam, the world's largest flower market – which is housed in the largest commercial building in the world at 600,000 sq m – handles 4 billion flowers each year'. In local news, the industry aims to increase demand with an advertising campaign featuring the catch-phrase: 'Be a Man Give Flowers'...

'From \$35: Bright, bold, brilliant sunflowers, to put a shine in someone's day.' By the way, including flowers, a US entertainer's 'wedding cost \$7m'.

...a] 27-year-old... whose father owns the American Banana Co... left her teaching job... and devoted much of her time to making her wedding day perfect... [But] she waited at the church for a groom who never showed... The ritzy reception room was set up for 250 guests... [so she] went ahead... with the reception, estimated to have cost more than \$US65,000... anyway... The crowd exploded with cheers when [she] showed up alone...

\$26,000 UP IN SMOKE: An Asian buyer paid 23,000 Swiss francs (\$[NZ]26,136) for a box of 25 rare Cuban... cigars at an auction in Geneva on Sunday... The... price of ...\$1113... per cigar set a new world record.

...An Auckland winery is claiming a world record price for a N[Z] wine. A large bottle... (equal to eight 750ml bottles)... of cabernet sauvignon merlot 1990 has sold for \$NZ6000 at an auction in New York... A[US]'s Grange Hermitage is regularly the highest-priced wine in the Southern Hemisphere – a 750ml bottle of the 1951 vintage has sold for \$NZ8000. - 1997

A single chateau wine collection... [of] 127 bottles... sold yesterday for a record £618,000...

SOLD: For \$55,000, a poster for *Casablanca*, the 1942 cinema classic... BOUGHT: ...at auction in Los Angeles... for \$1.1 million, the Oscar won... for best actor in the 1934 movie *It Happened One Night*... RAISED: ...\$6400 at a London auction.

...The big spenders came out yesterday to vie for... the former first lady[s]... worldly goods, pushing the midway total of the four-day sale to \$US20.8 million... The standing crowd cheered throughout the day as the most modest of baubles fetched 100, 200, even 300 times their estimates. A European museum paid \$US1.4 million... for the 18th-century desk which President John F. Kennedy used to sign the 1963 nuclear test ban treaty outlawing all nuclear tests "in the atmosphere, in outer space and under water." - 1996

In one of [last] year's most... poignant stories, members of the international social, arts and business elite gathered for several days and – in a moving tribute to the passing of one of America's most beloved and respected women[, President John F. Kennedy's widow – gave 'US\$34.4 million to her family,' including bidding] as much as \$20,000 for individual strands of... used dental floss. Speaking of class...

I said on t[v] that I thought the whole idea of taste was something invented by the upper end of the Middle Class to keep the Working Class in their place. So you invented this concept of taste, and what was in and what was out, knowing that a whole other group of people couldn't afford it...

"...the rich... they've always had ways of displaying their wealth... Some people buy paintings, some people buy Rolls Royces, some people buy titles." ..."All titles are in fact acquired, bought, purchased, use whatever adjective you like. Aristocracy really means that you[or your family] bought a title, or acquired a title, a long time ago..." ..."One of the great drawbacks of our culture is that people... begin to view themselves as licenced fools and at that point they start to accept titles and at that point they're essentially... useless..." - Class

...in December 1982[a p]lain, hardworking Kiwi farmer... then 43 and managing a 1200ha Lands and Survey Department sheep and cattle station near Kawerau... [– w]ithin sight of Mt Edgumbe... [–] woke one day to become the eighth Earl of Edgumbe. The death of an elderly uncle in England meant he inherited a 300-year-old title, his unpretentious wife... aged 41, was suddenly a countess and their five no-frills, country-bred daughters were titled ladies. From not owning their own home, the[y]... faced the prospect of living in a huge, stone, stately home built in the 16th century, complete with valuable antiques, paintings and furnishings. It was the stuff of legends – or maybe winning Lotto... [T]he bubble soon

burst for the innocents abroad. The naive N[Z]ers found themselves hounded by the British tabloids. Making headlines here too were the stories of the Countess running off with the village odd-job-man and the Earl taking up with the local barmaid... [T]he daughters have produced nine grandchildren for the Earl. However, on his death his title will go to a nephew. It rankles a little with [one] Lady... that, as the eldest[daughter], she cannot inherit because she is female. But most of the time her noble standing is immaterial... Friends sometimes tease her about her title...

It might just be the perfect accessory for that up-and-comer who has everything... To some, purchasing an ancient pedigree is the ultimate sign of success while to others, any attempt at buying into nobility reeks of tackiness and the nouveau riche. But for 26 people who splashed out a total of nearly £400,000... at an auction of manorial titles in London, it means they may now call themselves lords and ladies, whatever anyone might think. The Manorial Society of Great Britain holds three to four such auctions a year where down-and-out aristocrats or those simply tired of carrying so many lordships as a birthright can sell some of their ancient titles... "These things have always been bought and sold, dating back as far as William the Conqueror and the Domesday Book in 1086." ...Many... are sold by aristocrats facing enormous death duties or other bills for maintaining family estates... While Britain still has hereditary peers who sit in the House of Lords... purchased titles do not include any such ancient privilege nor do they convey noble status... The manorships and baronies have long since had any feudal powers associated with them stripped away by legislation... [along with] any accompanying estate or castle... The buyers must now content themselves with nothing more than an elaborate sheet of paper... "But it might well help us to get a dinner reservation somewhere," said the new Lord of Chuderleigh... He and his wife... purchased a manorship in their home county of Devonshire for £7500. "It's all in good fun. We won't use it too often." ...Last year, Princess Diana's brother sold the Lordship of Wimbledon for £188,000 to get the plumbing fixed at his stately home.

...*TOP SALE:* The tennis trophies and memorabilia won by... the 1934 Wimbledon... champion... [have] fetched \$704,194 at auction – twice the amount expected... Bidders and spectators at Christie's gasped when the... International Tennis Hall of Fame at Newport, Rhode Island, paid \$77,600 for a US Lawn Tennis Association Challenge Cup given to [the Englishman] for keeps after he won the title... in 1933, 1934 and 1936.

...*A guide to born losers* PEOPLE who stagger through their lives making the wrong decisions at every turn may have "losers' lobes" – brains that lack the parts needed to make good choices. The defect was discovered by neuroscientists in America. It could add a whole new dimension to staff recruitment. Management trainees and professionals could soon be asked to undergo brain scans so potential employers can be sure a candidate has the right type of brains before giving them the job. It also explains other research that shows some people really are luckier than others: Their brains might just be particularly good at making the right decisions in life. The existence of lose[r]'s lobes emerged during a study of patients who had subtle brain defects. Although they did perfectly well in IQ and memory tests, they seemed to have an uncanny knack of always making the wrong decision. A team of scientists... set up an experiment involving both the patients and people without brain defects. Each group was given four packs of cards, all of which contained cards awarding money. Two of the packs also contained cards that carried huge penalties. After being clobbered by a few of the penalty cards, the ordinary people started to sense what was happening and chose more cards from the other packs. But the patients took longer to work out there was a difference between the packs. Even when they did discover the difference, they still chose from the bad packs... and lost more and more money. Reporting their findings in the current issue of *Science*, [the scientists]... conclude that the patients lack vital circuitry in the brain needed to have hunches about the best decisions to make. They suspect that the part of the brain required to make good decisions lies right between the eyes. All the patients had damage in this area, which is thought to hold information about past rewards and punishment... [B]ecause the patients could not access the information about previous experiences, they could not have reliable hunches... When it comes to making wrong decisions, there are few to beat Captain Robert Falcon Scott, whose 1910 expedition to the South Pole has become the stuff of legend... He may be Scotland's premier poet, but many of [Robbie] Burns' personal decisions made as much sense as his lines... The original master of the macabre, [Edgar Allan] Poe's life was dogged by decisions every bit as horrific as his tales... Even glimmerings of success could not counter Poe's drink and drug-powered demise. He died, aged 39, after being bitten by a rabid dog... Living proof of Winston Churchill's dictum that tyrants contain the seeds of their own destruction, Adolf Hitler's apparent gift for political leadership was ultimately eclipsed by a catalogue of appalling military decisions. - 1997

Adolf Hitler's name will live in infamy. But how good was he at military matters? ...a... 34-year-old... [historian's] mission for the next three years is to look past feelings of revulsion... and delve deep into the German arch-dictator's military mind. He is painfully aware of the... Third Reich, having devoted his master's degree to the Holocaust... Now the Massey University lecturer has been commissioned by leading publishing house Macmillan Press UK to fill a literary void... Although countless volumes have been written about Hitler's ascension in the 1930s, he says only three serious books have ever focused on his military command, and the most recent of these was published 27 years ago... Some of his victories before 1941, such as his assault with paratroopers and gliders on a seemingly impenetrable Belgian fortress, were "stunningly successful" and rivalled anything in Germany's long military tradition. Hitler was an avid student of his Prussian military forbears, arming himself with the ability to defy advice from his own generals, who were amazed by the audacity of some of his strategies. But... he was no military genius, despite the innovative and pre-emptive tactics with which he swept through Europe, and he ultimately lost his war because of a succession of his own mistakes. His three big fatal mistakes, in [the historian's] eyes, were: • Letting a third of a million British and French troops escape to sea from the Dunkirk beaches. • Failing to reach peace terms with the allies after seizing all Europe by 1941. • And rushing to declare war with the U[S] after Japan bombed Pearl Harbour, in the mistaken belief that this might coax Tokyo into opening a second front against his own arch-enemy, the Soviet Union... [Hitler's] inability to delegate responsibilities reached the point where field commanders were afraid to move a single military division without his involvement[, and]... an inability to resist playing individual generals and services off against each other seemingly "undid all his good work." ...Hitler's failure to manage an effective coalition of Axis powers will also be scrutinised. His coalition of nationalities such as Italians, Finns, Romanians and Hungarians came unstuck amid language difficulties and racism, with Hitler routinely using his non-Aryan partners as cannon fodder. [But the historian] rejects any notion that Hitler was insane, a diagnosis which would reduce the dictator's responsibility for the devastation he caused. He points out that Hitler's poor health meant he was under constant medical examination throughout the... War, yet no doctors' records unearthed since his death point to insanity. "They show a person who was certainly a bit erratic but not insane... I think the reason for the German people's fascination for Hitler is that he seemed to offer a way out of their difficulties. Instead, he led them to destruction and barbarism."

...A small gun with a very large asking price is on sale in Melbourne. The seller, an anonymous gun dealer in the U[S], hopes to get between \$A2 million... and \$A5 million for the Walther PPK 7.56[– even though]... it could not be taken into the U[S]... The reason the price is so high is that the seller claims it is the very gun that Adolf Hitler used to commit suicide.

...Two pieces of Hitler memorabilia will be sold in Adelaide next month... [The] hand-painted porcelain vases[were] presented to the Nazi leader in 1937 by... [the] Regent of the Hungarian Empire. Hitler prized the vases and kept them at... his resort in the Bavarian Alps. On May 4, 1945,[a] US Lieutenant... overran Hitler's mountain retreat at Berchtesgaden with the infantry, and souvenired the vases. [H]e gave the vases to his sister... as a wedding present, moved to Hollywood, failed to break into movies, and died alone in near-poverty. The vases remained on his sister's cabinet shelf for 40 years until, after her death, the family found the German eagle and swastika and the Hungarian coat of arms. They will be sold... over the Internet... [by] Bruce's Auction Gallery... with bidding starting at \$285,000.

...Winston Churchill, who outdid Adolf Hitler both on and off the canvas, was celebrated yesterday with the largest exhibition of his paintings ever staged... Both Churchill and Hitler were keen painters. The difference was that Hitler, thwarted as an artist, went into politics while Churchill, triumphant in war, turned to painting to relax. "If it weren't for painting, I couldn't live, I couldn't bear the strain of things," confessed Churchill, whose self-styled "little daubs" now sell for as much as £150,000... each. In stark contrast, a Hitler water-colour of Vienna, whose Art Academy repeatedly rejected him, fetched just £3000 last October. The auctioneer said it was definitely a Hitler work because the quality was so poor... Churchill, who won the 1953 Nobel literature prize for his writing, had no delusions of grandeur about his painting... When one of his canvasses sold handsomely at a 1949 charity auction, he said the price was "all humbug, made up with 70[% notoriety, 20%] charity and, I hope, 10[%] the actual performance."

The market for contemporary art skyrocketed this week when... a 1949 painting... sold for a record \$US15.6 million... to an anonymous bidder...

[A] pen and ink drawing of Winnie the Pooh and Piglet was yesterday auctioned for a world record £80,500... The picture, expected to sell for about £15,000, was bought by an anonymous European collector.

...[a] drawing by Raphael, titled *Study for The Head And Hand Of An Apostle*, was sold for £5.3... million... yesterday, a record price for a work by the Italian artist... "It is a magnificent price for a magnificent drawing," a spokesman for Christie's said.

...Plain old stocks and bonds are not the only investments making people dizzy these days. Keen to add pictures to their portfolios, investors are spending more of their money on famous works of art... Many Japanese corporations, especially banks, joined the fray, spending freely on whatever treasures were put on the block... But a work of art cannot be priced with financial formulas. It is ultimately worth only what some other collector is willing to pay. To shell out millions now, in the hope that someone else will shell out even more in the future, is risky indeed. As an investment, art's main virtue is purely non-financial. Canvas millions are prettier to look at than paper ones... [In related news, t]he art collection of a Wellington accountant jailed for stealing \$1.09 million while in charge of the books of... art auctioneers... has realised \$790,000 at auction. - 1996

A fine art dealer has pleaded guilty in New York to... five charges... of selling valuable works belonging to his celebrity clients and keeping the proceeds... [He obtained ove]r... \$US2 m... [By the way, t]he world's smallest Rembrandt painting [- 105mm x 65mm -] ...has... sold... for \$4.24 m...

A newspaper reporter has had a furtive, middle-of-the-night glimpse of what appeared to be a Rembrandt masterpiece stolen in one of the biggest art thefts in history... *Storm on the Galilee* was unfurled from an oversized heavy-duty poster tube. The Rembrandt, along with 11 other works of art stolen... in 1990, are valued at about \$US300 million... Ever since the... heist, the missing works... have been a top priority of the FBI's violent crimes unit... [An antiques dealer and an] imprisoned art thief... were trying to broker a deal with federal authorities for... a \$US5 million... reward... and freedom from prosecution in exchange for help in returning the art to the Boston museum. Placards now mark the spots in the four-storey stone building where the paintings once hung... The... [museum] had no insurance on its collection... The *Boston Herald* said the reporter was taken by a circuitous route to a barren warehouse somewhere in the northeast... [T]he secret... viewing... was to be proof that the paintings were [still] in the U[S]... According to the newspaper, the guide told the reporter that five men took part in the theft... The guide also said the theft was commissioned by an international organised crime figure, and that the men were paid \$US100,000... each for... [their] work... They subdued and handcuffed the two guards on duty and spent 90 minutes... removing art from the walls...

['The French masterpiece *Still on Top* by James Tissot is back on public show at the Auckland Art Gallery, having been restored following the daring shotgun raid that saw it stolen three years ago. The restored work will be on show until October 14 along with other Tissot works. The exhibition includes photographs of the two-year restoration project, which cost \$140,000. Experts from the major auction house of Sotheby's and a leading Tissot scholar from the US have estimated damage to the 88cm by 54cm painting had resulted in a \$4 million loss in its value. The 1874 oil painting was valued at \$8 million before being badly torn when the thief jemmied it from its frame, rolled it up and fled on a motorcycle on a quiet Sunday morning. He later demanded a \$500,000 ransom for the return of the Tissot, which police found eight days after the robbery hidden under a bed at the home he rented. He was sentenced to nearly 17 years jail for that robbery and others'. In international news, 'an extraordinary 7-year thieving spree by a kleptomaniac art connoisseur has ended with the destruction of Old Master paintings worth an estimated \$NZ3 billion. What made his crimes difficult to detect was that, unlike most art thieves, he felt no need to advertise his success. Instead, with his mother's connivance, he kept the contraband in a kind of private museum at her apartment. It was there, after his arrest, that the mother exacted her revenge on a son whom she regarded as having ruined her life with his kleptomaniac urges. She told police that she took a knife to the canvasses. Having cut them to shreds she put them out with the rubbish. More than 100 other pieces were dumped into a French canal. "It is a shattering loss to the art world," said a spokesperson from the Art Loss Register in London, which co-ordinates information on stolen art.']

...A Russian artist, citing "artistic reasons," hurled green paint at a canvas said to be worth \$20 million in the Stedelijk Museum in Amsterdam on Saturday. [The Russian], aged 39, said he did it because he thought he could improve upon the work which was done in the 1920s by a compatriot... The painting, titled "Supremacy" consists of a large grey splash and a white cross. "It's instant art," said a museum spokesman "but it's an inadmissible form of art." [The Russian] was arrested as museum specialists dashed to clean up the mess.

...A British artist sold six of his 10 limited edition prints for £200... each at an exhibition at London's Royal Academy - despite show staff hanging the pictures the wrong way up... [Meanwhile, a] May 1939 comic book featuring the first appearance of Batman [has] fetched \$US68,500... at auction in New York. Detective Comics No 27, considered the finest unrestored copy ever offered for public sale, brought the highest bid at a sale of comic art that totalled \$US1.7 million...

One of the world's last great art collections still in private hands fetched \$US92.7 million... at auction yesterday... The 29 works... became the highest total for a single-owner sale... - topping the previous record of \$US85 million - since the art market hit its peak before tanking in 1989. Art experts said it was a sign of a new vitality in the market. The highest price of the night was \$US23.1 million for a Cezanne... The record for a Cezanne remained at the \$US28.6 million set in 1993.

The *Daily Telegraph* said it would include the 1932 Picasso *Dream*... which the... paper said... would sell for at least \$US35 million... putting it among the 10 most expensive paintings[ever] sold...

A collection of 20th-century art... shattered the record for a single-owner sale, going for just over \$US206 million... at Christie's yesterday. The auction house described the single-session sale... as "enormously in excess of anything we had hoped for." A record crowd of 2000 prospective bidders packed four salesrooms. Highlights of the sale included the \$US48,402,500... paid for... *Le Reve (The Dream)*... bought... for \$US7000 in 1941... It was the second highest price ever paid for a Picasso, about \$US4 million short of the price of *Les noces de Pierrette*...

['For many years Pablo Picasso was an ardent supporter of communism, an economic system which advocates equal distribution of wealth. Yet Picasso accumulated more wealth in his lifetime than any other artist. After his death his estate was valued at something over \$250 million, including two large estates in France and an extensive art collection. When his paintings began selling for very high prices, he was able to fulfill one of his earlier stated dreams: "I should like to live like a poor man, with a great deal of money." J. Paul Getty during his lifetime was considered the world's richest man. He was also known to be one of the stingiest. While on vacation at the Imperial Hotel in Vienna he gave the concierge the equivalent of twenty-five cents to

pay for a stamp and then asked for change. Getty also had pay telephones installed in his seventy-two-room mansion, presumably so guests would not run up his phone bill. On the other hand, he would freely spend hundreds of thousands of dollars for a piece of art to add to his extensive collection.']

...The most expensive and extravagant... home for art riches... in the U[S] threw its doors open to the public yesterday... The Getty Centre in Los Angeles was built at a cost of \$NZ1.75 billion and named after its... late... benefactor...

[The] investment banking arm of the Swiss Bank Corporation, is understood to be bidding to buy art auction house Christie's for \$1400 million... [Incidentally, more than 100 paintings and drawings said to be by Impressionist genius Vincent Van Gogh may be fakes. The *Daily Telegraph* reported yesterday that among the alleged fakes is the famous *Sunflowers* – one of a series of seven works with the same name – which was bought for £24.75 million... in 1987 [the same year that 'Van Gogh's *Irises* was sold for a then record of \$US53.9 million']... The report also claimed that a *Portrait of Dr Gachet*, hanging in Paris' Musée d'Orsay, was a counterfeit. A similar portrait of the doctor, who cared for Van Gogh before he killed himself, set a world record price for a picture in 1990 when it was sold to Japan for £48.8 million...

In the art world things are not always what they appear to be and, with tens of millions of dollars hanging on the truth, sellers as well as buyers need to beware. Take a cash-strapped baker in the southern French city of Montpellier, who sold what she thought was a decent imitation of an August Rodin bronze in 1988. It fetched \$US6700 and she thought it a good deal until she found out it was... the real thing, which was valued at \$US24.2 million... The baker wanted the buyers to return the 70cm bronze... of Rodin's one-time muse... in a position of supplication. They refused so she took them to court, where she has won the latest round in a long battle. Montpellier's appeal court has ordered the buyers to hand over \$US24.2 million to the baker. It might not be the end of the case, since the buyers are likely to appeal to France's highest court. Exactly the opposite problem may be facing Japan's Yasuda Fire and Marine Insurance Company...

A spokesman for Yasuda Fire & Marine Insurance Co Ltd... – [t]he Japanese owner... of... *Sunflowers* [–] yesterday rejected claims the famed painting might be a fake... The costly acquisition of... one of van Gogh's best-known works, earned a rebuke at the time from the Japanese Financial Ministry, which described the purchase as "an excessive demonstration of wealth." The painting is on public display at Yasuda's art gallery in its headquarters in central Tokyo. A spokesman for Tokyo's National Museum of Western Art said there was nothing to substantiate the counterfeit claim. "There have been several reports of van Gogh fakes but so far there has been no concrete proof... The majority of experts believe in the authenticity of *Sunflowers*."

...Amsterdam's Van Gogh Museum, London's National Gallery and Japan's Yasuda Fire and Marine Insurance... have begun an investigation to determine the authenticity of [their] Van Gogh's... All own... paintings... showing 14 sunflowers set against a pale green background.

...[*Gauguin case shows how hard it is to spot a forgery* A NZer owns a beautiful Gauguin painting that he absolutely adores. It's exactly the same as the \$10 million Gauguin held in New York's Metropolitan Museum of Art, but his Gauguin only cost a few bob. The former Rotorua Museum curator loves fakes; he collects forgeries as a hobby, a practice he calls "perverse pleasure." "I almost bought a *Mona Lisa*. I have a number of *Mona Lisas* but this one was an oil painting of approximately the original size." He is also thinking of buying a signed C.F. Goldie that is on sale for a song. It's not a "real" Goldie, of course, it's the work of a notorious art forger who changed his name by deed poll to Carl Feodor Goldie following his conviction for painting facsimiles of the master's work. The former curator believes this forger is behind the mysterious Rangitoto painting attributed to Gauguin (the forger has since denied responsibility) that was unveiled and for sale last weekend at an Auckland gallery. The Rangitoto painting's authenticity (or otherwise) has yet to be resolved but since NZ art is so "young," the country does not have a long history of art forgery. "You don't see a lot but they are out there. People are confused about what constitutes an original work of art. A poor chap in Te Aroha thought he had a Monet when in fact it was a good-quality textured print." Indeed, families who discover a family heirloom gathering dust in the attic often make that mistake. Each year, the Auckland City Art Gallery receives about a half dozen paintings by anyone from Constable to Goldie from individuals seeking authentication. A local auctioneer has only had to reimburse buyers on a couple of occasions during his 40 years in the business but turns away fakes every year. Buyers who unwittingly buy fakes would be protected under the Fair Trading Act, he says. The Auckland Art Gallery's principal conservator says a searching examination is needed to uncover quality forgery. Experts look at the cross-section of the paint, the materials used and the method of construction, and x-rays can reveal the presence of the titanium dioxide used by early masters. Contemporary forgeries are more problematic as there are fewer physical clues to betray dubious origins. Probably history's most successful forger, and certainly the most romantic, was Dutchman van Meegeren (1880-1947) who foisted a number of fake Dutch master Johannes Vermeer's works on an unsuspecting art world. His subterfuge was only uncovered in 1946 when he was put on trial for collaborating with the Nazis after he swapped a fake Vermeer for the return of 200 Dutch originals from Hermann Goering. He cleared himself of the collaboration charge by creating, in court, an "original" Vermeer. However, he was convicted of fraud as a result and sentenced to imprisonment but died before serving his sentence.')

...A year ago Eric Hebborn was found drink-sodden and dying from a head wound in a Rome square. No one knows if he simply hit his head on falling, or if there was something more sinister in the death of this flawed genius who made a monkey of the art establishment with his brilliant forgeries. One theory is that he was murdered to prevent his publication of the ultimate in do-it-yourself manuals, *The Art Forger's Handbook*. If that was the intent, it did not work. An Italian edition was already on its way and this week... the English edition... [was] published... Hebborn, although a superb draughtsman with enormous technical expertise, lacked the "spark of originality" genius needs... At any rate, the market now recognises infamy as well as fame and Hebborns themselves fetch a fair price.

...[the Londoner] 'put down the receiver and sat in silence. He was, he says, a man in shock. An abandoned husband with two babies to bring up, his career as an artist becalmed, he had just been offered £12,500 for a faked painting which he had knocked up in a few hours with old brushes and Dulux emulsion. "I couldn't believe it," he recalls. "I was broke. I used to get £150 for my fakes, but now the price had gone up. The art world was fooled. Hell, what could I do? I took the money." It was 1987 and the start of what critics accept as the greatest art-forgery caper of the 20th Century; a scam that would last eight years and take in the world's biggest auction houses; a tale of deception and chicanery that would see almost 200 fakes passed off as works by great artists. On the other end of the phone that day had been a 38-year-old confidence trickster, a man of such charm and intelligence that he had managed to worm his way into the affections of the art world and – crucially – into the archives of London's Victoria & Albert Museum and Tate Gallery, where buyers went to establish the authenticity of works of art. The scam finally came to an end in 1995 when the trickster's estranged wife found some incriminating papers and reported them to the police. The trickster maintained his innocence but he was jailed for six years. The forger admitted everything and was jailed for 12 months, serving four. He still spends his days painting in the style of contemporary masters, but now he signs his own name on the back. The latest chapter of the saga is that a Hollywood production company was in the early stages of producing a film about art fraud, "loosely based" on the pair's story. "It should be a good platform for my work," the forger jokes. "My fakes might genuinely be worth a few bob one day."')

...Aborigines protested in Perth yesterday about a window display of fake Aboriginal art, calling it "cultural and spiritual theft." ...A Dumbartung Aboriginal Corporation spokesman... said the works... under the name of "Eddie Burrup," were a misappropriation of Aboriginal culture, in the art itself and in the way it was described.

...[an] Aboriginal artist... has admitted that she did not paint many of the works which... earned her hundreds of thousands of dollars... and... won her a prestigious art prize... last year's \$A18,000... National Aboriginal and Torres Strait Islander Art Award... The *Australian* reports that [her] former... Welsh-born... de facto husband... devised and painted most of the work... "[He] started with the white cross [the foundation structure...] and did all the white dots. I just followed with the yellow infill,"... [She] told the paper she feared she would go to jail if she [had] told the truth when [his] claims were revealed last month... The... case is the second controversial incident recently involving Aboriginal art. An artist... aged 82...

from[a] famous... West A[US]n pioneering family... prompted a national outcry in March when she revealed... that paintings by a Kimberley Aborigine called Eddie Burrup, were in fact her own.

...An Aboriginal painter whose work this week fetched... \$A206,000... – more than twice the previous record price for A[US]n indigenous art... [–] was revealed to be a down-and-out welfare recipient who often sleeps in a river bed... He... had unsuccessfully asked for 4[%] of the proceeds from the painting's recent sale, arguing that as an Aboriginal the painting would always belong to him. He sold the painting for \$A150 in 1972[. □ A movement in Europe has 'called to allow artists to receive "a small levy" each time a painting of theirs is sold']...

Let be, let be... painted... [by] Colin McCahon... in 1959 as part of a series... has been sold in Sydney for \$1.14 million – a record price for a post-1910 A[US]n or NZ artwork. It... was sold to a private A[US]n collector by the gallery that... had bought the painting for \$712,000 at auction in Auckland in March 1995, which was then the record price for a N[Z] painting. Friday's sale... eclipsed prices of up to \$900,000 paid for A[US]n post-1910 paintings... "It clearly shows [McCahon] is regarded as the pre-eminent modern Australasian painter,"... [the gallery's owner said, while adding that the theft of the artist's] *Urewera Mural* from the Department of Conservation Visitor Centre at Lake Waikaremoana in... Hawke's Bay last month created a lot of interest in A[US]n media and art circles... [Some early A[US]n colonial paintings had sold for around \$2m... - 1997

One of the finest Maori artefacts offered at auction overseas will go under the hammer in New York today. The carving, expected to fetch more than \$2 million, will be sold by Sotheby's... The 1.2m male figurine... was held in a private European collection for more than 20 years. It was taken to England between 1880 and 1890 by A.H.W. Williams, whose... grandfather, William Williams... translated the *New Testament* into Maori and wrote a Maori dictionary... [An] Auckland ethnologist... has said the figure was made by a Ngati Kahungunu carver about 1850. It had been gifted to the Williams family but some Ngati Kahungunu people might be upset at its being auctioned. "It is a figure of an ancestor of somebody, and descendants of that ancestor might not feel happy about it being traded, and quite rightly so,"... Members of the East Coast Ngati Kahungunu iwi want the Taonga (treasure) repatriated but say they cannot afford to bid against art dealers from around the world.

...The record \$US1.1 million... paid for a Maori carving at an auction in New York yesterday could lead to more carvings being taken out of the country... "What's to stop people from smuggling out more of our taonga? The type of money just paid out in New York could encourage people to start stripping carvings and taonga from anywhere, including urupa [cemeteries],"... said... a master carver... [from] the Maori Arts and Crafts Institute in Rotorua... A Ngati Kahungunu senior elder... said the tribe was saddened over the sale... "Our pain... is deep. How can one not be affected by the sale of one of our ancestors? It's totally foreign to us that money has passed hands for our ancestor... A very strong protest should be made by our Maori leaders to those who sell our heritage." ...[a Maori] MP... said Sotheby's had played its part in the selling of taonga. "They have made a healthy profit exploiting Maori ties to their treasures, and the practice has to stop. It is cultural blackmail what these people do."

...[a Hollywood-based a]ctress... wrote to... a Virginian businessman to spare the life of a rare black rhinoceros to be sold for use in a hunt outside Johannesburg... which is her hometown. The owner... will be paid \$60,000 for the animal by a big-game hunter and the beautiful star... appealed to... him, "If you agree to release the rhino to a sanctuary, I will agree to meet you in South Africa to celebrate her freedom." ...so far her offer hasn't swayed [the owner]. "She's a wonderful animal but I can't afford to give her away," he responded. "Yet the last thing I want is to have her blown away..."

...white rhinos... at Christchurch's [Safari] Park have a peaceful existence compared to their cousins, the black rhino of Africa. The black rhino is under threat... slaughtered by poachers for their highly-prized horns[which are predominantly used to make 'dagger handles and Asian medicines']... Rhinos are... fighting a losing battle against total extinction... [In] Africa military-style operations defend them against poachers... - Our World

In the late 1960s, there were 65 thousand black rhino in Africa. After three decades of poaching... fewer than 2 1/2 thousand remain[. There are also only '7562 white rhino left in Africa (of which 7095 populate South Africa')].... Conservationists are constantly thinking of new ways to protect the rhino. In recent years they've been filing down their horns. In theory, it makes a less attractive target for poachers[– who often cut horns off at the flesh (leaving the animal to painfully bleed to death) in order to maximise their haul]. But the scheme hasn't worked... because even the stump of the horn will fetch a high price in Asia. - HUMAN NATURE

There is now a total ban on the sale of rhino horn, but this action has probably come too late to save the species.

A complaint about an advertisement selling rhino horn, that appeared in the Chinese edition of the N[Z] *Herald*, has not been upheld by the Advertising Standards Complaints Board. The advertisement... read in part... "Good Investment Opportunity in Rhino Horn... Absolutely pure Rare Species... Export documentation can be obtained... Only genuine offers over \$NZ150,000 considered." The complainant... said rhino horn was from an endangered species and its commercial use banned. The *Herald* said it had contacted the Department of Conservation before publishing the advertisement and found there was no restriction trading rhino horn already in N[Z]. In related news... Tanzanian police have impounded... elephant tusks worth \$195,000 at Dar es Salaam airport that were to be flown to Ethiopia's capital Addis Ababa disguised as diplomatic cargo belonging to the US. - 1996

A Hawkes Bay woman has had a fine... increased to \$1000 for returning from Africa with elephant hide... [The 48-year-old] had been fined \$250 in the Otahuhu District Court. But the D[oC] appealed and the fine was quadrupled by... the High Court at Auckland yesterday. [The woman] had admitted having a rifle case, belt and wallet made of elephant skin along with five pairs of ivory earrings without a permit, in contravention of the Trade in Endangered Species Act. She also admitted producing a false invoice to a Customs officer at Auckland Airport on her return from a month-long trip to Zimbabwe... When stopped at the airport she maintained that the earrings were bone, not ivory[, while]... the gun belt and case [was] buffalo rather than elephant... According to the summary of facts presented to the court... "The culling of African elephant herds in Zimbabwe is not undertaken in accordance with any approved species or herd management programme..." [Incidentally, 'when an elephant dies in an African rainforest, no creature can eat its tough hide. The body just rots and leaks toxins which kill the adjacent plant life, clearing a space around it. While alive, elephants also create space in the rainforest for all of the smaller creatures. If elephants disappear, many smaller creatures will go with them.' Furthermore, 'when an older, large-tusked elephant is killed, a herd loses a lot of knowledge necessary for its survival']...

Sri Lankan elephants face grim battle for survival... In the past 70 years, more than 60[% of Sri Lanka]'s jungle has been turned into farmland... Pushed back into ever smaller pockets of jungle, elephants are in daily conflict with farmers and... rebels of the Liberation Tigers of Tamil Eelam. The... elephants are driven out of the forest periodically by the movement of the guerrillas and by the sound of gunfire and explosions. Squeezed between the rebels on one side and subsistence farmers on the other, elephant numbers are dwindling... The country now has only 2500 to 3000 wild elephants, down from an estimated 12,000 at the turn of the century. The director of Sri Lanka's Wildlife Conservation service... said 110 elephants died in 1995 and 100 or so in 1996. This year at least 50 have been killed[, sometimes because]... wildlife was forgotten... when the farmers... cut down and burnt the forest[, but also in retaliation to]... the trail of destruction[an] elephant has left... The damage to farms is enormous. "Elephants find cultivated land easy pickings... A four tonne elephant can destroy six months' work on the farm in one night,"... said... a

conservationist... But... villagers are... [also afraid of] elephants. The number of people killed in attacks has risen sharply, with at least 59 deaths reported in 1996, up from 29 in 1993. Over 250 people have been killed by elephants in the past five years. [Editor's note: 'More humans are killed by hippos in Africa each year than by any other wild animal.']

...French Customs have seized 1738 hippopotamus teeth... and four wart-hog teeth at Paris' Only Airport en route from Uganda to Hong Kong. "The persistence of demand for ivory in the Far East is leading traffickers to find species other than elephants... to satisfy this demand," the Customs service said.

...*Demand for ivory has not disappeared despite ban since 1989* [African elephant numbers – which fell from '5 million in 1970 to 1.3 million in 1979' – have continued to decrease. Now 'there are about 600,000 African elephants, and between 30,000 and 50,000 Asian elephants left.']

...*Battle looms over plan to resume killing elephants*... Plans by three African countries to take their elephant populations off the list of endangered species, and thereby pave the way for a resumption in the ivory trade, look set to trigger a major international row next week... The U[S and AUS] are both opposed to the move[, but]... Botswana, Namibia and Zimbabwe argue that their burgeoning elephant populations are trampling crops and crowding people off the land... While the U[S] recognised the successful efforts of the three countries to manage their herds, easing trade restrictions would pose "unacceptable risks to elephant populations." ...Environmental groups are split over the request... Officials from African elephant range countries are meeting in Harare this week to decide their position on the proposal... The three countries need support from two-thirds of convention members... which they have been trying to do since 1990... [It] was unclear whether they would be able to secure enough votes now that the U[S] has said it would oppose them.

...Two leading wildlife groups... the U[S]-based International Fund for Animal Welfare and Amsterdam-based Greenpeace... yesterday backed a proposal to write off the debts of some African countries in exchange for existing ivory stocks. But they strongly rejected... [bringing an] end to the world ban on the ivory trade.

...[the] Environment Minister said in an interview published yesterday that Zimbabwe would defy a world ban on ivory trade if it fails in its bid this week to be allowed to sell ivory from its "excess" elephant population.

...The 10-day Convention on International Trade in Endangered Species (CITES) has attracted more than 2000 delegates, including some of the world's leading environmental groups. Many have already declared their position on the ivory dispute and media focus has mainly been on the issue... The three countries and their supporters, notably Japan, say they must be allowed some limited but strictly supervised trade because their elephant herd... is rising steadily and... [is] now estimated at around 150,000... Since the ban was imposed they have accumulated nearly 100 tonnes of ivory from annual culls and from legally hunted trophies. They say trade in ivory is vital to stabilise the elephant herd, which they say is now over twice the land's carrying capacity... The 138-member CITES will vote on the issue towards the end of the conference... But the proposal is strongly opposed by... the U[S] and French Governments. They argue lifting the ban will leave elephants at the mercy of poachers... CITES officials said the conference could also see intense debate on a proposal by Japan and Norway to open up whale hunting... The meeting will also debate ways to preserve the Indian tiger, the black rhino, the sturgeon fish [(whose 'eggs are used for caviar' –)] ...but the fish must be killed first to get them)... and the Cuban sea turtle – all threatened by poachers. The convention estimates the illegal global trade in endangered species is worth up to \$10 billion a year. [■ 'More than 12 million exotic animals a year are illegally trapped in Brazil's Amazon rainforest, according to the WWF. Of those captured, only 10% make it to the black market and stores alive, where they are sold.']

...A global forum's easing of an ivory trade ban could be a "blessing in disguise" that will help preserve elephants, says the W[WF]... "...the money from this renewed trade will be used for their conservation... I don't think it will open the floodgates... It will be subject to international scrutiny. It must only concern stockpiles. No elephants will be killed to provide ivory,"... said the fund's Hong Kong representative...

Millions of elephants once roamed free across the African continent. This century people have taken over much of their natural habitat through clearing the land for farms and settlements. Elephant numbers rapidly declined in the 1970s as poachers killed these large beasts for their tusks. Ivory fetched such high prices it was called "white gold"... Today many elephants are restricted to national parks and reserves where they can be managed... [However, 'even in parks, the elephants are not safe. Another conservationist alternative is to rebuild public opinion. "More than anybody, I blame those who buy ivory," says a Scottish zoologist. He and many allies hope to change people's attitudes to ivory and discourage its use, as was done with leopard and tiger skins. Only then will the slaughter stop.' Ivory is made] into... signature seals... jewellery, figurines, piano keys... - 1997

"Dad, how would you like to be sold to an ivory dealer?" "I'd like it fine." "Even if he killed you and made your teeth into piano keys?" "Yes, of course I would. Who wouldn't like that, to be part of the music scene?"

The harmless, gentle DIGIT had been slain for his head and hands, sold to a trader for the equivalent of \$20... to be made into ashtrays... [O]ther members of the study group[were also] found dead at poachers' hands... Although the park is protected under laws, illegal hunting goes on... and a greedy trader can still find a market for an impressive silverback skull... Often gorillas are accidentally caught in traps set for antelope, a favourite source of meat for the local Europeans...

Poverty-stricken islanders are pushing one of the world's biggest turtle populations to the brink of extinction by selling their eggs to Malaysian Muslims hungry for exotic delicacies... This prehistoric species already faces well-documented perils, with birds of prey, dynamite and cyanide fishing, monitor lizards, sharks and driftnets ensuring that only a tiny fraction of eggs laid will make it to adulthood. But these are insignificant compared with the effects of long-term egg plundering on the six Philippine islands... [among the] nine tiny islands... where... 80[%] of South-east Asia's green turtles... lay their eggs... [P]ermits are still issued in five of the Philippine islands allowing locals to collect almost 70[%] of them. These are then smuggled to markets in... Borneo... where it is illegal to collect or sell turtle eggs. In five days of collection a permit-holder can earn about 10,000 pesos... – a fortune in this poor, often-forgotten part of the country. Although the islands form the world's only transnational wildlife heritage area and won last year's coveted John Paul Getty wildlife award, egg production has plummeted almost 90[%] since the 1950s... [T]he director of the Philippines Department of the Environment and Natural Resources' turtle project, recognises "the irony of basically giving people permission to go and break the law in Malaysia." "On our side, egg collection is part of the local people's traditional livelihood. If we ban egg collection they will just resort to poaching, so it's better to regulate it." Regulation is in the hands of local wardens, but several have been caught protecting their friends' poaching activities rather than the turtles... However, [the director] remains quietly optimistic, even though his project's budget has been slashed from 7.9 million pesos... to 5.3 million... He hopes carefully managing eco-tourism will bring in money and employment to the locals within the next few years. A successful luxury resort on the Malaysian side already has a waiting list of up to three years for tourists eager to sample a turtle experience. The local... WWF... team is far less convinced, however. It set up a turtle protection project on Taganak Island in 1996, and plans to introduce alternative livelihoods such as live food fishing for the restaurant trade. But... their good intentions are in tatters. "Unfortunately, we found it impossible to keep a cooperative together. Right now we're... just trying to gain the trust of the people, especially the community leaders, who have always creamed off profits from the egg collection,"... said... [a] WWF marine programme officer... [He also] warned that tourism could be a big mistake, citing the problems of introducing rich tourists into a very poor... community where few people have ever seen a foreigner.

...IT'S GETTING close to 9.30 am on an already swelteringly day and the tourists at Sepilok orang-utan sanctuary... are growing restless. Many of the group – a mix of Germans, Japanese, Britons, A[US]ns and Malaysians – have been up since 5 am to catch flights to... the island of Borneo... [However, at] the first rustle of jungle leaves as the orang-utans – literally “men of the forest” – arrive for their morning feed of bananas and milk... the heat, weariness and the journey are forgotten. Delight and wonder spread among the humans as 10 or so of the gentle red apes gradually emerge... Then an excited buzz runs through the tourists as a giant ape, which has been watching from high in the trees, slides down a rope in a single, swift movement. Suddenly we remember the tour guide's warnings: “Be very careful around the orang-utans. They might seem friendly but they may try to steal things from you.” A tattered newspaper clipping in the sanctuary's information centre recounts the story of an embarrassed French tourist who was stripped naked by a mischievous orang-utan... The orang-utans' intelligence have led to a lucrative poaching trade, with a baby ape worth close to \$NZ12,000 on the black market.

Some... orang utan... mothers were killed so that the youngsters could be taken and sold as pets.

The biggest threat, however, to the orang's survival is, sad to say, the zoo trade. Every zoo wants a young ape to display to its visitors, and oranges are the easiest to obtain. Many unscrupulous private zoos, especially in the U[S], have paid high prices for baby oranges, and there has been quite a lucrative trade in them in Southeast Asia... The dealer does not make much effort to ensure the captive's welfare as he probably bought it from the hunter at a low fee, so many youngsters die. For every one orang that reaches a zoo alive, ten oranges – mothers and other babies – have quite probably perished... In 1963 [it was] estimated that only 2000 wild oranges remained in Sabah, 1000 in Kalimantan (Indonesian Borneo), 700 in Sarawak and 1000 in Sumatra. Of these, only the Sabah population seems to be anything like adequately protected. In 1964 another estimate put the Sumatra population at only 100.

A tiger has killed a couple as they worked on their plantation in West Sumatra... Villagers said the tiger was probably driven to make the attack because logging had cut the size of its natural habitat. - 1996

The... London-based Environmental Investigation Agency... says endangered animal trafficking is second only to the multimillion-dollar illegal drugs trade in cash terms... Tigers will be all but extinct in five years if major Governments do nothing to halt an illegal trade in medicines based on tiger body parts, [the] wildlife lobby group has warned... The agency has uncovered proof of a thriving trade in tiger medicines in New York, Tokyo and Amsterdam... Using hidden cameras, investigators found tiger bone products... on display at chemists... According to environmentalists, poachers seeking tiger bones used in Chinese medicine and sold around the world are killing at least one Bengal tiger a day. Tigers are slaughtered to feed an ancient belief [that the ‘animal's powers can be transferred to people’, and a]... growing demand for “alternative” Chinese remedies in the West was making matters worse... As stockpiles of tiger bones and other body parts have dried up in China... in the past decade... traders have turned to India... to replenish their supplies. Campaigners estimate that the tiger population in India – the last stronghold of the species – is fewer than 3000... Of the main industrialised countries... Japan... [was] singled out... as guilty of showing “no political will to do anything about banning tiger products.” “We are seriously pointing the finger at Japan... for allowing a massive loophole to exist so that tiger medicines are legally on sale there,” said... the agency's director... International trade in tiger parts has been outlawed since 1987... The agency says China remains the main destination for tiger bones used in medicines, tiger skins for rugs and even penises, which are cooked to create \$100-a-bowl soups.

...Available from your pharmacy... Tiger balm is an effective external analgesic that provides relief from aches and pains. Made from only the finest natural ingredients... Distributed by... Pharmaceuticals (NZ) Ltd Auckland...

[‘In tonight's final episode of the wildlife documentary PREDATORS, we discover which predators are natural born killers – like the sand tiger who has a grisly start in the womb, with only one of a dozen offspring being born, while the others are eaten by the survivor – and which must learn to kill’]...

Despite almost 40 years of study of wild tigers, estimates of their numbers are still poor, says... the Wildlife Conservation Society. The WCS announced last week it will spend \$1 million over the next three years counting tigers in... Indochina... and... India...

[‘Indian officials are worried that the US President might not spot a tiger when he visits one of their sanctuaries this week in western India on his five-day trip to the country. Nervous game wardens at Ranthambore National Park, 400km west of New Delhi, are sending teams of experienced trackers armed with walkie-talkies to vantage points around water holes to spot tigers for the visiting dignitary. The national park was placed on the President's itinerary after the US Ambassador sighted seven tigers on a recent visit to the sanctuary. But wildlife officials said frenetic activity centred around building eight helipads and repairing roads inside the sanctuary had sent the tigers into hiding.’ In another development, the ‘WWF is paying compensation to Indian farmers for cattle killed by tigers – rather than have farmers poison the’ tigers.

...‘Big city battle to save tigers A 55-year-old is on a crusade to save the tiger from extinction. But his battleground is not south China or India or Sumatra, the tiger's home. It is New York, where the lack of a strategy to stop imports of elixirs made from tiger parts is an obstacle to saving the animal from disappearing from the wild. “New York is the only major city in North America where tiger bones are openly sold in spite of the existing law,” said the leader of the Western Canada Wilderness Committee that helped force the Canadian Government to strengthen laws to stop people importing and selling tiger products. He expected US legislators to strengthen the penalties and provide money to enforce present laws to stop the traffic. Under the Rhino and Tiger Product Labelling Act, which bars importation or sale of products containing tiger parts, people caught with these products face a fine of \$US5000. Business owners pay \$US10,000 and can spend six months in jail. In comparison, fines for seal penises, also used in Chinese medicine, are, respectively, \$US100,000 and \$US200,000 and/or one year in jail. The Interior Department's Deficient Wildlife Agency is in charge of enforcing the law and monitoring imports. While acknowledging illegal tiger products were being sold in the US, it argued it did not have enough manpower or money to police the illegal imports. The US market is the largest for wildlife products in the world but the country has only 93 wildlife inspectors to cover 30 ports of entry.’]

...A CUSTOMS agent at Los Angeles International Airport eyes a Chinese businessman who fiddles nervously as he declares the contents of his personal luggage. The agent asks the man, who manages an import-export company, to take his bags to the secondary inspection table... Inside, they discover the complete, disarticulated skeleton of a rare Siberian tiger along with photographs documenting the kill as a warranty for potential buyers. The tiger skeleton, once it is pulverised into a highly prized medicinal powder, is worth more than \$500,000. The man was sentenced to 21 months' jail but his punishment has not deterred others from going after the money that can be made in illicit trade of tiger bone or products made with tiger parts... According to trade records, South Korea, Taiwan, Singapore, Japan and the USA imported at least 24 tonnes of tiger bone from China – derived from about 1000 tigers – between 1970 and 1993... In 1990, with increasing demand, poaching became rampant... [because] the pre-1997 boom of Asian economies provided consumers with more money to buy expensive tiger products. The collapse of the Soviet Union also played a role. Soon afterwards, large numbers of Siberian tigers... were killed and sold on the black market. And in 1992, poachers killed most of the tigers living on India's Ranthambore Tiger Reserve... “In the last quarter century, we've seen the disappearance of 95% of the world's wild tigers,”... At the beginning of the 20th century, an estimated 100,000 tigers roamed... as far west as Turkey and as far east as the Russian and Chinese coasts. But today 5000 to 7000 tigers from five subspecies remain in the wild worldwide. Three subspecies, the Caspian, Bali and Javan, are believed to have become extinct since the 1930s... A new problem, however, involves domesticated tigers in the USA, which probably

outnumber tigers in the wild... As more wild tigers disappear and the demand for medicines continues to increase... “our fear is we will see some of these captive animals finding their way into illegal markets.” ...Practitioners use nearly every part of the tiger for some purpose. Whiskers are used for toothaches, eyeballs for epilepsy, the bile for convulsions in children, the brains for laziness and pimples, and the tail for skin diseases... Demand for... penises, which are ingested as aphrodisiacs, is higher than ever.

...A retired Turkish worker... aged 52... who sought to cure his impotence by having a penis transplant from a donkey so irritated his family that his son shot him in the leg, according to Turkish media... [He had] twice bought donkeys and amputated their sexual organs in the hope of having a transplant even though doctors refused to co-operate... “For a long time now I have had sexual problems and I have spent all my pension funds to overcome them,” said [the ‘father-of-six’] who is waiting to recover from his wound before he goes out and buys a fourth donkey. [● ‘A Californian plastic surgeon says that over 30 men have come to him with deformities resulting from penis enlargement surgery.’

...a plastic surgeon said he had] extended a patient’s penis by a world record 14.5cm. The operation in Copenhagen which was a combination of surgery and post-surgical stretching... lengthened a 42-year-old patient’s flaccid member... to 19cm. [Incidentally ‘in the past 10 years the confiscation of such things as pickled seal penises, elephant leg footstalls, turtle shells and bottles of murky lizard and ginseng wine has skyrocketed a whopping 670%. Boxes upon boxes of precious coral taken from Pacific island reefs and beaches cram shelf after shelf of warehouse space. Giant spiders and beautiful butterflies in glass cases, snake belts, stuffed baby crocodiles and intricately carved ivory also fight for space. NZers overseas often unwittingly contribute to the depletion of species and plunder of nature, says a DoC worker who is also a technical support officer for CITES. Because tourists see souvenirs on sale in crowded markets they believe it is legal to bring them home. On the other hand – and incredibly so in some ways – it is at certain times of the year legal to hunt and kill members of some endangered species. But not without proper documentation and a CITES permit. She says a hard-core of NZ hunters go to huge expense to travel to the US during the legal bear-shooting season, designed to keep numbers under control. But some hunters do not get the correct permit and get angry and abusive when their trophy is taken off them. Fully stuffed and mounted bears are not as common as bear pelts and rugs – where the head is still attached to the skinned and flayed body. In the past two weeks alone, between 15 and 20 pelts have turned up. The DoC worker has yet to cry on the job but some days she really struggles to fight back the tears. The attempted import of a North American bear still bleeding in its partly gutted carcass was one such day. “In some countries they are still milking the bears. They put a tube in and milk the bile. It’s very painful and the bears die.”]

...“The sun bear’s gall bladder and bile is... reputed to boost sexual performance. A gall bladder will sell for anything up to \$US300, while bile is worth \$US100 a gram,”... an American with the A[US]n-based Save the Bears Fund... said. “When poor people are confronted with such high returns, it’s hard to convince them of the virtues of wildlife conservation.” ...Cambodia’s stocks of wildlife have plunged by about 60[%] since the early 1990s... as a result of deforestation, corruption and the illegal animal trade... Cambodia’s long-term isolation had made it a sanctuary until the early 1990s... “Now wildlife traders from throughout the region are looking to Cambodia to keep their trade going and make no mistake, there is a lot of money involved.” Environment Ministry officials and foreign experts say... the “out of control” trade in wild animals, particularly from the north-eastern provinces to Vietnam, involves Government officials and gangs of heavily armed men... “As Government salaries are so low, the potential for high returns make it very tempting for wildlife protection officials to become involved in the trade,”... A three to four-year old tiger will fetch between \$US5000 and \$US7000 locally, but in the markets of Vietnam an adult tiger is worth anything up to \$US30,000.” ...such high prices could result in tigers becoming extinct in Cambodia, and the sun bear... is likely to share its fate... The... Environmental Ministry... had so far received only a third of its promised \$US500,000 annual budget and many of its staff had not been paid for months. Meanwhile, a Cambodian newspaper reports that six elephants are to be exported to China... The report... said the Cambodian Council of Ministers had approved the shipment for research and crossbreeding purposes. But the paper quoted an unidentified Phnom Penh businessman who claimed the elephants were really destined for the restaurants of Beijing... where dishes such as elephant tongue... fetch up to \$US1300 a plate... The paper said the council had recently approved the export of a further 24 elephants.

...On a remote island in the South China Sea a bizarre and almost forgotten experiment launched by the late dictator Ferdinand Marcos is decaying into a violent territorial dispute between landless poachers and African animals... [In] recent years... the secluded 3,760ha Calauit Island... has become the scene of a mini-revolution, bloodshed and one of the longest-running legal wrangles in the Philippines. Calauit’s controversial history began in 1976 when the prestige-hungry Marcos answered an appeal by the Kenyan government to provide a temporary shelter for its wildlife, which was under threat from uncontrolled poaching by soldiers during a civil war. A team of government experts chose Calauit – known as the Philippines’ “Last Frontier” – as a suitable isolated site for the project. But the seeds of future conflict were sown with the eviction, some claimed at gunpoint, of Calauit’s 256 tenant families, numbering more than 1000 people. They were given small payoffs and resettled in purpose-built sites on nearby Cullion Island. In March 1977 a consignment of... giraffe, eland, topi, zebra, bushbuck, impala, gazelle and waterbuck arrived at the island after a 15-day sea crossing from Mombasa... Numerous problems arose, partly because animals used to the dry savannah were unsuited to the Philippines’ tropical monsoon climate. Zebras suffered from pneumonia and terrified giraffes broke legs after running blindly into mangrove swamps during lightning storms. Highly territorial zebras[– whose numbers back in Africa were ‘threatened by poaching for skins to hang on collectors’ walls’ –] almost wiped out the topi population by attacking the young, while the last gazelle died six years ago following violent mating season fights. Among the remaining population, in-breeding led to poor disease resistance, and young animals were picked off by Calauit’s native giant pythons and wild boar... [Furthermore,] “The original Calauit inhabitants didn’t like their resettlement areas, and when Marcos was overthrown, they thought they would be allowed back. When that didn’t happen, they... landed their boats[and] refused to leave.” The... illegal residents, numbering around 600... have taken over at least 200 hectares of the island’s lowland areas for farming – the only areas which provide sufficient grazing for the animals in summer. The government has been trying to evict them through court actions since 1987, but after a series of lengthy appeals, the squatters are still in place. And after travelling halfway around the world, the animals are now once again under serious threat from poaching. Meat from impala, eland and the endangered Philippine Calamian deer has been found on sale in local markets. Poachers may earn around 700 pesos (about \$[NZ]35) for the flesh of these animals – and a further 1000 pesos... by selling the valuable horns and antlers to collectors... The Calauit administrative officer... said: “We understand why some of the people have resorted to poaching – they are poor and they see these animals as instant cash... co-existence is impossible, and this is why [the squatters] must leave the island if this conservation project is to survive.” One of the squatters... said: “...This island was our home for years, but the government threw us out – it thought we were less important than animals. Millions of pesos are being spent to look after giraffes and antelope, but we get nothing.” Although a permanent presence of five marines has been stationed on the island since the 1986 uprising – and last year a poacher was shot dead by a marine – ...many see their anti-poaching posting “as a holiday.” The island’s 15 wardens are unable to control poaching themselves – largely through lack of funding... [The administrative officer] says the project’s five million pesos... annual budget needs to be at least doubled in order to buy medicines, food and fuel, and to replace dilapidated equipment and rusting corrals which are as old as the project itself. But... he... fears this funding will not be forthcoming, as what was once the country’s foremost wildlife showcase is now widely viewed as one of many embarrassing reminders of Marcos’ profligacy. Unsurprisingly, [the] post-revolution President... slashed the budget for such luxury projects – which resulted in the Calauit workers being unpaid for six months in 1991... Funding has increased slightly under[the current] President... who also donated a new safari truck after discovering during[a] visit to Calauit that tourists were being ferried around in a 1933 Isuzu truck with no brakes. Probably the best way to raise the necessary funding would be by luring more tourists... This seems unlikely, however[because]... Calauit is inaccessible to all but the

hardest of travellers... [In related news, policemen] in Srinagar, capital of the Indian state of Kashmir, yesterday displayed the skins of wild cats, jackals and leopards seized from a gang dealing in the hides of animals hunted and killed in the Himalayas. Indian wildlife experts claim the black-market value of the skins is \$14.5 million. - 1997

The staggering decline of the Indian cheetah was... due to the trade in coats, rugs and trophies... Apart from unconfirmed reports, the last record seems to be of three males being shot in the same place at night using artificial light. This is a sad state of affairs when one considers that the 16th-century emperor Akbar kept 1000 cheetahs in captivity for hunting[(in Namibia 'cheetahs are a pest – farmers shoot or capture and sell them to game parks for \$70 so overseas hunters can shoot them')].... Cheetahs can make good, but expensive pets, being affectionate and playful... However, [an]... animal weighing a hundred pounds or more, with non-retractable claws, can inflict injury without meaning to do so, and there is always the fear that a cheetah may revert to its normal hunting habits of chasing animals that are moving away from it... Unlike other cats, who tend to lie in wait for their prey and pounce with a single leap or a short rush when they are close enough, cheetahs will stalk their prey and then race after them... In a short sprint they can easily overtake their prey...

['Komodo dragons can outrun a cheetah during a short sprint', but some couldn't outrun a 42-year-old Malaysian. However, he couldn't outrun 'federal prosecutors investigating the international trade of endangered wildlife. After two years spent fighting extradition, the man accused of acting as the kingpin of an international rare-animal empire was turned over to US authorities by the Mexican Government in August to answer 40 charges of smuggling, conspiracy, money-laundering and violating US wildlife protection laws. Of the some 300 animals allegedly smuggled into the US, 38 are from species considered endangered, including the Komodo dragon and the rarest tortoise species on earth, the Madagascan spurred tortoise']...

Tortoises are well known for their slowness of movement and for their long life span. They live longer than any other animal today [– the]... longest authentic record we have is for one of the giant tortoises... [that] was... at least 152 years old, and probably 180 years or even more [–] ...and... are about the most heavily armoured... The greatest danger today is the trade in tortoises for pets. Once a tortoise has been bought and installed in a garden it will be treated with the greatest care. The method of packing them for transport has meant, however, that in recent years there has been a hideously high mortality rate between their being collected, mainly in North Africa, and their reaching the dealers.

Because of high profits smugglers were prepared to accept high mortality rates for smuggled birds... although the worldwide size of the illegal trade was impossible to measure...

Kiwi and kea beware – a new strain of economist wants endangered species hawked on the open market. A bio-economist... is pushing for a lively trade in taboo native birds, which he says would be good for them and us... [He] admitted that increasing the supply to world markets would drive down the kea's \$8000 price tag, but he said the bird would still be worth more than sheep to a high-country farmer... [M]ortified conservationists slammed the idea last night...

The Minister of Conservation... has condemned a suggestion to hawk endangered native birds on the open market... Putting a value on the prized birds was the only way to make people appreciate them... said... [a] bio-economist from Massey University's Albany campus... Private collectors around the world were willing to pay thousands of dollars for an exotic bird, he said. However, [the minister] said the suggestion was "commercialism gone mad. I don't believe that allowing free trade in such species will encourage their protection. The experience in Africa and Asia in threatened species... [has] shown that the higher the price, the higher the poaching." ...The Royal Forest and Bird [Protection Society (RFBPS)] has also condemned[the] suggestion. A spokesman... said N[Z] wildlife should not end up in cages overseas... "The kea is a bird that has evolved to fly the Southern Alps..." [The spokesman] said developing markets for endangered species encouraged poaching because the illegal sales could be masked more easily by robust legal activity[, whereas stifling markets was a proven method – 'if New Guinea had not banned the export of birds of paradise in the 1920s, most would now be extinct (before the ban, as many as two million dead birds had been imported by European hatmakers')]. □ *'The 43 species of birds of paradise – the most colourful and ornate assemblage of all birds – have a restricted distribution, being found only in the forests of New Guinea and neighbouring small islands, with the exception of four which live in the mountain forests of north-eastern AUS'*.

...More than 600 birds, mainly native A[US]n parrots, some declining in the wild, were being exported from N[Z] each year to markets in Europe, the U[S] and, increasingly, Japan where they fetched high prices... Exports of Cites-listed birds from N[Z] have escalated rapidly since 1989 following a 1988 ruling by the High Court that neither the Wildlife Act nor the Conservation Act prohibited the export of the birds.

...N[Z] has been used as a staging-post by international bird-egg smugglers, putting native species at risk, the High Court at Auckland heard yesterday... The case... is the first trial involving bird eggs and reptiles since the introduction of the Bio-Security Act in 1993... [The eggs of AUS]n species, in particular, have been brought into the country for "laundering" before being shipped on – on the face of it legally – to customers in other countries... With documentation issued by the M[AF] and the D[oC], breeders can legitimately export the birds... Once the eggs had hatched there was no way, short of using DNA tests, of proving that the birds were smuggled and had not been legitimately bred in captivity... Before the court are an exotic bird-breeder... and... [an unemployed man] of no fixed address... They are jointly accused of acquiring and possessing about 50 eggs of the long-billed corella and the galah species in September 1994. In addition, [the bird-breeder] is accused of acquiring and possessing 20 assorted bird eggs in October 1994 and attempting to possess 13 tortoises and four chameleons... brought in from the U[S] but... stopped by customs officials at Auckland Airport... in August 1995... The eggs were brought in by couriers in special vests and the tortoises and chameleons were hidden under a courier's clothing and in a camera case... The reptile importation... was very much a sideline after a plan to bring in a batch of threatened military macaw eggs from the U[S] failed. Tortoises have a market value up to \$2000 and chameleons, which are not normally available in N[Z], are a lucrative commodity for illegal dealers. There was also evidence... of a run in 1991 involving 16 bird eggs imported from the U[S], although they were not the subject of any charge... [The prosecutor] said smuggling was a high bio-security risk to the poultry industry and to native birdlife. Reptiles... carry various diseases, including salmonella. One of the tortoises had a strain of salmonella never before encountered in N[Z], which posed a risk to both wildlife and humans. It was destroyed and the rest went to zoos in this country and overseas.

...A witness in an exotic bird trial told the jury that she received... \$11,000... [worth of] financial help from the M[AF] to protect her animals and her... property after threats and intimidation [from the defendants]... Last week her former partner... who admitted acting as a courier... told the jury that he received almost \$6000 from the ministry to help with legal expenses after [the bird-breeder] mounted a civil action against him and [the woman] over two pairs of parrots which are in dispute... It is claimed [the bird-breeder] lent them nine pairs of birds, and they were to split the progeny with him but only seven pairs were returned. There is also an unspecified claim relating to his share of the off-spring... [The courier and girlfriend] have been granted immunity from prosecution in return for giving evidence for the crown... The trial... continues today.

...After... [a] three-week trial... [and 18 hours of deliberation, the]... High Court jury... found... [the unemployed man] not guilty of acquiring and possessing about 50 A[US]n parrot eggs in September 1994. [The]Mangonui bird-breeder... was found not guilty of a similar charge. However, he was found guilty of [two related charges]... He has been remanded on bail for sentencing[. By the way, 'DNA testing will be introduced to help stop NZ being used as a staging post for international wildlife smugglers. An amendment to the Trade in Endangered Species Act would allow officials to DNA-test birds that dealers in NZ want to export so that a DNA comparison can be made with the parent birds. Other measures against wildlife offending have involved scanning the Internet for NZ species being offered for sale abroad. Traders in the US have offered protected green forest geckos, believed smuggled out of NZ, with price tags of \$7500' ...

'All geckos except for a few species in NZ, which bear live young, lay eggs. In some species the sides of the pupils are lobed or notched in four places, and when the pupils contract they leave four apertures, the size of pin-holes each one of which will focus the image onto the retina.

...the third or pineal eye – which has the vestiges of a lens and retina but no iris – is shared with many other species of lizards but it is better developed in the adult tuatara than in any other animal. Nothing is known of the courtship habits of the tuatara. Pairing occurs during January but the sperm are stored in the female's body until the following September or October when 5 to 15 white, oval, hard-shelled eggs are laid in a shallow depression in the ground which has been scooped out by the female, and covered over with earth. The eggs receive no attention from either parent and do not hatch out until 12 to 15 months later, the longest incubation period known for any reptile. The tuatara's diet consists largely of spiders, crickets, beetles and other insects, although tuatara sometimes eat petrel eggs and chicks, even an occasional adult bird']...

Four hungry tuatara found in a box on a South Canterbury roadside were in D[oC] care last night as investigations began into their removal from the wild. The adult tuatara were... discovered by accident by a member of the public... Tuatara do not exist in natural habitats on the mainland and are found only on a few offshore islands some of which also contain predators... The D[oC] suspects they were taken from Stephens Island in the northern Marlborough Sounds, one of the last strongholds of the native N[Z reptile, where]... it is estimated there are about 40,000 of the creatures... [The four] would be returned to the island after checks that it was their home... The deputy executive director of the W[WF in N]Z... said the discovery was sinister. "It indicates the illegal trade in tuatara is still alive and well." He said he could only wonder if people were trying to ship as many of the animals as possible out of the country before a loophole in the Trade in Endangered Species Act was closed by a private members bill introduced into Parliament this week... [The loophole meant] animals such as tuatara could be exported under the act if somebody declared they had been bred in captivity. There was no means of challenging the declaration under present legislation... Tuatara, which... can be kept legally only with a permit, can fetch up to \$US6000 on the black market overseas. A man was jailed for the theft of some tuatara from the Southland Museum and Art Gallery in 1991 and an attempt to send a tuatara thought to be from Stephens Island to the U[S] in 1992 was linked to an international tuatara smuggling operation out of Christchurch. - 1997

TUATARA... is NZ's most distinctive creature, a living relic which has survived its fellow beak-headed reptiles, Rhynchocephalia, by about 100 million years... The Rhynchocephalia thrived throughout the major land masses about 200 million years ago... All other living reptiles belong to one of the three other reptile orders... It closely resembles lizards outwardly, but there are certain anatomical differences. The Tuatara once lived on the mainland... but now survives mainly on two groups of islands – one off the north-east of the North Island and the other in Cook Strait. It grows very slowly, maturing sexually after about 20 years, and achieving its maximum size of about 60cm and up to one kg for males after about 60 years.

The beak-heads flourished during the Age of Reptiles, along with the earliest turtles and long before the great dinosaurs trod the earth... [The] tuatara... was first named by... the British Museum, from a specimen received there in 1831, [and thought to be] merely a new species of lizard. It was not until 1867 that... the Museum... realised... from fossils found in many parts of the world... that the animal was no ordinary lizard but was... truly a living fossil.

OVER 3m long and looking deceptively docile, the Komodo dragon lay sunning itself on a patch of bare ground. It could have been a scene straight out of *Jurassic Park*... "Don't get too close," said our Indonesian guide and park ranger on the island of Komodo. "These dragons can be dangerous. Not long ago they killed a child." ...With a smile he reached into his shoulder bag and pulled out a large fish. Holding it by its tail, he threw it to a spot some 15m... from the dragon. Before we even had time to focus the camera, those ridiculously placed feet had been repositioned and the dragon had taken off like a rocket... [Although fully-grown komodos] weigh more than 150kg... they are still faster on their feet than the fastest human. They often down their prey by biting through the Achilles tendon, then eviscerate their victims[(although 'there is so much bacteria in a Komodo dragon's mouth that – like the extinct Tyrannosaurus-Rex – when it bites its prey they are poisoned')]. The gastric juices of the dragon can dissolve the bones and hooves of deer, boar and buffalo. Their jaws are also hinged in the same way as those of large snakes, and they will think nothing of swallowing a 60kg boar in one mouthful... There are about 3000... on Komodo, about 1500 on neighbouring Rinca, and hundreds on Eastern Flores... Technically, they are the largest lizard on Earth, a giant species of the monitor lizard linked to the dinosaur...

Who's a pretty baby then? Then, was about 70 million years ago in a remote valley in Argentina, where researchers made the discovery last year of eggs with dinosaur embryos[–] ...the first... found in the Southern Hemisphere... The find was described yesterday as representing a number of [other firsts, including]: the first dinosaur embryo skin impressions discovered... and... the first known embryos of the familiar giant plant-eating dinosaurs called sauropods...

A dinosaur's 65 million-year journey reached another milestone at a New York auction yesterday when the most complete skeleton of a Tyrannosaurus Rex ever found was sold for \$US7.6 million... It was the highest price ever paid in public auction for a fossil... The total price... after the auction house's fee was \$US8,362,500... The fossilised bones of the Cretaceous-era carnivore, dubbed "Sue"... were acquired by The Field Museum of Natural History in Chicago... Corporate sponsors backing The Field Museum included... the California State University System... Walt Disney... McDonald's... and... Ronald McDonald House Charities... "We see this as McDonald's gift to the world for the millennium," said McDonald's chairman... The T-rex... was excavated in 1990 and is nearly complete by paleontological standards. The specimen is missing only its left arm, left foot, a few vertebrae and a few dorsal fins... One of its leg bones shows signs of healing after a break – a life-threatening injury for a predator. A tooth fragment from a rival Tyrannosaurus is stuck in a rib and it has bite marks on its skull from what may have been its last struggle. The auction... caused vigorous debate about the wisdom of selling large, rare fossil specimens. Scientists argue while it would be nearly impossible to stop the sale of all fossils – [because the dinosaur 'bone business is booming'] – there are dangers to scientific inquiry when specimens like "Sue" are sold... "Sue"... was auctioned for... a native American from the Sioux nation who... [wasn't her 'discoverer' but] will receive most of the proceeds... [Incidentally, a]irport customs in the southern Chinese city of Guangzhou have uncovered an attempt to smuggle 16 boxes of mammoth fossils, said to be three million years old, out of the country.

...IT'S ONE OF THE OLDEST PRINCIPLES OF trade: the rarer the commodity, the higher the price. For the seahorse, the market may provide the hardest evidence yet that numbers of the unusual fish are declining. In Hong Kong, the finest seahorses – large, pale and smooth – can fetch \$1,200 per kg. That's more, by weight, than silver. Seahorses have long been used in traditional Asian medicines, but in recent years demand has increased to the point where some researchers fear the creature faces extinction... [G]lobal demand for seahorse-derived products is rising by up to 10% per year... Globally, the catching and selling of the little fish add up to more than 20 million seahorses a year across nearly 40 countries and territories... Many subsistence fishing communities in Thailand, India, the Philippines and Vietnam... depend on seahorse sales for survival. [Filipino fishermen 'can get the equivalent of 40p for 7 seahorses – but by the time the 7 get to Hong Kong they are worth £50' (5000p).]Although a complete ban on seahorse fishing would protect the species... it would be "pure and simple cultural imperialism." The attractions of seahorse fishing are obvious. Apart from the price – even seahorses considered to be of low quality are worth \$300 to \$400 per kg in Hong Kong – the creatures are easily collected from the mangrove swamps, sea grass and coral reefs they inhabit... "To be a major taker of seahorses doesn't require a lot of equipment." ...Believed among Chinese communities to be a cure for asthma, impotence, infertility, lethargy, baldness, rabies, throat

infections and skin diseases, powder or extract of seahorse is increasingly available in commercially produced pills... [A] monitoring group of the W[WF] and the World Conservation Union, met recently in Hong Kong with 500 practitioners of traditional medicine to warn them that “if we lose seahorses in the wild, they lose them from their pharmacopeia...” ...Much of the current seahorse research by prospective farmers and keepers is the first, though as far back as 342 B.C. classical writers had credited seahorses with curative powers.

...The tiny sea horse may seem an unlikely candidate for farming. But a Marlborough company is about to become the first in N[Z]... The new venture... which is waiting for a Ministry of Fisheries permit, could have far-reaching... benefits. Sea horses are in huge demand in Asia, where they are used to treat a whole range of medical conditions... The first stage... would be to acquire breeding stock, which would mean going out into the Sounds and catching about half a dozen wild sea horses... The sea horse has an extraordinary birth pattern. The... female lays eggs in a pouch in the abdomen of the male where they grow until the male gives birth to... anything from 150 to 600... tiny fully formed sea horses... They have the potential to grow rapidly to maturity in three months, provided conditions are right. “They are very difficult to raise...” ...the challenge would be to put structures in place with a small enough mesh to keep in the juvenile sea horses but allow a free flow of water. - 1997

The National Institute of Water and Atmospheric Research is promoting the development of seahorse farming to satisfy keen Asian demand. But... N[Z] needs to know how many seahorses it has before their farming is developed, conservationists say... [The] conservationists fear farming could lead to poaching of wild seahorses... There are seven species in our waters and four are endemic to N[Z] – one of which ‘is the world’s 2nd-largest species’. Although there... had been no commercial exports of seahorses from N[Z] and there were no customs regulations in place... a special permit was needed to take seahorses from the wild and this had so far been given only for educational and scientific purposes... The Island Bay Marine Education Centre, in Wellington, which has had a high success rate in breeding seahorses for educational purposes, supports a survey. Its director... said the centre returned all surplus seahorses to the sea and was not interested in exports. “We are interested in going to countries where there is exploitation and educating them about breeding and farming techniques.”

Seahorses live in shallow inshore waters among seaweeds or in beds of eelgrass in estuaries. They swim in a vertical position, propelling themselves by rapid waves of the dorsal fin. When swimming at full speed this fin may oscillate at a rate of 35 times a second – which makes it look like a revolving propeller. The pectoral fins oscillate at the same rate, and the head is used for steering, the fish turning its head in the direction it wants to go... If the fins are damaged they can be regenerated relatively quickly... The seahorse eats any kind of swimming animal small enough to enter its tiny mouth. Prey is located by sight and quickly snapped up, or is sucked in from as much as 1 1/2 in. away. It is mainly tiny crustaceans such as copepods, but baby fishes are also eaten... [B]aby seahorses are... about 1/2 in. long at birth, perfect miniatures of their parents and the first thing they do is to swim to the surface to gulp air to fill their swimbladders. They feed ravenously... and grow rapidly. In the Steinhart Aquarium in the U[S] young seahorses *Hippocampus hudsonius* were found to grow from 3/8 in. at birth to 2 1/2 in. in 2 months... In aquaria the males often die after delivering their brood but this does not happen in a natural state, because the male soon looks around for another female to fill his pouch with eggs. Seahorses have been described as having the head of a horse, the tail of a monkey, the pouch of a kangaroo, the hard outer skeleton of an insect and the independently moving eyes of a chameleon... *The colours vary widely but are mostly light to medium brown...*

Goldfish are, in fact, a domesticated form of a wild carp native to China. The wild ancestral form is a very ordinary fish, sometimes used as food, green and brown in colour but occasionally throwing up red or red-gold individuals. These were collected and cultivated by the Chinese as far back as 960 AD and by the period 1173-1240 goldfish were being kept as pets in earthenware bowls and ornamental ponds... [L]ife for the wild form is... precarious... but... [p]et goldfish can be long-lived, up to 25 years having been recorded...

Tish, the world’s oldest known captive goldfish, has died at the age of (at least) 43. First won by[a] seven-year-old... at a fairground in 1956, Tish outlived all [hi]s other pets.

GOLD FISH 95c

The high seas were the nautical equivalent of a jungle, where fishing fleets operated with a “gold rush” mentality, cleaning out stocks before other fleets could do so... the Minister of Fisheries... said yesterday... [‘The world’s oceans are the last place on Earth where man remains a hunter-gatherer, but they are now being fished beyond their limits and as the fish get scarcer fishermen from different countries clash over what is left.’ The minister believes] Northern Hemisphere fishing fleets will increasingly breach N[Z]’s exclusive economic zone as fish stocks are wiped out in international waters... “There is no concept of sustainability. There will be dire consequences for the future.” [The minister] told the Pacific Economic Co-operation Council fishing task force symposium in Wellington that “displaced fleets” from Europe, America and Asia were plundering the Southern Ocean and breaching exclusive economic zone boundaries “as if the age of imperialism and colonial exploitation was suddenly let loose anew.” ...he believed the answer lay in extending jurisdiction[, although he]... said after the speech that he did not have a figure in mind for how far... “I think the core principle is that unless someone takes responsibility, there will be nothing for anyone to take responsibility for.” N[Z] should seek to push out the 200-mile zone as far as it and other like-minded nations were “bold enough to assert and stand ready to defend on behalf of the future of the planet.” ...However, official advice appears to be that extending the... zone would be against international law, which sets it at 200 nautical miles[, and]... Defence Force sources said extra costs would be incurred patrolling the zone, depending on how much more had to be covered. At present \$37 million a year is budgeted to pay for patrols... by Air Force Orion planes.

...Greenpeace’s campaign against overfishing has a new target – the world’s super trawlers. The environmental organisation’s flagship, the Rainbow Warrior II, is in Auckland preparing to take on[a] giant Norwegian trawler... in the waters off Chile. The Rainbow Warrior skipper,[a] former commercial fisherman... said the 98m American Monarch was being sent to fish the largely untouched hake fishery south-west of Chile. The ship used two-mile-long nets big enough to hold a dozen jumbo jets. The owner of the American Monarch, Resource Group International through its subsidiary American Sea Food Co, had paid the Chilean Government \$US10 million... for the right to fish within Chile’s 200-mile limit. They stood to make up to \$US35 million... a year from the deal. Greenpeace hoped to convince the Chilean Government to ban super factory trawlers from its waters to allow its own small fishing vessels to catch sustainable numbers... “Traditionally when factory trawlers come in the fishery collapses... In some Argentine fisheries where 50 factory trawlers are fishing fish numbers have been reduced by 80[%] in the last 10 years.”

...The fishing industry was under threat from environmental groups and would have to fight for its survival over the next decade... the Fishing Industry Guild’s annual tuna conference in Nelson... [was told. The managing director from one of NZ’s fish suppliers] said the formation of the Department of Conservation was a political mistake... The world could not afford to sustain the environmental view that fish had an equal right to live on the planet... The fishing industry had been criticised for ignoring the rights of marine animals, for overfishing and burning fossil fuels, he said, but the world population explosion meant there was increasing demand for protein from meat and fish... “Government policies are spied on, are fiddled with, redrafted and shaped to ensure that the funding base for DOC is kept at a level that ensures the continued employment of 1600 ‘greenies,’ and to ensure that they always have an ample supply of four-wheel-drive vehicles.” [He] also criticised Greenpeace and the R[FBPS] for being hijacked by radicals and “eco-Nazis,” as well as providing a handy refuge for dole-bludgers and alternative lifestyles.

...[a] past president of the Fishing Industry Association... reacted yesterday to suggestions that not enough money was being spent on studying commercial fish stocks. "The[state scientists ha]ve had \$150 million in the last decade and they haven't done enough with it," he said. This year the Government has cut fisheries research funding by nearly \$2 million, a move criticised in some scientific quarters as putting at risk the future of sustainable fishing in N[Z]. A report of a parliamentary select committee which considered the fisheries budget last month quotes the Minister of Fisheries... as saying he was not happy with the quality of research produced in the past 10 years. A spokeswoman for [the minister] said yesterday that the minister was not criticising the standard of work done by the Ministry of Agriculture and Fisheries over those years. What he had meant to say, the spokeswoman said, was that science had been unable to provide the information he wanted, but a new method of using sophisticated acoustic technology was being developed... [However, the past president] said that the acoustic technology [the minister] talked about had been around for more than 10 years. The problem lay not in a lack of scientific advances but in the methods ministry scientists chose to use... The fishing industry had a vested interest in the issue because it now paid for the research through levies... Last year the Ministry of Agriculture and Fisheries was split in two. The Ministry of Fisheries now advises the minister on what research needs to be done. Most is commissioned from the state-owned institute Niwa, which employs many former MAF scientists, but the institute is about to face competition from the private sector.

...Shellfish farmers face losing their livelihood if they fail to test for biotoxins, says the Minister of Fisheries. He announced that following the breakdown of a joint monitoring programme with the commercial shellfish industry, the Ministry of Health would carry out its own biotoxin checks for public safety... Shellfish delivery centres would have direct responsibility for toxin monitoring and if the industry failed to support the testing marine farmers would lose their authority to harvest... The move means that... [shellfish] farms... will have to pick up the tab for testing. Biotoxin tests have become standard in the past few years following shellfish poisoning scares and blanket closures of harvesting areas. The shut-downs have cost the industry millions of dollars.

...From last Friday the shellfish industry, overseen by the Ministry of [Fisheries], is funding a separate programme to monitor the safety of commercial shellfish. The Ministry of Health said it would continue to monitor areas that had shown repeated toxicity.

...['Suva's harbour has become infested with giant sharks and is no longer safe, Fijian fishermen say. Six sharks were caught in the harbour this week.' In related news, AUS's federal government has failed to vote in a bill to protect great white sharks – whose 'jaws can collect \$100,000'...

'For millions of years sharks roamed oceans unchallenged. Now their domain has been invaded – by those who would destroy them and those fighting to save them.')

...After a 55-minute battle, the 921-kilo white pointer... is drawn, exhausted, up to the boat... The champagne corks pop as the boat heads back to shore. Towed backwards, the shark drowns. What of it? Another monster gone. Sharks are not renowned for exciting public sympathy. After all, it was only in September last year that a six-metre "monster" killed[a] 29-year-old abalone diver... off Hopetoun... This was the 512th known shark attack in A[US]n waters since European settlement and the 185th fatality... Today, however, 21 years after... [the] movie, *Jaws*, first terrified cinema audiences, and more than 400 million years since these predators began gliding through the oceans, sharks are in trouble. Their numbers are in such serious decline that the Species Survival Commission of the International Union for the Conservation of Nature (IUCN) has set up a specialist group to study the problem... [N]obody is suggesting that sharks are in danger of extinction – yet – "the oceans are so big, so unknown, that we could pass the critical moment of no return without ever realising it,"... But the anecdotal evidence of their decline is compelling. In the late 1930s, when shark nets were first positioned off Sydney's beaches, more than 1000 sharks were trapped every year; these days fewer than 200 are caught along the entire N[SW] coastline... Humans have long been fascinated by sharks. To the ancient Polynesians they were gods... Today we see them as a metaphor for evil – killers without conscience... It hardly matters that perhaps only five of the world's 350 or so species are considered potentially dangerous to humans... As[a] Harvard biologist... puts it: "We are not merely afraid of our monsters; we are transfixed by them. In a deeply tribal sense, we love our monsters." If we love them, we have a strange way of showing it. The spectacular trophy catches represent the tiniest fraction of the estimated 100 million sharks killed by humans every year... Unlike most other fish, which spawn thousands of eggs at one time, sharks may turn out only a few dozen or less a year. "Sharks breed more like mammals than fish,"... Sharks also grow more slowly and mature later... The spiny dogfish shark, for example, doesn't reach sexual maturity until the age of 20 but then may live another 50 years. Few get the opportunity to live anything like that long. Demand for shark products has never been greater. Shark livers are refined into a smooth translucent oil for cosmetics. Dried cartilage, used in cancer treatments and to make artificial skin for burns victims, fetches up to \$216,000 a tonne. Shark gall bladder extracts show promise in acne treatments and corneas from shark eyes have been used in human transplants. And... their teeth[make] popular jewellery items. A silver-mounted bronze whaler tooth can fetch \$360, while a... full set of jaws from a five-metre white pointer can command more than \$24,000 from collectors. Then there is humanity's feeding frenzy... In recent years, authorities in... A[US]n waters... have... [imposed] a six-week moratorium on the commercial shark-catching season. But fisheries experts say that A[US]n's annual harvest of... 3000 tonnes... needs to be slashed by another 30[%] to keep the... school sharks... fishery viable. Few nations share these concerns. "Most of the world's shark fisheries are totally unregulated and the huge catches, in excess of 30,000 tonnes a year, taken in India, Thailand, Japan and Indonesia are certainly unsustainable,"... Millions more sharks are taken accidentally, tangled in trawler nets or snagged on longlines set for tuna... "Japanese longliners targeting southern bluefin tuna take about 34,000 blue sharks off Tasmania every year,"... Until recently, the toll was even higher in the North Pacific squid-fishing grounds, where drift nets caught some 1.8 million blue sharks a year. They are shown scant mercy by fishermen, who regard them the way farmers regard mice in a grain silo. The burgeoning market for... [shark parts] only adds to the incentive to kill them. Perhaps most disturbing for conservationists is the practice of "finning." It is a simple and brutally efficient process: catch a shark, cut off its fins and hang them out to dry in the sun. Often the shark is dumped, still alive, into the sea to save space on deck... "Prices for top-grade fin are now around \$150 a kilo,"... But because the market is so informal and unregulated, nobody has any idea how many sharks are [involved]... "The sea bed around Costa Rica is just covered with the bodies of finless sharks,"... Similar sights have been reported off Indonesia and northern A[US]. What effect this has on the ocean ecosystem is anybody's guess. Sharks fill a crucial role: culling the weak or poorly adapted from fish populations... A clue to what happens when apex predators are removed can be seen in a study in which wolves and mountain lions were removed from a region of Colorado. "The deer population boomed, exhausted its food supply and then died of starvation,"... The hard data... suggest that sharks have been victims of bad press and overactive imaginations. Around the world there are fewer than 100 attacks a year, about 30 of which are fatal... Bees and wasps kill more A[US]ns than sharks do. Most shark attack incidents are single, inquisitive bites... Although sharks will never rival koalas, dolphins or whales for sheer lovability, there are signs that they are gaining a constituency. South African authorities declared the white pointer a protected species in 1991. California followed suit in 1994 and Tasmania this year. The shark is currently being considered for protection in N[SW, where]... the grey nurse... is already protected. Not surprisingly, some of the new-found concern for sharks is based firmly in economics. A study in the Maldives found that a living grey reef shark was worth \$3960 in tourism income, compared with \$38 to a local fisherman... At Ningaloo Maritime Park, near the West Australian town of Exmouth, scores of divers already pay up to \$360 a day to swim beside the gentle plankton-eating whale sharks, at 14 metres long and 14 tonnes the biggest fish in the sea. And at Port Lincoln, South Australian dive operators are scrambling to meet the demand from adventurous divers wanting a face-to-Plexiglas encounter with a white pointer... for... \$480[. By the way, 'monster hunters might soon be banned from Loch Ness after fears that they are wrecking the environment. Environmental agency Scottish National Heritage is worried people hunting the Loch Ness monster may be scooping up otters and seals in their attempts to snare Nessie. They want to set up a voluntary fisherman's code after a veteran Swedish monster hunter was allowed to trawl Loch Ness with a giant net. The Swede – who has been

looking for Nessie for 25 years – has also searched lakes in his home country for a similar beastie – Selma – but has drawn a blank. The legend of the Loch Ness monster dates back to 565 AD when St Columba apparently spotted the beast in the lake. Since then there have been thousands of sightings of creatures.'

...*'Ban on caviar advocated to save sturgeon* The sturgeon that produce "black gold" are rapidly approaching extinction because they are being over-fished. The annual catch in the Caspian Sea, where 90% of the world's sturgeon live, has slumped 97% because the fish have become so rare. Early next year, an international conference will try to decide on emergency measures to protect them before they disappear, and the WWF says a global ban on caviar may be imposed within six months. Caviar from the roe of the sturgeon has been a luxury for centuries. A spokesman for one importing firm said good quality caviar should be eaten only from a mother-of-pearl spoon – a silver or metal one spoils the taste – and should be accompanied by nothing apart from "a good Brut champagne." Peter the Great employed 50 fishermen to keep the royal tables stocked with the "food of kings." One of the first Bolshevik acts after the Russian Revolution was to make it a state monopoly and strictly control its trade. The communists took care to conserve the supreme symbol of capitalist indulgence. The Soviet Union had a treaty with Iran, the only other country then bordering the Caspian, to regulate sturgeon catches and conserve the stocks. But this collapsed with the breakup of the Soviet Union. The new nations of Kazakhstan, Azerbaijan and Turkmenistan, which appeared around the world's largest inland sea, see the sturgeon as "hard currency with fins," conservationists say. The price of a pound of high-quality caviar can range from £300 to £2000. Sturgeon, the world's largest freshwater fish – they can grow to weigh more than a tonne (although catching one weighing more than 45kg is rare today) – can live for 100 years, but take 18 years to reach sexual maturity. As well, the females spawn only three times in their lives, making the species extremely vulnerable to over-fishing. The new states have resisted all control on catches, and 90% of the fish are caught before they have spawned. The fish are also threatened by dams, which stop them migrating up rivers to spawn, by pollution, by plans to exploit oil from the sea and even by radioactive debris from the Chernobyl nuclear disaster. Russia has tried to save the fish by releasing 80 million fry every year and banning catching them in the sea. But the rapid decline of the species, which has survived since the age of the dinosaurs 250 million years ago, continues.'

...*'Russia may impose a ban on catching sturgeon next year to prevent the species dying out.* "Sturgeon are being ruthlessly exterminated," the PM said during a visit to Astrakhan, a region on the Caspian Sea. Russia's annual sturgeon harvest in the Caspian has fallen from nearly 12,000 tonnes a few years ago to just 470t last year. Caviar exports, which in the past exceeded 100t a year, have likewise fallen. The ITAR-Tass news agency quoted the PM as saying that official caviar exports equalled only 25t last year. But poachers are extremely active in the Caspian and the true catch and exports are much larger.'

...*'Under pressure from world trade regulators, three caviar-producing countries – Russia, Azerbaijan and Kazakhstan – have agreed to stop fishing sturgeon for the rest of this year.* It is part of an attempt to save the fish that produce the briny delicacy from dying out.'

...*Caviar's deadly legacy...* FOR centuries caviar has been regarded as the ultimate luxury – the world's most expensive food, eaten off silver spoons by kings, queens and millionaires. In the violent lawlessness of post-communist Russia, however, the precious black pearls have become a commodity to kill for. A massive explosion occurred last month in a block of flats in the town of Kaspiysk, on the Caspian coast, in the autonomous republic of Dagestan. Officials investigating the explosion, which claimed 67 lives – including 21 children – now believe the blast was not caused, as they originally thought, by terrorists from nearby Chechnya. They believe organised crime gangs were behind the grotesque murders and their motive was control of the illegal caviar trade... [The] deputy head of the economic crimes division of police in the regional capital of Makhachkala, has no doubt it was the "caviar mafia" who blew up the building which was home to dozens of Russian border guards and their families. The gangs were apparently out for revenge after guards made a number of seizures of illicit caviar at the local airport... He readily admitted that the poachers face few obstacles from the law. "The trade is conducted in the open... They... are better armed than we are. They have access to funds that we don't, and the laws we have are useless." It was Edward II who declared the sturgeon a "royal fish" when the dinosaur-age creature... still swam in English waters. Today its ripened eggs are more in demand than ever as London and other capitals are gripped by a caviar craze that has restaurants competing to provide their customers with beluga and sevruga... Desperate fishing authorities from the five Caspian countries recently signed an agreement to ban sturgeon fishing in the Caspian starting from January 1997. But the accord has no official diplomatic backing and is unlikely to be enforced... [In local news, d]rastic cuts to the commercial snapper catch are expected to be announced tomorrow, prompting the fishing industry to accuse the Government of fishing for votes. Last night, the industry repeated its call for recreational fishing licences, saying that it was only political expediency which was stopping the Government from bringing them in. Last year the Minister of Fisheries... tried to cut the annual commercial catch in Northland, the Hauraki Gulf and Bay of Plenty from 4900 tonnes to 3000 tonnes. The industry won a court order against the cut but sources say that the commercial catch for next year is likely to be 3000 tonnes. Industry leaders last night said they would fight any cut to their catches if similar cuts were not imposed on recreational anglers[– who express their views via slogans such as 'a million kiwis fish, hunt and vote' and 'secure your right to fish free forever'].

...*Snapper squabble hits snag on quota...* The northern snapper harvest has been subject to strict controls since the advent of the quota management system in 1986. The concept of giving all commercial fishers a guaranteed share of the annual catch has been hailed at home and abroad as almost visionary. The arguments start when catches are set. The commercial snapper business is worth more than \$28 million a year. Nearly three-quarters of the fish are caught in the waters between North Cape and East Cape, known as Snapper One. The area is also home to more than one million people and host to hundreds of thousands of visitors – many of whom want to catch fish. In 1986 the total catch for Snapper One was set at 4700 tonnes. Commercial fishers were given a share of that catch based on their previous catch rates. The total catch crept up to 6100 tonnes in 1991 but was held at around 4900 tonnes for the last few years. Sustainability is the fundamental idea behind the quota management system. Complicated formulae are used to calculate how many fish are needed – and therefore how many can be caught – for the fishery to be kept in a healthy state. The fishery is considered by officials to be below the level needed for "maximum sustainable yield" but by how much, and for what reason, has been hotly debated. Last year the... fishing industry went to court and won an interim injunction... The full argument of the case has still not been heard. - 1996

The Ministry of Fisheries has set up a Wellington-based serious offences unit to catch fisheries quota fraudsters... The unit will have a manager, four investigators, an analyst and a senior prosecutor... The national operations compliance manager... said... fraud turned up in different ways but it came down to taking fish commercially without quota, or in excess of quota and hiding the fact... [Fishermen often work in collusion with] the... fish processor... to... report lower quantities than actually caught... Serious fishing offences tied district staff to time-consuming investigations and left them little time for routine patrols and surveillance work...

The ministry is recruiting and training investigators, surveillance officers and volunteer honorary fisheries officers as it gears up to enforce the quota cut, and to tackle the existing black-market... [T]hey will use overt and covert aerial and sea patrols, hidden video and any other means available to make busts. [The ministry] accepts that plenty of illegally-taken snapper is on sale in Auckland, and has heard of disappearing paper trails – fish is landed and accounted for by the catcher, wholesaler and retailer, as required by law, but the paperwork is systematically disposed of once the fish is sold. Poaching runs across the board... from pseudo-amateurs who have been caught with 400 tiny snapper to \$3 million vessels exceeding quota. Commercial fishers face a \$250,000 fine, amateurs \$10,000. Those involved in conspiracy to defeat the quota system can be charged with offences under the Crimes Act, which carry jail terms. But perhaps the most effective penalty is that conviction usually means forfeiture of boats, gear, vehicles and other equipment used to perpetrate the crime.

...Five men quietly haul on handlines. It has been a good morning; in their boat are 476 snapper – 447 of them undersized. Legally, they should not have more than 75 but the chances of getting caught are slim, while the potential profits are high. Their 5.5m runabout noses on to the ramp at Takapuna at 10.30 am. For once a fisheries officer is there. They show him a bucket with a few fish in it but he is not happy. He searches the boat and finds two chilly-bins full of fish. The boat is impounded and rangers cleaning it the next day find 56 more fish under squabs in the cabin. The men are prosecuted and each fined \$1500. They never get the boat back; the Ministry of Fisheries... orders the boat be sold. The Crown keeps the proceeds. The men were unlucky to get caught. With a huge coastline to police and only one enforcement squad in Auckland the Ministry of Fisheries has lost the battle to stop snapper poaching – until now. Two squads are about to be added to the ranks as the ministry goes all-out against the lucrative snapper black market in Auckland. The Government has put up \$657,000 this year and promises \$862,000 next year for an attack on poaching in the area known as snapper one... At a time when the Government is not giving out extra money for even the most worthy causes, Ministry of Fisheries officials had to make a good case. Their claim that between 800... and 1800 tonnes of snapper a year were being poached clinched the debate. Tension has been building for years over who has the right to catch snapper. The Government is under constant pressure from environmentalists and recreational fishers to protect their “birth-right” while the fishing industry is taking the Minister of Fisheries to court over his bid to cut their catch. The problem is compounded by Aucklanders’ love affair with snapper. For decades it was almost the only fish they ate and they resent not being able to buy it as easily – or cheaply – as they used to. With snapper selling at up to \$25 a kilogram there is a ready market for cheaper fish in hotels and carparks. Commercial vendors, such as fish and chip shops, restaurants and fishmongers, can also be willing buyers when they cannot get enough through legitimate channels.

...Widespread job losses are expected in the fishing industry following a... decision allowing a 40[%] cut in snapper quota in the northern region... [T]he High Court at Wellington... ruled against the fishing industry and Maori interests who sought a review of Government plans to reduce the annual commercial snapper catch... to 3000 tonnes... The chief executive of the Federation of Commercial Fishermen... was... disappointed with the court ruling... [He] said the only group to benefit would be recreational fishers, who would be “rubbing their hands in glee.” The snapper limit for recreational anglers was reduced from 15 to nine fish a day on October 13, 1995, the day after the High Court granted an injunction stalling the cut in the commercial catch... The industry says the [latest] decision, which it will appeal, will cost it about \$300 million annually...

Celebrations by east coast fishermen claiming victory in the Court of Appeal over the Government snapper quota cuts might be short lived. The court yesterday tossed out the 40[%] quota cut imposed in 1995 and again last year for the area between North Cape and East Cape... The... decisions to cut the total commercial snapper catch from 4938 tonnes a year to 3000 tonnes were upheld in April by the High Court, prompting predictions of bankruptcies and job losses in coastal towns like Leigh... [However,] in a unanimous decision released yesterday, the Court of Appeal said the Government had not given enough consideration to buying up quota as a way of reducing the catch. Neither had it fully considered the “economic harshness” of cutting the... catch so heavily... But the Minister of Fisheries... last night signalled that he intended cutting next year’s commercial catch... He believed the conditions which prompted his predecessor... to impose the cut had not improved. “If anything, I suspect they have got worse...” [The minister] said the Government would consider buying up quota only in exceptional circumstances. “In this case the circumstances did not warrant it. It’s not a precedent we would like to set.” A fishing industry spokesman... said the... court action had cost nearly \$500,000 but an important issue had been settled. He hoped the Government would not try to impose a similar cut next year. The industry was prepared to go back to court if necessary, he said... The... Recreation Fishing Council... was... not happy with the decision... [Its] president... said the industry had had its catch restored through a legal loophole which politicians would be asked to plug... [In another development, a] \$10 million payout which the Government has agreed to make to compensate members of the fishing industry may end up going back to the Government. This peculiar result would be because the computer error – which the payment is meant to compensate for – may have caused such a mess that it is not economically feasible to find out who the compensation should go to. The Government offered the \$10 million package as a “positive” response to the computer bungle which has potentially short-changed thousands of fish quota holders. However, since the problem has been occurring for 10 years, the extent of its impact is buried in a mass of figures. One industry leader said he had been told it would take 10 full-time staff three years to unravel the thousands of incorrect quota transactions and establish the impacts of the glitch... The cost of identifying the problem had to be weighed against the cost of the problem itself. It is not clear how much money members of the fishing industry lost through the glitch. Estimates range from zero to \$50 million, but they are guesswork... The glitch that led to the retrospective legislation affected a fisheries management system known as “unders and overs” which gave quota owners a 10[%] leeway on catches. The problem occurred when the ministry’s computer system failed to recognise when quota lessees – who were not entitled to unders and overs – subsequently bought the quota and became eligible. For example, Fisherman B leases 10 tonnes of quota. During the term of the lease Fisherman B decides to purchase the quota. He catches only eight tonnes in the first year which by law as a quota owner entitles him to 11 tonnes... the following year. However, because the computer did not recognise his new owner status, Fisherman B effectively lost his right to the extra tonne. That loss could have been compounded over successive years. The system also works the other way allowing fishing operators to exceed their quota by up to 10[%] one year and for the excess to be taken off the next year. In Parliament, Labour’s fishing spokesman... said the mistake would have also affected the market value of quota traded. He said those who sold up their quotas had lost money because the quota was not valued to its full extent... [and] the error could have contributed to or even caused the bankruptcy of some operators – a possibility... [t]he chief executive of the Federation of Commercial Fishermen... believed was unlikely.

...N[Z]ers are ignoring warnings about the depletion of snapper in the Hauraki Gulf and Bay of Plenty... says the... 400-member Marine Sciences Society... The Court of Appeal’s decision overturning the Government’s 40[%] cut to commercial catches is disastrous for the fishery... [because] continued overfishing of the waters was adding to problems caused by climate change and ecology... The amount of legal-sized snapper in the [two adjoining regions] has fallen to just 36,700 tonnes and will drop to 34,300 tonnes next year, according to estimates. Government officials say that at least 57,650 tonnes are needed to maintain maximum fishing levels.

...The snapper quota will be cut by close to 9[%] in the... snapper 1 fishery area... The Minister of Fisheries... yesterday announced that the quota would be reduced to 4500 tonnes a year... Ministry of Fisheries data showed that snapper levels in Northland were not too bad, but in the Hauraki Gulf and Bay of Plenty stocks were only at 60[%] of what was sustainable... A Manganui commercial snapper fisher... welcomed the decision. “People can live with that – at least we won’t be put out of work.” Not so happy was a Whangarei fisher... who said the quota should be increased. “I’m miserable. Today I’ve lost \$300,000.” ...[he said the minister] should have looked at the number of amateur fishers who curtailed the commercial operators. Recreational fishers... [– who a]re thought to account for about 6[%] of the snapper take... [–] were not happy either...

Commercial fishermen say they will happily pull their snapper lines out of parts of the Hauraki Gulf as long as those fishing for pleasure take their share of the pain. A major fishing-industry player called for the amateur fishers’ catch limit to be cut to two snapper in parts of the gulf if the Government went ahead with further commercial fishing bans in the popular fishing ground... The area south of... Whangaparaoa Peninsula... was closed to commercial fin-fishing last October. [He] supported extending the ban to areas north of the peninsula... [but] there was no point banning commercial fishing boats from the area... without cutting back the number of snapper that could be taken by recreational fishers... “They... catch as many or more than we do in this area,”... But the proposal drew a sharp response yesterday from recreational fishers, who said it was nothing more than a “pipe dream.” ...Commercial fishers [also] want an annual limit on the number of fish caught from charter boats running fishing trips for the public. The Ministry of Fisheries has persuaded about 100 charter operators to record their catches as part of a year-long survey it plans.

...Thousands of... snapper washed ashore this week on a stretch of Coromandel coast, but the free feed for local people was soured... Residents... who gathered as much fish as they could while it was still fresh... were disgusted by the waste... The good-sized snapper were ready to spawn... The Ministry of Fisheries district compliance manager... hoped... that a net had split or that a vessel had got into trouble and had let go a load... Fisheries officers fear the mounds of fish littering 6km of beach... may be the start of a deliberate dumping campaign by commercial fishermen seeking higher grade catches... One resident, who declined to be named, said the consistent size of the fish supported the dumping theory.

...Fisheries officers seeking the source of thousands of snapper washed ashore between Papaaroa and Waitete Bay, Coromandel, believe it was unlikely to have been a case of deliberate dumping.

...A fishing trawler which netted more than it could handle spilled the thousands of snapper... last week, says a fisheries officer... The skipper of the trawler said he was working in rough conditions... when he picked up a big load. A seam on the net had burst, letting fish escape... The owner-operator of the vessel at fault will not be prosecuted... The Ministry of Fisheries district compliance officer... said it was an accident and not an attempt to keep the best and discard the rest... "There is nothing to gain from prosecution; it wouldn't change what happened." ...but pressure from an industry angry at the bad publicity his action brought it will force [the owner-operator] out of the Hauraki Gulf... No one had the power over where the man fished but "he has to sell his fish. A bit of peer pressure will come into play,"... said... [the] managing director of [a] Whitianga fish processing company... Snapper were gathering in large numbers ready to spawn and fishers knew to keep away from the "hot spots" if they could not handle the volume they were likely to net.

...['Experienced anglers know they can get some great fishing if they locate a school of spawning snapper. It seems contradictory to the conservation ethic to catch and kill animals which are in the process of reproducing, but when the numbers are studied the harvest of adult fish has little influence on the resulting population gain. What does affect the success of the season's spawning is the water conditions the tiny snapper encounter after they hatch.']

... 'little is known of their breeding habits. In tropical waters the temperature varies very little. Off East Africa, for example, temperatures vary from 24 to 29°C, and snappers spawn throughout the year. In Indian waters breeding seems to coincide with the cold season. Off tropical America there seem to be two breeding seasons for snappers. They live mostly in coastal waters, especially around coral reefs, at depths of 24 to 90ft. Most snappers move about in groups of less than a dozen. Snappers feed mainly at night. Their hunting method is to stalk living prey until a few feet from it, then to make a sudden dash, seize the prey and swim leisurely back to the starting point. *The name is derived from the way the landed fish suddenly and very forcibly opens and shuts its jaws as it is dying, which sometimes causes bad wounds to the hands of an unwary fisherman sorting his catch. They are up to 2 ft or more long*']...

Four men in a runabout have been caught with nearly 300 snapper, many of them undersized, as the Ministry of Fisheries continues its crackdown on the... Auckland black market... The men's runabout was impounded... The Ministry... has not yet decided whether to prosecute the four South Auckland men caught last Friday... [The ministry's] Auckland compliance manager... said yesterday that seven new officers had just joined the unit. They would be used to keep a closer eye on commercial fishers. The blitz on recreational fishers, which saw 35 people prosecuted over the summer for illegal possession of fish, shellfish and crayfish, would also continue, he said.

...more than 30 illegal crayfish pots and nets had been seized in Coromandel waters this week. There was concern that amateur fishers were cashing in on the high numbers of crayfish and selling them. A bigger catch by amateurs... prompted the ministry to boost patrols in the area.

...Crayfish selling for as little as \$10 on the black market are being snapped up, fisheries officers say. Legal prices are more than \$30.

...['NZ exports over 400 tonnes of lobster each year.' • 'The common lobster of Europe is very like the crayfish but it differs in being larger. Another difference is in the pincers. The many kinds of lobster include, in European waters, the smaller Norway lobster or "Dublin prawn", a source of scampi']...

'Fishing companies' scampi catch records of 1990-92 will be used as the basis for allocating \$100m of scampi quota when the species is brought into NZ's quota management system by the parliamentary select committee conducting an inquiry into the scampi fishery. The inquiry was prompted by allegations that the Ministry of Fisheries favoured certain companies when issuing scampi fishing permits during 1990-92.' Incidentally, a] **fish whose flesh is worth more per kilogram than just about any other is threatening to prove that an Antarctica marine life convention is little more than a Maginot Line...**

[The 'elaborate defensive barrier in northeast France was named after its principal creator, Andre Maginot, who was France's minister of war in 1929-31. The fact that certain modern fortresses had held out against German artillery during WWI, as well as the admitted saving in manpower, induced France to build the celebrated Maginot Line as a permanent defense against German attacks. This ultra-modern defensive fortification showed traces of the old circular system of fortifications, but its dominant feature was linear. The Maginot Line was, from the standpoint of the troops, a tremendous advance over previous fortifications. Its concrete was thicker than anything theretofore known and its guns heavier. In addition, there were air-conditioned areas for the troops. There were recreational areas, living quarters, supply storehouses, and underground rail lines connecting various portions of the line. Unfortunately, the line covered the French-German frontier, but not the French-Belgian. Thus the Germans in May 1940 outflanked the line, making it useless.' ■]

French commandos have abseiled on to a fishing boat in Southern Ocean waters... after it infringed the French exclusive economic zone around Kerguelen Island... as a confrontation loomed over lucrative new fishing grounds... The French embassy in Canberra could not confirm the action. Sources said at least 40 mainly Spanish and Norwegian fishing boats were operating south of the... islands of Kerguelen and Crozet, which [also was a French territory, and AUS]'s Heard Island. They were chasing toothfish which fetched up to \$10,200 a tonne... "More than 40 vessels are reported as having caught over 30,000 tonnes of the... toothfish." ...The Associate Minister of Foreign Affairs... said earlier that the Government was worried the "illegal fishing" was spreading to N[Z]'s polar waters... Fishing in these waters was subject to regulation by the Hobart-based Convention for the Conservation of Antarctic Marine Living Resources[(CCAMLR)], which, for the first time, has agreed to let N[Z] fish for toothfish in the Ross Sea this year. N[Z] would be bound by strict limitations...

A N[Z] fisheries vessel will head for Antarctic waters soon... N[Z] has permission to fish... for 3960 tonnes of toothfish... The Associate Minister of Foreign Affairs and Trade... said that although N[Z] was playing by the book and observing the 23-nation convention, the extent of illegal fishing was of great concern. No illegal fishing had been reported in the Ross Sea, but the threat existed. [He] said an Air Force flight to the Ross Sea three weeks ago had checked the technical parameters for surveillance in the area. Once N[Z] began fishing, surveillance flights would be an option to spot illegal vessels... This week French authorities boarded an Argentine fishing boat... for illegal fishing.

...N[Z] is seeking the co-operation of other Antarctic Treaty nations to protect its potentially lucrative Patagonian toothfish grounds... [after] the... Sealord factory trawler Pakura was apparently threatened with ramming by an Argentinian-flagged ship allegedly fishing illegally for... toothfish near Heard Island... [However, the] Associate Minister of Foreign Affairs and Trade... [said] that it would be inappropriate for the Government to protest to Argentina, because the Pakura had been leased to an A[US]n company... A[US] has been pushing the idea of a joint surveillance and enforcement programme with countries with an interest in the region, such as N[Z] and South Africa... Pirate vessels have been spotted around Heard Island six times in the past two months, the A[US]n Fisheries Management Authority reported.

...The head of an A[US]n fishing group has called for warships to patrol the Southern Ocean after poachers threatened to ram one of his trawlers... Although the crew were in A[US]n sovereign territory, they were a long way from help and only a "bit of bluff" stopped the situation escalating, he said. "They actually firstly threatened to ram us, which wasn't a very nice thing to do, then they realised we were bigger than they were..." The foreign poachers... were frightened off for the moment but were waiting on the edge of A[US]n waters, ready to resume plundering toothfish stocks when no other vessels were around.

...IN EARLY JUNE, THE *AUSTRAL LEADER* arrived off Heard Island... in search of... toothfish. As one of only two ships licensed to deep trawl for the... fish in A[US]n waters, the *Leader* might have expected a quiet time. Instead, it found six other vessels illegally hauling toothfish from the sea. When[her] Captain... radioed an order that the ships leave, they didn't respond, except for one that swung towards the *Leader* as if to ram her. Says[the] general manager of Austral Fisheries, the ship's owner: "These guys pay no attention to any of the rules at all." ...South Africa and France recently sent aircraft and naval ships to the region to protect their sovereign waters against pirate fishing boats. A[US and NZ]... are contemplating similar action. "If you declare war, what do you do?" asks [an AUS]n Antarctic Division policy officer... "You go into another person's territory. Well that's what it is. It's war without the declaration." ...[the toothfish's] widespread presence in southern waters was only recognized in the early 1990s; thus far, there is no detailed information on their numbers, range or life cycle[although AUS]... has just announced a \$2.9 million, three-year research project on the Marquarie Island toothfish stocks... What is known is their fine flavor. In the U.S., where it is sold as Chilean sea bass, toothfish is becoming increasingly popular – [the then NZ]Fisheries Minister... last year claimed it was "pushing our orange roughly off the menus of the eastern seaboard" – but it is Japan that leads demand. Most of the estimated \$300 million worth of toothfish caught illegally in the past year – more than 10 times the amount taken by legal vessels – ended up on Japanese tables as *mero*... More than money may be at stake: environmentalists, already concerned over legal capture of toothfish, fear large-scale poaching may wipe out the creature... Says Greenpeace N[Z]'s ocean ecology campaigner... "They're like the whale of the fish world: slow to reach reproductive age, slow growers. If they are hammered hard, other species may fill their niche in the food chain before they have a chance to recover."

...China is building a fishing fleet of around 200 boats specifically aimed at catching the lucrative... toothfish, diplomatic and environmental sources said yesterday. One high-level N[Z] official said a resources gold rush around Antarctica... would make environmental controls there worthless. China has not signed the 1980 Convention... which controls the region... The reports on the future Chinese presence is adding to the alarm over a rapidly expanding fleet, now estimated to be... 60 ships, in the area south of the Indian Ocean. The nationality of all the ships was not immediately known, but... the illegals were mainly Spanish and Norwegian ships flying flags of convenience... However, the rapidly growing fleet is depressing the toothfish price and much of the catch is being stored... The fisheries were only recently revealed when the U[S] declassified satellite photos originally taken to help its submarines hide in the cold waters... The rush to catch toothfish is expected to dominate the headlines at the Antarctic Treaty consultative meeting in Christchurch later this month.

...N[Z] will this month meet other nations with Antarctic fishing interests to further plan how to tackle "pirate" vessels plundering the lucrative toothfish. Up to 60 vessels flying flags of convenience have taken an estimated 30,000 to 60,000 tonnes of the deepwater cod-like fish... - 1997

Cod survival still in doubt as ban ends The 10-week ban on cod fishing in the North Sea has ended with barely disguised relief from the beleaguered fishing industry and a sense of foreboding from conservationists concerned about dwindling stocks. The E[U] imposed the emergency ban in January to cover 40,000 square miles of cod-spawning grounds off north and east Scotland, East Anglia and the coasts of Norway and Denmark... The ban[– which] covered just 25[%] of the North Sea for about a fifth of the year, [and]represented a reduction of fishing of just 5[%] over a year... [–] was a desperate attempt to prevent the total collapse of cod stocks. Because of the ban, hard-pressed cod fishermen in Scotland have had to resort to landing immature haddock, many of which were discarded as they were too small to be sold[while]... Dutch vessels blockaded the port of Ijmuiden in March, demanding compensation for the cod ban... Cod and other white fish have declined drastically in recent years. Annual cod catches in the late 1960s reached more than 350,000 tons, whereas last year the industry had difficulty finding enough fish to meet its quota of 132,000 tons. The E[U] estimated there are 65,000 tons of breeding cod left in the North Sea fishing grounds, which is less than half the numbers estimated to be needed to sustain a viable population. In addition to overfishing and pollution, cod and other fish have been affected by rising sea temperatures. [■ 'Arbrath haddock smokers no longer get haddock from Arbrath because the area is all fished out.'

... 'In February 1967 four haddock were caught with a handline off the Isle of Skye and taken to the Torry Marine Station at Aberdeen where they were put into a large glass-fronted aquarium. One was a female, and she spawned in April. Before she did so the males became very aggressive towards each other. They faced each other or swam broadside on to each other with their fins spread to the full. At the same time they made knocking sounds. From these encounters one of them emerged as the dominant, or boss fish, and it was he who finally mated with the female. They swim upwards together the female laying her eggs, the male shedding his milt to fertilise them. She lays about 12 000 eggs and then swims away. About 30 hours later she swims back to the male and they pair again, and she lays another 12 000 eggs. There may be a dozen spawnings over the next 2 weeks, and an average of 12 000 eggs laid each time. The number of eggs laid is larger with the older and bigger females, and the total laid in one season may be as many as 200 000 or more.'

...Hong Kong's Aberdeen typhoon shelter is packed but the storm on the horizon is man-made. China has imposed a fishing ban on... part of the South China Sea so fish stocks can be replenished. [But] the long-term view is not appreciated by some fishermen, who are demanding welfare help.

...*The Perfect Storm* isn't just another disaster movie, it's... based on terrifyingly real events that took place in October 1991. Three cyclone systems collided in the North Atlantic and the resulting "perfect storm" – because it could not have been worse – created 30m waves driven by 190km/h winds. Into this maelstrom steamed the *Andrea Gail*, a 22m swordfishing boat from Gloucester with six men aboard. [A]journalist... wrote a bestselling account of events leading to this encounter and *The Perfect Storm* became the film-makers' *Bible*. No one knows what happened to the *Andrea Gail*, but [the journalist] presented various scenarios of what had happened on other boats in similar conditions. The film selects some of these incidents and sets them on the *Andrea Gail*, going one step further than the book by taking audiences on board and into the eye of the storm... [The] special-effects house... says it made a technological breakthrough in the computer rendering of water which enabled it to create *The Perfect Storm*'s photo-realistic ocean with mountainous seas. But computer technology didn't shield[the] cast from the elements. Three weeks were spent in Gloucester, a small fishing port with a population of 28,000, 75km north of Boston. Eight days were spent at sea and during that time Hurricane Floyd blew in... [One of the stars, who also] went out for a couple of days and nights fishing on a longliner similar to the *Andrea Gail*, says, "It was the most backbreaking work I've ever done in my life. I take my hat off to these guys. If you work on a construction si[t]e operating a jackhammer all day, you know you'll be paid. For these guys there is no guarantee because fishermen's pay is determined by the catch." ...□ *The Perfect Storm* starts at cinemas on Monday.

...The release of *The Perfect Storm* in cinemas this week is a reminder of just how wild a fisherman's life is – both on and off the water – and just how important the sea and its bounty remain for us on this cluster of islands in the world's fourth-largest exclusive economic zone, covering 1.2 million square nautical miles. "It's the last frontier," says... a 48-year-old who has been fishing since he was 12. "It can be really unforgiving or really serene. Either way, it can kill you as quick as look at you. If 1[%] of society are outlaws, then fishermen would be the 1[%] of the 1 per centers. Fishermen are outside society 99[%] of the time because they're at sea." N[Z]'s deep-sea fishermen are hunting... places unknown to the land-bound – Chatham Rise, Louisville Ridge, Colville Sea Mount... Trips can last between one and eight weeks... In season... on a good trip... 100 tonnes can be caught in one five-minute shot. A bad trip – for whatever reason – leaves everyone out of pocket. Fishermen are all share-fishing, taking their cut after expenses. "No fish, no pay" is their lot. It's made N[Z] fishermen a canny lot, with a reputation as masters of fishing in "rough country" – the sea mountains where orange roughly and oreo dory gather and where foreign skippers refuse to go. "Nobody knows how dangerous it is really," says... one of four fishing brothers. "The ones who survive are the ones who realise it's dangerous. The guys that don't understand that lose..." "We lose people every year," says... [the] president of the Federation of Commercial Fishermen, whose members trawl our fourth-largest export earner... worth \$1.34 billion last year... "It's a fact of life." The sea, the gear and the life are not abstract threats. Danger is

always close and awaiting a slip. If they're trawling, the nets can be 100m long, held open by two-tonne trawl doors and hauled in by gigantic winches... [A fisherman], aged 28... remembers how one deckhand, known as Lucky, lost his arm regathering the trawl doors. "You may do it 10 to 15 times a day, 1000 times a year. One day you go to clip it on, all of a sudden a wave comes over, the boat rolls... wham, bam, gone. Just like that. If you're hauling the gear in and your foot gets caught, you can go half-way round the winch before anyone notices." Maritime Safety Authority figures mark it down in black and white. N[Z] has an estimated 6300 commercial vessels, and for every 2000 there is, on average, a fatality every three months. In the[past] year eight fishermen were lost at sea and 75 accidents reported. Many accidents go unreported. The ACC recognises the seriousness of fishing injuries by charging marine fishing operators a premium of \$4.69 every \$100 – one of their highest. While most injuries occur because of breakages or human error, around a quarter are labelled "environmental." As [the brother fisherman] points out: "The sea rules. You've got to realise you're in somebody else's territory." In that realm, a storm can be the sea's executioner, a hired gun. There's only so much a crew can do when one hits – lash everything down, check safety procedures and get below... Every fisherman remembers his worst storm. [The brother fisherman's] was in the Southern Ocean south-west of N[Z] in the mid-1980s, when he was hove to for 22 days in a "29-metre, skinny" former North Sea trawler. "There were 30 to 40-metre seas, 80-90 knots of wind and breaking swells, which are the ones you have to watch. I lost my liferafts, all the gear, everything on deck." ...fishing... has always attracted tough men drawn by the elemental existence the sea offers... For all the raw romanticism, they go, too, for the most practical of reasons – even the most unskilled positions of a boat can pay well. A 16-year-old straight out of school can earn \$40,000 processing fish on a factory boat for 300 days in the year. By the time he's 19 he could be hauling in \$70,000. It's a life spent in the hold of a ship working eight hours on, eight hours off continuously... "That's hard work, so when they come home they play the same way,"... A year's worth of partying is packed into a few crazy weeks... "You have your most wild adventures on land, not when you're at sea," says [the brother fisherman]. At least, you used to. "Everything's been tamed," he sighs. "The outlaws have gone... Those days have gone." Just as in the Old West, the wagons are rolling in and the ranchers are putting up fences. Since the quota system was introduced in 1986, the... industry is better regulated, poaching has diminished... and... the companies pay their taxes...

Russian authorities have seized a... Vanuatu-registered trawler, owned by a Seattle-based company Pacific Marine run by two Russian businessmen... that skipped N[Z] last month owing more than \$600,000. The Ascold, which unexpectedly sailed out of N[Z] waters with a 70-tonne catch of hoki... and failed to answer radio calls, was detained this week at the Russian port of Vanino, north of Vladivostok... [The] Ministry of Fisheries... said [i]t... could seek to take action against the Ascold for... landing its catch... and... leaving N[Z] waters illegally...

Dozens of Russian fishermen who had been drifting for hours on an ice-floe in the Gulf of Finland were taken off by helicopter yesterday. A total of 67 people had been in danger after the floe broke off from the main sheet of ice. Moscow Echo radio said the floe was floating off St Petersburg and risked breaking up as a result of strong winds... [In related news, two] Samoans who drifted more than 4000km across the Pacific for nearly five months have been rescued off Papua New Guinea. But two of their companions died of thirst and starvation and their bodies were thrown overboard from the frail, 7m aluminium dinghy. The survivors... aged 36, and... 27... caught birds... that landed on the vessel... and fish... with their hands... and drank rainwater... [One of the survivors], who is married with six children, was "very happy" to be alive... [– though he criticised t]he Samoan Government... for not searching for... [them –] and could not wait to be reunited with his family. The runabout had drifted close to dozens of islands, including those in the Fijian chain, and the men saw large ships, but no one responded to their flares... The survivors were finally rescued last week by a Normanby Island villager who paddled out to them after they fired off their last flare... The men were fishing off Samoa... when a huge load of fish dragged their boat underwater. They righted the boat by cutting away the fishing lines and two outboard motors...

A school of herring caught in a trawler's nets refused to give up without a fight. The fish swam for their lives and sank the boat. The 19m trawler Steinholm was fishing off the northern coast of Norway when it made a huge catch... When the crew tried to haul in the net, the entire school headed for the bottom and capsized the boat... The crew tried to cut loose the net, but was forced to abandon the capsized boat, which sank in 10 minutes... The 49-year-old skipper... told the Oslo newspaper *Dagbladet*: "I have been fishing since I was 14 and I have never seen anything like it." ...No one was hurt and the six-member crew was rescued by another trawler. It was not clear whether the fish escaped the net.

...*One that got away*... A GIANT snapper contest got even fishier when the biggest catch turned out to be a fortnight old. Police are now considering laying fraud charges against an Auckland angler who tried to claim \$20,000 first prize in the annual Kilwell competition, at Matamata, earlier this month... "This is the first time I've ever heard of anything like this happening..."... said... [a] Morrinsville detective... The \$20,000 was on offer for the heaviest snapper over 13.6kg and lured 300 fishermen. But officials... thought there was something strange about the 14kg snapper angling for top prize... It had sunken eyes and soggy flesh and the scales were falling off. Organisers locked up the fish and sent it to Auckland for testing. Experts said it was 17 to 19 days old, and it was disqualified... The \$20,000 went to the runner-up, [a]Matamata school-boy... Th[e Aucklander] may yet retrieve ...h[is] winnings through... court action.

...*Sweet smell of success had fishy odour*... [An Aucklander] had caught a huge snapper, one that put him in line for a \$20,000 fishing contest prize... But... when the weighmaster told scores of other contestants that the fish tipped the scales at 14.5kg... muttering started... The story of the snapper unfolded in a court yesterday when [the Aucklander] and his fishing mates that day... pleaded not guilty to charges of attempting false pretences. The men are accused of conspiring to win the money with a fish caught before they had even entered. It was allegedly stuffed with kawahai head and a mullet fresher than the snapper itself, and had freezer burn on its tail. At the Morrinsville District Court depositions hearing, their lawyer... conceded that they had a case to answer and said: "This case is all about an old fish dressed up as a new fish."

...THE men at the centre of a fishing contest furore won't be able to claim the winning prize despite being cleared of criminal charges of cheating, say[s the]... Matamata Fishing Club president... "What they don't realise is when you enter a fishing competition, you enter under a set of rules and they are that the committee has solo judgement of the fish at the weigh-in. If they chose to disqualify the fish, that is their right." The men... plan to mount a legal challenge to get the prize... "We'll continue the fight... We'll go as high as we have to go. There was never a case."

...N[Z]'s marlin record has been smashed by a Gisborne man after a 7 1/2 hour battle with a 473.2kg black marlin... using 37kg breaking strain line and "stand-up" tackle... The monster fish, which beat the previous record of 430kg, propelled [the Gisborne man] into the "Grander" club for catches over 1000lbs (453.6kg). He was competing in a four-day tuna tournament for the Tapatouri Sports Fishing Club. Three marlin, one of each type... [(the other two catches were a] 84.75kg striped marlin... [and] a 224.95kg blue marlin[)]... were weighed in – a first in a club tournament.

...on Sunday, a... Huia fisherman... hooked the biggest southern bluefin tuna that he – or possibly any other angler – has ever caught. It was 7.30 pm... [a]nd the lads on the 7m launch Pleco had just settled in for a spot of fishing in gentle swell 70km off the mouth of Kaipara Harbour. [The fisherman] had no idea what he had caught, but... [hi]s 37kg line ran with relentless torque in relatively short runs. After a two-hour fight, [the boat's] skipper... peered over the side and saw a fish big enough to be "a bloody whale." The hard bit was yet to come – hauling the leviathan on board... Back on shore yesterday, the Manukau Sport Fishing members were astonished to find that their catch weighed 198kg – smashing the southern bluefin record by 60kg. But the weight and tuna variety are yet to be confirmed by the N[Z] Big Game Fishing Council and, in turn, the International Game Fishing Association in Florida. That could take four months... So how will the lads pay homage to their monster catch? Smoke some, they say, and chuck the rest on the barbie.

...I was disgusted by your article yesterday celebrating the catch of a large bluefin tuna. It was highly insensitive to the serious issue of declining tuna populations as explored in an article in your newspaper the day before. Both articles refer to the recent \$187,000 price a tuna fetched in

Japan. Monday's article, however, connected high prices with the fact that "the species itself is destined for extinction." The article further stated that "the first species to disappear will be the bluefin..."

...The southern bluefin tuna has been called the cheetah of the seas, and like the cheetah it faces the threat of extinction... A[US]n scientists believe the species, now estimated to exist at about 8[%] of its 1960 population size, could collapse in 20 years... After early exploitation – the catch peaked in 1961 at nearly 82,000 tonnes – the global catch is[currently] about 16,650 tonnes a year... [But] Japanese demand for its flesh in sashimi, even at a price of \$20,000 for a 40-year-old 2m, 150kg fish is[rejuvenating] the pace of fishing... Now the Japanese want to catch a further 1400 tonnes "experimentally" on top of their allowable catch... But as the fish are caught so, too, are albatrosses and petrels... which dive on the tuna longline baits... [I]n the past 20 years about 54,000 albatrosses and petrels are estimated to have been killed in N[Z] waters by longliners. In the Southern Ocean it is estimated that tens of thousands more are drowned each year after being hooked... [The RFBPS] has asked the N[Z] Government to take action to protect the fish and the birds but there had been "total inaction." ...Like albatrosses, which have to grow into their teens before they breed, southern bluefin tuna are also thought to take many years to reach maturity...

Japan has given an assurance it will comply with an international court order limiting its catch of southern bluefin tuna. [The PM]... said the assurance was given at a 40-minute meeting... this week with Japan[']s... Fisheries and Agriculture Minister... While N[Z] for now did not intend dropping legal action against Japan, both [the PM] and the Japanese minister had agreed officials should start talks over management of the fishery... The U[N] International Tribunal for the Law of the Sea last Friday granted an injunction sought by N[Z] and AUS], ordering Japan to abide by agreed quotas for southern bluefin tuna to protect dwindling stocks. The injunction bars Japan from raising its annual 6065-tonne quota... [L]ast year... Tokyo... tried to overstep its quota by 30[%].

...This month a large frozen fish fetched \$187,628 wholesale at a Japanese fish market. Ten years ago it would have fetched \$80 – and probably gone into a tin of catfood... Coupled with an increase in popularity for fresh tuna – once found only in the Far East – world tuna catches have doubled in the past 10 years[, and now the]... "chicken of the sea" outsells all other canned fish or meat, at 3.3 billion cans worldwide... The... catch... is likely to top 4 million[tonnes] this year... In the South Pacific, the world's largest tuna fishery, catches have risen seven fold since 1972... Five tuna species – bluefin, albacore, yellowfin, bigeye and skipjack – are the most sought after... The... bluefin... is among the top five on the Wildlife Fund's Endangered Seas Campaign list of fish breeds needing immediate action to prevent extinction... But now that the Japanese, the world's biggest consumer of the most endangered tuna species, have refused to curtail fishing, conservation efforts are unlikely to succeed... Illegal and unregulated "pirate" fishing fleets are... taking advantage of the spiralling prices to be had for tuna in Japan... [A]n informal survey of sushi restaurants... revealed that bluefin was on most menus as toro – the fatty underbelly of the fish which has become Japan's caviar – commanding prices of \$170 a plate. "I wouldn't dream of eating tuna, especially bluefin tuna. It would be like eating a rhinoceros – it's just as endangered," says... [the] oceans campaigner for Greenpeace International. "There comes a time when consumers are going to have to cut the amount of fish they eat, and this may well be that time."

Although the name 'tunny' was first used in England – from the Latin thunnus – at least as early as the 15th century, and the Spanish word tuna did not come into general use until the beginning of this century, tuna is rapidly becoming the accepted name for this large fish. The tunny or bluefin tuna of the Mediterranean is said to reach 14 ft long and weigh 1 800 lb, but few exceed 8 ft in length... The many references to the tunny in classical literature show it to have been as important to the Mediterranean peoples as the herring was to the people of northwest Europe. The fisheries have continued through the centuries. Many methods have been used for catching the fish, [which]... are believed to reach speeds of up to 50 mph... The most spectacular are the net fisheries; very long nets are used to intercept migrating shoals and guide them into a final compartment or 'death chamber'. When this is filled with jostling fish the net floor is raised, the surrounding boats close in and the massed fish are clubbed, speared and dragged into the boats. Tuna fishing... has become a popular sport during the last half century. A large fish has been described as 'the tiger of the seas'... that strikes like a whirlwind and, played with a rod, will give a man the contest of his life, perhaps towing his boat for hours over a distance of several miles before becoming exhausted... The actual identification of species is difficult because tuna, like many of the large fishes, seldom reach museums, where they can be effectively studied... Nevertheless, the tendency now is to... [say that o]ne species ranges across the tropical and subtropical Atlantic and another ranges across the Pacific...

Delegates from across the Pacific gather in the Marshall Islands this week for talks with the major "distant water fishing nations" to iron out differences on how to manage and preserve tuna stocks.

...Pacific Island suppliers of half the world's canned tuna want a bigger share of the profits from the catch and a widening of the regulated ocean fishing grounds to cut down on renegade over-fishing. Their mouthpiece, the Solomon Islands-based Forum Fisheries Agency... says last year's South Pacific catch of about one million metric tons of tuna by the U[S] and four Asian fishing nations was worth \$US1.7 billion... Revenue for South Pacific member nations, many of them small, poor, and virtually without resources except fish, was only \$US60 million in fishing fees, about 3.5[%] of total revenues, plus \$US25 million to \$35 million more in spending on shore by foreign fishing fleets... [A]nother vital issue is to widen fishing controls over the entire ocean from Indonesia to French Polynesia to achieve measured and regulated harvesting of tuna. The agency says latest surveys indicate the stocks of skipjack, albacore and yellowfin tuna are healthy, and skipjack and yellowfin quotas could be raised 30[%]. But bigeye tuna, highly prized by Japan for sashimi, is under stress.

...Empty nets, high prices... The Cook Islands has two million square miles of ocean, but fishermen are not catching enough to supply the capital Rarotonga and the country is now having to import from N[Z] and Tahiti. Fishermen and restaurateurs agree that the past six months has been the country's worst fishing season... A meteorologist... said the problem was caused by the drift of warm currents from east to west, with the higher sea temperatures killing off nutrients on which fish survive. He said fish were moving further south to colder climates with plenty of nutrients. The Met Office has predicted that the fishless situation could last up to 12 months. And that is bad news for Rarotonga where visitors expect fresh, locally caught fish at reasonable prices. A 25[%] import levy and 12[%] Value Added Tax are making imported supplies very expensive and this was being reflected in the price of fish dishes being served in Rarotonga... The levy was introduced to protect local fishermen, but the reality is "local fishermen can't supply their regular clients," according to... a fisherman-turned-importer... Now restaurants and importers want the 25[%] levy temporarily lifted until fishermen can again meet the demand.

...Living in an island nation does make it rather difficult to envisage what it is like to share a common border. But it does make it easier to see just how illogical some borders are. During the recent Northern summer it has taken a fish to show how North American borders defy reality – in this case the mighty salmon. The U[S] and Canada used to have a treaty. It took 15 years to negotiate, it came into effect in 1985, it expired in 1992 and its basic aim was to take into account the simple fact that salmon do not acknowledge national borders. The treaty said each country's fishing boats were entitled to a catch proportionate to the numbers of salmon spawning in its rivers. Which would be fine except British Columbia rivers produce fish in abundance; Americans, in contrast, have inflicted dams and industrial development on their rivers. Result: American boats have over-fished for years, supposedly 35 million salmon since the treaty came into effect. Last year N[Z] supplied a mediator who called for American restraint. In July, Canadian fishers set out to reap the benefits of an expected record 18 million sockeye salmon returning to the Fraser River, but American boats got in first. The Canadians were not pleased. In retaliation their boats blockaded an Alaskan ferry in British Columbia's Prince

Rupert Harbour for three days. Last month, Alaskan officials said the ferry service would not operate next summer... Meanwhile, Canadian fishers have been scooping up as much fish as possible from around Vancouver Island, normally available to nearby Washington state boats. The Americans have already accused the Canadians of excessively fishing coho and chinook salmon off British Columbia. In the political arena, the British Columbia premier... advised the federal Government that the province would cancel the lease of a torpedo-testing range near Vancouver that just happens to be used by the U[S] Navy. On the other side of the border, a Republican senator from Alaska suggested a Navy or Coastguard escort for American fishing boats. Now the premier [of British Columbia] has filed a lawsuit contending that American fishers had broken an international treaty and seeking damages of \$US300 million. And the general public are not sitting idly by. Toss in a bit of American flag burning during the ferry blockade and such headlines as this one in a Seattle newspaper, "Let's take Canada, eh?" and it is clear the neighbours are restless... Put aside all artificial trappings, the jingoism, the flags, the anthems, and one day common sense will prevail... Like the salmon, the peoples who call their region Cascadia will redefine their borders... The regional nature of Canadian politics only confirms the crazy nature of the borders along the North American north-west Pacific coast... While the Liberal Party managed to scrape back into power in the June general election, the divide between its Ontario power base and the Opposition Reform Party's dominance of British Columbia and Alberta in the west became more clearly defined. [■ The 'World Trade Court has told AUS to lift its 24-year-old ban on certain salmon imports.']

...BATTLE lines have been drawn on some of [NZ's] premier salmon fishing rivers over whether anglers should be allowed to fish from boats. Some anglers in South Canterbury want fishing from boats banned and will decide this week if they will ask the Central South Island Fish and Game Council to endorse the move. They believe people fishing from boats have an unfair advantage of catching salmon... Two weeks ago a group of shore anglers were unsuccessful in getting a ban. The fish and game council's operations committee recommended the ban but it was defeated 7-4 at a full meeting. It had been proposed by [a] council member... Under the rules he can try again at this month's meeting... [B]oat owners say there is enough fish for everyone and believe their presence on the rivers... is vital for safety. Often they are first on the scene to rescue shore anglers who slip into the river and other boaties who get into trouble... [By the way, f]ive people were missing yesterday after a Russian helicopter crashed into the Black Sea off Sochi as it tried to rescue a group of amateur fishermen who had got into difficulties.

...The fate of at least 400 fishermen is unknown after tidal waves... [that] measured more than 3m... lashed the coastal districts of the Indian state of West Bengal. Forty fishing trawlers... left the shores last week but were yet to return...

Dozens of fishing boats anchored near Sri Lanka's southern coastal town of Hikkaduwa rock gently in the waves, a picture of tranquillity, but in the water below the scene is one of devastation. The keels of the boats dipping into the water chip away at the delicate coral reefs, wreaking havoc on what has been declared a marine sanctuary... [Damage] caused by... anchors... coral-mining, over-fishing... and... pollution... [is also] ruining the reefs... For centuries, Sri Lankans have depended on harvesting fish and other resources from the reefs... The country has reaped the profits in foreign exchange earnings from the export of spiny lobsters, sea cucumbers and ornamental reef fish that abound among the corals. Tourists have provided another source of income, attracted by the beauty of the corals. But at the same time, the reefs have been exploited to extract lime for Sri Lanka's... construction industry. Now the danger signs are showing – the reefs are fast depleting... A warning written on a wooden board telling people that damaging the coral reef is a crime has faded away... Reef depletion is a global problem. The coordinator of the Global Coral Reef Monitoring Network... said about 10[%] of coral reefs worldwide had disappeared. "[30%] of the world's coral reefs are in critical shape and may die within the next 10 to 20 years... unless we start doing something now." Besides being beautiful structures admired by divers, the strong ramparts of coral reefs serve as storm barriers that protect shorelines and provide ships with safe harbour... [Incidentally, s]tocks of deep-water fish have been wiped out across the North Atlantic – only a few years after trawling for them began... Fishermen turned to grenadiers, roughies, black scabbards and the rest because stocks of shallow-water fish, such as cod and herring, are... seriously depleted... Scientists are saying it could take... 100 years for orange roughy stocks to be restored in the North Atlantic... "The roughy is a classic deep-water fish," said... the director of... the Dunstaffnage Marine Research Station, Oban, west Scotland... "It used to be plentiful in the North Atlantic. Today you can hardly find a single one between Britain and Newfoundland. They are fished out because there are no quotas and no protection." ...Neither is the problem confined to the Atlantic... Similar disturbing patterns of depletion are found in... the Pacific... In N[Z], stocks are now 10[%] of their original volume.

...[NZ has a well-established process for assessing fish stocks as the basis for an annual review of the catch limits for quota species. There are 31 fish species or species groups currently managed under the Quota Management System. These groups consist of 179 different fish stocks and the Total Allowable Commercial Catches (TACCs) for these stocks are reviewed each year. The process begins with 13 working groups convened by the Ministry of Fisheries. Eight of these groups assess individual species or groups of species, and the other five deal with more general issues (marine recreational fishing, the impact of fishing on non-fish species such as marine mammals and seabirds, interactions between fish species, fisheries data and stock assessment methods). Each group consists of ministry staff and representatives from the commercial fishing industry, Maori, recreational fishing groups and environmental or conservation organisations. The main job of the eight species working groups is to estimate the sustainable yield that can be taken from each fish stock, and to determine whether current TACCs and recent catch levels are sustainable. When new information results in substantial changes to previous assessments of stocks, this is referred to the Fishery Assessment Plenary for further consideration. The plenary, which is open to all members of all the working parties, reviews the assessments for the stocks referred to it by the working groups. The outcome is a substantial document which summarises the state of each stock. This largely completes the scientific stock assessment process, and the involvement of the ministry, but the process of setting or adjusting TACCs is far from over. A range of considerations – economic, social and environmental – are added to the scientific assessments to determine whether the TACCs should be adjusted and, if so, how quickly. A series of meetings and consultations takes place before the TACCs are finally adjusted. Within a few months, the whole process begins again for the next fishing year. NZ's offshore fisheries are amongst the deepest in the world. Species such as orange roughy, which live at depths of up to 1,500 metres, present special challenges to the ministry's scientists. To study these deepwater fish, and assess the size and productivity of the fish stocks, the ministry's staff have adapted existing research techniques and developed new ones.]

...*'Quota slashing reflects depletion of fisheries* Moves by the NZ Government to close the Challenger Plateau orange roughy fishery will be the first time a deep-water fishery has been shut down because of depleted resources. The plateau in the Tasman Sea west of the lower North Island has had its quota cut from 1425 tonnes to one tonne. The Fisheries Minister says the stocks in the area are now at only 3% of their original size. It is one of three orange roughy fisheries affected by cuts as the Government tries to improve protection of the fish stock. The other two are the East Cape, where the quota is cut from 2500 tonnes to 200, and the mid-east coast, down from 2100 tonnes to 1500, and reducing to 800 tonnes the following year. The cuts take effect from the beginning of the new fishing year on October 1. The rapid "fishing down" of stocks and inadequate investment in research are being blamed.]

...The head of the country's second biggest scientist institute has hit out at the Government's user-pays approach to fish research... [The] director of the National Institute of Water and Atmospheric research (Niwa), said that making the fishing industry pay for all research into commercial stocks was simply not working. He wants more public money spent on studying commercial fisheries... Fisheries research has been slashed from \$17.3 million to just over \$14 million in less than two years, he said on board the deepsea research vessel Tangaroa yesterday. That meant there was little chance of critical work being done into the state of many commercial fish stocks... His argument is likely to win support from the fishing industry and environmentalists. Fishing people believe the Government's research levy is too high... Environmentalists oppose the industry's gaining too much say over research and would welcome more research.

...The Government has again slashed fisheries research... The Minister of Fisheries... has not yet announced the funding, but documents sent to a list of "approved parties" show a research budget of \$13.3 million for the 1997-1998 financial year. That is a drop of either \$500,000 or \$1.2

million, depending on how the sums are done. [The minister] acknowledged last night that either way it was a cut. He blamed falling fish profits, saying the fishing industry could not afford to pay more than the \$10.4 million it would be levied for research. The Government was not prepared to contribute more than \$2.89 million... Environmental groups said the decision was an aboutface on a promise last year by the then Minister of Fisheries... to increase research to \$18 million this year. A spokesman for the R[FBPS]... said fisheries research had fallen from \$22 million six years ago... A third of N[Z]'s commercial fish species were depleted, yet not enough research was being done to determine whether they could survive, he said. The eco-marine coordinator... said scientists were reluctant to speak out against the industry in case their... funding was cut off.

...Auckland Museum scientists have imitated a classic 1930s survey of organisms on the floor of the Waitemata Harbour and found that 60 years on it is still inhabited by an abundance of marine life. But the research work giving a picture of the state of the harbour's health will go unfinished because of the cost-cutting closure of the museum's marine department. [In related news, 'middle-aged men who eat a weekly meal of "fatty" fish such as tuna, salmon, mackerel or shellfish cut in half their risk of suffering a sudden, deadly heart attack, according to an American study. A Dutch researcher wrote an accompanying editorial: "Therefore fish should be a component of a healthy diet." However, the report also says the health benefits enjoyed by consumers of fish (the researchers studied 11 years of data on the dietary habits and health of 20,551 male physicians, aged 40 to 84 years) may partly be attributed to their healthier habits in general, as they were more likely to exercise regularly and take more antioxidant vitamins.'

... 'Fish is as useful a source of animal protein as meat. The oily fish, such as sardines, mackerel and salmon, contain vitamins A and D in their flesh, but in white fish, such as halibut and cod, these vitamins are present in the liver. The bones, when eaten, of sardines, whitebait and tinned salmon provide the body with calcium and phosphorus. Since all fish contains protein it is a good body-building food and the oily fish is useful for energy and as a protective food because of its vitamins (but, owing to its fat content, oily fish is not so digestible as white fish and is not so suitable for invalid cooking). Fish have formed a large portion of man's food because of their abundance and relative ease of harvesting. Fish are valuable, not only because they are a good source of protein, but because they are suitable to all types of menus and can be cooked and presented in a wide variety of ways. In addition to providing fresh and processed food for human consumption, other valuable products such as oil and isinglass as well as fertiliser come from fish. Unfortunately fish are not in unlimited supply and due to overfishing it is now necessary to have fish farms to supplement the natural resources.'

...while 'experiments in restocking with fish raised in hatcheries are carried on, maintenance and conservation of sources of supply remain problems under both federal and state jurisdiction. International disputes and treaties have resulted from controversy over fishing rights. Since pre-historic times fish, as food, have been important to the economic stability of many areas. The search for fishing grounds in pre-Columbian times brought Europeans to the Atlantic Coast of America, and led to much exploration. The total annual catch of fish in the world grew rapidly after WW2 to about 75 billion pounds annually by the mid-60s. North American fisheries (which employ more than 150,000 fishermen) account for about 12% of the total and Asia accounts for nearly half, with Japan being the largest single producing nation.'

... 'It seems so simple – Japan eats lots of fish, we have plenty to sell. But politics keeps getting in the way. At the recent Apec trade ministers' meeting, it was the US decision to slap tariffs on our lamb that attracted most attention. But the hypocrisy of that move overshadowed an issue which, for those committed to liberalising trade, has lingered for too long: access to the Japanese market for more of our fish. "The NZ fishing industry has been lobbying for 15 years – the Japanese stonewall every approach," says one industry spokesperson. The Japanese have cited quality, packaging, delivery – just about anything to block access or any advance on the tariff question. Each of those issues has been countered by involving Japanese in packaging and quality control – and still no progress. "It is an indictment of our politicians," says the spokesperson. On paper the issue looks simple. At a time when Apec countries have agreed to dismantle the tariff regime by the end of 2005, the Japanese – among others – have been intransigent, largely because Japanese law makers count on votes from vocal and well organised industries such as fisheries. Last September, Apec ministers could not reach consensus on removing tariffs affecting fishing and forestry, and passed the issue over to the WTO. Ironically, at the time Japan was desperately looking at ways of stimulating domestic spending, even to the point of giving all households a one-off injection of cash to spend. (Economists pointed out that most Japanese would simply bank the money so the idea was dropped.) Lowering or removing tariffs on fish would have had exactly that effect. High price, good quality fish, such as crayfish, had dropped off the menus at top class restaurants because it was too expensive. Remove the tariff, the argument goes, the price would drop and people would buy the stuff again. That simple. Japan's unwillingness to move on the tariff issue makes fishing a major philosophical discussion point on the Apec agenda when the meeting comes to Auckland. The reason it is such an important issue, however, has more to do with money than philosophy. Japan, being an enormous consumer of fish, is a lucrative market. But its fishing industry is subsidised by over \$US500m. The EU's fishing subsidies are a little less and the US supports its industry to the tune of \$US30m. Fishing in NZ – which employs about 10,000 in harvesting and processing – enjoys no subsidies. But the Japanese fishing industry, although small, is a powerful lobby. The introduction of the single-seat constituency system in Japan's Lower House has made its votes important – and it has insisted its government maintain tariffs which currently run at between 2 to 10% on frozen and fresh fish']...

Asia's status-symbol appetite for live fish has spawned a highly lucrative trade... But it is devastating the coral reefs of the Indo-Pacific and driving a goldrush-style boom on the Great Barrier Reef. A SNORKELLER ducks under crystal waters, descends about 3m and crouches outside a coral cavern on one of the 3000 reefs off Queensland. Following the instructions of the dive master, he holds out a prawn at arm's length, waving it gently. A large fish looms up, getting bigger and bigger. The giant maori wrasse is nearly 2m long and looks almost that high. The snorkeller's courage fades at the last moment and he lets go of the prawn and pulls his hand away. The jade green fish doesn't open his mouth. Its lips just suck in the prawn as it passes majestically by. It's an unforgettable experience. But though still common on the World Heritage-listed Great Barrier Reef, this fish is threatened with extinction on the once-spectacular coral reefs of Indonesia and the Philippines. The maori wrasse is the premium product of another huge, but far less environmentally friendly, industry... fetching up to the equivalent of \$318 a plate... The live reef fish trade is driven by a prestige dining tradition, centred on Hong Kong but also active in almost any city with a large Chinese population... "...among the Cantonese in particular, seafood is the food of foods,"... says [an AUS]n-based... international expert whose report to the U[S]-based Nature Conservancy 18 months ago exposed widespread Indo-Pacific reef devastation caused by disastrous fishing practices... [He] concentrates his work outside A[US] in regions where the use of cyanide to stun and catch fish for the live fish trade has killed huge areas of reef in what were the world's most ecologically rich coral reefs. But when the *Sydney Morning Herald* quoted him figures on the rapid growth of the \$NZ11 million-plus trade in A[US], he was alarmed. From nothing four years ago, 50 tonnes of live fish were exported in 1994, 100 tonnes in 1995 and 409 tonnes – meaning hundreds of thousands of fish – last year. Cyanide is outlawed in the Great Barrier Reef Marine Park... But [the expert] is also especially concerned about the targeting of spawning areas... using high-technology sonar and positioning devices. Because fish are worth far more alive than dead, the trade is changing the economics of the reef fishing industry at breakneck pace, while scientific knowledge lags behind... By chance, an opportunity has been provided to draw breath and reassess A[US]'s role in the live fish trade. Until last year, booming exports from Queensland were going by air in large containers with their own supply of compressed oxygen. But an air crash in America has led to an international aviation safety ban on carrying compressed oxygen and, despite loud protests from Queensland, the ban looks as if it will stick.

...[there have been calls for a ban on 'trawling, because it is allegedly wiping out a tiny barnacle which could be the key to a medical miracle.'

... 'The Auckland Regional Council's approval of a 30-hectare South Kaipara mussel farm application could trigger a marine farm "gold rush", say opponents. Three other applications for the same area – totalling 306ha – have been waiting for the outcome of the 30ha Biomarine Ltd application at Te Kawanu Pt. The RFBPS wants a moratorium on all new marine farming resource consent applications and suggests suitable aquaculture areas could be identified, zoned and appropriate provisions developed in regional coastal plans. A moratorium already applies in the Hauraki Gulf.' ● 'Kaipara Harbour

is NZ's largest, the largest inland waterway in the southern hemisphere, and the second largest harbour in the world with its 3,200 kilometres of coastline between Helensville and Dargaville. It is on Auckland's doorway but to many in the Auckland Region it is either a forgotten place or a great unknown.')

...A special quota has been called for to prevent the "rape" of the Kaipara Harbour and defuse growing tension... Police have reported a recent wave of anonymous threats to Auckland commercial fishers and vandalism of their vehicles... Another 18km to the west, Ngati Whatua residents at Tinopai have proposed a rahui (ban) on commercial fishing on part of the harbour and the northern rivers which feed it. The chairman of the Kaipara District Council's fishing committee... said yesterday... [that while] he did not condone violence or vandalism, he understood why locals were angry at the harbour exploitation... Helensville locals last year counted 34 dories on the harbour in just one night... "We believe man's greed is going to destroy the harbour." ..."Hordes" of fishers... were legally allowed access to the harbour, which was a breeding ground for mullet... Up to 1005 tonnes of mullet a year could be harvested from around the top of the North Island, and the Kaipara was targeted. "The fishers can go to the harbour and get all their quota there..." ...A rahui would not be necessary if the ministry did its job and controlled the harbour take.

...There were strong feelings of *deja vu* for [a]commercial fisherman... as three shots rang out on the Kaipara Harbour last week... [He had] armed himself with an automatic assault rifle in 1991 after being threatened by a Maori who fired a shotgun into the air, and warned to "bring his guns" if he wanted to fish the area again... Police are now trying to avoid a repeat, as they attempt to control a tense situation... [The commercial fisherman is not surprised that] the person rocking the boat in the Kaipara Harbour... once again... is... the man convicted for being on the other end of the shotgun six years ago. [This time the gunman has also] called for a rahui...

Commercial fishermen plan to defy a traditional Maori ban around Tinopai... The rahui... was put in place by... a public ceremony... on Saturday. The ban does not cover recreational fishing. Although some local commercial fishermen have indicated they would respect the ban, the chairman of the Auckland Inshore Fishermen's Association... said yesterday that... "A rahui is not recognised in any statute of N[Z] law and some members have no intention of changing the way they operate when they have a legal right to fish there."

...Police will meet Kaipara Harbour fishermen on Monday in a bid to calm the choppy water created by... a ban on commercial fishing in the area... A Tinopai Maori spokesman... has warned commercial fishermen they run the risk of having their equipment seized if they ignore the rahui. [A]Senior Constable... of Ruawai, 30km south-east of Dargaville, said yesterday that... [h]e did not want to see fishermen arming themselves, as happened in 1992 when a Ruawai man took an assault rifle out on the water after being intimidated by a Maori... [By the way,] Nelson fishermen are threatening to blockade Wellington Harbour in anger over Government moves to change rules governing the size of inshore fishing boats.

...Commercial fishing interests are uniting with recreational groups to fight a move by the Minister of Fisheries... to allow factory trawlers as close as 12 nautical miles from shore... [The] plans... sparked warnings that... these vessels... will plunder inshore fish, which will be caught as a byproduct of target catches... [A spokesman for the commercial fishing interests] said last night that the minister's proposal was a recipe for turmoil in the industry and would pit large and small boats against each other. Recreational fishers say the minister risks political suicide if he allows large trawlers on the country's "back lawn." ...Fishing groups in the South Island are also weighing into the battle, starting up fighting funds to keep the big boats away... At the moment... vessels 43m and longer... cannot come closer than 25 nautical miles... from much of the North Island west coast and to the full extent of the 200-mile exclusive economic zone down the eastern side [of the North Island, and around the Kermadec Islands. They can, however, come as close as the '12 nautical miles territorial zone around the lower-half and upper-north-west areas of the South Island']... A 30-year veteran of the fishing industry[, who is now the]... manager of Tainui-owned... Seafoods of Raglan, feared the impact on inshore species including gurnard, tarakihi, trevally and John Dory if the big vessels were allowed closer... But [the minister's] proposal was good news for... [another] company, also owned by Tainui, [which]contracts big Korean, Russian and Chinese deepwater trawlers to catch 20,000 tonnes of mostly squid and hoki a year. Allowing it closer to shore would... allow the company to harvest fish on a more cost-effective basis... said[its] general manager... The Auckland-based president of the Recreational Fishing Council... suggested the minister was trying to cover a botch-up... by his officials... after Independent Fisheries, of Lyttelton, built a \$20 million vessel too long for use in territorial waters. [He] said the company thought the boat would be small enough to fish close to shore, but discovered that it had been given wrong specifications by officials... [and] that shrinking the exclusive zone was one way of avoiding payment of damages. [The minister] admitted earlier yesterday that a change to the way vessels were measured was needed "because there has been some confusion with the interpretation of overall vessel length as prescribed by regulation."

...Forty centimetres is all that separates Auckland's Skaga Trawling Company from being able to send its \$5 million trawler... into fishing grounds restricted to ships under 43m. A Skaga director... said yesterday that the company sought advice from the Ministry of Fisheries in November 1995 before it bought the Norwegian-built [trawler] and was told it would comply. Measured... along the deck-line it is well inside the limit. It has fished inside the... restricted... areas... since being commissioned in early 1996 but now the company fears it is at risk of being prosecuted because of the new way of measuring. [The director] believes the small company's competitors were jealous of the [trawler], which was able to stay at sea for two months at a time with full refrigeration gear and storage for several hundred tonnes of fish... He said the Government should recognise the 1992 Ship Regulation Act's definition of "overall length" rather than the 1986 Fisheries (Commercial Fishing) Regulations... "We don't want to cut the nose off a \$5 million ship."

...[the director of a fishing company] found a simple solution when he thought the company's new trawler... was too long for the Government's 43m limit – cut the nose off. "It looked as ugly as sin but its seakeeping was okay," [he] said yesterday. He interpreted the regulations the way the ministry and courts are now interpreting them: that 43m meant overall length, from tip to tail... [A] few years later another company bought a similar... fishing ship, which it operated inside one of the restricted areas. It was more than 43m long but that company challenged the ministry's interpretation of the regulation and got agreement that anything above a closed deck did not form part of the hull of a ship and should not be included in the measurement... He then asked the ministry to confirm in writing that a hull was the area below the closed deck, which it did, saying that was its interpretation. "So I welded the nose back on our ship, which made it longer than 43m overall. It took a few days but the ship looks better like that." It... is used in fishing grounds where its length is not an issue. Should it be needed back in the restricted areas, [he] would simply cut the nose off... [again] if he had to.

...Fishing company Seafresh N[Z] is considering taking another of its boats to foreign waters in an effort to combat low profits from local catches. "We are looking at increasing returns for shareholders and if that means going elsewhere to fish then we will do that," [the]Seafresh chief financial officer... said yesterday... Seafresh has a fleet of four trawlers, of which three operate mainly in N[Z] and a fourth services Fiji and Malaysian waters. It also operates chartered squid boats... [The chief financial officer] was commenting after Seafresh reported pre-tax profits fell 75[%] to \$251,000 in its financial year... The drop in earnings was despite a 36[%] rise in sales to \$28.7 million... The company's overall result was eroded by a \$3.72 million write-off of goodwill[, but the]... company was able to book a tax credit of \$378,000 in the latest year... That took after-tax earnings to \$629,000 compared with \$659,000 a year earlier... [The company also] spent \$1.5 million up-grading its fleet in the latest financial year... Earnings a share were steady at 1c.

...A tuna boat belonging to the bankrupt American Z fleet fetched just over \$US6 million... yesterday in the first auction of its kind in N[Z]... The Big Z was ironically bought by its mortgagee, the U[S] National Marine Fisheries Service, which provided long-term finance to help to float the country's fishing fleet. The service's attorney... said the ship was bought to "protect the U[S] interest" by ensuring the best price was paid.

...A push by the West A[US]n Aboriginal Legal Service for hunting rights for all Aborigines, including a right to take undersize fish, has run into opposition. The state's Fisheries Ministry and Fishing Industry Council yesterday came out against the ALS campaign... [The council's] executive

officer... said his professional fishing association was[already] concerned about... the more than 20 native title claims over vast tracts of West A[US]n fishing waters. He said the worst case scenario[was] professional fishermen being denied access to such areas... A professional rock lobster fisherman had recently been barred from the Dampier archipelago when recreational fishermen successfully lobbied against him. "We're having to come to terms with the aspirations of the recreational sector and running into difficulties with the sheer weight of their numbers... Our desire with the Aboriginal people as well as recreational fishermen is to achieve mutual use of the fish stock with the bottom line being the sustainability of that stock." ...[the association would have to reconsider] the sustainability of stocks if there were any exemptions to conservation protections such as minimum sizes and bag limits... [The] ALS president... was convicted recently of poaching undersized freshwater crustaceans known as marron. The group planned to use an appeal against his conviction to launch its bid... for Aboriginal access to traditional foods in sea and on land other than private property... [The ALS's] chief executive... said the move would not threaten food stocks because Aborigines had traditional conservation methods... However, the... Fisheries executive director... said the appeal would be opposed. He said Aborigines were eligible for free recreational fishing licences that allowed for non-commercial, traditional fishing. [In local news, the Minister of 'Fisheries is telling recreational anglers that a controversial plan to make them buy licences is unlikely to proceed. More than 76,000 people rallied against the licensing proposal that appeared in a Ministry of Fisheries discussion paper. But yesterday the minister distanced himself from the concept, saying he did not like it, few NZers did, and it was unlikely to be introduced by the current Government. However, he said recreational fishing could no longer be taken for granted because too many fish were being taken. Options included a law to make the recreational catch a set percentage of the commercial take, or changes to the way fishing areas were managed. Under present law the minister sets an initial quota for each type of fish. An allowance is then made for Maori fishing and the rest is split between recreational and commercial fishers. The minister said he opposed the idea of the minister setting quotas because the rule was too weak, then added that recreational fishing was a birthright that should exist forever. "Dangling a line off a rock, wharf or boat is part of what it means to be a NZer," he said.]

...In the Wanganui District Court this week [a j]udge... dismissed a charge brought by the Fish and Game Council against [a Maori] for fishing without a licence. The decision is interpreted as a landmark allowing Maori to fish for trout in their tribal areas without a licence... [It has] caused dismay in the national fish and game body whose director... said the council was "almost certain" to appeal... The Auckland-Waikato Fish and Game Council and its North Canterbury counterpart said yesterday that they would prosecute anyone fishing without a licence in their regions, regardless of his or her race... The Minister of Conservation... yesterday indicated that he[also] would not tolerate a situation where Maori alone were excluded from paying for the right to catch trout, salmon and perch... [He] has called for an officials' report on the ruling... There is concern that if Maori are not required to have licences they will not be bound by restrictions on fishing seasons, times, equipment and daily catch limits. The Freshwater Anglers' Federation... president... said he had calls yesterday from anglers who were adamant they would not pay for licences if Maori were exempt. A Rotorua-based fishing guide... said: "That's going to kill the fishery and, as a commercial operator, it'll drive me out of business." But[the] policy and operations manager for the Treaty of Waitangi Fisheries Commission, said there was no need for alarm. The case appeared to be the freshwater equivalent of a 1986 landmark decision on marine fisheries, where the courts ruled that [a Maori], fishing at Kaikoura, had not exceeded the recreational bag limit but had exercised a customary right. In the 10 years since, marine fisheries had not been destroyed... Fishing licences cost \$46.50 a year for Lake Taupo and \$62 for all other N[Z] waterways... Licence fees earned the Fish and Game Council \$5 million a year, which was used to fund hatcheries to restock rivers with salmon and trout. "It's a user-pays system which works very well but it appears some now will be using without paying. It is going to create a lot of racial disharmony,"...

Recreational fishers have vowed to fight a landmark court decision that gives Maori the right to fish territorial waters without licences... It was not clear whether Maori would still be subject to quota and other fishing restrictions following the ruling by a Wanganui District Court judge that Maori fishing rights under the Treaty of Waitangi should be construed expansively and generously... The case was brought when the... Fish and Game Council... sought to prosecute [a Maori], of Okoto Pa, near Wanganui, after a ranger stopped him on the river in January 1995. In dismissing the charge and ordering the return of... [the Maori's] fishing gear... the... Judge... said his decision was not a charter for Maori to fish without a licence anywhere in N[Z]. "Nor does it declare open season on trout." Maori from a hapu or iwi with traditional territory authority over a river fishery... must... fish for trout... according to the terms and conditions of the local kawa (protocol) and be able to prove they were properly authorised to do so. Fishing was to be for personal or family consumption, or for a hui or tangi[(mourning ceremony)]. It must not impinge on the conservation of the resource... [T]he council's director... was puzzled that such a decision could be made when trout was an introduced fish... "Basically it sets up a situation where two fishermen can be standing on a river bank. One will need a licence and one won't[, and the 2nd one will be]... gaining access to a... resource which is funded by the person standing next to them... There is going to be obvious tension on the river bank."

...Maori are not indigenous people and should not be entitled to fish trout in their tribal area without a licence, says Act. The party's health spokesman... said yesterday that he had asked for an urgent debate in Parliament on last week's court ruling... [He] said the Minister for Treaty Negotiations... had signalled the Government was unlikely to change the law to overturn the decision because Maori customary fishing rights were recognised under international law as the rights of indigenous people. "This is incorrect... Some N[Z]ers (who happen to be Maori) arrived early, some came later and some are still to come. We have too many cultures living in this country not to have one law applying to everyone."

...The Government has decided not to join an appeal against a district court ruling allowing Maori to fish locally without a licence... Most National MPs are believed to have pressed the Government to join the appeal but NZ First MPs successfully opposed this... The appeal... will go ahead in the High Court at Wellington next month.

...Maori have never had a traditional right to fish for trout without a licence... the High Court at Wellington... [was] told... yesterday... The High Court has been asked to decide if Maori have traditional fishing rights that include trout and if they did, whether they have been legally extinguished. At the end of yesterday's hearing, the court reserved its decision and said it would not issue a judgment until next year. [While on the topic of trout, 'the Government has extended for three years the importation ban which was put in place to protect a domestic ban on buying and selling trout. People can eat trout they catch but it cannot be sold. The domestic ban did not apply to imported trout, so the import ban was necessary to avoid confusion.]

...Under the Sealord deal the regulations governing customary rights were to be made in consultation with Maori. At the same time, the Amateur Fishing Regulations were amended so that "traditional non-commercial fishing as approved by the Director-General" joined hui and tangi as lawful customary Maori fishing. However, so far no regulations have been made under the Fisheries Act or any conditions laid down under the Amateur Fishing Regulations. At a recent court case it was claimed that Maori and the Crown had been unable to agree on customary fishing regulations. A major stumbling block appears to be that different tribal areas honour different protocols for gathering food.]

...The Confederation of Chiefs of the United Tribes is seeking a restraining order against the Ministry of Fisheries to stop it "harassing" Maori customary fishers... [It] is seeking a date early next year in the High Court at Auckland in a bid to get an order to restrain the ministry... and to sue it for the loss of livelihood of [some customary fishers]... The legal action follows a case where... the nephew of Labour's associate fisheries spokesman... had his boat confiscated last November. [The nephew] was charged with obstructing a ministry inquiry by refusing to answer questions about his fishing practices... off the Northland east coast. The charge was later dismissed in the Kaikohe District Court... No further charges were laid and the 12m steel longliner fishing boat is to be returned to [the nephew] once repairs are completed. The confederation's legal adviser... said this week that [the nephew] had, for about a month, been giving his catch to the confederation for distribution around marae in

Northland and Auckland. In return the marae gave koha (gifts), which could include money, but which were not considered payment for sale... [T]he arrangement was allowed under customary Maori law, which was acknowledged by the Fisheries Act 1983. [The adviser] said the ministry wanted to regulate customary fishing but that it was beyond its powers to do so as the confederation was not a signatory to the Sealords deal.

...[4 tonnes of snapper, landed at Whangaroa Harbour in Northland last month, has been claimed for traditional Maori use. The Ministry of Fisheries confirmed that it was investigating claims that the haul had been landed without a commercial fishing quota and then delivered to commercial fishing premises in Auckland. Ministry officers who inspected the warehouse found more than 100 bins, each containing up to 35kg of snapper. The officers didn't seize the snapper. "We are satisfied at this stage that the fish was taken for legitimate purposes," the ministry's Northland district compliance officer said, "but because of the quantity of fish involved, we have to make further inquiries." The ministry expects its investigation to be completed by the end of this week. Commercial fishers, angered at the size of the catch, say the Government should sort out the issue of customary rights soon. The Auckland Inshore Commercial Fishermen's Association said: "If this situation is allowed to continue with Maori taking as much fish as they want, then the quota management system no longer has any integrity." It added that allowing one race to take fish without controls and guidelines was apartheid. Labour's associate fisheries spokesman agreed yesterday that customary rights needed urgent definition at Government level. "It should not be some sort of de facto excuse by people that are involved in commercial fishing," he said, especially if those people were using customary rights as an excuse for a "black-market organisation." He pointed out that 4t of snapper seemed like a "heck of a lot of fish" to be taking for hui. "I get very angry when people use and abuse the whole customary rights concept that has been negotiated between Maori and the Crown. It brings the whole kaupapa into disrepute." Speaking of negotiations between Maori and the Crown, last year 'about 30 iwi went to the Privy Council in London – at a cost of more than \$1m – to overturn a Court of Appeal decision recognising the rights of urban Maori. Urban Maori had successfully appealed a High Court decision that stopped the Waitangi Tribunal hearing their claims.'

...The Privy Council... [has] quashed a Court of Appeal decision that allowed urban Maori with no tribal ties to benefit from fisheries allocation.

...Deepening rifts between Maori [are developing as o]nce more the[y try to answer the] question of how valuable fishing assets are divided up... Tribes like... Ngai Tahu, with ties to the country's biggest fisheries, [have] argued that more coast[means] more money. Others, with no coastline, argued the asset should be divided by population. The commission's recommendation is a 60/40 compromise... But urban authorities say... [that] under today's recommendation they'll get nothing.

...It is estimated by Ngai Tahu Fisheries that for every 100 tonnes of local deep-sea quota, some \$1.2 million of cashflow is generated into the South Island economy... With few domestic or wild animals (except birds) on New Zealand's soil before European arrivals, fish resources assumed a very significant role in Maori life. They were jealously-guarded property rights which an iwi owned. It had Kaitiaki (guardianship) responsibilities over this property as well, ensuring its exploitation was controlled... Some northern tribes believe population should be the basis for [divid]ing... fish assets. If this population-only model applied, most of Ngai Tahu's fisheries asset would disappear north of the Bombay Hills. Conversely, if the coastline-only model ruled, Ngai Tahu would be looking at receiving about 90 per cent of the allocation. Neither is fully fair but Ngai Tahu is losing out under the proposed... division of assets... on the basis of 60 per cent tribal coastline and 40 per cent Maori population.

...Urban Maori challenging the allocation of fisheries assets... [say that in] the commission's proposed split... Ngai Tahu, would benefit the most... receiv[ing 28.6%] of the quota (by weight), plus cash and shares, while it had only 4.8[%] of the Maori population... [L]ast year's census revealed that 19[%] of those who identified themselves as Maori could not identify their iwi, and about 70[%] lived in areas distant from their ancestral base.

...Urban Maori have laid a complaint with the Race Relations Office in the first round of their fight against the latest model for allocation of [Maori] fishing assets... valued at between \$250[million] and \$350 million... Te Whanau o Waipareira Trust and the Manukau Urban Maori Association say the Treaty of Waitangi Fisheries Commission is indulging in ethnic purefying by telling urban Maori th[at] they are not Maori until they register with their iwi. In a letter to the chief commissioner of the Human Rights Commission they said the Fisheries Commission and its associated companies... also... refused to employ urban Maori... The Fisheries Commission has dismissed the allegations as "utterly preposterous." The commission announced on Thursday the formulae for the distribution of the fishing assets, which include directing urban Maori authorities to negotiate with iwi for a share. Deepwater fishing quota would be allocated 60[%] on the basis of iwi coastline and 40[%] on the basis of iwi population, based on last year's census results. Inshore quota would be allocated on the basis of iwi coastlines, with shares and cash to follow in proportion to the quota each iwi received. The Minister of Maori Affairs... said he was... concerned that urban Maori did not have "a foot in" following the announcement on Thursday. "But maybe we can use this process now to modify the... allocation model," he said on National Radio. Another equation will be brought into the argument today with the release of Maori iwi affiliation data from the census, in which more than half a million people said they had some Maori ancestry but not all could necessarily identify their iwi... [However, t]he chairman of the fisheries commission... disputes the number of urban Maori, estimated at 100,000 in the greater Auckland area... The urban organisations have set up a Maori register to prove they have the mandate to represent urban Maori in their Treaty of Waitangi rights.

...Auckland Maori representatives believe their efforts to sign up those who say they have no iwi may have given rise to a decision to exclude them from sharing fishing assets... "Maybe the... Treaty of Waitangi Fisheries Commission... is afraid we will get the numbers to prove that we do represent a large number of Maori,"... said... [a] Manukau Urban Maori Authority spokesman... The Waipareira Trust chief executive... said the decision... that up to \$350 million of fisheries assets should be shared between iwi on the basis of their territories and populations... was a step backwards and one of the worst made in recent Maori history[, while the]... Alliance co-deputy leader... said: "The Sealord deed of settlement says the beneficiaries are all Maori. This formula does not meet that definition." The commission chairman and Ngai Tahu leader... strongly rejected suggestions that the commission was disenfranchising and disowning a sector of Maori living in cities who could not identify their iwi[, and]... said he hoped the decision would not face more court action.

...Urban Maori are prepared to fight in court the... Commission's proposed allocation model for Maori fishing assets... following its rejection earlier this week by Far North Maori... At a hui[('meeting of tribes for discussion')] with commissioners in Glen Eden yesterday, urban Maori representatives claimed their offer to take 20[%] of the cash assets was generous – given that almost 80[%] of all Maori lived in cities.

...Urban Maori have been pitted against their rural cousins in a decision they say has dispossessed them of up to \$350 million worth of future fisheries settlements. They plan legal action to overturn recommendations made... by the Treaty of Waitangi Fisheries Commission... Maori without tribal ties fear... miss[ing] out on the job creation and health and education schemes iwi groups are planning from the asset divvy up... condemn[ing] them to state dependency. "Why should they go back to their tribal areas when there's nothing for them? Some of the greatest poverty is in the rural areas. There's no work and very little opportunity there," says the chief executive of West Auckland's Waipareira Trust... He wants the allocations to recognise that many Maori have lost their traditional tribal links and look to urban authorities to provide opportunity. "...Even at war Maori traditionally never left their dead behind, but that's what's happening to... urban Maori..."... A... veteran fishing rights campaigner... said the commission's decision was just plain wrong. It penalised someone born in Otara and not on the coast, suggesting that the distribution could[']ve been made instead through the Maori seats[in Parliament]... The assets at stake include cash, quota and shares in the Moana Pacific Fishing company, handed over by the Crown as part of an interim treaty settlement, but not including the assets of the 1992 Sealord deal.

...The new model for the allocation of... Maori fisheries assets... may still face a rough voyage, but those who launched it are glad it is at least off the drawing board. The chairman of the Treaty of Waitangi Fisheries Commission... almost embraced the stormy seaworthiness test ahead

yesterday, saying the model “will make everyone, we hope, almost equally uphappy.” ...The Sealord deal was trumpeted as settling once and for all commercial Treaty of Fisheries claims on fish[, but since it]... was signed in 1992, not a year has passed without at least one organisation taking the commission to court... From the start there was conflict over how the distribution of the multi-million dollar quota and assets should be made by the... [c]ommission. And it went all the way to the Privy Council... The council of law lords quashed... an appeal court decision... allow[ing] urban Maori with no tribal ties to individually benefit from Maori fisheries assets... and referred the case back to the High Court. At the time of the legal battle, Maori were upset at the thought that a group of people in England could decide who was Maori and who wasn't... Maori have a tradition of sharing, a tradition of welcoming. When Maori go onto a marae outside their area, the hosts have an obligation to ensure their visitors are well cared for, including meals and a place to sleep, to uphold the mana of their tribe. However, it seems that when it comes to distribution of wealth, all of a sudden urban Maori don't exist, don't have the right to share in the benefits and do not have iwi links... The words of Matiu Rata in the build-up to the signing of the Sealord deal... have grown prophetic. “We may have landed the fish... but our troubles will begin when we cut it up.”

...[The Court of Appeal decision to allow urban and tribal Maori to argue the allocation of fisheries assets before the Privy Council again is contrary to the will of most Maori, says the Tainui iwi. A Tainui spokesman said the decision was frustrating. “It's got to stop at some point. More than 70% of iwi have accepted the model. It's not a perfect model but the commission has gone as far as it could and it's time to allocate.”] In another development, [t]he Chatham Islands iwi have been promised a separate Maori fisheries quota deal. The Treaty Tribes Coalition chairman... said the deal would deliver inshore and deep-sea quota to the[Chatham's 4] Maori iwi... and establish a special Chatham's fishery for the exclusive use of local Maori.

...Three North Island Maori tribes have united to rock the waka at a meeting tomorrow to approve a model for carving up... fisheries assets... saying the model will entrench inequality between northern and southern Maori. A Maori rights campaigner... said the commission model would give the 30,000-member Ngai Tahu tribe of the South Island 31[%] of fisheries assets while a larger northern tribe would get just 2.1[%]. The commission already faces a court bid by urban Maori to receive benefits from fisheries without having to establish iwi roots. Now, the Tainui and neighbouring Maniapoto and Raukawa tribes have... shun[ned] the carve-up proposal... But the commission chairman and Ngai Tahu negotiator... said the northern tribes overlooked two large sea areas not adjoining coastal fisheries which would be allocated based on population.

...The division between urban and iwi Maori came no closer to being healed at a national urban Maori rights hui in Mangere... over the weekend.

...at a hui held at Parliament yesterday... Maori groups fighting over distribution of fisheries quota... agreed to give the Treaty of Waitangi Fisheries Commission [more] [time to develop a]n alternative... model for distribution...

The chairman of the Treaty of Waitangi Fisheries Commission... might try to broker a deal between Maori tribes and urban authorities in the wrangle over fisheries assets allocation. The urban authorities were a “political reality” that had to be dealt with, he said... [while adding] that Maori could not afford further legal delays that have soaked up money and time since the commission was established in 1992... The commission is dealing with about 70 iwi[, but]... urban authorities... want a slice of the assets, arguing that they are more relevant than the traditional iwi. The commission's view is that the settlement is in exchange for fishing rights that belonged to iwi, therefore... can go only to iwi. It is then up to iwi how to distribute the benefits of assets to its people, including those who live in urban areas... [Meanwhile, about] a thousand Maori have identified their tribe through a helpline set up by the [commission. • ‘Exclusive fishing zones allowing Maori communities to harvest and protect their customary quota are expected to be created around South Island and probably North Island coasts’ in 1998. But ‘a new High Court ruling will help to block Maori from arbitrarily hauling in large catches of fish claimed as a customary right. Definitions of the gatherings for which fish can be caught have also been clarified’ ...

‘NZ has one of the best managed and most sustainable fisheries resources in the world. It is a renewable resource that works for us, our children and their children too. It earns a valuable \$1.4 billion in overseas exchange and employs over 20,000 Kiwis. When the taxpayers of NZ gave Maori \$150 million to purchase its half share of Sealord, BIL purchased the other 50%. We – *Sealord Consortium Ltd* – believe that BIL's 50% share in Sealord, NZ's largest fishing company, is about to be sold to foreigners. Selling access to our fisheries is akin to selling our heritage and must be opposed. Surely the government has a duty to make sure ownership stays in NZ for the benefit of all NZers. Other countries including the UK, USA, Canada, Japan and Korea are far more protective of their fisheries and would not allow foreigners to own over 24.9% of their resources.’

...[NZ] fishing company Sealord has lost all its Korean orders in the past month. Korea takes 8[%] of the company's sales... [In related news, a] Maori commercial fisherman found with more than a tonne of scallops over quota has escaped criminal charges through his “birthright.” Customary Maori rights to seafood saved him from the law after he harvested three times his commercial limit of 600kg in one day... [He] had charges of exceeding the maximum number of shellfish and the taking of shellfish without a licence dismissed. The court decision opens the way for Maori to gather as many shellfish as they like in certain parts of the country. But the judge said the decision did not mean it was open slather for Maori.

...yesterday[Labour's associate fishing spokesperson]... condemned a court decision which allowed a Maori commercial fisherman... to take more than a tonne of scallops over... quota at Matauri Bay on the last day of the scallop season. “The whole process is a farce – total and utter humbug,” said... [the] list MP... “It's an open door to abuse and occurs when we get judges who are afraid to make decisions in case they offend somebody. People who live in the community and know those involved see it as a joke and a blatant abuse of Maori customary right.” ...[but the fisherman, who] had argued in court that he was not planning to sell the scallops, said [the MP] knew there was a deeper issue behind the case. He said he was one of many Maori who had lost their commercial fishing quota rights, and customary rights were all they had left to carry on working. “...You've got Japanese that own quota, you've got Yugoslavs that own quota. I'm a Maori... I've been a fisherman all my life... and I've got nothing.”

...A fisherman acquitted on charges of unlawfully taking... more than a tonne of scallops over... the legal... quota is welcoming calls for a High Court review of his case... The decision... to dismiss charges of exceeding the maximum number of shellfish and taking shellfish without a licence has sparked criticism from politicians, who say Pakeha judges are scared to come down hard on Maori exceeding limits. In court [the fisherman] denied he had planned to sell the seafood, saying that it was for two hui. He had also claimed it was his birthright to take scallops and under tikanga Maori (Maori customs) he did not have to consult anyone to fish in ancestral waters... “The issue is not about my 40 bins of scallops. All the scallops I took were to be eaten by N[Z]ers. What about the 100,000 tonnes of scallops that are exported overseas every year... As far as I am concerned the judge has made his decision. The prosecution gave its case and I gave mine. Therefore, I have no problem with an appeal.”

...Maori are demanding the Crown recognise hapu and iwi sovereignty before any regulations on Maori customary fishing rights are established... Maori say the furore ensuing from the... recent court decision dismissing charges of exceeding the number of shellfish and the taking of shellfish without a licence against a Far North fisherman... highlights the need to establish a set of rules regulating the practice... A Te Arawa kaumatua... said that in the old days, Maori went to war over a breach of fishing law. “There is no way a member from another tribe can come into our tribal area... and do what they want. They would soon be dealt with.” A Tauranga elder... said... “...Our harbour has been raped... Nowadays... [y]ou have to be lucky to get enough... for a good feed.”

...Dwindling shellfish stocks are worrying Maori, who want their traditional food sources better protected. Some... like Tainui, want their application to take over the management of their traditional fishing grounds fast-tracked... Auckland's urban sprawl meant growing pressure on those fisheries. Sewage, stormwater and industrial pollutants had also taken their toll... Experts agree that pollution and harvesting contribute to falling shellfish numbers. In response, the Ministry of Fisheries has stepped up its shellfish monitoring programme and tightened daily bag limits. Enforcement measures will be bolstered by extra money this year. But[the] general manager of the Huakina Development Trust (the

environmental arm of the Tainui Trust Board), said that was not enough. The Manukau Harbour was once a plentiful “food basket” for the Tainui tribes but shellfish was now “one-tenth the quantity it was in the 1950s. Education is not enough. You can tell people all you like but some of them are still going to overdo it. We need to monitor the jetties and come down hard on them. But the ministry doesn’t have the resources. Why look a gift horse in the mouth? There are 23 marae willing to participate in the monitoring.” ...[a] resource management co-ordinator for Ngati Whatua, said the iwi traditionally gathered food from Mahurangi, Kaipara and the Waitemata harbours... “The depletion has escalated in the past 15 to 20 years. Ngati Whatua has been hardest hit in a sense because of the sheer number of people in Auckland and the pressure is spreading to Mahurangi and Kaipara,”... The iwi feared the introduction of “no-take” marine reserves... to protect fish and shellfish populations... could shut them out, denying them their traditional right to gather kaimoana for ceremonial purposes...

An unlikely alliance of environmentalists and commercial fishers is demanding officials get tough with shellfish poachers. Two and a half thousand scallops were seized at Clarks Beach in Auckland at the weekend after extremely low tides left the shellfish exposed to gatherers from the shore... The Ministry of Fisheries is still deciding whether to prosecute the 110 people caught... with more than the allowed 20 scallops each, but angry commercial fishers and environmentalists say poachers have got off too lightly for too long. [A member of the RFBPS] said that more money should be put into protecting fishing regulations. The rules were there to protect fish stocks and should be enforced, he said. “People think that if they can get away with it, do it... We have to get the message across that they can’t.” [An Auckland fishing] industry executive... said people had been given ample warning of bag limits and what breaking the rules could mean. Rogue members of the commercial sector faced stiff penalties for flouting regulations and recreational harvesters should be treated the same way... The maximum fine for exceeding catch levels is \$10,000. Equipment such as boats is usually forfeited.

...Auckland fisheries officers say enough is enough... and... [they] would get tough with people found with too many shellfish... Extremely low tides have provided a bonanza for shellfish gatherers, not all of whom are prepared to obey the rules. The Ministry of Fisheries’ Auckland regional compliance manager... said fisheries officers had been run off their feet dealing with people taking more than their fair share of mussels, whelks, scallops, oysters and other marine delicacies. In one case, two people at Piha had nearly 700 mussels, when the law said they could take no more than 50 each. While holidaymakers from other countries might justifiably plead ignorance of fisheries regulations, in most cases that excuse did not wash... “People usually say they didn’t know about the limit, but often they are people we have spoken to before.”

...Piha residents are moving to ban shellfish gathering before thousands of summer visitors arrive to pick the shoreline clean. Many locals at the popular West Auckland surf beach are fed up with watching carloads of people strip the rocks of mussels, whelks, cats eyes and sea lettuce...

Piha residents... have decided to impose their own voluntary ban on shellfish-gathering from the... beach after learning that statutory restrictions could not be adopted in time for this summer. Although the ban will lack legal clout, residents hope the public will respect their wishes and leave the shellfish beds alone... Locals... were worried that shellfish stocks could not survive the onslaught of an ever-increasing number of summer visitors... They lobbied the Ministry of Fisheries and other authorities for a temporary ban on harvesting but were unable to secure any immediate action. It is understood that extensive consultation and the adoption of specific regulatory powers are required before a statutory ban can be instituted... Such powers can be invoked where there is a disease outbreak, a serious decline in abundance or reproductive potential of species, or a significant adverse change in the aquatic environment... A community action group... spokesman... said he had collected data and photographs showing how depleted Piha shellfish stocks were compared with neighbouring reefs.

...Enforcement of shellfish bag limits at Piha will be toughened to combat unscrupulous seafood gatherers who have devastated marine life on the... beach. The Minister of Fisheries... yesterday met Piha residents who are angry about the plunder. He said he was concerned at the evidence they presented... However, he said a ban on gathering marine life at Piha could not be put in place before... next year. He said lowered shellfish bag limits was a long-term management option[to prevent beds becoming ‘extinct, as has occurred with cockles at east Auckland’s Cockle Bay’]...

Fisheries officials are turning to ethnic media services... to publicise daily bag limits... to help stamp out illegal shellfish gathering... [by the] rising number of non-English speaking immigrants... But... the... Auckland district compliance officer... was quick to point out that immigrants were not the only offenders and they copped some unfair criticism.

...Multilingual signs... installed by the... Ministry of Fisheries... spelling out shellfish bag limits are encouraging people to take more seafood from Piha, says a lobbyist... “It may be a coincidence, I can’t prove it was the signs, but there was a massive increase in harvesting after they went up,”... A Ministry of Fisheries compliance officer... said the ministry had a responsibility to inform people of their legal entitlement. But he conceded the education process could be a double-edged sword. People who usually took only a dozen mussels for dinner might take more once they realised they were allowed 50 a day... Piha was the only beach with multilingual signs on permanent display and the ministry had no plans to install any elsewhere. A policy analyst... said the ministry was considering smaller bag limits for heavily populated regions like Auckland.

...[a shellfish lobbyist] looked at the pouring rain at Piha yesterday and declared: “What a beautiful day. As far as I’m concerned it’s been a cracker.” He was pleased because the rain discouraged harvesting of marine life at the west coast beach where residents have put up a voluntary ban on shellfish gathering... But even in the rain, [he]... and other Piha volunteers had to “encourage” about 100 people against harvesting from the rocks where cats’ eyes, whelks, limpets, barnacles, sea lettuce... starfish... and adult crabs were once common. “We cannot enforce it but we can beg, plead and encourage people not to take them,”... The... Ministry of Fisheries... supports the ban, and its compliance officers will inform the gatherers of its existence. But they will also advise people of their legal entitlement to take 50 mussels per person per day and a mixed bag of 50 other species... For that reason [the lobbyist] wishes the officers would stay away.

...[‘Shellfish gatherers have declared war on plans to cut daily bag limits in the upper North Island. The Ministry of Fisheries said yesterday that it aimed to slash bag limits by up to two-thirds to stop overfishing. But the Recreational Fishing Council said the problem was a result of harsh bag limits imposed in Auckland, which had caused busloads of city people to plunder stocks further afield. The president of the council said limits should be imposed on parties of people rather than individuals to discourage the busloads from Auckland. Present bag limits outside Auckland are 250 for oysters, 150 for cockles, pipi and tuatua, and 50 for green-lipped mussels.’ Ironically, ‘the ministry has announced plans to cut the number of honorary fisheries officers’...

‘Lawlessness on beaches is putting fishery officers at increasing risk of attack as they try to enforce amateur bag limits, bringing in undersize fish or catching fish in marine reserves. Some places have become virtual no-go areas for honorary fishery officers without back-up from Ministry of Fisheries staff and police. As well as facing frequent verbal abuse and generally obstructive behaviour, fishery officers have been assaulted, threatened with death or had their vehicles vandalised, while beachfront signs telling the public what the rules and regulations are have been cut down. Tough amateur fishing rules, with instant fines of up to \$3000 for first-time offenders while anyone taking more than three times the daily bag limit will be presumed a commercial poacher and face court action, will take effect in just over three weeks, and fishery officers hope then to be taken more seriously by people who object to having their bags or boats inspected. But there are worries that the threat of fines, which are expected to start at around \$250, will make some people more aggressive. However, honorary fishery officers will not be expected to issue the infringement notices.’ Editor’s note: commercial and recreational fishers are allowed to dredge for scallops, etc., without their quotas taking into account the number of fatally injured shellfish that aren’t collected or other seabed damage.]

...A study into the impact of vehicles on shellfish beds along Ninety Mile Beach will start early next year. A scientist will establish the number of beds along the beach and track vehicle routes to see if and how they cause shellfish depletion. The study is expected to take between three and... [six

months. In the meantime, a [l]gal bloom is once again making its presence felt in Northland, prompting a warning not to eat shellfish from Whangarei Harbour. The plankton responsible for neurotoxic shellfish poisoning has been found at the entrance to the harbour, although the area is not yet closed to shellfish harvesting... Northland Health[']s shellfish coordinator... said the public should... be cautious in taking shellfish from any area of the coastline if the[y] appeared sluggish in closing their shells, or if there were many recently dead or dying shellfish in a bed or rocky area.

...[']People are warned not to take or eat any shellfish from the Manukau Harbour. Auckland's Public Health Protection Service closed the area to shellfish collecting after testing found higher than acceptable levels of shellfish poison. The closure includes scallops, tuatua, cockles, pipi, pupu, kina and oysters'...

'28 Warkworth oyster farms have been forced to close for two months after raw sewage was pumped into the local river from the town's sewerage plant when 200 litres of oil destroyed its ability to treat the sewage. The farmers stand to lose about \$100,000 after Auckland Public Health and the Ministry of Fisheries imposed the temporary ban on farming oysters 7km downstream in the Mahurangi Harbour.' On a positive note, 'the first produce of the Bluff oyster season is about to be air-freighted to Christchurch supermarkets. They will sell for about \$1 each (pre-shelled per dozen) until more supplies arrive.'

...*Let the 'whitebait wars' begin* 'They call it pleasure. As a biting sou'wester howls up the Waikato River and rain pelts its dirty banks, diehard whitebaiters try their luck on the opening day of the season. But if there are any whitebait out there, they mostly kept to themselves. Yesterday marked the start of the season for most of the country, but West Coasters – who claim their bait is the best – will have to wait another two weeks. In the Waikato, whitebait numbers have declined significantly over the years as their habitat is destroyed and degraded by runoff from dairy farms, human effluent and competition from exotic weeds and fish. The DoC ranger for the Waikato says overfishing – there is no quota – contributed to the problem. In the 1950s about 120 tonnes would be caught in the river. Now only about 5 tonnes are caught each season. Pollution in South Island rivers has led to a warning from the Southland Recreational Whitebaiters' Association that bait should be washed three times, frozen and then washed again before cooking, to kill any bacteria. Although whitebaiters do not need a licence – but you must have one to build a whitebaiting stand – they can be fined up to \$5000 for using oversized nets or fishing too close to confluences (where rivers meet). Many baiters fish from the same stand year after year and do not take kindly to others snaking in on their turf – "riots" happen from time to time. For those who do not fancy braving the elements whitebait comes at a cost – up to \$110 a kg in Auckland last season.'

...*'a six-month operation by the Ministry of Fisheries has smashed a paua (abalone) poaching ring which had been operating in the Wellington area for at least a year. An estimated 4000 paua, believed to be worth \$30,000, were seized in the culmination of Operation Iceblock. A ministry spokeswoman said it was suspected that Asian restaurants in Auckland were the destination for the paua. The maximum fine for buying illegally obtained paua is \$250,000. The paua seized this week would be sent to a cannery where it would be processed for export and the proceeds collected by the Crown.'*

...*'Hard-core groups of criminals are plundering Wellington's paua stocks, with up to six separate groups of poachers still active, says the Ministry of Fisheries. It says groups are armed with spears and knives and considered dangerous. Although the legal daily limit is 10, provided the shell is longer than 125mm, the gangs are often taking between 600 and 700 a day. Paua meat normally retails at up to \$90 a kg but is available on the black market for as low as \$20 a kg.'* By the way, 'Southland paua pearls are selling for up to \$1200 each'...

'The Love Pearl – the ultimate gift for the special person who has everything! Throughout ancient history, pearls have been recognised as a precious gift. A love pearl is a fascinating cultured pearl that takes a minimum of 3 to 5 years to develop. Every oyster is guaranteed to contain at least one pearl – and every colour has a different meaning (*White* – Wisdom; *Cream* – Success; *Peach* – Health; *Gold* – Wealth; *Lavender* – Love). You never know what you're going to get until you open the beautifully presented gift box. *Only \$49.95'...*

'A pearl is a gem made by certain animals that live within shells called *mollusks*. A pearl is formed when a grain of sand or other small object gets between the hard outer shell and the inner coat, called the *mantle*. The mollusk surrounds the irritation with *nacre* (or *mother-of-pearl*), a secretion from the mantle. The result is a sore spot for the oyster but a beautiful jewel for man. Some may be pink, bluish, grey or black. Many mollusks produce pearls, but only two types produce precious pearls. These are the genera *Meleagrina* of the tropical seas and *Unio* of fresh water streams. Unfortunately, pearls are perishable. Sunlight and skin acids are injurious to them. Pearls should be kept clean and wrapped in moist coverings when not in use. With care, they last over a hundred years. The average pearl takes about seven years for its development. Its value is determined by size and lustre. The largest pearl found was about two inches in diameter. The biggest pearl oysters are found in the South Seas. The coasts of AUS, Venezuela, Malaya, Mexico and lower California are other important sources of pearls. *Cultured* pearls are real pearls but the original nucleus was inserted by man.'

...*'Japan supplies 99% of the world's cultured pearls, known to the Japanese as the "tears of the moon".'*

...*'A tiny black-striped mussel found in a Darwin marina last week was one of the greatest threats ever to face AUS's \$A350 million a year pearling industry, Paspaley Pearls said yesterday. The company, which started in the 1930s and now provided about 80% of the pearls AUS exported, had begun a massive programme to monitor all its pearl farms stretching 1500km along AUS's north-west coast once every three weeks. A Paspaley research officer said the saltwater zebra mussel "can form layers several inches thick. They will smother our shells. All our lines will sink under their weight. The boats will become fouled and the heating systems and water intake pipes clogged. The worst case would be if they ever reached the 80 Mile Beach near Broome in Western AUS. The wild oyster beds down there are the most valuable pearl oyster beds in the world."* Darwin's luxury Cullen Bay marina has been quarantined since Wednesday last week. Boats are not able to enter or leave. Darwin's two other marinas were also quarantined when small numbers of the mussels were found in them. Over 100 tonnes of chlorine have been poured into Cullen Bay and today about 2.5 tonnes of copper sulphate was added. The Northern Territory's Primary Industry and Fisheries Minister said he hoped the treatment would kill all the mussels in a few days. However, all other marine life in the 600 million litre marina would probably also die as a consequence.' Editor's note: 'mussel exports are worth \$118m per year to NZ'...

'The Government should expect a Treaty of Waitangi claim laid against it if it removes the moratorium on permits for commercial harvesting of seaweed.'

...*A controversial new marine crop... could become a multimillion-dollar industry[for NZ]. But conservationists say the "alien" undaria seaweed could damage the native marine environment... The seaweed... worth \$295.46 million each year to Japan as a foodstuff... was carried into N[Z] on overseas shipping in the early 1980s and became established in Wellington before spreading to other ports... and the Marlborough Sounds... The R[FBPS] is appealing against two applications to the Marlborough District Council to farm undaria... A D[oC] senior conservation officer... said the department would not oppose undaria farming where the seaweed was established, but would seek to protect areas it has not yet colonised... "As far as what it will do to the native ecology of the Sounds, only time will tell..."*

...*The R[FBPS] has[] called for tougher measures to protect the environment, branding... the 1980 Convention on Conservation of Antarctic Marine Living Resources... as toothless. "The major problem with CCAMLR is it can only enforce its measures through the goodwill of its member states..." CCAMLR has no powers of enforcing its quota system and there is no uniform inspection and surveillance programme for members to adhere to. It has no police force and no influence over the countries that are not part of CCAMLR – the commission can only urge countries to join. The annual CCAMLR summit in Hobart... will investigate how it can toughen its stance. [A RFBPS spokesperson] said expanding fisheries in the Southern Ocean was the greatest threat to the integrity of protection in the Antarctic region since mining was taken off the agenda seven years ago. Toothfish... is the latest major fishery to develop... Meanwhile, an environmental agreement made in Spain six years ago is expected to be rubber-stamped at the treaty meeting... The Madrid Protocol covers waste disposal, marine pollution and the conservation of plants and wildlife and will protect the frozen wilderness before technology makes digging it up commercially viable. It will limit the dumping of raw sewage into the sea, fuel spills, and emissions into ultra-clean air from rubbish burning, as well as ban mining on the continent for 50 years.*

...The 21st Antarctic Treaty Consultative Meeting started in Christchurch yesterday with 260 delegates preparing to lay the foundations for tough environmental measures. N[Z] officials hosting the... conference had hoped a new agreement... would come into force at the meeting... Russia and the U[S] last month joined 23 other treaty member countries in ratifying the deal in their own legislation. But... Japan has yet to pass the new frozen continent protocol... The 26 Antarctic Treaty member countries will have to wait until the end of the year when Japan is likely to have ratified the agreement made in Madrid... [Meanwhile, tensions] rose between long-standing rivals Greece and Turkey yesterday as each country accused the other of being at fault over a near-collision between naval ships in the Aegean Sea. Defence Ministry officials in Athens said a Greek navy minesweeper brushed against a Turkish patrol boat on Wednesday in international waters between the two Greek islands of Chios and Lesbos... [The] Turkish Defence Minister... described the incident as “street bullying” by Greece... A statement by the Turkish Foreign Ministry said the Greek minesweeper hit the Turkish patrol boat that had come to prevent the Greek ship from “harassing” a Turkish submarine... No injuries were reported on either side. - 1997

Seven-tenths of the world's surface is covered by sea, and most of the important trade routes, carrying raw materials or manufactured goods from country to country, cross the major oceans. Because they are used by everyone with access to the sea (all but about 30 of the countries of the world), such routes have traditionally been regarded as “international”, with no one enjoying exclusive rights... [I]n normal times merchant ships have the right of free passage... More recently, two problems have emerged. First, as mineral resources such as oil or manganese run out on land, countries have looked increasingly to the oceans for replacement stocks. In... the waters of Antarctica, mineral deposits are known to exist, apparently waiting to be exploited. However, if such deposits are situated in international waters, an obvious difficulty arises, for no one has the right to take them. If the minerals lie in such waters, they should belong to the world as a whole, but since only a few countries have the expertise to exploit the minerals, the only ones to profit would be those countries or their companies. This, in turn, would make the division between “rich” and “poor” worse, because poor countries could not afford minerals... One solution... [is] to divide the oceans into Exclusive Economic Zones (EEZs) – an idea put forward by the Law of the Sea Conference in 1982 – but this leads to the second of the major problems... EEZs overlapped (an inevitable consequence of 167 countries competing for access to the riches of the sea). Problems... also arise if the EEZs include... so-called “choke-points”... There are many such choke-points – areas of narrow or man-made “canals”... Since 1948, Israel has been to war with Egypt on at least two occasions (October 1956 and June 1967) to ensure free access to the Suez Canal and its port at Elat; Britain and Spain have failed to reach agreement over the Strait of Gibraltar... Argentina and Chile have nearly gone to war over the Beagle Channel... [and] EEZs belonging to Indonesia and Malaysia threatened free passage of the Strait of Malacca, vital to trade and communications between the South China Sea and Indian Ocean... In the Aegean... many of the small islands are part of Greece and, if the Greeks insist on the right to impose territorial waters... the Turks would be excluded from any mineral exploration or exploitation arrangements. This has, in fact, led to a crisis between the two countries which has gone on for some time: occasionally, as in March 1987, the Turks “test the waters” by sending out exploration vessels, supported by warships – something which the Greeks respond to with threats and naval manoeuvres. A crisis is always on the cards, requiring international diplomacy – exercised through the North Atlantic Treaty Organisation (NATO), to which both countries belong, or the U[N]. Similar disputes exist... in the Barents Sea... in the Okhotsk Sea... and... between Britain and Iceland in the waters of the North Atlantic. The latter led to the so-called “Cod Wars” of the 1970s as Icelandic fishery protection vessels tried to prevent British fishing boats from operating within 320 km (200 miles) of Iceland... All this makes the sea a potential source of conflict and adds weight to the need for workable international laws. The 1982 Law of the Sea Conference... did little to solve the problems and, with the future of Antarctica in the balance, something more is clearly needed. At the moment, Antarctica is divided into a number of “zones” of influence, administered by A[US], Britain, Norway, N[Z] and France, but as the mineral resources of the area become more and more vital, other countries are going to demand a share. Both Argentina and Chile have claims in the area. The 1961 Antarctic Treaty did not settle these.

A LEADING Antarctic scientist is urging caution over allowing increasing numbers of tourists to visit the continent until studies show what impact they are having on the environment. Nearly 10,000 tourists went to Antarctica last year, about the same number planned for this coming season, compared with 3000 five years ago. In Britain, a book, *Antarctica: The Travellers Guide*, is about to be published. But [a NZ] geo-chemist... says... “There are signs the current activity of scientific parties down there is having a noticeable impact. What is going to be the impact of lots of tourists?” Tourists pay big money, up to \$5000, to go to the ice on cruise ships. The majority come from the U[S], Germany, Britain and A[US]... While large numbers of tourists who go to Antarctica don't set foot on the ice – many stay on ships – those that do, go to the same locations... “The problem is you can see where people have been on the ice. There's no vegetation to cover where they've been. The ecosystem down there doesn't recover quickly. Footprints last for decades.” ...There are no laws governing the conduct of tour operators, but each country which administers pieces of the continent has agreed to a set of guidelines under the Antarctic Treaty environment protocol. Tour operators visiting the N[Z]-administered Ross Island are accompanied by a representative from the D[oC] or Antarctic N[Z]. However, the geo-chemist... said Antarctic N[Z] was in a difficult position because he believed it didn't have the resources to manage controls over tourists... Accidents do occur. The tourist and supply ship *Bahai Paraiso* spilled oil when it was grounded on the Antarctic Peninsula, and other large cruise ships have also run aground, requiring expensive rescue and repair operations... Meanwhile, three FBI agents are due at the U[S] Antarctic base at McMurdo Sound to investigate an assault case. A fight broke out between two cooks in the galley on Wednesday, in which one attacked another with the claw end of a hammer. A third cook who tried to break up the fight was also injured. Winter stress has been a factor in Antarctic exploration since the first expeditions. In the 1950s, a violently deranged staff member at A[US]'s Mawson base had to be locked in a storage room for the winter months. Only the base doctor could safely approach him. The doctor at Argentina's *Almirante Brown* station couldn't stand the isolation as winter closed in during 1983. He forced his own evacuation, and that of his colleagues, in the only way he could – he burned the station down... [In addition to the current problems at McMurdo, AUS]'s Casey base is embroiled in staff conflict. The A[US]n Antarctic Division confirmed yesterday it had taken the unusual step of sending a mediator to Casey to deal with an “interpersonal dispute” among the 15 winter-over staffers.

...The... N[Z]... Government ratified the U[N] Convention on the Law of the Sea earlier this year... For some years it has been thought that the convention allowing nations to exploit rights to resources beyond their 200-mile zones could set N[Z] and AUS] against each other in a dispute over ownership of the Tasman Sea seabed. Seabed disputes have been settled in the past with A[US] and Indonesia signing the Timor Gap Zone of Co-operation Treaty in 1989 after both countries had overlapping claims to part of the Timor Sea. N[Z], like AUS], is one of the few countries in the world able to take advantage of the complex formula in the convention to claim rights to the edge of its continental shelf... A[US]n sovereignty over its mid-Tasman islands is not affected by the convention which applies only to the seabed. - 1996

N[Z] is about to get a say in defining countries' undersea frontiers... A[n A]uckland... is spearheading a... N[Z] drive to claim... more territory. With one of the world's largest continental shelves, this country has much to gain if it wins international agreement to extend its underwater frontier beyond the 200-mile exclusive economic zone. Potentially lucrative oil and mineral rights are at stake... [The Auckland], a maritime boundaries expert who helped to draw up boundaries between Iraq and Kuwait after the Gulf War, will be N[Z]'s representative on a U[N] panel juggling countries' claims to the seabed. He will not be allowed to vote when N[Z]'s claim is considered. His job is to put our case and correct any

errors made in assessing it. By winning a coveted seat on the 21-member UN Commission on the Limits of the Continental Shelf, N[Z] is in a good position to argue its case. Since ratifying the UN Convention on the Law of the Sea last July, N[Z] has 10 years to lodge any claims. The Government expects to spend up to \$40 million on extensive surveys to support its claim, and late last year began joint seismic fieldwork with A[US] in the Lord Howe Rise and Fiji Basin. Negotiations will have to take place between Canberra and Wellington if competing claims are made later over Lord Howe Rise and the Three Kings Ridge, out from Norfolk Island. Initial evidence from satellite and hydrographic surveys shows N[Z]'s shelf extending north-[we]st across the Tasman Sea, beyond the Lord Howe and Norfolk Islands towards New Caledonia. It also extends north-east from the Kermadec Islands almost to Fiji and reaches beyond the sub-Antarctic Auckland and Campbell Islands, giving a total claimant zone about 18 times larger than N[Z]'s land mass. [The Auckland, a] civilian head of the Navy hydrographic office's nautical information division, will also represent A[US] and the Pacific Islands at the UN. He says his job is dealing with technical data, and he does not want to "get into the politics" of claims. Past disinterest in deepwater mineral exploration will change as states compete for dwindling resources, he says.

...A summit of Pacific leaders in Tokyo is expected to see Japan reveal how it has taken a strategic lead in exploiting the billions of dollars worth of minerals on the region's seabed, ocean experts said yesterday. "This should be a wake-up call to... A[US, N]Z... and... the U[S,] a)... Bank of Hawaii economist... said. [The] head of the South Pacific Applied Geoscience Commission, said international strategists "should be concerned." [He] said that while the world had lost interest in old mines on land, the Japanese "have been looking for their minerals off shore, and have taken a huge lead in the technology to do it." ...He understood Japan was about to pilot its technology to mine manganese nodules on the seabed which nobody is doing now[, and that]... over the past 12 years Japan had spent \$US100 million... mapping the Pacific seabed and surveying its minerals. "No other country has done this..." ...Japan "knows better than anyone," the wealth contained on the seabed. "The Cook Islands could be the richest spot of all with enormous deposits of mineral wealth within miles of Rarotonga."

...The Cook Islands, one of the world's smallest states, is planning a radical underwater mining operation... 5km deep in the Pacific Ocean... which could see a Norwegian joint venture dredging millions of dollars worth of manganese nodules from the sea-bed... The cobalt in the nodules has been estimated by [a U]S... engineering consultancy[company] to be worth \$US170 billion... The [PM]'s office said the Cooks had obtained a huge grant from the U[S] Trade and Development Agency to hire [the company] to undertake a pre-feasibility study of commercial nodule mining... The Cook's P[M]... said that for years the plan to mine the sea-floor had been dismissed as a fantasy. "Those who have rubbished the plan will get a surprise," he said. The influential South Pacific Applied Geoscience Commission (SOPAC) is opposed to the Norwegian scheme, believing it will not work. It says Japan has the only proven technology... The Cooks has quietly moved ahead with Norway and made no public statement about their memorandum of understanding... until asked... [The consultancy company is] proposing to build bulk carriers to take the nodules all year round to a new smelter and refinery it suggests be built in [NZ] near the Marsden Point oil refinery. Sources say the smelter is dependent on cheap electricity and might be built instead in Indonesia... "The basic criterion for the Cook Islands operation is the production of 2652 tons of cobalt per year, which represents approximately 10[%] of the current world consumption of the metal," [the consultancy company] says. "In order to produce such quantity, 1,097,360 tons of wet nodules must be harvested and processed annually." The... plan would cost around \$600 million.

...Leading Pacific scientists have cast doubt on the future of a multi-billion dollar undersea mining operation planned by the Cook Islands... The idea of bottom trawling at such depths involved "monstrous draglines" with major engineering implications. It was not known – because it had not been done – whether such lines would even work... The other difficulty with the Cooks proposal was the price of cobalt and nickel. "There is about to be a flood of cobalt on the market with Canada opening huge new mines,"... These alone would quadruple world cobalt production. If it proved possible to bring up the Cooks nodules this would suppress cobalt prices further. Land-based miners could be expected to vigorously defend their prices and contracts. The environmental impact of bottom dredging was also uncertain.

...The Ministry of Commerce is considering a partnership with the mining sector to attract further foreign investment. The ministry believes the local industry undersells itself and needs to work on both its public profile and corporate investment pitch to win new supporters. The minerals industry, including precious metals, coal and petroleum, is already a \$1 billion a year sector that generates export income of \$250 million. But it suffers from a public-image backlash because of perceived environmental unfriendliness. The ministry is concerned mining is seen to be contrary to N[Z]'s clean and green image when in fact the industry here sets international best-practice for safe and responsible performance. The Minister of Energy... who is responsible for minerals licensing, has suggested the mining industry get into the business of persuasion... "...the mining industry... must... begin to effect widespread change in public perception, achieving a more positive public opinion, thereby improving public policy,"... - 1997

Newly released cabinet papers show that A[US] was reluctant to sign the nuclear non-proliferation treaty[(r:p150, lns14-17)] partly because it wanted the right to use atomic explosives in mining... Yet at the same time, the Government worried that if it refused to ratify the treaty... it could be diplomatically cold-shouldered by the U[S], and denied knowledge and equipment for its... nuclear power station at Jervis Bay, on the south coast of N[SW – the]... Jervis Bay atomic power plans were[eventually] dropped in favour of the still-controversial research reactor at Lucas Heights in Sydney[–] and... the development of other nuclear technology... The dilemma produced the diplomatic sidestep of deciding to sign, but holding back on ratification and hedging the signature with qualifications in the hope of gaining better terms before the pact became final... [The use] of nuclear explosives for excavation in major mining and civil engineering projects[w]as advocated by the mining magnate Lang Hancock, who in 1952 discovered the world's richest iron ore deposit in Pilbara... [In local news,] Dunedin company Silicon Metal Industries has launched a feasibility study for a \$180 million silicon metal manufacturing operation in Southland. The proposed project is a quarry and smelter for processing silica gravel into 45,000 tonnes a year of solid silicon... Most of the product will be exported through Bluff, with a small portion being consumed locally, the company said. The operation is considered viable because N[Z] has a unique combination of vast high-quality resources of the raw material and some of the cheapest power in the world. Silicon Metals Industries... is 70[%] owned by Commonwealth Resources, which in turn is majority-owned by Commonwealth Gold of London. Commonwealth Resources was set up 5 years ago to look for gold and platinum in N[Z]. Silicon metal can be used in both high and low technology applications, including resins, medical implants, cosmetics, motor vehicles, and in the manufacture of semi-conductors for the electronics industry.

Western economies have become more dependent on mineral imports in recent years as a result of the "second industrial revolution". High technology industries, for example, require a growing amount of special steels and alloys. Cobalt is essential for computers. The American space shuttle programme uses 20 critical minerals, most of which have to be imported... In the U[S], domestic production has declined because it is no longer cost effective. Sixteen of the country's 27 copper mines have been closed because they are no longer internationally competitive... with half the industry's workforce unemployed since 1981... Environmental pressures and the wish to conserve the country's national parks have also forced the closure of all but one plant that is capable of processing chrome. In these circumstances it is not surprising that the U[S] has expressed serious concern about its dependence on imported minerals... The... Western powers appear to face the threat of a resource war... We should not leap to the immediate conclusion, of course, that every mineral is "strategically" important, or that its immediate or long term cut-off would be economically disastrous. Strategic importance differs from mineral to mineral and even the industry concerned... We can only determine whether one mineral is more or less important if we have a clear understanding of what each is used for.

Elements such as plutonium and uranium have been considered 'economically important' during the last half of the 20th century because of their use by the nuclear industry and relative scarcity. However, both are potentially dangerous to handle because of their radioactive properties. The elements that have been considered economically important for the longest time, and are also *potentially dangerous to handle* – because many people have been willing to harm or kill others in order to obtain them – are silver and gold.

Life is cheaper than what [they're] digging for.

Put bluntly, the Arawaks... the earliest inhabitants of Jamaica for whom there are historical records... were exterminated by the Spaniards... By the time Christopher Columbus "discovered" Jamaica in 1494, the island appears to have been one of the most thickly populated in the Antilles. The Arawaks were a peaceful people who cultivated maize, sweet potato and arrowroot, and brewed an intoxicating drink from fermented cassava. Above all, the Arawak loved to smoke; the word tobacco comes from their term for their pipes, which were made of Y-shaped tubes inserted into the nostrils... Just before the European discovery of the West Indies, the Arawaks' generally peaceful existence was shattered by the invasion of migrating Carib Indians... The Caribs were fierce and warlike, and were much feared by the Arawak for their nasty habit of eating their victims... But [worse was to come]... Spanish colonists gradually began to settle Jamaica, prodded by vast royal land grants providing for the enslavement of the native population. The accounts of the Spaniards' treatment of the Arawak are truly horrifying, almost pornographic in their description of the violence and genocide visited upon this population. To satisfy the Spanish greed for gold, Indians were forced into mines that proved worthless... [T]housands were worked to death... thousands more committed suicide... Also, the Spanish and the animals they brought with them carried new strains of disease, and a general pestilence among the Indians in 1520 wiped out a large number. In 1598, the Spanish governor took notice that the Arawak were dying off, and proposed setting up a reservation where they could live and cultivate in peace. The colonists objected, saying this plan would deprive them of the Indian labor they needed to survive. By 1655, when the English captured the island, the Arawak had been destroyed.

gold... [is the] most malleable and ductile of all the metals, and one of the most precious... Held in high regard since the dawn of human culture, it was one of the first metals to be worked by prehistoric artisans, and the search for it has helped to shape the course of history, luring whole nations to amazing feats of adventure, exploration of distant lands, ruthlessness, and even national disaster.

...*Black Friday*, in U.S. history, the day (Sept. 24, 1869) when attempts by Jay Gould and James Fisk, aided by officials in Pres. Grant's administration, to corner the U.S. gold market led to panic. Their scheme was thwarted by the government's release of gold.

"Gold," he proclaimed, "is the instrument of gamblers and speculators, and the idol of the miser and the thief... No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty it does not break. It has no friend whom it does not sooner or later betray."

IT'S DOWN-TO-EARTH. IT'S GLAMOROUS... IT'S A TEASE. IT'S A PROMISE. IT'S WITTY. IT'S PROFOUND. IT'S HOT... It's regal. It's ravishing... It's radiant. It's riveting. It's sensational... It's unique. It's unparalleled... Nothing Makes You Feel As Good As Gold. - 1994, World Gold Council

Investment demand for newly mined gold and gold coins accounts for, respectively, 45% and 20% of gold output. Industrial uses in dentistry and electronics, and of course its use in jewellery, account for most of the remainder... The principle applications of silver and silver compounds are industrial: they are mainly used in monochrome photography, in the electric industry and for the manufacture of silverware.

Of all metals, silver is the best conductor of electricity, and, next to gold, of heat... Silver is best known for its use in tableware, ornaments, and coinage... More gold is used in jewelry and watch-making than in industry... Diamonds are mined in deposits of gravel. Rough diamonds look like pebbles. They were formed from the element CARBON under great heat and pressure... It is the only gem that is composed of a single element. It has perfect cleavage. That means that if the stone is fractured by a sharp blow in a cleavage direction, it comes apart smoothly... No chemical can affect it, but temperatures of 900° C... cause damage to it. Since the diamond is the hardest substance known to man... diamonds can be cut only by other diamonds... [N]owadays the search for diamonds is only one phase of a highly-organized industry... Recently, a crude grade of synthetic diamond has been made in special high-pressure machines. These... industrial grade diamonds... serve as watch BEARINGS and as cutting tools.

Nowadays 'even experts have problems identifying between real and the latest imitation diamonds. They also fool most electronic scanners'. Advances in the production of imitation diamonds is likely to mean that real diamonds will increasingly be used only as an investment and to make jewellery.

"I would say diamonds are a sign of power and success..." ...never has so much been spent by so many on so little.

Glittering prizes on offer for rich... PRECIOUS jewellery is something many people admire, but by its nature, few can afford to collect... [A] jewellery consultant for auctioneers... said a true collector was about as rare as some of the gems they coveted... Needless to say, draping yourself in diamonds is not a cheap hobby... [Incidentally, a] con man posing as a millionaire stole jewel[le]ry worth £2 million... from two Americans in London after persuading them to fly from California to show him a suitcase full of gems. The con man told... [them] that he was a relative of the Sultan of Brunei and wanted to buy a wedding present for one of the sultan's sons.

...Three hungry war orphans who found a 100 carat diamond worth an estimated \$US500,000 in Sierra Leone have swapped it for bicycles, personal stereo players and food, according to a report from the town of Bo. The report said that a Lebanese diamond trader had given them the goods in return for the diamond... Meanwhile, the Government has suspended... mining in a southern district where the diamond was found. It gave no reason but sources close to the mineral resources ministry said the aim was to curb illegal diamond digging. [■] 'Raw diamonds worth \$US11 million lay unnoticed for two hours in a freight container thought to be empty in a Swissair freight room at Zurich airport. Swissair said a cargo handler discovered the shipment, from Zaire and bound for London. The sacks went unnoticed because a telex message alerting the Zurich cargo service about the incoming shipment had never arrived. The honest cargo worker was rewarded with 50 Swiss francs from his boss'...

'Little man who won battle of big diamond The one he's rolling around in his fingers is nice – 5.23 carats, nearly the size of a marble. But the diamond that he is talking about is the big one – the one that got taken away. He pinches a gap the size of a golf ball. And looks at the empty space, hard. Nearly 266 carats, the biggest diamond found in Congo in years, the stone had people across the country wearing T-shirts with its likeness and marching to defend his right to it. It forced the 38-year-old diamond dealer to stand up to the ruler of one of Africa's largest countries and win it back. The story began a year ago when awed villagers found the gem at a muddy dig in south-central Congo. They were frightened and hid. Word spread quickly up the rutted dirt roads to the open-air diamond markets of Mbuji-Mayi. Crowds formed in town, waiting for a glimpse. The dealer quickly assembled his own crowd, fellow diamond dealers. Unable to buy the stone individually, they pooled resources – selling cars and mortgaging homes, reportedly – to buy it. Within days, the

group had acquired the stone – for \$US4 million, he says – and he flew to Congo's capital to sell it. He left behind an abruptly enriched village, where an unprecedented Land Cruiser-and-motorbike-buying spree was about to begin. Rejecting the first offer in Kinshasa, the dealer picked up the stone and headed to another office but the President's security agents arrested him before he got there. A stone that big, that valuable, the government figured, must have been found on government land. Security guards took the Big Diamond away, and the dealer went to jail. The government released him a month later. It kept the stone. For investigation, it said. Mbuji-Mayi's people took to the streets, marching, chanting, demanding the stone's return. Smaller protests hit the capital. The government, meanwhile, was hawking the diamond but had no bites. There was talk the dealer had threatened to sue anyone who took his stone. It went on for four months, with traditional chiefs pressuring the government all the while. Eventually the President summoned the dealer. For hours the jowly Congo leader quizzed the dealer on how he got the stone. The President finally said, according to the dealer: "I think it's right to give back the stone." But there were no buyers. After the dealer's experience, no one believed the stone, once bought, would stay bought. After months of trying to sell the rock, the dealer gave up and flew to Tel Aviv to International Diamond Industries, the firm to which the cash-hungry President had sold the right to handle all Congo's diamond exports. Diamond industry press reports had estimated the stone's worth at \$13m to \$20m. International Diamond won't say how much it went for, or who bought it. "We were more than satisfied," a spokesperson says by phone, chuckling. The dealer flew home with \$6 million, he says. He reflects now, reclining on a sofa in a home where safes hold baggies stuffed to the Zip-Loc with diamonds. He smiles, tucks the marble-sized gem in his pocket, and stands to go. Congo is a big country. There are lots of diamonds left to buy.']

...THE smallest diamonds in existence may well be those scattered around the streets of the medieval town of Nordlingen near Munich. Scientists last year announced 70,000 tonnes of gems may litter the area as a result of a meteor strike 14.7 million years ago, but the largest individual gem measured just 200 microns across – a fraction of a pinprick... ['The most famous diamonds came from India until the diamond rush of Africa began in 1867 with the discovery that a pebble being played with by children was a rough crystal. The farmer exchanged all his worldly goods, including 500 sheep, for another stone used by a witchdoctor and sold it the same day for \$56,000. This stone became the Star of South Africa.'] THE highest-quality diamonds in the world are classified "D flawless." Pink diamonds are among the rarest stones, buyers of which are invited to make sealed bids... THE largest high-quality diamond ever found weighed 3106 carats – almost 5kg – and was discovered near Pretoria, South Africa, in January, 1905... [I]t was cut into 106 polished pieces. The second largest... was found in June, 1893... in South Africa. It was cut into 10 pieces in Amsterdam, one of which was sold last year for \$US2.63 million... THE highest price known to be paid for a cut diamond was \$US12.8 million... in 1990 for a mixed-cut diamond of 101.84 carats. The previous year \$US8.7 million, the highest known price[... was]... paid for a rough diamond, weighing 255.1 carats... LAST year saw the largest loan of diamonds in history, when De Beers lent the Tower of London 12,532 stones... for use in an exhibition of Royal crowns. The stones matched in size and number the diamonds used in the Coronation crown of George IV in 1821, the most lavish crown ever commissioned by a British monarch... ● ['Japan and the US account for more than half of the world's annual diamond sales' that] amount to about \$US6 billion, of which as much as \$US1 billion is accounted for by smuggling and other unauthorised trading...

[An operation that 'used pigeons to smuggle gems out of South Africa's diamond region' has been uncovered...

'2 1/2 tonnes of earth must be moved to get each carat of diamond.' However, the volume of earth moved depends on the accessibility of the diamonds, the method of extraction used and the grade of the ore. 'In the Kimberley Province of Western AUS, grades of up to 13.62 carats of diamonds per 100 tonnes of material treated have been recorded from lamproite intrusions', according to *THE AUSTRALIAN ENCYCLOPEDIA*...

THE WORLD BOOK ENCYCLOPEDIA says: 'Even in the richest deposits, tons of rock must be mined and crushed to produce 1 small diamond. By the late 1980s, the world's diamond mines produced 90 million carats each year. AUS outranks all other countries in annual production of natural diamonds.']

...BHP and its partners in the Big A[US]n's first diamond project are under pressure to market through the Central Selling Organisation the gems to be won from their mine site just below the Arctic Circle... De Beers is pushing to control the marketing... of the entire output from Canada's first diamond mine... The North-west Territories mine is expected to produce about four million carats a year – equal to 4[%] of the world's diamond production... The CSO remains attractive to BHP and its partners in terms of extracting the best prices... but allowing the cartel to market the entire output is likely to put them in breach of anti-trust laws. "The Canadian anti-trust laws have an effect on our partners while BHP itself has a very significant asset base in the U[S] which needs to be protected,"... [the] project's manager... said. For this reason, BHP has little choice but to sell at least part of the Canadian project's output independently... BHP has 51[%] of the project and is the operator... At this stage, the project is on time and on budget despite the enormous logistic difficulties confronting the development of a mining operation in the pristine and delicate region which hosts some of the world's rarest species. Caribou herds migrate through the tundra and grizzly bears inhabit the hills. The mine has at least a 25-year life but it could be much longer as the current feasibility plans involve only five of the 82 kimberlite pipes so far identified in the project area. The first three pipes... contain... high-quality gems at an average grade of just over one carat or 0.5 grams per tonne... The nature of the diamonds business means BHP has been reluctant to release details of production costs but industry analysts believe the project has the potential to generate about \$400 million in annual profit... [In related news, a] wave of friendly takeovers is expected in the A[US]n gold mining industry in the wake of a deal between the industry's two leading characters last month... More than \$US14 billion... was spent [internationally o]n mergers and acquisitions in the mining industry over the past year... Who owns Who in Mining... said the spate of mergers that started in 1995 was checked only by the Busang/Bre-X Minerals Ltd gold scandal earlier in 1997.

...an employee[was ordered] to salt worthless samples of barren rock in December 1993 in a desperate attempt to keep Bre-X Minerals from shutting its Indonesian exploration project, an investigator hired by the company claims. Bre-X has released a report by Forensic Investigative Associates saying... the Canadian firm's former chief geologist, made millions from the scheme... It is the first time Bre-X has officially laid blame in the scandal that saw investors lose billions of dollars when the gold find was exposed as a fraud. [The geologist] fell to his death from a helicopter on March 19 of this year, shortly before... [the] hoax... was revealed... Bre-X, which said it had discovered as much as 200 million ounces, and which grew to have a market capital of... \$NZ6.9 billion... just seven months ago, is now delisted from stock exchanges, near-bankrupt and facing a number of shareholder lawsuits... [An Alberta judge has] granted a request from a lawyer representing nearly 900 shareholders... to remove a ban on legal action while... Bre-X was under Canadian bankruptcy protection... [The lawyer] said his lawsuit... would seek to recover as much as possible for shareholders, including about \$157 million in stock sale profits made by... [the] Bre-X president... and other insiders... [A] Bre-X lawyer... argued a lawsuit should not be allowed because shareholders were trying to get their money back, and not necessarily acting in the best interest of the company... [He also] said most shareholders bought stock from other investors and not from Bre-X...

A dark chapter in Canada's mining industry closed at the weekend when [Bre-X's president] and his lieutenant... resigned as officers and directors of the now-bankrupt gold explorer... The accounting firm... appointed trustee of Bre-X's assets... [estimated] the disgraced firm could have more than 50,000 creditors worldwide.

...The Busang gold bonanza may have been the mining swindle of the century, but there is still plenty of money to be made from the saga... With a marketing zeal that rivals the wildest mining stock promoter, entrepreneurs are making a buck on everything from Busang ballads and T-shirts to worthless Bre-X stock certificates, which have become sought-after collectors' items. The first of several tell-all books on the... scam will hit Canadian bookshelves soon, while a Bre-X movie may also be in the works.

...Those who watched the A[US]n gold miner Helix go from 30c to 499c will know the allure of such stocks... Big companies were keen to invest in small miners... "A reason for this is that big companies do not explore very well and there is too much bureaucracy to get success." ...But today Helix is trading at 130c – fine for investors who got in early but not that flash for those who did not. This point is not lost on... the managing

director of a soon-to-be-listed... resources investment company... "There is nothing like small mining companies, because if you pick the wrong one you lose all your money," he said... However, the other side was that the rewards could be great.

...[Mineral explorer Max Resources has increased the size of its gold resource in the Mount Henry area of WA to 9.53 million tonnes graded 1.5 grams gold per tonne following recent drilling. This was up from 3.22 million tonnes graded 2 g/t and 1.95 million tonnes at 1.2 g/t shown in its annual report. Its interest in the resource reduced to 10% in 1995 after it entered into a joint-venture agreement with Perth-based Australasian Gold Mines. A feasibility study was underway to decide if the resource would support a stand alone mining facility with a capacity to treat at least 1.5 million tonnes of ore annually.] In local news, 'Environment Waikato has backed down on claims that a toxic waste dam near Waihi is just 300mm short of overflowing. The Environment Waikato programme manager said yesterday that if there was a "huge storm" and the waste diversions and emergency procedures failed, there "might be a chance" of it overflowing, but otherwise it was not a great concern. A report from the Environment Waikato independent engineering expert last week said that the controversial Coeur Gold tailings dam should be built up to provide a better safety margin. The report said there was a risk of the cyanide-laden waste spilling over a low point on the dam's crest if another 300mm of rain was to fall within a week. The dam has already been in the public eye because of its instability, caused by earth movement.'

...NZ's] biggest goldmine has turned into a multi-million-dollar headache and looming environmental disaster... AMERICAN mining giant Coeur... is coming under increasing pressure to move 4 million tonnes to toxic mine waste stored on unstable ground at its Golden Cross mine near Waihi. Environmentalists believe the company... has no intention of shifting its mine waste and will wind down mining next year and leave... [NZ. A] Coromandel Watchdog spokesman... says Coeur is closing the mine four years early because of the huge costs of remedial work... He says while Coeur Gold NZ Ltd signed environmental bonds totalling \$12.1 million, Coeur Gold NZ is only a shelf company, and that the parent company, Idaho-based Coeur d'Alene Mines Corporation, has no liability for future clean-up costs... and will, if allowed, abandon the site and leave a huge clean-up bill for future generations [of NZers]... Repairs have so far cost Coeur more than \$20 million and could cost more than \$100 million if it is forced to transfer mining tailings from one dam to another... The company has... [been] trying to drain and secure land under its toxic-waste dam... tunnelling under the dam and drilling into the slope to drain excess water but has had only limited success, slowing rather than stopping movement. Other work has also been unsuccessful... Both Coeur Gold and the Waikato Regional Council concede land under the dam is still unstable. The slide threatens the long-term stability of the dam and could, in a worst case scenario, rupture or crack leading to cyanide and heavy metal contamination of Coromandel waterways. Environmentalists say... the main risk is not that the dam will collapse, although that remains a possibility, but that the landslide under it will cause cracks in the base of the dam leading to a perpetual pollution process known as acid mine drainage... "Once mining pollution starts it is self-perpetuating and almost impossible to stop. The tailings dam was built on the premise that the toxins would be permanently sealed from oxygen and water. But with a landslide moving one block of land over another, and in different directions, the clay liner under the dam is subject to cracking and tearing. This must lead to the escape of toxins in waterways. Already there is evidence of cyanide in a stream which Coeur say has leaked due to the landslide." ...IN February Coeur Gold said 500,000 tonnes of "buttressing rock" designed to weigh down the slide had been put in the wrong place and may have in fact sped it up... Engineers say 3 million tonnes of rock may now need to be placed in the bed of Waitekauri River... [T]his would involve a major river diversion and consents under the Resource Management Act, a lengthy and costly procedure Coeur would rather avoid... IN July last year Coeur Gold wrote off the entire \$78 million value of the mine because of the slide and the remedial costs incurred attempting to secure the site. The company is already embroiled in legal action overseas and is being sued by the [US] Government for its share of an estimated \$US980 million clean-up of mining pollution in Idaho. Discovery of the... Golden Cross... slip has had wide implications for its [NZ] operations and has led to an \$80 million lawsuit against the mine's previous American owner... Coeur alleges that Cyprus Amax Minerals and its [NZ] affiliates failed to disclose geological problems with the site when it sold the mine in 1993 and is demanding Cyprus refund the purchase price... [A] test of Coeur's commitment[to Golden Cross] will come when a \$5 million trust-fund payment falls due later in the year. The payment was negotiated as an ongoing condition of the company's water rights. The money is to be held in trust and invested to meet unforeseen environmental contingencies.

...The owners of the Golden Cross mine... have been paid about \$US10 million... from insurers for interruption to business and property damage related to ground movement... The tailings problem prompted a sharp reduction in mine production over the past 18 months... Coeur will decide by late this month whether to continue operating the gold and silver mine beyond this year.

...Closure... will badly affect... [local towns. The] mine generated "about \$10 million a year" in salaries and other expenses... said... [the] Hauraki District mayor... [Yesterday the mine's] general manager... said the company had a commitment to ensure that its tailings dam "remains safe in the long-term." If the mine closed the tailings dump, covering some hectares, would be capped off with an impervious layer and all water drained from the area... then probably be covered with topsoil and planted. [The general manager] said the company was still working on the final plan.

...The mine general manager and Coeur vice-president... said yesterday a crucial issue was that Golden Cross... would run out of tailings capacity towards the end of 1998... However, [he] said production over the next three quarters should rise substantially, enabling Golden Cross to achieve a production target of 100,000oz of gold for 1997... compared with... 64,365oz for the whole of 1996... Cash costs showed a sharp improvement, from \$US323.41... an oz in the first quarter of 1996 to \$299.50, making Golden Cross more expensive than Yilgarn Star in A[US], but cheaper to run than Coeur's American gold mines. Cash costs at Golden Cross before the remedial work began were \$240.05 an oz... The ore grade in the open pit averaged 2.02g a tonne in the latest quarter, compared with 2.89g a tonne in 1995, while the underground grade was 6.47g a tonne, compared with 7.13g a tonne two years ago... Silver production for the quarter rose... to 71,930oz.

...an American mining corporation... has... sought \$85,836 from the group... Coromandel Watchdog... over a legal challenge against Golden Cross seeking to vary the conditions of a water right at its Waihi mine. [Previously, a]Planning Tribunal Judge... [had] ordered Watchdog to pay the company \$20,000 because its opposition "lacked substance." Watchdog immediately lodged an appeal, to be heard at the end of this month... [However,] Coeur Gold "had suddenly demanded[the] \$20,000 be paid within seven days and threatened to take legal action to appoint a liquidator of the society... This is bully-boy intimidation, and totally at odds with the N[Z] concept of voluntary organisations acting in good faith to protect the environment." Payment of the \$20,000 would effectively ruin Watchdog... A spokesman for the [RFBPS]... said the awarding of such court costs against a voluntary organisation "creates barriers for the community to take part in caring for its environment. That is not a criticism of the Environment Court - it's the process, which doesn't provide a level playing field and the Government of the time not allowing for environmental legal aid...,"... Coeur [has commented that large-scale]... gold mining in N[Z] is doomed unless authorities take a more realistic approach to environmental and resource compliance... [Meanwhile, the] creeping landslide... has stopped for the first time in more than a year. The Institute of Geological and Nuclear Sciences... reported that the company's measures to stop the movement were working. [However, the] author of the report to the Waikato Regional Council... said it remained to be seen whether the slippage would resume after heavy rain... [Incidentally, t]he Waihi Gold Company applied this week to Environment Waikato and the Hauraki District Council to extend the life of its Martha Hill open-cast mine... in the heart of Waihi... until 2007... to extract hundreds of millions of dollars more... The resource amounted to 7.5 million tonnes of ore, equivalent to 800,000 ounces of gold and 6.4 million ounces of silver. Current production is 75,000 ounces of gold and 650,000 ounces of silver a year.

...[Waihi, built over a honeycomb of old mine shafts and workings, is no stranger to subsidence Miners toiled deep under the centre of Waihi for more than 60 years. Martha's Hill housed one of the world's richest gold veins, but getting the precious metal out meant digging deep and moving hundreds of thousands of tonnes of spoil. Old mining methods were based on a simple concept: dig vertical shafts and branch off with horizontal tunnels to chase the

rich veins. The legacy for the town on the southern end of the Coromandel Peninsula is 150km of mine workings, now thought to be the reason for the latest land collapse. Shortly after midnight yesterday, a hole 50m wide by 15m deep developed in the middle of the town. It took one house, a caravan, van and car with it, and threatened several others. Two years ago, a 30m-deep hole appeared in the middle of the town metres from where another opened up in the 1960s. The 30m-deep hole was filled in and smoothed over, causing a ripple in a town well-used to rumblings and shakings from heavy earthworks. The issue of liability is unclear. The council isn't responsible or liable but has agreed to foot the bill for a lawyer to assist residents affected by yesterday's collapse as a "humanitarian" gesture. Martha's Hill, which closed in 1952 (the opencast pit was revived in 1988 to extract an estimated \$700 million worth of gold still underground), was a highly successful mine for the company, financed from London. But life was hard for the miners who worked over 300m underground.'

... 'mining relics, including the power pylons that brought electricity to the Martha Mine in 1913, 500kg rock stampers and intricate working models of gold stamping batteries are all very well, but it's the pickled thumbs that everyone remembers, like some kind of 1920s ACC ripoff. Two ghostly white thumbs are preserved in little bottles on a shelf at the Waihi Art Centre and Mining Museum. There were plenty of genuine accident cases, but cutting off a digit was also a nice little earner during tough times, and a severed thumb would fetch £400 in compensation. But the museum's patron would rather not dwell on the grisly display. He prefers to point out that the little museum is dedicated to the gold-mining operations that have kept the Hauraki District town thriving since 1882. A miniature train speeds around a scale model of gold mining operations in the Karangahake Gorge'...

'There were political battles aplenty back in the 1870s, when 15 different rail routes were mooted to link Dunedin's banks with Central Otago's goldfields. Finally they chose the route through Middelmarsh, along the foot of the Rock and Pillar Range, over the Maniototo and through Manuhirikia Valley to Alexandria. Work began in 1879 but it was prodigiously slow even for pick, adze, shovel and cart technology. 42 years later, NZ Railway's longest branch line was complete. By then, of course, the gold rush it was built for was over.'

...Last century gold drew people with high hopes from around the world to Otago. Today an AUSn company is back with high hopes... A BEARISH gold market... is failing to dampen the enthusiasm of the main player in a gold boom in N[Z] which, if maintained, should see]... exports exceed the value of present apple exports... Most of the expansion is because of the discovery of a gold bonanza at Macraes Flat... by... [t]he Perth-based company... The next few years could see the production of the precious metal equal that of the peak years of gold rushes last century... ■ ['NZ gold exports peaked at 735,000oz in 1866'. 'In 1992, NZ produced 10 tonnes of gold (total metallic & non-metallic mineral production was 22,322,176 tonnes']...

THE goldminer of yesteryear was, in the main, a fossicker looking for the big strike with largish lumps of gold. Today's goldseeker has swapped the pan or cradle for heavy machinery and science... [I]nvestment in discovery, prospecting and proving a patch is enormous, costing millions of dollars before a sod is turned. But the return can be equally handsome because scientific advances enable the corporate miner to win gold which the eye cannot see in the ore body. This is the basis of... a new era of goldmining in Otago. It has been a welcome economic relief for the province... Macraes[Mine is described as] the Big One, the showpiece soon to enter the big leagues not just as N[Z]'s most productive producer, but as the fifth largest mine in Australasia when a \$120 million upgrade and expansion will enable the operation to return between 320,000 and 350,000 oz a year. In 1996 [the mining company] was cock-a-hoop with an annual production of 139,464 oz... The "identified source" of the operation (gold in the ground) grew by 600,000 oz to 3.5 million in the past three years, and the profit before tax doubled to \$23 million. A golden future? Well, the old partnership between[the] mining company and the Macraes people is not what it used to be. There is new management, a new culture with bottom line returns writ large, and there are community questions now where few were voiced previously. Some regard the mine as akin to "Big Brother", largely because it is seeking to triple the size of the operation and maintain it for up to a decade with a new stand-alone processing plant capable of handling 6[million] tonnes of ore annually – double the capacity of the present plant – which will continue in operation. Perhaps the extent of the change of climate for Macraes Mining is that... Otago Regional Council staff are recommending the rejection of all 43 [resource] consents sought because of concern over a 300ha lake to be created along with a concern about the stability of pit walls, and... "an environmental eyesore"... two huge rock stacks... [to] be built in the clear view of the township. One stack, covering 173ha, would... [be] 2km long, 1.4km wide, and up to 100m above the ground. The second, to the same height, would cover 30ha, and run 750m by 500m... The... company claims economies limit the amount of site rehabilitation it can carry out! ...There is, of course, a division of opinion both in Macraes and the wider Otago region about all this. Some farmers have done "very nicely, thank you" by selling their farms, though a requirement of sale is that they will not subsequently oppose the mine's applications nor speak out against it. Some Macraes residents, perhaps a minority as most of the town's properties are now owned by the mine, are concerned about what happens to the hamlet in a decade or so when the miners move on. What will be left, and in what state will it be? ...Short-term, most see advantage for Otago [– where 'about 64% of people earned less than \$20,000 in the year to March 1996' –]from wages, supply, engineering work and so on. But the local authorities responsible for granting resource consents have a larger task in setting the rules not just for the next decade, but for the years afterwards when East Otago will not have millions of dollars pouring into the economy, but which might require large sums to remedy any omission and commission today.

...Landmark legislation protecting 3 million hectares of N[Z] from mining was passed by Parliament yesterday. All national parks are included. The Crown Minerals Amendment Bill (No 3) began life as a bill put up by Labour's then conservation minister... in the late 1980s... [Conservationists] welcomed the passage of the bill... although the specified area was not as large as[they had] wanted...

There was a time when mining was our most glamorous and expansive industry. Granted, that was nearly 150 years ago when gold fever pulled thousands of migrants into the prospects of... Coromandel... Otago[and] the West Coast... Those early miners laid much of the foundation for... [NZ]'s economy. It was gold-mining companies, for example, that first traded on our stock exchanges. But those early mining people also left another legacy... the failure to provide for rehabilitation of shafts and dumps. The old mine sites... are interesting tourist attractions, but mainly they help reinforce claims the industry takes an opportunistic and irresponsible approach to its activities. Such views are widely held by the public. Research on perception of industries shows the mining sector behind... tobacco barons and credit-card issuers as the least-liked industry in N[Z].

... 'What's up DoC, ask frustrated miners The mining industry fears it may be locked out of access to Timberlands resources if the DoC takes control. There are no commercial gold mines working on the 1.2 million hectares of DoC land on the West Coast, compared with 14 active on the much smaller Timberlands estate. The Government has frozen any new access arrangements on the state-owned enterprise land while it considers future criteria. Why should the rest of NZ care? A recent study by the Institute of Geological and Nuclear Sciences values metallic mineral resources at more than \$85.5 billion. The Minerals Association has developed a national strategy where NZ's mineral production could double from the present \$1 billion annually by 2010. Such a move would boost the country's GDP and double employment to 24,000, concentrated in regions lacking jobs such as the West Coast and Otago. Gold mining accounts for around one-third of the minerals produced in NZ. Much of the gold is concentrated on the West Coast. But what was a \$100 million industry on the West Coast in 1990 is now just \$30 million. The gold price is obviously a factor.'

...A prolonged slump in the price of gold could knock plans for expansion in N[Z]'s gold mining industry. "There wouldn't be a gold miner in the world that isn't re-evaluating its rate of growth," [the] chief executive of... Macraes Mining Company, said yesterday. Macraes produces about 60[% of NZ]'s gold output and plans to double production... Other companies... in [NZ] that might re-access their strategies are Otter Gold, operator of the Martha Hill mine... and Idaho-based Coeur... The need to rethink costings is because gold prices have sunk nearly 5[%] to \$US319 an ounce in the past week. This came after the Reserve Bank of A[US (RBA)] revealed it had been selling gold over the past six months. A[US] is the world's third-largest producer [behind South Africa and the US in the 'amount of gold produced in a year – 614,000, 329,000 and 240,000kg in

1992' – [and the sellout ignited fears other governments might follow suit. Gold prices are now down nearly 10[%] so far in 1997 and are 20[%] down on a year ago. Most N[Z] gold miners traditionally have relatively-low extraction costs of about \$300 an ounce, though Macraes' cash-cost per ounce was \$341 in the first quarter of this year and costs at Martha Hill are about \$350 an ounce. Cashflow is not a problem for those mines because they have sold their production in advance. Otter has sales tied up for up to two years at about \$400 an ounce, while Macraes has pre-sold for up to six years at \$380-\$403 an ounce. "Companies that have forward cover, cash, and no debt will do well in the current environment,"... The price slump is expected to most affect companies considering opening up new prospects, like Summit Gold which is evaluating a new discovery at Carrick in Central Otago. It cannot get forward cover because it does not yet have confirmed reserves to hedge against... [By the way, the] toxic legacy of the Tui mine and tailings, poised above Te Aroha... may be tackled next year. A mining company says it is willing to put the tailings in its dam, and a resource management consultancy expects a plan... will be completed by late next month. The move comes 24 years after the mine closed and its owner... went into receivership, leaving behind about 100,000 cu m of toxic sludge and seeping mine workings which poisoned the town's water supply.

...The Golden Cross mine... closes today but its general manager... said miners could return when the price of gold picked up... 35 staff[will remain] to manage the rehabilitation of the area... Macraes Mining... [decided] last week... to postpone a planned \$120 million expansion of its gold mine... [and] reported a reduced operating profit after tax for the half year... of \$2.48 million, [down]from \$7.05 million for the 1996 period... [Across the Tasman, n]ervous investors continued to sell out of gold stocks and major resource companies with gold components, dragging the A[US]n sharemarket to a lower close... The gold index dived 6.44[%]... to end the day at 1193.3. One dealer described the sell-off as the "lemming factor," while dealers agreed that if the gold sector was isolated, the all-ordinates would have been steady... "Nothing has changed in the past four days that should have changed the price overall than a small country has sold its gold holdings," a dealer said.

...The A[US]n gold industry appears on the verge of a major shakedown as sharemarkets yesterday continued to shred producers and speculation grew of mine closures... [The] Association of Mining and Exploration executive director... said... "In W[A], for example, there are 80 projects. The bottom 10[%] of the industry is usually pretty suspect, so you've got eight mines right there. Nationwide, 25 mines wouldn't be an overstatement." ...Since the R[BA] made its shattering announcement of the sale of two-thirds of its gold reserves more than \$A2 billion has been wiped from the value of producers' stocks, and plummeting gold prices have placed enormous pressure on an industry already battling high production costs... and... falling grades of gold in more marginal reserves... A[US]n production was[previously] predicted by the A[US]n Bureau of Agricultural and Resource Economics... to increase by 6[%] in 1997-98, to more than 320 tonnes... ABARE... analysis estimates that costs for 9[% of AUS]n gold production last year rose above the average A[US]n price of \$480 an ounce, which... would have squeezed margins... even without the R[BA]... scramble to dump gold... Gold production costs in A[US] are the world's highest, according to Gold Fields Mineral Services, a London-based research group... [However,] an estimated 30[%] of 1996-97 mine production was sold forward at an average price of about \$638 an ounce, well above an expected spot price of \$479 for the year. About half of A[US]'s forecast 1997-98 production is estimated to have been sold forward at an average price of about \$610, compared with the predicted spot average of \$493. But... [the Association of Mining and Exploration executive director], like a number of other analysts, believes there is worse to come... Analysts are further concerned at the longer-term signals the A[US]n sell-off has sent to the global market... Other central bank disposals have not generated shockwaves of similar scale largely because they do not represent major gold-producing countries, and because most have been central European institutions whose selling was curtailed by warnings that deficit reduction by gold sale would not be a ticket into the European Community. Gold has also softened because it has lost its role as the fulcrum of the international monetary system, and its appeal has been lowered further by a low-inflation world.

...Gold – once worshipped by the Incas as "the sweat of the sun" – seems to have lost much of its mythic value... Last week... the gold industry, from Outback dealers to international mining companies, awoke to find that[the price of] gold had fallen... [yet again. P]redictions of a price drop to \$[US]250, once unthinkable, now seem plausible... [U]p to half of the 36 A[US]n Stock Exchange-listed gold miners face possible closure if gold prices do not pick up... [S]ell-offs by several central banks in the past five years... add... strength to the argument that gold is losing its significance as a store and measure of wealth... Now... the [RBA has] sold... more than 13,000 gold bars... The A[US]n government says the sale is a wise investment decision: gold producers and dealers say it's a cold-hearted blow to an important national industry... "The R[BA] got the money... but the gold industry got slaughtered." ...The Federal Government is unrepentant, blaming the gold slump on the industry's own futures trading... [A] professor of economics at the University of Melbourne and director of the Asian Economic Centre, agrees that the sale was a sound move. "It's tough for the gold mining companies, but I'm afraid the writing's on the wall..." The world gold market was fragile long before the [RBA sale]...

MEN suffocated in deep shafts for gold. They died of dysentery or riotous living to procure the yellow metal that now lives in bank vaults around the world. But the often murderous scramble for the glistening metal that underwrote global financial transactions and the monetary system for a century from the 1870s has now taken a fresh turn. The fever that long infected gold bugs and helped to ramp up the price of gold from a heavily regulated \$US35 an ounce in 1970 to a spot market figure of \$US850 within a decade of deregulation has become a hot sweat as markets have been forced to confront an unwelcome new reality. The gold price reached its peak in January 1980, when raging inflation and the crisis in Iran drove investors to demand the metal as a hedge against surging prices and economic uncertainty. But gold is no longer the asset of last resort and central banks are unloading or threatening to unload at least part of their holdings on to a market unwilling to accept that fact... The abuse heaped on the... R[BA]'s announcement two weeks ago that it has shifted two-thirds of its 247 tonnes of gold into interest-bearing government securities over the past six months... is a measure of the industry's failure to come to grips with the changes in attitudes towards gold that have been under way for almost a decade... [T]he RBA's move brought that into sharp focus, revealing the worst excesses of gold hysteria. As one close observer unkindly put it: "There are quite a lot of nuts involved in the gold market." The background is simply told. In the 1870s, gold took over from silver the role of backing the world's currencies, and until W[WI] money] was directly convertible into gold and central banks had to maintain gold reserves large enough to make that conversion on demand. Gold's price was fixed, except in wartime... In the early 1930s, the US lifted the price of an ounce of gold to \$US35, which prevailed for almost the next 40 years. It survived the Bretton Woods international agreement which, after W[WI], underpinned a regime of fixed exchange rates for converting one currency into another. But in the 1960s inflation... put the gold standard under pressure, when the US's pursuit of its war in Vietnam – funded not from higher taxes but by government borrowings – unleashed a flood of dollars on the market. In 1968, US authorities agreed to allow a free market to develop for gold, while still accepting that central banks must be able to convert currencies at fixed exchange rates backed by gold in a still controlled gold market. The dual markets for gold, one where prices were set by regulation, another where they were determined through supply and demand – were unsustainable... In the past, gold was the asset you lusted after in times of crisis. It was sound; it could be guaranteed to defy inflation and hold or increase its value. That particular fantasy was pricked in the Gulf War of 1991. Despite the impact of that conflict on the oil market... gold... continued unhindered on its downward path, and still the penny failed to drop. It was not until the old generation of central bankers had died out, or at least its influence had died out, that national bankers were prepared to alter their policies to take account of the change in the role of gold... Switzerland still uses gold to back its currency and holds a larger gold stock – 2590 tonnes – than any country other than the US, Germany, France and Italy. If even a small proportion of the Swiss official gold holdings was sold on to the world market, its impact would overshadow A[US]'s off-loading of 167 tonnes... Defenders of the RBA's decision have noted that even the US Federal Reserve was now testing the water. And if the Fed does make a move, with more than 8000 tonnes under heavily armed guard in Fort Knox, the world gold market faces an even more unsettling time... [Also facing an unsettling time is the copper

market after copper prices... [e]ll... faster than anticipated in response to looming oversupply, although the low-point might be near... [(but it will come too late for the 'former copper trader arrested in Tokyo in connection with \$3.7 billion trading losses, who says he didn't act alone – "Sumitomo's management was involved in the loss")]. T]here was common agreement a market surplus would continue for several years and that prices would eventually find a floor of about 70USc a pound... [I]nvestment funds had already driven the price down to... 78USc a pound – the lowest price since January 1994.

...yesterday... [as the AUS]n-owned Emperor Gold Mining Company... [announced] it will cut its 2000 strong workforce by 350... [t]he gold index was down... [to] 900.7... slipping below the psychologically important \$US300 mark... T[he] recent slide in the price of gold may have brought tears to the eyes of people with large holdings of the precious metal, but it is creating bargains for buyers of... bullion coins... and... jewellery...

[A Hong Kong jeweller has built two solid gold toilets in a bathroom gilded with 24-carat gold and encrusted with gems. The jeweller has dreamed since his youth in China of having enough wealth to build toilets of gold – which Lenin in 1921 said were a useful reminder of the waste of capitalism. For the privilege of using the \$US4.9 million gilded bathroom, customers must spend the very capitalist fee of \$US138 on jewellery.' In related news, 'South Koreans and Indonesians have been selling gold jewellery to their governments so it can be melted down and sold on the international market to raise money, but there are concerns that a flood of gold could further decrease its value'...

'The Thai military plans a nationwide campaign to collect gold, jewellery and other donations from people who want to help tackle the country's economic crisis. A Government minister has been assigned to oversee the so-called Thais help Thais campaign. The PM said yesterday that people in his hometown had given him gold necklaces weighing half a kilogram'. He didn't discuss the fate of the unfinished 'gold city' project]...

Electricity is out again in the City of Gold, a dusty mining town... with no water and a ramshackle strip of zinc-roofed houses along the pot-holed main street. El Dorado, the dream of limitless riches that first drew... adventurers to the New World, runs into the real world here... "El Dorado is not in Venezuela," one frustrated mining executive said. "It's in Nevada." ...[the] City of Gold, lies some 500km south of the Caribbean coast, at the place marked with a treasure hunter's "X" in the yellowing maps of 16th century English explorer Sir Walter Raleigh[, who]... took no equipment, not even a pick, on his failed quests up the Orinoco River for El Dorado 400 years ago. In his imagination, the gold lay in ingots on the streets of a fabulous city, not in the ground at an average rate of one gram in a tonne of dirt... But the idea lived on as a folk memory, with its dream of riches, luxury and exotic obsessions... For a few years at the end of the 19th century, Venezuela was the world's premier gold producer, mining upwards of 17 tonnes per year... Now it ranks around 17th with just 12 tonnes of officially registered production. Local miners say the rest goes into the black market or other illegal channels such as laundering drug money... [Many] illegal gold strikes... cut... through[the] eastern forests and high savanna... Some are taken from concessions granted to foreign companies, the miners later evicted by the National Guard. - 1997

A N[Z] scientist has discovered how vegetables and other common plants can be used to "mine" gold. [The scientist from] Massey University is attracting international attention for finding a chemical that makes gold soluble, allowing plants to "grab" the precious metal as they grow. Scientists had already discovered "phyto-mining" of other minerals such as nickel. But nobody had been able to get plants to take gold up until [the NZer] found that ammonium thiocyanate could dissolve gold. [The scientist]'s experiments involved planting a range of plants, including carrots and chicory, in soil containing traces of gold from the Martha Mine in Waihi. Once the plants had grown, he added a solution including the ammonium thiocyanate to the soil... After about 10 days of soaking up the solution, the plants were harvested, dried and burned, leaving the gold... [T]rials showed that an average yield of 100g of gold from a tonne of dried plant material was enough to make the process economic, when carried out over treated mine tailings[(mustard plants have also been used to extract the mineral from surrounding soil, but it takes 'enough plants to fill a rugby field to produce 3oz of gold'). The scientist]... said the chemical used in the process sounded "nasty," but existed naturally in a lot of soils and did not harm the environment. "In parts of Brazil, people are trying to extract gold using mercury[, which] is dangerous to human health and leaves the soil contaminated. It's a huge problem in developing countries, where people are poor and try to get gold at any cost." ...The Brazilian Government is sending a doctoral student to Massey this year to help to investigate the development... The research has[also] attracted the interest of Dutch chemicals company Akzo Nobel, one of the world's biggest producers of ammonium thiocyanate, which has funded a \$100,000 research contract based on the project.

...Dutch banks made hundreds of millions of dollars from trading property stolen by Nazis from Jews during... W[W2], a historian estimates in a book to be released today... The book asserts that a group of 140 stock and bond traders from over half-a-dozen banks sold[Jewish] property including gold, silver, foreign currency, stocks and bonds... and made 1 billion guilders in the deals... Much of the property was obtained by the Nazis in exchange for documentation which claimed to exempt Jews from deportation... [T]he papers, which cost the equivalent of 300,000 guilders at the time, were worthless and... the Jews who bought them were deported to concentration camps. More than 75[%] of Dutch Jews... perished in the Holocaust... The... findings might be taken into account in a Government investigation into the role of banks during the war.

Fifty years on the Swiss are finally acknowledging their role as bankers to the nazis... Switzerland, the land of high mountains and uncompromising neutrality. But in... W[W2], "neutrality" was not quite what the unwary might assume... It now seems clear that the Swiss made a bundle out of the war – far more than other neutral countries like Sweden, Spain and Portugal. Precisely how much the Swiss made, or who among them made it, will never be fully known. But for the first time in five decades, a concerted effort is being made to find out. At the heart of this new attempt to confront the past is a dispute about the lost assets of Jewish Holocaust victims that are alleged to be languishing in Swiss accounts... The old Swiss way of doing business is changing rapidly under international pressure... And some Swiss are eager to help flush out the truth about a past too little examined. Some of that truth... can be found in hundreds of thousands of Allied documents declassified in recent months... In particular, the papers flesh out one of the lesser-known dimensions of the nazi horror – how it was financed with billions in blood money pilfered from its own victims. They weren't just Jews but occupied countries and citizens stripped of gold, jewellery and property. Many of the documents are embarrassing to Swiss banks that have since become world-class institutions, renowned for their integrity and, more and more, their clean reputations... Swiss bank secrecy is based on a 1934 law that threatens bankers with jail for revealing depositors' names. But in an era of greater financial transparency and international rules, the Swiss can no longer afford the rumours that have long swirled about their accounts... "A lot of Swiss are starting to ask themselves, 'Are all these myths true? Are we a pirates' harbour?'" says... a Basel law professor... "The anxiety is that this is a systematic part of the banking system rather than a matter of occasional black sheep." ...Since 1989, the banking-secrecy laws have been curtailed by reforms that make it illegal for Swiss banks to hide laundered or mafia money (though the law is proving tough to enforce). And where the Swiss once hid profits in the books of their subsidiaries, they have begun to accept U[S]-style consolidated accounting. Until recently, the banks denied that any Holocaust assets remained. But in February the banks turned up \$50 million in 775 accounts in a search of non-Swiss account names. "Basically they said: 'Sorry, we lied'," says... an Israeli business paper that broke the story about Holocaust victims' assets in April 1995. In subsequent interviews... Swiss bankers insisted that little money was coming into Switzerland during the war... Yet records show that deposits rose by 35[%] during the supposed decade of disaster from 1936 to 1946. SOME bankers, rather than simply deny the problem, have begun to blame Swiss fiduciaries... [-] accountants or lawyers... [One] contends the fiduciaries and insurance companies were greater profiteers than the banks... In the end, nothing close to a full accounting will likely emerge. Most of the depositors and bankers are dead, as are their Nazi oppressors.

Even the Allied intelligence agents who tracked the loot are gone. But there may yet be a moral accounting. Today even Switzerland has recognised that it can no longer be in the world but not of it.

...Switzerland, increasingly hounded by claims it hoards Nazi booty, is paying the price for not coming to grips earlier with its W[W2] history as a willing banker for any side, historians say. British allegations this week that Swiss vaults may hold [N]azi German gold are just the latest in a wave of allegations the Alpine state may be hiding wartime wealth left by both [N]azis and their victims. Swiss bankers and politicians argue they are now launching serious efforts to uncover lost accounts left by Jews murdered in the Holocaust and trace the murky movements of [N]azi loot. But critics say the fact that Switzerland waited until 50 years after the war ended has hurt credibility, leaving it vulnerable to accusations of hiding [N]azi-era wealth behind a curtain of neutrality and bank secrecy laws. The... bankers and Berne only acted under mounting pressure from world Jewish groups and U[S] and British politicians. Switzerland never forced a broad public debate about the dark side of its past as a neutral state with strong wartime pro-German elements. Instead, official Switzerland has preferred to toast the memory of its military-style army for defending the borders and keeping Switzerland out of the fighting that raged outside. However, most historians say it was not the Swiss Army alone that prevented occupation by Germany, but rather Swiss willingness to finance the Nazi war economy, export technology and allow Hitler to transport war materials through the Alps. The Swiss Government only got around to apologising last year for turning back German Jewish refugees from 1938 to 1945 to face death in Nazi camps. Swiss banks had also opened accounts for European Jews hoping to hide their wealth from the Nazis after Hitler gained power in 1933. With six million Jews murdered in the Holocaust, there were few survivors left to claim old accounts and few heirs with the kind of documents needed to find and claim accounts. [Family members who tried to trace the accounts have said that 'bank staff would ask them for a death certificate – which Auschwitz, etc., didn't produce! Even if the bank accepted the account holder was dead, staff would then ask for proof that the family member was the only heir – another impossible task in post-WW2 Europe' ...

A [NZ]29.6 billion class action suit has been filed in New York on behalf of Holocaust survivors against Swiss banks for allegedly refusing to return victims' money, jewellery and other valuables... [A] Republican Senator... last month called for the State Department to investigate what he called "50 years of deception" by Switzerland on the amount deposited by the Nazis... [He] has urged the US to reopen negotiations with the Swiss on a treaty in which Switzerland gave the Allies \$90 million in compensation for accepting Nazi gold. He said archive documents show the Swiss had up to \$900 million in Nazi gold. - 1996

A long-awaited U[S] Government report... will show that the Swiss took in \$US425 million in looted gold – worth more than \$US4.25 billion by today's prices... Jewish groups said they were pleased with the study, which took seven months to complete. "I think the report makes it clear that Switzerland and other countries, neutral and others, are now obligated to deal with the challenges of moral and material restitution," said[the] director of the World Jewish Congress [WJC]... "It is an outrage for more than 50 years that this information has been undetected, and what do we find, that the Swiss have kept the money,"... said... [the] Republican Senator... of New York, who has led efforts to discover what happened to the assets of Holocaust victims...

A conspiracy by Swiss bankers to hide Nazi loot, steal deposits from European Jews and prevent Holocaust victims from receiving adequate compensation is finally being brought into the open... "Switzerland, since the war, has been paraded as a small humanitarian country, and nobody has ever exposed that its wealth is based on profiting from crime... The Swiss dishonestly profited from the misery of Europe,"... Holocaust survivors last year gave heartbreaking testimony of the banks' refusal to acknowledge their murdered parents' bank accounts. There were sordid and terrible revelations... There were allegations of extensive collaboration between the Swiss banks and Nazis hiding wartime loot, with the Swiss operating a black market for Nazi gold. [The WJ]C... has alleged the Swiss banks were sitting on up to \$15 billion in Jewish assets either in accounts untouched since W[W]II or in Nazi loot often taken from those who died in the Holocaust... Then two weeks ago[while admitting]... wartime moral lapses, [the] Swiss President... announced that by revaluing Swiss gold reserves a fund worth just under \$10 billion would be set up to compensate victims of all human catastrophes, including the Holocaust... "Our task is to make sure history doesn't repeat." ...Earlier... several of the biggest Swiss banks... concerned... by mounting accusations and evidence of Nazi business dealings, a[tempted]... to salvage their tarnished reputations... [by announcing] they too were setting up their own fund to compensate Holocaust victims... [M]aterial from the US, British, French and Swiss national archives... traces how Swiss banks and the Swiss government exploited W[W]II for financial advantage. The Nazis had painstakingly minuted details of their crimes in correspondence, memos and the minutes of their conferences. Similarly, Swiss collaborators and profiteers recorded their decisions on paper, and although the most germane of those files remain hidden, sufficient government records had been deposited in Berne's national archives to make out a compelling case against a previous generation. The... declared deposits in Swiss banks rocketed from \$47 million Swiss francs in 1941 to \$1244 million in 1946, and its gold reserves doubled from \$US740 million to \$US1.47 billion... As a further sign of the sensitivity created in Switzerland by the revelations... the Swiss Federal Railways recently announced it had decided against marking the 150th anniversary of rail service in Switzerland with a "golden" locomotive, concerned that the plan could offend Holocaust victims. Last month the Swiss ambassador to Washington... resigned after it was revealed he had urged his government to "wage war" against Jewish groups calling for compensation for Holocaust victims. There are some people still unhappy with the Swiss Government's latest announcement of a fund to help Holocaust survivors. They point out that an inquiry accompanying the establishment of the fund will have a leisurely five years to make its way through all of the country's dealings with the Third Reich.

...The evening of... January 8, should have been just another tedious shift for... a student at business school in Zurich, who for the past three years had been supporting his wife and two children by working as a nightwatchman. His security firm... had assigned him to the offices of the Union Bank of Switzerland in Bahnhofstrasse – a maze of wealth and secrets above and below ground. In an average night he would walk 35km on his rounds. The timid 29-year-old, who until recently never had ambitions beyond collecting a regular salary as a salesman, is now in America. Tall, slim and apt to blush, he is now being whisked from one television studio to another. The talk is of rewards from Jewish organisations, a tree being planted in his honour on the Avenue of the Righteous, a new life in the U[S] and a green card. [The man] is the flesh-and-blood hero in the scandal over Switzerland's role in laundering nazi wealth and embezzling Jewish savings while officially remaining a neutral country during... W[W2]. Until he] smuggled some yellowing ledgers at UBS... the wartime role of Swiss banks had[only] been a subject of discussions... "I was on my round, which included the shredding room... Usually the wheelie bins by the shredder contain computer print-outs, or modern papers anyway. But this time, two of them were full of old-looking documents and ledgers written in fountain pen. I looked more closely and saw that some of the material was from Eidgenossische Bank which was strange. It was a state bank which went out of business after the war, yet its records were in the shredding room of a private bank. I also saw two thick black-bound books... which had debit and credit columns. The entries started in February 1945. I thought only very briefly about what I was seeing, and decided to take some of the documents away with me. I do not know if, in that moment, I had a clear idea that the material would relate to the nazi money or whether I just thought it could be valuable historical information, but I just knew I had to do something." [He] left the room with 59 yellowing pages stuffed under his uniform jacket. The next morning... he... decided that a Jewish person should see them, and took them to the Jewish Community in Zurich. The following night on his rounds, [he] found that the remaining documents... had been shredded, and thought he would not hear anymore[about it]. "Then a policeman telephoned and said the documents had been handed in. I was asked to go to the police station where I was questioned for five hours. The police were insistent that I should not go to the press. But fortunately, the Jewish Community had already arranged a press conference for 4 pm the

following day. The police and the bank called the media in at 11 am to say these were unimportant documents. Luckily, by that time, the media was much more interested in the 4 pm press conference.” ...a Swiss journalist who has written four books about the country’s secretive banks... says... [the] discovery is significant... “Certainly, none of those documents should have been in the shredding room.” By now the world of the unassuming nightwatchman-cum-student had been turned upside down. The security company, which had paid him a salary of 5000 Swiss francs... a month – sacked him for breach of confidence. Hate mail began arriving at the [man’s] house in the Zurich suburbs. “As soon as the newspapers reported what I had done, the letters started arriving,” he says. “There were... letters praising me and... threatening me. We also received telephone death threats and we were told our children would be killed.” He and his wife, who hardly speak any English, have now placed their future, and that of their children, in the hands of Jewish leaders in the U[S]. “We had never even dreamed of a life away from our parents and brothers and sisters,” says [his wife]. “But we are too frightened to go back to Switzerland.” ...The [US Government] Report – which involved the declassification of nearly one million pages of documents – ...paints a picture of cynical neutral countries profiting from the war and being spared U[S] scrutiny after 1945 because they remained strategically important in, for example, the Cold War. They include Switzerland, Sweden, Portugal and Turkey. The report criticises the U[S] for making only a “fitful effort” after the war to ensure that looted assets be returned to their owners... And it says that up to \$US400 million in German-looted gold remained in the Swiss National Bank at the end of the war. No more than \$US58 million was returned... After pressure from Jewish organisations including a threat of a worldwide boycott of Swiss banks, the country’s Government had admitted it had a debt to pay... Some Holocaust survivors believe Swiss banks are hoarding up to US\$7 billion... in unclaimed assets from the war, although the banks claim the figure is much smaller.

...Investigators... have been told that several hundred additional accounts belonging to Holocaust victims have been found in Swiss banks and thousands more are being examined for clues to their owners... [In another development, WJC researchers have released] a 1945 document from the top secret Ultra project that cracked Germany’s Enigma code machine... [which proves] Switzerland continued receiving tonnes of looted... gold after promising the Allies it would stop... [In a belated sign of remorse, a commentary on] Swiss Television... said: “Let us not forget that Switzerland [has been] reproached... over nazi gold... for letting its economic interests take precedence over morals. Switzerland would like to turn the tide.”

...[‘the WJC is to extend its battle for Holocaust reparations. “There are questions remaining on the billions of dollars with the French banks and the French Government,” said its executive director. The move follows a decision by leading German companies to set up a fund for victims of Nazi concentration camps and their heirs. Under pressure from the congress and other groups, 12 German firms yesterday agreed to set up the fund (reportedly over \$NZ3 billion), which also aims to fend off multibillion-dollar class-action suits against German companies that allegedly profited from Nazi camps.’ Incidentally, the spot price for] gold fell about 5[%]... on Friday... Gold is now at its lowest value in more than 12 years... The drop was triggered by news that the Swiss reserve bank was to sell half its gold stocks, about 1400 tonnes, equal to 2 1/2 years’ output by South African mines.

...[“We want to get out,” was the desperate message from nine surviving miners at African Rainbow Mines No 2 early yesterday after rescuers had dug to within 3m of them. Fifteen miners were trapped 2100m underground on Monday afternoon by a rockfall, caused by a tremor measuring 2.9 on the Richter scale. The gold mine is about 170km southwest of Johannesburg. Four of the miners are confirmed dead and there has been no recent contact with two who were critically injured. Expectations were high early today that the trapped miners would be brought to the surface by daybreak but underground conditions were said to be extremely difficult. The rescue was proceeding painstakingly slow, with rescuers crawling through an area just 40cm high, removing rocks by hand and passing them down the line. The survivors were using their hands and any equipment that survived the rockfall, to reach their rescuers.’ Editor’s note: ‘from 58 to 51 BC Julius Caesar was engaged in the wars which completed the Roman conquest of Gaul’. There were a number of motivations behind Rome’s wars with the Gauls, but probably the main one was ‘to gain control of their gold mines; and that was the only motivation for Rome’s invasion of Dacia’ – ‘what is now the northern and western part of Romania.’ ‘Romany – of the gypsies or their language.’]

...gypsies who survived the Holocaust are finally emerging from the shadows to press their case for compensation. An estimated 200,000 gypsies died at the hands of the Germans... during... W[W2]... said... a paper to an international conference on Nazi gold. The gypsy leaders say they want £80 million in compensation for the... property... stolen from their people. [By the way, ‘the Los Angeles Times reports that an international commission created to resolve Holocaust-era insurance disputes has spent more than \$US30 million on salaries and hotel bills while giving only \$US3 million to claimants’]...

Jewish leaders meeting in New York and Jerusalem yesterday authorised the allocation of nearly \$US200 million... in the fund set up by Swiss banks and businesses earlier this year.

...[a 65-year-old], who works as an accountant with Jewish Community Services in Sydney, is believed to be the first person in the world to successfully claim his family’s financial assets, which lay dormant in a Swiss bank account for half a century... About ten years ago, [an] aunt died in Tel Aviv and [his] cousin discovered among the woman’s belongings a bank statement believed to be with the Union Bank... She went to the bank’s headquarters in Zurich but was told to go away... [The 65-year-old] would not disclose the settled amount. But last week it was reported to be around \$A200,000... A[US] has the largest community of [Holocaust] survivors... per capita in the world outside of Israel... The N[Z] Jewish Council said that some... families here... [are] trying to obtain information about their family assets.

...N[Z]’s next big gold strike may well be found on the ocean floor. Scientists from the Institute of Geological and Nuclear Science in Lower Hutt are on the trail of a mineral discovery made by chance in 1996 by the Government research ship Tangaroa. It dredged up mineral samples containing 18[%] zinc (by weight), 15[%] copper, and six parts per million of gold – a higher concentration than some on-shore goldmining areas... A... mineral geologist... said the gold strike almost certainly came from a “black smoker” – an undersea vent where hydrothermal plumes gush from the ocean floor. They... belch hot water and dark clouds rich in particles... Scores of black smokers are believed to be in a belt running several hundred kilometres north-east of White Island... in the Bay of Plenty... [The geologist], who has secured \$1.3 million in state funding over the next three years to map the vents, said hydrothermal mineral deposits had been recorded in about 25 places worldwide. What make the N[Z] sites unusual was the presence of gold and the shallow depth at which the vents occurred. Most other black smokers were at depths of about 2.5km in mid-ocean ridges... [The geologist] rated the discovery of black smokers as one of the “sexier discoveries” in earth science in the past 20 years. Before that scientists were not sure how to account for the iron and manganese dissolved in the oceans. - 1997

Another resource that NZ scientists are searching the ocean floor for is *black gold*.

Government scientists say they have identified areas of potential undersea oil reserves extending hundreds of kilometres farther than previously known. The... Tasman Sea... areas could be claimed by N[Z] under the U[N] Law of the Sea Convention... [T]he crown-owned Institute of Geological and Nuclear Sciences Ltd[’s]... marketing manager... said black shale, dredged 50km beyond the 200-mile [EEZ], had indicated signs of oil, but a lot of work was needed before drilling could be considered.

...AN UNORTHODOX oil exploration company formed by three friends... has struck a deal with two joint-venture companies – Asia Pacific Oil and Niko Resources Ltd[. a]nd... plans to redrill an on-shore well in Gisborne that Niko abandoned last year but experts predict could contain 14.5 million barrels of oil worth \$400 million. If New Plymouth-based Eastern Petroleum is successful, it will be the first company to strike oil in Gisborne since 1874, when pioneers found a well that gushed 50 barrels a day before the rig caught fire and burned to the ground. Since then, numerous companies have abandoned attempts on wells in the city because of difficult drilling conditions... but... Eastern Petroleum... believes it

can... strike it lucky with the latest technology[– including]... a purpose-built Taranaki rig... [–] and the right approach... U[S] chemists, who tested the oil from several seepages in 1890, claimed Gisborne oil was some of the best they had seen... [T]he deal with Asia Pacific and Niko gives Eastern Petroleum: • 45% of production from the... well, [which]... is about 12km northwest of Gisborne... • 45% of oil found in any of the other onshore wells in the licence that the two companies drill. • And a 15% share in the companies' offshore licence.

...The rapid growth in oil consumption in Asia, outside of Japan, over the past decade highlights the region's rapid economic growth... The 1996 BP review of World Energy shows that oil consumption in Asia more than doubled from 262.9 million tonnes in 1985 to 538.5 million tonnes in 1995. Its share of world consumption increased from 9.3... to 16.6[%]. The region's demand rose 7.2[%] in 1995, compared with total world growth of 1.2[%] to 3.22 billion tonnes. The rapidly growing Chinese market, up 5.7[%] to 157.5 million tonnes last year, overtook the shrinking Russian market to become third-largest oil consumer. South Korea using 94.8 million tonnes, after passing Britain in 1994, overtook France last year and looks set to challenge Italy for the sixth-largest consumer spot this year. The average Brent spot price rose 7.5[%] in 1995 to \$US17.18 a barrel of oil, [while the]... world's oil reserves to production ratio eased slightly to 42.8 years, down from 43 years. In 1979, it was less than 27 years.

...The race for oil to power the Asia-Pacific region's economies in the next century risks sparking tensions... experts warned yesterday. [A f]ormer Japanese foreign minister... cautioned against the region's growing dependence on Middle East oil during a symposium in Manila... Most of the oil imported to East Asian ports from the Middle East would pass through the Arabian Sea and Indian Ocean, he said, forcing countries like China, South Korea, Taiwan and even Japan to strengthen their navies. "We are right now in the middle of an intra-regional arms race initially provoked by energy insecurities among our bigger northern neighbours..."... He said that by 2000, China's needs alone are expected to increase to 900,000 barrels a day and by 2010 to 2.8 billion barrels a day... [He] proposed the formation of a joint Asian energy organisation to develop Siberia's potentially vast oil and natural gas deposits... [Currently, the Asian] region provides "a little more than a 10th of global production and less than a 20th of world reserves,"... - 1996

Prior ages in the evolution of the biosphere had laid down more than 60[%] of the world's petroleum in what is now the [Last W]orld, most of it in the region of the Persian Gulf... [Russia has] its own supply of oil. Japan on its volcanic islands, lifted not long ago from within the Earth's crust... [is] almost totally dependent upon imported fuel. By 1970, the countries of Western Europe, with abundant coal, were deriving as much as two-thirds of their energy from imported oil. The [US], formerly the world's principal producer and exporter of oil, had passed the peak of its production. The country was now the largest importer, suddenly dependent upon overseas suppliers for more than 40[%] of its... oil... The daily flow of oil from the [Last World] countries into ports of the [First World] countries mounted from 2 million barrels (one barrel = '35 imperial or 42 US gallons') in 1950 to 18 million barrels in 1985. Into U.S. ports, the flow increased from 250,000 barrels to 3.2 million barrels a day. Along with the expansion of the world tanker fleet from around 2500 vessels in service in 1950 to more than 5000 came inflation of the size of tankers. Naval architects, in Japan especially, stretched the limits of steel structure to build 300,000-ton wallowing lakes of oil, too big to make passage through the Suez Canal but big enough to pay dividends on the journey made 15,000 kilometres longer by the detour around Cape Horn... The 600 to 750 million barrels of oil at sea at all times presents a new hazard to the global environment. A score of tankers are lost on the reefs and at sea each year... [T]hey account for – they spill – more than half the tonnage lost. Tankers afloat take their toll as well. They make their deadhead voyages ballasted with sea water, and they pump this oil-polluted water out at sea as they approach the loading ports... In addition to fouling the beaches and tarring the seabirds, it appears that the traffic in oil is polluting the ocean itself. To sample the microscopic "neuston," the biota of the ocean's top millimeter, research vessels tow arrays of fine-meshed nets. They have found no stretch of ocean where the crucial... site of the all-important exchanges of oxygen and carbon dioxide between hydrosphere and atmosphere and window to the 70[%] of the solar radiation that drives one-third of the energy turnover in the biosphere – is not veiled by microbits of tar. In some waters, this tar has seeped from near-surface oilfields in the continental shelves. There is no doubt about the origin of most of it... In the case of diamonds, the surcharge for scarcity over and above the cost of production is imposed by monopoly, in abrogation of the market process. In the case of oil... there was also some distortion of the market process by the oligopoly of the half dozen companies that set the price paid to oil producers before 1973. It was a distortion, however, that concealed the scarcity of oil and understated its true value in use. The [First W]orld thereby blinded itself to the fact that the commitment of its energy consumption to liquid fuels had made it dependent upon the [Last W]orld for supply of the very essence of what makes the difference between the two kinds of human existence in the two worlds... With steady increase in the footage of drilling required to bring in a well and with lower yield per well, the [US] became the highest-cost producer for the world market. Its costs ran more than 10 times that... which brought a barrel of oil up from the sands of the Arabian Peninsula. On the U.S. cost, the oil companies set the world price... To keep the lion's share of that 'phantom cost' in the price they paid for Arabian oil on their side of the transaction, the companies presented a solid front to the oil princes. At the outset, in 1948, the oil companies secured an 82/18 split in their favor. In 1960, the oil-producing countries organized their famous cartel, the Organisation of Petroleum Exporting Countries... With that solid phalanx at the table, the parties were more evenly matched. The split... went to 50/50 and, in 1970, to 30/70 in favor of the OPEC members. To the OPEC members it was then apparent that the world market price set by their customers bore no relation to the true scarcity value of petroleum and not even to its present value to those customers. At the pump... the consumer in the [US] was paying in taxes more than 3.5 times the producer's share of the price of a barrel of oil and, in Europe, as much as more than twice that markup. The oil-exporting countries of the [Last W]orld were rendering an entirely unintentional economic subsidy to the [First World] countries that had promised to come to their assistance... In 1973, seizing the crisis mounted by the Arab embargo on the shipment of oil to the [US] and other countries siding with Israel in the Yom Kippur war, OPEC took over the pricing of oil to the world market. The first OPEC price, at \$17 a barrel, made a fivefold improvement on the consumers' price. For the first time, oil appeared to its ultimate consumers as possibly a scarce resource... In 1973, a chastened [US] was ready to be lectured to by spokesmen for the oil-producing countries. [The] chief of the Iranian economic mission in Washington, D.C., wrote in the quarterly *Foreign Affairs* in July of that year: By keeping the Mideast oil price deliberately below its true scarcity value... the [First W]orld inadvertently perpetrated four hoaxes on itself and on its unborn generations... [It] (a) discouraged oil producers from searching for new sources of supply; (b) helped hold down prices of substitutes (e.g., coal gas and hydroelectricity) and likewise dampened their development prospects despite their huge reserves; (c) stifled and/or delayed research in the development of more efficient technology for the economical use of energy; and, above all, (d) contributed to an inexcusably reckless waste and inefficient use of world premium fuels.

Although it is generally conceded that there is a limit to the amount of oil beneath the burning sands of the Near East, some Arab oil magnates act as if it will last forever. And they appear to spend money as fast as the oil pours out of the ground... The biggest spender of all... is the Emir of Kuwait... The Sheikh hires eighty people who have nothing else to do but help him spend money.

Probably more geologists are currently employed in the hunt for petroleum than in all the other professional branches of science put together. Conversely, the petroleum geologist is only one of many specialists, ranging from economists to engineers, who are involved in the exploration and production of petroleum... Man's quest for petroleum began when God told Noah to coat the ark with pitch. In prehistoric and early historic times, petroleum from natural seepages on the surface of the Earth was used for many purposes, military as well as nautical. But it was only when petroleum products were required in large quantities, first paraffin for lamps, then petrol for cars, that Man's search became scientific instead of

haphazard... Petroleum is the name given to solid, plastic (i.e., pliable) and liquid hydrocarbons which occur naturally within the Earth... Petroleum is found in rocks of all types, igneous, metamorphic and sedimentary, of all ages ranging from the Precambrian to sands less than a million years old. The majority of petroleum geologists believe, however, that regardless of where it now occurs most oil was generated from marine muds of Cambrian or younger age... In the ordinary course of events, oil will migrate up through permeable rocks to the surface of the Earth, where it is dissipated, oxidized and destroyed. But, in certain favourable circumstances, upward-migrating oil may be trapped beneath impermeable strata, through which no fluid can flow. In this way... a petroleum reservoir... is... formed... Petroleum is generally drawn from the reservoir through perforations in the steel casing lining the sides of the borehole. Where the reservoir pressure is sufficiently high, petroleum flows naturally to the surface, where it is fed through a system of valves... to a pipeline. In low-pressure reservoirs it may be necessary to pump oil to the surface... Petroleum gas is far less important in economic terms than the liquid petroleum with which it is generally associated. For this reason, where there are difficulties in getting the gas from the source region to the consumer, it is not uncommon for unwanted gas to be burned off...

Fires believed to be the result of sabotage on oil pipelines killed hundreds of poor people on two continents yesterday... In South America, at least 45 people were burned to death and 70 others were hurt when leftist rebels bombed the largest oil pipeline in Colombia and blazing crude engulfed two entire villages before dawn... In Africa, at least 500 people scavenging for fuel from a burst petrol pipeline near the southern Nigerian oil town of Warri are believed to have died when a fire ripped through the area.

...Drawn by rumours that a huge pool of gasoline was free for the taking, hundreds of people converged on [a] small Nigerian town over the weekend. Yesterday, however, it was their relatives who converged... [on] Jesse... searching out the charred remains of their brothers, sisters, fathers and mothers, killed as the fountain of fuel burst into a fireball... With dozens of... unidentified bodies littering the town and flames still occasionally flaring up to 20m high, authorities began the grim task... of burying the dead. Firefighters had stopped battling the flames and waited for the blaze, which spread thick black smoke for kilometres, to burn itself out.

...Emergency medical teams are battling to save survivors of Nigeria's petrol pipeline inferno as the death toll exceeds 700... [T]he Red Cross... Unicef... and the W[HO] yesterday sent... teams to help overstretched hospitals that were filled with an estimated 1000 injured. "In cases of burns like this, the main danger to the injured is from secondary infections. That is one thing we'll try to prevent,"... [However, in] some hospitals, patients were being withdrawn by relatives fearful of prosecution by the authorities for seeking to collect... the spilled fuel... The independent *Guardian* newspaper said in one hospital where 18 people were admitted with severe burns only four remained... Oil provides more than 90[%] of the export income of the nation... but in recent years it has relied on fuel imports because the state-owned refineries failed to meet demand.

...Oil still spewed like a geyser from the transalaska oil pipeline yesterday more than 24 hours after a man shot a hole in the line... [that] carries about one million barrels of oil a day, or 17[%] of domestic oil production... Cleanup crews dug ditches and deep holes to capture... more than 984,000 litres of... oil, which was being vacuumed into trucks and transferred to storage tanks. The... man suspected of shooting the pipeline with a .338-calibre rifle... has been arraigned on charges of criminal mischief, driving while intoxicated, weapons misconduct and felony assault. [In related news, 'a Russian river is spreading burning oil – that had spilled from a ruptured pipeline – through the wilderness']

...An apparent dynamite attack has ruptured Ecuador's main oil pipeline, spilling between 5000 and 10,000 barrels of oil into an Andean river... [T]he president of Ecuador's state oil company Petroecuador, said the incident was similar to bombing attacks against the pipeline last month in Ecuador's remote Amazon jungle region. Authorities have not determined who was behind those blasts. Oil industry sources suspect that kidnappers who have been holding eight foreign oil workers hostage... used the bombings as pressure tactics in ransom negotiations.

...The discovery of the body of a US citizen who was one of 10 foreign oil workers... kidnapped last October in Ecuador is a matter of grave concern, says [NZ's] Foreign Minister... The body of Ron Sander, who had been shot, was found yesterday close to the Colombian border... Mr Sander was working for [a] Tulsa, Oklahoma-based oil company... when he was kidnapped by an unknown group along with [a] 52-year-old N[Z] helicopter pilot... and eight other oil workers... The kidnappers got away in a helicopter stolen from the oil field. Two Frenchmen in the group escaped two days later. The US State Department said it abhorred "the senseless death" and called for the immediate release of the remaining hostages... "In these situations Governments do not get involved in the negotiating. The employer of the kidnapped people and the employer's insurers are the negotiators."

...The Spanish-Argentine oil company Repsol has paid a \$US13 million... ransom for the release of a N[Z]er and six other oil workers held hostage in northern Ecuador... The money was handed over at an agreed location on the shores of the Bermejo River... near the border with Colombia... just before the February deadline set by the bandits to kill another hostage. The bullet-riddled body of... Ronald Sander, aged 54, was found on a jungle road on January 31. He had been... covered in a sheet scrawled with the Spanish words: "I am a gringo. For non-payment of ransom." ...The hostages... walked out of the jungle after their employers paid the ransom last week. The... Ecuadorean military, who had been hunting the suspected Colombian bandits, picked up the exhausted hostages.

...officials said yesterday... [that m]ore than 650,000 litres of fuel had escaped from a... tanker that washed up on... [t]he Galapagos Islands, [which]... are famous for their giant tortoises and rare species of birds and plants that have evolved for thousands of years in isolation and with little human intervention. British naturalist Charles Darwin visited the islands in 1835 and developed his theory of evolution by studying wildlife there... "The environmental damage is extremely grave," said Ecuador's Environmental Minister... adding that the spill had spread about 300 sq km... A team of US experts were expected to arrive today with specialised oil spill equipment such as high-capacity pumps and inflatable oil containment barges. The global conservation body WWF called yesterday for limits to shipping in the area... The... Ecuadorean... tanker ship Jessica, carrying 1 million litres of fuel, ran aground in a bay on San Cristobal Island... Officials believe the accident was caused by navigational error. Police said that no charges had been filed against the ship's captain... or against his company...

THE captain of the tanker that spewed oil into the sea around the Galapagos Islands says the damage to the environment isn't his fault... While he admits he's responsible for the crash... – ...[t]he tanker ran aground after [he] turned off his radar and mistook a signal buoy for a lighthouse... – ...he says damage... could have been reduced if the area's park officials got help sooner... [He] will face at least three criminal charges.

...because of rough seas... Ecuadorean Naval officers struggled yesterday to right a wrecked ship near the Galapagos Islands in a bid to prevent more fuel leaking... More than 700,000 litres have already spilled into the Pacific Ocean. Dead fish and other sea creatures are washing up on beaches of the famed islands... [T]he Mayor of San Cristobal... said the good news was that the brisk winds were dispersing the fuel quicker than expected, pushing it from the shores... But officials at the Galapagos National Park said the same currents that pushed the spill away from the port... had floated the oily film to other islands... The cleanup has cost \$US2 million... so far but the final bill is expected to be quadruple that.

...A crippled... ship is threatening the Galapagos Islands – and not just their famed... wildlife. The archipelago's humans... say the tanker has destroyed their fishing and... livelihood... In recent years, the... Galapagos Islands... have become the focus of a struggle between [the islanders] and conservationists as... [increased tourism and] migration from Ecuador's mainland poses a major threat to the islands' fragile ecosystem... [Ironically, the tanker was 'delivering fuel for tourist boats'. On a positive note, a]uthorities... say the spill hasn't been as bad as expected. Only one pelican and two seagulls are known to have died but... [a] statement from the... [WWF] warned the spill could have a deep and lasting impact...

In the wake of the Galapagos spill, [a NZ Herald correspondent reports] on how the thirst for oil threatens more wildlife... [The US] President... is... preparing to open up a priceless Arctic refuge to oil exploration... "Moving quickly on a national energy policy is important,"... the new White

House spokesman, said this week. "We'll push ahead to develop 8[%] of the Arctic National Wildlife Refuge." ...most Alaskans who pay no tax because of the oil boom and instead receive an annual oil dividend from the Government, worth \$US1963[... are]... fiercely supportive of... drilling in the refuge... Opponents of the plan are certain to point to Prudhoe Bay, to the west of the refuge. What was envisioned three decades ago as a very concentrated area of oil and gas exploration by the bay has spread like a rash in every direction and even into the Arctic Ocean. When astronauts see North America from the Space Shuttle, the blotch of light that is... Prudhoe, where emissions of nitrogen oxides now exceed 56,000 tonnes annually... is as bright and big as New York City... The experts have plenty to look at aside from air pollution. What are the risks associated with injecting toxic wastes from drilling deep into the Earth's crust, for instance? Or, what kind of imbalances have been wrought in the wildlife chain by the increase in the numbers of foxes and grizzly bears which scavenge daily for food overflowing skips outside the oil worker's homes? ...Hanging over the debate are memories of the Exxon Valdez[, which]... struck Bligh Reef and spilled more than 11 million gallons of crude oil over the pristine coastline of... Alaska's Prince William Sound in 1989.

...OIL from the Exxon Valdez, some of it nearly as fresh as when it spilled in 1989, still lingers on the once pristine beaches of Prince William Sound... Of the 42 million litres spilled... about 38,000 remain... [-] twice as much... as had been predicted eight years earlier... It is spread over 7km of shoreline, and is vanishing at a rate of 26% a year... according to... preliminary estimates... by the National Marine Fisheries Service...

Studies of the Exxon Valdez disaster... have shown that oil pollution of less than one part per billion is sufficient to kill marine life. Salmon and herring with half-formed tails, twisted spines and grossly distended stomachs are still being caught in... Prince William Sound... The discovery has serious implications for coastal regions affected by other major oil spills – such as the Shetland Isles off Scotland, hit by the Braer disaster, and the beaches around Milford Haven in Wales which were polluted by the Sea Empress. However, the findings of the Alaska study suggest that the problems are more wide ranging... Swilling out a tank of diesel fuel or an outboard engine will have deadly consequences... Meanwhile, N[Z] scientists were searching for oil spills in Wellington Harbour and Cook Strait over the weekend. Landcare Research said it would use satellite images and computers to detect spills from marine accidents over a 100 sq km. "The images can be used to track the drift and spread of a spill, so we'd have advance warning if a coastline was in danger,"... said ...a... spokeswoman[...]. • 'Auckland Regional Council staff battled a major oil spill in Drury yesterday but could not stop most of the slick from reaching the Manukau Harbour. The spill was reported at 6.30 pm on Thursday but responding ARC staff had trouble dealing with the oil streaming away quickly in a tidal creek in the dark. Early yesterday they were back with hired labour, containment booms and absorbent material. The ARC oil spill response team was put on standby but was not required.'

...this week the Maritime Safety Authority delivered to Auckland more than 1400km of boom, a recovery system, including skimmers and recovery tanks, and large quantities of chemical dispersants for use in oil spills of up to 20 tonnes. "Until now, we have only had in-house capability to deal with spills up to two tonnes." The authority is spending about \$9 million on oil-spill equipment 'that is to be deployed at 16 ports by 1999.

...Three truckloads of new equipment for handling oil spills were yesterday delivered to the country's busiest oil port, at Marsden Pt. Until now equipment to clean up any significant spills in the port approaches or Whangarei harbour has had to be trucked from Auckland, even though as the site of NZ's only oil refinery, Marsden Pt has had a high oil spill risk rating. The \$800,000 of new equipment is the second instalment of a \$9m MSA upgrade'...

'New oil pollution equipment only recently delivered to the Port of Tauranga was used to clean up a heavy spill in Tauranga Harbour on Monday night. Environment Bay of Plenty will try to match the oil with samples taken from each ship in port, so it can prosecute.'

...An oil spill into an ecologically sensitive estuary in the Manukau Harbour resulted in a company being ordered to pay a fine and costs totalling more than \$31,000. Cleaning up the 9000-litre spill took more than 20 people from the ARC, the Auckland Coastguard, the Papakura Volunteer Coastguard and the Fire Service. Analysis of the oil traced it to the Wiri premises of Salters Cartage Ltd, which yesterday pleaded guilty in the Auckland District Court to discharging a contaminant on to land in circumstances resulting in the contaminant reaching water.'

...*The growing threat of oil spills around our coasts has led to the establishment of a clear safety strategy* The new strategy launched by the MSA sets up a three-tiered system of response and provides 16 regional councils around the country with specialised equipment. Small oil spills are to be dealt with, where possible, by the companies or industries responsible for the spill, with regional councils stepping in when needed to handle spills inside 12 nautical miles up to the mean high tide mark in their areas. Any oil spills outside the 12 nautical mile zone are dealt with directly by the MSA, which will also take over when spills are too large for the regional councils. Half the councils have already been supplied with the oil-spill equipment, the cost of which is being covered by annual levies on the offshore petroleum industry, oil tankers, and the shipping and fishing industries. Every year, regional councils deal with around 100 small oil spills, ranging from a few litres to several tonnes. Most of the small spills are caused by careless recreational boaters, who get off lightly because it would be too difficult to levy them. The Auckland region deals with 40 incidents a year, says the on-scene oil-spill commander. "We now have 27 trained responders, and we can be ready and on the way within 10 or 15 minutes." Bigger booms, skimmers and an inflatable barge which can hold up to 100 tonnes of oil are stored at the National Oil Spill Service Centre in Te Atatu. The only two medium-sized spills have occurred when the Wahine went down in the Cook Strait in 1968 and when the Mikhail Lermontov sank in the Marlborough Sounds in 1986.'

...Penguins and other sea birds are the first wildlife victims of the worst oil spill to pollute N[Z] waters. The oil comes from a sunken trawler on the rocky east coast of Stewart Island... Fog played havoc with the... clean-up... operation yesterday, preventing aerial spraying of a chemical dispersant, although several boats including tugs used the detergent-like liquid to break up patches of the spill... The wrecked Korean fishing boat Dong Won 529 apparently stopped spewing marine diesel into the sea last night. It had run aground in the early hours of Tuesday. Up to 300 tonnes of the fuel, in a slick spreading north about 10km from the Breaksea Islands wreck site... is threatening the ecologically delicate Paterson Inlet and the feeding sites of several rare bird species... Only time, the weather and the tides will tell if a big wildlife disaster occurs. If so, N[Z]'s planning for responding to such an event will be put to the test. Critics have called the planning woeful... [An ornithologist] said the planning was based on "a fingers crossed" mentality of containment and clean-up. "The wildlife comes later." The director of the M[SA]... defended the lack of action to take the fuel off the ship in the three days it was aground, saying the sinking was inexplicable. The trawler hit the rocks at "full tilt" and was almost high and dry, unable to be shifted one centimetre by two tugs and a fishing boat. Salvage experts from United Salvage A[US] had been on the ship only minutes before it slipped off. "If they had been on board [when it went down] they wouldn't be with us now."

...Compensation claims for financial loss... are in the hands of [the boat's NZ] charterer... Fishermen have complained the spill... has stopped them from working in the area. Under maritime law, liability for such claims lies with the polluter or the ship's owner... By last night, although a gale stopped work in the late afternoon, the M[SA] was claiming success in cleaning up the diesel... but shags had been seen swimming through a slick... A... D[oC spokesperson said an] old public swimming pool in Invercargill was being converted into a bird rescue centre in readiness to care for up to hundreds of birds... Wildlife teams had seen fewer birds than normal. "We hope it's because they are avoiding the area."

...Bad weather yesterday hampered the search for wildlife caught in the oil spill... as the cost of the clean-up operation... headed towards \$1 million. Wildlife experts believe birds and other marine life will be starting to show symptoms of oil poisoning as the diesel harms the animals' respiratory and digestive systems... [U]nlike heavy oil, marine diesel was light and did not[immediately] immobilise birds. It would take days before they were overcome... The Korean owners of the ship would meet their liabilities under... N[Z law, an MSA spokesperson] said. Meanwhile, the newly elected Mayor of Invercargill... has lent his support to a \$22.6 million compensation claim by fishermen... By late yesterday evening no... signs of any oil were seen in the region from Paterson Inlet to the south of Stewart Island. Neither had diesel spread to the coastline. The air exclusion zone over the site was lifted and the shipping exclusion zone reduced from the original 10 nautical miles to half a nautical mile off the

Breaksea Island site... It is understood that almost one-quarter of the country's store of dispersant for oil spills was used in the clean-up operation, although the authority could not confirm this.

...The owner of the Korean fishing trawler Dong Won 529... has been fined \$20,000...

A MAN, 39, has been fined \$2000 for tipping five litres of used engine oil into a Timaru stormwater drain and ordered to pay \$3000 in clean-up costs. [● 'NZ dumps 30 million litres of oil every year' according to a 1990 advertisement for recycled oil...

In 1990 'the Lower Hutt City Council chose to dump 80,000 litres of oil in its Silverstream tip because it would cost nothing. This was despite an Auckland oil refining company offering to take it – provided the council paid transport costs. The council claims the oil will not find its way into the groundwater because oil and water do not mix.' By the way, wind has saved the Poor Knights Islands marine reserve from the worst consequences of Thursday's oil spill... A major operation was launched on Friday and Saturday to clean up thick clumps of the oil... smothering a number of seabirds and fouling water on the western side of the islands. Suspicions are focused on two ships, which will be asked to provide samples of bilge oil for comparison... A voluntary code has existed since 1994 for oil tankers allowing captains to choose whether to go... round the Poor Knights or cut between the islands and... mainland – a distance of 9 nautical miles. Many skippers take the easier, direct route... "We should push these guys to go the few extra miles around the Knights," said... [a] Northland-based diver, marine conservationist and author[, who also complained about the]... cleanup method... "I'm not knocking the guys working out there cleaning up. They've been doing their best but it's a matter of finding the best methodology to handle this sort of thing. From what I saw out there on Friday, what was happening is open to criticism. If nets and buckets are effective [in scooping up spilled oil] then it would be more effective to have more than just one or two boats doing it..."

...Two boats transporting three cleanup crews were expected to reach the area today... as... pollution... [from] an oil tanker that broke up off the Brittany coast... threat[ens to]... hit... French beaches... A British salvage vessel and two Norwegian ships were also expected to reach the area in coming days. Maritime officials said that contrary to initial assessments that the... 10,000 tonnes of heavy oil... would not pose a major threat to the coast, there was now a growing risk of pollution as the oil was mixing with water and emulsifying. Following the breakup of the... Maltese-registered Erika... French ships had tried to tow its oil-laden bow and stern sections away from the coast, but both sank by Monday. Port officials at St-Nazaire said the captain of the ship had sought permission to call in at the port on Saturday but was denied access because of safety concerns. Authorities said the ship's agent told them the Erika had a crack, was losing part of its oil and was listing... Police have detained the captain...

Troops battle oil slicks on French coast... [The P]M... yesterday ordered hundreds of troops to France's pollution-hit Brittany coast as European environmental groups lashed out at his Government's response to the oil spill. Surveying the pollution caused by the wreck of the tanker Erika, [the PM] vowed to push forward regulations on preventing oil spills when France takes over the E[U] presidency... The... German branch of Greenpeace... has demanded a system of strict surveillance of oil tankers. [A s]pokesman... said simple methods of keeping a watch on tankers during the whole of their coastal voyage should be used in the same way as planes are followed with air traffic control systems. There was fresh embarrassment for France when the British RSPCA threatened to withdraw aid to its overworked French counterparts. It is furious at the condition of oiled birds sent to Britain for treatment. "Seventy-seven were dead on arrival, 170 were in such poor condition that they had to be put to sleep... [W]e don't know if the... other ones[']... survive the night. We offered to help [the French League for the Protection of Animals] on the condition that the birds would be fit to resist the journey and that they would receive an initial treatment. That doesn't appear to have been done."

...Motley brigades of bird lovers, city kids and the unemployed have mobilised on France's north-west Atlantic coast to fight an oil spill that has caused the country's worst birdlife disaster and threatened the local shellfish industry. The wreck of the tanker Erika... on a coastline prized for its wildlife and scenery, has triggered a rare sense of national solidarity... The Bird Protection League says that so far nearly 22,000 dead birds have been washed up, but perhaps five times more have drowned at sea. A further 12,200 have been picked up alive, but only two-thirds of these are expected to survive. The toll compares strangely with the tally of 6000 dead birds caused by a massive oil spill in 1978, when the Amoco Cadiz was wrecked off northern Brittany, spilling 220,000 tonnes of crude – 22 times more oil than the Erika.

...All eyes on the Breton coast have turned to the sky in supplication, hoping that the weather gods will smile on a perilous operation to salvage oil from the remains of a shipwrecked tanker. The elderly, ill-starred Erika foundered in strong storms... spewing... tonnes of fuel oil into the sea, fouling 450km of coastline, including some of France's finest holiday beaches. Now an unprecedented \$160 million operation has been launched to recover up to 15,000 tonnes of oil holed up in the fore and stern sections of the ship. [Editor's note: Supertankers, which are 'double-hulled', have subdivisions that can be used to 'separate different grades of oil and, by reducing the effect of liquid moving about, help to stabilize the vessels at sea'.

...the Exxon Valdez ploughed into a reef and coated some 2000 kilometres of coastline with oil. In spite of an extensive cleanup, aftereffects continue to harm wildlife and commercial fisheries, critics charge. On some beaches, oil remains buried deep among pebbles and boulders. But a new weapon called PES-51 is helping to remove subsurface residual hydrocarbons. An environmental geologist who oversaw the first test of the chemical says PES-51 may keep future oil spills from adhering to beaches. Sprayed on before a slick hits, it would create a nonstick film, allowing the oil to slide back into the sea.'

...a 'child has invented a way of cleaning up oil spills using tiny polystyrene balls that soak the oil up.' Incidentally, Queensland's] Government will oppose any... moves to allow a seismic survey for oil exploration on the Great Barrier Reef. The Federal Government is considering an application for a survey 190km from Hook Island in the Whitsundays area. Queensland[']s Environment Minister... said the... Reef was not "up for grabs"...

As... the... U[S] President... advocates drilling in Alaska, A[U]Sns are furiously debating the future of one of their greatest natural treasures. Federal officials are preparing recommendations on an application by an oil explorer to conduct seismic testing as close as 50km to the... coral wonderland running 2100km down the Queensland coast. The testing involves the use of underwater air blasts in waters populated by whales, green turtles, whale sharks and other vulnerable marine life. Last November, when the grounded Malaysian freighter Bunga Teratai Satu was freed by explosives from Sudbury Reef off Cairns, researchers scooped nets full of dead fish from the area... The... world's biggest continuous coral reef, is protected by the federal Great Barrier Marine Park Act but administered by both federal and state Governments: Brisbane controls the islands of the reef and its internal waters, while Canberra oversees the waters beyond. But Canberra has additional powers through the World Heritage listing, which covers the reef from the low tide mark on Queensland beaches to the outlying islands... Balancing the protection of the reef with the exploitation of its commercial and economic potential has become an increasing nightmare, marked by an increasing frequency of battles between Brisbane and Canberra. The grounding of the Bunga Teratai Satu, with its 1200 tonnes of fuel oil and cargo of toxic chemicals, set new alarm bells clanging. But it was far from an isolated incident: in the past 15 years there have been 40 reported incidents, including other groundings and collisions between ships negotiating the waters of the reef... If the tests do confirm viable oil fields, opponents say, the reef would be at constant risk of accidents and environmental devastation.

...Gamblers go for the deep oil... Deepwater drilling is the buzz of the global oil industry. Drilling as deep as 4000m, explorers off the coasts of Angola, Nigeria and Algeria have in the past two years uncovered some of the world's biggest recent finds – with as many as 12 successful drills off Angola. N[Z]'s turn could come if the... deepwater survey now being conducted off Taranaki... gives the right indicators. The Ministry of Economic Development will hold a bidding round for deepwater permits next year... N[Z] is an unusual oil prospect. Sitting in an active seismic region, it does not look like the best place in the world to make oil and gas discoveries... The ministry has its... theories on why small- and medium-sized oil companies are being attracted to N[Z] in increasing numbers. Good permitting terms, lifestyle and, of course, political stability are drawcards, it says... "You're not at risk of being kidnapped on the side of the road like you are in some other countries." ...many A[U]S companies are looking to N[Z], where exploration spending alone put \$172 million into Government coffers last year. Royalties claimed from production could extend into

billions of dollars. But while oil opportunities are undoubtedly there, the industry continues to face negative images of the environmental effects of its exploration. [The ministry] counters the public image of the industry by saying: "Our view is that if it adds value to the local and national economies, it's a good thing. Why not explore for oil and gas here where we can control any impacts, if there are any adverse impacts?"

...[When we remove oil from the Earth, the Earth frequently retaliates. Sometimes it quietly sinks: in 1989 Phillips Petroleum had to build a 106m-high concrete wall around a giant North Sea oil and gas processing complex because the sea floor underneath it had dropped over 3m in the previous 19 years. But sinking is a relatively mild response to oil extraction. Around many oil fields Earth signals its displeasure by rumbling with low-level quakes. These tremors rarely exceed 4 on the Richter scale, but can still buckle pipelines and shear off wells. Such effects are well documented at drill sites around the world. But extracting oil from rock should make the rock less likely to move, not more. Indeed, experiments have shown that pumping water into drill holes near shallow faults increases the frequency of small earthquakes; removing the water locks the faults up again. After analysing several quake-prone drill sites in the US and Canada, the US Geological Survey has come up with a theory to explain the apparent paradox (that may help limit the consequences): it's not the rock that once held the oil that is set quaking by the extraction, but the rock immediately surrounding it. As the oil is sucked out, the porous rock in the reservoir contracts like a drying sponge. That contraction pulls on the less porous surrounding rock, adding stress that increases the likelihood it will spring loose along existing faults. Contraction in the reservoir rock can also pull down on the rock lying above, causing the surface to sink.]

...A New Plymouth family forced to flee their home after a long-abandoned oil well sprang back to life do not want to return... so the Bayly Rd house, overlooking Port Taranaki, seems likely to be demolished. The family, who do not want to be named, are living in rented accommodation while authorities decided what to do. The oil well, drilled in the Moturoa field in 1913, is gushing 6000 litres a day of oily water and natural gas... The New Plymouth District Council is trying to find dozens of other potentially dangerous abandoned oil wells in the... area. The precise locations of many of the more than 40 wells drilled in the oil field... since 1865 are not recorded... [In international news, a c]rusader... and her boss... have filed a lawsuit in the Los Angeles superior court seeking unspecified damages for former students of Beverly Hills High School... [The students all attended] between 1978 and 1992, and were later diagnosed with Hodgkin's disease – some have since died. The ex-students believe they contracted cancer from chemicals released by drilling at the campus... The case began when two former... students met coincidentally in a doctor's office where both were being treated for cancer... [O]ver 10 years, 170 graduates and staff developed three types of cancer. The lawsuit names several oil and gas companies. But... one of the companies, says tests were conducted by two... agencies and no evidence was found to support the claims.

WITH THE MASSIVE INCREASE in activities in Antarctica it had to happen sooner or later, and this year it has happened twice. On January 28th the Argentine support ship *Bahia Paraíso* ran onto rocks off Anvers Island, and a month later the Peruvian ship *Humboldt* did likewise at... the South Shetland Islands – both locations within the Antarctic Treaty Area. Both ships released substantial quantities of fuel and other oils into the sea and although some sort of international "clean-up" appears to be underway, reports so far indicate a substantial impact on the wildlife.

A wrecked Argentine navy ship is leaking diesel fuel into one of Antarctica's prime wildlife areas eight years after it struck rocks and capsized. The *Bahia Paraíso* lies belly-up on rocks near the US scientific base Palmer Station on the Antarctic Peninsula. Populations of... the imperial cormorant and the kelp gull, have been decimated.

...At least 3000 sea lions at a nature reserve off the Uruguayan coast have died from a massive oil spill that occurred... [last month]. The Argentine daily newspaper *Clarín* reported that at least 200 tonnes of oil spilled into the Atlantic when the Panamanian-registered tanker *San Jorge* ran aground near the island of Lobos... Greenpeace has accused the Uruguayan Government of downplaying the disaster.

...A Japanese cargo vessel that grounded last week near Dutch Harbour, Alaska, has spilled about 910,000 litres of fuel oil, about twice the amount estimated earlier. Roughly 570,000 litres of fuel oil is believed to be still on the ship and workers are attempting to remove it... [In related news,] Singapore yesterday charged the captains of two ships involved in a collision which caused a 25,000 tonne oil spill with reckless navigation and endangering lives. A Thai supertanker and a Cyprus-registered oil carrier collided [over a week ago] and a major operation is still under way to clean up one of the worst spills to hit South-east Asia.

...Two tankers collided in thick fog in the North Sea and one was leaking unleaded petrol, British coast guards said yesterday. No one was injured in the collision... and neither ship is in danger of sinking, but the French maritime authority said the spilled petrol might explode.

...A 66-year-old fireman was killed and nine people were injured... after two petrol tanker wagons exploded at an east German railway station. Police said the blaze, which started at dawn, engulfed the station... and destroyed the building. Fifteen motor vehicles outside were also set ablaze. The explosions happened after 15 tanker wagons in a freight train derailed and toppled over as the train arrived at the station... More than 240 police and 140 firefighters were involved in the operation to put out the blaze and to seal off the danger area... [Elsewhere, 'an explosion and fire has damaged an oil refinery in India'. Incidentally, the] biggest oil tank to be shifted in [NZ will soon] be railed from [Northland's] Marsden Pt power station site and on to a barge headed for Fiji... The giant tank, which weighs nearly 400 tonnes... would be welded to [the] 47m barge and towed by tug to Suva, where it would be used to store bitumen. The other three super-tanks lined up behind it at Marsden Pt will eventually also be shifted. However, for commercial reasons... Technical Bitumen... a New Plymouth road construction company... [that bought the] four tanks... during the decommissioning of the Marsden A power station this year... would not disclose what was planned for them... [T]he tank to be barged... had been checked by a naval architect, and was expected to be very stable when afloat as most of its weight was low in the structure. "The only possible problem will be wind. It's like a big sail – with a tail wind it will be in Fiji in six days, but if the wind's head-on it [could] take... 15 days."

...A consortium with an exploration licence off the Northland coast has committed itself to drilling two wells after seismic surveys identified potential hydrocarbon accumulations. The consortium, which includes Todd Petroleum Mining, had planned one well... [While on the topic o]f oil exploration, [about]... 4000 members of the U-wa tribe in Colombia have threatened to commit mass suicide [if any]... takes place on their ancestral lands. The indigenous community considers drilling for oil inflicts wounds on Mother Earth and could have deadly consequences not only for the tribe, but for the whole of humanity.

...Before [the US President's] arrival a Venezuelan environmental group said the U[S] gas-guzzling culture was destroying the delicate tropical habitat of Venezuela, which has become the largest supplier of oil to the U[S]... Venezuela has embarked on a massive 10-year plan to double oil production to six million barrels a day... Leading U[S] oil companies, including... Texaco, Exxon and Mobil have snapped up prime slices of Venezuelan oil country, including the environmentally delicate Orinoco river delta, which is home to the threatened Warao Indian group.

...Opec, the geriatric oil cartel, meets this week to mourn a slide in petroleum prices which it appears to have little power to resist... Only a core of... producers within Opec... now stick to the allocations... designed to buoy oil prices... Analysts say the flawed quota system will survive the week unscathed, because any attempt to renegotiate new allocations would only provoke a row guaranteed to send markets into a tailspin... Cash-pinched [Last] World producers like Venezuela... already prefer to maximise revenues by running supplies at full tilt, ignoring the consequences.

...There was a time the world awaited with trepidation the outcome of a meeting of... OPEC... But in recent years OPEC's power has diminished. Few... would have pencilled in their diary the fact that OPEC's oil ministers are gathering in Jakarta today. The decline in interest in the oil producers' discussions is in part due to the discovery and development of oil in non-OPEC countries like Norway. But largely, the weakening of OPEC's muscle is self-inflicted. Its members used to announce the amount of oil they would produce and strictly adhere to those quotas. Now greed

rules. Many OPEC members are producing at full pelt and are ignoring the self-imposed production limits designed to prop up oil prices. The OPEC output ceiling has been just over 25 million barrels a day for more than four years, but actual production has been 2 million barrels a day above that ceiling for most of this year. Even with that production rise, OPEC's total share of world oil production has slipped to less than 40[%]... Without doubt the public face of this week's OPEC meeting will be one of partnership, cooperation and commitment to production targets. But private discussions are likely to be heated and the end result could speed up the disintegration of an outdated cartel. And any shift that strengthens competitive market forces and likely reduces world energy costs must be good.

...Opec said it will pump more oil next year as Saudi Arabia and other big Persian Gulf exporters bet global consumption[, currently]... at a record high and rising... will rise enough to prevent a big drop in oil prices.

...Rapid demand increases – fired by economic growth and oilfield hiccups – ha[ve] helped to keep the lid on crude inventories. London September futures for North Sea Brent blend closed almost unchanged on Friday at \$US18.95 a barrel. Prices had recorded a robust recovery from the year's low of \$US17.32 in early June after a slump from slightly below \$US25 a barrel in six months. [Incidentally, 'British Petroleum unveiled profits of £9.7 billion on Tuesday – the biggest profit ever made by a UK company'.]

...Royal Dutch/Shell Group, the world's biggest oil company, says improved refining results have boosted its third-quarter profit by 5[%] despite lower oil prices. Profits after tax rose to £1.173 billion... in the three months to September... The result was slightly below average market forecasts.

...World oil prices rose on Friday amid signs that the U[S] is losing patience in a confrontation over weapons inspections with Iraq. London futures for the benchmark, Brent blend crude, settled 32USc higher at \$19.79 a barrel. Dealers said concerns that the row might escalate were countering the effects of ample world oil supplies and... Opec[']s decision to] raise its output ceiling. Oil traders said they were also worried about the possible effect of the standoff on the future of Iraqi oil exports running around 800,000 barrels a day. ['Iraq has threatened to cut its supply (5% of the world's total) if it is ordered to pay \$billions in compensation to Kuwait for setting fire to its oil wells'...

'The petroleum industry was a steady business achiever throughout last year. Locally, a broad exploration development programme dug up several good prospects and firmed up previous discoveries for commercial production. But the big story of the year came from overseas: the enormous upswing in the cost of crude oil. Opec put the squeeze on international oil supplies to reverse a world glut that had sent crude prices spiralling to a 10-year-low. The price of a barrel of crude rose to more than \$US25 – the highest level since the 1991 Gulf War.'

...the 'US President has sent a clear message to the oil giants that America has had enough. He has authorised a "limited drawdown" of the American emergency oil stockpile. The move has been seen as a message to oil companies and oil producing countries that America will not be held to ransom over petrol prices. The strategic petroleum reserve stockpiles oil at huge storage depots in Texas and Louisiana. The stockpile has not been touched for a national emergency since the 1991 Gulf War. The energy secretary said 30 million barrels of oil a day would be released over 30 days from the 571 million-barrel reserve, created after the 1973 Arab oil embargo choked world growth. The secretary warned the US was prepared to go further if necessary.'

...France's second-largest oil company Total and Russian and Malaysian companies have signed a \$US2 billion... contract to develop Iranian offshore gas reserves, challenging a U[S] law seeking to stamp out investment there.

...China has signed a contract worth \$US9.5 billion... to extract an estimated eight million tonnes of oil a year from one of Kazakhstan's vast Caspian Sea oil fields... [In local news, r]esource consents are being sought for oil and gas exploration drilling to start near Wairoa, on the east coast of the North Island in March. The Enerco and US-based Westech Energy joint venture said they had lodged applications for drilling at Kauhauroa, Awatere and Makareao as part of a programme expected to cost between \$12[million] and \$16 million. Applications for a further three sites in the same area would be made shortly.

...A small A[US]n-listed energy exploration company is aiming to drill for oil near Canterbury... But first it has to strike a rich deposit of cash. Pacrim Energy will list on the NZ stock exchange today... Although its present assets are... a market capitalisation of just \$6.5 million... the company believes its main resource is permits to drill for oil around N[Z]. In particular, it has 75[%] of two licences to drill 32,000 sq km of the Canterbury Basin. [The company's c]hief executive... said the Canterbury area... had been only lightly explored in the past. He said that a well called Galleon, drilled by British Petroleum in the area in the 1970s, had struck flows of 2200 barrels a day. The well was plugged and abandoned because BP thought the rock off Canterbury was not capable of a big reservoir... [However,] his company had reinterpreted surveys of the area using modern technology, and it believed BP was mistaken... But with an offshore well likely to give little change from \$19.5 million, Pacrim cannot afford to search on its own... Pacrim also has a 37[%] share of a permit to explore for oil off Westland. The operator of that permit is N[Z] Oil and Gas[, which 'is confident there is oil in its West Maui prospect off the Taranaki coast after finding samples of the black gold in seabed sediment. Seismic tests on one area show it could potentially contain 150 million barrels of oil in each of two levels'...

NZOG[] and its partners plan to drill two further wells at Taranaki's Ngatoro oil field this financial year. Increased oil production from Ngatoro boosted NZOG's earnings significantly in its June financial and it wants to build on that success... Production at the onshore field more than doubled to 1373 barrels a day over the 12 months as three new wells were brought onstream. The field is one of the lowest-cost producers in Australasia, with a cash operating cost of about \$3 per barrel... [Expect NZOG's earnings to be boosted even further in future because] production from its Chervil field off W[A] has increased tenfold since Chervil-6 came on stream... [T]he field was[now] producing 5900 barrels of oil a day, of which NZOG's share was 1367 barrels... [In international news, a] suit by six oil companies to prevent Unocal Corporation from collecting millions of dollars for its patent on a clean-burning petrol is set to go to trial next week in Los Angeles... California adopted stricter air quality standards than the federal government's because air pollution in the state is worse than most other places in the world... According to the suit... filed two years ago in the U[S] District Court by Atlantic Richfield, Exxon, Chevron, Texaco, Mobil and Royal Dutch Petroleum's Shell Oil Products unit... the oil companies had agreed to co-operate in developing ways to meet the higher specifications set by the state. Unocal "surreptitiously engaged in a scheme designed to appropriate to itself invalid patent rights to gasoline fuels meeting those specifications," the suit claims. Unocal claims its gasoline was developed independently... While the cleaner-burning gasoline is currently sold only in California[, where about]... 37 million gallons of... [it] are sold every day... the market for cleaner fuel may expand if tougher standards are adopted in other parts...

Two companies that have had run-ins with Canadian stock exchange officials because of overly promotional comments now contend that an oil-exploration area they have in Canterbury could hold a Californian-style oil dream. Trans-Orient Petroleum and Indo-Pacific Energy suggest the geology of the Canterbury Basin bears an uncanny resemblance to Southern California, which is one of the world's great oil regions... To add weight to the contention that Canterbury is a great oil prospect, Indo-Pacific notes that the Canterbury Basin also had a similar geological evolution to the Taranaki Basin, which is N[Z]'s only oil and gas-production area[(between 1886 and '1972, Taranaki's wells produced nearly 30 million litres')]. Indo-Pacific and Trans-Orient each have a 35[%] stake in a permit covering nearly all of the exploration prospects within the... 1.1 million hectares... [of the] onshore... area. The licence was awarded to them by the Ministry of Commerce earlier this month. A local unit of the companies, Trans N[Z] Oil Company, holds 20[%], while Gondwana Energy has 10[%]. There is no record of Gondwana as a registered company.

...Ravenous oil explorers Trans-Orient... and Indo-Pacific... continue to eat up the N[Z] countryside, yesterday taking an 8800ha bite out of Taranaki. The companies have been granted a five-year permit to explore for oil onshore in the province, with half the permit renewable for a further five years... [S]andstone formations within the Mt Messenger area of their new tract offered the major exploration chance... Indo-Pacific

and Trans-Orient are managed in N[Z] by a former N[ZOG] exploration manager... The companies are controlled by Iremco, a private company mostly owned by a U[S] businessman... In another exploration area in Taranaki, Indo-Pacific is involved in a joint venture with... Challenge.

...[Challenge] Energy is the company that... Challenge's... Group CEO... suggested "the stars all came into alignment for" in its latest financial year. The company's net earnings rose fourfold to \$308 million, cashflow from operations doubled... and oil production increased a fifth to 50 million barrels... [T]he company has boosted earnings in recent times mainly by extracting more value out of existing prospects – rather than finding new oil and gas sites. In particular... production from Maui rose [2/3]rds last year, mainly because of new technology. About \$200 m... was spent developing a floating platform... able to move around the vast field. Since commissioning the platform, [Challenge] has been able to increase proven reserves at Maui by 15 million barrels of oil... This... was a main factor in... [Challenge] replacing its production with new reserves by a factor of one-and-a-half last year. This is a high proportion of replacement... So far, the company has budgeted to spend at least \$70 m... this year to drill and electronically test its prospects to confirm the amount of oil in the ground. Most of that will be spent in [NZ] but it will allocate \$15 m... to test its Perdana oil prospect in Brunei in association with the Bruneian Government and its [US] partner in the prospect, UNOCAL. [Challenge] already plans to develop the Maharaja Lela oil fields in Brunei. Production is due to begin from early 1999... Challenge Energy has[also] launched an assault on the W[A]n energy industry with a \$50 m... investment in a planned power generation plant near Perth... The... 120-megawatt cogeneration plant... is part of a \$800 m... expansion of the Worsley alumina refinery... [Meanwhile,] sibling rivalry has surfaced... [amongst the corporate quads that their Group CEO] gave birth to... The four chief executives of... Energy, Forest, Paper and Building Products were given scope to express their corporate ego in the 1997 collected annual report folder... Three played the game with identically sized missives. But [the chief executive of]... Paper turned out to be the cuckoo in the nest with a brochure 24[%] taller than his colleagues. The corporate affairs department had to design an over-sized folder for the reports and shareholders will get a bigger envelope through the letter box. But then [he] did outdo his colleagues in other respects. Paper racked up a \$385 m... loss... [compared to 'Building's profit of \$146m, Forest's profit of \$101m' and Energy's profit.] Energy's share price rose 20 cents to a record \$6.25 yesterday... following encouraging results from development wells at... Mangaheva...

Some of the mystery surrounding [Challenge] Energy's Mangaheva gas and oil discovery will be unravelled next year when the company undertakes a full appraisal programme of the prospect. [Challenge] will drill at least two more wells to give it a feel for the size of the strike. Encouraging results from the only well tested so far... are a significant reason for a sharp rise in [Challenge] Energy's share price in recent months... The initial Mangaheva test well has flowed a maximum of 17.9 million cubic feet of gas a day, along with 236 barrels of associated oil. The well[, which has an estimated total of]... 223 million barrels of associated oil... flowed at high pressure rates, which is a major reason for the market's excitement... [Challenge] has already announced plans to pipe gas from the field to Taranaki production facilities of the synthetic-fuels producer Methanex.

...Methanex N[Z]'s methanol plant at Waitara was been saved from closure... Waitara uses gas from [Challenge's] Maui and Kapuni fields but the supply contracts expire from next year... [Yesterday] Challenge... agreed it would supply gas to Waitara and Methanex's nearby synthetic petrol plant at Motunui until well into the next century. The agreement staves off the real threat that the Waitara facility would be closed from the end of this year... Under the new agreement, [Challenge] guarantees to supply gas from a combination of [the existing 2] fields and a recently tapped source... Mangaheva has proved to be the lifeline for the Waitara plant. Mangaheva is known to be a large gas field, but the fuel is trapped in impervious rock and sands. [Challenge] has been trying to free the gas by pumping fluid and small beads of sand into the structure at high pressure. The new approach... is proving... successful... Methanex is a major export earner, with fuel sales in its latest financial year earning more than \$400 m... [In related news,] Natural Gas Corporation has sold 25 petajoules of Maui gas to... Methanex. No price for the deal... was disclosed.

...Companies that are significant buyers of gas are being advised not to sign long-term supply contracts until new providers of the fuel enter the market from early next year. Shell and Todd Petroleum Mining will soon be selling substantial amounts of gas, following the settlement yesterday of what has been a tortuous battle over ownership of gas at... Kapuni... in Taranaki[, which was NZ's]... first natural gas field. It was discovered by the Government in the 1960s and eventually sold to... [Challenge] and... Natural Gas Corporation... In 1967 Shell and Todd signed a contract with the Government to help develop the field. The High Court ruled this year that the contract, which restricted Shell and Todd selling their share of the field's gas independently, was illegal under section 27 of the Commerce Act... [Challenge] and NGC... have agreed not to pursue an appeal on [the] High Court judgment that... the remaining reserves at Kapuni... [be] divided... equally between Shell/Todd and... [Challenge]/NGC. The... field still has enough gas to supply a third of the nation's needs for perhaps 10 more years... an estimated 300 million gigajoules... The final agreement means Shell and Todd will soon compete with [Challenge] and NGC in the natural gas market. Their entry... is expected to have a significant impact on prices. Initially the main beneficiaries will be bulk industrial users like [CHH] and the NZ Sugar Company, which use large amounts of gas for heating and drying their products. Power companies like Mercury Energy, which use gas to fire electricity plants, are also expected to negotiate lower prices, as are residential suppliers... Shell's petroleum mining manager, described the out of court settlement as "a big relief." ...The first task for Shell and Todd will be to come to an arrangement with NGC to get their gas to the market. NGC owns a processing plant at the Kapuni field and also owns the network of pipelines that make up the national gas grid. NGC, which is one-third owned by [Challenge], cannot stop Shell and Todd using the network because that would be anti-competitive behaviour. But there could be disagreements over pricing methods.

...An attempt by the Commerce Commission to force [Challenge] Energy to sell its controlling \$30 million stake in the Kupe gas field has parties involved in the deal baffled. The commission contends [Challenge's] purchase of a 37[%] stake in the undeveloped Kupe field earlier this year contravened the Commerce Act, because it will result in [Challenge] further dominating the gas industry... Challenge... has ownership control of 90[%] of producing gas fields. This includes a 69[%] share of the Maui field, which accounts for more than 80[%] of the 210 petajoules of gas currently produced in [NZ each year and] also owns all of the McKee oil and gas field... [with a] production of 8 petajoules a year... and 97[%] of the smaller Tariki, Ahura and Waihapa fields... The commission has... lodged High Court action... Court documents also assert [Challenge] and the Electricity Corporation have further contravened the act by signing contracts that will lessen competition in the gas industry. The commission action relates to [Challenge's] purchase in March of a 63[%] stake in the Kupe field from overseas oil companies, and subsequent on-sale of 26[%] to the corporation. The commission alleges the arrangement included a gas supply contract and agreement on aspects of how and when the field will be developed. The field, which is estimated to hold gas equivalent to 20 million barrels of oil, cannot be integrated into [Challenge's] operations pending the court case... The court action, if it proceeds, is expected to take the best part of a year to get before a judge...

[Oil companies must be breaking out the bubbly this summer. Not only are energy consumers gobbling up more oil and gas than ever, but several promising oil and gas prospects popped up around NZ during the year. Houston-based Swift Energy struck black gold in south Taranaki last month when it discovered oil and gas at the wildcat Rimu-A1 prospect. US-owned Westech and Christchurch-based Orion continued testing on the East Coast during the year, following a gas discovery 10km northeast of Wairoa. The site has the potential to prop up NZ's fast-depleting gas reserves, as does Maari, a Taranaki oil and gas prospect developed by Cultus, Todd Energy and Shell. Challenge Energy had a disappointing result from an exploration well south of the offshore Maui gas field early in the year, with no significant reserves found. However, the company has big expectations of its Pohokura gas prospect, which will be drilled next month off Taranaki. Surprisingly few exploration wells have been drilled in NZ – only 300 since the first in 1865. Few dispute NZ's petroleum potential, but high exploration costs and difficult weather in the promising Great South Basin off the South Island have counted against development in the past.]

... 'Enerco says its Tuhara 1 exploratory well off Wairoa, which reached a depth of 2218m, has been abandoned as a dry well. Enerco and its joint venture partner, Westech, have moved the rig and begun drilling at Kauhauroa 2.' By the way, NZ] Petroleum... which fizzled as an oil explorer... is to diversify into the forestry business... Company executives yesterday said that it plans to spend up to \$8.3 million on 8693ha of natural forest estates near Wanganui and Wairoa. The forests comprise mainly beech, rimu and matai. The company has Ministry of Forestry and D[OC] approval to harvest up to 18,000 cubic metres of timber a year from the forests. The harvesting is expected to generate \$3 million a year turn-over for NZ Petroleum and the forestry operations are forecast to be profitable immediately... The purchase requires shareholder approval. It will also mean the private owners of the forests will take around a one-third stake in NZ Petroleum. The forestry operations will be managed by... a... former... director of the Forestry Corporation.

...Forestry is the division of the... Challenge group that has the most potential to add value to its earnings over the next few years... [Challenge] Forests owns or manages 285,000 hectares of forest estate. That makes it second only to ['CHH's 333,000ha'] in terms of trees under its control. Nearly 60[% of Challenge's] estate is held through an international consortium that bought the Forestry Corporation assets[, which]... included four processing plants, and [Challenge] is examining the future for those, as well as six of its own processing facilities... One of the main issues for [Challenge] will be to exploit the potential market for high-value radiata pine products... That will involve convincing overseas customers pine can be as structurally strong and as pleasing to the eye as expensive hardwood timbers. It is a big task. While that process is being worked through, [Challenge] Forests will continue to be heavily reliant on export log markets... [A]bout a third of the company's revenues... come from log exports... That means short-term investors in [Challenge] Forests need to closely assess the outlook for international log prices. In the past couple of years log prices... have been at cyclical lows.

...The forestry industry will soon face a wall of wood, and forest owners are concerned this will cause prices to slump... 24 million cubic metres of extra wood... will be harvested during the next five years. Finding a market for that 30[%] increase in production is what worries growers... [NZ] remains perhaps the best place in the world for sustainable tree growing, especially of softwood varieties such as radiata pine. But this is expected to be of only limited benefit unless markets for the product are developed. "There is no customer in the world that needs radiata pine," said the... Challenge Forests chief executive... The... president of the Forest Owners Association... noted the competitive gap between the[NZ] forestry industry and its counterparts overseas, especially in the processing of products. "The international market grows more competitive by the day, and if we want to remain a serious player we... [have] to make some fairly radical decisions – the sooner the better," he said... At their annual meeting in Auckland this week, members of the [association] agreed they needed to become more sophisticated... The... association represents around 80[%] of all owners in [NZ]. It works closely with the Forest Industries Council... The council can use its collective might to lobby for trade, research and political moves that will benefit growers[– who include people who have bought shares in forests as a retirement investment...]

'The year "Pinetree" retired (1971) a tree was planted. Back then it was a 3 cent seedling. Now it's a towering tree worth about \$146. That's real growth. Regardless of what's happening in the world, your trees keep growing. That's what makes forestry different from most other investments.'

...The government is not going to be able to support N[Z]'s increasingly aged population. It's up to each of us to invest to support ourselves and our families... The problem for most people is how to invest, and what to invest in. One investment option that does make sense is forestry... As the world supply of timber runs out, demand for timber is increasing... World wood consumption is forecast to increase from 3.4 to 5.1 billion cubic metres by 2010. That is over 170 times N[Z]'s forecast harvest in 2010... The future crisis in world timber markets is expected to push timber prices higher[, which]... will mean higher returns to forest owners... You can easily afford to own a forest for as little as \$35 per week... From an investment today of \$3,250, paid in easy interest free instalments, plus a \$50 annual administration fee, you could be looking at a return of \$97,582 if historic trends continue... *Want to know more?* For a free Greenplan Investor Kit, including the latest prospectus for the Cattlestop Forest Partnership No. 35... Call 0800 800 154... Greenplan is an established leader in forestry investments, with over 30 forests already growing for thousands of investors.

...[Small wood lots are likely to supply most new forestry plantings in the foreseeable future, says a forestry consultant. While forest land is generally replanted after the trees have been harvested, few major new developments are taking place, the former Challenge Forests Ltd manager of forest resources says. The big forestry companies have reached a level of investment they are happy with. However, farmers – particularly with areas that are difficult to farm – see forestry as an alternative. This is where the major growth in new plantings is happening and these smaller growers will become increasingly important in providing wood flows. NZ harvests about 18 million cubic metres of wood a year, but in five years that will increase to some 30 million cubic metres. "That's a pretty dramatic increase and a lot of it will occur in rural areas such as Northland. Handling it will certainly put pressure on the industry. Some of the skilled harvesting operators and the specialist equipment needed, especially for use in steep country, will be in short supply. It will also put pressure on regional infrastructures such as roading and port facilities." □] Northland firefighters were last night battling a large forest fire north of Kaitia which they feared might destroy more than \$70 million worth of timber trees.

...A Far North timber mill has been dealt a double blow with a fierce fire adding to its financial woes... [T]he 24-hour blaze consumed nearly 200ha of semi-mature pine in the Aupouri Forest... About 200 people spent the night fighting the fire, which was being fanned by strong winds... Rain helped the dampening-down effects... The... Japanese company with cutting rights to the 26,000ha forest, expects the damage to run to several million dollars. Its Kaitia-based triboard mill only recently resumed production following an eight-week strike, and company officials were still evaluating the industrial action's full financial impact. The company said the fire was a further blow and, although the forest was insured, it was too early to say whether full costs would be covered... Police and fire safety officers are investigating the fire.

...Police are searching for four teenagers believed to be responsible for the... fire that destroyed... 260ha... of semi-mature pine last week. The fire... started after a... deliberately torched... abandoned car... ignited scrub... Juken Nissho, the Japanese company that owns the commercial forest block... estimated... the damage and costs of fighting the fire... to be in excess of \$8 m... Forestry staff were still... dampening down... hotspots.

...Challenge plans to make redundant a third of the workers at its Waipa timber mill near Rotorua – only a couple of weeks after failing to negotiate a new employment contract with them. [Challenge] contends rising losses have forced it to take the sudden action. The Waipa mill lost more than \$8 million in its latest financial year and has lost \$25 million over the past three years... The mill is one of the assets bought from the... Forestry Corporation last year. [Challenge] has a 37.5[%] share of the assets, with a Chinese Government subsidiary owning 37.5[%] and BIL] the remaining 25[%]. At the time of the sale there was much speculation [Challenge] would close the mill, which was established in the 40s... It produces more than 200,000cu m a year, but that will drop by 40,000cu m... [Challenge] is to concentrate on just one shift at the mill, compared with the current two. The change will allow the mill to concentrate on certain products... Most of the output is framing timber for the domestic market and low-grade building material for South Korea. The Korean product will no longer be made... [■ Last month, Challenge] Canada said it would take an after-tax charge of \$16 million in ...t[hi]s... fiscal quarter... to cover costs of... plans to eliminate... about 40% of its salaried workforce...

...Challenge Paper will save nearly \$30 million a year by cutting workers from its Canadian operations... part of a major guillotining of expenses within... [the] division, which is struggling to combat weaker international pulp prices... So far, nearly two-thirds of 300 staff redundancies... have been finalised and the remaining jobs will disappear in the current financial year. The cuts come at an awkward time for [Challenge] because its Canadian workers are currently on strike over wages and working conditions... [Challenge is also] trying to get out of... [its money-losing] fine-papers operations in Britain... so it can concentrate on newsprint and publications paper manufacturing... The company recently bought the 50[%

of AUS]n Newsprint Mills it did not already own and was expected to use that company to capture Pacific Rim markets. [Challenge] Paper has also taken a 20[%] share in Malaysian Newsprint Industries and a 250,000 tonne-a-year newsprint machine being built by that company will be commissioned this year. [Incidentally, 'staff at Norske Skog pulp mill in Kawerau will be paid \$10,000 each for the stress of transferring their employment to CHH. CHH bought the pulp mill from the Norwegian-based company for \$311 million and it will officially change hands on Monday (the buyout makes CHH the only supplier of kraft pulp in NZ and the owner of two of the cheapest six pulp-producing mills in the world). After mediation both companies agreed to share the cost of the \$1.3 million "transfer fee" for stress to the 135 pulp mill staff. But about 150 staff have missed out on the deal after agreeing to new employment contracts.'

... 'Kinleith mill workers are stunned at what they see as management "treachery" after their union confirmed CHH has given two months' notice of its withdrawal from the mill's existing heads of agreement over a cooperative reduction of the mill's workforce, and plans to introduce individual contracts and change employees' wages to salaries. Workers agreed almost unanimously at a meeting in Tokoroa to boycott company meetings to explain the management position. Missing from the vote in Tokoroa were three workers who politely handed out leaflets to shareholders at CHH's annual meeting at the Ellerslie Convention Centre in Auckland. Inside the centre, the irony went unappreciated as shareholders walked past a display trumpeting the company's commitment to employee relations "based on involvement and two-way communication." Many mill workers regarded the restructuring as a union-busting plot inspired by CHH's American parent, International Paper.'

...International Paper's chairman... [said yesterday that annual] earnings had been hurt by a "free fall" in prices for all grades of paper. Prices for uncoated free-sheet, used in photocopy machines, fell by almost 50%. Slower global demand for paper also hurt earnings.

...Chilean forestry exports fell 1.3[%] in the first five months of 1997 from a year ago because of slumping wood pulp prices. Chile's largest forestry exporter... this year [i]s... Copec, with \$US154.3 m... or 20[%] of total exports. Copec is... a joint venture between [CHH and a local family]...

A Chilean arbitrator presiding over a case between one of Chile's richest families and N[Z] timber products company... CHH... sees no possibility of reconciliation in the dispute over the control of the Copec conglomerate... "Both positions are absolutely at loggerheads. Each of them wants to buy the other's stake, and on this they won't budge," [the arbitrator] was quoted as saying. CHH joined the[Chilean] family in 1986, buying half of investment company Los Andes, which owns 60[%] of Copec's stock. Under their agreement, the Chileans would run the company on their own until 2007. However, a few years later control of CHH was taken over by U[S] giant International Paper Co, which sought to have a bigger say in how Copec was run... Chile has no specific legislation on joint ventures...

[CHH] yesterday reported a 45[%] drop in net earnings to \$251 million in the year ended March 31. The result was [CHH's] lowest profit in four years and was down on its record earnings of \$453 million last year. The decline mainly reflected falls in the global prices for most of the products traded by [CHH]... Overall sales by value fell 4[%] to \$3.08 billion... But... [CHH] booked around \$32 million in dividends and around a \$69 million share of profits from Copec in the latest fiscal year.

...[CHH] plans further cost cuts and productivity increases to help offset the continued bite of depressed forest-product prices... The savings... would be in addition to a previously announced plan to generate savings of \$50 million in the current financial year... [CHH] reported first quarter earnings before interest and tax slipped 2[%] to \$60 million... The drop in operating earnings came despite total sales rising 3[%] to \$751 million... One expense of concern to the company was electricity. The power bill for[its] Kinleith pulp and paper mill rose \$1.5 million in the... quarter... [T]he company was looking to a new cogeneration plant at Kinleith to generate savings. A \$313 million modernisation of the Kinleith plant was one of the main projects for... next year. It would increase production by 30[%] while cutting staff by around a third. Currently, around 40[%] of Kinleith's production is exported, but that will rise to 60[%] when the modernisation is complete... [CHH] generates around \$1.5 billion in annual sales overseas... [The company's] biggest investment is its \$1.5 billion stake in... Copec[which]... plans to invest \$170 million in new lumber mills and new board plants to reduce the company's exposure to volatile prices for its prime product... [Copec is] Chile's biggest pulp maker... [W]orld prices for pulp... have... plunged 40[%] in the past two years to about \$544 per tonne... [and that] may force a further delay in a \$1 billion pulp plant planned near the southern Chilean city of Valdivia... Environmental concerns have[already] delayed plans to have the plant built by 2000. CelArauco, which is owned by... Copec SA, hopes to widen the company's revenue base by expanding existing operations in Argentina... The... Argentine pulp plant will undergo a \$40 million upgrade to boost production to 275,000 tonnes annually, from 235,000 tonnes now... \$80 million [will also be invested] in a plant in Argentina that would make medium-density fibreboard for the construction industry.

...A fall in prices for forestry... is forcing [CHH] to screw down costs to combat a 60[%] slide in operating earnings for its financial first half. Net profit fell to \$102 million from \$118 million.

...[CHH's] Chilean investment... lifted nine month net profit by 11.5[%] to 91.21 billion pesos (\$NZ351.5 million)... [Incidentally,] Swedish forestry company Stora Kopparbergs Bergslags and Brazil's Oderbrecht plan to invest \$US1.5 billion... in a pulp joint venture... The pulp factory... will have an annual capacity of 750,000 tonnes of short-fibre pulp... which is... used to make paper for books and magazines... Nordic forestry companies are increasingly looking at emerging markets to expand their operations after suffering from a collapse in pulp prices last year. Last... year, pulp prices halved to \$US500 per tonne from \$1000 in 1995. So far this year, prices have recovered to just below \$600 a tonne... [T]he head of information at Stora... said... "We have to be active in the emerging markets to be competitive."

...A biologist from the Wildlife Conservation Society has revealed that logging of the tropical forests in Gabon has triggered savage territorial wars among the native chimpanzee population... [T]he running battles have left four out of five chimps dead in some areas. Logging has been tightly controlled in an effort to minimise the effect on wildlife. No more than 10[%] of trees in any given tract are allow[ed] to be harvested. Still, the presence of humans and their extremely loud logging equipment is frightening troupes of monkeys into the territory of others. [The biologist] estimates that the number of chimps in the central African country has dropped from 50,000 to 30,000 since the logging began.

...A tiny load of timber that landed on an Auckland wharf this week is the first modest blow in a battle by the village people of the Solomon Islands to harvest and manage their forests themselves. The 20 cu m of timber is a drop in the ocean compared with the colossal 800,000 to 900,000 cu m that logging companies ship out of the Solomons each year to be made into chopsticks... furniture... decking... and plywood[(much of which is destined to be 'used by the Japanese construction industry for concrete moulds, after which it is burnt or thrown away; the Japanese Government has considered legislating against this wasteful practice, but the construction industry is complaining')]. The contrast between what happens at... the nine... communities on different islands... producing what is called eco-timber, and in the majority of forests where logging companies have negotiated rights, is profound. Five people with chainsaws can produce at most one cubic metre of planks in a day compared with the truckloads of whole logs that pile up at what is known as the "log pond" to await transport on company boats. But unlike industrial production, the forest remains virtually intact: no bulldozers have cleared roads, no siltation of rivers occurs, the soil loses no fertility. And the profits to the communities are greater than the royalties paid by the multinationals. Some estimates put them at 40 times greater, although comparing a one-off royalty payment with a smaller, sustainable sum is tricky... The shipment has been imported by... Kumeu timber merchants... It will be identified as eco-timber by a specific logo, developed by the N[Z] Imported Tropical Timber Group, which will be stamped on each plank... On it will be stated the country the wood came from and whether it was from forest or plantation trees... At present most of the 7000-odd cu m of tropical hardwood imported into N[Z] comes from Indonesia, some of it from commercial plantations and some from tropical forests.

...A battle is brewing for control of Auckland's \$22 million forestry assets. The tug-of-war involves the Auckland Regional Council – which has nominal ownership of 2200ha of plantation forests in the Hunua Ranges – and the Auckland Regional Services Trust. The trust manages the forests through a subsidiary, Regional Forests Ltd, and has been waiting for the Government to complete a promised transfer of valuable cutting rights from the council[... which]... has called for the transfer to be set aside. It wants the Government to leave control of the forests with the [ARC], saying it is necessary to safeguard environmental and recreational values in the Hunua... [The ARC] chairman... was concerned the trust would sell cutting rights to private interests... His views ran into opposition from the trust's chief executive... He noted that the trees were within five years of harvest and could not be left to rot... And he suggested that the trust was better suited to manage an asset that would return money to the region.

...A fight to block the sale of trees worth millions of dollars was signalled last night after Auckland's wealthiest local authority finally secured control of pine forests in the Hunua Ranges... Within hours of the Minister of Local Government... confirming that the forest would go to the... [ARST] its chief executive... flagged a sale of cutting rights in the next two to three months... "Selling the cutting rights now will ensure the people of the region get the maximum benefit from this asset." But the plan came under attack from the... [ARC] chairman... His council has eyed the forests as a source of cash to fund park purchases... Established in 1961 by the Auckland City Council, the forest was transferred to the Auckland Regional Authority in 1967. Land under the forests will remain regional park, with trees replanted for a second rotation.

...The [ARC] still has its sights on the Hunua forests as a means of generating income for parkland purchases. The council chairman... said he was still not ruling out legal action over the issue... [Meanwhile,] Challenge Forests and Taupo Maori are heading back to the Environment Court over a dispute about the legality of felling operations in the Waimihia forest, south-east of Taupo. The regional council, Environment Waikato, has ordered [Challenge] Forests to stop logging trees in some compartments of the 18,000ha forest, following a complaint from the Ngati Tutetawha hapu that the company did not have resource consents for the work. The company, which stopped logging in the disputed areas before the abatement notice was issued last week, has lodged an appeal... and says it has not breached the Resource Management Act... The resource group manager for Environment Waikato... said he hoped the issue could be resolved after talks over the hapu's concerns about possible damage to wahi tapu (sacred sites)...

['Trees played an important part in Maori customs associated with birth and death. Some northern tribes planted a tree in a ceremony akin to baptism, to mark the birth of a child. The growth of the tree was an omen as the child's future. The use of trees for containing the bones of the dead was not unusual. At times bodies would be placed on a platform in the branches of a large tree. More common was the exhumation of bodies after the process of decay had concluded and the removal of the bones to a large and hollow sacred tree. Take Takerau, a giant piriri near the town of Opotiki, concealed the bones of 200 people in its hollow trunk. It was by way of a tree that the soul of a dead Maori was said to depart the land of the living and begin its long journey back to the ancestral home of Hawaiki. At the very tip of the North Island was Te Reinga, the underworld, and here for centuries a huge pohutukawa perched above the cliffs, its branches hanging above the waves and seaweed which covered the entrance to the underworld. Although weatherbeaten pohutukawa are to be seen today on the cliffsides of Cape Reinga, as it is now known, the venerable old tree of the spirits died late last century. The use of simple medicines was highly developed by the Maori, and trees provided the source of many very effective herbal remedies. The sap of the matai provided one form of antiseptic'...

'Thieves have ripped an ancient matai tree from DoC land where it stood untouched for nearly 700 years. The 20m tree was hacked down with a chainsaw and carted away in a large truck from the Pureora Forest Park in the central North Island. Descendants of the land's original Maori occupants, the Poakani people, are angry about the theft. A spokesman said: "We are shocked by the sheer audacity of the attack. All of the trees here are treasures to us, a reminder of the ways things used to be." The Pureora Field Centre manager said native trees had been stolen before from the 68,000ha park. Tree thieves had been responsible for a recent spate of ponga being stolen for fencing, and they often mutilated trunks to get burl – a large tree's "warts" – for sale to craftspeople. "These are people who used to log for a living until it became illegal. Now they are just carrying on with that illegally." But this was the first time a living tree of this size had been taken. "And now it will be milled into saleable timber, or at worst, chopped into firewood." The 1m-diameter trunk would be worth several thousand dollars on the black market. The area has been renowned as a cornerstone of NZ's environmental history since a barefoot ecologist led a dramatic treetop sit-in to stop the logging of 1000-year-old totara in 1978. The ecologist was "dumbfounded" yesterday. "This is just another setback, thanks to some idiots with no conscience." Last week, a man was jailed 'for stealing rimu from a State forest,' an act which left a trail of destruction...

'A legal anomaly has left the DOC powerless to stop a businessman logging huge rimu in a pristine native forest on conservation land near Wanganui. Last week, about 100 mature trees were felled, provoking accusations of environmental terrorism and a stand-off with local iwi, who prevented the logs leaving the district. The businessman bought the forest six months ago'. On a positive note, **the Government intends to stop clearfelling ancient rimu on the West Coast of the South Island, says the Minister of Conservation...** [However, the minister] could not say when the rimu logging would stop. Nor could he put to rest conservationists' concerns over the fate of West Coast beech trees in native forests eyed for the chop...

It is a joy to see a new generation of West Coast tree-sitters scoring a first victory over Timberlands West Coast Ltd. The past decade has seen too much slipping back from the... [time when] there was a decent consensus against any more logging of native forests, public or private... The Government will claim it a sufficient victory if it can move Timberlands or private owners from clear-felling to sustained yield... [However, f]or sustained management to work the amount of wood cut at any time – together with the losses from wind-throw – should not exceed the increment by growth and regeneration. No one has yet come up with the proper calculations for a "sustainable" cutting regime. Even then, there could be no survival of the magnificent forest profile we have known. The giant canopy trees would be soon gone, more of them lost with each logging... Replacement of the lost giants that were the glory of the forest would take an immense time – far longer than human planning or political memory could envisage or economic policy care about.

...[the] emeritus professor of zoology at Auckland University... made an impassioned plea on this page... for the cessation of any harvesting of indigenous trees, claiming that even sustainable use of these forests was not possible and an anathema to modern NZ. "When you cut down a 1000-year-old-tree," he said, "you must remember that it will take 1000 years to grow a[nother]." The difference between his example and practice in the forests of... Westland is that while it may well take 1000 years for a forest giant to grow (500 to 700 being the more normal and correct figure he later uses), these days there will be the 499 or 699-year-old tree growing nearby. [The professor]'s article provided a graphic example of the gap yet to be closed between attractive simplistic concepts of sustainability (preserving forests as static objects) and using resources sustainably. Sustainability is not about zero change, even nature doesn't believe that. The greatest error in [the professor]'s argument is his failure to understand the philosophical and conceptual changes of the past 10 years. Sustainable management of the rimu forests of... Westland today recognises the need to retain old trees. (They are most often defective so that compromise is easy.) The harvest is spread widely across the age classes and only a small proportion of the stems (one tree in four hectares each year) are removed at any age... Good information on growth rates, regeneration and tree death can be modelled and the forest structure protected over cycles of 500 years. The whole objective is to maintain the status quo of the period. If the forest changes naturally yields will be readjusted, which should be quite simple given the long periods of forest adjustment in relation to those of human and commercial activity... The dilemma then is whether communities such as Auckland have a moral right to demand that there be no sustainable production of native timbers in a manner that is almost unassailable in its low-impact land use when compared to the impact of resource consumption in cities. Do they have a moral right to prevent a sustainable activity occurring on less than 4[%] of the region's land area which can add an economic advantage to a region where 78[%] of the land is protected mountains or forests and 57[%] at

least of all available lowland is under protection? ...Fortunately some conservation groups and individual members of others are able to look... for constructive relationships as the sustainable way forward for ecosystems and the human communities who share them.

...Native Forest Action[(NFA)], the group protesting in a Buller forest against logging of native trees, has been served notice that Timberlands West Coast intends to sue. The state-owned company says it will suffer civil loss if it cannot log timber because of the protest action.

...West Coast rimu logging protesters said yesterday that Timberlands had carried out a spiteful act of retaliation against them by sawing down a prized old rimu containing the largest of the tree-sitters' platforms. Police detained five protesters on Wednesday as Timberlands recovered 600 tonnes of rimu logs from Charleston forest, south of Westport. The N[FA] group, which has been protesting in the forest for 10 weeks... said they were sickened by the Timberlands action.

...Police have described the planting of a bomb... as an action "bordering on terrorism." ...police... disarmed the explosive device, which had been attached to a Russian Mil-8 heavy-lifting helicopter contracted by logging company Timberlands to take rimu logs out of the Buller area... [T]he helicopter crew had found the bomb... during a pre-flight check... A spokeswoman... said the company was "completely shocked and appalled" at the incident... "It goes past protesting as we know it in N[Z]." The... bomb contained an explosive called Power Gel, which was commonly used in construction and farming... It is illegal to possess the explosive without a proper purpose... Police were... talking to people who had stocks of Power Gel... Anti-logging protesters... have been camped in forest... [nearby] since February, occupying trees and disrupting logging operations. A [NFA] spokeswoman... said the forest occupation was both peaceful and non-violent and had widespread public support... [T]he group was angry about the bomb and saw it as an "escalation of dirty tactics against the campaign." The incident was a mirror image of tactics used by logging interests overseas, she said... [A former] Tasmanian Green MP... said yesterday that there were "staggering similarities" between the West Coast incident and a campaign to discredit A[US]n environmentalists... the most infamous example of "dirty tricks" across the Tasman was the planting of a hoax bomb on a railway line at Black River in Tasmania, two days before the 1993 federal election. Police later cleared environmentalists of blame.

...Westport police yesterday arrested two people protesting against the logging of native trees by Timberlands... The arrests were for trespass in the Charleston forest and not linked to the discovery of explosives on a logging helicopter... But a [NFA] spokeswoman... claimed the timing of the arrests so close to the bomb scare was no coincidence. Timberlands was using "unfounded allegations as an excuse to get heavy-handed with our peaceful protest." The company announced it was ending the retrieval of rimu logs from the Buller forests from last night... [● The] Government is considering a deal offered by West Coast forestry interests to end clear-felling of native timber in return for a \$55 million settlement.

...The status of the 1986 West Coast native forests accord is again under legal scrutiny... A \$425 million damages claim against the Crown, and the livelihoods of many on the Coast will depend on how the Court of Appeal views the arguments. The accord aimed to produce a strategy for the West Coast state forests that would see destructive practices, such as clear felling of the native rimu, phased out. At the same time the aim was to protect the local forestry industry in the transition to a sustainable future based on exotic plantations, with reserves protecting the native forests. Reading the document today it is not hard to see why it came to mean different things to different people... It begins inauspiciously. The first page... reads: "...the strategy also provides for the allocation of sufficient indigenous production forest areas to make possible the maintenance... of the sawmilling industry on the West Coast at its current allowable level of cut until exotic species become available... in adequate quantity planned to be 2006 in Buller and between 1990 and 1995 in North Westland..." The sentence is critical. It is the basis for... Timberlands continuing to log the rimu forest at Charleston... [NFA] says it is not necessary for Timberlands to continue harvesting rimu until 2006 when sufficient radiata pine is now available – a claim Timberlands disputes. Sawmillers in Buller have been shut down after Timberlands, in 1994, put the cutting rights for the rimu up for tender for the next five years and a Hokitika company won the milling rights. Locals believe the accord guaranteed that timber cut in Buller would be milled in Buller. The High Court, however, did not see it that way... Having already spent \$1 million on the case, the... Buller... local bodies and industry groups feared they could not afford an appeal. Their last-minute bid for an out-of-court settlement[of \$55 million] before this week's hearing was not accepted by the Crown.

...A... verdict in the next few days may decide whether Transit N[Z] is spending \$22 million on a bridge to nowhere. The plan to build a 400m viaduct to provide secure access to the West Coast... shows at least that someone other than Coasters themselves have faith in the region... Undoubtedly the Otira viaduct will contribute to tourism on the West Coast, but whether there are many people left there to offer the region's typically warm hospitality may be in the hands of the Court of Appeal. Representatives of West Coast ratepayers and the timber industry have asked the court to get the Government to face up to what they say is its obligations under the 1986 forest accord [or pay their damages claim]... The resolve of the Coasters through more than a century of... earthquakes, floods, industry closures and notorious weather... has never been doubted, and is reinforced by the willingness of their 18,000 ratepayers to shoulder a \$2.5 million legal bill in defence of a substantial part of their economy... The accord locked up most of the huge native forest resources of the West Coast... as world heritage parks... [It] allowed just 4[%] to be "sustainably harvested"... Since 1992, however, the Government has been giving way to environmental pressure to halt all milling of the ancient native beech (podocarp) forests, and less and less timber has been made available... "The Government never had any intention of honouring the accord," the chairman of the Westland Regional Council... said yesterday. "The result has been that logging and sawmill jobs have fallen from 730 to 460... We have borne the cost of being the conscience of N[Z] in environmental matters." ...There had been continuous and strenuous attempts over the past 10 years to negotiate "to preserve our rights under the accord" but these had met with blank refusal by the Government... Added to that has been Government action which has locked up 87[%] of the land under D[OC] control. That means the cost of West Coast infrastructure is spread over a very small area of rateable land, leading to some of the highest rural rates in the nation – eight times as much as in Northland, for instance.

...A West Coast local body[and] timber industry group has lost its battle with the Crown over interpretation of the 1986 West Coast Forests Accord. The Court of Appeal... said that while the accord was a contract, its terms were not as extensive as claimed by the resource interests. The group wanted the equivalent of 166,000 cu m a year of podocarp available... The West Coast community would, however, recognise political realities... [An NFA spokesperson] said: "The... way is now clear... to cease all logging of the threatened rainforest areas."

...[a] regional field officer for the R[FBPS] said some of the forests... on the West Coast were exceptional wildlife habitats. The Okarito forest was close to the Westland National Park which housed a unique white heron colony. The removal of native trees destroyed dozens of species of perching plants and decimated food and nesting for larger birds. "The tiny production of timber from the area does not even begin to match its ecological, scientific, scenic and tourism values." [However, the] chief executive of the Maruia Society... one of the signatories to the West Coast Accord... said the general desire for some native lumber for furniture or feature panels meant selective logging of a small area was acceptable... [In another development, the] Timberlands... managing director... [says he] expects his... company to be sold by the Government. "That is a natural progression for all state-owned enterprises,"... But before any sale can be contemplated, it appears the company's financial position will have to strengthen... The Government yesterday denied it planned to sell Timberlands...

A plan to be presented to the Government by the end of this year will seek approval to fell an average of one beech tree for every hectare of... 98,000ha of forests... Timberlands[which]... was established as a state-owned enterprise in 1990 to manage... forests owned by the Government on the West Coast... estimates 2500 jobs could be created from processing native beech if officials allow the trees to be harvested... Timberlands contends that the beech logging will be sustainable... "Without the native logging Timberlands isn't sustainable in the short term,"... said... Timberland[']s... manager of planning[while its]... chief executive... pointed out that two-thirds of the native forest areas to be selectively logged

were decimated by clear-felling earlier this century... “The taxpayer... [could] reap a really good reward from these forests,”... Timberlands pays the Government a royalty of just \$5 a cubic metre on the native trees it logs... [The NFA] claims a private forest owner would have to pay... market prices... of around \$230 a cubic metre... for a similar right. The protesters suggest Timberlands is therefore being hugely subsidised... The company’s profit projections... for its financial year to the end of March 1998... is based on a net profit before interest and tax of \$3.9 million... after allowing for... around 40[%] of revenue... from rimu sales of \$8.7 million and beech sales of \$2.5 million... Timberlands estimates that... [by] processing the native timbers... nearly \$600 million is generated throughout the country annually in areas like furniture manufacturing...

Bay of Plenty furniture makers appear to have lost tens of thousands of dollars in a timber supply scam... [A] New Plymouth man... has been offering cheap native timber to firms and asking for half payment in advance... [T]he wood never arrived and requests for refunds went unheeded... [In related news, t]he export of unsustainably harvested native timber and woodchips has been banned... The Forests Act w[il]l... be amended to implement the plan, which would end exports... by December 31, 1999. The ban... affect[s] Maori-owned forests in Otago and Southland and state-owned forests on the West Coast... The Minister of Forestry... said these forests were exempted from export controls introduced in 1993...

The Forest Amendment Act of 1993 prevents felling and milling of any Kauri tree after July 1, 1996, without a government approved sustainable management plan. The stock piles of native timber built up before the deadline are rapidly disappearing causing manufacturers of “new kauri” furniture and boatbuilders to switch to re-cycled kauri. This is causing shortages and price escalation in a very limited market. The Chairman is in the fortunate position of having 40 tonnes of prime heart recycled kauri from giants felled 100 years ago. The striking grain, colour and depth of this timber is magnificent compared to the soft, pale nature of newly felled young trees and imported kauri... Their designs recreate... furniture which features elegant beauty, comfort and strength... Due to their bulk purchase of the right materials, original production techniques and low overheads, The Chairman offers very attractive prices: 7-piece colonial suites for under \$2000... [or] \$2500 plus upholstery... approximately half the equivalent retail price... Kauri coffee and hall tables are... \$195 to \$495... This will be the last production run at those prices due to the scarcity of “primo” kauri... Now is your chance to invest in these magnificent quality heirloom pieces... before they become an expensive luxury. - 1997

Kauri (*Agathis australis*) is regarded worldwide as a truly noble tree and the name will forever be linked with the early days of European settlement in northern N[Z]. The kauri timber, kauri gum and associated ship building industries, provided work for numerous pioneer families and were the economic backbone of Northland and Auckland. When Europeans first arrived in N[Z], the northern parts of the North Island were covered in vast stands of kauri forest. Kauri did not grow south of a line joining Tauranga and Kawhai, but north of this was 1,200 000 hectares of kauri forest. Today only 4 000 hectares (0.3%) of this original forest remains. The vast bulk of it was felled by the kauri timber industry or burned to [‘access gum deposits’ or] clear land for farming. - KAURI TIMBER DAYS

It is difficult to accurately estimate the age of... the largest living Kauri tree in N[Z] and ‘the largest rainforest tree in the world’ (J... Total height: 51.5m... Trunk height: 17.7m... Trunk girth: 13.8m... Volume 244.5[cu m] but)... it may be that Tane Mahuta... [– which means] God of the Forest... [–] sprang from seed... during the lifetime of Christ.

For some extraordinary reason, which no one has been able to establish, [James]COOK and the men on his first voyage in 1769 made no detailed observations on the kauri, even though it dominated the forests of the north. The first written records come from Marion DU FRESNE in 1772, when his men felled a kauri at Manawaraora Bay and shaped it into a ship’s foremast... KAURI is, on maturity, one of the largest trees found anywhere in the world, and one of the most commercially attractive, with a long straight, branchless trunk producing durable straight-grained timber, and a resin once greatly prized for the manufacture of high quality paints, varnishes and polishes. As a result, it was the basis of the first export trade from NZ (cargo of spars to China 1798) and was cut and milled with a voracity hard to believe considering the technology of 19th-century NZ. The largest ever recorded kauri when measured in 1850 had a girth of 23.43 m... soared 21.8 m to the first branch... and [had a ‘volume of 736.1 cu. m. “Kairaru”’ is believed to have been ‘destroyed during 1890 in a fire started by gumdiggers’]. A tree still growing has a girth of 20.12 m and the first branch is 30.8 m from the ground. One that has a 17.2 m girth is estimated to be just 2000 years old... Although it attains such great age and grows so large, it actually regenerates easily and grows quite quickly through the seedling and... juvenile conifer, or ‘rickier’ stage... Seedlings grow tall and slender as they probe for an opening in the canopy of scrub... At about 100 years of age, the tree’s upper branches start to form the huge ‘spray’ of foliage on the crown of the tree, with all the lower branches of the tree having been shed by an efficient self-pruning system. From then on... the tree will grow tall and stout, possibly alone... or perhaps in cathedral-like groves. As the tree grows, it sheds its bark in large flakes and these form a mound up to two m deep at its base which is ideal humus and through which the tree’s feeding roots twist and turn. The tree will grow, if tended, almost anywhere in NZ and there has been no adequate explanation of why it was confined for so long to the northern region of the country... Land left after the cutting or burning of kauri is for a long time useless for agriculture because of a souring of the soil. But during the long life of a kauri, large amounts of resin are exuded and collect among the debris on the forest floor... Pre-European Maoris used the gum as fuel (often carrying it along as torches)... The value of the gum was established in the 1830s, with Maoris selling to American ships, and from then on, for a century, it was a substantial export commodity... The largest amount exported in any one year was 11116 tons... in 1899.

The value of NZ’s kauri forests was recognised from the earliest days of European contact. In 1770, James Cook assessed that NZ could supply “such masts as no country in Europe can provide”. Two years later, the French navigator Marion du Fresne was cutting trees for spars in the Bay of Islands when he and his party were attacked and killed by Maoris.

MAORI and conservationists are angry at the extraction of hundreds of thousands of dollars worth of ancient kauri logs from underneath four Northland farms caught up in a land claim. The Government bought the farms near Aranga, north of Dargaville, because the unresolved Te Roroa land claim had decimated the farmers’ equity. It’s negotiating for a fifth. As part of the sale agreement the farmers have until settlement date to remove the logs, which have lain in the ground for up to 30,000 years. Some of the trees were up to 1000 years old and metres across when they crashed into the swamps which preserved them. [A c]onservationist... who lives on the edge of the nearby Waipoua kauri forest, said the chance to learn valuable information about N[Z]’s prehistory and climate is disappearing on the back of logging trucks. “It’s like knocking down Stonehenge and turning it into road rubble because you have a market for rubble,”... Popular analysis of a large swamp sample such as the one at Aranga could answer one of the big questions of N[Z] prehistory – whether the forests were bowled by a cataclysmic event such as a cyclone[or the ‘tsunami that felled a Far North kauri forest thousands of years ago’], or whether the trees fell individually over time... Te Roroa claimants say the swamp kauri extraction is just one more theft of their tribal estate by the Crown. The land was in Maori ownership until the 1970s, when the Lands and Survey Department managed to extract the remaining shares. It was broken into five farms, which were balloted to pakeha farmers on generous development lease terms... [T]he claimants were never paid for the timber on the land, let alone what was underneath the land. “The[farmers]’re being given the logs as redress for their loss of equity, at our expense,”...

[‘Unlike the Maori, who had lived in harmony with the land for centuries and conserved majestic trees by means of tapu, European settlers had no qualms about clearing the land. Barely penetrable virgin forests clothed much of the country, and the trees were considered the greatest hindrance to man’s livelihood. Intent on carving farms from dense bush, they felled and fired vast areas of forest, and grass seed by the ton was sown on the cooling ashes. Some farmers had the foresight to preserve pockets of native bush on their land, and in some cases steep hillsides were thankfully allowed to retain their protective covering of trees. Where hill country was stripped of its stabilising forest cover and exposed to the ravages of heavy rainfall disastrous erosion of the land occurred. More than a century later farmers and catchment boards are still battling the problem, something which the pioneers were unable to envisage for they had no such problems in their homeland. European species of trees were later planted both to complement farm homesteads and to provide shelter from the fierce winds which swept over the countryside after native forests were cleared.’ ‘The extent of forest before human settlement commenced is now impossible to determine, but it is thought that at about the time white settlement began, at least two-thirds of the country was forest clad.’]

...Approximately three-quarters of our forest was burnt by pre-European and European immigrants before any significant harvesting took place. Harvesting of the virgin forests was under way in the 1870s and grew to a peak at about two million cubic metres in 1907[(when ‘about 20% of the country remained forested’)]. From then to the late 1960s the annual harvest of indigenous timber was at about 1.2 million cubic metres[– mostly ‘miro (sometimes called brown pine)’ and ‘rimu (also known as red pine)’]. ‘The *pinus radiata* species, or radiata pine, was introduced to NZ in the 1850s and was found to be well suited to the environment, maturing up to three times more quickly than similar trees in their native California’, ‘where it is now hardly known. Despite about 100,000 ha of pine plantation throughout NZ being destroyed by 1950 due to a wood wasp which had come from the US in the 1920s, the multi-purpose tree which reaches saw-log size within 25 years in NZ has become NZ’s most-widely grown commercial forest tree.’] There will be 16 million cubic metres of *pinus radiata* cut this year and more to cut next year. N[Z] could produce a greater volume of indigenous timber than the 1996 radiata cut. Forestry with indigenous trees would have a value in excess of the combined current value of forestry and hill-country farming products. N[Z] forests grow in a more favourable climate and with trees that have better growth rates than those of Europe. N[Z] foresters in the 1870s... recommended the management of indigenous forests for timber production. Instead... [the] settler preferred to own an impoverished land with grass and a cash income than a land rich in trees but difficult to work profitably. Cows and sheep can be walked to market but the cost of transporting timber took away its profitability. But for whatever reason the forests were destroyed, the notions that they were slow growing or that they could not regenerate were a way of covering the tracks of those who had made mistakes. Mistakes continue to be made. Since the 1960s regenerating kauri forests, virgin podocarp and beech forests have been burned in order to plant pines... Today pines are still displacing indigenous trees... Kauri in the long term would return more dollars per hectare than radiata. Landowners would benefit from paying some silvicultural attention to their “bit of native” rather than ignoring it or destroying it. There has been, with few exceptions, no careful management of indigenous trees in N[Z].

...A Rotorua timber contractor has been fined \$9000 and ordered to pay almost \$12,000 in costs and expenses for the unauthorised felling of 6.7ha of native bush near Thames. The contractor... has also been ordered to carry out weed and noxious animal control in the area for the next five years, with a bond to Environment Waikato of \$29,340, which reduces each year. Half of the fine is to be paid to Environment Waikato and the other half to the Thames-Coromandel District Council... [T]he Thames District Court... Judge... said he was satisfied council staff had fully explained what areas of the Kereta bush were to be cleared and which areas required consent, including a no-go area where consent was unlikely to be granted. Staff also showed... aerial photographs of the area... After the conviction, the solicitors for Environment Waikato... issued a statement saying they expected the fine to have been significantly higher, as the \$9000 was not enough to deter others...

[‘Brazil has slapped a record-high fine of US\$360,000 on a logging firm for illegally felling endangered trees in the Amazon rainforest. The government’s Environment Agency, Ibama, said it was the first significant sentence imposed since the Government released last month the small print of an environmental law calling for fines of up to US\$50 million and jail terms. Environmentalists had been clamouring for the details since the law was unveiled in February last year. Without this step, regulatory bodies such as Ibama are powerless to act. Brazilian-owned Cilla Industria e Comercio will have to pay out for illegally felling, storing and transporting 1300cu m of protected tree species including mahogany in the northern Amazon state of Para. The company had permission from Ibama to log in a limited area but ignored the terms of the authorisation, said the head of Ibama’s inspection department – which has 70 inspectors to survey an area the size of Mexico.’ ● Last year, ‘the Brazilian Geological and Statistics Institute announced that about 50 million hectares of the massive Amazon jungle had been destroyed by humans in the past 25 years. The worst damage occurred between 1977 and 1987.’ The ‘rate of deforestation has increased by 34% over the last three years. Conservationists doubt the Brazilian Government will stop it.’

...‘though environmentalists have championed tropical forests as priceless assets for the planet – touted as the leading weapon against global warming – their local value for inhabitants is pathetically low. The result is that villagers are tempted to chop down trees and plant crops which carry a higher value.’]

...Almost 40 countries producing – or using – tropical timber, have agreed that a controversial pact to sustain forests – negotiated in 1994 – would go into effect from the beginning of next year. The... pact, the international tropical timber agreement – Itta – was originally set to be in force from February last year but the timetable was scrapped when not enough countries came on board in time. Brazil, a strong critic of the accord and who had not signed it, announced that it would now do so but indicated that it still felt the deal should be extended to cover temperate forests in [First World] countries. As the world’s third-largest producer, its participation was considered key to the pact’s success. The U[S] – a top consumer of such tropical wood products as plywood and veneer sheets – had signed but not yet ratified – apparently because of opposition in Congress to such accords... Consumer states who have ratified are A[US]... Norway, South Korea, Spain, Sweden... Switzerland... Belgium, Britain, Canada, China, Denmark, Egypt, Finland, Germany, Japan, Luxemburg, Netherlands... and... N[Z]...

‘WHILE NZERS in their thousands protest at the logging of rainforests, and internationally the plea is heard for extensive reforestation to combat the greenhouse effect, calling for the felling of trees may sound like a cry from the wilderness. And indeed in a sense it is, because scattered throughout the country are forests that pose a significant threat to wilderness areas and to native plant communities. The spread of self-sown, or wilding, exotic trees affects something like 10,000 hectares in the South Island and 30,000 hectares in the North Island. In places it may be only the odd pine that has seeded from a shelter belt or roadside planting, but in others it involves thousands of wilding trees at densities of over 100 trees per hectare gradually advancing over areas of protected native vegetation or productive grazing land – costing the country money in lost agricultural production. In 1979 Corsican pine was declared a Class B noxious weed in the Amuri Range area and fire was used to remove stands of unwanted trees. This was only effective when followed by pasture improvement and grazing. Where oversowing with pasture species did not occur, and where stock pressure was light, re-establishment of seedlings was prolific, with densities of 8,575 per hectare recorded – seven times that of a plantation forest. Now Corsican pine covers about 6,000 hectares of the Amuri Range and six other species of wilding trees are also present. Another source of wilding tree spread is the research plots established by the former NZ Forest Service to determine which species were most suitable for high country revegetation. In the Branch and Leatham Catchments of inland Marlborough over 700,000 conifer seedlings were hand planted on steep country and, as if that were not enough, steeper more inaccessible country was covered by sowing 2 tonnes of conifer seed from the air. Today sparse but healthy pines emerge from regenerating manuka and beech while at higher altitudes stunted twisted pine grow from precipitous rock bluffs and scree slopes. When questioned about wilding spread from trial plots at lower altitudes in Marlborough the Forest Service promised to de-cone the trees to prevent seeding! The success of these introduced trees rests on their ability to shed large quantities of wind-borne seed and to grow in harsh conditions that our woody native species are less able to tolerate. The hardier of the pines thrive in dry cold conditions, growing faster than natives and producing seed at an early age, a mere 5 years in the case of *Pinus contorta*.’]

...Wellington shops selling furniture made of native timber can expect some rowdy visitors. Students from the Victoria Environmental Group, part of the nationwide Student Environmental Action Network, plan to demonstrate outside furniture retailers in a bid to end logging of native forests. A spokeswoman... said it was a common misconception that only recycled rimu was used to make furniture. In fact, South Island forests were still being logged to supply the furniture industry. "Most N[Z]ers do not realise that large tracts of pristine natural forest are still being chopped down by timber companies." ...Timberlands West Coast Ltd, which had plans for a massive new beech-logging scheme, was one. - 1996

Conservationists labelled yesterday an environmental day of shame as the Government gave conditional approval to logging of pristine native beech forests on the West Coast. The proposal involves the annual felling of tens of thousands of trees in about 100,000ha of forests, most containing ecosystems of medium to high conservation values. Activists promised a summer of protests. N[FA] said it would "fight them on the beeches." The Government had received more than 10,000 public submissions on the issue, most believed to be anti-logging. The state-owned company at the centre of the row, Timberlands... was delighted by the beech decision. But it appeared less pleased by Government plans to halt the company's unsustainable felling of ancient rimu in the Buller region by the end of next year – six years earlier than planned. This will affect the company's ability to get the beech scheme under way. The Government said the beech logging would satisfy the need for high-quality timber... and... potentially provide work... Labour said the decision rode roughshod over public opinion. The Alliance said it offered a false promise of jobs...

THE Government is vowing to end peppercorn royalties which give Timberlands... access to native rimu at more than 30 times below the going market rate. The move comes as Timberlands prepares a business plan to support its sustainable beech logging scheme, approved last week by the Government, and which private forest owners fear will undercut them and flood the local market with native beech. Final approval for the new scheme depends on proof of its commercial viability.

...Landcare Research has questioned whether ancient West Coast native beech forests... can be logged sustainably... Timberlands... claims it can sustainably manage the forests by using helicopters to pluck 15 trees a hectare out of areas that would not be visited again for 15 years. The Government has given conditional approval to the scheme, which attracted 12,354 public submissions but only 2038 in support. Aucklanders sent in the most submissions from any one area: 2624 against and only 10 in support... In other developments, the R[FBPS] has lost its Environment Court case challenging whether Timberlands had resource consent to log the 6450ha Orikaka Forest. Timberlands has recently moved into the forest, home to threatened native birds and fish, to carry out unsustainable logging as part of a Buller overcut that must stop by December 31 next year. The deadline for public submissions on the Forest Amendment Bill has also passed. The legislation, which includes provisions to allow the wood chipping of native forests for export, is being passed through Parliament under urgency. Conservation groups say the bill raises doubts over how committed the Government is to halting N[Z]'s biodiversity decline.

...Despite his lost fight to keep the Coast's logging industry, [the]... West Coast MP... is a fan of making the best use of the \$120 million compensation he once called a sellout... [T]he \$120 million package handed to the coast[by the Government is] to help boost development and ease the pain of an end to logging. He still has the bumper sticker on his office wall: "Stick your package – our jobs are not for sale." But now he is an enthusiastic advocate of the opportunities the cash injection offers. He says the trust money has huge potential to help the region, but Coasters must not bicker over where new ventures should go. Rivalries going back 150 years between Westport, Hokitika and Greymouth must be set aside.

...Part of a \$120 million compensation package given to the West Coast when the Government ended native logging in Crown forests has been used to finance the same activity on private land... \$400,000 has gone to Forever Timber, a company set up by three former Timberlands executives, including [the one] who resigned in January... after his e-mail attacking the Government's no-logging policy... became public. The... revelation that compensation money was used to set up the private timber company is potentially embarrassing for the Government... "West Coasters must be laughing their heads off," said... the... environment spokesman... [for the Opposition – though it's unlikely to make them feel any better about the news that 'several million dollars has disappeared following the collapse of a manufacturing company given the money to set up a factory on the West Coast.' In international news, a] Californian... who spent two years perched on top of a giant redwood in a personal protest against logging returned to the ground yesterday after the local timber company agreed to preserve the... ancient tree she dubbed Luna... Over the past two years, she has endured everything from fierce winter storms to dry summer heat on a bed-sized perch about 55m above the ground. Her feat marked one of the most remarkable protests against timber cutting in California's ancient redwood territory, where environmentalists and loggers have battled for more than a decade over the dwindling stands of trees... Pacific Lumber... voiced the hope that it could proceed with the "viable harvesting programme" in this year's Headwaters Agreement, under which it agreed to sell several thousand hectares of northern California redwoods for \$US450 million... The company... said it had agreed to... "[the]dirty tree-hugging hippy[']s]"... terms to end a public relations nightmare and prevent other "copycat" protests... [She] became a celebrity, speaking to journalists via cellphone, writing newspaper commentaries and even serving as an "in-tree" correspondent for a television show on the environment... [from] her 1.8m-by-2.5m treetop lookout... [The] preacher's daughter from Garberville... said she was forced to act by the prospect of chainsaws felling the tree, estimated to be between 600 and 1000 years old.

Botanists believe they have discovered the world's oldest living plant in the Tasmanian wilderness. [The]Tasmanian Parks and Wildlife Service[']s chief botanist... said tests indicated the *Lomatia tasmania*, commonly known as King's Holly, was 43,000 years old. The plant, found in a 1 sq km patch of rainforest in the World Heritage Park, was discovered in the 1930s but its age had never been suspected. Botanists previously thought the oldest living plant was a 13,000-year-old U[S] huckleberry... The... Tasmanian plant did not produce seeds but shed "cuttings" of itself which grew into identical clones... meaning they were essentially the same plant. "When people think of a 43,000-year-old plant they probably visualise something gnarled and twisted. This just looks like an undershrub in the forest." [In local news, our 'timber is getting weaker – resulting in bouncy floors, or sagging roof lines – because the country has been breeding fast-growing trees. Standards NZ said yesterday that new standards were being developed because it was no longer possible to tell the strength of timber by looking at it. Until now, builders had assessed the strength of timber by looking for splits, loose knots or other visual signs. The Master Builders' Federation president said stress-graded timber should be used for structural purposes.'

...Over 1 million cubic metres of timber, including roundwood, is preservative treated in NZ each year. Factors which have encouraged growth in the timber preservation industry include: the versatility, availability and high permeability of non-durable exotic softwood species such as radiata pine; regulations requiring timber to be preservative treated; high levels of quality control; and a research programme carried out by the Forest Research Institute.

...The pulp and paper industry is mainly concentrated near the big planted production forests on the volcanic plateau of the North Island. Of the eight plants in NZ, seven are in the North Island. There are four main pulp and paper companies – CHH, NZ Forest Products, Pan Pacific and Challenge. The Tasman Pulp and Paper Company Limited, part of the Challenge Corporation, has its plant at Kawerau, Bay of Plenty, where wood from Kaingaroa State Forest is utilised.'

...Challenge subsidiary Tasman Pulp and Paper will soon close the chlorine gas plant at its Kawerau mill after 40 years of chlorine bleaching. But instead of leap-frogging to a new oxygen-based technology, as successful mills have done overseas, Tasman insists on investing millions in a polluting chlorine dioxide process which will still discharge tens of millions of litres of effluent containing toxic organo-chlorides daily into the Tarawera River'.]

...The debate over the future of the Tarawera... went behind closed doors yesterday as deliberations began over bids by two mills and the... crown-owned Works Geothermal... to continue discharging... 160,000 cu m of treated effluent... each day... into... the river, known locally as the Black Drain.

...Blackened waste discharged into the Tarawera River from Tasman Pulp and Paper's Kawerau mill has been flowing into the Bay of Plenty for more than 40 years. Now the company thinks its... exceptional circumstances... should allow the discharges to continue for 35 years. Over the years the discolouration has been significantly improved by the company but this week it has told Environment BOP... that it will not be able to meet new colour standards beyond 2005... The company wants separate treatment... granted under a provision of the Resource Management Act... on the basis of the mill being established by an act of Parliament, its size and contribution to the economy and the lack of cost-effective technology to remove discolouration from the waste... Yesterday, [Tasman] opened its submissions... saying the company had evidence that the river was "presently in reasonable health." ...effects on the environment such as colour and toxicity... were "of little consequence." ...[however, the] regional council manager of environmental investigation... called the colour issue the greatest problem facing the river. It completely obliterated life on the bottom because light could not get through... Another... campaigner against Tarawera River pollution... accused Tasman of benefiting under its "exceptional circumstances" for most of its life. He referred to the Tasman Pulp and Paper Enabling Act introduced to Parliament in 1954 by the Minister of Industry and Commerce[, who]... was aware of fears for the river, but foresaw "no immediate likelihood of pollution."

...Greenpeace is confident a Resource Management Act amendment passed last week will trip up Tasman Pulp and Paper Co and its request to keep discharging... about 200,000 tonnes of industrial effluent a day into the... Tarawera River... Last week's amendment substituted new words, which Greenpeace claims strengthen its case that any discharge must be consistent with the purposes of the act... Tasman... believes the amendment has no bearing on the case... The general manager of the [BOP regional] council... said the hearing commissioners had already made their decision which would be released next year... [In related news, t]housands of tonnes of rubble that could be contaminated with toxic PCBs... or polychlorinated biphenyl... have been dumped throughout the upper North Island. The spread of the potentially deadly material has sparked an alert among authorities from Northland to the Waikato... [A] Mangere contamination was discovered by chance in June... Since then officials have discovered... suspect material including the waste or flock mud from scrap processing has gone to the Waipu landfill in Northland, Auckland's Redvale landfill and Hamilton's Horotiu landfill, parts of which are widely believed to leak into the Waikato River. About 4000 tonnes of soil contaminated with low levels of PCBs was also taken from Pacific Steel by the Slag Reduction Company to the BHP N[Z] Steel Glenbrook mill where it is stored under cover. The Slag Reduction Company produces the soil conditioner which was applied to farms where 90 cows died recently but no link to PCB poisoning has been established... [I]nvestigations into PCB... contamination at the Pacific Steel site on the Mangere inlet of the Manukau Harbour [are continuing]... Toxic PCBs used in electrical transformers are known to cause liver damage and respiratory problems in humans. They belong to the family of persistent manmade organochlorines such as dioxins, a potential cause of cancer and other health problems.

...After taking expert advice, the Northland Regional Council wants waste material tainted by a cancer-causing chemical removed from a Waipu landfill... [By the way, yesterday workers] in protective clothing began excavating the site... [of the former] central Hamilton... city gas works[, which]... is contaminated with creosote, or tar oil... [The contaminated soil will be loaded into] sealed trucks for removal to a landfill... A well on the site also contains 100,000 litres of creosote.

...The former... gasworks site, recently cleaned of pollution at a cost of more than \$1 m... is being offered for sale as a prime retail property. The... 6000 sq m of land... excavated in some places to depths of 5.5m to remove creosote and rubbish... then refilled, is expected to fetch about \$2 million.

...They thought their 287ha sheep farm at Mossburn, Southland, was "the ultimate" when they bought it from the Government under an assisted scheme in 1982. But there was no warning of what was to unfold a decade later... [They] have seen their prized farm turn from the investment of a lifetime to a worthless toxic waste dump that no one will buy... Investigations by the Southland Regional Council found the ex-Lands and Survey Department farm was once used as a dump for truckloads of the banned insecticide dieldrin in the 1960s. The organochlorine pesticide was used to kill grass grubs, black beetle and crickets, but caused a major scare when high levels were found in a shipment of meat exported to the U[S]. Residues were traced back to another widespread use of dieldrin – sheep dipping. Following the ban, dieldrin was collected throughout the country by Ministry of Agriculture and Fisheries officers, who then had the problem of disposing of it. New-development farm blocks like the [287ha] one... were seen as convenient, out-of-the way places to dispose of the supply. Holes were dug and unknown quantities of the insecticide were dumped in glass and steel containers, or even bags... An Environment Ministry spokesman said two Southland dumps were potentially hazardous. They are Flaxy Creek, near Te Anau, where nine deformed juvenile trout were found last month, and Mokoreta Forest... which was reportedly leaking when samples were taken in October 1995 and... August[1996]. Land Information, the government department responsible for monitoring toxic sites, is also investigating two Northland areas contaminated with dieldrin and DDT. One is a storage site in a semi-industrial area of Whangarei, where the chemicals were kept after collection. The other more seriously contaminated site is just south of Cape Reinga. [A]Northland Regional Council waste management officer... said the Government's past attempts to dispose of the chemicals was a comedy of errors... But what bothers landowners like [the couple in Mossburn] is the fact that although the problem is widely known, no one is claiming responsibility for the costly clean-up. They have spent the past 4 1/2 years battling to get the Government to accept liability for the contamination. Despite their dealings with the Environment Ministry, Conservation Department and now Land Information, they were no closer to an answer. "It's a farmer's worst nightmare... The liability issue still rests with the Ministry of Environment. Land Information is taking responsibility for monitoring the site, but that is as far as it goes." Suffering heart and hip problems[, he] wants to quit the farm and move to a smaller block that is easier to manage. But because of the cloud hanging over the farm, nobody is interested in buying, even when the price dropped to \$150,000 below the government valuation of \$600,000. Technically, the Resource Management Act [(RMA) holds the current owners] legally responsible as occupiers – even though their land was contaminated when owned by the Crown... But there is hope in the future that the issue will be resolved once and for all. The Environment Ministry is developing new policy which will clear up the confusion about liability for chemical dumps on private land.

...CABINET is expected to decide within six weeks who should pay to clean up properties contaminated by the banned pesticide dieldrin.[The] Environment Minister... has confirmed the Government will look at liability... [I]t had come as a shock that a... dieldrin dump at the Mokoreta Forest in eastern Southland was leaking and the council had not been informed by Land Information.

...SEARCHES of properties thought to be contaminated by... dieldrin have confirmed two former dump sites in Southland... However, extensive searches have failed to show any trace of a suspected dump on a 287ha sheep farm at Mossburn... If no dieldrin is found in further digs, [the farm's owner] hopes the authorities will "clear" his property's name so he can sell up and retire.

...[T]HREE Southland farmers whose land was devastated by secret dumps of truck loads of DDT and other pesticides will be paid compensation by the government worth more than \$1 million. The settlement packages were believed to have been set by the true market value of the properties if they were chemical-free.' Editor's note: 'When DDT and similar chemicals were first introduced, governments ran advertising campaigns to reassure the public they were safe, and the manufacturers tried to discredit any scientists who expressed concerns' that they weren't.

...the 'boy was always keen on playing soccer. So when his parents bought their first home in April 1991, they chose one with a huge backyard. They paid about \$90,000 for the 677 sq m property and felt as though they'd acquired their very own castle. Mum planted a vegetable garden; Dad took pride in keeping the lawns well manicured; and the boy took full advantage of the big backyard, kicking the ball around with the family's pet dog, Max, an 88kg Rottweiler. But in 1995, this domestic bliss was destroyed. Backing on to the property was a timber treatment plant operated by Timpro International Ltd

and, after 1993, by Hamilton Timber Treatments. Between June and August 1995, hazardous chemicals leaked on to the property, contaminating the backyard and house. The chemicals – arsenic, copper, sodium pentachlorophenate and chromium – leaked because stormwater outlets were inadequate and holding pads did not contain all chemicals during treatment processes. The family started feeling sick. Their dog died. By the time they left their home to move into a rental unit, the backyard was a barren wasteland devoid of any signs of life. After the spill, the Waikato Regional Council had tried to force the plant owner to remove all hazardous chemicals under the RMA. But the plant went into receivership and nothing was done. The family filed a lawsuit against the regional council and Hamilton City Council, alleging they had known since 1991 that toxins were contaminating the property. The claim was settled out of court when the two councils jointly paid the family \$115,000 in compensation. However, the family say the money was not enough and they're suing again – this time under the 12-year-old's name (making him possibly the youngest person in NZ to sue) and for \$500,000 – because they want all of NZ to take notice. Just about all of the money has gone on medical bills, but the family are still plagued by daily headaches, fatigue and stomach pains while their limbs and torsos are riddled with scars from recurring festering sores which just won't heal. As long as the medical bills continue to roll in, the parents believe it will be years before they can save the money to buy another home.'

...she 'used to jog past the old Ivon Watkins-Dow chemical plant on her daily run to the nearby surf beach. But now the one-time fitness fanatic can barely hobble to the front gates of the New Plymouth factory – a few hundred metres away. At just 38, she is riddled with arthritis. She is furious her disability may have been caused by dioxin discharged by the chemical plant. She and about 100 of her neighbours in the suburb of Paritutu are being given blood tests (each costing \$2500), to see if they have been poisoned. The Paritutu dioxin investigation group has appealed to the government to establish a commission of inquiry into the level of contamination from the plant, where the herbicide 245-T was manufactured from the early 1960s to 1987. Dioxin, a by-product of 245-T, can cause cancer and has been linked to birth defects. The group's spokesman said they had found girls in the suburb as young as 14 suffering from cervical cancer. It also found 23 people who had lived within a 1km radius of the plant over the past 25 years who had multiple sclerosis – eight times the normal incidence. But the general manager for Dow Agro-Sciences says some of the research results obtained by the campaigners were inaccurate.'

... 'From the top of Paritutu Rock, 10 minutes south of downtown New Plymouth, natural beauty mixes with ugly industry. It is a modern planner's nightmare, but in the 1960s and 1970s when the land was subdivided for homes, local authorities apparently had few concerns about people and hazardous industries living side by side. A former resident can recall standing as a youngster on the lawn of his parents' home, inhaling a strong chemical smell. "I can remember taking a deep breath, and saying, 'Mum, that Ivon Watkins smells good tonight.' That little tacker never envisaged what would happen further down the track." What has happened is 19 years of illness, which has had him near death, paralysed for months and diagnosed with the nerve disease Guillain-Barre Syndrome. Like all of the Paritutu residents who claim a link between their illnesses and exposure to dioxin from the 2,4,5-T manufacturing process at the Dow plant, he cannot prove it. As a long-time worker in the fertiliser industry, including a spell mixing up another Dow-manufactured herbicide, 2,4-D, he accepts that could be a cause in combination with his childhood exposure. Now 48, he has recently moved to Whangarei but made the trip back to New Plymouth this week to join a growing band of present and former Paritutu residents demanding answers. The Dioxin Investigation Action Group says it has surveyed 183 families in the area and more than 100 had reported "serious illnesses." Residents spoke of residents dying of cancer in their 50s, out-of-the-ordinary rates of diabetes and other diseases. The health concerns have been around for years, fuelled by a 1972 explosion when residents say a shaft of orange flame rose nearly as high as Paritutu Rock, by leaks at a company dump near the foreshore a few kilometres south in 1982 and by a chemical leak at the plant in 1986. But previous inquiries have not established any links between the manufacture of 2,4,5-T and illnesses suffered by nearby residents. A ministerial inquiry in 1986 and follow-up studies in 1987 found measurable levels of 2,4,5-T in Ivon Watkins-Dow employees and farmers, but said they did not represent a threat to human health. Since then, the WHO has found that dioxins are far more toxic than previously thought, particularly a compound known as TCDD, and has greatly reduced its acceptable daily exposure levels. For its part, the company has repeatedly denied that any discharges from the plant, mainly through incineration, have posed a public health or environmental threat. In 1987, the Dow chemical plant became the last factory in the world to stop making 2,4,5-T after increasing concerns about the health impacts of its dioxin by-products. Today, no manufacturing takes place there, leaving only blending and packaging operations.'

... 'The dark side of NZ's clean green image is coming back to haunt us. In the past fortnight, health officials have announced blood tests for residents living next to the former Ivon Watkins-Dow chemical plant in New Plymouth, and further moves towards an inquiry into timber workers' health problems from exposure to PCP (from 1960-88, contaminants from the formerly state-owned Forestry Corporation's Waipa Mill – NZ's biggest user of PCP for timber treatment – seeped into waterways and left Lake Rotorua heavily polluted with dioxin). And this week, an Environment Ministry report showed NZers were exposed to unacceptable levels of cancer-causing dioxins. "Illegal dumping has probably been a way of life for NZers," says the ministry's senior policy analyst. "As a country, we've been incredibly naive about the whole thing." The environmental clean-up machinery is creaking into action, but awareness of sometimes decades-old pollution in our green land is still dim. Your home may be sitting on a site contaminated by toxic chemicals without your knowledge and you may be forced to pay for the clean-up. Yet councils and the Government are deliberately obstructing the public release of details of thousands of locations known to be – or suspected of being – poisoned (even though taxpayers' and ratepayers' money was spent gathering the information; the ministry defends itself, saying councils would be open to "frivolous and incredibly expensive" inquiries if blanket regional lists were given out). Cleaning up the toxic errors of the past is one of the biggest bills NZers face (a 1992 report estimated the cost of cleaning up 1580 high-risk sites alone would top \$500 million). Every old gasworks, petrol station and drycleaning company has been tagged as a potential contaminated site – yet for hundreds, possibly thousands, more there are no records because of illegal dumping of hazardous substances.'

... 'Early results of an intensive health survey in the wake of the recent dioxin scare in New Plymouth have uncovered no increases in cancers, multiple sclerosis or deaths from birth defects.' However, 'legal charges may follow the discovery of thousands of tonnes of deadly asbestos drying in the sun at an unauthorised dump site in Auckland. Auckland City Council has given landowners Southpark Corporation until Monday to bury the 7m stockpile on Hugo Johnston Drive, Penrose, under at least 600mm of clean soil. It has also ordered an immediate end to dumping and the construction of a fence with warning signs around the site. Auckland City's manager of compliance monitoring said Southpark did not have a resource consent to dump asbestos. The asbestos has been accumulated from building sites on Hugo Johnston Drive.'

... 'A fresh asbestos scare has again raised fears that parts of Auckland are dangerously contaminated by old industrial dumps. The discovery this week of asbestos at Southdown Reserve, off Hugo Johnston Drive, comes 10 years after concerns were first raised about widespread asbestos contamination in the area. Auckland City Council has shut the reserve indefinitely, after council workers found asbestos material in the park while doing routine mowing. Waste was dumped at Southdown by the area's asbestos manufacturer, James Hardie and Co, until 1983. In 1988, the Auckland Area Health Board ordered developers of a Southdown industrial site to seal a trench that was riddled with hundreds of asbestos bags. Yesterday, as contractors began clearing asbestos material from the reserve, Auckland Healthcare was investigating the possible public health implications of the find. The Labour Department's Occupational Safety and Health service is also investigating the consequences for the workers involved.' ■ 'A report published in the *NZ Medical Journal* last month predicted that 12,000 NZers, mostly building workers, will die from cancers caused by inhaling asbestos dust. The authors suggested that the asbestos epidemic will peak in the next 10 to 15 years.'

... 'THE legacy of industrial poisoning in America is a grim one. But for sheer human misery, there rarely has been anything like Libby. At least 200 people have died because they worked at the Zonolite Mountain vermiculite mine, or had a husband who worked there, or jumped as children from ropes into fluffy piles of vermiculite, or played on the high school running track or the primary school ice rink, both filled with mine tailings. At the grocery store, you're likely to run into one or two Libby residents with oxygen boosters slung over their shoulders, connected to plastic tubes running into their

noses. The ones who can't get to the store sit at home next to their oxygen tanks. They struggle to get a breath of air in lungs that can't expand anymore, they cough until they vomit, and they wait for their children to show signs of the disease. Many already do. Asbestos – the invisible, deadly fibre that laces the vermiculite at Libby – seems a problem from the past. Many people assume it has been banned. Wrong on both counts. And the fact that asbestos lurks in the lungs for up to 40 years before sickening and killing means that mortality rates are expanding decades after the world first realised asbestos could kill. Libby is the latest asbestos crisis to come to light, but the small northwest Montana town's 2700 residents have the distinction, according to an Environmental Protection Agency toxicologist, of experiencing "the most severe residential exposure to a hazardous material this country has ever seen". Death rates from asbestos in Libby are 40 to 60 times the national average. And Libby has stunned toxicologists with evidence for the first time that asbestos, long known as an occupational hazard, has affected large numbers of people who never worked with asbestos – or lived with anyone who did. With cleanup costs estimated at \$US50 million for the town alone – not counting the massive contamination at the old mine itself (which could take the rest of next century to fix) – the EPA will decide over the next few months whether to add Libby to the federal Superfund programme, which provides aid for the nation's most polluted industrial sites. As an alternative, W R Grace & Co, which operated the mine from 1963 until it closed in 1990, has offered to do the cleanup itself. Grace, a \$1.6 billion chemical and building materials company, has already paid \$20 million in individual claims and spent more than \$2 million cleaning up its plants in Libby. The company has pledged to pay medical bills for anyone in Libby diagnosed with an asbestos-related illness and \$250,000 a year to the hospital for health screenings. The EPA's administrator will take on the difficult question of whether Superfund cleanup money can be used in Libby to remove Zonolite home insulation, which was installed in anywhere from 800,000 to 10 million attics across America.'

...*'Anger boils over in asbestos country* Fifteen angry Flat Bush homeowners plan to sue the Manukau City Council over its handling of an asbestos investigation. The group say they have lost tens of thousands of dollars from their property values as a result of being within a council-identified asbestos zone. They also say the council knew the area was contaminated at least 18 months before it tagged their properties. One resident said she and her husband would not have bought their \$250,000 house last year if they had known of the asbestos. They had intended to retire to a place by the seaside, but were now stuck. A land agent had told her he "wouldn't touch her house with a barge-pole." She said hundreds of Flat Bush home-owners were in a similar situation, and urged them to join the group in a class action.'

...*'House sections in some of Auckland's wealthiest suburbs may be riddled with asbestos material.* A man who delivered asbestos pipes and sheeting throughout the Manukau suburb of Flat Bush says he also delivered truckloads to the suburbs of Remuera, St John's Park, Ellerslie and Mt Wellington. The Auckland City Council manager of environmental health and licensing said the council would contact the driver to find out exactly what he knew and whether the information could help with its database of contaminated sites. The council knew of just one site with asbestos-contaminated soil – the Southdown Reserve. Unfortunately, the driver said he could not remember specific addresses because most deliveries took place from the 1930s to the late 1970s, and the landscape had changed dramatically since. But he remembers delivering loads of asbestos offcuts from James Hardie's Penrose factory to farms throughout South Auckland. "I used to get 30 shillings a truckload from the farmers. They used it for tanker tracks and to make driveways." At one stage he employed 20 people, and his asbestos was used to fill vast gullies, make dams and improve drainage. "In the end I was delivering 6 or 8 truckloads every day, six days a week." He also delivered up to 15 bags of pure blue asbestos to farmers every month. He had no idea of the potential dangers of the material. He said he had never been affected by asbestos, and believed the problem in Flat Bush had been blown out of proportion.' Incidentally, a] **legal hearing began yesterday over whether a West Auckland man illegally used his 24ha property as a dumping ground for... around 300 wrecked cars and... about 7000 cu m of fill and rubbish... The dispute centres on how the fill relates to a section-clearing business run by... [the] resident... and whether he has existing use rights for several activities on his property... A neighbour appearing as a witness for the... Waitakere City Council... said lingering fires and other "eye-sores" on [the] property had been a nuisance... since the 1950s... A firefighter... said he had attended four fires at [the] property. All but the most recent were large and contained rubbish, car parts, adhesives and vegetation... [A] recent site inspection revealed that most of the fill had been removed but... [the] council is seeking enforcement orders for [the resident] to remove the[remaining] fill and prohibit him from bringing any more on to his land... The extent of the earthworks was far greater than permitted under the relevant district plan and required specific consent... [The resident's lawyer said his] client had understood that the consent the city council granted last year to establish... a macadamia orchard... gave him the right to bring in the material... [to] spread across the orchard bed and trees planted in it... [The resident] is seeking permission from the court to provide facilities for housetruckers, to dismantle cars and to run a composting business on his land.**

...*A Northland family bought an 80ha run-off some years ago while they were share-milking. It was half in pasture and half in gorse and manuka. They recently decided to sell the land and buy a place in town. However, the actions of their local district council could ensure that this family ends up bankrupt. The problem has arisen because... the new district plan... puts in place mechanisms to protect land that planners considered to be "ecologically significant." It gives the powers to employees of the local councils effectively to take away the private property rights of landowners without consultation, and without prior knowledge... In effect... [it] provides for legalised land theft... By some bizarre twist of fate the Northland couple had... the... gorse and manuka... half of their farm... designated as a "significant natural area," or SNA. This means that not only do they have to fence the 40ha to keep stock... away from the area but they must seek resource consent from the council to do anything at all with the area – even spray their gorse. Each application costs at least \$450 and can take months to be processed. The effect of all this is that... two prospective sales of their land [have fallen] through. The value of their farm has plummeted and the couple are now in a desperate financial position... The... couple objected to the SNA on their farm. The council reviewed the designation and admitted it had made a mistake. It has now made a submission to itself to withdraw the SNA from their title. Council officers say that there will be a hearing around March 1998... The... couple, in danger of losing everything because of the R[MA], have been subjected to what must surely be the worst district plan in [NZ]. The recently released... draft annual district plan has attracted 60,000 submissions. With only 25,000 ratepayers, these submissions highlight the serious problems faced by people in the Far North. So far the plan has cost the people of Northland almost \$1 million. It is expected to cost close to another \$1 million before the process is complete. By the time these submissions are heard, the hearings organised, court actions and appeals gone through it is estimated that it will be 2003. In the meantime the draft plan[, which is]... already in effect, is destroying lives, destroying opportunity and halting progress in the north. The plan makes it illegal to have a... television receiver on the roof of a house if it can be seen from the road... prevents anyone from building on a skyline... restricts the number of motor vehicle movements in and out of a property to 30 a day... demands that hens not be kept closer than 150m from a boundary... pigs 650m... and... insists that all sources of water are fenced to keep stock at least 20m away. Since that ruling covers water troughs farmers are in for some serious costs as they seek resource consent to allow their animals to drink. These ridiculous restrictions suggest that those who drafted the plan had little common sense. They did, however, have a strong desire to control the future...*

[Four] councillors have asked the Minister for the Environment... to make the Far North District Council withdraw its "unintelligible" proposed district plan... which they claim is contrary to the spirit and intention of the R[MA because it]... sought to deny the rights of property-owners... and... the community... had not been properly consulted before its release...

MP attacks resource act... The Government should rethink the R[MA] provisions covering areas of conservation value on private property, says [an] Act MP... The Whangarei MP is planning a private member's bill to protect property owners from having their land "basically confiscated without compensation." The Far North District Council has been criticised in recent weeks for incorporating in its proposed district plan the act's suggestion that significant natural areas be protected... "The most depressing thing about the R[MA]] is that when someone decides a piece of land is ecologically significant, they basically put that designation on the whole property, and then if you want to do anything at all on the land you have to go and get resource consent and consult... every man and his dog,"... She said many farmers who had been protecting beautiful areas of land for

generations were now being told they were no longer trusted... [She can expect to count on support for her bill from] the Minister of Agriculture, [who yesterday described some]... of the regulations being proposed in district council plans a[s] “just madness,”... and... said there was concern throughout the community about the R[MA] and its interpretation by local bodies.

...Suppose Parliament amended the traffic regulations to remove all specified speed restrictions and at the same time included new clauses giving the police power to levy “instant fines” for undefined “excessive” speeding... The officer would be empowered to make a discretionary decision based on a situation as he sees it. While that is unthinkable it has now become a reality in [NZ’s] environmental law through the R[MA]. The Ministry for the Environment has recently introduced “instant fines” for alleged environmental infringement offences on a scale from \$300 to \$1000. Authority to levy these fines has been placed in the rapacious hands of regional and local councils. An enforcement officer from a council has power... to give you an infringement notice if he “has reasonable cause to believe such an offence is being or has been committed.” It is to be hoped that this official highwayman is having a reasonable day when he has to make one of these “reasonable” decisions, otherwise an alleged environmental offender may find himself on the rough edge of an unreasonable discretion. The act also states that “...it is not necessary [for the council] to prove that the defendant [in any prosecution] intended to commit the offence.” This means you can be fined for an environmental offence of which you have not been forewarned. In your innocence you may be a law-breaker... It is significant that there are provisions through which a person can challenge an infringement notice through the issuing council and the District Court[, but there]... will... be a strong incentive to pay the instant fine because the cost of seeking justice in most cases will be out of all proportion to the alleged offence. [‘□ Council officers can enter private property to check for compliance with the RMA – but not if they know there is a breach. To inspect a known breach of the act they need a search warrant, a High Court judge ruled. The ruling means failure to obtain a warrant may result in charges against the property owner being thrown out of court.’]

...If you use resources there will be costs in doing so... The R[MA] is an *environmental* statute. It replaced a raft of *planning* laws. The distinction is not well understood six years after the act was passed – not even by many of the people who administer it. It is the attitude and mindset of resource users (you and me), regulators (our local councils), lawyers and judges that will determine how successful the act is in achieving the “sustainable management of natural and physical resources.” ...The R[MA] was the result of intense bipartisan work over four years. It aimed to secure better environmental outcomes, improved public participation and a more flexible, less bureaucratic approach to problem-solving. The act allows for all of those things... The act can be a vehicle for raising the quality of environmental outcomes while letting people get on with their lives; or it can be a swamp in which citizens and businesses flounder without any discernible improvement in the quality of the environment. In other words, it is the policies and practices implemented in the name of the act that count... Central Government can regulate to establish national standards, which it has just done for marine pollution[, but] most resource use issues are local or regional and that is where the scrutiny is required... All sorts of schemes are promoted by people who are really seeking to protect commercial interests which have nothing to do with sustainable management... [The] act is not especially prescriptive [but it] provides a framework within which communities... can decide how they wish to “avoid, remedy or mitigate” the adverse effects of resource use. How far they wish to go is up to them... This places real power and responsibility in the hands of councillors. The policies that govern air and water pollution, amenity and landscape values and all the minor rules needed to keep neighbours from going to war with one another are in their hands... The... [a]ct... is not the answer for every environmental ill... it inevitably runs up against the rights of property owners... [However, people] who rail against the act as though there was once a rule-free paradise should take a careful look at the thicket of common law rules and doctrines that the English courts developed over several centuries to regulate the rights of adjoining landowners... There is not, and never has been, an absolute and undiluted right to do whatever you like on your own property. One property owner’s actions will often affect neighbours or properties further afield... But we do live in a property-owning democracy. And councillors need to think carefully before they extinguish valuable rights that property owners have paid for.

...[‘Residents living along the road opposite Christchurch’s Brighton Beach are pressuring the local council to obtain resource consents to remove sand dunes blocking their views of the sea (currently they can only smell and hear the ocean) so their house values will rise by an estimated \$20,000.’]

...[an] Auckland businessman... has the go-ahead to blast a 35m tunnel through a Bay of Islands headland to gain access to a boat jetty from his private bay... [T]he founder and major shareholder of Sky TV, owns a 6ha property with riparian rights at Opunga Bay on Moturua Island... where he is building a holiday house. With his island neighbour, [he]... applied to the Far North District Council and Northland Regional Council for resource consent to build a tunnel and pathways to link the two properties. The Bay of Islands Watchdog Group opposed the application, claiming the tunnel was unnecessary, inappropriate and harmful to the natural habitat... [22] submitters had opposed some or all of the resource consent applications, which included a dinghy pull and boat ramp... The joint-hearings committee this week granted the tunnel and boat-ramp consents, but declined the dinghy pull on the grounds that it would be visually obtrusive and hazardous. A condition of the tunnel consent is that Te Rawhiti Maori Committee will be on site to ensure there is no disturbance to any human remains. In 1772 French officers killed many Maori at the nearby Paeroa Pa in retaliation for the mainland massacre of the navigator Marion du Fresne and a boatload of his men who had infringed a tapu.

...The Environment Court has rejected a bid to remove an illegal reclamation on Waiheke Island... because of delays in bringing the court action... [and a lack of] agreement about fixing the reclamation and erosion problem... The owner of a neighbouring property had sought a R[MA] order to force the proprietor of the reclamation to remove it, a retaining wall and the remains of a jetty at Waikopou Bay. The action had the support of the D[oC] and other authorities. The reclamation was done in 1986... [The proprietor] was later fined \$4000 in the Auckland District Court. The [DoC], which prosecuted him, did not seek removal of the reclamation as it was considered established and tidy and the move might cause further environmental damage. In 1995 someone cut down the jetty and parts of the reclamation’s wooden retaining wall... [A]s a result of that... and the destructive effect of tides... and cyclones, the remaining wall and the leading edge of the reclamation had collapsed in a number of places. “After spring tides and rough weather the bay is awash with water discoloured by suspended clay.”

...The Environment Court has a backlog of almost 1800 appeal cases, it was revealed yesterday, although officials suggest that only 20[%] of them will come to court. But in some cases the backlog is costing big money while appellants wait for hearings. The court, until recently known as the Planning Tribunal, has six District Court judges sitting virtually continuously. Each judge has two commissioners to assist in the hearings. A spokeswoman for the Minister of Justice said another judge would be appointed soon.

...[‘More than 3100 cases are before the Environment Court, many of them already delayed for over a year. A report from the Courts Minister shows that in places like Timaru and Oamaru no cases were heard in the past year. In Christchurch, 402 cases are pending, 242 of which were lodged a year ago. The minister released the figures in response to a parliamentary question from a Northland-based Act MP, who said yesterday that the delays were unacceptable. “It’s a Government failure which costs individual NZers via the loss of productivity and jobs, the holding costs, interest rates and ongoing legal costs.” An Auckland barrister, who specialises in environmental law, said it was well known that the court was under-resourced. A delay of a year had become standard but in some cases people were waiting two and three years for their appeals to be heard, he said. The local government and environment select committee had previously heard submissions from people facing delays but nothing had been done. “There is certainly no sign of any response or any extra resources.” But local authorities had to take some of the blame for the delays as they often took a long time to sort out their district plans. Developers and conservationists sometimes appeal against district plans and councils can even appeal against each other. Meanwhile, the Environment Court has a new principal judge. She will be based in Wellington but preside at sittings throughout the country.’]

...yesterday, a] lawyer appearing in the Environment Court was challenged to a duel by a landowner... and operator of an allegedly illegal dump at Waimapu... [in the] Bay of Plenty... [The] Judge... eventually took an early adjournment to see counsel in chambers. When the hearing resumed, no mention was made of the duel. [Incidentally, 'conservation groups say the Waitakere Ranges have never been under greater threat from development than now, leaving a thinning green line between city and sea. Concerns over the ranges' future have been raised because the new centre-right local body party Go Waitakere's campaign talk centres on dumping "the extreme eco-environmentalists, fringe lunatics and fanatics" from the Waitakere City Council and restoring the rights of private property owners who have been entangled in planning rules over what they could do with their land.'

... 'Pakatoa Island in the Hauraki Gulf is likely to be turned into an exclusive playground for the rich and famous at a cost of \$60m. That's what the owner believes it would cost to redevelop Pakatoa into a resort which fulfills its potential. The owner, who's received offers from interested buyers almost from the day he bought it in 1994, has put Pakatoa on the market after receiving a substantial offer from a group of developers. The hardest part is likely to be settling on a price. It will almost certainly be much more than the \$4.25m he paid and higher than its \$6.5m government valuation. While coastal islands in private ownership come on to the market from time to time and are often sold to wealthy buyers as personal retreats, Pakatoa's location makes it unique and potentially more valuable. Just 32km from downtown Auckland, the 24ha island is tucked behind the eastern end of Waiheke Island, where property prices have skyrocketed. The owner – worth \$14m according to the *NBR Rich List* – made his money in forestry. He bought Pakatoa after it had been at the centre of a highly publicised scandal involving a German conman. The German hatched a sensational plan to purchase the island for \$8.5m and turn it into an international resort, but it fell to pieces when the scheme was exposed as a sham designed to fleece investors. The conman was eventually jailed in Germany after fleeing to Thailand. The conman was just one of several colourful characters and events in Pakatoa's history. At the turn of the century it was owned by the Salvation Army, which operated it as a treatment centre for female alcoholics. But it seems the Salvation Army's plans to rehabilitate the women did not always run to plan. Pakatoa became well known to passing sailors, who would call at the island on the way in or out of Auckland and supply inmates with alcohol and tobacco in return for sexual favours. In 1954 Pakatoa was bought by Kerridge Odeon, the cinema chain founded by an Auckland businessman']...

A Rotorua businessman may pursue his vision of turning Matakana Island into a Gold Coast-style residential development... [with] a causeway link to Tauranga, marinas and golf courses... following a ruling in the High Court at Auckland... Matakana... has 28km of white, north-facing beaches curving like a smile towards the mouth of the Port of Tauranga. The tan-junkies who cram Mt Maunganui over summer – only several hundred metres away at the closest point – can look across and see the empty, white strip below a dark bank of forest. But the peacefulness of this paradisiacal prize belies the fierce litigation hovering over it... [The businessman] wanted to buy the island... when it was put up for sale by receivers in 1991. Instead, the island was sold to merchant bank Finance and Resources Group (FAR) and forestry companies... [However, the businessman] claimed the sale was arranged by FAR using confidential information supplied by his company... and sued its directors in what is cited as N[Z]'s largest intellectual property rights claim. In a judgment yesterday, [the judge]... said: "The defendants pinched the plaintiffs' information and knowledge, used it for themselves and walked away with a pocketful of money, leaving the plaintiffs lamenting." ...[the businessman's] company... sought advice from FAR in June 1992 about raising \$5 million. Three FAR directors... met the chief executive of the Economic Development Office... [-] who had been helping [the businessman -] ...at Mt Maunganui... FAR learned at that meeting of [the businessman's] scheme, namely that the sale of forest and assets on the island would cover the purchase price of \$20 million, leaving it ready for development at almost no cost. "The directors of the FAR group saw a good prospect of a much better profit from dealing with the receivers than they would gain if they acted on behalf of the plaintiffs,"... [despite] a specific request for confidentiality...

Owning your own island isn't an automatic ticket to paradise on Earth, but it's a step in the right direction. Sure, exclusive access to an idyllic piece of offshore real estate featuring secluded sandy bays dotted with pohutukawa trees is many people's dream. But, like any property, there are rates bills to pay and a return on investment to consider... 210ha... Slipper Island, off the Coromandel Peninsula, is one of only a handful of private islands in N[Z]. A farmer... bought it 35 years ago. Since his death in 1995... [the] family have fended off numerous offers to sell... but... the island, which has a valuation of \$2.5 million... "is priceless, really,"...

Fort Tamaki – priceless land that's ours and not for sale... whatever the twisted logic of Treasury might come up with. The idea of selling it off for luxury housing so the military can buy a few missiles to kill Kaimanawa horses or pay for ward room silver on the new frigates is totally unacceptable. It seems both the D[oc] and originally the Crown Law Office, agreed it should become a public park once Defence moved out. But following pressure from the Treasury and Defence, the Crown's lawyers had a sudden change of heart and reversed their opinion. As for the politicians, they have been a dead loss... Indeed... the Minister of Conservation... has been downright belligerent. "It's not for central Government to go giving... [the people of North Shore]... land because their... forefathers didn't have the foresight to provide open spaces." You would have expected a Minister of Conservation to be focusing rather less on punishing Aucklanders for the sins of their fathers and rather more on how to preserve intact this unique publicly owned urban open space. Instead, he and... [the] local North Shore MP... are preparing to toss us a coastal strip and sell the rest off. That's not good enough. This is a national treasure... In its way it is every bit as worthy of preservation as a remote West Coast forest. Certainly it will bring a lot more taxpayers a lot more pleasure[– like Rangitoto Island ('bought by the Crown in 1890 from its Maori owners for £15, and subsequently opened to the public')].

...That magnificent 5.5 ha block of land along the cliff edge... overlooking the Rangitoto Channel... [has] a fascinating story. In 1885, the land was owned by an English civil engineer... During June... Mr Stark, evidently keen to return to England, put his... estate... on the market for £3000... The local people were aghast at the price and were not surprised that there was little buyer interest in it. However in January 1886, they were even more aghast when it was announced that the Government of N[Z] had purchased the "...estate, for Defence purposes" on behalf of Queen Victoria for £17,100... Rumours circulated alleging that the purchase price was far in excess of the value of the property, and that there were 'certain irregularities' in the mode of its purchase. These rumours were confirmed when, the authorities set up a public hearing... It transpired that in November 1885, Mr Stark was staying at the exclusive Waiwera Hot Springs Hotel... [while] the Premier of N[Z], Sir Julius Vogel, was also in residence. Over dinner one night Sir Julius told Mr Stark that the Government must purchase his property for "defence purposes" to build a fort to defend the port of Auckland from enemy invasion, presumably the Russians. On returning to Devonport, Mr Stark happened to meet the Government Valuer, who was coincidentally making a valuation of the Devonport District, at the time, on the cross-harbour ferry. During the conversation Mr Stark told the valuer he had received an offer of £17,100... for his property, and could produce a letter from a leading firm of city land agents confirming that. The valuer, being conscientious, noted the information and officially increased the previous valuation of £2,800... to £17,000... When the Government, only two months later, took over the property, it did so at its own valuation, and Mr Stark was a happy man as he made preparations to return to England... On March 30, 1886... Stark and his wife boarded the SS "Alameda" bound for San Francisco, never to return to N[Z]. On arrival in San Francisco, Stark was quoted in the press of the day, "that he was sorry that he had not asked £20,000... as the... Government would have paid that sum for it." ...But... the purchase has proved a good investment for the Crown... The valuation today... is \$15 million... The value of the land would be far less under a reserve zoning.

...A private member's bill designed to turn a disputed piece of Devonport defence land into a national reserve was thrown out of Parliament yesterday... by 59 votes to 61... The... Ministry of Defence wants compensation if it gives up \$15 million worth of excess land, and Government MPs argued Parliament should not try to circumvent how a government department uses publicly-owned assets.

...The Minister of Conservation... last night challenged local body leaders to take him to court over disputed defence land in Devonport... “I would welcome them taking me to court, albeit a waste of taxpayers’ money,”...

A group of... 300... North Shore residents is taking the Government to court over disputed Defence land... The Tamaki Reserve Protection Trust... will join forces with the North Shore City Council, which has already filed proceedings in the High Court.

...yesterday in Parliament the Minister of Defence... in response to a question from [an] Alliance list MP... indicated that the entire 11.2ha block might be sold[, meaning the]... 5.5ha section of surplus Navy land at Takapuna Head... [plus] the... 5.7ha, which housed officer training premises and a rugby field... “because if we find later that the second half is not required for defence purposes, surely it makes more sense to quit it in one block.” ...the Ministry of Defence wants about \$26 million... Referring to the Multilateral Agreement on Investment... [the Alliance list MP] asked the minister for an assurance that the land would not be sold to foreigners. The minister replied that the agreement would not open the door for foreigners to buy “all our land” and requests would be referred through the Overseas Investment Commission.

...For the first time since 1990 the Overseas Investment Commission has declined an application. The consent withheld related to a lifestyle block... The policy guideline on lifestyle blocks was the would-be overseas buyer had to demonstrate some sort of commitment to N[Z]. In 1996 the commission approved 85,945ha of land sales... That included the sale of 30,000ha of Hikurangi forest by... Challenge to Malaysian interests... [but excluded] sales between overseas parties, transactions where the applicants were becoming N[Z] residents and N[Z]ers’ share of joint venture transactions... [T]he commission has approved the sale of 285,000ha to overseas buyers, or 1.33[% of NZ]’s farm and forested land[, since 1990].

...Since 1828 the windswept Scottish island of Eigg has been owned by private landlords, most of them absentees who cared little about anything other than collecting rent... The 7,400-acre island, reachable by ferry from Scotland’s west coast, has been neglected... Now, thanks to an effort launched by the island’s 68 residents and the aid of a site on the Internet, the Hebridean isle is owned by those who live there. Eigg’s last landlord – “a German who called himself an artist,”... put the island up for sale in 1996. The residents formed a partnership with the Scottish Wildlife Trust and the local governing council, creating a fund-raising Web page that “sent the message further than it would have gone otherwise,”... A “mystery person” who read about the effort donated more than half the successful bid of 2.4 million dollars. On June 12 the islanders took ownership... The partnership hopes to stock farms, fix up homes and barns, establish a forest-management system, and... other programs to lure tourists to Eigg and keep the community alive... [In related news, ‘for 24 years it was a source of inspiration for Boris Pasternak. From his first-floor study in the house where he wrote his Nobel prize-winning novel *Dr Zhivago*, the Russian poet gazed out on a rich landscape of birch trees and pines. Beyond it was a field and then a gold-domed church. Now, though, the Soviet writers’ village where Pasternak lived from 1936 until his death in 1960 has been transformed. A housing estate for Moscow’s super-rich is being built on the meadow, just 50m from Pasternak’s historic wooden dacha. The new mansions are on sale for around US\$1.5 million to US\$4 million. So who can afford them? “People with criminal money,” a local novelist said. The colony is still home to about 100 novelists and philosophers, who pay token rent to a literary fund. They have protested against the new estate, but to no avail. The field used to belong to a collective farm. According to Pasternak’s daughter-in-law, the two heads of the farm who opposed the sale of the land were mysteriously shot dead.’]

...A 2.558ha section... on the north-eastern edge of Hong Kong Island, [has] fetched \$NZ2.317 billion at auction[, or]... more than \$90,000 per sq m... It was sold by the Government for residential and commercial development. Prices per sq m in Auckland for residential land are about \$1000 on large sections on the city fringe[and] up to \$2000 for smaller coastal sections. For commercial land, they range from \$800... on the fringe to \$4000 in the central business district.

...[‘In the past 140 years, the Coromandel has been invaded for its gold and kauri. Today, most Coromandel gold and kauri has gone and it’s the land that is now sought. Beachfront land is being cut up for housing, and on the eastern side of the peninsula near Whangapoua, about 20km across from Coromandel township, two brothers and a sister are selling 538ha of their near-1300ha farm as they approach retirement. One of the trio says civilisation is making inroads gradually, but it took until 1963 for electricity from the national grid to reach them and the last district council tried to slow down the modern invasion. Less than 100 years ago, the land the trio own and the surrounding countryside was kauri forest. Captain Cook had noted the tall trees in 1769, and in the early 1890s the Kauri Timber Co bought more than 1000ha around Whangapoua from Maori and the logs were made into rafts and towed by tug to Auckland. The trio’s ancestor bought the block from the timber company in 1907 and his nephew bought neighbouring blocks in 1944 from a woman said to have been a god-daughter of King Edward VII. She spent the summer here, breeding polo ponies for the British Army in India and Siamese cats, and the remainder of the time back in England. In 1929 she started building a homestead. It eventually had 18 rooms and was nearly 40m long – big enough for her grand parties and balls. The land for sale includes the homestead. Also included are two baches, three shearers’ quarters, a garage, implement shed, a four-stand 1930s woolshed, two sheep and cattle yards. There is an airstrip and an income-producing quarry. Three of the seven titles front on to more than 1km of beach – two to high-water mark. The proposed district scheme intended increasing the minimum 20ha subdivision right to 60ha. The new council is believed to be more liberal than its predecessor. The property’s year-old government valuation is \$3.18 million. Section prices are likely to be \$130,000 to \$150,000.’]

...Concern that land in many coastal areas is being sold too cheaply by... Maori people has been expressed by members of the Tai Tokerau District Maori Council. At a meeting at Otiria in Northland on Saturday, the fact that 294 acres at Takou Bay was... sold for \$20,000 was deplored.

...Tumbling agricultural returns are forcing down farm values... Land valuers in some areas have cut the worth of farms by as much as 30[%] in two years, a move which will probably lead some farmers to their bank manager’s office... Most farmers would withstand the downturn, though there would be a need for belt-buckling... A Ministry of Agriculture outlook report shows average farm prices tracking up to a peak of \$13,400 a hectare in 1995 before beginning a gradual decline last year, to \$13,187... The Real Estate Institute is predicting prices to fall even further.

...An Oamaru residential section was offered for sale with a \$1 price tag – and it sold almost immediately. [The real] estate agent... advertised the Eden St section in Friday’s *Oamaru Mail*. “A woman walked in and put one dollar on the counter. She bought the section sight unseen,”... [The agent] said her telephone rang red hot over the weekend... The 1012 sq m section has a fire-damaged house on it and a value of \$8500... [T]he previous owners were insured and chose to rebuild elsewhere. It was their idea to offer the section at a nominal price for a quick sale. - 1997

Our World on Sale

...it’s a small world and it smells funny I’d buy another if it wasn’t for the money...

...the man who sold the world... must have died... a long long time ago...

A fairly recent concept, or fantasy, in the history of the human species is the private ownership of land (‘most economists use the term *land* in a much wider sense as including all of the earth’s natural resources such as mineral deposits, lumber, supply of energy, and wildlife; land, especially agricultural – which has had a certain amount of capital put into it – must offer a return in the shape of profits’). If anyone ever had *sold the world*, that person was unlikely to have been ABORIGINAL (‘inhabiting a land from an early period, especially before the arrival of colonists’).

The Mungo National Park Visitors’ Centre provides a wealth of information on... history... It is hard to believe that here is living testimony to a civilisation that was already old when the Pyramids were new... Here you learn that the region was formerly inhabited by two tribes – the Paarintji

in the north and the Paakantji in the south. They settled here when Lake Mungo was full, and fish and wildlife were in abundance. For more than 20,000 years, the two tribes lived peacefully by the lakeshore, until the lakes started to dry out around 10,000 to 12,000 years ago.

The Tasmanians... the extinct Australoid population of Tasmania... were an isolated population... who were cut off from the mainland when a general rise in the sea level flooded the Bass Strait about 10,000 years ago. Their population upon the arrival of European explorers... has been estimated at about 4,000. They were a relatively short people... [who] spoke languages that were unintelligible to mainland Aborigines... The first permanent white settlement was made in Tasmania in 1803; in 1804 an unprovoked attack by whites on a group of Tasmanians was the first episode in the Black War. The whites treated the Tasmanians as subhumans, seizing their hunting grounds, depleting their food supply, attacking the women, and killing the men. Tasmanian attempts to resist were met with superior weaponry and force by the Europeans... In 1820 [it was estimated that Tasmania's human] population was 5468, of whom 2588 had come as convicts[as part of 'an improperly planned experiment unique in history']... Between 1831 and 1835, in a final effort at conciliation and to prevent the extermination of the approximately 200 remaining Tasmanians[, they]... were removed to Flinders Island... [S]ubjected to alien disease... they soon died... [Editor's note: A movie about 'an aboriginal group's first encounter with Europeans starts when two escaped convicts are washed up on the shore. The Aborigines nurse the men back to health then ask them to return to their own people. For obvious reasons, the convicts weren't too keen to rejoin their own people and, because they didn't want to fend for themselves in a wild and unfamiliar country, they talk the Aborigines into letting them stay. This they were allowed to do under the condition that they abided by the rules of the group. One convict made friends with the Aborigines, learnt their language and taught English to some of them. The other convict had nothing to do with the Aborigines, who consequently found him to be a source of amusement. He was eventually accused of the rape (or attempted rape) of a maiden, for which he was executed. Eventually, more Europeans arrived and, upon meeting the group and their European friend, asked if they could buy some land to settle on. The Aborigines' response was that this was absurd! They didn't view land as a commodity that can be sold (compounded by their lack of a monetary system). All of the Europeans went away. Some time later the European friend returned with two new men. The three Europeans proclaimed that their rulers had given them the land. After a misunderstanding one of the sagely Aborigine elders was killed and then a European. The two remaining Europeans escaped. The film ends with a group of Europeans slaughtering the village in retaliation.']

...The Tasmanian wolf... was widely hunted... by... Europeans because it was considered a threat to domestic sheep. Rare in 1914, the... largest marsupial of recent times... is now thought to be extinct... The Tasmanian devil... [is] extinct on the A[US] mainland, but] survives in Tasmania...

Tasmania was discovered in 1642 by... Abel Tasman, who... took possession of the island for Holland... "Aborigines" is a term generally used for the Australoid race which inhabited A[US], including Tasmania, at the time of its discovery by Europeans, who originally called them Indians. Present archaeological evidence establishes that their arrival in A[US] occurred at least 40 000 years ago... It is estimated that there were about 300 000... in 1788, although recent research indicates that the number may have been considerably higher, particularly in the south-east... Before European settlement, the economy of the entire continent was based upon hunting, gathering and fishing... Large congregations of people occurred only periodically for purposes of ceremonial and social obligation, after which groups dispersed widely. Despite the conventional use of the term "tribe" ...the key units of social and economic organisation were much smaller... estimated at 50 people... and more highly integrated. The term used for the basic economic unit is *band* (or horde), that is, the local land-using group... "Tribe" has become a shorthand term for the sum of the constituent land-owning groups (clan estates) with a language or dialect in common... Aborigines spoke... [over] 200 distinct languages, with numerous dialects.

The ancient law has never been written down but it is passed on by word of mouth. The elders hold the law, much of which is sacred and secret... but with no one to pass it on to the knowledge is in danger of disappearing... The... traditional life... is giving way to the modern world... and for the young people, it's harder to see the relevance of the law... [One elder says,] "I feel sorry for those who are living in other places and are not connected to their land and their place as I am. I'm[also] very sad for... [all the] people whose land has been taken away by others. A long time ago [our]... land... was stolen... [by Europeans who didn't] know how to care for that land, how to respond to it, because they've lost their story and their way." Sydney was the site of the first European settlement in AUS and the tribes from the East Coast were the first to be moved out of the way as the new settlers spread out looking for land... Isolated in this ancient wilderness some... [Aborigines] were still living their traditional nomadic lifestyle up until the '60s. They remember how white men came to the western desert regions to clear the area for rocket testing. They found the last of these desert people and moved them to the nearest mission towns. The [people] lived in the mission towns until the early '80s then started to move back to their country... but... [they've] never been granted legal title to their land by the government... [However,] in 1992 the whole issue of native title changed... in... a landmark... High Court... decision in [which one group of Aboriginal] people were granted legal title to their islands as the original inhabitants of that area. Historically, property title in A[US] was based upon the... legal premise that the country was uninhabited at the time of European settlement. In effect, [the law had denied] the very existence of the original inhabitants. The[High Court] decision polarised national opinion. One of the strongest opponents to the Court's decision has been the mining companies who want development rights to remote areas. The W[A]n State Government has also challenged the... Court's decision unsuccessfully, and yet the land [taken] from the... seven sisters... people is still in dispute... The... seven sisters... community... sits on a uranium deposit... The women of... the seven sisters dream... are fighting for title to land that their people walked on long before the beginning of any Western civilisation.

Aborigines win back their land... Court ruling a dream come true says tribal council... A Sydney court yesterday ruled for the first time under the Native Title Act that a small parcel of A[US] had always belonged to the... Dunghutti Aboriginal community of Crescent Head, on the N[SW] mid-north coast... Members... [of the community] packed a federal courtroom to witness white man's law... [give] formal ratification to the... 12.4ha... native title... Under the agreement reached by all parties during negotiations, the Government will pay compensation for the part of the native title that has already been sold in blocks. A Government spokesman said the final compensation figure would be \$A778,000... The Dunghutti Elders Council is to be the trustee for the title and the compensation money... [T]he Dunghutti woman under whom the native title claim was made... said outside the court... "It should have happened well over 209 years ago,"... [T]he decision was a great step in the reconciliation between white and Aboriginal A[US]ns. Asked if the non-Aboriginal people in his shire were as pleased about the decision as the Aborigines[, the]... Kempsey Mayor... said, "I don't think they have any reason not to be. It's reconciliation, that's what it's all about. It's certainly solved the problem for those people who bought the land out there. They can get on with their lives now. So can the Aboriginal people. We can all live together." However, in Canberra the National Farmers Federation yesterday threatened to launch compensation claims if the Federal Government failed to act on its demands for legislation to wipe out native title on pastoral leases.

...A[US]'s top farming group said yesterday that... polling in response to a television advertising campaign... found 62[%] of those surveyed... supported its push for farmers to be protected against Aboriginal land claims... and 58[%] believed their plight was genuine or believable... Farmers are pressing the Government to legislate to give pastoral leases – ...granted to farmers and graziers since white settlement began more than 200 years ago – supremacy over Aboriginal land rights claims... The conservative Liberal-National Government is due to announce soon its response to a December High Court ruling, known as the Wik decision, that... a 1994 law passed by the Labour Government gave Aborigines rights

to land leased to farmers... Its genesis lies in the 1992 High Court Mabo ruling, which held that indigenous people able to demonstrate continuous association with traditional land since European settlement could claim native title, provided that title had not been “extinguished” – or erased – by the creation of freehold title. The question of leasehold crown land remained uncertain... It had been thought the long-term leases overrode native claims... Farm groups say the Wik ruling created uncertainty about what they can do with their land and jeopardised rural industry... The decision opened up about 80% of AUS’s land mass to potential native claims... The P[M]... said no decision has been made, but he pledged to look after farmers and the rural industry, worth an estimated \$A34 billion... a year. The farmers’ federation... television... ads aroused Aboriginal anger because they featured white and black children playing complicated games – which the black children always won.

...leaders... [representing] 65,000 Aborigines... from northern and central A[US]... vowed yesterday to fight a “political war” with... [the PM] over his 10-point plan for native title... [They rejected outright his] plan saying it threatened their most fundamental rights and reconciliation for the benefit of a handful of rich landowners... The plan does not extinguish native title but significantly reduces Aboriginal ability to negotiate over mining and other rights and confirms the primacy of agricultural pursuits. [The] chairman of the Northern Land Council... said the 10-point plan set Aboriginal people’s rights back 50 years and they would now have to fight for their future... “I think it is a declaration of war,”... a “final drive” to destroy Aboriginal people... But in Brisbane, the deputy chairman of the Aboriginal and Torres Strait Islander Commission... vowed to press ahead with the proposal... [He] said Aborigines would be prepared to give up native title claims “for all small family farms and small pastoral holdings held by A[US]n battling farming families,” in a effort to end the impasse created by the High Court’s Wik judgment. “But we will not support financial benefits and gains being given away to huge multinational companies from overseas, and to large trust companies being used as tax schemes by those who are wealthy enough to pay the proper value for the land they are using.”

...a fragile off-shore environment is at stake in a legal battle over A[US]’s Great Barrier Reef. The world-famous tourist spot is the subject of an Aboriginal land-rights claim but tourism chiefs don’t want Aboriginal groups to control the billion dollar reef industry. “It’s something that is going to drag people into A[US] and if we can’t sell that competitively then we are going to lose a substantial amount of that trade.” But [the Aborigines] say they want to regulate not close access to the reef... In Darwin, Aborigines yesterday revealed multiple land claims over significant areas of the Northern Territory, including national parks, coastland to the low-tide mark and riverbeds, in a move leaders conceded was a “grab.” The claims come en masse before a June 5 deadline for new claims set... by a sunset clause... in the historic and controversial Aboriginal Land Rights (Northern Territory) Act...

The A[US]n Aboriginal Affairs Minister... yesterday handed over the deeds of two huge properties in the Northern Territory to their traditional Aboriginal owners. The Malgnin and Nyinin people were granted native title... more than a year ago but the handover was delayed because land trusts had to be established... But for all the jubilation that accompanied the handover, the future of relations between black and white A[US] remains in serious doubt. The Federal Government has yet to determine its response to last year’s High Court ruling that overrode the Native Title Act’s exclusion of pastoral leases from Aboriginal land claims, now the centre of a furious storm over land rights. The dispute has become so bitter Aborigines and pastoralists will no longer sit at the same negotiating table, and Aboriginal mistrust over the Government’s commitment to reconciliation has deepened with a series of policy decisions since the Coalition took office in March last year. And... as the... people celebrated the return of their traditional land, more evidence emerged of the scale of the problem A[US] faces in reversing the impact of racial policies extended over two centuries... Only 16% of indigenous A[US]ns are in fulltime jobs outside Employment Department and community service projects... [Un]employment for Aborigines is forecast to... lift[from] the... present 39% to 47... by 2006 – 40% at best... The consequences are immediately apparent: overall average income for indigenous adults in 1994 was \$14,000, almost a third below national levels. The... cost is heavy for the nation. Indigenous income support at present costs \$1.1 billion a year, and is expected to rise to almost double within a decade.

...yesterday[. at]... a major conference on Aboriginal reconciliation... [the AUSn P]M... made an unexpected personal apology... to... Aborigines forcibly removed from their parents... a practice labelled genocidal by a human rights report which was tabled in Parliament last night... The 700-page report contained a litany of physical and sexual abuse... [The PM] received loud applause for his apology, but jeers when he said A[US]n history since white settlement in 1788 was not a history of “imperialism and exploitation and racism.” Many of the 1500 Aboriginal and political leaders turned their back on the P[M] as he continued his speech. Before his speech, [the PM] was abused by an angry Aboriginal woman who jumped on stage... Despite its stormy beginning... the convention satisfied most of its aims. Delegates said they had set in place “the most solid foundation” Aboriginal people have had since the momentous 1967 referendum which gave them full citizen rights... [However, delegates] were told by[the] conference leader... that black and white A[US] were at a crossroads... as the nation debates two extremely important issues – native title and the ‘Stolen Generation’... or “People of the Bleaching.” ...[an] estimated 60,000... Aboriginal children were... taken... under a Government policy of assimilation from the 1880s to the 1960s... The federal... Government has rejected calls for financial compensation, saying modern A[US] could not take legal responsibility for the sins of past generations.

...Last night the P[M]... went directly to the people of A[US] in a televised address to the nation urging support for legislation that without major compromise on all sides will turn the... Aboriginal Reconciliation... council’s hopes to ashes. Unless there is compromise on the Wik amendments... [the PM] may be forced to make good a threat to dissolve both Houses of Parliament and seek a new mandate for Government in an election in which race would inevitably play a large and potentially nasty role... Dinner-table conversations provide overwhelming anecdotal evidence that the prospect of a racially inspired election causes... shudders across the nation. Nor is there any clear indication of broad public opinion on an issue many A[US]ns do not... consider important to their own immediate concerns... And for most, Wik is not a simple issue to follow... The language of the debate has deteriorated steadily, plunging to new depths as the bill went before the Senate last week in a welter of bitter claim and counter-claim... [The P]M... used his... nine-minute speech... to plead for a speedy end to the... debate... and called on the Senate to pass it as soon as possible – or threaten jobs, fairness and certainty... [However,] in the end, the future of the Government’s bill will rest with one man – [the] Tasmanian Independent... who now holds the balance of power in the Senate.

...A[US] was last night facing the near certainty of an early election because the Senate made sweeping changes to Government legislation on Aboriginal land rights... These included rejection of a proposed six-year sunset clause for lodging native title claims, inclusion of a provision allowing spiritual connection to the land in claims, ensuring the bill would be subject to[the] Racial Discrimination Act, and the extension of Aborigines’ right to negotiate on mineral exploration on pastoral leases. The right to negotiate, passed early yesterday morning, was the final straw for the Government, which was backed in its stand by powerful mining and farming interests... The man who decided the outcome of the Senate vote... appealed for calm as the nation headed toward political crisis... - 1997

Lost people, lost cause in ‘rush to buy votes’... Two months ago A[US] stood on the brink of a bitter and divisive election based on race and the rights of indigenous people to claim what traditional land remained available to them. The nation is now just two days from the election, but it has buried race so deeply beneath the opposing banners of tax reform and jobs that Aborigine A[US] is scrambling for a last-minute inclusion... The battle lines are... clearly marked... But the problems afflicting A[US]’s 390,000 Aborigines, many of them living in [Last] World conditions in rural and remote areas, remain as entrenched and severe as ever... [However, the incumbent AUS]n Government believes reconciliation with disadvantaged Aboriginal people can still be achieved despite condemnation of its handling of indigenous issues.

...Aborigines have launched legal action against the South A[US]n Government to assert their native title rights over the world's largest ancient burial site at Lake Victoria... The lake manager... is considering raising the water level nearly 3m to 27m – a move Aborigines say would desecrate the site... [where] at least 10,000 Aborigines[are] buried... The lawsuit could evolve into a landmark native title case, raising questions for the first time about native title rights over a pastoral lease outside Queensland.

...IT'S A spine-tingling moment – standing on a candle-lit hilltop in the middle of the night in the middle of a game park listening to the new South African national anthem. The singers are the mainly black staff of Bongani Lodge but there are white voices too... Not so very long ago *Nkosi Sikelel'i Afrika* was a symbol of protest, a song of resistance, a plea – God save Africa. Now the beautiful hymn is official... The undeniable beauty of the country – its scale and variety – remains the top... tourist... attraction, followed by wildlife and stunningly good weather. But lots of people also list the political changes and African culture as their reasons for visiting... A highlight of our visit was to be a trip to... Cape Town[']s)... Robben Island, where [the African National Congress's most famous leader] was jailed for 18 years... [The island was] declared a national monument and museum late in 1996. But you need to book well in advance to avoid my disappointment of not being able to get a ticket on one of the six daily tours. The District Six Museum helped to fill the gap. Located in the central city in an old Methodist church, the developing museum records the forced removal of 60,000 people from their homes when the area on the slopes of Table Mountain was declared "whites only." A cosmopolitan mix of people were relocated to strictly separate racial areas, mainly in the poverty-stricken Cape Flats area.

After three centuries of abuse, the descendants of the tribes first exploited by the British who colonised Cape Town are to sue the Queen... "The Griqua people... hold the present British Government responsible for damages; for the loss of life and property, bodily harm and physical and verbal abuse incurred when they seized our ancestral land in the Northern Cape and Orange Free State," said... a tribesman involved in the action, which is claiming \$2.2 billion in damages. From the beginning of the 18th century the Griqua people, who now number 20,000, were pushed from the Cape into virgin lands to the north and east. The British used the tough indigenous people to clear the land before moving in to steal it for themselves. Over nearly 200 years they forced the Griqua through the Free State, with its diamond wealth, across some of the finest farming land in the nation and finally into Kwazulu Natal. When the British moved out, the Boers moved in with their racial policies... Around the world, indigenous peoples have begun to receive large payments for land stolen during the colonial era. But this is the first initiative in South Africa. While the Griqua hold the British responsible for stealing their land, they hold the mining conglomerate De Beers responsible for stealing their diamonds. They plan to sue the company for \$1.87 billion in lost royalties. According to one of the group's leaders, they have found contracts that offered them 6[%] of all the profits made from the minefields around Kimberley. He pointed out that it was they who found the first of the big diamonds – the Star of South Africa – at Hopetown. So far the British Government and De Beers have responded cautiously. The British High Commission said it had informed Buckingham Palace, while De Beers said it was waiting for further clarification. "We would like to stress... De Beers acquired its properties and mineral rights holdings from the previous lawful holders," the company said... The South African Government is unhappy about the vast land claims being made... It says that because the Griqua's grievances are before 1913, the year of the infamous land acts, they do not apply under the new constitution. "If we went all the way back there could be eight or nine groups all with completely legitimate claims," an official said. - 1996

"I'm ready to fulfill a dream... [This territory is] ruled over by one naked old savage... all I want is a piece of paper, an agreement for exclusive mineral rights in all of [his] domains... an area bigger than France, Germany, Belgium and Holland combined... [F]urthermore, De Beers Consolidated Mines Ltd is empowered to control and manage railways, tramways, roads, telegraphs, canals, harbours, to acquire [secret services...]"

"[S]ecret services! And... [you want my support? W]e're gonna take on the whole bleedin' world. We're gonna run countries, raise armies, wage wars, paid for by De Beers..." "[F]or heavens sake, calm down man..." "Let me get this straight. I'm the largest shareholder with [this company] and no one is going to play Julius bleedin' Caesar or... Napoleon with my money, is that clear? I'm a businessman... not a bloody emperor!"

"Alright... let's talk as businessmen. Kimberley, [with] virtually all the world's diamonds [is here, and over there is] the greatest gold fields known to man, and a mere 300 miles between them. Now, it would be contrary to nature, wouldn't it, to suggest that in all this vast emptiness there... [isn't] another hundred Kimberleys. Where's our precious monopoly then?" "Look, I'm not here to talk bloody ifs and maybes." "...nor I... we have it on the authority of the Bible that somewhere here lies the... site of King Solomon's mines, the source of the Queen of Sheba's riches... Listen to me... all across [this land] wandering hunters have found ancient mines, groves of lemon trees, pomegranates, things unseen in Africa, and each new discovery supports the legend. [This land] is in my firm opinion the lost kingdom..." "So, we just gets ourselves an army and ups and takes it, [yes? What about the million-or-so people]... dotted about in there. No problem sorting that lot out!" "We don't have to sort them out, it's already been done for us. A generation ago a huge Zulu army... swept through this territory and established their headquarters at [this place]... I shall make a legal arrangement... [with their] King... for all the mineral rights throughout his domains." "You ain't got [the right]." "...look at this... the Queen's stamp... it's an official letter from the Governor of the Cape commending our mission to... [this King, and in] the north... the legal arrangement for all the mineral rights throughout [these] domains... our agents will cover Africa with scraps of paper till [our company] has the balance of the map..." "Are you seriously going to send blokes into [the] blue yonder with nothing but a letter from 'umpty Dumpty to cover their arses? You're talking about thousands and thousands of bleedin' miles! Places where no white man's ever been!" "...you're wrong... There's a whole network of white men in every kaffir capital. Men who are trusted by the blacks, men who are desperately short of funds... the missionaries! Our standard bearers! ...the London Missionary Society, the Scottish, the Jesuits." "Alright, supposing you pulls it off. It's all signed and delivered between [you] and his dusky majesty. You're happy, they're happy. So what's all this I'm supposed to sign about armies and secret services... What do you need them for if it's gonna be sweet and legal?" "...power, the power to protect those... mineral rights..." "You can't take on whole countries, that's a job for the blummin' British Government." "...I've tried the British Government, they won't touch it. I've tried the Cape Government, they're too poor to do it." "[Then] how are we supposed to be able to bloody-well do it?" "We must do it! Otherwise it'll be taken away from us. [Look, Germans are] all down this coast, almost to the Cape border. The Portuguese here, here the French, Belgian's... the Transvaal Boers[are] ready to sweep in from the South." "So this lot just sit on their arses while we ups and takes it?" "...don't forget the scraps of paper. We will have the legal rights. All we have to do is register those rights with the British Government. With the authority of Britain behind us who is going to stop us?"

"Pie in the sky! You do this, he does that, he does something else. You don't know, do you, [cause] no one's ever done anything like [that before]." "Yes they have! They've done it right here in Kimberley. Think of it as you think of the amalgamation of the mines. London is the claim exchange... and everybody wants this... block of claims right here, but the legal owners sell it to us. We register with the claim exchange and it's ours. It's... so simple!" "Tell me [if] I've got this right. His dusky majesty signs on the dotted line, up we go, do[a] spot of digging, when his back's turned we clips him on the side of the head with a shovel and steals his bloody country. [Now is] that about the size of it?" "It's fate... can't stand in the way of fate. All that vast emptiness given over to savagery with its waste of nature and contempt for human life, it is inevitable that that should change. All I ask is that we should be the instruments of fate." - RHODES

With the help of a local missionary, Rhodes eventually brokered a treaty between 'the Black King and the Great White Queen' (Victoria). That treaty was less formal than the one signed on behalf of the same monarch to bring NZ under her control.

HER MAJESTY VICTORIA Queen of the United Kingdom... regarding with Her Royal Favour the Native Chiefs and Tribes of N[Z] and anxious to protect their just Rights and Property and to secure to them the enjoyment of Peace and Good Order... confirms and guarantees to the Chiefs and Tribes of N[Z] and to the respective families and individuals thereof the full exclusive and undisturbed possession of their Lands and Estates Forests Fisheries and other properties which they may collectively or individually possess so long as it is their wish and desire to retain the same in their possession; but the Chiefs of the United Tribes and the individual Chiefs yield to Her Majesty the exclusive right of Preemption over such lands... to alienate at such prices as may be agreed upon between the respective Proprietors and persons appointed by Her Majesty... THE TREATY OF WAITANGI, [which was] for many years regarded as a symbol of enlightened, humane and generous respect for the rights of an indigenous population by a colonising government, has been increasingly condemned in recent years as a 'fraud' by a growing number of Maoris and Pakehas. It was signed at Waitangi in the Bay of Islands on 6 February 1840, by some Maori leaders present at [the] meeting... and by Lieutenant-Governor HOBSON on behalf of the British government... Kawiti... was the first name on the main sheet... although he was not the first chief to sign... [Hone Heke] was the first to sign... It was later signed by other chiefs in other districts... but many Maori leaders never signed it, either because they refused to do so or did not have the opportunity. It seems certain that Maoris and Europeans had mixed feelings about the Treaty at the time it was made, but Maoris who signed put their trust in missionary advice. They were told that the Treaty was a solemn contract between the two races, under which NZ sovereignty had been vested in the British Crown in return for guarantees of certain Maori rights. Many Europeans genuinely believed this and for some years the British government upheld the agreement and were reluctant to allow it to be broken. Within a decade, however, the Chief Justice... ruled that the Treaty had no validity in law since it was not incorporated in NZ's statutory law. As Pakeha settlers took up the Maori land for settlement throughout the 19th century, they tended to regard the Treaty, if they thought of it at all, first as a nuisance and later as irrelevant... The text of the treaty was written in English and then fairly loosely translated into Maori. The text was apparently amended by Hobson after it was first explained to assembled Maori leaders... Because the English and Maori versions suggest different meanings, and, as a result, a different understanding, it is not surprising that the Treaty has been the cause of much confusion over the years.

[Due to] the difficulties of translation it is hardly possible that... Maoris had the same understanding of the Treaty as the Europeans. One example is the use of the missionary-manufactured word "kawana-tanga" meaning governorship for sovereignty. Many Maoris... regard[ed] the Governor simply as the governor of the Pakehas, especially those people whose principal chiefs had refused to sign the Treaty... To avoid racial conflict over transactions, the Treaty... stated that the Maori chiefs yielded to the Crown the exclusive right of pre-emption over the sale of land. This meant... land could be sold only to the Crown, which then sold portions to European settlers at a higher price. The differential was seen as revenue which would provide the Government with funds to open up the country and build roads and bridges. Neither Maoris nor settlers were satisfied with the system... Maoris interpreted pre-emption as offering only the right of first refusal to the Government: they wanted the full market value. Settlers wanted to deal privately with the Maoris, believing... they would pay a lower price than that demanded by the Government... Checks on fraud and abuses in land transactions... were introduced by legislation but were largely ineffective as loopholes existed in the law... A Commission of Inquiry into land alienation revealed that... 4 million acres... of pastoral land in Hawke's Bay was in the hands of fewer than 50 Europeans[, while] Crown grants totalling 569,220 acres... had been issued to about 300 Maoris when the land properly belonged to 3,773 Maoris... [T]he individualisation of Maori land was exacerbated by the Native Land Act laid down that every man, woman and child with interest in a block of land had to be registered as an owner. Interests in blocks were to pass to all natural heirs unless otherwise designated by will. This led to the fragmentation of title with individual shares becoming smaller with each generation. This made it easier for the unscrupulous to buy into Maori blocks.

Subsequent encroachment on the lands set aside for them[, and]... the enforced sale of Maori lands to Europeans... led eventually to the Maori Wars of 1860-72 in which Maori independence was finally destroyed.

The wars – variously called the N[Z] Wars, the Land Wars and, less accurately, the Maori Wars – ...first broke out in the north, when Hone HEKE and his followers cut down the Russell flagstaff on several occasions between July 1844 and March 1845 as a gesture of Maori independence. British troops were called in to quell these disturbances which were followed by other outbreaks of violence in the Hutt Valley and at Wanganui.

[General Sir Trevor Chute] succeeded Sir Duncan Cameron as the commander of the British Imperial forces in N[Z] at the end of 1865. He intervened with a swift and efficient campaign in the war between Maori and settler in... Wanganui, marching his men 260 miles in six weeks, losing nine killed and 26 wounded, capturing seven fortified pa and 20 villages, and demonstrating that the troops could follow Maoris into the bush. He came to believe, as Cameron had before him, that the colonists in demanding the continuance of war were motivated by land greed, and accordingly he became involved in disputes between the British government and the local authorities on the control of local militia and regular troops. - ENCYCLOPEDIA OF NEW ZEALAND

[Governor] Grey made allegations of Maori plots to attack Auckland and some were... convincing... but we now know that all were almost certainly false. London did not know that they were false. It sent Grey enough ships and troops to transform N[Z] history. Troops came... from the four corners of the Earth. By 1864 the number of Imperial soldiers approached 12,000. The settler Government also provided its own army to supplement the Imperials, and some 5000 men, half of them from A[US], were recruited for the Waikato militia. In Auckland, 3000 more military were called up for active service... [T]hese thousands of soldiers and the hundreds of thousands of pounds flowing in to pay and supply them, transformed Auckland[('how many people know Great South Rd was the military route Grey built to invade the Waikato?')]. A small, ramshackle settlement of about 8000 people became a bustling town. The population doubled, shipping tripled, imports quadrupled. Business boomed, and so did crime, drinking and prostitution. Like other N[Z] towns, Auckland discovered that the troops were heroes on duty but villains on their time off.

Maori... ['the brown aboriginal people of NZ.' The word 'means "usual, ordinary". The Maoris used the word to describe themselves, as opposed to the "different", European settlers, during the 19th century, and the Europeans in turn adopted it. Before the time of the arrival of Europeans, Maoris had no names for themselves as a nation, only a number of tribal names.' H]istory describes their origins in terms of waves of migration beginning about AD 1150 and culminating in the arrival of a "great fleet" in the 14th century from Hawaiki, a mythical land usually identified as Tahiti. Although this tradition has largely been discounted by archaeological discoveries... it still provided the basis for traditional Maori social organization. Members of each tribe (*iwi*) recognized a common ancestry... and common allegiance to a chief or chiefs (*ariki*)... [T]he most important social groups were the *hapuu* (subtribe), the primary landholding group and the one within which marriage was preferred, and the extended family (*whaanau*). This social order was in force when Abel Tasman... arrived... [For centuries, European navigators had searched for a southern hemisphere continent they called Terra Australis Incognita which, according to legend, would yield even greater wealth than the rich East Indies. Seeking a route to South America, Abel Tasman came upon the West Coast of NZ which he believed was the Great South Land.] He did battle with a group of Maori on the South Island and left the area largely unexplored[due to a 'lack of evidence of gold and spices.' In the following century, James Cook] circumnavigated the two

major islands and wrote about the intelligence of the Maori and the suitability of N[Z] for colonization. Whalers, sealers, and other Europeans seeking profit were initially welcomed by the Maori. With the introduction of muskets, disease, Western agricultural methods, and missionaries, Maori culture and social structure began to disintegrate. By the late 1830s N[Z] had been joined to Europe, and European settlers landed by the score. After the British assumed formal control of N[Z] in 1840, European settlement and government began to alarm the Maori... The so-called King Movement was a response to the increasing threat to the Maori land. In 1857 several tribes of the Waikato area... elected as king Te Wherowhero, who reigned as Potatau 1. In addition to electing a king, they established a council of state, a judicial system, and a police organization, all of which were intended to support Maori resolve to retain their land and to stop the intertribal warfare over the issue. Not all Maori accepted the authority of the king, but the majority shared... the resolve not to sell the land. Until 1860 the Maori still owned most of the land in the North Island, but a large increase in the number of immigrants in the 1850s led to demands for greatly increased land purchase by the government... In 1859 Te Teira, a Maori of the Taranaki area, sold his Waitara River land, without the consent of his tribe, to the colonial government, precipitating the First Taranaki War of 1860-61. The war consisted essentially of a series of generally successful sieges of Maori *pas* (fortified villages) by British troops and militia employing a sap trench procedure. The British were defeated during an attack... on Putetakaure *pa* when the Maori executed a surprise counterattack... Maori also began to employ guerrilla tactics... The British government wanted to conclude peace in 1864, but the colonial government, wishing to acquire more land, continued the war and assumed an increasing share of the fighting... The main Maori combatants in the mid-60s were the fanatical Hauhau... warriors... From 1868 to 1872 the Hauhau were supplemented by a new warrior cult, Ringatu, founded and led by a guerrilla leader, Te Kooti. All fighting ended in 1872. Great tracts of Maori land had been confiscated and Maori society permanently disrupted. The supporters of the King Movement retreated to King Country, in the west-central North Island. This area was closed to Europeans and remained under Maori control until 1881...

TE WHITI-O-RONGOMAI (c. 1830-1907) was a leader of passive resistance against European confiscation of Maori land, and a Maori perhaps more unfairly treated by Pakeha settlers than any other. He was born in Taranaki, a member of the Te Ati Awa tribe, and educated at a mission school, where he was noted for his aptitude for Bible studies. After he left school he set up a flour mill at a place called Warea, about 35 km south-west of New Plymouth, and he was living peacefully in the area when, according to one historian, colonial troops burned his village in 1865. He moved his settlement to Parihaka, 42 km south-west of New Plymouth, where he granted haven to disaffected Maoris, but he would not allow any of his followers to fight... Te Whiti was opposed to any land being sold to Europeans, and claimed that land, which had already been confiscated in south Taranaki but not developed, should be returned to them. He believed that the Maoris should be left alone to work out their own destiny and that, because both fighting and direct negotiation with the Pakehas had not solved their land problems, they should resort to passive resistance or civil disobedience... Government surveyors moved on to the confiscated land in south Taranaki in 1879, and Te Whiti launched his campaign... [of] ploughing up roads and settlers' pastures, and removing surveyors pegs. At first the government tried to temper the anger of the colonists and some of their own members by advocating restraint, and the Native Minister of the time, BRYCE, resigned when his colleagues refused to accept his advice to take forceful action against Te Whiti. By the end of 1881, however, the government was forced into a position of taking action or admitting that the confiscation of the land was illegal. Bryce was reinstated in the Ministry, and in November 1881 led 1600 Armed Constabulary and militia men to Parihaka to arrest Te Whiti and his associate, Tohu. A constitutional crisis developed when the Governor, Sir Arthur GORDON, claimed that the Ministry was taking unwarranted action against the Maori leaders, and was illegally holding them without trial. Te Whiti was released after a year... However, he soon built up his following again and, when a government investigation was under way into the land question, he renewed his policy of passive resistance. In 1886 he [was] jailed for several months, and the back of the civil disobedience campaign was finally broken. Te Whiti was a man of great character, intelligence and commanding appearance. He taught his people to be sober, to work hard and to face their situation with courage and calm. - BATEMAN NEW ZEALAND ENCYCLOPEDIA

This encyclopedia reference didn't mention that '20 of the men who were arrested [in 1881] died due to the harsh conditions of the prison', or that it 'took three weeks of raping, looting and pillaging to displace the largest and most prosperous Maori settlement' ('when the Pakehas assembled a cannon the day before the assault on the pa, a black dog came up the road and lifted his leg on the cannon: a sign from heaven – even the animals despised warfare').

When the cavalry approached... there were only two lines of defence: the first a chorus of 200 boys, the second, a chanting of girls. On Te Whiti's clear orders, there was to be no recourse to arms despite the rape of women, theft of heirlooms and household property, burning of homes and crops, taking of stock and the forced transportations that followed... A section of the dispersed people began... marching throughout Taranaki so that a home might be found. "The invasion and sacking of Parihaka," the Waitangi Tribunal would state – and later be widely criticised for exaggeration – "must rank with the most heinous action of any government, in any country, in the last century. For decades, even to this day, it has had devastating effects on race relations. There was not a tribe in the country that did not learn of it, for Parihaka had been open to them all." ... (It should be noted here that Parihaka was affording refuge to Wiremu Hiroki who, it was alleged, had killed a surveyor in South Taranaki in 1878.)... Earlier this year I talked to the P[M]... about his early life in Taranaki. A Maori family took him to school where Maori made up 30[%] of the roll. He grew up on a rough farm... almost within shouting distance of Parihaka Pa... Did he know the history? "We knew there was a prophet Te Whiti... But, really, we were more interested in Jock Te Whiti who played rugby." ... [NZers] of my generation... knew... only that, undeniably, we enjoyed the best race relations in the world. At secondary school, in an age when youths were encouraged to take the "real" subjects of maths and sciences, we were taught precious little about the history of Aotearoa... I learned in school certificate and university entrance history about the Tolpuddle Martyrs and the English Corn Laws, Bismarck and the unification of Germany, about Cecil Rhodes, the Statute of Westminster and the American Civil War, but not so much about the land where I was born. It wasn't that "N[Z]" history was ignored, it wasn't. We learned about... the N[Z] Company, plucky pioneers, "rebel" Maoris and the Maori Wars... Vogel and Richard John Seddon. But it wasn't our *own* story, it was largely the British colonial story, one which a later historian would describe as "Anglo-centric and empire-worshipping". Sure, there had been a treaty signed at Waitangi in 1840... but we weren't told much about it... To the west of the *maunga*, the mountain, are the lands of the Taranaki people. All these people refused to sign the Treaty of Waitangi... On the ring plane around Mt Egmont[(Taranaki)], with its fertile volcanic soils and regular year-round rain-fall, these lands would make up a sizeable chunk of what was to become the first specialised dairying area in N[Z]. And they would become the subject of the nation's longest land conflict, "the never-ending war"... In 1841, from Devon and Cornwall, came the first organised settlers of the Plymouth Company, a subsidiary of the N[Z] Company, colonists who, in spite of a British government ban on private purchases of native land, had been sold tracts of it before they had set sail from England. And that was the beginning of the land conflict in Taranaki which, the Waitangi Tribunal was to note, "has continued with little amelioration for 155 years" as sometimes unscrupulous, sometimes ignorant, but always acquisitive Pakeha bought land from Maori who on occasions sold that which was not always theirs to sell. There was always Maori resistance... In 1854, hapu from central and south Taranaki met and resolved to stop further sales. Some settlers charged that Maori had thus formed a "land league" to restrain trade illegally – pledging... Maori soil could be taken by the Pakeha only over Maori bodies. Wiremu Kingi Te Rangitake was regularly described as the mastermind of the league, but there is, scholars have ascertained, no record of his involvement. Nonetheless, the image of Kingi as the leading figure in a murderous league determined to stop honest persons exercising their right to buy and sell

was conveyed to a new governor fresh from Britain, Colonel Thomas Gore Browne, and is said to have influenced his decision to launch an attack on Kingi's pa at Waitara in 1860. Thus began the full-scale fighting of the Taranaki Land Wars... *AFTER THE VICTORY*... [there] was land aplenty for Pakeha – the government saw to that. *IN 1863 ALL OF TARANAKI* except the uninhabited hinterland was declared a confiscated area on the suggestion of Governor Sir George Grey who urged that the government should punish “rebels” from the war by taking their lands. In 1865 and 1866, Grey issued proclamations confiscating 503,000 hectares... “The... [government] seized upon the idea [of confiscation] with a greedy enthusiasm and produced a grandiose scheme whereby several million pounds were to be borrowed in England on the security of the profits expected from the sale of the confiscated land to new immigrants.” ...The proclamations provided for compensation for “friendly natives”. However, none of the land specified for “loyal” Maori was set aside and made available to them... [Furthermore, the] acreage involved... was often estimated on the basis of rough sketch maps: “The Maori probably believed these initial boundaries to be final and accepted peace on this basis, reconciling themselves to the loss of a limited acreage.” But as the risk of resistance seemed to diminish, the government would proceed to survey and occupy more land. This process of creeping confiscation – Maori saw it as renewed aggression – was the cause of what became known as Titokowaru's War of 1868, the passive resistance of the prophet Te Whiti and the events that would take place at Parihaka in 1881. - North & South

A bureaucratic battle to win back Maori tribal land in the Tarawera Forest, Bay of Plenty, has reached a stalemate. - 1982

[A] Maori Land March began at Te Hapua settlement in the far north on Sept 14, 1975, and arrived at Parliament Buildings in Wellington on Oct 13. Here, its leader Mrs Whina (later Dame Whina) Cooper... presented a Memorial of Rights signed by 60,000 people to Prime Minister Rowling, Maori Affairs Minister Matiu Rata and other parliamentarians. One of the aims of the march was to obtain a guarantee that “not one more acre” of Maori land would be alienated. The Government made no specific promises... but... [a] tribunal was set up to hear Maori grievances against contraventions of the provisions of the Treaty of Waitangi...

The Government is on the brink of settling its largest-ever deal with Maori... Negotiations to settle the Ngai Tahu claim have intensified over the past 10 weeks... Both parties are reluctant to comment... because negotiations are at a sensitive stage... but the Government is keen to get the deal signed and sealed... [A] major stumbling block is the Crown's attempt to extinguish Ngai Tahu's customary fishing rights as part of the package.

...THE heads of agreement signed with Ngai Tahu yesterday is a non-binding deal. It will now go before the tribe's governing body... in the next two weeks. If it approves, the deal will be voted on by the Ngai Tahu beneficiaries. Its \$170 million value is mainly in assets and the only cash will be interest accrued until the deal is finally signed in Parliament. More negotiations will be needed to finalise just what Ngai Tahu will receive. It involves 1.38 million hectares of land, about a 10th of the land the tribe originally sold to the Government... Ngai Tahu can select properties to the total market value of no more than \$200 million, less the value of other properties transferred to the tribe under the deed of settlement. That means Ngai Tahu can... spend... \$30 million of non-settlement money... Apart from two surplus Telecom sites with memorials on them, no private land is being returned... Aside from three pastoral leases, purchased by the Government three years ago, no high country property is affected... Apart from Crown Titi Islands, only 630ha of... five million hectares of conservation estate is being returned... Conservation land affected will still be free and open to the public... Negotiations will continue about the tribe's relationship with its sacred mountain, Mt Cook. The settlement ends some 150 years of grievances with the Crown and five years of negotiation... The grievances arose from 10 land purchases by the Crown between 1844 and 1864, which covered most of the South Island. The Crown acquired some 15 million hectares for £14,750. The Crown also failed to honour part of the deal by not providing promised schools and hospitals, which had been an inducement in several of the purchases. As a result of the original deals, Ngai Tahu was reduced from owning about half of the N[Z] land mass to barely 15,000ha... THE NGAI TAHU agreement brings the amount committed to settling Maori claims to more than half a billion dollars in the past four years... A total of 618 claims have been registered with the Waitangi Tribunal, 70 of those within the past year... [L]ast year... the... Treaty Negotiations Minister... proposed a fiscal envelope, with a... limit of \$1 billion, to settle all outstanding grievances. But the plan stalled in the face of determined opposition from Maori at a series of meetings on marae around the country. But the Tainui claim was settled soon afterwards for a then-record \$170 million, which could increase by a further \$70 million after caveats to the deal are finalised. Last Tuesday, a \$40 million settlement was reached with the Whakatohea tribe over a claim relating to the confiscation of about 70,000ha of land from 1865. The deal involves the iwi becoming owners of the Opotiki police station and four police properties, courthouse and a local quarry.

...after negotiating for more than five years... the... Government and Ngai Tahu have... settle[d] the South Island tribe's Treaty of Waitangi claim for \$170 million in land and cash... The Government has also agreed to change 78 place names to provide for joint Maori and English names. Among them is Mt Cook, which will also be called Mt Aoraki. The... Minister for Treaty Negotiations... was particularly pleased the settlement preserved and enhanced public access rights and did away with the anxieties of private land owners.

...Northland farmers locked in a bitter valuation dispute with the Government have been told to keep quiet while their lawyer attempts to negotiate a satisfactory settlement. But the Northland division of Federated Farmers... has called for a retired judge to be appointed to mediate... on Waitangi Tribunal recommendations that part of their properties should be returned under a Te Roroa Maori land claim. - 1996

A search by a Northland... subtribe... for a... fabled 137-year-old treaty... is proving a mystery. The... Ngati Whata... hapu... believes the treaty... was signed between it and Governor Thomas Gore Browne on the back of a sheepskin in 1860, creating a direct link to the Crown. But it says the treaty was dishonoured when Queen Victoria ignored petitions by the hapu asking that it be exempted from policies disadvantageous to Maori. The hapu is now seeking compensation from the Crown through a 20,000ha land claim. It is also eager to locate the sheepskin – but continues to draw a blank... The treaty was kept at Arapaoa Marae, 20km south-west of Maungaturoto, along with a Union Jack and a Queen Victoria bust[, until a]... politician, Puraire Paikeu... kept the treaty early this century. According to some rumours, he passed the sheepskin to the Ratana Church near Wanganui just before he died in 1943. The... treaty may have been buried in a vault under the church building for safe-keeping. The church was rebuilt in the late 1970s, and people can remember seeing a sheepskin taken out along with other documents. “The problem is that the treasures were reburied under 16 tonnes of concrete when the new building went up.” The treaty may also have been lost when a boat – no longer identifiable – carrying items belonging to politicians sank on a journey between Auckland and Wellington. “There is also hope that it is being kept in the National Archives in Wellington or in some government vault,”... said a Te Uri o Hau spokesman...

In 1840... the Te Uri O Hau people... controlled almost 500,000 acres of resource-rich land in northern Kaipara and were poised to reap the benefits of the new Pakeha world of trade. Today they own a fraction of that area, and in many instances their rights as landowners are little more than nominal. The land was wrested from them in an insidious, incremental process... [As a result,] Te Uri O Hau... have suffered serious social and economic deprivation. It is notable that they have always remained loyal to their treaty partner – in contrast to the Crown, which has failed to honour its side... Compared with some Waitangi Tribunal claims, the submissions of the... [Te Uri O Hau], to be heard this week, are modest.

...THE Waitangi Tribunal's first report on the Muriwhenua treaty action – Northland's biggest land claim – is likely to have... significant ramifications for future claims. It will be particularly significant for other northern tribes... The report is understood to back arguments that much

of the land under question was leased and not sold to the Crown. Muriwhenua tribes will meet in Kaitia on Wednesday to hear the Tribunal's report on the land claim. The state-owned – but Japanese-leased – Te Aupouri Forest, 90 Mile Beach, DoC-owned Maungataniwha Forest and Tepaki Farm Park are some of the most significant pieces of land in the claim... If the tribunal agreed with claimants on this issue – which focused on the concept of *tuku whenua* (most closely translated as leasing or allocating) – a major precedent would be established... Other inquiries addressed by the tribunal so far have not used the same argument. Tainui's \$170 million claim... was based primarily on issues of *raupatu* (confiscation). The Ngai Tahu claim, still in the process of being settled, was largely based on the Crown's failure to set aside reserves... [I]n the case of the Muriwhenua tribes, however, land loss had occurred mainly through what the Crown argued were sales. Muriwhenua tribes had lost the vast majority of their land much earlier than other iwi around the country – 75% of it lost by 1865. The tribes had presented evidence showing that “sale” documents, written in Maori and normally by missionaries, referred to the arrangements as ones of *tuku whenua*... The argument had been hotly contested by the Crown, “which claimed tribes had willingly and knowingly sold their lands... Given that all the transactions were conducted in Maori, however, the Crown has had a very hard time proving this.” ...the weight of evidence lodged meant it would be hard for the tribunal not to find in the tribe's favour on this matter. Such a decision would “bring into question the whole nature of land transactions last century, when a good 50% to 60% of land (nationwide) went. This is why the Crown has vehemently opposed it from the word go.” ...A favourable decision would enable the re-establishment of the economic base that had been taken away at a very early date from the Muriwhenua people... [thereby allowing them to once again] become contributors to the Northland economy – a right long denied them... [A] Waitangi Tribunal director... said he couldn't pre-empt the release of the report, the subject of hearings since 1990, but said the different concepts of land transactions meant the tribes “were trapped by a paradigm they knew nothing about.”

...academic specialists... in the fields of linguistics, Maori studies and anthropology... who appeared before the... Waitangi Tribunal... [during] the Muriwhenua Land Report... gave evidence which demonstrated quite clearly that the land transactions conducted between 1830 and 1865 were conducted according to Maori custom law. Maori studies... noted that throughout N[Z] and Polynesia (and possibly well beyond that), the practice of transferring use rights for particular areas of land to non-tribal members is well known and at least many centuries old. The main aim of the transaction was to bind outsiders to the tribe's social structure for the period that they were resident there and to hence be assured of them contributing their knowledge, skills and support to the overall well-being of the tribe. It was also well understood that the land would ultimately return to the tribe... The... evidence also showed that the Maori who participated in the land transactions with Europeans were doing so, not surprisingly, within the context of their own language and culture. The values and assumptions which underpinned that culture at that time made no allowance for land being treated as a commodity which could be bought and sold. Rather the land was viewed as an integral and inseparable part of the tribe's... existence... [Hence,] no tribe could willingly and knowingly sever all its ties to its lands through the transactions it carried out with Europeans. For in terms of the custom law, this could only be done through battle and driving the tribe off their lands permanently.

...the Hawkes Bay claim of Ngati Pahauwera showed that lands bought from the tribe in the 1860s wrongly included 466ha... which local Maori had wished to retain. When a... chief pointed out the error at the time... officials investigated and concluded that a mistake had been made. This was never publicly acknowledged, and the land simply remained in crown ownership until it was sold to a European settler.

...Opponents of one of the largest Treaty of Waitangi claims are warning the negotiation team that it could face legal and “political” action if the deal is advanced at a meeting in Ootiki today... Whakatohea, was on the verge of settling its claim, but some beneficiaries unhappy with the... \$40 million... deal have slowed the process down... A... Whakatohea... spokesman... said... the negotiating committee... had gone beyond its mandate... and... the negotiators should cease all contact with the Crown... until the Government made a decent offer to settle the claim... “The deed of settlement... is a global offer that... proposes to settle all Whakatohea claims prior to September 21, 1992...” At risk if the deal is accepted is the separate claim by the Mokomoko whanau, whose ancestor was pardoned of murder 126 years after he was hanged. As punishment for the crime he did not commit, the Government confiscated 70,000ha. The Mokomoko whanau... finds it hard to understand how the committee can negotiate on its behalf... The latest argument is part of a long and at times bitter row. To date, the negotiations have cost nearly \$890,000.

...Lack of money is complicating the delicate consultation process with tribes following the Muriwhenua Land Report. Explaining what the Waitangi Tribunal report meant to claimant tribes in the Far North was a huge job... The cost... was mounting and funds were quickly running out. “If we don't get help soon we will be broke...,”... a Ngati Kahu spokeswoman... said. Division among the five claimants... makes it unlikely they can put up a united front to settle the \$500 million-plus claim. A Ngati Kuri spokesman... said that before any settlement could be made tribal boundaries had to be determined so each tribe knew what crown assets were in its area.

...Opposing factions in the huge Muriwhenua land claim are set to patch up their differences after a breakthrough in the long-running grievance. The claimants, split over who should represent the Muriwhenua people in negotiations with the Government, have agreed to a mediation process...

Muriwhenua iwi... say they need more than \$1 million to properly assess, then negotiate, the Crown's offer to settle their huge claim... [Ironically, rent on the Te Aupouri Forest] land of just under \$300,000 a year... which... is paid to the Crown Forest Rental Trust[(CFRT), has accrued to]... just over \$2 million... Cutting rights to the... forest were sold to[a] Japanese firm... for \$42 million in 1990. The deal covers two rotations of tree growth... Muriwhenua could be entitled to compensation for the value of the land, the accrued rent, further rental and up to 90% of the value of the money the cutting rights were sold for.

...Eight claimants awaiting decisions on Treaty of Waitangi issues are getting a \$20,000... payment from the C[FRT]. A number of claimants are living on borrowed money or mortgaging and selling land bequeathed by their ancestors in order to keep their claims alive, the trust says.

...The... C[FRT]... is to be reviewed. Terms of reference for scrutiny of the... trust... – which... handed out \$26 m... during the past 10 years – have been released by the Deputy P[M]... and the Minister of Finance... The review was part of the coalition agreement... [But the] Act leader... said... “When... the trust... [was established] the thinking was it would have a life of five years... 10 years on and not one forestry claim has been settled.” ...The tax uncertainty faced by the trust is also under review. Earlier this year an \$11 m... tax bill from the Inland Revenue was handed to the trust, after an earlier decision exempting the trust from tax. The trust was set up after the Maori Council and the federation of Maori authorities successfully challenged the Government's intended sale of 90 state forests in 1988. They negotiated an agreement whereby the Crown could sell the trees, but not the land. The land was put in trust and rentals used to assist... Treaty... claimants to prepare claims involving crown forestry...

An \$11 m... tax bill from I[RD] could change the face of Treaty... settlements, says the... C[FRT] chairman. Future... treaty negotiations may have to include a clause in the settlement to cover tax bills... [His comments came] as the signing of the Waitutu Settlement Act was[being] celebrated...

Years of controversy were absorbed by tranquil podocarp forest in western Southland yesterday... [when] the Minister of Conservation... formally presented the act to representatives of the Waitutu Maori Land Incorporation... [He] said the deal was unique because the forest would remain privately owned, by the incorporation, but be managed as part of Fiordland National Park. “This ends... 21 years of negotiations... The ancient, virgin lowland forest is of international significance and is home to N[Z]'s most dense rimu forest. It would have been a national tragedy for it to be logged.” ...Last year the Government agreed to pay the incorporation... about \$13 million cash... to manage the Maori-owned 2171ha forest... and [give them] cutting rights to 11,600ha of cutover beech... The incorporation chairman... said the settlement was a distant destiny finally reached... [They] had been unable to do anything with their land for 91 years.

...[‘a group of Maori landowners is threatening to log prime rimu in the middle of the 2300ha Waitutu Forest signed over to the DoC for \$13.5 million in cash. The 16 freehold owners of the 135ha block say they've been left out of the deal, despite having asked the Government for compensation.’

Meanwhile, a] tribe from the West Coast of the North Island has become the first Maori incorporation to buy out the Government's interest in a Maori lease forest. The deal involves... a 1000ha radiata pine forest... Tainui Kawhai will pay the Government \$9 million... [with help from a forestry company, which is gaining] in return... rights to the first harvest of trees... The novel arrangement is seen as a precedent for Maori interests... Several forestry companies had looked at the possibility of putting together the deal. They are now looking at how the Crown can be bought out of... the other 19 Maori-Crown leasehold forests around the country... involving a further 52,500ha... [In related news, t]he Waikato Raupatu Lands Trust has posted a \$9.8 million profit two years after Tainui... settled their \$170 million Treaty of Waikato land claim. The trust, administered by the Tainui Maori Trust Board, was established to receive, hold and manage assets returned to the tribe and to determine distribution of assets.

...Waikato Tainui people saw some of the benefits of their Treaty of Waitangi land claim settlement yesterday when educational grants and marae dividends worth more than \$2 million were handed out... double that of last year's payout... The grants were announced during celebrations to mark the 31st anniversary of the crowning of the Maori Queen... The chairman of the Tainui Maori Trust Board... said the money was going to ordinary, everyday people who were able to see tangible evidence of the settlement.

...□ PRESENTED: By the Tainui Maori Trust Board to celebrate its 50th birthday, a \$230,000 Mercedes-Benz S500 to the Maori Queen... □ [PRE-EMP]TED: ...Waitangi Tribunal hearings will continue despite a \$400,000 budget blowout... The Department for Courts said... the... blowout... resulted in tribunal officials being asked to find ways of saving money before the June 30 end of the financial year... [T]ribunal officials had "pre-empted" the process by sending out letters last week advising that hearings would have to be deferred... from April 24 until July 1... [T]he tribunal had resorted to deferring hearings because of Government underfunding, despite the coalition agreement promise to give it adequate resources... The Department for Courts said the tribunal's budget overrun would be absorbed through other savings in the department... In Parliament, the Minister of Justice... would not say how much extra funding the Government was proposing for the tribunal in this year's budget.

...[a] former Speaker and Labour MP... has attacked the return of Maori to tribalism, calling it his greatest disappointment in Parliament... "The old tribal boundaries are now of historic interest only. We need a new sense of nationalism if we are to deal with... the major problems of our time – employment, education and health..." H[owever, h]e said a large number of Maori were now funded in one way or another by tribal organisations, and they could not be expected to relinquish that willingly. "Any compensation payments under the Treaty of Waitangi will remain for some time a strong incentive to tribalism." Tribes that had received large compensation payments appeared to be doing well, [he]... said. "But I fear that a lack of business expertise, together with an inherent Maori nepotism, will bring growing dissension." He... had no doubt that regional Maori bodies were inevitable, "but without some governmental leadership they will take much longer to come out."

...a[n a]rticle... mentioned... that iwi organisations are from a bygone era and have no role in modern society... Our... [response is that w]hat makes Maori unique in [NZ] is not their skin colour but their tribal identity. If iwi identity is removed from Maori then, by definition, they[just] become... brown N[Z]ers – devoid of history... Through identification with... iwi M[a]ori... become part of a much larger family and feel greatly enriched by access to a heritage which has been denied them. Central to this sense of heritage and cultural well-being is descent from common ancestors. At its basic level, that is what an iwi or tribal organisation is about... The cultural aspect of iwi identity is an essential foundation for political and economic development... Iwi organisations have a responsibility to their... members. They have to prove that they are capable of delivering benefits to them. But there is only so much benefit that will be distributed to Maori through treaty settlements. Tribal organisations must also be given a fair chance to show what they can do. It must be remembered that[most] tribes don't as yet have the assets under their control.

...U[rban] Maori leaders yesterday threw down a challenge to their traditional leadership to ignore the cities at their peril... Central to the urban-tribal debate is how resources from... Treaty... settlements will be divided up... A[n A]uckland University education lecturer... said the Government was pouring money into the tribes when 85% of Maori lived in cities... Maori had spent \$11 m... in four years fighting over treaty settlements...

[The '24 Waitangi Treaty Fisheries commissioners have been paid \$11m in fees since 1990 (the former chairman received over \$2m), and 'the Waitangi Treaty Tribunal has been taking so long to hear cases that 5 tribunal members have died before reporting on their cases (another 6 are still involved in hearings years after their official warrants expired'). 'A member of the tribunal believes it's getting out of hand, "with an awful lot of thoroughly undeserving people making lots of money"' ('500 people have careers vested in the process – it isn't in their best interests for the process to move quickly').]

...The Associate Treasurer... has laid into lawyers with a stinging attack on their ethics and greed at the expense of Maori... Some tribes... were paying lawyers over \$1 million for advice for Treaty of Waitangi claims and "to date are no further down the road than when they started. The law fraternity have benefited enormously from treaty claims and Maori have seen precious little." [He]... has described lawyers, including some Maori lawyers, as "legal parasites who have been able to sponge up the potential benefits Maori may have been able to get..." The former Treaty of Waitangi claim negotiator said he knew of one lawyer who was charging for 36 hours a day. "When I went to school I was taught there were 24 hours in a day... The bulk of them haven't been worth a single dollar. They have ridden on the back of... ignorance by many Maori claimants of the process and at times misrepresented their own ability. They take their money and run and don't achieve anything. Most of the tribes who have made progress have done it notwithstanding the inadequacy of some of the legal representation." However, [he] said not all lawyers involved in treaty claims were parasites, saying some did "very good work for very fair fees." [He] also laid part of the blame for costly legal bills at the hands of Government. "Treaty settlement claims are not a matter of the law but what the Government is willing to do." He said that when he was negotiating the Whakatohea claim last year, his tribe... "...expended much more than we really needed to because of the attitude of the crown officials doing their absolute damndest to try and deny Whakatohea any sort of settlement redress whatsoever."

...Lawyers have fought back at allegations they were parasites... The... Auckland District Law Society... had the power to revise lawyers' bills if clients considered them excessive... A former Minister of Maori Affairs... said... "Most claimants have little money, and lawyers realise they must win before they get paid. Many wait months or years for their bills to be paid." ...Several prominent lawyers who had worked for treaty claim clients but did not wish to be named told... [that] they had put in hours of work free... Another said the problem was exacerbated by the Crown's demand for "an incredibly high standard of proof... more than what you would be seeking in terms of gaining a criminal conviction." ...[Incidentally, the] Ngati Awa tribe wants the Government to stop defence staff... using sacred rocks – part of a Treaty of Waitangi claim – for target practice.

...it is not the first time the Navy has upset people over its choice of target range. Last year environmentalists and Aborigines were angry over target practice by HMNZS Canterbury on an area south of Sydney that was listed on the Register of the A[US]n National Estate for its natural and cultural value... During the controversy... a spokeswoman for the A[US]n Conservation Foundation said she was sure N[Z] would not be stupid enough to use a Maori sacred area for a weapons range.

...Navy frigates and Air Force bombers have been ordered to hold their fire against rocks held sacred by... Ngati Awa[, whose]... customary title to the... Volkner Rocks (Paepae-Aotea)... was confirmed this week by the Maori Land Court after 36 years of military use... Pressure is also mounting to stop N[Z] forces bombarding a peninsula south of Sydney...

The A[US]n Government has agreed to stop bombing certain sites... [on] the Beecroft Peninsula... but... the A[US]n Conservation Foundation... said the entire peninsula was sacred to Aborigines. It was the birthplace of 13 south-coast tribes and had been under a land claim since 1988.

...Wairarapa Maori will lodge a Treaty of Waitangi claim to the foreshore of much of the North Island's southeast coast. The claim will include parts of the 50,000ha Glenburn Station, which will be auctioned today.

...‘No entry’ beach causes row... Kerikeri residents are rallying to reopen private access to a popular beach... [after] an electronic metal gate... installed at the start of the 2km private road access... was locked for the first time last Tuesday... The Maori incorporation which owns the land to the high-water mark at Tapuaetahi beach, about 15km north of Kerikeri, this year agreed to restrict access following complaints by leaseholders of having to clean up after... daytrippers... [due to] the lack of public facilities... [at] the beach, which is known for its safe swimming and good fishing... About 670 residents have signed a petition... The petition organiser... said people... who had used the beach since they were children... were “starting to spin out” about the beach closure as summer approached.

...History is repeating itself in an iwi push to reclaim... beaches... They call themselves Te Tau Ihu o Te Waka a Maui, meaning the tribes of the prow of the canoe of Maui. And they want their beaches back. According to a... Judge... they may have a chance. Eight iwi from the Marlborough Sounds joined forces... driven by a July 1996 decision by the Minister of Conservation to put a moratorium on marine-farm applications and introduce a coastal tendering system. [The eight] iwi decided that the Government could not privatise what it did not own. Granting Maori title to the foreshore and the seabed is certainly not new. It happened first in 1870 when the Maori Land Court, then just five years old, granted Maori title to significant areas of the Thames mudflats. The court recognised then that those areas provided Maori with their largest source of animal protein and that if any area was capable of being customary land... it was the foreshore and seabeds. Maori argue that when coastal land was sold – or confiscated – it did not include the foreshore unless clearly stated. The Crown strenuously argues this is simply not so. After the Harbours Act was passed in 1878, the Maori Land Court was forbidden to consider ownership of foreshore. That changed when the act was repealed in 1991.

...Public ownership of some beaches and seabeds could be thrown into question by an interim decision of the Maori Land Court setting out the criteria under which Maori can claim customary title... The interim decision confirms there has been no general extinguishment of Maori customary title to the foreshore. It continues to exist unless the sale of the adjoining land was done through the Maori Land Court... or the foreshore was expressly included in the sale, or the rights have since been extinguished by a specific statute. Once those criteria have been satisfied the local Maori still have to prove that title can be claimed in accordance with their own tribal tradition... The decision has no immediate effects. But the case is bound to cause debate within the coalition – particularly with the Maori MPs, who successfully argued for the Crown to keep out of the controversial trout-fishing decision... The Attorney-General... said that even if Maori proved ownership to beaches, “there are a lot of obligations that go with owning things... Parliament would have to decide what was the appropriate thing to do in the interests of all N[Z]ers.”

...[a] Rotorua lawyer... said even if Maori were successful in their claim for beaches and seabeds... there would be no need for panic... The interim decision by the Maori Land Court giving the go-ahead for Maori to claim customary title... could mean only a change of landlord... “What you would... be looking at is... money... would go to Maori... instead of... the Government...,”... Ngati Toa is looking at challenging Port of Wellington’s rights to the harbour. Port Marlborough Ltd and the Marine Fishing Association were cautious in their reaction to the interim decision.

...An official stamp of authenticity may be introduced to prevent cultural rip-offs. The Rotorua-based Aotearoa Maori Tourism Federation is developing an accreditation system... The aim is to stop imitations of Maori culture being passed off to tourists as the real thing, whether they be souvenirs, tour commentaries or cultural shows... such as the haka...

Conservation groups and businesses using native plants are nervous about a wide-ranging claim... from six tribes... before the Waitangi Tribunal seeking... “the protection, control, conservation, management, treatment, propagation, sale, dispersal, utilisation, and restriction on the use of and transmission of the knowledge of N[Z] indigenous flora and fauna and the genetic resource contained therein.” Specific claims are made over kumara, pohutukawa... tuatara, and kereru (native pigeon), as well as indigenous export timbers of various species. The claimants appear to be challenging laws and regulations protecting species and areas, including scientific and other reserves, and protected species legislation... They fear that traditional remedies accessible through their knowledge of the environment could be commercially exploited by overseas companies under international agreements... The Forest and Bird conservation director... said it was hard to get a grip on just how far-reaching the claim... lodged... in 1991... was. “We don’t see property rights existing in indigenous plants and animals.” [In another development, ‘Maori may soon be able to charge anglers and hydro-electric power stations for using the country’s rivers.’]

...Maori tribes are considering ways to take a controlling stake in the country’s rivers and streams so they can manage fisheries and prevent water pollution. If successful, the move could have major implications for agriculture and industries that pollute waterways, but it is expected to have less impact on recreational anglers. A working party of Maori has given its recommendations to the tribes after considering a paper... written last year by the Treaty of Waitangi Fisheries Commission... [that] said the management of freshwater fisheries was ripe for change, and Maori should be at the forefront... One of the key issues was how Maori would manage waterways without costly duplication. Waterways are currently administered by the D[OC], while the Fish and Game Council administers laws relating to fishing permits and how much anglers can catch...

The Tainui tribe, claimants to the Waikato River, want power station owners to pay resource rentals for using the water... Rentals would be based on the output of the stations... Nine hydro stations with a total capacity of 851mW are fuelled by the Waikato and the 1000mW gas and coal station, Huntly, uses the river water for cooling. At present, all are owned by the Electricity Corporation... If the Waitangi Tribunal accepts the claim and the Government agrees, it will set a precedent that would interest other tribes with claims on waterways. The introduction of resource rentals nationally would potentially add \$1 billion a year to the cost of electricity generation... The tribe with the most to gain from such rental... has not decided whether it wants them... Ngai Tahu was close to settling its land claim... but water was another issue.

...The Minister for Treaty Negotiations... laid it on the line to Pakeha N[Z]ers yesterday that it was time to accept there would be one law for them and another for Maori. The minister made the comment while revealing that exclusive riverside and lake campsites being negotiated with Ngai Tahu are expected to extend to... settlements with other tribes.

...Ngai Tahu will soon get \$170m from the Crown as a “full and final” pay-off for their multi-billion-dollar loss. Where, ask the critics, is the justice in that? “When you settle for 2% or 3% of what you lost,” says [a] claimant lawyer... “you can’t also say ‘This is full and final and there will be no comeback’. That seems to me to be a perversion of justice.” The Waitangi Tribunal appears to agree... “Maori should not be required to sign a full and final release for compensation...” Previous “full and final” treaty settlements have often turned out to be neither. A later generation has found them wanting, and replaced them... [I]n 1944... the Labour Government... passed a law giving £5000 a year to [a group of] Taranaki tribes for its claim... In 1946... it... signed a £6000-a-year “full and final settlement” with Tainui. In the same year, it imposed a settlement of the Ngai Tahu claim with an annual grant of £10,000 for the next 30 years... The deals in the 1940s made no allowance for inflation. In 1977, the Taranaki payment was increased... to \$15,000 a year. But economists said a proper inflation adjustment would have put it at nearly \$57,000... Maori leaders are asking why today’s deals should prove any different... By signing up to far bigger deals today, the Crown acknowledges the early deals were inadequate. But [the] Treaty Negotiations Minister... says *his* deals are fair, full and final... [● About] 12,000 voting papers on whether to accept... [the] settlement offer are expected to be delivered to Ngai Tahu tribal members next week.

...Ngai Tahu will receive a non-refundable \$10 million crown advance this month if its leaders accept the Government’s \$170 million offer and the deed of settlement is signed. This follows the Crown’s \$10 million goodwill advance in June 1996, when negotiations resumed after breaking down for two years. The \$20 million advance would be taken off the \$170 million total once the settlement legislation is passed... Tribal beneficiaries have until Monday to vote on whether to accept the deal.

...Ngai Tahu’s \$170m... deal... is in doubt after factions within the [‘31,000-member (12,000 of whom are of voting age’)]tribe confirmed... they will seek a High Court injunction to stop the offer being accepted. [16] of the tribe’s 18 runanga voted to accept the deal at a meeting... yesterday,

but... [two] groups... believe their interests are not served well enough. However, [the]chairman of Te Runanga o Ngai Tahu... said the injunction would be contested... Just over half the... Ngai Tahu beneficiaries registered with the tribe voted and 93.8% of those 5735 people voted to accept the offer.

...Don't blame me if Ngai Tahu were ripped off when they sold their land to the Crown 150 years ago... A staggering feature was that Ngai Tahu signed away their land, nearly half the area of N[Z], without reading the fine print. Now it is Pakeha who are not reading the fine print. A settlement proposal worked out by Crown and Ngai Tahu negotiators was announced on September 23, but... [y]ou cannot buy a copy in Auckland; the Auckland Public Library has still not ordered one; almost no letters have been written to the *Herald* on the subject. I eventually read a copy on the Internet. Meanwhile, Ngai Tahu people polled on the subject have given it 94[%] support and their governing body... voted last Saturday to accept it. A signing ceremony is planned for Friday. The good thing about the proposal is that it is intended to be final. Legislation would be passed to make sure these issues could not be raised in court again. The bad thing about it is the sell-out of legitimate concerns of Pakeha and other Maori, who also lose out... Ngai Tahu have scored a magnificent settlement package that goes beyond that achieved by Tainui, forging new ground in conservation and mineral rights... It breaks a Government promise that it would not give away conservation land in such settlements... It is proposed to get Parliament to rubberstamp the deal without public discussion – a deal that would entrench the view that Maori can do no wrong, Pakeha can do no right, and the Crown apologetically grovels.

...The Treaty Negotiations Minister... gets sick of the treaty business... [He] has spent seven years... on the claims – and... there is no obvious end in sight. Maori leaders, some of them treaty claimants, also suffer from Waitangi fatigue. "Some... claims are ridiculous," says... [the man] who won \$170 million for his Tainui people... "I don't blame pakeha for being hosed off. We... feel embarrassed." ...Five maps in a downtown Wellington office give a deliriously graphic picture of the problem... 670 claims have been registered... The whole country, in fact, is under claim, and many areas under more than one... Claim boundary lines throw a scrambled skein across the land, and small circles with claim numbers cluster over mountains, lakes, cities and farms: A crazy quilt littered with doubloons. There is no claim number 666. "We thought it was probably not appropriate to issue that number," says [the]Waitangi Tribunal director... The claim process is now, surprisingly, nearly 22 years old. [The]Maori Affairs Minister in the third Labour government, set up the tribunal... In those days it had little punch. It could only examine contemporary claims... breaches which occurred after October 10, 1975. In 1985, another Labour government opened the floodgates: It gave the tribunal the power to investigate claims dating back to 1840... The... tribunal... has[to date] dealt with about 100... claims... Will it ever end? [The director] says it will, in about five years.

...Maori Treaty of Waitangi claimants have sent a strong message to [the P]M... that the Minister of Treaty Negotiations... should not be touched in a cabinet reshuffle... "[The current minister] is vital to treaty negotiations. We have absolute confidence in him. He is a real person and does not play silly games,"... [t]he Whakatohea claims manager... said... The Ngai Tahu chief negotiator... said he could not see [the PM removing the minister]... "First off, I don't think anyone wants the job, and secondly no one else can do it. [The current minister] has an understanding command of the issues and it is imperative he stay there." ...Ngai Tahu completed its \$170 million claim when it signed the deed of settlement yesterday.

...The... 1800-page... Ngai Tahu settlement... includes... a full apology from the Crown... and... the return of the pounamu (greenstone) resource to the tribe... [currently situated on] 930ha of... D[oC] estate... but it is likely to be used for cultural rather than commercial purposes in future... In the past, the Crown has been adamant that no conservation land would be used to settle any treaty claims... [The settlement also includes some C]rown reserve land being set aside for the exclusive camping rights of the southern iwi on certain days of the year... The exact days, thought to be about 200, will be set out in the legislation that will enact the agreement the... tribe reached with the Crown last year... [The] Minister for Treaty Negotiations... said last night that some groups were concerned by the developments "but I do not think there is much merit in their concerns." ...also created[are] "topuni" reserves. They acknowledge the special significance of a site to Ngai Tahu but do not affect the public's access to it, such as Mt Aoraki... [Furthermore,] Ngai Tahu will have first right of refusal for Crown shares in Christchurch, Milford, Dunedin and Invercargill airports... Ngai Tahu earned \$9.2 million this financial year on interest from its \$170 million settlement. The interest will go to the tribe but will not be paid until the deed of settlement is passed in legislation. The... Whakatohea... settlement worth \$40 million... has earned \$1.2 million in interest... But again, that will not be paid unless the settlement is sanctioned by law... Waikato-Tainui was paid \$11.5 million in interest on the outstanding balance of its \$173 million settlement, which has been sanctioned.

...Maori need to move out of an inter-generational "siege warfare" mindset if they are to take full advantage of Treaty of Waitangi settlements, says the Ngai Tahu negotiator... Labelling himself an "unrepentant corporatist," [the negotiator] said some Maori had to get over their contempt for big business. Ngai Tahu, and other tribes, needed to plan for continuous growth of their assets and it was important they did not simply become "a privatised Department of Social Welfare." ...tribes which settled treaty grievance claims with the Crown faced fresh challenges when it came to managing their wealth... One option being considered by Ngai Tahu was the establishment of a bond market so tribal members could swap iwi shares for cash among themselves... [The negotiator] was speaking to 150 Maori leaders, academics, politicians and officials at a conference organised by the Waikato University's School of Maori and Pacific Development yesterday.

...The Hauraki Maori... will... today... present the Waitangi Tribunal with 20,000 pages of evidence gathered over four years... A feature of the claim, thought to be worth about \$170 million, is a bid for the return of natural resources, including the... gold and silver mineral... rights, and geothermal resources such as hot springs... Hauraki Maori... were taking a leaf out of the Ngai Tahu settlement, where... greenstone licences continue until expiry but royalties are paid to Ngai Tahu.

...A High Court case over land near Taupo that is subject to a Treaty of Waitangi claim will play a key part in determining whether the Government can privatise... the \$500 million of assets it has tied up in... Landcorp. More significantly, it will resolve the issue of whether state-owned enterprises... can sell land even though it might be involved in a treaty claim... In its latest financial year Landcorp's operating profit before interest and tax of \$6.2 million represented... [an] anaemic return on... average total assets of just 1.2[%]... Landcorp has nearly 120 farms spread the length of the country... At present 53 of the 54 farms Landcorp owns in the South Island are subject to Ngai Tahu claims... But under the deferred settlement process it will be 15 to 18 months before it knows if Ngai Tahu will buy any of them.

...The Maori Land Court ruled this year that the Wairoa District Council should return some land to its original owners because it had not been turned into the road for which it was taken... It is the first time an order has been made to return "private" land to Maori[, making the]... matter... an important jurisdictional issue... [The] decision is being appealed... [in] the High Court... by... the... Council... the Crown Law Office... and... Local Government N[Z], whose policy analyst... said local authorities were taking the matter seriously. If the powers of the [Maori Land C]ourt were interpreted widely, sizeable chunks of... land... taken by, or given to, the Crown for facilities which it then didn't build – such as schools, roads and hospitals – would be subject to the law, as would land no longer being used for the original purpose... [Previously, only] Crown land subject to memorials... [could] be ordered back to Maori claimants and only by the Waitangi Tribunal – an as yet unused power feared by the Government because it upsets its ability to control settlements... The... Maori Land Court register... said... the court had a number of similar cases pending.

...A LONG-OVERDUE revamp of the Maori Land Court will see urban Maori reunited with land... More than a quarter of a billion dollars of Maori land now lies unmanaged because tens of thousands of Maori are unaware of, or have faced major barriers trying to prove, their titles to it... [M]any... owners registered on titles are... also... deceased and... people didn't realise they had inherited titles... Much of the problem lies with the...

court's antiquated record-keeping system... A \$6 million national database of those records... is... in the process of being established... which will eventually result in 12 million pages of records being imaged electronically... The land is contained in some 25,000 titles with an average size of 59ha. Almost all of it is under multiple ownership... There is an average of 81 owners per title, but some titles had thousands of owners or potentially owners... Maori freehold land titles, comprise about 1,515,017ha or 5.6% of land in N[Z]... Currently about 20% of that land is under no form of management and is covered in bush or gorse. While some of it is unusable, much of it is believed to have forestry or farming potential.

...Maori landowners look likely to pay lower rates than other N[Z]ers after a landmark decision by the Court of Appeal. The court ruled that multiple-owned Maori land should be valued differently, and commentators say the decision will have a huge impact... Many councils will have to go back to the drawing-board in setting rates once Valuation N[Z] amends its assessments... [VNZ] has been ordered by the court to revalue the land on a case-by-case basis... Other landowners, including Maori with individual title to their land, would have to pay the extra money the [councils] lost... The national president of Federated Farmers... said it was unfair for people to pay different rates depending on the ownership of the property... A Rotorua accountant and Maori trustee... said the decision was good and bad news for Maori landowners. "Obviously... their rates could be cheaper[, but]... if they lease their land out they cannot justify charging market rents..." ...Maori Land Court figures show the total assessed value of the land... [under] Maori... control is \$40.259 million... Because of the structure of Maori ownership, the land was worth less than land owned under the European Torrens system... Maori owners could not sell their land and often were unable to borrow money from the bank because payment could not be enforced with a mortgage sale.

...Act's sole Maori MP... is voting for a controversial Maori land bill her Act colleagues have promised to fight to the bitter end. [The Maori MP] has permission to buck the party line on the Maori Reserved Land Amendment Bill, which will end perpetual leasehold titles on Maori reserved land in return for \$56 million in compensation. Th[e Maori MP]... said she parted company with her colleagues' view that the bill broke a promise by the Crown under which the Maori settlement process would not affect private property rights. She said the bill had nothing to do with the Treaty of Waitangi but was a matter of restoring natural justice for Maori landowners. She also disagreed with the view of Act's justice spokeswoman... that the bill prevented lessees suing the Government for any compensation. "If the lessees are able to sue the Crown for compensation, then Maori will be able to sue the Crown for compensation and that is something which has been prevented by legislation for many years..." The bill affects large numbers of Taranaki farmers, some areas in the South Island and Athletic Park in Wellington, and would move the land from perpetual lease arrangements to market rentals and more regular rent reviews. The bill was reported back to Parliament this week by the justice and law reform select committee with a recommendation that compensation terms be pushed out from 21 to 50 years – \$21 million for the Maori landowners and \$35 million to lessees. It is due to be debated again next week.

...Maori owners of leased land were losing between \$5 million and \$7 million a year because of the 21-year "oppressive" rent regime on their land, the Maori Affairs Minister... said yesterday... [while] defending... the Maori Reserved Land Amendment Bill... Later, the minister said changes to the original bill meant that tax-free compensation to lessors and lessees had increased... to \$66 million and would be paid out within three months of the implementation date of the legislation. Meanwhile, last night Federated Farmers said that it was against the rushed enactment of the bill. "This bill, if passed... will bankrupt some property-holders..." said its president...

Taranaki farmers desperate to get a better compensation deal from the Government over... leases will drive their tractors to Parliament to protest against a bill which they say could ruin many. The... Maori Reserved Land Amendment Bill... contains a clause stopping lessees from suing the Crown for financial loss... The row is over 2300 perpetual leases covering 30,000ha of reserved land... The leases are seen as unfair to Maori who own the reserved lands but effectively lost control of them when the land was leased out in perpetuity by the Government last century. A 1955 law set the rent at 4[%] of the unimproved value... for urban land and 5[%] for rural... reviewed every 21 years... [Farmers] have always believed that... perpetual lease titles were as good as freehold... Proposals to change the law had caused the value of farms on reserve land to drop by half... Taranaki lessees... [who] have 343 leases on 20,000ha... estimated their losses at \$50 million... But a spokesman for the Minister of Maori Affairs... said the bill contained adequate compensation... for lease-holders... The... P[M]... himself a former Taranaki leaseholder, said of the tractor convoy that "protests very seldom achieve anything."

...The Government succumbed to pressure last night and agreed to a late compromise to better protect leaseholders of Maori land... The proposal... will allow lessees who believe the value of their properties has been significantly eroded to test that in the Land Valuation Tribunal... Their tractor convoy is... due to descend on Parliament today...

Those lucky Taranaki farmers! How do they find time to climb on their tractors and drive to Wellington to protest about a proposed new law? I don't know... But I do know they can afford the trip. It's because generations of them have had an easy ride. They have the advantages of freehold possession of their farms without ever having bought the land... By law the owners have been forced to lease out their land forever. They may not live on it... farm it... sell it. They cannot choose their tenants; bureaucrats do that. They cannot kick out bad tenants; they are stuck with them – and their children, grandchildren and great-grandchildren... They cannot even say what rent they want... If the same law applied to the rest of us there would be a revolution: Parliament Buildings would be littered with bloody corpses. At last the patient owners are being offered a fairer deal... Bit by bit they will be allowed to raise rents. They will be allowed to sell. They will be compensated for lost earnings forced on them by the Government... [T]he new law... will give owners and tenants the rights and duties that the rest of us have to make do with. But listen to the whining tenants. Hear their teardrops fall. They are... being singled out to bear the cost of yet another Maori grievance. Bollocks... To ease the shock of having to pay market rents, tenants will be offered taxpayers' money. If owners want to sell, tenants will be offered first refusal. If the land goes to an outsider, tenants will get money for houses, sheds and fences they built...

King Country residents, many of them... pensioners... [and] Maori, who live on leased Maori land, say their plight is being overlooked... They were grateful Taranaki farmers had mounted the fight against the Maori Reserved Land Amendment Bill. Like the farmers, the Kawhia and Otorohanga residents would... face rising rentals... - 1997

In consequence of the passing of the Native Land Laws Amendment Act, it is stated that something like a land boom will arise in the King Country... I am informed that a committee has been appointed by the native owners and this committee has appointed... legal advisers... to proceed to Auckland and enter upon the preliminary steps for leasing a large area of native land that will be offered. The natives are sanguine that the results of this departure will enrich the tribes and attract a large number of Europeans. It is affirmed that a very small proportion of the good land in the Waikato and King Country remains unsold. The natives, however, say that they have sold the bad land to the government agents. - 1897

In 1840 the Ngati Ruapani people had an area of more than 250,000 acres... around the shore of Lake Waikaremoana. Today, with the exception of a few tiny reserves, they are a landless people. Ngati Ruapani never willingly parted with their lands and this goes a long way towards explaining the sense of frustration and anger which many young Maori of the area feel at their predicament today. When Government troops invaded the Waikato in 1863 some Ngati Ruapani saw a direct threat and rushed to the aid of their Tainui kin. Two years later Waikaremoana Maori were attacked by Government forces in punishment for adopting the allegedly "fanatical" new Pai Marire faith. Several so-called "Hauhau" prisoners were subsequently executed by Government-allied troops from other tribes. Worse was to follow in the late 1860s when Waikaremoana Maori provided shelter to the prophet and commander Te Kooti. Crown forces engaged in a systematic scorched-earth policy around the shores of Lake

Waikaremoana, burning all homes and crops in the area. Hundreds of Maori throughout the Urewera district were said to have died of starvation as a result. Hungry and homeless, the remainder had put down their arms by the early 1870s, encouraged by promises that the Crown would allow them to continue to control their lands and other affairs through institutions of their own choosing. Despite such promises, 172,000 acres of Ruapani land on the southern shores of Waikaremoana was in 1875 awarded to “loyalists” of the lower Wairoa district. From the 1880s Ngati Ruapani were forced to participate in Native Land Court hearings about their Waipaoa lands, or again lose all. By early this century their interests in Waipaoa had been extinguished... The Urewera District Land Reserve Act of 1896 had promised Urewera Maori continuing tribal control and ownership of their remaining lands. From 1900 onwards, however, a series of legislative enactments weakened the provisions of this original legislation to the point that, by 1916, the Crown could embark on a policy of full-scale acquisition of individual interests from as many Maori as could be persuaded to sell. And with poverty now rife in the region, and tribal leadership deliberately marginalised and undermined, this was not hard to do. Despite their plight, Ngati Ruapani had held out against any alienation of their remaining tribal patrimony. But since the lake’s hydro-potential was recognised, the Crown was determined to acquire the Waikaremoana block... In 1918 the Native Land Court had awarded the title of the lake bed to Maori, at a hearing which the Crown had failed even to attend. Despite this, the Crown disputed the ruling, arguing against overwhelming evidence that the lake belonged to the Crown... The Depression in the early 1930s struck an already impoverished... people harder than most. Their plight was made worse by the refusal of the Native Trust Office to pay them money owing on the debentures used in payment for Waikaremoana, and by the unilateral decision of two cabinet ministers to reinvest this capital sum on maturity... The few remaining reserves dotted around the lake were loaded with so many restrictions on their use that they were all but a liability. The owners might be charged rates, but could not build on their reserves – and could not even hunt on their own land without winning a special licence by ballot... After a staggering 26-year delay the Crown’s case[for ownership of the lake] was heard in 1944 and dismissed. Meanwhile the Crown had proceeded to build a hydro dam at Waikaremoana (drastically reducing the water level and depleting fish stock in the lake), as well as exercising numerous rights of ownership... The establishment of a national park in the area in the 1950s may have been a boon for visiting trampers and hunters but for the tangata whenua it has often been difficult to reconcile with their traditional uses of the land. Continuing desecration of Ngati Ruapani wahi tapu in the park only adds to the tribe’s anguish... [I]n 1954, the Crown reluctantly acknowledged Maori ownership of the lake bed but persistently tried to persuade the owners to sell... In 1971 it secured a 50-year lease of the lake bed (with a perpetual right of renewal) at 5.5[%] of valuation. From the Ngati Ruapani viewpoint this agreement was seriously flawed. No compensation was payable for the considerable hydro-electric revenue the Crown generated from the lake. Effectively the Crown had trespassed on the lake for 50 years and got away with it... Moreover, the Lake Waikaremoana Act of 1971 transferred legal title over the lake bed to... two Maori Trust Boards – neither of which was seen by many Ngati Ruapani as representing them.

...Ngati Whatua have... become joint venture business partners in a \$50 million retirement development... on the hallowed ground of Bastion Pt... A display home is open for inspection at 61 Te Arawa St. Units in the first stage are selling for between \$167,000 and \$295,000. However, the second, larger stage will bring upmarket apartments, selling for between \$550,000 and \$600,000... If it sounds like sacrilege to build on whenua rangatira, think again. The million-dollar income stream from the development is planned to bring substantial benefits to Ngati Whatua. No other retirement village[overlooks ‘the entrance to Waitemata Harbour’ and] has such affluence at its back door: the wealthy blue-rinse set from St Heliers, Mission Bay, Kohimarama and Remuera... It would be a vast understatement to say that Eastcliff on Orakei has a marketing edge. It is being promoted as “only parkland, which can never be developed, between you and the sea. No other facility will ever be able to enjoy the same breath-taking sea views or cityscapes.” ...But the tribe was not united in thinking the development was a good idea[– particularly the ones who had spent years fighting to regain ownership of the land ‘because of the government’s decision to make the land available for high-cost private housing.’ The] Labour MP and Bastion Pt occupation leader[’s]... grandmother, Te Mihiata Te Mamae, died during the relocations of Ngati Whatua from its Orakei land. Homes and buildings were pulled down and burnt by the Crown during the final eviction – a crusade prompted by the visit of the Queen in 1950 and the royal tour passing by Orakei. “The victims of one of the worst cases of cultural genocide in this country,” is how the Waitangi Tribunal’s Orakei report referred to the tribe.

...The long-running dispute over Moutoa Gardens has been resolved by an agreement between the Crown, the Wanganui District Council and local iwi. Last night, [the P]M... was welcomed onto the land, site of a 79-day occupation almost six years ago... The deal... gives the Crown, the council and the iwi Atihaunui-a-Paparangi joint management of the gardens. Ownership of the land goes to the Crown, and the gardens keep their historic reserve status... [The PM] said the Moutoa agreement could be used as a model for settling other issues... [By the way, m]ore than half the country believe Treaty of Waitangi settlements have been too generous, judging by... polls. Following multimillion-dollar settlements with several tribes, including the \$170 million deal with Ngai Tahu signed in November, the Government has been told it is giving away too much... [F]ewer than 30[% of NZ]ers believe the settlements have been “about right.” ...6.4[%] thought them “not generous at all” and 10.5[%] were not sure... The results indicate a ground-swell of unease about the amount of land and cash being handled over as the Government attempts to settle Maori grievances. They back up concerns expressed by the Race Relations Conciliator... who said he could see a backlash against Maori emerging...

Maoridom’s big leap forward... Last year was probably Maoridom’s best yet. The number of Maori MPs in Parliament was higher than ever – and they attracted a lot of attention... [T]he voice of an emerging group of leaders – urban Maori – grew stronger, often challenging accepted “tikanga” and questioning their role in the “tribal revival”. The historic Ngai Tahu settlement was signed, the Whakotohea deal now stands on shaky ground and Muriwhenua is making progress on its mandate issues. Various claimants have sought settlements and the courts – especially the Maori Land Court – have set several precedents which have wide ramifications.

...*Maori reverses in health, wealth...* The Minister of Maori Affairs... has promised Government action after the release of a report showing the... gap between Maori and non-Maori in health, life expectancy, educational achievements, employment and incomes... has widened in the past 10 years... [The minister] said he would expect action from the Government, although some initiatives could take several years to have an effect.

The proposed reservation for the Treaty of Waitangi in the Multilateral Agreement on Investment... is not strong enough, says the Minister of Maori Affairs. “You need to have an entrenched protection clause of the treaty to say something like ‘nothing in this international agreement shall impinge upon the Treaty of Waitangi and the settlements thereof between the Crown and Maori’,”... [The minister] said it was not a matter of Maori getting favourable treatment. A special relationship was guaranteed under the treaty between Maori and the Crown... The MP for Te Tai Hauauru... said the MAI was “fundamentally critical to every aspect of Maori development on land, trade, fisheries, flora and fauna, and forestry. If there is one issue this year that Maori must organise themselves around, the MAI is it.” ...Asked about Maori consultation, [the Deputy PM] told Parliament that “all N[Z]ers” would be consulted. “...A decision on signing the MAI will be made only after the consultation process is completed.”

...The \$200,000 Government funding for Waitangi Day celebrations is under threat unless more “non-Maori” activities are included. The [Deputy PM]... has threatened to reduce funding unless he receives assurances of more non-Maori participation in celebrations next February. He has told the organising committee that one-sided participation at this year’s event made a mockery of the spirit and purpose of the Treaty of Waitangi. “I am not prepared to condone a repeat of the situation that pertained this year, where our treaty partner was so poorly treated,” he said in a letter. The... Waitangi Day celebrations were the focus for Maori protest in 1995, when the Governor-General at the time... was spat on and a[Waikaremoana] activist spat at the feet of dignitaries. Official Waitangi Day celebrations were moved to Wellington last year in response. At this

year's celebration, [the Deputy PM] complained about too much Maori being spoken at the Waitangi Day church service... The Labour leader... said that... "The only reason [the Deputy PM] complained was because he cannot understand Maori, which is rich coming from [the leader of] a party that purports to represent Maori. This year's celebrations were perfectly appropriate and should not be changed."

...the Minister of Maori Affairs... has hit back at comments by [his party leader,] who has threatened to withdraw funding from Waitangi Day celebrations... [The minister] said control of controversial Waitangi Day celebrations should be handed to the people of Ngapuhi, and the Government should play an assisting role only... [He then] said some of the past events that had tarred the celebrations were part and parcel of the annual event, but it should not deter members of the Crown from participating. "It's the one day of the year that Maori truly get to debate in open dialogue with the Crown the meaning, spirit and intent of the Treaty of Waitangi, and that should not be feared..."

A group hoping to revive a Maori parliament to solve Maori social ills is short of details of how it will achieve its goal. Members of Te Runanga Ko Huiarau, who yesterday welcomed their new Tiaopuru or head... in a ceremony at Alexandra Park, refuse to talk about where the money is coming from or give information about the head of their organisation. A spokeswoman... said... "We are here to celebrate the revival of... the Maori parliament established in 1808, not to talk to individuals." About 700 attended the celebrations, although some said they were there to see what the group was all about. Earlier, about 40 members of Ko Huiarau gathered at Auckland's Mayoral Towers for the opening of their parliament. But they could not enter the building because the doors were locked.

...The Maori Council Chairman... says Maoridom is ready for a parliament of its own, but he does not know how much support there is for the self-styled parliament announced this week. "I would support any efforts to bring in a Maori parliament," he said yesterday, "but I'm not aware of them." ...He said there were many Maori organisations that represented Maori but Ko Huiarau had not approached any of them... [H]e had first heard of the group about five years ago when "they said some chap was the newborn king." It was strange that the group came from the Waikato because the area already had the Kingitanga movement, he said... However... an Auckland ethnologist... said... [the head of the organisation] had been chosen when was aged 6. "His elders installed him in 1936[after they] recognised him as the descendant of all Maoridom's chiefly lines." ...the "Maori parliament" was made up of the descendants of the... chiefs who signed the Treaty of Waitangi...

A Maori group says it will open its own Parliament in Queen St, Auckland, next week... Te Runanga Ko Huiarau will crown a new Maori king at a dawn ceremony on Tuesday. It has invited representatives from 60 countries with which, it says, it has had trading treaties since last century... Ko Huiarau has based its legitimacy on a document made from dogskin, written in Maori and signed with the seal of Queen Victoria and the group's Maori king... But a Tainui kuia, Eva Rickard, plans to confront the group, which she says has no credibility.

...Maori are to blame for most of their problems, says the veteran Maori activist Eva Rickard. "Why are our children in strife? ...I blame our own people. It's our fault now." ...[In related news,] Sir Hepi te Heuheu, paramount chief of the Tuwharetoa people and one of N[Z]'s great Maori leaders, died in Taupo Hospital last night. He was 78... Last night... the P[M]... paid a personal tribute to Sir Hepi, describing him as a pre-eminent N[Z]er known for his wisdom and humility. "His loss is N[Z]'s loss." ...Sir Hepi, a sheep and cattle farmer known as "the mountain," was one of the few figures within Maoridom who could transcend tribal boundaries. He was respected by his people, Pakeha and the Government. His influence was such that when he called a pan-tribal hui in 1995 to discuss the fiscal envelope policy for settling Treaty of Waitangi claims, 1000 representatives from every iwi answered the call. What followed was a rejection of the policy by Maori at all 14 consultation hui held around the country. The... only person who could stand with Sir Hepi on the same level in Maoridom was the Maori Queen... They both had their personal and hereditary mana... Sir Hepi was descended from a long line of paramount chiefs. Probably the most famous was his great-grandfather, te Heuheu Tukino IV, who with other Tuwharetoa kaumatua gave N[Z] the mountains and land that formed the Tongariro National Park. He succeeded his father as paramount chief in 1942. Kua hinga te totara niu o te wao a Tane ("The giant totara has fallen in the world of Tane").

...Maoridom has been devastated at the loss of Sir Hepi te Heuheu, so soon after the death of Matiu Rata[, whose]... lifelong battle for Maori causes and rights cost him a great deal and in the end... his life. The 63-year-old Maori leader died... from kidney failure[, but he had also] suffered serious head, chest and leg injuries in a head-on crash on July 17 as he drove home from Auckland after yet another meeting over Far North land claims. Mr Rata quit a cosy, well-paid MP's job in 1980 to form the Mana Motuhake Maori political party. He stood unsuccessfully for the party several times yet never stopped working for his race and he gave it everything he had... [A] former Labour P[M]... said Mr Rata, a former parliamentary colleague, was the catalyst behind the modern Maori renaissance. "The setting up of the Waitangi Tribunal, which was his work, has been an enduring contribution to the constitutional position of Maori in this country," he said. The present Mana Motuhake leader... described Mr Rata as a rare political person. "He was a true visionary and we should all consider as N[Z]ers what the landscape would be like if we did not have the legislation he brought in," she said... Mr Rata's son... said his father would have wanted N[Z]ers to carry on the process of bringing together all the people of the land.

...[*Computerising land titles is a big challenge* Standing among shelves of land title and conveyancing documents, we are informed that there are around 30km of these in the country and that shelf space is growing at the rate of 1.5km a year. We are in the Wellington region office for Land Information NZ (Linz) – so we can see first hand what the department is up against. Yes, there is an awful lot of paper here. We are taken through the process of finding a land title. Look up the certificate of title number on the computer. Fill in a form and hand it across the counter with the \$7 fee. In a few minutes, the staff member returns with a copy. It is a similar process for getting a copy of a survey plan. Find the deposited plan number on the computer. Get the microfilm, view it, then get a print costing \$10. Asked how long user-pays charges have been in effect, one of the office staffers can remember a time when getting land title information was free. No one mentions that the fees have been further increased since July to help pay for NZ's most expensive Government computer system – Landonline, which will handle land titles and survey plans electronically – or that the public will have to pay extra (between \$13m and \$17m a year until June 2003) because the \$150m project is a year behind schedule. What will the public get for the money? At the end of stage one, not a lot. True, the system should deliver much greater efficiencies, improving turnaround of lodgements from the present 10 to 15 days to something much less. With stage two – enabling surveyors and lawyers to lodge plans and title documents electronically – the aim is for a turnaround time of 24 hours. Landonline will also mean faster searching and accessing of information by lawyers and surveyors, who will pay annual software licence fees to link to Landonline via a virtual private network. While it can be argued that there will be considerable time savings for lawyers and surveyors, they will also have to carry the cost of connecting their offices to Landonline. Whether the service will produce the promised savings – resulting in lower conveyancing and surveying bills for property buyers – remains to be seen. Members of the public, however, will still have to visit Linz offices if they want to search titles or plans themselves. And there will be fewer of those to visit. The intention is to close seven of the 12 regional Linz offices and shed 200 of the 510 operational staff in the process. The question no one has yet considered is: with such a state-of-the-art computer system, why not make it accessible to everyone via a web browser over the internet?

... 'A new mapping system to be used next year in NZ and AUS will move coordinates, says Linz. The two countries will shift the reference point for their surveying 200m to the northeast because satellite technology has revealed discrepancies in their maps. A Geodetic Survey adviser says there could be some confusion if old maps are compared with coordinates from the global positioning system. An AUSn lecturer in surveying says the system will throw emergency rescues at sea and in the bush into confusion. NZ maps are based on 50-year-old information, but new technology shows how the Earth has changed since then. The datum will be able to accommodate any future changes, especially resulting from natural disasters.' Speaking of disasters, 'the Buller District Council is furious that the Cave Creek inquiry cost it \$45,793 – equivalent to 1.5% of its rates take – when other parties to the inquiry, such

as the DoC, had their costs met by the Government. The total bill for the inquiry was \$2.2 million, of which more than \$1 million was to cover DoC's costs. The DoC has refused to pay the council's costs, saying it is not legally liable for them.']

...The Government says it will pay \$2.675 million to the families of those affected by the Cave Creek tragedy. The compensation award was decided by [the]mediator-arbitrator... a former privy councillor and Conservation Authority chairman... Had it gone before the courts, he believed it could have taken several years to resolve and even gone to the Privy Council... The Attorney-General... said last night that the Government would implement the settlement promptly... It is understood that around \$1.7 million will be awarded to the families of the victims and about \$950,000 to the families of the injured and the survivors. Thirteen Tai Poutini Polytechnic students and a D[oC] field centre manager were killed when the overhanging department-built viewing platform collapsed['and fell 14m into a rocky chasm'] in the Paparoa National Park... north of Greymouth, on April 28, 1995. Four students survived the fall. Five other people in the party were not on the platform at the time... The Government has not yet decided whether to exempt its departments from prosecution under building and safety laws, as recommended in the Cave Creek commission of inquiry. One of the families said yesterday that they were keen for the exemption from prosecution law to be removed, so the lives lost would not be in vain. [The] commission of inquiry found in November 1995 that the... platform was poorly built. ['The platform was nailed to its foundations instead of being bolted.'] ...It said the department had acted incompetently and inappropriately and a lack of a proper project management system had caused the platform, which did not comply with the building standards, to fall with such tragic circumstances. [The Attorney-General] gave assurances a year ago that the exemption issue would be dealt with before the closure of Parliament leading up to the elections.

...STATE sector chief executives will in future be expected to resign if something goes badly wrong in their department. [The]State Services Commissioner... said that in the wake of the Cave Creek tragedy, an accountability review being carried out by his office would lead to much clearer expectations on chief executives as to their responsibilities... The review was commissioned by[the] former State Services Minister[, who is now the Attorney-General]... After the Cave Creek disaster there were repeated calls from some victims' families and others that [the DoC] boss... should resign like several other DoC staff. [The chief executive] rejected such calls, saying he wanted to see his contract through and leave his department in good condition. Late last year, there were reports[that the] new Conservation Minister... wanted [the chief executive] out. The minister denied it, but in January [the chief executive] announced he would be stepping down.

...Life is getting tougher for Government department heads – they can now be sacked even where no personal blame or liability can be established... But the new State Services Commissioner... indicated yesterday that this would occur only under extreme circumstances. He would not speculate on whether the provision would have applied to... the Director-General of Conservation at the time of the Cave Creek tragedy...

['A man who was the highest paid general manager in the DoC, earning \$136,000 a year, has been convicted of stealing more than \$180,000. The man who ran the department's business management unit until last August, had his sentencing deferred in Wellington District Court yesterday to ensure any reparation order could be met. The court heard that the manager set up two companies and sent invoices to himself at DoC from those companies. He also sent a quote, which he accepted and signed off at DoC. Of the money he obtained, \$104,783 was paid into a joint account of the manager and his wife. By last September, just under \$13,000 was all that was left in the accounts. The Serious Fraud Office prosecutor told the court that as the defendant was in a senior position and the amounts involved were large, a starting point for sentencing should be 3 1/2 to 4 1/2 years jail.']

...The Business Roundtable has commissioned a private report on the D[oC], sparking fears of privatisation of conservation land and services... [T]he chief executive of the big business think tank, acknowledged this week the report was under way, saying... privatisation of DoC land and/or services was "not the focus of the report but there are parts that could be put into private enterprise... We would hope there are no public concerns about our interest or intentions,"... But... [an] environmental economist and former chairwoman of the environmental group ECO, said... the Roundtable was ignoring basic ecological values in favour of market values... There is a clash of philosophies between the Roundtable and core interests of the department... She said that if private trusts were set up to handle public lands and services there would be little accountability... [T]he conservation director of the Royal Forest and Bird Protection Society, said he was aware of the move and that he was "extremely disappointed" by it... "It is clear from the terms of the review they have a predetermined outcome – they clearly want to privatise the functions and/or the estates of the department. It seems they now want a share of the spoils for private enterprise." [He] said several major corporations, which are involved with conservation work, were "hoping to make capital out of their good works, and by a large leap try to devolve the works of DoC into private trusts... If privatisation were to happen we could see many of our pristine areas used exclusively by wealthy tourists." ...[Speaking of wealthy tourists, the Indian P]M... says when the Queen visits... in October, she should not visit Amritsar, the scene of a bloody massacre by British forces in 1919. "It is a goodwill visit and we would not like to add anything historically that would cause bitterness,"... Troops... opened fire on a peaceful protest meeting... banned by the colonial authorities. The incident proved a watershed in galvanising opposition to British rule.

...The Indian P[M]... has been blasted for advising the Queen against visiting the site of a bloody massacre... A Sikh leader... said [the PM's] request... was "unfortunate" and that Sikhs wanted her to come. Amritsar, in the Punjab, is home to the Golden Temple, the holiest Sikh shrine. It is also the site where British soldiers gunned down 379... unarmed... civilians and wounded more than 1300 at a political meeting... Several Indians have demanded that the Queen apologise... during her trip... However, [the Sikh leader], who heads a national Sikh temple committee... distanced himself from the demands. "The demand for an apology is a conspiracy by those forces who did not want her to visit... It is time to forget the bitter memories of the past and look towards a bright future," he said... The British High Commissioner in New Delhi earlier confirmed that [the massacre site] was being considered as a possible part of the Queen's itinerary... The Queen's visit has stirred up a second controversy among the Sikhs. Some of their leaders have called for the return of the Koh-i-noor diamond, now part of the British Crown jewels and which Queen Victoria acquired from a Sikh prince last century.

...Ceremonial cannons boomed in salute to welcome the Queen yesterday on a visit marked by undiplomatic controversies before it began... [Then the Queen accepted] a pot from... an 'untouchable', a member of a caste who have now chosen to call themselves "dalits", a sanskrit word meaning crushed and downtrodden. What was remarkable about the gift was that under the norms of traditional Indian society, low-caste women would not be able to give a cooking utensil or a drinking pot they had touched to someone of a high caste, or an important person such as the Queen... At the... end of the... ceremonies... a British spokeswoman read a statement by[the] Foreign Secretary... replying to an angry denunciation of Britain by India's P[M] for what he saw as unwarranted meddling in India's dispute with Pakistan over Kashmir. "A third-rate power has presumed to say that they have a historical responsibility to solve the Kashmir issue," [the PM] was quoted in Indian newspapers as saying in a private meeting on Saturday with Egyptian intellectuals [during] a visit to Cairo. [The PM] allegedly said Britain was responsible for the Kashmir dispute in the first place, as a fallout of the partition of India when it ended its colonial rule in 1947... [The day began] with... further controversy... [when] what should have been a dignified [event]... degenerated into near-farce just minutes before the Queen arrived, with a British diplomat and a senior Indian police officer involved in a shouting match over media access... Tempers had flared when British photographers demanded the same access to the tarmac near the Queen's aircraft as was granted to their Indian colleagues. Scuffles broke out... Among those caught up in the melee was the Queen's press secretary... Today another controversy awaits the Queen when she visits Amritsar... On Sunday police used water cannons to break up a demonstration in New Delhi of Sikhs demanding an apology. Britain has indicated the Queen will not express verbal regret, but will lay a wreath in what should be seen as a gesture of reconciliation.

...It was meant to be a magnanimous and royal gesture. For the Queen and her husband... it was a good will tour to mark the golden jubilee of India's independence... Instead, old wounds between the erstwhile imperial masters and their colonial subjects have reopened. Simply put, it has been a week of diplomatic nightmares for both the British and the Indians... The royal couple... fuelled controversy thanks to some of their actions – or rather lack of them – in the second half of the tour... At the Jallianwala Bagh memorial... [at] Amritsar... the Duke of Edinburgh... told his official escort that... based on information he had gathered from... [the son of the man who ordered the massacre,] the massacre account as inscribed on the monument by the Indian trust was “vastly exaggerated.” ...These remarks and the refusal of the royal couple to leave any impression of their visit at the memorial site – they merely signed the visitors' book – raised the hackles of the Indian press. As if in retaliation the Government cancelled a speech the Queen was to deliver in Madras. The Indian official line was that the speech was never scheduled. Several explanations have been offered for the diplomatic disaster this trip has been. More than one British commentator has said it was India's way of showing the world it could now take on its one-time colonial master. Indians would see it as their country's way of showing it could no longer be treated like a colony... but it would be fair to say that it was all sparked off by a verbal duel between the British Foreign Secretary... and the Indian P[M].

...For someone who takes pride in describing himself as a diplomat who got into politics by accident, the performance of [India's P]M... on the matter of the Queen's apology for the Jallianwala Bagh massacre has been a total disaster. What is worse – and more worrying – is that the... P[M] created a controversy where none existed. He first advised the Queen against visiting Amritsar and Jallianwala Bagh... The result was an outcry in the media, contradictory statements by Sikh leaders in Punjab and red faces in the Indian Foreign Office. In less than a week the P[M] had changed his tune, saying... that the Queen was an honoured guest of India and there was no question of putting any restrictions on her itinerary. This time there was no mention of an apology or the need to soothe feelings as he staged another of his now familiar about-turns when caught on the back foot... The P[M]... tries to use the media for making grandiose announcements which can give him his moment of glory, however brief. The irony is that he ends up making only faux pas... [He] would do well to remember that leaders much more powerful, popular and possibly wiser than he have occupied the office of P[M] of India. And they seldom spoke out of turn.

...[i]n school Martin Luther King studied the work of Mahatma Gandhi, who was leading India's fight for freedom from Great Britain. Gandhi knew that armed insurrection would justify British attacks. His solution was non-violent passive resistance, in which vast numbers of Indians boycotted British goods and disobeyed what they felt were unjust laws. Relentless non-violent mass confrontation eventually forced the British to abandon their claim to India.]

...Ten years after the military coups, the impending expiry of land leases threatens to derail Fiji's economic and racial progress... Fiji's population of 750,000 is almost equally split between Fijians and... citizens descended from Indian workers brought to Fiji by British imperialists and A[US]'s Colonial Sugar Refining Co... [over] 100 years ago to work the land... [F]or generations... the... [Indians] have grown... sugarcane... on [leased land]... Most of Fiji's native landowners are determined to claim the land back by refusing to renew leases, leaving thousands of Indian growers facing the loss of homes and businesses... Indian lessees have seen the land they work fenced off by Fijian owners, fights have broken out... and more violence seems likely, even between the landowners themselves. If the leases are not renewed, [the Indians] do... not believe [they] will receive compensation, not even for [their houses]. “Who can pay? The landowners have no money. The Native Land Trust has no money. The Government has no money. If the landowners take the land back... [they w]on't do anything... and... Fiji will go down.” ...About 18,000 of Fiji's... 23,000... sugar leases... cover land owned by native Fijians. Only 45 leases expire this year, but over the next two years thousands will reach the end of their 30-year terms.

...A Fijian Government document leaked yesterday has revealed that the majority of agricultural land leases... will not be renewed, creating panic among the country's cane farmers. Fiji's land problem is a potentially explosive racial issue stemming from the fact that almost 90[%] of the land is owned by indigenous Fijians but most commercial farming is done by the Indian community under lease... [L]and authorities say 24... of... 45... leases due for renewal this year... will definitely not be renewed... 14,000... leases... are due for renewal over the next five years and signs that native landowners want most of the land back for their own use has left tenant farmers anxious about their future... In an interview in the *Fiji Times*, the P[M]... called on the farmers not to panic, saying those evicted from present land leases would be resettled on state land.

...Thousands of ethnic Indian farmers in Fiji anxiously awaiting a Government decision on their expiring... 30 year... land leases will have to wait until next year for a resolution to the crisis... The Government has avoided making a decision on the issue since it took office in June 1992.

...[Fijian police] have made several arrests after being fired on in long-running attempts to evict villagers from... land... earmarked by the Government as a sports venue... [but] used by villagers for their crops... [A] group of armed men have sworn to defend the block with their lives. [Speaking of land issues, 'NZ treaty negotiations are small and easy compared with those in Canada. The Minister for Treaty Negotiations aims to have all the big claims completed by the year 2000 on a budget of \$NZ1 billion. Compare that with Canada, where the minister estimated the cost of entering into new treaties and resolving about 2000 claims for breaches of existing treaties will be \$360b. Where treaties exist in Canada, aboriginal title has gone but where they do not it remains and the Canadian Government is trying to buy them out. To sell the exercise to the public, millions were spent on propaganda. The minister, back from visiting North America, says NZ has an advantage of just one treaty. In Canada, the minister hosted dinners for judges involved in decisions on customary rights and aboriginal title claims for Indians, so-called First Nation bands. He also met tribal leaders and politicians.']

...Canada's Supreme Court... issued a landmark decision establishing the principle that native Indian rights to resource-rich land were not invalidated by European settlement. The case involve[d] claims to 58,000 sq km in the west coast province of British Columbia but ha[d] implications for... other parts of Canada. The ruling [wil]l... bring large compensation settlements for Indians, with ramifications for lumber and mining companies and the ability of non-Indians to develop land... The Gitksan... a group of about 5000 Indians... along with the 1500 Wet'suwet'en people, [originally] launched a four-year legal battle over land rights in 1987 but lost in a lower court. They appealed to Canada's highest court, arguing that they retained rights to the land because they never signed treaties relinquishing those claims with British officials who colonised the area. British authorities in Canada signed no land treaties for most of British Columbia... Nor did they sign treaties for the vast tracts of land in the Northwest Territories and other scattered areas in Canada. The Supreme Court ruled in a unanimous decision by six judges that... it would be preferable for the federal and British Columbia Governments to negotiate a settlement with the native Indians. - 1997

In a time so long ago that nearly all traces of it are lost in the prairie dust, an ancient people were a part of the land that we love and call America. Living here for thousands of years, their children became the great Indian civilizations... Then white settlers... began a bloody war against the Indians, and in the span of a single lifetime claimed all the Indians' land for themselves, allowing [the Indians] only small tracts of land to live on.

[“]Grampa took up the land... he had to kill the Indians and drive them away. And Pa was born here, and he killed weeds and snakes. Then a bad year came and he had to borrow a little money... but it's our land. We measured it and broke it up... Even if it's no good, it's still ours. That's what makes it ours – being born on it, working it, dying on it. That makes ownership, not a paper with numbers on it...” [“]No. The bank, the monster owns it. You'll have to go.” [“]We'll get our guns, like Grandpa... What then?” [“]Well – first the sheriff, and then the troops. You'll be stealing if you try to stay, you'll be murderers if you kill to stay. The monster isn't men, but it can make men do what it wants.”] - The Grapes of Wrath

In 1867 the U.S., urged by William H. Seward, purchased Alaska from Russia for \$7.2 million. For many years the value of the purchase was not recognized, and Alaska... [– p]opularly called “the Last Frontier” –] ...was referred to as “Seward's folly.”

...Settled by the Dutch, the... 22 sq mi... island was named for the Manhattan tribe of Algonquian Indians; it was purchased by Peter Minuit from the Indians, 1626, for goods worth \$24. The first settlement, New Amsterdam, was rechristened New York when the English acquired it, 1644.

...The impact of European culture and the ceaseless impingement of white settlements were fatal to all North American Indian cultures. The relatively successful adaptation to their environment was disrupted when their hunting, fishing, and growing grounds were disturbed and seized. They were driven to compete for what remained, first among themselves, later with the settlers... Their resistance is known in American history as the Indian Wars... In the end, some tribes were exterminated, others driven from one exile to another, and survivors were either herded into reservations... or assimilated as individuals... Reservations developed from treaty arrangements between the government and the tribes, whereby the latter were assured inviolable territory for their own use in exchange for lands desired by the former. Few of the early reservations in the East remained in Indian possession; most tribes were eventually compelled to accept revised treaties and move West of the Mississippi. More than half of U.S. Indians now live on reservations in the former Indian Territory... now Oklahoma, and in Arizona, New Mexico, and South Dakota. There are about 185 reservations in the U.S.; the largest, that of the Navaho, covers over 24,000 sq mi.

Although feeble attempts were made to preserve the land and culture of North America's Indian tribes during the latter half of the 19th century, the plight of many South American Indian tribes remained unrecognised (or was ignored) well into the latter half of the 20th century!

On 23rd February 1969, the *Sunday Times Colour Magazine* published an article... called 'Genocide', which dealt with the destruction of the Brazilian Indians. Among the many appalling examples of systematic extermination discussed... and ranging from the sixteenth century to the present day was one which involved the slaughter of large numbers of the Cintas Largas tribe... on the river Juruena in the early sixties... It was seen as essential... to produce the maximum number of casualties in one single devastating attack, at a time when as many Indians as possible would be present in the village, and an expert was found to advise that this could best be done at the annual feast of the "Quarup" ...The "Quarup" is a theatrical representation of the legends of creation interwoven with those of the tribe itself... to testify that not even death can disrupt the unity of the tribe. 'A Cessna light 'plane used for ordinary commercial services was hired for the attack, and its normal pilot replaced by an adventurer of mixed Italian-Japanese birth. It was loaded with sticks of dynamite... On the first run packets of sugar were dropped to calm the fears of those who had scattered and run for shelter at the sight of the 'plane. They had opened the packets and were tasting the sugar ten minutes later when it returned to carry out the attack. No-one has ever been able to find out how many Indians were killed, because the bodies were buried in the bank of the river and the village deserted.' ...[']I can only go by what I've seen myself. I mean, I was in the Xingu only a couple of months ago, 25th May 1970... and they flew in the remnants of the Beicos-de-Pau tribe... They lived up by the river Arinos, and as far as we know, that's to say at the beginning of the year, there were about 400 of them left. There had, of course, been far more than that, but a few years ago, an expedition came up the river and left them a few sacks of food mixed with arsenic. Anyhow, after a great deal of red tape and nonsense it was decided to fly them into the Xingu, as it was obvious they didn't stand a chance of surviving where they were. So then it began. The rescue operation. Phase one was the measles epidemic, because as chance would have it, one of the rescue party was carrying measles. Only 109 of them survived it, but there we are. Phase two was the publicity stunt, in which four of the Indians were flown to Rio to meet the press. Unfortunately that didn't work out well either, because three of them died in Rio. Phase three was transferring them to the transit camp. Now that hadn't been thought out too thoroughly, because what they did was drive them down overnight in open trucks, not altogether taking into account the fact that the Indians were naked and it was the middle of the winter. As a result of which another 65 of them died. This made the logistics of phase four, which was actually flying them into the Xingu, a good deal easier, but even so they weren't as careful as they might have been, and the 41 survivors were bundled into an unpressurised cargo 'plane and set off on the last stage of their great adventure. I was there when the plane landed at dawn at Posto Leonardo. We lifted them all out and laid them on the ground, the corpses to one side and the living to another, although it was by no means easy to distinguish. In the end we found that 24 of them were what you might technically call alive. It was quite cold. They lay on the ground without moving, they didn't move at all even when the ants began crawling up their nostrils and into their eyes. I tried passing my hand in front of their eyes, but they didn't blink... they gave no indication of seeing... It just so happens I witnessed that, but I could have told you about any one of a dozen tribes, same story, same details. It's strange, when I was in England, I didn't seem to be able to turn on the television without seeing some impassioned programme about some threatened animal species. I mean, I've got nothing against that, it's just that everyone knows the blue whale and the white rhino are in trouble. But who's ever heard of the Beicos-de-Pau or the Pacaas Novas or the Trumai? ...I'd be the first to admit they show as much aggression, greed, superstition and cowardice as the next man. It's just that in their own terms they've provided themselves with solutions to all their immediate problems, and that makes them very well balanced, very relaxed and very happy... [' ']'You make me laugh. All this crap about the Indians, it's just romantic bourgeois sentimentality. Listen, there are ninety million people in this country, and there aren't enough Indians left to fill up Maracana football stadium. So you say, look after the Indians, after all, poor things, it used to be their country, didn't it, and they'll never cause much trouble, because there are hardly any of them left, and they're not interested anyway... but for Christ's sake don't look after the ninety million, or you never know what they might start wanting. All your liberal hearts bleed at the thought of those poor naked savages fading away, but it never begins to dribble across your apology for a mind that half a million children under five starved to death in Brazil last year... There are children of eight on the streets of Rio offering themselves to anyone in a suit, you think they're going to turn into good Democrats? ...I remember when I was much younger, I was posted in Venice... Used to hear a lot about capitalism in those days, and I used to think this is where it started and this is what it is: a lot of sinking palaces... If you want a city that really tells you what capitalism is all about, look at Brasilia. Designed by a Marxist architect as a city for the people and a city without slums. Then the property speculators get going, and before you know where you are the workers can't afford to live in the apartment blocks they're building. Well, they don't want to dirty up that sparkling white city, so the answer is, build slums in a big circle twenty miles outside the city and bus the workers in every day and watch a city for the people turn into a city where the workers have to construct the class barriers with their own hands... You know as well as I do the Americans were behind the coup in 1964, and they were behind it because their profits were being threatened, and now they bribe the ruling classes to make sure their profits aren't threatened again. The American public knows their government gives aid to underdeveloped countries, unless they're communist of course, in which case they prefer to ship over a few tonnes of napalm, but what they don't know is that nearly all the aid has strings attached, and what they also don't know is that twice as much money comes out in profit as goes in as aid. Why do you think the corporations make two, three, sometimes ten times as much profit in Latin America as they do in their home markets? You may think all's fair in love and commerce, but some of us take it personally when our children starve to death so that somebody in Detroit or Pittsburgh can buy themselves a third car... [' ']'That's a ludicrously oversimplified way of putting it... [' ']'Well, as it so happens, it's a ludicrously oversimplified process, starving. You don't get enough food to eat and, by an absurdly oversimplified foible of nature, it makes you die. And it can be aggravating when you think to yourself that the excess profits which ought to have been ploughed back into your country so you might have stood a chance of getting a bite to eat have gone towards installing a telex in the interests of business efficiency. It can be a terrible setback to your notions of international brotherhood... [' ']'Well, these things develop slowly... [' ']'We haven't got time for slowly. We need fast... [' ']'But a lot of these things just can't be done fast... [' ']'They can't be done at all, as long as the Americans have their teeth in our neck. Don't think I'm so stupid as to be against them just because they're Americans. If it wasn't them, it'd be someone else. It's just that they're the most powerful at the moment. Before them it was you... [' ']'Me?' ']'...You. England. You bled us empty all

through the seventeenth and eighteenth centuries. Or rather Portugal bled us and you bled Portugal... [] 'I thought Portugal was supposed to be our oldest ally... [] 'Of course. If I had you round the throat squeezing you dry for hundreds of years, you'd be my oldest ally... [] 'Well, it's hardly my fault... [] 'That's it. Nothing's ever anyone's fault. Millions of dollars flow out of the country, quite spontaneously, to the amazement of all. By some freak statistical whim, 3[%] of the population of an underdeveloped country find themselves controlling most of the wealth and look on bewildered as it slips from their nerveless fingers and fortuitously lands in a numbered Swiss bank account. How can it be anyone's fault? [] '... None of it ever lands in my numbered Swiss bank account... [] 'Think what you're missing, you silly man. My father has three... [] 'That's very interesting... [] 'For you, maybe. Not for me. I don't get on very cordially with my father, he being well to the right of Caligula. Apart from counting his money, he has only two enthusiasms: Vasco da Gama football club and the Death Squad... The military dictatorship has lined its pockets by selling our country to the interests of U.S. capitalism, which it has allowed to exploit our resources and steal our land, while poor people starve and suffer all the miseries of poverty and unemployment. Meanwhile, anyone who utters the merest whisper of protest risks joining the 12,000 political prisoners, including university professors, doctors, writers, students, priests and nuns, at present suffering detention and brutal torture in the regime's jails and concentration camps... I'll tell you what happened to a friend of mine, a girl of seventeen... a philosophy student, who had only the very remotest connection with us. She was a very quiet, thoughtful girl and she lived with her grandmother in Urca. Last September, they arrived in the middle of the night, and since it was a political offence she was suspected of, they naturally started off by raping her, right there in front of the old woman. Then they hauled her off for a few days on the Ilha das Flores and gave her all the usual treatment, more rape, electric shock, hanging her upside-down on the parrot perch and beating her, all that. She hasn't recovered from it and I don't think she ever will... She sent a message to us saying she never wanted to see any of us again. Mind you, it wouldn't do us much good if we did go to see her, because they gave her another piece of standard treatment, humorously referred to as the telephone, which consists of punching the ears of the victims as they hang upside-down. They broke her eardrums. She's completely deaf... You see, countries like ours operate their own version of the Welfare State. Instead of wasting a lot of money trying to reform and rehabilitate psychopaths, sex maniacs, thugs and sadists, we give them a uniform and a good salary and a title like the Death Squad, or the C.C.C., or the Metros, or the C.R.S. and let them use their skills for society's benefit... Don't think there aren't hundreds of people in every country who'd jump at the chance to belong to that kind of organisation, who'd love to spend an evening throwing beggars in the river or ramming a broken-off bottleneck up any pretty middle-class girl with a few vague ideas about improving the lot of the workers. And the unity those people have, the unity of hatred, the wonderfully simple level of their ideas! Whereas we, my God, we poor old nit-picking intellectuals, I sometimes think we spend all our strengths and all our energy bickering over points of doctrine like a gaggle of old nuns discussing the Immaculate Conception in a brothel... The rich believe in money, the intelligent believe in intelligence, the powerful believe in power, the Army believes in strength, the Church believes in morality. But you really mustn't expect that to apply to everyone. You really shouldn't expect the oppressed to believe in misery and the starving to believe in hunger. - Savages

And if there is no need to imprison, beat, or kill men when the landowners collect rent, or a man in need of corn pays triple price to a swindling dealer, or a factory-hand puts up with pay that is proportionately only half what his employer takes, or when a poor man pays his last ruble in customs-dues and taxes – this is only because so many men have been beaten and killed for trying to resist what was demanded of them, that the others firmly remember it. A trained tiger in a cage who does not eat the meat put under his nose and who jumps over a stick at the word of command, does this not because he wishes to, but because he remembers the red-hot irons or the hunger from which he suffered every time he did not obey. And in the same way men who submit to what is disadvantageous and even ruinous to them and that they consider unjust, do so because they remember what happened to them when they resisted. But those who profit by the privileges resulting from previous violence often forget, and are pleased to forget, how those advantages were obtained. Yet we need only think of history – not the history of the triumphs of various dynasties and rulers – but real history, the history of the oppression of the majority by a small minority – to see that the advantages of the rich over the poor have originated from nothing but rods, prisons, convict-settlements, and murder. One need but consider the unceasing and persistent struggle to increase material prosperity that guides everybody in our times, to be convinced that the advantages of the rich over the poor could not and cannot be maintained by anything but violence. There may be cases where oppressions, beatings, prisons, and executions, are not inflicted to secure the advantages of the propertied classes (though such cases are rare). But one may confidently say that in our society (where for every well-to-do man living in comfort there are ten who are exhausted by labour, envious, covetous, and whose whole families are often suffering) all the advantages of the rich, all their luxuries and superfluities, all that is beyond what an average workman possesses, is obtained and maintained by tortures, imprisonments, and executions... The society lady does not deliberately argue that if there were no capitalists and no army to defend them, her husband would have no money and she consequently would have no *salon* and no wonderful gowns; and the artist does not reflect that capitalists defended by armies are necessary for him in order that there be buyers for his pictures. But instinct, which in this case takes the place of reason, guides them unerringly.

Inequality in Latin America begins with the most unequal land-distribution system in the world. Typically, except in the unstable small countries of Central America, fewer than 10[%] of the landowners own 98[%] of the land... [T]he remaining 2[%] of land... is the soil that was left over.

Peasants have marched on the Brazilian capital to demand speedier land reforms. Thousands of supporters joined in as the protesters walked into the city. The peasants are demanding jobs and distribution of land to the landless. The peasants also want justice for 19 colleagues shot dead by police in a land protest a year ago.

...A Brazilian judge has ordered 153 police officers, including nine senior officers, to stand trial for the 1996 killing of landless peasants who were protesting on an Amazonian highway... [In related news,] Mexican authorities have captured a fruit vendor they allege was a hired gun who murdered up to 200 activists on behalf of rural landowners... [He] received from 20,000 to 100,000 pesos (about \$[NZ]4020 to \$20,120) per hit... His arrest exposed a murky Mexican underworld in which some major land owners routinely bump off pesky political activists and squatters. "Cacique" means Indian chief, but has been used as a nickname for men controlling vast stretches of land who operate outside the law. Reminiscent of the American Old West, many exist today on rich lands far from major cities.

...Two hundred mourning family members and friends huddled in a southern Mexican village yesterday holding a vigil with candles... awaiting the delivery of the bodies of 45 massacred Tzotzil Indians – among them 21 women and 14 children – who died in a five-hour bloodbath... [by] some 25 masked killers... this week. Survivors... and local people believe the killers were paramilitaries backed by local branches of [the President's] Institutional Revolutionary Party... The massacre... sparked world outrage as the U[N] condemned the killings...

The men arrested [for] the massacre... look much like their victims. They speak the same Maya Indian language. They live in the same highlands municipality. They farm the same subsistence plots. That has left many Mexicans struggling to understand how political differences among them could have led those men to form a death squad and gun down their neighbours with chilling brutality... One answer may be land. In this largely agricultural state, thousands of people of different political affiliations have been run off their farms by gunshots in the night... The Attorney-General... said... the dispute in the county goes back to the 1930s and centres on three families competing for economic and political power. A prominent member of one of the families... the ruling-party municipal president, was among those arrested. Some... witnesses say local police knew

of the... massacre as it started and refused to enter the town. State government officials said local police told them halfway into the massacre that the town was peaceful. And... state officials tried to cover up the massacre when it ended by piling the bodies into a truck and speeding them away to the state capital.

...[in Mexico, large estates and private holdings were confiscated by the government and redistributed among the native villages for purposes of farming – to make the importation of food unnecessary – and to correct the abuses of peonage. It was a communal system, title to all land being held by the state for the village, and the fertile portions, usually worked collectively, being distributed equally among family heads. The *ejido* system, stipulated by the constitution of 1917, was not energetically enforced until the presidency of Lazaro Cardenas – 1934-40; by 1945, 65,000,000 acres had been redistributed.]

...[In 1932, an Afrikaner adventurer persuaded a local villager to take him to the ancestral burial site of Mapungubwe. He was about to uncover some of the last remaining royal treasure in all of southern Africa – the few precious links to a long forgotten past. Though rescued, these treasures remain hidden from public view. To this day, the University of Pretoria has allowed only a few archaeologists access to these remarkable finds. All this secrecy has its roots in Apartheid. Dutch settlers maintained that blacks and whites had arrived in the area at roughly the same time, giving them equal claim to the territory. When carbon-dating placed Mapungubwe as early as 1200AD, white South Africans refused to believe blacks had arrived in the region over 400 years earlier than the first whites – and only 100 years later, founded one of the greatest African empires. While Europe was in the Middle Ages, southern Africa was dominated by the kingdom of Great Zimbabwe (House of Stone). In its heyday, Great Zimbabwe was a thriving metropolis, unique in all of Africa – as big as London at the time. It's not obvious why, but by the end of the 1500s the empire's buildings would lie forgotten. Their cultural legacy would suffer an even worse fate. Until recently, Zimbabwe's real history was denied by whites convinced that blacks couldn't have created such monumental structures.]

...Rhodesia's former P[M... who once said black rule would not come to Rhodesia (now Zimbabwe) in 1000 years, is among farmers whose land will be seized for redistribution to black peasants... The Zimbabwean Government on Friday gazetted 1503 farms, owned mostly by white commercial farmers, that it plans to take over to resettle peasants... The list... also includes farms owned by some companies, and prominent people such as the... family of South Africa's gold mining group Anglo American Corporation... - 1997

Zimbabwe war veterans say they will ignore a court order to vacate hundreds of white-owned farms they have invaded in the past month... [A] spokesman for veterans in Harare province, told a rally in the capital at the weekend that, if anything, more farms would be occupied. "We fought for land, and we are getting this land now. Anyone who wants to deny us the land of our forefathers will have to fight us, and we are ready for that fight." On Friday, the High Court gave the veterans 24 hours to leave the farms... saying police would evict those who did not comply. The Commercial Farmers Union, grouping 4500 mostly white members who were targeted in the invasions of more than 600 farms, had appealed to the court to declare the invasions illegal. [The]Home Affairs Minister... said the former guerrillas from Zimbabwe's 1970s war against white minority rule had gone beyond the peaceful demonstrations they had promised Government officials by interfering with farming operations, destroying property and threatening farmers and their workers. The veterans, who say their actions are meant to bolster [the President]'s plans to forcibly acquire white farms for landless blacks, have defied the minister's orders and the police have not acted, arguing it is a "political problem." A week ago [the President contradicted his minister]'s directive by saying the former fighters could stay on the farms provided they were peaceful. An opinion poll published last week showed that very few people supported [hi]s land seizure programme, with many preferring a reform plan that could attract international support. [The President] said Zimbabwe's former colonial master, Britain, had to assume responsibility for compensation because whites inherited the land from British ancestors who "stole" it when the country was colonised in the 1890s. He said it was immoral for 4500 white farmers to own 70[%] of the most fertile farming land while majority blacks are crammed in unproductive districts. His critics say [he] has allocated most of the land the Government has acquired for resettlement in the past 20 years to Government officials and their cronies.

...Hundreds of stone-throwing supporters of [the]President attacked a peaceful demonstration... [- protesting] at the takeover of... white-owned farms... [-] in Harare at the weekend, singling out whites for particular brutality... 50 riot police... made no attempt to disperse the mob.

...Zimbabwe[']s President... aims to intensify his land reform plans, involving the redistribution of white-owned land, after general elections this month. He... dismissed accusations by his critics that he deployed the veterans on to the farms as part of a campaign strategy... [The President], whose 20-year-old Government is fighting its biggest electoral challenge yet from the Movement for Democratic Change (MDC) in the face of a severe economic crisis, said... his ruling party... Zanu-PF would win the election fairly... At least 27 people, mostly MDC activists and five farmers, have been killed in a wave of violence that has swept the country... [The President] denies his Zanu-PF is sponsoring political violence, and instead accuses the MDC of provoking his supporters as part of a campaign to tarnish his image abroad.

...Zimbabwe's former state President... was found guilty yesterday of 11 charges of sodomy, attempted sodomy and indecent assault.[The] High Court... also issued a warrant for the arrest of the former President... - [who]... was alleged to have used his position as head of state between 1980 and 1987 to force... aides, bodyguards and a gardener... into submitting to sex with him... - after the state prosecutor said [he']d skipped the country and was seeking asylum... from the Anglican church... in neighbouring Botswana... [The] 62-year-old cleric, has been on bail since September 1997 when he... first... face[d] the charges. His trial proceeded in June this year only after the Supreme Court rejected his appeal that adverse pre-trial publicity had prejudiced his right to a fair hearing. [His] trial has been embarrassing for[the incumbent] President... who has outlawed gays and repeatedly described them as "lower than pigs and dogs." ...Meanwhile, the Commonwealth observer mission to Zimbabwe [has begun] work ahead of the elections, saying it expected[the] Government to give it full access to all areas during the poll. [The delegation's] leader and former Nigerian military leader... said in Harare that his group – including [two N]Z... members – was fully independent of[the new, NZ-born.] Commonwealth Secretary-General... [● L]ast night... Zimbabwe police said... they had arrested at least 133 white farmers for seizing orders to vacate their farms under [the President's]... controversial land reform programme... [And the] President... is threatening to seize the assets of foreign mining companies, dealing a further blow to investor confidence in a country already suffering political and economic turmoil.

...A white farmer was... killed at the weekend in Zimbabwe... [as the] land crisis... deepened, with banks halting new loans to embattled white farmers, raising fears that depleted harvests will result in food shortages. The violent occupations of white-owned farms and the uncertainty over a Government programme to nationalise thousands of the farms... without payment... have prevented many farmers from repaying existing loans, said the Commercial Farmers Union and the Zimbabwe Bankers Association... In addition, many farmers delayed investing in future harvests after the Government announced it would hand back 3000 properties to landless blacks... White farmers produce nearly half the country's 2.2 million tonnes of corn, the staple food, and most of its capital-intensive soy and wheat crops... In what theoretically amounts to one of the biggest population movements carried out in any country, the 76-year-old President... - [whose]... Zanu-PF only narrowly won... the... election... - ...says... an estimated 3 million people... will be moved on to 4.9 million hectares of land before the start of the rainy season in October.

...Tough legislation likened to the worst excesses of the apartheid era in South Africa... and stif[ing] free speech... will be pushed through Parliament in Harare this week... Whites may live in Zimbabwe but will never have a voice equal to that of blacks, says [the]President... On the economic front, the Government said the embattled economy had broken through the 100[%] inflation barrier for the first time.

...FARM invasions... are increasing in contravention of an international agreement signed three weeks ago. Under the Abuja accord, signed at a Commonwealth meeting in the Nigerian capital, the Zimbabwean authorities pledged to abide by the rule of law. In return, Britain agreed to

provide funding for orderly land reform. The deal was hailed as a victory for diplomacy, but opposition leaders have reported that it has been repeatedly flouted by [the Zanu-PF] government. There is evidence of a growing campaign to try to intimidate white farmers into leaving their properties, even though the agreement stated there were to be no more forced seizures of white-owned farms by self-styled war veterans of Zimbabwe's independence struggle... Meanwhile, the collapse of the farming industry is having a dire effect on poor rural communities in the south. The World Food Programme has warned of a growing danger of deaths from starvation and says at least 600,000 tons of grain is needed. In the cities, food is still available, but rampant inflation has pushed numerous items beyond the reach of many.

...BRITS are being offered a real estate deal which is out of this world. For \$35 they can buy a piece of the moon through MoonEstates.com.

...Internet users have been urged to report dodgy e-mail investment opportunities... to the A[US] Securities and Investments Commission... after a Sydney man was offered a block of land on Mars... The Mars Land Authority offered cash-only land packages of 100ha to 1000ha... for between \$A10 and \$A45... Worldwide Web browsers... could even win... a \$A50 prize as part of Asic's monthly "Gull Award – tales of the truly gullible."

...[THE ultimate risky property deal: Buy part of the Moon, or Mars, or any other planet in our solar system for that matter. Direct from – you guessed it – the US of A, an entrepreneur is selling 728ha blocks of the moon for \$25. The 39th and 40th Presidents have bought their stary plots, along with a host of other celebs. So too have 11,000 other "investors" since the entrepreneur's unreal estate business, Lunar Embassy in California, has been on the Internet. He hit on the idea of selling chunks of the solar system one day when, short of the readies, he looked skyward for inspiration. He drew up a title deed, declared ownership and filed his claim with his local council, the US and Russian governments and the UN. It sounds crazy, but an expert on space law says the entrepreneur is doing nothing illegal. Technically, there's no law saying people can't own the moon – not to say that the entrepreneur does. And, as no reasonable person could actually believe they were buying a piece of the moon for \$25, it's unlikely to be classed as fraud.' Editor's note: If an alien was to come to Earth with a *scrap of paper* which said a league of Milky Way planets acknowledges its claim to own the Solar System, would *the US and Russian governments and the UN* accept that the claim is valid?]

...Like most people I don't believe everything I'm told. I don't believe... aliens landed at Roswell... that Lee Harvey Oswald acted alone that fateful day in Dallas... and I certainly don't believe my uncle... when he says he was just trying to help a neighbour get a wasp out of her blouse... But ask me to believe that we never landed on the moon, that [an astronaut] never took that giant leap for mankind and that it was all a \$40 billion Nasa hoax and frankly I'm struggling. Some of the arguments put forward in *Conspiracy Theory: Did We Land On The Moon?* are pretty convincing – they'd have to be, otherwise there wouldn't be a programme. But who is really willing to believe that the Eagle never landed and that billions world-wide were tricked into mistaking film shot in the Nevada desert for a lunar landscape? Well quite a few it seems and this programme really is a conspiracy theorists' paradise... • The American flag is filmed waving on the moon – even though there is no air. • The lunar module landed with 10,000lb of thrust but no blast crater is evident on any pictures. • The American public was terrified at the prospect of the Russians winning the space race. Many thought they wanted to put a missile base on the Moon. To allay fears America adopted an 'if you can't make it, fake it' approach to the Apollo programme. • Between 1964 and 1967, 10 astronauts lost their lives in freak accidents. Did they die because they wouldn't buy into the conspiracy? ...the poor old Nasa spokesman landed with the job of trying to prove the zealots wrong... says 'we went'. End of story. But even a sceptic like me has to do a double take when faced with some of the so-called photographic evidence of lunar landings. For reference purposes cross hairs were etched onto the lunar camera so they would appear on top of every image. In some cases they are behind in the image. Other pictures show shadows going in more than one direction, hard to explain when the only source of light is the sun. But doesn't all this sound just like a little too paranoid? A little too like the plot for the 1978 movie *Capricorn One* which faked a mission to Mars. (Incidentally, it starred [someone who is] himself the centre of many conspiracy theories.) Who knows? In [a fe]w years Japan will send a space craft to take close-up pictures of the Moon's surface. For Nasa's sake, let's hope they find evidence of lunar landings...

[The 41st President] reaches for the sky... [He] has set his sights on the moon, Mars and beyond in a sweeping space programme but his plans could fall victim to congressional criticism and a budget squeeze. Some Congress members called his plan mere daydreaming at a time of conflicting financial priorities, deficits of more than \$US100 billion... annually and his refusal to back any tax increases. Congressional critics estimated the price tag for [the] moon-Mars programme at \$400 billion. "I guess the bottom line is you can't go to Mars on a credit card," said the House budget committee chairman... On the 20th anniversary of the first manned lunar landing [the President] outlined the most far-reaching space plan since 1961 when President John F. Kennedy called for Americans to be the first to step on the moon. Unlike Mr Kennedy, who wanted a moon walk in the 1960s, [the incumbent President] refused to target a specific date and instead called for a "long range, continuing commitment" to space travel. He said the programme should be three-phased, starting with a "Space Station Freedom" in orbit in the 1990s. "And next – for the new century – back to the moon. Back to the future. And this time, back to stay," he said. - 1989

...he can't get out of his bed he ain't got no hair on his head and he makes me think what's going on... cause when you think about... the money that they send to the Moon... well it might as well be going to the Sun[to] burn it all up cause Jacky's dying and there's millions like him...

In a remote part of Siberia, residents are suffering from unusual diseases... Doctors in the village... about 3300km east of Moscow, have reported patients complaining of unexpected seizures, high fevers, breathing problems and anaemia... Some newborns have yellow skin and only live five or six months. The area around Ust-Ulagan and other parts of the small Altai republic have been used since the 1960s as a missile testing ground. The area also lies in the path of spacecraft launched from the Baikonur Cosmodrome in neighbouring Kazakhstan. The spacecraft drop fuel tanks as they soar into space. Surrounding woodlands, including the Altai forest reserve, are littered with... fuel tanks... The tanks can contain up to a tonne of highly toxic unburnt fuel, and no one knows how many have been dropped over the years except the military, which is not telling... [More forthcoming are a] team of American scientists[who] said yesterday that they have discovered evidence of ancient, single-cell life on Mars in remains from a meteorite... A consortium of Nasa and university scientists said microfossil remains in the meteorite indicate that a primitive form of life may have existed on Mars billions of years ago... Scientists cautioned against people envisioning Hollywood-inspired creatures from outer space.

...Fear not – the alien invasion signalled by the discovery of life on Mars may be some way off... [said m]uch of the scientific information the public received was not particularly trustworthy, which made it difficult to adequately discuss the finding... [An] astronomy professor... at the University of Cardiff... hoped the Nasa claims could be verified[, but also]... had reservations. "Considering Nasa is absolutely avid to get funding from Congress, one has to be a bit suspicious." ...However, an internationally known space scientist... of Napier – whose achievements include having an asteroid named after him – said the discovery was extraordinary... [The d]irector of the Max Planck Institute in Germany and the 1995 N[Z]er of the Year... had no doubts that the discovery was genuine and not manufactured to bolster space exploration funding. "Science doesn't work like that..." It was only within the past 10 to 15 years that scientists had known that meteorites came from Mars. Before that they assumed they came from the asteroid belt... As a result of the find the pressure to visit Mars would increase. There had been only one successful mission to Mars in the early 1970s when the Americans landed two Viking spacecraft.

...Evidence of primitive life on Mars is expected to accelerate space exploration... [The US President has already] pledged to commit more Nasa resources... "I am determined... the... space programme will put its full intellectual power and technological prowess behind the search for further evidence of life on Mars,"... "There are over 10 spacecraft on the books right now," said a Nasa administrator... That armada will begin blasting off late this year when Nasa launches Mars Pathfinder, which will deliver a robotic lander to the surface of the planet on July 4, 1997... The lander will be followed by Mars Global Surveyor, a mapping satellite that will begin orbiting Mars in March 1998... [The cost of] the two probes... [is e]stimated at \$US300 million... each... [■] A British gambler [has] won £1000... with a bet he placed last August that alien life would be discovered within a year... Little expecting yesterday's announcement from Nasa that it had found evidence[, a British]... bookmaker... gave odds of 10-to-one on the bet... [Last night the bookmaker] said it had cut its odds on the discovery within a year of intelligent alien life to 25-to-one from 500-to-one.

...China poured scorn yesterday on the American announcement of fossilised evidence of life on Mars, saying... [that a]fter the "fake research findings" in discovering cold fusion were laid bare a few years ago... an increasing number of scientists have stopped believing America's "sensational discoveries." ... "Geologists from all over the world" at the 30th International Geological Congress in Beijing doubt [Nasa's] reports... the official Xinhua news agency said... The dispute over the potato-sized rock is only the latest in claims and counterclaims that have made the congress a hotbed of scientific discussion. Earlier yesterday... a Beijing University biologist, presented what might be "the only reliable evidence" that sexual differentiation occurred as early as 620 million years ago – preparing the world for sex 50 million years later... [S]ex joined the list of things "first discovered" by China's busy scientists, along with "evidence" that evolution was carried forward by giant meteorites...

In their first appearance before a major audience of professional astronomers, Nasa scientists vigorously defended their theory that a meteorite... thought to have been jolted away from Mars... showed evidence of ancient life on the red planet. Though they got respectful applause from researchers at a meeting of the American Astronomical Society's planetary division, the N[asa] team also got blunt scepticism and an outline of what they must prove to satisfy critics. "This is not bad for a new theory. It is much better than cold fusion," said [a researcher from]... the University of Arizona... But he said that few astronomers were ready... to accept the... theory... [S]everal times the [team] admitted they had yet to develop enough evidence to settle some controversial issues.

...A Nasa scientist has discovered what may be signs of life in a second meteorite... [that] could have been knocked away... from Mars... 600,000 years ago... The newest sign of life was found in a rock billions of years younger than the first, [the scientist] said, noting that "most of the lifetime of Mars is in this range between the two meteorites." Scientists said the first meteorite with signs of... polycyclic aromatic hydrocarbons... was thought to have formed on Mars 4.5 billion years ago, a time when the solar system was forming... [By the way, a] Russian space probe launched yesterday on a mission to Mars ran into problems after liftoff and officials say it will probably re-enter the Earth's atmosphere and burn up. "We've got a problem. The probe had been due to leave the Earth's orbit last night but it is still there," said... a spokesman for the Russian Space Agency... The probe could spend a maximum of 30 days orbiting Earth and another official said the team, which had lost contact with the craft, would continue trying to trace it... The six-tonne probe, which lifted off from Baikonur space centre... at 11.48 pm on Saturday Moscow time... had been due to reach Mars on September 12 next year. Mars-96 was launched two years behind schedule due to cash shortages in [Russia's] hard-pressed space sector. The... \$US64 million... probe is carrying 1.1 tonnes of scientific equipment from 20 European countries and the U[S]... Participating countries are not saying exactly how much money they contributed to the Mars-96 project, but a total of about \$US1 billion... is said to have been invested over the last two years... The... mission is the second of three planned trips from Earth to Mars in just over a month. The U[S] launched one craft two weeks ago and a second mission will blast off on December 2. [One of those craft can be expected to have problems because '2/3rds of 29 missions to Mars have failed.']

...□ CRASHED: Into the Pacific Ocean near Easter Island, the remains of Russia's Mars-96 \$260 million mission.

...The Russians couldn't get it up; the Americans couldn't pin it down, but either way the doomed Mars space probe got this part of the planet in a bit of a spin yesterday. The final frontier was the furthest thing from the disabled probe's expensive sensors as it hurtled back towards Earth... at the end of its 26-hour voyage... In its final erratic path the 2.3m-long probe, travelling at 27,400 km/h, spurred early-morning presidential calls, an A[US]n defence alert, and informal betting on where it would land. N[Z] had its time in the spotlight when a U[S] National Security Council official told... CNN that the probe was expected to plunge into the ocean 800km south-east of [NZ] "within minutes." In fact it passed about 100km above Southland. Hamilton wasted no time in putting its residents on full alert that a satellite... could be heading their way. In a statement headed: "Don't touch spacecraft," the city's civil defence officer... said people should not touch any debris, but immediately inform the police... The probe carried two tiny plutonium batteries about the size of 35mm film canisters containing a total of 200g of the radioactive material, but Russian officials said they were designed to survive the intense heat of re-entry and the impact of a crash.

...[Chile has] demanded that Russia provide more information on the exact trajectory... the doomed Mars probe took as it plunged toward earth on November 16... Russian scientists say... the probe... powered by 200g of deadly plutonium... splashed into the Pacific between Easter Island and the Chilean mainland. U[S] space experts believe it may have crashed in Chile's northern Atacama Desert, and eyewitnesses in the port of Antofagasta say they saw the spacecraft disintegrating over land.

...The Russian probe that fell to Earth this week is one of several spacecraft that have crashed through the atmosphere in recent years... The largest... to plunge from orbit was the Space Agency's 77-tonne Skylab space station, which in 1979 flung... 15,000 pieces of wreckage along a 4400km sparsely populated swath of Western A[US]. One of the biggest pieces to survive was an 80kg lump of aluminium. Parts of Russia's Salyut 7 space station are thought to have survived re-entry when it tumbled out of orbit in 1991. Most of the 39-tonne space laboratory fell into the Atlantic... but some pieces reportedly crashed in Argentina. The worst nuclear space accident was in 1978 when a Soviet Cosmos spy satellite burnt up over... Canada, scattering radioactive debris from its nuclear reactor over a wide area. The Soviet authorities were forced to pay for a huge clean-up. Very little of the tens of thousands of pieces of space debris orbiting Earth reaches the ground. Most wreckage that survives the fiery plunge through the atmosphere falls in uninhabited regions or into the oceans... No one had ever been injured or killed by space debris, nor had there been any property damage, [a]... Space Command... spokeswoman... said. The chances of being hit by falling space junk were "very... slim."

...[a 'woman in the US has been hit by space junk.' Don't laugh – you could be next: 'metal balls from a Soviet craft have fallen onto the South Island' in the past! By the way, Nasa] is working on plans to send six astronauts to Mars within eight years of getting the political go-ahead for a manned mission, says the scientist who is running the project. [The scientist] told the BBC he was put in charge of the work after Nasa announced earlier this year that evidence of traces of primitive life had been found in a meteorite from Mars... "We don't have strong enough evidence to conclude that there was ever life on Mars," [he now admits]... Nasa is due to launch a... mission tomorrow designed to take a Mars Rover to the planet. - 1996

To find out if life once existed on Mars, a prominent scientist says Nasa should launch a 15-year effort to retrieve and analyse rocks from the red planet – looking for three key ingredients... • *Chemicals*. There are certain types of carbon-containing molecules that could be produced only by living organisms... • *Isotopes*. Life prefers to absorb some types... of carbon atoms from the environment. So those preferred types of carbon should be more prevalent in places where life has been than in barren rocks... • *Fossils*... "The combination of those three would win over most sceptics, I think,"... [H]e recommended sending a series of probes to Mars... The first probes would scout out promising places to look for rock samples, and later missions would collect the specimens and return them to Earth. Using such a strategy... we could have the right Mars rock in our hands by 2010. He notes that Nasa already has two probes on the way to the red planet. "Looking for evidence of life on Mars really makes a whole lot of

sense.” ...[the] geochemist at the University of California-San Diego, is an outspoken sceptic of the theory that traces of ancient microbes were present in a... 1.8kg... meteorite from Mars.

...Scientists have cast more doubt on whether an ancient meteorite found in Antarctica contains fossils of life on Mars... [A] group... at the University of Hawaii on Wednesday said their analysis indicated that carbonates in the rock – taken as evidence of life – were formed as part of a high-impact shock... [While on the topic of Mars, t]he last earthly craft to touch [the red planet] were Nasa’s twin Viking landers which set down in 1976, scooping up sand yet finding no trace of living things. Four US and Russian Mars-bound missions have flopped in the past decade, including America’s \$US1 billion... Mars Observer that was lost in space in 1993... But given Pathfinder’s excellent performance since it was launched last December[... its]... deputy project manager... foresees “an outstanding chance of pulling this thing off.” ...After its airbag-cushioned touchdown, Pathfinder will release Sojourner... for at least a week... It should provide what scientists call “ground truth” for more distant observations by the Mars Global Surveyor, which was launched in November 1996... Nasa plans to launch pairs of orbiters and landers every 26 months... Human travel could come in 2011, depending on the will of taxpayers and the advancement of technology... Scientists are devising schemes to create fuel from raw materials... to propel returns from Mars.

...a spaniel-sized robot is scheduled to begin trundling over the red sands of Mars... in... a day or two... At a cost of... \$US267.5 million... the Mini Moke might seem costly. Yet [to] most scientists... the likely scientific returns – testing technology that may one day reveal life on Mars – justify the cost... Certainly, the little robot looks cheap compared with other recent ventures. Just getting [one] Nasa astronaut... to space station Mir... to keep [it] on its gloomy, rudderless wobbles... soaked up twice the Mars mission’s budget. And that was before he and his colleagues trashed their orbiting rustbucket with a bungled parking practice... [Most of Nasa’s] funds are now being diverted to space station work... Newspapers are urging that Mir be abandoned.[‘Mir was built before CDs. By today’s standards it’s a museum piece.’] It is just not the hardware that is out of date but the very concept of a space station. We simply don’t need to keep men in space for long periods. That is the mentality of the Dan Dare age of space colonisation. Instead we should survey our solar system cheaply, safely – and robotically... The... Sojourner robot rover... project is the first of a series of Mars missions, due to end, next century, with the return of soil and rock samples to Earth. These may provide final proof that life once existed there, or still does – an issue of major importance. The total cost of these missions is unlikely to exceed a few billion dollars. By contrast, the... Mir... successor, the International Space Station... will cost 30 times that figure.[‘The station’s latest incarnation has already surpassed Nasa’s “guaranteed” maximum budget of \$US17 billion by between \$4 billion and \$7 billion. By the time the last of 700-plus rocket and shuttle launches have lofted the ISS’s components into orbit 350km above Earth, the final cost of the single biggest project in world space history could be \$40 billion.’] Yet its prospects of producing ground-breaking research are remote. So why pour endless cash into a scientific black hole? ...The motivation has nothing to do with science and everything to do with politics. The space station was originally conceived by [the 40th] President... as a symbol of U[S] technological might. With the demise of the Soviet Union it became a symbol of “a new era of scientific cooperation.”

...RUSSIA, the once proud superpower, has seen its economy collapse and its armed forces disintegrate. Now the country that pioneered space exploration, faces a future without a space programme of its own. With the weary crew of Mir struggling to maintain power on the crippled spaceship, American officials are considering pulling the plug on Russia’s once-mighty space programme... Four decades ago, the Soviet Union established its lead in space... by launching the first satellite, Sputnik 1, followed soon after by the first live space flight, by Laika, a dog. The greatest Soviet triumph came on April 12, 1961, when [a cosmonaut] became the first man in space. After that flight, President Kennedy set America the task of putting a man on the moon... Losing the race to the moon did little to slow Soviet advance... In 1971 the Soviet Union launched the first of seven Salyut space stations. Mir has been permanently occupied ever since its launch... Even before last month’s orbital collision, which wiped out almost half the station’s power supply, US politicians and space agency officials had expressed doubt about safety aboard the complex... Since the station entered service in 1986, there have been almost 1500 minor breakdowns, 60 of which have been left unrepaired. In recent months accidents have included the breakdown of the cooling system, the air-processing system, and... a small fire... [In addition, it was discovered that the station’s ‘electrics had been affected by microbes that ate metal and glass.’ The station is still in service because it] remains the sole prestige project where Russia can claim world leadership. [However, t]hat is only possible with American money. [‘The Russian space budget has shrivelled from \$3.2 billion in 1988 to a paltry \$530 million for 1998’ while Nasa] pumps \$755 million a year into the Mir programme... If Nasa pulls out, it would seem very unlikely that other participating countries would continue to pay... Without these funds, Mir would have to be put out of its misery.

...Life on the orbiting Russian Mir space station can be distinctly unglamorous, with chores that include cleaning the toilet and scrubbing fluff from air filters, says [an] astronaut... aged 41, [who recently] joined the... station... Since arriving... [the] medical doctor and researcher, has taken part in experiments and repairs to the station... The astronaut lost his bedroom after a leak developed in the hatch next to his cabin. He now sleeps near a crammed storage area, where he found himself disoriented after waking up on the ceiling one morning... He has also written a series of e-mail letters home... In some of his letters he marvels at Mir’s life support systems...

While some of Mir’s systems require complex computer commands and high-tech wizardry, the ship’s air and water systems need the fuel of just urine and sweat... The crew of two Russians and one American have recently worked to restore the main Elektron oxygen-generating system... The chemistry is straightforward, recycling urine into water and then stripping out the hydrogen from the water... With the cosmonaut’s daily output of 1.2 litres of urine, the Elektron makes 0.86kg of oxygen – the exact amount needed daily... For drinking water, the cosmonauts rely mostly on their sweat, which floats weightlessly round the station before gathering into a... water purifier. “A person produces a litre and a half of sweat a day... From this we produce distilled water, but this water is not tasty, so we add salts...” Over the... 11 years while Mir has been in orbit, scientists have learned that a cosmonaut needs 2.7 litres of water a day. Of that... 0.6 comes... from moisture in food, and [an equal amount]t from fresh supplies sent up from Earth. Other human waste products are not recycled. Solid waste is gathered and eventually carted away on the Progress cargo ship. Another on-board filter strips out harmful elements from human gases, dumping them into space.

...Filthy conditions on board Russia’s space station... have given its occupants food poisoning and other infections, according to [an] Italian microbiologist... who has been monitoring hygiene on the ageing craft... His research [also] shows that people living in confined, dirty, sweaty conditions, like those seen on board Mir, can shed up to 50,000 micro-organisms a minute. Under normal conditions, the figure is just under 3000.

...Life on the space station Mir may not be comfortable, but it is profitable for the Russian cosmonauts who undertake missions averaging about six months in orbit. Cosmonauts typically make \$US400 to \$600 a day when various bonuses such as hardship pay are added [– and those bonuses may have increased since the ‘cosmonauts started doing TV ads promoting US products from Mir as a way to raise additional funds for the station’].

...CNN is considering a new reporting beat... A CNN spokesman... yesterday... said that he had heard [of] prices for a Mir visit ranging from \$US5 m... to \$US15 m... The Tokyo Broadcasting System paid \$US12 m... to send [a] news director... on an [8]-day Mir mission in December 1990.

...[‘If all goes according to plan, if the conditions on the steppes of south central Kazakhstan are deemed correct, and if a last-minute computer hitch is overcome, a U[S]er will tomorrow become the world’s first space tourist. The 60-year-old Ferrari-driving tycoon has received permission from Nasa to join a team that will be rocketed to the space station orbiting above Earth. Nasa is not happy. It has opposed the plan – whereby the U[S]er paid \$US20 million to the Russians to take part in the 10-day mission aboard a Soyuz spacecraft – claiming that a “civilian” would be a severe safety risk. In the end, Nasa agreed.’]

...‘The world’s first space tourist was in orbit last night on board a Russian rocket. The tycoon’s 26-year-old son watched the launch. “Wow, what an adrenalin rush. If I had the chance, I’d definitely do this.” Nasa had wanted the tycoon’s ride postponed until another flight, insisting he didn’t have

enough training and could jeopardise the work of the station's crew. But Russian officials said the former rocket engineer had received the equivalent of a cosmonaut's training. The Soyuz craft will not reach the station for at least 2 days, and the crew are expected to be at the station for 6 days. They'll replace its escape craft, whose service lifetime expires this month. The Soyuz capsule will serve as the new lifeboat, and the 3 men will return on the older ship.'

...at least one 'university student can already picture an engineering career exploring the mechanics of catapulting legions of tourists into outer space, while a marketing major dreams of enticing businesses to invest in orbiting science laboratories, and a hotel and resort management student is pondering ways to make food taste better in a space hotel. All three have been through the New York Rochester Institute of Technology's trailblazing course in space tourism development. It is an exercise in big dreams and small practicalities. An oft-repeated sentiment is that space tourism is closer to reality than most people imagine. One entrepreneur who visited the class hopes to open a ring-shaped, 500-person resort from discarded space-shuttle fuel rockets by 2007. "The first stations will be filled with actor-types willing to pay \$US1 million or \$5 million to be the first 10,000 guests up there," said the entrepreneur, whose Space Island Group wants to raise \$500 million this year for development.' Another 'private company is hoping to turn Mir into a space hotel'...

A 'BRITISH entrepreneur is planning a hotel in space and has registered a company called Virgin Galactic Airways to ferry guests into orbit. Britain's Times newspaper said last month that the entrepreneur was talking to a Californian rocket company about planned space jaunts for tourists for a fare of around \$183,621. "We're looking at various things that could enable people to go to space for a reasonable price," the Virgin boss told internet users on an online discussion group on Wednesday night. He said he would set up a hotel somewhere in space. "I hope in five years a reusable rocket will have been developed, which can take up to 10 people at a time to stay at the Virgin Hotel for two weeks. I'd love to do it and I hope the dream will become a reality," he said.' Speaking of dreaming, two] **Yemeni men claiming ownership of Mars have filed a lawsuit against the US space agency Nasa for trespassing during its current mission to the red planet. The...** [Yemeni men] had presented documents to the country's prosecutor-general which they said proved... "..."they received the planet as an inheritance from ancient ancestors..."...

The Mars Pathfinder has yielded the strongest evidence yet that Mars, like Earth, has a crust, a mantle and an iron core and therefore may have once hosted life forms... Scientists at Nasa's Jet Propulsion Laboratory in California say they do not yet know whether the iron core is solid, or molten like Earth's... So far the orbiting Mars Global Surveyor has found evidence of a weak magnetic field, but scientists are unsure whether it was generated from the core... Both rover and lander have out-lived their primary missions – seven days for the rover and 30 for the lander – but scientists said both could function for months more... The[scientists] are... still far from finding another component of life on Mars – water. But they have detected signs that the surface once teemed with streams and canyons that moved rocks around. [□ Nasa has announced plans to send a 'water-seeking robot probe to the Moon in the first week of 1998 for a budget price tag of \$US63 million. Scientists hope there is enough ice to support a colony of humans. It could also help them to identify the cheapest method of mining lunar rock.'

...'A lump of 3.9 billion-year-old moon rock brought to Earth by the crew of Apollo 17 and given to the Government of Honduras as a gift has been seized because it was smuggled into the US. The rock was being offered for sale for \$US5 million, US officials said. Although there is a vigorous black market in phoney space memorabilia it is the first time a genuine moon rock being offered for sale has been seized by US authorities. The sale of moon rock is not illegal. The pebble was seized because it was not declared to Customs, but officials were uncertain who had smuggled it.'

...The last humans to walk on the moon... said yesterday that it was time to turn from space exploration to exploitation. "The moon is a player in the energy scenario of the future." ...Helium-3, a lunar gas not found on Earth, constitutes "an ideal fuel for fusion reactor[s]." Incidentally, it has been alleged that uranium 'only comes from outer space']...

The world has almost... become used to nuclear-powered ships (except in our backyard) and we know there are some nukes in space. After October, when Nasa launches its Cassini space probe, another 32.9kg of radioactive material... will be floating in infinity. This is not the first time a probe has used plutonium to fuel its nuclear reactors but previous amounts have been much smaller... The risks involved in the project were several, said [a NZ lawyer]. He dotted in to his Tauranga home this month on leave from his job in New York as executive director of the International Lawyers' Committee on Nuclear Policy. The lawyers' group is one of those whose hard work resulted in the landmark decision exactly a year ago by the International Court of Justice in the Hague on the illegality of the use and threat of use of nuclear weapons... "...Now the onus is on states to prove that what they are doing is not damaging." The anti-nuclear lobby in the U[S] has picked up this aspect of the ruling to urge Nasa to postpone the Cassini project until safer fuels can be used. It says the Titan IV rocket which will launch the probe has malfunctioned on several occasions, the last time being in 1993 when one exploded in California, destroying a \$NZ1.5 billion spy satellite system. If the rocket carrying the Cassini probe explodes plutonium would be scattered over parts of Florida. According to Nasa's "final environmental impact statement on the Cassini mission" any miscalculation, however, slight, could cause the craft to re-enter the Earth's atmosphere when it circles the planet before heading for Saturn. If it did so, half the population could be exposed to radiation... Nasa estimates the chance of the rocket exploding on launch and releasing plutonium into the air at one in 1500. The plutonium is in the form of super-hardened ceramic chunks that can't be inhaled. Moreover, say safety officials, Cassini will ride atop an unmanned rocket, unlike the Galileo and Ulysses mission which rode on shuttles.

...It is an interplanetary explorer with a noble purpose but a controversial load: 32.6kg of highly radioactive plutonium. This nuclear power source has Nasa preparing for the upcoming launch of its... 5715kg... Cassini spacecraft... and the unmanned Titan 4B rocket that will carry it from Earth... amid stepped-up security and secrecy[among the '5000 scientists and engineers who have worked on the project']. The fear is sabotage. Antinuclear activists are threatening to use all non-violent means possible to stop, or at least disrupt, the... launch... They worry that if an accident does occur, deadly plutonium could be showered on Earth, despite Nasa's insistence otherwise. The protesters are planning, among other things, to try to enter the launch area sometime between now and October 6 and to sit on the pad.

...The Cassini mission is expected to be launched in mid-October, but will not reach Saturn – 1.3 billion kilometres away at its nearest orbit – until 2004. When it reaches its goal, it will send a small probe on to the huge moon, Titan, which scientists hope to use as a model planet for experiments in the study of meteorology and the Earth's evolution... The largest and heaviest interplanetary probe yet launched by the US, Cassini and its technical back-up are costing \$5.16 billion... Italy has provided extra funding of \$250 million... [The] probe has been designed, developed and manufactured by the European Space Agency... Such international collaboration is generally welcomed by scientists. It enables smaller countries to participate in projects they could not possibly afford alone. Moreover, competing missions need no longer bid in the same area.

...Twenty-seven anti-nuclear activists were arrested yesterday at the Cape Canaveral Air Station during a protest...

Nearly all the protesters left town: They didn't want to be around if the rocket carrying Nasa's Cassini spacecraft blew up and 33kg of highly radioactive, highly carcinogenic plutonium rained down. However, their fears proved groundless. The moment of truth – lift-off of the mammoth Titan 4-B rocket... – was called off just before the... launch because of last-minute technical glitches and high upper level winds. The launch is now not expected until tomorrow... [T]he engineers and scientists who devoted years to the project, had brought their families to witness what they believed would be an historic, and safe, event: launch of the first spacecraft designed to orbit the ringed planet... Cassini will swoop within 800km of Earth in August 1999, after having swung past Venus twice for gravity-assisted speed. The... plutonium... is needed to power all the instruments so far from the sun. Earlier, officials from Nasa and the Department of Energy, which made Cassini's three plutonium-powered batteries, said they had no qualms about the safety of the electrical generators... "There is no risk to the public, even if there is an accident." Cassini... is the last of Nasa's multi-billion-dollar planetary explorers. Future missions to the planets will have more modest objectives and price tags...

['NASA wants to launch and fly a robot plane on Mars in 2003, a project costing \$US80m. The plan, included in Nasa's \$27b budget request to the US Congress, has a good chance of approval. Nasa planners hope the drone would be launched on a French Ariane 5 commercial rocket inside a container

about the size of a computer terminal. Once in Earth orbit, the container's small thruster would fire, pushing it on a looping course toward the Moon where it could pick up enough speed to slingshot to Mars. A heat-resistant shell would protect the plane on its way through the Martian atmosphere, then the shell would drop off and the airplane's wings would unfold so it could robotically fly – either powered or gliding – to a landing on the surface. The plane's flight would be programmed before its launch. Scientists could not operate it by remote-control once it reached Mars because signals sent from Earth would take at least eight minutes to reach it.' Nasa has also confirmed plans to 'send a spacecraft the size of a small car to search for water on the Red Planet' in 2001...

'SCIENTISTS who found microbes thriving in the South Pole say the discovery will help the search for life on Mars.' It could also help with the 'Rosetta comet probe – which is planned to land on the comet in 2011' – but is too late for] **Nasa's nuclear-powered Cassini mission[that] lifted off yesterday...**

With its destination beckoning in a moonlit sky, Nasa's plutonium-powered Cassini spacecraft rocketed flawlessly toward Saturn on a mission activists had tried to stop for fear an accident would shower Earth with radioactive fallout... After a two-day delay caused by high wind and computer problems, the... monstrous Titan 4-B rocket[']s... launch was perfect. [However, 'a Titan 4 rocket carrying a \$2 billion satellite blew up a few seconds after being launched today.']

...An Earth-observing satellite, hailed by Nasa as an example of its new "faster, cheaper, better" philosophy, is likely to burn up in the atmosphere this week. It spun out of control last month, days after blasting off from California, and attempts to re-contact it have failed... [In related news,] **Russia's Mir space station will fall back to Earth and disintegrate in the lower atmosphere towards the end of 1999... [T]he operation would be controlled to ensure there was no danger to people on the ground.**

...['a Russian Progress cargo ship commanded by ground controllers will steadily lower the low end of Mir's orbit. At the same time, the atmosphere will drag down the station even more. After a month of this, ground controllers will fire the Progress ship's main engine one last time. The braking will slow Mir enough for gravity to catch the 120-tonne station and send it crashing down, it is hoped, over an unpopulated swath of the Pacific south of Alaska but north of Hawaii. Most of the station should burn up on the way down. Sturdy pieces like fuel tanks may survive, however, thus the remote Pacific locale. By planning for all this now, Nasa hopes to avoid the hype and haphazardness of Skylab's 1979 fall, which was largely uncontrolled.' By the way, the] **Russian space agency... says the AsiaSat 3 communications satellite, which spun out of control following an unsuccessful launch in Kazakhstan last week, will take four to five years to fall back to Earth...**

China has successfully fired a Philippine communications satellite into orbit on board a Long March 3B rocket... China had been banking on a successful launch... to restore confidence in its space industry after a series of disasters... since the first 3B exploded shortly after take-off, killing at least six people on the ground. That... followed the loss of a Long March 2E in January 1995 in which a family of six was killed by a rain of fiery debris and the August 1996 failure of a Long March 3 to put its Chinasat-7 into the proper orbit... The launch centre, nestled in a green, tree-lined valley... [- where water] buffalo still stroll... and poor peasant farmers eke an existence from small fields scattered around its perimeter fence... [while] a souvenir stand sells plastic model rockets to tourists for eight yuan (\$1) each... [-] has launched more than 20 satellites since the mid-1980s[. Meanwhile, 'the US, South Korea and Japan are scrambling for answers about whether North Korea has really launched a satellite – that is said to be transmitting revolutionary hymns in praise of its late leader and his son – as it claims. No country has been able to officially deny or verify the claim, although Russia's Itar-Tass news agency reported that Moscow's space observation centre had spotted the satellite.'

...the Russians have 'converted an oil rig into a rocket launcher for \$500 million.' No word yet on how much Brazil spent on its launch pad, but the country]'s first attempt to put a satellite in orbit failed at the weekend when one of four engines on its rocket failed to ignite and it had to be destroyed by remote control 65 seconds after liftoff.

...['a Russian rocket carrying 12 US satellites for the future Globalstar telecommunications network has plunged to earth after 4 min 32 sec. due to an unexplained failure of one of its engines.' On a positive note, 'plans for a truly mobile communications system that spans the globe have gone from the drawing board and into orbit. Following 11 years of design, development and implementation, Iridium is offering the service free of charge to a limited number of customers to do final testing and fine-tune the system, which has a network of 66 satellites. Including backups, the company has launched 79 satellites aboard 17 launch vehicles in 16 months. Seven have been declared nonfunctioning and one is experiencing communications difficulties but may be able to be fixed. Another satellite will be launched next month. The system has cost \$5 billion to date. Its mobile phones are expected to cost about \$5600.']

...AN unmanned Delta II rocket carrying a \$60 million... Navstar Block IIR satellite, a new generation of U[S] Air Force... G[PS satellites, has]... exploded about 10 seconds after blast off from Cape Canaveral. Photographers and reporters about 1.5km from the launch pad had to dive for cover when the blast occurred. The... air force said parts of the rocket had fallen into a safety area in the Atlantic Ocean and on to the air station.

...['the \$US225 million Boeing-built Delta III rocket, which was carrying a communications satellite, vanished in a mystery blast on its inaugural flight from Cape Canaveral yesterday.' Incidentally, today is the 8th anniversary of when the 'US Secretary of State and the Soviet Foreign Minister signed six agreements on arms control and other matters. One concession concerned a disputed Soviet radar installation. The US demanded the radar be torn down before a Start treaty could be signed. Somewhat hypocritically, the US had hoped the Soviets would sign a strategic arms treaty without insisting that a treaty limiting the Strategic Defence Initiative (SDI or "Star Wars") programme of space defences also be enacted – although Congress had already put the brakes on the programme with budget cuts.'

...['In the fall of 1990, Congress, in its defence appropriations, cut the administration's proposed funding for SDI by one half. By this time, the US had spent nearly \$US20 billion on the system since 1984.'

...["'Star Wars" was a plan, announced in 1983, to "make nuclear weapons obsolete" by building a shield of lasers (or particle beams or, later, "smart rocks" or "brilliant pebbles"). Study after study suggested that SDI shielding would hardly work at all because of the technical difficulties involved, and because effective counters could be developed much less expensively. Note that US efforts to develop defensive beams have not been entirely abandoned. The Air Force has awarded contracts for the design of a laser able to destroy missiles hundreds of kms away, yet capable of being carried by an aircraft.'

...the US] Army may try out one of the world's most powerful lasers to see if it can hit a military satellite, the Pentagon said yesterday. The unprecedented experiment... would show how vulnerable [US] satellites are to attack[– 'the more military hardware the US puts in space, the more she has to protect it' –] and how easy it would be for the [US] to hit enemy satellites... The \$US60 million... [target] satellite is run by the air force, which plans to shut it down because it was no longer needed. But the maker of the satellite, Spectrum Astro... said it still had a useful life [left]... The laser... produces a beam of light two metres across using millions of watts from burning fuel. The New York Times said it destroys targets by burning them up... [It has already been] fired... at ground targets, speeding drones and rockets in space... [N]o treaties or domestic legislation banned such tests... [T]he Army also had a project to destroy satellites with what [it] called a "kinetic energy vehicle." ...The Times quoted arms control advocates as saying the test would probably set off a race for better space weapons. - 1997

The wars of the future will not be fought on a battlefield or at sea – they will be fought in space...

The tiny Republic of the Marshall Islands has sent Washington a wake-up call. The islands' leaders want a much better deal in exchange for continued U[S] access to Kwajalein, an atoll in the central Pacific vital to Washington's drive to build a shield against ballistic missiles... Critical

aspects of US... space and intelligence-gathering programmes hinge on a \$US4 billion complex on Kwajalein... Raising the rent, variously estimated at \$US10 million... a year, to an unspecified “fair market value” will be the top priority in coming lease-renewal negotiations with the U[S], said the republic’s Foreign Minister... Pointedly, he left open the David v Goliath possibility that Marshallese clan leaders, if they perceive they are being short-changed, could seek to disrupt US operations as they did repeatedly... before the current military operating pact took effect in 1986. The current President... who is also Kwajalein’s largest landowner, was clubbed by a US-employed guard during one such protest he led in July 1979. The Marshall Islands has a complex relationship with the U[S under the] 1986 Compact of Free Association... A key provision of the compact gave the US continued use of[the] US Army missile test range on Kwajalein... for 15 years with an option to renew automatically at a fixed rate for another 15. In exchange, the islands received economic grants, access to many federal programmes and, with neighbouring island states, more US funding per head than any other nation... The Marshalls’ economy is[also] heavily dependent on revenue generated by the missile range, including an estimated \$US14 million in annual salaries to nearly 1300 Marshallese workers... Kwajalein is being used to develop a fixed, land-based system to shield all 50 US states from long-range missiles such as those North Korea and Iran are apparently developing... A decision on whether to deploy a limited national defence system, due in June next year, depends largely on four performance tests of interceptors cued by early-warning satellites and fired from Kwajalein, US officials said last month. Kwajalein is the only spot on Earth suitable both for full-scale testing of long-range missiles and for testing ballistic missile intercepts outside the atmosphere, the Pentagon said.

...U[S] astronomers believe they have discovered a blue-green diamond the size of a planet 17 light years from earth in the constellation of Centaurus. It has a diameter of 12,800km...

Gold and platinum are valued in large measure because they are rare. But when you look at the spectrum of the Sun and the stars, or examine a meteorite newly fallen to Earth, you find that there is relatively much more of these precious metals up in the sky.

...buy the sky and sell the sky...

How can you buy the sky? - Chief Seattle

The existence of laws which recognise private ownership of land – plus everything in and on it – suggests that individuals and groups should also be able to sell or *buy the sky* (‘the region of the clouds, atmosphere, and outer space seen from the earth’)! While people seemingly can’t to do so at the moment, it is already possible for governments – excluding Iraq’s, perhaps? – to claim ownership of the *airspace* above their land (excluding the immediate ‘airspace above buildings’, which belongs to each building’s owner), and they can sell *airwaves* to radio and TV broadcasting channels.

...in 1950... [resources] were abundant, and air and water were still widely regarded as free goods.

The gases and particulates of air pollution are most obvious in cities; in some, sufferers can now buy oxygen from slot machines.

How about a shot of clean air? For Southern Californians repulsed by smoggy air, plans are in the works to open three oxygen bars where they can relax, inhale and pay through the nose: 20-minute doses of oxygen will cost \$US16... - 1997

For \$US2 more, the oxygen can be spiked with lemon, lime or orange. Proponents of recreational oxygen blasts claim it eases headaches, boosts alertness, fights fatigue and reduces stress. “It[also] gives you a little buzz,”...

Information is easy to trade, because, unlike goods, you can give it away without losing it.

Although individuals and organisations *can give it away without losing it*, information is seldom GIVEN AWAY these days.

copyright, exclusive right to print, reprint, publish, copy, and vend... books, directories... newspapers; lectures and sermons[(thereby meaning that people can literally own *hot-air*)]; plays, music... motion pictures; works of art... maps; technical drawings and models; photographs and illustrations; and labels for merchandise... [‘Copyright owners are entitled to take legal action against persons who infringe their copyright.’ ‘Protection of rights was made necessary by the invention of printing (15th c.). At first the only protection available to the author was against publication of his work without his permission; once published it was out of his control. The first English statute recognizing the author’s rights was passed in 1710’.] **The first copyright law, passed by Congress in 1790, has been revised several times... The term of copyright is 28 years plus an optional renewal term of 28 years... In Britain, Canada, and other parts of the British Commonwealth... copyright holds during the lifetime of the author and for 50 years thereafter**[, ‘or until 50 years after publication or 75 years after death whichever is the shorter if published posthumously. Copyright is complex. A major problem which is spreading around the world since the 1980s is that of piracy of video and television material for private playing on cassette machines. They are clearly covered by law, but detection and prosecution are difficult’]... **Copyright differs from patent**[– the]... **exclusive right to manufacture, sell, or use an invention, process, or design.**

...totally natural and specially patented.

Who should profit from... natural remedies? ...In 1992, N[Z] became a signatory to the International Convention on Biological Diversity. Biodiversity is, more or less, everything in nature... The convention contains, besides an obligation to conserve, a mandate to ensure that the benefits of biodiversity are shared equitably. This is deemed necessary because the communities in which the jewels of nature are often identified are not adequately rewarded for the knowledge that led to these discoveries. The mandate was woven into international law because “bioprospectors” began to comb the planet in search of biodiversity which might have huge economic benefits. Already, one quarter of all pharmaceutical products are derived from natural products or processes. Accordingly, it is possible that “cures” for all sorts of ailments may be found in nature... [T]he “262” claim... before the Waitangi Tribunal... implies that the biodiversity broadly within[Maori] possession was, and remains, theirs. This claim may seem somewhat unusual to many Europeans because 2000 years of Western legal discourse has tended not to recognise biodiversity in its wild and free forms as being owned by anyone other than the state. The exception has been when biodiversity was taken out of its natural order by being either captured or modified. Only then could it become the property of a distinct person or group.

Anger over plan to patent living things... Non-governmental organisations are continuing their fight against a... European Parliament... directive... approving the patenting of genetic material... – aimed at harmonising the EU’s patenting rules with the U[S] and Japan... “Allowing patents on living organisms is a violation of the tenets of democracy, human dignity and respect for living creatures,” said[the] director of the London-based

Gaia Foundation... Patents were originally designed for industrial processes but under Europe's new directive, inventions will be patentable "even if they concern a product consisting of or containing biological material." Biological material "may be the subject of an invention even if it has already occurred in nature." ... "In other words... you can patent plants and animals as long as you don't call your end product a variety." ...the A[US]n organisation, Global 2000, said: "It is like saying you cannot patent a pig, but you can patent all mammals, including the pig." It could also open the way for companies to apply for patents on an entire crop... [A] farmer who used wheat seed which had been genetically modified, could have to pay royalties to the company holding the patent. This would have a huge impact on the food market... Legislation to patent genes was rejected by the European Parliament in March 1995. But pressure from the agrochemical and pharmaceutical industries led to its reintroduction... [There are potentially positive outcomes – in order 'to prevent others from ever using the technology', someone is attempting to get a patent on genetically engineered creatures that could be created by combining human genes with chimps. Unfortunately, according to a] Greenpeace campaigner... the European directive is sloppily drafted with contradictory provisions that will create legal confusion and thousands of billable hours for lawyers.

...[a professional basketballer] is bringing his 2.4m hulk and size-20 shoes down on the Otago Basketball team's mascot. Lawyers acting on behalf of the LA Lakers... multimillionaire... superstar... [and] Mine O' Mine Inc... yesterday demanded the Nuggets stop calling their mascot... 'Shaq the Cat'... and using the number 32 on its uniform... alleging breach of naming rights... But the Nuggets are not ready to give up their mascot's identity without a fight. An application to patent the name... and the number... in N[Z] was lodged by the Nuggets just before a similar application from Mine O' Mine... the general manager of the team... said... [Incidentally, t]he Ministry of Commerce is to slash jobs at the Patent Office in Lower Hutt as part of major restructuring... It is proposed that about half the 137 staff will lose their jobs over the next three months.

...A restructuring of the Patent Office resulting in wholesale job cuts has raised concerns that it could lead to a more litigious environment. About 35... staff were handed their redundancy notices last week and the once 150-strong office in Lower Hutt is now below a target full-time staff of 80. Attorneys are worried that a drop in examination staff numbers from around 60 to little more than 20 will compromise the office's ability to vet applications, resulting in an increasing number of High Court appeals against potential invalid approvals... However... the Deputy Secretary of Commerce... who has spearheaded a review of the office... said the office was now the most efficient in the world and would become more so over the next 12 months... The chairman of[a] patent firm... said the prospect of additional litigation was tempered by... the likelihood that disputes relating to international patents would be contested overseas. - 1997

...intellectual property and copyright is a knotty area, especially in the world of music, where it is possible to receive ideas almost unconsciously... [George Harrison] defended his "unconscious plagiarism" of the chords from *He's So Fine*, which were the basis of his hit *My Sweet Lord* back in the early 70s... [By the way, when rights to The Beatles songs went up for sale recently, the surviving co-writer (r:p30, ln32) of most of them was outbid at '\$US50 million' by a North American songwriter (r:p90, ln53) – who, it is worth noting, was sued earlier in the 90s by] a South American songwriter... over a song he claimed to have written... The word copyright alone "is a bit like calculus – people glaze over when [others] mention it." Essentially, for something to attract copyright it simply needs to be reduced to a material form... This means written, recorded, put on videotape and so on. Once that happens it automatically attracts copyright, which is "a collection of rights that the owner is entitled to use to the exclusion of all others, for example in broadcast, reproduction, publication and so forth." ...You can license your copyright for a defined period, or into specific territories, or sell it entirely... N[Z] does not require a system of registration, unlike the U[S].

...a three-member arbitration panel[has ruled the US] Government must pay heirs of the late Abraham Zapruder \$30 million for his 26-second film of *President John F Kennedy's* 1963 assassination in Dallas... [In related news, Alberto Korda, the] Cuban photographer... whose 1960 shot of Latin American guerrilla legend Che Guevara became an icon for would-be revolutionaries... has died aged 72. Korda, a leading visual chronicler of C[uba]'s Government after the 1959 revolution... took the picture at a funeral rally for 136 people killed in a boat explosion, a disaster that Havana blamed on the U[S]. "I took it without him [Guevara] realising," he said. Korda gave away the picture and never received royalties for the image that... was reproduced on millions of T-shirts, posters and banners around the world.

...A handwritten note... discovered in [a] basement a year ago could be the answer to one of the world's best-kept culinary secrets – Colonel Harland B. Sanders' recipe for fried chicken. The couple [who found the recipe] bought their white Kentucky mansion from Sanders and his wife... in the early 1970s. About a year ago, the [couple] were digging through a box of books from the basement and found a leather-bound diary from 1964. Among appointments and other notes was a recipe for fried chicken that called for 11 herbs and spices... The recipe is known by only a handful of people, all of whom have signed confidentiality contracts... A week ago, KFC filed a lawsuit in Shelby County Circuit Court asking that the piece of paper... be given to the company... The [couple] were considering selling the book through an auction house, but first contacted KFC to see whether the company could verify that the recipe was authentic. "They didn't say anything at the time. They just sent this court document to us,"... Sanders came up with the... recipe in the late 1930s for Sanders Court and Cafe, his roadside... motel and restaurant business[that] seated 142 people. [Nowadays, there are] more than 10,300 KFC stores[which together annually] generate... about \$US20.6 billion... [While on the topic of recipes.] Champagne, for centuries regarded as the quintessence of French sophistication, is in fact a British invention... A spokeswoman for... Christie's... auction house said the book... *A World Encyclopaedia of Champagne and Sparkling Wine*, which [it] is to publish this month... included a copy of a historical document "proving beyond any doubt" that Christopher Merret, a Briton, presented a paper on making sparkling wine to Britain's Royal Society in 1662. This was some 20 years before the legendary blind French monk Dom Perignon reputedly perfected his method of making... the world's most exclusive sparkling wine.

...Take a deep breath, N[Z]. When it comes to the origins of the Kiwiana icon Buzzy Bee, the Yanks almost certainly got there first. The Aussies created a buzz when they tried to claim our pavlova, and now Kiwis have been stung with the news that the clackety bee was an American concept. Hec Ramsey and his brother John, who are credited with inventing the... Buzzy Bee... started production in 1948... [A former worker] at Hec Ramsey's toy factory for 40 years... well remembers his cobbler... bringing a toy bee into the old Grey Lynn factory. "[My cobbler]'s sister brought one back from the States... Hec looked at it and decided to make his own version. Within three months we were making batches of 5000 to 10,000." ...the American bee "was flat, a[nd]... had coloured paper stuck to its body instead of paint." A[n a]ntique toy collector... said sticking printed paper on wooden toys was a 19th-century practice. The prototype... could easily have been from that period. However... the U[S] company Fisher Price produced its version of the toy for only a short time, in the 1950s. N[Z]ers have canonised Buzzy Bee as a national icon. Sentimentally, he is ours.

...A very sweet lump sum will replace the twice-yearly royalty cheques that Walt Disney has been paying since 1961 to exploit the honey-loving English storybook character Winnie the Pooh. The *Sunday Times* reports that the £240 million... honeypot made the deal Britain's biggest literary contract. The contract will last until the Pooh copyright expires in 2026... Sales of Pooh products have doubled over the past five years, while Disney's own stable of characters, including Mickey Mouse and Donald Duck, has managed just 20[%] growth... The biggest single beneficiary will be the Royal Literary Society, to whom Christopher Robin Milne, son of Pooh creator A.A. Milne, sold half of his quarter share of the royalty rights before his death five years ago. Christopher Robin's daughter, who was born with cerebral palsy and benefits from a trust fund set up with the other half of the quarter share, will receive a one-off cheque of £30 million. Christopher Robin's widow will receive nothing from the Disney deal but will continue to earn royalties from the original Pooh books. "Christopher was very anti-Disney," she said. "He hated what they had done with the books and the characters."

...Sir Arthur Conan Doyle, creator of the great fictional detective... stole the idea for one of his best-known Sherlock Holmes novels, *The Hound of the Baskervilles*, from his friend Bertram Fletcher Robinson and later poisoned him with the help of Robinson's wife, Gladys, with whom he was having an affair... [A]fter an 11-year investigation into letters, wills and other circumstantial evidence[, the author of a]... book titled *The House of the Baskervilles*... said much of the detail for the story of the giant, ghostly hound... had come from a manuscript entitled *Adventure on Dartmoor* written by Robinson a year before... Conan Doyle even borrowed the name of Robinson's coachman and gardener, Harry Baskerville, for his book's title... But the Sherlock Holmes Society dismissed the claims... "The whole thing is a complete fabrication," a spokeswoman told the *Independent*.

...A railway that was the inspiration for the *Thomas the Tank Engine* character is defying the threat of legal action after encountering a commercial equivalent of the Fat Controller, the autocratic station master in the children's stories. The Talylyn Railway in Gwynedd, North Wales, was adored by the Rev Wilbert Awdry, the creator of Thomas. Awdry was one of its first volunteers before writing his stories and based at least four characters on locomotives there. The 1921 locomotive on which Awdry's Peter Sam character is based has been running on the line as an attraction under his fictional name for more than 10 years... [T]he volunteer-run Talylyn [Railway]... bought... the locomotive... for £25 in 1951 – for... public duties... But... [t]he... company, which [recently] bought the Thomas copyright... for £13.5 million... is demanding that Talylyn Railway pay it the same licence fee to continue using the name as other steam railways pay to run Thomas the Tank Engine events... Thomas remains remarkably big business... A £9 million film... is expected mid-year, a theme park is planned for the US and [the new owner] is securing about 5.5 million hits a month on its Thomas Website, on which a copyright warning is featured.

...an attempt to tell [a] tale in Auckland yesterday brought despair for [a] three-year-old. An hour before her performance in an amateur production of a play called *Charlie and the Chocolate Factory*, she suddenly was not allowed to act as an Oompa-Loompa any more. Instead, [sh]e was asked to learn a new set of lines, which did not mention Willy Wonka... or any of the characters in Roald Dahl's famous book... of a little boy's joy in winning entry to ...a... chocolate factory... The hasty changes were made by the play's director after [a] threat of legal action by the Roald Dahl estate for breach of copyright... The play's director... who has been directing stage shows for 30 years, received a phone call 15 minutes before the third performance of the play, being performed by... about 60... West Auckland children at Green Bay High School. It told her to cancel the show or risk being sued. New Plymouth company Play Bureau also warned her to cancel the four remaining performances... She had written an original script for the play, believing she could use the title, as long as the words and story were her own. But the managing director of Play Bureau... said stage productions of Dahl's books required a royalty payment... [of] about \$120 a performance... in exchange for approved scripts. Adaptations were banned... The Play Bureau had contacted... a London company which collects royalties on behalf of the Dahl estate, after reading about the production... Welsh-born... Dahl became world-famous thanks to the children's fiction he wrote during the last three decades of his life. [However, 'naivety meant he accepted a one-off payment for his best known work and missed out on royalties that would have continued until 1990' – the year h]e died... aged 74. A recent biographer described him as a devoted father dedicated to charity causes, but also manipulative, petty and jealous of other writers. It said he was a bully, too – just like characters featured in his books.

...The... cast went ahead with the performance... [after the director renamed her play] *Oomp and Loomp and the Fun Factory*, removed the original posters, reprinted the programmes and changed the names of the characters... But The Play Bureau isn't satisfied. "Our concern in this matter is with what is right and fair, and also the bad example [the director] is setting with the children involved..." [The director] says The Play Bureau is "cruel", but... "I... agree... I've made a mistake and I'm prepared to pay for the rights of the idea,"...

Happy Birthday to You might be the most famous four-line ditty in history... [W]ritten in 1893 as a classroom greeting by two Louisville, Kentucky, teachers[, it]... was copyrighted in 1935 after a lawsuit was fought over it a year earlier... In 1996 the greeting brought in about \$US2m a year.

"Principal Skinner, *THE HAPPIEST PLACE ON EARTH* is a registered Disneyland copyright." "Gentlemen, it's just a small school carnival." "And it's heading for a great big lawsuit. You made a big mistake..."

The giant Walt Disney company has blown the whistle on the creator of a children's tank engine for an alleged breach of copyright... [The creator] received a letter last week saying the paint job on his train, featuring Mickey Mouse, Donald Duck and other Disney characters, must go. Walt Disney's news monitoring service spotted a photograph of the train in a Timaru newspaper six weeks ago. And on Monday, a registered letter arrived from the Walt Disney Company Asia Pacific Ltd, Hong Kong. "We sure didn't expect this. We thought it was going to be good news and my wife asked if I had ordered any parts from Hong Kong," said [the creator]. The letter warned that only authorised licensees could use Disney characters and to do so without permission was against the law. It accepted the breach was "innocent to date" but asked [the creator] to remove the characters. He will... [The] train, which he hires to galas and children's parties, is a tinpot weekends-only venture. A Walt Disney official said the company did not comment on individual infringements of copyright, especially when the case was ongoing. In most cases, Walt Disney got voluntarily co-operation without taking the matter further, he said. [The creator] built the blue train to look like Thomas the Tank Engine but, fearing a breach of copyright, called it Ernie the Engine. He planned to decorate it with fairground scenes but the retired signwriter doing the painting said that would be too complicated. Instead, they opted for Disney characters, chosen by... [the creator's children. The family] are not the first in N[Z] to be stung by Walt Disney's lawyers. Five years ago, the U[S]-based company targeted the Featherston public toilets, saying it was not a fit place for Disney cartoons. The South Wairarapa District Council was told to repaint the wall. In other David and Goliath battles, three N[Z] Hiltons were threatened with legal action by their international namesake in 1992. One of them, at Blackball, near Greymouth, got around the problem with its new name – Formerly the Blackball Hilton. In 1990, a Palmerston North motel, owned by [a couple with the surname of Harrod], was ordered to stop trading as Harrods after a four-year dispute with the famous British department store. Dunedin's Christies Antiques is fighting Christie's of London for the right to continue using its name of 25 years. And this year, a Southland cafe had to switch its name from Planet Hollyford to Hollyford Boulevard after legal threats from international food chain Planet Hollywood. It cost the cafe owners about \$5000 in legal fees, changes to its signs and menus and an undisclosed amount given to Planet Hollywood.

...As more companies enter the world of cyberspace, they all too often find themselves victims of a new scam: internet hijacking. The victims are companies that have failed to register their names, or product brand names, as internet addresses, and then find that a third party has appropriated their name for a web site. In such cases, companies either must pay the third company for the use of their own name or take legal action. High-profile victims have included Harrods... which last month went to court to reclaim the internet address <http://www.harrods.com>, fast-food chain operator McDonald's Corp and music television station MTV. Those cases and others have prompted internet experts to warn companies to register brand names on the internet as automatically as they register new trademarks... [R]egistries, typically trade organisations funded by members... have sprung up in the last couple of years around the world to act as clearing houses for internet addresses. [Incidentally, at an auction house yesterday, someone paid \$NZ2 million for a single page from a 16th century Persian book.]

...A "pile of rubbish" found in a chest of drawers contained documents by Rudyard Kipling which fetched \$24,217 at auction yesterday. The previously unpublished documents were stolen from the [writer and poet, born in Bombay,] by a disgruntled employee...

An auction of a collection of letters written by the father of Indian independence, Mahatma Gandhi, is to be postponed at the request of the Indian Government... "The Government says speculators will make money out of it and research scholars will be deprived of the material,"... but the vendor expects compensation for the letters, which are estimated to be worth about 55 million rupees (\$[NZ]2.17 million).

...Love letters written... to the woman who was [the] inspiration for... the heroine of [the] book *Dr Zhivago*, will be auctioned in London on November 27... [The letters,] described by an expert... as "absolutely beautiful," are expected to fetch around \$[NZ]1,167,000.

...The private letters of Albert Einstein, including 400 to his first wife... will be auctioned in November. The sale... is expected to generate about \$US2 million... The letters, which were found in 1986 in a safety deposit box in a San Francisco bank, were placed on sale by the foundation that manages Einstein's estate... They were being sold to try to settle a legal feud among his heirs... - 1996

For years there were whispers that Albert Einstein plagiarised a key part of the general theory of relativity from another scientist... Einstein submitted his conclusive paper... on November 25, 1915... [Although the other scientist's] paper was published the next year... the date on [his paper was]... five days before... [Einstein's, which] suggested... Einstein... had cribbed the results... But now researchers... from the Max Planck Institute in Berlin, Tel Aviv University and Boston University say... page proofs of the [other scientist's] paper, dated December 6, 1915, show his work was only an incomplete version of the theory and lacked key equations included in Einstein's work. The historians conclude that [the other scientist] saw Einstein's paper after that date and put the equations into his paper before publication.

...[9 letters written by the father of modern physics reveal that he had a love affair during WW2 with a purported Soviet spy. Sotheby's auction house said the letters, to be auctioned in New York on June 26, were written in elegant German to Russian emigre Margarita Konenkova, the wife of eminent Russian sculptor Sergei Konenkov, with whom she lived in the US for more than 20 years from the early 1920s. A 1995 memoir by a former Soviet spy master said Konenkova's job was to influence scientists that she met at Princeton University. Research by Sotheby's experts found that Einstein had met the Konenkovs by 1935 when Sergei was commissioned to prepare a bronze bust of Einstein now in the Institute for Advanced Study in Princeton. The senior vice-president for Sotheby's books and manuscripts department said that in "the broader sense" Konenkova's job was to recruit Einstein, but more than anything, Moscow probably wanted the scientist's endorsement of their system. The letters, which show that the lovers had their own vocabulary, indicate that Einstein was very careful not to grant that approval.' In further news from the US, t]hree screenwriters have sued the makers of the new James Bond film *Tomorrow Never Dies*, claiming the idea for the movie was stolen from a script they wrote... titled *Currency of Fear*, which was]... submitted... to several people in the movie industry... The lawsuit comes on the heels of... [a] \$US10 million... copyright infringement suit against DreamWorks...

THE MAN who could do no wrong may be about to lose his title... [The] acclaimed director of *ET*[: *The Extraterrestrial*], *Schindler's List*, *Indiana Jones* and *Star Wars*... has been accused of exploiting black slavery and stealing the script of his latest movie from a black author... *Amistad*... is about an "historical" black revolt aboard a Spanish slave ship in 1839... In a saga that *Time* is calling "Stealberg?", [the black author is accusing the director] of blatant plagiarism from her own fiction account of the forgotten slave mutiny... called *Echo of Lions*... [At] the behest of her friend Jacqueline Kennedy... [her] manuscript... was read by [the director's] production company Amblin back in 1988... Amblin decided to pass on developing *Echo of Lions*, saying it was more suited to a mini-series. But when, after the founding of the new production company Dreamworks, it was announced [that the] first film would be called *Amistad*, and that the... screenwriter would be [someone] who had once been hired by [another production company] to develop *Echo of Lions* as a screenplay[, the black author] contacted her lawyers... The case... is convincing. Dreamworks seems to have fallen into the trap of copying some altered historical "errors". In her book, [the black author] alters fact to describe a scene in which Queen Victoria writes a letter to[the] pro-slavery President... asking that the Africans be set free. In fact, the letter was sent by one of Queen Victoria's ministers to the US Secretary of State; in *Amistad* this... is presented as history. But what is perhaps most baffling about the controversy is the extent of Dreamworks' own denial about the existence or even knowledge of the *Echo of Lions* novel. The book was published in 1989 to considerable acclaim, translated into five languages and sold over 500,000 copies, but[the] screenwriter... claims never to have read it – despite having previously been hired to write a screenplay of *Echo of Lions*! Even his own lawyer... blurted to *The New Yorker* that in fact, [the screenwriter] was "hired precisely because of his *Amistad* experience". But this ugly shadow hasn't stopped the American media launching into a solemn debate about the troubled memory of slavery and crowning [the director as] the patron saint of racial victimhood... Part of the reason [the director] is tackling African-American slavery is to teach the world a PC history lesson. And, being [a director], he is making history mean whatever he wants it to mean. Forget for a moment that the *Amistad* incident is not even mentioned in the definitive *Penguin History of the U[S]* and merits only a paragraph in... [a] recent 908-page book, *The Slave Trade*; according to the [director's] theory of popular history, the *Amistad* rebellion was America's first "Civil Rights" case and directly led to the Civil War... Making movies, of course, has never been "education[al]". 'Hollywood never lets its historical dramas get bogged down in history. Accuracy is not the point of a movie' – they are about entertainment and more importantly, making money... America's leading black film makers... turned down the *Amistad* Project, not because of lack of resources, but because slavery was too complicated, painful and hateful a subject to deal with. Jewish non-profit museums such as the "virtual reality" Holocaust museum in Washington and the new controversial \$60 million Jewish Museum in San Francisco are thriving... No comparable African-American slave museums exist... [M]ost blacks in America simply don't want to know... Last month, there was a public out-cry when it was revealed that Christie's in New York were auctioning off some slave memorabilia – including a reward notice for run-away slaves and a slave auction poster. Angry blacks flooded Christie's with protest calls, accusing the auction house of a double standard since it had an existing policy of not selling items relating to the Holocaust... Overhanging the *Amistad* media hype lurks the question of [the director's] credentials... Not wanting what he called "blood money", [the]... computer-game-obsessed billionaire... refused to take any salary for directing *Schindler's List*. All the money he earned from the film was donated... to Jewish organisations... When I twice asked Dreamworks publicity department whether similar measures were planned for *Amistad*, they failed to call back.

...An American judge has refused to block the release of the... film, *Amistad*, saying in a court order that the movie did not appear to misappropriate another writer's novel... [The judge] cited the \$75 million investment made by DreamWorks to make and distribute the picture as an over-riding reason for it to open as planned... "No one likes to be called a thief," said... a lawyer for DreamWorks... The dispute has turned increasingly personal and vitriolic... DreamWorks' lawyers say... [the black author] herself is a plagiarist, arguing there are at least 88 similarities between *Echos of Lions* and *Black Mutiny*. They also have circulated a passage from [her] 1994 book, *The President's Daughter*, that appears almost verbatim in... [a] 1929 book, *Passing*. [The author] said she did not plagiarise *Black Mutiny* and that any similarities are merely historical facts.

...Herodotus, the "Father of History," is enjoying a new popularity 2500 years after he wrote his great work – all thanks to the film *The English Patient*. It's another example of the trendsetting power of the celluloid dream industry... The film has been smothered with Oscar nominations and done huge international box office business. So, in a more modest way, has *The Histories*, a book which has always been used in ancient history and classical Greek courses, but has never threatened the best-seller lists. British publisher Everyman, with a smart eye for a niche, shipped 10,000 copies of its edition to New York... and sold them all. Now Everyman is persuading British bookshops to display it beside [the] Booker Prize-winning novel on which the film was based. "It could become an essential accessory for every Hampstead [a literary-trendy London suburb] dinner-party," said [a] Newcastle University classicist... It all comes a little late in the day for Herodotus, who's seriously out of copyright.

...The fresh young things just embarking on the[musical] treadmill have learned from their elders' mistakes as well as their music. They pay tribute to their forebears in true rock'n'roll fashion, by plundering their albums... only the current chart-toppers, the Verve, haven't got away with it. They quoted the[Rolling] Stones' old hit *The Last Time* on a recent tune – and found themselves up against the... [person] who holds the copyright. He now gets all the royalties from the Verve's aptly named *Bitter Sweet Symphony*... When the history of rock is finally written, it may be realised that Kiss were the smartest band of all, hip to the value of their brand name, royalties and merchandising. [■ A company has developed an 'internet checker for essay plagiarism. Aimed primarily at university tutors, "Turn It In" scans the internet for any 8-word sequences that match those used in an essay which weren't acknowledged by the essay-writer as a quote.'

... 'a new computer programme makes it possible to read books as if they are real pages' (i.e., the reader sees two pages on the screen, and the pages turn from right to left). Most computer documents read like the first books humanity produced – scrolls. By the way, NZ[booksellers have been under the thumb of dictatorial overseas publishers for decades. But our steep book prices could tumble as chinks appear in this cosy copyright arrangement... that maintains N[Z] as a closed market. The arrangement is a hangover from the old British Empire. Under the Traditional Markets Agreement, British territory was off limits to American publishers. Despite several bitter skirmishes to try to end this territorial carve-up, the agreement is still binding on N[Z] booksellers, and retailers must order through the local agent of the British publishing house. But many booksellers complain this is often slower than going through the American publisher... [and some] stores admit to ordering from the US publisher if a title is not immediately available from the UK publisher, even though this practice is "not strictly legal." ...Unity Books... in Auckland... has been threatened with legal action several times for importing books from the US. Exasperated, [Unity's manager] says: "Delays are hurting my sales. I'm embarrassed to tell my customers that a book they have seen reviewed in an overseas magazine won't be available here for five months..." ...A[US]n book sellers, after years of battling foreign publishers, have recently won a concession that requires books to be available no later than 30 days after publication... But it is not just the delays that irritate [Unity's manager]. "Some British publishers are living in the Dark Ages. They haven't a clue how to market books. Covers frequently have nothing to do with the story, and the blurb on the back is pretentious waffle." She says American cover designs are more likely to be eye-catching... N[Z] is a nice earner for book distributors. We have one of the highest literacy rates in the world and the highest number of book stores per capita. Publishers are keen to protect this business, worth more than \$200 million a year... [They] claim delays don't happen often, and argue the cost of warehousing justifies higher prices in N[Z]... The copyright issue is more complex than just territorial rights, counters[the] sales and marketing director of Random House. "It helps protect authors' rights. A segmented market works well for us. There are clear lines of supply." He says booksellers don't understand life would be more difficult without a clear infrastructure... According to [Unity's manager, however], the UK price is usually multiplied three to six times for N[Z]. "NZers)... are paying a premium for their books. I have ordered a hardback from the US that retailed here for \$49.95. The same book from the British publisher would have had to sell for \$66... They know a certain market segment has more money and so they hike the price..." ...Another threat to the foreign publisher monopoly looms as the Internet neatly circumvents regional restrictions. Several sites offer impressive catalogues of popular and hard-to-get publications. One of the busiest Internet book sites[which is billing]... itself as the "world's biggest bookstore" – with more than 2.5 million titles – [is undercutting prices by] up to 40%... "The book trade is Dickensian in many respects," says[the] chief executive of the Consumers' Institute. "With increased retail and Internet competition, they can no longer rely on the usual reasons to explain the high cost of books."

...A Wellington-born computer whiz... is expected to reap \$A20 million... when he floats 20[%] of his Sausage Software company on the A[US]n Stock Exchange next month. The 23-year-old has made a phenomenal leap from unemployment to multimillionaire in a year thanks to a computer programme he wrote in five days... Hot Dog... makes it easy to publish information on the Internet's world wide web... and... is said to be the third most frequently downloaded software on the web... ha[ving] sold more than 100,000 copies worldwide... It is used by such global giants as Microsoft, Coca-Cola, NASA and... Telstra. "It's been my plan since age six to start a small business... I know it sounds like a cliché, but my advice to anyone who wants to achieve is to never stop believing in your dream..."

...In 1989, [an] Auckland printer... had a really bright idea. He devised a new type of logbook for taxi drivers which he hoped might prove a money-spinner for his small publishing company. Aware that such logbooks had to be approved by the then-Ministry of Transport, he spent months talking to officials about his idea. He even included their detailed suggestions in the finished product. So he was stunned when he soon found himself competing with a similar but cheaper version produced by the ministry. Seven years on, the Birkenhead businessman has won the first round of a bitter copyright battle over the books... [A] judgment from the High Court at Wellington this week... agreed that he does, indeed, have copyright... He... has a word for anyone contemplating suing the Crown: "Make sure you have endless patience and very deep pockets." ...He estimates he has already spent around \$20,000 in legal fees... [and] has yet to fight for damages in the case... Several years ago, he offered to settle the case out of court with the Crown for \$30,000 and his then legal bill of \$6000. The offer was declined. Since then, he says, the Crown has "thrown money at it like you wouldn't believe." ...he is also wary of the fact that the Crown could yet appeal. "If they do," he sighs, "I will counter-appeal." A spokeswoman for the Crown Law Office said the office did not want to comment on the case... [In related news, o]ne of N[Z]'s most successful educational publishers, Shortland Publications, has been sold to... Tribune Education, part of the American-based Tribune Company, for an undisclosed price.

...SOFTWARE companies are waging a battle of the brain as they fight for a share of the booming educational software market. As more PCs make their way into homes and schools, the demand for educational titles has created a multi-billion dollar market. The versatility and storage capacity of CD-Roms is opening a huge range of material to... users. Whereas previous generations struggled to afford a set of encyclopaedias, the average middle-income family can now afford entire electronic libraries. For less than \$100 they can buy what once would have cost 10 or 20 times more in printed form. It has also seen a changing of the guard... Where *Britannica* once ruled the reference world, Generation X has grown up with... Microsoft... and... *Encarta*... Although *Encarta* never pretended to contain as much information as *Britannica*, it changed the face of encyclopaedias by first introducing annual editions and monthly online updates. Suddenly, Generation X had access to electronic reference books that not only recorded history, but reported it almost as it happened... Recently, Microsoft combined *Encarta Encyclopedia* and *Encarta World Atlas* for \$99.95... When the *Encarta 98* series is released at Christmas, the two are expected to revert to their normal price of around \$160 for both. That makes *Collier's Encyclopedia 1998* even better value in the long run. It offers a three-CD package for \$129.95 and it throws the gauntlet down to *Encarta*. It has 45,000 articles, almost 50% more than its Microsoft rival... It also offers a big library of Internet links... Collier's stiffest competition comes from the *IBM World Book Multimedia Encyclopedia*... At \$109.95 it offers as much information as Collier's in an easier to access manner... [It also] offers free online updates and comes with a library of 3000 Internet links. *Britannica Encyclopedias* were considered the doyens of reference books, and Britannica made sure it kept that reputation by charging more than \$2000 a set. The company has failed to keep up with the times. Although *Britannica* is now on CD and the company operates a major Internet site, it has failed to compete on today's terms... At first the company attempted to trade on its name and charge almost as much for a single CD as... for its entire printed and bound collection. But at... \$1500 the CD was just about laughed out of the market place... Britannica has been forced to drop the price to around \$359, but is still struggling... Britannica has the most comprehensive text database, although much of it is two years out of date. Updates are available online – if you pay for them.

...Between hard covers, *Encyclopaedia Britannica* has always been the Rolls-Royce of information storage systems, but... [for most NZ] families' purposes Microsoft's *Encarta* – standard issue with PC sales – has been the beginning and end of a computer-based home library. And for a while

Britannica helped Microsoft to gain control of the market here with a pretty confused sales and marketing operation. My first inquiry in April in response to one of its newspaper advertisements was answered by a man who told me *Britannica* had sacked all its staff and was pulling out of N[Z] but if I met him at a warehouse in Kingsland he could let me have a copy on CD-ROM at significantly less than the advertised price. That now seems to have been cleaned up and, from a base in Sydney, *Britannica* is servicing N[Z] with some coherence... The encyclopaedia is dramatically different from Encarta in its presentation and intended audience. *Britannica* is aimed at the senior secondary school student and above...

DON'T assume the graphic you downloaded for the class project or that chunk of corporate wisdom retrieved to weave into your shareholders' pep talk is up for grabs. Copyright issues are working up steam on the internet as authors agitate for stricter controls over the use of their work in a digital environment... Everybody assumes material on the Net is freely available for use. But some people have crossed the copyright line... "They have tried to pass off work from the Net as their own or attempted to make money from downloaded material. This is considered commercialising someone else's property." Cautious legal experts admitted copyright on the internet was a can of worms... Trademarks are also causing headaches... Representatives from 150 nations recently met to thrash out up-grades to copyright protection and the rights of authors, musicians and film makers. The meeting, at the headquarters of the World Intellectual Property Organisation... in Geneva, agreed that authors had ultimate right of distribution of their works on the internet. But the new WIPO copyright treaties require 30 signatures to come into force. So far only 15 countries have signed. N[Z]'s representative at WIPO... was confident of the numbers once individual countries tied in local legislation. "But there are still plenty of grey areas... At the end of the day it is the author's job to enforce their copyright." Attribution (acknowledging the original author) would usually keep you out of court... Internet Service Providers... are increasingly becoming the meat in the Web copyright sandwich... [S]ome US courts have ruled that the buck stops with ISPs when it comes to publishing material on the Net on behalf of their clients. Several ISPs have been sued... for infringement of copyright and defamation. There have been no test cases in N[Z], yet.

...Schools may have to fork out an extra \$1.3 million a year when tighter copyright laws come into force next year. The amount that schools can legally photocopy will drop from five pages – or 5[%] of a book or article – to three pages or 3[%]. To copy more – up to 10[%] or one chapter of a book – schools can buy a licence from the copyright watchdog Copyright Licensing Ltd. That costs \$3 per secondary pupil per year and \$1.50 for each primary student. Most tertiary institutions now pay \$4 per student for the same right... The president of the N[Z] Principals' Federation... said cash-strapped schools could not afford a further \$400 or \$500 a year. "Often schools can't afford multiple copies of library books. They can't afford to buy books at all, so photocopying is the only way." ...she feared teachers would be discouraged from using up-to-date material.

...*Software sleuths on war path*... SOUNDS too good to be true. A \$5000 bounty for dobbing in the boss. The Business Software Alliance... has cranked up its campaign to nab users of ripped-off software... The media campaign, aggressively headlined "Nail Your Boss", resulted in several prosecutions when first launched in New York last year... "We are getting good leads from our phone hotline in N[Z]," said the alliance... vice president South-East Asia... Calls had increased from 20 to 60 a week in the past six months... Police search warrants were executed at three Christchurch companies last week. And it is not only business small fry feeling the... heat. BMW head office in A[US] is preparing to defend alleged end-user infringement civil proceedings brought about by the alliance. The tip-off came from a BMW employee.

...Interpol [– which has 'more than 150 of its 177 members linked by computer' (and hopes 'all members will be connected by the end of 1998 to the world's first qualified, fully equipped international communications network') –] will make inquiries in Singapore in an effort to trace the source of... more than 100 counterfeit CD-Rom discs containing... computer software worth more than \$1 million seized in Auckland this week [when police] swooped on a Queen St novelty shop... after a... private investigator... [for] an umbrella group of software companies which enforces copyrights... was tipped off... The investigator went into the store[last week] and bought four CD-Roms containing software programs worth more than \$[NZ]25,000 for just \$116. The software included the Office '97 program that has just been released on the market... The shop owner admitted importing the software from a friend in Singapore for \$10 each... People who bought... counterfeit CDs from the Auckland shop, which is still trading, have not committed an offence... The officer in charge of the case... said he believed it was the first time N[Z] police had cracked an overseas-based computer pirating operation... [The case] was carried out in conjunction with the Business Software Alliance... The alliance says the software seized this week is just the tip of the iceberg... Software piracy in N[Z] is rampant, with as much as 55[%] of all software used in this country illegally copied... [F]or many companies... pirates were their biggest competitors... Nabbing them is just a shade easier than nailing jelly to a tree... [The alliance] estimates the software industry in N[Z] lost \$US26 million in 1995 and the worldwide figure is put at \$US13.1 billion... Countries with lower... piracy... rates than N[Z] were Britain (38[%]), AUS (35) and the U[S] (26)... In the Asia Pacific region the worst offenders were Vietnam (99[%]), Indonesia (98), China (96) and the Philippines (91)... Since its formation in 1988 the [alliance] has filed more than 600 lawsuits against suspected copyright infringements throughout the world. In... N[Z] cases... are rare... [and] most... have been treated as civil infringements under the Copyright Act and settled out of court. Under the act a criminal offence is punishable by a fine of \$5000 for each illegal copy offered for sale (up to a maximum of \$50,000 in respect of the same transaction) or three months' jail. [The music industry also has 'a flourishing pirate trade based mainly in Asia and eastern Europe – accounting for more than \$NZ8.6 billion in world sales in 1996 alone, which represented 14% of all sales – or 1.5 billion music tapes and 350 million CDs.']

...A computer piracy watchdog group plans to take civil action against a Tokoroa man after a police prosecution for breaching copyright laws was thrown out of court on a technicality. [The Tokoroa man] was charged under the Copyright Act with possessing for sale two pirated computer CDs, and... a CD duplicating machine. Last month[a] Judge... dismissed the charges in the Tokoroa District Court, saying it could not be proved that... discs seized from [the Tokoroa man's] home were the same discs sent to Auckland for analysis. Police arrested [the Tokoroa man] after a tip-off on the Business Software Alliance anti-piracy hotline... Earlier... an Auckland retailer... pleaded guilty... [to] importing counterfeit software... and was fined \$15,000... The... [alliance] expected to reach out-of-court settlements in three other cases shortly.

...*Falling baht gives pirates ammunition*... The slide in the baht is spurring a rise in sales of illegal software in Thailand, reversing recent inroads into copyright piracy... [L]egal software prices have soared by 30[%] or more, causing computer owners to risk computer viruses and poor performance. Bangkok, with a myriad of computer and software retailers, is reported to be a major centre for pirated software sales... Industry representatives had estimated that software piracy in Thailand cost U[S] companies about \$US290 million... in lost sales in 1996... [S]uspected violators of intellectual property rights in Thailand [have] been arrested at the rate of more than three a day in 1997. In the first seven months nearly 300,000 individual items of counterfeit and pirated goods were seized... Despite police raids... and moves to set up a new... Intellectual Property Rights court... staffed with 30 judges and other specialists... breaches continue to flourish... The U[S] identified Thailand as a "priority foreign country"... in 1993. The move... triggered an active response by the Thai Government to avoid sanctions being imposed against it. This... brought improvements until the recession hit... [Incidentally,] Microsoft has reported an 88[%] rise in fiscal fourth quarter profit... The world's largest software maker earned \$US1.05 billion... in the three months... Revenues rose 41[%] to \$3.18 billion... While Microsoft's growth is expected to slow sharply from the torrid pace – 38[%] in sales and 54[%] in profit – of the past two years, analysts say the industry's most dominant company remains unfettered in its ability to turn bits of code into mountains of money. On a calendar year basis, Microsoft is expected to generate revenues of about \$US13.8 billion... in 1998...

Pop stars worry about "paradise syndrome:" the problems that arise from a surfeit of success and happiness. Superstar companies, seem to suffer the same complaint. Witness Microsoft. Tragically, it makes too much money. The Seattle-based software house is sitting on nearly \$US9 billion... in cash and short-term investments that earn a meagre 5.2[%] return – about a third of what even an average firm would hope for as a return on

capital. Sadder still, without some creative efforts to spend it, that pile grows by \$18m a day. Microsoft's problem is peculiar. Many cash-rich firms are in cyclical industries, where they may need the money for a rainy day. Others have big capital-spending programmes. For instance, Intel, a giant chip-maker that makes even more money than Microsoft, needs its cash to build new multi-billion-dollar manufacturing plants. But Microsoft is just a bunch of office buildings full of programmers, with no factories or capital investments to speak of... Cash represents 72[%] of its balance-sheet assets... So what to do? One option – buying other companies – is complicated by Microsoft's constant battle with the anti-trust police. A bid for any big software company would almost certainly be challenged (Microsoft was warned off buying Intuit, a financial-software firm in 1994). Buying small companies, even lots of them, does not use up enough cash. In the past three years, Microsoft has bought 45 firms, and its cash pile has still tripled in size. This suggests that financial engineering is the only answer. One option is buying back yet more of its own shares. The trouble is that Microsoft already does this on a grand scale to cover share options it has granted its employees. Since 1990, the company has bought \$6.2 billion of its own shares on the open market to reissue to its employees... But the company's skyrocketing shares are making this an expensive luxury: indeed... Microsoft employees are sitting on no less than \$35 billion of out-standing options... The other financial-engineering solution would be to shed the loot in the form of dividends. Microsoft pays no dividends on its 1.2 billion shares of common stock, partly because the stock market has considered dividends unnecessary for a firm growing so quickly. [Microsoft's chairman], so the reasoning goes, should be able to make better use of my money than me. But for the odd investors who felt otherwise, Microsoft last year issued 125 million shares of a special preferred stock that pays a dividend of 2.75[%] of the market price of the shares. But this costs the firm only about \$27m a year... Microsoft keeps its cash in low-paying short-term investments partly because that gives it the option to swoop on any big targets that present themselves. In a recent report... an investment bank, semi-seriously suggested that Microsoft solve its cash problem by buying Nokia, a Finnish mobile telephone equipment firm, for \$26 billion. That particular example would probably offend too many of Microsoft's other telecoms customers. But investments of nearly that size are becoming increasingly likely... Microsoft is also... spending more than \$2 billion a year on research and development... However Microsoft's share-holders might remind themselves of the recent history of Sony – a company that was once as widely admired as Microsoft. It has blown around \$7 billion in Hollywood in pursuit of another fashionable vision... Its belated lesson: it is generally better to have money burning a hole in your own pocket than in somebody else's.

...Apple Computer Inc stunned its shareholders yesterday with news that its nemesis Microsoft Corp would invest \$US150 million... in it to keep the money-losing computer-maker alive. The deal shows the depth of Apple's desperation to reverse years of sliding market share, mounting losses and management defections... News of the alliance sent Apple's shares up \$6.50 on the... Nasdaq exchange to \$26.25 at midday, as investors bet that Microsoft would keep the company afloat by writing software for its Macintosh line... Microsoft, meanwhile, was up 31.25c at \$143.62. As part of the alliance, Apple will receive an undisclosed payment from Microsoft to settle a long-running dispute over whether it infringed on Apple's patents when it created its top-selling Windows operating system. Microsoft has... [also] agreed not to sell the... Apple shares – which would not carry voting rights – for at least three years... For its part, Apple will make Microsoft's Internet Explorer the default Internet browser on its computers... While the patent agreement would allow both companies to share each other's underlying technology[, giving]... Microsoft features of Apple's easy-to-use operating system which it hasn't been able to duplicate in Windows... Apple executives said they would keep Mac and Windows distinct. Microsoft and Apple[have already] agreed to work together to develop software written in Java, a computer language that enables software to work on different operating systems... Lawyers said the deal was unlikely to raise anti-trust objections and might even help competition. By helping keep a flagging competitor alive, analysts said the investment could deflect criticism that Microsoft has been unfairly dominating the computer industry... [The US] President... said he was waiting to hear from the Justice Department on whether the plan had antitrust implications. "We will treat them in the same way as we would anyone else..." [he]... said. On Friday, the Justice Department approved Microsoft's proposed \$420 million acquisition of Web TV Networks Inc... after a thorough investigation into the deal's potential antitrust impact.

...Microsoft appears ready to invest up to \$US1 billion to acquire more than 6[%] of the cable TV operations of US West as part of a strategy to make cable the primary delivery mechanism for high-speed Internet... US West is a major shareholder in... the Time Warner cable empire... [Meanwhile, the] ousted... chairman and chief executive of... ailing computer maker... Apple... [has] received a \$6.74 million severance package... Separate from his exit pay, [he] received \$2.65 million for his services to Apple in the fiscal year... Apple lost \$1 billion in the year ended in September and \$816 million the year before.

...Microsoft Corp's billionaire chairman... got a modest 5[%] raise in the latest fiscal year, earning \$US591,352... in salary and bonuses... [He also] held 270.8 million shares, or a 22.3[%] stake... as of June 30, indicating he sold 11.4 million shares over the fiscal year[, which]... would have raised about \$1 billion... [A] statement filed with the Securities and Exchange Commission says Microsoft's highest-paid executive is[the] vice-president... who earned slightly more than \$1.2 million...

[When a 24-year-old Silicon Valley wunderkid launched the first commercial Web-browser in 1995, the world hailed him as the person most likely to dethrone Microsoft's chairman. Overnight his newly floated company, Netscape, which had yet to make a profit, was valued at \$US3.8 billion, and his paper fortune put at \$77.4 million. That left him way behind Microsoft's chairman, then worth \$22.5 billion. But Microsoft's chairman was 39, so the wunderkid had plenty of time to catch up – or so it seemed. Today, an increasing number of experts are declaring the would-be giant-slayer finished. As the "battle of the browsers" gets progressively fiercer, each company has tried to outdo the other with free offers. Explorer was launched with a free online subscription to the *Wall Street Journal* and ESPN sports news. Netscape responded by bundling its browser with free subscriptions to the online *New York Times* and *US News and World Report*. Several weeks ago, it said that it was adding 16 more online newspaper services from Europe. But Microsoft's prodigious wealth is hurting Netscape. While Microsoft is giving away Explorer free, and expects to lose money on the browser for three years, Netscape, which started by giving away its browser, is now charging \$49. A Netscape executive says: "You cannot compete with a company that throws money away like that. They can fund their costs with profits from other parts of their empire until they have driven the competition out of business." Netscape expects to make a small profit on sales of \$300 million this year. But its shares have fallen to less than half their peak. While the wunderkid's fortune dwindles, the Microsoft chairman is adding to his worth by \$10 million every day. Microsoft's first quarter profit showed earnings climbing 23% on the back of strong sales of Windows 95'...

Microsoft NZ's managing director... said... [yesterday that during] fiscal 97 some 200,000 PCs were sold in N[Z], most with Windows 95 preinstalled... [He] also reported good growth in the Internet market, claiming a 40[%] market share for its browser software, Internet Explorer... The sprinkling of N[Z]ers with Web access in 1993 has grown to 543,000 today. Around 212,000 people are regular users.

...MIDDLE age women are becoming addicted to the Internet... Many are spending almost 40-hours-a-week on the Net and suffer severe withdrawal symptoms when they attempt to break away. Even cancelling their Internet accounts, throwing out their modem and dismantling their computer failed to cure some addicts... [A] series of international studies... show Internet addicts suffer social problems, often lie to their loved ones and can suffer serious physical problems resulting from repetitive strain injury and sleep deprivation. Ironically, most of the addiction support groups and the Internet equivalent of alcoholics anonymous fail because they can only be accessed through the Internet... Addicts predominantly used the Net to meet, socialise and exchange ideas, mostly through chat channels, while ordinary users... [- people] who spent less than five hours[- a-week on the Net -] ...preferred to gather information.

...Oh Internet, how great thou art... aren't thou? IN John Lennon's day, the ultimate boast was to say that you (or your pop group) were more popular than Jesus. [One member] of the British group Oasis has matched that and said his group is going to be even bigger than the Beatles. To

really blow your own trumpet today, you need to compare yourself to the Internet. That level of hype has now been reached in a news release from Sony which boasts that sales of the PlayStation mean its popularity is bigger than the Net. Coming down to earth, figures show N[Z] lies fifth in the level of market penetration of the PlayStation in the top 13 markets. But how do you equate that to the Web? It is extremely difficult to get even the slightest handle on how big the Internet has become. The Internet is hard to feel and touch, let alone measure. Every time you log on, you can find new sites while some old favourites may now bring up "error" messages which mean that the people running them have lost interest, not paid the bills, gone bust or are having technical problems. As you surf around, you find more and more links to places you had never seen but there is no overall programming guide to tell you whether it is an infinite universe or whether there are only thousands, millions or billions of places to visit. If this much-hyped highway has the answer to every question, then surely the answer to its size must be on the Net – so Logged On went in search... The appropriately-named "Irresponsible Internet Statistics Generator"... says that in February 1995, there were 27,000 Web sites and that the number was doubling every 53 days. It may be plausible but hardly a scientific guess when the wording that follows says: "I read this statistic in somebody's e-mail signature... They had gotten the figure from *Business Week* which in turn was quoting someone at Sun Microsystems." ...If you use [t]his third-hand calculation, it would mean there are around 700 million Web pages or one Web site for every nine people in the world... A... new survey claims that of 220 Americans and Canadians over the age of 16, 23[%] use the Net... Another recent survey... claims that more than 20 million Americans now view the Net as an indispensable part of their daily life – especially replacing time spent watching TV... [However, t]he survey revealed... [that m]ore than nine million Americans have tried the Net but cancelled their online subscription... So at the moment, you could pluck a figure out of the air, double it, make it sound impressive and use it to justify your argument. There is no doubt the Net is growing fast. How big it is or may become are facts we may never know... It is hard for new users to grasp that no one controls the Net. Anyone can put up a Web site and it doesn't have to be registered with any global company.

...Microsoft Corp illegally requires computer manufacturers to install its Internet Explorer browser software, the[US] Justice Department charged in a lawsuit that seeks fines of \$US1 million... a day unless Microsoft changes its marketing tactics... Justice Department... documents show... Microsoft threatened to pull Compac Computer's licence to use the Windows 95 operating system unless it featured Microsoft's... browser... Two other major computer makers... sought permission from Microsoft to change the way the Internet Explorer program was installed on their computers, but were turned down... A June 10, 1994, message quotes a Microsoft executive saying that "we do not currently plan on any other client software [being in Windows 95], especially something like Mosaic." Mosaic was the name of the original World Wide Web browser, which Microsoft later licensed from Spyglass in developing its Internet products... Microsoft vowed to "vigorously defend" [itself. Its chairman said the company 'operates according to the finest traditions of American business']...

The... Justice Department's charge this week that... Microsoft's business practices are stifling competition is a big call – the sort that could change high-tech history... The Justice Department worries Microsoft is foisting its Internet Explorer onto consumers by bundling it with its operating system when it licenses it to PC manufacturers. Thus, Microsoft is rendering the existence of alternative browsers largely irrelevant – and is using an unlawful advantage to beat back an important competitive challenge to its Windows monopoly... Windows software runs on 90% of new PCs... Microsoft is no stranger to Justice Department investigations, which go back to 1990. The company has shown an uncanny ability to work through complex legal arguments and win... Then there's the lamentable performance of the lone... competitor Netscape...

COMPUTER and telephone companies say Microsoft is using extortion in its battle with Netscape Communications Corp for dominance in selling Web browsers... supporting the Justice Department's claim that the company is abusing its monopoly...

A federal judge has ordered Microsoft Corp to temporarily stop requiring computer makers to license and pre-install its Internet Explorer... So far, he has... refused the Justice Department's request to have the software giant held in contempt of court for violating a 1995 antitrust settlement. The judge... appointed a special master to gather more evidence while the court considers whether to make the preliminary injunction permanent... The judge's ruling... apparently affects not only... current licenses for Windows 95, but could hamstring plans for next year's release of a new operating system, Windows 98... that more formally combines the functions of Windows 95 and the Internet Explorer browser. [■ NZ companies 'are free to ignore the US court ruling']

...PC makers... say they will not stop including Microsoft's Internet Explorer with their products, despite the... maker being forbidden to require them to use it. However, Compac... [– whose latest]-quarter earnings rose to \$US561.7 million... a surge of 54[% –] ...and IBM said they would also include rival Netscape Communications' browser on some PCs, in order to offer consumers choice and to avoid taking sides in the "browser war"... [By the way,] Intel, Microsoft and Compac have... [united] to try to win support for a universal standard for Internet modems.

...In the fast moving world of the Internet where people say there are only 56 days to the year, new technology is in danger of becoming surpassed before it reaches the shops. But for the moment, modem technology seems set to settle down around the new 56kbps speeds according to... the... managing director of Insite Technologies, the N[Z] distributor of US Robotics modems... The new 56kbps modem protocols are currently the subject of an intense wrangle between US Robotics (who control more than 26[%] of the world modem market) and Lucent Technologies, who have developed a similar but incompatible protocol with [US] chipset manufacturer, Rockwell. The meeting for the establishment of the new worldwide standard is now set down for January... In the meantime, US Robotics has undertaken to provide a free upgrade to the new standard, whatever it is, when finally ratified next year... With the new modems... [– which] can make the Internet almost twice as fast... [–] now on sale... at \$350 each, they compare very well with the estimated \$1500 cost for hardware and installation faced currently by... home and small business... ISDN users.

...Determining the cost of owning PCs, particularly if you have a fleet of them, has been an elusive process. But Microsoft claims it has a proven cost of ownership formula worked out – and a strategy to keep the NC (network computer) out of PC (personal computer) territory. "We are lowering the cost of software deployment, maintenance and support. We think we will be able to provide a very flexible business architecture and choice in how people manage and deploy business software," said... Microsoft's vice-president of intercontinental operations... [Q]uoting an IDC-based survey, [he] said by the year 2001, 81[%] of PCs will be Windows-based, 5[%] will be DOS-based... and only 2[%] will be NCs. "That's a compelling reason not to buy an NC,"... But the battle is really for the mindshare of businesses as they consider the issues of futureproofing their technology for the new millennium. It is no longer a salesperson's game. Business knows what it wants and cost verses benefit is the big equation many are struggling with. Research... suggests the cost of each workstation in a business environment is \$US2000 to \$US3000 a year above the purchase price. [The vice-president] said he was surprised at the lack of companies in N[Z] implementing total cost of ownership (TCO) projects but was quick to point out Microsoft... now had a Zero Administration Initiative for Windows... Essentially, the TCO push from Microsoft is a direct response to the NC – the lower cost alternative to the PC workstation being pushed by Oracle Corporation, Sun Microsystems and others. Seeing their dominance of the PC-centric world challenged, Microsoft, Intel and Compac came up with an "industry standard" alternative – the NetPC – a cut down version of the PC with a lot of RAM, but no floppy disc and optional hard disc. Now in a further step to compete head-on with the under-\$500 NC, Microsoft has announced the WinTerminal, designed to run Microsoft applications from a Windows NT server... Combined with the newly announced Hydra Server... you would have an environment where not only NetPCs, but also legacy PCs and even MS-DOS terminals, Unix boxes and Macintoshes could be included on the network. "We would use a common set of APIs (application programming interfaces) and common architecture which will allow us to deploy this in volume and at low cost,"...

The PC price war, which has seen... cuts of about 20[%]... to entry-level home computers, has escalated to more highly specified systems using Intel's latest generation Pentium II processor.

...Intel and Advanced Micro Devices have slashed prices on their best-selling computer chips, stepping up their ongoing battle for market share. Intel, the world's largest maker of computer chips, cut prices on its popular Pentium chips by up to 57[%], prompting... Micro to trim prices on... its new and more powerful... K6 chip by as much as 55[%]... Analysts said the cuts would help lower personal computer prices later this year... Meanwhile, Intel has agreed to buy specialty semi-conductor maker Chips and Technologies. The \$402 million purchase would expand Intel's presence in the market for graphics accelerator chips.

...Philips N[Z] has closed its personal computer division and will no longer sell them in this country... The Philip's closure is the latest casualty of a market shakeout that began earlier this year with IBM withdrawing its Aptiva range. More recently Intel's largest distributor, NJS Technology, closed its doors...

The second largest N[Z] assembler and retailer of personal computers, PC General, has shut. Repeated calls to the two Auckland branches and its Christchurch head office yesterday went unanswered... Staff totalled about 50... Founded in 1990, PC General was one of the pioneers of direct sales of PCs in N[Z]. It assembled its own... brand from components sourced from local suppliers, including Tech Pacific... and from makers in Taiwan, Singapore and the U[S]... It grew to include seven shops... It recently closed the Wellington store... The... general manager of research company IDC N[Z], said the company "was playing at the price sensitive part of the market, where margins were very slim." ...IDC... ranked PC General as the seventh-largest supplier of PCs in N[Z] in 1996, selling 11,230 PC units. The largest local assembler, PC Direct, sold 16,845 units last year... [T]he Consumers' Institute, said a survey of computer companies about a year ago found more complaints from the public about PC General than any other company. The complaints were mainly about slow performance in warranty matters and slow delivery... It was not clear if any buyers are out of pocket for PCs they had yet to receive... Tech Pacific... received a fax... on Tuesday... [saying] the company had ceased trading because "trading conditions made it imprudent to continue." ...Tech[Pacific's] managing director... said his firm was owed a significant sum.

...Customers with computers under repair at PC General... may be in for a wait for the return of the machines... [The receiver] had been swamped with claims from landlords, suppliers and customers... PC General is the third computer retailer to shut its doors this year. Mt Wellington retailer Best Buy went into receivership on July 2 owing \$904,000, including \$377,612 to buyers who had paid cash up front. And Auckland retailer PC Power went into receivership on August 8 with \$1.3 million of claims by unsecured creditors – although some of those were by its former directors.

...A string of local PC retail collapses... reflects the sudden change in the nature of the PC market... The latest casualty is[a] Christchurch-based PC retailer... which went into receivership on Wednesday owing an estimated \$500,000... Meanwhile, customers who have PCs at PC General for repair may have to pay the freight costs from Christchurch to get their machines back... PC General... [folded] owing an estimated \$1.5 million... Usually in the PC business, no sooner does one company fall over, another quickly steps in. Perhaps in the current market, that space is already full.

...Information technology (IT) is the original, and still most potent, management fad. Worldwide spending on computer and telecommunications hardware and software has already overtaken investment in production equipment and plant – and the gap is growing. Worth well over \$NZ900 billion last year, the IT industry is replacing cars and housing as the driving force of the global economy. The latest frenzy has been caused by the internet and its internal company equivalent, intranets. International Data Corporation... says spending on net products and services will total \$133 billion by 2000, displacing the personal computer as the engine of IT market growth. Except for those who make them, computers do not have a point in themselves. They are sold to make other businesses more productive, customers happier and companies more profitable. But IT is notoriously difficult to manage. Disasters such as the London Ambulance computers and the Stock Exchange's Taurus make headlines. But a study by... Sheffield University, shows 80 to 90[%] of IT investments do not meet their performance goals; 80[%] are delivered late and over budget; 40[%] fail or are abandoned; fewer than 25[%] properly combine business and technology objectives; and just 10 to 20[%] meet all their criteria. The main reasons projects fail are that investments are technology-led, focus too narrowly on cutting costs and pay too little attention to human factors. These difficulties are compounded by the treadmill nature of IT investment, and the difficulty of measuring its costs and benefits. "Companies are driving down a one-way street, propelled by their past IT investments," says... a... research fellow at Imperial College's IC Parc. "Investment in IT isn't an event; it's a never-ending process." And with salesmen dangling the prospect of more computer power at ever lower cost, it is also seductive... [Unfortunately, m]easuring individual projects means little when they are add-ons to a larger and older system... and there are big problems in judging infrastructure projects – rewiring a whole company, say – whose effects are indirect and spread out over time. Banks have been trying – and failing – to come to grips with this issue for 30 years. In many industries, IT has rapidly turned from a novelty into part of the cost of doing business, offering no special edge over the competition.

...Widely accessible and increasingly affordable technology has broken the monopoly of governments over the collection, management and interpretation of information... Large international single-issue groups such as Greenpeace, Amnesty International and World Watch command knowledge, ideas and information that equals, indeed surpasses, that of governments. The tightly closed world of inter-government negotiations in areas such as trade, environment and the like are thus being changed forever... We are still in the midst of this profound revolution. It is difficult to explain, let alone forecast with confidence, its complete effects... [T]he revolution spreads power among more people and groups, at the expense of governments. Networks are emerging that decentralise communication, consultation and coordination. Governments are no longer "in control" especially of their own borders in ways that they used to be, or liked to think they once were. This has produced both a sense of opportunity among entrepreneurs, and a sense of anxiety at the level of the citizen, about individual security. I[T] has the potential to divide society, between those with the wealth and education to command the power of technology, and those without such endowment. Technology, communication and multinational elites are emerging who have more in common with their counterparts in other countries, than with their fellow citizens. The impacts of technology are therefore contradictory. They are both global, in the sense that they connect peoples across borders, and fragmenting in the sense that they divide people inside nations; and indeed they can divide nations. Levels of education, and scientific competence will determine which countries move quickest to exploit the advantages of the... revolution.

...[The microchip that spawned the personal computer revolution is 26 years old tomorrow. The world changed forever on November 15, 1971. And hardly anyone noticed. Watergate was still seven months away. The biggest news of that day was the readmission of China to the UN. Yet on that same morning, a small start-up company in California known as Intel, barely three years old, put out a press release that signalled the dawn of the Digital Age. The product launched was the Intel 4004, the first general-purpose "microprocessor" and the world's first computer chip. It was an innocuous sliver of silicon in a dark metal casing with fat metal electrodes for legs, looking for all the world like a headless electronic cockroach. With 2300 transistors, it could process what must have seemed like an astounding 60,000 instructions a second. In today's tech-talk, it was a 4-bit microprocessor with an operating speed of 100,000 cycles, or 1.0 mega-hertz. It cost \$US200. That modest chip represented a revolution so powerful it would sweep the world. In 1971, offices were filled with paper: order books and invoice folders, carbon copies and suspender files, forms in triplicate, memos, rubber stamps and typewriter ribbons. Today, the army of clerks has been replaced by a platoon of skilled IT workers, while that little-known company has 42,000 employees and annual revenue of \$US16.2 billion. Intel's latest chips, the Pentium and Pentium Pro, all trace their lineage back to the 4004. Intel had arrived at the 4004 chip by accident. At the time, logic controllers for machines had to be custom-made and task-specific. In 1969, Intel received an order from Japan's Busicom to manufacture 12 chips for a new line of desktop, spool-paper electric calculators. An Intel engineer had an idea: rather than making 12 separate chips, maybe he could design a single general purpose chip – a logic device that could retrieve the specifics of each application from a silicon memory. Nine

months later, he and a fellow engineer had created a working CPU, or central processing unit – the heart of today's PCs. Both engineers quickly realised the chip's potential and tried to convince Intel to buy the chip back from the Japanese. Intel's founder also saw its potential, as did a fellow founder. Others in the small company were not so sure: Intel was in the business of building silicon memory – CPUs might get in the way. Finally, the four men won the doubters over, and in 1971 Intel offered to return Busicom's \$60,000 investment. It may well have been the deal of the century. But it was not until 1979, with the launch of an accounting spreadsheet program called VisiCalc for the Apple II, that the world really took notice. For the first time, everyone could see what computers might do: instant calculations. By 1980, the PC industry was becoming too big to ignore. IBM created a crack unit of engineers in August 1980 to develop its own PC, a project codenamed "Acorn." With no time to develop a chip, Big Blue went to Intel. IBM also contracted a fledgling Seattle computer company, Microsoft, to write an operating system. In a piece of bravado that is now a part of computer industry mythology, Microsoft's chairman confidently detailed the idea of DOS to IBM, and agreed to license it – before Microsoft even owned it. After closing the IBM deal, Microsoft's chairman bought rights to the system and renamed it MS-DOS. When the IBM PC was launched in August 1981, it single-handedly legitimised the PC as a serious tool.'

...IBM has developed the world's fastest computer, which can perform enough complex calculations to maintain reliability of the USs' nuclear weapons without conducting actual bomb tests. "This is a computer that will make Deep Blue green with envy," said the Vice-President, referring to the current supercomputer. Pacific Blue runs 15,000 times faster and has 80,000 times more memory space than the average desktop PC, officials said. Complex calculations that would normally consume months of time, even on advanced computers, can be completed in just days with the new machine. Many recent major advances in drug development for health care have been driven by high-performance computers because speedy calculations can be used to identify compounds likely to succeed in clinical tests, freeing scientists from trying unnecessary combinations in the lab.')

...IBM ships Web-ready DB2 in database war ...to recoup ground lost last year to rival database powerhouse Oracle. The product... allows users to manage and organise vast amounts of information stored on computer networks... For the first time last year Oracle nudged out IBM for the largest share of the database market, something Oracle is keen to crow about. At a recent A[US]n conference Oracle produced figures showing it had 29.6[%] of the market, with IBM not far behind on 26.5[%]. IBM... is looking to win back the No 1 position... The database market was estimated to be worth about \$5 billion last year and is expected to increase to about \$9.6 billion by 2001. The broader data management market will expand to about \$25 billion...

The Internet poses massive implications for the management of global businesses. With... users in 159 countries... already... the Internet will rapidly build a \$US100 billion market by 2000," IBM's managing director in A[US] and N[Z]... predicted... As the Internet expanded exponentially, it would create havoc as well as opportunity.

...the Internet is a threat to N[Z]'s economic and cultural life. That is not the sort of warning you expect from someone whose company supplies the backbone for 12 of Australasia's biggest Internet sites and three of its biggest Internet service providers. But... Digital's Internet business manager for the South Pacific, said N[Z]ers and AUS]ns must wake up to the growing imbalances arising from the [USs'] domination of the Internet. "...Now many sites are moving from a straight brochure to commerce... [T]hat's going to lead to a fiscal trade imbalance."

...The art of flogging products and services has infiltrated what was supposed to be an advertising-free zone... the Internet... [S]ites now incorporate hard sell and blurred commercialism. Of course, everyone except a few diehard Web purists knew it had to happen. The Internet was relentlessly non-commercial until interest in online communications network[s] caught fire three years ago... The hitch is the Net itself... Traditional media placement is fairly straightforward, as you buy space or screen time from the medium that matches your target audience... But the Net is not so conveniently skewed. Onliners are typically... trawling through dozens of unrelated sites... This makes it tough for advertisers to get seen, let alone noticed... Because there is no rate card for the Internet, advertisers and their agencies are feeling their way with payment. How much is it worth to hang out their sign in cyberspace? "It's a bit like the Wild West at the moment,"... Advertisers were haggling with site owners, most of whom favoured a fee of around \$100 for every 1000 people who visit the site. But advertisers preferred payment for each time a visitor "clicked" on their promotion. Data extracted by Internet service providers or the advertiser's own server kept track of site "hits". Banner advertisements were "clicked" by 1%-4% of site visitors... which was consistent with direct mail response. Animated banners out-pulled the stationary version four-to-one, and advertisements needed to be refreshed, or updated, every two weeks... The benefits of using e-mail are too many to expand upon... For example, one company sent an e-mail message to 40,000 prospects in less than an hour – for \$5. What can beat that? ...It is somewhat ironic that the amount of advertising expenditure on the Internet is dwarfed by money spent offline to promote Web sites... "Web advertising can be effective for branding, but it is more cost-effective to stick with traditional advertising choices... The Internet is not yet a mass medium." [However, there]... are now more than 50 million users worldwide... serious numbers for enterprises eager to turn a profit. Factor in that most Internet users are reasonably well fed and it is no wonder advertisers are lying awake at night figuring how to grab the attention of this vast, affluent population of potential customers... There's a mind-blowing 150 million web pages, expected to multiply to more than a billion when we clock year 2000.

...Year 2000 a giant computer headache... THE computer systems which gave the business world its first real quantum leap into the space age could destroy many organisations... Many double-digit computer systems are likely to throw a major wobbly en mass on January 1, year 2000, if a lot of time and money is not invested in upgrading or completely replacing software and in some cases, older hardware. It's a universal problem affecting employers and the safety of staff and customers the world over. The cause of the problem is simple. Vendors still produce software to cope with the last two digits of any year. This means many computer systems, especially older ones, store the year 1997, for example, as a two-digit year, 97. But when 1999 moves to year 2000 the transition may be mishandled as the year will appear to move backwards from 99 to 00. If not fixed, organisations, relying on time-critical or process-controlled operations will see their dates either revert back to year 1900, miscalculate or malfunction completely... Known by the [IT] industry as the "Y2K issue", Year 2000 compliance is essentially a software and operations problem.

...['programmers have known about the problem since 1964 – they just "didn't think about it". To save space on the early computers, programmers used 2 digits instead of 4. Because the computer system is so interconnected, one computer with a bug can affect those that are otherwise OK.')

...The world's financial institutions must prepare their computer systems to reflect the Year 2000 date change to ensure their operations aren't disrupted, [the]president of the[US] Federal Reserve Bank... said recently... So[US] regulators want banks to create strategic plans by... about mid-1998... to make any changes needed... The F[RB]... plans to oversee how both [US banks and US] branches and agencies of foreign banks cope with the issue...

Financial regulators from around the globe plan to meet... to discuss efforts to prepare computers worldwide for the widely-feared year 2000,[the] Federal Reserve Governor... said on Monday.

...Directors are being warned shareholders could bite if their companies do not adequately address Year 2000 problems. Director liability will be one of the issues addressed at an Institute for International Research seminar, called IT 2000 Conversion – A Practical Guide, in the Wellington Town Hall... [D]irectors must be aware of their legally enforceable obligations. These include making sure their organisation keeps functioning, doing due diligence whenever new assets are acquired, making sure all audit, financial and regulatory obligations are complied with, knowing what their company is doing and taking any necessary defensive measures and contingency arrangement[s] to keep the show going. That means Year 2000 problems can be laid squarely at their door.

...Companies and organisations must stop thinking of the Year 2000 bug as an [IT] problem. That was the consensus from an Institute for International Research conference on the issue held in Wellington last week... Businesses which cannot ensure all their functions work after 2000 are a risk to other businesses as well as themselves. Directors should seek assurances or warranties from suppliers to ensure compliance.

...Telecom could have to spend more than \$50 million to ensure its managers sleep easily on the eve of the new millennium. Some analysts pick the company will have to pay that much to alter memory storage, so that what seems like a minor computer glitch is overcome and the year 2000 is accounted for... At the moment, the only solution appeared to be a wholesale replacement of computer hardware, one analyst said. That would be expensive. Telecom is not the only listed company affected by the year 2000 problem... But Telecom will be most exposed to the problem, according to analysts, because it has the largest customer base in the country, with around 1.4 million lines and about 400,000 cellular customers... Telecom is unwilling to put a dollar figure on what it will cost to diffuse the millennium bomb. But a spokesperson indicated that it could be in the tens of millions. I[t has]... engaged computer company Unisys to manage its programme to deal with the problem... [By the way, a] computer glitch at the Tiwai Pt aluminium smelter at midnight on New Year's Eve[1996.] ...left a repair bill of more than \$1 million.

...APART from misgivings about missing out on New Year parties as the last seconds of 1996 ticked away, it was much like any other night for the staff at the Tiwai Pt aluminium smelter in Southland. Midnight and crisis struck in the same moment. Each of the 660 process control computers that run the smelter's potlines... ground to a halt... their digital chips frozen. Five pot cells were ruined, leaving N[Z] Aluminium Smelters with a repair bill estimated at more than \$1 million, though the company will not confirm the final cost. What happened? It became clear only when Comalco's Bell Bay smelter in Tasmania shut down precisely two hours later... N[Z] time is two hours ahead of Tasmania. Both smelters use the same programme, which was written by Comalco computer staff... The general manager... said... [the] computer software programme... failed to account for 1996 being a leap year... Unable to cope with an extra day, the computers at Tiwai Pt and Tasmania stalled with expensive consequences. The incident has those who work with computers saying, "I told you so." ...[the] chief executive of the Information Technology Association of N[Z], says the Tiwai Pt glitch [wa]s hard evidence that the so-called Millennium Bomb is no high-tech bogeyman.

...WHENEVER my personal computer crashes, I thank God I'm typing a newspaper article and not flying a plane. Desktop PCs do not, of course, control flight systems... [C]omputers, known as safety critical systems (SCS), are used with planes, rockets, medical gear and other potentially hazardous equipment. [They are much] more expensive and extensively tested – but not crash-proof. Losing a document or even an entire hard drive of data after a computer crash can be upsetting. But when [SCS] fail, people die... By 1992, 1100 people had been killed by something which did not compute, says... [a professor from] the University of Edinburgh, who in 1994 published the first scientific study of computer-related accidental death. Yet despite 10 years of work by the International Electrotechnical Commission, a global standard for a level of acceptable risk in SCS has yet to be ratified. The most thoroughly documented digital fatalities include: ...A software malfunction which caused Therac-25 radiation machines to issue up to 100 times the recommended dosage to... patients... in the U[S] and Canada between 1985 and 1987[, and a]... faulty radio-therapy computer... in Britain[that] "under-dosed" patients from 1982 to 1991... [T]he London Ambulance Service computer system... fail[ed for]... three days in 1992... [and, in] 1982, during the Falklands War, the HMS Sheffield sank after its defensive computer system failed to intercept an Argentinian Exocet missile... Interference from the ship's satellite communications transmitter was blamed. During the Gulf War, 28 American soldiers were killed at Dhahran when a programming error caused a Patriot air defence system to malfunction during an Iraqi Scud missile attack. The computer bug was a known problem; a software fix was expected to arrive the next day. It was the biggest single Allied loss of the campaign... Robot malfunctions have led to maintenance workers being squashed... However, human stupidity or sheer bad luck seem likely to have contributed to such deaths... The crash of an Airbus A320 in France in 1992... [was] attributed to software failure or an inadequate computer interface. Wayward bits and bytes have also caused billions of dollars in damage – \$NZ140 billion in Britain and America alone, according to a journalist... who will next month publish a compendium of computer disasters... In one instance last year a \$500 million payload blew up with the Ariane-5 rocket after a software error... The software bug of the minute, of course, is the much-publicised millennium or 2000 defect... Although it has been over-hyped, even the chief executive officer of Hewlett-Packard recently said he would not fly in a plane on... New Year's Eve 1999, when many computer systems will reset, instead of ticking over to 2000.

...[A] GREEK inventor... is making fat profits out of the "millennium bug" which threatens to sabotage computers after midnight on December 31, 1999. He's selling a CD-ROM game... about a war sparked when the Turkish High Command's main computer switches back to 1919 – right in the middle of the Greek-Turkish war.

...There are plenty of horror stories about the impact of the millennium bug... It's Wednesday January 5, 2000, and you're heading to the office for the first working day of the new millennium. All the parking spaces outside are taken, but that's all right, you have your own spot in the basement. But what's this, the car park door is closed. Some chip in the system thinks it's a weekend in 1900, and won't open that door for anyone. The offices though are open. They've been open all weekend, and have been ransacked by technologically-savvy burglars... No time to look around though. The phone's ringing. Your widget assembly line has run out of o-rings. Your favoured o-ring supplier can't get his computer system to work. Their competitor just put the price up, and you have to wait in line until their regular customers (your competitors) are served. Now your customers are ringing. Their accounting software is causing grief, and the... back-up had a stroke. Can you wait a couple of weeks for payment. That means extending your overdraft... Your banker says no. She's had 50 similar calls already this morning, and the bank doesn't have the funds to cover it... Scary stuff. But is it true... will computers really run amok... or... are these... stories... just hype from people wanting to sell you services or software?

...How could computer vendors have made such a disastrous mistake...? Unfortunately, it is true and while the bug can be fixed, it's going to take considerable time and money. The problem is widespread – affecting not only older mainframe computers, but also many PCs and a range of everyday "date aware" microprocessor-controlled equipment found in a variety of machinery, including lifts, air conditioning and security systems... While hoards of people worldwide are currently working on fixing the problems, inevitably, come the millennium dawn some systems will fail. Some failures will be nuisances, others will cost companies millions of dollars and some could be life threatening... [– like] when the screens freeze at a computerised phone dispatcher for an ambulance service, or a navigation computer on an airliner will not reboot[, and many]... dialysis units... use... time-dependent... electronics to monitor cycles and blood flow... Common sense tells us that the vendors who sold these defective goods should fix them at their expense. But in the computer industry, it's never that simple...

Based on the experience of the U[S] and Britain... the cost of defusing the Millennium Bomb in N[Z] will amount to about 2.75[%] a year of the \$5.4 billion annual cost of the country's information technology... WHETHER the fix becomes public or private, it will take time. [One] report figures on 1000 person hours to solve the problem as the average company cost... One certainty is that N[Z] will need COBOL programmers to supply the fix. The outdated language for large computer systems lies in the bedrock of code on which later software was built... [T]he longer the delay, the more expensive the problem will become. COBOL programmers are predicted to be in short supply worldwide as the millennium approaches. THE British edition of *Esquire* magazine reports that there are 90,000 COBOL programmers worldwide, while the estimated number needed to defuse the Millennium Bomb in the world's computers is 3 million. Clearly, COBOL programmers will soon command top fees as countries compete for their expertise. At this point a final irony presents itself. In the [Last] World, India may well prove a market leader in defusing the First World's Millennium Bomb. India's solid education system has produced thousands of well-qualified software programmers proficient in COBOL and other outmoded computer languages. In N[Z], Indian companies and joint ventures are already exploring a new market.

...Less than 10[% of N]Z... organisations are likely to have completed an audit of their computer systems and date-aware equipment – the first step necessary to assess the potential impact of the Year 2000 problem on their business. That is the view of[a] PA Consulting Group managing consultant... who bases his opinion on his company's experience assessing the problem in N[Z] organisations, and the results of a survey the group conducted in Britain in November last year. The survey found that only 9[%] of organisations in Britain had completed an audit and that the anticipated costs of achieving compliance had risen, with 69[%] believing it would cost more than £500,000... to fix the problems. A third of the organisations polled had yet to begin an audit. "Defusing the Millennium Bomb" is... likely to provide significant revenue to help achieve the group's goal of doubling the size of its business by 2002... PA Consulting's... approach is to... develop a costed "millennium programme plan." Implementation of the plan is followed by testing, for which PA Consulting has formed a partnership with Infosys India.

...Tomorrow could be too late for businesses to begin inoculating themselves against the Year 2000 bug[. a] Year 2000 preacher... told a seminar in Auckland last week... "If you have 3000 sites to convert and 24 staff to do it, and you have to do the work on the weekend, there's not much time[." H]e... said almost a quarter of the companies in a recent... survey expected to buy help from major accounting and professional services organisations. They may be out of luck. Telecom – budgeting \$87 million – and the BNZ – \$37 million – for Year 2000 fixes would need to hire several hundred programmers. "There's not enough resources to satisfy Telecom's needs. The top 300 companies will exhaust all resources in N[Z]." A further 800 or so companies with more than 100 staff had no access to professional outside help. "It's a time problem – if you leave it, someone else will take [what's available] from you." ...Some chief executive and information officers had already found a personal solution to Year 2000 problems. A trend was emerging in the U[S] for executives to migrate to other companies... "They leave the problem behind and it's not their problem where they go to."

...A new users' group to link people working on year 2000 projects is finding employer confidentiality agreements are inhibiting membership. The group was set up after a seminar in Wellington earlier this year... But... many potential members feel there's no point joining if they can't discuss their own experiences... [In related news, a] Detroit grocer is suing a cash-register maker in what is believed to be the world's first... 2000 bug-related law suit... [S]imilar cases... can be expected in N[Z] soon...

Computer retailers who fail to tell customers about the year 2000 "bug" could land themselves in court. The Ministry of Consumer Affairs has warned traders about the risk of prosecution if they deliberately mislead buyers about the capacity of computer systems to handle the switch to the new millennium... Computer retailers who deliberately misheld... information from customers could be prosecuted by the Commerce Commission under the Fair Trading Act. Individual consumers could also claim their money back through the Consumer Guarantees Act if they bought computer systems or software from a trader who failed to disclose that the equipment had the millennium problem... Consumers should[especially] be wary when buying secondhand or imported hardware and software... The... [ministry's] general manager... said buyers... should get written confirmation from retailers that the products are year 2000 compliant, or a time-frame and cost to update them... He urged people with personal computers to be informed on the issue so they were not pressured into unnecessary or ineffective computer upgrades.

...Compac Computer, the world's largest seller of personal computers, says machines it has supplied since October 7 can cope with dates in the next century. About half the personal computers sold this year cannot tell the difference between 1900 and 2000... Some 93[%] of... pre-1997... computers fail a Year 2000 compliance test... Most of the attention paid to the Year 2000 bug has centred on the billions of dollars in losses that some consultants say could potentially result from shutdowns of large computer systems. PC owners may run into problems too, if they use their computer to perform date-related tasks such as calculating interest... Owners of older Compac PCs could test their computers by running a... programme available from Compac's Web site... Free [Y]ear 2000 upgrades were available from the site... Compac's fix teaches a computers' binary input-output software, or BIOS, to look at a separate data field on the clock chip that counts the century... Most PCs would not lock up if users neglected to fix them...

Leadership in alerting the country to the dangers of the millennium bug must come right from the top, says... *A Survivor's Guide to the Year 2000 Problem – a Non-Technical Handbook For All N[Z]ers*... Most boards of directors are paying lip service to their company's Year 2000 plight – foolishly believing management has the situation under control and failing to recognise their potential liability... The Insurance Council public affairs manager... said there was still too much complacency... She said insurance companies around the world were assessing their exposure to the millennium bug and taking action, including changing the wording of policies... [T]he "drop dead" date... when policies to take effect from January 1999 and extend to January 2000 will be drafted... is only 10 months away... A Commerce Ministry survey... claims 76[%] of small and medium-sized[NZ] businesses are confident they can deal with it[, but only 7% of respondents have]... completed their information systems work on the Year 2000... [NZ] businesses and organisations[also] get low marks for preventing security breaches... Nearly two-thirds... acknowledge they have suffered financial losses or disruptions to their business related to information security in the last two years. Viruses (80[%]) are the number one nuisance followed by inadvertent errors (47[%]) and information systems going down or being unavailable (45[%])... We're on a par with the rest of the world in respect to these and other causes such as malicious insider (28[%]) or outsider acts (23[%]), natural disaster (23[%]) and industrial espionage (22[%]). On a brighter side[NZ] organisations show up as the highest users (84[%]) of desktops and laptop PCs, are the fourth most extensive users of mid-range systems and one of the top five users of telecommunications... While the use of the Internet by businesses is widespread in [NZ], only one in five are using it to transfer important information. Alarming, only 25[% of NZ] users have Internet firewalls in place and less than 50[%] of organisations monitor their Internet usage.

...A[US]'s largest telecommunications company, Telstra, has put aside a further \$A500 million... to beat the Year 2000 bug. The company initially put aside \$100 million, about the same as Telecom N[Z].

...NZ's] Information Technology Minister... said businesses would receive in their next tax pack a warning notice, telling them what the year 2000 problem is and what their obligations will be... Alarming trends had already emerged. "When you have two businesses side by side, offering similar services and running similar software, and one says it needs resources to address the problem, while the other says they don't have a problem, they can't both be right." ...While stories about miracle fixes created false optimism, manufacturers were still producing non-compliant machines and software developers were writing bad code... said... [the] chief executive of British-based year-2000 solution company Greenwich Mean Time... "We tested 500 PC configurations in laboratory operation. Of the... 1997 machines, 47[%] failed."

...The Minister for Information Technology... believes market forces mean the Year 2000 bug will cause a series of minor hiccups rather than a catastrophic collapse of the economic system... [He] told a conference on Year 2000 issues in Wellington... that the Government's role should be limited to increasing awareness of the issue... His dry approach contrasts with that of the A[US]n Government, which is taking a more hands-on approach... [The] Year 2000 coordinator for the Office of Government Information Technology... said... A[US]ns saw the issue as one of national safety as much as economic survival. The dawn of the new millennium coincided with the bushfire... and... cyclone season...

A Sydney-based research company [has joined] the rapidly swelling ranks of claims to have developed a cure for the "millennium bug"... The bug is big business worldwide, inspiring a boom in computer jobs as businesses and governments alike set aside hefty chunks of their budgets to tackle the problem... [T]he repair cost for N[Z] will be \$1.9 billion. That's not a lot compared with the global bill of around \$400 billion... [T]he Year 2000 issue[is] a plague rather than a bug.

...A leading expert in solving year 2000 computer problems has poured cold water on claims a Christchurch schoolboy has licked the millennium bug. A story in a Canterbury business monthly about[the] 14-year-old... [boy]'s software patch for [PC]s sparked worldwide media attention,

including a story on the CNN news network. But [the schoolboy] said people had blown his achievement out of proportion. "They've been too excited to listen that it's not a solution to the whole year 2000 problem,"... [H]is programme, designed to run when a computer starts up, will[only] diagnose whether the computer's BIOS... will handle the switch from December 31, 1999 to January 1, 2000... [Incidentally,] Microsoft has posted a bug fix[for] its Internet Explorer 4.0 Web browser on its Web site (www.microsoft.com/ie). The bug, known as the Freiburg text-viewing issue, allows text, HTML or image files to be copied from victims' hard discs. It does not allow data to be destroyed. Users can disable "Active Scripting" to protect their hard disks until they download the patch.

...Prevailing opinion on the Internet is that a newly-discovered bug that crashes Intel Pentium processors could be serious... The bug was first reported by CNet (www.news.com) last Friday. Intel engineers were meeting immediately, according to sources... The "Pentium FO" bug can freeze up Pentium MMX and "classic" Pentium PCs and could be used as a weapon for sabotage...

Some security systems are akin to "putting a steel door on a wooden house," according to a visiting... [computer] security expert, who says the "human factor" is leaving plenty of scope for skilled hackers... He said middle management needed to be more committed to understanding and enforcing security... Over the past six months in the U[S], the FBI has set up a special task force to investigate more than \$US40 million in payments to computer criminals. "That's only the tip of the iceberg because the majority of these crimes go unreported,"... Two security systems, one developed by Sun and the other by Cisco, are competing for acceptance as Internet industry standards[, but]... standards authorities such as the Internet Engineering Task Force were a few years away from ruling on security issues... Sun computers has a number of firewall and security products which run on both their range of Sparc workstations and Microsoft NT, including a unique product which does not use an... Internet protocol... address[, thereby] making it invisible to attackers. [The expert] said the present ban on most strong encryption exports by the U[S] Government was hurting the development of encryption and security standards – as well as the American software community as other countries such as Israel were taking the lead in that area.

...An Internet crime-fighting agreement reached by Russia and the G7 group... provides for a 24 hour commitment to tracking and prosecuting cyber-criminals. Governments will be expected to prosecute even if the crime did not originate within their territory.

...Big Brother staged a raid on the Internet yesterday looking for scams, get-rich-quick schemes and anything else illegal... [as] part of an international crackdown... Statistics will be released once they are gathered from the 30 countries that took part in the operation. [The] general manager of the[NZ] Ministry of Consumer Affairs, said it was the first time this country had joined international enforcement agencies in the battle to clean up the Internet... "There's no magic about the Internet. They are just the old scams done electronically," [he] said... More than 1000 Web sites... were targeted... The ministry would warn illegal users of Web sites by e-mail and follow up later to ensure the information had been removed.

...Of 658... sites re-examined in a follow-up, 174 had either disappeared or changed... Most were American based, and although 50 sites were found to be operating in N[Z], they were not actually located here... The Internal Affairs Department sought co-operation from... Internet Service Providers... last year, resulting in a heap of trashy sites and more blatant newsgroups being shut down... However... [the] Ministry of Consumer Affairs general manager... said... the Internet was still a free-for-all. "There's a reluctance to regulate because it's so hard[to] get any one piece of law that applies everywhere..."

...You might not know it but... indiscriminate... electronic mail – more commonly known as e-mail – ...could land you in court or even get you fired... What started out as a blessing in electronic communication is slowly becoming a psychological and political war zone... [A] case involving forged e-mail... in the... U[S] began three years ago when... [a billionaire's] former girlfriend, also his employee, sued him for wrongful termination. An e-mail regarding the girlfriend's sacking was pivotal to the prosecution... The missive seemed to imply... [that the billionaire] (who, ironically, made his fortune with Oracle, a software manufacturer) fired the woman after a date when she refused to have sex with him. [The billionaire's] company eventually settled out of court for \$145,000. But without security devices, anyone can send an e-mail and pretend it's coming from a third party. And this year it was discovered the ex-girlfriend forged and sent that e-mail herself, using another employee's password... In altogether different circumstances in Christchurch, a Customs broker was charged with threatening to kill in an e-mail message... The 41-year-old man, who was eventually found guilty of illegally possessing an anti-tank rocket launcher and several other weapons, had sent the following message to several workmates: "I'm sure you will join me in celebrating the 50th anniversary of the Kalashnikov rifle... Guess who's got them and is going to use them one day." ...the accused man told the judge his e-mail should have been taken light-heartedly and he was... cleared of the first charge. This year three men were sacked from the N[Z] Employment Service for sending hundreds of offensive messages to each other... Their dismissals came after management examined back-up records and discovered the "derogatory" material. The three men had also referred to one of their managers in an abusive way. Now while you can call your boss all the names under the sun and get away with it in everyday conversation, legally any such message sent on computer is defamatory. E-mail is different from a private conversation... because company property has been used and the record was permanent. The wider the e-mail has been circulated and the more defamatory the message the higher the damages sought. For instance, in Britain, insurance company Norwich Union had to pay \$1.6 million in damages after staff sent[an] in-house e-mail suggesting a business rival was in financial trouble and the message reached brokers and clients. Forgery, defamation and sexual harassment are just some of the serious issues emerging as more people use e-mail from home and office. It is estimated there are now more than 40 million e-mail addresses worldwide... As well as the unresolved legal implications, social, psychological and just plain irritating e-mail issues are up for debate. There is the junk mail problem; laws governing direct marketing tactics don't cover e-mail. Cyber-slang for e-mail junk is "spamming". It is a little like programming your fax machine to send one message to several different fax machines; with the push of one button you can e-mail 40 or more people, or even every computer in your office system. The recent e-mail war between rival internet providers, Telecom and Voyager, annoyed many of their customers. Apparently the pair got hold of each other's client lists and started sending advertising messages to thousands of computers around the country... Eventually both companies put in place software that prevented the other from e-mailing anyone who was not a client. Then there are the behavioural problems e-mail creates. It can warp corporate... bosses who would rather terrorise their underlings with admonitory computer messages than confront them in real life... [Another] problem... is with personal use of the messaging system. "We had one e-mail sent to everyone in the company – someone looking for a flatmate. The sender might not have thought it was much, but... it takes up too much memory." ...Even a quick perusal of office messages reveals a lot of computer-borne text is personal. Embarking on an affair with a new boyfriend, one Wellington lawyer tells... "At one stage I think I was spending about half the day writing love letters... It was ridiculous." How [do you] regulate this kind of time-wasting e-mail abuse? Canny businesses have codes of conduct regarding security, access and transmission of inappropriate material (like pornography or bomb design), but most managers accept private use is unavoidable. It's much like employees chatting on the phone: Impossible to regulate... [although] it is possible to pick any old message out of the worldwide stream of data... The only real way to prevent others from accessing your e-mails is by using a special computer program that encrypts, or codes, messages, making them inaccessible to anyone except yourself. There are also programs that monitor e-mail... a little like putting a sign saying "No Junk Mail" on your letterbox.

...[Internet users worldwide are unwittingly paying an estimated \$NZ21.37 billion a year in connection costs to receive "junk" e-mail, or "spam," the European Commission says. "The exponential growth of junk e-mail in recent years is a fact of life," said the EU's Internal Market Commissioner.' Speaking of e-mails, a company has developed a new version 'that self-destruct, leaving no trace in the system']...

Online technology, it's often said, is liberty's natural ally – a claim reinforced by the elegant, anarchic structure of the Internet... As[one] cyberlibertarian... famously put it, “The Internet treats censorship as damage, and routes around it.” ...however, the case for the Net's innate freedom-fighting tendencies has lacked the sort of rousing historical example that might clinch it. Sure, the Beijing students who survived the crackdown at Tiananmen Square have since used E-mail to keep information moving between them and the rest of the world... And Mexico's still-defiant Zapatistas were wired from Day One of their quixotic rebellion, broadcasting manifestos from the jungle via a jury-rigged foot-messenger-to-fax-to-E-mail pipeline (these days they've even got a Web page of their own)... The Net's decentralization makes it easy for... [activist]s to tap in anywhere and reach a worldwide audience of millions – but equally hard to censor. Designed to withstand nuclear attack, the Net hardly blinks at lesser attempts to block the information flowing through it.

...WE TEND TO THINK OF THE WORLD'S great discoveries in terms of the people who made them: Thomas Edison and the electric light bulb, Marie Curie and radium, Einstein and relativity. But, in fact, discoveries are never the work of single individuals toiling alone. They are always the result of a group effort, with each individual building on the achievements of colleagues and predecessors... [For example, t]he creation of the Internet in the early 1980s... [followed t]he Arpanet data network established by the U.S. Department of Defense... in 1969. - 1997

He who serves the world... could have been richer than [the chairman of Microsoft,] but he chose instead to work for the common good... TYPE [his name into]... the AltaVista search-engine on your computer and it will come back with about 10,000 pages containing references to him. It ought to stand to attention and play *Hail to the Chief* as well, because without this modest, understated Englishman the Web would not exist and the Internet would still be a playground for geeks... The inventor of the Web ought not, on the face of it, to be a charismatic figure... Yet an aura clings to him, generated not just by what he has achieved but by what he has chosen not to do. For this is the man who invented the future, who created something which one day will be bigger than all the other industries on earth... And yet he has turned his back on... the... intellectual property rights... [However, we] sometimes forget that the Net is a pretty ancient system whose foundations were laid nearly 30 years ago... In computing circles, the idea goes back to 1945 when... the MIT engineer who masterminded the American scientific war effort, published an article outlining his vision of a system for creating “associative trails” through complex mazes of documentation... The explosive growth of the Internet dates from January 1992, when the fruits of [the Englishman's] labours were released on to the Net. It went really ballistic in 1993, when... [an associate] wrote Mosaic, the first of the big browsers and the precursor of Netscape and Microsoft's Internet Explorer. The most significant innovation [Mosaic] made was to make it easy to put pictures on Web pages. This was critical because it meant that the Web could now be used for entertainment (not to mention pornography) as well as pure information, but it infuriated [the Englishman. Mosaic's inventor] recalls being “bawled out” by him in the summer of 93. The frivolity that the visual Web offered worried its inventor because it “was supposed to be a serious medium...” The use of the Web for entertainment opened up the possibility of making money from it. The image tag, in other words, was the gateway to the commercialisation of the Net. At that point, the two men went their separate ways. [Mosaic's inventor] went on to found Netscape and become a multi-multi-millionaire. And [the Englishman] went to MIT and the World Wide Web Consortium to try to ensure that the Web would remain governed by non-proprietary technical standards and not fall into the clutches of computing or multimedia conglomerates. As the parent of this prodigious off-spring, he is possibly the only person alive who can keep the Web on the rails.

...It started out... as a rocky, unpaved road full of potholes and ended up as the information superhighway... The Internet celebrates its 30th today with a special conference of its proponents at the University of California at Los Angeles, especially those pioneers who can remember its first days, when... users logged in rather than logged on. While “WWW” now stands for World Wide Web, during those infant days the acronym might better have meant wild, wacky and who-knows-what's-going-to-happen-next. Indeed, the forerunner of modern e-mail went wrong the first time around when there was a system failure during the first attempt to link two computers, according to [a]UCLA professor... aged 65, the man largely credited as being the “Father of the Internet.” ...Although the UCLA conference honours... [today] as the birthday of the Internet, some people think the date should be October 20, the first time one computer had actually talked to another. [The professor] himself is not sure... In retrospect, he does not think he and his colleagues created a monster... [They had] looked at creating the Arpanet as a technological challenge, not an ethical one. “Were we thinking about the impact and the ethics? No. Did we try to lay down some codification of how this thing should be used? No. Did we abrogate our responsibility to think about that? Yes. We did not think about the potential dangers... We did not talk about, ‘Will little Charlie do his homework on it or will he look at pornography?’” But [the American] has no regrets. “Would I do it again? You bet.”

...Oxford University is to create the world's first institute dedicated to studying the internet. The Oxford Internet Institute, set up at a cost of £15 million... will carry out research and make policy recommendations about what effects the internet has on society... The university said it hoped to put Oxford and Britain at the centre of the debate about how the internet could and should develop.

...Local thirst for the Internet has led Telecom to invest in a \$2 billion telecommunications cable – the biggest investment made by a N[Z] firm in any project... A Telecom spokesman... said rising demand for the Internet meant existing capacity would run out before the originally expected 2003. When the project is finished in August next year it will increase telecommunications capacity between N[Z, AUS], Fiji and the U[S]. Telecom expects it to give 40 times more carrying capacity for telecommunications out of N[Z] – meaning that if every man, woman and child in the country logged on to the Internet there would be no problem. The cost of the project is shared among Telecom, which has a 50[%] shareholding, Optus in A[U], and World Xchange in the U[S]. The... 4cm... cable... will stretch... along the seabed and across land in each country... Divers will ensure the cable is lying flat on the seabed... Such attention is not possible across the 28,000km the cable will stretch... [- i]n parts of the Pacific Ocean the cable will reach 5km under water... [-] but contractors who work with Telecom and the other firms will have special cable ships ensuring that any breakdown is fixed quickly... The cable is also a self-healing loop, which means that the smaller cables run in both directions so that if one set of cables breaks down the other will pick up the usage... Yesterday the first section of the fibre-optic cable, known as the Southern Cross Cable Network, was supposed to be laid in the upper Waitemata Harbour. But strong winds and a rising tide[meant the work had to be] delayed...

The cost of surfing the Internet[in NZ] could skyrocket if Telecom goes ahead with a proposal to charge for residential data services. At the moment all local calls are free. Under the proposal, data calls would be separated from voice calls and... [one] Internet provider suggested the charge could cost users an extra... \$50 a month. However, any attempt to introduce the charges is likely to run head-on into the consumer protection provisions of the Kiwi Share and strong opposition from... providers and users... [A]ttempts to separate services to introduce higher data charges had been well canvassed and rejected in the U[S].

...the] US House of Representatives approved legislation yesterday to allow the US computer industry to bring in more than 300,000 high-tech foreign workers over the next three years to meet a shortage of skilled employees... H-1B visas[will] allow... noncitizen computer programmers and other professionals to work in the [US] for up to six years... [An influx of skilled employees is urgently needed for new projects like the] \$1 billion technology agreement... Nintendo of America... [made] with IBM to support Nintendo's next home video game console[, and to correct the Y2K bug]...

Americans should prepare for the year 2000 computer bug like they would a hurricane, by stocking up on canned food and bottled water in case vital services are cut off, senators leading a congressional study of the problem said yesterday. Global trade could also be disrupted because major U[S] trading partners, including Japan and oil producers Venezuela and Saudi Arabia, may not be able to address the computer glitch in time... “This will not be the end of the world as we know it. But we have to stay on top of... [t]his problem...,”... said ...t[he] chairman of the Senate's

special committee... There was no need for people to buy electricity generators or stockpile propane because a prolonged nationwide blackout was unlikely, [the chairman] said. The committee's draft report added that due to limited resources and a lack of awareness, rural and inner-city hospitals across the U[S] would be at high risk. It said more than 90[%] of doctors' offices had yet to address the problem... [In local news, a]rrangements aimed at comforting bank customers in the transition to the new millennium are expected to be outlined by the Reserve Bank this week. They are likely to include holding an extra \$1000 a week in cash for every man, woman and child, or an extra \$4 billion... While the banks are confident they have done all the work necessary to ensure information systems and equipment are secure against millennium problems, concern remains that customers will hedge their bets with a run on cash on the eve of the new millennium.

...Fear of a possible rush on banks by people worried that millennium computer bugs might leave them cashless is prompting the Reserve Bank to stash extra money. It will keep old banknotes due to be replaced next year by flexible plastic ones in vaults instead of destroying them... [The US FRB] will boost the amount of cash bills in its system by 25[%] to \$US200 billion... Many economists are working off predictions by... the chief economist for[a] European-based investment banker... that the year 2000 bug now has a 70[%] chance of causing a global recession...

In many parts of Asia plugs will be pulled out seconds before the dawn of 2000... as a means of protection against the millennium computer bug... Fingers crossed, they will turn everything back on minutes into the new millennium. If things do not work Asia should still be prepared – just. In Malaysia, for example, transport bureaucrats have already been equipped with a Contingency Plan Recovery Kit, containing a candle and rubber stamps for counter staff. In South Korea, officials are sweating over the possibility of an accidental launch by North Korea's ageing Soviet-built weapons systems. They have asked Russia for clarification. Thailand will shut down its missile computers to avoid such a possibility... Because Vietnamese computers will not be ready in time, the country's two national airlines have been ordered to train pilots to fly without radar... In India, because some state power suppliers have failed to address the problem, the lights could go out in a domino manner... China will not say how it is coping. "There will definitely be precautions," was all one official would say. Japan, the world's second-biggest economy, admits preparations are sketchy, with hospitals a major headache and lingering concerns over power and water. Central banks around the region are also stashing away large reserves of cash – \$US330 billion... for the Bank of Japan alone – in case of a systems breakdown, or a public run on reserves. But the biggest stock exchanges have said they will be ready.

...[the 'NZ stock exchange is planning to turn clocks back until sure its computers are safe from "ELECTRONIC ARMAGEDDON". Even though some commentators are declaring that the level of risk has been exaggerated by people who have a commercial interest – the same people, perhaps, who say we need to "start thinking about the year 3000" – the traders and other NZ companies are unable to get insurance against the Y2K bug. In the US, a law firm has set up a department of 50 people to study the legal implications in preparation for compensation claims.]

...AUS's P]M... may spend New Year's Eve on a plane to prove the millennium bug will not cause in-flight mayhem.[AUS's] Communications Minister... is so confident the computer bug will be zapped by the... [time] clocks tick over from 1999 to 2000... that he has invited [the PM] to join him on a plane trip [to coincide with the event]... Asked if he was taking up the invitation, [the PM said: "If my minister] deems that necessary, well, I'll give it serious consideration." [The minister]'s confidence mirrors the optimism of British Airways officials booked on... flights, so they will be mid-flight if the bug kicks in[(although Britain's Government appears less confident – 'BA's chiefs have been ordered to be in the air' at that time)]. A law has been passed in Canberra to protect people and businesses making Y2K disclosure statements from civil liability.

...The countdown may be on as the new millennium approaches. But that hardly seems to have consumers rushing to upgrade their computers. Far from getting vaccinations against the millennium bug, retailers say people are taking their time to check on whether their home computer will suffer from the year 2000 disease... Next month the Ministry of Consumer Affairs will release a guide on how people's homes may be hit by the problem and how consumers can ensure their rights are protected... The national service manager for [a major electronics retailer]... said that his stores had not received many calls from... worried... householders... Like most people... he had not yet bothered to check if his computer is one that needs an upgrade. But... [the company] has spent... 18 months assessing which of the products it sells will need to be looked at. The firm has just started selling software packages which people can use to ensure their computer is compliant. The packages sell for about \$150... □... Telecom has confirmed to telephone card dealers that its pay phone network is not Year 2000 compliant and will be replaced. The overhaul, expected to cost \$6 million, has prompted telephone card dealers to warn collectors that many cards will become worthless unless Telecom offers an exchange deal.

...A massive sewage-system failure faces N[Z] in the event of a year 2000-induced power collapse – and officials say some towns and cities are not safeguarding residents. Much of the North Island, including its biggest cities, could have trouble flushing away sewage within four hours of an electricity failure caused by computer problems as the new millennium dawns. Water supplies would generally last longer, according to a Local Government NZ survey out yesterday, but Hamilton could run dry in two hours given its total reliance on power. Although the... report says that most of the country's 86 territorial authorities expect to be ready for the millennium, its authors are worried that 14[%] will not be until the last quarter of [the year, while s]ome councils claiming to be 100[% ready were found to be] seriously lacking on closer scrutiny.

...A[US]ns thinking of going abroad at the end of the... millennium... have been warned of a scary range of potential... disasters. In a list... that suggested travellers may be better off staying at home around the turn of the century, the Department of Foreign Affairs and Trade yesterday raised the spectre of power blackouts, travel chaos, strained emergency services and disease outbreaks. Travellers could be left without cash or credit by the failure of international financial services. They may not be able to phone home for help – and A[US]'s ability to aid its stricken citizens through embassies and consulates may be sluggish by the bug. While noting that problems caused by computer failures are hard to predict and may cause little disruption in some countries, the department... said[in others] the millennium bug could place... security services under severe strain.

...Russia faces huge problems ensuring its missile systems will not be affected by the millennium bug... says... [the] head of the State Committee for Communications and Information... [F]ixing the computer problem could cost Russia \$US1.5 billion to \$US3 billion, up to six times his original estimate. "Entities such as the Defence Ministry face great difficulties from the viewpoint of all types of missiles... The technologies they have are 20 years old," he said, adding that... Government departments were due shortly to report on progress in updating their systems.

...Midnight, December 31... Across Russia, screens monitoring the nation's air defences freeze; in neighbouring China, early warning systems go crazy. Panicked generals in both countries order their nuclear strike forces to red alert... Chaos mounts everywhere as... [t]he countdown to holocaust has begun... This, [the US President]'s chief adviser on the Year 2000... Bug warned this week, may not be the stuff of a [horror writer's] novel. The adviser] is head of the council charged with coordinating the campaign to protect critical information systems from collapse... The scale of his job... [is daunting]: 180 billion lines of software code worldwide, and millions of embedded chips requiring replacement or scrapping... The US Defence Department has 1.5 million computers and 25,000 systems running its early warning satellites, radars, communications systems, missiles, planes and ships. With the job on present estimates unlikely to be completed by 2012, entire systems are being discarded. With defence systems such as the Tomahawk cruise missile being vulnerable to the bug, and fears of a sharp rise in cyber-attacks on critical defence information systems, defence planners are becoming increasingly anxious... [US] concerns were increased by the revelation that Russian defence computers are clones of European and [US] systems and that until an alert was issued by the Kremlin in May, few organisations had even heard of the bug. "Strapped for cash" says a CSIS paper[.]Russia's Atomic Energy Ministry announced on June 19 that it will wait to see what happens as the date approaches to fix any Y2K problems." ...The US has now offered Russia and China a new joint early warning system... "We are reaching out to the former Soviet Union... and trying to encourage it to understand what serious problems they face."

...Millennium bug-induced failures in communications systems and early warning radar might set off a nuclear exchange within hours of clocks striking midnight at the end of this year, say experts. Nothing will happen at midnight on December 31 – but disaster may strike soon after, they say... [The] US Secretary of Defence... has acknowledged “some nervousness” in Washington about potential computer problems in Russia. “They don’t seem to have the same level of urgency that we have had over it,”... The man leading Russia’s efforts to tackle the problem... finally responded yesterday by asking Nato and the US for advice and cash to help secure Russia’s nuclear weapons. Meanwhile, a survey of China’s most critical enterprises showed that more than half did not even know how to detect the computer glitch in their systems. Chinese officials doubt that Government ministries can meet an October deadline for fixing their systems. Little help is being given to agencies and enterprises outside the crucial finance, aviation, telecommunications and transport sectors. Still, many analysts say Russia and China have less to worry about than countries such as the U[S], because they have far fewer computers and a lower overall level of technology. [Some e]xperts believe that the risk of an accidental firing of nuclear weapons as clocks tick into 2000 is more or less zero... “Warheads won’t explode in their silos due to computer error. They won’t launch by mistake [at midnight,]” said... [the] author of a report published by an independent research group, the British American Security Information Council... That is very good news considering that the US has just over 12,000 nuclear weapons and Russia 25,000.

...*Low-tech saves the day in Moscow*... While the rest of the world scrambles to make computers Year 2000 compatible, most Russians are wondering what the fuss is about. Russians have inadvertently isolated themselves from the threat of the millennium bug by maintaining a low-tech lifestyle. As other countries dashed to digitise everything from bank accounts to elevators, Soviet society remained virtually computer-free... Russia has just one computer for every 42 people, compared with one for every two in the US, according to International Data Corporation. Water lines and telephones still run on analogue systems, and officials of all ranks continue to work for the endless pursuit of paper. Most computers they do use are for writing reports, which are in turn printed off and added to the stacks. So it is no surprise that Russians don’t know or care much about the bug; a recent survey of Moscow businesses reported that 85[%] had not even heard of it... While the Pentagon and corporations worldwide poured billions of dollars last year into reprogramming their computers, [last]... August... Russia’s Defence Ministry... ordered its soldiers to pick berries and mushrooms and to hunt wild game in order to feed themselves. The Government too is guilty of underestimating the problem’s scope; just two months ago the head of Russia’s strategic missile forces... maintained the nuclear forces had “solved” their bug problems. Now, officials say Russia needs up to \$3 billion to avoid disruption in military, nuclear and telecommunications computers.

...In what experts fear could be a portent of the chaos to come, the Wanganui computer is failing to recognise the year 2000 when police try to set court dates for people arrested for traffic offences. The glitch has been around since the New Year and is believed to be the first instance of the bug in N[Z]. The computer’s traffic programme automatically tries to find another date [a] year... on from the court hearing as a “failsafe” to check that police have not slipped up. But when it tries to search for a date, it hits a blank and spits out the file... The... court files... [affected have been] processed manually. The glitch would be fixed today... The computer stores information on criminal records, vehicles, drivers’ licences, stolen property and other personal material. It is used by police, Justice staff and the Land Transport Safety Authority. [The] Assistant Commissioner... said the traffic section of the Wanganui computer, built in 1978, was not programmed to recognise 2000. “We didn’t imagine at the time that we would build something which would last until the turn of the century,”... The new multimillion-dollar police computer, Incis, due to be finished by [the end of the] year, was being built to cope with the year 2000.

...Police are having to spend... \$800,000... upgrading the near-obsolete Wanganui computer to make it Year 2000 compliant even though they do not plan to use it beyond December [when] Incis... is supposed to take over... from the Wanganui computer, which houses records on every citizen. But continued Incis delays have forced police to fall back on a contingency plan...

The bill for the... Incis computer system may blow out to \$170 million – \$72 million more than planned. The cost of the project has been put publicly at \$119 million. But it was revealed yesterday that the... company contracted to complete the system has picked up another \$50 million in overrun expenses. A N[Z] First MP... claimed in Parliament that IBM would take the \$50 million hit to avoid more bad publicity for the police... In another development yesterday, the... Y2K Readiness Commission... warn[ed] people to protect themselves from “cyber-terrorists” producing computer viruses disguised as Y2K bugs. [The commission’s] special adviser... said computer hackers and virus freaks saw the new millennium as a historic opportunity to undermine information technology systems around the globe... On one Dutch hacker site, a hacker calling himself “The Might” invited virus writers to submit samples for his... page of new viruses. “It would be nice if your virus would have something related to the millennium bug or anything with the year 2000,” The Might wrote. They were warned not to release viruses in any other way “to prevent the AV [anti-virus] guys detecting all the codes.” The contest winner would be the last virus detected from this “Y2K infection fest.”

...fewer than 30 computer experts... strategically located around the... world, with a budget of less than \$US10 million... could bring the U[S] to its knees, a panel examining information warfare reported yesterday. “Attacks on information systems are as serious a threat as this country faces,” [a] Senator... said when endorsing a report released by the Centre for Strategic and International Studies... “Bytes, not bullets, are the real ammo,” the report said.

...Seven of the top computer hackers in the U[S] yesterday told a Senate committee they could cripple the Internet in a half-hour. Given more time and money, they could interrupt satellite transmissions or electricity grids – and snoop on the movements of [the US] President... While Internet security experts said such claims might be hyperbole, testimony before the Senate governmental affairs committee raised troubling questions for some about security of the nation’s public and private computer networks... “If you look at this, in some ways it is a whole new way of making warfare,” [one senator] said... The General Accounting Office, an arm of Congress, released two studies at the hearing critical of computer security at the State Department and the Federal Aviation Administration... It found weaknesses in the physical security of FAA computer systems... [and t]he State Department’s unclassified automated information systems “are very susceptible to hackers and terrorists,”...

FORGET the old police posters warning of masked men with crowbars breaking into your unguarded house. Cyberspace burglars are busting into Kiwi homes and businesses from as far away as the other side of the world through your PC. Internet criminals are hacking into computer files throughout N[Z], in acts of industrial espionage and even pornography peddling. Viruses sent from as far away as America can wipe out business or personal records in PCs here... [Yesterday,] internet hackers tried to shut down Ihug, one of N[Z]’s most popular internet companies.

...A hacker has wiped out more than 4500 N[Z] Web sites... – [including]... about 500 commercial sites... – ...in what is believed to be the worst case of computer vandalism to hit the country... There was no backup facility and, unless the owners had made their own copies, the Web pages were permanently lost... An e-mail apologising to those affected says: “Unfortunately three days ago, a malicious hacker managed to get into our Homepages server in the USA.” ...the hacker accessed the system via a “security hole” in a... small program on a Web page – and then damaged the disk drive and emergency backup on the computer server... The sites are hosted by the Auckland-based... provider the Internet Group, also known as Ihug... The company provides Internet access to about 45,000 subscribers throughout N[Z] and AUS]. It allows subscribers to create up to five free megabytes of Web pages, which can be accessed by anyone using the Internet... N[Z] did not have specific laws relating to electronic trespass. But if it could be shown there was intent to do wilful damage, a 1991 British case relating to hacking might support action under the Crimes Act.

...The Internet Group wants to extradite an Auckland teenager to the U[S] and charge him there with hacking into the Ihug computer on Monday and destroying 4500 Web sites... [The] Internet service provider[’s]... director... said yesterday that his company was considering the extraordinary move because its Web server is in San Francisco and N[Z] law is inadequate to deal with cyber vandalism. Legal experts doubt such a move would succeed and a Mt Albert youth who said he was the hacker... Sharkdog... told the *Weekend Herald* last night that he was too young to

be charged. The youth... claim[ed]... on TV One... he was 15 years old... But the *Herald* understands he is older, about 19, which would mean he could be charged in an adult court... The youth said he had friends who worked for Ihug but had not worked there himself. Ihug management said they had suspended one of those friends while they checked whether he was involved in the hacking... Sharkdog said he felt sorry for the Internet users who had lost files. "I was targeting the ISP... itself. They've abused a lot of my friends and cut accounts for no apparent reason and I'm just making a statement here that, yes, you guys are hackable and you should follow the rules and be nice."

...The country's largest I[SP] was working early today to set up safeguards against hackers who have compromised the security of Xtra customer accounts. The Telecom company, which has 300,000 clients, has learned that a hacker has acquired the passwords of hundreds of its customers. Clear Net, Ihug and Voyager services are also vulnerable to the practice, whereby a hacker uses other people's passwords to surf the Net at their expense... Password-hacking is common overseas, but the scale of the latest sniffing – on top of the sabotage of 4500 Ihug Websites by another hacker last week – shows N[Z]'s half-million-plus Internet users are exposed to local attack. Clear Net is advising its 40,000 customers to change their passwords regularly[, and]... recommends they check their Internet bills as carefully as they would a credit-card account.

...A computer hacker tapping away on a keyboard in Finland wiped out the archives and records of the student newspaper at the University of California in Berkeley. "We lost everything," said... [the] electronic editor at the university newspaper, the *Daily Californian*. "It was disheartening." ...Copies are stored digitally but the paper will have to upload the data and get new software to get its site running again... [In further news from the US,] Microsoft has vowed to fight the... Government's plan to break the company into two separate parts... Last week, the Justice Department and 17 of the 19 states that filed antitrust complaints against Microsoft submitted a plan... to break the company into two new businesses... to a federal judge... One company would retain the popular Windows operating system, which runs the majority of the world's computers, while the other would consist of Microsoft's applications and internet products, such as Microsoft Office and the Microsoft Network group of websites. The plan must be approved by[a] US District Judge... who will also receive a written response from... Microsoft, which reorganised itself along similar lines last year... and is expected to hold hearings on what, if any, remedies are necessary to counter Microsoft's violations of antitrust law... The court battle comes at a critical time for the company, which is facing increased competition on a number of fronts. The Linux operating system, developed by computer enthusiasts via the internet, has become a cheap and effective alternative to Windows for large corporate computer users. America Online, set to merge with Time Warner next year, is also planning several new consumer computing devices in partnership with Gateway. "I think there's a general sense of vulnerability over at Microsoft," said... [the] executive director of the Berkman Centre for Internet and Society at Harvard Law School. "Windows is starting to show its age... They'll be forced to reinvent themselves again while, at the same time, handling this case." Indeed, Microsoft[']s chairman... is already trying to steer the company in a new direction, hoping to put Windows operating systems not only on new computers, but on handhelds, cellular phones and home electronics.

...Microsoft officials are living in fear as the company's uncertain legal future could spark an exodus of its most productive employees. Just days after [a US District Court judge]'s ruling that the company be broken in two, Microsoft has admitted it is concerned it will lose top staff... "The company has always felt that it's a brains trust and its No 1 asset is those brains and it wants to hang on to them. There are a lot of extremely competent people in the company. If you lose a number of people who have been here a long time you lose continuity – and that's a danger... to the company," said... a Microsoft program manager... Microsoft has warned that the court order will snuff out innovation and progress, and has vowed to appeal all aspects of the ruling.

...SOFTWARE giant Microsoft Corporation has settled its long-running antitrust case with the US Government. [Yesterday its c]hairman... said the settlement, which involved restrictions on the company for five years, was fair and reasonable and, "most important, is in the best interests of consumers and the economy". The... pact, which must be approved by a federal judge and is not yet endorsed by the states that joined the antitrust case, is a far cry from splitting the company in two, a remedy sought by the[President's] administration... If approved, the pact will bring to an end a three-year-old legal battle in which Microsoft was found to have illegally maintained its monopoly in personal computer operating systems... [In the meantime, all eyes] will be... on the stock market tomorrow (NZ time). That is when traders return to Wall St, where the company's stock will be under the microscope offering a key test of consumers' confidence in the company.

...N[Z] share prices are expected to fall sharply this morning as stock markets around the world begin a second week under heavy selling pressure. Following on from Wall St's big losses on Friday, the NZSE-40 capital index might drop as much as... 3.5[%], some analysts estimate. "It's not going to be a very happy Monday," said... [a] senior investment analyst... The global share rout was triggered last week by a collapse in prices of high-technology stocks in the US. After years of rises – peaking with a 35[%] gain in the past six months – investors started to believe that such high values were no longer realistic... The news looked all bad on Wall St on Friday. High-tech stocks, measured by the Nasdaq Composite index, fell 9.67[%], taking their loss in the week to 25.3[%]... It all compounded Microsoft's year from hell; so far... its stock is down 43[%]. Microsoft's chairman has... suffered a loss of nearly \$NZ19 billion in his personal fortune... and c[o]me dangerously close to losing his ranking as the richest man on Earth to another technology supremo... The value of [the chairman's] 742 million shares in the software firm ha[s] plunged... to \$99.8 billion... At the same time as his personal worth sank, [his] rival... the... chairman of database software maker Oracle, drew near... when his... 663 million shares in Oracle[grew] to \$96.97 billion.

...Managers of [NZ's] Government Superannuation Fund will face a grilling at a parliamentary select committee this week after it was revealed they have lost another \$138 million in the overseas sharemarket. Figures released to the Green Party by [the]Finance Minister... show the seven-member authority that manages the... \$3.5 billion... fund racked up sharemarket losses totalling about \$380 million in the [past]14 months.

Although I [– the billionaire financier (r:p303, ln70) –]have made a fortune in the financial markets, I now fear... the spread of market values into all areas of life is endangering our open... society. The main enemy of the open society, I believe, is no longer the communist but the capitalist... - 1997

Evidently Capitalism has hidden within it a tendency to self-destruct.

Evidence is strong that the nervous breakdown is under way. The institutions and values that scarcity and want imposed – work, thrift, property – have begun to lose their sanction.

To even state the possibility of the collapse of the American economy, or monetary system, sounds paranoid on the face of it... Unfortunately[, this]... has become so real, that some of our most respected orthodox economists are beginning to seriously consider the possibility.

A new discourse is just beginning to emerge in the holy of holies of modern academia: economics. Factors of established economic analysis such as labor, capital, profit, marginal utility, and comparative advantage, and the unexamined companion assumption that human beings correspond to the model of acquisitive, self-maximizing individuals: these tried and true pillars of economic theory are having to give way a little to ecological and anthropological evidence... [M]ore and more... the virtual absence and distortion of the factor of land, or nature, in established economics... [is] questioning the prevailing ignorance of mainstream scholars of the fact that most cultures of the world integrate cooperative and competitive modes of behaviour and that this is a more natural way to understand human motivation than a one-sided emphasis on individual greed.

Money is clearly associated with envy, greed, crime, bitterness, social injustice and misunderstanding between nations. But we must be clear about one thing. Money does not *cause* them. In itself it is neither good nor bad. It is just a tool.

Much can be done to treat those characteristics which cause people to reject or be rejected by the modern industrial society... The limiting factor is not a lack of knowledge... Overwhelmingly, it is a shortage of money.

Plainly, the social order equal to the task of securing to all its members the benefits of industrial technology remains to be invented. The market is imperfect. The state is incomplete.

Growing numbers of people in the industrialized nations... [are] disillusioned with the once-accepted belief that ever-increasing material growth and ever-expanding technology and industrialization w[ill] overcome world poverty and help mankind to achieve a more meaningful existence... The world has always known poverty, but its contemporary form, co-existing with abundance, appears to be inherent to the industrialization process. The dilemma appears to be unresolvable without fundamental changes in the world economic system... - An Incomplete Guide to the Future

This economic system, by its nature, requires a large educational and scientific establishment. Will these people long be content with the rather mundane goal of ever-increasing affluence which the system espouses as the highest aim of man? Might there not one day be discontent with a society in which there is single-minded concentration on the goal of economic success? Might there not one day be suspicion of leadership... associated with economic achievement? Might not one wish for such a revolt?

A society has a higher task than to consider its goals... It must also, so far as this may be possible, ensure its own survival.

If there is no effective counter-challenge to monetarism, the result will be catastrophic for both the [First and Last World] countries alike.

Today the question is not just one of emancipation in economics, but a perspective at least of emancipation from economics...

Whereas freedom buyers seek money to purchase their independence... freedom fighters reject money and all it stands for. Money and the materialistic society that worships it are seen as the cause of enslavement of the majority of people... [Freedom fighters] believe in the elimination of money altogether and think of it as... not at all suitable to a time of high technology and social enlightenment... and that by abolishing money or distributing it more evenly, the quality of life could be improved... WITH ALL OF THE ABUSES AND PROBLEMS THAT MONEY SEEMS to generate, and with all of the self-destructive and crazy things it motivates people to do, [it]... makes... sense... to... question whether money has any legitimate place in a sane society.

It is... clear that the kind of political economy that now exists in... the... industrialised democracies is inherently unstable. - The Sane Alternative

...[the] English historian... Arnold Joseph [Toynbee] (1889-1975)... held various university posts and became Director of Studies at the Royal Institute of International Affairs (1925-55). His greatest work is his twelve volume *Study of History* (1934-61) in which he surveys the history of 21 civilisations, tracing a pattern of growth, maturity, and decay in them all and concluding that the present Western civilisation is in the last of these stages. His suggestion that its fragmentation and waning could be saved by a new universal religion, with one spiritually oriented world society, was not well received.

...the only way to fix it is to flush it all away...

...when the whole thing comes crashing down... when the whole thing washes away don't run to me... don't ask me why...

G O D

...we cannot sleep Turning over turning round twisting in our sweat They say there is no rest for the wicked ones Dear God what... is this evil that we must have done... is it the times that we've been out fighting... or is it that we were eating while other people were starving... - New Model Army

...just thought you'd like to know... when times are hard I think about you... I don't think you're listening I think I'll tell you again... - THE COMSAT ANGELS

Dear God, hope you got the letter and... I pray you can make it better down here. I don't mean a big reduction in the price of beer but all the people that you made in your image, see them starving on their feet 'cause they don't get enough to eat... [S]orry to disturb you but... I feel that I should be heard loud and clear. We all need a big reduction in amount of tears and all the people that you made in your image, see them fighting in the street 'cause they can't make opinions meet about God... and it's the same the whole world 'round. - XTC

There is only one (true) religion, but there can be faiths of several kinds. It is therefore more fitting to say, 'This man is of this or that faith... than he is of this or that religion.'

Join us tomorrow when our topic will be: Religion, which is the one true faith?

Each side confidently called upon the One True God, and publicly proclaimed the inevitability of victory.

The two *opposing* values "good and bad," [or] "good and evil" have been engaged in a fearful struggle on earth for thousands of years; and though the latter value has certainly been on top for a long time, there are still places where the struggle is as yet undecided. One might even say that it has risen ever higher and thus become more and more profound and spiritual: so that today there is perhaps no more decisive mark of a "*higher nature*," a more spiritual nature, than that of being divided in this sense and a genuine battleground of these opposing values.

All of the physical characteristics of man show... he is animal. He has gone through many stages of growth and development as other animals have... The animals most like man are... apes. But even these... do not have what... is often called the "spirit" of man... abilities to think, reason, believe...

Religion – belief in a superhuman controlling power, especially in a personal God or gods entitled to obedience and worship.

Religion is a nearly-universal phenomenon, extending as far back in history as we can trace human activity, and manifested among people in every part of the world. - THE NATURE OF RELIGION

Every people in the world has its own myths; but it is very obvious that many of these myths are strikingly familiar. These similarities may be accounted for by assuming a common racial origin at a very remote period... But sometimes these similarities are found in the stories of peoples who can have had no geographical or racial connections with each other. Human beings it would seem, while unlike each other in many ways, have always still more in common, and their imagination, when confronted with similar events, will react to them in much the same way... It was not till the 19th century of our era that scholars proclaimed that all myths were unhistorical, that the Trojan War never took place and that 'Homer', who did not exist either, supplied us with nothing but something in the nature of a 'solar myth'. Then, to the fury of the scholars, Schliemann actually dug up Troy and more recent archeologists have confirmed as basically true very many of the 'myths' of Homer and others... Today it is generally admitted that myth and legend can and often do have a basis in historical fact. Of course there is also very much mythical material which cannot be regarded as historical, except in a very loose sense. Many myths of all countries are attempts to explain the world which to primitive man was even more unpredictable and alarming than it is to us. - Encyclopedia of World Mythology

A larger-brained hominid called *Homo habilis*... evolved in Africa about 2 million years ago... *Homo habilis* is classified as the first species of true humans and appears to mark a transition between apelike and humanlike hominids... Around 1.8 million years ago *Homo habilis* disappeared from Africa and was replaced by *Homo erectus*. This species is widely accepted as human and appears to have evolved from *Homo habilis* in Africa, although it might have evolved in Asia independently of *Homo habilis* and subsequently migrated to Africa... About 1 million years ago, *homo erectus* occupied southern and eastern Asia... These people developed an elaborate culture, inhabiting caves and hunting game. They were probably the first people to develop an advanced form of communication, which enabled them to organize hunting parties and to pass tool-making skills to the next generation... [*Homo erectus* is also accredited with 'taming fire about 500,000BC.'] Many other types of *Homo erectus* were scattered over the world. It therefore appears that anatomically modern humans might have evolved from *Homo erectus* not just in Africa but in several places, possibly accounting for differences in races among modern humans. The Neanderthals, a species of *Homo sapiens*, first appeared about 300,000 years ago... [T]hey appear to have buried their dead, placing offerings such as ibex horns and flowers in the graves...

In this act is something which generally distinguishes people from animals: animals leave their dead; humans appear always to have felt a need to dispose of their dead with care and dignity, suggesting not only a lingering affection for the person who has died but also probably a feeling... that death may not be the end, and that provision for or protection against the dead is therefore appropriate... [E]arly man, or pre-man, buried his dead... and placed within reach of the body implements, such as stone weapons, which might have been thought useful for some future existence or might simply have been a memorial of an aspect of the person's daily work.

In view of the self-conscious nature of humankind, it is scarcely surprising that the formulation of abstract ideas about the relation of man to his environment has emerged from the everyday reality of getting a living. So far as the archaeological record permits, we can see evidence of such

abstractions from the very early days of human cultural development... We may surmise that there have been, through the millennia, various reasons for such abstractions. For a first example, there is the long-standing urge to explore and account for the origins of our universe and our species... Then there is the desire to understand people's relationships with nature and with some kind of Absolute. This is exemplified in the way in which some hunters found a need to propitiate either the spirit of the actual animal they killed or a tutelary deity of all animal spirits in order to avoid 'blame' for their act and to ensure the future supply of food. The right type of relationship with natural phenomena (and their Superiors if they have them), will also bring prosperity and fertility to the human communities.

The sudden disappearance of the Neanderthals after over 100,000 years of prosperity might have resulted from their assimilation by a more advanced species of homo sapiens known as Cro-Magnon. The... evolutionary line... [of these] early modern humans... can be traced back to Africa, perhaps 250,000 years ago. However, evidence also suggests that they arose in several parts of the world, as long ago as 1 million years, possibly evolving from *Homo erectus*. Neanderthals and modern humans... coexisted in Eurasia for at least 60,000 years and shared many of the same cultural advancements, although with probably little or no interbreeding... [N]either species appears to have been more intelligent than the other.

During the coldest part of the last ice age... humans were nearly an extinct species, until a population explosion brought on by extensive migration... set the stage for the emergence of fully modern humans. - THE HUMAN VOLCANO

It seems undisputed that Africa was the place of emergence of the earliest *Homo* stock... These Australopithecines and early men lived in a fairly wide range of environments within the belt of tropical and near-tropical country bounded by Ethiopia to the north and the Republic of South Africa in the south.

The tools that started the journey to the moon... [A N]Z... anthropologist... and his colleagues... [are] rewriting history with his discovery of the world's oldest stone tools, which date back 2.5 million years. The find, in... Gona... Ethiopia... may push the threshold for the hominid that became man back almost half a million years... The tools... known as cobbles, lumps of volcanic basalt split by hitting them with another rock, leaving sharp cutting edges... set one group of African primates apart from their cousins... [and] are evidence of the evolutionary trajectory that led to *Homo sapiens*... Anthropologists have identified three major classes of human-like ape... likely to have fashioned the tools found at Gona... "We... only have the tools so far, no primate fossils." ...There was *Australopithecus robustus*[, which]... had massive teeth, the grinding molars of a vegetarian... another smaller, gracile type of *Australopithecus*, and the forerunners of the species named... *Homo habilis* (*habilis* means handyman) – the toolmaker of... Olduvai Gorge, Tanzania[, where]... 1.8 million-year-old tools[were] discovered... in the late 1960s... It was *Homo habilis* that had a bigger brain case... [T]he tools at Gona... were fashioned by a creature that had a precision grip. Before the advent of the Gona toolmakers, the primates that inhabited the area were probably plant-eaters who foraged. The arrival of tool technology gave one group an advantage. They could become scavengers, using the tools to pierce the hides of dead animals and slice off flesh. "It was a major dietary shift... These early humans might have behaved like cheetahs, moving rapidly on to a carcass, cutting off meat and then retreating to more sheltered parts of the landscape." The Gona tools raise yet more questions... Their age and similarity to the tools found at Olduvai... imply that early technology remained frozen for almost a million years. Evolutionary theorists... say [the] find is evidence... that evolution progresses in great bursts, followed by periods of stasis, rather than the gradual progress envisaged by Charles Darwin.

...scientists... have found perfectly preserved 400,000-year-old wooden spears, strong evidence that early humans were more sophisticated hunters than previously thought. The... oldest wooden hunting weapons ever found... and other tools... [were] scooped out... ahead of a high-speed excavator at an open-cast brown-coal mine at Schoeningen... [T]he spears would have been used by *Homo erectus*[, and]... indicate they hunted big game for a living... Each took careful advantage of the hardest wood in the 30-year-old spruce trees from which they were made. "We see considerable depth of planning, sophistication of design, and patience in carving the wood, all of which have been attributed only to modern humans." The spears could also explain how people colonised northern Europe at the end of the last Ice Age... Before this, the oldest spear found was about 125,000 years old[. By the way, 'flutes appeared 32,000 years ago; sewing needles 23,000 years ago; bows and arrows 12,000' years ago]...

A set of Ugandan fossils may be the oldest known ancestors of humans and apes... [T]he remains... discovered from two sites... [i]n the 1960s... [have been dated] to at least 20.6 million years ago... [In related news,] *Homo erectus*... was thought to have become extinct 250,000 years ago. But... [a] geologist at the Berkeley Geochronology Centre[, who]... was re-evaluating *Homo erectus* skulls found in Java in the 1930s... kept making the same startling find: the bones were 53,000 years old at the most and possibly no more than 27,000 years. This would have made them contemporaneous with modern humans... "It looks like today is unique in that there is only one single species of humans." ...If he is right – and many dispute this – then human evolution was much less direct than previously suspected... It's already known that... *Homo sapiens*... walked the Earth at the same time as[their] heavy-browed cousins, the Neanderthals, who became extinct about 30,000 years ago... Only a few decades ago... inconsistencies in... fossil records led scientists to form two competing theories... The "multi-regional" hypothesis holds that *erectus* left Africa about a million years ago... then spread across the world and evolved into *Homo sapiens* at different times on different continents... "Out of Africa," argues that modern man evolved in one small area of Africa and then spread, possibly killing off *erectus* tribes along the way... [The geologist's] findings bolster the... [second] theory. It is "no longer chronologically plausible" to argue that *Homo sapiens* evolved from *Homo erectus*, he wrote... Actually, the multi-regionalists have already countered by suggesting that... he mistook early sapiens for *erectus*. For one thing, these Java skulls have a cranial capacity much larger than the average sapiens.

...theories... that all modern humans are Africans under the skin and... [o]ur ancestors... simply replaced the Neanderthals... [were] ignored a decade ago[, but]... have now been confirmed by German and American DNA research... It was... thought that... *Homo erectus*... left[their] savanna homeland about a million years ago to settle in the Old World, evolving into Neanderthals in Europe, Java Man in the Far East and Peking Man in China. The theory was that this process continued until Europeans, Asians and Chinese emerged, suggesting racial differences were deep and significant... But... these are not our ancestors. Instead, a second wave of humans – *Homo sapiens* – emerged from Africa 100,000 years ago, and replaced all the rest. In other words, all modern humans come from a recent tight grouping of people, implying that our modern racial differences are slight and superficial... [A] team at Berkeley University... studied DNA of different races and found that we all have had a common ancestor, an African Eve, a mere 200,000 years ago[, while the Germans]... cloned DNA from... Neander Valley... and... showed it was markedly dissimilar to modern humans... Using a technique known as DNA amplification... [they] created a... Neanderthal DNA... snippet 379 base pairs in length, compared with a modern human's total DNA complement about 3 billion base pairs long... There are 27 differences between *Homo sapiens* and Neanderthal DNA along this 379 base pair section... Only a species that began evolving separately from our lineage 600,000 years ago could produce such a wide variation... Humans and chimps diverged at least 4 million years earlier... [T]here are... 55 differences between modern humans and chimp[s]... Contemporary humans differ from one another by an average of eight variations in that sequence... [Want more] evidence? Scots, Japanese and Tamils live 10,000km apart but... are closer genetically than some African groups who live... a few hundred kilometres apart. -

The continent of Africa contains some 6,000 different tribes. So complex are African languages, races, cultures and religions that anthropologists cannot yet agree about many of the facts that are available to them. It follows that where there are so many sorts of men, there are many gods, or concepts of god, and many religious sects with their peculiar rites, magical practices and traditional myths... But there are certain basic concepts which underlay all African religions; and these concepts, far from being the mumbo-jumbo popularly associated with medicine-men, witch-doctors, black magic, fetishes, ju-jus and the rest of it, are still a powerful spiritual and social force. To most Africans, God in one of his many manifestations... is an ever-present being; and his priests (medicine-men and witch-doctors) are recognized leaders of the tribal community... The African pagan (like the pagan everywhere for that matter) believes in a polytheistic system in which a chief god presides over lesser deities, rather as a king ruled over his domain in ancient times. Nearly all African cults had their Supreme Being, called by a hundred names which vary from tribe to tribe. But no matter what the chief god is called, he is invariably conceived of as the Maker of the World, the Master of Human Destiny, an omnipotent and omnipresent 'king of kings' and 'lord of lords'. And under the rule of the Supreme Being are all the lesser godlings, each with his special function. The question that has puzzled observers since white men first arrived in Africa is whether this Supreme Being, whatever his name, is an abstract idea – a sort of creative energy which animates and pervades the universe, but has no direct relationship with man; or whether this god is a personal being... It is, perhaps, typical of the difficulties inherent in a study of African religion that no native has come forward to clarify the question; and that white men can only make their observations from the outside, with no help at all from written scriptures, texts or recorded ecclesiastical history... It is also clear that the worship of this Supreme Being is, on the whole, a lackadaisical affair. The Creator of the Universe is, after all, bound to be somewhat indifferent to a mere human and his problems. On the other hand, the lesser gods – the spirits of the earth and the ghosts of departed heroes – are thought to be much more sympathetic. They can be flattered, wheedled and even threatened. A not unusual African prayer will go as follows: 'You are useless, you gods! You give us only trouble! You are a bunch of so-and-so's! What do we get from you? Nothing!' ...Together with all religions, paganism has a collection of myths to explain the Creation of the World and the Fall of Man. While each tribe has its own account, the basic theme is nearly always the same... To the Ashanti the universe is the work of a Creator, Odomankoma. It is he who created the heaven and the earth, men and all creatures of the earth, trees and rivers. As they say on their drums, things that owe their origin to the Creator must be clearly distinguished from the works of man who draws on Nature for his own benefit. When Odomankoma... created the world, he also created life and death. According to an Ashanti myth, Death became so powerful that he was able to kill the Creator himself. But when the Creator died, the universe continued to be controlled by a Supreme Being, called Nyame. At first this Supreme Being lived very close to earth and was within easy reach of man but he was obliged to move far out into the heavens because women hit the earth continually as they pounded grain in mortars. From his abode on high Nyame is able to see everything, for he sees even with his eyes turned away. He seems to be everywhere, for the Ashanti say, 'If you have something to say to the Supreme Being, say it to the wind'... The Supreme Being is the source of morality. He does not like men to cheat one another. Man's destiny is in his hands: 'If the Supreme Being does not want you to die and a human being tries to kill you, you will not die.' Men can depend on him, for he is someone on whom one leans and does not fall... The underlying notion of nearly all African creation myths seems to be that God and man once lived on earth and conversed together. Then man – or more frequently woman – erred, and the unhappy Fall resulted. Ever since then, men have tried to climb back into heaven and have even built towers and ladders for that purpose, but without success... since no African myth explained how man was to ascend into Paradise.

It is interesting to consider how the idea that the world had a beginning or had been created arose in the first place. Although the idea is a familiar one to us, it is not self-evident. The earliest members of our race obviously could not have witnessed the creation of the world – indeed, to them in their brief lives, their physical environment must have seemed eternal, supposing that their minds were sufficiently developed to have reflected on the fact... The emergence of the child from the womb of its mother must surely have been a most impressive demonstration of the beginning of a new creature, whether human or animal. The earliest creation myths, indeed, instinctively used the imagery of biological birth.

How life began on Earth remains a mystery but each birth forges a miraculous chain that spans nearly 4 billion years... The puzzle of our origin... [is] how a humble cousin to the apes became the only species with the curiosity to fathom the world and all that is in it... Tool user, fire tamer, creator of language, cave-painter, myth-maker, weaver of dreams... a creature whose descendants would evolve a new sense of self and leave their mark upon the world in profound ways.

Different anthropologists had different theories of the origin of religion. For [one] it was magic, for [a second] it was animism, for [a third] it was fetishism, for [a fourth] it was pre-animism, for [a fifth] it was original monotheism, and for others it was polytheism. It has now become clear that reliable historical evidence of the origin of religion cannot be obtained, and that theories must remain unproven. Evidence from prehistory such as ritually treated skulls, burial sites, cave paintings and megalithic stones reveals nothing about the origin of religion; neither does research into present-day Eskimos, Bushmen, Pygmies, or Aborigines, and nor do myths about the creation of the world. However... anthropological theories and creation myths have been shown to be of relevance to rich foundation myths such as that of the Garden of Eden.▷ ...neolithic religion...

neolithic religion... refers to the religious ideas and practices connected with the neolithic civilizations that flourished in the world between 8000 and 3000BCE. The neolithic revolution was centred upon the rise of agriculture, the domestication of animals and plants, the invention of pottery, and the growth of settled communities, and included a focus upon the sanctity of nature, the cycle of the seasons, and mother goddesses.

For several thousand years our neolithic ancestors lived in agricultural settlements. The archaeology of such settlements in Old Europe has revealed sophisticated art and religious symbols reflecting reverence of Mother Earth, the elements, and animals; egalitarian graves; and *no fortifications or evidence of warfare* before the invasions of the barbarian Indo-European tribes from the Eurasian steppes.

...the 'Neolithic Revolution'[turned] man from being dependent on nature to controlling it at least partially and indirectly. The change led to the establishment of settled communities, accumulation of food and wealth, and heavier growth of population... [A]n ancient city north of the Dead Sea... [is] one of the oldest continuously inhabited cities in the world. Little remains of the late Bronze Age period, the probable date of its destruction by Joshua...

What may well have been the world's first town: Jericho... was settled between 10,000 and 7000 B.C.E. It seems to have covered eight to ten acres and to have housed as many as three thousand inhabitants. Though this places it before the making of pottery, it was not a nomadic community's temporary settlement, for the houses the people built were substantial (made of bricks and sun-baked clay). They were laid out in lines both utilitarian and aesthetic, with such conveniences as a central courtyard for cooking, plastered walls and floors for easy washing, rush mats, storage bins, and utensils of limestone and flint. What appear to be temple remains indicate a cultic use of stone and also a fertility orientation toward the Mother Goddess. The people of Jericho must have revered their dead, for they preserved skulls in a finely moulded plaster that gave them a delicate, lifelike appearance. The walls of this town were built many times, a fact that suggests both a high level of community cooperation and the presence of external enemies. [In addition, 'early in the 2d millennium Jericho was destroyed by some catastrophe, perhaps an earthquake.']All in all,

then, Jericho resembles a prosperous little medieval town, with rich fields outside and numerous amenities inside. By comparison with the wandering life that prehistoric peoples led before the rise of towns, the new settled existence must have possessed many advantages. Most likely it afforded the chance to develop better food supplies, health care, and traditional customs, all of which would have tended to increase the people's life span and sense of security. Women's roles in the early towns seem to have been important: in addition to their involvement with farming, women probably also worked at the domestication of animals, the development of weaving, and the perfecting of pottery making. Remains from Jarmo (near the border of Iran and Iraq) that date to about 6750 B.C.E. show both a strong Mother Goddess religion and a considerable domestication of animals (90 percent of the animal bones found there are from domesticated species, such as sheep, pigs, and goats)... The link between a Mother Goddess religion and the nurture of animals also suggests that women's economic-religious roles were significant. None of the great advances that occurred at this time – discovery of most plant species, use of fertilizer (largely the waste of domestic animals), and food grains – needed great physical strength, while the pig and the snake, both of which served new domestic purposes, became symbols of the Goddess (when patriarchal religions overthrew the Goddess cult, the pig and snake came into the disfavour they have retained to the present time)... Thus the period of early town life probably was a good one for women... Some scholars conjecture that both shepherds and chieftain-kings continued the hunting line. In the best situations shepherds cooperated with farmers, providing them fertilizer, early warning against approach of enemies, and so forth. On the other hand, the chieftain-king was an ambiguous figure. The very qualities that made him valuable as a military leader could also make him overbearing. It is likely that the decisive turn to male rule (there are some suggestions that early towns had a council of elders of both sexes...) came when hunters assumed first protective, and then kingly, positions... - The Oldest God

When pottery was invented in Neolithic times, further stimulus was given to the conception of creativity. In several myths the creator-god is imagined as a divine potter who fashions men out of clay. It is accordingly not surprising that in the earliest written cosmogonies, or creation myths, we find a mixture of thought and imagery about the beginnings of things which derives both from the new needs of civilized society, and from the cruder concepts of the pre-literary past. Egypt and Sumer provide our earliest examples of creation myths, the texts concerned dating in each instance from about the middle of the 3rd millennium BC.

Around 3200 B.C.E. in southern Mesopotamia ([‘later known as Babylonia’ and]present-day Iraq) the first true civilisation arose... Sumer lay between the Tigris and Euphrates rivers... and it developed a rich culture to parallel its rich farmland. The farmland provided agricultural surpluses, which could support a population large enough not only to work the fields but also to drain swamps, develop irrigation systems, and generally expand and upgrade the Sumerian's holdings. This process produced a buzz of economic activity sufficient to stimulate an efficient way of keeping records – first by pictographic writing, then by cuneiform writing... [Sumerians are also accredited with inventing ‘the sexagesimal system of mathematics, and the socio-political institution of the city-state with bureaucracies, legal codes, division of labour and a money economy.’] Moreover, the bustling prosperity of Sumer attracted artisans of all sorts – metal workers, jewelers, carpenters, and more. It was in Sumer that the wheel was invented, and probably also the plow and the chariot. We can glimpse something of the Sumerian cultural style and the skill and frugality of its carpenters from records that archaeologists have found: three old table tops and four fir boxes were remade into one table, two beds, and one small box. The physical core of the Sumerian cities was religious: the temple that housed the local god or goddess. Indeed, some historians speculate that cities may have arisen basically as ceremonial centres – aggregations of worship. The temples were major landlords, and therefore tied directly to the economy. For example, records show that the temple of the goddess Bau around 2400 B.C.E. controlled serf-run estates whose grain, fruit, fish and herbs were sufficient to support about twelve hundred temple employees. Temples provided their own farm equipment, breeding stock, bakers, brewers, wool workers, spinners, weavers, and administrators; they were small-scale corporations. The priests and priestesses who controlled the temple affairs therefore tended to be educated for business administration as well as ritual performance. In effect they were an elite minority – the upper class of the first class-divided society. The king, who probably was elected in earliest times, owed his position to the gods. Most profoundly he was conceived to be a son of the gods, for his coronation had the motif that he was being born again of the god and goddess of the city, and each New Year festival reaffirmed his divine status. Specifically, each Sumerian New Year involved a sacred marriage, in which the king had intercourse with a priestess who represented the goddess Inanna. Since the king himself represented Dumuzi, Inanna's consort, the intent of the sacred intercourse was to ensure fertility and prosperity through the coming year... Sumerian kings overlapped priests, and the kings' identification with Dumuzi made him somewhat divine. Thus persons who prayed to a dead king considered his body a source of blessing, while the live king's basic function was to meditate between the divine realm and the human. As the king mediated divinity to the political order, so did the temple mediate divinity geographically. The white temple of Uruk, for example, was elevated on a terraced platform to dominate the surrounding landscape. Other temples had staired towers (ziggurats) that apparently were symbolic links to heaven. Because the Sumerians seem to have thought their primary reason for being was to serve the gods, they offered sacrifices and libations in the temple each day... [Gods] were organized into a bureaucracy to reflect the bureaucracies of the temple and the city government. At the top were four chief deities: the rulers of sky, earth, air, and sea. An, the sky god, was the oldest and highest of all the gods, but he was too remote to have much popular effect. Ninursag, the earth, was a great goddess, a mother from whom issued all living things. Enlil was the god of air and storm and the source of kingly authority. Enki was the god of the waters and also of wisdom. The Myths about these gods explained the Sumerian world (and were background for much biblical mythology) – ‘Sumerian art, literature, and theology had a profound cultural and religious influence on the rest of Mesopotamia and beyond, which continued long after their demise c.2000 BC, as the prototype of Akkadian, Hurrian, Canaanite, Hittite and Jewish literature’)... Whereas fertility continued to be of great importance, enough institutionalization or culture had developed to make religion also go hand in glove with politics. As people became more conscious of their group identity their religion became more civil and less natural.

Primitive man believed that many natural objects, e.g. wind, fire or stones, possess supernatural powers and could be controlled by some form of worship – prayers and sacrifices; later these objects were believed to have a spirit or soul, and still later some of them were endowed with personal attributes. These forms of religion are known as animatism or animism... [W]hen the attributes of the objects worshipped resemble those of humans, the religion is called anthropomorphic. In further development, the spirits are believed to have a separate entity or existence, and eventually assume the form of deities or gods; such a religion is a form of polytheism... The great monotheistic religions represent a decisive development in... that a single God is recognized; anthropomorphism is diminished before the majesty, eternity, omniscience, and ineffable goodness of God; and ethical elements are introduced. Ethics is conceivable without religion, but no important religion has survived without ethical content... In most polytheistic religions, e.g. the Egyptian... relationships among the gods are established in a pantheon, and communication between gods and men is provided for through prayer and sacrifice on the one hand, through oracles and miracles on the other hand... The recorded history of Egypt dates from c.3200 B.C., although traces of earlier culture have been found, dating perhaps to 6000 B.C. The calendar was introduced as early as 4241 B.C... *Egyptian religion* – ‘the oldest religion of which we have substantial and decipherable documentary evidence’ –] appears to have been based on two main principles: the existence of an omnipotent Being, whose various attributes, being deified, formed a series of divinities; and the deification of the sun and moon. Each group of divinities formed a triad composed of a chief male deity, with a wife or sister and a son... Egypt's first king... Ra, the sun[– who was self-created]... and fashioned man from his own blood... [– is] usually represented as a hawk-

headed man. Mentu and Atmu are merely two phases of Ra, the rising and the setting sun... Besides these deities, the Egyptians worshipped beasts, reptiles and even vegetables, probably as symbols. The Egyptians believed in the transmigration of souls and in the existence of a future state, in which mankind would be rewarded or punished according to their actions on earth. They also believed in ka, the vital spirit within man. A man was said at his death to have joined his ka.

The concept of fate or destiny in Ancient Egypt[is called *Shay*], a term meaning ‘that which is decreed’, and personified as a deity... [which] was attached to each man from the moment of his birth, determining the length of his life and manner of death, and appearing after death in the hall of judgement. Shay could also determine good and bad fortune during his life, but was not unalterable; a man’s destiny could be changed by his own actions or the influence of a deity.

[‘In Egypt the manufacture of papyrus was a government monopoly, a kind of nationalized industry’, and t]he earliest evidence of ancient Egyptian thought... occurs... in the Pyramid Texts... The priests of Heliopolis[(‘city of the sun’)] who composed the texts about 2480 [to] 2137 BC, drew upon traditions about their god Atum, whose temple at Heliopolis was one of the oldest cult-centres in the land. Atum was a mysterious deity, whose name could mean ‘the not-yet-Completed One, who will attain (completion)’... identified with the sun god Re, under the composite title of Atum-Re. Various passages... reveal... the priests of Heliopolis believed that originally there had been only a primordial waste of water, without shape or order, called Nun. The ‘first time’ started when Atum emerged from this primeval deep and began the work of creation. In order to commence this work, Atum needed a firm place on which to stand, and reference is made in the texts to a primeval hill which also emerged with Atum out of Nun. This primeval hill was identified with the site of Atum’s temple at Heliopolis, thus making it the most ancient and sacred place in Egypt, since it was there that the creation of the world began. The idea of a waste of waters... doubtless reflects the conditions of the Nile Valley. Each year the Egyptians witnessed the inundation of their land by the mysterious rising of the... Nile; then, as the flood subsided, the higher points of land began to emerge from the water. Beyond the delta of the Nile lay the Mediterranean Sea, the ‘Great Green’, which seemed a limitless expanse of water.

When the political capital was moved to Thebes in Upper Egypt, during the Middle Kingdom, Re was associated with the local god of Thebes, Amun... The great pharaohs of the New Kingdom were zealously devoted to Amun, building at Thebes for his worship huge temples, richly endowed, so that Amun became in effect the sole state god... It would seem that the priests of Heliopolis... attempted to combat the exultation of Amun by promoting the worship of Re untrammelled by association with another god. Accordingly they proclaimed the Aten, the sun’s disc, as the symbol of supreme deity.

According to legend, King Menes united Egypt politically about 3100 B.C.E. That action seems to have been the catalyst Egyptians needed to adopt many of Sumer’s achievements... Nevertheless Egypt remained a largely rural culture, a condition that probably preserved it from the neuroses that Sumerian life developed. At any rate, Egypt appears to us more self-confident and calm, less anxiety ridden and class conscious. Egyptian children learned from childhood that hard work, virtue, and a little luck could make them a good life. It was possible for a... common labourer to rise to be royal constructor or royal attache... Good fortune with equanimity – that summarizes much of the Egyptian ideal. Nonetheless, the vaunted stability of Egypt, which maintained itself for over two thousand years, rested on deeper, more explicitly religious foundations. Among the most important were a belief in the consubstantiality of all reality, a belief in divine kingship, and a belief in fulfillment after death. Consubstantiality means the view that all creation, from mice to men, partakes of a single stuff. The world is a sort of giant organism whose energy or vital force all beings participate in. Egyptians did not speculate about notions like these (their temper was rather practical), but they did intuit or feel them. Thus they felt considerable kinship with animals, as with forces of nature. They also felt considerable kinship with their gods, who were not of a totally different order. By contrast with the Sumerians, they were less craven and self-abasing, for they were not so much the slaves of the gods as lesser participants with them in one integral cosmos – one sacral flow. Much of this mentality comes out indirectly through diverse, even contradictory, myths. That their myths often contradicted one another does not seem to have bothered the Egyptians at all. Perhaps they sensed that life was so rich or mysterious that all explanations were bound to conflict at some point... If one extends this tendency over millennia and adds the need of new capital cities to have their gods dominate the creation account, Egyptian mythology becomes downright confusing. Consubstantiality was malleable indeed.

Because the pharaoh... was so essential to the well-being of the land, he came to be regarded as divine. According to a tradition that arose in the Old Kingdom, he was believed to be the son of the sun god, and therefore the deity’s representative upon earth. The pharaoh was accordingly regarded as the owner of Egypt... and the mediator between the people and the sun god... When he died, or rather ascended to the sky to join his divine father, his body had to be enshrined in a great tomb, served by a mortuary temple. The pyramids were the distinctive tombs of the pharaohs of the Old Kingdom.

The Great Pyramid at Gizeh, one of the Seven Wonders of the World, was built... [for] *Khufu*... one of the great monarchs of the Old Kingdom.

The New Kingdom (c.1550-1070 BC, 18th-20th Dynasty), the ‘empire’ period[began]... with the expulsion of the Hyksos... a people of mixed Semitic-Asiatic stock who settled in the Nile delta c.1640 BC... [then] formed the 15th and 16th Dynasties[but were described as oppressors. Their name is]... interpreted... as ‘shepherd kings’ or ‘captive shepherds’... [or] rulers of foreign lands... Egyptian claims in Syria and Palestine became definitive and involved direct confrontation with her principal rivals, Mitanni and the Hittites; Nubia was administered directly from Egypt. These foreign interests brought Egypt considerable wealth as well as technological and cultural innovations, but by the end of the period a decline in the power of the pharaohs and an increase in that of the priests resulted in a weakening of the central government. Egypt fell successively to Libyans, Ethiopians, Assyrians, and Persians, and indigenous rule was finally ended by Alexander the Great, who took Egypt in 332 BC. From then until AD 1922 someone other than Egyptians ruled Egypt... The opening of the Suez Canal in 1869 made Egypt strategically important, and when the Turks became allies of Germany in... W[W1] the British (who had installed themselves following an Egyptian nationalist revolt in 1882) declared the country a British protectorate. Independence was granted... and a kingdom was established, becoming a republic after the overthrow of the monarchy in 1953.

Throughout most of Egyptian history the mythology that actually supplied Egypt’s cultural and political cement was that of divine kingship. Interpretations of this belief vary, but there seems to be fair agreement that for the popular mind the pharaoh was not so much a god as a manifestation of the divine. In other words, there was no popular doubt that pharaoh was a human being. Equally, however, there was a solid consensus that through pharaoh coursed the sacral order of the cosmos, in such wise that his realm and people received order only through his meditation. Therefore over the many centuries kingship became the marvel of the human species’ stability, much like the stability of animal species, which Egyptians found divine because of their constancy from generation to generation... As the pyramids demonstrate physically, and texts from

many periods show literarily, *death* was never far from the Egyptian consciousness. Apparently this awareness of mortality did not make the average Egyptian morbid... but it did make providing for death – perhaps more exactly, for afterlife – a societal preoccupation. Moreover, in death as in life the rulers functioned for the whole people... The prevailing notion seems to have been that through death the pharaoh would join the family of gods (to which he already somewhat belonged). His identification with Osiris, god of the under-realm and of vegetative rebirth, did not prevent the rise of mythologies that had him ascend to the heavenly realm of the sun – a fact that simply shows again that conflicting symbolizations did not trouble the Egyptians very much. We know that in later periods the average person fitted his projected destiny to the frame of the ruler's, expecting to descend to the realm of Osiris, undergo a scrutiny and judgement of his worldly life, and then gain a satisfying (if usually vague) continuance of a life like that on earth... [T]he Osiris symbolism... shows one peculiarity: the earth to which Osiris descends, under which he rules as a god of the dead, is masculine. For other agricultural peoples... the earth was feminine. She was *Mother Earth*, the primordial womb. Why Egypt broke this pattern is hard to determine. Generally speaking, neither Egyptian government nor Egyptian theology stressed the feminine, but that is not unusual. There were a few female rulers, and several significant goddesses, but they were never equal to males. In later periods Isis was Osiris's strong partner, and in early periods the Queen Mother had important functions. Thus Egypt did grant nature's polarity of male and female. When it came to envisioning the earth, however, some predilection for the masculine pushed nature's polarity to the background.

...Ramses II... reigned... for over 60 years when Egypt's empire was at its greatest... So long did he rule... that for most he was timeless... [Visit] the Valley of the Tombs of the Kings... [and he is] a constant presence... As a young man he singlehandedly turned the tide of the Battle of Kadesh... He had nearly 100 sons and daughters and outlived many of them... And as was the custom he married at least one of his daughters. Today he lies in the Egyptian Museum, Cairo... There you can gaze upon... the face of a man who knew all believed him to be God, essential to the well being of Egypt... Ramses... may have been the most powerful man in the Mediterranean world in the 13th century BC but his life was a misery of toothache and dental abscesses... [H]e had appallingly decayed teeth. At 97 years of age that is scarcely surprising. But it wasn't old age which ravaged his teeth. Bad teeth were endemic in ancient Egypt... Mummy after mummy... demonstrate appalling dentition... The primary cause... [was sand] and grit... everywhere, even in the food... And the Egyptians made matters worse for themselves by using sand and ground-up brick to help in the grinding of cereals to make flour... [Sand and grit] acts as an abrasive, eroding the enamel and exposing the inner pulp of the teeth... With an average lifespan less than 30 years, the general population were probably not hugely inconvenienced by the problem... As for poor old Ramses, he would have been urged to chew natron (hydrous sodium carbonate) each morning to purify his mouth. He may also have been prescribed a mixture of cumin, colocynth (bitter apple) and terebinth (turpentine) to provide a little pain relief and act as a mild antiseptic... [P]alaeontologists believe that the Egyptians did not... resort to extracting teeth... even... in the worst cases...

Seventy-five years ago today... a crusty English archaeologist... uncovered a seal at the base of a door to a tomb in Egypt's Valley of Kings... Two days later, with lashings of fanfare and official pomp, the sealed door was prised open... Tutmania was unleashed... and... [the archaeologist] inadvertently introduced whole nations to the notion of nosying around in other people's houses. Seventy-five years later it's a trick still employed by the makers of telly programmes who set out to persuade minor celebrities (Tutankhamun was a mere boy-king who happened to have a collection of rather nice toys) to throwing open the doors in the interest of low-level voyeurism.

...An exhibition of... more than 350 artefacts... [from] ancient Egypt... opens at the Auckland Museum next month... The super superstitious should note that the exhibition contains a torso from a statue thought to be of young King Tut... [A]nywhere between 11 and 63 (depending on who's stretching the yarn) of those associated with the archaeological exploration – including [the expedition's] long-suffering patron, the Earl of Carnarvon... – died of mysterious causes in the years following the discovery... [‘Carnarvon was bitten on the face by a mosquito upon exiting the tomb, which he later cut while shaving, leading to blood poisoning and then – via other complications – death. However, at the time of his death, Cairo's four power stations simultaneously ceased to function.’] According to legend, when... archaeologist Howard Carter broke open the tomb... he destroyed a clay tablet bearing the ominous inscription: “Death shall come on swift wings to whoever disturbs the tomb of the pharaoh.” ...There had been omens. An occultist had written to the English peer warning him not to go to Egypt. A cobra, mythical defender of the pharaohs, had gone to Carter's house and killed a pet song-bird at the moment the tomb was entered. A group of impressionable foreigners, acting out a ritual drama in the Valley of the Kings, stirred up thunder and lightning and the performance was rained out... Sunday's *Our World* sets out to get to the bottom of the legend of the curse but finds, instead, the loopiness continues... Local tomb robbers, pragmatic folk with no time for curses, have led, long healthy lives. But logic has no appeal for many Westerners visiting the sites today... “Some people still behave as if Egypt is the source of all the hermetic wisdom of the world,” sighs a weary academic. The programme then hives off to Salt Lake City, Utah, where the Summun sect is catering to... [an] accountant's deepest desire to be mummified after death (complete with bronze mask) as the “ultimate memorialisation.” In the land of modern democracy anybody can be Tut – for around \$US32,000.

...A ticket to immortality... A collection of artefacts from ancient Egypt go on show at Auckland Museum this week... [T]hey not only reveal the refinement of that civilisation, but are fine ambassadors for a nation too often defined by acts of terrorism... Spanning 3500BC to 450AD, the exhibition will demonstrate that [ancient] Egyptian society revolved around life rather than death... Such a fervent lust for life... explains the apparent perfection of every human figure in the exhibition. “They were trying to recall the ideal form of the world, when it was created by the gods. Nature was therefore represented in the most ideal manner possible, because that was the way they wanted to transfer it to the hereafter. So a human being is represented in the blossom of life...” In ancient Egypt, then, your first priority would have been to secure your ticket to the afterworld – by piety, through identification with Osiris, the god of resurrection, and by commissioning a flattering po[r]trait of yourself... - 1997

Everyone in ancient Egypt, rich or poor, wanted to be immortal... and the more you could afford, the better... your body... [was] preserved... The poor man couldn't put much money into it. He was merely wrapped, placed... in a mass... burial... pit... and just hoped for the best... They really wanted a continuation of this world; they wanted to resurrect; they wanted the body to reunite with the soul and get up and go again – and that was the reason for preserving it... The Ramses' mummy tells us just how good the Egyptian embalmers were. His hair was dyed... his fingernails were painted, everything was done for him so he would look young forever... Hollywood got the ancient mummies up and walking again but not in the way the ancient Egyptians ever envisioned. For them the body was to be treated with great reverence and care. When a king died he was ferried across to the west bank of the Nile. The Egyptians lived on the east bank... The Sun dies in the west, so they associated the west with death. And they called the people who died westerners – they didn't want to call them dead... After the body was dropped off... the embalmers had to work on it for 70 days. The first thing they did was to take out the moist internal organs. This is to prevent decay... Each organ was... ritually placed in a special vessel... [‘The remainder of the body was then covered in salt to remove any remaining moisture.’] If you were wealthy enough you'd have a priest... [to] say certain rituals over the body as it was being wrapped... to anoint... the head... with frankincense... and say a final blessing to give the mummy new life... Frankincense and myrrh probably came from... Yemen... [or] the Sudan. It would have been very expensive... - Mummy

MUMMY, a dead body preserved by embalming. The name arose because the skin and bones of corpses embalmed by the ancient Egyptians are often found to be blackened, an effect mistakenly attributed to the use of bitumen (Arabic, *mumiya*)... For many centuries only the wealthy could afford mummification. Eventually cheaper methods allowed the practice to spread, but for the most part it was confined to the wealthy and to

animals sacred to certain gods, such as bulls, cats, and ibises... The earliest indisputable evidence of attempts to preserve the body by artificial means dates from about 2600 B.C. The remarkable state of preservation of many bodies from earlier times is the result of the natural drying effect of the hot sand in which the bodies were interred.

At first, mummification was accomplished through natural means. The hot dry sands of the desert in which bodies were placed slowed down decomposition, especially when sodium nitrate was present in the soil. The natural preservation of the body was apparently responsible for the development of the mummification later practiced by the Egyptians beginning with the Dynastic period. The earlier mummies were usually treated with crude natron (sodium carbonate) and wrapped in linen... The full development of mummification did not occur until the Fifth Dynasty... Practically all mummies from Lower Egypt have perished. From Upper Egypt, where the climate was drier, a large number have survived...

“The ancient Egyptians mummified millions of people but they never wrote down how they did it. It was a secret.” ...with so many secrets buried in time, [an Egyptologist] realised that the only way to solve the mystery was to do it himself... In May of 1994 at the University of Maryland, [he]... began a process that hadn’t been done in 2000 years... He started by collecting the drying salts used by the Egyptians... He trucked out 600lbs of natron salt and then ventured to one of the world’s oldest markets for the remaining essentials. “The Egyptians also used spices[to], I think... help with the smells. They used frankincense and myrrh.”

According to Egyptian hieroglyphic texts... pharaohs sent fleets of ships... [to an early Ethiopian] civilization (known to the Egyptians as Punt)... to buy precious goods such as spices, incense, and myrrh... The northern and central parts of Ethiopia are said to have been occupied... by the Cushites, a group of Hamito-Semitic-speaking peoples. The Cushites drove out the various tribes speaking Nilotic or Sudanese languages in the southern and western zones of the Ethiopic plateau. These peoples may have been the aboriginal inhabitants of the area, rather than immigrants from the lowlands of the Nile River basin.

That life is of great antiquity in Ethiopia is indicated by the Hadar remains, a group of skeletal fragments found in the lower Awash river valley... Sometime between the 8th and 6th millennia BC... an ancient tongue spoken in this region fissured into the modern languages of the Afro-Asiatic, or Hamito-Semitic family.

Akkad, north of Sumer, was settled by a Semitic people; its chief cities were Akkad or Agade, Borsippa, and later Babylon. Sargon, ruler of Akkad, united the city-states of all Sumer and Akkad, c.2275 B.C.; he and his descendant... conquered or controlled neighbouring lands before the rudimentary empire, first in history, disintegrated c.2150... Sumer was settled by a people of unknown origin... They founded and maintained independent and rival city-states, most noted of which[was] Ur... Excavations have revealed the city’s importance as a centre of moon-worship. It was conquered first by Elam, later by Babylonia... Ur... is the place from which Abraham began his journey to Canaan...
