Abraham (c.2000 – 1650BCE) Revered in the Old Testament as the father of the Hebrew people. According to Genesis he came from the Sumerian town of Ur... and migrated with his family and flocks via Haran... to the ‘Promised Land’ of Canaan... After a sojourn in Egypt, he lived to be 175 years old and was buried with his first wife Sarah in the cave of Machpelah in Hebron. By Sarah he was the father of Isaac (whom he was prepared to sacrifice at the behest of the Lord) and grandfather to Jacob... [B]y his second wife Hagar (Sarah’s Egyptian handmaiden) he was the father of Ishmael, the ancestor of 12 clans; by this third wife Keturah he had six sons who became the ancestors of the Arab tribes. - LAROUSSE Dictionary of BELIEFS & RELIGIONS

Although Abraham is *revered as the father of the Hebrew people*, he only has a minor role *in the Old Testament*. One of his alleged descendants is the central character in four of its first five books – collectively known as the *Torah* (or, alternatively, *Pentateuch*) – and all five are called ‘the books of Moses’.

...the first five books of the Old Testament[were] traditionally ascribed to Moses but[are] now held by scholars to have been compiled from documents dating from 9th to 5th c. BC incorporating material from oral traditions of varying dates... Although there is a strong and fervent tradition about the events... relating[to] the departure of the Israelites under Moses from their bondage in Egypt... ascribed by scholars to any of various dates within the limits of c.1580-c.1200 BC... the variety of sources and purposes of the narrative make it impossible to treat this as a straightforward historical account, though such considerations have never inhibited speculation about the date and the route involved.

...the children of Israel... came into Egypt; every man and his household came with Jacob... And the children of Israel were fruitful, and increased abundantly... and the land was filled with them. Now there arose up a new king over Egypt... And he said unto his people, Behold, the people of the children of Israel *are* more and mightier than we: Come on, let us deal wisely with them; lest they multiply, and it come to pass, that, when there falleth out any war, they join also unto our enemies, and fight against us, and *so* get them up out of the land. Therefore they... set over them taskmasters to afflict them with... burdens. And... the Egyptians... made their lives bitter with hard bondage... [The Hebrews] built for Pharaoh treasure cities, Pithom and Raamses. But the more [the Egyptians] afflicted them, the more they multiplied and grew... [So] the King of Egypt spake to the Hebrew midwives... When ye do the office of a midwife to the Hebrew women, and see... it *be* a son, then ye shall kill him; but if it *be* a daughter, then she shall live. But the midwives feared God, and did not as the king... commanded them... Therefore... Pharaoh charged all his people, saying, Every[Hebrew] son that is born ye shall cast into the river... [During this time] a man of the house of Levi... took to *wife* a daughter of Levi... [T]he woman conceived, and bare a son: and when she saw... that he *was* a goodly *child*, she hid him three months. And when she could no longer hide him, she took for him an ark of bulrushes, and daubed it with slime and pitch, and put the child therein... And his sister stood afar off, to wit what would be done to him... [T]he daughter of Pharaoh came down to wash *herself* at the river; and... when she saw the ark... she sent her maid to fetch it... [Pharaoh’s daughter] saw the child: and, behold, the baby wept[so] she had compassion on him... Then said his sister to Pharaoh’s daughter, Shall I go and call to thee a... Hebrew[woman], that she may nurse the child for thee? ...Pharaoh’s daughter said unto her, Go... [T]he child’s mother... [was] called... Pharaoh’s daughter said unto her, Take this child away, and nurse it for me, and I will give *thee* thy wages... And the child grew, and... became... [the son of] Pharaoh’s daughter... And it came to pass... when Moses was grown, that he went out unto his brethren, and looked on their burdens: and he spied an Egyptian smiting an Hebrew... [Moses] slew the Egyptian, and hid him in the sand... Now when Pharaoh heard this thing, he sought to slay Moses. But Moses fled from the face of Pharaoh, and dwelt in the land of Midian... [T]he priest of Midian had seven daughters... [who came to a well] and... filled the troughs to water their father’s flock... [Some shepherds came to drive] them away: but Moses... helped them, and watered their flock. And when they came to... their father... he said unto his daughters... *where is he?* *why is it that ye have left the man?* call him, that he may eat bread. And Moses was content to dwell with... the priest... [who] gave Moses Zipporah his daughter. And she bare *him* a son... called... Gershom... [I]t came to pass in process of time, that the king of Egypt died: and the children of

Israel sighed by reason of their bondage, and they cried, and... God heard their groaning, and God remembered his covenant with Abraham, with Isaac, and with Jacob... Now Moses kept the flock of... his father in law... and he led the flock to the backside of the desert, and came to... Horeb... the mountain of God... And the angel of the Lord appeared unto him in a flame of fire out of the midst of a bush: and... said, I have surely seen the affliction of my people which *are* in Egypt... I am come now to deliver them out of the hand of the Egyptians... therefore... I will send thee unto[the new] Pharaoh, that thou mayest bring forth my people... out of... Egypt... unto a... land flowing with milk and honey; unto the place of the Canaanites, and the Hittites... I am sure that the king of Egypt will not let you go[, so]... I will stretch out my mighty hand, and smite Egypt with all my wonders... [A]fter that he will let you go. And... this people... shall not go empty: But every woman shall borrow of her neighbour... jewels of silver... gold, and raiment: and ye shall put *them* upon your sons, and upon your daughters... Moses answered and said, But, behold, they will not believe me, nor hearken unto my voice: for they will say, The LORD hath not appeared unto thee... [T]he LORD said unto him, Who hath made man's mouth? or who maketh the dumb, or deaf, or the seeing, or the blind? have not I the LORD? Now therefore go, and I will be thy mouth, and teach thee what thou shalt say... And the Egyptians shall know that I *am* the LORD, when I... multiply my signs and my wonders in the land of Egypt... [B]ehold... the waters which *are* in the river... shall be turned to blood... for seven days... And the fish that *is* in the river shall die, and the river shall stink; and the Egyptians shall loathe to drink of the water of the river... And the river shall bring forth frogs abundantly... [Furthermore,] all the dust of... the land of Egypt... [will become] lice... the houses of the Egyptians shall be full of swarms of *flies*... all the cattle... horses... asses camels... oxen, and... sheep... of Egypt... shall... [die;] but... there shall nothing die of all *that is* the children's of Israel... [There] shall be a boil breaking forth *with* blains upon... all the Egyptians... [So] there was hail... such as there was none like it in all the land of Egypt since it became a nation... [T]he hail smote every herb... and brake every tree of the field. Only in the land of Goshen, where the children of Israel *were*, was there no hail... [Then] the east wind brought the locusts... [to] eat every herb of the land, *even* all that the hail had left... Pharaoh sent... for Moses... and said... I and my people *are* wicked. Intreat the LORD... that there be no *more* mighty thunderings and hail; and I will let... the Hebrews... go... Moses said, Thou hast spoken well, I will see thy face again no more... In the third month[after] the children of Israel were gone forth out... of Egypt... came they *into* the wilderness of Sinai... Now... the LORD called Moses *up* to the top of... mount Sinai... And the LORD said unto Moses, Go down, charge the people... [with my Ten Commandments – t]hou shalt have no other gods before me[; t]hou shalt not make unto thee any graven image, or any likeness of *any thing that is* in heaven above, or that *is* in the earth below, or that *is* in the water under the earth[, and] shalt not bow down thyself to them, nor serve them... [; t]hou shalt not take the name of the Lord thy God in vain... [; thou shalt r]emember the sabbath day, to keep it holy... [; thou shalt h]onour thy father and thy mother... [; t]hou shalt not commit adultery[; t]hou shalt not steal[; t]hou shalt not bear false witness against thy neighbour[; t]hou shalt not covet thy neighbour's house, thou shalt not covet thy neighbour's wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor any thing that *is* thy neighbour's[; a]nd... thou... shalt not kill... [However,] if *any* mischief follow then thou shalt give life for life, Eye for eye, tooth for tooth, hand for hand, foot for foot, Burning for burning, wound for wound, stripe for stripe. - Exodus

AND the LORD spake unto Moses in the wilderness of Sinai... saying, Take ye the sum of all the congregation of the children of Israel... twenty years old and upward, all that are able to go forth to war... And all the children of Israel murmured against Moses... and... said... Would... that we had died in the land of Egypt! or... died in this wilderness! ...[why] hath the LORD brought us unto this land, to fall by the sword, that our wives and our children should be a prey? were it not better for us to return into Egypt? ...the LORD spake unto Moses [again]... Send thou men, that they may search the land of Canaan, which I give to the children of Israel... [T]hey returned from searching... the land after forty days... [W]hen king Arad the Canaanite... heard... of the spies... he fought against Israel, and took *some* of them prisoners. [So the children of] Israel vowed a vow unto the LORD, and said, If thou wilt indeed deliver this people into [our hand, then we] will utterly destroy their cities. And the LORD hearkened to the voice of Israel, and delivered up the Canaanites; and they utterly destroyed them and their cities... Then... [Moses] sent messengers unto Sihon king of the Amorites, saying, Let me pass through thy land... Sihon would not suffer Israel to pass through his border... Sihon gathered his people together... and fought against Israel... Israel smote him with the edge of the sword, and possessed his land... Moses sent[men] to spy out Jaazer, and they took the villages thereof, and drove out the Amorites that *were* there... [After that the Israelites] turned and went by the way of Bashan: and Og the king of Bashan went out against them... at Edrei... So [the Israelites] smote him, and his sons, and all his people, until there was none left... alive: and they possessed his land... [T]he children of Israel set forward, and pitched in the plains of Moab... *by* Jericho. And... Moab was distressed because of[what] the children of Israel... had done to the Amorites... Balak... *was* king of the Moabites at that time. He sent messengers... to Pethor... and... Midian... saying, Behold, there is a people come out of Egypt... [to] cover the face of the earth, and they abide over against me: Come now therefore, I pray thee... *that* we may smite them... [together]; for they *are* too mighty for me... Moses spake unto the people, saying, Arm some of yourselves unto the war, and let them go against the Midianites... And they warred against the Midianites... and they slew all the males. And they slew the kings of Midian... And the children of Israel took *all* the women of Midian captives, and their little ones, and took the spoil of all their cattle, and all their flocks, and all their goods... [But] Moses was wroth with the officers of the host... [He] said to them, Have ye saved all the women alive? ...Now therefore kill every male among the little ones, and kill every woman that hath known man by lying with him. But all the women children, that have not known a man by lying with him, keep alive for yourselves... THESE *are* the journeys of the children of Israel, which went forth out of the land of Egypt with their armies under the hand of Moses... And Moses wrote... [about] their journeys... in the book of the wars of the LORD... - Numbers

...the LORD thy God... have brought thee into the land which he swore unto thy fathers... to give thee great and goodly cities, which thou buildest not, And houses full of good *things*, which thou fillest not, and wells digged, which thou diggedst not, vineyards and olive trees, which thou plantedst not... Then beware lest thou forget the LORD, which brought thee... from the house of bondage. - Deuteronomy 6

...the LORD said unto Moses, Behold, thou shalt sleep with thy fathers; and this people will rise up, and go a whoring after the gods of the strangers of the land... and will forsake me, and break my covenant which I have made with them. Then my anger shall be kindled against them in that day, and I will forsake them, and I will hide my face from them, and they shall be devoured, and many evils and troubles shall befall them; so that they will say in that day, Are not these evils come upon us, because our God *is* not among us? - Deuteronomy 31

THEN said the Lord... Though Moses... stood before me, *yet* my mind *could not be* towards this people: cast *them* out of my sight, and let them go forth. And it shall come to pass, if they say unto thee, Whither shall we go forth? then thou shalt tell them, Thus saith the LORD; Such *as are* for death, to death; and such *as are* for the sword, to the sword; and such *as are* for the famine, to the famine; and such *as are* for the captivity, to the captivity. And I will... cause them to be removed into all kingdoms of the earth... And... who shall have pity upon thee, O Jerusalem? or who shall bemoan thee? or who shall go aside to ask how thou doest? Thou hast forsaken me, saith the LORD, thou art gone backward: therefore will I stretch out my hand against thee, and destroy thee; I am weary with repenting. - Jeremiah 15:1-6

...powerful stories still renew our hope... [A] Bible study group... were working through Genesis, trying to apply its insights to their own experience. Among the questions they had confronted were: why did God create human beings in his image and allow them freedom of choice if he knew they

would sin? ...Can you trust a God who asks a father to put the knife to his son? ...Why was the sin of Adam and Eve so terrible as to bring about such a long fall from grace? ...What do we make of the God so disaffected with humanity that even innocent children would perish in the mighty flood? ...The stories of Genesis have been familiar to me since childhood... As our Sunday-school teachers expounded on the Bible stories again and again, they sanitised them to protect our fragile sensibilities from the less spiritual qualities of the patriarchs. Over time I formed heroic profiles in my youthful mind. So it was not until much later that I noticed just how imperfect were the human instruments God had chosen – Abraham, quivering before the Pharaoh's officials and shamelessly offering them his wife, Sarah, to save his own neck; Jacob, cowardly and cloying as he makes off with the stolen birthright; Noah, disembarking from the ark to build an altar – then drinking himself into a stupor while cursing his own grandson... Genesis confronts and confounds us. It also comforts... These stories live. Their themes of forgiveness and redemption are as powerful as they were in the beginning. They tell of life in the making, of falling and starting over – of second chances. - 1996

“Leave the faucets there,” urges a bumper sticker distributed as part of a new campaign that aims to refine the sometimes embarrassing behaviour of Israelis abroad... A survey of Norwegian hoteliers found Israelis to be the least liked of tourists because they “steal everything possible...”

...[‘The forces of light and darkness gathered in Jerusalem yesterday in an epic near-confrontation that marked a dangerous divide in Israeli society. 2000 police separated simultaneous rallies by ultra-orthodox Jews attacking the Supreme Court and secular Jews defending it. Both camps assailed their opponents as purveyors of spiritual darkness while portraying themselves as upholders of the light. The demonstrations, only 500m apart, passed peacefully but the polarisation they represented caused widespread concern about where similar faceoffs in the future may lead. In one of the largest rallies in Israel’s history, 250,000 ultra-orthodox Jews – known as *haredim*, or God-fearers – gathered from around the country to accuse the court of attempting to legitimise non-Orthodox strains of Judaism, and undermining the implementation of Jewish religious law in various aspects of public life, such as Sabbath laws.’]

...Orthodox Jews must respect... their Sabbath. Banned activities... include operating electric switches[, which means television is forbidden!] ...A solution... has been devised at Jerusalem’s Institute of Science and Halacha. Scientists have patented a light-sensitive electric switch... It’s left on before the Sabbath but can’t work because a tiny pulsating light interrupts it every six seconds. If a shutter is drawn over the light, however, the circuit is completed and the power flows. “Separating the person from the final action makes him not legally responsible,”... Critics protest this “amounts to pulling the wool over God’s eyes”. But... “There are loopholes in the law... and they are God-given loopholes.” - 1997

Originally all first-born sons were to be dedicated to God’s service, but God exempted these by taking instead the tribe of Levi. In turn, all firstlings, whether of men, animals, or produce, were to belong to the priests. Human children, however, and animals unfit for sacrifice were to be redeemed from the priests for the sum of five shekels (Num. xviii:13-17). The... *pidyon ha-ben*... ceremony is still observed by Orthodox Jews, other than priests and Levites, when a male child who is the first-born of his mother is thirty days old. A *cohen* (a member of the priestly caste) is called in, and... the child is redeemed from him. In the United States five... dollars are often used to represent the shekels. - Collier’s Encyclopedia

...[a] Semitic people of Palestinian origin... called themselves “children of Israel,” as descendants of Jacob, also called Israel. Together with non-Israelite groups they were apparently called Hebrews by neighbouring peoples... [S]ome tribes found their way to Egypt... and under Moses’ leadership... wandered... [back] into Canaan (Palestine). Allotment of the land was followed by its conquest, over a period of three centuries, against the persistent opposition of its hostile inhabitants, notably the Philistines. During this period the 12 tribes... stemming from Jacob, were autonomous under local leaders... Finally Saul... became king of Israel, a united state, c.11th cent. B.C... David... continued to build the nation, which emerged as a prosperous and powerful empire under Solomon... At his death (early 10th cent.) Israel was divided by a revolt of 10 northern tribes, who appropriated the name of Israel, while the kingdom of Judah was formed in the south around the tribe of that name. The two states were alternatively hostile and friendly to each other and to the neighbouring peoples until the rise of Assyria, which ended the existence of Israel, 722 B.C., and exiled its people (thence known as the Lost Tribes). Judah was conquered by the Babylonians, 586 B.C. The people of Judah were deported to Mesopotamia, and their descendants became known as the Jews... When Persia eclipsed Babylonia, which had already eclipsed Assyria, the Jews were allowed to return to Palestine as Persian subjects... Finally the revolt of the Maccabees... restored the Jewish state, 142 B.C... In pagan antiquity... Jews preserved their communities, with minimum admixture of outside influence, by adhering to their Law, although after the destruction of Jerusalem by the Romans, A.D. 70, no authority replaced that of the Sanhedrin... [– which was the] council and court of the Jews[, consisting]... of 71 members[(who were mostly] learned men, including priests and scribes[) –] ...nor was any pan-Jewish organization ever established; each synagogue ruled itself, and lay rabbis took the place of the ancient priesthood. The rise of reformed Judaism, 18th cent., was the first important break from this tradition. The reformers, originating in Germany and later... the U.S., rejected and modified certain practices such as the strict sanitary rules, the Saturday sabbath, and traditional forms of service... The reformers felt that many of these ancient rituals were inconsistent with modern ways of life and tended to isolate the Jews. [There is also another modern Jewish movement who call themselves *Liberals*. Incidentally, although the various Jewish sects practice their faith in different ways, they are linked by the Egyptian belief that humans are judged by God – be it immediately after their death or at some future time (when the ‘living and dead’ will be judged simultaneously). However, the Jewish ‘Day of Judgment (probably of Persian origin’) introduces the concept of an ‘expected deliverer and ruler of the Jewish people’. The reformist, liberal, and lesser – but usually more radical – Jewish movements predominantly evolved because this event is still awaited (although at least one non-Jewish faith disputes that point). Fortunately for them, Jews also expect to be forewarned – thus enabling them time to prepare (or cleanse) themselves prior to God’s ‘final’ judgment.

...Elijah was a] 9th cent. B.C... Hebrew prophet... [who] was taken to heaven in a fiery chariot. His second coming[is] expected to herald the arrival of the Messiah.

...*Isaiah*[was a] Hebrew prophet who lived in Judah, late 8th cent. B.C. He was the reputed author of the... *Book of Isaiah*, probably composed from traditional material by several writers much later. This book, notable for its grandeur of style and ethical concepts, predicts the doom and redemption of Judah, describes the fate of many people and the judgment of God, and foretells the coming of the Messiah.

Therefore the Lord himself shall give you a sign; Behold, a virgin shall conceive, and bear a son, and shall call his name Immanuel. - Isaiah 7:14

Although... [the] Lithuanian Hasidic Rabbi... Nahman... (1772 – 1810)... had messianic pretensions, both for himself and his son, he attributed his rejection by his contemporaries to their unpreparedness for the messianic age.

...*Kook, Abraham Isaac Hacohen* (1865 – 1935)... Although staunchly Orthodox and no advocate of pluralism within Judaism, he supported the return of secular Jews to the Holy Land. He saw this as part of the divine plan prior to the advent of the Messiah; even if such non-religious Zionists were unaware of their role, the coming of the Messiah required a material basis in the land of Israel which they were preparing.

...[‘Some Jews support the State of Israel, arguing that it paves the way for the messianic era, whilst others take a neutral position. The most traditional do not acknowledge the largely secular State as valid since its establishment should be left to God and his Messiah.’]

...Traditional Judaism allows considerable diversity in conceptions of the afterlife, since speculations about it belong to Aggadah not Halakhah. Thus whilst rabbis of early talmudic literature equated the Olam haBa... normally translated as 'the world to come'... with the Messianic Era, later writers viewed... [it] as an intermediate stage between this and the world to come.

cabbala... a pretended tradition of mystical interpretation of the Old Testament, using esoteric methods (including ciphers)...

Much of the Jewish faith depends on messages from God, and most of these messages were interpreted via dreams (although only 'God can understand a dream to interpret it' – Genesis 41:15-16).

...in my life and in my dreams I've got a message...

...Joseph dreamed a dream, and he... said unto... his brethren... Hear, I pray you, this dream... behold, we *were* binding sheaves in the field, and, lo, my sheaf arose, and... stood up-right; and... your sheaves stood round about, and made obedience to my sheaf. And his brethren said to him, Shalt thou indeed reign over us? ...And they hated him yet the more for his dreams, and for his words. - Genesis 37

In Gideon the LORD appeared to Solomon in a dream by night: And God said, Ask what I shall give thee. And Solomon said... Give therefore thy servant an understanding heart to judge thy people, that I may discern between good and bad: for who is able to judge this thy so great a people? And the speech pleased the Lord... God said unto him, Because thou hast asked this thing, and hast not asked for thyself long life; neither hast asked riches for thyself, nor hast asked the life of thine enemies... I have... given thee a wise and understanding heart; so that there was none like thee before thee, neither after thee shall any arise like unto thee. And I have also given thee that which thou hast not asked, both riches and honour: so that there shall not be any among the kings like unto thee all thy days. And if thou wilt walk in my ways, to keep my statutes and my commandments, as thy father David did walk, then I will lengthen thy days. And Solomon awoke; and behold, *it was* a dream. And he came to Jerusalem, and stood before the ark of the covenant of the LORD, and offered up burnt offerings, and peace offerings, and made a feast to all his servants... Solomon had twelve officers over all Israel, which provided victuals for the king and his household: each man... made provision... [during] his month in a year... Judah and Israel *were* many, as the sand which *is* by the sea in multitude... And Solomon ruled over all kingdoms from the river unto the land of the Philistines, and unto the border of Egypt: they brought presents, and served Solomon all the days of his life... And Solomon's wisdom excelled the wisdom of all the children of the east country, and all the wisdom of Egypt. For he was wiser than all men... and his fame was in all nations round about. And he spake three thousand proverbs: and his songs were a thousand and five. And he spake of trees, from the cedar tree that *is* in Lebanon even unto the hyssop that springeth out of the wall: he spake also of beasts, and of fowl, and of creeping things, and of fishes. And there came... to hear the wisdom of Solomon... all kings of the earth... - I Kings

The Queen of Sheba, 'visiting the court of Solomon (1 Kings x), was impressed by his wisdom'. 'The purpose of her visit was to test Solomon's wisdom by asking him a number of riddles (according to Jewish tradition, she was ruler of the Kingdom of Saba – or Sheba – in southwestern Arabia; the story also appears among the Persians, where she is considered the daughter of a Chinese king'). However, were 'all her questions' difficult to answer, and – assuming she actually existed – is her opinion worthy of consideration (after all, inbreeding was rampant amongst royalty during those times)? Furthermore, like all kings Solomon would have had a court full of 'learned men and scribes' to whom he could turn for advice or information – yet no one but the king is likely to have received credit for their replies! The most popular biblical evidence of Solomon's alleged wisdom is his common sense solution to an argument over a baby (1 Kings 3) – but, if the real mother hadn't forsaken her claim to the baby in order to save its life, would it have been wise to obey his suggestion that the baby be cut in half ('Solomon became king despite the claim of his older half-brother Adonijah, whom he ordered killed'; 'his grandiose schemes, including the building of the Temple with which his name is associated, and the fortifying of strategic cities, led to a system of levies and enforced labour, and the resulting discontent culminated in the secession of the northern tribes')? In addition, it is often stated that 'wisdom comes with age.' If this is true, the level of wisdom exhibited by Solomon in old age should serve as an indicator to how wise he truly was when younger.

And it came to pass... [that] the LORD appeared to Solomon the second time... And the LORD said unto him... if thou wilt walk before me, as David thy father walked, in integrity of heart, and in uprightness, to do according to all that I have commanded thee, *and* wilt keep my statutes and my judgments: Then I will establish the throne of thy kingdom for ever, as I promised to David thy father, saying, There shall not fail thee a man upon the throne of Israel. *But...* Solomon loved many strange women, together with the daughter of Pharaoh, women of the Moabites, Ammonites, Edomites, Zidonians, *and* Hittites; Of the nations *concerning* which the LORD said unto the children of Israel, Ye shall not go in to them, neither shall they come in unto you: *for* surely they will turn away your heart after their gods... [And] it came to pass, when Solomon was old, *that* his... seven hundred wives, princesses, and three hundred concubines... turned away his heart after other gods: and his heart was not perfect with the LORD his God... Then did Solomon build a high place for Chemosh, the abomination of Moab, in the hill that *is* before Jerusalem... And likewise did he for all his strange wives, which burnt incense and sacrificed unto their gods. And the LORD was angry with Solomon, because his heart was turned from the LORD God of Israel, which had appeared unto him twice, And had commanded him concerning this thing, that he should not go after other gods: but he kept not that which the LORD commanded. - I Kings

Ecclesiastes [is] a book of the Old Testament traditionally ascribed to Solomon but no longer seriously held to be his work. Its... author exhorts to wisdom, industry, and the fear of God, but the general tone is pessimistic, with observations on the futility of human life.

A man has been living in a cashew tree for the past seven years... "It is my fate," [he] said... His eldest son said his father climbed up the tree after he had a dream and has not come down since. - 1996

An A[US]n court has upheld the right of an Aboriginal couple to refuse a postmortem examination of their 12-day-old baby because it contradicted their... spiritual and cultural beliefs. The parents said their son's spirit would not enter the "Dreamtime" if his body was cut up. - 1997

The Aboriginal worldview centred on the... "Dreamtime," a complex and comprehensive concept embodying the past, present and future, as well as virtually every aspect of life... Spirit beings were used as messengers to communicate with the living and to introduce new knowledge into human society. Through dreams... the living could come into contact with the spiritual realm and gain strength from it.

It is said a long time ago in the beginning there was darkness over the land... Aboriginal people had no light or heat. Many of the Dreamtime ancestors were living then... [They] not only created the world but gave each tribe its moral and social law. The Dreamtime and the law exist in the

present, sustaining and energising all plants, animals and human beings. Every person is directly related to one of the ancestors by family and birthplace... [O]ne of the biggest ceremonies happens when someone dies. Death is celebrated more than birth. It involves the whole community... Out of respect for the dead [person's spirit its] name will no longer be spoken by anyone. The ceremony itself may continue for months. Before burial the... body lies inside the house so... family and friends can dance [the dead person's] spirit onwards...

What the aborigines believe about their own origin and their birth from generation to generation, they also believe about animals and birds, reptiles and fish, insects and plants, and indeed also about inanimate things such as rain, wind and fire... The cycles of the heavenly bodies and the seasons must have contributed to the aboriginal idea of time as a continuing cycle... Time does not go on and on in serial order, but returns on itself. So too, human souls do not arise one from the other in a biological line but appear and reappear from the spirit-homes.

...[‘Genetically Aborigines show considerable diversity but are quite distinct from groups outside AUS. They came originally from somewhere in Asia’... ‘Because of their Negrito characteristics, the *Dravidians* – an ancient people who inhabited India before the Aryans came – are sometimes believed related to the aborigines of AUS.’ Speaking of whom, ‘there has been controversy about whether Aboriginal people recognized a high God in the sky over all; it seems clear that several AUSn peoples did, though the sky father was not the focus of religious activity.’

...[the] ancient Aryan religion was based upon sky worship, and the early gods were *devas* or ‘the shining ones’, the father god being known as *Dyaus*... But when the Aryans reached India this remote Almighty had faded into the background and survived principally as the parent of a more real and active brood.

Between 2500 and 1700BCE, before the incursion of Aryan tribes into India, an urban civilization flourished in the Indus Valley... This culture was perhaps akin to Mesopotamian civilizations with which there may have been trade links... Little is known of the religion or social structures of these people and their language and script has not been deciphered. There are, however, hints which suggest that... features of their religion continued...

The Aryans... [were tribes] of Indo-European pastoral nomads who... subjugated what remained of the Indus Valley civilization and moved slowly east across northern India, finally settling in the Ganges plain... [They] introduced into India a tripartite social structure which became the basis of the Hindu caste system, of priests (*brahmanas*), warriors or nobles (*kshatriyas*), and commoners (*vaishyas*). The indigenous populations of India were placed at the bottom of this scale as the serfs (*shudras*). Hinduism developed from... Aryan religion, absorbing into it non-Aryan religious ideas and practices as it developed.

...the ancient religion of the Aryan tribes who entered NW India c.1500BC... was a religion of ritual sacrifice to many gods... [A]nimal, vegetable, and human sacrifice are described... The increasing complexity of Vedic ritual led to the dominance of the specialist priesthood... The transition to classical Hinduism began in about the 5th c. BC.

Common to most forms of Hinduism is the idea of reincarnation or transmigration.

Starting as a stone a jiva [(soul)] will move to such things as plants and animals quite automatically until it reaches a human being. From then on reincarnation occurs, that is to say it is reborn in people. The new human body a jiva gets into depends on the life it led in its previous human body. The law of karma (works) applies, and this maintains that you get a position in life according to how good or bad you were in a past life. So karma is a moral or behaviour law and it works because human beings are self-conscious and can know if they are doing right things or not. Your present position... happiness and status are directly the product of your previous life. Consequently you are wholly responsible for your present condition and your future. Notice that God does not judge you for your behaviour as the karma law is an automatic one. No god fixes your future; you do so yourself. You decide your own fate. Luck plays no part in life at all[(unless you pray to ‘*Lakshmi* – the Hindu goddess of prosperity and good luck’)]... The Laws of Manu list punishments for wrong-doing. The man who kills a priest will be reborn as a dog, ass or bull; a man who steals from a priest will be born a thousand times as a spider or snake. Sometimes it is possible for a jiva to find temporary rest in the heaven of one of the gods before returning to earth. Each god has his own heaven, and, to qualify for such a rest, a jiva must have done a pilgrimage, built a temple or some such good deed. The Upanishads claim that a jiva can spend time in one of the numerous heavens or hells between its incarnations... Although your jiva will go up and down in a zigzag way with transmigration, in the end it will find its atman (real self). Then it will become part of the Godhead and so obtain moksha (release) from the round of transmigration. Until then it can revert to a lower status in life or progress according to its karma. The world is a jiva's gymnasium, its training ground, midway between Heaven and Hell; a mixture of pleasure and pain, good and evil. No social progress, no cleaning up of the world or the bringing of the kingdom of heaven to earth is possible according to Hindus. - Religions of Man

In the end, liberation... (moksha)... is a matter of seeing clearly – of understanding. Good actions are only part of the way in which the aim of liberation is worked for. If you are not ‘good’ you can not begin to move along the way.

The law of karma leads to the classification of humans into strict classes and castes...

The caste system is a unique feature of... Hindu religion. The account of its origin is... Brahma created Manu, the first man. From Manu came four different types of people, as the creator Brahma determined... Brahmins are honoured by all the people, including the royal family. Their job as priests and philosophers are subsidized by the state and involve the study of their sacred books... Kshatriyas are the upper middle class involved in the government and professional life, but they are lower in status than the Brahmins... Vaisyas are the merchants and farmers below the [Kshatriyas] but above the rest of the population in... status and religious privileges... Sudas are the lowest caste whose duty is to serve the upper castes as labourers and servants. They are excluded from many... religious rituals and are not allowed to study the vedas[– ‘the original scriptures of Hinduism’]. The... system became more complicated as time went on, with literally thousands of subcastes coming into existence. Today... caste... is still an integral part of the social order of India, even though it has been outlawed by the Indian government. - Handbook of *Today's Religions*

Termites, often called *white ants*, are not really ants... They are, however, social insects like ANTS... Thousands of termites live in a single nest. Different groups of them are specialized to do different kinds of work for the colony. A group of insects specialized for a particular job is called a *caste*. There are [3] important castes – ...*reproductive*... *worker*... *soldier*. Unlike other social insects, there are both males and females in each caste.

The true origin of caste may be the early trade and professional guilds listed in later Vedic literature.

Hinduism does not trace its origins to a particular founder, has no prophets, no set creed, and no particular institutional structure. It emphasizes the right way of living (dharma) rather than a set of doctrines, and thus embraces diverse religious beliefs and practices. There are significant variations between different regions of India, and even from village to village. There are differences in the deities worshipped, the scriptures used, and the festivals observed. Hindus may be theists or non-theists, revere one or more gods or goddesses, or no god at all, and represent the ultimate in personal (eg Brahma) or impersonal (eg *Brahman*) terms.

Brahman is described as the 'ultimate, holy power', the one great spirit God, the supreme soul of the universe. Brahman is present everywhere and is like a powerhouse 'lighting up' all the other gods and goddesses... Brahman is not a person and should be referred to as It... Because Brahman is so mysterious and impersonal It has made Itself manifest (clear to people on earth) in the forms of different gods and goddesses in a much more personal way... Brahmins are nearest to finding their atmans as they are the top class. A Hindu welcomes death as a step to final union with Brahman. Some say that when a jiva passes into the Godhead it loses every trace of its separateness and so it cannot be identified in any way. Others say that some slight differences remain so that a jiva can be identified... [A further Hindu belief is] that God is always creating... whatever is created eventually fades away or is destroyed and new creations are necessary.

[The founder] of the Hindu reform movement, the Arya Samaj... became disillusioned with image-worship when he saw mice running over the... sacred symbol of Shiva... at an all-night vigil in the temple during the Shivaratri festival. If the image were truly the 'body' of God, then, Dayananda thought, he would not allow it to be defiled in this way.

The cow for centuries has been looked upon as a tangible symbol of life and fertility by nomadic and pastoral peoples, who depend on this uncomplaining beast for nourishment and prosperity... The cow is thought of as a symbol of the divine bounty of the earth, and as the 'mother' of gods and men... It is in India and Hinduism that the cow plays the most striking role, both in mythology and the day-to-day practice of religion. In practice, Indian cow worship is restricted to one species of the animal, the East Indian humped zebu.

A Hindu religious group has put cows up for adoption on the Internet... [T]he Bombay-based International Society for Krishna Consciousness (Iskcon) [- alternatively known as the *Hare Krishna* movement -] ...said the West Virginia-based... Adopt-a-Cow programme fitted in with the group's philosophy of "cow protection." Cows are sacred to Hindus and roam the streets of most Indian cities often lying down in the middle of streets as the traffic weaves around them. The programme asks people to sponsor "one of Lord Krishna's cows" for \$US30... a month. For \$4000 the cow can be adopted for life. Prospective sponsors can choose an animal from photographs.

...Yogis in the northern region of India have increased foreign tourism in some towns by as much as 300[%], due mainly to the photo opportunities they present... as they bury their heads in holes in the sidewalk. As they practise this form of meditation, their bodies achieve a state of suspended animation, where breathing ceases and their pulse drops to just two beats per minute... Yogis[also] regularly perform acts of self-inflicted torture... The followers of the belief are convinced that ongoing pain in this life will lead to eternal enlightenment in the afterlife.

...Hindus believe they can wash away their sins - reducing their number of reincarnations and achieving nirvana - if they bathe in the confluence of three sacred rivers at the auspicious time of the Kumbh Mela that occurs every dozen years... The Ganges and the Yamuna, bringing melted snow from the Himalayas, converge at Allahabad, the "city of God." According to Hindu belief, the mythical Saraswati River also converges at that spot... About 65 million people are expected at the Kumbh Mela before it ends on February 21.

...It may become the biggest gathering of human beings assembled for a single purpose in history... It is the Kumbh Mela... and organisers believe that 70 million pilgrims - 10 times the size of London - will arrive over the next 40 days, with... millions bathing together at one time... Hundreds of thousands of tents have sprung up over a 30km radius along the sandy banks of the Ganges, 575km southeast of New Delhi. Nearly 300 special trains, 4000 Government-owned buses and hundreds of flights have begun ferrying in the devotees. To handle the numbers, the... state Government has built 15 new pontoon bridges, 80km of new roads, 20,000 new streetlights, thousands of water faucets and portable toilets. There are... 35 police stations... and... 12 temporary hospitals... In 1984, during a smaller festival in the town of Hardwar, 200 people were killed in a stampede.

...Thousands of pilgrims jostling for space atop a holy mountain... yesterday... to watch what [they] believe is the celestial light, visible deep in a forest facing the... Sabarimala shrine... near... Pamba... in southern India... caused part of a hill to collapse, triggering a stampede which killed 51 people and injured 56 others.

Indian Army and paramilitary forces are battling to rescue thousands of Hindu pilgrims stranded along a rugged Himalayan mountain path after at least 116 died from cold. Around 70,000 devotees were last night strung along the 50km route to the holy Amarnath cave, which is 3880m high... Officials said about 112,000 Hindus had arrived in Kashmir this year to visit the cave, where devotees worship an ice stalagmite believed to be a manifestation of the "lingam," or phallus, of the Hindu god Shiva. There are many naked "sadhus," or Hindu holy men, smeared only in ash, among the dead, relief officials said. "The main reason for the deaths is that the pilgrims had no warm clothing. Many were old people. The holy men were trekking naked," said a doctor at a pilgrim camp in Anantnag, 50km south of Srinagar... Officials said prospects for a successful, full-scale relief operation had brightened with an improvement in the weather, which had hampered earlier rescue attempts... [Local] villagers have also come forward to help the stranded pilgrims. They had taken them into their homes and given them food and warm clothing, officials said.

...Military helicopters plucked 2000 pilgrims from the mountainside yesterday after the weather cleared for the first time in four days... "121 people have so far died but the number of deaths may increase as we are searching for bodies buried under the snow along pony tracks." - 1996

Indian authorities have begun the mass cremation of unidentified victims of an inferno that killed at least 200 worshippers at a Hindu gathering... The inferno erupted on the last day of a convention... in Baripada... The flames, fanned by winds, scorched the shelters for men devotees but spared a separate section for women and children. The cause of the fire was thought to be an electric spark. The P[M]... announced federal payments of 50,000 rupees... to the victims' families and 25,000... to the injured. The aid came on top of state payments of 25,000... and 10,000 rupees.

...At least 39 Hindu worshippers were killed and 90 injured when fire tore through an 11th century temple in southern India on the eve of a major religious ceremony... Kumbabhishekam, which has been postponed... It started when holy fire used for prayer set alight a temporary tent of coconut leaves inside the famous Brihadeeswara temple... [T]he death toll was expected to rise... Witnesses said there was only one exit and many devotees, including women and children, were prevented from leaving by barricades set up to control the crowd. Many were trampled to death after tripping on bamboo sticks or urns, while others suffocated in the rush... It was not immediately known how much damage the... "Big Temple," suffered. It... [is] classified as a world architectural monument by the U[N] Educational, Scientific and Cultural Organisation. The temple houses the biggest lingam, or symbol of a Hindu god's regenerative power, in India, and its tower is 66m high... [By the way, a glacier] in the lower Himalayas that is the source of the holy Ganges River is said to be threatened... Construction of hotels and restaurants to accommodate the half a million people who visit the area every year has led to the destruction of forests, contributing to the erosion. And environmental warming... in part[from] campers' cooking fires, is melting the glacier... "Massive cracks have developed in the lower reaches..." said... the Government-

funded Himalayan Glaciers Project... Visitors see a 4225m-high ridge of ice, partly covered with earth and vegetation that is nearly 24km long and 2 to 4km wide... [T]he mouth of the glacier... [resembles] the mouth of a cow... Calls to ban tourism in the area would likely meet resistance. Hindus, who make up 82[%] of India's 930 million people, believe that a dip in the Ganges... absolves them of sins, and many see a trip to the river's source as the ultimate pilgrimage. Its holy status has not stopped Indians from polluting not just the source... but the entire 2525km course of the river. There are 692 towns and cities whose sewerage systems flow into the river... [estimated at] 1200 million litres of waste every day.

...[Thirty-four lower-caste Hindus, including 20 women and four children, were massacred at Miapur village in Aurangabad district, 150km south of the capital Patna, in the eastern Indian state of Bihar, at the weekend. The state's police chief said 19 others were injured in the second outbreak of caste violence in a week. He said about 150 armed men ringed the village, forced members of the lower-caste Yadav community to line up and gunned them down. Witnesses said the attackers shouted "Long Live the Ranvir Sena," a banned private army used by feudal landlords to terrorise poor peasants and lower-caste Hindus. The villagers said the Ranvir Sena made it clear the massacre was in revenge for the earlier murder of 12 feudal landlords by about 150 armed men, believed to be landless farmers, in Bihar's Nawada district. The first killing itself was apparently aimed at avenging the murder of five poor farm workers on June 3. Four days later, two landlords were slain by local farm tenants in the ongoing caste war. Extreme left-wing Maoist groups have conscripted poor farmers into their private armies, which often clash with powerful landlords in the eastern state, which borders Nepal. With an annual average of 5000 reported homicides, 12,000 incidents of rioting and hundreds of abductions, Bihar is India's most lawless state.']

...Indian police say a couple sacrificed a neighbour's six-year-old daughter to the goddess Kali in the hope it would give them a child of their own.

...Four men and a woman have been arrested in western India for allegedly sacrificing a five-year-old girl in a bid to find hidden treasure... The girl's body was found after villagers saw a dog carrying a human limb.

...A Welsh local council has been asked to dig up great hunks of the Gower Peninsula. A local man claims that in an earlier existence – discovered by him under hypnosis – he buried a casket of treasure. This is reminiscent of a 19th-Century Englishman who stipulated in his will: "In view of my firm belief in reincarnation, I leave my money and chattels to myself in whatever form I may return." Which could be why an albino wild rabbit in Bedfordshire... is eager to establish its rights to a fortune. [In local news, 'a new \$7m Hindu temple and cultural centre in Avondale is expected to be completed next month. Six craftsmen from India are putting the final touches to intricate carvings on temple pillars and domes. Hundreds of carvings have been brought in from India. Many pieces were damaged during transportation, requiring repairs from skilled craftsmen. Their design knowledge and skills, passed down through generations, is highly sought after at temple building projects throughout the world. A "labour of love" is how the craftsmen describe their work. The Swaminarayan fellowship co-ordinator says fundraising and a loan from the religious organisation's US branch made building possible.']

...This weekend... Auckland's Downtown Centre... will overflow with a predominantly pakeha middle-class audience prepared to pay \$400 a head for two days of spiritual guidance, known as an Intensive... A high point for many will be the ceremony known as darshan. The audience, one by one, approach the woman they have come to see... [- a]n Indian... in her early 40s[... who the]... magazine *Hinduism Today* has called... one of the 10 most influential Hindu leaders of the last decade. As spiritual head of the Siddha Yoga Dham... of America Foundation, otherwise known as SYDA, [she] heads a major spiritual organisation with more than 550 meditation centres, 10 ashrams and tens of thousands of followers worldwide. LIKE the Maharishi Mahesh Yogi before her, [she] can count among her admirers a coterie of [Hollywood] celebrities... Such is the sway that [she] holds over her devotees that they are said to vie to sit in her dirty bath water. When... last in N[Z] in 1992, her arrival was accompanied by a veritable media blizzard. The guru's handlers were only too happy to accommodate journalists and photographers. Articles duly appeared, lauding the sense of spiritual peace apparently provided by mere proximity to [the guru], who sat cross-legged [o]n a transparent perspex chair, giving the illusion that she was levitating. THIS week it was different... From a public relations perspective, there could be good reason for a low profile... [T]here have... surfaced disturbing and well-documented reports of a darker side to [the guru] and the SYDA... These first surfaced as long ago as 1983 in an article... in the *CoEvolution Quarterly*... detailing sexual activities that [her] predecessor, Swami Muktananda Paramahansa, engaged in with young female disciples on a table in the sect's Catskills ashram in New York state... Muktananda had earlier decreed that residents of the Siddha ashrams were to remain celibate... Perhaps the most comprehensive account of the recent trouble SYDA has faced appears in a 1994 *New Yorker* article... [which] describes what appears to be a power struggle between [the incumbent guru] and her brother... Originally the siblings were jointly anointed successors by Muktananda... [After his] death in 1982... the conflict began... Devotees were commanded to turn in videos and photographs of the younger brother and cut any reference to him in SYDA publications. Later that year SYDA said that [the brother] had broken his vow of celibacy and this was the reason he was stepping down as co-leader. For his part, [the brother] has claimed in the *Illustrated Weekly of India* that he was abducted and forced to retire... While captured he alleged that he was [also] forced to give up access to a SYDA Swiss bank account that had been set up in both their names...

Indian cities are dotted with parks and schools named in honour of the nation's freedom leader, Mohandas Gandhi, revered by Indians as Bapu (Father) and Mahatma (Great Soul). But many look at India's growing consumerism and the Government's pursuit of nuclear [weapons] and wonder whether the teachings of the peaceful philosopher have been forgotten... "The politician and social philosopher who articulated an alternative model of society... [has been], by a curious sleight of memory and imagination, transformed into the presiding deity of a system that negates every conviction he stood for," wrote... a columnist for the *Pioneer* daily... Leaders of the Congress Party, which Gandhi once led, stand accused in numerous cases of bribery and fraud involving several billion dollars. Religious and caste violence convulses the nation Gandhi wanted to see as an example of tolerance... ['In almost any village at almost any time, issues incomprehensible to outsiders will bring on arson, mayhem, murder and massacre.' But Gandhi, who 'was assassinated by a Hindu who blamed him for the division of the subcontinent'.] need not be an empty icon remembered only in portraits and statues... "He has become a worldwide symbol of meaningful moral dissent,"... This week marked the 49th anniversary of Gandhi's assassination. In commemoration, the last of his ashes were spread over the Ganges... After his death... Gandhi's ashes were sent across India to be scattered in rivers. Why some ashes were kept... in a government bank in Orissa... is not known... [but when news] of their existence surfaced in 1995, [it sparked] a legal battle by the family to gain custody of them.

...A quick check of biographies of Gandhi published in the last two decades reveals... most are hagiographic... "worshipful or idealised..." ...The Gandhi who emerges... [from *Rediscovering Gandhi*] is human enough to deflate any saintly misconception. Writing from South Africa, Gandhi looks down his nose at "kaffirs," who spend their lives in "indolence and nakedness." During the Boer War, he overtly supports the British but privately admires Boer resistance. He argues publicly that the Jews of Nazi Germany should submit to their persecutors virtuously, for their "cult" will be ultimately redeemed by such voluntary sacrifice. He dies estranged from his eldest son... who believes Gandhi's obsession with shaking off British colonialism has caused him to abandon his family. He... regrets much of his treatment of... his wife Ba... including his authoritarian manner, his frequent absences and his mistaken charges that she was adulterous. Yet... the simple power of Gandhi's life and work shines through... - 1997

He studied law in London, and in 1893 he gave up a Bombay legal practice worth £5000 a year to live on £1 a week in South Africa, where he spent 21 years opposing discriminatory legislation...

"It's sad that people... say... Mahatma Gandhi... was a super calloused fragile mystic hexed by halitosis. He was a great man with a strong will who freed India from the clutches of the British snakes... When a person has a great goal in life, he doesn't bother about looks or clothes or bad breath."

...Another reader found the remarks about... Gandhi extremely offensive. "Given the current situation where there is so much violence, terrorism and war chants all around the world, we have all the more reasons to remember this great leader and his preaching of non-violence."

I do believe that where there is only a choice between cowardice and violence I would advise violence. Thus... it was that I took part in the Boer War... [by leading] an ambulance corps for the British... Hence also do I advocate training in arms for those who believe in the method of violence. I would rather have India resort to arms in order to defend her honour than that she should in a cowardly manner become or remain a helpless witness to her own dishonour... There should therefore be no yielding to bullying, bluff or worse, even though it may mean the loss of a few precious lives... [But] I cannot think of permanent enmity between man and man, and believing as I do in the theory of rebirth, I live in the hope that if not in this birth, in some other birth I shall be able to hug all humanity in friendly embrace. - *The Words of Gandhi*

REMEMBER Like Water for Chocolate? Well, [in [the author's unlikely latest[it] is the 23rd century and reincarnation rules the world. Where hatred has existed between two people they will be born again to live in proximity as often as is necessary for them to learn to love one another. It could take as many as 14,000 rebirths until they qualify for earth's ultimate reward – fusion with one's twin soul.

...just because the calendar which arrived as part of the promo pack for the Bad Girls N[Z] tour titillates with the promise of "A[US]'s hottest women nude for your visual pleasure," this doesn't mean you can call the six-pack strippers... [A] former Miss Personality A[US], gave up hairdressing to play a blond geisha. [Another] used to be an air hostess... while [a third] describes herself as a dancer and a model... The women have practised their pat phrases. They're professionals. The s-word, sleazy, is not part of the vocabulary... for what it is like to dance butt-naked for a living... As... [the] 1996 *People* magazine covergirl of the year says, "I was born nude so I feel very comfortable with it." ...Backstage at the Powerstation, in between applying lashings of stage make-up, [the fifth Bad Girl] is telling me that in another life she used to be a kindergarten teacher. Nothing much has changed, according to the former *Penthouse* Pet. She may have exchanged hyperactive rug-rats for... around 700 primed to get visually excited through a fug of booze and galloping testosterone... punters, but, "they're all kids." ...The only time they become at all agitated is when they think the photographer is taking shots that might show flashes of flesh. Such are the paradoxes of life in a game which involves strutting your stuff on a stage nightly – sometimes wearing only the trademark Bad Girls calendar smile. - 1997

In the Hindu religion there is a legend in which the banana was the fruit forbidden to Adam and Eve in the terrestrial paradise, which... was on the island of Ceylon, where the parents of the human race covered their nakedness with banana leaves.

In addition to sharing an *Adam and Eve legend*, Hinduism and Judaism both declare a person is punished or rewarded according to the deeds of its lifetime. What happens immediately after death shows how they diverge – Jews bury their dead so each body remains intact enough to eventually be reunited with its soul; Hindus cremate their dead so souls can be released to enter a new body (although it is likely that burying the dead was originally introduced to prevent scavenger animals from eating them; whereas cremation evolved from the notion that a soul *will rise to the gods* [or to heaven] with the smoke).

Pilgrims from all over India visit Banaras to... bathe in the purifying waters of the Ganges and so expiate bad karma. Alongside the bathing gnats... are the burning gnats where the dead are cremated. To die in Banaras is to ensure liberation... and many elderly Hindus undertake the journey or are taken to the city to die.

...denying reincarnation... made it difficult... to understand evil in the world. If there is no transmigration of souls, where is Divine Justice? How can we account for fortune and misfortune? Why... on the basis of one finite lifetime, is one man... pious, knowledgeable, beautiful, or opulent, and another... impious, ignorant, deformed, or poor? Why... is God so arbitrary, so unmerciful?

...why is one man intelligent and another man ignorant? This is due to continuity... Since we are always acquiring experience, we cannot say that [someone] was self-taught. Rather, in his previous lives he cultivated knowledge, and his knowledge is continuing. That is a fact.

Gradually, logically, reasonably, she builds up the story of how she was brought against her will to believe in reincarnation. She quotes authorities from the... East and from the West, who have given it as their considered opinion that reincarnation is an actual occurrence. To them she adds a frank record of a number of her own personal lives... In addition to acquiring knowledge of one's self – the vital underlying principle – from the lives of the past, she postulates an interesting theory, based on her own practical experience, that many phobias and fears may have their roots in a past that was active thousands of years ago and that by finding the causes the effects may be very much alleviated if not cured.

U.S. auto magnate Henry Ford once told a newspaper interviewer, "I adopted the theory of reincarnation when I was twenty-six... Genius is experience. Some seem to think that it is a gift or talent, but it is the fruit of long experience in many lives." In a similar fashion, U.S. general George S. Patton believed that he had acquired his military skills on ancient battlefields.

...King Bharata was a wise and experienced *maharaja* who one might have thought would rule for hundreds of years. But in the prime of his life, he renounced everything – his queen, family and his vast empire – and went to the forest. In so doing, he was following the advice of the great sages of ancient India, who recommend that one devote the latter part of one's life to self-realization... One day while Bharata was meditating near the bank of the river, a doe came there to drink. While she drank, a lion in the forest nearby roared loudly. The doe was pregnant, and as she jumped in great fear and ran from the river, a baby deer fell from her womb into the swiftly flowing waters. The doe, shivering in fright and weak from the miscarriage, entered a cave, where she soon died... As the sage observed the fawn floating down the river, he felt great compassion. Bharata lifted the animal from the water and, knowing it to be motherless, brought it to his *asrama*... One day, as Bharata was meditating, he began... to think of the deer instead of the Lord. Breaking his concentration, he glanced around to see where the deer was, and when he could not discover it, his mind became agitated, like that of a miser who has lost his money... While frantically searching for the lost deer along the dangerous forest paths, Bharata suddenly fell and was fatally injured. Lying there at the point of death, he saw that his deer had suddenly appeared and was sitting at his side, watching over him just like a loving son. Thus, at the moment of his death, the King's mind was focused completely on the deer. In *Bhagavad-gita* we learn, "Whatever state of being one remembers when he quits his body, that state he will attain without fail." In his next life, King Bharata entered the body of a deer.

...As we live through thousands of dreams in our present life, so is our present life only one of many thousands of such lives... Our life is but one of the dreams... and so it is endlessly, until the very last one, the very real life, – the life of God. - COMING BACK The Science of Reincarnation

Do you have any idea how many lives we must have gone through before we even got the first idea that there is more to life than eating, or fighting, or power in the Flock? A thousand lives, Jon, ten thousand! ...we choose our next world through what we learn in this one... But you, Jon... learned so much at one time that you didn't have to go through a thousand lives to reach this one. - Jonathan Livingston Seagull

The last quote on the previous page implies that every human has the potential to learn what is required to reach *the life of God* in one lifetime, while it follows from line 64 of the same page that you will also reach your goal – *without fail* (i.e., even if you have brought any bad karma upon yourself during your present lifetime) – if you manage to be thinking about God at the moment you *quit your body* (therefore, if you want to enhance your chances of gaining liberation, in addition to having good karma you must be thinking about God at all times – which necessitates employing other people to do all your menial tasks like cooking, cleaning, etc.). Another unfortunate consequence of the theory of reincarnation is that it gives people an opportunity to believe they were someone famous in a past life. How many people currently believe they were Cleopatra? No more than one could have been!

At least one political leader of the '90s is said to have 'been Krishna in a past life' (Krishna is regarded as being an *incarnation* of God – i.e., 'the embodiment of God in human form'). This may be based on him thinking and behaving like Krishna – but it is possible that he thinks and behaves like Krishna because he studied him in a past life (or is a descendant of Krishna's)! A further point to consider is that if *the karma law is an automatic one*, what keeps check of each jiva's behaviour (and when the *thousand [life]times as a spider*, for example, are complete) to ensure that billions of jivas automatically get their deserved position in their next life – which will be linked to the lives of at least two other people (their parents) who may have been born before the jivas' previous bodies died – if it isn't God (r:p838, ln40)?

"I'm selling only the concept of Karmic realignment." "You can't sell that. Karma can only be portioned out by the cosmos... No offence Apu, but when they were handing out religions you must've been out taking a wizz."

If your next life is determined by what you do in this one, and this life was determined by what you did in the last, and the last was determined by the previous life and so on, then each past life has been predetermined, or predestined and, therefore, each future life must also be predestined – which necessarily implies that you can't *decide your own fate*, and everyone is being punished or rewarded for past actions that they had absolutely no control over!

Karma... the principle of cause and effect, governing not only the present life, but also future lives... in... Brahmanism... and... Buddhism...

The *upanishads* are a collection of speculative[Hindu] treatises. They were composed during the period 800 to 600 B.C., and 108 of them are still in existence... The upanishads reportedly had an influence upon Guatama Buddha, the founder of Buddhism, as can be observed in some basic similarities between the upanishads and the teachings of Mahayana Buddhism.

A... term meaning the perfection of wisdom... is used for a set of Mahayana Buddhist scriptures known as the *Prajnaparamita sutras*... Their basic message is that reality transcends all existing forms, and concepts of the mind, and can only be known by intuitive wisdom (*prajna*).

Buddhism teaches that the world passes away, and is not real in the end. It is 'impermanent'. While Buddhists take life seriously, they think that we should not be trying so hard to change it. - ETHICS & RELIGIONS

The moral code of the Buddhist tradition is known as *sila*, and the *pancasila* are the five moral precepts that are central to Buddhist ethical practice. Morality is the first of three stages on the Buddhist way, and therefore following the five moral precepts is the beginning of the Buddhist path. They are: not harming other living things; not stealing what belongs to others; avoiding undue sensuality; desisting from wrong or harmful speech; and abjuring drugs, alcohol and other substances that hinder consciousness.

Born a Kshatriya prince in the Nepalese Terai c. 563 BC, [Gautama] renounced kingdom, wife, and child to become an ascetic. After taking religious instruction from various teachers, he attained enlightenment ([provisional] nirvana) c. 525 BC through meditation beneath a bo-tree in the village of Buddh Gaya in NE India. He then taught all who wanted to learn, regardless of sex, class, or caste, until his death in c. 480 BC.

...which gave him his final nirvana (*parinirvana*). Early Buddhism did not speculate too much upon the meaning of nirvana after death, and felt that the question was unhelpful if not unanswerable, albeit it did not signify heaven or annihilation... Buddha...

...did not oppose the gods, he acknowledged them as realities in the workings of the world. But without repudiating them, he reduced them to unimportance... [W]hat is characteristic of Buddha is that he cared for not only men but all living things... According to Buddha's teachings, it is not prayer, not grace, and not sacrifice that brings redemption, but only knowledge.

It is important to realize that the Buddhist road [– or 'noble eightfold path' –]does not lead to a Being in the sense of a creator God which other religions believe in. For them life is not a preparation for eternity, but a way of living... until you reach the highest good. Buddha's teaching (dharma) works because it offers a solution to this life's problems and not because it taps into supernatural resources to aid you. Freedom is your quest. Your aim is to develop yourself from an ordinary person into an extraordinary or enlightened person – the superior species.

Buddha appears as a type, not as a personality. H[is]... is a personality which owes its existence to the extinction of all individual traits.

Buddha has been described as one of the greatest personalities of all times... He made things seem very simple. His teaching was about how to solve the problems of this life until you could eventually reach the truth after a series of lives on earth. He said the Hindus were wrong in thinking there were immortal gods, and so there was no need for sacrifices, rituals and prayers to them. So there was also no need for priests. Man had no immortal soul; instead his personality consisted of ever-changing components that would die with him... [Since Gautama's death, Buddhism has developed separate components. *Theravada* (or Southern) Buddhism teaches that] Buddha was simply a human who had pioneered the way to nirvana so showing others how it could be done. Individuals must work their way across the sea of life on a 'small raft' (Hinayana) and achieve nirvana for themselves aided only by Buddha's teachings... [*Mahayana* (Northern) Buddhism teaches that there] is a big raft capable of holding many people who had put their trust in the eternal Buddha who had come to earth to help them find the way across the sea of life. This implies that Buddha can be worshipped as a god because he is eternal and comes down to earth[. *Zen* Buddhism teaches that] you should concentrate on living life rather than reading and thinking about it... [In addition, some Buddhists believe in the existence of *Dhyani* (or meditation) Buddhas, who live] in nirvana but will share their happiness and help anyone who prays to them... [Nirvana is described as being *nothingness* –] neither being nor non-being, it is oblivion, spiritual freedom, freedom from space and time, from illusion, from passion and from all passing things of this world... [After 'attaining provisional nirvana, nirvana in life, Buddha'] sat... for 49 days in rapture[because] now he knew the cause of suffering or dissatisfaction and how to cure it.

NOBODY WILL BE FOREVER HAPPY IN PAR-adise or suffer forever in hell. Thus... followers of Buddha do not aim for any form of paradise but seek Nirvana – emptiness, nonexistence. Of the three ways to acquire knowledge – studying, contemplating and practice – Nirvana can only be known through practice... [Followers of Buddha might *not aim for any form of paradise but*] **Buddhists in Thailand are making a desperate bid to save the country's northern forests from illegal logging... The *Bangkok Post* report[s] that an alliance of lowland Thai villagers and northern hill tribes... plan... to ordain 50 million trees during a two-day celebration on February 8-9. To deter the loggers, the trees will be wrapped in orange robes usually worn by Buddhist monks. "It is a ritual to connect people's minds with nature," said... a... monk...**

[*'Forever watchful AS IF being beheaded wasn't unjust enough, a stone Buddha is forced to stare at the ghostly scene of his execution two centuries ago. His future lies in the roots of a tree, which cradle his head as if in comfort from the horrors of a siege that destroyed the glittering Thai city of Ayutthaya and ungraciously knocked him from his pedestal. Ayutthaya, according to one of many conflicting stories, means undefeatable. In its heyday Ayutthaya was the most powerful and one of the wealthiest military empires in the East. Its 33 kings were worshipped as gods and were famed for courage and arrogance. Armadas from China, France, England, and Japan sailed down its waterways to sell their wares, and the city was said at one time to be larger than London or Paris. In 1682 a foreigner counted 1700 temples, 30,000 priests and more than 4000 gold and gilt Buddhas. He marvelled that the reflected light from the buildings caught the eye miles away. A golden age of art and architecture ensued as the city turned its attention on itself, but the military was neglected and it became insular and vulnerable. In the latter half of the 18th century the Burmese began a series of invasions. The Siamese defended themselves valiantly for decades, but on April 17, 1767, after a long siege that brought famine, disease and fire to Ayutthaya, the Burmese stormed the city. All but 10,000 of its one million inhabitants were massacred or marched to Myanmar as slaves, including the royal family. More than 400 years of history was erased. So vicious was the assault that tears were said to have run down the chest of one of the Buddha statues, and the heart of another broke and fell into its lap.'*]

...Not even the world's largest Buddha statues have escaped the ravages of the Afghan war. One of the 1800-year-old statues now serves as an anti-aircraft gun platform... The poor and the displaced live in caves around what was once one of the world's archaeological treasure troves. It may still be for some. Holes in the ground bear witness to the poor who scavenge for artefacts to sell for cash, the scarcest commodity of all in Afghanistan, apart from peace... The last archaeological and repair work was carried out... [on the] colossal Buddhas of Bamiyan, some 55m and 38m high respectively... in the late 1970s but most of the drains for protecting... [them] from floods, rain and snow are damaged. "[They] are a cultural heritage which belongs to the world... and if the UN and international community do not help in their preservation then this heritage... will be destroyed by warlords and civilians."

...The United Nations cultural body Unesco yesterday announced 46 new world heritage sites, including... the birthplace of Buddha... [Incidentally, t]wo Buddhist nuns told a Senate committee yesterday that they destroyed and altered documents relating to [the US Vice-President's] visit to their temple, which raised \$US100,000 in apparently illegal donations... to spare the temple embarrassment... The Justice Department is conducting a criminal investigation of their activities.

...[Cambodian and Thai authorities have two suspects for the theft of dozens of priceless artefacts from a 10th-century temple in northwest Cambodia. News of the thefts drew international outrage and prompted Cambodia's king to request his government to take sterner measures to protect the country's national treasures. It also highlighted the continuing problem of looting and pillaging of Cambodia's Angkor-era temples, which conservationists say is increasing. Cambodian military officials and Thai businessmen have long been suspected of dealing in stolen Angkor-era artefacts, which are sold around the world.']

...Promoters of N[Z]'s biggest Buddhist temple have to convince... local residents that the Manukau City complex will not house a crematorium and pose health risks to neighbours. The proposed \$10 million, 4ha development... will include... meditation rooms, accommodation for those on overnight retreats and a stupa... "Some Kiwis mistake the stupa for a crematorium," says... [the] Buddha's Light International Association... which... has... 100 branches around the world... The complex[, which has been]... planned... for three years... would take three years to complete.

...Buddhist followers searching for a resting place can now book a space for the hereafter in a religious monument in Auckland. A Buddhist centre in Avondale is financing the building of a stupa – a shrine for inspiring a virtuous life – by selling storage space for believers' ashes. Twelve overseas followers due to immigrate from... [Southeast Asia] have paid \$3000 each for their ashes to rest in the monument[, which one]... of the builders... described... as a type of spiritual advertising. "It's like a billboard..."

...When Buddhists wanted to build a concrete structure in the hills near Thames, the first problem... was to explain what it was... Finally approved as an "accessory building for community use," the completed stupa was yesterday dedicated by the visiting founder of the Friends of the Western Buddhist Order... The two-day celebration must have attracted more cars up the unsealed road through "poor man's Kaueranga Valley" than have travelled it in the past decade... Over a year in the planning and 10 weeks in construction, the stupa has cost \$50,000... "We have lots to spend money on – and I have been asking for funds to put a lump of concrete on top of a hill," says the]... acting caretaker... Four members of the international order (originally established in London in 1967) donated the money for it, and the... 80ha... retreat centre is run as a charitable trust... To outsiders it may seem a crazy gesture, especially given that the property still lacks electricity, proper roads and weatherproof buildings... But there is... a growing Western Buddhist tradition here, just as... in Europe... Stupas are commonplace in... South-east Asia, but the Tararu one is only the fourth completed in N[Z] – although five more are underway. There are an estimated... 50,000 Buddhists in N[Z], and 25 Buddhist groups within the Auckland area... In the 1970s Westerners attracted to Buddhism tended to be young and "some could be described as hippies,"... Today they are more likely to be in their... 40s, often well educated and established in careers. "They have started looking for greater meaning in their lives... Some turn up because of their stressful lives. They learn to meditate to relieve that stress and discover Buddhism in the process."

...A major insurance company in the US gives lower premiums to people who meditate. In Germany, another insurance company refuses to cover heart patients who don't. - 1997

There are many exercises to help "heal" your mind. The first thing to do is "still" the mind, getting rid of the clutter to allow new thought patterns to emerge. We all have thoughts firing through our heads all day, randomly firing off ideas in all sorts of directions. This can create stress, and to combat stress you need calmness and stillness. Meditation is the ultimate technique for this. It may lower blood pressure, increase blood flow to the brain and help ease insomnia and migraines. If practised daily it can create self-confidence and clarity, which helps you see your goals and teaches you to go about setting them without negative thoughts interfering. Other great tools to help you think positively are hypnosis, visualisation techniques, cognitive behaviour therapy and good old positive thinking. Go to any local bookstore and you will find tons of books with great advice...

The... story broke last week that a [Dept. of Social Welfare] case worker offered yogic breathing workshops to sickness beneficiaries... [Y]ogic breathing was something I'd never heard of... For that matter, I didn't know much about yogis... As far as I could tell, yogis are those bearded guys who sit on the top of mountains, doing not much. It doesn't seem a stretch for them to be able to advise people on unemployment... Seven sickness beneficiaries each spent \$50 (of our money) to attend the... workshops... If it worked for depression, maybe it could work for my laziness. I looked through the *Yellow Pages* and found a yoga place... The woman who taught me had skin which shone with health... "Your thoughts are not your reality," she said... I was to clear my mind till all I was focused on was my breath... I did so well clearing my mind, I wound up sleeping for most of the session. This, the instructor said, was because I was stressed out. True relaxation came from being able to clear the mind yet stay focused.

While relaxation exercises are very beneficial for the practice of meditation, they are only a starting point. Similarly, peace of mind is only one of the many benefits of meditation. Meditation leads us to deeper self-awareness, in the broadest sense of the word. Sometimes self-awareness is painful and disturbing... Whatever is inside us, we must eventually come to accept. This self-awareness is the first step towards self-transformation. Then we can continue to delve into the deeper layers of our mind... But we must remember that meditation because it makes us more aware, also opens us to the pain which exists... around us. That is why meditation also helps us to develop our compassion. One of the goals of meditation is to give every individual an experience of the spiritual reality that all religions speak of. Indeed, meditation will bring you closer to the essence of any religious creed. Meditation is unique because it is a science of our inner realms – an intuitive science. This intuitive science is so astute that western physics is only now coming to understand aspects of the ultimate nature of reality in the universe which were grasped by meditators thousands of years ago. Instead of calling meditation unscientific we need to expand our notion of what is science... The paradox of meditation is that you can receive the basic teaching in minutes and then spend the rest of your life uncovering all the wisdom that is hidden in that teaching. True meditation accepts no limited conception of our Self. It leads us toward the Infinite which is ultimately beyond technique.

To Socrates – *who has meditated more than anybody else* – MEDITATION was the process of thinking deeply about any subject, or ‘planning in one’s mind.’ Buddhists generally relate meditation with emptying the mind completely of all thoughts (i.e., trying to think about *nothing*) in the hope that some novel thoughts might enter it, or to achieve *self-awareness*; while, in Hinduism, meditation is associated with repetitive chanting and yoga – with the latter sometimes being linked to ‘mind-over-matter exercises’ where people attempt to prove they can ignore pain (e.g., by walking on hot ashes, mutilating their own bodies) or test their bodies in other unorthodox ways (e.g., r:p839, lns30-1). The difference between the Socratic interpretation, and Buddhist or Hindu interpretations, may explain why 2500 years of Eastern meditation contributed little to humanity’s technological, philosophical and sociological progress!

Zen Buddhist groups ‘can meditate for up to 12 hours [at a time] – and in some the meditators are “whipped” [by senior monks] if they fall asleep. And just what is the Zen reply to the question: “Will this help me?” – “That is for you to decide.”’

For two years he “lost the plot”, finally regaining some inner peace through the study of... Zen. “I read many books on this. I am not a practicing Buddhist, but I like some of their ideas...” He is not into meditation, “but before I go to sleep at night I always spend maybe 30 minutes thinking about what I did during the day – the right and the wrong.”

...It’s a regimented lifestyle... But five Buddhist monks living at Kelston still find time for life’s little pleasures... [They] all love chocolate, a small vice they have picked up since arriving in N[Z] just over two weeks ago. They live in a house that doubles as a temple, along with the “Abbot”... and one other. They are six of only 10 Thai monks living in N[Z]. But the monks are already picking up N[Z]’s language and culture, an amazing feat considering the strict rules of their religion... “They can’t buy food. They can’t make food. They couldn’t take an apple off a tree. They’re not allowed to drive. They can’t touch women. They can’t sit next to women. They can’t run and they can’t swim.” The monks... like to “think about N[Z]’s beaches”. They’re not allowed to go to the beach, just in case they see a bikini clad woman, a big no-no for any Buddhist monk.

...[‘Thousands of devotees crowd Kathmandu’s Durbar Square for the Indrajaatra Festival. Spilling from balconies, pressing forward with anticipation, they eagerly await a glimpse of the living virgin goddess Kumari – for this is her night, and her festival. From the moment she is swept up into the priest’s arms and placed inside her three-tiered chariot, the life of this child goddess, barely two years old, will never be the same again. “I am so proud of her,” says her mother. Her father says, “She was screened by the royal astrologer, many priests and the King’s religious adviser.” She was also inspected for the necessary “32 perfections” of a goddess by female attendants. These include clear skin with small pores, even teeth, black hair and eyes, soft hands, a moist tongue, no bad body odours and “small and well-recessed sexual organs”. Most importantly, she must show no signs of ever having bled, for blood signifies the end of her reign as a living goddess. In Nepal, as in remote areas of India, mystic tantric priests have worshipped virgin girls for centuries, believing it helps the priests achieve spiritual perfection. There are seven other living goddesses in Kathmandu but their lives are less restricted than that of the Royal Kumari, who is thought to be the incarnation of the goddess Taleju. It is not possible for just any girl to become a Kumari. Although Taleju is a Hindu deity, the Royal Kumari is always chosen from the Buddhist caste of goldsmiths and silversmiths. Once chosen, she is separated from her family and must live in isolation in the Kumari house. The Royal Kumari’s only companions are the priests. She cannot use her real name while living as a goddess, and no reference is made to her former family life. She has to wake early every morning to spend hours at her devotions. She isn’t taught to read or write, and has to live on a strict diet. She is told that now she is a deity in human form, beyond experiencing feelings of joy and sorrow – if she weeps or laughs, the deity will leave her. Her feet must never touch the ground; she can only walk on specific cloths in the house and is forbidden to go outside in sunlight. A girl cannot stay a Kumari forever. With the first shedding of menstrual blood, the deity Taleju is said to leave the child’s body, returning her once more to the everyday world. Two years ago, just days before the big Desain Festival, loudspeakers declared the incumbent 12-year-old Royal Kumari would be replaced by a new goddess. “When I began to menstruate, I didn’t know what was happening,” the previous Royal Kumari explains shyly. After four days in isolation in a dark room, she was stripped of all her ornamentation and led by the head priest, plus 20 guardians, to the family home she barely knew. For her family, the sense of prestige associated with having a virgin goddess for a daughter has been tempered by feelings of bitterness. Her mother says, “If I knew what I know now, I would never have let my daughter become the Royal Kumari. It’s been so hard for her to adjust. She can’t read or write. She barely smiles. When we joke and laugh, she sits quietly, withdrawn. We, her family, are strangers to her.” In the old days, a bleak future awaited living goddesses after they left the Kumari house. Few Nepalese men wanted to marry a dethroned goddess. Many still believe an ex-goddess retains enough of her power to kill a weak husband while making love. Snakes are said to issue from her vagina and devour him. Many cite the seven recent ex-Kumaris whose husbands all died within the first year of marriage. Material rewards are also few and far between. The government provides a paltry pension (just over \$9 a month) for the goddess once she leaves office. This does not even begin to cover school fees, let alone the tutor’s fees necessary for her to catch up with lost schooling. In this rapidly changing world, how many families will continue to choose the life of a goddess over a modern-day future for their daughter?’ In related news, yesterday] **South Korean police... storm[ed] Chogye Temple, the headquarters of Korean Buddhism, which has been split by bickering among adherents... It took five hours for the police to evict the occupants in the raid, after mobilising 4500 riot police troops including 80 police commandos... About 47 occupants were taken into custody.**

...The Chogye Temple is normally an oasis of calm in noisy downtown Seoul but for the past two months it has been a battleground between two factions of monks belonging to the 1600-year old Chogye Order, South Korea’s largest. The two sides are embroiled in a squabble over who should lead the order. The dispute boiled over on November 30 in a battle between monks which sickened their followers. Television footage showed these “men of peace” brandishing clubs, empty bottles and banners, dodging furniture and rocks as they stormed enemy monks holed up inside the order’s administration building. The defending monks occupied the temple grounds... in protest at the order’s secretary-general... seeking a third term. They say it is illegal under laws passed in 1994, and accuse the head monk of incompetence. [The head monk]’s faction... argues that his terms have been interrupted... Observers... say... the bottom line is money. Chogye is very wealthy and has a history of corruption... While many... Korean Buddhists... monks live dignified, meditative lives in the mountains, some care deeply about money and power... [The] order gets 40[%] of all entry fees to national parks as there are usually temples nearby. “Those temples are the goose that lays the golden egg.” The order also earns a pretty penny from large donations by the faithful and profits from shops selling religious paraphernalia... [A]ll of this is tax-free. “In this

particular case, there are no good guys[," says]... a US expert on Buddhism who has lived in Seoul for 12 years... The monks themselves insist they fight a just war, carrying on the tradition started by their predecessors who fought off Japanese invaders centuries ago.

...As part of its campaign to clean up its image, the cult accused in the 1995 nerve-gas attack on Tokyo subways has offered to pay 120 million yen... a year as compensation to the victims. "I don't intend to deny that I bear a heavy responsibility," said... one of the cult's top leaders, who was released from prison last month... [T]he Aum Shinri Kyo cult['s former guru was]... replaced... this month...

It could only happen in Japan... Robot[s are replacing priests] to compensate for the current shortfall of Buddhists available to perform traditional funeral rites[. A] robot guru can chant up to 10 different Buddhist sutras, blink, and move his mouth. Enough to fool a dead person, anyway.

A HIGH PERCENTAGE of new cars sold in Japan have their first "service" at a temple or shrine rather than at a garage workshop. In a form of religious insurance taken out by an increasing number of Japanese motorists, drivers go with their new car to the temple gate for the blessing ceremony[performed by a] Buddhist or Shinto priest...

The indigenous religion of Japan[was] so named in the 8th century to distinguish it from Buddhism, from which it subsequently incorporated many features... By the 8th century divine origins were ascribed to the imperial family, the emperor believed to be descended from the sun god, and in time became the basis for State Shintoism and its loyalty and obedience to the emperor. In the 19th century it was divided into Shrine (*jinga*) Shinto and Sectarian (*kyoto*) Shinto...

The [word] *Shinto* comes from a Japanese term meaning "the way of the gods." Basically a primitive religion, it originated as animism and developed... a system based on mythology and traditional prayers... In modern times the divinity of the emperor became the crux of a state religion that served as a powerful integrating force for nationalism, and during [WW2] state Shinto substantially strengthened the militarist program. State Shinto ended with Japan's defeat... and was officially disavowed by the emperor, 1946, by his denial of his divine descent. Sectarian Shinto, however, continues to flourish.

...Nichiren Shoshu is intended to be the national religion of Japan and ultimately of the world... [I]t currently has one of the largest memberships in the world among new religious movements outside the major world religions... Nichiren Shoshu stresses three main teachings: that the hidden truth of the *Lotus Sutra* affirming that the Buddha exists from all eternity is superior to the truth of any other sect or religion; that the *Lotus Sutra* is the only relevant scripture in the later period of Buddhist history and the repetition of a mantra stressing the *Lotus Sutra* can bring salvation; and that the teaching of Nichiren is the final truth...

Buddhism reached its maximum strength in India during the reign of Asoka (3d cent. B.C.), who made it the state religion. By the end of the 10th cent., however, Buddhism had almost disappeared from India, while Brahmanism had reinvigorated itself greatly by borrowing from Buddhist doctrines. Thereafter Buddhism survived in countries outside the land of its birth. The two main schools of Buddhism are the... more orthodox... Hinayana... and the Mahayana[which]... is important in Japan, where one of its forms is the distinctive Zen sect, and in China and Korea. In Tibet the Mahayana doctrine has developed into the state religion known as Lamaism...

During the 7th and 8th cents. A.D., the original Tibetan religion called Bon... was replaced by Mahayana Buddhism imported from India. At first... Mahayana incorporated much of the demonology, necromancy, animism, and phallicism of the indigenous Bon, but the Indian monk Atisa in the 11th cent. purged it of its corruption, establishing... Lamaism... An extensive hierarchy of Lamas (priests), residing primarily in Lamaseries, characterized this mystical system of "secrets," which emphasized confession, worship of images... and use of magic formulae. In the 14th cent., following a second period of corruption, Lamaism split into two main sects, the older "red hats," and the reform group or "yellow hats,"... In the 15th cent. Lamaism was divided between the authority of two Grand Lamas, the Dalai Lama, the temporal head residing in the Potala at Lhasa, and the Panchen, or Tashi Lama, the spiritual head... Traditionally... both... have been worshipped as "living Buddhas."

"I have the same emotions and desires as everyone else. Perhaps, as a monk, I find more contentment, but, at the same time, I like my Rolex watch"... So he does not see himself as a god-king, as he is so often described in the Western press? "God-king?" he exclaims. "...I am just a simple Buddhist monk." ...His mission, as always when he travels, is to draw attention to the plight of Tibet under Chinese occupation. I ask him whether he feels more optimistic than in 1992, when he was last in London. "No," he says bluntly. "As far as the immediate is concerned, there is no hope. I think it is even worse than before. The Chinese repression is now increased and also the Chinese are now making accusations against me. But in the long run, of course, I am, as always, optimistic." ...What has really been happening is attempted genocide. More than a million Tibetans have died since the Chinese instituted their "democratic reforms" in this formerly peaceful "Land of Snows" – the only society on earth ruled by consecutively reincarnated saints. Now, Tibetans are fined if they carry pictures of their exiled ruler, and eight million Chinese have been moved into the country, outnumbering the six million Tibetans, who are discriminated against in jobs, housing and education. All but 13 of the country's more than 6000 monasteries and temples have been destroyed. The cruelty and humiliations have been staggering – as well as torture and murder, nuns and monks were forced to have sex in public and use sacred texts as lavatory paper. Political arrests are on the increase and even a six-year-old boy, recently identified as the next Panchen Lama (the[Dalai] Lama's number two), was abducted last year by the Chinese authorities.

...[the flight of a 14-year-old Tibetan lama to India has thrown China's policies on Tibet into disarray and threatened a diplomatic tangle, say analysts. Last week's escape of the Karmapa Lama, one of Tibet's top religious figures, illustrated China's failure to win over the Buddhist hierarchy in the Himalayan region. And both Beijing and New Delhi could face further embarrassment if the boy applies for political asylum in India, which recognises Chinese rule over Tibet but has provided a home for the Dalai Lama and his government-in-exile since 1959. The Karmapa Lama, the only senior lama recognised both by Beijing and the Dalai Lama, has switched allegiances, despite years of grooming as a "patriotic" lama. China courted more controversy yesterday in announcing plans to ordain a 2-year-old boy as the reincarnation of the Sixth Reting Lama, who died in February. The Reting is one of the few Tibetan lamas who can act as regent in the absence of the Dalai Lama. Last year, China installed a new Panchen Lama, who had been studying near Beijing. But many Tibetans regard him as a fake and revere another boy who was picked by the Dalai Lama and has since disappeared. China has left the door open for the Karmapa's return, but has shown no sign of softening its stance on Tibet, or on the Dalai Lama, whom it accuses of seeking independence.]

...'China says its doors have always been open to the Dalai Lama, but Tibet's exiled god-king must renounce dreams of independence for his homeland.'

...'The Dalai Lama is willing to settle for genuine autonomy for Tibet within China at present and to negotiate with China if Beijing is ready, his chief representative said yesterday. But added that the Dalai Lama would not be able to give up his demand for full independence for Tibet without the approval of the majority of the Tibetan community of 6 million. "His holiness is not harping on independence. But just one person cannot make that decision." ● 'The Dalai Lama's forthcoming visit to NZ sparks interest in many Aucklanders concerned for Tibet, or seeking spiritual enlightenment. But members of an Avondale Buddhism centre anticipate the holy man and Tibetan peace campaigner's visit with particular enthusiasm. One member, a monk for more

than 25 years, has met the Dalai Lama several times. "His Holiness is so kind and humble, like a lot of people, but has this incredible wisdom." He is offering an introductory class on Saturday for people wanting to learn more about the Dalai Lama and his philosophies. A Buddhist scholar began learning more about the Dalai Lama last year after reading his book, *Art of Happiness*. The scholar, who has never met the Dalai Lama before, will listen to him closely. "He is respected worldwide as a man of peace and a scholar. He is the embodiment of wisdom, compassion and patience – all the qualities we aspire to.""]

...China has vowed to curb the influence of Buddhism and the Dalai Lama, Tibet's god-king, saying religion must conform to socialism instead of the other way round... Chinese agents have[even] threatened to call off a deal with a Nelson fish exporter if the Dalai Lama's... five-day visit... to N[Z] goes ahead... In September... At a dinner to raise funds for the Dalai Lama's visit... the Tasman MP... said N[Z] must ignore the Chinese "bully tactics" and "commercial blackmail." "The Government has made the right decision to reject calls from the Chinese to deny a visa and should now go one step further and agree to meet him at the highest levels."

...The 14th Dalai Lama of Tibet will give a public talk from a specially designed stage (complete with giant video screen) on September 14 at the Ellerslie Racecourse as a finale to his four day... tour. Entry is free, but donations ensure a preferential seat. An art auction to raise funds for his visit is being held at the Carlton Hotel.

...Many [NZers], Buddhist or not, will offer a warm "Haere mai" to His Excellency, the 14th Dalai Lama, especially in light of the Chinese Government's heavy-handed attempts to prevent this visit. To its great credit, the[NZ] Government has refused to be intimidated. That said, the Dalai Lama's visit represents more than an itinerant pastor ministering to his flock. He... comes at a time of great stress for his people. The responsibility must, in large measure, be laid at the door of the Chinese Government which has tried to stifle Tibetan dissent at home and abroad. While the office of the Dalai Lama has deep historical roots in Tibetan history, it is a very checkered history at best... [T]his Dalai Lama recognised this when he recently said that he is ready to give up his office should he return to Tibet. He described the office as "outdated." It can be argued that his office has been outdated since it was first established in the 15th century, because the secular power historically exercised by those in his office was an arrangement originally imposed upon the Tibetan people by successive Mongol rulers. Over the centuries, Mongol armies repeatedly intervened in Tibet on behalf of their theocratic proteges (thereby protecting their own economic and political interests). With those origins, it is not surprising that by the sixth Dalai Lama, the office was occupied by a Buddhist monk in name only – a monk who spent most of his time drinking and chasing women. Eventually, he was deposed, Mongol armies invaded again, killing the interim regent and leaving death and destruction in their wake. A semblance of normality did not return until 1720 when the Chinese army arrived in Lhasa to drive the Mongols out. The Chinese were widely welcomed, not least because their armies brought with them a new Dalai Lama. Until the end of the 19th century, successors to the office of the Dalai Lama were careful to safeguard Chinese interests while retaining almost total control over domestic affairs... In Tibet theocracy lasted into modern time. As late as 1950 the vast majority of Tibetans eked out a living as serfs cultivating land owned either by more than 2500 monastic complexes or their close allies, the hereditary nobility. Before the Chinese [reoccupation] in 1951 Tibet had no wheeled vehicles, modern roads, railways or means of communication and almost no secular schools or modern hospitals, let alone an army capable of defending the country. In the monasteries, such as the Dalai Lama's 1000-room Potala palace in Lhasa, it was quite common for high ranking and politically powerful monks to be waited on hand and foot by the children of the serfs who were encouraged to enter the monastic order as young as seven or eight. Because it remained a feudal society in a modern world, it is hardly surprising that rapacious powers looked on Tibet as "ripe for picking." The British invaded in 1903, exploring the possibility of yet another colony in Asia. The Dalai Lama fled to China for protection. One is left to wonder just how welcome the Dalai Lama would have been in [NZ] in 1903 if he had come here as a refugee from British imperialism... From everything I have read, [the current Dalai Lama] seems to be genuinely learned and spiritual. In these stressful times such people are a welcome and needed asset to our collective religious life. Theocracies, however, are not. - 1996

The second highest ranking guru of Tibetan Buddhism is visiting Auckland today for the first time... During his five-day-visit, the religious leader will speak on "the three paths to world peace"... He has previously visited A[US, the US], Europe and much of Asia.

...The people of Tibet are suffering "boot-level subjugation" by their Chinese rulers and are yearning for help from the West, a U[S] congressman who visited Tibet in the guise of a tourist said yesterday... "There is no freedom in Tibet, period,"... [However, China's President rejected the] criticism... saying jailed religious leaders were lawbreakers and the people of Tibet lived in "happiness and contentment."

...[FAR be it for me to accuse Martin the Infallible director of delivering his first dog, but woof, I think they say. In Tibetan, naturally, although the beautiful, maybe too beautiful, scenic vistas look sort of Hollywoodish (Morocco, actually). The youngest of our several young lamas even has a pet dog that didn't look at all Tibetan. It looked incongruous. I suppose that like the rather wonderful ceremonial hats, this detail has been checked carefully against the big fat book of obstinate facts. In the face of a blushless outbreak of hyperbolic sycophancy on the part of a wide range of the film-world's serious press – it has to be said, *Kundun* ain't a flawed masterpiece, it's just plain flawed. Unfortunately, the problem is that we've got big-feature style trying to deliver large events of very ordinary big-power imperialism, at a pace that retains some of the appeal of action-based period costume drama, with the sedate dignity decorous to our holy hero, through the point-of-view of a very young monk who is having most of the facts of life concealed from him.]

...a US actor] is embroiled in a... row over his swashbuckling role in the new adventure movie, *Seven Years In Tibet*. The red-faced star must be wishing he had researched the life and times of [the film's] "hero"... a little more closely before agreeing to play him on screen... In his book, [the hero] told how he found refuge... during W[W]II... in the forbidden kingdom of Tibet, became tutor to the Dalai Lama and helped save him from the invading Chinese back in 1950. But the former mountaineer forgot to mention that he was also a Nazi – sent to the Himalayas by SS chief Heinrich Himmler to recruit local tribesmen.

...oops! ...Hollywood has egg on its face... IT'S always good to see Hollywood making an expensive fool of itself. A \$US70 million Oscar wannabe epic called *Seven Years in Tibet*... just opened, somewhat nervously, in cinemas across America... In 1938... its protagonist... now 85... and three other climbing maniacs became the first men to ever scale the North Face "Murder Wall" of the Eiger peak in Switzerland. The following year... he... was part of another climbing expedition to... the Himalayas. After war broke out, his team was captured by the British in India. He and his compatriot... escaped from their PoW camp in 1944. With no food or maps, they trekked alone for 21 months over 2500km, crossing some of the most inaccessible passes of the Himalayas, until they crawled into Lhasa, the forbidden holy city of Tibet. [The protagonist] lived there for five years, becoming a tutor to the young Dalai Lama. [The protagonist's] seven-year true life "action adventure" has all the required elements of a Hollywood hit, including the \$14 million services of the blond-haired [lead actor], who travelled to Austria to have a meet-the-legend lunch... in a pub near his home in Huttenberg... The old man was given a souvenir poster of the movie. All that was left was for [the protagonist] and his wife to receive first-class... air tickets to attend the Hollywood premier. But the tickets were never issued – thanks to... a resourceful 33-year-old radio reporter for the Austrian National Broadcasting Corporation. Earlier this year, he took the trouble to look up [the protagonist's] name in German military records held in the National Archives in Washington. Inside a thick 80-page file was a CV in [the protagonist's] hand-writing stating that he had joined the SS in 1938. A vast budget had been spent shooting a "chic Tibet" film arguably glorifying [a Nazi]... To Hollywood's acute embarrassment, [the reporter] teamed up with *Stern* magazine to expose [the protagonist's] SS past in damning detail. A photograph was published of him smiling proudly beside Hitler. [His] "Nazi dream couple" marriage to the daughter of a renowned German polar scientist had been hurriedly approved by Heinrich Himmler himself, head of the SS... "I am a climber – nothing to do with this silly war," says [the protagonist's]

character] of the... Himalayan expedition... in the film. In reality, however, it was a Nazi reconnaissance and propaganda mission (climbing impossible peaks was an expression of Nazi triumphalism)... Nazis... became obsessed by Central Asia, going so far as to film and measure Tibetans and plundering the swastika symbol from Tiger and ancient India. Because of Tibet's isolation, with no foreigners polluting their "purity", Himmler and his SS Nazi ethnic scientists regarded Tibetans as "racial relatives of the Aryans"... *Stern* pointed out that although [the protagonist] had only been recruited into the SS as an athletics coach, he had signed up as a member of the ...Storm Troops... back in 1933. It reminded readers that this was the organisation that had popularised the 1935 slogan, "Wenn die Olympischen Spiele vorber, schlagen wir die Juden zu Brie" ("Once the Olympic Games are over, we will beat the Jews to a pulp")... To placate Los Angeles' militant rabbi faction, a would-be diplomatic photo-opportunity meeting was set up in Vienna between [a]Nazi-hunter... and [the protagonist. However, the Nazi-hunter] was left unimpressed by [the protagonist's] efforts to explain why he had kept his past hidden for 50 years... Meanwhile, how do you change a completed... [film] when you awkwardly find yourself with a diehard Nazi hero on your hands? The Mandalay production team answer is the addition of two last-minute voice-over dialogues that cure [the protagonist] of... amnesia... Next, Mandalay redrafted their marketing campaign. In the 1952 introduction to the English edition of *Seven Years in Tibet*, the '30s British travel writer Peter Fleming attested to [the protagonist's] "integrity of character"... [T]he ingenious line now cranked out by... Mandalay's head of marketing, is that [the protagonist] was so egotistical and self-centred in his early life – until his supposed "spiritual enlightenment" through the young Dalai Lama – that it is obvious he must have been a Nazi... These days, marketing a sexy controversy ([Mandalay's head of marketing] also masterminded the tumult over the... film *JFK*) is simply a smart way of turning a very costly film into a media event. And if that involves stringing up the occasional old European legend, so much the better... The record of history, of course, will always be what Hollywood wants it to be. It will come as no surprise to learn that the movie's phoney ending, with [the protagonist] proudly placing a Tibetan flag on a mountain peak he has climbed with his teenage son... never happened... [He] and his son, whom he abandoned in 1939, never got on.

...HOLLYWOOD may have to rethink its relationship with the Dalai Lama – the living embodiment of... the trendiest political and religious cause in California. It turns out that the celibate monk is not quite as sexually liberated as his supporters imagined. On a fundraising trip to California last week, the red-robed Nobel Peace Prize winner catapulted himself into a storm of controversy by telling crowds of faithful in the gay mecca of San Francisco that "from the Buddhist point of view, men-to-men and women-to-women is generally considered sexual misconduct"... The Dalai Lama's spiritual guidance did not go down well with his listeners. Decades of doing battle with the Chinese regime... had not prepared the 62-year-old leader for the fury of the offended Americans... Many American homosexuals embraced Buddhism because they thought it was sexually non-judgemental... Gay and lesbian Buddhists insisted on a private meeting with the Dalai Lama to resolve the conflict. After the meeting the Tibetan leader... issued a statement looking forward to "further study and discussion on human sexuality". His followers acknowledged the Dalai Lama may have had other things on his mind. "As the head of state of an occupied country and as a celibate religious leader, I think he has not spent much time considering issues of sexuality, gay rights and homophobia," said [one of the people] who organised the meeting. But the Dalai Lama then proceeded to provoke another storm with his heterosexual followers in Hollywood, a presumed nest of sexual deviancy. "Sexual misconduct for men and women consists of oral and anal sex... Even with your wife... Using one's hand, that is[also] sexual misconduct." Oddly enough[he]... said that Buddhism does not condemn using the services of prostitutes. "To have sexual relations with a prostitute paid by you and not by a third person does not constitute improper behaviour;"...

The trial of [an]eccentric millionaire... charged with the shooting death of[a former US] Olympic wrestling champion... opened yesterday in Pennsylvania. The 58-year-old was arrested a year ago after a two-day stand-off with police. His lawyers said [their client], who has repeatedly claimed he is the Dalai Lama, would plead insanity. - 1997

Dalai Lama[is the] title of the hierarch of the Gelugpa tradition of Tibetan Buddhism and political ruler of Tibet from the 17th century to 1959[when]... the present Dalai Lama fled from Chinese persecution after... Tibet became a province of... China. Each successive Dalai Lama is believed to be a reincarnation of the previous one. They are also thought to be manifestations of the bodhisattva Avalokiteshvara... the name given to the most popular bodhisattva... ('enlightened existence')... within the Mahayana Buddhist tradition, who is seen as the embodiment of compassion.

When he died, the lamas professed to search for a child who gave evidence that the soul of the deceased had entered into him[(the lamas themselves are selected in a similar fashion – 'a NZ-born boy of Asian descent was recently declared a "high lama"')]; when found, the child succeeded to the office.

While [the child] is still learning, his contact with outsiders... [or] ordinary people... is carefully monitored so that he cannot pick up any bad habits... Instead he is surrounded by... a "family" of twelve teachers, attendants, cooks, housecleaners and caretakers... In the Tibetan tradition, the most important teachings are always passed directly from teacher to student through the spoken word[although every person also]... has the seed of knowledge and spirituality inside his or her own mind. It is up to each individual to develop that potential. - The Little Lama of Tibet

The intermediate state between death and rebirth in Tibetan Buddhism[is called *bardo*]. At death an individual's consciousness... enters the bardo which lasts for up to 49 days... until attracted by a copulating couple. The consciousness will then enter the woman's womb and the process of birth will begin again... [By the way, a] Tibetan... layman... learned Sanskrit... at Myung-lung monastery... then travelled to India where he studied... the teachings of the six yogas... for 16 years[and]... also received Mahamudra meditation teachings... before returning to Tibet[where he]... took up the life of a married householder, passing on the teachings he had received for a substantial sum.

...the barbarian rulers from the Wei dynasty onwards who had invaded and captured north China... espoused Buddhism but their people knew little about it, and the Lung Men Caves offered visible teaching about the Buddhist tradition that told an immediate story to even the most illiterate peasant who came upon them... [The] set of caves near Loyang in China... contains around 100000 wall paintings and statues of Buddhas and other Buddhist figures, ranging from minute figures to ones over 18 metres high. It is the third and most impressive set of Buddhist cave-temples in China. The earliest set had been started around 400CE at Tun-haing in northwest China, and the second one is at Datong, north of Loyang...

Modern humans... moved into south China some 60,000 years ago... according to new genetic studies. The research supports the idea modern humans evolved in Africa and then moved from that continent to Europe, Asia and... following the Indian Ocean coastline across India, to South-East Asia. Later they moved to south China. Descendants of these original Chinese then migrated... north-west, [finally]populating... the Americas.

Best to head north-west of the inner city – as the Imperial court once did to escape the worst of the August heat – to... the Summer Palace... Nestled against the coolness of Kunming Lake, this 291ha of sumptuous chocolate-box gardens, courtyards, and 3000 palaces, pavilions, towers and halls make for more than a day trip... To early European traders like Marco Polo, this site was... the Mongol... Xanadu... But to the modern tourist... the most beautiful... palace... lies in the heart of Beijing's 16,800 sq km – the Forbidden City, the Imperial Palace of China's emperors, the Sons of Heaven and the Lords of Ten Thousand Years. To... 24 emperors and their minions... it was the centre of China and therefore the Universe... But

it's the centre of this centre of the universe, the Hall of Supreme Harmony, with its ornate throne and vast courtyard, the Sea of Flagstones, that really whips you through a time-warp. It was here that the most important ceremonial occasions were carried out in front of a cast of thousands, including pretenders, concubines, eunuchs and ministers of the state.

Religion in China has always been deeply embedded in the social system, and it is not possible to consider one without the other... Intermingled with the strands of... ancestor worship... and... folk religion... is a deep concern with the fate of society. From this complex background three major interests emerge. One interest was in man, in his individual relationship to the universe: Taoism has been its important representative. The second was in man as a being important in the future of the world, and has been represented by Buddhism. The third concern was with society rather than with man as an individual or the world at large. This 'social religion', was represented by a set of ideas which had no name of its own (although some of its parts had names) and is of central importance for understanding China. What one might call the blueprint for social relations in the traditional Chinese system was provided by a group of ideas which has been loosely and popularly termed 'Confucianism', from its connection with the teachings of Kung Fu-tze (550 – 480 BC). There have been many different interpretations of its precise nature. Some writers have stressed its concern with the things of this world and with ethics. Others, seeking to align it with the 'higher religions', have stressed the semi-personal nature of its concept of heaven. There has been much controversy among scholars over definitions and functions but in outline the theory is as follows. Originally, there was a single cosmic cell containing 'ether' (*Ch'i*) which was made to pulsate by a creative force known as *Tao*. Tension set up by this activity eventually rent the cell into opposite and complementary halves; twin ethers which encompassed the universe and which are known as *Yin* and *Yang*. The *Yin* ether is of the earth, dark, female, heavy; while that of *Yang* is of heaven, bright, male, light. The continuous operation of *Tao*, which is a sort of natural law, causes these entities to alternate, and by this process five 'elements' are produced: water, fire, wood, metal, and earth. By various combinations of these elements, the multitude of things in this world comes into existence. The *Yin* and *Yang* and the elements were the basis of traditional classifications in China. Colours, parts of the empire, parts of the body, numbers and many other things, were grouped and defined in terms of them. They were thought to determine the natural forces, even the process of history and the fate of dynasties. By their continuous motion all things are formed. Death and decay is the process by which they separate into their original cosmic components.

The words of Confucius are thought to be contained in a collection of conversations called *Lun Yu*.

The Master said, I once spent a... day without food and a... night without sleep, in order to meditate. It was no use. It is better to learn. - Book XV

A native of Shantung, of poor parentage... *Confucius*... rose to prominence as prime minister of his state. His life, as well as his writings, are the finest example of wisdom and moderation produced by Chinese civilization... In the 1st cent. A.D... Confucius came to be worshipped as a god... [Lao-tse's (or Lao-tzu's)] original name was Li Ehr. Few reliable facts[are] known about his life... He might have met Confucius, whose more worldly wisdom he matched by greater religious power. To Lao-tse is attributed the *Tao-te-king* [(or *Tao Te Ching*)].

Not exalting the gifted prevents quarreling. Not collecting treasures prevents stealing. Not seeing desirable things prevents confusion of the heart... The wise therefore rule by emptying hearts and stuffing bellies, by weakening ambitions and strengthening bones. If people lack knowledge and desire, then intellectuals will not try to interfere. If nothing is done, then all will be well. - *Tao Te Ching*

Lao Tzu, an older contemporary of Confucius, was keeper of the imperial archives at Loyang in the province of Honan... All his life he taught that "The Tao that can be told is not the eternal Tao"; but, according to ancient legend, as he was riding off into the desert to die – sick at heart at the ways of men – he was persuaded by a gatekeeper in northwestern China to write down his teaching for posterity. The essence of Taoism is contained in the eighty-one chapters of the book – roughly 5,000 words – which have for 2,500 years provided one of the major underlying influences in Chinese thought and culture, emerging also in proverbs and folklore.

neo-Confucianism... emerged during the Sung dynasty in China (960 – 1126CE). After the collapse of the Han dynasty... which had been a Confucian empire, the Taoist and Buddhist traditions grew much stronger. Neo-Confucianism was a reinterpretation and a reassertion of Confucian values which also assimilated some elements from Taoism and Buddhism. Its influence was strongest in China from the Sung dynasty to the beginning of this century. According to this, everything in the world, including human characteristics, is generated from the Supreme Ultimate (*Tai Chi*) or Ultimate Non-Being (*Wu-Chi*); by living in harmony with them inward harmony and outward peace can be achieved... Confucian and Taoist traditions... [also influenced an] indigenous Korean religion founded in 1860... *Chondogyo*... stresses the immanence of God in the whole of life, and sees human beings as 'bearing divinity' and as being called to treat other humans 'as God'. It emphasizes the need for a co-operative kingdom of God on earth based on faith, sincerity, steadfastness, and simplicity.

His concept of *twin ethers* (*Yin* and *Yang*) suggests that Confucius could have been influenced by ZOROASTRIANISM:

...a monotheistic religion of ancient Iran founded by Zoroaster (or Zarathustra[– 'c.628-551 BC, or perhaps considerably earlier'])... According to Zoroastrian mythology the supreme god, Ahura Mazda, created twin spirits, one of which chose truth and light, the other untruth and darkness. Later formulations pit Ahura Mazda (now called Ormazd) against his own evil twin (Ahriman). Zoroastrianism survives today in isolated areas of Iran and in India, where followers are known as Parsees.

In later Zoroastrianism Ormazd was depicted with attending angels, while a host of demons administered to Ahriman. The sacred writings of the religion... called in combination the *Zend-Avesta*, have been partially preserved by the Parsis... [and use a] language... more like that of ancient Sanskrit than any other preserved.

It is not possible to assign a precise date and place to the great Iranian prophet Zarathustra, but evidence from his own hymns – the Gathas – makes it probable that he lived between 1200 and 1000 BCE.

[He] believed that the world and history exhibit the struggle between... the creator or good spirit, and the evil principle, the devil... in which finally evil will be banished and the good reign supreme.

...*Saoshyant*[is an] Avestan word meaning 'One who will bring Benefit' or 'Saviour'. Passages in the Gathas where Zoroaster himself refers to this concept suggest a sense of immediacy. Many scholars therefore believe that, initially at least, Zoroaster used the word for a person or group of people who would restore the world to a pristine state of purity within or shortly after his lifetime. In post-Gathic... Zoroastrianism, however, expectations of the appearance of a Saviour came to be projected into the remoter future. The Saoshyant, who would appear just before the end of

time and bring about the final battle between good and evil, was probably thought to be in some way connected with Zoroaster himself. A legend thus evolved that he would be born from a virgin who had bathed in Lake Kansaoya, where Zoroaster's semen is held to be preserved. In the later Zoroastrian tradition legends about the Saoshyant became more complex, postulating three such figures, each born from the prophet's seed, who would appear at the end of each of the three millennia of the period of Mixture, at a time when the world was entirely dominated by evil. The last of these, the Saoshyant proper, would usher in Frashokereti... the moment when evil has been eliminated from the world, ie the beginning of the final, ideal state, when the sun will stand still in mid-heaven and the dead will be resurrected... The dead will rise up and the final judgement will take place. A stream of molten metal will flow like a river over the world; all people must pass through this stream, which will burn away any remaining sins, causing great distress to those who still have unexpiated sins, but none to the righteous. After this, all people will live in perfect peace and harmony in the world, together with Ahura Mazda and the divinities.

...*Parsi religious reforms*... began in the... 19th century, owing in part to the greater economic prosperity of the Parsis and to the spread of Western education, but especially to the confrontation of the traditional Parsi community with western religious concepts and values. The attack on Zoroastrian doctrine made by the Scottish missionary, John Wilson, affected the Parsis very strongly. In his writings Wilson stated that Parsi doctrine was dualist in character and that, as it fell short of his ideal of monotheism, it was 'monstrous and supremely unreasonable'. The Parsis naturally rejected these arguments. However, they had long understood their religion as one that preached simple, practical goodness, and in the ensuing discussion it became clear that their knowledge of the more theoretical aspects of their faith had eroded over the centuries, so that even learned priests were no longer able effectively to rebut attacks made by Western theologians. As a result the priestly classes suffered a significant loss of prestige and authority... [T]he Parsi community came to be divided between the 'traditionalists', who held fast to the form of Zoroastrianism adhered to by their ancestors, and various groups of 'reformists', who wished to return to what they believed to be a purer form of their faith.

...*Mani* (216 – c. 277)... founder of the Manichaean religion, born in northern Babylonia to parents of Iranian descent... Tradition has it that he received his first revelation as a boy... from a spirit he describes as 'the Twin'. Around 240 the Twin appeared to him again, urging him to preach what he had learned. Mani first preached his faith to his immediate family, and then set out on a journey to the north-western part of the Indian subcontinent, where he apparently made many converts... ['Mani's ideas also gradually spread along trade routes to Europe, especially Italy and France']. 'He opposed the prevailing Zoroastrian religion and claimed to be the last of the prophets of God'.] From the time of his return to Iran in the 240s, Mani's great adversary... [was] the Zoroastrian high priest Kirdar, who eventually had Mani put in prison, where he died.

America's largest Indian tribe today, the Navaho live on a sizeable reservation that sprawls across the Arizona-New Mexico border. It is poor, eroded, infertile land but like so much of the south-west of the United States it is an area of spectacular natural beauty – magnificently coloured sand and stone, wind-sculpted rock formations, towering hills and high rocky tableland. This visual splendour might be economically useless to an agricultural people but it is fundamentally important to the Navaho. Their religion and their ordinary way of life, which are in any case interrelated, are remarkably attuned to Nature, to the environment. It is hardly surprising that their religious belief and practice should contain much that is extremely beautiful: the poetry and music of the great ritual chants, the glorious 'sand paintings', the eternal, renewable beauty of Changing Woman, their chief deity. Changing Woman is an Earth Mother figure, ageing with the seasons, who is restored to girlhood each spring. From her union with the sun, also a major deity, sprang the Twins, hero figures and models of virile warriors... [In comparison, traditional] Maori religion... believed in a pantheon of numerous gods, which some scholars have divided into four groups. It is still sometimes claimed that at the head was a Supreme Being, Io, but the evidence is not very convincing. On the other hand, there were a number of less esoteric gods, the children of Rangi (sky) and Papa (earth), the original parents.

The Maori are a Polynesian people who, because of long isolation, developed their own civilization while retaining the general features of an East Polynesian world view. This includes a power-packed universe, in which all, or at least all the well-born, shared in *mana* – 'the Maori word which has found the firmest place in NZ English, possibly because there is no English equivalent of it and seems to have come into common usage from 1860 onwards, with the original meaning being respect and consequent authority but, nowadays, mana means power and influence gained by a person through a personal respect that others have for him' –] the most powerful chiefs and leaders partaking of it in high degree. This mana was fenced round with a system of *tapu* (*tabu*) or ritual prohibitions, which regulated daily life. But mana extends beyond human relations into a universe of spiritual beings. This universe has two spheres. Te Rangi is the sphere of sky, heaven, day and light; Te Po the sphere of night, dark, the underworld. The two spheres are always in tension, but they are complementary rather than opposed, and creative forces arise from their relationship.

The time frame of the Maori is diametrically opposed to that of metropolitan society – which is future oriented. For the Maori, social reality is perceived as looking back in time from the present to the past. Only the past is known, so it is defined as *mua* (being in front); the future is termed *muri* (behind) because it cannot be seen. The past is defined in a tripartite sequence of myth, tradition and history whereby gods, ancestors and living people are linked through genealogical descent. The cosmogenic myths recognised three states of existence: Te Kore (the void), Te Po (the dark) and Te Aomarama (the world of light). The first state... signified the vastness of space and time in which there was nothing. It was the realm of potential between non-being and being when the universe came into existence. The subdivisions of Te Kore are subsequently tabulated in the manner of a genealogy, each with its own qualifying adjective. In this period Ranginui the sky-father and Papatuanuku the earth-mother materialised, out of primeval matter of the universe, to cause the second state... [during which t]here was no light in the world because of the physical unions between earth and sky. This was the era of gods, demi-gods and legendary heroes. The sons of Rangi and Papa separated earth and sky to establish the third state of existence... in which men live. Tane the procreator breathed life into Hineahuone (earth-formed maid), thus combining *ira atua* (divine principle) with *ira tangata* (human life). Tane co-habited with Hineahuone and with his daughter Hinetiitama as well. Because of this incestuous relationship Hinetiitama fled to Rarohenga (hades), there to become Hinenuitepo (goddess of death). The myth sequence then relates the adventures of Maui the demi-god – fishing up the land, discovering the secret of fire, and jousting with death itself in an unequal contest with Hinenuitepo. Since Maui the culture hero of Maori mythology could not defeat death, all other humans must accept its inevitability. Subsequent myths concerning legendary heroes such as Tawhaki, Rata and others provide charters for human institutions such as whanau (family), mana (power), tapu (sanctity), utu (revenge, warfare) and makutu (sorcery). All these are concerned with social control and regulation of human conduct. The cosmogenic myths and stories of legendary heroes are located in a remote time in the fabled Hawaiki homeland.

God is rarely prominent in accounts of Melanesian religion, though the great power in the universe is often identified with the sky... A common theme in cosmology is that of the release of the sea, a primal catastrophe (often provoked by an act of human greed or folly) that has separated people ever since. Another is the story of two brothers. At first co-operating, they become estranged. One was cleverer than the other, or one cheated the other; eventually they separated and one brother left for the underworld.

Jainism – a non-theistic religion founded in India in the 6th c. BC by Vardhamana Mahavira as a reaction against the teachings of orthodox Brahminism... There are two major sects: the white-robed Svetambaras and the naked Digambaras.

Springing from a reaction against the elitism of the Hindu caste system and the Hindu practice of sacrificing animals, Jainism bears some resemblance to Buddhist thinking. Jains do not believe in a creator god... [and] have their own distinctive view of karma... One of the central tenets of Jainism... [is] no living creature ought ever to be harmed... [T]his policy grew from the belief that... a person might come back in the form of an animal or insect... To prevent even accidental damage to creatures, Jains... wear[cloth] masks to prevent inhalation of insects, and sweep clear the ground ahead of [their feet]. Some do not wash for fear of killing body lice or other parasites... [A]bsolute non-violence and starvation were features of the life of... a number of Jain saints... Mahavira [is the]... title given by the Jain tradition to its effective founder. It means 'great hero' and was added to his own name of Vardhamana in the same way that... the title Buddha [was added to the]... name of... his contemporary... Gautama... Mahavira, like... Buddha, was from the warrior caste; also like him he lived in the lower Ganges area... He is seen by Jains as the 24th and last in a succession of spiritual leaders known as *tirthankaras* ('ford-makers'[or 'jinas'])... Apart from him the others are lost to history. They are not viewed as divine, but are outstanding persons who have obtained liberation in life and passed on its meaning and possibility to others.

Jains – presumably those not starving themselves – also 'strain all beverages to avoid swallowing invisible organisms.' But wouldn't a soul that has *come back in the form of an animal, insect* or organism welcome death – because it presents a chance to enter a new body (hopefully that of a human) – and, if the death is accidental, can the human offender be considered blameworthy (i.e., should it justify increasing 'the weight of karma that lies upon' the human)?

...“axial period”[has been used] to designate the time around 500 B.C.E. when the great thinkers who still influence our lives flourished.

...a significant epoch in human history... centred on the 6th century BCE when religious factors were vital in new developments in world history. Great religious teachers arose simultaneously in four different areas of the world... and... [on] the basis of[their] work... over the next 2000 years four great civilizations were to rise that would be roughly equal, parallel, and separate... The balance of civilizations established by the Axial Age would only be disturbed by the rise of the West in the 16th century... In the Middle East the Hebrew prophets were active, and there was the elaboration of Zoroaster's earlier work in Persia. In India the great Hindus Upanishads... emerged, the Buddhist tradition arose out of the life of Buddha, and the Jain tradition arose out of the life of the Mahavira. In China Confucius[and Lao-tzu were] active... In Greece the rise of the Ionian philosophers prefigured the glory of Greek philosophy... [initially associated with people like] Pythagoras...

In short, Porphyry and Iamblichus convey in their *Vitae* of Pythagoras a portrait of the ideal philosopher that compels us to recognize him as a holy man, just as he himself recognizes that all human knowledge and thought is the gift of the gods, and incomprehensible without their help. - Pagan Philosophers in late Antique Society

Pythagoras is said to have discovered the numerical ratios determining the principal intervals of the musical scale, whence he was led to interpret the world as a whole through numbers, the systematic study of which he thus originated. He is the probable discoverer (though not in its Euclidean form) of the geometrical theorem named after him... No writings by him survive, his achievements were early confused with those of his followers, and his life is obscured by legend. The Pythagoreans held that the soul is condemned to a cycle of reincarnation, from which it may escape by attaining a state of purity... [– which is similar to *Orphism*.] a mystic religion of ancient Greece, originating in the 7th or 6th c. BC... emphasizing the mixture of good (or divine) and evil in human nature and the necessity that the individual should rid himself of the evil part by ritual and moral purification throughout a series of reincarnations... In astronomy, [Pythagoras'] analysis of the courses of the sun, moon, and stars into circular motion was not set aside until the 17th c[– although *Aristichus*, a 3rd c. BC astronomer who, like Pythagoras, was born in]... Samos... was aware of the rotation of the Earth... that the sun must be larger than Earth... [(*Eratosthenes* – c.275-194 BC – a] Hellenistic scholar and geographer, pupil of Callimachus and head of the library at Alexandria[had already]... calculated the circumference of the earth to a high degree of accuracy and... with much less accuracy... the magnitude and distance of the sun and moon[)]... and that the stars must be very distant... and, by placing the sun at the centre of the universe, was able to account for the seasons. Many of his theories were more accurate than those of Ptolemy which replaced them... [*Heraclitus*, a contemporary of Pythagoras,] regarded the universe as a ceaselessly changing conflict of opposites, all things being in a state of flux, coming into being and passing away, and... that fire, the type of this constant change, is their origin... [whereas *Xenophanes* (570-490BC), in] ruthless criticism of Homer and Hesiod... denied that the gods resemble men in conduct, shape, or understanding, and argued that there is a single eternal self-sufficient Consciousness which sways the universe (with which it is identical) through thought.

Religious belief and ritual action in Minoan Crete (3000 – 1000 BCE) w[as] aimed at the protection, continuance and increase in the human and animal populations and the usable products of the whole environment.

The abiding mystical concepts derived from Cretan religion are significantly marked by the influence of a mother goddess and a dying god, associated with the bull, who later became worshipped as 'Cretan-born Zeus'. This Zeus, who died and was born again, was different from the Olympian Zeus of the familiar Greek pantheon. He was much more comparable with the Greek Dionysus, also a bull god and a dying god... The most dramatic form of this process was a struggle, never quite resolved, between the old concept of a mother goddess and the newer concept of a dominating male god, Zeus... The mother goddess of Crete held sway over mountain and earth, sea and sky, life and death...

The ancient Greeks... deified the Earth, revering her as Gaia, the Earth Goddess. She was responsible for the well-being of her domain and would reward care for her bounties – the forests, rivers and creatures that inhabited the world – with good harvests and game to eat. But abuse her, destroy her forests, erode her hills, kill her creatures or pollute her rivers and lakes, and she would avenge herself through the agency of natural catastrophes – through drought, famine, earthquakes, violent storms and disease.

In contrast to the concept of *Gaia*, however, is the ancient Greek myth of the FATES:

...the goddesses who presided over the birth and life of men. The gods were thought of as spinning, with a thread, the great realities – death, trouble, riches, homecoming – around a man, as if he were a spindle. From this image came the 'harsh spinners', usually three: Clotho who presided over the moment of a man's birth and held a distaff, Lachesis who with her spindle spun out the events and actions of his life, and Atropos who cut the thread of human life with her shears.

Socrates of Athens, who flourished in the last half of the 5th century BC, was the first of the great trio of ancient Greeks – Socrates, Plato, and Aristotle – who laid the philosophical foundations of western culture.

Philosophers before Socrates speculated – naively, though interestingly – about the composition and workings of the natural universe, but Socrates made others conscious of the absence of any agreed standard of truth in such matters... The reorientation he accomplished is reflected in the standard practice of referring collectively to his predecessors as “pre-Socratics,” and in the view, common in later antiquity, that, except for Epicurus and his followers [– who promoted ‘the theory of a materialist universe, unregulated by divine Providence, composed of indestructible atoms moving in a void (which follows *Democritus*’ atomic theory, according to which all things in an infinite universe are composed of the random groupings of atoms moving in a void, plus Epicurus’ own moral theory – later misrepresented as licence for indulgence of appetites – of seeking the minimization of pain by avoidance of unnecessary fears and desires in private and public life’) –]all subsequent Greek philosophical schools were his more or less direct intellectual heirs... [T]hough there is no record of his having rejected the traditional gods, Socrates did claim supernatural guidance through a “divine sign,” a kind of voice that he sometimes heard warning him against a course of action, and this was doubtless part of the basis for the charge... “Socrates is guilty of... not believing in the gods recognized by the city but other supernatural beings of his own invention.”

Socrates was clearly a man of deep piety with the temperament of a mystic. He regarded mythology, with its foolish and immoral tales about gods, as a mere invention of the poets... God’s existence is shown, he held, not only in the providential order of nature and the universality of belief in him but also by warnings and revelations given in dreams, signs, and oracles... But... Socrates believed in the soul’s immortality.

[Plato also believed] that the soul is immortal; this is elaborately argued in the *Phaedo*.

After Socrates’ death... Plato... traveled widely and visited Egypt. About 387 B.C. he founded the Academy... for the study of philosophy...

The Greeks had three words for ‘love’... The first is ‘eros’ from which [the] word ‘erotic’ is derived... [E]rotic love is closely linked to desire or, more narrowly, to sexual desire... A second word... used for love was ‘agape’. This could mean anything from tenderness and affection to deep love... The third word... used was ‘philia’... the most general word for love[which] can cover peace-like relations between nations, [or] [the love parent and child may feel for one another... It occurs in... words such as ‘philosophy’ [‘love of wisdom’]... Finally there is the notion of Platonic love – a love between two people that is purely spiritual and devoid of sexual intimacy... How the phrase came into existence is not known... [because there] is no Platonic love discussed as such in any dialogue written by Plato.

Plato thought that the sky was a kind of dome that turned around the earth.

Plato (c. 428 – c. 348BCE) Greek philosopher, indisputably one of the most important philosophers of all time and so enormously influential that... the subsequent history of Western philosophy... was able to [be characterised] as a series of ‘footnotes to Plato’. He was the pupil (or at least the associate) of Socrates and the teacher of Aristotle...

...[who] marshalled reasons why the Planet Earth must be round; and much later, in the fifteenth century A.D., Magellan proved Aristotle’s hypothesis when members of his expedition (he himself died en route) circumnavigated the globe.

The ruins of the Lyceum, where Aristotle taught... have been unearthed in modern-day downtown Athens... on the building site of Athens’ new modern art museum... In its day the Lyceum was one of the three great schools of philosophy in ancient Greece, together with Plato’s Academy and the school created by the Cynics after the death of Socrates... - 1997

Neither Socrates nor Plato ever mentions service to God, though they speak of the contemplation of God’s reality, or the supreme splendor, or good... For Plato, perfect happiness lies in attempting to become godly. Insofar as man is godly, he is ethical. Evil forces within man combat his efforts to attain this ultimate goal. But Plato was not a determinist; he emphasized freedom of the will, and insisted that evil acts are due to man’s failure to meet his responsibilities. Evil does not come from God, who is all good... Aristotle sees a hierarchy of forms extending from minerals, vegetables, animals, to human beings, and ultimately god, who is pure form and pure act. Aristotle’s God is the unmoved mover. He is perfect, and He wants nothing... For Aristotle, the goal of action is to realize our potential and attain the greatest happiness or pleasure. Since God created man for self-realization, it is realization that will bring him satisfaction.

In metaphysics, [Aristotle]... (384-322BC)... reacted against the mystical speculation of Plato, whose Theory of Forms he rejects; for him form and matter were the inseparable constituents of all existing things... His influence in all fields has been immense... [T]utor to Alexander the Great, in 335 BC he founded a school and library (the Lyceum) just outside Athens... [After the death of his murdered father, Philip II in 336BC (Philip had) unified Macedonia and fostered its economic growth, and introduced the phalanx formation in the army[] Alexander]... immediately set about the invasion of the Persian empire... Undoubtedly the greatest general of his country, and probably of antiquity, his... plans for the empire were grand and original but perhaps impossible of execution. Regarded as a god in his lifetime[– some people ‘proclaimed Zeus was his father’ –] he... died of fever at Babylon, and his empire quickly fell apart... On Alexander’s death the Macedonian Ptolemy I acquired Egypt, and for three centuries the country was the centre of Hellenistic culture because of the considerable role played by Alexandria, home of a cosmopolitan Greek-speaking population who cultivated the arts and sciences, until on the death of Cleopatra it became a Roman province.

YOU’VE read the headlines: “Superpower smashes small eastern nation. Thousands of civilian casualties. ‘We’ll fight on,’ vows toppled leader.” These headlines, though, come from 2300 years ago. The toppled leader did fight back... And, in less than 10 years, he literally ruled the world. Unfortunately he also hit the goblet, became a megalomaniac who murdered his mates, and died from a mosquito bite when he was only 32. The story of Alexander the Great is an epic journey of war and conquest carving a 32,000km trail from the hero’s homeland to India and back... The warrior-king of Macedonia set out in 334 BC to avenge the defeat of his country by superpower Persia, inspiring his thousands of soldiers to follow him to places they imagined to be the ends of the Earth. [Now a]British documentary-maker... [has] retraced this pivotal event in European and Asian history. In his four-part series, *In The Footsteps Of Alexander The Great*, [the documentary-maker]... sets out from northern Greece, travelling by bus, Jeep and mule through the Near and Middle East... He traces Alexander’s track across Egypt to the desert oasis of Siwah and the ruins of Persepolis, capital of the Persian empire, in modern Iran. Further east, he crosses the Hindu-Kush mountains on foot, hitches a lift with a warlord in Afghanistan and travels by steam train through the Khyber Pass. In the last leg he sails down the Indus river in modern Pakistan and goes by camel train through Iran’s forbidding Makran Desert, where many of Alexander’s army perished.

Fifty years ago a shepherd searching the desert near Jerusalem for a stray goat stumbled upon a cave and uncovered one of the greatest finds of all time. Now, aided by... DNA... technology and luck, scholars are still unlocking the mysteries of the treasure – complete documents and scraps known as the Dead Sea Scrolls. Scholars cite the scrolls as both inspiring for Jewish continuity and a source of knowledge... about the Essenes, the devout Jews who numbered 200... and, living in isolation, wrote the manuscripts at a time 2000 years ago when Judaism was in turmoil... The Essenes – who scorned as too lax their fellow Jews in the Jerusalem Temple established 40km away – lived... beside the Dead Sea for 200 years until the Romans destroyed their settlement in AD 68. Faced with defeat, the sect hid its sacred works...

When ancient scrolls were discovered in caves near the ruins of Qumran... they carried with them a delicious sense of mystery. In Jerusalem this week, at the largest congress on the Dead Sea Scrolls ever held, it was apparent that after half a century of research the mystery has deepened... [–] we know less today about who wrote the scrolls than we thought we knew when they first came to light... Some... speakers at the international congress... believed that most of the scrolls were written at Qumran. Others maintained that all were brought from Jerusalem. It had all seemed so clear at the beginning. The thesis set forth in the 1950s by the Dominican priest archaeologist who evacuated Qumran... was that... an ascetic Jewish sect... wrote the scrolls over the course of 200 years and hid them in the surrounding caves at the approach of the Roman army... There was convincing historical and archaeological evidence for this scenario and it was, for a while, universally accepted. Over the years, however, new possibilities were advanced... leaving lay listeners more puzzled than ever... [A professor at] the University of Chicago said that handwriting analysis of the 800 Dead Sea Scrolls showed that they had been written by at least 500 different scribes. This was far too many, he said, to have worked at such a small site, even over the course of a few generations. He contended that the scrolls belonged to the libraries of Jerusalem... The Qumran “monastery,” he said, was in fact a Jewish fortress... [Another professor, this time from] the University of Sydney... contended that Qumran had been a trading post and there was probably a wharf to serve vessels plying the waters of the Dead Sea... [He] said that Qumran probably served also as a quarantine station for travellers suspected of having... plague. The cemetery with its 1100 graves would have accommodated those who didn’t recover. Meanwhile, the authors of the scrolls remain... in the shadows, whispering secrets still unknown.

...An American scholar says he has broken some of the... codes used... in writing... 10... of the 800 documents found in 11 caves along the Dead Sea shore... He said the... celibate sect of men who referred to themselves as the “Sons of Light,” used the coded scripts to “keep teachings from the Sons of Darkness.” ...he broke two... codes that were based on symbols relating to the letters of the Hebrew alphabet, and was working on a third... Among the revelations... covered in the codes is how to tackle mildew. The Essenes... were obsessed with cleanliness... - 1997

If... [an archaeologist from the] Hebrew University, in Jerusalem... has his way, the ancient Essenes, generally believed to have... [included] John the Baptist in their midst, will be changing their address and abandoning claims on authorship of the scrolls... If his thesis were upheld it would strengthen the hand of those scholars who argue that the Essene settlement known to have existed on the Dead Sea coast was not at Qumran and that the scrolls found at Qumran had no connection to the sect... [His] contention... hangs mainly on a single, literary thread – a... Roman historian... in describing the Dead Sea area in the first century AD, wrote about a strange sect that dwelt alongside the inland sea. “Out of range of the noxious exhalations of the coast is the solitary tribe of the Essenes, which is remarkable beyond all the other tribes in the whole world... [having] no money, and... only palm trees for company... as it has no women...” ...[the Essenes also practiced ‘complete community of goods.’ What the Hebrew University professor] found on the slopes 200m above Ein Gedi, a Jewish farming village in antiquity and today the site of a kibbutz, was a cluster of 22 small stone “cells”... each large enough to house only one man... However[, in]... antiquity, the terraced slopes of Ein Gedi were planted with balsam which produced an expensive perfume highly valued in the Roman world. Balsam was grown only at Ein Gedi and Jericho... Asked whether the stone cells might not have simply been seasonal shelters used by villagers from Ein Gedi during the harvest to spare themselves the trek up and down the hills, [the professor] acknowledged that it was a possibility... The reclusive Essenes, who attempted in antiquity to detach themselves from a fractious world, have proven once again their ability for stirring scholarly conflict centuries later.

...*Dead Sea faces death by tourism* When a spa was built in the sultry oasis of Ein Gedi 13 years ago, it stood on the shore of the Dead Sea. Today, tourists who come to the lowest point on earth to cake themselves in Dead Sea mud and float in the warm, oily water have to take a shuttle ride down some 400m of asphalt to get from spa to seashore. The Dead Sea... has dropped by 40m in the last 50 years... Environmentalists fear further damage from a flurry of uncoordinated plans by Israelis, Palestinians and Jordanians to exploit the inland basin’s economic potential... The plans, if implemented, would add 50,000 new hotel rooms as well as roads and more industry, further shrinking the sea and polluting its shores... From the heights of Masada, the fortress where a group of besieged Jews in the year 73 committed suicide, visitors can see the... result of water diversion upstream... [from] the River Jordan... by Israel and Jordan and the impact of the potash industry in the south. The drop in the sea’s level threatens unique species which live in its estuaries and causes sinkholes by changing the equilibrium between fresh water and salt water underground... “Tourism depends on the environment and if we cannot stabilise or improve the Dead Sea surroundings there is no future [for it] ...here,”...

Dead Sea scrolls... are important for the evidence they provide on the history of the Old Testament text, scripts of the period, and the life and doctrines of a Jewish sect at the time when Christianity was born... [However, t]he suggestion that St John the Baptist and even Christ himself were Essenes is highly improbable.

...a group of writings fancifully attributed to the Biblical patriarch Enoch, the father of Methuselah... are important works of Jewish literature but are not part of the Old Testament. The principal Book of Enoch [(I Enoch)]is the one known from an Ethiopic version, but there are also books in Slavonic and Hebrew... The Ethiopic Book consists of an introduction and five distinct works, including apocalyptic, prophetic, exhortatory, and astronomical materials. The introduction (chapters 1 to 5) consists of The Blessing of Enoch, addressed to “the elect and righteous” in the future “day of tribulation,” and of predictions of impending judgment. It is usually dated between 100 and 80 B.C., though the precise dates of all sections are in dispute... Chapters 83 – 90... [predict] the eventual repulse of the heathen and the establishment of the New Jerusalem... as well as the conversion of the surviving Gentiles and the advent of the Messiah. This section is dated from about 163 to 130 B.C... The Apocalypse of Weeks (chapters 93, 91:12 – 17, and 94:1 – 5) gives a summary of world history in ten unequal “weeks,” culminating in the rout of oppressors... the doom of the world, and the eventual New Creation. It has been dated about 170 to 163 B.C.

I Enoch may have originated with or been influenced by the Essene community of Jews at Qumran. No fragments of the longest portion of the work (chapters 37 – 71), however, were found among the Qumran writings[– ‘whereas all the others are’]. This has led scholars to theorize that this section was perhaps written in the 2nd century AD... and added... to four older apocryphal Enoch writings.

From Herod’s demonstrated character, we may be sure that he had little sympathy with the moral principles and Messianic hopes of the Essenic group a few miles from his palace at Jericho. Their strict discipline and high standards of conduct must have been a constant rebuke to his ungovernable passion and sensuality. Then, too, it must be remembered that Herod the Great was no Jew. His love for Greek culture and his disdain for Jewish laws and regulations made him especially hated among the Pharisees, the “straitest sect of our religion”... So insanely jealous a man, who lived in constant fear of court revolt or popular uprising, would hardly allow at Qumran, on his very doorstep, a community of believers

who held that the Messiah from Aaron and Israel was to come through them. They believed that through their Covenant community the ideals of the Messianic age were to be realised. In view of what this same Herod did when he heard about Him "that is born King of the Jews"... we may well understand feelings that would prompt him to banish from his realm a community with such extreme apocalyptic views... The two principal rites of the Qumran community were baptism and the communal meal... They believed that they were living in the last days, when the kingdom of Belial was about to be destroyed and God's kingdom of righteousness and truth would be set up.

Egyptian archaeologists have unearthed a well which Jesus Christ was said to have blessed during the Holy Family's flight into Egypt... They came upon it by chance while looking for the remains of the temple of Tell Basta near Zagazig... in the Sharqiya region of northern Egypt's fertile delta... Jesus, Mary and Joseph fled to Egypt to escape persecution after Christ's birth when King Herod ordered the massacre of boys under the age of two in the Bethlehem area. They lived in Egypt for two years and made stops in many areas of the country. The stops on their route are now being compiled into a special Holy Family tourist map... The temple where the well was found dates to the Roman period. Before entering... Bubastis which, according to legend, was the first Egyptian city the Holy Family visited[, they]... rested under a tree and the Virgin Mary, carrying her son in her arms, went to ask villagers for water. It is believed that after the villagers refused to give her water, Mary cried, prompting Christ to wipe her tears and then trace a circle on the ground, out of which the water flowed.

...A rock on which, by ancient tradition, the Virgin Mary rested on her way to give birth to Jesus has been uncovered by archaeologists just off the Jerusalem-Bethlehem road. Described... as one of the most significant Christian sites to be excavated in the Holy Land, it is expected to become a prime draw for pilgrims and to figure prominently in the Year 2000 festivities when masses of Christian visitors are anticipated from around the world... Measuring 2m by 4m, the rock was the centrepiece of an enormous octagonal Byzantine church built in the 5th century. The church and adjacent monastery were destroyed in unknown circumstances in the 8th century... The remains were subsequently covered over and the location forgotten. Scholars, however, knew from ancient documents of the church's existence and of the holy rock known as "kathisma" – the seat, in Greek. The rock is not mentioned in the *New Testament* but it is known from Christian documents dating from as early as the 4th century. Mary and her husband Joseph were travelling from Nazareth to Bethlehem, Joseph's birthplace, to participate in a census. Tradition holds that the pregnant Mary rested on the large, flat rock just off the Bethlehem road, which followed the same alignment then as today. It was, in fact, a plan to widen the existing road that led archaeologists to carry out an emergency dig... The road widening plans were subsequently changed. - 1997

The course of Jesus' life and the geographical setting of his ministry can only be given in... outline. The details are surrounded by... uncertainties.

Jesus is a figure of late antiquity, living on the margin of the Hellenistic-Roman world. In a period of luminous history, he spent his life in obscurity, barely noticed by the outside world. What part could this man who did not calculate at all have in a calculating, realistic, rationalized world where nothing mattered but power? From the standpoint of all material reality, his life was a mistake and could only end in failure... Some have tried to explain Jesus as one of the many religious or political fanatics of his time. He has been identified with the apocalyptic movement that was widespread in the Near East... Jesus may have something in common with all these types. Certain aspects of their lives and modes of thought provide a possible framework for his existence. But once this is recognized, the reality of Jesus shatters the framework, for it is utterly different in meaning, origin, and dignity. He reveals breadths and depths unknown to the others. All those who came forward as Messiahs were executed and forgotten; when they had failed, their followers ceased to believe in them. The religious fanatics lost themselves in particulars and externals. If so many heterogeneous types can cast a light on Jesus, it only goes to show that he belongs to none of them... Jesus grew up in Nazareth in Galilee with his mother Mary, four brothers, and several sisters. He learned a trade. He must have received rabbinical instruction in the Old Testament. Grown to manhood, he heard of John the Baptist, the anchorite of the Jordan country, who proclaimed the coming of the kingdom and God's last judgement, and preached repentance, baptism, and the remission of sins. Jesus sought out John and having been baptized went into the desert. On his return he preached to the people. When he was about thirty, he spoke in the synagogues, was addressed as Rabbi, wandered from place to place in Galilee, gathered disciples around him, preached the end of the world and the coming of [God's] kingdom... His friends regarded him as a madman... Jesus' view of himself is by no means clear. In his preaching he must have become aware of the discrepancy between what he himself was, saw, and strove for, and what others understood. The people followed him eagerly; in their way they needed him. He could not prevent them from attaching themselves to him and raising him more and more above himself. But the development of his picture of himself is not clear. The contradictions in his utterances only show that there was such a development and that perhaps it was never completed... When among those who had long known him he encountered an indifference of contempt that offended his sense of his own worth, he said: "No prophet is accepted in his own country." He was surprised at their lack of faith and at his inability to perform miracles among them. He surely believed in his calling to preach... Jesus learned to his sorrow how paltry and unreliable the results of preaching could be. The seed falls on fertile and on barren soil. Many receive the message with joy, but they are children of the moment. The cares of the world, the delusion of riches, carnal desires stifle the word... Jesus utters his disappointment. "I stood in the midst of the world... and found all men drunken, and none did I find thirsting among them, and my soul is afflicted for the sons of men, because they are blind..."

During his lifetime Palestine was experiencing great distress under the rule of three sons of Herod and oppressive Roman procurators... Jesus preached a message of religious reform and divine love. He was received with enthusiasm by common people because of his extraordinary healing powers, his effective teaching by parables, and his message of the redeeming love of God for every person... His teaching was strongly opposed by the Pharisees (a Jewish society of scholars and pietists) and by the privileged classes because of his attacks on hypocrisy and his interest in the poor... His growing influence alarmed Jewish and Roman authorities alike; regarded by some of his followers as the long-expected messiah, he was suspected by the... authorities of having revolutionary aims. After a brief ministry in Galilee, Jesus went with his disciples to Jerusalem to observe the Passover. There he taught in the Temple... arousing the ire of the priestly class... Under Roman law he was crucified at Golgotha as a political rebel and was buried in [a] tomb... Belief in his Resurrection from the dead became the focus of the religion that developed around his teachings.

In his lifetime his influence made itself felt only on small groups and among the nondescript multitude. The Pharisees, the Roman centurion, a few friends and adversaries were deeply affected... But at the same time he was disappointed in the results of his preaching. To whom did Jesus speak? Essentially to every man who came his way... But he leaned chiefly toward the poor, the outcasts, the sinners, because their souls are shaken and therefore ready for the new faith. "They that are whole have no need of the physician, but they that are sick; I came not to call the righteous, but sinners." "The publicans and harlots go into the kingdom of God before you." Furtherest from him were the men who feel sheltered and secure, those fettered to possessions in this world... [T]he smug Pharisee who prays: "God, I thank thee, that I am not as other men are, extortioners, unjust, adulterers, or even as this publican," will[not] find peace in God, but rather the publican who dared not so much as lift up his eyes unto heaven, but smote upon his breast, saying: "God, be merciful to me, a sinner"... Jesus rejects legalism, not for the sake of lawlessness, but in order to seek the source whence the law flows and whereby it is fulfilled beyond all legality. He accepts the traditional law of the Old Testament as self-evident. He does not oppose it in principle as St. Paul was to do... It has been said, rightly perhaps, that there was nothing new in the teachings of

Jesus. He accepted the knowledge of those around him, worked with traditional ideas. The God that he loved so intensely was the Jewish God. It never occurred to him to break with the Jewish faith. Like the ancient Prophets, he lived in it, while opposing the congealed forms and dogmas of the priests. Historically, he is the last of the Jewish Prophets. He cites them often and explicitly. But if only because of the changed world, there was a difference between Jesus and the ancient Prophets. They had lived in an independent Jewish state and witnessed its decline and end. Jesus lived in a long-stabilized and politically dependent Jewish theocracy... The Jewish theocracy cast him out, as the priests in the days of the Kings had attempted to cast out the Prophets... Jesus' faith in God is one of the great creations of Jewish Biblical religion. The God of Jesus... is the living God who speaks directly to each man. Jesus... fulfilled the old Prophetic religion. Like Jeremiah, he was... pure of heart, freed from all bonds of law, ritual, and cult. He did not reject all these forms, but subordinated them to the present will of God... Jesus embodied the Prophetic faith, which sustained him as it had sustained men for centuries... He sent [the disciples] forth by two and two... "Go not into the way of the Gentiles... but go rather to the lost sheep of the house of Israel." For the world would end even before they had "gone over the cities of Israel." ...He regarded himself as a prophet and perhaps in the end as the Messiah... The thought and action of Jesus presuppose the forthcoming end of the world... It is seen as a catastrophe. "For in those days shall be affliction, such as was not from the beginning of creation... neither shall be;" "...the sun shall be darkened, and the moon shall not give her light, and the stars of heaven shall fall." Here Jesus merely accepted the prevailing apocalyptic conceptions. But he was in utter earnest. The end of the world was imminent. "Verily I say unto you, that this generation shall not pass, till all these things be done." "Verily I say unto you, there be some standing here, which shall not taste of death, till they see the Son of man coming in his kingdom"... Unlike most of the apocalyptic preachers of his time, Jesus has little to say of the terrors of the end. But because for him this event, usually regarded as far off, was imminent, he believed it to be the inexorable concern of every living man. In the face of it, everything else paled into insignificance... The acts of Jesus, which are those of all wonder workers, his behaviour toward sinners, social outcasts, harlots, his words that stir the souls of his listeners: all these serve as signs and examples. His purpose is not to improve the world, not to reform men and their institutions, but to show all those who hear and see him that the kingdom of God is at hand. He lives the brief moment "between eras," between the existence of the world and the kingdom of God... The kingdom does not mean beatitude for all. Each individual is faced with the question of what will become of him in the catastrophe. For the end of the world is also a judgment, in which man is either accepted or rejected by God. "Then shall two be in the field; the one shall be taken, and the other left"... This prophecy of world's end and kingdom of heaven relates to a cosmic event. But it is not an event in the world, such as might give rise to a new world; rather, it is the event by which the world ceases to be, an intervention of history, whereby history is broken off. The kingdom of God is neither world nor history, nor is it this world's hereafter. It is something entirely different. But the tidings of the kingdom carry a strange ambiguity. The kingdom will come and it is already here. What the future will fulfill is already at work in the world... "For behold, the kingdom of God is within you." ...Jesus the man reveals himself in the purity of his soul and in his struggle with unexpected realities. The struggle culminates in no finished self-awareness or dogma. In the face of unexpected terrors, in the face of his mounting disappointment, all that was left him was his prayer: Thy will be done... His actions in Jerusalem were perfectly open... He purified the Temple on the strength of the position he claimed in the Jewish community. To the Sanhedrin[(Jewish council of elders)] he was a rebel against the Jewish theocracy and a blasphemer. The Romans suspected him of political insurrection. Jesus himself avoided any statement of what he took himself to be. According to the Gospel, he makes such a statement only at the end. When the high priest asks him if he is the Christ, he replies: "I am," and to Pilate's question: "Art thou the King of the Jews?" he answers: "Thou sayest." According to the inscription on the cross, he was condemned to death as a pretender to the crown... [D]isappointed that the world was taking so long to end and identifying himself with the servant of God in Deutero-Isaiah, Jesus had come to believe that God demanded his martyrdom at the hand of the worldly powers and that with this event He would usher in the kingdom of heaven. It has been suggested that Jesus on the cross expected the kingdom to dawn at the last moment and gave vent to his final disillusionment by crying: "My God, my God, why hast thou forsaken me?"

Jesus of Nazareth, the founder of Christianity... was born in Judea about 6 BC and died by crucifixion about AD 30... The history of the life of, work, and death of Jesus of Nazareth reveals nothing of the worldwide movement to which he gave rise. He lived and taught in a remote area on the periphery of the Roman Empire. His life was of short duration, and knowledge of it remained hidden from most of his contemporary world. None of the sources of his life and work can be traced to Jesus himself; he did not leave a single known written word. Also, there are no contemporary accounts written of his life and death. What can be established about the historical Jesus depends almost without exception on Christian traditions, especially on the material used in the composition of the Gospels of Mark, Matthew, and Luke, which reflect the outlook of the later church and its faith in Jesus... The Gospel according to John... assumes a special position. Though it offers some parallels to the other three, and though the independent traditions in it may in individual cases have historical kernels, the tradition in John shows that the gospel has reached an advanced theological state. Because a theological conception has been incorporated in the account to such an extent, this Gospel cannot be directly used as a historical source. It is also the latest of the Gospels, written about AD 100... The Synoptic Gospels were originally anonymous. According to questionable 2nd-century tradition, they were written by the immediate disciples of Jesus or companions of the oldest Apostles. Most probably the Gospels were composed between AD 70 and 100. That they were written at such a relatively late time does not detract from their historical significance, however, because an older, oral tradition is collected in them and has left its traces everywhere.

...knowledge of [Jesus'] life... is derived from the Gospels of the New Testament, the earliest of which, viz. Mark, dates from a period at least three decades after Christ's death, and gives no information about him prior to his public ministry. Matthew and Luke... written... between 70... A.D. and the close of the first century, though incorporating earlier material, do give stories about his miraculous birth and his infancy; these, however, do not represent duly ascertained facts; they rather elucidate the beliefs which had grown up in the Christian Church subsequent to his death.

Specialists had long assumed that the Magdalen Papyrus was written sometime in the mid-to-late 2nd century A.D. Now, however, [a]German papyrologist... has startled the rarefied world of biblical scholarship by arguing that the papyri are actually the oldest... fragments of the New Testament, dating from about A.D. 70. [His] thesis, if correct, means St. Matthew's Gospel, as well as Mark's (on which it is based, in part), is not the secondhand account of Evangelists who were separated by decades from the Jesus of history. Instead, it reflects eyewitness testimony by near contemporaries of the carpenter from Nazareth. Inevitably, [the German's] thesis has been sharply criticized by other experts who question both his credentials as a papyrologist and his methodology... There are, after all, four Gospels, whose actual writing, most scholars have come to acknowledge, was done not by the Apostles but by their anonymous followers (or their followers' followers). Each represented a somewhat different picture of Jesus' life. The earliest appeared to have been written some 40 years after his Crucifixion. Which was most accurate? ...[furthermore, there was a fifth gospel –] Thomas'... For hundreds of years, most Christians would have found the idea of distinguishing between the Jesus one prays to and the Jesus of history a ludicrous one. Well into our half of the millennium, it was assumed (as it still is in America's expanding Fundamentalist and Evangelical congregations) that the Gospels, the *Acts of the Apostles* and Paul's Epistles were the best history of all... Might faith have caused the writers... to embellish on actual fact? Did the politics of the early church cause them to edit or add to Jesus' story? Which parts of the New Testament were likely to be straight reportage rather than pious mythmaking? Depressingly few... There are only two or three references to Jesus in six pagan or Jewish sources, providing precious little corroborating data... Seminarians circulated papers

among themselves and met twice a year to vote on more than 2,000 separate pieces of scripture. They conceived a mediagenic means of voting: for each Gospel verse, each voter dropped a plastic bead in a bucket. The bead's colour signified the scholar's opinion... "Red: That's Jesus! Pink: Sure sounds like Jesus. Gray: Well, maybe. Black: There's been a mistake." ...positive and negative criteria[were identified] before taking up the colored beads. The voters favoured passages attested to by two or more sources. Since Jesus' culture was oral, not written, they assumed that shorter, punchier passages were more likely to be accurate... [T]hey... eliminated... language used to contextualize or connect; borrowings from the Old Testament (including most of what Jesus said on the Cross)... Also taboo were monologues by Jesus to which there could have been no witness, verses expressing foreknowledge of events after his death and any claims on his part to be the Messiah. And one final admonition: "When in sufficient doubt, leave it out." And leave it out they did. According to the *The Five Gospels*, only 18% of the words ascribed to Jesus in the Gospels may have actually been spoken by him. *John* was eliminated completely; only one sentence in *Mark* met muster.

...*Uncertainty*[is] *essential to faith*... For the great majority of non-practising Christians... the news that the church does not have an infallible set of... [scriptures] simply confirms something which they have always suspected... Dogmatic authoritative declarations are now seen as abortive attempts to cover up the cracks. Christians must learn to live with uncertainty, which is surely the pilgrimage of faith... the walk without sight.

...*The whole intellectual foundations of the world have changed dramatically in the past generation and... [there] is no turning back*... [A woman once] would not have thought of entering a church with her head uncovered... because... St Paul, writing 2000 years ago, had decreed that women wear hats in church so therefore it must always be so... There was no questioning of the tradition. That was how... [people] behaved and that was the end of the matter... But... [the] whole structure of "divine law" fell apart as we grasped the processes which led to the formation of the scriptures... Whatever it means to be a Christian in today's world, it does not entail the acceptance of a legislating God... The decline in social acknowledgment of the legislating God and the power of tradition have been a process going on over more than two centuries, coming to fruition in the last generation. But what marks the last generation as the defining moment in a global cultural movement has been the collapse of confidence in the power of reason to penetrate ultimate reality and universal moral principles... We look with longing back to the sense of sure faith and moral rectitude which characterised our forebears... That world is gone. No amount of questioning... will bring it back... [according to the Anglican priest who] is administrator at Holy Trinity Cathedral in Auckland.

...By his confused, meandering attempts to formulate a philosophy that denies the authority of God, [the]Anglican priest... only goes to prove the truth of God's word: "Professing to be wise, they became fools, and changed the glory of the incorruptible God into an image..." No human philosophy can ever meet the deep needs of the heart. That is why the world is so messed up, and why people such as [the Anglican priest] have no answers... [I]f he cannot do so what point is there in his being a priest?

...After reading [his] article I wonder why he goes on... being an Anglican priest when, to all intents, he believes God is dead. Where is the spiritual leadership he should be providing in his chosen profession? - 1996

Given the scandals which surround him, perhaps it is not surprising that [the US President] sought divine guidance yesterday. As he was formally [resworn] in... symbols of religion were all around. There was a morning service at a gospel church where he occupied the front row... [as the preacher led prayers by] remarking pointedly: "Where there has been failure, forgive us." En route to the Capitol building, [the President] clutched a *Bible*. There was a gospel choir before his speech and two more after... It was hard to escape the conclusion that [he] is in desperate need of spiritual inspiration... [B]attered by everything from funding scandals to the... sexual harassment case, it was a subdued [President] who spelt out his vision... "May those generations whose faces we cannot yet see... say of us here that we led our beloved land into a new century with the American Dream alive for all her children... with America's bright flame of freedom spreading throughout the world... Guided by the ancient vision of a promised land, let us set our sights upon a land of New Promise,"... Why was [the President] so low key? Perhaps it was in the knowledge that next time he may be swearing to tell the truth in a courtroom. And what role will there be for [his] wife? She smiled, trying to convey an image of togetherness. But perhaps the truth about their relationship had been more accurately revealed earlier... As they emerged from the church service, her hands were thrust into her pockets. [He] was clearly keen to hold her hand, but there were several seconds of fumbling before she complied... Then [the President], who is 50... led his inaugural parade back down Pennsylvania Ave past throngs gathered to savour history and have some fun on a cold but partly sunny day... [which] was also a national holiday marking... [the birth of] slain civil rights leader Martin Luther King jun, who gave his famous "I have a dream" speech in 1963 from a spot... on the horizon from where... [the President] took his second-term oath from [the]Supreme Court Chief Justice... and... [in] a speech of about 25 minutes... cited [King] as a source of inspiration [before offering] grand visionary words appropriate to the occasion and the special place he occupies "on the edge of a new... millennium."

...*American pie made with rotten apples*... BY ANY outward measure, the U[S] is enjoying immense success as a nation. Its economy has adapted superbly to the technologies of the post-industrial age, confounding the prophets of decline who once predicted that mastery of the global economy was passing to Germany and Japan. But America is prey to a wasting disease of the spirit. As I covered the last inauguration... I found myself doubting whether this great country – which has managed the affairs of the world with so much altruism for half a century – still has the moral strength and sense of purpose that once marked it out. In fact, I would hesitate to describe America as a nation at all in 1997, because it is becoming something very different: A polyethnic federation administered by a single ruling class... The crime figures are down, but that is what one would expect after 15 years of punishment which has increased in severity to the point where a man caught shop-lifting in California can be sentenced to life in prison... Sadly, I am forced to conclude that the accumulated rot in America has now reached a point where the pillars of society itself are failing. This was brought home yet again this month when a bomb went off at an abortion clinic in Atlanta, followed by a... booby-trap device that wounded the rescue workers. Anybody with a cause thinks himself morally licensed to engage in terrorism in the US, whether it is saving unborn babies, or animals, or trees, or for that matter the Aryan race. An organisation called the Aryan Republican Army has threatened to use chemical and biological weapons to pursue its goals. One of its suspected members... is already c[onvicted for] blowing up the Oklahoma federal building, murdering 168 people in the most deadly act of domestic terrorism in the history of the country. What lies behind it all is a loss of respect for the rule of law, no[small] matter in a country that depends on statute rather than shared ancestral culture to fashion a workable society. It was the Left, of course, that made it a chic pastime in the 1960s to disobey the law and rubbish cherished institutions. Flags were burned. Sacred memories... defiled. But it is no good harping on about the radical Left forever. It is the ruling establishment itself that has tarnished its authority by behaving dishonourably. The culture of cover-up and mendacity at the US Justice Department, the FBI and other agencies of coercion appears to be pervasive. "Unspeakable acts of cold-blooded murder and fabricated evidence now routinely characterise everyday acts of law enforcement..." writes... [a] former assistant treasury secretary. It is an exaggeration, but a great many people feel the same way... It is disappointment that helps explain why frustration is now erupting into sedition. A group of respected Christian intellectuals... held a symposium last year in which they concluded that the US judiciary had "usurped" power and asked whether it was time for "morally justified revolution... There is a growing alienation of millions of Americans from a government they do not recognise as theirs..."... A war of sorts is being conducted by the elites against cultural and religious outsiders. The low point (so far) in this war, was the paramilitary assault in 1993, in Waco, Texas, on a religious sect that was minding its own business. Nobody has ever been held to account for the death of 80 people, most of them women and children, and it is the refusal of the Justice Department to admit any fault that ignited a movement of "Christian patriot militias"... On the other hand, the campaign to reshape the US armed forces into a unisex institution... is still under way. Accusations of sexual harassment are flying. If this

continues for another five years, the US military will be reduced to a gelded parody of itself... Another worrying feature is the way that yuppiedom is amassing wealth and segregating itself into a discrete culture, while the lower classes are falling out of the bottom of the economy. As a marker of the new inequality, it is worth noting that in 1960, the average chief executive of a *Fortune 500* company earned 41 times as much as his workers. Now he, or she, earns 157 times as much. America is remarkably resilient, however. The fund of Calvinism [(‘the theology of the 16th-century reformer, John Calvin’)] is not entirely exhausted, and it may be possible to restore the legitimacy of the government institutions – provided there is a cathartic exposure of sin, starting at the White House. But once a cultural cancer has metastasised, it is exceedingly hard to reverse.

...For many... 16th-century... [reformers,] the whore of Babylon[seemed] to have matured into a respected maiden aunt... By those who took part in it, the Reformation was recognised within a few years as a reform of unprecedented power to change the Church, the world and the soul of the worshipper. It helped transform... a monolithic church into a fiery, cloudy pillar from which sparks floated away to form the bewilderingly numerous Christian churches and sects today... [Incidentally, a] Western Samoan man who escaped being burned at the stake had defied banishment, a common punishment for going against the village council... The council had banished [the 33-year-old] for criticising its petition to the Lands and Titles Court trying to stop him setting up a Mormon church in the village.

...[‘missionaries from the Church of Jesus Christ of Latter-day Saints have long devoted particular attention to Polynesia, perhaps because some Mormon scholars believe that a lost tribe of Israel settled there. Tonga is now roughly 45% Mormon; Samoa, about a third. As a result, many emigrants from the islands have settled in the capital of Mormonism, Salt Lake City. But acculturation has not been easy in a state that is 93% white, and some young people have reacted by joining the likes of the Tongan Crips or the Sons of Samoa. A police study estimates that more than 10% of gang members in the area are Pacific Islanders. Many Polynesian gang members are Mormon, which puzzles and disturbs Church leaders. Some say the Mormon policy of organising Tongan “wards,” rather than absorbing the immigrants into established congregations, has added to the alienation that makes gangs appealing. Church leaders deny responsibility for the sins of their Polynesian flock but have begun an outreach programme. “This is Zion,” says a Samoan policeman. If only the promised land was more like heaven.’ Editor’s note: Mormons also ‘believe that American Indians are descended from the ten lost tribes of the kingdom of Israel – who were deported by the Assyrians, 722 BC, after which no more is known about them.’ Coincidentally, ‘the foundation of the Mormon Church is enshrined in a series of gold plates, or tablets, given to Joseph Smith by an angel in the 1820s which, unfortunately, have been mislaid.’]

...There’s no shortage of assistance available to prepare me to meet... the world leader of the Church of Jesus Christ of Latter-day Saints... [T]he man running the PR machine for [the leader’s] first visit in 22 years... is... not looking for propaganda, he insists, but adds that the church has been “ambushed” by journalists in the past. He laughs off the suggestion that he is vetting me, but ends the... 30-minute... phone[call] from Australia... with an apology for “the vetting,” and I must have passed because he announces in triumphant tones that “the interview is on” – and I hadn’t even realised it was off... 87 next month, [the leader is in NZ] as part of a tour to mark the 150th anniversary of the westward migration which culminated in the establishment of Salt Lake City. The church’s first prophet, Joseph Smith, led his followers across the country in a 3000km flight from persecution which gave birth... [to what is] popularly, though incorrectly, known as Mormonism... [Its incumbent leader] is regarded by church members as possessing the same authority as the *Bible*’s seers and the early apostles. But to those raised on traditional images of holiness he seems an unlikely prophet... and with... his wife of 57 years, beaming from a respectful distance... he answers questions with an ease so practised that it can sound like recitation... A question about the church’s now abandoned practice of polygamy quickly turns into an answer about the purpose “of any church – to teach people to honour and obey and sustain the law.” The suggestion that the cycling pairs of missionaries may be an image problem draws the response that “we have a job to do: to preach the gospel, to build the kingdom.” ...By any standards, the growth of the church has been phenomenal... [T]he church says its adherents, 1.5 million worldwide in 1958, will number 10 million by mid-year... Its congregation in this country grew by 30[%] between 1986 and 1991 – faster than any other Christian faith.

...Bigger attendances at... [NZ] churches are not surprising to [church] leaders... However, the religious studies lecturer at Massey University... said the [figures] could be discouraging to Christians who committed themselves to a decade of evangelism in the 1990s. Survey results showed... a rise of just 2.4[%]... in overall attendance or membership of... churches... in the 10 years to 1996... when the country’s population grew 10[%]. ■ In order to attract members, some churches have resorted to advertising themselves in newspapers...

‘Old church too big for its flock An old Auckland landmark church is being sold by its congregation because they find the building too bulky for the number of worshippers using it. But members of the Christian Science Church – who study the *Bible* for practical guidance to spiritual wellbeing and healing – are pragmatic. “We don’t worship a church building. Let’s put it that way,” the chairman of the church board said yesterday. He said if there was a wrench to leaving it was because of all the effort, time and money the early congregation members had put into the building from about 1916 to 1933. He added that until its sale, the public were welcome to pop in to view the church or attend its services, which revolved around the writings of Mary Baker Eddy in the late 1800s. The church has a category B heritage listing with the Auckland City Council, meaning it is a significant building protected from major exterior modification. The interior contains a reading room, Sunday School premises and a cavernous wood-panelled auditorium with seating in pews for 300’]...

Empty pews give Church hollow ring... There’s no denying that times are getting tough for God Inc[in NZ]. Last year’s census figures... show the number of people professing Christian belief continues to decline – down from 2.3 million to 2.1 million[(or from 68% of the population to 61%)] in the five years since the previous census. A couple of hundred thousand empty pews may not sound like a lot but it looks worse when you consider the increase in the population as a whole. Some 72[%] of us said we were Christian in 1986... And the numbers of professed faithful may overstate the case anyway. Some will be what one churchman called “weddings and funerals Christians,” or people who wrote on the census form the church their parents went to... [T]he number who described themselves as Anglicans fell... 17[% to 631,761 (during the ‘1920s the Anglican Church – at that time the denomination with the most Maori adherents – threatened to excommunicate any Anglican who joined the Ratana Church; but the influence of Bill Ratana – known as Te Mangai, a mouthpiece of God – amongst Maori of all religious persuasions increased’; today the Ratana Church is ‘NZ’s 7th-largest with a membership of 36,450’)]. It’s not quite as bad for the Catholics and the Presbyterians (down 13[% to 473,112 and 470,442 respectively]) or the Methodists (down 12) but it is bad news for the Mormons, whose world leader told me in May that business had never been better: the numbers are down... 14[%]... to 41,000. Unsurprisingly, the numbers of Hindu... and Buddhist faithful have risen sharply[to 25,551 and 28,131 respectively], but so have the... non-believers – now at least 25[%] of us... And while the number of people objecting to answering has stayed pretty steady, the number who simply ignore the question has more than trebled. What it adds up to is a country where Christianity is in the process of becoming a minority. And that causes some to wonder whether Christian belief should infuse the national debate quite as strongly as it does.

...Is religion in N[Z] alive or dead? ...Those who declare themselves as having no religion were the largest category of the religion question in last year’s census. More than 890,000 people said they had no religion, up more than 34[%]... It was the first time this category had headed the field... In 1991, Anglicans had the largest number... And the holy war was not confined to those in the religion and no-religion camps. Traditional churches were having to fight to hang on to their flocks who were drifting to the Pentacostal movement[, which is ‘characterized by a literal interpretation of the Bible’]... In response, the... mainstream churches were... finding ways to adapt to the changes in society... Non-believers were philosophical about the declining church numbers... The phenomenon was simply an evolutionary process by which religion was losing its position in society. “People are tuning out...,” said... the Association of Free Thinkers and Atheists... Churches would not disappear overnight, however. “Religion has been going for 6000 years. It is going to take a lot of people a long time to wean off superstition,”... - 1997

In a largely secularised culture such as our own, it is always possible to write off the Christian movement in all its form[s] as having at last had its day. True, in most western countries and cultures Churches as institutions are in the course of being downsized as fewer citizens find a place for formal religion in their busy lives. Yet the view that the movement which began with Jesus has finally run its course simply does not square with the facts, even in N[Z]... In world terms, the claim that Christianity is finished could hardly be further astray. The latest figures I can lay my hands on are from the 1980s, and must be very approximate, but are far from negligible. Research then showed that 1433 million of the world's people would call themselves Christian. They are distributed between 1.5 million congregations, served by 3.75 million clergy and other workers; 43 million *Bibles* were distributed each year, as well as 20,000 Christian periodicals and an equal number of book titles... If "an institution is but the lengthened shadow of a single man," the shadow cast by Jesus of Nazareth shows no sign of fading away, although the institution's fortunes will continue to fluctuate, country by country and century by century.

In 1990, church-affiliated Christians made up slightly less than one-half of the [US] population at 49.3%... Roman Catholics made up the largest single denomination... with a membership roll of 57 million... In 1990, the total number of pastors, priests, and other religious leaders was estimated at 340,094, serving 350,337 churches.

Preaching to more than 10,000 people... [means] the pastor-teacher of the interdominational Grace Community Church in Sun Valley – the largest church in Los Angeles – might be tempted to speak out on all manner of social issues. So thought the editor of the *Los Angeles Times*... when the men met over lunch recently. Society does not need to hear another opinion, [he] said in Auckland this week. "It needs to hear the voice of God." ...rather than be known as a social commentator or a crusader for justice... [the] broadcaster and author of dozens of Scriptural resources which are distributed worldwide... [but] for which he draws no royalties... says he has devoted his 27 years in ministry... to giving God a voice through preaching. Sunday by Sunday he feeds his all-age multi-cultural flock a steady diet of the *Bible* – verse by verse... The Church does not need more entertainment... American culture[, which displays the]... inability of people to take responsibility for their actions in a society which he said bordered on no-fault crime... is over-indulged in entertainment... [He's in NZ] for three weeks to speak at conferences in the North and South Islands about church growth... [In related news, the] wages of sin are supposed to be death but in the interim, the... Christian Coalition has totted the annual cost of sin in N[Z] and arrived at the astonishing figure of \$8.4 billion... A co-leader of the coalition... said... "It is... appalling that we are having to pay out from the public purse vast sums to cover over the cracks of a valueless society." In all, the direct cost to the taxpayer has been put at \$1.9 billion, while the[remainder is the] cost to the wider economy... The coalition admits the numbers are a "loose figure," but still plans to use them... to illustrate the costs of dishonesty and neglected morality, integrity and upright lifestyles.

...Candidates on the Christian Coalition party list have been measured against the *Bible* to make sure they stack up... 41 candidates... had passed a rigorous "integrity" test. An unspecified number of potential candidates failed...

The Christians' bottom-line coalition terms are still being worked out... [On one side] is... the harder-line Christian Heritage[, while]... the Christian Democrat half... does not insist on Biblical dictum... [However, there] is a strong thread of fundamentalism through both parties... [– although there is going to be] nothing about making religious or Christian education compulsory in schools... [Indeed,] the Bible is not explicitly advanced as the fundament of any curriculum. Equally, the coalition does not have a shopping list of the favourite bogey bills. Repeal or even amendment of the Homosexual Law Reform Act, the Contraception, Sterilisation and Abortion Act and Human Rights Act are not seen as attainable coalition goals in the next Parliament, nor even bargaining chips. The coalition will also disappoint its foes by failing to campaign for the death penalty or the restoration of capital punishment. It is silent, even, on the right to discipline children by hitting them. This is a more generic brand of Christianity. No one doubts both coalition parties have longer-term ambitions in these controversial directions. But... they are[simply] trying to take a more realistic approach. "We are always saying at our public meetings that it is no use just having policies for Christians. They have to be policies for everyone."

...*"I need 500 supporters to establish the True Christian Party."* ...I am standing for parliament in the Tamaki electorate as an independent under the banner True Christian, because other "Christian" parties misrepresent *Jesus Christ*... True Christianity has almost ceased to exist having been supplanted by pseudo-Christian "Judeo-Christianity" and business managers, while a massive accumulation of myths, legends and tales of the supernatural is obscuring the truth about *Jesus*... He was a politician who fearlessly sought to change human systems... the supreme visionary[who] taught that moderate free enterprise democracy with heavy lashings of personal freedom is the supreme social and political system[, and]... that such a system will evolve on our planet... Nearly two thousand years after physical death his intentions have not been realised. Religious and political hierarchies are mainly male dominated, with some religious leaders clinging precariously to the notion that god is a masculine entity so only men can speak to god. - 1996

Hundreds of thousands of men held hands, prayed and prostrated themselves on the Washington Mall yesterday in a dramatic show of Christian fervour... Organised by Promise Keepers, the fastest-growing Christian evangelical movement in America in recent years, the male-only gathering may have been the largest religious event ever held in the U[S]. But there would be no official attendance figure issued. The National Park Service, which used to count crowds in Washington, has stopped doing so since its estimates became sources of controversy. [However, the]Promise Keeper's founder... said that numbers were irrelevant. "Success is not going to be measured numerically. There's only one audience member as far as we're concerned, and that's Jesus Christ,"... Forty-four speakers addressed the gathering, urging men to... unite and convert the nation... [by spreading] the gospel... to... work for church unity, end racism, aspire to sexual purity and take back family leadership... "Don't apologise. Don't say you're sorry. God tells you you are responsible to spiritually lead your family..."... said... a preacher from Dallas... [The US] President... praised the rally in his weekly radio address to the nation.

...Not Only in America. In fact, it's coming to a city near you: the men-only evangelical Christian movement which attracted hundreds of thousands to the streets of Washington. Promise Keepers, a cross-denominational group founded by a former football coach... plans events in Auckland, Wellington and Christchurch next month. Women's rights campaigners are already alarmed. As the participants in... Washington filtered back to their homes charged with inspiration, feminists were decrying Promise Keepers as an attempt to reintroduce authoritarian control of women... "I do not think an authoritarian reassessment of the right to rule is going to do anything other than make things worse," said... the Alliance spokeswoman on women's affairs...

'The guys' on a mission to take back what 'feminists' have grabbed... Promise Keepers say they're not chauvinists: they're just misunderstood... The group's director in this country... went on the front foot in defence of his "guys" soon after returning from the Washington rally. It's all about interpretation, he says. Take the chapter "Reclaiming Your Manhood" from the Promise Keepers' manual, for instance... [The group's leader] writes: "Sit down with your wife and say something like his: 'Honey, I've made a terrible mistake. I've given you my role. I gave up leading this family, and I forced you to take my place. Now I must reclaim my role'... I'm not suggesting you ask for your role back, I'm urging you to take it back... There can be no compromise here." [The NZ director] is unfailing in his support of the sentiment in that chapter. "I've got no problem, but the word leadership seems to be confused with domination. Most of what he is talking about is spiritual leadership." Promise Keepers talk about

encouraging men to take a Christ-like leadership role. They use the image of Jesus washing the feet of his disciples. But the beginnings of the Promise Keepers has more to do with football than foot-baths... "There is a need for men to take responsibility for themselves..." said... a former women's studies lecturer, [who] is wary of the Promise Keepers... "But when it is linked to the kind of statements they are making, it has the absolute opposite impact, which is about the assertion of power and control."

...Listening to... [him] speak, you get the impression he was always this good. As he held 1000 people spellbound at yesterday morning's mayoral prayer breakfast in the newly refurbished town hall, the former lawyer... [delivered] an address which was dense, textured and sublimely paced. No doubt [this man] – dubbed the "hatchet man" of the... White House in the dark days of the Watergate coverup – has honed his skills as an orator in the quarter century since his well-publicised conversion to Christianity. [This man], whose official title was Special Counsel to the President, does not shy from talking about his publicly recorded sins. The first member of the... Administration jailed on Watergate-related charges, he served seven months of a one-to-three years sentence in an Alabama prison. And he is happy to tell yesterday's assembly how it came about. "I went to the prosecutors and said that I hadn't done what they charged me with but I'd done something they didn't know about and if they wanted to charge me with that I'd plead guilty... In situations like that you usually find that prosecutors are extraordinarily obliging." For the record... "I gave damaging information to the press... and that was obstruction of justice..." ...He allows that it is in the nature of the political process "to bring out the worst in us." ...Of course... these days... [he] is more interested... in talking about his redemption than his sinning. His 1973 conversion prompted the *Boston Globe* to comment that "if [he] can repent, there has to be hope for just about everybody." And it is as a globetrotting evangelist that he is to be found these days... "...we live in an age that is aggressively secularist and is trying to remove Christian values from popular discourse." I suggest to [him] that the events of the previous evening, in the very building where we're talking, have rather demonstrated the opposite: the success of a largely Christian lobby in persuading the council to deny public funds to the [Auckland gay and lesbian] Hero Parade tended to suggest that the tide was turning. "If it is," he says, "then in N[Z] you are unique because I don't find that tide turning any place else. People resent those who bring the Christian viewpoint into public debate..." [His] visit was organised by the local branch of the Prison Fellowship, the organisation he launched on his release from jail in 1975. Its guiding principle: that "prison is very expensive and it's counter-productive. There are alternatives. They just take a little bit of effort and creativity and resistance to the public pressure which says we should lock 'em up and throw away the key." ...[By the way], a little known Catholic priest was last night poised to kill off the high political aspirations of [a] former Papua New Guinea prime minister... In a David and Goliath struggle... [the priest], who risked the Vatican's wrath to take on the financial and political might of... one of the wealthiest men in P[NG]... had virtually sealed victory for the Western Highlands regional seat... [The priest who campaigned strongly throughout the province... "...spoke about social services and how they were run down, and tired politicians who were doing nothing for the country... I think he touched a nerve that ran through the... [people]."]...

IF EVER the myth of the journalist as observer needed to be exploded... *The Lost Tribe*... would make powerful gunpowder. The British journalist and broadcaster first read about the discovery of a hitherto unknown Stone Age tribe in P[NG] in 1993... and when asked why... he's in P[NG] on the trail of the Liawep himself... he says he wants to record the moment of change as an observer. This doesn't mean a lot to most people he meets on the way and the experts are downright scornful. "Lost?" exclaims one anthropologist. "Who says they are lost? Do they feel lost?" Another warns him about the rigours of finding the Liawep. "It's tough, buddy, and excuse me for saying so but you don't look too tough to me." But the wisest comment comes from the chairman of the local research committee, who refuses [the journalist] permission to visit the tribe. "It is possible you will be dangerous to them. Or they to you." Nevertheless, [the journalist] decides to go – without permission... Although the tribe were "discovered" by a local government officer and already had a local missionary living with them, [the journalist] is the first white person they have seen. The 79-strong group live deep in the jungle of the far north-west of P[NG] where they worship a mountain and dress in leaves. Until recently they had been using stone axes. In a sense [the journalist] is already too late. The moment of change has already begun... The missionary is fighting to stamp out their mountain worship. The government officer has already destroyed the community's traditional hierarchy [by] replacing the former chief with the young man he first encountered. And the tribe, once the region's fiercest and most feared warriors, are becoming timid as they learn about the modern world... Apparently, [PNG] has more missionaries a head than anywhere else – one for every 2000 people. [● 'The chief suspect in last year's gruesome murder of an AUSn Christian missionary was arrested yesterday during a night raid on his Indian forest hideout. The suspect had been on the run since a mob of Hindu zealots burnt missionary Graham Staines, aged 58, and his two young sons to death while they slept in a jeep'...

'The chief minister of India's Orissa state resigned yesterday, accepting moral responsibility for attacks on Christians, including the burning to death of an AUSn missionary and his young sons on January 22 last year. Last week, a Catholic nun in Orissa was allegedly raped after two men offered her a ride in a taxi. Later, two young Christian tribal people were murdered, although police were quick to deny any sectarian motive for the killings. The latest Orissa incidents followed a wave of arsons at churches and missionary schools in the western state of Gujarat. Church leaders have complained of an organised campaign of violence against their tiny community in India and accused the ruling Hindu nationalists of appeasing militants behind the attacks.'

...*Spurning Marx and Mao, millions of Chinese are turning to Christianity. But the state is intent on crushing their belief* The Chinese Communist Party began to suppress religion after it took over the country in 1949. Thousands of Protestants and Catholics, refusing to repudiate their faith, were sent to prison. After the fall of the hard-line Maoists in the late 1970s, foreign companies, teachers and even ideas began to be cautiously welcomed in China. Some churches and temples were gradually returned to state-controlled religious organizations. A few monasteries and seminaries reopened, though only under rigid government supervision. Tens of thousands of political prisoners were released. However, the return to power of communist hardliners after the 1989 Tiananmen Square massacre led to a new wave of repression. Heavy fines have been levied for preaching outside the state-controlled church or for possessing foreign Christian literature. Christians are often locked up without formal charges. One April morning in 1989, 1500 Catholics of the village of Youtong in Hebei Province stood in frightened silence as 270 vehicles filled with soldiers snaked towards them. The villagers had gathered for prayer in a school playground where their destroyed church had once stood. For years they had petitioned authorities to return the land so that they could rebuild their church. Now they saw the government's reply. More than 4000 police and soldiers piled out of the trucks, armed with clubs, electric stun batons and bricks. The police broke through the villagers' frail line and beat them as they ran. By the end of that bloody day, two young people had been killed and more than 300 others wounded. 32 people were arrested. No-one has heard anything of them since. Hardly a month now passes without arrests of Catholic and Protestant leaders, evangelists and lay people. Officially, the government estimates that of China's one billion citizens, five million are Protestants and four million are Catholic. Outside observers, however, estimate there are eight to ten million active Catholics and an even larger number of Protestants. Last year, a European priest made a pilgrimage to a remote corner of South China where a famous missionary had died. When hiking past two elderly women, the priest wished them "Good day." "You are a Catholic!" one of the women declared. The women led the priest to their village, which was entirely Catholic. "When was the last time you saw a priest?" the European asked. "In 1951," they replied. He had died in a communist labour camp.'

...SOME missionaries do God's work in China, others in Africa or India. Until now, though, none set their sights on cyberspace. [However,] that's where souls will be lost in the 21st century, says... [the] soft-spoken monk... known on line and in religious circles for turning a group of financially strapped Benedictines into... designers... producing spiritually oriented Web sites compelling enough to compete with the likes of Microsoft and Disney... But his new project is the most ambitious yet: Founding a religious community whose mission will be in a virtual country inhabited by a new generation. Christian ideas "have been almost completely lost" in secular society, he says, but he hopes the Scribes of St Peter can use the far-reaching Internet to bring them back.

...“Why don’t they get on with their own miserable lives and let us live ours?” wails [a *NZ Herald* columnist]... It’s a cry that has echoed frequently down the past couple of millennia... When it comes to getting up people’s noses, religious Christianity is without peer in history... [But] one of the many wondrous things about the life of Christ was that it was devoid of condemnation – except of the religious leaders of the day... Other than that he condemned no one... not Judas who betrayed him; nor Peter who denied him. St Paul told the early Christians in Rome: “There is now no condemnation for those who are in Christ Jesus.” And if our Lord does not condemn us, who are we to condemn others? Christianity has been held back ever since the apostles were still warm in their graves by religionists who have sought to impose their beliefs and opinions on others...

[‘Professor gained notoriety in the 1960s when he challenged some fundamental precepts of Christian belief Today, the Rangiora-born 82-year-old emeritus professor of religious studies at Victoria University is considered one of NZ’s foremost academics in the field of religious studies. But in 1967, while principal of Knox Theological Hall in Dunedin, the centre of Presbyterian teaching in NZ, he questioned the Resurrection and the fundamental Christian belief of the immortal soul. Comments such as: “Anyone who thinks of God as a Santa Claus in the sky to whom one prays in order to fulfil one’s own personal wants must be prepared to let that image die, for it is a travesty of the truth,” led to hate mail and his trial for heresy by the Presbyterian Church. The charges were unproven. “Many of the ideas I was simply putting forward then are widely accepted these days and don’t cause problems, although they still do within the conservative rumps of the churches.”]

...‘the leader of the world’s 70 million Anglican faithful, the Archbishop of Canterbury, has triggered a religious storm after questioning the resurrection of Jesus Christ, the *Mail on Sunday* reports. The archbishop undermined the central tenet of Christian belief by stating: “I can tell you frankly that while we can be absolutely sure that Jesus lived and that he was certainly crucified on the cross, we cannot with the same certainty say that we know he was raised by God from the dead.” While the archbishop firmly believes in the resurrection, “it goes against human experience and our first instinct is incredulity.”]

...JESUS Christ was not a Christian and had no intention of founding a religion. The faith that bears his name was “invented” by St Paul, according to a controversial new biography. The claims... have caused such alarm in the Church of England that one of the country’s leading authorities on Paul has rushed into print to “put the record straight... Many ordinary church-goers could have their faith significantly shaken by the idea that Christianity is really based on a muddle when it is not...,” says the... Pauline scholar at Oxford and Cambridge... [The biography of Paul follows its author’s] equally controversial biography of Jesus and his own departure from the Church after many years as a high-profile Anglican. In his latest salvo... [the biographer] argues that Paul was Christianity’s creative director who came up with the idea of Jesus being divine. However, Paul, like Jesus, never envisaged starting a new religion. Jesus’ family, says [the biographer,] believed he was neither a divine being nor born of a virgin; to them he was simply an observant Jew who wanted his followers to become even purer Jews. Even his closest friends made no effort to break from Judaism. Paul had little interest in the historic life of Jesus of Nazareth, and it was after his mystical “apocalypse” experience on the road to Damascus that he developed a romantic religious vision with a crucified Jew at its heart – a notion that would have come as a surprise to Jesus. Paul transformed him into the focus of a new religion. History, [the biographer] concludes, would have remembered Jesus only briefly as a minor “Galilean exorcist” had it not been for Paul...

This is not the first time this claim has been made. Many have seen Paul as the villain... Before accepting [the biographer’s] claim, it would be wise to look briefly at Paul. Because Jesus’ brief and turbulent life and ministry had been lived within the narrow confines of Palestine, his followers at first saw themselves as a purifying sect within the Jewish covenant and establishment. Even the first disciples were not quite sure what Paul was up to. They had taken the whole Jewish tradition with its inbuilt exclusiveness for granted, then super-imposed on it the Christ event. Paul (Saul as he then was) had been an unhappy but totally convinced Jew, ablaze with indignation towards those he saw as schismatics and heretics, followers of a false Messiah. Then, against all expectation, he had an encounter with Christ on the road to Damascus... Paul then, according to [the biographer], transformed this Galilean peasant into a cosmic figure... We will never know exactly what did happen that morning, but we do know that to his dying day this tough, intelligent, dedicated man believed that the one he had been so busy persecuting was indeed the living revelation of God. His powerful personality accepted that fact and after long contemplation he began to see that Jesus... had far broader implications for the wider world than his early followers had discovered. With enormous courage he leaped the gap between Jew and Gentile, Asia and Europe, and began universalising the faith... yet Paul remained to his dying day a Jew whose life and character had been shaped by the matrix within which he was born... Why has Paul been so influential not only in individual lives, but also in the unfolding drama of history? To begin with, he was the most prolific contributor to the New Testament, his epistles making up a quarter of the text – letters written by a missionary to Churches he had founded, long before the gospels themselves were finally plucked from human memories and written down... Paul was a man of action as well as of thought, constantly on the move and often in danger... The letters, written in haste and sometimes under stress, are more like the log-book of an explorer moving through unknown territory than the theological discourse of a university don... So much of his writing has stood the test of time... Augustine and Luther, Wesley and Barth... found in... his writings... the inspiration for great new movements of thought and action including the reformation. Yet contradictions remain... He could give us the great hymn on love in 1st Corinthians 13 and a hundred other passages of inspired scripture, but... he could also pen opaque and turgid passages, logic-chopping and argumentative... He displays attitudes to women which today we would challenge. Slavery was to him a natural institution, though his writings would, centuries later, inspire its abolition... We sometimes overlook that Paul was not the only apostle or thinker of the early Church. Many others whose thoughts and works never made their way into the New Testament were even then actively working out and sharing the implications of the basic Christian encounter, taking it to lands Paul never visited... For them also the coming of Christ had been decisive... Delusions and hoaxes may for a time lead people down strange paths to follow false visions, but sooner or later reality catches up. The Christian experience persists. Is it possible that the tent-maker... was indeed on to something? - 1997

It is a delusion to make Christianity begin with Jesus... [as it] was Paul who first led Christianity into the sphere of history.

His efforts and his vision of a world church were responsible for the rapid spread of Christianity and for the speed with which it became a universal religion. None of the followers of Jesus did more than he to establish the patterns of Christian thought and practice... For Paul’s life there are no reliable sources outside the New Testament. The primary source is his own correspondence... The letters alone, however, provide no connected story. For that it is necessary to rely on Acts, written some 30 years after Paul’s death. Because its evidence sometimes conflicts with that of the letters, some scholars question the historicity of Acts. The general belief is, however, that Acts was written by Paul’s companion the evangelist Luke, who drew on his own diary for much of the story... Paul’s birthplace, Tarsus in Cilicia, a district of Asia Minor lying on the main trade route between East and West, was a cosmopolitan university city, which had been the home of famous Stoic philosophers. Paul was proud of his native city and manifested his debt to its Greek culture in his command of idiomatic Greek, in the occasional use of philosophical terms, and in a wealth of metaphors drawn from city life. He was proud, too, of his Roman citizenship inherited from his father; he used his Roman name Paulus in preference to his Jewish name Saul, and he found in the world empire of Rome a model for his later faith in a universal Christian commonwealth... According to Acts, Paul was trained as a rabbi under... a renowned teacher of the Law... Like most rabbis he also learned a trade – tent making – by which throughout his missionary career he was regularly to earn his own living. It is unlikely that he ever met Jesus. In Jerusalem, however, he learned enough about Jesus to regard him as a menace to Pharisaic Judaism, for Paul first appears on the scene of history as a persecutor of the Christian Church. In the judgment of Paul the Pharisee, Jesus had broken the Law and taught others to break it and had

been justly condemned under the curse that the Old Testament book of Deuteronomy pronounces on lawbreakers... Through a vision on the road to Damascus, Paul became convinced that... the curse of crucifixion had been real enough, but it had been borne vicariously. Out of love for men Christ had identified himself with them and now invited them to be identified with him in his new life... Immediately after this experience, Paul withdrew into solitude in Arabia, no doubt to think over the implications of what had happened to him... Three years later Paul spent two weeks in Jerusalem visiting Peter and James... From Jerusalem Paul returned to his native Cilicia... 14 years later (or possibly 14 years from his conversion)... the missionary Barnabas finds him and takes him to Antioch... Thus far, Christianity had been disseminated beyond Palestine without plan or direction from its leaders. Christians had been scattered by persecution and had carried the gospel with them, preaching at first to fellow Jews but finding a growing response also among Gentiles. The idea of a planned mission first arose at Antioch. The missionaries Barnabas and Paul, before setting out on their travels, went to Jerusalem, accompanied by Titus. They had a private consultation with the leaders of the Christians there – James, Peter, and John – and reached agreement on future missionary policy... Shortly after this Peter visited Antioch. One question that had not been discussed at Jerusalem was the relationship between Jewish and Gentile Christians in the new community. Jews were forbidden by their Law to eat with Gentiles. The church at Antioch had been disregarding this rule... until a protest came from James that this practice... was making things difficult and even dangerous for the church in Jerusalem. The Jewish members, including Peter and Barnabas, accordingly abandoned their liberalism for fear of Jewish reprisals against the mother church. According to Galatians, it was left for Paul to show his mettle by insisting that not only church unity but the very truth of the gospel was at stake.

Jesus is one element in the Biblical religion, an element of paramount importance for those who believe him to be the Christ. Yet though Jesus... is the beginning and centre of this creed, Jesus himself even in the Christian world is only a component of Christianity; he was not its founder and through him alone it would not have come into being. The reality of Jesus was overlaid by ideas that were alien to him. He was made into something different... [Jesus] was not a philosopher who reflects methodically and systematically orders his ideas. He was not a social reformer who makes plans; for he left the world as it was, it was about to end anyway.

The difficulty began when the world failed to end. In the new situation, thought and action had to be revised. In practice, the place of the expected kingdom was taken by the Church, Jesus, the herald of the end, became the institutor of the sacrament. But once the kingdom of God that would end history was drawn into history, its whole character was inevitably changed... The articles of faith: Christ's sacrificial death; the redemption of all believers through this death, wherein Christ took their sins upon himself; justification by faith; Christ as the second Person in the Trinity; Christ as Logos (world reason), participating in the creation of the world and guiding the people of Israel through the desert; the Church as Christ's *corpus mysticum*; Christ as the second Adam, historical beginning of a new mankind; all these tenets and many more that mark the rich history of Christian dogma have nothing to do with Jesus. Christ was a new reality that was to produce the most overwhelming effects in history... Without the churches, Christianity could not have developed through the centuries. If Jesus kept a place amid the innumerable motifs that entered into this development, it was thanks to the canon of the Christian Scriptures. While even so early a Christian as Paul had no interest in Jesus the man, the Gospels remained a part of the New Testament. The Christian canon, including the books of the Old Testament, is so rich in contradictory themes that there is no justification for trying to find anywhere in it the key to the Gospel, to the message of Jesus, to the Biblical religion. Even Jesus is not the key. But it was his reality that gave the impetus wherever the idea of the imitation of Jesus has arisen.

A Council of the Church... agreed that Jesus Christ is truly God and truly man, two natures in one person (the 'Chalcedonian definition'). The definition is generally accepted by the Churches, though from the beginning there was uneasiness about its interpretation, and recently it has come under sustained criticism... The Coptic Church[... a]... Christian tradition mainly present in the... lands of Egypt and the Sudan... separated from the Orthodox Church after the Council of Chalcedon in 451. The Copts were Monophysites who believed that Jesus Christ had a divine nature only, rather than a human and divine nature which was the orthodox belief.

...[Docetism is the] belief... that the natural body of Jesus Christ was only apparent... and not real, thereby stressing the divinity of Christ and denying any real physical suffering on his part... Gnosticism was considered a heresy by the early Church Fathers, particularly for its... docetic view of Christ (ie that Christ had only 'assumed' human form, and that his supposed crucifixion was merely a deception to fool the evil powers).

...Origen (c.185 – c.254) Christian scholar and teacher, the most learned and original of the early Church fathers, born probably in Alexandria, the son of a Christian martyr... In the last 20 years of his life he travelled widely. In the persecution under Decius in Tyre he was cruelly tortured and there he died.

...we no longer take sword against a nation, nor do we learn any more to make war, having become sons of peace for the sake of Jesus who is our leader. - Origen

...Moses, and the prophets, taught that he who kills, maims, or injures his neighbours, does evil. To resist such evil and destroy it, the doer of evil is to be punished by death or maiming or some personal injury. Injury must be met by injury, murder by murder, torture by torture, evil by evil... But Christ rejects this... Do not resist an insult with an insult, but rather bear the repeated insult from the doer of evil. What was authorized is prohibited. If we understand what kind of resistance is taught, we must clearly see what we are taught by Christ's non-resistance... A Christian has not the right under any condition to deprive of life or to subject to insult him who does evil to his neighbour... May a man kill or maim another in self-defence? ...No... May he enter a court with a complaint, to have his injurer punished? ...No, for what he does through others he really does himself... May he fight in an army against enemies, or against domestic rebels? ...Of course not. He cannot take any part in war or warlike preparations. He cannot use death-dealing arms. He cannot resist injury with injury, no matter whether he be alone or with others, through himself or through others... May he voluntarily choose or fit out military men for the government? ...He can do nothing of the kind, if he wishes to be true to Christ's law... May he voluntarily give money to aid the government, which is supported by military forces, capital punishment, or violence in general? ...No, unless the money is intended for some special object, just in itself, where the aim and means are good... May he pay taxes to such a government? ...No, he must not voluntarily pay the taxes, but he must also not resist their collection. The taxes imposed by the government are collected independently of the will of the subjects. It is impossible to resist the collection without having to recourse to violence; but a Christian must not use violence, and so he must give up his property to the violence which is exercised by the powers... May a Christian vote at elections and take part in a court or in the government? ...No, participation in elections, in the law-court, or the government, is participation in governmental violence... In what does the chief significance of the doctrine of non-resistance consist? ...In that it alone makes it possible to tear out evil by the root, both out of our own hearts and those of our neighbours. The teaching forbids the doing of that by which evil is multiplied in the world. He who attacks another and insults him, engenders in him the sentiment of hatred, the root of all evil. To offend another because he has offended us, on the specious pretext of removing an evil, is really to repeat an evil deed, both against him and against ourselves – to beget, or at least to free and to encourage, the very demon we wish to expel. Satan cannot be driven out by Satan, untruth cannot be cleansed by untruth, and evil cannot be vanquished by evil. True non-resistance is the one true resistance to evil. It crushes the serpent's head. It kills and finally destroys

the evil sentiment... But even if the idea of the doctrine be right, is it practicable? ...It is as practicable as any good prescribed by the Law of God. The good cannot under all circumstances be executed without self-renunciation, privation, suffering, and in extreme cases the loss of life itself. But he who values life more than the fulfilment of God's will is already dead to the one true life. Such a man, in trying to save his life, shall lose it. And in general, where non-resistance demands the sacrifice of one life, or the sacrifice of some essential good of life, resistance demands thousands of such sacrifices. Non-resistance preserves; resistance destroys. It is incomparably safer to act justly than to act unjustly; to bear insult than to resist it by violence... If no man resisted evil by evil, our world would be blessed... If only one man acted thus, and all the others agreed to crucify him, would it not be more glorious for him to die in the triumph of non-resisting love, praying for his enemies, than to live wearing the crown of Caesar, bespattered with the blood of the slain? But one man or a thousand who have firmly determined not to resist evil with evil – whether among enlightened people or savage neighbours – are much safer from violence than those who rely on violence. The robber, murderer, or deceiver, will more quickly leave them alone than those who resist with weapons. They who take the sword perish with the sword, and those who seek peace, who act in a friendly manner, inoffensively, who forget and forgive offences, for the most part enjoy peace, or, if they die, die blessed... And, if, in the very worst case, a few members of the minority should be persecuted to death, these men, dying for the truth, would leave behind them their teaching, sanctified by their martyr's death. - THE KINGDOM OF GOD IS WITHIN YOU

...when he had called unto *him* his twelve disciples, he gave them power *against* unclean spirits, to cast them out, and to heal all manner of sickness... These twelve Jesus sent forth, and commanded them... to... go, preach, saying... Heal the sick... raise the dead, cast out devils: freely ye have received, freely give. Provide neither gold, nor silver, nor brass in your purses, Nor script for *your* journey... take no thought how or what ye shall speak: for it... is not ye that speak, but the Spirit of your Father which speaketh in you... And ye shall be hated of all *men* for my name's sake: but he that endureth to the end shall be saved... Fear not... therefore: for there is nothing covered, that shall not be revealed: and hid, that shall not be known... And fear not them which kill the body, but... rather fear him which is able to destroy both soul and body in hell... Whosoever therefore shall confess me before men, him will I confess also before my Father which is in heaven. But whosoever shall deny me before men, him will I also deny before my Father... Think not that I am come to send peace on earth: I came not to send peace, but a sword. For I am come to set a man at variance against his father, and the daughter against her mother, and the daughter-in-law against the mother-in-law. - St Matthew 10

...he sat down... with... the twelve apostles... And he said unto them... he that hath no sword, let him sell his garment, and buy one... And they said, Lord, behold, here *are* two swords. And he said unto them, It is enough. - St Luke 22

In the Gospel, Jesus appears as an elemental power, by turns unbendingly aggressive and infinitely gentle. “He looked on them with anger”, “he assailed him”, “he rebuked him”, “he menaced him”. Finding no fruit on a fig tree, he withers it with his curse... Violently, with a whip, he drives the money changers from the temple. Jesus can simply not be interpreted as passive, mild, moved always and only by love...

[Jesus is portrayed] as the ideal of trust. Yet Jesus... sets Judas up to betray him and prevents anyone interfering with the outcome so that the Scripture might be fulfilled. Jesus knew Judas would afterwards become a scapegoat. Thus, he betrayed Judas. - 1996

In *The Dead Sea Scrolls Deception*, [the authors give the] material additional drama when they explain that it signifies a considerable threat to the Christian faith. “It had hitherto been believed,”... that “Jesus’ teachings were unique... ‘good news’ which had never been enunciated in the world before.” ...Paul reaches back to... [practices] that we know only from the Qumran texts, but... almost all apocalyptic groups characteristically required nonviolence and relied on God's monopoly on force. All... of[the] early... Christians and the Essenes... belonged to such representatives of nonviolence. - Jesus and the Dead Sea Scrolls

The early Church was noted for ‘the constancy of the Christian martyrs under persecution’. However, some Christian communities eventually decided that it was acceptable for them to use violence. This modification might've been due to the mixed messages from Jesus; could've been a response to violence against Christians; or may've been related to the fact that Paul – the most famous Roman Christian – was apparently honoured by God despite his earlier acts of violence (‘Paul, who was himself martyred at Rome c. AD 64, had assisted at the martyrdom of St Stephen’). Regardless of why this modification occurred, it made the faith more palatable to the citizens and rulers of Rome!

Because they effectively ruled the known world like only God was supposed to be able to do, most of the Caesars lived out the Egyptian fantasy that they actually were gods. Consequently, they thought nothing of killing other humans for trivial reasons – even as a means of entertainment!

gladiator... a professional who fought, usually to the death, for public entertainment. The practice, arising from Etruscan funerals where it replaced human sacrifices... became an official diversion... The fighters were usually slaves or Christians trained for the purpose.

...gladiators originally performed... with the intent to give the dead man armed attendants in the next world; hence the fights were usually to the death. At shows in Rome these exhibitions became wildly popular and increased in size from three pairs at the first known exhibition in 264 BC (at the funeral of a Brutus) to 300 pairs in the time of Julius Caesar (d. 44 BC). Hence the shows extended from one day to as many as a hundred, under the emperor Titus; while the emperor Trajan in his triumph (AD 107) had 5,000 pairs of gladiators... The shows were announced several days before they took place by bills affixed to the walls of houses and public buildings; copies were also sold in the streets. These bills gave the names of the chief pairs of competitors, the date of the show, the name of the giver[(sponsor)], and the different types of combats. The spectacle began with a procession of the gladiators through the arena, and the proceedings opened with a sham fight... with wooden swords and javelins. The signal for real fighting was given by the sound of the trumpet, those who showed fear being driven on the arena with whips and red-hot irons. When a gladiator was wounded, the spectators shouted “*Habet*” (“He is wounded”); if he was at the mercy of his adversary, he lifted up his forefinger to implore the clemency of the people, to whom (in the later times of the Republic) the giver left the decision as to his life or death... The reward for victory consisted of branches of palm, sometimes of money. If a gladiator survived a number of combats he might be discharged from further service; he could, however, reengage after discharge. On occasion gladiators became politically important, because many of the more turbulent public men had bodyguards composed of them. This of course led to occasional clashes with bloodshed on both sides. Gladiators acting on their own initiative, as in the rising led by Spartacus... in 73 – 71 BC, were considered still more of a menace. Gladiators were drawn from various sources but were chiefly slaves and criminals. Discipline was strict, but a successful gladiator not only was famous but, according to the satires of Juvenal, enjoyed the favours of society women... To be head of a school (*ludus*) of gladiators was a well-known but disgraceful occupation. To own gladiators and hire them out was, however, a regular and legitimate branch of commerce. With the coming of Christianity, gladiatorial shows began to fall into disfavour. The emperor Constantine I actually abolished gladiatorial games in AD 325, but apparently without much effect since they were again abolished by the emperor Honorius (393 – 423) and may perhaps even have continued for a century after that.

Constantine... Roman emperor from 306, who in his youth... learned the new Byzantine ideas of absolute sovereignty. In 312 he defeated his rival Maxentius at a battle near Rome, adopting the *labarum*... consisting of a spear converted by a transverse bar into a cross and surmounted by a wreath enclosing the Christian monogram of the first two letters (chi rho) of *Christos*... as a standard (reportedly after a vision of the Cross; probably because a Christian symbol secured the loyalty of the army, which was largely Christian). Shortly afterwards toleration and imperial favour were given to the Christian faith. His policy was to unite the Church to the secular State by the closest possible ties... After 324 he fixed his capital at Byzantine (rebuilt and inaugurated as Constantinople in 330), a move which led to an increasing imperial control of the Eastern Church and incidentally left the Bishop of Rome as the most prominent figure in the West; the secular importance of the papacy in the Middle Ages... [–] the period in Europe after the Dark Ages... [(a term denoting the obscurity or barbarity of the period [following] the fall of the Roman Empire) –] ...dates from this time...

Charlemagne... military and political colossus of the Dark Ages... who ruled the Franks... Had he not conquered the Saxons, whom he severely Christianized, and the Bavarians, Germany could hardly have come into existence... His coronation [as ‘emperor of the Romans – after providing Pope Leo III with military aid and protection’ –] on Christmas Day, 800, is taken to have inaugurated the Holy Roman Empire... He gave to government new moral drive and religious responsibility.

The first years of his reign were spent in strenuous campaigns to subdue and Christianize neighbouring kingdoms, particularly the Saxons... In 782 the Saxons rose again in rebellion and destroyed a Frankish army at Sunteberg, which Charlemagne avenged by beheading 4500 Saxons... The remaining years of his reign were spent in consolidating his vast empire which reached from the Ebro in northern Spain to the Elbe.

...Encouraged by a spirit of toleration, Jewish culture and religion flourished in Spain during the 13th and 14th centuries; but when, in the 1390s, Jews supported the losing side in a civil war, anti-Jewish violence flared up. As a result, large numbers of Jews, including many of their leaders, became Christians through fear... However, despite initial acceptance many Christians began to suspect that conversos were remaining secret Jews. Thus anti-converso violence broke out in the mid 1400s, and the converts were dubbed *marranos* from the Spanish word for ‘swine’. When the Spanish Inquisition was established (1480) to investigate all forms of heresy... *marranos* accused of remaining Jewish did not fear well; many thousands were burned alive in subsequent decades. Hatred also continued to be directed towards those who had remained faithful to Judaism, and in 1492 a decree was issued expelling all such Jews from Spain. That summer some 100000 [to] 150000 Jews left Spain to settle in other parts of Europe and North Africa.

...The term... *Inquisition*... comes from the Latin *inquirere* to ‘inquire into’, and signifies the idea that inquisitors were actively to hunt heresy. Pope Gregory IX (13th century) gave special responsibility to papal inquisitors to counter the threat to political and religious unity from heretical groups. The activities of the inquisitors were later characterized by extremes of torture and punishment, most notoriously in the case of the Spanish Inquisition, which survived until the 19th century.

In 1252 Pope Innocent IV authorized the use of torture to encourage extravagant and satisfactory confessions and valuable denouncements of others from the accused. Peter II of Aragon enhanced the effectiveness and novelty of the public trial-plus-sentence procedure known as the *auto-da-fe* (act of the faith) when he introduced public execution by burning alive at the stake. That process was referred to in official documents of the ecclesiastical courts as “relaxation.” It was witnessed by high church dignitaries and noble personages, who applied long in advance for passes to attend such events. Executions were frequently delayed so that prominent guests might be accommodated. Coming into full and terrible effect with the appointment of Thomas Torquemada as Inquisitor General of the Spanish arm of the Inquisition in 1483, his Holy Office became arguably one of the most horrid inventions of our species, and was not likely to ever be matched until the blind, mindless mass slaughter of the Holocaust... The Spanish Inquisition claimed an estimated three hundred thousand victims... In the Spanish version of the process, the accused went through a macabre trial which they seldom survived. In 1827, Juan Antonio Llorente, former Secretary of the Inquisition in Spain, revealed the horrid truth of the judicial process that was used to place the accused on the bonfire: Never has a prisoner of the Inquisition seen either the accusation against himself, or any other. No one was ever permitted to know more of his own cause than he could learn of it by the interrogations and accusations to which he was obliged to reply, and from the extracts of the declarations of the witnesses, which were communicated to him, while not only their names were carefully concealed, and every circumstance relating to time, place, and person, by which he might obtain a clue to discover his denouncers, but even if the depositions contained anything favourable to the defence of the prisoner. Llorente went on to explain that there were several options open to those who had been convicted and sentenced. To escape the torture which was usually used to extract a final confession – which was felt necessary to justify the execution – miscreants could admit sins they had never even countenanced and win immediate death. The spectacle was made less entertaining for the witnesses when convicted heretics opted for this fireside confession. In some cases, if they wished to escape the horror of being burned alive, they could confess and then submit to strangulation before their bodies were consumed in the bonfire. In only one manner could death be avoided, and it was a fiendish method whereby the Inquisition perpetuated its own existence and obtained fresh fuel for its fires. By choosing to implicate other innocents and condemning them to the authorities, a victim could, under some circumstances, earn a communication of his sentence to a long prison term, loss of property and final expatriation – if he survived the prison dungeon...

The [Armada] operation was planned by Philip II, king of Spain, to help realize his dynastic ambitions and his desire to reconvert Protestant Europe. He was repeatedly exhorted by Popes Gregory XIII... and Sixtus V as well as the English Catholics in exile to extend the Counter Reformation to England. The stringent policies of Elizabeth I toward her Catholic subjects, her moral leadership of Protestants abroad, and particularly the encouragement which she gave to Philip’s estranged subjects in the United Provinces of the Netherlands infuriated the Spanish king. As widower of Elizabeth’s immediate predecessor, Mary I, Philip contended that his claim to the English throne was superior to that of Elizabeth, who he claimed was illegitimate. Events of 1587 roused Philip into action. In February Mary Stuart, a Catholic who also claimed the English crown (through her descent from Henry VII), was executed for treason against England. (Since her exile in 1567 her Protestant son, James VI, had ruled Scotland.)

Covenanters... resisted the theory of ‘Divine Right of Kings’ and the imposition of an episcopal system on the Presbyterian Church of Scotland. When declared rebels, they resorted to open-air preaching. Until Presbyterianism was restored in 1690, they were savagely persecuted, with imprisonment, execution without trial, and banishment... In 1543 [George Wishart had] accompanied a commission sent to Scotland... to negotiate a marriage contract between... Prince Edward... and Mary, Queen of Scots; and he preached the Lutheran doctrine of justification by faith... At Cardinal David Beaton’s insistence he was arrested... incurred a charge of heresy... and burned... [Hugh Latimer] devoted himself to preaching and practical works of Benevolence. Under Mary I he was examined... and committed to jail. In September 1555... he was burned with... [Nicholas Ridley, the] Bishop of London... [The] Archbishop of Canterbury, [Thomas Cranmer, who]... compiled Edward VI’s First Prayer Book... and... composed the 42 articles of religion... later called the Thirty-nine Articles... witnessed Latimer’s and Ridley’s martyrdom... In rapid succession he signed seven increasingly submissive recantations... When the time came for him to read his recantation, he retracted all that he had written. Taken to the stake, he thrust his right hand into the flame... crying: ‘This hath offended! Oh this unworthy hand!’ ...In 1532... Henry VIII... was declared

head of the English Church; and[Thomas] More's steadfast refusal to recognize any other head of the Church than the pope led to his sentence for high treason... By his Latin *Utopia*... More takes his place with the most eminent humanists of the Renaissance.

As a reaction to the unreasonable polity of Christian-Europe, divided by self-interest and greed for power and riches, Thomas More... wrote about a fictional island where the institutions and policies were entirely governed by reason.

UTOPIA consists of two books... The first book is critical. It presents a picture of English social life at the beginning of the sixteenth century, on the eve of the Reformation. Tyranny and corruption are everywhere... The concentration of riches, especially of land, in the hands of a few powerful corporations, e.g. the Church, had led to the dispossession of the poor, and that in turn to unemployment and want with its resulting wave of crime and the savage laws with which society retaliated. In the second book... a social satire... we are shown the opposite picture... in an imaginary island. Here tyranny and luxury have been abolished, private property is unknown, and manual labour is looked upon as the sole occupation profitable to the state. Superficially considered, *Utopia* appears to be based upon the *Republic* of Plato and early Christian practices, and it shows the influence of St Augustine's *De Civitate Dei*. The work is, however, no mere adaptation. For not only does More confront all the serious evils of his day, religious, social, and political, but he considers philosophically their remedy, and that in a manner far in advance of the period at which he wrote. He saw... the evolutionary truth that the ascent of man has been marked by the triumph of altruistic over egoistic sentiments... Thus he has been claimed as a forerunner of Karl Marx on the strength of his advocacy of communal property. It must, however, be remembered that More expressly rejects... what we now term Socialism and Communism... [– u]nderlying these proposals there is always one radical fallacy, namely, that they not only invent ideal institutions for mankind, but invent an ideal mankind for their institutions[–] ...and he believes that the abolition of private property will lead to bloodshed and plunder. He was opposed not to private property as such, but to its misuse... Moreover... it has been pointed out that More attends too much to the material property of his citizens at the expense of their liberty: slavery is an essential feature of Utopia. This slavery, however, is rather of a penal nature, for specified crimes, and not irrevocable. It is administered by wise and beneficent rulers, and preserves the essential dignity of human nature. Christianity has never taught that freedom is the liberty to follow every whim... Tribulation, indeed, is but a means to draw man closer to God... [W]hilst in the Tower awaiting martyrdom... Thomas... [wrote that the] highest motive and the strongest incentive to perseverance is the Passion of our Lord Jesus Christ... THE DIALOGUE OF COMFORT... affords us a vision of More's own soul beset with doubts and fears, yet full of tranquillity, gentleness, and his... 'sober mirth' in the dark night before his[own] supreme sacrifice.

...to find citizens ruled by good and wholesome laws, that is an exceeding rare and hard thing... The forefronts or frontiers of the... island of Utopia... what with fords... shelves and... rocks, be very jeopardous and dangerous. In the middle... [of its main harbour entrance] standeth up above the water a great rock, which therefore is nothing perilous because it is in sight. [However, upon] the top of this rock is a fair and strong tower builded, which they hold with a garrison of men. Other rocks there be lying hid under the water... and therefore it seldom chanceth that any stranger, unless... guided by an Utopian, can come into this haven, insomuch that they themselves could scarcely enter without jeopardy, but that their way is directed and ruled by certain landmarks standing on the shore. By turning, translating, and removing these marks into other places they may destroy their enemies' navies... The outside or utter circuit of the land is also full of havens, but the landing is so surely fenced, what by nature and... by workmanship of man's hand, that a few defenders may drive back many armies... King Utopus, whose name as conqueror the island beareth[, who]... also brought the rude and wild people to that excellent perfection in all good fashions, humanity, and civil gentleness, wherein they now go beyond all the people of the world... set to... work not only the inhabitants of the island... but also all his own soldiers. Thus the work, being divided into so great a number of workmen, was with exceeding marvellous speed dispatched... I think that this nation took their beginning[from] the Greeks, because their speech, which in all other points is not much unlike the Persian tongue, keepeth divers signs and tokens of the Greek language in the names of their cities... There be in the island fifty-four large and fair cities, or shire towns, agreeing all together in one tongue, in like manners, institutions, and laws. Of these cities... there is none of them distant from the next above one day's journey afoot... The precincts and bounds of the shires be so commodiously appointed out and set forth... that none of them all hath of any side less than twenty miles of ground... None of the cities desire to enlarge the bounds and limits of their shires, for they count themselves rather the good husbands than the owners of their lands... [Each] city is compassed about with a high and thick stone wall full of turrets and bulwarks... overgrown with bushes, briars, and thorns... The houses be of fair and gorgeous building, and on the street side they stand joined together in a row through the whole street without any partition or separation... On the back side of the houses... lie large... enclosed... gardens... Every house hath two doors, one[opens] into the street, and... [the other] into the garden. These doors... [are] never locked or bolted... Whoso will may go in, for there is nothing within the houses that is private or any man's own. And every tenth year they change their houses by lot... [V]ery seldom chanceth that they choose a new plot to build an house upon... [T]heir houses continue and last very long with little labour and small reparations; insomuch that this kind of workmen sometimes have almost nothing to do, but that they be commanded to hue timber... and to square and trim up stones, to the intent that if any work chance it may the speedier rise... Every thirty families or farms choose them yearly an officer which... is called... the Philarch. Every ten [Philarchs], with all their thirty families, be under an officer... called... the chief Philarch. Moreover... all the... [Philarchs] choose... out of the four quarters of the city... four... [candidates] whom they think most... expedient. Then by a secret election they name prince one of those four... The prince's office continueth all his lifetime, unless he be deposed or put down for suspicion of tyranny... [In addition, there] come... out of every city... yearly to Amaurote... because it standeth... in the midst of the island... three old wise men and well experienced, there to entreat and debate... common matters of the land... Husbandry is a science common to... all[Utopians] in general, both men and women... Besides husbandry... every one of them learneth one or... several... particular science as his own proper craft... For their garments, which throughout all the island be of one fashion (saving that there is a difference between the man's garment and the woman's, between the married and the unmarried)... [are] seemly and comely to the eye... let to the moving and wielding of the body, also fit both for winter and summer... [W]omen, when they be married at a lawful age[, which]... is not... before[they] be eighteen years old... go into their husbands' houses, [whereas] [the male children... [who are] four years older before [they] marry... continue still[with] their own family... Furthermore, in choosing wives and husbands they observe earnestly... a custom which seemed to us very fond and foolish. For... an honest matron sheweth the woman, be she maid or widow, naked to the wooer. And likewise a discreet man exhibiteth the wooer naked to the woman. At this custom we laughed... But they, on the other part, do greatly wonder at the folly of all other nations which, in buying a colt... be so chary and circumspect, that though he be almost bare... they will not buy him unless the saddle and all the harnesses be taken off, lest under those coverings be hid some gall or sore... [In order that] the prescript number of the citizens should neither decrease nor... increase, it is ordained that no family, which in every city be six thousand... shall at once have fewer children... than ten or more than sixteen... This measure or number is easily observed and kept by putting them that in fuller families be above the number into families of smaller increase... [I]f chance be that in the whole city the store increase above the just number, therewith they fill up the lack of other cities... [I]f so be that the multitude throughout the whole island pass and exceed the due number, then they choose out of every city certain citizens, and build up a town... where... [there is] much waste and unoccupied ground... [F]irst and chiefly of all, respect is had to the sick that be cured in the hospitals. For in the circuit of [each] city... they have four hospitals, so big... and... ample... that... the sick, [even if]... they... be... many in number, should... [be accommodated. It is punishable by] death to have any consultation [relating to] the commonwealth out of the council or the place of the

common election. This statute... was made to the intent that the prince and [chief Philarchs] might not easily conspire together to oppress the people... If... any be desirous to visit either their friends dwelling in another city or to see the place itself, they easily obtain licence... But... if... any man, of his own head and without leave, walk out of his precinct and bounds... without the prince's letters he is brought [back like] a fugitive or a runaway with great shame and rebuke, and is sharply punished... Observing this law and condition, he may go whither he will within the bounds of his own city... Breakers of wedlock [are] punished with most grievous bondage... Finally whosoever for any offence be infamed, by their ears... upon their fingers... and about their necks... they wear... diamonds... gold and silver... And these metals, which other nations do as grievously and sorrowfully forgo, as in a manner their own lives, if they should altogether at once be taken from the Utopians, no man there would think that he had lost the worth of one farthing... perceiving that none but children do wear such toys and trifles... For they marvel that any men be so foolish as to have delight and pleasure in the doubtful glistening of a little... stone... Or that any man is so mad as to count himself the nobler for the... finer thread of wool[he wears], which... a sheep did once wear, and yet was she all that time no other thing than a sheep... These and suchlike opinions have they conceived, partly by education... and partly by good literature... For though there be not many in every city which is exempt and discharged of all other labours and appointed only to learning... all in their childhood be instruct in learning. And the better part of the people, both men and women, throughout all their whole life do bestow in learning those spare hours which... they have vacant from bodily labours... There be neither wine-taverns, nor ale-houses, nor... any occasion of vice... no lurking corners, no places of wicked councils or unlawful assemblies... Now you see how little liberty they have to loiter, how they have no cloak or pretence to idleness... This fashion and trade of life... cannot be chosen but that they must of necessity have store and plenty of all things. And seeing they be all thereof partners equally, therefore can no man... be poor or needy... [A]s soon as it is perfectly known of what things there is in every place plenty, and again what things be scant in any place... the lack of the one is performed and filled up with the abundance of the other. And this they do freely without any benefit, taking nothing[in return] of them to whom the things is given... So the whole island is as it were one family or household. But when they have made sufficient provision... then of those things whereof they have abundance they carry forth into other countries... grain, honey, wool, flax, wood, madder, purple-dyed fells, wax, tallow, leather, and living beasts. And the seventh part of all these things they give frankly and freely to the poor of that country. The residue they sell at a reasonable and mean price. By this trade of traffic or merchandise they bring into their own country... such things as they lack at home, which is almost nothing but iron... Now... they care not whether they sell for ready money... But... [they] putteth it into the common box, and so long hath the use and profit of it until the Utopians... demand it. The most part of it they never ask... But if the case stand that they must lend part of that money to another people, then they require their debt, or... they have war. For the which purpose only they keep at home all the treasure which they have, to be... [used] either in extreme jeopardies, or in sudden dangers, but especially and chiefly to hire... for unreasonable great wages, strange soldiers. For they... rather put strangers in jeopardy than their own countrymen, knowing that for money enough their enemies themselves many times may be bought and sold, or else through treason be set together by the ears among themselves. For this cause they keep an inestimable treasure... This custom of buying and selling adversaries among other people is[regarded] as a cruel act of a base and cowardly mind. But they... think themselves much praiseworthy, as... by this means [the Utopians] dispatch great wars without any battle or skirmish... War or battle[is] a... beastly... thing... And, contrary to the custom... of... almost... all other nations, they count nothing so much against glory as glory gotten in war. And therefore, though they do daily practice and exercise themselves in the discipline of war, and not only the men, but also the women upon certain appointed days... they never go to battle... either in the defence of their own country or to drive out of their friends' land the enemies that have invaded it, or... to deliver from the yoke and bondage of tyranny some people that be therewith oppressed... Thus... must I needs confess and grant that many things be in the Utopian weal-public which in our cities I may rather wish for than hope for. - UTOPIA

Although religious freedom was a feature of More's perfect society, as Henry VIII's lord chancellor he persecuted heretics. Later he upheld the pope's denial of the validity of Henry VIII's divorce from Katharine of Aragon, was dismissed by Henry, and was beheaded for treason.

...*Savonarola, Girolamo*, 1452-98, Italian religious leader. He became a Dominican, 1474, and vicar general of the order, 1493. He agitated against the... rulers of Florence, and after... [being f]orbidden by the pope to continue preaching, he disobeyed... was excommunicated... charged with heresy... then... burned at the stake.

...[*Girolamo Savonarola*] was hailed as an inspired prophet... But... his preaching began to point plainly to a political revolution as the divinely-ordained means for the regeneration of religion and morality, and he... welcomed... Charles VIII... to Florence. However, the French were shortly compelled to leave Florence, and a republic was established, of which Savonarola became the guiding spirit, his party ('the weepers') being completely in the ascendant. At this point 'the puritan of Catholicism' displayed his... genius and the extravagance of his theories. The Republic of Florence was to be a Christian commonwealth, of which God was the sole sovereign, and His gospel the law; the most stringent enactments were made for the repression of vice and frivolity; gambling was prohibited; the vanities of dress were restrained... Even the vainest flocked to the public square to fling down their costliest ornaments, and Savonarola's followers made a huge 'bonfire of vanities'. Meanwhile his rigorism and his claim to the gift of prophecy led to his being cited... to answer a charge of heresy in Rome, and on his failing to appear he was forbidden to preach. Savonarola disregarded the order, but... [the] new system proved impracticable and although the conspiracy for the recall of the Medici failed, and five of the conspirators were executed, this very rigour hastened the reaction... [Next] came a sentence of excommunication from Rome; and thus precluded from administering the sacred offices, Savonarola zealously tended the sick monks during the plague. A second 'bonfire of vanities'... led to riots; and at the new elections the Medici party came into power. Savonarola was... brought to trial for falsely claiming to have seen visions and uttered prophecies, for religious error, and for sedition. Under torture he made avowals which he afterwards withdrew. He was declared guilty... the sentence was confirmed by Rome... and... this extraordinary man and two Dominican disciples were hanged and burned, still professing their adherence to the Catholic Church. In morals and religion, not in theology, Savonarola may be regarded as a forerunner of the Reformation.

...[a] Spanish theologian and physician... [called *Michael Servetus*] denied the Trinity and the divinity of Jesus; he escaped the Inquisition but was burnt by Calvin in Geneva... [At the time of Servetus' death, *Giordano Bruno* was about 5 years old. He eventually] propounded an extreme pantheistic philosophy whereby God animated the whole of creation as 'world-soul', and his enthusiastic championship of Copernicus and his [own] 'insistence that the stars were simply very distant suns'] brought him into conflict with the Inquisition. He was arrested in 1592 in Venice and after a seven-year trial was burned at the stake in Rome.

...[the] socialism and mystical doctrines[of the German *Thomas Munzer*] soon brought him into collision with the authorities. After preaching widely... his communistic ideas soon aroused the whole country. He joined the Peasants' Revolt... but was defeated at Frankenhausen, and executed a few days later.

Peasants' War... Its causes lay in the economic decline of Germany following the transfer of trade routes from the Alps to the Atlantic, 15th cent. Restless under their deteriorating economic and social position, the German... farmers... peasants and artisans took part in numerous uprisings before Luther's revolt... prompted them to a major attack on the inequities of German feudalism... Their radicalism quickly increased under the leadership of Thomas Munzer, an Anabaptist preacher. Rebuffed by Luther, who appealed to the German princes against them, they were

suppressed... and their leaders executed. So ended a major crisis in German history, which prompted Luther to depend more closely on terrified rulers, to whom he delegated wide powers of religious control... Lutheranism is the state religion of the Scandinavian countries and the major Protestant faith of Germany.

...*The Protestant Ethic and the Spirit of Capitalism*[, written by Max Weber, a]... German economist... put forward the theory that there was a direct relationship between Calvinist work ethic and the rise of Western capitalism.

...Unlike Luther, Calvin envisaged a complete restructuring of society in accordance with Christian principles, an ideal which in practice proved inhumanly austere. The private morality of citizens was monitored, the power of excommunication readily used, and Calvin did not shrink from [using] torture and persecution, most notoriously in the case of Servetus...

Ulfilas... a Christian of Cappadocian origin, who became bishop of the Arian Visigoths... translated the Bible... into Gothic, inventing (it is said) an alphabet for the purpose and omitting the Books of Kings as their warlike deeds might have a bad influence upon a nation so fond of war...

Faced with ecclesiastical opposition to his project for translating the Bible, [William] Tyndale went abroad, never to return to his own country... His vigorous translations from the Greek and Hebrew... published in Germany... became widely popular[back] in England and were the basis of both the Authorized and the Revised Version... [Tyndale was eventually] arrested on a charge of heresy, and later strangled and burnt at the stake.

...[Oliver Cromwell] was an English general and statesman. A['member of the more extreme English Protestants', the] Puritan squire... was among the Parliamentary opponents of Charles I, but only became a national figure as a soldier during the English Civil War, playing a decisive part in the... formation of the New Model Army. His rise to pre-eminence continued with his subjugation of Ireland... [Christianity] reached Ireland, probably in the 4th c... and after the break-up of the Roman Empire the country became for a time a leading cultural centre, with the monasteries fostering learning and missionary work. English invasions began in the 12th c., under Henry II, but the authority that he established was never secure... until the Tudors succeeded in extending it over the whole of the island. Revolts against English rule, and against the imposition of Protestantism (which met with unexpectedly stubborn resistance), resulted in the 'plantation' of Ireland by English (and later Scottish) families on confiscated land in an attempt to anglicize the country and secure its allegiance... After an unsuccessful rebellion in 1798, union of Britain and Ireland followed in 1801. In spite of genuine efforts towards its success Ireland sank deeper into destitution. A share of Britain's industrial prosperity reached Protestant Ulster, but the rest of the island found its agricultural produce and assets dropping in value, and at the failure of the potato crop (Ireland's staple) in the 1840s thousands died in the famine, thousands more fled abroad. [In all, more than 750,000 Irish men, women and children died from the effects of the famine, and by 1855 more than a million had emigrated. The Irish diaspora of the famine years created a "Greater Ireland" overseas. In the 1870s the perennial question of tenants' rights and the act of union became fused with the revolutionary zeal of Greater Ireland, thereby transforming both Irish politics and Anglo-Irish relations. The reawakening of Irish nationalism was made possible by the presence of new leaders and the emergence of an Irish party at Westminster with a new battle cry of "home rule". Home rule meant a federal parliament and executive for Ireland, subordinate to Westminster.] The Home Rule movement... failed to achieve its aims in the 19th c. and implementation of a bill passed in 1910 was delayed by the outbreak of... W[WI]. An Act of 1920 divided Ireland into two parts: Southern Ireland, later recognized as an independent State ([originally] called the Irish Free State... [then Eire and, finally], the Republic of Ireland...), and Northern Ireland [(NIr)]... At first a self-governing province with its parliament meeting at Stormont Castle in Belfast, it was dominated by the Ulster Unionist Party, opposed by an increasing Roman Catholic [(RC)] minority favouring union with the Irish Republic. Discrimination against the latter group in local government, employment, and housing led to violent conflicts and (from 1969) the presence of British army units to keep the peace. Continuing terrorist activities resulted in the suspension of the Stormont assembly and imposition of direct rule from Westminster. Attempts to organize an agreed and permanent system of government have so far met with failure.

Since 1971, when the IRA campaign on mainland Britain began, Special Branch and the Anti-terrorist Branch have led the police response... Special Branch has its own armoury[, although] the weapons are seldom used... "If there was no other option then... we would shoot to kill... that's what we've been trained for anyway." One of the responsibilities of Special Branch is to protect people who are under high threat from terrorism... [A] Detective Chief Inspector... leads [the Iron Lady's] protection team. "Once... we just had a... three man close team, but you could use more and we do... depending on the situation... [We] have an outer circle and that's done... with... local police..." [The Iron Lady is unaffected:] "I've lived with it now for so long it's just part of my life. I know that every effort will have been made to see that things are safe and I'm afraid it slows down the signing [of autographs. But]... I accept their advice and you have to because they have a job to do; they're in danger as well." ...Although Londoners have carried on with their lives as usual, the need for security has caused serious disruption... Security at government buildings has caused much inconvenience. Larger gatherings are subject to intense security operations, and the arriving traveller at Heathrow is hardly greeted by a picture of peaceful Britain. Last year in London there were 52 terrorist incidents but explosives officers from the Anti-terrorist Branch were called out over two thousand times to investigate suspect packages... [They] wear protective clothing but it... [is] of little use at close quarters... In recent years two explosives officers have been killed... Since[it was] formed in 1883 to fight the... forerunners of today's IRA, the work of the Special Branch has been cloaked in secrecy. Even other police officers have little idea of what they do... "What's happening as we speak is a live surveillance operation... which is, I have to say, speculative, like many of our operations are... There is a target on the streets of London right now, and what we're doing is looking at where [the target is] going... doing, who they're meeting, and frankly, what the outcome of it will be we don't actually know. What... if our target goes into some premises that we've not previously identified... and comes out with a bag. Now what's going to be in that bag. It could just be that it's some shopping... Do you... see where he goes with this bag and risk losing him, risk a bomb going off somewhere, risk people being killed, or do you step in and stop him, only to find that it contains some cornflakes and... milk, and in fact you've then blown what would have been a very promising operation. Hard decisions... The fact is that the initiative is always with the terrorists, and if a terrorist is brave or bold enough to try something such as the mortar attack on Downing St there is virtually nothing you can do to stop that. You can do a lot of things to prevent people parking in particular areas, you can have big spaces around particularly vulnerable places, you can give people personal protection, but the fact is that unless you take an individual and lock him up in a castle and don't allow him any contact with the outside world you cannot guarantee to keep him safe... Politics in a free society couldn't carry on without [the Special Branch], that is the importance of the work they do." The price of protecting public figures is high. [The former PM's] book signing tour cost £300,000. IRA terrorism has cost billions of pounds.

The All Blacks were on their way early today to a Belfast shaken by bomb blasts as it nervously greeted the British P[M]... They are to play Ulster in Belfast at a ground not considered to be in the danger area. - 1972

1846 Aug 28 NZ's first representative Constitution... was passed by the British Parliament. The Act provided for the division of NZ into separate provinces... The main provinces were to have been New Ulster and New Munster, as the North and South Islands respectively were then known. Steward Island was to have been New Leinster... 1868 Apr 3 Loyalist Irish goldminers returning from Westport, where they had been celebrating the survival of the Duke of Edinburgh from an assassination attempt in Sydney, were attacked by Irishmen who opposed British rule. Anticipating retaliation by government forces, Fenian (anti-British) Irishmen from surrounding districts rallied at Addisons Flat. An armed clash was averted

by the moderating influence of a local warden, but the incident became known as the “Battle of Addisons Flat”... The hostility between Irish religious factions flared [on Dec 26, 1879,] when Irish Catholics opposed a march Protestant Orangemen planned to hold in Timaru. Police reinforcements were called from Christchurch but could not prevent the Orangemen from being besieged in the Foresters Hall. The Riot Act was read, but the Catholics would not disperse until the Orangemen agreed to cancel the march.

Where hate thy neighbour is their creed... SHE shivers in her tiny living room but it isn't cold... [- it's because N[Ir]'s peace process has been shattered... “...It's all right during the day but at night – I don't know what to do at night...” ...They came at night, smashed the windows... [of the house she moved into] only three weeks ago... and left a spoor of white-painted hate on the front door and back fence: “UVF” (Ulster Volunteer Force – a Protestant paramilitary organisation) and “Toreens says no more taigs.” They came because [she is a RC or “taig”] in the Torrens triangle which is a Protestant enclave in the [RC] Ardoyne area of north Belfast. They came to commit ethnic cleansing. Two families left that night... leaving [her as the last RC] living on the street... but [she is] trying to ride out the hate. “I'm stuck between two thorns... My boyfriend is a Protestant. I came from a Republican family. I've had a real bad time – they don't want me. I have nowhere else to go... I mean no harm to anyone. I just want a home of my own...” The broken windows have been fixed but her front door is still broken. And she can't forget the noise of the mob and the telephone call warning her to get out... The front door opens and in walks her boyfriend... a former soldier in the Royal Scots... He... recalls the cease-fire: “The peace was great... Catholics and Protestants were all [going] in and out of each other's doors. Nobody mentioned religion. We all lived happy... It's a shock to go back to how it was before... We don't know who smashed in our windows. Maybe the Catholics did the front one and the Protestants did the back one?” He laughs, then sighs. “It's a hell of a country...” A march by the Portadown Orangemen at Drumcree two weeks ago was blocked by police, causing a chain reaction and turning N[Ir]'s reactor critical. At Old Park a gang of loyalists protested outside the... Royal Ulster Constabulary (RUC)... station. A few yards away on the edge of the Torrens triangle... a[n RC]... neighbour of [the couple] was celebrating her 30th birthday. As the party was breaking up, the nationalist revellers were confronted by loyalist demonstrators. Both sides had been drinking. According to [the boyfriend], “the party-goers gave the demonstrators the finger” and the abuse turned nasty... “They just kept calling us Fenian bastards and said they were going to burn us out... I can't believe it. A crowd of men and women all shouting at us... My kids play with their kids,” [another neighbour] told reporters... I... walk down the Old Park area towards the centre of Belfast. Round a sharp bend a cohort of dirty grey RUC armoured Land-Rovers are doing wheelies. One of the motorised armadillos takes the corner so fast it almost tips over. The RUC are chasing a mob of kids throwing rocks who have taken over a stretch of waste ground. The armadillos screech to a stop and a knot of officers in full riot gear dismounts. The kids vaporize. More Land-Rovers block the road ahead forming a makeshift barrier between nationalist homes and loyalists in Shankill Road... Members of the Shankill Protestant Boys Band... lead... an Orange Lodge [march]... directly up to another RUC road block... The crowd roars, half-disintegrating into a mob... A flurry of people run my way, then stop and run back... A woman built like a brick out-house with a face to match... starts removing the rockery beneath my feet. A few stones fly... Then, as weirdly as the riotette begins, it stops and the band reverses back up the Shankill. Late that night, rumours start to seep through that the Chief Constable... is going to [back] down and let the Orangemen march down the Garvaghy Road past the nationalist houses to Portadown. Suddenly the Orangemen are the upholders of the law and the nationalists are back to being the outlaws... Later that night, the sky above Old Park RUC station is lit up... [as the] nationalists of Garvaghy Road, furious that the Orangemen have been let through, erupt with violence... At the top of the hill, just short of the RUC station, stands a gaggle of police and soldiers. A teenage girl is teasing them. “What's that fire?” she asks. “It's hot and it's orange,” says a blond copper. I laugh at his joke. A few hours later three policemen standing at this spot are shot by a nationalist gunman. No one is killed – not this time... With all the racket, the one noise you can't hear is the sound of big money getting out of N[Ir]. And so the cycle of unemployment and despair is reinforced by the bigotry that fuels it... The following day, I... try to call on [the RC woman]. Her front window has been smashed again... I knock on the door but no one is in... [In the street the] next generation plays with a burned-out car...

The village of Bellaghy staged a piece of sectarian street theatre with all the potential for violence that has scarred N[Ir] recently, but... the day ended without violence... [which] boded well for the future... There had been widespread fears that the three days of traditional parades and rallies could lead to disturbances, especially after rioting last month over a Protestant march in the town of Drumcree. But negotiations made it possible for nationalists to hold rallies and Protestants to hold traditional marches without serious incident, notably in Londonderry...

A... weekend of rival marches in N[Ir]'s second city got off to a calm start after [RC]s changed their parade route to avoid a Protestant neighbourhood... Nonetheless, an air of uncertainty hung over the marchers... as they later listened to speakers at the city centre... protesting against a scheduled march... by the fervently pro-British Apprentice Boys... [P]olice stood by in case of trouble later when Protestant ceremonies marking a 17th century battle victory over [RC]s were due to start... The summer marching season is always tense in N[Ir]... Trouble erupted during the Apprentice Boys' march in Londonderry in 1969, sparking a quarter-century of guerrilla conflict in which 3200 people were killed.

...since a majority in N[Ir] wish their statelet to remain in the U[K], “what in the name of democracy is there to stop them?” In 1918 there was no “Northern Ireland.” There was just Ireland, a British colony. In the general elections of that year Sinn Féin, campaigning for independence, won 73 of Ireland's 105 Westminster seats. Sinn Féin took this as a mandate for self-rule... In 1921 the British agreed to cede a large part of Ireland but, threatening “a terrible and bloody war,” refused to relinquish Belfast, a significant centre of British capital. To secure Belfast, the British drew an artificial border around six counties of Ulster, where a loyal settler majority could be mustered... [N]ationalists who remained in the north proved a problem but were secured by introducing a property-holding franchise and gerrymandering electoral boundaries, by creating an armed loyalist police force backed with a loyalist militia and by a Special Powers Act that was the public envy of apartheid legislators in South Africa.

...A detective shot dead in a bungled raid on a post office van was murdered by members of the IRA in contravention of IRA policy, the terrorist group admitted yesterday. The organisation had previously denied responsibility for the shooting last Friday. Detective Garda Jerry McCabe, aged 52, the father of five, was shot dead while escorting a van carrying \$230,786.98 in the village of Adare, County Limerick. His partner, [also]... aged 52, was injured... [□ Yesterday t]he Queen led the way... in condemning a bomb blast blamed on the I[RA] in which more than 200 people were injured... She said in a statement... that she was “shocked and deeply saddened to be told of the terrible bomb attack in Manchester,”... The U[S] President... was “deeply outraged” by the bomb explosion. “I join [the] British... and... Irish[PMs]... in utterly condemning this brutal and cowardly act of terrorism,”... His condemnation echoed that of the Irish President... who ended a state visit to the U[S] yesterday and said at the Irish embassy earlier that she was “shocked, saddened and numbed” by news of the blast. Three people have been killed in the resumed campaign – but until [now] all the attacks had been in London. - 1996

After the US bombed Iraq in 1996 a NZ TV station ended a primetime news article about anticipated retaliatory strikes on civilian aircraft by implying that the IRA might adopt similar tactics. When a viewer rang the station to point out that “the IRA has never targeted civilian aircraft,” he was told the story had come from a source in AUS (unsubstantiated NZ TV news reports have also accused the IRA ‘of supplying the detonator for the Oklahoma bombing’)! Furthermore, the US's Christian President said of the bombing raids: ‘When you abuse your people or attack your neighbours you pay the price.’ Backing him up was NZ's PM (a ‘good churchgoing’ RC): ‘It's an appropriate response to show [the Iraqi President] that such action will not be tolerated.’ By the way, when the then US President declared war on Iraq in 1991 he said: ‘we pray that God will bless America’. This ‘believing and practicing Fundamentalist Christian’ was the leader of a country that sings ‘Long may our land be bright with freedom's holy light; Protect us by Thy might, great

God, our King!' (*America*); plus 'And this is our motto: In God is our trust' (*The Star-Spangled Banner*). Obviously USers don't trust God to protect them in a literal sense – otherwise they wouldn't have nuclear weapons, etc. (or are such things needed in case God proves to be untrustworthy; or in case the US has to eventually fight God?). However, Christian's shouldn't care about their country or fear what happens to themselves while alive (rp861, ln20).

God of nations, at Thy feet, In the bonds of love we meet, Hear our voices we entreat... defend our free land... From the shafts of strife and war... Men of every creed and race, Gather here before Thy face, Asking Thee to bless this place... From dissension, envy, hate, And corruption guard our state, Make our country good and great... May our mountains ever be, Freedom's ramparts on the sea, Make us faithful unto Thee... Preaching love and truth to man, Working out Thy glorious plan... Peace not war shall be our boast... Let our love for Thee increase, May Thy blessings never cease... From dishonour and from shame, Guard our country's spotless name, Crown her with immortal fame, God defend New Zealand.

Absolutely nobody is totally certain what Irish-born poet Thomas Bracken meant when he penned it in the 1870s... The poet's great-grandson... feels that N[Z] is failing to live up to the anthem, and refers to its principles as "still very valid." Not everyone agrees with him. Thomas Bracken's words seems to picture N[Z]ers as lying back and expecting someone else to come to our aid for everything. A contemporary cynic describes this as an endemic plague in N[Z] thinking. "For Bracken's 'God'," says the cynic, "replace the word 'Government' and you have an image of the Welfare State person, confident from cradle to grave that someone will take care of him." The harsh reality of recent decades seems to be that nobody is going to "take care" of anybody... Most of the things Thomas Bracken asked God to do for N[Z] have not actually come true, and they show little sign of doing so. People just do not have any faith in the song anymore... In short, the prayer has not worked. To many, the song seems valueless as a result... That it has not come true is obvious. Nevertheless, a huge amount of commercial media advertising is still pushing us to believe a fantasy image of N[Z] that is the same as that of Thomas Bracken... [In 1972 'a public opinion poll on the adoption of a distinctive NZ anthem showed 53% of NZers favoured *God Defend New Zealand*, 31% preferred *God Save the Queen* and the rest didn't care'.] At present, 23[%] of people polled think N[Z] should create a new national anthem to replace *God Defend*. But there is still a great blankness about what it could be replaced with.

...*God must hate listening to our national tune* [When I first heard *God Defend N[Z]*... I was thrilled to discover that I had emigrated from a country with a bad anthem to a country with a worse anthem... I am no musician but the tune that represents this young and vigorous country has all the youth and vigour of a pauper's funeral... But it is in the nonsensical lyrics that this song excels. Typical of that nonsense is the line addressed to the God of Nations... presumably the God who will sit in judgment on the nations of the world and "shall separate them one from another, as a shepherd divideth his sheep from his goats: And he shall set the sheep on his right hand..." Implicit in the song is the assumption that we are a virtuous sheep country and not one of the smelly left-hand goats. The trouble... is that every other country also sees itself as a virtuous sheep. A vigorous survey of the national anthems of the world has revealed that... every country claims to have God on its side. This is particularly evident in times of war. During the Gulf War, for example, [the US President] came over all religious... [and the US] God, with the help of a few Stealth bombers, won... My point is that calling on God to defend us is a pointless piece of rhetoric from another age. *God Defend N[Z]* should go. Replacing it, however, will prove difficult. Few anthems exist that are worth imitating. The French have got a cracking tune, but archaic and bloodthirsty lyrics; *Advance A[US] Fair* starts well but goes on too long; and if you want a giggle, study the text of *The Star-Spangled Banner*.

The American Founding Fathers were up-front in their acknowledgement of God in the establishment of their democracy... The national Thanksgiving Day in the U[SS'] public holiday schedule reflects... that... belief... American Presidents today still frequently invoke God in the public arena... [NZers] are not so up-front in their acknowledgement of God in our national lives... It is interesting to note that as N[Z] society has become more overtly secular in the past generation our Parliament has seen fit to pass more and more laws spelling out, specifically, what constitutes appropriate moral behaviour in a range of settings. This has become necessary in the light of so many people not knowing what appropriate behaviour is or, alternatively, not being prepared to follow acceptable norms of behaviour based on long-standing religious moral precepts and traditions... It is becoming very apparent that no present-day democracy can operate successfully without the strong rule of law. Religious influence, however, seems essential for democracy to flourish for practical reasons. Our history teaches us that the greater the religious restraints on people, the less need there is for a range of secular laws to bring about moral behaviour. The *Bible* says that the fear of the Lord is the beginning of wisdom. Without some prudent fear of the Lord, the alternative is unnecessary fear of the law, which means huge police forces, large numbers of prisons and plenty of constraining regulations and strictures[. The *Bible* also says: 'Wisdom is better than weapons of war']...

An Irishman who received mysterious official permission to live in N[Z] bought weapons for a Protestant paramilitary organisation... the [UVF]... an MP claimed yesterday... [-] an allegation the Belfast-born man denies[although, when]... interviewed by the *Herald*, he said he... [had bought] firearms for two[unidentified] men. "I did a stupid thing..." [The man], aged 56, was granted residency after unexplained top-level consideration in 1987. Before coming to N[Z], he was sentenced to jail for two years in N[Ir] for possession of[the] two semi-automatic pistols. The final approval for his case is believed to have come from the office of the Governor-General. And an Immigration Service source revealed [the 56-year-old] was not the only one to receive vice-regal help to stay in this country... [U]p to eight cases that he knew of were approved by the Governor-General in the 10 years before the Immigration Act was rewritten in 1987. Under the 1964 act, the Governor-General was empowered to grant his prerogative of mercy to allow anyone to stay... The Minister of Immigration... has asked for an urgent report... following questions from other MPs concerned that the... [approvals involved] deals with British authorities... [● Yesterday, h]undreds of thousands of motorists endured traffic chaos on the M6 and on the main north-south artery, the M1... after two bomb alerts blamed on the IRA crippled the road system in central England... On the M6, two bombs were found attached to roadway supports. The cost to... industry was estimated at more than \$NZ4.5 million.

...THE IRA said yesterday it planted two bombs which closed a vital British highway for more than 30 hours... Police also evacuated King's Cross subway station, a connecting station and four subway lines... after another bomb threat... A tactic of the IRA... is to cause disarray and economic losses by planting bombs and then giving coded warnings.

...Britain's railway operator Railtrack said last night that there had been a small explosion at Leeds railway station in northern England. The blast followed suspected IRA telephoned bomb warnings... Doncaster, Crewe and Stoke-on-Trent railway stations were evacuated... This cut off the main north/south rail lines on both the east and west sides of Britain... [T]he M6 motorway[was also] closed off near the city of Manchester... causing traffic chaos... [on] one of the two main highways linking the north and south of the country.

...Central London was at a virtual standstill last night after suspected IRA bomb warnings closed five major railway stations in the capital as well as Heathrow, Gatwick and Luton airports... The bomb threats coincided with the Queen's 71st birthday and followed two IRA explosions and a series of hoax calls on Friday night which paralysed road and rail links in northern England.

...Fears are rising that next Sunday's London marathon may be the IRA's next target. The wrecking of the Grand National last Saturday appears to confirm a new strategy by the terrorists – maximum disruption at minimum risk to life.

...Commuter trains, London subways, key highways, and now Britain's premier horseracing event: the I[RA] can stop them all with a phone call. The outlawed group's renewed sabotage campaign in England is putting the IRA and its Sinn Féin allies back in the spotlight – as a thorn in England's side, but with no dead civilians to explain why... On Saturday the IRA forced around 70,000 people to evacuate minutes before the

Grand National steeplechase at Aintree... an event being televised live to millions in Britain and Ireland. Undaunted, organisers planned to run the race... today... amid a security “ring of steel.”

...Liverpool police confirmed yesterday that they received an IRA-coded bomb warning on the day of the Grand National re-run on April 7, but allowed the race to go ahead. Their decision not to evacuate 20,000 spectators was the first time a major public event was allowed to go ahead in the face of a recognised coded bomb threat... [Incidentally, yesterday N[Ir] marked the first anniversary of the... IRA bomb at London’s Canary Wharf which ended a 17-month truce... [W]ith peace talks at a standstill, violence on the increase and the gulf between... [the 60%] Protestant majority... and minority R[C]s widening... the Ulster Unionists (UUP), accused the IRA militants and their political wing, Sinn Féin, of trying to turn the province into another Bosnia... [The UUP] security spokesman... said... the... IRA and Sinn Féin strategy is to render N[Ir] ungovernable... so that the U[N] is called in, bypassing British insistence that the IRA end violence for good to earn a place at the peace talks table... [T]he Sinn Féin president, insisted at the weekend that Sinn Féin wanted to take part in Belfast peace talks which have done little but mark time since last June, but sidestepped questions about a new IRA truce... [However, the] IRA said last week it... would not accept any preconditions for Sinn Féin involvement... at the talks... Communal tension was vividly illustrated at the weekend when up to 1000 Protestants chanting anti-R[C] abuse marched on a R[C] church at Harryville... The Harryville demonstration effectively kicked off the yearly “marching season” by Protestants, which last year caused the worst civil unrest in decades when police banned one of its parades... and then allowed it...

[T]he powerful Orange Order... handed a letter accusing Britain of breaching their human rights to a senior policeman on Sunday. The letter of protest was prompted by about 500... police separating rival... demonstrators earlier in the day during marches in the flashpoint town of Bellaghy. Police... had feared... a re-run of last year’s violence... which... cause[d millions]... of pounds of damage... Mediators have tried to get Loyalists and... nationalists to negotiate over this year’s marches, but Orange Order leaders refuse to hold talks with... [RCs. In another development, a relation of the first RC US President, John F. Kennedy,] filed a resolution in the[US] House of Representatives yesterday urging the British Government to ban marches by a Protestant group through [RC areas]...

*T]he gulf between Protestant and [RC in N[Ir] is] so wide that it can be bridged only in people’s dreams... Drumcree is a tiny enclave perched at one end of Portadown... Last July it achieved infamy as the scene of violent confrontations... Next month a repeat performance is expected. Loyalists plan to march to Drumcree church along the mainly nationalist Garvaghy Rd. The local residents have decreed the Protestants shall not pass and to stop them are organising a fair. In the centre of the road along which the Orange bands intend to parade will be a bouncy castle of the sort familiar to anyone with children under five. The [RCs] insist it is the right of their kiddies to bounce in peace; the Protestants proclaim their constitutional right to parade wherever they wish. Neither will back down. The fear is that this time round the violence will be far worse than sticks, stones and petrol bombs. Talk of war was precipitated by the IRA shooting two Ulster police officers in Lurgan, a town 10 minutes by train from Portadown. Before the killings tension in Portadown was high; now it is boiling. [One girl, aged] 16, lives in... Lower Garvaghy Rd. She is a [RC]. In the rest of Britain, address can be a sign of social status. In Ulster it defines your brand of Christianity. So much so that [she] lies about it. She is about to leave school and is job-seeking. “I give a false address. If they know I’m a [R]C... I have no chance of a job.” On Friday, sitting in the safety of Drumcree High, the all-[RC] local school, she is wearing a school uniform of the type any self-respecting teenager gets rid of the moment they are outside the school gates. But she doesn’t change to make a fashion statement: “You have to get out of the uniform before going to town. It wouldn’t be safe not to.” At her school are... sisters of Robert Hamill whose fate gives horrible credence to her fears. Robert was set upon earlier this year by a gang of loyalists as he walked from the centre of Portadown on his way home. Eye-witnesses report that the loyalists chanted “Fenian die” as they danced on his body. A police patrol was at hand, but they felt unable to intervene. Hamill died. Next month his wife is due to give birth to their third child... [P]upils at Drumcree High have just made a video which has won first prize in the Limerick film festival. It is called *Caoimhe Loves Philip* and is a remake of *Romeo and Juliet*. Caoimhe is a [RC] and Philip a Protestant. It is set in Drumcree during last year’s riots and uses film footage of the police beating up protesters and of Orangemen giving clenched fist salutes. It is very arty, but also a statement about the Troubles. “Love can conquer all” is the message, and it has moved some parents to tears. But making a video is one thing, living in Portadown another. When asked if they would marry a Protestant, all the pupils said no. Not because they are bigots but because, they claim, there is no chance of the situation arising. In Portadown the two do not mix. Most pupils will not be around in a fortnight’s time because their parents are shipping them off to relatives in safer parts of the country... 300 schoolchildren[are to catch] a charter flight to New York where they planned to stay for six weeks with sponsor families as part of a peace programme called Project Children... [The 16-year-old’s parents] think she is going to Dublin but they have a surprise coming. “I’m not going. This is my home and I won’t be driven out. I don’t see why I should be blamed for the killings. I couldn’t help being born a [RC].” Later that evening, in a pub in a part of Portadown that [she]’d never dream of entering, sat another young girl of great courage. [This girl] is 18 and in appearance very like [the 16-year-old]. Both are... pretty... short and slight and, although of similar age and living close to each other, have never met, for the reason which should by now be depressingly obvious. Since the age of [9 she]’s played the accordion and next month will line up with... other members of the Orange Order Star of David Accordion Band. She says she will play her accordion down Garvaghy Rd come hell or high water, because that is her right as a loyal subject of Her Majesty the Queen. She marched last year and was stoned. She does not like to think what might happen this time. “Why should anyone be offended? We will be playing hymns. They are Christians, aren’t they? If they don’t like it, stay indoors.” [She] says it’s tough to be a Protestant in Portadown: “We are discriminated against all the time. At school we are not allowed to bring in sectarian literature and now they are trying to stop us marching, which is something we have always done. It’s not safe to walk in town because [RC] gangs with nailed sticks chase you. And the police always side with the[m]...” ...the... two very brave girls... in different ways are victims. But so far they have escaped injury. Not so... a 21-year-old [RC] from Belfast who made the mistake of walking down the wrong street. On Saturday night, after one drink too many, he took a stroll down Crumlin Rd. Five middle-aged men surrounded him and asked for a light. [The 21-year-old]... has a distinct accent. Identified as a [RC], he had no chance. The men tried to cut his throat, opening a seven-inch gash under his chin. They sliced into his head in two places, cut his fingers and broke his skull... He should have died, but miraculously survived... [But] he was once handsome... now his face, skull and neck are disfigured... A couple of nights after that attack... [one of Robert Hamill’s sisters –] the star of the *Caoimhe Loves Philip* video[–] had a dream: “There were all these people, [RC]s and Protestants walking together down the Garvaghy Rd in memory of all those who have died.” She pauses and smiles ruefully: “Yeah, well it was only a dream.”*

...[RC residents have] lost the bitter battle to stop a controversial Protestant march through their community... marking the Battle of Boyne, the 1690 defeat of Britain’s last [RC] king. The annual march has become a trial of strength. [RC]s say the practice smacks of triumphalism and intimidation, while the Orange Order says the march is a birthright and that the road belongs to the Queen, not to those who live beside it... Police seized control of Garvaghy Rd... before dawn. This led to clashes with [RCs] who suspected that the Drumcree Orange parade would be allowed... Several hundred protesters eventually marched, protected by one of the biggest security operations in the history of the... [N[Ir] conflict. T]he Protestants were not permitted to march behind their bands, in a concession to... [RC feeling. However,] about 400 residents kept up a din of jeers and whistles... banged dustbin lids[, and]... threw rocks and petrol bombs at security forces[, who replied with]... plastic bullets... Foreign politicians monitoring the event expressed shock at what they described as police brutality.

...Police and [RC] rioters clashed across N[Ir] yesterday in a wave of violence prompted by a Protestant... march in... Portadown... Security forces and rioters traded gunfire... [near Garvaghy Rd as a] traffic jam caused by 100... departing armoured cars... gave rioters a chance at point-blank attack for several minutes... The[widespread] display of firepower by the [IRA]... was the biggest in years and the outpouring of nationalist fury

appeared to mark the end of the honeymoon with Britain's new Labour Government... While the violence continued on the streets, the British N[Ir] Secretary... was embroiled in a controversy over leaked documents purporting to show that a decision to allow the... march down Garvaghy Rd was taken weeks before it was announced. A report in the *Independent* quoted a confidential Government document as saying the decision was the "least worst option" and contradicted [the secretary's] public version that the move was a last-minute decision after mediation attempts failed... [T]he... chairman of Sinn Fein... said the document showed Britain was guilty of "an outrageous example of double speak."

...The British N[Ir] Secretary... has said that she failed in the way that she handled negotiations for the Garvaghy Rd march last weekend... [S]he was trying to negotiate an agreement on two parades planned for this weekend which police fear may repeat the pattern of last weekend... But... it would be difficult to make progress... [RC] residents groups in the Lower Ormeau Rd are refusing contact with [the secretary] because of her failure to get the Portadown parade rerouted or to tell Garvaghy Rd residents personally of the decision to allow it... Nationalist areas were calmer yesterday, with only isolated incidents of shooting and petrol bombing... According to police figures... [arsonists] set fire to three buildings belonging to the... Orange Order... over the weekend... [while hundreds] of cars, trucks and buses were hijacked and some torched... In the border town of Newry alone 221 vehicles were hijacked [during a] 36 hour... orgy of violence that included the looting of the town's biggest supermarket... [Amongst the hijacked cars was one belonging to a 17-year-old Protestant who was] forced... to parade around an Irish nationalist estate playing hymns on his accordion while... [RC] youths bent on revenge... pelted him with bricks and stones. The youth said he believed he was saved from further punishment because an Army helicopter spotted the incident.

...They're both 14 years old, ardent soccer players and lying in hospital beds... [The RC boy] is in a coma after being struck on the back of the head... by a plastic bullet during rioting between youths and police in Lenadoon, a grim public-housing project on the edge of... west Belfast... [The Protestant boy] may have his left arm amputated after a bullet struck his shoulder and punctured a lung about the same time as he stood atop a fence that separates... Protestant and... [RC] sections of west Belfast. Protestant youths had been trading rocks with [RC] youths on the other side, and both groups were watching adult [RCs] assault a police station with gasoline bombs further up the road... His family are demanding an investigation into why he was hit by a... hard cylinder 10cm long and 2cm thick that leaves the barrel at more than 200km/h. British-style plastic bullets are supposed to be fired below the waist to knock down rioters, but only if they're in the act of launching an assault. Seventeen people, many of them teenagers, have been killed by plastic bullets since their introduction in 1973... Loyalists[were] not... involved in any of the weekend violence, security sources said... [However, in] south Belfast the body of a Protestant youth was found yesterday near the site of a small explosion. Police... did not believe anyone else was involved in the death[, but]... they could not confirm that the youth was killed by a bomb he was handling.

...The moderate... leader... of the... nationalist... Social Democratic and Labour Party... hailed the "moral courage" of the Orange Order for calling off four controversial marches... after a week of... tumult... culminated at the weekend in tense but peaceful parades by pro-British Protestants... Ireland... Britain... and... the U[S] also... praised the... Orange Order... The British [PM]... signalled that Sinn Fein could enter... peace talks six weeks after an unequivocal end to IRA violence.

...I READ – in these pages – that... the new British [PM] goes to Mass regularly with his wife. Mrs [PM is a RC while Mr PM] is an Anglican... The very fact such journalistic asides are no longer news, is an indication of the distance we have travelled on the road to religious toleration. Unfortunately, there are many in N[Ir] or in the former Yugoslavia who have yet to start the journey.

...[IRA] supporters and the British Government were expected to relaunch negotiations today... The new British [PM]... authorised the negotiations on his first visit to Belfast in expectation that a new cease fire might be on offer... But the leader of Sinn Fein... emphasised that a new cease fire would only be on offer if the British promised "with absolute clarity" that his party... would be admitted immediately to negotiations... In that event, leaders of the province's... Loyalist groups... responsible for killing about 900 [RCs] since the 1960s, and... blamed for a string of recent... bomb attempts... and... shootings of... [RCs,] would be certain to walk out... Outlawed Protestant "loyalist" guerrillas have also urged Britain not to dilute its demand for an unequivocal IRA ceasefire... Meanwhile, the two Sinn Fein leaders, who won seats in the general election have failed to overturn a ruling by the Speaker... barring their use of offices at Parliament unless they swear allegiance to[the] Queen... Sinn Fein officials said the party would now consider what legal avenues were open to it.

...Dublin and London have agreed a joint stance on guerrilla disarmament that could pave the way for progress in dead-locked[N[Ir]] peace talks. The Irish [PM]... said Sinn Fein now had to choose between the political path and the dual approach of political action and violence that it had been pursuing. Sinn Fein is barred from the multi-party discussions because the IRA refuses to restore a truce it broke in... 1996. Earlier Sinn Fein's chief negotiator... had said the disarmament issue remained a major stumbling block in peace efforts. He said Sinn Fein wanted an end to violence... [but] Republicans opposed to British rule have always maintained that the IRA will not call a ceasefire if they suspect the negotiations will be turned into a "decommissioning conference." Meanwhile, Britain has said it would not permit Sinn Fein and the IRA to hold the peace process to ransom... The IRA's murder of two police patrolmen last week, which was followed by two suspected Protestant bomb attacks on [RCs], has clouded hopes of political progress.

...Unionist politicians... yesterday appeared philosophical about proposals from the British [PM and outgoing Irish PM]... to revive the Irish peace process... They are proposing that the IRA and its rival Protestant guerrillas should give up their arms in stages while the talks proceeded. The idea – known as parallel decommissioning – was rejected last year by [the British PM's] predecessor... who was under pressure from unionist and loyalist politicians... whose support he needed in Parliament. With [the Labour leader's] landslide election in May, the loyalists have lost much of their influence... [The] leader of the... [UUP] said parallel decommissioning was not his party's "first preference" but it was prepared to accept it... [The] Sinn Fein leader... pledged to study the... proposal carefully. But [a reverend who is the] hard-line Democratic Unionist Party leader... accused London and Dublin of having "given in to the IRA" and said his party might quit the all-party talks... [In further news from Britain, the] Labour Government yesterday fulfilled its election promise to ban arms sales to countries with poor human rights records that might use them for internal repression. Britain, one of the world's leading defence exporters, would also turn down licence applications if there is a clear risk that the arms will be used aggressively against another country, the Foreign Secretary... told the British Parliament. However, he disappointed arms campaigners by refusing to withdraw more than 21,000 existing defence licences, including one for the controversial sale of 16 Hawk jets and armoured vehicles to Indonesia. Human rights activists... contend that the jets have been used against opponents in the breakaway East Timor region... The[British] Government said it had no firm evidence Jakarta had used Hawk jets in East Timor. Moreover, its lawyers advised it was not realistic to revoke licences issued by the previous Conservative administration... In a related move, [the Foreign Secretary] said that Britain was also banning the export in any circumstances of electro-shock batons, stun guns, leg-irons or similar instruments of torture.

...[the IRA] used the liner Queen Elizabeth 2 during the 1970s to ship arms... The... *Sunday Times* said... "tonnes of weapons provided by Irish-American sympathisers" had been brought over from New York to Southampton... [after] IRA operatives... infiltrated the crew.

...The... IRA... called a ceasefire at the weekend to its 28-year war against British rule... [Unfortunately,] Anglo-Irish proposals that [N[Ir]] guerrillas should disarm while taking part in peace talks were defeated yesterday in a setback for attempts... to end... [the] conflict. "...All three unionist parties voted against," said [a spokesperson for] the Ulster Democratic Party.

...Leaders of the... Sinn Fein party are finally to take their seats around a huge square table – but who... among nine other parties... that began... the talks... in June 1996... will be there to meet them? That's the big question as Belfast's on-again, off-again negotiations resumed yesterday... The... [UUP] are internally divided over whether to confront Sinn Fein directly or to withdraw from a process many fear will give concessions to

their enemies. The... [UUP] is expected to remain officially in the process but refuse to sit down opposite Sinn Fein in the main conference chamber, where parties have been allocated five or six chairs each. That likely policy of staying under one roof, but not in the same room, would be followed by representatives of [NIR's] two main pro-British paramilitary groups. It would hamper the prospects for early progress without scuttling the talks entirely... Two harder-line Protestant parties... [the] Democratic Unionists and... [the] United Kingdom Unionists[(UKU)], have vowed not to show up at all and say the [UUP] would be playing with fire if they stay.

...[one] of Britain's most popular television soap operas has provoked hundreds of messages from angry viewers complaining that recent episodes have portrayed the... Irish as drunken and backward... [M]any Irish... are[already] the butt of bad jokes portraying them as backward and slow-witted... Newspapers in Ireland united to condemn the episodes. The *Irish Independent* newspaper's television critic... said he was so "gobsmacked" that he forgot to take notes... A spokeswoman for the BBC, which has apologised for upsetting the Irish people, [confirmed] the broadcaster had received hundreds of complaints since the first two Irish episodes of *Eastenders* were screened this week. But she said there were no plans to withdraw the third episode, to be shown early today... [In related news,] British and Irish Government officials tried again last night to coax reluctant unionist leaders to join their arch-foes Sinn Fein at historic... peace talks.

...A... bomb which exploded outside a border market town... yesterday blew the... peace process off course. Protestant politicians extended [their] talks boycott... The estimated... 170kg van bomb, which went off as police were evacuating the area... followed a telephone warning to the BBC in Belfast. The bomb caused extensive damage to a police station and the surrounding area but no human injuries. Several people suffered shock and up to 400 cattle in a nearby market suffered blast wounds. Senior security sources blamed the attack on the republican splinter group the Continuity Army Council, which failed to sign up to an [IRA] ceasefire declared on July 20. But... [the] leader of the... [UUP] openly accused the IRA, despite denials from the... group... He later said the unionists would join the peace talks "to expose their [the IRA's] fascist character," but would not say when... The timing of the blast, on the second day of peace talks was interpreted by all sides as an attack on the negotiations... The paramilitary Loyalist Volunteer Force threatened to "step up attacks" in response to what it called "a final push by the republicans to bring people of Ulster into a united Ireland." ...The next session in the talks has been postponed... to find more time to persuade the unionists into full talks.

...[the British PM has] pledged his commitment to securing an agreement on [NIR's] future by May[1998 as] long-time foes finally agreed to full-scale peace talks... Britain and Ireland hailed the breakthrough... after... seven hours of tense talks... [and] 16 months of squabbling... as an unprecedented opportunity to cement peace.

...The first full-scale political talks on [NIR] began yesterday... Officials from eight political parties... sat down together for substantive negotiations for the first time since 1921... "Too many generations have grown up in an environment of violence and political stalemate, and only the middle aged and the elderly can now remember a time before 'the Troubles'," said the Irish justice minister... "We can set N[IR] on the way to a fundamentally better, happier and more stable peaceful future... I believe agreements can be reached,"... said... [the] British secretary of state for the province... But... [the] Democratic Unionists and the U[KU]... are boycotting the talks saying they are part of a secret agenda to end British rule and merge[NIR] with the Republic of Ireland... And unionist suspicions that the IRA ceasefire is a mere tactic rather than a genuine commitment to negotiations provide an additional complication... "The only solution for dealing with the IRA is to kill 600 people in one night – let the UN and [US] make a scene and it is over...," ... a former defence minister... [who is] still a member of Parliament, told a meeting... Sinn Fein [confirmed] they are joining in with the aim of smashing the union between Britain and... [NIR. Its] leader... said... British rule... had manifestly failed.

...Ireland is prepared to renounce its historic claim to sovereignty over... [NIR, the new Irish PM] said yesterday... A settlement is likely to hand the province a substantive devolution of power from Britain, while it remains within the U[K. The]... settlement is also likely to see the setting up of a cross-border authority promoting co-operation with Ireland in areas such as agriculture, energy, health and education.

...[lawyers begin questioning a former Irish PM, aged 74, today about financial gifts he received during his political career. The accused is a former leader of the country's biggest political party, the centrist Fianna Fail, and was PM three times, in the early 1980s and early 1990s. He resigned in 1992 and the party is now led by the new PM. Since the Irish Parliament set up the latest tribunal, he's mounted several legal challenges against its investigation of his finances. He is also facing criminal charges of hindering and obstructing the first tribunal – which established that he received 8.5 million punts, including 1.3 million from a businessman. Revelations about the scale of the money he received from top businessmen in Ireland and abroad has shocked the country.]

...people across the US are in shock after 'police recently had to break up a fight between two Bible salesmen in Lincoln County, Nebraska. The argument began with the two salesmen fighting a turf war over the best sales pitcher, and culminated in their duelling with baseball bats. The Bishop of Nebraska later offered to "nut" journalists pushing him for comment on the incident'. By the way,] **Texans need not feel naked in church anymore. A new state law allows individual churches to decide whether worshippers can attend... services with a revolver at their hip.**

...[from the state of Arkansas comes 'news that ministers of religion might be permitted by their church to carry weapons to defend their flocks (and their donations). In a country where overt piety and wanton murder co-exist in a symbiotic relationship, it is entirely logical that the Christian pulpit should become a citadel. Flak jackets and steel helmets will follow, no doubt. But when the last taboo is removed from men and women of God, turning the other cheek becomes an option less easy than loosing off a few rounds. Then, presumably, the dog-collared gunslinger is supposed to dash to give spiritual succour to the afflicted one, or at least to pray over the corpse of what might well have been a tragic loser driven to desperation by a greedy society. I am not sure whether saving souls fits into this scenario. "Smite the heathen!" is an inspiring war-cry. But in these violent times, the heathen is only too likely to smite back, what's more with assault rifles and grenades. And since, in the Land of the Free, the criminals greatly outnumber the clergy, the cynical military observation will be widely quoted: "God is on the side of the big battalions." However, the notion of pistol-packing parsons is not as grimly farcical as it might seem, and indeed in the present state of America there is much to be said for the argument in favour of the right of clergy people to bear arms. Oliver Cromwell's ranting Ironsides emphasised their sermonising at swordpoint as did, and do, zealots of other faiths.]

...on this day in 1649] **Oliver Cromwell, the leader of the victorious parliamentarians in the English Civil War, besiege[d] Drogheda in Ireland and massacred its inhabitants...** [This year, the anniversary] came a day after the UUP leader... accused the U[S] Administration... of "naivety" following its decision to drop the IRA from a list of terrorist organisations barred from raising funds in or entering the U[S].

...In a major show of unrelenting grief and anger, more than 20,000 [RC]s marched peacefully on Sunday in memory of 13 demonstrators shot dead by British troops... Those killings at the end of a civil rights march... galvanised [RC] support for the outlawed I[RA], which launched its violent campaign against British rule of N[IR] in 1970... IRA-allied Sinn Fein party... leaders... and [RC] moderates jointly called for a new international investigation into Bloody Sunday to refute the original British inquiry, which concluded that soldiers fired with justification and should not face charges because some victims could have been armed – a claim bitterly disputed by locals, who say the troops fired first...

EVERYONE who was in Londonderry on that day remembers the bullets. Terrified civilians... at a rally protesting at Britain's internment of several hundred [RC]s opposed to rule from London... crouched and crawled spider-like, nostrils in the gutter, as... members of Britain's crack Parachute Regiment, sent to keep the peace... fire[d] 108 shots in less than 15 minutes, killing 13... and wounding 17, one fatally... Bloody Sunday was a defining moment in the present era of conflict over British rule in N[IR]. Security analysts and politicians concede that it marked the end of a sort of phoney war and the start of all-out violence. Disaffected [RC] youths swelled the ranks of the... IRA... because of the incident and joined its hit-and-run campaign to drive Britain from Ireland... Britain called in its Lord Chief Justice, [who]... exonerated the soldiers... Silver-haired, urbane, courteous and commanding, it was soon evident he spoke a different language from the local [RC]s, who saw themselves as fighting a civil

rights struggle as just as that of American blacks. [RC]s were unanimous in calling the shooting unprovoked murder and ridiculed the Army version that troops themselves had come under heavy fire... To relatives and the people of Londonderry, Bloody Sunday is an open wound which will not be healed until Britain admits that its troops were culpable... "I think it is imperative that the British Government quite unequivocally admits what happened,"... says... [a] respected Irish churchman... [who] tended... amateur boxer Jackie Duddy... the youngest to die that day... "In other words that paratroopers deliberately killed innocent civilians – picking them out and targeting them individually – and apologise for it."

...The British Government yesterday rejected a call for a formal apology for the shooting of unarmed civilians in Londonderry... 25 years ago...

[RC] petrol bombers ambushed police in Londonderry... yesterday in a fresh flare-up of violence triggered by a march... The annual Lundy's Day demonstration by the Protestant Apprentice Boys organisation marks the shutting of the city's gates in the face of [RC] forces in 1688. It led to a siege the next year that cost thousands of Protestant lives and which Protestants have regarded as one of the defining moments in their history in the northern sector of the island. As dusk falls on this day each year, they burn a 20ft-high effigy of Colonel Lundy, the Governor of the besieged city who has gone down in Protestant lore as a traitor.

...Protestant demonstrators yelling "traitor" jostled and jeered [the British P]M... after his historic hand-shake with [the] Sinn Fein president... the first meeting in more than 70 years between a British P[M] and an Irish republican leader. Women donned rubber gloves and thrust their hands at [the PM while he]... went on a Belfast shopping centre walkabout... "You are contaminated. You have shaken hands with a murderer[," they screamed at him. He]... also met leaders of seven other parties involved in [the] peace talks... British officials said [the PM] had told Sinn Fein leaders that they and [the] other parties... had a once-in-a-lifetime chance to shape history. "If we don't seize the opportunity now, we may not see it again in my lifetime,"... [Tomorrow the Sinn Fein president will visit] 10 Downing St, [the] traditional home of British [PMs].

...Punching the air in triumph and declaring it a "moment in history," [the] Sinn Fein leader... became the first IRA sympathiser to meet a British [PM] in London in 76 years. Protesters shouted "murderer" through the railing gates at the end of Downing St... [while, just] metres away, supporters waved the... Irish flag... The meeting... was heavy with symbolism... [but] appeared to have made no substantive difference to the talks in Belfast... Meanwhile, an IRA convicted double murderer who escaped from [NIr's] Maze prison on Wednesday remained on the run. [The IRA leader publicly wished the fugitive] "good luck" before meeting [the British PM] – a remark British officials said "had not been helpful."

...In the wake of weekend rioting a leading Protestant in [NIr] has agreed that he may meet [the] Sinn Fein leader... It was a major shift for... [the] head of the... [UUP]. A day earlier he had rejected [the Sinn Fein leader's] offer of a meeting as a "silly little stunt." However... the weekend violence in Londonderry which left six people injured... was the worst... seen since the [IRA] declared a ceasefire in July, and gave a clear warning that the peace process would not be quick and trouble-free.

...[NIr's] chief... Protestant leader... yesterday scotched speculation that he might hold talks with the leader of the IRA's political arm... "I have no intention this week, next week, next month, so far as one can see into the future of having a private meeting," [he said. The UUP]... leader... had seemed to raise the possibility of an encounter... in a weekend interview with Irish television but [he] told reporters he had been misinterpreted.

...[NIr's] political parties have failed to agree on a crucial mechanism that would break an impasse and enable peace talks to move forward... [After] hours of wrangling, Protestant and [RC] leaders could not settle on a list of key issues to be tackled but... said they would resume broadly based talks next month... Earlier [in the day] a man arrested in N[Ir] last week was flown to London for questioning by the police about the bombing... in London's Docklands business district on February 9 last year...

Three IRA guerrillas have been sentenced to a total of 62 years in prison after being found guilty by a British jury of plotting a... massive bomb attack in London's Docklands area... [By the way, a Protestant] guerrilla chief... shot inside N[Ir's] top security jail... was a maverick who was hated by the Irish republicans who killed him and regarded with both fear and awe by fellow pro-British extremists. Security forces said he was shot five times in the back... by two inmates of the Irish National Liberation Army (INLA)... as he waited for a minibus to take him to a visitor's area. The prison holds some 500 inmates who are members of paramilitary groups, both loyalist and nationalist, making it the largest detention centre for convicted terrorists in Western Europe. The killing caused rioting in Belfast and in an apparent reprisal shooting attack suspected Protestant extremists killed a man and wounded three others... [including] a 14-year-old boy... outside a [RC] owned hotel in Dungannon... [K]nown as "King Rat", the assassinated guerrilla chief was head off [the] 100-strong... Loyalist Volunteer Force (LVF)[, which has been opposed to ceasefires]... since October 1994. He was sentenced by a court last March to eight years in prison for making death threats... Both the INLA and the [IRA were after him]... He survived six assassination attempts. But it was his own ideological colleagues, the... UVF... who "sentenced" him to death and ordered him out of N[Ir] in 1996... "His group was responsible for between a dozen and 20 sectarian murders," said... the *Irish Times*. "The... [RC] victims range from young women to elderly people... Almost none of them had any connection with republicanism... His sole role was to create tension,"... Hooded gunmen from the... [LVF] guarded his coffin... as British and Irish politicians embarked on a damage control exercise... Three members of... the outlawed... INLA... were last night... charged with the murder... An investigation has been launched at the Maze prison... - 1997

[No-one has claimed responsibility yet for the 'firebombing of a house that resulted in the deaths of three RC children,' but] Pro-British extremists yesterday said they were behind a New Year's Eve pub shooting in N[Ir] in which one man was killed and five others injured. Members of the... LVF... said they were avenging the assassination of their leader... and warned: "This is not the end." ...the minister responsible for the province... [said Britain] will reinstate daytime army patrols in Belfast... [after] a negotiator for the... Ulster Democratic Party who spent 18 years in prison for butchering a [RC] politician and his Protestant girlfriend with knives, said... that the group was considering "a return to war." ...young children from Belfast are used to seeing soldiers with guns on the streets...

For the first time in the history of N[Ir], eight parties from across the political divide [have come] together to sign a peace deal... The... Good Friday peace agreement... [that] will be put to a referendum in N[Ir] and the Irish Republic on May 22... still needs a lot of work... The agreement provides a return to self-government in N[Ir] after... years of direct rule from London, a sharing of power by Protestants and [RCs], an end to the violence by the IRA and Protestant paramilitary groups and new links between [NIr] and the Irish Republic... Ireland's history of bitterness goes back... [to at least] 1541 – when Henry VIII [declared] himself King of Ireland... People left their homes in mixed areas of... [NIr when the] present-day... Troubles began. Whole streets were engulfed in flames as families fled... for the safety of one-religion ghettos. It was often innocent victims who got caught in the violence. For example, in one IRA raid, the target – a bus driver who was also a member of the Ulster Defence Force – escaped unharmed, but a 14 year old schoolgirl died when his bus was blown up... Girls and adolescents are often daubed with paint or have their heads shaved... Children aged 12 and less are often victims of punishment attacks which used to be carried out with guns but are now administered with nail-studded baseball bats... What effect do you think this random violence would have on childhood? ...A whole generation has been raised in a climate of hatred, anger, fear and bloodshed. More than 20[%] of children in N[Ir] have lost a family member or friend in the conflict.

...A 13-year-old boy was beaten with baseball bats by suspected guerrillas in the latest of N[Ir]'s so-called punishment beatings... "Nothing would justify this type of assault, particularly on a child. It has all the hallmarks of a paramilitary-style assault,"... a police spokeswoman said.

...Nearly 200 children have ended up in hospital after being beaten by guerilla groups in N[Ir] since... April last year. The N[Ir] Civil Rights Bureau said 4000 children under the age of 18 had been victims of I[RA] and loyalist violence in that time. [However, children aren't the only victims. "Our father lost both his legs after being mistakenly blamed for passing on information," says one family. His perpetrators, who remain free

because the family is too scared to testify, regularly walk past him and his wheelchair. One analyst says: "In peace, the IRA is turning on its own people in an attempt to terrorise the population into staying under its control, while also getting into the drug industry by taking protection money from the leaders of drug rings.""]

...No group claimed responsibility for the latest... punishment attack... on a 23-year-old... Police said [the RC]'s attackers battered his legs and impaled his hands onto a fence with nails. Firefighters took him to the hospital with the fencing still hammered to his hands... The... peace agreement... obligated rival armed groups to fade away, a moderate [R]C... leader declared as the outlaws' latest victim recovered from h[is] h[or]rific wounds... The... [leader] yesterday joined calls from Britain and Protestants for the I[RA] and other illegal groups to disarm and shut down. He was addressing the weekend conference of his Social Democratic and Labour Party, the moderate... rival to the IRA-linked Sinn Féin...

[The British PM] urged extremists to "hear the voice of reason," but left N[Ir] yesterday] with Protestant marchers and [RC] protesters still on a stubborn collision course. The Orange Order... is threatening to defy an official ban on its annual... Garvaghy Rd... parade this Sunday... Anti-Orange protesters there have sat down on the road for the past three summers, forcing authorities to decide whose rights should prevail. The confrontation has triggered widespread violence each year, and appears to be doing so again... In 1995... the protesters agreed to wave placards from the curb as the parade passed. In 1996 police blocked the parade but caved in after... Protestants rioted elsewhere for four nights. Last year authorities opted to permit the parade and saturate Garvaghy Rd with riot police and soldiers, which sparked four nights of widespread [RC] rioting. In all cases the... [RUC] has prevented direct clashes between Orangemen and Garvaghy Rd [RCs]. Orange leaders vow this time to rally for weeks at Drumcree if necessary to wear down police resolve. They refuse to enter direct negotiations with the protesters... The... conflict [threatens] to torpedo a hard-won accord...

British authorities in [N]Ir held firm under Protestant pressure yesterday after a ban on a controversial parade passing through a [RC] district triggered widespread street violence... Portadown itself was calm... a day after thousands of Orangemen... named for their allegiance to William of Orange, a Protestant king who... [lived] in 1690... were prevented from marching down Garvaghy Rd by a massive metal barrier, a moat and lines of barbed wire fences erected by British troops.

...The Drumcree siege... may be over, but the bitter legacy... lives on in Kilkeel, a thriving fishing port in South Down. Throughout the marching season, the centre of Kilkeel has seen scores of Orange and loyalist marches... [but] on August 15 – two nationalist bands, along with the... Ancient Order of Hibernians, will take their traditional route through the mainly Protestant town. Even those unionists who support the right of the [RC] order to march through Kilkeel are worried that extreme loyalists will cause disruption, in retaliation for the Government's insistence that Orangemen could not march down... Garvaghy Rd... Twelve local Protestants[, including four children, were]... killed by the IRA during the Troubles.

...Residents of a county in the front line of the Troubles have yet to see a peace dividend a year after an acclaimed deal... Soldiers call it bandit country. Locals call it God's country. Strangers shudder at road signs warning of IRA snipers and stare at the British Army helicopters buzzing over South Armagh. Rarely is the symbolism of and sympathy with the I[RA]'s fight against British rule more evident than in County Armagh, whose wriggly border marks the end of N[Ir] and the beginning of the 26-county Republic... The snipers went off duty when the IRA called a ceasefire... in 1997, easing the path to peace. But constant British surveillance continues, with roadside cameras and a network of 33 watchtowers to aid the Army and R[UC]... "It seems as if the Army and RUC want to rattle cages until something happens,"... But relentless IRA attacks which won South Armagh its reputation will take a long time to be forgotten – most notoriously, the Kingsmills massacre of 1976, when 10 local Protestants were dragged from a mini-bus and gunned to death... [T]he official view[is] that the checks help control dissidents – like the Real IRA...

At least 28 people were killed... when a car bomb tore apart the... Omagh... town centre... Many of those slain... were unwittingly evacuated closer to the bomb by police acting on a misleading phone warning... The streets surrounding the bomb site were strewn with glass and rubble and streaked with blood... "There were limbs lying about that had been blown off people," [a witness] said, noting that one young pregnant woman had lost her legs... The dead included both Protestants and [RCs], nine of them children – including a toddler and a Spanish pupil... No group claimed responsibility for planting the 220kg bomb in Omagh, which was crowded with weekend shoppers and families attending a festival.

...The momentum for peace in N[Ir] is gathering pace with key Unionist and Republican leaders setting a date for an historic meeting... tomorrow... and the so-called Real IRA... [-] the organisation that... [planted] a bomb in the town of Omagh last month... [-] declaring a ceasefire... The Real IRA... broke away from the mainstream [IRA] in opposition to its July 1997 ceasefire... The *Irish Times*... reported last week that the mainstream IRA had visited individually members of the Real IRA and told them to give up their terror campaign... [The Irish PM] said the Real IRA... ceasefire announcement... was important and positive... But he made clear the British and Irish Governments remained determined to track down the Omagh bombers.

...Police hunting... the Real IRA... bombers... [responsible for] the deadliest attack in three decades of conflict... arrested 10 people yesterday in dawn raids north and south of the Irish border... The suspects were held under tough new laws rushed through the British and Irish Parliaments to crush splinter groups opposed to the... peace deal... [□ The] pregnant woman who survived... the... explosion... [in] Omagh... which left 29 people dead and more than 250 injured... has given birth to a healthy baby girl.

...NEVER have the Troubles in N[Ir] seemed more hopeless. We have become used to seeing terrible images from Belfast. But the sight of terrified little girls shrinking from missiles and filthy verbal abuse as they make their way to school is one I won't forget... A group of Belfast protestants say [RC] mums and dads take their girls through their enclave to the Holy Cross primary school to provoke them. They say the kids should go the long way round – where they won't offend protestant sensibilities. The army was called in to protect the kids. Just as well – a pipe bomb thrown into the crowd of children mercifully missed them but injured a soldier. What's odd is that the protestant men and women generating this terror are parents. They don't fit the stereotype of radical extremists. I used to think the trouble came from minorities on both sides – young men desperate to prove themselves. But the hatred is so ingrained that ordinary people think nothing of killing little girls because they're [RC]. And it won't stop. Can you imagine these girls ever seeing protestants as decent?

...N[Ir]'s rival communities will be symbolically united tomorrow when [their] Protestant First Minister... and [a leading RC] statesman... receive the Nobel Peace Prize... [for] "their efforts to find a peaceful solution to the conflict..." But back home, the honeymoon is over for an agreement they helped broker. The hard-won peace process is bogged down in wrangling and acrimony. Pro-British and pro-Irish militias operate truces, and hundreds of imprisoned extremists have been freed under the landmark agreement. But political momentum has slowed amid suspicion and squabbling... People are heartened that the guns are silent, but accord supporters are weary of the bickering. "...Agreement?" snapped a... waitress... "I call it the Disagreement." ...[two] leaders of a N[Ir] peace movement that later ran out of steam, were awarded the prize in 1976.

...Milestone on long road to Ulster peace... N[Ir] is heading for a new era of self-government... following the weekend decision by the U[UP], the largest Protestant party, to join a government that will include Sinn Féin... Each party in the assembly will nominate ministers to the first devolved government for N[Ir] since 1974. The next step will be for the British Parliament to transfer home rule power to Belfast... But unionist leaders warned that the deal would collapse if the IRA did not start to hand over its weapons soon... The Belfast government should be fully operational by Thursday. At that point the IRA is expected to name a representative to discuss with a "decommissioning" commission the practicalities of getting rid of its weapons. The following week this commission... will report on its talks with paramilitaries... [then] set out a timetable for disarming.

...N[Ir]'s First Minister... says he believes that a key report to the British and Irish Government has dashed hopes of an early handover of arms by I[RA] guerrillas. The minister, who has threatened to resign over the arms impasse, was last night waiting to hear whether Britain would intervene by suspending the province's... two month[old]... coalition Government... But Sinn Fein has warned any collapse in the assembly was likely to lead to the IRA breaking off talks with the arms commission... The IRA has always equated disarmament with surrender.

...Protestant and [RC] politicians have thrown down gauntlets to each other to save peace in N[Ir]. Majority Protestants say IRA refusal to give a clear timetable for disarmament is to blame. [RC]s blame what they say is Britain's premature suspension on Saturday of the province's power-sharing Government. But with the tussle of wills over the latest crisis... just starting, both sides have... made clear nothing is going to be picked up for weeks at least. The result is that the[peace] agreement has descended into limbo... The new institutions which have been placed in cold storage had seemed to offer the chance of a new beginning. Now they have gone, and no one knows for sure whether they can ever be brought back.

...The I[RA] was smuggling guns and heavy weapons into Ireland and N[Ir] while also negotiating peace, the *Sunday Times* alleges. The newspaper says Irish police and the... [FBI] are investigating claims that the paramilitary organisation shipped in part of a 20-tonne cache of weapons last year... The report came amid crisis in the N[Ir] peace process – after London suspended a... power-sharing Government... because of a lack of IRA disarmament. The IRA responded by breaking off talks with an international disarmament commission... The reports will fuel... unionist... anger...

The discovery of two murdered young men by a country roadside has again raised the spectre of violence in N[Ir]. Their wounds were so extensive that police could not immediately confirm the cause of death... [A]nalysts say instability will increase if the... killings are confirmed as part of a loyalist feud... Richard Jameson, a reputed leader of the Ulster Volunteer Force, was killed last month... The rival L[VF] denied widespread rumours that it was behind his murder, but Jameson's relatives, while denying he was in the UVF, insisted the LVF was to blame.

...A human rights group[has] accused members of the Belgian [RC] clergy of protecting two Rwandan nuns allegedly responsible for... the deaths of up to 6000 Tutsis... during the 1994 genocide in Rwanda. London-based African Rights... called on the Belgian judicial system to prosecute the two nuns[who]... have been living at the Benedictine order in Maredret... since August 1994. The order declined to comment...

The... Pontiff, who... le[ads] the world's one billion [RC]s... is expected to officially ask forgiveness for past... [sins of the RC] Church... next year...

Pope John Paul is a great man, possibly a saint, certainly one of the most effective popes in history. But he is also a puzzle and a problem. His papacy, which began 20 years ago, falls into two halves. In the first, the focus was the communist adversary. Exactly what part the Polish Pope played in bringing about the collapse of the Soviet empire with hardly a shot fired will be variously estimated by historians. "Everything that happened in Eastern Europe would have been impossible without the presence of this Pope," [the last Soviet leader] has written. In the second phase, the adversary has been the permissive capitalism of the Western democracies, and here the Pope has been less successful. He has been rapturously received almost wherever he has gone, and his message respected and admired – but from a distance. This discrepancy between the reception of the singer and that of the song is part of the puzzle... No one has done more to mount an ethical critique of global capitalism... and during his papacy the[RC] Church has everywhere confirmed its concern for the poor. He has tirelessly promoted the religious liberty which a previous Pope rejected as "madness," while the doctrine of human rights, which the[RC] Church used to spurn as the bastard offspring of the French Revolution, has become the platform of his preaching to the world. Far from being always a conservative, in important ways he is an innovator: his international journeys are one example and his determination that the Church should apologise for the sins of its history, despite the misgivings of some of the cardinals, is another. Why then are there such reservations about this papacy on the part of a significant number of [RCs], who look to a different future from the one John Paul presents? That is the problem. Perhaps the Pope has been almost too confident in his role. He presided over a huge reassertion of centralised papal authority. His advocates hailed it a "restoration," and they were right. It was achieved through the choice of handpicked archbishops and bishops and the muzzling of progressive theologians. The disciplining of progressive theologians began in his very first year, when... [licences to teach were withdrawn and priests were] excommunicated. The theologians were put on notice that they were not the teachers. How can a Pope whose humanity and acceptance of suffering inspire many to love him, who forgave his would-be assassin, who has been an evangelist to the ends of the Earth, show such inflexibility in the exercise of his papacy? ...The cardinals who elected... [him] 20 years ago wanted a strong Pope. They got one, but cannot have foreseen the rest. They did not guess that riding on the back of a centralised papal authority, the papal service would sometimes treat them, in the words of one American cardinal, "like altar boys." Twenty years later, it would seem that strength alone is not enough. One highly successful papal journey was to Britain in 1982, but that has not prevented Mass-goers in England and Wales declining by 50[%]. Latin America has been one target area for papal journeys, but the[RC] Church has suffered there one of its greatest defeats since the Reformation. Lacking the priests to celebrate the Mass, the heart of [RC] life and worship, many [RCs] have deserted to the evangelists and sects. Because of the lack of priests, the bishops of Brazil have been among those who have asked to be able to ordain mature married men – in vain. It can be dangerous to raise these matters with the Pope. At one meeting, it is reported, a Spanish cardinal told the Pope that "as a bishop I feel forced to make you aware that there are many problems concerning the question of celibacy and the shortage of priests." John Paul II replied: "And as a Pope I feel forced to dismiss you." Such inflexible leadership produces unreliable consensus. The Second Vatican Council, called by Pope John XXIII to update the[RC] Church, did not envisage bishops being treated in this way. According to the council doctrine, they govern the Church with and under the Pope. The council did not say that the bishops could join the team only if they said the same things as the captain... But any harm can be repaired by his successors, who will need to govern in a less monarchical style.

...Putting perhaps one of his final stamps on the group that will elect his successor, Pope John Paul created 22 new cardinals yesterday and asked them to help him guide the[RC] Church into the next millennium. Under clear skies in St Peter's Square, the 77-year-old Pope gave... the new cardinals... their red hats in a solemn ceremony known as a consistory.

...The Pope, in a highly unusual move, has named a further five new cardinals, following the appointment of 37 last week, and also disclosed the names of two cardinals he appointed secretly [three years ago]... to protect the prelate or the local church... Since all... of the men named yesterday are under 80, the number of "cardinal-electors" rises to an unprecedented 135, and the College of Cardinals membership to 185... Addressing pilgrims and tourists in St Peter's Square, Pope John Paul said he was again making an exception to a rule that no more than 120 cardinals – and only those under the age of 80 – should enter the conclave to elect his successor after his death.

...IMAGINE this! Pope John Paul II, finally overcome by age and illness, is dead. Mourning is for later in the busy corridors of the Vatican, even if business is being done surrounded by a respectful hush... A great old man has died and gone to his God, but the church on earth must be as eternal as John Paul's soul. They are playing politics with a viciousness that would put almost every other assembly on earth into holy dread and fear. From all over the world, the red hats of the princes of the church have flown to the meeting of the College of Cardinals that will elect the successor, gazing for inspiration from time to time at Michelangelo's dazzling allegory on the ceiling above them in the Sistine Chapel. On and on they sit – it took three votes and endless intrigues before... [electing] Pope John Paul II – until finally, having decided, the paper is lit to create white smoke from the chimney and the new pope has been examined by the youngest cardinal present through the chair with a hole in it, to make sure he is, indeed, a male... The world is then told that the new pope, who will supply his chosen name, was... born in Ezioelle, Onitsha, on November 1, 1932, a black Nigerian... [and] the direct descendant of St Peter the Apostle, Holy Father of the Church and Bishop of Rome. It is a scenario many modern [RCs] long for when Pope John Paul II dies. Until recently... it was a romantic outside chance. Lately, it is starting to look less outside than before as this stubborn old pontiff declines to die and throws the options of succession more... open with each passing year of his

reign. "The First Black Pope" is the cry surrounding the campaign for [the Nigerian] Cardinal... to succeed John Paul. [But] Gelassius I, Pope from 492... to 496AD, was a black African, and it depends what you mean by "black". St Peter himself, a fisherman from the Sea of Galilee, was as dark-skinned as the present-day Semitics who haul... fish from that inland lake, or carpenters from Nazareth. Still, it... would represent an astonishing breakthrough if [the Nigerian] were to become... Pope... [But] according to Vatican insiders, it probably will not happen. Yet. Instead, the favourite for the post remains [the] Cardinal... of Milan. The trouble is, [this] Cardinal... is a Jesuit; and while there has been at least one black pope, there has never been a Jesuit pope. Why this sudden rush of discussion about the succession? Realists in the Vatican see John Paul's health declining weekly. His left hand shakes uncontrollably from Parkinson's Disease that has afflicted him for... five years. Recently, it took him minutes to gather himself together for a simple message[– but a 'pope can't be removed if he becomes senile (he has to remove himself before senility occurs')]... Many in the Vatican believe this... frail old man, with a 9mm bullet hole in him since the 1981 assassination attempt, is determined to live until the millennium, when his private stated intention is to climb Mount Sinai... He hopes to be there with the... Jewish [leader]s as well as other Christian leaders.

...Pope John Paul II celebrates his 78th birthday today, only three days away from breaking the record for the longest papacy of the century... [T]he robust sportsman and newcomer to the vast bureaucracy of the Holy See succeeded John Paul I, who was Pope for only 33 days... As of today, John Paul[II] will have headed the church for 7149 days, compared with the 7152 days of Pius XII... who reigned during... W[W2]... In all of history, there have been only 12 Popes, out of 264, who reigned longer... The absolute record goes to St Peter... who had 34 or 37 years as head of the first community of Christians... [The incumbent] pontiff has probably broken other church records, notably for travel. He has made 210 papal voyages, 128 inside Italy. He has also canonised more saints – 279 – and beatified more church figures – 796 – than any other Pope. He also holds the dubious record for being hospitalised more than any other pontiff... Today's celebrations will be quiet and for most of the day it will be work as usual, since by Church tradition it is his saint's day, November 4, and not his secular birthday, that is celebrated at the Vatican.

...Live recordings of the Pope delivering prayers, homilies and chants in five languages are to feature on a CD going on sale ...[ext] March... *Abba Pater*, released by Sony Classical, will combine original compositions of contemporary music with the Pope's broadcasts... [(but don't expect to hear the Pope referring to *the Second Commandment*, which] has been left out... [of *the General Catholic Catechism*... [– while the First Commandment was changed by Rome to become:] Thou shalt not have strange gods before me; at]... the Council of Toulouse, the church leaders ruled: "We prohibit laymen possessing copies of the Old and New Testament... [and n]o one may possess the books... in the Romance language[)]... The album took two years to complete... [Y]esterday... the... 78-year-old[, who]... last week suffered a light bout of influenza, celebrated midnight Mass in St Peter's Basilica, the largest church in Christendom... During the Mass, televised to 40 countries, prayers were said in French, German... and... Swahili...

A Pacific Islands delegation notched up a historic first in St Peter's Basilica in Rome yesterday. Their traditional costumes left their chests bare, something the Vatican has never before tolerated. The group was marking the inauguration of a special assembly of bishops from Oceania.

...The boatbuilder who cobbled together the 8m-long fishing boat on the shore of the Sea of Galilee 2000 years ago would have been proud of, or at least amused by, the furore his rough handiwork would create two millennia down the line. Dubbed "The Jesus Boat," the vessel was uncovered by archaeologists in 1986 during a severe drought that lowered the level of Lake Kinneret, as the biblical Sea of Galilee is now called... Since it may have plied the lake during the time of Jesus... the boat has become a minor pilgrimage site for Christian tourists. The vessel, however, may not have made its last voyage. The Israel Antiquities Authority revealed this week that it had agreed to lend the boat to the Vatican for three months at the request of church officials as part of a millennial exhibition. The announcement touched off protests in Israel from Government officials and some conservationists, who expressed fear that the fragile boat might be damaged by the journey... There were also objections that Israel's own drawing power as a site for millennial pilgrimage would be diminished by the absence of the boat for three months... However, [in]... explaining why he agreed to its loan[, the]... chairman of the authority... said... "It will be good for the Vatican and good for us... The [Yigal Allon] museum has only been drawing about 70,000 visitors a year. In the Vatican, during those three months, millions of people will see it. It will... [also be blessed by] the Pope..." ...If the Israeli Government so decides, the resurrected junk boat will fly... first class luxury to Rome and return, perhaps, a holy relic.

As the [RC] Church travels through troubled waters... Pope John Paul II... [is supporting] a range of vast and fast-growing... fundamentalist movements. Among the largest and most powerful are the strangely named Focolare, Communion and Liberation and Neocatechumenate, the last the subject of an ecclesiastical inquiry in... England. Many [RCs] are puzzled by the Pope's enthusiasm for these extraordinary organisations which have been favoured in this pontificate over the traditional religious orders. They certainly present a frightening vision of the Church. Each is sect-like in character, secretive and elitist, with a personality cult around the founders who claim direct illumination from God. Although the Vatican views these movements as a group, they are in fact incompatible; each preaches its unique role not only as the sole salvation of the [RC] Church but also of the entire world. [However, these] movements share the Pope's bleak view of the modern world and the futility of human endeavour. In contrast with the lack of enthusiasm shown by much of the [RC] laity, they campaign vigorously on behalf of the causes that have characterised John Paul's [crusade] against birth control, premarital sex, sterilisation, homosexuality, divorce and liberation theology... Proselytising takes precedence over justice and peace issues; social problems will be resolved, they believe, once the whole world joins the movement. The Neocatechumenates' zeal is such that they are already planning evangelising aliens in "distant galaxies." These movements are the embodiment of the Pope's "new evangelisation." They share his backward-looking vision of a Europe reunited by Catholicism. They are his bulwark against future reform, the best guarantee that the agenda of his reign will be perpetuated. If this were not alarming enough, reports have recently issued from Vatican sources that only influence from a[n] arch-conservative Cardinal... has managed to restrain John Paul from declaring all his encyclicals infallible[('the claim that statements on matters of faith or morals, made by a pope speaking *ex cathedra* – from the throne – are guaranteed the assistance of the Holy Spirit'; since being 'promulgated in 1870, a pope has only once so spoken – when, during the 1950 holy year, the then pope announced the dogma of the Assumption of Mary'). The] Cardinal... is no doubt aware that such a move would push the notion of infallibility into the realms of the absurd, and papal authority would be irretrievably damaged. Such quixotic attempts to defend a tottering Church from the enemy within – as though the entire edifice depended on the efforts of one man – verge on Pelagianism (believing you can do things on your own without God's grace).

...The Pope has been dropped as a customer by a small Scottish smoked salmon company which says he has not paid his bill... About 200kg of smoked salmon, with a market value of nearly \$6000, was supplied each fortnight. But the firm became increasingly frustrated as the Vatican took its time to pay its bills. It finally acted to cut off supplies when the outstanding debt ran into thousands of pounds... "Getting paid from the Vatican proved as much a miracle as feeding the 5000," said the company's chairman...

Pope John Paul steps into a historical controversy on Sunday when he honours a fifth-century king seen by some as the founder of Christian France but by others as a Dark Ages war criminal. The pontiff will upset many merely by attending celebrations in the city of Reims of the 1500 anniversary of the baptism of Clovis, a pagan king who was the first west European monarch to convert to Roman Catholicism... Clovis promised his [RC] wife... he would convert if her God helped him win the battle of Tolbiac against the Visigoths in 496... To traditionalists, Clovis' conversion was France's baptism as a nation, making it the "eldest daughter of the Church." ...Clovis... inspired myths about a divine link between French monarchs and God... French monarchs before the 1789 Revolution regarded him as their spiritual forefather – the 16 kings called Louis

were using a modern version of Clovis' name... Yet to some historians, Clovis was a brutal Frankish warlord devoid of religious convictions who converted merely to enlist Church backing against rival tribes like the Visigoths... He continued to slaughter his relatives to eliminate potential rivals even after his conversion. Pre-revolutionary Church and royal apologists explained away the massacres as a way of uniting a nascent France.

...[Sir William Wallace, one of Scotland's greatest national heroes, has already received Hollywood sanctification in the film *Braveheart* and now Scottish RCs and historians want him made a saint. Wallace led the struggle which ultimately freed Scotland from English rule, heavily defeating the English Army in the Battle of Stirling Bridge in 1297. Despite Wallace's violent life, which culminated in his execution for treason in London in 1305, Scottish RCs are urging the Church to pursue the cause of his canonisation. They argue that his personal faith and martyrdom have parallels with Joan of Arc, the French warrior who was canonised in 1920. Wallace remained loyal to Pope Boniface VIII during his turbulent life and read the psalms as he was disembowelled.]

...[In the past 900 years, the RC Church has found only three Popes worthy of veneration as saints. However, as part of the Church's millennial celebrations, John Paul II would like to beatify three 20th-century Pontiffs, the last step before canonisation. The candidates are Pius XII, who guided the Church throughout WW2 and into the Cold War; John XXIII, the smiling Pope who charmed the world with his wit and convened the Second Vatican Council, the first Church council in 100 years; and Paul IV, who brought the council to a close and reaffirmed the Church's ban on contraception.]

...[the original ideal of the saint in Christianity was the martyr. The cessation of persecution in the 4th c. led to the transformation of this ideal: the monk tended to take the place of the martyr. A saint in this sense is one who is close to God and can therefore intercede with God on behalf of other Christians, and one through whom divine power is therefore manifest. The persecution of Christians in some countries in the 20th c. has to an extent restored the primitive ideal of the saint'. Editor's note: in addition to teaching followers about its 'cult of saints', the RC Church teaches the concept that sins can be forgiven if they are absolved by a priest immediately before death. This could explain why members of the Mafia aren't scared to exploit, steal, kill, etc.!

...[prize] for Idiot of the Year in 1996 must surely go to[the] New York mugger... who snatched the purse of... a 94-year-old out walking with one of her sons, [a RC] priest. While the priest might forgive... his sin, the old lady's other son... Godfather of the New York Mob, is unlikely to do so.

...[AN artwork of a life-size sculpture of Pope John Paul felled by a black meteorite, has fetched \$2 million at Christie's auction in New York.]

...a famous 1984 essay... argued that a biography creates, rather than documents, its subject. In that sense, biography is a form of fiction. A biography instructs the public how to interpret and evaluate the life it purports to detail, opening up specific understandings, but closing off most others. Two prize-winning journalists, an American Jew and an Italian [RC], have collaborated to write [a] study of the current Pope. The portrait they paint... is of a politician out of touch with his constituency, a once-powerful man who has sadly outlived the creative authority potentially due to the spiritual head of one billion[people]. In this sense, their biography shuts down the continuing viability of the present "Vicar of Rome." ...Drawing on hundreds of interviews with key players in Rome, Washington, Moscow, and Warsaw... [we] learn what he eats for breakfast, his adulation of and bitter disappointment with his mother, his personal opinions on sexual intimacy, and how he holds together a humble simplicity with his sense of calling to a messianic destiny. [The Pope] appears to believe that through his suffering of both unpopularity and ill health, he can redeem the world for Christ. The authors present [his] career as a play in three acts. The First Act is one of "proud vindication for his Christian message," as the first non-Italian Pope in more than 500 years... The Second Act, in the 1980s, is marked by the Pope's influence in international politics... The authors document the Pope's influence with[US] Presidents... and... the... Solidarity movement... The Third Act leaves [the Pope] isolated and angry. The fall of "godless" communism in the Eastern bloc has left him without the "enemy" around which his mission was traditionally structured. The Church is wracked by dissension, and women remain unconvinced that their rightful role in creation is limited to child-bearing and submissiveness. [The authors] close their book with the image of an ailing Pope, sailing toward the millennium "like Osiris on his boat heading into the sunset," a reference to the Egyptian god who preferred to leave this world to dwell among the dead in the afterlife.

...[Unholy alliance... Pope John Paul II and[the 40th US] President... established an informal "secret alliance" to bring about the fall of communism, according to a new book... The book, which is being published this week, also says that the [US] Administration secretly spent \$US50 million... to keep Solidarity, Poland's independent trade union organisation, alive from 1982 to 1989. The Pope was kept informed, although he was careful not to learn too many of the details... The book... added that the Pope received "some of America's most carefully guarded secrets and sophisticated political analysis: information from satellites, from intelligence agents, from electronic eavesdropping, from political discussions at the White House, State Department and CIA. And the [US] received information from the Pope." ...Other presidents had waited anxiously at their desks for bombers to return from their missions: [the 40th President] waited for reports from the Pope... "[The President] had a deep and steadfast conviction that this pope would help change the world," [his]... National Security Adviser, noted... [Interestingly,] on the single most important arms control issue of the era – the introduction by NATO of a new generation of cruise missiles into Western Europe – the Pope, through his silence, appeared to support US policy. He did so, despite the public opposition of his American bishops... The book also said that during this period of Vatican-[US] collaboration, the... Administration reinforced the Pope's opposition to abortion by blocking funds for family planning programmes around the world... The cut-off continued during the [41st President's] administration.

...John Paul said yesterday that artificial birth control was ruining people's moral sense by giving a false idea of sexual freedom... He criticised public health campaigns that promote contraception... "The 'Gospel of Life' must be maintained by educating children to recognise their vocation as carriers of life, in responsible collaboration with... the creator," he said...

A leading U[N] official yesterday contested Pope John Paul's... reject[ion of] population control as the answer to food shortages... The issue of "reproductive rights" was the minefield at... a stormy U[N] population conference in Cairo in 1994... because the Vatican felt the phrase was a backdoor way of supporting abortion[. However, much like the issue of divorce – in '1970 divorce law went into effect in Italy despite RC Church opposition' – 'most Italians ignore the church's rules on contraception (the average family now has 1.2 children').

...IN 1989 a NZ[writer... contributed a satirical short story called *The Visitation to Kiwi* anthology, *New Women's Fiction 3*. Set in the 1960s, it describes how two young girls from a huge (but still expanding) [RC] family see a vision of the Madonna in the backyard of their Carterton home. The Virgin Mary gives them a letter instructing the Pope to change his attitudes about contraception. Alas, however, there are many obstacles, including not only the girls' father but the entire [RC] church, to preventing the message from circulating... [The author] has not been a practicing [RC] since her teenage years. "I didn't leave the church lightly... but I couldn't continue with an institution that appeared to value women so little..." [she] says... She doubts if the church has really changed much in recent times. "The Pope hasn't changed his stance on contraception and abortion and there are still no women priests..."

...[A nun has quit the religious community she entered when she was 17 after the Vatican allegedly bullied her over her support for women priests. Dr Nun, aged 52, is well-known in Britain as a religious contributor on BBC radio. She has asked to be dispensed from her vows so she can leave the Institute of the Blessed Virgin Mary. The provincial superior of the order was "desperately sorry that it has come to this." Dr Nun has accused the Vatican of a campaign of intimidation and behaving like the Inquisition. The Vatican's demands followed the publication seven years ago of Dr Nun's book *Women at the Altar*, which set out the arguments in support of women priests. The book was later banned and the Vatican confiscated 1300 copies with a suggestion that they might be burned. "Religious women do most of the work in the Church," she said, but it was their fate to be "an invisible subspecies."

...[a RC priest has been reprimanded after having a sexual relationship with a nun. A panel set up last December is reported to have upheld a charge of pastoral sexual abuse brought by the Sister against the Father. But the nun, aged 56, remains dissatisfied with the hearing and has instructed lawyers to sue

the Church and the Father, who has remained within the Church. The nun has written a letter to the Pope to resign her vocation, and has agreed to be named in a bid to highlight the “hypocrisy” of the Church in regards to the issue of celibacy.’

...she] spent much of her time helping out at a Franciscan retreat called La Verna, in Kew, Victoria. All the priests and brothers seemed very friendly but one, in particular, made her uneasy. He seemed to creep around and [she] was grateful she had little to do with him... [“Then one day] he suggested we go for a drive... I thought nothing of it. He was a priest. But when we... parked in [a] dark street, he suddenly grabbed my hair.”] [She] claims the priest, who is in his 60s and almost 30 years older than her, forced her to perform oral sex, before finally pushing her from the car and driving off. “I just stood there gazing after his tail-lights in shock,” she says... The Vicar-General of the... Archdiocese of Melbourne... stresses that, although familiar with... the case... the Archbishop could not be responsible for the behaviour of his priests... [However, the RC] Church in A[US] has apologised for its part in the assimilation policy aimed at breaking the spiritual and cultural identity of Aborigines, by removing tens of thousands of black children from their parents... The statement is the first formal apology by the Church for taking part... Some elderly Aborigines... blame their present psychological problems, which have resulted in alcoholism and drug addiction, on the separation and sexual and physical abuse they suffered in institutions... [Speaking of separation, RC] belief that the Pope is superior to all other church leaders is the main obstacle to church unity, the... Ecumenical Patriarch of Constantinople... [-] the first Orthodox Church head to visit... [NZ -] says... and the ordination of women would pose problems for Anglicans... Negotiations were taking place between [RCs], Anglicans, Lutherans, Methodists and Baptists over theological differences.

...The head of the Church of England... has called during a visit to the Vatican for a coming together of the Anglican and [RC] churches... The... trip was aimed at reviving links between the two churches which were frozen after the [CofE] decided to allow women priests. - 1996

THE DESIRE for the next pope to allow women and marriage in the priesthood is strong in the once staunchly conservative nations of Spain and Ireland, according to final results of a five-nation poll.

...And *MARY makes four...* A GROWING movement in the [RC] Church wants the Pope to proclaim a new, controversial dogma: that Mary is a co-redeemer... Such a move would elevate Mary’s status dramatically beyond what most Christians profess. But in the last four years the Pope has received 4,340,429 signatures from 157 countries... supporting the proposed dogma. Among the notable supporters are Mother Teresa of Calcutta, nearly 500 bishops and 42 cardinals, including... half a dozen cardinals at the Vatican itself. Nothing like this organised petition drive has ever been seen in Rome. But then, it isn’t often that [RCs] beg a pope to make an infallible pronouncement. If the drive succeeds, [RCs] would be obliged as a matter of faith to accept... that Mary participates in the redemption achieved by her son, that all graces that flow from the suffering and death of Jesus Christ are granted only through Mary’s intercession with her son, and that all prayers and petitions from the faithful on earth must likewise flow through Mary, who then brings them to the attention of Jesus. This is what theologians call... Mariology... In place of the Holy Trinity... there would be a kind of Quartet, with Mary playing the multiple roles of daughter of the Father, mother of the Son and spouse of the Holy Spirit. “Personally, I’m confident that there will be this recognition of Marian truth before the year 2000,” says... the leader of the petition drive and a lay theologian at Franciscan University in... Ohio... [T]he Virgin Mary is no ordinary religious figure, nor just another pretty face. For nearly two millennia, she has been the dominant female figure in Western culture. For her, men have erected many of the most beautiful churches in the world... The Annunciation... may well be the most painted scene in the history of Western art. In many ways the 20th century has belonged to Mary. From almost every continent, visionaries have reported more than 400 “apparitions” of the Virgin – more than the previous three centuries combined... Taken together, these visions point to what the Marian movement believes is a millennial “Age of Mary,” which will produce a final dogma that confirms her ongoing maternal mediation between God and humankind... Not all of it, however, is driven by Marian apparitions. Feminists who 20 years ago dismissed Mary as the oppressive Virgin-Mother created by a clerical patriarchy now celebrate her as a “free woman” who chose to say yes to God at the Annunciation, whereas Eve said “no” in the Garden of Eden – and thus made salvation history possible... Once asceticism became the privileged road to Christian holiness, [Mary] became the perpetual virgin, the model of chastity and self-denial. In 431, the Council of Ephesus issued the first dogmatic statement on Mary: she was to be honoured as Theotokos, the Mother of God... No less a theologian than Thomas Aquinas argued vehemently against the popular conviction that the merciful Madonna was born without the taint of original sin. But in the 19th century, long after many Protestant reformers had rejected the cult of the Virgin as popish nonsense, Pius IX proclaimed the Immaculate Conception... [to be RC dogma. Therefore, Marians] have precedent on their side... Moreover... John Paul... is known for his devotion to the Virgin who he believes intervened to save him from an assassination attempt... and... [he’s] declared a jubilee celebration for the millennium – a perfect occasion for defining a new dogma. The only time that papal infallibility has been exercised since 1874 – the year Vatican Council I made papal infallibility itself a [RC] dogma – was another jubilee year, 1950, when Pius XII defined the dogma of Mary’s immediate Assumption into heaven, meaning that her body was spared decay... With that single act, Mary became forever identified, in the eyes of the Church’s harshest critics, with papal arrogance... Rumours of the potential new dogma have triggered blistering criticism from other Christian denominations and ignited a battle within the [RC] Church itself. “Calling Mary a co-redeemer is a heresy in the simplest sense,” says the... chancellor of the Greek Orthodox Archdiocese of America.

...A Nobel Peace laureate... was among 250,000 [RCs who yesterday] packed the shrine of Fatima, in Portugal, to mark the 80th anniversary of the “apparition” of the Virgin Mary to three peasant children... the first of five monthly apparitions during which she delivered three prophecies... Fatima... is one of the most revered [RC] sites and the annual celebrations... draw thousands of pilgrims from... far afield... According to the writings of... the sole surviving visionary, two of the... prophecies concerned the end of... W[W1] and the collapse of communism. The so-called “Third Secret of Fatima” has never been revealed by the [RC] hierarchy, stirring speculation that it alluded to some future catastrophe. But a senior Vatican official said... last year that it contained nothing alarming... [The surviving visionary], who recently celebrated her 90th birthday, hardly ever leaves the Carmelite convent in central Portugal which she entered in 1929.

...[“The 1917 “Secret of Fatima,” long feared as apocalyptic, predicted the attempt to kill Pope John Paul II and the communist persecution of Christianity. The secret, which has intrigued the world for 80 years, was revealed at the weekend by the Pope’s Secretary of State. Over the years, the Vatican’s refusal to make it public has inspired books, doomsday cults convinced that it predicted the end of the world and even a hijacking by a man who demanded that the Vatican reveal the secret. Speaking to hundreds of thousands of people at a Mass where the Pope beatified two of the three shepherd children said to have seen the Madonna, the cardinal said the “vision of Fatima” concerned the “immense suffering” of Christians and the Popes in the last century of the Second millennium. The third part involved a vision including a “bishop clothed in white” who “makes his way with great effort towards the Cross amid the corpses of those who were martyred. He too falls to the ground, apparently dead, under a burst of gunfire.” The cardinal said that after the assassination attempt on the Pope in St Peter’s Square in May 1981, “it appeared evident to His Holiness that it was a motherly hand which guided the bullet’s path, enabling the dying Pope to halt at the threshold of death.”] In related news, hymns will not become Hers at the [RC] Church, but “the brotherhood of man,” “sons,” “men” and “he” are... on the way out. Father, Son and Holy Spirit are not... Women worshippers... felt [excluded] by male words, so the Church [has] published a guide to “gender inclusive” words, said [a NZ RC] Communications spokesman... “The use of male imagery for God will not change... [- although] God is neither male, nor female, but spirit...” ...The guide covers approved Bible translations, church services, gender language within prayer services and hymns, and personal prayer... [However, RCs] are asked to tolerate the male slant of older traditional hymns because of copyright and the need to respect church traditions. But hymnists have been urged to show preference to

gender-inclusive music. Erasing sexist language comes soon after instances of [RC] political correctness overseas. Last week the Vatican said homosexuals could achieve holiness – if they abstained from sexual activity. In March the Vatican went high-tech, unveiling an internet site powered by three computers named after angels. But there is still some resistance to the 90s world – in February priests were banned from performing marriage ceremonies at Disney World in Florida.

...four international regional meetings[have been] called by the Pope to study the position of the church as it approaches the new millennium. In the South Pacific, the most pressing problems are seen as including... the numbers of people turning to other religions, challenges to traditional [RC] teachings and the declining numbers of priests... In [NZ], the number... training to be priests has dropped dramatically... The... rector of the national seminary at Mosgiel, said yesterday that 25 men were[currently] training... “Back in the 60s, there would have been 90 in the place,”...

Like many employers, [the]... Most Rev... has found himself in charge of a shrinking workforce. But the down-sizing is not his fault: there is no sinking-lid policy or redundancies on his factory floor. In fact, the... [RC] Bishop of Auckland, is in the position of not having enough applicants for the vacancies. A chronic shortage of priests has hit Auckland. This year alone, three senior priests have left. Only one ordination is on the books for the diocese next year. Fewer young men are signing up to be priests, and the average age of the present crop of men of the cloth creeps ever upwards. In the early 1980s the average... was 48 – now it is 62. [The]Bishop... is well aware of the harsh reality that priests are dying off and there is not enough young blood to replace them, let alone fill the gaps that already exist. But he is not so sure the wider [RC] community is aware of the gravity of the problem. “Everyone knows, but it is not until it hits their parish that people become very alarmed,” [the]Bishop... said yesterday... H[owever, h]e... has his eyes on a property in Ponsonby as the long-term answer to his prayers about priests. From next year, the Vermont St site will become the country’s new centre for the training of priests. The priests’ school, which has been in Mosgiel... for nearly 100 years, is set to move to the site... While there are many in the Church who feel it is time to ask if celibacy should be optional rather than mandatory, nobody is under any illusion that the Vatican will chance the policy soon. In the meantime, the... Bishop... hopes that the move to Auckland will spark more interest in the priesthood. He is encouraging parish communities to become involved in the recruitment drive.

...WANTED: *Clean living individual with good interpersonal skills to swap worldly pleasures for meaningful spiritual activity, to work as counsellor, caretaker, philosopher, community leader and within charities; to organise and officiate at social functions. On call 24 hours, and every weekend. Below-average salary (guaranteed to remain the same for the rest of your career). Work from home, accommodation supplied. Few prospects for promotion and eternally answerable to a higher authority. No homosexuals, no women, no sex, no children...* So it’s hardly surprising that few 20-somethings, when faced with a career choice... choose... [training] for at least five years... [to juggle] social dilemmas for the rest of their earthly lives... [In addition, unlike] swapping accounting for economics, being a minister has never been the kind of career you can easily drop out of... [As a consequence, the] image of the earnest, young do-gooding clergyman may soon be history as all major religious denominations in the industrialised world note a big decline in the number of ministers in training... To turn this ecclesiastical low-tide, the... [RC Church in] Britain... has taken the unprecedented step of preparing a recruitment video promoting the joys of becoming a priest... [which] will be sent to 4000 British secondary schools this month... The average age of trainees... in [NZ is] 32... The... spokeswoman for the [RC] Church in Auckland... can understand why... younger men... may not be as happy to join the clergy. “Being a priest today is very much counter-cultural... It’s not a career in which you can make money or succeed in a material way.” ...Of the major denominations in [NZ, the RC] Church is probably the most pro-active when it comes to recruitment. But this might change if a planned Anglican-inspired tertiary course goes ahead next year... To make ministry more attractive, the Auckland bishop is proposing a degree that is half theology and half marketing or management studies... [The] principal of the theological hall at Knox College in Otago where Presbyterian ministers are trained... says... “The television stereotype of the clergy often presents a gormless, ineffective, bumbling kind of person. That’s not real at all – it’s actually a job for self-directed people who can get things done,”... For this reason he believes it might be worth fostering a more realistic image via video or other forms of marketing. At present, the Presbyterian Church recruits only in a very low-key way with would-be ordinands approaching ministers rather than the other way around... “I would have worries about too vigorous recruiting where you lure people into something they are not suited for...”

...[the RC] Church has big expansion plans for its school system in Auckland because of rising demand for religious-based education. The growth could see the Government finance new [RC] schools... At present, the church paid for school land and buildings while the state covered ongoing costs... [‘The NZ RC school system, which had demanded large numbers of unpaid workers (most of whom were nuns), was integrated with the state school system in the 1980s.’ In international news, the ground radar used to unearth the victims of Britain’s infamous “House of Horrors” serial... [killers –] who... tortured and killed at least 12 women and girls... [–] may be used to test the truth of allegations of secret child burials in a former [RC] orphanage in Queensland... [C]laims, made by former residents of the... Neerkol orphanage... allege the bodies of children who died in infancy were buried by nuns in concealed graves... The orphanage, and others run by the Sisters of Mercy across A[US], have been the focus of numerous and detailed allegations of cruelty against children in their care, ranging from public humiliation, floggings and solitary confinement to a girl being tied across a bull ants’ nest... [On a positive note, o]ne million young [RCs]... from around the world... gathered at a racecourse outside Paris yesterday for a vast open-air Mass by Pope John Paul to mark the climax of a six-day evangelical festival... The... Pontiff... went among the faithful in his trademark Popemobile. The World Youth Days event is held in a different city every two years and the Pope announced Rome... as the next venue... The Pope took the opportunity to try to defuse a row which has dogged the festival: that its climax coincides with the 425th anniversary of a 16th-century massacre of Protestants by [RCs] in the French wars of religion. Specifically, he conceded the Church’s role in the St Bartholomew’s Day Massacre on August 24, 1572, and said religious authorities could not hide from the truth if they were to achieve reconciliation. “Acknowledging the weaknesses of the past is an act of honesty and courage which helps us to strengthen our faith,” he told the congregation. The Pope arrived in Paris on Thursday and was feted in a welcome ceremony in the shadows of the Eiffel Tower...

Pope John Paul’s visit to the World Youth Days in Paris was an unexpected crowd success but left the Church with a deficit of up to \$7.5 million, the organisers say... [M]any of the young pilgrims left without paying their \$35 a day for food and lodging. Four fifths of those who attended the Pope’s final mass on Sunday dodged the loosely-enforced \$27 admission fee. The... faithful gave a meagre 50c each on average at Sunday’s collection... [T]he organisers had not wanted to charge those who could not afford it and many people had taken advantage of this. Also, the number of young people from impoverished countries allowed to come free-of-charge had been higher than expected, at 107,000. Organisers had hoped that contributions from the pilgrims and sales of souvenirs would pay for the \$65 million cost.

...[an] unusual encounter between the... head of the [RC] Church and a hero of the 1960s drug-smoking, anti-war protest scene took place at a youth rally in the... city of Bologna. The Pope listened as... [the folk]-rock idol... sang two of his most famous anthems, *A Hard Rain’s Gonna Fall* and *Knocking on Heaven’s Door* in front of an enthusiastic crowd of 300,000... The Pope earlier quoted lines from what is perhaps [the singer’s] most famous song, *Blowing in the Wind*... The Pope, looking well and happy, told a rapturous crowd... that the answer was indeed “in the wind” – but not in the wind that would blow things away, rather “in the wind of the spirit” that would lead them to Christ. He was surrounded on the podium by a group of young people, who in turn read out the lyrics... One says: “How many roads must a man walk down before you can call him a man?” The Pope responded: “...Only one. And that is the road of... Christ... He is the road of truth and the road of life.”

...23 anti-tank devices [were found under a] Sarajevo bridge hours before [the pontiff was] due to arrive... Police stepped up security in the city... The entire route from the airport was closed to traffic. Apartments were being checked and cars towed away. Streets were empty. Although the Pope’s visit highlights his desire to heal Bosnia’s war wounds, there were no Serb officials on hand to welcome him.

...IT IS a tale to warm the heart of the Pope: Speculation that [the leader] who erased Christmas from the calendar and expelled hundreds of priests from Cuba, may be looking for help from on high to tackle economic hardship and discontent threatening his 38-year rule. Since [the comandante] emerged misty-eyed from a chat with the Pope in Rome last year, his voice has softened and he has stopped haranguing his people. Even sceptical Cuban exiles in America are debating whether he is undergoing a “spiritual re-evaluation” – and it is whispered in Havana the comandante is turning to God... [He] was educated by Jesuits before he became a lawyer, a guerrilla fighter and then a revolutionary leader. Later, he was said to have become an adherent of Santería – a Cuban form of African voodoo involving animal sacrifice. His tenacious pursuit of communist ideals ruled out any notion he had time to be communing secretly with God. Since 1991, however, he has eased restrictions on religious gatherings and [RC]s are again practising their faith openly. To cap it all, the Pope will visit Havana for the first time in January... Whether or not the comandante reaches for his rosary in January, Havana will feel the benefit. Such is the importance of the Pope’s visit that, for its duration, [the comandante] has decreed there must be light. Cubans will be guaranteed a respite from the power cuts that blight their lives.

...[the] faithful turned out[in their thousands] to welcome Pope John Paul to Brazil at the start of a four-day visit... to the world’s biggest... [RC country. W]aving pale blue flags with the Pope’s image printed on them, [people] lined the streets of Rio de Janeiro and hailed the... Pontiff when he drove by in his white “Popemobile.” As he approached the site... where in 1993 eight street children were gunned down by a police-led death squad, a young boy freed a white dove in... [their memory. T]he Pope said the unfair distribution of income and the sad fate of street children in big cities were among the greatest challenges faced by modern government... [During] his visit... he is... expected to... [promote] the church’s traditional views on birth control... and... abortion... what he [calls] an abominable crime and the shame of humanity... Brazil is in the throes of a debate over whether abortion should be made more readily available. The [RC] Church... is opposed to a bill that would make it easier for women to obtain abortions in cases of rape or if their health is in danger... [Incidentally, yesterday stunned] churchgoers in the Basilica of Guadalupe in Mexico City listened as a priest told them top drug kingpins were... generous donors to religious good works campaigns... [The priest] made the surprise announcement... during services marking the 12th anniversary of an earthquake that devastated Mexico City. Another official in [the priest’s] religious order said he did not know whether the revelations were true, adding that his congregation never received money from drug traffickers.

...Thousands of Italians afraid to return to their earthquake zone homes camped out for a second night after twin tremors... in which 11 people died... rocked central Italy... Scores of aftershocks rippled through... the... region... on Saturday, the day after[the] two quakes caused serious damage to the Basilica of St Francis... Miraculously, however, the most famous frescos, painted... on the side walls in the early 14th century and depicting scenes from St Francis’ life, were cracked but mostly intact... [O]ne of the top three officials of the 20,000-strong worldwide Franciscan order, said celebrations for the nine-day feast of St Francis... would continue but would be quieter this year. He mourned the loss of two Franciscan brothers... who were killed along with two structural experts who had gone into the basilica to access the damage of the first quake when the second tremor struck. “They died next to St Francis... We trust the Saint of Assisi will lead them in the peace and beatitude of God.”

...The Italian Government[has] approved emergency measures to grant a total of 856 billion lire... in state aid to the regions worst hit... 56 billion lire would be made available immediately and the rest by the end of the year... “Unfortunately, I fear it won’t be enough.” Asked if more cash would be available if needed, [the PM] said: “Yes, I think so.” ...In the Marche, at least 27 mountain towns were... [affected. N]early 1500 buildings across the region had been damaged and thousands of residents were still sleeping in “tent cities,” caravans or cars, many too afraid to return to areas still quivering with after-tremors... Four days after the tragedy, the order founded by the gentle patron of Italy who cherished the natural world was still coming to terms with the act of God that killed two friars and ravaged their 13th-century pink stone church... [The] superintendent for cultural affairs in Florence, visited the basilica yesterday and declared the damage akin to the devastation wreaked by W[W]II bombs...

A leading Italian art critic has blamed poor restoration work done in the 1950s for weakening the structure of the world-renowned Basilica of St Francis... [He] said the original wooden beams supporting the roof of the edifice had been replaced by reinforced concrete which had made the building heavier and more rigid. He called the decision to use the concrete “pure folly,” noting that the old wooden structure had... enabled the building to withstand many previous quakes over the centuries. Other specialists backed his view... Two earthquakes which shook central Italy on Friday caused part of the dome of the basilica to collapse, damaging several frescoes... A fresco by Florentine painter Cimabue was badly damaged. The 28 frescoes depicting the life of St Francis, painted between 1294 and 1304 and attributed to Giotto, were also damaged but less seriously.

...Frescoes in the earthquake-damaged Basilica... suffered a fresh mishap when water poured on to them... from a waste pipe... A spokesman for the Franciscan order... told reporters the incident was probably caused by human error... “It obviously hasn’t done them a lot of good...,” ... Part of [the] Basilica... was opened on Sunday... [to worshippers] and tourists... for the first time since[the] earthquakes... The friars have said they hope to reopen the whole building in the year 2000... [■ A]t the Vatican’s request, a Sao Paulo artist is giving Jesus Christ a facelift for the third millennium, concentrating on a more dynamic look... [Jesus’ new] image would be made public in 1999.

...[‘ON A GREY DAY in 1988, a cardinal stood before a packed hall in the north Italian city of Turin and made an announcement that sent tremors throughout the RC Church: one of Christianity’s most cherished relics, the Holy Shroud of Jesus, was actually a medieval artefact. The news hit millions of believers like a bombshell. The simple cloth had been venerated for centuries as the shroud in which Jesus had been wrapped after dying on the Cross, and RCs loved it as a palpable connection to the risen Christ. But for the Vatican, a larger issue was at stake: dissociating the Church from the legends, myths and bits of folklore that sometimes threaten to obscure the sound historic roots of Christianity. Yet, today, as many devotees kneel in the limpid shadows of the Chapel of the Shroud as there were before the painful verdict. Behind them stands an understanding clergy. “The Church,” the cardinal added in his formal statement, “reaffirms its respect and reverence for this venerable image of Christ.”]

...Experts have discovered how the Turin shroud... was faked to give the impression of the human form it bears... The *Sunday Times* said[a] Chicago-based microchemist... calculated that a man had been sprinkled with red ochre, a pigment widely used in Italy in the Middle Ages, then wrapped in the shroud. Vermilion paint made from sulphate of mercury was then applied to various parts of the shroud to simulate blood... The shroud... was venerated as a holy relic by the [RC] faithful for centuries. But... 410 years after it arrived in Turin, three teams of experts used carbon-dating on a tiny fragment of the cloth to fix the approximate era of its weaving at between 1260 and 1390.

...A Swiss archaeologist said yesterday she had proved beyond all doubt that the Turin Shroud... was not a medieval fake... [The archaeologist], who has studied the shroud for 16 years, said the carbon-14 tests were wrong for one simple reason – the fragment tested was a corner of the cloth repaired five times since 1400. The proof, she said, was that the samples taken weighed 42mg a square centimetre, whereas the whole Shroud had a average weight of 20-23mg... She said new research in Paris had also shown that what appear to be the words “Jesus Nazareth” were written on the cloth shortly after the body was wrapped in it. “This is the only document on earth that proves the material presence of Christ 2000 years ago,” [she] told a news conference in Rome to present her book, *Shroud... The... Shroud...* [– ‘which remains enclosed in its locked silver casket’, only occasionally (i.e., whenever the coffers run low) being made available for public viewing –] was saved from a fire in Turin Cathedral last April... - 1997

Under circumstances that to this very day remain shrouded in mystery[, during the era of]... the Byzantine emperor Justinian... numerous Church writings were... purged from the scriptures... and... destroyed...

However, Justinian also carried ‘out an active building programme throughout the Roman Empire, erecting fortresses, churches and other public buildings.’

...during... Nicholas V[’s reign]... a group of buildings next to St Peter’s... in Rome... [were] unified into one great... papal palace...

The Vatican City, established in 1929 by the Lateran Treaty between the Holy See and the kingdom of Italy, is the world’s smallest sovereign state. Its territory, an enclave within the city of Rome... broken by the vast expanse of Saint Peter’s Square... covers only 44 hectares... Vatican citizenship, unlike that of other states, is not normally acquired by right of birth. It is granted to church dignitaries and others who, by reason of their office, because they are employed there, or by a special concession from the pope, reside in the Vatican... There are also a number of residents – employees [(the Vatican ‘has its own police force, diplomatic service, postal service, coinage, and radio station’)] and their wives and children – who are not citizens. In 1932... the population... was 1,025. It has declined since then: today there are about... 500 residents. - THE VATICAN

The vast and complex organization of the [RC] Church is controlled by the Vatican, an independent state in Rome which, under the direction of the pope, implements Church policy, and administers property and finance... The title ‘pope’ (...Greek[for] ‘father’), originally given to any bishop, became restricted to the Bishop of Rome with the rise of that see’s importance... his authority deriving from the belief that he represents Christ in direct apostolic succession from... Peter...

The R[C] Church includes, in addition to those [RC]s who use the Latin ritual, those Eastern [RC]s who accept the authority of the... successor of St. Peter... but adhere to one of the five Eastern rituals: Byzantine... Alexandrian... Antiochan, Armenian, and Chaldean... The clergy of the west are bound by a vow of celibacy, while those of the eastern churches... may receive orders if married... In the West, the Church shared in the unity of Europe which accompanied the development of the Holy Roman Empire... [L]ater encroachments upon its authority by the successors of Charlemagne were vigorously opposed by Pope Gregory VII, who set the relationship of the Church to secular authority. The... High Middle Ages saw the... veneration of the Virgin Mary... in the ennobled role of women and the general refinement of manners seen in medieval literature and in the code of chivalry. The same period, however, gave rise to feudal monarchies which sought to limit the authority of the Church within their individual realms; the Council of Basle (1431-49) recognized the weakened authority of the Church north of the Alps. This factor... was responsible for the movement which began with the protest of Martin Luther in 1517. The long and sanguinary religious wars which followed were ended by the Treaty of Westphalia, 1648, which assigned to each realm the religion of its monarch... R[C]s believe that the Mass is the mystical sacrifice of the body and blood of Christ... They also believe in purgatory, that the Virgin Mary and the saints are to be honored and invoked, and that honor and veneration are to be given to their images.

Christianity developed beyond a Jewish sect when it was determined... largely through the influence of St Paul, that non-Jews were to be included in its communion. For some 3 centuries it was either illicit, since Christians could not acknowledge the pagan gods of Rome, or tolerated in competition with other religions. Christians suffered periodic and brutal persecutions until the reign of the emperor Constantine... who granted them a large measure of toleration and protection. Finally, under Theodosius the Great... Christianity, on the basis of the creed drawn up at the Council of Nicaea (325), was made the established church of the Roman Empire... The major centres of the... Christian faith – Rome, Constantinople, Alexandria, Antioch, and Jerusalem – were the seats of bishops designated as patriarchs. The questions of the primacy of the Roman bishop... and of certain doctrinal interpretations of the nature of Christ, combined with political considerations to divide the eastern and western branches of Christendom, culminating in the schism of 1054... Immediate cause of the Reformation was the sale of indulgences, which Luther attacked... From this period of change... many historians date the opening of the modern era... The name Protestant was first given to the followers of Luther... Eventually, the term was extended to... Calvinists... Anglicans... Anabaptists and Moravians. While these groups differed among themselves, all originated in attempts to reform Catholicism. Most developed the view that the Bible is the highest authority for Christians, and they diminished the role of the priest as intermediary between man and God.

indulgences In Roman Catholicism, grants of remission of sin to the living, following repentance and forgiveness; also, to the dead in purgatory. They were based on the Church’s treasury of merit, accumulated through the good works of Jesus Christ and the saints. Abuses in the Middle Ages, leading to the ‘buying and selling’ of places in heaven, finally occasioned Martin Luther’s ‘95 Theses’, which launched the Reformation.

Surviving the fall of Rome in the 5th century, the Church was the only effective agency of civilization in Europe, and after the... schism with the... Eastern Church[, the Roman Church] was the dominant force in the Western world... The Protestant Reformation of the 16th century inspired revival, and the need to restate doctrine in an unambiguous form and to purge the church and clergy of abuses and corruption was recognized.

The Protestant Revolution fell upon the established church like a pestilence. It was in part a reaction to the obvious corruption of the Papacy under quite worldly leaders more concerned with fleshly and mundane pleasures than the old, comfortable standards of spirituality, faith and simplicity that the medieval church had supplied. That revolution brought the Inquisition into full force and installed an atmosphere of dread on every level of society, thereby furthering the cause of the reformists... by providing further examples of orthodox excesses... The proscription of specific divination in... Rome was absolute, but generalized prophecy was allowed... Permission was available if the church coffers were sufficiently improved by the applicant, a system not unlike a regular modern licensing procedure.

...[‘In 1900, *Alfred Loisy*, the lecturer at the Sorbonne, resigned after his works on biblical criticism were condemned by Pope Pius X as too advanced.’]

...In A.D. 496, the last year of his reign, Pope Gelasius I issued the first list of both recommended and prohibited books, the precursor of the Index. The list was meant at that point as a general guide [for the] faithful... though special exemptions were made whereby high-ranking scholars could read specified texts for very specified purposes. It was not until 1559 that the first official *Index Librorum Prohibitorum* was printed by Pope Paul IV... The new Index was ardently enforced when, in the bull of January 5, 1559, *all* permissions for reading prohibited books were revoked, and officials of the Inquisition were instructed to prosecute all who read or possessed such material. Under the new rules, confessors in every church were instructed to ask their penitents if they knew or had heard of any persons possessing, reading or dispersing writings which appeared on the Index, and in particular anything dealing with Lutheran doctrine, which was the major focus of the bull. The confessors were required, on pain of excommunication, to inform the Holy Office directly of any information thus obtained... No one was exempt. Church officials, bishops, archbishops, patriarchs, cardinals, kings and emperors came under this order, and accusations poured in from all quarters when it was announced that a 1505 edict was not only still in effect, but was now renewed. That edict awarded to the accuser one-fourth of the confiscated property of any convicted sinner. The bonfires of the Inquisition blazed regularly, fuelled by new candidates identified by ambitious informers. Simultaneously, church coffers swelled dramatically... The church did not abandon the Index until 1966.

In 1967, Pope Paul VI... reformed the practice of indulgences when he ordered the number of plenary, or full, indulgences reduced... The... Council of Trent... [had] called for moderation in the number of indulgences and suppressed most indulgences granted for an alms, thus removing the main

cause of scandal... [T]he Fourth Lateran Council criticized some bishops for excessive grants of indulgences[, after] theologians developed the idea of the “treasury of the church,”...

The change in our monetary system to decimal currency finds [NZers] concerned wholly and solely with the new method as such. Nothing is heard of the ethics of money, whether[under] the old system or the new – or for that matter under any other system... [-] can any God-fearing man fail to see the searching truth in the... Commandment, “Thou shalt not covet.” ...Our regard for the Ten Commandments will continue to have a lot to do with our right or wrong use of money. We may employ it in the fulfilment of each Commandment or in the transgression of all. - 1967

[Jesus said], Take heed, and beware of covetousness: for a man's life consisteth not in the abundance of the things which he possesseth. - St Luke 12

Pope John Paul took delivery of a sleek black convertible limousine yesterday and joked to reporters that it was about time he had a new car. The Mercedes S500, fitted with two telephones and white leather upholstery, took a year to fit out. Among personal touches are a single rear seat and an image of the Madonna. The normal version of the car costs \$126,000. [Meanwhile, some 'Polish priests have been indicted for importing German cars as religious donations between 1993-96 then selling them for profit.'

...18 priests and monks have been charged with illegally importing dozens of duty-free cars into Poland by saying they were for charity. The scam cost the Government \$US66,000 in unpaid duty. Polish import tax on cars is close to 90% of the factory price.' Speaking of ex-factory cars, Ford is using a priest and church as props to sell the latest model of its *Escort* range in Britain!]

...Ten clerics will next week model multi-coloured designer cassocks, stoles and capes at Britain's first fashion show for the clergy. The outfits by leading fashion designers reinterpret traditional symbolism and colours in a range of modern styles.

...POPE John Paul II can be accused of traditionalism in many areas, but fashion isn't one of them. At least not since last January, when... a French cardinal, approached[a] Paris designer... on behalf of the Vatican and asked him to create a line of couture vestments for the Pope, 500 bishops and 5000 priests. The vestments are to be worn at the 12th Festival of Youth which takes place in Rome this August... The man most famous for his tandem poncho and teddy-bear coats... says he had been given certain guidelines: the vestments were to be based on a Byzantine theme (as opposed to a Mickey Mouse theme...); and they had to be simple. “Christ was a simple man... so it makes sense that the clothes [of his disciples] should be too.” In ready-to-wear terms this translates as (for the acolytes) simple wool robes and (for the Pope) ultra-fine silk... What... this sartorial revolution means for the [RC] Church as it moves into the new millennium is hard to say, but [the designer]... has an idea. “Fashion,” he preaches, “is now the only true language of the world; the bridge to all people. It is the way to bring the Liturgy into the 21st century.”

...THE Archbishop of Canterbury is studying plans for a \$25 million theme park featuring an animated, talking figure of Christ and a “time ride” through the Bible... The Disney-style scheme is certain to be treated warily by some churchmen... But Lambeth Palace said that the proposal was “interesting”, and that the Archbishop had asked to be “kept informed of its progress”. Criticism came from the... Rector of Pitsford with Boughton... a leading traditionalist. He denounced the project as being “more *Life of Brian* than C[ofE]”... Describing himself as “an evangelical Christian”, [the architect] said the idea came in a “still, small voice” in the night three years ago. “But I really didn't do anything about it until one night, last October, when I was literally woken up and told to get[on] with it. I was compelled to drop all work I was doing for an entire week. The message was very clear that this had to be at Canterbury, because that was where St Augustine came (1400 years ago this year) to reconvert Britain to Christianity.” ...[he] was aware that the project would be at risk of being labelled tacky... [but] had an answer for those who might label the idea sensationalist. “Being there in Jesus' time was the most sensational few years people ever had,” he said... [The architect], whose work includes the highly-praised Hayes Galleria shopping centre, and a yet-to-be-staged audio-visual history of London Bridge, is... seeking a site close to St Augustine's Abbey in Canterbury... and... hoping for private funding through donations and sponsorship...

Church leaders at St Paul's Cathedral were under pressure yesterday to hand back £15,000... in sponsorship money they received from an arms company. The decision to accept cash to provide corporate hospitality to other defence firms at a concert was met with outrage from within the [CofE]. The Campaign Against Arms Trade said: “It seems to us that the Church has rewritten the Sixth Commandment to ‘Thou shalt not kill – unless we get a wracking great profit’.” ...The Rev Canon... who chaired the concert committee meeting approving the sponsorship, defended the decision. “The matter was really never debated. If a firm offered money it really did not occur to us to inquire where it came from.” Insisting the Church would accept the cash from Lockheed Martin again, he added: “They are not involved in selling arms to revolutionary governments... but to countries which need to defend themselves.”

...British church officials have leapt to the defence of priests who cannot rattle off all Ten Commandments, saying it is substance not words that count. A poll... found only 34[%] of 200 Anglican priests could recite all 10 without help. “When people are put on the spot like this of course they can't remember,” a [CofE] spokesman said... The survey also found 31[%] of vicars polled did not believe in the virgin birth, 21[%] did not believe in the devil, 12[%] did not accept the second coming of Christ and 5[%] did not believe he performed miracles.

...[an Anglican] priest has advocated shoplifting from supermarkets to avenge the damage he believes they do to communities... “I don't regard it as stealing. I regard it as a badly needed reallocation of economic resources.” The 75-year-old cleric made his comments in front of police at a community committee discussing local crime. Supermarkets were “evil” and “places of temptation” which had “[f]orced more traditional local shops out of business,” he said.

...British shoppers flocking to supermarkets yesterday... heard the word of God as the Archbishop of Canterbury's... [voice] boomed over... loudspeakers... “Jesus is for everyone – shoppers as well as worshippers,” the archbishop told his unusual congregation. “If we all work to show God's glory and love in the High Street, our society will be a better place,”... Customers jostling in the aisles... were asked to raise their voices in song as [the archbishop] broadcast his... service from a branch of the... Asda... chain in Essex.

...[a g]rammy-winning gospel singer... aged 27... is suing for \$3.63 million over a head-first fall into an orchestra pit in Memphis last year... His suit claims he fell in a dimly lit area as he walked to his dressing room from a stage... [H]e was forced to cancel tour and TV appearances for about a month after the fall on November 1, 1996, depriving him of income.

...[After fighting a legal battle for nearly 30 years, an American is going straight to the top. He's suing God for losing his job with a US steel company in 1968. His suit argues that God did not stop his life from being ruined. He wants God to return his youth, enable him to play the guitar like the world's best, and resurrect his mother and his pet pigeon. But don't expect God to be receiving a subpoena anytime soon. A district judge threw the case out after deeming it “frivolous”. In local news, a RC] priest with a disfigured nose and impaired sense of smell and taste after a series of operations... to correct a bone obstruction in 1969 and... during the early 1980s... has won a five-year battle for compensation... The amount has yet to be determined... [but] an otolaryngologist... said... he should be awarded the maximum[amount] allowable... One surgeon told the [ACC] Appeal Authority that [the priest's] nose now went slightly to the right and had a “slightly piggy appearance” which caused him considerable embarrassment... [A]fter winning his case, [the priest] thanked God and his lawyer for helping him.

...[A MINISTER was asking for contributions to the church fund to buy food for the needy. The town gambler, who also owned the tavern and several other shady operations, offered the minister \$500. “You can't take that,” said a scandalized deacon. “That's the devil's money.” “Well,” said the minister, cheerfully accepting the gift, “in that case, the devil has had his hands on it long enough. Now let's see what the Lord can do with it.”]

...Churches are now] at the left hand of Government, not God... The British [RC] newspaper the *Tablet* has upbraided... [the new PM] for his pledge not to increase taxes. More taxes, it says, are needed for more spending to “solve” poverty. The [NZ] Churches are constantly signing letters to the Government urging the spending of another few billion for the same reason... In the 1970s well-meaning liberals stormed into bureaucracy and Parliament determined to wage social justice on a large scale. The Churches were ripe for a complete abnegation of their pastoral role. With their new friends they signed to the view that poverty was the business of the Government. For it seemed the solution to poverty had been found. Keynes had provided governments with a perpetual motion machine that ground out endless public money. This, allocated by the wisdom of the politicians, and administered by a caring bureaucracy, had the power to solve conclusively every social ill. This was reinforced by the fact that the welfare state and reforms of the 1930s had answered the injustices of the previous 100 years... [- until the] flaws in Keynes theory surfaced. The welfare state... had the unintended consequence of destroying those who relied on it. Government bankruptcy, inflation, the drug wars and the plain refusal of some problems to answer to massive injections of money jerked some sections of the community back into reality. By then the Churches were paid-up members of the “chatterati” – those who talk, report, address, lobby, study, exhort *about* such problems; who demand that the Government *do* something about them, but who never ever themselves *do* anything. The Churches... are not outside the pubs preaching sobriety. They no longer appear among the poor, arguing the virtues of postponed gratification, saving, abstinence from vice. They just hand out food parcels to supplement the spending of the state. They shifted from active organisations with agendas of their own to become mere petitioners of Government. They gave up recruiting new members. They stopped preaching to the convertible and demanded more taxes from the dwindling converted. They ceased believing that their message had any power... [T]he Churches are locked into post-modern groupism and find any alternative heresy. Any change, they say, can only be a return to dreary Dickensian workhouse charity. It may be only generations from now, when it is proved beyond a shadow of doubt that the Government offers the poor only total devastation, that the search for real solutions will begin. For the Churches to remain relevant in the quest for real solutions they need to disengage themselves from pleading at the public trough. They need again to preach the message of their founder... to the population at large... For today’s poor the only sign of Christianity is another whinging, hand-wringing cleric interrupting the flow of violence on Government television...

I... [- the] vicar of St Matthews-in-the-City... [-] was shown on television blessing the... building of the facilities for the America’s Cup in the Viaduct Basin. I was honoured to be invited... to share in this ceremony of turning the soil... Not reported were the words I said before the blessing... In wishing the project well and being full of warm sentiments for the yachting to come and the success of Team N[Z], I acknowledged that a huge sum of money was to be spent. For this to be just, the facilities need to benefit all Aucklanders and be a fine recreational development on the waterfront for all of us well into the next century, whether we be rich or poor. For so much is happening in our land which is deepening the divide between rich and poor. The poverty trap is all too real for too many of our citizens and decisions appear to be made in Government by people who simply will not listen to those who are most affected and to those working in social and community services.

...St-Matthew-in-the-City, the church that offers spiritual care for the Auckland business community, is about to provide something more worldly. It is opening 131 long-term car parks on a site beside the church. The operation is another venture by a church which makes no bones about its links to city enterprise... The vicar... said the five-storey, \$1.6 million project was an investment to pay for the church’s social services. “We are trying to be good stewards with this asset.” ...St Matthew’s is being restored at a cost of \$2.8 million, with its neighbour Sky City Casino a “significant” donor... [By the way, a] Sicilian archbishop has gone on trial on charges of taking a... four million lire... kickback for renovation work to his cathedral... in 1979 after termites weakened its wooden interior. Prosecutors also allege [the archbishop] inflated the size of vineyards on church property in receiving a 750 million lire... EU improvement subsidy... He did not attend the opening session... [of court, although defendants] in Italy are not required to attend their trials... Vatican officials said they could not recall a criminal case of such proportions being brought against... such a high-ranking [RC prelate].

...Wellington Cathedral is in its final stages of enlargement, which began in 1954... The cathedral still needed about \$750,000 to complete the building included in the original plans in 1935... [● Auckland’s] St Matthew’s-in-the-City is shedding its construction cloak... Scaffolding has been removed from the north side, revealing clean sharp stonework. All that remains to be finished are the east and south sides – and the problem of payment. Estimated to cost \$970,000, the restoration job has taken longer and cost more than expected. The [vicar]... said it would be a tragedy if the work was unfinished for lack of funding and was desperately door-knocking to find the \$250,000 needed.

...Guardians of St Matthew-in-the-City... are selling time capsules... which cost \$250 for individuals, \$500 for a family and \$1000 for corporates... to raise the final \$250,000... The capsules... sealed[in] lengths of plastic spouting... [will be] locked away until St Matthew’s Day 2097.

...[‘Would it were that the restoration of St Matthew-in-the-City was nearing an end as reported by the *NZ Herald*. And if only we had most of the funds required. So far we have raised and had promised \$2.1 million. We need a further \$800,000 to complete the exterior and save a unique part of Auckland’s architectural heritage – a responsibility we invite all to share in.’]

...Join the dogs and donkeys and ducks at noon tomorrow at St Matthew-in-the-City for the annual animal blessing service. [Last year, ‘a black Labrador sang the loudest, and before the minister blessed the animals a goat blessed the floor of the church.’]

...‘Everything is available over the internet, and that includes a blessing. Called A Gateway to God – Online, the blessing is part of a vicar’s master plan to “globalise” the Anglican Church, starting with his parish of St Matthew-in-the-City. The website would cater for people who could not always make it into church buildings and the anonymity factor could appeal to those who didn’t want to “join the club.” His venture into cyberspace has not drawn any complaints from the parish – yet. But the Methodist Church president said she had real difficulties with the website, as it was “marketing” something that was quite profound. “I think it is commercialising something that is deeply sacred. It trivialises the depth of Christianity.”’

...‘St-Matthew-in-the-City is again appealing for funds – this time to restore stained-glass windows and the pipe organ. The vicar said work on the church had so far cost about \$3m, and a further \$1m was needed.’ Incidentally, a] **valuable Anglican Church-owned chunk of Parnell is to be deconsecrated...** a ceremony to show respect for the past use of the land... before it is sold to the highest bidder. The 2048 sq m... property was the site of St Mary’s Church until 1982, when the wooden building was moved across the road to become part of the Cathedral of the Holy Trinity... [T]he property... could... sell for \$2 m... The church is putting the land on the market after the Auckland City Council refused to buy it for use as a reserve because it was too close to the Domain. Sale proceeds will be put into the cathedral project, which needs about \$3.5 m... for completion.

...The Anglican Church is again asking ratepayers to dig into their pockets to keep the cathedral revamp afloat. The Auckland Cathedral completion project in Parnell is facing a short-term cashflow crisis and supporters have asked the Auckland City Council to bail them out... In 1994 the council provided a \$600,000 loan for the project and donated \$250,000. The church has repaid nearly \$200,000 and is now asking the council to write off a further \$205,700, leaving a debt of \$200,000. It has also asked the council for an interest-free loan of \$400,000 to help complete the final stages... which include the nave, car park and ancillary buildings... The project, which began in 1990, has so far cost \$18.2 million and a further \$3 million is needed... Further grants of \$750,000 have been promised from various organisations, leaving a deficit of about \$2.25 million, which the organisers hope to meet through the sale of the old St Mary’s site... [A] report questions whether the council should be contributing more funds given its contribution to date and uncertain benefits in the future... The council originally supported the project as the nave would provide a performing arts venue for the city and much-needed parking in Parnell... But nearly half of the groups that used it have not rebooked, citing a lack of adequate parking and accessible toilets, acoustic problems and external noise.

...A plea by the Anglican Church for more ratepayers' money to help the revamp of Auckland Cathedral has been turned down... The financial controller of the project... said... he was disappointed that the city felt it was not able to assist what was a worthy development. But he said the project was not about to go belly up.

...the de facto wife of... the late... millionaire Letraset king... has been ordered to leave by today the 248ha property... on Waiheke Island... which the couple shared for nearly 20 years. The Melanesian Mission Trust, fronted by the Anglican Church, is believed to have made a \$3.5 million profit selling the land just two years after buying it from [the Letraset king's] estate. The trust will not disclose the identity of the buyer or the sale price. However, sources say it was bought for more than \$7 million by the managing director of Mainfreight...

Ask... [him for] his view of the Anglican Diocese of Auckland and he will say it is "pretty unchristian." ...the retired farmer's history is intertwined with the tiny St Martin's Anglican Church, Waimauku. The family farm provided kauri for the church altar when it was built in 1921. [As a baby he] was baptised the same year and later confirmed and married before the kauri altar... Anglican parishioners[have now] agreed to sell the church to the Presbyterians after they voted to amalgamate with a new Anglican church to be built in Huapai. Local parishioners were happy with the price tag of \$100,000. But the Anglican Diocese has said the church must be sold for its market value of \$210,000. The diocesan secretary... said the church was owned by the diocese's General Trust Board which meant it must comply with the 1988 Trust Board Amendment Act. "The trustees are bound by that act and it says you can't sell property for half of what it's worth." ...[However, an] option was... to give a paper mortgage, whereby the church would be sold for \$100,000 on the proviso that if the Presbyterians sold it, the Anglican diocese would get a percentage of the profit.

...Karangahape Rd retailers say the Methodist Church is a greedy landlord forcing tenants out and stifling growth in the inner-city shopping precinct... The church charges twice what an independent valuer said the property rental was worth.

...[a Methodist reverend who was] forced to take... retirement... seven months before [it] was due... has taken legal action against his church... B[ut] before his personal grievance can be heard, the Employment Court has to determine whether a minister of the church is in fact an employee... The Methodist Church argued that ministers are called by God, and are not employees in the normal sense. Each earns about \$32,000 a year... (no matter where you rank in Church hierarchy this never changes apart from[annual] adjustments for inflation)... which is regarded as a stipend, or living allowance, rather than a salary, said the president of the N[Z] Methodist Conference... Anglican and Presbyterian Churches[also] made submissions at the hearing. The [RC] Church had input into the Presbyterian submission... If he wins his case, employment contracts are likely to become a part of religious life... [However,] similar cases had been heard in Britain and Canada, where each had failed... [In related news, Greek] monks looking to stash their cash have had their prayers answered. For the first time since... W[W2], the all-male monastic community of Mt Athos... will be graced with the convenience of a bank branch... [However, women] and all female animals except hens and cats are[still] banned from the rocky peninsula, which contains 20 monasteries.

...[the founder of Western monasticism was born in Nursia near Spoteto. Educated at Rome, *Benedict* became convinced that the only way of escaping evil in the world was in seclusion and ascetic religious exercise; so as a boy of 14 he withdrew to a cavern or grotto near Subiaco, where he lived for three years. He ultimately established a monastery on Monte Cassino, near Naples, afterwards one of the richest and most famous in Italy.' Incidentally, 'leaders of the World Council of Churches, which links more than 400 million Christians in over 100 countries, have been told the council is in deep financial crisis and would have to scale back. With a decline in revenue of nearly 50% since 1991, income was no longer enough to maintain the present level of activities.'

...yesterday, 'Ghana's churches faced tax gatherers demanding they "render unto Caesar". The Internal Revenue Service has decided to tax church-run businesses after church leaders' wealthy lifestyles were criticised.' In further news from Africa, a]eroplanes sent to Zaire by... [a] US televangelist's... humanitarian organisation were used almost exclusively for his diamond mining business, say two pilots who flew them. Three aeroplanes were flown... in September 1994 on missions code-named Operation Blessing[but]... the chief pilot... said only one or two of... his... 40 flights... in the country could be considered humanitarian... However... Operation Blessing reported no income in fiscal 1995 that was unrelated to its charitable purpose... The [televangelist]... has refused to comment... [His] company, African Development Company... ended up losing millions of dollars, and is at the centre of a lawsuit in which [the televangelist] is trying to recoup some of his losses from a mining equipment manufacturer. - 1997

PLASTIC buckets have gone around the crowd. There are white envelopes for those preferring to use Mastercard or American Express... [The] American televangelist... tells people to fill in their card numbers carefully. Obviously there's been trouble before. "Fill in the expiration date," he says. "Write clearly... Do not write in tongues." Everyone laughs... [The televangelist] stands in a white double-breasted suit... Outstretched, he holds a *Bible*. In the other hand is a microphone. Two symbols of power. The third is his hair, a space-age creation in silver... Verily, his hair moves in mysterious ways. The newspaper ad came straight to the point. "Experience the presence of the Holy Spirit. Come expecting to receive your Miracle!" And almost presciently... it... [answers] your first question... "No admission charge!" Well, count me in! Who can argue with a miracle? Who can argue with no admission charge? Why, I'd pay for a miracle! I'd pay lots! ...Perhaps you sense some cynicism. And you'd be right. Which raises the legitimate question: why go along if you don't believe? ...If you believe, you see... miracles... everywhere... You bandy the word about. Everything's a miracle: trees, clouds, mountains. Finding a parking space... Your own existence... yes... *You* are a miracle! The odds against being conceived were astronomical! What were the odds against winning that great sperm marathon? And that's only the tip of the iceberg! What were the odds against your parents meeting? Getting along? Getting drunk? All that makes you *special*. Those who don't believe, cannot see miracles at all. By definition. Everything has a logical explanation. If you see a cripple rise from a wheelchair, your reaction isn't: *praise the Lord!* You would ask for x-rays, before and after, and a complete medical history... [The televangelist] is under the Supertop at Ericsson Stadium, home field for the Auckland Warriors. The Warriors haven't been playing well, so [the televangelist] will fit in fine. People are used to going to Ericsson expecting miracles... Every seat is full and then some - the entire perimeter is surrounded... I'd say a third of the turn-out is Polynesian. On stage is a huge choir, all dressed in white. Above the stage is a giant video screen, and there's another one outside for those who can't get in. It's better technology than you'd expect at N[Z]'s actual religion, rugby... [The televangelist is] impressed by the turnout. He asks how many came to the service the night before. Half raise their hands emphatically. Greedy! I guess they came back for seconds on the miracles. He asks how many came from overseas. A handful. He wants to know what countries. One says American Samoa. The next says Western Samoa. The crowd goes wild... How many people are from Western Samoa? The hands go up. Nearly half... Incredible. You can see [his] mind tick over. Hmm. Samoa. Obviously a Christian stronghold he has somehow overlooked. [He] suggests he should take a crusade there. Big cheer! Boy, was that the right thing to say! I'm sure [he] will look into the Western Samoan economy before he commits to a trip. Ahem. Perhaps God is doing well enough there already... Out comes - a child. [The televangelist] cannot be serious. It's [his] seven-year-old son... [who] sings a song about Jesus... [The son] is cute. Too cute... I'm about to be unwell... He closes on a song about spaghetti. Not religious, but that just adds to his charm... The audience loves him... I dislike [the televangelist] more and more. This is loathsome. He's exploiting his own son! *God so loved the earth, he sent his only son to sing karaoke?* Next [the televangelist] brings out two of this three daughters... [He] sure did beget. What now? ...Thankfully... [the] daughters, vaguely teenagers, are monosyllabic and uncooperative. He asks if they like N[Z]. Their reply has the tone of: like, we asked to come here? One says, we've only been to the mall... He asks... what they bought at the mall. Nothing, replies the daughter. The daughter[said the shops] didn't take American money... Horror! ...The one true money... Proof surely that she is in a Godless land. To be honest, it surprises me the people in the mall didn't accept it. I would have... *You want to*

pay with US dollars? Sure! It's worth exactly the same... The children are dismissed. I'm not sure what the point was. To win our trust? If I was in a doctor's office, and the doctor brought out his family, I don't think I'd be more at ease. Especially if the kids began singing... It's not just the currency that's different here. The congregation is not as boisterous as [the televangelist is] used to. They're attentive... But these preachers need to hear the crowd. "The Devil cannot read your mind! He can only hear your words!" ...When he says something stirring, expecting the audience to shout agreement, he eggs them on. "And the people said amen!" ...The people say amen... All the way through, there's an us and them mentality. Like a Warriors game. This time, it's us versus Satan. Bad things are Satan's fault. If you're poor... [or] sick... Satan did it... If you're in a wheelchair, forget about being differently-abled, special, or even handicapped. No, you are possessed by Satan. And once you give yourself to the will of God – which plainly, by your inability to walk, you have not yet done – once you *believe*, you will be released... At the moment... Satan has scored from a set piece. Once you believe, God will equalise from deep in His own half, and score the winner as well... If I was in a wheelchair, I'd be thinking: I wish God had played better defence early in the game... I think it's dreadful to link physical ailments to morals... Being sick is unpleasant enough. It literally adds insult, to say it's their fault as well. It's not their fault, necessarily. Frankly, I'd find it hard to look up to a deity who punishes people with illness. Or rather, who has the power to heal illness, yet allows it to continue. I wouldn't do that, and I'm only human. I'm quite selfish, and I think I'd heal first, and ask questions later... I don't think I'd even ask for much begging... The hymns I could do without. I would, however, continue to make the priests dress up in funny clothes, but only because I have a sense of humour... [The televangelist] was raised by [RC] sisters in Israel, who told him poverty meant sanctification. But [he] knows better. He has met the Pope. "I met him privately, in New York City,"... The Pope doesn't believe in poverty. "The Vatican is very rich." Did [he mention he has also gone to] the Vatican? That was the other time he met the Pope. Privately. The Pope was pleased to meet him. Again. [He] says one Leonardo painting from the walls of the Vatican would support his ministry for a year. Only *one year*? ...How much does this ministry cost? Good grief. The point is well made. Follow the interests of God, and the paintings will come. [The televangelist] announces a special offer... They are chartering four jumbo jets from the US to Israel. That's 2000 people. He wants to fill one jumbo jet from A[US and NZ]. It costs only \$7295, but for an extra \$1000, they throw in Jordan. But wait, there's more. [The televangelist] will baptise you himself... His hands, laying on the holy water of the River Jordan! ..."Quit asking for little things," [the televangelist] bellows at his... audience. "He's a big God." ...REMEMBER, to the believer, "wealth and riches shall be in his house." [This televangelist] must be one hell of a believer. He must believe like... a barn door in a storm. He must believe all the way to the bank. And every time he looks at his bank balance, his belief is confirmed... WE ARE to feed the poor, says [the televangelist]. "But how] can we feed the poor if we're poor ourselves...?" This makes sense. So let's get rich. But don't seek riches. "Seek ye first the kingdom of God. If you put God's interests first, all these things will be added." ...After two hours in the cold, I leave. The miracles haven't begun yet, but I can't see the point of staying... I trudge through the rain and get back to my car... I turn the wipers on rapid – but there's still rain on my glasses. I'm sure any half-poetic preacher could find a sermon in that. Which of us has our wipers on? Yet has not wiped our glasses? Surely that man does not see!

...God is working hard tonight. He tells [the televangelist] things. "There are three people here involved in witchcraft – Jesus just set them free." That's the first miracle in a series delivered with breakneck speed. "Someone's cured of deafness, a tumour, stomach cancer, skin disease." ...[the televangelist] blows into his microphone and a section of the audience tumbles over. He calls the pastors in the audience to the stage where he waves at them with his hand and they all fall down... [T]he crusade's N[Z] coordinator, careers backwards into a row of chairs and has to be helped to her feet. Later she says she had her eyes shut and didn't know [the televangelist] was standing in front of her. But the next day the sore back, which means she has to take morphine to function, is no better. It's in God's hands, she says. Then begins the parade of those who have been healed... A 79-year-old woman is moving without her walking frame for the first time in years. [He] takes her hand and runs with her across the stage. Then he does that Holy-Spirit-dispensing thing and knocks her down. A young woman with a prolapsed disc manages to walk up the stairs and across the stage unaided. [The televangelist] has her touch her toes, then she... has to be carried off the stage. Strangely, the enduring image of the crusade is not the startling sight of the faithful being felled by the breath of a mortal. It's the last, sad picture of two, still wheelchair-bound, crusaders slowly wheeling their way up the rise, away from the razzmatazz, through the drizzle and out the stadium gates. It would have been easy to catch up to them and ask whether they'd hoped to be walking home through those grey mesh gates tonight. I didn't have the heart... [The televangelist's] "incredible spiritual journey" began when he attended a service by Kathryn Kuhlman... in the 1970s... [He]'s the consummate showman. His on-stage antics were the inspiration for... [the] faith healer in the 1992 film *Leap of Faith*... On the Saturday night, according to organisers... 10,000 had to be turned away. Impressive figures. Let's talk a few more. The pastor himself won't talk figures or indeed anything else. A spokeswoman for the crusade says [the televangelist] doesn't give interviews. He's not here to promote the glory of [himself] but the glory of God. This is not strictly true. [He] has given interviews in the past; that he does so no longer may be a consequence of investigations by the broadcaster CNN, an American-based group called Personal Freedom Outreach, and accusations from former followers that his healing is unsubstantiated... His ministry brings in an estimated \$NZ100 million a year. [He] won't say how much he pays himself, some estimates put it at around \$1 million a year. His half-hour television show, *This is Your Day*, screens on 95 stations across America and in 65 other countries including N[Z]. He has what you might say is a novel approach to interpreting the *Bible*... "Prayerfully ask the Lord what he would have you give," he exhorts on his Website. "There are those who will know immediately that they are to give \$1500. Others will feel led to give... perhaps... \$10,000 or even more. Simply respond as the Spirit leads you." Perhaps unwisely, given the sex and financial scandals of earlier televangelists, the fundraising plea is signed: "Everlastingly at it..."

... "It was a grave error," said the fallen American icon last week. "...I apologise to everyone. Everywhere I go there are people who still hate me. Until the last few weeks I've had a hard time forgiving myself." As acts of contrition go, the... [reverend's] was nowhere near as mealy-mouthed or calculated as other public figures. But [he] has nothing to protect any more, nothing to lose. His "inappropriate" behaviour with a 24-year-old church secretary scandalised Christian America a decade ago, igniting the collapse of his [TV] empire in a squalid quagmire of sex and fraud. He was jailed for 45 years. [However, last week the] shamed TV preacher turned up unannounced at a Christian leaders' meeting at the Crucible Theatre in Sheffield... England, and apologised for disgracing the name of Christ... Ten years ago the baby-faced preacher owned and ran PTL Ministries – which, depending on your perspective, stood for Praise the Lord or Pass the Loot. [He] and his wife... were the most popular of America's prosperity-preaching tele-evangelists, with... homes that included an apartment in Palm Beach with floor-to-ceiling mirrors, three Cadillacs and plastic surgery for his face and her breasts. Broadcast on 200 cable TV stations to millions of viewers, they used tax-free donations to build an 800ha religious Disneyland complex called Heritage USA... which became the third most popular attraction in America. But, inexplicably, God wasn't picking up the tab. Sobbing before cameras... on [their] knees... they begged for donations, claiming their organisation was on the verge of bankruptcy. It was as close to telling the truth as they came... The empire... [fell] around his ears when it emerged – allegedly thanks to the ministrations of a rival man of God – that [the tele-evangelist] and another preacher had been given a tour of the sins of the flesh in a motel room... and paid [their hostess] \$265,000 to hush it up. She did, until *Playboy* magazine made a better offer... [The tele-evangelist eventually] was convicted on 24 counts of corruption involving more than \$US160 m... "I... felt God abandoned me." Inmate 07407-058 discovered that in jail preachers are not particularly welcome. "It was a cesspool... A man twice tried to rape me, but God protected me..." There were other men of cloth, too. "There was a nice little group of us, including a... cocaine fiend." Why would a pastor take cocaine? "Because we're in show business instead of God's business. We gotta perform like trained monkeys." ...He is not planning a return to tele-evangelism and lives in a one-bedroom apartment in a Los Angeles ghetto where he does voluntary work. [His wife] divorced him and married his best friend. When... [he] left jail – the sentence reduced on

appeal on the grounds of the trial judge's religious prejudices – he had only the clothes he stood up in. Last week he [re]married... and is in Britain on... honeymoon. He is taking the chance to... announce the end of the world. In prison, he said, Jesus picked a sliver from the divine eye and put it in his own. With this unique device, [he] can see the world much better – but things are not looking good. He now has the vision of a contemporary economist. “God has given me a message for the last days... The four horsemen of the Apocalypse are about to enter the world stage...”

...scandal can often be a perfect little morality play... [T]ake... the... TV preacher who kept telling us God wanted our money – now! ...[he] ran a 150 million-dollar-a-year religious empire. Then he got caught with a hooker and turned on the tears. “I have sinned against you my Lord...” But he went and sinned some more! In California for a prayer-meeting, he sneaked out at dawn and bought porn mags, he picked up a street-walker, then he saw a police car and the guilty preacher began hiding the porn mags. That made the car weave and he was pulled over... [T]hat's when the faithful stopped sending him wages for sin... [B]ut... he was an angel compared to the undisputed king and queen of hallelujah hanky-panky... Ah, what a sweet couple, and what power they had over the faithful millions who tuned in for [her songs and his] preaching. They tugged at... heart-strings and hauled in the dollars but then... [he] was jailed for fleecing his flock... What doomed his Praise the Lord empire? ...an unholy laying on of hands with... [a] church secretary... Then [a man] went public and admitted [the preacher had blackmailed him] to become his gay lover[, promoting]... him from gardener to producer of the TV show in exchange for gay sex... [And, although the preacher's wife] was never prosecuted, she was no innocent. While [her husband] was facing charges she played the faithful wife for news cameras, sobbing rivers of mascara... [B]ut they were crocodile tears. [The pious wife] was actually having a sexual affair with... [her husband's] very married... best buddy... In the final days before [the preacher's] conviction, friends who visited his hotel room revealed that he was consoling himself with vodka and porn films.

...How much money have I got to send you preacher...[?] “G]ive what you have... I take donations from all denominations in any currency big or small... The spirit of the Lord shows me that somebody is being impressed by the Holy Ghost to write a cheque for \$5000...[?] “I worked hard for my money Now you say you want to save me Is this for your church or your pocket... - Stealing In The Name Of The Lord

One of the cultural forces that has helped shape the American character is the Puritan ethic, also known as the Protestant ethic... The Puritan ethic, with its emphasis on hard work, thrift... and... overcoming adversity... has helped to make America the prosperous industrial nation it is. It has also contributed to the confusing and paradoxical views of money that most Americans have. The ethic teaches that people should work hard and sacrifice to earn money but should not enjoy it once they have it; that a lot of money made too easily is the “work of the devil,” but that a lot of money accumulated over a period of time and as a result of hard work proves that one is “favored by God”; that both money and lack of money produce feelings of guilt; and that money can both protect and destroy one's virtue... Affluence implies a *superabundance* of money, [and] a limitless supply of what is necessary for the most satisfactory life possible. In contrast, the Puritan perception of the world includes *limits to everything*. Therefore it is necessary to conserve things... Some people are not content to purchase human friendships, they also try to buy the love of God. By paying heavy tithes and making large contributions to the church, they hope to ingratiate themselves with God... Most of the great religions of the world preach the virtues of poverty and self-denial. Foregoing personal and material pleasure is believed to enhance holiness, righteousness and spiritual development. One of the most frequently quoted passages in the Bible is Christ's proclamation that, “It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God.” Yet it is obvious even to the most confirmed believer that some... religious leaders apparently do not practice what they preach. The late Kathryn Kuhlman, the well-known evangelist, reportedly left a very sizeable estate... [‘Brigham Young, a leader of the Mormon's – a denomination that has been known to require its followers to hand over 10% of their earnings – died leaving \$2500000 to 17 wives and 56 children.’] While church leaders stress the value of sacrifice and penury to their congregations, many churches, cathedrals, and temples of even the most traditional denominations are impressive architectural masterpieces, richly adorned with gold and silver, and housing some of the most valuable art collections in the world. Despite their stated beliefs, it would seem that most church leaders and churchgoers prefer to worship in attractive and expensive surroundings. The “success” of the ministry is too often measured less by the “spiritual impact” on the congregation than by the amount of money donated by the congregation to erect an imposing house of worship. Occasionally, a religious leader comes along who preaches that it is better to receive than to give, rather than the other way around. Such a person was Russell Herman Conwell, a Baptist minister... He went about the country giving a speech called “Acres of Diamonds,” in which he proclaimed that acquiring wealth was an honourable ambition... Conwell followed his own advice. By the time he had given his speech to some six thousand audiences, he had accumulated approximately \$8 million, which was certainly a lot of money in the 1890s. The modern counterpart to Reverend Conwell is the... head of the United Christian Evangelistic Association[, who]... has sixteen Rolls Royces at his disposal, as well as six residences in the [US] and others throughout the world. His wardrobe costs approximately \$50,000 a year and he has enough jewelry to start a small store. He is a self-proclaimed hedonist and admits to being a multimillionaire. Addressing his huge congregation, [the head of the UCEA] says... “Now repeat after me! ...I have a wonderful relationship with money... Money loves me... I see a mountain of money piling into my arms... I see myself on shopping sprees... taking fabulous vacations several times a year... Oh bless you, money, you're wonderful stuff!”

But Peter said unto him, Thy money perish with thee, because thou hast thought that the gift of God may be purchased with money. - The Acts 8:20

...Jesus... said unto him... sell all that thou hast, and distribute unto the poor, and thou shalt have treasure in heaven... And when he heard this he was very sorrowful: for he was very rich... [W]hen Jesus saw that he was very sorrowful, he said, How hardly shall they that have riches enter into the Kingdom of God... woe unto you that are rich! for ye have received your consolation... So likewise, whosoever... forsaketh not all that he hath, he cannot be my disciple. - St Luke

“...a number of cities have rejuvenated their economies with legalized gambling... What do you think Reverend?” “Once something has been approved by the government it's no longer immoral.”

IT can easily be claimed that the single most divisive issue in Christianity today is homosexuality. Is there a difference between homosexual orientation and homosexual behaviour? Are homosexual relationships theologically moral? Should same-sex partnerships be blessed in some way? Are gay men and women suitable candidates for ordination? In N[Z], the Methodist, Presbyterian, Baptist and Anglican Churches often find themselves at loggerheads over these questions. One might claim that the R[C] Church is more generous, in that in 1986 the Bishops of N[Z] declared that “the homosexual condition is morally neutral.” ...however... all is not well, even in Rome... THE Vatican conundrum is symbolised by the tension between official documents. According to the catechism, homosexuality is not a choice and every form of discrimination against homosexuals is to be resisted. Yet according to the Vatican Congregation for the Doctrine of the Faith, even an inclination toward homosexuality “must be seen as an objective disorder.” This latter opinion assumes that gay men and women are unable to control their lust, and so mandates celibacy for all homosexuals... [– something the] argument suggests that gay[s]... are by nature incapable of... Behind both positions lies the basic [RC] doctrine that the primary purpose of all sexual activity is the begetting of children. That the vast majority of sexual activity in marriage, not

to mention the world, is undertaken for increased intimacy or for a couple's recreational pleasure seems to escape Vatican comprehension... Many gay men and women have already left the[RC] Church, hearing too loudly the irony of that old hymn, *They'll Know We Are Christians By Our Love*.

...[over 'the weekend thousands gathered for a parade to the Colosseum that amounted to a victorious coming-out for Italy's gay community. The parade marked the end of an international event that took place in the face of staunch opposition from the Vatican and neo-fascists. The opposition boomeranged. Instead of stopping the festival, it turned attention to discrimination against gays. Only a few dissident priests took part in the World Pride roundtables and conferences. The Vatican newspaper, meanwhile, made a point of reiterating that homosexual acts are a sin. The Church, wrote the pope's personal theologian, can't accept the "public and legal recognition of homosexuals." ■ 'Cyprus' Orthodox church is to try a bishop on gay sex charges next month.']

...The first openly-gay[NZ] Methodist priest has been accepted as a full practicing minister. However, the vote... was not unanimous.

...Presbyterians are about to vote... in a referendum that has caused damaging divisions within the church. Opposing factions have been campaigning to win votes from church members on the issue of whether gays and lesbians should be ordained as ministers or church elders... with an unholy war of words setting the scene for the debate... More than 80,000 ballot papers will be sent out next week.

...THE Presbyterian Church will announce from the pulpit next week whether gay people should be ordained as church ministers. Its decision follows a ground-breaking move by the Methodist Church... which decided a gay man, who was already a minister, could be made a church superintendent. Some 54,000 church members have voted in the Presbyterian referendum organised to determine whether members support their Council of Assembly ruling, made last year, that practising gays should not be licensed or ordained as ministers. The ruling didn't apply to gay people who were already ministers or who were in training. The referendum is non-binding but will be taken into consideration by the assembly when it will decide whether to uphold the ruling at its meeting next year... [I]t was only the third referendum held by the Presbyterian Church in [NZ]. When a lesbian was licensed this year, several South Island presbyteries disassociated themselves from the Wellington presbytery that licensed her. She has yet to be ordained by the church... Meanwhile, [the NZ] Methodist Church President... said the decision to accept an openly gay person to the position of superintendent had been a major and difficult decision for the church... Homosexuality was not an issue in the[RC C]hurch, because all priests took a vow of celibacy, a[RC C]hurch spokesman said. The Anglican Church has no fixed position on the issue, although it is the subject of research, a spokeswoman said.

...[an] Anglican Bishop... from New Jersey... America... is determined to drag the Church into the 21st century[, although his]... views... have won him enemy status with conservative Christians everywhere. Here's why: On homosexuality in the clergy: "We have had homosexual priests for 2000 years..." On... the future of Christianity: "...we have got to deal with... that imperialistic claim that we and we alone have the right to God... I have travelled in China and... met Buddhist monks who are truly holy." Religions had to recognise that... God worked through others... By expressing his opinions, he has earned death threats, public protests and accusations that he does not believe in the resurrection of Christ... He may not be brandishing insurance policies, but the 65-year-old is keen to sell his brand of Christianity during his month-long stay in [NZ], his third visit... [H]e is not afraid to reveal his past. "Hell, yes, I was a chauvinist, homophobic, fundamentalist, racist." Huh? A peek into his past explains all. Brought up in North Carolina... his father was an alcoholic who abused his mother. Around him, blacks were segregated and homosexuals were targeted in bitter attacks... His career as a man of the cloth has... broken down his prejudices. It was his appointment to his present position in the Newark diocese which exposed him to the issue of homosexuality. During the first days of his new job, gay clergy from parishes under his orders came to him and divulged their sexuality[, so he]... headed off to university to talk to scientists. "I became convinced that homosexuality was not a choice." [The bishop] believes that neuro-chemical factors lead people to being homosexual or heterosexual. Accepting gay clergy is a logical step... His latest book (he has written 15)... [deals with another belief of his] that the gospel writers harboured a deep anti-Jewish bias. Therefore, he questions the literal translation of the Good Book... "A literal Bible presents me with far more problems than assets. It offers me a God I cannot respect, much less worship, a deity whose needs and prejudices are at least as large as my own."

...['Priesthood haven for homosexuals The RC priesthood in Britain is fast becoming a gay profession. Proportionately, those training to be priests include significantly more homosexuals than there are in the general population. And now a forthcoming British Channel 4 documentary, *Queer and Catholic*, is to allege that, while many of the gay men remain celibate, others do not. The programme claims that seminarians at the English College in Rome, where elite candidates for the priesthood are sent, have cruised Rome's gay bars and parks. Student priests in the college frequently referred to one another by girls' names and the culture in parts of some seminaries is one of "high camp." Taken together, all this suggests that a gay subculture is emerging in some seminaries, similar to that which has developed in the US, where it has been suggested that as many as a quarter of American priests are gay. However, the rector of one of the leading US seminaries, St Mary's in Cleveland, Ohio, suggested that among priests under the age of 40 it could go as high as 60%. It was reported last year that the number of priests who had died of Aids was proportionally four times that of the general population. American seminaries now demand an Aids test before ordination.']

... 'A FORMER gay stripper claims God has miraculously cured him of AIDS. The American pastor is touring NZ churches and schools telling how he is sure he was healed of HIV after putting his faith in God. The NZ Aids Foundation says it doesn't know of any cases of people being cured of HIV. The foundation's executive director said: "Once you've got AIDS, you've got it. But when AIDS first came to public awareness, there were a lot of false positive readings." However, the 30-year-old – who told *Sunday News* that "by the time I was 18, I'd had over 500 sexual encounters with boys and men" – claims he had numerous documented tests confirming he was HIV positive. He was hospitalised in 1993 with full-blown AIDS. He said he was so sick, doctors told him he would not live through the night. "But I had a revelation. I was unconscious and God came to me and said he had healed me of AIDS." The next morning he said he astounded the doctors by waking up feeling normal. "I've already had many medical tests showing I no longer have AIDS." Incidentally, the [NZ] Methodist Church is teetering on the brink of a break-up with its leadership conceding that a split is looming. Factions... have become so polarised over the appointment of a gay minister to a key position that leaders are calling a crisis meeting in an effort to hold the fragmented Methodist conference together.

...['A row over gay clergy has left 300 members of a Methodist congregation holding their service yesterday under a makeshift marquee. While regular worshippers attended the Tongan Methodist Church in Otahuhu, the rebels – the bulk of the congregation, who were locked out of the church in February – assembled in front of a house around the corner. The group members are now demanding that the church let them back in and have taken their fight to the High Court at Auckland. The group has requested keys to the church as well as \$200,000 in damages for being excluded from the building. Tension within the congregation stems from a vote to leave the Methodist Church of NZ because of the appointment of a homosexual minister to a key leadership position in Christchurch. The bulk of the congregation was disgusted with the church's gay-friendly attitudes.' ●] Presbyterians have rejected the idea of gays and lesbians taking up leadership roles... Results from the month-long postal ballot showed that 75[%] agreed with the assembly. Only about 35,000 of 81,000 ballot papers sent out were returned.

...In May the... Auckland City [Council]... gave... \$140,000 for... the "city's total contribution to the cost of the 1997 and 1998 Auckland Santa parades." ...The city promotion committee vote was split, but underlined the council's view that some parades are more deserving than others. It was the same committee that rejected a recommendation to back the Hero Parade with \$15,000... Th[e] philosophy... that homosexual and lesbian celebrations are not activities deserving of ratepayer support... extends to other gay events. Money for an art show and a gathering of young people was rejected by councillors after its endorsement by officers. Council staff have been slow to accept that most of their political masters do not want

a bar of the city's homosexual community, despite the council conceding that residents want projects "that encourage community involvement and identity." Few public events have electrified Auckland in recent years as much as the Hero parade, which will proceed without ratepayer backing.

...It must be very confusing being a fundamentalist Christian. At home you know you can beat your child for being naughty, safe in the knowledge that it's all part of God's work... It's all for the child's good, they tell themselves. Part of growing up in a loving, caring, God-fearing, family environment. Step outside the front gate, however, and a philosophical flip-flop occurs. This sort of behaviour suddenly becomes sexually deviant. Wave a sandshoe within a mile of a bottom in Ponsonby Rd during the Gay Hero Parade and it's the devil's work. Indeed it's so evil that keeping the children inside at home in bed with the blankets over their heads for the night is not protection enough. They could, we're told, turn on the television and risk exposure via a news broadcast... [The] Mayor... and... fellow opponents... – [including a councillor whose]... famous actress daughter... [is] an icon of the gay world – ...say they're not anti-gay. How else, then, do they explain their obstruction of this hugely popular event? The \$15,000 requested is only needed as a result of \$40,000 in charges the council has imposed because of the very popularity of past parades.

...A groundswell of support has emerged for the... Hero parade in the wake of the Auckland City Council decision to refuse it funding. *Metro* magazine yesterday announced it would contribute \$15,000 towards crowd control and Auckland city youth councillors pledged their support for a float in the parade. The *New Truth* and *TV Times* has already donated \$5000 and set up a nationwide 0900 donation line to help fund the... event.

...If it was trial by media, then the... [c]ouncil would be dead and the street parade of homosexuals... would be very much alive. If it was trial by expressed public opinion, then exactly the opposite would be true. The... parade has a history of floats depicting simulated sex and alternative sexual practices, with... whips and chains in evidence. Such practices, whether homosexual or heterosexual, simply do not have a place on our city streets. As many citizens have noted in letters to me: "If I did that, or appeared topless, in the streets, I would be arrested." True. Finally... I maintain that sexuality – and that includes sexual preference – is a private matter. To openly and publicly flaunt that sexuality, is to strip it of any deeper meaning... I, and others, have been labelled "homophobic" and "gay basher" by those who label themselves as "gay." I am no such thing. I... have [n]ever bashed verbally or physically, homosexual men and women. It is ironic that the reverse is not the case. Let *Metro* magazine spend its readers' money on the parade. The council has more pressing issues to deal with and far more needy causes to spend ratepayers' money on.

...About 56[%] of Aucklanders do not want their rates helping to fund Hero parades, but... [52%] of people aged between 18 and 29 favoured the idea... The results did not impress the Deputy Mayor... who said last night: "All I know is there is a heap of people who don't want to fund it."

...Community boards planning to channel public funds into the Hero parade are defying public opinion, says the Deputy Mayor... The Hobson Community Board has pledged \$2200 for portable toilets at the event and the Western and Eastern Bays boards are likely to offer similar support... The editor of *Metro* magazine... last week announced a \$15,000 donation for crowd control at the parade.

...[next 'year the Sydney Lesbian and Gay Mardi Gras is celebrating its 20th year of jubilant existence. In that time it has gone from a small protest march which ended in a mini-riot to one of the greatest celebrations in the world. The city of Sydney acknowledges this by giving \$120,000 to the Mardi Gras, which brings in more foreign currency than any other single event in AUS. I mention this, by way of contrast with Auckland's Hero Festival. We are in our fifth year and, as every man and his poodle knows, the hillbillies who happen to run the city decided the parade – the great climax of the festival – was too far beneath their notice to award it a relatively small sum of \$15,000. To make their contempt clear, the council awarded extra money to clean up after the Santa Parade, which encourages small people to believe in a fat old man dressed in red who everybody above the age of five knows doesn't exist. Someone somewhere might be able to explain the logic. Fortunately, the people of Auckland have shown they can rise above the minds of its elected leaders.]

...[What would Jesus Christ have thought of the Hero festival if he was around today? I have a sneaking suspicion that Jesus, while perhaps not leading the parade in a pair of pink hot pants, would have been among the spectators, enjoying the spectacle immensely. And I'd be prepared to take bets that he would not be at all pleased with the so-called "Christians" who handed out hate mail. While I have never read the whole *Bible*, classic movies and musicals and the odd (begrudged) scripture class have given me a pretty good understanding of what Jesus was all about. He wanted people to love and respect one another. So judging by the open show of love, friendship and respect displayed at the Hero parade, I'd say most of the 100,000-odd participants will get passes to heaven, validated by The Boss himself. The fringe "Christians" who chose not to enjoy a good boogie along Ponsonby Rd but instead tried their damndest to spoil everyone's fun are another story. They could find their exploits backfiring on them when Judgment Day arrives. Next year, I hope the extremists give up their hopeless task of trying to persuade right-thinking NZers that there is something unholy in celebrating your sexuality.]

...The Archbishop of Canterbury... laid down the law on homosexuality... during the only interview scheduled for his six-day tour of [NZ]... "Human sexuality must be expressed within marriage, and... the lifestyle expected of clergy is either marriage or celibacy,"... But gay Anglican clergy have opposed the archbishop's stance. "The archbishop does not have a monopoly on God's wisdom," an openly gay priest... who is the associate priest at St Matthews-in-the-City... said last night.

...The Church has always maintained the primacy of scripture in dealing with matters of a moral nature. It will seriously compromise its credibility if it attempts to depart from the view it has always held... that the intention of God... is that human sexuality is essentially expressed between male and female within marriage. An argument which is frequently advanced is that the recorded words of Jesus Christ nowhere include any statement concerning those who are possessed of an orientation towards homosexual relationships. Of course that is true but it has to be qualified by the fact that the words of Jesus on heterosexual marriage are sufficiently clear and unmistakable as to exclude any other possibility. In a democratic and pluralistic society we have become much used to our long tradition of exercising our right (if not always our responsibility) of expressing many differing opinions on many subjects. In recent years it often seems that personal opinions are pushed to the point where some trade on a personal charisma to become leaders or gurus. The prominent leader of an Auckland [religious] community who holds strong opinions on matters sexual is now completing a long prison sentence because this country (for the moment at any rate) still holds that sexual acts between adults and children are morally wrong. It is alleged that he remains unrepentant, holding to his creed that it is only the unenlightened members of our society who fail to see that his beliefs are not only reasonable but desirable. He is not alone, either in this country or overseas. In a society which has become inured to violence in many forms and expressions of sexuality of every and any sort, it is probably inconvenient to remember that the Church expects all its members but particularly the clergy, by virtue of their pastoral role, to abide by the standards of Scripture they are expected to follow... It should be recalled that one of the early proponents of a change to the law regarding homosexuality in Britain was a former Archbishop of Canterbury... It was his contention that the offence of homosexual acts between consenting adults should be decriminalised. The fact that he was very careful in continuing to describe such actions as remaining outside the will of God and thus a sin has been conveniently ignored... [P]riests who deliberately flout the discipline of vows freely taken invite... condemnation. Sadly the whole emphasis on homosexuality tends by comparison to trivialise those situations in which heterosexual priests live, for example, an adulterous lifestyle... [By the way, a] two-year British study has unveiled shocking evidence of domestic violence by clergymen... many clergymen's wives had suffered mental, physical and sexual abuse.

...A 76-year-old retired [RC] priest has been convicted of rape by a judge in Providence, Rhode Island, who labelled him a sexual predator... [In related news,] almost half of the estimated 100,000 priests disrobed worldwide since the early '60s left the order to marry. A survey in the [US] found that at any time, 30% of American priests are likely to be heterosexually active and 10% homosexually active. Recent church scandals have centred on the [heterosexually active, like the] Scottish ex-bishop... who eloped with a divorcee in a blaze of tabloid publicity. - 1997

Britain's leading cardinal said yesterday that the [RC] Church could relax its centuries-old insistence on the celibacy of priests... [R]eacting to the resignation of a Scottish bishop linked with a divorcee, [the cardinal] said the church was losing many excellent candidates for the priesthood

because they wanted to be free to marry. "It is not divine law. It is church law, so any Pope or general council could change it,"... [The stance of the] head of the church in England and Wales... was in sharp contrast to the unbending line taken by the Archbishop of Glasgow... after the resignation of the Bishop of Argyll... He said [the Bishop of Argyll], who disappeared from his home last weekend... had been guilty of a major lapse. If a bishop had admitted an affair or it were proven, the Vatican would probably "urgently request" him to resign under church canon (law) 401, which applies when a priest is unable to fulfil his office because of ill health or "another serious reason."

...A woman has revealed that a practising priest fathered two children by her and in a television interview she implied that the scandal over[a] runaway bishop... could be but the tip of the iceberg for the[RC] Church... Her revelation came as the church was reeling from the news that [the Bishop of Argyll] had fathered a son more than 15 years ago... [Furthermore,] he refused to acknowledge being the father and threatened to go to Peru to avoid the scandal... While the Church was supportive and helped the couple "work through" their problems [the mistress] was left to bring up the child alone, she claimed.

...[the d]isgraced ex-Bishop... claims that so far he and[a] divorced mother-of-three... have not had sex... "We have... not even shared the same bed..." ...Speaking to the *News Of The World*, the... former Bishop of Argyll and the Isle in Scotland... also denied claims that he had had affairs other than those with [a woman] aged 41, and with [another woman], with whom he had a son... now 15. He said he felt guilty about the way he had treated [his son]... Reports of the amount paid... for the story range from a five-figure sum to £500,000... The interview, which includes the first picture of the couple together, was given after they were tracked down to a Lake District hideaway... The couple moved into a cottage in the quiet Cumbrian town of Kendal about a week ago after asking neighbours to help them carry new twin beds into the house. Meanwhile, a[n]... underground support group for British women in secret relationships with Catholic priests, named 7-11 after the date it was set up on November 7, 1993, said it had almost 80 members and had heard rumours of possibly hundreds more such liaisons in Britain.

...[In Christian teaching marriage is the place for sex, as a unique expression of love between a man and a woman committed to each other for life. But marriage is not the greatest human good; it may have to be foregone in order to do the will of God. Many Christians, including RCs', however, believe c]elibacy should be an option for priests... A spokeswoman for the... Diocese of Auckland... said... priests... [already] chose a... lifestyle which included... vows of poverty...

The clergy of Britain are to submit their first pay demand to the cash-strapped Church of England. They want their stipend increased by up to 27[%] a year, a rise which would cost the Church more than £178 million. The priests claim it can afford £160 million of the total and say worshippers could make up the difference by putting an extra 76p a week in the collection plate...

At Sweet Haven Holy Church of God in Virginia, you can put some money in the collection plate and get some back. The pastor passes out green play money. Find a bill with his initials on the back and you can win between \$US10... and \$US100. There's a catch: parishioners must be at church for the entire service, which often lasts more than two hours... [However, if you're pressed for time, you might prefer to attend a 'drive-thru church. On its first day, one in AUS provided taped sermons to 60 drivers on their way to work.' In another development, w]orshippers at the church of San Claudio in the Spanish city of Leon can now make their traditional offerings through a credit card terminal that has replaced the traditional collection box... [A]mong other advantages the terminal gave donors a receipt, enabling them to claim tax exemptions.

...In Thivers, France, two men attacked and tied up a parish priest... and helped themselves to 5000 francs... from the collection plate. - 1996

[When a collection basket is passed around at church, the point is to give money, not take it. But thieves continue to target churches, particularly in Auckland's inner-city, where parishioners are frequently warned to keep an eye on their belongings. A Detective Sergeant said churches were "easy pickings because the doors are always open. People can quite comfortably wander in and instead of seeking solace, so to speak, they can get up to no good." St Patrick's Cathedral's business manager said: "The general public wouldn't expect thefts in churches. But obviously some people are desperate." The Auckland Baptist Tabernacle associate pastor said: "I think thieves think church is a really good place because people are gullible." Two men were sentenced last week to five years' jail after a North Island crime spree in which they went into churches and convents and took credit cards from wallets while people prayed. Last month an unemployed 39-year-old man received an 18-month suspended sentence after breaking into numerous central-city churches, stealing cash, wine and gifts that had been donated for children.'

...[Salvation Army staff are devastated after thieves stole \$2500 in hard-earned funds from their Henderson headquarters. "Who would steal from the Salvation Army? Everything we get we give back to the community," says the West Auckland community and family services manager. "Times are hard and the giving to us is down." Most of the cash was going to be spent on toys for the child care centre and the youth group. Insurance will cover most of the losses and damages but the policy excesses mean the organisation will be out of pocket. This is the second time in 14 months that burglars have targeted the Salvation Army's View Rd home.' In international news, a CofE] vicar has called for the thieves who stole 100-year-old figurines from his church to have their hands cut off... [The British vicar] said it would "act as a deterrent" and would prevent them from further hindering their progress to heaven. The state should be responsible for carrying out the dismembering...

A Bay of Plenty pastor got his congregation praying aloud and singing while two masked and armed youths rampaged around them. Having tried to reason with the pair who had gatecrashed a meeting in the Kawerau Assembly of God church, the... [reverend] started singing *In the Name of Jesus We Have the Victory*. "It was the first thing that came into my head... I believe there is a lot of power in praise... If we had not all called on the help of God, there might have been a lot more violence." ...the 55-year-old felt as if he was taking part in a scene from an American movie. The intruders burst in "shouting obscenities" and threatened to blow his brains out if he did not hand over "60 bucks." While... another stood guard at the door... the pair went around demanding money and jewellery... "I told them, 'Jesus loves you guys. Why don't you go now and we'll forget the whole thing. If it goes on, you'll be in serious trouble.' Then they went ballistic," he said yesterday at his Lake Rotoma home where he was nursing cuts, bruises and stitches to his scalp... After about 20 minutes, during which one offender threatened to douse [the reverend] with fuel and set him alight, "a great calm came over me." Refusing to lie on the floor, he said, "I am now going to leave this building. Shoot me if you are going to, but I am leaving." He walked outside where the pair... "karate kicked" [him] in the head... [then] beat him around the head with the gun and slashed his arm with a knife before running off... Two 15-year-olds and a 17-year-old... appeared briefly in the Whakatane Youth Court and were remanded in custody to face a judge today. The 17-year-old will go to the district court.

...Practising martial arts puts some punch into preaching the *Bible*, according to [a] self-defence expert, maker of low-budget action-pictures and recently retired... Methodist minister... Running karate classes for children attracted more interest than conventional *Bible* study... Between sermons... [he] has also graced the silver screen himself - his biggest success being a 1984 low-budget film *Killpoint*... After a stint starring in martial arts movies in the Philippines he returned to his... Californian... church and set up his own production company. Some members of his parish have even taken roles and found the action not all that different from a good church service. "It's still the good guy against the forces of evil." [Incidentally, a group of 'British clergy - called the Kung Fu Vicars - have taken up martial arts to defend themselves.']

...Sunday prayers at the Soul Winning Salvation Church in Nairobi ended in chaos when the congregation beat up their pastor in a row over church funds... He was rescued by police officers and taken to hospital...

[On Sunday, about 70 heavily armed men, allegedly members of the United Self-Defence Forces of Colombia, swept into the village of Playou de Orozco, where residents had packed the church for a baptismal Mass. The gunmen, carrying lists with the names of their intended victims, selectively dragged them outside the church and shot them dead while other villagers and a parish priest watched in horror. At least 27 people, including several

children, had been confirmed killed. Meanwhile, the Indian PM has visited the violence-hit tribal area in the western state of Gujarat and urged stiff punishment for Hindus behind a series of attacks on Christian churches and prayer halls.' In local news, 'arsonists set fire to two New Plymouth churches early on Saturday, and only good fortune saved both buildings from destruction. A driver of a passing taxi noticed flames in the Knox Presbyterian Church shortly after 2am. He and his passengers used a garden hose to slow the spread of the blaze until the Fire Service arrived. The Apostolic Church's Park City Centre escaped ruin only because the fire started in the basement and its concrete ceiling prevented the flames from rising to the rest of the building.'

...BERENGER Sauniere was a typical 19th-century village parish priest, with the meagre income you would expect of a rural clergyman in southwest France... But [there is nothing typical about] Sauniere's church... – an edifice that psychically repels some visitors to such an extent that they find it impossible to step inside. From outside, square-towered and solid, it appear[s] reassuringly normal, were it not for the strange Latin inscription carved above the door: *Terribilis est locus iste* – "This place is terrible." Just inside, crouched to support a font, his face a rictus of hate, his fingers splayed like claws, a carved black devil glared at me... Did Sauniere make a deal... with Satan? Are unseen forces at work here? - 1997

Master Four went to church for the first time. When I asked how it went, he replied: "I looked for God but he wasn't there."

The New Testament describes the church by several images, including 'people of God' and 'body of Christ'.

And I saw no temple therein: for the Lord God Almighty and the Lamb are the temple... - Revelation 21:22 (also see I Corinthians 3:16)

We heard him say, I will destroy this temple... made with hands, and within three days I will build another made without hands. - St Mark 14:58

...she is everywhere and no place the church not made with hands...

It was stated on line 36 of the previous page that church *doors are always open*. However, the 'Church of the Holy Sepulture in Jerusalem has long been locked at the end of the day' and, nowadays, it isn't uncommon for churches in NZ, for example, to be locked when left unattended – to protect them from theft and vandalism. Would such acts be allowed to occur in churches if these edifices were important or sacred to God?

Two priests at New York's City's famous St Patrick's Cathedral were robbed of \$US175... by two men, one with a pistol, inside the foyer of the cathedral rectory in midtown Manhattan on Christmas [(X)mas] night...

"Glory to God in the highest, and on Earth peace, goodwill towards men." So sang the heavenly host as the birth of Jesus Christ was announced in the early hours of the first [X]mas morning. It's been the theme of the [X]mas season ever since – the second part of it anyway. Again this year we read it in the newspapers, heard it on the radio and on television, saw it in the shops. But as usual there wasn't much peace to be seen... There are individuals, organisations, even Governments which devote vast amounts of their time to promoting peace. But there is no peace... [By the way, letters] addressed to Mr S. Claus, c/- North Pole, flood... mail centres across... [NZ each year. T]his year kids... [covered] all their bases to make sure the bearded one [brought] them just what they want[ed on X]mas Day... Teams of Santa's little elves at mail centres around the country... [handled the] deluge of... 75,000 letters ...while[at] Telecom elves... registered more than one million calls from kids nationwide and more than 600 letters on e-mail... • T[he letters of the word SANTA can be rearranged to spell the word SATAN! Coincidentally, 'St Nicholas is the patron saint of Russia and the guardian of virgins, children, sailors, scholars and robbers. In France, Pere Noel (Father Christmas) leaves presents on the hearth on St Nicholas' Eve.'

... Father X]mas, alias Santa Claus, is a religious figure and was around a lot earlier than those who have in recent times hijacked his image... The linkage was corrupted in America some time after the arrival of settlers from Europe who had taken with them the custom of giving gifts to children on December 6 [- St Nicholas Day – each year. Nicholas, a bishop, lived in the latter part of the third century and the beginning of the fourth. Stories about his care of children, the elderly and the poor were legendary but only came out after his death... Parents and the Church emulated St Nicholas even to the point of preserving their own anonymity to help children experience love and trust for themselves and to learn to know that the world values them as people. Now the myth has been changed to serve the needs of a consumer society.

...Surely, with a new millennium approaching, it[is] time for an entirely new image for Santa... Coca-Cola gave him his current look in the 1930s, when the company's advertising executives adapted the image of the European and rather dour St Nicholas to make their soft drink appealing to Americans in winter. They did away with the traditional, pale, all-in-one robe, dressed him in Coke's corporate colours, fattened him up and gave him a jolly demeanour, and featured him in magazine ads enjoying a Coke at the end of a night's gift delivery. - 1996

It's a battle of the Santas, a clash of cultures between two [figures who are] both descended from St Nicholas... The Dutch are torn between the American-style Santa Claus – with his crass commercial trappings – and their traditional Sinterklaas... Anti-Santa sentiment is so strong in some Dutch villages that signs posted on streets... warn... against any Santa invasion until Sinterklaas has left town. But some say Sinterklaas isn't exactly as pure as driven snow. The legendary character, who lives not in the North Pole but in Spain, is under attack [ove]r his servants... known as Black Petes[, who]... carry toy-filled sacks slung over their shoulders, but strike fear in the hearts of children. After the gifts have been handed out, they are said to stuff their sacks with naughty boys and girls and take them back to Spain. "Some people complain that Black Pete is a stereotype of a black person..." says... the Anti-Discrimination Forum... Amsterdam's official Sinterklaas for nine years... says it's the grown-ups who are creating the problems. "Children don't think like that. All they want is to... receive candy... Black Petes are just part of the story... We shouldn't tamper with tradition." Bah, humbug, say some residents in Bijlmer, an Amsterdam suburb with a high population of minorities. Many there have sought to ban Black Petes[, who]... usually are portrayed by whites in blackface... from visiting their schools.

...RETAILERS are upset by a Christian anti-shopping campaign which could bring a silent night for shop tills in the build-up to [X]mas. Wellington's Youth for Christ group is promoting Friday, November 28, as Buy Nothing Day, when people boycott shops... [Observed] overseas for six years[, the boycott]... is meant to curb the shop-till-you-drop mentality of a consumer-driven society, at the start of the annual [X]mas frenzy... But[the] Retail Merchants Association... is unimpressed. "What people have to realise is that in total there are 300,000 staff employed in the retail industry. You are talking about the livelihoods of a lot of people,"... [It] hopes the campaign won't take off and people keep on spending.

...[WHAT do Christians and shopkeepers have in common? They both sit down on December 25 and thank God for Xmas. Ever since the Three Wise Men showed up with precious metal and pungent spices, the inviolable link between Xmas and presents has been the salvation of the retail sector. That's why it can be such a nail-biting time in the retail trade. Fail to pick the trends when you start ordering the stock mid-year and you could end up as retail's equivalent of the Xmas turkey. Pity, for instance, the toyshops that missed the Monopoly craze of 1935, the Sooty rage of 1954, hula hoops in 1958 and Barbie dolls the year after, or Rubik's cubes in 1980 and Transformers in 1985. This year, pundits tell us, there is no single must-have toy, meaning retailers have to work much harder to satisfy an uncertain demand. Statistics NZ says that we spend about \$400 more in the December quarter than the other quarters. And our Xmas spending has been increasing each year, with last year's spending up 6.3% on the year before. This year's shopping pattern is still anyone's guess, but will undoubtedly be affected by the US dollar. □ 'The glitzy Neiman Marcus department store in New York has an equally glitzy Xmas catalogue. This year it offers an exclusive motoring deal – a Mercedes-Benz G-Wagon for a staggering \$380,000. The store imported 15 from

Germany. Mercedes-Benz' parent Daimler-Chrysler doesn't sell the four-wheel-drive G-Wagon in America. If it did it would probably cost \$80,000. But it wouldn't be exclusive then, would it? And well-healed Americans wouldn't be able to boast about buying it from Neiman's, would they?"

... 'THERE is a new niche toy market growing in size and popularity throughout the US: Christian toys. From board games to biblical action figures, conservative Christians are fuelling this emerging industry from its roots in the Bible Belt over to the East and West Coasts. Mass retailers, once sceptical, are taking note of popular toys in religious stores and giving them a try, and mainline toy manufacturers are also entering the act. 20% of the toys Cadaco makes have a Christian theme, including games like WWJD (What would Jesus do?), Bible Trivia and Bible Pictionary. Other Christian board games on the market include Bibleopoly (build churches as you move around the board); Missionary Conquest (learn to finance your missionary trips); City of Bondage (biblical heroes try to rescue the Lost Souls held by the Evil Hordes who have overthrown the desolate city).' ● 'A British child psychologist says the belief that Santa "knows if you've been bad or good" helps to teach children the difference between right and wrong and is a "useful ace up a parent's sleeve".']

...So your child's wish list to Santa is as long as your arm and includes every toy fad on the market, including ones you know you'll be infuriated by. Don't worry. According to [a] child psychologist... you won't be the world's worst parent if you don't meet their every request – in fact, you shouldn't. "Kids have to learn that they don't get everything they want,"... [H]e suggests that parents presented with over-the-top lists to mail off to Santa should gently suggest that the big man might not be able to get all those gifts in his bag or down the chimney...

SANTA Claus would be happier to enter by the front door rather than the fireplace this year, judging by the size of toys at Jack's Toy Co of Remuera. Little girls will be searching for the country collection of stand-alone kitchens, \$495, with built-in cupboards, stoves and twiddly knobs... Little boys will look for a Poseidon-version Porsche, \$795, or jeeps at \$850 and tractors at \$350 for indoor or outdoor play. Less expensive are hideous-looking Glow Power insects and creepers at \$7.50 each...

THE REPUTATION of the Scots as mean and penny-pinching is shattered by a report which reveals they splash out... an average of \$1520... on gifts, food and drink at... [Xmas. I]t is people in the south-west of England who come out bottom of the... table... [at] \$1340... Last December, N[Z]ers spent around \$1020 a head]. ■ 'Every man, woman and child in NZ uses 6 or 7 rolls of wrapping paper. Last Xmas, we ripped to shreds about 600 tonnes of festive paper. That so-quickly discarded paper cost us \$15 million. Most of the ribbon tied around the presents came from AUS and China'...

'30 million Xmas trees are sold annually in the US', but if] you want to know what all the best-dressed [X]mas trees are wearing this year, step into Nature's Alternative... This year decorations are from the 75c items to... \$399 a piece... the array of lights, from \$24.95 to \$69.95... Replica... trees... are from \$12.95 for a 30cm... to \$600 for a 2.75m floor-to-ceiling mixed pistol of fine proportion... Ribbons, and "angel hair" of spun gold and silver set the finishing touch to the trees – and yes, you can buy aromatic pine oil, to sprinkle on the boughs. The ensuing smell is better, in fact, than the real McCoy... Some people choose an all-gold, or all-silver theme... Some prefer a glorious kaleidoscope of colours, adding just a few baubles at a time... All you need is imagination, or inspiration... Garlands for doors and mantelshelf are from \$28.95; and a fireplace swag (to welcome Santa) is \$48... [X]mas carousels, which twinkle with activity and merry tunes... range from \$99 to \$350 for Santa's musical workshop. Patchwork sampler wallhangings, with a charming representation of *The Twelve Days of Christmas*, are... \$37.95... [Speaking of things to hang on the wall,] we're buying and sending more... [X]mas cards... "It's a lucrative, multi-million dollar market." ...Hallmark employs 700[Xmas card] designers...

A postal price war has emerged over overseas [X]mas mail between N[Z] Post and a postal franchise group new to the country. [NZ Post] has dropped its charge for sending [X]mas cards to Britain and Northern Ireland by 33[%] to \$1.20. This follows the move by Mail Boxes Etc, which cut its price to all overseas destinations to \$1.10.

...Hundreds of West Auckland residents may be short of [X]mas mail after two teenagers stole two mail bags from a Titirangi shop... The bags were dropped off... for a postie to pick up and deliver but the thieves... ran off with them... People expecting mail are advised to contact N[Z] Post...

THESE days, the ghost of [X]mas past is far more likely to visit its victims covered in credit card statements rather than chains – they make less noise arriving in the mail, but you can guarantee they'll bring plenty of yuletide shoppers sleepless nights in the New Year. Scrooge would no doubt have approved of Eftpos' ability to instantly separate people from their hard-earned cash. "Retailers go into an advertising frenzy," says... [the] director of Otago University's retail studies group. "Looking at it from the shop-keeper's point of view, a lot of companies and stores will be expecting to do 70% of their annual turnover within the next six weeks, some of those probably in the last three weeks before [X]mas. It's quite staggering... many stores will have committed themselves maybe eight or nine months ago to large stocks which [they] will be hoping to shift from here on in." Did anyone mention Levene? ...despite the threat of liquidation that a barren [X]mas could bring retailers[he]... agrees the real Santa sandtrap is the one waiting for consumers. "There's an awful lot of pressure on people to 'give', and we're all bombarded with junk mail and plenty of pretty pictures..." ...Whether you pay first or later, the bottom line in consumerland this [X]mas is that companies want you paying one way or another – but are they concerned about selling you into debt in the process? "The short answer to that is no," [he] says... A lot of... people wake up next to (metaphorically speaking)... [the] managing director of Auckland's Debt Recovery Company. After 17 years in the game, [the managing director] is well aware of the post-December-25 trauma an overdose on overdrafts can inflict on shoppers. "Just before and just after [X]mas is when most individuals incur their debt. You've got the Farmers card and Warehouse card run up to the max... and the majority of people who have those cards are from low-income families... Peer pressure goes on as well – my mate got this, my girlfriend got that – the Star Wars toys have all come back and they're not cheap... In my experience, even a cheap [X]mas costs the average family nearly \$1000... an awful lot of money... to contend with." ...if a decade researching retail has taught [the Otago University director] anything, it's that, ultimately, sound financial planning runs a close second to surfboards when it comes to escaping mistletoe madness.

...We all know how it ends – with a bearded fat guy in a red suit. But how many Aucklanders realise who and what is behind the city's largest annual event? Synonymous for years with the Farmers' Trading Company, the Santa Parade, which celebrates its 50th anniversary this year, is no longer run by Farmers and survives thanks to a clutch of corporate sponsors... Early advertisements for the Santa Parade, which terminated at Farmers' flagship store in Hobson St, made no secret of its ulterior motive: Farmers, it reminded Aucklanders, was the ideal place to buy [X]mas presents... By the late 80s, however, Farmers was in trouble. It had been bought by... Chase Corporation and at one stage was being run at the mercy of its bankers. In 1990, it gifted the expensive-to-run parade to the city of Auckland, to be run by a trust. The parade's manager for the past decade... estimates the total cost of the parade this year is likely to be around \$400,000, including storage costs ['storing the floats in a warehouse uses 1/5th of the total parade cost'] and donated services... TrustBank (now WestpacTrust) ends its three-year contract for naming-rights this year... [Other sponsorship] opportunities range from the \$15,000 splash-your-name-all-over-a-float-and-get-heaps-of-other-benefits package, to the \$3000 sponsor-a-character package... Other major sponsors who have stuck with the parade include the *NZ Herald*... the Auckland Regional Council and The Warehouse... Around a quarter of a million people are expected to watch this year's parade. That's a sizeable audience by anyone's standards. However, many sponsors are still undoubtedly attracted by the parade's wholesome, family-focused image... The original parade included bus loads of orphans and children from the Sunrise Blind Babies' Home, all of whom were guests of Farmers for the afternoon. The tradition continues, with disabled children given their own special area to watch the parade. Terminally ill children are brought in by ambulance. Research carried out by TrustBank last year showed around a third of those who watched the parade had attended the event at least half a dozen times. Many were able to name the main sponsors. While satisfaction with the quality of the parade was high, 32[%] of those surveyed wanted a better Santa and a better Santa float this year... One year he was brought in by plane – to his obvious discomfort. The spectacle was

outdone the following year when a parachutist agreed to play Santa – and accidentally landed in the lily pond at the Winter Gardens in the Auckland Domain. Six weeks later the parachutist was killed in another jump and Santa has been grounded ever since. However, no-one can accuse the parade of not moving with the times. In the early days, other main attractions included Jack and the Beanstalk, a huge Noah's Ark, Humpty Dumpty and the Three Little Pigs. This year's parade... will be led by... television's Xena Warrior Princess. Those concerned about family values should note that Barney the purple dinosaur will also be present... It will be interesting to see who gets the biggest cheers – [Xena], Barney or Santa.

...[the Maori Affairs Minister lifted his arms and declared himself king of the world yesterday as he walked away from Kaikohe's Santa Parade unscathed. Last year the Santa needed laser treatment to his eye after being pelted with waterbombs and in previous years Santas have been assaulted for running out of sweets. Running alongside this year's float clad in a tight yellow elf's suit was the government whip with a more conservatively dressed Labour MP in tow. The three MPs tamed the crowd with 120kg of sweets. Local sportspeople had done their bit to ensure the parade's success, visiting schools and urging children to leave their water bombs at home.]

...Santa has been a big hit in the business world in London... [T]he word Santa, or some form of it, has been registered as a trademark by seven different companies in the past seven years. The name covers toiletries, greeting cards, ornaments, animal playthings and even plum puddings. Names registered include Young Santa, Son of Santa, Santa's Son, Santa Babes and Santa Claws.

...Move over, elves – Santa Claus' new helpers are the telecommunications giants. Santa, always an "international gentleman," is coming from everywhere... [including Cuba! The Cuban] President... has declared [X]mas Day 1997 a holiday as a gesture to the country's Christians and Pope John Paul II... [following the latter's] landmark first visit... But [the President] stressed that the holiday was a one-off.

...[It comes around once a year, and always at the same time, yet for some reason, some people still never quite prepare for Xmas. But while you're waiting in line with the hundreds of other grumpy, tired, last minute shoppers, spare a thought for those NZers who manage to avoid the festivities. If you are of Vietnamese descent, chances are you will be a Buddhist who does not recognise Christian iconology in your cultural practices. However, Vietnamese living in NZ still celebrate Xmas and attend celebrations, such as the Christmas in the Park concert held at Auckland City's Domain.]

...more] than 200,000 people packed into Auckland Domain for the annual Christmas in the Park last night. Police reported few behavioural problems but said the bumper crowd – the biggest in three years – created traffic congestion on the Southern Motorway.

...The Auckland Domain burst at the seams as crowds packed in for the city's latest serving of Christmas in the Park... Picnic-packing families soaked up the mild evening air, tempered only by an outbreak of "snow" – flakes of fake snow showered over the crowd to the delight of children and parents alike. Television star... "Xena"... wooed fans with several carols... Not everyone entered into the [X]mas spirit, however. Police arrested 11 people, including several youths who hurled glass bottles at them... Organisers... said the event was the country's largest gathering of people.

...It is on these Sundays leading to [X]mas that congregations swell. This may not be entirely due to an onrush of piety, rather the parental duty of seeing Belinda in the nativity play or... Uncle Fred... read one of the nine lessons in the carol service. For... [most] of the year I have little use for the extravagances of sentimentality... But [X]mas is different. The shepherds, the wise men, the baby in the cradle and the choir of angels may all be of doubtful historicity, but I rejoice in it all and lament its absence from television schedules. They are far too busy of course urging us to spend. They have forgotten – if they ever knew – that the most important gifts we can give at this time of the year cannot be bought: Love, friendship, understanding, consideration, a helping hand... a smile.

...The Auckland City Mission hopes to jolt the community into giving to poor families this [X]mas with a poster showing the Virgin Mary without baby Jesus in her arms. Produced by local advertising agencies, the image is intended to symbolise that joy is absent from the lives of thousands who have to get by on very little... On [Xmas Day, the mission] will hold its usual large dinner for 1500 low-income people who would otherwise go without what most people regard as the usual festive [X]mas fare. It also hopes to give presents to 7000 poor children and teenagers likely to miss out on treats. The city missionary... is spending his last year in this role before going into retirement. [The reverend said X]mas would be a sad time this year for a growing number of Auckland families. "Christ the child brings joy and hope but what we are finding is that for many people, there is no joy and no hope... The welfare system is not working and a radical rethink is needed..." ...The Christchurch City Mission will cater for around 700 people... Around 300 people will attend the Wellington City Mission... and[more] than 100 people will gather in Dunedin for a [X]mas lunch... hosted by the Church of Christ. [Its] minister... said the lunch was primarily for those who would spend [X]mas on their own, but families who couldn't afford a [X]mas meal were welcome.

...an enterprising 7-year-old, is determined to have [X]mas despite her family's tight financial situation. After being told they could not afford to celebrate [Xmas, the girl] and her brother decided to set up a "kids' sale" outside their home... [They didn't offer their other two siblings but] made \$4.10 from selling goods including her only doll and broken cutlery. Her mother, who declined to be named, was amazed to wake up to see the stall.

...[a ten-year-old from Howick, upon hearing that a girl] had sold her only doll to help the family finances, has asked her mother to send [to the 7-year-old] her own prized talking doll... The *Evening Standard* in Palmerston North has been inundated with offers of gifts for the needy family but donors are being told their gifts will be passed on to the Salvation Army. When the gifts are distributed the family will be among those who benefit.

...I know [X]mas is a time for giving, because it said so in all the four-colour junk mail that poured into my letterbox... And in case it slipped my mind, my teenagers kept reminding me... by ostentatiously mentioning the name of designer fashion accessories, each of which cost as much as I was planning to spend on wine between now and the end of the tax year. I used to know about the [X]mas spirit. I remember the joy of watching the children's tiny faces crease into smiles of delight as they opened packages containing two-dollar items... They were pre-schoolers; life was simple. These days... [anything] I think they will like is almost certain to make them roll their eyes heavenward and wonder how they could have been born to a father who is – and I believe I quote them verbatim here – "such a loser." Thus [X]mas becomes a time not so much of giving gifts as of filling orders... for young people whose retail appetites have been whetted by American sitcoms, simply because I would look churlish if I maintained the same monosyllabic resistance that I get away with for the other 364 days of the year.

...THE exchange of gifts at [X]mas time goes back beyond Christianity. In ancient Rome it was customary for wealthy men to give money or clothing to their poorer neighbours and to receive garlands or incense in return. During the calends of January, beginning on the first day, the Romans exchanged gifts between relatives, friends and the children. The gifts were looked upon as omens for the future. Sweets or honey were given for a year of sweetness and peace... gold and silver for prosperity... and... lamps to bring light... Devout Christians left all this exchange to the pagans[although burning]... candles... is a Christian custom that symbolises the birth of Christ, the Light of the World... THE scene of the [X]mas crib – the Holy Family in the stable at Bethlehem, with animals and shepherd kneeling in adoration – was probably started by St Francis of Assisi in 1224... It is difficult to put a date to his first appearance but... Father [X]mas has called bearing gifts on... [Xmas Eve for] centuries... he is referred to in a carol dating from the 15th century... [Incidentally,] three children, all under the age of 13... could face manslaughter charges after they admitted mugging an elderly woman... of \$13.85 after they sang [X]mas carols on her doorstep... [T]he 79-year-old... later died.

...We had a wonderful time singing [X]mas carols on the forecourt of the cathedral in Parnell last Friday evening... But I confess that after singing all three verses of *We Wish You a Merry Christmas* I began to have nagging doubt whether this was what [X]mas was all about. What had this splendidly happy time to do with the story of Bethlehem? ...The ingredients of the story of Bethlehem include taxation... a homeless family (no room at the inn), refugees (they fled to Egypt), social outcasts (unmarried parenthood), political intrigue (Herod fearful for his throne), child abuse

(the murder of all boys under the age of two) – and even foreign tourists (but at least they had no bother with Customs and MAF). These hardly constitute a merry tale. Yet they have a contemporary ring about them. They are issues that fill the pages of the *Herald* day after day... We miss the point of [X]mas entirely if we think that it is a time for forgetting the ordinary problems of ordinary life... [X]mas is not about escapism... Rather it is about involvement, particularly about God becoming involved and getting stuck in at the sharp end of life in human society. The story of Bethlehem is an account of God's commitment to his creation... In the city of the Sky Tower we surely ought to be able to recognise a gamble when we see one, and in Bethlehem we see God gambling everything... A gambler who risks that much is either stupid – or totally dedicated.

...Christmas at the Park [wa]s captioned "Full as a Bethlehem inn"... New flesh is thus put by the secular media on the old bones of religious myth... Glad tidings come curiously gift-wrapped this year. Secular writers reach for religious terms to make their [X]mas point. The Churches move another way. The media offer to the public a kind of show window through which to view the community as it struggles towards... [X]mas, whereas in the] City Mission's advertisement... [we] end up with a poor Mary with no gift baby to offer to her family or her world... Surely this is a publicity stunt gone blasphemously overboard, taking Christ even further out of [X]mas? ...Since the 1960s the Church has been trying to get closer to "the world" which for centuries it had condemned... The Church and the world, the holy and the secular, moving each away from their previous bastions, have drawn curiously close to one another over these... [past] decades... Offensive to some, the media's use of religious references recovers central truths of the gospel. Fireworks and lasers in the park are not far... from replicating the... single great Bethlehem pyrotechnic.

...[Almost 2000 years ago Three Wise Men (or Kings – the jury is still out on that one) trekked across the desert, guided by a bright star that they had been told signified something special. What magnitude of spectacle 2000 years ago was it that drew the Three Wise Men towards Bethlehem? Was it a brilliant new star? Based on interpretations of ancient writings, precise Chinese astronomical records, and analysis of the various calendars, astronomers now believe it wasn't any single star, comet or supernova, but more likely a rare conjunction of celestial bodies. The only astronomical event of note closest to the time of Jesus' birth was a conjunction of the planets Jupiter and Saturn. We don't put much significance today on conjunctions of planets, but in astrology there is great significance to it, and if you look back into Jewish folklore to see what that meant you find that Jupiter always represents the king. Saturn represented the wisdom, Messiah. And this conjunction occurred in Pisces, which was associated with Israel. So you could make the interpretation that "stars" coming together like this meant that there was going to be a king who would be a Messiah in Israel.]

...THE night of the first [X]mas, three wise men came to visit baby Jesus bearing gifts[after 'the star, which they saw in the east, went before them and stood over where the young child was' (St Matthew 3:9)]... What the *Bible* conveniently forgets to mention is a) they weren't invited, b) they didn't bring exchange cards with their gifts and c) one of the[m]... absolutely trashed the place. Two thousand odd years later (and let's face it, they have been rather strange), [X]mas is still the season to be driven completely insane rather than jolly. Even if you survive the annual blitz of advertising, shopping queues and over-friendly Santas, you still have the 25th itself to contend with. Laugh if you like, but somewhere out there lurk members of a species known only as *extended familius* – salivating predators who have spent the entire year locked in their rooms, thinking about nothing but how much pleasure they're going to get from annoying you in a couple of days... Nowhere else are family feuds more likely to be reignited than at the dinner table... If you feel daunted by the prospect of entertaining and feeding your meagre kin, spare a thought for... an ex-merchant navy cook... [who] is the man at the heart of Auckland City Mission's efforts to dish up [X]mas dinner to an estimated 1800 people this Thursday.

...Do they know it's Christmas? ...[X]mas should be a time of unalloyed joy... The memories parents treasure are of excited children racing into their bedroom to show what Santa left... under the tree. It's an image coopted by advertising and the media, but at its heart lies what [X]mas should be... The year he turned six he and his sister were dropped off at his auntie's in Otara on [X]mas Eve. "Mum said she had to go away and didn't know when she'd be back," he remembers. "There were six kids and my auntie living in this two-bedroom flat so we had to sleep on the floor. On [X]mas morning I don't think anyone had presents. I was a sad and confused six-year-old, being around all these cousins that I'd only met a few times before. Then a policewoman came round, picked us up and took us to my father's house on the North Shore. That was [X]mas Day... It turned out that my mother had met a guy... and she just took off. I don't know whether she or my auntie rang the police." ...It isn't clear whether[the] father was expecting his children (who he hadn't seen for three years). And although he had presents and rooms ready by the time they arrived, it didn't make up for the trauma. [The next] story is similar if from another perspective. [The mother] faced the "meaning dropping out of her life" when her children left earlier this week to spend [X]mas in Queensland with their father... [The children], aged 11, and... 13, will be away for a month... "It's a funny feeling [watching them go] because every time they've been over there it's taken three months of counselling to get their heads together again." For all that [she] is happy that her children are getting the opportunity to spend some time with their father... who spends half his time at sea... She brightens, "And financially it'll be great – a real burden off my back!" [However, without the kids X]mas threatens to become just another day for [her]. Last time they went she tried to postpone [X]mas and have it when they got back but it didn't work out... This year she organised a pre-[X]mas gift-giving party... before they left... "Next year, if I've got the kids with me, we're going to do some voluntary work at [X]mas – go to the City Mission and see the reality of other people's lives." Then there's [the man] who will wake up on [X]mas morning without the whoops of excitement from [his] children's room for the first time... Separated[nearly] a year, with daughters aged six and three... [he will spend X]mas on his own... [until he] picks the girls up from their mother at 3 o'clock... The pain of a broken marriage at [X]mas doesn't stop when children are adult. Take [the 57-year-old] who parted, reasonably amicably, from his wife nearly two years ago. She was 55... their children all over 30. "The first [X]mas it was all quite friendly... However, this year it's a shambles." What's the difference? Simply that [he] now has a new partner and his children don't approve. "The kids refuse to meet her. The one who's organising the [X]mas do told me not to bring her... [T]he ironic thing is, my ex-wife and I get on OK – she'd like to meet my partner... it's the kids who can't cope." [A family] counsellor... says... "[X]mas is supposed to be a family time[but often]... there are only fragments of the family left... loyalties are split, the family has formed alliances and taken sides and that makes it impossible to have a joint family holiday or festivities. Basically you're trying to have fun in the middle of a war zone." ...[the counsellor's] most important tip is for parents to get their [X]mas custody arrangements organised well before [X]mas itself... "My whole front lawn is littered with people who've left it until [X]mas Eve." She's not joking. At the Auckland Family Court in Albert St, where the saddest cases end up, the six weeks leading up to [X]mas is the busiest period of the year... [Most cases involve] the various court orders that can be made to safeguard at-risk children – orders preventing removal of children from the country, protection orders, custody and access agreements.

...It is a case of "let the buyer beware" when it comes to supermarket [X]mas hampers. Contents of a... hamper, which customers of... New World supermarkets can pay off at \$2 a week for 35 weeks, have been valued at under the \$70 total... [T]he value... was closer to \$55... The manager of New World Group... said savings could... be made if customers chose to "cash and carry" and buy specials, but the hamper offered convenience.

...Dreaming of a white Christmas has taken on new meaning for some Nebraska residents... A car dealer in Omaha is offering anyone who bought a vehicle between November and last Thursday night... \$17,000... in cash if it snows 10cm on [X]mas Day. The company has taken out a \$2.85 million insurance policy with Lloyd's of London just in case... [In local news,] Ashburton has introduced a fire ban from noon today until January 5 and fire officers are rescinding permits for... [X]mas Day because of the] South Island drought.

...Faulty [X]mas tree lights may have started a fire that destroyed a house in Nelson. During the blaze two firefighters were burned...

[The man known as Mister Christmas can expect a whopping electric bill. He has lit his annual Christmas Wonderland in Killingly, Connecticut, turning on a display featuring more than 380 holiday animations and 108,900 lights – his biggest show in the 32 years he has been decking his 12ha property' ...

'Churches are all hustle and bustle transformed with coloured lights, tinsel-covered fir trees and ornate nativity scenes. The best silver is on display. The clergy and choir wear resplendent robes. The music is awesome for a change, replacing the dirge of canticle, psalm and hymn. It is the time to be merry – in a sober and proper way. The soft, gentle, intimate words of the birth stories fan generous and warm fuzzies in the hearts of young and old. A baby is born, all is well in the universe. The truth? Honesty? Forget it! It's Xmas. It has magic all of its own and, God help us, the world needs that magic for a night and, as a bonus, for a few hours next day. The world is desperate for a gripping fairy tale to keep it from falling over a cosmic cliff into the bottomless abyss of chaos. But that's the problem. Xmas is just that – a dramatic fairy story – at least the way it is celebrated today. That's not the way it was in the first century and for quite a time thereafter. The early Christians did not have birth stories for their hero until around AD90. Birth stories in the Gospel of Matthew were put there by Jewish Christians, to let us know that Jesus was greater than all the great heroes of Jewish faith and history. The stories were scripted in because there were points to score. The writer of the Gospel of Luke (AD95), without any knowledge of Matthew, used a similar technique to tell Greeks and Romans that Jesus was of greater rank and significance than the emperors. Both sets of birth stories are incompatible and point in very different directions. The accounts are not about events that really happened: they are fiction in the best sense of the word. Neither Mark, the first gospel to appear (around AD75), nor John, the last gospel in the New Testament (AD100-120), contain birth stories, an omission which suggests that the actual circumstances of the birth of Jesus are missing. It was in the sixth century that Dionysius Exiguus, now famous for creating the Christian millennium, turned the Church's attention away from gazing at the crucifixion to pondering the birth of its victim. The Church then lost its way and allowed the story of Jesus to be increasingly corrupted and distorted. Isn't it time to tell the truth?

...the Associate Professor of Religious Studies at Victoria University' 'calls the stories of Xmas "fairy tales," to be tossed aside with other stories of little people, extraordinary happenings and happy endings. The birth narratives of Matthew and Luke are not to be categorised as "fairy stories" at all. They are classic forms of literature in their own right and need to be taken more seriously than the professor's contemptuous dismissal. The professor is correct in pointing out that they are late additions to the tradition. They are post-Resurrection narratives whose purpose is to develop a full answer to the question: Who is Jesus? Their whole purpose is to emphasise that Jesus is uniquely "God's person" and from the beginning has always been so. Both birth narratives are radically subversive documents. Matthew recites Jesus' genealogy. He is son of David by adoption not by birth. The legal requirements of premarital births is set aside by the word of the angel. The Church celebrates at Xmas, in awe and wonder, that Jesus born of Mary is the Saviour of the world, God's promised gift of life. The stories of Xmas convey this good news with splendid and dramatic power'...

'There is certainly no shortage of targets for those who are bent on trying to discredit traditional Christianity. All the attacks of these would-be iconoclasts have this in common – they assume that the four gospels are merely pious frauds, an uneasy mix of fact and fiction, unreliable records of the life and teaching of Jesus. But nothing could be further from the truth. When we read them, we are in the realm of rock-solid history, not of fairy tale magic. For example, when Luke introduces us to John the Baptist, the predecessor of Jesus, he enables us to date the beginning of John's ministry with precision – that is, John began to preach in AD 28 and Jesus shortly thereafter. Of course, to have dates is not to have proof that this or that event actually occurred but it does show a writer's concern for historical accuracy. Again and again Luke's reliability as an ancient historian of the highest order has been shown by inscriptional evidence throughout the Roman Empire that has been uncovered by archaeologists. Before 1961 sceptics sometimes declared that Pontius Pilate, the Roman ruler in Judaea mentioned in all four gospels, was a figment of the writers' imagination. But in that year an inscription was found at Caesarea that establishes that Pilate was indeed the prefect or procurator of Judaea at the time of Jesus' trial. We now have multitudes of similar examples that illustrate the reliability of the four gospels. But there is a real sense in which Jesus does not need to be "rescued" by anyone or from anything. He is well able to care for himself, as he has done for 2000 years. Sceptics come and go but he goes on for ever. At present they grapple with his living Spirit but they don't face him in person – yet.'

...doctrines regarding X]mas are axiomatic: Humankind is not inherently good, but fundamentally flawed; human beings will always disobey God because they want to be their own gods, not the faithful and obedient servants that their Creator wants them to be; no amount of human striving can make us worthy of God's approval because no one can break through the circle of self-centredness that imprisons us... The miracle of [X]mas is that, by sending Jesus into our world, the Creator has done all of the work for us, that we merely have to believe that Christ is our Lord and Saviour to gain forgiveness for our sins and to receive eternal life... God sent Jesus to save us from the utter despair of living permanently in the prisons of our own making...

More than 300 prisoners have been given the best kind of [X]mas present – a "get out of jail free" card. Inmates due to be released between December 15 and January 5... [were] let out... under the... early [X]mas release programme... However, 315 other prisoners[were also] sent home early... to allow [them] to organise accommodation, look for jobs and register for benefits before organisations closed over [X]mas.

...in the past fortnight... [more] than 1000 workers... have received [X]mas presents they did not want – redundancy packages... [They] face an uncertain and stressful festive season... The announcements continued yesterday with Bendon Hickory, N[Z]'s largest lingerie manufacturer, closing its factory in... Whangarei, resulting in the loss of 86 jobs... and... Trans Power... putting off 85 staff... The Employers Federation chief executive... said the timing of layoffs was coincidental. It was an international trend... It was important people realised the industry they now worked in might not be "relevant and prosperous" in the future. The Building Trades Union national secretary... said the layoffs showed a disregard for workers and their families at a time of financial and emotional pressure. "It... means [employers] couldn't care less about whether a family can survive in comfort during the holiday period." ...[Xmas 1997 also] won't be one that many Cook Islands public servants will remember fondly. An unidentified number are to lose their jobs because the Government... has been forced to slash its budget by \$3.5 million. The cuts are the result of the Government's over-inflated estimate of \$42 million from income and company taxes... [Furthermore, the NZ] Overseas Development Assistance is to stop funding Transition Services – the agency set up to handle all jobless public servants – at the end of this year... [By the way, e]ach day, up to 7000 letters and [X]mas cards from around the world are sent to... Bethlehem, a small Bay of Plenty town... of 2000 people... The [two] post outlet staff... said last night that they were jolly but just a little weary because all the mail had been flanked by hand, a rarity nowadays.

...Although Christian pilgrims will be pouring into Bethlehem at [X]mas, Palestinian Christians... often feel like strangers these days in Christ's birthplace... Christians now make up 35[%] of Bethlehem's 50,000 people – 50 years ago, they were 80[%]. Since... Israel captured the West Bank in 1967, thousands of Christians have emigrated, mainly to... America, in search of better economic opportunities... [T]he economy is faltering... and... [this year] Bethlehem was under Israeli Army siege twice... Christians say the Palestinian Authority, which has run the town since December 1995, has treated them with respect... however... [But X]mas-time celebrations have become rowdier under the Palestinian Authority, which does not screen visitors as Israeli officials did. Many of the revellers now are young... men looking for a chance to cut loose... said... a... [local] Christian. "It's like a street party in the square, especially when they get drunk and hit on the women... It does[n']t feel like [Xmas. I']d rather stay home."

...Stray bullets killed a 12-year-old schoolgirl... and a 13-year-old boy... and at least 68... people were... maimed, blinded or burned... in the Philippines as [X]mas Day revellers fired guns in the air and set off firecrackers... [In Romania, p]lainclothes policemen kicked and punched... a group of nuns at a [X]mas Mass in Bucharest's Orthodox cathedral... for shouting slogans criticising the head of the church... for collaborating with the regime of former dictator Nicolae Ceausescu. - 1997

Political correctness puts Santa on run... According to two Jewish families in the Virginian town of Kensington, just outside Washington, Old Saint Nick is a symbol of religious intolerance, a sinister presence whose yearly visits make them feel "deeply uncomfortable". That was enough for Kensington's city fathers, who banished the jolly man from the annual tree-lighting ceremony outside City Hall. Nor is Santa welcome in state

Government offices in Arizona, where an official edict banned all workplace displays of Yuletide sentiment. No... cards... nativity scenes, not even tinsel is being tolerated. According to [the] assistant attorney-general... those traditional trappings of the season exhibit a callous indifference to the feelings of minority religions... In Silverton, Oregon, and Sarasota Springs, New York, high school teachers voted to ban their students' [X]mas-themed artwork, one enlightened educator even going so far as to liken sleighs, elves and red-nosed reindeers to the fiery crosses of the Ku Klux Klan. Absurd? Indeed it is, but things are even worse in Minnesota, where one high school suspended two students for wearing red and green scarves and a second prohibited flame-hued poinsettias in the mistaken belief that they, too, were a sacred Christian symbol... Meanwhile, at the Pentagon, helicopter crews are warned against flying Santa to carol concerts and tree-lightings – something the military had done for years as a public relations exercise. Any pilots who disobeyed the order, the generals warned, would find disciplinary charges in their stockings. To be fair, Santa should have seen it coming. He was, after all, but a secular substitute for the Christ Child, who was long ago driven from public view. Blame the US Constitution for that, since it demands a total and absolute separation of church and state... This is, we are told, the age of tolerance and inclusion, an enlightened period in mankind's history when minority views, beliefs and cultural norms must not be judged by the yardstick of an intolerant and oppressive majority. Yet here is a revered tradition... being dismantled without apparent right of appeal by those for whom [Xmas] means more than an opportunity to brandish credit cards in a binge of conspicuous consumption. "In plain English," writes [a] US *News and World Report* columnist... "the term inclusion has come to mean exclusion". In America, he continues, it is now the unassailable right of "the most sensitive person in town to set policy". All it takes is but a couple of dissident voices. So here is a possible solution, one that comes by way of Japan... A decade or so ago, in an arresting display of cultural cross-pollination, a Tokyo department store marked [X]mas by taking a life-size Santa, nailing him to a cross and then giving the grotesque collage of confused Christianity pride of place in the toy department. Perhaps America should follow suit. If you plan to crucify [X]mas, might as well make a thorough job of it.

...A[n]... incensed... primary school principal in Wales has banned a [X]mas disco after the... angelic-looking youngsters, aged 11 and under, belted out a course version of the... Jingle Bells ditty to a visiting Santa... But parents have accused [the principal] of overreacting...

Teacher violates Santa clause... Telling a class of 6-year-olds that Santa isn't real has turned an A[US]n teacher into a national pariah. [The r]elief teacher... on her first day in class... was reading a [X]mas story to her wide-eyed pupils last week when she interrupted the tale to announce: "You do know, kids, he's not real." There was more to come – apparently it is parents who deliver all those presents. When all those wide eyes arrived home brimming with tears, the parents were up to Corowa Public School faster than you can say, "Ho, ho, ho". The school just as swiftly passed the Santagate issue on to the state Education Department. A department spokesman said [the teacher] would not be returning to the school and was receiving counselling. The department has no formal position on the reality of Santa, he added.

...A new book uses quantum physics and computer technology to establish what every child already knows – Santa Claus does exist... *Can Reindeer Fly: The Science of Christmas...* takes up the sticky problem of how Santa manages to deliver presents to the world's 2.1 billion children... [B]y starting at the International Date Line and flying counter to the Earth's rotation, Santa actually has 48 hours to complete rounds. Time also slows down for the man in red because he moves so quickly... [The] American author... says Nasa has speculated that [Santa] picks up electromagnetic signals from children's brains. Scientists believe the sleigh is built of materials still beyond our comprehension and is powered by fuels yet to be discovered... [When people start talking about Santa, you can at least be sure of one thing – the season of the X]mas bash is here. All that is left to do is raise the glass and get merry at the boss' expense. That's if the company is still forking out. These days, big and flash is out of kilter with some corporates, which have scaled back to lower-key celebrations and stay-home venues. The [X]mas bash hasn't exactly crashed but for some the holly has gone limp under the heat of economic recession. Where once the spirit of [X]mas was top shelf, it is now more likely to run to beer and wine specials at the wholesalers – if you're lucky. TV3 forged ahead with its annual knees up for advertising and media contacts but the number invited this year was chopped in half. Despite the cutback, the "sales party" flew in the face of recession. Decadence of the Greek and Roman variety was the theme and togas abounded... No depravity, however, for the staff and their families. Parties are held in marquees at Christmas in the Park concerts in Auckland, Wellington and Christchurch. Tellyland rival TVNZ was also somewhat muted... But some bosses are steadfastly ignoring gloom-mongering and partying up large.

...A Merrill Lynch worker whose Hawaiian fancy dress costume caught fire... is fighting for his life in Middlemore Hospital... [T]he 24-year-old's condition [i]s critical. The man's synthetic grass skirt caught fire at the sharebroking firm's [X]mas Party at Quay West Hotel just after midnight on Friday. It is understood that a cigarette lighter caused the fire. A woman at the party was also burned... Her condition is not... life-threatening...

• A 26-year-old man appeared in the Auckland District Court on Saturday charged with assault. He was granted name suppression.

...About 40 family, friends and colleagues packed the Auckland District Court yesterday when a young investment banker was charged with manslaughter... [He] was also charged with causing disfigurement. Gareth MacFadyen... died on Monday night from burns to 70[%] of his body. His synthetic Hawaiian grass skirt caught fire in the men's toilets of the Quay West Hotel during the Merrill Lynch [X]mas party the previous Friday... [The] 26-year-old[']s... lawyer... told... the... Judge... that the incident had been a practical joke "gone terribly, terribly wrong. One can describe it as an act of stupidity committed in the atmosphere of a [X]mas party where alcohol had been consumed."

...*One thoughtless moment and three lives irrevocably changed...* If their lives had continued on course... Gareth MacFadyen would be a highly paid futures trader in Sydney or Tokyo. [His former colleague], 29, would be living, unscathed, in blissful anonymity, without women's magazines pounding the door for her story, and [their friend], 26, would be mapping out the rest of his career as a financial analyst, fulfilling his early promise as one of the best mathematicians in the country. But one Friday night... all that changed. Three days later... MacFadyen[']s parents] were taking their son's charred body home for a funeral in Invercargill. [The 29-year-old] – lying in a hospital bed with a tube for food, a pump for morphine and about to face a series of skin grafts – was the subject of nationwide tittering about what she had been doing with him in a men's toilet. And [the 26-year-old] was left living a life in which there must surely be times when he envies the dead... [F]or Merrill Lynch this was clearly a public relations disaster. After all, it is a company with a prescribed set of values, among them, "respect for the individual..." and "no one's bottom line is more important than the reputation of the company." Had this happened in America, the multimillion-dollar lawsuits would have already been filed. Certainly Occupational Safety and Health considered charging Merrill Lynch. But the law did not fit the circumstances.

...[an investment banker] is to challenge his two-year prison sentence for... manslaughter and... injuring by an unlawful act... [He] was also ordered to pay \$37,000 reparation for the "practical joke" that went wrong... at the... Merrill Lynch... [X]mas party. On a positive note, a] 13-year-old South Auckland cancer sufferer... will have a merry [X]mas after all, with a room full of gifts replacing those stolen... The thieves struck during daytime on Wednesday, walking away with their haul and leaving behind a bare [X]mas tree... The... [boy]'s mother... had worked overtime to buy her family and friends presents. Some of the gifts stolen had also been given by the Child Cancer Foundation... News of the... family's plight galvanised hundreds of people across Auckland and N[Z]. Manurewa police arriving at work were immediately bombarded with gifts and offers of help. The... [boy] was diagnosed with lung cancer when he was six months old, and when he was 4, doctors found three brain tumors.

...PLANS to recreate the birth of Jesus on a Kiwi website have been stopped by a court order. Calendargirls.co.nz – a Christchurch-based, adults-only website... [that] was criticised in October when it became N[Z]'s first live-sex site... – wanted to broadcast a live birth on [X]mas day. A former dancer... was to have got a percentage of the money web subscribers paid to watch her give birth. The baby would have been induced tomorrow if it didn't occur naturally. But the stunt... outraged Christians... The... Christian Heritage Party leader... said the live-birth plan was a "con-job in the name of Jesus Christ." ...[In related news, the US] Federal Aviation Administration has issued an official statement saying it has

cleared Santa Claus for his annual flight. The FAA said it had certified the reindeer-powered red sleigh “Kringles One” for all-weather operations. “The entire agency stands ready with its international partners to make sure Santa’s flight is as safe and efficient as possible,” said [an] administrator... She said the sleigh was equipped with features such as an in-flight de-icing system, a Terrain Avoidance Warning System required for low-altitude flying, and a special seatbelt extension for the craft’s rotund occupant. The FAA also announced that it had coordinated with air-traffic controllers around the world to... waive... landing... fees... for the vehicle.

...[Palestinian labourers are adding the finishing touches to] a fountain in the market near the Church of the Nativity in Bethlehem... It will be ready for [X]mas festivities... The star-shaped fountain... symbolises the star which the *Bible* says led the Three Wise men to... where Jesus was born.

...Seasonal celebrations in Bethlehem were but a ghost of Christmases past yesterday, as few pilgrims braved warfare in the Holy Land to visit the biblical birthplace of Jesus... Only about 200 people stood in a windswept and rainy Manger Square for the arrival from Jerusalem of an annual [X]mas Eve procession headed by... [the] Latin Patriarch of the Holy Land, to celebrate Midnight Mass. Meanwhile, gunshots echoed in the West Bank... overnight, setting a sombre [X]mas Day backdrop...

The festival of Christ’s birth has been celebrated in the Western Church on 25 Dec. from about the end of the 4th c., and in the East formerly on 6 Jan. in conjunction with the Epiphany. There is no biblical or other direct evidence of the season of Christ’s nativity, and the date may have been chosen to oppose the pagan celebration of the rebirth of the sun after the winter solstice.

The fact is, December 25 is not the date of Jesus’ birth. It could not have been, since the Bible shows that at the time of his birth shepherds were still in the fields at night. They would not have been there in the cold, rainy season of winter... Actually December 25 was chosen... because, as *The World Book Encyclopedia* explains: “The people of Rome already observed it as the Feast of Saturn, celebrating the birthday of the sun.

Overwhelming historical evidence shows that about 300 years after Jesus, church leaders decided to hijack a popular pagan Roman feast day and rename it as “Christ’s Mass” to win more pagans into the fold. *US Catholic* says “the Romans’ favourite festival was Saturnalia, which ended with the ‘birthday of the unconquered sun’ ...on December 25. Somewhere in the second quarter of the fourth century, savvy officials of the church of Rome decided December 25 would make a dandy day to celebrate the birthday of the ‘sun of righteousness.’ Thus Christmas was born.” Just three days before Christmas [(‘the word for Christ in Greek is Xristos and, according to *Did You Ever Wonder*, the use of the shortened form Xmas became popular in Europe in the 1500s’)] 1993, Pope John Paul II acknowledged in a Vatican press release that the celebration of Jesus’ birth on December 25 had no Biblical basis and that the celebration of [X]mas occurred for the first time in 354BC. He explained that “on this day, in pagan antiquity, the birthday of the ‘Invincible Sun’ was celebrated to coincide with the winter solstice (in the northern hemisphere)... It seemed logical and natural to Christians to replace that feast with the celebration of the only and true Sun, Jesus Christ”... The fact is nobody knows when the founder of Christianity was born because Jews of that period didn’t celebrate birthdays. They considered it a practice of heathen star worshippers who needed to remember the time of their birth to consult their horoscopes. This Jewish view was carried over by Jesus’ disciples. “The early Christians did not celebrate his birth, because they considered the celebration to be a pagan custom,” says *The World Book Encyclopedia*. The gospel writers also reflected this belief by omitting Jesus’ birth date from their writings... It wasn’t in December, and the favoured months now are October or September... A further factor... is the journey by his parents, Joseph and Mary, to their home town to register in a census decreed by Caesar Augustus. Many historians point out the pragmatic Romans would not have provoked the rebellious Jews by ordering them to travel on muddy roads in mid-winter when travel would be arduous and even hazardous. They would have chosen summer – or the autumn at the latest.

...Astronomers may have solved the mystery of the biblical Star of Bethlehem. A powerful computer programmed to replay “the history of the universe” has shown how the paths of planets in our solar system crossed to create a bright celestial body at about the time Christ is thought to have been born. According to the programme, the “star” appeared in June of the year 2BC and, far from being a miracle, was actually the result of the “conjunction” of Jupiter and Venus which would have created one of the brightest objects in the unpolluted skies 2,000 years ago. The findings may finally resolve the debate over the exact date of Christ’s birth, which has raged for centuries.

...The carols we sing on [X]mas Day tell us that Christ was born in a manger in Bethlehem. What you may not know, as I didn’t know, is that the manger was actually part of a cave... “Conventionally we think of Jesus born in a stable, and the stable as a building, but for the most part the people actually lived in caves and if they had animals you’d keep them in a cave, and so the place where Mary and Joseph would have stayed would not have been a grand building but a cave.” That same cave is visited today by people from all walks of life. They come from many different countries and speak many different languages... “People like myself have gone to that cave constantly for two thousand years. It is a very deep, holy, spot on this earth.” ...Now even for those who haven’t been to the Holy Land it is possible to have a connection with this sacred place. How? Through... the Cross of the Nativity, a beautiful and unique cross... [E]very Nativity Cross has in its centre a stone from the Cave of the Nativity... We have the[se]... stones... thanks to the dedicated efforts of one man. [He] has spent most of his life as a successful businessman and lay archaeologist. Now at ninety years of age he still has a passion for Biblical history. In 1964 [he] was invited by his good friend... the Mayor of Bethlehem to the Cave of the Nativity. When they arrived [he] saw that they were carving rock from the wall of the sacred place because of a much needed renovation. “There were stones all over the place from the wall being changed and I asked the Mayor... if he would ship them to me and I [also] [said] people won’t believe it unless you give me a letter.” [The mayor] did send a letter confirming the shipment of the stones and in addition these Nativity stones have been documented and verified by the Geological Survey of Israel and by the Israel Museum in Jerusalem... These Nativity stones can help us focus on Christ and the good news that he brings to us... “It’s a symbol. It’s where God touched down on earth and I have a little piece of this rock to say he came, he was Immanuel, God with us.” ...“[When] I hold this cross... I feel like I’ve got a grip holding God’s hand.” ...“It’s so amazing that a little stone could do so much but it has... I feel more Christian I guess you could put it... It brings such warmth to my heart because I have him right here... on my neck, you know. It’s just so nice.” ...I cherish my Nativity Cross for helping me to feel closer to him. It is my true hope that it will do the same for you. The Bible says that when Jesus was born into the world the angels sang, and shepherds and wise men bowed down in that sacred place where Christ was born... The stone in the centre... [of your] Nativity Cross... was there on that holy night... This beautiful cross is lovingly crafted and finished in brilliant 22 carat gold, yet it is so much more than jewellery. This timeless symbol of his sacrifice and resurrection now also reminds us of his birth and his life... Look at the fine fastening. You’ll treasure the rich and intricate detail... How wonderful to finally have a beautiful piece of jewellery with meaning that can be worn by both men and women or elegantly displayed in your home, and what a cherished gift; birthdays, holidays, or maybe someone you love yearns to feel closer to Jesus. Call now and you’ll also receive [a] beautiful 18 inch... chain finished in 22 carat gold, [an] elegant inscribed display box and your Collectors Certificate, individually numbered and registered... and because of the Nativity stone inside, this cross may become, for you, priceless... This unique symbol of faith is destined to become a family heirloom. But this offer is limited. When these Nativity Crosses are gone they are gone forever... The Nativity Cross is now available in... [NZ] for only \$128.00... A contribution from each purchase will go to the upkeep of the Cave of the Nativity... In Luke’s account Jesus cautioned those to whom he was speaking that if they kept silent about him the very stones would cry out. Well, the stones of the Nativity Cross may not audibly cry out but they certainly will testify to your faith and commitment to our Lord Jesus Christ.

...at Bethlehem's Church of the Nativity... a centuries-old painting of Jesus has begun to weep just above the grotto where tradition holds that Christ was born... Bethlehem['s] representative of Jerusalem's Greek Orthodox Archbishop... dismissed sceptics' belief that the weeping Jesus was a ploy to bring pilgrims and holiday cheer to Bethlehem this [X]mas... "I don't know what this means for tourism, this is a religious matter," [the] Father... insisted... "I saw him closing and opening his eyes... This is a miracle and a sign that Jesus sent us to strengthen our belief,"... - 1996

Now the birth of Jesus Christ was on this wise: When... his mother Mary was espoused to Joseph, before they came together, she was found with child... Then Joseph... being a just *man*, and not willing to make her a publick example, was minded to put her away privily. But while he thought on these things, behold, the angel of the Lord appeared unto him in a dream, saying, Joseph, thou son of David, fear not to take unto thee Mary thy wife: for that which is conceived in her is of the Holy Ghost. And she shall bring forth a son, and thou shalt call his name JESUS: for he shall save his people from their sins. Now all this was done, that it might be fulfilled which was spoken of the Lord by the prophet, saying, Behold, a virgin shall be with child, and shall call his name Emmanuel, which being interpreted is, God with us. - St Matthew 1

And in the sixth month the angel Gabriel was sent from God unto a city of Galilee, named Nazareth, To a virgin... whose... name was Mary. And the angel came in unto her, and said, Hail, *thou that art* highly favoured, the Lord is with thee: blessed *art* thou among women. And when she saw *him*, she was troubled at his saying, and cast in her mind what manner of salutation this should be. And the angel said unto her, Fear not, Mary: for thou hast found favour with God. And, behold, thou shalt conceive in thy womb, and bring forth a son... He shall be great, and shall be called the Son of the Highest: and the Lord God shall give unto him the throne of his father David: And he shall reign over the house of Jacob for ever; and of his kingdom there shall be no end. Then said Mary unto the angel, How shall this be, seeing I know not a man? And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God. - St Luke 1

...in the days of Herod the king, behold, there came wise men from the east of Jerusalem. Saying, Where is he that is born King of the Jews? for we have seen his star in the east, and are come to worship him. When Herod... heard *these things*, he was troubled, and all Jerusalem with him. And when he had gathered all the chief priests and scribes of the people together, he demanded of them where Christ should be born. And they said... [i]n Bethlehem of Judea: for thus it is written by the prophet... Then Herod, when he had privately called the wise men, enquired of them... what time the star appeared. And he sent them to Bethlehem, and said, Go and search diligently for the young child; and when ye have found *him*, bring me word again, that I may come and worship him also. When they had heard the king, they departed; and, lo, the star... went before them, till it came and stood over where the young child was... And when they... saw the young child with Mary his mother, [they] fell down, and worshipped him: and... being warned of God in a dream that they should not return to Herod, they departed into their own country another way. And when they were departed, behold, the angel of the Lord appeareth to Joseph in a dream, saying, Arise, and take the young child and his mother, and flee into Egypt, and be thou there until I bring thee word: for Herod will seek the young child to destroy him... Herod, when he saw that he was mocked of the wise men, was exceeding wroth, and sent forth, and slew all the children that were in Bethlehem, and in the coasts thereof, from two years old and under... But when Herod was dead, behold, an angel of the Lord appeareth in a dream to Joseph in Egypt. Saying, Arise, and take the young child and his mother, and go into the land of Israel: for they are dead which sought the young child's life... And [Jesus' family] came and dwelt in a city called Nazareth: that it might be fulfilled which was spoken by the prophets, He shall be called a Nazarene. - St Matthew 2

And the child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him. Now his parents went to Jerusalem every year at the feast of the passover. And when he was twelve years old... Jesus tarried behind in Jerusalem... And when... Joseph and his mother... found him not, they turned back again to Jerusalem, seeking him... [A]fter three days they found him in the temple, sitting in the midst of the doctors, both hearing them and asking them questions... And when they saw him, they were amazed: and his mother said unto him, Son, why hast thou thus dealt with us? ...And he said unto them, How is it that ye sought me? wist ye not that I must be about my Father's business? And they understood not the saying which he spake unto them. - St Luke 2

St Luke 2 implies that stories of Jesus' divine conception are either false, or both Mary and Joseph somehow forgot he was *the Son of God*. While it seems impossible that they could've both forgotten such a thing, it is easy to understand why some early Christians would've said Jesus was sired by the Holy Spirit – it's more appropriate for a Son of God than the alternative: that Jesus was a bastard child and Mary wasn't a virgin (i.e., Mary and Joseph had pre-marital sex, or Mary willingly had sex with someone other than Joseph, or Mary was raped – perhaps by a drunk Roman soldier). The stories of Jesus' divine birth would be more believable if Mary and Joseph had named him *Emmanuel*!

The tradition of Bethlehem as the place of Jesus' birth has its source in all probability in the Old Testament conception of the Messiah as a descendant of David. Early Christianity took this view from the beginning. "Son of David" is found in many texts (e.g., Mark 10:48) alongside other titles of Jesus... The theological motif of Jesus' Davidic descent, however, did not necessarily involve the idea that he was born in Bethlehem, David's hometown. That is the case only in Matthew 2 and Luke 2. The accounts differ in that, in Matthew, Bethlehem is thought of as the parents' original place of residence, which they soon change to Nazareth because of the dangers threatening their child (e.g., the flight to Egypt), whereas, in the Lucan story, Jesus' parents really live in Nazareth but stay temporarily because they are obliged to register at the Davidic family's place of origin. Both traditions are to be judged as legendary variations of the theological theme of Jesus' messiahship, even though each in its own way assigns to his birth a place in history... The two texts, however, cannot be harmonized. They show that originally a unified tradition about Jesus' ancestors did not exist and that attempts to portray his messiahship genealogically were first undertaken in Jewish Christian circles with use of the Septuagint (Greek translation) text of the Old Testament. Both texts have to be eliminated as historical sources. They are nevertheless important for the development of Christology (doctrines on the nature of Christ), because they reveal the difficulty of reconciling the genealogical proof of Jesus' Davidic descent with the relatively late idea of his virgin birth. This last tradition, too, is recorded in only two stories – in Luke 1 and Matthew 1 – and was originally quite unconnected with the frequently found motif of Jesus' divine Sonship. Paul, John, and the rest of the New Testament writers are not acquainted with the idea. Also, it has left no traces in the rest of the Synoptic tradition, not even in the story of Jesus' birth (Luke 2:1-10), where Joseph and Mary appear as his natural parents... What underlies this tradition is, rather, the concept of the creative power of God and his Spirit, which is known from Hellenistic Judaism. This theological, not biological, motif has been applied to Jesus and, with the greatest probability, only secondarily combined with the Greek version of the messianic promise of Isa. 7:14 (in the Septuagint, the Hebrew word *'alma* – i.e., "young woman" – is translated as 'virgin'), and in this way the Christian story came about... His mother, brothers, and sisters did not join his movement at first but, rather, disapproved of his behaviour (Mark 3:31-35). Mary is, however, mentioned as a member of the Christian Church after his death (Acts 1:14).

...belief in the Christ was not inaugurated by Jesus but sprang up after his death. The first step was belief in the resurrection, based on the visions of Mary Magdalene and several of the apostles. Next, the shameful death on the cross was transformed into an act of sacrifice. Finally, with the outpouring of the Holy Ghost, the meaning of the company of believers was actualized and became the Church... While Jesus lived, the disciples shared his belief in God, in the kingdom of heaven, and the end of the world. *When he died*, they dispersed. But soon they regathered and a revolutionary event had occurred. They had seen Jesus risen from the dead. Now they no longer believed with Jesus in God, but without Jesus in Christ arisen. The step had been taken from the religion proclaimed by Jesus the man, a prophet of the Jewish religion, to the Christian religion. While Jesus lived, there was no such thing... His disciples took a first step when they began to believe not only in his message but also in him. Subsequently, they came to believe in him as the Messiah, as the Son of God, as God Himself. With this the human reality became irrelevant, except for two points: that he had actually lived in the flesh and that he had been crucified. It is characteristic that in the Credo the human reality of Jesus disappears. Its second article is a profession of faith in God's only begotten Son, our Lord, conceived of the Holy Ghost and born of the Virgin Mary. After this transcendent introduction nothing is said of his life except that he suffered under Pontius Pilate, that he was crucified, died, and was buried. After that, we return to the transcendent: he descends to hell, rises from the dead on the third day, ascends to heaven, sits at God's right hand, whence he will come again to judge the living and the dead.

Easter, festival celebrating the resurrection of Jesus. It occurs on a Sunday between Mar. 22 and Apr. 25, inclusive, and has been observed annually since the 2d cent. Its date has been determined by various methods, which have been disputed; even today the celebrations of the Eastern and Western churches rarely coincide... The name of the feast is derived from the Saxon goddess Eastre... Her rites were celebrated at the beginning of spring... and much of the symbolism associated with her, *e.g.* the egg and the rabbit, has been absorbed into Easter tradition.

In a time-honoured collecting tradition, th[e] heirloom... plate... "The Life of Christ" by [an] internationally renowned religious artist... [depict]s the greatest story ever told. His birth... the Last Supper... the Crucifixion... the Resurrection... Priced at just \$55, the edition is limited... [E]ach imported plate... is... bordered in 24 carat gold... hand-numbered and... bears the artist's signature on its reverse side.

...Male models, fast cars, hip-hop music, nightclubs and basketball are among the images used to sell Christianity in the first television advertisement commissioned by the Church of England. But the advertisement, to be shown next week in central England, will not be able to proclaim that God exists because broadcasting guidelines prohibit the use of "unsubstantiated claims." The 30-second commercial shows a variety of people, all Christians, doing everyday activities... A voice-over says: "These people are doing something which has never been done in a television commercial. They're praying. If you want to know more about Christianity, why not try going to church this Easter?"

...[*What is Easter all about anyway?* This weekend, in churches throughout NZ, a familiar story will be told, exactly as it has been told for nearly 2000 years. It is a gripping story, commemorated graphically day by day in some churches during the week. Yet from Palm Sunday, marking Jerusalem's welcome to Jesus of Nazareth, to Thursday, when he held a last supper with his 12 closest followers, the story is scant. The written accounts of his life and death leave more questions than answers and, in a way, that enhances their credibility. It would have been easy to fill the gaps in the narrative with some creative licence. The Gospels were written by and for those who believed Jesus to be the Messiah. The pretext for his execution was of less interest to them than the belief that it was divinely determined. It was the sacrifice he had to make to fulfill his worldly mission. Easter is the most sacred of Christian feasts.'

...NZers are likely to chomp through nearly \$15 million of chocolate around Easter – one of the biggest chocolate-eating binges of the year. But NZers still favour Xmas over Easter as a time for chocolate. In the weeks around Xmas, supermarkets last year sold \$28m worth of chocolate confectionery (figures show supermarkets sold \$95m worth of chocolate confectionery last year, amounting to around 6.7m kg). In the US, Easter is the second biggest candy-eating feast of the year behind Hallowe'en. Americans spent nearly \$US1.9 billion on Easter candy last year, compared to an estimated \$2b at Hallowe'en, \$1.4b at Xmas and just over \$1b around Valentines Day. The custom of offering Easter eggs, chocolate or hard boiled and coloured, dates well beyond the early years of Christianity. Both the hare and the egg were the symbols of the Norse Goddess Ostara, and represented fertility. In the Northern Hemisphere, Easter comes in spring, a time of new life – hence the idea of eggs.' By the way, 'on Good Friday, members of the Filipino Catholic community will gather on a hill overlooking Auckland in Winstone Park, Mt Roskill, to re-enact Christ's walk to Calvary. They will carry a heavy wooden cross up to the summit'...

'POPE John Paul carried a wooden cross at the ruins of the Colosseum in Italy as part of Easter celebrations. The Pope has not carried the cross for this service since 1994 when he broke his leg in a fall. Meanwhile, in Mexico, RCs flailed their backs with nail studded ropes in an ages-old Easter ceremony.'

...Even those who have only a passing acquaintance with Christianity know that the Easter festival celebrates the triumph of life over death... Living out our faith in a way that affirms and promotes the life-giving message of Easter in a world of so much pain and negativity is a huge challenge for all who follow Christ... The Easter message of a man who had died and then was seen alive is so astounding and so extraordinary that it has always been a test of faith. When St Paul's own community at Corinth began to entertain doubts about the literal truth of the Resurrection, Paul reminded them... of the message that he himself had received... *If for this life only we have hoped in Christ, we are of all people most to be pitied.* Those who follow Christ accept that we are either "most to be pitied," or that we are justified in our faith. - 1997

...Paul defines the basic access to God as "faith alone." Whoever sees a different access sets it in strict opposition to the path of faith... The first beatitude, in Matthew 5:3, reads: "Blessed are the poor in spirit, for theirs is the kingdom of heaven." ...Many have puzzled over the meaning of "poor in spirit." A favorite popular interpretation understands it to refer to "stupid" persons...

Jesus preached not knowledge but faith... The strange duality of gentleness and uncompromising militancy is evident in the words with which Jesus demands faith. He can say: "My yoke is easy, and my burden is light," but he can also command men to follow him at once, without hesitation, and without reservation. To the young man who wishes first to bury his father, he cries imperiously: "Follow me; and let the dead bury their dead." He curses the unbelievers in the words of Isaiah: "Ye shall hear, and shall not understand; for this people's heart was waxed gross." He gives thanks that God should have hidden the truth from the wise and prudent, and revealed it to babes.

...subterfuge is very artful, and men who wish to be deceived are easily deceived by it... [N]othing has contributed so much to obscure Christian truth in the eyes of the heathen, or has so hindered the spread of Christianity in the world, as the sanctioning and practice of war and violence by Christians. - Tolstoy

A house divided against itself cannot stand, and the truth of [Tolstoy's] statement that no society can permanently endure half militarist and half Christian [seems to have been] recognized by Stalin and Hitler, who... realized that teachings such as those of Jesus are dangerous to a dictatorship relying on physical force... In England, and in western Europe generally, Christianity is not as yet officially denounced or derided, but it seemed to Tolstoy to have been sterilized by the Church Creeds which divert men's attention from those teachings of Jesus which conflict with the tendencies of patriotic governments. Tolstoy held that it is this intrusion of dogmas, elaborated by angry theologians at the time when the Church was first

submitting to State control, that renders it wellnigh impossible for educated and intelligent Hindus, Chinese, [and followers of other faiths to regard Christianity as anything] other than a grossly superstitious and irrational religion.

...Tolstoy: "I know that most men, including those at ease with problems of the greatest complexity, can seldom accept even the simplest and most obvious truth if it be such as would oblige them to admit the falsity of conclusions which they have delighted in explaining to colleagues, which they have proudly taught to others, and which they have woven, thread by thread, into the fabric of their lives."

Born of a noble family, he... served in the Russian army... during the Crimean War. After marrying... he settled on his estate... devoting himself to the interests of the peasantry and the enjoyment of nature. Here he wrote two of the greatest of all novels – *War and Peace*... embodying Tolstoy's fatalistic view of history; and *Anna Karenina*... Tolstoy's conversion to religion[occurred] in this period... So fervent were his belief in the practice of nonviolence and extreme simplicity in living that a Tolstoyan cult developed... By the time of his death he had given away almost all of his possessions in his effort to achieve complete Christian charity...

Reading official teachings of piety and moral theology would actually have made him an atheist, he said, if he had not independently found his way to faith – a naive faith – in Christ's actual message... Tolstoy's conversion had occurred when he realized that Christ's declaration "Resist not Evil" (Matt. 5:39) meant what it said. This was a revelation to him because he had always been taught that Christ's laws were not practical, and so must be interpreted – in effect, silently circumvented... Tolstoy [believed]... that the ruling class everywhere and at all times is hostile to Christianity, and tends to suppress it, even in the books they write. That is why these truths have been lost so many times... The contradiction is concealed by social hypnosis, which modern methods of communication extend into private life. And the great example of such hypnosis is in the preparation of whole peoples for war. (He cites the effect of military parades – so dear to Russian czars – and the selling of toy soldiers for middle-class children to play with.) ...The German kaiser, "this miserable sick man who has lost his mind from the exercise of power," is the *enfant terrible* of European politics who reveals the mania that others discreetly conceal. And yet men today pride themselves on "that high degree of culture on which European civilization now stands, with its Krupp guns, smokeless powder, the colonization of Africa, the government [subjection] of Ireland, parliament, journalism, strikes, and the Eiffel Tower." Tolstoy contests the American Colonel Ingersoll, who said that Christ's teaching is no good today, since it does not harmonize with our industrial age. Tolstoy reverses the proposition: since Christianity is the abiding measure of our lives, it is industrial civilization we should get rid of, together with its attendants, science, art, and theology. Unbelievers are deceived by science, as believers are deceived by the churches... [T]he fifteenth-century Bohemian Chalicky... denounced the adoption and adaptation of Christianity for state purposes by... using the metaphor of fishing: The[re]... larger fish, like emperors, tore their way out of Christ's dragnet, and through the holes they made lesser folks followed. - PROPHETS OF A NEW AGE

In... *The Net of Faith*... Chelcicky some four centuries ago had put forward the... [notion of] true and false Christianity... A Christian, according to Chelcicky, not only cannot be... a soldier... a ruler or... take any part in the government... he[also] cannot... be a merchant, or even a landowner... This book is one of the few exposing official Christianity that have survived the *autos-da-fe*. All such books, which were pronounced heretical, were burnt, together with their authors, so that ancient works exposing the errors of official Christianity are very rare.

Around my town you see 4WDs with bumper stickers saying "Take My Gun Lose My Vote." There is also a ute with a bumper sticker saying rude things about barcodes. I know the man who owns that ute. He says the barcode on the Weetbix packet is a sign that the Devil is coming because it says so in the *Bible*. Revelations chapter 13, verses 16 and 17. "Read it for yourself," he told me. [Then he asked.] "What did you read last?" "Matthew, Mark, Luke and John – the bits where Matthew says one woman found Christ's tomb empty with one angel outside saying: 'He is risen,' and Mark where he says three women found one angel inside the tomb, and Luke who says two men were in the tomb and John who says one woman found two angels outside and then Jesus came and said: "I am not yet ascended." - 1997

Actually, in St Matthew, 'Mary Magdelene and the other Mary' found Christ's tomb empty. However, who has erred the most – the columnist who failed to check his facts before publishing an article (although different translations of the New Testament may say different things), or the people who have based their system of belief on four stories that can't agree on the facts? In addition to the points already mentioned, St Luke contains the passage 'remember how he spake unto you when he was in Galilee, Saying, The Son of man must be delivered into the hands of sinful men, and be crucified, and the third day rise again. And they remembered'; whereas St John says 'For as yet they knew not the scripture, that he must rise from the dead.'

dying and rising gods The... deities who, according to myths associated with them, are said to have died and subsequently been resurrected. Such deities are invariably male and alleged to be found in agrarian societies around the Mediterranean, examples being Adonis... and... Osiris... In recent years, considerable doubt has been cast on the legitimacy of the category of 'dying and rising deities', evidence for such deities being based on late Greek, Roman and Christian texts, which in themselves are ambiguous. It has been suggested that interest in this category has been sustained by biblical scholars, concerned with the background to the Old and New Testaments and interested in the category of 'resurrection'.

The New Testament – or at least, and significantly, the book of St Luke – was 'written originally in Greek' (and 'the name *Bible* is derived from the Greek word for "book"). The ancient Greek gods allegedly came down to Earth to have sex with human women and, as a consequence, half-god-half-human children were often created – a concept that wasn't foreign to the Old Testament!

AND it came to pass, when... the sons of God saw the daughters of men that they *were* fair... they took them wives of all they chose... [A]fter... the sons of God came in unto the daughters of men... they bare *children* to them... [who] *became* mighty men... of renown. - Genesis 6

The Unity of God is so clearly laid down as the basis of the religion of all prophets in the Old Testament that if the allegorical nature of certain prophecies had been kept in mind, the blunder of Church Christianity, the Divinity of Christ, would have been impossible. But the gravest mistake in human history was made only by disregarding the right principle of interpretation... The epithet "son of God" was freely used in Israelite literature, and was always taken allegorically... Even in John, where the Divinity of Christ is looked upon as finding a bolder expression than in the synoptics, Jesus Christ is reported as saying in answer to those who accused him of blasphemy for speaking of himself as the son of God: "Is it not written in your law, I said, ye are gods? If he called them gods, unto whom the word of God came, and the scripture cannot be broken, say ye of him whom the Father hath sanctified, and sent into the world, Thou blasphemest, because I said, I am the son of God" (John 10:34-36). It is thus clear that even in the mouth of Jesus the term "son of God" was a metaphorical expression, and by taking it literally the Church has destroyed the very foundations of religion.

...what makes Christians distinctive from what Jews... believe is their acceptance of Jesus as the Son of God, and not just another prophet... Jesus is unique in being both God and Man.

Therefore the Jews sought the more to kill him, because he not only had broken the sabbath, but said also that God was his Father, making himself equal with God... Jesus saith... I am the way, the truth, and the life: no man cometh unto the father, but by me. If ye had known me, ye should have known my Father also... Believest thou not that I am in the Father, and the Father in me? the words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works... If ye loved me, ye would rejoice, because I said, I go unto the Father: for my Father is greater than I. And... the Father... shall give you another Comforter, that he may abide with you for ever... [T]he Comforter, *which is the Holy Ghost*, whom the Father will send in my name, he shall teach you all things... [T]he prince of this world cometh, and hath nothing in me. - St John

But of that day and hour knoweth no *man*, no, not the angels of heaven, but my Father only. - St Matthew 24:36

Comprehension of the nature of the Holy Ghost and of His procession from the Father and the Son is a mystery of the Christian Church and beyond the powers of discovery or the grasp of human reason.

In New Testament teaching, God is the holy God of the Old Testament, yet Jesus calls him 'Father' and, in the Lord's Prayer, teaches his disciples to do the same. Jesus also promises that when he leaves them he will send the Holy Spirit to confirm his teaching, continue making them holy and be with them permanently... [T]he doctrine of the Trinity makes biblical statements such as 'God is love' more appropriate than some of the classical doctrinal statements that God is infinite, immutable (cannot be forced to change), impassible (cannot be made to suffer), omni-present (all-present), omnipotent (all-powerful) and omniscient (all-knowing)... Christianity holds that men and women are made in the image or spiritual likeness of God... This image has been marred by sin, yet it can be remade through Christ... This potential, however, will be completely realized only in the heavenly kingdom of God, when evil and all the limitations of creaturely existence will be overcome. Meanwhile, the Church, faulty as it is because its members are still in the process of being made holy, by its display of the gifts and fruits of the Holy Spirit, gives some glimpses of the future reign of God.

The history of Christianity is not yet complete... This common element forms a bond between the many Christian churches that have fought each other to the death... Enormous intellectual efforts have been made to confine the contradictory flows of... [Jesus'] life and thought in a systematic whole. In their drive toward worldly order, the churches have tried, often with considerable success, to muffle his explosive power, to limit and direct the flame. But from time to time it has broken loose, bringing new hopes and fears of the catastrophe that would usher in the kingdom of heaven... His message... forbids complacency; it reminds men of the existence of a higher authority.

All scripture is given by inspiration of God... - II Timothy 3:16

Truly, You, only You are the All-Knower of all that is hidden and unseen... Jesus, son of Mary said: 'O children of Israel! I am the Messenger of Allah unto you confirming the Torah (which came) before me and giving glad tidings of a Messenger to come after me whose name shall be Ahmed (i.e., the second name of Prophet Muhammad and literally means one who praises Allah more than others)... I wish to remind the reader here that Jesus, son of Mary will be returning to this world before the Day of Resurrection. He will return to become a leader of the Muslim nation... and all mankind will be required to embrace Islam with no alternative... as has been revealed in the Qur'an...

The monotheistic religion founded by the Prophet Muhammad in the Arabian Peninsula in the 7th c. AD is... regarded by its adherents as the last of the revealed religions...

It teaches that Allah has already predestined the fate... of all [(e.g., God 'knows what is before and behind men.' – Qur'an 2:225) and]communicated with mankind through numerous prophets, of whom Adam, Noah, Abraham, Moses and Jesus were important, but Mohammed by far the greatest.

Muslims consider Muhammad to be 'seal of the Prophets', the final messenger sent by God to warn mankind against the consequences of rebelliousness against the divinely ordered way.

That God speaks, or has spoken, to man has long been a joyous proclamation or quiet assumption of religious faith... Is the Qur'an the word of God? ...The question after all is not a minor one. If a problem were peripheral to men's serious concerns, then there would be no harm, and little cause for comment, if it went unresolved even for centuries, as this one has. But... this question is manifestly a radically important one. Those who have answered it 'yes' have taken the answer passionately. They have been willing to die for it; and what is more important, if one remarks that people may be stirred to die for many roseate causes, they have been willing to live for it too, to order their lives in accord with it, day after day, year in, year out, generation after generation, patterning their behaviour and controlling their choices and selecting their goals, and to persist, firmly but quietly – against both opposition and distraction, against both attack and indifference – in taking it seriously... It is no small band of eccentrics that holds this book to be God's word; nor is the idea a passing fashion among some volatile crowd. Those who have held it are to be numbered in the many hundreds of millions... The other group, whose answer has been "no,"... [and who also] are numbered in the hundreds or thousands of millions... have in one sense shown no corresponding passion or fanfare. Yet their persistence has been hardly less steady; and the seriousness of their rejection, not really less. Their conviction has been just as firmly held that the answer is not only "no," but is... so obviously "no" that the matter is not worth bothering about. The West's very indifference to the question is a measure of the profundity of its assurance. Westerners allowed centuries to pass without going around busily asking themselves whether the Qur'an is the word of God, not because they did not have the time or were unconcerned, not because they thought that such issues did not matter (what could matter more?), but because at heart they took for granted that they knew very well what the answer was. - Questions of Religious Truth

...born... c.570... in Mecca... [and orphaned] at six... *Muhammad* or Mohammed... was brought up by his grandfather and uncle... who trained him to be a merchant. At the age of 24 he entered the service of a rich widow... whom he eventually married... Soon after... he began to receive revelations of the word of Allah, the one and only God. This Quran (Koran), or 'reading', commanded that the numerous idols of the shrine should be destroyed and that the rich should give to the poor. This simple message attracted some support but provoked a great deal of hostility from those who felt their interests threatened. When his wife and uncle died, Muhammad was reduced to poverty, but began making a few converts amongst pilgrims to Mecca from the town of Yathrib, an agricultural community to the north. By 622 the position of Muhammad and his small band of devoted followers had become untenable, but they were saved by an invitation from the people of Yathrib, who wanted Muhammad to

come and arbitrate in the feuds that raked their community. He migrated there, and his migration, the Hegira, marks the beginning of the Muslim era. The name of the town was changed to Medina, 'the city of the prophet'. The most important act in the first year of the Hegira was Muhammad's permission to go to war with the enemies of Islam – especially the Meccans – in the name of God... ['Fight against them until idolatry is no more and Allah's religion reigns supreme. But if they mend their ways, fight none except the evil-doers' (Koran 2:193); 'Prophet, make war on the unbelievers and the hypocrites and deal vigorously with them' (9:73). Without this permission, verses such as 'if they give no heed to you, bear in mind that your mission is only to give plain warning' (16:82) and 'Had your Lord pleased, all the people of the earth would have believed in Him. Would you then force faith upon men?' (10:99), would've meant Muhammad was contradicting himself!] By 629 he was able to take control of Mecca, which recognized him as chief and prophet. By 630 he had control of all Arabia. In March 632 he undertook his last pilgrimage to Mecca... He fell ill soon after his return and died... in the home of the favourite of his nine wives... ['His only surviving child was Fatima, wife of his cousin Ali.'] His tomb in the mosque at Medina is venerated throughout Islam.

Islam The Arabic word for 'submission' to the will of God... Followers of Islam... believe that... the revelation to Muhammad of the perfect Word of God... [provides] the guidance necessary for the attainment of eternal reward...

Islam spread rapidly throughout Arabia in Mohammed's time. By 12 years after his death... it had conquered the Zoroastrianism of Persia and the Christian sects of Egypt, Palestine, and Syria.

1095 – Pope Urban urges the Christian faithful to wrest the Holy Land from the Muslims, heralding start of Crusades.

The Turks were nomadic warriors from central Asia newly converted to Islam. They invaded the Middle-east and part of the [Byzantium Empire]. Twenty years later... the Turks... established their capital only a hundred miles from Constantinople... [By 1095 the emperor of Constantinople and ruler of] the Byzantium Church... was ready to kick them out, but he needed more soldiers... The emperor... decided... [to seek] help from his brother Christians in the West so he... [sent] a letter to the pope... On the face of it, [it was] a perfectly reasonable proposition. Actually, [the emperor cannot have imagined]... the effect this letter [would] have. This letter was going to blow the world apart... [The emperor] assumed the pope would act like a Byzantium official [by] organising the recruitment of a few paid professional soldiers. This was a mistake... [T]he pope was... an ambitious politician building a super power... What was happening in the Western Church was that the pope was becoming the head of the state... In 1073... Pope Gregory [VII began creating] a... revolutionary movement that was struggling to take control of the whole world and make it truly Christian... Gregory's successor, Urban, was carrying on the good work, and then the emperor's letter, as it were, fell into his lap. The pope decided to use [the] letter as an excuse for creating his own army and conquering the East... There had been holy wars before but this was new – a fighting pilgrimage... "When the pope talked about liberating the Holy Land, what he meant was bringing them under the power of the... Western Church. Now you could well say that this is not a very religious exercise. After all, Jesus told his followers to love their enemies not to exterminate them." Jesus' words were, of course, a problem for all Christian knights in any case... "Whereas in 1066 the soldiers who fought at Hastings had to do penance for their slaughter... what the pope was proposing was war as a penance... war which assisted a man towards salvation... This was a completely... radical idea which seems to have come from the mind of the pope because... I can think of no precedent in Christian history for that... and what is[more] amazing is the way people responded to it." ...One thing is obvious. The Church had a power over people that it didn't really understand... [The unofficial First Crusade was the *Pilgrims Crusade*.] Each pilgrim was to wear a cross to show that they had taken the vow to reach Jerusalem. They would be excommunicated if they turned back... [Upon reaching Turkey] they made a base camp... and from there they set about their God-given mission to torture and massacre the locals... The only snag was that most of the local inhabitants in those days were actually Christians – though I don't suppose the crusaders could be expected to tell the difference. Unfortunately, few members of the Pilgrim's Crusade were adept in the art of warfare and, apparently, they were themselves 'slaughtered by the first Muslim army they encountered.' The next crusade, officially the First, was better organised and more blood-thirsty... In mid-winter of the year 1098 [a] small town... 300 miles north of Jerusalem... was invaded by cannibals. Men who had marched two thousand miles[in two years] to do good in the name of Christ. "...our troops boiled pagan adults in cooking pots. They impaled children on spits and devoured them grilled." ...This was holy slaughter. This was what the crusade was about. After two years of hell they had become, in their own eyes, the instruments of the Last Judgment, and if they killed Christians as well as Muslims, so be it... [Previously,] the crusade had arrived at the... important enemy stronghold... Antioch. It had a tremendous symbolic resonance. It was the place where the word Christian had been invented. By the time of the crusade, however, the city had fallen under Turkish rule [and the crusaders] were locked out. The sight of Antioch must have been staggering to the crusaders. Its walls stretched... 25 miles round the city... [G]uarded by 400 towers[it was]... regarded as virtually impregnable. However, the crusaders decided to surround the city and starve it out. But how do you surround 25 miles of wall and... starve out a city when there's actually more food being grown inside than out? ...The siege of Antioch dragged on interminably... The besiegers... [began] dying in large numbers from disease and starvation, and many of them were now beginning to desert... But... it so happened that... the captain of one of [the] towers... an Armenian Christian who'd converted to Islam... was not a happy man... [H]is commanding officer had fined him particularly heavily for hoarding grain and also, according to some reports, had seduced [his] wife. So as you can imagine [the captain] was pretty pissed off... [H]e started carrying out negotiations secretly with [the crusaders] through a window in the tower... [and] was finally persuaded to open the window and let in a crack squad... That night 60 knights slipped in... 60 was quite enough to open the gate... It was the greatest victory yet for the crusaders but their celebrations were short lived. The streets were still wet with blood when a great Turkish army surrounded the walls. The Turkish emirs of the Middle-east had finally combined forces. The besiegers became the besieged... [and also] found what a thorough job they had done in starving the city out... Their only hope was a rescue army from Byzantium, but [one deserter] on his way home told the emperor the crusaders were already dead, so the rescue army never came... They were cut off, dying alone with their God. The ecstasy of slaughter was replaced by the delirium of... despair... [T]hen the miracles began to happen. Some... crusaders entered a trance world in which visions and strange lights filled the space around them. Reality became translucent... [One] vision... revealed... that the holy lance that pierced Christ was buried in the Cathedral floor. Morale soared. With the holy lance on their side they could break out of the city and take on any number of Turks. Weakened by starvation... and outnumbered they opened the gates of the city and stumbled across the plain of Antioch towards the enemy. It should have been a suicide mission but the miracles kept happening. When the dust settled the invincible Turkish army had vanished. God was indisputably on the side of the [crusaders]. According to some historians, the Turks 'rode mares into battle, due to their speed, and this caused them problems because the crusaders all rode stallions'. But in fact the Turkish collapse had a more down-to-earth explanation. "There was much jealousy between the[Turkish] commanders..." The Christian leaders were just as likely to fall out as the Turks... [However, for] some crusaders there was no need for earthly leaders. There was now a core of savage fanatics convinced that they were marching under the direct command of heaven with a sacred mission of butchery... [The crusaders] were spared any real insight into just how primitive they appeared to the sophisticated Arabs around them. The red-blooded knights of Europe were illiterate and superstitious. An Arab gentleman was expected to be a poet and philosopher as well as a warrior... Damascus, which the crusaders never saw, was a centre of learning and literature. One... [Damascan Arab] had already correctly calculated the distance from the Earth to the Moon, while another had suggested that if you could divide the atom you

would release enough power to destroy a city the size of Baghdad... Doctors were already teaching anatomy, preventive medicine, hygiene, surgery, the circulation of blood, centuries before... [any Europeans. B]aths in Damascus... were open to the public before most English churches were built. What's more, they're still in use to this day, which is more than you can say for most English churches... Finally, on Tuesday the 7th of June, 1099, after three years of unimaginable hardship and suffering, [the crusaders] reached their goal – Jerusalem... They'd set off in the first place to expel the Turks and rescue the Holy City for Christianity, but they'd taken so long to get there that things had changed. The Turks had already been expelled by the Egyptians, and the Egyptians got on fine with the Christian world. The truth is Jerusalem was, and always had been, a multi-cultural city, sacred not just to Christians but to Jews and Muslims alike... [A]ll venerated the city, and respected each other's right to do so... [All but the crusaders, that is! 20,000] crusaders... laid siege to the Holy City... [When] they finally breached... [its defences, the] new Children of Israel slaughtered everyone they found. They set fire to the great synagogue where the Jews had gathered and burned them alive... It was a Friday, just after midday. Thousands of Muslims had gathered... for... prayers. They fled into the... mosque. In return for a high ransom [one of the crusaders] guaranteed their safety and sealed them in. The next day they were all slaughtered. It was here that the blood was said to run so deep that it [reached] up to the ankles of the knights...

POOR KNIGHTS OF CHRIST AND OF THE TEMPLE OF SOLOMON... also called **KNIGHT [TEMPLARS,** were members of a]... religious military order... established at the time of the Crusades... when the crusaders controlled only a few strongholds in the Holy Land, and pilgrims to the holy places were often endangered by marauding Muslim bands. Pitying the plight of such pilgrims, eight or nine French knights... vowed in late 1119... to devote themselves to their protection... Baldwin II, king of Jerusalem, gave them quarters in a wing of the royal palace in the area of the former Jewish Temple... The Templars[– who 'were both monks and soldiers, and took vows of chastity and poverty' –] performed courageous service... and their numbers increased rapidly, partly because of the propaganda writing of St Bernard of Clairvaux... The Templars had originally vowed obedience to the patriarch of Jerusalem, but Pope Innocent II in 1139 placed the Templars directly under the pope's authority: the Templars thus were exempted from the jurisdiction of any bishop in whose diocese they might hold property. Thenceforth the Templars rapidly diversified their activities. They soon became a vital element in the Christian defence of the... Holy Land, and they garrisoned every town of any size there... The Templars also came to acquire considerable wealth... The Templars' military strength enabled them to safely collect, store, and transport bullion to and from Europe and the Holy Land, and their network of treasure storehouses and their efficient transport organization caused the Templars to be used as bankers both by kings and by pilgrims[. 'Some scholars speculate that treasures amassed by the Templars ended up in Rosslyn chapel in Scotland. Others have hinted at locations in Ethiopia, Spain and Canada. The Holy Grail (most widely thought to be the chalice that Jesus drank from at the Last Supper) and the Ark of the Covenant (believed to be a box-like container that held the stone tablets inscribed with the Ten Commandments God gave Moses) may have been hidden on the Baltic Sea island of Bornholm 830 years ago, according to a new book. The authors point to a find of nearly 3000 tiny, intricately carved golden figures unearthed in a 1985-86 excavation of a Bornholm field as lending credibility to their claim. The figures have been dated to AD400-600 when the Merovingians – a clan of Frankish kings who claimed to be of the house and lineage of the *Bible*'s King David – were at the height of their power (descendants of the Merovingians later settled in Burgundy, but the book quotes an AD417 work by Spanish historian Orosius which says the Burgundians came from Bornholm). The Templars viewed the Holy Grail and the Ark of the Covenant as their rightful possessions because of their bloodline to the House of David']... **The Templars were not without enemies, however. They had long engaged in a bitter rivalry with the other great military order of Europe, the Hospitalers[– or the 'Order of the Hospital of St John of Jerusalem' –] and in the late 13th century proposals were being made to merge the two contentious orders into one[(there were other orders of European knights – e.g., the Teutonic Knights: 'founded 1190 as a fraternity of German knights of the Third Crusade, which was eventually abolished by Napoleon in 1809, but then restored in 1834 as a religious order of charity in Austria')]. The fall to the Muslims in 1291 of Arce, the last remaining crusader stronghold in the Holy Land, removed much of the Templars' reason for being. Moreover, by 1304 rumours... of irreligious practices and blasphemies committed by the Templars during their secret rites of initiation had begun to circulate through Europe. At this juncture, King Philip IV the Fair of France had every Templar in France arrested... and sequestered all the Templars' property in France. The reasons why Philip sought to destroy the Templars are unclear... At any rate, Philip accused the Templars of heresy and immorality and had many of them tortured to secure false confessions to these charges... Philip eventually succeeded in having... Pope Clement V... suppress the order... and the Templars' property throughout Europe was transferred to the Hospitalers or confiscated by the state. Many Templars were executed or imprisoned, and in 1314 the order's last grand master... was burned at the stake. The question of the guilt of the Templars has been a matter of fierce controversy for centuries, but modern opinion inclines to the idea that the Templars were victims of a highly unjust and opportunistic persecution.**

...the second... Crusade... (1147-9) failed to stop a Muslim resurgence, and Jerusalem fell to Saladin in 1187. The third (1189-92) recaptured some lost ground but not Jerusalem, while the fourth (1202-04) was diverted against the Byzantine Empire, which was fatally weakened by the resultant sack of Constantinople. [Next came the *Children's Crusade* of 1212 – when 'thousands of children (some as young as six) from Germany and France aimed to reach the Holy Land and recapture it from the Turks. Some reached Genoa, Italy, but did not embark; some reached Marseilles, whence they were shipped to North Africa and sold into slavery.']The fifth (1217-21) was side-tracked to Egypt, where it accomplished nothing, and although the sixth (1228-9) resulted in the return of Jerusalem to Christian hands the city was lost to the Turks in 1244. The seventh (1248-54) ended in disaster in Egypt, while the eighth and last (1270-1) petered out when its leader Louis IX... died on his way east, and the Holy Land was left in Muslim hands...

Crusaders committed themselves with solemn vows, and by the 13th century were granted the full Indulgence; ie remission of all punishment due for sin and an assurance of direct entry into heaven. Papal authorizations of war against Islam continued to be made until the 18th century... In contrast to the effects of the Crusades on Europe – where trade was stimulated, the power of the Italian city-states was increased, military orders such as the Templars... were established... the church was strengthened, and chivalry renewed – the effect upon Islam was relatively small... However[, one]... result was that ill-feeling increased between Muslims and Christians...

By late in the [17]th century, Turkey, ruled by the Ottoman dynasty, was a mighty world power whose sway stretched from Mesopotamia to Morocco. To its capital at Istanbul, endless caravans brought tribute from three continents. The empire had taken Crete from the Venetians a few years earlier, and now enjoyed complete mastery of the eastern Mediterranean. Where would it go next? The question was being asked anxiously by every government in Western Europe. For the Turks, there was no doubt: their eyes were on the glittering prize of Vienna... The Golden Apple, the Turks called it, perhaps because of the gilded domes of the myriad churches they had glimpsed when they first attacked the city a century and a half before. It was a bitter memory for them. For the first time they had found an enemy in the west... who could break their tide of conquest. The city's strategic importance was immense. Its fall would be regarded as a catastrophe for the Western world, and the Turk who conquered it might well push on in any direction. The warrior who pledged himself to this task was Kara Mustafa Pasha... As grand vizier, or prime minister, he ruled the Ottoman empire in the name of the weak and ineffectual Sultan Mehmed IV. For months, Kara... collected troops and supplies, and on March 31, 1683, his expedition of 250,000 men set forth, ceremonially led by the sultan. It took two months to follow the imperial highway to Belgrade...

There the sultan handed over the prophet Mohammed's own black banner, and commanded Kara... to fight a *jihad*, a holy war, against the Holy Roman emperor, Leopold I... Then the sultan rode back to Istanbul... In Vienna, all was fear and confusion. On July 7, a bloody horseman galloped in to report that the imperial army had been wiped out in a major battle down the Danube. It was a false report, but it sufficed to create general panic. Leopold I, a man who had been bred for the church rather than for war or statecraft, fled to Passau, 270km to the west, followed by his court and some 60,000 citizens – more than half the city's inhabitants... [The] commander of the town garrison... had barely 15,000 professional soldiers under his command... [O]n July 14, the Turkish horde came in view and spread itself majestically round the city walls... Kara... was serenely confident of success. Like a good Muslim, he sent a herald to offer the unbelievers a choice: "Islam or tribute." Vienna would accede to neither... The great siege had begun... Every day at dawn... shells... [from] 300 heavy bronze cannons... began falling on the city, and went on falling till late at night. Every day... the... [a]ttackers and defenders e[ngaged]... in a perpetual round of charges and counter-charges... [B]y early September, two enormous holes had been blown in the city wall, the last line of defence... [T]he garrison was now down to fewer than 5000 men... Nothing could save Vienna... unless an outside force came to the rescue. Until then... it was hard to get together an efficient force[in Western Europe]. Money was lacking. Princes who... promised thousands of men [would arrive] with but a few hundred, and then squabbled about putting their troops under the command of foreign generals. But... [the] appearance of a clear and present danger in Vienna galvanised a feeling of European unity, a willingness to forget old quarrels and look to the greater menace. There was a crusading Pope Innocent XI in Rome, who pleaded with the princes of the West to close ranks against the common enemy of Christendom. And he unlocked the treasure chests of the church to help meet the soldiers' pay... On September 7, a council of war at the Austrian village of Stetteldorf divided the... 70,000-strong... army into three units... Two days later, armed with a papal blessing, the... army started the laborious march to Vienna. The plan was simple: seize the forested ridge... north of the city, then swoop down on to the plain and hammer the Turks. Luckily, the allies got some assistance from Kara... who in his blind confidence had not bothered to occupy the heights. The few scouts he had sent there were easily disposed of, and by the morning of September 12 the allied contingents had occupied the crest. It was not a moment too soon. From the spire of St Stephen's the defenders set off rockets to signal that their last lines of defence were crumbling. One after another the columns came... as the whole allied army threw itself forward in an irresistible charge... Camels and horses stampeded, and the Turks soon joined them in a panic flight. Kara... had vowed to die fighting rather than flee, but in the vain hope of rallying his troops, he joined the rout. He did not stop until he got to Belgrade, over 600 kilometres away. He did not have long to taste the bitterness of defeat. Emissaries from the sultan came to Belgrade... and strangled him. After Vienna, the Ottoman Empire was increasingly on the defensive, withering... until it collapsed entirely in W[W]I, routed in the deserts of Arabia after its stubborn defence of Gallipoli against the Anzacs. Vienna is a peaceful city today. Fear of the Ottomans is a thing of the past. In fact, [in 1988 there were] 25,000 Turks in Vienna. But in... the... defence of Vienna was a triumph of international cooperation and a lesson for generations to come.

...Built between 447 and 405 BC, the... Parthenon... was blown apart by the besieging Venetians in 1687... In the early 1970s, Greeks were stunned to learn that this national treasure was in imminent danger of collapse... Moreover, it was discovered that less than three decades of air pollution and acid rain had done more damage to the Parthenon's few surviving sculptures than had the previous 25 centuries of war and pillage. In 1975, the Committee for the Preservation of Acropolis Monuments... was formed to oversee a major preservation effort... For more than 2000 years, the Acropolis was almost constantly changing. The Romans remodelled most of its monuments... In the third century, the Acropolis was used as a fortress to fend off barbarian attacks... Later, the... Parthenon... was converted into a... Christian cathedral... In the thirteenth century, Frankish crusaders occupied the fortress, followed by Florentine dukes, who surrendered... to the Turks in 1458. - Reader's Digest

A new movement is emerging in Europe aimed at diffusing the bitter legacy of the Crusades... a series of expeditions in which thousands of Jews and Muslims were slaughtered... The Reconciliation Walk is calling on Christians to retrace the old Crusaders' routes to meet Muslims and Jews face to face and to offer an apology on behalf of their forebears. The regional director of Youth With A Mission in Europe, a former Aucklander... said the... walk... was not an evangelistic effort... "It is recognising that awful things were done in the name of Jesus Christ..." ...The walk was officially launched with a day of prayer in Clermont-Ferrand in France... on November 27 last year – the 900th anniversary of Pope Urban II's call to Christendom to retrieve the holy places from infidels... The[walkers will] take in much of Europe leading south toward Istanbul, Turkey...

An inmate died on the 63rd day of a hunger strike yesterday, the first fatality among 1500 leftist and Kurdish prisoners fasting... to protest against prison conditions... The death came two weeks after Turkey's new Islamic-inspired Government cancelled strict new prison policies in a bid to end the hunger strikes... Police... detained about 200 people protesting [about the] death...

Hundreds of Turkish prisoners agreed... yesterday... to end a wave of politically damaging hunger strikes after the Government partly accepted their demands... Word of the deal came hours after three more prisoners had died, bringing to 11 the death toll... [during] the 69-day fast... The hunger protest provoked concern from Western allies who have in the past criticised Turkey's human rights record.

...Earlier this month the[ir country's leading] English-language newspaper the *Jakarta Post* questioned whether Indonesians may have misjudged the seriousness of the East Timor [(ET)] question. "Could it be true that there is still much room left for improvement with regard to the protection of human rights?" the paper said... Two decades of consistent international condemnation and the refusal of the U[N] to recognise E[T] as part of Indonesia may be taking its toll... Even [the] President... who ordered the 1975 invasion of the former Portuguese colony, has given indications that he is uncomfortable with the E[T] problem.

...[NZ]'s handling of the East Timor situation has been marked by political gutlessness... There has always been a school of thought which coldly argues that moral considerations have no place in foreign policy. Such arguments are promoted in this country about Indonesia although that country has inflicted on E[T] the worst slaughter in proportional terms since the Jewish Holocaust... We have chosen to bow our heads in silence before a powerful neighbour. Disregarding the evidence of history we have chosen appeasement over courage, the market over morality... Nowhere is disregard for public opinion more clearly seen than in the shaping of N[Z] policy on the Indonesian military takeover of E[T]... When five Timorese men sought refuge in the N[Z] Embassy in January this year they were told by embassy officials that N[Z] did not accept asylum requests resulting from embassy occupations. This policy has never been discussed in Parliament and conflicts with N[Z]'s role under the U[N] Convention on Refugees... When protest groups burned the Indonesian flag, the N[Z] Government was quick to apologise. However, when the Indonesian Tourism Minister... fled... [NZ] after a complaint of indecent assault against him by a hotel waiter, our Government sought no apology. N[Z] has always wanted to stay on side with... [Indonesia]. In December 1975 this country abstained from the U[N] General Assembly resolution condemning the... invasion... As the situation has deteriorated so the Government support for Indonesia has strengthened. By 1978 deaths in E[T] were already estimated at 100,000. Strong Timorese resistance led to a military stalemate until Indonesia was able to obtain large supplies of military equipment from Britain, the U[S] and AUS (the country which 'not only recognised Indonesian sovereignty but signed' 'a joint resource exploration and exploitation deal with it for large oil deposits off the ET coast'), thereby] allowing whole villages to be systematically wiped out and people forcibly resettled in military-controlled hamlets – little more than concentration camps[where] deaths from disease and starvation followed... Despite strong and sustained pressure on the N[Z] Government, shocked and critical comments from the five MPs who visited E[T] in 1994, and even a petition calling for East Timorese self-determination signed by the majority of MPs... no substantial policy changes... [have been produced. NZ] continues to carry out defence exercises with the Indonesian military. This is a military that commits atrocities not only in E[T] but across the Indonesian nation. These have been well documented. Such stubbornness also resulted in the shameful refusal of the National Government to advocate forcefully the

case of [aid worker] Kamal Bamadhaj, the son of [a NZ woman, who was] murdered by an Indonesian soldier at the time of the 1991 Dili massacre. Such was the outcry that the Indonesians sent the officer in overall command... to the U[S]. There a District Court judge awarded [Kamal's mother] \$US14 million in damages against the general. There are no legal means of enforcing the awards and the Indonesian Government refuses to pay. The [NZ Foreign Affairs] Minister... was approached by a delegation of four Auckland community groups... He promised... to consider raising the Bamadhaj issue with the Indonesian Foreign Minister... "I made him aware that a number of N[Z]ers have expressed their concern that the U[S] Court's decision should be followed up appropriately." When [the Indonesian minister later] responded that he was not aware of this issue[, the NZ minister told Kamal's mother he had]... let the matter drop.

...[In 1975, Indonesian soldiers in ET murdered five AUSn television newsmen. One of them was a NZer, cameraman Greg Cunningham. Days later, the editor of an AUSn weekly, the *National Times*, questioned muted AUSn Government reaction and why AUS's PM privately asked NZ's PM to try to keep protests at the death of Cunningham to a diplomatic level. The editor answered his own questions: Indonesia was vital to Asia and Pacific defence interests – Russia was still a bully then – and the US President was about to visit Asia to fly the ANZUS flag. A ruckus from the governments of AUS and NZ over the murders might jeopardise Indonesian cooperation.]

...Since Indonesia invaded... [ET] its Government has been hoping that time and the world's forgetfulness would gradually erase opposition to Indonesian rule. But the... [Government of Indonesia – 'the world's most populous Islamic country' – seems] closer neither to winning the loyalty of the territory's [Catholic-dominated] population nor to winning other countries' acceptance of their right to rule there. Instead, they have had to squirm as the world watched the Nobel Peace Prize being awarded to two of the staunchest critics of their occupation. International diplomacy over the fate of the territory has reached a dead end. There is now only one way out: a referendum must be held to settle who should rule this unhappy demi-island. Indonesia will have many objections to the idea... It fears that if the [ET]ese were allowed to vote for independence, the rest of the Indonesian empire might begin to unravel, from Aceh in the far west to Irian Jaya in the remote east. That is certainly possible; but such concerns do not negate the right of the [ET]ese to justice and self-determination... [However, the Indonesian] Government's deepest worry must be that allowing the outside world in to supervise a referendum would expose, once and for all, the full terrible story of what has happened in E[T]. The Indonesians vehemently deny the figure... of 200,000 dead... But in unguarded moments... officials have admitted to over 100,000 deaths... It has also often been reported – and on one occasion corroborated on film – that Indonesian troops have killed unarmed civilians. That most of the killing took place over a decade ago will not dispel Indonesia's fear of further revelations. Yet, in the long run, allowing E[T] to decide its own future may be the only way to begin to clean up Indonesia's reputation abroad... With a population still under 900,000 and few educated people, an independent E[T] would undoubtedly struggle. But... [there] are plenty of other small states dotted around the Pacific Ocean which manage to survive.

...[after two ET] human rights campaigners... received their Nobel Peace Prizes[, they] immediately called on Jakarta to open talks on a peace settlement... "It is high time that the guns of war are silenced in E[T], once and forever..." said [one of the recipients, a RC bishop]. The Nobel Committee chairman... called E[T]... "the forgotten conflict... There have been so many other [international] interests and regards to attend to, and E[T] is so small. Rarely has the cynicism of world politics been more clearly demonstrated. Of a population of between 600,000 and 700,000, nearly 200,000 have died as the direct or indirect result of the Indonesian occupation." ...the Indonesian Foreign Minister... said... [their] statements... were "full of misrepresentations, half-truths and even lies."

...The Bishop of E[T]... has denied controversial anti-Indonesian comments attributed to him in a German magazine. As he made his denial at a news conference in his office about 500 [ET]ese youths staged a brief protest outside. They waved banners and shouted "Free E[T]." ...Inside the office, [the] Bishop... said that an article which quoted him as saying that Indonesian soldiers treated E[T]ese like "scabby dogs" and "slaves" was distorted. "I hereby state that my interview has been heavily manipulated..." ...But one of the protesters outside said: "The soldiers treat us badly. Everything the bishop said in *Der Spiegel* is true." On Sunday [the] Bishop... blessed the giant statue of Jesus Christ that the Indonesian Government built with money from the national airline, Garuda. The... statue, the largest of Christ outside Rio de Janeiro in Brazil, has angered some of the E[T]ese. Many residents say it was conceived as a tourist attraction rather than a religious monument. - 1996

SINCE last year [the bishop] has been made to confront a calculated Indonesian insult every morning. As he says Mass in the tiny chapel, he faces the east and a window that naturally takes his gaze to a giant statue of Christ the King on a headland a few kilometres out of town... Built... [for] \$2.3 million... the... statue was Jakarta's response to claims that E[T] was being Islamised. And, in a calculated act of political symbolism, it is precisely 27 metres tall, one metre for each of the 27 provinces of Indonesia, with E[T] being the 27th. But already the new road around the headland is collapsing into the sea and sections of the huge plinth on which the statue stands appear to be giving way... [By the way, as the bishop] left Dili on Tuesday on a trip to the Vatican and the [US, 'the former Governor of ET confirmed earlier reports of the execution of wounded prisoners from the Santa Cruz incident.']

...the RC bishop and co-Nobel Peace Prize recipient] has witnessed hell on earth... Screams and bursts of automatic gunfire drew him from his home into the thick of the Santa Cruz massacre in November 1991. That day the Indonesian military gunned down up to 400 young [ET]ese who had been protesting at the death in detention of a young student activist. There is no precise death toll: [the bishop] says he has a list of 271 names... An official Indonesian inquiry found that only 50 had died... When [he] was appointed apostolic administrator of Dili in 1983 the Vatican congratulated itself on a "safe" appointment and Jakarta was grateful... The man [he] replaced had been sacked by the Vatican because of his close ties to the resistance... But the local clergy were disgusted and dealt [their new bishop] a snub rarely matched in modern church history – not one of the 39 priests in the diocese would attend the ceremony to mark his appointment... [– even though] the church had become hugely relevant to the people. Pre-invasion, E[T] was about 33[% RC]; today it is about 90[%].

...You get the sense that the elegant, bespectacled figure of [ET's co-Nobel Peace Prize recipient] is glimpsing some light at the end of a very long tunnel... [B]rought to N[Z] by aid agency Oxfam, ...his twelfth overseas trip in three months, [he]... is better placed than anyone to sense the global warming to his occupied home country... A trained journalist who became Minister for External Relations in the short-lived East Timorese Government, [the Fretilin leader] fled before the 1975 Indonesian invasion and annexation, and has spent the past 21 years prodding an indifferent world into action... [He] said human rights abuses had escalated again in recent months, including the November [1996] killing of up to 20 teenagers involved in a demonstration. However, he remains optimistic... "The Nobel Prize has... given the greatest hopes and determination to our people, and in the end it is the will of the people on the ground that will determine [the outcome]... and nowadays in this global village you can't go on killing people with impunity."

...[ET's co-]Nobel Prize winner... reacted with rage yesterday when he saw a news release from the [NZ] Minister of Foreign Affairs... on their half-hour talk. [The minister] said that ...[his] Government no longer viewed the Indonesian occupation of E[T] as irreversible. But he included a reference to efforts to encourage "reconciliation among the E[T]ese factions." Speaking in Christchurch, [the Fretilin leader] said it was a myth that E[T]ese seeking freedom... were divided... "If I keep reading this kind of communique, N[Z] should drop dead. I will not set foot here again..."

...N[Z]'s decision to no longer treat Indonesia's annexation of E[T] as "irreversible" has angered A[US], according to leaked cables between Canberra and the A[US]n High Commission in Wellington. A[US]'s anger, revealed as [its PM] prepares for his first visit as P[M to NZ] this

weekend, was fuelled both by the potential diplomatic difficulties it posed for Canberra and the fact that it became public without transtasman consultation... [T]he cable said: "...Please approach the Minister of Foreign Affairs and Trade at a senior level to seek a read-out on current N[Z] policy on E[T]. If the thrust of the press reports is confirmed, we would like you to register our displeasure at the failure of the N[Z]ers to keep us abreast of their thinking on what they know is an important issue for us." ...A[US]n policy continues to accept the irreversibility of the annexation and the de jure recognition it gave to Indonesian occupation in 1979... [In addition, the two countries have maintained a 'security treaty since December 1995'. The UN], however, still considers Portugal the administering power of the half-island territory...

Of all the numerous myths about E[T, writes the]... first secretary and head of information at the Embassy of Indonesia, Wellington... none is more malicious and misleading... [than calling it] the worst "genocide" since the Jewish Holocaust. The inclination by some to rewrite history will certainly not end the turmoil that started when Portugal abandoned its former colony to civil war in 1975... Indonesia's detractors often fail to recognise the fact that many E[T]ese died as a result of the Fretilin reign of terror and many also forget that the chaotic situation caused by civil war forced many people to leave the area and flee across the border to West Timor. The hunger and disease caused by the civil war, combined with acts of Fretilin aggression, were the major direct cause of loss of life... There is no question that life in E[T] is not perfect; Indonesia very much regrets the loss of so many lives. The record shows, however, that more has already been done by the Government of Indonesia to improve the quality of life in the past 20 years than was done in over 400 years during Portuguese colonisation.

...WHEN E[T]'s leading human rights activists... shared the Nobel Peace Prize in December, it might have been expected to ease the pressure on the guerrillas fighting in the mountains. But if anything, the conflict has worsened... In early January, the Indonesians were still deploying fresh troops... to flush out the guerrillas... A wave of arrests of suspected resistance sympathisers was taking place... and another unidentified corpse was found... in Dili on January 7... [after] three headless corpses[were] found in a Dili suburb on Boxing Day... [One guerrilla] leader... believes that the Indonesian security forces are taking revenge for the events of December 24, when... an E[T]ese corporal in the Indonesian Army, was beaten to death by the crowd who had gathered to welcome [the RC bishop] back from the Nobel Prize ceremony in Oslo. The crowd believed he was there to assassinate [the bishop]... In October last year, Major Julio Fraga was killed in Baukau by Red Beret (Kopassus) troops because he refused an order to assassinate [the bishop]... THE people of E[T]... immediately report... all arrests, assaults and killings by the Indonesians... [to] the guerrillas... and often... wait... for orders as to how to respond... The grim commitment of the Commandante – they will die fighting the Indonesians until they withdraw their troops – ensures there will be no peace in the immediate future... "My experience living in the village was so traumatic," says [a man] who joined the guerrillas in 1983 when he was 17. "Most of my relatives have been arrested, tortured, killed. My three sisters were sexually violated before they were killed." ...[another guerrilla] watched Indonesian soldiers rape and murder his sister when he was seven years old... He is under no illusions about his future. "We know that we are going to die – at least we will die fighting to achieve freedom, peace and justice for our people." ...E[T] is barely 500km northwest of Darwin and ABC radio broadcasts, clearly received, are a primary source of information in the mountains. [The guerrilla leader, who] heard last year's coverage of the... report into the deaths of the six A[US]n-based journalists killed by the invading Indonesians in 1975... cite[d AUS]'s moral debt from... W[W2] when thousands of Timorese died helping A[US]n soldiers fight the Japanese... [when he] issued a heartfelt appeal to the A[US]n Government to cancel the agreement which provides military training to the Indonesians... [■ Yesterday,] Indonesian police said they had arrested 109 youths in E[T] for taking part in brawls between young [RCs] and members of... the military-backed... Gada Paksi[, otherwise known as] the Youth Guard of Integration Upholders, [which] was set up in 1995... [I]ts members receive military training in Java.

...In January of 1995 three A[US]n tourists witnessed the beating of... [a guerrilla] as he was arrested at a demonstration at Dili University. One of the tourists later said that "they were beating him so hard the police van was rocking wildly like a washing machine." For his part in the demonstration [the guerrilla] was sentenced to 18 months' jail... He was then beaten... [some more,] cigarettes were extinguished on his chest and arms and electric shocks were administered to his genitals... He was released in May last year on the promise that he would leave E[T] and attend University in Jakarta[, where t]he harassment by the Indonesian authorities continued as he was constantly detained, questioned and beaten.

...An Indonesian doctor working in... Ermera... said... that... [t]he mood among the [ET]ese in... the town... was such that any Indonesian, whatever their attitude or past treatment of the local population, was in danger – especially at night. The killing, in the town of Los Palos, of an E[T]ese couple who had openly collaborated with the Indonesians is a signal that some old scores are being settled on both sides.

...Rioting in an E[T]ese enclave was a sign that tensions had reached "boiling point"... [an ETese] Nobel laureate... said yesterday... [from New York. T]he latest unrest... erupted when about 6000 people went on the rampage after a migrant Muslim insulted a local R[C] priest, and left one person dead and scores of buildings destroyed. [□ Last night, 'in Jakarta, at least six people were killed, some of them mutilated, when Muslim rioters set fire to a Protestant church. Mobs also ransacked a RC church during a wedding.']

...A mob... burned and wrecked churches and temples east of Jakarta yesterday after reports that a Christian had insulted Muslims... "The rampage was sparked by an [ethnic] Chinese woman who scolded a number of youths for being too noisy,"... the youths were beating drums to wake Muslims in the neighbourhood early... so they could eat before fasting through the day... Witnesses said a number of shops were damaged and looted... There were no reports of serious injuries... Some members of the mob had scrawled graffiti on walls saying "Muslim power," "Long live Islam," and "Destroy the Chinese." Ethnic Chinese, a number of whom are Christians and are regarded as more wealthy in their neighbourhoods, are frequently targets of mob violence in Indonesia... Last month, four people died when a... Muslim... mob went on a rampage in the town of Tasikmalaya in West Java, setting fire to shops, buildings and churches... As well as economic factors, observers have blamed religious tensions for the wave of unrest, with almost all the violence perpetrated by Muslims. One of Indonesia's most influential Muslim leaders... said[Indonesian] Muslims... had become more "aggressive" as a result of increased contacts with their Middle Eastern counterparts. "Subsequently, Muslims here have developed a fear of other faiths... This fear has materialised in... aggression towards people of other faiths." [In related news, officials]... in Jakarta have banned parties this New Year's Eve so as not to clash with... Islam's holy month of fasting.

...[Ramadan observes 'the month in which Muslims believe the Koran was revealed to the Prophet Mohammad' – and 'is one of the five "Pillars of the Faith" or basic ritual duties. Emphasis is on Allah's forgiveness and the atonement of sins. The fast (which entails abstinence from food, water, tobacco and sexual intercourse) is from dawn to sundown every day. Muslims are also expected to live in especial simplicity during the month and to provide more than usual for the needy members of the community.']

...50 Buddhist monks desecrated a Muslim mosque in... the Burmese capital yesterday... [I]n Burma's second city, Mandalay... a curfew has been in force for a week... [because of rioting by] Buddhist monks... after a report that a Muslim had raped a Buddhist girl.

...Several hundred residents have fled from the town of Tangkal in the southern Philippines where Muslim gunmen are holding a [RC priest] hostage. Meanwhile, 'about 500 Muslims brandishing weapons gathered yesterday at Indonesia's Parliament in Jakarta demanding permission to go to the Moluccas, or Spice Islands, and fight a holy war against Christians. Horrific massacres have been carried out by both sides in the islands.']

...Riots erupted in the Indonesian city of Ujungpandang yesterday with mobs attacking shops and cars owned by ethnic Chinese after a nine-year-old girl was hacked to death. The Muslim girl's attacker, an ethnic Chinese... known to be mentally disturbed, had slashed the girl, her mother and another passer-by with a machete in front of his house... [He] was reported to have died later... In[cidentally, In]donesia will send nearly 200,000 of its Muslim citizens to Saudi Arabia for the... haj pilgrimage. The Government is charging each pilgrim 7.5 million rupiah... for the trip...

[Although 'Muslims with sufficient financial means are required to make a pilgrimage to Mecca at least once in their lifetimes, Iraq accused Saudi Arabia yesterday of surrounding thousands of its pilgrims with tanks and armoured vehicles, forcing Baghdad to decide they should be called home. Baghdad television quoted a senior Iraqi official accompanying the pilgrims on their annual haj as saying the Saudis had turned down an Iraqi demand that the pilgrims' expenses be withdrawn from Iraq's assets frozen in Arab and foreign banks (last year the frozen assets were worth more than \$US1.5 billion)']...

Muslim pilgrims were killed yesterday when a fire, triggered by a cooking gas cylinder and fanned by high winds, swept through a vast sea of tents near the holy city of Mecca... [where] some two million Muslims from 100 countries[have been] gathering for the annual haj pilgrimage, which reaches its climax today. Saudi Arabia's state television reported the official toll as... 343... dead and 1290 injured... 70,000 tents were destroyed... The fatal blaze is the latest tragedy to strike Muslims on pilgrimage to Mecca[a]... journey... every able-bodied Islamic believer is required to make at least once... The worst of recent Mecca tragedies was a stampede in 1990 in which 1426 pilgrims were crushed to death in a tunnel. In 1994, 270 pilgrims were also killed during a stampede. Saudi Arabia said three people were killed in 1995 when a fire swept through the tent camps in Mena. Saudi Arabia, custodian of Islam's two holiest shrines, has spent \$US18.6... billion... in the last decade on expanding pilgrimage sites... Most of [this year's] victims were from India, Pakistan and Bangladesh [- the country created 'when East Pakistan seceded from the exploitative West Pakistan in 1971' (24 years after Pakistan itself was created 'by dividing the Indian subcontinent into its Hindu and Muslim communities')].

...A tornado levelled a huge camp of Muslim devotees near the Bangladesh capital... killing at least 22 people. Officials said last night that the death count could go up as many of the 500 or so injured were in a critical condition and more bodies would be dug up as the clearing of rubble continued. Witnesses said a powerful whirlwind sucked up all the makeshift tin-roofed temporary camps in a 1 sq km area on Sunday night... [By the way, Saudi Arabia has announced] plans to provide Muslim pilgrims to Mecca with fireproof tents...

30,000 Muslim rioters rampaged through a central Pakistan town yesterday, setting fire to two Christian churches.

...The Pakistan Muslim League party... won a landslide victory in general elections this month[, and already one woman has been executed by family]... members... after tribal clerics sentenced her to death in Pakistan's North-west... for marrying her son-in-law... Her son-in-law, who she had married four years earlier, also was sentenced to death and then executed by members of his family... who disagreed with their union. They had two children... The council ruled that marriage between a mother-in-law and son-in-law was against Islamic laws. [Editor's note: 'traditional Islamic law is dispensed in a shariah court by a Muslim judge (*qadi*) - who should be a male (women aren't eligible) of fine character and sound learning.'

... 'When a Pakistani tribal jury ordered on June 22 that a teenager be gang-raped and forced to walk home naked as a punishment, stunned villagers watched without a whisper. Two weeks later, the medieval justice system is itself on public trial. The sexual assault on the 18-year-old as punishment for her 11-year-old brother's alleged indecencies with a 30-year-old woman of a higher tribe outraged the country and prompted a Supreme Court inquiry. The victim's mother said yesterday the family had been threatened by relatives of the alleged rapists for reporting the crime. Pakistan's President offered the rape victim US\$8300 in compensation. She declined the money for herself and diverted it to set up a village school for girls.'

... 'A Pakistani woman gang-raped by 4 men on the orders of a traditional village jury says she is satisfied with the 6 death sentences handed down for the crime. A special anti-terrorism court in the town of Dera Ghazi Khan in Punjab province sentenced 4 rapists and 2 jurors early yesterday for the June 22 attack on the 30-year-old divorcee. 8 other men who had sat on the jury that authorised the crime were released. The victim approached the traditional jury, or panchayat, to settle a dispute with the more powerful Mastoi clan after her 12-year-old brother was kidnapped and sodomised by members of the Mastoi family as a punishment for having an illicit affair with one of their female relatives. The jury ruled that to save Mastoi honour, the boy should marry the woman with whom he was linked. The sister was to be given away in marriage to a Mastoi man. When she rejected the decision, she was gang raped. Yesterday, police sent extra staff to Meerawali and cordoned off her house to prevent a revenge attack.' In related news, a) Sri Lankan housemaid and her Bangladeshi lover in the Gulf state of Abu Dhabi are to receive more than 100 lashes for having an illicit affair which resulted in her pregnancy.

...At least nine people were killed and several others injured at the weekend in Hindu-Muslim rioting in the[Indian] state of Tamil Nadu.

...['Killings in India's worst Hindu-Muslim bloodshed in a decade eased last night, but the death toll jumped to almost 500. In the bloodiest incident overnight, a mob burned 2 people alive. Police opened fire to disperse the attackers, killing one. Many of the dead were burned alive when mobs attacked Muslim residential areas and shops. Police shot dead 80 in trying to control the crowds. A Government official said the toll from the rioting across Gujarat state had risen to 478, including 58 Hindus burned alive last week when a suspected Muslim mob torched a train, triggering the wave of revenge killings.'

... 'Indian forensic experts have cast doubt on police statements that an arson on a train was carried out by a Muslim mob hurling petrol. A report said the sleeping car in which 59 Hindus were burned alive was set on fire inside. The pendulum of blame has swung wildly since the torching of the coach set off a wave of reprisal killings in which officials say at least 1000 people, mostly Muslims, lost their lives. Human rights groups put the death toll at over 2500.'

...the 80km front line of the Siachen Glacier, an all-too-real place along the border between India and Pakistan... is proof that even in an age when famines and massacres are instantly beamed to your living room, there are still some war zones you'll probably never glimpse... Which is not to say that these obscure wars aren't worth paying attention to. Beside the singular appeal of exotic locations, their stakes often are anything but trivial. A flare-up of fighting on the Siachen [- where both sides 'fire on each other on virtually a daily basis (both sides say they are only retaliating), annually resulting in about 200 civilian deaths on each side' -] ...for instance, could trigger the world's first nuclear attack since... Nagasaki. - 1997

Stinging diplomatic fallout rained down on India yesterday for conducting... three... underground nuclear tests... A[US] State Department spokesman... called the tests a "very negative development" and said Washington was exploring likely sanctions... Tokyo was[also] considering... sanctions... yen loans and aid grants could be frozen. Japan is India's largest foreign aid donor. Pakistan... pilloried the tests but vowed to rise to India's latest challenge, saying it "reserves the right to take all appropriate measures for its security." The... father of Pakistan's nuclear research programme... said yesterday that a bomb could be assembled within a week... "We are like a cook waiting for the orders." India had for years endorsed peaceful use of nuclear energy but the Hindu Nationalist-led Government which took office in March had hinted that it was leaving its options open, alarming Islamabad. Temperatures were further raised last month when Muslim Pakistan tested its medium-range "Ghauri" missile. But analysts said India's tests may have been intended more as a message to northern neighbour China. China was silent on the tests and analysts said... [this] raised the question of whether it was planning to resume its own testing... Meanwhile[, domestic]... squabbles and economic woes were forgotten as... Indian newspapers sounded a chorus of jubilation over what they saw as an expression of national pride and security. "Explosion of Self-esteem," rang [one] headline...

Pakistan's cabinet met yesterday amid reports it had already decided to carry out its first nuclear test... Meanwhile, India woke up yesterday[to] the first full day of biting U[S] sanctions... estimated by the White House at more than \$US20 billion... Governments around the world condemned India's actions... In Beijing, the Foreign Ministry said: "The Chinese Government is shocked and strongly condemns" India's two nuclear tests on Wednesday and three others on Monday... But the Indian Government... remained unmoved... and... Russia, long India's main arms supplier, remained in New Delhi's corner, working behind the scenes at the U[N] to soften the proposed language of a U[N] slap at New Delhi.

...India moved yesterday to allay global concern over the motives for its recent nuclear tests while taking steps to minimise economic damage from the... sanctions imposed as punishment. "Whatever we have done is for our self-defence," [the P]M... told supporters... "We have no intention of attacking, we want to live and let live but we want our sovereignty to remain intact, our borders to be secure... so that we can focus on

development at home.” ...[his comments came as Pakistan was denying] reports... that it had conducted its first nuclear test. It was responding to claims by[the] German Chancellor... at the Group of Eight industrial nations summit in Birmingham... The Pakistani Government says it is in no rush to retaliate with its own... trial blast but says that its security is paramount... G8 leaders declined to impose joint sanctions on India at their weekend summit.

...The Indian Minister of Defence... says India will arm itself with nuclear weapons. “Weaponisation is necessary and I believe... inevitable,”...

India yesterday demanded entry to the exclusive club of nuclear weapons powers and insisted it would not buckle under the weight of condemnation... “We are a nuclear weapons state and the international community should address us on these terms,” said the defence minister.

...the hardline Vishwa Hindu Parishad (VHP)... organisation vowed yesterday to celebrate India’s nuclear blasts by spreading dust from the test zone round the country and building a temple... for... Shakti Peeth (The Goddess of strength)... at... the Buddha test site... The VHP... was blamed for the razing of a 16th-century mosque in the northern city of Ayodhya in 1992 which sparked bloody Hindu-Muslim violence.

...Before the Pakistan nuclear tests... early this morning... the U[S] was still giving credence to assurances from senior Pakistani officials that a decision to carry out a test had not been made... The U[S] was... ready to offer incentives for Pakistan not to go ahead with the tests... The concern is that the Pakistani blasts will inflame tensions with India... Pakistan said before its test blasts that it feared an attack from India on its nuclear facilities... The tests themselves were announced by the Pakistani P[M]... in a televised address. He said five successful nuclear explosions were carried out in response to the same number of tests by arch-rival India.

...India wants all nuclear-weapon states to join it for early negotiations on a nuclear-arms convention... [The Indian PM said] that New Delhi will observe a voluntary moratorium and refrain from conducting further tests. Pakistan announced on Saturday that it had carried out one test, bringing to six the number it said it has conducted since Thursday... The Indian Foreign Ministry reiterated [the PM]’s commitment to... peaceful and constructive dialogue... Meanwhile, Pakistan said last night that it had recalled missiles from forward positions... [T]he missiles were deployed after... reports of a possible attack by India last Wednesday on Pakistan’s nuclear enrichment plant... News of the ending of the alert was seen as a further sign of decreasing tension...

Airstrikes increase tension... India’s sudden airstrikes against Pakistan-backed mercenaries in the snow-capped mountains of Kashmir have raised the stakes in the long-running battle for the disputed region. Pakistan yesterday called for restraint but vowed to defend itself if its positions were attacked. However, Indian defence officials said the operations would continue until the Indian Army re-occupied outposts in the remote Dras-Kargil sector... The Pakistani[mercenarie]s caught the Indian Army off-guard when they occupied a series of early warning posts along the inhospitable line of control abandoned by both sides during the harsh winter... An Indian patrol discovered them earlier this month but the Pakistanis were well entrenched and their artillery began bombarding Kargil, forcing the town’s 25,000 residents to flee to refugee camps... 17 [Indian]soldiers had been killed and 70 injured in fierce fighting. Another 14 Indian soldiers were missing... The operation spokesman... said more than 100 of the infiltrators had been killed and many more wounded... [T]he world’s newest nuclear states, routinely exchange fire across the 720km ceasefire line dividing Kashmir...

Three children were killed yesterday when Indian mortars hit a school in the disputed Kashmir region, the second school Pakistani authorities say has been hit in two days... 10 children were killed when Indian troops bombed a boys school in Neelum Valley... on Tuesday... India denied the accusations, saying the charges were vicious propaganda. A defence official said... “Are we[such] fools that we... keep hitting their schools... [instead of] military targets...?” India began a second week of airstrikes yesterday on what it says are infiltrators holed up in northern Kashmir.

...India has begun a huge military exercise... involving more than 65,000 members of the Army and Air Force in the western desert region of Rajasthan. The two services are simulating a land and air battle during the 11-day [exercise] codenamed Shiv Shakti (Destruction) that will concentrate on practising offensive manoeuvres against neighbouring Pakistan... The exercise also includes new weapon systems operating in a simulated nuclear... environment. Among the weapons is the locally developed, surface-to-surface Prithvi missile capable of hitting targets... 565km away, and capable of carrying a nuclear warhead... Meanwhile, in Washington yesterday... [the US President] said he planned to brief... [the Pakistani PM on US] efforts to compensate Islamabad for the \$US658 million it paid for 28 F-16 fighter aircraft... in 1990... but never received... He declined to say whether the U[S] would endorse N[Z]’s agreement to pay \$US105 million over 10 years to lease the fighters, providing money that could be used to refund Pakistan in part... NZ’s] Minister of Defence... may have lost his battle to get a third Anzac frigate but he is claiming “the deal of the century” for... persuading his Government colleagues to [pay the US] \$325 million – \$200 million for spare parts now, plus \$125 million over 10 years – ...[to] lease... 28 F16... jet fighters, which last about 30 years, from 2001... then have an option to buy them for about \$280 million... Indonesia, which... operates 11 F-16As... was to have paid... \$311 million... for [9] of the... aircraft... originally sold to Pakistan... [The minister] says the F16 package will save the country \$431 million compared with running [the]19 ageing Skyhawk aircraft until 2007 and then replacing them with new fighters... [The minister] has consistently argued that [NZ] needs a third Anzac frigate... [Indeed, just days earlier he had declared on TV that ‘NZ will buy a third frigate!’] He... now... acknowledged that it was unlikely N[Z] would buy another new Anzac frigate. (● According to one commentator ‘the irony is that the US, which punished NZ in the ‘80s because of its anti-nuclear stance, is now helping NZ at the expense of Pakistan, which is being punished by the US because of its nuclear stance’...

[The] Government’s decision to lease 28 Lockheed Martin F-16s... will place it among the region’s largest users of one of the world’s most successful modern multi-use fighters. Although the capabilities of the... jets are a quantum leap above the present A4 Skyhawks, the aircraft the [US is] offering are early versions that have been stored for almost a decade... [T]hey need significant avionics and weapons upgrades to make them effective in the 21st century... But questions remained about how and when they would be used operationally... The... former head of strategic policy with the A[US]n Defence Department, now policy analyst with the Strategic and Defence Studies Centre at the A[US]n National University... said... “N[Z] needs the most bang for the available bucks, but beyond that there doesn’t seem to be any strategy against which these decisions have been made.” ...There are also doubts over whether the RNZAF can find pilots and other resources to operate the entire fleet. Any shortfall would be likely to see a number placed [back into] storage.

...When the citizens see those babies... greasing across... [NZ’s skyline] in tight formation... you’ll hear... cries of... pride... [over] the... gorgeous... weapons of death. We’ll see why every tinpot dictator gets himself... the same aircraft Israel used to take out the Iraqi nuclear power station in the early 80s... But... the politicians have... [exposed the NZ] military mind-set... which believes our defence forces are for engagement overseas.

...Up on East Point, looking across Fannie Bay towards Port Darwin, is an ancient cannon used in the defence of... Timor several centuries ago. Beyond the cannon is the vast concrete bulk of a... W[W2] 9.2-inch gun emplacement, silent now but for the squeal of a bat colony in its cavernous basement. Around Darwin are the scars of battle... and... memorials to air-raid victims... Economic crisis, bloody turmoil in Indonesia and the fraying of Malaysia’s political and social fabric have heightened a sense of vulnerability in [AUS]... The lessons of Darwin have never been forgotten, and are being applied now in a vast shift of military power to northern A[US] and the building of an electronic web reaching out to seas to make sure that the continent will not be surprised again. It is here, where A[US] juts into Asia, that Canberra’s perception of N[Z]’s defence policy moves into sharp focus... While the defence relationship with N[Z] is listed alongside the U[S] alliance as “among [AUS]’s most important strategic assets” and political leaders continue to affirm its importance, there is a belief among many in the A[US]n defence Establishment that

N[Z] increasingly does not represent value for money. At its strongest, this view holds that N[Z] is becoming a liability... And there is undeniable pique that Wellington opted for[US] F-16 fighter aircraft rather than another Anzac frigate... The decision not to buy a third Anzac frigate[, which would've meant]... more business for A[US]n shipyards, and an effective addition to an Australasian fleet should an emergency arise... has hardened anger and resignation: some argue that we should simply be cast adrift, others that we will be anyway as the technological and logistical gap between the two defence forces widens.

...when[the] ousted politician... was being tried for corruption, the courtroom resounded with so much graphic sexual detail that it shocked many Malaysians. Now that the former Deputy P[M] is going to be tried for... sodomising his family driver in 1992... many Malaysians shudder at how sordid this trial could get... Despite Malaysia's Western influences and booming development, the society remains conservative, and sodomy is a crime. Among Muslims, promiscuity is taboo, and open discussions of sex are rare... No movie is screened until censors have snipped out even hints of nudity [or] sexual language... and... [there's no] sex education in schools... But since November, Malaysian newspapers have published page after page of lurid testimony about how... Malaysia's second most powerful man... performed the alleged homosexual acts. Malaysians were probably even more shocked about this than Americans were by vivid details they read about... [their President]'s affair... during his impeachment debate.

...Operation Desert Fox... [- the third US offensive against Iraq -] is drawing growing international flak... [However, the US has] vowed to bomb on, saying their strikes are "surgical" and aimed at Iraqi military facilities. The death toll after a second-round of night-time shelling of the Iraqi capital has risen to at least 25, with about 75 injured. No Americans, or the British who have joined in the attack, have been killed... US defence officials said it would take several days to work through their target list... [The US President], who faces his delayed impeachment vote today, rejected Republican claims that the attacks were a bid to avoid his day of reckoning over the... sex-and-lies scandal. The attacks were "absolutely the right thing to do" to punish Iraq for ending cooperation with U[nscom] weapons inspectors, he said... [But] a former member of... Unsc... also accused the [US] Administration... of a *Wag The Dog* approach, referring to a [recently released] fictional film depicting the artificial creation of a war with Albania to deflect attention from the president's personal problems... The bombings have bitterly divided the five permanent members of the [UN] Security Council, leaving them unable to reach any conclusions as long as the attacks continue. Russia... which has recalled its ambassadors to Washington and London... called on the [UN] - already bypassed in the leadup to the air strikes - to call a halt to the bombing of Baghdad. It says it is reconsidering its links with the Western defence alliance... China called for an immediate halt to the raids... France disapproves of the attacks but has also criticised Iraq for its actions.

...a senior lecturer in chemical engineering at the University of Auckland... ate his breakfast yesterday morning while he and his wife... watched the city they once called home go up in flames... [T]he images of Baghdad being pounded by cruise missiles from [US] and British aircraft are terrifying, even though they now live half a world away from the war zone. [He still] has a widowed mother and three siblings in Baghdad; [she] a large extended family. They hunger for news of their loved ones, but have not been able to get through to them since the bombardment began on Thursday morning... The telephone lines, they suspect, have been cut by a Government that wants no communications to reach the outside world... There [may be no phone] contact but, thanks to CNN close-ups, the... [couple, who] were still in Baghdad... [during] the worst of Allied attacks in 1991... [can re-]witness the carnage... "I don't think a human being can have immunity when he comes under pressure of war," [the lecturer] said... "...I feel very sad, not only because of my beloved family and friends there, but in addition to that I just cannot find the justice in this shelling. I suspect this is a lot more for show than anything else." ...[he] said news that a stray missile landed in south-western Iran did little for the family's confidence in the precision of the US attack... "I called my mother last week," said [his wife]. "She has a heart problem and if something were to happen to her it would be impossible... to get her to a hospital."

...[the] head of... Medical City - the biggest hospital in Iraq - said three patients had died from heart attack because of the shocks of the explosions... [H]e had instructed his patients to stay in the basement of the hospital because of the damage caused to the building and the fear of more strikes. Reporters were taken around the basement where... patients were lying on the ground without beds. One of the injured men had his leg cut off after being hit by a bomb shell. [The amputee] told reporters the blast took place as he was walking in the street... [T]wo hospitals in Baghdad were damaged as a result of massive bombings on Thursday night... [M]ost of the equipment had been damaged... [at] Medical City... "There is another maternity hospital which was damaged tonight,"... said... [the] Iraqi Health Minister. He[also] said hospitals in the sanctions-hit city were suffering from severe shortages of medical supplies and would hardly be able to cope with a growing number of casualties... [■] Iran has protested to the [US] and Britain about the stray missile which crashed into a south-western Iranian border city, causing damage but no casualties.

...Iranians [will get to] vote... in the first local elections in the country's 2500-year history as part of a package of reforms to create a civil society within the existing Islamic system... The contests feature almost 300,000 hopefuls contending for 197,000 seats in city, town and village councils.

...*Revealed: CIA's coup bungling*... A secret CIA document shows that the U[S] intelligence agency "stumbled into success" in its covert 1953 operation to oust an ultranationalist Iranian P[M] and bolster a "vacillating" young Shah... [T]he Government report, written in 1954, showed that the... CIA "had almost complete contempt for the man it was empowering[.]" ...The *New York Times*... said the study of the CIA's first successful overthrow of a foreign Government had been provided by a former official who kept a copy... CIA officers sent a stream of envoys to bolster the Shah's courage, directed a campaign of bombings by Iranians posing as members of the Communist Party, and planted articles and cartoons in the press. But almost nothing went according to plan... and the Shah fled to Baghdad. A second coup based on popular support was successful four days later, but only when several Tehran newspapers published the Shah's decrees. Two days after that, CIA officials moved \$US5 m... into Iran to help consolidate the Government they had put into power... The CIA operation was designed to maintain the West's control over Iranian oil.

...Pentagon leaders... [announced yesterday] that more than 50[Iraqi targets have been] attacked by well over 200 [missiles and]... that damage assessment... showed good results... [They] produced enlarged... aerial pictures [of] intact buildings before the raids and rubble afterwards... [The] US Defence Secretary... said an oil refinery at the port city of Basra had[also] been bombed because it had been a conduit for oil smuggling.

...[U]S warplanes blasted strategic Iraqi installations yesterday in one of the biggest strikes this year as Baghdad fought to restore oil supplies after a raid on Monday... Iraq... said repairs to a repeater station on the oil pipeline to Turkey... could take four weeks.

...The U[N] is concerned that U[S] strikes on Iraq, which Baghdad says damaged its oil pipeline, will frustrate UN efforts to get food and medicine to Iraqis... Prospects that... the flow of oil... might soon resume have faded with reports that a second facility was damaged the following day, said... the executive director of the UN oil-for-food programme. ["The US has admitted that an attack on Iraq may have damaged a UN-authorized oil-for-food link to Turkey. The US had targeted a communications facility but hit the oil-line in error. One man was killed."]

...military strikes against Iraq have heightened tensions in Cape Town, where a young... member of the militant... Muslim... group Pagad... has died of injuries he suffered while protesting... At his funeral... Pagad... declared war on the forces of law and order and said they could go to hell.

...as bombing raids on Iraq continue... UN humanitarian staff evacuated from Baghdad... told stories of terror... when an explosion... less than 1000m... [away] rocked their headquarters... Meanwhile... US air force commanders said... the B-1 bomber, once derided as a colossal waste of money and a Cold War relic, has proved its worth... Two B-1s, which have never been used against a real target, flew from a base in the Gulf region in the second wave of attacks against Iraq on Friday... The sleek, slate-grey aircraft... costing \$280 million each... [were] originally designed to carry nuclear weapons deep into the heart of the Soviet Union, [but] [suffered a number of embarrassing setbacks, including two crashes in 1988.

...US fighter jets pummelled Iraq's air defence system for the second consecutive day yesterday in a renewed effort to crush... [the Iraqi President]'s defiant stand in the Western-enforced no-fly zones.

...Allied aircraft have not attacked Iraqi targets outside a no-fly zone and they do not intend "at this point" to do so, says the chairman of the U[S] Joint Chiefs of Staff. [The]General... reinforced denials by Pentagon officials of Iraq's claims that US aircraft attacked civilian targets near Baghdad yesterday, killing one person and wounding others... "Anything coming out of Baghdad should be questioned in terms of its veracity since we have seen very little of the truth coming out of Iraq in recent years."

...*Tyrant lying in wait...* When[an] Egyptian journalist... visited Iraq during the early years of [its incumbent President]'s rule, he met the Minister for Industry. [The journalist] was impressed by the intense, hard-working, intellectual man running Iraq's dynamic industrial output. So on his next visit, [the journalist] asked to meet him again. Officials explained that they had no information about the minister and all inquiries should be addressed to His Excellency the President. When [the journalist] turned up for his interview with the dictator of Iraq, he asked about the Minister for Industry... "We scissored his neck – he was suspected of being a traitor." But was there any evidence of this, the appalled [journalist] asked... "In Iraq, we don't need proof," [the dictator] replied. "Suspicion is enough." ...In the days when [the dictator] clawed his way to power, personally shot members of his own cabinet, or used gas for the first time on his recalcitrant Kurds, the West loved him. When he invaded Iran in 1980, we gave him... Mirage jets... from France... poison gas... from Germany... and U[S] satellite reconnaissance pictures of the Iranian front lines... [H]ow did he do it? How come the man who defied [the US President in 1991] is still there to defy [the current US President]? ...and... years after U[N] sanctions that have killed at least a million Iraqis, [how come the dictator] is still enjoying his palaces and cigars?

...Israel planned to assassinate Iraq[']s leader... last month, but cancelled the operation because it clashed with US-British air attacks on Iraq. [The President] was to be killed with guided missiles during a visit to his mistress...

House of Representatives prosecutors opened their case against [their]President... yesterday, charging that he repeatedly put himself above the law and betrayed his oath of office in trying to hide his affair with [a White House intern]. Laying out their arguments in the first presidential impeachment trial since 1868, prosecutors said the Senate's failure to remove [the President] from office for lying and obstructing justice would "cause a cancer to be present in our society for generations."

...Andrew Johnson is an obscure figure in America's past, a President who by most accounts did a pretty poor job during a crucial moment in history. In 1865, when Abraham Lincoln was shot dead at the end of the Civil War, Johnson became the first Vice-President ever to take over as President because of an assassination... But in the end he... would be remembered for little except one thing – he was the first President impeached by the House of Representatives. That singular place in history has changed now that he has been joined by [the incumbent President]... An early attempt to impeach Johnson failed in December 1867, with every Democrat and a majority of Republicans in the House voting against impeachment. Then in 1868 Mr Johnson fired... the Radicals' informant inside the White House. The Republican-controlled Congress had passed a law saying that... the Senate also had to vote to remove anyone from the cabinet... The House... with every Republican voting in favour, sent 11 articles of impeachment to the Senate for trial... But in the final vote... seven Republican senators broke ranks and voted against impeachment. Thirty-five voted for impeachment... [T]he Radicals needed 36. Johnson's presidency was saved by one vote.

...A smiling [US President] strode out onto the White House lawn yesterday and vowed he would stay in office until the last hour of his term, despite the two articles of impeachment voted against him... for perjury... and for obstruction of justice... Two other articles of impeachment... were defeated. [The President] now faces a trial in the Senate before the Chief Justice and the Supreme Court with the 100 senators sitting as jurors... [The President] appealed for a fair, prompt punishment short of being removed... Conventional wisdom holds that the Republicans will be under pressure to compromise because they are unlikely to muster the two-thirds majority... required for a conviction, which would remove him from office... A snap poll by NBC News after the votes showed that 55[% of USers] disagreed with the House action, while 43[%] said lawmakers had done the right thing. [The President's] job approval rating remained high at 72[%]. Incidentally, today the President... will ask Congress for an additional \$US12 billion[, which he hopes will]... be the downpayment on a six-year, \$US100 billion increase in defence spending. That represents the largest real increase... since the Cold War build-up in the mid-1980s... US military commanders have complained to the President about the state of defence preparedness... [T]he increase would pay for the next generation of ships, planes and weapons systems and enable the military to play its part in meeting emerging threats to America's security... [Nearly 250,000 USers] on active military service... are overseas... [The President will also] ask for a 4.4[%] military pay rise... US commanders have told [him] that it is increasingly difficult to retain... top military pilots and other key personnel because of pay and housing. Pilots are easily lured away to commercial flying positions...

[The US President] has ended the air attacks on Iraq, declaring the operation a success but vowing to strike again if necessary... [He] broadcast a... message to the Arab world last night, saying the... air strikes against Iraq were in the interests of the Middle East... "...I hope all Muslims will consider America's sincere desire to work with all people in the Middle East to build peace. We have the most profound admiration for Islam..."... [The Iraqi President] had... called on Arabs to resist what he called the agents of Satan... [I]n a taped television address... the 61-year-old leader... thundered... "We stand against the barbaric ways of those who have used our airspace to launch an aggression against our people." A Gulf television station said yesterday more than 50 people had been killed in Baghdad and 200 wounded[during Operation Desert Fox]...

The West still bombs[Iraq] and slowly, the Arabs, dismayed by the bloodshed in the Palestinian-Israeli conflict, are warming once more to the man who never gave in. Jordan, Lebanon, Syria, the Emirates, Egypt, Bahrain, Saudi Arabia – almost all of them American allies in 1991 – are breaking the air embargo by flying into Baghdad.

...Palestinians poured out their joy at the inauguration of their first airport yesterday, hailing it as a symbol of statehood. Crowds... cheered, danced and sang as nine aircraft flew in from Arab states and Europe to a red-carpet welcome... [T]he opening of the airport... built with \$US250 million... in deferred loans, was stalled for 20 months in the freeze that had beset Israeli-Palestinian peacemaking.

...A US-led conference... raised pledges of more than \$US3 billion... to help... Palestinians to build their economy and... bolster the peace process.

...More than 1500 senior Army and police officers urged Israel[']s P[M]... in a letter published yesterday to choose peace with Arab neighbours over Jewish settlements. The letter they signed was almost identical to one sent... to the[then PM]... when peace talks with Egypt reached a fragile stage. The 1978 letter launched Israel's mainstream Peace Now group whose leaders are also behind the new initiative. "A Government that prefers maintaining settlements beyond the Green Line to solving the historic conflict and establishing normal relations in our region will cause us to question the righteousness of our path," the letter said. The "Green Line" is Israel's pre-1967 border.

...*Why Israeli Army has failed to keep peace...* Those old enough to remember Britain's League of Nations Mandate over Palestine (1920-48) may feel a depressing sense of familiarity at the unrolling of events in the Holy Land. As in interwar years, and in the brief continuation of the mandate after 1945, Zionist Jews and Palestinian Arabs have become locked in combat over the issue of which community is entitled to enjoy rights over what portion of historically sanctioned territory. Palestinian Arabs are prepared to die for a national heritage that extends at least as far as the pre-1967 western border of the Hashemite Kingdom of Jordan... Zionist Jews are equally ready to die for Eretz Israel, the biblical land that embraces not only the state of Israel but... much of what is today Jordan, Egypt and Lebanon. Arabs and Jews killed each other over their rival claims in outbreaks of organised violence between 1920 and 1948. In fairness, it must be recognised that the Arabs took the lead, though their attacks were less efficient than the Jewish response... The task... [of] restraining, let alone containing, well-organised mobs of rioters, reinforced by gunmen... was handed to the[Israeli] Army, in retrospect, a lamentable decision... [T]he Israeli Army... excels at large-scale armoured operations. [But a]t the sort of small-scale... street-by-street enforcement of local control that is at the heart of urban peacekeeping... it... was not very good...

Israeli agents married Muslim women and raised families to hide their identities during a secret operation in the 1950s to spy on Arabs... [I]n an atmosphere of suspicion about their loyalty to the state... Arab communities were subject to military government for several years following Israel's creation... Despite full citizenship... Arabs[– who] now account for... [15%] of the population in Israel... [–] complain of continued discrimination.

...ON MAY 14, 1948... the State of Israel formally came into being. Peace and prosperity were promised for all – including the majority Arab population, who could look forward to enjoying “full and equal citizenship” in their own country... [T]hat dream of a “blooming” desert has withered into ongoing conflict and hostility... After 1948... “hundreds of thousands of Arabs... fled from Palestine and hundreds of thousands of Jews... [moved in] from Arab lands... [O]n this basis, it seemed that what had taken place... was a legitimate exchange of population.” This “legitimate exchange” – referred to in Arabic as *Al-Nakba*, or “The Catastrophe” – still continues. Today, roughly five million Palestinians live in exile, 1.2 million of those in refugee camps set up half a century ago by the United Nations.

The problem began with the independence of Palestine and the U[Ss'] refusal to accept the U[N] General Assembly's 1947 plan for the country's partition into separate Jewish and Arab states. The U[S] objected to the... role of a peace-keeping force which might include Soviet soldiers and was conscious of domestic pressure from a strong Jewish political “lobby”... The Palestine debacle highlighted two lessons which have remained central [to UN peace-keeping operations] ever since. First, the U[N] can only prevent the outbreak of war if the Security Council is prepared to act. Second, the failure to agree on the causes of conflict because of deep-seated ideological differences between the Council's Western members and the Soviet Union [made] it inevitable that, even if the U[N] succeeds in keeping the peace, it can not possibly hope to create it. At best violence might be contained, but conflict as such can only be postponed, not pre-empted... Unable to agree on a peace plan, the U[N] found itself unable either to prevent the state of Israel from coming into being on 15 May 1948 or from being attacked on the same day by its Arab neighbours. Once war had broken out, it was reduced to imposing a ceasefire agreement, monitoring demilitarised zones and supervising the eventual truce. The problem itself persisted... When war between Israel and Egypt flared up again in 1956, the U[N] set out to divide the two forces by maintaining a semi-permanent mission in the two principal areas of tension: the Gaza Strip and the Sinai desert. Eleven years later, when the Egyptians decided to test the issue again by massing forces in Sinai, they asked the U[Ns'] monitoring team to withdraw from the area, a request with which the U[N] had no option but to comply: after all, like all UN forces, it could only be deployed at the “invitation” of the host country, in this case Egypt. Concluding that the Egyptians had resolved to press home their advantage, the Israeli government chose attack as the best means of defence.

For 12 years, [the]... chairman of the Palestinian Liberation Organization... used Lebanon as a springboard for terrorist attacks against Israel. Then... in 1982, [the]... Israelis invaded, pounding over 10,000... [PLO] guerrillas with artillery and air strikes. To halt the bloodshed, the U[S] negotiated a cease-fire allowing [the chairman] and his men to leave. Today the 60-year-old guerrilla is stronger than ever. His forces have reinfiltated Lebanon. He is the guiding hand behind the *intifada*, the uprising of young Palestinians in the Israeli-occupied West Bank and Gaza Strip. And he has made striking political gains. More than 90 countries have either extended diplomatic recognition to the PLO or acknowledge the non-existent state of Palestine. Last December, [the chairman] declared publicly that he accepted Israel's right to exist and that he repudiated terrorism. With that, he bagged the biggest diplomatic trophy of all – US dialogue with the PLO. Israeli officials protested that [the chairman]'s move was a trick, but [the US] Secretary of State... took the PLO leader's words at face value. In the blink of an eye, [the secretary transformed the chairman] from outlaw terrorist to diplomatic partner... With Tunis as his base, [the man who]... lives under constant threat of assassination and rarely sleeps in the same place twice in a row... barnstorms the world in private jets, soliciting support for the Palestinian cause... He has been welcomed by Pope John Paul II, [the] French President... the... King... of Spain and others in the West. He confidently predicts an independent Palestine within “two to three years.” For that to happen, [the chairman] believes, the two-year-old *intifada* must continue. “You have to remember the story of David and Goliath in your Bible and our Koran,” he said. “The new David is a small Palestinian child facing the Israeli Goliath.” But that simple tale bears little resemblance to the complex confrontation in the Holy Land... Meanwhile, Israel's [PM]... vows his government will never relinquish the West Bank and Gaza and never agree to a Palestinian state on its borders. - 1989

The... Israeli [PM has tried] to allay fears about the direction of his hawkish Government [by calling] on the Jewish state's Arab neighbours to “join the circle of peace.” ...He said... his Government... would strengthen the peaceful relations that exist with Jordan and Egypt and continue negotiations with the “Palestinians.” ...Unfortunately... the... P[LO], Israel's peace partner, accused [the PM] of deliberately omitting reference to... [it. The PM] has opposed the Israel-PLO peace deals that led to Palestinian self-rule in the West Bank and Gaza and ruled out giving the Golan Heights to Syria, its price for peace... [Israel's former PM] said in his first speech since... narrowly... losing Israel's election that the Jewish state must honour its peace deals with the PLO even if it did not like [the PLO leader's] dreams... “We must... find a compromise... a solution.” [However, the]... militant Islamic resistance movement Hamas vowed yesterday to go on resisting Israel... as long as it occupied Palestinian land.

...[the] Jerusalem deputy mayor... [whose] Torah Judaism party received a boost in last week's election... said yesterday that he wanted to force... McDonald's... to stop serving cheeseburgers and close on the Jewish Sabbath... “[K]ashrut” dietary laws... bar mixing milk and meat products. McDonald's has opened 25 restaurants in Israel since 1993 including four kosher branches... [In a more serious development, the PLO leader and Palestinian Authority] President... said yesterday that Israel's decision to place almost 300 mobile homes in Jewish settlements on occupied Arab land was a violation of their peace deals... The move was the first on settlements since the new hardline Government... lifted restrictions imposed by its predecessor on Jewish settlement in the West Bank and Gaza Strip.

...Four Israeli phone company workers repairing a phone line near a West Bank village were slightly wounded yesterday in an explosion apparently set off by Palestinian guerrillas...

[Today is the 7th anniversary of when ‘two messianic Jews confessed to desecrating 300 Jewish graves in Haifa, Israel, in hopes Arabs would be blamed.’]

...yesterday... Israel... created an office to co-ordinate the fight against terror... Israel has been on high alert for fear of a possible attack by Palestinian militants of Islamic Jihad marking the one-year anniversary of their leader's assassination.

...The constant threat of terrorism has made Israel one of the most security-conscious countries... Handbags are searched in grocery stores. guards frisk patrons at cinemas. Bomb pits are dug outside schools in case explosives are found. Passengers are asked to show up at the airport three hours in advance... Nobody can prove that such measures work. Suicide attacks by Islamic militants have claimed the lives of 63 people this year and hardly a week goes by without a drive-by shooting... an infiltration attempt or a bomb threat. But Israelis believe the efforts are effective, and they pay a lot for the extra precautions, even though the result is often tantamount to security mania... Israeli police responded to 49,979 reports of suspicious objects last year, and safely diffused 51 bombs. In... Jerusalem alone, police investigate about 20 suspicious cars a day, which means a lot of motorists return to find their trunks popped open and a note saying their car was searched... The broad mandate Israelis have given their security forces, however, has sometimes led to abuse, including unauthorised wiretapping and interrogation techniques that human rights groups have described as inhumane. The Association for Civil Rights in Israel recently asked the Supreme Court to order Shin Bet interrogators to stop using torture, especially a practice called “shaking” which has been blamed for the death of one detainee.

...Amnesty International yesterday accused the Israeli armed forces of deliberately killing civilians "in clear breach" of the rules of war during raids against Islamic Hizbollah guerrillas in Lebanon... [after a UN] report into the killing of more than 100 civilians at a U[N] compound in southern Lebanon on April 18 had concluded that it was "unlikely" the shelling had been a mistake. The... report... pointed out that Hizbollah had attacked civilian targets, saying that "many Israeli civilians" had been wounded by Hizbollah rockets during the Grapes of Wrath operation... Amnesty... [also] criticised what it called a worrying increase in human rights abuses by the Palestinian Authority over the past two years... [In related news, a] Jerusalem court has ordered six Israeli border guards to face trial for brutality... Two policemen were caught on video berating and humiliating Palestinian workers.

...The name of the [Jews'] holiest city... Jerusalem, means God's city of peace... Jews do not need to be convinced by well-wishers of the virtues of peace. Yet a majority of Israeli Jews – 55[%] – overthrew a Government... [that]d pursued peace... No referendum was offered by the previous Administration... [E]ssentially a coalition between the left and Arab parties, [it didn't] observe the basic democratic right of letting people voice their opinion... The majority of voters... are not religious zealots but secular, middle or working-class... nationalists who had been disenfranchised and totally alienated during the so-called "peace process." ...The constant pressures of world leaders and the media on Israel to concede to Arab demands actually feeds Israeli anxiety that the world has once again given up on them. In many respects Israel is more isolated today than ever. The memory of the Holocaust is fading... There are clear anti-Semitic sentiments behind criticism of Israel's policy. France... has the most ardent bias against Israel, officially beginning with Charles de Gaulle's reference to the Jews as "this arrogant and elitist people" in the wake of the Six-Day War... Upon the Syrian-Egyptian attack on Israel in 1973 [a] normally calm and rational... [Israeli General – who] may have been ready to retaliate with means of last resort, had he had it[(n)ow Israel does possess weapons of mass destruction] –] ...cried in despair to [the then P]M... that the Third Temple was being destroyed (the destruction of the biblical First and Second Temples led to the expulsion of the Jews from Judea).

...Israeli security forces were braced last night to prevent violence in Jerusalem after Palestinians called for protests against the opening of a tourist tunnel near the Temple Mount, a site holy to Jews and Muslims... [During] a day of unrest reminiscent of the Palestinian uprising that ended with the 1993 interim... peace deal reached under Israel's previous government... youths throwing stones... [clashed with police firing] rubber bullets... No injuries were reported... The Higher Islamic Council has... called for a commercial strike in Jerusalem today and demonstrations after noon prayers... Israel[has] hailed the tunnel as an important archaeological site... it... runs along the Western Wall, the retaining wall below the Dome of the Rock and Al-Aqsa mosques. It comes out on the Via Dolorosa, the traditional route travelled by Jesus before his crucifixion.

...A Sudanese court has ordered six men hanged and three crucified for armed robbery... [I]n Egypt... a... Muslim woman facing divorce because a court found that her husband's writings insulted Islam, said yesterday the ruling was a blow to freedom... Muslim fundamentalist lawyers... [had demanded that the writer] divorce his wife because his scholarly writings showed he was no longer... Muslim and thus could not be married to a Muslim... In 1992, Muslim extremists murdered a secular writer... after... [a] sheik declared that his work violated Islamic tenets. The[divorce] case... which has been in the courts for... three years, has been seen as a key challenge by Muslim fundamentalist lawyers who want to replace secular law in Egypt with Sharia, or Islamic law... The ruling had "no effect" on the couple because they intend to remain together... [in Holland, where they both] teach at the University of Leiden. She wouldn't say if they[']ll return to Egypt, noting that their contract was for three more years.

...[Libya's leader has surrounded] himself with a corps of women bodyguards... For his five-day trip to Egypt last week, he brought 12 "revolutionary virgin guards" rather than his usual one or two... [In 1981 the leader first] called for "10,000 girls to join the Revolutionary Nuns movement..." But the call raised protests from parents[, while religious]... figures insisted that the concept of "nuns" does not exist in Islam and that the religion in fact frowns on women not marrying... [However, one of the nuns' slogans is]: "Despite our uncles and fathers, we give ourselves to you, dear colonel." ...Egypt's *Rose al-Yusef* magazine... said Libyan girls who join the force[also] take the vow: "I give myself to the revolution and refuse marriage to protest against Arab manhood which lost Palestine and wasted Arab rights and to goad the defeated Arab male." ...[Incidentally,] Palestinian police battled Israeli troops in the West Bank and Gaza Strip yesterday, and thousands of Palestinian stone-throwers attacked isolated Jewish settlements, the clearest sign yet of a breakdown in the Middle East peace process. Ten Palestinians, including a 12-year-old girl, were killed and at least 70 wounded in... the... worst... clashes... in recent memory... [The day before], Israeli soldiers shot dead five Palestinians in the town of Ramallah... [S]kies... blackened with smoke from burning tyres... marked the third day of Palestinian rioting set off by Israel's decision this week to open up an archaeological tunnel that runs along the... compound[of] Islam's third holiest site... [I]t was not clear whether [the PLO] leader was in full control, especially over all of his 30,000 armed policemen... The Israeli Army[has] imposed a blanket closure on the West Bank and Gaza, barring thousands of Palestinians from jobs inside Israel. In Germany, [the Israeli PM]... cut short by several hours his three-day visit to Europe, and was expected back in Israel to attend to the crisis... The violence sparked concerns that a new Palestinian uprising was developing and confronted Israelis with the unsettling possibility of a hostile armed neighbour just beyond their capital's borders: the sound of gunshots from Bethlehem could be heard in downtown Jerusalem, 8km away.

...At the heart of the controversy is the Temple Mount, a magnificent 480metre-long structure built 2000 years ago by Herod... as a platform for the holy Jewish temple. The temple was destroyed by the Romans in 70AD. Following the Arab conquest six centuries later, a mosque was built on the Mount which became the... holiest site in Islam, after Mecca and Medina. The Mount remained the holiest site in Judaism but Jews could pray only at a small section of the outer wall of the platform which became known as the Western or Wailing Wall. Arab structures were built up against the remainder of the outer Temple Mount wall, blocking it from view. After the 1967 Six-Day War, Israeli authorities began excavating a tunnel... Because of the issue's sensitivity, the Israeli authorities refrained over the years from opening an exit at the northern end... into the Muslim Quarter. Instead, visitors entering the narrow, 380m-long tunnel at the Western Wall have been obliged to double back in order to leave. The decision by the present Government to permit an exit to be opened – [by]... punching a doorway through a concrete wall – means... hundreds of people can visit the tunnel every hour, instead of dozens... [The tunnel] opening... should have been applauded by Jerusalem's Arabs, since it also reveals some of the glories of the Islamic past in the city and will bring streams of tourists to shopping streets in the heart of the Muslim Quarter.

...Israeli security forces late last night stormed Jerusalem's Temple Mount... killing at least two Palestinians... after five Israelis were injured by stone-throwing protesters... Arab-Israeli clashes have now claimed 66 lives in recent days... [including] 11 Israeli soldiers... The Israeli cabinet secretary... said... that police had now closed the tunnel temporarily for security reasons but it would not be permanently shut... The... city of Hebron was a virtual ghost town, its... Palestinian residents confined to their homes after the Israeli Army imposed a total curfew.

...[our conversation went like this: "You live in a place where you think your neighbours want to kill you?" "Yes." "Why do you live here?" "God gave us this land." "Could God have given it to both people?" "No.""] Arab and Jew in Hebron share at least one thing: each is sure the other wants him dead. The fear leads to a hair-trigger tension that has made the West Bank town... one of the toughest problems for Middle East peace negotiators... Some 400 Jews... [who] see themselves in direct line with the... 60 Jews slaughtered by Arabs in Hebron in 1929... live amidst 100,000 Arabs in Hebron[, which is]... sacred to Muslims and Jews as the burial place of the biblical Abraham... [Although 'Jews and Arabs, for the most part, have lived together here peacefully for centuries', one] Palestinian... said there was only one solution: the Jews must be moved from Hebron to nearby Kiryat Arba Jewish settlement – though she'd prefer the Jews weren't around at all. "Gathering them in... Kiryat Arba, is not the best but it's better,"... "They want to kill us... to throw us out of here. And the Jewish tradition says that if someone comes to kill you, you kill him first," said... [the] leader of the outlawed anti-Arab Kach movement, [who] lives in a heavily fortified enclave of seven Jewish families in the heart of Hebron... Meanwhile, Israel's chief-of-staff is planning to quit in anger at [the PM's] handling of this week's crisis, a London newspaper reported yesterday...

"The tunnel has been around for 2000 years... It will always be open," [the PM had told cheering supporters. The chief-of-staff]... actually opposed opening the tunnel, the *Sunday Times* reported, and also blamed [the PM] for not heeding his warnings that Palestinian anger was rising. The Palestinian economy has all but collapsed under a seven-month sealing of Palestinian lands after a deadly series of bus bombings in Israel carried out by Islamic militants. Anger has also mounted... [because the PM] has stalled on commitments made by his predecessors... Both the [US and the UN] were trying to arrange a meeting between [the Israeli PM] and Palestinian President... to avert more bloodshed.

...Israel and the PLO, moving back from the brink, [have] agreed at a U[S]-mediated meeting to hold intensive talks on how to implement a long-delayed troop redeployment from the... town of Hebron... [T]he Hebron committee would meet at the Erez crossing between Israel and the Gaza Strip. Other committees on civilian, economic and security matters would also be activated, negotiators said... Meanwhile, a leading Israeli human rights group yesterday issued a scathing indictment of systematic Israeli violence towards Palestinians. B'Tselem levelled its attack against the backdrop of recent police beatings of Arabs, a symbolic fine imposed on soldiers who violated "open-fire" orders in killing a Palestinian and High Court rulings allowing the use of force in interrogations... [The] group said that Israeli soldiers "humiliated" Palestinian women by forcing them to strip naked during raids on their homes in... Hebron last month... In one case... [two] pregnant women were beaten as they stripped. One, seven months pregnant, was beaten in the stomach...

Lieutenant-Colonel Rabin's orders were explicit: "The inhabitants of Lydda must be expelled quickly without attention to age." The previous day more than 250 of these inhabitants had died at the hands of the soldiers to whom the orders were issued. Nearly 50 years later our television screens showed the descendants of these... soldiers firing into crowds of rioting Palestinians from the comfort of helicopter gunships. The expulsion orders were issued on July 12, 1948, some six months after the U[N] had voted for the partition of Palestine, then under a British mandate. As a result of the order 50,000 to 60,000 Palestinians were forced to leave their homes in Lydda and the neighbouring town of Ramle. Many civilians died as the Haganah, which would soon become the Israeli Defence force, stamped out all resistance to their occupation of the town[s].

...Thousands of Islamic activists, some of them masked and brandishing rifles, rallied in Nablus yesterday to commemorate militants killed... and to reaffirm their opposition to peace accords with the Jewish state. - 1996

An Israeli human rights group says that 1479 Palestinians have been killed by Israelis... since the outbreak of the intifadeh... All but 133 were killed by the Army, said the B'Tselem... Most soldiers who killed Palestinians were not punished by the Army... "In most of the instances in which Palestinians were killed by Israeli Army fire, Israeli soldiers' lives were not in danger, although the Army... has not admitted this. Despite this, up to now, soldiers had been brought before the law in only 55 cases and only 19 were convicted." ...B'Tselem also said the Army had destroyed 1800 Palestinian homes built without the proper permits and another 447 as punishment for crimes... The intifadeh... marked its 10th anniversary this week. In that time 256 Israeli civilians and 127 Israeli soldiers had been killed by Palestinians...

Palestinian police are holding several suspects in the *death by torture* of a man in Palestinian custody, said to be the eleventh Palestinian to die after being tortured in detention. His death sparked a new debate over the human rights record of the Palestinian Authority... [■ NZ] is considering inviting [the authority's President] for an official visit. But the Palestinian leader's insistence on being surrounded by pistol-packing bodyguards could jeopardise the visit. The A[US]n deputy leader... issued an invitation to [the President] last week.

...Israel and the Palestinians are preparing to pull up chairs at the peace table, but an uninvited guest is casting a long shadow – the radical Islamic group Hamas. Even as the peace talks moved towards resumption following a bitter six-month breakdown, one of Hamas' founding members dismissed any hope for their success. "There is no future for us in negotiations... They will lead to nothing." The hard-line rhetoric... underlines the intractability of the conflict not only between Hamas and Israel, but between Hamas and Palestinians who seek peace... Hamas – the Arabic acronym for Islamic Resistance Movement – came into being in 1987, as fierce but scattered clashes were coalescing into the Intifadeh... In those tumultuous years, the group's radical agenda and street-fighting style swiftly found a following... In response, [the]... Palestinian Authority launched a crackdown on Hamas, rounding up activists and shutting down more than a dozen Hamas-affiliated institutions in the West Bank and Gaza. That move was cited by the Israeli P[M]... as a preliminary but crucial step in restarting the peace talks.

...[the Israeli PM's] closest political adviser... resigned yesterday... As chief of staff, he was widely viewed as the right-wing leader's political point man within the Likud[Party] and coalition Government... He was[also] widely seen as the moving force behind... a party mutiny over the perceived attempt by [their leader] to grab more power... Earlier yesterday... [the PM, guarded] by 1000 police, including sharpshooters stationed on... roof tops... paid a defiant solidarity visit to right-wing Jewish settlers in east Jerusalem's Old City... [He] stopped briefly in the alleyway where Gabriel Hirshberg, aged 26, was killed by automatic rifle fire last week in an ambush by suspected Palestinian militants. Police ordered all shops closed and kept Arab residents in their homes during the tour. [The PM] then addressed the right-wing seminary where Mr Hirshberg studied... declaring: "We intend to continue expanding our sovereignty in all parts of Jerusalem and to let Jews live everywhere." ...His fervent show of support for the settlers flew in the face of rising US frustration over his refusal to accept... a final peace agreement...

The snare drums began rolling this week as [the Israeli PM] stepped out on to the high wire for another of his breathtaking acts... Holding up one end of the wire were moderate ministers, principally[the] Foreign Minister... who wanted [the PM] to inform the Americans... waiting in Paris for him... that Israel would pull back from... 12[%] of the West Bank to meet Washington's demands. Holding up the other end were hardline ministers backing[the] Infrastructure Minister... who wanted [the PM] to offer... no figure at all on the grounds that the cabinet was still discussing its parameters for a final settlement with the Palestinians... Both hardliners and moderates hinted that if [the PM] sided with the other camp they would drop their end of the pole – that is, pull out of the coalition and bring down the Government. As if that wasn't enough, the cabinet was also sharply divided over... proposals for a final settlement... On the eve of [the PM's] departure for Paris, he let it be known that he favoured the more moderate approach... However[the] Infrastructure Minister warned the PM... in a private meeting... [against committing] himself in his meeting with... [the] US Secretary of State[– who recently said that 'the young people of Israel may have more wisdom than the older people' –] to any specific pullback. He received [the PM's] acquiescence but demanded it in writing. Even as a beaming [Infrastructure Minister] was telling reporters about [the PM's] retreat, the latter's aides were telling other reporters on the way to the airport that the note he had signed was just a draft, not an agreement. [Although the PM] escaped from Jerusalem still intact politically[it]... is clear that in the end [he] will have to betray someone – either the settlers and their supporters who elected him in the certainty that he would preserve Israeli rule over the West Bank or those who voted for him because of his pledge that he would bring peace. No one [knows] where he intends to go. It is not... certain that he knows. But he has gained some time.

...[he] became chairman of the Likud party in 1993... Prior to Likud's victory... in May 1996... Yitzhak Rabin[the Labour Party PM.] had been pursuing a "land for peace" programme, turning over portions of the West Bank and Gaza... to Palestinian self-rule. Then Rabin was killed by a religious fanatic who opposed this programme. The Israeli left blamed [Likud's leader] for abetting an atmosphere of hate, which they say led to Rabin's assassination.

...The murder of... Yitzhak Rabin two years ago may have stemmed more from frustrated love than from ideological extremism. According to an agent who had worked for the Israeli security services, Rabin's murderer... was motivated in large part by a desire to impress young women friends whose favour he was otherwise unable to win... [B]ecause of his Yemenite origin[h]e... had difficulty making headway with Ashkenazi girls of European extraction active in right-wing circles. A budding romance with one girl ended abruptly when her parents objected to her going out

with a non-Ashkenazi boy. Other relationships did not even get that far... Someone whom [the assassin] particularly wanted to impress was... a beautiful fellow student... The two held frequent ideological discussions. "He loved her," said [the agent]. "She didn't love him."

...[Israel's PM] loves a daring feat. As a deputy Foreign Minister a decade ago, he suggested in a meeting to blow up an Israeli hotel rather than hand it to Egypt. At the time, his idea was dismissed with embarrassed silence. But now he is [the PM] and often acts on his impulses without seeking expert advice. His latest venture – ordering the assassination of a Hamas leader in Jordan to avenge suicide bombings in Israel... without consulting his cabinet... – is still reverberating across the Middle East in ways [he] never anticipated... The bungled job has strengthened the very Islamic militants he sought to contain; soured ties with his only friend in the Arab world; chilled relations with Canada... and... weakened Israel's Mossad spy agency... Israel's secret services[also] suffered a crippling blow to their prestige with the charge that... a... Mossad agent fabricated spy reports on arch-foe Syria... Several major scandals in [the PM's] 16 months of power have been attributed to his habit of not seeking advice. Among those were opening a tourist tunnel along Muslim holy sites – which triggered Palestinian riots that cost 80 lives – and appointing a political crony as attorney-general... Still, the[latest] scandal is unlikely to bring [him] down now... He has broad support in his right-wing coalition that only increased by his having targeted Hamas; under Israel's new electoral system Parliament needs to muster an absolute majority to oust the [PM]; he is very skilled in influencing public opinion; and many Israelis have become indifferent. "Israelis have become accustomed to very strange ways of Government," said [a lecturer from] the Hebrew University. "You would expect we would all take to the streets, me included."

...My first close-up glimpse of [Israel's PM] shortly before last year's elections fixed parameters for all that has followed... [He] is one of the most persuasive public speakers Israel has ever known and at the same time the least credible national figure it has ever known. To many, including people close to him politically, nothing he says can be taken at face value. He is a man of transparent artifice, a spinmeister masterful at manipulating tomorrow morning's headline under the impression that he is shaping history. He is a man who... acts as if he can make peace by bullying the Palestinians into accepting his terms... Yet he is intimidated by peace, and the concessions it demands, and he clings to the terrorism issue like a lifesaver... Instead of offering vision or hope to his own people, instead of seeking creative solutions, he is constantly blaming others... At a time when a deeply divided nation cries out for leadership and direction, it has a [PM] without the moral weight needed to offer solace. The joylessness with which the nation's 50th anniversary celebrations next year are being anticipated reflects the stewardship of a public relations slickster with an empty bag of slogans. [He] ridicules the notion of a New Middle East conjured up by [a former PM]... even though it touched a powerful longing in the hearts of Jews and Arabs alike... He is impervious to the notion that partnerships are built on respect from which grows trust, and not by one side manipulating the other. Respect is something he has never shown the Palestinians. He refused for months after his election to talk to... [the] Palestinian leader... leaving that task to underlings... There is an immaturity about the man, an inappropriate swagger. What can one make of someone who brags "I always get what I want," as he said in a newspaper interview last week? ...His ordering of an assassination in Jordan, a critical partner in the peace process, is another skid mark marking his perilous passage through history.

...*Lack of political wisdom [is the PM's] weak spot...* On September 25, [the Israeli PM]... arrived at the headquarters of the Mossad as part of a round of visits to Government agencies to toast the Jewish new year which would start in a few days. The faces of the officials forming the reception committee bore the polite smiles suitable for the occasion. There was, however, one notable exception. "Can I talk to you in private for a moment?" asked... the Mossad chief... [The general led the PM] aside and broke the stunning news. Just an hour before he had been informed that the planned assassination in Amman of a senior Hamas leader... had ended in a fiasco. A deadly poison had been successfully injected into [the target] but the two agents involved had been caught. Four other agents on the periphery of the operation had fled into the Israeli embassy... observed by Jordanian security personnel. "[The victim] has another eight hours to live," said... [the general. The PM] was aghast. None of the scenarios presented to him before he approved the operation had envisioned such a debacle, he would later tell associates. From [the general's office, the PM telephoned the King of Jordan]. The Jordanian monarch had no way of knowing that Israeli agents had just carried out an assassination attempt on his soil. For one thing, [the target] did not yet feel the delayed effect of the poison injected into his blood stream through his ear. For another, the two men taken into custody after an unexplained street brawl with [the target's] bodyguard held Canadian passports... [The PM asked the king to receive the general] for an urgent talk that afternoon. The king agreed, even though [the PM] said he could not explain on the phone what the subject was. As[the] General... headed out to the car that would take him to the airport, one of [the PM's] aides ran after him. "The P[M] wants you to take the antidote to the poison with you." That, at least, is one decision by [the PM] that nobody faults... The Hamas leader was a guest in [the king's] country and under his protection. In a worst-case scenario, [the] King... would have been implicated by the Palestinians as a partner, silent or otherwise, in the killing, with consequent danger to himself and the stability of his regime. This explains [the king's fury when the general]... revealed to him the Mossad's involvement... As the Mossad chief was being escorted back to his plane, one of the king's aides told him he was henceforth persona non grata in Jordan. [The PM] secretly flew to Amman three days later but[the] King... refused to meet him. The Israeli leader met instead with the king's brother... [The PM], on the advice of an ex-Mossad veteran highly respected by[the] King... offered to release[a] Hamas spiritual leader... as a gesture of Israeli contrition. [The] King... demanded, and got, the release of some 50 other Arab prisoners from Israeli jails as well. He also demanded, and got, not only the antidote to the poison but also the formula for the antidote... An official inquiry committee began hearings this week into the episode, one of the most embarrassing security blunders in Israel's history... [Yet,] Israel has repeatedly proven its ability to plan and execute complex military operations... with great precision. The long-distance rescue of hostages at Entebbe in Uganda in 1976 and the slaying of a PLO war chief in Tunis by a large commando force operating 1000km from home are but two examples... Yitzhak Rabin, a grizzled battle veteran, would consult before deciding on such matters not only with the formal chain of command but with outside people whose experience and wisdom he respected. He would consider both the ramifications as well as the minute operational details, sometimes sending the Mossad officers back to the drawing boards to replan... [Another former PM] likewise consulted extensively, even though he was himself a Mossad veteran with extensive operational experience, including involvement in hit teams. However, [the current PM], whose previous security experience was limited to a relatively brief stint as a young commando officer, reportedly did not discuss the planned operation beforehand even with central figures such as the Defence Minister, the armed forces chief of staff or the head of the internal security service – the Shin Bet... [The Foreign Minister, who also was] not consulted, has publicly attacked [the PM's] decision and declared that he... would have blocked the operation, had he known about it... The decision to attack a senior Hamas official came after a suicide bombing on July 30 in a crowded Jerusalem marketplace in which 16 Israelis were killed and 200 wounded. There was another suicide bombing on a... pedestrian mall a month earlier. On that occasion, [the PM] declared publicly: "We cannot continue this way. From this moment on, we will take a different way."

...The agreement on Hebron puts the hard-line Israeli leader... firmly behind the peace process for the first time. But it... [is] planting the seeds of future disagreements... Jewish settlers in Hebron yesterday accused the... [PM] of selling them out by agreeing to hand the... city over to Palestinian rule... [A] spokesman for the... settlers, said: "This is a dark day for Jews in the land of Israel. The agreement... will lead to a massacre of Jews in Hebron." But he said the Jews would "stay in Hebron, and will fight to stay here forever." ...a chief ideologue of the Israeli right and son of the late... [PM] Menachem Begin, the guerrilla-turned-peacemaker[who] made history when... he traded the Sinai peninsula for peace with Egypt in a 1979 deal... resigned from his cabinet post because of his refusal to compromise his belief that the entire West Bank, heartland of the biblical Land of Israel, must stay in Israeli hands... "I thought it was correct to no longer be a part of a Government... I don't believe in,"...

IT HAS TAKEN DECADES OF BLOODSHED and years of negotiation to reconcile most Israelis and Palestinians to the idea of partitioning the Holy Land into two states, one Jewish, one Arab. Now, a group of angry Israelis is demanding that it be divided further into three states: one for

the Palestinians, one for secular Jews and one for ultra-religious Jews. Far-fetched as it seems, the idea is attracting serious debate. There is even a biblical precedent. In 993 B.C., when the heirs of David and Solomon could not agree on a single realm, they created the Jewish kingdoms of Israel and Judah and shared the Holy Land with the Philistines on the coast. The call now comes not from religious romantics yearning for a long-lost past, but from secular Israelis who are fed up with the violence and intolerance of their Orthodox brethren... The issue has become more urgent recently as the religionists have grown dangerously militant... In a rally last month... [the] spiritual leader of the ultra-Orthodox Shas party, a member of the governing coalition, declared that Jews who desecrate the Sabbath – for example, by driving a car [because ‘there is no public transport from Friday afternoon until Saturday evening’] – “will be killed.” Support for such views is disconcertingly broad. The grave of Baruch Goldstein, the gunman who was clubbed to death after... [his] 1994 massacre of 29 worshippers in a Hebron mosque... is now a shrine visited weekly by scores of sympathizers. Informal fan clubs dedicated to Goldstein and to... Rabin’s assassin, have cropped up in religious high schools. A teacher in one such school called his pupils together after... the wounding of six Arabs in a Hebron market earlier this month... to condemn the act, explaining that man was created in the image of God and that “man” included Arabs. Nearly half the class walked out in protest. Secularists are annoyed by their religious compatriots in many smaller ways as well. Some [Orthodox rabbis recently said that]... 150,000 Israelis who claim to be Jewish aren’t Jewish enough to marry... Still, not all secular Jews agree that extremism is on the rise... [An] increasing number of businesses open on Saturday, including cinemas, bars and suburban shopping malls, [while civil] marriages and funerals are tolerated by the state... “I don’t know who’s winning,” [one secular Jew] retorts. “I do know it’s a war.” While that might sound extreme, a recent poll found that 35[%] of Israeli Jews believe that the religious-secular divide will lead to a civil war... The last time the Jews were divided into [separate] kingdoms... 10 of their 12 tribes vanished into eternity.

...[an Orthodox rabbi says the word God may be erased from a computer screen or disk because the pixels do not constitute real letters. In Jewish law, printed matter containing the word “Elohim” or God must be stored rather than buried.] In further news from Israel, its P]M... said yesterday that [he] was cracking down on Jewish extremists, a day after police revealed a suspected plot to throw a pig’s head into a Muslim shrine. “The Israeli Government... will fight with determination against anyone who attempts to incite a religious war,”...

An unrepentant right-wing extremist giggled, smirked and laughed at prosecution witnesses as she went on trial for putting up posters in Hebron depicting the Prophet Mohammed as a pig... [which] triggered several days of clashes... between Palestinians and Israeli troops in [Hebron]... Israeli leaders condemned [her] actions and apologised but Muslim outrage spread as far as Bangladesh and Kenya while Muslim clerics ruled that insulting the prophet should be punishable with death... Jewish settlers in the past have received light sentences for serious offences against Palestinians... however... [the] unemployed art school dropout... aged 26... faces a... maximum of 26 years in prison because the prosecution has added incitement to racism to the original charge of offending religious feelings... She told investigators the Middle East was on the brink of a holy war that would put an end to its current chaos... [P]sychiatrists have ruled that, in spite of personality disorders, she is fit to stand trial.

...HE THOUGHT he was Samson. Not only that, he was convinced a stone at Jerusalem’s Wailing Wall was in the wrong place. Like any right-thinking strongman, he tried to move it. Police wrestled with the deluded young Canadian... then took him to... the psychiatric hospital on the city’s outskirts. He was recognised as a sufferer from the “Jerusalem Syndrome”, a condition which makes some... [people] believe they are figures from biblical prophecy... [T]he Israeli soldier from a township outside Jerusalem who emptied his M-16 automatic rifle into a crowd of Palestinians in Hebron [last] December seems to be a sufferer. According to his friends, a Rabbi once told him he was the Messiah... “Jerusalem can send people mad,” said... a psychiatrist who has treated some 5000 cases of people, usually tourists, who suddenly discover they are the Virgin Mary or King David when they visit... One morning a British woman disappeared from her group. She was found later near the Wailing Wall telling all who would listen that she was the reincarnation of Mary and was about to deliver the second Jesus Christ... Recently he encountered three Virgin Marys the same day... Most victims arrive totally sane, are overcome within a matter of hours, and then leave days later, normal again.

...[a 43-year-old American from North Carolina moved to Jerusalem nearly six years ago in the belief that God selected him to recite words from the Old Testament book of Ezekiel when the time comes to raise the ancient Hebrew people from the dead. With the Year 2000 approaching, he believes their resurrection is close at hand and that it will start a 1000-year reign of peace when he will sit at God’s side as a high priest. Convinced of his calling – and his sanity – the 43-year-old no longer leaves the confines of Jerusalem’s walled Old City, fearful that he might miss his mission. Upwards of three million foreign pilgrims are expected to flock to the Holy Land for the coming millennium, the vast majority of them mainstream Christians marking the anniversary of the birth of Jesus. A minority, however, will arrive convinced that the end of the world is nigh and eager for “front-row seats” at the Second Coming on the Mount of Olives. The prospect that zealots with apocalyptic visions may use violence to try to hasten the final showdown has galvanised Israel’s security forces. Their greatest fear is of attempts to destroy Muslim shrines on Jerusalem’s Temple Mount to make way for the building of a Jewish Third Temple as a prelude to the end of the world. Israeli police last month traced 14 members of an American doomsday cult to two rented properties near Jerusalem and swiftly deported them on the grounds that they were plotting violence and mass suicide to mark the millennium. The 14, six of them children, were part of a larger group of followers of the Concerned Christians cult who disappeared from Colorado several months before. Their leader has promised that he will die in Jerusalem in 1999 and be resurrected three days later. The leader remains at large.] □ Israel has] released 30 women... from the Sharon and Neve Tirza prisons under agreements with the PLO after the High Court rejected a last-minute petition to keep nine of them behind bars... [27] were convicted of security offences... [including two] killers... and three were jailed for criminal activity unrelated to the Israeli-Arab conflict... [T]he promise to free the women had been made originally by the previous Labour Government... [A] PLO official... said that after the release... around 5000 Palestinians remain in Israeli jails... [but only one was] female... a 15-year-old arrested two weeks ago for trying to stab an Israeli soldier.

...On Sunday, Israel said it would return half of the Palestinian revenues it had been withholding as a “goodwill gesture” in response to Palestinian moves to fight terror. The Army also announced it would lift the “internal closure” that confines Palestinians to their individual communities... even though the general closure that keeps Palestinians out of Israel will remain... But... [a] new confrontation loomed in Jerusalem yesterday after a group of 11 Jewish settlers took over three buildings in the middle of an Arab neighbourhood in the city’s disputed eastern sector. The settlers’ action seemed to take both the Israeli and Palestinian authorities by surprise. Palestinian stonethrowers gathered at the site and smashed settlers’ cars before they were driven away by... Israeli border police who surrounded the compound to protect the settlers through the night... In July, a Jerusalem planning committee approved [a Miami millionaire’s] plan to build up to 70 Jewish homes on the site... [However, although the PM] has... vowed building... will continue... [at] the 6500-unit Har Homa settlement on Arab East Jerusalem’s outskirts... that plunged peacemaking into crisis... [when] launched in March[, the PM]... suggested... that he would prevent the construction[of the millionaire’s homes]...

The] King... of Jordan warned yesterday against any new construction... “We are always in principle against any change in the status quo that might adversely affect any final outcome of the... negotiations over Jerusalem,” the monarch said after arriving in Amman... from a tour of Germany, Britain, Morocco and Ireland... On Thursday, [the] Palestinian President... described as “completely illegal” Israeli plans to build in the eastern half of the city which he wants for the capital of a future Palestinian state.

...Israel yesterday approved the building of new Jewish housing... between Jerusalem and Bethlehem... despite warnings that the project could unleash a wave of Palestinian violence... more costly... [in lives than when a tunnel was] opened... last year... The homes will be built... [on] a tree-covered hill taken by Israel in... 1967... In a move not recognised internationally, it later annexed East Jerusalem, declaring it part of an indivisible capital... [● Last night, Israeli soldiers and Palestinians clashed] over the opening of a road for Jewish settlers on the West Bank.

...Israel and the Palestinians have set themselves on a collision course... only days before the next deadline is reached in their interim peace accords. The Palestinian Legislative Council[has] called a general strike... to protest an Israeli building project... [The] Palestinian President... who is to meet [the US President] in Washington today, has tried to keep a lid on Palestinian rage... Nonetheless... on Sunday he[said he] might declare a Palestinian state in reaction to the... building project... In New York, the[UN] General Assembly began a debate expected to end in over-whelming support for a demand that Israel abandon its plans.

...[a top] Palestinian peace negotiator... has resigned from heading[PLO] talks with Israel over what a key aide said... was the Jewish state's intransigence... "[The negotiator] is tired of... one-sided Israeli decisions... ['Israel wanted to dictate not negotiate']," the aide... told Israel's Army radio... Israel angered Palestinians last week with its decision to hand over 9[%] of the West Bank... [-] of which only 2% was not already under shared... authority... [-] in the first of three withdrawals outlined in a peace agreement. Palestinians say they were expecting 30[%]... The decision came on the heels of... the approval to build a new Jewish neighbourhood in Arab East Jerusalem and the decision to shut down four PLO offices there... Meanwhile, an Israeli official said yesterday that Israel would not go ahead with its planned withdrawal as long as the Palestinian Authority refused to co-operate. The latest snags... came as... [the Israeli PM] prepared to leave for a visit to Russia... And late last night, Israel Radio reported that a Jordanian fired into Israel near Naharayim, killing an estimated seven people...

[A 14]-year-old... lay next to her twin sister in hospital yesterday and relived how a "bad guy with a big eyes" shot them on a field trip to a Jordan border site nicknamed "The Island of Peace." Seven Israeli teenagers were killed and at least six wounded by a Jordanian soldier who sprayed automatic weapons fire at the school group... Jordanian authorities were briefing Israeli teachers in the group when the uniformed Jordanian standing on a hill above them took aim... [A witness] said the carnage could have been heavier... [but] Jordanian soldiers overpowered the gunman... Western officials said the shooting would temporarily take the diplomatic heat off [the Israeli PM], who would be able to point to Arab violence as the greatest threat to peace-making... [While delivering] the main eulogy at the funeral of four of the dead girls[, the Israeli PM]... said the killings only reaffirmed Israel's commitment to tighten its hold on all of Jerusalem despite Arab warnings of violence... "If anyone thinks the murder of little girls will bring this people to its knees... or that we will relinquish our birthright, holy land and eternal capital, he does not know the strength that exists in each person standing here around me today..."... After the attack several Israeli cabinet ministers... [suggested comments by Jordan's monarch that the Israeli PM] was pushing the Middle East... towards an abyss of bloodshed... possibly influenced the soldier... But [the king], who cut short a visit to Spain to return to Jordan, rejected the suggestion. The soldier's mother said her son was insane. Jordan said he had been arrested and would be prosecuted... [On a positive note, yesterday some] 9 and 10-year-old... Palestinian school children... [went] on their own peace mission to see children of the same age at an Israeli school in Jerusalem. The idea was to change both sides' perceptions. It seemed to work; some of the Israeli's had never met Palestinians.

...I was driving my family's 15-year-old babysitter home... [in] Jerusalem's Beit Hakaram district... one day recently when I told her I was going to the Old City afterwards. "The Old City?" she said... "Can I go?" Sure I said... I brought her into my favourite Old City shop... [The antique-seller] served mint tea. We talked politics... The 15-year-old... seemed stunned... "I just had tea with an Arab." That gave me pause, and made me understand a little more about Jerusalem as it reaches its 3000th year... [Jerusalem 'was a Canaanite stronghold, captured by David (c.1000 BC), who made it the capital of the national state'. Today, however], despite all the Israeli politicians' calls for a unified eternal city... Jerusalem... is decidedly split... Three great religions consider Jerusalem as a spiritual centre, and[their] shrines... are bundled together within a 10-minute walk of each other inside the Old City... where 35,000 Jews, Christians, Muslims and Armenians somehow coexist... [In addition, about 400,000 Jews live in the Israeli west and 155,000 Arabs in] the Palestinian east... Jerusalem actually can[be] split into a few dozen... neighbourhoods, each of which has extremely distinctive characters. A few neighbourhoods are so distinct that they are insulated from the modern world... Jews from all over the world come to the... Western Wall, to pray, meditate and simply touch the boulders... The wall is full of cracks, and those are stuffed with notes to God... Beyond the wall stands the Dome of the Rock... It is here, atop the ruins of Solomon's Temple, that the Prophet Mohammad is said to have ascended to heaven. [The]King... of Jordan, paying homage, spent millions of dollars in recent years to lay gold leaf over the dome... According to Muslim tradition, on the floor of the cave in the Dome is a marble slab with a black star. There is a pit beneath; the Muslims believe this is the opening of the underworld and that the souls of the dead are buried under the slab. I found a similarly ghoulisish spot at the Church of the Holy Sepulchre, first built by the Crusaders in the 12th century over the spot where Jesus was buried... Descending worn staircases... I stopped in a darkened dead-end room called St Anne's Chapel... There, on the near wall, was a big window. Legend says it's the Window to Hell. But I was taken with the window for its ancient lore and for the reality that it portrays... Jerusalem, according to one count, has been conquered 37 times. The city is visibly scarred. The face of City Hall... was blistered with Jordanian sniper fire from 1948 to 1967, the bullets shot from inside the Old City's New Gate... This city is[supposedly] next to godliness, yet there is evil, there is bloodshed, there is hate, there is even... an opening... to hell...

In December 1987, Gaza was a powder keg waiting for the spark. Poor, gritty and angry, the crowded strip, home to about half of the territories' two million Palestinians, was a landscape of tumbledown towns and tin-shack refugee camps where the streets ran with raw sewage. The explosion was sparked by a traffic accident between a truck driven by an Israeli and a car carrying Palestinian workers, four of whom were killed. In Jebaliya the next day, ugly rumours flew in the crowded confines of the camp that the crash had been a deliberate attack, one that would go unpunished. Mourning turned to anger, and hundreds of residents took to the streets with bottles, firebombs and stones. On the camp's dusty main street, rioters converged, confronting a small contingent of Israeli soldiers, who opened fire on the crowd...

Black days come all too often in Israel, and Friday was another... As costumed merrymakers paraded down[Tel Aviv's] streets to celebrate Purim, which commemorates the deliverance of the Jews in ancient Persia from a plot to slaughter them, a... [member] of the extremist group Hamas... entered one of the cafes and detonated himself, killing three Israelis and injuring at least 47 more. A six-month-old girl, her tiny, blood-soaked body cradled in a policewoman's arms added one more horrific image to the Holy Land's chronicle of tragedies... Now history will decide whether... the empty hillside on the southern reaches of Jerusalem... [was] a necessary, legitimate addition to Israel's housing stock or a flaming branch tossed on the pyre of Palestinian impatience and despair... For... Israel's... [PM.] the deaths in Tel Aviv cannot help raising questions about whether his way is working. When reporters standing amid the cafe wreckage suggested Har Homa had contributed to the bloodshed, [the PM] bristled, "Nothing justifies terrorism." He is surely right about that, and there is an incalculable moral difference between building on disputed land and setting off a bomb in a cafe. But violence is the only real lever the Palestinians have in their conflict with the Israelis, so scenes like that in Tel Aviv are certain to be repeated. Indeed, many Israelis fear this is only the beginning of a new terror offensive like the one last year that drove [the Labour PM from office]... A committed Zionist, [the new PM is, however,] opposed to the welfare-statism traditionally favoured by mainline Israeli Zionists.... [He] was born in 1949, just months after Israel had fought its war of independence with invading armies from Arab nations. His family moved to the U[S] in 1962, and the boy became Americanised quickly... [- although he] kept in touch with events back home through a beloved elder brother... who was serving in the Israel Defence Forces. In May 1967, as fellow high-school students were planning graduation parties, [the future PM] took his final exams early so that he could be in his homeland as war clouds were gathering. On June 5 he stood on the roof of an apartment building in Jerusalem, watching Jordanian artillery shells explode in the streets. It was the start of the... joint Arab effort to "exterminate the State of Israel for all time." But in less than a week, Israel shattered the forces of Syria, Jordan and Egypt. A triumphant Israel now completely controlled its ancient capital of Jerusalem (previously partitioned with Jordan), as well as the West Bank of the Jordan River, the Golan Heights on the Syrian border and the entire Sinai desert to the south. At the height of national euphoria, however, [his] father made a

prediction. Within a generation... [he] told his son, the Israelis would be ready to give the captured land back in an attempt to appease the Arabs. This prediction provides a clue to understanding... [the] son... Just a few weeks after the 1967 war, [the son] joined the armed forces and was accepted into Sayeret Matcal, an elite commando unit. He rose to captain... In 1972 four PLO terrorists hijacked a Belgian airliner with 100 passengers. They forced it to land at Israel's Ben-Gurion Airport, and threatened to blow it up unless PLO prisoners were freed... [I]n mechanic's overalls, [the son] led a "maintenance crew" to the plane. He burst through the door, grabbed one of the terrorists and... all passengers were freed unharmed. In 1973, on Yom Kippur, the most significant Jewish holy day, Egypt and Syria launched a surprise attack... Over the next 19 days... 2552 Israeli soldiers died – a staggering loss in a population that was then about three million. The Yom Kippur War imprinted a lesson in [the son's] mind. Israel had barely escaped annihilation because the land it had gained in the 1967 war gave it the space to absorb initial Arab blows... In 1976 [he] was working as a management consultant in Boston when his younger brother... was killed during the Sayeret Matcal's rescue of 98 Jews held hostage... in Uganda. The daring foray electrified the world, but it profoundly altered [the future PM's] life. The two brothers [had been] extraordinarily close... In [the dead brother's] honour, the family founded the Jonathan Institute, dedicated to combating terrorism. In 1982 [the future PM] was appointed deputy chief of mission to the U[S]. In 1984 he became Israel's ambassador to the U[N]. Now as PM, he [wants] two very old-fashioned things for Israel: peace and prosperity... A secular Jew who has been divorced twice and has weathered an adultery scandal, he has maintained close relationships with the ultrareligious parties that wield an influence way beyond their numbers... [and] has always kept open the option of sending Israeli troops back into the areas now under Palestinian control. Even worse, he might decide to use the bombing as a pretext to abandon, once and for all, the talks he has always opposed. The carnage in Tel Aviv was only the latest, some would say inevitable, result of the troubles that have piled up during [his]... months in power. One difficulty was plain old inexperience... The youngest [PM] in Israel's history... came into office almost wholly without practice in the real business of government. His energies in public life were spent... making arguments for and against policies, but not formulating them. He never mastered strategy, only shifting tactics. In command of a telegenic appearance and glib tongue, he figured his rhetoric could explain away his mistakes... After an early interview, a *Jerusalem Post* reporter wrote that it was clear [the new PM] hadn't actually read the details of the Oslo accords... But he is... eager to succeed – to... stay in power, to earn history's regard – and he... [accepts] there is no going back. Peace is what a majority of Israel's voters want, and a [PM] wishing to stay in office had better deliver.

...Jewish settlers turned on Israeli soldiers... in... Hebron... [yesterday], pelting them with stones, eggs, tomatoes then soaking them with a water hose as Palestinians... watched in wonder... [T]he soldiers were stringing chicken wire above a gate... to block stones... [after] nearly a month of stone-throwing riots by Palestinians... [but the] settlers said more fencing at the tightly guarded compound made it feel like a ghetto. One settler tried to stab a policeman... Two settlers were arrested. "This is good for us," said an Arab bystander... "Now the police will see the settlers as provocateurs, too." ...in recent days there have been signs of mending. Israeli media reported yesterday that the [ir PM]... told his Italian counterpart that actual construction on the [Har Homa] housing project would not begin until 2000, providing time to reach a final peace agreement... [However, one newspaper quoted the PM] as saying work would continue to level the ground and pave roads. The contractor... told Israel radio that his crews were working "at a murderous pace."

...Living in an area less than a quarter the size of [NZ's] North Island, Israel's nearly six million people are surrounded by 150 million Arabs... Most mainstream Zionists were socialists who envisioned a utopian brotherhood with the Arabs once the state of Israel was established... and developed a far-reaching and costly socialism, in which the government owns over 90[%] of the land. But the utopian brotherhood with the Arabs never emerged. The result has been a precarious existence for Israel, despite its economic potential, military power and \$3.9 billion in annual aid and guarantees from the [US]. Incidentally, possibly... the strangest operation the Hadassah Hospital in Jerusalem had ever seen [was recently] performed in a parking lot on a dead man by police sappers wearing helmets and protective clothing. The victim was a soldier who had been hit in the stomach... by an anti-tank missile... [He] was a sentry in an arms depot and had toyed with the missile, setting it off. He was flown by helicopter to hospital where doctors declared him dead, but were astounded, when examining x-rays, to see the... live 50cm missile... was... [still] in his body. After hasty consultations... it was decided that... [the] police... would remove... [the missile by] following directions given [to] them... by surgeons – with whom they remained in radio contact during the [successful] operation...

Israeli planes attacked suspected guerrilla bases in South Lebanon yesterday, hours after eight Lebanese civilians were killed in guerrilla attacks against Israeli posts inside the South Lebanon occupation zone... [In related news, the PLO leader] has said that at the end of the five-year autonomy period, in May 1999, the Palestinians would declare statehood, regardless of whether there was a peace settlement... [and despite] warnings by Israel that it would annex parts of the West Bank if the Palestinians declared independence unilaterally. Keeping open the annexation option is reportedly a key reason for... [the Israeli PM's] reluctance to hand over more of the West Bank now... The Palestinians control, in full or in part, 27[%] of the West Bank.

...Palestinian... role models are sorely needed. The handful of Arab writers and journalists who reject self-censorship face... isolated lives... on blacklists... For those based in the Middle East, it can also mean the occasional spell in jail. Speak the truth in the Arab press and you will be deemed "unreliable" and will never be published or invited again. Those who... succumb to such pressure are rewarded with murmured confidences and leaks, the very stuff of journalism, and end up recognised as... "experts" who have special insights and contacts at the top. There is also the... endless freebies in five-star hotels around the Middle East. The net result of decades of such blacklists and inducements is that Arabs are simply unable to discuss their lives and problems in their own media. This stifling of debate has been compounded by a total absence of democracy and spawned a militancy that threatens the very Arab liberal tradition the West claims it wants to preserve... In the Arab Gulf, the defence salesmen's dream, not a single state subscribes to the International Bill of Human Rights... [T]his gap between the people and its rulers has been ignored since... [WWI] by all Western Governments... Western acceptance of this lack of democracy had left the region's dialogue with the West in the hands of an exclusive and unrepresentative elite... Ironically, it has been the most brutal Arab regimes that have been the beneficiaries of... short-sighted Western policies. Iraq, Syria and Libya are all boycotted by the West and their Governments have proved the most oppressive of all the Arab regimes. Yet their leaders are admired by more ordinary Arabs for their continued refusal to succumb to... pressure... [from the US], home of the world's largest Jewish community... Nowhere is this... tragedy in Western policy more apparent than in the current... Middle East peace process. Arab liberals who signed the imperfect peace in the hope of a final settlement have been abandoned by the West, left to face the inevitable retribution that will come from the militants.

...Israeli troops took revenge on the family of a Palestinian suicide bomber... who killed himself and three Israeli women in Tel Aviv... [by having bulldozers demolish his] home... Israel believes this will deter other suicide attempts. Human rights groups condemned the demolition as an unjust collective punishment because it leaves [his] widow and 4 children homeless...

Two suicide bombers blew themselves apart in Mahane Yehuda market on Wednesday, killing 13 people and wounding 170. A leaflet issued in the name of the Islamic Hamas movement claimed responsibility for the attack. It gave Israel until 5am on Monday (NZ time) to free all Palestinian prisoners. As a result of the blasts a furious Israel has halted peace talks and [the] US special Middle East envoy... postponed a planned mission to salvage peacemaking during a period of national mourning... But the... [cessation of peace] negotiations is likely to create even greater despair within the Palestinian camp and therefore greater prospects of terror.

...Israel yesterday freed the jailed founder of the... militant movement Hamas... Palestinian sources said the freeing of the Sheikh [who has] been imprisoned since 1989, was in exchange for two Mossad agents captured by Jordanian security forces... after an attempted assassination on the

leading Hamas representative in Jordan... [T]he wheelchair-bound Sheikh... was serving a life sentence for ordering attacks by Hamas guerrillas... His movement[']s... uncompromising opposition to the Israeli-Palestinian peace deals... is behind the[recent] series of suicide bombings.

...did... Israel... barter for the... freedom... [of the agents who botched] a bid to assassinate a leader of... Hamas in Jordan... by releasing the long-held spiritual leader of Hamas? ...It's a tangled cloak-and-dagger tale, a fast-brewing diplomatic fracas – and likely to become a big embarrassment for... [Israel's PM and it]s spy establishment... If what has been reported by Israeli media is true, no one involved is going to come out looking good... The much-mythologised Mossad has had its shares of ups and downs over the years. In one notable failure, agents in July 1973 gunned down a Moroccan waiter in Lillehammer, Norway, after mistaking him for a Palestinian terrorist behind the 1972 attack on Israel's... team[at the Munich Olympic village].

...in the wake of [last week's] twin suicide attacks in Jerusalem... Israeli security forces[have] raided several West Bank villages... to seize "terrorists"... [PLO officials] called the moves a "declaration of war"... [By the way, the] parents of a Palestinian child... aged 9... who... died from severe brain damage after he was shot... with a rubber-coated bullet by an Israeli soldier... near an anti-Israeli demonstration... in... Bethlehem... have donated his... heart, liver, one lung and one kidney... [to be] transplanted into two 12-year-old Israeli boys.

...the 15-year-old... who spoke four languages... and... emigrated to Israel... [from Russia with his family in 1995, only to be] killed in last week's terrorist bombing... was turned away from cemetery after cemetery before finally being buried in a [non-Jewish plot. Grisha, whose body was]... so badly mutilated that it had to be identified through DNA testing... could not be buried in a Jewish cemetery because his maternal grandmother was not Jewish, making... both... him and his mother... non-Jews according to Jewish religious law... [The Israeli Immigration Minister had] stepped in with a concession: Grisha would be buried in a section of a Jewish cemetery set aside for those whose Jewishness is "under doubt." But even that agreement fell apart... "I did not... know they were not fully Jewish," said a family friend... "What difference does it make? He was a sweet, funny boy and his mother's only son." ...The addition of indignity to the... family's tragedy underscored... [the] problems facing... the almost 800,000... part-Jewish... immigrants who have arrived since 1990.

...After nearly 50 years of dramatic airlifts, daring rescues and covert diplomacy to bring Jews to Israel, the Jewish state is taking on a potentially tougher job: ...trying to attract young... Jews in the U[S and AUS]... to migrate. Israel has been built on waves of... new arrivals typically from dangerous and impoverished areas. Now... the pool of "distressed" Jewry is running dry...

For... [over] 10 millenniums... travellers have stopped at [Jericho's] tiny watering hole... Ein es-Sultan... to quench parched throats and to rest... Jericho is at once... the... most ancient of cities and the newest of political states. The village of 5000 is the quasi-official capital of the Palestinian self-rule territory... For now, Jericho is merely a quick stopover on the way to the Petra ruins in Jordan... Dead Sea resorts and the Monastery of John the Baptist near Qumran. But Palestinians hope the city will become the jewel in their efforts to bring visitors into their old, new-born land.

...Israel handed over Bethlehem to Palestinian self-rule... four days before [X]mas in 1995. The mood in the town of 35,000 Muslim and Christian Arabs has since turned from hope to one of gloom as the peace process has stalled and expectations of a tourism boom have soured... [The mayor estimates] that more than 50% of Bethlehem's workforce is unemployed. He said the erection by Israel of a fortified checkpoint between Bethlehem and Jerusalem and security closures imposed by Israel in the wake of Islamic militant suicide bombings were strangling the town's economy.

...Israel has allocated a quarter of a billion shekels (\$[NZ]109.26 million) for celebrations to mark its 50th birthday. Israel turns 50 on May 15 next year, but celebrations will begin at the end of this year... [Meanwhile, Malaysia's PM] has taken his attack against foreign currency speculators a step further... Speaking to supporters... he said the government suspected Jews who don't want to see Muslims progress may be behind the foreign currency speculators. More than 60% of Malaysia's 21 million people are Muslims.

...[the Malaysian PM] will face a confidence vote in Parliament to allow lawmakers to reaffirm their support after his reported anti-Jewish statements, his deputy announced yesterday... [The PM] is expected to easily win the vote since his National Front coalition of 14 parties controls 153 seats in the 177-seat powerful Lower House... The decision to call the vote came after his supporters decided to respond to demands in the US Congress that [the PM] resign or apologise for his comments... This week [the PM] reiterated that he never meant to offend Jews when he spoke of a Jewish conspiracy against Muslims... He... was merely citing the perception of some people – a perception that he did not endorse. - 1997

ON DECEMBER 17, 1986, the central Asian city of Alma-Ata, capital of the sprawling Soviet republic of Kazakhstan, erupted in massive rioting... The fighting was a clear sign that after generations of smouldering resentment, the Soviet Union's Muslim population was beginning to stand up to the Russians... According to Marxist-Leninist theory, of course, there should be no Muslims in the Soviet Union at all. Beginning in 1923, Stalin's purges wiped out virtually the entire Muslim intellectual class... Islamic schools were shut, and Muslim clerics were liquidated or sent to labour camps. Of the 47,000 Muslim clerics who officiated before the Russian Revolution, only some 2000 survived. The more than 30,000 pre-revolutionary mosques have dwindled to just 365 officially authorized places of worship... Preaching or teaching Islam outside the mosque remains punishable by jail, and it is illegal to hold group prayers or give religious instruction at home. Marriage and funeral ceremonies are also the exclusive domain of the state, [which means] it is a criminal offence for Muslim clerics to perform their religious duties even at these occasions... [However, in spite of the Kremlin's efforts, today more] than 50 million Muslims live in the USSR, and they will probably outnumber the Russians by the middle of the next century. Fired by deep religious and nationalistic fervour and spurred by radio programmes from abroad, they are displaying a rising militancy that is ringing alarm bells in the Kremlin... At the same time, however, Moscow is engaged in an extraordinarily successful courtship of Muslim nations – particularly the conservative states of the Gulf and the Middle East... Presenting itself as a major Islamic nation, the Soviet Union skilfully exploits the public-relations potential of its... Muslim establishment... The result has been spectacular. Soviet embassies are sprouting in the Arab world. One after another, international Islamic conferences attended or hosted by the Soviets pass resolutions against [US] imperialism, Zionism... and other Soviet propaganda targets. These same conferences collectively are averting their eyes from the tragedy of Afghanistan, whose Muslim population the Red Army has been killing for over eight years.

...In [1987]... the news from Afghanistan was bad. Soviet troops displayed no stomach for combat... Demoralised... conscripts were bartering weapons, clothes and petrol for opium and hashish. The Soviets had suffered crushing defeats and, for the first time since their 1979 invasion, the tide of war was turning against them. The Soviet generals attributed their troubles to [US] weapons... But the real strength of the... fierce Afghan... *mujahedin* [was derived] from an indomitable will to be free... [I]n the south-east, *mujahedin* were battling thousands of Soviet troops sent to break the three-and-a-half-year siege of Kandahar. By the end of July, the Soviets... [had] lost nine helicopters, eight jets, 54 tanks and personnel carriers, and at least 600 dead. Most of those belonged to the elite Twenty-second Spetsnaz Battalion... Another battle raged at the same time around Ali-Khel... south of Silk Gorge... The fabled Silk Route, which for centuries has linked Europe with India and China, runs through the gorge... There[... during]... three weeks of ferocious combat, the *mujahedin* crushed the best units the Red Army could field, inflicting... 900 casualties, and destroying more than 100 tanks and vehicles... "At Silk Gorge and elsewhere, the *mujahedin* in effect said to the Russians: 'We know where you are, and we're going to get you.'" Battlefield defeats... finally made Soviet leaders weary of this war. In February[1988], they announced a tentative timetable for an Afghan pullout... An American authority on the Afghan War... says: "The... Soviets... also must worry about whether the *mujahedin* spirit of rebellion and freedom may infect their own Muslim population."

The mighty momentum that swept the... Taliban movement from nothing to power in Kabul in just two years may have stalled with the capture of the Afghan capital and its problems are only just beginning... [O]ne veteran western Afghan watcher... said: "The mullahs [priests] are in control as they have been in the countryside for centuries, but... they have no idea how to run a Government. How can you run an efficient administration when you order men to go to the mosque five times a day to pray? Where is the money to run Government going to come from? We hear the previous Government took most of the assets from the central bank and we don't know of any significant revenues." Kabul is in bad shape after more than five years of fighting for it, although many ordinary people are delighted at the Taliban's arrival because they now have peace even though they frequently admit to being afraid of the Taliban fighters. Electricity supplies are occasional and reach only parts of the city... with an estimated population of 1.2 million... On top of the problems of running the civil side of life, there is the military problem of trying to take the Panjsher Valley and dealing with[the] Uzbek General... who controls six northern provinces... [Furthermore,] the "Lion of Panjsher"[, the veteran *mojahedin*]... guerrilla general who was military chief of the Government that the Taliban drove out of Kabul last month, has retreated to the Panjsher Valley. Black-turbaned Taliban warriors have been attacking it since Saturday... The Taliban movement... which... means "seekers" or "students," was... born... in religious schools in refugee camps in Pakistan. It comprises mainly ethnic Pushtun, a collection of frequently quarrelling tribes. [The Lion of Panjsher] is a minority Tajik, [while the Uzbeks are] descendants of the Mongols of Genghis Khan... Uzbeks and the Taliban have widely diverging views on Islam. Many Uzbeks drink, an abhorrence to the strictly Islamic Taliban, who banned television, music and alcohol immediately after taking Kabul. They ordered women to stay at home until a way could be found for them to work without coming into contact with men. They ordered men to... forgo Western dress.

...T[V]... pictures coming out of Kabul in past weeks only strengthen our impression that the world is dissolving into... chaos... [F]ormer President Najibullah is beaten, dragged behind a jeep, and shot in the head... The youthful new rulers of the city announce that henceforth all girls' schools will be closed, all women must quit their jobs, all men in Government employment must grow long beards. Clearly, the barbarians are at the gates.

...For many... in Kabul, it has been a difficult month under the rule of the... Taliban, but not for everyone... Sales of burqas – the all-embracing cloak with a mesh over the eyes that all women must wear in public [despite 'being difficult to see out of' and causing health problems (e.g., they restrict the body's production of vitamin D)] – have blossomed... and... their price[has] risen about 70[%] to 550,000 Afghanis (\$[NZ]50.53), beyond the means of most... Few are willing to be drawn on whether they want the Taliban gone. But[a] shoe-seller... is dismissive of the Taliban policies. "Anyone can bring peace to this city. But I call on the Taliban to allow women to go out of their homes. This city is full of widows whose households have no bread-winners..." Before the Taliban arrived, he sold up to 300 pairs[of shoes] a month. So far this month he has sold 10... Others are critical of the continuing war, blaming all factions for failing to down their weapons and the U[N] for what they say is its failure to impose a solution.

...the [U]N... special envoy... [has] held more talks with the new Taliban rulers... [He] refused to give details about his talks, but he had been expected to convey... dismay over the Taliban's human rights record... Punishments are quick and harsh, with death the penalty for murder, drug dealing and adultery... "God says that those committing adultery should be stoned to death,"... said... Kabul Radio... "Anybody who drinks and says that it is not against the Koran, you have to kill him and hang his body for three days until people say this is the body of the drinker who did not obey the Koran and Allah's order." ...Amputation is the penalty for theft... Men would face Islamic punishment unless they grew their beards within the next month and a half... Some orthodox Muslim scholars say growing a beard is a must for a Muslim to follow the Sunnah, or tradition of the Prophet Mohammed, but many others say it is not necessary and Taliban's insistence on beards seemed highly unusual.[However, the] Taliban... announced yesterday that all women Government employees in Kabul who were ordered to stay at home would get their salaries without working... pending a further decision on the issue. The announcement follows strong criticism abroad... The Taliban... did not say whether Kabul's working women would eventually be allowed to return to work. In... [another] announcement yesterday the Taliban... said no religious funeral could be held for the former President... who was summarily executed with his brother... and two aides... The four men were dragged from a U[N] compound where they had sheltered since Najibullah was ousted in a palace coup in April 1992. The bloodied bodies... were hanged from a concrete traffic post outside Kabul's presidential palace for two days.

...[2 days ago, Afghanistan's] Foreign Minister... said the... Taliban... wanted international recognition and financial aid to help rebuild their country... [Today] Pakistan appeared to signal the first recognition of the new regime by announcing it would dispatch officials for talks in Kabul.

...Here's an odd twist: Islamic militants come to power in Afghanistan. Iran is critical, while the U[S] says it's ready and willing to work with the hard-line... movement. How can this be? Almost 20 years of warfare have left Afghanistan a confusing and chaotic land and... the Taliban... takeover... may have only made it more of an enigma. For the U[S], Afghanistan was one of the Cold War battlefields in the 1980s. It largely fell off Washington's radar screen when the Soviet Union withdrew its Army in 1989... Now, America's limited interests focus on drugs – Afghanistan is one of the world's biggest opium producers – and Afghanistan's role as a safe haven for a variety of Muslim extremists who have gravitated there over the years... [The US] Assistant Secretary of State for South Asia, has met in the past with Taliban leaders. [A] State Department spokesman... said this week that... diplomats are prepared to resume travelling to Afghanistan if their safety can be assured. A... source in Washington said the U[S] does not see the Taliban as trying to export Islamic revolution... As a poor country devastated by war, Afghanistan is in no position to enforce its will on other nations... Iran, a neighbouring country run by Muslim clergymen, has been consistently... [anti-]Taliban. "The Taliban top brass is sick in the mind," said an editorial in the semi-official *Kayhan International*. The newspaper also criticised the group's interpretation of Islam, calling it "more akin to the Stone Age." ...[the] Iranian President... was more diplomatic, but he said last week that "the events in Afghanistan are quite regrettable." There appear to be multiple reasons for Iran's stance. Iran is fed up with the Afghan conflict and wants to rid itself of the 1.5 million Afghan refugees it continues to shelter with increasing impatience. It fears the Afghan militants could ignite a fresh upheaval, sending more refugees streaming toward Iran. Also... the... Taliban are from Islam's Sunni wing; Iran is ruled by Shi'ite Muslims... [and] the Afghan Shi'ites... that accounted for about 10[%] of the population... suffered greatly during the long years of war. In addition, Iran seems to have lost out to Pakistan, the country that has tried hardest to control events in Afghanistan in recent years.

...[the Pakistani PM], grieving for her slain... [though] estranged brother Murtaza... faced the task yesterday of halting sectarian unrest... Tension is running high over the death of Murtaza... who had led a splinter faction of the ruling Pakistan People's Party... [but] died in a clash with police in Karachi on Friday... The Government must try to prevent further outbreaks of violence after attackers killed 24 worshippers... and... injured... another 50... at a Sunni mosque in the Punjab provincial city of Multan on Monday. Troops in armoured vehicles patrolled Multan after angry crowds stoned Shi'ite neighbourhoods and attacked police. Gunmen killed a hardline Shi'ite leader in the town of Bahawalpur, 95km south of Multan, on Monday morning and... another just hours after the mosque attack... Apart from her brother's death and religious tension, [the PM] must also cope with a newly assertive President... [and the new rulers of her northern neighbour. Speaking of whom, although 'the Taliban says girls don't need to be educated past the age of eight,'] Kabul's... caretaker Deputy Foreign Minister... said yesterday that women were allowed to go to school and could eventually return to work in Government offices. But... they would have to stay away from schools and Government offices until officials decided how girls should be educated and until preparations had been made for men and women to work in the same premises... About 30,000 Kabuli women are the sole breadwinners in their families, while tens of thousands work to help boost their husband's meagre incomes... [A]

European humanitarian aid commissioner... attacked the [U]N... yesterday for... [its] silence over the fate of Afghanistan's women... [and] failing to censure Afghanistan for slipping back into what she said was the barbarianism of the Dark Ages.

...[the 55-year-old] never went to school but was determined her daughters would have the same opportunity in education as her son, now working in Germany. She was well on the way to success. [One], aged 26, is a lawyer. [Another], 19, was studying language and literature at Kabul University and [the] 13-year-old was doing well at school... [A cousin], aged 21, was in the second year of her medical studies and wanted to be a doctor. Her sister... 23, was studying pharmacology and [their] friend from down the street... aged 22, won a technical diploma and was working as a telephone engineer. None of them expects to study or work again, even though the Taleban say they favour women's education and will find a way... for women to work in complete separation from men... "They're lying... They always say that, but they've been in control of places like Kandahar and Herat for a long time now and girls there don't go to school and women don't work," [the 26-year-old] said... Women... could go out only if wearing the head-to-foot covering called a burqa... and only if accompanied by a very close male relative like a father or a brother. [The 55-year-old and her three daughters] have no such close male relative living with them. They have not been outside the house since September 27, when the... Taleban warriors swept into the city after a lightning attack... The... women rely on... nephews to go to the bazaar to buy food.

...Paper bags have been banned... "We respect paper, whether it is written on or not. We have announced that people should not use paper for bags or put paper on the rubbish tip," said... [the] information minister of the Taleban administration. Paper bags are used in preference to more expensive plastic bags in most of Kabul's markets. [However, one] trader explained: "The Taleban said there might be words from the Holy Koran on the paper, which might then be thrown away and that would be an insult to the Koran." Since the edict there has been a rush to buy toilet paper by people unsure how wide the ban would be... [■] C]easefire talks between warring Afghan factions appeared last night to be nearing collapse, making a new push on Kabul by anti-Taleban forces increasingly likely... An... Afghan watcher with a military background said all the signs on the ground were that a major battle was likely on the plain north of Kabul, where [the Uzbek] General... sent tanks, artillery and men to join [the Lion of Panjsher's] front line last week.

...[a] ceasefire announced by Algeria's Islamic Salvation Army while stunned citizens buried the dead from a second savage massacre brings a faint glimmer of hope for an end to the killings, diplomats and analysts said yesterday... But... others saw [no] hope of a quick end to the bloodshed which Algerian officials and media as well as foreign analysts blame not on... [the] AIS but on its ruthless rival, the Armed Islamic Group (GIA). Algeria has been immersed in violence since early 1992 when the authorities scrapped a general election dominated by the Islamic Salvation Front (FIS). The AIS emerged from the FIS... Foreign analysts largely accept AIS denials of involvement in killing civilians – a phenomenon that started last [year] and in which thousands have died – and blame the GIA for massacre's like Tuesday's on the edge of the capital Algiers. Officials said 85 people died. Survivors said 200. There was no claim of responsibility for that slaughter, nor for the massacre in late August in which 98 people died according to the official toll – and 300 according to residents... [– or for the massacre on August 17, when] 100 militants set up a false roadblock... between Messila and Batneh south-east of Algiers... stopped two buses [then] asked passengers for their identity cards before "cutting the throats of... 63... passengers from Batneh, including women, the elderly and children..." The... London-based... Arab daily *Al-Hayat*... quoted Algerian sources as saying th[at] massacre was to target inhabitants from a specific region in order to provoke unrest between various tribes... Complicating the issue is what political analysts say is the power struggle in Algeria's military-dominated leadership, divided on how best to end the slaughter. The failure of security forces to respond rapidly to massacres carried out near military bases has raised questions in Algeria and abroad. It has brought blunt charges of military involvement... - 1996

The Algerian military is killing and torturing its way to victory... In the basement of the Chateau Neuf police station in Algiers, they use blowtorches... [P]art of Algeria's secret gulag... Chateau Neuf and its sister torture centre, Bourouba, on the outskirts of Algiers, provoke fear even in this country, which has the worst human rights record on earth... More than 60,000 people... [including] 58 journalists... have now died in Algeria's civil war, after the coup by the military junta – le pouvoir (the power) – in early 1992 blocked the democratic elections which would have seen the FIS, come to power. The regime... has been backed by the West, worried about the rise of Islam in the Maghreb and concerned to safeguard its cut in Algeria's oil and gas exports, worth \$13.5 billion a year... The scale of the atrocities, particularly in the Mitidja plain south of Algiers, is grotesque... The Algerian press... puts down all the killings to the "terrorists" who wish to establish an Islamic fundamentalist state. The papers do not touch on what goes on in Algeria's gulag, or the disappearances. They concentrate on the killings in the countryside – all blamed on fringe Islamic armed groups... An Algerian human rights lawyer – who did not wish to be named for obvious reasons – gave his opinion as to who was behind the killings. Of the atrocities, how many are caused by le pouvoir and how many by the Islamists? "About 70[%] by le pouvoir." There is no doubt that armed fundamentalist Muslim groups have also killed thousands of people in Algeria's nightmarish civil war. But that the regime kills innocent people is plain... Algeria's PM... from 1984 to 1988, sa[ys]: "The Algerian junta is killing Islamists and blaming it on them. It's machiavellian... But everything happens in secret. You cannot find any official information, only that there is a reign of terror." [The former PM i]s especially critical of France's support of the junta [and his opinion is backed up by at least o]ne... Western... political analyst... "Le pouvoir has the French Government in particular by the balls. They have made secret donations to French parties and politicians so that they can blackmail them. At one time, five French cabinet ministers had mistresses controlled by the Algerians. And if the French won't play ball, they can bomb Paris..." This extraordinary claim is supported by an influential Rand Corporation report written by a former CIA operative... "Suspicion had arisen, including among French analysts, that the Algerian intelligence services had infiltrated and were manipulating several Algerian terrorist groups both to sow disinformation and support terrorist acts in a desire to bring the West – especially France – around to the conviction that the Islamists represented an unacceptably violent movement."

...Algerian soldiers may have dressed up as Muslim rebels to carry out atrocities in the country, according to a former soldier. The 23-year-old army conscript told the *Independent* that he had found a false beard amid the clothing of soldiers who had returned from a raid on a village where 28 civilians were later found beheaded... [He then] spoke of watching army officers torture... prisoners by boring holes in their legs – and in one case, stomach – with electric drills in a dungeon called the "killing room." Two former Algerian police officers also... accused the Algerian police and army of involvement in acts of mass torture and executions... [T]he officer in charge of the armoury at Dar al-Baida police station in Algiers, told of how his colleagues... raped... prisoners... with bottles [then]... killed... them... in cold blood... with acid-soaked rags... And an Algiers policewoman... [who,] like her colleague is seeking asylum in Britain... told how... she saw "innocent young people tortured like wild animals." ...she watched prisoners, at the rate of 12 a day, tied to ladders while salt water was poured into their stomachs until they agreed... to sign confessions.

...[unknown assailants have] cut the throats of six foreigners, apparently Asians, and dumped their bodies in the... Algiers... sewage system...

Algeria has denied that six foreigners had been killed in the capital... as reported... by Algerian newspapers. The security services, in a statement on the official news agency APS, said: "The information is without foundation." ...More than 100 foreigners... have been killed in Algeria since September 1993... Most foreign residents fled Algeria after radical Muslim rebels told them to leave the country... or risk being killed without warning... Most of the remaining foreigners... [are] working in the south... [at] the oil and gas facilities.

...ISLAMIC extremists hacked 15 people to death... with knives, axes and spades... including 10 women and a toddler... as [the] Algerian President... gave a TV address to a nation traumatised by savage violence... [The President] accused unnamed foreigners of being behind "terror

and fear” in Algeria... In a 20-minute nationwide broadcast... he... said Algeria would pursue its course of elections, pluralism and democracy but gave no date for a general election promised for the first half of this year... Added to a separate attack on Wednesday[, when]... 19 people had... their throats slit... in the Baba Ali region just south of Algiers... the death toll from Islamic radical attacks has risen to more than 200 since the... holy month of Ramadan began on January 10.

...A total of 42 people have been slain in a village in... Algeria. The massacre came just 24 hours after 93 people... including women and children... were killed in Bougara... in the bloodiest such attack since the start of an Islamic insurgency five years ago.

...Eighty-five people[have been] killed and 67 wounded by “terrorists”... The massacre, in the Baraki district on the outskirts of the Algerian capital, was the second worst single slaughter in nearly six years of violence.

...Muslim “terrorists” killed 31 people... in Medea, 80km south of... Algiers... the newspaper *El Watan* said yesterday... “A dwarf... cut the heads from the bodies... [Luckily,] a... passing... [security] patrol... prevented the whole district being massacred.” ...[Incidentally,] Algeria... votes in a new Parliament on June 5. Everyone knows the vote will be fixed.

...The first election campaign in Algeria after five years of nightmarish violence began drenched in the blood of 30 villagers massacred in a village south-west of the capital... Near midnight on Wednesday, a group of 40 armed men... entered the undefended farm and set about cutting throats, hacking away with blades, and burning the villagers alive. Those slain... included seven women and 17 children... [F]our other inhabitants had been wounded, and two women and a child were missing. One elderly villager... pulled out a hidden hunting rifle and fired on the marauders trying to break into his home, killing one... The gunshots were heard by civil militia in the neighbouring... village, who arrived to chase off the marauders... Undeterred, [the Algerian President] is pressing ahead with the elections, in which 7747 candidates from more than 40 political parties are vying for 300 seats in the National People’s Assembly. The election will be overseen by about 2000 foreign monitors.

...Algeria’s opposition parties cried foul after allies of[the] President... emerged victorious from[the] elections... All but one of the main parties... protested to the Constitutional Council about the integrity of the vote... The alleged irregularities ranged from direct vote-rigging by the authorities in favour of the... National Democratic Party (RND)[– which]... won 155 seats in the 380-member lower house, way ahead of the second-placed Movement of a Peaceful Society... with 69 seats... [–] and missing voter lists, to bans on party officials from supervising voting and vote counting... [T]he RND... hailed the election result and said it was a decisive blow to the Islamic rebels.

...More than 200 people were massacred yesterday in... Rais... in the Sidi Moussa region... the heart of what Algerians call the “triangle of death”... The government, which rarely comments on specific attacks and often seeks to minimise the death toll, gave an official count of 98 killed and 120 wounded. But hospital workers and villagers... said the death toll surpassed 300... Journalists arriving before the village was sealed saw at least 100 bodies in the streets, some badly burned... About 1500 people have been killed in attacks... since early June, when the military-backed government swept Algeria’s first multi-party elections with promises to crush the bloody insurgency... Besides frequent massacres, there have been bombings. On Thursday, bombs in the port city of Oran and in Algiers took 18 lives. Though it is never clear precisely why specific villages are targeted, the militants often want to take revenge on residents who have joined government-armed self-defence groups.

...Survivors of Algeria’s single most bloody massacre told in harrowing reports... how “terrorists” blasted their way into the village houses to hack to death children and women begging for their lives. Some pregnant women were disembowelled. Those fleeing were shot or axed and their bodies burned... Adding to the horror... scores of... Sidi Rais[’s]... youngest and most beautiful women were dragged off for “temporary marriages” – forced sex... [with] the attackers... before being abandoned and killed... “We cried with all our force but no one came to rescue us,” one traumatised young man told *El Watan* newspaper... Some of the victims were guests who had come to celebrate a boy’s circumcision.

...Sidi Rais, Ben Ali, Souhane... village names wrenched from Algerian obscurity on a wave of bloodshed... [that] commentators, diplomats and foreign analysts see no end in sight to... Political analysts say one reason rebels carry out the mass killings is to force the authorities, because of the sheer size and savagery of the carnage, to allow press coverage of rebel acts. In Sidi Rais, this aim was realised... After weeks of silence on individual massacres, this slaughter propelled... [the PM] on to state television. He vowed the state would... take measures to protect those living in lonely spots in the country... In terms of butchery Sidi Rais... surpassed all other massacres... Algeria’s Medical Union testified: “Even foetuses have been taken from their disembowelled mothers to be mutilated...”

...11 primary teachers, all women, had their throats cut in front of their pupils as they left a school at Ain Adden... [during] barbarous weekend violence attributed to Islamic extremists in Algeria.

...Despite international hand-wringing at a chain of blood-curdling massacres in Algeria, the world will not lift a finger to promote a political settlement... Violence in Algeria, however harrowing, does not threaten wider stability or impinge on Western nations’ oil and gas interests... “The oil and gas keeps flowing...” ...[but even the hand-wringers should be pleased that the Algerian] Army has essentially won the civil war against Islamic guerrillas for now, as this week’s unilateral declaration of a ceasefire by the largest guerrilla group... the [FIS]... shows.

...Algeria’s bloody insurgency shows no sign of stopping despite one militant group’s ceasefire, with witnesses reporting 105 people killed in a 48-hour spree of massacres and bombings... [T]he rival Armed Islamic Group targeted schools, apartment buildings and even a wedding... [In addition,] a candidate for an Islamic-leaning party running in Algeria’s local elections... [was] gunned down... yesterday... [T]hree supporters of the Movement of a Peaceful Society... also died in the shooting inside a mosque... The slain MPS politician is the ninth local elections candidate to be assassinated. No group has claimed responsibility... About 15 million... of [Algeria’s] 29 million people... are eligible to vote in tomorrow’s polls to choose members of 1500 local and 48 provincial councils. Nearly 80,000 candidates are running.

...the President’s supporters[took] most seats in the first local elections in seven years. Several legal opposition parties cried foul and said the result of the elections was fraudulent... [T]he first instance of a Government supporter being killed by a legal party member... [occurred] during a showdown over the outcome... During polling television footage showed... many voting centres... in Algiers, where the turnout was put officially at nearly 46[%], had]... more election officials than voters...

Thousands of people marched through Algiers yesterday as pro-Government and opposition parties protested at... widespread fraud in last week’s local and regional elections. Leading parties urged that the results be revised or scrapped... Police used batons to beat [the protesters]...

As [t]housands of French and Algerians[were marching] through Paris yesterday, their “Day for Algeria,” to call for an international probe into massacres of civilians[, the]... French... newspaper *L’Humanite Dimanche* released... what it said was a police account of a massacre of Algerian protesters by security forces in Paris in 1961... It said protesters were caught between two police forces on the Neuilly bridge... “All those caught in this immense trap were bludgeoned and thrown into the Seine river. At least 100 suffered that treatment... Among thousands of Algerians taken to a fairground in western Paris, “dozens were killed with rifle butts and pickhandles...”... [A]n inner yard at police headquarters was turned into “a killing field.” ...the account... was sent a few days after the crackdown to Paris newspapers who did not use it for fear of censorship... Although the official death toll stands at three Algerians killed, historians say more than 200 died... The Government earlier this month decided to open state archives a quarter of a century earlier than normal to shed light, and the daily *Liberation* said it had found a first list of 70 people killed... The... Paris police chief in 1961[, who is currently on]... trial for crimes against humanity in Nazi-occupied France... has admitted... that up to 30 Algerians may have died, but he blamed the killings on fights between rival Algerian nationalists.

...Assailants cut the throats of 29 people in a massacre in an Algerian village 400km southwest of Algiers at the weekend.

...[28] civilians were killed... in Algeria at the weekend... Four men were tied up, locked inside their truck and burned alive by... extremists in Algeria last week...

[Suspected] Muslim rebels... have killed at least 79 civilians in three massacres, a roadblock attack and a bombing in Algeria in a flare-up of violence before elections this week.

...As Algeria took another step yesterday towards completing a parliamentary election, details emerged of grisly massacres of more than 90 civilians, mostly children and women. As expected, most of the representatives chosen by local councils to sit in the new... 144-seat upper house, known as the Council of the Nation... were followers of the President.

...At least 74 people have been massacred in Algeria since Saturday... according to independent press reports. The latest mass killings were concentrated in the west of the country... More than 30 people were murdered in Algeria every day last week... Amnesty International estimates that some 80,000 people have been killed... since the outbreak of... Islamic insurgency in 1992.

...“We are fighting the government because the government is against God.” [That is the claim of the]... terrorists who are seeking to convert... Algeria... into a radical Islamic state... The rest of the world has paid little attention to this nation’s troubles. Yet Algeria represents one of revolutionary Islam’s most crucial battlegrounds. Modern Algerian history begins in 1962, when nationalists threw off France’s 132-year-long colonial rule after a bloody eight-year war. The new leaders converted prosperous farms into Soviet-style cooperatives and invested the country’s oil wealth in inefficient state-run industries. To boost Arab consciousness, they hired thousands of teachers who quietly indoctrinated a generation of Algerian youth with Islamic ideology. That decision would come back to haunt the nation. When oil prices crashed in the 1980s, the socialist economy nose-dived... Reports of corruption among the country’s leaders were widespread. Meanwhile, Algeria began borrowing heavily, and a ballooning foreign debt fed anti-Western feeling. Into this vacuum stepped religious extremists preaching Islam as the solution... In late 1991 radical Islamic groups began to attack police and the military... The most militant formed the... GIA... with a core of battle-hardened veterans who had fought the Russians in Afghanistan. The terrorists total about 5000, in bands of a few dozen each, supported by outside sympathisers. They believe they have a sacred mission... Unfortunately, the Algerian government’s determination to defeat the extremists has led to cruelties that, in some cases, rival those of the terrorists. The US State Department reports “security forces carried out extrajudicial killings... and... were responsible for ‘numerous cases of disappearance,’...” Every day, men in skullcaps and women in drab robes gather in the cramped Algiers office of [a] human-rights lawyer hoping for news of missing relatives... [The lawyer] shows me a thick binder filled with 309 photos... [of people. He] has many such folders. The one thing they have in common is that all the people... vanished without a trace. “It’s no mystery... They were arrested by the security forces.” ...If it is to escape the clutches of radical Islam, Algeria must solve its own problems, but... [a] militant Islamic takeover would threaten secular and pro-Western regimes in the Middle East and give Islamic terrorists a base on the doorstep of Europe... On the other hand, if Algeria’s Islamists are defeated, says a senior US State Department official, “it will strengthen the backbone of democrats in the Muslim world. They will see that radical Islam is not the wave of the future.”

...Iran’s moderate President-elect... was swept into office on a tide of desire for change after 18 years of revolution... [He is] Iran’s fifth President since Shi’ite Muslim fundamentalists toppled the Shah in 1979... [However, the] Ayatollah... tacitly backed the loser... [and his word as] spiritual successor to the revolution’s founder... remains sacrosanct and unchallengeable in all affairs of state including foreign policy.

...the crown jewel of the... [Shah’s] car collection – a rare 1971 Lamborghini Miura SVJ – [has been bought] for... \$NZ690,000... The car was one of 10 put up for auction in Geneva... Islamic revolutionaries separated the 10 cars from... the [Shah’s]... collection of 3000 after they overthrew him.

...TEHRAN – Closing a three-day summit, leaders of the world’s Muslim nations have strongly condemned religious-inspired terrorism, declaring... “the killing of innocent people is forbidden in Islam.” But the joint declaration of the 55-member Organisation of the Islamic Conference made no mention of the Middle East peace process or sanctions against Iraq, underscoring differences among nations bound by faith but divided by politics.

...[an] Iraqi refugee says [a NZ] Employment Service official threatened to cut his dole because he refused to clean toilets. Even[the] Iraqi President... had not treated him like that, [he said, before adding that, as] a Muslim... it was against his religious beliefs to clean toilets... [– although he] was happy to do [other forms of cleaning. He didn’t say whether it was against his religious beliefs to use toilets!

...it was the senior engineer’s bad luck that the head of the Iraqi Olympics Committee’s personal elevator broke down. He wasn’t the maintenance man for the lift but the President’s son insisted he mend it. A few hours later it broke down again and the engineer was dispatched to the Olympics Committee Detention Centre. “I was stripped, beaten with cables until I bled and made to carry concrete blocks on my chest. Then they made myself and 23 other prisoners jump into a sewage pit. Can you imagine this? All of us – doctors, engineers, veterinary surgeons, even government bodyguards – all ordered to smear our heads and bodies with sewage and dirt.” The purpose, he now believes, was not to humiliate the prisoners. It was to infect their wounds. “When someone persuaded the son to release me after four days, I returned to my office and one of the girls there fainted when she saw me. I couldn’t even get doctors to treat my wounds – they were too frightened of the Government.” Today, in the safety of Lebanon and with his resettlement papers for the US in his possession, the engineer gives an account of his former master. “He was crazy, he wasn’t mad. He loved money and power and he loved women very much. He had a secretary who hunted girls for him – in the universities, in the ministries. Usually, they agreed to sleep with him. They could do nothing else.” The engineer had to attend to the son’s cassette player. “He would listen to Beethoven and Arabic songs and say ‘play cassette three’ and listen to the Koran. But he also watched videos of his prisoners being tortured. I don’t know if he got a kick out of this but, of course, by having the tortures taped he was making sure that his orders were being carried out. There was a manservant of the son whom I met. His job was to bring the son his nargila (hubble-bubble pipe) and one day the charcoal fell to the ground. So the son forced the manservant to hold a red-hot charcoal until it had burned a hole right through his hand.” There are stories aplenty of the son’s cruelty, and of the equally tormented spirit of his younger brother’]...

Syria, Iraq face trouble with rising sons... The immediate future of... [two] of the Arab world’s most powerful clans... will be shaped by how internal tribal differences can be settled... over whether the eldest sons should be allowed to succeed their fathers... It is an open secret that the two dictators have been grooming their sons as future rulers, but this has provoked rumblings of dissatisfaction within the ruling establishments of both countries. Modern Iraq and Syria were created by the British and French mandates that replaced Ottoman rule after... [WW1]. But the monarchies in Baghdad and Damascus were soon forced to give way to republican systems of government that have never recognised dynastic succession. Yet[the two] Presidents... believe their sons have qualities of leadership that give them the right one day to step into their fathers’ shoes. But parental pride and hopes of preserving the families’ political heritage will not be enough to ensure an easy transition. In Baghdad,[the President’s] security forces have traced the guns used in the failed attempt to assassinate the dictator’s son... to the secret police – one of the pillars of [the President’s] regime. The four bullets still lodged in [the son’s] spine have left the 33-year-old partially paralysed but have not diminished his father’s hopes. [The son], a convicted murderer and rapist, [who] retains the rank of lieutenant-general, heads the Iraqi Olympic Committee and operates two newspapers and a television station. For the persecuted Iraqis, he is the mirror image of [his father]. One quality he has inherited is the penchant for killing his critics. Like his father, [the son] never hesitates to assume the role of executioner. His own sisters... will never forgive him for beheading their husbands. [The son] never graduated beyond elementary school but this was no obstacle to being awarded a first-class degree by Baghdad’s engineering college. At the degree ceremony, his nominal professor said... “I gave him 99[%] because he did not attend any classes. If he had attended, I would have given him 100[%].” If Iraq’s future seems bleak, the people of Syria have reason to be thankful that their President’s heir-apparent is at least better educated and more civilised.

...Soccer's world government body Fifa is investigating reports that [the Iraqi President's] son had the Iraqi team beaten after it lost to Kazakhstan and was eliminated from next year's World Cup contest... The English newspaper the *Sunday Times* reported at the weekend that [the son] ordered the Iraqi team to be taken to a military base and to be caned on the soles of their feet and beaten on their backs. Earlier this month, Iraqi dissidents also claimed that [the] son ordered the team to be imprisoned and tortured and to have hair and moustaches shaved off on their return to Iraq following their June 29 defeat. Yesterday, the London-based Iraqi National Congress, an umbrella group representing several Iraqi opposition groups, said [the son] killed a woman this month... [B]odyguards took her to his palace after he spotted her walking in a Baghdad street. "He tried to have sex with her but failed and in a fit of anger he shot her. As compensation, her family received \$US700... a car and a promise of \$US50 monthly..." The son... remained impotent despite several operations following the assassination bid... on December 12[. 1996, when he] was hit by 14 bullets... The report could not be independently verified... Meanwhile, Jordan yesterday expelled seven Iraqi diplomats to show its outrage over Iraq's execution of four Jordanians accused to smuggling \$US850... worth of car parts.

...Until last year, the daughters of Iraq[']s President... were virtually unknown to the public. The last photograph of them, in 1988, shows attractive women, standing close to their husbands (all senior officials in their father's government), smiling nervously... The sisters have lived their lives largely in seclusion and, unlike many dictators' families, do not entertain palace hangers-on. "They were simply too dangerous to get to know," says a former Iraqi general... Last February, their husbands... were slaughtered in a shoot-out ordered by [their father. The husbands]... paid the price of disloyalty to the man who has ruled Iraq for 18 years... [An] estimated 1.6 million Iraqis [ha]ve lost their lives since he came to power.

...A scale model of... [a grand mosque] in Baghdad has been given the once-over by the man after whom it is named – [Iraq's President. When]... the mosque is finished it will hold 30,000 worshippers... [While on the topic of mosques, a] Belgian company has developed an alarm clock that calls its users to Islamic prayer no matter where they are in the world... [[T]he clock] calculates prayer times as determined by the *Koran* and relays the clear voice of a muezzin calling the faithful to prayer for 2 minutes and 40 seconds...

The Army chief of staff in the Comoro Islands warned local women and girls yesterday that any of them caught wearing mini-skirts or tight-fitting dresses would be imprisoned... [He] also warned men not to sport... necklaces... earrings... or dreadlocks... on the islands with their mainly Muslim population... [By the way, Afghanistan's] Taliban... has announced an Islamic code for sportsmen... The code... banning the wearing of shorts... also ordered sportsmen and spectators not to use tobacco products... and... not to clap... [S]pectators applauding sportsmen must shout the slogan "All[ah]-o-Akbar" (God is great) instead... All games, training and spectators must stop when the muezzin calls for prayers... [However, the] prolonged civil war has destroyed many of the sports facilities in Afghanistan and hundreds of athletes have fled abroad.

...[yesterday, cricketers became] the first sports people to test the new... Taliban... sports code... [P]layers and spectators stopped for prayers... instead of stopping for tea... [Meanwhile,] Taliban patrols promoting virtue and suppressing vice took over barbershops in Kabul, [then] gave 120 males forced haircuts and charged them 5000 afghanis... each. According to the... [fundamentalists,] long hair gets in the way during prayer.

...700 Afghan men have been punished according to Islamic law for trimming their beards, following intensive Taliban anti-vice checks along Kabul's southbound highway... [In another development, the] Taliban's religious police have issued new regulations restricting Afghan women's access to aid... [outlawing] make-up, jewellery... and ordering them to avoid making noise when they walk... A large proportion of aid programmes are aimed at women... many of whom have been driven to destitution by the... ban on women working.

...A Taliban food blockade on opposition-held central Afghanistan and the looting of U[N] wheat by their own leaders has placed thousands of Afghans at risk of starvation, aid workers warned yesterday.

...*Desperate Afghans in barter war*... The people of Kabul are selling their possessions to survive another winter at war... The U[N] estimates that as many as half of Kabul's houses [have been] destroyed or severely damaged... Many have no glass in their windows and plastic sheeting does not provide any insulation... when night temperatures are 20 deg below zero... an aid worker said. Half the city lacks electricity... Having a job does not necessarily make much difference... [S]ince... September last year... [civil] servants... have seen the Afghan currency depreciate to the point where its buying power is equivalent to about \$5 a month... Dealers said the Afghani had lost at least 10[%] in a week because of an influx of new banknotes with old serial numbers imported to Kabul from an unknown destination... Food prices are soaring as the... currency drops... [Kabul has] more than 10,000 invalids and disabled and some 60,000 street children... [□ The] Taliban have changed the name of Afghanistan from the Islamic State of Afghanistan to the Islamic Emirate of Afghanistan. The... leader of the Taliban... is known as Emir al-Momineen (Leader of the Faithful).

...THE Commander of the Faithful squats on a simple bed in a narrow room inside the governor's mansion in Kandahar... The paintings adorning the governor's residence have been ripped down; it is forbidden to depict Allah's creations. The... Faithful... is an imposing figure. One of his eyes was blown away in a gunfight with Russian troops, and his eyelid is stitched shut... To challenge him is akin to a sin... These days, most of... [his] visitors are military commanders who want their spiritual leader's blessing before launching the next... battle in the Taliban militia's conquest of Afghanistan... In his first interview with a western publication, the stocky, 37-year-old Taliban leader says, "The time for a negotiated settlement is running out fast. We feel a military solution has better prospects now." [His] divine mission, he says, is to rid Afghanistan of its bandit warlords and restore a truly Islamic government. In Kandahar, this means collecting all the guns as well as stringing up confiscated TV sets and VCRs from lampposts... [Afghanistan's spiritual leader] concedes he is no great Islamic theologian – his studies were interrupted by the jihad... against the Soviets in which he was wounded four times – but he and his followers are convinced that Allah is on their side. "Only if we deviate from Islam will we start losing," [he] says... The interview stops as a Taliban fighter comes forwards bowing to him. The leader listens impassively to the man's whispered pleas, then reaches into a metal strongbox beside his bed. Using both hands, he scoops up a heap of banknotes for the soldier... This is how... one of the most improbable characters in Afghanistan's tortured history... rules... The devout son of a poor farmer... he returned home after the Russian retreat to resume his studies in [his] village's mud-walled Koranic school. But after the Moscow-backed regime of Najibullah fell in April 1992, the country slid into lawlessness... One outrage that finally provoked [the Faithful's] wrath was a deadly tank battle in Kandahar between two militia commanders who fancied the same handsome boy. In 1994, [the Faithful] launched the Taliban to restore order... During the holy war against the Russians, [his] favourite weapon was the rocket-propelled grenade. Today, it is faith. Shortly before the attack on Kabul, [the Faithful] entered Kandahar's grand mosque and emerged with a holy cloth from the Prophet Mohammed, which he waved from the rooftop... This sacred relic had been only displayed a few times this century... Kabul fell effortlessly, and [the Faithful's] belief in his God-guided destiny swelled. He may have to haul out the object again: the Taliban are preparing an offensive against their northern enemies... When all of Afghanistan falls... he'll move to Kabul. After that? "We have no intention of... [poking] our noses elsewhere." Even then, few westerners are likely to see his face; he refuses to be photographed or filmed.

...[the] Taliban have told[Afghan] news agencies... they cannot photograph... [or] film... living bodies... and[. after dubbing a]... famous cliff carving "un-Islamic"... Taliban fighters... warned they will demolish[the] massive... ancient statue of Buddha if they advance into enemy territory.

...The snows are melting in the passes of Afghanistan, and the fundamentalist Taliban militia... will soon be moving north to complete their conquest of the country. Another chapter of the Great Game is closing – which means that the next is beginning. The struggle to control the strategic crossroads of Afghanistan was first called the Great Game in the 19th century, when the British in India played it against Russians encroaching from the north. Now the British are gone, but the same patterns of intervention and alliances continue. The next round of the game involves a realignment of the alliances that came together after the Soviets invaded Afghanistan in 1979: the U[S], Pakistan, and Saudi Arabia on

one side, India, Russia and Iran on the other. But this time, the fragile new countries of Central Asia may be dragged into the chaos as well. All this is far beyond the ken of the ragged soldiers of the Taliban, a force of only ten thousand mostly illiterate young men... All they know is that they obey [the Commander of the Faithful] (now known as “King of the Believers”)... All the rest of the world notices is that they are religious fanatics of the most radically conservative kind. In areas captured by the Taliban trees are festooned with smashed television sets strung together with miles of magnetic tape torn from audio and video cassettes... The blind extremism of the Taliban has provoked strong criticism in Iran, where [the] Ayatollah... accused them last year of “defaming Islam”... But [the Taliban] know no better. What they are actually doing is re-creating the harsh life they knew in the refugee camps of north-west Pakistan, which is where most of them grew up. In the camps there was no entertainment, and no education even for boys except the rote learning of large parts of the Koran in Arabic, a language none of them understand[‘the Koran is held by Muslims to be untranslatable, although versions or interpretations in many other languages are available’ – but not including Pashto, apparently)]. So it makes perfect sense to them... to [educate the next generation of boys by having them also rote learn *large parts of the Koran*]... In the same way, the Taliban attitude towards women is driven not so much by Islam but by the traditions of the villages... of southern, Pashto-speaking Afghanistan, where women are little more than house-slaves... There is virtually no chance that the Taliban can be stopped from rolling over the nine northern provinces... that they do not already control in the next month or so... Between the money the Taliban get from their foreign supporters... Pakistan, Saudi Arabia and the U[S]... and the money they earn from exporting heroin (the Afghan opium crop has tripled in the past four years, and now accounts for half the global production), they hardly ever have to fight as they advance. They just bribe the opposition commanders into quitting... That is why... [the] Uzbek General... did the unthinkable in January and blew the bridges south of the Salang tunnel, for 30 years the only link between Kabul and the northern provinces in wintertime... The question is what happens next... There is little likelihood that the fighting will stop when the Taliban close up to the northern frontier with Turkmenistan, Uzbekistan, and Tajikistan. Even if they do not try to push any further, their brand of Islam and their language make them unwelcome interlopers in the north, and their intolerance will soon stimulate local resistance... For Pakistan, the reason to back the Taliban is strategic... For Washington and Riyadh, the logic in backing the Taliban is even simpler. Anything that is bad for Iran, they reason, is good for the U[S] and Saudi Arabia [a Muslim country whose government believes the internet is bad – and, therefore, ‘forbids ordinary citizens from using’ it; the country also ‘imposes segregation of the sexes in schools, universities and work places’]... The line-up on the other side is even simpler to explain. Iran fears the victimisation of Afghanistan’s Shia minority and the extension of Pakistan’s power to its own frontier. Russia fears the destabilisation of Central Asia. India fears that bored Taliban, after victory in Afghanistan, will find a new cause to fight for in the predominantly Muslim Indian state of Kashmir... In these circumstances the best that can be expected is a continuing low-level conflict across Afghanistan’s northern border. The worst is a great deal worse: the toppling of all Central Asia into the kind of chaos that has swept both the Caucasus and the Balkans in the past five years. It’s hard to see how that can benefit either the U[S] or Pakistan].

...Villagers buried... bodies near the... Afghan opposition stronghold of Mazar-i-Sharif yesterday after the... Taliban militia retreated... The Shi’ite... Hezb-i-Wahdat militia has accused the Taliban of massacring 70 civilians[mostly]... women and children... in the village at the weekend and the Iranian foreign ministry has issued a condemnation. A Taliban spokesman... had no information about the reported incident, but denied... the Taliban could have been responsible for what he called an anti-Islamic act. “Our leader... has ordered us to protect the people. We began our struggle to stop these kinds of actions,”... The Taliban are not known to have carried out mass killings in the past... Aid workers said they could not confirm that a massacre had taken place. They had been unable to see the bodies before they were buried and could not say... how they died.

...[the UN] secretary-general... is deeply concerned about reports of the discovery of mass graves of Taliban soldiers in northern Afghanistan and has asked his special mission there to find out more about “this sad situation.”

...A UN team[has] spent the past two days in northern Afghanistan investigating... what was apparently mass slaughter on both sides of the conflict... [T]hey... found evidence of mass killings of ethnic Uzbeks by Taliban troops... Some of the bodies were stuffed into deep wells... They said it was possible some of the victims were thrown into the wells while still alive. There was... evidence that grenades had been tossed into the wells and that machine-guns had blasted away at those trapped inside... Other corpses showed signs of torture... The UN team... also... found dozens of skeletons, their heads wrapped in the black turbans worn by Taliban soldiers, in nine different wells... “It appears that everybody was butchering everybody up there,” said one UN official... the death toll could be as high as 4000... [In related news, g]unmen killed about 30 foreign tourists in an attack on an ancient temple in Egypt’s southern town of Luxor yesterday, security sources said. It was the bloodiest assault since Muslim militants took up arms in 1992 to set up a purist Islamic state... No N[Z]ers are believed to be among those who died or were injured...

A terrified 21-year-old Dargaville woman hid... [for] three hours... in an Egyptian tomb with her boyfriend... aged 26, of Pukekohe... as gunshots rang out around them during the terrorist attack on... Luxor (formerly Thebes)... [The couple] were one week into their Egyptian holiday and visited the Hatshepsut temple on Monday shortly before the attack by the Islamic group in which 67 were killed... 57 tourists died. [Her mother] said she was trying to convince the pair to leave... but they had not been able to get flights out[due to ‘a mass exodus of tourists leaving Egypt’]...

Britain is flying its citizens home after the massacre but the N[Z] Government is taking a more relaxed approach to the safety of Kiwis in Egypt... [The NZ] Ministry of Foreign Affairs says it has not issued a warning for people not to go to Egypt because it would deny them their rights to travel. It... is not clear how many are holidaying in the popular tourist destination, which draws up to 10,000 N[Z]ers a year. Hundreds of Britons will fly home today on seven special flights out of Luxor after the slaughter left six of their countrymen dead and two missing... Travel insurance companies are reconsidering cover for Egypt but any insurance confirmed before yesterday will remain.

...Police say the main Islamic militant group in Egypt... [-] the... Al-Gama’a al-Islamiya (Islamic Group)... [-] has admitted it mounted the terror attack on Luxor. A witness at the scene said he saw a note which read “No to tourists in Egypt – [the blind cleric]’s Squadron of Havoc and Destruction.” ...[the] blind cleric... is... serving a life sentence in the U[S] for conspiring to blow up the U[N] building and other New York landmarks... [However, a] spokesman for... the... [blind cleric] said yesterday that the... Islamic Group... aimed to damage... [Egypt’s] \$4.83 billion a year tourism industry... not tourists... “If they claim responsibility for [the latest] violence, then it is a major change in their policy.”

...The massacre at the Egyptian temple on Monday was an attempt to take hostages which went horribly wrong, according to the militant group behind the attack. Al-Gama’a al-Islamiya... sent a message to Reuters saying it had planned to take hostage as many tourists as possible to force the U[S] to release its leader... “But the rash behaviour and irresponsibility of Government security forces with regard to tourist and civilian lives led to the high number of fatalities.”

...An Egyptian... militant group which had claimed responsibility for... [t]he bloodiest attack in Egypt’s five-year Islamic insurgency... said it would stop targeting tourists as a tactic in its war with the Government... [which has killed] more than 1150 police, Muslim militants and civilians...

Egyptian... militants have targeted Egypt’s lucrative tourism industry... kill[ing] 34 foreign tourists in the past five years... [excluding Luxor. O]n September 18... two brothers shot at and petrol-bombed a tour bus in central Cairo, killing nine German tourists and an Egyptian driver...

Egyptian security officials have arrested four mental health officials for allegedly taking bribes and aiding the escape of the man who attacked a tour bus at the Egyptian Museum... [on September 18. Incidentally, a]n Egyptian lawyer... has filed a lawsuit against[the] British... government over the Luxor massacre and is demanding \$8.5 billion compensation... [He] claims Britain is to blame because it provides a haven to terrorists.

...British officials have vehemently rejected accusations... that Britain was harbouring Islamic “terrorists”... According to the Egyptian press, several leaders of the fundamentalist groups Jihad and Tala-eh al-Fatah benefit from political asylum in Britain. Cairo has sentenced some of them to death or prison sentences, or has issued arrest warrants against them, for ordering or financing attacks in Egypt.

...Egyptian police have detained 42 suspected members of the Gama'a al-Islamiya... for killing 58 foreign tourists and four Egyptians at Luxor... "My father's death would have been easier to bear than this," lamented[an] Egyptian tour bus driver... He was contemplating the aftermath of... last month[s]... carnage at the Queen Hatshepsut temple... The attack, the first in Luxor, has wiped the smiles off the faces of residents who make their living from the 2 million tourists who flock each year to the area's dazzling monuments... Their glum faces belied the "Smile, you are in Luxor" signs dotting the town. "People look as if they are at a funeral, everybody is pessimistic,"... The attack coincided with the start of the winter tourist season... The town, with its mild sunny weather, is a popular winter holiday destination. But... yesterday... there were hardly any foreigners milling about the ruins, where bloodstains had been scrubbed from walls and paving stones. And few foreign faces were to be seen in Luxor town... Many countries have issued travel warnings about Egypt and analysts say tourism will take a while to recover... "People want to go on holiday and not into a war zone," said... the director of Bonn's Phoenix travel agency, which[has already] had 182 customers cancel holidays to Egypt. - 1997

Egypt has launched an armed attack on lost tourism... Hotel and tour operators say business is a mere 10-15% of what it was before what they refer to as "the accident" at Luxor in November. In response, the country has strikingly militarised to protect its second-largest industry... [However, the] extra security... can be a double-edged sword... It... would seem to sap a tour to Egypt of any spontaneity and remind tourists and Egyptians that the place isn't entirely safe.

...THE... chairman of the National Transportation and Safety Board, said... [yesterday that the] engines on EgyptAir Flight 990 were shut down manually as the Boeing 767 plunged toward the Atlantic at near supersonic speed... [T]his had been gleaned from the flight data recorder of the plane which crashed [a fortnight ago], killing all 217 people aboard... He said the information raised many questions. "Further investigation, including information on the cockpit voice recorder, might shed some light,"... The Navy resumed its search on Friday for the recording device.

...Egyptian airline pilots welcomed a statement by U[S] investigators yesterday that cast doubt on reports that the co-pilot of EgyptAir Flight 990 downed the plane deliberately. The... director of the US National Transportation Safety Board... had denounced speculative reports about conversations taped by the cockpit's voice recorder, saying some were "flat wrong." Speculation on the cause of the crash heightened last week when anonymous officials were quoted as saying that the voice of co-pilot Gameel al-Battouti was heard on the cockpit recorder saying: "I made my decision now. I put my faith in God's hands." ...yesterday, a Government official said the first phrase about the decision had not been taped at all and was the result of confusion among investigators... But investigators have not excluded the possibility the plane was crashed intentionally... Meanwhile, Egypt's Economy Minister... said relatives of the crash victims would receive compensation after submitting death certificates and proof of relationship. The amount has not been disclosed... In... news... from... the... [other side of the Middle East,] press reports yesterday cited [a]... former head of [Iran's] Supreme Court, as referring to several students as "martyrs." The term is customarily used in Iran for those who have died in the name of Islam or the Islamic Republic... Five Iranian students were killed in a bloody raid by police on a Tehran university dormitory and dozens more who were wounded have disappeared at the hands of the secret police... Iran's top security body, chaired by[Iran's] President... yesterday... vowed to dismiss the police official who gave the order for the attack[, which]... has sparked a wave of campus unrest... [- t]he chancellor of Tehran university and 18 faculty department heads have resigned over the incident... [-] and thrown the nation into political turmoil.

...IRAN'S first local election in 20 years drew a heavy turnout yesterday... Polling stations in some provincial towns ran out of ballots and voting hours in larger cities had to be extended. The crush of voters in Tehran and other big cities was a sign of strong interest in a contest that could give supporters of[the] President... the upper hand in a power struggle against hardliners in the Islamic government. The election could turn out to be a replay of the May 1997 presidential polls... At that time, many Iranians said they were voting for [the President] only to show their opposition to the hardline clerics... Though council elections are mandated by the constitution, they have not been held since the Islamic revolution in 1979.

...[nearly 2 decades 'have passed since the Ayatollah Khomeini and his Shiite extremists overthrew the shah, but the Islamic revolution has brought only pain and poverty to the people of Iran. A generation of young Iranians lost their lives in a futile eight-year war with Iraq. And in place of foreign policy, the Ayatollah launched a campaign of assassination and hostage-taking. Corrupt mullahs (members of the Muslim clergy), a shattered economy and a dispirited populace are the fruits of fundamentalist rule. BUT THERE ARE strong indications now that the mullahs and their radical followers are losing the struggle for Iran's soul. One day a taxi driver asked me whether Americans had liked Ayatollah Khomeini. "Not very much," I confessed, expecting an angry reaction. "Neither did we!" he shot back. Much dissatisfaction stems from the revolution's failure to deliver on the economy. Khomeini promised to transform the lives of the poor, but unemployment now stands at roughly 30%. Many industries nationalized by the mullahs operate at under two-thirds of their 1979 capacity. Oil production is down by more than a third. Galloping inflation has multiplied the price of rice ten times and meat almost 15 times.']

... "Horses have always enjoyed a privileged status... in Oman,"... said my guide... "In olden times, they were the Sultan's prized possession - so they were kept on the rooftop of the castle and watered by buckets drawn up from underground irrigation channels." ...Being a horse in Oman would certainly have been better than being a human on the wrong end of the Sultan's wrath. Enemies who ventured too close... were liable to be drenched with boiling honey, poured from special openings in the castle tower. Fortification has been a specialty of Oman's rulers for more[than] a thousand years. Throughout this starkly beautiful country... can be found more than 500 old castles, forts, walled cities and defence towers. Mudbrick houses were the first structures in Oman, [but] with the... need to defend the country against invasion, the... largest and most detailed... were soon converted into intricate fortresses. The Portuguese, who invaded and ravaged the country from the early 1500s, refined the concept of fortification, and this pattern was enthusiastically adopted and further refined by the Omanis, who built ever bigger and better forts. Nizwa fort, which became a virtual prototype for fortress construction, was converted over 12 years... a task completed in 1649. This remarkable structure, with its interconnecting tunnels, escape routes and secret passages, was fully restored between 1988-91. Today, visitors can roam freely through the fortress. Oman was for many centuries one of the world's most closed countries. The fortress mentality was shown by the xenophobic Sultan... who ruled with an iron fist from 1938 through to his overthrow by his son, the present Sultan... in 1970. Before 1970, there were no schools, no newspapers, and no radio or television in the capital, Muscat, and Oman had just 10km of paved roads. Coastal dwellers were prohibited from visiting the inland, and vice versa. Even the one motor car in the country, owned by the Sultan for appearances, was pushed by servants, petrol being a prohibited import. Despite this isolationist heritage, Oman has made greater strides in the last 28 years than probably any other nation on earth. It is socially one of the most liberal countries in the Arab world, with its Ibadhi sect of Islam being renowned for tolerance. Israelis are welcome to visit the country, most hotels have well-stocked bars... women wear superbly coloured outfits, covering their heads to the bare minimum. [However, although the country's 'GNP in the early 1990s was equal to Saudi Arabia's at \$US8000, Saudi Arabia's infant mortality rate of 54 per 1000 live births was much lower than Oman's 100, which was comparable to the 120 rate of its southern neighbour Yemen - the country that is both at the foot of the Arabian peninsula and the 17 nation Arab world's GNP scale (\$US400)']...

10 US[intelligence officers who have flown to Yemen to investigate last week's hostage shootout... believe that the 16 tourists... were kidnapped as direct retribution for last month's air strikes on Iraq. The kidnapping was not to force the release of local Islamic militants, as Yemeni authorities originally claimed... US and British officials remain unhappy about the Yemen authorities' lack of cooperation following the chaotic raid by security forces to free the hostages. Yemeni authorities insist that the rescue bid only began after the kidnappers started executing the hostages, but six survivors say all the hostages were alive when the gun battle started. Analysts in both Sanaa and Aden say the tour group was kidnapped because of a dispute between the Yemeni Government and... the Islamic Jihad... over the terms of its disbandment and... integration into

the Yemeni armed forces. They say the group was one of five or six militant organisations formed about 1993 with Government backing to sow dissent in the more liberal and secular south. A Yemeni journalist said: "The problem is the Government created a monster they could not control."

...The climbers were faced with a stark choice. Having risked their lives on some of the most challenging mountains in the world, where only their skill and courage had kept them going, the four-strong American group seized by kidnappers during an expedition in a remote part of former Soviet-controlled Asia contemplated the ultimate dilemma: kill their guard or face being killed themselves. In an epic real-life adventure story that has prompted a frenzied bidding war between Hollywood film studios and New York publishers, the real story of the mountaineers and the guard they pushed off a cliff to certain death is only now beginning to emerge... [However, s]ince returning to the US... the climbers have[also] been criticised for going to such a[n] unstable area. The US State Department has been warning Americans to stay away from the region for more than a year... [M]embers of the Islamic Movement of Uzbekistan... [are] fighting for the creation of an independent Muslim state where the borders of Kyrgyzstan, Uzbekistan and Tajikistan converge. The group regularly kidnaps Westerners and has plunged the area into political chaos.

...Russian police say Islamic terrorists are behind a wave of Moscow bombings that have killed almost 300 people... [Russia's] Deputy Interior Minister... said police were examining reports that \$US20 million... was recently transferred from a Middle Eastern terrorist network to the rebel Russian republic of Chechnya to finance the bombing campaign... "It is time to recognise that terrorism has become Russia's national problem," said [Russia's P]M... "It is obvious to us that in Dagestan and in Moscow we are dealing not with independent fighters, but rather with well-trained international saboteurs." ...the leaders... belong to the fundamentalist Wahhabi sect and see their actions as part of an international holy war. The campaign began in the 1980s when... militants went to Afghanistan to fight Soviet forces, and has since moved on to wars [around the Middle East]...

The Taliban... warned yesterday of a regional "fireball" if Iran turned a huge military border buildup into an invasion... Tension between the two neighbours follows the disappearance of 11 Iranian diplomats and one journalist during a Taliban takeover of [an] opposition stronghold... last month, and charges of Taliban massacres in the area... The opponents of Afghanistan's hard-line Taliban... say[its] troops massacred at least 600 civilians... [T]he killings occurred on January 1 and 2... [after the] Taliban captured the... north-western Qaisar district... and began a campaign of terror... The Taliban's ambassador to Pakistan... dismissed the accusations as "absolutely untrue." ...[However, UN officials] in Islamabad... said they had received some security reports suggesting mass killings had taken place in Qaisar district, followed by a mass exodus...

Afghanistan's worst disaster since the Soviet invasion of 1979 is unfolding as drought, famine and renewed civil war drive 300 families a day into refugee camps. The crisis has gathered pace with fresh fighting between the Northern Alliance and the ruling Taliban majority, which rejected U[N] calls for a ceasefire to help the country's 800,000 displaced people living in extreme squalor. The UN High Commissioner for Refugees... said the situation was desperate. He was speaking after a four-day mission to Afghanistan had failed to persuade the Taliban to accept a truce on humanitarian grounds. Last week, Taliban forces launched a major assault in the central province of Bamiyan...

Defying protests from around the world, the radical Taliban... have begun destroying all "icons" – including two huge, 2000-year-old Buddha statues – because they are un-Islamic... The... Buddhas... are... in the central A[f]ghan city of Bamiyan[, which]... has changed hands three times in the past 18 months during fighting between the Taliban and opposition forces. The figures, one of them the world's tallest standing Buddha, soar 55m over an exquisite valley... The... U[N] World Heritage List[ed]... figures are now likely to be blasted by tank shells... The UN, which does not recognise the Taliban, recently imposed sanctions because of its refusal to hand over... the wealthy Saudi living in exile in Afghanistan, who is accused of being a terrorist mastermind... The Taliban had previously held off from destroying the Bamiyan Buddhas, but as the movement has become more isolated, it has decided to follow its principles which, it claims, follow the word of the Prophet Mohammad to the letter.

...Afghanistan's ruling Taliban movement yesterday banned the import of 30 items it said were un-Islamic, including playing cards, neckties, lipsticks, nail polish and chessboards... Other items banned for being "against the Sharia,"... include fireworks, statues, fashion catalogues... greeting cards featuring pictures of people, musical instruments and cassettes. Also banned were computer disks, movies, satellite TV dishes, pig-fat products and anything made of human hair.

...though... just 18 years old, [she]'s already seen more horror and suffered more humiliation than most people will ever see in a lifetime... Now that she is safely out of Afghanistan, [she] no longer faces the risk of mutilation for wearing nail polish, but she fears for her friends... Women... cannot visit a male doctor, and as female doctors are prevented from working, the mortality rate among newborn babies and women in general is one of the highest in the world... According to the Taliban: "*It is biologically, religiously and prophetically proven that women are inferior to men.*"

...Refugees arriving in northern Afghanistan tell of a fresh wave of terror at home... The Taliban ordered the population of the war-ravaged northern town of Taleqan into its main square and began parading three dogs. Each had a shaved head stencilled with the names of the men the movement most despised – [the] ousted Afghan President[, the]... exiled King... and the U[S] President... Then they poured petrol on the dogs and set fire to them... The burning of the dogs 10 days ago was meant to serve as a warning.

...Civilians are burned alive, whipped with electric cable and mutilated with... bayonets... political opponents disappear; adulterers are lashed in public or stoned to death; homosexuals are executed by having a wall topple on them; and those who cannot recite their prayers or who trim their beards to less than fist-length are beaten by the thuggish foot-soldiers of the Ministry for the Prevention of Vice and the Promotion of Virtue... The Afghans are victims of a legal system that has few basic rights and little forensic skills. Instead, it functions on knee-jerk findings of guilt and the irreversible punishments of stoning, flogging, amputation and execution. This is a country in which a barely educated band of schoolyard bullies is in control and the only book they have read is the Koran. They have been described... as "perhaps the most fiercely anti-modernist movement in any Asian country since the Boxer Rebellion"... Academic and press freedom do not exist. The Taliban this year threatened to make members of the minority Hindu community identify themselves by wearing a piece of yellow cloth (sound familiar?) and the Taliban incurred the wrath of the world when it destroyed the ancient Buddha statues at Bamiyan... The violence of war, the privations of drought and the outright ugliness of life under the Taliban have destroyed any sense of a normal upbringing or future for children in a country in which about half the population is teenage or younger. With no sign of a break in the drought and the fighting at a stalemate, a deep sense of hopelessness grips the land...

Algeria has denied charges by... [a former PM] that security forces were behind a wave of massacres which have claimed more than 1200 lives this year... [On] the first day of Ramadan... 412... people, including many women and children[, were killed]... by unidentified attackers... [who also] abducted about a dozen girls... in... [what] is believed to be the worst massacre in Algeria since the start of civil strife... Survivors who fled in terror into the darkness yesterday described how the attackers threw babies against walls to kill them... Several hundred civilians were burned alive and 117 had their throats cut... One wounded survivor, whose daughter was raped, then had her throat slit, cried out: "Why? Islam is not like this."

The Muslim believes that everything comes from Allah, and that Allah leads astray whom he wills and guides rightly whom he wills. A favourite expression of Muslims is "if Allah wills."

...whom Allah willeth, He leaveth to wander; Whom He willeth, He placeth On the Way that is Straight. - Koran 6:39

If Allah so willed, He Could make you all one People: But He leaves straying Whom he pleases... - Koran 6:93

...when they went wrong, Allah let their hearts go wrong: For Allah guides not those Who are rebellious transgressors. - Koran 61:5

And no protectors have they To help them, Other than Allah: And for any whom Allah leaves to stray, there is No way (to the Goal). - Koran 42:46

He created life and death that He might put you to the proof and find out which of you acquitted himself best. - Koran 67:2

The *Goal* of Islam is to gain everlasting life in heaven. However, if you wanted people to prove themselves worthy of such an 'eternal reward', would you bother guiding any of them beforehand?

Every chapter of the Koran begins with the declaration that Allah is 'Most Gracious (or Beneficent), Most Merciful', but would a merciful entity be responsible for creating *unbelievers* and *evil-doers* – by either deliberately leading them astray or allowing them to go astray – then punish them?

...Who has revealed the Book to thee; some of its verses are decisive – they are the basis of the Book – and others are allegorical. Then those in whose hearts is perversity follow the part of it which is allegorical, seeking to mislead, and seeking to give it (their own) interpretation... [N]one knows its interpretation save Allah, and those firmly rooted in knowledge. - Koran 3:6

I do not tell you that I possess the treasures of Allah or know what is hidden, nor do I claim to be an angel. I follow only that which is revealed to me. - Koran 6:50

Never did a prophet talk in plainer language and with greater modesty to his people. Appearing among a superstitious and ignorant people, he could have claimed any supernatural powers for himself, and the people would willingly have accepted him. But he told them plainly that he was but a man... [N]or did he lay claim... to know the secrets of the future, nor did he profess to be any more than a mortal. What distinguished him from the rest of mankind was that Allah revealed his will to him, and he faithfully followed and translated everything that he received from on High. And as he himself was, so he wanted others to be. It was not his object to make his followers possessors of treasures, or wonder-workers, or fortune-tellers, but *men* first and last – men true to themselves and true followers of the high principles of life which had been revealed to him. He plainly told the people what was wanted of them, and it is for his plain speaking that he is frequently called... *a plain warner*.

Do not split up your religion into sects, each exulting in its own beliefs. - Koran 30:32

After the prophet Muhammad's death, his religious community splintered into various groups, divided over the issue of leadership. The Sunni Muslims followed their religious leaders known as caliphs and muftis. ['After the first four caliphs the office became hereditary'.]The Shi'ite Muslims looked to their... ayatollahs... and... imams [(a Muslim term meaning "model" or "example")]. There were to be twelve imams. However, the twelfth imam disappeared in the ninth century AD, and according to Shi'ite teachings he will return at some future time to deliver Muslims from the clutches of evil and restore to them an existence of righteousness and justice.

Sunnis look forward to a time before the Last Day when a Mahdi will appear and establish a reign of justice on earth. Shiites identify the Mahdi with the expected reappearance of the Hidden Imam. Many Muslim leaders have claimed the title... An Islamic religious movement[was] founded in 1889 in India by Mirza Ghulam Ahmad... who was believed to be the Messiah Mahdi prophesied in the Quran. In 1914 the sect split into two... neither having any dealings with the other, but both spreading the movement across the world. The sect is rejected by orthodox Islam, which cannot accept Ghulam Ahmad's claim to be a prophet following Muhammad, since the traditional belief is that Muhammad was the last manifestation of God... In 1974, after several years of vicious demonstrations against the sect, its followers were declared to be heretical and were officially banned from the orthodox Islam community.

Sunni and Shi'ite are 'the two major groups in Islam' – but there are lesser groups (e.g., Sufis) and subsects (e.g., Shi'ite Ismailis; Sufic Dervishes), some of which have been further divided into 'orders' (e.g., the dervish Bektashis). In addition to undergoing SEGREGATION, Islam has also been SYNCRETISED.

...a medieval mystic poet and religious synthesist... Kabir (1440-1518)... was the link between Hindu Bhakti and... Sufism... Sufis... welcomed non-Muslims in their hospices. Sikhism drew inspiration from both Bhaktas and Sufis.

Sikhism... [was] founded by... Nanak (1469 – 1539) in the Punjab area of North India[by] combining elements from Hinduism and Islam. Nanak believed that in both these religions the truth about God was obscured by ritual. He believed that one would come close to God through meditation and devotion rather than by ceremonies and religious ritual... Nanak taught... [that a person's] inner guiding voice... represents the... presence of God... [He 'raised the first Sikh temple in present-day Pakistan'. His friendship of *Mardana*, a] 'low-caste' Muslim[whose] skills lay in providing music at festivals and ritual occasions... symbolized the guru's desire to bridge the gap between different religions and social classes... Throughout Sikh history there have been a number of reform movements. In modern times... those who have been initiated into the Sikh *Khalsa* but have fallen from their vows, for example by cutting their hair or smoking, and... therefore... [have] seriously offended against the Sikh Code of Discipline (*Rahit Maryada*)... [are labelled *Patit* ('fallen') and then] expelled... from the faith.

The Guru is the most important single idea in Sikhism. The true Guru is God. He has spoken to humankind through ten historical leaders, each called a Guru. The sacred scriptures eventually replaced human leaders... [Sikhs] believe that there can be no understanding of truth apart from righteous behaviour.

Originating as a religion, Sikhism became a militant political movement within the Punjab.

Govind Singh (1666-1708), ['the son of the ninth guru – Guru Tegh Bahadur, who was executed by the Mughals (1675)' – and]last of the 10 gurus, developed the Sikh military power to resist the Moslems and other religious groups. Caste[, samsara (the doctrine of 'rebirth') and polytheistic principles of Hinduism were adopted... Ranjit Singh (1780-1839)... united most of the Punjab into a single Sikh kingdom. The area was brought under British control after the Sikh Wars, 1845-46, 49. Many Sikhs were recruited for the British Indian army. The Sikhs began in the late 1950s to campaign for formation of a separate Sikh-dominated state and demonstrated with increasing vigor to achieve this end.

Sikhism has always been regarded by Hindus as a movement within Hinduism, although it has resisted pressure to be reabsorbed from early times... In 1526, centuries of intermittent invasions and dynastic rivalries... in the Punjab were finally replaced by settled government when the latest invader, Babur, established... the Mughal Empire. Early Mughals, especially Akbar... permitted a considerable degree of religious freedom, even if preference was given to Muslim subjects. During Akbar's reign the Sikhs prospered and perhaps aspired towards their faith's becoming the third accepted religion – the one which the Emperor could use to reconcile his Hindu and Muslim subjects. Interpretations of Sikhism as a synthesis of Hinduism and Islam are thought possibly to have been purposively formed for the first time during this period, and from a modern viewpoint, many Sikhs now regard the Gurus as precursors of [Mohandas] Gandhi, bringing a message of brotherhood to Hindus and Muslims, trying to weld them together in a united India.

When the subcontinent was partitioned into India and Pakistan... the Sikh population was divided equally on both sides of the boundary line. Since the partition had been preceded by savage Sikh-Muslim riots, some 2,500,000 Sikhs were compelled to leave Pakistan... [Those who crossed the border found that the] government of... India[had] abolished privileges previously extended by the British to religious minorities... The decline in... Sikh... fortunes nurtured a sense of grievance and gave birth to agitation... [until increased] wheat production during the 1970s brought unprecedented prosperity to Sikh farmers. [However, material] improvement was accompanied by the growth of Sikh fundamentalism... Tension increased between Sikhs and Hindus as the Akali Religious Party (...SAD), the predominant Sikh political party, began demanding more political and economic advantages for Sikhs. By the early 1980s the demands of the SAD had become strongly militant, and there was an escalation in sectarian violence. The Indian government responded by arresting and imprisoning thousands of Sikhs. Armed bands, under the direction of Bhindranwale, spread a reign of terror throughout the Punjab region. Matters came to a head in 1984, when Bhindranwale and his followers entrenched themselves in the compound of the Harimandir (Golden Temple). In June the Indian Army launched an assault on the temple that killed several hundred Sikhs (including Bhindranwale) and resulted in heavy damage to the temple buildings. In October India's PM Indira Gandhi was assassinated by two Sikh members of her bodyguard, touching off widespread Hindu violence against Sikhs. These... events... fuelled the movement demanding the establishment of a separate Sikh state.

An Indian court has sentenced three men to be hanged for participating in the 1984 massacre of hundreds of Sikhs following the assassination of Indira Gandhi, a report said yesterday. About 3000 Sikhs were killed in frenzied rioting. A further 2000 were killed across India.

...An obscure Sikh militant group, the Shaheed Khalsa Force... has claimed responsibility for three bombs which killed an 18-month-old child and injured 16 people in the Indian capital... during an annual Hindu religious festival... The same group had claimed responsibility for three bomb blasts which... ripped through a train near the Indian capital, killing two people and injuring 38, including two Japanese and five A[US]ns.

...Two bombs exploding within minutes... near a Sikh temple in the... district of New Delhi... killed two people and injured 58... More than 20,000 people[have] died in Punjab during the... insurrection... [by Sikhs demanding] their own state, Khalistan, or The Land of the Pure. - 1997

...the... president of the International Sikh Federation (NZ)... said the... group aimed to promote an independent Sikh homeland of Khalistan by peaceful means, and sent only humanitarian aid home to families of those killed or detained by police. The group's 1995 protest at the Commonwealth Heads of Government meeting prompted a letter from the Auckland police commander praising its demonstration. [The president]... who held office in the moderate All India Sikhs Student Federation in the Punjab... said he made the hard decision to leave his country in 1990 after several of his friends had been killed in police custody... [He] is matter-of-fact about his torture at the hands of Indian police... [before terrorist] charges laid against him were dismissed... He describes one of the usual methods: the victim is bound in a chair with his head pulled back while a heavy wooden roller is placed across his legs. Two men then lean their full weight on each end of the roller, pressing it back and forth across his thighs to cause excruciating pain. At the Sikh temple in South Auckland, [he] still feels the pain from his permanently damaged quadriceps. But he feels a different pain these days. After seven years in N[Z], he will not be granted permanent residency by the Government because of undisclosed Security Intelligence Service information alleging he has helped Sikh terrorist groups... But he said he never used weapons or supported groups which did. For more than four years... his lawyers have been trying to obtain evidence for the allegations, but the SIS refuses to release its information "for reasons of national security." ...proposed law changes would widen SIS powers to declare someone a threat to national security and have that person detained... [and] the Immigration Service has been told to seek a third country which would accept him... his wife and their 13-month-old N[Z]-born son... permanently... [However, he] still hopes he can stay... The Inspector-General of Intelligence and Security... has agreed to look into his case... [after appeals] to successive Ministers of Immigration... and the Privacy Commissioner... failed...

Trying to create a separate *homeland* or state for themselves has diverted modern Sikhs from the original ambition of their faith – to create religious unity! That aim has now largely been left to another Islamic offshoot:

Babism is a religious movement which originated in nineteenth century Iran as a powerful expression of messianic Shi'ism. Its founder was Sayyid 'Ali Muhammad Shirazi... a young merchant who in 1844 laid claim to be the Bab [– a title meaning 'The Gate' –]the traditional intermediary between the Shi'i Hidden Imam and his faithful followers. Later he made the higher claims of being the Imam Mahdi and the 'point' (*nūqta*) of a new divine revelation. Under the Bab's direction, his chief disciples... undertook an intensive missionary campaign which soon led to the widespread diffusion of the movement throughout Iran... [D]uring this early period the Babi movement remained strongly Shi'i in orientation and, despite its pronounced messianism, its followers conformed strictly to the requirements of Shi'i law. Nevertheless, its doctrines were evidently heterodox, and its rapid expansion alarmed the Shi'i ulama, and they began to oppose and persecute its missionaries. In response, some Babis tended towards militancy and, in 1848, fighting broke out between Babis and orthodox Shi'is in the northern city of Barfurush... The Babis' separation from civil society was underlined by events at Barfurush.

...when they seceded from Islam... [further] persecution... followed, and the Bab was finally executed by the Iranian rulers. His followers split into two groups. One, known as the Azali Babis, followed his designated successor Subhi Azal; the other, a larger and more successful movement, followed Subhi Azal's half-brother, ['Husayn Ali, or Bahaullah ("The Glory of God"), who gave the next of the progressive revelations (none are final)']... at Ridvan Garden in Baghdad in 1863... Bahaullah... declared that he was the manifestation of God foreseen by the Bab, and they became known as the Bahais... Bahaism teaches the oneness of God, the unity of all faiths, the inevitable unification of humankind, the harmony of all people...

A garden situated on the outskirts of Baghdad... was... original[ly named]... the Najibiyya garden, but it was changed to the Garden of Ridvan, meaning "Paradise", because of the importance attached to the 12 days spent there by Bahaullah... It was here... that he forbade jihad, holy war, as well as announcing that no further manifestation of God would appear for another thousand years. Ridvan Garden is... the place where Bahaullah first claimed that he was the promised one of all religions, that his message was for all humans, and that a new time in human history had begun...

Since W[W]II, and especially in recent years, [Bahaism] has expanded significantly into the [Last] World, where it now has its main strength, and for this reason it is fair to call Bahaism a world religion in its own right... A number of Amerindians have become Bahais in countries such as Bolivia, Ecuador and Panama. In India the results have been even more impressive... [– possibly because] Bahais... portray... Bahauallah as the tenth and final avatar of Vishnu... In the Malva area of Madhya Pradesh in central India from 1961 Bahai teachers used visual aids, music, local training centres and social networks to convey their teaching...

All prejudice, economic extremes, asceticism, slavery, monasticism, and mendicancy are condemned. Equality of the sexes, an auxiliary universal language, and compulsory education are advocated.

In many respects, Bahaism is like FREEMASONRY – a ‘non-political, international fraternity open to members of any religion, based on brotherly love, belief in a supreme being and obedience to the law of the land’ (which probably accounts for its popularity amongst police officers and solicitors – ‘only 14 out of 52 Chief Constables in Britain are non-Masons, around 60% of all policemen in the UK are Masons, as are 90% of the male staff of the governing body of the [British] Law Society’) – although, unlike Freemasonry, Bahaism doesn’t ‘regularly come under attack for the secrecy with which it carries out its activities.’ However, Bahaism can be attacked for trying to unify all faiths by creating a system of beliefs that was compatible with the teachings of the major faiths but incompatible with the pre- and post-1844 discoveries of science.

...religion... doesn’t have any real value as a science but... it may be used by the state to pacify the people or to keep them confused.

Religion is *far* closer to magic than to science... The recognition of science involves acceptance of the... fact that Nature does not care about Man... and that events are brought about by the operation of discoverable and quite beautiful laws. That beauty may... be terrifying and difficult to accept, but we enjoy no choice in the matter.

[Science’s] purpose is to establish workable laws o[n]... the behaviour of matter and thus achieve greater control over it. Among primitive peoples science is rudimentary, often being an aspect of religion and magic, which also represent efforts at control of the... environment, though lacking the experimental method. In ancient... Greek... civilization... science was mainly classificatory – concerned with the naming and arrangement of known facts. It was otherwise indistinguishable from speculative philosophy. Modern science[was] originally called natural philosophy...

...philosophy... has taken... a position between science and religion.

Philosophy differs from science, in that its questions cannot be answered empirically or by experiment, and from religion, in that its purpose is entirely intellectual, and allows no role for faith or revelation... With the scientific revolution of the 16th and 17th centuries... philosophers... began to assess the philosophical implications of the new scientific results.

The way[was then] opened up for the insights of science and religion to be seen as complementary.

The idea that science and religion are combatants, or even divided explorers – friendly but separate – doesn’t wash with... two of this country’s leading... academics... The sum total of human learning and insight did not, and could not, lead to either the realm of science or of religion. “No, we end up in the realm of truth, which is a word that is hardly ever used now in our culture, and some people, when they do use it, put it in quotes. So-called ‘truths.’ Yet it’s the only thing that matters,”... sa[ys] the 90-year-old academic. The 77-year-old academic nods:] “I’d go along totally with that. It’s the unity we’re looking for... science and religion blended produce one unity.” Such insistence that science and religion are meshed puts the pair at odds with thinkers such as [the author who, i]n his latest book, *Rocks of Ages*... described science and religion as two pictures, side by side in a gallery... “I do not see how science and religion could be unified, or even synthesised, under any common scheme of explanation or analysis...,” he wrote. “Science tries to document the factual character of the natural world, and to develop theories that coordinate and explain these facts. Religion, on the other hand, operates on the equally important, but utterly different, realm of human purposes, meanings and values.” In other words, the two are separate apples – one relying on reason and testable hypotheses, while the other, no matter how much you study and test it, ultimately requires a statement of faith. [The 77-year-old] disagrees. “It’s a cop-out... This disjunction between faith and reason is quite wrong... [The author]’s division is just old-fashioned Greek dualism. I’m saying the universe is a unity, our minds are one mind, everything is interlocked with everything else.” ...The clear message is that science and religion are entirely compatible: they are teammates in a three-legged race rather than competitors in a marathon. Indeed, [the 77-year-old], in contrast to those who argue that the Genesis story and science are poles apart, takes the radical stance that the Hebrew world-view laid the ground in which science took root. It’s an extreme departure from the widely accepted view that science was a gift from the Greeks first and foremost... While acknowledging the Greeks’ laws and philosophies, Arabic numbers and the many other fertilisers that made the growth of science possible, [the 77-year-old] said the Hebrew world-view, as spread through Judeo-Christian religion, was “the greatest cultural revolution in the whole of human history. With this new natural philosophy the world was cleared of gods and spirits, and declared to be the good creation of the one rational God; the foundations had been laid for the study... that we know as science.”

Francis Bacon [(1561-1626)] is generally acknowledged as the founding father of modern science in England, and although he did not work in a modern laboratory like today’s scientists, he inspired what has become known as the scientific method. He believed that science could give man a mastery over nature that would improve his life on this earth. For Bacon, science was not simply an intellectual or academic undertaking, but a utilitarian one... Bacon did not conceive of science as being a disunifying factor as far as religion or God is concerned. Rather, he believed that science could enable civilization to progress. It could be a binding force between man and God... [Bacon – who rose ‘to become Lord Chancellor under James I before falling from favour after impeachment on charges of ‘having taken bribes, for which he was imprisoned after pleading guilty’ – was a ‘principal protagonist of *empiricism*, a philosophical theory which holds that sensory experience or sense perception is the sole source of our knowledge, at least of the external world.’ For Descartes (1596-1650), who is ‘often called the father of modern philosophy’], all truth can be derived from reason, which is superior to and independent of sense experience. Knowledge is deductible from self-evident concepts, or innate, necessary ideas... When Descartes meditated on the first philosophy, he concluded, *cogito ergo sum*, “I think; therefore I exist.” He felt that everything was subject to doubt with the exception of the act of doubting itself. Since doubting is a part of thinking, the act of thinking is an undeniable experience... He accepts doubt as the only real fact... I can doubt that... everything perceived... exists, it may be a hallucination, a dream... but the fact that I am doubting cannot be doubted... His point is that truth cannot be doubted, but that to discover the truth, we have to doubt everything. When we come to the truth, the truth will be undoubtable... He says that even though I am imperfect, there exists perfect knowledge, or a self-conscious awareness of perfect ideas within myself. Knowledge of the perfect is innate within me, and I can know it through meditation... The power of forming a good judgement and of distinguishing the true from the false, which is called good sense or reason, is by nature equal in all men... Descartes considers

five basic ideas to be inherent within every man, ideas which every man knows without having to verify. One is that God is innate to us as our own soul... Secondly, it is impossible for something to originate out of nothing; every effect must have a cause, and therefore there is a cause of everything... Thirdly, it is impossible for a thing to exist and not exist at the same time... Descartes's fourth innate idea is that whatever is done can never be undone... Descartes's fifth principle is that we cannot be nonexistent as long as we are thinking... When Descartes inspects reality, he concludes that reality consists of substances. He defines substance as "a thing which exists in such a way as to stand in need of nothing beyond itself." He says that there is only one absolutely independent substance – God. All other substances are created by [God]. There are also two types of substances – ...spirit... and... matter[(the 'theory according to which the ultimate reality in the universe is matter, called *materialism*, a philosophy usually regarded as antagonistic to all religious systems, was taught among the Greeks and has had powerful advocates in modern times, particularly as an explanatory frame of reference for science – in ethics it takes the position that there is no life after death; hence one should make maximum use of the present life')... Descartes considers God a substance that is infinite... [and believed] an innate idea of an infinite being necessitates the existence of that infinite being because a finite being could not possibly create such an idea. In other words, because I can think of the infinite, the infinite must exist. The infinite must have put that thought in my head. [It does not matter that I do not grasp the infinite, or that there are countless additional attributes of God which I cannot in my way grasp, and perhaps cannot even reach in my thought; for it is in the nature of the infinite not to be grasped by a finite being like myself.] Being 'a cautious man, Descartes suppressed his heretical doctrines of the Earth's rotation and the infinity of the universe', 'mindful no doubt of Galileo Galilei's condemnation by the Inquisition'...

Galileo (1564-1642) – who 'at college became known as "the wrangler" because he dared to question the teaching of ARISTOTLE – had explored the Copernican theory that the Sun, not Earth, was the centre of the universe. Ever since PTOLEMY – ruler of Egypt between A.D. 127 and 157 – had pronounced that the Earth was the immovable centre of the universe around which revolved the planets, the Sun, and the stars, people had held rigidly to this point of view. Galileo's lectures were so popular that the church began to be uneasy about the excitement he was creating. Four times Galileo was called before the Inquisition. Finally Galileo denied the truth of his discoveries. He was imprisoned in his own villa and denied any visitors. Five years before he died, Galileo became blind. No longer could he study the heavens and speculate with mathematical formulae.'

...Blaise Pascal (1623-62) was a mystic [– which means he 'relied on intuition rather than intellectual reflection' (much like '*theosophy*, the religious system based on intuitive knowledge of God') –]who believed very deeply in God... [H]e was also a skeptic in the sense that he believed that we cannot prove the existence of God by our reason or any other way. Therefore he emphasized that... it is impossible for man to understand the universe or his position in it. We cannot look for certainty or stability in the material world because our reasoning powers are always being deceived... Pascal [had been 'a mathematical child prodigy: before the age of 16 he had proved one of the most important theorems in the projective geometry of conics (which Descartes refused to believe was the work of a teenager), and at 19 constructed an arithmetic calculating machine – the first mechanical calculator to be offered for sale, of which seven still exist' – 'latter simplified by Gottfried Leibniz' (1646-1716)]... a German mathematician and philosopher who maintained that in the universe, every act has a purpose, and the purpose of the universe is to realize the goal set forth by God.

In his philosophical writings he argued that... the world... is composed of single units (monads) which are simple yet each in its own way mirrors the whole universe; each is self-contained, but works in harmony with every other, and they form a continuously ascending series from the lowest (which is next to nothing) to the highest (which is God...). Their pre-established harmony is ordained by God who, Leibniz argued, never acted except for a reason that required it, and so the world that [God] had created was the best of all possible worlds (a view satirized in Voltaire's *Candide*)... A man of wide-ranging expertise... he worked on the problem of the continuum and the laws of motion, and discovered the infinitesimal calculus independently of Newton, which made his disputes with Newton's followers acrimonious... Throughout his life Leibniz was ardently devoted to the cause of international peace.

...[Baruch Spinoza (1632-77), was a] Dutch rationalist philosopher... [Maligned by many, Spinoza is regarded by others as one of the saintliest of philosophers, and his influence – particularly on Leibniz – has been considerable, although he died in poverty due to tuberculosis, which was aggravated by the glass-dust in his lungs from] his living by grinding and polishing lenses. Rejecting the Cartesian dualism of spirit and matter [Spinoza] saw only one infinite substance, of which finite existences are modes or limitations... [A]mong his conclusions are determinism and a denial of personal immortality. Spinoza's *Ethics*, published posthumously, founded morality on the 'intellectual love of God'... virtue is its own reward.

Spinoza defines the supreme virtue to be understanding God... [W]e can appreciate God by intellectually appreciating all of [God's] creation and therefore understanding that God is the perfect principle behind everything... He states that the infinite universe is like a machine, yet... Spinoza does not believe that God has a body because "by body we understand a certain quantity possessing length, breadth, and depth, limited by some fixed form; and that to attribute these to God, a being absolutely infinite, is the greatest absurdity... [God also 'has an infinite number of attributes, which together make up the universe, but man is acquainted with only two of them, thought and extension'. P]roperly speaking, God loves no one and hates no one; for God is not affected with any emotion of joy or sorrow..." ...For Spinoza, evil is due to ignorance, an inability to see reality in its entirety... [In comparison, David Hume (1711-76)] says that if we like, we can attribute the order and design of the world to an architect, but... he... feels that... such an architect... must be responsible for evil in nature... According to Hume, we really know nothing of God; at the most we can only know of people's ideas of God, and these are but perceptions... He rejected revealed religion, which he considered dogmatic, and accepted "natural religion" instead, a religion wherein the existence of God can be proved or even shown to be probable by argument and reason... Hume writes: "All the new discoveries in astronomy, which prove the immense grandeur and magnificence of the works of nature, are so many additional arguments for a Deity, according to the true system of theism... Let those go further who are wiser or more enterprising." ...He states that it is not the being of God that is in question, but God's nature, which cannot be ascertained through study of the universe itself... [I]f the universe can only be studied by imperfect senses, what is the value of our conclusion? ...For him, the only certainty is found in mathematical proofs[. 'In 1748 he published *An Enquiry concerning Human Understanding*; its translation was said to wake Immanuel Kant (1724-1804) from his "dogmatic slumbers"']...

"Absolutely no human reason... can hope to understand the production of even a blade of grass by mere mechanical causes. That crude matter... originally formed itself according to mechanical laws, that life... spr[an]g from the nature of what is lifeless, that matter should have been able to dispose itself into the form of a self-maintaining purpose – is contradictory to reason[." Kant]... acknowledges... there is a design in nature but... [the] design, as man sees it, does not necessarily prove the existence of the designer... He claims... it is impossible to arrive at the ultimate reality by pure reason alone because phenomena are endless... Kant is simply saying that whenever we begin to speculate about the Absolute, we run into contradictions... Kant suggests that certain knowledge of God's existence would destroy a man's freedom and reduce human experience to a show of puppets... Kant also writes: "It does not enter men's heads that when they fulfill their duty to men (themselves and others), they are, by these very acts, performing God's commands and are therefore in all their actions and abstentions, so far as these concern morality, perpetually in the service of God, and that it is absolutely impossible to serve God directly in any other way..." ...What Kant means by morality is rather vague... [but, according] to his categorical imperative, man should act in such a way that the maxim of his actions might become the principle for universal law... The goal of Kant's personal ethics is twofold: it is a person's duty to attain his own perfection and also to seek the happiness of others.

If Kant's *categorical imperative* and *personal ethics* are combined, they resemble UTILITARIANISM – 'a teleological ethical theory which maintains that one ought always to act so as to maximise welfare; choosing that action, of the available alternatives, which will produce the most welfare on balance for all people affected' (i.e., 'the guiding principle of conduct should be to achieve the greatest happiness of the greatest number; the usefulness of an action is the criterion of whether it is right or wrong'). Incidentally, the book *Democracy in America* (vol. II) states: 'We may naturally believe that it is not the singular prosperity of the few, but the greater well-being of all that is most pleasing in the sight of the Creator and Preserver of men.'

Kant... express[ed] strong sympathies for the American and French anti-monarchal revolutions. He complained more than once that the state spent too much on war and too little on education.

...in his work *Perpetual Peace* he advocated a federation of free States, bound by a covenant forbidding war... [Kant] never travelled more than 40 miles from his native town, Königsberg[('now Kaliningrad')], where he was a professor at the university...

He lived a quiet, orderly life and local people were said to set their watches by the time of his daily walk. His early publications were in the natural sciences... [H]e... predicted the existence of the planet Uranus before its actual discovery by William Herschel... Kant... exerted an enormous influence on subsequent philosophy, especially the idealism of... Hegel...

Kant's philosophy had left an essential dualism: nature opposed to spirit, object to subject, the outer world composed of isolated unrelated substances. Hegel sought to bridge this gulf, to reduce duality to unity... [He] states his view of the direction and destination of human history as 'the development of the idea of freedom'... [He influenced] political thinkers of both right and left (Marx, in his youth, was a disciple of Hegel)...

[Georg Hegel], 1770-1831... taught that the world of objects is not only related to an intelligence, but can be nothing more than the manifestation or revelation of that intelligence... which he saw[as] the incarnation of the "world spirit." ...The material world could not exist of itself. Matter is... the necessary counterpart of spirit and in it spirit reveals and realizes itself.

Hegel believes that everything has a purpose, that the whole universe is rational, and that it is unfolding under the direction of reason, the spirit of the Absolute... For Hegel, the highest form in which the Absolute manifests itself is philosophy, which is the synthesis of art and religion... Of all the arts, Hegel says, music and poetry are the highest... Hegel believes that when the dialectic is exhausted, it reveals the whole, unified Absolute Truth... Hegel sought to synthesize other philosophies to arrive at the truth... But since nature is constantly unfolding, guided by the World Spirit, the dialectic process continues indefinitely. Hegel saw the Absolute Truth unfolding itself in history, biology, sociology, and other sciences... Hegel considered history and theology to be intrinsic. History is "a justification of God," and tells the story of man's elevation to God... Since God is not transcendental but is manifest in the world, [God] depends on human history... Without the history of man, God would be alone and lifeless... [Furthermore,] history shows that thought is dynamic and progressive, and the great... souls are not content to accept something simply because it is handed down by tradition. Indeed, tradition has often proved untrustworthy, for in the course of time, and influenced by common men, its purity is lost... Absolute Truth... was thus received through the chain of disciplic succession... But in course of time, the succession was broken... Therefore perfect knowledge must be accepted from a perfect source... [By the way, the first person to describe *the history of man* by 'proposing a complete theory of man's evolution' 'from a hairy quadrumanous animal belonging to the anthropoid group,' and to 'postulate that those type of animals and plants which are better fitted to their environment tend to be perpetuated while the more poorly fitted species tend in time to disappear' – was Charles Darwin (1809-82).] At first Darwin was a Christian, but his faith in the existence of a personal God eventually faded. - Dialectic Spiritualism

Many persons seem to make themselves quite easy about immortality and the existence of a personal God, by intuition... I do not feel any innate conviction on any such points... The safest conclusion seems to me to be that the whole subject is beyond the scope of man's intellect. - More letters of Charles Darwin (vol. II)

Grandson to the eminent physician Erasmus Darwin and son of a... doctor... he failed to complete his medical training at Edinburgh and just scrapped a degree at Cambridge in vague preparation for a life in the Church. ['Whilst still a student at Edinburgh he was a member of the local Plinian Society; he took part in its natural history excursions. His biology studies seriously began at Cambridge, where the botanist John Henslow encouraged his interest in zoology and geology. He was recommended by Henslow as naturalist to HMS *Beagle*, then about to start']... on her circumnavigation of the globe... [S]eizing his one great opportunity... [at the age of] twenty-two... he set out as an untried amateur and returned five years later to take his place amongst the elite of the learned sciences... [As a consequence of his observations while travelling the world, Darwin] propounded the theory of evolution by natural selection, to the consternation of certain theologians at this threat to the beliefs that they found comfortable... [Despite their best efforts,] *On the Origin of Species*... and *The Descent of Man*... changed our concept of nature and man's place in it.

...evolutionary theory has... pried open the neatly-arrayed toolbox that is our mind... Our minds and brains, just like our bodies, have been honed by natural selection to solve the problems faced by our ancestors over the past two million years... This mind-and-body-building is orchestrated by genes... The Darwinian exploration is still a fledgling science. But already it is yielding answers that we didn't even know had questions... New though this science is, researchers are already pretty confident about some things. Fortunately, one of them is sex. Consider a familiar sex difference that emerged in a study of [US] college students. Asked by a stranger for a date, 50% of both women and men agreed. But asked "Have sex with me tonight?" not one woman agreed – whereas men shot up to 75%. And when students were asked "How long would you have to know someone before having sex?" the questionnaire had to be rescaled for males requiring only minutes or seconds. Not only are men willing to have sex with a perfect stranger; they're more than willing with an imperfect one too. Another [US] study found that, for brief encounters men, (but not women) were willing to drop their standards as low as their trousers, ready to dispense with intelligence, humour, charm, honesty and emotional stability. Why this difference between men and women? When natural selection shaped male-female differences, it didn't stop at muscles and [reproductive organ]s. It also shaped differences in our psychologies... Why? Think of it this way. Give a man 50 wives and he could have children galore. But a woman with 50 husbands? ...[for generation] after generation... natural selection favored the men who strove most mightily for mates – the most competitive, risk-taking, opportunistic. We are all the descendants of those winners. Females, meanwhile, faced nine months hard labour, breast feeding, rearing. A woman had to be far more picky about whose genes ended up partnering hers. Faced with the prospect of highly dependent offspring, she'd be on the lookout for someone who was not only fit and healthy but also had access to resources. Nowadays a Rolex or designer trainers provide clues. But for our hunter-gatherer ancestors roving the Pleistocene plains, what mattered were social resources – status, reputation, respect. Genes that built brains with tools for making these shrewd decisions were the ones that got themselves replicated. Of course, natural selection doesn't download its strategic plans straight into our consciousness. Its instruments are[the] emotions, priorities, desires... [that

were] millions of years in the making... Evolution... created males and females so unlike that the differences don't stop at how fast you'll jump into bed; they pervade our... interests, our values, our ambitions, our skills. It's often said, for example, that men lack social skills. Don't believe it. It's just that their skills are, all too understandably, not what we call sociable. They are... more disposed to... showing off... Men outstrip women in deaths from... homicide and accidents. Social scientists view these causes of death as "life-style" as opposed to "biology." But, in the light of evolutionary theory, speeding to death in a flashy car is enmeshed in men's biology.

Though not the sole originator of the evolution hypothesis... Darwin was the first thinker to gain for that concept a wide acceptance among biological experts. By adding to the crude evolutionism of Erasmus Darwin... and others his own specific notion of natural selection, he supplied to the idea a sufficient cause, which raised it at once from a hypothesis to a verifiable theory. ['Perhaps the most significant contribution to evolutionary ideas was made by Linnaeus (1707-78), who published *Systema Naturae* – which erected a hierarchical scheme of all living things that suggested certain groups owed their similarities to descent from common ancestors.' The 'Greek philosopher and astronomer *Anaximander* (c.610-c.545 BC) – reputed to have drawn the earliest map of the inhabited world and to have introduced the gnomon sundial into Greece – taught a primitive form of evolutionary theory, in that he argued that life began in water and that man originated from fish.' 'The Greek philosopher Empedocles (493-435BC) believed that new forms are generated spontaneously. The first modern theorist of evolution, Leibniz, introduced the notion that environment causes the changes in form. Jean Lamarck (1744-1829), carrying this notion further, argued that an acquired structural characteristic can be inherited by succeeding generations, use or disuse of the characteristic being an important factor.' 'George Cuvier (1769-1832), the first person to classify the lower invertebrate animals, originally rejected all ideas of changes in animal form and stated that life had been repeatedly wiped out and replaced by new species, but later realised that invertebrate species could be derived from another by small changes in their structure, an observation which proved crucial in the emergence of the theory of evolution – though he himself believed resolutely in the conventional Biblical ("special creation") view and quarrelled publicly with the early proponents of evolutionary ideas' ...

'Fundamentalism, ultra-conservative movement in certain US Protestant churches, from c.1920. Its tenets, based on a booklet series, *The Fundamentals*, 1910-2, include the literal interpretation of the Bible and belief in an impending messianic advent and in bodily resurrection. It cut across church lines, dividing Baptists, Presbyterians, and Episcopalians into two general groups, those opposing Fundamentalism being termed Modernists. One result was legislation in some states forbidding teaching contrary to the Bible, primarily aimed against the teaching of evolution.'

... 'The Kansas Board of Education has rejected evolution as a scientific principle, approving a new curriculum that eliminates the teaching of evolution as a way to describe the emergence of new species – including the descent of humans from ape-like creatures. However, nearly a dozen federal court rulings have struck down similar attempts in other states to force schools to teach that a god created the world, and all its animals and plants. Debate began soon after Charles Darwin made the theory of natural selection and evolution famous in the 19th century. It culminated in the US in the "Monkey Trial" of 1925, when Tennessee teacher John Thomas Scopes went to trial for breaking a state law banning the teaching of evolution. Scopes was convicted and fined the minimum \$100, but the verdict was reversed on a technicality by the state Supreme Court. More recently, federal and state courts have defended evolution against creationism, ruling that creationism constitutes religion and cannot be required teaching in public schools. In 1968, the US Supreme Court ruled that an Arkansas law prohibiting the teaching of evolution was unconstitutional under the First Amendment, saying teaching must not be tailored to the principles of any particular religious sect. In 1981, a California Superior Court ruled against a man who sued the state Board of Education, saying teaching evolution prohibited the right of his children to exercise their religion. Arkansas lawmakers passed a law requiring schools to give "balanced" treatment to "creation-science" and "evolution-science," but in 1982 a federal court struck down the law, saying creation science is not science at all. Assaults against the teaching of evolution continue. In 1995, Alabama passed a law mandating that all biology books used in public schools bear a sticker describing evolution as a "controversial theory." The Institute of Creation Science supports research aimed at showing that Earth and life on it are much younger than scientists say.'

...Henri Bergson (1859-1941) said that t[he] *elan vital*, or 'creative impulse', not a deterministic natural selection, is at the heart of evolution.

For Bergson... evolution had become God's "undertaking to create creators."

Bergson sees the life impulse moving through the universe and creating new forms and varieties, just as an artist creates different paintings. The creations progressively improve... Bergson saw change as maturation... "We are seeking only the precise meaning that our consciousness gives to this word, 'exist,' and we find that, for a conscious being, to exist is to change, to change is to mature, to mature is to go on creating oneself endlessly." ...Bergson spoke of the world as "a machine for the making of gods."

...[according to Samuel Alexander (1859-1938),] the philosopher of emergent evolution... external objects have an existence independent of consciousness. Unlike many other philosophies, Alexander's neo-realism contends that something may exist even though it is not perceived... Alexander sees God's body as neither spaceless nor timeless, for it is space-time itself... Alexander believes that man may evolve to the demigod platform in the future, that he may have super consciousness.

Space-time... produced matter, and matter in turn gave rise to mind (or "awareness") as a further, higher, qualitative synthesis. "Deity" signifies the upper goal, the next higher level toward which the cosmic order spontaneously tends. In this hierarchy of change, the higher synthesis emerges from below but possesses genuinely new characteristics; hence in each instance the new synthesis is unpredictable. Alexander did not attempt to give an ultimate explanation for the world's existence; he tried merely to explain the world in terms of spontaneous creative tendencies... For Alexander, the mind never creates anything new, but rearranges things. Since everything already exists, there is no question of creating anything.

Philosophy displaces the belief in Divine Incarnations by belief in divinely inspired men. Although it refuses to deify any man into being fully representative of the Infinite Consciousness, it affirms that any man may approach nearer to and be uplifted by that Consciousness... The tendency to assume that the spiritual man was perfect in his youth and never made a mistake in his maturity, is common among his followers and passed on by them to the public – with the result that the latter stares at him with great awe as a rare phenomenon but does not dream that it is possible to follow in his footsteps to the same achievement. The truth is that he had his share of struggles and failures... was born with his own particular imperfections, and... had to make the character and expand the consciousness which adorned his later years. - Enlightened Mind, Divine Mind

...research showed that many people who might have no contact with institutional religion knew the reality of religious experience, and that the capacity for religious experience was an integral part of human nature... [Central to Emile Durkheim's (1858-1917)] work is the idea that societies are held together by means of a 'conscious collective', powerful beliefs and sentiments that are shared in common by members of the society, and that exert a strong influence on individuals' behaviour... [H]e regarded... religion... as having been created by society as a means of expressing its ideals and unifying itself... [Carl Jung] (1875-1961)... introduced the concepts of 'introvert' and 'extrovert' personalities, and developed the theory of the 'collective unconscious' – 'that part of the unconscious mind which derives from the ancestral experiences of a group, or is shared by all human beings, and is additional to the personal unconscious' –] with its archetypes of man's basic psychic nature... His early [studies]... led to his meeting

Sigmund Freud [(1856-1939)]... He became Freud's leading collaborator... [However, his] independent researches, making him increasingly critical of Freud's insistence on the psychosexual origins of the neuroses, which [Jung] published in *The Psychology of the Unconscious*... caused a break in 1913... Undeterred, Freud... [went on to elaborate] his theories of the division of the unconscious mind into the 'Id' ['a person's psychological impulses'), the 'Ego' ('the part of the mind that reacts to reality and has a sense of individuality'), and the 'Super-Ego' ['a person's ideals of itself which direct its behaviour'). Freud published many books, including]... *Why War?*, written in collaboration with Albert Einstein... and... a controversial view of religion, *The Future of an Illusion*.

Christ pointed out that unless one becomes as a little child, he shall not enter into the kingdom of God, but Freud advocates "growing up" and setting this illusion aside... ['In fact, so peripheral a role do they play in the twentieth century that Freud insisted that Judeo-Christian tradition "keeps people stupid" because it hands them everything and denies them the individual quest that results in true growth and wisdom.'] Freud admits that without religion man will "find himself in a difficult situation. He will have to confess his utter helplessness and his insignificant part in the working of the universe." Yet he goes on to say that without religion, man will venture at last into the hostile world, and this venture is his "education to reality."

...Writing in the early part of this century, [John Dewey (1859-1952)] felt that it was high time to set aside all superstitious religions. According to him, logic "demands that in imagination we wipe the slate clean and start afresh by asking what would be the idea of the unseen." In other words, we must define God and religion anew... For Dewey, we can never attain absolute certainty or perfection. We can only attain higher levels of moral progress... "The good man is the man who no matter how morally worthy he has been, is moving to become better. Growth itself is the only moral end." ...For Dewey, truth must satisfy human needs and improve social conditions... He felt that the greatest good is the elimination of the greatest evil. It is the fulfillment of man's greatest needs... Dewey sees God emerging out of man's striving for perfection... [In comparison, Jean-Paul Sartre (1905-80)] sees man as being overwhelmed by his responsibility... the freedom to change himself and the world... Sartre believes that the fate of the world depends on man's decisions. Obviously, if man decides properly, the world would be a better place... ['Sartre sought optimistic individual resolutions in a threatening and oppressive world, and developed a somewhat altered existential approach to Soren Kierkegaard (1813-55), the precursor of existentialism' – a movement 'that emphasises the existence of the individual' but whose 'most salient theses are that there is no ultimate purpose to the world; and that truths about the world and our situation are revealed most clearly in moments of unfocused psychological anxiety or dread.' Most notably, Sartre 'presented an atheistic philosophy, whereas Kierkegaard upheld a pessimistic personal form of Christianity.' Kierkegaard wrote]: "The true relation in prayer is not when God hears what is prayed for, but when the person praying continues to pray until he is the one who hears what God wills." ...Kierkegaard[, who] believed that a man should live as if he were to die at any moment[, also wrote: 'It is perfectly true, as philosophers say, that life must be understood backwards. But they forget the other proposition, that it must be lived forwards.' According to Sartre]... "Existentialism isn't so atheistic that it wears itself out showing God doesn't exist... Rather, it declares that even if God did exist, that would change nothing. There you've got our point of view. Not that we believe that God exists, but that we think that the problem of [God's] existence is not the issue."

atheism... includes both the rejection of any specific belief in God or gods, and the view that the only rational approach to claims about divine existence is one of scepticism. [It 'is frequently confused with agnosticism, which is not denial of deity, but merely a profession of uncertainty concerning the existence and nature of God'.]Justification of atheism is often made on the grounds that some branch of science or psychology has rendered belief in God or gods superfluous, or that experiential verification of religious belief is lacking.

Atheism is a subject that the psychologist and the student of religion have hitherto regarded as scarcely worth careful investigation. Much has been written and argued about it, and very roundly, by the free-thought martyr on the one hand and the religious zealot on the other. But no one has had anything to say about the *species* of atheism; or has treated it analytically as an *individual and definite* phenomenon, positive and necessary and intensely symbolic; or has realized how it is limited in time. Atheism, rightly understood, is the necessary expression of a spirituality that has... exhausted its religious possibilities, and is declining into the inorganic. It is entirely compatible with... Romanticism, which likewise would recall that which has irrevocably gone, namely, the Culture... Atheism comes not with the evening of the Culture but with the dawn of Civilization... [T]his late form of world-feeling and world-image... preludes our "second religiousness"... There is no religiousness that is without an atheistic opposition belonging uniquely to itself and directed uniquely against itself... There are atheisms of Classical, Arabian and Western kinds and these differ from one another in meaning and in matter. Nietzsche formulated the dynamic atheism on the basis that "God is dead," [whereas] a Classical philosopher would have... [said] that boundless space... [and] countless bodies have, become godless.

[Friedrich Nietzsche (1844-1900) was the] son of a Protestant pastor and a studious and brilliant scholar... until his mind failed 11 years before his death... He proclaimed a new religion in his *Thus Spake Zarathustra*... a somewhat rhapsodically written gospel of the superman, of whom he was the prophet... Equality, charity, and submission were anathema to him; he glorified the "will to power," a heroic ethic of masters, whose right it was to conquer the weak... [However,] he abhorred nationalism and racial theories.

Roused by Darwin he argued forcefully that since human life has no meaning bestowed on it supernaturally it must create meaning... The principal features of his doctrine are contempt for Christianity with its compassion for the weak... [In Nietzsche's writings, which] are often obscure and open to different interpretations[, he]... divided mankind into a small dominant 'master-class' and a large dominated 'herd'...

His reputation suffered when his views were taken up in a simple-minded and perverted form by the... Nazis...

Nietzsche may also have influenced the Russian proletariat because their country's link to atheistic beliefs, expressed by people such as Stalin and the last Soviet General Secretary, can hardly be attributed to Marx (who, incidentally, was 'born of Jewish parents' and 'felt revolution would come to Russia last').

Marx succeeded in giving the dogmas of social science the power of a religion. And the... International Working Men's Association, which he founded, properly christened his monumental *Das Kapital*, with no intended irony, as "The Bible of the working class."

Marx believed that the state should eventually assume the role of Christ[, although he also]... believed that if man persists in worshipping God, he should do so privately and not communally.

When we become members of a political party, or a professional organisation, or trade union, or followers of Christ or Marx or some other... guru, we become opponents to people who are marching in the same direction under another banner. Much of our energy and theirs is then siphoned off into secondary activities directed to the maintenance of our particular club or clique and to the propagation of its proprietary doctrines.

The experiments of [a] social psychologist... showed that people arbitrarily assigned to rival groups will act, quite predictably, to favour their own group, however meaningless it may be... [His research] illuminates all religion and politics. Different people believe contradictory religious tales with equal conviction, and often detest those with other views enough to kill them... The [research] helps to explain why people with quite different opinions can belong to the same political party, and why scientists and scholars who care about ideas can't abide public politics. At the same time the academic world is notorious for its infighting, and for intellectual prejudices... Most important of all, [the research] tells us that the great confrontation in the world is not between capitalism and communism, or between the US and the Soviet Union, but between nice ordinary Americans and Russians who just like to be told who to hate this year.

The greater the things are in which a man believes, the more fiercely he despises those who do not believe in them.

There are 1200 kinds of 'primary religious bodies' in the United States.

...freedom of religion is a crucial part of a good society. It offers people... an opportunity to find the life of spirit through their own ritual, doctrine and priesthood.

[Conversely, Percy Shelley – an 'English poet who was expelled from Oxford, 1811, for publishing the pamphlet *The Necessity of Atheism*' – has been recorded as] saying that the overthrow of the idea of God would bring about the supreme good on earth.

At the start of 1917 the Russian Empire is still governed by an autocratic Tzar. From his palace in St Petersburg, one man rules over 170 million people, answerable only to God. Nicolas II holds more power than any other monarch in Europe. He has resisted political change but the Tzar's days are numbered... In February, a first revolution takes place. A provisional government takes over. The Tzar abdicates and is arrested... Russians believe they've won their freedom at last... Most people expect elections and an Assembly to decide the future. Lenin, leader of the small Bolshevik Party, wanted more revolutionary change and his own type of Marxist socialism. First he built up popular support by promising to end [WWI], give land to the peasants and power to the workers. In October the Bolsheviks decided they were ready to seize power... [T]here was little resistance... Lenin... told... the workers' revolutionary councils... [that] Russia had turned a new page... From now on, he said, the oppressed masses would themselves form the government... [M]any were frightened by what the Bolsheviks might do but the early believers were excited by Lenin's message and full of hope... "What I liked was the promise of a classless society in... which everyone would enjoy all the good created by society." "I was attracted by the idea of justice[and] equality between people acting in the name of humanity." The Bolsheviks moved the capital... to Moscow soon after the revolution. They took Russia out of the war, the Tzar and his family were shot, and from Moscow they planned to extend the revolution to the rest of the world. A forceful message was sent to workers everywhere: If the proletariat in other countries followed the [Russian] way they could kick out kings and capitalists and achieve a world with no more war... In the ferment after [WWI others did try] to follow the Bolshevik example. In Berlin, Bolsheviks tried to seize power. In Munich they succeeded briefly. In Hungary, a Soviet Republic lasted several months... Every communist uprising was crushed, and back in Russia itself the Bolsheviks had to fight for their own survival in a vicious civil war with supporters of the old regime who were helped by Western governments. By 1921 the [Russian] Bolsheviks were victorious but the [Communist] Party, who claimed to speak for the people, had never had majority support. Lenin had created a large secret police force to kill and terrorise his opponents. After the civil war the Bolsheviks... tried to win over the mass of people. They became masters of modern propaganda... Posters put across the central ideas of communism as conceived by... Marx, and adapted by Lenin... Thanks to the revolution, many... peasants... now farmed land taken from the land-owners, but their standards of living were well behind the rest of Europe. Few were literate. In 1920 the new government [had] decreed that all... citizens were to be taught to read... To provide the engineers and technicians the new society needed, training was expanded, and the communists said women should have equality with men... But despite all the talk of equality, the Russian masses did have a conductor, who directed everything, and it was Lenin. By the time he'd died, he'd created a one party, one ideology state, and an elaborate system of control. But under Lenin the aim of socialism had not yet been achieved. His successor, Joseph Stalin, inherited a society in which large parts of the old Russia still survived. Peasants were still able to sell the produce they farmed themselves in the markets. Stalin was determined to complete the building of socialism, so he launched the first five-year plan to modernise the economy... [and] to create the heavy industries the Soviet Union needed to defend itself in a hostile world... With so much to build so quickly... thousands of... workers... [and] forced labourers... were sent all over the country to fulfil the plan... [A]ll lived in terrible conditions. "...I think that we... were united by the difficulties we all faced. We... felt that the whole economy was ours, that we were... working for ourselves." The burst of construction and spending in the Soviet Union came at the time of the Great Depression in the West. Many of the jobless liked what they heard about communism. It sounded like a worker's paradise. "I became communist in short because of what I saw around me here in the U[S]... There was misery, children were going to bed hungry, there was poverty, and there was no reason for it. We were the richest country in the world and I saw communists out on the street demonstrating and trying to do something about it..." [Irish playwright *George Bernard Shaw* – an active member of the Fabian Society, an English socialist society founded in 1884 and advocating social change through gradual reform rather than by violent revolutionary action' – visited Russia and gushed]... "We have rebuked her ungodliness and now the Sun shines on Russia, as on a country with which God is well pleased, whilst [God's] wrath is heavy on us and we don't know where to turn for comfort or approval." ...Soviet newsreels showed Stalin as a genial figure... but he was ruthless with anyone who challenged him. He demanded cooperation at all levels. For millions of Russians the [Russian Orthodox] Church was still a source of strength and offered the only alternative system of beliefs. The communists saw the Church as a challenge and intensified their attacks on it. Village priests were ridiculed... harassed and forced to renounce their beliefs... [One peasant recalled a local incident:] "The priest came in... They called the barber and he cut off his hair and the priest announced, 'There is no God. I've lied to you.'" ...The greatest threat to the life of the peasants came when Stalin decided to end private farming. He thought their methods were too inefficient to raise the food the country now needed. A campaign was organised against the richer peasants, the so-called Kulaks... Stalin said the Kulaks should be liquidated as a class. Over three million were shot or died in... the [forced labour] camps. The state... took over all the land, which was now to be farmed collectively in large units. But the peasants didn't want collectivisation. They killed their livestock rather than give it up, and the state took the grain. The result was famine. Over five years, seven million people died of starvation... The price was not mentioned when Stalin listed socialism's achievements in 1937... [Ironically, the] leader of the first workers' state lived in reclusive comfort. [However, he] felt insecure, even about those closest to him. One by one the most senior communists, who had planned the social and political transformation of the country, became his victims... Stalin's morbid paranoia grew. Nobody at any level... regardless of whether they were in the Party or not, was safe. From his desk the great terror was controlled and conducted. Secret police orders gave every region an arbitrary quota for the purges. Category 1 meant death; category 2 meant the prison camps... The purges struck many of the earliest enthusiasts for communism... On the surface, for those of its people it had not devoured, the great communist experiment could claim to have achieved some of its aims by the end of the 1930s. The vast majority were able to read. Great construction projects, like the Moscow Metro, had been completed whatever the cost [in human lives], and many Soviet citizens had opportunities of work they'd never had before... But twenty years... [after] a small minority... [had] imposed their idea on their fellow countrymen, hoping to persuade them with the results... even the earliest

believers knew the promise that the oppressed masses would themselves form the government had not been delivered... “There was no socialism of any kind under Stalin[... but if he hadn’t]... destroyed... socialism... someone else... would have... because, probably, the time had not yet come for such a society.” ...ordinary men and women toiled and died as a result of a political system whose rhetoric and utopian promise became one of the most powerful forces affecting the [20th] century. And far from dying[itself], the communist system would go on to dominate the lives of many more people after the end of [WWII], bringing the same popular hopes and the same vicious realities.

The Bolsheviks ruthlessly broke the grip of both tsar and the church in the Russian people. When Stalin[... a]... lapsed seminarian turned militant atheist... looked out over Moscow and saw church domes and steeples dominating the city’s skyline, he saw not beauty and sanctity but ignorance and superstition... By the time of the purges of the late 1930s, nearly every church in Moscow was closed. Only about 100 still functioned officially in the entire Soviet Union. But in 1941, as German armies attacked, Stalin was so desperate to rally the country against the Nazi invasion that he shamelessly appealed to the people’s religious faith. He approved the re-opening of 20,000 new churches. By 1959, however, Nikita Khrushchev had redeclared the communist war on religion, and the number of open churches in the Soviet Union soon decreased... It was not until[the last General Secretary]’s annunciation of *glasnost* and *perestroika* that the Soviet state... [began] remaking the graceful old capital as a showcase...

MOSCOW’S new spacious Kallinin Prospekt supermarket was supposed to be a communist showcase. But the long queues at the counters immediately told me this was just another Soviet store. In Russia, shoppers don’t help themselves to food stacked on shelves. First they pay. Then they queue with their receipts at separate counters... On this day, the store had beef, but it looked spoiled. And sausage, the popular substitute, was quickly running out. “Sausage is finishing...,” announced the loud-speaker. A wave of muttering swept the meat queue. Scores of shoppers, some having waited half an hour, returned for refunds before joining yet another queue in the hope of buying potatoes or milk. The Soviet food crisis is worse than it has been in decades, and this year the country seems headed for another grain-harvest disaster. Last year’s shortfall, 40 million tonnes, helped bring about sharply higher grain imports and shortages of everything from meat to standard consumer goods. “For my entire life, the food situation has done nothing but deteriorate,” one shopper told me. “But under [the current General Secretary], the decline is accelerating.” The massive failure of Soviet agriculture is much more than an inconvenience for the consumer. It threatens to derail [the Secretary General’s] whole economic reform programme. The reforms require the people to work harder, but the workers have made clear they won’t do so if there is nothing to buy... Why is Russia, a net exporter of food under the tsars, chronically dependent on food imports? Why, with more land devoted to cereal production than any other country, has Russia become the world’s largest importer of grains? And how – with roughly 25[%] of its labour force working in agriculture, compared with just [3%] in the U[S] – can Russia average little more than half the US output per hectare? ...Today’s rural devastation has its roots in political decisions made in the late 1920s, when a still-free agricultural market was considered a threat to the Communist Party’s control. Given a choice between total power and feeding the nation... Stalin chose power. He exiled millions of farmers to the Arctic and Siberia, and herded the remaining farm workers into massive collective farms. Then he demanded more grain than they could produce. During 1932 and 1933, seven million Soviet farmers died of starvation. Those who survived began to work in a completely different way – not as independent farmers but as rural slaves. The result was the death of initiative and the sundering of the farmers’ natural ties to the land. For years, Soviet authorities blamed agricultural failure on the country’s severe climate. Under the [reformist General Secretary], they began to blame the excesses of Stalin. Only now are some beginning to acknowledge that the problem is not Stalin but the communist system... In private agriculture, the rhythm of work is determined by sunshine, rainfall and the requirements of the land. In the Soviet Union, what matters is the plan. Regional officials tell the chairman of each collective what to plant and how much. He, in turn, issues precise orders to his foremen who instruct those who actually work the land. In this way, every operation is directed, rigidly and inflexibly, like military manoeuvres, without the individual farmer making a single decision. To ensure that commands are carried out, there... [is] one... supervisor... for every ten farmers. The farmers have to fill in forms to move animals, haul loads of produce... even[to] pull weeds. In a single year, a 4000-hectare collective farm may produce half a tonne of paper... Besides forcing farmers to plant inappropriate crops, the plan dictates deadlines... Thus, if the plan decrees it is time to plough, the fields will be ploughed even if the ground is so wet the tractors sink to their axles. If the plan says it is time to reap the crops, they will be cut, ready or not. Not only does the system not work, but the people don’t work either. “Someone who tried to get the maximum return from the land would be a misfit... The general pattern is that of a perpetual strike.” To improve efficiency, the government tried pouring in money. Between 1971 and 1985, it invested nearly \$US1000 billion in agriculture, but got no increase in production. Every place I visited, farmers were doing the absolute minimum... The crops that do get harvested are subject to a bewildering array of barriers before they can reach consumers. There are only four trucks for each 400 hectares of ploughed land... far less than the number necessary to avoid delays. Once trucks are loaded, they have to brave primitive roads. Only 20[%] of roads in rural areas are sealed. For much of the year the others are a mass of mud. As a result, milk turns sour on the way to the processing plant and is dumped... What makes the chaos complete... is the absence of warehouses. Only 40[%] of Soviet collectives have storage facilities. On average, Soviet farmers lose 20 to 30[%] of the harvested grain – about the amount Russia imports. They also lose over a third of the fresh fruit... and... vegetables... In an effort to deal with a worsening food situation, the Kremlin is offering farmers the opportunity to work tracts of land on their own. They are permitted to lease plots for 50 years or longer, pass the leases on to their descendants, and earn money based on what they produce. The problem is that the scheme operates within the existing collective-farm system. It is the collective that sets the terms of the lease and controls access to equipment, feed, fertilizer and seed. Furthermore, the would-be renter has to contend with a society that has been brainwashed for decades to think that profit is profiteering and personal ambition is greed... [In addition, a] continuing exodus from the countryside is expected to create a shortage of some 14 million trained agricultural specialists by 1990. If urgent steps are not taken, the food crisis could become catastrophic... To a stranger, the most frightening scenes take place on payday... [F]armers gather round and begin a drinking binge. Almost everyone pitches in to buy vodka. By midday, virtually the entire village is drunk. According to a recent study by the state-run Academy of Sciences, “...To meet a sober male in a Siberian village after dark is like meeting a Martian.” ...BACK IN MOSCOW, in the long queues at the... supermarket, there is[another] shortage... “How long can this go on?” asks an angry shopper, after being informed that there is no more cheese. “For as long as there’s socialism,” says a woman who has been waiting patiently with her empty paper bags. - October 1989

November 8... 1989. Winds of freedom are gusting. The nations of Eastern Europe are tearing loose from the bondage of decades... The situation is spinning out of control. The GDR Politburo, in a desperate gamble that people will stay if given the right to leave, announces that, from midnight on Thursday the ninth, the wall [– that an ‘estimated 860 had been killed trying to cross’ –] will be open, and citizens will be allowed to come and go.

Berlin on the night of November the 9th, 1989: East Germans mob the frontier posts that divide... [them] from the West, scarcely believing what they’ve heard – that for the first time in 30 years they may be free to travel to the other side... [B]ut the spokesman failed to announce that the visas needed would only be issued the next morning... East German border [guards were] faced with a momentous decision. “We had no orders from our superiors... suddenly we saw how hopeless we were when faced by the will of the population. When the will of the people is stronger than the power of the state, something is wrong. All [we] could do was open the barrier and let the people go.” The breach of the [‘fortified wall erected in 1961 to curb the flow of refugees to the West’ (prior to ‘its collapse, over 5000 people had successfully crossed over the Wall’)] marks the final failure of

the communist ideals so many had once believed in... The conquest of the Berlin Wall brings liberation. All over the communist world, after years of resigned acceptance, millions of people had finally stood up. Back in the 1970s the Soviet system was at the height of its power. Each year, on the anniversary of the October Revolution, they celebrated an idea still expected to transform the world... "Each factory displayed their achievements. We were so proud our country was so powerful..." The communist world stretched from the Pacific in the East to the heart of Europe. Poles, Czechs, Romanians and East Germans were all seen as part of the same great family... creating a better world, all in the name of Lenin. The... vision inspired thousands... of schoolchildren. "We... [believed that the communists] had the best tractors, the best schools. Everything was the best here. We never had any doubts." The state planned for everything. Peoples lives were mapped out for them in a system that claimed to provide the care and stability that capitalism never could. "Our state was an example for all the world... Everything was organised for everyone, down to the youngest child. It was all planned in advance, even how many bearings would be sent to which factory." ...by the 1970s the central planners were attempting to produce everything a modern consumer might demand... [However, the Communist Party had] control of all newspapers and television, and the people heard only the good news – the propaganda of success... "Decisions were made for you somewhere else; the Party newspaper told you what to think..." It was a world of mass illusion... When Romania's President Ceausescu was shown[on TV] visiting markets... the displays of food had little to do with real life. "The truth is that the shops didn't even have one-hundredth of what we used to see on TV..." Across the Soviet block, communist economic planning wasn't delivering. Queuing became a way of life... People spent up to five hours a day in line. The wait for a flat was 15 years. But the Party still tried to persuade them that life was far worse in the capitalist West... "I remember the films we saw, like *Oliver*. That was exploitation. I was so shocked... I cried... What a nightmare his life was. I thought they still lived like that in the West." ...In the East they were told that the Iron Curtain – that divided the continent – was there to protect socialism from the evil influence of the West. But by the late 1970s, barb wire and dogs could no longer shield them from the... din of Western culture. "I got to know... [the West's] music, though I didn't understand a word. I imagined these people dancing and smiling. You couldn't hide the feeling in that music." Anything from the West – records... clothing – became a prized item on the black market. "I wanted blue jeans. I'd seen them on someone. All I had to do was find the money – two months salary..." ...But whatever people might want and think, it was dangerous to speak up. The state's tentacles reached into every area of life. Telephones were bugged, hotel rooms were filmed, idle talk could lead to arrest on the street. Though the worst days of the Stalinist terror were over, fear – not ideology – still kept people in check. The secret police held millions of files on ordinary citizens, full of information supplied by a huge network of paid informers. "I travelled by train a lot. People were always grumbling about... living conditions but I preferred to stand in the corridor or pretend that I was sleeping. I was scared. Why should I take the risk? Nobody knew who might be an informer." ...The penalties were high for individuals who challenged the system... [However, in] one country in the Eastern Bloc the opposition to Soviet domination, and the socialist idea, was more widespread and deeply rooted than anywhere else. In Poland people still clung to another set of beliefs. The election of a Polish pope... gave the Poles a new confidence in their Christian faith and in themselves... Poles were told they lived in a workers' state, but the workers felt ignored and exploited, and any attempt to improve conditions was ruthlessly put down. [In addition, many Poles remembered 'one of the most abominable episodes of WW2: the execution of all but 448 of 15,570 Polish military officers and "upper class" men held in three Soviet prisoner-of-war camps – a tragedy that continues to send shockwaves through Eastern Europe and the former Soviet Union. The wrongly dated Katyn memorial reading: "Polish officers shot by the Nazis in 1941" was a further insult. ('The Soviet Union finally admitted to being responsible for the massacre in 1990, announcing it as "one of the worst Stalinist crimes," on Moscow Radio.')]The discontent was greatest in the port of Gdansk. In 1980, a year after the pope's visit, the shipyard went on strike... [T]he strikers gathered in the shipyard and issued 21 demands. Many were a direct challenge to the Communist Party's claim to represent the workers... The strikers and their supporters prayed that the army wouldn't be sent in... With strikes spreading all over Poland, a government minister arrived in the shipyard for talks... [N]egotiators could now confront the Party leaders face-to-face... The Party caved in. The workers were allowed to form the first independent, non-communist trade union in the Soviet Empire. Led by[a] shipyard electrician... they had taken on the full might of the communist state and won... Within weeks, 10 million Poles had joined the new union. Terrified that Solidarity was a dangerous virus that would spread to their own people, other communist governments tried to discredit it... Soviet workers accused their Polish brothers... [of wanting] to restore capitalism... The pressure on the Poles was turned up when the Soviets held[military] manoeuvres just a few miles from Gdansk. The clear message to the watching Polish[Communist] Party leader... was that the Red Army would intervene if the Poles failed to put their own house in order... In December 1981, just 16 months after the Gdansk agreement, the General banned Solidarity and declared martial law. Faced with the full might of[the] army and police, the unarmed trade union kept up resistance for as long as it could. Thousands of Solidarity leaders were rounded up and arrested... "I knew they'd come for me. I was so afraid. Four of them burst in and started to kick me around like a ball because I resisted. When one of them saw I was pregnant it made no difference... They left me bleeding on the floor." [She] lost her baby and any chance of having children. The Soviet leaders still held ultimate control... but their grasp was faltering. Three General Secretaries[of the USSR] were buried in quick succession. A leader from a new generation took over, and [he] seemed to understand the frustrations of the people on the street... He was a leader... who declared the socialist world could only be transformed with the full participation of the people... A new policy of openness, or 'Glasnost', allowed Soviets to read books and see films that had previously been censored... Television viewers were transfixed by programmes which told, for the first time, how people really lived... [Economic] reforms began... But in many places political freedom was the major goal. All across the Soviet Union, long suppressed nationalism burst into the open. Soon [the General Secretary's] revolution was running out of control. In Eastern Europe the Party had been kept in power by Moscow's past willingness to send in the tanks. When [the General Secretary] removed that threat... the cracks appeared. In Hungary, new leaders began to dismantle the old political system – even allowing people to take down sections of the Iron Curtain. In Poland, Solidarity, whose popular support had never been destroyed, forced the government to hold free elections. They swept to power. But a swathe of old-style regimes, from Romania to East Germany, still seemed firmly in charge. In Berlin the... leadership celebrated 40 years of communism as if nothing had changed. Most East Germans... knew it had. "People were quieter. Previously you would always celebrate the 7th of October and you'd be forced to be cheerful. But that day there was something in the air." The crowds chanted for the visiting [Soviet General Secretary], not for their own diehard leaders... Just a couple of streets from the official pageantry, a counter demonstration was broken up by the police... "...Plainclothes police took truncheons out of their pockets and beat up those youngsters..." Despite the police tactics that night, the demonstrations spread. People, who for years had passively accepted the status quo, felt brave enough to take a stand. And with the opposition swelling, the Party was driven into making hurried concessions... The Party decided to allow people to travel to the West... Both East and West Berlin exploded in joy... Poles, Hungarians and East Germans had broken free. Now the Czechs tried to join them... [H]uge crowds took over the capital every evening... The Czech[Communist] Party leadership, without the threat of the Red Army to back them up, was floundering... In two weeks, 40 years of communist rule[in Czechoslovakia] was swept away... It was called the Velvet Revolution. But in Romania nothing had changed... In the same week as the revolution in Prague, Nicolae Ceausescu held a Party congress. The faithful greeted him as they always did, and he rewarded them with a six hour speech... They responded with 67 standing ovations. No mention was made of the fall of the Berlin Wall. The Romanian press had never even reported it. "There was no information about what was going on in Eastern Europe, but... in Timisoara [some people] had a trump card. Through [being able to pick up Yugoslav TV they] had news about the outside world." Emboldened by what they knew had happened in Berlin and Prague, the people of Timisoara... were the first[Romanians] to dare to protest... Thousands gathered [for a rally]... As the march approached the bridge into the centre of town it became clear Ceausescu was not going to bow to the inevitable, like his German and Czech comrades. "There were troops with their

weapons aimed at us. When the group approached, they opened fire without any warning. They shot with real bullets. People screamed in pain. My wife... was hit by one bullet... straight through the heart..." The slaughter went on as the troops surrounded the city, but the defiance continued... In the capital... stories of the Timisoara risings spread quickly. A rally was organised for [the President] to reassert control... That night Bucharest dissolved into chaos. Hundreds were killed. The people kept coming, and when the army deserted their leader it was the turn of Ceausescu and his wife to flee... When... [they] were caught, there was no mercy. With the executions of Ceausescu and his wife, seen on television, an era of repression in Eastern Europe had come to an end. In the country where it had all begun, the Communist Party still held power, but [the General Secretary's] reforms had shaken the old certainties... Loyal Party members... were bewildered by the changes at home and abroad. "I felt the ground slipping from under my feet. I cried tears of despair. How could this be happening? Maybe we communists did make mistakes... but did they need to ruin everything?..." ...With [the General Secretary] threatening everything they believed in, communist hardliners in the army and KGB mounted a pre-emptive strike [in August 1991. The General Secretary] was held prisoner as they sought to reimpose the old order... But the leaders of the coup had miscalculated. One of a new breed of radical politicians... called on the people to fight back... The White House, where [the radical] presided over the Russian Parliament, became the centre of resistance... "People began... asking the soldiers, 'Have you come to kill us?'" ...The troops were uncertain what to do... Unwilling to turn their guns on their own people, the young soldiers were the first to disobey their commanders. The coup began to crumble... For two nights the defenders waited for an attack that never came. The hardliners who'd led the coup had failed, and as they were swept away they took [the General Secretary] and the whole Communist Party with them. Russia had a new hero... [who became their new president,] and for the first time in 70 years the Russian national flag was unfurled at the Kremlin. All over the Soviet Union people tore down the symbols of an ideology that had shaped so much of the 20th century. The[y]... were asked to put their faith in new gods – democracy and capitalism.

An early-1990s publication stated that the 'Commonwealth of Independent States population was 35% Protestant, 2% RC, 12% Muslim, 1% Jewish and the remaining 50% were Non-religious belief'. Next below the CIS for *Non-religious belief* was 'South Korea (36%), while above it were Cuba (55%), Bulgaria (65%), North Korea (68%), China (71%) and Albania (74%).'

[Yesterday], the manager of an Albanian pyramid scheme... [told] thousands of angry investors that... their money is gone. Pyramid schemes... have sprung up across the impoverished Balkan state since the fall of communism...

Protests against Albania's crumbling network of get-rich-quick... schemes spread beyond Tirana yesterday... [I]n Vlore, 150km west of Tirana, protesters hurled stones at the city hall in fury that a local firm called Gjallica had postponed resuming payments to depositors... A strong police presence in the Albanian capital itself was intended to prevent a repeat of clashes on Thursday when thousands of angry savers took to the streets to demand money back from Sude, once one of the most popular of the schemes.

...The collapse of... investment schemes, which has sparked violence in Albania, has plunged the country into its most serious crisis for years. The schemes started to appear in the early 1990s... Europe's poorest people soon embarked on a frenzied investment drive when word got out that big money was to be made... and quickly. Undeterred by the failure of similar schemes in Russia, Romania and Bulgaria, many Albanians sold their houses, sheep, cattle and other possessions to jump on the bandwagon... Businesses and shops, even food retailers, reported a plunge in earnings as people stopped spending to invest in[the pyramid] schemes... But for most, the good times are over. At least five of the top 10 Albanian pyramid schemes have either declared bankruptcy or had their bank assets seized by the Government... First signs of trouble surfaced last October when [the]Finance Minister... voiced concern at a meeting of the I[MF]. Economists estimate more than \$US1 billion... might have been sunk into the funds... Albania was ruled... by one of Europe's harshest communist regimes which banned private bank accounts and private property. After the communists fell, many Albanians, unused to the ways of the free market, felt their cash was safe in pyramid schemes. There was no small print warning them they could lose money as well as make it. Protests erupted two weeks ago when a scheme run by... a 32-year-old former shoe factory worker known as Sude, collapsed, owing 100,000 creditors \$US100 million. Sude, who was once heard mistaking the IMF for an FM radio station... offered 170[% returns] over five months. Around 2000 people a day crammed into her offices from dawn to dusk. In November she stopped paying out. Two other firms, Xhaferri and Populli, registered as charitable foundations, offered 100[%] a month for three months... Authorities have frozen \$US300 million placed in state banks by the two scheme operators... [However, the PM has] pledged to pay Albanians all the money they have put in failed schemes with bank interest starting from February 5... But the... schemes have also influenced the value of the Albanian currency. In November, the lek gained strongly on the dollar and German mark because Xhaferri accepted only leks from its numerous depositors. But the lek weakened... when Xhaferri investors rushed to turn profits into hard currency... [In related news,] Bulgarians... are struggling to make ends meet as hyper-inflation destroys the value of the lev and sends prices soaring... The lev has fallen below 1000 to the dollar for the first time – it was 70 to the dollar a year ago – and monthly inflation in January is forecast at 50[%]. Economists say annual inflation could top 3600[%] this year... With inflation devastating the lev's value, some Bulgarians[have] bought electric appliances as a way to "invest" money... before it becomes worthless.

...Albanians who lost their life savings in... pyramid schemes can expect no help from the Government even though it was partly to blame... [The] President... sternly told the people, who emerged from 45 years of isolation and stalinism in 1990, that they had learned a hard lesson in free market economics and would get no cash from the Government. "...No democratic government would do this. It would... creat[e hyperinflation]."

...as t[housands of people rallied yesterday in south-western Macedonia to demand that the Government reimburse them for money lost in failed investment schemes], the]... founder of the biggest investment holding firm in Albania... Vefa... said... angry investors should "roll up their sleeves and get back to work" instead of protesting and burning down buildings... [He] said that his... 80,000 investors... had nothing to fear and would get back their deposits in three or four months after a climate of insecurity had passed... Albanians had become used to a soft life over the past five years... "Have they forgotten already when they received a kilo of meat a month and... getting a... television took three years and meant asking a manager 1000 times?" he asked.

...the 36-year-old unemployed civil servant who... has a university degree in economics, sunk his life savings of equivalent to nearly \$NZ900 into a... scheme that promised to triple his money in three months. Sure enough, three months later, scheme operators showed him some official-looking coupons and assured him his investment was worth the equivalent of \$NZ2680. Would he like to reinvest for another three months? Like nearly everyone else in [his] desperately forgettable town, [he] could not resist... But a month later, as pyramid schemes throughout Albania began collapsing like a house of cards, the Government belatedly stepped in and began arresting the operators and freezing their bank accounts... Last week, riots erupted across the country as angry investors blamed the Government for their losses. In Lushnje, local residents burned city hall and trashed several other Government buildings... The national epidemic of pyramid schemes has plunged Albania into its gravest crisis since 1990... [I]n terms of sheer breadth and lunacy, it is hard to top what... [happened. The] amount of money poured into various pyramid schemes... represents a staggering 43[%] of the nation's [GDP]. At least 800,000 Albanians have put money into one or more of these schemes, which, out of a population of 3.8 million, means virtually every family was in. "It became a national mania..." said one Western diplomat... "We thought this was how capitalism works," lamented... [a] Tirana taxi driver for 36 years... [who had] sold his taxi and put the money into a pyramid scheme. His daughter and son-in-law sold their house and moved into a tiny apartment so they too could get in on the easy money. So did the son-in-law's

parents, who sold their small shoe factory and made plans to retire on the anticipated interest payments... [■ One] of the most spectacular [economic frauds of recent history] was the MMM fund in Russia, which claimed to have 10 million investors before going belly-up in 1994. MMM's mastermind... evaded a prison sentence by winning a seat in... Russia's Parliament.

...More violence and shooting broke out in Albania, Parliament declared a state of emergency and the [PM] said even a new government could not save... [the] country from its descent into chaos. [The Albanian] President... said he would "employ all measures under the law... against this rebellion." He gave no further details in his televised speech... [but on Saturday he had] ordered his Cabinet to resign... The state of emergency allows the army to be deployed to quell public unrest and protect public buildings and key roads. Albania has been convulsed by weeks of riots and protests... In the capital, several foreign journalists were attacked outside Parliament by men the reporters believed were secret police.

...Violence flared again in Albania's capital as popular protests against the... Government... entered their sixth week. Riot police prevented about 1000 opposition supporters from marching to central Tirana yesterday... Truckloads of police, supported by plain-clothes security men, moved in with truncheons and hit several protesters... [T]hree protesters were killed during pitched street battles with riot police last week... [in] the... town of Vlore... About 60 students in Vlore [have begun] a hunger strike to demand the Government's resignation and full compensation for investors...

Pyramids just the tip of Albanian frustration... Protests that rose from the ashes of Albania's get-rich-quick schemes... have exposed a deep north-south divide in this impoverished Balkan land. Not only are north and south inhabited by distinct ethnic groups, but their economies have been determined by differences in geography, and when their inhabitants look abroad they look in different directions. The collapse... of the harsh communist rule that isolated Albania from the outside world and minutely regulated the lives of its citizens has brought the two regions into greater contact – and conflict. [The] President... is from the mountainous far north, where the Geg ethnic group predominates. He has surrounded himself with people from his region... Southern Albania – where the Tosk ethnic group and ethnic Greeks live – was home to [the last Albanian] communist dictator... and has remained a stronghold of the Socialist Party, successors to the communists. Many southerners lost out in the political power struggle after the fall of communism, but they also profited from... economic ties with Greece to the south and Italy to the west... In addition to legitimate trade in food and consumer products, drug-running, illegal migration and smuggling have brought money in. The north, in contrast, suffered from sanctions imposed on the neighbouring former Yugoslavia in 1993; its foreign trade was limited for several years to smuggling petrol in violation of the economic embargo. The seeds of Albania's current troubles lay within that greater wealth gathered in the south.

...After weeks of unrest... beleaguered Government... officials [have] issued orders to shoot armed rioters on sight... and... imposed a dusk-to-dawn curfew... At least 12 people were reported killed at the weekend after crowds in several southern towns raided weapons depots and went on a rampage of burning and looting.

...Albania's police and Army are seen by western military experts as unknown quantities in a volatile equation, capable of brutally suppressing demonstrators, or just as easily siding with them... "The police and the Army are unable, it seems, to react in a measured way," said... [the] former editor of *Jane's* defence publications. "They just either run, or get their batons or guns out. The police were trained in how to put down a riot, rather than to help police a demonstration." ...the International Institute for Strategic Studies, said: "There is an obvious lack of discipline and training..." And... a University of Warwick historian specialising in the Balkans, said: "Policemen and soldiers have also been badly hit by financial difficulties and are therefore quite likely to join with the rebels." ...soldiers on numerous occasions have willingly opened fire on crowds, sometimes from helicopters as, the opposition claims, happened in Delvino... [But some have also] stood back and allowed mass looting of security arsenals... Looters even grabbed antiquated Kronshdat and Shanghai patrol boats from the port of Sarada... The 54,000 troops enforcing the state of emergency, with orders to shoot when necessary, constitute one of the most obsolete, rag-tag armed forces ever to be coughed up by the Eastern Bloc... Its arsenal is an antiquated patch-work of hand-me-downs from... China and the former Soviet Union. Add to that some 155,000 reservists, 13,500 paramilitaries, 3500 neighbourhood militia and 5000 border guards, none equipped with anything approaching modern-day crowd control gear. Riot shields, helmets, tear-gas and other non-lethal weapons are either totally lacking or in such small supply as to be negligible.

...It seems that every man in... the southern town of... Vlore... has an AK-47 and fires it with abandon. At nightfall the constant crack of machine guns and the booming of explosives... are deafening... "Ten days ago the sound of that shooting was music in my ears. Now I'm sick of it. Everything is in the hands of the mafia,"... [says a man who is slumped] in the twilight of a waterfront... hotel bar, nursing an Italian beer and musing aloud on the "time of the pyramids." ...Suspicious at first[, he had]... finally succumbed two months ago and invested \$US9000... in Vlore's local pyramid plan, known as "Gjallica." The money represented not only his savings from two years of work as a labourer and waiter in Greece, but most of the proceeds from the sale of his parents' home as well. "With the money we had left over my parents and brother and sister and I moved from our little village... to Vlore where we rented a house. None of us had a job but that wasn't a worry since we were going to be rich. Then one day all the members of the Albanian Parliament showed up in town and wanted their money back from Gjallica, and of course they got it. The next day Gjallica closed its doors and that was the end for us... I worry for my family. There is no future here... But... [in] my home village the chief of police is a convict, a man who just escaped from jail. It's horrible. These people are criminals and they are destroying everything." ...Suddenly a muffled explosion breaks his narrative. The bar's plate glass windows buckle visibly and rattle in their frames. Residents... are fishing Albanian-style by tossing grenades into the harbour. [The man], who works at the hotel, complains that the kitchen freezer is full of fish forced on him by hooligans who have too much to carry away... Since last week 20 people have been killed and more than 100 wounded by gunfire, and a nurse at the Vlore hospital says perhaps half of the shootings are accidental.

...For the past five years, Albanians and the international community have lived under the illusion that communism was dead. But it did not end when the [communist] regime... ceded its monopoly on power. [The incumbent President, a former] communist... has been just as good as his predecessors in using violence against his opponents... [His] regime has jailed and beaten up opposition leaders, independent journalists, businessmen and ethnic minorities as well as ideological adversaries within his Democratic Party. This man still considers power an inherited right rather than a responsibility to which he has been appointed. He masterly deceived the West, saying he was using its sponsorship in his battle against communism. After five years of democracy, Albania has an even weaker state than the one inherited from the communist regime... The international media have written much about his peace proposals. The people understand the President had no choice. About 70[%] of the Army had deserted and joined the protesters. Let the West be in no doubt: [the President] was prepared to crush the revolt with tanks. Only when the kalashnikovs were pointed at the capital was he obliged to relinquish the power he had wielded with an iron hand. The cost of his power games has been exorbitant: in three months, Albanians lost \$US2 billion, about 200 were killed and 200,000 took up arms. The population is now more heavily armed than ever before. All this could have been avoided if the President had accepted the resignation of his Government a month ago and called new elections. Only when a new army emerged, an army controlled by no one, was he forced to bow to these demands. A... new Government will have its work cut out to persuade people to surrender weapons... The West, whose Albanian policy is bankrupt, would be well advised to increase its aid. The only possible way of retrieving the arms is to buy them back. Especially in the south, where a food crisis is emerging, the state may exchange guns for food... Albania's neighbours should have an interest in disarming the country... Across the borders, in Kosovo and Macedonia, Albanians may grow hopeful of unification with their mother country... So far, the overthrow of the ruling regime is the only aim of the armed protest, but this will not necessarily be the case a month from now when the military officers leading the revolt enter into negotiations.

...[over the weekend, f]ighters in the south repeated vows that they would not give up their weapons... They brought no new towns under their control but raided military bases for arms, including one... 55km from Tirana. In some parts of the south the rebellion visibly deteriorated into

lawlessness. Armed gangs roamed at will through rebel-held towns, robbing motorists, terrorising women, shooting at travellers from Greece and ignoring warnings of stern punishment issued by insurgent “defence councils.”

...Albanian authorities, buoyed by a new all-party Government, appealed for calm amid fresh reports of looting of arms... Unrest reached Tirana late last night as the military academy was looted of weapons.

...Tanks moved on to the streets of Tirana yesterday in an attempt to stem virtual anarchy gripping Albania... The crackle of small-arms fire interspersed with tracer rounds as insurgents discharged their weapons into the air could be heard... against a backdrop of the roar of tank engines, but the level of firing appeared to diminish as the tanks patrolled up and down the... main Boulevard of the Martyrs of the Nation... In the clearest sign yet that [the President] and the new coalition Government were no longer in control, all political parties urged Nato's European members to use their military to end the turmoil[... which]... has spread to the north of the country in the past 48 hours... In the northern city of Shkoder... local residents reported that five people had been killed... But the German Chancellor... said after talks with the Dutch [PM]... that the crisis was largely an internal affair and it was not clear what Western troops would do in Albania if sent there to help restore order.

...Italy[... which]... fears a continuing crisis in the small Balkan country could lead to a new exodus of Albanians across the Adriatic... is calling for a[n urgent] European Union meeting on Albania.

...prompted by what it said was deteriorating security, [the US Administration has] ordered 160 Government employees to leave the country... by regular or charter flights... along with their families... Another 2000 [USers] were urged to... join... an international exodus from Albania... [However, staff] of international airlines reported that Tirana Airport was closed, hampering the evacuation...

[Yesterday, the US] sent four Chinook military helicopters into Tirana to pull out its citizens. About 50 [USers] had already been ferried out of the country to[US naval] ships standing offshore. Italy[also] used helicopters to rescue 400 foreign nationals and ferried them to Italian warships in the Adriatic... A few Albanians tried to join in, with one family running toward the open door of an Italian helicopter. As the chopper took off without them, the father sobbed in panic and despair, holding his ill six-year-old daughter in his arms. Moments later, a British helicopter landed to unload paratroopers. The family... climbed aboard.

...After two US Cobra gunships came under fire – with one of them firing back – the U[S] suspended its evacuation. US aircraft rescued 408 people, but dozens of [USer]s were stranded at a diplomatic compound under US marines protection... A bullet hole was later discovered in one of six German choppers taking evacuees to Podgorica, the capital of neighbouring Montenegro. Gunfire also hit an Italian helicopter, the Defence Ministry said in Rome... The unrest threatens to swamp neighbouring countries with refugees. Albanian military ships crossed the Adriatic yesterday, carrying 100 Albanian seamen and 300 civilians seeking asylum in Italy. Most of Albania's borders with Yugoslavia, Greece and Macedonia have been closed... [Meanwhile,] a European mediator has called for an international force to halt Albania's anarchy... [However,] Britain firmly ruled out military intervention in statements issued in London, and in Washington, [the]US State Department spokesman... said: “I don't believe there's an outside force anywhere in the world that could impose order... in Albania.” Albania's armed forces mounted a show of might yesterday with a procession that roared through Tirana's ramshackle streets. Armoured personnel carriers filled with soldiers and armed civilians were followed by... vans stacked with guns. After the procession, soldiers handed out leaflets decorated with a picture of shaking hands, which urged people to calm down, “love each other” and pray for Albania's salvation.

...[yesterday, a] former Chancellor of Austria, [who is now an]... envoy for the Organization of Security and Cooperation in Europe... went to the southern port of Vlore to talk with rebel leaders. But it seemed doubtful whether his rounds would produce anything more effective than the prayer from Mother Teresa, who from Calcutta said of her fellow Albanians, “May God bring them joy, prosperity, peace and unity.” First of all, Albania [i]s in need of sanity... Europe gazed at its southwest last week to find civilization vanishing down a sinkhole. Albania suddenly was no longer an organized society but metastasizing chaos, a malignancy that armed forces of other countries were struggling to keep at bay. In one week, what had begun as spontaneous revolts in a few southern cities turned all of Albania into a collection of scenes reminiscent of Mad Max movies: children brandishing grenades and AK-47s, looting and gunfire on an epidemic scale, an utter collapse of civil authority. Foreigners were fleeing the country en masse, many by helicopter airlifts to warships in the Adriatic. All at once, it seemed, small, sun-washed Albania had become the state of Anarchia. Europe has experienced nothing quite like this within living memory, perhaps for ages. The uprisings that spread north to overtake Tirana, were outbursts of sheer lawlessness more than any kind of movement, since the insurrection had no command. In one sense, it was a bit like the French Revolution, complete with a latter-day Bastille: Tirana's central prison, from which all 600 inmates escaped, including[a] former Socialist Party chief... and Albania's last communist ruler.

...Albanians fired... weapons... into the air... to celebrate the election of [a]Socialist... as their [new President. By the way, their]... last communist President[... who was]... charged with crimes against humanity... [but] was among 130 inmates who escaped from Albania's jails during an armed uprising last March... is still on the run. [3] senior ex-communists were... [also] charged with crimes against humanity for ordering the deportation of anti-communist dissidents... [and] sentenced to death last year... An appeals court revoked the sentence and imposed jail sentences instead.

...East Germany's last hardline communist leader... was jailed for six and a half years this week for the deaths of citizens who tried to flee to the West. The following is a guide to the fate of Europe's other communist leaders since the collapse of the Iron Curtain... [The last East German leader's] Stalinist predecessor... who ordered the building of the Berlin Wall... briefly went on trial but the case was dismissed in 1993 because of his ill health. He died in exile in 1994. The former head of East Germany's notorious state security (Stasi)... was released in 1995 having served two-thirds of a six-year sentence for killing two policemen. In May, a German court handed [an]East German spymaster... a two-year suspended sentence for kidnapping, coercion and bodily harm for supervising Cold War snatches. The former East German Defence Minister... and his deputy... were jailed last year for seven and a half years and five and a half years respectively for the killing of East Germans trying to flee the country. [The recent ‘cracking of the Stasi secret code is opening files that could lead to more arrests for Cold War activities.’]*Czech Republic* – The most serious cases concern three former Politburo members accused of treason for their part in the 1968 Warsaw Pact invasion of Czechoslovakia. They are... the Communist Party chief overthrown during the 1989 “Velvet Revolution,” [a one-time PM]... and... a former central committee member. Only one top communist, [the]Prague Party boss... has been jailed since 1989. He was sentenced to four years for “abuse of power” but paroled on appeal. *Romania* – ...[after] Ceausescu was summarily tried by a military court and executed by firing squad with his wife... over controversial “genocide” charges... [post]-communist authorities abolished the death penalty and brought to trial 87 top communists and senior secret policemen on charges linked to the repression of the 1989 uprising in which more than 1000 people were killed. All 87 were freed on health grounds, paroled or pardoned... *Hungary* – ...had the most liberal of all the communist regimes... Consequently there was less demand for trials of former communists than a desire to set the record straight. *Bulgaria* – A one-time associate of the late Soviet leader Leonid Brezhnev and... Ceausescu, [Bulgaria's]... communist leader... was convicted in 1992 of embezzling about \$37.5 million of public funds... The Supreme Court overturned the sentence in January, but he remains under house arrest on separate charges for his assimilation policy against ethnic Turks in the 1980s. *Poland* – No former senior communist official has ended up behind bars. A trial of[a] former military strongman... for the shootings of protesters by security forces in [the 1970s] has been indefinitely postponed because of his poor health. Seven senior officials still face a trial that has been repeatedly delayed... *Russia* – The only prominent Russian ex-communists sent to prison were a group of hardline pro-communists who led a coup against the [last General Secretary]... in August 1991... The plotters were granted an amnesty by a sympathetic Parliament in 1994. [Incidentally, ‘after Stalin died his successor went to East Berlin, which he intended to hand over to the West. However, the puppet rulers of East Germany

wanted to remain in power and, after the Soviet ruler left, staged a riot, then requested Soviet help to quell it. Stalin's successor was executed on return to Moscow.']

...An explosion yesterday blew apart the year-old, 10-metre bronze statue... of... Nicholas II... Moscow's only monument to Russia's last tsar... who abdicated 80 years ago. Now, with communism swept away, the resurgent Orthodox Church may make him a saint.

...[NICHOLAS II and his family officially became saints this week after a concerted campaign of films, lectures, icons and exhibitions extolling the ruler executed by the Bolsheviks. The Russian Orthodox Church's Council of Bishops, meeting in Moscow, praised Nicholas and his family for their meekness, patience and humility, and hailed "the light of all-conquering Christian faith". Efforts to sanctify the Romanovs at the last Council of Bishops four years ago collapsed, but this time extensive lobbying by supporters of their canonisation made approval almost inevitable. The council emphasised that the Tsar was being honoured for his conduct after giving up the throne and the way he met his death, not for his rule while emperor. He was called Bloody Nicholas for authorising the city's governor's troops to open fire on striking workers in 1905, killing 4600 demonstrators in St Petersburg.]

...Two Orthodox priests, a handful of fervently religious pensioners and some local monarchists have begun the macabre task of excavating the ruins of the house where Russia's last Tsar was murdered with his family, in an attempt to carve out the precise boundaries of the windowless cellar where they were shot in July 1918. Once the room has been located, the construction of a huge church in honour of the Romanov family will begin. Highlighting the project's gruesome origins, the building will be consecrated as the "Church on the Blood." For most of the century, Soviet governments feared that the Romanov execution site could become a shrine for repressed monarchists and a pilgrimage point for Orthodox Christians. Officials swiftly converted the modest two-storey house into a museum of the revolution. In 1977, they demolished it altogether, covered the ruins with a thick layer of asphalt and built a five-lane road next to the spot. But a large pile of bricks and stone fragments from the walls of the cellar has been gathered and will be used in construction of the Russo-Byzantine style church, which is expected to cost at least \$US7.5 million. No state funding is forthcoming, so the bulk will come from private donations and sponsors. The extravagance of the project has shocked many, particularly given the manifold problems troubling the local community. However, none of the volunteers seemed unduly concerned by the expense. One volunteer, who received a monthly pension of 706 roubles (\$48), agreed that the price tag was irrelevant. "Before I started going to church, I was always short of money. But then I started praying and God began to help me."

...if you take your rubbish out after midnight you risk losing all your money. Superstitions play a major role in Russian daily life, particularly in rural areas, where people prefer to observe irrational traditional beliefs rather than accept the arguments of a more scientific approach and tempt fate. Even in cities, superstitions govern the lives of many. Many of their superstitions are known in other parts of the world but in Russia they are very popular and part of the social game. Recently, when a former PM was welcomed in the provinces, he was offered a cutting instrument as a present. He immediately took a few roubles from his wallet "so that friendship would not be cut." □ 'When Russia's President showed up for work last week for the first time this year, government and Opposition leaders alike were nervous that he might trigger a major new political crisis – the last thing this depression-mired country needs. Their nervousness increased when the respected daily *Kommersant* wrote: "The tradition is that firings will follow." This time, he ousted several Kremlin aides. Rumours are rife that the Finance Minister, Agriculture Minister and First Deputy Premier and perhaps even the PM will be next.'

...yesterday, Russia's President 'rocked financial markets by sacking the PM and appointing his ally as acting PM'...

'The world has, by turns, respected Russian's President, feared him, laughed at him. But last week may go down in history as when the world finally came to share the feeling of so many Russians towards this sick, self-obsessed, man – a feeling of contempt, mingled with alarm and shame that a well-educated, nuclear-armed European country should be under his control. What made the President dump his third government in 14 months – a stodgy but well-liked team that had staved off economic disaster and brought the country a measure of political peace? Envy? Unquenched ambition? Habit? Fear? Or madness?'

...Russia's President sacked yet another PM last night, leaving analysts worried that the country could be slipping into anarchy. The President signed a decree discharging the acting PM, who had served less than three months, and his entire Government. No reason for the move was given. The head of the Federal Security Service – the former KGB – was named as acting PM. The decree ordered all present cabinet ministers to continue in their posts until a new Government is formed. In a television address, hours after the sacking, the President also said he'd decided the new acting PM should succeed him next year. The President has not said so clearly before whom he would prefer to succeed him, although he has alluded to others in the past. According to the Centre for Political Technologies in Moscow's deputy director: "The President has a special talent for taking all of our problems and making them worse."

...The] President... has signed a controversial law on religious freedoms, sparking concern Russia was taking a step back towards the religious repression of the Soviet era... [In related news], an atheist group has been given permission to put its sign next to the official... [Xmas tree] in Madison, capital of the US state of Wisconsin... [It will say]: "In this season of the Winter Solstice, may reason prevail. There are no gods, no devils, no angels, no heaven or hell. There is only our natural world. Religion is but a myth and superstition that hardens hearts and enslaves minds."

...Chesterton is often quoted, "Whoever doesn't believe in God will believe in something worse"... The worst thing that happened to humans as they evolved from their ancestor apes was acquiring superstition as soon as it dawned on them that they could not explain their environment... [I]nstead of accepting natural hazards the way the other animals did they made up tales to explain them in terms they could understand. Without belief there would have been no Christians fed to the lions, no Crusades, no Inquisition, no... mad claims of "satanic abuse" of children, no Taleban, no Muslims massacring villagers in Algeria... no Bosnian "ethnic cleansing"... When it comes to belief, we have not progressed a single step beyond the cave-dwellers... People are only truly free when they can say, and mean it, that there is nothing they believe in.

...[the Yugoslav President does not, apparently, believe in anything. Almost everyone who has done business with him has come away convinced he is devoid of any ideology beyond the maintenance of his hold on power.]

...analysts believe... that the... [Yugoslav President] can probably hang on only until republican elections at the end of the year... The decline and almost inevitable fall of [this President] will surely become required reading for dictators everywhere. In a matter of weeks, he has slipped in the public eye from invincible supremo to vulnerable lame duck... As the President hesitated behind closed doors in recent weeks, the political cost... grew inexorably. Nervousness about the future hit the dinar. In the space of a month, it lost a fifth of its value against the German mark. This depreciation is already having an inflationary impact, which will be exacerbated if the Socialist regime continues to print unbacked money... The pundits in Belgrade's smoky bars are already thinking of [their President] in the future perfect tense. "When he is gone," they are beginning to wonder aloud, "what next?" It is a question few, even among the opposition, have given much thought to. Most Serbs had grown accustomed to [their President]'s domed head and widow's peak as permanent fixtures on the throne. As in most states dominated by one party, the opposition has little experience. Of the two main leaders, [one]... is a philosophy graduate, and [the other] is a novelist. But as [a] Serbian economist... argues in his book *The Economics of Destruction*, the ruling elite has become expert only in plundering the nation's assets and producing a system in which "stupidity and insanity is heavily promoted." Could it possibly be worse? A more serious concern about [the President]'s would-be successors is their fixation with nationalism. [The novelist] ran a Serb paramilitary group before the Croatian war although he subsequently renounced violence. And throughout the Bosnian conflict, [the graduate] openly backed... the Serb leader charged with genocide by the U[N] war crimes tribunal. The opposition's potential supporters in the Orthodox church, the Army and the Academy of Sciences all have blood on their hands, as promoters of militant Serb nationalism. Might the fall of [the President] unleash untapped reserves of xenophobia and trigger another war?

...[a 'US envoy met the ethnic Albanian's leader yesterday after failing to move the Yugoslav President on the question of independence for Kosovo. Even the threat of new Western sanctions inflicting fresh damage on his crippled economy didn't budge the President from his refusal of foreign mediation

of Kosovo's independence demands. Serbs voted overwhelmingly against foreign mediation in a referendum last month. The Albanian leader, with Western support, has refused direct talks with the Belgrade government without the participation of a mediator'...

'The Yugoslav Army pounded ethnic Albanian strongholds in the province of Kosovo at the weekend after the Kosovo Liberation Army captured eight Yugoslav Army soldiers. Reuters correspondents saw several tanks rapid firing in the direction of the KLA-controlled villages of Lapastica and Gorna Lapastica, nestling in forest-covered mountains in the region of Podujevo, north of the capital Pristina.' In further news from the Balkan Peninsula, 'the man killed by French peacekeeping troops in Bosnia at the weekend was the first person to be charged with rape as a war crime. The French troops shot dead Dragan Gagovic after he tried to run them down in his car during an attempt to arrest him in the eastern Bosnian town of Foca. Gagovic was local police chief in Foca, where Serb paramilitary forces expelled or killed Muslims. The tribunal charged that on at least one occasion he responded to complaints about sexual assaults by raping women who protested. No other international court, including the Nuremberg and Tokyo trials after WW2, dealt with sexual crimes against women. The female tribunal judge said at the time of Gagovic's indictment: "After this tribunal, no single war criminal can say, 'I did not know that rape was not allowed in war'." Foca is known for allegedly harbouring several indicted Bosnian Serb war criminals. The fatal shooting sparked an angry protest, involving about 100 people, outside the office of the UN policing mission in Foca, during which two staff members were injured'...

'Unarmed international monitors of the Kosovo Verification Mission are struggling to control an extremely tense region and Nato has warned the Serbs not to launch a new offensive before peace talks resume next month. The warning came as the US said the Yugoslav Army had moved 4500 troops, more than 60 tanks and other heavy equipment to the border of Kosovo, backing up forces already inside the conflict-racked province, where around 2000 people have died in the past year. Nato threatened air strikes against Yugoslav military targets if the Serbs blocked an autonomy deal, but the alliance's hands were tied when the ethnic Albanian negotiators did not sign up either. International pressure for a deal appeared to have caused a new split in ethnic Albanian ranks too, pitting the negotiating team against KLA hardliners wanting full independence. In Kosovo itself tank, machine gun, mortar and small arms fire broke out in the north after the security forces deployed their full range of heavy armour in what they called a winter training exercise.'

...'Serbian security forces blocked two major roads in new fighting in Kosovo yesterday and ethnic Albanians reported that armed, masked Serbs had ejected thousands of people from their homes. Civilians fled the town of Srbica with only the clothes on their backs as violence intensified in a dangerous vacuum caused by the withdrawal of truce monitors following the Serbs' rejection of a Kosovo autonomy plan at peace talks in Paris. Serbia is now under threat of Nato air strikes to force acceptance of the peace deal already signed by representatives of Kosovo's restive 90% Albanian majority. All 1380 monitors crossed into nearby Macedonia to avoid the risk of being taken hostage or used as human shields by angry Serbs should Nato bombs rain down.'

...'Hollow threats and fake deadlines are Nato's trademark in the Balkans, but this time it will not be able to run away. Letting the Serbs call Nato's bluff over Kosovo yet again, as they did over Bosnia so many times in the past, would leave the alliance's remaining credibility in shreds. So you can hear Nato's leaders talking out loud, trying to work up the nerve to drop a few cruise missiles on the Yugoslav President. "The military clock is ticking," says Nato's Secretary-General. "The threshold has been crossed," says the US President. "The Serbs absolutely must move. There is no other alternative except war," says a spokeswoman for the French Foreign Minister. "I wouldn't look at this as a one or two-bomb affair," says the Supreme Allied Commander in Europe. But the Serbian dictator says nothing at all – and in St Petersburg, a website contains instructions on how to make a device for less than \$200 that will jam the signals from global positioning system satellites that make cruise missiles so accurate. It also contains an appeal to "the mothers of Nato pilots and soldiers" not to bomb Belgrade. The problem with cruise missiles is that they are good for everybody except the real victims of this confrontation, the Albanian Kosovars who are being shelled and burned out of their villages by Serbian forces even as you read this. They are good for Nato because they let it act on its threat to punish Serbia without annoying the "mothers of Nato pilots and soldiers," who would get very upset if their offspring were killed or captured in a Balkan war. The thought of taking casualties, and paying the price in domestic support paralyses the will of political "leaders" throughout the West. Cruise missiles are good for the Serbian dictator, too, because he needs a few bombs to be dropped on Serbia right now. Not too many, you understand, but just enough to unite Serbian nationalists behind him if he decides to tough it out. And "not too many" is what he is likely to get. When your bluff has been called this many times, it is stupid and irresponsible to start bluffing again. The main victims will be the people you are trying to protect.'

...'A fresh Serbian anti-guerrilla offensive and the ambush murder of four policemen pitched Kosovo deeper into a vortex of violence as a US envoy swung into a last-ditch peace mission. The architect of Bosnia's 1995 peace treaty, and the broker of an October ceasefire in Kosovo that later collapsed, is due to see the Yugoslav President today. The envoy will deliver a final warning to the dictator to call off new offensives in Kosovo, from which 70,000 civilians have fled in the past six weeks, and accept a plan granting wide autonomy to the province's ethnic Albanian majority. If the dictator spurns the message, Nato says it will be poised for air strikes to cripple Belgrade's war machine and avert a looming new refugee disaster. As the likelihood of Nato intervention increased, both warring parties in Kosovo appeared to have gone on the offensive. The British Liberal Democrat chief, a specialist in Balkan affairs, said last night that the situation in Kosovo was putting Europe closer to a major ground war than it had been for 50 years.'

...'Nato forces were this morning poised to launch airstrikes against Yugoslavia aimed at ending its scorched-earth policy in Kosovo. Eight US B-52 bombers, based in western England, took off late last night, but it was not clear early today if they would join the first wave of airstrikes. Stealth bombers in Italy are ready to scramble and Nato's permanent fleet in the Mediterranean is steaming towards the Adriatic. Fears that the Kosovo crisis could spill across borders and bog down Europe in a Vietnam-style conflict are already haunting Nato's call to arms. The strikes were called after the US special envoy failed to persuade the Yugoslav President to halt his offensive against Kosovo's rebels and allow a 28,000-strong peacekeeping force into the area.'

...'Kosovo is the rock on which the Yugoslav President founded his rise to power and its unresolved conflict between Serbs and ethnic Albanians still holds him in thrall a decade later. The land strewn with ancient battlefields and Orthodox monasteries belongs to Serbs, most of whom refuse to live there although they accord the southern province almost mystical status as a pantheon of their national identity. Serbs and Albanians have competed for centuries in Kosovo, the seat of Serbia's medieval kings, and their rivalry has been riven with outbursts of bloodshed and foreign interference. An Albanian leader says: "Albanians, who are descended from the ancient Illyrians, have lived in Kosovo for 2000 years. Slavic tribes, ancestors of the modern Serbs, entered the region 1500 years ago." A Serbian historian wrote that more than 500,000 Serbs fled Ottoman persecution in Kosovo between 1690 – when Serbs say they first became a minority – and the start of the 20th century. An Albanian legislator says: "The Serbs ethnically cleansed 650 Albanian villages in central Serbia in 1877-1878. Some 50,000 Albanians were killed during Yugoslav military rule over Kosovo in 1945." Albanian historians blame the Great Powers for dividing the nation when they drew Albania's present-day borders. "Half the Albanian nation lives in the territory of former Yugoslavia and the other in Albania created at the London Ambassadorial Conference in 1913 and the Paris Peace Conference in 1919." In 1989, Kosovo lost the autonomous status it had enjoyed since 1945 when the Yugoslav President imposed direct rule from Belgrade to contain what he said was secessionist agitation. Albanians retaliated with a campaign of civil disobedience, creating their own parallel government and public services.' ● 'A squadron of US B-52 bombers armed with cruise missiles was en route to Yugoslavia early today for what was expected to be fresh airstrikes in defence of the Kosovo Albanians. And both Britain and the US warned the Yugoslavs that the bombing would continue until they stopped the horror in the province. Early yesterday (NZ time) Nato forces attacked Yugoslavia with missiles and bombs for a second night. The second wave of attacks occurred in the face of growing protests'...

'As Nato forces stepped up air strikes against Yugoslavia, a sign posted in a downtown Moscow building implored: "Russia, Save Serbia and God will save You!" And as bombs rained down on the Balkans, missiles of a different kind were being launched in Moscow. Eggs, bottles, ink, and rocks pelted the US Embassy, where some 500 people gathered to protest against the US-led military intervention in the Kosovo conflict. In the foreground, however, a

separate group of Russians looked somewhat nervous. They were waiting to receive their US visas, much to the disgust of their compatriots. Buses, courtyards and newspapers are buzzing with debate about exactly what Russia's policy towards Yugoslavia and Nato's military intervention should be. Russia has fought to defend Serbia, which shares a language, religion and culture similar to its own, at least half a dozen times in the past 150 years. In the great Russian author Leo Tolstoy's novel *Anna Karenina*, hundreds of young Russian volunteers, singing patriotic songs, pack into railroad cars bound for Serbia to fight in the Balkans.' While the protests in Moscow were largely peaceful, 'police fired teargas and chased hundreds of demonstrators through the Macedonian capital yesterday after crowds attacked the US, British and German Embassies and other sites in protest at the Nato attacks.' ■ Last night 'the Albanian news agency quoted their Information Minister as saying that 176 Kosovo refugees who crossed into northeastern Albania told of a massacre in the border village of Dobruna. "The Kosovo refugees, among them 96 children, were eyewitnesses of this massacre, in which the Serb military and police forces executed 20 teachers and the director of a school in the presence of their pupils." The agency also said Serb forces had attacked and set Goden on fire.'

...yesterday, as KLA sources said Serb paramilitary gangs had slaughtered several hundred Albanians in the southern city of Djakovica overnight after Nato bombed a local barracks, Nato launched its third air raid against Serb military positions, and its first in daylight, and followed it up with a fourth wave from bases in Italy. There were also unconfirmed reports 30 civilians were executed and their houses burned down in Suva Reka on Thursday and Friday.'

...CLOUDS of toxic gas drifted near Belgrade after Nato warplanes hit a nearby pharmaceuticals plant. Residents in the village of Batajnica, northwest of Belgrade, complained of sore eyes and a metallic taste. The Belgrade civil defence crisis centre said a second cloud of toxic material had been reported in Sremcica, also near the capital. The centre advised people to wear wet towels around their faces to avoid inhaling fumes. □ THE Pilots who flew the B-2 Stealth bombers in Yugoslavia – their first use in combat – were happy with the jets' performance after travelling for 31 hours to deliver their payload. A senior US defence official said the B-2 was selected because of its ability to attack many targets. Each bat-winged, radar-evading plane carried 16 one-tonne weapons. The F-117 Stealth bomber, also used in the fighting, carries only two bombs. With only a pilot and co-pilot aboard, the B-2 also puts fewer crewmen at risk than the B-52, which unleashed cruise missiles from launch points outside Yugoslavia.'

...Yugoslavia's plans to bring three captured US soldiers before a military court today have ratcheted up tension in the ugly Kosovo crisis. The prospect of the three Army cavalry scouts being paraded into a courtroom a day after being shown, bruised and exhausted, on Yugoslav state television had the US Administration fuming. After a US Defence Department spokesperson said 12 more F-117 Stealth fighters like the one that came down in Serb territory last weekend will be deployed to boost the 10-day-old campaign, the US President said Washington would hold the Yugoslav President personally responsible for the safety of the men, who were seized on patrol along the Macedonia-Yugoslav border.'

...Scenes the world swore it should never see again are playing out at the borders of Kosovo, where thousands of dispossessed refugees are being forcibly transported. Robbed of identity papers and the deeds to their homes, the province's ethnic Albanians are being driven out by Serb security forces. The forced deportations have now stepped up, with 10,000 people herded into two trains in the capital, Pristina, and abandoned with their marching orders near the Macedonian border. "People were crammed on to the trains like sardines," said the UN High Commissioner for Refugees. "Two people died in the crush." As chilling as the border scenes are – likened by an aid official to the Nazi persecution of the Jews – the real fear is that the picture inside Kosovo is much worse. "I do feel that something horrible is happening inside," said the EU's official in charge of aid. "Otherwise there is no reason media and humanitarian personnel are not allowed in." More than half a million of Kosovo's mainly ethnic Albanian population of 1.8 million has trickled out in the past year, but since Nato launched its airstrikes the exodus has escalated. More than 180,000 refugees have left in the past week.'

...Yugoslavia's President and a moderate Albanian political leader have agreed at a surprise meeting to seek a peaceful solution in Kosovo, according to reports in the Serbian state media. It was not immediately clear what practical effect such a pledge would have. Commitments to peaceful solutions have been made by both sides before but fighting went on regardless. Government leaders in Albania were sceptical the meeting had really occurred, while KLA guerrillas said the moderate would be guilty of treason if he had seen the President. But Kosovo Albanians contacted from abroad said the moderate could not have met the President willingly. "He was forced to go there after being threatened by police," said one Pristina man in a typical comment.'

...NATO fired cruise missiles into the heart of Yugoslavia's capital yesterday. The strikes signalled a promised escalation of the air campaign. Three loud explosions shook a government district near residential areas and the city's main medical complex shortly after midnight. Flames engulfed the Yugoslav interior ministry and the Serbian interior ministry, which is the republic's police headquarters. Serbian TV also reported Nato missiles hit the slopes of Fruska Gora hill northwest of the city, where three villages were hit, and 'missiles destroyed a major bridge over the Danube River at Novi Sad, in northern Serbia. Shipping on Europe's longest waterway to and from the Black Sea was blocked as a result, and trains between Vienna-Belgrade were suspended.'

...The first indication that Nato was bombing a capital city in Europe came with three gentle thuds at 12.40 am exactly. What was left of the buildings that housed the Serbian and Yugoslav Interior Ministries faced each other across Kneza Milosa Boulevard, shattered and smouldering. The air was filled with the smell of burning plastic. A woman was in labour in the city's maternity hospital, 300m away from the blazing buildings. Her 1085gm son was Belgrade's first bomb baby since May 15, 1944, when US, British and French planes bombed the city to drive out the Germans. "They wanted to rescue us then because they were our allies – but they chose the wrong way, just like they are choosing the wrong way now," said a student reading Chinese.'

...WHEN it became clear that Nato was about to launch airstrikes against Serb-led Yugoslavia, a popular Belgrade TV station immediately changed its programming. Out went a much-advertised Hollywood comedy named *Twins*. In came an epic Serbian movie, *The Battle for Kosovo*, depicting 14th-century Serbian knights in heavy chain mail being slaughtered by Ottoman hordes on horseback. To most outsiders, a film about the most crushing defeat in Serbian history might seem a strange way of boosting the morale of the population on the eve of an attack by a combined air force of the US, Britain, France and Germany. But that way of thinking fails to take into account the historically charged mind-set of many Serbs – one in which defeat can mean victory, and the fact that the rest of the world is against you is merely further proof you are right and everybody else is wrong. As they prepared for their bombing campaign against Yugoslavia – the first time in Nato's history that the alliance has attacked a sovereign country – Nato military leaders have been able to draw on exhaustive intelligence data about Yugoslav troop concentrations and anti-aircraft defences. Such information is obviously essential for waging the kind of high-tech war in which Nato is now engaged. But equally important to the success or failure of the strategy, including the key question of what will happen after the bombing stops, is intelligence about the collective psyche of the Serbian nation. Here satellite photos are of little use. The Serbian empire was effectively annihilated on June 28, 1389, a day as important to Serbs as July 4, 1776, is to Americans or Bastille Day is to the French. After the battle, the Serbian leader, Prince Lazar, was captured by the Turks, brought before the sultan and ceremonially beheaded. To the Serbian mind, the parallels between past and present are clear. Turkish Ottoman Empire was the superpower of the 14th century, militarily and technologically superior to the Serbs. Just as Prince Lazar's knights were no match for the Turkish cavalry, the Yugoslav army has only a fraction of the military power available to Nato. But this may not matter if the Serbs are able to resurrect their tradition of national defiance. The Yugoslav administration attempted to tap into this tradition by declaring, even before a shot had been fired, that Serbia had already won a "moral victory". Although the battle of Kosovo led to the extinction of the Serbian state, memories of the heroic last stand by Prince Lazar and his knights sustained the Serbian popular imagination during five centuries of Ottoman rule. Every Serbian soldier "knows what he is fighting for", reported an American journalist at the outset of WWI. "When he was a baby, his mother greeted him, 'Hail, little avenger of Kosovo!'" The legend of Prince Lazar and Kosovo became a potent political force in Serbia as the old Yugoslavia broke apart in the years following Tito's death in 1980 and the collapse of communism. In 1988, a coffin purported to contain Lazar's mummified remains was taken on a triumphal tour around Serbia and displayed in front of huge crowds of wailing, black-clad mourners. The then leader of the Serbian Communist Party and now Yugoslav President, used this outpouring of emotion to repackage himself as a national leader. On the 600th

anniversary of Lazar's death, in June 1989, the President was hailed as the reincarnation of the fallen prince at a rally on Kosovo Field attended by more than 1 million Serbs but boycotted by Albanians'...

'Nato jet aircraft pounded into armoured vehicle columns in Kosovo for the first time yesterday. The attack was a fiery verdict on Yugoslavia's unilateral ceasefire declaration in Kosovo, which Russia alone welcomed, saying the chance for peace should not be missed. Earlier, Nato missiles destroyed another bridge over the Danube in Yugoslavia's second city, Novi Sad, over which civilian traffic was crossing. Seven people were reported injured. But the main success for Nato lies in being able to strike at Yugoslav ground forces in Kosovo as opposed to static targets such as buildings and bridges. Nato believes yesterday's raids will demonstrate to an increasingly sceptical Western public that Nato aircraft are able to do something about the units carrying out actions against ethnic Albanians. Meanwhile, France's President urged on national TV that a European Council meeting on April 14 consider an emergency plan to help Albania, Macedonia and Montenegro deal with the 430,000 refugees the UN says have fled Kosovo since strikes began on March 24.'

... 'the EU had previously allocated 2.4 million euros to Macedonia in humanitarian aid before the refugee crisis. Another 15 million euros, to be shared with Albania, is earmarked for budget support to help organise the administration and between 20 and 30 million euros will come as balance-of-payment support. Another 10 million euros in humanitarian aid will be available to the whole region affected by the crisis.' 'German politicians have cited the flood of refugees from Kosovo as a major justification for Western intervention. Germany will accept temporarily some tens of thousands of refugees and is urging other EU countries to take in some as well. Germany took in more than 350,000 refugees from the Bosnian War – more than any other EU country (some 100,000 have yet to go home) – and spent billions of marks caring for them.'

... 'US military action in Kosovo has already cost \$US500 million and extended intervention could cost the US billions more, according to US reports. Last year's four-day Desert Fox strike against Iraq – which Congress has yet to pay – was \$US260 million over the Pentagon's budget, while the 1990-91 Desert Shield and Desert Storm operations cost \$US61 billion, of which the US paid \$US7 billion, with the remainder picked up by other countries.'

... 'Vaso Cubrilovic, one of the young men who took part in the assassination of the Archduke Ferdinand in Sarajevo in 1914, later became a distinguished historian and member of the Serbian Academy of Sciences and Arts. In 1937, turning his mind to Kosovo, he wrote that Yugoslavia should expel as many Albanians from the region as possible – or it would pay a heavy price later on. A 1986 memorandum on the future of Serbia, written by leading Yugoslav academics, declared in a section on Kosovo that: "It is not just that the last remnants of the Serbian population are leaving their homes at an unabated rate, but according to all evidence, faced with a physical, moral and psychological reign of terror, they seem to be preparing for their final exodus." Kosovo's Serbs were, it went on, being subjected to a "physical genocide". This was nonsense, but the memorandum changed the political landscape.'

... 'Britain's PM stepped up the pressure on the Yugoslav President yesterday by appearing to warn Belgrade that Nato objectives in the campaign against Yugoslavia may be widened to give Kosovo its independence, which the West has so far ruled out. "I think it's more and more difficult to foresee autonomy within the Federal Republic of Yugoslavia," he told the BBC. Nato warplanes continued to hit targets across Yugoslavia yesterday. More than 100 workers were badly hurt when bombs damaged the Zastava factory in central Yugoslavia which makes cars and small arms. The Pentagon said Yugoslavia's two oil refineries had been knocked out, and Nato air attacks had curbed Belgrade's ability to supply fuel to its troops in Kosovo by at least 20%.'

... 'Serb soldiers crossed into the remote Tropoje district of northern Albania last night and heavy shelling could be heard, said peace monitors in the nearby town of Bajran Curri. Albania has accused Yugoslavia of trying to draw it into the war in Kosovo by launching attacks against its territory.'

... 'The first of 24 US "Apache" attack helicopters could arrive in Albania this week to join a Nato force striking Yugoslavia. The low-flying, lethal Apaches will increase the alliance's ability to smash Serb tanks and troops sweeping Kosovo.'

... 'Serb military forces in Kosovo are forcing ethnic Albanian refugees to march alongside tanks and other armoured vehicles in an attempt to shield them from Nato air attacks, a top US official said yesterday.' In local news, 'the cabinet has decided to offer permanent residency to up to 200 refugee families, under a programme uniting them with relatives already in this country. Members of NZ's Albanian community have prepared a list of families to whom they are related and who are believed to have fled Kosovo. This will be handed to the high commissioner, to see whether the families can be traced. The UN has not yet decided whether to accept the offer and the international aid effort is giving priority to temporary resettlement in countries closer to their homeland.'

... 'Every day the people of Belgrade turn out in large numbers to vent their anger against Nato. Some have been standing on strategic bridges to act as human shields and defy the bombs and missiles.' However, the human shields may feel less defiant today because 'at least 10 people died yesterday when Nato jets bombed a bridge in southeast Serbia as a train was crossing it. A further 16 passengers were injured in the daytime attack'...

'*Misfortunes of war* A picture transmitted from a Nato missile moments before striking the Gdelica Bridge over the South Morava river clearly showed a passenger train crossing it. Yugoslav officials say 50 people were killed while Nato expressed its regrets and said the train was not the intended target.'

... 'A man's body remained seated at the wheel of his tractor. On the trailer behind were two dismembered legs. On the grass nearby lay a man's head and around a dozen bodies, clearly mutilated by explosions. This was the scene foreign reporters witnessed as they were taken to Kosovo on a conducted tour to see what Serb officials called a "first-class criminal act." The reporters also saw damage Serbs say was wrought by Nato planes which bombed a long column of ethnic Albanian refugees on Thursday morning. "There were four attacks, one after another. 72 people were killed and dozens wounded." Nato has admitted it mistakenly bombed a civilian vehicle in a convoy in Kosovo in what it called "one tragic accident." However, yesterday it denied a Yugoslav news agency report that its missiles hit a refugee centre in the Serbian town of Paracin overnight.'

... 'Nato planes targeted a hydroelectric plant, bridges and command centres in overnight raids on Yugoslavia as Germany unveiled details of a plan it is working on to end the conflict in Kosovo. Germany's deputy foreign minister said the plan involved Yugoslav troops leaving Kosovo, the return of all refugees and the installation of an international peace-keeping force, which would have a UN mandate but be under Nato leadership. Under the plan, Nato would suspend its bombing as soon as Yugoslav troops started withdrawing from Kosovo and officially halt it once the withdrawal had been completed.'

... 'Nato leaders vowed yesterday to launch a naval campaign to halt oil shipments to Serb forces in Kosovo despite French concerns that stopping a ship on the high seas would be an act of war. The 19 allied leaders attending the anniversary summit of the "world's most successful military alliance," as it likes to bill itself, also adopted a new strategic mission that lays out Nato's broader job of intervening beyond its borders to halt regional crises or to meet other threats to its members' security. Their agreement stressed the "primary responsibility" of the UN Security Council for world peace without giving it an explicit veto on Nato action. France claimed victory for the wording, saying it meant Nato could not act without UN authorisation. But Nato's Secretary-General, asked whether the alliance would need a Security Council resolution each time it intervened outside its members' territory, said bluntly "no." With evidence that the Serb military was growing short of gasoline to the point of siphoning fuel from cars of ethnic Albanian refugees, Nato leaders said they wanted a "visit and search" regime to stop oil shipments to Yugoslavia. But they admitted the plan might have legal problems, and it could antagonise Russia, Yugoslavia's main oil supplier, at a time when Nato leaders are counting on Moscow to help to mediate a settlement with Belgrade and contribute troops to an international security force for Kosovo.' In another development, 'three US soldiers celebrated their release from 32 days in Yugoslav captivity last night. Their release came despite air raids in which a Nato plane crashed and at least 34 people, including 15 children, were killed when a bus full of civilians was hit on a bridge in Kosovo. Nato acknowledged it had hit the bus, which was sliced in half by the impact. The bridge remained standing.'

...‘At the end of last week, Nato warplanes were conducting 600 sorties a day, several times the intensity of bombing at the start of the campaign. As the rhythm has stepped up, punishing damage has been inflicted on the machinery of the Yugoslav regime, as well as the country’s infrastructure and economy. But the risk of tragic blunders has escalated too, as evidenced by the weekend bombing of a bus on a bridge at Luzane. Despite such horrors, morale and unity within the alliance remain remarkably strong, with high public support for the air offensive – which seems likely to carry on for the coming weeks.’

‘“For them on the ground it must seem like they’re fighting God,” declared one Nato commander.’

...‘Nato missiles slammed into China’s embassy in Belgrade yesterday, killing at least 3 people and injuring 21. An outraged China, which said 3 missiles hit the mission in a “barbarian act”, strongly condemned the attacks and the UN Security Council met in private session at Beijing’s request to discuss the issue. Nato admitted its planes fired on the wrong building by mistake. “This was a terrible accident,” a spokesman said. But air strikes would continue.’

...‘Plans for a ground force of up to a 100,000 strong are being drawn up for Kosovo, defence and diplomatic sources say. The huge scale of the peacekeeping commitment is two to three times more than originally expected and is bound to cause further disquiet among Nato allies, rocked by the weekend’s mistaken bombing of the Chinese Embassy in Belgrade. With Beijing protesting about the attack to the UN, Nato’s hopes of utterly isolating Yugoslavia over Kosovo look shaky. Although Russia and Nato have agreed to a joint approach on peacekeeping, China’s anger may jeopardise Nato leaders’ hopes of ensuring the mission can be quickly mounted under a UN flag. Amid cries of “Kill Americans” and “get out American pigs,” students broke into the US Embassy compound in Beijing yesterday. Chunks of concrete rained against walls as tens of thousands massed for a 2nd day of protests. A report from Chenghu, the southwest provincial capital, said foreigners might have to be evacuated after the US Consul-General’s house was razed.’

...‘About 200 anti-Nato bombing protesters marched from Queen Elizabeth Sq to the US consulate in Shortland St at the weekend. Anti-war groups meet in the square each Saturday. Meanwhile, a 3-person refugee selection team from the Immigration Service left Auckland at the weekend for refugee camps in Macedonia to find relatives of Kosovar families already living in NZ. The Government has agreed to accept up to 600 refugees with family ties to NZ.’

...‘Authorities in Belgrade have banned fishing in the Danube River because of pollution caused by Nato’s bombing of nearby chemical plants. Yugoslav officials have deemed the situation an “ecological disaster.” There is no word on what effect the military action is having on the region’s other wildlife.’

...‘Serbian pensioners received a nasty surprise yesterday when a newspaper said their monthly payments would be halved. Students received a lesser blow when they learned their graduation parties would be cancelled. People in Belgrade have not lost everything like those fleeing Kosovo, but the side-effects of Nato’s seven-week bombardment are multiplying by the day. Prices of many imported goods have gone up, soap by half as much again’...

‘Nato swung into its 54th day of air strikes against Yugoslavia vowing that Serbian forces in Kosovo could not protect themselves by putting civilians in harm’s way. Refusing to flinch at Yugoslav reports that 87 ethnic Albanian refugees were killed by Nato in the southern Kosovo village of Korisa at the weekend, Nato defended the air strikes by saying the target area had been used as a Serb military camp and the civilians reported killed there must have been put at risk by the Yugoslav authorities. “This accident at Korisa did not shake Nato’s resolve in any way,” a Pentagon spokesman said in Washington.’

...‘The strain of the Nato bombing campaign is starting to show among the people of Yugoslavia with claims that attempts are being made to cover up war crimes in Kosovo and reports of anti-Government protests. Some 1500 protesters in the southern Serbian town of Krusevac had smashed windows at the local radio and television station. “Kosovo Is No Use To The Dead” said one of their banners. An anti-war rally in the central Serbian town of Cacak was said to have heard demands that Nato halt the bombing – but also calls for “an end to the Yugoslav President’s adventurist policies.” Montenegrin television said mothers of soldiers had gathered in the nearby town of Aleksandrovac to demand peace and the return of their sons.’

...‘A NATO missile reduced a Belgrade hospital ward almost to rubble early yesterday and medical staff said it killed three patients and a guard and injured a number of people. “Nato probably thought soldiers were being treated in the maternity ward,” said one Serbian. In Brussels, Nato said one of seven laser-guided bombs went astray and struck the base of a building 500 metres from the centre of the target area, a military barracks. A Nato spokesman said he had no details about the type of building hit but denied media reports that the alliance had intentionally hit a civilian target as “completely false”.

...today, the US President is expected to ‘deny the Nato campaign is a war so the alliance can’t be accused of breaking the US War Crimes Act’...

The ‘UN human rights chief has accused the Yugoslav army and police of committing gross violations in Kosovo. In a major report, she called on Belgrade’s forces to withdraw immediately from the blood-soaked province. But she also criticised Nato’s use of cluster bombs in its air campaign against Yugoslavia and destruction of schools and hospitals. She urged the US-led alliance to respect humanitarian law, including the “principle of proportionality.” Earlier, Amnesty International said Serb forces seized hundreds of women and children from a southern Kosovo village and subjected them to 3 days of terror, including gang rapes. Amnesty did not name the village for fear of reprisals. Nato warplanes pounded Serbia again yesterday, and Belgrade reported more civilian deaths. At least 10 people died at a sanatorium in Surdulica, the scene of one of Nato’s previous high-profile blunders. On April 27, 20 people, mainly women and children, were killed when a laser-guided bomb went astray and hit a residential area. The sanatorium strike came after a devastating daylight Nato attack on a bridge crowded with pedestrians in the central Serbian town of Varvarin that killed 9 people and wounded at least 17. Meanwhile, EU foreign ministers are meeting in Brussels to plot strategy for ending the Kosovo crisis. Britain’s *Financial Times* newspaper reported yesterday that the Yugoslav President had significantly shifted his position by agreeing for the first time to the principle of allowing some Nato troops into Kosovo.’

...‘peace has been agreed to after 72 days. Nato troops could move into Kosovo within a couple of days, although no one knows how long it will be before they can come back out. BBC TV declared: “The Serb people can’t help realising that every time their president has got them into trouble, they’ve emerged with a worse deal than they could have got at the start.”

...‘It was the kind of scene that foreign-aid workers in Macedonia’s hot and angry camps have dreaded. On Saturday night, hundreds of Albanians, armed with clubs and faces distorted with fury, set on a family of gypsies in the camp at Stenkovec 1 and almost tore them limb from limb. The family were attacked because, in the eyes of their assailants, they were quislings – agents and also beneficiaries of the Serbian campaign of ethnic cleansing of Kosovo. Rightly or wrongly, they were thought to belong to the teams of marauders who have swept through villages in the wake of the Serbian Army and paramilitaries, looting deserted houses and stacking the booty in their wagons. Aid workers managed to get the family to safety but gangs of Kosovar Albanians began hunting other gypsies in the camp. The savagery at Stenkovec 1 is an example of the climate of hatred and retribution created by the recent history of Kosovo and it gives a disturbing glimpse of what Nato troops may confront when they go into the province and escort hundreds of thousands of Albanians back to their ruined villages. Nato may offer guarantees to Kosovo’s Serbs and gypsies. But the fact is that scores are going to be settled whatever the alliance says and there is no way that Nato troops can sit on every doorstep and prevent them. The likely outcome is either the mass migration of Kosovo’s Serbs and gypsies – 10% and 2% respectively of the pre-conflict population – in the next few weeks or a rash of murders in outlying villages.’

...‘The deeper Nato pushes into Kosovo on the heels of the retreating Yugoslav Army, the more evidence they find to back up numerous reports of atrocities committed against ethnic Albanians. A British war crimes investigator says the evidence suggests that the atrocities were far worse than anyone thought. In the south, the British have found mass graves near the town of Kacanik. Italian troops in Pec and Djakovica have reported finding 3 mass graves. Bodies were found yesterday in 4 wells in a village near the provincial capital, Pristina. And in the village of Velika Krusa, Dutch troops found the charred remains of 20 people at a Kosovo farm. Despite the lack of hard evidence or witnesses, it seemed clear these were ethnic Albanians slain by Serbs.’

...‘On a cold and sunny morning, an 11-year-old girl called Merita Shabiu was playing in the snow outside her family home in the Kosovan town of Vitina when a smiling man in uniform offered her some chocolates. Having gained her trust, the man led her by the hand to the block of flats standing

opposite. There, in a dank basement, he sodomised her before crushing her neck on the concrete floor with his steel-capped boot. It was a savage death, but Kosovo has in recent years been a savage country. What made the murder of Merita different was that it took place *after* Nato's "liberation" of the former Yugoslav province, rather than during the murderous chaos that preceded it. And Merita's killer was not Serb or Albanian, but a Nato "peace-keeper": a staff sergeant with the elite 82nd Airborne Division of the US Army. Astonishingly, he had boasted to fellow soldiers of raping three girls while on another mission in Haiti.'

... 'Even as peacekeepers began building the foundations of peace in Kosovo, they could not escape the remains of war. Two British servicemen were killed while preparing to detonate piles of unexploded Nato cluster bombs, the first deaths among the alliance's K-For peacekeeping force. Earlier, the bodies of four Serbian brothers, all in their fifties, were found in the village of Gracanica, near Pristina. British forces are investigating. A Lieutenant said: "They were not mutilated but they had been stabbed in the heart or in other organs. There is not a lot we can do now. We're just trying to keep the peace." The villagers are not convinced. Murders such as these are exactly what the Serbs of Kosovo have been afraid of ever since Nato took control of the province.'

... 'Despite a pledge by the KLA to demilitarise, rebel leaders have no intention of disappearing now they have won their struggle against the Serbs for control of Kosovo. Relations with the Americans and the rest of Nato will depend on whether the guerrillas believe the peacekeepers are helping them to achieve their goals of self-rule in the province or standing in their way. For now, the picture is all smiles. The KLA leader has signed an agreement with Nato under which the rebels will hand over most of their weapons, dismantle their military structure and stop wearing uniforms over 90 days. Before Nato launched its 78-day bombing campaign and forced the Serbs to leave Kosovo, the KLA leader, known by his codename "the Snake," was a wanted man, indicted by Yugoslav authorities for murdering police officers. In the past, the KLA has used whatever means are necessary to achieve goals. Last year, the defence minister of a rival guerrilla group close to the twice-elected "president" of an unrecognised Republic of Kosovo was murdered, and the "president's" closest aide was wounded in an assassination bid. Both attacks were widely attributed to the KLA.'

... 'British paratroopers may face murder charges in Kosovo for riddling a carload of men from the KLA with gunfire over a week ago. The incident, which left two KLA fighters dead and two Albanian civilians seriously wounded, has caused anger in the capital, Pristina, and undermined goodwill towards Nato forces. The official version says a patrol from 1st Battalion opened fire because they believed their lives were being endangered by celebratory firing into the air by a man on the car roof. The Paras were said to have been protecting frightened Serbian civilians sheltering in a nearby building.'

... 'The Pentagon says Russian mercenaries fought in Kosovo alongside Serb forces, and their role is likely to be examined as part of an international investigation of war crimes against ethnic Albanians. The matter of Russia's role is sensitive. Nato has arranged for 3600 Russian troops to join K-For.' By the way, 'Yugoslav troops forced out of Kosovo by Nato are said to be pouring into Montenegro at an alarming rate, raising fears that Serbia's tiny neighbour will become the Serbian dictator's next victim. The number of troops in Montenegro has risen to 40,000 – one for every 20 people. The founder of the independent magazine *Monitor*, who faces a possible 10-year jail sentence by a Yugoslav military court for criticising the Yugoslav Army, argues that the rest of the world fails to appreciate the dangers facing the republic. "We're so small that we're not interesting for anybody among the great powers."

... 'Nato's high-tech air war resulted in the deaths of about 500 civilians, far more than Nato Governments claim, a report by Human Rights Watch alleged yesterday. The group accused Nato of failing to do more to protect civilians as it dropped bombs and missiles on Yugoslavia.'

... 'It was acclaimed as the most successful air campaign ever. "A turning point in the history of warfare," wrote one noted military historian, proof positive that "a war can be won on air power alone." An antiseptic war, fought by pilots flying safely 15,000ft high. It seems almost too good to be true – and it was. In fact – as some critics suspected at the time – the air campaign against the Serb military in Kosovo was largely ineffective. Nato bombs hit some fields, blew up hundreds of cars, trucks and decoys, and barely dented Serb artillery and armour. According to a suppressed US Air Force report obtained by *Newsweek*, the number of targets verifiably destroyed was a tiny fraction of those claimed: 14 tanks, not 120; 18 armoured personnel carriers, not 220; 20 artillery pieces, not 450. Out of the 744 "confirmed" strikes by Nato pilots during the war, the USAF investigators, who spent weeks combing Kosovo by helicopter and by foot, found evidence of just 58. The damage report has been buried by top military officers and Pentagon officials, who in interviews with *Newsweek* over the past few three weeks were still glossing over or denying its significance.'

... 'More than \$US1 billion in public funds and international aid may have been stolen by top Muslim, Croat and Serbian officials in Bosnia, international officials say. The corruption report is a painful one for international efforts to rebuild Bosnia. Donor nations have poured in \$US5.1 billion since the end of the war in 1995 to reconstruct infrastructure and try to stitch together a viable government on all levels. In Kosovo, Russia is blaming its Nato peacekeeping partners for continuing attacks against Kosovo Serbs as the rapidly dwindling ethnic group buried their latest victims – killed in a mortar attack in an area where US troops are supposed to be keeping order. Russia called for "energetic actions" to stop "terrorism, separatism and ethnic cleansing" in Kosovo'...

'The CIA said yesterday that one employee had been fired and several others disciplined because of errors that led to the bombing of the Chinese Embassy in Belgrade.' 'China has received \$US28 million in compensation from the US for the bombing.'

... 'Thousands of Kosovo pupils will return to class today for the first time since school was suspended after Nato began bombing Yugoslavia on March 23 (some rural schools have been shut since February last year, when the Yugoslav President launched a bloody crackdown on ethnic Albanian separatists), although the UN estimates nearly half the schools were damaged or destroyed during the 18-month ethnic war. UN officials were uncertain how many pupils – ethnic Albanians and Serbs – would show up for class. Most Albanian children have not officially attended school since 1989'. In related news, a **study finds 40[%] of responding scientists say they believe in a God who actively communicates with humans and responds to prayer, 15[%] claim to be agnostic and about 45[%]... do not believe in God as specified in the questionnaire**. The findings, which... closely mirror those of [a] 1916 survey on which [the] study was based[... test the] hypothesis of... the... author of [the] earlier study, that disbelief in God would grow as education spread...

The older we get, the more we believe... [R]esults show that... [nearly 70% of NZers] **polled said they did believe in a god, with just 25[%] rejecting the contention entirely** [– up from '16% in 1990' (when, in comparison, the US figure was '7%'). About 17%]... **of women said they were non-believers, compared with 32[%] of men. Age seemed to have a lot to do with... belief... Just over half of the people in the 18-30 age group said they believed in a god. That figure jumped to 72[%] in the 31-50 age bracket. Nearly 80[%] of those aged over 51 said, "I believe."**

... '[while older people may be more liable to believe in a god, it doesn't follow that their beliefs increase with age. Indeed, research shows that the older a person and the better the education the less likely a belief, hence the dramatic growth of non-religious funerals.' Incidentally, the] **spoor in the great media hunt for... the... atheist once tagged "the most hated woman in America," are thin on the ground in Auckland** [despite claims]... **in the March edition of *Vanity Fair* that... the large, loud and unruly [atheist had been]... found in Auckland... Interpol is not looking for her, so the [NZ] police have not been notified that she is missing... She would be hard to miss. If you dismiss dumb fate, then it takes a particularly potent or obnoxious personality to rise to national prominence... where notoriety so easily translates to celebrity. That she did says as much about the bedrock of conservative U[S] Christianity as it does about [her] sense of mission: to ensure the ship of American state is firmly separated from religious belief. [She] rose to prominence in 1963 when the U[S] Supreme Court removed prayer from public schools. The legal challenge was brought by a Philadelphia Unitarian... but it was... the second litigant, who drew the media attention... The Cold War was at its chilliest, and in the U[S] Godless and Communism were synonyms. In [her] case there was some truth. Born during the Depression, she was a member of socialist groups in 1960**

when she tried to defect to the Soviet Union... but [the]... Soviets did not want her... Throughout the 60s... her movement, the American Atheists, were a vocal if small pressure group, pressing on with a succession of lawsuits. To NASA... she was their nemesis and public relations nightmare. During the Apollo programme [she] took the space agency's chief executive... to court. Under cross-examination, [he] revealed that Apollo 8's flight had been delayed so the first circling of the moon could be televised on [X]mas Eve. In an 1982... interview, [she claimed that NASA's chief executive had] conceded the flight was a Christian mission. "The astronauts were under military orders to have a 'spontaneous manifestation of religious awe at 7.31 plus 10 seconds, at which time they would recite the first 10 verses of *Genesis* from memory.' [The chief executive] said this would emphasise who led the space race. Not the Hindus or the Moslems or the Communists..." she said. STUNG by the experience, NASA was cautious when Apollo 11 finally did land on the moon. The first thing[one] astronaut... an elder in the Presbyterian Church, did was take communion. He had carried a tiny chalice, host and vial of wine to the moon. [He also carried a Freemasons's ring which was left on the lunar surface.] [His] ritual was deliberately not televised because of legal pressure brought by [the atheist]... She joined in the court and public battles fought by[the] *Hustler* magazine publisher... to continue to publish his brand of pornography, and worked as his speech writer for the porn king's 1984 bid for the presidency. Interviewed by *Hustler*, [she] came out in favour of legalised prostitution, bestiality and pornography. "Whoever does not like porn should not purchase it..." she said... The latest headlines... focus on her disappearance from her home in Austin, Texas... [in] August 1995... Missing also was \$NZ900,000 of... American Atheists... funds. A former employee claimed to the *Houston Chronicle* that he had seen bank statements from the Bank of N[Z] showing more than \$1.2 million in an account. Other atheists claim that a trust fund had been established with the N[Z] Guardian Trust. Neither financial institution would confirm these details. So for journalists, the trail led to [NZ], where it peters out with no confirmed sightings and little evidence that... [she is] in Auckland. What is certain is that... at 77 [she will still be a] committed atheist... - 1997

Claims that[an] infamous US atheist... fled to N[Z] have suffered a blow with the discovery of what could be her burned body parts at a Texas ranch. Federal agents have unearthed a leg bone, which seems to be cut off at one end, finger bones and part of a hand on a 2000ha ranch where, some investigators believe... the most-hated woman in America... her son and granddaughter were killed and dismembered [in 1995]... Past searches of the property had failed to find any bones... [An] FBI officer... would not comment on whether the main suspect in the case participated in the... [latest search. The atheist]'s former office manager, faced kidnapping and extortion charges but some media reports say prosecutors agreed to strike a deal if he led them to the bodies... [The atheist], aged 77... had been involved in successful court battles in the 1960s to ban... Bible-reading, [X]mas carols and songs from public schools. She was also involved in a petition to ban any reference to Jesus on radio or television.

...A California court was yesterday asked to let homosexuals, atheists and agnostics join the Scouts. The challenges... hinged on whether the Scouts should be considered a business or a charitable organisation... If the court rules the Scouts are a business, the organisation could[also] be forced to admit... women... The court's judgment could have national implications... [Someone] was fired from [a] Scout troupe in Berkeley... 16 years ago... when the movement discovered he was gay... At yesterday's hearing... a lawyer[was] representing his own two... 16-year-old... sons... The twins, who are declared agnostics, were booted out of their Orange County Cub Scout pack in 1991 when it was discovered they were lip-synching part of the Scouts' oath that mentioned "duty to God" and omitting the words "under God" when reciting the... Pledge of Allegiance.

...A MOTHER'S story of her teenage daughter, murdered with 11 other pupils and a teacher for declaring her faith in God during the Columbine school massacre at Littleton, near Denver, Colorado, is set to become one of the year's publishing sensations... *She Said Yes...* tells the story of her daughter's transformation from a troubled teen to committed Christian. It is believed to disclose at one time she plotted with friends to murder her parents. The title refers to the last seconds of her life in the library at Columbine, where she was studying when the attack took place in April. One of the killers held her at gunpoint and demanded to know if she believed in God. When the 17-year-old replied she did, the attacker... asked: "Why?" He then shot her through the head... Cassie's death appears to have inspired thousands of young Christians across America and she has been hailed by evangelical leaders as an authentic martyr – someone prepared to die rather than renounce their beliefs. At her funeral, friends wore T-shirts emblazoned with the word "Yes"... She [had beco]me part of a group... who carried Bibles around the school and held prayer meetings – activities that made them the focus of the gunmen, who proclaimed their atheism through a cult known as the Trenchcoat Mafia.

...“...religious people... ask... important questions. They want to know why we exist and why the world exists, and they don't want to know who's going to win Wimbledon and what's for dinner. And to that extent I have great respect... for [them]... But I get irritated at the way those deep and fundamental and mysterious questions are hijacked – because I think that science can answer most... if not all of them.” The “if not all” is not a revised bid for comprehensive explanation, but a concession that some mysteries will always remain. The “why?” question that is often thrown at... the... Professor in the Public Understanding of Science at Oxford University... in public lectures (“everyone who asks it, asks it in the tone that suggests that no one has ever asked it before”) is, to his mind, irrelevant. “The mere fact that a question is put... doesn't mean that it's a legitimate question.” Darwinians ask meaningful “why” questions, he says. Those who ask “Why is this leaf this particular shape?” or “Why does this animal walk like this?” What about, “Why are people so credulous?” I ask. So happy to pay through the nose for an aura massage or crystal healing. Mustn't gullibility have an evolutionary explanation, too? “I would put it back to childhood and say that there's a Darwinian survival value in children's believing what their elders tell them, because the world is too dangerous a place and it takes too long to learn what you need to learn to survive... You've got to have a rule of thumb that's built into the nervous system that says, ‘Believe what you're told.’ ...whether it's beneficial or not.” The vulnerability of children to such parental downloads is one source of... the... atheist['s]... fierce opposition to religious schools (he recently described Government plans to encourage the spread of single-faith schools as “evil”)... “I can't bear the religious labelling of children. Like four-year-old Islamic... or... Catholic children... If anything makes me see red, that does, because these children are too young to know what they are... Would you ever talk about a four-year-old neo-Keynesian monetarist[o]r... Gramscian Marxist? Of course you wouldn't. Religion is the one place where opinions about society, about philosophy, about cosmology are grafted on to labels tied round the necks of children.” ...His confidence in evolution as an all-encompassing explanatory framework... allows for doubt. “I've sometimes thought about this. Would I be discomfited if, say, Darwinism turned out to be wrong and the truth about the guiding force of evolution, why things are so beautiful and so – apparently – well-designed, turned out to be something else? ...Obviously, I can't imagine what that alternative might be, and I'm sure there isn't one... but I would be totally fascinated if there was one.” ...In the meantime, though, he continues to fight the good fight against the enemies of reason...

What a shame the world couldn't have a moratorium on God... Earlier in the week, I read that Muslim bodies littered a street somewhere, slaughtered by Christians who outnumbered them; and in Northern Ireland Catholics and Protestants dipped again into the bottomless well of religious hatred. On the Indian subcontinent, Hindus kill Muslims and vice versa, and Sikhs kill and are killed by them both as a side dish. Earlier this year, we were treated to a story about some elderly Hindu men murdering young women who, they felt, were breaching their religion's moral code by dressing in a provocative manner. Iran is still ruled by bigots, but slightly less savage now than a few years ago when dissent was a capital offence. If you don't believe in their version of the next world, they sent you off to it early to be convinced. And that's something that interests me: that so many religions speak piously of the ultimate judgment of God but insist on intercession on Earth for their own vindictive punishments... And the latest scourge is the Taleban... If all these people are right about God and they are all monotheists – then one can assume that, if we could identify and catch [God, God] would have to be tried for crimes against humanity. As a writer I try to imagine myself in the minds and hearts of other people in an effort to understand their impulses and motives... Do they sit around and say they have struck a blow for humanity... for their race... for their political party[o]r just for king and country? No, they could only justify [terrorist act]s to themselves and others by invoking the

will of God... People's gods and their theology are reflections of themselves. Decent, kind, compassionate people see God that way. Brutal, pitiless, psychotic people may share a vengeful, ruthless God of the same name who justifies their inhumanity. One of the things almost every religion traditionally has in common is exclusivity. We have contact with the deity and, therefore, we know we are right and you are wrong. You will be shut out of heaven, or Valhalla, or wherever, because ours is the one true God, not yours. Religions traditionally focus on differences whereas all the humanists... agnostics and most of the atheists I know think inclusively and concentrate on the shared humanity we all possess. So what a shame we couldn't get all people to put God on hold for a while, and rebuff visions of the next world in a bid to put this one right. Then the psychopaths and... exclusivists would... not be able to cite an invisible higher power as vindication for their violence and thus... hide behind the image of their God... * The recent *Star Wars* fan campaign urging people to list 'Jedi' as their religion on the N[Z] census... didn't have much effect... but the idea apparently took off in the UK, where newly revised statistics give Jedi official religion status! It comes in at 174 out of 177 religious choices, just above Heathen, Atheist and None.

...[as the RC] Bishop of Auckland... I was astounded to read that 24.7[% of NZ]ers believe there is no God[(r:p942, ln58)]... The great astronomers and mathematicians... calculated from their work on... molecular structure... that the mathematical probability of a single enzyme occurring by chance was one in 10 to the power of 20[, or]... "insensibly different from zero" – which I understand is a mathematician's way of saying that the odds are unbelievable. But 24.7[% of NZ]ers presumably think... the evolution of life... [to] "the most complex mechanism on Earth"[– which, after]... the fertilisation of an egg... [becomes] six trillion cells working in concert... [-] all "just happened." What faith!

...the physicist... proclaimed: 'God is a pure mathematician!' The point... is that the 'cosmic code' is written in mathematical language. When we unveil nature in this mathematical way we see that there is an underlying simplicity, elegance and unity to the laws of the cosmos...

[Arthur Schopenhauer (1788-1860) 'says, "Human life must be some kind of mistake." The greatest crime of man was that he was ever born. He concludes that because the world is mad or irrational, it could not possibly have an author. If there were a God, it would have set the world in order'.] According to... his... pessimistic... adaptation of Kant's... philosophy... the will, of which we have direct intuition, is the only reality and the means by which all other things are understood; what is real is one vast will, appearing in the whole natural world, animate and inanimate alike. This 'cosmic will' is a malignant thing, which inveigles us into reproducing and perpetuating life... [I]n his ethical doctrines he was influenced by Buddhism... Asceticism[– which]... he made no attempt to put into practice... [-] and chastity are the duty of man, with a view to terminating evil. As a stage towards this goal he found a transient place of rest in the realms of poetry, art, and above all music.

...you can analyse the frequencies of Bach's B Minor Mass until you are blue in the face, but this will not get you any closer to it *as music*... [Likewise,] a... chemist can analyse[a painting's] pigments, describe their pi electrons, and list the frequencies at which they absorb light. But this scientific approach is not an alternative to the fact that the painting is a work of art, a thing of aesthetic beauty, a creation with a purpose... It is the same in the natural world... ['Theories developed in the science of cosmology show the universe to be an orderly system', b]ut... some people... would have us believe that the... insights of evolutionary biology allow one to rule out purpose and meaning as realities in the world... The... "bleak[and nihilistic] message" is that living organisms... [only] pass on their DNA[, and]... that natural selection and genetics rule out purpose in nature. - 1996

[Whereas the theology of the Swiss Protestant Karl Barth (1868-1968) 'begins with the realization of human wickedness, the principal sin being humans' endeavour to make themselves rather than God the centre of the world (Barth therefore re-emphasized the finiteness of humanity and made God's grace once again the goal of our life').] the dominant scientific paradigm since the time of Newton has been against teleology and any hint of a goal-oriented or progressive aspect to nature. And it is from this paradigm that so many scientists have drawn their bleak and depressing conclusions about our place in the universe... [A French biologist who] believes that DNA is a 'frozen accident' and so is unlikely to occur anywhere else in the universe... writes: *The ancient covenant is in pieces: man at last knows that he is alone in the unfeeling immensity of the universe, out of which he has emerged only by chance. Neither his destiny nor his duty have been written down.* It is a stark sentiment echoed by... the words: *The more the universe seems comprehensible, the more it also seems pointless.* These scientists base their images on the belief that the processes of nature are essentially... without meaning or purpose... It is predicated on the assumption, made almost universally by biologists, that the course of evolution does not follow any law-like trend but is purely random... If the hypothesis is correct, then a feature of life such as intelligence is a purely chance phenomenon... [A]lthough it is clear from the fossil record that life began with very simple and primitive organisms and has evolved to a state of staggering organized complexity[– with modern man being 'the only living thing known to have the capacity to create a culture' –] talk of evolutionary *advance* is anathema to biologists... Having long ago cast God out of the Garden of Eden, biologists are reluctant to concede any suggestion of a guiding hand, even in the guise of a law of nature. 'There is nothing inherently progressive about evolution,'... 'Progress is a noxious, culturally embedded, untestable, nonoperational, intractable idea that must be replaced if we wish to understand the patterns of history.' ...Nature simply cobbles together contraptions at random, and a few flourish. Evolution stumbles onward, blindly and haphazardly, to wherever contingency takes it. It may give the impression of directed ingenuity, but beneath it all is simple chaos. The problem is that chaos is *not* simple, as scientists have recently discovered. The investigation of chaotic systems in physics, chemistry and astronomy reveals a deep linkage between apparently random behaviour and the spontaneous appearance of order. To use the catchphrase, there is order in chaos.

Nearly all organisms are composed of cells (the simplest consist of a single cell), which are microscopic structures bounded by a membrane and capable of metabolism, self-repair, and reproduction... Cells arise most commonly by the division of other cells, but sometimes by fusion (as of gametes in sexual reproduction). There are two basic types of cell: those of bacteria, lacking nuclei and other complex structures, and animal and plant cells, which are larger and more complex and possess a nucleus. This nucleus contains the genetic information (DNA)... necessary for the organization and functioning of most living cells and... DNA molecules... control inheritance of characteristics... The structure of a DNA molecule... consists of two strands coiled round each other to form a... structure like a spiral ladder; it is the 'rungs' of the ladder that carry the information. Each rung consists of a pair of chemical groups called bases (of which there are four types). The different rungs function rather like different letters of the alphabet, which are without meaning in themselves but in sequences produce meaningful words... These control the manufacture of proteins needed by the cell; genes are 'copied' in the nucleus into the similar RNA, which then passes out into the cytoplasm and forms a template for the synthesis of particular proteins, especially enzymes. The DNA... strands separate and each provides a template for the synthesis of a new complementary strand with which it recombines, thus producing two identical copies of the original... In large organisms such as humans there are many specialized types of cell lacking some of the features described above; for example, red cells have no nuclei, and nerve cells in adults, although nucleated, are unable to reproduce... In some viruses it is RNA (not DNA) that carries the genetic information... The brain... a structure... found in many invertebrates... directs an animal's activities and exerts control over internal physiological processes; in humans and perhaps some other animals it is the seat of consciousness... Its wrinkled surface or cortex is coated with nerve-cells, which appear grey... The functions of most of the cerebral cortex, the nature of the physical embodiment of memory and of consciousness itself, remain unknown.

Something known, however, is that whereas brains are made up of lots of cells, cells don't have brains – and, therefore, they can't think. Because cells can't think, they can't decide to divide. Therefore, in order to question God's existence, an atheist must either believe that absolutely nothing motivates a cell to divide itself, or that DNA alone makes a zygote – 'formed by the fusion of male and female gametes' – 'undergo cell division' until the two original 'germ cells' ('the sperm and egg cells in higher organisms – in simple plants or animals the gametes are quite similar') have become a complex body consisting of a myriad of different looking 'somatic cells' (including unique combinations of cells – e.g., 'no two people have exactly the same pattern of ridges and marks on' their fingers), 'occupying different environments' (e.g., 'inner cells are cut off from the outer cells, leading to internal cellular differences in such factors as temperature, oxygen content, or acidity') while performing different tasks *in concert*, until they decide to stop growing or reproducing themselves and, eventually, certain cells stop working, causing every other cell to die (assuming death hasn't occurred prematurely due to external interference).

Over the... 280 day... period of... prenatal development, the new organism shows many varieties of change. Changes in the kinds, number, position, size and shapes of cells, tissues, and somatic systems occur. Systems and structures usually increase in size and complexity. However, some prenatal structures actually decrease in size or disappear. For example, at the end of the third week gill arches appear, but by the middle of the second month they have been transformed into parts of the inner ear and neck and the cartilages of the larynx. Another example is the emergence and gradual disappearance of an external tail between the second and fourth months. Prenatal development includes three periods: the period of the zygote, the period of the embryo, and the period of the fetus. These periods should be thought of as continuous phases of development, for from the moment the sperm penetrates the ovum, the development of the organism involves a systematic series of sequential changes by which the organism becomes increasingly complex and differentiated... [A]lthough many of the organ systems are present in the first three months of prenatal development, many also continue to evolve. The nervous system and brain continue to develop and differentiate even after birth.

Modern man has used his brain to develop a complex culture. Evolution has not stopped, and there are, in general, two directions which further development of man can take. He can be lost as earlier men were lost, perhaps destroying himself, or[undergo] further refinement of his brain... A human... uses the wisdom of the past to enable him to live in the present and plan for the future.

At the pinnacle of complicated dynamics are processes of biological evolution, or thought processes... Intuitively there seems a clear sense in which these ultimately complicated systems are generating information. Billions of years ago there were just blobs of protoplasm; now... here we are. So information has been created and stored in our structure. In the development of one person's mind from childhood, information is clearly not just accumulated but also generated – created from connections that were not there before. - CHAOS

It's been said that 'sometimes the finger-print of God is a paw-print', and dogs are apparently able to sense some things that humanoids can't (or before they can – e.g., illnesses, bad weather), but there is no evidence to suggest that dogs – or any other of Earth's non-humanoid species – have ever believed, or have the capacity to believe, in a supernatural controller of nature. Therefore, the brain of the first person to ever contemplate God's existence had apparently created something *from connections that were not there before*. Furthermore, until that event occurred, this planet was, technically, 100% atheistic. Hence, when it comes to spirituality, human atheists have more in common with other species than their own! Atheists assume that if God really existed, everyone would know about it (not just the descendants of the first person). However, while it might seem unlikely that God would make some people believe in itself and others disbelieve, logic declares that something (the Universe, for instance) can't be created out of nothing.

It is true, that a little philosophy inclineth man's mind to atheism; but depth in philosophy bringeth men's minds about to religion. - Francis Bacon

If God is *all-knowing*, then the more a person knows, the more god-like it must be (and, if the Devil exists and is the opposite of God, that makes it the most ignorant entity in the Universe – i.e., it has the brain of an amoeba or, more accurately, a *stone*!).

And God said, Let us make man in our image, after our likeness... Behold, the man is become as one of us, to know good and evil... - Genesis

God didn't want him *to know good and evil* while the man lived in the fictional Garden of Eden – banning him from eating the tree of knowledge's fruit (Genesis 2:17) – but as soon as the man learnt the difference, he was sent away (Genesis 3:23)! Therefore, it can be assumed that knowing what constitutes good ('morally correct') or evil ('morally bad, wicked: tending to harm') is only necessary for life outside of the Garden of Eden. This makes sense if it is accepted that everything was provided for the man inside the garden, but outside of it he had to provide for himself – and that a person who doesn't know the difference could, while attempting to provide for himself, accidentally cause evil; whereas someone who does know the difference will only cause evil deliberately. Unfortunately, the early chapters of the Bible don't clarify whether or not a god-like person only uses its knowledge to do good.

The Bible is rather vague about what God actually is – a fact which is often used by atheists to justify their beliefs. However, how can a species be expected to fully explain or understand God – undoubtedly the greatest entity in the Universe – while its knowledge of the Universe remains incomplete?

The study of the origin of the universe, or cosmos, is known as cosmogony, and that of its structure and evolution, COSMOLOGY.

cosmology, field of study that brings together the natural sciences, particularly astronomy and physics, in a joint effort to understand the physical universe as a unified whole... Three great ages of scientific cosmology can be distinguished. The first began in Greece in the 6th century BC when the Pythagoreans introduced the concept of a spherical Earth and... postulated a universe in which the motions of heavenly bodies were governed by the harmonious relations of natural laws. The infinite atomist universe of Leucippus and Democritus followed, wherein countless worlds, teeming with life, were the result of chance aggregations of atoms... The Copernican revolution ushered in the second great age... The third... began in the early years of the 20th century, with the discovery of special relativity and its development into general relativity by... Einstein. These years also saw momentous developments in astronomy: extragalactic redshifts were detected... and... extragalactic nebulae were shown to be galaxies comparable with the Milky Way... Such discoveries and the application of general relativity to cosmology... gave rise to the view that the universe is expanding. The basic premise of modern cosmology is the principle... that the laws of physics are everywhere the same. The principle is plausible because of the observed isotropy of the universe (on the average, all directions are alike). The essence of general relativity, when applied to cosmology, is that space has dynamic properties and may be uniformly curved. If the curvature is negative (hyperbolic) or zero (flat), the universe is open and space is infinite; if the curvature is positive (spherical) the universe is closed and space is finite. Space itself expands, and the galaxies, stationary in space, recede from one another... at speeds increasing with distance... [W]hile propagating through expanding space... light... rays... emitted by a distant galaxy... have their wavelengths progressively stretched... and this is the origin of cosmological redshifts. Expansion indicates... the universe originated in a congested state (i.e., the big bang) some 10,000,000,000 years ago. The steady-state theory – an attempt to eliminate the big bang – has been disproved by the existence of microwave background radiation that is believed to be the afterglow of the big bang... Since then

considerable progress has been made in the study of the early universe that lasted for a period of... 100,000 years... Immediately after the big bang, the universe consisted primarily of radiation, but as it expanded matter came to dominate – roughly 1,000 years after the explosive beginning.

If the universe had a beginning, what was it like? For most of human history... scientists considered it a question so impossible of resolution that even to pose it was irresponsible. Only with the advent of radio astronomy and nuclear physics did science have the tools to gather the evidence and interpret it. The result was two conflicting theories – the ‘steady state’ and the ‘big bang’. Within the last decade the debate has been resolved, in most scientists’ minds, in favour of the ‘big bang.’ ...the... theory... has become so widely accepted that astronomers often call it “the standard model.” ...In the beginning there was an explosion. Not an explosion like those familiar on earth, starting from a definite center and spreading out to engulf more and more of the circumambient air, but an explosion which occurred simultaneously everywhere, filling all space from the beginning, with every particle of matter rushing apart from every other particle. “All space” in this context may mean either all of an infinite universe, or all of a finite universe which curves back on itself like the surface of a sphere. Neither possibility is easy to comprehend, but this [does] not get in our way; it matters hardly at all in the early universe whether space is finite or infinite. At about one-hundredth of a second... the temperature of the universe was about a hundred thousand million... degrees Centigrade. This is much hotter than in the centre of even the hottest star, so hot, in fact, that none of the components of ordinary matter, molecules, or atoms, or even the nuclei of atoms, could have held together. Instead, the matter rushing apart in this explosion consisted of various types of the so-called elementary particles... One type of particle that was present in large numbers is the electron[, which]... makes up the outer parts of all atoms and molecules in the present universe. Another... was... the positron[, which has]... precisely the same mass as the electron. In the present universe positrons are only found in high-energy laboratories, in some kinds of radioactivity, and in violent astronomical phenomena like cosmic rays and supernovas, but in the early universe the number of positrons was almost exactly equal to the number of electrons. In addition... there were roughly similar numbers of various kinds of neutrinos, ghostly particles with no mass or electric charge whatever. Finally, the universe was filled with light. This does not have to be treated separately from the particles – the quantum theory tells us that light consists of particles of zero mass and zero electrical charge known as photons. (Each time an atom in the filament of a light bulb changes from a state of higher energy to one of lower energy, one photon is emitted. There are so many photons coming out of a light bulb that they seem to blend together in a continuous stream of light...) Every photon carries a definite amount of energy and momentum depending on the wavelength of the light... [All of these] particles... were continually being created out of pure energy, and then after short lives being annihilated again. Their number therefore was not preordained, but fixed instead by a balance between processes of creation and annihilation. From this balance we can infer that the density of this cosmic soup... was about four thousand million... times that of water. There was also a small contamination of heavier particles, protons and neutrons, which in the present world form the constituents of atomic nuclei... The proportions were roughly one proton and one neutron for every thousand million electrons or positrons or neutrinos... This... is the crucial quantity that had to be taken from observation in order to work out the standard model... As the explosion continued the temperature dropped, reaching thirty thousand million... [°C]... after about one-tenth of a second; ten thousand million [°C] after about one second; and three thousand million [°C] after about fourteen seconds. This was cool enough so that the electrons and positrons began to annihilate faster than they could be recreated out of the photons and neutrinos. The energy released in this annihilation of matter temporarily slowed the rate at which the universe cooled, but... [it reached] one thousand million [°C] at the end of the first three minutes. It was then cool enough for the photons and neutrons to begin to form into complex nuclei, starting with the nucleus of heavy hydrogen... The standard model sketched above is not the most satisfying theory imaginable... We would prefer a greater sense of logical inevitability in the theory. For example, one alternative theory that seems philosophically far more attractive is the so-called steady-state model. In this theory... the universe has always been just about the same as it is now. As it expands, new matter is continually created to fill the gaps between the galaxies. Potentially, all questions about why the universe is the way it is can be answered in this theory by showing that it is the way it is because that is the only way it can stay the same. The problem of the early universe is banished; there was no early universe. How then did we come to the “standard model”? ...by the pressure of empirical data... Can we really be sure of the standard model? Will new discoveries overthrow it and replace... [it] with some other cosmogony, or even revive the steady-state model? Perhaps... I [will] now say a bit about the future of the universe. It may go on expanding... at speeds approaching the speed of light... forever, getting colder, emptier, and deader. Alternatively, it may recontract, breaking up the galaxies and stars and atoms and atomic nuclei back into their constituents. All the problems we face in understanding the first three minutes would then arise again in predicting the course of events in the last three minutes... Looking further back, we can imagine an endless cycle of expansion and contraction stretching into the infinite past, with no beginning whatsoever. Some cosmologists are philosophically attracted to the oscillating model... It does, however, face one severe theoretical difficulty. In each cycle the ratio of photons to nuclear particles... is slightly increased by a kind of friction (known as “bulk viscosity”) as the universe expands and contracts... Right now this ratio is large, but not infinite, so it is hard to see how the universe could have previously experienced an infinite number of cycles... Our knowledge of the expansion of the universe rests entirely on the fact that astronomers are able to measure the motion of a luminous body in a direction directly *along* the line of sight much more accurately than they can measure its motion at right angles to the line of sight. The technique makes use of a familiar property of any sort of wave motion, known as the Doppler effect... The measurement of velocities by the observation of Doppler shifts is an intrinsically accurate technique... provided only that there is enough light to pick out spectral lines against the radiation of the night sky... [A]side from a few close neighbours like the Andromeda Nebula[, which]... was found to be moving toward the earth at about 300 kilometers per second... the other galaxies are generally rushing away from our own... [However,] it is not easy to determine the relation between velocity and distance at really large distances... The earth is going around the sun at a speed of 30 kilometers per second, and the solar system is being carried along by the rotation of our galaxy at a speed of about 250 kilometres per second. No one knows precisely what velocity our galaxy has relative to the cosmic distribution of typical galaxies, but presumably it moves at a few hundred kilometers per second in some direction... Thus... the present cosmological theory and astronomical observation have not yet revealed the extent or the future of the universe... It is natural to ask how large the universe was at very early times. Unfortunately we do not know, and we are not even sure that this question has any meaning... Fortunately, it is not necessary to come to a definite decision about the large-scale geometry of the universe in order to draw conclusions about its beginning... True, we are not absolutely certain... but it is exciting that we are now able to speak of such things with any confidence at all... However, it must always be admitted that our simple cosmological models may only describe a small part of the universe, or a limited portion of its history... [Furthermore,] we simply do not yet know enough about the physics of the elementary particles[, or]... enough about the quantum nature of gravitation even to speculate intelligently about the history of the universe... [O]ur ignorance of microscopic physics stands as a veil, obscuring our view of the very beginning... [and, naturally,] we want to know what there was before this moment... although... it is at least logically possible that... time itself has no meaning before that moment. We are all used to the idea of an absolute zero of temperature. It is impossible to cool anything below -273.16 °C, not because it is too hard or because no one has thought of a sufficiently clever refrigerator, but because temperatures lower than absolute zero just have no meaning – we cannot have less heat than no heat at all. In the same way, we may have to get used to the idea of an absolute zero of time – a moment in the past beyond which it is in principle impossible to trace any chain of cause and effect... [W]hichever cosmological model proves correct, there is not much comfort in any of this... The more the universe seems comprehensible, the more it also seems pointless. But if there is no solace in the fruits of our research, there is at least some consolation in the

research itself. Men and women are not content to... confine their thoughts to the daily affairs of life... The effort to understand the universe is one of the very few things that lifts human life a little above the level of farce... - THE FIRST THREE MINUTES

Recently [a] cosmologist... pointed out the following intriguing fact. In any sufficiently gigantic universe, a few observers could exist without any evolutionary preliminaries. They might have no ancestor whatever. Why? ...[because b]lack holes aren't entirely black... [They] radiate particles of all kinds, randomly. Sooner or later, therefore, in any large enough collection of black holes, some black hole or other would emit particles which just chanced to form a book, for example... This is just a variant on the point that a monkey typing in a fully random fashion would sooner or later type a sonnet. Well, another thing which might conceivably be emitted by a black hole... would be a monkey, a rather primitive observer... Regardless, however, of how many black holes there are in our universe, *no observer should at all expect to find that he or she or it had come into existence in this curious way... The Mysterious Universe...* [tells] a story about worms which felt sure that raindrops sprang into existence at random. Moving only over the Earth's surface, the worms knew nothing of the weather's three-dimensional machinery. Mightn't we be like them, ignorant of some important dimensions of the real? Physicists speculate about 'hidden variables' which determine precisely how events happen at the quantum level... Even when quite far separated in space and in time, particles can have properties correlated in ways which cannot be explained by supposing that each particle had been carrying some record of a decision about how to behave, a record formed when they were last in contact and consultable... when the time came for the decision to be carried out... According to such theories, far separated events can have a connectedness permitting them to influence one another deterministically and instantaneously... '[S]tochastic electrodynamics' takes classical physics and adds a background of ever-fluctuating zero-point fields... This refers to a jittering which particles would have (according to quantum physics) at temperatures right down to zero. [The theory] suggests that zero-point fields drive the motions of particles throughout the universe, these motions in turn giving rise to the fields 'in a self-generating feedback cycle'. Calculations based on such an approach are in good agreement with experimental findings... Whether the world is radically indeterministic is therefore very much an open question. True enough, we are sadly ignorant of what individual particles are about to do, and our ignorance cannot be explained in any straightforward fashion... no matter how greatly it is magnified by doomsday-argument considerations... For up to a few weeks, a supernova can radiate as brightly as a hundred billion suns, much of the energy taking particularly damaging forms – X-rays, gamma rays and high-energy 'cosmic ray' particles... [Thus] it seems that... dangerously close ones could... [destroy] Earth's normal electromagnetic shielding against cosmic rays... Alternatively, a... neutron star or black hole might emit energy able to damage... the ozone layer... from a great range... because of being concentrated into narrow jets... One might also need to consider large solar flares. If the sun were to enter a period of convective mixing, as may already have occurred at intervals, then an immense flare, up to a thousand times more energetic than any yet observed, might destroy the ozone layer about as effectively as a nearby supernova, especially if Earth's magnetic field had fallen to a low level during one of its reversals: there have been ten of these in the past two and a half million years, with the field dropping to near zero for up to twenty thousand years at a time. However, all such matters could seem to pose little immediate threat. After all, Earth hasn't been troubled by events of this sort for many millions of years... [It has been] calculated that supernovae inside thirty-three light years of Earth, attacking the upper atmosphere with cosmic rays sufficient to destroy perhaps 90[%] of the ozone for perhaps three hundred years, would occur no more often than around once every 240 million years. We would therefore appear to be safe for quite a while, particularly since the nearest potential supernova revealed by our searches is Alpha Crucis at a seemingly very adequate distance of four hundred million light years.

Apart from the sun, the star nearest to Earth is Proxima Centuri, at a distance of some four light-years... The Galaxy in which the Earth is located... has two main components: the halo, 100,000 light years in diameter... and the disc, a few thousand light-years thick... where the spiral arms denote regions of most recent star formation. Our sun is located slightly above the mid-plane of the disc, and about two-thirds of the way out from the centre. The... central few light-years of the Galaxy contain energetic radio and infra-red sources, associated apparently with disturbed complexes of ionized hydrogen. These streaming gas-clouds behave as if ejected explosively from something not yet understood, perhaps a massive black hole, at the precise centre... The known Universe is believed to be at least ten thousand million light-years in diameter... [I]n 1929... Edwin [Hubble]... demonstrated the statement (known as Hubble's law) that the distance to a distant galaxy is directly proportional to its observed velocity of recession from us. Such a result is a natural consequence of a uniformly expanding universe, as predicted by the 'big bang' theory... and implies that the age of the universe is inversely proportional to the constant of proportionality in the mathematical expression of the law. This constant (Hubble's constant) is uncertain to a factor of two, suggesting an age for the universe of between ten and twenty thousand million years.

...the big bang coughed out mainly hydrogen and helium[, which]... the stars... turned into heavy elements like carbon and oxygen and iron, and even uranium... Carbon nuclei form in the cores of stars from the triple encounter of three helium nuclei. Now the collision of helium nuclei within stars is a common enough process, but the simultaneous collision of three such nuclei is very rare, so rare, in fact, that there would be little prospect of significant carbon production were it not for a remarkable coincidence. Nuclear reactions vary rather a lot as a function of energy. Occasionally you get... [what] is called a 'resonance' – a sharp peak in the reaction rate. It turns out that nature has obligingly provided just such a resonance in the triple-helium reaction at precisely the thermal energy corresponding to the core of a star. As a result... laws of physics, and the structure of stars, felicitously conspire to ensure that carbon production... is prolific... [O]ccasionally stars explode. It sounds like bad news... but if they didn't... we wouldn't be here because these explosions are the principal means whereby the carbon and other important elements become disseminated around the universe. The dispersed material gets caught up in the next generation of stars and planets... [I]f, in the first few minutes of the universe... all the hydrogen had been processed into helium... the universe today would have no hydrogen. It turns out that about 90[%] of the nuclei in the universe are hydrogen, and this serves two very useful purposes... Without hydrogen there would not exist stable stars like the Sun. The second vital use for hydrogen is water (H₂O), crucial for life as we know it... One of the depressing things about the last three hundred years of science is the way it has tended to marginalize, even trivialize, human beings and thus alienate them from the universe in which they live... It is a sobering thought how delicately our existence is weighed in nature's balance of forces. There are several ways of interpreting these rather amazing facts. One is to say: 'I knew it all along! God designed the universe... and it's all put together in a very satisfactory way.' Not many scientists would be happy with that. Another response is to say: 'So what? If it wasn't like that, we wouldn't be here to worry about these things... It may be amazing, but why not just accept it as a brute fact?' A third point of view is to invoke the so-called 'many universes' hypothesis. The idea here is... that ours is not the only universe, but that there exist many others, and each universe is slightly different... There could be an infinity of these other universes with all possible combinations of things, all possible laws and so on... but only a tiny fraction of them is actually cognizable... [If there is an infinity of other universes, every event could be unique or be repeated an infinite number of times.] At present the astronomical evidence is probably consistent with a spatially finite (closed) universe, although it favours infinite (open) models.

According to Einstein's theory of relativity, light travels in a curved path, eventually returning to its starting point, and in this sense the universe may be considered finite though boundless.

The general theory of relativity opened an extremely fascinating possibility... On the other hand... [this] theory is also... dangerous because it came into the hands of mathematicians and cosmologists, who had very little contact with empirical reality. Furthermore, they applied it to regions which are very distant, and counting dimensions far away is not very easy. Many of these scientists had never visited a laboratory or looked through a telescope... They looked down on the experimental physicist whose only job was to confirm the high-brow conclusions they had reached, and those who were not able to confirm them were thought to be incompetent... The... general belief... is... that long ago the state of the Universe must have been much simpler, much more regular than today, indeed so simple that it could be represented by a mathematical model which could be derived from some fundamental principles through very ingenious thinking... [However,] if a scientist makes a guess about the state of the Universe some billion years ago, the chance that this guess is realistic is negligible. If he takes this guess as the starting point for a theory, this is unlikely to be a scientific theory but very likely will be a myth. - Cosmology, History, and Theology

The special theory of relativity is largely the outcome of experimental and theoretical efforts late last century to produce a coherent theory of electromagnetism... Although mathematically the theory is surprisingly uncomplicated its results are far-reaching, changing the basis of physics and undermining intuitive common-sense notions. Among its consequences are th[at]... nothing can go faster than the speed of light in a vacuum; the mass of a body increases and its length (in the direction of motion) shortens as its speed increases; the time interval between two events occurring in a moving body appears (to a stationary observer) to increase; ...mass and energy are equivalent and interconvertible. All of these are well attested by experiment. Their explanation, however, quite eludes modern physics and they tend to be regarded as the basic datum of nature.

THANKS [largely to a succession of] extraordinary scientific discoveries made over the past century or so, we now possess some extremely deep theories about the nature and structure of reality... Our best theories are[n't] only truer than common sense, they make far more sense than common sense. But taking these theories – and the experiments that corroborate them – seriously means discarding old beliefs and accepting explanations that are so counter-intuitive that at first sight they often seem ludicrous. One such explanation is that the universe we see around us is only one of a vast number that exist – some very similar to ours, some very different. Curiously, what compels us to adopt this grand “parallel universes” theory of reality is a deceptively simple laboratory experiment with light and shadow. Indeed, many of the most jarring discoveries of modern physics have emerged from the study of light, for almost nothing about light is as it seems... [T]he first clue to the existence of parallel universes [is] that light... tends to bend and fray... In everyday experience, light travels only in straight lines and therefore casts shadows that are silhouettes, similar in shape to the obstacle in the light's path. But... when directed at a narrow slit in a screen, the beam... of a flashlight... does not form a silhouette of the slit but instead disperses into an intricate pattern of brightness and shadow... When a second, identical slit is opened up in the same screen, the resulting pattern of shadows is radically different from – instead of merely a doubled image of – the single-slit pattern. There are places that are illuminated in the single-slit pattern but actually go dark when the second slit is opened... [T]o 19th century physics... the prevailing explanation was that light coming through the new slit interfered with the light from the original slit, deflecting both into the new pattern. But this... was ruled out by an astonishing experimental result: if the experiment is performed with only a single photon at a time, the interference still occurs... Something is still deflecting that solitary photon from its path in a way that depends on what other slits, of what shapes, are open. Moreover, further experiments with mirrors and lenses show that the entities... doing the interfering behave exactly like photons – except that they are invisible. So it appears that photons come in two sorts: tangible photons – the ones we can see or detect with instruments – and “shadow” photons, which are far more numerous but detectable only indirectly through their interference effect on tangible photons... Quantum theory – the fundamental theory of microscopic physics – predicts, and experiment confirms, that... every neutron... must be accompanied by an invisible retinue of shadow neutrons; every electron by shadow electrons, and so on... The world of shadow particles [– ‘virtual particles come and go so quickly that you can't see them’ –]could be called a parallel universe... Everything in the tangible universe has its shadowy counterparts in other universes... [But parallel] universes differ from each other in that the particles they contain are in slightly different positions... As you read these words now, your counterparts in some parallel universes are reading them too. Some have moved on to the next paragraph; others... have paused for a cup of tea; a few have thrown the article down in disbelief. Each version of you is not directly aware of the others, but can deduce the others' existence phenomena that link the different universes. If there are identical copies of you in other universes, you may ask, which one is the real you? The answer is that all of them are equally real and equally you... We do not feel the presence of our counterparts in other universes. Nor did the Inquisitors feel the earth moving beneath their feet when they prosecuted Galileo for saying that it did... In 1963, the U[S] co-signed the partial Test-Ban Treaty... The Senate ratified [i]t... with the stipulation that the U.S. must create a monitoring system capable of detecting violations... Los Alamos Scientific Laboratory... got the job of detecting clandestine bomb-tests in space. To do this, a group of scientists... built detectors (code-named Vela Hotel) that were launched into orbits roughly half-way between Earth and the moon. They were sensitive enough to detect the pulse of prompt nuclear radiation from any bomb of interesting size exploding within a million miles of Earth. But they never detected a bomb... [However, occasionally] they saw bursts of nuclear radiation that lasted for a few seconds, much too slow for a bomb and much too fast for any known astronomical source. They called these explosions gamma-ray bursts. They obviously had nothing to do with bombs. They also appeared to have nothing to do with our solar system or... galaxy... They were reluctant to publish, not because their data was secret, but because it was too weird to be credible. They wanted to wait until they had some plausible explanation for what they were seeing... 2,000 gamma-ray bursts have now been detected. We still have not the faintest idea what the[y]... are... how they are or why they are. All we know is that they are the most violent events in the universe... a[nd a]re immensely far away, half-way back to the beginning of time and half-way across the universe. Now that we know... gamma-ray bursts are far away, the mystery of their nature and origin becomes even deeper. To be detectable half-way across the universe, a single burst must contain far more energy than our sun will generate in its entire lifetime... It seems likely that the true explanation of gamma-ray bursts must involve new science... Newtonian physics was superseded early in this century by several theories, including Einstein's theory of relativity, the quantum theory of the atom and the Big Bang. Since then, physicists and cosmologists have attempted to meld these... into a “theory of everything” that answers some fundamental questions about the universe... [S]tring theory posits the existence of loops of energy in space, and claims that all forces and particles are aspects of these strings... suggesting that the universe is a vast tapestry, and all its patterns are combinations of individual threads of energy. String theory is a promising candidate for a unified theory of everything but it presently faces two problems. [1:] it describes strings moving in space but fails to follow relativity in demonstrating that space itself is made of relationships among the things that move within it. [2:] string theory comes in a great many versions, which describe many different possible worlds. One potential solution is that the different string theories actually describe different realizations of the same basic stuff, just as ice, liquid water and steam are all just different phases of the same water molecules. But this leads to another question: Why do we see a particular phase in the universe at any given time? It may be that the universe chooses a phase depending on its history. This, in turn, raises a final question: Did the universe have a choice in the laws of nature and, if so, how was that choice made? If a choice was made about the fundamental laws of physics, it seems to have been made so that we and the world around us would be possible. Reflecting on this has made many scientists turn to mysticism or religion. But I prefer to search for a rational, scientific understanding of this puzzle[, in which]... the universe can be understood as having constructed itself... by means of something operating in physics and cosmology just as natural selection does in biology... If this theory... called cosmological natural selection... is true, it means... we live in a benign universe, one that is hospitable to life because it shares some characteristics with living things. It also means...

principles of justice, law and equal rights are not imposed from outside; they are made by us as part of an evolving system called human society. And human society, like space and time, is not absolute or eternal... Since our universe turns out to be only one among many... a new word has been coined to denote the whole of physical reality: the multiverse... It follows that reality is much bigger than it seems... The part we call the universe – all the objects and events that we and our instruments can directly observe – is the merest tip of the iceberg... We forget that [our own] world is always... stranger than we... can guess. Instead, we search for... simple laws of nature, in a sleight of mind that makes us uniquely human. Just as we're addicted to rules, home-truths and slogans, we're addicted to certain ways of explaining things. There's bound to be a simple answer to everything, we insist... Maybe complexity frightens us. Maybe we fear becoming as plural as all we survey. Maybe we still tacitly believe that the universe was created for our pleasure, that we pint-sized demigods are its sole audience and goal. Then something like *pandora* turns up, a minute being with a sex life even stranger than our own... (it will try anything)... a creature that breaks all the rules and gives biologists a jolt... With a mouth like a hairy wheel, and other anatomical oddities... *pandora* is... so outlandish that a special phylum was created for it – Cyclophora... I must admit, I get a devilish delight when the miraculous appears right under... one's... nose... I don't[even] worry about the mites that live among my eyelashes... Because we have swarmed across the world with our curious and agile minds, we sometimes think that nature has been fully explored. But that's far from true. Plants and animals are going extinct at an appalling rate – some estimates are as high as 300 species a day – and many... are vanishing mysteries. The riches of the natural world are slipping through our fingers before we can even call them by name. Hanging on by a suction cup, and reaching around to vacuum up fallen morsels from a dining lobster's lips, *pandora* reminds us that we share our planet with unseen hordes, and it hints at the uniqueness of our own complex niche in the natural world. Recently a graduate student... happened upon a fungus... sprouting behind the head of a beetle grub. Intrigued, she took it to a laboratory... and soon realized that she had made an astounding discovery: the sexual form of... a mould that produces closporin, an immunosuppressant used to combat organ rejection. We know the tropics contain a rich pharmacopoeia, but there are many organisms still to be found in our unexplored backyards... The word "discovery" literally means: uncovering something that's hidden from view. But what really happens is a change in the viewer. The familiar offers a comfort few can resist, and fewer still want to disturb. But as relatively recent inventions such as the telescope and microscope have taught us, the unknown has many layers. Every truth has geological strata, and you can't have an orthodoxy without a heresy... And then there are those awkward psychological mysteries. I suspect human nature will always be like mercury, a puzzle to grasp. No matter how much of the physical universe we fathom, what makes us quintessentially human eludes us to some degree, because it's impossible for a system to observe itself with much objectivity... I[n one of the least noted ironies], modern Western man's enlightened grasp of history – with his belief in progress, in the rise of civilization and in laws for all humanity – led to the abdication of man's sense of control over his own future and to the discovery of historic forces that mastered him. The result in this century was a new word with a new meaning – historicism, expressing a belief that historical change occurs according to fixed laws. According to this view, the course of history may be predicted but cannot be altered by human will. The social sciences have taken on the role of the ancient prophets... [Yet no] matter how hard or where we look, even under... a lobster's nose, surprise awaits us. There will always be plenty of nature's secrets waiting to be told.

Up until this century, the most mysterious thing about the sun was its lifetime. Anything that radiates energy must eventually deplete its source, and [our] sun is no exception. We know now, through radioactive dating, that the oldest meteorites are about 4.6 billion years old, so that the sun's lifetime must be at least this long... At the beginning of nuclear burning... the sun was only about 75[%] of its current luminosity... The helium "ash" produced by hydrogen burning in the sun remains where it was produced – at the center. The material seen at the surface of the sun, for the most part, is the material out of which the sun formed... About 5 billion years from now the hydrogen will be exhausted at the solar centre. Nuclear burning will continue in a shell surrounding the now-inert helium core. Lacking an energy source to keep it hot, the core yields to gravity and collapses... As the core collapses the hydrogen-burning shell will be drawn in and heated up, greatly increasing its nuclear burning rate. The resulting increased energy flow passing through the outer layers of the sun will cause it to expand and cool. In a [further] few hundred million years, the sun's luminosity will increase to a few thousand times its present value, and its radius will be more than 100 times greater than it is now. Venus will be consumed inside the sun, and the earth burned to a crisp. The photospheric temperature will drop and the sun will be red – a red giant. During... [this] phase, the helium core will grow in mass but not in radius. When it reaches about one-half of the solar mass, the temperature will be high enough for helium to fuse into carbon... and oxygen... During the burning of helium, the sun will decrease somewhat in luminosity and radius. Eventually, the helium will be exhausted at the center, and the sun will begin a second red-giant phase, with a degenerate C and O core surrounded by a region of helium burning and, still further out, hydrogen burning... [S]olar wind will eat inward, as the hydrogen- and helium-burning shells eat outward. As the helium shell nears the surface, it will become unstable and flash on and off with increasing intensity. Eventually these flashes will become large enough to expel the outer part of the sun, which will expand into space as a spherical shell... At an age of about 10 billion years, the sun will have ended its life as an energy producer. It will not be capable of fusing [C and O]. Its remaining hydrogen and helium fuel ejected into space, the initially very hot core will cool forever... Such a star is called a white dwarf. The final ejection of mass produces a planetary nebula, the result of a relatively mild (as these things go) stellar explosion... The material that the sun returns to the interstellar medium via the solar wind and planetary nebula has not undergone nuclear processing. But that is not the case for all stars... The spectra of the oldest stars... show that they are essentially pure hydrogen and helium... If the oldest stars contain no heavy elements, then these must have been synthesized after the birth of the universe... It seems clear now that they are produced in massive short-lived stars, or super-giants... The very oldest stars deficient in heavy elements are now extremely rare... The sun... has about 2[%] heavy elements. Some new stars have as much as 4[%]... Birth is perhaps the least understood aspect of the life of a star. Observation has shown that stars are formed in large, interstellar clouds of gas and dust... It is now generally agreed that a large dust cloud will not collapse to form stars all on its own, but that some sort of external stimulus is needed to get the process going. For most clouds, this stimulus comes from the structure of the galaxy itself... A few million years after the Big Bang, our galaxy... started to form. This was about 15 billion years ago... It turns out that if the stars were scattered uniformly throughout the Milky Way disk, the galaxy would not be stable. The stars would tend to bunch together into long, spiral-shaped arms of the type seen in other galaxies. These arms rotate with a speed different from the speed of individual stars and clouds, so that a given cloud "catches up" with one of the spiral arms during the normal course of affairs. When this happens, the gravitational forces of the stars that are bunched together will compress the cloud... As the cloud collapses... it fragments and forms smaller clouds, which continue to collapse. Ultimately a group of stars is formed... and, in the one case we can adequately observe, a system of planets was formed as well... 99[%] of the angular momentum of the solar system is carried by the planets (primarily Jupiter)... Even when the sun was formed, it carried at most only half of the total angular momentum of the system... Our bodies are about 92[%] star dust (and 8[%] hydrogen, surviving from the beginning of the universe...).

...the original fireball which began all of creation... is literally present in our brains when photons go off, and in the process of photosynthesis...

...the possible discovery of life forms elsewhere in space, and the vast age of the Earth turn out to be largely irrelevant when it comes to addressing that most fundamental question: is there a Creator? There is ample evidence... in our own backyard... Observe how the green leaves of plants have grown towards the sun. A thoroughly insignificant observation it might appear. In fact, such plant behaviour is loaded with significance... The

plant actually wants to organise its ability to extract energy from the sun's rays so as to grow... The microscopic bit of the leaf that performs this task is called the chloroplast and is crudely analogous to the function of the modern combustion engine – fuel in one end, useful work out the other. But don't be fooled. The chloroplast is infinitely more sophisticated in its work than even the latest high-tech car engine with its on-board computer. Molecular biology has made a superb job of describing the chemical and physical processes that are harnessed in the operation of the chloroplast. Nobel prizes have been won by some of the scientists who have unravelled these. But this same science is powerless to explain why there is such a purposeful biological entity called the chloroplast... To pretend that science has "explained" plant photosynthesis without acknowledging the crucial role of a higher cause is about as silly as claiming that the modern internal combustion engine can be fully accounted for by ignoring completely the evolution of human ideas and insights that led to its design and eventual construction.

The Sun is a member of a class of stars numbering in the hundreds of millions among the several billion stars in our galaxy[, which is among]... the several billion galaxies in the observable universe... At the face of the Earth... the Sun beams radiant energy with a power of 173 trillion watts, and a solar wind blusters high energy particles... [T]he atmosphere absorbs and scatters high energy particles from the solar wind and from more distant starting places in the universe... The oldest known... sample of sedimentary rock, 3.5 billion years old and located in A[US]... holds evidence of the presence of living cells. That early start argues for the inevitability of life in the circumstances afforded by the Earth. The planet is the right distance from the Sun, not too close nor too distant to be either too hot or too cold. It is the right size – that is, it has sufficient mass – to keep its iron-nickel core in the molten state. That, too, keeps the planet at the right temperature... Whatever the composition of the atmosphere[when life on Earth began], it had no oxygen... From various considerations, including what is known about... thick (Venus) and thin (Mars) atmospheres... it is thought that the Earth's atmosphere at this early time was composed of methane... and ammonia... plus carbon dioxide... in much higher concentration than now. This apparently thin atmosphere offered little insulation from the ultraviolet radiation and the x rays and gamma rays in the solar radiation, or even from the solar wind. In laboratory glassware, the exposure of such a mixture of water vapor and gases to such fierce radiation has brought about the synthesis of small organic molecules. Their essential ingredients are carbon, hydrogen, and oxygen, and often nitrogen as well... Organic chemists soon learned... to synthesize them. The subsequent discovery of these components in carbon-laden meteorites has led some workers to speculate that life on Earth was seeded by such meteorites. Be that as it may, among the small organic molecules synthesized from models of the ancient atmosphere, investigators have identified the simple piece-parts, the "monomers," that link together repetitively in the long-chain molecules, "polymers," that conduct life processes in the living cell... Proteins have similarly wide recognition... in... life processes... What they do is supply energy to speed up chemical reactions between atom and atom, atom and molecule, and molecule and molecule that would without them proceed much too slowly. Proteins... also give the cell structure. How the monomers... got lined up in these remarkable polymers breaks down into questions that keep a great many clever biochemists busy. One alluring possibility is that highly ordered crystals of silicon in compound with aluminium and other metals and with oxygen and hydrogen, forming the clays on the bottom of the early seas, provided templates on which the monomers lined up and linked into polymers. The sequences that had the right properties took off from there. How such molecules came to assemble in the living cell presents another whole class of dazzling questions... [However, isolated] from the living cell, protein and DNA molecules exhibit spontaneously the chemical reactions that, orchestrated in the cell, make the cell a living organism.

The story of the amoeba illustrates not only the advances made in the last few decades in the techniques of microscopy but also the difficulties involved. Years ago microscopists could watch amoeba only from above in the usual manner of looking at very small objects. From this angle one could see the pseudopodia advancing over the surface of the microscope slide and apparently in contact with it. Recently, however, a technique has been devised for watching it from the side and a new detail has come to light. In fact, when each pseudopodium moves forward it is supported by an extremely small peg of protoplasm which remains attached to the ground at one spot while the rest of the animal, raised just above the ground, advances over it. Finally, the pseudopodium is withdrawn and reincorporated into the body of the amoeba. A number of theories of 'amoeboid movement' have been proposed over the last 20 years but its mechanism is still not thoroughly understood. One can see... the protoplasm streaming forwards along the centre of the pseudopodium and moving out to the sides at the tip in what has been descriptively named the 'fountain zone', and there acquiring a firmer consistency. At the same time the reverse change occurs at the 'tail', where the protoplasm resumes its forward flow. What is still in doubt is whether the advancing protoplasm is being pushed forward from behind, like toothpaste in its tube, or pulled by changes in the proteins in the fountain zone. The problem is by no means trivial, for some of our own cells move in an amoeboid manner and its solution in terms of the behaviour of protein molecules could cast light on one of the basic properties of protoplasm. - Pushing or pulling?

It so happens that physicists are quite certain that no physical object possessing mass can move at a speed equal to or greater than that of light... In 1911 the Austrian American physicist Victor Francis Hess... was able to show that certain very energetic forms of radiation reach Earth from space, and they were therefore called *cosmic rays*... Because... cosmic-ray particles are electrically charged... they curve in their paths in response to the various magnetic fields associated with stars... They end up reaching us from all directions, and there is no way we can tell from what specific direction a specific cosmic-ray particle began its travels... In 1931 the American radio engineer Karl Guthe Jansky... discovered that there are *microwaves* reaching out from the sky. Microwaves are lightlike radiations without electric charge, so they travel in straight lines, unaffected by magnetic fields. Microwaves... are about a million times as long as lightwaves are. Despite this... [it] was... much harder to work out the point of origin of microwaves than light... In 1939, when Oppenheimer was working out the theoretical implications of the neutron star, he... saw that... [when] the nuclear force fails, there is nothing left to withstand gravitation, that weakest of all forces, which when added to and added to by the endless piling together of mass finally becomes the strongest... The inward-pulling gravitation is... however... essentially changeless, but the outer push of temperature at the... center, which balances that pull, depends on nuclear reactions that consume hydrogen and produce helium... Fortunately... the various galaxies do exert a gravitational force on one another. This may not be sufficient to prevent the[universe's] expansion, but it will tend to slow it... [Unfortunately, we] are not sure by exactly how much the gravitational force in the universe is slowing the rate of expansion. It depends on... the average density of matter in the universe... If the density is high enough, then the slowing effect is great enough to bring the rate of expansion to zero eventually... Once that happens, the universe under the pull of its own gravitational forces will begin to contract, till the cosmic egg is formed and explodes again. This... [is] an *oscillating universe*. A[n A]merican astronomer... has suggested that a cosmic egg forms and explodes every 80 billion years... Actually astronomers are not yet certain just how dense the matter of the universe is, on the average, so that we can't be sure exactly... whether the universe is oscillating or not... Consider the Earth, for instance. It tends to lose some of its mass as its atmosphere leaks very slowly away. It also tends to gain some mass as it collides with and retains meteoric matter[, which]... is considerably greater than the amount of mass lost by Earth each day... [T]herefore... the Earth is very slowly, but steadily, growing more massive. In the same way the Sun is constantly losing mass... The Sun remains what it is only at the expense of steadily converting 600,000,000,000 kilograms of hydrogen into 595,800,000,000 kilograms of helium *every second*... The missing 4,200,000,000 kilograms is converted into... radiation... Nevertheless, it can easily be argued that the general tendency in the universe is for large objects to grow at the expense of small. - THE COLLAPSING UNIVERSE

...the question of entropy in an oscillating universe... is... a major... difficulty... Expansion means work to be done and so does contraction. Why is it then to be assumed that the enormous work implied in pushing apart the galaxies and pulling them again together is free of the dissipation of energy? Should it not rather be assumed that due to this dissipation of energy the oscillating Universe represents an oscillator with a vibration of ever-diminishing amplitude? Would not, therefore, an oscillating Universe tend toward a state of complete quiescence in close resemblance to the heat-death of the Universe[– ‘where the temperature is even throughout the whole Universe’ –] as proclaimed by Helmholtz and others a century ago?

[Is] *the Universe... destined ultimately to collapse...* and, perhaps, “bounce” to repeat the cycle indefinitely[, or]... *expand forever into infinity, ending “not with a bang but with a whimper”?* ...our best answer to the question of how the Universe will end is still “we do not know”... Cosmologists do not claim to know exactly what made the Universe explode into existence from a state of zero volume and infinite density – a space-time singularity – but they do claim, by and large, to be able to describe in detail how a hot fireball of matter and radiation has evolved... to produce the cool, dark spread of empty space, dotted with galaxies... that we see about us now... The idea that the Universe ought to look the same, in broad outline, in all directions and to all observers in it is so important to cosmology that it is called the cosmological principle – and without this uniformity, there could be no successful science of cosmology, as everything we see would be special to our own location, and could not easily be interpreted in general terms... After the first thousand million years or so, with matter firmly established and radiation playing only a minor and decreasing role, the story of the Universe can be taken up in terms of gravity, left as a dominating force because of its long range and its independence of electric charge. Curiously, though, the standard picture now becomes much more vague, and the precision of saying just what photons were doing so many seconds after the big bang is replaced by generalisations... [The] greatest intellectual contribution to man’s understanding of the Universe and his place in it was the general theory of relativity, from which the whole of the modern science of mathematical cosmology derives... Einstein’s... theory... is[, however,] almost *too* complete... with some problems beyond the skill of today’s mathematicians... Einstein’s revolutionary vision of the Universe saw the inseparability of both... space-time and matter; it was not just *matter* that was created in the big bang, but space-time as well. There was nothing “outside” for the big bang to explode into – and this... means not even empty space, which on the Einsteinian picture is far from being “nothing”... Einstein’s equations describe the geometry of space-time, and naturally he wanted to apply them to the geometry of *all* space-time – the Universe itself... But he failed... In order to make the equations fit in with the way astronomers then believed the Universe to be... [–] isotropic... homogeneous... and static... [– he] had to introduce an extra factor, called the “cosmical constant”. Quite frankly, he fiddled the equations. And in later life Einstein commented that this fiddle was the biggest scientific mistake he ever made. - Cosmology Today

We think we can work out a theory of the structure and evolution of the universe... [even though our] observational basis is necessarily so limited – we cannot poke a star, or look at the universe from another place... [Cosmology’s] inferences are therefore indirect and often controversial. - ORIGIN and EVOLUTION of the UNIVERSE

The expanding universe is now a cornerstone of cosmology, but... [there] is no astronomical evidence that the universe has a centre or an edge, as the idea of an exploding lump would imply... The expanding universe is not, therefore, the motion of galaxies *through* space, away from some centre, but is the steady expansion of space... Around each galaxy, every day, no less than a hundred billion billion billion billion billion cubic kilometres of new space appears from nowhere, as it were. - The Edge of Infinity

The total rate of creation for the observable universe is about 100,000,000,000,000,000,000,000,000 tons of matter per second. And it is the appearance of this matter which drives the universe: the new material produces an outward pressure that leads to the observed expansion... It would appear, then, that the past of the universe has been as brilliant as the present, that the future will be as the past, and that the present is of no more importance than any other time. It would also appear that life is not an accidental, meaningless and extremely fleeting episode in the history of matter. On the evidence of recent theories of origin, it is possible to say that *life is the purpose of the universe*.

It is now the prevailing view about the nature of matter that all of it, living and otherwise, is descended from neutrons... [and] that the entire visible universe once consisted of one or several balls of neutrons endowed with such energy and mass that it collapsed or blew up... Where the ball (or balls) of neutrons and the accompanying radiation may have come from is a question that transcends the bounds of science... [because] there is as yet no apparent way to deal with this question scientifically... It is... [a] question... belonging to metaphysics and theology... Perhaps the “big bang,”... was simply an initiating event in the most recent of a continuing succession of pulsating expansions and contractions... Each new generation of stars and planets builds from the ashes of the last. The abundance and range of the heavy elements and isotopes found on Earth implies that... [our] sun... is... a second- or third-generation star... To earlier generations [of humans] Earth seemed awesome and illimitable in its capabilities... Now that the entire earth has been photographed from afar in a single field of view from a variety of spaceships, it is hard to defend such a view. At last our planet can be seen by all as it really is: a relatively tiny habitable sphere, suspended in... a... captive and delicately balanced orbit around the life-giving but potentially lethal sun... [T]he term *infinite* is... however... still commonly but incorrectly used, even by highly intelligent people, to refer to the life-supporting capabilities of our planet. - COSMOS, EARTH, AND MAN

If there is a single quantity that appears to us limitless, unplumbable, infinite, then that quantity is time. Yet modern scientific investigations assure us that, although there is a great deal of it, time is of strictly finite extent. In a more restricted sense we talk of “geological time”, meaning the timespan encompassing all matters connected with the origin, evolution and structure of... Earth... Only within the last few decades has it become possible to measure the absolute age of rocks... of almost any geological age with a high degree of precision... The radius of... Earth is determined by astronomical measurements to be 6371km (3950mi), and... from the value of gravity at the surface... the mass can be determined... To study the internal structure of... Earth in detail, indirect methods must be used since only the upper few kilometres are accessible to direct examination... Earth’s deep interior is studied primarily by seismic methods... In addition to determining density, seismic-wave velocity places important constraints on the chemical composition of each zone... Earth is divided into... the crust, the mantle and the core... Most of [Earth’s] volume and mass... – approximately 83% and 67% respectively – are contained within the mantle. It is not simply because it makes up so large a part of our planet that study of the mantle is important: the processes that operate within it are responsible for crustal plate movements... The core is in two parts. The outer core does not transmit shear waves and so must be liquid; the inner core, having a radius of 1220km... is solid and... thought to be composed of an iron-nickel alloy similar to that found in meteorites... [O]ur knowledge of temperatures within... Earth, particularly in the deep interior, is meagre. It is an area of study in which much more information is needed if we are to fully understand the present structure of... Earth and how this structure may have evolved through time... A rare and problematical class of natural objects, tektites are much studied and little understood. They are small pieces of glass, varying in colour from light green to black and having... distinct and characteristic shapes – spheres, buttons, dumbbells, etc. They have been found in only four areas of... Earth’s surface, known as “strewn fields”: southern A[US] and southeast Asia, the Ivory Coast, Czechoslovakia, and Texas and Georgia, USA. Each group has its own distinctive age, but all are geographically very young... [Tektites older than] 34,000,000 years... are unknown. Any theory which seeks to explain the origin of these mysterious objects must take

account of their restriction in both space and time, and... that they bear no discoverable relation to their surroundings. Other highly significant features which must be explained are the presence ...in some tektites of minute grains of meteoritic minerals... [A]mong all natural objects available for [laboratory] study... meteorites are the closest relatives to the inaccessible matter that forms [Earth's] bulk... - PLANET EARTH

The shape of this planet is not a perfect sphere... The diameter through the poles is approximately twenty-seven miles shorter than the diameter at the equator. The bulge at the equator and flattening (or oblateness) at the poles is caused by the CENTRIFUGAL FORCE produced by the rotation of Earth... Earth consists of several layers. The *centrosphere* makes up the vast interior while the *lithosphere* is the crust of the earth. All of the water bodies (oceans, lakes, rivers, etc.) make up the *hydrosphere*. Earth is surrounded by an ocean of air that is termed *atmosphere*. Man lives at the bottom of this sphere... The... land is very unequally distributed on the globe, and occupies only 30[%] of the surface... The surface... is continually undergoing deformation. All coastlines show evidence of repeated rise and fall patterns of the land relative to the sea... While the exact nature of the origin of the earth is not known[, the]... crust... is operated on by thermal, gravitational, and other forces. These factors... contributed to the distribution of the surface features... Earth moves around the sun in an elliptical... orbit which takes one year to travel. During this time, it... has rotated on its own axis 365.2422 times... Earth spins around its own axis at a fairly constant speed. It takes 23 hours, 56 minutes, and 4.095 seconds... to make one complete rotation relative to the stars... The axis of the earth is tilted... about $23\frac{1}{2}^\circ$ from the perpendicular to the plane of revolution. This accounts for the changes of SEASONS and change in the length of DAY AND NIGHT. At times, the North Pole is inclined toward the sun and the South Pole is inclined away... causing summer in the Northern Hemisphere and winter in the southern... Actually, Earth is closer to the sun in winter than in summer. Midway between summer and winter, both poles are at the same distance from the sun... Earth's revolution and rotation are its two main movements. However, the tilt of Earth's axis causes... *precession of the equinoxes*... Every spinning body is subject to precession or gyroscopic pull whenever any outside force tends to tip its axis out of line. Instead of tipping, the spinning body merely wobbles around its centre of gravity in such a way that the ends of its axes describe circles. The gravitational pull of the sun and moon are forces that are constantly trying to straighten up the axis. Because this "righting effect" of the sun's pull is very slight in comparison with the earth's mass, the pole's motion is so slow that one circle is made in a little over 25,800 years... The earth's velocity in its orbit... has a maximum velocity... when it is closest to the sun[, and]... its rate... of rotation[is] sometimes speeding up, sometimes slowing down... The cause of these changes seems to be related to changes in the distribution of mass within the earth and the friction produced by ocean tides... The moon moves about Earth in an elliptical orbit... [attracted by] earth's mass... Earth's pulling or gravitational force also supports its atmosphere, as well as pulling objects... to the ground rather than floating off into space... The tidal forces, which result from the attraction of both moon and sun, have an effect on GRAVITY. Tidal motions of the earth's crust exist also, but are much smaller than the ocean tides because the earth and its interior are more rigid. The elasticity of the crust does allow tidal deformation, however... Earth is one huge magnet... The magnetic poles are changing location ever so slightly. It is believed that the magnetic axis rotates about the geographic axis once in approximately every 1000 years... Since 1790 scholars have tried to explain the origin of the solar system... The nebular hypothesis of LAPLACE explained quite well the high speed of rotation of the planets and that all the planets except URANUS rotate and revolve in the same direction. It does not, however, account for the very slow period of rotation of the sun. The sun rotates in 26 days, but it should rotate in about one-half day according to the principle of conservation of angular momentum... Since ancient times men have... wondered, and still wonder, how the universe began and how... [or] if it will end... If a person could look at the whole known universe, he would probably notice the Milky Way. But he might not even single out the sun, much less... Earth[, which] would be less significant than a guppy swimming in the Pacific Ocean... From the earth a comet looks like a shining tadpole in the sky... [T]he gigantic tail... always points away from the sun... because the pressure of the sun's rays seems to repel the gaseous material... Comets are members of the solar family... The orbits of comets, however, are not like the planets' orbits.

Comets are commonly distinguished from other components in the solar system by their... [tails] and extremely elongated orbits... When furthest away from the Sun... comets can literally be halfway to the nearest stars... On nearing the Sun, a... solar wind of high-speed protons and electrons [sweeps] cometary ions in a direction away from the Sun, producing a straight plasma tail... A second tail consisting of dust particles... may appear. This dust tail has a greater curvature than the plasma tail and is usually shorter. It also points away from the Sun because of the repulsive force exerted by solar radiation pressure on the micron-sized particles. Larger particles released from the nucleus simply take up orbits that have nearly the same parameters as the parent comet. This is known as a *meteor stream* [like meteors, 'some asteroids have elliptical orbits that intersect the orbits of the inner planets (most asteroids circle the Sun with orbits that lie within the asteroid belt) – Icarus and Adonis are the best known such asteroids; Hidalgo, the asteroid with the most eccentric orbit of all, approaches the orbit of Saturn at one extreme and that of Mars at the other']... On average five new comets are discovered per year. Unfortunately most of these are faint and can only be observed with the aid of a telescope.

Before the Earth was formed, there were comets here. Afterwards, and for all subsequent eons, comets have graced our skies. But until very recently, the comets performed without an audience; there was, as yet, no consciousness to wonder at their beauty. This all changed a few million years ago, but it was not until the last ten millennia or so that we began to make permanent records of our thoughts and feelings. Ever since, comets have... trailed images, poetry [and] questions... in their wakes... Comets must once have been a kind of psychological projective test – something wholly unfamiliar that... must [be described] in familiar language... To the Chinese, comets were 'broom stars', and much else. In other cultures, they are 'tail stars'... Scientists today still describe comets as having 'tails'... [In] Tonga, comets are 'stars of dust', which is much closer to the truth... We are told that Democritus believed comets to be produced when one planet passed near to another... he was on the right track: comets... arise by natural processes. So far as we know, no one had ever proposed this outlandish idea before... Our knowledge of Democritus comes mostly from Aristotle... who held him in high regard and disagreed with virtually everything he had to say... Aristotle believed he could disprove [Democritus' theory] by noting that Jupiter had, in his time, come close to a star in the constellation Gemini, and had not produced a comet. But Aristotle did not know that the star was light years behind the planet... In this matter, as in most others, Democritus was the better astronomer. But Aristotle's argument appealed to observation, not myth or conventional wisdom... Aristotle was forced to concoct a terrestrial source for the comets, since he had locked them out of his changeless skies, in which, for quasi-religious reasons, he had decreed that no new celestial bodies may be born and no old ones die. His insistence on the immutability of the heavens was the most influential error in the history of astronomy, contributing to a detour from reality that lasted nearly two millennia... All knowledgeable experts agreed with Aristotle. The first real doubts were raised on a night in 1572, when Tycho[Brahe] looked up at the constellation Cassiopeia and saw a star 'brighter than Venus', where no star had been before... Evidently, and to nearly everyone's surprise, the heavens were not immutable. Aristotle and the Church had been wrong. The supernova... was a reveille for the astronomers of Europe and, soon, for the culture of the world... It was hard not to take the comets personally... [The] tendency to construe each apparition as a telegram to the locals from the gods permeates virtually every cometary record until the sixteenth century. Rarely have so many diverse cultures, all over the world, agreed so well... Everywhere on Earth, with only a few exceptions, comets were harbingers of unwanted change, ill-fortune and evil... ['The word "disaster" itself comes from Latin for "bad star".'] This connection of comets and misfortune is made in the earliest surviving reference to a comet, a single Chinese sentence from the fifteenth century BC: *When Chieh executed his faithful counsellors, a comet appeared*... A survey of the early history of cometary observation gives the impression that for almost a thousand years

everybody, except the Chinese, went to bed early. The Chinese logged at least 338 separate apparitions from roughly 1400 BC to 1600 AD. Since 240 BC they have missed a return of Halley's Comet only once, in 164 BC... In the West, nothing approaching systematic observation of comets was in evidence until the fifteenth century [AD]... Western cometary astronomy prior to the Renaissance was a chronicle of occasional episodes of lucidity – especially in Ionia, Athens and Rome – punctuating a far longer and more widespread gloom of ignorance, superstition and delusion. The earliest unambiguous references to comets in the West come from what is today Iraq... and... are favourable: *When a star shines and its brilliance is as bright as the light of day, [when] in its shining it takes a tail like a scorpion, it is a fortunate omen... for the whole land.* A comet that rivalled the Sun in brightness must have come very close to the Earth... When we think of Edmond Halley, if we think of him at all, it tends to be only in connection with his namesake – humanity's favourite comet. The comet becomes a kind of mnemonic device, operating at roughly seventy-five year intervals, that chides us into remembering him... The date of his birth is uncertain; Halley believed it to be 29 October 1656. He began life in the Borough of Hackney, then a rural community outside London, but long since subsumed by the spread of the city. We have not a single anecdote, even apocryphal, that indicates the texture of his childhood. We do know that it was then that he first dreamt what he would later become. 'From my tenderest years I gave myself over to the consideration of Astronomy,' he recalled... In his boyhood, two great comets were seen – one, in 1664, popularly associated with the Great Plague of London, the other in 1665, associated with the subsequent Great Fire... His father, also named Edmond, was a businessman, a soap boiler and salter who owned lucrative properties in London. In 1666, the Great Fire devoured his real estate holdings, but his other business flourished. The recent horrors of the bubonic plague had given Londoners a new respect for personal hygiene. The manufacturing of soap became a growth industry. Moreover, the expanding British Navy had a chronic need for salted meat to sustain its sailors on long voyages... [Incidentally, the] first expedition of Captain James Cook in HMS *Endeavour* was intended specifically to respond to [the junior] Halley's plea to measure a transit of Venus from Tahiti on June 3 1769... The elder Halley... was happy to use his recent wealth to see his son's evident promise realized. He sent him to St Paul's, one of the best schools in England, where Edmond did brilliantly. In 1671, he was elected Captain of St Paul's, which indicates that he was that rare thing – an excellent student who is popular with his classmates. We know nothing of Halley's mother, other than that her name was Anne Robinson and that she died on 24 October 1672, nine months before Halley's departure for Queen's College, Oxford. Additional evidence of his father's largesse is provided by... a twenty-four foot long telescope... that Halley took along to college... which he immediately put to good use. We know this because on 10 March 1675, the eighteen-year-old... had the audacity to write to John Flamsteed... England's first Astronomer Royal, informing him that the authoritative published tables on the positions of Jupiter and Saturn were in error. The young man had also found some errors in the star positions published by the incomparable Tycho Brahe... We do not know exactly what Flamsteed's response was, but it must have been positive, because the next year he helped Halley publish his first scientific report, or 'paper'... *A Direct and Geometrical Method of finding the Aphelia, Eccentricities, and Proportions of the Primary Planets, without supposing equality in angular motion*... Newton... had demonstrated that... comets... have the same kinds of orbits (conic sections...) as the planets... Since the work of Tycho's student, Johannes Kepler, it had been known that each planet moves along a path called an ellipse... The eccentricity is a measure of how stretched out the ellipse is: an ellipse with zero eccentricity is a circle, and an ellipse with an eccentricity of one or greater is... a parabola or hyperbola. The eccentricity of the Earth's orbit is 0.017, indistinguishable to the naked eye from a circle. Mercury's orbital eccentricity, by contrast, is 0.21 – perceptibly elongated. It would, many years later, be one of Halley's triumphs to determine that comets move in elliptical paths and to determine the eccentricity of cometary orbits, one of the keys to their origin... He [also undertook] investigations into the age of the Earth... using the salinity of seawater as a kind of clock that had been ticking at the time the oceans were formed. He thought that... the ocean would reveal increasing salinity as time went on. Rivers carry salt into the oceans at a rate that Halley crudely calculated. Extrapolating back to a time when seawater was fresh, Halley found that the world is much older than the Bible implies – not 6,000 years, but at least a hundred million years... Halley's method[, however,] cannot be used to determine the exact age of the Earth because seawater is saturated with salt. But it is a... brilliant anticipation of a range of modern techniques for dating rocks... and gave heart to geologists and biologists of the next century... Halley then compared the orbital characteristics, or elements, of the comets of 1531, 1607, and 1682, and found many striking similarities... These similarities were... enough to suggest that the same comet was being seen in three different apparitions. When Halley compared the dates... he found something like a periodic return – just as Newtonian theory had promised... Halley[also] concluded that... a comet... would be perturbed by even moderately distant approaches to... giant planets[, thereby causing]... the slight differences in the orbital elements of the [three apparitions]... For millennia, comets had been the almost exclusive property of the mystics, people who considered comets as portents, symbols, wraiths – but not *things*. Halley shattered their monopoly by beating them at their own game, a game that no scientist had ever played before: prophecy. He predicted that the comet seen in... 1682 would return... in the future. And he did not hedge his bet. It would return, he stated flatly, at Christmas time in 1758 – from a particular part of the sky, with specific orbital elements. There is hardly a prophecy of the mystics that even strikes for comparable precision... In contrast to Edmond Halley's father, [Thomas] Wright's father apparently attempted to influence his course of study by burning his books... With this promising start, he taught himself surveying and navigation, became a tutor to the children of the aristocracy, turned down a professorship at the Russian Imperial Academy at St Petersburg, and began writing books on astronomy. The most extraordinary of them, called *An Original Theory of the Universe*, was just that. Published in 1750, it is the first known statement of the true nature and geometry of the Milky Way – not a road of the gods, not divine milk splashed across the heavens, not an architectural support holding up the sky, but a flat disc of stars each like the Sun, all suspended in the ocean of space... [By that] time, it was possible for a poet to describe the Milky Way as a galaxy, 'powder'd with stars'. But the idea of the Milky Way as a flattened concentration of stars in which the Sun is embedded was first proposed by Wright. He even imagined that the stars revolved about some centre of the galaxy 'as do the planets around the Sun'. While there are mystical elements in Wright's writings, and certainly not all that he proposed... has stood the test of time, his vision of the Milky Way is a landmark in the history of astronomy. The work is the more remarkable since its author had never acquired a formal education... Wright's book probably influenced the perspective of astronomers and the future of astronomy in ways that can no longer be traced, but its most significant known influence occurred because of a review that appeared... the following year... in a German magazine... One of its readers... was... a twenty-seven-year-old graduate student... Four years later, aroused by Wright's vision of the universe, but still having read only the review of his book, Kant published the *General Natural History and Theory of the Heavens*... Kant was the first person to consider the origin and evolution of the galaxy, a central topic of modern astrophysics. And he made a daring leap – he supposed that the Milky Way was one of innumerable other galaxies, each filled with stars and, it may be, planets and life, a cosmic perspective not fully demonstrated until the 1920s. Wright had reached for such a vision, but had not grasped it... There are many other delights to be gathered from the pages of the *Theory of the Heavens*, including the first statement that the solar system had been formed from a cloud of diffuse interstellar matter... [Kant] imagined that, unlike the planets, the comets formed at all inclinations, a situation he described as 'lawless freedom'. 'Hence,' he said, 'the comets will come to us without restriction from all quarters.' ...The triumphant return of Halley's Comet in 1758 powerfully supported, in the minds of people all over the world, the Newtonian view that we live in a clockwork universe. In the predictable motion of the planets, and in the periodic apparitions of Comet Halley... many people saw the hand of God... In the time of the American and French revolutions, optimistically proclaimed The Age of Reason, the regular motions of the comets represented a continuing reminder of the gradual emergence of the human species from rank superstition, while at the same time the majesty and elegance of a Divine Purpose was considered evident in every cometary orbit. As a large sample of comets was examined, however, some odd idiosyncrasies, and a disquieting departure from Newtonian regularity, were uncovered. A class of short-period comets was found. They circuit the Sun once every few

years... Comet Encke, discovered in 1786, comes closer to the Sun than does the innermost planet, Mercury... In 1819, J. F. Encke was studying the repeated returns of the comet that... [has a period of] only 3.3 years... Encke found, to his considerable surprise, that in every perihelion passage the comet was arriving a couple of hours early – even after perturbations by Jupiter and the other planets were properly taken into account. Here was a substantial mystery, which Encke was destined never to solve. It put the new astronomy in an awkward position: comets had been touted as the proof of a precise and universal law of gravitation, but at least one comet chose not to play along... The phrase ‘defying the laws of gravity’ goes back to these times. Most scientists believed that Newtonian gravitation was valid, but that here some other, additional force was at play. But what? ...There was something chaotic, slightly unsettling about the motions of comets... But by and large, comets were considered well-understood... [In addition, the] subject was considered respectable and mature. Nevertheless, the central fact about comets – their composition, and the nature of the spectacular variations in the appearance of comets – was at best only dimly glimpsed. In reading the literature of the time, we are struck by how rarely it was even acknowledged that these were important matters awaiting future discovery... An elliptical cometary orbit has a certain size. Its near point to the Sun is called its perihelion, and its far point its aphelion. The distance from perihelion to aphelion... is the major axis of the ellipse, and half the major axis is called the semi-major axis... Comets with small semi-major axes never leave the planetary part of the solar system, and comprise the kingdom of short-period comets. Such comets are tightly bound to the Sun’s gravity; it would take a very major influence to perturb their motion significantly. But comets with large semi-major axes spend most of their time far beyond the region of the planets, and less than once in a human lifetime do they make a brief foray into the inner solar system... Comet Kohoutek, which passed by the Earth in 1973... will not return for another ten million years... Such long-period comets are much more loosely bound to the Sun, and are more easily perturbed... The short-term comets tend to orbit the Sun in the same plane as the planets... They also tend to go around the Sun in the same direction as the other planets. The long-period comets, on the other hand, show a chaotic mix of every orbital inclination, and are as likely to be going around the Sun clockwise as counter-clockwise. Newton thought that the chaos of the long-period comets was to be expected in a universe in which only gravity was calling the shots, while the orderly regularity of the short-period comets was a sign of divine intervention... As late as 1835, a lecturer at The Royal Institute was able to conclude that the orbital inclination and eccentricity of comets ‘does not depend upon physical laws, but upon the will of the Creator’. However... [Pierre] Laplace showed that the orbital characteristics of long-period comets could be transformed into those of short-period comets during gravitational capture by Jupiter, and religious opinion changed... Laplace once imagined the Sun... [as being] surrounded by a vast population of randomly moving interstellar comets. Some would... be attracted by [the Sun’s] gravity, and... fall into the inner solar system... Laplace had also calculated that the short-period comets were being destroyed – by gravitational ejection from the solar system... or... by running into a planet now and then... If there were a vast cloud of interstellar comets, then the population of short-term comets could be resupplied by the cascade from interstellar comet to long-period comet to short-period comet... By the late nineteenth century, Laplace’s concept of a cloud of interstellar comets had been rejected... But if the Sun is not sweeping up interstellar comets, what resupplies those comets in the inner solar system that are being destroyed? There are only two possibilities: either comets are being made today somewhere in the solar system, or there is a vast repository of hidden comets which supplies a steady trickle of samples. All suggestions about how comets might be manufactured lately, in anything like sufficient numbers, have failed. That leaves only the possibility that the comets are sequestered. If they were stored nearby, we would have some sign of them. It follows that they must be a great distance from the Earth (and the Sun)... That might account for the nearly random orbital inclinations of the long-period comets; we can imagine them as decoupled from whatever influence confines the planets and the short-period comets to the ecliptic plane... Among... contributions... [to astronomy by] the dean of the... [University of Leiden in the Netherlands] are the first correct estimate of the distance of the Sun from the centre of the Milky Way, the first use of radio astronomy to map the spiral structure of the Milky Way, and the discovery of massive episodic explosions at the hub of the Milky Way – which may indicate the presence of a vast black hole at the exact centre of our galaxy... [S]hortly after the end of... [WW2 the dean] proposed the existence of a distant cloud of comets loosely bound to the Sun... He found a smattering of long-period comets with semi-major axes of a few thousand... astronomical [units (AU) – the]... semi-major axis of the Earth’s orbit is... one AU [–] ...and even a few tens of thousands of AU. These are already immense distances from the Sun, hundreds of times further away than Pluto is. But the bulk of the comets... [that he] studied... seemed to be clustered in the vicinity of 100,000 AU... [The dean] proposed that a vast cloud of unseen comets surrounds the Sun at immense distances, and that all the comets we see are the leakage from that distant assemblage. Most of these comets are on nearly circular orbits with negligible eccentricity... But, occasionally, a cometary nucleus leaves its fellows and plunges into the inner solar system, where it may come close enough to the Sun for us to designate it as a long-period comet; or else, it might make a close pass by one or more of the major planets and have its orbit progressively altered, so that eventually we describe it as a short-period comet. But what induces this occasional comet, weakly held by the Sun’s gravity, to enter the inner solar system? [The dean] calculated that the Sun, in its motion about the centre of the Milky Way galaxy, would sometimes come close enough to other stars to make a kind of gravitational flurry in the comet cloud – spilling numbers of them in all directions, including into the vicinity of the Sun... No single gravitational impulse from a passing star causes the comets to flutter about. Rather, the accumulation of a few dozen close stellar passages has produced a jittery population of faster moving comets, and the latest stellar encounter provides the small increment needed to drive some of them towards the Sun or out into the interstellar medium. It’s the straw that breaks the camel’s back... In addition to nearby stars, we also know today that large clouds of interstellar molecules – many of them organic – exist in the vicinity of the Sun, and the solar system should plough through a few of them an eon. Each time this happens, there will be an additional gravitational stirring within the circumsolar cometary halo... Like everything else of which we have evidence, comets are born, live for a time, and then die – or at least disappear... Each time the comet passes through the inner solar system, it runs a gauntlet of risks. Eventually the odds catch up... Typically, the amount of water ice that disappears in a single perihelion passage is a few metres... Each time the comet passes by the Sun, it shrinks. Of course, the comet is not pure ice, but an intimate mix of ice and dust. Huge quantities of dust are blown off... and dust is also lifted more sedately by evaporating ice... until the comet is altogether gone, and nothing is left but a powdery contribution to the zodiacal cloud... [M]eteors are the debris and sometimes the shrouds of dead and dying comets... [Sometimes] not all... of the dust... [is] carried away by the evaporating ice... The next time the comet approaches the Sun, the dust serves as an insulation for the underlying icy dirt. It is now harder for it to heat up. And if it does heat up, it is harder for the underlying ice to escape... After a number of perihelion passages, so large a lag deposit may be created that no further ice can be lost to space. No longer does the comet form a coma or a tail. It shuts down... becoming just another small, dark lump of matter in the inner solar system... indistinguishable from asteroids... Other comets collide with something in their path, [either transmogrifying] themselves into a different world, or [setting] out for the interstellar void... Tewfik’s Comet (1882) came fairly near to hitting the Sun; it is called... a sungrazer. It was discovered only when near the Sun during a total solar eclipse. Before perihelion passage, it showed a single nucleus. Afterwards, as it headed out past the planets, it revealed itself to have split into four separate nuclei, which gradually drew away from one another. The Sun tugs on the near side of the comet a little more strongly than on the far side, and for a very fragile structure and a close passage this might be enough to break it into two or more pieces. The computed periods for the return of these... four fragments – each of considerable size – ...are all between 500 and 900 years in the future... [P]ouring out of the same small region of the sky and heading for the Sun... but separated by intervals of about a century... they might be fragments of a still larger ancestral comet that, in another age, came too close to the Sun and was [also] torn apart by solar gravity. The closer a comet passes to the Sun, the stronger is this disruptive tidal force. Comet Ikeya-Seki 1965 VIII was... a... sungrazer, but did not fragment. The Great Comet of December 1680... was also a sungrazer, passing within 200,000 kilometres of the Sun’s surface – closer than the Moon is to the Earth. It too, did not split during perihelion

passage. On the other hand, Comet West 1976 VI, despite coming no closer than thirty million kilometres from the sun, split into four fragments which slowly receded from each other at more than their mutual escape velocity. Thus, the gravitational tides of the sun cannot be the sole cause of the splitting. Except for the sungrazers, we still do not know why comets split... Eighty percent of comets that split do so when they are far from the Sun in the vicinity of the asteroid belt... Such splitting is probably due to the vapourization of exotic ices... [Comets move] *very slowly when... far from the Sun and much more quickly when... close to the Sun...* Occasionally, comets approach the Sun, are lost in its glare, and are never seen again... However, through an entirely chance discovery, we can now be sure that comets do sometimes hit the Sun... All told, about ten tons of interplanetary particles spiral into the Sun every second – 300 million tons a year... Like the Sun, the moons and planets collect their share of cometary impacts... [– although the] Sun, being made of gas, can retain no impact craters... On Mars... there are craters with splash marks around them, indicating the presence of sub-surface water ice that has been momentarily liquefied in the collision... The impact of a large comet might even bring water or an atmosphere to worlds that are almost airless... They remind us of a time... when the solar system was made of nothing but comets and their rocky equivalents, hundreds of trillions of them or more, swarms of bodies merging and smashing, careening from one district of the solar system to another, a whirlwind of small worlds that eventually led, after the impetuosities of youth had subsided, to the present staid machinery of the solar system... After the Earth was fully formed, more cosmic matter, chiefly from comets, glued itself to the Earth's surface... The comets... are a part of our planet and ourselves... We are surrounded by cosmic particles in our everyday life. We eat them and breathe them. And we are made of them. Some of these extraterrestrial atoms are incorporated into sperm and egg cells, and are carried down to future human generations... Life on our planet is built entirely around a handful of molecular types, the most important of which are the nucleic acids and the proteins. If we could understand the large-scale production of these molecules on the early Earth, we would have made significant progress towards understanding the origin of life. The conventional scientific wisdom today... is that the key molecular building blocks were spontaneously formed on the early Earth in obedience to well-established laws of physics and chemistry. Molecules in the hydrogen-rich early atmosphere were broken apart by ultraviolet light from the Sun, from lightning, or even from the shock waves produced when meteors entered the atmosphere at high speed. The fragments are known spontaneously to recombine... to form the stuff of life. It happens in the laboratory... Paradoxically, cyanides, the deadly poisons that produced the great comet scare of 1910... seem to be an essential intermediary in the origin of life... So could comets have contributed to the origin of life – not by carrying life to the Earth, but by conveying the building blocks out of which life arose? ...The close-up examination of comets from space [would be] the fulfilment of an astronomer's dream, because we are still painfully ignorant about the most fundamental aspects of comets... It seems likely that we are on the verge of a revolution in our understanding of the nature of comets. But if the past history of space exploration is any guide, the most interesting findings will provide answers to questions we have not yet asked. - COMET

ASTRONOMERS... have used the Hubble space telescope to observe a cosmic equivalent of a giant taxi rank. They glimpsed a disc containing at least 300 million frozen, comet-size bodies just beyond Neptune and stretching for more than 60 billion kilometres. The most crowded region of the solar system, it appears to be the long-theorised Kuiper Belt, filled with icy chunks that are sometimes kicked out of orbit by the gravity of Uranus, Neptune, Saturn or Jupiter, and sent hurtling towards the sun in orbits lasting 20 years or less. Comet Shoemaker-Levy, which bombarded Jupiter so spectacularly in 1994, is one of these short-period comets. Long-period comets like Halley's come from a belt called the Oort Cloud, much further away. If [the astronomers are] right, the solar system is many times bigger than anyone knew – and there are enough comets-in-waiting to put on sky shows like the Jupiter pelting until long after the sun flickers out.

...When[a] supernova... died in a titanic cosmic explosion 10 billion years ago, the universe was in its infancy. Now the brilliant flash from this dying star is providing more evidence that mysterious “repulsive dark energy” is accelerating the expansion of the cosmos. The supernova, which is the furthest exploding star ever seen from Earth, was discovered by the Hubble Space Telescope, launched in 1990... [A] former director of the Auckland Observatory and Stardome Planetarium, who now works at the Hubble Space Telescope Science Institute in the U[S], said the discovery of the supernova was like opening a new door in... the cosmos... Astronomers involved in the discovery... say the latest findings put “a stake through the heart” of other theories. One of those was that dust in the universe caused objects to appear brighter or dimmer... But... the only thing scientists had successfully done with dark energy was to give it a name. It may take decades of further study to understand it.

...EINSTEIN called it the biggest blunder of his life. But now astronomers believe the great physicist may have been right when he said the universe was pervaded by a mysterious force that acted against the effects of gravity. Researchers have discovered that a group of distant... supernovae are flying apart at a speed which cannot be explained by present cosmological theories. The team of British and American astronomers says this shows that empty space must be filled by a force that counteracts gravity, pushing objects away from each other. If they are right, the group will have found the holy grail of modern physics: anti-gravity... Anti-gravity was proposed by Einstein after 1910 while working on his ideas about relativity. At that time, it was thought... that stars and galaxies simply hung in space, but Einstein realised their gravitational fields would pull them together. The universe would then collapse on itself. So he added a fudge factor to his equations and called it the cosmological constant or lambda. This represented a... repulsive force which would stop the universe from imploding – although Einstein had no evidence for its existence. A few years later, astronomers discovered that galaxies were flying apart, a consequence – we now know – of the Big Bang 15 billion years ago... But even when he was in apparent error, Einstein may still have had a unique insight into the cosmos. As scientists studied the universe's birth, they realised its initial constituents must have been very finely balanced to produce a cosmos filled with stars and galaxies that we see today. “Too much mass, and the universe would have simply collapsed shortly after the Big Bang,” said... the British National Space Centre. “Too little, and it would have dissipated in a spray of sub-atomic particles.” But no matter how hard astronomers look, they cannot see the matter they need to balance the universe's books. Galaxies are simply not heavy enough. Some scientists have begun to suspect this “missing mass” may be locked up as an invisible form of energy that pervades space. This is vacuum energy, the exact equivalent of Einstein's lambda – though detecting that force has proved extraordinarily difficult. Now, using the Hubble space telescope and ground-based observatories... they have begun a detailed analysis of distant supernovae to discover if the lambda force exists... The discovery would not have immediate practical consequences, because the lambda force must be extremely weak. “It would have no effect on our solar system, or even our galaxy, and would only have a large-scale effect on clusters of galaxies... However, a repulsive force would have an impact on our universe. It would cause the universe to fly apart at faster and faster speeds as stars died out and the cosmos got ever colder. The end would be quicker than we ever thought – though not for the [next] few billion years.”

...There should be antimatter galaxies filled with antimatter worlds where antimatter people live in antihomes, but... scientists can find no antitrace of any of them... Theory says there should be no difference between antimatter and matter except for the fact that their atoms are made with the electric properties reversed... But no matter where they look, scientists cannot detect a single whiff of the stuff. For some reason, our universe seems to be entirely constructed out of normal matter, even though theory says antimatter and matter should have been created in exactly equal amounts in the Big Bang... [Because they've failed to detect antimatter in nature, scientists] are preparing to build the world's first antimatter factory. In a few months, they will start churning out atoms of antihydrogen... “Our antimatter will be created at a temperature of about ten billion billion deg C. That's much hotter than the Sun's surface... Then it will be cooled to one degree above absolute zero...” Having created and harvested the antimatter atoms, scientists will then face the problem of containing them. An atom of antimatter and an atom of normal matter would destroy each other in bursts of pure energy if one touched the other... The aim is to understand some of the universe's most baffling mysteries, but the project could also lead to the development of the perfect fuel. An estimated 20kg of antimatter could power a spaceship to boldly go across the

galaxy[. Some] scientists... warn that antimatter could be used to make bombs more devastating than the most powerful nuclear device... [In related news,] experiments at CERN... will... re-create[the] Big Bang by colliding lead atoms to show[the] state of matter when... the... Universe began...

[An] experiment measuring radiation at Antarctica left over from [the Big Bang has revealed the universe's] origins... and show[ed that the] geometry of space is "flat"... [By the way, a new theory states] that there are regions of[the] universe where time runs backwards...

SCIENTISTS have recorded the music of creation in an experiment using the astronomical equivalent of a time machine to go back to the origin of the Universe. A telescope suspended from a high-altitude balloon circling the South Pole has detected harmonic "notes," which rang out like a bell in the first fractions of a second after the Big Bang. Cosmologists believe these minute ripples of sound became the "seeds" of matter... "Not only are we finding out the right notes of the Universe, we're finding what key it's in," says... the British team leader of the international Boomerang project to investigate the cosmic background radiation – known to be the "echo" of the Big Bang... The Boomerang experiment[, which] involves 36 scientists... is important because if the background microwave radiation was perfectly "smooth" and unperturbed, then it would be difficult for existing cosmological theories to explain how matter could coalesce under the influence of gravity into larger structures... The findings are doubly important because they relate to the first fractions of a second after the Big Bang, when the Universe expanded from a minute point in space to something billions of times bigger, the so-called inflationary period.

...A spacecraft that looks a bit like a foil-covered umbrella aims to take the "ultimate baby picture"... NASA's \$[US]145 million... Microwave Anisotropy Probe... will swing past the Moon on its way to an orbit around a point 1.6 million km from Earth away from the Sun. From this vantage point, [the probe] will take note of the tiniest fluctuations in temperature... searching for what remains of the explosion that many astronomers believe started the universe... Astronomers have predicted specific scenarios for different theories of the birth of the universe. [The probe]'s findings will capture the actual scenario, and this will be matched with the most likely theoretical version.

...Astronomers say they are mystified by an enormous burst of gamma-ray energy from the far reaches of the universe... [T]he... explosion... far eclipsed a supernova... and was second only to the universe-creating Big Bang in energy... "For about one or two seconds, this burst... [in] a region about 100 miles across... was as luminous as all the rest of the entire universe... Most of the theoretical models proposed to explain these bursts cannot explain this much energy," said... a professor at the California Institute of Technology who worked on the report.

...Astronomers in California... have spotted the oldest and most distant supernova yet seen. The exploding star, dubbed Albinoni, is 18 billion light years away... "This is a very rare type of supernova....," said[the] team leader... They only explode a couple of times in a millennium.

...On average, a star blows up in our galaxy every several decades. But wouldn't you know it, there hasn't been a[local] supernova since 1604. Gravity wave astronomers are particularly keen for a nearby world to go up in smoke because they are in the embarrassing position of having some pretty hot instruments but nothing to measure. There are three trained on the heavens almost full-time waiting for one of these long overdue supernovas and the gravity waves they hope it will produce. Predicted by Einstein, gravity waves are literally ripples in the fabric of space and time. A sufficiently violent cosmic ruskus – like a bursting star – will shake things up so much waves of gravity will propagate out through the universe. Most physicists believe these ghostly vibrations exist although, so far not one has been found. The problem is they are incredibly weak. Detecting one involves measuring ridiculously small changes in length. Today's generation of detectors will register only the strongest swells. Hence the eagerness for a nearby supernova. In a new book, *Ripples on a Cosmic Sea*, [a]University of Western A[US physicist]... outlines in great detail how important it is to find these elusive undulations. Bold new frontiers, a chance to shed a little more light on our cosmic roots and all that. The physicist doesn't just want to detect them he wants to open up a whole new discipline – gravity wave astronomy. The dream is for gravity telescopes to be alongside their optical and radio cousins... Who knows what secrets such a new window on the heavens will reveal. One of the targets will be black holes. It may come as a surprise but, despite their notoriety, it's not known whether these theoretically predicted objects really exist. No one has actually seen one. (They're black after all.) But if a couple of them collided, the commotion would create a profusion of gravity waves. Find these and you've found indisputable evidence these galactic weirdos are indeed real. Finding funding for this quest, however, has been almost as elusive as the waves themselves. But at last a decade of badgering and begging has paid off. A consortium of would-be cosmic surfers has just been granted the best part of \$3 million to get the project off the ground... If the money keeps flowing, and the total cost is probably going to be around \$10 million, the facility... just north of Perth... should come on line early next century. With a bit of luck the Department of Cosmic Events may be about to take pity on us. The black holes could be soon coming to town for their first show ever.

...['Peering deeply into a spot seen from the Earth as a single blur of light, the Hubble Space Telescope has discovered either a black hole in the Earth's galaxy or an equal rarity: thousands of stars rushing towards the core of a globular cluster. "Stars in globular clusters are almost as old as the universe. If any globular cluster in our galaxy is suspected to have a black hole, M15 is the best candidate," said a University of California at Santa Cruz astronomer'...

'Our modern quest to understand gravity, and ultimately black holes, was born on Christmas Day, 1642, at Woolsthorpe Manor. But it was a shaky start. The great Isaac Newton was premature and only just survived his first day of life. Showing little promise as a farmer, the young Newton was sent up to Cambridge University. As an academic, Newton would formulate laws of physics which form the basis of modern science. Fate played its part. In 1665 the plague swept across England. Cambridge was closed to help contain the spread of the contagion. Newton was forced to flee. He sought refuge back at Woolsthorpe Manor. Over the next 18 months he was to discover the mathematics of Calculus, to formulate laws for the motion of the planets, and to unravel the spectral nature of light. And one day a falling apple interrupted his thoughts and led him to ponder gravity itself. Newton reasoned that all matter in the Universe has gravity; that it's a force that reaches out from one body to another and pulls everything inwards. The more mass an object has, the stronger this inwards pull. The first person to combine this notion with knowledge that the speed of light was infinite was John Mitchell. As rector of Thornhill Church in Yorkshire, and one of the 18th century's great forgotten scientists, Mitchell took Newton's view of gravity to its ultimate, dark conclusion. Mitchell's giant leap was to imagine a ray of light leaving a star in the same way we think today of a rocket leaving a planet. Mitchell knew nothing about rockets, but he did know that in theory a massive star could have so much gravity that it would pull back into its clutches rays of light. "John then went on to say that for that reason maybe the most massive object in the Universe might be invisible to us." Mitchell had explained how gravity could turn a star black, but not how it could turn it onto a hole. When our Sun runs out of nuclear fuel, its own gravity will crush it into a tiny ball the size of Earth – but a hundred thousand times more dense. Yet our Sun has too little mass, and therefore too little gravity, to become a black hole. However, when a giant star switches off, it goes with a bang. While we see the outward explosion as a supernova, this masks the implosion going on inside. The core has been given a gravity bearhug so extreme that all the atoms have been squeezed into a ball of superdense, subatomic particles called neutrons. It has become a neutron star – a mere 20km or so in diameter. "We know that there are neutron stars which are just a little bit heavier. And the question is: what do you have beyond that? We believe it's black holes." Theory suggests that when a neutron star is more than three times as heavy as our Sun even the neutrons cannot resist gravity. The collapse is irrevocable. The density of mass becomes so great in the centre that gravity overwhelms space itself, distorting it so horribly that it, and time with it, begins to wrench off from the outside Universe. A darkness forms at the heart of the collapsing star and moves relentlessly outwards as the star's brilliance is sucked in. As the star dies a black hole is born. Speculation that tamed black holes may provide a way of cheating the laws of physics have become a hallmark of science fiction. One physicist likes to speculate on what would happen if you joined two black holes together to make a wormhole – a continuous tube through hyperspace. Whereas a black hole is a one-way street with a deadend at the singularity, a wormhole – if we can develop the technology to tame the ferocious forces at work (the tunnel would be prone to collapse as soon as a traveller attempted to pass through it) – could be a freeway to the stars. "It seems to me that the scientific evidence is that this is not going to happen. It's just not possible," says a professor from Oxford University, who pushes the mathematics of black holes in a different direction. He's formulated a way to extract enormous quantities of energy

from the way that black holes spin at the same time as sending enormous quantities of garbage into oblivion. His energy-extraction process would require building a power station at a safe distance around the spinning hole. But there is a long way to go before observational science catches up with the wider speculations of black hole theory. Seeing them is still beyond us – although astronomers are virtually certain that hidden behind the dust in the centre of our own Milky Way galaxy there is a black hole weighing three million times the mass of our Sun. We will never be able to appreciate the full majesty of the super-massive black hole from Earth. It is one of the great cosmological contradictions that the larger the black hole, the weaker the gravitational forces near the event-horizon. This is where Einstein's laws fail; this is where the laws of quantum mechanics fail. "What really happens is as unknown as what happened before the Big Bang. It's the other side of that story." Everyone has trouble coming to terms with black holes. Just how a black hole can manifest itself so powerfully in the emptiness of space is something that weighs heavily on the mind of a professor who now holds Newton's old job at Cambridge University.'

... 'the world's best-known physicist (r:p947, ln4), now 55, who impressed his peers with a revolutionary 1974 paper on miniature black holes, and also impressed the rest of the world in 1988 with his lucid account of the mysteries of the universe, *A Brief History of Time*, and has outlived early predictions of imminent death due to amyotrophic lateral sclerosis (Lou Gehrig's disease), which he has had since his 20s', says the] **universe may have started as no bigger than a pea... The... wheelchair-bound mathematician... believes the pea-like universe only existed for a fraction of a second before the big bang. The new theory, called Open Inflation, also postulates that the universe will expand forever to infinity, explains how matter was created and resolves Einstein's equations of gravity...** [His co-author] **and fellow Cambridge mathematical physicist...** [admitted that] **the pair had not yet worked out all the predictions in detail but said the theory had "no obvious flaw."** ...[the co-author] **told the *Sunday Times*... he believed the theory could be accepted by the scientific community. "It's the best answer anyone has come up with so far for how the universe began,"...** The physicists formed their theory by mentally juggling the laws of physics rather than direct observation...

To some he was a towering intellect who dominated the rarefied atmosphere of astronomy for a quarter of a century. To others he was a stubborn iconoclast who consistently chose the wrong scientific shibboleths to shake. Professor Sir Fred Hoyle [- who]... resigned from Cambridge in 1972 and... [has d]ied aged 86[-] ...will be remembered for his pioneering work in cosmology, his books on science fiction and his support of radical and highly speculative theories of how the Earth is being bombarded by microbes from outer space, causing, among other things, outbreaks of flu... and Aids. Hoyle was the original voice of popular science with his BBC radio broadcasts of more than 50 years ago, where he coined the term "Big Bang" to describe the idea that the universe was created in a massive explosion. The catchy alliteration was meant to be tongue-in-cheek – he did not believe in the Big Bang – but the name stuck.

...we need to keep in mind that when the universe came into being it wasn't just matter that was created, but time and space. In this sense, to ask what is beyond the universe is meaningless... [The a]stronomer... of Auckland's Stardome Observatory, says the furthest galaxies that we can observe seem to be receding from us at almost the speed of light. We cannot see further than them, as the light has not had time to reach us. The universe may be infinite, or it may end just outside this light horizon. We cannot tell... Such questions have been asked by philosophers and scientists for thousands of years. ■ Se[veral]... moonstruck travellers criss cross the globe just to capture a couple of minutes of magic – that special moment of "totality" when day turns into instant night and the moon blocks out the sun... [One e]clipse veteran... certainly has no lack of dedication. In 1984, he flew specially to Gabon to catch one total eclipse that lasted just three quarters of a second.

...It was the longest lunar eclipse anyone on the planet will ever see. When the moon disappeared from sight from 1.02 this morning it hid behind the Earth's shadow until 2.49 am – a phenomenon which will be unmatched for 1000 years. Around N[Z], thousands had watched as the moon... slowly slid from sight... While cloud cover in Auckland made the eclipse difficult to see through the naked eye, live images from... the Auckland Observatory... telescope were available to all on a big screen inside... the observatory... Images from Dunedin, and from A[US]... were shown on the screen in the building... At the observatory, one gazer... seemed to sum it up. "This is a unique moment – it just opens your eyes to how big the universe really is." ● Th[e 'Universe is contracting due to the gravitational pull of a dense phenomenon known as cosmic string, called the Attractor']...

A team of A[US]n and British astronomers is less than a year away from unmasking the "Great Attractor", a mysterious object sucking thousands of galaxies including our own towards a point in the southern sky. It is hidden from direct view by the dense cloud of stars that form the heart of our galaxy... It is less than 20 years since astronomers became aware of the presence of the Great Attractor... As astronomers painstakingly built up models of the distribution of the visible universe over the past two decades, they discovered that galaxies not only clumped together, but the clumps tended to line up into filaments or rivers of galaxies hundreds of millions of light years long. In between these filaments are areas so empty they are termed by some cosmologists as the "Great Voids." The voids are also being studied by... scanner to determine if they are really as empty as they seem, or whether, in fact, they hide some of the 90[%] of missing dark matter whose existence is deduced from the strength of gravitational attractions observed in the universe. The speculation about the Great Attractor is that it is a cosmic confluence of several strings of perhaps 100,000 galaxies, all being drawn into cataclysmic collision... at about 600km a second.

...The Milky Way's gravitational pull is ripping apart two smaller neighbouring galaxies, say astronomers in A[US who]... used a new multibeam instrument of the Parkes radio telescope[, which]... usually searches for faint, hidden galaxies that cannot be found any other way. The image of galactic brutality created with this instrument settled a 25-year controversy over the origins of the so-called Magellanic Stream, as the river of hydrogen gas flowing from the two little galaxies is called.

...A[US]n scientists say... recent explorations of PNG's east coast[have] discovered bacteria living in 15-million-year-old rock, as well as the beginnings of a new ocean. The live bacteria... found nearly 1km under the earth's crust... may help to unlock secrets to the origin of life...

Nasa scientists will soon be poring over rock samples from[NZ] hot springs to prove whether life existed on Mars. Fossilised microbes found in rock deposits in Northland may be identical to those from Mars, scientists believe... Nasa is interested in [NZ] samples because this country has one of the best examples of extreme environments captured in rocks of many ages. This is because of the huge number of volcano sites here. "We can look at how the rocks were crystallised through time and each sinter [a hot spring deposit made of silica] captures part of the preservation story... Nasa's space mission is aimed at visiting hot springs formed on the flanks of Mars volcanoes to see if microbes similar to those found in [NZ] were captured in deposits there," said... [an] Auckland University geologist... Nasa scientists received global attention when they announced they had discovered signs of ancient bacterial life on a potato-sized... fragment of Mars rock...

Will the Martians alter our view of God? ...A flurry of excitement surrounded the... announcement that scientists had found evidence of life in a meteorite. One of the first questions that followed... was: "Will this change anything about our view of God?" The initial excitement has subsided, but the question remains... Of course none of this can change God. It can only change the way in which we think about God... For several centuries the early Christian thinkers spent a considerable time defining the nature of Christ. In doing this they also ended up defining the nature of God. In effect, though the Church will steadfastly deny it, they drew boundaries around God and started to pencil in the arms and legs and colour the features... They produced a working model, "God in our own image,"... "God we can understand." ...The ancient wisdom was to prohibit images of God. This meant more than just refraining from carvings or paintings of God; it meant prohibiting trying to define God. It meant resisting the temptation to say that "God is like this"... or... "God is like that." ...One of the interesting facts about the life of Jesus is that he spent no time talking about the nature of God... This might provide the hint as to how important Christ thought [the subject] was – unimportant... knowledge[, however, should] make us more, not less religious. "We can... look outwards, be aware that we are simply a part of that which can be called God..."

...the Melbourne-based... priest and historian who has published a number of books on the... contemporary world, comes to a similar conclusion... though via a different route... “Our biggest problem as late 20th-century people is that we have become so anthropocentric, so focused on ourselves... Many religious people today are more disciples of Freud and Jung than of Jesus. From the devotees of the new age across the spectrum to fundamentalists of all sorts, the religious focus of today is centred on the self, on personal salvation. It takes something like the discovery of new life forms elsewhere to remind us that the transcendent is also out there in the cosmos, that... God’s reality is not exhausted by us...” ...People had to believe that Jesus was “the Son of God,” though what this could possibly mean in reality was utterly incomprehensible. The great problem in using analogies is that after a while people forget that they are using an analogy and the analogy becomes the truth in itself... [□ Nasa’s] space probe Galileo will have its closest encounter with any of Jupiter’s moons this week when it swings within 260km of... Ganymede – the largest moon in the solar system – ...to take three-dimensional pictures of its icy surface.

...New information sent back by... Galileo, which flew within 155,000km of Jupiter’s largest moon last month... indicates there may be water on one of Jupiter’s moons, heightening the possibility that it could support a primitive life form. Scientists said yesterday that they think “warm ice” or even liquid water may have existed and perhaps still exists beneath the moon Europa’s cracked ice crust. - 1996

The U[S] space probe Galileo may have detected microscopic life forms on the surfaces of two of Jupiter’s moons, the British weekly *New Scientist* says... [A] compound including the carbon and nitrogen atoms is of interest, as complex life substances can be formed from such a mix... Galileo was launched in 1989 and has already taken in four of Jupiter’s 16 moons. On the Europa moon, Galileo detected volcanoes and glaciers, reinforcing the theory that microscopic life may exist[there, or that the moon]... may once have harboured primitive life forms. “Almost wherever we look in the solar system today with our space craft it’s almost like going and looking at different restaurants. It seems that there are many places where there’s an interesting kind of organic soup on the menu...” ...[Incidentally, two] new moons named U1 and U2 have been discovered orbiting Uranus, bringing the planet’s total to 17... [B]oth are fairly small – just 80km and 160km in diameter, respectively.

...[‘New data from the Lunar Prospector spacecraft support the theory that the Moon was ripped away from the Earth following a massive interplanetary collision. The data shows that the lunar core contains less than 4% of the Moon’s total mass, a very small ratio compared with Earth, which has about 30% of its mass in its iron core. The theory has been floated since the 1960s, when scientists first began collecting information about Earth’s nearest neighbour.’]

...Frustrated by man-made noise drowning out their efforts to tune in to the universe from radio telescopes on Earth, astronomers are staking out craters on the moon for their observations... Plans to develop the moon were a featured topic last week at the International Astronomical Union’s general assembly, a triennial gathering of... astronomers which closed at the weekend... [E]xperts... outlined a series of parallel projects to send gradually more complex missions to the moon’s surface, culminating in an unmanned radio astronomy outpost Japan hopes to establish by... 2009.

...Nasa has found that payloads can be put into space at a certain chaotic low earth orbit. Two years later the payload reaches the moon... [I]f there is ever a moon colony that needed a regular supply of resources like water or oxygen, this would be the way to deliver it with huge savings in fuel... THE young discipline of chaos theory has become the overhyped buzzword on the lips of everyone from stock market analysts to anarchists. But here’s a paradox... The world is predictable, but also unfathomably complex... The orbits and gravitational forces that keep the planets in their path are well-known and stable enough for sailors to use for navigation for centuries. But it is impossible to measure all the forces with complete accuracy. The small errors astronomers cannot avoid or allow for, escalate inexorably. After a long enough time span, say a billion years, assuming nothing catastrophic happens, the location of the planets in our solar system is impossible to predict... “There are rules but we can’t follow the chain of causality from initial conditions to the future in a sufficiently repeatable way. If those initial conditions are slightly different, the future is very different... It’s not a problem about the universe, it’s a problem for human prediction of the universe... We know there are rules but we accept that we cannot predict what will happen to us when we go out the front door... The first thing chaos theory did for weather prediction was give forecasters an excuse for why they were wrong... after four days...” ...The mathematics behind chaos theory reaches the oddest areas. Designers are at work on pacemakers that can measure the inherently chaotic pattern of the human heartbeat. The hope is... they will use less electricity to keep the heart beating regularly and so last much longer without maintenance. A Japanese dishwasher uses two... spray heads that rotate chaotically. It turns out that this is better than conventional dishwashers at dislodging dirt from dishes. American defence contractors have applied chaos theory to the apparently random pattern of noisy air conditioners. The uneven whining drowned out the conversations that the police and intelligence agencies wanted to bug. With the air conditioner noise pattern analysed, sensitive conversation can now be prised from a clutter of background noise... After an hour’s conversation... the man from chaos... has talked widely about mathematics without resorting to a single formula or equation, a skill which explains his appeal to a general public taught to find maths incomprehensible... [His] lecture... at Auckland University last week... *Does God Play Dice?*, drew mostly respectful questions as well as one from a man who wanted to know where God came into the topic.

...[A ‘Nobel prize-winning American physicist comes to Auckland this month as the University of Auckland’s Robb lecturer. In 1979 the author of the major popular-science book *The First Three Minutes* shared the Nobel prize for physics with a childhood friend for their work explaining how two of the four fundamental forces of the standard model of physics were linked. Einstein devoted the last 30 years of his life to a unified field theory and failed, arguably because he was heading down the wrong track. The four fundamental forces that physicists are struggling to link into a unified theory are gravity, electromagnetism, the weak nuclear force (which is responsible for the change of neutrons and protons into each other, and radioactive processes), and the strong nuclear force (which holds quarks together inside protons and neutrons and holds atomic nuclei together). The final theory would link these forces of the standard model of physics with Einstein’s theory of general relativity. That would be the final theory, once memorably described as a mathematical theory that could be put on a T-shirt that would describe the fundamental forces that mould existence. The discovery of a final theory would not mean the end of physics or philosophy, the Texan contends. The theory of fluid flow has been well-known and proven for more than a century, he says, but scientists still have little idea why strong turbulence, such as the movement of heat from the heart of a star, behaves as it does.’]

...A recent book *The Life of the Cosmos* suggests in essence that whenever matter collapses into a black hole a new universe emerges on the “far side” – and that each new universe has slightly different physical laws... [N]ow imagine... not a single universe but an evolving population of universes whose generations are interconnected by unpassable “wormholes” passing through black holes... Then even if most universes originally were tiny and very short-lived, natural selection... is bound to occur. Selection for what? For universes that are bigger and longer-lasting, since those will produce the most black holes and effectively “out-breed” the others... It is the most ambitious “theory of everything” anybody has yet produced and not even [the author] has figured out how we might set about proving it.

...The keen-eyed Hubble Space Telescope was upgraded yesterday with an instrument so sensitive that it can spot an aircraft flying a continent away by merely tracking the motion of its landing light. The new guidance sensor, a collection of mirrors and lenses that locate a target star and point the huge telescope, replaced one that was nearing the end of its life. Nasa officials were surprised at the extent of damage[due] to the... effects of ageing in the harsh environment of space... Insulation around one compartment door had weblike cracks up to 20cm long. Some insulation was torn loose. And... one rip was about 45cm long... The insulation... [and] the underside of the solar panels... also suffered numerous hits by micrometeoroids as small as a match head... The Hubble has been in space since April 1990. [Its] programmed lifetime... is 15 years.

...[‘orbiting the globe 595km up’] the \$US3 billion [‘Hubble, 13 years in the making, is one of the most complex scientific instruments ever built. Far above the atmosphere, it has an unobstructed view into the deepest reaches of space. Its launch was to help answer the most profound scientific mysteries:

How old is the universe? How long will it last? Do other stars have Earth-like planets – or are we alone? But the unthinkable happened. A tiny fleck of paint had been missing from the tool used to measure the curvature of the primary mirror while it was being shaped. The result was a surface too flat at the edge by just 2 microns – enough to make distant stars fuzzy blobs instead of sharp points of light. To correct this, ‘Hubble was, in effect, fitted with a set of \$80m spectacles. Before the big fix, only about 15% of the available light was concentrated into the cameras. The goal was to catch 75% but it got almost 85%’]...

Scientists... using the... Hubble space telescope... have identified what might be the biggest and brightest star in the universe – 10 million times more powerful than the Sun... Despite its brightness, the... celestial mammoth, named Pistol Star... cannot be seen from Earth with the naked eye because of interstellar dust between Earth and the centre of the Milky Way, where it is located... [The star was] named... after the pistol-shaped nebula... that surrounds it. The nebula is so vast that scientists... [estimate] its diameter at four light years.

...A mini-planet with a big, deep dent could be the mother of thousands of asteroids orbiting the Sun between Mars and Jupiter. Scientists say the new images made by the Hubble space telescope of the mini-planet called Vesta show for the first time a huge crater 459km wide, nearly equal to Vesta’s 531km diameter... The discovery of Vesta is nothing new: German astronomer Wilhelm Olbers first spotted the extremely bright object in 1807. What is exciting astronomers is tracing the source of... some of Vesta’s likely progeny[, which] are strung out in a chaotic part of the asteroid belt where Jupiter’s pull could send them into orbits that intersect with that of Earth... About 6[%] of the meteorites that fall to Earth are composed of the same type of frozen lava as Vesta... Hubble [has also shown stars being]... born... by the thousand... as... the Antennae galaxies (so named because the long tails of new stars resemble an insect’s antennae)... [collide] 63 million light years away in the Corvus constellation... [Nasa] said the discovery would help to explain why some galaxies were spirals and others elliptical – one of the fundamental questions in astronomy.

...[‘evidence from 500 excavation sites suggests that a cataclysmic shower of giant meteors in about 2350BC destroyed the great Bronze Age civilisations in Egypt, Mesopotamia and Greece by provoking a series of natural disasters. Meteors from the same stream struck Earth with less force on a return orbit in AD500’. Further] evidence suggests a comet slammed into Earth 370 million years ago, blasting a huge crater into the sea floor and triggering 300m waves that led to the extinction of many species... The crash[, which]... happened three million years before one of the five greatest extinctions of life in Earth’s history at the end of the Devonian Period, when most organisms lived in the oceans... may[’]ve been the first of a series of comet strikes...

Giant cosmic snowballs are bombarding the upper atmosphere and then breaking up, adding water to Earth’s oceans and possibly nurturing life on the planet. [US] scientists say the snowballs are actually small comets about 12m in diameter, which appear to be streaking towards Earth in a steady stream. According to data provided by Nasa’s Polar satellite, the snowballs are no danger to people on Earth... or planes because they break up at altitudes from 965km to 24,140km... Exposure to sunlight then vapourises the fragments into vast clouds which are dispersed by winds.

...Battle over ‘cosmic snowballs’... A... fight erupted at a scientific meeting this week over a theory that the Earth is bombarded every day by thousands of comets... Some researchers at the American Geophysical Union meeting called the “small comet” theory bunk, saying it was based on instrument interference similar to “static you hear on your hi-fi... the white snow in space is no more than the black ‘snow’ on the television screen.” ...A group of scientists from the University of Arizona said there would be far more evidence... if they really existed. “Earth’s sky would sparkle like a Christmas tree, its air would hold at least 30,000 times more inert gas and its moon would be pocked with millions more bright-spot craters,”... But the theory’s main proponent... said evidence for the snowball comets, called “atmospheric holes,” was conclusive... Nasa has launched an interagency effort to independently verify that the tiny comets exist.

...After a break of 4000 years, Comet Hale-Bopp has returned... [T]he spectacular Hale-Bopp... regarded as one of the brightest comets ever... enters southern hemisphere skies later this month... [I]t... will not be back for more than 2300 years... Nasa is launching a series of sounding rockets to gauge the comet’s composition. Scientists believe it could help confirm a theory that water on Earth came from comets that hit Earth’s surface, their frozen cores melting to form oceans... [In further space news, an] “annihilation fountain” has been discovered spurting up from the centre of the Milky Way... The fountain, which may be evidence of a region of exploding stars or the winds around a black hole, is made up of the hot gas that results when bits of matter and anti-matter meet and destroy each other... Such warring particles were expected on the... galactic plain, where... our solar system [resides], but never before has a huge plume of anti-matter been detected hovering above the galaxy. To detect the fountain, scientists used data gathered by the orbiting Compton Gamma Ray Observatory, launched by Nasa in 1991.

...[‘Beyond the reach of the naked eye, black holes slurp up surrounding matter, churning columns of dust and gas trillions of kms tall erupt in newborn stars, and galaxies cannibalise their smaller neighbours. No wonder it takes more than a pretty supernova to catch astronomers’ attention these days. What is currently scaring astronomers? Well, the largest structure ever observed. More than 6.5 billion light-years away, just south of the constellation Leo, it is about 500 million light-years across and seems to be a cluster of galaxies grouped by gravitational attraction. “Gravity simply wouldn’t have had time to pull a structure together, 500 million light-years across, given the age of the universe back then,” says a spokesperson for the National Optical Astronomy Observatories. Also fascinating astronomers are two newly discovered and “clearly bizarre” planetary systems. One star, 123 light years away in the constellation Serpens, is circled by what seems to be the biggest planet ever found. The XXXL planet is at least 17 times more massive than Jupiter. “We never expected nature would make such gargantuan planets, and indeed maybe they aren’t planets at all,” said a member of the Carnegie Institution. Around another star – Gliese 876, which is only 15 light-years from Earth – astronomers found two planets whose orbits are in almost perfect harmony: one takes 30 days to make the trip and the other takes twice that long. Through mutual gravitation, the planets maintain this synchrony. Although four moons of Jupiter have resonant orbits, these are the first full-fledged planets to earn that honour.’

...‘Astronomers have found two new planets orbiting stars outside Earth’s solar system, bringing the total of known extra-solar planets to at least 17, and more could be discovered within months. The first such planets were identified in 1995. The new planets cannot be seen, but can be inferred by the gravitational pull they exert on the stars they circle. Neither is a place humans would want to call home: they are too big – one is 3.5 times the mass of Jupiter, and the other has 1.3 times Jupiter’s mass – but the scientists who found them believe the discovery of an Earth-like planet is possible.’

...‘Astronomers have found a planet the size of Jupiter close enough to be seen with the naked eye. It is the nearest planet to be found beyond our solar system. Epsilon Eridani, which frequently features in sci-fi stories, is just 10.5 light years away, and the 42nd planet identified to be orbiting a distant star.’

...‘Discussion of recent world events haven’t been drowned out, oddly enough, by the stunning discovery that Upsilon Andromedae’s inner-most planet is not alone. There are 2 others orbiting the star as well, and all 3 orbit their sun as closely as Venus, Earth and Mars orbit our own. It’s understandable that local news will get a bigger play in parochial media like Earth’s than even the biggest events elsewhere. But this news is big. At least 18 relatively nearby stars have been found to have single planets orbiting them, but Upsilon Andromedae is the first multi-planet system ever discovered (apart from ours). And although nobody has yet found planets able to support our kind of life around other stars, the odds that such planets abound – and in our own galactic neighbourhood – has now risen to near-certainty. “With the discovery of the first planetary system beyond our own,” said the head of the San Francisco State University team that shared the discovery, “we are witnessing the emergence of a new era in human exploration.”’ In related news, the] end of the universe as humans know it will occur in about 10 trillion years, scientists have been told at a meeting of the American Astronomical Society... - 1997

In the beginning was the end. That’s how it is in the postmodern, post-Newtonian, post-any-hope-of-everything-turning-out-okay universe. The Copernican clockwork proved fatally flawed: the very force which set it in motion is eroding away... and one day there will be no more days... A

thousand years ago, [w]e... would have inhabited a universe sustained by its Creator with us in mind. And even if that universe were to end, its ending would at least be apocalyptic and purposive, moving through cataclysm to a just eternity. It might not, for some of us, turn out well, but at least it would turn out. No longer. Now, the universe will not turn out but peter out... [We are] stuck in a gently decaying cosmos in which all systems – stars, planets, us – are gradually losing overall energy to the point where they can do no more work, and energy itself is moving towards... absolute zero... The Heat Death of the Universe. It's not as grand as the Revelation of St John the Divine, nor as minatory as the Day of Judgment, but it is the truth. Alas, like so many other truths of this millennium, it's a beast, whose acquaintance we might be happier not to have made.

Since it was first expressed in 1842, the Doppler effect on light from an object that is travelling away from the viewer has held true throughout all scientific tests... This effect indicates that every part of the universe is moving away from earth. Recently, though, studies of distant powerful astronomical features, such as quasars[('any class of point-like sources of light visible in large telescopes, often associated with intense radio emissions, whose spectra show large red-shifts, suggesting great remoteness and high velocities of recession; if they are indeed at such distances, they must be emitting exceptionally large amounts of energy, the nature of which is not fully understood')], have challenged the Doppler effect, causing astronomers to question whether something other than motion could sometimes cause the shift... toward the red end of the... spectrum. If the suspicion that the effect has alternate explanations is true, our entire view of the universe's activities may need to be revised. We may find ourselves in a smaller, more intimate cosmos, or we may discover that the rules of physics as we know them do not apply everywhere in quite the same way... [Soon, a]stronomers will attempt to measure the total amount of hydrogen in the universe and to detect any sources of new matter. Depending upon what they find, we will discover if the universe we live in is eternal, if it will implode on itself one day and then regenerate, or if a final disintegration into nothingness will be the cold fate of everything. - The Omni Future Almanac

People who say the Universe will *disintegrat[e] into nothingness* are commonly known as BUDDHISTS, and the Big Bang theory – which, like atheism, holds that something can *be created out of nothing* – is Buddhism in reverse. Unlike the Big Bang theory, the oscillating model of the Universe does give an explanation for what existed prior to the huge explosion (and would make long-period comet orbits easier to understand), but it doesn't take into account our limited knowledge of the Universe (r:p946, lns61-2 + p949, ln4) and, in particular, that the Universe is infinite. The Universe has to be infinite because, if it isn't, then it must (like Earth) have a boundary – on the other side of which must be something else that either is infinite in size or also has a boundary; in which case, on the other side of this must be another infinite or limited something; and so on, until we eventually come across an infinite body (even if it is filled with nothing). Some people believe that the Universe is limited, and on the other side of its boundary lies the eternal expanse of HEAVEN. However, the concept of heaven was created thousands of years ago to explain the existence of what we now call the UNIVERSE! The *many universes* theory maintains that our Universe can be bounded by one or more others, but it also suggests that somewhere exists a Universe full of cartoon characters. Logic, therefore, declares both that there is only one Universe and it is infinite. It is impossible to draw an infinite Universe, and virtually impossible to picture one mentally, but that isn't important – the numerical series is infinite even though no one will ever be able to physically prove it (or that *pi* is also infinite – computers 'have calculated the sequence to 10 million digits'; 'the world record for memorising the digits, set in 1995, is 42,195').

None of this means that a Big Bang didn't occur, or that the Universe surrounding Earth isn't oscillating, or even that Albert Einstein was completely wrong when he described the Universe as being spherical. If we unite these concepts then take them one step further, we get a model of the Universe in which multiple Big Bang-type explosions occur, but the impact of each upon the entire Universe is limited – and the limiting factor is the existence of multiple Big Bang-type explosions! The model can be constructed in a number of different ways. In the first, the Universe is completely symmetrical. Imagine the forces from a Big Bang-type explosion spreading out from a centre point in a spherical fashion. While the hypothetical sphere increases in size, 6 more identically increasing spheres – created by Big Bang-type explosions in adjacent parts of the Universe – are heading towards it at equal speeds (4 are approaching its sides at right-angles to each other, one is coming directly from above and the other from directly below). The spheres continue to expand until the edges of the first are literally touching the edges of the other 6. However, rather than crash into each other, or blend together in some way, the force of impact makes the edge of each sphere bounce back in the direction from whence it came (i.e., each sphere gradually shrinks until all of its mass is compressed into a minute space, after which it explodes and re-expands – with every trace of its former self having been destroyed prior to, or during, the explosion). This process continues indefinitely. A problem with this model is that it only explains what happens at the 6 points where a force sphere touches its neighbours. There will be areas approximately midway between these 6 points where a sphere's edge hasn't yet touched another sphere. Perhaps these areas contain vacuums that effectively absorb the force of spheres like a rubber ball until their absorption limit is reached, after which they bounce the sphere edges back in the direction from whence they came (at the same time as the spheres' other edges are doing likewise). In a second model the Universe is still completely symmetrical but, instead of having the spheres bounce off each other, as one sphere expands it fills space vacated by 6 adjacent spheres that are retracting (and each retracting sphere is surrounded by 6 expanding spheres). In other words, a sphere's force of expansion causes adjacent spheres to contract until they reach a point at which they can't contract any more, after which they explode, creating an expansion force that then causes the adjacent spheres to contract. This might help to negate the issue of *bulk viscosity* (r:p946, ln46) and the *question of entropy* (r:p951, ln1). According to these models, the Universe is infinite because it is constantly regenerating itself (r:p947, ln19) – and each regeneration is identical to the previous one. In a third model, instead of being completely symmetrical the Universe is chaotic – meaning that force spheres don't always (or ever) meet at right angles, suggesting that the edges of colliding spheres could combine to form energy eddies, which eventually create a new Big Bang-type explosion at an unpredictable location.

We may have already detected evidence that supports the *multiple Big Bang* theory (r:p948, lns53-4 + p956, ln20). If not, it might be impossible for us to measure anything that exists outside of our force sphere of the Universe, which means the theory can never be proved. However, whether or not the theory is true is irrelevant – because it has absolutely zero effect upon us. The lifetime of these spheres is measured in billions (or trillions) of years. In comparison, the recorded history of our species is only measured in thousands of years, the natural history of our closest relatives in tens of thousands of years, and that of the genus *Homo*, millions of years. The death of our Sun is of more relevance to us, but even that won't occur for 5 to 10 billion years. It is estimated that 'Earth will probably not be habitable in another 1 or 2 billion years.' If we assume that only bacteria will be able to survive during the later part of the second billion years, the planet still has the potential to continue supporting mammals for at least a billion years. The onus is on the word POTENTIAL. Probably because they're primarily concerned about what happens to *themselves* after their own death, the majority of people alive today treat the planet with so little reverence it is valid to suggest that the time when Earth becomes inhospitable to mammals will occur a lot sooner. Perhaps because their dogma holds that on an imminent day Earth will literally be destroyed then replaced by the Kingdom of God, Christians are the worst offenders!

Telling about God's arrangement for blessing his people, the apostle Peter wrote: "There are *new heavens* and a *new earth* that we are awaiting according to [God's] promise, and in these *righteousness* is to dwell." – 2 Peter 3:13; Isaiah 65:17; 66:22. What are these "new heavens"? They are not new physical heavens... The "new heavens" refer to a new rulership over the earth. The "heavens" are now made up of man-made governments... [T]hese will pass away... [and] God's heavenly government... will replace them... What, then, is the "new earth"? It is not a new planet. God made this planet Earth just right for humans to live on... The "new earth" refers to a new group or society of people.

In 1967... a professor of history at UCLA, published in *Science* 'The Historical Root of Our Ecologic Crisis', a critical analysis of the attitudes Western religion has encouraged toward our environment. Since then ecologists often point to the injunctions in Genesis that humans should attempt to 'subdue' the Earth and have 'dominion' over all the creatures of the Earth as being bad advice with disastrous results. If fact[, the]... co-author of *Deep Ecology*, spoke for many citizens when he declared in August 1984, 'Unless major changes occur... all those working in ecology movements will feel very uncomfortable sitting in the pews of most U[S] churches.'

The long literary history of cultural attitudes to nature in the West from classical antiquity... has been reviewed in... [the] magisterial opus of 1967, *Traces of the Rhodian Shore* [– which, f]rom a great mass of detail... extracts and presents for our consideration the relatively simple notion that throughout this period three themes have been persistent, although their exact form has had different forms of expression. The first... is the idea of a designed earth: one especially fitted for the human species... The second... is that of environmental influence on culture... and came to be used in interpreting the great array of human cultural and biological differences. It is not totally incompatible with the idea of a designed earth and attracted thinkers such as Thomas Malthus (1760-1834...), who emphasized not only the influence of different environments but also the limitations which the earth imposed on social development... [The] third ancient strand of thought... is the set of views that sees man empirically as the modifier of nature... The evolving western world-view has entrained the notion that nature may be seen as a set of resources to be used to satisfy human demands, and so in the course of centuries there have been many changes in the genetics of species and manifold alterations of ecological systems at all scales. [The opus] traced the descent of the basic idea from its state where God was an artisan who left the creation unfinished and man became the collaborative finisher... through its optimistic development in the seventeenth and eighteenth centuries... forecasting a tide which would carry men to ever greater heights of perfectibility, to a nineteenth century pessimism when the deleterious effects of some of the efforts of the finishers became all too obvious. In more recent times, we associate this approach... with... the upsetting of a balance within nature by unwise human action.

One of the major concerns... is that we are pushing natural processes beyond their capacity to maintain an atmosphere fit for higher forms of life. Beyond a certain point, the system may 'flip' to an entirely new state which could be extremely uncomfortable for life as we know it. At present we have no idea whether we are heading for a 'flip' but, once triggered, the change to the new state could occur with extreme rapidity – in perhaps as little as a few decades... For life as we know it to continue, the balance of gases in the atmosphere must remain within certain limits. For the past 250 million years, oxygen levels in the atmosphere have remained remarkably constant. It is fortunate that they have done so. For should levels of oxygen fall to, say, 16[%], then fast metabolizing animals such as humans would be left gasping for breath. Should levels rise to 25[%], the atmosphere would support combustion more easily. The surface of the Earth would be consumed by raging fires, even the wettest tropical forest catching alight with the first lightning strike. We tend to take the Earth's atmosphere for granted. But we would be wrong to do so. As[an] atmospheric chemist... points out, the chemical composition of the Earth's atmosphere is "highly improbable", given the expectations of orthodox chemistry. It contains gases which, left to their own devices, should react with each other at such a rate that only traces of the original gases remain. For example, oxygen is found at the same time as methane, which can mop up oxygen. Certain derivatives of oxygen react with methane in the presence of sunlight to yield carbon dioxide and water. Without new sources of methane and oxygen to compensate for that used up, these gases would rapidly be exhausted. This is indeed the case with Mars and Venus... both of which have atmospheres with minimal traces of oxygen and no methane. The oxygen content of the Earth's atmosphere, by contrast, is just under 21[%] and levels of methane are... 1,000 million trillion trillion times greater than would be expected given such levels of oxygen. The explanation, argues [the atmospheric chemist], is that both the methane and oxygen are being replenished by living organisms. In effect, it is life on Earth which keeps the Earth's atmosphere in the unique state that permits life to survive... [A]ncient, microscopic organisms not only released the first molecules of free oxygen, thereby paving the way for respiring organisms such as ourselves[, t]hey also began the process of depositing [CO₂] as calcium carbonate... or chalk. Since then a host of different organisms, including... corals, have acquired the ability to lay down external chalky shells and skeletons. It is this process... that provided the mechanism whereby the Earth's [CO₂] blanket was reduced. In effect... the Great Barrier Reef and other limestone deposits may be seen as vast natural dumps of [CO₂]... There is evidence, too, that life plays a vital role in regulating the [CO₂] content of the atmosphere and thus, in part, the surface temperature of the Earth. Unlike the Earth, both Venus and Mars have atmospheres that are rich in [CO₂], with concentrations greater than 95[%]. By contrast, the [CO₂] content of the Earth's atmosphere is just 0.03[%]. CO₂ is a powerful greenhouse gas, meaning that it lets through the heat from the Sun but traps some of the heat that is radiated back... How much [CO₂] remains in the atmosphere depends on many factors. For example, it is known that photosynthesizing plants tend to increase their growth as the [CO₂] content of the atmosphere rises. This increased growth, by its very nature, tends to reduce the [CO₂] levels. The cycle therefore regulates itself by a process known as feedback, which in this case controls the amount of [CO₂] in the atmosphere. Sulphur is another essential nutrient which, like the bicarbonate from the soil, tends to run off into the sea, entering a cycle in which living organisms are involved. Here, simple plants such as coccolithophorid algae have evolved an ingenious use of the sulphur, creating a special compound in their cells which prevents salts in the seawater from entering. When this compound eventually decomposes, after the death of the coccolithophorids, it produces the volatile substance, dimethylsulphide. This quickly oxidizes in the atmosphere above the seas to give sulphur dioxide (SO₂)[, which]... has the effect of causing rainclouds to form over the oceans. These clouds then carry rain to the land, and with the rain comes sulphurous acid... produced by the combination of [SO₂] and water... Acid rain is thus a perfectly normal and essential phenomenon. But we, with our highly industrialized society, have added a great deal more [SO₂] to the natural output and begun to overload the natural system, overwhelming its controls. Acid rain has therefore become an acute problem in many parts of the world, turning lakes and rivers in Scandinavia, Scotland and North America into waters that can no longer support even the hardiest species of fish... In Sweden, [this has happened to] at least 18,000 out of a total of 20,000 lakes... In relatively pollution-free areas, such as the more northerly parts of Canada, sulphur fallout is less than 10kg/ha... per year. The average levels in areas afflicted by acid rain, such as southern Sweden, are two to three times higher... Soils too are suffering, and some regions of southern Sweden are showing a tenfold increase in acidity. One of the consequences of this is that toxic minerals such as aluminium, cadmium and mercury have become soluble and therefore available to plants, with disastrous effects. Normally such toxic minerals remain harmlessly bound to the soil. Worldwide some 100 million tonnes of sulphur a year enters the atmosphere as a result of human activities, most of it coming from the burning of fossil fuels. Another source, often overlooked, is untreated sewage discharged into the sea. This helps stimulate the growth of those algae that generate dimethylsulphide. Modern farming, with its heavy inputs of artificial fertilizers, also plays havoc with natural... cycles... In areas of northern Europe where fertilizer use is heavy, the fallout of nitrogenous compounds from the atmosphere has increased twenty-fold or even more. The rain falling through the forests of northern Europe is now so rich in nitrogen compounds that the trunks and branches of many trees have become covered in green slime, as microscopic, single-celled algae flourish on the fertilized bark... The loss of forests to logging, agriculture and urban development has a long history in temperate areas. Today, however, there is a new threat... a syndrome known generically as waldsterben or 'forest death'. Many of the symptoms of waldsterben had never been seen before the early 1970s... Waldsterben has claimed more than 70,000 [sq. km]... of forests in 15 European countries. In West Germany, 52[%] of the country's forests... are affected. In Britain, nearly half the oak and three-quarters of the yew in southern England have lost

over a quarter of their natural foliage. On the other side of the Atlantic, the picture is not much different. Acid rain – just one component of the waldsterben phenomenon – has been devastating, particularly for the conifer forests stretching up the Appalachian Mountains from Georgia to New England. In Vermont, New Hampshire and New York, 60[%] of high-elevation red spruce are reported dead, while, in southern California, 87[%] of the Ponderosa and Jeffrey's pines in the San Bernardino Forest are damaged. In Canada, sugar maples are dying over large areas... Waldsterben is undeniably a new disease of the post-war era. The enormous increase in the use of motor cars and aircraft, the emission of thousands of man-made chemicals, the massive increase in power generation and the industrialization of agriculture have all added dramatically to the number of pollutants in the environment... In 1984, the discovery of a hole in the ozone layer over Antarctica provided dramatic evidence that human activities are causing irreparable damage to the atmospheric systems upon which life depends. Although the size of the hole fluctuates from year to year, in 1987 it was as deep as Mount Everest and covered an area as large as the entire US. Since the early 1970s, scientists have warned that the stratospheric ozone layer could gradually be eroded by chlorofluorocarbons (CFCs) and other gases, but they had no idea that the damage could occur on such a drastic scale. Indeed, for several years prior to 1984, American satellites had been measuring the appearance of the hole each Antarctic spring, but their computers were programmed not to accept this 'aberrant' data... Ozone is formed and broken down again all the time in the stratosphere, with the two processes cancelling each other out, so that there is usually a constant amount of ozone. But highly reactive substances such as chlorine... and nitric oxide... cause ozone to break down much more quickly. These molecules set off a chain reaction, with a single atom of chlorine capable of breaking down thousands of ozone molecules. Our industrial activities have released numerous compounds containing chlorine into the atmosphere... The stability of CFCs in the troposphere, the layer of the atmosphere up to 15km... from the surface of the Earth, means that over a period of years, CFCs drift up to the stratosphere. Here they are broken down by ultraviolet light into free chlorine atoms and other compounds containing chlorine. Under normal conditions, most of the chlorine in the stratosphere is bound to other molecules, and thus does not damage ozone. However, during the Antarctic winter, the winds of the polar vortex, swirling around the South Pole, create unusually cold conditions. Ice crystals form in the clouds of the stratosphere, providing a surface on which the chlorine-containing compounds begin to break down. With the coming of spring and warmer weather, the damaging chlorine atoms are released as the ice crystals melt. The chlorine is then free to attack ozone. It is not only CFCs that are implicated in the destruction of the ozone layer. Other gases must share the blame, including halons (used in fire-fighting equipment), methyl chloroform (used in cleaning solvents, adhesives and aerosols) and carbon tetrachloride (used for many purposes, including dry cleaning). All these release chlorine or the related bromine and fluorine (known collectively as halogens). Nitrous oxide (N₂O), another culprit, is a naturally occurring gas, but one that is increasingly present in the atmosphere due to human activities. Its concentration is currently rising by 0.4[%] a year. Like CFCs, [N₂O] is stable until it reaches the stratosphere, where it breaks down to form nitric oxide... which attacks ozone in a similar fashion to chlorine... The outlook for the stratospheric ozone is bleak. Although many governments now agree the need to phase out CFC use, stratospheric chlorine levels will continue to rise dramatically in the next few decades... Each molecule of the most commonly used CFC is 10,000 times as effective at trapping infra-red radiation as a molecule of [CO₂]... The main importance of the ozone layer is in protecting life from short-wave ultraviolet-B (UV-B) solar radiation. Most UV-B is absorbed by ozone, but the proportion which does reach the ground is responsible for causing sunburn and skin cancer in fair-skinned people. Excessive UV-B also causes eye cataracts and weakens the immune system. The most harmful consequence of increased UV-B, however, may well be its impact upon food production and ecosystems. Of 200 plant species which have been tested, two-thirds showed sensitivity to UV-B[(including 'cotton and soybeans')]. Plant sensitivity to UV-B appears to be greater if the phosphorus level in the soil is high. Heavily fertilized agricultural areas could therefore be badly affected. The effect on marine life may be equally severe. Phytoplankton are microscopic plants which float in huge numbers near the surface of the ocean and supply all the food on which marine animals depend. It has been found that UV-B affects the phytoplankton and the larvae of some species of fish. Some scientists believe the effect of ozone depletion in the Antarctic's seas will be particularly dramatic, since krill, the tiny shrimps which are essential to the Antarctic food chain... depend on phytoplankton. If the krill decline, the whole ecosystem of the Southern Ocean could collapse... For over a century, scientists and environmentalists have warned that rising levels of [CO₂]... could bring about a catastrophic warming of the Earth's atmosphere... [However, when a] NASA climatologist... claimed in 1988 that "the evidence is pretty strong that the greenhouse effect is here", most of his fellow scientists[still] thought this view extreme. Now it is close to becoming the accepted opinion in the scientific world... Without naturally occurring greenhouse gases, such as... CO₂... water vapour, methane... and... N₂O... the planet would be some 30°C... cooler. These important gases allow short-wave energy from the Sun to pass through them, but trap the longer-wave infra-red or heat radiation which is reflected back from the Earth's surface. Unfortunately, the levels of these greenhouse gases in the atmosphere are now rapidly increasing... The production of synthetic greenhouse gases has greatly worsened the problem. Around 30 [to] 40 trace greenhouse gases are known, and there may be many more – every year hundreds of new gases are produced with little idea of their greenhouse potential... Because it is produced in such quantities the world over, [CO₂] is expected to be responsible for over half of the total predicted global warming. Levels of [CO₂] in the atmosphere have already increased by 25[%] from pre-industrial levels and are now at their highest levels for 160,000 years... Methane... is responsible for around a fifth of global warming and its atmospheric concentration has already doubled from pre-industrial times... This cocktail of greenhouse gases is expected to cause a rise in global temperature of 1.5 [to] 4.5°C... by 2050. Factors such as changing cloud distributions, increasing water vapour in the atmosphere, and shifting snow and ice margins may slow down global warming or speed it up. Other uncertainties in the precise details of climate change are due to the wide range of political, economic and social factors involved in the control of greenhouse gas emissions. Even if these forecasts are accurate, they represent only *average* changes in temperature for the whole planet. Wide regional differences are likely to occur, with much larger warming expected at the poles than in the tropics... Current estimates suggest that global warming could cause a sea level rise of anything between 7cm and 165cm... by 2050, due to the expansion of the oceans as they warm up and the melting of glaciers and the Greenland and Antarctic ice caps. A sea level rise of 1m... could potentially affect all land up to the 5-m... contour line. Worldwide, this would amount to an area of some 5 million [sq. km]... This is only 3[%] of the land area of the globe, but it includes a third of the cropland. [It is estimated that 'a 1m sea-level rise would displace at least 70 million Chinese']... Today Haiti stands stripped of its trees. Forty years ago, forests still covered 80[%] of the country; now, the figure is down to less than 4[%]... Many tropical countries which were heavily forested only a few decades ago are now virtually denuded of trees. ['India has almost no forest left.']Africa has lost almost half of its tropical forests, while the Americas have lost a third of theirs. In Madagascar, whose forests harbour thousands of unique animals, 93[%] of the island's original primary forest has been destroyed in the last 60 years... The UN Food and Agriculture Organization... blames shifting cultivation by landless peasants for causing 50[%] of tropical forest clearance worldwide, and names fuelwood collectors as the second major cause of deforestation. The impression given is that the forests are being cleared by those too poor and hungry to care about protecting the environment. On the face of it, FAO has a case. From Amazonia to Indonesia, it is indeed landless peasants who light fires and operate the chainsaws that annually destroy vast areas of forest. Around the major cities in Africa or India, trees stripped of all but their highest branches bear terrible testimony to the fuelwood crisis. But blaming landless peasants for deforestation is tantamount to blaming conscripted soldiers for causing wars... Firewood shortages, for example, are the consequence, rather than the cause, of deforestation... Thousands of hectares have been cleared for plantations, transformed into pasture, logged or torn apart by mining. Rivers have been dammed, flooding some of the most remote areas of forest in the world, and the products of millions of years of evolution have been bulldozed aside to create necessary 'infrastructure' to support the development process... In the Philippines, the island of Negros – once a carpet of forest – is now little more than a vast sugar estate... In Thailand, many of the most fertile soils have been used to grow

cassava, mainly for export to feed Europe's livestock. In the 10 years between 1973 and 1982, exports of cassava from Thailand to the EC rose from 1.5 million tonnes to 8 million tonnes. Almost all the increased production took place... at the expense of forest... In Latin America, cattle ranching is responsible for the destruction of at least 20,000 [sq. km]... of forest a year. Since 1950, two-thirds of the lowland tropical forests in Central America have been cleared, mostly for pasture, and in several countries cattle now outnumber people. The expansion of cattle rearing has been promoted by the major international development banks and lending agencies – the Inter-American Development Bank, the World Bank and the UN Development Fund. Governments have also promoted ranching through local fiscal incentives... Large corporate ranches now cover some 8,750 [sq. km]... of Amazonia. In the states of Para and Mato Grosso they have been responsible for 30[%] of clearings. The ecological destruction caused by ranching programmes is long-term and often irreversible. The land is rapidly depleted of nutrients and invaded by toxic weeds. In a few years, it is so degraded that it must be abandoned – a fate that has befallen one in three of the large cattle ranches established in Amazonia... In Central America, most of the beef raised is exported, 80 to 90[%] of the exports going to North America. Cheap beef imports have reduced the price of hamburgers by a few cents. However, the cattle trade has done little to help the poor in the cattle-exporting countries, few of whom can afford to eat beef... Under Brazilian law, anyone who clears an area of forest can lay claim to the land [(and, incidentally, 'if landholders leave forest areas standing as reserves, such areas are classified as "unproductive" by Government agencies, which gives landless people the freedom to move onto the reserve and cut the trees down so they can farm the land')]... It is... no coincidence that those areas where clearance is most vigorous are frequently closest to gold strikes. It is this quest for quick (and easy) profits – rather than a hunger for beef – that provides the key to much of the deforestation in Brazil... Worldwide, the tropical timber industry is held responsible for degrading some 50,000 [sq. km]... of primary rainforest annually. Much of the wood is used to make cheap, throwaway goods... The tropical timber industry is particularly sensitive to accusations of causing deforestation, arguing that it is only responsible for some 10[%] of forest destruction worldwide. However, that global average obscures the fact that logging is the major cause of primary rainforest destruction in much of Southeast Asia, Africa, A[US] and the Pacific islands... The damage caused by logging is extensive. Current logging practices in Sarawak, Malaysia, leave 33 trees damaged for every 26 trees removed as timber. In some areas, up to 70[%] of the remaining trees die from their injuries. The extensive network of roads and skid trails needed to get the logged timber out of the forests adds to the damage. Erosion is a particular problem, increasing the silt load of rivers with consequences that extend far beyond the forests. Two out of every three rivers in Sarawak are now officially classified as 'polluted' due to soil erosion... [(By the way, i)n Idaho, logging has increased erosion rates in some areas 220 times[.]] ...Significantly, there is hardly a single example of sustained industrial timber extraction from tropical rainforests. Indeed, the International Tropical Timber Organization (ITTO)... has itself concluded that successful sustainable tropical timber operations cover less than 0.8[%] of rainforest land and are "on a world scale negligible"... [F]ew could provide the rates of return demanded by commercial companies... The world's tropical forests are known to contain large quantities of minerals and oil. Schemes to exploit these resources are increasingly important as causes of deforestation... The quest for cheap electricity, presumed essential to economic development, has seen river after river being dammed throughout the tropics... The dams planned for Amazonia are expected to flood an area the size of Montana; 68 dams are planned for Brazilian Amazonia alone. The state electricity authorities of many tropical countries insist that consumers will suffer an energy crisis unless new dams are built. Yet studies of the situation in Brazil by the World Bank suggest that sufficient generating capacity already exists to satisfy the expected rise in demand over the medium term, provided that energy is used more efficiently... To environmentalists, the [Carmanah] valley is "a monument [of the] way Canada used to be – lush and green." To... the company that owns the timber rights to the valley, Carmanah is an asset to be cashed in. With each spruce worth up to \$40,000, the entire valley, if logged, would bring in some \$13 million. And, if the company has its way, all but... less than 10[%] of the valley, will indeed be logged... Many of the trees... were saplings when William the Conqueror invaded England in 1066... Every year, over 200,000 ha... of 'old-growth' forest in British Columbia are clear-cut for timber – an area the size of Carmanah being lost every ten days. On Vancouver Island alone, all but 11 of the 67 rainforest watersheds have been clear-cut. Even those forests set aside as parks have not escaped the onslaught... Most of the old-growth forests of Ontario and eastern Canada have long since disappeared. The native hardwood forests of the eastern US are but remnants of their former glory, 80[%] of the valley forests having been cleared for agriculture... In the USSR, where pine, spruce, larch, cedars and birches still cover about half of the country, recent reports suggest that forests are being lost at a rate equal to that in Brazil... In Finland, all but a few patches of old-growth forest have been destroyed. In A[US], whole areas of eucalyptus forest are being converted to wood chips for export, approximately 1 [sq. km]... being chipped every day... Native forest in N[Z] – already reduced to scattered remnants – is attacked with napalm. Once the forest has been burned, it [is] replaced with plantations of non-native trees, which offer little food or shelter to N[Z]'s rare endemic species. The destruction of such forests and their inhabitants, by a relatively wealthy nation for minimal financial gain, shows how little the environment is valued by N[Z]'s politicians and commercial interests... International trade, and the consumer society that feeds it, ensures that we are all parties to the destruction of the rainforests. The beef mountains of Europe have been fed on soyabeans grown in southern Brazil, on land from which peasants have been dispossessed and sent as colonists into the forests. Aluminium cans which end up on our rubbish dumps come from smelters fed with bauxite from Amazonia and powered by dams that have flooded forests... In that respect, saving the tropical forests relies, not just on measures taken in the rainforest countries themselves, but also on the international community adopting policies which reduce its ecological impact... There is now overwhelming evidence to suggest that [the current] climate is going to change, but scientists will never be exactly sure by how much, or at what rate. Likewise with the ozone layer, we know that it is set for greater disruption but any predictions as to how much will be lost, or by what date, are pure speculation. These uncertainties, however, must not be taken as an excuse for inaction in dealing with the problem. On the contrary, they should be seen as a reason to begin reducing our impact on the atmosphere *now* as an insurance policy against the massive disruption of the Earth's natural systems... The risks are too great not to start taking action immediately... By the time corrective measures are taken, it may already be too late. - 5000 DAYS TO SAVE THE PLANET

...extinctions of the past occurred on geologic time scales [instead of being] compressed into a mere century, as in modern times. The number of species disappearing today far exceeds the natural rate of extinction prior to the arrival of humans... The human race came into being during a time of high species diversity – perhaps the greatest diversity in the history of the Earth. Today, however[. our]... uncontrolled population explosion... is inflicting major damage on the Earth, as people encroach into wildlife habitats in a desperate struggle for survival. If present trends of environmental destruction continue to spiral out of control, the planet could tumble into cataclysmic extinction... We thus constitute a major geologic force on the face of the Earth, and it remains to be seen what kind of world will result from our folly. Our species is conducting a dangerous global experiment by cramming as many people as possible onto the planet. We are altering the environment with our waste products, destroying the forests, and pumping pollutants into the air and water, thus unfavourably changing the composition of the biosphere and interfering with the Earth's energy balance... At first, simple organisms lived in an anaerobic (lacking oxygen) environment, in which oxygen was poisonous to life. When photosynthesis first evolved, as early as 3.5 billion years ago, all oxygen that was produced bonded to chemical elements and was permanently locked up in the Earth's crust. About 2 billion years ago, these oxygen sinks held all the oxygen they could contain, and the gas began slowly to build up in the ocean and the atmosphere. As oxygen production reached higher levels, complex organisms began to evolve. When the level was near to where it is today, the ozone screen made it possible for plants and animals to conquer the land. Life appears to maintain oxygen and [CO₂] in a perfect balance, and too much of one in relation to the other could have disastrous consequences... To a great extent, life began because of the greenhouse effect. Large quantities of greenhouse gases in the early atmosphere maintained temperatures within tolerable, life-

sustaining limits, even though the sun's heat output was lower than it is today. Fluctuations in the [CO₂] content of the atmosphere have resulted in major... climate... changes... During the ice ages, when the carbon cycle removed too much [CO₂] from the atmosphere, temperatures plummeted and great ice sheets flowed across the land. When excessive volcanic activity added too much... [CO₂], temperatures soared and the Earth became a hothouse. Only when [CO₂] levels remain fairly constant does the climate maximize benefits for all living things... Humans are... confounding nature's efforts to maintain [that] balance... The industrialization that made modern civilization possible is polluting the environment heavily... The release of cancer-causing chemicals and other hazardous substances into the atmosphere and the ocean is far greater and more widespread than ever before suspected. Dangerous chemicals seep into groundwater supplies... Each year, about 8 million tons of toxic wastes dumped into the ocean could cause irreversible changes in aquatic ecosystems... Improper farming techniques erode topsoil at several times the replacement rate, causing man-made deserts to spread... Strong winds send the sediment aloft, and huge dust storms clog the skies... Motor vehicle exhaust accounts for half the particulates and aerosols injected into the atmosphere... Human industrial activities release 10 times more sulfur into the atmosphere than natural sources like volcanoes... One of the greatest surprises of this century has been the discovery of a huge ozone hole over Antarctica, where half the stratospheric ozone disappears during the southern winter... When the ozone hole breaks up in the spring, ozone-depleted air travels to the mid-latitudes, where ultraviolet levels climb appreciably. A similar ozone hole often hovers over the Arctic... The ozone shield over the U[S] is eroding twice as fast as had been previously predicted. Long-term records show that ozone levels in the high northern latitudes have dropped about 5[%] over the past two decades... In addition, large volcanic eruptions, like Mount Pinatubo's in the Philippines in June 1991, contribute to ozone depletion by emitting sulfuric acid. Unfortunately, even if the chemical emissions ceased entirely, the ozone layer would continue to diminish for at least another century – the amount of time required to cleanse the upper atmosphere of ozone-destroying chemicals... The rise in global temperatures could also cause part of the polar ice caps to melt and raise sea levels, flooding the coastal regions where half the world's population lives. Shifting precipitation patterns could cause serious drought and desertification in some regions and severe flooding in others, thus dramatically reducing agricultural output. Changing atmospheric circulation patterns could significantly affect the weather, resulting in a large number of violent storms, and potentially much death and destruction... The forests of the world have a major effect on the global climate. The loss of forests increases the Earth's surface albedo, allowing more sunlight to be reflected into space. Thus, deforestation could cause global cooling that might counteract greenhouse warming caused by pollution... The harvesting of forests, the extension of agriculture, and the destruction of wetlands speed up the decay of dead organic matter in the soil, releasing massive amounts of [CO₂] into the atmosphere... Moreover, agricultural lands, which also produce [CO₂] during cultivation, do not store nearly as much carbon as the forests they replace. Forests conduct more photosynthesis for a given area than any other form of vegetation... Deforestation accounts for up to a third of the total amount of [CO₂] and up to half the methane released into the atmosphere... Another threat posed by deforestation is the release of [N₂O] into the atmosphere, possibly damaging the stratospheric ozone layer... Forest clear-cutting encourages soil bacteria to produce [N₂O] that escapes into the air... [(‘in 1987 the US had about 4 times Britain's population but its industries emitted 10 times as much N₂O – 21,510,000 tonnes’)]. The number of termites is rapidly rising because of deforestation... Termites ingest as much as two-thirds of all terrestrial carbon, about 1[%] of which is converted into methane, another potent greenhouse gas. Methane production is increasing at a rate of about 1[%] per year, or about twice as fast as [CO₂]. Methane is also about 20 times more efficient as a greenhouse gas. In future years, methane and other trace greenhouse gases might together contribute more to global warming than [CO₂. ‘Roughly half is generated by irrigated land, above all by rice paddies, and much of the rest by burning of forests and grasslands, oilwells, coalmines, landfills, or leaks in natural gas pipelines.’] In addition, large numbers of cattle raised on cleared forested land contribute substantial amounts of atmospheric methane during their digestive process... The coastal seas of the world are among the most fragile and sensitive environments... By far the most damaging of all sources of coastal and river pollution are oil spills... Every year, as much as 25 million barrels of oil spill into the... oceans. Offshore drilling and shipping accidents account for some 20 million tons of dissolved and suspended matter in the ocean.

...the oil floats in a very thin layer, gradually spreading over a wider and wider region. Until the oil layer is removed... it covers the water and inhibits evaporation. Under the oil, the water warms up. (It also becomes oxygen deficient.) Meanwhile, less water vapor reaches the atmosphere, and there is less rainfall... The atmosphere is... an insulating heat blanket for... Earth... As it happens, there is another atmospheric phenomenon which seems to be acting in the reverse direction; that is, to *cool* the surface of... Earth. The amount of dust that is suspended for long periods in the stratosphere determines how much of the incident solar radiation is transmitted downward to the ground level and how much is reflected (or scattered) into outer space... Nobody knows how important man-made dust clouds are in comparison to natural ones. But many industrial processes certainly contribute a share. Cement plants, coke ovens, blast furnaces, electric arc furnaces, and large thermal power plants are particularly potent smoke producers, as are automobiles and aircraft... [(‘commercial jets produce over 600 million tonnes of CO₂/yr’; ‘so many planes are flying over the Atlantic every day that their fumes are affecting cloud levels’). T]he contrary effects of increasing [CO₂] from fossil fuel combustion and small dust or smoke particles in the upper atmosphere – also largely from combustion – may simply cancel each other out. It is also quite possible that the balance is only temporary and that the cooling or warming effect will eventually predominate. - Uncertain Futures: Challenges for Decision-Makers

Gilbert White's *Natural History of Selborne* was published in 1789, and just ten years before that the books and papers of Linnaeus were... brought to England. These two naturalists are usually considered the founding fathers of the ecological movement... As far as the ecological movement goes... the word *ecology* seems not to have been used before 1866, and it was a hundred years more before it became part of the general language.

In the 1960s and 1970s, those concerned about environmental destruction often projected an image of being more concerned about wildlife than human life. Saving whales, whooping cranes, and wilderness areas seemed their major interest, and many citizens refused to take them very seriously. There was a feeling in many quarters that their movement could even be a threat to the economy and to job expansion because the activists were, in many cases, trying to limit industrial expansion. - Forecast 2000

...many of our most thoughtful scholars now believe that this type of industrial society is creating problems faster than it is able to devise cures for them... [A popular slogan is: ‘You cannot do violence to Nature without paying for it as a nation.’ T]he slogan of the Values Party, in N[Z] was: “We do not inherit the world from our parents, we *borrow* it from our children.” ...the social bills[are] now coming due for the past exploitation of the environment, the unconscionable exhausting by four generations of industrial citizens of the planet's 60-million-year endowment of petroleum, not to mention the grim legacy of radioactive wastes. It is our children and grandchildren that will pay these bills, and suffer the... consequences.

...Cyclone Giselle hit Cape Reinga on Apr 10, 1968... [E]xtensive damage... to property and... livestock... was caused in the Bay of Plenty, Hawke's Bay and Wairarapa... It was during this storm[, which]... is believed to be the worst storm since the arrival of Europeans... that the inter-island ferry *Wahine* was wrecked in the Wellington Harbour with the loss of 51 lives... By the time Giselle reached Wellington the winds were gusting at 275 km/h... [During Dec 1976, a] freak storm lasting 12 hours concentrated in the Hutt Valley and Wellington areas[caused] the loss of one life and flood damage estimated at more than \$30 million – the costliest in NZ's history.

As they review the bizarre and unpredictable weather pattern of the past several years, a growing number of scientists are beginning to suspect that many seemingly contradictory meteorological fluctuations are actually part of a global climatic upheaval... The earth's current climate is something of an anomaly. In the past 700,000 years, there have been at least seven major episodes of glaciers spreading over much of the planet. Temperatures have been as high as they are now only about 5% of the time... However widely the weather varies from place to place and time to time, when meteorologists take an average of temperatures around the globe they find that the atmosphere has been growing gradually cooler for the past three decades. The trend shows no sign of reversing... Since the 1940s the mean global temperature has dropped about 2.7° F. Although that figure is at best an estimate, it is supported by other convincing data. When... Columbia University's Lamont-Doherty Geological Observatory... analyzed satellite weather data for the Northern Hemisphere, [it] found that the area of the ice and snow cover had suddenly increased by 12% in 1971 and the increase has persisted ever since. Areas... once totally free of any snow in summer[are] now... covered year round. Scientists... [also] found... there has been a noticeable expansion of the great belt of dry, high-altitude polar winds – the so-called circumpolar vortex – that sweep from west to east around the top and bottom of the world... By blocking moisture-bearing equatorial winds and preventing them from bringing rainfall to the parched... region... from Central America to... India, the polar winds have in effect caused the Sahara [(which, '135 million years ago was covered in lush forest')] and other deserts to reach further south. *Paradoxically, the same vortex has created quite different weather quirks in the U.S... As the winds swirl around the globe, their southerly portions undulate like the bottom of a skirt. Cold air is pulled down across the Western U.S. and warm air is swept up to the Northeast. The collision of air masses of widely differing temperatures and humidity can create violent storms – the Midwest's recent rash of disastrous tornadoes, for example.*

In September 1989 British scientists discovered that the Arctic icesheet has thinned by one third in the previous ten years... Scientific reports backed by hard evidence are one thing. The evidence of our eyes is something else... The last few years have seen changes of global weather patterns that twenty years ago we would not have imagined. Britain suffered hurricanes... Gilbert and Hugo... in 1987 and 1990[which both]... caused horrific damage and death[including]... the loss of over 15 million trees... [W]hole towns... had to be rebuilt[. Around the same time], Bangladesh saw its worse flooding in living memory: over 3,000 people died. Citizens died in Greece because of the searing heat, and in December 1987 Arizona experienced snow at Christmas for the first time. In 1989[droughts]... occurred in China and the Soviet Union as well as in Africa. The USA suffered crop failure because of the heat... The problem is that the capitalist economies are quite happy to concern themselves with environmental reform, providing it does not harm their profits... The emphasis will not be on prevention but on limited cure... and profit will remain the goal, though constrained by stricter environmental controls.

A hundred years ago it was thought that all the gas pushed out into the air by factories and coal fires was simply spread out and 'lost' somewhere. To some extent this is true. The earth can absorb a great deal of the [CO₂]... released into the atmosphere... Above a certain level, however, the [CO₂] simply collects in the atmosphere... [It was] calculated in 1971 that the Amazon Basin, through photosynthesis, produces approximately 50% of the oxygen added to the earth's atmosphere annually, and consumes about 10% of the [CO₂] in the atmosphere... Tropical forests are extremely important for the world's climate. In higher latitudes we depend on tropical forests to keep us warmer, through the circulation of water vapour. Also, the enormous quantities of water vapour produced help to cool the tropics on both sides of the equator... The forests are being cleared for immediate economic reasons. The countries concerned are usually poor, and many have high debts to repay. They want to develop their industries and earn more money abroad through timber, beef or mining... Action has been taken without thinking about the longer-term consequences... During the third quarter of this century alone, the area of man-made pastureland in Central America more than doubled, almost all at the expense of tropical forests... Forests retain large quantities of rain water. Rainforests, in particular, protect the poor soil from the ravages of the sun and the force of the rain. When the trees are destroyed, there is frequently massive erosion of the soil and the creation of rock-hard, useless land. In Panama, it has the added effect of washing large quantities of silt into the rivers, and eventually into the Panama Canal. This has caused difficulties in navigation, because the dredging of the canal is unable to keep pace... A most serious effect which many in Bangladesh and elsewhere have already experienced is devastating floods, caused once again by deforestation. There is also a threat to supplies of drinking water. This is because, after forests are felled, water runs off the mountains more rapidly, and little water soaks into the ground to replenish springs...

Like much of N[Z], Poverty Bay has swift rivers running down from the hill country over fertile coastal plains. In pre-European times the bush covered the land down to the coast... The hills "catch" the rain-bearing clouds... but... [the] bush was cleared for farming... By the 1950s, it was already obvious that many such hill country areas were highly erosion-prone and that every year thousands of tonnes of top-soil were being washed out to sea. As well, the water table fell and lack of rain meant real drought... [until,] in a freak reversal of rain patterns... Cyclone Bola... brought the issues to the fore. Now, any prolonged rainfall aggravates the problems.

Ethnobotanical studies conducted by the Institute of Economic Botany at the New York Botanical Garden show that managing the forest for its yield of fruits and other edibles and latex for the manufacture of rubber can produce twice and three times as much value as harvesting it for lumber or clearing it for pasture... [In addition, replacement] of a forest with cultivated fields... increases the rate of erosion (for soluble minerals leach even from the soil of a mature, closed forest) by 100 to 1000 times... As of 1850, extension of arable land had cleared 600 million square kilometers of the world forest. The next century brought the clearing of 850 million [sq. kms] more. Half of the original forest has now... been cleared. That must be acknowledged as a substantial reduction of the biomass... When the Stockholm Conference on the Human Environment convened in 1972, 26 nations had established environmental protection agencies. By 1982, 144 nations had done so... [T]he "second Stockholm Conference,"... [will] be held in Rio de Janeiro in 1992... - ONLY ONE WORLD

Over the next few months, delicate negotiations will determine whether the world's largest environmental meeting will produce real progress in saving the planet from man-made ruin. Or whether the session will merely add to global warming with hot-air emissions from about 100,000 parliamentarians, religious leaders, environmentalists and heads of state... For two years, international committees have been hashing out a declaration of principles for the so-called Earth Summit... to be held in Rio de Janeiro next June... But as the final negotiating sessions approach, [the RC Church's insistence that population control be excluded from the range of topics and]U.S. intransigence on[other] key issues means the summit may turn into little more than a biodegradable photo opportunity... The U.S. is resisting pressure from the European Community and Japan to use the Rio conference as a forum to set targets and timetables for the reduction of warming gases, among other things[– although all 'First World leaders insist that their nation's lifestyles are non-negotiable.' The US] has also resisted pressure to commit new funds so that [Last World] economies can grow without destroying precious ecosystems. Washington's posture stands in contrast to the leadership the U.S. exercised in 1972 at the U.N. Conference... in Stockholm... Now, says... [the] president of the Washington-based World Resources Institute, "our government is not accepting the responsibilities that come with the world's largest economy." ...[the] secretary-general of UNCED[said]: "This conference is an opportunity that may not occur again in our lifetime. When, if not at Rio, will we address these problems?" ...[Another] question is whether the

bureaucratic timetable and that of the biosphere will match up... There was more grim news last week about the ozone layer... ozone-deplet[ed air]... now covers almost all of North America, Europe... A[US, NZ] and much of Latin America... Even before last week's report, the U.S. Environmental Protection Agency projected that ozone loss would cause 200,000 additional skin-cancer deaths in the U.S. alone over the next 50 years.

...over 3,000,000 by the year 2100 if ozone depletion continues unabated. There will be many more cases of blindness (100,000 more for each 1[%] decline in stratospheric ozone, according to a U[N] panel), a weakening of the human immune system, and premature aging... [C]artoons showing cows wearing baseball caps and sunglasses to defend against blindness and applying sunblock creams to avoid skin cancer... led to the Montreal Protocol of 1987. Signed at first by twenty-seven countries, the protocol called for a 50[%] cut in the manufacture of CFCs and halons... by 1991. Later... the signatories, joined by more than fifty further countries, called for phasing out the use of these chemicals by the end of the century... However... governments have quite often failed to ratify the Protocol, demanding financial aid before doing so, and... companies advertising their commitment to the environment nevertheless quickly unloaded stocks of ozone-destroyers in [Last World] countries which hadn't signed: in India, the tonnage of halons sold in 1990 was eight times greater than in 1987. By 1993 only nine [Last World] countries had cut emission levels... India, where sales of refrigerators are rising rapidly, is said to be trying to move straight into ozone-friendly refrigeration. But... China plans to put CFCs into fifty million new refrigerators before changing to other substances[, while]... far richer... nations have [not set a] good example... In April 1995, the state legislature of Arizona voted to legalize manufacture of CFCs, in contravention of federal law. 'Irresponsible theories about the ozone layer are no excuse to deprive people of necessary technology', the Governor is reported to have said as he signed the legislation... Carcinogens such as many pesticides... PCBs... and the yet more dangerous dioxins are special causes for concern. They can be tremendously concentrated as they move up natural food chains. In the North Sea, PCBs in marine mammals have become concentrated by ten million times... An explosion at a chemical plant in Seveso in 1976 brought dioxins to international attention, but such dramatic incidents form only a small part of the problem. At Bhopal in 1984 a pesticide-manufacturing explosion injured two hundred thousand and killed two thousand – yet accidental pesticide poisonings number a million a year, causing twenty thousand deaths... Lead now enters the environment at eighteen times the natural rate; cadmium at five times... mercury, nickel, arsenic, vanadium at twice the natural rate. Two thousand tons of mercury have joined the Amazon's eco-systems, just from gold prospecting... A possible sign of imminent environmental collapse is that frogs and toads are becoming rare everywhere but in Africa... [T]here is an apparent halving of human sperm counts world wide, and a twofold to fourfold rise in testicular cancer. These may be the effects of pollutants which mimic human estrogens... At Rio in 1992 it was agreed... that efforts would be made to reduce... CO₂... emissions to 1990 levels by the turn of the century, but the U[S], which had insisted that meeting this target should be 'urged' rather than required, almost certainly won't meet it, now that it has abandoned the idea of taxing energy. The Canadian government, giving hundreds of millions of dollars in subsidies to Alberta's oil industry megaprojects, has replaced its election promise of a 20[%] cut... by the year 2005 with plans just to ask its citizens to act responsibly, the predicted outcome being a 13[%] rise by the year 2000. The European Union, too, is delaying energy taxes... [T]axes on emissions have inspired Norway to strip CO₂ from natural gas, compress it, and bury one million tons per year by injecting it into rocks under the North Sea... As for the [Last World] countries, almost all have done little more than talk about the problem. Atmospheric CO₂ levels thus seem likely to keep increasing for quite a while... This relaxed approach was reflected in the... Berlin Mandate of 1995, which committed its signatories merely to continued talks: detailed targets for limiting emissions after the year 2000 would be debated only in 1997... All this gives some plausibility to the title 'Ten years to save the world' which the president of the Worldwatch Institute gave to an article of 1992...

[According to NZ's] Minister for the Environment... the... 1992... framework... to reduce carbon emissions was "doomed to failure." ...this task is so vast and dependent on countries finding cheaper ways to rely less on fossil fuels that there is a danger that a universal sign-up will not get off the ground... He said some countries, such as Britain, which had moved from dirty coal-fired power stations to gas-fired stations, could easily meet their [CO₂] reduction targets. "...Countries like N[Z]... have a more difficult task." Since N[Z] signed up to reducing [CO₂] emissions to their 1990 levels by the year 2000, the country has headed on a path which is projected to see net... emissions rise by 60[%]. NZ currently 'contributes 0.12% of total global greenhouse gas emissions', or 'two tonnes of carbon per person per year, compared to AUS with four tonnes and the US with five tonnes'.

...despite the lurid predictions of our professional eco-Jeremiahs, we have so far not all starved to death, woken up one morning to find the oceans dead, been fried by nuclear weapons... found our industrial society grinding to a halt for lack of resources... succumbed to diseases from pesticides, or been forced to stand on each other's heads as a result of overcrowding. Indeed the exact contrary to most of the predictions has been much closer to the truth. Economic growth continues; people almost the world over are living longer lives; and the natural environment – at least in the rich countries – has been improving... Air pollution has fallen notably in Britain and America, as has water pollution... resource prices continue to fall, a trend that has been going on for centuries if not millennia... The "acid rain" scare has proved unfounded. So has the scare on species extinction. Stab-in-the-dark estimates of 40,000 species becoming extinct annually – upon which we were urged to drop everything and rush out to save them all – have since been modified downwards. The new estimate? Lower by a factor of around 40,000. Whatever species it was that became extinct this year it was probably no oil painting. As for global warming from "greenhouse gases," there are many reasons for maintaining a healthy agnosticism: the crude state of the climatologists' models; the fact that the temperature of the earth fluctuates naturally for many reasons; and the even more inconvenient fact that no net warming has occurred in the last 50 years (the very period of the supposed greenhouse gas emissions). Only the very gullible would be confidently expecting hotter weather. None of this will stop the eco-Jeremiahs from seizing on the next lurid apocalyptic story to come along... and telling us that, unless industrial society repents and goes back to living in caves, we will all be flattened, suffocated, fried, boiled, frozen, starved, poisoned, or bored to death by Greenpeace.

...A mysterious epidemic at an important rest stop on the Pacific Flyway has caused the largest number of pelican deaths in [US] history, and poisoned a staggering number of other birds... [So far] more than 6000 birds, including 846 endangered brown pelicans and 3929 white pelicans at the internationally renowned Salton Sea bird sanctuary [have died]. In local news, 'scientists are scrabbling for theories as millions of pilchards continue to die off the north-eastern coast. Pilchards have been dying in huge numbers in AUSn waters since March 1995, but the first large-scale deaths were not seen here until last week. The deaths began in the Hauraki Gulf and appear to be spreading almost daily. Scientists are reluctant to speculate on what is killing the fish but the fishing industry and Greenpeace are blaming ballast water from ships. The Fishing Industry Association chief executive said the industry had long been concerned about the risk of diseases being brought in ships' ballast to NZ, which has a voluntary code requiring ships to exchange their ballast water at sea. It is claimed that most ships comply. The scientist leading the investigation said it is not known whether the disease killing the fish can affect humans. However, it was unlikely to affect humans immediately because few people ate pilchards. Fish bait was the biggest potential market. It was also not known whether the disease would get into other parts of the food chain. Even if the disease did not spread, the death of the pilchards could cause food shortages for other species. Pilchards are the "meat and potatoes" of the sea – standard fare for all sorts of bigger fish, sea birds and penguins']...

Penguins, seals and albatrosses are dying on Macquarie Island in what scientists fear is alarming new evidence of the onset of the greenhouse effect. The island, 640km south-west of the Auckland Islands and 1294km from the Antarctic continent, is one of the most important measuring points for the ecological health of the globe... In the 1970s there were 6000 rock hoppers scattered around the island but now, say zoologists from

the University of Tasmania, only 3000 survive. Scientists believe that an increase in ocean surface temperature has forced its prey – billions of tiny creatures called euphausiids, a form of krill with a very narrow tolerance range for temperature – to travel further south. The rock hoppers... are unable to expend precious energy reserves to travel far enough south to follow the food... Even more alarming is the discovery that 16[%] of eggs checked by the scientists have been infertile. “We have never before seen infertility in rock hoppers...,” says one... Scientists on... Campbell Island, 500km north of Macquarie, have recorded a decline in rock hopper population of 94[%] since 1940. There were well over one million birds; now there are fewer than 80,000. Scientists say there has been so little food available for the penguins that they have been forced to eat fish, which is less suited for their body needs, rather than krill. Meteorologists on Macquarie have measured an annual average temperature increase twice that of the rest of the world. The average temperature near the island has risen steadily from 4.5 deg... in 1912 to more than 5.4 deg today. “Global change is now a certainty”... Last year’s weather on Macquarie was what the island’s meteorologists describe as “extremely abnormal” – they recorded the island’s sunniest summer and its coldest winter... A one degree increase in temperature may sound insignificant but Macquarie Island scientists fear it is enough to alter completely the ecosystem in the Southern Ocean... Climate change is not the only threat to the subantarctic. Rubbish from every continent swirls around the world in the currents of the Southern Ocean, and it’s beginning to have a major impact on Macquarie Island. Scientists are listing the debris that arrives on one small beach on the island. Every month they are recording around 40 significant pieces of rubbish weighing a total of about 20kg; these include wooden beer kegs, commercial fishing debris... shampoo bottles from Japanese ships... and... soft drink bottles from Argentina...

A vast area of southern Argentina has become part of an expanding desert, mainly because of human activities, according to a recent Government study. Satellite surveillance [confirmed] that more than one-third of Patagonia is affected... [T]he newly arid lands have degraded to the point that “their use to man is practically nil” and the damage economically irreversible... [In further news from South America, a] five-month drought in the Ecuadorian province of Loja has forced more than 3000 people to abandon their parched homeland... The drought, the worst in a decade, is expected to cause further economic and social disruption.

...the enchanted Galapagos Islands... gave... Charles Darwin... the inspiration for his book *The Origin of Species*... But now a much more unnatural process, that of human intervention and disruption, is... changing the face of the Galapagos at a much quicker rate than evolution... As the number of tourists visiting the islands increases, along with associated industries, thousands of starry-eyed immigrants have come, unrestricted, from the Ecuadorian mainland to try to make their fortunes... “...human activity and its consequences have already made some species extinct... One of the biggest threats today is species introduced by man. Pigs and dogs kill baby giant tortoises while... we have a goat crisis on the largest island, Isabella... There is an estimated 100,000 feral goats... and unless their numbers are cut back, their machine-like destruction of the island’s vegetation threatens to leave the tortoises with no food.” Other campaigns have brought the ecologists... at the... Charles Darwin research station... [–] which runs the Galapagos National Park on behalf of the Ecuadorian Government... [–] and villagers into conflict. Last year, marine biologists at the... station called for an urgent ban on fishing for sea cucumbers. The slug-like creature is a sought-after delicacy in the Far East and has been fished almost out of existence in Galapagos waters... Hundreds of fishermen marched on the... station, surrounding it for several days and not allowing the staff to leave. Some threatened to kill animals such as Lonesome George, a giant tortoise from the island of Pinta and the last known surviving member of his subspecies. George, who is thought to be aged about 80, has been locked up for the past 20 years in the station for his own safety. There is strong evidence that giant tortoises and other animals on some islands have been slaughtered by fishermen venting their anger at park authorities... THE ecologists’ arguments for strict, closed seasons to conserve fish stocks, and ensure the long-term survival of the fishing industry, do not convince fishermen whose priority is to make ends meet in the short term... [Furthermore,] Ecuador is a country with severe financial worries and the prospect of greater economic growth in the Galapagos has politicians’ mouths watering. For that reason there is unlikely to be any directive from Quito agreeing to the kind of controls on development that the ecologists are calling for... “But if there’s too much economic activity in the Galapagos, bringing with it more immigration, the wildlife will suffer and the visitors will stop coming, sending the economy and the lives of the locals into decline.”

...scientists are worried about the world’s coral reefs... [E]xperts say 10% of earth’s coral reefs are dead or mortally wounded and another 30% could die in two decades without dramatic action... [97%] of the Galapagos corals are gone because of bleaching. Coral bleaching usually is fatal, because suffocating thick algae normally replaces the simpler forms that corals need to survive. Marine species then flee the barren corals, dooming them... “Is there a crisis? ...Yes. If you’re talking about a resource that is one of the oldest ecosystems in the world that’s been around 50 million years and you see a change in a couple of decades, that’s a crisis.” Reefs are sometimes known as the rain forests of the ocean for their rich biological stores... More than 100 nations have economies that depend in part on reefs for tourism and to feed their people; and... reefs remained “an almost untapped source of chemical compounds” for medicines and other uses... Reefs require clear and relatively nutrient-free water, but coastal development and agricultural runoff are destroying near-shore water quality... Reefs live on the thermal edge. They are extremely sensitive to temperature swings[– ‘higher water temperatures cause bleaching’ –] which are more common as water quality declines... [In related news, scientists] from Britain and Russia have discovered a gigantic freshwater underground lake... up to one million years old... beneath an Antarctic glacier.

...[Yemen has] appealed for international assistance following extensive flooding. Entire villages were underwater... [Elsewhere] this week... dehydration... and... [sunstroke] has claimed at least 250 lives... in... Pakistan, where temperatures have not fallen below 41 deg C for several days. Officials fear an outbreak of disease from drinking water unfit for drinking... [In the meantime,] floods killed at least 12 people in northwestern Pakistan, and... in neighbouring Afghanistan. At least six people were killed during flash floods that swept central Morocco. Others were killed by lightning. Algeria reported major floods in the western province of Tlemcen... but gave few details... [R]ain left 1200 people homeless in the Ghanaian port city of Sekondi-Takoradi. One man was killed when attempting to rescue a duck... Heavy rains across the country helped an international firefighting effort to contain or extinguish most of the blazes... that have ravaged Mongolia for three months... Cool and damp weather[also] helped bring forest fires north of Anchorage... under control. Nearly 350 structures and 30,000ha of forest... on Alaska’s Kenai Peninsula... were destroyed by the fires... Fires covering more than 809,000ha continue to burn in six American states.

...Firefighters battled through the night against wind-driven wildfires that cut a path of destruction from the mountains to the sea and sent thousands of Californians fleeing the celebrity enclave of Malibu... While many residents heeded the call to evacuate, some of the city’s most famous homeowners stayed behind to defend their properties. [One a]ctress... watered down ...he[r roof as]... flames... licked dangerously close by.

...tanker aircraft drop[ped] chemical retardant over... house[s] about to be engulfed in flames in San Diego County as fires[continued to] rage across 14,000ha of southern California[yesterday]. The Santa Ana winds turned dry brush and oil-rich eucalyptus trees into blow-torches, and, by last night, the major fires were less than half contained and some flared up again as the wind shifted and gusted up to 66 km/h. Ninety-five houses had burned and six firefighters battling a flare-up in Malibu were hurt after their truck stalled and flames roared over them in Corral Canyon.

...Lightning-sparked fires[still] burn... in... New Mexico, Utah and Arizona, where 10 Grand Canyon hikers were airlifted to safety... Thousands of people fled up-market homes in the Sierra Nevada after two boys playing with petrol... accident[ally]... started a wind-whipped fire[. Editor’s note: ‘In 1990, there were 2.019 million fires in the US, resulting in property damage of \$8.609 billion. 624,000 structure fires were of suspicious origin’]...

YOUNG arsonists and children who play with fire are costing... [NZ] millions of dollars in property damage. In Auckland alone, children aged three to 16 have lit 319 fires so far this year... Nationally, the total number of fires started by children is more than double that... About half are deliberately lit and these are just the blazes that the Fire Service knows of. Overseas statistics suggest that 90% of such incidents are not reported to the authorities... Now recognised as a national problem, the service is keeping records of the damage done by young hands... [Now for some news from overseas: after leaving] 19 people... dead, 39 missing and[causing] fishery and farming losses... estimated at \$430 million... [i]n Taiwan... Typhoon Herb pounded southeastern China yesterday... Gales[have also] lashed Sri Lanka, killing 10 people and leaving more than 10,000 homeless... [and n]early 300 people are dead after seven days of floods that have ravaged wide areas of India's southern Andhra Pradesh state.

...UP TO 500,000 Indians left homeless by a devastating cyclone... in... Andhra Pradesh... huddled in tent camps yesterday as rescuers searched for bodies, brought in relief supplies and sought to prevent a cholera outbreak. The death toll from the cyclone, which... state administration estimated [caused]... about \$792 million... [in] crop and property losses... exceeded 1000, and up to 1000 people were[still] missing... It was the second major storm in three weeks. The battered... Bay of Bengal... region was still recovering from storms and flooding that had killed 350 people.

...Indian Army helicopters dropped food to thousands of victims after torrential monsoon rains flooded 400 villages in the state of Rajasthan... A storm in the Bay of Bengal sank 18 fishing trawlers, killing at least 16 people and leaving 100 missing... The storm and monsoon floods battering India and Bangladesh, together with disease blamed on the deluge, have now... made millions homeless... Bangladeshi officials said about 58,800ha of rice crops had been destroyed... and 30 million affected... in 37 flood-hit districts... And in Nepal, the death toll from floods and landslides triggered by incessant rain over the last 10 days has reached 45... Floods in Northern Italy and southern Austria killed at least two people and derailed the night train between Rome and Vienna... Floods in the central Mexican city of Puebla left at least 11 people dead and swept away homes and bridges. Authorities expect to find more victims who were trapped in their cars... Hurricane Alma, first of the season, [also] slammed... Mexican ports... with winds up to 195 kph and killed at least three people who were buried as their homes collapsed.

...[the US southwest has so far equalled the record for hurricanes in one season – six.] Over the US's northeastern border, h]eavy flooding in eastern Quebec has left at least 10 people dead and hundreds more stranded... "It's just horrible, horrible," one woman said in Jonquiere... "I never thought I'd see something like this."

...Atmospheric pollution high above the idyllic Polynesian islands is worse than the smog of the bustling Los Angeles Basin, according to initial reports from... NASA... [T]he discovery was made by high-flying aircraft which have begun to survey the region. High concentrations of [CO₂] and methane measured at between 2000 and 10,000 feet are probably caused by bushfires in A[US] and perhaps East Africa. These greenhouse-effect gases from the smoke were transported to the remote and expansive Oceania by high-altitude winds... [Incidentally, textile] and electronic factories are releasing high levels of "gender-bending" chemicals into Britain's rivers.

...A team of Dutch scientists [has confirmed] that chemicals and other human waste dumped into the environment can cause sex changes in wildlife, at least in fish... [By the way, r]adioactivity from dumped Russian nuclear waste could be carried in icebergs to the Atlantic where it would poison fish, according to a Norwegian scientist... [T]he Soviet Union dumped 17 reactors and other radioactive rubbish into the Kara Sea, assuming it would affect only nearby waters which had few fish. But satellite photographs showed that while the local currents flowed eastwards, drift ice was blown in the opposite direction to areas where fish were more plentiful... The *New Scientist* also reported that scientists studying wildlife in contaminated wastes around Chernobyl nuclear power station in the Ukraine had found voles that thrived on radioactive pollution. The small rat-like creatures were producing ever-stronger offspring whereas radioactivity usually triggered lethal mutations in genes.

...[trees close to the Chernobyl reactor died, but further away, they began to grow abnormally, with strange shoots and deformed leaves and, one year after the accident, 500,000 sheep in Britain had to be banned from slaughter because their flesh contained more than 1,000 becquerels per kg.]

...Scientists say that a fresh fallout, possibly from a nuclear reactor abroad, occurred over Scandinavia during January. Above-normal levels of iodine and caesium 137 were detected from Norway's Arctic province of Finnmark to the capital of Oslo in the south. "We have measured nucleides from a reactor between January 8 and 15 which are not found in nature," said... a researcher at the State Radiation Protection Agency. South and south-east winds during the period indicate that the fallout came from Russia or the Balkan states... [■ A] newly disclosed plutonium spill said to have occurred a decade ago when a Soviet nuclear submarine sank in the Atlantic probably contaminated the sea floor but did not endanger marine life, a [US] expert said yesterday. Soviet authorities denied any radioactive contamination after the nuclear-armed submarine caught fire and sank 1000km east of Bermuda in October 1986... But a top Russian nuclear scientist told his [US] counterparts much later that nuclear warheads on the doomed sub broke open, spewing plutonium-239 into the Atlantic... A [US] scientist familiar with the Russian's account... said the amount spilled was "a few kilograms" – 'out of a total amount of 90kg' – which he called the single biggest loss of weapons-grade plutonium into the ocean... H[owever, h]e said it would not have been dangerous because of the site's extreme isolation and the fact it sank in 5500m of water... "Plutonium is extremely heavy... and would have extremely rapidly dropped into the deep ocean." ...four crew members and 32 nuclear warheads sank along with the sub... One warhead was destroyed by an explosion and others were destroyed by high pressure as the sub sank into deep water.

...Researchers in Canada announced that the permafrost, which covers a vast area of the nation's far north, is retreating[– causing]... experienced and knowledgeable... Eskimo hunters[to] fall... through the Arctic ice [–] as... key world powers... pledged to fight global warming... at [the UN] Conference on Climate Change... [in Geneva. AUS] rejected the document, siding with oil-producing Opec countries[but the US] made an about-face... committing itself to binding targets to reduce global warming gases... The U[S] based its new position on a U[N]-commissioned scientific report which said increasing amounts of global warming gases were already changing the climate... N[Z], already committed to reducing emissions[, also]... signed the statement. But... the change in the U[S] stance left N[Z] in an untenable position. "In the past, N[Z] has hidden behind the U[S], calling for more research. Now they are effectively saying we have to deliver. And at the moment we don't have anything to deliver."

...What can we do to cool things down? ...According to the recently published working party report there are three broad policy options... • Subsidise investment in desirable technologies; • Direct investment into desirable technologies by regulations; and • Use an "economic instrument" to give all [CO₂] emitters an equal incentive to reduce emissions in proportion to the quantity of their emissions. The working party recommends... the third option. It rejects the first two options on the basis that they both require a Government agency making a decision on which group of technology options will deliver the greatest emission reductions at the least cost. N[Z] has been down this type of policy road before when, in response to the 1970s oil crisis, the Government invested heavily in... disastrous... "think big" projects... [A]ccording to the working party, an economic instrument leaves these investment decisions to individuals and companies who are the best informed and motivated to make optimal choices.

...The future global climate and the impact of warmer temperatures on N[Z], from its skiing industry to its pastures, were among issues presented at the Meteorological Society Weatherwatch 96 conference yesterday. With[NZ] temperatures warming by about 0.7 deg C so far this century, and with global warming slowing but still on the rise, the weather watchers were told that scientists still could not attribute the observed effects to a specific cause... Global warming, climate change and sea-level rise were regarded as distant issues because there was a perception of climate as a constant or unchangeable element of the environment... [G]lobal warming was very low on the political agenda, little research was carried out, public awareness was dismally low and there was little coverage of the issue in the mass media... "People are not attuned to climate change. We need to have environmental education on a democratic scale or whatever you call it... to convince policy makers of the importance of these issues."

...CLIMATE prediction could prevent[huge economic] losses in N[Z]... says a Ministry of Research, Science and Technology report. The report... says increasing ability to predict extremes such as floods, droughts, storms and cold temperatures could save money for many industries... Unusually heavy snowfalls in Canterbury in 1992 – the coldest year for over 50 years – caused an average stock loss of 13% for sheep farmers, with some losing half their stock. The cost was estimated at \$100 million. Losses during the 1988-89 drought were estimated at \$330 million. The... main industries to benefit would be agriculture, horticulture and energy sectors, and water supply, tourism, transport, fisheries, insurance...

The world insurance industry is about to confront the giant fossil fuel interests head-on over the implications of global warming... The industry has seen claims for weather-related disasters rise from... \$NZ23 billion... for the entire decade of the 1980s to \$NZ68 billion for just the first half of the 1990s. "This dramatic rise cannot yet be definitively linked to global warming," says... an essay published in *Vital Signs 1996*, a widely respected annual business and industrial reference work. Nevertheless, that increase has convinced many insurance executives that the time has come to take the trend very seriously... "The insurance industry's total size is similar to that of the huge fossil fuel industry, which has worked very hard in recent years to discourage governments from taking strong action to slow global warming. These two titans may soon clash head-to-head on the issue of global warming." ...Some analysts believe that another series of bad years, or even just one particularly catastrophic storm, could force major insurance companies out of business... For example, a catastrophe in the U[S] causing between \$US50 billion... and \$100 billion worth of damage could result in one third of U[S]-based insurers failing... The past five years have witnessed unprecedented damage from weather-related disasters. In May 1991, for example, a cyclone with winds of 270km/h hit Bangladesh, flooding vast areas of the coastal plain. An estimated 139,000 people were killed, more than a million homes were damaged or destroyed, and financial losses were put at \$NZ18 billion – more than a tenth of the country's entire annual economic output. Within the following year, at least five devastating tropical storms caused billion-dollar-plus losses from China to Pakistan and Hawaii. After two decades of relative calm, the southern [US] has been struck by several serious hurricanes... Hurricane Andrew... in 1992, cost \$[US]17 billion and resulted in seven companies failing... It flattened an area of 430 square kilometres, destroyed 85,000 homes and left 300,000 people homeless... "If Andrew had happened just 100 km further north, the insured losses were estimated to have been \$US100 billion,"... [The 'US expects to be hit by a "Force 5" hurricane once every 100 years – but during the 1990s it has been hit by 2 in 4 years.'] Last year saw the most active Atlantic hurricane season since the 1930s... [If the trend continues,] the insurance industry would inevitably have to find ways to reduce its losses... In 1988, [NZ's] West Coast town of Greymouth experienced two "100-year floods" within six months. The insurance industry withdrew cover when local authorities failed to implement flood mitigation projects... [After a DoC report said c]lose to \$1 million needs to be spent on protecting Mt Cook village from the ravages of a possible major flood, [the]... Department of Physics at the University of Auckland warned that flood losses would continue to increase until the issue of flood plain management was addressed... [However, while] some environmentalists are ringing alarm bells, there are still plenty of scientists who discount global-warming arguments as part of nature's cycle,"...

THE world is not getting warmer. Sorry about that, everybody. I know it is politically incorrect to doubt global warming. But the masses of sophisticated measuring equipment being used to prove planet warming have failed to find any evidence of it, although plenty of scientists pretend there is in order to keep their research funding... [S]urface readings have lately been indicating a slight long-term temperature trend upwards; but the satellites show there is no trend, upward or downward... In fact the earth's temperature has been fluctuating for thousands of years... In medieval times grapes were grown throughout Britain in temperatures substantially warmer than they are today... The ice at both poles is supposed to be melting... although I can't say I've noticed any change in the high tide marks. Some parts of the world have been recording unusually low high-water marks, and others unusually high ones, and in any case land masses are moving ever so slightly up and down over the long term. But that didn't stop a bunch of Eskimos at the Geneva warming-fest bringing cries of dismay from gaping delegates when they told of their people falling through holes in the Arctic ice... The fact that this outlandish tale was accepted without question shows just what mass gullibility can achieve... [T]he media will never sell advertising around stories saying, The climate is fine, folks! So it all goes from bad to worse... Apart from this, the evidence shows that there have been periods of earth's history when there was far more [CO₂] in the atmosphere than... today.

...The fierce storm that roughed up the country this week[, lifting roofs in Wellington, felling trees and cutting]... power in Auckland, Taupo and Otago... was one out of the meteorological box. The MetService said it was not common for such a deep low to form in the Tasman Sea and cross [NZ]. Usually such troughs developed down in the Southern Ocean and passed well below the South Island... It set a new record low for Christchurch of 972 hectopascals – the measurement of atmospheric pressure... The MetService says this... unruly weather is the likely pattern for the rest of [the year], with above average rainfall and temperatures forecast for Northland and western districts. But the east coasts of the North and South Islands are expected to be drier than usual... Auckland's... second coldest July day since reliable records started, in 1868, was July 4 with 7.6 deg C. The second warmest July day on record was July 16 with 19.8 deg, when the warmer conditions sparked a big thunderstorm... A sodden Auckland region has received double its usual amount of rain since the winter downpours began in earnest a month ago.

...Aucklanders can blame warm seas for the rain which has fallen just about everywhere in the region every day this month. A senior climate scientist with the National Institute of Water and Atmospheric Research... said yesterday that higher than average temperatures in the Indian Ocean were causing wetter winters and springs. Global warming could be the reason for the higher sea temperatures. "The Indian Ocean has warmed up since the mid 1970s," he said. "If we go back to the pre to mid 1970s the winters were drier. It is a definite trend we are able to detect, so that is significant." The warm air blows the Indian Ocean produced north-westerly cloud bands. "When they get over the Tasman Sea they become reinvigorated and spin into lows flowing across the region, producing grey, showery days,"... Drenching rain yesterday raised the September fall in some parts of Auckland to more than the historical average for the entire month... Henderson has had more rain so far this year, 1384mm, than its average annual rainfall, 1365mm... Flood-stricken farmers at Meremere, south of Auckland, again face thousands of dollars of damage after losing acres of land to the swollen Waikato River for the second winter in a row... [One couple], who have farmed the area for nearly 19 years, lost \$50,000 last year. This year's deluge could cost them up to \$75,000. About a third of their 65ha dairy farm is under water... As well as repairs to fences, races and stopbanks[, they]... are having to fork out for feed... With 130 new calves, the... flooding could not have come at a worse time... They will also have to pay for fertiliser and a helicopter to spray for weeds borne by the floodwaters... "It... will take another two years to get... back to top production,"... They are calling for compensation from Environment Waikato and ECNZ, who manage the flow of the river... [However,] Environment Waikato's manager for the Lower Waikato and Waipa Control Scheme... said there was no question of compensation, and farmers would have to dig deep into their own pockets to remedy the problem... [□ Thousands] of... rubber scandals... thrown away by Indonesian factories... are washing up on remote A[US]n islands and polluting beaches... Indonesia, [a local MP] said, "should find their own rubbish heap."

...Thousands of washed-out holidaymakers remained stranded by floodwaters early today as Cyclone Fergus triggered a state of emergency on the Coromandel Peninsula... Elsewhere in Coromandel and throughout Northland, motels, marae and community halls filled up as rain-swollen rivers kept visitors trapped... [Elsewhere in the world, the] grim search has resumed for the bodies of holidaymakers swept away by a torrent of mud and rocks that engulfed a family campsite in northern Spain, killing at least 76 people... Identification of any foreigners among the victims was hampered by the fact that few of the campers were carrying documents when the freak rains struck... [T]yphoon Sally killed at least 114 people and destroyed more than 200,000 homes when it slammed into China's Guangdong Province... The torrential rains followed devastating floods in nine provinces in central and southern China, which have killed more than 1760 people... left two million homeless... and destroyed more than five million tonnes of grain in recent weeks... A massive search and rescue operation has been launched... in eastern Malaysia... to find... people still

missing after... tropical storm Greg... blew ashore... from the South China Sea... 500 houses in nine villages... were swept away, leaving about 3000 people homeless... It was one of the worst storms to hit Sabah in living memory... The death toll in landslides and floods triggered by torrential rain in northern South Korea has risen to 68 dead or missing... [More] people drowned from flooding... [when] Hurricane Hortense swamped Puerto Rico and other islands... A Caribbean-born hurricane has jumped to the Pacific, leaving at least 35 people dead in its sweep across northern Colombia... Renamed Hurricane Douglas from Hurricane Cesar because of the move, the storm... barrelled across Central America on Monday, with Nicaragua taking the brunt... Nicaragua has declared a state of emergency after... [the] storm left three dead and 10,000 homeless... Damage from Hurricane Fran across the eastern [US] topped \$1.2 billion... [and may eventually reach 'US\$6 billion. Fran killed 24 people in North Carolina and came just two months after Hurricane Bertha hit the same area.'] A large area from the Carolinas to Pennsylvania suffered severe flooding... Hurricane Fausto... caused flooding northward into the Desert Southwest... [Meanwhile, more] people were killed and more than 100,000 homes were left without power by a powerful winterlike storm that raged across the Pacific Northwest[, causing]... several devastating mudslides across western Oregon... [Americans who are confused by the current weather patterns can, at least, take heart that they're not alone – yesterday the] first grey whales of the winter migration season were spotted more than a month early in Magdalena Bay on the Pacific coast of Baja California.

...parts of South Africa... [have seen] the first snowfall... for 35 years. Villagers in the mountainous kingdom of Lesotho, trapped by the heavy snows, were running out of food, water and fuel... At least 15 people in the Great Rift Valley district... of tropical Malawi... were burned to death or asphyxiated by coal heaters placed by villagers in their huts to keep warm... [during the record] wintry conditions... At least 12 people were[also] killed in western Europe when car accidents followed unseasonably early snow-storms and torrential rains. Hardest hit were northern England and Scotland, where blizzards left thousands of people without power, and blocked long stretches of road with up to 2.4m of snow.

...Much of Europe is gripped by one of the coldest periods on record as the number of deaths from the... glacial weather rose to at least 120... [I]n Poland... temperatures dropped to as low as minus 32°C, the lowest... since 1927... Romania was worst hit, where a spokesman for the pathology institute said the cold rooms in the mortuary could no longer cope with the number of bodies since grave-diggers have refused to work because the ground is frozen solid... Around 300 people were still blocked yesterday by avalanche snow after spending five days trapped in a road tunnel in the Russian Caucasus republic of Northern Ossetia... Heavy snow... was blamed for the breakdown of a Paris-bound Eurostar train several kilometres into the Channel tunnel... Many German river transport firms are out of action as waterways in central Europe remained clogged by thick ice... [Record snowfalls also] disrupted transport in southern British Columbia and Vancouver Island... [South] of the Canadian border... National Guard troops were mobilised to contend with the aftermath of huge snowstorms over the weekend in Washington state in which two people died. - 1996

Vast areas of the Northern Hemisphere were plunged into an Arctic deep freeze during the last days of 1996... [Now rapid] snowmelt and torrential rain[is] inundating many areas from Washington and Oregon south to the Californian Wine Country... The rains... [that were caused by surges] of moisture streaming from near Hawaii... unleashed mudslides, which blocked several roadways... [The US] President... has declared a major disaster in California and Idaho as storms... killed at least 20 people and forced 100,000 from their homes... In Reno... the Truckee River burst its banks pouring muddy water through the downtown area and forcing some casinos to close... [In Europe,] Germany's national railway company said it was letting the homeless spend the night in railway stations. More than 30 people, many of them sleeping rough, have died in Germany... A 90-year-old woman, whose frozen body was found curled up on her doorstep on the Isle of Wright by a milk delivery man, became Britain's 13th victim of the cold spell... British bookmakers... [have] shortened their odds on the Thames freezing over between Westminster Bridge and Tower bridge from 200-1 to 20-1 as the river froze further north.

...Skating fever has gripped the Netherlands as freezing temperatures raise hopes of the first Elfstedentocht (Eleven cities tour) skating marathon for 11 years. The day-long 200km race has only been held 14 times since the first competition in 1909 as safety requires a minimum thickness of ice of 15cm along all the canals on the route... [Meanwhile, l]osses from California's... 10 days of storms... have doubled in a day to more than \$US1.5 billion... The severe flooding, which looks set to become the most costly in California's history, has... damaged thousands of homes and inundated tens of thousands of hectares of prime farmland... Receding waters allowed evacuees in some areas to return to their homes, but officials warned that they faced hazards from raw sewage, dead animals and chemicals that may have contaminated the water... The winter storms of 1995, California's most damaging flood disaster, caused \$US1.8 billion in damages... [Elsewhere, at] least 76 people were killed and more than 42,000 left homeless from floods and landslides in eastern Brazil [after storms] raged across the region for more than five days... Heavy rains pounding Bolivia have destroyed the crops and homes of... 100,000 farmers... Some areas have received three times the normal annual rainfall.

...In 1996, for the second year in a row, Auckland was the wettest of N[Z]'s four main centres. But... it was also sunnier than normal and had the most sunshine hours of the four centres... The national average temperature calculated by... N[IWA]... was 12.5 deg C, 0.1 below normal. The highest temperature, 34.7, was recorded at Christchurch Airport on February 7 and the lowest... minus 15.3... at Tapanui in South Otago, on July 4. Milford Sound[– the 'second wettest place in the world' –] was the wettest place with 5917mm of rain; Clyde [– which is only about 125km from Milford –] was the driest with 376mm. It was sunniest in Blenheim with 2564 hours of sun... Auckland... had... 2087... The[end of] year was... marked by some damaging wind events, while several[summertime] hailstorms, all within four weeks, produced damage in horticultural areas... Cyclone Fergus... brought record rain to the Coromandel... The year's rain and cyclones were linked to the La Nina weather pattern... La Nina, which brings moist north-easterlies and easterlies to Auckland, originates in the tropical eastern Pacific Ocean, where a pool of colder than normal ocean water develops.

...Last year was the eighth warmest year since global records began in 1860... 0.23 deg C warmer than the long-term average from 1960 to 1990 of 14.44 deg C... The year was not as warm as 1995, the warmest on record... [at] 0.4 deg C warmer than average... but indicates that the global warming trend which began in the mid 1970s remained consistent in 1996... "A... contribution to less global warming was the weak La Nina conditions in the eastern tropical Pacific. Fluctuations between cold La Nina and warm El Nino waters occur naturally and irregularly every few years," said... [a] senior climate scientist... [His words will be of little comfort to] Coromandel residents and council officials... [who, d]espite their best efforts, [have been]... left with a trail of flooded homes, destroyed roads and other damage in the wake of Cyclone Drena, the second tropical cyclone to hit the area in as many weeks... Aucklanders marvelled at the power of the storm but escaped lightly... Power was restored to most users by early yesterday... The Fullers Ferries services to Waiheke were cancelled from late on Friday night until Saturday afternoon... the first time in eight years[of service] that they had been stopped... The last two Devonport-Auckland ferry crossings were also cancelled on Friday night. At least seven boats broke their moorings, and some were smashed to little more than driftwood against sea walls. Tamaki Drive was closed to traffic at high tide on Saturday and on Friday night as heavy surf crashed on to the road... Auckland beaches lost large amounts of sand and some beachfront properties parts of their front lawns. Long-time residents at the normally calm Cheltenham beach in Devonport said the storm was one of the worst they could remember, with the high tide coming within metres of their homes.

...[the] Auckland man who was electrocuted... when he clutched a live power line which had been felled by high winds during Cyclone Drena... will be remembered as a good Samaritan by residents of the settlement of Kaiaua, in the Firth of Thames, where he met his death... Police said the 35-year-old was collecting seashells at a beach with a friend... when he grabbed the line in an effort to hoist himself up a steep bank... His friend got a shock when he touched Mr Erickson's body. Only hours before, the pair had stopped to offer help to an elderly Kaiaua couple who were trying to

save belongings from their flooding garage... Cyclone Drena was[also] blamed for the death of an elderly Auckland couple when their car slid sideways into an oncoming vehicle on the Kopu-Hikuai road between Thames and Tairua on Saturday.

...The Insurance Council said yesterday that MetService forecasts of Cyclones Drena and Fergus had helped to reduce damage... around the country. Early warnings had allowed holiday-makers, home-owners and local authorities to be better prepared. Last winter's weather had cost the insurance industry about \$8 million, but it was looking at an early estimate of \$1.5 million damage for Thames alone from the two cyclones... Transit N[Z] estimates Cyclone Fergus caused \$1.6 million damage to state highways in the Coromandel and Bay of Plenty areas... As the country mops up, weather forecasters are monitoring a depression north of Western Samoa which has the potential to become another tropical cyclone...

Children made snowballs... yesterday as freak weather frosted the central North Island... Snow fell to low levels in the Kaimanawa Forest and Tongariro National Park, covering Mt Ruapehu... A MetService spokesman... said the Chateau hotel had experienced snow in January only once before – “and that was in 1923.” ...The unseasonal cold snap... was also blamed for a hailstorm that damaged apple crops in the Nelson region...

Hundreds of orchardists have the grim task of surveying damaged crops for the third time this season after hail hit... Hawke's Bay yesterday.

...[The repair bill from the hailstorm that battered Sydney this week is rising as the clean-up continues and the extent of the destruction becomes clearer. The NSW Government yesterday declared the worst-affected areas to be natural disaster zones, making residents able to seek emergency Government help. An estimated 20,000 homes and up to 60,000 cars were damaged on Wednesday night as the storm swept from south to north over metropolitan Sydney, raining down hailstones the size of cricket balls. About 3000 homes were reported to be still without electricity last night. The Insurance Council of AUS said the havoc wrought was likely to be the most expensive on record. Preliminary estimates indicate that insurers face paying out about \$A350 million. State emergency service crews and firefighters were back out again yesterday to help mopping up. Also out in force were glaziers and roofers, who have found themselves rushed off their feet and booked solid for days. There was just one human death, a fisherman struck by lightning. However, lightning also killed Towering Inferno, the horse which played Phar Lap in the 1983 film about the great racehorse. In a curious twist of irony Phar Lap means “lightning” in the Sri Lankan language Sinhalese. Amongst the damaged cars were ‘rows of brand-new Holdens. The hailstones also made hundreds of holes in a Qantas Boeing 737.’ Incidentally, the] bitter chill and harsh wintry weather plaguing many parts of the Northern Hemisphere could usher in a “little ice age” lasting several years, according to a [US] meteorologist... He attributed the cold snaps to unusually warm surface temperatures in the central Pacific. A similar pattern existed from 1976 to 1979 when record low temperatures and snowfall amounts were registered.

...scientists said yesterday... [that the] world may still be experiencing the effects of the “Little Ice Age,” which caused bitter winters and very cool summers from 1400 to 1900... Some of the storms that... [are lashing] Europe may stem from the last gasp of the period, during which the Thames froze over solidly in London – something that never happens now.

...The second winter storm to strike Europe within a week[has] killed eight people... Hurricane-force winds tore across Sweden and Denmark, uprooting trees, bringing down power lines and wreaking havoc on ferry, rail and road traffic... High winds and heavy seas[also] prompted officials to close the Suez Canal and port of Alexandria for three consecutive days... [The] deadly... winter storms... caus[ing] widespread destruction across seven [US states have now]... killed at least 45 people... [– the majority of casualties] were reported dead in the wake of a swarm of tornadoes... tha[t]... tore through Tennessee and Kentucky.

...[much to the delight of ‘tornado chasers’, a] slowly moving storm centred in the heartland of the U[S] triggered swarms of destructive tornadoes for three days... The hardest-hit area was north of Austin, Texas, where the most deadly string of tornadoes in the state in decades wiped out a neighbourhood around the town of Jarrell... Service meteorologists tracking the tornado swarm by radar were able to give residents 35 minutes of warning. But the storm was so severe, and... widespread, that there were few safe places to take shelter. ■ ‘A mini tornado left a trail of destruction in eastern Bay of Plenty yesterday. The twister passed 6km southwest of Whakatane and knocked out power to 10,000 homes. No injuries were reported’...

She ‘was making a cup of tea when she saw a bright flash of light and heard several loud bangs on her roof. Thinking her chimney had been hit by lightning in the thunder storm battering Huntly, she went into the lounge to investigate and found a gaping hole in the ceiling. Her roof had succumbed to a mini-tornado which swept through the town at 7.30 am yesterday. The MetService's weather ambassador says mini-tornadoes are caused by up- and down-drafts within storm clouds, some of which can reach 100 knots. The weather pattern that brought the thunder, lightning and mini-tornadoes from the Tasman Sea was expected to peak at 3 am today’. A tornado also] raked parts of Japan's Okinawa island, tossing cars and critically injuring one passenger.

...[West Auckland firefighters were kept busy on Sunday and Monday dealing with damage caused by bad weather. Falling trees landed on roads and the northwestern motorway and brought down power lines. A Ranui home was badly damaged when a tree crashed through the roof, just missing the occupants.] In international news,] cyclone Grette, the worst to strike... Madagascar[’s east coast] in living memory,[has] killed at least 50 people and left 60,000 homeless. The storm hit... with winds of 195 km/h and torrential rains that caused heavy damage to... coffee crops...

More than 140 bodies have been found in the wake of cyclone Grette... Starvation threatens the 60,000 people sleeping in the open across the south of the country, and French transport planes have brought in emergency relief supplies to the worst-affected areas.

...500 people [a]re missing and 34 confirmed dead on Madagascar in the wake of... cyclone Josie, the second to lash the island within two weeks.

...Cyclone Lisette drenched parts of eastern Mozambique that were inundated less than a month ago by cyclone Josie[and cyclone Grette. Closer to home, cyclone Gillian whipped up gales... produc[ing] minor flooding... on the northern coast of Queensland... and... Cyclone Justin[hit PNG]...

Killer cyclone Justin, which claimed at least 11 lives in P[NG], five in the Coral Sea and two in Queensland's far north, had weakened into a rain depression south-east of Townsville late yesterday. The cyclone left 12,000 homeless in PNG and in far north Queensland caused tens of millions of dollars damage to infrastructure and sugar, fruit and vegetable crops... [The] Federal Finance Minister... said the commonwealth would repay the state Government \$3 for every \$1 spent on emergency relief, even though Queensland had already overspent its disaster funding of \$A27.3 million... by 1.7 times, due to earlier flooding and storm damage.

...An RNZAF Orion's reconnaissance flights will today give Fiji authorities a clear picture of the devastation wrought by Cyclone Gavin. Its mission will include outlying islands where communications have been completely blacked out... A disaster relief co-ordination group, with representatives from N[Z, AUS]... and the European Union, would then decide how to deploy aid... Authorities have confirmed eight deaths so far. Fifteen people are missing, including the crew of the... missing trawler, Wasawasa, which has a N[Z]er among its crew.

...[barricaded towns around NZ's] North Island breathed a sigh of relief late last night as high tides came and went without destroying property. However, thousands of sandbags are still barricading shop doorways around the northern North Island as Cyclone Gavin moves down the country.

...Is NZ on a cyclone highway? ...In Fiji, cyclones come so frequently that entrepreneurs have become accustomed to them and make money from them. Tourists preparing to leave Nadi after Cyclone Gavin were sold T-shirts proudly proclaiming “I survived Cyclone Gavin in Fiji 1997.” Should [NZers] be adopting the same philosophical approach? Gavin is the third cyclone to reach [NZ] this summer... By the time they reached [NZ], none of these cyclones came close to the ferocity which Gavin showed in Fiji, where... at least 19... people were killed and thousands were left homeless... But the mere fact that we have had three of them in a season raises the question – is [NZ] becoming cyclone-prone? [The]MetService... said it's too soon to draw that conclusion... it was largely a “fluke” that Drena, Fergus and Gavin reached here in one year and we may not get three cyclones in one year again for many years... In simple terms, [NZ] is “just too far south and too cold”... Our colder seas and stronger surface winds sap the strength of most tropical cyclones... One of the damaging cyclones to reach [NZ] was Cyclone Bola in March 1988, and we felt only

the edge of it. It swept over the North Island's east coast, causing an estimated \$138 million in damage. Several people lost their lives... But a storm of Bola's intensity happens only about once every 10 years. Other storms still packing a punch... were... in 1968 and Cyclone Bernie in 1982.

...Something will have to be done about [NZ's] summer. It used to kick in about November, hit baking heat in December and January, and ease off in February before gracefully making way for the first hint of autumn in March. Nowadays you can forget about November, and December more often than not is a month of grey skies, wind and rain. Summer only starts getting cranked up around New Year, and the finest weather – that unbroken succession of hot, cloudless days that constitutes true summer – tends to arrive in February, just when the kids have gone back to school and the rest of us back to work. Even March is more summer than autumn now. This dramatically changing weather pattern – dramatic, because it can be measured in decades rather than centuries – has given rise to a serious discombobulation. We are historically a holiday-taking nation and, naturally, we like to take our main holidays when the weather is warmest. Trained from birth to snap into holiday mode by Christmas Day at the latest, we break out the tent-poles, barbecues and chilly-bins in mid-December and head for the beach or motor-camp like automatons. What follows has the awful inevitability of a Greek tragedy: cyclones, gales, roads awash, vast hordes of refugees driven shivering from flooded camps... We have never, as a people, shied from hard decisions regarding the redistribution of time. We introduced daylight saving time when it suited us... and abolished the six o'clock swill... Now we must face the fact that the holiday season and summer are out of kilter, and that the situation is rapidly becoming intolerable. What we need is nothing less than a total rethink of the summer/holiday interface... Why not keep schools going through December, treat Christmas Day and Boxing Day as a short sharp two-day break... and delay the start of the main summer holiday till at least the second week of January, if not later? ...Here is a challenge worthy of the coalition government.

...The highest political office in the land has lent a sympathetic ear to low-lying Far North farmers deluged in last week's torrential rain and flash floods. The Federated Farmers Northland president... said the P[M]'s Office had approved the use of Taskforce Green labour to help to clean up... 17 properties... in the Mangamuka ranges south of Kaitiaki... [T]he Government had not been able to provide... cash relief but labour was what was most needed... to help restore the properties including repairing... 50km of fences washed away, clearing debris, and cleaning silt out of 12 flooded homes... However, finding the 50 workers... through the local employment service could prove difficult... [Summarising news from around the world: d]estructive blizzards... have lashed vast areas of Mongolia in recent weeks... kill[ing] nearly 10,000 cattle and threaten[ing] hundreds of people with starvation; r]esidents in Bangladesh's south-eastern Bandarban Hill district awakened to an unprecedented dusting of snow in the mainly tropical region[– s]cores of people have died of exposure[; snow]... blanketed Damascus... for the first time in five years[; the]... island of Cyprus was... also... blanketed with snow, including the capital, Nicosia, which normally receives almost year-round sunshine[; almost year-round sunshine has caused a severe]... drought... to parch most of eastern and north-eastern Africa, and international relief efforts are being accelerated to help combat starvation from Kenya to Somalia[; o]ngoing drought across southern Argentina's Patagonia region has killed more than 500,000 sheep.

...[the] Greenpeace ship Arctic Sunrise left southern Argentina yesterday on an expedition to document signs of climate change.

...The climate record shows that the whole 8,000-year span of human civilization, from the dawn of cities to space flight, has taken place during a period of extraordinary warmth and stability... The experience has left humanity with the notion that climate is warm and stable. But those who look at the past know different. "Climate is an angry beast... and we are poking it with sticks." ...Entombed in the Antarctic are memories of ice ages, of volcanic eruptions, of epochal changes in winds and rains. These memories are encrypted in dust particles, rare molecules and the properties of the ice itself. The tales they contain of thousands of years of climate changes provide intimations, and warnings, of our fate. That is why people... [are] drilling to the base of the ice sheet and extracting a 1,000-m-long series of ice cores... Four years ago... [when] geophysicists... extracted... an ice core... [from] Greenland, at the opposite end of the earth, [they found] that climate can change dramatically over short periods of time. Roughly 11,500 years ago, Greenland suddenly chilled, and then 1,500 years later, it suddenly warmed. The speed of the last change – a 10° C warming in some places in as little as three years – was fast enough, a meteorologist wryly comments, to capture the attention of politicians. To put a change of this magnitude in perspective, a mere 1.1° C drop in global temperatures during the 13th century started the "Little Ice Age" that wiped out the Vikings' Greenland colony, spurred glaciers to crush villages in Europe and contributed to periodic episodes of starvation and mass migration. A "flickering climate"... would be a biblical disaster in today's crowded world... Since 1968... the University of California at San Diego has studied emperor penguins, beguiling flightless birds that... need 255 days of sea ice in order to complete the cycle from egg laying to the stage when fledglings are hardy enough to begin their wanderings through the southern ocean. Typically, the young birds jump into the water only two weeks or so before the ice breaks up. This[breeding] year... the ice... broke up in mid-December, two weeks before the fledglings were ready to embark, probably dooming the juveniles to an early death. The story is a reminder of the thin margins that sustain life, even for creatures as durable as the emperor penguin, which has thrived for millions of years in the harshest climate on earth.

...On an unusually warm day like this... a balmy 10 deg C... you can almost forget that Antarctica is rightly called "the frozen continent." Heat-stressed penguins are panting and sliding down snowbanks to try to cool off. Elephant seals bask in the sun in tepid pools. There may still be debate about why the Antarctic climate is changing... but there is no doubt that it is changing. The mean temperature on the Antarctic Peninsula has risen by about 1 deg since 1950... Adelie penguins still breed on craggy Cormorant Island, but not in the numbers they used to... Adelie penguins used to crowd this Antarctic island so thickly you would think you had wandered into a headwaiters convention, but global warming has sent many of them searching for colder climes... Penguins are also under siege on other fronts – a chicken virus that predisposes hatchlings to lethal infections has shown up in some emperors and Adelines... Weddell and crabeater seals, which like the Adelie penguin depend on pack ice, are[also] declining, while species such as the elephant seal and especially the fur seal that avoid pack ice are increasing.

...An attempt to drill through the Antarctic sea ice by a six-nation group... has been abandoned[for '12 months']. The drillers were evacuated after the ice cracked and began moving... 50mm... up and down... under the... 50-tonne rig... The aim was to recover and analyse cores from sediment strata beneath the sea floor... Scientists involved in the \$US4.3 million... programme did, however, succeed in taking nearly 150m of core sample from their first drilling... Scientists wanted to discover if there were Antarctica ice sheets which caused fluctuations in worldwide sea levels before the glaciations of the last 36 million years. ['Over 75% of the Earth's fresh water is locked up in glaciers – most of it in Antarctica.']

...[THE] STORY ON WHAT ANTARC-tica's ice layers can tell us... correctly noted that today's average global temperatures are relatively low. For more than three-quarters of geological history, Earth was considerably warmer than it is now. The Antarctic ice cap will certainly melt again, causing world sea levels to rise by up to 18 m... Even before human populations existed, the Earth's climate and sea levels varied widely over hundreds of million of years. [Indeed, 'during the coldest time, about 18,000 years ago, sea levels were up to 200m lower than they are today.'] Clearly, climate change involves vast forces that are quite beyond human control. [● 'ANTARCTICA has been closely associated with NZ ever since Captain COOK, early in the 1770s, sailed south to investigate the existence of a legendary southern continent. He penetrated as low as 71°S without sighting any land. The first known sighting was by Thaddeus von Bellinghausen in 1819. NZer Alexander von Tunzelmann was probably the first person to ever step on to the continent at Cape Adare, on 25 January 1895. NZ has had bases on the continent since 1957, first near Cape Adare and since 1964 at Scott Base, in McMurdo Sound. A treaty "ensuring the use of Antarctica for peaceful purposes only and the continuance of international harmony" was signed in 1959 by 12 nations – NZ, Argentina, AUS, Belgium, Chile, France, Japan, Norway, South Africa, Russia, Britain and the US. Poland joined the treaty in 1977.']

...a delegate to the Antarctic Treaty consultative meeting in Christchurch, said... scientists were distraught... this summer... when they saw... ice shelves... tumble into the sea. "Scientists who have been going to the northernmost part of the Larsen ice shelf for 20 years were upset to find their workplace actually disappear." ...Antarctic[a contains 70%] of the world's fresh water and if it all melted away, sea levels would rise by up to 90m.

...Every summer in Antarctica it happens. Massive chunks of ice – some the size of small Pacific islands – break away from the freshwater ice shelves which fringe the continent and shatter into icebergs which float out to sea. These annual “calving” events have been getting more frequent and a lot more dramatic. And the scientists who have been observing them are increasingly worried... Two years ago this month, a 2600 sq km area of the Larsen Ice Shelf... collapsed and drifted away... Now, the... 12,000 sq km... area of the ice shelf left behind – Larsen B – is under similar threat of collapse... [S]atellite observations of nine ice shelves on the Antarctic Peninsula – south from Argentina – showed that five had “retreated dramatically in the past 50 years.” ...What is most worrying is that warming of the Antarctic environment could have serious implications for the global ecology since the southern ice cover helps regulate global climate, ocean circulation and sea level[, which]... has recently been rising about 2 mm a year... It is no coincidence that... Greenpeace is undertaking a voyage on an ice-strengthened ship... within months of the next major gathering of the parties to the international convention on climate change... in Kyoto, Japan... The crew of around 25 aboard Arctic Sunrise will visit several of the research stations on the peninsula to gather evidence of ice retreat and to “bring this information to the world’s attention in a visual way,” says... [the NZer who is the expedition] co-ordinator... About 140 countries have ratified the 1992 Climate Change Convention... [O]pponents to the strengthening of the climate convention... are likely to find themselves isolated if the Americans get tough in Kyoto. [NZ] has been on the outer in these talks with its controversial proposal to trade off [CO₂] emissions against tree planting.

...There are many... untidy elements to the whole climate change debate. Even if average global temperatures did rise their effects on regional temperatures, global agriculture and human life generally would still be highly uncertain. But one thing is known for certain: at our present state of technology, curbing greenhouse gas emissions – or even restraining their growth – would be economically costly... [And] would have its greatest negative impact on the poor – both the relatively poor in [First World] countries and the absolutely poor in [Last] World countries, whose living standards would be compromised by slower growth in the [First World. NZers]... should be thankful, I suppose, that we have an Environment Minister who understands some economics, even if he takes the global warming threat too seriously... He proposes... that in international negotiations we oppose a uniform national emissions charge and instead promote the idea of international emissions trading. Recognising that the costs of reducing greenhouse gases vary from country to country, [NZ] will propose that countries be allowed effectively to trade their emissions quota with one another... Countries that found it particularly costly to reduce emissions could... pay other countries to take up some of the burden of adjustment. This... seems better than an immediate carbon tax. But... [there] are other ways in which we could prove ourselves a good world citizen on the issue of climate change. First, we could cease our irrational posturing on the subject of everything nuclear. It is one of the ironies of this whole debate that nuclear energy produces no greenhouse gases yet is hated by our eco-Jeremiahs even more than greenhouse gas emissions. Consequently, we could help the world by growing up a little and no longer going into collective convulsions every time a ship carries nuclear waste through the Pacific... Many countries subsidise their energy industries... Subsidies artificially push down energy prices, leading to overproduction and inefficient energy use. They undoubtedly add to greenhouse gas emissions. On one estimate, energy subsidies total around \$NZ\$70 billion worldwide... That is bad economics and usually bad for the environment as well. We need only remember the bad old days in our own country: the Clyde Dam and some of the Think Big energy projects were environmental debacles just as much as they represented money down the drain.

...Opposition parties and environmentalists have accused the[NZ] Government of a cop-out in deferring a carbon tax... from June until... the... world can agree on an all-inclusive plan to stave off global warming... [at] the next international meeting on the subject in Japan in December... A spokesman for the Royal Forest and Bird Protection Society... said the Government was avoiding making hard decisions and passing an environmental debt to future generations... But the chairman of the parliamentary commerce select committee... welcomed the deferral, calling it a victory for common sense over political correctness. He said a high carbon tax would only force big industries like aluminium, steel and cement-making to locate overseas where they would not be penalised... [for carrying] on adding to global emissions. The Government promised a low-level carbon tax if voluntary agreements with industry failed to curb[NZ’s rising CO₂] emissions. The voluntary agreements have fallen short of targets.

...Environmentalists are warning that the Boreal forests of the Arctic Circle... which make up a... third of... Earth’s total forest cover, are among the most threatened habitats in the world... The plight of tropical forests has sapped so much public attention over the past decade that loggers have been free to pulp the vast woods of the Arctic Circle while raising barely a whisper of protest... Boreal forests, also known as taiga, form a belt around the freezing upper reaches of the Northern Hemisphere. Mostly, they are made up of conifers... and deciduous trees... But despite the harsh climate in which they exist, Boreal forests support tens of thousands of species of animal, some of which – the brown bear, flying squirrel, Siberian tiger and the longhorn beetle – are now endangered. Their principal enemy is logging. The U[N] has forecast that the world’s consumption of timber products will rise by almost 60[%] between 1990 and 2010, forcing the timber industry to look for new resources to compensate for shrinking supplies in tropical regions... [Yet in] Britain alone – where the average person uses 30 times more timber products than the average Indian – an estimated 500,000 tonnes of wood is buried in rubbish dumps each year... Around 70[%] of Boreal forest grows in Russia, a prime target for exploitation. Logging was blamed for a... 20[%] reduction in Siberian forest tree stock between 1966 and 1988... There are also a few small tracts in northern China, Mongolia and Scotland... The remainder... are in Canada – where the governments in Alberta, Manitoba and Quebec are opening up large areas to logging – Alaska and Scandinavia... Friends of the Earth, which has just launched a campaign to save “snowforests” – a term created in a bid to capture the public imagination – reports that in Sweden less than 5[%] of the old forest remains, and much of this is being logged... Just 3[%] of Sweden’s remaining forest is officially protected; a little less in Finland, and just 1[%] in Norway... “Despite forestry industry claims, the ‘factory forests’ that replace the natural snowforests are not ecologically friendly and do not replace lost habitat for wildlife,”... [T]he number of birds found in plantations can be as little as a third of those in natural forest... In many areas, replacement with plantation is not even an option because the initial removal of vegetation exposes frozen permafrost soils to sunlight. When these soils melt during the summer, they are converted to swampland, making reforestation impossible... The way of life of human inhabitants of the snowforests is threatened, too. The Saami, a group of around 45,000 people in northern Scandinavia and the Kola Peninsula, survive chiefly by herding reindeer, hunting and fishing... But local peoples and wildlife are not the only cause for concern. “Large-scale degradation of Boreal forests could have very serious global consequences, because these areas store huge amounts of carbon...,” says... a researcher at the Washington-based World Resources Institute. “If that carbon is released, it could be a major contributor to global warming.” ...At present, there is no single organisation which tracks the status of the world’s forests, making it hard for environmentalists to estimate the proportion of natural forest in a healthy condition. However, in March, the institute will release the first global study of the status of the world’s large tracts of ecologically intact primary forest – known as “frontier forest.” This assessment... will give the most accurate figures yet on how much forest existed before modern man... and how much remains as frontier forest – as opposed to fragmented or degraded forest... [By the way, a] family in France showed signs of radioactive contamination after eating... wild mushrooms they collected in the forests of the Vosges Mountains. The exposure to cesium 137 was discovered when one family member was tested before being assigned to duty aboard a nuclear-powered sub... The contamination is believed to have come from the 1986 Chernobyl disaster, or from [US] or Russian nuclear testing in the 1960s, according to... France’s Ionizing Rays Protection Bureau.

...Greenpeace announced that radioactivity measured on a beach next to France’s nuclear reprocessing plant at La Hague... was up to 3000 times above acceptable levels. The measurements were taken from a pipe that carries waste water from the plant into the sea. The pipe is usually submerged but has recently been exposed by the lowest... tides in 10 years.

...Greenpeace warned that it has found crabs with twice the maximum European allowed radiation level near... the La Hague plant near Cherbourg, [while] saying the level of radiation in the sea has increased by 100 times since the plant management ordered the cleaning of outlet pipes... [In related news, dozens] of nations pledged an additional \$US37 million... yesterday towards rebuilding the rapidly deteriorating concrete tomb of the Chernobyl nuclear reactor, scene of the world's worst nuclear accident... The explosion... at Chernobyl's number 4 reactor, which killed 31 people, injured hundreds and forced hundreds of thousands out of their homes in the Ukraine... spewed radioactive fallout across the Northern Hemisphere, and the health consequences for much of Eastern Europe are still being felt today. Twelve countries – the... [G7] nations and the other [EU] members – have so far pledged nearly half the estimated \$US760 million... cost of the reconstruction... The Ukraine, which intends to permanently close the Chernobyl plant's remaining operational units by 2000, is contributing \$US150 million... The Ukrainian President... told delegates... at a conference in New York... that Chernobyl remained “a particularly poignant and painful issue” for his country, and he blasted the conduct of the “totalitarian regime” in the former Soviet Union. “The people of Ukraine paid a heavy price for the actions of Soviet authorities, taken without accounting for the opinions or concerns of Ukrainians.” Russia was notably absent from the list of donors. A senior [US] official said Washington was interested to know “why they have no need to share in this common responsibility.”

...[a] study of barn swallows has yielded more evidence that contamination from the 1986 Chernobyl accident caused inherited genetic damage... [R]adiation had caused mutations that were passed on to the swallows' offspring... [Incidentally, a] Chilean ecological group [has] warned residents living around Santiago that two-foot-long “mutant” rats have attacked barnyard animals in a suburb of the capital... [The] president of the Ecological Council of Maipo, said he believes that the rodents have grown so large because they fed on the droppings of hormone-fattened poultry.

...deformities found in frogs in recent years – such as missing or extra limbs – are traceable to something in the waters they inhabit, scientists say... Preliminary results of experiments conducted by... [US] researchers show that frog eggs nurtured in water from two wetland sites in northwest Minnesota, where malformed frogs had been found, produced malformed embryos... In the experiments, frog embryos from a non-native species, the African clawed frog, developed malformations even in half-diluted pond water. Samples taken from areas without deformed frogs produced normal embryos... Frogs' skins are permeable to water and previous research showed the most commonly deformed species to be mink and leopard frogs, which spend the most time in the water. Deformed frogs have [also] been reported in Wisconsin, Iowa, South Dakota, Missouri, California, Texas, Vermont and Quebec... “We now need to determine if people are at risk,”... said... the... director of the environmental toxicology programme at the [US] National Institute of Environmental Health Services... “The causative agent or agents could be chemical contaminants or natural products such as pond plants or algae. Alternatively, ‘the deformities may be due to bird-borne parasites getting into tadpoles’.”

...one team of researchers has reported that a soil fungus evident in every dead frog and toad they collected in AUS and Panama matches the fungus found by another team studying dead frogs in the US. It is not known why the chytridiomycete fungus, which has never affected animals such as frogs before, is killing the creatures. In local news, [l]iver and kidney abnormalities in eels and reproductive problems in trout have been found in a study of fish downstream of the Tarawera River paper mills. The findings were used by the Department of Conservation yesterday to show the need for long-term investigation into the effects of chemical contamination of the river... [while presenting] evidence challenging the discharge applications of Tasman Pulp and Paper and [CHH] Tissue mills as well as the geothermal fluid discharge consent sought by the Crown. A senior conservation officer... said short-finned eels, known for their water-quality tolerance, dominated the lower Tarawera. However, inanga, adult whitebait, were completely absent. In its submissions the [DoC] called for all the applications to be declined unless conditions meeting the Minister of Conservation's concerns were met. It recommended a raft of substantial changes to conditions suggested by staff of Environment Bay of Plenty, some of which had already been described as too tough by [Challenge, the owner of] Tasman.

...A symbol of [NZ's] clean green image, the Hector's dolphin, is probably the most chemically contaminated marine mammal in [NZ], says an environmental scientist... His team of scientists had recorded PCB levels up to 30 times higher in Hector's dolphins than in other marine animals... [He] said whales, seals and dolphins were good subjects because they accumulated persistent chemicals during long lives at the top of the marine food chain. This made them useful indicators of pollution, especially as pollution levels in the sea itself were sometimes too low to measure... Dioxin contamination of the country's coast was originally found when medium to high levels of chlorine were detected in Hector's dolphins. Studies have since shown the widespread presence of other organochlorines in marine mammals around... [NZ. D]ioxins and... PCBs... are probably of the greatest concern among “persistent organic pollutants”... because they can be carried by air currents for long distances. Eventually they condense and are deposited on land and water, especially in cold regions... So far most [NZ] studies, beginning in 1989, had concentrated on the Hector's dolphin because it lived close to shore... Its levels of organochlorines... were minimal compared with those recorded in beluga whales in the Gulf of St Lawrence, which drains North America's Great Lakes. Tumours in those whales had been blamed on PAHs – polycyclic aromatic hydrocarbons – but no one knew if PCBs contributed indirectly to the cancers. The chemicals had been shown to affect the immune systems of some mammals.

...A 20-metre, 70-tonne finback whale died on Spain's northern coast after eating 50 kgm of plastic debris. The Spanish daily *El Pais* reported that the whale beached near Santander, and died despite the efforts of 40 rescue workers. An examination of the whale's intestines revealed that the mammal had swallowed about 30 plastic bags, a rubber glove and several hard plastic objects. The plastic had formed into a ball that blocked the whale's digestive tract, causing it to lose more than four tons of weight before dying.

...What do Europeans worry about most when they look at the world? Overall, their prime concern is war, according to... one of the largest [surveys] conducted on European social concerns... [M]ore than 13,000 people... [from 13 different nations were interviewed. 41%] cited war and violence, 27[%] cited famine and 25[%] cited environmental degradation. Poverty was fourth on the list of worries followed by unemployment, drug abuse, Aids and population growth... [However,] the Germans... generally view the environment as a bigger problem... [as do] the Dutch... almost half the Swedes [also] mentioned the environment as a major concern, [but] only about one in 10 Britons, French, Belgians and Spaniards cited it.

...Conservation groups have welcomed a global survey which shows that [NZers] rate environmental protection above economic growth. But their delight has been tempered by claims that the Government has failed to live up to Coalition Agreement promises that the environment would get a better deal. The poll of... 27,000 people in... 24 countries... [from] six continents was... carried out by a Canadian company, Environics International, and shows that... [in NZ 77%] of those surveyed said looking after the environment should take precedence. That compared with 73[%] of respondents in Canada and Switzerland. Only 23[%] of those surveyed in the Ukraine and 27[%] in Nigeria shared this view.

...Niger[s] government announced that about 71,000 villagers [a]re threatened by famine in its drought-afflicted south-eastern areas.

...In honour of Niger's independence in 1960, more than 60 million trees have been planted during the past 12 years... in a massive effort to stave off the encroaching Sahara Desert... which... [covers more] than two-thirds of the country... but only half have survived.

...China's vast Gobi Desert is encroaching into... crop and grazing lands at a rate of 2500 sq km each year... [The] vice-minister of forestry... blames over-grazing of reclaimed lands, the blind search for medicinal herbs... excessive gathering of firewood... and... chaotic digging of mines...

REMEMBER the... chaos of the massive slips that caused \$3 million damage to the Haast highway and extensive flooding around Wanaka, Queenstown and Glenorchy... [in 1994; the] East Coast drought [and the] Auckland water crisis? ...Prepare for more of the same. Those droughts and that rainfall were produced by El Nino... And according to the climate scientists, it looks as if El Nino is on its way back... [L]atest scientific evidence shows a definite change from the last 12 months, when the opposite, La Nina side of the Southern Oscillation delivered five tropical

cyclones... If so, by the end of the winter it'll be cooler and windier than usual throughout [NZ]... and... there'll be a higher risk of spring or summer drought in... Auckland... Northland... and... Hawke's Bay...

Wairoa[']s... Deputy Mayor... said preliminary assessments suggested environmental damage... caused by the storm which battered northern Hawkes Bay for five days could be worse than that caused by Cyclone Bola nine years ago... The state of emergency in the area was lifted... yesterday.

...Wind gusts up to 100 km/h yesterday battered orchards, damaged buildings and caused a road crash in the central North Island. The winds kept emergency services busy from early morning... and reached their peak by early afternoon... [Meanwhile, parts] of north-eastern [US] and northern Europe[have been] plunged into mid-winter conditions again by separate blizzards that paralysed transport and cut power to nearly a million people. The storm in New England was the third worst to ever strike the region, and produced Boston's heaviest April snowfall on record... [However,] Britain remained in the grip of its worst drought for 230 years, and authorities expect to impose water rationing within a few weeks... Pleasure cruises along the Thames west of London have been cancelled because the river has dropped... [Elsewhere, hydroelectric] supplies in Chile were cut to accommodate a severe energy crisis caused by continuing drought in the Andes... Reservoirs have fallen to record low levels... [in] the upper reaches of [China's] Yellow river... and residents are urged to use available water supplies "wisely." ...[but torrential] rains falling for a second week across parts of East Africa provided relief from a severe drought that has parched the region since September... Some rains were so heavy that they unleashed flash floods in Tanzania, killing at least 13 people.

...Flash floods caused by torrential rains following three years of drought have left hundreds of thousands of people homeless in four countries of southern Africa... [Authorities] fear... that disease would spread across the malaria-prone region... Zimbabwe was the hardest hit...

The rainy season is a time for rejoicing in Zimbabwe, where farming is the mainstay of the economy, but the storms take a fearsome toll in human and animal lives. According to experts, an average of two people are killed by lightning each day during the rainy season, which lasts for between 130 and 150 days from mid-November. Official police statistics put [Zimbabwe's] lightning toll at about 150 people each season. But... many deaths go unreported in the remote rural villages which are the most vulnerable to this natural killer... Zimbabwe's 1975 record in the *Guinness Book of Records* as the country where the largest number of people were struck dead by a single bolt remains unbeaten... [at] 21... The... faculty of electrical engineering at the University of Zimbabwe, attributes the high incidence of lightning strikes mainly to the granite outcrops which surround many rural homesteads. The... outcrops... are associated with low-level radiation which results in the ionisation of the air above... As well, the conical point of the mud-huts roofs are capped with galvanised steel cones which can attract lightning... Almost 70[%] of the huts struck by lightning are kitchen huts that contain objects like steel stoves that attract lightning. The carbon from the fire which accumulates on the kitchen walls also helps attract lightning... [The] University... has designed lightning conductors for private homes but poor peasant families cannot afford to buy them... Earth is struck by lightning 100 times every second... [However, Zimbabwe's death figures seem excessive in comparison to the] 40 fatalities in neighbouring South Africa, which not only covers four times the territory but has similar climatic conditions[, and]... an average of 84 deaths a year in the whole of the U[S] - roughly 30 times the size of Zimbabwe. [● A '21-year-old Auckland was running up his driveway to avoid the heavy rain on Saturday morning when he heard a deafening bang followed by a bright flash that seemed to shoot through him. Then he felt a warm sensation in his back and realised he had been struck by lightning, which had burned a hole in his shirt. His only injuries were a graze on his back where the lightning hit and some damage to the retina of his left eye. It is thought the lightning entered his body through his back and exited through his eye. In December 1984, a Te Awamutu man was struck by lightning and died, and in December 1986 lightning struck a man and his horse in Taihape, killing both.]

...A lightning strike in the Auckland suburb of Kohimarama shattered dozens of windows, skinned a 40-year-old Norfolk pine and blew the lid off a toilet cistern. Miraculously, no one was hurt when the lightning struck just after 11.30 am on Saturday in Southern Cross Rd, near Selwyn College. About 20 homes on both sides of the road suffered some damage, most of it to windows and glass doors. The clean-up after the strike is expected to take a week, as glass has showered lawns, pathways and garages as well as homes. It appears the damage is not covered by the Earthquake Commission. Residents plan to contact their insurance companies today. "I was in shock, I didn't know what to do or who to ring," said the 32-year-old whose rented home was at the centre of the blast. "I just heard the loudest boom I've ever heard and then the windows went. I think I'm lucky to be alive." In international news, m]ore than 300 families fled flood waters as... [the US state of] Washington... battled a deluge of rain, mud and melting snow after unseasonably high temperatures.

...A combination of flash spring floods and a snowstorm over the upper Mississippi Valley and Great Plains produced some of the most miserable conditions in memory... [North Dakota's] Red River, overwhelmed by meltdown from a record snowfall, is at its highest level for a century... 54ft[or] twice the flood stage... and floodwaters have turned parts of the city of Fargo into vast lakes... Grand Forks... a city of 50,000, has been abandoned... Then came a new calamity - in the middle of the flood an office block in the business district suddenly caught fire. Unable to get near the blaze at first, the fire brigade could only circle from the air, watching the fire spread... [It] quickly wiped out four blocks of the city... Firemen tried and failed to attach their hoses to fire hydrants submerged in the freezing water. Finally they resorted to bombing the buildings with floodwater. The result looks more like Bosnia than North Dakota... Almost 90,000 cattle died in the flooding. Bloating, rotting animal carcasses were dragged from ponds and creeks before they could foul drinking water[. Compounding the region's problems, 'cold weather has frozen the flood water' still covering fields]... Nearly 200,000 residents in Kentucky were told to boil tap water before drinking it after floodwaters submerged at least 40 residential water systems. Tetanus and diphtheria shots were offered free to those who have not been inoculated recently... Psychologists from surrounding states offered their services free of charge at Red Cross shelters, and warned flood victims to be aware of signs of lingering stress such as recurring nightmares, edginess, depression and memory gaps... The late-season outbreak[that] brought... a hard freeze southward to the Ohio Valley... [also caused the deaths of] 17 people in Kentucky, five in Ohio, five in Tennessee and one in West Virginia... [plus] extensive crop damage.

...Parts of... Canad[a's prairies have] experienced their worst flooding in more than 500 years... After devastating the US town of Grand Forks the Red River spilled across the border... ABOUT 17,000 people headed for high ground as the Red River spread into a 1300sq km lake and soldiers worked around the clock to build a 24km dyke southwest of Winnipeg, a city of 650,000... [A] comparable flood in 1950 forced the evacuation of 100,000 Winnipeg residents... Red River floods in 1979 covered 1000sq km... 2000sq km may be flooded as the Red River crests this year.

...[destruction] of the wetlands in the Red River Valley of North Dakota... this century worsened the damage from the record floods that inundated the region... according to the Sierra Club. The environmental group announced that... the river's watershed had... lost 75[%] of its original wetlands, which can act as river sponges... [T]he group said that if just 6[%] of the basin's wetlands had been restored at an estimated cost of \$NZ\$375 million, it would have stored 20 days of... peak flood flow... [By the way, although many] residents of Canada, the northern [US] and parts of Europe would disagree... scientists say that spring arrived a week earlier than usual in the Northern Hemisphere... [Unfortunately, the] freak Arctic chill was not predicted, and [French winegrowers] were unprepared to protect their crops against temperatures as cold as... -7 deg C. The worst freeze in decades was even more damaging because early spring warmth had caused the vines to flower three weeks earlier than normal... [The] sudden spring frost and freeze... wiped out up to 100[%] of the wine crop in... south-eastern France.

...Jules Verne... was... hailed for his vision and advocacy of science's wonders... The... Parisian lawyer-turned-novelist... predicted the submarine, the aqualung and television in books such as *20,000 Leagues Under the Sea*, *Journey to the Centre of the Earth* and *Around the World in Eighty*

Days... while in *The Begum's Fortune* he depicted a Hitler-like megalomaniac who used technology to commit genocide... In... *From the Earth to the Moon*... Verne broke with literary tradition, which called for the recounting of such a voyage as only an imaginary undertaking. Instead he used scientific principles to outline a book of startling prophetic quality. His moon rocket was launched from land near Cape Canaveral and had the correct escape velocity, while its capsule even had a splashdown at a site 5km from that of the first real lunar spaceship, Apollo 11. But Verne nurtured deep doubts about technology's impact and, when... his publisher, Pierre-Jules Hetzel... died in 1886, reverted to his true nature, "championing environmentalism, anti-capitalism and social responsibility while questioning the benefits that science and technology could bring to an imperfect world." Before his death in 1905 these ideas were outlined in... *Propeller Island*, in which Verne depicts politicians and missionaries destroying the native cultures of the Polynesian islands; *The Ice Sphinx*, in which he anticipated the extinction of the whale; and *The Will of an Eccentric*, which described global pollution. Most striking of all was *The Purchase of the North Pole*, the finale to a trilogy that began with *From the Earth to the Moon*. By now Verne's bold astronauts have been reduced to ravaging despoilers who attempt to alter Earth's axis so they can melt the poles and expose their underlying mineral wealth, heedless of the millions who would be drowned.

...[The Earth might have tilted toward the sun 600 million years ago far more than it does today, making the polar regions warm and the tropics cold, according to research published in the journal *Nature*. Scientists say this could explain evidence that there once were glaciers in what are now the tropics.]

...NZ's glacier snow lines have shrunk further than ever recorded, raising fears for water supplies and hydro lakes in the South Island. Tourism could also be affected as visitors find it increasingly difficult to reach the 48 glaciers, from the Kaikoura Range through to Fiordland, on sightseeing trips.]

...the Brogg Glacier... Peru's highest snowcap... has receded 766m since the turn of the century... Global warming has been blamed.

...The Bering glacier in south-east Alaska has shrunk by 130 sq km over the last century... The... rate at which the... 191km long... glacier was melting... had increased during the last 20 years, with some areas losing as much as 1km per year since the start of the 1990s... According to Greenpeace, temperatures in the western Arctic have increased by one degree every 10 years over the last 30 years.

...Life expectancy has increased dramatically in most countries, but that does not mean our health is getting better... The Bank of Planet Earth is becoming overdrawn as humans spend... more than [their] fair share of the planet's ecological capital... This[has] left little space for other species, and would eventually rebound against human health... [I]nterference with natural systems... [has already] contributed to an upsurge in climate-related diseases... [Furthermore, a] report in the *New Scientist* magazine suggested that water pollution can cause brain damage that turns ordinary people into violent criminals... Some[US] counties with the highest pollution levels had crime rates triple the national average... [C]rime figures from the... [FBI were] compared... with information on industrial discharges of lead and manganese from the Environmental Pollution Agency.

...pollution is increasing... [f]orests, farmlands and coral reefs are dwindling... oceans are overfished and one billion people are so poor they threaten to use any resource available just to stay alive. Environmentalists are jittery. And so are the organisers of the second Earth Summit, apprehensive that speeches from world leaders will be bereft of concrete action... [After] Rio... at least 1800 communities set up their own environmental programmes. But... "Overall, we haven't made the fundamental change of course promised in Rio," said... [the] secretary-general of that conference... "We should be beyond promises of Rio and into implementation." ...The EU formula calls for a 15[%] reduction in greenhouse gas emissions below the 1990 level by the year 2010. Small island states are fighting for a 20[%] reduction by 2005. To achieve these goals, energy usage has to be more efficient, subsidies for fossil fuels have to be phased out and wind or solar energy alternatives have to be explored... Despite many... innovations[by the US] toward energy efficiency, experts say it still takes 120 workers to produce the energy needs for the average [USer], 60 for each European but only eight for each Chinese and one for each person in Bangladesh.

...Bangladesh announced[yesterday that] it will plant 80 million seedlings along its shoreline in an effort to limit damage from tropical cyclones...

Bangladesh launched a massive rescue and relief operation yesterday in areas devastated by a severe cyclone that local newspapers said had killed more than 350 people... Detailed estimates of losses of lives and property were not available as many areas were still cut off... But... there was enough warning for... 33,000 Red Crescent and other volunteers [to evacuate] about 500,000 people to more than 130,000... cyclone shelters... The fate of the Panamanian flag ship *Esco Argo*, which sent an SOS message during the cyclone saying it was sinking... was still unclear. The Bangladeshi ship the *Pioneer* and survey vessel *Anusandhani* might also have sunk, one port official said. Weather officials said they feared the cyclone could trigger a tidal surge of up to five metres, inundating huge areas. Saint Martin's island near Teknaf was under two metres of water.

...Small island nations issued a cry for help... yesterday, saying they were rapidly becoming the first victims of global warming and could disappear under the sea. "This affects us... in the most profound and dangerous way... The people know things are changing..."... said... Western Samoa's UN ambassador and head of the Alliance of Small Island States... Several island representatives said the damage was already well under way... [The] President... of the Maldives said he had been talking about the issue for 10 years...

[T]he UK Meteorological Office... [says] island and ocean surface temperatures... in... [a large] section of... the south-west Pacific... have risen by 0.6-0.8°C since 1910... "To put that in context, average global temperatures at the peak of the last ice age were only 5°C lower than they are today,"... [While small island nations fret that rising temperatures may cause them to disappear, AUSn] farmers are benefiting... Global warming has helped[the] farmers reap bumper crops of wheat... "The frequency of severe frosts had decreased in eastern A[US] in recent decades,"...

An international group of climate scientists... using data from 5400 observation stations worldwide... has found that nights are warming faster than days... leading to a narrowing of the daily temperature range for most of the world... They are... investigating the effects of increased cloudiness... thought to be one contributing factor... [C]loudiness tended to increase night temperatures and slow down changes in day temperatures... [T]he impact of dust particles might... also... be significant... Meanwhile, scientists are predicting that if the El Nino weather pattern... develop[s]... this... year, and if no volcanoes impact on the weather, [next]... year... could be the world's warmest year recorded... [In related news, economists have warned that AUS] risked long-term economic damage if the Federal Government pursued its greenhouse gas policy, and expressed concern at suggestions A[US] may not sign a [proposed] agreement to extend emission reduction measures.

...The [UN Earth Summit in New York] opened with Europe attacking the U[S] for not doing enough to combat global warming... [- since 1992, carbon] emissions have actually increased[in the US] by more than 13[%] - and with Last World]... nations condemning broken promises by the [First World nations]. The week-long, 173-nation conference is taking stock of what has been done to save the planet since the first Earth Summit... Worldwide carbon emissions from the burning of fossil fuels... climbed to 6.25 billion tonnes in 1996.

...The U[S] is under heavy attack at the UN Earth Summit... but delegates said yesterday they don't believe... [its President, who] addresses the... conference today... will make any concessions... The US is by far the world's largest polluter of greenhouse gases followed by China, Russia, Japan and Germany. The summit ends tomorrow with a document giving guidelines for the environment and development in the 21st century.

...Environmental groups attacked[the US] President... yesterday for refusing to announce specific targets for cutting the greenhouse gases... But a key business group welcomed his cautious approach, saying he had softened his position from several months ago... In his speech, [the President] pledged to cut "significantly" [US] greenhouse gases and promised to spend \$US1 billion... to help [Last World] nations reduce their production of the gases... [However, US] officials said \$750 million... of the \$1 billion... would be shifted from existing foreign aid programmes... [The President] said he would seek specific targets... in Kyoto... at the end of the year. "...with 4[%] of the world's population, we produce 20[%] of its greenhouse gases... we must do better..."... [The] week-long UN Earth Summit ended with its chairman delivering the verdict: "Our words have not been matched by our deeds." ...Delegates made no firm commitments on... emissions... Prospects, however, were good for new agreements on protecting fresh water in separate negotiations after the conference... On protecting forests, the session put off until 2000 a decision on whether to negotiate a

treaty, pushed by Europe, Canada, Malaysia and Russia but opposed by... Brazil... and... the U[S. Furthermore, the]... final summit document... failed to include a political statement of intent because governments could not agree on one. Instead a more general, shorter preamble was attached to the voluminous final document reaffirming the lofty principles set forth in Rio that enshrined the concept of “sustainable development” – economic growth compatible with social justice and ecological safety.

...The beauty of Rio de Janeiro's Guanabara Bay as it curves around world-famous Sugar Loaf mountain and the city's coastline has been immortalised on millions of postcards. But most locals would not swim in its waters despite the city's stifling heat. For many years now the fish have been dying, the mangroves have been wilting and white vultures circle where seagulls used to fly. The stench that drifts across the murky waters in parts of the bay and the dead fish and garbage floating on the oil-patched surface were one reason Rio never even came close to succeeding in its bid to stage the 2004 Olympic Games. As hosts of the 1992 Earth Summit, Rio's authorities promised to clean up the bay, launching in 1994 what they described as Latin America's biggest environmental clean-up programme. But the \$US867 million... effort financed by Rio state, the Interamerican Development Bank (IADB) and Japan's Overseas Economic Cooperation Fund (OECF) has been marred by delays, controversy and accusations of political opportunism. [And environmentalists] say the project... is using almost 90[%] of its funds to improve sanitation... “The programme does not address all the environmental problems in the bay... Not one penny is being spent to regenerate fishing, to save the mangroves or to stop the silting up of the bay, which is the most serious problem.” ...Twenty years ago as many as 20,000 fishermen made a living fishing the waters of the bay, but today the numbers have dwindled to less than 3000... The pollution of Guanabara Bay goes back... to the arrival of the Portuguese in Brazil 400 years ago. Ever since, the 300 sq km bay has been used as a garbage dump... The roughly eight million people living around Guanabara throw hundreds of tonnes of garbage into the bay every day and enough raw sewage to fill Rio's world famous Maracana soccer stadium. An oil refinery, two commercial ports and some 6000 industrial firms add their share of waste such as... heavy metals to the lethal cocktail... [E]nvironmentalists doubt pollution levels will be cut by more than 30[%] at most... But the vice-governor of Rio de Janeiro state... who is in charge of the project, is confident pollution levels will be cut significantly... “...Our aim to reduce pollution by 50[%] will be achieved by 1999,”... when work agreed to under the financing scheme must be completed. He said the work was proceeding at such a rate that authorities had almost made up for a one-year delay at the start of the programme caused by legal and managerial wrangling, which cost the state Government \$US1.2 million... in fines by the IADB... The programme foresees six new garbage disposal plants, seven new sewage treatment plants and 10 new water reservoirs... [The vice-governor] said the bay would also benefit from related projects including another \$US130 million spent on water treatment plants and \$US300 million being spent to regenerate shantytowns around the bay.

...[meteorologists say Rio recently] experienced its hottest winter day in 75 years with temperatures soaring to 42 deg C.

...[last week.] temperatures over 40 deg C in Washington, DC, and Philadelphia... prompted officials to issue heat warnings. Heat... exceeding 40 deg C... and smog in Athens, Greece, sent more than 700 people to hospitals with pollution-related illnesses... Freak summer snows... struck Spain and southern France... Much of Chile was declared a disaster area after storms killed at least 19 people, left 51,000 homeless and destroyed more than 15,000 homes... A forecast Brazilian cold snap sent coffee prices soaring in London out of fears that the crop might be damaged by heavy frost... [In] Hong Kong... four days of the heaviest rainfall in a century... caused 130 landslips, resulting in traffic chaos... 14 people died... Typhoon Peter... the second typhoon to strike Japan in recent weeks... caused floods and disruption of train and airline services... The country's worst natural disaster of the year occurred when tonnes of mud... swept over the sleeping village of Harihara, killing 21 people.

...One body has been found in the ruins of two A[US]n ski lodges destroyed in a massive landslide. Rescuers working by hand in sub-zero temperatures continued their search early this morning under arc lights... for at least 20 people thought to be buried... at Thredbo, south of Canberra. Police believe a N[Z] woman was among 18 people at the Bimbadeen Lodge at the time of the landslide... [A]side from the N[Z]er and a Californian couple, all were A[US]n. Police said as well as the people feared to have been crushed to death by the lodges, a woman was swept away as she walked along the road that leads into the village. Her body has not been found... [T]he mayor of the Snowy River Shire... says... [o]ther parts of the road that collapsed... have previously fallen away into a river... Several local residents suggested the landslide may be linked to recent minor works on the road above[the lodges]. One resident, who did not want to be named, pointed angrily to a newly built stone culvert which had moved the water flow about 1.5 metres... Later, police suggested seepage from a mountain spring might have caused the earth to give way. Lodges further down the slope escaped the landslide, allowing rescuers easy... access to the scene and for excavations.

...THE voice came out of a dark hole but brought a ray of light into rescuers' hearts. “I can hear you,” the trapped survivor... called. Pulled from the ruins of A[US]'s worst skifield disaster... last night, he is the miracle for which everyone prayed – the triumph of the human spirit over the most awful tragedy. In one of the world's most astounding survival stories, the 27-year-old Thredbo ski instructor lay entombed for more than 64 hours under 10m of rubble... drawing air through a fist-sized hole. He clung to life numbed to the bone by underground water flowing over him, the body of his wife Sally apparently nearby. Rescuers dug by hand for 12 hours to reach him after hearing his muffled cries, despite sirens sounding warnings that the hillside was unstable... Colleagues of Auckland ski instructor Mary Phillips... [– who ‘loved to play; the world was her playground’ –]are refusing to give up their friend for dead... [Her] mother and sister... are maintaining a vigil at the ski resort, hoping for a second miracle.

...Shifting rubble yesterday cost rescuers precious hours in their race against the weather to find eight people... Police have declined to identify the 10 bodies – six male and four female – so far recovered. On Monday, police revised down the number of people initially trapped from 20 to 19 when a woman... thought to have been swept off her feet by the landslide... turned up alive and well.

...[the sole] Thredbo skifield disaster survivor... has signed up with... [a NZ]-born... agent... a day after... [the agent] said it would be inappropriate for the media to pay for the story... [and a NSW] National Party politician... criticised media behaviour at the disaster site, claiming they had disobeyed police instructions, abused rescuers and bugged police transmissions... [In another development, a] former resident of Thredbo... says that nearly 40 years ago she was refused permission to build a chalet on the site where [the] landslide... buried two ski lodges... [She] told ABC Radio she and her husband were warned off in 1959 because of the landslide danger and instead, built on adjoining land... [T]he blocks did not have any trees and you could see there had been a slide there in the past... “Then all of a sudden they started developing the village and that is when all these little clubs started building... underneath... the new road. We thought to ourselves ‘that is strange’...”

...Training was completed in April of a 27-strong team who... have the capability to respond to a disaster of Thredbo dimensions but have yet to gain “a mandate” to do such work... And despite its name – the outfit is known as the N[Z] Urban Heavy Rescue Team... – its goal... “is to be able to respond within three hours and to be anywhere in N[Z] within six.” ...An alpine incident similar to Thredbo is unlikely in N[Z], according to the N[Z] Ski Council... because... there's no commercial ski area or club area that has that sort of infrastructure actually at the bottom of the lifts.”

...The president of the Auckland University Rock and Alpine Club... and the club secretary, died of asphyxiation... under a Mt Ruapehu avalanche despite being “wise and cautious beyond their years.” And while the pair's failure to carry personal transceivers [‘that aid searchers by “peeping”] was not a factor in their deaths, alpine clubs should consider... buying the \$400 items and training their members to use them... [Incidentally, f]ierce wintry weather[has] arrived early in parts of South Africa, producing the first snowfall in 30 years across... Swaziland.

...A fierce late-autumn storm in... Chile killed at least four people and forced more than 2000 others from their homes... [but] ended a year-long drought... Violent storms and flash flooding... also... killed four people... in north-eastern France[, while a]... broad swath of the Philippines was swamped by... tropical storm Levi... At least 53 people were killed... and 77,000 others were forced from their homes.

...The lives of millions of people in China and the mountainous Indian province of Sikkim have been disrupted by heavy rainfall which has sparked landslides and severe flooding in the past week. The death toll rose to nearly 300 yesterday... The fierce onslaught... [destroyed] more than 21,000 houses and [closed] 200 factories in Hubei... said the official *China Daily*... adding that direct economic losses were 400 million yuan.

...floods threaten to sweep away 18 villages in eastern Nepal if further glacial melting pushes a dam to its bursting point... Engineers are... trying to siphon some of the water and divert it to other areas to lessen the threat[but more]... than 7000 residents... have been evacuated to safer ground.

...A dozen... residents were evacuated from their homes and Kaitia was cut off yesterday as heavy rain hit the “winterless north.” In the six hours from 10 am, about 120mm of rain pelted down – more than 50mm of that before lunchtime... “This is the fourth time this year we’ve had weather like this. We’ve only just finished cleaning up from the last storm,” said [one resident]... And the bad news from forecasters last night was that more of the same could be expected today...

[Six people in the] Far North were rescued by helicopter... as heavy rain blocked roads and inundated farms. It is the fifth deluge to swamp the region this year... Northland farmers are wondering how much more they can take... [while the] Far North District Council is unsure where money for flood repairs will come from. It has already spent more than \$1.8 million this [year] and its budget is \$700,000 overdrawn. The council works manager... said... that... the... full impact of the... latest downpour... has yet to be assessed but [he] expects the council damage bill will be about \$300,000... The MetService said the rain band should move slowly south towards Coromandel and the Bay of Plenty...

The Fire Service was flooded with calls as huge downpours caused havoc in Auckland over the weekend... Weatherwise Auckland said 151mm of rain fell at Beachlands and 142mm at Manurewa on Saturday – levels which exceeded the normal monthly totals... Such heavy rainfall occurred once every 50 years or so, said a spokeswoman... By the way, Auckland’s just had its sunniest April... since 1909, the year sunshine records began. Mangere clocked up 203 hours of sunshine, 50 hours more than normal... Although the sunny conditions... helped to lift spirits the month was cool with temperatures 0.5 deg C below average.

...[developing] summertime warmth in the Northern Hemisphere [has] caused... sharp heat waves... Italy sizzled under its hottest May weather in 50 years... [while, in the US, the] San Francisco Bay area... baked under days of record-breaking heat. The hot, dry weather... caused some heat-related illnesses... and... sparked grass fires... About 1000 firefighters... [failed to save] about 80 homes.

...Firemen battling a large bush fire on the outskirts of Noumea for nearly a week were forced back yesterday because of the intensity of the flames. The fire has burned about 1000 hectares but no houses have been threatened... [□ Police] say a fire which caused \$600,000 worth of damage to Heretaunga College’s gymnasium in Upper Hutt last month was started by... children aged between 4 and 9 who had been playing with matches.

...Damage from arson at schools cost \$2 million last year, compared with \$16 million seven years ago, the Government said yesterday. The change had occurred because \$10 million had been spent on fire and security systems at 700 schools, said the Associate Minister of Education. He announced a further \$2 million would be spent installing security systems in 86 schools from Kaitia to Bluff. “It is far better to spend funds on prevention than have to pay out millions on lost buildings after the event. There is also a high cost to educational programmes when schools go up in flames.” Schools to benefit from the latest funding had been identified after risk assessment, but he declined to name them.

...Two more Auckland schools were set alight at the weekend in what could be the... [work of] a serial arsonist. The fires, in Royal Oak and Three Kings, are the latest in a spate of school fires that have caused hundreds of thousands of dollars of damage this year... A dozen fires have been lit at schools... in suburbs between Epsom and Mt Roskill in the past six weeks... Fire safety officers have visited schools and kindergartens in the area to warn them of the danger and urge them to install smoke alarms. At Royal Oak School, [where] the smoke detector was at the opposite end of the classroom block from the fire and a burglar alarm was set off first [the]... board chairman... said... “We can’t turn the school into a fortress.”

...A lonely professional man living on the edge of Mt Roskill and Epsom could be the serial arsonist who is striking at schools and kindergartens on weekends, says a psychiatrist. The Ministry of Education revealed yesterday that it had started random roving patrols of schools and kindergartens in the area after two further schools were set alight early on Sunday morning... The Fire Service yesterday appealed to the ministry to install sprinklers in schools in the area... [The service’s] hazard manager, said sprinklers or smoke detectors would have helped to reduce “the flow of tears” at education facilities over the past month. Schools and kindergartens were traditionally a target for arsonists as they were accessible and unoccupied, he said. But the ministry’s district property manager... said it would cost \$70 million to fit sprinklers nationally.

...A 27-year-old female arsonist has caused about \$1 million of damage to Auckland schools, kindergartens and public toilets... [The judge] told the Auckland District Court that, because of the high cost, he was obliged to seek some form of reparation from the woman... The Mt Roskill bakery assistant stood handcuffed in court after admitting six arson charges on... [schools and kindergartens, including] the Carlson School for Cerebral Palsy... this year. She also pleaded guilty to 10 counts of wilful damage for attacks on... public toilets... between August 10, 1996, and April 27 this year... The police summary of facts read to the court... said [her] strike on public toilets was similar to 27 intentionally lit fires she admitted to in court in 1996... When the police spoke to [the woman]... she said she had lit the fires when she had been drinking. Then she would get angry about what she had done, so she would light another fire.

...The male-dominated world of arson is being challenged... [A]n Auckland forensic psychiatrist and arson expert, says 5[%] of arsonists are female but that group is increasing at a greater rate than any other. International research shows a big correlation between lighting fires and sexual abuse. About 30[% of all] fire-starters have been sexually abused but more than half the women setting fires have been victims... [The expert] says it is essential to treat arsonists [while they are still] children because rehabilitation is “almost impossible” as an adult. He was instrumental in launching a programme with the Fire Service in 1993 to target child and adolescent pyromaniacs. In the past two years he has treated children as young as three... who have a fascination in lighting blazes. A typical profile of a pyromaniac is someone depressed, introverted, and a non-achiever who often feels deep rejection. A dysfunctional family and a dependency on drugs and alcohol abuse are common symptoms... He says fire-starters use flames to get control back in their life or to hit back at places that are personally connected to them, such as schools. Most of the property women attack has a sexual nature, such as toilets. Despite common belief, only a small percentage of arsonists feel sexually aroused by the flame... [■ The] arsonist who caused \$1 million in damage to Auckland schools, kindergartens and toilets has been sent to prison for five years.

...[an] arsonist may be responsible for a string of suspicious fires... in the Nelson district... Hundreds of residents in the Nelson suburb of Atawhai were evacuated on Saturday night when a blaze devoured 250ha of scrub and gorse and came to within 100m of houses. Atawhai was the target in the first fire about a fortnight ago. Then... fire engulfed 300ha of C[HH] forest, destroying as many as 150,000 pine trees... Firefighters considered it lucky that no people... had been injured... [T]he company was not insured against forest fire. “Our insurance is maintaining an effective firefighting force, and so we do not insure our forests and accept that every five or 10 years we are going to lose little bits.” ...the cost of putting out the fire was about \$400,000 and crop loss was in the multimillion-dollar range... [However, about 10% of the damaged] pine trees were salvageable.

...A bush fire near Nelson on Wednesday, the fifth suspicious fire in the region in a month, was arson, say fire officers... [In related news, a] Dunedin man was last night charged with setting fire to a vacant garage yesterday afternoon – one of four... arson attacks in 36 hours in the city.

...[a] 68-year-old widow has become the third victim of arson in one... [Auckland street. She] was woken by her neighbours banging on a window at her... Mt Albert... house. Her garage was on fire and the flames were getting dangerously close to the house. The blaze gutted her double garage and destroyed its contents, including her car... and... her son-in-law’s motorbike... “What a senseless act,” she said. “I cannot believe someone would want to burn down a garage and leave without taking anything. I have been happy living alone but now I am scared they will come back.”

The widow... had installed a burglar alarm and smoke alarm in her house. "Who would have thought I needed them in the garage as well?" ...another Hendon Ave house was set ablaze after three firebombs were thrown into the hall and toilet and a car parked outside... [In the third attack], a car parked outside a house in the avenue was gutted and a second vehicle suffered smoke damage... All the fires have been lit in the early morning and there have been no witnesses... Scientists from the[nearby] Institute of Environment Science and Research are testing samples... An Auckland region fire investigation officer... said... he could not see a link between... the three fires...

['Lack of water and limited access thwarted firefighters as they tried in vain to control Christchurch's largest blaze of the year. The fire at the McLeans Island warehouse was one of several serious blazes tackled by Christchurch firefighters over the weekend. Three are considered suspicious and are being investigated by police. Christchurch's deputy fire chief officer said there were similarities between Saturday's fire and the one that destroyed Crown Relocations in Hornby 10 days ago' (also destroyed were the 'household possessions of the removal firm's clients – many of whom didn't have insurance')...]

'A fire-eater lost a layer of skin from her face and received singed hair when a late-night show went wrong in a Wanganui bar. The 32-year-old Wellington woman, said to be an experienced fire-breather, was burned when the liquid she was using ignited back towards her – a well-known hazard for performers.'

...The Waitakere City Council may prosecute whoever lit a fire in a West Auckland wrecker's yard yesterday after... 11 people from a neighbouring firm... needed treatment for nausea and dizziness... Five ambulances were called... The deputy chief fire officer for the Waitakere district... said the source of the fumes was a burning pile of old cars and car parts, including upholstery and tyres... [I]t took firefighters more than an hour to extinguish the... illegal fire, being lit during a closed fire season apparently without a council permit... [Last night i]n Wellington, a big fire in Titahi Bay... came "dangerously close" to evacuated homes... By 10 pm the fire was under control but just a few hours later a second one began, at South Karori. Two Fire Service engines and three rural firefighters' vehicles attended...

Major fires[are burning] through parts of central Alaska, where summer temperatures neared 32 deg C... Two... fires, one covering more than 67,000ha, and the other, 16,000ha, burned in the Innoko National Wildlife Refuge. At least 39 other blazes burned throughout the state... Several wildfires... including one ignited by an arsonist[have also]... blackened parts of Southern California... destroy[ing] homes and vehicles...

Hurricane-force winds and extremely dry conditions... [have] sparked large wildfires in pine forests and brushland around the[French] port of Marseilles... and... around the Russian city of St. Petersburg[, where the largest of]... more than 75 forest fires... blackened... more than 1000ha...

High heat and drought conditions sparked several large wildfires from Greece and Serbia northward to Russia's Altai region. Blazes blackened 10,000 hectares of pine forest near the northern Greek city of Thessaloniki. It was one of more than 20 major fires across the country.

...[fires continued] in many parts of Greece yesterday, destroying thousands of hectares of trees and fields... Thessaloniki was virtually cut off from access by land by flames... [Firefighters have, however,] extinguished a... forest fire in Inner Mongolia that raged for 10 days... The blaze threatened a repeat of last summer's conflagration that blackened more than 3.2 million ha across [the region] and the neighbouring nation of Mongolia...

At least 40 people have been killed and 100,000 left homeless by ferocious rainstorms wreaking havoc in southern China. The storms caused the worst flooding to hit... Guangdong province in 500 years. About 30,000 people have been cut off and rainfall of up to a metre recorded.

...the second round of severe flooding to strike... Guangdong Province... this summer... [has] killed 21 people and destroyed thousands of homes...

A thunderstorm in central China has killed 20 people, left eight missing, and destroyed more than 66,000 buildings... [By the way, yesterday Colombian authorities said] there has been a sharp decrease in the number of... tuna, mackerel, herring and other species... [of] fish along the Pacific Coast... The National Institute of Fishing and Aquaculture... [believes the fish] have migrated to other areas due to... El Nino ocean warming.

...Ecuador's President... [has] declared a national emergency to give his government special power to cope with the developing El Nino ocean warming phenomenon. Sea-surface temperatures have already reached at least two degrees above normal off the western coast of South America.

...Leading forecasters are predicting the latest El Nino will become the largest climate event of the century... setting off more global disasters than ever before... Further rises in sea-surface temperatures off South America are altering global weather patterns as the above-normal heat from the Pacific is becoming absorbed into the atmosphere. Record high temperatures in Alaska and northern China are probably linked to the phenomenon. China's most severe heat wave this century... [has] killed more than 50 people in areas from Beijing to the port of Tianjin. In Indonesia, farmers are reporting crop losses from a developing drought that was predicted earlier this year as a result of El Nino.

...A severe drought and heatwave in... China's Shandong province has killed 200 people... forced factories to close... left cities with water shortages and caused more than \$US1.2 billion in economic losses... In Hebei province... the water table... has lowered... by over 1.2m since June, drying up wells and destroying 3 million ha of crops[. ■ 'Auckland recorded its coldest June day' this year]...

Invercargill had a frosty night but nowhere near the minus 14.2 deg C ground temperature recorded in July last year, the coldest since records began 92 years ago. One of the lowest temperatures recorded in N[Z] was a ground frost of minus 22 deg C at Ophir in Central Otago two years ago. Motorists faced severe ice problems on shady state highways yesterday morning and police and the Automobile Association appealed for them to take extreme care... Ten flights were cancelled at Wellington Airport... yesterday... after rain and hail flooded the main terminal. The... terminal was closed for most of the morning while hail was cleared from the roof and leaks fixed. An Air N[Z] flight to Sydney was delayed on the ground after the 767 aircraft was struck by lightning while landing... Spectacular lightning strikes on central Wellington blew circuits on computer and telephone systems. Thunderclaps and hail triggered more than 20 fire alarms... [The] MetService... said that the extreme cold had done its dash.

...An El Nino weather pattern due to hit N[Z] during the next few months could be more severe than predicted, according to British scientists... However, N[Z] forecasters reacted cautiously... saying the British sea temperature predictions were much higher than their figures... The exact effect was hard to predict because each... El Nino, or "the child" after the baby Jesus because it tended to peak at Christmas... was different. One in seven... actually bring more rain to Hawkes Bay, one of the sunniest areas in the country... British forecasters said this year's pattern... could reach the record temperatures set in the 1982-1983 El Nino, which caused an estimated... \$US13 billion... of damage worldwide, if present trends continued... A drought... the most severe since European settlement, with estimates of the total cost rising to \$A7 billion... and massive bush fires[, like]... the disastrous Ash Wednesday fires... which killed 72 people, destroying more than 2000 homes – including entire towns – and ravaged hundreds of thousands of hectares of farmland... afflicted A[US] following the 1982-83 El Nino... Already 63[% of NSW] has been declared as drought-affected, and in half of Victoria's 15 weather districts the 10 months to the end of July were the driest on record for the period... [Economists think] that a severe drought could... force down [GDP by 1.5%. The]... Farmers Federation... economic committee... warned that El Nino was likely to strip almost 12[%] from the nation's crop production this year. For wheat, one of A[US]'s major export commodities[, estimates]... in June of a one-third fall from last year's record harvest, to 16.3 million tonnes, have since been reduced again by a further one million tonnes... [El Nino] was blamed in June for the worst flooding in Chile in a decade... The flood... devastat[ing] central Europe was probably not connected.

...SIX DAYS of flooding have killed 23 people in Poland, inundating... about 3500 sq km... including major towns... Graphic pictures of some of the 18,000 suffering evacuees forced to quit their homes eclipsed even a visit by[the] US President... the [Polish Government is hunting] for scarce budget funds to help the victims rebuild.

...[yesterday,] Poles fought to save the historic centre... of Wrocław, a city of 650,000 people... as... [their Government announced] a... \$1 billion... reconstruction plan for the affected areas... Floods... have[also] left two people dead... in Scotland... and led to the evacuation of around 1200 families from their homes.

...[yesterday,] raging river floodwaters drove tens of thousands more people from their homes in Poland and the neighbouring Czech Republic.

...The worst inundations to strike the Czech Republic this century swept away houses, roads and railway tracks... [T]he same summertime storm... swept parts of Ukraine... and... Belarus[, leaving]... at least 25 people dead and hundreds of villages under water... [according to] Russia's Itar-Tass news agency[, which has also] reported that more than 250,000 trees were killed during 1996 alone in metropolitan Moscow [by] various forms of pollution. One of the most deadly influences was said to be the salting of pavements to melt the notorious ice and snow that accumulates during the bitter Russian winters.

...A report [estimates that a]... quarter of all the trees in Europe, and almost half of all oak trees over 60 years old, have suffered extensive damage because of pollution and bad weather... The worst-affected region was Central Europe, particularly the Czech Republic, where 72[%] of the trees were found to be significantly damaged... [The report's authors] made the conclusion after studying 430,000 trees in 29 European countries... [In further news from Europe, e]vacuated villagers in flood-hit regions of southern Poland, waiting with resignation for the waters to recede, said yesterday that rescue and relief operations had been chaotic... [V]illagers complained that food, medicines, clothes and other aid had been distributed unjustly and that the police were not doing enough to stop looting. Some aid provided by the Government, the Church and private organisations had not reached the most needy because of... bureaucracy, they said... By contrast, on the other side of the Oder River, the German Army's largest peacetime mission saw soldiers working round the clock to repair dikes and prevent huge damage to the fertile Oderbruch plain... The Oderbruch plain was drained 250 years ago but plans to celebrate the anniversary this year were shelved as the Army moved in, filling 200,000 sandbags... Their trucks and tents made parts of the region look more like a battlefield than an agrarian community. Yesterday another village was flooded by a 1km breach in the eroded dike... 18,000 [Germans have been forced] from their homes. Throughout Europe, the month-long floods have caused more than \$NZ3 billion in damage... While much of... Europe is in the grip of disastrous flooding, Finns... are sweating out their hottest summer in decades. Temperatures have soared to 30 deg C as far north as Pudasjärvi, near the Arctic Circle. The warm water has sent Finns flocking to packed beaches, and is blamed for thick blooms of toxic blue-green algae in Finland's... coastal waters... and... thousands of lakes.

...floods may cause up to \$21 million in crop damage in Ireland... [according to estimates. Meanwhile, more] than 15,000 people[have been] evacuated... from the Polish town of Slubice on the German border as the surging River Odra (Oder) nearly swamped the... low-lying... area, but floods receded in other regions of south-western Poland.

...[a new] weak point has emerged in dykes holding back the River Oder... "We now have to speak of three crisis points... We can see that this permanent water pressure is slowly making the dyke sodden along the whole stretch of the river,"... said... the environment minister of Brandenburg state. Workers were now felling trees to allow helicopters to fly in and drop sand to reinforce the dyke... The flood waters have already claimed more than 100 lives in Poland and the Czech Republic... While there have been no flood-related deaths in Germany, damage to houses and farms has been extensive... [Thousands of] people have been... warned to be ready to leave at a moment's notice as the likelihood of a dam break grows daily. Many despondent German officials were saying only a miracle could save the... [Oderbruch's] low-lying fertile farmland... [In local news, seven] people died on [our] roads over the weekend as heavy rain and snow swept the country.

...The MetService is telling farmers to take a hard look at their farming practices instead of blaming weather forecasters for the weekend's stock losses... 600 recently shorn sheep had died on two farms and perhaps 10[%] of newborn lambs had also died. Snow had fallen almost to sea level on Friday, yet on Thursday the weather forecast predicted nothing stronger than showers... The chief meteorologist... said it was regrettable that some Hawkes Bay farmers had lost stock... but the... [farmers] had known for months that heavy snows were likely this year and should have considered delaying shearing... [S]nowstorms and freezing temperatures have[also] killed 2500 alpacas... [i]n the Peruvian Andes...

Peru's enigmatic Nazca lines were invocations to the gods from a civilisation facing annihilation by drought, according to a new investigation. The giant drawings of animals and straight lines laid out in the desert were first spotted from the air in 1926... Similar giant... animal figures are found in Ohio and Iowa... But Nazca's spectacular geometric figures – straight lines running for miles and gigantic truncated triangles or trapezoids – are found nowhere else... The absence of any writings from the... people who created them 1400 years ago has left scientists baffled over their purpose, especially as they are too vast for the patterns to be appreciated from the ground. Academics believed until recently that they were part of a giant astronomical calendar. A more controversial theory, advanced... in [the] book *Chariots of the Gods*, argued that they were tracks left by alien spacecraft... [T]he key to the enigma may lie hundreds of miles to the east, high in the Andes, where scientists have used ice-cores to track climate change through the ages. They found a 40-year drought occurred around AD 550 or 600. "The Nazca region has almost no rainfall... people were entirely dependent on water brought down from the Andes in aquifers or... channels. If the water failed, there was no life." So the best explanation for the lines is that ancient inhabitants held ritual processions along them to pray for rain. Many of the trapezoids are aligned to point at sources of water. [A US] archaeologist... thinks the drought triggered a religious crisis among the Nazca. "Perhaps the efficacy of the priests as intermediaries between this world and the other became doubtful... The lines may have been a way of people... trying to attract the attention of their gods... without their priests..." As the drought worsened there was an increase in line-making – as if attempts to draw down the clouds became more desperate. If so, it did the Nazca no good: the drought destroyed their civilisation.

...[PNG] is reported to be in a "desperate situation" as El Nino-inspired droughts and frosts push as many as one million people to the edge of starvation... PNG, a rugged and very wild country in parts... has no national road or rail network. Two of its greatest rivers, the Fly and the Strickland, used to be navigable into the Highlands. "The Fly has a small creek in its middle now; you can walk across it in parts, and the Strickland has dried up,"... the country's director-general of National Disaster and Emergency Services... said. As a consequence of the Fly drying out the enormous BHP-owned Ok Tedi gold and copper mine is being forced to close. The Acting [PM]... said the Government wanted reports urgently from provincial administrators. "The National Government is not fully aware of the situation in some parts of the country due to the failure of some provincial Government administrators to comply with numerous requests for information on the extent of damage and suffering in the provinces over the past couple of weeks,"... He said this failure... was totally unsatisfactory and would not be tolerated... [● NZ will] provide a further \$150,000 for drought relief work in P[NG]. It has already given]... \$250,000... Save the Children Fund is accepting donations for... P[NG].

...AUSn war veterans yesterday launched an appeal for \$A1 million... to send food aid to drought-hit P[NG], saying they owed their hungry neighbours a deep favour. The Returned Services League... said such a sum would represent only a small repayment of the debt... owed to... the "Fuzzy Wuzzy Angels," the highland men who, during Japan's invasion of P[NG], rescued hundreds of A[US]n troops from the jungle battlefields.

...An A[US]n report on the... PNG drought[has] assessed that some 500,000 people... [are now] critically affected by short supplies of food and water. The PNG Government estimates that up to 700,000... may be affected... Almost 100 people are believed to have died, mostly either elderly or children who had succumbed to illnesses... Relief officials and international aid workers said that no one in PNG had starved to death... [However, a] relief coordinator... yesterday called on the Government to immediately release 20 million kina... for drought relief...

[PNG] officials yesterday were preparing to send food aid into the... country's parched highlands... Rivers and dams have... dried up in the resource rich [region]... The huge Ok Tedi copper mine, which uses river barges to move its production to port, has been sealed off from the coast for almost a month... [and the] big Porgera gold mine yesterday... fell victim to the drought, announcing it had closed down... operations because of

a lack of water to treat the ore... Both mines could resume operations quickly if their prayers for rain were answered, though... Ok Tedi would need a week of heavy rain before the Fly River was navigable again. But it may be too late for P[NG]'s two most important export crops – coffee and palm oil. Palm plantations are already starting to suffer and a continuation of drought late into the year could... harm the flowering of coffee shrubs... Farmers in Indonesia are... also... worried about an extended drought... Analysts fear... the Government may need to import the national staple crop, rice... Indonesia reached self-sufficiency in rice in 1984, but was forced to import the crop in 1994 because of drought... Already the Ministry of Agriculture has provided 2 billion rupiah... in aid to farmers whose harvests have been ruined... But some reports claim that in Lampung... up to 20,000 families are short of food and cannot afford to buy rice... One kilogram of rice in Lampung now costs 1000rp... while 1kg of dried cassava goes for a mere 85rp... [N]ear the ancient city of Yogyakarta, many farmers have been forced to share their precious water supply with their cattle. The drought is so severe, say villagers, that chickens are pecking at banana trees for water. At least 262 man-made lakes and deep wells have dried up in seven subdistricts in the... Gunung Kidul... area, reported the official news agency Antara[, which added that the]... drought-related famine... has[already] killed 545 people... [in the] remote Irian Jaya province... Indonesian forest fires, which have caused haze pollution in neighbouring Singapore and Malaysia, are expected to increase as[the] ongoing drought reaches its peak in September.

...Malaysia, which has been rocked by economic woes since July, is facing another crisis: thick haze engulfing the nation, causing poor visibility and health problems. Kuala Lumpur's skyline, and the much talked about panoramic view from the world's tallest Petronas twin-towers, have been blurred by the dense haze... [which] has reduced visibility to as low as two or three kilometres in some major cities... Malaysia's Environment Protection Society adviser... warned that the haze could turn into a smog problem... if... [it] was not tackled soon... In Kuala Lumpur alone, some 1.6 million motorcars are caught in daily bumper-to-bumper crawls, with at least 620 vehicles per kilometre of road... But an environment department official downplayed the seriousness of the situation, saying rainfall would wash away the "layered" haze... "It is not as serious as that in 1994. We are in a much better position to tackle the haze now," he said, requesting anonymity. The Southeast Asian region was hit by serious cross-border pollution three years ago... before improving towards the end of the year. This time around, the crisis has not obscured a need for regional cooperation... [However, the Malaysian PM said] the worsening haze could have been minimised if counter measures were taken earlier.

...Dusk comes an hour early each day in the Sumatran town of Gelumbang as smoke rising from grass and scrub fires covers the region and spreads to neighbouring countries[, 'contributing to Asia's now US-sized brown haze cloud']. Malaysia... has called it a national disaster and has launched cloud-seeding operations over its capital... to induce rain. Both Kuala Lumpur and Singapore had heavy rain overnight... and officials said the pollution levels appeared much lower... Besides the pollution, some Indonesian airports and sea traffic have been affected by low visibility. On Tuesday, Indonesia's President... apologised... [to] South-East Asian environment ministers... for the suffocating [haze and]... banned the use of fire to clear land for cultivation, but that message has apparently not seeped down to southern Sumatra. "It's good for farmers, as burning the scrub makes the land fertile," said a... worker on a water-melon farm near Gelumbang. The Indonesian Environmental Impact Management Agency says people who clear land using fire without permission face a 10-year jail sentence or a 100 million rupiah... fine.

...The Yellow River, cradle of China's civilisation, has run dry in its lower reaches for the first time in September... The growing population has exhausted water supplies from the river, a problem that is compounded by rampant waste, poor water management, and soil erosion. Scientists and engineers are considering some far-fetched methods to feed the river with new sources... One scheme is to build a huge hydroelectric dam to provide electricity to pump water into the river from Tibetan water systems, nearly 2400km away... Meanwhile[, schools]... and private and government offices were shut... in[Malaysia's] eastern Sarawak state yesterday... but essential businesses such as clinics... and pharmacies... were to stay open... Supermarkets, other markets and restaurants were also allowed to stay open... Malaysia Airlines... said all flights to... Sarawak's state capital... had been cancelled... [Kuching's] air pollution index measured 635 at 2.30 pm... API readings from zero to 50 indicate good air quality... A measurement above 500 was considered extremely dangerous, officials said... [T]he government had contacted Indonesia offering the services of its air force to carry out cloud-seeding over the affected forest areas[, and]... would also contact France and Japan to ask for their advice on fighting the pollution... Singaporeans [were advised by their]... Environment Ministry... to avoid vigorous outdoor activity... "Don't use this as a holiday to run around. Stay indoors and take care of your health... If people have to go out, we suggest they wear masks for safety and good health." ...Indonesian officials say they fear for the health of about 20 million people... [M]ore than 10,000 residents of Riau... have[already] sought medical treatment for respiratory and eye complaints because of the smoke... The fires, many of which have been deliberately lit... have been burning out of control for weeks on the drought-affected islands of Sumatra, Borneo, Java[(where a 'large mud lake created by a drilling mishap continues to increase in size' – but it isn't in a position to help douse the flames)] and Sulawesi... As much as 300,000 hectares have been blackened... [In addition], as many as 140 villagers from a remote corner of Indonesian-controlled New Guinea have died from the effects of... drought... [A]ttempts to get supplies... of food and clean drinking water... to isolated areas had been hampered by... [the thick haze, which] may worsen before it gets better as Indonesian timber and plantation companies [are accelerating] slash-and-burn activities before the Government clamps down.

...Greenpeace is urging [NZers] to boycott Indonesian forestry products from 176 companies because of the fires... The blanket of smoke covering much of South-east Asia has forced the cancellation of a joint Malaysia-N[Z] military training exercise... one of two N[Z] planned to join this month. The other, involving 120 infantry, has gone ahead in northern Malaysia, which is not affected by smoke... [Ironically, as] Malaysia bemoans a 30[%] drop off in tourist numbers because of the smog[, it is proving a]... boon to Bali[, which has become a]... popular alternative destination.

...The throat-clutching smog now choking much of South-east Asia shows just how much the environment has been neglected in a quick and dirty dash for[economic] growth... The common argument that the need to provide jobs in a poor and populous region outweighs concerns for the environment is indefensible, the experts say... "What we are up against is inertia and the belief that the free market will always provide the most effective means of production. It's a cop-out and the biggest obstacle." ...the Singapore energy consultancy Super Solutions, blamed the "yin and yang" approach to development in Asia. "If there is a benefit, it is given that there must be a cost, which is the rationalisation for waste and damage." ...Though Asian countries are loathe to criticise each other over what they consider internal affairs, the pollution is so serious that it topped the agenda at a meeting of regional environment ministers in Jakarta last week... Elsewhere in Asia air pollution has set in hard... New Delhi is the fourth most polluted city in the world. [The WHO] estimated that in 1996, 1.2 million of the city's nine million people were treated for, and 7500 died prematurely from, pollution-related diseases... [Acid] rain strips the leaves from trees across much of southern China, while dirty air is blamed for a high incidence of respiratory disease in cities such as Chongqing. South Korea's car industry, one of the miracles of its economic development, has come back to haunt the 12 million people of Seoul[, where]... vehicle exhaust emissions are the overwhelming cause of pollution. At least 6.5 million tonnes of toxic waste are generated each year in and around the Philippine capital, Manila, which has no major facility to treat it... Bangkok is also plagued by exhaust fumes and dust from numerous construction sites. A study by the Thai Ministry for Science, Technology and Environment showed healthcare costs for pollution-related illnesses were about \$US65 per person per month. Treatment of patients with other ailments costs about \$US9 per month... "There is only one way to sell ecology in Asia and that is to dress it up as a profit-making business – which it is," said... the Singapore-based Regional Institute of Environmental Technology... "We can solve this problem with market-based systems, but it requires the game rules to be set by Governments,"... Wiser use of resources, introduction of efficient technology and tough regulation would force business to become more eco-friendly... Taiwan says its pollution problem has improved after years of efforts, including daily fines of up to \$US10,500 for firms breaking environment laws. Japan, which 30 years ago had the problems faced by South-east Asia now, has tough anti-

pollution laws born out of some of the worst cases of industrial pollution... [Incidentally, w]inds near the centre of super typhoon Oliwa reached 240km/h as the storm passed over parts of... Northern Mariana Island. Oliwa [is] expected to weaken before striking [Japan's] southern islands...

Typhoon Oliwa killed a farmer and destroyed homes as it hit Japan's southwestern islands yesterday. On Amami Oshima island, more than 19,000 homes were without electricity after winds cut power lines.

...Typhoon Oliwa slammed into Kyushu Island in southern Japan yesterday, leaving six people dead or missing... [Elsewhere, a]t least 110 people have been killed in flash floods in a remote Himalayan region in northern India... At least 21 people... [also died after heavy] rain... brought chaos... to the... city of Bombay... Typhoon Victor [has so far claimed at]... least 65... lives in China... Damage... was estimated at 480 million yuan... in Meixiang province alone, where some 146 towns were ravaged affecting 1.69 million people...

Typhoon Winnie slammed into China's eastern coastal province of Zhejiang on Monday and brought havoc... for 11 hours, destroying... 100,000... homes, flooding... 667,000ha of farmland and damaging dams and sea dykes... causing direct economic losses of 18 billion yuan... The storm left at least 140 people dead... The death toll would have been higher if authorities... had not evacuated 790,000 people from coastal towns and villages in the path of the typhoon, officials said... In... the Philippines, flooding spawned by the storm killed 16 people and forced 60,000 to abandon their homes... In Burma, the worst floods for decades killed at least 13 people and left thousands homeless, officials said... [T]he death toll stood at 24... [in] Thailand... And in... Taiwan, the typhoon killed 37 people and left six missing when apartment blocks collapsed under the storm's fury... Taipei residents are blaming illegal property developers, shoddy workmanship and the Taiwan Government for the heavy death toll...

Taiwan issued a sea warning for Typhoon Amber yesterday, a week after Typhoon Winnie killed 44 people on the island... [In local news, m]ore than 260mm of rain fell in Whitianga yesterday, a record for a September. It flooded numerous shops and houses, and led to the closure of all roads into Whitianga... A family fled from their wrecked home after a hillside "exploded" on to it and a man had a lucky escape after his car was swept off a bridge... Some residents said... the... damage... was... worse than cyclones Fergus and Drena... Although the rain had eased, residents furiously sandbagged in coastal areas in preparation for the overnight high tide.

...[at least] one person is feared dead after torrential rain and high winds caused havoc in... Wellington... The MetService yesterday warned... [that the] Coromandel Peninsula and western Bay of Plenty could expect... heavy rainfall overnight... [as the] rain band... move[d]... north...

Police recovered a... body, believed to be that of a woman... from a muddy Wellington Harbour yesterday after a car plunged into the flooded Hutt River on Saturday... Lower Hutt police said a helicopter was still searching the harbour... for a man's body... The two main highways out of the capital were blocked by floodwaters on Saturday night... [M]any of the region's waterways overflowed their banks by up to a metre at the peak... [T]he situation had come close to a civil emergency... [● In] September the rain came down and down and down. It drowned the Auckland region, with the wettest September totals since records began. A gauge at [Auckland] airport recorded 637mm for the month, 400[%] above normal. The usually saturated Milford Sound had 164mm... Whitianga had 60mm in one hour on September 24... 300,000 million to 600,000 million cubic metres of rain falls on N[Z] each year. Flood damage costs about \$125 million a year in spite of investment in protection schemes.

...Tuvalu islanders face months of dependence on overseas supplies after... the unseasonal cyclone... that flattened their crops and homes. Relief at the arrival of supplies flown in by an RNZAF Hercules on Sunday has been tempered by the knowledge of months of hard work ahead.

...Devastated Cook Islanders are counting the cost of one of the country's worst tropical storms, after huge seas and high winds swept over three low-lying northern atolls. Three people are confirmed dead and 20 others are missing... Most crops and 90[%] of buildings have been destroyed and the lucrative black pearl industry is in tatters in the wake of Cyclone Martin... Last night it was heading for a cluster of southern French Polynesian islands, some of which are inhabited... The storm first struck Pukapuka Island on Saturday... and then about 24 hours later Rakahanga and Manihiki atolls... A Royal N[Z] Air Force Hercules is on its way to... Manihiki...

[NZ] Government officials will continue talks next week with authorities in the Cook Islands about more assistance... [T]he RNZAF Hercules... will make a fourth trip to Manihiki today... before returning to Auckland...

Cook Islanders contemplated starting over again yesterday after 150 km/h winds devastated much of the island nation's export fruit crops. Cyclone Pam... arrived just... weeks after Cyclone Martin wiped out the... atoll of Manihiki on... the first day of the official hurricane season...

[As] Hurricane Erika weakened over the cooler waters of the North Atlantic after skirting islands of the north-east Caribbean[, the]... strongest eastern Pacific hurricane on record is raging toward southern California. Hurricane Linda tore up the... waters off Mexico with 295km/h winds yesterday and gusts up to 354km/h, but is losing power as it moves towards land and is unlikely to cause serious damage.

...At least 178 people are dead and nearly 1000 reported missing, most of them fishermen... after... Typhoon Linda hit the south coast of Vietnam... About 1800 boats floundered or disappeared... At the port of Con Dao island, where waves up to 15m high were reported, a total of 160 vessels sank. One stricken vessel spilled 80,000 litres of diesel oil. Two naval vessels were sent to the island to rescue fishermen, but one sank on the way... Described as the most severe storm to hit Vietnam for more than 100 years, Linda also left a trail of devastation on land. Figures from various provinces showed that more than 20,000 houses had been destroyed by the... 100km/h winds... and 45,900ha of rice fields had been flooded... Linda also killed two people... along Thailand's southern coast... [plus at] least 20 fishermen... off Cambodia... as it moved towards Bangladesh... Residents of Guam were last night bracing themselves for an onslaught from Super Typhoon Keith which was bearing down on them... with... winds of 265 km/h [and] gusts of up to 320 km/h.

...Asian typhoons will be given Asian names under a proposal to end the use of American names and give the storms a more regional identity... [In related news, the] smouldering wildfires across parts of Indonesia and Malaysia... that... have... razed 1.7 million hectares of trees and vegetation... were reignited by strong winds blowing around the periphery of typhoon Linda. The fresh blazes blew another wave of hazardous smoke into Singapore and Kuala Lumpur only a week after officials had declared the air pollution emergency over... Smoke from... Indonesia and... [from bushfires in PNG also] remained settled over the northern tip of [AUS].

...yesterday, the AUS[n] Embassy said two "Air Tractor" AT-802 water-bombing planes were expected in Indonesia next Tuesday to help fight the fires... Indonesia has been using C-130 planes for cloud seeding to induce rain, but so far with little success... Meanwhile two boys have been killed and six other teenagers are missing after a motor boat collided with a cargo ship in thick haze on the Musi river in South Sumatra... Forty-seven people were on the boat, used regularly by students to get to school... Police said... visibility... at the time was... only 10m.

...The smog... thickened dangerously in... Sarawak yesterday, cutting visibility in... Kuching, to an arms length. The [API] rose to 839 at 11am... Exposure to an index level of even 200-300 for a day would be like smoking 20 cigarettes, officials have said... Levels of pollution in Mexico City, Athens, Cairo and Sao Paulo, considered the most polluted cities in the world, vary but even on a bad day rarely hit 500... The Information Minister... said the state's two million residents may have to be evacuated if the pollution... "worsened further." ...But he said details of any evacuation plan had not been worked out. Preventive and protective measures remained the top priority... [Last Friday the PM] ruled out the possibility of evacuating the state. "To where? You can't go to Indonesia, you can't go to Sabah [the neighbouring state]. It's just as bad..."... Authorities in Jakarta have said at least 20 million Indonesians have been affected with eye, skin and respiratory problems... [I]n the South Kalimantan capital, Banjarmasin... 21 school children had to be hospitalised after attending a flag raising ceremony on Monday morning in the thick haze shrouding the city... 17 hikers were believed to be trapped on the burning slopes of Mt Slamet in central Java... Late on Monday night, flights to... Brunei were cancelled... With visibility reduced to under 800m, Brunei has set up a task force to deal with the problem... Malaysia [has

decided] to send 1200 firefighters and a number of medical and communication experts from the air force to Sumatra to assist... 8500 Indonesians... with fighting the fires, said the Coordinating Minister for People's Welfare...

[As two] Malaysian Navy ships carrying 1040 firefighters arrived at the port of Dumai on Sumatra yesterday... [to] battle fires in the south of the island[, the]... choking smog claimed its first fatalities... The... secretary to Indonesia's Coordinating Minister for People's Welfare... announced the deaths after a meeting... of ministers and other senior officials.... [In another development, WHO experts] in Geneva expressed concern about the smog... but said none of the countries[affected] had yet asked for help... The N[SW Government has] offered to send the NSW Rural Fire Service...

Thousands of people will be killed by the smog... [or] famine... as crops are devastated and livestock choke to death[, a]... Hong Kong University pollution expert... said... "It's an absolute disaster in health terms,"... Smog[has now] spread to the Thai resort of Phuket, 400km north-east of the northern tip of Sumatra... Meanwhile, almost everyone is praying for cleansing rain. "Allah will give us rain," said one of 600 faithful who gathered in Jambi's smoke-draped town square to pray for the monsoons to come.

...Jambi, about 600km northeast of Jakarta, is at the centre of an ecological disaster which... shows no sign of abating... Your eyes sting. Your throat is sore. Wheezing follows coughing. You're lethargic and nauseous. Breathing is something you no longer take for granted. The smell of burning permeates your clothes and your hair. Smoke is everywhere: in your house, the supermarket... and the factory floor... [S]moke detectors in offices have been switched off after days of being triggered by the pollution... There is no sunshine... Visibility is less than 15 metres... Health officials yesterday asked Jambi's only international standard hotel to reserve two floors for dozens of seriously ill respiratory patients and infants. The hotel's air conditioning system means it has the best air quality in town... In Irian Jaya, the remote western half of New Guinea[, officials]... unable to reach some desperate communities, say 265 people have died of famine or from disease after drinking contaminated water.

...A Garuda Indonesia Airbus crashed last night in a mountainous region south of the city of Medan and all 232 passengers and crew on board were feared killed... There was no immediate word on the cause of the crash, but one resident in Medan told Reuters that the city was shrouded in a thick haze... although officials said the airport was open at the time...

The... Antara news agency said yesterday the pilot... of a Garuda Indonesia... plane which crashed... killing all 234 people on board reported low visibility because of a smoky haze... [and] asked air traffic controllers... for guidance in landing... minutes before the aircraft came down... And at least 28 Indian crew of a cargo ship are missing after it collided with another and sank in the Strait of Malacca early yesterday... It was the second recent collision in the strait.

...It took just one minute for a 31,000-tonne ship to sink after it was hit by an oil tanker in the Straits of Malacca, according to survivors... [The dead included] the two-year-old son... and... wife... of [the] Second Engineer... "I lost my son," said [the sobbing engineer] over a television news broadcast... [Incidentally, the] UN is sending an emergency evaluation team to Indonesia and 150,000 face masks for children... In Geneva... [the WWF] director-general... called for international action to halt the conflagration, which he described as a "planetary disaster". Satellite surveys indicated the fires were spreading from scrublands to forests, although there was as yet no sign protected areas or national parks had been burned. In a statement from its Indonesian Programme, the WWF said unique animals... could be under serious threat if tropical forest areas were affected. "The lowland tropical rain forests of Sumatra and Kalimantan... unlike those that grow in drier climates, are not adapted to fire and suffer great damage when burned." ...Tourism has[also] been badly hit as tour groups cancel and travellers... venture elsewhere.

...According to the WWF, villagers are using chainsaws to cut down trees harbouring... frightened... orang-utans fleeing the forest fires... [in] Indonesia's Kalimantan province... then hacking the females to death. Orphaned babies are being sold into the illegal trade. WWF's rescue centre is filled to capacity with 120 orang-utans, some of which are being treated for near-fatal wounds. At least 138 other injured animals are on a waiting list to be admitted... [The WWF – which recently reported that, worldwide,] 17 million ha of tropical forest are now lost each year, compared with 15 million... in the 1980s... [-] has warned of possible floods[in Indonesia] when the rains do arrive because of the loss of forest cover.

...Forest fires and illegal logging in Indonesia are threatening the survival of five of the 150 types of orchids found on the eastern... islands of Maluka, according to the Indonesian Orchid Lovers... [■ A]s weeping relatives threw flowers into a mass grave of 48 bodies mutilated beyond recognition... details... emerged... of the final conversation... between... [the] pilot... and an air traffic controller... before an Indonesian jetliner crashed into a jungle, killing all... aboard in the country's worst air crash... At one point, the... unidentified air traffic controller... emphatically assured Captain Rachmo that... [he] was clear of mountains in the area. Two minutes later, the jetliner slammed into a highland jungle 32km south of the airport. The last minute and a half of the conversation showed repeated misunderstandings about which direction the pilot was turning.

...From my bedroom window in Kuala Lumpur I used to be able to see the Twin Towers building. Well, of course I could. It was only 4km away and it was the tallest building on earth. The other day I rang my family in Malaysia... Can you see the Twin Towers...? Derisive laugh. "Not for... weeks." At one point the family fled to Bangkok, which is supposed to have the foulest air in the world. There they rejoiced at being able to gulp lungfuls of air which by comparison was fresh and pure... So what next? "Back to Christchurch, quick." ...the family now say that Christchurch[, with its]... fuzz of chimney smoke and car exhaust fumes... is like waking up in heaven... I like the theory that southern Borneo and Sumatra would not be on fire today if only the people could afford fertiliser – yes, the fertiliser... that organic zealots condemn. Instead, poverty tied... [local people] to a traditional form of organic farming. Forests, plantations and crops grow there in peat, which is wonderfully fibrous but contains damn-all plant food. By regularly burning forests and crop wastes, the people spread nutrient-rich ash over their peat... Soon, when the monsoon ends the drought – and, with any luck, puts out the fires – the full extent of the tragedy will be seen. Already an unbelievable amount of peaty topsoil must have burned away. Rebuilding it will take centuries... On a cosmic scale, the area is not daunting. Sumatra is only one and a-half times as large as N[Z]. Yet the job could easily turn out to be the biggest challenge the human race has faced – or turned its back on.

...Every morning, [the] three-year-old... puts on her tiny mask and walks to kindergarten. She is a pint-sized example of what is happening to N[Z]ers in Kuala Lumpur, living amid the smoky haze that has enveloped the Malaysian capital for... weeks. [Her] father... said yesterday that she was coping well with the new morning routine. "She... accepts... her little mask... because other kids also have one." ...[her father], who chairs the N[Z] Business Council in Malaysia... said people were getting increasingly frustrated with the haze. A keen runner, he was annoyed at not being able to exercise outdoors frequently... Sharing the frustrations of living in a haze that could last many months is the N[Z] High Commissioner to Malaysia... who said he donned a gas mask for a jog because he was sick of being inside... The High Commission's 20 local staff were taking turns coming into the office... The Ministry of Foreign Affairs and Trade [is giving] its staff the chance to have time out of Malaysia for spells of up to weeks[, although flights]... out of Kuala Lumpur were full... [By the way, tribal] and religious elders in Sarawak... believe the environmental disaster reflects God's anger at humanity's disregard for nature... "To our eyes, it may be due to forest fires but, from the religious perspective, it is the wrath of God." Muslims make up the majority in Sarawak, which grabbed headlines recently with a ban on bodybuilding contests which clerics ruled were against Islam... A week ago, the chief minister of Kelantan state in Malaysia... said... "It has been stated that a time will come when the sky will emit such thick smoke that the people will appeal to God to make it disappear,"...

Peasants are still torching their land... on the Indonesian side of Borneo... The fire-setting... tells the story of... [villages] struggling to survive, regardless of the environmental consequences and heedless of weeks-old Government exhortations to stop. In Singapore, the *Straits Times* newspaper made the point yesterday that the... out of control... fires... could continue for a long time.

...Singapore face[s] an environmental double whammy... – its worst ever oil spill and excessively unhealthy smog. More than 30 vessels [are working] to clean up 25,000 tonnes of oil that spilled into the busy Singapore Strait after two ships collided early on Thursday. Port officials, who

had... used helicopters to disperse the oil and keep it from hitting beaches of Singapore's main island, [have] approached... Japan, A[US and the US] for extra equipment. They all agreed to help... The U[S] is sending experts and three fire-fighting military planes... Separately, the Ministry of Environment warned the public to reduce outdoor activities... 100,000 cases of smog-related illnesses have been reported in Singapore clinics...

Singapore's leading newspaper[has] lashed out at Indonesia... for the dense smog... "The patience of Singaporeans and Malaysians is wearing thin," the *Straits Times* said... [Other] news reports said... Singapore's Taoist leaders have asked devotees to cut down on the use of giant joss sticks in their religious rites... "Bigger joss sticks do not translate into more effective prayers." ...There were concerns that the giant sticks – which burn like ordinary incense but can be up to three storeys high – might worsen the smoke haze... In Singapore, the sun has not been visible for weeks... But overnight rain helped extinguish most of the peat fires in Malaysia's eastern Pahang state.

...Smog that has blotted out the sun across South-east Asia for almost two months is beginning to recede as monsoon rains arrive... Scattered showers have already fallen on Singapore, parts of Malaysia and northern Indonesia, bringing the first glimpses of blue sky. Weather forecasters expect the air to clear from the north over the next month, but say the rains will be intermittent for a while and the fires may not be put out for some time... The monsoon is switching the region's wind direction from A[US] to north-west Asia to a more general southerly path as colder air builds up for the northern hemisphere winter... Meanwhile, emergency teams were searching a haze-covered area on... Sumatra yesterday for a missing police helicopter with three members aboard.

...Technicians drilling for oil in far northern Sumatra unleashed an eruption of natural gas that produced thousands of explosions, forcing 1600 people from their homes... Four homes sank into the muddy craters caused by the blasts, and nearly 200 others were damaged by falling debris. There were no reports of injuries... and workers[have] gained control of the gas jets...

Ribbons of fire along irrigation channels designed to drain a huge peat bog... for a massive rice-planting project... are helping sustain noxious smog across Indonesia's Kalimantan provinces... One source said the fire in the peat was creating a silicon layer impervious to water which could affect future irrigation vital for wet rice planting.

...Jakarta... received its first heavy rainfall for months on Monday night, but the city... was[still] blanketed in thick haze yesterday morning from its perpetual traffic pollution. "...What we now have to pay attention to is the possibility of floods in Jakarta," the fire control bureau... said... [In related news,] wildfires burning in the Amazon River basin... have produced a choking cloud of smoke that covers an area nearly two-thirds the size of the U[S]. Even a lake bed caught fire when dropping water levels exposed vegetation that had been submerged for years.

...one of the world's ecological treasures is going up in flames. This year, man-made fires in the Amazon rainforest pumped more smoke into the atmosphere than all the cars and factories in Europe. A seven-year study shows the rainforest is undergoing dangerous and fundamental changes... "It's a devastating discovery... Brazil's rainforest, which was always lush and wet, is now quickly drying out. This explains why man-made fires blanketing Brazil in smoke are getting much bigger each year. It means many more thousands of species in this biological treasurehouse burned into extinction each year... [R]esearchers... told us water was disappearing from 35ft shafts in the rainforest floor, where a few years ago it was abundant... tree tops are drying out, shedding leaves, letting in more light, which dries the ground even more[, then]... timber companies cut roads into the wilderness. They take the big trees... then cattle ranchers use those roads to come in and burn what's left to create grazing land, which produces less water vapour than trees, which means less rain. Much of this is illegal but Brazil sends only a handful of officers for a million sq miles. As bad as the destruction of the Amazon rainforest is now... it could soon be much worse because timber companies from Asia are... buying their way into the Amazon. And the Asian companies have an appalling record... Even when Brazil denies logging permits, Asian companies... are able to buy into Brazilian companies that have permits to log, and seem not to care about the consequences. The world's leaders at the Earth Summit... in Rio five years ago made a big show of pledging to stop all this with lots of support and money. The thing is, little of it has ever arrived... So, unless international and Brazilian leaders can get their acts together, say goodbye to... much of the life calling from this wilderness."

...[the] number of fires blazing through the Amazon River Basin has increased by 28[%] during the past year... The Washington-based Environmental Defence Fund said the latest satellite data revealed that there were 24,546 fires burning in what is often referred to as the "lungs of the Earth"... The smoke clouds over Brazil's Amazon rain forest are thicker, and cover a much larger area, than the asphyxiating smoke produced from the burning forests in Indonesia.

...[to date, m]ore tropical forest[has been] burned around the world in 1997 than at any other time in recorded history, according to a report by the... [WWF. Incidentally,] Indonesia has reinstated 45 of the 144 timber exploitation permits revoked in the wake of... the... widespread forest fires... after... 21 companies... agreed not to clear land through burning.

...The causes of the... [smoke] in South-east Asia [we]re many but[one of] the biggest is greed. For years giant logging companies have plundered the forests of Indonesia with impunity, swelling their profits and moving on... In their wake came plantation owners and farmers who wanted to clear the brush to grow lucrative palm oil and other crops. They could have bulldozed or burned the debris. They chose to burn, because it was cheaper and faster... The consequences [we]re like something from a futuristic disaster film: hundreds of people reported killed as the fires spread uncontrollably... throwing a deadly blanket of smog over 70 million people in six countries... Psychologists expect a rise in the number of people suffering from depression. "Not seeing the sun and worrying about their health will have[had] a horrendous psychological effect on vulnerable people,"... Satellite pictures show the fires... spread to one million hectares of deep peatlands where they may burn underground for years. The world faces a human and environmental catastrophe that will have a devastating effect on public health and change global climate more than the Mt St Helen's eruption in 1980 or... [the] torching of the Kuwaiti oil fields in 1991... It seems incredible that this ecological nightmare could start in Indonesia where the rainforests are said to be richer than those in the Amazon. But[, like its counterpart in 'Cameroon (which recently sold 99% of the country's forest to companies for export'),] the Indonesian Government has a lot to gain from big logging companies – enough to make them deaf to the pleas of environmental groups. Yet the disaster would not have happened were it not for another crucial factor: El Nino...

THE planet's biggest bathtub, the Pacific Ocean, is brewing up again... and the... world will be forced to endure the wildly varied fare of weather pattern threatening to eclipse its ancestors... It starts with the trade winds. They blow from east to west across the Pacific, scraping an unimaginably vast amount of water to raise the ocean in Asia 60cm higher than along the coast of South America. The winds become laden with moisture; the surface water, spun by the earth's rotation, diverts to the poles. Caught between these flows, cold water wells up from the deep ocean. As the trade winds weaken, the warm water stays in the eastern Pacific of equatorial South America triggering strange climatic events worldwide... The next few months will tell whether the southern oscillation index, a measure of atmospheric pressure used to gauge the extent of the pattern, will reach new depths. It will take even longer to find out whether this El Nino, said to have a flavour all of its own, has the punch to cause dramatic financial fallout... But whatever the future potency, El Nino has arrived and has already shown its hand... El Nino is no rare beast and in the last couple of decades has dominated the weather. The last one continued for four years, from 1991 to 1994... What sets the 1997-98 model apart is... comparisons with the 1982-83 slammer are coming thick and fast. Livestock Improvement Advisory, a subsidiary of the N[Z] Dairy Board, is already working with farmers in a bid to minimise effects of the El Nino, which is expected to reduce milk production... [-although] milk production dropped about 3[%] in the 1982-83 summer compared with a 10[%] drop in the summer of 1986-87 when the El Nino was less severe... [The advisory's liaison officer believes NZ] farmers have learned from history but... [for] many, he says, plan is a four-letter word and people are reluctant to buy into prevention for something that may creep in over months rather than arriving with the sort of rapid-thump-bang reality that an earthquake brings. There is also a credibility problem with weather forecasting. People remember the short-term predictions

that weren't right and forget about the accurate ones. One organisation which will be avidly weather-watching over the summer and into next winter is Watercare Services, responsible for Auckland's water supply... Watercare, despite having more than doubled the capacity at its Onehunga ground water station and pumping water from lower to upper dams for better storage, is, in real terms, no better off than 1994. Countering the savings measures are the 60,000 more people living in Auckland since then. The only advantage Watercare has these days is the advance warning and should next winter prove a dry one, "we would be going to the councils in the Auckland region and we would be seeking to bring in restrictions a little earlier." While drought-prone farmers and water supply planners brace themselves for the worst, the wine industry is cautiously raising its glass. For wine producers the formula is simple – grapes like dry weather... The arid weather brings out an intensity in flavour and 1983... was a very good vintage. For the rest of us pinning for a long, hot summer, unless we live in those areas under drought threat... [-] Gisborne, Hawkes Bay and Marlborough... [where about 85%] of the country's grapes are grown... [-] temperatures will likely be cooler than usual. And don't be surprised if the sea seems colder for swimming – it will probably be at least a degree or two cooler than usual... [W]esterly and south-westerly winds will be more frequent over the... country. The fisheries research director for the National Institute of Water and Atmospheric Research... says this could affect fishing, simply because high winds could prevent boats getting out. On a positive note, and in contrast to last summer... the... MetService weather ambassador... has some good news: "We don't expect cyclones to be a problem this year." ...[However, according to NIWA, tropical] cyclones will be more frequent in the South Pacific this summer because of the strong El Nino...

Futures blowing in the wind... The most direct impact of this year's El Nino... has been seen in the commodity markets. Coffee, cocoa, grain and soybean prices have all risen. The Chicago Board of Trade, the world's biggest futures market and the leading exchange for agricultural produce, is expecting increased trading as players hedge against climatic risk... The board also sees the possibility of increased activity in its financial futures contracts if inflation picks up and insurance contracts could be boosted as damage looms... [□ Economists] at New York's Columbia University have developed what they... call... the Catastrophe Bundle to help governments and firms reduce financial exposure to crop losses, floods and hurricanes associated with El Nino... Several experts said Columbia's plan could help to spread... El Nino disaster costs among a large pool of investors and take pressure off the property-casualty reinsurance industry, which has been hit hard in recent years by climatic volatility... "Instead of wringing your hands and asking the World Bank for help, countries would be able to take a market position to hedge against El Nino," said... Columbia's Earth Institute... "There probably is room for creative financing during these periods. But it may be a little too late for this [El Nino]."

...Cocoa prices rose[a further] £17... to £1136 a tonne on the London Financial Futures and Options Exchange on Friday amid concern that an El Nino-related drought may damage crops due to be harvested early next year in Indonesia... the world's third-largest producer of cocoa... England [itself is experiencing] the driest weather in years... which... has caused two separate [wildfires, one] in West Cornwall... [which destroyed] 1000 acres of heath-land... [and the other on] the Isle of Wight[, where] a charred wasteland is all that remains of the Brightstone Forest.

...Massive brush fires blazing out of control in remote northwestern A[US] have destroyed vegetation in an area the size of England... Landowners have described the blazes as the worst in living memory.

...[hyenas] competing for dry ground are attacking Somalis marooned by the worst floods in living memory, a relief agency sa[ys]... At least 1000 people have been killed... and 100,000 families... displaced... across much of East Africa... by... nearly constant storms during the past three weeks.

...The worst flooding in recent memory along Kenya's Indian coast resulted in the deaths of at least 16 people... In eastern Ethiopia, at least 57 people were swept away... and... more than 4000... left... homeless... [Fierce] storms and flash flooding[also] struck a wide area of the Middle East, killing at least 10 people from Egypt to... the Palestinian territories[, where]... 74 homes in... Jericho... [were] destroyed... Many of the victims were washed away when torrential rains caused rivers and streams to overflow their banks... in nature reserves and National parks... But heavy rain wasn't the only problem. A hailstorm damaged cars and roofs, and gave the normally dry area a distinctly European look... In Colombia, flash floods killed two people and left 2000 others homeless when rivers burst their banks in the north of the country... The death toll from flash floods in Portugal's mid-Atlantic Azores islands threatened to rise to over 30... as rescue workers continued the search for survivors... [of] a mudslide shortly before dawn... In neighbouring Spain, at least 15 people were killed and many were missing as the violent storms swept eastwards.

...the death toll [i]s expected to rise... in southern Spain... after... [s]ome buildings collapsed in the hard-hit coastal city of Alicante... [Speaking of death tolls, h]undreds of thousands of Alaskan seabirds[– representing]... the biggest bird kill in western Alaska history[– and]... an unusually large number of dead whales... are thought to have starved... because of El Nino... [A]utopsies on carcasses showed the birds had no body fat, wasted muscles and anaemia... because warmer sea temperatures forced their normal food sources – zooplankton and small fish – deeper into the ocean beyond their reach... El Nino has[also] cut the water level in the Panama Canal by 25[%] and draft restrictions are likely to be introduced if levels fall further, a canal official said on Thursday.

...Waves whipped up by... El Nino... are tearing away at Rio de Janeiro's sandy shores, leaving nothing but bare rocks along parts of world-famous Copacabana beach. All of Rio's beaches have shrunk in width by 30 to 50m over the past few months... [In related news,] Peru announced this week that the World Bank and... the... InterAmerican Development Bank... would lend the country \$[NZ]250 million to gear up for... El Nino...

When I disclosed in this column a few weeks ago that El Nino is nothing more than a Peruvian myth that lazy journos drag out and dust off when news gets a little yawny between seasons I had expected, hoped even, that the revelation would stir up a zephyr or two... [And, in] my own modest way, I had hoped that my Ninogate would attract a sprinkling of kudos for the N[Z] Herald. However, despite]... my prognostications to the contrary... after my column appeared [the Herald] ran a long piece in Weekend Magazine not only administering CPR to the idea of El Nino, but interviewing everyone between Cape Reinga and the Bluff on the hypothetical climate and economic effects of its presumed existence. That was humbling enough, but someone apparently sent... my column to the World Bank. After a lull in the storm, the reaction thundered in only the other day – right across the top of page one of this newspaper's world section. You can't have missed it... "Be ready for the worst: World Bank." And that was only the heading. The first sentence was even more alarming. "The powerful weather phenomenon known as El Nino could this year be the mother of all El Ninos, says the World Bank." ...Certainly worrying stuff, bankers sticking their abacuses into the weather forecast. [● 'The people who make a career out of predicting our weather say that while forecasting can never be totally precise, they get it right more than 80% of the time. A NZ Herald-DigiPoll survey shows that 49% of people distrust the weather forecast, against 37.7% who have faith.']

...Retailers get ready for 'Sell Nino'... Can the "mother of all storms" be the mother of all marketing tools? Plenty of California businesses hope it can. They have wasted no time in latching on to the huge publicity wave generated by El Nino[, which]... is being coopted to help... sell brake jobs, roofing and comfy gas fires. It is even being used by the U[S] Government to sell its environmental policies.

...Greenhouse gas plan under fire... Japan, set to host a high-profile climate conference in December, unveiled yesterday its proposal for [First World] nations to cut greenhouse gas emissions by an average of 5[%] from 1990 levels between 2008 and 2012. But the... A[USn PM] rejected the... proposal, which would let some countries including... Japan[, the US and AUS] cut emissions by less than 3[%] based on their industrial conditions... saying A[US] would not sign an international climate change treaty which was unfair and failed to take into account the country's reliance on fossil fuels. Environmentalists also lambasted Japan's plan... Greenpeace... [called] it "ridiculously weak" and accus[ed] the Japanese Government of caving in to its powerful Trade Ministry and to heavy industry... The U[S] has also] been dragging its feet as[its] industry conducts a costly campaign against binding targets and US car-makers insist that [Last World] nations set targets. Japanese media, meanwhile, said that officials from... Japan... Canada... the U[S, AUS and NZ] had agreed over the weekend to urge the... E[U] to alter its... 15[%] cut by 2010... proposal[– AUS]... has estimated its cost of compliance... [with the proposal would be] \$A150... billion by 2020... [-] and to seek targets for... [Last

World countries. The European Coordinator of... W[WF]'s climate change campaign, said... seeking such targets could scuttle the Kyoto conference. "[Last World]... countries want to see a good first step from... [First World] countries. That's how the deal was set up in Berlin in 1995... Trying to get new commitments at this time from [Last World] countries... threatens the negotiating process." ...If [First World] nations slashed energy consumption, they might have to go easy on refrigerators, cars, air-conditioners, washing machines and TVs. If Last World nations did the same, hundreds of millions of people might have to live without even electric lightbulbs. Expect more compelling arguments like that [as December draws nearer...]

AUS's PM has insisted his Government will not budge from its refusal to accept uniform and legally binding targets for greenhouse gas emissions to be proposed at the UN conference in Kyoto... A[US] is under pressure over its stance and [its PM] is likely to wear the wrath of several... South Pacific... island nations... Small island states see the issue of reducing CO2 emissions in terms of survival; A[US] depicts it in terms of threatening its economic wellbeing... [The NZ Government anticipates] some "arm-twisting" from... A[US], but... was unlikely to change its stance, leaving A[US] potentially isolated. The [NZ] Minister for the Environment... made plain 11 weeks ago that N[Z] didn't agree with AUS's position, saying it came "perilously close to special pleading" and each country could make a special case.

...N[Z] has been accused of helping A[US] to bully the leaders of smaller Pacific Island states into submission on the issue of... binding targets for the reduction of [CO2 emissions at the]... 16-member South Pacific Forum... [The Tuvalu PM said AUS] had got its way, despite 14 of the 15 other nations at the forum being united against it. He did not say which other country had held out against the island nations, but Greenpeace last night accused [the NZ PM] of siding with the A[US]n PM. Tuvalu's PM... said he had tried to hold out on the issue but had to give in at the end. "Being small, we depend on N[Z] and AUS so much we had to give in... [I]t was not compromise, it was just no, no, no, no, no, all the way through."

...A[US's PM] said yesterday he did not want to turn his official Sydney residence into an armed garrison... after... [security] was called into question [when] Greenpeace activists stormed Kirribilli House to protest against the [Federal] Government's hardline opposition to greenhouse emission targets... [AUS's] greenhouse gas emissions were set to rise by 18[%] by 2010 despite a \$A180 million... strategy unveiled yesterday to fight global warming, the Federal Government said... [In further news from AUS, a] new fire in the Hunter Valley has worsened problems for... 3000 firefighters... battling to contain... 145... bushfires raging across N[SW]... National Parks in N[SW] were closed yesterday...

Two firefighters died, more than 20 houses were destroyed and 200,000ha of bush were razed as 160 bushfires fanned by strong winds burned out of control across N[SW] and licked at Sydney's outskirts last night... Home owners in Sydney's southern suburbs stood defiantly on the roofs of their houses, their faces masked with water-soaked towels as they fought the fires with slender garden hoses. Others threw buckets of water at walls of fire in a futile attempt to stop flames reaching their homes... Thirty-eight aircraft were in the air and 4500 firefighters [were now] deployed statewide to battle the blazes. In Lucas Heights... a nuclear reactor was shut down after smoke entered the ventilation system... [By the way, China has] announced that it is drilling for oil near its former nuclear test site in the Lop Nur Desert, where radiation levels are said to have returned to normal... China conducted 23 atmospheric nuclear tests at the site from 1964 to 1981, and scores of subsequent underground blasts, until... 1996.

...A coalfield fire burning for... 400 years in China's Xinjiang region was finally extinguished [this week], according to the *Weekly Digest* of the *Sichuan Daily* newspaper. The report said that the fire in the Bailanghe coalfield spontaneously ignited in 1560, and its toxic emissions have caused desertification and ecological deterioration in the area [incidentally, the Saguaro Desert in Mexico, home of the giant Saguaro cacti – although 'cacti grow in DESERTS all over the world today, they first grew only in the Americas' – 'has been threatened by wildfires since foreign plant species were introduced by humans']]. No details were given of how the fires were put out... [In related news, c]ooler temperatures and reduced winds [have] aided firefighters trying to contain blazes in... [NSW. But a] total of 157 fires were still burning across the state affecting 300,000ha and... [the NSW] Rural Fire Service Commissioner... said there was little hope of containing the fire in the Pilliga scrub area in the state's north-west. "To me that is a great pity because it is a unique area and to have lost so much of it is a great tragedy,"... In Victoria, 100 smaller fires have been reported...

The first seeds of disaster were sown as warming equatorial waters gave grim warning of an El Nino summer. When temperatures in parts of N[SW] soared last week to 47.5 deg C, calamity was inevitable. Victoria had already felt the heatwave... It turned forests and grassland to tinder, which was ignited by the electrical storms that raged across the state. But the freak weather patterns that swept across N[SW] over the past two weeks realised all the worst fears of fire officials already alarmed by the... drought... The outbreaks that have razed massive tracts of N[SW] and killed two firefighters were, according to [the] Rural Fire Service Commissioner... "textbook predictable." The only way to stop them, he said, would be to concrete the whole of the state. For A[US] ('the sunburnt land') the pattern is tragically familiar – forests, bush and pasture parched by drought, and a combination of strong winds, high temperatures and low humidity. Since European settlement at least 678 people have died in bushfires – in recent years, at the rate of five a year. Almost a third were killed in just three disastrous days: Victoria's Black Friday of January 13, 1931, when 71 died and more than 1000 homes were lost; in Tasmania on February 7, 1967, when flames swept almost to the heart of Hobart and killed 62; and the Ash Wednesday fires of February 1983, when 71 people died... in... South A[US]... and... Victoria...

Bushfires in Victoria in which three people died were deliberately lit in five places, the police say... "It's possible that one person using a mode of transport could have been at all five places," [a]... Detective Senior Sergeant... said. He appealed to the public for information about anything suspicious they might have seen at the spots where the fires began.

...[Victoria's] Premier... outraged legal groups by proposing mandatory life sentences for firebugs yesterday as police sealed off bushland in Melbourne's eastern hills where deliberately lit bushfires killed three people this week. [The Premier] said he would ask [the] Attorney-General... to examine doubling the existing sentence of 12 and a half years for arson for bushfire culprits, with even longer sentences if lives were lost. The proposal was angrily attacked... as an irresponsible and reckless diversion that would result in fewer arson convictions, while a senior legal figure described it as "ridiculous." "Most arsonists are either people with a psychiatric problem or young children," [the] Opposition legal affairs spokesman... said... [Meanwhile, up] to 10,000 firefighters were last night mobilised throughout N[SW] as authorities braced themselves for some of the toughest conditions in their bid to control blazes... Warm temperatures, strong northwesterly winds and low humidity forecast for today are expected to worsen tomorrow when winds are due to gust up to 50km/h... Yesterday there were further outbreaks in the north of the state and in the northwest near where a giant fire is burning in the Coonabarabran area. There are fears also that two fires burning in the Lithgow and Hawkesbury regions northwest of Sydney could join to form a massive fire front. The state's worst ever fires, in the summer of 1993-94, burnt out 800,000 hectares in 16 days... Since the latest spate of fires began seven days ago already 400,000ha of the state has been burned out... About 70,000 volunteers can be called upon throughout the state. So far, about 4500 have been working each shift, with two shifts around the clock each day.

...In the face of a forecast predicting searing nor'westers, low humidity and temperatures beyond 30deg C, light rain fell yesterday in many of the areas still ablaze [including]... on the huge Coonabarabran blaze, which has burned out... about \$A8 million... worth of timber resources... [B]ut the... fires in Sydney's south and in the Hawkesbury region immediately north-west of the city were untouched by rain... Thunderstorms and more rain are forecast to scatter across the state today, but even then they may provide only a mixed blessing. "With the storms comes the risk of more lightning strikes, which is what started most of the fires last week,"... said a NSW Rural Fire Service spokesman... Light rain was not only insufficient to extinguish fire, but also hampered backburning efforts.

...Back burning, reinforcement of containment lines and maintaining patrols of fires burning under control were the main activities for firefighters yesterday... [after rainfall] overnight dampened blazes around N[SW. However]... Victoria is now in extreme peril... with the number of fires already running above the devastating Ash Wednesday bushfires of 1983, say fire authorities.

...[summer heat has] sparked further wildfires in both the west and east of... [AUS]. Blazes flared up again on the outskirts of Sydney, where another blanket of thick smoke covered the city[, and a]... 75-year-old volunteer firefighter... died in bushfires in Western A[US]... "A neighbour's crop was on fire and the deceased and his son were heading over to assist when the deceased fell out of the back of the ute and into the flames,"... An 18-year-old woman[also] died when she apparently abandoned her car in choking smoke... Police say her body was found by searchers yesterday a few hundred metres from where her car was bogged on the roadside. "Her car was intact, not burnt, so we don't know why she left it," a Pingelly police spokesman said... The worst blaze had razed 25,000ha of farm and scrub land... 150km south-east of Perth.

...Firefighters stayed on standby yesterday in the Porirua suburb of Eidsdal where a fire had swept through a kilometre of scrub and threatened homes. Sixty firefighters battled the blaze, which started... about 9.40 pm on Sunday... Meanwhile, the Nelson City Council is offering a \$1000 reward for information leading to the conviction of anyone found responsible for... suspicious fires around Nelson... A fire ban in the Nelson region until midnight tonight may be extended... A decision on extending it would depend on the weather and long-range forecasts... [One f]ire investigator... said the fire ban meant any fire was illegal and should be reported immediately. Fireworks went on sale on Monday in the leadup to Guy Fawkes celebrations next Wednesday.

...['Hallowe'en and Guy Fawkes celebrations will produce an extravaganza of colour and sound tomorrow night at Ericsson Stadium in Auckland. The Hallowe'en Fireworks Display is being touted as the best chance for families to see a professional pyrotechnics and laser display. Organised by the Howick Lions Club, it will raise money for the Royal NZ Foundation for the Blind, which plans to build a playground in Manurewa for all sight-impaired children. Such family-oriented fireworks shows have become increasingly popular since skyrocket sales to the public were outlawed in 1995. If the weather is bad tomorrow night, the show will be postponed to Sunday night. Admission is \$5, with pre-schoolers free. A public fireworks display will also be held at the Onewa Domain in Northcote tomorrow night. Tickets cost \$10 a family. A spokesperson has warned those planning to attend not to bring any fireworks.']

...The grisly killing of a 12-month-old cat has sparked new calls for a ban on fireworks sales and an end to unlicensed Guy Fawkes celebrations. The Fielding pet's throat was torn open after three bangers were forced into its mouth and lit on Saturday... [The cat's] owner was shocked at the killing. "I just can't believe it. It's sick. Why would someone want to do it?" ...the Auckland SPCA had already dealt with several incidents involving "animals, fireworks and stupidity." ...The Auckland SPCA executive director... called for "an end to this ridiculous celebration[as 'every November 5 hundreds of pets are lost or get run over after fleeing from their homes, frightened by the noise from fireworks. Animals and people are terrorised by irresponsible people and it's not worth it.']Since there has been a ban on skyrockets and crackers, they have been replaced by ones that are often worse." ...The Auckland area fire safety promotions officer... said one of the newer fireworks, Godzilla, was like a skyrocket crossed with a banger and could be a problem if misused. The Godzilla shoots out small cardboard tubes of gunpowder which explode in midair... The Explosives Act[, which] was amended in 1990 and 1994... says fireworks are banned if their sole or principal effect is percussive or aerial.

...['a 13-year-old South Auckland schoolboy was recovering in a burns unit after a horrific fireworks attack. With his face on fire, he cycled 80m and threw himself in a ditch full of water. He suffered burns to his entire face and almost lost his sight when fireworks were thrown at him from a car in Drury on Friday night while he was on a bike ride with his best mate.' • 'Youngsters with fireworks are believed to have started west Auckland's biggest blaze in 7 years over the weekend. The fire destroyed 10 hectares of bush at Signal Hill, Whatipu. About 10 hectares at Anawhata was destroyed by a fire in 1994.']

...A scrub fire believed to have been ignited by young people drinking and setting off fireworks has ravaged more than a third of Mt Maunganui.

...Arsonists are using Guy Fawkes as the fall guy to cover their fire-raising activities... [The] president of the Professional Firefighters Union, said fireworks were being unfairly blamed for many blazes... "There's no doubt a few people come out of the woodwork. It's a great opportunity to set a few fires." ...[every year] blazes around the country... in the first week of November... have led to calls for a total ban on the sale of fireworks. The Fire Service acting chief executive... said he would ask the Labour Department to investigate what types of fireworks were on sale. Other hazardous fireworks may need to be... joining sky rockets and bangers, which were removed from sale after amendments to the Explosives Act in 1990 and 1994. [The acting chief executive] said he favoured selling fireworks in July, when surrounding scrub was less dry. [July 4th is an obvious date (although, ironically, 'fireworks used to be part of US Independence Day celebrations but are now banned as dangerous in many communities except for large public displays').]Guy Fawkes Day could be reserved for public displays[in NZ]... The Minister of Internal Affairs... said he was happy to ask the Fire Commission to investigate further bans. He was concerned, however, that a total ban would prompt people to create dangerous homemade explosions... [He agreed that] the public would not stand for a total ban. "There is a huge tradition there related to Guy Fawkes."

...['Guy Fawkes (1570-1606) was a Roman Catholic soldier who became involved in the Gunpowder Plot, which was a plan to blow up the House of Parliament in revenge for penal laws against RCs. The plot was discovered and Fawkes was arrested, tried, convicted and executed. Nov. 5 is celebrated in England as *Guy Fawkes Day*. Children make effigies of Fawkes, build bonfires and burn "the Guy."'] Nowadays, the date is merely a commercial exercise revolving around the sale of fireworks and fire engine call-outs (last Nov. 5, Auckland's fire service received 'one call-out every two minutes')...

Firefighters were called to more than 130 blazes in three hours last night as Guy Fawkes celebrations went off with a bang in Auckland... The Fire Service estimated 90[%] of calls were linked to fireworks or bonfires... Scrub around Tamaki Drive was set alight regularly.

...SERIOUS scrub fires in Wellington on Friday night have prompted at least one fire chief to call for a total ban on the sale of fireworks. Firefighters were kept busy battling[the] fires... including one that forced 12 Hutt Valley houses to be evacuated... [The Wellington region's c]hief fire officer... said firefighters suspected most of the... fires were the result of wayward fireworks. "There were a lot of fireworks being let off last night. It is about time this sort of nonsense came to an end – we had a wonderful (public) fireworks display in Wellington this week," he said.

...Hutt Valley firefighters battled their 20th bush fire of the season early yesterday in what has already been their busiest summer in years... [A]ll fires are banned... [in] Wellington, Marlborough, Kaikoura, Canterbury...

[Canterbury] farmers have been accused of greed by hiking the price of hay desperately needed by drought-stricken Marlborough farmers... [T]he normal \$30 to \$35 price... for a bale of hay had "surprisingly" gone up by about \$10... It had "saddened" Marlborough farmers... "They know we need feed, so they're capitalising on it accordingly. It's disappointing. When the big snow came to Canterbury in 1992, we trucked hay free to farmers there..." ...[the] North Canterbury Federated Farmers president... said he was disappointed by... [the] comments. "It's quite an unfair statement. A marketplace exists. Canterbury farmers have helped other areas in the past," he said[, adding that] some Canterbury farmers were themselves experiencing a drought.

...IT MIGHT seem like rubbing salt into farmers' wounds, but at least one[other] industry is making hay while the sun shines from Marlborough's drought. Production at N[Z]'s biggest salt lake, Lake Grassmere, is heading for a record... The highest salt harvest... was 117,000 tonnes in 1973. Already this season – which is only a third way through – about 55,000 tonnes have been deposited.

...Marlborough had only 1.3mm of rain last month. It normally averages 50mm. In October there were 24mm (normally 60mm) and in September 33mm (60mm). Because of a harsh winter and cold early spring, hay and other feed have not grown. Fertiliser spread over paddocks still sits on top of the ground. Farmers have been forced to sell lambs and cattle to abattoirs earlier and at lighter weights for lower returns, or move them to properties outside Marlborough. The large movement of stock has meant a bottleneck at Picton. Farmers have been forced on to a waiting list while the backlog of stock booked on the Cook Strait ferries is cleared... Nine thousands lambs are[also] being sent to Christchurch every week... "Everyone wants to get their stock off the land... [or get what they] can for them now because in a few months they might be worth nothing." Low wool prices were compounding the financial plight. "We're only getting \$3 a kilo, whereas normally you'd get \$5. People seem to be going away from carpets. They're into polished floors and that sort of thing, which is no good for the farmer,"... said... [the] Marlborough Federated Farmers

president... While doom and gloom prevails in Marlborough and in parts of Canterbury[, someone who]... has worked his farm near Blenheim for 40-odd years... believes this drought is not as bad as the one in 1958... "After the 1958 drought, we didn't get back on to our feet until 1962..." ...Meanwhile, the Grey River floodwall in Greymouth has held back the river's worst flooding since 1930, but local businesses and farmers are counting the cost. The river rose nearly 7m on Tuesday... The Mayor of Grey District... praised Greymouth's floodwall, built after the Grey River poured into the town in the 1988 flood. "A repeat of 1988 would have... destroyed us. We would have struggled to recover."

...West Coasters are mopping up after floods[, but forecasted]... heavy rain in the northern South Island is unlikely to provide drought-breaking relief for the farmers of Marlborough, says the MetService... Meanwhile, the D[OC] is likely to introduce a fire ban in Hawkes Bay by the end of the week. The move follows an 85ha scrub fire in the Kaweka Ranges last week... and almost two months without significant rain... Napier City Council says it could be forced to impose water restrictions because of high-water usage... [In international news, t]he official wind instrument at Guam's Anderson Air Force base measured a gust of 382 km/h just as it was being knocked down by super typhoon Paka's peak winds... the highest winds recorded from a typhoon or hurricane... The storm generated 13-metre waves... Thousands were made homeless... [in the US] territory... At least four people were killed after heavy rains pounded a wide section of northern and central Texas, flooding streets and prompting evacuations... Four people[also] died and tens of thousands... were left without electricity after... 160 km/h... winds... lashed Britain...

[Every December for the last 50 years, winter moths have been counted in Britain's Whiteham Wood. Since 1981 their numbers have been very low. The effects of global warming may be killing the moth's caterpillars. Global warming will affect when the first oak leaves appear, whether the caterpillars win or lose their race against the trees' defences, how the birds adjust the timing of their nesting and suffer if they get it wrong. Crucial changes like these will show if Whiteham's creatures can respond to the changing climate and, in revealing which of them cope and which can not, this small but extraordinary wood will warn how other lives might change'.]

...the global temperature appears to be warming but the scientists are divided over what or who is causing it. The environmentalists, on the other hand, have a clearer-cut view – we, humankind, should feel guilty. Question that environmental zealotry and, well, you can find yourself being treated like a heretic. "We've now got thousands of lunatics trying to make everything... relate somehow to global warming[," says a geophysics professor from Auckland University who]... believes in the integrity of science over what he sees as the new order, and religious-like zeal, of greenism. "It carries over from religion the guilt that used to keep people honest church-goers... and it does worry me that young children are coming out with[a] huge guilt-load over things which they have no control over." ...[the geophysicist is] something of a lone voice challenging theory taught as fact in schools: that man-made pollution is warming up the planet with all the disaster that implies. "The conventional orthodoxy with respect to global warming is way over the top compared to the reality and yet, if you advance anything other than the conventional orthodoxy you're vilified, so we're in the throws of the new Spanish Inquisition." ...images... [of] Antarctica... just brought back by Greenpeace – images it will use to pressure governments worldwide into severely restricting greenhouse gas emissions – ...[show] that... ice shelves, which have taken thousands of years to evolve, are, within the space of just decades, crumbling... "The fact that the ice is melting there does not, to me, indicate that they've got concrete evidence of global warming... It's always melted around the edge of Antarctica at some rate or other, so you need to be rather careful to access whether this is more than usually happens." Don't undermine a good cause with bad or exaggerated science, he warns. The risk is valid argument being discredited altogether. "...one could argue, I suppose, that Greenpeace exploits science for its own political ends... By and large, they take the scientific literature and... put the most sensational spin on it that they can in order to grab people's attention and persuade them to do something about it... It's important to realise that... when... the ice that's floating in the water now... melts... it... does not contribute significantly to seawater rise..." A simple... high school physics... experiment [– ice placed in a glass of water – shows why. The geophysicist]... relishes his political incorrectness almost as much as he does his left-hand drive MG. Perverse? No, sceptical he says, and why not? If theories are going to become fact they should be argued beyond reasonable doubt... [S]cientific truth... more than environmentalism... is what matters to [the geophysicist]... Greenpeace, of course, argues that it... [is the ice on the land – not the ice already in the water – melting which is] probably going to be serious, [and] we also have... a Climate Convention that says you don't need scientific proof to act... Greenpeace... says... we[can't] afford to gamble with... Earth's ecosystem... [Ironically, while the argument over global warming continues,] the Russian capital[has just] suffered its coldest mid-December night on record... with average temperatures in the city hitting minus 27.3 deg C.

...[while at] least five people in the Russian capital... [were freezing] to death overnight in record temperatures as low as minus 28.8 deg C... [– and, in other] parts of Russia... to 45 deg C below zero... [– the US] President... saying it would be a mistake to ignore global warming, said he was convinced carbon emissions must be curtailed "to avoid leaving our children and grandchildren with a catastrophe." ...opening a White House conference on global warming, [he] said any reduction of heat-trapping pollution should be done through technology changes and rejected any new... measures to make energy more costly, saying this "won't pass muster with the American people." The conference... was designed to gather support for the Administration's global warming policy in advance of[the] international climate talks in Japan...

[The US President's] grand plan to fight global warming[– which]... also offered \$US5 billion... in tax cuts and research to improve[US] energy efficiency, and promised to restructure the electric industry to reduce fuel bills... [–] came under a torrent of criticism as soon as it was announced... Environmentalists said it was too little, too late... but business groups said it was too much, too soon. Lobbyists for [US] industry said it could wreck the economy, send petrol prices soaring and give nations like China an unfair competitive advantage. Japan raised a lonely voice of welcome for the much-maligned plan but even the Japanese urged Washington to try harder...

The city of Kyoto... will soon host a[UN] climate summit that aims to set legally binding targets for reductions in [CO2] emissions. The economic risks are enormous since a decrease... can be achieved only in two ways: by severe rationing of oil, coal and gas (using tradeable emission permits); or by increasing the price of these fuels (carbon taxes) aimed at discouraging their use... The justification for this is the perceived threat of global warming. But is the case for global warming so convincing as to warrant the use of such harsh measures? ...Stirred in with this view are the reports of the[UN] inter-governmental panel on climate change (IPCC). The first publication was in 1990, the most recent in 1996. The dense, 300-page reports have by and large been good compilations of global warming science. But few people read the lengthy publications. Instead they read the politically approved "summaries for policy-makers" which have become notorious for their bias, tendency to overstate certain views and penchant for dramatising scientific speculation.

...The competitive global economy drives industries and their governments to ask: "Will climate change improve my competitive advantage by hurting my competitors more than me?" Or: "If action is costly, can I benefit from acting last and least?" Or: "At the very least I will not act until everyone else acts, too." ...[NZ's government, which] has dithered for a decade... must not join this race to be last.

...The visiting British Deputy P[M has left N]Z... after urging a strong stance... in Japan... The cabinet is due to finalise N[Z]'s stance... next week, but it will be considerably more moderate than that of Britain...

Britain has called climate change the most urgent world problem of next century and warned that too many countries are clinging to short-term national interests in their failure to limit greenhouse gas emissions. The Foreign Office Minister... said yesterday that Britain would take the lead, at... Kyoto... Last week the U[S] President... said his country must take a lead and commit to "realistic and binding goals" on cutting gases, but gave no hint on how far he would go... Last year, the U[S] accounted for... about 23[%] of the world's total of six billion tonnes... of carbon emissions... China now accounts for 12[%], but is expected to surpass the US in 20 years... [Previously,] average global temperatures [increased or decreased] by around 1 deg C every 700 years. Studies suggest that we[now] face a rate of change up to 10 times faster than life on Earth can adapt

[to]... The Third Conference of the Parties to the UN Framework Convention on Climate Change (COP3) will hold official-level talks until next Monday when ministers, including possibly the US Vice-President... take over the final negotiations.

...World leaders... yesterday warned of a doomsday future for planet Earth if global warming was not stopped. But they had no new ideas on how to cut greenhouse gas emissions. The leaders addressed the[UN] summit... at the start of three days of ministerial meetings after a week of official-level talks failed to break deadlocks... “Last week we learned from scientists that this year, 1997... will be the hottest year since records have been kept. Indeed, nine out of the 10 hottest years... have come in the last 10 years. The trend is clear,” [the US Vice-President] said in his speech...

Back in her Pacific atoll home, she says people put their trust in “God the Almighty.” But in Kyoto, in the hardball world of high-stakes diplomacy, [she’s had] to put her faith in people. And her faith is fading. “All we can do is plead,” says the environmental official from remote Kiribati, a delegate to the historic Kyoto climate treaty conference. For some round the world, the meaning of global warming remains unpredictable, even inconsequential. But... [a recent UN] report concludes that in some island nations “migration and resettlement outside national boundaries may have to be considered.” It is a prospect that is preoccupying island leaders. “When our President speaks in Kyoto, you will hear him say he doesn’t want to go home and tell the people to start packing,” said the Marshall Islands diplomat... “We are scared, really and truly.”

...[NZ’s] Minister for the Environment... has defended a controversial proposal by [his country] at the Kyoto conference... “We didn’t go to Kyoto to sit in the back row and mutter platitudes from the stalls,” he said. N[Z] was the only country that had actually put pen to paper and generated some text... N[Z]’s proposal would see [Last World] countries agree in Kyoto that if by 2014 the [First World] countries are meeting their promised reductions, targets to limit growth (not reductions) in [Last World] countries would begin to take effect from that year. Those targets would be set by the year 2002... [The minister] calls it a sort of “double conditionality... If we don’t meet [whatever our targets are], then they don’t have to do anything.”

...The U[S] last night bowed to demands that it do more to stop global warming with an offer to cut its greenhouse gas emissions in the next 15 years. It is the first time the US has offered to cut rather than freeze emissions and it set off a hectic new round of talks[, taking]... key negotiations past a deadline imposed by the [COP3] chairman to come up with draft plans for global cuts... Most of the activity involved environment ministers of the... EU... There were reports... that some EU members wanted to stick to the 15[%] figure, while others were prepared to give ground in the interest of an agreement. Without fanfare but plenty of drama, the US offered cuts on the main three greenhouse gases from 1990 levels and secondary gas cuts from 1995 levels. The cuts were put at more than 2[%]... In a sign of the sensitivity of the issue, the first hint of the figure was leaked to reporters by[the] Danish Environment Minister... rather than announced by US officials in Kyoto... His comments set off a scramble to explain the remarks. A US official lashed out at the comments, saying the remarks were not an accurate account of the proposal, and that a 2[%] reduction was in fact “an understatement.” ...Frustrated by lack of progress in the talks, the meeting’s chairman... yesterday [offered an ultimatum to First World] countries to either present a plan to fight global warming or accept his... At the end of his 19-hour visit... [the] US Vice President... announced that he had given US negotiators more “flexibility” to find an agreement... An official close to the negotiations said discussions on reduction targets were circling between 3... and 7[%] below 1990 levels. Deviations were expected for Iceland, which is expecting a 40[%] rise in emissions due mainly to construction of a new aluminium smelting complex, and for A[US], the world’s largest coal exporter, which has long shunned any discussion of an emissions reduction... [because, apparently, most AUSns] fear... a reduction could harm the economy... [Speaking of AUS, five] years after an assertive geologist and a crusading creationist first confronted each other, a highly charged trial begins in Sydney today. And the costs could wreck one of them financially... Scientists and those fundamental Christians believing in the literal interpretation of the first chapters of the Book of Genesis have battled in court in the U[S] for 70 years over the teaching of evolution in schools. The A[US]n case, however, is the first in the world in which creationists stand accused, in effect, of intellectual and scientific fraud... Creationists claim the world, the universe and all life were formed in seven days some 6000 to 7000 years ago and, therefore, that geological evidence for the evolution of life stretching over thousands of millions of years is not only wrong but anti-Christian... [An AUSn ‘doctor’] came to public prominence in 1991 after returning from Turkey where he reported having been captured by Kurdish rebels while on an expedition to the site of the so-called Ark, a structure shaped like a boat at Akyayla near Mt Ararat in the mountains of Eastern Turkey. Its dimensions are precisely those of Noah’s Ark recorded in the *Bible* – 300 cubits long, 50 cubits wide and 30 cubits high. In 1992 he toured A[US] raising funds for an expedition to examine the structure further... Styled as [an] “archaeological research consultant for Ark Search,” [the Dr] sold lectures, publications and tapes, asking in all: “If this is not Noah’s Ark, then what is it?” ...[a professor] of Earth Sciences at the University of Melbourne... says [the Dr’s] claims are “codswallop” and damaging to the good name of science. After a 1994 visit to the Akyayla site he concluded it was a normal fold of rock, covered partly in mud and about 110 million years old... [The professor is charging the Dr before a judge] (there is no jury) in a civil trial which will see the relative authority of science and creationism argued under legislation designed to protect consumers against misleading or deceptive conduct by traders[, and says]... he has been motivated to pursue [the Dr], in part, by surveys of new students coming into the science-based faculties of A[US]n universities showing that the creationist view is sincerely held by up to one in five. A fast-growing sector of A[US]n education comprises private schools run on fundamentalist Christian principles and these have criticised [the professor] for supposedly not supporting “freedom of speech,” expressly the teaching of alternative “theories” of life... The case is peopled with contrasting characters. The white-haired Professor... a researcher on mineral formation and an expert in Turkish geology, is an ebullient activist for science and a skilled user of the media. He has sold his house to finance the case. The white-bearded Dr... styles himself as a profound preacher, philosopher and prophet. His financial sidelines are likely to be examined... [The judge], however, is not being asked to decide between science and creationism or whether the Turkish structure is the Ark. He will adjudicate first on allegations by... [someone] from Oregon, of infringement of copyright by[the] Dr... and his support group, Ark Search Association Incorporated... [Mr Oregon], a nuggetty marine salvager, was[once] a firm believer in the Ark, writing a book in 1988 which is the basis of his copyright claim... [The Dr] and Ark Search deny all the claims and damages. As part of their defence, he and Ark Search claim [Mr Oregon] had “formed an association” with... a white-breaded[self-proclaimed] prophet of... Nashville, Tennessee[, who]... wrote in a 1989 book: “The Turkish Government officially recognised [Mr Tennessee] as the archaeologist who discovered Noah’s Ark.” Documents obtained from Israel show [Mr Tennessee] claiming other discoveries, hotly dismissed by others, including the Ark of the Covenant, chariot wheels in the Red Sea and the blood of Christ... The financial pressure on all parties is intense. The trial is scheduled to last four weeks... [The professor] estimates the case is already costing him \$A500,000... [The] Dr... and associates tried hard to stop the case reaching court. Six days before the trial, Ark Search went into liquidation. Pending the outcome of the current trial is another case, in which[the] Professor... is being sued by[the] Dr... for alleged defamation in public and in the media... [The professor] also challenges... the... [Dr’s] claims to scientific expertise by citing his doctorate in Christian education... from... Freedom University, an unaccredited Bible College which, after a search in 1992, was found to be the mail box of the Maitland Bible Church in Orlando, Florida... [– although he also] has bachelor and master degrees from two A[US]n universities of high repute...

The astonishing Great Noah’s Ark Trial ended in Sydney... as it had begun – with biblical allusions and few observers prepared to bet on the outcome... The Jewish judge noted, to guffaws from the courtroom overfull with reporters, creationists and sceptical scientists that the trial had lasted seven days. In massive publicity generated by [the professor’s] side, the case has been represented as the “Scopes (or Monkey) Trial II,” a sequel to the infamous 1925 trial in Tennessee... Occasional witticisms aside, the trial was deadly serious... [It] may affect... assessment of [each side’s] sharply differing claims and their general credibility.

...*Genes v Genesis: the endless debate*... An A[USn judge has]... intervened in a matter of belief. In the creation versus evolution debate, he took the side of the angels... [A] Melbourne geologist, now faces huge costs for taking creationism to court – and losing. The case seems distant and the subject irrelevant. But they are essential... The Bench's lofty judgment: "Some issues – no matter how great the passions they arouse – are more appropriately dealt with outside the courtroom." Well, fine. Except that the law cannot simply duck the clash between science and belief. Genetic engineering, human cloning, abortion... they all deserve their day in court. Legal edicts on the scientific nature of things go back a long way, and the believers are still trying to affirm their rights. Alabama demands that a note be pasted into textbooks: "This book may discuss evolution... No human was present when life first appeared on earth. Therefore, any statement about life's origins should be considered as theory, not fact." Many biologists are concerned that such determined ignorance is winning... The theory of evolution is simple. It is "descent with modification" – exactly what cloning, descent without modification, is not. Parents produce offspring different from themselves, the differences are inherited and, inevitably, over the generations, life changes... [via] natural selection... Even to creationists, Aids is proof of descent with modification because they can see it happening... What is more, the HIV virus adapts by natural selection to overcome new treatments as they appear. Darwin would have been delighted... [T]he failure of creationism in Britain came because... [British Christians, unlike their counterparts] in America, where humourless literalism holds sway... were happy to define man as becoming human with the emergence of a soul that leaves no fossils and has no genes.

...A Melbourne scientist has failed in his appeal against a creationist's court win... A full bench of the Federal Court dismissed the appeal... against... [the] judgment... that... a... Sydney church elder... was not acting in trade or commerce when he made false representations about the site that many believed contained the... remains of Noah's Ark... [The scientist now plans] to file for bankruptcy... [Ironically, the Dr had] made the first legal move, serving a writ for defamation on [the scientist]... Meanwhile, the public spat between scientists and creationists continues and is now more focused as a result of the trial. [A palaeontologist who was one of the scientist's] witnesses in the original trial, intervened during [the Dr's] press conference last Friday and challenged him over his defence of "free speech." When [the palaeontologist reminded the Dr] of ordering his eviction by security guards from [a] May 1992 lecture because he asked a scientific question on the geological structure of the supposed site of Noah's Ark, [the Dr] declined to respond... terminated the interviews with reporters and walked away.

...Buried somewhat in the media noise was a clear finding of infringement of copyright by [the] Dr... in a drawing of the supposed Ark of Noah by an American... who was... [the professor]'s co-applicant in the case. Speaking from his home in Oregon, [he]... described the judge's award of \$A2500... in damages as "a slap in the face, which wouldn't even pay my hotel bill." [Mr Oregon] cited, as he had in court, two cases he had won in the U[S] for similar breach of copyright for which he was awarded \$US40,000... and \$US42,500.

...Then God told Noah and his sons, "I solemnly promise you and your children and the animals you brought with you... that I will never again send another flood to destroy the Earth... I have placed my rainbow in the clouds as a sign of my promise until the end of time." Genesis ch 9 v 8-12... The Bible is so entrenched in the Pacific that it is hampering the efforts of a new wave of modern scientists. Western scientists warning the island nations of the impending threat of global warming are up against the teachings of the men and women who introduced Christianity... The story of Noah... and God's promise... is one of their biggest obstacles. The people who embraced Christianity and its teachings find it hard to believe the predictions of scientists... [An environmental] scientist... of Auckland University, said he has repeatedly run into religious-based fatalism, a belief by the people that they are either being protected or punished by God. As a Tokelau village elder put it: "When there are no more rainbows I will prepare for sea level rise." ...many of those who do hear the scientists' warnings respond with a feeling of either helplessness in the face of this Western-induced disaster or optimism at the prospect of becoming environmental refugees. "The official Government response... often has the Pacific as the innocent victim. In other words: 'give us money to cope with this problem.' Others say it's the greatest thing to ever occur because it will give them an excuse to migrate to A[US or N]Z..." Intellectual colonialism has not helped smaller Pacific nations to come to grips with the problem, he said. For years the region's universities have been dominated by foreign intellectuals who have no long-term commitment to the islands, and aid money supposedly for environmental research has been siphoned off into other projects – including the development of new technologies in the donor countries. On top of that, Pacific peoples have been seduced by the glamour of Western technology, believing that the Western way of doing things must be better than traditional methods. For example, the boulder banks thrown up by cyclones to form natural seawalls have been taken and crushed for Western-style buildings, leaving the islands exposed to the sea. Western engineers have then advised that concrete seawalls be built in their place. "They don't have cement in the islands so they have to import it at great cost. Then, when there's a cyclone, the concrete blocks move and the islanders haven't got the machinery to put them back in place, so the whole thing is a waste of time and money..." Another natural source of shelter, mangrove forests, has been pulled out to make beaches for tourists, and islanders have left their traditional homes to live in Western-style cities on the big islands. "In the past Pacific Islanders were capable of repairing cyclone damage themselves. They cut down trees to make a new roof and someone from a neighbouring island paddled over with food. But you can't do that with a whole city of people. Now, when there's a cyclone, they need foreign aid to get back on their feet."

...A disaster can be defined as an event such as a fire, flood or drought, which occurs at a magnitude or frequency beyond human expectations. A characteristic of many disasters is that the management practices and procedures designed to deal[with] them fail. A common factor at many fire disasters is the inability of fire managers to predict fire behaviour.

...Floods, droughts, out-of-control fires. The devastating effects of the El Nino weather pattern on both sides of the Pacific Ocean are troubling enough. But when [one] scientist... reached the Pacific atoll of Christmas Island, in Kiribati, he found something more quietly chilling: stretches of dead coral, no sign of fish in the water and few birds in the sky... The water surrounding the sparsely inhabited atoll, the world's largest, is 4 deg C higher than average for this time of year, throwing the environmental system off its axis... "It's an example of a complete ecosystem collapse that's directly linked to El Nino," said... [the] climate expert at the Lamont-Doherty Earth Observatory at Columbia University, New York. While delegates... in Kyoto haggle over greenhouse gases and emission limits, a compelling – and so far unanswered – question has emerged: is global warming fuelling El Nino? Like many of the issues surrounding global warming, nobody is really sure. Scientists say they need much more data than they have today... Right now, experts have accurate data going back only 100 years... Even environmentalists say it is too soon to blame El Nino on car exhaust. But one thing is certain: El Nino is getting stronger and more frequent.

...At the start of the conference the U[Ss'] position was to stabilise emissions at 1990 levels in the next 15 years, while the E[U] wanted to cut them by 15[%]. But both sides gave ground and authoritative sources said last night that a historic deal... was imminent. The figures had narrowed to 8[% for the EU, 7% for the US and 6% for Japan. However a]... group of US senators and congressmen in Kyoto to observe the meeting predicted a major battle to muster Senate support for any agreement that would oblige the US to cut its greenhouse gas emissions.

...The world's first treaty to reduce greenhouse gases finally emerged from weary delegates exhausted by long hours of debate that pitted nations, interest groups and whole regions against each other... At the end of 11 days of non-stop negotiations, which turned chaotic in the last 24 hours, a new front was opened in the battle against global pollution. No nation claimed victory and none ended up completely happy... The big three[– the US, the EU and Japan –] committed themselves to cuts of [7, 8 and 6%] from 1990 emission levels in the next 15 years... But... the... EU Environment Commissioner... [is] worried about the future. "We would have liked the parties to be more ambitious," she said. The way the agreement was reached is likely to become the stuff of international diplomatic legend... At one stage... [the] conference chairman... Argentina's ambassador to China... adjourned the meeting for a 30-minute cooling-off period when he thought it was about to break down irretrievably. The two issues that held up the treaty mainly involved the U[S] and China, which fought to a one-all draw. China's victory was to have a paragraph deleted that would

have committed it and the rest of the [Last W]orld to joining the global warming fight, an expense they said they could not bear while their economies were just growing. The US victory was to keep the right to emissions trading... [T]he target for N[Z – an 8%] cut to emissions... – was achievable but it would not ratify the protocol until key issues were resolved... [said its] Environment Minister...

For the next generation, the Kyoto Protocol is certainly going to be a landmark document. All countries now accept that the increase in greenhouse gas emissions is highly risky. The [First World] countries also accept that they have to act first. The [Last World] countries have agreed that they could benefit if some of the new “clean” technologies are made available to them. Some have been surprised that such a package was possible. Many have been disappointed, because they wanted to see even deeper cuts. Why should we wait until 2010 for the world to stop using the atmosphere as a rubbish dump? Others (like A[US]) want to see the canaries actually drop dead before they get out of the coal mine. N[Z]’s variant is to ensure that there is a deregulated market for dead canaries... [T]here can be no doubt that this Protocol has got teeth. No government will be able to ignore it. More important, no private investor will be able to neglect the cost of generating CO₂ or other greenhouse gases, especially when a market mechanism is established to create financial benefits for those who invest elsewhere... The new focus of the international community is on risk and risk management. There will be a large effort to help the Pacific Islands and other [Last World] countries get the power they need without adding to risks. Globally, there will be exponential growth in the market for proven renewable technology such as solar PV, wind, biomass, and the efficient back-up systems which are now available for small to medium electricity plants.

...China yesterday hailed the damming of the mighty Yangtze River as a major milestone in the world’s biggest hydropower project that would symbolise the nation’s technical prowess. Today an army of construction workers will block the main channel of the Yangtze... which ranks only behind the Amazon and the Congo in terms of water flow... in a high-profile ceremony... celebrating what is arguably the most ambitious engineering project in history... The blocking of the river will allow the building of the gargantuan Three Gorges dam, the core of a \$US30 billion... project aimed at slaking China’s growing thirst for electric power... and taming the flood-prone Yangtze... an unruly waterway that has claimed 300,000 lives this century alone... [C]lean hydro-power will reduce China’s reliance on sulphur-belching coal power plants... [An area covering] more than 56,000 sq km... is being flooded to... [supply the] power station, which will begin generating electricity from 2006... The project[, which]... will include... agricultural initiatives... [and] large infrastructure... ranging from airports to railways... is due to be completed in 2009. But its critics say a series of smaller dams on Yangtze tributaries would be more efficient and that the current blueprint will trap a vast pool of industrial and human waste... [which] Chongqing pumps into the river... creating an environmental nightmare... Silting, they say, will block the river drainage outlets in Chongqing: sewage will bubble up through manholes and slosh through the streets of China’s largest city... They also say it will needlessly force the evacuation of people and submerge priceless archaeological treasures. In... Wanxian a sign shows the water level in the huge reservoir will rise 146m. And high on a hill in the city of Fuling, a big red warning sign says: “177 metres – Three Gorges Water Inundation Line.” Both give ominous notice of the largest peacetime forced migration in history – the relocation of 1.2 million people to make way for... a 600km long lake... The forced eviction of families from their ancestral homes has stirred deep unease in China, where respect for one’s forebears is an overriding virtue. China’s communist rulers fear popular wrath, and are struggling to convey a sense of caring and compassion... Activists opposed to the dam said the relocation was a violation of human rights on a huge scale... [T]he... 1989 book *Yangtze! Yangtze!*, which argues that the project is a monstrous white elephant, has been banned in China. In Sichuan province’s Guihua village, [a] sweet potato farmer... said she was paid 15,000 yuan... for her old... home... [S]he had to borrow more than 40,000 yuan... from family and friends to buy her new home, which cost 60,000 yuan... Farmers uprooted from fertile plots complain about their new holdings on unwelcoming soil. “The newly developed land will be a little bit worse,” conceded... [the] Mayor of Wanxian city, which administers a vast area now home to more than two thirds of all the people doomed to be displaced.

...Environmental debate is still raging over the Three Gorges dam, even as work starts on blocking the Yangtze so that workers can begin pouring the concrete for its towering walls... China’s economic boom of the last two decades has already taken its toll on the river while intensive farming has further muddied the river’s waters by speeding up soil erosion. “When I swam in the river as a child, I could cup the water in my hands and it would look like mineral water,”... said... the captain of a tourist steamer who has plied the Yangtze for 26 years... “Sometimes I look at the river and I want to cry.” Things are likely to get worse. Official estimates say one billion tonnes of sewage will flow into the reservoir each day. Human waste, industrial chemicals and heavy metals will be the main ingredients of this toxic soup. Adding to the problem, the dam will dramatically slow water flow from Chongqing to Yichang, robbing the river of its natural self-cleaning mechanism that now flushes sewage into the East China Sea. While acknowledging the problems, China says the project will be good for the environment... The dam’s 26 turbines... will pump out 18,200 megawatts of electricity, equal to about 10 big coal-fired power stations or 50 million tonnes of coal a year... [Furthermore, metropolitan] Chongqing, which covers dozens of towns and villages and has a total population of 30 million, is to spend 300 million yuan... on environmental clean-up, officials said... [D]oomed factories will be torn down and their sites scrubbed clean of pollutants. Paper and plastic are to be picked out of landfills and burned. Pollution is only one aspect of the ecological problem. Critics say the dam will also threaten many rare plant and animal species along the river and cut fish stocks. Most at risk is the snub-nosed Yangtze River dolphin. Many have been killed or maimed by the propellers of boats, and now only 200 are left... [In addition, some] scientists say the sheer weight of the huge lake could trigger an earthquake that in a worst-case scenario would damage the dam and threaten millions of people downstream. - 1997

Earthquakes, floods, blizzards and other natural disasters killed 3200 people in China last year and caused 197.5 billion yuan... in damage, according to the China Daily... [In addition, t]he population of the most endangered marine mammals on the planet... reached such a low level that Chinese authorities feel that the... number is... too few for the species to survive much longer... Scientists in Beijing told reporters that they found only... 21... of the white flag dolphins in the middle and lower reaches of the polluted Yangtze River... in 1997. The scientists called on the public and Government agencies to increase protection efforts and curb pollution and other human activities pushing the dolphin toward extinction.

...These are good times for the elephants of Yunnan Province, in southern China. Poaching remains a problem... but compensation for trampled crops has forged a reluctant peace with local farmers and numbers have been rising. But in a broad valley sweeping out from Kunming, Yunnan’s ancient capital, a pall of smoke drifting several kilometres downwind from a factory smokestack tells another grim story of modern China: endemic pollution which, by fouling the air alone, will this year cause the deaths of almost 290,000 people. In Beijing... one of the country’s most distinguished environmental scientists, worries at the possible consequences of rising affluence. “When I visit America people ask me if China should have the same living standards as the US,” he says. “I tell them no. At present China’s consumption is one-tenth of America’s, but the population is 10 times greater.” The implications are clear. Between 1952 and 1987, while national income rose 8.6 times, energy consumption rocketed almost 15 times and the use of non-ferrous metals and iron ore about 24 times. At the heart of China’s dilemma is its reliance on coal... Although [coal’s] share is expected to fall to 50[%] by 2050, production will this decade rise by 500,000 tonnes. Across China, the legacy hovers in a permanent, acrid haze that dries the throat and stings the eyes. Urban pollution... is getting worse. Few of China’s 500 cities meet national or world environmental standards: in some the total concentration of suspended particles is more than 12 times the maximum levels set by [the WHO]. Agriculture is suffering. About a third of China’s farmland is scarred by serious soil erosion, 100 million hectares of grassland is degraded – almost one million hectares is lost every year – and overfishing and pollution are increasing in coastal waters. But China... has at least started on its long environmental march... China now has an environmental plan termed Agenda 21... It emphasises sustainable development and agriculture, cleaner

industrial production and environmental protection, clean energy and transport, conservation... Much of the work is already under way. Reafforestation projects have increased forest cover in China from 4... to 12[%]. The Sanbei forest belt is said to be the world's largest ecological project, creating a "Great Green Wall" stretching further across China than the ancient defence works.

...Dykes along the Yangtze River are caving in as the... fight against China's worst flooding in... decades stretches defences... Millions of peasants, officials and volunteers from the city were camping out... on the dykes, watching for leaks, as soldiers frantically sandbagged potential weak spots.

...The Red Cross is appealing for aid to help... victims of devastating floods... which have deluged the southern half of China since March... The floods... [are] the worst in living memory for many areas... Authorities[have] evacuated 132,000 people stranded by swollen waters near the Three Gorges dam... A massive crest of water that rushed down the Yangtze last week caused a scare over the... dam project... Although officials said a temporary dam now in place withstood the swell that passed late on Friday, state media warned the crest was threatening to overwhelm dykes downstream... Meteorologists had said the rains were moving northward, but warned that serious flooding could resume with summer typhoons.

...Rain continued to pound the crucial upper reaches of the Yangtze River in China yesterday. A typhoon, the third of the season, was also due to hit southern Guangdong province, with heavy downpours in the late afternoon... The continued rainfall in Sichuan province renewed fears in the central Wuhan city... The official *China Daily* credited Wuhan's high dykes with protecting seven million residents from the river's fourth flood peak of the season. "The city's 286km of levees along the main stream of the Yangtze stood up to the trial and remained intact, though the water level hit 29.39m," it said. That was the second highest level in 133 years of record-keeping... About 150km upstream, at Shashi in the Hubei province, the river fell slightly to 44.59m... A river diversion is being prepared at nearby Jiujiang to save large cities downstream in case the level rises above 45m. About 500,000 residents were evacuated from the zone last weekend to prepare for the possible dynamiting of big Yangtze dykes...

Three dykes have burst along the Nen River in north-east China, threatening the country's largest oilfield of Daqing. About 200,000 soldiers and civilians have been reinforcing flood defences... [around] most of Daqing's 20,000 oil wells... [However,] waterlogging has closed 355 oil wells and reduced daily output by 807 tonnes... Water control experts forecast that in about one week the water level on the Songhua River flowing past the city would rise to a record 120.3m... China has been battered by more than 60 days of heavy flooding... While the Government has largely blamed the floods on the[El Nino] weather phenomenon, some officials have pointed to widespread deforestation along river systems as a major factor in the severity of this year's disaster. Critics have also blamed the Three Gorges Dam project... for sucking funds from other flood-control works.

...There was a tragic inevitability to the admission by Chinese officials that their own lack of concern for the environment, particularly the wholesale clearing of hillside forests, had added to the toll of the Yangtze floods. In the vast territories radiating out from Beijing, stinging air and toxic rivers are an unrelenting reminder for China to fully embrace the cleansing of five decades of thoughtless industrial development.

...Chinese authorities, bracing for more floods, have declared a state of emergency in two provinces... Water levels on the giant Yangtze River have exceeded the danger marks in eastern Jiangsu and central Anhui... In Anhui, about 200,000 people have been evacuated from villages along the Yangtze... Authorities planned to inundate the villages as a means of diverting water from key industrial cities... About one million civilians and soldiers have been mobilised to reinforce dykes... the country's largest military mobilisation since the Communist revolution in 1949...

Wearied Chinese flood workers, beset by disease, are battling yet another "devastating" surge on the Yangtze River... [I]t was reported from Beijing that the Yangtze's eighth flood crest of the year was rushing towards central Hubei province's Yichang, a city of four million people and construction base for the Three Gorges Dam project... Widespread flooding this year has killed at least 3004 people... and... left millions homeless[most of whom have been]... warned not to expect too much from their cash-strapped Government...

[China's] Ministry of Finance... said this year's natural disasters, especially floods, were "unexpected and unprecedented in their severity" in many areas. In central Hunan province, the water level at Dongting Lake's Chenglingji hydrological station hit 35.48m, breaking the 1996 record of 35.31m... The danger mark for the lake is 32m... [A]bout 280 million people – about one quarter of China's population – have been affected by natural disasters... [which] have... destroyed 3.86 million houses and forced the relocation of 8.65 million people... More than 3.4 million hectares of crops have been destroyed and a further 28.4 million hectares of farmland have been affected, cutting... output by about 30[%], bringing direct]... economic losses from natural disasters... to 153.1 billion yuan... Disaster-hit areas have received 1.6 billion yuan in relief funds... Donations totalling 178 million yuan and relief material worth 224.5 million yuan had been distributed...

[T]he cost of the disastrous summer floods has been put at 300 billion yuan... cutting up to 4[%] from the country's... GDP... While the floods had a major impact on agriculture, they [a]re actually expected to boost the growth of industry and the service sector... [A] Chinese Academy of Sciences economist... predicted that a new wave of construction would boost domestic demand for investment and retail sales...

China is fighting "speculative" price rises as the... floods... affect everything from grain to cement to household appliances. Authorities have slapped price controls on many goods after... prices... doubled... in many areas... The measure followed a call by the Communist Party mouthpiece the *People's Daily* for local governments to combat business activities that "disrupted the market order." As the floods hit prime grain-growing areas, officials ordered the unloading of record grain stockpiles on the market to help bring down prices... Faced with the destruction of 5 million homes... officials were fretting that the effort to rebuild millions of homes and thousands of factories could be hampered by price rises.

...China has started resettling 2 million more people to make way for the giant Three Gorges Dam, bringing the total displaced to 3 million. The resettlement will stop wetland farming and increase the Yangtze River's floodwater capacity to more than 10 billion cu m... China says it will help solve the perennial problem of flooding along the Yangtze... [However, i]nternational and domestic critics have voiced scepticism about the dam's flood-control and questioned its high financial and human costs.

...[a] Booker prize-winning author... led a howl of protests after India's highest court cleared the way for a dam stalled for six years by an environmental lawsuit... [The writer], who donated to the... Save Narmada Movement... the \$US35,000... prizemoney she won in 1997 for her novel *The God of Small Things*, said the court decision was heartbreaking. "The court has crushed the most non-violent peoples' movement in the country. This shows that you can stand in front of the map of India and throw darts anywhere on it without bothering about the environmental or human costs, or analysing the benefits for the people." "...We will certainly go back to the people. People are ready to fight a battle even beyond this verdict," said... the... head of the... [movement], who staged a 26-day hunger strike against the Narmada River hydro-electric project in 1994.

...Floodwaters raged in northern and eastern India yesterday, pushing the death toll to more than 1000... About 500,000 people have been evacuated and 50 million affected... [F]loodwater from upstream India... [has also killed] nearly 1000 people... in... Bangladesh... Hindu women [have been pouring] milk into a river on the outskirts of... Dhaka as part of ritual prayers to end the... flooding.

...In Dhaka, the head of the Bangladesh Red Crescent Society... said: "When we made the first appeal for help 10 days after the flooding started... no one imagined it would take on such a huge magnitude... [They] have assumed the level of 1988 floods and might have a much bigger impact on life and economy when waters recede," he said... More than two-thirds of the impoverished country is under water[as a result of this year's floods, which] have... led to epidemics in the past seven weeks... [The UN Secretary-General has] urged the international community to respond generously to an appeal launched by the Bangladesh Government for emergency aid of \$US680 million...

Bangladesh is asking international donors for \$US680 million in emergency aid amid the worst floods in 10 years... 700,000 tonnes of rice... have been destroyed... [The] floods set off by heavy rain have... left over half a million marooned[. • 'The RNZAF's first contribution to a major international relief operation took place in Apr, 1972, when a Hercules airlifted 500,000kg of food throughout Bangladesh. A few weeks later, a second

Hercules distributed 1.5 million kg of food. For its efforts, the RNZAF was awarded the Red Cross Meritorious Service Medallion – the first time it had been awarded’]...

Bangladesh’s already strained economy is suffering a major setback as the country grapples with its worst floods on record. The floods... have shut down operations at nearly 5000 small, medium and large-scale industries... causing losses worth 200 billion taka (about \$[NZ]8 billion), a Bangladesh Chamber of Industries estimate said... Bangladesh has so far received flood aid worth \$37.8 million, mostly from Western countries.

...Triggered by heavy rain and fed by swollen rivers flowing from the Himalayas... including the Ganges shared by India... Bangladesh’s... floods... [caused more] than 150,000 people[to] contract... diarrhoea from polluted water or rotten food. Diseases such as hepatitis, jaundice, malaria and scabies are rampant and increasing... Meanwhile, [the]... Indian Government’s plan to relieve the country’s worst drought for a century has finally – and belatedly – swung into action, even as thousands of people desperate with hunger and thirst are fleeing the worst-affected regions. In Jodhpur, the first relief train has arrived, carrying 200 tankers of drinking water, which will be trucked to Rajasthan’s parched countryside... Every village in western Rajasthan is a potential victim in a drought. The rivers and ponds dry up, rainwater tanks become exhausted, the water table in wells plummets. That is why the Government has built fine concrete water tanks in most villages, hooked up to pipelines. Moklashani has one... But the structure is disintegrating, the tank is bone dry and it has no pipes or taps or troughs connected to it. Built 10 years back, underwater pipes fed it for a few days – then never again. So what do you do? ...The answer... is to dust off the wisdom of the ancients. Hundreds of years ago, when these villages were first established, settlers made a vital hedge against dying in droughts: in the beds of the seasonal ponds they dug wells lined with stones for durability. “In the old days they guarded the pond fiercely... and they went to a lot of trouble to maintain the wells.” When the Government waved its wand and shot pipelines out into the Rajasthan Desert, these careful practices fell into disuse. But for want of other alternatives, the women of Moklashani are rediscovering these wells, or bheri... [However, a]part from being... badly depleted, the water in Moklashani’s bheri is not... potable. It is dirty – due to slack maintenance of the pond – and can be used only for watering the animals and washing. The village’s only way to get drinking water is to buy it from the water barons. Sharp local businessmen sink bores on their land – or use intimidation to plunder common sources – then fill tankers and ply them up and down the gravel roads. Price varies according to need. Close to Jodhpur they charge 150 rupees... for a tanker full. But in Moklashani the price is doubled. To some Indians, that price is a snip. After all, at Bombay Airport the only drinking water available is Evian, imported from France and priced at 70 rupees for a 300ml bottle... [In related news, ‘Canadian researchers have found traces of man-made toxic chemicals in snow at remote mountain locations – and they believe nowhere on Earth is untainted.’ Other ‘scientists warn the world’s oceans are more polluted than first thought.’ One] scientist, who has just completed a review of A[US]’s seagrass resources... says... [it has lost a]bout 45,000ha of... seagrass[, which]... compares to similar losses throughout the industrialised world... The world’s seagrass is vanishing because of urban and industrial pollution, raising fears of underwater deserts that will cause the decline of some fishing industries... When seagrass dies, sand becomes more mobile, creating erosion and gradually ending other forms of life. [■ ‘The U.N. Environmental Programme has described the Caribbean as one of the most polluted and endangered areas in the world. The Sea’s ridges and deep basins prevent natural flow to the open sea, trapping pollutants that are swept in from Mexico, America, Brazil and Venezuela, choking the marine environment.’]

...An estimated 140 dolphins have been washed up along beaches on an island off the coast of Venezuela. The dead and dying dolphins have reddish marks on their abdomens but the cause of their deaths is not known. The mysterious dolphin deaths come as the scientific world focuses on the sickly state of the world’s oceans. In Washington today a group of scientists sounded an alarm over the various threats to marine ecosystems. The problems have now led the U[N] to name 1998 the International Year of the Oceans... The oceans were once thought to be too vast to suffer serious harm but not any longer... “The sea is in real trouble...” Among the signs: diseased and dying coral in more than 90 countries; in South Africa, two million lbs of crayfish killed by algal blooms called red tides; in N[Z], more than a billion fish killed in recent years by a toxic organism[; in]... California, the virtual extinction of white abalone... “We take too much from the sea and we put too much into the sea.” ...The scientists... say government and the public must act now to prevent irreversible damage to the Earth’s largest ecosystem... [They] want a White House conference on the seas, more maritime sanctuaries, and tougher laws on clean water and endangered species.

...KAIKOURA is famous worldwide for the great toothed whales that spout within sight of its pebbly beaches and dive to inky depths in search of the elusive giant squid. But why Kaikoura? What has it got to offer? The answer is as impressive as the whales themselves. Beneath the waters of the broad bay south of Kaikoura Peninsula lies one of the world’s natural wonders: a submarine canyon. It slices more than a kilometre down through the surrounding shallow continental shelf. Importantly for the whales, the canyon funnels deep, dark blue, nutrient-rich oceanic water in close to the shore so that life teems there... including giant squid. But these terrors of Jules Verne’s *20,000 Leagues under the Sea* are only a tasty meal for Kaikoura’s whales. High-tech marine surveys over the past few years by N[Z] and French scientists have revealed that the Kaikoura Canyon has a grandeur and a life independent of its whales. “Swath” sonar images... show huge rockfalls partly blocking the canyon, and a rough textured floor from which beach pebbles, with shells and driftwood, have been dredged. The images show that the chasm cuts to within a stone’s throw of rocky promontories near the tiny settlement of Goose Bay. A river of sand running along shore pours into the chasm and pebbles, torn from beaches by storms, are swept over its rim. Abrasive sand and pebbles gave birth to the canyon and keep it a growing feature of the Earth’s surface. Submarine canyons are not particularly rare but most are comparatively insignificant features far from land. They cut only the outer edge of continental shelves. They are dead, relicts from the ice ages when polar ice caps took so much water out of the oceans that the sea was more than 100m lower than it is now, and rivers carried their loads to beaches at the rims of emergent, windswept continental shelves. But when the ice melted and the sea flooded these shelves, the canyons were left without the sand and pebbles that sustained them. For the marine geologists who study it, Kaikoura Canyon is a rare example of one that survived the flood, perhaps because it could cut back through fault-shattered rocks. To understand it is to understand how the relict canyons worked and how canyons have flushed sand and pebbles from shore to settle in deep-ocean basins through geologic time. Some of these ancient, deep basins have been pushed up high to form the mountain ranges of N[Z]. And there the cycle of the Earth begins again. Sages have long waxed eloquent about mountains being washed to the sea. But the pebbles, sand and mud from N[Z]’s snow-capped Southern Alps have barely begun their journey when they reach the coast. In a dogged “two steps forward and one step back” dance, they are moved inexorably north by large waves and currents from the great Southern Ocean around Antarctica. They move... until the yawning chasm of Kaikoura Canyon appears before them. About 2 million cubic metres each year fall into the canyon head and settle on its steep walls. Like the soft snow that settles quickly on the steep lee slopes of mountains, the pebbles and sand are unstable. Periodically, perhaps when shaken by earthquakes on the nearby plate-boundary faults, they collapse in great avalanches that rush down the canyon... When they reach more gentle slopes they dump their load of pebbles but they don’t stop. Submarine avalanches have a curious way of entraining mud that has rained from above since the last event and metamorphosing it into fluid slurries. These... can travel at motorway speeds along meandering, Mississippi-like channels for enormous distances. Those that begin at Kaikoura have been traced for 1500km... Radiocarbon dating of a piece of driftwood in the lower canyon suggests... the last avalanche... [was] about 170 years... [ago. O]nshore, many rockfalls along the San Andreas-type Hope Fault have been estimated, from the growth of lichens on bare rock faces, also to be about 170 years old... No stories have survived of the spectacular sea “boils” and tsunami waves that would have resulted. But that was a time of great social upheaval in Maori society.

...[the] Captain... aged 75... was harbourmaster at Whitianga when the night-time tsunami from Chile struck the Coromandel Peninsula seaside settlement without warning in May 1960. To this day he remembers the terror of powerful water surges and a panic evacuation of the town... But... a coastal hazard scientist at the Institute of Geological and Nuclear Sciences, says the Whitianga tsunami was small compared with past tsunamis

and what might be expected in the future... Four or five big tsunamis have hit N[Z] in the past 180 years... No coastline around N[Z] has been spared from tsunamis, although some areas, such as the east coast of the North Island, are more susceptible... On the West Coast, it is a case of double jeopardy. Not only is the region at risk from tsunamis generated by local earthquakes, but seismic waves originating from South America passing to the north of N[Z] could bounce back across the Tasman Sea from A[US]. The hazard scientist said: "The parallels between what has happened in P[NG] and what will happen at some point in N[Z] are stunning... We need to learn some significant lessons from th[e PNG tsunami]."

...The... tsunami that gouged the north-western coast of P[NG]... on Friday... came in the dead of night and wiped out whole villages – a huge wall of water that... left total devastation in its wake... "There were three waves that came in... The first was about 10m and then there were two smaller ones..." ...The earth sciences department at Waikato University was yesterday scrambling to get one of its team to the destruction zone, saying it was vital to learn as much as possible about the tsunami... Rescue workers were also racing to the area to help the injured... [T]he official death toll stood at about 700 last night. More than 6000 villagers were homeless... Immediate needs were to get food and shelter to the survivors, many of whom were badly injured, and to help to dispose of corpses. An RNZAF Hercules is on stand-by in Auckland ready to ferry supplies... Damage to airstrips and rugged terrain will make distribution difficult. The tsunami hit... after an earthquake just off the coast which measured 7 on the Richter scale... The district's disaster co-ordinator... said: "We have assumed schools... will be closed because we don't have the children. They're... all dead." ...There were reports of villagers dying in swamps where they lay waiting for help. Other bodies were floating in the Sissano lagoon after two villages housing 2000 people on a spit of land were obliterated. N[Z] scientists fear a similar tsunami could strike without warning here. As recently as this month a huge wave was recorded during a storm in the outer Hauraki Gulf. The 12.3m wave was measured... by a deepwater wave rider buoy... Such waves surging from the sea are not uncommon... It probably flattened before hitting the coast at Leigh, where no damage was reported. But what scientists fear most is an earthquake close to the coast causing an underwater landslide and a huge seismic wave... Cases of huge waves hitting N[Z] have been recorded for centuries... The entire Pacific region faces the risk of tsunamis... Hawaii, Alaska... Russia's west coast and Pacific islands have all suffered tsunamis... this century... with the most deadly triggered by an 8.6 quake off Chile in 1960. As many as 2000 people may have died and damage was estimated at \$100 million... More than 100,000 d[i]ed after a tsunami hit Japan in 1703...

Tsunami waves start as insignificant ripples on the ocean's surface, capable of passing under a ship unnoticed... [and travelling] across the ocean at speeds of up to 1000 km/h... It is when the tidal wave nears shore in shallower waters that it gains its destructive force... For those on shore there is little warning of a tsunami's approach. The first indication is often a sharp swell, not unlike an ordinary storm swell, followed by a sudden outrush of water that often exposes the shore area as the first wave trough approaches... "A tsunami is not a single wave, but a series of waves. As the tsunami enters the shoaling waters of coastlines in its path, the velocity of its waves diminishes and wave height increases..."... said... Hawaii's Tsunami Warning Centre... The highest reported tsunami was one triggered by an underwater landslide. It struck the island of Lanai in Hawaii about 105,000 years ago. The *Guinness Book of Records* says it deposited sediment up to an altitude of 375m. The highest known in more recent times appeared off... Ishigaki Island... near Japan in 1771. It was possibly as high as 85m and tossed a 750-tonne block of coral more than 2.5km inland. The highest wave ever surfed was about 15m – a tsunami which struck Minole, Hawaii, on April 3, 1868. A Hawaiian named Holua rode it to save his life... Probably the most destructive tsunami on record occurred on August 27, 1883, following an eruption of the Krakatoa volcano between the Indonesian islands of Java and Sumatra. Over 36,000 people were killed by the resulting tidal waves, which reached a height of up to 30m and travelled at... 720 km/h. The tsunami's passage was traced as far away as Panama. There has already been scientific speculation that the P[NG] tsunamis might have owed much of their force to an undersea landslide.

...Yesterday, the once-idyllic fishing villages that bore the brunt of the tsunami were eerily silent... As survivors staggered into a small hospital in Vanimo, a local health official asked...: "Where are the little ones? Where are the children?" ...Rescuers fear a generation of children has been wiped out... in some villages... by P[NG]'s terrible tidal wave... "The most saddening thing is that 70[%] of the survivors have been adults... The children may be hiding somewhere; we hope so. But the fear is that they have drowned..."... a... priest... said... Children were too weak to escape the 10m-high wall of water... Officials said yesterday that... about 1000 bodies had been buried... where they lay on beaches... so far and "at least 3000 are still missing." ...many... [of] the injured... remained hard to find after fleeing in terror into the jungle-clad mountains, fearing more waves. Hospital staff said they were running out of medical supplies to treat the injuries... A [RNZAF] Hercules is expected to reach Port Moresby this morning with 28 personnel and... some medical supplies. A second Hercules will leave Whenuapai at midday today. The first of three A[US]n Air Force Hercules arrived at Vanimo yesterday with emergency supplies, including a field hospital and a 100-strong team of doctors, nurses and engineers... Private aid agencies have also set up emergency appeals for funds and sent immediate shipments of clothes, food and shelter to the area... [where up] to 10,000 people were estimated to have lived... "The water in the lagoon is so contaminated with... decomposing... bodies that most of the fish and crabs... are dying," said a provincial rescue official... [M]otorboats... patrolled the sea... towing nets to try to reclaim floating bodies... that big water crocodiles were feeding on...

The horror is far from over... 70 gravediggers were airlifted into Sissano, civilian volunteers equipped with digging implements. But the task is clearly beyond them... They dug the first mass grave in Aitape... [with] the only mechanical digger in the area... but it wasn't for those killed in the tidal wave. It was for 90 survivors who have died since, exhausted by wounds, shock and the infections which prosper in the humid heat... "We are seeing people so devastated they cannot talk; so deeply in shock they are simply unaware," said an emergency co-ordinator... The injured are dying so quickly, the morgue cannot contain them, and the decaying bodies have become a threat to the living... But at least those who died at Aitape were identified and counted, their deaths recorded. In the bush, many more are dying... [after being] washed 2km inland... [by] tonnes of water... Two A[US]n Army teams were helicoptered into the bush yesterday with the unenviable task of grading the survivors – giving priority to those with a chance of living. There is no space or time for those beyond help. "It's a tough call," said a rescue pilot... "You die quickly here." Even as they are rescued, many have about them the unmistakable stench of death, of flesh rotting with gangrene and tropical ulcers, a smell "you can't imagine... The... sea is full of bodies... After three days in the water, if you touch them, they disintegrate. We cannot wait for them to be identified."

...The sound of prayers and hymns have begun to rise from under palm trees across P[NG] as a stunned... [but] deeply religious nation... comes to terms with tidal waves that killed at least 1600 of their brethren... [U]p to 6000 others remain... unaccounted for... The prayer vigils have helped ease the distress of survivors who have been unable to observe traditional mourning rites. "Wantoks" – members of extended families that make up villages – usually keep their dead with them before burial... "They normally have the body in the house, certainly overnight. The whole wider family gather around and they have the telling of stories and the wailing... It's all a very important part of mourning. I don't think they've come to terms with it at all at this stage. They haven't got the bodies to wail over."

...A restricted zone of death may be declared on P[NG]'s tsunami-ravaged north-west coast... The Vice-Finance Minister... said: "I am calling on the Government to seal Sissano... and allow natural decay to destroy the rotting corpses." [As soldiers] yesterday began shooting dogs and pigs that were digging up buried bodies... [a team of US] search and rescue dogs was said to be on the way to help sift through debris for more survivors... Doctors are concerned that disease will spread through contaminated water and food. Sissano lagoon, the centre of the affected area, remains choked with corpses... Food and fresh water were running low and many of the survivors were already suffering tropical malaria. "We will have to monitor to see if typhoid and cholera occur," said... [the minister. NZ] medical staff working desperately to save survivors made do with just a few hours' sleep... "You never know when or where the next case will come from... It's been pretty strange... We worried about getting their T-shirts dirty, because it could be the only piece of clothing they own."

...The true death toll... will never be known. Relief workers have sealed off the most devastated areas, allowing hundreds and perhaps thousands of unrecovered bodies to decompose... After-shocks of last week's earthquakes added to survivors' worries and led seismologists to warn that there was a 50[%] chance of more tremor activity in the area. But they added that it would pose no danger of surges. The effect of the tsunamis has hit aid workers as well as the villagers. Four days after arriving... [one NZ] Army nurse... still does not know what to say to a 6-year-old who has awoken to see that her leg has been amputated or to a man who has lost his whole family. "There's nothing you can say that will make the hurt go away,"... [she] said yesterday as she stood in the post-operative "ward" – a cluster of tents on a sportsfield... She is one of 26 N[Z]ers working 20-hour days in the tropical heat... [S]peaking through translators to the Pidgin-speaking victims[, she]... has been told that villagers thought the noise of the killer waves was the sound of an ocean liner going by. They rushed to the coast and their deaths. The disaster has been a challenge for young military medics, trained for wartime injuries to young healthy soldiers. They have found it hard to cope with treating children, said the leader of the A[US]n contingent... The medical teams work is being hampered by the conditions. X-rays are carried out in an open-air structure with a roof of palm fronds. Those wandering behind a patient as x-rays are being taken are warded off in a manner akin to a golfer's cry of "fore". Surgery – often including amputation – is carried out in a tent. As darkness falls, doctors and nurses work by car headlights or television camera lights... [The NZ nurse begged NZ]ers to keep sending help. "It would benefit so many... People would be so grateful." [Another RNZAF] Hercules loaded mainly with medical supplies and aircraft parts, will leave Whenuapai at 8am today and should reach Port Moresby this evening.

...A "no-go zone" established in the area of P[NG]... devastated by tsunamis has been extended... However[, authorities]... have dropped plans to destroy the lagoon where... hundreds... of... bodies... still lie as it is considered sacred by survivors... Authorities were proposing to clean out the lagoon by blasting through the narrow sandbar... The decision came as an international team of doctors began winding down its operations... Over 800 injured people were still in[local] hospitals... Meanwhile, the controller of the disaster relief operation... confirmed the death toll at 1600. So far, he said, it had been confirmed that 10,073 people had survived... Authorities were now considering where to permanently resettle 6500 people left homeless by the tsunamis... [and, in] an effort to prevent a recurrence of the disaster, A[US]n Geological Survey Organisation seismologists have begun work to install a network of seismographs across the disaster area... [Incidentally, t]sunami experts believe... a tidal wave bomb... secretly tested off the coast of Auckland 50 years ago could be developed to devastating effect. University of Waikato researchers believe a modern approach to the wartime idea... could produce waves up to 30m high... [S]tudies proved that while a single explosion was not necessarily effective, a series of explosions could have a significant impact. "It's a bit like sliding backwards and forwards in a bath – the waves grow higher,"...

Indonesian fishermen from neighbouring Irian Jaya have spotted about 200 floating bodies believed to be victims of the [PNG] tsunami. The frightened fishermen left the bodies... and stopped fishing in the area... [By the way, at] a meeting in Geneva last week the [UN]... agreed on an urgent plan to provide equipment and training for 1000... Indonesian... firefighters.

...Most of the raging forest fires devastating Indonesia's... province of East Kalimantan are out, partly because of rain, partly because there is nothing left to burn. "...about 70[%]... of the fires... have been extinguished," said... the East Kalimantan Environment Impact Management Agency (Bapedal)... According to the Indonesian Meteorology and Geophysics Department, the rainfall is caused by the El Nino phenomenon... "The rains... meant for the rainy season, which did not arrive, have now come during the dry season,"... The fires[, which covered much]... of Southeast Asia... [with] smog for three months late last year... caused billions of dollars in damage to economies... Meanwhile, in Argentina the weather phenomenon is being blamed for flooding millions of hectares... The death toll from two weeks of devastating floods... which... also affected areas of Paraguay and Brazil... has risen to 14, and 87,500 people have had to be evacuated, officials said... Damage is estimated at more than \$NZ2.7 billion, mostly due to loss of crops and livestock. Meteorologists say the flooding could reach historic levels if the intense rains continued falling.

...Floodwaters in Argentina's Rio de la Plata estuary broke through a barrier built to hold back last month's oil spill, spreading the crude up the Atlantic coast. With the water level 2m above normal, the oil spill seeped into the river banks, making it difficult to remove... [In related news, n]ature plagued the world with a record number of disasters [last year] but the death toll fell far short of the worst single catastrophe of the last 1000 years, a Chinese flood that killed 900,000 in 1887... [O]ne of the world's largest reinsurers, said that about 70,000 people were killed in well over 700 disasters last year. Climatic changes... were partly to blame, but it was impossible to say to what extent.

...The skies over England... poured down more rain in the past 12 months than in any year on record, the Government meteorological office said.

...It is the middle of winter, but the hedgehogs can't sleep, insects are still buzzing and our lawns won't stop growing... Even rodents, which normally invade people's homes to escape the winter, are staying outside... But not just the plants and animals are confused about what time of year it is. So are humans, it seems, as scientists struggle to explain the bizarre weather conditions... Hospitals report lower-than-usual levels of flu and bronchiolitis, psychiatrists reckon seasonal depression is down and store-owners are concerned about a slump in sales of traditional winter items such as heaters, pullovers and thermal underwear. The minimum nightfall temperatures on Wednesday and Thursday nights, of 13 or 14, were 8 deg above the... average and matched the average maximum temperatures for the month... While scientists in N[Z] have been left baffled by the weather, Londoners are wondering why their summer is turning out colder than our winter.

...LONDON – The hapless citizen had only one concern: the weather. Why were we having gales and storms, he wanted to know? Could they be due to the impiety of the nation? The questions were of such pressing concern that the poor amateur meteorologist carefully carved them on a lead tablet – then deposited it at a Roman oracle 2400 years ago. The answer, unfortunately, is not recorded... Yet the questions it posed are intriguing, for they suggest humans have always thought the weather is odd, and that we tend to blame its quirks on our behaviour. Two thousand years ago, bungled sacrifices, strange omens and sin among senators took the rap for floods and downpours. Today we have a different scapegoat, the [CO2] that is pouring from our factories and power stations... But not every scientist is convinced of this neat connection between storm and industry. One increasingly vociferous group has started to argue that many climatologists have failed to take proper account of a key aspect of the problem: the behaviour of climate in prehistoric times... Scientists have been able to study past climates by analysing samples of ancient, buried ice.

...Samples taken from a lake high in the Andes show... a continuous geological record of El Nino weather events dating back 15,000 years... Previously, scientists had been able to chart the pesky weather pattern back only 2000 years, even though scattered evidence of much older El Ninos existed... [The new information, which puts] scientists on a path toward better predicting what El Nino will do in the future[, was unveiled at an AUSn]... conference on El Nino... Scientists attending... the El Nino History and Crisis conference... also... announced that the... ocean-warming phenomenon is probably responsible for several historic events from revolutions to plagues. The present El Nino is the same pattern as during the French Revolution, said [a conference spokesperson]... The Black Death, which originated in the rodent populations of Asia and spread across the world, was... associated with El Nino[, as were]... most major influenza pandemics between 1557 and 1900.

...Writing in the journal *Science*, researchers said chemical dating... showed El Ninos have become much more frequent in the past 5000 years, occurring about every two to eight years instead of every 15 to 35 years when the Earth was hotter.

...a heatwave[has been] blamed for at least 117 deaths across the U[S]... The temperature in Dallas hit 38[°] C for the 15th straight day... Other states were struggling to cope with the heat as well. In... Oklahoma[, chickens]... have died by the thousands in the past few weeks, according to unconfirmed reports. No official count is available. "When the temperature reaches 90[°] F (32[°] C) or above in the... poultry... house, the birds begin to stress... When it reaches above 95... they begin to die." In... Iowa, temperatures were... expected to climb above 40[°] C in some spots. "It's

hot here, but I think it's hot everywhere," said... a foreman with Central Asphalt Paving of Des Moines... In... Nebraska... road work was at a standstill because it was too hot to pour concrete. "Productivity is way down. If it's not raining, it's too hot," said... a construction company...

Cloncurry would fight to defend its... record of having the hottest shade temperature ever registered in A[US], locals said... after the town's claim to fame was challenged... [R]ecords show the thermometer in... the... Queensland cattle town... reached a blistering 53.1[°] C... in... 1889, a reading that has never been topped anywhere in A[US]. However, a scientist... of the University of Melbourne, claims the temperature in... Cloncurry... was measured with a "defective" instrument... He believes the thermometer was over-exposed to the sun and an accurate reading would have been about 47[°] C – giving the actual title to Oodnadatta, in... South A[US], which posted 50.7[°] C in... 1960. But the Mayor of Cloncurry... said yesterday: "It's our record and we're keeping it." He challenged [the scientist] to back his claim with substantial fact instead of supposition... [A barmaid] in the town's Central Hotel, said: "Everyone here believes we hold the record. It's a real talking point and it's put Cloncurry on the map."

...in each of the past 18 months... Earth has set new monthly temperature records... since... [they were] first kept in 1860.

...Stop blaming El Nino for the weather – scientists confirmed yesterday that a strong La Nina pattern is developing to shape the global climate... [Temperatures] have been hitting record average highs around the world this year, but La Nina should cause some cooling.

...The world's oceans are likely to rise by 7m to 8m over the next 1000 to 2000 years, according to A[US]'s leading research body into polar influences on climate. The estimates, released by the Hobart-based Antarctic Cooperation Research Centre, contradict popular speculation that there could be a large rise in sea levels over the next century... If the... Antarctic ice sheet melted, ocean levels would rise by about 55m. But warming of 2 to 3 degrees would not melt it because most Antarctic temperatures were well below the melting point of ice. The centre said that over the next century... ocean levels would be determined by thermal expansion and the melting of non-polar glaciers. This could be counteracted by an increase in the volume of Antarctic ice because more snow was falling as a result of higher evaporation from the warmer oceans.

...At least nine people were killed and 32 still missing yesterday after a giant avalanche engulfed an Austrian ski resort... Heavy snow prevented rescuers from evacuating the injured to hospitals from Galtuer, in the Paznaun valley, which has been cut off by heavy snow since last Saturday. Lacking outside help, the people of Galtuer searched for survivors using their bare hands... Maximum avalanche warnings have been in effect for the past few days in the Tryol and Vorarlberg regions, where some 10,000 people have been stranded in ski resorts... Austria has asked the armed forces of Britain, France, Germany, Switzerland and the U[S] to provide helicopters to evacuate the snow-blocked villages... [I]n neighbouring Switzerland the death toll from a chain of snow slips now stands at seven... [S]ome 40,000 people, half of them tourists, are stranded at the ski resorts of Klosters and Davos... where the maximum avalanche alert is in effect. In Romania, two students died in the Carpathian mountains, while authorities in Italy said a 52-year-old woman was killed and three people were injured in an avalanche in the north-western Aosta valley near the French border. Floods are also reported in France, Germany and Hungary, caused by melting snow flowing into river systems.

...Rescuers searched in the glare of floodlights well into the night to find five people still missing and feared dead after avalanches killed at least 33 people in the Austrian Alps this week. The search continued amid the evacuation of some 3600 trapped holidaymakers from ski resorts threatened by more slides, on one of the biggest airlifts in the country's history... There was little hope of finding survivors... [– 'within 30 minutes half the people trapped under the snow will have died; most after 1 hour' – but Tyrol's] provincial governor... said: "We will continue digging until we have recovered the last missing person from the snow." ...Austria's worst post-war avalanche was in 1954 in the Vorarlberg village of Blons, where 56 people were killed... [□ D]elays caused by Japanese police and insurance company holdups have severely reduced the chances of finding alive three N[Z]ers missing in an avalanche in Japan... [A] friend of the missing men, said from Hakuba yesterday that Japanese police would not institute a proper search until they had received faxed confirmation of the trio's insurance cover, resulting in a wasted day.

...The mother of a snowboarder killed in a Japanese avalanche is crusading to make sure others do not meet the same fate... She has visited schools up and down the country, promoting to back-country snowboard enthusiasts the need to carry safety equipment such as shovels, probes and transceivers... "I guess I would have balked at \$700, which is what it costs to get basic equipment, but believe me a funeral costs more. How much are our children's lives worth?" She says... friends who went to seek help after the... avalanche passed within metres of the buried trio. Had her son and his companions been equipped with transceivers, they might have had a chance. The three had ventured past the skifield's boundaries and were boarding outside patrolled areas at the time of the tragedy... [H]er son, who died just a month short of this 19th birthday, was planning to take an avalanche safety course when he returned from working at a ski resort in Japan. [■ '90% of avalanches are triggered by humans.']

...gunshots could have started... [an] avalanche that killed nine people, including five children, in a remote town in the Canadian province of Quebec... [A] wall of snow smashed into a school gymnasium packed with up to 500 revellers in the Inuit village of Kangiqsualujjuaq... Survivors said that gunshots had been fired by rangers shortly before the catastrophe, possibly loosening tonnes of snow on a 200m hillside just above the one-floor building. Police refused to rule out the theory... Canada's CTV broadcasting network suggested the tragedy could have been avoided if authorities had not ignored a report recommending snow fences be built after a smaller avalanche three years ago. [Incidentally, 'avalanches kill more people in the US each year than hurricanes and floods combined'; and, worldwide, 'water kills more people every year than guns.']

...Typhoon Babs has] killed 139 in the Philippines and left hundreds of thousands homeless. Yesterday it brought landslides to Taiwan and in one area 500mm of rain fell in 24 hours... More than 500mm of rainfall in 24 hours was[also] reported in some areas... of Japan[, sending]... rivers spilling over their banks and [setting] off landslides that left[at least] seven people dead... [I]n remote northern Guatemala[, mudslides] landed on three small communities yesterday, leaving at least 17 dead.

...In Guatemala, emergency officials were on alert [again yesterday as]... Hurricane Mitch, already grown into one of the strongest Atlantic storms ever recorded, threatens... [A] rare potentially catastrophic Category Five hurricane, the highest rating on forecasters' Saffir/Simpson scale... Mitch is two days from landfall...

Bodies surfacing from seas of mud... are constantly adding to the death toll in Central America and the Caribbean which yesterday stood at 485 after a week of torrential rain. In Nicaragua, local radio reported that up to 1000 people might have been buried alive in a huge landslide on the slopes of the Casita volcano, near the country's border with Honduras. But Nicaraguan... officials in Chinandega, some 90km north of the capital, Managua, had reported only 70 dead... Tropical depression Mitch, ranked earlier in the week as the fourth most powerful Atlantic hurricane this century... had been dumping 62.5cm of rain per day... sparking flash floods that ripped away shanty towns, buried banana plantations to their tree tops and city streets to the top of telephone poles. Bodies buried in mud littered the flooded streets of Tegucigalpa yesterday as the rains of almost Biblical proportions began to recede and looters took advantage of the chaos to strip supermarket shop shelves bare. As many as a third of the houses in this... capital of 1 million people were badly damaged or simply swept away... Frightened inmates tried to escape a flooding Tegucigalpa prison on Saturday but were held at bay. In... La Ceiba, 200 convicts stampeded out of a prison on Saturday. Guards shot 10 to death and wounded 45 but the rest were roaming the city... Forecasters expect Mitch to swirl parallel to the Honduran coast... then turn north and head for Mexico...

The heaviest rains in a century continued to drench the Mexican capital yesterday, causing... sewage overflows and a rash of intestinal illnesses. At least six people have died in mudslides that engulfed shanty huts on the edge of the sprawling metropolis[, which]... is built over a series of lagoons, making it susceptible to flooding... [In Nicaragua.] Government officials said as many as 1500 people might have been killed, buried under cascading tonnes of mud and rock that... [fell from] the slopes of the 1405m Casita volcano... Flying near the disaster zone, a Reuters correspondent

saw countless bodies poking out from beneath tree branches in a huge sea of mud... [A] Red Cross worker... said at least 610 bodies had been pulled from the mud... A further 1900 were still missing in Posoltega. The first reports of the mudslide began to trickle out of the area only at the weekend because furious floods... had torn away bridges and ripped roads to shreds... Two military helicopters [had plucked]... survivors from treetops or waist-high mud... and... shuttled more than 100 wounded to hospitals... Virtually nude or wearing bloody, tattered rags, survivors packed into Chinandega's Hospital Espana, many with crushed bones, bleeding gashes and eyes sealed shut by infections caused by the muddy waters. Many were covered with lesions like rope burns from grinding rocks and debris... The 150-bed hospital's facilities were stretched beyond capacity. Doctors said they were short of food, medicine, stretchers, surgical masks and gloves.

...Hampered by still more heavy rain, rescue workers yesterday removed a further 769 bodies... from the muck on the south flank of the Casitas volcano... bringing[the] death toll in this country to 2569... The death toll was expected to rise dramatically since only 180 of the 4500 people living in the five towns on the volcano's flank were known to have survived... Pigs, dogs and other predators prowl through the mud, eating bits of exposed rotting flesh as workers battle shifting ground to remove[the] bodies... Each step requires a Herculean effort to extricate a waterlogged leg from the muck, then the horror of squishing it in again and praying it does not fall on one of the hundreds of bodies buried beneath... Nicaraguan civil defence officials – fearing more mudslides – have ordered the evacuation of 2000 people still in the Casitas... [T]he... Nicaraguan President... said 70[%] of the country's crops had been wiped out and called the disaster worse than the 1972 earthquake that flattened Managua and killed 10,000... The risk of disease has been steadily worsening. Drinking water was becoming scarce in many areas as the disaster threatened to set the region's economy back decades. As if things could not get worse in Nicaragua, the Cerro Negro volcano, about 40km from Casitas, erupted late on Wednesday, forcing dozens to be evacuated and yesterday a minor earthquake hit the storm-damaged city of Chinandega. The latest incidents did not, however, add to the death toll... Meanwhile, Mitch[has] regained strength. A tropical storm warning was in effect for... parts of the Florida Peninsula, western Cuba and the north-west Bahamas. Across Central America... 10,001 people [a]re dead, 14,202... missing and 2.78 million people homeless[as a result of the hurricane], according to official figures.

...In Central America they are used to their disasters, natural and man made, but nothing prepared them for the fury of Hurricane Mitch... [Y]esterday the US National Hurricane Centre in Miami did its sums and upgraded Mitch's status from one of the deadliest hurricanes ever to hit the Gulf of Mexico and the Caribbean to the deadliest... [T]hey reckoned that Mitch had killed 24,000 people in all. More than the Great Hurricane of 1780 in which 22,000 people perished. This falls well short of a tropical cyclone which killed 138,000 people in Bangladesh in 1991, but such figures give only the most superficial idea of the depth of human suffering in a part of the world that has had more than its fair share... In a cruel reminder that nature wreaks destruction from earth as well as from the air, the 675m Cerro Negro volcano... began erupting in the middle of the chaos bringing back memories of 1995 when it spread tons of ash over 240 sq km of rich farming country. "Now we have two emergencies..." said... an expert with the Nicaraguan Institute of Territorial Studies. Soon there was to be a third, and this one could not be blamed on the vagaries of nature. Thousands of landmines planted along the border between Nicaragua and Honduras were washed loose by the hurricane's rain. The mines were planted in the 1970s and 1980s during Nicaragua's back-to-back civil wars – the first to overthrow [a dictatorship – and]... the US-financed campaign to bring down the leftist Sandinista Government that replaced the dictator. "We're making this announcement not to alarm people but so they take precautions," said[a] Honduran armed forces spokesman... But there seemed to be good cause for alarm, by one estimate 75,000 of the 150,000 landmines planted in the region have been displaced... and scattered at random to kill and maim at times and in places that were never intended... Twenty-seven supervisors and 400 demining personnel working along the Honduran-Nicaraguan border suspended operations after their bases were flooded. They have been redeployed to help in the massive regional hurricane assistance effort. It could be several weeks before demining efforts can again get under way... Nicaragua, with 73,000 mines, is the most pressing problem... Fifty bridges in Nicaragua have been damaged by Mitch, but work to restore them cannot begin until the areas around the bridges have been checked for mines... One civilian was killed and another injured by mines near the Blanco River Bridge, which was also damaged in the explosion... In the face of such overwhelming evidence of the power of nature and the immeasurable scope of human folly, there was no arguing with[the] Honduran President... when he surveyed the scene and described it as a "panorama of death, desolation and ruin." ...[whereas the Nicaraguan President] said... "Our people have suffered misfortune and know how to handle adversity." ...But... [such] Churchillian pleas cut little ice with some of Mitch's victims in the back blocks... The lack of food and water and a widespread fear of disease are pre-occupying the survivors at the moment. These immediate problems are daunting enough, but there is the larger problem of rebuilding the shattered economies of Nicaragua and Honduras. Despite [the Nicaraguan President's] faith in heroism[both countries]... are especially short of the one commodity that is likely to make a difference in their present troubles: cash... Given the colossal destruction, Nicaragua and Honduras have called for debt forgiveness, a suggestion backed by[a] former US president... who visited Nicaragua... Over the weekend the U[S] began an airlift as part of its \$US70 million in assistance... More than \$US100 million has been pledged by the international community to ease the suffering... [However, the Honduran President] has said it will take \$US4 billion to rebuild [his] country.

...France has annulled the debts of Guatemala, Honduras, Nicaragua and El Salvador, the four... countries hit hardest by Hurricane Mitch.

...After three days of devastating, hurricane-force storms, Europe was struck with more weather havoc today as blizzards, avalanches and floods pushed the death toll to at least 138. The new disasters forced rescue workers in many of the countries already hard hit to concentrate on saving lives, leaving the cleanup and repair tasks to later... The first wave of storms had built up over southern Britain, where eight people died in huge winds and floods, before gaining speed and strength and sweeping into northern France, then on to Belgium, Germany, Switzerland and Italy. A second wave hit... southern France, northern Spain, Switzerland and Italy and through the Balkans and northern Turkey... But in both storm fronts, it was France that bore the brunt... French state weather forecasters had clocked windspeeds of 175 km/h near Paris, the highest on record for the French capital, during the first front on Sunday. The second, the next day, brought with it winds of up to 200 km/h in the southwest... Fr[ance's] Interior Minister... said 68... French... people had been killed and eight people were missing since Sunday... France awoke yesterday... to find state electricity firm EDF struggling to restore power to 3 million households. National rail carrier SNCF cancelled all trains in the southwest and services were disrupted across the country by fallen trees and power failures. France's cultural heritage also suffered heavily... [T]he Palace of Versailles lost part of its roof and around 10,000 trees from its grounds, and the Cathedral of Notre Dame was damaged.

...Record floods threatened a string of historic towns yesterday as central European leaders were due to meet to discuss the huge costs of the path of destruction wrought across the region. Flood waters have ravaged vast swathes of central Europe, claiming at least 91 lives in Germany, Russia, Austria and the Czech Republic. Tens of thousands have been evacuated and many have lost their homes. Some of Europe's great museums, including Dresden's Zwinger Palace art gallery, and the city's Semper opera house have been forced to close and may need extensive repairs.

...The British Government has announced emergency measures to cope with severe nationwide flooding as flood waters peaked in the northern city of York at the highest level in nearly four centuries... The Government also approved an extra £51 m... for flood defences... over the next four years... An intense storm front battered Britain early last week, unleashing high winds and torrential rain that plunged road and rail transport into chaos. After the storms passed, rainwater steadily drained into the nation's rivers, causing the worst flooding in more than 50 years. In York... the Emergency Agency... said some improvement was expected overnight... But more heavy rain... was forecast for parts of England today.

...Raindrops keep falling and falling and falling... The suave television reporter, standing knee deep in a fast-flowing river that used to be the main village street, informs his viewers: "Well, as you can see, it's really wet here." Such statements of the obvious have become the norm on

British TV in recent days. In a nation obsessed with the weather at the best of times, the media has been lapping up some of the worst storms and floods in recorded history. For home and business owners it is a different story. As rivers across the country burst their banks, cascading water into heavily populated areas, there were thousands of stories of untold misery. A dozen lives have been lost, homes and businesses destroyed and the transport network crippled in some places. The likely cost to the economy could rise to more than £1 billion... [□ 5] South African helicopters rescued 2100 people from[Mozambique's flooded] Chokwe district yesterday after rescuing 2120 people on Monday.

...Over 100,000 stranded Mozambicans wait for rescue today as aid agencies appealed for more funds and hunted for extra helicopters and boats to pluck people to safety from rooftops and trees... [A]n official at the National Disaster Management Institute... warned that the rescue mission, which has been hampered so far by too few helicopters, could be further constrained by a lack of fuel. Mozambique's water authority... also warned that another wave of fresh water from Botswana and Zimbabwe would hit the already ravaged central and southern regions of Mozambique in a few days. At least 350 people have died, [over]... 650,000 have been made homeless and crops vital for surviving the coming winter have been swept away in Mozambique, South Africa, Zimbabwe and Botswana in three weeks of flooding. The Commonwealth Secretary-General... has appealed to the organisation's leaders to help the rescue operation... [A UN] World Food Programme official, has said rescue teams were having to make tough choices about who to save because of the lack of resources. "It's heartbreaking. We are leaving people behind we know will not be there tomorrow."

...The outside world is finally waking up to the... flood disaster... that has devastated a country... which was just starting to recover from 16 years of civil war... Lethoso and Zambia, among the poorest of African countries, have committed their only cargo planes to deliver food and medicine to Mozambique, where an estimated one million people have been displaced. Reconnaissance military contingents from Britain, France and the U[S] were arriving today ahead of bigger groups tomorrow. Transport planes from the US and Britain are expected with helicopters, boats and equipment. South African military helicopters have rescued 10,000 people since Sunday but it is estimated that 100,000 remain stranded.

...FLOOD levels in at least one ravaged area of Mozambique have dropped dramatically allowing thousands of people stranded in trees to make their way to dry ground. But the country's nightmare is not over. An estimated 12,000 to 15,000 people remained stranded yesterday in the Save River valley; there was the risk of outbreaks of disease; and a storm over the Indian Ocean threatened to dump yet more rain. The first of two British planes carrying more rescue boats arrived in Maputo yesterday. An American plane with rescue boats from the Miami area was expected to arrive today, a day later than announced... [E]arlier yesterday, tragedy struck rescue efforts along the Limpopo[River] when an inflatable boat carrying 17 refugees capsized. Four toddlers fell into the swift current and drowned, said the boat's South African pilot... The boat's engine had cut out after hitting debris and the boat drifted into a tree and flipped. [The pilot] clambered up a tree along with the remaining survivors and got a taste of what thousands of people have endured since huge areas of central and southern Mozambique were flooded by torrential rains last month. "There are snakes in the trees, stinging ants, wasps and lots of mosquitoes... These people have been sitting in the trees all these days with these things crawling on them and biting them. I didn't realise what they were going through until I got stuck in a tree." Aid officials said people stranded in trees were being driven by hunger and thirst to eat the carcasses of drowned animals and to drink filthy floodwater... Mozambican officials said U[S] troops expected to arrive in the country soon were likely to be based in the central city of Beira. But US Embassy officials declined to say where the 600 troops would be based or when they would arrive, along with helicopters and other rescue gear... M[eanwhile, m]ore than a week after Hurricane Mitch wrought devastation across Central America, more deaths [have been] reported in Honduras as landslides again bury entire villages... [As residents of Comayaguela searched] for canned goods in a river which swept away the Honduran community's main supermarket... looters descended on Posoltega... [in NW] Nicaragua... stripping bodies of anything of value... and... breaking into abandoned homes.

...At least 200,000 people have been forced from their homes by... mudslides, which are reckoned to be the worst natural disaster to hit Venezuela in half a century... [The m]udslides have killed at least 650 people [in Venezuela's] Caribbean coast... state of... Vargas... and 7000 are missing, presumed dead... [Last night Venezuela's] Defence Minister... said: "We might never know how many people died because in some areas they were buried under five or six metres of mud." ...Once-idyllic tourist beaches in the area were strewn with tree trunks and boulders... There was no food, no electricity, no running water and no telephone service. Drains were blocked, causing health risks aggravated by decomposing bodies. Storefronts had been wrenched open and looted. Residents spoke of widespread looting, in particular during the night when gunshots rang out, heightening a sense of insecurity for the few remaining residents unwilling to leave for fear of losing their remaining possessions.

...Troops are ploughing through head-high mud and rubble so rescue teams can dig for up to 30,000 bodies in a Venezuelan coastal area devastated by one of Latin America's worst mudslides... Most of the state's 350,000 inhabitants have been evacuated in a massive rescue operation led by 13,000 troops, 5000 volunteers, about 40 helicopters and 16 warships... [M]any survivors would be moved to new settlements away from the coast... The mudslides and raging rivers swept away shantytowns perched on steep slopes of the lush Avila mountain and left tall apartment blocks with swimming pools marooned in a sea of rock-hard debris. Troops warded off gangs of youths ransacking empty apartments but several people could be seen making off with televisions and other goods strapped to their backs.

...Venezuela has restricted travel to its stricken Caribbean coast to discourage gawking "catastrophe tourists" from adding to the crush of people impeding rescue efforts where up to 50,000 people may have died. "There are too many people in the area who have no business being there..." said[the country's] Education Minister... "It is unacceptable to have youths with cups full of soda taking pleasure trips down there, taking photographs with their girlfriends..." The Government said there was a "critical risk" of epidemics among those left in Vargas.

...Rotting livestock carcasses and floating sewage[have] created a mounting health threat across eastern North Carolina, still flooded days after Hurricane Floyd forced tens of thousands of people from their homes. And still more rain lies ahead. Forecasters said heavy rain from Tropical Storm Harvey, about to hit Florida's Gulf Coast, could cause new flooding... More than 60 people were killed from the Bahamas to New England when Floyd churned up the U[S] east coast. But the aftermath appears the worst in North Carolina[where]... the carcasses of 100,000 pigs, 2.4 million chickens and 500,000 turkeys[are] lying about the state.

...FEMA... made \$80.5 million available to relocate North Carolina residents in areas that had repeatedly flooded in the past decade. Only about half of the money was spent because most people chose to rebuild where they were. The agency, which just underwent a massive streamlining to speed payments following disasters, now plans to ask Congress to re-examine flood policy in order to discourage people who build again... in flood-ravaged areas – either by paying much higher insurance premiums or by eliminating entirely the possibility of [providing] coverage in risky areas.

...A woman who drowned, trapped in an office lift that lost power, was one of two people who died when the remnants of Tropical Storm Allison swamped... southeast Texas and flushed alligators... agitated by the storm's thunder, lightning and heavy rain... into towns in Louisiana...

The death toll in the cyclone which tore through India's impoverished eastern state of Orissa has jumped to more than 9392. Millions have been made homeless after the... cyclone.

...Months after a supercyclone wreaked havoc in Orissa, the effects are still being felt... For many[people] their bodies survived but their minds did not. Unable to cope with the shock of death and destruction, many have suffered mental breakdowns... become mute or attempted suicide. At Cuttack, the only hospital in the Indian state specialising in the treatment of psychiatric disorders has been swamped... More than 2500 cyclone victims have been brought in... "It is only the tip of the iceberg," says... a psychiatrist at the hospital. "...Only the maniac cases where people cannot be kept under control are coming to us... In fact half of the survivors need psychotherapy with counselling... But the state does not have the means

to take care of these people – numbering more than 100,000 throughout the coastal belt.” Countless families have faced total ruin. Most of them had no savings. Inadequate relief from the Government and non-government sources has made life more miserable for survivors. Many have had no aid at all. The storm outside has ebbed. But the... storm... seems to be... still raging in tens of thousands of minds.

...Cyclone John... the strongest cyclone to hit A[US, with winds]... of up to 290 km/h... smashed into the northwest coast... yesterday... [N]o injuries were reported, but about 30 homes... and... [2] pastoral stations... in Port Hedland, Roebourne and Wickham... lost all or part of their roofs or suffered other structural damage. “In some cases whole sections have been blown away,” a... State Emergency Service... spokeswoman said.

...Maryland, Delaware, New Jersey and Rhode Island are... enduring the worst drought since the Dust Bowl days, says[the US] President...

A White House source said the... [US] Administration is about to present to a budget-conscious Congress a \$US7.8 billion... blueprint to restore the fragile Florida Everglades, hoping to protect... wildlife and drinking water for residents... The plan[which will]... flood 109,000ha of land... would[also] revamp flood control and water management systems throughout Central and South Florida... While the... price tag seems large, it is dwarfed by other... projects now under way. Boston is spending \$US10.8 billion for highway improvements and Miami plans to spend about \$US4 billion to build a new airport runway and terminal, say environmental leaders. Conservation groups said the Everglades project was[however]... an important test case to show whether severely damaged ecosystems could be restored... [The] vice-president of the National Audubon Society, said: “It’s the poster child for sustainability.” ...The Everglades encompass 800,000ha of... a flat expanse covered by shallow water that provides home or food for alligators, wading birds, manatees and the endangered Florida panther. The area, nicknamed “a river of grass,” has been polluted by agricultural run-off and urban development during the last half-century... Fires are[another] one of the threats to the Everglades...

A shadowy environmental group... has admitted responsibility for numerous arsons... “If you build it, we[’]ll burn it,” the Earth Liberation Front scrawled in red paint on one of... three luxury homes torched... on Long Island, east of New York City... The fires caused at least \$US30,000 [worth of damage] at each site... In [addition], front members started a blaze at Vail... in Colorado... in protest at a planned expansion of the resort and of its ski area. The front said the project would endanger the lynx. The fire caused \$12 million damage. Members also claimed responsibility for torching a Federal Bureau of Land Management horse stables in... Oregon, as well as setting fire to the Oregon offices of the[paper-making] Boise Cascade Corporation... because it had “ravaged the forests of the Pacific Northwest.” That the group... ha[s] turned its sights on Long Island is not... surprising. Anger has been rising in many quarters at the willy-nilly blanketing of the island with new developments and oversized mansions.

...It is July 12, 1997. Three firefighters are about to burn their careers and singe the integrity of 10,000 colleagues. It has just turned midnight when a car pulls to the side of Lake Rd, Mangakino. A big, red-haired 18-year-old... steps out with the simple tools he needs to make a timebomb. [The local f]ire chief... and his deputy... leave [the 18-year-old] and drive into the night... [They] return... to pick him up and whisk him to safety... [after the 18-year-old has sparked] one of the biggest fires in Mangakino’s history... Why did they do it? ...For more than a year there has been talk that the tiny South Waikato town will lose one of its two trucks to a busier district... [The 18-year-old] said in court this week that [the chief] wanted to generate more work so he could keep his fire trucks... [The] young volunteer hoping to forge a career in the Fire Service, said he feared he would be sacked unless he agreed to the plan. [The deputy] also said it was [the chief]’s idea, and that he simply went along out of loyalty. [The chief] said the other two did it and lied to get him in trouble. [A] Californian arson investigator... has identified two types of firebug – the “true pyromaniac,” who is often thrilled sexually by watching fires, and the vanity pyromaniac, who craves attention and is the most likely type to become a firefighter. [The Californian] should know these things – he was arrested in 1990 after a spate of arsons that killed four people. [However, Mangakino’s fire chief] seems to fit neither of those profiles, and Tokoroa police were initially surprised when the trail led to him... [The trio] were just three of 10 [NZ] firefighters charged with arson last year. Concern about the trend has forced fire chiefs to look at the way they recruit their members. A[n AUS]n arson expert... has urged them to cull the bad eggs during selection. She says enough psychological data is available to construct screening tests.

...[the NZ Fire Service has announced that volunteer] firefighters may under[-]go psychological testing if trials in A[US] are successful... As researchers question the spate of arsons allegedly committed by firemen here... [it seems pertinent to look] at the case of [a] top Californian arson investigator... who loved fires so much he started his own. Before he was eventually caught he had caused at least 75 fires... IT was the third straight summer of drought and in 1990 California was a land where rain seemed a memory of long ago. The dry scrub of the suburban valleys was just a dropped match from catastrophe as afternoon temperatures soared... as high as 40.5°C. At the end of June, that catastrophe happened in Glendale in the north-eastern sprawl of Los Angeles. A fire roared through a hillside housing estate, destroying 67 homes before being brought under control. But there had been nothing inevitable about the disaster – it had been arson. Someone had set this fire for the thrill of it. California’s governor offered a \$50,000 reward to help find the arsonist, and reporters turned to... [the] head of Glendale’s Arson Investigation Unit, in search of an explanation. Who could have done such a thing? There are two possible types, he told them. There was the vanity pyromaniac... And there was the “true” pyromaniac... “Arson,” [he] added helpfully, “is the only crime where the suspect sticks around.” [He] would certainly have known. He had been a fireman for 20 years and had built a formidable reputation not only as an arson investigator, but also as an inspiring trainer of investigators. But he was even better qualified than that. For [he] was the man who had started the fire. The arson investigator... turned arsonist... had been setting brush fires and burning down businesses for a decade. In the end it was chance – a random fingerprint check – that brought him under suspicion. But when it did, the investigators noticed a definite pattern. When [he] left town to train other firemen, suspicious fires seemed to flare near the conferences he attended. The greatest of his crimes is now known to have been a horrifying fire in a big, modern hardware store in Pasadena... in 1984. Four people were killed – one a boy aged three. Last September, a jury convicted [the 48-year-old arsonist] of four counts of capital murder. “[He] was the perpetrator of evil under the guise of the protector of good,” said [the] Assistant District Attorney... But to the fury of his victims, he escaped the California death chamber because the jury that unanimously convicted him of multiple murder deadlocked on the sentence... Instead, [he] was sentenced to life imprisonment plus 20 years. He was already serving a 30-year term, convicted on federal arson charges. [He] was arrested in 1991 and it was only after his first conviction a year later on multiple counts of arson that prosecutors trawled back through the records and discovered evidence he was not only a firebug but also a killer. They had been given a remarkable clue by [the arsonist] himself in a final, shocking twist to the story. He had described his own crimes in fine detail. The fire chief not only turns out to have... [committed] the ultimate breach of professional trust – but to have been writing a thinly disguised book about “his” fires as he was setting them... [H]e describes it as a “novel”. But it is one that proves fact is as strange and as chilling as fiction, for he made his story a real-life version of the hit film *Basic Instinct*, in which the novelist... is also the killer she describes in vivid, meticulous detail. [The arsonist] sent his 350-page manuscript to a literary agent in 1990... The covering letter he included in the package sent [said]... “*Points of Origin* is a fact-based work that follows the pattern of an actual arsonist who has been setting serial fires in California over the past eight years... He has not been identified or apprehended, and probably will not be in the near future. As in the real case, the arsonist in my novel is a real firefighter.” One of those who has now read this manuscript is... [the father of] the... murdered... three-year-old... [who] died with... his... grandmother... And in [the] novel, in chapter 6, [the father] found the story of a three-year-old boy who dies in a fire, in a hardware store, with his grandmother. “You know what he did? ...He used my boy’s name! He... killed Matthew and then he described Matthew dying in his book!” [The arsonist] could hardly offer a more graphic illustration of the banality of evil. A small, tubby, profoundly unprepossessing man, he would never be taken for a fireman, let alone a mass killer. He looks like the stereotypical English bank clerk... Despite all the evidence, he still protests his innocence... Even today, after years of

investigations and two trials, no one is quite sure why [the arson investigator] became an arsonist. Psychiatrists talk of how arsonists are often attracted to the fire brigade. Small towns in America run volunteer fire stations and that can make them particularly vulnerable to the enthusiastic, often knowledgeable, "bug". At first, joining up gives them the opportunity to indulge in the thrill of the blaze, to fight a fire rather than set it. But then lighting their own proves a more reliable way of making sure they get a good fire, and increases their sense of power. There have been dozens of cases of firemen turned arsonists. Five years ago, nine volunteer firemen on a suburban New York brigade were arrested, charged and convicted... Last year, two firemen were arrested in Centreville, Illinois, and charged with setting 16 fires... One of them was injured just before his arrest, fighting the fire he had set before being taken off to jail. But [the investigator], a professional with... years of commendations and promotions, was in a different league. His colleagues were devastated by his arrest, in part because [he] was a man who had commanded such respect... At the fire department where [he worked, the new]... chief... says: "We... feel so naive. You believe you work alongside people who feel the way you do – and it's a shock to realise that can be wrong. It is hard to trust after something like this." ...[● A] 14-year-old Henderson... boy, who cannot be identified for legal reasons... appeared in Waitakere District Court on Wednesday charged with the fire at The Warehouse in New Lynn in April... [The store's o]perations manager... says damage from the fire totalled \$2.5 million... [T]hat figure includes repairs, damaged stock and loss of trade during the... two month... shutdown... Fifteen Waitakere and Auckland fire crews tackled the fire which closed Rata St... for more than three hours.

...FIRES lit by juveniles in west Auckland have increased by 30[%] over the past three years... [Last] year 228 juveniles caused more than \$3 m... worth of fire[damage] across the Auckland region... Some cases were accidental, but... in a growing number aerosols and accelerant were used... West Auckland Fire Service[']s youth liaison officer and investigator... says if young fire-starters are not brought to his attention early the chances of them lighting fires of a serious nature is highly likely... Since counselling started in 1990 a 95[%] rehabilitation success rate has been achieved.

...They were young, from all around the world... They came to Childers, with its market gardens and century-old wooden buildings, to pick fruit and vegetables for cash to see A[US]. But the dreams of a life on the road turned to ashes for at least 15 backpackers who perished in a nightmare of flames and choking black smoke in their Queensland youth hostel. Last night, as the 62 survivors, including seven N[Z]ers, relived their ordeal, police confirmed that they suspect arson. Survivors say the fire in the historic timber Palace hotel could have been lit in three places by a disgruntled ex-resident... The state Government immediately announced a taskforce to examine issues surrounding the tragedy, including the licensing and safety of backpacker hostels, and Queensland[']s Premier... said he was considering a state day of mourning.

...Philippine investigators[, who] have until today to wrap up a probe into a hotel fire in Manila that killed 78 people... said faulty wiring could have caused the fire... Officials said the owner was likely to be charged with homicide. The management of the Manor Hotel was initially found to have committed "many offences of the fire code," including failing to install a sprinkler system, emergency lighting and proper fire exits... Radio reports said the hotel management had bribed officials to turn a blind eye to safety violations... [Incidentally, an AUS]n held for questioning over a fire which killed 15 backpackers, most of them foreign tourists, was yesterday charged with attempted murder of a policeman... [The] 37-year-old itinerant fruitpicker, was shot and wounded on Wednesday by police who had tracked him through bushland near the farming village of Howard, not far from the scene of the fatal fire at Childers... One of two police officers who detained [him]... was stabbed in the chin during the struggle. The policeman's wounds were not serious... No charges have been laid in relation to the Childers fire. Police... have said they regarded [the 37-year-old] as a suspect in the fire after he was seen near a rubbish bin fire in the lounge of... the 94-year-old hostel... on the night of the blaze.

...A[US]n police have arrested 21 people for arson linked to more than 100 bushfires blazing around Sydney and along A[US]'s east coast... While thousands of firefighters battle the blazes across the state, a 35-member police unit named Strike Force Tronto is trying to track down serial arsonists suspected of starting many of the fires. A[US]'s worst fires in seven years have destroyed 300,000ha of bush, twice the size of Greater London, destroyed 150 homes and killed thousands of livestock[, most of whom were trapped by fencing]... There have been no [human deaths. The t]askforce leader... said the operation, helped by the public, had arrested 14 juveniles, some as young as 9... since it was set up six days ago... N[SW's] state Premier... has vowed to impose the full sentence of 14 years' jail on convicted arsonists and... plans to change juvenile laws to force young arsonists to visit hospital burns wards and bushfire victims and to clean up bushfire areas. "I think... juvenile prison is... too good for them."

...Despite [the large number of] arrests so far, arsonists continue to light fires – including four near Appin, south of Sydney, yesterday – sparking calls for penalties harsher than the 14-year maximum jail term for convicted firebugs.

...One firefighter was killed[and 7] others were injured... yesterday... [when] their water tanker... became trapped [by]... bushfires in N[SW, and in]... the Myall Lakes National Park on the mid-north coast up to 2000 holidaymakers were evacuated to escape a fire burning since Wednesday.

...A "LACK of personal discipline" was to blame for a major bushfire in East Gippsland that has swept through 27,000ha of remote national park, says Victoria's Premier... However well trained they are... Victoria's firefighters could not compensate for public negligence, he said. "...This fire seems to have been started from a group of campers who just left a campfire. That anyone could be so irresponsible or thoughtless is beyond me." ...He said the fire had cost more than \$2m to fight, but it was impossible to put a value on the national park that would be temporarily lost to Victorians... After flying over the fire scene, [the Premier] said the government had allocated an extra \$12.9 million to firefighting.

...[']a deerstalker who made a fire to brew his billy which caused a fire that destroyed 75 hectares of forest and took two days to put out, has received a bill for \$260,000 from the NZ Fire Service. People are liable if they cause a fire on Crown land. The deerstalker didn't know this, or that a fire ban was in force, or that for \$48 he could have got insurance cover and a year's membership of the NZ Deerstalkers Association! Now he's got to sell his house. From about 750 cases taken to court in recent years, the Fire Service has received money from less than 90, totalling about \$1.5 million.' In related news, [t]he tinder-dry heartland of drought-ravaged Central Otago exploded in flames yesterday, with two huge scrub and grass fires near Alexandra, one causing a civil emergency and forcing more than 150 people to flee their homes. One man died, apparently from a heart attack, while checking a property near a fire at Springvale, 9km northeast of Alexandra... And, in Dunedin, the fiery Sunday continued with a major blaze near Green Island...

Central Otago had its last real rain in December 1997. Now... the stress on farmers is becoming unbearable... Even parched and dirty brown, Central Otago is stunning. The... air is clear and clean and the landscape vast with a pared-back, spartan beauty. This is tough, uncompromising country – qualities reflected in its inhabitants. Homes are modest here, even where the farm has been in the same family for generations... [The man] who farms the large Shag Valley Station with his son... has rainfall figures stretching back 140 years. He says it's the cruellest drought on record. It is also the longest, now stretching into its fifteenth month. As a result, many farmers have already exhausted their dry feed supplies and are having to buy in hay at prohibitive prices. A survey... found the average cost of the drought over the two seasons was \$108,000 a farm and rising. Few farms can sustain losses of that order... So far the banks... have been supportive. But everyone knows some fore-closures are inevitable.

...Fires sparked by the worst heat wave in 30 years have ravaged a huge area of Brazil's northern Amazon... At least 5000 sq km of forest and savannas had been destroyed since the drought in Roraima state began in mid-January... So far, the drought had killed 12,000 head of cattle. Unless it rained within the next two weeks, another 100,000 cattle – or 15[%] of the state's total herd – would die, the... state Government's press office said... [As Brazil prayed for rain, f]loodwaters carved through central N[Z] yesterday... gouging away chunks of land. Swollen by record rainfall... the rivers of the Kapiti Coast, north of Wellington, raged through buildings and over bridges. It was the second time in eight days that householders lost futile battles to save their homes from floodwaters. One homeowner was drowned... Frustration... turned to heartache for some... Two weeks ago... [a couple] were full of excitement as they moved into their first home. Yesterday, [they] watched floodwaters advance for the

second time. “A good house-warming present for us would have been a dinghy,” she said. The MetService said the destruction was triggered by a deluge in the Tararua Ranges, which had 500mm dumped on them in 24 hours[(the monthly average for the Tararua’s is ‘less than 200mm). One site received 300mm in 3 hours’!] More heavy rain is expected until early today... State Highway 1 at Otaki is expected to be closed for two days, after the Waitohu Stream washed away the bridge. An alternative route through backroads was blocked by slips. Record rain also flooded homes and roads... in Taranaki... In the South Island, the Army will aid flood-stricken West Coasters.

...Rush-hour traffic is expected to face delays on Tamaki Drive this morning after a big slip early today brought down a 20m section of a clay bank... Police and Auckland City Council staff were warning traffic and working to clear the road... Heavy rain caused surface flooding through much of Auckland with areas to the south worst hit... Many telephone lines throughout the region were down because of the weather. Water has been sluicing out of the sodden Waikato River catchment from Taupo to the sea in the central North Island’s biggest flood in 100 years. Still more rain water overnight threatened the protection system which yesterday, like a dripping, over-full sponge, was seeping excess water everywhere authorities turned. First light will have revealed the bad news but because the river takes around 40 hours to flow from Taupo to flood-ravaged Mercer the worst may still be to come. The regional council, Environment Waikato, and ECNZ, which manages the eight dams on the river, spent yesterday trying to make space in some of the lakes to cope with the 40mm of rain it was feared would fall through the night. Lake Taupo, which has the biggest storage capacity, was only 8cm off its maximum level. Water flowing into it at 300 cu m per second was being matched by the deluge tumbling out through the wide-open control gates into the Waikato River. A spokeswoman for ECNZ... said if the corporation was asked to shut the gates it would but that could mean flooding areas around the lake[, and – as we all saw recently when Lake Wakatipu rose a few feet above street level, ‘devastating central Queenstown’ (Queenstownians blamed their third ‘100-year flood in five years on silting of rivers not cleaned by Contact Energy’) – flooded lakes take a long time to return to their normal depth]... A council flood control officer... said a gauge at Mercer yesterday recorded the river’s flow at 1466 cu m a second which was unmatched by previous major floods. There were few control options, he said[, before pointing out that the Waikato River is expected to have ‘a major flood once every 40 years, and the last major flood was in 1958.’]

...A major clean-up is under way... today... through much of... [central NZ, especially in Wanganui, where flooded] sewage systems failed, sending raw sewage into the... Whanganui River[, which] rose slowly but surely, slopping over the stopbanks on to Anzac Parade... The Whanganui peaked at levels last seen in 1990 when a 40-year flood ran through homes. But lessons learned in that disaster helped to avoid a repeat... Meanwhile, [a]... flood-prone Mt Roskill property is at the centre of a scrap between the Auckland City Council and the Building Industry Association. The council is appealing against an authority decision that stops it putting a warning on the title off[the] Melrose Rd property... A section 36 warning under the Building Act is applied to properties with problems such as flooding, erosion, or slips, and recognises development has been allowed, but only in a way that does not worsen the problem. It aims to put responsibility on the developer, warns purchasers, and prevents subsequent owners claiming they were unaware of the problem, and suing the council. The dispute started when the council told a developer that three homes being built would have the warning placed on their titles. The developer appealed to the BIA, a Government body, which reversed the council’s decision, saying a section 36 warning applies only when permission to build has involved a waiver to the usual Building Act conditions – not the case at Melrose Rd. The council is appealing in the High Court, saying the decision sets a precedent that leaves it exposed to claims.

...A voracious grub munching its way through thousands of riverbank willow trees is endangering multimillion-dollar N[Z] flood protection schemes. Damage caused by the willow sawfly has major environmental implications and the race is on to find a way to stop the insect in its tracks. The worst of the destruction is in the Bay of Plenty, Hawkes Bay and Poverty Bay... The sawfly was discovered in Auckland in 1997 but quickly took up residence in the Bay of Plenty. It... has since moved as far south as Central Otago... *World in Brief*[: The AUSn]... city of Wollongong [has been declared a] natural disaster after being cut off by [its ‘worst floods in almost 200 years’].

...Residents... on the Sunshine Coast... in southeast Queensland are bracing for a massive cleanup as authorities yesterday estimated that the cost of the worst floods in the region since 1893 would exceed \$A2.5 million... The death toll had last night risen to seven... The town of Gympie, 180km north of Brisbane, was inundated after the Mary River burst its banks. A... [NZer] who moved to Gympie to live 12 weeks ago, said... “The water down the street from where we are is something like 15 to 16 feet deep in places... I haven’t seen anything like it. The rain began on Saturday. It was torrential then and it just got progressively worse.”

...*Let’s hope we don’t have a big flood! ...a parable for our time...* And the Lord spoke to Noah and said: “In six months I am going to make it rain for 40 days and 40 nights until it floods the whole Earth with water and all mankind and every living thing is destroyed.” But the Lord said to Noah and his three wives and their sons: “I will save a few good people, so build an ark [for] you and your family and two of every living thing on the Earth I have made...” In a great flash of lightning [the Lord] delivered to Noah the specifications of the ark... “Six months and it starts to rain,” thundered the Lord. “Finish the ark or you better learn to swim for a long time.” The six months passed and it clouded up and started to rain heavily. The Lord looked down and saw that Noah was sitting at home, weeping in great anguish. And the Lord saw that there was no ark. “Noah,” shouted the Lord, “where is the ark?” “Lord, please forgive me!” begged Noah. “I did my best but there have been problems. First, I took your plans to the district council to get a building permit and they did not meet the code. There weren’t enough windows, the colour wasn’t compatible with the environment and the engineers wouldn’t sign off on wooden beams under the main floor. When I got the plans redrawn they argued I would need a fire prevention sprinkler system. It took three months to get the approvals and the cost has gone up 50[%]. The council insisted I get a resource management consent since an ark is not a permitted activity. My neighbours objected because of the hammering and the lights at night because we were now running late. Some thought they might be shaded by the height of the ark and others complained that we had no plans for dealing with the smell from the animals. The council staff demanded we have an effluent disposal system and larger doors for safety purposes. Lord, just as I got through all that I had a protest around the site by the greenies complaining that we had chopped down native trees and that our forest management plan was not sustainable... By this time I needed my carpenters to work long hours and some who wouldn’t agree I fired. They went to the Employment Court and got their wages reinstated for the whole period, plus \$50,000 each for my causing them embarrassment. When I started compiling my list of animals the Privacy Commissioner intervened and demanded that I not release the list to my sons who were responsible for loading the ark. At this stage I had a visit from the Human Rights Commission because we had our wives doing the administration and none working as carpenters. They insisted we stop calling it Noah’s Ark and use something gender neutral... The next day the safety and health inspectors arrived and wanted more safety standards. They are taking a case against me for not having a sign up to say it was a place of work. Inland Revenue have been in to try to seize my assets, claiming I might sail any time, leaving the country without paying tax. Just when I thought I was in the clear the regional council heard there was going to be a flood and they demanded that you obtain a resource consent that will have conditions about reinstating the Earth to its natural condition. They are concerned that the environmental and social effects may be adverse and that you must avoid, remedy or mitigate them... As you can see, Lord, it has been one delay after another and I don’t think I can be finished for another two years. This morning the local iwi were here saying that we were building on land that belonged to them and they want half the ark under Article Two of the Treaty of Waitangi... They have set up a tent on the top deck.” Just then... [a] rainbow stretched across the sky. Noah looked up and sighed. “Does this mean you are not going to destroy the Earth, Lord?” he asked hopefully. “No,” said the Lord sadly. “The Government has done it for me.” [■ ‘US geologists claim to have evidence that the biblical flood did take place.’]

...Scientists suggest the Black Sea may have been created by the sudden bursting of a natural dam – a finding that could rewrite the history of agriculture – and may account for the Biblical story of Noah’s flood. It had previously been assumed the Black Sea grew slowly as melting ice caps

raised ocean water levels. Sea water would have poured gradually into the Mediterranean, and then into the Black Sea. But... sediment patterns on the Black Sea would be gradual and layered if this had happened. Researchers have instead found a thin, uniform dusting of sediment, consistent with a geologically instantaneous refilling of the Black Sea. It now appears that a vast plug of sediment held back the rising Mediterranean waters for centuries and then burst. Speaking at the American Geophysical Union in San Francisco the scientists said the flood could[have] forced the spread of agriculture, driving farmers to new pastures across Europe. Farming is thought to have arisen in southwestern Asia around 9,000 years ago, reaching Greece and Turkey 1,000 years later. Then it surged into eastern and central Europe – at the same time as the flood. The coincidence is too much to be chance, said [the scientists]... Not all are convinced. “Farming was such a big idea that it was bound to move across the continent, no matter what happened at the Black Sea,” said [a] Professor... of the Natural History Museum, London.

...In *The Quest For Noah's Flood* on the National Geographic Channel at 8.30 pm, Sunday, [an]... explorer... leads an expedition for artefacts which might support the controversial theory that the Black Sea was hit by a cataclysmic flood. The Black Sea is... the only sea with oxygen-free water – like a bathtub with no drain, just an overflow... “So we’re looking at whether a lot of area went underwater and stayed underwater. Can we prove that? Are there plants there? Can we find the ancient shoreline? And we did. Then their theory says it all happened 7500 years ago. So we found shells and dated them. Bing, bam, okay. So to my mind there’s absolutely no doubt about a flood of biblical proportions.”

The account of the Deluge in the Bible and similar traditional accounts are evidence that there always have been floods large enough to affect man’s struggle to win a living from the earth. The early civilizations that grew along the Nile, Tigris, Euphrates... and... Indus... rivers are examples of the development of civilizations in an environment where a river enforced community action for flood protection... [T]he earliest... flood... recorded... [was] in China in 2297 B.C... [The Yellow River or] Hwang Ho is known as “China’s Sorrow.” Despite... setbacks caused by... repeated floods during 4,000 years... however, the Chinese did not abandon their lands. This generally was true of the other great early civilizations that experienced river floods. For example... explorations at the ancient city of Ur in Mesopotamia in the 1920s... found evidence that sediments deposited by a flood became the site for rebuilding the settlement... Most of the world’s population and property are located on lands subject to the overflow of rivers or seas... [F]lood-prone lands comprise 5% of the area of the U[S], more than 10% of the Hwang Ho basin... almost all of the Netherlands, and nearly all of the southern part of Vietnam... Many cities, including Paris, Rome, Washington and New Orleans [– which, like the Netherlands, is ‘mostly below sea level’ –] occupy land subject to river floods.

In a flood a river can take life as easily as it gives – a testament to the power of water. This force isn’t always apparent. In its natural state a river’s vast watershed acts like a giant organic sponge. The majority of rainwater is absorbed by soil[, then] vegetation aids evaporation. Remove the natural landscape, or pave over it, and the foundation for disaster is laid. In cities all over the world... development centres around rivers... like Labelle in Canada’s Quebec province... Here, as water runs down the rocky hillsides... gravity gives the rivers enormous power. The dams built to harness their power are already stressed by a season of rain in July of 1996 when the most powerful storm in a century strikes – 11 inches, or 3 months worth of rain, falls in just 36 hours... Some dams can’t take the strain... Concrete and asphalt reduce the friction that normally slows water down... As the water picks up velocity its destructive power increases drastically and, when channelled through steep city streets, the flood’s focused power pushes large objects. Turbulence... [loosens] earth and debris, increasing the flood’s destructive mass. People are cut off from rescue as roads wash away. Hundreds of families are forced from their homes. 3000 flood victims must be rescued by helicopter on the first day alone. The Canadian Air Force plays Noah in a disaster of biblical proportions... The Quebec flood causes \$704 million worth of damage and forces the relocation of 15,000 people. It is called the worst natural catastrophe in Canadian history... “Rivers normally flood – it’s their natural way to exist. Every river will start developing an area that it floods... and that’s called a flood plain. These are generally very fertile – they’re very good places for agriculture – but they’re also high hazard areas... Rain comes, rolls off the tops of the hills... the rivers swell and they flow on to the flood plain. These floods have been going on since before man... And when there are really bad floods, they flood beyond their flood plains... erosion takes place and new landscapes are being built.” [However, during the flood in Quebec,] erosion that might have taken eons occurs in one day and one night... “When we, as the human race, decided to move to the river, we challenged nature and we’ve been in this battle ever since... As far back as we can look... there has been this struggle between the people who have wanted to live along the rivers and the river itself.” ...a classic example is Italy’s ancient city of Florence... [Its problems go back to a time] when the hills were cleared for farming. “...deforestation up river... [meant] there was no absorption by the vegetation and that caused more flow to come down into the city.” Floods became so frequent that artist Michelangelo advised his nephew to stay away... The worst flood hit in 1966. “You just had a mass of water coming through a city and the river had no place else to go.” As in Quebec, helicopters provided the only means of rescue for some. The impact of the water increased as it[was] forced through narrow streets. Florentines’ declared the disaster worse than W[W2] as the deluge destroyed everything in its path. Overflowing sewers joined the flood, polluting water supplies and leaving the streets coated in stinking mud. This time the Arno[River] claimed 113 lives. The... region continues to be plagued by floods to this day. In 1996 the Arno’s tributaries gave way. After torrential storms, rivers ran wild through an area just west of Florence, killing 11 people. Yet, after every flood, communities all over the world rebuild – forgetting the unpredictable but relentless timetable of the weather... January 1997... high in the Sierra Mountains three feet of snow melts in an unusually warm spell... It’s already been a wetter than average winter in a region where water is usually scarce. Rivers are swollen to capacity from northern California to Nevada. Downstream the flood plain is protected by levees – raised earthen banks built along large stretches of river. Several generations of Californian farmers built up the levees... “As far back as the gold rush we began to see problems in... the Sacramento and in the San Joaquin areas. Heavy flows out of the mountains would cause damage. The Federal... and... local governments have been active since the 1850s in trying to deal with this particular problem.” ...But when raised banks artificially increase the quantity of water in a channel, and bring the level above the surrounding flood plain, levees can actually increase a river’s destructive potential... A massive system of dams was also built – to control floods and to irrigate this semi-desert region... When another Pacific storm sweeps into the Sierras, a month’s worth of rain falls in just two days. The 150-year-old system of flood control reaches... breaking-point. To relieve pressure on the reservoirs, a dozen dams open their sluice-gates... The massive discharge rampages through the rivers below... [breaking] through the levees in dozens of places, carving out huge chunks of earth and asphalt... Almost 2000 homes are damaged... A mobile home park is swept downstream. The desert city of Reno is submerged when the Truckee River crests at 15ft above flood level. After it recedes, the flood leaves a thick layer of mud and debris. Some victims are angry. “...politicians talk about doing something about the river but it never seems to get done.” ...“People have said to me: ‘Isn’t there anything you guys could have done to prevent this?’ There’s no way. Mother Nature just took back what belongs to her, and there’s no stopping [her]...” ...In Georgia a tropical storm dumps 25in of rain in 24 hours in 1994. The rivers strain to free themselves of their man-made restraints. In one rural community, six old earth dams break simultaneously. A wall of water slams into homes and businesses, killing 16 people and causing panic in the streets... 31 people[eventually] drown in the flood – the worst natural disaster ever to hit Georgia – but no match for a major flood on the Mississippi, [the] sixth largest river in the world. Seen from space it’s a glittering ribbon across America... Over 2000 miles of levees line this mighty... shipping lane... For over a century a massive project has been under way to control floods on this meandering giant... US Army... engineers built a system which has protected the lower Mississippi for 70 years. But in 1993, levees on the upper part of the river, many built by locals, are tested to their utmost. Communities rally to strengthen their levees against the most prolonged heavy rain the U[S] mid-west has ever seen. Over the course of 150 days of floods, volunteers shovel 927 million pounds of sand

into 26 million bags. But their last line of defences is not... enough. Upstream from the town of St Genevieve a levy starts to fail... [T]he force of water proves too strong... Dozens of levees, especially the older, unregulated ones, collapse under the water's weight. A wide swathe of America's heartland is destroyed. More than 6 million acres are flooded. 48 people are killed... "...Right after the flood there were a series of sand-dunes over what was good agricultural land." Sand had streamed from the levy breaks, leaving farmland ruined long after the water receded. This and other flood effects brought damages to \$12 billion. "The other cost that is not often totalled up are the... non-quantifiable costs. What about the trauma to the families that are affected by this? We under-estimate the power of water because most people never have really come into contact with it until it's too late." ...The disaster contributes to a growing realisation about the price of progress[, which only stands to worsen as]... more people live, work and play in flood zones... "['An inch of rain is equivalent to 100 tons of water to the acre', and a] cubic foot of water... weighs 62lbs... Water 12 to 24in deep can spill a pedestrian trying to get through a stream. Not much more water than that in a rapidly moving stream can carry away a vehicle." Cars and trucks are swept away every season on the Los Angeles river system. Some 2500 miles of concrete channels... [- in which] children play... and homeless people live... [-] flow through the city. Those caught in a torrent can be swept to their deaths... "The water that comes through these channels was designed to do one thing... to get... from... one end... of the LA area... to the ocean, as fast as possible... Once you get into these channels there's no way out..." Each year the Swift Water Rescue Team[pulls] at least 10 people from the treacherous currents... [B]ut one-third of swift water victims are would-be rescuers... [LA is] a city that's faced the destructive energy of raging water many times... sometimes with devastating results. For 330 days of the year the 10 million inhabitants of L[A] live in a region as arid as the Sahara, but in the brief rainy season sometimes the problem is too much water... Vicious winter storms saturate the dry, bare mountains surrounding the LA basin, triggering dangerous mudslides. L[A] owes its very existence to a controversial, century-old battle to capture and control seasonal storm water from the Sierra's and beyond. Precious H₂O is diverted from rivers and lakes hundreds of miles away, [then is] transported across deserts, pumped up hills and through mountains, and into LA, where it's stored behind dams high above the... basin. This vast network stands as a testament to an era of confidence that engineering could solve any problem – including building a dam above a crowded subdivision, in an area riddled with fault lines and oil wells. "If you remove oil from the sands and gravel that create the oil reservoir, there's a void created and the weight of the earth is going to cause subsidence or settlement in that area... The reservoir was designed with the knowledge that there would be subsidence, and... that there were certain faults in that area." But on December 14th, 1963, this delicately balanced system springs a terrifying leak. At first the water draining down the streets of the Baldwin Hills neighbourhood is no more than a minor inconvenience, but above this quiet community 300 million gallons of water is waiting to do what all water behind dams... given the chance... would do... It starts with a silty seepage at the base of the dam, then cracks appear on both sides of the earth-filled walls. Water engineers try to empty the reservoir but as the leak increases they realise the dam is close to collapsing[and set off a warning]... "...You are urged to evacuate your homes immediately. Go to higher ground." Once the deluge reaches critical mass it rips through steel and concrete. The final catastrophic breakthrough is as inevitable as it is swift... The result is 5 dead... As residents survey the ruins of their homes, engineers survey the remains of the dam – trying to work out what went wrong. Although they had calculated for subsidence, they hadn't planned for new oil extraction methods... using high pressure water to flush out oil deposits[, which] weakened the land around the reservoir... Although such dramatic failures are rare, L[A] suffers almost annual crises because of its volatile seasonal rainstorms and its... [ill-conceived] attempts at flood control... LA's river system is a classic example of urban intervention gone wrong. "What we've done is to pave over so much of our watersheds that two-thirds of the rainwater that used to soak in now goes directly into the river channel. The second thing that we've done... is to wall... natural river channels... off from their flood plain... it's asking for trouble." To protect people from flood [a new dam] was built, and the flood basin behind it[was] turned into a park. "If you were to ask people that live in L[A what the new] flood basin was they would tell you it's a recreation area... a place where we play golf." ...when the worst storm in 50 years triggers a flash flood[, the] dam protects communities downstream but the basin behind it fills so fast that people in the park are trapped... In the haste to save everyone, mistakes are made... It's a powerful lesson that even small dams, functioning as planned, can be deadly. But when a monster dam fails, the destructive power is unstoppable. ['On May 31, 1889, a dam broke and a wall of water, 75 ft. high and 1/2 mi. wide overwhelmed the city of Johnstown, Pennsylvania. More than 2200 people lost their lives, and', apparently, nothing was learnt from that disaster!]Snake River Falls in Idaho [rushes] down from the mountains of the American west... Harnessing this power, and trying to control the cycle of droughts and floods, became an American obsession... [Consequently,] during an era of great dam construction... man's belief that he could tame the wilderness reached its peak... on the Snake River Valley... Engineers spent 30 years coming up with a way to control the river. The [result was the] Titan Dam, thicker than 5 football fields at its base and 30 storeys high... [No one] who lived below the giant structure... could... conceive of it collapsing... But [they] couldn't have been more wrong. While... being filled the mighty Titan Dam bursts. The water power in the reservoir behind it equals 250,000 tonnes of TNT. 2 million cu ft per second gush out, smashing two towns off the map... As flood waters recede 8 people are found dead. Tens of thousands are forced from their homes... The US Bureau of Reclamation, which built this and many other dams throughout the western states, concluded that faulty construction was to blame. "When the Titan Dam failed people began to look around at what we were doing in dam construction. Many of the projects that have been built over the last century have prevented billions of dollars of damages and saved... thousands of lives. [However, in] other cases they've been unnecessary, and in some cases counter-productive." "We [had] the idea that technology could really solve all our problems. We've learned the hard way that it's really not that simple – that we make trade-offs. We no longer have small floods that happen frequently; we have very big... floods that happen less frequently but in fact cause much more damage. The era of building dams for flood control is over." But this belief is slow to catch on in [Last World] countries, where big dam building projects are increasingly popular... "The dam building industry estimates that about 1% of the new dams being built today will fail catastrophically, and that's a lot of time bombs each year being built around the world." ...China... is building a dam across the mighty Yangtze River... The Chinese believe this technological marvel will generate the electricity needed to compete in the information age, but the construction of the world's largest reservoir has many experts worried. - EARTH'S FURY

On... December 2 1959 the... headlines throughout Europe carried the shattering news of the failure of the Malpasset Dam in southern France and the subsequent loss of over 400 lives in the catastrophic flood wave resulting from the emptying of the reservoir. Less than four years later... an even more massive flood wave was formed when part of Mount Toc, in northern Italy, fell into the Vaoint Reservoir causing considerable destruction downstream and the deaths of over 1500 people. Such events bring sharply to our awareness the hazards inherent in civil-engineering construction, when Man interferes, often unwittingly, with the forces of the natural environment. In both cases the reaction of a rock mass to changed conditions... was not fully appreciated. At Malpasset, a highly stressed arch dam was built on a relatively weak foundation composed of faulted schists; failure occurred in the left foundation as a result of rupture along pre-existing defects within the rock structure. However, at Vaoint, the conditions were different in that flooding by the reservoir of the toe of a very old landslide, forming one side of Mount Toc, resulted in a weakening of the rock mass, followed by movement of... 300 million cubic metres... of rock... [O]n the Indus River in Pakistan... the Tarbela Dam... [is under construction. It was once] destined to be the biggest in the world, but flaws due possibly to poor design have delayed completion... [D]ramatic examples... of [dam collapses]... illustrate the importance of adequate prediction of geological conditions prior to the construction of engineering works... Earthquakes are probably the most dramatic of Man's natural enemies; and for that very reason they are worth our study... 60,000 people died in Lisbon on All Saint's Day, 1755, in what was one of the most violent earthquakes on record. At least two major tremors struck the city, causing enormous structural damage and sending the waters of the River Tagus rushing through the streets. The death toll was

especially high because the churches were packed, and because of the fire that ravaged the city after the tremors had passed... By developing an understanding of both the causes and effects of earthquakes we can hope to reduce the horrifying toll of lives in the future... by selecting suitable building materials and sites...

[NZ]'s Earthquake Commission (formerly Earthquake & War Damage Commission) administers the Earthquake Commission Act 1993. This provides private property owners in NZ, who have purchased fire insurance, with insurance cover for damage to properties... caused by: ☐ Earthquake, natural landslide, volcanic eruption, hydrothermal activity or tsunami. ☐ In the case of residential land, storm or flood. ☐ Fire occasioned by or through or in consequence of any of these. War damage has been removed as an insured peril... Claims for the year ended June 30 1995, totalled 3,903 earthquake claims (\$1,411,408), 239 landslide claims (\$3,590,872) and 876 land claims (\$2,875,751)... The Earthquake Commission [EQC] is a Crown entity... responsible to the Minister of Finance... [which is] controlled by provisions in the Public Finance Act 1989, and a body corporate with perpetual succession, a common seal and capital of \$1.5 billion. - *New Zealand Official Yearbook 1996*

The EQC... has insufficient assets to be regarded as solvent on a long-term basis, [an] independent appraiser... says in the commission's annual report... [T]here was a 60[%] "probability of ruin" in which a major disaster, such as an earthquake in Wellington, would force the commission into a financial position where it would need to call on the Government for funding to cover any subsequent major loss... The EQC general manager... said the commission had \$2.54 billion in assets at June 30, 1996, \$127 million more than the year before [the total has now 'grown to \$2.7 billion']], and \$1.52 billion in reinsurance, as well as the Government's guarantee to meet all the EQC's obligations.

...Treasury raids on the EQC's reserves... replaced \$2 b... with IOUs... A bill... gives... Parliament... power to direct how the money is invested...

Members of Parliament's finance and expenditure select committee were treated last week to the sight of the chairman of the EQC... tearing up its annual report. It was a gesture of frustration at the long-running battle between the commission and the Treasury about how the commission's reserves should be invested... In effect successive governments have taken the commission's funds and annual surpluses, spent them and left IOUs. And not always even that. Between 1988 and 1995 the Government took a third of the commission's surplus each year, in lieu of tax, and then took half of what was left as a "dividend." ...Evidently accepting that the commission's reserves needed building up, the Government agreed in 1995 to exempt it from taxation until it was an unquantified "substantially" larger, and to extract no more dividends until at least the 1997-98 year... But the policy of treating the commission as a captive lender to the Government remains and a bill now before the select committee would put beyond doubt the Minister of Finance's right to continue instructing the commission how to invest its funds... A Works Consultancy Services report last year concluded that in the event of a serious earthquake in Wellington the commission should expect to pay out between \$3.5 billion and \$6.5 billion... The commission only covers the residential sector... Add the cost of damage to commercial and public sector property, infrastructure, and residential property above the ['\$112,500 inc. GST for homes, \$22,500 inc. GST for contents and some cover for sections'] cap, and the total destruction of capital stock in a Wellington earthquake would be between \$10 billion and \$20 billion, the NZ Institute of Economic Research estimates... The total cost of "the big one" would be far greater than that, of course... In the event of a major disaster the first \$700 million of claims on the commission would be met from its reserves. Then... \$1.5 billion of reinsurance kicks in. When that was exhausted the commission's remaining \$2 billion of Government securities would need to be redeemed. Anything beyond \$4.2 billion would fall to the Government, as the reinsurer of last resort. The problem is that the circumstances which required the commission to cash in its Government securities would also create adverse market conditions... When the commission called on those Government IOUs, the Government would have to find the money either from taxation or from borrowing in those hostile conditions... Treasury's view seems to be: We'll cross that bridge when it falls down. Ultimately the taxpayers would pay, for cover they thought they had already bought through a... premium levied with house insurance (currently \$67 a year).

...[P]ayments for repairs to earthquake damaged homes will in future be made directly to builders rather than to the owners of damaged properties. This follows an agreement between the Master Builders Federation and the EQC, which are also joining forces to develop quick methods of rebuilding after a major quake. Property owners in the past have sometimes used the money for purposes other than repairing damage.'

...repeating what it did with 'the \$3.5 billion in the Government Superannuation Fund, the Government has decided to move the \$3 billion national disaster fund which covers the cost of mid-sized earthquakes, from safe but stolid local stocks and bonds on to international sharemarkets. At present, all the disaster fund money is in non-negotiable Government bonds. "We're not making the most of the money. It's plus-plus," said a spokesman for the Finance Minister, "but it's going to depend on overseas markets and interest rates." Incidentally, a seismic study into the earthquake-proofing work needed on the Auckland Harbour Bridge will be completed in September. The study, by international consultants, began in 1995 after a preliminary report found some parts of the bridge were susceptible to damage in a major earthquake. Although the Auckland region historically has a low level of seismic activity, an active fault – the Wairoa North fault – runs beneath the Hunua Ranges, about 40km from downtown Auckland. Part of it has moved in the past 10,000 years – enough for the Auckland Regional Council to identify it as a potential major earthquake hazard.

...eight years after the massive Loma Prieta earthquake ravaged the San Francisco area, the symbol of the temblor's greatest destruction is rising from the rubble. The first leg of the Cypress Freeway... has just reopened and an additional bridge and two offramps will open in the months to come... No smiling dignitaries took the first ride on what has become the most expensive strip of highway in California's history – a \$1 billion project fraught with pain, strife and lawsuits... The new Cypress link arcs sharply north and west of where the old structure stood... The collapse of the 32-year-old Cypress Freeway – the first double-decker roadway of its kind built in the US – claimed nearly two thirds of the quake's 67 victims. When the ground began to shake at 5.04pm on October 17, 1989, the upper deck slammed [o]nto the lower level for more than 1.5km. Motorists... were trapped... in pockets ranging in height from virtually nothing to more than a metre.

...[The Petronas Towers (which have 14 dampeners) and the 800ft tall JRC Central Towers (6) are both steel-cage designs, yet during 1994's Los Angeles quake, the steel-cage structure of sky-scrappers was found to be faulty (the quake caused stress fracture cracks – if the quake had lasted more than 20 seconds, the structure of some could've been compromised).] By the way, 'lead-rubber bearings, invented by a Wellingtonian in 1976, helped save the USC University Teaching Hospital, when the quake hit. While other LA hospitals suffered major damage, nothing fell from university building's shelves.'] - 1997

Scientists say they have found a hidden fault under Los Angeles that probably caused quakes in the past and could cause bigger ones in the future. The fault runs 40km from downtown... to the Coyote Hills in northern Orange County and toward Brea in the east, covering at least 840 sq km...

When... Earth was formed the Southern Hemisphere contained only one enormous super-continent... But 120 million years ago huge geological forces started pulling it apart into the great southern continents of South America, Africa, India, Antarctica and A[US]. As part of that process, one huge piece of land – much of it beneath the sea – slowly separated from A[US] to form the islands of N[Z]. But the very idea that... Earth's crust can shift in this way is very recent... On the 17th of June, 1929, the... Murchison earthquake shook and heaved the earth['almost everywhere in NZ']... 17 people died... but 25 years later the tragedy provided vital information for [a] Kiwi geologist... By taking careful measurements throughout the Murchison area, [he] established that bits of... Earth's surface were constantly sliding and rubbing against each other along what we call fault lines. In other words, [he]... helped prove that... Earth's crust was not static, as scientists then believed... N[Z] straddles two of the

biggest plates – the A[US]n and the Pacific. As they slowly grind past each other, they're stretching our two main islands, making them longer and thinner[('Earth's crust under NZ's North Island is the thinnest in the world – 16km thick'; Earth's 'crust varies from 0-40km thick – it is thinnest under the oceans')]. At the same time the[y]re slowly pushing up... the Southern Alps... The result is a vast alpine fault line running 450km... Its crisp line [is] clearly visible in... Nasa photograph[s] taken from 800km out... [in space. E]arthquakes can bring long-term benefits. Every day Wellingtonians profit from the flat land pushed up by the huge earthquake of 1855... [U]sually it's a pretty slow process, but sometimes things can... happen with a bang... [O]n... February the 3rd, 1931, the Hawkes Bay fault gave in to the strain of thousands of years of compression... and released an earthquake measuring a mighty 7.8 on the Richter scale. 256 people died and hundreds more were injured in N[Z]'s worst natural disaster.

...The Earthquake Society conference in Auckland next week will look back on a quiet year in N[Z] for earthquakes, with about 130 recorded[('in an average year 60-100 record between 4 and 5 on the Richter Scale; 10-20 record 5 or more'). Only 2] were larger than 6 on the... scale... both... so deep they caused little damage. The biggest was one of magnitude 6.3 on October 26 164km under Taupo. It was felt from Auckland to Christchurch.

...[Auckland is heading for Christchurch, and the result will be a major earthquake. Geologists say that over the next 70 years, the northern city will move 4m south. Since 1990, Institute of Geological and Nuclear Sciences staff have taken thousands of global positioning satellite measurements. By repeating the measurements over several years, parts of the country are shown to be moving up to 5cm a year. A survey adviser for Land Information NZ said relative boundaries would stay the same. "A property-owner is not going to suddenly have land taken away or get some extra land."']

...Auckland... lies on a north-south axis on a narrow isthmus... [of] land susceptible to serious earthquake damage. The result is that a big shake is likely to bring Auckland problems many other cities might escape in a similar-sized earthquake... Nobody knows when the big one will hit Auckland... The last earthquake to cause significant damage occurred in 1891... [A]n earthquake, with a magnitude of 6 on the Richter scale and a shallow epicentre close to central Auckland, would produce widespread instability. Fine sedimentary soils could liquefy, amplifying the shaking on reclaimed land around downtown Auckland, the port and airport. Bridges, motorway viaducts and their approaches would be most vulnerable. They also carry water supplies and communication lines. Motorways would be largely unusable. All normal traffic would cease... It could take up to six months to rebuild the region's bridges. But it would take years to build another port if present wharves were destroyed... Auckland seems to have enough trouble[s]... without worrying about an earthquake. In the capital, where the Wellington fault line passes through the centre of the city and the Ohariu fault is not far away, 200 experts have just met to contemplate the economic fallout of a major earthquake hitting the city. Their... estimate[was] that a big earthquake would destroy 15 to 20[%] of Wellington's commercial property... representing... \$4[billion] to \$5 billion in capital losses to business... [D]amage to the residential sector... [would add a] further \$4 billion[, and during]... the first year[after the earthquake there would be] about \$1 billion[worth] of lost income flowing from the damage. So the bill could be a cool \$10.5 billion, all up... However... [r]eplacing about \$10 billion of buildings and their contents would send a strong "demand pulse" through the economy, offsetting the negative effects of the quake. It would boost [GDP]... for a year or two... In the long run – five to 10 years – the economic effects would be neutral.

...Scientists are discovering geological faults beneath the seabed in the earthquake-prone coastal region of Hawkes Bay and Poverty Bay... The questions are... How big are they? How big might the earthquakes be? When might they happen?

...British geologists have developed a new way of forecasting earthquakes... The technique involves analysing vibrations from stressed fluid-permeated rocks... It can be used to predict the time and magnitude of large quakes, and although it cannot pinpoint where they will occur, it can help geologists with local knowledge to estimate which area is likely to be hit. [A g]eophysicist... from the University of Edinburgh, employed the technique to warn the Icelandic authorities last October that a quake registering 5 on the Richter scale would happen soon... A final warning was issued on November 10. Three days later, a magnitude 5 earthquake was reported within 2km of one of the monitoring stations... [Now that it is possible to answer some of the most important questions concerning earthquakes, we can move on to lesser questions – such as:] Where is the safest place to be when an earthquake strikes? It may well be among the ancient towering pillars of the Parthenon on the Acropolis of Athens. Almost every part of Greece has been battered by earthquakes over the centuries. Yet the columned structures... have withstood earthquakes for 2500 years... [R]easons given for the longevity and stability of the monument [include that i]t was built of hard, strong marble[, and i]ts foundation was on rock...

Seismologists have warned people in the Sydney region to expect more earthquakes over the next few weeks after yesterday's big tremor. Power was cut to more than 2000 homes, mines closed and emergency switchboards jammed in the second quake to hit N[SW] within a week. Yesterday's quake measured 4.7 on the Richter scale and was felt up to 200km from the epicentre... [No one was killed. However, over] 1000 people have died in the earthquake that rocked western Colombia, and rescue workers are so strapped that many bodies remain on the street uncollected... Worst hit were the poor... districts of... [the] provincial capital of Armenia[, a]... city of 300,000 residents, where "few of the homes remain standing."

...Colombia's President... ordered a military crackdown in [the] earthquake-torn city[of Armenia] yesterday after looting and rioting by survivors... 2000 soldiers and 700 policemen would be brought in to stamp out gangs of armed looters still roaming the streets... Frayed tempers [had] boiled over as survivors, tired of waiting for government aid to arrive, took matters into their own hands, smashing their way into scores of downtown stores and businesses to carry off food and water as well as shoes, jewellery and compact discs. What started as an isolated incident quickly degenerated as crowds of hundreds swelled into thousands in a rampage that engulfed the entire downtown area. [The] Interior Minister... was unable to explain why food aid had not been handed out. [● Several] aid appeals have been launched in N[Z]. For details, contact] World Vision... Oxfam... [or phone] 0900 UNICEF (888-55) for an automatic \$25 contribution.

...[on this day in '1995, Japan's deadliest earthquake in 70 years slammed into Kobe and other cities killing 5000 and causing \$85.5 billion in damages.']

...Yesterday was the anniversary of the 1923 Great Kanto earthquake, which killed 140,000 and left millions homeless. Thousands of Japanese practised for a major quake... [Schoolchildren wore] padded hoods to protect them from falling debris... during an earthquake drill... in Tokyo.

...Japanese troops were told yesterday to target foreigners to prevent looting and rioting in the event of a major earthquake... "Atrocious crimes have been committed... by sangokujin and other foreigners,"... [said Tokyo's] Governor... After the Tokyo earthquake of 1923, which killed about 100,000, rumours about riots among Tokyo's Korean residents led to Japanese mobs killing hundreds of Koreans... The... slang term "sangokujin" means "people from [Last] World countries" and was used insultingly for residents from the former Japanese colonies of Korea and Taiwan.

...Thousands of dazed Taiwanese – many wearing only underwear or pyjamas – stumbled into dark, chaotic streets early yesterday, shaken awake by an earthquake that killed at least 1450 people, injured 3750, destroyed thousands of homes and toppled buildings islandwide... The majority of buildings... that collapsed were recently built high-rises... With a magnitude of 7.6 on the Richter scale, it was the strongest to hit Taiwan in a decade... Ironically, in a local newspaper yesterday morning, a news report had quoted seismologists predicting that... Taiwan was in for a potentially devastating earthquake following a relatively calm 30-year cycle. "The next one will be the big one," the report said.

...The Big One merely a matter of waiting N[Z] is in line for an earthquake the same size as the one which has wreaked havoc in Taiwan – but no one can say when... As recently as last year, geologists predicted a huge earthquake for Wellington... The likely size of a quake out of the big Wellington fault is put at 7.6 on the Richter scale... The last time one that big struck[NZ] was the Inangahua quake in 1968. Edgecumbe's 1987 quake was relatively small at 6.5... An eruption out of the Wairarapa fault could be greater than 8... In 1855 Wellington and the Wairarapa were rocked by a gigantic shock of 8.2... On average, such shakes occurred every 600 years on the Wellington fault. [But the previous] one was 350 to 450 years ago... "[However, the next] big... event, Richter 8 or larger, is expected on the Alpine fault."

...The big earthquake expected to strike the South Island within the next two decades could trigger a series of serious shakes throughout the country experts from several fields have concluded. An Alpine fault earthquake measuring eight on the Richter scale was more likely to hit before the feared Wellington tremor. Satellite gear had shown the fault was moving at the rate of 24mm a year... The devastation in Taiwan is a grim reminder of the high toll earthquakes exact. At least 8928 people were killed by earthquakes around the world last year, says the US Geological Survey National Earthquake Information Centre. The number of deaths in 1997 was 2900, and in 1996 it was just 419... But the annual average death toll over the century is 10,000 says the centre's director... [- primarily due to t]his century's worst... earthquake in July 1976 that killed 290,000 in the Tangshan region of northeast China... [O]ver the past two decades the average annual toll has been dropping to about 8000... [The director] told the BBC World Service this was probably because of safer buildings...

More than 500 people were reported killed when a violent earthquake hit heavily populated western Turkey yesterday, flattening buildings in towns and cities and sending thousands rushing into the streets in panic. Rescue workers and distraught survivors grappled with the heaps of concrete and metal rubble, trying to free people trapped beneath... The quake, measuring 6.7 on the Richter scale, was centred near the industrial city of Izmit on the Sea of Marmara, home to about one million people... Firemen extinguished a blaze that broke out at a major oil refinery in Izmit... At least 40 people died in sprawling Istanbul... The city of 10 million was plunged into darkness as the quake cut power... The minarets of dozens of mosques lay on the ground. There was no immediate word of damage to Istanbul's many historical buildings dating from... Roman times.

...early today, the... Mayor of Golcuk, a port town of 75,000 on the Marmara Sea, gave some idea of the possible extent of the disaster when he declared that as many as 10,000 people might be trapped in rubble in his town alone... "...No one is helping us. Neither the city nor the military," [another man from]... Golcuk... said as he continued bashing the concrete that pinned his 21-year-old nephew's feet... Turk[ey's P]M... was close to tears during a visit to the towns of the western Marmara region. "The loss is huge," he said. "May Allah help our state and our people."

...Foreign rescue teams with sniffer dogs and lifting equipment poured into devastated northern Turkey yesterday as the death toll... reached 3480. Firefighter aircraft were expected from France and Germany to tackle a blaze threatening to blow up the country's main oil refinery... [in] Izmit... and spread havoc across a radius of 4km to 5km... Seismologists put the quake at 7.8 on the Richter scale, more powerful than first thought. Newspapers accused building contractors of shoddy work that cost lives as hundreds of apartment buildings crumpled, flattening people in their beds. "Murderers!" screamed a banner headline in the best-selling *Hurriyet* newspaper... The earthquake has put on hold debate of a series of fiscal reforms urged by the I[MF] if Turkey wants a financial support package later this year. Turkey's stock exchange[has] suspended trading...

Turkey declared its quake-devastated northwest a disaster area yesterday, enabling the Government to commandeer private and public resources to provide help... Turkey, criss-crossed by seismic fault lines, suffers frequent earthquakes and tremors. Some... 98[%] of the population are in a "high risk" area. Nearly 33,000 people died in the eastern city of Erzincan in 1939, some 2400 were killed in Varto in 1967 and 653 in Erzincan again in 1992... After the 1992 Erzincan quake, civil servants began a project supported by the World Bank to review construction regulations and recommendations to tighten laws. The "Erzincan Project" is still unfinished. But those familiar with Turkish building laws say it is not the lack of regulations, of which there are many, but their application on the ground which, they say, is patchy at best. "The problem is that we don't have construction supervision," said one Government official. A council inspector is appointed to supervise each building site and his name appears on a sign outside. "But most of the time the inspector approves the building without even visiting it... Also... [w]e don't have any standard for contractors... You could become one tomorrow." As for the professional builders' organisation, they deny responsibility and... [blame] the state.

...in Cinarcik, Turkey, [a 9-year-old has been]... pulled from rubble which trapped her for 100 hours. [Her mother had been] pulled out after 30 hours. The death toll from Tuesday's earthquake has passed 10,000 and is expected to reach 40,000.

...[as g]ravediggers struggle to bury[the] flow of dead... [-] Islamic tradition says the[y]... should be buried within 24 hours... [- Turkey's P]resident... and Pakistan's [PM have]... joined thousands of Muslim faithful throughout Turkey in mass funeral prayers for victims. Turkish newspapers billed the event as the largest show of mass grief in modern Turkey's 75-year history. Heavy rain on Friday plagued teams working to clear the rubble and recover some of the thousands of bodies still buried under collapsed buildings. Yesterday the main crisis centre raised the confirmed death toll to 13,472, with 27,164 injured... The estimated number of homeless is 600,000... and the cost of rebuilding will be \$20 billion.

...RESCUERS toiled through a freezing night in northwestern Turkey to extricate hundreds of people from the rubble of a powerful earthquake. The death toll last night stood at 247 people... The earthquake measured 7.2 on the Richter scale and hit the province of Bolu on Friday, demolishing hundreds of buildings and panicking residents already traumatised by a devastating quake which struck in mid-August... kill[ing] at least 17,000 across the northwest... [In related news, a cat has been] pulled alive from a building that had been damaged by a devastating earthquake in Taiwan nine weeks ago. The cat was discovered by a construction worker... [A v]eterinarian... said the cat may have survived the ordeal by eating another cat that had been killed by the magnitude 7.6 temblor... [which killed m]ore than 2400 people... and... injured... 11,000...

India has mounted the biggest rescue operation in its history to save thousands of earthquake victims trapped under rubble... across the state of Gujarat... The Government has declared that the country is on a "war footing" to cope with the catastrophe... [Over] 200 aftershocks, measuring up to six, have been [felt] since Friday's 7.9 quake... Virtually no houses in India are earthquake proof, although the region is seismically active... Several dams, including the enormous Tehri hydroelectric dam in Uttar Pradesh, [also] haven't been built to withstand earthquakes.

...The... quake that killed 2400 people in Taiwan... measured 7.6 - so was the Indian quake just slightly stronger than the Taiwanese one? The answer is no. As the strength of quakes rises in steps up the Richter scale, each quake releases 31 times more energy than one at the previous notch. Introduced in 1935, the scale is named for American physicist Charles F. Richter, who developed it from patterns he discovered by studying more than 200 earthquakes a year... The Richter scale is a more objective, quantitative basis of measuring quakes than the other widely used standard, the 12-point Mercalli scale... The Richter scale... starts at one and has no upper limit... The most devastating quake in recorded history occurred in China's Shanxi province in 1556. It measured possibly 9 on the scale and killed more than 830,000 people.

...Strongest earthquake: In Chile on May 22, 1960, the world's strongest earthquake shook the country, measuring 9.6 on the Richter scale.

Auckland Star, 29 December 1966. "BIG 'QUAKE IN CHILE". "A prolonged severe earthquake rocked northern Chile yesterday, causing heavy damage and casualties... A strong earthquake also shook the city of Mendoza in Western Argentina... near the... border of Chile." This was the day after China exploded an atom bomb at its Lop Nor test site. According to a Chinese report, this test was "a great victory for the invincible thought of Mao Tse-Tung, and a new rich fruit of the great Proletarian Revolution... as well as an important contribution to the defence of world peace." While they were thus glorifying each other in China, hundreds of unfortunate people in South America were buried alive... Study the records, and you will find that the number of serious earthquakes is on the increase. In recent years this increase has been estimated to be in the vicinity of 400[%]. Perhaps it is only coincidental that this increase has occurred during the same period of extensive atomic testing. [But] I think I have found circumstantial evidence that suggests... the two have a connection... [Consider] the experiments of Michael Faraday. He found that the Earth's atmosphere had magnetic properties. This is due to the oxygen it contains, and variations in temperature... [- such as those caused] by the passage of the Sun... [-] have a direct effect on this property... If the oxygen is lost, then the atmosphere will... lose its magnetic properties... Faraday... stated that the lines of magnetic force which issue from the Earth more or less suddenly, according to the amount of inclination, are held beneath by a force of location; and because of the unchanging action of the Earth in respect to atmospheric effect, are restrained... from alteration beneath during the changing action of the atmosphere. Also, due to the nature of magnetic force, any disturbance of the magnetic lines will have an effect

all over the Earth instantly or at the speed of light... If we can produce a sudden great change of temperature in a large mass of the atmosphere, we can also produce a sudden great change in its magnetic conductivity. This could... cause a certain amount of strain on the Earth's crust in the areas where the biggest disturbance occurs in the magnetic force lines. The magnetic lines will tend to expand or contract in the atmosphere, but where the lines enter the Earth's crust, there will be a definite resistance to the change. A slow change over a large area would probably cause little reaction; an almost instant change of tension over a small area might mean a shifting of the Earth's crust[, which would be]... more pronounced... in... an earth-quake-prone area... A nuclear explosion is the biggest man-made disturber of the atmosphere yet experienced... Everybody these days may be reading Mao Tse-Tung's books of glorious thoughts, but more practical reading would be a book that proves the connection between atom tests and the earthquakes that follow. If this testing does not cease... our tired old world... may... eventually... split at the seams... - HARMONIC 33

Atlantis, [a 'beautiful and prosperous fabled island located west of the Pillars of Hercules']... in the western sea (Atlantic Ocean)... long since submerged by an earthquake because of the wickedness of its inhabitants. Plato and Pliny mentioned it, and it suggested the site of Sir Francis Bacon's *New Atlantis*, the home of an imaginary ideal society.

If climate change were to cause the oceans to rise high enough, lots of cities could be buried (literally creating new – or real – Atlantis'). But, because water covers between 2/3rds and 75% of the planet, being IN FLOOD is Earth's normal condition. An abnormal condition would be if Earth was ever IN LAND.

And I saw a new... earth: for the first... earth [had] passed away; and there was no more sea. - Revelation 21:1

Imagine a world with no oceans, no clean air, no offshore breezes, no big swells, no flora, no fauna... no sea-shells by the sea-shore, no sea-shore. At the current rate of pollution it's not hard to imagine.

Recall that *Earth tends to lose some of its mass as its atmosphere leaks very slowly away*. What if this natural process was to be sped up by, for example, a hole in the atmosphere? Unlike a puncture in a bicycle tyre, it would be impossible to repair such a hole! Furthermore, if such a hole was to grow bigger, could Earth's atmosphere eventually become too flat to support life – or might all of Earth's moisture escape through the same hole as steam?

For the fourth week in a row, scientific monitoring shows the loss of an entire ozone layer in the atmosphere above Antarctica, says the U[N] weather agency... the World Meteorological Organisation (WMO)... The surface area of the loss was about 20 million sq km – twice the size of Europe.

...N[Z]'s incidence of melanoma is among the highest in the world... a new study says... and N[Z] is reported as experiencing the highest death rates from melanoma... [M]elanoma was the leading cancer for men under 50 and for women under 35... Early detection of skin cancer led to a cure in 99[%] of cases. Another report highlighted by the... Cancer Society... warned that N[Z]ers, because their skies are relatively pollution-free, faced a high risk of exposure to cancer-causing UV radiation as ozone levels continued to decline... [O]zone levels would reach their lowest levels around the year 2000... [S]teps had been taken to reduce further damage to the ozone layer, but the ozone would not recover fully until the middle of next century... The... department of preventative and social medicine at the Otago School of Medicine, said that there appeared to be some levelling off in the number of new cases of cancer, but... warned that the figures might not be accurate. Reporting of new cancer cases was voluntary until July 1, 1994, when the Cancer Registry Act, which required laboratories to report new cancers cases, became effective... [U]p to a further 50[%] of cases might not have been reported... "The high rates of skin cancer in N[Z] are due to exposure that occurred before ozone depletion began..."

...N[Z]ers are not at risk during the ozone hole season because they are protected by a band of concentrated ozone, says a... [NIWA chemist. I]t was a fallacy... th[at th]e hole affected N[Z], although it had slightly in 1987... This year's... hole[– currently lying just]... short of N[Z] at 60 deg latitude south... [- bega]n slightly earlier than usual... Now 25 million [sq. km], the hole should be at its biggest this week and be gone by early December.

...A hole in the ozone layer... is already as big as it will ever get over the Antarctic, the W[MO]... said yesterday. But the world should now watch out for potentially more life-threatening depletion over Europe and America, it warned. [A] special adviser on ozone to the... WMO... told a briefing in Geneva that up to 10[%] of the ozone had been depleted over Europe and North America by man-made chemicals in the past 20 years... "Within the next 10 or 15 years, we may expect a stronger ozone depletion,[" said the Bulgarian-born scientist, who is a... world expert on the issue. "We'll always have a little bit of ozone left over our heads but it may not be sufficient to protect biological species." ...Studies show a [1%] drop in ozone levels causes an average 1.3[%] rise in UB-V radiation. - 1996

A study of salamanders in Oregon's Cascade mountains provides new evidence that depletion of the Earth's ozone layer is the cause of an alarming worldwide decline in amphibians. More than 90[%] of long-toed salamander embryos left exposed to the sun's natural ultraviolet rays either failed to hatch or were born with physical deformities... By contrast, 95[%] of embryos protected from UVB radiation survived, and only 0.5[%] of those that hatched were deformed... [I]ncreased levels of ultraviolet radiation caused by ozone depletion also is believed to be responsible for... a loss of plankton in waters surrounding Antarctica, where ozone depletion is most severe.

...The continued depletion of the earth's protective ozone layer appears to be producing its first adverse affects on wildlife around Antarctica... Ultraviolet light shining through the largest hole ever measured in the ozone layer... is causing DNA damage in a species of icefish, according to biologists from Boston's Northeastern University... Researchers... [from the] University of San Francisco... [who have been working at the US] Palmer Station revealed that starfish embryos are now developing ugly deformities due to the radiation, and die before they are born. Some sea urchins have stopped reproducing, and certain plants have started to create their own "sunscreen."

...TOO many people are using sunscreen as an excuse to soak up more of the sun's harmful rays and many still end up burnt, risking possible skin cancer. That's the concern of the Cancer Society in the wake of four complaints to the Consumers Institute from people who maintained they were sunburnt even though they used sunscreen. It is the first time the institute has fielded such complaints and a spokesperson said while all cases had been referred to manufacturers, she was satisfied there were no problems with the sunscreens, which she would not name... The issue has prompted more sunsmart urgings from the Cancer Society's marketing manager... "It is time people stopped worshipping the sun and showed some respect for it. There is a false expectation that sunscreen is the ultimate all-day sun protection, but... [n]o sunscreen can filter out all of the sun's rays – sunscreen should be seen simply as an additional protective measure. We want people to reduce their sun exposure not increase it..."

...Half an hour on a sunbed can bombard tan-seekers with as much damaging... radiation as a day at the beach... Britain's Imperial Cancer Research Fund said in a statement accompanying new guidelines on sunbeds. "We are concerned that people do not understand the risks they are running by getting a tan – whether from sunbathing or a sunbed,"... Sunbeds mostly emit ultraviolet A radiation (UVA) which doctors used to think was safer than the UVB normally associated with sunburns and skin cancer. But they now know it can damage the middle layer of skin, elastin and collagen – which leads to wrinkles and sagging[, and] can cause... skin cancer... [Incidentally, the US] National Oceanic and Atmospheric

Administration (NOAA)[has] announced that the Concorde supersonic aircraft may be adding to the depletion of the ozone layer by leaving a fog of sulphuric acid in its stratosphere wake... [In addition, a] significant ozone-destroying agent, methyl-bromide, is still used to fumigate soil for crops such as strawberries and tomatoes.

...methyl bromide... will be phased out by 2005... [By the way, the] World Watch Institute said in its annual report that global production of... CFCs... were down 77[%] from a peak in 1988... [However, in] a report to the Antarctic Treaty Consultative Meeting in Christchurch the W[MO] said it might be five years before a “statistically significant trend in the weakening of the ozone hole may emerge.” ...[In the meantime,] Earth’s protective ozone layer has now reached record low levels over northern Canada and other parts of the Arctic. The layer was recently measured to be 15 to 25[%] thinner than during the same time last year... [T]he worst affected area stretches from the North Pole to north-central Siberia.

...the British Antarctic Survey and Cambridge University[researchers] have found the ozone hole over Antarctica begins forming earlier in the year than first thought... Spring depletion was more severe but the process began over the winter... “We now have a new perspective on the ozone hole. This is important because ozone-poor air from the edge of the Antarctic ozone hole regularly passes over southern South America, exposing many populations to larger than normal doses of damaging... radiation.” ...[In local news,] the lowest... ozone... level... over... [NZ] since measurements began in 1979 – 35[%] below normal – was recorded... [in] mid-August... at the [NIWA] ozone-monitoring base... in Central Otago.

...The hole in the... ozone layer near the South Pole may be growing bigger, according to early readings from a satellite released last week by the space shuttle Discovery. The German-built satellite, which was threatened when a piece of space junk whizzed to within a couple of kilometres of it on Tuesday, gave scientists monitoring results at the Kennedy Space Centre their first peek at the ozone hole. The co-investigator of atmospheric research at the centre... said yesterday the data suggests a cloud forming around the South Pole is much thicker and larger than anticipated. This type of cloud “plays a real important role in the destruction of ozone” and is an early warning sign of an ozone hole... [T]he clouds... “suck in all the nitrogen compounds and water vapour,” making it easier for other chemicals to eat up the ozone.

...Scientists have discovered that two giant plumes of ozone are appearing over the Atlantic and Pacific every year. Caused by tree and crop burning in Africa, South America and A[US], the plumes are low-lying... Scientists have also found that ozone in the lower atmosphere is reaching intense concentrations every summer across the northern hemisphere, approaching those that would trigger health and smog alarms in cities... At the turn of the century, scientists in Paris measured atmospheric ozone for the first time and found levels of 10 parts a billion. Last summer, in latitudes between 30 and 50 degrees north, levels reached 60 parts a billion, and they continue to rise... [T]he Atlantic and Pacific... plumes of air containing ozone at between 100 and 130 parts a billion... [are more than 1 1/2 kms] thick, dozens of kilometres broad and hundreds of kilometres long... [T]he potential for damage is enormous. People are made sick by ozone and crops get ruined... [O]zone in the upper atmosphere... is good because it protects us from ultra-violet radiation... [but when] ozone appears lower in the atmosphere, near the ground, it is very harmful indeed.

...a study... conducted on mice... by the University of California... concluded that ozone rapidly strips vitamin E from the uppermost layer of skin. This vitamin... a fat-soluble compound found in some plant oils and the leaves of green vegetables... is an important component of healthy skin... and has long been a folk remedy for skin ailments. The Berkeley researchers said the depletion of vitamin E could expose important skin fat molecules, called lipids, to air pollution. Destruction of these lipids, which regulate the movement of materials in and out of the skin, could aggravate skin ailments that commonly afflict people in urban areas.

...[the *Journal of the American Medical Association* has published results of a meticulous study tracking the incidence of skin cancer in over 300,000 people in western USA. Over a period of 27 years, the number of cases of squamous-cell carcinoma – the most dangerous of common skin cancers – had increased 260% in men and 310% in women. Researchers laid the blame for this astounding increase directly on “increased voluntary exposure to the sun.” The study also revealed that the incidence of malignant melanoma of the skin – the deadliest of skin cancers – increased 350% in men and 460% in women during the same period. Malignant melanoma is so dangerous that one-fifth of its victims die within 5 years of diagnosis. The message didn’t stop there. In the same issue of the *Journal*, an editorial recommended physicians tell patients to “avoid sunbathing, which we now recognize as a hazardous activity.” The American Academy of Dermatology agrees. In its 1988 Consensus Conference on Photoaging/Photodamage, 18 of the world’s leading medical experts on skin diseases asked the question “Is there a safe way to tan?” Their answer was a straightforward: “No.” The idea that a suntan was “healthy” started in the 1930s. How mistaken that was! A suntan is not a sign of health. It is a crude defence mechanism; your body’s desperate – and unsuccessful – attempt to protect you from damage that can be irreparable. Your system throws a dark curtain of pigment called melanin over you to keep dangerous UV radiation from doing even more harm. But it is too late. Once a suntan appears, the damage has already taken place. Your chances of getting skin cancer depend in part on your skin type. Medical researchers have divided us into 5 categories. Types I and II usually have blue, green or hazel eyes, and red or blonde hair and freckles. Type I never tans, and Type II tans minimally. Those who have dark skin are type V or VI. These two types tan profusely and rarely burn.’

...‘The more time you spend in the sun the higher your risk of contracting skin cancer, even if you are the type who tans rather than burns. An ability to tan doesn’t especially protect a person, US researchers say. Many studies link sun exposure with skin cancer, but the team at the National Cancer Institute say their research is the first to show that the intensity of sunlight a person receives over a lifetime is directly related to its risk of contracting melanoma.’

...The Cancer Society has rejected a claim by British dermatologists that there is no proof melanoma... is caused by sunlight... [Two] professors of dermatology at Newcastle University... said cancerous growths often occurred on parts of the body that received little sun, such as the soles of feet, and that the disease existed in countries where sunbathing was not fashionable. But a Cancer Society spokeswoman... said all the evidence in N[Z] and AUS] pointed to a strong link... [and that] there was also a genetic link... “It’s very difficult to prove the link absolutely,” she said, but... the epidemiological evidence was “almost overwhelming.”

...A SURVEY to gauge whether a... melanoma warning campaign by the Cancer Society has sunk in has begun as the summer sun continues to tantalise N[Z] with sporadic appearances... [The lack of sunshine is, however, ‘a blessing in disguise’ – the UV risk is decreased during heavy cloud cover. ‘Some 12,000 NZers develop skin cancer each year’ and about] 250... mostly males, die from melanoma and other skin cancers each year... [– which, per head of population, places NZ] just ahead of Queensland... “Most of this illness and most of the deaths could be prevented if there was a reduction in sun exposure and sunburn, especially in children,” says the society’s health promotions manager... The society has invested \$2 million in public awareness... over the past nine years. Most of the money has come from public donations and, in earlier years, sponsorship. The survey will also assess the impact of the Health Sponsorship Council’s “SunSmart” campaign. The society hopes the latest survey will show an improvement o[n] 1994 findings which indicated on a typical sunny weekend three quarters of N[Z]ers were outdoors for at least three hours and about 20% suffered sunburn. The society was also concerned that 41% of respondents said they felt healthier with a suntan. “People will continue to die unless we manage to wean ourselves away from the notion that you have to get a tan to look healthy and attractive.” ...A grandmother watching her two young grandchildren swim... [at] Wellington’s Scorching Bay... believed the public concept of sun-worshipping bronzed bodies has changed. “It’s no longer considered sexy. There is a move back to the Victorian image of delicate skin and that’s great. I’m proud of my lily-white legs,” she said... [Indeed, her grandchildren were wearing swimsuits which, like those from the Victorian age, covered their bodies from] neck-to-knee... However, [recent research in AUS]... revealed teenagers in particular ignored the multi-million dollar sun smart advertising campaigns.

...A new study shows that more[NZ] adults are being sunburned despite publicity... One in four adults... [and 30%] of men... who were outdoors during weekends last summer ended up with sunburn... The sunburn rates in the survey... were 50[%]... higher than for a similar survey in 1994... [A]bout 1600 new cases of melanoma occurred a year, making it the second most common cancer. “Yet it is largely a preventable cancer... Most of

us have the potential to burn during summer weekends because on average we spend 2 1/2 hours outdoors on weekend days and it is possible to be burned in as little as 15 minutes,”... said... the Cancer [Society’s spokesperson]... The society’s melanoma awareness week begins on Monday. - 1997

...the public[has a] general lack of understanding – and often unfounded fears – about radiation. Controversy has raged about the potential dangers of cellphones, nuclear testing and electronic equipment, and all sorts of theories have been thrown around. [Because of this], the... National Radiation Laboratory in Christchurch... has... compiled... a... report[covering] all forms of artificial and natural radiation, such as those found in soil, building materials and gases inhaled daily. People should be most concerned about solar radiation[, which]... has increased by 15[%] since the late 1970s, according to a... new study... Auckland [– where the burn-time for fair skinned people can be as low as 10 minutes at midday on sunny mid-summer days –]has already been dubbed the melanoma capital of the world, with huge rates of skin cancer among a population of sun-worshippers.

...Not getting enough is bad for your health[, but to]o much can be very bad for you. Yet we worship the sun as the ancients did thousands of years ago. If the sun shines through this holiday weekend, we will flock outdoors like lemmings, spirits raised by the warming rays, deep blue skies and the promise of a long, hot summer... But this summer there is searing new evidence of the need to moderate our exposure... Since 1985, ozone over N[Z] at the height of summer has decreased by 10 to 12[%], with UV intensity increasing by about 15[%]... The UV index measures the intensity of UV radiation. The larger the number, the more intense the UV. A UV index of 12 corresponds to a burn time of about 12 minutes; an index of 6 corresponds to a burn time of 24 minutes. Values of 10 or more are considered ‘extreme.’ In N[Z], the summer maximum value is about 12 but it can exceed 13 in the Far North... [The] Cancer Society’s mantra[is] to cover up and seek shade between 11 am and 4 pm... In the southern Chilean port of Punta Arenas, the citizens have been told not to go out in the sun between 11 am and 3 pm. Health authorities last week called an orange alert – the second most dangerous level on a scale of four – in which UV exposure can cause skin burns in seven minutes. A red alert means burn-time is five minutes[(although, if you happen to be allergic to the sun – as at least 2 children in the UK are – your skin will ‘blister after a minute’ in any sunshine)]... After 13 years of ominous warnings, most [NZers] have heeded the slip[(on a shirt), slop (on sunscreen), slap (on a hat)] message... The generation, now in their 40s and 50s, who basted themselves in coconut oil and grilled both sides for 12 hours a day under a blazing sun will surely be the last to do so. Surveys show one in three N[Z]ers still like to offer their bodies to the sun. But now, most at least use sunscreen.

...Sunburn experts are introducing super sunblocks in an effort to reduce the soaring rate of skin cancer. Sun protection factor 15 cream, once regarded as maximum block, will no longer be labelled “total protection,” as scientists advise people to slap on a new range of 30-plus lotions... [A] Cancer Society spokeswoman... said a revised A[USn-NZ] standard had been brought in because people were getting the wrong message about how much protection sunblocks gave, and suffering sunburn... “...we want to correct that impression as no sunscreen can guarantee total protection. People should cover up completely with hats and clothing too.” ...Women are still the worst offenders and are literally dying for a tan, according to research. They are using sunscreens to help them tan without burning, rather than preventing tanning at all... Previously, labelling rules in A[US], where most of the[sunblock] products are made, meant makers were allowed to claim only that they were 15-plus protection. But improved laboratory techniques mean it is now possible to test a sunblock’s effectiveness to ensure it measures up to its SPF factor. New standards were also planned for sunglasses, sun-protective clothing and sunbeds... [An optometrist] said the standard would tackle the growing problem of cheap sunglasses, which caused more eye damage than not wearing sunglasses at all. Sunglasses needed to have 95[%] protection against UV light... Cheap sunglasses fooled the pupil into letting in more UV light than in normal conditions.

...The school’s got the perfect name, the [pupils] did their very best – only the weather refused to play its part. But the showers didn’t dampen the spirits of 450 youngsters at Sunnyvale Primary as they paraded their homemade hats to start the Sunsmart Schools policy. The policy... launch coincided with Sunsmart Week, a campaign to get people to cover up over the summer.

...Schools are finding novel ways to ensure their children are sun-smart this summer. Howick’s Owairoa Primary School is setting up screen stations around the school, providing free sunscreen lotion in child-friendly dispensers. [The school’s p]rincipal... said he believed theirs was the first school in the country to use them... Hats were also compulsory, shade covers had been erected and... tree[s planted]... to create more shade.

...principals fear their pupils risk exposure to skin cancer because of Government reluctance to pay for sunshades. They want the Ministry of Education to include sunshades... – specially designed canvas awnings – ...as part of capital works when they fund schools. Principals say it will take years for some schools to grow trees for protection so sunshades are the best option... The shades also comply with guidelines that require schools to provide a healthy and safe environment for all pupils. If all 2775 schools in the country bought an average-priced sunshade, it would cost \$83 million – [but the principals]... argue that money is better spent preventing cancer than on paying medical bills later... [and] not all schools need them.

...2 out of 3 N[Z]ers get skin cancer[, therefore] 3 out of 3 N[Z]ers should get a MoleMap... MoleMap (or the digital melanogram) is a new way to keep track of which moles are safe, and which ones need immediate attention.

...Computers join the battle against skin cancer Computer technology has been harnessed to detect melanomas by monitoring skin spots... After three years of research and evaluation dermatologists... have initially established five MoleMap scanner centres around Auckland... The 30-40 minute photographic session is non-invasive, painless and does not involve X-rays. It is completely safe for pregnant women. The computer in the scanner... compares the spots with data in its own memory, and goes on-line for comparisons with a database at a leading melanoma research and treatment centre in Vienna... For more information contact your GP or MoleMap at phone 0800 MOLEMAP (0800 665 3627)...

Scientists are monitoring the growth of the largest-ever ozone hole over Antarctica. The hole is covering 27 million [sq. km] of the frozen continent and has developed earlier, faster and up to 25[%] larger than the previous record hole in 1996... Up to this year, scientists had been confident that the ozone layer over Antarctica would recover in 50 years. Now, the recovery could be delayed by 10 to 20 years.

...Atmospheric scientists... [have] calculated that... CFC-based asthma inhalers... made up about 63[% of NZ]’s contribution to global ozone depletion in 1997-98. Doctors from the Thoracic Society... accused the Government drug-buying agency, Pharmac, of dragging its heels over... CFC-free inhalers... Pharmac... recently made a CFC-containing beclomethasone inhaler the “preferred product.” It partially subsidises CFC-free salbutamol inhalers and has delayed providing reimbursement for CFC-free beclomethasone... A[US] officially stopped subsidising CFC-containing salbutamol... inhalers on May 1... Last month, Niwa scientists... estimated that the ozone layer would not fully recover for at least 500 years... [In related news, bickering between First and Last World] countries yesterday again snagged efforts to forge a plan to cut industrial emissions that are blamed for warming the planet. The Group of 77... and China pushed a proposal to encourage [First World] nations to invest in clean technologies in the [Last World] as a way to cut emissions, and to postpone a U[S] plan to let [First World] countries trade allowances. [First World] nations want the programmes to work in tandem... The dispute has stalled action on ways to give [First World] countries more flexibility in meeting their targets under the pact reached last year in Kyoto... [Ironically,] 1998 was officially declared the world’s warmest year yesterday...

...now there’s a hole in the sky and... if the ground’s not cold everything is gonna burn we’ll all take turns... - Doolittle

...the day cometh, that shall burn as an oven; and all the proud, yea, and all that do wickedly, shall be as stubble... [T]he day that cometh shall burn them up... and... leave them neither root nor branch. But unto you that fear my name shall the Sun of righteousness arise with healing in his wings; and ye shall go forth, and... tread down the wicked; for they shall be ashes under the soles of your feet in the day that I do *this*, saith the LORD of

hosts... Behold, I will send you... the prophet before the coming of the great and dreadful day of the LORD: And he shall turn the heart of the fathers to the children, and the heart of the children to their fathers, lest I come and smite the earth with a curse. - Malachi 4

I believe... I should warn you I think I should tell what you've been doing makes you go to hell... - THE TRIP #6

They will be in the midst of a fierce blast of fire and in boiling water, and in the shade of black smoke: Nothing will be there to refresh, nor to please: For... they were wont to be indulged, before that, in wealth and luxury, and persisted obstinately in wickedness supreme. - Koran 56:42-5

Russia's breakaway republic of Chechnya is to try a new weapon against Government corruption: the threat of punishment in Hell. [The] Chechen First Vice-Premier... has ordered signs bearing a warning from the prophet Mohammed to be attached to the office doors of all officials: "Hell awaits those who receive bribes." [Editor's note: 'The traditional view of hell as an inferno is still familiar in art, literature and popular usage today.']

...The threat volcanoes pose is nothing new, but popular appreciation of it is. The warning bell this time is being sounded not by scientists but by the entertainment industry. Recently Universal Pictures released its heavily promoted volcano film, *Dante's Peak*... and 20th Century Fox will release its more prosaically named *Volcano* later this year. A[s]... make-believe mountains erupt on movie screens... real peaks continue to smoulder worldwide... There are explosive mountains in every corner of the world. Late last week, Alaska's Okmok volcano coughed a cloud of ash a kilometre and a half into the sky, perhaps presaging a period of increased volcanic activity. Near Mexico, Popocatepetl... has begun to smoke and churn, threatening 500,000 people who live beneath it. In Italy five active volcanoes are being watched, the most menacing of which is the temperamental Vesuvius. In Japan 86 active volcanoes are packed into an archipelago smaller than California... All told, there are more than 1,500 active volcanoes around the globe – 550 or so on land and the rest under water – that could put the lives of 500 million people at risk... Increasingly... scientists can do something about it. They did so most famously in 1991, when they took the pulse of Mount Pinatubo in the Philippines, predicted it was about to erupt and persuaded officials to evacuate 35,000 people two days before it did... [As a result, only] 737 died... In 1985 Colombian seismologists warned their government that the Mount Ruiz volcano was smouldering dangerously. Their data was too spotty to convince officials, however, and the government did nothing. One month later, the mountain erupted, claiming 23,000 lives. Even when officials get it right, at least a little luck is involved. The first warning volcanologists got of increased seismic activity within Mount Pinatubo was not from a high-tech instrument but from a local nun who walked into the Philippine Institute of Vulcanology and, begging the scientists' pardon, reported that the mountain, clearly visible from her village, had just blown up... Researchers now have at their disposal an arsenal of newly developed vulcanology hardware, ranging from satellites to acoustical sensors to highly sensitive gas sniffers. Whether the technology is up to the task of monitoring not just one peak but hundreds worldwide, though, is impossible to say, but the question is becoming pressing. "Someday," says... the... chief scientist of the USGS Volcano Hazards Program, "one of these mountains will erupt on a scale many orders of magnitude greater than mankind has ever seen." ...[■ Yesterday, t]housands of people were ready to evacuate the area around the port of Rabaul, in Papua New Guinea, after the Tavurvur volcano began spewing ash and lava 8km into the air... In Indonesia, a trail of lava more than 1.5km long flowed down the slopes of Merapi volcano. Residents around the Central Java mountain were not considered to be in any immediate danger.

...Scientists and civil defence planners have identified the sort of volcano which might erupt in Auckland one day but they have no strategy for dealing with its nightmarish consequences... Auckland is a volcanic field covering 360sq km in which activity has erupted from vents during the past 140,000 years. The field contains 49 identified vents['while the Franklin district further south has 80 (areas people may not recognise as volcanoes include Lake Pupuke, the Domain, the Panmure Basin, Albert Park – created by a volcano located at the junction of Victoria St East and Bowen St; further west, the Waitakere ranges are actually the eroded remains of a huge underwater volcano that millions of years ago grew to be 3000m high and 50km in diameter; down south, the Hunua Falls flow over the remains of an eroded volcano')]. Twenty eruptions have occurred in the past 20,000 years. [T]he largest, formed... Rangitoto[Island]... 600 years ago... Auckland volcanoes are typically single-episode eruptions ending when magma is blocked by solidification from reaching the surface. Subsequent eruptions occur through new subterranean pathways in different and unpredictable places... [However], apart from the potentially serious impact over the region of ash falls to transport, drainage, electricity supplies, agriculture and horticulture, it is thought the principal effects of a[ny future volcanic eruption]... in Auckland... would be limited to within a few kilometres of a vent. "We are not talking about the destruction of the whole Auckland metropolitan area," said... the ARC Civil Defence team leader. But while the events may be small on a world scale and sightseers 10km away might be able to watch the fireworks, the problem faced by the planners is that large numbers of people will have their lives overturned by an eruption. Evacuation may involve 150,000 people before and during an eruption or more if the eruption makes it impossible to live in areas hit by a loss of electricity, water supply or other services. And because of Auckland's shape, with only northern and southern exits, evacuation would be difficult. "We have got to get things right first time and it has got to be a co-ordinated response,"... The aim of Civil Defence would be to not hold any information back from the public and to let people know as soon as possible of any alert... The ARC will install a fifth seismometer monitoring the field within a few months and hopes to add a sixth. - 1997

Scientists predict a 3km radius will be devastated by thick ash falls and lava flows when Auckland's hidden volcanic timebomb goes off... And although the risk of an eruption is low, the Auckland Regional Council and the Institute of Geological and Nuclear Sciences say many Aucklanders are under the false impression that one will never strike... The lack of surface activity gives the impression the field is extinct, yet Auckland sits over a hot spot of molten rock about 100km below ground... The institute's manager of volcano surveillance... said it was difficult to predict when the next eruption would strike and it was unlikely perhaps for centuries, but he added: "That's not to say the next one won't start tomorrow." Experts planning for a disaster say region-wide seismic monitoring [stations] already in place[(each one was installed 'at a cost of about \$20,000')] would give the city early warning, with a likely two weeks' notice of any rumblings before molten lava forced its way through the earth's crust...

At Turakirae Head, 20km east of Wellington, you can see how at certain moments in time, parts of N[Z] have been jolted up out of the ocean... [T]he bits of N[Z] that weren't shoved up by earthquakes were spewed up from the bowels of the Earth... [Y]et, we... have built our busiest and biggest city on a nest of volcanoes... Closest to the centre, Mt Eden, with its classic cone shape, provides the most frightening reminder that the City of Sails floats above one of the world's volcanic hot spots. Queen St was once a lava flow and... experts are saying that in the next 100 years, there's a 3% chance that a new volcano could well break through in this area – and that's better[odds] than your chances of winning Lotto.

...[Scientists seeking the source of voluminous ice streams in West Antarctica have discovered a volcano under nearly 1.6 kms of solid ice near the South Pole – the first time an active volcano has been found under an ice sheet.] Incidentally, t]he secret of Lake Taupo's huge trout may soon be unlocked in a Jacques Cousteau-style exploration. A team of scientists will use a German mini-submarine to gain first close-up footage of the volcano under the lake. Researchers from the Institute of Geological and Nuclear Sciences will... explore and chart the 160m-deep Horomatangi Reefs... "The reefs are at the site of the huge Taupo eruption of AD181, which is acknowledged as the world's most violent eruption in the past 5000 years. It produced about 50 cubic kilometres of ash and pumice and soft sediment." Immediately after the eruption, the vent was plugged by solid rock...

The secrets of a mystery Maori... meeting house in England will be revealed in a book... *The House With the Golden Eyes*, [when it is]... released... next month... Few visitors have any idea what they are seeing when they discover the thatched-roofed wooden building opposite the 4th Earl of

Onslow's former mansion... The carved meeting house, Hinemihi O te Ao Tawhito, is the only Maori whare in England and has been standing in the open at Clondon Park... for 105 years. Part of its fascination is that dozens of people survived the eruption of Mt Tarawera in 1886 by sheltering inside. The meeting house was considered taonga by Rotorua people but was bought for £50 six years after the eruption by the Governor-General of N[Z], Lord Onslow, and shipped to England... Lord Onslow wanted to use the meeting house as a boathouse next to his ornamental lake... It later became a storehouse for garden tools and furniture being restored. It was fully restored[itself] by the National Trust in the 1970s... Over the years there has been pressure for the building's return to N[Z], but the trust has no intention of doing so... [Today,] many Maori people visiting England... seek out the building and make the pilgrimage to Surrey... Maori people believed ancestral spirits still exist in the building and within the carvings... Victorian[-age tourists to NZ] paid one shilling to enter the single room to look at gold sovereigns decorating the eye sockets of many of the carvings, the work of carvers at Te Wairoa, near Rotorua... [A]n elder in Te Wairoa village was unhappy that gold sovereigns had been used. "He said such a display of wealth would bring misfortune to the area. A few days later, scores died in the Tarawera volcanic eruption."

...Congolese who fled Africa's most destructive volcanic eruption in 25 years have begun going home despite the... chance that... more lava will engulf their ruined home town... Aside from destroying vast numbers of houses in Goma, the eruption also destroyed the town's water works, cut its electricity supply and damaged part of the airport runway... The morass of charred rock has consumed more than 1000m of the tarmac strip, stretching its bulk across the horizon like a fossilised sea. Three firefighters stand on the edge of the black tide, spraying a jet of water on to the rocks from a hose. It is a pathetic gesture, dwarfed by the vast expanse of lava that seems, for now, to have taken pity on the town and ground to a merciful halt[in the middle of its main street]... Unconfirmed reports said up to 40 people might have died... Goma has the honour of being Africa's capital of crisis. In the past decade it has been inundated with floods of refugees, many of them murderers. It has also seen disease and starvation on an enormous scale and been home to the rapacious dictator Mobutu Sese Seko as well as the equally rapacious rebels who overthrew him... Its benighted people must have thought there was not much they had not seen until Mt Nyiragongo, 50km to the north, erupted with biblical fury.

They are hell on Earth – mountains of mass destruction that annihilate everything in their path... Volcanic eruptions have produced some of the most terrifying disasters the world has ever known. These natural born killers have buried cities in a single blast and pumped out boiling rivers of lava... that can incinerate an entire countryside... They will stop at nothing, and nothing can stop them... [However, can volcanic] tragedies... be averted? The people of Mexico City are praying the answer is yes... [T]he world's largest city has been built in the shadow of the world's most dangerous volcano... [Because it] had not erupted for more than 50 years[the] people... thought they were safe, but when it rumbled to life in 1994 they realised they were still living next door to a killer. "The biggest eruption... would... maybe kill 10 million people. Mexico City would essentially cease to exist." Scientists realised that if they can predict a catastrophic eruption, they can give millions of people living in and around Mexico City a chance of survival. But even if forewarned, how can a city this congested be evacuated in just a matter of hours? "There aren't facilities to handle that and, actually, there couldn't be... We can't prepare for disaster on that sort of scale." ...Nearly 3000 miles away the residents of a tiny island south of the Caribbean are living a nightmare of their own... Monserrat has already suffered one major eruption... [- a] day... the... citizens... will never forget... [-] and experts fear an even bigger one is possible. This is a 3000ft-high ticking time bomb ready to explode... At the base of the volcano the anxious citizens... live their lives with one eye to the sky. They know that when this time bomb goes off they will find themselves in its path of destruction... [During the last explosion, in] April 1996, black ash[billowed] skywards in a... 30,000ft... column... Earthquakes[struck] every 30 seconds... "...it just got darker and darker, and lightning was flashing across the road. 51 seconds later it was pitch black like midnight... It was absolutely scary. It was like the end of the world." ...Today people are living in churches and hastily built shelters north of the volcano – the areas considered to be the least dangerous... "Some people [have been] living in those [shelters for] 18 months, and those persons can not go back home for the next 5 years or more, maybe not at all." ...Because recent eruptions are becoming increasingly violent, the Government has implemented an extensive evacuation plan... "If this volcano blows... we could get tidal waves, this whole island could sink. The situation is getting... worse, and I think they should take us off the island. I don't think we should be here right now." ...Iceland[is] a vast expanse of frozen wilderness. Magnificent glaciers dominate this serene landscape, but lurking beneath this arctic beauty are some of the most ferocious volcanoes on Earth. This is truly a land of fire and ice... January 1973, a mile-long fissure cracks open the frozen earth[and] an endless stream of lava sprays into the sky, threatening to consume [a] once peaceful village... As the volcano continues to erupt, 5000 people scramble to leave the island... The villagers manage to escape, but their battle with the volcano has only begun. 33 million tonnes of lava and volcanic rock rain down... destroying more than 400 homes... [and] covering everything in sight... The volcano[also] produces a 500ft-high wall of burning lava that marches relentlessly toward the town's harbour. Iceland is in danger of losing its primary fishing port[, so the villagers fight]... back. 43 giant waterpumps are shipped in and 19 miles of pipe are quickly strung together. The [villagers] spray the advancing wall... with 4000 tonnes of seawater per hour and the fiery... lava cools... A brave group of Icelandic fishermen has stopped this seemingly invincible monster dead in its tracks. "It felt like we had been fighting a war, except... we were not fighting each other, we were fighting Mother Nature." ...[a] new neighbourhood has been... built on top of the homes buried below... For the first time in history, man had battled... lava... and won... [However, although Iceland won a battle it hasn't won the war.] Today there is new danger for the people of Iceland... [B]etween 30 and 40 active volcanoes... are submerged under hundreds of feet of solid ice... [One of them erupted] with little warning... [during] October 1996... The intense heat quickly [melted] the glacier above and 3 billion tonnes of water flood[ed] the countryside. "When the river started to flood you could see... the precautions that had been taken were working, but then the water just kept increasing till it got to the point that it took out the bridges as well." The government disaster agency [wa]s quickly mobilised, but they [we]re overwhelmed by the sheer volume of the flooding... Throughout history a huge amount of all the lava produced on this planet has poured from this tiny island. The reason for this is terrifying. Iceland is built on two subterranean plates that move in opposite directions, causing the country to be literally torn apart, inch by inch. This raises fears amongst the people of Iceland that future eruptions will be even more violent... Washington's Mt St Helens finally... [awoke on] May 18, 1980... after sleeping for 123 years[, causing]... the deadliest eruption in U[S] history... In... nine hours the volcano... claimed the lives of 57 people... Scientists... knew an eruption was coming. Just two months earlier seismic activity was at an all-time high – nearly 10,000 earthquakes were recorded near the mountain... "Although it appears to have gone back to sleep, it's a volcano that could reawaken at any minute." But Mt St Helens isn't the only threat... Just 50 miles north stands another menacing monster... Mt Rainier. Although dormant for more than a hundred years, volcanologists now think it could erupt at any moment... An eruption of Mt Rainier could claim more lives than [Mt St Helens]... Most at risk are the people living at the base of the mountain... "I personally would love to live in this beautiful area. However, I would also be very sure that my home site was at a level above the level of the potential mud flows that we have calculated are going to come down these valleys." Unfortunately, most of the houses... are not built at safe elevations[, and the local]... elementary school stands directly in harm's way... The school's evacuation plan calls for the students to be loaded into buses and faculty cars within 15 minutes... this may not be easy. "...I just hope we never have to put those plans into action." ...While only 5% of the world's population live near an active volcano, many experts believe that some day we could all be in danger. The fear is that if a series of volcanic eruptions occur within a short period of time it could trigger global changes of catastrophic proportions... If this disastrous chain of events were to occur, it would likely happen in the countries that form a circle around the Pacific Ocean... "...statistically these things occur twice in every hundred thousand years, so we're just about overdue for another one... The most dangerous volcanoes in the world are the ones around the Ring of Fire, because

these are the ones where the vents get plugged up and, instead of lava oozing out at the top, [they] blow the material out as pumice and ash.” ...Krakatoa sent a shock wave that circled the world 7 times. Dust from the eruption polluted the atmosphere and fell, 10 days later, over 3000 miles away... A similar Indonesian eruption in 1815 was the deadliest volcanic event in modern history – it affected the entire world. “The amount of material put up into the atmosphere... led to the now quite infamous year without a summer – 1816 – when the weather in western Europe and [the US’s northeast] was extremely bad. It snowed in June and July, crops failed widely, there was widespread famine...” Could another eruption of epic proportions wipe out... countries, or even civilisations? It happened before... “74,000 years ago... [an] Indonesian mountain... erupted and... [as a consequence, the worldwide] human population crashed from hundreds of thousands to... less than 10,000...” ...experts say it will happen again... “It’s difficult to say whether it would mean the end of civilisation, but it would be the most drastic natural event that mankind has faced for many thousands of years.”

VOLCANOES touch our lives in many surprising ways. Indeed, scientists say that without them life on Earth as we know it would disappear. To understand, picture the world the way it was...

In the beginning... Earth... was an orb of fire. In time... creation... [forged] molten rock into continents. As the land cooled, gathering clouds burst forth[, beginning] the cycle of water[that] would make this world unique in the Solar System, and perhaps beyond...

In the beginning, Earth was literally hellish, and – in billions of years – it will again resemble a hell-like state. The implication of this is, however, that inbetween those two extremes, Earth must pass through a era when it is heaven-like. That era may be now, or the near future – especially if weather patterns enter a lengthy phase where they are relatively more stable than today or in the past.

An elderly friend’s husband had recently died. She was sitting quietly at her son’s home, one day, naturally feeling sad, when her grandson asked where his grandpa had gone. She replied that he had gone to a lovely place called Heaven, where he would be very happy always. The little fellow thought for a while, then said, “Well, if it is such a lovely place, why didn’t you go with him?”

heaven... is the place where God... and God’s immediate family of angels [(‘a survey has shown that 7 out of 10 Americans believe in the existence of angels, and half think they have a personal guardian angel’) **and spirits... reside[, and]... to which those who obey God will come... also called... Paradise, a Persian word for park land, or the Garden of Eden...** [“Eden” may mean “delight” (Hebrew) or simply and more probably “a plain” (Sumerian).] **In the prevalent Christian view, redeemed souls abide in heaven, in spiritual bliss in the immediate contemplation of God, until they are united on Judgment Day with perfect bodies in a general resurrection...** [I]n Greek mythology, [heaven (or *Elysium*) is] a sunny, flowered land on the banks of the river Oceanus, where heroes, without dying, [are] transported by the gods to spend a joyous eternity[; whereas]... in Norse mythology, [heaven (or *Valhalla*) is] the hall of slain heroes... Each morning the heroes [leave] through Valhalla’s 540 doors, to engage each other in fierce combat; each night they return... wounds healed, to feast and tell stories of the day’s feats... [A] medium... supposedly communicates with spirits of the dead... Claims of[mediums or] spiritualists have been often exposed as frauds but have not been entirely disproved.

Although mediums appear to have access (in varying degrees) to knowledge beyond the ordinary, how it comes to them is still a mystery... Belief that spirits of the dead can and do communicate with the living is very ancient and is an element in most primitive and some higher religions. Saul clandestinely consulted the woman of Endor (I Sam. 28) in order to speak with the dead prophet Samuel, but the Jewish prophets disapproved of the practice and this repugnance was maintained by Christianity. In 1848 three sisters... living in New York State, heard strange rappings in their house and devised a simple code which, they asserted, was answered by rappings in such a way as to prove that they were made by an intelligent being. The news caused a sensation, and from this the modern spiritualistic movement had its origin. Hitherto most Christians had believed that spirits were evil and invoked only to do harm; now it was proclaimed that they dwelt in lands far better than this world... were continually progressing... and... [spiritualists can ‘query whether communicating spirits are who they claim to be by posing questions which could only be answered by the spirit of the deceased and by the person asking the question.’ ‘Princess Diana’s psychic says most children possess psychic abilities because they are “pure-minded”. She also says there are a few tell-tale signs to look out for, such as: Imaginary friends or conversations with themselves – these may not necessarily be figments of their imaginations; they could be communicating with a spirit.’] **The impulse to make psychic communication the basis of a new religion comes from the natural longing (particularly evident after the two World Wars) to know what happens to people after death.**

[An actor] says he has been having ghostly chats with his younger brother, who died of cancer last year. *The Sixth Sense* star reveals that his brother Robert came to life through a renowned psychic... [The grieving actor, who] had been desperate to know whether Robert had been aware that all of his family members were at his bedside during his final hours... was stunned when the female psychic turned to him and, in the voice of his dead brother, said: ‘How could I not hear when you talked so f***ing loudly!’ [The actor] explains: ‘...Until then I had always been up in the air about what happens after we die. Now I know the switch is not turned off, that there is life after death. I don’t know how it works, but I really believe it.’

LORD THOMSON... was one of the great newspapermen of our era. At one time he owned some 285 publications in England, Scotland, Canada and the U[S]. One day he invited me to luncheon in the sumptuous dining-room of *The Times* of London. The table was made up of distinguished editors and writers as well as prominent businessmen. The conversation ranged over many themes: world affairs, politics British and American, the prospects for greater prosperity. Suddenly, in the midst of much good-natured banter, Thomson said... [to me, an] eminent clergyman... “...I am an old man, and one of these days I’m going to die... I want to know: is there an afterlife?” I couldn’t be sure he wasn’t pulling my leg, but then I sensed that the question was indeed serious and weighed on his mind. “Lord Thomson,” I said, “I believe in the promises in the Bible. But beyond the Biblical is the evidence of intelligence and common sense.” Then I told him and the others a parable about a pre-natal baby... “Suppose... someone came to this unborn baby and said, ‘You cannot stay here long. In a few months you will be born, or, as you may think of it, die out of your present state.’ The baby might stubbornly say, ‘I don’t want to leave here. I’m warm, loved, happy...’ But he is born. He does die out of his present life. And what does he find? He feels beneath him strong, loving arms... He is welcomed, cared for, and says, ‘How foolish I was. This is a wonderful place to which I have come.’ ...The years pass... he becomes an old man. His step slows. Someone says, ‘You are going to die, or, as we call it, be born out of this place unto another.’ And he might remonstrate: ‘But I don’t want to die. I have loved ones. I love this world... I don’t want to leave... I don’t want to die.’ But in natural course he does die. What happens then? Is God, the Creator, suddenly going to change His nature? Can we not assume that [the man] will once again feel loving arms beneath him...? Won’t he soon be exclaiming, ‘Why, this is wonderful! Here I want to remain for ever’? Does this not make sense?” I concluded. A deep silence hung over the table... [Eventually,] Lord Thomson sighed, “It does make sense... I will never forget that parable. It has helped me answer a question that has haunted me for years... Do you think I will like it there?” “Of course, for it will be exciting.” “What will I do there?” he asked... “Perhaps buy and sell newspapers!” A laugh went round the

luncheon table. Since then, Lord Thomson has gone into the life beyond. And, judging by the affirmative way this lovable man responded to the power of faith, I think God must be taking good care of him. - *Why I believe there is life after death*

When we die we make our own heaven or hell, which are states of consciousness, conditioned by the way we lived on Earth. Houses and gardens are very like those on Earth. So are clothes. There are cities with colleges, art galleries and concert halls. The flowers are wonderful. There is no money. You can eat what you want but food is no longer necessary. You can travel at will. You can study anything you want. There are lots of animals and birds. You look and feel much as you did on Earth. The only bond uniting people is love. Eventually you progress and move on to higher spheres... "Now I'm able to go into the lower spheres and talk to the people to try to educate them a bit - to make them realize that the situation in which they find themselves is, to a great extent, their own fault." ..."Have you visited any of the higher planes?" asked [the medium]. "Well," he replied, "there are laws which no one can avoid. The point is, you are allowed to go on as far as you have merited within yourself by your life, by your development. But you cannot go into a higher sphere until you are ready to enter into that state... In a sense I suppose it is comparable in your world too. A man can only be happy in an environment to which he is best fitted..." ...Advanced spirits in the really high spheres, it seems, are too far removed to describe them to us directly. Any reports that do reach us are based on rumours or snippets of information which reach the inhabitants of the spheres still in contact with Earth... "It is impossible... for any soul to describe the spheres that are more advanced. The spheres near... [E]arth can be depicted and described. But... souls who have gone into an atmosphere and condition far removed from Earth can never recapture in words to that which they inhabit... You cannot depict something for which there is no language." ...Any number of famous and gifted personalities queued up to talk to us through [mediums]. From Oscar Wilde to Mahatma Gandhi... But they had too much advice to give us on how to run our lives in this world and too much information on their academic progress in the next to tell us how they got there... They left that sort of thing to the earthy, uneducated types... They want to tell everyone in the world how wonderful it is in passing from your world to this. The most natural process. There is no need for all the terrible fear that people have of dying... Don't worry about it. - *Life after death*

Death is a natural force and needs to be respected as a natural force... Each generation is the springboard for the next and if it did not pass away no new generation could evolve. The goal is not longer life as such but the good life... In a well-ordered society, that is a reasonable expectation. Death, then, when it comes, comes in its own good time, hopefully in the fullness of one's time, with dear ones and friends and the fresh faces of coming generations within hand's reach. Death may then be embraced with confidence, curiosity and undiminished hope. For death is also a mystery and opens out to messages yet unknown.

In New Ages, people are especially ready to believe that there are forms of knowledge and power that have been hidden from them by vested interests in the past.

Conversations with dead embarrass White House... [O]fficials rallied behind [the first lady] yesterday after a book revealed that a New Age self-help author and psychic researcher had encouraged her to hold dialogues with the dead. "All I can tell you is that the first lady's a human being. She reaches out, talks to her friends, talks to others, gathers information," said the White House chief of staff... "We have to draw strength from wherever we can in order to make it from day to day." Washington was titillated when the *Washington Post* ran the first of four excerpts from *The Choice...* by... a... Watergate reporter... The... co-director of the Foundation for Mind Research... advised [the first lady] on her childrearing book, *It Takes A Village...* and... got [the first lady] to hold an imaginary talk with Eleanor Roosevelt, who died in 1962, during an April 1995 session in the White House solarium... [The first lady] was also led into a conversation with... Mahatma Gandhi... but drew the line when asked to talk to Jesus Christ, the book said... [The first lady] has often drawn parallels between her own life and that of the wife of President Franklin Roosevelt, a first lady who was as controversial in her time as [the incumbent first lady] is now. In a recently syndicated column, [the incumbent first lady] wrote that she occasionally had "imaginary conversations with Mrs Roosevelt to try to figure out what she would do in my shoes. She usually responds by telling me to buck up or at least grow skin as thick as a rhinoceros." ...The revelations... immediately prompted comparisons between [the incumbent first lady and the 40th President's wife], who consulted an astrologer and used the information to schedule presidential trips and key events... [The co-director, who also] runs the... Mystery School on Port Jervis, New York... holds advanced degrees in psychology and the philosophy of religion. She... reads several ancient languages, including Greek and even Hittite[, and]... was indulging in transcendental psychobabble years before the New Age movement went mainstream... Three decades ago, she studied "altered states" and worked as a student with the early pioneer of LSD research into the nature of human consciousness... She no longer advocates using drugs to find enlightenment... - 1996

WHEN... [he] stayed overnight at the White House, [the]President... paid him a visit in the Lincoln bedroom. After talking for a while the two men got down on their knees and prayed... One of the U[SS]'s most prominent television evangelists... says that as he knelt beside the president, he kept thinking about the history that surrounded him. "I could almost hear the voice of Teddy Roosevelt and the sound of Franklin Roosevelt's wheelchair moving around the corridors." Since that prayer meeting two years ago... [he] has become the president's spiritual guru and an informal clergyman at the White House. [The president has even] adopted one of... [his] favourite lines from the *Bible* - "Thou shalt be called the repairer of the breach" - as his personal mantra and... use[s] it in all his key speeches, even laying his hands on the passage when he was sworn in for his second term... Other sayings... passed on to [the president] include "turn your heart into a halo"... and... "God plus me equals a majority"... The two men talk and write to each other every month and... [he] visits Washington regularly for a reinforcing prayer meeting in the White House. Clearly [the president] is comfortable with this combination of spiritual encouragement, ego massage and admiration from a man who claims a closer connection with God... [He] has 30 million devotees around the world who regularly tune into his *Hour of Power* from the Crystal Cathedral in southern California - a \$28 million monument to his oratory. To many other preachers... [his association with the president] is little short of blasphemous. To them, [the president] is an immoral and amoral adulterer, who has attacked America's spiritual heart... During his first administration, the president socialised with a wide range of self-help specialists trying to understand why he was not liked and why so many of his views appeared to be misunderstood... [While the US president] has found a spiritual guru... [Russia's] leader... prefers the advice of a fortune teller...

To westerners it may seem odd that a president should seek the advice of a fortune-teller. Not in Russia. [Its president] has consulted astrologers before to help make important decisions... [The c]ommander of the Russian far east military region... is, by all accounts, a man of superhuman ability[, and]... he has become one of [the president's] most trusted advisers. But it is not about the army that the leader likes to consult him. [The] General... according to a government figure with knowledge of goings-on in the Kremlin, claims he can see into the future. He has a particular knack for predicting what sort of medical treatment a person might need and believes he can tell at a glance when a person is going to die.

...IN THE world of mediums... [she] is extra-large. [The spirit]-botherer extraordinaire... has gained celebrity status, baffling [a reporter from] 20/20 and amazing [the US Queen of Talk] with her mystic skills. [She] claims she can "see" spirits and communicate clearly with the other side. On

[another TV talk-back show, she] left her host gobsmacked with her accurate description of his deceased parents who appeared to her, hovering behind him. "I would diagnose [the second talk-show host's] condition as terminal gullibility," scoffs... [the] senior lecturer in philosophy at Canterbury University and spokesperson for the Skeptics Society. "[The second talk-show host] is renowned for being fooled by all kinds of people." ...Without any further prompting, he takes a guess at [her] technique. "Does she say 'I see someone having trouble breathing?'" he asks. Yes, I confirm... "Does she have a 2000-year-old Tibetan monk as a guide?"... Err no, actually she relies on an ancient Apache Indian called Grey Eagle. [The lecturer] sighs. "What really depresses me is the lack of originality exhibited by these new English spirit mediums. It's like they're stuck in 1970s' California... I would love to believe in some sign of life after death, would love to think I could contact my dead parents. But the pathetic blatherings of some housewife from Luton isn't evidence of life in the hereafter." ...There is... more than a hint that [she] is as daft as a brush and shouldn't be allowed to operate heavy machinery or be left alone with sharp objects... Still, how do you explain the fact that when [she] was a little girl she was disturbed by "spirit visions", which inspired her to become a mystic. "[5%] of the population have visions... These people experience a condition known as eidetic, if you describe something clearly they will see it vividly in the mind's eye." That doesn't mean they are in contact with the dead, although... practitioners can convince themselves what they see is real. In other words they are charlatans who believe their own hype. Bursting the bubble on [her] techniques however, will probably do no harm at all to her book sales... This week... she is heading Down Under on a tour to promote her new book. *Proud Spirit*... tries to... answer... all the big questions: Is God real? Could Hitler have been stopped? Was Jesus a psychic? (Actually... [the two] get along famously. He has been known to help her occasionally with the laying on of healing hands.)

...German police have arrested a man posing as a spiritual medium who was paid 15,000 marks... by a woman to pay off gambling debts he said her dead husband had contracted in heaven.

...Been... duped, ripped off or cheated? Dreaming of making your tormentor pay, but don't have the guts or imagination to carry it off? For \$250 plus GST and costs, you don't have to – Wellington-based Revenge Incorporated will wreak vengeance on the liars... and low lifes of the world. The company spokesman on the... cellphone was cagey about his identity – "just call me the facilitator. We embarrass, irritate, annoy, humiliate or inflict massive practical jokes. We are nothing like that company in Christchurch that mails dog poo – we are elegantly nasty. We do not engage in any illegal activities – we have got two lawyers who monitor everything we come up with." That means no damage to property, no injuries inflicted... The company had carried out three acts of vengeance so far, but the spokesman would not give details. Wellington police had no concerns about the company, because they had not heard of it... Inspired by the British documentary *Dial V for Vengeance* and the book *Don't Get Mad, Get Even*, the spokesman and friends decided that revenge could be sweet and lucrative. "I think those who believe that the world goes full circle are wrong," said the spokesman. "I'm not sure that the righteous will be rewarded in Heaven, so we are making sure it happens on Earth – and making money."

...*DOES HEAVEN EXIST?* ...[he] likes to think about heaven. He might even be said to revel in it. Oddly enough, he has had to struggle to... find fellow believers and pastors whom his thoughts don't embarrass. And more oddly still, his struggle is not unique... [I]t dawned on him that the same R[C] chaplains who had welcomed him into the fold were reticent about discussing salvation's reward. This was disturbing. "I felt a real lack in my life... There was this hope of heaven I thought we all should have. But the priests didn't like to talk about it... [A]s soon as someone would say, 'Let's do this so we can go to heaven,' someone else would say, 'No, no, no, no. Let's do it because we *should* do good.' It got to the point where I began to think that heaven was too much like an ace in the hole, that it was sort of like cheating. I almost felt guilty thinking too much about heaven." Now there's a peculiar idea. Is it possible for a Christian to think of heaven too much? How can one enjoy robust faith without envisaging faith's ultimate consummation? "Heaven is the greatest good," says... a professor of philosophy at Boston College and author of the 1990 volume *Everything You Ever Wanted to Know About Heaven... but Never Dreamed of Asking*. "It is the reason that God banged out the Big Bang 18 billion years ago. Next to the idea of God, the idea of heaven is the greatest idea that has ever entered into the heart of man, woman or child." ...practicing Christians... can affirm: heaven is destination and reward, succor and relief from earthly trials. It is reunion with those we love, forever, as we loved them. It is our real home, our permanent address, our own true country. It is the New Jerusalem and Paradise regained, the community of Saints and the eternal Eucharist; everlasting Easter and a million Christmases. It is an end to death's sting... And yet, in a curious way, heaven is AWOL. This is not to say that [USers] think death ends everything or even that they doubt heaven's existence. People still believe in it... [– a recent] poll in the U[S] has found 67% of [USers are] certain that heaven exists... 67%... think of heaven as something that is "up there"... 61%... think... [they will go] directly to heaven... 66% [think only their soul will] live in heaven... 63%... believe in hell... and... 1%... [think they will go to hell –] it's just that their concept of exactly what it is has grown foggy, and they hear about it much less frequently from their pastors. To reverse the words of the old spiritual: Everybody's goin' to heaven, just ain't talkin' 'bout it. The silence is such that it sometimes seems heaven might as well not be there... Marked by an apparent combination of lay ignorance and pastoral skittishness, the minimization of paradise not only creates problems for heaven-hungry believers... it also suggests the marginalization of one of Western civilization's greatest ideas. When heaven comes up in public debate these days, it is often just as [a] metaphor for the concerns of a perfectible secular kingdom of man, as in the debate that started in the *Washington Post* last month and continued online in *Slate* over Jesus' statement that "it is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God." ...[the] policy director for... Empower America, decried the worldliness of Christians who feel they can serve both God and Mammon – resulting in too many people left in poverty... [But a reverend – disregarding St Luke 6:24 –] qualified Christ's admonition as being against only the "unjustly" rich, and accused the [policy director] of trying to win attention by "bashing rich Christians." As aspersions were cast and tax credits argued, heaven fell to the wayside. In the '60s, clerics and scholars pondered the question Is God dead? (the subject of a 1966 TIME cover). Asked what is going on now, they first cite denominational differences and the ongoing religious split between modernists and traditionalists... [A] theology professor at Massachusetts' Gordon-Conwell Theological Seminary, notes... "I don't think heaven is even a blip on the Christian screen, from one end of the denominational spectrum to the other. The more perplexing question is, What explains this?" What indeed? [A] University of California at Santa Barbara professor... [and] author of the upcoming *A History of Heaven*... says, "I think [clerics] want to stay off the subject because they feel they're going to have to climb a wall of popular skepticism." A spokesman for the United Methodist Publishing House is reluctant to comment at all about heaven, explaining that the subject is "controversial." A brother in faith... whose Foundry Methodist Church is up the street from the White House, explains bluntly, "I'm not interested in speculating on the architecture or the geography. I don't think of heaven as a specified place in the universe to which we could somehow go if we could find the right galaxy. We dig a lot deeper. I preach on trust in God." ...[the] religion editor at *Publishers Weekly*, who has tracked the recent popular vogues for angels and miracles, observes that there is almost no corresponding interest in the place where angels live and from which miracles erupt into our lives. Perhaps the biblical heaven is too big to be marketable. Perhaps it is a victim of its own, centuries-long hype: so much has been claimed for it, much of it contradictory, that our literal-minded age overloads and calls the whole thing a wash. Or perhaps America has finally got heaven just right... The current generic heaven still delivers when people need it most, say some unsentimental observers – at the death of a loved one. Why bother with it any other time? ...Jesus was hardly tentative about proclaiming the world to come... However, most of his famous metaphors for heaven... address humankind's ideal relationship to God's kingdom more than a specific paradise. Regarding heaven's actual "mysteries," he tells the Apostles that it is not given to most people to know them... Paul, too, seems closed-minded. Although he claims to have been "caught up to the third heaven," he is bound to secrecy and offers no travelogue. The first detailed Christian heaven explodes to life in the book of *Revelation*. Its author, John, is as extravagant as Jesus and Paul are reserved... Did John expect his readers to accept his heavenly portrayal – and his subsequent spectacular

descriptions of the Beast, Armageddon, the Last Judgment and Christ's final triumph – as a literal truth? Most scholars today regard his heaven, at least, as symbolic and mystical, its images painstakingly retrieved from the Old Testament and reorganized to frame an allegorical argument rather than an actual detailed reality of the next world. The same applies to hundreds of other heavenly visions generated by various holy men and women in the next two centuries that were eventually excluded from Scripture but some of which nonetheless exerted influence on early Christians. From those visions and their successors in Christianity's first millennium, a colorful, sometimes contradictory mystical vocabulary of heaven emerged. It was a garden, a city... It featured buildings and streets of precious metals and jewels, doves, palm trees... singing stones (a late borrowing from Celtic myth), white clothing, milk, honey, wine, olive oil, harps... and... fountains... But Protestant reformers of the 1500s reinstated a vision severely centered on Christ and his Last Judgment. This became the dominant understanding in America... By the mid-19th century, however, heaven had hit a sort of ornamental bankruptcy. The stark vision of the Puritans had given way to what would later be called the Victorian heaven. Here was the humanistic heaven with a vengeance, calmly convinced of its own literal truth but with a spiritual core seemingly provided by *House & Garden* magazine. Its strongest proponents were not clergy but a new breed of popular novelists like Elizabeth Stuart Phelps, whose 1868 *The Gates Ajar*, set in heaven, was a runaway best seller through the end of the century. Wrote Phelps of one celestial interlude: "We stopped before a small and quiet house built of curiously inlaid woods... There were flowers – not too many; birds; and I noticed a fine dog sunning himself upon the steps." There was dog, but there was very little God. The vision, like the age itself, honoured human progress: it assumed almost all respectable people would reach heaven[(much like 'the doctrine of *universalism* – in which salvation is possible for all)]; if there were problems, they could continue working them out once they got there... The model finessed the doubts about God that were seeping into cultural mainstream by relegating God and even Christ into a nearly invisible role in the background. But it did so at a price. Without a compelling spiritual center, the vision of the future was hostage to the endurance of the society it mirrored. Which meant that the 20th century blew it apart. Some indication of the shift can be had by studying the learning curve of [one] evangelist... In his 1950 Boston revival, [the young evangelist] was ebulliently specific about the world to come. Heaven, he said, was a place "as real as Los Angeles, London, Algiers or Boston." It was 2,600 km long, 2,600 km wide and 2,600 km high. Once there, "we are going to sit around the fireplace and have parties, and the angels will wait on us, and we'll drive down the golden streets in a yellow Cadillac convertible." [The evangelist] went on to a magnificent career, but he dropped the Cadillac, which nonetheless haunted him for years. Late 20th century America had little patience for detailed, literal views of heaven. Two world wars and the prospect of nuclear disaster made the idea of a comfy, progressive afterlife seem suspect. Modernist attacks on God's place in this world made people allergic to bold predictions about his kingdom in the next. By 1988... [a] survey... concluded... with the bleak assessment that "scientific, philosophical and theological skepticism has nullified the modern heaven and replaced it with teachings that are minimalist, meager and dry." Many scholars, especially conservatives, are inclined to agree... "Heaven... is uncomfortable because it's righteous and holy, not just fun." ..."Today the objective is to feel better about ourselves rather than to differentiate people morally. If you reduce salvation to our state of well-being, heaven doesn't make much sense... It's difficult for some people to conceive of anything that is really much better than this life..." ...There are still some churches where one can find a robust heavenly vision in the late 1990s... But most late 20th century... [US] Christians have a better grasp of heaven's clichés than of its allures. "It's this place where you've got wings, you stand on a cloud, and if the concept is more sophisticated, where you see God and you sing hymns. It's a boring place, or a silly myth, or something people invent in order to make themselves feel better, or all of the above." ...[according to the writer of] *A History of Heaven*... the... "space" taken up by heaven is neither the original Eden nor the kingdom of God within us nor a paradise at the end of the world, but all three. The time frame it occupies is not the future or even infinity, but an enveloping eternity... Heaven, he concludes, "is reality itself; what is not heaven is less real." Such a vision, expressed so unabashedly by a bona fide member of the academic elite, stands to make a splash in the upmarket reaches of academia, theology and perhaps even among mainline Protestant preachers... Adding to the plenitude, the New Age is now unrolling its own versions of eternity... "Heaven is not a place; it's a state of awareness. Heaven is where your heart is, where your soul needs to be." Yet every paradise partakes of the same spiritual journey, and even [the New Age ideas] share... attributes outlined in one of Islam's most venerable divine proclamations: "My heaven and my earth do not comprise me, but the heart of my faithful servant comprises me." Islam inherited older traditions of heaven from Judaism and Christianity, including the hierarchy of angels and the seven tiers of paradise. But Muslims have a specific plan of paradise in mind, based on the stories of the Prophet's miraculous night journey to heaven. Rising into the skies on the Buraq, a fantastic creature often described as part woman, part horse, part peacock, Muhammad meets Adam, who resides in the lowest heaven, and Jesus, who is only in the fourth level. Abraham welcomes him in the seventh heaven before the Prophet is ushered into paradise for his encounter with God. It was in heaven, according to one traditional tale, that Muhammad, on Moses' advice, bargained down God's original demand of 50 prayers a day to five, the number of times a day each devout Muslim must face Mecca. - 1997

The Islamic heaven is usually symbolized as Paradise, and this often takes the form of a garden (*al-jannat*). This garden contains beautiful trees and flowers and fruits; it is enclosed and sheltered; and it repeats and extends the earthly Garden of Eden. However, it is also so wonderful that it is beyond the human imagination fully to conceive.

Those who are nearest to Allah, those on his Right Hand side, will live forever in the Gardens of Bliss. They will sit on thrones encrusted with gold and precious stones with companions of equal age in gardens enclosed with grape vines. They will wear garments of silk and recline on carpets whose inner linings will be of rich brocade. They will not be exposed to the day's excessive heat or the night's excessive cold. There will be fruits such as dates and pomegranates that will be near and easy to reach, and the flesh of any fowl they desire. Perpetually fresh youths will serve them a liquid from clearflowing fountains that will neither give them a hang-over nor make them drunk. This liquid, wine mixed with Zanjabil, will be drunk out of crystal-clear goblets made from silver. There will be pavilions in which will be [confined] specially created maidens, who no man... ha[s] previously defiled, for their reward. These maidens will be equal in age, be chaste, fair, good and beautiful, with big lustrous eyes. - Koran

Despite the fact that Muhammad neglected to explain what happens to these 'bashful, high-bosomed, loving companions' after they have presumably been *defiled*, or whether there is a perpetual supply of them, the vision still manages to convince unimaginative Islamic men (especially youths) that, if they die while fighting for their spiritual leaders' cause, they stand to gain more than they have now! However, many Islamic men currently live their lives as if they are already in heaven (e.g., they have wives, daughters and hired help to serve them; they are obsessed, often to the point of paranoia, with finding a virgin bride). Would such men see the irony if, upon reaching heaven, they were to find themselves acting as servants to their mothers and wives?

Theoretically Islam regards men and women as equal before God, and as 'created of a single soul' (Quran 4.1). However, they are not regarded as socially equal, and women are seen as having different roles from men. In law their testimony counted for less than that of men, they needed men to act for them legally, and... had fewer property rights. In theory a woman can perform all Muslim rites, but except in women's mosques this rarely if ever happens in communal situations[('women must worship in a screened-off section of' unisex mosques)]. The Quran called for modesty in female dress and in some Muslim societies this developed into full veiling from head to foot, and even strict seclusion in the home (*purdah*)... The harem is related to the notion of *purdah*... but goes one stage further by forbidding women to be seen at all by... men other than close relations or eunuchs.

UNTO the woman... the LORD God... said, I will greatly multiply thy sorrow and thy conception; in sorrow thou shalt bring forth children; and thy desire *shall be* to thy husband, and he shall rule over thee. - Genesis 3

The division of labour between men and women was fundamental in [Aboriginal] religious organisation, just as it was in economic affairs. In nearly all the great ritual constellations women were, and are, active participants where it is traditionally convenient for them to be so. While they rarely enter the men's secret-sacred ground, they are supportive of what goes on there... The secret-sacred rituals of women are focused on puberty, personal welfare and love, healing, fertility, but also on land and on mythical happenings... In many myths and rites, generally speaking, female creative and spirit beings are of particular importance, and in some areas women are regarded as sacred in their own right, if only because of their physiological functions. Some myths claim that women first possessed ritual emblems and the key to all sacred knowledge, and that these were eventually taken from them by men, through force or, more usually, through trickery or theft.

...in... *Gk myth*... Zeus punished mankind in general by creating woman to their confusion. The first woman was called Pandora, because she had 'all gifts' from the gods... Prometheus' simple brother, Epimetheus (= After-thinker) married her despite his brother's warnings, and she let out all the evils from the stone-jar where they were kept; hope alone remained to assuage the lot of mankind.

Goddess, victim, idol, plaything, mother, virgin, harlot, ministering angel, slut, enchantress, hag, 'better half' or 'weaker vessel' – woman plays all these roles in supernatural contexts, partly in reflection of man's frequently professed inability to understand her. Women, in male eyes, are supposed to be contrary and mysterious creatures, bewilderingly combining all sorts of opposite characteristics, as changeable as chameleons, and yet somehow vexingly in touch with reality through intuition, through a secret sympathy with the heart of things. Among the most powerful strands in the web of the mythical female are that she is man's inferior and that she is essentially evil. In the Jewish... and classical traditions, evil came into the world through woman... [who was also thought of as being negative and] passive... male is generally classed with good, positive, active... In many societies... women's bodies are hung about with a miasma of impurity and pollution which does not cling to men[('the periodic discharge of blood from the womb was widely regarded in many cultures as a polluting act second only to contact with a dead person; the result of such beliefs is that menstruating women are often excluded from religious acts, and indeed, in some cases, women as an entire gender may be forbidden to play a role in religious rites')]. In many parts of the world women do not eat with men, they walk a few paces behind their husbands as a sign of their inferiority, and they are often excluded altogether from important activities... It is characteristic that one of the dictionary meanings of the word 'female' is 'epithet of various material and immaterial things denoting simplicity, inferiority, weakness, or the like'. All this has the weight of hundreds of years of tradition and custom behind it: some women welcome it, many accept it, and almost all are brought up to behave in accordance with it and so perpetuate it. But how it began, how hatred, fear and contempt came to be injected into the image of woman – remembering that a child's first love is his mother, that men and women do fall in love and live happily together, and that what may be the oldest known representation of a deity is a figure of a woman – is a question to which there is no certain answer. Psychoanalysts in search of an answer have created new myths of their own, including penis envy and the castration complex. Stated in a very brief and over-simplified way, the theory is that the little girl, lacking a penis, feels a sense of inferiority to males which lasts her the rest of her life: and the little boy fears losing his penis when he sees that little girls have none, and fears that his father will castrate him because he is a rival for the affections of the mother, these fears mingling with desire in his attitude to women, who become both love-objects and hate-objects. It is true that the theme of castration occurs in mythology and religious practice (in the worship of Cybele, for instance), and the motif of woman as castrator has enjoyed some literary popularity in the wake of Freud, but it seems unlikely that fear of castration is really a crucial element in the myth of women's evilness. A simpler approach sees the source of this myth in the difference between the sexes itself. Women are different from men, and tolerance of what is different is not a marked feature of human societies... The fact that it is woman who bears and rears children means that it is first and foremost a child's mother who not only loves and protects him but also thwarts and punishes him. The twin experiences of mother's love and mother's rage seem to implant an ambivalent attitude to women in general, which is reflected in beliefs about the supernatural... The age old assertion that woman is fickle and changeable may have the same root... In the Near East, almost always, mother goddesses and love goddesses were also wrathful war goddesses. Kali, the goddess of terror in Hinduism, significantly presides over undeserved retribution as 'the Mother who nourishes but also punishes'... Orthodox Hindus believe that women cannot attain salvation as women, but only through being reborn as men... [Even the most] virtuous Hindu woman, who must treat her husband as if he was a god, is considered inferior to the worst of men.

The only male is God. Male means enjoyer, and female means enjoyed... According to Vedic civilization, a man should accept a wife for *putra*, for sons... Generally, women are interested in a comfortable home life. That is their nature. They are not spiritually very advanced or interested, but if a man has spiritual interests, and the woman helps the man – either as a mother, wife, or daughter – both can make spiritual progress. However, the woman must remain subordinate, and the man must make spiritual progress. Because the woman helps the man, she shares his spiritual benefits. - A.C. Bhaktivedanta Swami Prabhupada (founder of the Hare Krishnas)

A new religious movement... [– known as the *Brahma Kumaris* or] *Raja Yoga Movement*... [– arose] out of the Hindu tradition that began in the 1930s through the vivid religious experience... of a diamond merchant... [H]e became the inspirational instrument and channel of the movement and he encouraged leadership to pass into the hands of female leaders, where it still remains... [T]hey believe that we are nearing the end of the present age of decline (*kali-yuga*); a new golden age is at hand... The movement is unique in being led by women and in working eagerly for the world, even though its end is shortly anticipated.

Women's work... was never done, remember? ...Once upon a time men would never have touched any equipment [related to housework]... Women... did the cooking, they did the cleaning, they brought up the youngsters; the men went out to work[, they] were the providers, and the line between the... sexes... was very clear. And then came the war... [T]he men went away to fight and women stayed at home, doing not only the cleaning... cooking... [and] bringing up of the youngsters, but now they were contributing seriously to the economy as well. And things have never been the same since... N[Z] women might have won the vote a century ago but it took [WW2] to really advance the female cause in this country... "No longer [has she got] dainty... lily-fingered... hands and[a] pretty dress... now [she] is... working for war." ...while Hitler was invading Europe... the N[Z] female was invading the workplace... "...The hand that rocks the engine wields the lipstick... They work like men but they're women still when it comes to knocking back a cup of [tea]..." In 1945 the war ended, and so did women's brief taste of power... to look after, well, nearly everything... Government propaganda insisted it was time for women to go back to rocking the cradle again[, and if]... a... girl... did not want to be a housewife [she was] left... with very few career options. "...those few girls who went back to... the upper sixth[form] were taken away by the careers adviser, one by one, and... told to be teachers. Every single one of us." "The options for women then were... either[train] to be a nurse, teacher,[or go to] secretarial school... So I left school shortly after that and joined the bank." And... society had other ways of controlling them. In a man's holy of

holies – the pub – there was no room for women... A woman's greatest concern[supposedly] was how to get... whites whiter, and... brights brighter. And if she could achieve... that she was complete. Such were the expectations on women to stay at home and raise a family that those who didn't raised more than a few disapproving eyebrows... "...my mother used to work in Treasury, and earlier Defence... [S]he was regarded as a bit of a freak. What's more, probably slightly immoral, if not amoral." As well as keeping their families and homes... clean and tidy, women had another public burden – they had to look good. Fashion was feminine, and women were instructed in the arts of attraction. Success was luring the right man[, and]... in the 1950s... [came] exercises to keep a woman looking good for her man. Unsurprisingly, not all women were happy with this role... and the term suburban neurosis was coined to explain the depression that many women were confronting. "My husband has got another woman. I'm obviously not attractive to him any more, and I seem to spend all my time washing... children's clothes." ...the swinging '60s... [changed] much of that, and they changed everybody's attitude to sex. Young women in particular led the way thanks to the pill. But the issue of equality for women spread far beyond the bedroom. Against the backdrop of Vietnam War protests, students adopted righteous causes left, right and centre, and the Women's Movement became formalised... [B]y 1970, sisterhood was here... Men[soon] felt inadequate. They felt they'd been convicted without trial... [F]rom all directions the smothering values of [NZ] men were being challenged... "I don't like the idea of equal pay for women. I feel that the male has to have something left, even if it's [only] a little bit[of] extra money in his pay packet... I think [equal pay will rob each man] of his ego." But a group of angry young women were all too keen to do the robbing... [Men shook] at the very mention of feminism, but it was a word which united all kinds of women... The groundswell of women's liberation began in the universities... and in 1971 the sisterhood held a funeral in Auckland's Albert Park to mourn the lack of progress... since women gained the vote 78 years before... [O]ld prejudices were deeply ingrained [still]... But some of the arguments were very forceful, [and] some of the women of this time[were] strangely aggressive... "You have to keep telling women th[at the part they]... play... as a man's wife and mother of his children are the most important parts [they] can play in this life... because being a wife and a mother is such a stinking role..." ...I was very sympathetic to the cause, actually... and I used to have a group of radical separatist lesbian feminists... come to my flat and[, while]... drinking my booze[, go on]... all night with bitterness [about] the evils of men... [Then] one day I realised I'm the one... washing the glasses... putting the dishes away... and... getting up in the morning... to[go to] work to earn the money to pay for [those all-night parties]... "I took exception to some things about the Women's Movement. The early lunacies, of course, were... very funny, and one of them was that you mustn't wear bras... I have to say that some women my age who didn't wear bras are probably very sorry now gravity has done its thing in a very ruthless way..." During... 1973 the first of four women's conventions was held... "...The feminist movement was amazingly strong in N[Z]. It's like any new wave of something – by the time it comes down... [here] it's distilled like terribly... strong coffee. Have you noticed that? They do everything twice as much... [Y]oung women... refused to shave their legs or wear excessive make-up... [They] were not going with what God gave them in my view." ...in 1984... the Women's Ministry was established. Finally it seemed the[NZ] Government was taking women's issues seriously. "...The ministry will be setting out with a clear goal: to achieve economic and social conditions for equality for men and women in N[Z]." Here was commitment at last that[NZ] women no longer needed to be second-class citizens in their own land, or in business... at home... at school or even in the pubs... [S]cattered... throughout the country... thousands of women were... now... living lives unimaginable to their grandmothers, or even their mothers... The road to equality has been a very long and... torturous one but... these days... a man knowing his way round the kitchen is no longer an embarrassment... [M]en used to run the show. Now not quite so much... - THE WAY WE WERE

Maori women have always been closer to meeting men on equal terms than their Pakeha sisters. They have made significant contributions to Maori history. There is a story about a woman of high rank who is said to have given women the right to speak on the marae... [W]hen the Mataahua canoe landed at Whakatane the rising tide threatened to float the canoe off while the men were exploring inland. Wairaka (or Muriwai) saved the canoe saying, "Me Whakatane au i ahau" (I shall acquit myself like a man).

Unfortunately, the practice of giving *women the right to speak on the marae* is not universal – 'some northern tribes still forbid women to officially voice their opinions.' ('It is a woman who calls visitors on to a marae – and a woman from among the visitors who gives the answering karanga. These women, usually kuia past childbearing age, have the mana and power to negate any evil influences, any makutu or curses, coming with the visitors or harboured by the tangata whenua [the local tribe]. But after that it is the men who sit in the front rows of the paepae, the men who make the speeches.') For this and other reasons, not everyone shared in celebrations to mark the centenary of the 1893 Government Electoral Bill that extended the right to vote to NZ women.

...in... this[centenary] year... religion... has come in for a damning attack by an Auckland District Court Judge, who blames it for impeding the progress of women... The judge's criticism included Judaism and Christianity[, but]... particularly... Islam... the religion most detrimental to females... "Religion has not been kind to women. Ironically, in Christian countries the most devout adherents of the faith are women. Women 'liberated' from religion by Marxism now flock back to the church." They were deprived of power through male interpretations of holy writings, set down in times when practices like slavery – now outlawed – were acceptable... [She] used St Paul's teachings to illustrate the point, quoting from his epistles: "But I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence." She[also] criticised bans on artificial birth control, questioning the Catholic Church's true agenda for enforcing it. "Is it birth control per se or the retention of power and control over women?" (Ironically, the rise of feminism in NZ has been linked to the Catholic Church 'because the nuns did everything in the schools and didn't know about repression by men, so they effectively taught NZ girls how to be feminists.')

The judge asked which should prevail – religion or women's rights – when the teachings of the former encroach on the latter. - 1993

[During] August 1970... 50,000 women [marched down New York's] 5th Avenue... They... [wanted] genuine equality with men, under the law at home and at work... The campaign in the U[S] was another stage in a long fight. Since the start of the century, women have been battling attitudes that hold them back, yet around the world half the people still can't enjoy all the freedoms the other half take for granted. Pioneer campaigners had to struggle to get the most basic political rights. ['Restriction of the franchise to men was attacked vigorously at the first U.S. women's convention at Seneca Falls, N.Y., 1848.' However, it] wasn't until after [WW1] that women in the U[S] and most of Europe finally won the vote. Even then, Britain limited it to those who were over 30 and married. Not until the 1929 election could all women over 21 vote on an equal basis with men... The vote was only the start. For most[British] women... it made no difference to the assumptions that governed their lives. Most were confined to the home as wives and mothers. And the millions who needed to go out to work in the mills and factories were seen as a source of cheap labour and paid less than men. In the rest of the world... women were completely subservient. They worked long hours in the fields, set to the heaviest physical labour and the most repetitive tasks. Their place was defined by tradition and custom as secondary to men. In the Islamic countries, religion was the strongest influence on... women... But... one Islamic country lived through a cathartic change that affected all women. Attempting to modernise Iran and bring it into line with the [First World], the Shah ordered his country's women to take off their veils in 1936... "Above all unveiling gave us a new boldness... We didn't fear anyone any more... It was as if we were in a closed place where a fire was burning, and the smoke was suffocating us, and suddenly the door was opened... We'd all been rescued. This was the feeling." But in a country where religion was a central

part of daily life, others were outraged. Tension between the modernisers and the traditional believers was only suppressed – it didn't disappear. In Britain... [WW2] was a turning point, raising women's awareness of what they were capable of. With so many men called up, women had a chance to work on an equal basis. "The Ministry of Labour... launched a big scheme for training half a million women for arms production..." ...Up till then, large companies had been proud of the way they kept women out. "[Ford]... always made a point of not employing women. They said a man should be paid enough to keep a wife and family in comfort. That's all changed now[because] there's a worthwhile job for women folk at the same basic rate of pay as men... until the men come back." ...When the U[S] joined the war [its companies followed suit]... But the temporary nature of it all was constantly emphasised... After 1945 the soldiers were released from the army in their millions, and came home to assurances that their old jobs were still open to them... In the... '50s, in the country which took so much pride in its progressiveness, there was a return to the idea that women were there to support men... Women were expected to find satisfaction at home bringing up a family... Films and advertisements on both sides of the Atlantic helped to reinforce the stereotype, equating happiness with fulfilment at home. "...it makes no difference if you're rich or poor or if you're smart or are dumb, a women's place in this world is under some man's thumb..." ..."On the first morning of our honeymoon I discovered my beautiful wife didn't know the first thing about coffee, and I love good coffee. 'Wife,' I said, 'this is Maxwell House. So remember, be a good little housewife and this honeymoon could last forever.'" ..."Carol took a general home economics course. Not one which would lead to professional employment, but one which fitted her for that very important career of being Mrs..." ...Even when women's energy was acknowledged, the tone was patronising. "What is that whip-cord resilience that lets the fairer sex play half the night then bob up clear-eyed[and] ready for the next morning's work?" In fact, a third of all [US] women worked outside the home, but in the 1950s most were still restricted to low-paid menial jobs, with no chance of becoming supervisors or managers. At the Southern Bell Telephone Company, the management had a clear policy on what was appropriate for women – they could be operators but go no higher... "...I worked 17 years before I had a half-day for Christmas with my children. I'd watch... the switchmen[doing] work... I felt that I could do... [which] meant so much more pay and better hours..." Whatever education women had, or whatever their interests, the limits were the same. [One woman who] graduated from college in 1950... knew her childhood dream of being a pilot would never be realised. "...It broke my heart, so I settled on being... a stewardess." ...[however, stewardesses were] expected to stop work when [they] turned 32... "The image of a stewardess is of a young, single girl... [and] the airlines wanted to perpetuate... [the idea] that the male[passenger] could get on... and think, 'Maybe I may have a date tonight.' ...It made me angry, it... violated my sense of fair play that... pilots can be fired at age 60 and... we were fired at age 32. Something was wrong there." Even when women did break through to the jobs they wanted, they found new barriers. [One woman] managed to become a journalist but couldn't get[a] promotion. "I would train young man after young man, and... they would step over my head and give me instructions... I just couldn't endure it, so I went to the editor rather nervously and said, 'Why...? Don't I measure up?' 'Oh,' he said, 'there's nothing wrong with your work, but we have to safeguard the succession, and the successor has to be a man.'" By the 1960s, more[First World] women were coming out of higher education than ever before, with new ambitions for themselves. And as prosperity grew, and new appliances went into more homes, some of the old drudgery was removed... As this happened, many [US] women grew dissatisfied and frustrated... In *The Feminine Mystique*... a best-seller in 1963[. a]. New York academic... wrote a devastating critique of the modern woman's situation. 'Women, as well as men, can only find their identity in work that uses their full capacities. A woman cannot find her identity in the dull routine of housework... If a job is to be the way out of the trap for a woman, it must be a job that she can take seriously as part of a life plan; work in which she can grow as part of society.' ...for... housewives... the [book] was a revelation. "[The author] was speaking to me. I was a married woman trapped. It just expanded my life. The first thing I thought of was, instead of blaming my husband or myself... it was the society." In 1963, [US] society was changing fast. The campaign for civil rights for [non-whites] was making real progress. Women's grievances... called for an end to discrimination on grounds of gender too. The great march in Washington that year led to a landmark victory... [The] Civil Rights Act of 1964 guaranteed equal rights for everyone. With the passing of the Act, women started to apply for jobs they'd previously been barred from. [The] telephone operator saw her chance. "I was very excited... I bid on the job for switchman, and my bid was returned stating that 'this was not a job being awarded to women.'" Citing the Civil Rights Act, [she] took her fight to be a telephone engineer to court. But she lost when the company found an obscure law that barred women from lifting more than 30lbs. "It was just foolish to use something like that against women... wet babies weight more than 30lbs." [She] finally got to do the job, but it took five years and an appeal to the Supreme Court... [Before] they tried to get the more demanding jobs, working women in Britain had to fight for a more basic principle. In 1968, women machinists at Ford's Dagenham [factory] were paid 20% less than their male colleagues... Women in the trim shop tried to argue their case to the management. "We'd been getting no where with arguments... [so] I just picked up me bags, switched the machine off... and said, 'Right, I've stopped work. Who's coming?' And 187 women closed the whole plant down... The biggest surprise [of all was] when I found myself on a... protest rally along The Embankment [and then finding] myself in the House of Commons, lobbying MPs." ...The dispute lasted three weeks before the company gave in and agreed new pay rates... As a result... equal pay became a national issue... In 1970... [Britain's] Parliament passed an Equal Pay Act, which made discrimination illegal. But it was a scientific breakthrough, not a change in the law, that made the most difference to women's lives. The birth control pill did more than anything else to give them an entirely new sort of freedom... By preventing ovulation, the pill let women control their fertility as never before. By 1966, 6 million [US] women used the contraceptive pill; by 1968, 11 million. Almost overnight, long-held restraints on sexual behaviour could be thrown aside. Moral attitudes were changing and a sexual revolution was under way... "It was just like a new world had opened up... [which was] telling me... I can do anything I want... We didn't know quite what we were doing in our relationships but they were going to be equal..." ...[however, one woman] was determined to have a small family though she knew her husband wanted a large one. "...Without the pill he would have been able to control me... [With the pill] he didn't even know when I took it. I hid them so well that I could keep on taking them and [say], 'I don't know why I'm not getting pregnant.'" ...Women now expected the pill would make it easier to combine children with a career... [At about this time, US] activists began what soon became a mass movement... They knew the importance of publicity and went all out to court it. They challenged every example of male dominance, including the Church... [They made signs that said:] AND GOD CREATED WOMAN IN HER OWN IMAGE... "...What did we want?"[men asked.] They didn't understand that we wanted to be thinking human beings and take responsibility of running this world equally with men." To the feminists, the annual television beauty pageants seemed a gross offence... Inside[pageants] one set of young women accepted the chauvinist baubles; outside others carried on with... consciousness raising... "We... learned very early on that the press likes crazy things..." The stunts got the coverage they wanted, but at some risk to their reputation. "For those who think that the Women's Liberation Movement is a joke – vaguely connected with burning bras and getting in the men-only bars – may I disillusion you of that notion..." [But feminism turned farcical when attempts by women to join or enter men-only clubs inspired some men to battle rules preventing them from joining or entering women-only clubs!] ...In Iran... the changes for woman had accelerated. When the Shah crowned his wife... in 1968, she became a role model... Whole new possibilities had been opened... Once denied the most basic schooling, they now had full equality and higher education... In the cities, educated women were going into government jobs, becoming lawyers, engineers or scientists. "...Iran had become a part of the big world." It was a world in which, at least in some countries, women had made it to the top. India had a woman P[M], so did Israel, there was another in Sri Lanka and, before the 1970s were out... in Britain too... [Yet despite] what was happening at the top, individual working women had to make their own assaults on each male preserve... "I... wrote off to British Rail saying I wanted to become a train driver... I was called to an interview... [but they hadn't] realised I was female... [T]he whole interview, basically, was designed to put me off the job... [I got on the training course but] people were waiting for me to fall on my behind, and they felt that if I passed it

would denigrate the job... I was the first woman to actually... [become a train driver. Unfortunately, after that it] was open warfare. People wouldn't work with me... my locker was defaced, pornography went up in the mess-room... [But] I knew if I left the railway I would have let these people win..." ...From the 1980s on, commercials told a different story – glamorising a new type of woman who was taking charge... [Meanwhile,] all over Latin America, women were still held back by traditional ideas about their role... But the culture was changing and there were signs that women were starting to assert themselves. Impoverished villagers were pouring into Mexico City from the country, and 20,000 had settled in a shantytown on a barren hillside. It was the women who led a self-help campaign to build proper housing[, who]... dug trenches for sewers and water pipes, and... tried to browbeat the city authorities into providing the basic services they needed... But if some in the [First World] took it for granted that women everywhere shared the same ideas of progress, what happened in Iran in 1979 proved them wrong. With the return of [the] Ayatollah... from exile, and the overthrow of the Shah, an extraordinary turnabout began. Millions of Iranian women went back to the veil... "The veil is not a matter of personal taste, to choose to like or dislike, it's a social question. If I go without a veil it will tempt men and lead to an immoral society..." ...Nevertheless, when the Ayatollah declared it was illegal for women to be seen in public without [a veil], thousands of pro-reform women took the risk of defying the decree openly. "The Shah put the [veil] down by force but these people are putting it up by force." ...[a] demonstration was broken up by the revolutionary police, and from then on Iranian women had to comply with religious decrees... [The limitations First World] women had to contend with seemed a quite different order to the real dangers and exploitations still faced by [Last World] women... In 1995, with much fanfare, a huge Women's Conference was mounted in Beijing by the U[N]. It showed the yawning gap between the concerns of the women in the... [First and Last Worlds]. While one group talked of better childcare and more responsible jobs, others still wanted basic education, better health and protection from violence and exploitation.

A year ago, the largest gathering of women in history took place in Beijing... what has happened since[?] ...after 189 states pledged to make equality of the sexes a reality in the 21st century, many governments are crediting the U[N] conference... for their latest steps to help women... Brazil has promised [them] free cancer-screening examinations... The U[S] is spending \$US1.6 billion... to try to end domestic violence. South Africa[s] President... is setting up a unit in his office to monitor the status of women... Women's groups in Zaire joined forces to try to change laws that bar [wives] from travelling or opening bank accounts without their husbands' permission... At Beijing, [First World] governments and lending institutions fell in love with [the] concept of "micro-credit" – providing small loans to enable poor women to start small businesses... But very few countries have committed new resources to implement the women's agenda. Many are juggling existing funds and some countries, like Argentina and Colombia, have slashed resources for women, according to a 25-nation survey by the New York-based Women's Environment and Development Organisation. South Africa is the only country surveyed that is considering reallocating part of its military budget to support women's economic advancement... [The] director of the U[N] Development Fund for Women, is concerned the partnership between women's groups and governments that helped make the Beijing conference such a success may start to crumble – and a key reason is money. "Many women's organisations are having problems sustaining themselves after Beijing – and yet they are most needed now in the monitoring and implementation of priorities and recommendations that have come out of Beijing," [the director] says. At the heart of the struggle are the raw statistics of inequality: The female gender constitutes... 65[%]... of the world's... illiterate [people and 11% of its] legislators. Women's earnings average 75[%] of men's... The intense debates in Beijing over abortion, sexual rights and inheritance rights illustrated the divisions among women and governments on key issues... [T]he old divide between women from [First and Last] World countries is diminishing – but the divide between feminists and fundamentalists is growing... Many Muslim countries... and some staunchly Catholic nations have been very slow to take on the Beijing agenda.

...In a report for its conference next month on the problems of the world's burgeoning cities, the... UN... Centre for Human Settlements says that of the estimated 1.3 billion people living in poverty, 70[%] are female. They... are also the most rapidly growing group of impoverished, which the report calls "the global feminisation of poverty." Women make up half the world's population, but own just 1[%] of its wealth... Women are relegated to homelessness or squalor status in many parts of the world where they cannot legally own or inherit land, cannot obtain bank loans, receive lower wages than men, and often are abandoned to raise children alone. [Editor's note: It is not the intention of this thesis to promote sexism. Therefore, in an attempt to avoid the use of sexist connotations, for the remaining pages the words *man/woman*, *male/female*, *lady* ('loaf-kneader')/*lord* ('bread-keeper') or *gent*, and *he/she* will be replaced by terms such as *guy/gal*, *him/her*.]

...LISTENING to... *Love Songs To Midnight* on Radio 1... I heard [a guy] ring up, wanting a song to be played for his wonderful, much-loved wife... Aah, said [the DJ. The wife]... was due to have a child, which made it even more sweet and touching. Is it your first? ...It wasn't, this was the second child... [The caller then admitted to loving his job as] a househusband... At this point [the DJ] started to sound doubtful. Do you send her off to work each morning? [the DJ] asked. Yup... I kick her out of the house at 6.30. When is [your wife] going to stop work? ...Two weeks before the birth, [the caller] told us. Well, you make sure [your wife] gets plenty of rest, [the DJ] said slightly sternly... One of the greatest social transformations of the century – the disappearance of the breadwinning father – has occurred with barely a murmur... [T]his is proving more a burden than boon. [Gals] have not only assumed the bread-winning role, alone or jointly with their [guys], but they do the reproductive work as well... Once again I found myself pondering whether this was the liberation feminists had fought for. [Mothers] are back at their workbenches before their episiotomies have healed, sneaking off to express milk in the [gals'] luo so that dad can feed it to bubby the next day. For many [gals] this is not of their choosing... Feminism argued that [gals] should have the choice to work and that the authority which came with being the money earner should be shared with the person doing the unpaid family work. This was not a popular line. Families, we were told, needed clear sex role differences with a mother at home. In the 1990s, opposition to the working mother has evaporated. The New Right – taking over where feminism left off – has welcomed [gals] into the marketplace, applauding their compliance and willingness to work for low wages. Cynically, normalising the two-earner family has allowed [guy] wages to be driven down. More than that, many [gals] are forced out to work because a single income is rarely sufficient to support a family. Workplace deregulation with low wages and fewer tax concessions has diminished [the ability of guys] to establish and support a family. The New Right decries the number of fatherless families but they have created conditions which encourage [guys] to walk away. The market is inherently hostile to the family... irregular working hours, shift work, and weekend work eat into important family time. In the new market family – where both parents work – parents play pass the parcel with the children before hurrying back to the workbench. The much-vaunted flexible labour market has led to the casualisation of work and a huge increase in part-time work. Traditionally this has been [gal work. Gals] have always been the reserve workforce which accommodates employers' needs. They have also predominated in the low-skilled service industries which recently have seen the greatest growth. Many... traditional jobs[for gals] have no career structure, and have been weakly unionised. Ironically, the vulnerable position of... [gal]s has given them an unwelcome kind of advantage in the new marketplace. Employers prefer workers with no clout.

...Indonesian [gal] groups yesterday condemned comments by [the]Vice-President... that a [gal's] place was in the home... [The guy said working gals] should... realise that the "quality" of their household chores was bound to be lower if they had jobs... [Nearly 50% of the gals] of working age... have jobs... according to Government figures. In 1988 only... 33[%] of those of working age, were in employment. [Gal] groups... said the... gender ideology... [was] a way to justify wage disparity between... [guys and gals, and] had been "exploited by industry to use [gals] as cheap labour."

...A group of Jewish [gals] who tried to worship at the Western Wall in Jerusalem yesterday... were attacked by ultra-Orthodox [guys] who hurled insults and folding chairs at them... [Although the gals] were at the section of the wall normally reserved for... [them, they] were removed by police.

...UP TO one in five former [gal police officers] say sexual harassment by [guy] colleagues was a reason for their leaving the force... said[the] Wanganui police district commander... [who] has completed a research paper on [gal experiences as NZ police officers]. It will be presented later this month at a police conference in Sydney... While some successfully complained, [most] were generally unwilling to do so... There was a “deep distrust” whether the system... would help them with their complaint or punish the offender... [The commander] said chauvinism had to be eliminated from the force. One practice which must be stopped was [gals] having to watch confiscated pornographic videos at [guy]-dominated, unauthorised night-shift showings... Police managers were being told they were accountable for behaviour that occurred in their stations and regions. Police sexual harassment contact officers were trained last year and 16 sexual harassment mediators trained last month. The officer in charge at police national personnel... said the force had traditionally been seen as a [guy] bastion. “We’ve always struggled to attract [gals],”... The percentage of [gals] in the force, however, has risen from 2.39% in 1967 to 13.64% in May this year... [In international news, v]irginity tests on would-be nurses in the Indian state of Andhra Pradesh... [have] sparked mass strikes by doctors. The... state’s Chief Minister... had told its assembly that the tests, along with a rule that only unmarried, childless, [gals] could become nurses, was being shelved. The controversy began a fortnight ago when two [gal] hospital gynaecologists were suspended for allegedly carrying out the tests at the King George Hospital in Vishakapatnam after suspecting an applicant of having borne children. Their suspension caused a doctors’ walkout, which has since been blamed for the deaths of eight patients at the hospital. The decision to reinstate the two doctors, who denied that they had carried out a specific virginity test, came just hours before doctors across the entire southern state joined the protest. The Chief Minister said earlier that [the Government] would offer cash compensation of about \$US570... to relatives of the eight who died. Andhra Pradesh was the only Indian state where tests were carried out.

...Most Indian feminists and political parties yesterday welcomed a Government proposal to reserve a third of seats in Parliament and state assemblies for [gals], but some remained sceptical, warning that the bill would not necessarily transform the lot of women. [● ‘In India’s capital, a special jail wing for mothers-in-law – arrested for demanding excessive dowry and breaking up marriages – faces overcrowding due to the “pressure” of new entrants. It has 150 inmates, 50 more than it was designed for. A majority of the inmates claimed to have been framed, innocent victims of the “evil machinations” of their wily daughters-in-law who’d successfully duped their guileless sons into conspiring against their mothers. “The increasing number of inmates in Tihar jail’s mother-in-law wing is indicative of how serious dowry demands have become in consumer-hungry middle class Indian families,” said a lawyer. Many parents believed that “squeezing” dowry out of the hapless bride was the quickest way of satisfying their consumer needs and incessantly harassed her to meet their demands. More than 12,612 dowry deaths were recorded across India during the past 2 years – the victims were frequently doused with paraffin and set alight. In the early 1980s such deaths became so common that anti-dowry activists forced the Government to change existing laws. Now, any death by burning within 7 years of marriage is deemed unnatural and a case of murder can be registered against the husband and his parents.’]

...Four sisters have hanged themselves in the Indian town of Agra because they were too poor to offer dowry for their own weddings. The sisters, aged between 12 and 24 years, lived with their widowed, mentally ill mother.

...A Zulu [gal]... lives with her daughter in a Johannesburg township. Three years ago, her husband was shot dead. Because [they were] married according to African traditional law, under which property passes to the nearest [guy] relative, her father-in-law claimed ownership of her house. South Africa’s bill of rights guarantees freedom from discrimination on the grounds of sex, but in [this] case the Supreme Court has ruled that African custom should prevail over the modern concept of... [gal rights, even though] African customary marriages, called “customary unions,” are not recognised in common law... [W]hen such a marriage, polygamous or not, ends in divorce or the husband dies, the [gal also] does not have the common-law right... to receive insurance benefits, or even to custody of children... [Other customs that irk feminists are:] polygamy... and payment of *lobola*, or “bride price.” ...*lobola*... is... paid by the husband to the parents of his bride. Traditionally, this involved handling over, say, six cows in a ritual to mark the union of two families. These days payment is often made in cash or by cheque. Some parents among the new black elite demand up to \$NZ7000 for a well-educated daughter. “It’s degrading,” says one [gal]... “It’s like you’re being bought.” To educated [gals], *lobola* may be just a ritual. But many rural [gals] feel it deprives them of the right to refuse their husband’s demands to have sexual intercourse, for example, or to take a second wife. Many fear being beaten, a punishment sanctioned in many traditional cultures, if they reject their husband’s demands... South Africa is the continent’s most urbanised nation: half its population still lives in the countryside, compared with an African average of 70[%]. However, *lobola*... is still... paid for 98[%] of wives... Feminism in South Africa is a prickly matter. For many years, the campaign for [gal] rights was overshadowed by the bigger struggle for political freedom... Some things that now worry feminists, black and white, are familiar the world over: how to get more [gals] into Parliament, how to give [them] more control over their fertility, how to protect them from domestic violence and rape. In some respects, South Africa fares quite well by [First World] feminist measures. Almost a quarter of MPs are [gals]... Legislation before Parliament would allow abortion on demand up to the 12th week of pregnancy. Contraception means the average number of babies born to each black [mother] seems set to drop from 4.3 today (compared with 6.5 across Africa) to 3.5 by 2000. Some issues are particularly African... Across the country, you see [gals] with babies strapped to their backs walking along dusty roads and balancing hefty stacks of firewood or jerry-cans of water on their heads. A government survey last year, showed rural [gals] spend on average three hours and ten minutes each day fetching water, and 80 minutes fetching firewood. Installing water taps, or connecting villages to electricity, would do much to reduce their workload.

...Divorce is now legal in Ireland, but a pioneering Irish judge... says the Irish constitution still severely limits... [gals. The judge] has a dizzying list of accomplishments, not least her appointment by the Secretary-General of the U[N] to conduct an inquiry into an allegation of sexual harassment within the organisation in New York. More recently... [the judge, who addressed] a symposium of [gal] lawyers in Auckland at the weekend... headed an Irish Government Commission which recommended the holding of a referendum on divorce. The referendum was passed by a slender majority this year but it was a hard-fought campaign by the opponents of divorce, [the judge] told the audience. “Hello divorce, bye bye Daddy” was one of the more effective opposition slogans. “This of course had children asking at home if the referendum was passed would daddy have to leave.” ...[gal] rights in Ireland still have a long way to go. [The judge] says the advances made so far are due to the country’s entry into the European Community... in 1973. Articles in the Treaty of Rome, which established the European Communities, were important in the area of sex equality... However, the Irish constitution, and its interpretations in various court decisions, is still limiting [gals]. For example, it says [a gal] ought not to work unless compelled by economic necessity... [T]he Irish political scene predicated on the notion of the “serviced [guy].” “That is a full-time spouse looking after him, caring for children at home and acting as additional secretary and administrative assistant. What [gal] has that kind of help?” ...Abortion has caused major controversy over the years, especially in 1992 when a 14-year-old rape victim and her parents were prevented from travelling to the [UK] for a termination of her pregnancy. That was successfully appealed and since then the number of Irish [gals] who travel abroad to get legal abortions has grown. In 1994, 4590... had abortions... [in the UK. By the way, a] leading jurist’s proposal that children should carry the surnames of mothers has sparked heated debate in traditionalist Italy, where [fathers] yearn for their sons to carry the family name... [S]ome legislators rejected the proposal out of hand. “Our society is still a patriarchal one and it is still more advantageous for children to carry the name of the father,” said[one] MP... But... the... Equal Opportunities Minister... defended... [the] proposal, saying it was a

“sacrosanct right” that children should be able to take the surname of the mother... It also prompted speculation about how some famous names would have been different had the proposal been law in the past... “I realise that for many fathers this initially can come as a shock, or at least as a problem. But this is a way of recognising through law the primary and privileged role that the mother has with a child. We can’t deny that. I... think that making the father’s surname obligatory is an absurdity, stuff of the Middle Ages,” said... the... granddaughter... [of WW2] dictator... Benito Mussolini...

A [US] judge gave... some free advice [to a suspect] before accepting her guilty plea... for misusing a credit card...: Dump your boyfriend, show your legs and find a doctor to marry. “[Guys] are easy,”... the... Common Pleas Judge... told [her]. “You can go sit in the bus stop, put on a short skirt, cross your legs and pick up 25. Ten of them will give you their money.” Two national organisations yesterday called the remarks sexist and insulting to both [sexes]... The judge later claimed that her remarks were taken out of context... [In local news, a] Justice... of the High Court... says... [that if every guy] throughout history stopped the first time a woman said no, the world would be a much less exciting place... [The judge, who] was summing up in New Plymouth on Tuesday in the trial of a 21-year-old process worker on charges of rape and unlawful sexual connection... also questioned whether the accused’s use of a condom fitted with the act of a [guy] having sex with a [gal] against her will... The jury of [7 gals and 5 guys] took 45 minutes to find the [accused] not guilty on both charges. The judge’s remarks have “incensed and... bloody dismayed” a New Plymouth Sexual Abuse Centre counsellor... a[nd] former detective. “The judge let his position... and... [guys] down... To make a statement like that suggests that there is some excitement to be found in a [gal] being forced. In any context that is unacceptable, and I hope the Crown appeals the verdicts. They should on that statement alone.” However, the New Plymouth crown solicitor... said it was not open to the Crown to take any such action... During the trial... the Crown alleged that on January 9, three days after [the accused met the complainant, they and some of] her friends watched videos and had drinks at his house. When the friends left, the accused offered to give the complainant a back rub... The Crown alleged the accused kneeled on her arms and undressed her, despite her struggles, and committed the offences. [The accused] also allegedly hit her three times.

...I was disheartened to read [the recently published] letter regarding the false allegation of rape against [a guy]. False allegations of rape are no more common than false accusations of other crimes and it was not that long ago that the deck was firmly stacked against the victim in court. Her previous sexual history was taken into account and unless there were outward signs of violence sexual assault was extremely hard to prove – and[until 1986,] rape within marriage was perfectly legal[in NZ. Would the letter writer] prefer to have rape victims treated as they are in some Muslim countries – requiring witnesses ([guys] of course)? ...i[n]cidentally, gals i[n] Lahore, Pakistan, held two separate demonstrations yesterday after the High Court ruled that a [gal] could not marry of her own free will and must have the approval of her guardian. One group said the verdict contradicted the “equality of [guys and gals]” guaranteed in the country’s constitution; the other hailed the judgment and accused progressive feminist organisations of spreading obscenity and promoting un-Islamic Western culture. - 1996

The *New York Times* said in an editorial this week that “Western Governments must make it clear that continued oppression will cost the Taleban aid and harm its bid to win Afghanistan’s seat at the U[N] currently held by the previous Government.” It is doubtful the Taleban heard the message. The only foreign newspapers readily available in Kabul are ones from Pakistan, and they receive strict Taleban attention. Somewhere between Pakistan and the Afghan capital, a censor goes through each copy, blacking out any pictures of [gals] that might lead [guys] astray... The graveyards of Afghanistan, huge urban parks on the fringes of major towns or small plots in every hamlet, are one of the few places where [guys and gals] can be found in... intimate, open proximity... Nothing denotes the sex of the deceased except, perhaps, a headstone if the family was wealthy enough to buy one. Husbands and wives... are buried beside each other... [Under] the purist... Islamic militia... death is an equaliser...

Egyptian [gals] have had a gutsful of [guys]. So they’re killing them... [A] new film, *The [Gal] and the Cleaver*, is based on a true story and reflects growing violence in crimes committed by Egyptian [wives] against their husbands or [guy] partners. Such... violence showed up in more than half the cases in a study of... murders of [guys by gals] from 1983 to 1992... All... were convicted of premeditated murder. Three were sentenced to hang but had their sentences commuted to life because they were judged mentally unstable. Others were given jail terms of five to 25 years... One... crushed her husband’s skull with a metal gas canister as [the husband] took an afternoon nap. [The wife] had been forced to have sex during her menstrual period, a practice condemned by Islam... The... movie is... [about] an Alexandria widow whose second husband turned out to be a conman who squandered her inheritance, repeatedly raped her and sexually assaulted her teenage daughter. The case sparked nationwide sympathy and a dozen lawyers came to the [gal’s] defence. However, the gal] was jailed for 15 years... [M]ost husband-killers are... illiterate or little-educated, from poor families... were abused as children... or... victims of rape and other abuse, often throughout marriage. Others are faced with losing their husbands, who provide their only livelihood, to another [gal]... “Society has not equipped these [gals] to take care of themselves,”... says... [the] professor of sociology and psychology at the American University in Cairo... [Such gals] see murder as their only defence against a life of cruelty in a [guy]-dominated society. “They say, ‘I’m not going to accept this any more, I’m... not going to wait for my brother to come to my help.’” In Egypt’s traditional society, [gals] commonly rely on [guy] relatives to take care of them, including resolving marital disputes or taking revenge against unfaithful husbands... [■ An Egyptian guy] who kills his unfaithful wife can get up to three years in prison.

...[in Jordan, ‘a third of all murders are honour-related. Guys who kill their wives, daughters or sisters for allegedly affecting their family’s honour, get only six months in prison. Many gals are in prison to protect them from harm.’ In some Islamic nations, honour-related murders receive no punishment at all! In related news, ‘Egyptian gals are becoming more interested in marriage than piety. For example, one had worn a headscarf, in line with Egyptian Islamic tradition, since leaving school. However, despairing of finding a husband, the gal plucked up courage four years ago and took it off. Now 28 and engaged, the gal believes God will understand and be merciful. Removing the headscarf, or higab, as it is known in Egypt, is a highly visible personal statement which does not come easily to gals who consider themselves pious, observant Muslims. Yet the urge to marry, often reinforced by intense family and social pressure, prompts some to cast off this symbol of Muslim modesty in an effort to attract a mate. Curiously, some gals with a more secular upbringing who wear Western-style clothes occasionally don the higab for the same, non-religious, reason. One vendor of Islamic garb in the suburb of Heliopolis, who sells headscarves for \$NZ45 each, said his income had tripled in the past five years. A religious scholar conceded that gals were permitted to choose whether or not to wear a higab. More religiously-minded Muslims opt for the niqab, or face-veil’]...

A young Egyptian... fainted on his wedding night... [after lifting] the veil of his bride only to discover... someone other than... [the] young beauty of 18 with whom [it] had fallen in love... [T]he marriage veil concealed a [gal aged] 45... as soon [as the groom] regained his senses, [the groom] dashed to the police to file a complaint against his in-laws for cheating him... [By the way, curious] decisions about alimony... are made regularly in Egypt. The newspaper *Al-Akhbar* reports that one wife had her request for a lump sum payment of nearly \$16,000 rejected... [for neglecting] her appearance and [putting] on too much weight. This was the prime reason, a court accepted, for her husband seeking solace in the arms of his secretary.

...[an] Egyptian industrialist, who married off his divorced wife... as a way to win her back, has run into an unforeseen problem... The romantic nightmare began when the [industrialist]... came home one day to find his pretty young wife out of the house. Madly in love, but also mad with jealousy, [the industrialist] pronounced the “talaq,” a triple renunciation, which legally divorced him from his spouse. [The industrialist] soon regretted his decision, and sought to get her back. But under Muslim law, a husband cannot remarry his wife until [the gal] has first married

someone else, then divorced again. To speed the process, the... industrialist paid one of his poor employees to marry his ex-wife and to divorce her immediately after the wedding night. But the... morning after, the temporary husband – or “substitute goat” – refused to give up his wife... [Incidentally, decisive] action was taken by... [a Kenyan guy] when his girlfriend rejected his proposal. [The guy] kidnapped her aged uncle... and threatened to keep him prisoner until [the girlfriend] relented. The “relenting” took five days. The pair are now spliced.

...[the ‘12-year-old looks like any other schoolgirl while running across the playground with her friends in a green pinafore, white ankle socks and black lace-up shoes. But two years ago, her father – from Kenya’s cattle-raising Masai tribe – decided it was time for her to marry. A suitor was found, and following traditional Masai custom, the suitor handed over the “bride price” to the father – two cows, several crates of beer and some money. They were married. The bride spent two weeks with her husband. “My husband was very old, old enough to be my father,” said the little girl softly, biting her nails while speaking. “I had to start taking care of him straight away. I did all the things a wife is supposed to do.” But luckily, some in the local community did not approve of the marriage, and helped her escape to a girls’ boarding school run on a shoe-string budget by a redoubtable Masai gal who says it is her mission to “rescue” girls like the 12-year-old who are being pushed into marriage at younger and younger ages. “The girls used to get married at about 14 or 15, at the onset of puberty. But now we see the age of marriage getting lower, even to the age of 9 years.” In preparation for marriage, Masai girls must be circumcised, a painful ritual performed at the age of 7 or 8. The reason girls are being pushed into early marriage is unclear. Some say fathers are motivated by the desire to get their hands on the dowries they receive.’]**□ PARENTS in drought-hit central Tanzania have forced five girls below the age of 10 into marriages so they can eat. The daily *Nipashe* quoted one girl as saying her parents would receive a dowry of five goats.**

...[‘it is just after noon in the Ivory Coast village of Korhogo, and in a steamy square room no larger than a prison cell, a girl is covered in a pink-and-white striped blanket. The girl briefly lifts a veil that hides her angular features. Her neighbours are celebrating her wedding day, but the girl is not smiling. The girl is 14-years-old, and in this town and throughout sub-Saharan Africa, such celebrations are common. It does not matter that in many African countries, such early marriages have been illegal for years. Her family will not discuss the tradition, but people in her community eagerly defend it. They say forcing girls to marry early protects them from immorality, strengthens clan relationships and honours Islam. “If a girl doesn’t marry at an early age, that girl will sleep with many guys. Nobody would want to marry her later,” said one 55-year-old guy. Such marriages, the 55-year-old said, keep girls from “adventures”. The 55-year-old married his first wife when the gal was 11. The 55-year-old forced his oldest daughter to marry last year when the daughter was 12. His next daughter, age 7, is scheduled to wed next year. A prominent gal rights activist in the West African country sees only tyranny in the tradition. Her battle to eradicate childhood marriage is a struggle between an oppressive Africa tied blindly to traditions verses one urgently seeking to embrace the modern world. “Paedophilia is a phrase that’s only recently become popular in the First World. But in Africa, it’s been around for a long time.” Islamic law experts say the Koran says a girl can be married as soon as her body can conceive, but add the religion does not condone forcing girls into wedlock. The practice has, however, come under increasing assault since a 12-year-old killed her 30-year-old husband in April 1996. The parents of the girl with a heart-shaped face, a sweet smile, bright, almond-shaped eyes and a tiny voice, had forced their daughter to marry a distant cousin that the daughter had never heard of or seen. The daughter and her husband lived together for 3 weeks. Every night, the daughter said, her husband raped and beat her. Finally, one night the daughter stabbed him. The police held her in the Abidjan prison for nearly a year before gal rights groups prevailed on the president to free her, at least until her trial. The 55-year-old had not heard of the girl’s case until recently, but does not have much sympathy for her. “In Islam, when the girl is married, her husband is just under God. You should obey him, no matter what.” The 55-year-old said that before his 12-year-old daughter’s marriage, the daughter frequently would leave the house and return hours later, and the father would not know where the daughter had been. Once the father tied her up, burned her back with a piece of iron, then locked her in a room for three days without food. The father laughed while telling this story; so did the guys nearby. The father never sent his daughters to school because if girls went to “modern” school, they might meet people who would drive them from their traditions. Educated girls “argue with their parents. They start asking questions. They want to have a say in everything in their life. As soon as I married the 12-year-old off, I got peace of mind. The daughter was no longer my problem.” The daughter became the problem of a 41-year-old who had picked her to be his bride when the gal was 6 years old. The husband has had trouble with her but said the problem was that his wife was very young and “still very childish”. His wife does possess a tender goofiness. It flashes in the way the wife melts into giggles at the slightest thing, and in the embarrassed frozen silences that follow questions about having children. The wife does not recall much about her wedding in February 1996, just that “I wasn’t happy”. The wife spends her days bent over, sweeping the room they rent, preparing meals, washing clothes, scrubbing pots and plates. The wife has one friend, a 12-year-old who wed when aged 9 and has a 6-month-old daughter. Back in Korhogo, the dancing and singing stops. About 50 guys sit and wait to seal the marriage officially. There will be no exchange of vows; the husband, 36, is not even there. His family offers a symbolic bride price (less than \$100). Then, the ceremony over, the families exchange cola nuts and candies. Thirty minutes later the bride sits down in front of her former home, head stooped and still covered, waiting to be taken to her husband’s house. The bride is there 15 minutes. No one seems to notice. Then a white car arrives, scoops her up and drives her into the darkness.’

...upon turning] **13... in Pakistan’s... fiercely conservative [northern] region, a boy gets a gun... [and a] girl gets married and disappears behind a wall of sunbaked mud... Today tribespeople will put their thumb print beside the candidate of their choice for parliamentary elections. The election will end a decades-old tradition that gave a few tribal elders the right to decide for three million people who would represent them in the National Assembly, 300km away in the federal capital... In hundreds of dusty wooden teahouses scattered throughout the region, [guys] – their Kalashnikov rifles slung over their shoulders, bandoleers of bullets hugging their chests – welcomed the news that [they] would have the right to vote. But their happiness was tempered when it became clear that the vote would be extended to [gals], as it is in the rest of Pakistan, where [gals such as the one] who became the country’s first [gal PM] in 1988, have been politically active for some years... Election officials, taking note of the reaction, moved cautiously during voter registration. As a result, in one region of the tribal belt only 360 [gals] were registered compared with 78,377 [guys]. Election commission figures show that overall, 1.6 million [guys and 469,000 gals] have registered... Unlike elsewhere in the country, [gals] in the tribal region will have separate polling stations set up in schools and hospitals away from the prying eyes of [guys. But one]... Islamic cleric... said that’s not enough... It was decided... [at] a meeting of his followers after hearing of the voting announcement last month... that any [gal] who tried to exercise her new right would face swift, harsh punishment: her home would be burned down and [the gal] would be fined 500,000 rupees... a huge sum for this poor area where most people earn less than 4000 rupees... a month.**

...Oman’s election for its next consultative council tomorrow will be a milestone... [Gals] from anywhere in the country are eligible for the first time to put themselves forward as candidates. An electoral college will choose among a field of almost 800... to help the Government select a new 82-member Majlis al-Shura... Among Gulf Arab states, only Kuwait has an elected Parliament but [gals] are not allowed to vote.

...[‘Kuwait men flocked to polling stations at the weekend to elect 50 MPs to a Parliament which will decide whether to open the next election to gals. Despite widespread opposition, Kuwaiti leaders – who do not face election – have called it a done deal. The unelected Government is due to resign after the elections, to be replaced within two weeks when the new Parliament meets. Only 113,000 guys – or 14% of the almost 800,000 Kuwaitis (the electorate is just 5% of the 2.2 million people who live in Kuwait, where foreigners make up 65% of the population) – had the right to vote in the country’s ninth parliamentary elections since 1963. Only Kuwaiti guys born to Kuwaiti fathers can vote. Military and police personnel, Kuwaitis naturalised less than two decades ago and citizens under 21 do not have the vote.’ On a positive note, the] **new Government of... the... moderate Iranian President... has named a [gal]... as vice-president for the first time since the 1979 Islamic revolution.**

...[around] **70,000 flag-waving soccer fans gathered in Tehran stadium to welcome the returning Iranian team after their World Cup qualifying success in Melbourne – among them 3000 young [gals] who defied a ban on [gal] fans attending the event... Once the [gals] were inside police seated**

them in separate stands from the [guys]... “In view of the lack of suitable space and in order to safeguard Islamic dignity, sisters will be strictly prohibited from entering the Azadi stadium and can watch the fervent ceremonies on live television at home,” Tehran radio said beforehand.

...[gals] should not be allowed on TV, unless their appearance is absolutely vital, and must never co-host light entertainment shows with [guys]. These are among the basic rules designed to avoid inflaming [guy] viewers and protect morality in Pakistan. Advertisements for Sunsilk shampoo, with models tossing their hair “provocatively,” have also been banned. So have ones for Close-Up toothpaste because the gleaming white smiles are considered too seductive. Children’s programmes are also vigorously censored. A scene was cut from *Tom and Jerry* because a cartoon dog received a quick kiss from a cartoon cat... [The Pakistan PM] was particularly outraged by the prospect of a [gal] promoting soap by having a shower – although only her face and head would be visible. ...one of India’s most senior... [gal bureaucrats has confessed to being] amazed throughout her career by the lack of [gal] toilets in Government offices. It is a reminder that nearly half a century after the Indian constitution declared them equal to [guys, gals] are still waiting for their presence to be acknowledged... It took nearly thirty years after independence... for Indian law to give [gals] the right to equal pay... The average Indian [gal] gets married before... [turning] 21. Only 41[%] use contraceptives, and one in 12 has her first child before the age of 19. A recent U[N] report said up to 50 million girls and [gals] were missing from India’s population, the result of systematic sex discrimination extending to the abortion of [gal] foetuses, which is officially banned. In 1921 there were more than 97 [gals] for every 100 [guys] in India. Seventy years later, the number dropped to 92.7[– and the ratio of guys to gals is likely to increase now that more parents are using modern technology such as ultrasounds to identify the sex of foetuses]. “Why should it be economically feasible to have a girl child when all the laws reflect a gender bias against them?” says [the]Health Minister... “We have couples who want only [guy] children because only [guy] children have legitimate social support. The laws of the land are unequal, and they are made by the 50[%] of the population that... [aren’t gals,” the minister adds. “Gals] are becoming a party to destruction of their own species as they are unable to break out of the vicious cycle of undervaluation by others and by themselves,” said a recent report by a voluntary [gal] group, Tinnari. “They crave for the birth of a son who is seen as their saviour in an environment that is hostile to [daughters].” Experts say many Indian girls remain illiterate not only because they are expected to run the house and raise their siblings while their parents work, but also because working [mothers] have no safe nurseries for their young daughters. Yet when girls do go to school, Government statistics show that they consistently perform better than their [guy] peers. In 1994, more than 75[%] of the girls who took India’s final high school examination passed – fewer than 64[%] of the boys cleared it... “After a girl is nine or 10 years old, the dropout rate increases because her parents would rather take her out of school than leave her alone after school hours...,”... Government figures show that about a quarter of the 12,223 [gals] raped in 1993 were under the age of 16. About 80[%] of the rape cases reported between 1991 and 1993 remained pending for trial for at least [3] years... In 1990, more than 50 widows were burnt alive when their husbands’ bodies were cremated in an archaic ritual known as “sati,” based on the belief that a Hindu [gal] has no existence independent of her husband. [‘Although sati is supposedly a voluntary act, there is little doubt that in some communities the widow was more or less expected to carry it out.’] In 1993, about 16 [gals] were killed every day for dowry by greedy in-laws, although the Government declared accepting dowry illegal in 1961. [Gal] groups say the number of cases reported is a fraction of the real figure.

...In a country still battling dowry deaths a bill which calls for one-third representation for [gals in] Parliament and... legislative assemblies seems a tall order... [P]rogress of the Constitution (81st Amendment) Bill, 1996, has been sluggish... The 13-party coalition Government has so far offered no gift except lip service promising commitment to the cause of... [gals. B]y January this year[, the then PM]... indicated the 33.3[%] quota was unrealistic and proposed 10 to 15[%]. Supporters see cutting the percentage as insulting because it implies there are not enough competent [gals] to fill the quota... Now last week’s defeat, by a vote of no confidence, of... [the then PM’s] Government has put it on the back burner even further... “The survival of the Government is at stake and the bill has taken a back seat...” ...One of the bill’s strongest promoters... said... “I see no chances for the bill in this session... In the past we talked about the trickle-down effect, going from up-down but it hasn’t really worked. So what we are now talking about is the down-up effect. It is already working at the grassroots. One million [gals] have been elected to local bodies in the past five years... This part of the world has always been labelled, by the so-called [First World], as backward. Yet we have produced... [gal PMs in India, Pakistan,] Sri Lanka... Burma... Bangladesh and the Philippines. It will take... another 200 years to have a [gal] President of the U[S], I assure you.”

...[gals] in America have equality, but not equal remuneration... This helped [them] to get positions, as budget-conscious organisations employed them because they did the job as well as [guys] but for less money. For example, there were few [guy] high school principals for this reason.

...[the US and UK’s First Wiv]es and a whole host of the[ir] sisters are unlikely to approve, but in a new and peculiar... version of a political wife, the supporters of one candidate in PNG’s Southern Highlands claim to have boosted his election chances with a gift of two pigs, a [gal] and some food... [The gal] was bestowed on a wifeless would-be MP... before a crowd of 15,000 at an election rally... last week. Her aunt... is reported as saying that her family felt it would look bad if [the candidate] went on the campaign trail without a wife... [H]er niece... is now living with the candidate, who is related to her family. PNG’s daily newspaper, the *Post Courier*... said... [the] candidate was openly happy... but went on to report [her] as having reluctantly whispered: “My people said I should come, so what could I say?” No reference has yet been made to a widely publicised court case earlier this year which reversed a compensation package in which an 18-year-old... had been given to an enemy tribe in the highlands. The [18-year-old]... had already been handed over with 24 pigs and \$20,000 in cash when lawyers had the arrangement declared unconstitutional.

...[in] the second revolution wrought by last week’s... British [Parliamentary elections, the number of gals]... in the 659-seat House of Commons has doubled to 120, 101 of them in the triumphant Labour Party, 78 years after Nancy Astor became Britain’s first [gal MP. The new PM] immediately acknowledged the changed gender balance by including a record five [gals] in his cabinet of 22. Observers believe the “genderquake” will change the Commons, generally regarded as an exclusive... [guy’s club, despite the Iron Maiden’s years as PM. Many gals] believe they will gradually reduce the schoolboy humour, the heavy drinking, perhaps even the confrontational ethos – although [the Iron Maiden] was scarcely a role model for political co-operation... Most of the new [gal MPs] are relatively young; overwhelmingly they are tertiary educated. The youngest... aged 24, is a law graduate and mayor of a town just outside London. [One gal’s] victory meant she joins [her] twin sister... on the Labour benches. They are Parliament’s first twins. Another first was... Parliament’s first mother and son team... The Commons has a shooting range, but not a creche. That’s unlikely to last, because... a 28-year-old Bank of England economist who won a Lancashire seat, is eight months pregnant... [● As if to prove that Britain still has a long way to go before the sexes are treated equally, t]he appointment of a [gal] priest at St Paul’s Cathedral is to be challenged in the High Court. An[] Anglo-Catholic priest... is to seek a judicial review of the... appointment... which [it] blames on “loony liberal” leadership...

Rebel Anglican bishops are planning to leave the Church of England and set up their own independent church with the backing of up to 1000 vicars, according to a report in the *Sunday Times*. The newspaper said the bishops were appalled by what they saw as the liberal drift of the Church of England’s leadership since the decision to ordain... [gals. A spokesperson] for the Archbishop of Canterbury declined to comment.

...Lapsed and would-be Freemasons are invited to a meeting at the Masonic Centre, in... Auckland City... to learn all about the ancient order... “We aren’t going to randomly give out secrets. It’s not a secret society, it’s a society with secrets.” ...While members once did not make a song and dance about their good work in the community, the organisation... is... beginning to promote itself to halt the decline in its ageing membership... In fact, Freemasons are now using a common marketing tool to tout for business. Forget about the secret handshake, modern Freemasons are letter-dropping the neighbourhood... But despite the drop in Freemason numbers, the... society will not change certain requirements – [gals] are still not allowed[, perhaps because]... members must believe in... the universal brotherhood... Politics and religion are[also] banned at lodges...

[Guy] judges are from Mars. [Gal] judges are from Venus. That seems to be the reality for the people charged with judging [NZers] without fear or favour, affection or ill-will... [NZ's] justice system is riddled with sexism – from the benches of top judges down to the lawyers who stand before them. A confidential report on judges' perceptions of gender bias has revealed widespread discrimination against [gals. 90% of gal]... judges... had seen other judges making remarks, gestures or jokes that were demeaning to [gals]... While sexism was endemic in other [guy]-dominated institutions, judges had sworn an oath to exercise their judicial function without discrimination... said... the Auckland [Gal Lawyers Association.

...Maori in Northland and around the country are upset by a judge's decision not to convict a guy charged with assaulting his partner because of the guy's mana. They say mana is no reason for a judge not to convict, and is not a justification for name suppression. The judge had said: "The courts recognise the concept of mana and if named, the loss of this defendant of his mana would affect him and his people significantly." But a Maori elder said the guy had already lost his mana. The Maori Affairs Minister said that to lose mana, someone first had to have it. "If you bash your wife, you don't have any mana."

...16 guys] appeared in Auckland courts yesterday charged with bashing their wives or partners. Police said... lack of finances mixed with alcohol... [had] combined to form an explosive mix in many homes... Wellington [gal] refugees have been overflowing for months[, and]... workers had little time to spend on maint[enance. Gals are also]... taking longer to move out of the houses because of high rents elsewhere... [(not many wives) turn up on the doorstep of... [refuges] claiming their husband has financially assaulted them[, b]ut... money can be used in malevolent ways... – [the]... case of the [wife] who is literally held to ransom with the household spending may be rare... but imbalances in the division of money within the family are common[). This]... year had seen a significant rise in Indian... and... Chinese [gals arriving at]... refugees to escape abusive relationships...

[Gals are] still battling severe discrimination in the workplace in China, with many forbidden from getting married within three years of starting a job, according to a report in the official media. Many... were also forced to sign contracts preventing them from having babies within five years of joining a company... Apartments were often allocated to [guy] staff only, under the theory that [gals] would find a [guy] to provide for them. Statistics from one university in the eastern Zhejiang province supported the discrimination theory. Of 500 [gals] who graduated last July, only 25[%] had found work, while 66[% of guy] graduates had been employed. "...personnel departments of some Government organisations have said very simply that they just do not want... [gal graduates]." In local news, yesterday t]he entire Auckland police dog unit c[a]me... together in one place – Cheltenham Beach on the North Shore... "It was great fun getting everyone off shift and out of bed and in the same place at the same time,"... said... [t]he regional coordinator... The unit has 38 members – 19 of them dogs.

...German shepherds of the fairer sex will be trained for general police work next year, ending the last [guy] bastion in the force. The reasons? [Bitches] are just as good... the demand for dogs is increasing; and the supply of unwanted German shepherds from the public has dried up... Spayed [bitches] were used before 1980, but were phased out because of an oversupply... Before 1980 police had also preferred the bigger [guy] dogs for the sake of uniformity... But the stigma of smaller dogs has gone the way of the height restriction for human members of the police... [Incidentally, just 1.2%] of commissioned police officers are [gals, despite gals comprising 14.6% of NZ's] police force. The... figures showed the police force was "still an overwhelmingly [guy]-dominated bastion with an intolerable record in terms of promoting [gals] to senior positions."

...[gal] bosses are better than their [guy] counterparts because they are prepared to put extra effort into their jobs and their supportive nature fits well with modern work-places, a new survey has found... [A] principal consultant... said the survey helped dispel the myth that [gals] were unsuited to leadership positions and suggested [guys] could have something to learn from the opposite sex... The DDI Asia Pacific survey found [gal] managers inspired workers to achieve higher goals and were more likely to give symbolic rewards such as notes and public praise to employees for a job well done. [Gals] were also more likely to encourage their staff to try different ways of doing things... [Gals] as a group scored better than [guys] in eight of the 11 categories on which respondents were asked to rate their leaders. They were equal in the three others... There was little difference in the findings among the four countries surveyed... There was little in the survey's findings that surprised [the consultant. The consultant said gals]... have had to fight harder to get to the top so it was likely they were going to be better managers than their [guy] peers at a comparable level... [60%] of survey respondents didn't trust their managers, but [gal] managers tended to be trusted more because of their greater ability to listen, respond with empathy and share their feelings... "[Guys] are still operating on the assumption that information is power." ...Meanwhile, a straw poll of staff... at this newspaper found... most couldn't care less whether their boss was [a guy or gal.

...The NZ] Government is failing [gals] in the workforce and letting them fall behind in pay rates, says one of its human rights commissioners... In 1972 [gal pay was 72% of guy pay]. By 1990 it was 82[%]... but since then it had shrunk to just over 80[%]. "I suggest that the free-market model is not suited to redressing existing power imbalances such as socio-economic and gender-related inequality. It actually capitalises on them." ...the... Equal Pay Act 1972... failed to come to terms with the concept of equal pay for work of equal value and it was designed for the days of centralised wage-fixing and national awards. Its inadequacy in a changing industrial environment led to the enactment of the Employment Equity Act in 1990. However, that was repealed when National took office that year... [In related news, complaints to the] Human Rights Commission about sexual harassment increased 45[%] in the year to June...

Sexual harassment complaints are up 9[%] this year compared with last year, according to an Equal Employment Opportunities Trust survey. It also says compensation to the victims... can be as much as \$25,000... Sexual harassment... is most prevalent in traditionally [guy] workplaces – the Fire Service, the Navy and the Prison Service have all hit the headlines recently – and in the pub-club-restaurant area. "No sector or type of organisation has a monopoly on this," says... [the trust's] Executive Director... Young workers are particularly vulnerable... Workers who are desperate to hold on to their jobs for financial reasons will not complain. In some occupations, employers report it is very risky to lay complaints, because they will be identified as troublemakers within their profession. [The director said gal] lawyers, for instance, have a sense that if they lay a complaint in one legal firm this may affect their chances of getting work somewhere else. "This is not necessarily an accurate perception, but it stops [them lodging complaints." The]... Proceedings Commissioner for the Human Rights Commission, said [gals] living in small towns faced the same issue... The... [c]ommission dealt with 858 sexual harassment inquiries in the year ended June 30, and 80 formal complaints were opened.

...A [gal] harassed by two drunk [guy] workmates while at a conference was told by her employer that [the victim] must take some blame because [the victim] did not lock her bedroom door. A Human Rights Commission newsletter reported that the pair woke her at 1 am and interfered with her clothes. [The victim, who] suffered a neck injury in the incident... eventually received an apology and \$9000 compensation.

...A dairy owner who groped and fondled two teenage sisters working in his shop and told them to take their tops off to attract more customers has been ordered to pay nearly \$20,000 by the Complaints Review Tribunal... [for] lost pay, damages for hurt and humiliation, legal... and medical costs... The defendant denied the allegations, and claimed the touching was accidental... [In international news, a KFC] worker in Wisconsin who quit over her manager's explicit remarks – such as the suggestion that [gal] employees get a tattoo on their breasts... referring to [gal] managers as "bitches" and references to oral sex... – was denied unemployment benefits by a judge, who said the talk may have been an attempt to boost morale. "Use of vulgar and obscene language and terms can serve to promote group solidarity," said... an administrative law judge who hears unemployment cases... The ruling has been appealed, and a sexual harassment complaint filed with the state's equal rights division is pending.

...It seems... hard to believe that considerable numbers of... [gals] do not... make a complaint... that they have been sexually assaulted... [bu]t... research... presented... [at] the rape conference in Wellington last year... estimated that only one in 10 rapes are reported to the police. Auckland

Help is the largest sexual assault agency in the country (serving central Auckland and surrounding areas as far north as Orewa) and we know from experience with our 24-hour crisis line that this estimation is about right, although of course it is impossible to be precise. The reasons most [gals] do not report that they have been raped are varied. Fear that they won't be believed by the police is a common one. Others include fear that they won't be believed by anyone – sometimes they aren't – and fear that they will be blamed by family and friends. They usually blame themselves, feel tremendous shame and humiliation that that happened to them, are in shock and they may fear reprisals from their assailant(s) if they report. Of rapes that do get reported to the police, the research shows that the police proceed with investigating three out of 10.

...Nearly one-third of... [guys] aged between 14 and 26 in the southern suburbs of Adelaide... believe it is all right to force [gals] to have sex with them in... at least one of 11 given scenarios. Of that group, nearly two-thirds thought it acceptable if the [gal] had had sex with him before, if they had been going out together for a long time or if [the gal] allowed him to touch her below the waist. Nearly half though it acceptable if [the gal allowed the guy] to touch her above the waist, and 30[%] said it was all right if [the guy] had spent a lot of money on her or [the gal] was wearing revealing clothing... [By the way, gals] pay more than [guys] for goods and services, according to a report released in A[US] yesterday. The... six-month research project [concluded that gals]... were treated differently to [guys].

...‘Concerning the different qualities of the sexes, Comte wrote: “In all kinds of force – physical, intellectual or practical – it is certain that guys surpass gals, in accordance with a general law which prevails throughout the animal kingdom. If there were nothing else to do but to love gals would be supreme.”’

...‘*Guys lie, gals cry* We are all born equal – well, not according to an author and body language expert who was in NZ last week to hold seminars about understanding the differences in behaviours of guys and gals. Guy brains are solution-oriented while gal brains are process-oriented – and while gals use the silent treatment to punish guys, guys actually love the silence! In summary, guys will never understand gals and gals will never understand guys’...

Danish researchers... have [found that on average, guys] have about four billion more brain cells than [gals. But the]... Copenhagen neurologists do not know what [guys] do with the extra brain cells... No such quandary for... [an Auckland comedian – their] egalitarian tendencies impelled [guys] to take up pastimes such as rugby to rectify the brain cell imbalance... “War was good, but I think concussion is... the... better... brain cell leveller.” ...[an] Alliance MP... suggested that the extra cells were connected to sex drive – and [the MP] has a point. British research shows that [guys] fantasise about having sex seven times a day. [A media personality is also bemused about what guys] use the extra brain cells for, but said it certainly was not for “intellectual or creative pursuit or for making themselves better people.” ...Nobody is suggesting [guys] are more intelligent than [gals] as a result of the examination... which showed [guys] had an average of 23 billion brain cells and [gals] 19 billion.

...when a group of Danish researchers announced that [guys] have an average of four billion more brain cells apiece than [gals], a lot of us guys decided to celebrate this affirmation of our superior intelligence by spending a couple of months drinking beer and throwing furniture off the tops of buildings to see what happened to it. But now we return to find that many [gals] have been ridiculing the discovery. They have been saying that maybe [guys] have more brain cells, but it doesn't matter, because [guys] never use their brains to think about anything besides sex. This is not true. [Guys] are perfectly capable of thinking about other topics... but it's [usually] about some issue that [gals] would not understand. For example[, when]... guys are not using their extra brain cells to protect their loved ones by refusing to ask directions, they are thinking up important new ways to advance human society, such as Big Gun Radio-Controlled Warship Combat... This is a hobby wherein guys build large, elaborate models of [WW2]-era fighting ships... equipped with radio-controlled motors and CO2-powered cannons that shoot ball-bearings. The guys then go out to a pond somewhere to manoeuvre their ships around and try to sink their opponents' ships by shooting them; when ships are sunk, they're retrieved from the water, repaired and put back into action. We are not talking about a casual pastime. We are talking about an all-out, totally obsessive guy effort involving clubs, bylaws, an international sanctioning body and many pages of detailed rules and specifications... I'm sure many of you [gals] out there are snickering at this... Not me. I think high heels are insane.

...[*Guys and gals*] both get jealous over unfaithful partners, but there are big differences between the sexes... What would distress you more: • Discovering that [your partner] has formed a deep emotional attachment to [an]other, confiding in that person and seeking comfort there rather than from you? • Discovering that your partner is enjoying daily passionate sex with the other, trying positions rarely seen outside the Kamasutra? ...Researchers have been using such “forced choice” experiments to probe one of the more controversial questions in psychology: Why do more [guys than gals] say sexual betrayal is more upsetting. And why do more [gals than guys] find emotional infidelity more disturbing? [A p]sychologist... of the University of Texas, Austin, first reported this gender gap in 1992. Since then other researchers have found the same pattern. But when it comes to finding reasons for the difference, the battle rages. In 1996 there were claims that genes inherited from our parents make us risk takers or neurotic, happy or sad. In 1997, expect an increasing number of studies on how genes passed down from Neanderthal days make us what we are... The debate shapes up like this: Evolutionary psychologists argue that sex differences in jealousy are a legacy of human-kind's past, a biological imperative that no amount of reason, no veneer of civilisation, can entirely quash. In other words, genes for traits that characterised the earliest humans shape how we think, feel and act, even if we are doing that thinking, feeling and acting in cities rather than in caves... If, at the dawn of humanity, a [guy]'s partner slept around, [the guy] could have wound up inadvertently supporting the child of a rival. [The guy] would also have had fewer chances of impregnating her himself. That would have given him a poor chance of transmitting his genes to the next generation. Put another way, only [guys] who carried the gene that made them livid over a spouse's roaming managed to leave descendants... [while any guy] who didn't do all [it] could to keep his wife from straying sexually would not have become our ancestor. For a [gal] – the evolutionary theory says – the stakes were different. If her partner sired another's child, his infidelity could have been over in minutes. (OK, seconds.) But if [the partner] became emotionally involved with another [gal, the partner] might have abandoned wife No 1. That would have made it harder for her to raise children.

...the Blokes Liberation Front... has been active since 1989, promoting role reversal of the sexes as the answer to our country's many problems. Its main thrust is to get blokes out of the workforce and into the homes, to get them learning the ancient arts of cooking, ironing and having dinner on the table on time, as well as learning and developing the skills of child-minding and child-raising. To lessen the trauma of this monumental change, the BLF does insist that the bloke takes over this role only after the youngest child has started school. Not only will this be less stressful for all concerned, but will give the [blokes] time to make their home-brew, thus saving money for an otherwise much-stretched household budget; [and] to watch cricket and rugby on telly, enabling them to talk to their peers on an informed basis... In the meantime, the newly liberated [gals], or blokettes as they are sometimes referred to, will be out in the workforce, eagerly redesigning the silly schemes that [guys] have used for years while getting the country in such a mess, and employing... common sense and intuition to show that, without a doubt, [girls] can, and will, do anything.

...In the battle of the sexes, the most lethal weapons are a vacuum and feather duster. It's a fact that [gals] do twice the amount of housework that [guys] do... A... new book, *I Love You But... How to stop doing more than your share of housework* (...\$24.95.) ...looks at evening up the odds... - 1997

...a dinkum Aussie bloke... [is] the would-be peace-maker in the battle of the sexes. His new book *Why [Guys] Don't Listen And [Gals] Can't Read Maps* (sub-titled “Beyond leaving the toilet seat up”) has been selling like hotcakes within days of being released in A[US and NZ]. Like the actors in the detergent commercials, [the author] has done the research and the clinical tests show – wait for it – that [guys and gals are different. Gals] turn maps upside down, can't parallel park and go to rugby games for the atmosphere because they're not the finely honed hunting machines that [guys

are. Guys] can't do three things at once or spot a flirtatious look at 100m because they're not the finely honed nest-defenders that [gals] are... "We have a million years of biology running around inside our bodies and we have these irreconcilable differences. Yet we are in a politically correct environment that has no relation to that biology and we are trying to treat everyone the same! ...We tested 50 copies of the book before we published it and... a lot of people [were] saying: 'I finally understand why [my partner] does this'. It doesn't mean that person is going to change doing those particular things, it means because you understand it you accept it." ...[the British resident, who's] best-selling book *Body Language*... is on its zillionth reprint here and has sold two million copies worldwide... has had his own TV show and holds communication seminars all over the world... [However,] like any good preacher, his message starts at home. There'll be no [White House]-style shenanigans going on in [the author's] office late at night because, unlike [the US President's wife], his wife understands him! ...HERE's the one angle you may not have heard on the [President's sex-and-lies] fiasco: it's actually [his wife's] sex life that should be investigated. "Look[, if an intern]... is in there giving it to him, where's [his wife? Why isn't his wife] giving him some?" Crikey... How could [the independent counsel] have been so blind? It's [the wife] who's been guilty of withholding all along! This brings us to one of [the author's] many jokes: how do you stop a [gal] giving you oral sex? Marry her... [The author] bursts into fits of laughter at the mere thought, then [the author is] back on to... jokes [about the President]... The exhausted HarperCollins publicist has warned me to keep him off... jokes [about the President, but the author is] having such a good time, it seems churlish to stop him. And that's the thing about [this author – a person who is] as obnoxious as hell, but... also just so damned likeable. It's only when you think back over what [the author] said that you wonder why you didn't scratch his eyes out instead of giggling along with him. Why [Guys] *Don't Listen*... has already come in for criticism... from the "occasional hardcore feminist who hasn't read the book and says: 'I can read maps.'" But [the author] has news for those types – they're little more than blokes in drag... "We tested [the saliva of] 32 hard-core feminists to show that their average testosterone levels were four to five times higher than the average non-feminist [gal] which means they have a masculinised brain. That's why they can read maps,"... [the author concludes. ■ Gals] may have smaller brains than [guys] but they use them more efficiently... Scientists have discovered that [gal]'s brains are richer in grey matter than the brains of [guys], whose heads are more densely packed with less-efficient white matter. The findings shed new light on the long-established sex differences in intellectual abilities, with [gals] better at verbal skills, including gossiping, and [guys] better at spatial relation tasks, such as darts... The results may... explain why [guy and gals] perform equally well in IQ tests even though [guys], who tend to have larger bodies, also have bigger heads and brains... The grey matter is composed of the central part of brain cells and is involved with information processing, making [gals] formidable intellectual partners. Although [guys] may have just as much grey matter as [gals]...

FROM the greyness of the pre-electronic age comes a most colourful person, Grey by name. Heroic, idealistic, eloquent and described in a new book as "the first great N[Z]er,"... Sir George Grey... was the kind of charismatic leader we now yearn for, to justify the modern marvel of television. Here was a [leader] of "almost irresistible personal charm and kindness." In just another of history's ironies, the [leader with] great vision made his mark without the mass media. And now that we have the mass media, we do not have the [leader. Grey] died 100 years ago today. But... the Good Governor Grey, might equally have been shown up by TV for his conflicting qualities. While he could cleverly talk people around to his own opinion, [Grey] detested opposition... and could not take criticism. [Grey] rationalised his defects into apparent virtues, made his calamities appear like benedictions and gave forgiveness the force of insult, says his 1961 biographer... Now all the conflicting energies of a complex life are released anew in the biography, *To Be A Hero*... (...\$49.95)... which is said to be the fifth full-length study of Grey and the first in 35 years. In particular it gives the fullest details yet of the scandal which wrecked Sir George's marriage and distorted his subsequent life. This was the shipboard flirtation of his wife Eliza with Rear Admiral Henry Keppel, discovery of which drove Grey to the brink of murder or suicide, and led to Lady Grey being put ashore at Rio de Janeiro for return to England. Husband and wife did not see each other again for 36 years... The matter went public and though the Colonial Office refused to take sides, the First Sea Lord eventually transferred Keppel to the Brazil Station. Eliza, not surprisingly, accused Grey of "frequent infidelities" which were also the subject of wider rumour, but [the latest] biographer points out that in an age when people were under little restraint to say what they liked, nobody produced the evidence... [However, f]or one so abnormally sensitive to criticism as Grey, the knowledge that the entire colony was alive with rumours that [its new governor] had been cuckolded was veritable hell...

"Hell is America," the leading French daily *Le Monde* wrote... at the weekend as... a fascinated international community... [regarded] the explicit sexual exploits of the world's most powerful [guy]... In an editorial ringing with stupefaction, *Le Monde* described... the report by[the] independent prosecutor... as a "monster... worthy of the reports of the Inquisition... where deviants and heretics were hunted down to the depths of their souls." ...The report's publication on the Internet also prompted surprise in France, where politicians' sex lives are a private affair.

...Is it smut or a civics lesson? Easy access to the... report online has put parents and teachers in a dilemma, wondering whether it is wise to let [kids] log on to read a graphic description of [the US President]'s sex life... Experts say tell them something – they are going to hear about it anyway.

...Though some had predicted the imminent demise of the Internet from a crush of Web surfers seeking [the] racy report on the presidential sex and perjury scandal, the global network buckled but did not break at the weekend as the... 445-page... document became available on more than a dozen online sites... To longtime Internet watchers, the real news about the release of the... report was the use of the global network as the primary means of distributing unfiltered, primary news to millions of Americans. "This is a historic event," said [one] Internet political consultant... "It shows that the Net is making an impact on our nation's democracy." ...the Internet posting allowed reporters worldwide to develop their own take... To ease the load on its servers, CNN spread the document over many computers... Demand peaked at 340,000 hits per minute, a record.

...You could almost feel the wind whipping through the living-room as [the presenter]'s enormous ego deflated. After reports on his CNN show... that the *New York Times* would carry a salacious new angle on [the President]'s miseries in its next day's issue, [the presenter] promptly had to "unreport" it. The suggestion was... a load of cobblers. And [the presenter] wasn't getting any moral support from his studio guest... Everybody made mistakes, the Watergate warrior offered. "But... sometimes you've got to eat the carpet." [The presenter looked like it'd had it's fill of Axminster... yet another victim of the vagaries of breaking news... [S]ometimes, often even, the first draft of history should be thrown in the bin... [A]nother CNN show... *Insight's* counsel was to weigh carefully each new revelation in Trousersgate, or whatever [the President]'s... indiscretions have been dubbed... You're unlikely to hear such cautions from local [TV] news. They, particularly *One Network News*, treat us like... undiscerning children. Like Moses walking off the mountain with his tablets, *One*... delivers its news as though it was handed to it by God, and carved in stone. And – with every frown and smile from [TVNZ's news presenters] – it tells its viewers just how they should react to these divine words... *3 National News*, while less heavy on the emotive face-pulling, is little different, and much more prone to giving the story a tabloid spin. (There is no defence for starting a story on Zippergate, as *3*... did last week, with a sentence calling [the President's wife the gal] who slept with the President most).

...If you are looking for evidence that power is the ultimate aphrodisiac, you will find all you need to know in the coat closets of the White House. It was there that Warren Harding, President from 1921 to 1923, was caught by his wife having sex with his young mistress... It... was in a closet that Lyndon Johnson was caught by his wife... with one of his "personal secretaries." ...And it... was in a closet that... John F. Kennedy, known to his security guards as The Lancer, hid while smoking joints with, and making love to[, one of his groupies. While it appears that the 42nd President is trying to 'follow the footsteps' (or, perhaps, phallus) of JFK, the 42nd President probably hasn't smoked joints while in office – although the 42nd President claims to have 'experimented with marijuana but didn't inhale' when it was a draft-dodging student (can a guy who admits it has deceived

friends in the past be trusted to not deceive anyone in the future?)... The American political establishment may still be in shock from the latest allegations about [the 42nd President's] prolific sexual activity, but delve deep enough into the history of the American presidency and you will find a trail of lipstick-smeared collars and unzipped flies. It started early. "When once the [gal] has tempted us and we have tasted the forbidden fruit, there is no such thing as checking our appetites," said... the first President[... who] should know... George Washington... is believed to have had an affair with [a gal whom the President] pursued for 11 years... From then on tales of debauchery were never far away from 1600 Pennsylvania Ave... During the 1884 election campaign, one of the dirtiest on record, [guys] in suits marched down streets pushing prams and chanting, "Ma, Ma, Where's my Pa" – ridiculing the future President, Democrat Grover Cleveland, who had... been exposed as having fathered a child out of wedlock. During his... years in office, Franklin D. Roosevelt had several affairs... [One of his mistresses] was with him when [Roosevelt] suffered his fatal stroke in 1945. Lyndon Johnson, whose secretarial pool was known as the "harem," had sex with one employee on a White House table. Once, when [Johnson] overheard an account of Kennedy's affairs, Johnson, irritated at the prospect of being overwhelmed by his predecessor's sexual legacy as well as his political one, thumped the table and shouted: "I had more [gals] by accident than Kennedy had on purpose." This is almost certainly not true. In terms of both the number of [gals Kennedy] had affairs with, and the indiscretion with which [Kennedy] did so, Kennedy was in a league of his own. From Marilyn Monroe to high-society socialites, with a bevy of White House secretaries in between, this was the [president who informed a British P]M... in passing, that [the President] got headaches if [it] went too long without [intercourse]... When... Monroe sang "Happy Birthday, Mr President" for his 45th birthday, in a see-through gown with clusters of rhinestones over her nipples and other strategic spots, Kennedy had reached the pinnacle of impudence. At the other end of the performance scale was Dwight Eisenhower, whose two-year affair... was never consummated because [Eisenhower] was impotent. Whatever their differences, all of these [presidents], from Washington to [the 42nd], have one thing in common. It is not classic good looks – no one could accuse Johnson or Roosevelt of that – and it is not sexual prowess (Kennedy was referred to as a "lousy lay," and [the 42nd President's] approach has been likened to smash-and-grab). The one attribute they all share is their job – the presidency – and the aura of power... Psychologists say the... social status conferred by the presidency, the self-confidence it suggests and the impression that a [guy] at the helm of public affairs will translate his dominance into the bedroom... causes [gals to find presidents attractive]... Whatever it is... it is getting worse. There is an unmistakable trend in the sexual conduct of American Presidents. "Only three of the first 14 Presidents were involved in any sexual scandals, four in the next 14, and eight of the last 14. If this trend continues, many if not all of our next group of 14 Presidents will be philanderers."

...In America, as in most other civilised countries, the average citizen has long been troubled by a nagging suspicion that his elected representatives would be unemployable in any industry which did not require a talent for lies, an affinity for mud and a gift for preposterous posturing. After yesterday's release of [the US President's] videotaped testimony before the jury investigating [his intern affair] scandal, this country now knows there is no truth to that proposition. If Congress were to be abolished tomorrow, the same people who have filled the past nine months with so much ingenuous nonsense would be snapped up in an instant by Hollywood. After all, Tinseltown can always use a few more gifted fabulists to hype its latest turkey... *Just before [the President's announcement about his affair], reporters in a nearby press tent were watching "Wag the Dog," the movie about a crisis staged to divert attention from a president's sex scandal.*

...Whatever his private vices, [the 42nd President] has always made a habit of parading his piety on Sunday mornings. Sporting a *Bible* and a look of photogenic humility, the President can generally be spotted at 10 am ascending the steps of a Methodist church not far from the White House, [dutiful wife] by his side. Today, after the bombshell report on the front page of this morning's *New York Times* that [the 42 President] is the first President ever subpoenaed by a grand jury, the leader of the Free World has every reason to hope the Almighty is more than usually attentive to his prayers. There is ample precedent, of course, for Divine intervention. Time and again over the course of his 20-plus-year career in public life, [this person] has wriggled and squirmed off the sharpest hooks. Counted out of the 1992 presidential race for his dalliance with[a] tattletale lounge singer[, the Democratic candidate] came back from the presidential dead and whipped [his Republican opponent] all the way home to Texas. In Arkansas – where [the Democrat] rose, fell, and rose again – the locals had good reason to dub their young Governor "Slick Willy." But this time, it all looks very, very different. For six tumultuous months, ever since the [intern] scandal broke in late January, the White House has been in overdrive to control the damage – and up until last week the well-oiled spin machine has whirled without a glitch. Constantly attacked by [the President's hatchet guy]... and the President's lawyers (there are now 45 of them on the full-time payroll), [the]hapless Special Counsel... has become one of the most disliked [guys] in America. One recent poll put his approval rating at a meagre 8[%] – three points lower than that of [Iraq's President. Meanwhile, the US President's] own ratings continue to hover at an improbable 70[%]. As a green-eyed Richard Nixon is said to have exclaimed shortly before his death, "How does this guy do it?" This morning's *Times* story demonstrates the shortcomings in the White House approach: [the President's] team has played the [opponent], but the plodding [opponent (the special counsel)] has kept his eye on the ball.

...In the sex-and-impeachment scandal, it hardly seems to matter how you play the game. What's important, as the case limps toward its foregone conclusion, is who wins and who loses. [The]President... wins points for managing to cling to office... [The First Wife] has gained in personal popularity[– although, on]... the minus side, [it] has had to confront [her husband's] infidelities and his lies about them, reportedly learning of the... affair [with an intern] only on the weekend before [her husband] testified about it... [T]he Beverly Hills-bred former White House intern, could be another damaged winner. [The former intern] is likely to be known forever as the President's sexual playmate, and certain symbols of the affair – a cigar, a stained blue dress, thong underwear – are destined to be comedians' punchlines into the next millennium. But a year in the spotlight has made her bloom like a hothouse flower... And the spotlight is still shining: [the former intern] has made a book deal with... Princess Diana's biographer[, perhaps because the former intern]... sees a parallel between her difficulties and the Princess of Wales' problems... *Diana, Her True Story*, revealed the dark side of the Princess' marriage to [the Prince of Wales]... "I'm not a princess in a royal sense, but I was wronged by a [guy who claimed to love] me... I had a lot of pressure on me, and like Diana, I had nowhere to go, no-where to hide." ...[the biography] is to be published on Friday. The... *Mirror*, says it is going to be carrying [the story] this week. However, it has not indicated which day or whether the excerpts will be extensive. The article published yesterday... in... the... *Sunday Mirror*, [which was] a prelude to this week's publication... was by... [a reporter who quoted the biographer as saying the subject] was "a victim at the hands of the most powerful [guy] in the world. There are huge similarities here to the Diana story, where the Princess was trapped in a situation with a [guy] who was at the heart of the most powerful royal family in the world,"...

[Gals] have emerged among the biggest losers from the [White House intern] affair and are more likely to suffer from sexual harassment as a result, claims a right-wing leader. The message from [the US President's] acquittal at his impeachment trial was that "[guys] in the workplace now have one free grope,"... [The guy whose] Christian Coalition... represents the most conservative wing of the Republican party, was[also] critical of US feminists, who are split on whether to condemn [the President] whose record on promoting... [gal issues] won him widespread feminist support.

...When the Republican congress[people who impeached the President] saw their case rejected by the US Senate, several of the President's more zealous foes warned that it was but a matter of time until the next scandal. Yesterday it arrived on nationwide television: [the President] was accused of being not merely a liar and philanderer but a brutal rapist... Once again, America is obsessed with its President's private life. And once again, his supporters are urging the nation to reject [the] story as but one more attack in a vile campaign of false accusations intended to render [the President] politically impotent. This time, however, the allegation of an actual physical attack may be much harder to shrug off... "The... details [the alleged victim] provided mesh totally with the known record,"... said... an award-winning reporter who has covered Washington for more than

two decades... The attack was over in minutes, [the alleged victim] said, bitterly recalling how [the then state attorney-general assured her while walking away that there was no need to]... fear getting pregnant because an adolescent attack of mumps had left him sterile. At the time [the state attorney-general and future president] had been married for three years and [his wife] was almost two years from becoming pregnant...

[The President's] lawyer is denying an Arkansas [gal's charge that his client] sexually assaulted her more than 20 years ago when [his client] was the state's attorney-general... [The Arkansas gal's] name surfaced in the 1992 presidential election campaign when a friend in whom [the Arkansas gal] had confided revealed her allegations, but [the Arkansas gal] never came forward publicly... [The Arkansas gal also said her reason for not reporting] the alleged incident to authorities [at the time was because her attacker] was a rising politician and [his victim] was "young and vulnerable." ...In mid-January, NBC News interviewed [the Arkansas gal] but has not broadcast the story. On Friday, a spokes[person] for the network declined to comment on any plans to air it. [The Arkansas gal] told the... *Washington Post*... [that in her opinion it wasn't a mistake to keep] quiet in 1978, but... [not coming] forward in 1992[may have been]. As for going public now, [the Arkansas gal] said: "I feel like I have gotten the biggest weight off my shoulders..." [The Arkansas gal] was subpoenaed by lawyers in [an earlier] sexual harassment suit against [the President, and was] interviewed by agents for... [the independent counsel, who looked into her] story briefly but dropped it after determining that it did not fit the pattern of obstruction of justice... [being investigated because the alleged victim insisted the President] never tried to coerce her to keep quiet...

Another week, another of the President's [playthings] – another chance to marvel at the numb weariness a year of endless scandal can bring. Last week it was... allegations of rape. Tomorrow it will be [the former intern's] videotaped reminiscences of [her affair with the President]. It is the latest stage in the ingenue intern's blazing trajectory across the public arena. From nonentity to notoriety, [the former intern] has ascended to the high altar of modern celebrity: a comfy chair and a cosy chat with [a current affairs programme] interviewer... whose special talent is drawing sobs of photogenic self-pity from her celebrity subjects. If the projections are right, perhaps 50 million viewers will be watching as [the former intern] assumes her latest incarnation. From innocent to [gal]-devil, victim to vixen, [the former intern] is now a commodity. Permed and primped by... [an AUsn hairstylist, the former intern] and her chic new 'do are ready for their closeup. Her book comes out on Monday, [her face] is all over British media and the bucks are pouring in. Even her father is enjoying the ride, inviting *Hello!* magazine to visit his home and observe a father's pride. For the moment, [his daughter] need not ponder the slippery slope that waits on the far side of celebrity. [The former intern] is said to be "buoyed and positive" about this latest moment in the spotlight. As for the TV interview, it will certainly be less stressful than the 33 times [the former intern] told her story to congress[people], FBI agents and... beaky inquisitors. There will be no oath, no possibility of prosecution for perjury. And the rewards will be substantial – though nowhere near so bountiful as they might have been. When the story broke more than a year ago... HarperCollins put a cool \$4 million on the table. Her handlers rejected it, pressing for more. The price dropped and dropped, and then dropped quite a bit more. By the time her agents finally inked a \$US400,000... deal... [US] publishers were generally of the opinion that [the former intern] had done as well as could be expected – even allowing for the reputed \$US160,000 [the former intern] must pay the Princess of Wales' biographer. The scandal had simply run too long... what more could [the former intern] possibly have to say? So [the former intern] will be free tomorrow to milk what remains from her ribald renown. [The current affairs programme] will not be paying for the interview, but Britain's Channel 4 has handed over \$US640,000 to get all the breathless details... Foreign rights may fetch another million or so, and there is the possibility of endorsing[cigars, thongs,] lipstick, mints or jeans – especially if [the former intern] can lose a little weight. And if [the former intern doesn't? A pornographer]... will pay \$US2 million to expose her generous proportions in *Hustler*. "[The former intern is] famous – and some guys like fat gals," [the pornographer] explained. There will be a European tour, and almost certainly an American one. [A] TV producer... is said to have guaranteed a slot on one of his night-time soaps. All told... [the former intern] could make \$US10 million... And then? What after the tours and the book is discounted to the bargain bin, and the camera crews leave to stake out somebody else? "A husband, children – a normal, happy life," is her father's wish... [The former intern hopes the President's wife and daughter] can forgive her... One of the things in her favour is that after the shocking allegations of rape... [the former intern's] romps in the Oval Office will seem almost like good, clean fun. [The President] has still not bothered to answer [his alleged rape victim's] tearful accusation with anything more than his lawyer's terse denial. The White House strategy has been to hope that it will fade.

...The sound you hear is the collective sigh of relief as the media dance that has filled so many pages and occupied so many minds enters its final steps... By now only Kalahari bush[people] cannot recite the list of signature events that have become neon shorthand for the farce and tragedy that lay so unlovingly at the centre of the most powerful country on the planet. We know the tawdry details: the semen-stained navy blue Gap dress, the inappropriate use of a cigar, the troubled moment on the living room floor as we tried to explain phone sex to the children. [So what can the former intern's biography] add to the millions of words and images? Like any story of a [gal] wronged it has the stock cast: the charismatic main [guy], and his underlings who alternately support then attack the young and plucky heroine... There is the [friend turned] betrayer... and the inquisitor... (a former *Bible* sales[person, as the biographer characterises the independent counsel]) and his henchmen, the stern [guys] from the FBI, flashing badges, guns and handcuffs... [The former intern, now] drama queen, recalls the first time [the President] shakes her hand: "...[the President] undressed me with his eyes." Soon they do more than shake hands... [The President's] own sexual triggers, as depicted by [the former intern], are so strange they can only be true. They met after [the President] hears of the first death of [a US serviceperson in Bosnia. The biographer] writes: "So while [the President and the intern] once more indulged in their favourite form of making out, it was an emotional occasion... for the President, who, as Commander-in-Chief of all US forces, was feeling his heavy responsibilities especially keenly." One way to cope. So what can be left now?

...[the] President... mailed a cheque for \$US850,000... to [an Arkansas gal] yesterday... the President drew about \$US375,000 from the personal funds of him and the First [Wife]... and got the rest of the settlement... from an insurance policy.

...It gives away no deep journalistic secret to state that any reporter writing about [the First Couple] needs to bring a healthy dose of cynicism to the chore. And when the subject is the First Marriage, suspicion must be even more pronounced. Spoken with telegenic sincerity, even the simplest statement from the White House screams for a good parsing. Assertions, denials and apologies inspire press releases that really ought to be written in fine print. Given the years of slick words, how much faith can one put in official attempts to explain why so many presidential intimates are jumping ship? Even more intriguing: Is the long-suffering [First Wife] among those finally turning their backs on the [President] who has broken one too many hearts? It wasn't supposed to be this way, not after the White House did such a sterling job during the impeachment battle. Yet last week, as [the former intern] ascended from scandal to celebrity, a touring President was very much alone. While her husband inspected hurricane damage in Central America, [the First Wife] sat silent in Washington amid swirling rumours of a marital split, even an impending separation. A simple word would have stopped the chatter. It never came... The official explanation for the First [Wife's] absence from Latin American was that [the First Wife] had aggravated an old back injury while skiing ten days earlier in Utah with [her] daughter... Hubby... was on the jaunt as well, but the First Couple were never seen together. They were definitely heard, however, if one accepts the reports that raised voices repeatedly rattled their borrowed lodge. An appearance at a local restaurant was cancelled at the last minute, apparently because the First Couple were feuding, and they flew back to Washington so suddenly that a stranded press corps spent another 24 hours trying to catch up. Then [the First Wife] was off by herself to New York... [stoking] speculation about a Senate bid with two frantic days of photo ops and speeches. If [the First Wife] was in physical pain, reporters failed to notice it. They did notice, however, when the White House announced that [the First Wife] would not be going to Latin America after all. According to breathless reports yesterday, it was because [the First Wife] could no longer bring herself to suffer the company of her husband. An unnamed friend was quoted by Fox News as saying: "They hardly ever speak anymore. There is nothing left. The only thing they

have in common is [their daughter].” Next came word that the First [Wife] would send her husband by himself to the annual Radio and Television Correspondents’ Dinner, the first one [the First Wife] will miss. Her gig at another press bash, the Gridiron Dinner, also has been cancelled, and [the First Wife] is currently packing for a hastily arranged solo trip to North Africa... “[The President] would be a very lonely guy without [his wife,” observed the] former White House pollster... who last year became the first White House insider to turn against his former master. “[The President] would be wandering the hallways of the White House late at night... lost... and... talking to himself...” For [the First Wife], the pain of a ruptured marriage might have its compensations. When the rape allegations against her husband came to light two weeks ago, [the First Wife] was leading the pack to become New York’s next senator. After [the Arkansas gal’s] tearful account of being raped by the future president 21 years ago, [the First Wife] dropped 25 points. “...the advantages of a separation must figure in any calculations [the First Wife] makes about her future... If her husband continues to duck the press, to avoid answering questions that might put [the rape] charges to rest, it is a dark cloud over both of them: [the President] is the sexual monster, and [his wife] is the enabler who stands by him. And if [the President] answers the questions, who can believe what [those answers are? Without her husband, the First Wife] has immense appeal to a large segment of... [gal voters: a divorcee] trying to make it on her own. [The First Wife] is a very smart [gal, who] must realise her husband is a lame-duck, perhaps a fatal threat to her own hopes.” ...And why should [the First Wife] stick around after all those indignities? As a sympathetic [former White House staffer] writes... in *All Too Human*, his new book on the six years... spend as... [the President’s] top aide and adviser... “[The President’s wife] had to pull it together every single day – for him, for [their daughter – and the First Wife] never really knew what was coming next. And all for what? Not just to be First [Wife], but to do big things. Everything [the First Wife had] worked for was imperilled, [yet] no one was there for her.” ...Meanwhile, as[the] once-devoted presidential aide and intimate... was confessing that... his political skills... had[been] put... at the service of an unworthy president, America’s feminist leaders were remaining ominously mute. While the sisterhood stood by [the President throughout the former intern’s] soap opera... allegations of rape are proving to be another matter. “[The President] is so damaged, so worn down by scandal, his ability to deal with any one of the issues plaguing him is minimal at best,” said [the former aide. “The President] has won every battle but the war is going badly.”

...An ice-cold [First Wife] has finally had enough. After months of putting up with her husband’s amorous antics, after countless feuds and reconciliations, the First [Wife] has decided to become... single... Sources say [the First Wife] has had a cast-iron legal contract drawn up, which [her] chastened and shattered [husband] has finally agreed to, and which will ultimately lead to the couple’s divorce. The... agreement spells out that the[y]... will sleep in separate bedrooms, there will be absolutely no sex, and... shortly after the President leaves office, the couple will split. A massive pile of legal bills... amassed in recent years in the face of countless accusations against him, will be [his] sole responsibility... In return for agreeing to all these demands, the First [Wife] has agreed to remain by the President’s side until the end of his term, so [the President] can keep some credibility in office... [However, if the President takes] up with any other... [partner, his wife] will walk out of the White House immediately.

...[The former intern] may no longer be the name on everybody’s lips – but strange goings-on continue in the White House... IN 1997 [the 42nd President]’s “distinguishing characteristics” became the first First Penis in White House history to have a formal statement issued on its behalf in terms of its “size, shape, direction, whatever”, as [the President]’s lawyer... put it – and the first to be photographed by a naval surgeon as Exhibit A in a sexual harassment case. This month the 42nd presidency chalked up another historic first, with the news the First Penis has returned to home base – or, as the First [Wife]’s Chief-of-Staff... puts it: “We’ve slowly seen a physical passion come back into their lives.” In other words, Air Force 1 is back in the hanger... for the first time in seven years... According to [the Chief-of-Staff], the first couple’s dormant sexual relationship was rekindled by their late-night discussions during the Nato strikes against [Serbia]. So, if it’s any consolation to those bombed-out Serb rail commuters, Chinese embassy employees and Kosovo refugee convoys, the earth moved for [the US First Couple], too. One explanation is the President did her a favour by cheating on her. Her ordeal... “has given her a certain glamour, almost a regal look”. Her husband has noticed this, with some surprise... “Doesn’t [my wife] look beautiful?” ...the... [President] has been heard asking friends. Wow! If [the President] put her through the stress of a couple more interns, [the First Wife] could end up a really foxy babe... [Incidentally, an AUS]n feminist... is set to ignite another bout of controversy when her sequel to her groundbreaking book *The [Gal] Eunuch* is published in Britain next month. Despite... [her pledge to] never write a sequel to the bestseller published in 1971, *The Whole [Gal]* was written out of her despair over the pliant attitudes of those [types that the AUS]n calls “lifestyle feminists.” ...“It was not until feminists of my own generation began to assert, with apparent seriousness, that feminism had gone too far, that the fire flared up in my belly.” Much of her fury was sparked by [US] feminists... who claimed[the US] President... had done nothing wrong in having an affair... “...I just thought, can’t anyone see what is going on? And I sat down to write the book straight away.”

...[the US ‘President said in his address beginning his second term that the 20th century was the American century. “And what a century it has been. America became the world’s mightiest industrial power, saved the world from tyranny in two world wars and a long Cold War. Along the way America produced a great middle class and security in old age; built unrivalled centres of learning and opened public schools for all; split the atom and explored the heavens.” Which got right up a NZer’s nose: “I have never heard anything so ridiculous. It’s laughable as far as I’m concerned.” The retired commercial fishperson wants to put the President straight on a few basic facts. The New Plymouth 91-year-old doesn’t want to split hairs but it was his uncle, Sir Ernest Rutherford, who first split the atom and therefore it is NZ, not the US, which deserves the credit. “Uncle certainly put NZ science on the map. Uncle had an outstanding brain which was used to the best of his capacity in the interests of humanity.” A Canterbury University physicist said the President’s remark ignored the NZer’s work, as well as that of British and German scientists. The President’s remarks referred to work carried out by Italian-born physicist Enrico Fermi and others in the 1930s which led to the first self-sustaining chain reaction in Chicago in 1942. Rutherford’s splitting of the atom in Britain in 1917 when the physicist fired a helium nucleus into nitrogen and produced oxygen had required huge amounts of energy whereas Fermi’s created energy, paving the way for nuclear power and the atomic bomb. Fermi’s work owed much to work carried out by German scientists Otto Hahn and Fritz Strassman, who discovered nuclear fission in 1938.’ ‘Researchers under Rutherford’s guidance had developed the first proton accelerator which split the atom in 1932.’ ‘It was this work that made Rutherford the father of nuclear physics and ushered in the atomic age.’ Ironically, perhaps because his initial experiment had required huge amounts of energy, Rutherford believed the act of splitting an atom served ‘no good’ purpose.

...‘An experimental genius with a strategic approach to research, Rutherford (1871-1937) had an unrivalled capacity for isolating a problem until there were only a small number of possible explanations, and then devising a series of simple experiments until all but one possibility has been eliminated. For his considerable services to science Rutherford received many honours, including the Nobel Prize for chemistry in 1908, a knighthood in 1914, and a peerage in 1931. The artificial element rutherfordium is named in his honour.’ Rutherford ‘was interred in Westminster Abbey.’

...‘AFTER years of international haggling and horse-trading, Ernest Rutherford has finally and formally become the only NZer to have a chemical element named in his honour. As far as we know, there are just 92 naturally occurring elements in the universe; with atomic numbers that range from 1 for hydrogen to 92 for uranium. These elements are the components of all the matter in the natural universe and of these only 81 are truly stable. Those with higher atomic numbers are in a state of radioactive decay. Physicists calculated long ago that other elements could exist with higher atomic numbers and that after an atomic number of 112, elements could again be stable. They set out to prove this with the modern-day alchemy of the particle accelerator. To the discoverer went the honour of proposing a name for each new element. Curium (96), einsteinium (99), fermium (100), mendelevium (101) and lawrencium (103) honoured the discoverers’ scientific heroes. In 1964, the Dubna laboratories in Russia claimed to have manufactured one isotope of element 104. They proposed the name kurchatovium in honour of a Soviet nuclear physicist. In November of 1969, the father of the periodic table proposed that element 104 be named rutherfordium because Rutherford was one of his heroes. This person later withdrew his suggested name and accepted that proposed by the Soviets. For nearly two decades, the world lived with three names for element 104. The US and Russia each used their own name but

politically correct periodic tables used an interim name Unnilquadium. To solve the impasse, a Transfermium Working Group – a joint committee of the International Union of Pure and Applied Physics and the International Union of Pure and Applied Chemistry – was set up in 1985 to determine precedence of discovery for all elements beyond fermium. An August 1994 meeting adopted a new rule that no element could be named after a living person. Since both Albert Einstein and Enrico Fermi had been alive when they had had elements proposed in their honour, this move was a ploy to take a very much alive person's name off element 106 so that that element could then be renamed rutherfordium. This left element 104 open to be renamed dubnium. Confusion reigned. In early September last year, a final compromise was reached and all phases of naming were passed: 104 rutherfordium (Rf), 105 dubnium (Db), 106 seaborgium (Sg). However, there are still arguments. Only a few thousand atoms of rutherfordium have ever been manufactured. Rutherfordium's longest-living confirmed isotope has a half-life (the time it takes to decay) of about 70 seconds. So it doesn't last long, is hard to make, and so is as rare as the honour it confers.']

...Ernest Rutherford's Nobel prize did not come easily. His discoveries of the nature of the atom took years of perseverance, of diligent and repeated experiments. Now, another N[Z] scientist is concerned that a modern lack of discipline may mean that N[Z] will never produce another Rutherford. The newly-appointed dean of graduate studies at Unitec... does not rate our modern Nobel Prize-winning chances as particularly high... [However, the] executive officer of the Association of Science Educators, says... "With the kids today and the teachers some of them have been fortunate enough to have, I'm sure we will have Nobel Prize winners in the future. But it will take a long time."

...There have been two other N[Z]-born winners of the Nobel Prize. □ [NZ]... experts have slammed... the omission of Lord Rutherford from *Time* magazine's series on the most influential people of the 20th century... *Time* includes Dr Enrico Fermi, J Robert Oppenheimer and Edward Teller among the top scientists and thinkers... [A NZer] who worked... with all... th[re]e... on the famed W[W]II Manhattan Project, said... Teller and Oppenheimer were "politically interesting. But if you ranked their scientific achievements they wouldn't come anywhere near those of Rutherford. To omit him is quite extraordinary." ...Another N[Z] scientist, the... author of the biography *Rutherford, Scientist Supreme*, said the scientists named by *Time* "wouldn't be a pimple on Rutherford's bum. *Time* is an American magazine – it has a little trouble seeing over the horizon. Rutherford never worked in America – they tried to get him there on several occasions, but [Ernest] didn't have any interest." ...The *Encyclopaedia Britannica* says Rutherford's leadership "inspired two generations of physicists" and his "influence on scientific thought may be compared with that of Faraday and Newton".

...N[Z] hero and international science legend Lord Ernest Rutherford was a... 'sexist thug'... says a book. *E=mc2: A Biography of the World's Most Famous Equation* – which sold out at Whitcoulls in Auckland – briefly charts the personalities of many of the world's top scientists of the day and gives an unflattering account of Rutherford's treatment of [gals] generally, and in particular of Cambridge University student Cecelia Payne, who became one of Britain's early... [gal] astronomers. The book's a]uthor... alleges that Rutherford, a "great booming bear..." was... "....cruel to her [Payne] at lectures, trying to get all the [guy] students to laugh at this one [gal] in their midst. It didn't stop her from going... but even 40 years later, retired from her professorship at Harvard, [Payne] remembered the rows of braying young [guys], nervously trying to do what their teacher expected of them." But the claims are nonsense, says... [the] author of *Rutherford, Scientist Supreme*... Rutherford, who grew up near Nelson, was in fact a champion of [gals] who married the daughter of a suffragette, [and] campaigned to get equal rights for [gals] at Cambridge University... [Rutherford's biographer] was "bloody outraged" that a populist author could malign such a champion of [gals, and said the author] seemingly based his claim solely on Payne's biography. [Payne] had felt offended because Rutherford began his lectures each day with "*Ladies and gentlemen.*" Payne wrote: "All the boys regularly greeted this witticism with thunderous applause, stamping their feet in the traditional manner, and at every lecture I wished I could sink into the earth." [The populist author], speaking from London, was upset to think [his book] might have maligned a N[Z] hero. But [the populist author] stood by his book, saying Rutherford's behaviour was typical of [guys] at the time.

...It was supposed to be an easy job which would help pay off a mountain of debt. But less than four months after [the then 22-year-old] started cleaning cars at an Auckland auto services yard, [the now 25-year-old] was forced to resign – her self-esteem in tatters after constant humiliation from [guy] co-workers left her feeling fat, ugly and a failure. [The victim] was subjected to crude and derogatory remarks on a daily basis from ...he[r first day]... at Fleetcare Auto Services... [The only gal] working at the yard... asked repeatedly for it to stop but, instead, drawings of her naked and obese... with huge private parts covered in sores... were pinned to the company's Penrose yard noticeboard. When [the gal] complained to one of the firm's directors, [the guy]... accused her of "over-reacting"... [The victim] took the company to court and... was awarded \$25,000 in compensation after an Employment Tribunal adjudicator found [the gal] had been sexually harassed, humiliated and constructively dismissed... • According to a Human Rights Commission survey, 31[% of gals] are sexually harassed. Those aged between 18 and 29 are most vulnerable and almost all incidents occur in the workplace. The average payout for damages is almost \$6000 while the highest to date has been \$80,000.

...It is 20 years since discrimination on the grounds of sex became unlawful[in NZ], but... the playing field is still far from level for [gals]... The bulk of sex discrimination complaints continue to arise from the workplace... [Gals] have come a long way, at least in terms of legislation, says... [the person] who in 1993 became the first [gal] judge appointed to the High Court... "I would be hard put to think of a single area where the legislation which allows for equality between [guys and gals] isn't in place." [However, the judge]... thinks there are more insidious battles ahead...

Figures out this week say that... [working gals] are better qualified yet still paid less than [guys. The NZ Herald] finds that the battle of the sexes at home isn't much better... BEWARE the humble dunny. If you haven't worked it out already – and if you haven't you're probably a [guy] – it's ground zero in the gender war. Forget about that old seat-up, seat-down argument, this war of attrition is about who wields the loo brush. And the sad facts are: in the beginning [a guy] created the toilet, but in the end it's almost always [a gal] who cleans it. How far will some [guys] go to avoid cleaning it? ...[consider] Exhibit A in the Great Cleaning Swindle... One Saturday not so long ago [Exhibit A] agreed, after much cajoling from... [his] partner-of-a-year... [to] apply a bit of elbow grease to the bathroom-washhouse combo. This was a glorious victory of sorts. [Exhibit A], a builder who started fulltime university study this year, doesn't hold with cooking, doing the dishes or washing laundry. The 23-year-old definitely doesn't like scrubbing the porcelain throne. None the less, into the bathroom [Exhibit A] went with his rubber gloves, locking the door behind him (...[Exhibit A] didn't want the humiliation of her sneaking a peak...). An hour or so later [Exhibit A] came out. His efforts, [his partner] decided upon viewing them, could best be described by a word often associated with toilets. It wasn't until a month or so later that [Exhibit A] finally (and foolishly, one would have thought) 'fessed that... [nothing had actually been] cleaned... The loathsome truth was [Exhibit A had] spent the hour sitting on the washing machine reading a magazine. Think about what that means... some [guys] will go as far as pretending they're cleaning the dunny so that they don't have to clean the dunny... Says [his gullible partner], a marketing assistant: "[Exhibit A] was in there for as long as it took me to do the rest of the cleaning. As soon [as] it was finished [Exhibit A] came out because [Exhibit A knew there wouldn't be anything left] to do..." ...Who's to blame? Well, [Exhibit A] blames his mother. During his formative years on the family farm near Tauranga, [Exhibit A] never had to worry about that sort of stuff – Mum did all that. In his defence his mother... says [Exhibit A] was at school until... [leaving] home at 17. "Wouldn't most mothers do those things?" [Exhibit A's mother] says. But ask what [Mum thinks of Exhibit A] being a bit slack on the old housework now and [Mum's] emphatic: "It's time [my son] jolly well learnt. I think [my son] picked a good... [partner. But, if my son wants her to stay around, I think my son] should probably do a bit more... his father does." [Exhibit A] does have what the generous might call an excuse when it comes to his loo hoax: "Well... [as] far as I was concerned... the bathroom... wasn't dirty. How do you define filth?" ...A rum sort of a do then, but the young Parnell couple are by no means unique. They are the norm. According to a survey done by Massey University in 1995 (it was part of an international study

of the issue), the laundry was done by [gals 75%] of the time, the grocery shopping 59[%] of the time, and deciding on what to have for dinner 70[%] of the time. Put it this way: for every hour a [guy] spends on domestic chores, [a gal] will spend three. The only category of chore [guys] always or usually did was small repairs around the house. So there you have it. While many [guys] are more than happy to perform traditional... tasks like lawn-mowing, DIY and light-bulb changing, much housework remains [gal] work – and not doing it can sometimes prove disastrous. Last year a 24-year-old Nelson [husband] assaulted his wife after [the wife] refused to clean the bedroom. According to police, the couple's argument about it ended with him dragging her into the bedroom by the hair, throwing her on the bed and then hurling a container full of liquid at her. [The wife] was holding their six-month-old child at the time... [A]fter admitting the charge and being sentenced to six months' supervision, [the husband] was also ordered to do a living-without-violence course. But the judge did note that instead of getting angry [the husband] should have done the job himself. So why... won't [guys] just do their half around the house? It's partly about conditioning and partly about money, says... a sociology professor at the University of Auckland. "In countries like N[Z] there is vast imbalance between paid work as well as unpaid work, with [guys] doing the vast amount of paid work. So you can say... it makes sense for [NZ guys] not to do half the housework if [gals] are only doing a quarter of the earning." Indeed, the short answer to the question is that N[Z] is still very traditional, with a large number of [mothers still staying] at home looking after the kids. [The professor,] a Canadian who has been studying the issue since the 1970s, says things have got better since the rise of feminism, but only slightly. [Guys] now do more housework, and the [guys] most likely to do it, apart from those living alone, are the educated middle-class. "They accept the ideology that housework should be evenly distributed." Even so, the so-called "New [Guy]" – the sort of chap who [experiences womb-envy and] feels guilty because [of his inability to] breast-feed – appears to be a myth... But is it only [guys (and their mothers)] at fault? Perhaps [gals] just expect too much. Indeed, some of the [guys and gals] spoken to in the course of this inquiry agree that [gals] have a more exacting yardstick for measuring dirt... "Basically, [guys] have no idea what clean means," says... an Auckland advertising administrator. "That usually means... [gals] end up doing most of the housework, as the guys reckon if we want it clean to [gal] standards, then we can do it. Basically, [guys] are quite happy living in tidy but unclean houses." What are [gals] doing about it? Well, the obvious thing – if you can afford it – is to pay someone else to do the dirty work. That's surely one... reason for the booming Auckland home-cleaning industry. One of the bigger operations, Green Acres (which offers everything from ironing to dog washing) has jumped from two franchises to 64 in just four years of operation. Its two-person teams now clean at least 2000 homes every week... at a... minimum of \$45 a visit. A cheaper option is... a local guide to winning the chore war... [– the] 1997 book *I Love You, But...* The Auckland contract accountant's idea is to use business methodology to solve the problem. It's simple: you beat them into submission with a business plan, an organisation chart and a position description. [The accountant has] sold about 2500 copies of the book. But while [the accountant] had a "very positive" reaction, [the accountant] knows of fewer than 20 cases of real success from it. [The accountant] admits it's a depressing figure that isn't helped by using five-cent psychology like the British magazine *Company*. It has declared that housework is sexy... For the record, cleaning the dunny will never be sexy. For blokes, it will never even fall into the "has a nice personality" category. That's why, as one [gal] once told me, "most [guys] think God cleans the toilet." I'm sure God does[– after all, God has more in common with gals than guys, who are incapable of creating new life from within their own bodies!] □ Next week: The [guy] who does it all...

MEET... the guy who does everything. Cooking, vacuuming, the laundry and the lawns, the dunny – no problem, the 42-year-old Weymouth wonder does the lot and [i]s happy to do it. [Mr 42] and his 30-year-old partner... a personal assistant, are doing very nicely. His personal circumstances mean [Mr 42] is at home all day – well... at[least] when... not playing golf on Mondays, Wednesdays and Fridays. "Hey, I don't mind doing housework," [Mr 42] says sipping a can of beer. "It's not really that hard... But... [a]s far as I'm concerned, when you're in a relationship it's give and take." ...[unfortunately, many of his gender still say: 'Around the house I never lift a finger, as a husband and father I'm sub-par, I'd rather drink a beer than win Father of the Year, I'm happy with things the way they are'. However, i]t can be argued that, internationally, the N[Z gal] doesn't do too badly in the Chore Wars. According to a 1994 study, fewer N[Z gals (75%)] "always or usually" did the washing and ironing compared to those in Germany (88[%]), Britain (79[%]), the Netherlands (87[%]) or Sweden (80[%]). These figures suggest the Kiwi [guy] is not quite as lazy as the Euro [guy. And NZ gals]... are grateful. So grateful in fact that they have begun exaggerating how much housework their partners do... says... a [gal] sociology professor at the University of Auckland... [By the way, yesterday guys] in Russia's mainly Muslim Ingushetia region were told by a federal court they can no longer marry up to four [wives] each.

...Meet... the first American polygamist brought to trial in 50 years AS proposals go, it wasn't exactly hearts and flowers. 'I called [hi]m and I told him to come and get me because I wanted to marry him,' recalls... one of [hi]s nine wives... H[im] has five wives, four ex-wives and 30 children – the youngest born just weeks ago. [Hi]m must have something – stamina for a start – but [i]s no oil painting. H[im] i]s 52, paunchy, with thick glasses, thin hair and a red beard which is going grey. None of this matters in the slightest to [the 50-year-old wife]. Nor does his unconventional lifestyle. When [the 50-year-old] asked him to marry her, h[im] was already married to one of her sisters – and her 15-year-old daughter. And just for good measure h[im] went on to marry another of [her] daughters, aged only 14. Now [hi]m is facing up to 25 years in jail after being convicted of bigamy and failure to provide child support. H[im] branded the verdict 'lousy' and accused[the] prosecutor... of being 'a hell of a liar'. Amazingly, all but one of [the] wives and ex-wives are on his side... The authorities were finally goaded into action when [hi]m took his wives onto [a TV chat show] to boast about their lifestyle... The w[ives] do not believe in make-up and wear clothes in the style of the mid-1800s pioneers... Technically, only two are still [hi]m's wives, as three divorced him to avoid being charged with bigamy, but they still live with him like the others. And they all call themselves 'sister-wives'. The 'Chief Wife' is [the 50-year-old's 28-year-old] niece... Her most important duty is updating the 'Little Blue Book' – a sex rota that decides who will climb into [hi]m's bed on which night. H[im] sleeps with only one wife at a time... [One of them says the wives] are in control of everything. 'We rotate sex to eliminate any problems or jealousy,'... But what happens if [hi]m gets tired? 'That never happens,' laughs [the 25-year-old]... 'Of course, we sister-wives like to think we're good in bed, so there is some competition among us to please [hi]m more than the others... We are fundamentalist Mormons, and the Book of Mormon says that a husband does not have the right to divorce a wife. But [a wife] can divorce him. [A guy] cannot turn a [gal] down either. If [a gal] wants to be his wife and obey his rules and be in his family, [a guy] cannot say no – no matter how ugly [the gal] might be.' ...Although now frowned upon by Mormon leaders – who excommunicate polygamists – the practice has always been tolerated in Utah. An estimated 30,000 polygamists live in the state, mostly in remote desert communities.

...The conviction of an avowed polygamist who lived... in western Utah may push other polygamists deeper underground, say the [52-year-old]'s lawyers... And that may be just what local leaders want as the state polishes its image before[applying to host] the 2002 Winter Olympics...

BACK in 1911 when... a native of Alsace-Lorraine, stepped ashore on Bathurst Island... the... missionary... could never have imagined one day becoming master of a "harem" of 150 Aboriginal maidens. The story of the bishop's harem is just part of the colourful history of the two Tiwi islands – Bathurst and Melville – 80km from Darwin... The Tiwi are an Aboriginal people whose matriarchal culture evolved in isolation from the mainland over thousands of years. These Aborigines knew no boomerangs, spear-throwers or kangaroos but did develop distinctive art forms, including grave poles prized by museums and collectors worldwide. For many years the missionaries found the going tough, for the Tiwi were deeply enmeshed in a complex web of belief, kinship and custom, including a rigid system of arranged marriage. At puberty a girl was claimed by a [guy] old enough to be her father. Wealth was measured in wives. Father Gsell soldiered on without so much as a single baptism, until at dusk one evening in 1921, [a]10-year-old... ran up to his door. [The girl] was a rebel, fleeing her "hairy old leprous" husband, aged 35, and his other 12

wives, and her plea for sanctuary precipitated a crisis. Armed [Tiwi guys] gathered to demand her return. Father Gsell sought guidance from above and was rewarded with the inspiration that [a missionary], too, could buy a [wife]. Laying out a selection of trade goods – knives, axes, mirrors – [Father Gsell] invited the belligerents to do business. The deal was done. [The girl] was... his bride by Tiwi custom. And so the bishop... began to build his congregation... Once “divorced” by Father Gsell, the girls became free to choose husbands of their own age, within the limits of customary law and blood relationships... [Speaking of customs, imagine having your neck extended by large rings or] having your two lower incisor teeth removed with the tip of a lance at the age of 10 to make way for a decorative lip plate. That’s the practice still common among the Mursi tribe of Ethiopia... Mursi [gals] are famous for their huge lip plates, which are regarded by them as a symbol of beauty and wealth. Before marriage, the... bottom lip is pierced and stretched using different sized plates until the entire length of the lips is slit to accommodate the ceramic disk.

...The practice of “foot-binding” began about 500 years ago in China... [‘clearly marking a fall in the status of gals, but’ feet are no longer bound tightly in a painful attempt to make them smaller – allegedly to make them more attractive (or was it to stop wives running away when husbands wanted sex?). Incidentally, a NZ]-born polygamist who had nine wives and 63 children was refused bail yesterday when... appear[ing] in a Melbourne court charged with 22 child sex offences... includ[ing] two counts of sexual penetration... and... of attempted sexual penetration... of a child under 10...

MELBOURNE [– A guy] who burnt his wife to death after [the wife] refused to have sex with his three mates has been jailed for at least 13 years.

...Nearly one in three sexual assaults are committed by partners or former partners, says Rape Crisis. More than 200 [NZ gals] reported partner rape to the agency last year and this was nearly 30[%] of rapes reported, up from 14.4[%] in 1996. Rape Crisis... is focusing on “Partner rape – the ultimate home invasion.” during Rape Awareness Week which starts today... [A spokesperson] says rape between partners has been a crime since 1986, yet very few [guys] have been charged with or convicted of this offence. “Many of the [guys] who choose to sexually assault their partners have great reputations and might be seen as really caring husbands or boyfriends... This makes it much harder for the [victims] to tell anyone.” ...Some rapists still believe they had consensual sex with their victims even though they are serving jail terms, a leading rape researcher says.

...Italy’s highest appeals court, the Court of Cassation, said [yesterday that] it was impossible to take off tight pants like jeans “without the cooperation of the person wearing them.” ...The ruling came in the appeal of the... conviction of a 45-year-old driving instructor in southern Italy... for raping an 18-year-old student. [The Court of Cassation said the student] must have consented to sex and sent the case back for retrial... A lower court had sentenced [the driving instructor] to two years and eight months in prison... A[USn gal] groups have reacted with disbelief... “Usually [rape victims] are blamed for wearing something too skimpy and now it’s because they’re wearing jeans,” [the AUSn Gals’] Electoral Lobby convener... said... “Nothing will satisfy the Judiciary – and it’s not confined to Italy – it doesn’t matter what you wear, the [victim] will still unfortunately have to shoulder some of the blame for rape,” said... the N[SW] Rape Crisis Centre.

...California’s [gal] lawmakers wore jeans to the capital, Sacramento, yesterday to protest against an Italian judge’s... [rape ruling. They] called on lawmakers throughout the world to join the protest... [(in the US, ‘the horrible rape rate for 100,000 gals over 12 grew from 46.3 in 1970 to 96.6 in 1990’). Meanwhile,] British prison bosses are considering dangling the carrot of sex to make inmates behave... The move is similar to... schemes in Scandinavia and other parts of Europe. In Spain, [prisoners] are given condoms, shower facilities and clean towels in rooms where they... [and their] wives or partners... can spend four hours together. However, victim support groups reacted angrily to the idea. “What next?...” said... the Victims of Crime Trust[. “Supplying prisoners with prostitutes, perhaps?”

...Gal] prisoners in the U[S] are subjected... to rape and being sold as “sex slaves” to [guy] inmates, Amnesty International says. In a wide-ranging report the human rights organisation said [guy] guards often supervised naked [gal] prisoners and searched them in ways involving contact with their breasts and genitalia. The authorities’ response to complaints was inadequate, leaving the victims with “no voice,”... While many... nations follow U[N standards that gal] prisoners should be closely supervised only by [gals, guy] guards in US prisons may watch... [while a gal prisoner] is dressing, showering or using the toilet... Many of the violations described in the report are illegal under US law. But... [gal] prisoners find it difficult to stop unlawful conduct by guards or to have a perpetrator brought to justice, Amnesty said, citing the case of... [the prisoner who] filed a lawsuit against US authorities in 1996... [after being] raped, sodomised and made into a sex slave by guards who “sold” access to her cell to [guy] inmates in a federal prison in Dublin, California. The case, filed with two fellow... prisoners, was settled out of court and the US Bureau of Prisons agreed to institute significant reforms. It paid the [three victims] \$500,000... to partially compensate them for their ordeal... “[Gals] in prison have been sentenced to be deprived of their liberty not to be subjected to sexual abuse,” said... Amnesty’s campaigns director for Britain. “The US is a country that prides itself on its constitution and often draws attention to human rights abuses in other countries...”

[‘No-one knows the exact number of political prisoners in China. Estimates range from hundreds of thousands to 20 million overall. Many are guilty of nothing more than calling for what we take for granted: freedom. Their numbers have swelled with the arrest and imprisonment of students and others who protested for democracy in Tiananmen Square. Many languish in jail, while others are exploited as slave labour. Now, China’s masters want loans and assistance to export products made by political prisoners.’ While on the topic of Chinese slaves, two gals] forced to provide sexual services to the Japanese army... during... [WW2 have appeared in] court... in Tokyo and told of the brutality they experienced as “comfort [gals]”. “All I could do was cry. I had no sexual experience before,”... said [one, who] was 15 when four Japanese soldiers barged into her house and dragged her away in front of her mother to where the soldiers were stationed. Her mother later committed suicide while [her daughter] was confined in a cave for five months, [being] raped by the soldiers day and night. She lost the vision in her right eye and has difficulty walking, disabilities [the gal] said were caused by the soldiers’ violent assaults. [The other gal]... was forced to serve up to 10 Japanese soldiers every day[, and in]... the evening... was raped... by... the... commander... After [her escape] from the brothel, no one in her village wanted to marry her and [the gal] lived the next 50 years in shame, never revealing the truth until recently. The two... are among a group of six Chinese... who filed a lawsuit against the Japanese Government last August, demanding \$270,000 in damages and a public apology. In December 1991, 35 [Koreans]... launched a similar suit... 500 South Korean protesters gathered in Seoul on Saturday to demand that Tokyo pay compensation... Friday’s hearing was the first time any of the [victims] had testified on what they had suffered. The suits challenge the Japanese Government’s contention that the issue of compensation ended with treaties normalising ties with Asian neighbours. Instead, the government set up a “private” Asia [Gal’s] Fund, which is still wrangling over the amount to pay the estimated 300 [survivors]... The fund managers agreed to payments of \$26,000 as one-time compensation, aside from the government’s plan to provide \$9.3 million as medical and welfare aid. But many of the former sex slaves said they will refuse the payments because they want direct compensation from the Japanese Government. They also want a letter from... [Japan’s PM] acknowledging the government’s “moral responsibility”. A report that [the PM] would accept such responsibility could not be confirmed. After decades of denials, the Japanese government acknowledged... that it operated wartime brothels with conscripted... [foreigners] in 1992... Historians say as many as 200,000... sex slaves... were rounded up.

...[‘a Dutch-Indonesian, who was 21 when the Japanese invaded, and was forced to have an abortion after being raped up to 10 times a day for three months – her body was so damaged that after the war the girl who had led a comfortable and secure Catholic life on her parent’s sugar plantation miscarried three times and needed surgery to eventually have two daughters to her husband – and who only went public with her story so that such atrocities may never happen again, pointed out that after the recent overthrow of Indonesia’s Government, Chinese people had been raped by soldiers.’ In related news, h]uman rights activists say thousands of farm workers are trapped in feudal servitude in southern Sind province, despite forced

labour being banned four years ago... Authorities have been raiding landlords' estates and freeing workers, but few prosecutions have been laid. [One worker claims to have been] gang-raped by her landlord and four of his men. [The worker] and her husband, who owed their landlord a small debt, fled when [the landlord] threatened to sell her. They fear for the children they left behind. Another worker... fled after subsisting on a ration of flour in return for labouring in sugarcane fields. The illiterate [other worker] said his master claimed [the other worker] owed him 400,000 rupees... Workers who questioned their debts were beaten, [the other worker claimed.

...the 44-year-old was just an ordinary looking guy the 23-year-old had met at a party. So when the guy offered her a lift home, the gal thought nothing of it. While the gal waited in his garage for him to fetch his car keys, the guy offered her a quick drink to ward off the cold. Moments later, the gal passed out. When the sleeping tablets wore off, the gal woke to find herself in an airless bunker, six metres below ground. The pale faces of four other captives peered at her; two of them bore the tattoo "slave" on their foreheads. They'd been there for two years. The slaves were forced to work day and night, making underwear, housecoats and oven mitts for their captor to sell at the local markets of Vyatskiye Polyany, a small industrial town 1000km east of Moscow. If they failed to fulfil his clothing orders, they were beaten and raped. Within a few months of the 23-year-old's kidnapping, only three of the five slaves were alive, taking the murder toll to four. The first two were guys recruited to help enlarge the bunker then killed for fear they would blab. One was electrocuted, while the other was forced to drink poisonous antifreeze. Their bodies were dumped in nearby wasteland. Police assumed they were alcoholics who had frozen to death. The captor was eventually arrested in July last year. Today, his victims are attempting to piece together their lives, but the process is painful. "No-one can imagine what I've been through," says the 23-year-old. ■ 'In mid-1987 "Sabrina" had accepted a sailor's invitation to join him on board his ship at the Auckland waterfront. A naive teenager, Sabrina thought it was just going to a party and never imagined the ship would leave while a guest was on board. Sabrina remembered being held in a coffin-like box in one of the cabins as the ship rolled through the ocean. Eventually, Sabrina was taken ashore in Ecuador, but her ordeal was only beginning. Sabrina was chained in a basement dungeon with other girls who were held as sex slaves.'

...Police in Los Angeles are looking for a guy who allegedly imprisoned a Guatemalan in his caravan for 14 months and repeatedly raped, beat and tortured her. The 27-year-old victim, who was also forced to cook and clean for the guy, two other gals and five children, told her story after unlocking the chains at night and escaping from the caravan. The ordeal began when the Guatemalan was lured to the caravan by the promise of a job.'

...Slavery is thriving in modern times, according to a report prepared for the U[N]. There are... entire Nepalese families[who've been] held in slavery for generations... An Asian group... said more than 55 million Indian children were kept in servitude although slave labour was officially abolished 20 years ago. In Pakistan there had been 774 cases of employers convicted for exploiting child labour... Another contemporary form of slavery was evident in the living conditions of migrant workers employed in Gulf states such as Kuwait, and also in Britain, the Netherlands and Greece... [T]he principal victims of this kind of slavery were [gals], whose employers demanded that they reimburse the costs of their travel and of immigration formalities. The most frequent abuses consisted in the employer confiscating the employees' passports, lack of payment for months and physical violence. Official statistics quoted included 690,000 immigrant domestic employees in France and 600,000 in Spain.

...Slavery has returned in... Africa's largest country. Behind the cloak of a brutal civil war, tens of thousands of people have been abducted from their homes and sold like chattel... Some are bought by individual owners to serve as field workers, household servants or concubines. Others, confined in camps, work on government farms or are leased to large private landowners. Still others are reportedly exported to Libya and countries in the Persian Gulf. Whoever their "owners," the captives are often treated brutally. They are regularly beaten and sexually abused. They are branded as if they were cattle. Slaves who try to escape are... mutilated or murdered. [But]Sudan's Islamic rulers... flatly deny it. [The]Sudanese Justice Minister... declared to a London newspaper: "Slavery does not exist in Sudan and will not be condoned by the government." On my recent visit to the region, however, scores of escaped slaves told me that the Khartoum regime is lying. What's more, investigations by private human-rights groups and the U[N] confirm that the Sudanese regime condones slavery as a means of subjugating the people of southern Sudan. - 1996

['Christian Solidarity International (CSI) – a Zurich-based human rights group – has bought the freedom of 1050 slaves in Sudan, mainly children, for \$US50 per person with the help of the Confessing Church Movement in Germany and North American financial backers, including the American Anti-Slavery Group and the Canadian-based Slave Redemption Project. It was the largest number of slaves known to have been freed at one time. In all, CSI has liberated some 5066 slaves through its programme since 1995. However, CSI said that Sudanese Government forces were mobilising ahead of a fresh wave of what it called "slave raids" expected next month in the famine-hit southern region of Bahr-El-Ghazal. "The armed forces of the Government of Sudan systematically capture and use Christians and animist black African slaves – particularly child-slaves – as one of the most potent instruments of its declared jihad against the communists that resist its totalitarian policies of forced Islamisation and Arabisation.']

...NINETY children have been rescued from being sold as slaves in the West African country of Benin. A senior officer from Benin's police force said three adults were arrested as the children were about to be loaded on to buses to be taken to... Nigeria's main port city, Lagos. Benin's newspapers carried reports that 42 children were rescued by the police in similar circumstances last week... Trading in children is a common practice in both Benin and Nigeria... Child Rights organisers in Nigeria say... [t]he practice is tolerated and perpetuated by many educated Nigerians who say that some children[do] end up better off than they would in their villages... however, [the]... "house helps" in Nigeria... are not paid and are often poorly fed, even when other children in the house are well looked after... [In addition, they] are often sexually abused, beaten and made to work long hours[. □ Police have also 'rescued 23 youngsters in a raid on a Kathmandu carpet-weaving factory after 2 youths escaped to raise the alarm. Those released were in a shocking condition. The skin on the hands of some of them was "peeling off from long-untreated diseases". Most appeared haggard, unhealthy and feeble – a result of long hours of work in damp and cramped quarters without sunlight. They said they hadn't received their promised 1200 rupees wages in the 2 1/2 years they had worked there. The dirty youngsters had been confined in a room containing only 6 mattresses and 5 blankets. The person whom the youngsters identified as the owner has been arrested, but denied the charges, saying the children had been cared for adequately.'

...the UN] conference on how to stamp out child labour did one good thing at least. It ignored the easy and hurtful campaign to boycott goods made by child workers. One logical outcome of a boycott would be to kill all Indian exports of tea and rice. In turn that would threaten the two great changes India has achieved in 50 years of independence – self-sufficiency in grains and the growth of a prosperous middle class. Those two changes mean an end to the appalling famines that British rule created and a huge increase in the number of people too rich to be trapped by the slave-masters who run the factories that hold child and adult workers in bondage. Not that child labour is caused only by vile and rapacious capitalists. In India alone, 60 million children are reckoned to be working. A fair slab of them made a perfectly rational choice. They faced starvation, prostitution or work, and chose the least disagreeable path... [B]y boycotting goods made by children, am I not also making damn sure that none of my money goes into the kids' ricebowls? In a world of moral uncertainties I say – but without cast-iron conviction – buy and hope. And have a bob each way by... giving another dollar to... Save the Children.

...Beneath Asia's economic miracle lies a darker side – the growing menace of trafficking in [gals] and children, exploited for their... pursuit of better lives... [They] are... used for sex, labour, begging, false marriages, adoptions and... as agents of crime. Now with the economic downturn in many countries of the region, "there is a fear of more opportunities for exploitation... especially... via the sex trade." ...From one Lao province alone, Savanakhet, "more than 15,000 of their youth sought employment in Thailand in 1995." They... [were] forced to work in factories without

pay, or as servants in private homes... [or] in restaurants and night clubs “to repay debts or fees.” ...Many are... doing dangerous work in unhealthy living conditions... [W]hile precise numbers are unavailable, Thai Immigration Bureau data put the number... of... migrant workers... [being] trafficked through Thailand to Malaysia and Singapore... at 500,000. Other studies estimate the numbers at between one and two million.

...[The AUSn] Minister for Justice yesterday flagged tougher laws to curb the burgeoning sex slave trade between Asia and A[US]... “There is state legislation in place that deals with sex slaves... but we want to get at the perpetrators of this crime and make life very difficult for them.” ...[the minister] said there were between 200 and 300 sex slaves in A[US], and there was strong evidence of links between the trade and organised crime. Girls as young as 13... were brought to A[US] under the ruse of paying off a family debt. Once in the country, their passports were taken and they... [find] their contracts... demand that each [slave’s] brothel earnings go directly to the owner until her debt is paid.

...Four people accused of holding dozens of deaf mute Mexicans in servitude have been charged with conspiring to transport and conceal illegal aliens. The ringleaders allegedly forced their victims to live in dire poverty and sell trinkets on the streets and subways of New York City... [A]uthorities estimate... the scheme... earned up to \$US1 million... a year... [Incidentally, the US President] will consider extending a national apology to Black Americans for slavery – but not compensation for their ancestors’ suffering. “It’s been so long and we’re so many generations removed,”... The idea of an apology came from a white Ohio lawmaker who introduced apology legislation in Congress last week, just as [the President] was preparing to unveil his national initiative on race in a speech in San Diego... Last month, [the President] apologised for America to the black [guys] who were unwitting experiment subjects in the... Government’s... 1930s-era Tuskegee Syphilis Study... [(during which the subjects) were told they had bad blood, and were denied syphilis treatment, even for years after penicillin came into use in 1947; b]y the time the study was exposed in 1972, 28... had died, 100 others were dead of related complications, at least 40 wives had been infected and 19 children had contracted the disease at birth[)]... and in January [the President] awarded – 50 years late – the Medal of Honour to seven black soldiers for valour in combat... [(a)lthough 1.7 million blacks served in... W[W2], they did not receive one of the 432 Medals of Honour awarded[; a] special team of military historians who investigated the issue for the Army concluded that racial segregation and prevailing attitudes towards blacks were the reasons[)]... Slavery was a central theme in the consultations that [the President] made with activists, scholars and other experts in drafting his plan for a national dialogue on race. Their advice was... to... first address the lingering wounds of slavery, then try to resolve the array of... problems that stem from it. - 1997

There are now more slaves in the world than at any time in human history, according to research by an adviser to the U[N. The]... professor of sociology at the University of Surrey, has calculated that 27 million people are living as slaves... [(this] figure... did not include the millions of people working in sweat-shops or doing prison labour[), and says]... that although legal ownership of people is no longer claimed, modern slaves were living in worse conditions than when the practice was lawful... “[People] must understand that slavery is a relationship between two people marked by dominance,”... [The professor said] that slavery was becoming common in First World countries such as Britain as human trafficking led to people being tricked into domestic service and prostitution[), but] said the problem was not being taken seriously because modern forms of exploitation did not mirror traditional ideas of slavery... The form of modern slavery which most compares to the common idea of the problem is the increasingly rare chattel slavery, where people are born or sold into the possession of another. Chattel slavery is still found in... Africa and some Arab states. At its height the Roman Empire was said to absorb 500,000 slaves a year, with around 250,000 living in Rome itself – around a quarter of the city’s population. Best estimates of the transatlantic slave trade suggest... 13 million people were taken from Africa over a 350-year period.

...[‘In 1550, the king’s counsellors gathered to listen to two great figures of the age – one speaking for the South and Central American Indians, the other for the mission of Imperial Spain. It was quite a moment in the history of the world – the first time that principles of universal human rights and global justice were worked out. The philosopher concluded by saying human beings are not equal, that some are superior to others, and the inhabitants of the New World were natural slaves because they were barbarous and inhumane. “How can it be doubted that they have been justly conquered by our most humane nation, which excels at every kind of virtue.” The Dominican’s argument was that the conquests of the New World were wrong and had to be stopped, because it is unjust to wage war against our fellow humans. The king listened, but couldn’t stop history – driven, as ever, by the lust for gold.’ ●] THE parents accused of keeping children in slavery receive \$64,000-a-year in state benefits... The married couple – aged 50 and 45 – have had up to 17 children in their care... Their Wellington home was raided by detectives who arrested them on charges of assault, neglect and using children as slaves.

...Slavery charges against a Wellington[ian] and his wife were dropped when they appeared in the Wellington District Court yesterday. But the pair admitted 22 assaults between them, using belts, brooms, a vacuum cleaner pipe and high-heeled shoes to attack up to eight foster and adopted children in their care. The pair also pleaded guilty to neglect and cruelty against the children... Three children were put to work unpaid late into the night last year, cleaning office blocks around Wellington for the step-parents, who were also contract cleaners.

During the 1830s-40s, Maori life was considerably altered... Cannibalism, which had been a significant source of protein as well as a ritual[‘following war as a final humiliation inflicted on the defeated (after a skirmish most captives were killed and eaten although young gals and children were often taken as slaves’)], declined as the supply of pigs increased and Christianity spread. Infanticide, polygamy and slavery gradually diminished.

A widespread institution in ancient times, slavery had died out in England by the 12th c. The transportation of slaves from Africa to the Americans by European traders began on a large scale in the 16th and 17th c., and although slavery became illegal in Britain in 1772, [‘the need for cheap labour in new colonies’ meant that] it remained an important part of the economy of the Empire until the 19th c., the slave trade being abolished in 1807 and slavery itself throughout the Empire in 1833. [Interestingly, ‘William Penn (1644-1718), the English Quaker reformer and founder of Pennsylvania, had done something to mitigate the evils of slavery, but held black slaves himself.’ ‘In 1808 the US Congress banned further importation of slaves but the slave population still rose from 700,000 in 1790 to 2 million by 1830.’] In the American South slavery was an essential part of the cotton-based economy, and the abolition campaign waged during the first half of the 19th c. eventually led to the American Civil War and to final emancipation[in 1865]. In some parts of the world chattel slavery, the ownership of one person by another, continues to exist.

It continued in Moslem countries[– where it is condoned by the Koran (Muslim guys even have absolute sexual rights over their slaves – 23:6; although they ‘shall not force a slave-girl into prostitution in order to make money, if the slave-girl wishes to preserve her chastity’ – 24:33) –] Central Asia, and China through the 19th cent. [Jeremiah 34:9 forbids the enslavement of fellow Jews, but ‘in the Old Testament slavery was taken for granted as part of the social order and a series of laws was developed regulating the treatment of slaves. In the New Testament there is no outright condemnation of slavery, although it can be argued that Christ’s teaching as a whole is an implicit criticism of the institution’ (‘Text for Today Whoever desires to become great among you, let him be your servant. And whoever desires to be first among you, let him be your slave. – Matthew 10:26,27.’). However, n]ear-slavery, in the form of serfdom, prevailed in tsarist Russia until 1861, and forced labour became common in Soviet Russia and Nazi Germany. The League of Nations declared against slavery in 1926. In 1935 the existence of slavery in Ethiopia was cited by Italy as a justification for invasion, but before the year was over the Ethiopian government abolished the institution. Members of the U[N] have formally condemned slavery although some

countries refused to sign the protocol. Saudi Arabia, for example, refused to sign because of... well founded... charges... that slavery still exists there... The unilateral exploitation of one life form by another is called parasitism.

Tapeworms, or cestodes, are... about the most unpleasant of parasites, yet we cannot ignore them... The hydatid worm... is one of the most serious tapeworms that infects [people] since its larval hydatid cysts may be formed in various organs and can be removed only by operation. These cysts are sometimes as large as 10 in. across. Thousands of scoleces may develop in each, as well as secondary cysts which each contain a dozen or more scoleces. Development into the adult occurs only if a larval scolex is eaten by a member of the dog family. The frequency of hydatid cysts in [shepherds] is closely related to the density of sheep in the area, for these infect the sheepdogs and [a shepherd] tends to become infected in turn by the eggs from his dogs... [Other serious ones are the *pork tapeworm*, which] lives as an adult only in the human intestine and... *beef tapeworm*...

[*Beef comes from*] large hollow-horned ruminants, belonging to the family Bovidae... called cattle. The name, from the Latin for 'head' indicates property, and meant originally much the same as 'capital' and 'chattel'... Strictly speaking, cattle must be domesticated, and the two species are the western... and the zebu of southern Asia and Africa. Western cattle were derived from the aurochs... which once lived in the forests of Europe and Asia and became extinct in 1627, the last survivor dying in a Polish park... The date and place of the first domestication are unknown. By 2500 BC several domesticated breeds were already in existence... While prehistoric [humans were still hunters, they] killed the aurochs for its meat and hide. When it was domesticated [they] could get milk from it as well, and as [humans became farmers, they] could use it for pulling the plough... It seems likely that in early days of domestication and, in some countries, persisting even to this day, the primary use of cattle was as draught animals... In parts of Africa they are an index of wealth, a means of purchasing wives – cattle or chattels in the original sense of the word... Cattle... [have an] ability to do well on a wide variety of foods... and... naturally live in groups, or herds, which means they readily form social bonds with others of their kind. They also live readily with... other species, which makes it easy for them to live in association with... [humans. However, the] whole process of domestication is so sophisticated that one is constantly surprised that primitive peoples should have accomplished it. Their knowledge of natural history may have been rule-of-thumb, but it was none the less profound. For example, primitive peoples today dealing with semi-wild cows quickly learn that the sight of a calf, or of a boy dressed in a calf skin, will cause the let-down of milk in an otherwise refractory cow. Moreover, in the absence of these the let-down can be stimulated through inflating the cow's vagina by blowing air into it.

According to the Bible, the first thing God ever said to humans was that they could 'have dominion over the fish of the sea and over the fowl of the air, and over every living thing that moveth upon the earth' (Genesis 1:28), while the second thing was: 'Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in which is the fruit of a tree yielding seed; to you it shall be for meat' (Genesis 1:29). But God later told Noah: 'Every living thing [– excluding other humans –] shall be meat for you; even as the green herb have I given you all things' (Genesis 9:3-4). From that, and Noah's act of making 'the first burnt offering on the first altar', evolved the Jewish practice of killing animals according to a set ritual.

According to Jewish law... only certain animals slaughtered in a prescribed way and prepared according to set rules, are considered kosher[– the]... term used to designate food permissible for consumption...

Because such rituals have to be performed by authorised (i.e., trained) people, those people can charge more money for their meat than unauthorised butchers. Another point, and one which has greater relevance to the present, is the notion that when Noah and his family eventually got out of their ark, 'every living substance which was upon the face of the ground was destroyed' (Genesis 7:23) – i.e., there wouldn't initially have been anything in the way of vegetation for them to eat (other than whatever they had stored on board)! It's possible, therefore, that when God gave Noah permission to eat animals (fish and offspring of the animals it had carried in the ark, presumably), God was merely temporarily making a practical detour from its earlier commandment. In that case, people who continue to eat other animals are disobeying God – and, perhaps, challenging God to punish them?

A fourth British cattle farmer has died from the human version of mad cow disease, raising fears that it may be possible to get the disease from simple contact with infected cattle and feed... [In another development, r]elatives of children who died from the human equivalent of mad cow disease after being treated with human growth hormone have won a court case for compensation from the British Government. A London court ruled at the weekend that the Department of Health had been negligent, but only in cases arising from treatment after July 1, 1977, when the risk of catching Creutzfeldt Jakob Disease (CJD) should have become clear... [At least 10] children... died of CJD and two now have the invariably fatal neurological disease. The case has no connection with the new strain of CJD which triggered the mad cow scare and beef crisis in Europe.

...The British Government has put on hold a plan to cull 147,000 cattle because of mad cow disease... "The new scientific evidence available means that further work is needed on appropriate culling strategies," said a spokes[person] for the British P[M]. The PM] acted after reviewing the latest evidence from a group of Oxford University scientists who argued that the disease would die out naturally within five years and that mass culling was unnecessary... [However, the] European Commission President... said that Britain's decision had not [changed] the rest of Europe's view... At a E[U] summit in Florence in June, [the British PM] agreed with other European leaders that Britain would impose a cull and other measures in return for a gradual lifting of the worldwide ban on British beef exports... After the Florence deal, [the British PM] had... expected the E[U] to start lifting the ban within five months but this confident prediction found little backing from other EU countries. After talks with European farm ministers in Brussels this week, British officials said they were once again convinced that the ban was not about to be lifted.

...In the "first comprehensive analysis" of the... mad cow epidemic... in the scientific journal *Nature*, the veterinarians, epidemiologists and other experts said it would be hard to get rid of the epidemic any faster without slaughtering vast numbers of cattle... British scientists predict the... epidemic will die out by 2001 but admit they still do not know how many people will get the human form of the disease... [–] which normally strikes one in a million per year and has an incubation period of up to 30 years... [–] from eating infected meat... [However, researchers led by a] zoologist and epidemiologist... of Oxford used statistical analysis to predict there would be 340 new infections and 14,000 new cases of BSE before 2001. They also gave what they believed to be definitive numbers on the epidemic. About 446,000 infected animals were eaten before the use of infected organs was banned in 1989, and 283,000 more before restrictions were tightened last December... BSE... decimated British cattle herds in the 1980s. Scientists decided it was caused by feeding cows the rendered remains of sheep that had scrapie... They eventually banned this type of feed...

A new health scare over mad cow disease... or bovine spongiform encephalopathy... has broken in Europe after scientists warned that the brain-wasting condition could spread directly to sheep[, and the EU] Farm Commissioner... announced new plans to tighten food chain safety... By introducing the agent which causes the disease in cattle to sheep, scientists had found it could spread more widely in sheep than cattle... A similar condition in sheep is known as scrapie... EU vets will consider the [commissioner's plans] on August 1... [T]he Irish Farm Minister... who is chairing the farm talks, appealed for calm. "We have seen the consequences of BSE on beef. It would be a tragedy... to visit the same thing on lamb..."

The latest twist in the long-running controversy over mad-cow disease, linking the disease with sheep, is causing concern at the N[Z] Meat Board offices in Brussels. Suggestions aired by the E[U] Agriculture Commissioner... could have a direct impact on N[Z]'s multimillion-dollar lamb exports to Europe... The fear is... that even if the scare proves unfounded it could still lead to a slump in lamb sales. Scientists have been unable to prove for certain that humans are in danger from BSE-infected cattle, but that has not stopped a crisis in confidence that is still supporting a beef

ban in Europe, and has caused a drop in sales in Britain... “We are talking about an issue of consumer confidence and it is very difficult to predict the consumer reaction.” ...so far British proposals for a cattle cull and selective slaughter have not succeeded in lifting an export ban... [which has left] Britain’s beef industry... in turmoil... The British Minister of Agriculture, [who was] heavily criticised for his handling of the BSE crisis, reacted quickly yesterday by saying that [the commissioner] was talking about a “theoretical risk.” ...[the minister also] said that scientists had found considerable difficulty in passing BSE on to sheep. A BSE adviser to the British Veterinary Association... said: “We have been living with scrapie for more than 200 years and no scientist has been able to make a connection between scrapie and [humans].”

...NZ ‘farmers want an apology after more than 30 million homes in Europe got a leaflet that claimed NZ sheep have scrapie. The PM also called for a retraction. “We don’t have it here. It’s an outrage.” The leaflet – sent out by a German group called the Central Marketing Agency – could impact on meat sales in Germany, one of our biggest markets.’ By the way, NZ s[heep and beef farmers’ profits before tax fell 15[%] last season, says the Meat and Wool Board... The... estimated average price for a head of beef cattle fell... to \$431, compared with \$529 the previous year. The high of \$716... was reached in the 1992-93 season when the U[S] market was strongest. Cattle numbers are estimated to be 10[%] lower because of fewer calves being reared last spring in response to the poor prices. Wool prices were down 7[%], reflecting the continued lack of demand from overseas customers and the high [SNZ]. But lamb prices rose 10[%] and mutton 4[%] as the size of the national flock fell and prices strengthened, particularly in the British market, following the mad cow disease scare. Gross farm revenue fell 5[%] over the past 12 months to \$148,900 a property, and spending was down 2[%]. Interest payments rose 7[%]. To compensate, spending on fertiliser and maintenance was down 11[% and 8[%] respectively.

...Sale day is a social day and, these days, also a profitable one for sheep farmers. With lamb prices reaching a three-year high this month... of \$83 a head... there is plenty to celebrate down on the farm. For shoppers the news is not so good as butchers issue a warning that lamb prices are on the way up... [In related news,] animal welfare campaigners[have expressed] outrage as 70,000 sheep[were] left to die on[a] blazing Panamanian cargo ship en route from... [AUS to the Middle East (where they were due to be slaughtered according to Islamic ritual). ‘All of the ship’s crew were saved. The AUSn RSPCA has requested that such shipments be ended.’ The still-]blazing abandoned ship [has gone missing near the Seychelles. (NZ has also send shiploads of live sheep to Arab nations, but they were ‘temporarily stopped because 5% were dying before arrival.’)

...yesterday, the search for a] ship with 70,000 sheep on board[was] abandoned after debris... [was discovered. In local news, meat] companies have been chided for not undertaking enough research into consumers’ meat preferences or else not publicising their... marketing... activities sufficiently. The Minister of Agriculture... told a N[Z] Farmer function in Wellington that if companies expected farmers to sign long-term contracts they would have to provide far more information... to build the necessary confidence. But [the minister] also said that if farmers “were not prepared to get into bed with meat companies then it would be better for them to sell their farms now and leave the industry. I don’t believe we have much time to get the message across... We are about to have a significant shortage of stock with the risk of a procurement war. That is precisely the last thing the industry needs right now, particularly beef... [A]s minister I am seeking the information...”... In response to a letter to five meat companies... asking about market investment, [the minister] had received four replies. “There... is some investment in the marketplace, particularly with lamb... But what I haven’t seen much of... is companies going to the next level.” ...this required companies to find values which were important to customers, then develop and position a product which latched into those values. [The minister added that] Parliament was unlikely to pass the Producer Board Acts Reform Bill... The bill was introduced into the House last week... [However, the minister] has confirmed that [his ministry] will encourage the select committee to which it is referred to remove meat grading powers from the Meat Board.

...Lack of consistency in beef quality is holding the industry back, says the Meat Board’s market services manager for Europe and the Middle East... [The manager] told a Ministry of Agriculture seminar in Auckland this week it was recognised that N[Z] lamb was the best quality. “That is giving us an edge... But... you can’t get a premium for a variable product... To survive in the marketplace you’ve got to have a product which is better than anyone else’s. We have got to attempt to be number one.” ...[the manager] said the industry was aware of the problem, which related to how cattle were farmed and handled... Establishing a reputation in Asian markets[, which are experiencing]... enormous growth... was not going to be easy... These markets had concerns in the wake of the mad cow disease crisis, so potential customers needed reassuring that N[Z] did not have the disease or the sheep equivalent... [I]n the U[S] market, where most beef is exported at present, prospects were not good for the next... year or 18 months... But [the manager] said the new season’s outlook for lamb prices was more optimistic than that painted by the industry, which predicts prices from \$33 to \$36 a head. “I think we will do better next year than this for lamb...” ...unlimited access for chilled lamb into Europe was “an open door to get into the top end of the market.” A promotion at 22 Sainsburys supermarkets in Britain was introducing new cuts such as parisienne racks, gourmet fillet and grillade steaks to customers. “We are trying to get them to rethink lamb as an upmarket product... It is going extremely well and buyers are coming back.” ...consumption... [of] lamb... in... Europe... had increased 18[%] over the past 12 years... W[TO] figures showed that over the same time lamb consumption was down 46[%] in Japan and 4.3[%] in the US (where the Federal Government recently announced that it ‘aims to try to save the local sheep industry with at least \$US30 million of taxpayers’ money’). In Canada consumption grew 15.7[%]. Beef consumption was up 78.6[%] in Japan, but down 10[%] in the US, 17[%] in Canada and 10.8[%] in the EU. Poultry showed growth in all markets, climbing 31[%] in the US, 39[%] in Canada, 32[%] in Japan, while pork consumption increased 17[%] in Japan and 32[%] in the EU.

...A Dutch rubber company is offering what it claims to be the ultimate in comfort for... pigs, goats... horses... sheep... and... cows – ...waterbeds... [that] cost around \$250 each... “[Animals such as] cows find it takes a bit of getting used to at first, but after initial hesitation they like it,” says [the company’s sales chief, who]... believes that a happier cow will produce more milk... [Speaking of which, d]airy farmers in the Auckland area will be able to apply twice as much nitrogen fertiliser to their properties as their Waikato counterparts. Environment Waikato sets a limit of 100kg of nitrogen a hectare a year. But the Auckland Regional Council’s dairy shed discharge plan, which was adopted by its environmental management committee this week, sets a limit of 200 kilograms... The council[’s] rural resource quality officer... disagreed with Environment Waikato’s contention that application of more than 150kg of nitrogen a year suppressed clover growth... Under the [ARC] plan, discharge of dairy shed sludge and washwater on to farm land is encouraged by being designated a permitted activity while two-pond treatment systems are a controlled activity. About 30[%] of the Auckland area’s 900 dairy farmers spread or spray sludge on their properties but it is hoped that level can be doubled.

...The 6000 farmer suppliers of [NZ’s] largest dairy company have earned an average of \$30,000 more this year. This follows the announcement yesterday of a payout by the N[Z] Dairy Group of \$4.10 a kilogram of milksolids for the past season. This... payout[, which] was the highest received by... the Hamilton-based company[’s]... suppliers... is 60c up on the previous season’s payment of \$3.50...

Almost a quarter of the wool offered at the first sale of the season, in Christchurch, was passed in because it did not reach growers’ reserve prices. Early in the sale passings were running at 36[%]. While Wools of N[Z] did not report a market indicator price, it said most wools on sale were cheaper than at the final sale last season, except for lower micron cross-bred fleece and second shear... Meanwhile, the Ministry of Agriculture forecasts an average wool price for the new season 70c a kilogram higher than the prediction from W[NZ, which]... predicts an average wool price for the coming season of 500c a kilogram. Prices fell an average 11[%] last year... Fine wool prices were hit worst, falling 36[%] to 787c (in ‘September 1995, fine wool had fetched 1400c/kg’)... This was largely a result of... global demand... for use in apparel... being weaker... and problems in the countries which consumed most N[Z] wool. Incidentally, back in the early 1980s, when annually the ‘NZ Government supported woolgrowers incomes by an amount close to \$100 million, the mountain of unsold wool grew to more than 400,000 bales’...

20% of NZ's] 17,000 meat and wool farmers now hold 51% of the... \$9.2 billion... [farmers] owe rural financiers... [Unfortunately, net] profit before tax for the average sheep and beef farmer was about \$35,000 for the 1995-96 financial year, little more than half the average during the decade to 1984-85... [M]any dairy farmers also are under increasing pressure from rising costs and easing output prices. The Dairy Board has warned that its payout to farmers will be down 10% on the previous year... Their only mechanism to beat the lack of profits is to produce more for less cost... [– even though NZ's pastoral farming already] has a worldwide reputation for its efficiency of production... Two-thirds of farmers or their partners already work off the land to supplement their income. And other sources of revenue... are being tapped.

...Deer farmers are being asked to kill at least 10[%] of their velvetling stags this year to fill orders from markets, which are paying record prices for venison. The Game Industry Board chairman... said demand for N[Z] venison was already 25[%] higher than it could supply. "With the peak chilled venison season closed, the supply situation is very serious and we risk losing our best markets,"... At least 40,000 animals were needed over the next few weeks to fill the shortage between production and market demand. Farmers, buoyed by... prices of... \$9 a kilogram for venison... up at least 30[%]... on the year before... have been holding stock back from slaughter for breeding purposes. The board is recommending, however, that below-average velvet-producing stags should be killed over the next six weeks... [Because] the velvet markets were oversupplied, killing poorer-producing animals should ensure that both the velvet and venison industries had a good future... [T]he average schedule price for AP2 venison in the past year was \$6.50 a kilogram, or \$1.50 a kilogram more than in the previous 12 months... [Prices are] likely to continue to rise... [during the next] three years... to be about \$7 a kilogram. Velvet production also would rise, with 700 tonnes being exported by the year 2000. Prices over the past year had fallen from an average of \$158 a kilogram of A-grade velvet to \$135... They are expected to stay at about \$130... over the next three years. "Prices... are expected to remain up in the high area because of good demand from Asian markets,"... But with Korea's consumption growing from 7000 tonnes to 21,000... in 10 years, and the Taiwanese market jumping from 14,000 tonnes to 28,000 in the same time, N[Z] filled only 4 to 5[%] of sales. The... Ministry of [Agriculture's]... regional policy manager for the north region... said that in 20 years, land use for deer farming in N[Z] had risen from 1000ha to 218,000ha. For a model deer farm of 135ha running 2000 stock units – all deer – there was a substantial cash farm surplus of \$111,892 in the past season. Gross farm revenue was \$191,159... Farm spending increased 12[%]. While on the topic of non-traditional meats, passengers]... on some Air N[Z] flights may soon find ostrich... as a menu choice... Afro Ostrich, will supply the airline with meat from its Queensland properties in the next few weeks for... kitchen trials... as the first stage in deciding whether it could be included in in-flight meals. [● 'For those keen to pay \$36/kg to sample ostrich meat, stir-fry packs are available from the Big Fresh supermarket chain.'

...small]-scale ostrich farmers in N[Z] should be wary of getting involved with an overseas company of considerable size, says the former president of the Auckland Ostrich Association... A close working relationship had existed with the A[US]n Ostrich Association... but it needed to be remembered that the N[Z] industry was still in a breeder phase... "We will have 4000 birds throughout the country shortly...,"...

A[US]'s largest ostrich farm, which expects to be running 200,000 birds by the year 2000, is looking to co-operate with N[Z] farmers in product marketing. The international marketing manager of Afro Ostrich farms... said in Auckland last week that the company hoped to have an annual kill of 100,000 birds in six years. It is negotiating to buy a 20,000ha property in Queensland where the birds will be farmed and slaughtered... [B]ecause the birds got stressed easily, resulting in high pH levels and a dark colour to their meat, on-site killing facilities were important... At present, the unlisted company, which was set up three years ago, owns two breeding properties on the Gold Coast. It runs about 2500 ostriches which are the result of crosses between A[US]n grey ostriches which have survived in the wild since earlier farming ventures were abandoned and imported African black, blue and red bloodlines... "The N[Z] ostrich industry is in its infancy but it's developing on the right track. We have the expertise and opportunity to work with N[Z] ostrich growers and we will make an approach to the industry... [F]arms here are small and little guys find it difficult to operate in Northern Hemisphere markets. We have always wanted to get involved in the whole deal, not just breeding and selling ostriches." ...Smaller farmers in A[US] are already beginning to opt out of the industry and... the company is in a good position to soak up the stock they no longer wanted to carry... [However,] the company would not be looking at running birds on farms in... [NZ. O]striches farmed by the company were robust birds producing large amounts of meat, leather and feathers... The company has just signed a heads of agreement with Italian tanners for production of a range of leather goods using ostrich hide... The company already has interest in low-fat, low-cholesterol meat from up-market restaurants in Britain, Europe, the Middle East, the U[S] and Asia, and recently ostrich meat was served to first-class passengers on British Airways... A cookery book containing ostrich recipes is planned[, and]... there were also good prospects for other ostrich products[– which, according to the manager, means it is] highly unlikely that the whole lot would fail at once... More unusual uses of ostrich products are the incorporation of the birds' toenails in jewellery and decorating their hollow [egg]-shells. Research work is being carried out in the U[S] at present on the possible use of their eyes for corneal transplants and the company is financing research at an Italian university which is trying to find a way to use the contents of infertile eggs as a food supplement. Each bird lays an average 60 eggs a year, every one containing around 1.5kg of high-protein material. About 30[%] of the eggs can be infertile... [They are currently] a waste product.

...A national shortage of[chicken] eggs which is causing stores to run low on some lines has prompted predictions of a price increase over the next six months. Egg producers and marketing bodies have blamed the shortfall on the deregulation of the industry in 1987 which left it open to "boom and bust" cycles... The chair[person] of marketers Eggs Incorporated... said there had been no national collection of data since deregulation and production and consumption could not be accurately predicted... A producer... [from] Paerata, said a surplus last year had driven prices down, causing many farmers to cut back their flocks... [and] about 100 farms – mostly small or "part-time" interests – had closed... [In addition,] an anti-battery hen farming campaign, which had looked as if it might result in a national referendum, had... made investment in the industry less attractive... Now farmers were struggling to get replacement stock from hatcheries, which had also cut breeding numbers.

...A vet has been ordered to pay \$A12,300 for endangering the stud career of a Sydney [resident's] prize macaw parrot... [The] 38-year-old investor... sought \$A250,000... [from the] specialist bird vet... for breaking the bird's... left leg... while trying to carry out an x-ray in 1994... [on] its broken right leg... [The judge was told that] the strenuous mating ritual of macaws put extreme pressure on the legs, and now... [the \$A9500 bird bought] in the knowledge it could father six to 10 offspring a year of equal value... was now unlikely to withstand such vigour.

...One mynah bird would begin shouting "Robbie's Coming Home" when its owner was returning from an overseas trip... Some cats and other pets showed the same psychic bond with their owners... While... proof of pets' intuition will please all animal lovers, the bad news is that Britain's pampered cats and dogs are the fattest in Western Europe... [A] survey had asked hundreds of vets in Britain, France, Italy, Holland and Belgium to weigh pets being treated... About 52[%] of Britain's] dogs and 47[%] of its] cats needed treatment for over-eating... [In further *bad news* for animal lovers, 'Taiji village in Japan is the scene of an annual slaughter in which dolphins are casually butchered then their mercury-laden flesh is sold as whale meat.' ● Japan's] whaling fleet returned home yesterday with 77 minke whales caught... for scientific reasons. Japan has hunted whales for research in a government programme that began in 1987, a year after the International Whaling Commission [IWC] banned commercial whaling. - 1996

...Japanese scientific whaling in the Antarctic [has been wou]nd up for another year. You won't have heard much about it but in the five months or so they've been there the Japanese would have killed... m[any]... minke whales. You[certainly] won't have heard much about how they kill those whales... when the harpoon fails. It's all legal of course, done in the name of science. It also gets around the international ban on commercial whaling... [Now, for] the first time[, it is possible]... to see... what is really happening in our southern oceans... [A] British film-maker... has

exposed... just how the Japanese kill minke whales... [and, although the evidence was collected] during a five month voyage with the Japanese whaling fleet... the Japanese whaling authorities... [are] infuriated... “What pictures, specifically, did they not want released?” “Specifically... [anything that came under their definition] of unsightly practices[, such as]... the electrocutions... and any blood-letting... I kept the blood-letting on screen to a minimum but the electrocutions, of course, couldn’t be disguised... [Amongst all this icy] beauty... there’s all this violence and ugliness... I think I was tremendously lucky in that the chap who was ultimately responsible for giving me permission to go hadn’t actually been to the Antarctic himself to see the electrocutions, so, clearly, [the chap] wasn’t in a position to anticipate what might happen.” ...it was privileged access into a foreign world of ritual brutality... [T]here was no problem with filming... [harpooning] from the catcher boats... [A]fter all, everyone knows harpoons loaded with grenades are used to kill whales... The hunters and the hunted, it’s as primal... as it’s ever been. Inside the animal the harpoon’s barbs claw open... its innards... [T]he pain? That we can only speculate on. What we do know is that it is cruelly inefficient. Less than half the whales hit die this way. The rest meet with an additional but quite different form of torture... electric lances are stabbed into the whale... The lances are wired to a generator [that produces] just 220 volts... [O]nly part of [the electric charge] is likely to reach the brain, the rest is either insulated by blubber or conducted away by the sea... [This procedure lasts for] anything up to 30 minutes. “I don’t believe that a normal human being... from any culture... could sit and watch this and not think that it was wrong... Unfortunately, the Japanese conditioning is so powerful... that for some extraordinary reason... the Japanese don’t seem to share the same respect for the life experience of other sentient beings as we do...” ...the Japanese... bluntly maintain to the I[W]C that the way they kill whales is not inhumane, and they back that up with their own research. But scientists here have recently found quite differently. “One would have to say that during the electrocution the animals must be in absolute agony... Only instant death can be humane.” ...For the job to be done properly at sea, thousands, not hundreds of volts, would be necessary, but that... “...would place the lives of the sailors at risk.” ...The Japanese claim there’s been a campaign of misinformation about the electric lance... [O]n average it takes 44 seconds for a whale to die that way... [and they] say no other way of secondary killing is as effective... You may be wondering why they don’t kill the animal instantly with, say, a shot to the head? Well, Japanese science demands that the head be returned undamaged because that’s where the most important [sample – a tiny ear bone – is] found... The Japanese maintain, as always, [that] [the mission is... about establishing the size of the whale populations rather than harvesting whale meat... “...the Japanese and other countries do use the scientific whaling as a cover for a small-scale commercial catch and... there’s really not much question about that...” ...there are other... more sophisticated methods, like DNA analysis, for gathering the same information and more... without having to kill the animals, let alone kill them Japanese-style. [But] in the name of science the... [slaughter, which is clinical] in its efficiency – there is no wastage [–] ...goes on... Every part of the whale is dissected, sorted and processed... [T]he lucrative spin-off from all that research... [is] hundreds of thousands of kilograms of meat and blubber, worth more than a hundred million dollars; most of it [being] destined for Japanese restaurant tables... [Someone] went undercover to find... evidence... [of] whalemeat samples bought in the markets of Japan... The results made *Time* magazine... [Unfortunately, the film-maker] was forced to pay for his conscience. The Japanese Whaling Commission successfully sued him for revealing unsightly pictures in contravention of the filming agreement. [The film-maker] couldn’t afford to contest it. The court also ruled that his film can not be broadcast in Japan.

...In an effort to pass on Japan’s whale meat-eating tradition to a new generation, education authorities in a southern Japanese city said yesterday that whale would be served as part of a school lunch. The... plan to dish up... a special one-day menu for 25,000 elementary and junior high school students... is designed to inculcate a sense of pride in Shimonoseki’s historical role as a major port for Antarctic whaling ships... said a city official who declined to be named... While schoolchildren throughout Japan were regularly served whale meat for lunch up until the late 1950s, the meat was gradually removed from school menus amid criticism against commercial whaling... [But] Shimonoseki is not the only part of Japan to have whale meat served for school lunch. Arikawa, a small town... on Japan’s southern... island of Kyushu, uses whale meat dishes several times a year, local officials said... Japan plans to permit catches of up to 440 minke whales in the fiscal year ending next March. Minkes generally reach about 9m in length... Meat from the slain whales is often sold at fish markets... Norway, has[also] ignored the IWC ban on commercial whaling.

...Norway’s commercial whale hunting season has opened with a quota of 580 minke whales for the 34 boats heading out to the North Atlantic. Last year, a quota of 425 whales had been set, but only 382 were hunted because of bad weather... In 1995, a quota of 232 whales was set but only 217 were killed. Oslo’s decision in 1993 to resume the hunt has been condemned by many countries and organisations. Environmental groups... have also carried out actions in recent years to try to prevent the whalers from carrying out successful hunts... [A] 46-year-old Canadian citizen... [and] Greenpeace co-founder... is wanted in Norway in connection with a December 1992 collision between his Sea Shepherd Conservation Society boat and a whaler during a protest. A Norwegian court sentenced [the Canadian] in absentia to 120 days’ jail. On April 16, the Norwegian Government demanded his extradition from the Netherlands... under an international warrant... The W[WF] and Greenpeace... are meanwhile urging[the US] President... to use diplomacy or trade sanctions to force Norway to comply with the international ban. Norway has proposed opening commercial trade in minke whale meat with Japan, and the countries are seeking to ease international protection for several species.

...THE annual... IWC... meeting in Monaco looks set to be one of the most heated in years, with pro-whaling nations increasingly vocal after years of retreat. Environmentalists say the meeting, which starts [next week], could be the most crucial since the establishment of the Southern Ocean Whale Sanctuary in 1994. Opponents to whaling, such as N[Z, AUS, the US]... Britain and... and Ireland, will be pressing... for the moratorium on commercial whaling to be replaced by a permanent ban. “We believe the practice of killing whales is unjustifiable,” said... [the AUSn Environment Minister. However, many analysts] believe, with whale populations possibly on the rise, the pro-whaling nations will arrive at the IWC with their strongest hand in years... The... IWC chair[person]... said Japan and Norway were expected to argue that whale stocks had been replenished to a level that would support commercial whaling... [B]oth countries used this argument to try to have the 138-member Convention on International Trade in Endangered Species... lift its ban on whale meat trade. While the move won half the CITES votes, it fell short of the necessary two-thirds majority... A whaling report to the A[USn] government... said evidence of a replenishment of whale numbers was “not entirely reliable”. It said there were inaccuracies in the estimates of whale stocks and whale catches and warned of the understating of whale catches by the former Soviet Union, and more recently Norway and Japan. According to figures released last year, Soviet fleets killed 88,888 more whales between 1947 and 1972 than originally reported. The fleet killed 48,000 humpback whales, one of the most endangered species, yet reported a catch of less than 3000. In the case of Norway, the report cited a 1993 example of 3.5 tonnes of whale meat destined for Asia being “disguised and labelled as Norwegian prawns”. The report said between 15,000 and 18,000 whales had been killed legally since the 1986 moratorium, but that the illegal catch[– much like the number of stranded whales that die each year –] “can never be known”. A report by Traffic, which monitors trade in endangered species, found whale meat on sale in 13 Asian cites came from protected species... [■ Yesterday, Iceland] announced it will resume whaling after a break of nearly 10 years... Before the halt, Iceland[, which left the IWC] in 1992... exported 95[%] of its catch to Japan...

A rare sighting of two humpback whales feeding and leaping in the Bay of Islands has excited researchers tracking the slow recovery of the species... [I]t was only the second time in four years... [that the] Project Jonah representative... and... skipper of the... Fullers dolphin observation vessel, the Tutunui... had seen the species in N[Z] waters... Humpbacks growing to 30m were once abundant in N[Z] waters... For the past six years... researchers at the University of Auckland School of Biological Sciences... have been observing the whales congregating and calving in Tongan waters. A whale expert... hoped photographs of the two whales in the Bay of Islands would identify the animals if they turned up in Tongan waters next year... [W]hile populations in migratory habitats along eastern A[US] had increased, the N[Z] and Tongan populations had not... since their protection in 1966... [T]here were suspicions that one of the reasons... was illegal Soviet whaling in Antarctic waters from the

1950s to the 1970s. [□ 'Each humpback whale in Tongan waters is calculated to be worth \$30,000 a year in tourist dollars, or \$1.6 million during its lifetime.'

...[The] Ngai Tahu leader... is fed up with hysteria over whales. [The leader] has no intention of hunting them but is tired of being told [it] cannot by people who... have "almost made them a religion." [The leader] caused a stir last year when [it] called for fur seals to be culled. Now the Treaty of Waitangi Fisheries Commission, which [the leader] heads, is calling a hui of tribes to discuss their rights to whales... The commission's official position is that it opposes large-scale commercial whaling and supports the Southern Ocean whale sanctuary. But it also supports the rights of indigenous people to sustainably use their natural resources, including whales. [The leader] said that sustainability was the key to the issue. While whales were endangered they should not be hunted, but neither should they be protected just because environmentalists wanted them to be. Western lobbyists had an emotional attachment to marine mammals and had successfully forced their views on the rest of the world, [the leader] said. "They... kill[ed] lots of native insects in Auckland when they spray[ed] for the tussock moths, but you don't see anyone protesting about that because it's okay to kill insects." The hysteria of the environmentalists had grown so enormous that people now wanted to hold funerals for whales, [the leader added]. "I've never wanted to hunt seals but I do want them culled in places where they are a nuisance. I bet if the beach at Mission Bay was colonised by seals the vote in Auckland would soon change,"... Sustainable use of whales did not necessarily lead to whale hunting... His tribe had a successful whale watching business at Kaikoura and the bones and teeth of whales stranded on beaches could be used for cultural purposes.

...A 12m Bryde's whale died yesterday after stranding itself at Miranda in the Firth of Thames. Department of Conservation staff inspected the whale, which was lying in over a metre of water, and said it probably died of shock. They planned to haul it to the beach. A D[OC] staff member... said... whales[often] swam into the Hauraki Gulf believing it continued south. Their sonar became confused in the shallow waters and they ran aground. The Hauraki Maori Trust Board said it would make a recommendation on the disposal of the whale. [● Mechanical 'sonar is thought to disorientate whales (and dolphins), making them surface too quickly, creating nitrogen bubbles in their blood stream, similar to the bends in humans'; numerous cases 'of strandings have been linked to naval sonar experiments. Sonar can affect whales for a 1000 sq km – whales are able to stay in touch over such distances.'

... 'An increasing volume of underwater noise is threatening the ability of many sea creatures to find mates, seek food, protect their young and escape their predators, according to a study by Californian researchers. A Natural Resources Defense Council report described the effects of the underwater noise like being "in the middle of an acoustics traffic jam." In deep water, where the sea animals rely on their sense of hearing, the noise is especially harmful. International shipping produces the most underwater noise pollution, but there are few regulations in place to control it. Noise from supertankers and military sonar equipment can scramble the communication signals used by dolphins and whales and cause them to abandon traditional breeding grounds.'

...Scientists from the University of St Andrews in Scotland... [have found that i]nstead of hugging the shoreline of the High Arctic... beluga, or white whale[s]... race... to a deep marine trench to eat polar cod. They use previously unsuspected skills to navigate under ice for thousands of kilometres, finding isolated breathing holes, possibly by faint sounds of water swirling around them. Once at the marine trench, the whales dive up to 550m to catch fish... [By the way,] Maori may be able to take whales for cultural reasons under a plan[proposed by] Britain... Britain's indication was that it would back the limited resumption of commercial whaling in coastal waters by countries such as Japan and Norway, in return for their strict observance of an international ban elsewhere. Indigenous peoples in countries including Russia, Canada and N[Z] would be allowed to take whales for subsistence and cultural reasons under strict quotas. The chair[person] of the Treaty of Waitangi Fisheries Commission... was not available to comment yesterday but has said this year that Maori did not want to hunt whales [- they just]wanted customary rights recognised.

...[93% of NZers] oppose commercial whaling, according to... polls. It is hardly surprising, therefore, that there has been lively debate... [since t]he Treaty of Waitangi Fisheries Commission... organis[ed] a hui... so that iwi c[ould] discuss the rights of indigenous people to use whales. Greenpeace sees no valid case for any resumption of whaling by Maori. The [environmental organisation says the] historical record is clear that Maori did not generally hunt whales. While stranded whales were regarded as precious taonga (gifts) from... [their gods], active Maori participation in whaling [only]began when European whalers involved them in their industry. [Greenpeace's] categorical opposition to commercial whaling of any kind includes the trading of carcasses, blubber and bones from either stranded or hunted whales... While very small-scale use of whales and seals may, arguably, be justified in high Arctic indigenous communities which have always subsisted on them and where the whaling is consistent with the whaling commission's guidelines for aboriginal whaling[, it]... is clear that putting indigenous whaling – which Japan also conveniently argues some coastal communities in Japan are entitled to – on the agenda of the IWC is the thin edge of a wedge to expand Japan's own whaling programme.

...The [IWC] came under fire yesterday from environmentalist organisations for failing to halt commercial whaling by two of its members, Japan and Norway. A joint statement by Greenpeace, the International Fund for Animal Welfare (IFAW) and the... WWF... to the commission's 49th annual meeting said the IWC faced a deteriorating situation. "Whaling is growing rapidly and is out of the IWC's control... Unless firm action is taken to bring the situation under control, unregulated whaling looks set to increase even further." ...Meanwhile, the... week-long[annual IWC] meeting... prepared to debate a contentious proposal to resume whaling on a limited scale for the first time since... 1986... Ireland, which is to chair the commission for the next three years, will propose[the] limited resumption... Though Ireland considers the number of whales being killed as a "major problem," it hopes allowing limited hunting will end abuse in the guise of hunting for research purposes, a concealed form of commercial whaling... Last week Britain said it was prepared to back the limited resumption of commercial whaling... by Japan and Norway...

A proposal to let the U[Ss'] Makah Indians resume whaling after a 70 year break met stiff opposition at [the IWC] conference... yesterday, partly because it affects the needs of other indigenous groups. The joint U[S]-Russian proposal... sought a shared quota of whales for the Inuits of Alaska and the Chukchi of Russia's eastern Siberia out of a stock that roams waters between the two countries. The Makah of Washington state would get four whales annually as part of the deal... The 2000-member Makah tribe, which voluntarily stopped whaling... had sought permission to hunt five grey whales a year... But A[US], Austria and other countries at the conference said the U[S] has failed to prove that the Makah needed the whale meat for food... Opponents... [also] objected to linking the Makah demands to those of the Inuits... and the Chukchi... related tribes that have depended on whales for millennia... [The NZ] delegation, said the Chukchi were among the indigenous groups to fit best the commission requirements, especially during the hard times after the Soviet Union broke up. "The Chukchi are starving," [the delegation's spokesperson] said. By including the Makah in a package deal... "an acceptable proposal has been linked to one that is unacceptable." The U[S] and Russia want the Chukchi to give four grey whales out of their annual quota of 140 to the Makah. In exchange, the Inuits... would give five of their quota of 67 bowhead whales to the Chukchi... [A] long-time member of the commission's scientific committee, said the issue was important because it would set a precedent of aboriginal peoples of two countries sharing one stock of whales... The U[S] opposes commercial whaling, but has pushed hard on behalf of the Makah, which it said were the only tribe to secure the right to hunt whales under an 1855 treaty with the[US] Government... After heated debate, the... proposal was postponed to allow more time to strike a compromise.

...The... IWC... [will end] its annual meeting today with a compromise plan to try to break the deadlock between whalers and their opponents. The plan would allow limited coastal whaling of abundant species but only for local consumption and would ban whaling on the high seas. It would also phase out scientific whaling by Japanese hunters... The response to the compromise proposal has generally been cautious or cool. But its advocates say there must be agreement to bring the whaling nations back under IWC supervision... Despite strong objections from several

government and environmental groups... the IWC approved... the Makah tribe... quota allocation... The controversy pitting aboriginal rights against whales overshadowed the issue[of] whether the IWC can survive an evolution from a regulatory hunting body to a group with a majority of members who think whale-hunting is cruel and unnecessary.

...A Japanese research institute put 298 tonnes of minke whale meat on sale in Tokyo on Friday just as [the IWC] conference... ended... Anti-whaling groups in Japan called the timing insensitive, but officials said it was coincidental.

...The Japanese whaling fleet has left port to conduct its annual slaughter of hundreds of whales in the three-year-old Southern Ocean whale sanctuary... which includes about half of N[Z]'s territorial waters... WWF believed that in recent years the fleet had sailed down the west coast of A[US] rather than through the Tasman Sea but its route this year was unknown. The organisation also had evidence that the fleet's mother ship entered N[Z] waters twice during the... [previous] whaling season to take on supplies to refuel the fleet as well as other Japanese fishing boats in the Southern Ocean. "We believe that N[Z] authorities should not allow it into [their harbours]." - 1997

Japanese plans to slaughter hundreds of minke whales in the Southern Ocean whale sanctuary this summer are in turmoil as the fleet's mother ship... continues to burn in the Coral Sea. A Japanese whaling official said the whale-meat-processing ship could not travel under its own power... [- the] 130m vessel has been drifting for more than four days... - ...and the future of the season's hunt was in jeopardy. "Without the mother ship we cannot conduct such activities," said... [the] head of the Tokyo-based whaling section of the Japan Fisheries Agency. The... Greenpeace vessel Arctic Sunrise found the ship yesterday but its crew signalled by flag that the fire was under control and they were safe. Japan says the Nisshin Maru and its four whalers - one of them on its maiden voyage - are engaged in scientific research. According to... [f]igures from... the I[WC]... in 1996 the "research" made \$[NZ]37 million from meat sales. The Japanese Government subsidises the hunt by \$13.5 million.

...Moves to lift the international ban on commercial whaling are gathering momentum. As Japan and Norway step up their pro-whaling campaign, delegates at the I[WC] annual meeting in Adelaide last week appeared unable to stop them. The Japanese plan to expand their "scientific" whaling to include two new species, Bryde's and sperm whales, in defiance of a whaling commission resolution, while Norway plans to kill 655 minke this year under its official objection to the ban. The other major event... was the defeat of a plan for a whale sanctuary in the South Pacific after N[Z and AUS] failed to get 75[%] of the eligible 35 votes. Its supporters... vowed to press ahead with the plan at the[next] meeting...

Pacific Island countries could follow French Polynesia's example... if a bid for a South Pacific [whale] sanctuary fails, says[NZ's] Conservation Minister... N[Z and AUS] yesterday welcomed French Polynesia's announcement that it would turn its 5 million sq km exclusive economic zone into a sanctuary for whales and other marine mammals... French Polynesia, which is not an I[WC] member, supported the... bid for a South Pacific sanctuary... [at the] last... commission meeting[- when 18]... nations supported it while 11, including six small Caribbean island states, opposed it.

...[NZ's PM] is appalled by the admissions of a senior Japanese fisheries official that Japan has been bribing poorer countries to help overturn a global moratorium against commercial whaling... At the last annual IWC meeting, six Caribbean countries helped Japan defeat a joint N[Z-AUS]n proposal for a South Pacific whale sanctuary... These countries appeared to have no direct interest in whaling, but had their votes bought... "When put alongside Japan's long-standing but spurious assertion that it is taking large numbers of whales for purely 'scientific' and 'research' purposes, this confirmation of Japan's tactics shows the desperate lengths it will go in order to maintain whaling..." [the PM] said.

...The largest animal in the world sank into the icy abyss, a harpoon in her heart. [The Japanese]... gunner, watched from the prow of the whaling boat rolling in the Antarctic swell as the 28m blue whale descended, taking with it all the rope [the gunner] had. Unlike many other whales, the blue sinks when it dies and its immense weight tested the rope... "I thought we were going to lose it," [the gunner] said, recalling his proudest moment. The whale was raised and harvested for its flesh, oil and wax. A gunner for 44 years, [the gunner] has killed 3700 whales, including 20 blues, of which only a few thousand remain of an original population of more than 250,000... It is impossible to tell, from a few sightings or catches, how many whales lie beneath the ocean. The IWC's scientific committee reckons there are between 510,000 and 1.1 million minke in the southern hemisphere... It guesses there are another 150,000 in the North Atlantic, and 25,000 in the North Pacific. The most populous great whale is the sperm, which numbers two million. The moratorium means many whale populations are growing strongly. US scientists believe the number of humpback whales in the North Atlantic has doubled since the 1980s to 10,000, with the population growing at 7[%] a year. The grey whale population is thought to have... grow[n]... to 26,000 in the eastern North Pacific. In 1994, the US removed the grey whale from its endangered species list. Japan insists some whales are so abundant it can take a limited number each year... Using conservative estimates... the IWC's scientific committee... reckons that Japan could take up to 2000 minke a year. Yet the 40 members of the IWC have repeatedly rejected their scientists' advice. With public opinion so opposed to commercial whaling, it is inconceivable the Governments will vote for its resumption... In the face of the Japanese arguments, a former US whaling commissioner said that because [Western Governments] can no longer object on conservation grounds, they will object on ethical grounds. And that's what really angers the Japanese. In the West, whales are regarded as intelligent, beautiful, almost mystical animals. To the Japanese, whales are food... "The West is suffering from double standards. Wildlife is for them to see and admire, and you should only eat animals such as cows and pigs that are reared. But A[US] kills three to four million kangaroos a year, and in the US they catch 5.6 million wild deer..." [the] deputy director of the far-seas fisheries at the Japanese Fisheries Agency said... [The deputy director] asks how Britons would react if Hindus tried to ban the eating of the cows they consider holy. "The West is trying to force their values on us..."

...Having caught their first whale in more than 70 years, Makah Indians are searching the collective memory for ways to cook the monster. But hundreds of tribal members who live on the Olympic Peninsula in Washington State have already sampled a bonus from their controversial catch: blubber. The traditional native American treat is served raw in bite-sized chunks and looked like chewing gum... "I've been chewing this for four hours," said[a] whaler... Their first assault on the whale was made with two harpoons hurled into its back. Contemporary technology stole into the scene as well... [when] a hunter with a high-velocity rifle fired into the mammal. The... grey whale, thought to be three years old, took about 10 minutes to die... The first choice cut from the front of the fin went to [the Indian] who threw the first harpoon. It took the hunters an hour to drag the carcass on to the beach... Over the next three days the meat will be cured as tribes from all over the U[S] and Canada meet for a pow-wow, a traditional festive gathering... The meat can be smoked, barbecued, fried or grilled... "We're going to try it all ways," said [the whaler's mother].

... 'In the Middle Ages whale meat, under the name of *crapois* or Lenten bacon, was sold on meatless days and formed the staple diet of the poor. As whale meat can be kept for quite a long time without going bad, sailors used to store it, to cook as required. However, the flesh is most indigestible and remains tough even after 24 hours of cooking. Whale meat was not generally esteemed by our grandfathers, but they set some store by the tongue of the animal, usually salted. They also much appreciated whale fat which they ate "during Lent, with peas". From the gastronomical point of view, only whale calves are of any interest. The flesh of these is of a reddish colour and somewhat similar to beef in appearance, but not in taste.' Whale meat tastes 'like yellowfin tuna.'

...The not so free willy [The genitalia of a guy whale] has sold for a whopping \$3400. The 1.6m preserved penis - from an unlucky sperm whale - was snapped up by a private collector at a joint auction by Auckland... and Sydney auction house[s]... Whale penises were often used as... wet-weather coats by whalers in the nineteenth century... "The sailor would remove the inside of the penis and cut arm and face holes out of the skin to produce a... top that would last for years[," the]... auction director... said... The whale penis[which]... originally came from western A[US,] ...was one of the more unusual items auctioned off... Other bizarre items up for grabs included inner ear bones from whales... and... whale teeth etched with saucy Victorian nudes...

Whale watching has grown into a \$US1 billion... a year industry... A study from the Cape Cod-based International Fund for Animal Welfare reports that the money whale watching brought in... [has doubled since 1994. Today,] the industry flourished in some 500 communities in at least 87 countries, including some with long histories of hunting whales, compared with only 31 in 1991... Among continents, Africa had the single largest jump, from 46,000 whale watchers in 1991 to more than 1.5 million... The U[S] accounted for almost half of [last year's] 9 million whale watchers...

Scientists and environmentalists were yesterday reassessing plans to free a rare right whale... off the U[S] Cape Cod coast after earlier attempts failed. The North Atlantic right whale, one of 100 to 500 of the endangered species remaining, has green fishing line deeply embedded in its upper jaw. The resulting wound is badly infected and the whale is likely to die unless the line can be removed or falls out on its own.

...A distressed whale entangled in a fishing net in the Great A[US]n Bight has died. Spotter planes reported on Saturday that the whale, which had not been seen for two days, was trying to fend off two marauding sharks. "...the spotter plane went out [again]... When it got back it reported that the whale was dead on its side and sharks were feeding on it." Poor weather in the past week had prevented any attempts to help the whale... The Whale and Dolphin Conservation Society has blamed shark fishing in the area, which is a marine reserve, for the whale's entanglement... [A society spokesperson] said the park was supposed to protect the endangered Southern Right whales that calve and breed at the... Bight...

A[US]n tourism authorities are considering a law change "to protect people too stupid to protect themselves" after sightseers clambered on a floating dead... southern right whale... and patted Great White sharks eating the carcass... The tourists' actions were caught on film this week...
