...Tainui's investment wing expects to reap long-term profits from the \$7 million it is paying for naming rights to Hamilton's new stadium, but others in the tribe are less sure. MDC Investments Holdings Ltd said yesterday that it would pay the money over 10 years for the planned 30,000-seat venue... MDC[']s special works manager... said the deal would boost the tribe's overseas profile, give it a free corporate box[(normally worth a 'minimum of \$195/head for test matches')] and ensure that 20[%] of stadium staff were Tainui... The... stadium will employ [5 or 6] permanent staff and 60 or 70 for major events... [The deal] would also give Tainui free use of the venue four times a year for lucrative events that might include... Maori All Blacks games. [The manager] said the tribe was confident its people backed the scheme. But most Tainui people the N[Z] *Herald* spoke to on the streets of Hamilton yesterday said they opposed the deal. They felt the money would be better spent on housing or university scholarships. Previous Tainui investments... [such as] a plush resort in Pauanui, the Tainui Novotel hotel in Hamilton and the city's planned Riverside Casino... have also been controversial... The chief executive officer of the stadium trust... said the Tainui cash meant that just \$15.5 million was still needed for the \$43.5 million venue... Building would start in November and... the... stadium was expected to last at least 50 years... The naming deal is believed to be the nation's biggest for a stadium. Computer firm Aoraki Corporation paid an estimated \$4 million to name Jade Stadium...

CHRISTCHURCH[City's] manager... has won the backing of the Christchurch council in the wake of a furore over his claim that the city has been made ready for Christ's second coming. [The manager], a fundamentalist Christian, said in a paper written for fellow fundamentalists that the Lord wanted to move "very soon" on the city and projects such as the WestpacTrust Centre, Cathedral Square and Jade Stadium were part of His plan. After a meeting yesterday, [a] councillor... said the council had confidence in [the manager]'s abilities and... noted that it was the councillors who initiated the building of the city's new facilities "for the benefit of all the people in Christchurch."

...In days past, communities used to compete to erect the biggest and grandest war memorial. These days we war over stadiums... Predictably enough, Manukau City's latest plan for a... indoor-outdoor sports and cultural complex has sparked a round of fear and loathing from the rest of the region. It's not that people necessarily begrudge Manukau its dream of a new... arena... it's just that any new facility poses a commercial threat to existing – or planned – ones elsewhere. What concentrates the heat in this case is that the South Auckland proposal is a multipurpose bitser... The history of multipurpose anything is so studded with failure, both here and abroad, that you must wonder why local bodies continue to waste public money on them. I guess it's a case of better a mediocre hybrid concert hall/opera house/convention centre/rugby field that you can afford than nothing. Before Manukau becomes a real threat to other venues, of course, its promoters have to come up with the little matter of \$37.6 m...

Big-stadium food and drink are the pits... Everywhere, stadium food and drink are expensive. Generally... food is cold when supposed to be hot, and vice versa. And always bad for you... My first time at a U[S] baseball game in 1994 – ...at brewer-sponsored Anhauser-Busch Stadium – I was keen to try the sponsor's product, but was seated 50 seats from an aisle. The bloke in the next seat introduced us to the local custom. First, grab the attention of the aisle-moving busboy whose product you want. Second, raise the number of fingers required to indicate the amount of product you want. Third, use both hands to flash the size of the bill you're paying with. So we waved wildly at the beer carrier, flash[ing] him... two... high-fives. Then we gave \$US10 to the bloke in the seat to the left and said goodbye to it, expecting to get nothing more than a story to tell the folks back home. [But the bloke] passed it to his left – and so on, 48 times. Back came two beers and two crumpled \$1 bills stuffed between the plastic cups in a two-beer holder. Shame about the beer. Despite its lack of head, stadium temperature, poor taste and price, we were impressed. Our adviser could see we weren't used to this behaviour and we told him that, in N[Z], there was little likelihood of the cash making it to the end of the row. Should such an unlikely event occur there was absolutely no chance of the beer making it back... Do you like sport? Then get used to cold, fattening food and warm, flat beer, no hot drinks on offer. Or get down to your local club ground. The Mangere East Hawks win my prize of [this] season... so far. Hot meat pies that live up to the description and large mugs of steaming tea and coffee, \$1.50 and \$1 respectively. It takes the same amount of time to prepare good food as it does bad. How come the big-stadium guys can't serve stuff they would eat and drink themselves? [Speaking of big-stadiums, the 'Seattle "King Dome" has been demolished – even though the county still owed over \$US200 million on the 24-year-old' facility.]

...The famous Murrayfield roar, dating back to when 90,000 fans used to pack the old terraces, is not what it used to be. Although Scotland's [recent] game against South Africa attracted 60,000, the Scottish Rugby Union saw fit to augment the crowd noise with taped cheering... [In related news, South Africa's 1995] World Cup hero... announced his retirement from rugby yesterday, after suffering a serious knee injury playing for Leicester last season. [The No 10] guaranteed himself rugby immortality with his extra-time drop goal against the All Blacks [in the final]...

FRESH from a 14-try flogging of Italy, [the All Black No 14] claims the 1995 All Blacks were a better side than the current... [side and] remain the best team of all time. "I don't think any team is going to play rugby like that again... In 1995 we attacked from everywhere. We had weapons everywhere." ...[the No 14] dedicated his record-breaking try to his father Bill who died last November... [The No 14] said the try that put him ahead... as the leading [All Black] try-scorer in tests was made more special with his mum... among the 22,000 spectators in the crowd... [Regarding his playing future, the No 14 said:] "It's a year by year thing. I honestly don't know what I'm going to be doing next year... If I'm playing rugby it will be [in NZ]. I'm not going to play rugby anywhere else in the world. I won't." ...[the No 14] plans to holiday with h[is mum] in Europe for three weeks... before a week in America and a week in Fiji with his girlfriend... In Fiji [the No 14] will contemplate his future.

...WHEN Fiji's NZ-born coach – soon to become the Italian coach – wanted to talk to [a couple of his top players, it] had to telephone a police officer on the tiny Pacific island and persuade him to cycle across half-inhabited terrain with a message. "They got through a lot of bicycle parts, those police... It's a good job they love their rugby." It's a good job coaches like [him], and his players, love their rugby too because they are not doing it for the money... Fiji rugby's budget [is] \$225,000 – not even enough to cover travel expenses. Fiji player payments range from \$2500 for rookies to \$5000 for experienced players and \$7000 for stars... Compare that with... [NZ's players.] No bikes for them. They drive... Landrovers and BMWs and are paid between \$180,000 and \$400,000... [By the way, next season the NPC provinces can buy a maximum five players... First division players carry a \$20,000 price tag. Other transfer fee costs are \$30,000 for a Super 12 player, \$15,000 for a second division player and \$10,000 for a third division player. All Blacks are split into four categories – \$125,000 for an All Blacks star, \$75,000 for established, \$50,000 for current and \$40,000 for... former All Blacks... NZ U-21 and NZ Academy players cost \$20,000, NZ U-19 players... \$15,000 and NZ Secondary Schools players... \$10,000.

...Kelston's dream of defending its world secondary schools rugby championship title has been shattered with news that the tournament has been cancelled. Kelston Boys High won the inaugural tournament in Zimbabwe... and was preparing to defend the title in Cape Town... But a lack of sponsorship has meant that the tournament has been cancelled... Kelston's director of sport... says the tournament was meant to be held every two years... "We started preparing for it last year. The boys worked hard all over the summer and it is very disappointing that it is not going ahead..." N[Z] teams win the right to compete in the world tournament if they win the national secondary school championships... Despite its world cup disappointment, Kelston's first XV may still get to see the sights of South Africa. The team is planning an 18-day tour around Cape Town... The side will play at least four games against various high schools and development squads. Unfortunately the cost of... the team touring South Africa is substantially more than the proposed world cup tour... The team needs to raise \$94,000. Each of the players in the 23 member squad has to pay \$1900 and the rest will hopefully be found through fundraising. [The director] says... local businesses have been very generous...

A Tongan college, rebuilt by N[Z] donations, has been destroyed by students from a rival school for a second time. After a fierce rugby match between... state school... Tonga College... and church school... Tupou College, two Tonga College students, including the captain of the first XV team, were set upon by a mob of students from Tupou College. Buildings... were trashed in the early morning raid. Estimates of damage range from \$500,000 to \$2 million... With the groups involved as large as 200 students... the police force was helpless to do anything... "In the past there have been one-on-one fisticuffs but now they just aim to trash each other's gear... And there will be retaliation for this. Someone will be killed."

...BEFORE considering rugby tests, you need rugby exams – this is the vision of [an] All Black great... who wants the national game to become a school subject. "Rugby is an industry... We need to change our mindset that it's just a sport." The former Auckland winger and Manu Samoa coach has been asked by the Auckland Rugby Football Union to come up with ideas to rescue the game from decline – a problem felt nationwide... [with] players deserting rugby between primary and secondary school and again after leaving school... Several Auckland schools were especially "at risk" of declining numbers – with less than 20% of [teenage boys playing rugby. The former All Black] said his former school Mt Albert Grammar, which ran 18 teams in the 1960s, had only nine this year. It was vital to have qualified people teaching students, [the former All Black] said. "Many school teachers are willing volunteers but many of them haven't had [enough] background in the game to do it effectively so the rugby union needs to put better coaching resources into the schools... The way they can do that is to create situations where club people can come into schools and assist with the coaching. They can come up with funding to pay designated people in schools to run the rugby programme. We can create better accessibility to our top players... we can have them training at the school and going along to prize givings." Rugby should also be considered as a career option by [gals, said the former All Black], who believed that... [gal] rugby would eventually turn professional [in NZ].

...the Black Ferns coach... emphasised forward power in naming his side to play the first test against England in Rotorua today. [The coach] expects the improving English side to attack the Black Ferns at the set pieces and in the tight, in a repeat of the forward battle between the two sides in last year's Canada Cup final in Winnipeg, which N[Z] eventually won 32-12... [The coach] said his team were feeling the pressure going into the two-test series against England, who swept aside A[US] 3-0 in a test-series en route to N[Z]. "Their players are semi-professional and they have two fully professional coaches... What they don't have is the black jersey of the Black Ferns' history and tradition to motivate them." The N[Z]ers have not lost an international match since their World Cup semifinal defeat to the U[S] in 1991, going an incredible 26 matches without defeat. [The team's captain... acknowledged the record could be used for motivation heading into the clash. "No one wants to be a member of the first Black Ferns team to lose since 1991,"... The second test will be held at North Harbour Stadium next Saturday...

The Black Ferns' inspirational 27-match... winning run was ended by a strong England side at North Harbour Stadium when they lost the second test after winning the first. The N[Z]ers, with only 10 days' preparation behind them and limited club rugby, toughed it out against an internationally hardened England side. An injection of \$1 million and a sound build-up against A[US] and Northern Hemisphere teams gave England a decided advantage. With her team trailing 15-17 with five minutes left to play on Saturday, [an English player spoiled NZ]'s record with a 50m runaway try to seal victory... Both teams scored three tries, but it was N[Z]'s poor goalkicking that proved the difference... Communications problems, which N[Z]'s coach... targeted in the build-up to the test, continued to plague the side, with frequent lineout errors and missed calls.

...England's record-breaking rugby win over N[Z]'s Black Ferns was achieved in part using underhand tactics at North Harbour Stadium. The... English management team had an unexpected helping hand as they stumbled on the radio frequency that the N[Z] coach... and his assistant were using to field calls from the grandstand to the sideline, and tuned in for the entire match. [The NZ coach] only found out that England were eavesdropping on the N[Z] tactical conversations at the after-match function when the English physiotherapist confessed to [a former Black Ferns] captain... "They knew what we were doing the whole match... They heard my calls about where the holes in their defence were. I wondered why those gaps suddenly closed. It was a kick in the guts. The girls sweated their brains out there. They gave it their all and I feel we lost it for them off the field." The winning try... was brought into question, the English well aware that the N[Z] side were worn out, courtesy of [the information the coach thought it] was telling just his staff... [In... the final minutes... "I said, 'We've lost our spark, we have to dig deep,' and on hearing that, England officials said after the game that was when they... started to throw absolutely everything at us,"... [The coach] is sure that without the inside knowledge England would not have [won]... While the loss reduced some of the team to tears, [the coach] is pleased they were beaten now rather than at [the]... World Cup... "I said to the girls, take a big, long whiff of that because that's what defeat smells like."

...[NZ] will be the first television audience in the world to see the [gals'] rugby World Cup final this weekend – provided the Gal Blacks are in it. The game, to be played in Amsterdam early Sunday morning (NZ time) won't be shown live anywhere around the globe. But TVNZ has arranged for a tape to be couriered to London where a local team will add commentary and graphics before it is shown on Sunday Grandstand...

[The Gal Blacks], who won their first World Cup... yesterday, may in the future be paid... However... any money paid would not match the lucrative [All Black] contracts, but be designed to help cover costs... The [team (who prefer to be known as the *Black Ferns*) has] been a class above the other teams competing – none have got closer than 33 points – and finished the two-week tournament by beating the U[S] 46-12 in the final. It was a personal victory for [one] wing... who scored five tries and is now averaging more than three a game. The win ended years of work for the players and their coach... and avenged the 1991 semifinal defeat to the U[S] in the only other World Cup [NZ gals have contested. There was another gals' World Cup in 1994 – 'won by England' – but this year's was the 'first official' gals' rugby World Cup].

...A superb defensive display ensured back-to-back Hong Kong [gals]'... rugby tournament titles for N[Z]. The NZ[ers], unbeaten since they made their sevens debut in 1997, beat the U[S] 22-0 in a rugged final at the Hong Kong Stadium... ■... Hong Kong's annual rugby sevens tournament... is likely to continue despite the loss of the tournament's head sponsor, the collapsed Peregrine group. It's bad news for the organisers regardless: they'll have to dump \$HK6 million... worth of T-shirts, umbrellas, teaspoons, caps and bags stamped with the words 'Peregrine Sevens'.

...An emotional [All Black No 11] dedicated his three-try effort to [his] injured captain... as [the captain led N[Z] to their first World Cup sevens rugby win, in Mar del Plata, Argentina, yesterday. [The All Black] emerged from a quiet first two days to spur N[Z] to a 31-12 win over a much-improved... A[US –] who upset reigning champions Fiji 22-14 in the semifinals... [–] in the final... N[Z] stormed through finals day without the [team's inspirational captain – who]... broke his right leg in the team's final pool game against England [(the winners of the first Sevens World Cup) Jon Sunday and left the team yesterday morning to fly to N[Z] for surgery –] ...to beat Samoa 45-7 in the quarters then book their final place with a 31-7 win over Argentina, supported by a parochial home crowd... [The No 11], making a rare sevens appearance with Super 12 and All Black commitments taking up his time, was moved to tears after the match. His thoughts were with [the captain] and his team-mates afterwards and [the No 11] typically refused to take credit for the win... The entire day was emotion-charged for the team as they had to farewell [their captain] before leaving for the ground. [The captain], who turns 36 next month, was playing in his last World Cup and has been the driving force behind N[Z] sevens success throughout the 1990s... N[Z]'s next task is the World Series round... in a fortnight.

...N[Z] barrelled Wales 29-0 in the quarterfinals of the Cardiff sevens rugby tournament early this morning to retain their world series crown. N[Z] only had to win to make it impossible for nearest rivals A[US] to catch them on the world series points table... Victory sealed a quest begun by [the] coach... and his [guys] in black last November in Durban, South Africa, where they won the opening of nine tournaments in the series. This morning's victory was marred by personal tragedy for [the coach], whose mother, Adeline, died last Thursday. [The coach] said yesterday that his first thought was to return home rather than stay on... Last year, [the coach] was in South America with the... team when his father, Gordon, died.

...More years ago that many of us would probably care to remember, Rob Muldoon claimed that most people wouldn't be capable of recognising a deficit if they tripped over one. The same dictum appears to be at work when it comes to the magnificent win by the N[Z] sevens team in Cardiff. Some people seem to be incapable of recognising it for the exceptional achievement that it really was. Believe it or not, there have been complaints that this was not the real thing. Sevens, the theory seems to run, is a bit casual and knockabout; backyard stuff, not to be taken that seriously. Some people are, of course, never satisfied. This, they say, is a very poor substitute for the big one and why can't we seem to win that anymore? It's just not good enough to be crowing about winning a tin-pot tournament like this one. Well, the truth is, it is good enough. It's more than that. It's absolutely outstanding. And it was achieved not with a team bolstered by the presence of superstars, but by an extraordinarily focussed bunch of young players on the way up and coached by a shrewd, creative [person] whose name has now become virtually synonymous with that of sevens rugby. It is churlish to under-rate the substance of what [the coach] and his charges have been able to do two years in a row. Notwithstanding some rifts in the Fijian camp, the N[Z]ers have taken the world title very much on merit. Both times. They saw off the Fijians and now they have seen off the A[US]ns who have emerged, perhaps inevitably, as the main challengers. The most encouraging thing, however, is that in spite of all the resources, the technical preparation and the tactical complexity the A[US]ns are increasingly applying to sevens, they are still regularly beaten by sheer, natural running talent. And let us sing hallelujah for that. Sevens still provides enough space for creative runners to embarrass the patterned Brumbies-style with its familiar, patient build-up to the final strike. It takes a lot of ability and exceptional nerve to be able to overcome this kind of calculated onslaught. It takes real defensive grunt, as well as the ability to cut loose, but that is what our N[Z] team have managed to combine and they have done it with style and grace. For the past two years, the... [NZers] have been able to stalk the A[US]ns around the field until their composure snaps and then take off with sidestep, swerve or just a shimmy or two and run them ragged. Long may this golden run continue. Realistically, however, we have to accept that the competition will catch up sooner or later. Will it be the A[US]ns who, by the application of advanced physics and bio-dynamics, find a failsafe way of shutting down the N[Z] tearaways? Please no, not that. Will it be because the Fijians finally click? Somehow, it wouldn't seem so bad being beaten by the Fijians. Theirs is the purest expression of instinctive rugby that there is, and the world of sevens needs them to produce a reminder of what a joyous sight a game of rugby can often be. But for the time being we've got the title and we should enjoy it while it lasts. It might not be the World Cup, but it sure is the next best thing.

...N[Z] is pushing for prizemoney at next year's Rugby World Cup, with the top eight teams rewarded for their efforts. The first three... were run under rugby's old amateur rules[, although the]... last World Cup in South Africa in 1995 made a profit of more than \$45m... [The NZRFU] had not worked on any finer details, but suggested a ballpark figure of \$US3m wouldn't be unreasonable with the winner collecting \$US1m. The IRB has closely guarded the World Cup, but slowly there are signs of some commercial realism entering its thinking... [● The Welsh] captain... could not believe [it] was holding the Deaf World Rugby Cup aloft after his side beat N[Z] 28-14 in the final at Eden Park on Saturday. The two sides had previously met only three times... N[Z] won each of the internationals by big margins. The N[Z]ers were favoured to win but a loss to Wales in the opening round of the competition was a warning... the [Welsh] had to be taken seriously. The final was an absorbing contest dominated territorially by the Welsh but with the result in doubt until a minute from fulltime... [Although their captain] was the outstanding player in the games, Wales' right wing... looked to have extraordinary talent. The profoundly deaf 21-year-old will play for Bath in the English premier competition in the coming season. N[Z] created their own problems by failing to shore up their midfield defence and making errors when tries beckoned. Three times players got clear but were pulled back for forward passes. One such occasion was a last-ditch effort that would have tied the scores.

...Deaf rugby is on the map. That's the call from [the] Deaf Rugby World Championships organiser... after the staging of the inaugural event in Auckland. "It was a great first step for deaf rugby. We're now probably where [gals'] rugby was 10 years ago,"... A crowd of around 2000 saw Wales upset pre-tournament predictions by defeating N[Z] 28-14 in the final of the XV's competition... It was probably the first win by a Welsh side over N[Z] in senior competition since Llanelli lowered the All Blacks 9-3 in 1972. The Deaf Blacks beat A[US] 23-13 at College Rifles Park to go with their 19-17 victory in the Cochlear Cup, held in A[US] before the world championships. N[Z] was disappointing in the sevens event held at Waitemata Park, suffering losses to A[US] and Japan before succumbing to Wales 53-5 in the playoff for third and fourth.

...[a 26-strong NZ] under-19 squad leave tomorrow for Wales, where they will be this country's first side to compete in what is called the World Junior Championship. The 30-year tournament has been organised by the French union in the past, but has now... come under the wing of the [IRB], leading to the N[Z] side's involvement... There are 16 teams in the main draw... Ireland[are the defending champions]...

The NZ] under-19 rugby team showed profound spirit and discipline in beating Ireland 21-15 to book a place in the final of the Junior World Cup... [The NZers, who scored three tries themselves,] never had their line threatened... but... were battered by a staggering penalty count from the...

[South African] referee... The young Springboks drew 10-10 with Wales in their semifinal, but Wales sneaked through on a countback... N[Z] will play Wales in the final in front of more than 20,000 Welsh fans at Llanelli on Monday (NZ time).

...N[Z]'s under-19 side crushed hosts Wales... 25-0... to win the Junior World Cup... final... The teenage All Blacks scored four tries in an utterly clinical performance to win the 30-year-old tournament at their first attempt... [T]he former Waikato [Chiefs] coach who was handed the under-19 job after the disappointment of missing out on a Super 12 appointment this season, said: "We hope this win will prove a boost for N[Z] rugby. We've had a few downers over the last six months or so and hopefully we have helped change that situation... Immediately before the game I got the [team] together in the changing sheds... and I told them I believed in them and so did three million people back in N[Z]. I talked to them about attack, which is our natural game, and self-belief. I felt that self-belief was essential today in front of all these Welsh supporters, when some of our players had hardly been away from home much before this tournament... The boys performed a haka before kickoff but you couldn't hear them because they were drowned out by the Welsh singing." ...Meanwhile... South Africa moved a step closer to a special place in rugby history when they beat a spirited Scotland team 35-10 yesterday for their 16th consecutive test victory... The South Africans are now within one victory of equalling N[Z]'s record of 17 international wins in a row set between 1966 and 1970. They can equal the world record with victory over Ireland at Dublin this weekend and have a chance to beat it [the following weekend] when they take on England at Twickenham.

...England deprived... [the Springboks] of a unique place in history yesterday when they snatched a shock 13-7 victory... The [Springboks] were... looking for a world record of 18 consecutive test victories... [Incidentally, a] few weeks after its apparel contract to supply the All Blacks expired, clothing company Canterbury International has picked up a five-year licence and sponsorship agreement with the A[RU] and the Wallabies. The A[US]n contract with the LWR Industries unit will start on 1 July, 2000... The move returns Canterbury to the top echelon of international rugby...

The Canterbury clothing company has laid a complaint with the Commerce Commission in the latest round of a high-stakes row over replica All Black jerseys. Adidas, the official supplier of All Black jerseys, has given sports stores until next Monday to remove Canterbury's unofficial Invincibles jerseys from their shelves. Retailers who refused would no longer be supplied with adidas-licensed products, the company said yesterday. Canterbury's chief executive... said its lawyers believed adidas had breached the Fair Trading Act and the Commerce Act, which prohibit restrictive trade practices. "It's a pretty aggressive statement by them... It's hard to know where it will stop, but I think most retailers are thinking people and will say 'should adidas tell us what to do in our stores?'" ...several retailers had told him that they were unhappy with the adidas ultimatum and would be backing Canterbury. Adidas' managing director... said the company was simply talking to its distributors, just as it would in the normal course of business. A company found guilty of anti-competitive behaviour can be fined up to \$10 million. But even the lawyers cannot make up their minds about who is in the right... [A]n Auckland lawyer specialising in the Commerce Act, thinks adidas is within its rights in making its demands to retailers. "All we have in front of us is a supplier refusing to continue to supply certain customers and, generally, that is the prerogative of the supplier." Adidas could be accused of being anti-competitive only if it set up an ongoing deal with retailers to sell its products exclusively... But a [nother law firm's] senior competition partner... said Canterbury had a good case to argue... Meanwhile, a N[ZRFU] spokesperson... said the union was reluctant to become involved in what it saw as a commercial matter between two competing companies. But... the union was still pursuing its own intellectual property case against Canterbury... [which] is expected before the courts again early next year.

...The All Blacks have run into problems with their \$180 million sponsor, adidas. The team will be warned today that they cannot afford further sponsorship breaches with adidas after criticism of the new test ball and several clothing slip-ups... "I will be talking to the whole team about the issue of all our equipment," ...said... [t]he new All Black manager... "Brand loyalty with adidas is a significant part of being an All Black."

...*Programming the All Blacks* The All Blacks file into their team room, plug in their laptop computers and call up the data on their international match the day before. [One player] surveys his tackle count, continuity and turnover statistics, and [another] has a look at his linebreaks, passing success and positional play. Unsure about the backline defensive screen in several areas of the field, [a third player] ditches the numerical data and calls up the slow-motion replays. The visual evidence backs up what the numbers have shown. After a solid spell scrutinising their individual contributions to the team effort, the All Blacks are ready for the arrival of [their coach for]... a debrief on the test and discussions about their next assignment. They can talk turkey with some hard evidence. Fictional? Certainly at the moment, but the time may not be far away when rugby players can analyse their own work, rather than waiting for coaching staff to dissect games, piece together the figures and deliver the verdicts. The All Black selectors are already using computer technology to help them to analyse form. As [one] selector... points out: "No one can hide. The computer program allows us to track any individual throughout any game. Then it is a matter of collating the statistics. It allows us to look at players and get the most accurate comparisons we can on a variety of skills. It is a marvellous tool to help us..."

...Rugby historians may need the photofinish camera equipment from Ellerslie Racecourse tonight to judge the 1000th All Black. [A Waikato f]lanker... in the starting 15, will be the 999th to wear the famous black jersey with the silver fern – unless [the flanker] suffers the misfortune of 55 players who were chosen for the All Blacks but never took the field. The magic milestone, the 1000th, should fall to one of the three uncapped reserves... They can be called on as replacements during tonight's test against Samoa in Albany. The trio will be on alert throughout the match in case of a temporary bloodbin substitution or an injury to one of their colleagues. In recent years it has been a pattern for the All Black coaching staff to send several substitutes on at the same time late in a game. If that scheme is repeated it may take a video replay or some other photographic evidence to identify which player crosses the touchline first to become the 1000th All Black. While those scenarios may be played out in the minds of the crowd or reserves during the test, the coaching staff might keep the suspense until next week's test against Argentina... If the 1000th landmark happens tonight there will be no special presentation to the player because the [NZRFU] wants to honour the black jersey rather than any individuals. There will be some promotional celebrations later in the season and special reunions of past All Blacks and councillors during the test against France in Wellington this month. A [n] author... will unveil a book this year which celebrates those who have played for N[Z].

...a huge prop last night became the 1000th All Black. [It] reached the milestone in last night's 50-6 victory over Manu Samoa at North Harbour Stadium. [The huge prop] took the field in the 58th minute, r[unning]... on moments before [a back] but will be classified as the 1000th.

...["Disgrace" is the designation that] has followed... a... former All Black... [during the] years since h[is]... exile from the 1972 tour of Britain. [Yet, i]f anything, the disgrace has been the apathy of N[Z]ers, and the N[ZRFU] for not putting this case into perspective, [and for not] offering to repair the damage [the former All Black] has suffered. The captain on that trip... has often regretted not backing [his team-mate] against the demands of the English Rugby Union and then the decision of [the All Black] tour manager... who had the huge prop banished. [The captain] felt that if the team had not been caught off guard by the decision and had supported [the prop], an appropriate compromise could have been found. Instead, shortly before Christmas 1972, a confused [All Black] left for home alone, swapped planes in Singapore and made his life in the A[US]n outback. Compare [the prop with a] young Wellington loose forward... Both, in the early hours of the morning, celebrating after an All Black test win, punched people. [The prop] was hauled off a team bus, banished from the tour and sent home alone. [The loose forward] was talked to, counselled, guided by the All Black management and then taken with the squad on the trip to South Africa for the opening Tri-Nations test. One was hung out to dry, the other told to chill out. Different strokes for different folks, and certainly an indication of the different times we live in. We have been hearing plenty from the NZRFU lately about the intellectual property of its All Black brand and how it wants to increase its revenue from overseas gate-takings. They are arguments based on the heritage, tradition and success of the All Blacks, the 1000 [athletes]... who have been "[guys] in black." The damage has been done and it appears [the prop] might never have felt comfortable even if [it] had been given an NZRFU apology and offered the chance to

settle back in N[Z. The prop] might always have been trouble waiting to explode, but that was all the more reason to offer assistance. When [the prop] made the headlines again this year for all the wrong reasons... [- the prop] was forced to surface last month to answer a summons to appear as a coroner's witness into the death of a young Aborigine in Tennant Creek[(the prop was subsequently 'cleared of any wrongdoing') -] ...did anyone at the NZRFU consider [the prop] was still part of the family, part of the legacy which made the All Blacks so respected? Did anyone at the Huddart Parker HQ in Wellington (the union is thinking of moving because the building cannot accommodate the growing staff list) think about contacting [the prop], giving him a phone call to see if there was anything the NZRFU could do to... make amends and offer... help? It would have been appropriate if previous NZRFU administrators had emulated attempts like those of [a NZ] *Herald*... rugby writer... or TVNZ some years later, to speak to [the prop] and get his version of events in 1972... The words "former All Black" and "disgrace" which were the historical tags in most reports should have awoken some NZRFU sympathy. Much of its time is spent spin-doctoring and deflecting negative vibes these days. This was a great chance wasted to do something positive... ■ [Yesterday in]CHILE... 14 amateur Uruguayan rugby players... played a match that had been postponed for... decades... The Old Christians rugby team had been on its way to Chile on October 12, 1972, to play a game against the Old Boys, a Chilean school team, when their Uruguayan Air Force plane crashed into the Andes, south of Santiago. Of the 45 people on board... 16 were killed instantly. Another 13 died over the next few weeks – some from injuries they sustained in the crash and an avalanche, some from starvation. Seventy-two days later, long after search efforts had been suspended, 16 survivors stunned the world as they emerged alive from the mountain to tell a story of struggle, pain and drama... [- most notably, being forced] to eat the flesh of their dead friends...

Christians seek conversions... [S]ome top Christian players are hoping... to attract new recruits from that other N[Z] religion, rugby. Two special "Beyond the Try Line" editions of the New Testament have been released... featur[ing]... testimonies from... former [and present]All Black... Wallaby... and South Africa[n stars]. The Bible Society campaign is targeting N[Z] fans because... Christian... players are seen as role models.

...accusations continue following a weekend of violence in international rugby. After mayhem in the Lions' game against the Wallabies and... the Springboks' second test against France, the All Blacks' discipline was under scrutiny when [their]skipper... was sinbinned for punching[during their game against Argentina. In AUS], repugnance and righteousness fought for the headlines after the Lions game. [The Wallabie]s fullback... was sent off for repeated punching and five others were binned during the match. And in South Africa, two Springboks and a French[player] were yellow-carded and [a third Springbok] cited and suspended in a very physical game with the French, who play the All Blacks in Wellington on Saturday. It prompted questions about whether the All Blacks would stand up to any French intimidation... The Pumas felt they had been provoked, especially by [one All Black lock. But the All Black coach] thought the All Blacks had faced up well to some roughhouse Puma work and had held their discipline against a fair amount of off-the-ball intimidation. There was general sympathy for [the skipper], who became the first All Black captain to be sent to the cooler in a test. [The captain] had retaliated against an Argentine facial. [The captain] was disappointed about his punch and the All Black coaches said they did not condone fighting, although there were occasions when retaliation was necessary. "Clearly [the captain felt it] was being threatened," said [the coach] in defence of his captain. There was no similar sympathy for [the]Puma prop... who was banned for three weeks after kneeing [the lock] in the All Blacks 67-19 victory in Christchurch. [The prop] was cited by an independent committee after dropping his knee into [the lock]'s ribs in an off-the-ball incident, for which [the prop] was yellow-carded by [the AUS]n referee... The... All Blacks lost four players to injuries, with [their Wellington loose forward and the lock] the most in doubt for Saturday. An x-ray showed no crack in [the lock]'s rib and after the game [the lock] was moving much more freely[, but]... it would seem most unlikely [the Wellington loose forward] would be risked or picked against France... [□ An] assault of a 12-year-old boy, allegedly by his father and sister after [the boy] missed a... tackle, will be investigated by the Auckland Rugby Football Union's disciplinary committee tomorrow. The boy's father and his 19-year-old sister were charged last week with assault following a junior rugby game in West Auckland. The pair were granted bail after entering no plea in the Waitakere District Court. The couple were due to appear in court again today. The boy was admitted to Starship children's hospital with concussion last Monday and discharged the following day... The committee's powers, which include suspension and fining, cover players, coaches, clubs and members of the public. The committee dealt with all rugby – including secondary schools – under the control of the union. Members of the public found guilty of misconduct could be suspended or barred from attending rugby games under the union's control. They could also be banned from taking part in any rugby club activities... Children, Youth and Family Services said the boy was being looked after by family members.

...Welsh rugby authorities were criticised yesterday following a court case which saw [a]Bridgend prop... ordered to pay £2000... compensation to a rival player... almost blinded in one eye. [The]Cross Keys fullback... had to undergo an operation to save the sight in one eye following an on-pitch attack by [the prop] in a Welsh/Scottish League match. [The fullback] has suffered a 25[%] loss of vision from a detached retina and has been forced to retire from the game. [The prop], a 25-year-old Wales A player, was also ordered to do 200 hours of community service after admitting causing grievous bodily harm. [The fullback] said the Welsh Rugby Union's inaction over the incident forced him to go ahead with the court case.

...The [IRB]... yesterday announced the upcoming Six Nations Championship would trial the sinbin for foul plays and professional fouls. The sinbin is already in place for Super 12... the Tri-nations[and other southern hemisphere test matches]... Disenchanted fans and rugby officials found repeated professional fouling responsible for slowing the game down. The... former international referee who chairs the IRB's laws committee, said the... sinbin will foil cheats. "It's the way to clean up the game, to prevent deliberate cheating and foul play. Teams playing a [member] short nearly always concede a score before [the member] returns." ...The decision is historical. It is the first time experiments of such magnitude have been introduced in the middle of the northern hemisphere[season] in the IRB's 114-year history.

Rugby [Union is a 15-a-side]... form of football played with an oval ball which may be carried as well as kicked. It is named after Rugby School in Warwickshire where it was developed, though the exact date when the distinctive practice originated (in 1823 or later) of running while carrying the ball is in dispute. The oval ball owes its shape to the inflated pig's bladder which was used in ball-games for many centuries before being given (by the 16th c.) a leather outer cover. – *Rugby League*, [is]a... form of the game with teams of 13. It dates from 1895 when a group of northern clubs, exasperated by repeated refusals of the ruling body to allow them to compensate players for money lost by taking time off work to play football, decided to break away from the Rugby Union.

Brisbane and Auckland will usher in a new era for rugby league tonight with intense scrutiny on revised rules and their effect on releasing some of the game's shackles. About \$250,000 has been spent by Super League on the pre-match music and fireworks at ANZ Stadium for the first-round match but there are concerns that the main course will not live up to the entree's promise. League has struggled to get away from what coaches describe as "arm wrestles" and predictable patterns, while rugby union has undergone a style revolution. The two key Super League rule changes... [involving an] extra tackle for kick receivers and the abolition of the "downtown system", which allowed kick chasers to surround the receiver, will help to keep the ball in play and open up running room. Super League referees are also expected to police the play-the-ball far more strictly to prevent delaying tactics by defenders and attackers alike. Brisbane will be hot favourites tonight. Auckland have not been helped by a series of hiccups this week[, including]... having Super League muck up their travel arrangements – they were only due to arrive in Brisbane late last night... Many Warriors' careers are on the line this season... [- especially their British import, who 'wants his contract upgraded' despite being] nowhere near worth his \$600,000-plus annual salary... The club exceeds its salary cap of \$4.6 million... for the contracted 25 players... but [its chief executive] is confident the club will dip under the cap next season.

...The owners of the... Warriors have learned they face a substantial six-figure valuation fee if the rugby league franchise is sold. A sale price of \$4 million would see the Warriors' sole shareholders, the Auckland Rugby League, pay \$180,000... The fee has rocked... [Auckland Rugby League's new chairperson] and his board members, who had no knowledge of a success fee clause in the league's contract with... [an Auckland valuers company]. There was no doubt the [Auckland Rugby League] board approved of[its] solicitor... seeking the... valuation but there is confusion over who approved the contract details with the company and who was aware of its clauses. Under that agreement, the valuers were to be paid \$5000 regardless of whether the Warriors were sold or not. The second part of the contract covers the payment of the success fee to the valuers who completed their report in May last year. The fee is \$100,000 plus 2% of the sale price. Since last year's valuation, the [Auckland Rugby League] and the Warriors – at a cost of \$20,000 – have received a second valuation of the Super League club from Price Waterhouse. [The Auckland valuers company] is no longer involved in the sale process, but its success fee clause would still appear to apply. In the last month, the company said it has re-emphasised this point to [the solicitor]... The timing of... [last year's] valuation was at the peak of the A[US]n Rugby League (ARL)-Super League standoff with Warrior politics meaning it was done under a veil of secrecy. Last year's valuation, produced when the Warriors were performing and the club appeared to be in good heart, assessed the club's worth at between \$11 million and \$28 million but the Price Waterhouse valuation, completed during the present disastrous season, places a value in the region of \$1.5 million to \$3.5 million... [On a positive note, the ARL] and Super League look set to run a joint competition next year, healing the acrimony which split the code. Powerful Super League officials, in Auckland for last Friday night's tri-series clash between N[Z] and Queensland, delivered the most optimistic message yet that an end to the rift is in sight. Similar thoughts were echoed by ARL figures across the Tasman... One source suggested agreement between Optus Vision and Telstra – the two pay television networks and the reason for much of the friction in the game – must be progressing favourably. Once the corporate world reaches its compromise, it will then be up to Super League and the ARL to stitch together the details... But speculation that a compromise announcement could soon be made was wide of the mark, said... [the] executive director of sport for Super League backer News Ltd. "I think there will be just one competition next year... But to say there is going to be an announcement is news to us... It is essential there is only the one competition but as we stand now there have been no discussions between Super League and the ARL." ...The poor performances of the... Warriors could trigger questions about whether the side deserves to be part of a combined competition, but [News Ltd] was adamant that, as far as Super League was concerned, the side must be there... Super League opposed a two-tier competition... The battle for control of the game has been littered by court action. The issue of player loyalty agreements[– between clubs who signed with the ARL and any of the clubs' players who signed with Super League (or vice versa) –] still has to be resolved by the judicial system. One source suggested that both parties were not confident enough about their legal positions and this feeling could hasten compromise talks. Super League's rebel Telstra Cup competition kicked off this year.

...The war of words over the Anzac rugby league test between A[US] and N[Z] took on new impetus yesterday after a newspaper advertisement... called the game the "mother of all battles." The naming of the Sydney clash as the Anzac Day Test had drawn flak from A[US]n war veterans, who argued it offended the spirit of the Anzac Day remembrance. A full-page advertisement in the N[Z] *Herald* for television coverage was similarly attacked. The advertisement read: "Eighty years ago it was side by side. Tonight it's head to head." It was surrounded by spent cartridges... [A] past president of the Auckland Returned Services Association, said: "...They shouldn't use the fallen to publicise this type of thing. The history and emotion of Gallipoli alone would make it offensive." [However, the NZ] coach... said the test was dedicated to those who lost their lives fighting for either country... "We are not trying to exploit the day." ...The A[US]n Super League obtained approval from the A[US]n Returned Services League and the N[Z]RSA to use the Anzac theme to promote the test. It[also] gave \$22,555 to the building of a memorial walkway in Sydney.

...A group of former [NZ Rugby League chairpersons] are demanding answers over the financial state of the NZRL, with suggestions they may even ask[the] current boss... to resign. [The current boss] said yesterday that the NZRL – which has been renamed Super League N[Z] – was likely to have lost \$700,000... in 1996. That will add enormous pressure to the league, which is still trying to recover from the \$1.6 million loss the Lion Red Cup made in its first season, and past administrators fear for the organisation's continued viability... [The group's] concerns include: • SLNZ running foul of the new strict company regulations if it continues to trade while making huge losses. • The NZRL changing its name to SLNZ, and that if the only way out of the financial mess is to borrow money from Super League, it will lose what little independence it has and become totally enslaved to overseas interests... [By the way, the Warriors' British 2nd-rower has pulled out of their game] against... Brisbane... at Ericsson Stadium on Sunday... because of a hip injury meaning for the first time in 53 games, the Warriors will not start an English or A[US]n player. That comes just days after [a NZer replaced an AUSn as the coach (following complaints from sponsor DB about poor results affecting its image – r:p1356, ln17).

...the fit and in]-form Warriors second-rower... has rejected... claims [about his being] ready to quit the club. Reports from England say European Super League giants Wigan... [– who claim to] have first option on their former star... [–] and Leeds are lining up for [the second-rower's] services in the belief [that the British international] will leave Auckland after this season[, even though his contract finishes]... at the end of 1999... Those rumours come at a time when Auckland has yet to secure the long-term future of their other star second rower [and Kiwi international], whose contract finishes this year. [The Kiwi second-rower's] manager... claimed yesterday that an A[US]n Super League club had made a firm offer for him – in apparent contravention of anti-poaching rules – while another two from Europe had inquired about the Kiwi's availability. "The for sale sign isn't up yet... but [my client] isn't going cheap,"... [and may be worth more than the British second-rower, who] was a major beneficiary of the crazy cash cow that rugby league became during the height of Super League's takeover bid. His reported salary of \$600,000-plus makes him the second-highest paid Warrior behind [the captain]. The Warriors have a stream of good backrowers coming through and [the Brit's] massive wages will have to come into question if... [it] ever asked for an early release. [However, the] Warriors chief executive... said yesterday [the club] wanted to keep [the Brit] even though it is understood the club wants to reduce the \$5m players' wage bill.

...[the] Warriors will release[their British] forward... at the end of this season. [The forward, aged] 27... refused to comment last night[, but in the past]... has admitted to some homesickness... [The forward] had a glittering career with Wigan before joining Auckland halfway through their inaugural season in 1995... but has largely been an inconsistent performer and, in truth, the club could invest [his salary] more wisely in other playing areas. Back row is one of the[Warriors'] few real strengths... Their main recruitment target is believed to be a quality centre and there could be added pressure in that position with [the club's first-choice centre] understood to be considering joining [the second-rower] in the European Super League next year if the Warriors do not offer the 32-year-old a long-term deal.

...IN THE modern era of Super League, superstars demand and receive astronomical contracts. But their telephone number deals are prompting questions... Super League... has got itself into a situation where players are paid these huge base salaries and yet very few are performance related... The players certainly couldn't accept reductions without a fight, but I can see the clubs banding together and saying the situation has got out of hand and that the contracts must be performance related. Players paid like stars will be expected to play like stars... Today N[Z] fans have the chance to see at Ericsson Stadium... a player who is beyond reproach. No one gives better value-for-money to his club than Cronulla's [No 1]... A Shark through and through, [who] has also given great service to [the Kangaroo and the NSW State-of-Origin teams, the No 1]... is the type of player who rarely misses a game through injury... In short, [the No 1] is a player worth twice what other superstars receive... [Incidentally, Sydney's Canterbury Bulldogs] rugby league club will introduce video crowd surveillance at future home games following Monday night's crowd disturbance after a Super League game at Belmont Oval. Club officials and police yesterday attributed the melee after Penrith's 28-20 win to a community youth problem... Inquiries had revealed that the majority of spectators involved in the brawling, which led to four arrests and three

police officers being treated in hospital, appeared to be in the 14 to 20 age group. [However, the club's] chief executive... said the incident which triggered the fracas was a police officer being thrown to the ground while attempting to control one unruly fan.

...[a young] Kiwi giant... has signed one of the richest rugby league deals ever offered to a schoolboy. [The Kiwi], who lives in Sydney, this week put his signature to a two-year deal with the Penrith Panthers that is worth around \$100,000 a season to him. But most of the time... the 18-year-old Junior Kiwi star, who migrated to Sydney with his family some years ago... [and] this season... has... developed into a regular in the top-grade side... can't even train with his team-mates... because of school commitments... [In related news, if the Warriors Kiwi second-rower] leaves... at the end of this season... it will be the most telling symbol of rugby league's messy war that Auckland will experience. It is inconceivable that a player the Warriors should treasure might [leave]... I am reliably told the Warriors have offered [the second-rower] a three-year contract, and \$400,000 a season. It is... great money, but [the player] is holding out... [The Kiwi international probably looks at his British international second-rower team-mate], a good player but one who is grossly overpaid, and [wonders why the Brit] earns so much. [The Kiwi] must try to figure out why disaffected rugby union players... could take on the Warriors as a bit of a hobby and line their wallets in the process. It is just human nature. [Their captain] is often described as the Warriors highest paid player, on around \$800,000 a year... [The captain] might, at a pinch, deserve the money. The [Brit, along with the former All Blacks], ended up with some of the money that [the Kiwi second-rower] deserved. And the second-rower, who equates money to status in the game, knows that. • Adelaide are in a must-win situation against the Warriors at the Adelaide Oval tonight as Super League enters the business end of the season. Canberra's last round win over Canterbury means Adelaide's finals hopes are almost gone.

...Rugby league, hit by the damaging split in the game and the Auckland Warriors' poor results, has tumbled in popularity[in NZ] over the past two years, according to poll results released yesterday... The National Business Review-Consultus poll shows that 51[%] of the 750 people questioned were either fairly or very interested in league. That compared with the healthy figure of 65[%] in August 1995, when the Warriors were attracting big crowds to Ericsson Stadium in their debut season... [and] interest in netball, which is a high 62[%] (no figure is available for 1995) despite the Silver Ferns' inability to beat main rivals A[US] and the controversy this year over a change of coach... Meanwhile, interest in rugby [union] nationwide had remained almost constant, falling a negligible one percentage point (smaller than the margin of error) to 74[%]. ■ On Sunday the]... Warriors scored just their seventh win of the Telstra Cup... against North Queensland... which means they have finished in seventh position.

...Brisbane's coach... claims a premiership is worth more than the \$A1 million... prizemoney on offer in Saturday's Super League grand final against Cronulla... Cronulla have promised their players half the cash... while... Brisbane are yet to decide how it would split the prizemoney. The Broncos are also favoured to win the World Challenge Cup in October. Success there would bring another \$A1 million in prizemoney to the club.

...The Panthers play the last round of the World Club Challenge on Monday night against St Helens, who were thrashed last week by Auckland, while the Warriors meet woeful Warrington in Christchurch on Sunday... [□ N]ext Saturday... Wellington will host a historic [gals' rugby league test between NZ and AUS]... The match will be the first between the sides in N[Z]. The second test is in Auckland... [the following weekend. NZ met the AUSn gals' team] for the first time in 1995, returning home unbeaten in three tests.

...Tonight... [a] 21-year-old... will be in the Kiwi [Ferns team against AUS] at Carlaw Park, two days before... her brother... and the [guy Kiwis play their AUSn counterparts] at North Harbour Stadium. The assignments are worlds apart. While the... [guys] stay at one of Auckland's poshest hotels, the [gals] sleep on a sea of mattresses in a room at a Mangere marae. "But I'm proud to wear my Kiwi emblem and it will be great to think... [that my half-brother] [the... rugged... Canberra prop, who is expected to join the Warriors] is]... here watching us play... [My half-brother] had no idea I'd end up playing rugby league. I was just a little girl running around the house in my dresses and with my dolls. [Gals] playing rugby league have been regarded as a bit of a joke by a lot of [guys] but we're getting more acceptance. [My half-brother has] always been really good about it and we're all proud of what each other's done." The "all" brings [her older half-]brother... into the picture. [The older half-brother has represented NZ] in basketball and was in the Auckland Police rugby league team who beat N[SW] this month. Rugby league is in the family genes. Their maternal grandfather... was a Kiwi in the 1930s. And home town Greymouth is a rugby league stronghold... But... "I really want to come and live in Auckland and I think if [my younger half-brother] does join the Warriors, mum and dad will move here as well,"... says... [the sister, who] admits her brother's tough image means people wonder what to expect from her... "I just let the comments slide by... [My bro]'s been hard done by at some judicial hearings, just because [my bro] has appeared before." ...[the sister] began her rugby league career as a mascot for her brothers' teams, and was one of four Coasters on the inaugural... [Ferns tour to AUS] two years ago... The [Ferns won this year's] first test at Petone, 34-26.

...N[Z] completed a 2-0 win in the [gals'] rugby league series with a 40-16 victory over A[US] at Carlaw Park... The result meant the Kiwi [Ferns] remain undefeated in their... tests against their transtasman rivals[– and, best of all, their success seems to be rubbing off on our guys' league team...

Super League AUS's] coach... has called for a return to a traditional representative programme after his side's mauling by the Kiwis at North Harbour Stadium... [However,] the likeable Cronulla coach, refused to be drawn on who could claim the No 1 spot. "People can make their own judgments, although [the Kiwis] were No 1 on this night... [The Kangaroos] have been No 1 for a long time [(they 'haven't lost a series since 1978, and haven't lost a series to NZ since 1953')]]and obviously there were some A[US]n players who could not be in the Super League team. I really believe we should go back to the State of Origin involving just Queensland and N[SW], and then have a three-test series. Then you might be able to answer those sort of questions." ...[the] victorious Kiwi coach... backed [his counterpart], saying... any team in green and gold had the right to claim they were the best in the world. "We were No 1 on Friday night but they are No 1 in the world, absolutely, and I've never questioned that... If we could beat them in a series then that's another matter..." ...The Kiwi's emphatic 30-12 win on Friday could have been even greater as they went desperately close to scoring at least three more tries. N[Z] lost the first test 22-34 in Sydney on Anzac Day, and the question of who can claim to be top dog in international rugby league will remain unanswered, especially if A[US] remains split between Super League and the... [ARL. The State of Origin NZ] side, who could not use English-based players, were beaten by N[SW] and Queensland in the new Super League tri-series... [earlier this year. Friday's effort] has rekindled the test careers of a number of Kiwis... It was also another big step forward for [a young Warrior], whose combination of skill and work-rate appears to give the backrow an ideal balance. The 21-year-old has had a remarkable start to his test career which began with three victories over Britain last year. • The Warriors in the Kiwis came through the test unscathed and [their coach] will have an almost fully fit squad for the Auckland club's World Club Challenge quarter-final against Bradford at Ericsson Stadium [next]Friday night...

The Warriors have chopped ticket prices in a bid to attract more fans to Ericsson Stadium. The number of seats will also be reduced to bring fans closer to the action, after a season in which the stadium has been mostly half empty. "When you are not winning football games, then it is hard to justify charging premium prices," the Warriors' marketing boss... said yesterday. "It is an act of faith in our supporters." ...The Warriors have been drawing an official average crowd of 17,000 this season, compared with 27,000 in their inaugural season two years ago. Against sides such as Adelaide and Perth, attendance dropped to 12,000... The cheaper tickets will take effect for Friday night's... [game] against England's Bradford Bulls... Match seats now costing \$80 will drop to \$50, \$40 seats to \$25 and \$25 seats to \$20. The minimum children's price of \$5 remains, but they will have access to more areas. A premier season ticket will still cost \$500, [while]... other categories... drop... from \$275 to \$200 and \$200 to \$170.

...The best of British were left licking their wounds at Ericsson Stadium again as the Warriors strolled to a 62-14 win over Bradford... [in front of a crowd of 12,500. The] European champions, who were beaten 64-14 in their previous appearance in Auckland... had promised a more committed effort this time but... [by] the end of the match, Auckland were [‘toying’] with their opponents. [The Warriors' captain] attempted a sideline

conversion with his left foot, and [a winger] was given a conversion attempt from in front of the posts, which [the winger] missed... “I kick them from the sideline at training but the pressure got to me,” said [the winger], apparently seriously... The... Bulls coach... said: “It was our own fault they didn’t show us respect at the end. I didn’t expect to win, but I thought we could have been respectable.” ...The result will again raise questions about the W[orld Club Challenge] concept – and British rugby league. [However, Auckland’s] coach... said: “The concept is fine but teams shouldn’t have the right to be [in the quarterfinal] because of geography.” ...Auckland’s victory should set up a semifinal clash against Brisbane, who play St Helens at the ANZ Stadium tonight... [By the way, a] multi-million dollar upgrade of the home of N[Z] rugby league is again being seriously considered. Development plans... [for] Carlaw Park... from several years ago have been dusted off while updated costings suggest a revamp would cost between \$28 million and \$35 million. The result would see a modern 28,000 seater stadium as well as a multi-purpose building on the old No 2 field... [T]he Auckland Leagues Club... building... could also become a lever for the redevelopment... [W]ith spectacular views of the Waitemata, it could well have a \$4m-plus price tag... The vision... is for the park not only to become league’s playing home but also the base for the offices of the [Auckland Rugby League, the NZRL (or SLNZ)], and ultimately the Warriors and space for [a new] Leagues Club... The Leagues Club... president... would be “amenable” to making a move to Carlaw Park if the redevelopment plans went ahead... And a move would make financial sense for the... club... [which is] just “getting by” in the new environment of tougher drink-driving laws and also the advent of Sky Television. Several years ago, the clubs’ membership had dropped to 470 but it has rebounded to 800. This is still well short of the 2000 tally of its heyday. However the Warriors are an even bigger factor than the leagues club... [Its president] firmly believes the original decision to base the Warriors at Ericsson Stadium rather than at [Carlaw] Park was wrong... Rent will be a big factor in any debate on moving the Warriors. Currently, the Warriors pay the Auckland Regional Council for the rental of Ericsson. Moving to Carlaw Park would keep this money in league circles... There would be opposition but at the end of the day the Warriors are owned by the [Auckland Rugby League]. However a Warriors move isn’t a short-term prospect. The Super League side has a 21-year licence (as opposed to a lease) to use Ericsson Stadium... The [Auckland Rugby League] has discussed its plans... [for Carlaw Park] with Auckland City Council representatives... [A] new stand on the railway side of the ground is proposed... [T]he council has just decided to buy land near the railway station with the idea of building a 16,000-18,000 capacity entertainment stadium.

...Fiji used a supposedly ancient rule to help upset American Samoa 21-20 in the Auckland Polynesian league festival at Carlaw Park[yesterday]. The Fijians had 11 Tongan players, which they say they could do because Fiji imported Tongan warriors to fight their tribal wars during pre-British rule. Meanwhile[the]... Mad Butcher... is running buses from all his... stores to the World Club Challenge final at Ericsson Stadium next Friday. Hopefully the Warriors will be there too.

...THE... Warriors – staring down the barrel of a \$1 million loss this financial year – ...[missed] a berth in this Friday’s World Club Challenge final... and a stab at the \$A1 million first prize... [after] they were beaten 22-16... at ANZ Stadium... by... the... home team... [But the franchise] will reap a tidy payout... [of] between \$A150,000 and \$A200,000... from its commendable showing in... [the competition. Furthermore, knowing] they had matched and at times outplayed the best club side in the world was a huge confidence boost[, which is why the chief executive was sure]... the club’s annus horribilis was now a thing of the past... “...If we can kick off next year the way we have finished this season it will be a hell of a lot better 12 months...”

...Super League has set itself up for a hugely embarrassing night out at Ericsson Stadium on Friday as a disappointing season thankfully grinds to a halt. The Brisbane Broncos will line up for a predictable thrashing of the Hunter Mariners in the World Club Challenge final... Some dirty Auckland weather could turn the event into a farce watched by the coaches and those who accept giveaway tickets. If Super League sticks to manipulative form they’ll restrict photographers to the one area of the ground where pictures will show full stands. The embarrassment will be compounded should the lowly Hunter Mariners win. Will [News Ltd’s executive director of sport] hand over the \$1m winner-take-all purse to a club [the director’s] about to close down...? The Mariners upset Cronulla 22-18 at Shark Park on Saturday night, their coach... admitting the Sharks struggled for motivation after a long season in which they’ve already played out the[Telstra Cup] grand final. “The Broncos are almost out of petrol too and the Mariners have a great chance,” [Cronulla’s coach] said... But the big losers are the Warriors. They could have been in Friday’s final had[the] referee... who controlled their... semifinal loss to the Broncos on Friday, been on the ball. [The ref] missed four blatant forward passes despite the Brisbane team’s penchant for pushing that law; at least one of those resulted in a try and the others deserved penalties. [The ref] caught only one, then ordered a scrum. Think back to the season opener: the Broncos versus the Warriors in Brisbane, the score 14-2 to the home team, and [the Warriors’ No 7] scores under the posts. [The same ref] disallowed the try without referring to the video referee, then penalised [the Warriors when their captain] disputed the decision. The fans are... relieved the 1997 season is over, and desperately hoping for one well-managed competition next year. Certainly no one will believe Friday’s Super League finale is the promised “best of the best.”

...Brisbane... will bring their personal cheer squad to Auckland tomorrow, which could almost be called a significant contribution to the crowd... Just 6000 tickets have been sold so far for... an occasion which should have the historical significance of being the last Southern Hemisphere event under the outright control of Super League... The Warriors are shielded from any financial loss from the match... – they have no stake in the gate-takings... The Bronco’s players have donated a significant part of the \$500,000 they shared for winning the Telstra Cup to charities, and are also shouting the club’s... [18] staffers... to the Auckland game... [plus two days] accommodation and meals. “We’ve had staff cuts through the year which has given people added responsibilities and we feel this is a tremendous gesture from the players,” said [the club’s football manager].

...the outgoing Warriors football manager... says the club is heading for trouble if it cannot field a second team in an A[US]n competition after this season. The 52-year-old... who has been cut by [the franchise’s] chief executive... said shortsighted economic considerations were putting the Warriors’ future in danger. Super League has scrapped the reserve and under-19 grades, which they largely financed, but clubs based in and around Sydney are considering creating their own reserve grade[(ironically, the ARL evolved from the original Sydney league clubs’ competition). The chief executive] said joining that [reserve grade] competition was one of three options being considered... “We would fly in and out of Sydney on the same day, but it is a very expensive exercise,”... \$150,000 to \$200,000 a season. “[However, that] is less than the cost of a first-grade player,”... [The other options involved] playing in the national or Auckland competitions[, but these]... could not provide the quality of football necessary for first-graders who had missed out on the playing 17[(13 starters and 4 reserves)], or up-and-coming players... Auckland is no longer regarded as a developing club – teams such as Adelaide will be allowed a first-grade squad of 25 – so will be limited to a squad of 20 under the \$4.7m salary cap, plus three “protected juniors.” ...[following the announcement that an AUSn media] magnate... is prepared to spend a further \$A350 m... over the next five years to unify rugby league in A[US] under his rebel Super League banner[, both Auckland and Adelaide might be more concerned about whether or not they have a protected franchise]... The offer, conditional on rival A[RL] clubs agreeing to join a merged competition with Super League teams, will be tabled at talks between the two ruling bodies... The additional funding would be divided between 14 clubs in an elite league, a condition that, if accepted would force several existing clubs to either merge or miss being left out.

...[a nerve]-racking week faces several... [of] the 29 Warriors who played Telstra Cup football this season... as they wait to hear whether they will be cut by the... franchise. The names of the club’s 20 contracted players and its three “protected, younger” players must be at Super League’s Sydney headquarters by October 24... For borderline players, the situation will become even tighter if the Warriors elect to name only 18... contracted players. All players, who are not named by the various clubs, then go into the Super League pool and can be picked up by other franchises. [The Warriors’ chief executive] suggested it would be prudent to leave vacant spaces so the club could act if it felt a particular pool

player could help boost the club... Clubs such as Canberra... and [Brisbane] were a long way over their salary caps and therefore players would have to go in the pool.

...[the] ARL... chief executive... and News Limited[']s executive director of sport... yesterday re-opened peace talks aimed at a united 1998 competition... Meanwhile, an industrial court has ruled that ARL loyalty contracts are binding on... [a Brisbane team-member and two from Penrith.] meaning they must return to ARL clubs. But... [three other Penrith players, and one from the Bulldogs] are free to remain with their Super League clubs.

...[NZRL, which] had sent a five-year plan to Super League[, indicating]... what was required to fund this... [plan,] wants an urgent meeting with Super League as it attempts to nail down its guaranteed income for next year. As the peace talks between Super League and the A[RL] grind on, the national body... cannot plan... with any certainty – until it knows what income will be guaranteed... All the indications are that the... tri-series... concept will be scrapped next season, especially if Super League and the ARL resolve their differences. The NZRL would favour such a decision. The new series bastardised the traditional State of Origin clashes between NSW and Queensland. However, it was also a big earner for the N[ZRL], with Super League guaranteeing a \$600,000 return... Super League also guaranteed a \$200,000 return from the two tests against A[US] this year... There is no indication whether Super League will continue to guarantee test returns... Super League is [currently only] committed to paying a \$200,000 administrative grant to the NZRL next year... [The NZRL chairperson] said that Super League had never failed to deliver on the money front. However, there must be some unease in national ranks as a result of the speed with which the Perth Reds franchise was ditched and the almost certain demise of the Hunter Mariners. On top of that, the World Club Challenge will become, at the very least, a shadow of its current format, while as part of the peace talks News Ltd originally sought [to have] the proposed company, which would run a joint competition, [take] over Super League's \$342 million debt. News Ltd has evidently now backed down on this requirement, but the picture which emerges is that the days of a bottomless Super League bank account are over.

...There are indications the NZRL may have asked for a funding package... between \$5m and \$10m... for next year... Such a package would allow the NZRL to fulfil commitments to district leagues which have met certain pre-requisites for funding... [Its president feels that previously the] NZRL sold out too cheaply, especially compared to the English league, which is receiving... \$230m... over five years. "We believe when the[original] negotiations were done with Super League they weren't done in a business-like manner,"...

Super League officials are discussing the possibility of switching the Paris franchise to Glasgow for the 1998 European season. The Paris club, coached by[the] new Great Britain coach... narrowly avoided relegation in each of the first two seasons of Super League.

...Super League has begun laying off administrative staff in preparation for a united 1998 rugby league competition... With News Ltd understood to have agreed that Super League's \$A300 million... debt not be imposed on the new company set up by the ARL to oversee a combined competition, it is thought the main problem now revolves around funding... At present, Optus provides \$A1.8 million a season for each of the ARL's 12 clubs, while the 10 Super League franchises receive \$A4.5 million apiece from News Ltd – creating a huge imbalance if those funding levels continued. It is unclear what impact Optus' seemingly successful efforts to derail the proposed merger between pay-TV rivals Foxtel, jointly owned by News Ltd and Telstra, and Australis would have on the peace process.

...[the ARL] chief executive... announced a loss of more than \$4 m... [for] the 1997 season yesterday but... will resume peace talks with [the] Super League boss... today armed with some fresh ideas gleaned from a 10-day business trip to the U[S]. "I hadn't realised before but all major sports in America have been through what has happened to us and all resulted in some sort of merger out of it,"... [In another development, their ex-coach's re-]signing with Wigan will be a six-figure saving for the... Warriors. Dumped as the Warriors' first grade coach in April, [the AUSn] has remained on the... club's payroll. Under his Auckland contract, the [AUSn] was to be paid an estimated \$380,000 a year until next October. And the only way out for the Warriors was if [the AUSn] signed with another club... Wigan was the former giant... of the English scene before falling on leaner times.

...Top English side Wigan claim they will soon be the richest rugby league club in the world after announcing the sale of their ground to a supermarket chain. Wigan, whose financial problems have deepened over the past year, have agreed to a deal worth over £12 million (\$27.72 million) and will abandon their Central Park home in two years... A rival bidder, who wants the rugby league club to share Central Park with the local soccer team, is threatening legal action over the decision... [In local news, the NZRL] president... said indications were that next year there would be a [Super Bowl-type] two-conference system, with the Super League 10 teams playing in one and... 10... ARL... teams playing in another. At the end of the round-robin play the top four teams from each conference would go into the playoffs. The playoffs would be run by a joint ARL-Super League administration, while the game on the whole would be run by ARL, with Super League running the finances... The A[US]n team to tour Britain could now be an ARL-Super League side.

...A FIRST round, Super Bowl-type clash between Brisbane and Newcastle... will be seriously considered if there is a unified rugby league competition next year. Super League favours season openers which would see their sides playing teams which finished in the corresponding position in the... A[RL]'s Optus Cup.

...Next season will see a 20-team united... [ARL] premiership... but there is a general consensus that some clubs will have to go within the next couple of years. Super League is insisting that the premiership be trimmed to 16 teams by 1999, although the ARL is trying to resist this move. Sydney's inner-city clubs – Souths, Balmain and Sydney City – are in the hot seat because they are the teams who have been targeted for either extinction or mergers. The Sydney market is clearly battling to support nine clubs, with most of the city teams struggling to make ends meet. Indeed, the clubs are only surviving through a combination of grants... and handouts from sponsors. [However, the Sydney] clubs believe their tradition and heritage is enough to keep them in the game and are pointing at some of the newer clubs as the teams who should go. And at the head of their list is the Auckland Warriors. "What are they doing in an A[US]n premiership anyway?" one official from a senior Sydney club asked last week. "They have been here five minutes – we have been around 90 years." Fortunately... the move to cut the Warriors is destined to failure because of lack of support from the remainder of the A[US]n clubs... The club's strong supporter base and good track record in marketing has been enough to convince the top [officials] in both the ARL and Super League camps that they should stay. Officials realise league's future strength clearly lies in the one-team towns, as the success of the likes of... Newcastle... Brisbane... and... Canberra... in recent years has shown... [Speaking of Canberra, the team's] players have asked their club to rescind the sacking of [their Fijian winger, who was] dismissed for assaulting three [people], including his wife, outside a city nightclub. A magistrate ruled [the winger] was too drunk to know what [the winger] was doing because of the 28 schooners (425ml) of beer, half a dozen stubbies (375ml) and half a bottle of wine [the winger had] consumed. The ACT Government says it will change the law to eliminate such an excuse; the club will decide next week whether to accept the appeal.

...The number of teams in the united premiership, to be known formally as the National Rugby League Competition, will be reduced to 16 in 1999, with financial incentives to encourage mergers... and by the turn of the century there will be only 14 clubs... [I]t had been agreed that the number of Sydney-based teams would be no fewer than six and no more than eight going into the next century... Yesterday's momentous agreement ended three years of civil war for control of the game and its pay TV rights, estimated to have cost more than \$A800 m... Key features of the deal include: • The immediate demise of Super League's Hunter Mariners... • Guaranteed funding of \$2m a year for each of the... teams in the merged competition. • News Ltd's Foxtel and Optus having agreed to share the pay-TV rights for the competition while free-to-air will be retained by the Nine Network. • The ARL and News Ltd will form a partnership which will be 50% owned by Super League and 50% by the ARL. The competition's new governing company will have equal representation from both parties... • ...a \$A3m salary cap will be introduced from next year.

...In the end, both warring parties needed each other. Here's the picture as the dust settles: **MONEY** *The winners:* The players, their managers and all the lawyers who were consulted in the league war which became a legal war... Some footballers received double their real market value. *The losers:* The News Ltd bank account... It is believed the cost of the civil war exceeds \$900m... **CLUBS** *The winners:* Are there any? Crowds have been down at all clubs... [At least] the Adelaide Rams can claim a small victory in that they have survived the first round of club purgings. *The losers:* The Hunter Mariners and Perth Reds now can only be found in the history books. S[ome] S[ydney]-based clubs – many from the ARL ranks – are losers-in-waiting... Clubs like Balmain... Western Suburbs... and... Souths... look shaky... [‘27 years since they last won the premiership, the Rabbitohs’ rich history will count for little as the future of Souths – who will open their 1998 campaign against the Warriors at Ericsson Stadium around March 13 – hangs in the balance.’ Balmain’s] chief executive... believes his... club should snub a proposed merger with Parramatta to remain the Tigers and play in [Sydney’s] Metropolitan Cup in 1999... **TELEVISION RIGHTS** *The winners and the losers:* Does Armchair Arnie in Otauhu really care? No, not as long as we can see it... Perhaps the... battle of the box is best labelled a draw. - 1997

Foundation club South Sydney have been dropped from the National Rugby League as the league reduced the competition to 14 teams... Auckland, Brisbane, Newcastle, St George Illawarra, Wests Tigers and, it is believed, Manly Norths, are... joining Penrith, Parramatta, Cronulla, Sydney City, North Queensland, Melbourne, Canberra and Canterbury as the 14 teams in next year’s competition... Souths[have]... won 20 premierships – more than any other team – and have contributed more internationals to the Kangaroos (61) than any other side... Born out of a meeting at Redfern Town Hall on January 17, 1908, the Rabbitohs were the third rugby league club formed after Glebe and Newtown. For whatever reasons, Souths, the oldest surviving A[US]n club after Newtown went bust in the 1980s, have never fitted into News Ltd’s plans for the game and are not seen as part of its future by the media empire that now effectively runs the NRL. According to Rabbitohs supporters, the NRL’s criteria for inclusion in next year’s competition were unfair and designed to ensure they were excluded – the club’s rich junior nursery not considered, a \$A2.5 million sponsorship announced last week deemed to be too late, while other clubs profit from massive financial injections from News Ltd. Souths held a rally last weekend attended by up to 30,000, protesting at what they saw as News Ltd’s takeover of the sport. North Sydney was also omitted from the 14 teams but the NRL said they offered to help secure a joint venture between Manly and Norths. Brisbane topped the criteria ranking with 232.25 points, followed closely by Newcastle and Melbourne. South Sydney scored just 73.75 points, with only Western Suburbs rated below them on 53.25 points. However, Wests have secured their future in the competition after merging with Balmain earlier this year. The NRL said yesterday’s announcement completed a... process agreed on by the over-whelmingly majority of clubs, the NSW Rugby League and A[RL] boards...

South Sydney’s battle to be reinstated in next year’s N[RL] competition continues today when the Rabbitohs return to the Federal Court. Souths begin the hearing into their claim for an interim injunction against the NRL which, if successful, would ensure the club’s inclusion in the... competition. The... Rabbitohs claim News LTD and the A[RL] contravened the Trade Practices Act when they agreed to establish the NRL’s 14-team competition. The club have said they were not seeking to stop next year’s competition going ahead, merely to be included when it kicks off...

South Sydney, A[US]’s oldest and most successful rugby league club[– it holds the ‘record for the most wins’ by an AUSn club (a record which is currently under threat by the club’s arch rivals, Sydney City) –]yesterday laid plans to re-enter the national competition after a legal victory it hailed as a battler’s triumph over corporate clout. “We are over the tryline,” declared[the club’s] president... after a bitter... court-battle that cost millions of dollars and further eroded the game’s support base already hard hit by the Super League wars. The club’s green and red flag was immediately hoisted to the top of the masts at the Sydney Cricket Ground, scene of the Rabbitohs’ 20 grand final wins... [The president, a] former South Sydney and test player who has led the fight for reinstatement... saluted [the] people who funded the court case and marched “in droves” at two separate rallies attracting a combined 130,000 people... News Ltd, chief financial backer of the N[RL], said it accepted the court’s decision and... would not... appeal... “We did not set out to target Souths or any particular club... All we sought to do was to create a viable competition...”

...Time to wind up this club with the culture of losing [The Auckland Warriors’ coach] has said on a number of occasions that [it] will resign from his... position... if the team do not make the NRL playoffs this year. It is a frank, honest assessment by a bloke who has been around rugby league all his life. What [the coach] is simply saying is that given the resources the club has provided, if [it] can’t produce the results... [it] is the wrong person for the job. Admirable as this blunt appraisal may be in normal circumstances with a normal team, it is not accurate when dealing with the Warriors. This is not a normal team, nor could the circumstances surrounding the club be remotely described as normal. It isn’t [the coach] who is to blame for the team’s failure... [The team’s first coach a]rrived as a Messiah, [but]... couldn’t get any consistent results, and despite [his replacement]’s best efforts [the second coach] could never get regular wins. It wasn’t as though they were a couple of mugs who couldn’t coach. [The first coach] had won the ARL title with Parramatta and cleaned up all the silverware in Britain with Wigan over a four-year period. [The second coach] took Canterbury league to unprecedented wins over Auckland and has arguably been the most successful Kiwi coach of all time. Apart from his ability as a coach, [the second] is respected throughout the sporting world for his sincerity, honesty and integrity. If you couldn’t play for [this coach when it] looked you in the eye and asked for your best effort, you couldn’t play for anyone. And that’s the point: the Warriors simply can’t play. Not consistently, anyway. For short periods and occasionally even for the odd game they can mix it with the best, but week in and week out for 80 minutes they simply haven’t got a clue. It doesn’t matter who you get to coach them, it will always be the same. There is a culture, a tradition of inconsistency now established at the Warriors that stops the team from achieving. There is no point now in pointing fingers at referees...

CONTROVERSIAL refereeing couldn’t deny the Warriors victory... at Brookvale Oval yesterday. Two crucial decisions tainted a gutsy win for the Warriors. [The No 11] was sent off just before halftime in his first game back from a four-game suspension. His dismissal, on a touch judge’s report... was for a forearm [to an opponent’s head during a tackle]. Replays showed it was a legitimate tackle at shoulder height. A second incident midway through the second half saw[the home team’s] fullback... incredibly let off after tripping [a Warrior. The fullback was only] put on report... ■ [The]... Warriors have lodged a complaint about the sending off of [their] second-rower... “We will lodge a complaint to the NRL expressing concern that a player was sent off on a touch judge’s advice for something that clearly did not happen,” [said the] Warriors chief executive...

The Auckland Warriors face a standoff with the N[RL] over the sending off of [a second-row] forward... with the club in possession of damaging evidence against match officials should [the player] be charged. The drama queens of the NRL were in the thick of it again after their gutsy 18-14 short-handed win over the [weekend]... and will remain there this week as the league’s governing body closes its refereeing ranks. The NRL will shut down access to conversations between the referee and his touch judges during the halftime break because [the] Warriors chief executive... overheard comments about [the] dismissal – comments some in A[US] described as a “conspiracy” between the touch judges and the ref to get their stories straight in order to justify a poor decision... A source within the A[US]n television industry said last night that [it] believed there were matters on the tape of the Sky monitor that should be of concern to the NRL regarding refereeing, but nothing that revealed any anti-Warriors or anti-N[Z] bias. The Warriors chief executive[refused all comment yesterday, saying [the player] had yet to face the review of [the] judicial commissioner... today and [the chief executive] did not want to speak before notification of any charge related to the tackle. But it is clear the overheard conversation is a bargaining point in that, despite threats from [the NRL chief executive] yesterday to get heavy over what [the NRL chief executive] regards as eavesdropping on a private conversation. [The NRL chief executive] told the *Herald* [it] had not listened to the recorded conversation, which was available to A[US]’s Fox Sports and Channel Nine... [A] source within television sa[id] “five or six” others heard snippets or all of [the conversation], including laughter... H[owever, the NRL chief executive]... will not be listening to it or asking[the] ref’s boss... or anyone

else to, either... "The central issue is that... a private conversation between officials... should not have been listened to," ... It's a shame the drama again cornered all the attention because this was a polished effort and a big turnaround from a team on the ropes... [A]ll across the park there was effort, enthusiasm, support for the ball carrier – all things not seen frequently enough this season... They could have been 30 points better with [the second-rower], and reversal of a video ref ruling at the 50m mark that said a [Warriors'] pass... was forward when it clearly wasn't.

...*They're real Warriors now!* THE Warriors celebrated [their halfback]'s 100th first grade appearance with a record 42-nil win over Newcastle yesterday and [the]visiting coach can't understand why the Aucklanders aren't in the NRL playoffs. The Warriors scored seven tries at Ericsson Stadium to record their first victory over the Knights. It was Newcastle's worst loss and put a serious dent in its hopes of a top four playoff spot... [The Warriors halfback and captain], who received a standing ovation from the crowd of 15,000[,] was delighted with the effort, the side's third consecutive win... The Warriors development is pleasing [their]coach... "This team has come a long way in a pretty short time. We've got some great athletes and they're really learning to play tough... For me the biggest satisfaction was the nil next to Newcastle more than the 42."

...THE Auckland Warriors will post a \$1.5 million loss for the past 12 months but the owners are convinced the club has hit bounce-back mode. The NRL franchise is budgeting to remain in the red next year but a profit is forecast by the end of 2001. The latest loss was expected when Rugby League People Ltd – a grouping of Tainui... and [two businesspeop]le – bought the club from Auckland Rugby League late last year... The omens look good for the next season. After dismal and embarrassing mid-season performances this year, the Warriors rattled home at the end of the year. A[US]n imports... sparked the transformation. Two further imports... will boost the club... next season... The club... loss... forecast... hinges on a conservative home crowd average of 9000 fans – last year, it was 11,500. It is understood the Warriors would break even next year if this swelled to 15,000. Ticket sales for next season... at 4500 are 1500 ahead of budget... The Warriors had a solid core of sponsors and [the chairperson of Rugby League People Ltd] said many of the ghosts from the past were disappearing off the books. The club has been paying part of the salaries for nearly 10 former players after severance deals... These payments, where the Warriors continue to pay part of the salaries despite the players being at other clubs – [or in one case,]having returned to rugby[union –] would have been costing at least \$600,000 a year. Only one over-the-top salary remains – the \$665,000 a year package of [the team's ex-Manly fullback]. The Warriors don't want [the fullback] next year but there has been no divorce yet... By last year, the Warriors had accumulated losses of more than \$4 million but this was covered by the Super League severance deal... [The chairperson] said the Warriors would soon control their own destiny. "Anything that happens will be because of decisions we have made."

...Any decision about the future of the Auckland Warriors rests in N[Z, not AUS says the] ...NRL... chief executive... [The chief executive described AUS]n television reports which suggested that the NRL was about to axe the Warriors from the competition as being "irresponsible reporting in respect to the NRL's position." "We remain very supportive of the Warriors. We've just issued a... draw for next season which includes the[m. We're]... giving them time to work through what are obviously very complex and difficult issues," [the chief executive] said... yesterday... The Warriors' future remains unclear as attempts by the majority shareholder, the Tainui tribe, to sell the club, which is \$6 million in debt, drag on.

...The chief executive of the troubled Waikato tribe Tainui has resigned after just four months in the job, blaming board mismanagement of the \$180 million business... Disastrous investments, wasteful spending and internal power struggles have resulted in a failure to build on the initial asset. In the[latest] financial year, Tainui posted a \$40 million asset writedown. In contrast, South Island's Ngai Tahu, which also received a \$170 million settlement package... now has a total asset base of \$370 million... ■ L[oyal]... to the bitter end was the slogan when the Warriors first fielded a team in the A[US]n league competition in 1995... [Today] the word loyal leaves a sour taste in the mouths of players who have not been paid in two months. Cullen Investments and the N[ZRL] have bought the club, renamed it the N[Z] Warriors and appointed Parramatta[s] reserve grade coach... as coach. But... although they bought an operating licence, they did not buy player contracts. "You simply cannot buy people... That means we have to enter into a new sustainable contract with every player on terms that we and they can live by." ...refusing to pick up players' contracts mean[s that] the future of [some of the team's]stars... has yet to be decided... Despite the shambles and overseas offers, a handful of players have opted to stick with the club... [O]ne of 10 players... who have signed... says the past few months have been very stressful and as a result [the No 12] has withdrawn from the Aotearoa Maori World Cup side... [The No 12] says the players received letters two months ago saying they were no longer employed and the Warriors club had folded. "It is hard when you have done the work and I can't see us recouping anything. A lot of the guys have had to go out and get labouring jobs and that to survive. It is going to be hard for the guys to come back and be loyal to the club when the club has not been loyal to them,"... On top of that... [the new NZ] Warriors executive director... has spoken out about the players taking pay cuts – something [the ex-Manly fullback], himself, was against doing as a player. "It is quite ironic," says [the No 12]. "But it is one of those things. We could sit around and be annoyed about it but we have to do what is best for ourselves and best for rugby league in N[Z] even if it means eating humble pie..." In the new Warriors... players will have the opportunity to earn more than previously, based on performance incentives.

...The N[Z] Warriors will be a smaller, slimmer outfit... but management do not see any problems with that, given the end of unlimited interchange. Most of the players remaining after the change of ownership have dropped kilos, with the biggest... down from... 123kg to 113kg... [The f]ormer fullback turned boardroom suit... has been at trainings and rates the squad enthusiastically... [The executive director] likes the swagger of some of the youngsters, recognising a bit of himself, and wonders if in the past there was not too much deference paid to the highly rated stars.

...[the NZ Warriors executive director] has been branded a greedy hypocrite by his former Warriors teammates and bosses. "[The ex-Manly fullback] was really hard work. His relationship with sponsors was appalling," the league club's former chief executive... says in a new book. "[The fullback] was our most recognisable player but his willingness to be involved with anything to do with the club off the field was virtually non-existent." ...[the former chief executive] said his first dealing with [the fullback] was when the Kiwi star demanded a Pajero 4WD from Warriors sponsor Mitsubishi. "[The fullback] didn't like the first one and we had to send it back. Then [the fullback] didn't like the second one because of the way it drove... The poor guy at Mitsubishi was saying to me, 'Does this guy realise that when [a player] drives a car out of the showroom it depreciates \$25,000'. A few days later [the fullback] turned up in an Audi." ...[the fullback] is also savaged by his ex-Warriors prop teammate... in the book *Beleaguered* – which lifts the lid on the Auckland club's backroom dealings... [The prop] was furious at being asked to take a 50[%] cut in his \$350,000 salary when [the fullback] had... earlier... refused to take a drop in his \$650,000-a-season-wage... "Then [the fullback] puts on a suit and everything changes,"... The controversial fullback got \$1.3 million for his last two seasons but played only 10 games. The payment equalled \$1600 for every minute [the fullback] was on the field. But when... contacted in Wellington where the Warriors played the Canterbury Bulldogs last night, [the executive director]said those attacking him were just bitter. "It sounds like there are some bitter pills people have struggled to swallow..."

...THE Canterbury Bulldogs appear to have broken the golden rule – don't put anything you don't have to in writing – after breaking the NRL's salary cap. A note left by a club executive to himself may be their undoing as the league investigates payments to players said to be as much as \$300,000 on top of declared incomes. It's a matter the NRL needs to clear up quickly. If it's true, the Dogs should be penalised, and smartly. The teams below them on the competition ladder would rightly feel aggrieved if the penalty is a slap with a wet bus ticket. There's talk the Dogs will be dropped altogether, although that is unlikely considering the legal options open to the club. The courts would be unlikely to settle matters with alacrity. The NRL's rules allow it to fine a club the amount of the salary breach, which in this case could be as much as A\$1 million, and to deduct

up to four competition points. The Warriors and Broncos would be the two sides to benefit most from that – a four-point deduction... would move them up to first and second in the competition. Executives from those clubs would not comment yesterday on action they would like to see [taken]...

The Bulldogs are cheats and shouldn't be allowed to play in the finals... When Canberra were retrospectively punished by having their 1990 salary cap cut by A\$300,000 after they had breached the limit but won the competition in 1989, no one bar the Raiders and their supporters was happy. Melbourne and the Broncos breached the cap by A\$90,000 and A\$60,000 respectively in recent months and were fined the same amounts – A\$90,000 and A\$60,000. How can the Dogs be charged less than the A\$1 million by which they overspent? The Warriors are the only team in recent history to have competition points deducted – for having an extra player on the field against Wests in their first season.

...Down, out and ashamed in Doggie-land... Canterbury-Bankstown was a Bulldog-free zone yesterday. The blue and white banners were absent. Not a single Bulldogs jersey walked the streets. The district seems to feel the shame and embarrassment of the local league side's salary cap scandal. The local sports store has taken the club's gear out of its window. The official NRL shop said it expected sales to drop from a predicted A\$100,000... to zero – not one bumper sticker was sold this week. Before the decision came out last night, there was concern that too harsh a punishment could provoke riots. Already this season there have been several serious incidents in Bulldog country. There were brawls with rival fans at the Sydney Showgrounds and on trains carrying fans. Gangs of generally Lebanese youths wearing Bulldogs jerseys are the subject of police warnings after reports of standoff tactics and street robbery. The Bankstown police station was shot up by a Lebanese gang two years ago and Asians have been beaten. The gang of rapists whose leader was sentenced to 55 years' jail for pack attacks on A[USn] gals came from the area. All this is leading to nervousness and talk of... lawlessness. There's a feeling the football club has added to the general attitude of ignoring the rules, of snubbing authority, or taking it on... The Bulldogs fan club is running a bus convoy to Canberra for th[is weekend's] game. Police are nervous, planning extra security for the ground. Veiled threats are running between players from each side as the Raiders ask why they should risk injury against cheats. The club found nothing good in yesterday's news. Even before the announcement that it had been pushed from the top to the bottom of the table, an NRL audit turned up evidence that A\$200,000... taken from ratepayers' money given by the Liverpool Council for the grandiose Oasis casino, sports centre and apartment project had been siphoned off for a player payment. The A[USn] Taxation Office said it was reviewing the tax-free status of the Oasis development. The Bulldogs' sponsor, National Telecommunications Group, met the club to discuss its concerns about the scandal, and is believed to be on the verge of withdrawing. [The]Dogs coach... went to NRL headquarters to make a personal plea that the team not be expelled... But... it was to no avail. When the punishment came, it was comprehensive – the Bulldogs lose 37 points... They retain four points awarded to them for byes, and are required to play the remaining three home and away matches so other sides will not be prejudiced. But they will not be in the finals and they will have to pay a A\$500,000 fine[– which, together with the points deduction, constituted 'the harshest punishment in AUSn sporting history']. Bulldogs historians have just completed a record of the club which was all set for printing, due to go on sale after the glorious grand-final win. Now, Volume 2 and possibly a third will be needed, because the fall-out from this is set to run some distance.

...[its c]hief executive... wants NRL auditors to have the authority to scrutinise players' tax returns to avoid a repeat of the Bulldogs' salary cap scandal. The... [chief executive] was seeking the measure under tough new NRL rules to ensure players' earnings equal what clubs claim they are being paid. Future NRL premiers would also be stripped of their title if found guilty of severely breaching the salary cap... The idea of checking tax returns was based on a similar rule adopted by the A[USn] Football League... Auditors will also now go through the books of every club. ['Three other clubs have already been fined this year for breaching the salary cap' – which 'was introduced in 1990 but dropped during the Super League wars, then was re-introduced in 1997.' The Warriors' management has assured local supporters and sponsors that the Auckland club has nothing to fear from an audit.]

...From no-hopers to an historic surge into the top-eight play-offs. That's the remarkable turn-around of the Warriors league club this season and the credit is laid at the feet of a person who is neither a coach nor a player. League fanatic... The Mad Butcher... says the Warriors coming of age is because it has one boss – [the]multi-millionaire... who bought the club after Tainui opted out. Without [the multi-millionaire], the Warriors might have become history. "[The multi-millionaire] has done wonders for the club because [it] has the right people in place and there are no committees... Committees need a consensus whereas what [the multi-millionaire] says goes." ...at the start of the season the Warriors were given no show of making the semi-finals by punters on both sides of the Tasman. "People were tipping the Warriors not to win a game this season, and that was fair enough, because at the start of the year they didn't have a full squad... But the players have... exceeded everyone's expectations... and are on the verge of history..." Even die-hard... critics are finally coming over to the Warriors, with... a... sports broadcaster[– who once wrote that it was *time to wind up this club with the culture of losing* –] one of those impressed.

...If making the playoffs was the highlight of the Warriors' history, then losing 18-30 to lowly North Queensland yesterday was the lowlight, the anti-climax of all time. It was a lacklustre performance, a half-effort, some of the side just not turning up to play and [their]skipper... admitting as much. [The skipper] did not feel it was the big effort in Melbourne [last weekend]that cost them, rather that having one eye on the playoffs next weekend, and the thought that they could score easily against the Cowboys resulted in them over-burning with excitement. "We did some silly things and turned the ball over too much. It was frustrating and disappointing..." The final NRL regular season round produced no changes to the positions in the top eight... At Bruce Stadium, Canberra[']s coach... ended his 16-year association with the club on a positive note as the Raiders produced a 32-6 win over Melbourne[, whose]Kiwi hooker... again led the... defence, becoming the first player to top 1000 tackles in a season. [The Kiwi hooker] was 48 shy of the milestone before the start[of the game in Canberra], but went on to pull off a staggering 52 tackles.

...An upset 40-22 victory by the St George-Illawarra Dragons over defending champions Newcastle not only handed the N[Z] Warriors the National Rugby League minor premiership, but set up a rematch for the two A[USn] clubs in the opening games of the play-off series this weekend.

...The big games are here. Now is the time for the big-game players. Warriors fans can expect to see [their No 7] back from injury and leading his team against the Canberra Raiders at Ericsson Stadium at 4pm next Sunday... The... Dragons did the Warriors a huge favour in dumping the... Knights 40-22... That left the Knights and Warriors equal on 38 competition points but gave the minor premiership, and the A\$100,000... that goes with it, to the Warriors... The Roosters and Sharks have a rematch next Saturday. The Cronulla side [has 'never won the championship in the Sydney club's 36-year history'. The fourth qualifying final matches the Brisbane Broncos with the Parramatta Eels]... All the sides in the top eight are fragile in one way or another. In Newcastle's case it's [their No 7], who has been playing with an injury for a long time and is separated from his wife.

...Brisbane[']s captain... has written off the... Warriors and rates the... Roosters as the team to beat... expect[ing] the Roosters to beat a[No 7]-less Newcastle in tomorrow's semifinal... It was hard to back the Knights without [their playmaker], a player... the... [captain] rated "pretty close to Jesus Christ"... [E]ven the urgings of [the No 7] – a messiah in Newcastle – have failed to lift Novocastrians out of their "mood of depression".

...[Newcastle's No 7] may have won three Dally M awards, but yesterday [it] was dethroned as the world's best league player – by a Kiwi.[The NZ] Warriors halfback... is the Golden Boot recipient for [this year] – chosen by league journalists... [–] only the second Kiwi to win... And the winner of the last two golden boots awards doesn't seem to mind. "Not at all. [The Warriors' No 7] had a stronger season..." [Newcastle's No 7] said.

...The Sydney City Roosters proved "you have to lose one to win one" last night when they applied themselves more professionally to pressure the Warriors into game-deciding errors and take the NRL premiership 30-8... The Roosters' last appearance in the final was two years ago wherein they were beaten 14-6 by the Brisbane Broncos. Their last grand final victory was 27 years ago.

...A total of 2,851,000 people have passed through... N[RL] turnstiles this year, an increase of 33[%] on last season and just 199,000 shy of the all-time season record of 3.05 million... thanks largely to one semifinal and the grandfinal being staged at the 110,000-seat Stadium Australia.

...Picture a new state of the art stadium for the Auckland region complete with retractable roof, a moveable football pitch and seating configurations to host crowds of 5,000 to 50,000. It may sound far fetched and expensive but could it happen? The Auckland Regional Council has given a consortium... the go ahead to conduct a feasibility study into just such a development at Ericsson Stadium. The ARC Chair[perso]n... has been extolling the virtues of a super stadium in the region for many years but the council is adamant that such a development should take place at no cost and minimal risk to ratepayers... While the exact cost of the project won't be known until the feasibility study is complete, estimates put the price at approximately \$175 million. [The chairperson] says that's less than the combined total which could be spent on Manukau's Pacific Arena and Auckland City's Quay Park Stadium if they go ahead. "As a region, Auckland would be far better off pooling its resources and putting them into one multipurpose arena than trying to keep a plethora of new stadiums plus Eden Park and North Harbour Stadium afloat..." [The chairperson] says Ericsson is the best location for such a development, a view backed up by a second international consortium which has... talk[ed] with the ARC.

The Kiwi Ferns were unbeaten in the World Cup competition which also included A[US], Great Britain (a side combining England and Ireland) and an English B side, the Wildcats... [I]n the final against A[US], the Kiwi Ferns won 26-4... The Kiwi Ferns... had to find their own funding to get to Britain[, where their]... accommodation... was a lot less flash than that of the Kiwi [guys'] World Cup squad – who maintained their record of having never won a World Cup ('Great Britain won the first in 1954, and twice since, while AUS has won the rest'). NZ... has dominated... g[als']... world league in recent years – having not lost a test series in its six year history. But [the team's captain says AUS] and Great Britain proved at the World Cup they have come ahead in leaps and bounds.

...The inaugural Tri-Nations league series involving N[Z, AUS] and Britain will be staged on consecutive Fridays from October 15 to November 5. [The Kangaroos] will start the competition against [the Kiwis in Auckland]...

Reigning champions Queensland retained the rugby league State of Origin trophy in torrential rain in Brisbane last night. A 10-all draw in front of a crowd of 40,000... left the three-match series tied at one apiece. It was the first draw in Origin history... However, N[SW] appeared to blow their chance to win the series when they failed to attempt a field goal from close range in the final seconds. The scores were locked at 6-all at half-time... [In local news, a] referee was punched and kicked to the ground for prematurely ending a children's friendly... match... at the weekend. One [adult] faces assault charges and a ban from attending all sport after the incident[, during which the referee]... was bruised over much of his body. [The referee] was attacked, allegedly by supporters of the Ellerslie under-10s team, which was winning easily when [the referee] called a halt to the game, ruling it had become too violent. His 10-year-old son... and the other children burst into tears as they watched him being kicked by several people as [the referee] lay curled up on the ground. Police were called and the children were quickly hustled away to their clubrooms. The Auckland Rugby League, N[ZRL] and the Ellerslie Eagles club will investigate... It was the second instance of sideline violence at children's sport in a fortnight. A 10-year-old league player from St Joseph's School in central Auckland was struck by his father 10 days ago when [the son] refused to return to the field after being heavily tackled. The principal of the opposing May Road School team has demanded action from the Auckland Rugby League. On Saturday... the [under-10s were playing their] last match of the season. The Papakura team was about 60-0 down when [the referee] ended the game a few minutes early. [The referee] had already sent off one boy after two warnings for head high tackles and a half-time chat with his coach. "But the tension built up on the sideline and it started to reflect in the game... The sideline started to get loud and aggressive. They were saying, 'Go out and smash 'em, waste 'em.' It got to the point where it was getting out of hand, [so]I called, 'Time over, you win'." Then, [the referee] said, "the sideline came over, swept me off my feet, bowled me over and punched and kicked me when I was on the ground..." ...Papakura club members and supporters stopped the assault... Despite the attack, [the victim] intends to continue refereeing children's sport, and yesterday was watching [his son] at practice with the Counties under-10 representative team. [The NZRL chairperson]... said such incidents were totally unacceptable. Anyone who attacked a referee "won't have much of a future in rugby league... I had to deal with a parent involved in violent behaviour when I was on the A[uuckland Rugby League board and that parent] can watch league again when [it]'s about 75."

...Ban these sideline thugs... The vicious and cowardly attack on a kids' rugby league referee at the weekend left me feeling sick. What kind of an example were these cave[people] setting for the kids? ...What sparked the incident? [The referee] had called a halt to the game a few minutes early because it had become "too violent"! Too violent? These are nine-year-olds we're talking about – not grown[-ups]... And where are these youngsters picking up their on-the-field aggression? From their sideline mums and dads – the very people who should be teaching them respect and tolerance of others. It's been reported that comments like "go out and waste 'em," and "smash 'em" were being snarled from the sidelines during the game. Sending that kind of message to your kids compares to egging your dog on with cries of "sic 'em boy" when it comes face-to-face with another dog. Subject a dog to such thuggish taunts for a period of time, and it's heading for the pound. These parents exposed nine-year-olds to callous goading and violence once reserved for wrestling and boxing ringsides. Now we have instances where littlies are being urged into sports-ground thuggery – and for what? Nothing more than the spoils of victory – and parental pride[perhaps the pride of the parents of the Ellerslie under-10s will be dented by the club's decision to 'ban the entire team from its upcoming awards ceremony, and prevent those players selected to participate in their regional under-10 representative team from doing so']... Refereeing is a notoriously thankless job. But we desperately need more people [like the referee who was attacked – it]'s been a better role model for these kids than their own parents. What's your view? Email: ...@communitynewsalk.co.nz... [Incidentally, the] Kiwi... coach... has called on rugby league to unify its rules to help continue restoring the game's credibility.

...A coaches' revolt has prevented proposed rule changes that would have discouraged the bomb as an attacking weapon in rugby league. But after a day of tinkering with recommendations put forward by the N[RL]'s rules advisory group, little will change... and the video ref's role remains confusing. The video ref cannot rule on a forward pass, the NRL has decreed. [The video ref] can rule "only on incidents in the final play leading to the scoring of points (i.e. from the previous play-the-ball.)" Why not have the video ref rule on a forward pass if [it] can see ground markings and the ball clearly travels to a player in front of the passer? Nor will the video ref rule on cases where [it] cannot see the clear grounding of the ball, the NRL board has decided, instead handing the decision-making back to the ref. Why have a video ref then? Surely a ref in such a position has to rule a try out, given that [it] couldn't decide in the first place. But the contentious bit is that "in cases of extreme doubt the referee and video referee will give the benefit of doubt to the attacking team." Surely the benefit of doubt should go to the defending team unless the grounding is clear. In the old pre-video days, the ref wouldn't call a try unless [it] and/or his lines[people] saw a try.

...A lot has been written and said about the performance of our sporting whistle-blowers but criticism of referees... is not limited to A[US]. In America, 28 of the 31 team owners in the National Football League have voted in a radical instant replay challenge system to combat the mistakes match officials are making. The recently-completed season was littered with mistakes from officials, so... for the upcoming one[coaches] will be given two challenges a game and the referees will rule on the validity of each from television monitors on the sideline. Coaches will lose a timeout if the challenge does not wash with the ref. [By the way, this weekend sees the annual match between the national gridiron teams of NZ and AUSn – respectively known as the 'NZ Iron Blacks and Australia Outback']

...It's the day the Pro Bowl selections are announced and the members of the Minnesota Vikings, for whom... N[Z]'s only representative in America's National Football League... plays... have eagerly gathered at their practice facility to see who has made it. A record nine of their number have made the annual All Star selection, reflecting the mighty season the Vikings are having[, which could end in the Kiwi becoming]... the second Maori to earn a Superbowl ring [- the first earned] three with the... San Francisco 49ers... in the 1980s... A tally of 13 wins and a loss heading into tomorrow's match at home against the Jacksonville Jaguars is equal best in the NFL and tops in the NFC... [A] win tomorrow... clinches home advantage over the next two rounds to find the NFC's representative... But[, getting back to the Pro Bowl selections, the Kiwi] has missed out. Despite the fact [that the Kiwi is] having what they call over there a career year, the media know-alls who vote in the players have bypassed him. And with it has gone almost \$600,000 in bonuses... Now, if you're going to have a potentially 600,000 big ones slide tantalisingly by, you want to be able to afford it. [The Kiwi, who is] the biggest thing to have come out of Pukekohe in more ways than one, certainly can. At the start of the season, his fifth in the big league, [the Kiwi] negotiated himself a four-year deal worth... a little under \$3 million a season. Not bad for a guy whose main job is to clear holes on the field for others... [A]s a starter at right guard on the offensive line[, it is the Kiwi] who indulges in the mass sumo wrestle at the snap, slamming himself into the opposition's defence to, first, keep them away from the quarterback and, then, clear a path for the running backs. It is a case of immovable object meets irresistible force and the 163kg [Kiwi] tends to end up on the right side of the ledger. It's why... [the] Vikings have committed themselves to him... [and why the Kiwi] earns money All Blacks can only dream of... [The Kiwi] has bought a house in Minnesota, where [the Kiwi] resides with his American wife and three children... At this stage, there are no thoughts of a return to his native land... [for the] 29-year-old... who puts his body on the line for around 18 weeks a year and then spends the rest of it recovering... although it does remain close to his heart. "I'm always cheering for the All Blacks,"... says... the former Pukekohe High School first XV and [All Black] under-19 lock... [that was plucked] from the streets of Auckland by an American college scout who was blown away by the size of the overgrown teenager... [The Kiwi] has made a smooth transition to a game few Kiwis understand let alone play... [and is disappointed about] the Pro Bowl thing. "To be considered one of the best... in the NFL for the year would be quite an honour. But you never know, there's some more years to come." ...[assuming] the banged up body [the Kiwi starts] to feel at this stage of the season[holds up that long]. "...Yeah, it's war out there, a straight head-on collision. You certainly need your summers off. I take all kinds of drugs just to get my body right." All legal of course. The NFL wouldn't have it any other way... [His] is... a position which is likely to see the ball about as often as Halley's Comet comes out to play. But after four years of never seeing the pigskin, [the Kiwi almost] had a touchdown this year. It was a goalline stand and one of the Vikings running backs fumbled the ball going for the score. [The Kiwi] couldn't believe his luck as [the Kiwi] scooped it up and launched into a "rugby dive to touch down like a try. Or at least I thought I had". Only problem was the rules say you can't advance a fumble in the last two minutes of a half and [the Kiwi] was denied his glory and instead merely credited with a recovery... Now [the Kiwi]'s thinking Superbowls and more chances to stock his paypacket. And who knows? Maybe if the ball bounced his way, [the Kiwi]... boy-made-good... could become the first Maori... to score a touchdown in the Superbowl.

For years, diehard... Dallas Cowboys... football fans have worshipped the turf their team walks on. Now they can buy it too. Recently-replaced turf from the Super Bowl Champions' home stadium went on sale last week - at Texas-sized prices. A simple 15cm piece... costs \$US24.95 while \$US100,000 will buy you an entire end-zone.

...THE top running back in American football is [a]Dallas Cowboy... home alone one night recently, minding his own business, [the Cowboy's head was crowded by an]... old picture... again... It was... the former Chicago Bear who rushed more yards than any player in NFL history... This night a torrent of numbers came trailing after the picture, and [the Cowboy] felt compelled to write them down. [The Cowboy] made a note that [the Bear] had rushed for almost 17,000 yards in his career. Next to that [the Cowboy] scribbled the number 9000 which is about how many yards [the Cowboy] has gained since joining... Dallas... in 1990. On the page the difference seemed incredible. After considering the disparity for a while, [the Cowboy] did some simple arithmetic. If over the next five years you gain 1500 yards a season, [the Cowboy] said to himself, that'll give you another 7500. It was still a few hundred yards short of [the] mark. But there was something else to consider. In five years [the Cowboy] would be 31. [The Bear] finished his playing career at 33... "It's a dream until you write it down... Then it's a goal... I can be there... But I've got to get ahead of the curve..." What makes [the Cowboy] run? Why is [the Cowboy] in such a hurry? What, exactly, does [the Cowboy] expect to find when [the Cowboy gets where the Cowboy is going? Today the Cowboy]'ll find a new \$2 million home in Addison... just north of Dallas... To reflect his great good fortune - a \$US3.4m salary matched by endorsement earnings - [the Cowboy] wanted something special[, so the Cowboy]... spared no expense in building the place, for this was to be the home of a [person] who in only six pro seasons had won three Super Bowls[(including a)]... Superbowl MVP performance in '94[)] ...and four rushing titles and who last year set the NFL record for touchdowns in a season, 25... A few years ago [the Cowboy] was earning only about \$500,000 a year in endorsement money. So [the cowboy] gave his agent six months to change things, then fired him. - 1996

An amazing NFL gridiron comeback story ended after one brilliant touchdown catch yesterday... [The catcher], who confounded the experts by working his way back to playing shape just 15 weeks after surgery for torn knee ligaments, was hurt after snaring a 14-yard touchdown pass in the San Francisco 49ers' 34-17 win over the Denver Broncos... Tests later showed a fracture... on the knee... which will sideline... the NFL's all-time... leader in receptions (1057), receiving yards (16,455) and receiving touchdowns (155)... and... one of three active players to be named in the 75th anniversary all-time NFL team... for the next eight to 10 weeks... [The catcher] also holds the single-season mark for touchdowns (22) and yards (1848)... [In related news, attendance at the NFL] in 1996 was down by nearly 600,000 fans from the year before. The... total paid attendance... was 18,648,981, a drop from 1995's record total of 19,202,757, but still the second-highest total in the league's 77-year history.

...In America, as elsewhere, drunken, belligerent and sometimes violent fans have an impact drastically out of proportion to their numbers... In an attempt to keep the violence where it belongs - on the field - the Philadelphia Eagles American football club have opened their own courtroom so unruly fans can be dealt with immediately and hauled off to jail. The Legal Eagle... [who previously worked] in a mobile night court so is familiar with the concept of instant justice... worked his first day last weekend, and while Philadelphia were beating the Pittsburgh Steelers 23-20 the judge went 17-3 against the fans beneath the stadium... [All of the offenders were guys] and most drink-impaired... The [17 found guilty] were fined and rebuked. One threw up, one wet his pants and one admitted to multiple murder - "I killed 12 guys" - but was[only] done for disorderly conduct. [The Eagle's] owner... who pays the judge's wages, declared the experiment a huge success. There have been an average 60 arrests at an Eagles game... The idea was prompted by ugly scenes at an Eagles-San Francisco 49ers game where running fights between rival fans were described in the U[S] as "a bloody imitation of a riotous European soccer match." It was television's showcase Monday night game and having a major brawl screened live across the nation affronted the civic pride of a community that bills itself as "the city of brotherly love." ...□ IT'S a tough game that American football. Just ask [the]Mississippi State noseguard... who had to sit out his team's recent NCAA match against Northeast Louisiana through injury. It's a fair bet, though, his coach wasn't happy with how it was sustained. [The noseguard] was crocked in a fight with a teammate...

Adidas has signed a multi-year agreement with the N[FL] to provide clothing and shoes for players, giving it a presence in three major US sports. Adidas already has licensing agreements with major league baseball's New York Yankees and the National Basketball Association.

...The Super Bowl will be the year's top-rated television show in the U[S], no doubt, but with small-market... so-called expansion... teams vying for the game, sponsors who paid... an average cost of \$1.3 million a spot... for... 50-odd... 30-second commercials are jittery. The big-time football franchises in Dallas, San Francisco and other major cities have already fallen by the wayside. Left in the running are Jacksonville, Florida, the No. 55 media market, Charlotte, No. 28, and Green Bay, No. 71. Only the New England Patriots play in a top 10 market, in Boston (No. 6). Two of those sides will advance to the Super Bowl on January 26. "I'm concerned about a Jacksonville-Carolina matchup," said... [the] national media director for advertising agency BBDO. "That could lead to a loss of 10[%] of the audience." ...For the advertisers, who booked their... spots last year before the commercial time sold out, such a matchup seemed highly unlikely. The oddsmakers considered the chances one in 100,000 at the start of the season. The National Pork Producers Council is one of a handful of advertisers that puts virtually all of its annual advertising budget into the Super Bowl. "I'm not worried," said... [the] vice-president of marketing for the group. "People will tune in at least for a while, even if it doesn't have the same built-in appeal fan support that Dallas or Chicago might bring." But if [the vice-president] had to pick, [the vice-president] would prefer that the Green Bay Packers make it into the final round. The media buyers agreed. "Green Bay has a unique history... Even though it's from a small market, Green Bay is a draw. It's important from a ratings standpoint that they be there." ...But even the worst-case scenario isn't so bad for advertisers, said the media buyers. "...People... tune in every year... regardless of who plays... It's like the Academy Awards..." [Another media] consultant... said that "along with the Olympics, it's one of the few remaining events where you can talk to the nation simultaneously. More importantly, they've managed to make it into an exhibition for advertisers, where people actually watch and critique ads. It's a very interesting media phenomenon." The game has become "the event" for not just football, but also for advertising... While the leading television networks continue to lose market share the rest of the year, demand has remained strong for... News Corp's... Super Bowl...

In the end there was an air of inevitability about America's biggest sports event... Even after the New England Patriots took a surprise lead over the Green Bay Packers at the end of the first quarter of play, there was a feeling it could not last. It didn't: they went down 21-35... It was one of those wasn't-as-close-as-the-score-looks games. At Super Bowl parties all over America a very familiar thing was happening – as the Super Bowl went on people started talking among themselves and otherwise losing interest. Imagine the consternation of advertisers who shelled out \$US1.2 million for the right to air a 30s commercial that took more megabucks to make, only to have a one-sided game, as most of the past dozen or so of these spectacles have been. The Green Bay Packers have been put together over the past few years by some of the top minds in the game, from management to coaches. There is a trick to getting a team together these days because players have the right to sign very short contracts then go test the waters to see what some other team will offer them. It is not unusual to... go to the start of a new season and find your team with a whole new crop of players. That wasn't always the case. It is the result of lawyers for the players primarily, and sports agents secondarily. And nowadays there is the salary cap, an innovation that limits total players' salaries that was agreed to by team owners as a way to make the NFL more competitive... [T]he Packer organisation did a superb job of... building their team like shrewd card players building a good hand. The rest of the kudos go to... a coach who could get them to play together rather selflessly, no small feat in today's age of superinflated sports egos. I... a former *N[Z] Herald* journalist living in the U[S]... can honestly say that after watching a lot of games this season, this was one of the least interesting. It has become such a spectacle that simple, hard, good football gets lost in silly exhibitionism, cheap shots and the players' need to feel they have done something special that will live on in videotape highlight reels. Hence those banal walks and dances that they should have left behind when they grew up. Grew up? Ah, yes of course, now I see... [■] S[itting] out the gridiron season... [was a guy] who believes in his faith... The defensive tackle turned down the Washington Redskins' \$US3.6m contract offer because... "a revelation from God" [said] the team should pay him \$US5m. - 1997

Investors have agreed to pay nearly \$US800 million... for the Washington Redskins football team and... [their s]tadium in the richest deal ever for a North American sports franchise. The price... dwarfs the \$US530 million paid last year for the Cleveland Browns... [While on the topic of North American sports, i]n the days before the fall of the Iron Curtain, the joke was that if the Soviets chose to attack they should do it on the last Sunday in January – the day assigned... to Super Bowl. They would find America sprawled on a couch and rendered... insensible by cold beer and... hubris.

...Supporters of the Green Bay Packers usually form the largest and noisiest contingent when [US] football fans jam into The Sports Bar in New York's East Village every Sunday afternoon to follow their teams on satellite TV... Green Bay is definitely in, not only because the Packers are winners again, but because of their appeal as the embodiment of small-town America, peopled by selfless and community-minded citizens... Green Bay is a mill town in Wisconsin with a population of 96,000, and the Packers make [USers] feel good about themselves. They are unique in that they are owned by Green Bay citizens after shares of the team were sold in 1951 to keep the Packers afloat. This year's share plan, designed to raise \$80 m... for capital improvements to Lambeau [Stadium] and, ultimately, to finance its replacement, has been wildly successful as people clamoured for the 400,000 virtually untradeable shares. Under a bylaw, if for some unimaginable reason the Packers – now valued at \$165 m... – must be sold, the proceeds will go[to] the local branch of the American Legion of war veterans. These uplifting nuggets about Green Bay would matter little if the Packers had not rediscovered the habit of winning. They comfortably beat the New England Patriots in Super Bowl XXXI last January, ending a drought stretching back to the halcyon days of 1967-68, when the Pack won consecutive championships under their legendary coach... after whom the Super Bowl trophy is named, [and] who made the famous remark, "Winning isn't everything, it's the only thing." Green Bay's fortunes withered after [his] departure in 1969. The team became perennial losers and a joke. In the lean years, players – especially black players – shunned Green Bay. It was considered too cold, too isolated, too white... The team's rebirth dates back to 1992, with the arrival of... [a new] general manager from the New York Jets[, who] hired... the offensive mastermind of the San Francisco 49ers... [and] also made a key acquisition in the same year... [of] the backup quarterback with the Atlanta Falcons... [– who] grew up in... a small town in Mississippi next to a waterway called Rotten Bayou, home to alligators that ate three of the family dogs[, and]... had a reputation as a party boy who would rather drink than train, and was considered a foolish choice as Green Bay's pivotal player. But [the quarterback] has curbed his wilder instincts on and off the field, although [it] needed treatment last year because of his addiction to painkillers... While [the quarterback] marshals the offence... an ordained minister... anchors Green Bay's defence... [T]he Minister of Defence, thought long and hard before signing... for \$17 m... for four years. The night before [the minister] made up his mind, [it] got down on his knees and prayed for guidance. [The minister] wanted to go to San Francisco. "When the Lord spoke to me, [it] said, 'Let me ask you a question: where did the head coach[and] the defensive coordinator... come from before they went to Green Bay?' I said, 'San Francisco?' And [the Lord] said, 'That's the San Francisco I'm talking about.'" God, money and [the quarterback brought the minister] to Green Bay in his quest for a Super Bowl ring, and [the minister] fulfilled his ambition after more than a decade of frustration with the Philadelphia Eagles... The Packers... beat the San Francisco 49ers 23-10 in the NFC play-off on Monday to reach the Super Bowl for the second year in a row.

...After countless dry-eyed interviews in the week leading up to the Super Bowl, [the] [famously emotional] St Louis Rams gridiron coach... was finally moved to tears yesterday. [The coach] has a reputation for misting up and his penchant for crying surprised many of his players until they got used to it. So sportswriters were perplexed that [the coach] appeared so in control of his emotions following his team's thrilling 23-16 victory... in the Super Bowl. "I expected to win and when you expect to win it takes a little edge off when you do it," the 63-year-old... said. But when asked if [it] had cried at all the night before, [the coach]'s eyes welled up and the tears began to flow. [The coach] recalled that his mother, who died five years ago, had predicted [her son] would return to coaching and lead a team to a Super Bowl victory before [it] quit. "God... I didn't think... [mum] was... right... but [mum] was." Many football insiders thought it an odd choice three years ago when the Rams hired [the person] who had spent the previous 14 years out of football in the broadcast booth. After all, [this was the person who] practically invented the phrase coaching burnout when

[it] left the game after seven years with the Philadelphia Eagles... [The son] came back to see if [it] could get back to a level where [it] was satisfied with his own performance as a football coach and as a person. Following two terrible seasons in which [the son] questioned his own sanity for returning to the coaching pressure, [it] has finally attained the pinnacle of his profession and must be satisfied – even by his own lofty standards.

...ON A HIGH: The New York Giants [are trying] to win the pre-Super Bowl psychological battle by looking bigger than they are. Tomorrow they play the Baltimore Ravens in... gridiron's main event. All 150 players should get on the field for at least 20 seconds each – 18 of them for dancing.

FOOTBALL, a field game between two teams, played with an inflated oval-shaped ball that is advanced to a goal by running, passing, or kicking[, subdivided under]... the names of American, Canadian, and Australian football. These games... also include blocking, which permits a ballcarrier's teammates to make contact with, knock down, or ward off opposing players seeking to tackle the player running with the ball. The most distinctive aspect of the [North]American... games is the principle of possession. Through a series of plays, or downs, the team possessing the ball can sustain an attack, mixing its plays on the ground and in the air until it either scores or is forced to relinquish possession to the opposing team. In the A[US]n game, play is continuous; the ball goes back and forth between the teams until a goal is scored, a foul is committed, or the ball goes out of bounds. Another marked difference among the games is substitutions – unlimited in the [North]American... games and disallowed in A[US]n play... More than most games... American football... has been subjected to rules revisions as new techniques and tactics are devised to give the offence or the defence the upper hand... The rules and eligibility of players are administered by national organizations... [but] the control of amateurs and professionals is separate. Only on military service teams may amateurs and professionals play together. Amateur control is divided among the National Collegiate Athletic Association (NCAA), which numbers among its members all the large universities; the National Association of Intercollegiate Athletics (NAIA), to which many smaller colleges belong; the National Junior College Athletic Association; and the National Federation of State High School Athletic Associations. For rules making, the last three are combined as the National Alliance Football Committee. Control of professional football is vested in the National Football League... which merged in 1970 with the rival American Football League... The clock-running time is 60 minutes in professional and college football and 48 minutes in high school games. There are two halves, each divided into... quarters. A 15-minute interval is allowed... NFL rules provide for a “sudden-death” overtime period when games end in a tie[(but even non-tied games often run longer than 75 minutes of real-time due to the abundance of opportunities for clock-stopping by coaches and officials)]... In professional football games, seven officials supervise play... In college games four to six officials are used. A team consists of 11 players[, with]... the use of separate teams for offense and defense... The playing area is 120 yards long from end to end... The offense is permitted a series of four plays... in which to advance the ball at least 10 yards or else relinquish possession to the defense. If the first play fails to produce a 10-yard gain, the next play becomes the second down, with the remaining yardage of the 10 to be gained. Any time the ball is advanced 10 or more yards during a series, and after the ballcarrier or pass catcher is halted, the team is entitled to resume the offensive, starting with a new first down. This allows the team four more plays to gain an additional 10 yards. The ball changes hands immediately, however, if a defensive player recovers a dropped (fumbled) ball, “steals” the ball from the ballcarrier, or intercepts the ball in flight. Otherwise, the offensive team retains possession until it scores or elects to give up the ball (usually on the fourth play of the series) by kicking, or punting, it. The punt is the offensive team's way of exchanging distance for loss of possession... Once the offense loses possession, the defensive team takes the offensive... The prime unit of scoring is the touchdown... worth 6 points... which... occurs whenever either team takes the ball over the opponent's goal line or when the defense recovers the ball in the opponent's end zone. The offense can score a touchdown by running the ball over the goal line... or... by passing it to an eligible receiver... in the end zone... [I]f... the ball... touches the ground before it is caught, the pass is incomplete and the [touch]down is lost... Once a touchdown is made, the scoring team may try for a conversion – that is, for 1 or 2 additional points... [depending on whether the game is using college or professional] rules... The offensive team at any time (except the kickoff) may try to score a “field” goal by kicking the ball from the field over the crossbar of the defensive goal either by placekick or dropkick. Such a field goal is worth 3 points. Another method of scoring is the safety, which is worth 2 points to the team forcing the safety... It is a safety when the ball becomes dead (downed or out of bounds) behind the offensive team's own goal line, provided the impetus came from a player of that team... [F]ootball equipment has undergone many changes through the years. Most of these changes are the result of improved materials and the needs of the players... Each player wears a helmet, usually of unbreakable plastic, filled with a face mask or bar and webbing on the inside to lessen shock[, plus]... pads that protect the shoulders, thighs, hips, knees, and ribs. Some of the pads are sewn into the football pants. The shoe has cleats attached to the sole for improved traction. On frozen fields, players may wear shoes without cleats to aid in traction... Football is generally an outdoor sport, though domed stadiums allow the game to be played indoors... on grass or on a grass-like composition material... Intercollegiate football in the U[S] marked its 100th birthday on Nov. 6, 1969. It grew steadily from the time of the first undergraduate game between Rutgers and Princeton universities... Professional football had its beginnings in small towns of western Pennsylvania towards the end of the 19th century. The local teams were made up of former college stars eager to continue playing the game... In 1920 representatives from 12 teams gathered in the back room of a Canton, Ohio, automobile agency to discuss the future of professional football. This meeting led to the formation of the American Professional Football Association... Franchises at \$100 each went to [each of the 12 teams]... Canton is recognized as the cradle of modern professional football. The Pro Football Hall of Fame, dedicated in 1963, is [t]here... Among the most ancient of ball games and known by a variety of names, modern football divided into two forms in the mid-19th century. One version of the game ruled that the ball could be advanced only by kicking and that all players except the goalkeeper were prohibited from handling the ball. This version was formalized by the London Football Association, founded in 1863 in England, and was known as association football, or soccer. This is the form most extensively played throughout the world... The other version[, which]... permitted touching the ball with the hands – [and from which North American and AUSn football]... evolved... – was... formalized by the Rugby Football Union in London in 1871... It stemmed from a game played at the Rugby School in England, when, in 1823, a [soccer]player illegally picked up a ball and ran with it.

Contrary to what many people may think, the word soccer was not invented by the Americans so they could call their odd, quasi-gladiatorial national game football. In fact, it was the British who invented the word. Soccer, when it first appeared in the 1890s, was spelled socca. The word is derived from... association football, meaning the football played by the rules laid down by the British Football Association. It was spelled socker until the current form... appeared around 1895. The er suffix attached to soccer, incidentally, was often used in late 19th and early 20th Century slang. This can be seen, for example, in the transformation of the word rugby into the term rugger... ■ [Rugger]... is by far our most dangerous – and expensive – sport. The latest statistics released by ACC show a quarter of new sport and recreational claims are for rugby-related injuries. While it is true that rugby has the greatest number of participants... the figure is alarming... [O]ver the last Super 12 season there were 22,000 tackles, causing 40 players to need medical treatment. There were eight tackle injuries per 1000 tackles... Both ACC and the NZ[RFU] have injury prevention plans in place to try to bring down injury numbers... Soccer... [is] next on the list, but... account[s] for just 7[%] of new claims... [(an Auckland] is to receive accident compensation for an injury sustained in a soccer game 10 years ago... when... [it] was a 12-year-old boy... [- t]he original claim was declined after medical advice that the... constant pain... in... the lefthand side of his body... w[as] unrelated to the soccer injury[]).

...The NZRFU] boss... says the time is right to launch an attack on the U[S] market in an effort to establish the game [of rugby union ahead of basketball]as the “number two sport in the world.” A... former soccer player, [the NZRFU chief executive] said the just-finished [soccer]World

Cup... had involved a lot of boring matches... “...out of something like 60 games, there were only four or five really good ones... There are 260 million people in America and while they have been brought up on other sports, I believe we have something to offer them...”

...To... [the] chief executive, NZ[RFU, in reference to your]... article in the... *Herald*... From the No 1... sport in the world, I wish you every success in your quest to achieve the status of No 2 sport in the world. If I can help in anyway, please feel free to contact me... General manager, Soccer NZ.

...*Soccer kicks rugby off roost*... Soccer has become the most popular sport for young N[Z]ers. Rugby, the national game, is now number two. The two codes have always attracted 5- to 17-year-olds in fairly even numbers, but new Hillary Commission research shows around 114,000 of our youngsters regularly play soccer. About 99,500 favour rugby union. It is the first time such figures have been gathered. The balance is tipped by the increasing number of girls who prefer to dribble a round ball, rather than kick an oval one. Fewer girls are drawn to the physical contact of rucks, scrums and tackles... The codes switch places for players over 18... with rugby rating as N[Z]’s ninth most popular sport and soccer 12th.

...[*Soccer*] still No 1 in money game... The silly... season is in full cry with soccer clubs shelling out crazy money to buy players... Arsenal hit the jackpot when Real Madrid paid \$US35.7m for [a player to keep]... the Spanish club firmly at the top of the big-spenders... The [former ‘world record transfer fee’ of] \$US19.92m Newcastle... paid Blackburn... for [an England striker]... still stacks up... as the... biggest fee paid by a British club.

...British soccer fans fought running battles with police... and members of [the local] immigrant community yesterday in the aftermath of a... soccer match between England and Germany... [R]esidents, mostly North African... youths... and English fans played a cat-and-mouse game, with occasional running battles... A police official on the scene said one [person] had been wounded with a screwdriver... Many English fans, revelling in their team’s rare victory over arch-rivals Germany, swigged beer from cans. In one incident, English fans taunted riot police, who responded with tear gas. Riot police with dogs closed in on a group of English fans who had taken refuge in a bar, using teargas to force them out. They were then arrested and loaded on to buses. Calm returned to the city centre in the early hours after police systematically swept through the streets dispersing groups of fans... Police said about 70 people had been arrested, mostly English. That brought to more than 900 the number of soccer hooligans detained in the past 24 hours... One police[officer] said about 3000 English fans were believed to be in... the city... England-Germany game[s have] always been regarded as one of the highest-risk matches... because of the reputations of the hooligan fringe among the fans of both national teams.

...BRITISH MPs are putting the boot into soccer hooligans and passing emergency legislation to stop further violent clashes. The... football (disorder) bill... comes in the wake of hundreds of drunk England fans being deported from... Euro[pe following a game against Germany] last month... A core of English fans have an international reputation for violent and drunken behaviour since 1974 when they rioted in Paris. Last week, England soccer officials blamed hooligans at Euro[pean matches] for the failure to win the vote to host the 2006 World Cup.

...SPRAWLED in the back of a Mercedes on the M1, one of Britain’s most feared football hooligans brandishes his mobile phone to marshal more than 150 you[ths]... for a riot. Known to his followers as “Nightmare,” [the hooligan] tracks the movements of fellow thugs travelling by coach as [it] prepares to telephone the leader of a rival gang with the words: “It’s the Nightmare calling – are you boys ready?” [The hooligan grins as it] boasts of an attack in which a police[officer] was stabbed in the face: “We was laughing at him... [as the copper] said, ‘You can’t do that – I’m an off-duty police[officer].’” An 18-month television undercover investigation has exposed the ringleaders of Britain’s most notorious gang of football hooligans and uncovered evidence of a resurgence of the widespread thuggery associated with the sport in the 1980s. It shows how a small circle of thugs is co-ordinating growing attacks on rival fans... Modern hooligans shun scarves and hats in team colours for plain clothes and baseball caps to shield their faces from surveillance cameras. Many are members of the right-wing group Combat 18 and also have Ulster loyalist sympathies. They generally prefer cocaine to lager. Hidden camera footage of a Chelsea match in Copenhagen last November reveals that [a 32-year-old]... who runs a tyre business in Hanworth, southwest London... is an organiser with [the Nightmare] (35) of the... hooligan gang, the Chelsea Headhunters... [The 32-year-old] tells his followers in a Danish bar: “We’ve come here to have a war.” It was the Chelsea Headhunters who organised an ambush of Scottish supporters in Trafalgar Square during the Euro 96 championship in which 40 people were injured.

A Scottish doctor warned yesterday that England could see an increase in domestic violence if it loses its Euro 96 soccer semi-final against Germany this week... [T]he British Medical Association... secretary... said marital abuse... almost doubled... after Scotland’s defeat by England...

THE Euro 96 soccer championship hosted by England... this year made a profit of \$NZ156.25 million. Around two-thirds of the money will go to the 16 teams that took part in the three-week tournament, with winners Germany pocketing \$12 million. The remaining third... will be ploughed into a special fund created by UEFA, European soccer’s governing body, dedicated to the development of football in the emerging nations of eastern Europe. The announcement caps what was generally regarded as a successful tournament for the hosts both on and off the field, [so it’s a shame some hooligans have dashed] England’s hopes of staging the 2006 World Cup.

...[A] BRAZILIAN World Cup striker... has been dropped again by Valencia... in what many fans are already seeing as punishment for sleeping through a training session... [However, the striker] did not think his arrival 75 minutes late for training on Thursday was behind the decision. The Brazilian, whose salary of around \$NZ5.08 million a year makes him Spain’s best-paid player, threatened to leave the club after being left out of Valencia’s UEFA Cup games against Bayern Munich earlier this season. □... [NEWCASTLE’S] OUT-OF-FAVOUR Colombian striker... says [it] is happy in English soccer and definitely staying at Newcastle... – booting into touch talk of an imminent return to Italy. In Bogota to train with his national squad, [the Colombian said it]... was not about to quit. With... Newcastle[’s former]... world record... signing... and [another British striker] knocking in the goals... [the Colombian], an \$16.7 million capture from Parma, has been used more as a substitute, often as a midfielder [instead of] in his preferred... role... [In addition to being in-form in league matches, the former record signing – who] won the premiership title with Blackburn in the 1994-95 season... [before joining] his home town club... for £15 million... [-] topscored with five goals in the European championships...

[THE] GOLDEN boy... Newcastle fork[ed] out a world record transfer fee for... always had a boyhood dream of playing with Newcastle. That was 21 years ago when, kitted out in the Magpies’ famous black and white strip, the five-year-old learned to kick a ball in the Tyneside streets as his sheet-metal worker dad struggled to support his family. Now that dream has come true... with the... soccer star... receiving a huge welcome at St James Park. But plenty else has changed. The mammoth \$[NZ]30 million transfer deal... mean[t] the soccer sensation could probably buy the factory where his father works. His move from Blackburn Rovers is... earn[ing] him \$60,000 a week, which could be lifted to... more than \$4 million a year... through bonuses. It was reported... [the striker also pocketed] a \$2 million slice of his transfer fee. And... will continue a \$1 million a year sponsorship deal to wear Umbro boots... When [the striker] was 12... the... [striker] queued for four hours to watch his hero’s debut for Newcastle. And... stayed after the match to get [his hero]’s autograph... But... on a cold night in 1983 as [the striker] played for Newcastle City Schoolboys[, it] was spotted by... [someone] scouting for Southampton. [The scout] snapped up the budding superstar from under the noses of Newcastle.

...[the striker] scored from a controversial penalty against his former club Blackburn yesterday to set Newcastle on their way to a 2-1 victory which took them to third in the English premier soccer league. The England striker, who left Blackburn... for a [then-]world record \$33.85 million, smashed home his spot kick after[Blackburn’s] Scotland defender... was harshly adjudged to have handled in the area on the stroke of halftime. Newcastle are now level on points with... Manchester United, who came from behind to beat Nottingham Forest 4-1.

...[shares] in the English soccer champions... have risen to record highs after the club’s chief executive said the club was a probable bid target... The speculation sent [Manchester] United shares soaring to... more than £5 – which valued the club at more than £300 million... The club responded to the swirl of speculation with a statement that its board was not aware of any bid approaches... United shares have risen from below 200p at the

end of January because the club won the coveted English premier league and FA Cup double. The rise had also been fuelled by a lucrative new television deal signed by the Premier League with satellite broadcaster BSkyB that would virtually treble television income for top English soccer clubs[('ticket sales don't cover British soccer's wages bill')]. United were reported – earlier this year – to have rejected a takeover bid from publishing group VCI[, which]... did a deal with United in January to buy the publishing rights to club videos and books... Share analysts said that the huge interest in soccer and the potential growth of revenue from pay-per-view television deals made a bid likely... at some stage in the near future... A *Times* article named brewer Whitbread and media-and-leisure group Granada as potential bidders. - 1996

Football clubs around the world are making more money from franchising and property deals than they are from their ticket sales... The product is far worse than it used to be and inferior to its main competitors. The company office is discreet... Yet it is a place of pilgrimage. Two smiling visitors are asked where they are from. "China," they reply. God apart, only sports teams inspire such devotion. The well-hidden office, and a huge collection of trophies within, belongs to AC Milan which, despite an awful season – ninth at best in the Italian league – is a giant of world soccer... Countless lesser teams in Europe, Latin America and Asia are adored in their home cities. And the game itself has unrivalled worldwide appeal. Even in America, where other sports rule[, the 'people's']... game is played by more children than any other sport... No wonder money is flooding into soccer. Most striking is the advent of pay [TV], which has pushed the price of broadcasting rights skywards. Between 1997 and 2001, the 20 clubs in England's Premier League will be paid £620m... by BSkyB... European football now earns a sum similar to those paid by America's networks to its main sports. Companies want their names on team shirts: Opel, the European arm of General Motors, pays AC Milan 10 billion lire... a season for the privilege, as well as sponsoring Germany's Bayern Munich. One or two firms have even bought their own club... Can football become a normal industry? Almost certainly not... [because] in many countries ownership of two clubs, which could in theory be competitors, is banned. However, there is surely plenty of room for football to become a much more normal business. So, for example, clubs thwarted by curbs on mergers at home are looking abroad. Canal+, a French cable television firm, has majority stakes in both Paris Saint-Germain and Servette, a Swiss club. Servette will probably be used as a testing ground for prospective PSG players. Caspian, owner of England's Leeds United, is said to be considering an equity swap with a Dutch club, PSV Eindhoven. One reason for clubs' newly business-like behaviour is that the game has become riskier as well as richer: winners get more money from television and sponsors but, by definition, there is more for losers to miss out on. Even the bottom... Premier League... team... can expect £3.5m from [TV] rights next season; in lower leagues, there is far less on offer. On May 27 the price of shares in Sheffield United, beaten in a play-off for promotion to the Premier League the previous day, fell by 31[% 18]... British clubs now have stockmarket listings, up from [3] two years ago. In part this is because pay [TV is more d]eveloped in Britain than other markets. But British clubs have also led the way in merchandising... Manchester United... now gets only... one-third of its £70 million-odd in revenues from ticket sales and one-[6th from TV]. The rest comes from sponsorships, catering and conferences, and retailing. More, including a United [TV] channel, may follow.

...Manchester United is set to add to its ever-growing riches with new sponsorship deals estimated at £30 million... a year. Their £5 million shirt deal with Sharp ends... [soon] and United will then look for a deal with at least eight different companies.

...[British soccer c]lubs are compelled by their governing body to make major changes to their jersey designs at least every two years. This is to make money from eager young fans buying the uniforms... British soccer fans have become accustomed to frequent changes in their teams' uniforms... [but s]ome European sides... have resisted the trend. Italian teams Inter Milan and Juventus have refused to make substantial changes... for decades in order to sustain tradition... The latest kit to undergo a transformation is that of [NZ's]national soccer side, the All Whites, who in defiance of their nick-name turned out in a black strip in Sydney on Sunday. Their coach... is pushing for a continuation of the colour traditionally associated with [N]Z... sports teams[, saying]... it would do the side no harm to ride on the All Blacks' success. [A f]ormer coach... whose successful 1982 World Cup side sparked the All Whites tag, has no qualms about a possible permanent return to black... The term had taken hold after [the coach] happened to put his players in a white strip for a cup qualifier... "The media began calling them the All Whites and the name just stuck." ...[the current skipper] loves playing in black, and... says... it's time [NZ]soccer started concentrating on the future rather than always looking back to 1982. A soccer historian... says [N]Z soccer] teams were kitted in all black clothes until 1951 when white shorts were introduced. Those colours remained for the next 30 years. The colour issue is expected to go before Soccer [N]Z's council meeting on Saturday... Last year the Auckland rugby strip... [of] more than 100 years, was given an overhaul... At the time, the Auckland rugby chief executive... said the new design projected a new image for a new era of professionalism[, but] agreed that the jersey was designed to appeal to young people and would be competition for the Auckland Warriors rugby league strip in the marketplace... [B]lack gear was originally left off the kit list for the 1994 Commonwealth Games. There were fears the competitors would turn out in blue, green and white uniforms based on the colours of the team sponsor, The [N]Z Way. But the Olympic and Commonwealth Games Association backed down after protests and the competitors were able to wear traditional black.

...[a 'stroppy' French soccer star has shown] a new face to the world courtesy of some Maori-inspired make-up. [A] moko was sported by the retired Manchester United striker for a cover-shoot for *GQ* magazine. Following the furore when the Spice Girls did an impromptu haka this year, Maori spokes[people] were more subdued about the... cultural appropriation... [The striker] enjoyed a successful, if controversial, career, marred in 1995 by his kung fu kick of a spectator.

...Manchester United's [retired]French footballer... has long been idolised by football fans but a new painting which portrays him as the risen Christ is taking adulation a step too far, according to many clergy in Britain.

...[the striker who replaced the team's French footballer] shrugged off the jeers of fans who used to adore him to give Manchester United a 1-0 English premier soccer league victory at Newcastle... [The striker], who left Newcastle's St James' Park in a £7 million... deal... three years ago, headed the only goal... in the 67th minute, to restore the champions' four-point lead at the top of the table... United... have 43 points and are clear of Blackburn, who beat West Ham 3-0... A further point back are Chelsea, who won 4-1 at Sheffield Wednesday... Newcastle won the corresponding fixture 5-0 last season but never looked likely to repeat that incredible scoreline in the absence of... [their £15 million striker who], according to... University of Lincolnshire... researchers[, is – together with an AUSn pop star – one of]... the two famous figures most hero-worshipped by Britain's youngsters.

...Barnsley's... 20-year-old defender who has yet to play for the first team, [has]tested positive for banned amphetamines at a random training-ground test... [The] first player with an English premier league club to fail a drugs test... pleaded guilty... [and] was given a three-month ban.

...The heat is going on the harmless poppy seed roll after a Brazilian football player failed a dope test. [The]Internacional midfielder... tested positive for morphine after a 4-0 defeat by Santos in the Brazilian championship. [The midfielder] had eaten bread rolls covered in poppy seeds on the morning of the game. Internacional doctors carried out an experiment on four students, who also tested positive for the same drug after eating the same type of rolls. Players have been warned not to overdoughs on the rolls... [Incidentally, if] you like to play a bit of soccer to support your drug habit, it looks like... Charlton Athletic is the place to be. The London first division team sacked... [one defender who had] tested positive for cocaine and marijuana after training. [The defender was] the fifth Charlton player to fail a drugs test. [One of the other four] served a four-month suspension for taking cocaine, cannabis and ecstasy. This is not recommended preparation for a game.

...[A] FORMER England soccer midfielder... is finding it hard to settle at first division English club Middlesbrough because [the player] has to spend more time on the train than in training... [His new manager] said in a radio interview that the former Arsenal player, who has overcome cocaine and alcohol addiction in his career, was feeling the strain of... making a seven-hour daily round trip to attend training sessions... But,

speaking a day after the club sold [its] unsettled Italian striker[, the manager]... rebutted suggestions that [the midfielder] was so unhappy that [the player also] wanted to leave the club... [Meanwhile, Arsenal's manager has] admitted to increased concern about his players' commercial activities after omitting... [a striker -] who... appears in TV commercials, campaigns for the FA, lends his name to a gun amnesty appeal and is involved with books and videos... [but] has not scored in his last four matches... [-] from the side to face Coventry in the English League Cup overnight.

...English premier soccer league is set to sign a three-year deal for overseas TV rights that will bring in around £100 million... This is in addition to the £740 million contract with Sky and the BBC for domestic rights up until 2001.

...[the] American football team has never won a World Cup and, despite its avowed intention of competing in international soccer at the highest level, is many years away from matching Brazil, Germany and England. Yet last week Nike... signed an eight-year sponsorship deal with the US Soccer Federation worth \$194 million. For that, the Oregon company gets the right to supply America's team with kit, to organise Nike-sponsored matches, and to help cultivate the game at its grass roots. Nike sees its [move] as an investment for the time when football takes off in America, but laying out that sum illustrates the inflation gripping the global sports goods market. It also comes just a few days after Adidas, one of Nike's great rivals, piped it to sign a \$73m deal with the... [All Blacks], and a matter of months after Nike signed a record-breaking deal with the Brazil football team, worth about \$324m for 10 years... The spiral of big-money sponsorship deals is being watched by soccer's governing body in England... which is in the process of negotiating a new kit deal... The Nike-USFF deal will raise the FA's expectations... At its most basic, Nike and the other big groups... can throw huge sums of money into sponsorship because of the marketing return they get from being associated with sport's top teams and individuals. Now the market leaders believe the next step will be to get involved in the lucrative business of televised sport and creative rights. Nike took this goal to its logical end... when it acted as a broker in the biggest footballing transfer – the \$52m transfer of [a] Brazilian star... whom Nike sponsors, from Spain's Barcelona to Inter Milan... As well as kitting out Brazil and America... Nike... also supplies Italy, Holland and a clutch of other national football teams. Nike has invested \$1.6 billion in such contracts... Reebok, which spends about \$400m a year on sponsorship, was the market leader in the 1980s until overtaken by Nike... Nike's strategy has been simple. It realised early on that consumers wanted to wear the clothes and footwear they saw on their sporting heroes – even if it was just for a short walk in the park. So it began to sign up the big sports names. Its portfolio now reads like a pantheon of the world's sporting stars – [including]... the world tennis No 1 [and the top US]... basketball player...

EVERY now and then you'll hear that basketball is the [world's] most popular game... It's likely the person telling you will be well over 2m... You also hear from volleyballers that their game is the most popular sport... And tiddlywinks fans are sure their game is No 1 with 100 million exponents playing in a lost city beneath the ocean. All nonsense, of course. Soccer is the world's favourite game. Countries have been to war over it. Countries have postponed war because of it. The Queen hurried out of her... bath to see the slow motion replay of... [England's World Cup] goal against Argentina in 1986... Many theories abound to soccer's success. Mums and dads in the U[S]... love it for [these] reasons: • Their child doesn't have to be super tall, super heavy or super fast to play... it's a game for normal kids. • Their child is active, building co-ordination and fitness, unlike baseball and American football. • Their child doesn't break the bank to be clothed in helmets, pads or ice skates. • Their child can understand the rules. • Their child comes home in one piece... Strangely, soccer has yet to catch on as a spectator sport[in the US] but, hey, we're talking about a country that loves pro wrestling. Elsewhere, people flock to watch soccer... [The] book, *The Soccer Tribe*, suggests that a sport's popularity depends on: *Scoring ratio*: In basketball or cricket scoring is so regular that it becomes devalued. Each score is of little importance. Scores need to be scarce to be valuable but not too scarce as to be boring. A goal every 15-20 minutes is the right balance[(as soccer is 'all low scoring and ties', many leagues have begun to award 3 points for a win instead of 2 in an attempt to discourage teams from playing for draws – worth 1pt – and, as a consequence, encourage them to score more goals)]. *Play/stoppage ratio*: Sports need to flow to be popular. Cricket, baseball, gridiron, etc will always appeal only to a certain, strange kind of individual, perhaps those who are excited by boredom. Some breaks are necessary, just as action movies need occasional lulls, and soccer's 4-1 play stoppage ratio is ideal... *Dimension*: Soccer's one of the few sports where the ball may be passed through 360 degrees, on or off the ground. The options a player has are endless and so is the variety in play. *Technique*: More parts of the body are used to play the ball than in any other sport. Because there are so many skills to master, players can develop a fascination for the ball. Other sports[people] throw, hit, or kick the ball back and forward. A soccer player can amuse himself for hours juggling a football... *Speed*: Play can go from one end to the other in seconds. A near miss at one end becomes a goal at the other with one, long pass... *History*: Soccer, because of its simplicity, has been played longer than any other sport. Cave[people] were kicking mammoth bladders around for... a thousand years before they used tusks as bats and darts... Many sports incorporate a handful of the above qualities. Ice hockey, [the author of *The Soccer Tribe*] reckons, comes close to being the perfect game except that it's played in two dimensions, flat and ice. Ice is scarce in Africa. And the Middle East. Plus, it's expensive to play. I guess fans of all sports could argue that their sport is best. And that's great because for many, the best sport of all is arguing.

...“Only football has the power to solve the problems of international conflicts...” – Outgoing world soccer chief... on the value of the world game.

...FIFA is trying to set up a soccer friendly between Palestine and Israel... “If we succeed we will once more show the world that through football we can reach solutions that neither... politicians, business[people] or diplomats can achieve,”... FIFA[’s new] president... said... ■ In 1970, after El Salvador beat Honduras in a World Cup qualifier, the... countries severed diplomatic relations. A four-day war broke out in which... 10,000... died.

...[a] Costa Rican FIFA referee... claims [to have been] offered \$US50,000... to help the United Arab Emirates beat Japan in [their] World Cup qualifier... [The ref] rejected the offer straight away... The game ended 1-1 but Japan qualified after beating Iran 3-2 in a one-leg playoff while the UAE missed out... [The referee's claims follow an admission that] Belgian soccer club Anderlecht... [paid] \$42,904 to the... Spanish referee... of its 1984 UEFA Cup semifinal against England's Nottingham Forest... [-] Anderlecht won 3-0[, which] gave it a 3-2 aggregate victory and put it into a final it lost on penalties to Tottenham Hotspur[– and ‘a Hong Kong-born professional gambler being found guilty of plotting to sabotage an English premiership soccer match between Charlton and Liverpool last season in a multi-million pound Far Eastern betting scam. The gambler was the London-based fixer for a gang who plunged top English games into darkness by tampering with floodlights.’

...a former] Wimbledon soccer goalkeeper... charged with fixing matches for an Asian betting syndicate, regularly paid large sums of cash into a Swiss bank account after his side lost... [The chief] prosecutor... told a court in... Winchester... yesterday... that[the] Dutch-born... goal[keeper]... had made... deposits totalling £104,000... from October 1993 to November 1994... The prosecution accuses... [the goalkeeper of being] paid by... a... former... Wimbledon... striker... – who it says received a total of more than £250,000 from Indonesian accounts – and[a] Malaysian... All three have pleaded not guilty... [The goalkeeper claimed to have talked to the striker] only infrequently, but phone logs showed the two... called each other countless times during the period in question... [A former] Liverpool goalkeeper... faces separate match-rigging charges, which... the... Zimbabwean-born... [goalkeeper] denies, in the most sensational match-rigging case in Britain for 32 years.

...[for] the first time since 1946... none of the so-called “Big Five” of Manchester United, Liverpool, Everton, Tottenham and Arsenal have reached the fifth round, and it will be the first final without at least one of them since 1975[, as the]... English FA Cup soccer competition continued its remarkable season of surprises... [On Saturday,] second-division sides Chesterfield and Wrexham beat... premier-league... Nottingham Forest and... first-division Birmingham... respectively to reach the quarterfinals. Chesterfield reached the last eight for the first time in more than a century of trying... Premier league aristocrats Leeds also slipped up... beaten 2-3... at home... by first-division Portsmouth, leaving Wimbledon and Middlesbrough as the only top-flight sides definitely through to the quarter-finals... Wimbledon recovered from going behind at home to Queens Park Rangers... while Middlesbrough beat Manchester City... Wrexham... made their names as giantkillers when beating then league champions Arsenal in 1992... In league action, Arsenal missed the chance of going on top when... held to a goal-less draw at north London rivals Tottenham...

ONE of the most common addictions is gambling. I became... a flipball machine... addict... For 2c (a fortnight's pocket money) you flipped the ball and watched it do three circuits of the board before dropping into one of seven holes, two marked "lose" and five marked "win" (if you won, you got the 2c back; if you didn't win, you lost the 2c)... My Saturdays were spent collecting Coke bottles to feed my habit. I'd get the 2c refund on them at the shop with the flipball, wait for the guy to stack them out the back, then "collect" them again for another refund... Another common, but much stronger, addiction is soccer. The losses to the soccer strain of gambling are the same as for any other – money, family and, in the case of the Arsenal fan, credibility. Some people are addicted to FA Cup finals. They wake up every Sunday at 2am in a state of arousal and have to watch a rerun of a past final before they can get back to sleep. Psychologists say the addiction takes 53 weeks to wear off. Of course, a new cup final puts the addict back to square one. Soccer addiction takes many forms. If a [fan]'s "lads" lose (lads [the fan] has never met), [the fan] may shun loved ones until the next game, even if the next game is next season. Any family member stupid enough to say "it's only a game" deserves to be ignored. A young soccer addict is easy to spot. His pyjamas are not covered with Disney characters, but with league tables. In his prayers [the young addict] says "please protect mum and dad and Leeds from relegation". If untreated, the youngster will develop into a full-blown nutter who tattoos the name of his favourite player on to his forehead; backwards, so [the nutter] can read it in the mirror. The addiction leads to people becoming blind. Tottenham [Hotspur] fans truly believe they'll win the league and suffer nine months of torture as they watch their dreams, and money, go down the tube... But the fans bounce back every year, buoyed by the latest signings. Spurs fanatics [had] the double bonus of signing [one player and offloading another], but even at 40-1 they're a waste of money. Arsenal's shopping spree [included a Dutch player] and at \$5.50 the Gunners are good value.

...*"Good enough for the homeless but not an international striker."* [That was the comment of a]Dutch soccer striker... on his proposed £7000-a-week pay increase from Scottish club Celtic.

...[a] Dutch soccer fan died and dozens were injured yesterday in a pre-arranged battle between supporters of rival first-division clubs... Hundreds of Ajax Amsterdam and Feyenoord Rotterdam fans armed with baseball bats, clubs and knives streamed to waste ground along the A9 motorway near Amsterdam for a showdown before Feyenoord's match against AZ Alkmaar... Police said they had known the supporters planned to meet but were unable to prevent the bloodshed because the gangs chose their battleground at the last minute and spread the word by mobile phones... In London, the Football Association has launched an investigation into an outbreak of crowd violence at the first-division clash between... QPR... and Portsmouth. The FA could take disciplinary action against the clubs after some of the worst terrace fighting seen in English soccer in years... stopped... the... match... for 18 minutes as supporters, including children, spilled on to the pitch to escape the trouble.

...A trial has begun... [for] 14 Feyenoord Rotterdam fans charged with aiding and abetting [hu]manslaughter in the wake of a pitched battle with Ajax Amsterdam fans... The fight, involving 150 people, was prearranged via the Internet... If convicted, the[y]... face... six months' imprisonment.

...Two Olympiakos players... were treated for bruises and scratches and a police[officer] was injured during clashes after the away match with Ionikos Piraeus, won 1-0 by the visitors, when angry fans stormed the pitch... In Athens, riot police charged the stands and called off the game between Panathinaikos and Proodeftiki, which finished 5-0... More than 30 fans and riot police were injured... [In related news, a] leading Belgian professor is taking court action against soccer agents and clubs for "slavery" of Eastern European players. "That sort of slave trade in which someone is bought cheaply and sold expensively... totally violates the basic principle that people are not merchandise and labour is not a merchandise." [The]... labour law professor... said these practices violated Belgian law which prohibited the broking of jobs in exchange for money.

...EASTERN EUROPEANS MAY WELCOME the democracy and free market they have imported from their Western neighbors, but there's one import they could do without: football hooliganism. Even as Britain and Germany are finally winning the battle against the thuggery and mob rule that once plagued football matches in the West and made "hooligan" an international word, fans in Eastern Europe are running riot... Freed from the constraints of police-state rule, young working-class fans from Bratislava to Warsaw are adopting the... mindless violence that ruled the terraces of the West in the 1980s... In Bucharest earlier this month spectators showed up for a match between rivals Steaua and Bucharest Dinamo armed with smoke bombs, colored flares and soft-drink cans filled with gasoline. By game time a fire was blazing in the stands and police had to battle some 2,000 screaming fans to clear a way for firefighters. On the same day in Budapest visiting Ferencvaros fans set fire to their section of the Ujpest stadium and tore down perimeter fencing. Police used tear gas to subdue the crowd before the game could be continued... [The East] may... be heading for catastrophes of the kind that cost the lives of 39 spectators at the European Cup Final in Heysel Stadium in Brussels. That tragedy and others brought fundamental changes to the sport. Policies of control, containment and punishment for offenders were superseded by the introduction of all-seat stadia and stricter – and more expensive – ticketing. That prevented troublemakers from forming gangs on the terraces. They also made the sport more attractive to families and the middle class – thereby discouraging the working-class youths who had been at the core of the violence... According to... a researcher at the... Centre for Football Research in England, "there is a kind of consensus in Europe... that hooliganism revolves around youth... and their search for identity." Identification may be at the heart of the problem, but it's also one way to stop it. Police in Hungary are following the British example of using video cameras inside the grounds to pick out ringleaders, and after the street battles in... April[during] the local derby between Polonia Warsaw and Legia Warsaw[which] saw supporters set fire to a rival's clubhouse... 37 police[officers] injured and 10 police cars wrecked... the clubs involved were ordered to introduce identity cards for their fans. International censure has... had limited effect. UEFA... fined Ferencvaros for their fans' racist behavior and regulates stadia where European matches are played, but still the violence continues.

...WHAT did [the blind person] say about the cheese grater [it received for]Christmas? "That's the most violent novel I've read in years." ...*Among the Thugs* [is] a book about the... [author]'s time spent with Manchester United fans on a trip to Italy. Now that's a violent book, certainly more violent than a cheese grater, and perhaps even as violent as a chainsaw. The author, an American, discovers that after spending time with the hooligans, [the author] becomes more like them. The environment, therefore, is largely to blame for the violence associated with European soccer fans. I was at White Hart Lane some years ago to watch Spurs play Coventry. Each side, incidentally, had four black players. We were in the family area of the ground, where mums and dads and kids sat quietly and watched the game. The singing and chanting happened in other parts of the ground. Only one person was getting into it vocally, a burly shaven-headed chap, who I'll call Mowgli because his behaviour suggested [the chap] was raised in the jungle by a pack of pit-bulls. "Break the black (bleep's) (bleeping) leg! ...You black (bleeper). Can't you keep the (bleeping) ball on the (bleeping) park?" The barrage of racist[filth] continued non-stop from first whistle to last, to the obvious discomfort of all around. No one said anything, presumably because they didn't have time to visit the hospital on the way home. In the surrounding crowd were a good percentage of blacks, including two young... boys right in front of Mowgli. Eventually, one [hu]man could take no more and left with his daughter. On the way out, [the human] spoke to a steward and pointed at Mowgli... obviously complaining. Mowgli saw this and was incensed. "Come 'ere you!" [Mowgli yelled as Mowgli] started clambering over the seats. "I'll (bleep) you up!" "Leave him...," Mowgli's girlfriend told him, holding him back. "[The human] doesn't understand football." Then [the girlfriend] yelled after the departing [hu]man, "What d'you fink this is? Bingo?" At that point I realised I didn't understand football either. Not the way these people did. Violence is becoming more and more acceptable in society, and therefore in soccer. People become desensitised to it. In my uncle Jim's day, if you threw a punch you were off. No two ways about it. And you never, ever, brought an opponent down on purpose. Today, a punch might be described as "handbags at 10 paces" and overlooked. If a player drags a striker down, [the player] "had to do it". Or, if a player calls the ref "a bloody disgrace" because [the ref] gave a throw-in the wrong way, the ref allows it because [the ref]'ll be abused if [the ref] takes action... What's the message kids get if they see Wile E Coyote fall on his head from

100m on Saturday morning, then [the Warriors' No 7] speartackled in the afternoon? They'll think "Road Runner can do it, so can the Broncos, and so can I." Thankfully, soccer's nowhere near the level of unpleasantness seen in other codes, but violence – verbal and physical – still rears its ugly head at too many games. The authorities should pretend it's a head poking out the bottom of a ruck and stamp on it...

[Italian] government and soccer officials who met to discuss rising violence at stadiums... are considering... England's methods of combating hooliganism... "The objective is to prevent the problems of Italian society from finding an outlet through violence inside the stadiums." Recent incidents... [included fans clashing] with police at Bologna last week after an Italian Cup semifinal match. Last Sunday, Fiorentina fans threw rocks at the Juventus team bus, breaking four windows. Two weeks ago, metal objects were tossed from the stands during Reggiana's home game against AC Parma. A solution will be found... said... [the] Italian League president... "In England, where there is a violent society, they have resolved the problem of the hooligans... Why shouldn't we be able to do the same? ...I'm also encouraged by the U[S] example, where there is a very violent society, but calm stadiums."

...England will take a record 7000 fans to Rome for next month's World Cup qualifying showdown with Italy, raising a huge security headache for Italian police. The national criminal intelligence service, which monitors soccer hooliganism in Britain, said it will send undercover officers to help Italian authorities to spot any known troublemakers. Thanks to an emphatic 4-0 win over Moldova on Thursday, the English will need only a draw against Italy to qualify for next year's World Cup finals in France.

...700 known English hooligans... – including 60-70 hard-core trouble-makers – ...will be travelling to Rome for Sunday's crucial World Cup qualifier... a high-ranking police official has confirmed... About 10,000 England fans are expected in Rome for the game, which... Italy must win.

...Italian police in riot gear patrolled parts of Rome yesterday to prevent further violence by soccer fans after clashes flared earlier as England and Italy battled it out in a World Cup qualifier match. At least one police[officer] and five English fans were injured... at the Olympic stadium... [as] England booked a passage to the... finals... by drawing 0-0... [in front of] 80,000 spectators... During the game baton-wielding police pushed about 200 English supporters away from a bank of Italian fans after the two groups started hurling plastic chair seats and water bottles at each other. The stadium violence followed pitched clashes earlier in the day when police in riot gear charged into unruly English fans in two central Rome squares... To prevent incidents after the match, Italian fans were let out of the stadium immediately, while English spectators were guarded... and told to wait in the stands for more than two hours... More than 40 English fans have been arrested or detained... Several Italian youths have also been held. Several hundred English fans were returned home on charter flights... [Some of the] arrested English... fans... say Italian police beat them. They also allege that officers forced them to confess to crimes they had not committed... England fans have a fearsome reputation in Italy, where many people still recall the 1985 Heysel stadium disaster.

...[the] families of 78 Guatemalans crushed to death in an overcrowded stadium at a World Cup qualifier last year have received a cheque for \$US6500... each from Fifa, the international soccer governing body.

...FIFA announced in Germany today... [that the] first world club championship for soccer clubs will... include the best team from each continent, the champion of the hosts and the winner of a contest between teams from Europe and South America.

...N[Z] club sides have a sniff of a chance of taking on soccer giants like Liverpool, Ajax and Juventus with the advent of the world club championship. FIFA... has approved the competition, which will have its finals in July 1999. The champion teams from each nation in FIFA's six confederations – Europe, Asia, Africa, South America, Oceania, and the North and Central American area – will play off against their regional counterparts to find the confederation champion side to contest the finals. For example, Borussia Dortmund, as holders of the European Champions Cup, would be Europe's representatives... The Oceania play-offs are scheduled to take place in late 1998. Clubs in the 1997/98 Summer National League will have an even greater incentive to win the competition this time round as they will represent N[Z] in the regional showdown... Initially, N[Z] will have just one team in the Oceania play-offs. But should the Auckland-based entry bidding to become part of the A[US]n Summer League win that competition, then two teams from this country would contest the confederation play-offs.

...Iranian soccer fans have been going wild this week after their team qualified for the World Cup by drawing 2-2 with A[US] in Melbourne. When their return flight stopped over in Dubai, 20,000 ex-pat Iranians turned out to salute their heroes. Thousands of fans jammed Tehran airport on their return and 70,000 crammed into the capital's Azadi stadium to hail the team... According to experienced commentators, the Middle East has not witnessed such scenes of mass jubilation since the invention of the moustache comb.

...[the Socceroos' coach] may be coaching Nigeria in the World Cup next year – and staying as boss of A[US]. An agent claiming to represent the Nigerian FA... [asked him] to coach them for two months for... £500,000. [The Soccer AUS] chief... could allow [his coach] time off to take up the post.

...[an] English soccer star... could be tempted to cross the Atlantic and join the U[S] competition after next year's World Cup. What's the attraction? Fame, of course. [His] reasoning is: "In America, once your famous, you're famous for life. And they make great pina colodas!"

...[a] Brazilian... midfielder... has signed for Barcelona. The Catalan club paid \$40 million to buy out [the Brazilian]'s contract with Deportivo La Coruna, the most expensive transfer between two Spanish clubs.

...Italian football clubs pride themselves on producing Europe's most passionate fans. Now, one year after the Government allowed the formerly non-profit sports teams to make money, they are vying for an equally devoted following among international investors. At least seven of the 18 Serie A Italian football clubs said they wanted to sell shares on the London or Milan stock exchanges... One of the clubs, Rome-based Lazio, has already entered international financial markets, raising 50 billion lira... this week in a global bond offering... The Italian Borsa's new private owners proposed this week to relax the exchange's rule that companies must show three consecutive years profits before listing... Many Italian clubs seeking a stock market listing have... [racked] up losses this year. But they are owned by big companies with deep pockets. The director of AC Milan... said his club, which lost 27 billion lira in the 1997 fiscal year to June, will choose the Italian Stock Exchange once it returns to profit.

...[AC Milan's] president... whose fortune helped build the most successful European soccer side of the last 10 years, was sentenced to 16 months' jail for false accounting. But a judge said yesterday [that the president] would not have to serve the term. Under Italian law sentences of under two years are rarely served. Instead... the former [PM] and one of Italy's richest [people], was fined 60 million lira... later reduced to 10 million lira.

...AC Milan's French international soccer midfielder... wrote off his Ferrari in a high speed crash on Monday night but escaped uninjured... The accident happened on the same road on which [hi]s Milan and French team mate... wrote of [it]s Mercedes last month. [His mate] was also unhurt.

...[its players all came through the game unscathed, but c]ompetition favourites Chelsea suffered an embarrassing 3-2 defeat at the hands of Norwegian minnows Tromso in a farcical European Cup Winners Cup second-round first-leg soccer match deep in the Arctic Circle yesterday. Chelsea failed miserably to come to terms with a terrible pitch, sub-zero temperatures and a second half played in driving snow. Only two late goals... spared the English side a more humiliating defeat. Chelsea are riding high in the English premier league, while... the part-timers from... Tromso face relegation... [A furious] Chelsea coach... claimed the game should never have gone ahead... The second half was barely visible as heavy snow obliterated the pitch markings, but the game was completed, albeit with regular stops to sweep the lines clear.

...NO ONE ever said it was going to be easy being a [gal] managing a top English soccer team... [The 28-year-old who] took over as managing director of Birmingham City in 1993... [says gaining] the players' respect... was [the hardest part]. The first time [it] went to an away game on the team bus... "...a player shouted, 'I can see your tits from here!' I replied 'Oh really? Well, when I sell you to Crewe you won't be able to see them from there.'..." [It] has... received floods of lucrative offers from [guys'] magazines to be a pin-up girl... *Hustler* magazine... offered \$271,500... to do

a series of wet T-shirt and wet-pants shots... "I said... I haven't got any tits, and... I can't be bothered." ...[the managing director, who] is married to a player with rival division one club West Bromwich Albion... was appointed to run the club by its owner, the millionaire publisher... who made his money out of the daily and Sunday *Sport* newspapers which are famous in Britain for their combination of the salacious and the bizarre.

...[a player 'has been thrown out of the Massey University Staff soccer team by officialdom because it is a gal. The ruling was made by Fifa, after a complaint from an opposing team. Fifa's ruling has prompted a complaint from her teammates to the Human Rights Commission. The post-doctoral fellow in Massey's geography department – who came to NZ from Canada 10 months ago after playing top-level gals' soccer for 2 years in Canada – believes it is her right to choose which team to play for, having decided not to switch to the Manawatu gals' league in favour of playing alongside colleagues. A letter of protest was lodged by Marist after Massey beat Marist last month. The letter was passed on to Soccer NZ, who in turn asked for clarification from Fifa. The reply from Fifa's general secretary said: "It is absolutely forbidden to allow a mixed team to participate in an official competition." The Manawatu Football Association president confirmed the Massey team had inquired pre-season about the situation. "I didn't say yes, you can play, I just said there was nothing in the rules which said a gal couldn't play." On a positive note, approval has been given for a] **\$1.2 million soccer academy in Auckland, funded by... Fifa...**

THE N[Z] under 17 World Cup soccer side did everything right. They lived and breathed soccer for the past six months. They had the most thorough professional preparations ever given to a N[Z] youth side. The boys were fitter and sharper than they've ever been in their lives. And they went to the youth World Cup and got their butts kicked... [T]he boys beat A[US], one of the best junior sides in the world, to qualify for the finals. On paper, that result suggested the Kiwis would be a match for anyone they encountered... Unfortunately, soccer's not played on paper. [In NZ it's] played on... muddy pitches like the one in Christchurch, which enabled the heart and guts of the Kiwi kids to overcome the skills and speed of the Aussies[; elsewhere it's played on bumpy], barren wastelands that develop excellent touch and razor sharp reflexes... [or beaches], which develops strong legs... [or sun]-scorched surfaces under searing skies... that cause cold weather players to melt like lollipops... There are so many variables to consider when playing international soccer, and the only way to learn about them is to experience them. Beating A[US] on home soil was brilliant. But Mali, Mexico and Spain, in Egypt, is a whole new ball game. Most of the young [players] the Kiwis encountered last week have played more than 100 international matches. Our most experienced had four, plus a few against such powers as Western Samoa... It's probably for the best though. If the Kiwis had gained a result or two, the authorities from whom the codes ask money to develop their sport would have probably said: "Money? What for? You've just shown you can do it on a shoestring, so here's another one to see you through to 1999... Next!"

...[the former All White's] on-field ability has never been questioned. His naming by... Fifa as its Oceania player of the decade – an award [the player] will receive at a glittering ceremony in Germany early next year – is testimony to his standing among the world's great players. But in naming him as coach of the national under-17 team for the World Youth Cup in 1999, is Soccer N[Z] asking him to run before [the player] can walk? It is a huge ask for [an inexperienced coach] to take over the reins of a team which will be under the microscope and expected to justify Fifa's decision in awarding this country its fifth biggest tournament. Granted, [the player] has already told Soccer N[Z] bosses of his intention to call [on his brother... who has had coaching experience in Europe... [The new coach] will also work with [a former All Whites teammate], who had a hands-on role in getting the 1997 team to their finals in Egypt... Out of the picture is the former under-17 supremo... "Obviously [the former under-17 coach] is unhappy, but [that person is also] contracted as the national coach and the national director of coaching. [That person] can't possibly do it all..." Is Soccer N[Z] heading for yet another of its messy off-field wrangles? ...Hopefully all will fall quickly into place, as N[Z] Soccer must succeed in this project. The eyes of the world will be on [the new coach] and his campaign to prove [the player] can coach as well as [it] played. Great players have not always made great coaches – let us hope [this one] is not being pushed too far, too quickly.

...England have jumped to [4th, 8] places higher than they finished last year, in Fifa's end-of-year world rankings issued yesterday, behind Brazil, Germany and the Czech Republic. However, the rankings throw up their usual inconsistencies. [23] of the 1998 World Cup qualifiers are in the top 30, but the other nine are spread from 31st-placed South Africa to Nigeria... at 71st... [NZ] are ranked 120th among the '192 teams in Fifa's world'.

...yesterday the chairperson] of the World Cup organising committee, said players on two yellow card bookings would be free to play in their country's opening matches in the finals, but those sent off would not. Three other matters were dealt with by the committee yesterday – financial rewards for the finalists, trouble at the Italy-England match in Rome on October 11 and a doping offence – the only one reported in any of the 643 qualifiers. Each of the finalists will receive one million Swiss francs... for every match played in the finals and in addition each finalist would receive 750,000 Swiss francs towards their costs... FIFA's disciplinary committee will deal with [the] Ukrainian... who tested positive... in the match against Croatia on October 29]. The player has already been] suspended by the Ukrainian F.A. until the end of 1999... FIFA also said that "lessons needed to be learned with regard to control of tickets to fans through unauthorised sources" following... the... crowd trouble... in Rome.

...[the] increasingly desperate English [FA] is mounting an undercover operation... to stop hooligans disrupting the World Cup... A senior copper has been appointed to mainstream police infiltration of groups of hard core hooligans. Far be it for me to say they would fit right in... Is that a truncheon up your Liverpool jersey or are you just pleased to see me?

...World Cup fever is building in France, with the 10 cities hosting matches competing to provide the best tourist-attracting logo... - 1997

The possible postponement of the Junior World Cup soccer finals, scheduled to be played in N[Z] in February 1999, could be a windfall for Dunedin... Fifa wants Soccer N[Z] to delay holding the finals until October next year[. However, at this time] accommodation in Auckland is expected to be tight because of the America's Cup, so it's likely Carisbrook would receive more than the six round games and quarter-final planned at present. The world youth finals, ranked fourth biggest sporting event globally, will be televised to millions of viewers worldwide.

...[for an example of what Dunedin and] Auckland need... to cater for major sporting events, day or night and in any weather[, take] a look at Paris' new 80,000-seat Stade de France which will host, among other things, the opening soccer match of the [Senior]World Cup on June 10 and the final on July 12. The first soccer game for the plush stadium is the clash between France and Spain on January 28.

...It was a champagne baptism yesterday for the Stade de France... [France's] President... inaugurated the... stadium and World Cup participants France and Spain tested the tender turf. All eyes were fixed on the dazzling light show and daring trapeze artists. The \$NZ770m stadium boasts all the latest amenities and shopping facilities, but is also well known for labour disputes, controversy over building and other contracts, and for a lack of car parking space. France... beat Spain 1-0... [By the way,] Iran's journey, via Melbourne, to the... World Cup... finals... was promoted from the sports pages after the draw for the first rounds[placed] Iran and the U[S] in the same group. If there need be any reminder of the political heat implicit in such a pairing, consider the comment of American soccer's executive director[who] expects it to be... "the mother of all games." Said an Iranian player: "At the World Cup, we will get what is our right, and help our nation hold its head up high." ...Iran's road to France was not a smooth one. But even disastrous results could not prepare... [most Iranians] for the idea that a... non-Muslim... coach might be hired... to lead the Iranian team... But it came to pass. The Iranian coaching staff were sacked. The Brazilian... who had just parted company with Costa Rica, was hired – and Iran's home-and-away draws with A[US] earned it the place in France that... gave Iranians the chance to see their country associated with a prestigious event instead of terrorism and fundamentalism... If that shows sport as a possible catalyst for positive social relations, recent events in the U[S] send a different message. As the *Washington Post* asks in an editorial, what would happen to any employee who started to choke and threatened to kill a nagging boss before being pulled off by fellow employees – only to repeat the performance 20 minutes later? No surprise that the individual was suspended and, when [the individual] showed little remorse and refused to cooperate with an investigation, his employer

terminated his contract... [Such an event occurred in reality in the] basketball... industry... with a coach on the receiving end of the attention of an NBA player... Basketball's commissioner... banned [the player] for a year. Any other such incident and that would be the end of it – if, of course, the individual did not end up in court on assault charges. Not in basketball. [The player], looking very contrite, holds a press conference, backed by a legal team numbering nine, including the... star lawyer [who successfully defended a black sports star (r:p1414, ln3) charged with murdering two people, one of whom was his wife]. Amazing what losing \$US25 million can do to a thug... No surprise, with such a line-up, that the[legal] team has resorted to allegations of lack of due process and racism ([the player] is black, the coach is white, reflecting the colour of American basketball)...

[The British] Professional Footballers' Association is investigating allegations from [an Israeli who claims to have been] subjected to racial abuse during an FA Cup tie. The West Ham midfielder accused Blackburn players of making anti-Semitic remarks during a 2-all draw 10 days ago. [A Blackburn player], who was sent off in the fifth round match... for elbowing [him] in the face, has threatened legal action if... accused of being involved in the alleged abuse. West Ham advanced to the sixth round... after beating Blackburn in the replay on penalties – no goals having been scored in two hours' play. Favourites Manchester United suffered a shock loss... [Another shock for the club's fans was that a] media magnate, who uses control of sports in his bid for global satellite [TV] dominance, is reported to be paying up to £575 m... for... Manchester United... The *Daily Telegraph* said [the magnate] would take control of the club through his satellite television group, BSkyB. [The magnate] is said to have struck a deal with... Manchester United's chief executive and chair[person], who will sell his 14[%] stake for... £80 m... Manchester United was floated on the London stock market in 1991 for £47 m... Its value on Friday was... £412.66 m... [The magnate] recently bought the LA Dodgers... baseball [team]...

English soccer c[lub] Arsenal have opened talks with media company Carlton Communications about possible co-operation a day after Manchester United... agreed [to] a \$US1 billion... takeover by... BSkyB... London's *Evening Standard* said the two were discussing a possible £275 million takeover[. The claims caused Arsenal's 'shares to rise 38% in value in one day'].

...BSkyB's £623 million... bid for the Manchester United Soccer club will be waved through by the Department of Trade and Industry, but a number of stringent conditions... aimed at preventing [BSkyB's owner from] using new leverage over the game to benefit his broadcasting interests... will be attached... [In the meantime,] English premier league clubs have reacted with fury and frustration to Manchester United's decision to pull out of next season's FA Cup. United will not defend the historic trophy but instead travel to Brazil next January for the first world club championship... [The manager] who steered United to the premier league title plus the FA and European Cups last season, said United needed to take part in January's tournament... [but] the congested fixture list made it impossible for United to fulfill their obligations in each of the domestic competitions... [Derby's] manager... summed up the feelings of the other 19 premier league clubs when [it] said United should take part in the 127-year-old FA Cup. "This is the thin edge of the wedge... It's the first time a famous domestic competition like the FA Cup has been treated in this way." ...United's mid-winter trip to Brazil will mean two premier league matches and a possible League Cup semifinal will have to be rescheduled. The fourth round of the FA Cup was scheduled at the same time as the world club championship... United have maintained the premier league should be reduced from 20 to 18 teams and [the club's chairperson] has restated their argument.

...Manchester United might after all play in next season's FA Cup. *The Observer* claimed that in secret talks with the F[A], United had agreed the club withdraw from the League Cup, play both the [3rd and 4]th round of the FA Cup in December and bring forward some premier league games.

...Man[U – which has confirmed that it won't contest next year's FA Cup – dwarfs] the earnings power of its closest rivals in the Spanish and Italian soccer elite by a clear \$NZ91.32 m... The... club generated \$266m in income from all sources in 1997[. which also makes it the 'most valuable sports franchise in the world']... Of the top 20 clubs, only Flamengo of Brazil in 11th place was non-European... [Incidentally], a small newspaper piece may have slipped by without notice this week. As England and Argentina were heading for their crucial World Cup match at St Etienne, [a former Argentina No 10] felt obliged to set the record straight – even if it was 12 years too late. No stranger to ego-enhancing, and some other enhancing habits since, [the No 10] reportedly told an English Sunday tabloid that [it] was really sorry about his infamous "hand of God" trick which gave Argentina a 2-1 win over England in an equally vital World Cup match at the 1986 World Cup... That was the time when [the No 10 and England's] goalkeeper... went after a high ball and as [the No 10] leaped up the ball just happened to be deflected into the... [goal], without touching anything below his upstretched arm. The stocky No 10 went into his victorious tail-spin, while every right-minded English[person] screamed for justice that never came. Now that [the No 10] has, as they used to say in western movies, fessed-up, the little side-winder may have set a dangerous trend. Somewhere in Scotland, there is doubtless a youngster searching in an attic for a letter from his great-granddad who refereed the Wales-N[Z] rugby match at Cardiff on December 16, 1905... saying... [that it] had been roped into refereeing these colonials while on a Christmas shopping expedition south of the border. At a critical stage of the match, the letter will read, [great-granddad] slipped over ("owing to the fact I left my boots behind I had to wear my street shoes which had awfu' slippery soles")... [and, consequently,] arrived late at the point where one of the [NZers] thought it] had scored a try. [The ref] did not see the act and so did not award the try. The letter will end with [great-granddad] noting that the Welsh said [it] had made the right decision. And was [the ref] short of a gold watch as a Christmas present? ...We can probably also expect an abject apology from [a pair of AUSn] brothers... about that Melbourne mully-grubber – the time they were the only two cricketers in the whole world who thought [that a lower-order NZ batter] would be able to hit a six at the MCG. Why disturb history? These are the quirky things that make sport special, that create yarns and allow some spleen venting. They are the essential part of the human sporting drama. As long as they happen to other countries.

...IT'S probable [that a Manchester United midfielder] is having nightmares these days after his sending-off against Argentina was a major factor in England's second round loss at the World Cup soccer finals in France. The... player, [who is] engaged to marry... [Posh Spice] of the Spice Girls pop group, won't be sleeping any easier with revelations [that the 23-year-old] is England's highest paid footballer, earning \$[NZ]24.3 million a year. [*Stupid Spice*] just nudges out his England skipper [– the Newcastle striker – who earns \$]23.25m... but the pair languish well behind the Brazilian... [quartet from] Inter Milan... Real Betis... Barcelona... and... Real Madrid... [who earn] \$61.5m... \$56.25m... \$53.25m... [and '\$47.55m] respectively. In fifth place is one of Juventus' Italians (\$45.75m); one of Arsenal's Dutch players is sixth (\$41.25m); another Italian, this time from Bologna, is seventh (\$32.25m); AC Milan's Liberian is eighth (\$27.75m); the two English players are at ninth and tenth.'

...The world's highest-paid soccer player, who is] worshipped at his Italian club Inter Milan for his soccer skills, is to appear as Christ on a provocative new billboard. The poster, unveiled by Italian tyre company Pirelli, shows [the striker] with arms outstretched, gazing down on Rio de Janeiro in an imitation of the huge statue of Christ the Redeemer which overlooks the Brazilian city... Pirelli dismissed charges the poster was blasphemous... [The player – who is currently trying to emulate his hero in 'helping Brazil win the World Cup twice' – was unavailable for comment yesterday as his team prepared for its World Cup final against France. In related news, Manchester United's] manager... expressed fears for the safety of [the club's highest paid player] after the midfielder became the target of abuse following England's soccer World Cup exit. And... [the player's father said his son] would consider a move abroad if the abuse carried on.

...[a] British bookmaker has taken its biggest single sporting bet – \$772,000 – on Brazil beating France in the World Cup final in 90 minutes' play. It is an even-money bet, so if Brazil wins, the lucky punter will make \$772,000 profit. The bookmaker, however, will have a lot more to pay out if Brazil emerges triumphant. A Birmingham florist will land \$1.7m, making him the biggest ever winner from a British bookmaker, having staked \$58,000 coupling a Brazil success with Arsenal winning the English Premiership, which it duly achieved in March. In 1994 [the florist] won \$1.2m when Brazil clinched the trophy, having staked a \$41,000 accumulator bet.

...[the] French linchpin... earned his billing as national hero in yesterday's World Cup soccer final, scoring two goals in France's 3-0 demolition of defending champions Brazil... the first player to score two goals in the final since... 1978... After losing three finals in as many years – in the Uefa Cup with Girondins Bordeaux in 1996 and then two in succession in the European Cup with Juventus – [the hero] heard some say that [it] was not a [perso]n for great occasions... [It was] France's first World Cup triumph... In scenes probably not witnessed since liberation in 1944, millions swarmed into the streets to dance, sing and wave red-white-and-blue French flags. More than a million people packed into the Champs Elysees to celebrate what most French fans had hardly conceived possible when the World Cup finals started a month ago... Car horns blared, church bells rang and people danced in fountains across a nation which may not go to bed before Bastille Day, the national holiday today. Others yelled "[linchpin] for President"... France is traditionally reserved about football and its fans were urged by the team to live up in the stadiums. But the nation has surprised commentators with the outpouring of joy over its soccer success and intellectuals are already talking about the victory changing the face of France. Across the other side of the Atlantic, Brazilians wept as the defeat hit hard where there is little but soccer to boost national pride. On Rio de Janeiro's famous Copacabana Beach, hundreds of people clung to each other in pouring rain and sobbed uncontrollably... Brazilians, who have suffered years of economic chaos and grinding poverty... had prayed hard for a fifth World Cup title. The loss in Paris was felt like a jolt across Latin America, where the poor-versus-rich aspect of the Brazil-France final found deep resonance. Mexican radio commentators even wondered whether Brazil had been bought off. "How can such a world-class team perform so badly. Were they paid off?"

...The World Cup... cost Swiss employers an estimated \$US190 million... as workers shun[ned] the workplace for the television, says a study by the University of St Gallen. [Its d]irector... said... "A World Cup is always important to people. It can brighten the atmosphere and raise spirits."

...THE soccer World Cup made a provisional profit of \$165.53 million, [the] French organising committee president... has announced. [The president] believed the profits should go to the 10 host cities with some of the money used to build sport grounds in the suburbs. [However, the] French federation chair[perso]n... argued the profits should be handed over to the federation and kept within football.

...THE just finished... World Cup has underlined the truly global nature of the world's most popular sport... played to international standard in virtually every country... Fiji played for a place in the finals... Jamaica made it to the finals. No other game of football comes close to achieving [soccer's] global appeal... Rugby league is played to international level in just a handful of countries... A[US]n rules, American football, Canadian football and Gaelic football are played in just a single country each... [U]nion is the only other form of football with any pretension to global status.

...Sports fever 'turns the French into cretins'... FRANCE is becoming more stupid and its political life is being destroyed because of... sport, according to a leading French philosopher[, who]... suggests it would be a terrible misfortune if Paris succeeded in its campaign to host the 2008 Olympic Games – a bid launched with great media hype and thousands of car stickers bearing the legend "Paris 2008 – Oui!" [The philosopher] says the impact of sport has been totalitarian and has "impoverished the lives and intelligence of millions of [guys]." A crime has taken place "against society and against political life,"... argues[the philosopher, who adds that]... the 1.5 million people who celebrated on the Champs Elysees the victory of France's football team in the[Soccer] World Cup "gave the impression of having really come alive," but in fact they were all victims – assassinated by the woeful impact of sport. "Political life has been discredited by all the legal cases and corruption, while all the opinion polls put sports[people]... on the summits of collective admiration," laments [the philosopher], an editor at the influential philosophical review *Les Temps Modernes*. Even scandals – the exposure of drug-taking in the Tour de France, footballers with false passports, rigged matches – have not undermined this admiration. In fact, [the philosopher] argues, scandals have become fodder for endless chat about sport... Ever since France won the World Cup... at the Stade de France... the country has become obsessed with sport. Historically, French teams seldom did well internationally – their record in the Olympic Games before 1996 was feeble (in 1976, for instance, France came 18th), but this changed at Atlanta... when the French won 15 gold medals. As a result of such triumphs, sport often dominates conversations in bars and even seeps into the columns of newspapers such as *Le Monde* and *Liberation*, which hitherto gave sport a wide berth. When France's handball team won the world championship in February a headline ran: "Beaux comme des dieux ('As fine as gods')." When a French team won the European [gals'] basketball championship in April, they were feted as national heroes... Ever since goalkeeping existentialist writer Albert Camus picked his last ball out of the back of the net more than 50 years ago, philosophers haven't had much time for sport. [An] Italian philosopher... wrote an essay in which [it confessed it] could not share his country's passion for football. But [the French philosoph]er's diatribe goes much further – his is a detailed diagnosis of how sport has corrupted French life[, drawing]... a parallel with Marx's description of religion as the "opium of the people," arguing that sport is worse than opium. But why shouldn't the rise of sport be a good thing? After all, one of the most symbolic moments in the country's public life came when a French multi-racial team lifted the World Cup... Their triumph took the wind out of the extreme Right's sails and did wonders for race relations.

...[the US] beat China 5-4 on penalties to win the[gals'] World Cup soccer final yesterday after the teams finished the final 0-0 after extra time... sending the crowd of 90,185 – a 'record attendance for a gals' sporting event' – at the Rose Bowl into a frenzy... The victory capped a three-week love affair between the U[S] public and their team. "The whole country is caught up," said[the US] President... who was among the crowd. Brazil claimed third place in a similar result by beating Norway 5-4 after the two sides also played to a scoreless draw in regulation time.

...The African Football Confederation... has acknowledged South Africa's soccer 2006 World Cup bid could be damaged without the support of the entire continent. The CAF wants... Egypt, Morocco, Nigeria and Ghana[, who] have all tabled rival bids... to withdraw and unite behind South Africa... [In local news, our] top young soccer players were reeling last night after learning they had lost their guaranteed place in next year's world youth tournament. The teenagers expected to qualify automatically... But the Youth All Whites lost this right as hosts when... Fifa, suddenly pulled the plug on N[Z] holding the tournament. Chile is now believed to be the host[, which means that] to qualify, the N[Z] team must win the Oceania tournament... The change of venue has been a huge blow to the young players, many of whom left their home towns this year so they could train with the Auckland-based squad [at the new soccer academy]... It is understood that Fifa pulled the plug after the Soccer N[Z] general manager... and the Hillary Commission chief executive... agreed at a meeting in Zurich this week that staging the tournament here in November next year was not in the best interests of the game... N[Z] would not get the crowds if the tournament went ahead at that time because it would clash with the... America's Cup yachting challenge. N[Z] has been offered the 2003 tournament.

...Just when Soccer N[Z] (NZS) thought things could not get worse, they did... [T]he decision not to stage next year's Auckland-based World Youth tournament is a body blow. This was the chance to sell soccer to N[Z]'s public, and to sell NZ as a country to the world... But it has been obvious for some time there were problems... [The] tournament director... said yesterday that the impact of playing the tournament in the Southern Hemisphere for the first time had not been fully understood by the... European nations[, who] wanted to switch the tournament from February-March to November. [NZ]S... agreed, with some provisos, that they would attempt to accommodate such a change... "I said all along it would be difficult to re-position the tournament... Fifa complimented us on our professionalism and integrity. Underwriting the costs, estimated at \$1.3 million [to make such a switch] was not seen as a problem... In the end our honesty [in saying November 1999 might not be the best time to play in N[Z] given the conflict of other sports] backfired on us."

...IMAGINE how a five-year-old feels, waking on Christmas Day, his little heart pounding merrily in his chest, excited beyond words. [The child] rushes into the lounge, expecting to find a glittering tree and a stack of presents wrapped in colourful paper and ribbons. Instead there's his dad laughing: "Fooled you! No more Christmases mate. There's no Santa either. It's all a joke." The little fellow would be dazed at first, then angry, then simply crushed. That's how many people around N[Z] are feeling after the under-17 World Cup was taken from us. But at least there's the

consolation [NZS]'s financial worries are over because[, much]... like... movie stars... are sued for millions if they pull out of a deal to star in a film[, NZS will] be able to sue someone for enough money to clear all its debts... Unless, of course, [NZS] agreed the tournament shouldn't be held here. That's hard to believe... Our blokes in Zurich should have held to [the] position... that... "You agreed to February-March and that's when it'll be."

...Damage control was still very much the name of the game yesterday as N[Z]S... officials continued their battle to ensure the 1999 World Youth Championships would go ahead here... The stand-off continues between... [NZS, whose] chief executive... has been handed a contract to run the tournament... and [a former All White], who maintains... the okay... to organise and run the tournament... was given [to him] last September... It is understood... [that the] Oceania Confederation president... was determined a solution be found without the need to go to this morning's scheduled High Court hearing. [The president] was perturbed to learn yesterday that news of the stand-off had reached Fifa headquarters in Zurich... While [Fifa's] director of communications... was unaware of any "internal difficulties" and agreed... NZS... had "heaps of time" to organise the tournament, [the president] is concerned the chair[perso]n of Fifa's youth committee... would act quickly if... given the opportunity to take the tournament from N[Z] – for a second time... But as boardroom politics have taken over, there has been little news of late of the tournament itself.

...N[Z] soccer continued to bang the drums of incompetence so loudly yesterday that it must be numbing the brains of everyone involved in the sport from the midgets to those who run Fifa. The dispute over who will run the world under-17 tournament... appeared no closer to resolution after a High Court hearing in Auckland. Sources close to the parties insisted the dispute could be settled this week, but as one official commented: "Every day lost working this out is another week lost in organisation." The background seems fairly clear: [a]former All White... claims[to have] a letter from... [the] NZS... chief executive... authorising him to run the tournament. However, NZS wants one of its former chief executives... to run the tournament, [and suggests that the] letter is not a fully authorised contract from the NZS board... Meanwhile the... Auckland-based secretary-general of the Oceania federation, said yesterday: "...It is all very unfortunate. We saw it as a glorious opportunity for N[Z] soccer, but it hasn't quite worked out so far. This is reducing the chances of the tournament being a great success. There is no time limit on it, but if it doesn't get resolved at some point... Fifa will take the tournament off N[Z] again!"

...the] chief executive of the... world under-17... championships, thought [it] was organising a football tournament. Instead, [the chief executive] has become nurse-maid to the administrative stars as [it] tries to find time to balance the finances, meet tournament demands – and organise a banquet, complete with piano, floral arrangements and round tables... Fifa will pay for the invitation-only banquet in the poshest Sky City restaurant, and for the November 8 referees' dinner. "But please," it asks... "could you cut costs elsewhere to ensure your tournament comes in under budget?" "Elsewhere" does not include the limousine service for Fifa[']s boss... and other hierarchy – even though major sponsor Hyundai is supplying 63 new cars. Neither does it include the... four tailors needed for four days to ensure the Fifa uniforms fit perfectly. Fifa even wants a N[Z] multi-plug sent to its headquarters in Lausanne, Switzerland... "so they can check their plugs can be used here[," says the chief executive].

...Fifa have postponed until 2003 this year's world club championship... Financial problems and a congested fixture list were blamed for the postponement, a major embarrassment for world soccer's ruling body and its president. The tournament, which Fifa had been planning to extend from 12 to 16 teams... would have involved clubs who have won major championships in Fifa's six continental confederations, plus a host team, Deportivo Coruna. The Oceania representatives for the July 28-August 12 event... in Spain... were to be [AUS's]Wollongong Wolves.

...The controversial soccer semi-final between Napier City Rovers and Dunedin Technical will be replayed tomorrow. Two days of protracted negotiations ended last night with the Dunedin players agreeing to return to Napier and to play at Park Island. The winner of the afternoon match will play University/Mt Wellington in Sunday's Ansett national club championship final at North Harbour Stadium... [The]NZS... chief executive... has welcomed the decision. "[NZS is] happy it has been resolved and that the team to play in the final will be found on the football field... We have agreed to underwrite the cost of Dunedin's travel and will fly them in and out on a charter flight." The Dunedin players, who met behind closed doors for more than an hour before agreeing to the NZS replay proposal, wanted an assurance they could return to Dunedin tomorrow night and, if they win through to the final, fly to Auckland on Saturday for the final. Their concern was the struggle for some players getting time off work for an extra day if they had had to go on to Auckland on Friday as NZS proposed. The replay was seen by the NZS appeal committee as the fairest way to resolve what has been a contentious issue from the time [the]referee... blew his whistle in last Sunday's game. There is no doubt that a breakdown in communication involving NZS, the referees' administration, match officials – both on and off the field – and the clubs led to the confusion. The match should have been decided under the "golden goal" rule – as per instructions issued to clubs on August 14. But [the referee], his fellow officials, [the]referee match inspector... and [the]match commissioner... saw it differently. After the teams were level 1-1 after 90 minutes, the officials decreed that the game should go to two 15-minute periods of extra time and, if needed, a penalty shootout. Tech scored first in extra time, Napier equalised in the final minute, then won the penalty shootout. "We assumed everybody knew what was going on," said... Rovers['] club manager... "but obviously there was a communication error somewhere along the way." Tech[']s coach... said the matter had reached "farical proportions" but remained adamant yesterday that there was no way... his players would have agreed to play the [replay], as originally proposed, this afternoon. "The odds are stacked against us... but we will reluctantly go up and play." Last Sunday's match has been declared null and void, which means the one-match suspension incurred by Napier[']s captain... will be scrapped.

...The longest-running saga in N[Z] domestic soccer got even longer last night before Napier City Rovers clinched the inaugural national club soccer championship 4-2 in a penalty shootout over University/Mt Wellington. The shootout, at North Harbour Stadium, after 120 minutes of tense football had failed to produce a goal, finally ended a week of turmoil – on and off the field. In a game which struggled to get out of first gear at times through the first 90 minutes but came to life under the threat of what would have been a match-deciding "golden goal" in extra time, a penalty shootout was perhaps appropriate as the top two sides from the Ansett national club championship season played each other to a virtual stop. In the end, Napier, who had been taken to extra time and a penalty shootout a week earlier and then played another 90 minutes on Thursday in the controversial replay against Dunedin Technical, fully deserved their win. It was just reward for their persistence and ability to lift themselves when leaden legs had long cried enough... "We did everything but score," rued [the]University/Mt Wellington coach... [One of his players came closest to scoring] when his header, 25 minutes into extra time, was cleared off the line... [Rovers'] former All Whites' keeper... saved University/Mt Wellington's first two penalties... Napier will be back at the stadium this Saturday to square off against Central in the Chatham Cup. It gives [Rovers' captain], and others, the chance of a double-double after being a member of the side that won both seven years ago.

...THE Napier City Rovers juggernaut continued yesterday when they added the Chatham Cup to the league title they won last week. It was the club's third Chatham Cup... and their second league and cup double... In the [gals'] final, Lynn Avon thumped Wairarapa 6-0 with [one player] scoring three goals and setting up another two.

...[a f]ormer Napier City Rovers striker... earned himself a place in FA Cup history when [it] became only the second player... to score 10 goals in a game. His Unibond League team, Stockbridge Park Steels, demolished hapless Oldham Town 17-1 in a preliminary round of the competition.

...Prizemoney is to be awarded for the first time in the English FA Cup... in a total package worth... £30 m... The next winners of the knockout competition, the oldest in the sport, will receive... £4 m... in prizemoney and television revenue. Winners of preliminary rounds will pocket £500.

...Wembley Stadium, the venue of England's FA Cup final and the home of the national soccer team, is to be sold to a trust owned by the FA.

...Expect uproar from... heritage buffs after it was revealed that two of the most famous landmarks in sport – Wembley Stadium's twin towers – face demolition under a \$455 m... redevelopment plan... [T]hey would be in the middle of the pitch of the proposed new 80,000-seater... stadium.

...Wembley Stadium's... twin towers will be demolished next year when rebuilding as a state-of-the-art, 90,000 all-seater arena with a retractable roof starts. They will be replaced by four giant masts soaring 130m into the sky and visible for miles around... The... retractable roof[will be] suspended from the four masts to give a "halo" effect above the stadium... "It is regrettable that no way could be found of saving the towers," the project's architect... said at the unveiling of the £475 million... design for the new stadium[which] will be 57m high, nearly 30m taller than the current stadium... [E]scalators will carry fans to the upper levels of seating... The project... should take two years to complete... It will be used primarily for soccer but also for rugby, rugby league... athletics... and could also stage future Olympic Games... Wembley Stadium was built in 1923 and has staged... the 1948 Olympic Games, the 1966 World Cup soccer finals and the 1996 European championships... [Someone] who played in England's 1966 World Cup-winning team and for Manchester United's 1968 European Cup-winning side at Wembley, said: "You have to progress, and... the new stadium will be the best in the world." ...[the chairperson] of Chelsea and also... of the new Wembley National Stadium company, said: "All of us involved in creating the new Wembley are confident we are building the best stadium in the world. It will not simply be the most beautiful but it will have the best facilities for fans, with outstanding levels of comfort, leg-room and vastly improved sight-lines..."

...[during the 1966 World Cup final England scored a controversial goal when Germany protested that 'the ball hadn't crossed the goal-line.' Now] English soccer's Premier League is set to install electronic goal-mouth sensors to verify disputed goals, especially those when the ball deflects down from the crossbar. FIFA has given in-principle approval for the plan, whereby... [balls] would be fitted with small transmitters which would send a signal to an earpiece worn by the referee... whenever the ball crossed into the goal... [Incidentally, w]ith the grand old [gal] of British sport to be demolished in September, Wembley's owners are about to cash in. For around \$80,000, fans will soon be able to hire the hallowed venue for a 60-minute match officiated by top referees. The two teams will be kitted out in replica England playing strips, receive refreshments at halftime and get two match balls to keep. Completing the footballing fantasy is the chance to walk the famous 39 steps to the Royal Box where a... lookalike... [of the] Queen... will present winners with a replica FA Cup.

...[an import] brought 77 years of history to a close yesterday when [it] scored the only goal after 73 minutes to give Chelsea a 1-0 win over Aston Villa in the FA Cup final at Wembley Stadium. The 29-year-old Italian midfielder... – ...who has sat out most of the season injured... – ...rifled home from two metres out to score the 215th and last cup final goal at the stadium, which is being demolished later this year. It was Chelsea's third FA Cup win and it earns them a place in next season's Uefa Cup final. [The Italian] scored the fastest-ever goal in a Wembley FA Cup final when Chelsea beat Middlesbrough in 1997. [On that day, the Italian] found the net after 43 seconds. [Chelsea's captain], previously a cup winner with Wimbledon in 1988 and Chelsea in 1997, became the last skipper to lift the cup under the Twin Towers... However, the ['72nd' and]last final was another disappointing affair. The two sides, who produced a 0-0 draw and a 1-0 win for Chelsea in the league this season, cancelled each other out.

...Plans to rebuild Wembley Stadium are bound for the shredder after the F[A] said yesterday that they could not finance the project. English football is now faced with the very real possibility that the new national stadium, if built at all, will not be at Wembley. The *Telegraph* understands that there is now a very real possibility that the FA, which owns Wembley, will look to the Midlands for the site of the new national stadium. The British Government, from which the FA demanded £150 million last week to carry on with the project, declined to provide a cheque... A spokes[person] for the P[M]'s office said: "It's important to recognise that this has always been an FA project and it was always the case that they would secure the necessary funding from the City[of London]. The Government cannot simply write blank cheques or act as a national bank for projects which encounter funding difficulties." ...Instead it appointed a committee, headed by... the Home Secretary, to look into the project... This will be the third time in the last six months that the Wembley project has been looked at. If this sounds excessive, even by Wembley's standards, the latest chapter in the fiasco is a combination of the FA developing cold feet and evidently the left hand not knowing what the right is doing. Three weeks ago, when [Wembley's chairperson] briefed Government ministers... there was no suggestion of alarm. [The chairperson] accepted that with Wembley having [already] failed to raise the money from the City, [a] second attempt would be tricky, but [it] seemed confident that J. P. Morgan – the leading bankers – could raise the £410 m... required to finance the £660 m... project. The FA were committed to providing £100 m... of their own money... However, [an]... independent... report... said that, while the banks might be prepared to lend the money, they would expect the FA to take all the risk. The FA would have to put up £125 m... in equity capital. They would also have to provide £55 m... a year for some 10 to 15 years to cover interest and repayments of the money borrowed. In addition, while there was a fixed-price contract of £326.5 m... for the construction, the banks wanted the FA to make provision of another £80 m... just in case there were construction overruns. This report alarmed the FA. Until now, it had been... hoping to capitalise on No 10's well-known sensitivity to football. At several meetings at Downing St between the FA and [the PM]'s advisers... the chief executive of the FA... made the point forcefully that there had been government funding of... the Stade de France, so why not in Britain? ...[the new stadium was to have been] English soccer's showpiece... [had it secured] the 2006 World Cup soccer finals.

...South Korea, hit hard by the Asian financial crisis, has asked neighbours Japan for a \$203 million loan to build a new stadium in Seoul for co-hosting the 2002 World Cup soccer finals. It is unclear whether Japan, which is suffering its own financial problems, will be able to come up with the money... [In related news, Ghanians] have buried 30 people who died in a football stampede that killed 126 people.

...Ghana's police, blamed for sparking a soccer stadium stampede... have apologised for their role in the disaster. Angry mobs have attacked police stations in Ghana's capital, Accra, since Africa's worst soccer tragedy on Thursday, in which police fired tear gas into the packed stadium, starting the stampede... Ghana's inspector-general of police... has set up an internal investigation into the behaviour of the 70-officer contingent responsible for security at the match at the national stadium in Accra between local team Heart of Oak and arch-rivals Asante Kotoko.

...[South Africa's] President... yesterday joined families at Johannesburg's Ellis Park stadium to mourn the 43 people killed in South Africa's worst sporting accident. Bouquets were scattered across the field where last Wednesday (local time) emergency workers had laid out the bodies of the 43 people, including two boys aged 11 and 13, killed in a crush. "Too many in our country die from unnatural causes,"... said... [the President, who] has appointed a judge to inquire into the cause of the accident 33 minutes into the first half of an evening match between the country's top soccer teams, Kaiser Chiefs and Orlando Pirates. [The President] said yesterday that the inquiry would not seek to lay blame, but to ensure that last week's disaster was never repeated. Local newspapers highlighted a growing row over responsibility for the disaster, with police, stadium managers and the clubs trading allegations of negligence. An estimated 15,000 people, some claiming to have tickets, pressed against gates, one of which fell, trapping dozens of people who died as the mob ran over them.

...[the South African] was separated from her brother in the chaos of the football disaster at Ellis Park. The next morning... [the sister] began her search at Hillbrow mortuary, up the road from the stadium where 43 people died a horrific death as thousands of supporters surged into the stadium... "I thought I would start with the worst possibility,"... said... [the sister], aged 33... as [it] waited in the street for a friend to accompany her... [The sister] hoped later to be doing the rounds of Johannesburg's hospitals, where around 90 of the injured are still being treated. Hundreds of people all over this soccer-mad country faced the same prospect. The Kaiser Chiefs v. Orlando Pirates match had been the derby of the year – a must-see for all true lovers of the game, from company executives with hospitality tickets to humble folk who expected, as usual, to buy their 15-rand... tickets at the gate. By yesterday morning... South Africa's disaster machinery had gone into gear. A judicial inquiry was launched... All weekend soccer fixtures were cancelled and a helpline and disaster fund were set up. Very quickly, officials launched a counter-offensive against speculation that South Africa's ambitions to host the World Cup in 2010 were now well and truly scorched... At Ellis Park, scene of the 1995 rugby world cup final, there was a strange sense of futility, masked by a rather distasteful attempt at business as usual – or was it good old-fashioned South African amnesia? The football goals in the all-seater stadium had been replaced by rugby posts and a team of work[ers] had dyed a Vodacom

logo into the grass ahead of this weekend's match between Western Province and the Golden Lions. Two wreaths on the grass, from the "rugby sport lodge" and the management of Ellis Park were the only sign that something was wrong – until you walked up the gradual concrete steps of a ...wide corridor, leading through the red plastic seats up to a tunnel at Gate 4. Halfway up the steps, a metal barrier dividing the passage in two had been flattened. Several of the red plastic seat-backs were bent forwards... On a second level of seating, above the Gate 4 tunnel, the crowd had done similar damage and... up to 16 people fell to their deaths from the upper tier – the equivalent of an eight-storey drop... "The pressure started... 10 minutes before the 8 pm kick-off, when people outside the perimeter area realised they would not get in. Some... had tickets and yet we were instructed not to let anyone in because the stadium was full. It does not make sense that there were people outside with tickets and yet it was full. The Pirates equalised... 10 minutes into the match and at that point, the pressure just soared. There were so many people... We are not armed and could not handle the crush and it took a while for the police to intervene," said... [a] 21-year-old security guard... [T]he financial manager of Ellis Park... insisted that excess tickets were not printed. "The capacity of the stadium is 62,000 but 52,000 tickets were sold. At 7 pm there were 50,000 people in the stadium and 20,000 outside. We just could not contain the crowd. They started physically removing the fence. The more we said it was sold out, the more aggressive they became,"... [33] minutes into the first half, at 1-1, the referee stopped the match. By then, according to players, it was very clear that something was wrong. One witness said the first body was carried away a full 10 minutes before play was stopped. As the... crushing continued through the tunnel of Gate 4, the players, spectators and officials watched powerlessly... "We are simply too small to handle this kind of game," said [the financial manager, who] was asked whether Johannesburg's principal stadium, FNB, which is the Orlando Pirates' home ground and is purpose-built for soccer, would not have been a better choice for the biggest derby of the season. "Kaiser Chiefs wanted to play here... They used to share FNB with the Pirates but they want to establish this as their home ground. We had an operations meeting the day before and everything seemed to be in place. Except that, it has to be said, no ground wants to host a Chiefs-Pirates game." Later, at a hotel in the northern suburbs, [the chairperson]... of... the Premier Soccer League... said 200 officers from the South African Police Service had been on duty at the ground. According to inquiries by the *Independent*, a similarly "high-risk" match in the United Kingdom in front of a crowd of the same size – say Manchester United at home against Leeds United – would generally be policed by 400 officers in the immediate vicinity of the ground, as well as reinforcements at stations. The comparison offers a useful measure of ratio but is unfair in the sense that South Africa has not had the benefit of decades of highly commercialised soccer nor, until now, anything resembling the 1989 Hillsborough disaster and the subsequent... report.

...TWO retired South Yorkshire police[officers] have pleaded not guilty to charges of [hu]manslaughter and neglect of duty resulting from the death of 96 fans in the 1989 Hillsborough soccer disaster. [The f]ormer chief superintendent... ((aged)54) and former superintendent... (57) appeared in Leeds Crown Court on Friday and were granted bail. Their trial is set for June next year... [The pair] were ordered to stand trial after a hearing in July to determine the legality of a private prosecution brought against them by families of the dead. The former high-ranking officers are accused in the deaths of John Alfred Anderson (62) and James Gary Aspinall (18) on April 15, 1989... Anderson and Aspinall were among Liverpool fans who were crushed to death after being herded into an already crowded and fenced-in enclosure during the FA Cup semifinal against Nottingham Forest. Two attempts in 1990 and 1997 to prosecute the case have failed, through insufficient evidence.

...English soccer changed forever as a consequence of the Hillsborough disaster... Although nothing could compensate for the deaths of the 96 innocent fans, killed... as a direct consequence of years of official ineptitude, their passing changed everything... [Today] England's major clubs – and many in the lower divisions – play in modern, all-seater stadiums, in many cases totally transformed from the slums that they had become by the late 1980s... Ancient concrete terracing, laid down in the late 19th or early part of the 20th century, has been ripped away... Liverpool's Kop has disappeared, so has Arsenal's North Bank, Manchester United's Stretford End, Chelsea's Shed, Tottenham's Shelf – so has much of the culture that fuelled the insanity of English soccer that both directly and indirectly brought such a painful and agonising death to so many people that spring afternoon in 1989... "What should never be forgotten is the absolute dereliction of the duties of the football authorities and police in the 30 years that led to the Hillsborough disaster," says... a London-based media consultant... "Football clubs had been only too pleased to take the gate money from fans clearly intent on causing trouble throughout the late 1960s, 1970s and 1980s. Instead of kicking those people out of soccer – because all the authorities knew who they were – they erected fences at grounds to stop them coming on the pitch. The fighting never stopped on the terraces – it was perceived to be part of English soccer's 'special atmosphere'. And the innocents who died... [while being] fenced in like animals... at Hillsborough were the ultimate victims of that officially condoned violence..."

...An Argentine judge recently suspended all national club soccer matches in a clampdown on football violence... Argentine soccer followers are involved in shootings, death threats and extortion. After announcing his ruling, [the]Judge... had death threats and was put under police protection... According to the newspaper *Clarín*, there have been 37 football killings in the 1990s, up from 16 in the 1980s... In April, 30 gun and baseball bat-toting fans of the weirdly-named second division club Chaco For Ever entered the dressing room and threatened the players because they were nearing relegation. [An Irish soccer player who was] forced to pull out of an international after a sectarian death threat, said yesterday [it] would never play for Northern Ireland again. [The player], a Catholic, withdrew from the "friendly" against Cyprus in Belfast hours before [it] was due to lead his team out as captain on Thursday. The threat was from a Protestant paramilitary group. [The player] said yesterday that "enough was enough" and it would be too traumatic for him to play for his country again. "It's a real pity that it all has to end like this... My parents were pretty distraught. Obviously I can't put them through this every time." The 31-year-old midfielder, who plays club soccer for Scottish champions Celtic, nearly quit when [it] was booed by Protestant Loyalist fans in an international in February last year after his transfer to Celtic... The antipathy between Celtic and Glasgow rivals Rangers mirrors the emotive sectarian divide in Northern Ireland... [The] president of the Irish Football Association... was gutted by the death threat, one of the rare occasions the national team have been targeted by paramilitaries... In 1971, when Northern Ireland's guerrilla war... was at a peak, [Manchester United's]Northern Ireland soccer target... needed police protection after receiving death threats... Drawn in group six, [losing their captain]... would be a major blow to [Northern Ireland]'s hopes of qualifying for the... European championship[s].

...The first soccer match between Catholic and Protestant teams in sectarian Northern Ireland for 28 years ended in a diplomatic and peaceful draw... Police mounted a huge security operation to prevent the two sets of supporters mixing. The crowd was limited to 1500 and about 100 armoured cars lined the streets outside the stadium. But the only trouble happened on the pitch with the sending-off of a Linfield player after a fracas with one of his opponents... The... Irish Football Association president... said the match was "a step forward towards normality."

...Three local residents are putting their soccer-playing robots to the test in A[US] this week, at the world RoboCup championship. The three are part of the five-m[ember] Auckland University team pitting their robots against other countries' creations... The robots, named after the four stooges, are guided by pre-programmed commands that allow them to recognise the different coloured goals and balls. A micro video camera forms the robot's eye, which allows a computer on the robot's back to process the information sent... The Stooges robots bulldoze into the ball to send it nearer their goal. Motorised by batteries, the small soccer players look like little radio-controlled cars... The students are doing a robotics paper at university, and are learning advanced programming techniques. Their budget for the robots is thousands of dollars behind larger countries' budgets, with some other robots worth more than \$10,000 each... But they are the first team to trial a pioneering programming technique. All the other robots at the championship have coloured balls on their heads so they are easily recognisable to other team mates. The N[Z] robots do not have these, and instead the computer gets more of a workout... The Stooges have already played against France, America and A[US] university

robots... The robots play soccer because it is a standard function that is easy to compare to others... The ultimate goal of RoboCup is... [to] develop a team of fully autonomous humanoid robots that can win against human world cup champions in soccer... by 2050... says the RoboCup website.

...So England's professional soccer players are threatening to strike over money? Will you contribute when... the collection plate [comes] around?

...The English Professional Footballers' Association is conducting an investigation into the long-term effects of heading a soccer ball, following studies in both America and Scandinavia that show it can increase the risk of brain damage and may result in illnesses such as senile dementia and Alzheimer's disease... [Incidentally, a Real] Madrid soccer striker... has been suspended for one match and fined \$29,000 for a handball goal against Leeds in their champions league match last week.

...Leeds... had reason to rue the absence of... the world's most expensive defender... from their defence when they were beaten 1-3 at home by Newcastle. And they will probably have to do without... [him] again for tomorrow's FA Cup match against Liverpool. And all because [the defender] spent too long relaxing. Putting your feet up and watching the telly seems a harmless enough leisure activity, but [the defender], bought for £18 million... from West Ham, did it for too long, with unfortunate consequences. "[The defender]... had his foot up on the coffee table,"... said... the club's website. "[His leg was] in a certain position for a number of hours, and when [the defender got up it found it] had strained a tendon behind his knee." The defender is continuing a rich tradition of footballers sustaining ridiculous injuries. Another TV-related incident... came a couple of years ago when [the defender]'s team-mate... was kneeling down to pick up the remote control in his hotel room while on international duty. [The team-mate] felt a twinge in his knee, and although [it] scored the next day for the Republic of Ireland against Malta, the pain got worse and [it] had to leave the field – and ended up having a cartilage operation. [Another player] also suffered remote misfortune. Arsenal's England goalkeeper was at the team hotel... and pulled a muscle in his back while reaching for the remote in order to tape *Coronation Street*... And [a] former Wimbledon goalkeeper... missed a few games for Chelsea after dropping a jar of salad on his foot... [A] Sunderland striker... nearly missed the start of this season when [it] was injured while asleep. The England international woke up in pain having twisted his knee. [Another striker may] have been a championship winner with Leeds, but his finest hour came when [it] put his back out shovelling snow on a neighbour's drive. [One player] loved his new-born daughter until [it] poked the Danish international in the eye, shortly after his move to Spurs, forcing him to miss a few games... Perhaps the most damaging injury was that incurred by... Liverpool's Danish goalkeeper who injured his shoulder doing the ironing. [The Dane] was forced to retire...

Spanish soccer giants Barcelona, stung by two Champions League defeats, are ready to break the bank and offer an \$US85 million... package for [Liverpool's] England striker... according to yesterday's *Mirror* newspaper. The package would comprise a \$US55 million transfer fee, on a par with the record \$US56 million Barcelona received from Real Madrid for Portugal's... European Footballer of the Year... three months ago, and about \$US30 million more for [the striker] himself. Barcelona's reported interest comes after... [the striker – who recently stated that]: "There is nothing going on in the world at the moment that I find distressing or have a view on!" – said it... could envisage leaving Liverpool and going abroad to further his international career... [The striker] sprang to prominence at the 1998 World Cup, scoring one of the goals of the tournament in a 2-2 draw with Argentina, who forced England out on penalties. But... [England's coach has] substituted him in all three matches[since the World Cup. The striker] was on the bench again for last month's friendly against France, but came on and scored in a 1-1 draw. [The striker] is set to partner Manchester United's [striker]... tomorrow... against Germany... [– where] Nike soccer jerseys [were] pulled from store shelves... after a television consumer show report... said... the yellow-and-black jerseys contained tributyltin, a heavy metal compound used in anti-barnacle paint for ships... [(tests have since] found that the jerseys pose no danger to health[) –] ...as both look to inherit the mantle of the now retired [No 9. England's captain] has given England a boost by declaring himself fit for the match... Tomorrow's group nine qualifier will be the last international to be played at Wembley before it is knocked down... [England's captain feels it] has finally won over the England fans who have verbally abused him since his sending-off against Argentina in the World Cup finals... saying: "The fans were unbelievable in our last game against France."

...England's captain... signed a new contract with Manchester United yesterday that ties him to Old Trafford until June 2005. The deal, reputed to be worth a staggering \$[NZ]291,000 a week, follows protracted negotiations between the club and [player], whose present contract was due to expire at the end of the next season... ■ [After]... two seasons in the top flight... Ipswich Town returned to the English first division with their tails between their legs yesterday, relegated after a 5-0 thrashing on the final day of the English premier league season. With Sunderland safe in the top flight after drawing 1-1 at home to Derby County, the defeat at Anfield was immaterial for... [Ipswich], who ultimately paid the price for their poor start to the season... Ipswich... estimate relegation will cost them at least £10 million... Liverpool's win meant they secured second place ahead of Manchester United to claim the second automatic qualifying place for the Champions League behind champions Arsenal, who paraded the premier league trophy after a 4-3 home win over Everton... [Manchester] United drew 0-0 at home to Charlton Athletic and finished... outside the top two for the first time since 1991... United's 0-0 draw was [also] their first goal-less stalemate at Old Trafford in 115 premier league games... Arsenal's victory at Highbury set a premier league record of 13 straight wins, and they scored in every game this season, another record.

...Champions Arsenal... scored in 45 consecutive premier league games, breaking Manchester City's 65-year-old record in the top flight of... soccer... Arsenal... also set a club record of 27 league games unbeaten and equalled Nottingham Forest's record of 22 away matches unbeaten...

London neighbours Chelsea spent more than £110 million (\$311.35 million) on players in the close season in a bid to build an all-conquering team. They should have little trouble overcoming Notts County at Stamford Bridge. The cash-strapped second division outfit, the world's oldest league club, are in administration and have been given [10 weeks]... to resolve their financial woes or be kicked out of the Football League.

...[the French World Cup hero]'s world record \$US66.05 million... move from Juventus to Real Madrid did more than strengthen Real's bid to regain the Champions League title. By waving goodbye to Italy, [the French international] gave a further indication of how the balance of power has changed in European football. The world's top three players... all ply their trade in the Liga, and Spanish clubs have dominated in Europe over the past two seasons. By contrast, Italian clubs have struggled. Serie A has also bid goodbye to another world-class performer with [an] Argentine... moving from Lazio to... Manchester United.

...Soccer clubs in European countries could eventually be stopped from fielding teams made up completely of foreigners[(as Chelsea did for the first time this season)]. The president of Fifa... and the chief executive of Uefa, [have]... met sports ministers from Finland, Portugal and France... Afterwards they said the meeting could prove to be the first step in ensuring that clubs fielded at least six domestic players...

Some of Britain's best-known footballers... are owned by Barclays Bank rather than the clubs for which they play. In a revelation that will raise further fears about the financial strength of British football... increasing numbers of clubs are effectively mortgaging their players to pay spiralling transfer fees. Players thought to have been sold to Barclays... include... the England defender bought by Leeds... for £18 m... who... is the subject of a £35 m... transfer bid by Manchester United. Leeds have sold four... squad members to Barclays, while other Premiership sides including Everton, Bolton Wanderers and Leicester City are thought to have used a similar scheme to buy expensive players... The scheme being used by the clubs is similar to a traditional mortgage... Under the football scheme, a club transfers the "right to use" a player to Barclays in return for a cash payment. The club then leases the player back from the bank for a quarterly fee. If the player is sold or transferred, the club pays off the loan and keeps any profits. To ensure that Barclays does not lose if a player's transfer value falls or the club cannot keep up its payments, the bank takes out an insurance policy with a specialist firm. Because it has this insurance policy, Barclays does not have the right to "repossess" the player if the club collapses or fails to keep up its payments. The bank makes a profit by charging interest on the cash advanced, plus the leasing fee it charges the club. The complex financial deal... allows a club to spread the cost of buying a new player over the length of his contract, rather than... raise all the

money immediately... One director of a leading premiership club said such schemes could lead to further financial difficulties for many clubs. "The fear is that cash-strapped clubs are overstretching themselves... There will be nothing left to mortgage soon." In the financial year ending April last year, seven premiership clubs lost [over] £25 m... In the six months to last December, Leeds, who[']d spent... £90 m... on new players, lost £13.8 m...

Losses huge but team spirit is too... His team had just gone 0-18 down and... the national coach [of]... Guam... thought it couldn't get any worse. Then, an Iranian striker rushed into the goal, grabbed the ball and started sprinting back towards the halfway line, eager to keep the massacre going. [Guam's coach] took a deep breath, raging impotently at professionals taking the pee out of his boys who had suffered enough indignities. [The coach] had always known – from the day [it] turned up for his first training session... and only [7] players trotted out to greet him – that this job was going to be, er, a bit different. But two years later, as [the coach] presided over the biggest defeat in World Cup history – 19-0 – [the coach] realised how painful it could be too. "Well, the whole experience wasn't too pleasant... [48] hours and three stop-overs to travel from the island to Iran, arrived at 8 one night and played at 2.30 pm the next day. I'd got a lot of young kids, some of whom had never even been off the island. They had certainly never seen the snow which you could see on the mountain peaks. In Guam, they're used to a tropical climate which doesn't get much below 25 degrees Celcius all year round. In Tabriz, it was wet and freezing. I warned them about wearing gloves and long-sleeved undershirts, but the only realistic aim was to keep the score below 20 against a team with so many top European-based pros." They succeeded, and two days later they triumphed again. Only 0-16 this time, to mighty Tajikistan... Fifa rank Guam 199th of their 203 nations, so somewhere out there, there are apparently four worse international teams. [The coach] says, actually, they beat an island called Yap, but I couldn't find it in my atlas.

...One-sided scoring romps are doing nothing for football in this part of the world and have led N[ZS] to call for changes in the way Oceania tournaments are run. Concerned that A[US]'s record 22-0 runaway win over Tonga in their World Cup qualifier in Coffs Harbour will not be looked on too favourably by Fifa, the NZS chief executive... has suggested that the Oceania Football Confederation should consider making changes. The record-breaking is unlikely to end there. A[US] play America Samoa in their second match tonight... Tonga are ranked 185th on Fifa's latest list – 18 places ahead of American Samoa (203rd and last) – while Samoa come in at 174, but were still good enough to beat American Samoa 8-0. Tonga earlier upset Samoa 1-0. "We accept the place the island nations have in world football," [the NZS chief executive] said. "Being beaten like that is doing nothing for the game in their country or for the A[US]ns." And it goes much deeper than senior World Cup matches. In recent under-20 matches, A[US] have beaten Samoa 16-0 and the Cook Islands 13-0. In under-17s, A[US] beat American Samoa 30-0... "N[ZS] and, no doubt, the A[US]ns, feel it would be more beneficial for the island nations to play off in their own competitions for the Polynesian or Melanesian Cups as they did before last year's Oceania Nations Cup,"... Those winners would then join N[Z] ('the current Fifa rankings place AUS at 50 and NZ at 49') and AUS] in a four-team play-off, either as a round-robin tournament, or home and away, to find the Oceania winner.

...[the national NZ] soccer team, in Mexico for the Confederations Cup, became an instant hit by visiting a Guadalajara children's cancer hospital. But then relations quickly soured. The local organising committee handed the All Whites[(the team will wear all black in their first match against the US – the first time the teams have met – because that country also plays in an all-white strip)], who entered the country on visitors' rather than business permits, an unexpected "tax" of \$6000 and would not allow them their mandatory training session at the match venue.

...The Big Two of Scottish soccer, Celtic and Rangers, will be invited to join the English Football League this week, says the BBC. The 72 Football League clubs will vote at the weekend on whether to accept the plan, under which the two Scottish clubs would start next season in the English first division. Celtic and Rangers... have expressed interest in competing in the English League, which they believe is more competitive and attracts more television revenue than the Scottish premier league. The two Glasgow clubs have dominated Scottish soccer to such an extent that it is 17 years since any other club has won the title and seven years since they did not occupy the top two places. Relations between Celtic and Rangers and the rest of the Scottish premier league have become increasingly strained after the two clubs scuppered plans for a premier league-owned, subscription-based television channel. After the Old Firm clubs voted against the plan, the 10 other clubs in the Scottish premier league announced their intention to quit the league. If that move goes ahead, it would leave the fierce Glasgow rivals together, but isolated. Even if English Football League clubs accepted the proposal, there would still be several hurdles to overcome. The most notable among those would be opposition from European soccer's governing body, Uefa, to clubs from one country playing in another's domestic league.

...The Football Kings will be scuppered after just two seasons in the A[US]n league if a strongly worded directive from soccer's governing body is enforced... [T]he... Oceania Football Confederation president... received a letter from Fifa['s] general secretary... late last week which, in part, reaffirms "that the inclusion of the Auckland team in the professional league of A[US] is restricted to a two-year period after which the club concerned will be compelled to return to... [NZ]." However, NZS] received a letter from Fifa earlier that said the Kings had been granted a licence [to play in A[US]] for two years or until such a time as a professional league is established in N[Z]. "This is not a Kings issue... It is between N[ZS] and Fifa. Fifa will not talk to any club..." But [the Oceania president] said: "The conditions under which the Kings are to be allowed to play in A[US] were made very clear at the executive meeting in Los Angeles last month. There were four speakers of which three were totally against the move. I was the only one who spoke in their favour but it was obvious to me that two years was the best they could hope for. The Fifa executive saw the granting of dispensation to the Kings as a dangerous precedent. Such a move is not covered in their statutes... They pointed to the Welsh clubs who play in the English leagues and the poor standard of Welsh football to back their thinking." ...The timing of this bombshell could not have been worse... The... Kings[' chairperson]... intends to announce a major sponsor this week, as well as the signing of another couple of players – including at least one on the Confederations Cup All Whites squad[that lost 2-1 to the US, 2-0 to Germany and 2-0 to Brazil (which went on to lose 4-3 in the final to Mexico). The chairperson]... flew to Sydney last Saturday for a meeting of Ericsson Cup clubs at which they attempted to finalise the... draw. "It has not been sorted out yet but I expect to see it within seven to 10 days,"... However, reports from A[US] yesterday suggested the Kings will kick the first ball of the new season in a home game – almost certainly against Canberra – on October 1.

...the Auckland Kings soccer team... start playing in A[US]'s national league in October, but a decision on the club's ownership should be finalised by the end of next month... The Kings must move quickly if they are to be ready for an official launch next month. Time is also of the essence in getting ready for the start of the 16-team competition. Preparations for the Warriors' debut were spread over two years, but the Kings have a much tighter schedule. The Kings will not command the same price as the Warriors did last year. One source suggested a major shareholding could be bought for less than \$1 million. Investors will also be wary of reports which suggest a number of A[US]n soccer franchises are struggling. However, like the Warriors, the Kings will have the advantage of being Auckland's sole side in the competition. The successful bidders for the Kings ownership will be basically buying the club's five-year licence in the A[US]n national league. The club does not have the licence yet, although it does have a written undertaking and last week received the franchise agreement from Soccer A[US]. Depending on who becomes the owners]... the side could be based with the... Warriors at Ericsson Stadium... [or] at North Harbour Stadium.

...TALKING to... [the two] Aussies... you realise how big an impression [NZ's Oceania player of the decade] has made around the world. N[Z]ers don't often realise what [the strik]er achieved in soccer but the A[US]n pair know. Both said [the strik]er was the main reason they signed one-year contracts with the [Auckland side]. "When I went to play in Germany I had never heard of [him]," the 24-year-old... said. "But over there [the strik]er's like a superstar, a celebrity. If you go to any family home they would know who... [the strik]er is." The other Aussie, also 24... met [the strik]er at the recent All Stars game against A[US] and made the decision to sign in two days. "...It was an opportunity to play under someone who can teach you so much." ...The pair[, who played together]... in the 1995 A[US]n World Youth Cup side... aren't household names in soccer circles but are hardened players who know what it takes to succeed. Management at the... Auckland [club]... learned from the... Warriors how important

it is to have those types of players. A third A[US]n... has also signed up... With four weeks until kickoff [the pair are] encouraged by what [they've] seen at training with the likes of [the team's four]All Whites... The [Auckland team] are a fully professional outfit while only two or three A[US]n teams are. This means that playing for the [Auckland club] is a 24-hour-a-day job... At Monday's first official training there were only nine signed players. It's likely others won't be in the country until just days before the first game against Carlton on October 1.

...An Aucklander's footballing fantasy is about to come true... The 24-year-old Kingz midfielder – and All Whites defender – expects to leave Auckland today for his 4 1/2 year stint with Dutch first-division club Roda JC. It could be a week or two before the paperwork is completed, which means his first game might be a league clash... against Dutch giants PSV Eindhoven... – currently second in the championship race. “No pressure,” quipped [the Aucklander] yesterday. “But it is certainly something to look forward to.” This latest footballing odyssey is a far cry from [hi]s first foray into European football when, as a 17-year-old, [it] tried his luck in Croatia. “I’m a lot more experienced and certainly more mature now. I have played a lot of football since then, including the All Whites... I’m sure that all helped in my final trial with Roda.” [The Aucklander] turned up at the club, based in the southern city of Kerkrade – a 2 1/2 hour drive from Amsterdam – after the Dutch league's winter break. “They had a couple of friendlies and I was supposed to play the second half of the first one, but one of their players was injured and I was on after 35 minutes. We were down 0-1 when I came on and we went on to win 3-2. I played well and there was a picture and a nice story in the paper the next day...” The club obviously liked what they saw and offered the former Waitakere City and Central United defender a contract worth around \$750,000 a year on top of a \$100,000 transfer fee... Of that, \$11,000 will be split between N[ZS] and his] former club Central... [The] Football Kingz chair[person said the 24-year-old's] signing was “absolutely brilliant.” “Sure, there were some mixed emotions... Clearly, we are losing a very good player but it shows what the Kingz was set up for. It also shows that the standard of football in the NSL gives exposure to the big European clubs. “We want more to follow.” ...[● The Auckland club] substituted the S in its name with a Z to avoid a copyright battle[with the Sydney Kings basketball club]...

The owners of the Auckland basketball team yesterday confirmed a... push to take a city-based national side into the Aussie league, [with]one of the conditions of entry meaning Auckland will get a bigger indoor stadium. The team, to be named via a public competition as the Auckland Warriors were, will join the 11-team A[US]n NBL for the summer... season if it can meet financial and other criteria... The Auckland entry is dependent on: 75[%] backing from the existing... clubs (Sydney Kings, Western Razorbacks, Brisbane Bullets, Canberra Cannonballs, Wollongong Hawks, Cairns Taipans, Townsville Crocodiles, Perth Wildcats, Victorian Titans, Melbourne Tigers, Adelaide 36ers); purchase of a \$1 million franchise licence (open-ended and able to be on-sold, or sent back for a refund should the team fold); a viable business plan based around solid spectator support... [–] 3500 bums on seats at fortnightly home games[is] the break-even point... – ...and a juniors development programme... [However, the] president of the local basketball association... expressed confidence in their bid being accepted and the NBL chief executive... backed that. “The NBL has always viewed Auckland as an attractive expansion possibility,” [the chief executive] said, confirming the existing clubs were not only supportive but keen, seeing trans-Tasman rivalry as a valuable addition in terms of television audience and therefore marketability... Basketball NZ will have a representative on the board and is a possible shareholder, the new franchise [being]keen for a good relationship with the Tall Blacks national squad... The players will largely be... [NZers,] though they'll probably take the allowable two imports... There was thought from A[US] that the Aucklanders would need an extra import allowance in their playing squad of 12 but... [the franchise's backers] expressed faith in local talent to make the grade... Going up against the Aussies, their [senior guys' team being] ranked fifth in the world, would be a huge challenge[though]... NBL sides work under a salary cap of \$A725,000. The Auckland team will need around \$2.15 million in income a year... The North Shore Events Centre... is the frontrunner as the home court.

basketball, an indoor court game, played by two [5-member teams, 'in which a goal is scored when the ball is thrown into a net fixed on a ring 3m above the ground.' Freethrow (or penalty) goals are worth 1 point; standard goals are worth 2 pts; goals scored from outside the keyhole are worth 3 pts]. It was first developed in 1891-2 by... an instructor in the Y.M.C.A. Training College... Springfield, Mass. Today it draws more spectators than any other sport in the U.S... Also played by girls, basketball has hundreds of thousands of professional industrial, community, college, high-school, church, and pick-up teams which play the year round, though the season[is] usually... Dec.-Mar... Basketball became an Olympic sport in 1936; the U.S. team has always won... The... *National Basketball Association*, league of professional basketball teams,[was] founded in 1949... [T]he N.B.A... is divided into two divisions, E and W, and has teams in all the major cities... The Boston Celtics has been the outstanding team... in recent years.

[The]Chicago Bulls basketball star... [– who] signed a \$US30 million contract to play next season for the Bulls[, and]... is the richest commercial spokes[person] in sports for the sixth consecutive year, taking home \$US38 million... in advertisement payments in 1996... [(h]is first full season after retirement[) – claims to understand]... the frustration of [a teammate], who has hinted at retirement rather than accepting an offer of \$US6 million from the... Bulls. “I know it's very difficult for him because... [my teammate] has more value and better talent than some of the players making \$US14... million... But a lot of those guys have youth and longevity.” ...[the teammate – who this season] served a two-match NBA suspension for using foul language during a television interview... and received a six-game suspension... last season... [after head-butting a referee, yet was asking for] a one-year deal worth... \$US10 million... – ...became a free agent after helping the Bulls to win a fourth N[B]A championship last month.

...The N[B]A yesterday voided the \$US110 million... contract the Miami Heat had signed with [a]free agent... earlier this month. The league contends that the seven-year contract exceeded the room available to the Heat under the salary cap. The matter will be resolved by an arbitrator.

...[A s]uperstar centre... says [it] has signed with the Los Angeles Lakers out of a desire for a change and not because of the record \$US120 m... the seven-year deal is believed to be worth. “It wasn't about money,” said... [the superstar,] aged 24, who was previously with Orlando Magic. “...To me change is good.” ...[the superstar (r:p811, ln11)] will also]bring in... \$20 m... from his off-court entertainment and endorsement deals this year...

The number of... Lakers... season ticketholders has risen from just less than 10,000 a year ago to 13,600 – 600 shy of the season ticket ceiling[– since it was announced that the franchise had]... lured the... superstar centre from Orlando... It doesn't seem to matter that the cheapest ticket at the 17,505-seat Great Western Forum jumped to \$21, from \$9.50, and courtside seats went to \$600... Not even the... returns [from retirement]of... the team's vice-president and part-owner... [– who's nickname matches that of his new signing's old team –] had that much box office impact. - 1996

The future of basketball has arrived and it isn't exactly pretty. It wears a baseball cap turned not just backwards, but inside out, and jeans – big enough for an elephant – slumped precariously down its hips. The future... is... a guard in his first season with the Philadelphia 76ers. Compared with some of the NBA's towering giants, the 21-year-old is just a slip of a thing, skinny and barely tall enough to reach the counter. So why does the future seem so scary? Because [the guard], like some of the other youngsters who are trying to take over the NBA, is impertinent and cocky... Check out this recent conversation between [the guard and Chicago's highest-paid player] during a game between the... Bulls and the 76ers. Chicago's [cross-dresser was looking for another suspension by taunting the guard] for shooting so much, so [the highest-paid player], being the nice guy that [a highest-paid player always] is, tried to take the new kid under his wing. The kid pushed the wing away. [The Bull]: “Show some respect, kid. If you don't respect anyone else in this league, you have to respect us.” [The guard]: “I don't have to show respect for anyone.” And then [the guard] spat on the ground. Now listen in to some of the greats as they slam-dunk... the... baggy pants-wearing adolescents who think that tradition and

history are whatever happened in last night's match... "They are not making the kind of money they are making because of what they have done. They are making it because of what *we* did." The caretakers of the game, the celebrated geniuses who helped to turn basketball into one of the most popular sports on the planet, fear that many of the newer players are more concerned with learning to fly like [the Bull] instead of mastering the fundamentals. Does anyone know how to do a jump shot any more? Of course not. Jump shots don't make the highlight reels or video games. Still, shoe executives fell all over each other in the race to give [the guard] \$US40 million just to wear their sneakers. Never mind that [the guard plays like the guard is] the only one on the court, or that [the guard] can barely dribble the ball without palming it... [T]he NBA threatened to fine him if [the guard] didn't pull up his socks, and ordered him to stop wearing 38-inch... trunks on his 30-inch... waist ([the guard] now wears 36s) – and that means everything to today's Generation X consumers... [When a senior All Star was watching the guard] in this year's All Star Rookie game, his face went sour... as the youngster made a murderous cross-over dribble. "Today's young players are selfish... I hate to say it, but it hurts to watch a lot of these guys because it just gets me upset. What's it going to be like when me and [the Bulls' superstar] and veterans who have respect for the game and its traditions are gone? I'm sitting here and a guy goes by... [who]'s only the best... to ever play the game! I'm running over to get his autograph and most of these young punks don't even know who [that retired great] was. It's a sad commentary on the state of our game."

...THE N[BA] should write... a nice royalty che[que for a certain song-writer], because one of his hits is the theme song for this season. *The Thrill Is Gone*, baby, and it's been gone for quite a while... A month remains in the regular season, but is there any reason the engravers should not get started on the championship trophy right now? Does anyone envisage a scenario... in which the Chicago Bulls... do not breeze to their second straight title and their fifth of this decade? ...This NBA season has been tailor-made for narcoleptics... In a way, the Bulls' cold-blooded efficiency has worked against them. While their effort to break the record for regular-season wins was big news last year – they succeeded with a 72-10 mark – the fact that it took them only one more game this season to reach 50 wins has largely been overlooked. There was more excitement... connected to the Chicago crusade of 1995-96. It was [their highest-paid player]'s first complete season after almost two years away, and fans were eager to see if [the old-guy] was still the game's best player. ([The player] was). It was [his cross-dressing teammate's] first season with the Bulls, and fans were curious to see if [their new signing] would be a cross-dressing virus that would kill the team. ([That player – who]... lost more than 10[%] of his \$US9 million... season's salary for [his latest] suspension and has vowed to give his cheques from his next 10 appearances with the... Bulls to 11 different charities [–] ...wasn't.) ...Even when the Boston Celtics were stringing together 11 championships in 13 seasons between 1957 and '69, there was always a threat in the shadows – ...[the] St. Louis Hawks or... [the] Philadelphia Warriors and 76ers. No one's lurking this year. Chicago isn't significantly better than it was last season, yet the gap between the Bulls and everyone else seems wider... [One player]'s move to the Los Angeles Lakers broke up the Magic. All that seems to stand between the Houston Rockets and mediocrity is one more injury to [its biggest star]. The New York Knicks have several new faces but are still the good-but-not-good-enough Knicks of past seasons... At this checkpoint, then, the most intriguing question seems to be, Is Chicago's supremacy good or bad for the NBA?

...YOU can never have too much of a good thing... [USers] know that and that's why their basketball teams play about a million games a year, and their baseball teams twice as many. The crowds want it so authorities give it to them. Come playoff time, the Yanks milk the occasion to the max. Each round is the best of five, and then it's best of seven for the final... The U[S] is also on to it when it comes to rules. If existing rules slow a game down or hinder spectator enjoyment, they change them. In basketball, ball-handling rules were relaxed to allow more "carrying", so players could perform fancier dribbling manoeuvres. The spectacular alleyoop, once outlawed, was permitted because the crowd loved it. In ice-hockey, the laws prohibiting fighting were relaxed – removed might be a better word – to cater to the American taste. In soccer... [they] have toyed with the offside rule, the penalty shootout, the size of the goal, and anything else they can think of to make the game more entertaining... Of course, they go overboard sometimes. Their love of commercials has reached the stage where they want to interrupt infomercials once every 15 minutes for five minutes of NBA basketball. What would the players do during the 15 minutes? Play five minutes for each of three rival TV stations.

...[Chicago's highest-paid player] has signed a 10-year deal with CBS worth about \$15 m... As a member of the CBS SportsLine team, [it']ll answer e-mail messages from his fans around the world, conduct interviews on a monthly basis, appear in radio and [TV ad]s and provide exclusive content for CBS SportsLine and his official online fan club... [The player], who earlier this month led his team to [its 5th NBA title in 7 years, already endorses]... his own line of... underwear... and... cologne... Last year, [the player] starred in his first movie, *Space Jam*... [In another development, the Bulls' coach] has agreed to coach the... side for one last season for \$US6 m... clearing the way for the [player's] re-signing... Several times during the run to the... championship... [the player claimed to have] no interest in breaking-in a new coach... [F]ans and NBA insiders were surprised by the Bulls' apparent willingness to replace... [the coach, who] was paid \$US2.75 m... last year... [making] him one of the best bargains in pro basketball...

WHAT... NBA COACHES EARN... (*Celtics*) \$7m... (*76ers*) \$5m... (*Pacers*) \$4.5m... (*Supersonics*) \$3.5m... (*Heat*)... (*Nets*) \$3m All figures \$US... Italian sportswear company Fila Holding SpA... signed a [7]-year endorsement deal with... a... Detroit Pistons forward... valued at... \$US80 m...

[The Chicago] Bulls want to sign their bad boy... aged 36... for another season. [The] cross-dresser – and the best rebounder in the... business for the past six years – ...will make... \$US4m... [The cross-dresser] was in trouble for most of the 1996-97 season and it was believed the Bulls might not retain him... [Following] an 11-game league ban in January [*the Worm*] was fined \$US25,000 for kicking a camera[operator] during a game in Minneapolis and was warned in a meeting with [the] NBA commissioner... that his next act of craziness could be his last. [But the Worm] picked up another one-game suspension for a tussle with [a] Milwaukee Bucks forward... and spent the final month of the season on the injured list...

IN CASE you thought that the money being paid to [US] sporting stars these days is getting a little out of hand, think again. It's getting a lot out of hand. Take the Minnesota Timberwolves... Naturally they're anxious to hold on to their star second-year forward... when his contract ends after the upcoming season, and their recent offer reflected that. They scrimped and saved and[came] up with \$US103.5 million over six years, all of which would have made [the forward] – who has won diddly squat in his fledgling career – the second highest paid player in the game... Would have! [The forward] turned it down. And when news surfaced that [the forward] had, the player... threatened to leave the team.

...The Minnesota Timberwolves have put six years' faith and \$[NZ]190 million into a contract to secure [their 21-year-old forward]. The wolves apparently negotiated right up to the midnight deadline to re-sign their 2.11m star... who they hope will assume [the Chicago Bulls' highest-paid player's] mantle as unstoppable shooting superstar. Either there's some magically creative accounting involved, since the salary cap this year is just under \$54 million, or his team-mates can't be getting much.

...The N[BA] season tips off tonight... when the... Chicago Bulls play the Boston Celtics... [8] teams will be playing for new coaches, and a host of players have switched teams. The one thing that has not changed is that the Chicago Bulls are again favourites to win the championship, as they are every year that [their shooting superstar] continues to play. In addition to the biggest single-season contract in NBA history at a reported \$US36 million, [the superstar insisted that the coach] remain the coach, that[another] star forward... not be traded, and even that[the] troublesome resident bad boy and NBA rebounding king... be asked back... [Incidentally, the] hardwood will be graced for the first time by [gal] referees this season...

In an empty Madison Square Garden... the New York Liberty [gals'] basketball team... runs... through a drill... The [gals], who stand six feet tall on average, will never play with the balletic athleticism of the [guys]: when the defences clamp down, they cannot soar to overcome... [While gals] have thrived in pro golf and tennis, they have yet to break through in team sports. Three attempts at basketball leagues have flopped in the past two decades, including one brief inspiration that featured cling unitards and lower baskets. The [latest incarnation of the] WNBA offers a... combination of old and new... Commercially, the league is a brand extension. Wholly owned and run by the 29 teams of the NBA, it is something to

busy the NBA's formidable marketing-and-merchandising machine while the [guys] are on summer vacation... [The star] Utah Jazz forward (who has six front-row seats for the Utah Starzz)[says] – "I decided that it was important for me as an NBA player to show my support... The first few weeks were tough; the ball handling wasn't that great, and the offence suffered a great deal. But things... really picked up... I love the influence the game is having on my girls [aged 4 and 5]. When they watch me play, I don't think they feel like Daddy is doing something they can do. But when... I take them to see the Starzz, they're beaming because... they can see themselves on the court. And that's priceless... to see your children be inspired."

...[the Kiwi who] was born and raised in Wanganui, struts down the streets of Philadelphia like a star. No one recognises her, not even with her Utah Starzz logo jumping out from her jacket. But [the Kiwi is] feeling pretty happy with herself. And why not? [The Wanganui export, who is NZ's] first... professional basketball[er], is]... back at her Philadelphia home now that the first season of the WNBA is over. Waiting to hear if... a summer contract in Greece or France [is available, the] 22-year-old has time to contemplate the past three months of excitement and disappointment. [The Kiwi] has lived in the U[S] for the past four years, after getting a scholarship with Philadelphia college St Joseph's University. [The Kiwi] majored in sociology, putting it to work with shelters for [mothers] and children. Then earlier this year [the Kiwi] heard about the new... national[basketball] league, and was invited to trial for the... team in Salt Lake City. "I went all the way out there without a guarantee I'd get on the team... There were 130 girls – and two spots. I was so rapt to hear I'd made it." But, in the tough world of professional sport, her elation was short-lived. "They needed a 6ft power forward and I was moved down to the developmental side. We practised and did everything with the team but it wasn't the same,"... [However, halfway] through the WNBA season, [the Kiwi] was suddenly "reactivated" – called back into the top side... "The team had been really struggling offensively – my strength is outside shooting. They decided to release one of their big players and I was back again..." First-game nerves were few... even in front of a 9500 home crowd. "It was amazing, though. In N[Z] you'd be lucky to get 50 fans a game." And WNBA games were shown on three big-time TV channels four days a week. And then there's the money... "The top players get excellent money. It's nothing near what the [guys] get, but their money's crazy. The top [gals] get \$US60-70,000 for three months. I was on the lower end of the pay scale. But you have no expenses – they give you an apartment and food allowance... The average age of the team was 27 – we were the youngest team in the league, and I was the youngest player in the Utah team..." [The Kiwi] was the rookie – even though the league was new – and often had to carry the bags and fetch the water bottles... But [the Kiwi] will not be one of the Starzz again next season. Only the top six players in the side – who finished fourth in the western conference – are retained, [so the Kiwi] is available for any of the other seven sides in the league... "If the league takes off the way it started to do this year, I plan to stay... till I'm 30." [Editor's note: Most NZ girls play netball – 'a 7-a-side game introduced to England from the US in 1895 as the indoor version of basketball.' The difference between the two codes is that netballers aren't allowed to run with, or dribble, the ball – it has to be passed between players – who must remain in their position's zone (e.g., defenders are forbidden from standing in their team's offensive zone; centre's can stand in both the defensive and offensive zones but aren't permitted to enter the goal zone, and – unless they are playing 'indoor netball' – can't shoot for goal).

... 'It began as a game played on grass with clothesline props as goalposts and paper bags for baskets. It became NZ's No 1 gals' sport, although the Kiwis virtually isolated themselves from the rest of the netball world for 20 years over a matter of how many people were allowed on court. Netball started in NZ as basketball – but not the dribbling, three-pointer version. The game was born in Massachusetts as a guys' fitness exercise at the School for Christian Workers. A gal teacher in New Orleans soon heard about it, got a few things wrong in translation, and ended up with a game not too much unlike the netball of today. The big difference from modern netball was that it was nine-a-side – three players in each zone. Before WW2, it was a game for single gals. Wives – especially mothers – simply were not picked for teams. In England and AUS, they were playing seven-a-side. But NZ stuck to sides of nine, concerned there would be too many teams and not enough courts if the numbers were reduced. The first NZ team was invited to AUS in 1938, and the Aussies were determined to play seven-a-side. The home team thrashed the visitors by 29 goals on grass, but still the NZers wouldn't be swayed. Ten years later, the AUSns came here and again walloped the NZers, who couldn't adjust to having fewer people on court. It took another decade for NZ to bow to the pressure and adopt the sevens game, after they'd been shunned from international play. Netball (still called basketball until 1970) could finally get serious in 1960, when NZ toured AUS. Every player in the team, which included the current coach, had to pay £100 towards the trip. Only in the past two years has professionalism arrived in netball so players can be paid, though not enough for anyone to give up their day job. NZ lost those tests, but the margins were single-figures – the last test was decided by one goal, setting a precedent for some heartbreaking transtasman clashes in the next three decades. Even then it was obvious there were two superpowers in world netball – although the South Africans and West Indians would now and then throw a spanner in the works. Travel was a difficult venture for the early Silver Ferns. The boat trip to the first world championships in England in 1963 took five weeks, with players training on deck at 5.30 am and sometimes losing balls overboard. NZ again lost to AUS by one goal in those world championships – and lost by the same margin to their neighbours in 1991 and 1995. The NZers have been on the victor's rostrum as well, winning their first world championship in 1967, but had to wait 20 years to do it again. The Silver Ferns battled to get reasonable exposure in the public eye until well into the 80s. In 1969, they were told they could have 10 minutes TV coverage of a test in Dunedin, during the halftime break of a club rugby match. Today they have no such problem getting on the small screen. Live TV made netballers into stars. The Silver Ferns suffered some dark days in the early 90s, struggling to keep pace with an AUSn side who had benefited from years of training at the AUSn Institute of Sport. They finally got on top of the reigning world champions in last year's Fisher and Paykel series, with a team who were touted favourites to win the world title in Christchurch in September. But yet again, like Groundhog Day, the aptly besuited AUSns crushed the aptly-named Silver Ferns by 'scoring in the final second' (although the Silver Ferns missed several chances to win the game during the last minute). ■ Some fans were justifiably upset when the '\$75 tickets for the opening ceremony/game that they'd bought in advance were reduced to \$15 a day or so beforehand as only half had been sold'!

... 'Netball NZ generated a surplus for the financial year despite spending a record amount. The surplus of \$22,590 was returned without having to use special funds as originally planned because total revenue, a record \$4,018,846, was 17% higher than the previous year. Income was boosted by increased sponsorship, particularly from new Silver Ferns sponsor Vodafone, increased grant revenue from the NZ Sports Foundation to assist the Silver Ferns' preparation for the world championships, and increased revenue from gate takings. The result does not include a share of the profit from the championships'.

... 'some of the coaches of the country's top sides are afraid the physical nature of the game is over-shadowing skill.' Netball is also] becoming a game for Amazonian [gals] as the rest of the world try to use height to beat the sport's giants, A[US and NZ. The] Silver Ferns coach... is concerned that netball will turn into a "tall person's game" after witnessing British sides stacking their teams with six-foot-plus shooters. The touring N[Z]ers beat Wales 77-39 yesterday morning, but not before having to overcome two lofty Welsh shooters. "They were both six foot four... One of them was a basketball, not a netballer." England used a... 6ft 3in... shooter... to good effect in the second half of the opening test last weekend. The British seem to be latching on to the idea adopted by the Caribbean and African nations, trying to outwit and out-lob the N[Z and AUS]n defences... "I was speaking to a Scottish coach who told me that they... go to basketball games and try to get players to join netball clubs..." Despite the Welsh ploy, [the NZ coach] was buoyed by the effort of the Kiwi defence... [One] Silver Ferns defender... measuring in at 1.82m, coped well... But... was having to become "a jumping jack" to intercept the big passes... The game served as a shake-down for the Ferns after their sluggish 12-goal win over England last Sunday and before the second test in Birmingham tomorrow... [The Silver] Ferns... beat the English by 30 goals... two years [ago].

...The high life DON'T be surprised if your children turn out taller than you. Or even if your younger brothers or sisters seem to have inherited an extra dose of height. Medical and social research is confirming that people the world over are getting taller – not just with each generation, but

with each decade. Some say the growth is happening too fast to be genetic. So theories about why younger people have a better view focus on nutrition. And better hygiene and housing reduce the incidence of childhood disease, which cut earlier generations down to size. But one N[Z] researcher believes that we are simply reaching our genetic potential, that we might always have been this tall, and maybe taller yet, if other factors had not stunted our growth in the past... The average height of the famous 1957 All Blacks was 1.8m – 6cm shorter than the average height among the 1995 World Cup team[, whereas]... the members of the 1907 All Blacks... averaged 1.77m. Most of our added height is in our legs, which an Auckland doctor thinks is partly responsible for the soaring rate of hip fractures among the elderly... All this growing does not mean that we will all end up about the same height... [T]he human race will simply reach the spectrum of heights it was always genetically programmed to have.

...*Giant... aims high...* [The teenager] is a basketball prospect on the move – upwards. The... [giant] from Huntly has grown more than 6cm since August and now stands close to 2.11m (7ft) in his size-20 basketball boots. [The giant] has been playing basketball for only six months, but his potential has been quickly realised and [it] has been named in a Maori squad to compete in the international Arafura Games in Darwin next May. This term [the giant] is off to board at Church College, Hamilton, one of this country's strongest basketball schools. "Huntly is a league town and I'd never played basketball," said [the giant] yesterday. "Now I really love it. It was always difficult getting football boots to fit. But they have basketball boots my size in the States." Just how big is [the teenager] going to be when... fully grown? [The] doctor... who is in charge of the Maori team's fitness, believes [the teenager] has some way to go. "This kid has an arm span of 2.33m which is probably not too far off his height when [it] is expected to stop growing in eight years time... His potential is exciting as the current Washington Bullets' centre... at 2.30m could not bounce a basketball when... drafted into the NBA. [The centre] is now paid \$1 million a year and leads the NBA in shot-blocking." The Arafura tournament is held every two years and this year has attracted 29 countries, including teams from... China... and... the U[S]...

A) New York Knicks basketballer... had surgery on his dislocated right wrist yesterday and will be out for the season. The 35-year-old... signed a four-year, \$US68 million... contract prior to this season... [In further basketball news from the US,] the champion Chicago Bulls side... ran away from the Miami Heat in the final 10 minutes of their latest NBA match. After the score was tied 72-all, Chicago won the... match 90-80. Miami, however, lead the Atlantic division of the Eastern Conference with 17 wins and nine losses, ahead of Orlando 16, 11, while Chicago are running second in the central division with 18, 9 to Atlanta's 19, 8.

...Only a few weeks after [claiming to be] bored with basketball, [the Worm] is calm, content and committed... [to winning] a seventh consecutive NBA rebounding title and... [helping] the Bulls capture their sixth championship of the 1990s... [The Chicago Bulls defender with] a "smiley" face painted on the orange hair on the back of his head, has only three technical fouls this season... [- the] guy... attracted 25 technical fouls in 1996-97 followed by at least one in each of last season's first 13 playoff games... [-] and hasn't been late for a... game in a month. Could the Worm really be a nice guy beneath all those tattoos and body piercings? ...*"The Bulls put [behaviour clauses] in the contract,"* [his head] coach... said.

...*The... Chicago Bulls head coach...* [- 'a Harley-riding sports philosopher who has woven Zen sayings, American Indian totems and the Lord's Prayer into his rituals with the Bulls' – was] congratulated by his former college coach and Los Angeles Clippers boss... after the Bulls beat the Clippers 94-89 for [his] 500th win in the... [NBA. The coach] reached 500 in 682 games – faster than any other coach in NBA history... [The previous] record of 500 in 684 games... [was held by a] Miami Heat coach... [By the way, when the best player in the NBA] was asked by a Spanish reporter what... [the] Chicago Bulls... legend... thought of... [Brazil's] No 10... soccer star... [who is his Nike stablemate, the basketballer] replied, "Sorry, I don't know who [that person] is." ...*TALK about tunnel vision.*

...*EVERYONE* knows [the Chicago Bulls forward] can play basketball. People know... the great one... [has] flirted with baseball. Now the biggest name in world sport plans to leave his mark on another sport. The Chicago Bull has teamed with ten pin bowling in another huge endorsement[to promote a company's]... bowling products... BUT not everything is running smoothly in [his] ever-increasing... empire of endorsements. There's trouble rumbling from a 1995 scenario when... well into his multi-year contract with Nike which was paying him \$US20m a year to endorse the company's apparel and footwear... [the Chicago Bull] signed a 10-year agreement with sunglass manufacturer Oakley to help hawk its glasses and sit on its board. It was a deal that would pay... \$US500,000 a year plus stock options. But [the Chicago Bull] appeared in print ads wearing the shades [and] also a black beret bearing Oakley's logo last year. Nike sued Oakley claiming that the beret constituted "apparel" and [the basketballer's act of] wearing it was a violation of his Nike contract. In September, Nike was granted a preliminary injunction restricting Oakley to using only eyewear in its... ads[featuring the basketballer]. But the battle will continue and it could get messier considering Oakley is now producing a line of athletic shoes that will hit the market next year and Nike now includes sunglasses in its merchandising line... [In related news, the] NBAs fashion police have been busy dishing out fines to cut the players' short longs back to long shorts (parents of teenagers take note). The Minnesota Timberwolves were stung \$US25,000... and five players \$US2500 each for wearing oversized shorts, and the Portland Trail Blazers and two of their players... were fined for the same violation. The rules state shorts must end at least 2.5cm above the knee.

...*WE* all know [US] sport is a mega-buck business. And it seems the good teams get the travel perks. Take the Orlando Magic basketball team. It has its own plane which flies under the banner of Magic Carpet Aviation. The operation includes a 2229sq m hanger where players can park their cars before take-off. The Boeing 737 carries 42 passengers in leather upholstery... But apparently it isn't the best in the NBA. The Portland Trail Blazers have refused media requests for a peek inside their customised 35-seat Boeing 757... estimated to have cost \$US98m... [● NZ] lost to Italy, 56-70 in an international basketball tournament in Madrid yesterday... N[Z]'s defence was superb, given that the... Tall Blacks... were much smaller than the Italians. They... held Italy to 34-36 at halftime but too many turnovers and the loss of rebounds cost them in the second half... Italy also converted 22 freethrows to N[Z]'s 8]. The Italians were expected to be the toughest team on the two-week European tour for the... Kiwis... and [their] coach... was delighted with the result. "Our guys got something resembling a standing ovation at the end. They are immensely popular,"... The Tall Blacks... now travel to Amsterdam for another tournament, starting with a match against Israeli side Galil Elyon tomorrow. - 1997

N[Z] basketball made a[nother] giant step forward in its quest for international recognition when the [Tall Blacks] beat the world's ninth-ranked Cuba 85-81 to reach the final of the... legendary Haarlem... tournament yesterday. The win gives the Tall Blacks a better world ranking and almost certainly a guaranteed start at the 2000 Sydney Olympics... Cuba was unbeaten this week, but were halted by a... team that hustled them on defence, and shot an outstanding 53[%] from the floor... After losing 86-79 to the Cubans earlier in the tournament, [the NZ] coach... made a tactical change, crowding the... keyhole and forcing Cuba into low-percentage outside shots. [The coach] described the result as... almost a dream come true... This morning the Tall Blacks meet Brazil, ranked in the world's top four countries, in the final.

...*The...* [Tall Blacks] squad had their first day off during their European tour yesterday, taking to the canals of Amsterdam still pinching themselves about their four wins in top competition. The team lost the final of the Haarlem invitation tournament 74-93 to Brazil, who beat them by the same score in a warmup tournament in Madrid... However, [the NZ] coach... said the players had gained invaluable experience... [The Tall Blacks, who] were surprise finalists at the high-calibre tournament, a hunting ground for NBA scouts... had no answer to the high-speed Brazilian game... But... in... the final N[Z]'s shooting percentage let them down, 39[%] from the floor to Brazil's 53[%]. Nelson's NZ representative... was named the tournament's most valuable player and earned a place as guard in the All-Star Five. [The 23-year-old's teammate,] a 30-year-old Canterbury stalwart, took the award for the top three-point shooting percentage... [The NZers] return home tomorrow after a day sightseeing in London.

...Amid frenzied scenes of jubilation, the Tall Blacks secured an international future for their game yesterday with a historic basketball victory over the A[US]n Boomers. The N[Z]ers won 89-78 at Auckland's North Shore Events Centre after being behind for [75%] of the game. It was only the third victory over A[US] in 39 games, with two of those victories in the past three days. The first win was in 1978... It was their first series win and the first time N[Z] had secured an Oceania spot for a world event. The Tall Blacks pack their bags for the world championships in Indianapolis this time next year, now rated one of the best 16 of the 211 national teams under international governing body FIBA... No mean feat. Worldwide, basketball is huge. The international body... claims 400 million players. With 208 associations, basketball has more affiliates than soccer or table tennis, sports generally regarded as the world's most popular... Indianapolis [will be N[Z]]'s first appearance at this level since 1986, when their only win was 77-75 over Malaysia en route to a first round exit... And one immediate spinoff... could already have emerged... [Basketball N[Z]] had heard positive noises from across the Tasman about a proposal for an annual series between the teams, which had previously been a low priority at A[US]n headquarters... Is... [t]he Tall Blacks'... [coach] the best volunteer coach in world sport? ...[the c]oach... and his team are now strong contenders for the Halberg awards as the nation's best when they are announced early next year. Meanwhile... A[US] swept to a commanding 102-55 victory and a 2-0 test series success against N[Z] in the Oceania [gals'] world championship qualifying series in Christchurch. A[US] were too powerful for the Tall Ferns, who battled to make an impression against their taller and more internationally experienced opponents... A[US] won the first test at Invercargill by... 97-61... The Tall Ferns' cause was hindered when they were again without [their] leading forward... whose torn quad muscle had not responded sufficiently to play... The [series] win qualifies the Opals for the world championships in China next year.

...Despite the sweltering conditions... [and having] to adjust to the American basketball rules... the Waitakere under-14 boys... side showed their international opponents a thing or two about the Kiwi way of slam dunking. They won the second World Youth Basketball tournament in Hawaii. Waitakere sent two teams, an under-14 boys team and under-16 girls team to the tournament... The girls team didn't win a game but the under-14 boys caused the upset by beating competition favourite San Francisco in the final 39-29. They... [had lost in pool play] to San Francisco 37-45.

...the... Waitakere Kiwi Boys basketball team adjusted to the hot Hawaii climate to defeat the two-times world champions at the recent world basketball competition... After winning five of its seven games in searing 30°C heat, it had only one team to win over – the San Francisco team, the crowd favourites. Without air conditioning and with different American rules of play, the Kiwis had to adjust quickly to come out on top. They won the crowd over, and locals played Hawaiian music during their warm-up and the game at their request.

...The 18-year-old has cheated death to score a shot at the hoop of basketball fame. A pituitary tumour left the Huntly teenager towering 2.23m... With the tumour removed... the... modest young Mormon[, who] is slightly shorter than [N[Z]'s tallest recorded person –] who is 2.25m... [–] leaves next month to take up a two-year scholarship at the Salt Lake Community College in Utah... [T]he opportunity was a dream come true... [it said yesterday. □ Another NZ basketballer recently left a US university and is certain to gain selection for an NBA franchise (probably the Toronto Raptors) during the next draft of rookies – thereby making him 'the first NZer to play in the NBA.' Furthermore, the NZer has expressed a desire to represent his country, which would make him the first NBA player to play for the Tall Blacks. Speaking of tall blacks, who] is *the world's best sports person of the modern era* – the current Chicago Bulls shooting superstar or a former Brazilian soccer player? According to one commentator, the basketballer] has to be. Six championships this decade... and, baseball apart, it could have been a clean sweep. The NBA is the World Cup of basketball. And held every year. [The basketballer], with his innate athleticism, has become the world's most recognised sports[person]. Even in his mid-30s his brilliance has hardly dimmed... [However, another commentator says the soccer player] has to be the best... We are talking about the world's most popular game and its greatest player... [The basketballer] worked magic with his hands. But [the Brazilian] works magic with his feet, which is even more skilful. [It] led Brazil to two World Cup victories and became the sport's ultimate global superstar. Heck, [the Brazilian] even brought soccer to the U[S].

...From Chicago to the Chatham, [the Chicago Bulls' superstar] is a shaven-headed god in baggy shorts. [The NZ Herald] farewells 'the best there will ever be'... THE WORLD'S most famous active sports[person] is walking away from it all. The Chicago Bulls have won what [the superstar] has said will be his last... [NBA season. The superstar] has already retired once, in October 1993. His father... had been murdered a few months earlier, a random robbery-killing[, and the superstar] had been angered by reports about his gambling. [The superstar] had won three NBA championships and all of its awards. [So the superstar] wanted to try something different: professional baseball. Then [the superstar] came back, 17 months later, having proved to himself and the world [that the superstar] was a far better basketballer than baseball player. A huge poster went up on the main expressway leading into Chicago[when his return was announced. The poster showed his] face and the single word: YES. Since then, the Bulls have won three more NBA championships and the [superstar]'s fame, his wealth, his influence have never been greater, largely because everything [the superstar] does now is tinged with a sense of finality... Having celebrated the Second Coming, Chicago is now braced for the Second Going. It makes no sense. [The superstar] is still setting records[and] started April by passing 29,000 career points. Only two players in NBA history... have scored more... [The superstar holds the 'highest match points total – 69 points (v Cleveland, Mar. 1990)'; and the highest] NBA play-off record [–] 63 points against... the... Boston Celtics. 'God came to the game tonight and played under the name of... [a basketballer,' said one of the Celtics' stars at the time. Only a former heavyweight boxer and a Brazilian soccer player can rival the basketballer] as the most-recognised athlete on Earth... [The basketballer even] displaced the figure most often previously associated with Chicago – gangster "Scarface" Al Capone... [However, a] *New York Times* sports columnist... wrote that [the basketballer has] done little beyond sport to make a stand in society, contrasting him with [the boxer] and his opposition to the Vietnam War... There are finer things for an adult to be doing... There are two things [the basketballer] considers off-limits: his family life... and his golf, which [the basketballer] regards as private time. Golf is more than recreation to [him]. It means competing against himself... [The basketballer] once said that his perfect day would involve two rounds of golf and time with his wife... and his three children.

...Who says money doesn't talk? ...The... basketball living legend has paid almost \$500,000 to become a member... at the exclusive Medinah Country Club in Chicago. The... four-handicapper could have become a member for around a fifth of that if [the Chicago Bull] was prepared to endure the five-year waiting list. But [the basketballer] wanted immediate access to the course which has hosted four US Opens... and so opened his chequebook. Seems... [the basketballer and ex-baseballer – who signed with the] Chicago White Sox... [in 1994 but failed] to impress and[was] assigned to minor league... [–] wants only the best in his quest to get his card in order for an attack on the Senior Tour when [the basketballer turns 50. Incidentally, a]... basic framework for a[n]... NBA... labour agreement appear[s] to be in place following eight hours of talks between... owners and players. But both sides acknowledged they were not yet close to making a deal... The owners are seeking to scale back the players' share of some \$US2 billion... in revenue to 48[%] by the year 2003. Last season, 57[%] of revenue went to pay salaries.

...The... [NBA] and the players' union reached an agreement yesterday to end a six-month lockout and save what is left of the professional season, after a secret, all-night bargaining session. The deal... was struck only 29 hours before the league's board of governors – the committee of club owners – was set to vote on cancelling the remainder of the season... Players are to report to training camp to begin the first week of... a season of about 50 games – compared to the usual 82 – plus playoffs... The union had wanted higher salaries for the so-called lower-class and middle-class players. The players, all millionaires, had been locked out by owners desperate to impose a tighter salary cap to halt an exploding wage bill which was exceeding \$US1.1 billion this year... The NBA is paying each of its 400-plus players an average salary of \$US2.6 million... Players in the N[FL] (who went on strike in 1982)] average about \$US900,000 and major league baseball pays an average of \$US1.45 million... [T]he median N[B]A salary is... \$US1.3 million... and... the... NBA minimum pay rate is... [\$US240,000. Incredibly, the NBA] was prepared to increase[its average salary]

to almost \$US5 million over the next five years but the players fought for more... The lockout was essentially a strike by the club owners... The lockout... caused the NBA to miss games because of a labour dispute for the first time in history... Before this season, the NBA was the only major North American sports league that had never lost a game to a work stoppage. The agreement saves it from becoming the first existing league to lose an entire season to a labour dispute.

...the... basketball world... still... [has] to wait to find out if [its biggest superstar] is returning to the NBA... [The league's highest-paid player had said it] would wait until the end of the lockout to announce whether [it] will retire... Under terms of the new collective bargaining agreement, a grandfather clause allows any player to sign for 105[%] of his previous salary. That means... the [Chicago] Bull... can get about \$US34.7 million...

IMAGINE the numbers... [that might have been produced if the Chicago Bulls' most famous player was] playing one more season. Not just points, rebounds and assists. Dollars and cents too... "Every place [the player] went, they would sell out," said... a professor of sports administration at Ohio University in Athens... "Every piece of junk they put his name on would sell like crazy... The thing about [this player], and it's an emotional issue, is [that the player is] a clean hero... From [the] US President... on down, everybody is shameful these days. Now you're looking at a public that needs someone to admire." ...A [third] farewell tour would have meant one more big payout for the NBA, a last chance to milk the greatest cash cow the sports world has known... Instead, the NBA is coming to terms with the loss of a player who, by some estimates, accounts for 10%-20% of the league's... annual revenue. The projected loss of... [up] to \$US200m... comes at the worst possible time, in the wake of a costly lockout that has the league scrambling to win back fans... His departure is expected to hurt television ratings immediately.

...[the living legend]'s back... at 38, to return to play in the NBA, for the Washington Wizards.

...[the living legend's] return to the NBA has ignited huge interest in the league and already his Washington Wizards have become the hot tickets around the country. Odds on their chances of making it to the post-season have also been slashed. And it seems his rivals are even happy to see him back... "I don't know anybody who doesn't like [him]," said the New York Knicks guard... who will probably mark [him]. It remains to be seen whether, at 38, [the former Chicago Bull] can keep the legend alive.

...[the legend] tested himself and came up a winner yesterday as [it] got down to serious business in his... NBA... comeback campaign. The 38-year-old, five-time league most valued player scored six points in the final 2 1/2 minutes to lead the Washington Wizards to a 105-92 victory over the New Jersey Nets in a pre-season game in South Carolina... – the first time during the pre-season [the legend] was on the court in the closing minutes of a game. The Wizards begin the new season with a game against the New York Knicks on Wednesday.

...WHAT would you pay to see one of the most eagerly awaited sporting comebacks in history? One American sports fan has shelled out... \$US101,300... for a courtside seat... for [the legend]'s NBA season-opener appearance against the New York Knicks at Madison Square Garden.

...Wizard... lacking that old magic... [The legend] returned to N[B]A action... yesterday as his Washington Wizards fell to the New York Knicks 93-91 in the season-opener... [W]earing his familiar No 23 in the unfamiliar dark blue of the Wizards, [the legend] had a chance to tie the game with a long-range three-pointer in the final seconds but his shot clanked off the front rim. The old [version] rarely missed in the dying seconds. "I think we're all surprised," said [the] Knicks coach... "When that three went up, I thought it was in." ...the game's greatest player and world's most recognised sports[person] during his celebrated seasons with the Chicago Bulls, finished with 19 points, missing 14 of his 21 shots from the floor... Thicker in body and slower of step, the team's elder states[person] contented himself with shooting jump shots and dishing off to his young teammates[, so was unrecognisable as the player]... who soared over and around rivals in his title-winning years.

...AMERICAN university basketball fans are being offered the chance to win \$20 million during this season's championship. The catch? Sandbox.com's tease comes with the need to predict every result in the 64-team tournament and it will take a miracle for that to happen. Mathematicians figure that even a college basketball expert with a 70% success rate has only a 1 in 5.7 billion chance of collecting the prize. If you don't follow the sport then your odds may be as high as nine quintillion – that's nine followed by 18 zeros – to one. Good Luck!

...In his book *Playing For Keeps*, [a] Pulitzer Prize-winning writer... describes the incredible rise of basketball since sports television company ESPN began broadcasting college games in 1979. From being shunned by advertisers, who considered it a fringe sport dominated by sky-scraping black [guys] and therefore not great as a sales vehicle, it now rates with American football and baseball.

...With collectors offering \$US100,000... or more, catching... [the Cardinals' No 25]'s historic 61st home run may be like winning the lottery – which is why [the catcher] plans to give [the ball] back to the player... "It will mean more to him and baseball than it will to me," said the 28-year-old catering manager... [who] wants only to meet [the No 25] and get an autographed jersey... The homer tied... [a] 37-year-old single-season record... Meanwhile, [another]... slugger... hit two home runs yesterday, becoming the record third player to reach 50 homers this season. The Seattle star, the American League leader, reached 50 with a grand slam in the sixth inning against Baltimore[, making him]... the third player in the major league to hit 50 home runs or more in consecutive seasons. Babe Ruth did it in 1920-21 and 1927-28, and [the Cardinals' No 25] has done it the past three years... [No 21], of the Chicago Cubs... has 58... [homers this] season...

"I didn't have a sexual relationship with that [gal]." – Swamped by the American media, an 11-year-old boy's cheeky comment [(referring to an infamous quote by the US President)] when asked what his first thoughts were after catching... [the] record-tying 61st home-run ball of the season...

[No 21] of the Chicago Cubs matched [No 25] of St Louis for the Major League Baseball home-run record with his 63rd of the season... on Wednesday... It was... [also] the... Dominican Republic star[']s third grand-slam homer of the year and his career... The ball was specially marked, unlike the 62nd hit by [the No 21] to surpass the old mark set in 1961 by the late Roger Maris, a mark [the No 25] had beaten last week...

In the wake of [the St Louis Cardinals' No 25's] admission that it has been using a testosterone-producing pill for more than a year, major league baseball and the players union have asked doctors to research the... use of the muscle-enhancing supplements... Use of androstenedione is legal in baseball but banned in the NFL, Olympics and the NCAA. It is an adrenal hormone produced naturally in [the human body] and is converted in the liver to testosterone, which is used in muscle production.

...[while the Cardinals' No 25] has been making history in the home run chase with... [the Cubs' No 21, the No 25 has] also been making millions for the pharmaceutical industry. Since [it] admitted to using androstenedione late last month... weekend warriors... have... [been] gobbling the pills at a Viagra-like rate. "This has gone from a \$US5 m... a year industry to maybe a \$100 m... a year industry," says... Met-R Nutrition, a sports nutrition company that has seen sales of its andro products jump by 300%... Health food stores have been besieged... and have struggled to keep it in stock.

...[the Cubs' No 21] grabbed the lead in the historic record-setting home run race... yesterday by crushing his 66th home run of the... season. But it lasted less than an hour... 46 minutes later in St Louis, [the Cardinals' No 25] smashed his 66th.

...THE faces in the crowd are what you remember. It's not just that people are smiling. They're grinning so broadly, talking so animatedly, that you can see their teeth... Everywhere [the Cardinals' No 25 and the Cubs' No 21] play, America's mouth is agape. For the last week, which constitutes both the last days of the baseball season and the final act of the greatest home-run chase in any year... fans have been smiling, screaming, chanting and applauding in packed ballparks from St Louis to Milwaukee... They're having the time, and the memory, of a sports lifetime. They're the lucky ones. And I know just how they feel. Last Friday I was one of them... In a ballpark, you can meet anybody. And, because it's a ballgame, you can talk to them. I bumped into a tall young [guy] followed by dozens of screaming adolescent girls. With this clue in hand, I realised I'd just collided with a Smashing Pumpkin... Now that Harry Caray's dead, they'll let anybody lead the crowd in *Take Me Out to the Ballgame*... Ballgames aren't "destinations", in the current jargon of the travel industry. They are, as they've always been, lazy journeys. It's

all about the process. That's why we don't care "if we never get back". Exactly 100% of the people who love baseball understand that the final score is just more syrup on the ice-cream sundae. It's the game in which the highlight of the day might be a long foul ball... If you want to know how baseball itself feels about... [the No 25 and No 21, ask] the... Cincinnati Reds manager... who has bounced around the game for 49 years... "Aw, this is the greatest... You love to see two good guys, two really genuine people, doing something like this instead of some of the jerks we've got. I loved the way [the No 25] picked up his kid after... [hitting home-run] No 62. And I like the way [the No 21]'s mother is so nervous watching [on TV] back in the Dominican that [mum] can't hold her cup of tea when [her son]'s at bat." ...When the Reds were in Houston last week, and [the No 21] was driving in six runs in TWO innings, in a late game in San Diego, [the manager] held up the Cincinnati team bus so everybody could watch... "This is part of our history," [the manager told his players]. "...Think about how hard you want to work so that, some day, we'll be good enough to have people pay that much attention to us." ...A role model isn't somebody who "puts up numbers," said [the No 25], finding the precise words to make his central valuable point for – who knows – the thousandth time this summer. "A role model is a person who lives his life right. Everybody makes mistakes. People who are role models overcome their mistakes and become good people." Somehow, [the No 25 and No 21] have kept their dignity, their craft, their heroism and their sport, on higher ground for one summer than much of the culture that surrounds them.

...In a fitting ending to a magnificent, magical baseball season, [the]St Louis Cardinals slugger... belted two more homers in his final game yesterday to reach a previously unthinkable 70 home runs... That made it five home runs over the final three games for "Big Mac" as [the No 25] pulled away from [the] Chicago Cubs star... The record will not become official, however, until [the Cubs'] season is over. [The Cub], who did not hit one out of the park in Chicago's 3-4, 11-innings loss to the Astros in Houston, remained on 66 home runs. But moments after the Cubs lost, the San Francisco Giants fell 8-9 to Colorado, leaving Chicago and the Giants tied for the National League wildcard berth... Any home runs [the Cub] hits in today's one-game playoff against San Francisco will count towards his regular season statistics. [The No 25] finished with a dazzling flourish in front of his home fans... drilling a three-run shot off Montreal... into the seats in left field in his final at-bat of the season to lift the Cardinals to a 6-3 victory over the Expos. "This is a season that I hope I will never forget and I hope everybody in baseball never forgets," [the No 25] said in a post-game ceremony on the field honouring him... "It's been one hell of a ride."

...Is [the] record of 70 homers in a season worth the paper it's printed on? YES There's no such thing as a bad record... Sure expansion has diluted pitching talent, but remember, unlike [37 years ago], there are now starters, mid relievers, relievers, setup [pitchers] and closers to contend with... Big Mac... ate 'em all up... NO Many of the pitchers in Major League baseball today can't compare to the [pitchers] who worked magic on the mound... [37 years ago]. Then, only those with stuff got the ball tossed to them. The pitch served up to [the No 25] for his 69th homer was pathetic. [Big Mac]'s a great hitter... [of] soft pitching.

...The baseball... that [Big Mac] struck into history last summer for his... record-setting 70th home run has sold at auction for \$US2.7 m... The price obliterated the previous record for a baseball of \$US126,500... paid last month for a ball hit by Babe Ruth as the first home run in Yankee Stadium. The [70th homer] ball was sold by... a St Louis research scientist who retrieved it on September 27... at... Busch Stadium... [The] creator of the "Spawn" comic book and movie character, is the [village idiot] who paid... for the baseball... "I blew my life savings on this," said... [the] 37-year-old self-described "baseball psycho" who would give up [his] seven companies... for a chance to play centre field for a Major League Baseball club.

A column in June on sports payments was prompted by a four-year pay deal signed by an American baseball pitcher... That \$US8.5 million annual paycheck record has just been buried; [the Atlanta pitcher]'s fellow Braves pitcher... has signed a \$US57.5 million five-year contract.

...UPDATE: [a US baseball player has signed a new contract that will pay him '£337,000 per week']...

SIGNED: A \$[NZ]137m sponsorship agreement between... Adidas and World Series Baseball champion the New York Yankees.

...Chevrolet describe their trucks as [being] tough as... the... [baseballer who] hasn't missed a day's work for 16 years. Last week, the Iron [Hum]an of American sport laced up his boots, tucked in his shirt, tightened his resolve and clocked on again for his 2489th consecutive baseball game. It is an implausible record – an unbroken string of appearances for the Baltimore Orioles that began back on May 30, 1982... In 1995 [the Oriole] passed the supposedly unbreakable record of 2131 straight games set 56 years before by the legendary Lou Gehrig, then [the Oriole] just kept on playing as many as seven games a week, 162 games a season. Interrupted only by a players' strike two years ago, [the Oriole]'s "streak" has become one of the constants of [US] life, a symbol of dependability and continuity. Presidents have come and gone, movie stars have flared and sputtered, athletes have soared and faded but... [the Oriole] was always out there, reliably patrolling the infield with the reflexes and grace of a gazelle. But now [the Oriole] is grey at the temples, and this season [his] 37-year-old body has started to betray his will. The Iron [Hum]an is rusting. From July, [the Oriole] played injured – a disc problem that affected a nerve in his left leg – and... fell into a batting slump, evidence of mortality that has provoked a once unthinkable question: should [the record-breaker] be rested? Baltimore led their division from the first game of the season to the last to take their first title in 14 years. They reached the eight-club play-offs for the World Series, beating Seattle 3-1 but missed out on the finals after going down 4-2 to Cleveland. The Orioles finished the season with [the record-breaker] and the team faltering, and with the whole country, it seemed, involved in a compelling argument. Had preserving "the streak" become a burden, a selfish obsession that was hurting [the player] and the club? In an age where professional athletes make dubious role models, [the Oriole] embodies what are now thought of as older values. [The Oriole] is a wholesome, private, unflashy, single-minded, one-club player who believes in winning through application, improvement and determination. His work ethic made him an unassailable hero in the blue-collar city of Baltimore, and the example of his character and the lesson of his streak – success from perseverance – endeared him to every American parent. Many fans believe that the greed of players is harming sport, but nobody begrudges [the Oriole] his \$6.2 million a year. So what if his form fell away? In a *Baltimore Sun* poll, 65[% said the Oriole] should not be benched. His play was only part of the story, argued his supporters. There was the incalculable value of his leadership, experience and inspiration. At the Orioles [the record-breaker] is considered infallible and although [the] club owner... suggested that everybody needs a day off and wondered whether [the record-breaker] was risking permanent damage by continuing to play, [the team's]manager... made it clear that the decision on whether or not [the record-breaker] stayed in the line-up was... [the player's]. If the manager took him off the team... "I'd get run out of town." ...[However, last year the manager moved the player] from short-stop, a pivotal fielding position requiring sharp reactions and speed, to the less demanding third base – in baseball circles, a drama comparable to moving the Vatican from Rome to Teheran – but [the manager] did so only after [the player] himself had authorised it... Gehrig ended his streak by dropping himself from the New York Yankees in 1939 when... [that player realised it] could no longer play up to his own demanding standards, and just two years later... died of the degenerative neuro-muscular conditions now known as Lou Gehrig's disease. [The Oriole] has admitted that at times his back problems have been so bad "I felt almost not able to play". But in the unrelenting ethos of [a single-minded person that] harder is better, and playing is the entire purpose[, the Oriole says]... "You want to be in the line-up more than ever... You have a responsibility to finish what you started." It is not clear what sitting him down would achieve, and most baseball fans want him to hang in till next season. One day... his long and remarkable demonstration of endurance will finally come to an end.

...[this year] I went out to the Astrodome to watch the Houston Astros play the Milwaukee Brewers. The Astrodome was built some 20 years ago. It was the first stadium of its size to be completely enclosed by a roof. The roof is not retractable like many of the more modern ones, but it is still an extremely impressive construction. They have had enough of it though. The Astrodome is to be bulldozed in the next year and a new stadium

will be built downtown. It will cost around \$250 million. The reason is financial. The Astrodome was built before there was demand for corporate boxes. It has none... A box sells or is leased for \$US250,000 a year. A stadium with 200 boxes will pull \$US50 million a year in sales to box holders alone. It is easy to see why the Astrodome is out of fashion. The stadium will be built by the City of Houston, but it will not get much of the revenue... That goes to the team owner, who will rent the stadium from the City. This sounds a bit inequitable, and it is, but that's the way it works in business. The owner of the Houston Astros is in a strong negotiating position... If [the owner] cannot strike an appropriate deal with the li'l ol' City of Houston, [the owner] might just strike a deal with the li'l ol' City of Galveston, and "those boys surrre are keen to have a baseball team down thar." This is exactly what happened to Houston's football team. The owner demanded a new stadium be built so [the owner] could make more money from his investment. The City refused and [the owner] up and took the team to Tennessee. Now they are the Tennessee Oilers, which is something of a misnomer, given that there is no oil in Tennessee. I don't suppose they can cope with calling themselves the Tennessee Line Dancers yet... Baseball is not what you would call an all-action sport. Things sort of happen in brief bursts, with long periods of changing teams or changing batters or changing pitchers. But that doesn't really matter because there is so much else to do besides watching [guys] in peaked caps wave a bat at a ball as it whistles past. For a start there's the food... And then there's the beer. The game takes three-and-a-half hours, so you have to pace yourself... For the record, the Astros maintained their losing streak in glorious style... [●] I[n]... Cleveland yesterday... [2 locals] hit two-run homers as the Indians pounded out 15 hits on a cold, snowy night to batter the Florida Marlins 10-3 and even the World Series at two games apiece.

...“I just tried to drive the ball, and I got it into the right place in the park. When I looked up, I said, ‘Lord, please guide the ball.’ [The Lord] did it, I didn’t. I’m just his instrument.” – [A] *Cleveland Indians baseballer... on God and home runs.*

...The people of South Florida united yesterday behind the Florida Marlins in celebration of Miami's first major professional sports championship in... years and the city's newest sporting hero, [who is a]Cuban defector... From ritzy Palm Beach to the laid-back Florida Keys, residents popped champagne and beer in... the first... joyful celebration... since the Miami Dolphins gridiron team won their second of two consecutive Super Bowls in January 1974... Officials planned a parade in downtown Miami, a boat parade in Fort Lauderdale and a rally at the... Pro Player Stadium... [The] Marlins owner... who spent about \$US\$9 million... on free-agent players before the season... was jubilant: “It doesn’t get any better than this.” [The Cuban player]’s mother... was given last-minute permission by the Cuban Government to visit her son and arrived in Miami two hours before the start of the game... [His mother, who] had not seen [her son] since the defection... watched from the billionaire owner’s private box at the stadium... Back in Cuba, [her son] is branded a traitor. His half-brother... who [the Marlin] says is a better pitcher than him, works as a sports instructor in a Cuban psychiatric hospital. Known to Cuban baseball fans as “the Duke,” [the half-brother] was banned from playing baseball for life after... [being] accused of planning to flee too. [The Marlin] defected... while with the Cuban team in Mexico... In Cuba, [the player] had cycled to practice, and on foreign trips bought [gals’] underwear to sell in his deprived homeland to raise extra pesos. In Florida, [the Cuban] has a \$US4.5 million... contract, a luxury condominium with an ocean view, and a sports car. His dream, [the Cuban] told the Spanish-language weekly *Exito*, was to bring his mother over to Miami and “build her a palace.”

...Less than a week after celebrating their first World Series baseball championship, the Florida Marlins have begun cutting costs by announcing they will not pick up contract options on... [some players. The] Marlins owner... said... that the team were losing too much money and... would be forced to curb a payroll that exceeded \$US53 million... last season.

...Calling himself “a terrible failure” as owner of the world series-winning Florida Marlins, [the]billionaire... has put the team up for sale for around US\$150 million... [The businessperson indicated that it]’d lost around \$35m this year and couldn’t stand the heat any longer.

...The N[Z] Black Sox softball side cruised to an easy 4-0 win over Auckland last night. The world champion side are in the middle of a tour of N[Z] celebrating their success in Michigan last year. The... Black Sox now head for the South Island to complete their tour.

...[‘The White Sox softball team came from 1-3 down in their last turn at bat to record a morale-boosting win over AUS in Christchurch yesterday. It was their first win over AUS, who are ranked second in the world, since the 1996 Superball tournament in Atlanta (AUS won the earlier game yesterday 6-1 to take an unassailable 2-0 lead in the Smokefree Series, having won the first 7-1 and won a warm-up game on Friday 3-1). The White Sox pitcher made a triumphant return in just her third appearance at international level since taking a break from the sport, being on the mound for the full seven innings.’ In international news, yesterday a US major leaguer completed the ‘perfect pitching performance – to out 27 players before they got to 1st base’.

...‘pitcher perfect A NZ SOFTBALL veteran will fulfill her dream of playing at the Olympics. The 37-year-old pitcher missed out in 1995 when the NZ gals’ side blew two chances to get to the 1996 Atlanta games. Despite playing in four world series tournaments a shot at the Olympics remained her ultimate goal. But after losing an Olympic qualifier in 1995 to Japan the “guttred” pitcher put her international glove down. The pitcher continued to play domestic softball but her international absence left a huge hole for NZ on the pitching mound. After her spell in the international wilderness the pitcher was asked by the White Sox coach to see if it would be available for selection for Sydney. That was all the Aucklander needed to seriously consider being available to play for the White Sox again. In his quest to bring home gold the coach wanted the best side it could muster and the Auckland pitcher was an essential part of the plan. “There’s some good young talent out there but they’re just not ready for this level yet.” The coach doesn’t believe the number one pitcher will be affected by the added weight of leading the side. “It’s not a big issue. I’ve used it before when a pitcher led the Black Sox to a world series in 1984.”

...‘Pitching for sponsors SOFTBALL officials will schedule more Black Sox tests in NZ in a bid to attract new sponsors. A shortfall in funding means the 17-strong squad have to pay \$500 each to defend their World Series title in South Africa. The Black Sox beat Canada 4-0 in the 1996 World Series final.’

...softball is a ‘popular kind of baseball game differing from regular baseball. The ball is larger and softer, the bat smaller, the base paths less widely spaced, and the pitcher must throw underhand. Thus the physical dangers of baseball are largely avoided. Softball began to achieve popularity c.1910. In the US there are now 10 million players in over 100,000 amateur teams, playing in thousands of leagues.’ Softball was ‘originally devised (c. 1887) as an indoor game. Baseball, a game evolved from rounders,’ is ‘an outdoor game played by two 9-member teams (probably first played in the northeastern US c.1825). Each of the two major US leagues, the National and the American, had 8 teams, but in 1961 the American league added 2. A team during the regular season plays each of its rivals 22 times. The World Series is played early October between the winners of each league. The American league’s New York Yankees have won by far the most World Series, with National’s St. Louis Cardinals next. There are approximately 50 minor leagues, many owned or controlled by major league clubs, which use them for developing young and promising players. Baseball has become extremely popular in Latin American countries, such as Mexico and Cuba, and in Japan’. Baseball has also] taken a stronghold in Norway with 30 clubs being established there in the past six years.

...“...No N[Z]er has ever made the majors, and that is the big incentive for me[,” said a former Black Sox star (r:p1433, ln7) who]... won’t disclose his sign-on fee but... will be paid pre-tax \$US950 a month, a small part of which will go towards provided accommodation... After spring training for a month in Florida, [the NZer is playing]... for a Braves’ club in that area as [it] tries to go from rookie, through the A, AA and AAA leagues, into the majors... Batting alone will require plenty of adjustments. Instead of dealing with drops and rises, it’s curves and fastballs. Even the bat is different. Baseball takes the metal power factors away by staying with wood bats... Two N[Z] softball] outfielders have returned to Auckland after making baseball attempts in recent years... [One] tried the college system, and [the other] joined the California Angels. But the Braves already have

high hopes for two 19-year-old A[US]ns they signed three years ago... [One w]as at their big league training camp and is regarded as maybe their best pitching prospect. And [the other, an] infielder... who is coming back from surgery on his non-throwing arm, caused a stir when [it was reported that the infielder] was paid a... \$US900,000 sign-on fee. - 1997

Major League Baseball has suspended [the Chicago Cubs' No 21 for 8] games for using an illegal... bat. The power-hitting star had filed an appeal and would continue playing in the interim, the Chicago Cubs said... but... "some punishment is in order"... [The No 21]'s bat splintered last week during a game against the Tampa Bay Devil Rays, revealing a hollowed-out, cork-filled centre. The forbidden alteration is designed to add speed and distance to a hit ball by allowing the batter to swing the bat faster. An examination of 76 bats in his possession found no others were corked.

...[the] St Louis Cardinals slugger... hit baseball home run number 574 yesterday to claim fifth place on the all time list, a bright note in an injury-ridden year for the red-h[ead, who]... was stuck in a 0-for-15 batting slump before hitting the two-run... homer off [the]New York Mets starter to pass [a retired player (who had)573 home runs in 8147 turns at bat) on the career list for homers. Now the 37-year-old slugger has only... (755 home runs in 12,364 turns at bat)... (714 in 8399)... (660 in 10,881) and... (586 in 10,006) ahead of him. [The Cardinals' No 25] reached 574 in just 6087 turns at bat for the highest ratio of home runs to turns at bat of them all... [The slugger] came into yesterday's game batting just .189 (62-for-196) with 19 home runs and 39 RBI... as [it recovered] from knee surgery... [The slugger] left it jubilant. ■ [Another slugger], of the San Francisco Giants, continued his record-setting home run pace yesterday, setting a record for the least number of games needed to reach 50 homers in a season. [The Giant], 37, belted a three-run shot off [a]Chicago Cubs pitcher... in the second innings to also become the oldest player to hit a half-century of homers in a season... [The Cubs' No 21] had been the quickest player to 50 homers, taking 121 games to get there...

[A USer] has millions of reasons to root against [the Giant's] chase to break [the Cardinals' No 25]'s record of 70 home runs in a season... [The USer] paid \$US3.05 million... for [the No 25]'s 70th home-run ball. Yesterday, [the Giant] hit his 69th homer, and... has seven games to go. It was [the Giant's] second homer in consecutive days and came during the San Francisco Giants' 3-1 victory over the San Diego Padres. The left-hander now has 563 career homers, tying his cousin... for seventh on the all-time list... If [the Giant] broke the record, [home-run ball] No 70 would probably fall in value... [Yesterday, the USer] said: "I'm the village idiot, what can I say?" [However, the village idiot] can afford to make fun of himself. [The village idiot said it] had already had plenty of mileage out of the [70th homer] souvenir – as well as [the Cardinals' No 25's] home-run balls No 1, 63, 68 and 69... plus [the Cubs' No 21's] No 33, 61 and 66 homers from that year... [The Cardinals' No 25] said yesterday that it would not surprise him if [the Giant] did break his record...

The "71" baseballs and banners quickly become outdated as San Francisco's Giant takes the benchmark to 72... [The Giant's] record-breaking homer... Less than an hour later, the \$US18... balls already were out of date. [The Giant] broke the record of 70 homers... by... slamming a first-inning fastball... 133m. Two innings later, [the Giant] sent another... pitch over the centre-field fence for his 72nd homer... And no fan got this souvenir. A few fought for the ball, but it bounced back onto the field and was thrown to [the slugger] inside the Giants dugout. [The slugger claimed later to have] no idea what... [to] do with the ball except "just stare at it for a while". [The slugger] started the season 17th on the career list and now is sixth. [It] has one more game to add to his total – at home to the Dodgers – because the Giants' loss eliminated them from playoff contention... And his godfather... was ready for more. "I want him to get to 75. I want him to put it where no one can get there," [the godfather] said in a ceremony after the game... [The slugger], who broke down in tears during the post-game ceremony, said the historic homers had come at a price – a new Mercedes for [a]team-mate... who bet him earlier this year that [the slugger would break the] record. They will also raise the price [the Giant] should command this winter. [The slugger] is eligible for free agency after the season, his ninth with the Giants. As [the]team owner... spoke on the field after the game, fans chanted, "Sign him, sign him".

Lawyers said it was the first time that they were aware of anyone asking a judge to settle a dispute over ownership of a ball obtained from the field of play at a major league baseball game. "This is a free country," [the lawyer for the guy] said. "Anybody can sue[, but what the restaurateur]... is asking the court to do is to get involved in something that happens at every baseball game in the country,"... [The catcher]'s lawyer... said the judge's decision was a victory for baseball fans. "My whole issue is that this is America's pastime... I want kids – big or little – to be able to go to the ballpark and catch the ball with their eyes wide open." ...The Giants[, whose slugger]... became the fourth major league player to hit 600 home runs... ...BABE RUTH remains the king of baseball despite the best attempts of modern players such as [the Giant]. Ruth lost three more records during this... season but still owns 40 batting marks and shares four others. On the road to 73 home runs this season, [the Giant] shattered Ruth's single-season slugging percentage mark of .847, raising the bar to .863. [The Giant] also walked 177 times, breaking Babe's mark of 170. [Another player] overtook Ruth's career record of 2062 walks early in the season, finishing with 2141. Among Ruths' remaining records are most total bases in a single season, 457 in 1921. By comparison, in his 73-home run season, [the Giant] finished with 412... Ruth has his own room at baseball's Hall of Fame, in Cooperstown, New York. And his memory travels America in a road show put on by the Babe Ruth Museum. "When you let major leaguers hold one of his bats, they clutch it in awe, like a 12-year-old," said... [the] executive director of [the]museum in Ruth's native Baltimore. "When I visit a school and ask kids how many of them have never heard of Babe Ruth, nobody raises a hand. [Ruth]'s become a cultural icon. I would put him right up there with people like Elvis (Presley) and Marilyn (Monroe)." ■ [The]... Baltimore Orioles... 19-time All-Star who broke one of baseball's most coveted records... closed out his illustrious career before a sellout crowd of dignitaries, politicians and adoring fans... [during] the Orioles' season finale against the Boston Red Sox... [The] Baseball Commissioner... said the [Oriole]... was "one of the greatest players of our generation"... [When the Oriole] broke Lou Gehrig's mark of 2130 consecutive games played in 1995, [the commissioner said it] "became the symbol for the American work ethic and... for the American work[er]." The Oriole... is one of only seven players in history with 3000 hits and 400 homers.

...Legendary baseball star Ted Williams, one of the greatest American hitters of all time and the last to hit .400 for a season, has died at the age of 83. Williams[, who] suffered a cardiac arrest on arrival at Citrus Memorial Hospital in Inverness, Florida... played as an outfielder for the Boston Red Sox, [and]was famous... for sharp vision and fast wrists... Williams contended his eyesight was so keen [it] could pick up individual stitches on a pitched ball[, and also asserted that his nose] could smell the burning wood of his bat when... foul[ing] a ball straight behind him, just missing solid contact. [Williams] was known as a loner and a brooder... Also known as the Splendid Splinter, [Williams] was elected to the Baseball Hall of Fame in 1966 and rates among the true immortals of the game... More than anything else, Williams was[a] big hitter... When [Williams] arrived at his first major league training camp in Florida in 1938, Williams said: "All I want out of life is that when I walk down the street folks will say, 'there

goes the greatest hitter who ever lived'." Williams went on to achieve a combination of 521 lifetime homers and .344 lifetime average matched only by Babe Ruth... But Ruth struck out 1330 times in 8399 at bat. Williams fanned just 709 times in 7706 at bats.

...From New York to Los Angeles, the talk was of strikeouts not walkouts, scores not salaries, as fans flocked back to the Major League ballparks yesterday with the threat of a player's strike just a fading memory. The doom and gloom of a ninth work stoppage in 31 years was replaced with calls of "play ball," when Major League players and team owners reached agreement on a four-year deal minutes before a Saturday deadline to avert a strike that threatened to drive away the already embittered fans. But although most fans were wearing broad smiles as they passed through stadium turnstiles, it was clear that not all was forgiven. The owners and players, whose average salary of US\$2.4 million... is likely to rise over the length of the agreement, have put their fans through another emotional wringer... Word that a strike had been avoided appeared slow to reach some cities, as less than 5000 turned out in Miami to watch the Florida Marlins edge the Pittsburgh Pirates 4-3... At Jacobs Field, home of the Cleveland Indians, the spectators made their point by filling vacant seats in the upper deck with "On Strike" signs. "The fans have a right to still yell at us and tell us what they think," said... [the] St Louis Cardinals pitcher and player representative. "That's what the fun thing is about coming to the ball park." In Montreal, where the Expos were about to be contracted out of existence, fans celebrated a reprieve, with the league agreeing not to fold the club over the length of the new agreement... But nowhere was the relief felt more than among those who earn their daily bread on the fringes of the baseball industry, the hot dog vendors, programme sellers and groundskeepers. "They walk and I lose thousands of dollars. It's that simple for me," said... [a vendor] who operates a hot dog cart outside the SkyDome, home of the Toronto Blue Jays.

The winner of three... baseball awards... ended his 13-year run with the Boston Red Sox on Friday by signing a three-year contract worth \$[NZ]35 million to join the Toronto Blue Jays. The deal makes the power-pitching... "Rocket", baseball's highest paid pitcher.

...[THE dictionary defines the word "obscene" as "indecent" or "bawdy". Another should be added. "Obscene" is "that amount of money paid to a pitcher." The much-heralded chucker for the San Diego Padres side recently signed for the Los Angeles Dodgers for \$US105m over the next 7 seasons, making him the highest annual earner in the glorious history of America's national game. His salary isn't only obscene for baseball, but for all pro sport ...

The top US National (ice) Hockey League's career scoring leader, will sign with the New York Rangers today. [The scoring leader] had rejected between \$22 million and \$26 million for three year contracts with other teams. [Editor's note: NZ representative ice hockey teams are known as the 'Ice Blacks.' NZ is, however, better known for producing field hockey players – the national guys' squad winning gold at the Olympic Games in 1976...

'The hockey player kept the biggest secret of her sporting career from her Auckland team-mates. But yesterday the champion team still orchestrated the most fitting farewell to NZ gals' hockey's test recordholder. The Aucklanders blitzed a stunned Canterbury 4-1 in the final of the National Hockey League. After the match they were the ones left stunned when the test recordholder, one of the genuine greats of the modern era, announced her retirement from all hockey. The veteran, whose test career spanned 12 years and 164 internationals, decided on Tuesday the final would be her last match. It steered her personal resolve to win back-to-back titles, but the veteran didn't want her decision to become between her team-mates and their focus on the big finale at the Auckland Grammar School turf. It had been expected the veteran would continue until after the next Commonwealth Games. However, the player who has done so much to lift the Black Sticks from 23rd in the world to their current top six slot, knew it was time to go. The veteran said it had struggled to give 100% to both hockey and her marketing job. The veteran also felt the buzz of playing test hockey wasn't always as it once was. The 29-year-old bowed out in style, producing a signature goal – a magnificent solo effort which saw her dribble around four Canterbury defenders, slot a perfect shot and take the champions to a telling 2-0 lead inside the opening seven minutes. It was fitting Canterbury was the defeated finalist. Yesterday's national title was the veteran's eighth but the other seven had come during her time at the red and blacks. The veteran has now had two perfect farewells. Her last test, against Spain, produced a Black Sticks victory. The Champions Trophy match was where the inside right-cum-centre forward broke NZ hockey's old test record of 163 games.'

...AS a so-called minor sport, hockey struggles to get a decent share of media coverage. So it was welcome that the gals' World Cup, which ended in Perth last night, got time on TV. Despite the similarities, hockey doesn't command anywhere near the same interest as soccer. But that should in no way be allowed to detract from a sport which continues to grow in popularity. The introduction of artificial playing surfaces has done most to lift hockey's profile. The water-based pitches in Perth continued the world-wide trend of ensuring players have a true surface. Boggy grass pitches are but a distant memory in most parts. The abolition of the offside rule was a watershed decision which led to a truly expansive game, even if one still dominated by play on the right side of the pitch. Hockey is not played left-handed – all sticks are designed to be played on the right side of the body. The distance between the top rugby nation and that ranked 16th is huge – not so in guys' and gals' hockey (the 2nd code where Ireland has a united team – r:p1434, ln43). Hockey's advantage rule is infinitely better than in other major sports. Very much a "get on with it" sport, the ball is constantly on the move. The only blight is the number of free-hits awarded when the ball hits a foot, either deliberately or accidentally.' By the way, the 'teenager hit in the head by a puck at an NHL ice hockey game in Ohio, has died. Brittanie Cecil was hurt at the match between the Columbus Blue Jackets and Calgary Flames. It is thought to be the first death of a fan hit by a puck at an NHL game and one of the few spectator fatalities at a US sports event, other than car racing, directly related to action on the field.'

...Golfers be warned: it may cost you money if you accidentally hit someone with a wayward shot. A British judge has ruled that a player who struck an innocent party in the eye when his shot bounced off a tree is liable for damages. It means shouting "fore" for a miscue isn't sufficient warning anymore'...

'Losing balls in the water is one of golf's accepted hazards, but it has landed an enterprising Briton in jail FOR 10 years the Briton made a modest living diving for lost balls and selling them for 15p each. But when police caught him on an illicit midnight expedition, the authorities frowned on his unusual profession and jailed him for 6 months for theft. The severity of the sentence provoked a public outcry, made the 36-year-old father of two a cause celebre of daytime TV, and prompted lawmakers, celebrities and the media to campaign for his release. Police caught the diver, equipped with a rubber diving suit, last August at Whetstone Golf Course. The diver and a colleague, 24, had fished 1158 balls from Lily Pond – the bane of hundreds of golfers playing the difficult par 3 fifth hole. The diver, who made £15,000 a year collecting balls at courses throughout the country, claimed in his defence they didn't belong to anyone. The diver told a jury at Leicester Crown Court last week it even filled out tax returns. But the judge said, "It is obvious you show no remorse and no intention of quitting." The Labour lawmaker who represents the diver's home town of Chorley raised the case in the House of Commons this week and urged the PM to look into it. The diver's girlfriend has appeared on daytime TV and given countless newspaper interviews pleading for his release. "It is amazing. People mug grannies, steal, attack others and get a lighter sentence than someone who is making a legitimate living and hurting no one," the girlfriend told the *Daily Telegraph*. "Rough justice" read an editorial in the same newspaper. "On the scale of human wickedness, the diver's crime registers barely a blip." The managing director of UK Lakeballs – a firm that buys balls from hundreds of divers and sells over a million worldwide every year through the internet – said the 36-year-old had supplied the company for more than three years. The managing director insisted recovered balls were not stolen, but abandoned property and said more than 2000 people had signed his online petition to "Free the Whetstone One". The resident professional at Whetstone said the pair had been caught "accidentally" when an alarm in the clubhouse went off, unconnected to their activities. They had not asked permission to fish out the balls, but nobody at the club wanted to see the diver jailed. "The sooner the diver gets out of prison the better," the resident professional said, adding that the sentence was "ridiculous". Britain's top professional golfer was quoted in the *Daily Mail* as saying balls lost in lakes were "finders keepers".

...Britain's top golfer] is eyeing the [£1m] mark now that [it]'s secured top ranking on the European golf tour's 1996 money list. The... Scot's [4]th place in last week's German Masters gave him an unassailable lead in the money race but [it] is determined to keep up the pace... [with] just one more counting tournament for the year, the Masters... in Spain. "If I win there I'll go over the [£1m] mark... The way I am playing, I can win..."

...[an AUS]n golfer... is ready to defy a broken breastbone and play just one shot in a forthcoming tournament so [it] can collect a bonus of £73,000... [The AUS]n is third in the European tour money-winning list and has been told that to collect the bonus [it] must tee off in the season-ending Volvo Masters in Valderrama, Spain... [The AUS]n broke his sternum in a car crash in Spain 12 days ago and originally planned to make his comeback in the A[US]n Open from November 21 to 24. However, his manager said yesterday: "I've now re-entered him [for the Volvo], even though I doubt... [it] will be able to hit more than one shot. I don't think it's good for golf if someone prevents someone else from playing, then pulls out after one shot. But it's worth a lot of money and... [my client] must think of himself." Bonus money goes to the top 15 players in the tour's final money-winning list... If [the AUS]n drops to fourth [it] would collect £53,000.

...[two NZ] golfers... had lacklustre closing rounds at the Volvo Masters tournament in Sotogrande, Spain, to complete their European Tour commitments for the season... [A Zimbabwean] waltzed away with the tournament, winning by seven strokes... [NZ's No 1-ranked golfer], who began the last round in second place... crashed out of contention with a round littered with bogeys. [NZ's other golfer] struggled as well, dropping four shots after starting even with the card... [The second NZer] finished 31st on the European Tour Order of Merit, with earnings of £172,052... [The No 1 NZer], who next defends his Sarazen World Open title in Atlanta, ended his 11th season in Europe 23rd on the Order of Merit. His career earnings in Europe now total nearly £2 million. "...I've got to work hard in the next couple of days to lift myself for the Sarazen. Then I've got one event in Asia and one in A[US] before heading home for the N[Z] Open." Meanwhile, the... 17th hole at Sotogrande was slammed as "the worst we have played all year," by... [the] No 1... European... golfer[...], who ended the season on '£875,146. The Zimbabwean came 5th (£463,847). In 2nd place on the Order of Merit was a Welsh golfer (£650,423), and in 3rd was an AUSn (£532,143)' – who didn't complete the Volvo Masters due to injury...

The NZ No 1 golfer's brilliant victory in the Sarazen World Open... yesterday has lifted his year's winnings close to \$[NZ]1.5 million. In addition, the NZer earned] around \$500,000... on the European [Tour]... and won a \$70,000 reward as part of the N[Z] team who finished second in the Alfred Dunhill Cup. If back problems which have troubled him all season do not flare up the Auckland, now based in England, will be in N[Z] next month to play in the Air N[Z] Open. Incidentally, a sensational young US golfer... has played his last competitive round as an amateur... The 20-year-old Stanford University student won an unprecedented third consecutive [US] amateur title on Sunday and is the most heralded player to come out of the amateur ranks... [in] 35 years... And because times are different, [the 20-year-old] will receive endorsement riches never dreamed of by a golfer. The *New York Times* reported yesterday that [the 20-year-old] had signed a \$US40 million... five-year deal with... Nike. In addition to his enormous talent, [the 20-year-old] is extremely marketable because of his youth, good looks, intelligence and his ethnic background – his father is black and his mother was born in Thailand. [The 20-year-old had] earlier accepted a sponsor's exemption to... the Greater Milwaukee Open, where [the sensation] will play this weekend... and to next month's Quad Cities Open, saying [it had been his intention to] play in both events as an amateur before his junior year in college starts... But... [now] there was little left for him to prove on the amateur level.

...[the latest guy golfing sensation] attributed some of his success in winning his first professional tournament to his outstanding match-play record... [The 20-year-old – who 'finishing 60th in his first pro tour event' – won] a play-off to claim the Las Vegas Invitational title in just his fifth tournament since turning professional... a win that earned him \$[NZ]431,560.

...the 20-year-old arrives Down Under this week to play in the A[US]n Open. The baby-faced superstar is the... first professional golfer in history to average more than 300 yards (275m) per drive... BOOM! ...the latest sensation in world golf, of world sport, the successor to... [the Chicago Bulls' superstar and] to Clark Kent, coiled the upper half of his tall, slim, elastic body, swung his driver gracefully, yet whiplash fast, and fired the ball 302.2 metres down the fairway. It was straight down the middle, but to use the arrow as a simile would be a mistake. The arrow has been long obsolete, just as much as golf, its courses, records and apparent limitations, is in danger of being rendered obsolete by [one golfer]. If ever a single shot fired a warning it was that huge... first... drive... as a professional... at the Greater Milwaukee Open... [USers], being obsessed with statistics, have made a science of... measuring driving distance, as well as a host of other aspects of the game, on the US Tour since 1980... Averages are kept up to date for every player and a top 10 table is published... All 10 register 256m or more, while the average for all Tour pros is 243m. [The 20-year-old] is not yet in the top 10 table because [the 20-year-old] has not played the required 50 rounds. But thus far, after 31, his average is 276.8m. [The 20-year-old] is not just ahead of everyone else... but in a different league. Yet [the 20-year-old] is not even trying to hit it as far as... [possible]. The words of his coach... are truly frightening: "[The 20-year-old] can hit the ball... 310m... swinging at 75% capacity. Believe me, [the youngster] has another 36.5m to call on..." ...Hailed as a prodigy in the Mozart class, winner of three US boys' championships and three times the US amateur championship, [the 20-year-old] was already a multi-millionaire, having signed clothing, footwear and club deals worth \$[US]84.5 million... Some will hail [the 20-year-old] for his precocious wealth and celebrity status, some for his breakthrough as a black in a game largely played by whites, some will see him as an example of sponsorship gone mad (his deal with Nike for \$56.3m, [was] just under the total sales made by their golf division last year). But golfers will mostly marvel at how far [the 20-year-old] hits the ball... Where [the 20-year-old] is exceptional is in his flexibility. At 1.8m, and just over 69kg, [the 20-year-old] is able to complete a full turn of his upper body while resisting with his lower body. His hips hardly turn on the back swing. Such contortion unleashes tremendous clubhead speed. It could also make him a martyr to lower-back trouble, the bane of many golfers... But the advantage... is enormous[... (and, if the golfer does destroy his back but can't find someone to make him a bionic spine, the multi-millionaire might be able to continue playing with the assistance of a wheelchair – after-all, handicapped golfers will soon be permitted to use electric carts during professional tournaments)]. As one fellow Tour player remarked, courses which are par-72 for most are really par-68 for [the 20-year-old, who] has made a mockery of course design. Par-fives which were originally intended to be reached with two long shots and a short shot, and which big hitters might reach in two long shots, can be reached by [the 20-year-old] with one long shot and one short shot. [This ability] has removed a full shot... In the US Tour statistics, [if the 20-year-old had qualified, the youngster] would not only lead in driving distance, but in birdies and eagles and in the average number of strokes per round, the most significant statistic of all. [The 20-year-old] has played seven tournaments and won two of them... [and] is the first [pro] since 1982 to have five consecutive top-five finishes. Yet after the most impressive start to a career in the game's history, [the 20-year-old] merely said: "I haven't played my best yet. I've hit the ball pretty good, but I haven't had the greatest putting round."

...One of the best rounds [at the AUSn Open yesterday] belonged to... the... [right-handed 20-year-old USer], who finished... even with the card and seven-over for two rounds after his embarrassing 79 on Thursday. His total was good enough to make the cut and avoid some humiliation for tournament organisers, who paid a reported \$US240,000 appearance fee to the 20-year-old with rock star status... [H]is fellow golfers have been quick to turn on the 20-year-old following his decision to pull out of the Buick Challenge. [The 20-year-old] initially needed seven exemptions to play the tour this year and try to get his card for 1997. [But it's] already done so well in terms of prizemoney that now looks a formality. "This tournament was one of seven to help him out at the beginning [with sponsor exemptions] when [the rookie] needed help... How quickly [it forgot]."

...an AUS]n won the U[S] LPGA Tour money title with her fourstroke victory in the \$US700,000... Tour Championship in Las Vegas. [The AUS]n clinched the title with earnings of \$US1,002,000 in her rookie season on the tour[... and] is the first [gal] to win \$US1 million in a single season.

...[the NZ] left-hander... had an eagle and two birdies over the final five holes yesterday to hold off [a USer] and successfully defend the Kaanapali Classic golf title in Hawaii, his third since 1990... [The USer and NZer had] started the final round tied at 13 under and traded the lead... But... the

[‘only NZer to have ever won one of golf’s four major championships’ (the 1963 British Open; another NZer came second in the 1978 British Open)] clinched the \$US97,500... first prize... his first victory of the year and his 23rd senior tour title.

...ONE is left handed, the other is right handed. One is white, the other is black. One is 60, the other is 20... Both... deserved the title of youthful phenomenons in this tough and difficult game. [The left-hander] was only 18 when [it won the NZ] Open championship... from a field which included the brilliant... [AUSn] who won the British Open five times, and a younger Aussie... who... won a great deal of money on the U[S]PGA Tour... Yet[. to]... be frank... the... Kiwi golf veteran... as an infant prodigy was not quite in the class of... the game’s latest phenomenon... If [the right-hander] were to sustain his form for as many years as [the left-hander] has done... his earnings... would probably... be able to retire the US national debt. But... it is foreseeable that [the right-hander] may not be capable, physically, of lasting in tournament play. Recently, [the left-hander] and three other experienced professionals joined [the right-hander] at a course in Florida as guests of a group of amateurs... “I wouldn’t dream of disparaging the young [golfer,” the left-hander] told me as [it] prepared for this week’s N[Z] Open at Paraparaumu, an annual engagement [the veteran] has managed to maintain among his hectic schedule. “The lad is polite and pleasant, a most engaging youngster. And ability! I’ve never seen the like! ...[however, without] in any way denigrating or knocking this incredible young [golfer], I keep wondering whether his body will be able to withstand the torque, or twist, which produces his phenomenal power. It’s just a thought. We shall have to wait and see.” Meanwhile, [the left-hander]... who has been playing in the U[S] for 36 years, has returned from a pleasurable and profitable season. In 28 events, [the left-hander] finished first once, second twice... in the top 10 three times and the top 25 21 times. In the U[S] PGA Senior Tour proper, [the left-hander] finished 12th with earnings of \$US760,179. Additionally, in the Super Seniors (plus 60 years) [the left-hander] finished first with \$US266,100... In career earnings on the Senior Tour, [the left-hander] has won \$US7,168,000.75 cents... and... lies second in this statistic... When [the left-hander] set out to conquer the great big world of pro golf, [the left-hander] borrowed £400 from his father on the understanding that, when it was exhausted, [the left-hander] would return to his job at a bank. [The left-hander] never needed the money[, being]... ahead from the start. [The left-hander] is still well ahead.

...*Golf heaven – at a price*... “When God created N[Z] God must have had an 18-hole golf course in mind for this spot; we feel particularly pleased to be able to accommodate his wishes,” [a Taiwanese businessperson] is quoted as saying in publicity brochures advertising his \$100 million development... including... 500... palm [trees]... at... around \$10,000... [each – despite the fact that NZ already ‘has more golf courses per capita than any other country’. The course has been] designed in consultation with... architects with international experience... and... [NZ’s famous left-hander, who claims it] will be one of the world’s top 100... In recent years, [the left-hander] has become keen on course designing. His first effort was a fine nine-hole at Matarangi, a beautiful spot on the Coromandel. Then... followed, at the request of an Asian interest, the designing of the Millbrook course near Arrowtown. This, at almost 6400m, is a severe test. But there are no plans as yet... for the second course [the left-hander] is to design next door. That will be done when the traffic at Millbrook reaches an average of 25,000 rounds a year. Today, it accommodates no more than 15,000. - 1996

[NZ’s left-handed] golf legend... is bringing [a] good mate on the U[S] senior tour... to help him officially open the course [the left-hander] designed – ...Formosa Auckland Country Club... [The pair] will tee up on January 11 with two leading Asian professionals for a skins game carrying total prizemoney of around \$US150,000... The golfers trade strokes for a certain amount of money each hole and if there is no clearcut winner then the cash jackpots to the next hole[(some overseas tournaments have seen golfers ‘playing for more than \$100,000 on a single hole.’ Like the NZer, the USer] is a golfing icon in his own country. [The USer] was the winning [US] Ryder Cup captain in 1991, collected the USPGA Championships in 1970 and 1976 and the US Senior Open last year... [‘With 16-holes-in-one during his long career, the USer may also have an advantage. Any ace will be rewarded with a new Jaguar XK8 Sports Coupe, valued at \$NZ175,990’ (although, in comparison, overseas tournaments have offered ‘\$1m for a hole-in-one’ – but such a prize usually can only be won at one designated hole).] The skins game is likely to be preceded by a pro-am tournament... The new course will first be tested by competitors in the Honda corporate teams final... The members – so far 400 have signed up – will play over the weekend... and it will open to the public on [the Monday]. The membership fee, for 99 years and resaleable, is \$27,000 for individuals, \$36,000 for a family up to four, and \$40,000 for corporates. Green fees will be \$100 for the public[– which is double the previous highest green fee in Auckland –] \$40 if playing with a member during the week and \$60 during the weekend... Lasting the distance on N[Z]’s largest golf course demands the use of some helpful form of transport for all but the super-fit. So... Formosa... will... [have a] 105-strong fleet of electric golf carts... In the golfing world, Formosa will be the focus of the dawning of the new century when it hosts the Millennium tournament on December 30 and 31, 1999 and January 1 and 2, 2000... The winner is expected to take away \$US1 million... with total prizemoney in the \$US4 million range... That sort of money will attract the world’s leading golfers... One source told the *Sunday-Star Times* [that the 21-year-old US golfing sensation] was the tournament’s No 1 target.

...WHEN an artist sees an attractive landscape [the artist] thinks of painting it. When... [the] Taiwanese golf fanatic (and very wealthy business[perso]n)... sees a nice piece of land [it] thinks of building a golf course. Actually[, the businessperson] does more than think about it. The... [businessperson] has already built one golf course in N[Z] – the Formosa Auckland Country Club at Whitford... [–] and is thinking about a second one in Christchurch... [It visits NZ] about 10 times a year, catching up with his son... who lives here and oversees his father’s investments[– including]... a couple of shopping malls on Auckland’s North Shore... Up until four years ago [the businessperson had] never been to N[Z]. Then a personal approach from our government at a time when it was targeting Taiwanese investment got him interested. [The businessperson] flew down for a short visit, liked almost everything [it] saw and whipped out his chequebook. “The N[Z] economy was on the bottom then but what really impressed me was the help I got from government and the council,”... Alongside the kind of free market policies to warm a foreign investor’s heart went a welcome lack of backhanders. “Taiwan ranks poorly... for corruption, but I found almost no corruption in N[Z].” The malls? “I was taken around North Shore and found it didn’t have any large sized shopping centres, so I built two.” Santa Claus in a red golf sweater.

...W[hen the police came to take] away their... ancestral... land, the farmers of Tho Da village invoked a powerful symbol: Ho Chi Minh. Hundreds of them marched across their paddy fields clutching photographs of the founding father of Communist Vietnam who inspired peasants to rise against their colonial landlords half a century ago. The object of the farmers’ unrest this time is their own government, acting on behalf of a South Korean firm that plans to convert the... fields into a golf course. The police came on New Year’s Eve armed with clubs, electric prods and tear gas, but they proved no match for the stubborn farmers, who hurled rocks and set ablaze a truck, a car and an ambulance... In order to develop... Vietnam must convert large tracts of farmland into factories, highways and houses... At the end of last year, for example, Hanoi announced approval of a massive \$[US]2.11 billion suburban city not far from Tho Da... Outside Ho Chi Minh City, work recently began on Saigon South, a \$242 million satellite city of factories, universities, housing and shopping that will eat up 3,300 hectares of farmland. Hundreds of farmers there protested the loss of their land, delaying construction for months. “...you are a farmer, you get a few hundred dollars for your land, but then what...?” ...In Tho Da... a manager for the golf course developer was ready with an answer: “They can be caddies.” That doesn’t sound promising to the 1,800 villagers... “They cut off our irrigation, so now our soil is poor,” said a 44-year-old... [digging] through hard-packed dirt for a few shrivelled sweet potatoes. [The farmer] earns about \$100 a year from growing rice and vegetables. Those meagre wages perhaps made the development firm’s officials confident... they could easily buy off the farmers. But the villagers have learnt it pays to be defiant. Last May, work crews from an Army division were dispatched to dig up the farmers’ rice seedlings... The villagers’ tendency to consider the plots of farmland to be theirs is at the root of the conflict. In Vietnam, private ownership is outlawed... [Yet the] villagers said they had been offered... \$200 for each plot...

Rather than accept the offer... negotiated on their behalf by the local government, they fought with the Army workers. Four people were arrested – at least one is still in prison – and a [gal] from the work crew died after falling into a pond while fleeing the rampaging villagers. In the months following the incident, the developer – a partnership between... Daewoo Group and a local firm – agreed to pay... \$650 to each farmer[, but the]... villagers of Tho Da vow not to relent... Daewoo and its partner... Hanoi Electronics Co... which... is owned by Hanoi's city government... were apparently willing to up the ante. "We probably can give them more money," said the venture's vice director... [who adde]d the project would offer a job to any resident who wants one at the golf course or related facilities and for construction work... [even though most] of them are uneducated and have no skills... Those positions... will pay \$50 a month. "Always the farmers want to get more and more money... but if they receive a big sum of money, they will waste it on casinos and cards and karaoke." As French colonialists and the U[S] military that faced Ho Chi Minh's fighters learned all to well, however, Vietnamese farmers are nothing if not determined. "We will die for our land if we have to," said a villager in Tho Da. "It is all we have." [The story isn't much different over the northern border, where 'the modern world of professional golf and China's land-tilling peasant culture have come face to face over the last four days near Peking. Not far away from where a farmer's son – a rookie Chinese professional, a rarity in itself – finished third in a much more experienced field, an old peasant tilled his small field in the shadow of the Great Wall oblivious to his country's great leap forward on the world's fairways. The old peasant had never heard of the farmer's son, who received a cheque for \$US28,800 – the biggest windfall of his four-month-long professional career – in the inaugural \$US400,000 Volvo China Open. The old peasant did not know much about golf either, but was angry that Japanese entrepreneurs had been allocated so much valuable land and precious water to create the neighbouring Peking International Golf Club, where the farmer's son finished as the most celebrated rookie on the course. According to the old peasant, the loss of so much arable land to an elitist pastime was heartbreaking. China's new breed of golf mandarins call it groundbreaking. The Peking International Golf Club is an oasis in an otherwise dry and dusty valley that lies 45km north of the Chinese capital, along a congested road littered with cyclists, overloaded trucks and broken-down, windowless buses. The peasants knew by the number of imported cars whizzing past their humble village that something big was going on inside the plush club, where a round of golf costs 1000 yuan or about two months local wages, and where members pay \$US50,000 to sit on heated toilet seats at the 19th hole. Not only is a round of golf prohibitive for China's mainly peasant population, but they were prohibited from watching the farmer's son, who like them, comes from peasant stock. Spectator entry to the historic tournament was free, but the local farmers said they were stopped at the gate by uniformed guards who allowed only China's golf-savvy set inside the club gates. One curious old gal who was turned away could not comprehend how anyone could trade a plough for a putter and win the \$US72,000 first prize collected by a Paraguayan. That was more than a Chinese peasant could expect to make in two lifetimes. It did not seem real. Golf was not always so alien to China. The Chinese claim to have invented the game they once called "chuiwan." They even have scrolls showing emperors of summers past playing the game in palace gardens 500 years before Scottish shepherds invented the sport. What is new is golf's acceptance by China's Communist Government, which has embraced the capitalist trappings of what is now deemed a "worthy and worthwhile" sport. The suave secretary-general of the government-backed China Golf Association, readily admits that 10 years ago golf was banned as an "elitist bourgeois decadence". "Developing golf is part of China's new open door policy," the secretary-general said. "The Government is encouraging golf to attract more foreigners to invest in China and take part in joint ventures. As China's economy grows so will golf." A decade ago, the farmer's son was a pauper who left his parents paddy field and did not go back. A natural athlete, his minders gave him the choice of playing bowls or golf when it graduated from the Zhuhai Sports Institute in southern China. The farmer's son chose golf even though it had no idea how to play. With minimal coaching, antiquated clubs and nothing but holes in his pockets, the farmer's son developed into a fearless, compact-swinging player. His first break came when China allowed its motley bunch of leading amateurs to turn professional in December last year, and get some experience on the Asian circuit. His parents watched his triumph in the capital on TV in their new three-storey house, which their increasingly affluent son helped to finance. They moved from their rice farm when their land was re-claimed by the local Zhuhai government for industrial redevelopment. The farmer's son reckons the land would be better used as a golf course. Millions of his struggling countrypeople disagree.']

...Life is so strange. For two decades you are just a guy leaning against a wall... Then suddenly you are the fifth Beatle, and everybody wants to know how you lean against the wall, why you lean against the wall, and can we get a picture of you and the wall together? VH-1 wants to interview [the US golfing sensation's caddie, and the caddie] is about to sign a huge sunglasses deal, and has offers to write a book... Talk about your odd couples. [The golfer] has been alive 21 years, which is exactly how long [the caddie] has been... caddying on the PGA Tour... [The golfer] is like a red Testarossa, the shiniest and smoothest thing on the showroom floor. [The caddie] is like a 1967 VW van with a dragging muffler and a Legalise Hemp bumper sticker... [The golfer works out. The caddie] has *flashbacks* that are older than... [the golfer. The golfer] plays *Mortal Combat*. [The caddie] protested against the Vietnam War. Yet their partnership works. "I think [mine is] the best caddie in the world," says [the golfer], who picked up [the caddie] last August for his first pro tournament and hasn't let him go... "I'm just enjoying the ride," says [the caddie]. You figure his 15 minutes of fame should be up by now... Fame has not changed [the caddie]... "I just want to be a caddie." That's all [the caddie] has wanted to do since... 25. Before that... [the caddie] wanted to be a Tour player[having been] the star of the 1969 golf team at William Penn College in... Iowa... the holder of the record (29-33-62) at the Edmundson course in Oskaloosa and... a two handicapper. But after leaving school, the guy... hitch-hiked around the country, then returned to his home town state and became the assistant pro at Martindale Country Club in... Maine. One day in 1976, when [the 2 handicapper] got lost on the way to a pro-am and decided to fit in 36 somewhere else, the club fired him. That's when [the 2 handicapper] decided to do what [the 2 handicapper had] been talking about doing for years: caddying on the Tour. His first bag... missed qualifying at the Greater Hartford Open. [The caddie] got \$20 and 3% of [his bag]'s winnings, which worked out to be a total of, well, \$20. [His] first full-time bag... made a whopping \$60,045 in his five years on the Tour. One day[another] Tour player... gave [the caddie] a lift somewhere and asked him how things were going... "Well... it gets kind of hard to go out there every day and work for a guy you're pretty sure you could beat two days out of three." Two years into caddying... [the caddie] hooked up with [a golfer who "was living in his car... had this huge beard with lunch from four days ago in it and this old Pontiac and his dog... I thought why not?"] They formed the longest-lasting player-caddie team anybody can remember, 19 1/2 [years] together... Which is what made the events of last (northern) autumn so bitter/sweet for [the caddie]. In the summer [his boss] had hurt his back, which sat them both down. But one night [the caddie] got a call. It was [a 20-year-old] who had won his third straight US Amateur only hours before. "I'm turning pro this week, and I plan on playing the next seven events... How many of those can you work for me?" You could have knocked [the caddie] over with a bong. "Well, I expect just about all of them,"... According to a survey, the average [USer] would pay \$7800 to carry [the 21-year-old]'s bag for one day. If [the caddie] plays things right, [the caddie] could clear about \$40,000 a week. And no heavy lifting! ...If there is any resentment among the other caddies because Destiny came down and French-kissed... a frumpy 49-year-old white... guy... wearing a faded Grateful Dead T-shirt... no one has said anything. "Nobody deserves this more," says... [one of his peers. □ In what could be a precursor of his future, the then 20-year-old USer] received treatment on his back... from... a... chiropractor... during[last year's AUSn Open...

The 21-year-old won] the Mercedes golf championship in Carlsbad, California, yesterday. The 21-year-old... became the fastest player in PGA Tour history to record \$US1 million... in earnings, reaching the plateau in only nine tournaments. His third career win was worth \$US216,000... and a Mercedes-Benz car. [A not-much-older South African] held the previous record, but needed 27 events to reach the million-dollar figure.

...The 21-year-old... agreed yesterday [that it] was a leading candidate to win the US Masters in April at his first attempt as a professional... The... American, who won the Bangkok Classic by 10 shots on Sunday... his fourth title since turning professional... was named by [his South African] rival... last month as the [person] to beat at Augusta... [A]t a news conference before the A[US]n Masters tournament, starting at Huntington tomorrow[, the 21-year-old told the 'hundreds there to record every word' that]... his game... was ideally suited to the Masters layout in golf's first

major of the year... Tournament organisers[, who paid the 21-year-old]... a reported \$US300,000 to play at Huntington... are predicting a record crowd to follow [him] this weekend. A gallery of several thousand watched him at the pro-am warm-up event yesterday. When [the 21-year-old] made his overseas debut in the A[US]n Open... last November alongside[AUS's] world No1... crowds increased 400[%] on the previous year[, and the half-Thai]... attracted huge crowds and massive media and public attention in Thailand in his first tournament as a professional in Asia... Meanwhile, the first US LPGA Tour tournament to be held in A[US] has produced the strongest [gals'] golf field assembled in the country but hopes for it to become an unofficial world championship will have to wait at least a year.

...At Huntington this week [the 21-year-old USer] has turned a tough, par-73 course into a par-69 by reducing all the par [5]s to elementary [4s – but so did 2 AUSns, who]... finished level on 16-under... [The AUSn who won the] playoff to claim the A[US]n Masters... ended... a... [Kiwi]'s hopes of winning [the AUS]n Order of Merit... The... Kiwi... [who] won... the AMP-Air N[Z] Open... at Paraparaumu... started the... tournament with a \$A260... lead on... the... [AUSn], who picked up \$A142,000 for his win compared with [the Kiwi]'s \$A4000 for a share of 35th... The gap between [them] is too great for the Kiwi to bridge, as only the Canon Challenge remains on this summer's tour and the first prize there is under \$A70,000.

...Prizemoney for this summer's British Open... has been increased... to £1.6 m... The winner's share of the record purse was increased by £50,000 to £250,000... [By the way, yesterday's winning] 26-under total... at the Phoenix Open... missed the all-time PGA Tour record by a... stroke.

...BEN HOGAN... died yesterday... aged 84... Hogan had 63 PGA Tour victories, [including 9]... majors... placing him third... on the alltime list... “[Ben] was the best who ever played,”... said [the Senior PGA Tour prizewinning leader, despite one player winning 81 tournaments and another (the ‘Golden Bear’) 70], Hogan's greatest year was 1953 when [it won 3 of the 4] Grand Slam tournaments – the US Open, the Masters and the British Open... It started with the Masters. Hogan won with a stunning 274 – [5] better than the previous record... At the US Open... weeks later, Hogan tackled the brutal Oakland layout and won with a 283, five under par. [The runner-up – the golfer who won 81 tournaments –] couldn't break par... His success was all the more remarkable [as, 4]... years earlier, his legs were shattered in a head-on car crash and his career appeared to be over.

...[a Spaniard]'s return to competitive play this week is both a miracle and a medical disaster after [it spent \$NZ]4.3 m... trying to remedy a foot injury that... was misdiagnosed. The 1994 Masters champion played his last round at the Lancome Trophy in... 1995 before severe foot pain that was originally diagnosed as rheumatoid arthritis forced him away from the game... Now... the source of the pain has been discovered in his back – a hernia between the fifth lumbar and first sacral spinal bones... It ended a period described by [the Spaniard] as “pure hell”. It also ended continual calls and letters from healers and spiritualists. And it... ended those unnecessary medical bills[, which] will certainly take time to recover [from]...

The... awe-inspiring victory by [the 21-year-old USer in the] Masters yesterday was a dream come true for the golfing phenomenon – although it came later than the supremely confident 21-year-old expected. “I thought I could win [the Masters] when I was 19. That's when I first played here...,” said... [the 21-year-old, who claims to have] always fantasised about winning the Masters, although... [it didn't] dream his first victory would be so spectacular – with a record score of 270 and a record winning margin of 12 strokes. “It's a wonderful thing to see someone live up to his dreams,” said his proud father... aged 64... who... underwent cardiac surgery six weeks ago and said the doctors “almost didn't save me.” [His son] said: “I think [my] winning here is going to do a lot for the game... kids will think golf is cool and they'll start playing it.” ...After sinking his par-putt at 18, [the 21-year-old]... who won... \$[NZ]707,000... for his virtuoso, 18-under-par-total... celebrated his victory with his familiar, fist-pumping gesture of joy to wild cheers from the jam-packed galleries... Asked what it meant to him to become the first African-American and Asian-American to win a major championship, [the 21-year-old] said: “It means a lot. But I wasn't the pioneer... [One] early black professional golfer... was passed over for the Masters despite winning on the PGA Tour in the 1960s, and... [another] became the first black to play in the Masters... in 1975... If it wasn't for them I might not have had the chance to be here... When I walked up the 18th, I said a prayer of thanks for those guys.”

...[while] the Masters was all about the... hooplah[over the 21-year-old], there was also tragedy. A business[person] who had been contracted to provide 100 corporate tickets for the great golfing tournament but who couldn't meet his obligations, killed himself!

...[the 21-year-old's win has] opened up a new future for golf as a global glamour sport. The heir-apparent to... [a basketballer]'s title as the superstar of sport lived up to all the hype in a fairytale finish to golf's premier tournament... With a hug for [his black] father and a kiss for his Thai-born mother... [the] boy named for a South Vietnamese soldier who saved the life of his father... took a giant step towards unifying a sport that was once regarded as sport's most[racially] divisive... Also expunged were any last doubts that the promise would not turn into greatness... This should ensure a sizeable core readership for any one of the six... biographies that are now being written... [about him, and viewership for a \$NZ69.95 3-video package entitled *The Story So Far*]. Returning from the war, [his father] purchased a house next to a golf course. By the age of 10 months [the son] was hitting practice shots in the family garage. When... [the son was 3 years old it] was outputting Bob Hope on... National television and being coached in public relations... With a family able to stump up competition costs of around \$20,000 a year, [the son]... was always expected... to... succeed as a golfer... thereby repaying his father's faith. [The father] recently told... *Sports Illustrated* that “[my son] will do more than any other [human] in history to change the course of humanity.” More than [the first black South African President] or Gandhi? ...“Yes, because... [it] has a larger forum than any of them... a sport that's international. Because [my son is] qualified through his ethnicity to accomplish miracles[it is] the bridge between the East and West... the Chosen One. [It] will have the power to impact nations. The world is just getting a taste of his power.” His mother concurs. “[Our son] can hold everyone together... [It] is the Universal Child.” [The son] – who shares some of his mother's Buddhist faith... claims that these expectations are not a burden on him. “I see it as fortunate. I've always known where I wanted to go in life... This is my purpose. It will unfold.” Golf experts scratch their heads in wonder...

A PERSON with more impact than [the first black South African President], more than Gandhi, more than Buddha? Are we talking sport here? ...if you believe the thoughts of [his] dad... the 21-year-old is set to become the most famous and most influential person the world has ever known. [The son] was named sports[person] of the year by the respected... publication, *Sports Illustrated* and it devotes 18 pages to, as it puts it “The Chosen One”. There are some amazing predictions from both [his dad] and the publication itself and they stretch way beyond the manicured fairways of the world's best golf courses. Basically, the vision is to unite the world and it will be fulfilled “because of God's mind”... “Can't you see the pattern?” [his father] asks. “Can't you see the signs?...” ...[the golfer is d]amned good. And... will get better[.] But... to label... [him] as... “The Universal Child” is stretching it a bit. Who, for instance, chose The Chosen One? And since when is a 21-year-old a child, let alone a universal child... No way making a 10m eagle putt, or driving the ball 328m qualifies anyone to accomplish miracles. And no way that donning some green jacket and getting the odd 100 million bucks from companies such as Nike suddenly make ...hi[m] God... Having parents like [his] must be daunting[, but if this guy]... is, as his parents insist, The Chosen One, for goodness sake let's get him out of golf immediately... [The guy] is wasting time on the golf courses of the world if [it] can accomplish miracles. The world needs him elsewhere... Let's get him to all the starving people on the globe... No one seems to talk about his one dimensional childhood. Golf, golf and more golf... [T]here are plenty of [parents like his] out there... “The evil always begins with adults who desperately want to win championships... denied them when they were young. They use children to achieve this dream and, in doing so, pervert the normal experiences of youth. With shocking frequency they destroy the child's interest in further sport, and the outcome of their overly ambitious programmes is apt to be a cynical realisation by the children that they have been misused.” [The 21-year-old] won't be feeling misused just yet, but the jury is still out on how [the golfer] will react when [it] inevitably comes to the realisation that [it] is not The Chosen One. No one is.

...[the 21-year-old's] achievements will be immortalised... [H]is dominating father, has decided to turn the house where [the golfer was] raised... – a single-storey dwelling in Cyprus, California – into a museum. In [the father's] words: "It will be a historic monument to preserve what [my son] has done for history and I hope it becomes a place that will serve as an inspiration to young people." ...*Sports Marketing Letter*... predicts [the 21-year-old] could earn between \$750 million and \$1 billion over the next ten years, which is not bad going for a young fellow still in his first year out of college. And already a punter in England has wagered \$475 on the young golfer becoming President of the U[S] before it] is 50. What is even more remarkable... was that Ladbroke's offered only odds of 50-1 on it happening. "We've just had an actor president, [so] it's not impossible..."

Nike's]... chief executive... can be excused a little gloating. There were calls that his company had overpaid [the 21-year-old] in their \$60 million deal. "I wonder what they are saying now. [The golfer is] making us look smart..." were [his words after the 21-year-old] won again last week... "I find... [all of the] media attention... weird because... I'm a human being... just like you guys... and all I do is chase a little white ball around[," the 21-year-old had said] on the eve of the... Masters... [Incidentally, the 21-year-old] has just signed a \$30 million deal... to endorse American Express.

...[the 21-year-old U[S]er] can do no wrong in the golfing, and business world these days[, recently agreeing]... to a \$US13 million... deal with American Express. Later, [the golfer] became part-owner of the All-Star Cafe, one of those trendy memorabilia restaurant chains. But guess what? At the All-Star Cafe they don't accept American Express.

...Asahi Breweries has signed[the 21-year-old] golfer... to a three-year contract to endorse the company's new line of canned coffee in Japan. The trade magazine *Brandweek* reported the contract is worth... \$US13.5 million... and is the biggest golf endorsement ever signed in Japan[, where canned coffee accounts for 23%]... of soft-drink sales... [In related news, NZ's No 1 golfer, who is] fit again after mysterious... injuries, claimed the biggest win of his golf career... in a playoff at the... Greater Greensboro Classic in North Carolina... yesterday... [The] Kiwi... sank a putt from two metres for par at the first extra hole for victory after... [it and a U[S]er] had tied on 274, 14-under par, in cold and steady rain on the waterlogged Forest Oaks course... [The NZer] received \$US342,000... for... his first U[S] PGA Tour victory... and jumped to 17th on this year's money-list. Although technically a U[S] Tour rookie, it] is a hardened 36-year-old campaigner with five wins on the European Tour, where [it] has played most of his golf for the past decade. But everything [it] has achieved in the past paled beside his magnificent finish yesterday as [it] came from six strokes behind... over the last nine holes... Only last month, [it] pulled out of two successive tour events because of pain in his wrists and shoulders. But a visit to the Mayo Clinic in... Minnesota, just before the Masters reaped a rich reward[and 'reduced the amount of painkillers it used each day.'] Even so, after missing the cut last week, [the NZer didn't] plan to play in the Greensboro until... talked into it by fellow pro[and personal mate, the top South African (r:p1486, ln69). The NZ No 1]... is the fourth [Kiwi] to win on the U[S] PGA Tour... • NZ's senior left-hander won at]... Greensboro... in 1974.

...NZ's most durable golfer... yesterday... [became] the biggest money-earner on the flourishing U[S] senior PGA tour. The 61-year-old... tucked another... cheque into his back pocket after finishing [4th – his 6]th top-10 finish of the year – in the Nationwide Championship near Atlanta. [The left-hander], who continues to defy the playing odds in his 37th year as a pro... calmly compiled his second consecutive par round of 72, to go with his... 66 in the first... for a tournament total of 210 – [5] shots behind the... [AUSn winner. The NZer's] feat in recording [7] birdies on the first day prompted the eventual runner-up, [a 3-times US] Open champion... to say: "[The left-hander] is... my hero [for] shooting that kind of score." ...[the runner-up collected] \$US114,400 to be the first golfer past \$1 m... (in 11 tournaments) on the senior tour this year... [The NZer's 4]th placing earned him \$US78,000... plus the extra \$18,000... picked up the day before for winning his [7]th Mastercard championship of the year (for golfers over 60 years who compete over two rounds). This took [his] total earnings in 11 years on the senior tour to \$US7,079,893[, taking him]... past the previous leader... (now \$US7,048,517)... who... won... 27... PGA Senior events... During his 24 years on the major USPGA tour, [the NZer] earned just \$US458,686 – now his combined prizemoney... makes him the 13th all-time money winner in the U[S]. AUS's former world No 1] heads the list with \$US10.7 m... [The previous senior tour prizemoney leader is 3rd on] \$10.4 m... By producing form, consistency and fitness that belies his age, [the NZer] is still a strong contender as [it] flew from Atlanta to Chicago for this week's U[S] Senior Open, one title that has eluded him. [The NZer] is matching hardened professionals 10 years younger than him because of his driving accuracy, not because of his renowned putting ability. [The NZer] is ranked 10th in hitting greens in regulation... and 13th in driving accuracy... but only 59th in putting with an average of 1.841 putts a hole.

...A frustrated [NZ left-hander] let another chance at a seniors major golf championship slip away over the final day of the U[S] Senior] Open at the Olympia Fields Country Club... The 61-year-old... ended up... [tied] for 18th, after beginning the day in seventh equal place... The 53-year-old... [AUSn], the overnight leader, won his first seniors major... [plus his second tournament in succession,] and his 61st tournament victory worldwide... [A South African was the runner up. ■ NZ's No 1] golfer... went into overdrive on the final day of the Buick Classic, shooting a final-round of six-under-par 65 at the Westchester club in suburban New York, to finish in equal 12th place... following a lacklustre third round of 77... [Yesterday the NZer] attacked the course at every opportunity, shooting the second-lowest round of the tournament to jump nearly 40 places up the field... [His] brilliant surge earned him \$US29,400[, giving him]... total earnings of ...\$[NZ]707,905... on the U[S] PGA tour this year... Lightning stopped play when... his friend – and the tournament winner – ...was 13-under after four holes, having dropped a shot at the third. His two-shot lead had been cut to one... but [the South African] came back to hold... out in a repeat of the US Open final. The win makes [the South African] the world No 1, with [the 21-year-old US sensation] dropping to two and [AUS's top golfer (and the world's leading prizewinner)] to three... The... [other NZer in the tournament continued to struggle by completing] the tournament with a five-over 76 to finish on 14-over...

[The other NZer], with earnings of \$US96,262 from 17 events, has climbed to 140th on the U[S] PGA tour moneylist following his top-10 placing at last weekend's Greater Hartford Open. [The NZer, who is] in his second year on the tour, needs to finish in the top 125 to retain his player's ticket for next year. [The NZer] is just \$11,500 shy of [a]fellow Kiwi... who is 128th... [To retain their playing cards, they] will need close to \$US175,000... [The other NZer has his best chance to improve his earnings when contesting next week's] \$US2.2m... World Series of Golf at the Firestone Country Club course in... Ohio... Meanwhile... NZ's] No 1... struck a watery end to an epic first-round matchplay contest against [his South African friend – who has fallen back to being] the world No 3... [-] in the international playoff of the World Championship of Golf at the Blackwolf Run River course in... Wisconsin yesterday... [P]laying the par-four 18th, [the NZer] hit his second into the water... [The US] Open champion, grabbed the opportunity with a regulation par to win one up and march on to this morning's semifinal against [the]British Open and U[S] PGA champion... The defending champion and [current]world No 2... crept away from [a fellow AUSn] over the final seven holes to win 2 and 1 and now plays another... [AUSn] in the semifinals... In all four matches the margin was never more than two up as the players battled to become the international qualifier for a tilt at golf's biggest prize, the \$US1 million, at the world final [at] Scottsdale, Arizona, in January[next] year...

Of golf's four majors, the... British Open... stands above the others as the championship for the people. Corporate grandstands on course are kept to a minimum and no crowd limits are set... If for no other reason than this, my hat goes off [to the British Open's] organisers... I also applaud their decision to admit under 18s for free. The result was that this year around 200,000 spectators were able to enjoy the proceedings. The other major benefactors of the Open are the local communities. The Open has a roster of eight venues, and as a consequence one of eight communities each year benefit by an influx of an estimated NZ\$30 million. To small, seaside communities such as Troon, this windfall must be a real fillip.

...Planning a quiet Sunday drive? Then take a trip towards the tip of the Whangaparaoa Peninsula. You will be surprised, even exhilarated... Prime coastal land that once housed 300 head of cattle on an 323ha farm is being transformed into a \$500 million seaside community that will accommodate 8000 residents, mainly retired, [all wealthy,]within eight years. The enclave's focal points are the already-developed 1600-boat

marina, the second-largest in the Southern Hemisphere, and the par 72, 6400m championship golf course to be opened... on November 14. A year later, Gulf Harbour has the opportunity of hosting the 1998 World Cup, the Olympics of golf which began in 1953 and is the oldest teams event in the game... The course... designer... went home and raved about the best piece of land [the designer] has had to work with in 20 years of designing unforgettable courses. And so the organisers, the International Golf Association, and the promoters, Parallel Media Group, half-owners of the NBC network outside [the US], put the word to the Gulf Harbour management: "Would you like to host the 1998 World Cup?" Right now, the Gulf Harbour executives are rustling together a financial package of... \$[NZ]3.6 million... – the local contribution to the overall cost of \$US7 million to stage the event, involving 32 national teams, 64 golfers and their caddies, and worldwide television coverage. Parallel organises the remaining \$US4.7 million, including \$US1.5 million in prizemoney, and have global sponsors such as American Express... Gulf Harbour management have approached the Government for assistance and have until the end of next week to say: "yes." If they say "no," the event will go to Morocco... Staging the World Cup at Gulf Harbour would have a three-fold benefit: naturally, it would give the developers a promotional boost; it would truly put the country on the international golfing map; and it would provide N[Z] Tourism with another platform to sell our charms... The World Cup at the Erinvale club near Cape Town... last year was televised to 120 countries and a viewing audience of 250 million. The competition over four days attracted 80,000 spectators including 10,000 from overseas spending around... \$10,000 a person per stay... The South African Government made the most of the exposure by establishing a sports tourism campaign to encourage more people to visit the country.

...A \$2 million golf tournament is being planned in N[Z] to mark the beginning of the new millennium. The aim is to draw a top professional field for an event which... would be the first of the 21st century. The promoters of the concept have lodged a \$50,000 non-refundable deposit with the A[US]n PGA tour to secure the dates straddling the New Year. No firm details have been announced but it is known that the new Formosa and Gulf Harbour resort courses in Auckland have been considered as venues, with Formosa looking the more likely choice. Both... developments are... keen to stage high-profile tournaments... The Formosa Country Club... [owner is especially] keen that his course should be considered as a venue for the... \$500,000 N[Z] Open next year... The idea has been welcomed by the executive director of N[Z] Golf... but... it may be 1999 before the course would be ready... Formosa... is also keen to play a part in resurrecting the N[Z]PGA championship, which was last played – and won by [NZ's No 1] – at Mt Maunganui in 1987... [□ Two of NZ's top golfers (r:p1487, ln9 + 128th, p1488, ln54)] tee off on the Ocean Course at the Kiawah Island resort, South Carolina, this morning on a trek that could take them to Gulf Harbour... playing in front of their home crowd at the World Cup of Golf... [The pair], who make up the latest[N[Z] professional team, are playing... in the first round of the 43rd World Cup... A top performance would put... [them] in a strong position to again represent their country... Though rich in golfing talent over the years, N[Z] has never won the World Cup, the closest was [when NZ's senior left-hander and a partner] finished second in Mexico City in 1967.

...The 61-year-old... [NZ left-hander] has been nominated for the Professional Golfer's Association Hall of Fame... Other nominees include... [AUS's current world No 2]. The latest Hall of Famers will be announced next month at the Tour Championship, the final official event on this year's USPGA circuit. To be selected they have to receive at least 75[%] of the ballots returned by 238 voters. [A golfer] who has just joined the senior tour, was the only inductee from the 1996 voting... At the time of the Hall of Fame selection [the NZer] will be defending his Kaanapali Classic senior title... in Hawaii... After a three-week break, [the NZer] was back on the circuit finishing in a tie for 36th at the Boone Valley Classic in Augusta... yesterday. [The result] increased his year's earnings to \$US525,412... [keeping him] 18th on the current moneylist... enough to contest the rich end-of-year Senior Tour Champion for the top 30 golfers on the moneylist... [By the way, NZ's pair] produced their best form of the World Cup golf tournament to lift themselves to seventh after the third round in South Carolina[, but couldn't maintain their form and finished 'tied 9th'.

...A disappointed 61-year-old[, chasing his third successive Hawaiian title, had to bow to the winning instincts of the U[S] Senior Tour's No 1 golfer... at the Kaanapali Classic in Hawaii yesterday. The defending champion mounted a challenge, after having two early bogeys, by collecting three birdies on the eighth, 14th and 15th, and running second, two shots behind... after 16 holes. But sadly [the NZer] bogeyed the last two holes to fall to fifth place with a one-over 72 and eight under for the tournament, five strokes behind... [the winner. The NZer] was also aiming to become the second golfer to win the same tour event four times. [The Golden Bear] had achieved the feat in The Tradition. But instead [the Senior Tour No 1] maintained his record-breaking pace... collect[ing] his fifth victory in his last eight starts, and his ninth of the year to equal... [an AUSn's] record set in 1985. And [the Senior Tour No 1] pushed his year's earnings to \$US2.13 million – [making him] the first golfer on either the USPGA or Senior Tour to pass \$2 million in a single season. [The Senior Tour No 1], twice winner of the U[S] Open, has now won 13 Senior events since joining the tour two years ago. It shouldn't take him long to overhaul... [the] record of 24 tour victories; [the NZ left-hander] has 23.

...The AMP NZ Golf Foundation coffers have been replenished by another... donation [from NZ's left-handed golfer] following his 12th successful season on the U[S] Seniors tour in which... the... 61[-year-old] finished 21st... The... [left-hander] handed over a cheque for \$US6234... representing [1%] of his official tour earnings this year. The great golfer's total contribution to the foundation... used for four... golf scholarships each year, enabling youngsters to play golf while furthering their education... is now \$117,916... [Incidentally, NZ's] latest golf winner... left his run a week too late to qualify for next month's \$2.4 million Dunhill Cup, though [the golfer] helped the three-[member NZ] side to their best placing of runner-up in the event last year. Following his win in the British Masters, [the NZer who was ranked 31st in Europe last year] leapt 66 spots to 101 on the latest world ranking list, released yesterday, to be N[Z]'s third-highest placed professional, behind [NZ's No 1 at] 23rd and... the [holder of the NZ Open at] 93rd. Early last week... the Dunhill Cup promoters, International Management Group, looked at the current rankings and named the [NZ team of the 23rd and 93rd ranked players plus a NZer] who is ranked 124... [The 101st ranked golfer] was philosophical this time, but last year... was steaming after the promoters picked [a fellow Kiwi (r:p1488, ln54) even though the now-101 ranked golfer] was ranked 30 places higher than him at the time. In the end, [the then 2nd ranked NZer] pulled out, and both [the now-101 ranked golfer and the golfer who was ranked 30 places below him last year joined NZ's No 1] at St Andrews, Scotland, to win their group and lose 2-1 to the U[S] in the final... NZ's high standing on the international scene is proved by the fact that there are seven professionals ranked within the top 210 – [the other NZer (r:p1488, ln50)] is 141st and [last year's 2nd ranked NZer and the ranked 30 places below last year NZer] are floating between 201 and 210... [The 101st ranked golfer]'s ninth career victory last weekend provided him with other incentives. If [the NZer] can finish the latest European tour in the top 20 – [the golfer] is now 19th on the moneylist – [it] will have direct entry in the British Open next year. And if [the NZer] can finish in the top 15 [it] will also receive invitations to the U[S] Open and PGA championships. But [the NZer] has only two more tournaments to achieve those aims – the Oki Pro Am... and the end-of-year Volvo Masters... [The NZer, whose wife is scheduled to give birth to] their first child this weekend... will then... return[home]... to contest the N[Z] Open at Middlemore in Auckland as one of the favourites.

...If confirmation was needed of N[Z]'s status as a golfing power, it came at the Dunhill Cup tournament... Seeded seventh, the team... finished joint third with the U[S] (for which the members of both teams earned '\$NZ75,000 each') after a 1-2 semifinal loss to South Africa yesterday. South Africa won the 16-nation tournament when they beat Sweden 2-1 in the final. N[Z]'s two top-three finishes in two years, and a third in 1990, is the sort of consistency supposedly superior golfing nations like... [AUS, which has] reached the play-offs only twice in the past 10 years... can only dream of... [In Florida, a US golfer] won his second consecutive title in a sudden-death playoff at the Walt Disney World Classic... after waiting for the better part of three seasons to taste victory on the [US]PGA Tour... The... [User, aged 25... who [collected] \$US270,000... also won last week's Michelob Championship in... Virginia, in a playoff, defeating [two others, including the NZer who is currently ranked about 210 in the world.

...the NZer who is currently ranked about 210 in the world], took his earnings... in 27 PGA tournaments this year... to \$US171,860... and will sit around 120 on the money list, with four tour events remaining... [The NZer], the joint leader after two rounds[, picked]... up a healthy cheque of \$US36,400... for his eighth placing with three other golfers at the BC Open in... New York... [The NZer who is ranked 141st in the world] equalled the best round of the day and vaulted into a tie for 23rd... The... \$US10,692... took his year's earnings past \$US234,000. But spare a thought for[a] Swede... playing his first year on the USPGA tour. [The Swede thought it] was out and heading for the December qualifying school, having earned \$US27,144 and lying 226th on the moneylist[, but]... won his first professional tournament, by one shot[, then]... pocketed \$US234,000 and had no worries about continuing the tour – his win gave him a full exemption for two years.

...the 21-year-old... has finally returned to the type of golf [it] likes best at the Ryder Cup which begins tomorrow... [The 21-year-old] gets the chance to play three types of matchplay as the U[S tries] to regain the trophy from Europe at Valderrama... [However, the 21-year-old] was told that all 12 players on the European team felt they could beat him... [- perhaps because it] has not won since the Western Open early in July and... missed a half-way cut for the first time, at this month's Canadian Open... [T]he Ryder Cup... is a competition where there is no prizemoney, where players – who are used to competing for millions of dollars – play for nothing... It's an ingredient that seems to be disappearing from the majority of sports, where many now play for their bank accounts and not their countries.

...[the] European Ryder Cup capt. celebrate[d victory yesterday but revealed it won't lead the]team in future... [The team's preparation this year was marred by a] Spanish golfer seek[ing] compensation from... t[he]... Ryder Cup c[ommi]ttee for being excluded from... [Europe's team. The capt. was responsible for the] allocation of final places in... [the team. The] PGA Tour di[recto]r agrees... future teams should be drawn from world rankings...

N[Z's No 1 golfer] was bundled out of the world matchplay golf championship in London[by a golfer from Zimbabwe], going down 6 and 5... over their scheduled 36-hole encounter... [The NZer] clung on desperately, hoping to peg back his Presidents Cup colleague, but to no avail. [The Zimbabwean] sealed the match and a semifinal spot against [the world No 3 and] defending matchplay champion... [from South Africa. ● In the latest 'world rankings, NZ has six players in the top-150. NZ's No 1 is ranked No 22. An AUSn has regained the overall No 1 position. The 21-year-old USer – the world No 2' –] was yesterday named USPGA Player of the Year, after winning four events in his first full season... [The 21-year-old would seem to be a good bet to eventually equal] the record... o[f]... six awards.

...a... [NZer]'s record stayed intact when... a... Scot... won the A[US]n PGA golf championship yesterday. But it was a close thing. [The NZer] still holds the dubious honour of winning an Austral[asia Tour] tournament with the highest final-round score after [it] fired 80 to win by one shot in the 1979 A[USn Masters. The Scot]'s victory meant [it] has won the tournament on both occasions [it] has entered, following his previous success in 1994.

...[a Swedish golfer] finished the season the way [the Swede] started it, with a win to clinch LPGA player-of-the-year honours for the second time in three years... [The Swede] parred the third hole of a sudden-death playoff... to capture her sixth victory of the season at the LPGA Tour Championship... and... pocketed \$US160,000 to boost her record-breaking earnings to \$US1,236,789... [By the way, the other sex]'s leading golf professionals have been given new incentives. They can strive to qualify for the new World Golf Championships, which begin in 1999 with three tournaments – two in the U[S] and one in Europe. The world series will probably expand to four events in 2000... Each event will carry in excess of \$US4 million in prizemoney... for the top 64 golfers on the world rankings... and money lists from the US, European, Japanese, Southern African and Australasian tours... The catalyst for the World Championships was an attempt by a private promoter, backed by [AUS's]world No 1... to start a world tour of about eight events yearly.

...[the world] No 1... is favourite to win his [6th AUS]n Open... when play begins at the Metropolitan course in Melbourne [this week]. The Queenslander is rated a 9-2 chance... to level with [a USer's 6] victories in the tournament, and one win off... [a South African]'s record of... [7. No NZ]er has ever won the famous 93-year-old, \$A1 m... event and a breakthrough this year seems unlikely, judging by the bookmakers' odds... [■ The NZ No 1's] latest successes... mean... [the world's No 22 ranked player can't] it now commit himself to playing for N[Z] in front of his home crowd in the World Cup of Golf at Gulf Harbour... next November. "If it works in I'd love to play. But I've got a... hunch that something will conflict,"...

Construction is underway on N[Z]'s latest prestige golf resort, the \$100 million South Island Terrace Downs Country Resort and Golf Club... The 6500m course... is a blend of traditional Scottish links and American parklands courses... [D]evelopments such as Terrace Downs, Formosa... and Gulf Harbour were generally positive for all prestige golf resorts in N[Z], as they provided a circuit for international golfing tourists wishing to play at several championship courses... Symphony Group and its partners yesterday launched plans for a \$70 million hotel and condominium resort to be built at the Wairakei International golf course... A \$2.5 million upgrade of the golf course should be completed next year.

...[this year's NZ] open championship... is being marketed around its talented home-grown professionals. Normally the organisers pull out all stops to drag in some overseas stars to maintain the hype... But the pre-tournament publicity for the latest AMP Air N[Z] Open... has centred around whether the country's... [No 1] can win his first national open championship... [The NZ No 1] is the top-ranked golfer in the field and will be the star of the show... When [the world No 22] arrives in his hometown... next Tuesday, [No 22] begins a sentimental journey. It was at Middlemore, or more accurately the Auckland Golf Club, where [No 22] first broke par in competition, and it was also the venue of his first open championship as a 17-year-old amateur in 1977... A year later [No 22] won the national amateur championship... and soon after turned professional to register 12 career victories... Along with [the senior left-hander who is a] four times NZ Open winner... ([and]who is again competing next week), [No 22] is the best professional N[Z] has produced... But [No 22] is not the only homegrown favourite. There... are... [other NZers] who... rank... in the world top 200... Add in... all three members of [the] 1992 world amateur teams championship-winning side... and you have a real Kiwi challenge next week... The N[Z] Open only rarely belongs to a N[Zer. When a NZer] triumphed at Heretaunga in 1976, there was a 13-year hiatus before another Kiwi became champion... [Two Kiwis have won it since then]. In between, the Open went to [USers, AUS]ns and an Irish[person. This will be]... the eighth time the open has been played at Middlemore. The last time was in 1983 when [an AUS]n... won.

...a... Dunedin-born [NZ]er yesterday... picked up his... [seventh] tournament... and his second N[Z] Open... with his runaway seven-shot... victory... a victory that seemed unlikely two weeks before, when [the NZer] hurt his back while helping with renovations to his home in Queenstown... The 34-year-old... who... [took] a one-shot lead into the final round... and... has never lost a tournament [after leading] going into the final round... became the first Kiwi in the last two decades to win the open championship twice... In true champion's style, [the golfer – who earlier in the year was ranked 101st in the world –]also delighted the large gallery with a birdie on the 18th... [to finish] with a magnificent 10-under tournament total[, despite complaining the day before that]... the greens were difficult. "Some were soft, some were firm... You start to lose confidence... Sometimes people on championship committees have the feeling the harder the course is the better it is... That is not always the case... [Local] interest in golf has never been greater and it would be nice to turn on a better show[, but]... unless you really understand the intricacies of what is going on out there... people must look and say these guys aren't any good." ...[NZ's No 1 golfer] agreed... "I have never seen so many players miss so many short putts and everyone can't be having a bad day... I want to see [a] tournament won and not lost." ...[the world's No 22, who] had another up-and-down day... but... [finished] with the memory of birdies on the last two holes... to finish a frustrating tournament at 2 under... argued in favour of playing the course in the way the members do.

...The NZ Open was not only about [NZ's top golfers], even though they were centrestage. It was also about 970 volunteers from the Auckland Golf Club giving up their time, rolling up their sleeves and getting stuck into all sorts of tasks to make the tournament a success. Some of them

collected rubbish, 20 jumbo bins of it over the four days. Others directed cars to be parked in neighbouring King's College... The most impressive performance came from 60 [gals] who made sandwiches every morning from six o'clock to nine. The cynics may sit back and scoff at the privileged members of the Auckland Golf Club, but they showed at the weekend why they have become successful: they work... Huge crowds, beautiful surrounds, wonderful sport, wide media coverage and a local winner were just the ingredients to put the icing on the golf boom... The most pertinent fact in predicting a bigger golf boom was the number of young children and teenagers following their heroes around... [M]ost of them will be wanting Santa to come up with some golf equipment this Christmas... Meanwhile, following... his superb seven-shot victory in the NZ Open last week, [the previously 101st ranked golfer]... is now 77th – his highest placing – and 50 spots behind [NZ's top golfer who is now] at 27... 10 [NZ golfers rank from '108 to 507.' NZ]... is one of five countries to have six players in the top 200, the others are [the US, AUS,] England and Japan whose ratings of 23 golfers is a little artificial because they play mainly on their own domestic tour that is largely inaccessible to foreigners... [While on the topic of rankings, t]hree of the four major championships this year were won by players under 30 years of age... Nine of the top 30 on the money list... were under 30... Four of the top-five finishers on the money list... were 27 or younger.

...[3 NZers are] in the... 1998... European golf circuit... qualifying school finals... [They] must finish in the top 35, including ties, to qualify... [Yesterday an Italian in] the 180-strong field... was struck by lightning... Because of the storm the tournament has been reduced from [6 rounds to 5].

...With the final round played overnight, [one NZer] was fifth and [another] joint 26th... to be well-placed in... the European PGA tour qualifying tournament. The top 40 finishers... will gain full playing status for next year's tour... [The 3rd NZer has] dropped in the reckonings and will need a strong finish... to retain his tour card. [The 3rd NZer] is one of 13 players grouped one shot behind the top 40... The only other [NZer] competing... missed the cut for the final round by three shots.

...[an AUSn] feels like... the world's media[is stalking him]... The 37-year-old Queenslander let his emotions and frustrations boil over yesterday after intentionally disqualifying himself halfway through his first round at the \$A275,000... Coolum Classic... "Why do you guys [media] have to take pictures [of me] and have quotes?" the 1991 British Open champion [and winner of 15 other tournaments, including the 1983 NZ Open,] said after adding another chapter to his celebrated form slump... [It] declared this week was not a comeback, but a chance to have a "bit of fun." But yesterday was more like torture for the troubled golfer, who has been making his income through commenting on the sport rather than playing it. [The Queenslander] worked at the NZ Open in Auckland last week. [The Queenslander], who has made three cuts from 22 events on the A[US]n PGA Tour and won \$A4200... in prizemoney since 1993... had won Coolum in 1990 with a record 16-under total. And his latest outing was his first PGA Tour tournament since [it] shot an opening round of 92 in the British Open at Royal Troon in July. [However, the Queenslander – who was 'once in the top 9 but now isn't even in the top 900' –] plans to continue searching for the game which has deserted him. "What do you want me to do, quit...?"

...[the 37-year-old] may be... disciplined for his actions, which included a two-finger salute, during the Coolum Classic... and... is certain to be fined a mandatory \$A500... for picking up his ball... Thursday's behaviour was completely out of character for the popular Queenslander who has an exemplary tour record and a reputation for being one of the nicest players in golf. There is no disputing [the guy is] under tremendous strain, who is going through hell after one of the most cruel slumps in golfing history. But the Tour has set such rigid standards for its players that it can hardly turn a blind eye, especially when it involves a player with such a high profile... His... unfriendly gesture – seemingly... t[... journalists – was captured by a... photographer and run on the front of Friday's *Sunshine Coast Daily* under the headline: 'Get Lost!' If found to have brought the game into disrepute with conduct unbecoming a tour player, [the Queenslander] could be fined \$A5000... and suspended from tournament play.

...[the AUSn] golfer... has been fined by the Australasian PGA Tour... However, the tour refused to disclose details of the measures taken... - 1997

Go golf, the sport for principled people... Golf is booming... Part of the attraction of golf has to be the etiquette, manners, history and traditions of the game that are invariably honoured by the top professionals. Last year [a NZer (r:p1487, ln9) had a chance to win an AUSn Tour tournament but] penalised himself a shot for an indiscretion no one else noticed. At... [a tournament this year, another NZer (r:p1488, ln50)] called in the referee when the ball [the golfer] was addressing moved in the bunker's sand. [The NZer, who eventually missed coming 2nd by one shot,] was penalised a shot at a critical time in his round. It used to be that cricket had similar etiquette, with [batters] "walking" if they got a nick. Now they are more likely to start rubbing their thigh before mouthing off at all and sundry. Nor do golfers sledge each other... On many occasions recently all sorts of dreadful behaviour has been excused on tennis courts, cricket pitches, soccer fields and rugby grounds with the sentiment that "these young [and offensive people] are under tremendous pressure in the new professional era." Rubbish. No one plays for more money tha[n] the top golfers and no other sport comes remotely near the standards of behaviour and discipline that are displayed by the... [top golfers] of this world. If you haven't done it already, do it now. Go out and buy a second-hand set. There can be few better ways of ensuring that you will learn self-discipline, respect for and of others, the competitive spirit and some good, old-fashioned manners... Throughout Asia, increasing numbers are being attracted through cheaper gear and increased television exposure. [However, the] Asian golfer still faces an enormous problem in getting to play on a decent course and often has to be satisfied with hitting from a multi-level driving range. That is not the case in N[Z], still the country where it is easiest to play on excellent courses at reasonable costs. Not that it is likely to stay that way much longer... In the U[S], a new course is being opened daily...

GOLF is a game renowned for its etiquette and Augusta National, home of the US Masters... must be top of the list of clubs with a long list of dos and don'ts that stretch well beyond its manicured fairways... It has much to do with the fastidious nature of one of its founders, Wall St stockbroker Clifford Roberts... Roberts committed suicide in 1977 but his legacy lives on. Pictures at the club are still hung on two hooks, because crooked pictures drove Roberts to distraction. The golf shop still makes change with new currency because Roberts couldn't stand dirty notes. And have you noticed there's rarely a piece of litter lying or flying around the world's most picturesque course? ...The cups and sandwich bags sold at the club are green, making them virtually invisible to television cameras – another issue with Roberts. As for the green jacket? Well, let's just say that for all its sartorial inelegance, it remains the game's most coveted adornment. According to... a new book, *The Making of the Masters*... late at night after [a 21-year-old]'s record breaking victory in 1997, [his father] looked in on his son and found him curled up in bed, asleep with a smile on his face, his arm wrapped around his green jacket. [● 'Augusta has lost \$7m in advertising revenue following publicity about the club's no-gal policy.']

...A small group of Augusta National Golf Club members plan to seek an internal compromise to end a conflict with [gals'] groups critical of the club's all-[guy] membership. About a dozen of the roughly 300 members... said they were concerned that... the... club chair[per]son... had not taken the right approach. They would seek to have Augusta National admit at least one [gal] member within the next six months or so.

...Controversy over... [guy]-only clubs spread to Ireland yesterday as a [gals'] group demanded the Government drop sponsorship of the Irish Open. The National [Gals'] Council of Ireland said use of... government funds to promote the event... at the Portmarnock Golf Club... was an "insult"... The club allows [gals] to play on the course[– yet hasn't hosted a gal in a PGA tournament, as occurred earlier this year in the US for the first time in over 5 decades (the gal]... missed the cut[) –] ...but not to become members. The protest echoes... the... calls for a boycott of the [US] Masters...

Ten of [guy golf's top] 30 players... said Augusta National should offer membership to a [gal], although no one who responded to a newspaper survey said [they] would boycott the Masters if the golf club remained all-[guy]... Players were divided when asked whether golfers have an obligation to speak out on the issue. Of the 14 who responded, five of them – including [the now 22-year-old former Masters title-holder] – said yes.

...SHAME on the U[S] media and public. The appalling chest beating and abhorrent jingoism that erupted when [a then 21-year-old USer] won the 1997 Masters championship was sadly missing when [a]Fijian... became only the second non-white... in history to win a major golf title. [The Fijian] beat all comers to win the 80th US PGA and although [the Fijian] was given a courteous reception from the Sahalee Country Club crowd, his victory hardly received the same elevation of status that greeted [the USer's] Masters triumph. Then, the U[S] media more or less told the golfing world to move over, their [product] was set to dominate the game like no other before him for the next 25 years... The *Washington Post* last week ran a cartoon of... [the 22-year-old] leaning on a golf club with the caption: "I'm [Mr O'M]." The reference to [Mr O'M] is because it has been [Mr O'M] this year, not [the 22-year-old], who has "changed the course of humanity" and accomplished miracles... at least on the golf course where [Mr O'M] has won two majors in 1998 and finished tied for fourth place at the PGA. And where was [the 22-year-old] in those same majors? Usually in the pack. What happened of course, is what is happening worldwide these days in sport. The media picks up on some prospective superstar like [the US golfer or Brazil's soccer striker] and before their careers have the necessary time to earn the sort of results that distinguish genuine greatness from being just good, the media makes them great. The media fails to give them any chance to prove their superiority and often, like [the US golfer and the Brazilian striker, the sportspeople] are too young to have had the chance to replicate the deeds of genuine legends. [The Fijian] has earned his major title arguably more than most, and probably more than [the 22-year-old]. Being black, both... have had to overcome hurdles others in professional golf have not. But [the Fijian] has been going at it and facing those hurdles considerably longer than [the USer]. The road to stardom for [the] 35-year-old... was paved through a career that took him to almost every corner of the globe to refine his game. His string of titles as a professional would be the envy of many, even [the 22-year-old. And the Fijian] has done it with a humility and calmness, with a lack of arrogance and bravado that [the USer] still has to learn. None of the petulant club stomping after a bad tee shot [for the Fijian]. None of the lower protruding lip when a putt is missed. Just a gentle giant... [who] loves... playing a game... and playing it well. [The USer] might do well to stand in front of some mirror soon and recite after himself: "I'm [Mr Fijian]". The USer could pick a worse hero to worship. [Apart from their colour and success in their chosen career, the pair have another mutual link – the Fijian's father lives in NZ and the 22-year-old recently hired a NZer to be his new caddie.]

...*Kiwi caddie cashes in...* WHICH N[Z]er is making the most money on the world's golfing fairways? [The NZer who] doesn't swing a club[but instead] carries them... THE... [Kiwi]'s caddying job with [the]world No 1... is proving extremely lucrative as the flamboyant American finds himself in the middle of a hot streak which has seen him dominate the professional game this year. [The No 1]'s victory at the NEC Invitation last Monday was his fourth in seven US PGA Tour starts. Including the Deutsche Bank SAP Open in Germany, which included six of the top 10 players in the world rankings, [the No 1] has won five from his past eight events. [The 22-year-old]'s NEC win made him the first[US PGA] player to surpass \$[US2] million in one season. Add his win in Germany and [his caddy] is clearly on a winner with a bag job reportedly worth 7% of [the No 1]'s prizemoney along with salary and bonuses. The Kiwi is closing in on the \$1m mark himself and doing it a lot easier than the likes of [NZ's No 1-ranked golfer]... The pair have built a good rapport. There's little doubt [the Kiwi] has been instrumental in reviving [the American]'s game and helping to make the most of a remarkable golfing talent which was stagnating earlier this year.

...*Million dollar caddie* [A caddie] is thought to be N[Z]'s latest sporting millionaire. The caddie is cashing in on carrying the bag for golf's world No 1... who has won \$[NZ]13.9 million in nine months. [The caddie's] pay is secret but it is accepted caddies get 10[%] of a winner's purse, [7%] of other top 10 finishes, and [5%] of the rest. That means [the caddie] has earned \$1.3m. Caddies also get between \$1000 and \$2000 a week in living expenses. [The Kiwi] does not discuss his arrangement with [his boss] whose last caddie... was sacked for disclosing his earnings. But [the Kiwi] said his life changed forever when [it] joined one of the world's biggest sports stars. Despite previously working with [AUS's former world No 1 and another top golfer, the Kiwi said his current boss] was in a different world. "[My boss i]s constantly in demand and finds it difficult to go out in public without it turning into a circus... We went shopping without girlfriends the other day. I thought in Kuala Lumpur it would be OK but we got to a mall and [my boss] was mobbed. We had to quickly return to the hotel." [His boss] has two burly security guards in KL and they have struggled to cope with the fans. [The golfer] also uses his own back entrance to the Palace of the Golden Horses, leading to a private lift to the Presidential Suite. But... [the golfer] rarely leaves the Palace during the tournament, eating at the suite before arriving at the course as early as 6 am to practise. [The Kiwi flies with the golfer] in his private jet to Hawaii tomorrow for the Grand Slam for winners of the four majors... It is the end of a long series of tournaments which included four consecutive victories[(making him 'the first player to win four consecutive starts since Ben Hogan won five in succession, including the Masters, US Open and British Open, in 1953')]. To break the intensity [the Kiwi] returns to N[Z] to visit family and friends or... races stock cars in America, in which [the caddie] is highly rated... [After the Grand Slam the caddy and golfer leave for the golfer's] own... tournament which... i[s] an invitational matchplay. The first match for the host is against the basketball superstar who plays for the Washington Wizards]...

The best golfer in the world is attracting so much attention that there's plenty to spare for his Kiwi caddie... THERE was only one show in town last weekend and everybody wanted a piece of [the world's No 1 golfer]. Even the autograph of the world's No 1 caddie... – reputed to be the highest-paid N[Z] sports star through his association with [the world's No 1 golfer] – was fiercely sought by the hundreds of children who lined the route along which [the golfer] made his regal way to the course. If anybody needed reminding... [about who] is the biggest star in world sport today, it was there to see in the size of his entourage of three bodyguards, a cluster of officials and a legion of Fife Police, who escorted [the golfer] to the practice putting green. Every move [the golfer] makes is planned like a military operation by the bodyguards, dressed in identical red Nike jackets, black caps and wraparound mirror sun-glasses... [T]he crowd screamed, but [the golfer] already had his game face on and barely acknowledged the crowd as [the golfer] and his caddie walked on to the green... [The pair] have been together since March last year, during which time [the world No 1] has embarked on the hottest winning streak in golf history... The 36-year-old... Aucklander who now lives in Sun River, Oregon, is a rarity: only a couple of the top 100 US golfers have foreign caddies... "[The Kiwi] can just read me, to the point when [it] knows where to say something and when not to say something," [the golfer] says. "And we genuinely like being around each other. I think that is what makes for a partnership, especially one that lasts a long time." ...The young maestro finished his practice session by firing several balls down the practice ground. As [it] made his way towards the first tee somewhere in the crowd the other members of [his entourage], his mother... and girlfriend... were watching. History beckoned.

...AS A TODDLER, [golf's current world No 1] was paraded on American television like some kind of circus freak... It was the sort of start in life that spoke of manipulative parents and unavoidable self-destruction. A gift mishandled. Too much, too soon. Yet walking down the 18th fairway of St Andrews last Sunday was a... [person with] immense composure, shrugging off mental pressure as easily as [it] swings a golf club. [The golfer] was wearing the colour [it] always wears on Sundays – red, his winning colour... After his 19-under par victory in the British Open – the lowest score to par in any major – [the]championship committee chair... said: "[The world No 1] is the complete golfer. The most awesome part of his game is his mental strength. [The golfer] is so focused." That [the golfer] has serenely survived the expectations, the frenzy of interest in his first... years as a professional, and the pressure of winning[another of] the world's four great golf tournaments, makes no sense. Faced with the terrible brilliance of their own potential, [countless other talented young sportspeople have] cracked and... bottled out. [The golfer], so far, is riding the swell. But then [it] has a talent that defies logic. At 18 months [it] was able to count strokes well enough to say, "Daddy, you got a double bogey." At 3 [it] was working out how wind, distance and "sand traps" might affect his shots. It was a prelude to domination. Golf, arguably the most technically demanding sport, was supposed to be as unconquerable as the sea that lapped obediently on the St Andrews shore. Golf was never designed to be

conquered. It is the history of broken spirits. The pack trudges round. One player pokes ahead to win by a stroke or two. This is how it works, how it has worked for five centuries. Human frailty decreed it would always be so. Then came [the Chosen One]. Born on December 30, 1975, [it]... won the Optimist International Junior Tournament six times at ages 8, 9, 12, 13, 14 and 15. While a 16-year-old amateur [it] played his first professional tournament in 1992. His first major championship – the US Masters – came in 1995, making the cut in a PGA tour for the first time... [The] teenager... wrote a thankyou note to the Augusta National members saying the tournament “was like Fantasyland and Disney World wrapped into one. I was treated like a[n adult] throughout my stay and I trust I responded in kind... It is here that I left my youth behind and became a[n adult].” Within months [it] turned professional... In 1997, his first full professional season, [it] won four PGA tournaments, including the top-ranking US Masters.

...[the world No 1's] gritty one-stroke victory in the U[S] PGA Championship yesterday was nothing like his record-setting romp in the 1997 Masters, but it revealed a lot more about the young [golfer, who admits it] is still learning about golf and himself. [The world No 1] had to overcome several of his own mistakes while dealing with a hostile crowd and fending off an incredible challenge by an even younger player who is already known as “the [Chosen one] of Europe.” ...The effervescent 19-year-old Spaniard performed with skill and bravery... in only his second major tournament as a professional... As an amateur [the Spaniard] won just about everything – more than 50 tournaments in all. At 15, [it] was the European amateur champion and... became only the second player in history to hold the British boys and British amateur titles at the same time. The other [person] to achieve that feat was [another Spaniard], who this year took his second U[S] Masters title. It may not be long before [the 19-year-old] matches that achievement... [The Spaniard's effort yesterday] secured a place in the European Ryder Cup team to fulfil one of his greatest ambitions while still in his teens... “It was a tough day,” [yesterday's winner] admitted. “But it's always nice to play with all the pressure on the line.” [The]... world No 1... actually made things tough for himself with a double-bogey and two bogeys within five holes on the back nine at [the] Medinah Country Club... • [The US]... Ryder Cup golfers will have a say in future charitable contributions from the biennial matches after yesterday making their desires clear in a meeting with PGA officials. The [12 team-members] would receive a lucrative tax break from a donation in their names – with charities set to receive \$US17 million from next month's clash...

The U[S] Ryder Cup golf team controversially downed Europe yesterday in the biggest come-from-behind victory in the competition's history. The Americans' win in the 33rd Ryder Cup was marred by a premature celebration that shocked and angered the Europeans. When [a US player], capping a tremendous comeback against [the Spaniard who this year took his 2nd US Masters title], sank what would prove to be the victory-clinching putt at the 17th hole, many of his team-mates ran up to congratulate him – even though the Spaniard still had a putt to stay alive. While the Americans' and their wives mobbed their team-mate, and photographers... scurried about to record it, [the Spaniard] was left standing on the green looking at a long putt... “I think that kind of behaviour is not the one anybody expects, especially when you're playing a match and you know the whole match [for the Cup] is going down to yours or the one behind,” [the Spaniard] said later. “I think it was very sad to see. I think it was an ugly picture to see,” added [the Spaniard], who eventually missed the putt after order was restored... ■ Europe swept the... fourball competition to rally back from a morning setback and establish a 9-7 lead over the U[S] at the Solheim Cup [gals'] event at Edina, Minnesota. After losing [3 of the 4] four-somes matches in the morning, the Europeans, led by... the... world No.1 [r:p1491, ln66]... fought back to win all... the afternoon... matches.

...AT NEWS that the most successful left-handed player in the history of world professional golf... had become a knight, every Kiwi worth his or her salt exclaimed: “At last! About time.” At last, indeed. Because of his extraordinary achievements, not least the winning, in 1963, of golf's supreme title, the British Open Championship, [the left-hander] was made an OBE in 1972. [The leftie] kept on winning, and doing other wonderful things in the game, but a full 20 years were to pass before N[Z]'s Government... advanced him the rank of CBE. But no Kiwi worth a damn was fooled. Not least after his magnificent gesture of donating 1% of his tournament earnings to advancing [NZ] junior golf: the [leftie] must become “Sir”. To be fair, there was a problem. By all the luck in the world, [the leftie's] proposal of marriage, back in the early 1960s, to a [gal] of extraordinary charm and beauty, had been accepted... But for a long, long time, it caused an intractable problem. [The charmer was South African.] and in the dark days of apartheid, when... [members] of Halt All Racist Tours were tearing about the country, rugby offices and grandstands were being burned, golf greens and rugby fields were being sprayed with acid, no sensible politician could risk promoting [the husband of a South African] to about as high a rank as a Kiwi can get... [The leftie] undertakes a strict regimen these days... [involving stretching, lifting] light weights... aerobic exercises... [while sticking] to a diet heavy on vegetables and fruits[, supplemented]... with vitamins and minerals... Small price to pay... Especially when you get tournaments like last year's father and son event which the great leftie describes as the highlight of his... calendar. [The leftie] teamed with his boy[, who]... works for the PGA of America... [running] the seniors PGA and Grand Slam of Golf tournaments, as well as assisting in the Ryder Cup and PGA Championship events... to finish fourth in a star-studded event. Not only did dad love the chance to draw iron with his son, but their effort was a mighty one considering [the son], a four-handicapper, was one of the few non-pros taking part... It is not possible, of course, to pass over the story of Sir [Leftie] without referring to that long period when, wonderful golfer though [the leftie] was, his fellow Kiwis thought him the sourest puss this side of the Black Stump. Only the other day, a dear old lady (who has never met [the leftie]) said to me: “I wish [the leftie] would smile.” During a N[Z] Open at Auckland's Middlemore in 1965, I taxed [the leftie]. “You have a rotten reputation,” I said. “Kiwis who don't know you... give you a bad name.” “I am aware of the public attitude... I would do anything I could to change it. But I can't change my serious attitude to my job. I have to be serious if I want to win.” [The leftie] thought for a moment. “Do you laugh much... when you are writing a story.” “I don't kill myself,” I admitted. Which brings [us] to the moment of absolute greatness in [the leftie's] story. At the 72nd and last hole of the British Open at Royal Lytham in 1963, [the NZer] faced up to a putt of at least 1.5m to achieve a half with a burly American... who, having just holed out, had yelled like a banshee while darting forward to put his hat over his ball in the hole. (The revered British critic... called the [USer's] effort “disgraceful conduct in every possible respect”.) [However, the NZer] holed his putt; and, as was then required by the Royal and Ancient Club of St Andrews, set out to play [the USer], head to head, over 36 holes, and murdered him. When I met [the leftie] at Whenuapai on his return, [the leftie] fetched out a life-size copy of the Open trophy, the immortal claret cup. “Were you mad,” I asked him, “about [the USer's] performance?” The leftie] gazed at me. “What performance?” [Speaking of bad British Open performances, last year a French golfer had a 3-shot lead at the 18th tee. Rather than playing safe to ensure victory, it pulled out his driver (perhaps, being French-born, the golfer felt obligated to win with style?). After getting himself into a not-so-good position after his first shot, the Frog avoided taking the chance to play safe a second time, and was fortunate to get a reasonable bounce off the gallery. Unfortunately, the ball was in such long rough that his 3rd shot landed in a creek not far ahead of him. After delaying proceedings for a while as the Frog contemplated playing his 4th shot from the creek (which included removing and then refitting his shoes and socks), the Frog took a drop and put his 5th shot into a green-side bunker. The Frog, who now needed to get his next shot into the hole to win, then had to watch as his AUSn playing-partner played out of the bunker first – and succeed at putting the ball straight into the hole! After l]eading by 10 strokes heading into the final round, [the Frog] triple bogeyed the 72nd hole to force a three way play off with [an American and a Scot. The latter] became the first Scot... in 68 years to win the title...

[Scotland's No 1 golfer] nearly blew a huge lead but held on to win the Anderson Consulting World Championship of Golf final on Sunday... beating [a USer]... two up in the 36-hole final on the Grayhawk club's Raptor course, in Arizona. [The Scot] was four up with four holes left, but lost the next three... before responding to the pressure with a magnificent three-iron second shot to the par-five 18th. [The USer] also reached the green in two, but after missing his eagle putt... conceded to [the Scot], who collected the \$US1 million cheque, equal to the biggest prize in golf.

...The first golf tournament in the world to offer \$US1 million as a first prize will this year be played for twice that much. At a glittering function at the Sun City resort in South Africa, officials said the move was in response to the proliferation of events offering \$US1 million to the winner. That had hurt the tournament's ability to attract the world's top golfers. The elite 12-[player] event was first played in... 1982, when [the winner] took home \$US500,000 of the total purse of... \$US1 million. The top prize was increased to \$US1 million in 1987.

...[a U.S. golfer, Mr Y.] became only the second golfer in U.S. PGA Tour history to record more than \$US2 million... in annual winnings with a two-stroke victory at the 37th and final World Series of Golf yesterday... his... third victory of the year... The 26-year-old[– who ended last year by 'becoming the first golfer to win his first three tour victories in consecutive starts' – joined the US and world No 1, who] set a single-season PGA record last year with \$US2.07 million. [Two golfers also] eclipsed the \$US2 million mark last year on the Senior Tour...

N[Z] is well placed to win the World Cup [of Golf] for the first time after [its two representatives]... continued to hold their nerve... yesterday. The Kiwis go into today's fourth and final round holding a three-shot advantage over the U[S] pairing of... the No 1... and No 2 [(Mr Y)]... players in the world... Led by [a]Japanese tour regular... N[Z] shot a seven-under-par 65 to retain the lead on 22-under... There is a pack of talent chasing the Kiwis with Japan, Argentina, France and South Africa tied for third, one stroke back of the... Americans, the defending champions... N[Z] has not won the World Cup since the event's inception in 1953 although it has gone close several times, including in Buenos Aires last year when [the world No 27 in 1997 and that year's NZ Open winner – who is 'ranked 27th on the European Tour this year' – represented the country (the same pair 'tied for 5th place with Zimbabwe, 5 shots behind the winners, England, in the 32-nation' event the previous year)]... Today's final round, when the N[Z]ers will be partnered by the Americans in the final grouping, will be foursomes.

...N[Z] chose a stunning location to at first scale and then tumble down one of golf's tallest peaks and concede the World Cup teams event in dramatic fashion in Japan last night. With a snowladen Mt Fuji providing a majestic backdrop, [the Japanese tour regular and his partner (the former NZ No 2 – r:p1489, ln54)] needed to birdie the 474m final hole to win their country's first World Cup title since the event's inception... The par-five hole, considered one of the easier challenges at the Taiheiyo Club at Gotemba City, had moments before coughed up an eagle... to South Africa and would do the same again when [the half-Thai]American superstar... pulled out a spectacular chip and run from off the green. But the N[Z]ers could manage only a par... consigning them to a four-way playoff with Denmark, South Africa and the U[S]. The challenge of second and third round leaders N[Z] as well as the glamour U[S] team... ended on the first playoff hole... South Africa won their fourth World Cup at the next hole. It was a cruel finale for the N[Z]ers, who entered the \$US3 million... tournament considered rank outsiders only to shock observers by setting the pace... Boasting a modest world ranking of 136, [the Japanese tour regular] more than held his end up...

[A NZ golfer, who in 1997 was ranked 141st in the world,] banked the biggest paycheck of his career yesterday... [and] more than doubled his season's earnings, pocketing \$[NZ]396,980 for finishing second, three strokes behind [the]world No 2 and defending champion... in the Michelob Championship in... Virginia... [The Maori (who doesn't travel with a partner – so will avoid media questions like the one put to the white partner of another Maori, the former NZ No 2: 'What's it like to sleep with a Maori?')] started the closing round in third place, two shots shy of [Mr Y], whose \$700,000 winner's purse boosted his season's earnings to... \$5 million as [the 26-year-old U.S. golfer] enjoyed his seventh victory in 12 months... [The winner] was generous in his praise for... [the Maori, who] was a lowly 165th on the money-list and quickly running out of chances to make the top 125... "I can promise you, the pressure [the NZer] was under today was a lot greater than me... In that regard [the NZer] played a better round of golf than I did. I am tickled pink to see him do it. It's a heck of an accomplishment." ...It... catapulted [the NZer] into the top 100... [In related news, a revitalised AUSn has declared himself] on course to return to competitive golf in the next two weeks. The former world No 1... had made a complete recovery from shoulder injury and would tee off in the Shark Shootout in California... [The AUSn] had streamlined his practice routine and was now hitting only about 150 balls a day instead of spending six to eight hours on the driving range...

Who was the longest hitter at the N[Z] Open... yesterday? ...Don't look for him in the list of competitors. The 26-year-old Aucklander paid his \$20 entrance fee as a spectator. But [the Aucklander] could show those pros a thing or two about crushing those drives on the par-fives. [It] is in the top 20 of the world's longest drivers with a personal best of over 400 yards[, and an average of] 353 yards... How does his driving fit with his golf game – "I did once play off a two handicap, but I don't play many rounds now. My short game is no good. I've also been banned from a couple of driving ranges because I hit it too far. I usually use the range at Ellerslie golf course because there's plenty of room." ...[the Aucklander] reached the finals of the world long-drive championships in Mesquite, Nevada, in October from an original entry of 10,000 entrants from 10 countries... The final in adverse conditions was won by... [a] Swede... with 316 yards. [The Aucklander] had one drive of 372 yards in the early stages but did not reach the final group. Competitors have six balls to fire in five minutes and drives must finish in an area 45 yards wide. [The Aucklander] used Integra gear with a 50-inch shaft, six inches longer than normal. The club has a four-degree loft. His next target is a top-30 contest in South Africa in May, where the top prize is \$US100,000... [A] Canadian... holds the official world record with a carry of 430 yards and 10 inches, achieved in thin air.

...Over the past eight years, [a]30-year-old... has chased tournaments in... Canada[, AUS] and the U[S] to grind out a living in professional golf. Since [the NZer] settled on the U[S] Nike Tour in 1995, [it] has been regarded as one of the best strikers of the ball. And it has surprised even his tour colleagues that [the NZer] had not won a major four-round tournament before now. [His] ailing career – with earnings of just \$150,000 in four years on the Nike Tour – hit a low last month when [the NZer] missed the final stage of the qualifying school and lost his tour card. Next year [the NZer] has to rely on Monday qualifying each week to play in the Nike events. But a more confident [golfer] will have the satisfaction of turning up for one of the 14 qualifying spots as the reigning N[Z] Open champion, which at least earns him a place in the lucrative end-of-season Sarazen World Open... [after the NZer], who left Wellington on a scholarship to the University of Oklahoma 12 years ago, fired a... Formosa Auckland Country Club... course-record... eight-under 64 for a total of nine-under 279 to win the 82nd Open and \$90,000 by three shots from[a] Queenslander... who... had a 69 for a total of 282, one stroke ahead of two more [NZers, one of whom maintained the form which earned him a 2nd at the recent Michelob Championship. Unfortunately, the 30-year-old's win was tainted by the fact that NZ's top two golfers, including the defending NZ Open champion, were forced to miss the tournament due to President's Cup duty in Melbourne]...

Kiwis share in golfing nirvana with victory... The International team's victory over the U[S] in the President's Cup golf tournament yesterday will go down as a great sporting achievement, according to [NZ's No 1 golfer. The NZer], who lost his singles match 4 and 2... yesterday, knew the Cup had been won as [it] came down the 16th fairway. As [the NZer] stepped up to play his second shot, [a Zimbabwean] confirmed the victory by making par to score a 2 and 1 win over [the world No 2] on the 17th – all of which was shown on the giant television beside the 16th hole. The International team won 20 1/2-11 1/2. "This is just unbelievable... I've been to every President's Cup so far and after losing the first two this was just such a fantastic experience... The [USers] had a fantastic side, a great side, and to get our 12 guys to play so well together was just phenomenal." [1997's world No 27 and his compatriot, this year's European Tour No 27 – whose place in the International team was questioned by some people –] were major contributors to the victory. They took the scalps of four of the world's best players in their foursomes matches... As the first team out on Friday morning, their dramatic win over [Mr O'M and the world No 2 (Mr Y)] was the catalyst for the International team to take charge of the match.

...[NZ's No 1 golfer has slammed the US] team for their disparaging comments about the remarkable putting and chipping display put on by the International team... [His] massive putt to win the opening match... started a trend... with the International team going on to make some

astonishing putts and chips to win matches. The response of some [USers], particularly a grumpy [senior golfer], was to play down the strokes as lucky or “unbelievable.” When [a portly AUSn] chipped in on the 18th to win a match against [the senior US golfer and his youthful world No 1 partner, the senior golfer] described it as a “goofy” shot. “Personally, I think it’s sour grapes,” [the NZer] said. “That sort of thing happened to us two years ago when they won... and we took it on the chin.” ...The event is only a few years old but the International team’s winning margin... was more emphatic than any defeat the U[S] have suffered in 70 years of Ryder Cup matches against Europe. Looking for answers, the shellshocked [USer]s simply acknowledged they had been outplayed – more specifically out-putted – by a collection of players previously regarded as incapable of troubling the best in the world. [The US] captain... coined the phrase “drive for show, putt for dough” and it is an adage which applied over the [3] days. “Every time I looked around an International player was holing a putt,” [the non-playing captain] said. And they were not short putts, they were from 15 feet and... sometimes off the green – such as [the NZer]’s on Friday... That putt[went] from off the fringe, past the sprinkler-head, down the slope and into the cup... Those heroics were matched by[an] unheralded Japanese star... and his portly[AUSn] partner... Every time they needed a miracle they came up with one... Much has been made of the [USer]s’ lack of knowledge of Royal Melbourne, with its demanding greens and complicated winds. But [the Jap], unbeaten in four pairs matches, had never played at the course before this week. His secret? “I just hit it where Mr [Portly] told me,”... Despite the claims of local knowledge, only [8] of the 12 international players had played at Royal Melbourne before. But [the]Internationals captain... made sure the experience was shared... The seeds of victory for the International team were sown at a small cabin at Lake Manassas, Virginia, two years ago. After their demoralising loss by one point... the team gathered in the cabin... and poured their hearts out to each other... [A Zimbabwean] remembers that day and that mood. “I think... at that time, it seemed to me, the whole complexion of the President’s Cup changed because it was then I realised that you could take a group of 12 people from the four corners of the globe and make them a team. At the first President’s Cup we weren’t a team, at the second one we came pretty darn close, but this time around we are a team.”

...The slight, blond... [teenager] was no infant prodigy on the course, but... it was no real surprise when on Wednesday [the school boy] added the national strokeplay title at Mt Maunganui to the foursomes... won with his Rotorua Boys’ High team-mate... three days before... [The new national strokeplay title-holder] began playing golf as a primary school boy... Each day after school either mum or dad would drive [their son] to the Rotorua or Springfield clubs for a couple of hours of practice. The hard work soon paid off and when [the son] went to Rotorua Boys’ High, [it] joined the school golf team as a third former. Last year the team... won the world collegiate championships in Ireland, with [the son] the leading individual scorer. They... are off to defend their title in England next week, and in June, [the son, his foursomes team-mate and another Rotorua Boys’ High team-member] will join... a... Christchurch golfer... at the world junior teams’ championship in Japan... Despite a heavy playing schedule, [the son] intends to keep up with his books. It will be a test of his concentration. This month [the son] was in A[US] for the Clare Higson Trophy where [it] had three wins and a half in a N[Z] loss... Professional golf is his ambition. But [the son] wants to finish his studies first. An American university is one option, but the recently announced P[M]’s scholarship could provide a home-based alternative. [The son]... pre-qualified for the N[Z] Open this year and shot 75 and 70 to miss the cut by only two shots[and] has already qualified for automatic entry in next year’s event... [A] Bay of Plenty-based member of the N[Z] Golf Association Board, has watched [hi]s career... “...we should treasure him... [The boy]’s a great team [guy.]”

...[t]he... 16-year-old... N[Z] amateur strokeplay champion... became the first player to successfully defend his individual world inter-collegiate crown when his school team won back-to-back world titles in England[(but the team’s winning margin of 28 shots last time was cut to 4 this time).

...a US golfer] captured his third Phoenix Open golf title in Scottsdale yesterday, establishing US PGA Tour records for the lowest 72-hole score and most birdies in a 72-hole event. Winless since the 1998 Honda Classic, [Mr Z] ended his drought in spectacular fashion with a four-round total of 28-under 256. His total eclipsed by one stroke the long-standing record of 257 set... at the 1955 Texas Open in San Antonio. [Mr Z] also tied the US PGA Tour mark of 28 under established at the 1998 Hawaiian Open... “It’s semi-indescribable right now actually,” said... [t]he 39-year-old former British Open champion... who also won this event in 1989 and 1992.

...[an]American golfer... set a PGA Tour record, as well as his third Bob Hope Classic mark, by firing a six-under-par 66 yesterday to reach 29 under par and seize a five-shot lead after four rounds of the 90-hole event at La Quinta, California... with... [Mr Z and another player] tied for a distant second place... [The leader] broke the 36-hole and 54-hole tournament records and also claimed the 72-hole tournament standard, previously held by [Mr Z] in the 90-hole pro-am tournament. Despite reaching 10-under par... N[Z]’s No 1] missed the cut.

...THE first US Open was played on a nine hole course in 1895 for the princely sum of \$335 – \$150 for first prize. It was considered something of a sideshow to the first US Amateur which was played on the same course during the same week. [Some people]... still rate... the US Open as a bit of a sideshow – as far as golfing majors go... A record 8457 players, now whittled down to 156, entered for the chance to add \$1.6 million to their bank account at this year’s event – the 100th... [The NZ No 1], who is undergoing something of a revival after a lean couple of years brought about by injury... came through qualifying last week and has fond memories of the US Open. In his five previous appearances [it] has finished ninth, 10th, 13th, 36th and 40th. The [NZ No 1] is climbing his way up the PGA Tour money winners list and currently sits on 138th... [The NZ No 1] will be joined this week by [a]fellow Kiwi... The 31-year-old[(r:p1494, ln19)] played in the 1996 US Open and remembers [it] did little more than make the cut. “That was in 1996 when I was struggling. I fancy my chances more this time.” It’s hard to argue with four tournament wins this season. His rise up the world rankings saw him climb to 38th last week, up from 465th two years ago and 216 less than 12 months ago. It’s nearing his career high of 27 in 1995. “The last six months have been great,” [the Maori] said from his London base mid-week... “I’ve made the news a few times but I’m not here to make the news, I’m here to win golf tournaments. I believe I’ve got the game to win golf tournaments and I’ve shown that over the last six months.” Some have slipped by, like last week’s one shot loss to [an Irish player] in the English Open... [Earlier this year] the amiable... Irish[player], a 20-1 outsider, [had]prevailed over the world No 1... [– with whom the Irish player] shares... a... coach... [–] in the World Matchplay Championship in Carlsbad, California... [The Irish player] won \$US1 million and jumped five places to 14th in the world rankings...

N[Z]’s richest sports[per]son... believes his [2 1/2]-year-old son is the... reason [the 31-year-old] has risen through the ranks from 108th to 14th in the world and taken some of the sport’s most prized titles. Now... the Maori Sportsperson of the Decade... [(who came 3)rd... at the... 1995... British Open... [– after leading following the 3rd round]] is aiming to be golf’s [No 1] and has another inspiration to help him reach this... goal – a smiling [7]-week-old baby boy... [who] is named in honour of [a Washington Wizards] basketball legend... “I’ve found there are more expectations from people, the media, [nowadays],” the now No 1-ranked Kiwi says... “I asked [the world No 1 how it] copes with it all, and [the world No 1] said you just have to keep your business side, your golfing side and your private side separate...” ...[□ The world No 1] goes into today’s final round of the... US Open with a comfortable four-shot cushion and the knowledge that [it] has won all seven of the major championships in which [it] has led after the third day... [The world No 1] remains on course to become the first player since... 1972, to win the first two majors of the year... and is also still in the frame to clinch the first professional grand slam of all four majors... American amateur Boddy Jones is the only player to achieve anything comparable. [Jones] claimed the “Impregnable Quadrilateral” in 1930 by winning the amateur and open championships of both Britain and the US.

...Now lets see a real Grand Slam. Beyond that, there is not much left in golf to occupy [the world No 1, who]... has cleared the horizon of rivals. History is the last challenger still standing... [However, 10 names still] remain ahead of him on th[e] list of major winners, topped by... 18 titles. The... [world No 1] was already the youngest golfer to accomplish a career Grand Slam. Now [it] becomes the only one in the modern era to hold all four components of the slam – Masters, US Open, British Open and PGA Championship – all at the same time. For the moment, [the world No 1] is

ducking the question of whether that constitutes a Grand Slam. Before now, golf historians have argued that all four majors must be won in a single year. Until now, it was a moot point. "I don't think it's right for me to comment on that," [the world No 1 said as it pocketed \$US1,008,000...

The USer] was... unhappy... despite minutes earlier pocketing \$2.8m for a week's work. It was hot and humid and security lapses had allowed fans a little too close for comfort. But you'd still think the pay day... would satisfy. But to the world's greatest golfer beating mere humans is no longer enough. [Another golfing great once said: 'Winning isn't everything, but wanting to win is.'] But for... the... [world No 1, wanting to win isn't enough. It]... sets his own goals, far beyond just winning... "I was standing at the tee at the 18th. I looked at the leaderboard and saw I needed par to finish with a 10-shot lead over [the NZ No 1]. That's what I wanted... [To] finish with a bogey and... a record nine-shot victory... was disappointing. I wanted double digits." ...So... you focus more on your own targets than on other players? "I'm goal-driven without forgetting the contest is to win." There is no failure in that department. [The world No 1], who rarely agrees to one-on-one interviews, won his 10th title... on Sunday, flew to Hawaii in his hired 747 that night and won his 11th title of the year, the Grand Slam for major winners on Thursday. "It's been a long year and I'm looking forward to a break... We've been going for longer than usual without a break and as you can see it gets pretty hectic... [However,]I'm young and there are still lots of places I'd like to visit and if they can fit into my schedule then they are an option..." No doubt his attendance will rely on another multi-million payout. His fees for playing... [this past week] were four times as much as his prize money despite winning both titles.

...[The world No 1]'s extraordinary... golf season showed the young American won \$US7.68 million... in prizemoney around the world – double his nearest rival, according to his agents... [The world No 2] was a distant second with \$US3.84 million in winnings, according to the list which includes prizemoney from tournaments with a minimum of 36 holes and four players, but no skins and shootout games... [The world No 1] equalled Ben Hogan's winning streak of six tournaments in a row this year and could conceivably eclipse the achievements of any of the other giants of the game.

...[the] American golfer... receive[d] an honorary doctorate in sports science from Bangkok's Kasetsart University[yesterday. The world No 1], whose mother is Thai, was criticised for receiving the honour at his hotel instead of the university where even more Nike workers could have protested about their pay compared to his. [The new Doc] never got his degree at Stanford University so the moral is clear: Drop out and play golf.

...The [academic] burned too brightly for [the current NZ No 1] and the rest as [it] won... in Thailand yesterday. [The world No 1] won his second Johnnie Walker classic and \$US190,729... with a record-breaking 263 – 25 under par at Bangkok's Alpine Golf and Sports Club. It was five shots better than the tournament record and four shots better than his [personal] best, the 21-under... fired in winning at Firestone earlier in the year... Fresh from his course-record 63 in the third round after [it] had bogeyed the first hole but fired 10 birdies on the remaining holes to equal his best-ever round... [the NZer]'s hopes of a second consecutive victory in the tournament – the first on the... European and Australasian tours – evaporated in the middle of his round. In the end, [the Maori] held on for third – seven shots behind [the winner...]

The book] *How I Play Golf* – which will be released in N[Z this week – underscores]... why the American golfer has become the No 1 sports[person] in the world. The 306-page, A to Z guide to the game is a one stop golfing lesson from the youngest Masters champion, the first person since 1953 to win three majors in one year and the fifth and youngest golfer to complete a career grand slam. The beautifully illustrated... book... ([rrp] \$59.95)... shot to No 1 on the U[S] bestsellers' list in the first week after its release and it promises to attain Bible-like status...

The rest of the world's golfers owe [the world No 1] a debt of gratitude according to [the] top Danish player... "[It]'s by far the greatest player I've ever seen... [B]ecause of him, we're all making more money and the rest of us can get down on our knees and thank him for choosing golf." ...But, perhaps, [a] great American sports columnist... put it best... in *Sports Illustrated* magazine. "I would pogo from Bangor to Birmingham to see [him] play. I ought to buy my dad a box of cigars for having me the year [dad] did... We're lucky. All of us. We're alive when the single most dominating athlete in 70 years is at his jaw-dropping best. Bathe in it. Wallow in it. Savour it. Take notes. Save newspapers. Your grandkids will want details."

...Fancy playing one hole with [the] world No 1 golfer... for a mere \$US80,000...? The Mission Hills club in southern China is offering duffers and experts alike a chance to pit their skills against [the No 1 when it plays] one 18-hole round on November 11, with four amateurs at each hole.

...WANT to see [the Chosen One or his European equivalent] in action in N[Z]? Well, keep dreaming. The... N[Z] Golf Association chief executive... said it would cost about \$500,000 to lure [the young Spaniard] to the N[Z] Open. To get [the world No 1] here would be at least \$1 million. "Five hundred thousand is the total purse we [put up]... We are never going to have a huge budget so the opportunity to entice a top 20 or 30 player is that much more difficult." ...[another] one of the reasons for this was the timing... The third week in January has been pencilled in for next year's event at an, as yet, unknown course... While not good for the world's best, it was perfect... timing... for Australasian players. The Open didn't clash with any other event and was perfect preparation for [the following] week's... Heineken Classic in Perth.

...The world's most recognised sports[person]... is coming to N[Z. The world No 1]... will play in a multi-million dollar tournament at the Paraparaumu golf club on January 10. The \$2 million tournament will be one of the biggest sporting events in N[Z] history. "It would be a dream to have [my boss] come down here and play," [his] Kiwi caddie... said. [The world No 1] will be paid \$4 million to play in N[Z. It] visits at least one new country each year. [The golfer has said it] would love to visit and play in N[Z.

...News that the Chosen One] has signed the contract which will bring him to Paraparaumu Beach to play in the N[Z] Open has delighted local golf fans. They will be even more impressed if the brave organisers can afford a field to stretch the talents of the world's No 1 golfer. Kiwis have never been too enthusiastic about sporting exhibitions, preferring the competitive element of real tournaments. And the PlusFore group of Wellington business[people] from the start aimed for a revived NZPGA tournament for [the world No 1] to play in. The decision to opt for an enhanced N[Z] Open instead may have freed some funds to attract some other stars to N[Z]. The International Management Group had apparently intended to boost the Open purse from \$500,000 to \$1 m... even with no [world No 1] in the field and that can now be expected to be a minimum... One of the major attractions will be [the NZ No 1], in the world's top 20 and back on the course where [it won last year. The Maori] has vowed to play each year in the Open without an appearance fee, but it would be unfair to hold him to that when [the USer] will be paid over \$4 m... The course has proved an ideal championship venue for the players and the club should resist any ideas of lengthening it significantly just for [the world No 1]. Better to provide some tigerish rough and rely on the wind off the sea to keep the scoring in check. The par-five closing hole... is perfect for a dramatic finish. [The NZ No 1] won... with an eagle on the last. [A fellow Kiwi] did even better, holing out in two on the way to his Open win.

...The controversy surrounding admission prices to January's N[Z] Open continues, with [one NZ golfer slamming the AUS]n Golf Union boss... [The Dunedin golfer] has spoken out against [the boss, suggesting it] take a hard look at the AGU's own record of running the A[US]n Open rather than criticise him and his fellow N[Z] golfers for deciding to take a stance against ticket prices for the January 10-13 event at the Paraparaumu course. [The AGU boss suggested the Dunedinite and NZ's No 1 golfer] "should be grateful to [the world No 1 for what it]'s done for the game and they should be competing and flying the flag for the locals." [The Dunedinite], twice winner of the N[Z] Open, has now joined [the NZ No 1 and two other] compatriots... in deciding not to contest the event unless there is a considerable reduction in the suggested asking price of \$500 a season ticket. "I don't know what this all has to do with [the AGU boss, but it]'s got the wrong end of the stick," said [the Dunedinite], just before teeing off in the rain-affected Scottish Open at Loch Lomond. "What [the NZ No 1] and all of us are trying to say is that [if] the only way they can afford [the world No 1] is to make it impossible for your normal support base, or average N[Z]er, to go and watch, then you can't afford him..." [The

Dunedinite said it] appreciated, as did [the NZ No 1], that there was still time in the intervening... months to reach an amicable situation with the organisers of the N[Z] Open, but unless there was a backdown in the foreseeable future, the event would go ahead without this country's leading golfers. "At \$500 a ticket, it's turning the Open quite clearly into an exclusive corporate wank,"... [The person who manages the NZ No 1 also] was outraged with [the AGU boss's] comments and was quick to defend [his client's] stance. "This has nothing to do with... the A[GU, and its boss] should have had the decency to contact his counterparts at the N[Z] Golf Association, who are backing [my client's] position... Everyone is thrilled [the world No 1] is competing in N[Z], none more so than [my client], but it has nothing to do with that. The thrust of [my client's] concern is the suggested entry charge..." [The manager] indicated that when [his client] spoke to event organisers from Scotland on Wednesday, they were not aware that the N[Z] Golf Association had long admitted spectators aged under 16 free of charge to the Open. "It seemed that the first time the organisers were ever aware of that policy is when... [my client mentioned it. My client's wish is that policy be kept in place..."

...Wellingtonians are prepared to pay big bucks to see [the] world golf No 1... play in the N[Z] Open in January, a new... independent... survey shows. So sold are most sports fans on seeing [the world No 1], they will splash out more than \$140 to attend one day of the Open at Paraparaumu.

...TICKETS... [for the NZ Open are:] \$40 per day... [for the] *Practice Day and ProAm*... \$105 per day [for Thur/Fri, and]... \$170 per day... [for the weekend. Concessions are:] FULL WEEKDAY... \$240... FULL WEEKEND... \$295... SEASON... \$450... 1000 FREE Season tickets are available to NZGA Juniors. Apply in writing with... NZGA Membership and Club No details to: AMP Golf Foundation... NB: "First Come/First Served" basis.

...[the world No 1's] return to the fairways of international golf next weekend will be, for the first time, without his caddy... The hot Kiwi bag-carrier... [-] who has won 85 events as a professional caddy (believed to be double anyone else in his profession)... [-] has put the world's best player on hold to attend a speedway meet in Tauranga. [The caddy] spent Friday at the... course near Wellington where [the caddy] compiled the yardage book [it] will use for [his boss's] celebrated appearance at January's N[Z] Open. As well as confirming... the [world No 1]... was a definite starter for the Open... [the caddy] revealed his emotional decision to bypass [his boss's] comeback tournament in favour of [testing] the... new Baypark speedway track at Mt Maunganui in his V8 Mustang saloon... [The world No 1] has missed three major events... [and] returns to action... at next weekend's Disney World Invitational in Orlando... [The world No 1], who is receiving close to \$5 m... to play in the N[Z] Open, will have [a] former Stanford University team-mate... carry his bag at Orlando. The... [world No 1] will play in the Tour Championship at Houston starting on October 29 following Orlando and [his caddy] will join him there following his speedway hiatus. They will also play in China... and... Japan... before making their way to N[Z] in January. The caddy... gave the revamped Paraparaumu Beach course the thumbs up after pacing... the 18 holes...

No doubts, [the world's greatest golfer] really is human... Golf has taken its revenge on [the Chosen One]. Tired of being pushed around, the world's most intricate game lured the upstart into the desert with a \$2 million appearance fee and launched an ambush. The dramatic implosion of sport's biggest name at the final hole in the Dubai Desert Classic has cleared the mirage of his invincibility. So [the world No 1] is mortal, fallible, flawed, like us. [The young golfer] knew it, and most of us did too; it was just that an army of Americans given to overstatement talked themselves into believing a god was in their midst. A god who transformed the world's most difficult game into a pageant, destroyed the 129th Open Championship at St Andrews and trashed the comfort zone in which so many cosily-attired golf professionals reside. [The world No 1's] failure to hold on to a one-shot lead... in the final round (and more particularly his double-bogey at the 18th) was a failure not of the body but of the mind: of decision-making, computation and nerve. It shunted America's run-away hyperbole train into the sidings. It punctured the unreality that has grown up around him. Golf is too intricate to be subjugated day after money-minting day. Golf fights back. We knew that, so why the shock when... [the world No 1] surrendered a last-day lead for only the fourth time in 27 events? Because we cannot bear the thought that our heroes are human, and because the metronomic magnificence of [the world No 1] last season led us to believe, wrongly, that a savage game had been subdued. Let us run through it again. [The world No 1] won three majors... and was victorious in... the most... events... since... 1950... One other detail. In September, [the world No 1] signed yet another multi-million-dollar sponsorship contract. It] has not won a Tour Event since... Nobody has dared to suggest that the two are connected, though somebody probably will. Many sports industry experts say that commercial "distractions" are bound to affect his game in the end. According to some reports, [the world No 1] was so upset by his capitulation at the 18th that [it] cancelled a charity putting contest with... the Crown Prince of the United Arab Emirates. This is said to have cost the charity \$150,000. But until we know the full circumstances of [his] dash for the private plane, we ought to remember that the Sheikh, the world's most powerful racehorse owner, would hardly notice if \$150,000 dropped through a hole in his pocket. [The Sheikh] would certainly think twice about risking his back by picking it up. Rich [people] like to play golf with [the world No 1]. They pay big money for the boasting rights. There is some substance to the accusation that [the world No 1] has distorted the economic structure of golf, but we can hardly start chastising him for charging oil tycoons the going rate, particularly when his own charitable foundation puts plenty back. The significance of [his] nine-iron into the pond at the 18th on Dubai's oasis course had nothing to do with money and how it distorts our perspective. With a three-putt in an earlier round and one messed-up finale, [the golfer] took us back to the great... debate about the nature of genius... If [the world No 1] wins three majors again this [season], the same American golf correspondents who are so relieved to see a measure of competition restored to their beloved game will plunder the thesaurus afresh for new ways to portray his brilliance.

...There must be a secret handshake for left-handed golfers on the U[S] PGA Tour, some sort of weird thing going on out there that we right-handed people don't know about. One lefty... is tied for the lead after three rounds of the... [latest tournament] and three others are in the top 45 and will earn decent cheques today... This is a tale of overcoming obstacles that right-handed people will never know about. It is, almost entirely, a tale of technology and how the machine has forgotten the lefties of this world. The power is in the hands of others. "The problem is that there are right-handed people making the left-handed clubs," said [one of the three others], who is at even-par 216. This is how bad it is. When [the lefty who is tied for the lead was 13, it] wrote a letter to [the Golden Bear], asking the legend whether [it] should deny his nature and become what society wanted him to be. A righty. Stay a lefty, [the legend] wrote back. "When the greatest player of all time tells you to stick with it, you're going to do it,"... But then [the leading lefty] had to face the reality that all lefties must face. There are fewer clubs available for left-handed players because there are fewer left-handed people. Companies that make golf clubs do not need to put as much effort into making as many different models for lefties. "Equipment was the biggest problem I had growing up as a player," said [another of the three others], who is two-over after three rounds. "It was very frustrating for me at a younger age to have all this great equipment coming out and not be able to get it for another one or two years. [The third of the three others], who is at two-under 214, said: "I never really felt at a disadvantage, other than as a kid walking onto a pro shop with a thousand clubs and there were only two that were lefty." [The leading lefty said it] had not changed his clubs in three years. Part of that might be that lefties learn never to look around for them much. At every PGA Tour stop, there is a trailer with equipment for players to test filled almost entirely with right-handed equipment... Years ago lefties often had difficulties with right-handed golf teachers who taught mostly right-handed students. The technology now is such that lefties can have their swing filmed and computers can flip the image, allowing a teacher to analyse players' swings as if they were righties. And then there are the golf courses. Most seem to be set up for righties who fade the ball from left to right, but the lefties... say it is not an issue. They have to find ways to get the ball to the hole in the fewest number of strokes, just as righties do. However, Medinah is regarded as a course more accommodating to a left-hander... With millions of people watching, the lefties of the tour yesterday rose up, standing up for the people who refuse to act right... But it is lonely out there, and heroes are hard to find. [A NZ golfer] is the only lefty to win a major...

A Massey teenager amazed golfing professionals when [it] sunk her ball in two swings on a par four hole at Waitakere Golf Club... [The] fourth former at St Dominics College, got the “eagle” on the 10th hole at the recent Honda Nine Golf Fun Day... [The person] who co-ordinates sports at the school, says it was a great achievement. “It’s virtually unheard of for a girl her age.” [The]Waitakere Golf Club manager... agrees. “Very few [gals] I know have had an eagle on hole 10.” [The teenager, who] was a bit surprised herself... has started golf lessons, and is working on getting her handicap down. Handicaps are like grades, so in principle the lower it is, the further the golfer can hit the ball. Over the last year [the teenager] has lowered her handicap from 54 to 23... When [the teenager] tells fellow students [it plays golf, it] often gets a funny reaction. “They say ‘oh, do you play golf?’ like it’s bad.” But [the teenager] does not let this stop her. [The teenager] will be competing in the North Island secondary school girls’ golfing championships this July. [A spokesperson for] North Harbour Golf says the ratio of girls to boys playing golf is about one to 10. Golf is traditionally seen as more of a boys’ sport... But [the spokesperson] has noticed an increase in the number of girls over the last three years... The number of girls participating... [in t]he annual golf fun day started two years ago, and... run specifically for girls with little golfing experience... has risen from 12 in [the first year] to 56 this year.

...Some people reckon it’s a good walk spoilt, but for 100,000 N[Z]ers over the age of 50, bashing what one wag called an undersized ball round an oversized paddock is a pastime that puts a spring in their eye and a breath of fresh air in their lives... Golf... is enjoyed by 460,000 people of all ages on 400 club and public courses throughout the country. More than 132,000 golfers are members of clubs... Club membership can cost from less than \$200 a year to upwards of \$1500 and for the casual player, green fees vary from \$5 a round at some country courses to... \$400 at a top layout... They are drawn to the sport for a variety of reasons including the fact that as well as being good physical exercise, golf is a mentally challenging game that calls for a high level of hand-eye coordination and, unless you want to run out of playing partners, an even temperament. It is also a great leveller. “Thanks to the handicap system, you can compete with anyone,” says... [the NZGA’s] operations manager... “You could have a game with [the world No 1] and still start out on an equal footing.” ...On the tee... you are just as likely to meet a truck driver as a property developer.

...[an AUSn firmly believes it] can win every golf tournament [it] enters, but also knows her freakish results of the past two years cannot go on unabated. Following her six LPGA tournament victories [last year, the AUSn] went one better this year, winning seven times from 22 outings and sweeping a raft of awards. The A[US]n, who will be 26 next month, has made such a habit of winning it was a surprise to hear her talk down her chances of another bag of titles [next year]... The highlights... were undoubtedly the two majors [the AUSn] won, the Nabisco Championship and the U[S] Open... With the British Open belatedly gaining major status following the loss of the Du Maurier Classic, [the AUSn was confident it] could add another major to the three [it] has won so far... As [it] did last year, [the AUSn] won the player of the year award, topped the LPGA money-list with \$US1,876,853... and won the Vare Trophy for the best scoring average of 70.05 strokes a round. [The AUSn] also earned enough points for the golf Hall of Fame, and now needs only to put in 10 years as an LPGA member for induction. [The AUSn] is also within striking distance of taking over... as the leading all-time money-earner on the LPGA tour. [The LPGA’s leading money-earner], who earned only one-third of [the AUSn’s] prizemoney this year, has \$US6.83 million. [The AUSn] has career earnings of \$US6.16 m... [In local news, a] Wanganui golfer... continues to have the sort of year that even the superstars might envy. The 51-year-old made world headlines by holing in one either side of the new ...y[ear] on December 31 and January 1. Yesterday [it] belied her three handicap with a par round of 71 at the Rotorua Golf Club to lead a field of top amateurs in the first round of the Honda national strokeplay championship. On a day when the rock-hard Arikikapakapa course sent most scores soaring, [the 51-year-old’s] closest challenge came from [the]Malaysian champion... on 72, with the next best 76s... [The Malaysian], a graduate of Brigham Young University in Utah, is a member of a government-sponsored squad who do nothing but play golf. The 26-year-old was in N[Z] last year and was runner-up... in the national matchplay championship at Russley. This year [the Malaysian] has played as an amateur on the Asian pro circuit, making the cut in the last two tournaments... Seven professionals were invited to play alongside the amateurs [at Rotorua]and the best round of 76 came from [a local pro. Another pro], now based in England, had a 77... The field will play 36 holes today and the final 18 tomorrow...

[If you see a certain Aucklander in a park it] may look like [the Aucklander’s] aiming a frisbee at a giant beer can – but don’t be fooled. The Henderson Valley [resident] is demonstrating the skills that won him a national title at the frisbee golf championships. [The Aucklander] won the masters division and finished third overall among 40 competitors at the 22nd national champs at One Tree Hill. Frisbee golf – or disk golf – is a professional sport in the U[S] and Europe. It’s played like normal golf except frisbees are aimed at targets – anything from steel poles to trees – instead of balls being hit into holes. A frisbee golfer carries a selection of frisbees as golfers do clubs. “The different frisbees are designed to flow further... You can play with the same frisbee if you like but if you play on a more professional level you tend to have a set of frisbees. [The Aucklander] has played the game for more than 15 years, winning the overall national title in 1997 and the masters title twice... A N[Z] team is being confirmed to compete in the world frisbee golf championships in the U[S] later this year. From the world championships, players can qualify for the world games in Japan next year. [The Aucklander] hopes to get to the worlds but says it really comes down to who can afford it.

...[a NZ]er... failed to make enough money to retain his full U[S] PGA tour card, but... believes [it] has accumulated a wealth of experience to stand him in good stead on the world’s toughest golf campaign next year. The Palmerston North right-hander, in his rookie year among the sport’s elite, finished 11 places outside the top 125 and a guaranteed place on [next year’s] tour. But... will be entitled, as a top-150 player, to at least a partial exemption and the prospect of at least 20 tournament starts... [The NZer] tied for 20th when the last tournament on the calendar, the Southern Farm Classic, ended on Monday. His \$US21,535... share of the pot lifted his earnings to \$US297,912, not enough to make the cut, but a welcome boost to his coffers all the same. With his game solidifying after a sub-par start to the year[– when it]... made only one of the first eight cuts... [– the NZer], though exhausted, wished the tour had another month to run. “I usually play well at the end of the year. It’s sad it’s come to an end, but I’m beat to death,” said [the NZer], relishing the chance of a fortnight off... [before getting] ready to return to the cut-throat tour qualifying school next month. [The Palmerston North golfer] emerged from qualifying last year to become the only N[Z]er with a full tour card and has a exemption through to the finals. “All I can do is better my ranking. If I can finish higher I’ll get more starts...” ...His season’s highlight was a share of [4]th in the Canadian Open. [A c]lose friend and fellow Palmerston North golfer[(r:p1489, ln53) was 2]nd in that tournament, a shot behind [the]world No 1... [The close friend] was the best-performed Kiwi on the tour, earning \$US1,142,789 to finish 37th and earn a spot in the US Masters.

...Guess how much [an AUSn’s] retirement account with the U[S] PGA Tour will be worth – \$A2 million, \$A20 million or \$A200 million? If you answered \$200 million, take a bow. That’s how much [the AUSn] is projected to receive eventually if [it] keeps playing at a high level for the next dozen years or so. “It’s mind-blowing... The numbers are phenomenal. It’s hard to believe they’re possible.” [The AUSn] was one of many players whose jaws dropped when they were presented with their projected future worth at a recent meeting of US Tour players. The 30-year-old Victorian stands to become one of the major beneficiaries of the Tour’s astonishingly generous performance-based pension plan, but even the so-called journey[people] will not be begging for money on street corners. “A guy who just keeps his card, who averages 125th on the money-list [for 17 to 20 years] could get \$US30 million... If [the world No 1] played as many tournaments as me, and kept his record, [it] could have... \$US1 billion, no problem.” The projected payouts for the tour’s pension plan are not etched in stone, it should be noted. [The AUSn], for example, would have to finish an average of about 30th on the money-list for the next 12 to 15 years to be worth \$200 million. Over the past four years, [the AUSn] has averaged better than 30th, finishing 18th, 40th, 25th and 24th respectively... The performance-based plan, which began in 1998, rewards players for their position on the money-list, for making cuts, and for averaging at least 25 tournaments a year, so the more often a player plays, the more

[it] stands to make. The projections assume each player's plan will grow at 8[% annually until each player] turns 60, the earliest [they] can cash in. But even if the projections turn out to be too high, there is no doubt [the AUSn] will be... extremely rich... when [it] turns 60.

...The Tour Players' Association (TPA), which was formed last August and looks suspiciously like a union but claims it is not, wants travel expense compensation for players, among other changes... [I]t seems hard to believe[but] PGA Tour golf players, humankind's quintessential models of the good life, aren't entirely satisfied... To Joe Public, this looks like: • A two-iron to the teeth of every fan, sponsor and unpaid tournament volunteer who has made it possible for 50 players to earn over \$US500,000 [annually]... • Backstabbing the cash cow just when it is on the verge of growing even fatter. The new four-year, \$US650 million... television contract, which is under way this year, will boost purses by at least 30%... Unlike most pro athletes, PGA Tour players are independent contractors. The PGA Tour, a non-profit organisation, runs the business, sets policy and controls allocation of revenues. According to the tour's 1997-1998 annual report to membership, the projected 1998 net revenue... was \$US207.99m... Of that, \$US153m... was allocated for 1998 purses, another \$US26m... for PGA Tour and senior tour retirement plans... [However, since]... the tour's projected gross 1998 revenue was \$US405m... the TPA[– which]... about 50 players have joined... although only half have paid the \$US1000... association fee... [–] wonders whether players are getting their fair share. It wasn't complaining... one of the TPA's organisers... said, just asking. "It's a business, and when you can't see what's happening with it, that's when you're blindly led... I reserve faith like that for religion..." The TPA's lightning rod issue – travel expenses – is not new... [W]hen players come to tournaments, they are required to play in at least one, sometimes two, pro-am events, for which they are not paid. Corporations and individuals are charged thousands of dollars to play in these pro-ams. And yet, come Friday, tour players who miss the cut could actually lose money for the week... What no one seems to know is where this TPA thing is heading... [but] other major American sports like baseball and basketball... took radical strike action and lost favour with many of the fans. Until the TPA gains more weight that's unlikely to happen in golf but the thought of the PGA fairways empty of the pros is chilling.

...[much like their golfing counterparts, the professional tennis players' association for guys (ATP) and its gal equivalent (WTA), rank members – 'the rankings go from 1 up to around 1404' (depending on how many players have just one ranking point; a Cantabrian 'won his first-round match at the Hamilton tennis Futures yesterday, earning him his first ATP singles ranking point'). Incidentally, the ATP might wish it could also gag its members after a former] world No 1... [and] winner of four Grand Slam tournaments... [who] has earned \$US13.6 million... in his 12-year professional career but... is now ranked 77th... said... thinking is bad for your tennis. "Tennis unfortunately doesn't encourage any kind of intellectual development. It actually discourages that... The dumber you are on court, the better you're going to play... I think that's a kind of truism of sports. When you're playing the best tennis, for example, you're in the zone where you're not thinking about anything. It's all instinct." ...Despite his misgivings about the game's intellectual possibilities, and his very quick exit from the... [guys' AUSn] hardcourt championships... in a 5-7 3-6 loss to [a]Czech player... the [No.77] is not yet ready to give up tennis... [The User], aged 28... is due to receive a wildcard entry into the Heineken Open in Auckland next week[, despite the misgivings of locals who think the wildcard should go to a NZer in order to help its development. Since 'A.F.Wilding, NZ's greatest-ever tennis player, who won the Wimbledon singles from 1910 to 1913 – a year when the NZer also won the world hard court title in Paris and the world covered court title in Stockholm – was killed at Ypres during WWI' (Wilding also 'won the AUSn Open twice'), only one other NZer has reached a Grand Slam final (Wimbledon 1984). Confirming NZ's lowly status in professional tennis, the current top NZ gal tennis player has just 'improved her singles ranking almost 200 places to around 750.' In February, the NZer] had a singles ranking of 707 and at one stage it blew out to 1000...

[NZ's top guy tennis player] could finish playing tennis right now. Abandon airline queues, chauffeured cars, hotels, and hitting balls for a living. The husband and father of two could easily wrap himself around his family, tee off on his eight-handicap, revel in his fat bank balance, and not miss for a second the pro tour [the NZer] has been a part of for 14 years. [The NZer], who will be 30 next April, has for a year talked about a too-soon end to a polished career, worn down by having to make his mark from this end of the world. But when the new year comes around, so will [the tennis player], ready to clock in one last season in what [the NZer] regards as a job, playing the breadwinner before his enthusiasm wanes completely. "I don't have anything to do after tennis yet..." However, [the player who is] 96th-ranked... cannot see himself finishing out... [this year. Now that the NZer] is living back in Auckland, [the tennis player] cannot stand to leave his family for long, especially since they grew by one in July with the birth of a] daughter... This year [the NZer took his] wife... and son... on tour with him, but not any more. Instead of relaxing at home, [the NZer] had intended playing doubles in the Eurocard Open in Stuttgart this week in a late bid with [his US doubles partner] to make the ATP world doubles championship... The pair, Auckland champions and quarter-finalists at the A[US]n, French and Wimbledon slams, were fifth in the team rankings for a while and 12th this month, not far off the top eight ATP qualifiers, but a first-round loss in Singapore a fortnight ago helped to kill their hopes... [The pair have now] parted amicably, with [the NZer] unable to commit to the fulltime doubles schedule [his doubles partner] seeks next year. They won't be defending their title together in Auckland in January... [The NZer's] excellent doubles effort – Auckland was his ninth title, the most by a Kiwi in the open era – hurt his singles, in which [the NZer] went without a win at the majors for the first time... and his ranking fell.

...North Harbour's [No 1 tennis representative] has become N[Z]'s latest member of the "200 club" following appearances in finals of Futures tennis tournaments. [The North Harbour player] is the 13th N[Z]er to reach the top 200 since ATP rankings became the official barometer in 1973. [The North Harbour player] was ranked 199th after reaching the final of the Sprint tournament in the U[S]. In reaching the final of a tournament in China his ranking is certain to go even higher. His improved ranking means [it] can move to second-tier Challenger tournaments and qualifying for the French Open at the end of the month. [One player in 1972 and another in 1984] reached No 19 on the ATP list, the highest ranking achieved by N[Z] players. Others to make the top 100, with their career-high and year in brackets, were... (24, 1973)... (31, 1989)... (47, 1983) and... (66, 1973).

...The motorists on Interstate 80 near Pinole, a small town north of San Francisco, could never have imagined that the girl running in and out of traffic yelling obscenities was once one of the brightest hopes of American junior tennis... By the age of nine, this tall left-hander with sandy blonde hair could beat most adults. At 13, [it] reached the final of the Easter Bowl Tournament, a showcase for young talent in America. A year after, in the final of a tournament, [it] narrowly lost to a former Wimbledon champion... [The girl] was called "the brightest... star on the horizon..." Still, [the girl] had a problem. "Her mother worked her about five hours a day on the court," recalls [a friend] who used to hit with her, "then made her run sprints." By the age of 14, [the daughter]'s body was hobbled by over-use injuries. "[It] had shin splints, blisters, stress fractures and bone spurs," recalls... one of her coaches. "There was too much skipping rope, too much pushing." At 15, [the daughter] rebelled... dropped out of school, moved out of home and began to sleep on the streets. [The teenager] became bulimic and took drugs such as PCP... and methamphetamine... dyed her hair, had breast implants, began to work as a lap dancer and was arrested several times for prostitution. Finally... having been released from the psychiatric emergency unit of a hospital, [the teenager] walked into a petrol station, put 23 litres of petrol in a can, got in a truck, poured the petrol over her head and... set fire to herself, sending a 12m column of flame into the air... Ever since Charles "Papa" Lenglen laid a handkerchief on the ground and made his daughter... hit ball after ball until [the daughter] could routinely land it on the little linen square, tennis has been famous for its "sideline warriors": driven, often terrifying, parents who take their children's raw talent and mould them into champions. Such as [the mother] who eased the pain of a broken marriage by drilling her son... on the tennis court. Or... [the father] who dreamed of tennis greatness for his son and threatened to sue anyone who criticised him. Some have been athletes themselves, such as... a former Olympic boxer, who hung a tennis ball over his son[']s... crib and once threatened to break the legs of a tournament director who, [the boxer] thought, had given his son a bad draw. Many... are first or second generation migrants who are determined their children should not have to suffer the indignities they have known. Nearly all begin to chase the dream almost as soon as their children were born. [A German father] began to drill his daughter... as soon as [his

daughter could walk. Another father] drew cartoon characters on tennis balls so that his seven-year-old daughter... could focus better on the 500 to 600 balls [it] served to her each day... [The father of another teenage player to publicly go off the rails – a]t 14, a Grand Slam singles semifinalist, by 20 in a police mugshot over petty theft and drug use... [-] began planning the career that would rob his daughter... of her childhood while [it] was still in the womb. As a baby, [the father] had her doing sit-ups in her crib. By the age of three, [the daughter] rarely had a tennis racquet out of her hand... As money and ambition have become the driving forces of the game, so tennis has spawned more parents from hell. Such as... an ex-convict, who made his daughter... train eight hours a day, hitting balls at her until [the little girl] cried. At 13, [the ex-con] stopped her education and ferried her to tennis tournaments around the US. At 14, [the ex-con's daughter] turned pro and for the next four years, until [it] broke away, her father bullied her and beat her as [it] drove her to pursue wealth and greatness. "[Dad] would slap me if I lost a match or even if I had a bad practice,"... [Her father]'s behaviour at tournaments was so abusive [it] would shout "Kill the bitch!" at her opponents or pelt them with drink cans) that [it] was finally banned and [his daughter] took out restraining orders against him. Then there is [the]... Serbian truck driver and one-time boxer... [that] enrolled his six-year-old daughter... in a tennis school after seeing... [the 600-ball server's daughter's success], who caused a sensation at Wimbledon this year. The All-England Club threatened to ban him after [the one-time boxer] smashed a reporter's mobile phone, made obscene gestures, screamed abuse and, dressed in the English flag of St George, accused Britons of being fascists. [The one-time boxer], who last month took over as [his] daughter's coach after sacking [the coach who is a]tennis legend... keeps a very tight grip on the family's breadwinner. "[The one-time boxer] once told her to stop smiling... [and] not to be friendly on court – you have no friends when you go in, only when you come out." For every one of these high-profile cases, there are dozens of children whose parents want them to be famous and who are subjected to scarcely less abuse. "Everyone says they don't mind if their children win or not," says a former employee of the Bollettieri Tennis Academy in Florida. "Then, when they lose, they take them out to the car park and beat them." "I've seen parents hitting and screaming at children," said... the sports psychiatrist who helped [the former 600-balls-a-day-hitter] after her on-court stabbing in 1993. "I was at a junior match and when this boy's opponent made a point his father would scream at him, calling him a dirt-bag." Tennis is unusual in that, unlike Formula One or football, children can often play the game as well, if not better than adults. This is particularly true in the [gals'] game, where child stars... have risen to the top while still teenagers. In no other sport are children exposed to such intense pressure and so much money... Nearly a quarter of the players who earned more than \$300,000 on the ...WTA... tour last year were under 21. No wonder then that the competition among the financially interested adults on the sidelines is so fierce... Last month at Wimbledon, the top 16 [gal] players banned their mothers from the dressing room amid claims that some mothers were making some of the players uncomfortable, if not intimidating them.

...[the person] at the helm of British tennis fears the first drugs scandal in Wimbledon history has exposed the game to ridicule... [after the offending professional] escaped a mandatory ban... [The] Czech tennis player... who failed a drugs test at last year's championships... [- which] had a surplus of \$90m... [-] successfully appealed against... an automatic one-year ban... by pleading ignorance of the presence of nandrolone in his body... [T]he director of national training at the Lawn Tennis Association... said: "This judgment sends out the wrong message... If I go to court accused of being drunk and submit a plea that I don't remember how I got drunk, does that make it okay? The LTA has taken legal counsel to make sure that British tennis is in line with the rules of the International Tennis Federation and the International Olympic Committee. And we ask ourselves two questions: is that work a waste of time? And where do we go from here?" ...The appeals committee [did, however,] order... the 30-year-old Czech to forfeit his ranking points and prizemoney of around £60,000... from... his... Wimbledon... quarter-final defeat... [The LTA director's response to that decision was]: "We have a good drug-testing programme in tennis, but this case is going to leave a lot of people mystified. [The Czech] has been fined and had points taken away, yet... is not suspended. Is [the Czech] guilty or not? ...this whole episode is quite bizarre." ...[despite his concerns, the director shares the] belief that the positive test does not identify a drug culture in tennis. "I don't think there has been a cover-up... Tennis is not like other sports. If anyone was taking steroids, you'd see it, and anyone who disappeared from the tour for six months is effectively finished because you vanish from the computer." ...[the Czech], at home in Prague before flying to Melbourne later this month to defend his A[US]n Open title, is relieved. "I have been under a big black cloud stretching from here to eternity,"...

A[couple of USers,] ...the two greatest tennis players of the past decade, have criticised [a]Russian... for saying tennis players are not paid enough. "[The Russian] should take his prizemoney when [it]'s done here and go buy himself some perspective," said [one of the USers, the son of a former Olympic boxer and] the defending A[US]n Open champion. "I'd be hard-pressed ever to spend time with a person who thinks that making hundreds of thousands of dollars is not enough." [The Russian], a multimillionaire who uses his own jet to travel to tournaments, raised eyebrows on Thursday when [it] said tennis fared poorly in comparison with some other professional sports. The former French and A[US]n Open champion... who has won \$US18 million... in prizemoney, said many players shared his view. [However, the two USers], winners of a staggering \$US62 million in prizemoney between them, disagreed. "I think we're all overpaid," [the second USer] said. "We play a sport and we get paid very well. I don't play for the prizemoney, I play for the titles." [The second USer] has cut the number of tournaments [it] enters over the past five years to concentrate on the four Grand Slams. "[The Russian] plays every week, so you know what [it] likes,"... In total, the... ATP Tour carries prizemoney of \$US65.5 million, excluding the four Grand Slams... [But p]layers often earn many times more than their prizemoney in endorsements and sponsorship contracts, allowing the best players to live privileged lives... [The defending champion said the Russian's] comments were disrespectful to the game's fans and [it] had told the Russian not to speak on his behalf. "The fans deserve a lot of respect. They pay for the tickets and they come out and they make it possible for us to play tennis for a living." [The Russian said it] hoped fans would not judge him harshly for speaking his mind. [The defending gals'] champion... voiced some support for... [the Russian's claim. By the way, AUS]n Open tennis officials announced a new scoring system yesterday, with mixed doubles as the guinea pig. For the... mixed doubles, matches will be played over two sets with a tiebreak game added if the match is split one set apiece. [A Tennis AUS spokesperson]... said the new rule, dropping a third decisive set, would speed up the game which would help television coverage at the elite level, but also benefit social club players. [Editor's note: Ironically, 'in an attempt to slow down games, a larger ball has been introduced, and players can now legally use either size – the decision is up to the players' (but if they disagree, does that mean they will use one of each size?); note also that in professional competitions, balls are 'renewed after the first 7 games, not including the warmup, then after every 9 games'.]

...Tennis fans love to play doubles. But ever notice how many stream for the stadium exits after a [guys'] singles final, skipping the doubles title match that follows? [Gals'] doubles are flourishing, with many of the big names in singles... teaming up before full houses. But top [guy] players shun doubles, relegating them to the shadows of the professional game. [Guys'] doubles are so much a sideshow that tennis officials, promoters and players' representatives met at the A[US]n Open... this week to debate how to bring fans to courtside, and cash to promoters' pockets. "There are a million suggestions, from the radical to the reasonable. The goal is to find one that works for everybody," said... [the] vice-president of the Association of Tennis Professionals... Officials at the ATP, which runs 68... tournaments annually in 31 countries, declined to discuss specific proposals. But the year-long debate over how to change [guys'] doubles is all about money. [A]South African... said there were many doubles specialists whom tournament directors felt were not bringing in the revenue to justify the prizemoney. [The South African] was seeded No 10 in the singles, and, with [his Russian (r:ln40 above) partner], No 3 in the doubles at Melbourne Park. The South African, along with the workhorse Russian, are rare specimens. [Two USers (r:ln40 above), the top AUS]n and other marquee names focus on singles in an ever-more cut-throat field of competitors... Players and... organisers agree that doubles would benefit if teams paired up more often instead of mixing and matching just before a

tournament draw. "There can be more promotion, but the doubles teams have got to be teaming up more often than a few months a year," said... [the] director of the \$US750,000... ATP world doubles tennis championship last month in Bangalore, India. "People can hang a hat on them and follow them,"... Doubles lost its most famous pair last year with the end of the [AUSn] partnership... who won 11 Grand Slam titles... [■ Yesterday a British player] out-served... the... home hope... in a battle for power. [The British player]'s 7-6 (9-7), 6-3, 6-4 victory leaves the Open without an A[US]n in the third round of the [guys'] draw for th[e] first time since 1969, the first Open of the professional era.

...One of the most memorable tennis matches that [the German umpired was the AUSn Open defending champion]'s thrilling five-set victory over [the champ's compatriot from a broken home (r:p1499, ln66)] in the quarter-finals of the 1989 US Open. "It was an unbelievable match," said... the longest-serving professional umpire in tennis. "The crowd was incredible." [The umpire] has a few less-dignified memories as well. [The son of a litigation-happy father (r:p1499, ln67)] screamed at him at Wimbledon in 1988. [An AUSn] swore and argued with him at the 1991 A[US]n Open. A South African (r:p1500, ln66)] refused to shake his hand after a match last year in Toronto. [Another USer] gestured obscenely at him this month in N[Z]. Now, after a colourful career marked by occasional sparring with the sport's marquee names, the 49-year-old German is on his swansong. [The German] will retire as an employee of the A[TP] when the A[US]n Open ends tomorrow... [The German] has dealt with drama in his last Grand Slam: last weekend, [the AUSn player seeded] No 7... swore at him for overruling a line call in a tense fifth set against [the] eventual winner... The A[US]n was fined \$US2000... [The German], a club tennis player, said [it] had never complained to the umpire about a call. "I know how difficult it is." ...[the German] has been a fixture on the tour since [it] became a pro umpire in 1987, abandoning a career as a civil servant in what was then West Germany. By his estimate, [the German] has umpired more than 4000 matches in up to 40 countries. "I don't think there was any tennis player ranked in the top 300 in the last 15 years that I haven't umpired,"... Starting on Thursday, [the German] will manage the Iphitos tennis club in his home town of Munich and help to organise an annual ATP tournament there. In many ways, the pattern of [his umpiring] career has mirrored that of the players...: the routine of international flights, anonymous hotel rooms, and trying to stay sharp every match. "You have to be good every day... If you're not good enough, there are a lot of young kids who want to take your job. They want to get where you are." The secret to longevity as an umpire is staying neutral by steering clear of the players off-court, [the German] says... Umpiring is a far more professional affair than it was when [the German] embarked on the pro circuit, and the notorious disputes and challenges of old are rare these days. Today's players learn about the organisation of the game at one-day ATP workshops, most notably that no amount of complaining will make an umpire change a point call. The money stakes are also higher now, making it less likely players will expend energy on arguing individual points... Line judges now must pass a 120-question exam on tennis rules; if they get more than five questions wrong, they are out. They take an oral test in English, the sport's international language. Umpires also get help from the Cyclops, a machine that detects serves that fall wide. "The eye is tricky, especially covering the sidelines... A ball can be out by two centimetres and it looks like it's good from the chair." A company in Norway has developed a metal chip that, once embedded in a tennis ball, will signal whether it lands out. But [the German] said the removal of human umpires would make the game sterile. Besides... "with close balls and close decisions, players don't rely on machines. They believe what they want to see..."

They say that second to Hollywood, the tennis circuit is the world's most glamorous lifestyle... After... the... gorgeous... Argentin[ian]... burst on to the tennis scene... by reaching the semi-finals of the French Open at 15, [it] was hailed as the sport's first real sex symbol. The miniskirts [the Argentinian] wore off the court were as hot as the little numbers [the player] wore on it. The sultry beauty from Buenos Aires... also loved plunging necklines and bikinis that show off her super untanned shape. [It] got such a following that the ballboys at Wimbledon began selling the sweaty towels [the Argentinian] used in her matches. "It makes me feel good to be a sex symbol," [the Argentinian] says. "Tennis is only for a few years but looking nice is for the rest of your life. In the end, to look attractive, to enjoy simple things, is more important than anything – even tennis."

...the sixth-biggest money winner in [gals'] tennis history... announced her retirement today... The glamorous, 26-year-old Argentine... turned professional at 14, and was hailed as the rival most likely to challenge [a German (r:p1499, ln70)] for dominance of their sport... Her highest world ranking was No 3 in 1989, 1991 and 1992[, but the Argentine]... won only one grand slam title – the U[S] Open in 1990... Overall, [the Argentine] won 27 singles titles and 12 doubles titles, and earned \$12,497,651.50... In addition to her winnings, [the Argentine] made an estimated \$32 million from a perfume bearing her name, modelling clothes in fashion magazines and endorsements. Her final tournament ended in a first-round, straight-sets loss... It was the second straight event at which [the Argentine] was ousted in the first round, and dropped her world ranking to 31 after a decade in the top 10. Once again, the German was this year's leading money winner for gal tennis players with a total of \$US2,665,706. The 2nd to 4th-placed money winners all made over \$US1m' (however, the 3rd-placed money winner is actually 2nd in the official rankings)...

MUNICH – ...The first British player to contest the \$US6 million... Grand Slam Cup... the richest tournament in the game... [– which is only for the] best performers from Wimbledon and the French, US and... [AUSn Opens –] showed a killer instinct and experience beyond his 22 years to defeat [the] American Wimbledon finalist... in 75 minutes, earning \$US431,250 [(or the equivalent of the year's earnings of the 12th-placed gal tennis player)] in the process. [The Brit], who became eligible for the tournament only after late withdrawals, now takes on[the] local hero and A[US]n Open champion... where \$US812,500 will be at stake. The winner will get a shot at the top prize of \$US1.625 million... The [AUSn Open and] three-times Wimbledon champion took just 58 minutes to defeat [a Swiss player] who came out of retirement to play here. - 1996

Before [Miss Swiss] went off to rollerblade beside the Yarra River... the... 16-year-old... elaborated on the \$US10 million clothing and endorsement contract [the teenager] scored on Tuesday. It splits into \$US1.4 million a year, depending on her ranking[, which last year was 5th]. "If I will be No 1, I will get more, but if I drop, less... So I have to try and stay where I am." A teen with millions in a piggy bank? In tennis, that's normal...

Lord knows, it was bad enough in the shade let alone playing tennis at the A[US]n Open... The day after the biggest one-day slaughter of [gals'] seeds in open-era grand slams, when on-court temperatures recorded 53 deg C, it approached 60 yesterday. It wasn't about tennis, it was about survival... Throughout Victoria, all fires, including welding and soldering, were banned. [The 9th seeded gal, backed by her 8]th seed... opponent... asked for a temporary ban on tennis, wary after seeing their peers need post-match saline drips on Sunday. "We said we don't want to be like this,"... All they got was a 30-minute delay before organisers denied their request[, but eventually the organisers]... got wise... Buckets of ice and fans were provided by players' chairs, and the players brought towels filled with ice and wet shirts... Players' solutions to the extreme heat, exacerbated by a rubber court which sucks it up and spits it back with more venom, have included closing the roof and invoking 10-minute rests after split sets in [gals'] games, as happens in WTA tournaments, and after four sets in... [guys' matches. The No 1 seeded guy (r:p1500, ln46)] got into another of those five-setters [the USer]'s famous for... This time, his tormentor was [a] fearless 19-year-old... whose last name is Slovak for hunchback. There's nothing deformed about his game though. [The 19-year-old] made the biggest leap of anyone into the top-100 last year, from 364 to 77... "The heat is part of playing here and... I don't think anything is going to happen until someone is physically so depleted that their health is in danger. We saw some girls yesterday really suffer. These are the toughest conditions I've ever had to play," said the victorious guy's No 1 seed. Victoria's AUSn Medical Association... representative... has warned tennis players risked extreme dehydration and possibly death on court... with such high temperatures... • [The WTA]... world number one... [and 7]-times Wimbledon champion, who suffered a surprise [4]th-round defeat in the A[US]n Open, is... still [being investigated by German prosecutors. Her]... father was found guilty last week of evading millions of dollars in tax on her...

career earnings[, which] are estimated at more than \$US61m... [The German star] has told tax investigators [that it] entrusted her financial affairs to her father from an early age and had little idea how her money was managed. But... by law [the tennis star i]s still liable for her own tax deductions.

...The huge amounts of money involved in tennis these days are ruining the game, says [a retired US player (r:p1501, ln7)]. The person] behind the Champions Tour (which no doubt provides him with a healthy pension) made a piddling \$14.5 million in his time on the ATP Tour. [The f]ive-times U[S] Open champion... says the joy of playing and quest for excellence have disappeared. "Once tennis turned into big business, I think a lot of attitudes changed and it wasn't that you really wanted to be the best player." [The retired USer] does have a point. [His compatriot and current world No 1, Mr] 'Personality Bypass'... earned \$11 million [last] year (not counting endorsements) for mopping about the tennis courts of the world.

...[an article calls the retired USer] a... mega-brat and a clown and blame[s] him for players becoming overpaid, pampered, pouting pains in the backside. "...we once had generations of tennis players who knew how to entertain by playing tennis like sports[people] – not game-show hosts."

...[a former tennis great withdrew his support and approval for a Swedish TV documentary on his life once it found out the programme was to discuss controversies including his financial woes, and demands for cash to represent his country. The Swedish Tennis Federation was forced to meet its all-time great's demands for \$US120,000 in 1979 for Davis Cup play. Creditors claim the tennis player has owed them \$1 million since 1989, but the player says it is penniless after being tricked out of his fortune in bad business deals, and declares no official income in Sweden from his Masters tour earnings.]

...the retired Swede said recently] on life after tennis... "I lost a lot of money, but that is not a major problem... all I can say is that I survived."

...[Few] sports... these days could survive without a national league... [I]n the draconian days of sport in the 1960s and '70s, few codes [in NZ] had national leagues. Soccer probably started the ball rolling when it kicked off its national competition, and slowly... came rugby, league, basketball, netball. Even tennis decided it required some sort of national league to provide its top players with regular competition during the summer where Kiwi fans could catch a glimpse of the best we had to offer. Today, it is almost unthinkable that any sport would can their national league. Some such as netball and rugby, are continually tinkering or fine tuning their competition. But to dump the concept? Nope, wouldn't happen. Except tennis recently did just that. It took a national league... and tossed it on the rubbish heap. Tennis N[Z] justified the move by saying its top players – whoever they may be – would not be around to bolster the teams and consequently the league was not worth persisting with... [P]erhaps the decision to chuck out the national league was inevitable... [considering the current lack] of... depth... in [NZ tennis]... In reviewing tennis' past national league attempt, though, it is impossible not to wonder if it could not have been done a bit better, or at least been marketed with more zest and expertise. Surely, the tennis public is not so fanatically attuned to two international tournaments in Auckland each year that it refuses to support any other competition of lesser quality. But that appears to be so. Crowd support at national league tennis was pathetic. The promotion of the league was not far behind... Tennis, of course, will move on as it has done so often and so easily in the past. Already announcements have been made detailing some of the superstars coming for the BellSouth Open and the WTA event that follows in the new year. And already a new satellite circuit has been resurrected (an old satellite circuit was dumped several years ago) to allow our fringe professionals an opportunity at home to collect valuable ATP points. In another stroke of genius, Tennis N[Z] has also managed to have its junior nationals become an ITF-sanctioned event, making it part of a world circuit for young players... Perhaps... the national league will reappear in the not too distant future. Perhaps our top players, who aren't so crash hot anyway (our No 1 guy] excluded) can make the time in their busy schedules to be available for a national league.

...[the] Kiwi tennis No 1... [has won] the \$180,000 Slovenia challenger tournament and lift[ed] himself back into the top 100 at No 92... [By the way, f]or at least 25 years, twice a week if the weather's holding, [a guy], aged 83, and [a gal too] shy to admit her age... have been playing each other at the Parnell Tennis Club wedged in hedges beneath the concrete hulk of the Auckland War Memorial Museum. [The guy] initiated their matchup as relaxation for [her, when the gal] was caring for her mother. It was medicine so good that on the day her mother died, [the gal] went and played at Parnell... They've known each other since they belonged to Remuera when that was the club before WW2. The guy] was the 1931 King's College champ[; the gal]... the 1939 Epsom Girls' Grammar champ. When [the guy] returned from the war, [the guy] helped Parnell move by necessity from their original site at the Cathedral to the Domain... It's a club that today winds up their 125th birthday party. They say only a club in Lyon, France is older than theirs. (Wimbledon's only 120). Parnell at 125 are nothing like they were at 100 in 1972. Back then it had a down-home Waltons family feel. The courts were still grass, playable for only four months a year. The bar was a fridge in the corner with a little box for change. In the 1980s the grass was replaced by astroturf and lights came on. The club also got caught up in the greed-is-good ethic of the decade. Parnell opted out of Caro Bowl for a few years when players began demanding too much. They got a licensed bar that put Newmarket publicans in a tizzy and parties there had queues from the door into the Domain. It's still busy... The club turns over about \$800,000 annually from subscriptions and tournament profits. Way back... a second-grade team player and the freelance journalist who's compiled a celebratory newsletter, recalls winning a tournament and earning a couple of balls and a cup. Now, club tournaments can offer cars, jetskis, Wimbledon Centre Court tickets and airfares.

...As Parnell blew out the candles on their 125th birthday cake, their wishes were delivered by their hired guns who reclaimed the Auckland club tennis titles on Saturday. Parnell, losing [guys' and gals'] finalists a year ago, won the ASB Bank Caro Bowl double for the third time in four years. [NZ's] Davis Cup No 2... arrived back from a second round loss in the Burbank Challenger in the U[S] on Saturday to head the [guys'] 4-1 defeat of defending champions Remuera... Parnell's [gals] routed Blockhouse Bay 5-1. [In international news, a USer 'will use her enormous serve to quell a Belgian upstart in the Wimbledon final, just as the black used it to silence a compatriot yesterday. The athletic 21-year-old, who beat her compatriot 6-2, 6-7 (1-7), 6-1, thumped down eight aces and won 74% of points on her first serve to reach her second successive Wimbledon final. The black holds the gals' serving-speed record set three years ago in Zurich at 205km/h, just 22km/h behind the guys' record.' The black had also 'over-powered her compatriot 6-3, 7-6 (7-3) in last year's Wimbledon final. It was her first Grand Slam title and made her the first black gal champ at Wimbledon since 1957 and 1958. The victory gave her family its second Grand Slam title, which is the first time in tennis history that sisters have each won a Grand Slam. Her 18-year-old sister won last year's US Open.' When it was a 17-year-old, the elder sister had become the first black gal tennis player to appear in the final of the US Open in almost four decades.

... 'You've fathered historic tennis sisters, so why not drive a bus with the words "World's Greatest Dad" on the side? The alleged World's Greatest Dad suggested it might buy the Rockefeller Centre for \$3.9 billion and once claimed it had bought the air rights over India, which would "make millions".'

...the gal who was [the... first black... to reach the final of the U[S] Open in 39 years, [has again] showed heradroitness in sidestepping questions about her father's charges... of racism against professional players in the wake of his daughter's semifinal collision with [a] Romanian... "I didn't even read the paper,"... Meanwhile, the [new] world No 1... took [the black] apart with Swiss precision yesterday to claim her third Grand Slam title of the year – only the sixth [gal tennis] player to achieve this. The others... [include last year's No 1 and No 2 (r:p1500, ln19)]. The 16-year-old... extended her extraordinary season record to 63-2 with a 6-0, 6-4 demolition of the... American rising star in a pairing of the youngest Grand Slam finalists in Open-era history... [The winner] made \$US650,000... and became the first [gal] tennis player to surpass \$US3 million... in earnings in a single season. [□ Next year, the 'US Open tennis champs will provide a \$33.48m prize, the largest amount for any annual sports tournament.'

...two of NZ] tennis' most promising players... [have 'current rankings of 403 and 640 after obtaining their best rankings in 1995 of 279 and 327' respectively. In 1993, they] were... the chosen ones – destined for big futures. It seemed only a matter of *when* rather than *if* they would make it. The confidence appeared well placed. [The pair] finished their final junior year as the best age-group doubles combination in the world... [T]he pair won the Wimbledon junior doubles title and the French Open title with [one of them] also being the No 1-ranked doubles (individual) and No 5 in the

singles... [after reaching] the junior singles final at the U[S] Open. His opponent and conqueror that day was... the N[Z]-bound Chilean who hovers on the border of the world's top 10 players... Playing club tennis in Europe is a long way from the 1993 US Open junior final. The German club scene is not where [the NZer] wants to be. But the slog of satellite circuits does not seem to appeal either. "Playing satellites every day is... a hard life...." said... [the NZer who] labels this year a shocker. Whether it's rankings, results, injuries or the April incident where [the NZer] threw a racket which accidentally hit a ballboy, 1997 has been bad news... [The 403rd-ranked guy] is regarded as the most naturally talented Kiwi of recent years. But... if [the NZer] wants to be a successful professional, [it] will have to return to the satellite ranks... [His ranking was] 320 at the start of the year. But [the NZer had] garnered a huge chunk of his ranking points (43) from reaching the final of last year's Perth Challenger... The challenger is on again this week and [the NZer] faces the prospect of another ranking plummet... Unless [the 403rd-ranked guy] can produce form early next year, [the player] will also struggle to crack the [NZ] Davis Cup team for February's tie against Lebanon. [● 'The US has won the Cup 31 times...

AUS has won the Davis Cup for the 28th time'. In further news from across the ditch, an] Auckland bowled out of the quarter-finals in his first tennis challenger at Perth yesterday. [The young Auckland] lost to another unseeded player... but will move his career-high 415 ranking... to 383[rising him]... to No 4 in the national rankings... [and ahead of the NZer who reached the Perth final last year. NZ's No 1 guy] comfortably remains... the... best rated player with a world ranking of 50 in singles, 183 places above... [the No 2 NZ guy. The previous No 2 NZ gal] is rated among the big movers on the 1997... WTA tennis tour in a list of the main "movers and shakers" issued yesterday. [The previous No 2] began the year ranked No 617 in singles and finished at No 420... The biggest mover was [an] American... who started the year ranked No 973 and finished at No 339.

...[the guys' world] tennis No 1... [-] who ended the season as the world's top-ranked tennis player for a fifth consecutive year, [and] was named Sports[person] of the Year by the US Olympic Committee[(making him) the first tennis player to win the award] – crushed AUS's]... US Open champion... in straight sets for a lucrative win in the Grand Slam Cup yesterday. [The USer] made sure of a \$US2 million... cheque with a fine display of attacking tennis... in a one-sided final lasting 95 minutes... [The AUSn] Open and Wimbledon champion, got \$US1.5 million for his victory plus a \$US500,000 bonus for his two Grand Slam wins. [The AUSn], making his debut in the tournament... earned... \$US750,000 for appearing in the final and [a \$US250,000 bonus – placing him 2nd for prize-money winners this year at '\$US2,432,084. The No 1 is 1st at \$3,905,078.'

...the world No 1 'broke the Grand Slam record when it triumphed at Wimbledon this year. His 13th Grand Slam title and his seventh Wimbledon prize elevates him to arguably one of the best tennis players ever. The USer's amassed a staggering \$89,353,818 in career earnings which illustrates the fact that tennis treats you pretty good once you're at the top.' In related news, w]hat could be good about losing 6-3 6-0 in less than an hour to a lower-ranked player? [Fortunately for the guys'] world tennis No 2... [the answer is irrelevant because the Asian-American still has a chance] for a place in the semis... at the ATP Tour World Championship... [if it can win his next round-robin match]. The \$US3.3 million... tournament brings together the top eight...

[The world No 1] was named the best player of the past 25 years shortly before cruising to a fourth title at the ATP Tour world championship in Germany yesterday. [The USer beat the retired Swede and the semi-retired USer (r:p1501, ln9) who won the 1984 Wimbledon final] into second and third places respectively in the vote by 100 present and past players, tournament directors and journalists. "It's very flattering, it really is, to have the respect from people in tennis," the 26-year-old... said after learning of the vote, organised to commemorate the 25th anniversary of the ATP Tour... The elegant American, [who this year equalled]... the record of... [another USer (r:p1502, ln3) -] to end the year in the No 1 spot for the fifth consecutive year... [-] needed just 88 minutes to take apart [his Russian opponent (r:p1500, ln68)]. Meanwhile, the rankings system in [guys'] tennis will change... to an annual points race with players starting at zero in January... The new system, signalling the end of the complicated present method under which the players carry their points from one year to the next, was one of several changes announced by... [the] ATP Tour boss... [A] new super league of seven events – in addition to the Grand Slam – would be launched and the year-end championships... reshaped. All the changes would be introduced from the year 2000. It is also possible that [gals] will be included in super league tournaments and the season-ending event.

...[the outgoing] WTA tour chief executive... says the 1998... circuit will add six... tournaments, increase prizemoney... from... \$US38 m... to over \$US40 m... and try to head off a players coup launched earlier this month... by a number of mid-ranked players... [While on the topic of gals' tennis, the former world No 1] has broken another date with Auckland... The great [German], out of tennis since June when [it] had an operation on her left knee, was set to make Auckland's ASB Bank Classic in January part of her comeback before the A[US]n Open. Germany's second-best fraulein... [who is now] down to No 12 in the world rankings, also wanted to return after falling in the quarterfinals this year, but was swayed to play in the mixed doubles Hopman Cup the same week. After the US Open in September, [the injured German]'s agent told Auckland [that the German No 1] wanted to play here, encouraged by kind words about N[Z] by her brother... who motor-raced here in 1994. Within four days, Auckland met her main requirement of a six-figure appearance fee. But... a month ago [the German] felt the knee was not responding as well as... hoped and became non-committal about playing Auckland. [The German] was also going to play the 1996 Classic but withdrew less than a month out when [it] had an operation to remove bone spurs from her left foot. [However, the tournament] director... was still happy yesterday to announce [3] top-50 players: [the]No 20... No 36... and No 41... Also, [the guys'] No 12... confirmed [his intention to] return for the BellSouth Open... [The] Chilean... will likely be the Open's top seed again. [The Chilean] crashed in the quarters this year but elsewhere... made the US and A[US]n Open quarters, reached [4] finals and won one... [The director] was working on attracting two more top-20 [gals] and the Classic field was shaping to improve on this year's which featured six top-50 players. But [the director] may yet run into [the same] problems encountered a year ago, when [the gals'] tour governors, the WTA, switched [the]10th-ranked... from Auckland to the higher-level but less-popular Gold Coast event on at the same time. Gold Coast are again struggling to attract the [3] top-20 players they're entitled to. [A]Belgian 24-year-old... won this year's doubles [at the Classic]and went on to win the Hobart title and reach the A[US]n Open quarter-finals, beating [the]No 2... and 15th seed[s along the way]. Since late September [the Belgian] has won the Surabaya event – becoming the [7th gal] to win more than one title this year – and was runner-up at Quebec last week. - 1997

[Germany's No 1 gal tennis player] retired yesterday secure in the knowledge [it] had been the greatest [gal] tennis player of her generation... and with all her dreams fulfilled... Still only 30, the pony-tailed blonde with the devastating forehand was only 13 when [it] was the youngest [person] to receive a WTA ranking in 1982. Her big breakthrough came in 1987, when [it] took her first grand slam, winning the French Open. The next year [it] claimed all four major tournaments plus the initial Olympic title. Ever since, the reserved German has remained in the limelight, taking a total 22 grand slam titles and staying in top spot for a record 377 weeks... Life has often been tough on [the German], who was dismayed when a deranged fan stabbed [a]rival... in 1993, aiming to sideline her so the German could recapture the No 1 spot... A chronic back injury... and recurring knee problems started taking their toll in 1997[– the German] was out for 3 1/2 months that year... There were fears then that [the German] might never play again... But [the German] still had plenty to offer, as [it] demonstrated by teaching [the current world No 1] a lesson to win her sixth French Open last June. Then came Wimbledon... where... the German... reached the final before losing...

An Indian punter who gambled a total of \$A60,000... on [the AUSn]defending champion... and [the US]world No 1... winning their opening round US Open matches has bombed out badly. While [the world No 1] didn't even make it onto court, [the AUSn]'s shoulder injury forced him to quit his opening match... Alice Springs bookmakers CentreBet refunded the \$25,000 wager on [the world No 1] who didn't even hit a ball... [Incidentally, NZ's No 1 guy table tennis player] yesterday qualified for his seventh World Cup... event – a record for Oceania – after surviving a countback on wins against [a]fellow Kiwi... The... [gals' representative is an AUSn citizen, who beat the NZ] No 1... in a spectacular match 23-21 21-23 23-21 – with [the NZ citizen] surviving seven match points in the final set before losing her first game in 13 years to another Oceania player.

...[the NZ gal squash player who is ranked 13th in the world] **advanced to the second round of the A[US]n Open squash tournament... yesterday. The second seed will meet [the]eighth-seeded American... in today's quarter-finals.**

...[the NZ pair have won the inaugural world gals' doubles squash title in Hong Kong. In the final the NZers, playing in all-black outfits, beat the top seeds of England 15-4 15-12. The NZers had been seeded third for the event, but toppled the No 2 seeded AUSns in their semifinal. "It sets the pair up as favourites for the gold medal at the Commonwealth Games in Kuala Lumpur," the NZ coach said. The NZ guys' pair finished fifth in their event.' The gals' doubles win was NZ's first major success on the international squash circuit since the retirement of the then world No 1 gal squash player, who, 'apart from a brief injury break, reigned from the time the NZer won her first British Open in 1984 to her sudden decision to quit after winning the 1992 British Open' (having lost the final of the British Open for the first time since 1984 in 1991)...

'After a lean period NZ's gal squash players are making a real impact on the international circuit. Following on from the juniors' second placing at the World Championships, the country's leading players won the inaugural World Doubles championship – a huge achievement because this was their first significant doubles competition together. As their world ranking of 13 and 14 suggest, the NZ pair are intense rivals. So it was to their credit that they could put aside their personal rivalry and train and work effectively to produce these outstanding results. Although squash players have played friendly doubles for years, it has only just been recognised as an official competition, as part of world squash's acceptance in to the Olympic and Commonwealth movement. There are a few differences from singles. Firstly, it is played on a court four foot wider than usual which obviously allows more room for four players and it is compulsory for all players to wear safety glasses, a wise move considering the nature of the game. The scoring is American with the service rules differing, allowing each player a serve regardless of who wins the point and the rules of interference are slightly altered, compensating for the number of players on the court' (singles squash resembles *badminton* – 'a volleying game using rackets and a shuttlecock that derives its name from Badminton, Glos., where the game is supposed to have evolved about 1870 from the ancient game of battledore and shuttlecock; from the outset it gained popularity with army officers who took it to India and played it out of doors' – in its allocation of serves and points: a player can only win a point if it had served, although badminton's authorities are considering changing that rule so games will be completed in less time.)]

...**"I have finally achieved something that [the former NZ No 1] did..." A lifetime dream came true for [an emotional NZ] squash star... yesterday when [it] won the British Open from [the]world champion... The 25-year-old [NZer and world No 13 who] won her first major title in Aberdeen... was spurred on by a British magazine article... proclaiming that [the English world champion] would not be beaten by anyone on the [gals'] circuit for the next five years. Then there was the drive to emulate... the last great Kiwi squash player – who was thrilled for [her compatriot] yesterday. "It's particularly good... because it hasn't been easy for her... [The 25-year-old] hasn't had any handouts [and] didn't do it in luxury or style. I've always told her the opportunity was there for her to take. [The 25-year-old]'s come pretty close to the top before, but it's so important to have a title. It's good to see someone [from NZ]doing well in squash again – [locally]it's been in the doldrums, and it needed a champion." It took [the Kiwi] an hour to beat [the]26-year-old... [world champion. The Kiwi] won £4524... but was more captivated with the... trophy fashioned from Edinburgh crystal. "I don't need any more Christmas presents – this is all I wanted," [the Kiwi] laughed. However, the Kiwi] will get another present in the New Year, when... [the gal who] this year... has been runner-up in four major events... [– the Kiwi] lost to the now-retired A[US]n No 1... in the A[US]n, Singapore and Helipolis Opens, before dipping out to [the world champion] in the semifinals of the world championships and the final of the US Open last month... – ...officially becomes the world No 2... "Of course it would have been nice to have won absolutely everything this year,"... The [Mormon]... returns home to Hamilton tomorrow, to take a break until New Year when [it] will play in a summer tournament in Mt Maunganui.**

...[a Pakistani] was so good at squash, [it] squished opponents and it got ridiculous. After winning his first world open in 1981, aged 17, [it] remained unbeaten for five-and-a-half years in more than 500 games. His winning streak was finally broken in 1986 by [a NZ]er... in the World Open final in Toulouse. Indeed it did teach [him] how to lose but the Pakistani great never thought it would be to a [guy] they called Rosco.

Squash [is] a game played with rackets... in a closed court... the word... being derived from the softer hollow 'squashy' ball used... It is derived from the game of rackets... a ball-game for two or four players... [rackets (or 'racketball') in its] modern form developed in England in the 19th c., but its origins may be traced to medieval handball. It was played in open courts in the backyards of inns and taverns; the rackets court in the Fleet debtors' prison in London is depicted by Rowlandson and described by Dickens.

court games [is a general term for] ball games played on indoor or outdoor courts between teams or individuals. Typical are basketball, tennis, handball, squash racquets, squash tennis, badminton, and volley ball... Badminton... is played over a net... Originating in India, it was introduced into England in 1871, and has since become popular in the U.S. Volley ball is a combination of tennis and basketball... The... fairly large inflated ball... must not touch the ground... and... cannot be thrown... being batted across a net with the player's hands, elbows, or head... Handball is played by batting with the bare or gloved hands a small, hard rubber ball against four walls of a court. A similar game was popular in England, 16th cent., under the name of "fives." In the U.S. handball is jointly governed by the U.S. Handball Association and the Amateur Athletic Union.

Denmark... [had a] 33-20 victory over Norway in the [Gals'] World Handball championship final. But the tournament in Berlin will be remembered for the death of two Danish fans who were stabbed, in an apparent drunken row with a German spectator[(who 'didn't remember anything'). Speaking of Denmark, the country]... will join the Netherlands in the 1999 England and Wales NatWest Trophy cricket competition. The English Cricket Board's chief executive... said the inclusion of Denmark gives cricket a firm foothold in mainland Europe. The 1999 competition will be contested by 60 teams – [including] the 18 first-class counties, Scotland, Ireland... and 38 amateur teams representing English county boards.

...THE face of sport around the globe has changed markedly over the last few years... Perhaps the most important of these changes involves the apportioning of power in these modern bureaucracies, for where that power lies will have an enormous effect on where each sport heads into the 21st century. The delicate line to be walked is regarding the influence of "player power"... The major hurdle modern bureaucracies of professional sport have to deal with is balancing the demands of players with the long term interests of the sport, and therefore the interests of the next generation of players. This debate is obviously most apparent in N[Z] in rugby union but it continues in other sports as well. In England the debate has recently been loudest in cricket... [T]he former Tesco magnate... was hired to produce a report as a blueprint to the future of English cricket. This report was deemed necessary due to the dire state in which the English test side has recently found itself. The financial security of England's 18 first class counties and indeed the game as a whole depends on the revenues from international cricket, and England's decline... is... testing the allegiance of even England's most stoic supporters. The... report's main thrust was that the breeding ground of English test cricket, the county championship, had become so brazenly uncompetitive as to be a significant handicap to the development of the test side. Its stated preference was for a two division championship with promotion/relegation of three teams from each division to ensure competitive fixtures all season long. This proposal was thrown out and what amounts to the status quo was reinstated. The stubborn self-interest of the counties – fear of failure rather than desire for success – and the players (who wants a tough competition when you can have a soft one?) ruled the day. Short term interest overruled long term concern. The demise of English cricket, the counties have decided, is rooted elsewhere. Three-day cricket is no good, uncovered pitches, too much one-day stuff, too many overseas players! That's the one I like. "English county cricket has provided a finishing school for overseas players for long enough." Ha! The purge on overseas players began about 15 years ago with the reduction in the number of foreigners allowed

from two per county to one. From my memory this decision coincided roughly with the beginning of the decline in England's status at test level. The second stage of this purge is to ban overseas players all together. That should do wonders for the already generally accepted sub-standard level of the county game. I'm sure the cream of English [batters] will learn much from facing the demon bowling of Durham's 13th best player rather than from encountering the likes of South Africa's [best fast-bowler or Pakistan's best spinner.

...as members of the Fleet St cricket press, we care very deeply that England's cricket team is currently among the worst in the world, if only for the selfish reason that eventually it may stop us travelling the world at somebody else's expense and force us to get a proper job. Then, perhaps, English cricket would get the press it prefers instead of the one it deserves.

...[English batspers] on joins elite... [T]he seventh English player to bat through a completed innings in test cricket... made 94 not out in England's first innings of the third test against N[Z] at Lancaster Park[yesterday]. It was the first time [the opener] has achieved the feat.

...[a N[Z] opening bats[person], has been cleared of showing dissent about his dismissal on the third day of the third test against England... After offering what appeared to be a close-in catch – which had the A[US]n umpire... raising his finger in dismissal – [the NZer] stood his ground... obviously insisting the ball had hit the ground first... After a code of conduct hearing... the International Cricket Council referee, said in a statement that the incident had been examined with video replays, and... [the NZer] did not appear to see the umpire's signal giving him out “and given his unblemished record in the past, no further action would be taken.” ...Footnote: The ICC referee's decision is final. Had [the NZer] been found guilty... [it] could have been fined up to 75[%] of his match fee, and/or suspended for three tests and three one-day internationals, and various combinations of these ranging up to six one-dayers.

...[the NZ opener cleared of misconduct has revealed that it] had to sell his house to mortgage his international cricket future... The 32-year-old... [Northlander] spent a period in the winter of 1996 “on the breadline” as... the Kiwi batting hero... [–] whose mammoth innings of 267 not out in the first test last summer against Sri Lanka was the second best ever by a N[Zer –] ...contemplated long-term exclusion from the N[Z] cricket side. During that time [it] had been excluded from the Kiwi team for the World Cup on the subcontinent and subsequent tour of the West Indies[, which meant the opener] had effectively been “made redundant” and spent a long time wondering how... to make ends meet... But [the opener] was yesterday keen to accentuate the positives of the experience, which included him establishing an employment link with the ASB Bank to provide much-needed stability in his life... [His] fortunes turned when [the opener] gained a belated place on the tour to Pakistan when [the first-choice opener] was forced to withdraw... [The replacement opener went on to head NZ's batting] averages for the '96-97 test campaign with 648 runs at 54.00.

...An Auckland[er] at the centre of sexual misconduct claims involving [an]England cricketer... denies any wrongdoing. The 20-year-old AIT commercial studies student met... The British newspaper *News of the World* has published claims that [the cricketer and the student] took part in “steamy sex romps” at his Centra Hotel room... [P]hotographers and reporters have dogged her since... “It's been blown way out of perspective. All this looks very suspicious, I guess, but nothing happened.” ...in hindsight [the student had] realised that “I was very naive.” [The student claimed to feel sympathy for his wife who] gave birth to the couple's first son... shortly before [the cricketer] left on the three-month tour to Zimbabwe [– where ‘a test was drawn for the 2nd time due to both teams achieving the same scores after completing 2 innings each’ (tests are normally drawn because 4 innings aren't completed in the 5 days allowed; ‘31% of the 163 tests played during the 1950s were drawn – the respective percentages for the '60s, '70s and '80s were 47, 42 and 45, while 35% of tests during the '90s have ended in draws') – and NZ]. ...Eden Park, which [earlier this season] throbbed with cheers for... [a Sri Lankan]'s epic one-day century and during the heroic... [last-wicket stand by NZ] for the first test draw against England, yesterday farewelled the cricket season with boos from irate spectators. The crowd of 5000-odd showed their displeasure when, shortly after 2 o'clock yesterday afternoon, the captains decided that conditions were unfit for the start of the... Sri Lanka-N[Z] one-day international. An announcement over the public address system – after security staff had ringed the field – said parts of the outfield and the bowlers' run-ups were unsafe. However, various newspaper reporters walked over the surprisingly firm run-ups, and neighbouring ground staff members said they were surprised the players did not want to play... [T]he umpire who maintained the field was not fit for international play, responded that [it] did not think the ground staff had enough experience in these matters. There was no hope the match would start as scheduled on Saturday, with heavy rain saturating the ground, but the showers became less frequent as the staff tried to prepare the pitch for play on the reserve day yesterday... [T]here were hopes for a start about noon, then at 12.30 pm and, most promisingly, for a 32-overs-a-side game to start at 1.30 pm[(one-day internationals normally have 50-overs-a-side). The NZ] captain... had been prepared to toss at 1.30, but another shower stopped that... An adult ticket was \$30 and a child's \$15, though many at the ground would presumably have been unaware that fine print in the match conditions limited any refund to half that in the event of no play taking place... [The NZ] team manager, said his players felt sorry for the spectators, especially after they had been so loyal to the... team during the season... [The NZ] Cricket chief executive... was also very conscious of the spectators' loyalty, and NZC would immediately start arranging 50[%] ticket refunds. NZC will itself hurry to its insurers this morning seeking over \$200,000 in compensation... NZC had received over-budget returns from the England tour, and could make a very useful return from the Sri Lankan tour if the gates for the one-dayers at Christchurch (tomorrow) and Wellington (Thursday) were up to expectations. “The incredible thing is that all three one-day internationals at Eden Park have been badly affected by rain. Otherwise we would have had a fantastic season.” The bad luck with rain at Eden Park will not affect future tour planning.

...[a globe]-trotting cricket fan... was hoping a one-day international would provide a thrilling send-off from N[Z]. Instead, the fan] and his girlfriend were left out of pocket and furious... With about 5000 other spectators they will receive just half their ticket price back. Last season patrons were offered full refunds if they paid a \$1 insurance fee. “I think it's appalling... I don't like being ripped off.” ...The couple are mid-way through a nine-month world tour and fly out from N[Z] today... It did not rain after the... game was cancelled around 2.15 pm... Had the match started and gone through 15 or more overs, N[ZC]'s insurance cover would have lapsed.

...[NZC] will give full refunds for tickets to the washed out one-day international between Sri Lanka and N[Z]... The chief executive of the Consumers Institute... said yesterday that the... 50[%] refund... condition – printed on the back of tickets... – ...was not valid unless it had been pointed out at the time of sale. “The responsibility is on the seller... to point out any extra conditions... It is assumed you get to see the game if you buy a ticket. If you don't, then the contract has not been met and you get your money back.” ...Refunds to 6000 supporters... some who went to the ground just minutes before the match was called off... will make a big bite into the \$300,000 insurance windfall from the wash-out game. Unofficial estimates suggest a \$90,000 payout.

...[an AUSn's century has given his country] hope of an unlikely victory in the second cricket test against England at Lord's... [The AUSn] scored 57 runs off 54 balls yesterday and 20 fours in all before being caught on the square leg fence for 112 just before stumps. With one day remaining, A[US] were 213 for [7] in reply to England's woeful first innings of 77. Heavy thunderstorms throughout the morning prevented play starting until 5.40pm and in the 17.4 overs possible A[US] smashed 82 runs... before rain stopped play for 12 minutes. The England players could not leave the field fast enough, while [the AUSn] stood his ground, wanting to bat on. Even the crusty Lord's members yelled “get on with it,” booed and slow-

handclapped. With fewer than 25 overs bowled, patrons were entitled to a 50[%] refund, bringing the total insurance payout so far to £1.3 million...

N[Z] cricketers who take part in the Commonwealth Games in Malaysia next year will not be paid, N[ZC's] chief executive said yesterday. England have decided not to take part in the limited-overs competition being held for the first time at the Games and one of the reasons given was that their players would not be paid... Meanwhile... [s]eeing off their opponents in double-quick time has had its downside for the N[Z gals'] World Cup cricket team in India. While happy to have won through as top qualifiers in their pool and thus avoiding another horrendous early-morning journey, N[Z] are lamenting the limited opportunities for their middle and lower-order bat[ters]... Despite the frustrations of being confined to their hotels for long periods – it is not considered safe to walk about without some form of security – the N[Zers, who]... meet Ireland in the quarter-finals next week... are getting on fine. “Because we are so popular, we are always receiving invitations to social functions...,”... the... vice-captain... said. If, as expected, they beat Ireland in Bombay... [they] will meet the winner of the England v Sri Lanka quarter-final in a... semifinal in Madras.

...N[Z] qualified for the final of the [gals'] cricket world cup after a tense 20-run win over England in Chennai (formerly Madras)... early today. The... team will play A[US] in the final at Calcutta... on Monday. It is the second consecutive final the Kiwis have reached, after losing to England in England four years ago. The English ghost was well and truly exorcised by a superb display of pressure cricket in the field... [after England had earlier restricted NZ to] 175 for six... As a form guide, N[Z] lost 1-2 to A[US] in last month's Rosebowl one-day series and 1-4 the previous summer.

...Even a valiant 79 by the N[Z] batting star... could not give the fighting N[Z]ers a winning chance in their... World Cup one-day final at Eden Gardens in Calcutta late last night. [Like f]our years ago... N[Z] again entered the final undefeated, but... the powerful A[US]ns batted superbly on the easy pitch to score... their fourth world title – while the N[Z]ers still wait for their first... But the stocky [NZ vice-captain] caught the imagination of the crowd of about 40,000 Indian [gals] with her long, lone effort as the back-bone of the N[Z] innings... her 79 from 121 balls[included] one mighty six... [The vice-captain] continued her phenomenal form of... the [previous] six tournament matches... [during which time the batter] compiled 377 runs, including two centuries, at an average of 94.25... Last year the idea of Disneyworld building a special sports arena and staging tournaments that might attract or fascinate [USers] was picked up by the I[CC] development committee, headed by... [a South African who] immediately realised the vibrations that such a venue would create. It took him some time to persuade other council delegates, who could not envisage staging a full-on one-day international tournament in such an un-cricket environment. But [the South African] is a persuasive [person], and showed that the Disneyworld scheme could broaden the appeal for cricket in the U[S] and give some novelty to the one-day circuit. The promoters were just as eager, and they more or less pencilled an annual international cricket tournament starting in 1998, and mentioned their rich rewards from the pay-television receipts – with the cricket countries also being handsomely paid. The only problem was that the fancy purpose-built stadium which could handle both winter and summer outdoor sports did not exist. The Disneyworld people work on the theory that they create the event and then built the facilities. The... [ICC] does, however, need a lot of money, quickly, to fund the development work it wants in place in the second- and third-tier cricketing nations. So instead of Disneyworld the world cricket elite may be looking instead toward India or Pakistan, now regarded as the television-rights financial basis for all world cricket. The plan is to have the nine test-playing countries... playing a... mini-World Cup... one-day knockout tournament with as much profit as possible going to... development work. Earlier next winter, about April, the N[Z] team will be able to shake another money-tree by playing in the annual Sharjah tournament, along with A[US], India and Zimbabwe. This is the traditional tournament; N[Z] were invited to a special tournament there late last year, where they reached the final... Then, for a pleasant change, the N[Z] players may even appear in club and representative matches before moving into a torrid international programme... against India and South Africa, and leave soon afterward for England and the World Cup, followed by a three-test tour of England. They will be busy, they will be paid... – but it is rather a pity about missing Mickey Mouse... [By the way, yesterday NZC's chief executive] said discussions on a future world test cricket championship [are still] proving difficult. A subcommittee... headed by NZC[']s chairperso[n]... met recently in Singapore and has asked the ICC to revisit several of the original recommendations made on the proposal.

...In recent years the plans gaining strongest appeal involve the test-playing countries having home and away series against each other in a four-year period, with points gained for tests and series won or drawn. It is understood that[another of the] major recommendations... being considered by the... ICC meeting... in Calcutta... is for a test-match tournament spread over two months... two years after every World Cup one-day tournament. The A[US]ns favour this and see their country as the logical trial area, although England and India could offer similar widespread facilities, at different times of the year. The major plan... sees Bangladesh joining the nine test-playing countries in a 10-team competition. This would also involve a pre-tournament series of matches to decide seedings, with... the lowest-ranking test sides... not taking part... An alternative is the playing of a more compact eight-team world championship, and this would put N[Z]'s place at risk. [The lowest-ranking teams, including] Bangladesh... would play one another with the winning team joining the top seven in the eight-team championship.

...[a cricketer] lives just 100km from India[but] has never been there. His parents have never ventured outside their native Bangladesh. With the average Bangladeshi wage around \$50 to \$65 a month that is understandable. [However, the cricketer], who is 22... is [in NZ on] his fourth... trip... with the Bangladeshi cricket team... [One of the other trips was all] expenses paid, to A[US] for coaching at the A[USn Cricket Academy. The test cricketer, who']s spent his recent years at university in Dhaka... studying for an honours degree in anthropology... is... glad to be seeing the world...

A[US]'s test cricketers, disgruntled at their treatment by the A[USn Cricket Board[(ACB)], are prepared to escalate a campaign for a substantial pay rise, [the] players' union boss... said yesterday.

...Tie me bank account down, sport... Outwardly, cricket would still seem to be the pre-eminent sport with the greatest social clout in A[US, and the AUSns] – at test level and in their home Sheffield Shield competition – would appear to be the best, typically confident competitors. However, over the last six months or so there have been signs that... [AUSn] cricket... is not quite as healthy as it might appear... The test players are still winning, even if they made England look rather good in two of the recent... tests in Britain. The home heroes of the Sheffield Shield, especially in Queensland, twice winners of the trophy in recent years, seem to attract attention bordering on adoration. But since the formation of the players' trade union, known as the A[USn Cricketers' Association, the... [ACB] is taking a hammering. The ACA and the ACB are currently engaged in a battle for the high ground, especially in the matter of contracts not only for test players, but for the rank-and-file first class players... The ACA... are basing one part of their attack on the need for the ACB to reveal their allegedly vast financial reserves, and to skim off some of the cream for the rank-and-file state players. The aim, evidently, is to put at least \$25,000 in each player's pocket, and to set up education and vocational services so the players will have some earning capacity after cricket... [However, two famous AUSn] players of the past... simply maintain that the average and younger Sheffield Shield players are not worth \$25,000 each a year. They should be encouraged instead to hold regular jobs outside cricket, and not to regard themselves as fulltime professionals... A[USn] test cricket players are on contracts ranging from \$275,000 to \$500,000 plus, and they are also able to earn money from advertising and promotional work... Eyebrows were raised when it appeared... [that AUS's] leg-spin bowler, turned down a 14-week contract in England in the next northern summer[and] was evidently going to be paid \$500,000 for his work... but decided (and wisely, for his spinning finger will not hold shape forever) to rest at home instead – which raised a cheer amid the ACB ranks... The final word, as the ACB and the ACA were digging their trenches in readiness for a long and grimy war, came from... a fine [AUSn] cricket writer with a nice sense of the nonsensical. In the *Telegraph on Sunday*, [the writer] said... the ACB chief negotiator, offered a young fast bowler a contract. “I

don't care how much it is for, I'd play for nothing... where do I sign?" Perhaps if there is enough of that old attitude left, A[US]n cricket may survive this latest crisis... But even with this in-fighting, it was staggering to find yesterday that the ACB (or its members associations) lost \$7 million on the Sheffield Shield competition last year... [] NZ] cricketers... can hardly match the earnings... of the top A[US]ns. NZC offered 20 players contracts for this summer, compared with 14 last season. The NZC chief executive... has described the retainers as "not a brilliant amount of money, but it is what we think is appropriate in the present circumstances." ...The [NZ]contracts include a basic signing on fee and a match fee which is allied to a bonus for individual performance. On top of that is an increased win bonus... NZC lost \$300,000 in 1995-96 and would appear to have made a \$500,000 turn around last summer.

...Saturday's inept total of 82 became the smallest by [an international NZ cricket team in AUS] this century. In 1913-14 N[Z] scored 89 against Queensland, but things improved during the rest of that match... [This time it] took a 20-run last-wicket stand... to save... N[Z] cricketers from the embarrassment of another grisly record. [The final pair] came together... at 62 for nine wickets, and they soon moved past 64, the lowest innings score by a N[Z] side in AUS – a sad relic of the tour of 1898-99. On that occasion, N[Z] scored 140 and 64, and N[SW], helped by 253 from a talented youngster named Victor Trumper, reached 588. However, [what]... really hurt the Kiwi tourists yesterday was the news that if the A[CA] is to strike in pursuit of the outlandish attempt to hijack the A[CB], they would not bother to include games against the hapless N[Z]ers in their strike plans.

...While the big powers in A[US]n cricket are battling over wages and conditions and declaring strikes and strike-breaking methods, the touring N[Z] squad are sitting in the dark at ringside. An unnamed A[US]n player yesterday leaked to the A[CB] the news that the A[CA] plans strikes against four one-day matches next month. This would stop the one-day internationals: A[US] v South Africa in Sydney on December 4, and in Melbourne on December 9; A[US] v NZ] in Adelaide on December 7; and the A[US] v AUS] A one-day game at Sydney on December 14. The N[ZC] chief executive... is urgently seeking details from the ACB... But... [talks] between the factions broke down last week, when the board said it could not accept the financial plans outlined by the association and its consultant... Sports Entertainments Ltd... The association will send a circular to its members pointing out the legal background and inviting them to sign consent to the strike, looking for a two-thirds majority.

...The A[US]n cricket establishment lost a major war in the officials v players battle yesterday when the test side refused to follow the lead of their skipper... His team-mates had returned to their original stance that unless the talks were resumed based on the use of the Workplace Agreement (for arbitration of disputes) the threat of strike action remained. The players stopped short, though, of signing the "intention to strike" notice the Workplace Agreement requires to be delivered to an employer 72 hours in advance of industrial action... No further... talks [between the skipper and ACB chairperson] are scheduled, and now the speculation is that [the skipper] has been isolated by his team-mates.

...You could never accuse the A[US]ns of being subtle as they prepared the Bellerive Oval pitch in Hobart for the third cricket test against N[Z] starting tomorrow. The newspaper headlines yesterday announced 'Bellerive Ripe for [Aussie legspinner]', and quoted the grounds[perso]n... as saying: "It's definitely a result wicket... it will not hold together for five days... and I think [our legspinner] will rip it severely late in the game." ...This sounds rather like the Tasmanian Cricket Association shooting itself in the foot. The TCA is determined to project Bellerive Oval as a test venue, and there have already been statements that if Bellerive can draw more than the 28,000 who watched the first test at the Gabba, and the 23,000 who attended the second test at Perth, it will remain on the test calendar... However, Tasmanian cricket enthusiasts face the risk that there might not be much action left in the test by the time Sunday – and the expected big crowd – comes along... N[Z] have played only one previous test at Bellerive, in 1993-94, and the loss by an innings and 222 runs does not figure on their roll of honour. But that match remains one of [the legspinner's] fondest memories. The legspinner] had figures of six for 31 and three of 36. And it now appears [that the bowler] who has already taken 13... wickets in the two previous tests of this series, will be presented with another kindly canvas on which to splash his art... Perhaps N[Z]'s only chance is the disruption to A[US]'s preparation caused by the ongoing war between players and their administration.

...If N[Z] slump to an historic 0-3 test series loss to the world's best in A[US], here are some reasons why: [AUS's latest batting sensation (r:p1505, ln66) and two other recent test caps (Mr B and Mr P)] had all scored about 5000 first-class runs before they were picked for their country; [the NZ captain and his team-mates]... all had fewer than 1500 runs before they wore the Silver Fern. [One] fast bowler... had delivered 16,000 balls in first-class cricket before... [playing his] first... test... for A[US; NZ's fast bowler] had delivered around 2500 before... the first of his... tests...

BAD news for N[Z] cricket fans hoping for a return of the golden one... to their ranks. In an interview with the *Independent* newspaper, [the duel-international told a] rugby writer... that the bat and ball game does not hold the appeal for him that it once did. Nor does it have much prospect of fitting into [the All Black No 14's] busy schedule. "When could I hope to play? ...We've been on the rugby field since February and we don't get off it finally until December, so the opportunities for serious cricket are non-existent. Do I miss it? No, to be honest with you, N[Z] is one of the lesser cricketing nations and being a competitive sports[perso]n at heart, I'd rather keep what I've got with rugby and stay shooting with the big guns."

...N[ZC] will trial revolutionary sightscreens that incorporate television replay screens this summer... The TV screens – which will be made up of 20 seamless cubes set in the middle of the sightscreens – will allow advertising opportunities as well as replay action. Sightscreens are now widely used around the world as static advertising hoardings when not in use behind the bowler's arm... Custom trailers are being built for the two screens, making them portable for use around the country. With a flick of the switch they can be made black or white for one-day or test action... The screens cost around \$400,000 and the trailers are in the \$35,000 bracket. NZC will lease them from... Auckland company Monaco Corporation... but should be able to make them self-funding given the advertising opportunities... [In international news, the AUSn skipper] put aside his disastrous one-day form to lead a spirited... fightback on the opening day of the first cricket test against South Africa in Melbourne yesterday. [His] unbeaten 87 and [Mr P]'s 56 not out saw the home side reach 206 for four at stumps after they had slumped to 77 for four... due to some tight bowling from the visitors... The home side managed only 92 runs in the opening two sessions, much to the dismay of a huge Boxing Day crowd of 73,812, the biggest for a day's play in a test in A[US] since 1975. It was also the third-largest Boxing Day attendance ever... The annual Boxing Day test has become a fixture of Melbourne, A[US]n and even world cricket. For decades Victorians have packed their leftover... turkey (plus any remaining cans of beer in the days before it was banned) and marched into the MCG... The first Boxing Day test was in 1950 with 60,486 fans turning up to see the Aussies win a thriller over England by 28 runs. By the mid-1970s the day was already one of the most eagerly awaited on the A[US]n sporting calendar with more than 77,000 turning up in 1974 to see... [AUS's pair of fast bowlers] hurl their thunderbolts at the English. A year later and the record Boxing Day crowd of 85,661 was set as [AUS's fast bowling partnership] destroyed the West Indies to set up an easy... victory. Six years on and the Windies were back... for perhaps the most memorable Boxing Day match of all. After [an AUSn batter] had scored a breathtaking century out of a total of just 198, the delirious Victorians watched [AUS's greatest wicket-taker] reduce the Windies to 10 for four at stumps – the highlight was [a West Indian batting star's] wicket off the last ball of the day. Thousands stayed behind for more than half an hour after stumps chanting [the bowler's] name, celebrating a moment in which many more people than the 39,982 present claim to have witnessed.

...Police arrested 10 people for drunkenness and 161 were thrown out during the [recent AUS]-South Africa one-day international at the MCG... [- when the second of] two collapses against... [South Africa extended AUS]'s lean trot to 10 wins from 31 games in the past 18 months... [-] as troublesome fans threw rubbish when spectators stood up for the Mexican Wave. Police say they'll be more forceful in future.

...Police were not amused to learn that a stalker at the Basin Reserve... during a Shell Cup one-day match... was hired as "entertainment" by Wellington Cricket's controversial marketing division... That was also the game at which the Basin's sound system blared cheeky songs as

Auckland's bats[people walked out to the wicket. The marketing division's maestro] defended the diversion as a success... [However, n]ews of the stunt has angered the district police commander... who... failed to see its entertainment value... [The] Superintendent... questioned how police could identify real streakers if Wellington Cricket turned them on for entertainment. "We would not encourage it at all," [the Superintendent said after the] maestro... confirmed yesterday that [a] stripper... had been hired to run across the pitch clad only in cricket pads and a protective box...

Fancy a game of cricket – with the very best of gear? No problem as long as your pockets are deep or you know a friendly bank manager. The top bats come in at \$499 (10 star willow). Pads \$249.50. Thigh pad \$45. Batting gloves \$119.50. Helmet \$135. Shirt \$45. Trousers \$55. Sweater \$67.50. Shoes \$129. A wicketkeeper can add on another \$135 (for gloves) and \$99.50 (pads). And a bag to put your \$1579 worth of gear in? A snip at \$95. Oh, and a ball [(which in tests can be renewed every 80 overs)]to play with? A mere \$44.50 each to send hurtling at a set of stumps worth \$85. - 1997

A new no-ball law will be in effect during N[Z]'s international cricket games this summer. When a no-ball is called, the batting team will get one run for the no-ball and any runs scored from the ball. Previously, if runs were scored from the no-ball, the no-ball was superseded by the runs scored. The move is being standardised throughout the world to deter the number of no-balls being bowled. [No-balls will still have to be rebowled.]

...The last bastion of cricket umpiring – the sole responsibility to call leg-before-wicket without consulting the third umpire – may be bowled by new computer technology. Massey University has developed a system that shows exactly where a bowled ball would have gone if the bats[person] had not got in the way. Using a three-dimensional reconstruction of the ball's path, processed from video footage of the bowl, a third umpire could make an lbw decision within... 15 seconds, less time than it takes to determine a run-out using slow-motion replays... Such technology would have saved [an AUSn cricketer (r:p1507, ln28)] a fine this week for an out-burst about a [n umpire] who made a controversial lbw decision during a recent Sheffield Shield match... From this season, N[Z] umpires can consult the third umpire for all decisions except lbw... [A former NZ] cricket captain... said anything that improved decision-making should be worth considering. But... if umpires were consistent in their lbw decisions, players could not complain... [NZC's] umpiring manager... said while the Massey project had the [body's] support... the game was not ready for more technology.

...The Aussies wronged us and they know it THE Aussie umpires have shafted us again. [One of them has admitted it] stuffed up when [it didn't give an AUSn opener] out LBW to [my son] in the first over of the test on Thursday. But [the umpire said it] doesn't know why [it didn't give the opener] his marching orders. Everybody in N[Z] knows why. And I'm not going to try to find some nice way of putting it. [The umpire] doesn't deserve it. It was so obviously out there was only one decision [the umpire] could have made. But [the umpire] found – as an A[USn – that it] couldn't give a fellow Aussie out in the first over of a test. [The umpire] had to admit his mistake[because if it can't give someone the finger in that instance, surely it] couldn't give another lbw appeal out. By acknowledging [it stuffed it, the umpire thinks it]'s free to get on with [his job] and all is forgiven. No way. I hope the N[Z] management make it clear [that this umpire] is not to stand in future games between A[US and NZ]. They have to make a stand.

...dark memories end bright career... Five [gals] clapped and one raised her finger in dismissal as[an] international cricket umpire... was driven to jail yesterday after being found guilty of 15 charges of indecent assault. The [umpire], aged 43, pleaded not guilty to 17 charges of indecent assault against girls aged between 10 and 12 while... teaching in a Catholic school in Burnie in 1981 and 1982... [but] was impassive as the verdicts were given. His wife... a former Miss Tasmania, retained her composure in court but later was close to breaking down. During the trial, the court heard that... [the future test umpire], fresh from university, in his first teaching job... used trust and fear to manipulate some girls in his class. [The fresh teacher] also regularly visited some of their parents, winning their friendship and then molesting their daughters... [The alleged victims] gave evidence that [their teacher] put his hand up their shirts or skirts and fondled them in class or other school buildings... Most of the nastiest accounts – including his forcing some of them to stimulate him sexually – occurred in their own bedrooms. On one occasion [the teacher] had volunteered to keep an eye on his victim when both parents had to go out. Another time, when [the teacher] heard her mother approach, [the teacher] told a girl: "This is our secret." ...[the teacher], who has... stood in an A[USn] record of 36 tests, 88 one-day internationals and 68 Sheffield Shield matches... was one of two A[USns] on the I[CC] panel of international umpires. When charged, [the umpire] was about to leave for London to stand in the first England-South Africa test. If [the umpire] was big in the cricket world, [it] was huge in Tasmania where famous people are few. Many knew him... [and the former teacher] was a popular speaker... [However, in] the witness box... [the umpire] frequently did little more than deny any improper touching. To many specifics [the umpire replied that it] did not remember... [The umpire agreed it] was an affectionate person and... was "touchy-feely," but denied ever doing more than patting a girl on the back or shoulder for a job well done. It was a question of whether the jury of nine [guys and three gals] believed, beyond reasonable doubt, the... stories... [which arose at] a class reunion... in... 1997... Soon after, the police started investigations, although they had been approached earlier by one... of the... [victims. In related news,] England's Marylebone Cricket Club, still responsible for the laws of the game, broke with 212 years of tradition by announcing their first 10 [gal members including a] former England captain... [who has campaigned for gals] to be admitted to the previously all-[guy] club since first applying for membership in 1991. And the first officially-sanctioned MCC [gals'] team will play its first match on May 11.

...Big game hysteria can bowl you over for good The sight of [Zimbabwe's opening bowler] tearing down the cricket pitch may strike fear into N[Z]'s batters] – but if you are a sports fan watching today's one-dayer against Zimbabwe, it could literally strike you dead. Dutch medical researchers have found that [guys] are more likely to suffer a heart attack or stroke on the day of big sporting events, probably because of stress. The number of cardiovascular deaths on June 22, 1996 – the day the Dutch football team were knocked out of the European championship – was about 50[%] above average. Increased mental and emotional stress, heavy drinking, overeating and smoking are believed to have triggered the heart attacks, and such factors are often combined when watching big sporting events, say the researchers. [The]NZ Heart Foundation medical director... urged those prone to heart disease to take care. "I imagine if you're at a one-day cricket event, eating a lot, drinking a lot, screaming a lot and getting excited, that group may have an increased risk." The researchers found no corresponding increase in deaths among [gals]. "Either we are more controlled or we get more excited about other things,"... said... [the director. A former NZ captain turned c]ricket commentator... suggested that an electro-cardiograph machine be installed on the boundary... "When you're feeling a bit tense you can go down there and be tested."

...If there is such a thing as the best job in the world, then cricket commentating is about as close as you can get. Consider the working conditions: the commentator is tasked with the most demanding of obligations – watching sport for money. Some sports are so whizz-bang that the commentator switches on... blasts for 80 minutes and that is the end of the matter. In the case of cricket it is all done in slow motion. Nothing ever happens in a hurry... and what with all the interruptions for drinks, lunches and teabreaks, the commentator has more than ample time to catnap during the day, or even pursue another career if... upwardly mobile. Whether on television or radio the commentators are naturally provided with the best view in the ground and are plied with drinks of a rather more robust character than those delivered to the players. Lunches of quality and other delights are available at the click of a finger, while the average punter down below has to forage for hotdogs and eskimo pies at outrageous prices. Besides these attractions are the instant replay monitors, and of course, the ultimate privilege, via the wonders of the audio age, of being privy to the most intimate exchanges between players and umpires, many of which would make life unbearable for the Broadcasting Complaints Authority if, in error, they were unleashed on the public ear. All this is attractive enough, is it not? But there is more. No commentator need be an early riser... The astute commentator can live it up most of the night and still be in reasonable shape by the time play starts... The game starts at the civilised hour of 10.30am and no sooner has it started than it's time for morning tea... Cricket also happens to be very much a fair-weather occupation... When it rains, the commentator is paid to do nothing. It is a bit like working on the railways or for the postal service before the

ravages of... restructuring and silly new words like productivity... and... Rogernomics... began to worm their way into the workplace... The company is good, the humour is always near the surface[and] the chance to wax lyrical... about the setting, the... habits of... seagulls or the idiosyncrasies of some of the spectators picked out by the camera, all go to make for an occupation that can only be dreamed about. Opportunities to score points at others' expense abound. The chance to mock... cricket's more stolid personalities is not to be passed up lightly... Life as a cricket commentator might have a few minor challenges but when you look at it objectively, there is nothing to compare with it. Why can't we all have a job like this?

...[a player] has no plans to quit after becoming the most successful bowler in West Indies test cricket this week. "People have been saying for a while I should pack it in and maybe they will be saying it more now the record has gone," said the 36-year-old veteran after taking his tally to 379 in the opening test against South Africa... [The fast bowler]'s 4-48 haul on the second day took him beyond [his country]'s previous best of 376, reached in 1991... [by Malcolm Marshall, who is now the] West Indies coach... [The fast bowler] moved to fourth on the all-time world list, headed by [an Indian's] '434 in 131 matches. In comparison, the West Indian's total was reached in 103 matches. In second place on the all-time world list is a NZ bowler (431 wickets in 86 tests) and in seventh place is AUS's greatest wicket-taker (355/70)'. The West Indian is the only bowler amongst the top seven still playing].

...IN THE 1980s, Marshall was the most dangerous fast bowler in the world. In 81 tests [Malcolm] took 376 wickets at an average of 20.94 runs per wicket... Until [a]Jamaican... surpassed his mark this year, Marshall had been the [4th-placed]... wicket-taker in the major version of the game... Marshall was a lithe athlete with a whippy action who so impressed the West Indies selectors that [it] was chosen for his first tour – to India in 1978 – on the strength of only one first-class appearance. That was for Barbados against Jamaica where [the debutant] took an impressive 6 for 77 at Bridgetown. From 22 yards away, Marshall, with his sprint to the stumps and his front-on action, was described by [a]former England opener... as "fearsome" and "certainly one of the best fast bowlers I ever faced." Away from the middle, though[, Malcolm] was "one of the nicest blokes you could meet." [The former England opener was lucky it] did not play against Marshall when [the West Indian] was at the peak of his powers. His English counterparts did during their tour of the Caribbean in 1986 and in the series [Malcolm] took 27 wickets for the measly price of 17.85 per scalp. Although never picked for his batting, Marshall was good enough to score 10 half-centuries in tests and averaged 18.42 an innings. But with the ball in hand... Marshall was an indispensable member of a side that be-strode international cricket from the early '80s to 1995. In 16 years, the team did not lose a test series. In England, [Marshall] was an important member of Hampshire where [it] played and coached during 14 seasons. It was his bowling in 1982 for the county that cemented his place in the West Indies test side. During that summer, Marshall took 134 wickets – the most collected by a county bowler in a 22-match championship. His last appearance on the international scene was... when [Malcolm] coached the West Indies. While... [coaching overseas Malcolm], aged 41... had an operation on a tumour, but never recovered and died [last week]in Bridgetown's Queen Elizabeth Hospital from colon cancer. As one report from the Caribbean put it, his death was mourned by [PM]s to post[ies].

...Cricket's greatest ever player... celebrated his... birthday yesterday amid the sort of fanfare usually reserved for royalty. More than 1300 guests attended a dinner in his home town of Adelaide while other celebrations were taking place at his birthplace Cootamundra and the town where... Sir Donald Bradman... grew up, Bowral... [The PM] led the flood of tributes by lauding Bradman as the greatest living A[US]n.

...Sir Donald Bradman... head[s] a list of the best test batting... performances announced by *Wisden* yesterday. Bradman, regarded as the best bats[person] to have played the game, tops the list for his 270 made against England in the Melbourne third test of the 1936-37 series. His innings enabled A[US] to narrow a 0-2 deficit and eventually go on to win the series. Two Bradman innings figure among the top 10. His unbeaten 299 against South Africa in Adelaide in the 1931-32 series is rated fifth in the all-time list. [The current West Indies captain] is placed second for his 153 not out in Bridgetown during the West Indies' 2-2 home series draw against... [AUS two years ago. Hi]s 375, the world record for the highest test innings, made in St John's, Antigua, against England in 1993-94, is 10th... *Wisden*... took the most exhaustive set of parameters ever used in the cricketing world. "The beauty of these ratings is that there is no bias. The only way to get in is to score," [the]... director of *Wisden* Online, said at the global launch of *Wisden* 100 in Mumbai... [Incidentally,] Bradman, who turned 92 last month... has lost an appeal to stop local businesses, including a sex shop, using his name after a bid to honour him in his home town backfired. [Its m]ayor... said the West Torrens council had been forced to reject a personal appeal from Bradman to scrap a plan to name the road from Adelaide's airport to the city Sir Donald Bradman Drive. "The council had very firm legal advice that we would be liable for compensation to all those businesses that have... got ready for the name change and altered all their stationary... etc,"... West Torrens council planned to rename the road to honour Bradman who had a test average of 99.94 runs on his retirement. But the move sparked controversy when a business[person] wanted to rename her restaurant Bradman's Cafe on the Drive. [The mayor said it] believed the move by a sex shop on the road to register the name *Erotica* on Bradman was "the final straw" for Bradman...

DON'S GONE: Donald George Bradman was a... humble... skinny Babe Ruth... with... arthritis. His test batting average was anything but average – 99.94. His skill was such that [the Don] sometimes played with his eyes shut, his hands tied behind his back or standing on his head. On those days[, however, the Don] was dismissed for a duck. "The Don" died in Adelaide last Sunday, aged 92. A[US] is in mourning. Sports Talk is too.

...The golden light of N[Z] cricket has gone out. Bert Sutcliffe, a prince among world cricketers, had been fighting a long illness with his typical good humour and unquenchable spirit. Early yesterday, [Bert] quietly eased off his gloves, tucked his bat under his arm – and left... for [a]higher pavilion... le[aving] us with the memories. What memories! There was the teenager who went to his big cricket matches at Eden Park by ferry and tram, and later the great bats[person] who probably deserved transport to Lord's by royal carriage... There was the left-hande[r]... of sublime and classical style who scored hundreds and double hundreds and treble hundreds like a major symphony orchestra in perfect pitch. That was mirrored by the [person], who, in his later life as a Rothmans representative, told the yarn of what [it] reckoned was his greatest moment in cricket. At Tauranga one Saturday morning, Sutcliffe was guest umpire at a youngsters' match. One late bat[ter] was the bunny who had not scored a run in his first eight matches. [The boy] nicked one. At Sutcliffe's command [the bunny] ran to the bowler's end ([it] was safe, no chance I would run him out), and kept on running, past Sutcliffe, past the boundary, down the road, all the way home, yelling "Mum, I scored a run." The discussions – Sutcliffe was not the kind of person you would argue about – will arise again as to whether [Bert] was the best bats[person] in N[Z]'s 70-odd years in test cricket. Whether [Bert] was a better left-hander in what you might term the modern generation than our own Martin Donnelly...

Tributes to the great N[Z] cricketer... – who died... aged 77, in a South Auckland hospice – ...flowed with the same grace and volume as the thousands of runs... Bert Sutcliffe... scored in a first-class career spanning 24 seasons. Martin Donnelly, who died recently and was often compared to Sutcliffe when argument raged over who was N[Z]'s greatest left-handed bats[person], once said: "If I had to pick a team from all the players I saw, my opener... would be Sutcliffe. Bert was the one player we had who could truly be compared to Bradman." ...one of the many younger players who toured with Sutcliffe, then aged 41, on the arduous six-month tour of India, Pakistan and England in 1965, batted with Sutcliffe in the first innings of the second test in Calcutta. "Bert scored 151 – which was 150 more than I got... I never saw him at his prime but I knew that if [it] could, at 41 years of age in front of a very noisy crowd and with temperature in the 90s, score 150 [it] must have been a great player." ...In *Wisden*... it was said: "Figures alone do not convey an adequate picture of the capabilities of this well-built, good-looking, golden-haired bats[person]. Supremely confident and possessing classic style[, Sutcliffe] was a master of all strokes." ...[the former NZ] coach and captain... who remains the greatest run-scorer in N[Z] first-class cricket with 34,346 runs at 49.70 – compared with Sutcliffe's 17,447 at 47.41... [(i)n his 42-match

test career, Sutcliffe scored 2727 runs... includ[ing] five... centuries... at an average of 40.1[...]. – yesterday said: “People were surprised by his power for such a little guy.” [The top run-scorer and brother of a top NZ golfer] said Sutcliffe used to watch him bat in the Otago Boys’ High School nets when [it] was a third former. “I was a bit young to fully appreciate him. I remember seeing him play at Carisbrook. People were in awe of him as a player.”

...By the time everyone had given up and splashed their way out of Carisbrook, not only a day’s play in the first cricket test had been lost, but a fair portion of good-will as well. For a game yet to start, and being played between two teams yet to be named, this first Bank of N[Z] test between India and the Kiwis has already seen a bit of action. It became more apparent yesterday after the first day’s play was officially declared a washout at 3.20 pm... India, who could never be accused of putting in overtime on this tour, yesterday turned down... [the match referee]’s invitation to play an extra day... (thereby still playing a five-day test)... This was just 24 hours after rejecting an experimental rule which allows for lost time to be made up on following days, and for ground floodlights to be used when necessary. The experimental I[CC] law requires the agreement of both teams before it can be invoked, and while N[Z] were anxious to play an extra day or make up some time over the next four, India were just as keen not to... [The NZ] coach... climbed into the tourists over their refusal to play an extra day on Wednesday... “I simply don’t understand them,”... [it] said of the Indians’ stance. “Why wouldn’t you want to play? They’re the favourites, and I thought they’d be keen to get out there as quickly as possible and exert their dominance.” ...India have been in N[Z] for only a fortnight but have already refused N[ZC]’s suggestion of bowling a minimum of 110 overs a day in[stead of the usual 90. India’s coach]... said... “We want to stick to the ICC test match laws that we’re familiar with... As far as the lights are concerned, our experience in India is that the effect in daylight is quite unreal, and very difficult to cope with.”

...THERE was a little ray of sunshine in gloomy Dunedin yesterday. The most gifted cricketer of our time, arguably the second best in history, spoke publicly for the first time... The little Indian who waves his bat like a magic wand is every bit the class act off the field as... on it. Denied the chance over the first two days at least of this... test, to see the master bats[person] in the middle, the media was blessed with his appearance in front of the microphone... [The] 25-year-old who is revered in India... is a private individual who prefers to let his willow do the talking. But yesterday [it] explained to us ordinary folk a little of what makes up his other worldly gifts... Dressed casually in a T-shirt and cap, [the 25-year-old] sat and talked on a range of subjects, from his thrill at meeting Sir Donald Bradman earlier this year, to the special feeling fatherhood has thrust upon him, to his status as saviour of a nation... The voice is quiet and... well spoken, considered and polite... Yes, the world’s greatest active cricketer, certainly its finest bats[person] of this era, is a nice guy, too. If indeed 1989 at Carisbrook is to be repeated and the test abandoned without a ball being bowled, it will still have been a privilege to be here when... the magician from Mumbai (Bombay) spoke. [The magician] even sympathised. “It’s certainly frustrating,” [the magician] said of the lack of activity on the cricket front. Heavens, at least [the magician] hasn’t been waiting to see himself bat like we have. Already with 16 test centuries to his name among his 4593 runs (average 54.03) the world is at his still young feet. If it is possible, [the magician] is even better in the one-day game where [it] single-handedly wins games. Our [cricketer] with the Midas touch[(r:p1509, lns11-2)], was emphatic we were seeing the arrival of the second finest bats[person] to have played... “[The Indian]’s approaching 5000 test runs, h[a]s got more one-day centuries than anyone else and over the next 10 or even 15 years if [it keeps going, wi]ll beat every record there is except one – and that’s Bradman’s 99.94 average...” As good as this guy is, [the magician] has never scored a 200... But don’t imagine for a minute this [makes him] unhappy... As a youngster [the magician] was inspired by India’s World Cup success of 1983. [The youngster] played cricket in the streets, but watching that successful team taught him something important. “That was the time I really decided that I can do something in cricket. This time [at next year’s World Cup in England] I hope the team will produce the same performance. We’ve played well in the past in English conditions.” But it is N[Z] conditions that concern him now, particularly Dunedin’s inclement weather... [It’s denying him the chance to master an] attack which doesn’t send shivers down the international cricket world’s spine[. Editor’s note: ‘Although the game was widespread in NZ and had a large following, the country’s teams were notably unsuccessful during the first 100 years or so. NZ’s first test win was against the West Indies at Auckland in 1956. In 1960 and 1961 NZ won an official test against the MCC at Wellington, and twice beat South Africa to draw a series there. NZ first beat India at Christchurch in 1968, and in 1969 NZ won its first test series – against Pakistan – winning one test and drawing two. The first win against AUS came in 1974. Since then NZ’s become more of a force in world cricket, especially in the one-day matches developed as television spectacles since the second half of the 1970s.’]

...A bewildered N[Z] team almost produced one of the great turnarounds in one-day cricket... in a cliff-hanger at McLean Park last night... But in the end the Indians – who joined for a world record of eight run outs in a match – scrambled home by scoring the winning runs from the second-to-last ball of the BNZ match to level the series 1-1. Asked by [the] Indian captain... to bat first on the hard and reasonably-grassed pitch the Black Caps quickly went into a giddy spiral... It was a shambles. Only pathetic Indian fielding enabled N[Z] to edge beyond 200. And when [an opener smacked NZ’s opening bowler (r:my son, p1508, lns22)] through backward point to the boundary from the first ball of the Indian innings the pain became even greater. The comic opera then threatened to become a full-blown farce when [NZ’s other opening bowler – who was a replacement for NZ’s injured strike bowler] – hobbled off with a hamstring injury after bowling just 14 deliveries... But this is a resolute Kiwi outfit... and [the game made it] to the last over... with [India needing] eight runs to win with two wickets in hand. [One Indian batter] scored a single from the first. [His batting partner made] a swing and a miss, another swing and an edge for four... A single and then a two and an amazing victory[was achieved] – eight hours and eight minutes after the first ball had been bowled.

...Tuesday night’s [final match of the series] was the 50th ODI between India and N[Z], with 21 now won by the Kiwis, and 27 by India... [By the way, when the Indian team arrive back home they will find themselves at the centre of a religious argument after a] top Hindu priest... asked cricket-crazy India to give up the game, blaming it for the deaths of thousands of cows... [The priest] said cricket balls were made of cowhide and went against one of Hinduism’s main tenets – that cow slaughtering was sinful. [The priest has] called for a national campaign against the offending factories and said manufacturers should find “alternative sources” of leather if the game was to continue in India[(where, when AUS last toured, ground ‘entry at Delhi cost 1000 rupees – which could feed a family of slum dwellers in the city for weeks’)].

...Politics and cricket made an explosive mixture in Bombay this week when a mob of about 70 right-wing Hindus burst into the Indian cricket board office and smashed the fittings, including some of the nation’s prized silverware. The vandalism was to protest against the decision to allow the first test series against Pakistan on home soil in more than a decade. Protesters promise to follow it up by disrupting the first test... next week.

...[an] Indian legspinner... equalled one of the most famous records in test cricket yesterday when [it] took all 10 wickets [for 74 runs] in the second innings of the second test against Pakistan. The 28-year-old computer software engineer [(r:ln49 above)] became only the second player in test history to take 10 wickets in an innings as India tied the historic series 1-1 with a thumping 212-run win in New Delhi... [T]he first... player to have previously taken all 10 wickets in a test innings was [an English bowler] – who snared 10 for 53 against A[US] at Old Trafford in 1956. In the first series between the two teams on Indian soil for 12 years... [the legspinner ended] the match with figures of 14 for 149 off 51 overs... Ironically, his match figures rank just third on the Indian wicket-taking lists, behind... [someone] who took 16 for 136 on debut against the West Indies in 1987-88, and [another bowler] – who took 14 for 124 against... [AUS in 1959-60. On that occasion, the bowler took ‘9-69 in one innings. At least 7 other players have taken 9 wickets in a test innings, including the English bowler (9-37 in the other AUSn innings at Manchester in 1956). Another English bowler holds the 3rd-best record –] 9-28 v South Africa, Johannesburg, 1895-96... [The legspinner], who now has 234 [test] wickets... has taken 10 wickets in a match twice and five wickets in an innings on 12 occasions. “It’s a dream,” the [player]-of-the-match said.

...[for] a decade, a trip to Pakistan by an Indian P[M] has been out of the question. But thanks to the recent India-Pakistan cricket series... – ...referred to by the local media as “cricket diplomacy” – ...relations between the two countries have thawed and... [the Indian PM] is heading across the border – by bus... after an invitation by... [the Pakistani PM. Analysts say the Indian PM]’s trip has raised hopes of improved bilateral relations... [D]espite threats by Hindu militants, the cricket went ahead and a cross-border bus service is to begin this weekend... A team of 35 Indian MPs has also concluded a goodwill tour to Pakistan, the first ever, and negotiations to buy electricity from Islamabad are at an advanced stage.

...A mournful [West Indian batting great and current team manager] revealed his sheer despair at the latest devastation of West Indies cricket yesterday after his once-feared side equalled the worst run of defeats in their history... [The] demoralised team have sunk to such depths that by early afternoon in Cape Town they had succumbed to their fourth consecutive test defeat of the tour, this time by 149 runs, despite South Africa being without [its top strike bowler (r:p1505, ln4)] for the entire second innings. The margin between the teams, given the temporary absence of the world’s leading strike bowler, suggests that the tour will end later this month in the ultimate humiliation, the first 5-0 series whitewash since the West Indies began playing test cricket 71 years ago. A tour which almost had to be aborted before it began when the players went on strike for a better deal has served only to highlight the increasingly bankrupt state of the Caribbean game, especially their batting. The collapsing top order make England’s appear positively stable in contrast... [The specialist batters] have folded with such regularity that not one has made a century in the series and not once in eight innings have they totalled 300... “I hold my head and try not to commit suicide,” [the manager] said, pausing for a sardonic chuckle at the thought of such a preposterous over-reaction... Despite leading a team that terrorised the cricket world like no other since... [WW2, the manager] knows how it feels to lose four tests on the trot. [The manager was the captain] when it last happened to the West Indies, during the winter of 1975-76 when... A[US] won the six-match series 5-1... “When I was playing I could go out there and do something about it... We weren’t a bad side on that A[US]n tour so I wasn’t worried. We were not as professional as we should have been... So we employed trainers and made ourselves more resolute.” Resolute is about the last adjective to be attributed to... [the current batch of West Indian batters (including, during this tour, their captain – r:p1509, ln35 – one of the most resolute batters of all time). The manager] could never have envisaged such nightmare scenarios as those at Newlands which undid the team’s two leading... [batters, one of whom] ran himself out in the first innings by hardly running at all until it was too late and [the captain], of all people, doliied a return catch... [● In AUS, the home side] was in total command at stumps on the first day of the second Ashes cricket test after England... self-destructed... in just 39 overs after being sent into bat... England collapsed to 112 all out on the opening day... in Perth... Only four English[batters] made it to double figures as A[US]’s pace bowlers ran riot... In reply, A[US] was 150-3... England’s total was its lowest ever in a test at the WACA, eclipsing their 123 in the 1994-95 Ashes series. A[US] won that match by 329 runs.

...“I still have a lot to learn,”... [the s]pin bowler... ominously told reporters after... celebrating his 300th test wicket... The... 28-year-old [AUSn (r:p1508, ln17), who claimed]... 11 wickets at the S[ydney Cricket Ground]... is young enough to go on to topple India’s [test wicket] record-holder...

Smoking star’s foul outburst at young fans A[US]N cricket’s bad boy... hit a young Kiwi fan for six after [the fan] snapped a photo of the spinner sneaking a cigarette. [AUS’s second-highest test wicket-taker] – paid \$239,000 last year by a health care company to quit smoking – turned on [the fan] at Thursday’s one-day international in Wellington after the 15-year-old took the photo. “[The spinner] kept asking me what I was going to do with the photo and I said, ‘Nothing’. [The spinner] said, ‘Either you give the camera to me or I’ll get security to take it and smash it’.” [The 15-year-old said the AUSn]... threatened to have him and his friends thrown out of the ground... “[The spinner] was going ballistic, swearing and screaming at us,”... [The AUSn] called one friend... a “cock-head”... [The friends], who both play in Wellington’s Heretaunga College 1st XI, were taking photos of their cricketing idols with a \$20 disposable camera. [The 28-year-old AUSn] was captured having a cigarette in the smoke-free players’ enclosure at Wellington’s \$130 million WestpacTrust Stadium... When play in the match against N[Z] was rained out, [the AUSn] complained to security staff who searched [the 15-year-old]’s bag. But another friend had gone home with the camera... [so the spinner] slung the bag over his shoulder and said: “Maybe I’ll just hold on to this for safekeeping until the camera turns up.” ...[at that stage cock-head’s] father... called the cops... Police took the bag off [the cricketer]’s shoulder and handed it back to [the 15-year-old, who later said it still admired the spinner]’s ability. “But I think... [the spinner’s] a loser. It’s supposed to be a role model, and kids are supposed to look up to him. [It] shouldn’t go around mouthing off at his fans. If [the spinner] hadn’t said anything about it, the photo would just be in a photo album now[– instead of a newspaper –] and nothing would be done about it.” But... yesterday [the AUSn – who has signed a ‘one year deal with English county side Hampshire for £100,000 (the largest deal in county history)’] – [denied verbally abusing the teenagers... It was a “minor misunderstanding,”... In a statement last night, [the spinner] apologised for any misunderstanding.

...Members of our family on holiday overseas were unfortunate enough to share accommodation with [a then young NZ wicket-keeper] and his team-mates on tour, and they told of the humiliation and embarrassment they felt as N[Z]ers offended by their outrageous behaviour. Their rude and arrogant manner upset all the other visitors staying at the hotel. You have to ask how we are supposed to feel proud of [sportspeople]... representing our country when they act like that? Thank goodness his days of representing our country are [soon to be gone]...

THE BLACK Caps wicketkeeper... wants pitches to be doctored for the up-coming [test] series against A[US]. The wicketkeeper says the local groundspeople should prepare slow pitches to slow the pace of [the young AUSn who]... was clocked at 154.1-kmh during his test debut... – 0.21kmh slower than Pakistan’s [speedster (NZ’s all-rounder – r:p1510, ln45 –)] is the fastest Black Cap... at 144kmh... [while the lesser wicket-taker of the retired pair of AUSn fast bowlers – r:p1507, ln60 –] is regarded as the world’s fastest bowler ever, clocking [unconfirmed] speeds in excess of 160kmh[–] ...for the three tests [following the] six one-dayers. “All the other nations prepare wickets that favour their bowlers and we’d be mad not to do the same,”... [The wicketkeeper], who turns 29 today, said snail’s pace pitches would also frustrate A[US]’s free-scoring bats[people] who are used to playing off the back foot on hard, bouncy wickets. Meanwhile... the most successful test wicketkeeper[last year] with 40 dismissals... [– who l]ast month... completed a low degree... [– believes it] has the ability and desire to remain in the Black Caps for at least five more seasons.

...In memoriam: The spirit of cricket, died after a long and painful illness... much loved and sadly missed. If you’re wearing black in memory of the dear departed, then join the club. Forget the umpiring issue for now. The topic is sports[personship. AUS]n failure to allow [NZ’s wicketkeeper] to bat on after a vicious bouncer knocked his helmet on to the stumps is living proof that the pernicious spirit of underarm (and bodyline) is still alive. Match that against the... hoonery of the crowd on the... terraces, then the knife attack on the Aussie buses, and the sad... picture is complete. A once great game is now apparently permanently in the hands of money-mad professionals and idiot fans who mimic UK soccer nutters...

I WAS at the ill-fated cricket international at Carisbrook. What they say is true. The behaviour was a disgrace. Uncouthness, bad language, attempts to maim, abuse, arrogance, obnoxiousness and cheating were all apparent in abundance. The behaviour among the crowd on the terraces wasn’t much better either, but then that’s hardly surprising considering the amount of alcohol that had been encouraged to be consumed. And why should drunken spectators be expected to behave better than international sports[people], we might ask? The authorities have proceeded to huff and puff. No more internationals at Carisbrook they threaten. What exactly was expected, I can’t imagine. The game was deliberately scheduled for orientation week so as to seduce the “scarfies” while they still had cash in their pockets and weren’t hamstrung by study commitments. Add to that the nature of more than [7] hours encompassing a warm afternoon and evening and you have a recipe for shenanigans. I fancy that indignation would have been replaced by the odd tut-tut had there been another 10,000 paying customers. In reality, the most dangerous place to be when the cans started flying was in the corporate boxes. It’s hard to judge the flight of a can as it rebounds off the inside of a plate glass window! But the A[US]ns’ condemnation of the crowd is a bit hard to bear. I happened to be at the SCG a few weeks ago when they demolished the Pakistanis and

noticed plenty of jetsam flying on to the field. [The AUSn captain yesterday] commented: “We put up such a great show, we scored 310 runs and gave 100%. Then as soon as a decision doesn’t go the crowd’s way they try and wreck the game.” Surely [it] didn’t really believe having the home side battered into submission by anyone, let alone the old enemy, was liable to pacify the assembled mob. I shudder to think of the reaction in Sydney if it were the Black Caps inflicting such humiliation upon their... hosts (mind you that is stretching the limits of the imagination a little).

...A[US] became the first team in test cricket to record 12 consecutive wins after trouncing the West Indies by an innings and 27 runs in Perth yesterday. The tourists were dismissed for 173 in their [2]nd innings and slumped to their [2nd 3]-day defeat in as many matches to give A[US] a 2-0 lead in the five-match series. The A[US]n winning streak broke the former record of 11 wins enjoyed by [the manager]’s West Indies team in the mid-1980s... The victory followed A[US]’s innings and 116-run first test win at Brisbane. It was the West Indies’ 14th defeat in 16 away tests and the fourth inside three days in six games. The visitors now face the possibility of a sixth straight series defeat away from home... [AUS’s record run began with a win] by 10 wickets in Harare [over Zimbabwe, followed by 3-0 series win over Pakistan and India at home, then their 3-0 series win in NZ].

...AUS thrashed the West Indies by 352 runs yesterday in an embarrassing mis-match... [The new West Indies’ captain – whose appointment was made to relieve pressure on the team’s star batsperson (r:p1511, ln20 – who made a duck in the second innings of this test, to go)... with scores of 0, 4... 0... and... 17... [in the first two tests) –] admitted after the match that [it] was struggling to cope with the pressures of leading an unsuccessful side... [The West Indies’ captain – who] scored a duck in both innings... [– denied it] was personally intimidated by the A[US]ns, but quickly added: “I can’t speak for everybody in the team. What I will say is that this [playing A[US] in AUS]] is the biggest challenge in international cricket. I think as a player, this is what you should want, to be tested to the limit.” Sadly for [the captain], the bulk of his bat[ters]... are failing the test dismally.

...A[US]’s historic 5-0 demolition of the once-mighty West Indies was just a warm-up for even greater challenges that lie ahead, says [the team’s captain. Hi]s team completed their first 5-0 series win over any country in 79 years in taking the final test in Sydney on Saturday. But the ever-practical [captain] was quick to put a lid on the team’s celebrations. “The West Indies was an important series but the Indian series will be the big one and the one we’ll be judged on.” A[US] in recent years have beaten every major cricket-playing nation in the world both home and away but have not won a series in India for 30 years... Meanwhile... A[US] will play the West Indies and Zimbabwe in a one-day series starting on Thursday.

...Just a day before his moment of truth arrived before cricket’s investigators, [the brother of AUS’s captain] yesterday belted the highest one-day score ever by an A[US]n. His innings of 173 carried A[US] to a massive 338 for six in the second of the best-of-three one-day cricket finals series against the West Indies. His innings surpassed... [an opener’s] score of 154, set in Melbourne against Sri Lanka two years ago. [The brother]’s performance was remarkable given the pressure [it] was under on the eve of his interview with [the AUS]n Cricket Board investigator... over his alleged involvement with illegal book-makers. The 35-year-old will today defend himself against the allegations that have hung over him all summer – whether [it] accepted a \$US20,000... gift from [an]Indian bookmaker... in 1993 to provide team, weather and pitch information. That appeared the furthest thing on his mind as [it] punished the West Indies’ attack with an array of elegant, attacking shots. His runs came off only 148 balls... On the way, [the brother] became the first A[US]n to chalk up 8000 one-day international runs. The only players above him are... [a retired] West Indian... and Sri Lankan[(r:p1505, ln37), India’s captain, plus India’s magician, whose] 9899 runs... top... the list. It was [the brother]’s 17th one-day century[, placing him] equal third on the all time list with only [the magician] (27) and Pakistan[’s] opener... (19) ahead of him.

...A malfunctioning scoreboard almost robbed [a NZ batsperso]n of his greatest moment in one-day cricket. The 24-year-old right-hander blazed the country’s equal-fastest century as N[Z] beat Pakistan by 138 runs in the fourth one-day international in Christchurch yesterday, levelling the series 2-all. [The right-hander]’s unbeaten 102 off 75 balls equalled the mark set by [NZ’s all-rounder] two summers ago against India, and is the equal 12th-fastest in history[(the fastest was in 37 balls by a Pakistani). The right-hander] reached the milestone in a dramatic last over in which 24 runs were scored, including three sixes. But the century was almost missed because the broken-down scoreboard and a misinterpreted ground announcer’s message had [the right-hander] – on 97 after the fourth ball of the last over – thinking [it] had already reached [his century]. After a quick bat-waving celebration, [the right-hander] reverse-swept the next ball for a single, which would have left him stranded on 98 had [Pakistan’s] [off-spinner]... not managed to finish his over with two no-balls. This enabled him to get back on strike and smash the eventual last ball of the innings over mid-wicket for six, bringing up his first century in 83 ODIs.

...Pakistan[’s quirky] off-spinner... is keen to add a match-winning spell with the ball to his record-setting deeds with the bat. The 24-year-old sheikh of tweak was unbeaten on 98 when stumps were drawn on the fourth day of the second test against N[Z] last night, and believes there is a chance to further the home side’s misery when [it] has a bowl today. [The off-spinner], who shared in a seventh-wicket partnership of 248 with [his team’s] double-century maker... as Pakistan pushed on to 561 for seven at stumps, said afterwards there was still an outside chance for a result. “Cricket is a funny game and anything can happen,”... His highest test score allowed Pakistan to build a lead of 85 and reach an unassailable position in the match and the series, which will continue next week in Hamilton with the third and final test... [His seventh-wicket partner] became the second player in the test to post a double-century after [a NZer when it] struck 203, in the process bringing up his highest test score and ensuring that his team would avoid the follow-on mark... The N[Z]er with the unlabelled bat went for another lengthy stroll through the record books as [it] struck an unbeaten 204... [on] the second day of the... test at Christchurch. It was his second double century in tests following his 214 on debut and allowed the home side to post... 476 in their first innings... [and made him] just the second N[Z]er (behind the country’s top run-scorer)] to score two test double centuries... [The NZe]r’s effort was also the highest score by a N[Z] batsperso]n against Pakistan, eclipsing [a former captain’s (r:p1508, ln18)] 175 at the Basin Reserve, and was just the second double-century scored by a N[Z]er at Jade Stadium...

[The right-hander who last month equalled the fastest century scored by a NZer in an ODI] put the icing on the cake of N[Z]’s runaway win over Pakistan in the third cricket test with a world-record batting spree at Hamilton yesterday. Seeking quick runs before the first innings declaration, the 24-year-old... smashed 26 runs off one over from [a] part-time spinner... as [it] blazed his way to 98 off 97 balls in N[Z]’s eventual total of 407 for four. The previous record was 24, held jointly by five players. After [their] skipper... declared, N[Z] bowled Pakistan out for 114...

[NZ’s skipper rates the] record-breaking win over Pakistan as the most complete performance in which [it] has been involved as captain. N[Z] romped to an astonishing innings and 185-run victory in the final test... to square the series, leaving [him] over the moon at his side’s improvement through the year. It was the biggest win in N[Z]’s test history, surpassing the margin of the 1983-84 side, who... knock[ed] England over in a couple of days and w[o]n by an innings and 132 runs... N[Z]’s longest and most successful captain, has now extended his winning record to 13 wins from 36 tests, and was understandably in upbeat mood after his side wrapped up [the] match with a day to spare... [The captain] acknowledged how helpful it was to win the toss. The pitch had played a part in N[Z]’s taking the early initiative. N[Z] were buried in the first test on a turning portable pitch and could gain no advantage on another portable pitch at Jade Stadium, which turned out to be a bats[person]’s paradise.

...The love-hate cricketing relationship between India and Pakistan has come to the boil again with India’s refusal to play against Pakistan for the fourth time ...in [recent]... months for reasons other than cricket. This week, the Indian Government refused permission for their national side to play in the Sharjah Cup next month against Pakistan and Sri Lanka. Now N[Z] have agreed to step in as the third country in the tournament. The angry reaction of the chair[person] of the Pakistan Cricket Board... – who declared that Pakistan would never play India again – is understandable and so is [the Pakistani coach]’s comments that “Indian politicians were using the popularity of cricket to exaggerate the border tension in the disputed territory of Kashmir.” Politics, and not cricket, has sadly dictated India’s decision to sever... their cricket relationship with their neighbour... India... refused to fulfil their commitments to visit Pakistan for [a] test series... and they even snubbed Pakistan’s gesture to play in a

couple of charity games in India in aid of Ahmedabad earthquake victims. Contrary to that, Pakistan have always showed their willingness to mend fences and play India at any venue of their choice. Ignoring a threat by Hindu extremists to disrupt their visit to India, Pakistan embarked on the tour of 1998... [T]he Hindu Prishad's leader, and his followers even threatened to release snakes on the field wherever Pakistan played in India. That prompted the Board of Control for Cricket in India to hire a horde of snake charmers in case the threat was carried out. Pakistan downed India in the first test at Chennai... lost the second at Delhi, when [an Indian] bagged all 10 second-innings wickets, and won the third in Calcutta when, during the final day's play, 60,000 people were evacuated from the Eden Gardens ground after they had set fire to one stand to try to deprive Pakistan of a win. Barring that incident, the Pakistanis were warmly greeted everywhere they played. That, indeed, speaks volumes for the... Indian... crowd's passion for the game... In 49 years of test cricket between the two, there have been 12 test series, comprising just 47 matches. The... ICC's 10-year plan, for each country to play all the others on the test roster, has taken a severe jolt.

...N[Z] umpires are unlikely to stand in home tests from the end of next season. And they may have limited opportunities to be appointed at all under a new system to be introduced... A proposal to develop an elite panel of eight full-time contracted umpires to stand in most test matches could be operating by April next year, says the ICC. At present, independent test match umpires are selected from a 20-strong panel nominated by all test-playing countries except Bangladesh. One neutral umpire and one home umpire stand in each match. The new system would involve a flying squad of the world's best umpire's. They would qualify for the panel on the basis of merit, seniority, status and – not least – marks awarded by test captains. One of the biggest changes would be that two neutral umpires would stand at each venue. Another group of up to 30 emerging umpires would be groomed to eventually join the elite panel... N[Z]'s national umpiring manager, said that it would be more difficult for N[Z]ers to be appointed to tests. It was sad that umpires would be deprived of standing in their own country. But for the good of the game the alterations were needed... "We're in a professional environment now, and anything you can do to cut down error or perceived error must be good for cricket."

...Scene now set for another great battle... Fittingly, having played in the defining test match of their generation, the A[US]n cricketers arrived in Chennai yesterday at the scene of one of the greatest battles waged by a previous generation of [guys] in baggy green. It was here 15 years ago that A[US] and India played in only the second tied test in cricket history – a match that has gone down in A[US]n legend for the fighting qualities of [one AUSn], who batted himself into hospital on the way to a double century in the relentless heat and humidity. It probably will take another performance of that calibre if [the current] team are to realise their long-held ambition of winning a series in India for the first time in 32 years. This team has been all about rewriting history with their 16-match winning streak, but the A[US]ns arrived in the city formerly known as Madras with the distinction of being only the third team in test cricket to lose a game after forcing the opposition to follow-on. And each time it was an A[US]n team on the losing end... as the captains... made what would normally be a safe decision only to see the match taken away from them. [The incumbent captain said it] had no regrets about making India bat again in Calcutta, despite the possibility A[US] were going to have to bat last on a wearing pitch. "I never thought twice about it... India in nine previous innings against us had not scored a big total. If anyone thinks I shouldn't have enforced the follow-on they should have come to see me a couple of days ago." Although his predecessors in the unenviable role both lost narrowly... (1895 v England, lost by 10 runs at Sydney)... (1981 v England, lost by 18 runs at Headingley)... [the current team] were thumped by 171 runs in a test that will long be remembered for its milestones and the way both teams' fortunes ebbed and flowed to extreme levels. On each day there was at least one twist to change the pattern of the game and send the match tilting to one side like an over-laden Calcutta bus. On the first day it was [an Indian]'s hat-trick, on the second it was [the AUSn captain]'s stubborn and emotional hundred to rescue [his side], followed by India's stunning collapse. The third day saw the resurgence of India through [a batter], who finished the day with his second test century – only an inkling of what was to follow as [it] eventually made 281 and with [another batter] (180), added 376 for the fifth wicket over seven hours. On the final day, A[US] may have entertained hopes of winning, despite needing 384 runs off 75 overs but, under the mesmerising twirl of [a spinner]'s hands, India plucked the game out of Calcutta's dusty air by taking seven for 46 on the final afternoon to conjure up a historic victory. [The AUSn captain, seeking AUS]'s 17th straight win, always praised his team's ability to survive tight situations. Yesterday, a hero was not forthcoming for the first time in nearly 18 months... In response to India's stacking their squad with even more spinners for the Chennai match, starting tomorrow, A[US] will probably re[act] by including two spinners in their team... India's selectors have made three changes in naming a 14-[strong] squad for the test.

...As India rejoiced at winning one of test cricket's greatest series, a N[Z]er stood at the eye of a nationwide swell of jubilation yesterday... [The former NZ] captain and test opener – whose CV includes one of N[Z]'s two test victories in India – was a crucial figure in India turning impending disaster into one of cricket's most memorable triumphs. His appointment as India's first foreign coach last year was not universally accepted in a country where off-field political intrigue has long been intertwined with on-field endeavour. Halfway through the second test in Calcutta, with the first match having ended in humiliating defeat and his team following on, [the coach] may have been eyeing his suitcase and checking the airline schedules. Instead, [the coach] sat his team down and delivered a pep talk of such quality that it turned the series on its head. India's manager... himself a former test opener, believed [the coach]'s speech before the third morning's play was the decisive moment of the rubber. That day, [a pair of Indian batters] embarked on their historic fifth-wicket stand of 376, lasting more than a day, and [then] a young bowler... went on to spin A[US] to defeat on a gripping final afternoon. Thursday night's heart-stopping win in Chennai won't have helped [the coach]'s blood pressure, but his stock [in]international... cricket has undoubtedly risen. India's media went into overdrive as the nation rejoiced at the toppling of a team whose last test series defeat was [19 months ago] in Sri Lanka... The *Times of India* in a story titled "[Young bowler] gives Indian cricket brand new spin," said the victory... was being celebrated across the cricket-crazy continent. "Take a bow... [coach, captain] and the boys. We are proud of you," [an]Indian cricket legend... wrote... The mass-circulation *Hindustan Times* said the win would restore confidence in the Indian team, who have been demoralised by match-fixing scandals and slovenly performances at home and abroad. "The match was won. But perhaps more significantly, a lost faith was restored," the newspaper said... The English-language daily, the *Pioneer*, punning on the A[US]n captain's name, headed its eulogies [with a phrase] which phonetically translates into Hindi as "Bravo India Bravo." ...[the AUSn]... captain... has no regrets over [his team]'s preparation for the tour of India, in particular his team's inability to handle quality spin bowling. The only A[USn] batsperso[n] to truly flourish... [– scoring] 549 at an average of 109.80... [–] made a point of practising against spin bowling in conditions that resembled India... While his teammates were dining out in the one-day series at home this summer, [it] was practising his skills against spin bowlers on a specially prepared wicket.

...[THE]INDIAN master bat[ter]... has become the first person to score 10,000 runs in one-day cricket. [The magician] reached the mark in the third game of a five-match series against A[US] in Indoree yesterday... [– claiming] the landmark when [it scored 34. The magician] went on to score 139 as India piled on 299-8. It was his 28th one-day century. [The magician] shared in a second wicket partnership of 199...

In one of the most spectacular collapses in limited-overs history, Zimbabwe were dismissed for 38 by Sri Lanka... [at Colombo yesterday. A] fast bowler... grabbed eight for 19... [from just] 45 balls... and collected the first hat-trick by a Sri Lankan in one-day cricket as... the visitors... were shot out in just 15.4 overs and 87 minutes. Their score eclipsed the previous lowest by Pakistan against the West Indies at Cape Town in 1993.

...[yesterday's ODI was eventually] abandoned because of bad light[– while most of the crowd remained] blissfully unaware of the permutations of the Duckworth Lewis system designed to find the winner in a shortened match. [One spectator], of Hamilton, declares it an "absolute disgrace". "We were sitting on the bank and didn't even hear what the result was. I would love a refund and I deserve a refund. I spent all day here for nothing; no result, no nothing." The Duckworth Lewis method g[a]ve... Sri Lanka the game by three runs. They lead the series four-nil, with the

final game on Sunday in Christchurch... [Incidentally, s]ince the first one-day international in A[US] in 1971, there have been 1176 one-day matches.

...*On-field controversies all in the name of one-day cricket...* The world of one-day cricket was rocked again last weekend when a pitch invasion not only brought a premature end to the one-dayer between England and Pakistan, but also put a Headingley ground steward in hospital. England's captain (r:p1509, ln18-9) conceded the match to Pakistan, who were just four runs short of victory with six wickets and 10 overs to spare when the crowd – many wearing the lime green supporters shirts of the tourists – ran on to the field. Only days after a one-day international between the same sides at Edgbaston was held up for nearly half-an-hour for similar reasons, England cricket administrators are finally cracking down on the practice and have asked Parliament to rush through emergency legislation with stiffer penalties for hooligans. The steward injured in the invasion at Leeds is understood to have been kicked in the head and stomach, and suffered broken ribs and a damaged spleen. [The English] concession was one more controversial moment in an ODI since A[US] and England played the first official match at Melbourne on January 5, 1971. Lest we forget... *June 7, 1975, Lord's*: The opening match of the World Cup is reduced to a farce after India decide they have no chance of overhauling England's 334, and instead use their innings for batting practice. [An Indian legend] bats through the full 60 overs, scoring just 36 off 174 balls. The match ends at 7.30 pm with India's score at 132 for three. *June 6, 1977, the Oval*: A[US] are chasing England's total of 242 when rain begins falling in the 23rd over. Realising there will be no television coverage the following day because of Jubilee Day celebrations, match officials persuade the players to return to the field and finish the game in torrential rain. A[US] win by two wickets. *November 3, 1978, Sahiwal*: Relations between India and Pakistan take another dip when [the]Indian captain... calls his players off the field in protest at short-pitched bowling... The Indians also refuse to attend the official post-match function. *March 12, 1982, Karachi*: A crowd riot spills on to the field during a match between Pakistan and Sri Lanka, forcing the players to flee the field. Following several unsuccessful attempts to break up the disturbance, police fire teargas grenades to restore order. Pakistan win by eight wickets. *October 22, 1982, Karachi*: An ODI between Pakistan and A[US] is abandoned after the crowd pelt the A[USn] fielders with all manner of missiles, including a battery which narrowly misses... "Fat Cat"... [The AUSn captain (r:p1507, ln62)] leads his players off the field, saying afterwards that the rocks being hurled were twice as big as golf balls. *January 17, 1988, Brisbane*: To the astonishment of umpires and players, [the local]curator... sprints on to the ground during the World Series match between... A[US and NZ], shouting "Get off, get off," and proceeds to tear the stumps out of the ground. One minute later the heavens open up and the ground is saturated. *March 22, 1992, Sydney*: South Africa, needing 22 with 13 balls remaining to win their World Cup semifinal against England, are forced from the field by rain, and one over is lost. Because of some absurd weather rules, however, the South Africans return to the field needing 22 off one delivery. England win.

...N[Z's top test-run scorer and former] coach... believes it makes sense for captains to try to "organise something" in rain-affected matches. "Don't call it collusion. Just call it getting together to try to get the best out of a match..." [T]he Otago chair[person] of selectors, was commenting on Thursday's controversy at Carisbrook when part-time bowlers fed runs to Northern Districts to hasten a declaration on the last day of the Shell Trophy match. The second day of the game had been virtually lost to rain and [the chairperson] said it made sense for teams to try to prevent games drifting to tedious draws... Wellington and Canterbury both forfeited innings with little public comment in their rain-ruined first round Shell Trophy match to try to achieve and outright result. That game, too, was drawn. "You didn't used to be able to forfeit an innings, so there's an attempt there to do something." [The chairperson], who played many years of county cricket for Worcestershire before his retirement in 1983, said [it] was "fairly sure, about 20 years ago they actually encouraged county captains to get together to try to formulate results. What are people afraid of? Each captain is representing his own side. We're trying to achieve a positive result." [The chairperson] said Thursday's controversy had a positive effect. "People are talking more about cricket because of the different angles and fascinations that can play a part in it."

...The credibility of... [the NZ cricket p]layers' association chief... was hanging by a gossamer-thin thread yesterday after [it] appeared to mislead radio listeners during an interview on the cricketers' pay dispute. The spokes[person] for the players... found himself in a slightly bigger scrap than one involving money after publicly denying claims that his organisation had suggested removing funds from grassroots cricket... But only hours later it was found that [the chief] had proposed the cuts himself, after travelling to Christchurch [2 months ago and meeting the] NZC chief executive... financial manager... and... Canterbury cricket's chief executive... ■ CRICKET... bible *Wisden*, in its wisdom, nominated another Cantabrian (r:p1510, ln28)... as the second-greatest test bowler of all time... Depending on your view of the way... the... Sri Lankan [ranked No 1] arm twists bat[ters] back to the pavilion, [the NZer] is the greatest test bowler of all time on *Wisden's* calculations... A[Pakistani fast-bowler and a West Indies batter (r:p1507, ln64) have respectively] been named as the top one-day [bowler and batter] by *Wisden*. The... [batter], who accumulated 6721 runs in 167 one-day innings... [holds the record for t]est cricket's highest runscore in a calendar year... 1710... [in 11 matches during] 1976...

Cricket-mad son slain... An Indian... beat his teenage son to death with a cricket bat after... learn[ing] the... 14-year-old... boy had spent his weekly wages on posters of Indian cricketers, police in Calcutta said yesterday... Sushanta had also bought garlands to decorate the posters...

Cricket-mad fans in the West Indies were still celebrating last night, hours after their hero... captured his 500th test wicket... [to put him at the top of the all-time test wicket-taking list. The fast bowler], playing in his 129th test, which is also a record for a specialist bowler[– it has]... made 28,833 deliveries, some 1000 more than anyone else has sent down, to break into statistical territory thought for generations to be out of reach... [–] set the island nations alight when [it] reached the milestone with two wickets in three balls in South Africa's second innings of the second test... [After reaching the milestone, the bowler] ran down the pitch with his arms raised in triumph and was engulfed by his team-mates. It was yet another record for a player[(the bowler also has)]... the world record of 43... ducks in... test[s]... whose achievements owe as much to stamina as they do to natural ability. Although [the bowler] has not officially announced his retirement, it is accepted that the series against South Africa will be his last.

...South Africa's cricket board rocked the game last night by sacking [their test captain after it]... admitted being "dishonest" over match-fixing allegations. United Cricket Board of South Africa's managing director... confirmed that [the]... captain... had been dumped... [The captain] and three other South African players face accusations of match-fixing during... a tour of... India, but [the captain] had strenuously denied the claims made by Indian police that [it] conspired with bookmakers to rig games. Earlier yesterday the South African squad erected a wall of silence... as they met behind closed doors to discuss the... scandal. The players wanted to deal with the issue as a team, then try to put it behind them... [The captain and the 3] other South Africans... have become the first cricketers to face criminal charges over alleged match-fixing... In New Delhi, police said they had new evidence to shore up match-fixing charges... "We believe we now have sufficient evidence in this case but it is for the courts to decide," [the]New Delhi Crime Branch chief... said, describing additional evidence obtained by the police as "clinching." ...[the chief also] said the police were in possession of evidence beside tapes of purported conversations between... [the captain,] a London-based bookie... and his associate... who is now in police custody... The South African High Commissioner to India... called at the Foreign Ministry to request access to the tapes.

...International cricket survived bodyline, and took only a few years to turn [an AUSn media mogul] from enemy to ally – helped not a little by the transfer of A[US]n television right's to [hi]s Channel 9. But the cricket world will face all manner of difficult problems before regaining some balance after the [South African captain] affair lifted the stone and revealed the match-fixing and player manipulation that squirmed evilly below. Bodyline and the... revolt[associated with the mogul] were, in contrast, brief glitches within the international boundaries of the game. The problems were solved basically by cricketers negotiating with cricketers. Now cricket faces a greater peril. The game has now become the plaything of the eastern underworld, of the illegal bookmakers and money-launderers and tax-dodgers of India. The I[CC can't] act against those using the game as

the basis of an... illegal multi-million-dollar industry. The ICC cannot touch those people, the powers behind the foul-smelling empire that can have close to \$500 m... as the jackpot for the recent India-South Africa one-day series – the time when the apparently squeaky-clean [South African captain] threw such a sordid shadow over his own career, his team and the game. [The captain] was dealing in peanuts... taking up to \$US15,000 from a bookmaker... A tight India-Pakistan series can bring in individual bets approaching \$10 m... The ICC can only hope that the Indian police and anti-corruption squads can identify and isolate the ringleaders of this vast empire, for cricket does not have the power to fight crime. Fortunately, the chair[person] of the ICC... is an Indian, of considerable personal fortune, and will already be conscious that the good name of his country as well as his sport is under... serious threat. The ICC will start its crisis meetings early next month. One reason for the habitual avoidance of instant action is that India must first assemble more close-to-the-action evidence before heading for London. In the meantime, a judge will be appointed to lead an inquiry in South Africa. Even so, the ICC must act urgently, and with strength – two virtues that may have been clouded in recent years. A recent N[Z] radio “news” broadcast gave a biased hint on how the ICC was regarded as a powerful law-enforcing body. The senior disc-jockey dismissed the ICC as “people lining their own pockets and flying first class” while the sidekick indulged in a brief but nasty assault on the character of... one of N[Z] cricket’s strongest international allies for the last 20 years. The ICC is a healthier band than that summary dismissal would indicate, but is not yet equipped for hard-nose counterattack against such powerful and hostile forces menacing the game. Only in the past three or four years has the ICC, with a permanent secretariat in London, fashioned a quick-action (by ICC standards) band of chief executives from the major cricketing powers. From the London meeting the ICC must show strong leadership. [The South African] and anyone else found guilty of tampering with individual scores or the conduct of matches must be banned from the game under control of the ICC or its members. The ICC must give the players, and not only those at international level, the old-fashioned (and perhaps amateur) message. Cricket, or any game, is a waste of time if it does not offer dignity, credibility and commonsense conduct within the laws of the game, decent society and the land. It has already made some progress in this direction with the growing impact of international referees and a strict code of conduct. The game, at least at international level, does already have punitive sheriffs, as well as the traditional umpires. But there is a longer, harder trail ahead for the ICC. It must toss aside its traditional, conservative and leisurely conduct of world affairs, a state of mind based on the old-fashioned premise that cricket was a decent game played and administered by decent people. It must now get on the front foot. [The ICC chairperson] must provide the leadership, and the liaison with the Indian law-enforcement people. Perhaps [the chairperson] might even try to persuade the Indian Government to legalise betting on cricket, and thus take the money-making means away from the criminals (or at least from those who can be caught)... Betting on cricket... may... [be] illegal in India but domestic media reports... suggest... Indian players... have wagered while on tour. Meanwhile, the Indian Government [has] vowed to get tough over the match-fixing controversy. “We will not spare any effort to get to the bottom of this,” [the] Minister of Youth Affairs and Sports... told the Lower House of Parliament in a short debate on the scandal. The Government is under pressure to order a federal police investigation, with some alleging Mafia links to the wrongdoings... India’s former skipper[, former]... national coach... and... [former world’s highest test wicket-taker,] has called for a halt to the country’s international cricket until the mess arising from the scandal is cleared up.

...About 70... Indian income tax officials... conducted... raids yesterday, targeting the houses and offices of various alleged bookmakers, as well as... top Indian cricketers and officials... Those raided included [the country’s highest test wicket-taker (a former captain) and another former captain (r:p1512, ln30 + opener, p1510, ln44)]... The former chief of the I[CC] (r:ln6 above) was also targeted.

...In Delhi’s crowded alleys, there is always room for a game of cricket. Small boys dodge cows, washing and rickshaws on their run-ups, crumbling walls cut off cover drives, bare-handed keepers demolish stumps. The dream is to play for India, reaching a movie-star world of fame and fortune. Across town in comfortable hotel suites the big boys of cricket’s seamy side are still in business. Their equipment is a cellphone, a pager and a tape recorder to receive bets. The bookmakers also dream of fortunes and are willing to bribe international players to make them. Unfortunately for the once-lofty honour of the game their advances have not always fallen on deaf ears. It was detectives investigating an extortion racket in Delhi who unwittingly taped a conversation between [an] Indian bookmaker... and a [person who]... turned out to be the South African cricket captain... and the subsequent [fallout] rattled the cricket world. The battle to take cricket back from greedy [adults] and return it to the dreams of boys is now tangled in a series of inquiries and investigations throughout the world... □ [A former]... Pakistan cricket captain... told undercover reporters from the *News of the World* that [it] could fix the result of any match – and had done so in the past... “The players will agree. We’ve all done it before. It’s better than dealing drugs...” ...[the former captain] is the central character in Pakistan’s match-fixing controversy, but has twice been cleared by a Supreme Court judge... [The] former South African captain... has denied actually fixing any matches.

...A conspiracy of silence has surrounded corruption in world cricket, the first report of the I[CC]’s anti-corruption unit said last night. The report, a response to the match-fixing scandal which erupted... when [the] former South African captain... admitted taking money from bookmakers, does not name individuals. But it paints a disturbing picture of corruption and players under-performing to order as betting on cricket mushroomed during the 1980s and [early] 1990s with the proliferation of televised one-day internationals. In the report the head of the unit, [a] former London metropolitan police chief... said match-fixing was still a problem. “Corrupt practices and deliberate under-performances have permeated all aspects of the game... I also... believe that corruption continues to happen and the potential for corruption in cricket remains a real threat.” ...while blatant cases and excesses had been stopped, there remained “a small core of players and others who continue to manipulate the results of matches or occurrences within matches for betting purposes.” ...his investigation had been met by “what amounts to a conspiracy of silence. Players did not want to be branded an informant and risk being ostracised by team mates... Some people were apathetic and thought corruption would always be present. The most disturbing aspect of the tolerance of corruption is the fear that some people have expressed to me about their personal safety or the safety of their families.” ...people... had been threatened, and others... had alleged a murder and kidnapping...

In India, they called him the [guy] who knew too much. Ashraf Patel was rich and well-connected, a regular fixture at Bombay’s glittering Bollywood parties, but it was his connections that may have got him killed. Not his friendships with diamond dealers, shady business[people] or film stars. Instead, Patel may have been shot in a Bombay street because of his love of betting on cricket. Patel, 40, was a successful gem dealer... with distribution rights to brands such as Cartier and Tissot. In Bombay, [Patel] would shower gifts on film stars and cricketers – held in equally high esteem in India – in his hope that they would endorse his products. And they did... [Patel] certainly loved two things: cricket and money. And... knew too much about one of them... [A]fter his murder, an Indian magazine, *The Week*, said [Patel] had become very close to several cricketers and even accompanied the team to tournaments in Sharjah in the United Arab Emirates. Here the cricketing alarm bells started to ring, for Sharjah had become a byword for alleged match-fixing. Organisers admit it has happened there, and the Surrey skipper... was once called there in his hotel by a [person] who offered to “make him very wealthy.” [The Surrey captain] didn’t take up the offer. The alarm bells rang louder still when police discovered Patel had bookmaking contacts in South Africa. That was where the whole match-fixing debacle took its biggest scalp with the demise of... the squeaky-clean captain of the South African cricket team. [Mr Squeaky-clean]... was banned for life, and... [a] former London metropolitan police chief... was appointed head of a seven-m[ember] anti-corruption unit dedicated to weeding out cheating and setting in place mechanisms to prevent it. But his task was enormous. There have been claims and counter-claims of cheating, bribing and fixing in eight of the 10 test-playing nations. In Pakistan, [a former captain (r:ln40 above)] was among two [test-players]... banned for life when they were found to have affected matches for the benefit of bookmakers. In India, [the top test wicket-taker (and former captain then national coach)] has been accused of involvement[– though it denied any wrong-doing in a tearful televised speech – and South Africa’s former captain] told the... inquiry [it] had taken money from a [guy] introduced to him by... [another] former captain of India. [That captain (r:ln31 above)], also banned for life, was questioned by

Bombay police after the shooting of Patel because the two had met two days earlier. The deputy commissioner of police... said. "[The former captain] will be questioned again and again. This is not a small case. We are working on the match-fixing link. It cannot be ruled out of the murder inquiry." [The head of the ICC inquiry] has warned players they can run but they cannot hide, so more may yet emerge. [The head] has recommended increasing players' wages – adequate in England but poor in Asia – to make corruption less attractive. "That's a good idea," said... [the] editor of *Wisden Cricket Monthly*.

...*Cricket's bible confounds the powers of darkness* The forces of darkness seem to be gathering round the grand old game of cricket... But fear not. Amid the deepening gloom there comes a shaft of golden light, a glowing signal that one pillar of the game remains unbesmirched, that 137 years of cricketing history will not be lightly discarded. In the French autumn they make much fuss about the arrival of the first of the season's beaujolais in Paris. But not with half the heart or joy that greets the arrival, in the English spring and other climates around the world, of the latest copy of *Wisden*. The chunky almanac, 1600 pages and weighing at a whisker over 700g, retains all its old virtues and this year two bonuses marking the [imminent] arrival of the new millennium. The first is the election of the five players of the... century, a mammoth task largely organised by... the retiring editor. The second is a free supplement, a separate 208-page softcover book, which contains an extract from every edition over the past 100 years... [The person] who edited the collection, explains that [it] could only provide glimpses of the themes and theories and all the other cricketing interest... But in these days when – if you can find one – a collection of the 137 editions of the venerable almanac can cost about \$80,000, [hi]s saunter down cricketing history is still intriguing compensation. Sir Donald Bradman was picked by all 100 judges, spread round the cricketing world[, to head]... the five players of the century... Another knight, Sir [Midas Touch], was 10th and the only N[Z]er in this illustrious list. Many people have quibbled that "W.G." should have been on the list, but... Grace [(who once refused to leave the crease after being given out for 0 because, Grace barked, "the fans] haven't come to see you umpiring, they've come to see me bat[")]]... was largely a player of the previous century... N[Z] might complain that... the... list of 100 special matches over the century does not include any involving N[Z] teams. As it happened, the smaller book fell open, as I laid it down, at the 1956 section, which dealt with N[Z]'s 26 against England at Eden Park the previous year. And that was N[Z]'s only mention... England's cricket writers lauded [a NZ batter]'s double century... [against England in Christchurch] as one of the greatest test innings, but [*Wisden* didn't feature it among its top 10 innings because of the context of the game in which it was scored. The batter had arrived in the middle with NZ]... in trouble at 119 for three, [and] brought up his eighth test century off a comparatively pedestrian 114 balls before launching a stunning assault, picking up his next 122 runs off just 54 balls... progress[ing] from 100 to 200 in a scarcely believable 39 balls, and by the time [it] was dismissed, sparking fevered celebrations from the English... had hit 11 sixes... and... 28 fours... in an astonishing 168-ball innings... [A f]ormer England allrounder... writing for the *Independent*, rated the innings and the match unique. "Indeed, some of the biggest names of test cricket were present and none could recall an innings where the ball was struck so cleanly, so often. In particular, his treatment of the second new ball was savage and three shiny Kookaburras had to be used after [the NZer] twice lost the original..." ...It was also a game of bizarre contradictions, given that England won after losing their first two wickets of the test without a run on the board, that by far the quickest double-century in 125 years of test cricket was not enough for victory, and not even enough for the [player]-of-the-match award – which went to [England's] first-innings double-centurion. [For the NZ batter], there was at least one record [it] was unable to break and that was the fastest 200 in terms of time, although [it] did manage to come within three minutes of creating more history. The only player to score a faster double-century was Sir Donald Bradman... Perhaps history, or the new [*Wisden*] editor... a N[Z]er, will treat us more kindly.

...*Time to close the book on a rotten era...* Sir [Former Police Chief] "uncovered" enough dirt to fill a mini-series, although it is unlikely that producers will be knocking on cricket's door – there aren't enough heroes in this mess. Has any sport been dragged as low as cricket by these revelations? Unlike some other betting scandals, which were of the sudden-explosion type, this has been a slow-ticking timebomb. You are continually left with the feeling that, however hard... [the inquiry head looked, it was] impossible for him to crawl under ever[y] rock to find every bit of slime, and that some of that slime still exists in international cricket. Cricket administrators have hardly helped by turning the game into a continuous worldwide circus of one-day affairs. And they showed all the reactions of a No 11 bats[person] in dealing with the issue as revelations surfaced. One thing is for sure – many test and one-day results are now treated with contempt by the public... The following list recalls some of the more recent allegations of corruption and some of the more suspicious moments that have marked the modern era. *Lahore, February 15-20, 1975* According to [a] West Indian international [(r:p1514, ln44), the then] Pakistan captain... forfeits the toss in the first test against the West Indies. [The cricketer] wrote later in a book that [his]... captain... returned from the toss with the curious news that despite having made the wrong call, [it] had been advised by [his Pakistani counterpart that it] had, in fact, won. *Calcutta, January 29-February 3, 1980* [Another] Pakistan skipper... allegedly pulls a similar stunt following reports that bookmakers had fielded large bets on the home team's winning the toss in the sixth test against India at Eden Gardens. [A Pakistani pace bowler] would later claim that [his captain] picked up the coin before [the then] Indian captain... had a chance to verify the result – and congratulated him on his success. *Leeds, July 16-21, 1981...* With England following on and close to defeat, [an AUSn batter and AUS's top test wicket-taker] reportedly bet £10 (at odds as huge as 500-1) on their own side losing. England duly complete a monumental turnaround to claim a miraculous 18-run win, and [the two AUSns] collect a small fortune. *Lahore, November 4, 1987* Pakistan suffer a shock loss to A[US] in the semifinals of the World Cup and [the Pakistani pace bowler], apparently no great mate of [the captain it has played with for over seven years], later alleges his team-mate and a range of business acquaintances paid 30 million rupees to members of the home team.

...A... Pakistani speedster [(r:p1511, ln50)] spat blood and vomited in the dressing room after hurtling a 157.3 km/h missile at [an AUSn (r:p1512, ln24)] to become the world's fastest bowler in Cardiff yesterday. [The Pakistani, who bowled the opener] next ball with a "slower" 151.6 km/h delivery that cut the A[US]n vice-captain in half and should have been called a no-ball, was taken to hospital for tests but was expected to be fine.

...*Speedy...* became the first bowler to officially clock 100mph... in international cricket during Pakistan's lost to England... yesterday. In his second over, [the speedster finished]... the maiden... with... a... 161.3km/h (100.23mph)... delivery... [The speedster] bowled 160.2km/h (99.54mph) in a one-day international against N[Z] in Lahore last year. [But the ICC] refused to recognise it because the speed gun was not officially sanctioned.

...*Ducking his way to cricket history...* [A NZer (r:p1510, ln46) broke three] of the more unusual cricket world records during his mind-numbing defiance in the first test... yesterday... [Hi]s feat of not managing to score a run in roughly the time it takes to watch three episodes of *Coronation Street* greatly improved his country's prospects of saving the... test... and catapulted him into sports news headlines around the world. The 27-year-old opening bowler came in as the last N[Z] batter on the third day of the test – with his team in deep trouble at 320 for nine – and left 101 minutes (and 77 balls) later without having troubled the scorers. [The bowler] was protected early in his innings by [his] batting partner... who farmed the strike and forced [the tail-ender] to turn down runs to keep him at the non-striker's end. [The tail-ender] was relaxed enough to salute the crowd twice – first when [it] eclipsed the N[Z] record for slow batting, and again when [it] broke the world record. "It's the only chance I'll ever get to salute the crowd... So I thought, what the hell? It was funny... even the [opposition] clapped." The innings was not only the longest in a test before scoring a first run... It was also the longest without adding a run, taking the record held by... [another NZer], who took 94 minutes against A[US] in 1989-90. And it ranked as the longest duck in first-class cricket history... [The bowler] has taken more first-class wickets (87) than [it] has scored runs (83).

...the Black Caps... wrapped up the series... against England... 2-1 yesterday... when they won the fourth test by 83 runs, in the process becoming the first Kiwi side to win two tests in a series against England, the first to win a test at... Lord's and... at... the Oval and just the second to win a

series in England... [(NZ would've won the series 3-1 if it hadn't rained on the last day of the test in Manchester). The triumphant] coach... a former A[US]n test wicketkeeper... is poised to walk away from both the... team and the game of cricket... when his reputation as coach has never been higher... The... coach... has made no bones about how badly... the... Sydneysider... has missed his family... during his... tenure... The series win against England caps a three-year term in which his side won nine of 26 tests... Under [him, NZ] won a test match in Pakistan for the first time since 1969, beat Zimbabwe and Sri Lanka at home in the same season... and... won the test series against the touring Indian side last summer... His one-day international record is less impressive – 25 wins against 35 losses – but there were some notable highs, including the World Cup semifinal and the World Cup round-robin defeat of eventual winners, AUS]... England's cricket writers mercilessly greeted their... team's new unofficial ranking as the worst test side in the world... The *Daily Telegraph*... even questioned if England were capable of beating non cricket-playing nations... [but also wrote that NZ – who previously were ranked below Zimbabwe by an English publication, even though that country (which has just nine cricket clubs and three first-class teams) has never beaten NZ (which, like AUS, has six first-class teams) in a series –] had climbed ahead of England in the world rankings “entirely on merit.” “For their spirit, as well as their skill, the Kiwis were cities, not just streets, ahead of the lily-livered rabble who have done service this summer as the England team.” [The player] of the series[, who took 19 wickets during]... the series... and... is now the world's third best all-rounder in the latest cricket rankings and... has... moved into fourth position on the all-time list of N[Z] test wicket-takers with 127 scalps... just behind his father... (130)... was singled out for special praise by [the *Daily Telegraph*, which] wrote of ...h[is]... effort at the Oval, when [it]... took five wickets... then rescued N[Z] from almost certain defeat with a swash-buckling... innings of 80: “For sheer gumption, England had nobody within a country mile of... [NZ's] allrounder... it was the most accomplished performance of the summer, and an experience so bracing that the whole crowd, English[people and NZers] alike, acclaimed it with joy.” Otherwise, there was again a distinct lack of credit among the English media for the N[Z] performance... the *Guardian* focused on England's new ranking but at least excused the 11 players who took the field for the final test... blam[ing] the state of English cricket on a nation which “fails to promote physical excellence among its increasingly unfit youth, and denigrates team sports as an assault on individualism. It is equally the failure of a cricketing culture which has been forever reluctant to respond to trends, protects soft club cricket in the name of tradition, and persists with an overloaded first-class structure that dulls the ambitions of many who play it.”

...Officials bowled over by snub CRICKET bosses are stumped by the poor crowds at the Shell Cup. N[ZC] is so concerned it is setting up a panel to investigate and suggest crowd-pulling ideas. *Sunday News* understands it will include a review of ticket prices. Adults pay \$12. Fewer than 1000 fans went to last weekend's clash between Canterbury and Central Districts at Christchurch... The game featured... [eight present and former Black Caps. NZC] rates the Shell Cup a vital part of boosting the pool of players chasing international selection. But the poor crowds have damaged the finances of the six provincial cricket associations. The blow is being softened by grants from NZC. Match payments to Shell Cup players have increased significantly in the past two seasons. In 1997... first-class players who failed to make the N[Z] team earned less than \$10,000. This summer the figure is \$20,000 to \$30,000. NZC's marketing manager... said many cricket fans had a tough choice between international and domestic games this summer. “We've had two full tours this summer... That's five test matches and 11 one-dayers. A[US]n cricket's domestic one-day competition, the Mercantile Mutual Cup, has also been plagued by small crowds. Some have numbered in the hundreds.”

...IF THE image-makers are searching for something to encapsulate N[Z]'s domestic cricket as we head into the new millennium, then they need look no further – an empty stand will do the trick nicely. First it was the Shell Trophy which caught the bug. All of a sudden the cricketing public – the ones who watch domestic first-class games – became as scarce as free hospital treatment. For a while now you've been more liable to get lonely than lively at a four-day Shell Trophy game. It has reached the state where some associations have given up employing gatekeepers because the crowd doesn't cover their cost... At Taupo last week there were a dozen people for a day of the Otago-Northern Districts match. And this was far from an exception... But now the malaise seems to have spread to the premier domestic one-day competition, the Shell Cup. Where once it packed grounds, especially around the holiday season, it too has had attendances cut drastically... The figures are disturbing. Northern Districts reckon they will be lucky to make 30-40% of what they took last year. Canterbury's takings were also down about 60% and Otago's about the same, while Auckland estimates the fall at closer to 75%. Central Districts also reported a significant shortfall, although sponsorship helped offset it. And you don't need to be a member of Mensa to detect the reasons. As well as the range of leisure alternatives for people who have less time, there are cricketing factors. Two high-profile touring teams playing significant series have deflected considerable attention, as has the surfeit of matches shown from across the Tasman on pay TV. Basically, people get more than enough cricket without having to trudge along to a domestic game of dubious standard without leading players. And if they do want the live vibe, they'll wait until the internationals come to town. So, there's a problem. Of the provincial coaches and administrators surveyed, all acknowledged this. Significantly, none blamed N[ZC] for the scheduling of tours. In fact, nearly everyone supported twin international tours and believed success by the Black Caps would have benefits for all forms of the game. The message was the powers-that-be need to work out a way to fit everything in... “We've got two major products in N[Z] cricket and they're competing... we're making people choose. We have to move our premier domestic competition to another window.” ...The Shell Trophy, too, needs close attention. All coaches expressed a clear desire for it to come back to two rounds... [The] Wellington coach... believes one round creates a “Russian roulette” feel with a mad scramble for points and often the best two sides aren't in the final... So there you have it. Move the cup to a new time frame, extend the Shell Trophy, and continue to have two teams touring. Easy. Now about the fickle public...

It has been said of cricket: ‘How many games can you watch for 4 hours where the next ball could be the last ball?’ But how many games can you watch for 24 hours (6 hours per day for 4 days) – or 30 hours in test matches – and not see a result? Actually, if you include the lunch and afternoon tea breaks, test match cricket spectators have to devote at least 7 hours of their day to follow a game that they could eventually watch for 5 days – if they have the time or money to spare – and still not see a result! It may be hard for people who aren't fans of cricket to understand why anyone would want to watch a game which is split into 15 2-hour sessions – with each session being split into approximately 30 overs (or 6 bowls of the ball every 4 minutes) – that often ends in a draw. It isn't hard, however, to understand why TV executives would want to screen a game which allows them to show an advertisement approximately every 4 minutes, with a chance to show more ads on the hour (drinks breaks) and whenever a batter is dismissed – NZ TV producers show negligible quantities of 10-pin bowling and lawn bowls, games which are popular in NZ (and, in the case of the latter, NZ performs well at in international competitions) but involve only an hour or so of playing-time and allow fewer advertisement-long breaks during playing-time.

Another game that spectators *can watch for 4 hours* or more in anticipation of the final piece of action – and often, at international level, enables the competitors to be the focus of public attention for a number of days on end before a result is (or isn't) achieved – is CHESS.

[The w]orld chess champion... has called supercomputer Deep Blue an “alien opponent,”... The best player in the history of the ancient game has suffered the double embarrassment of needlessly resigning to the IBM system at the weekend and then being held to a draw in yesterday's third game of their six-game... nine day... re-match despite the advantage of the white pieces. “The scientists are saying that Deep Blue is only calculating, but it has showed signs of intelligence,” said [the champion], who had no advance information on his opponent... “Suddenly you know it played like a god for one particular moment [in the second game],” an animated [champion] told hundreds of spectators after yesterday's game. It was unclear whether [the Russian] was accusing the IBM team of cheating or just awed by the computer's performance... One point is awarded for a win and a half for a draw... The \$US1.1 million... match is tied at 1 1/2 points each and [the Russian] will have to play with the black pieces in two

of the three remaining games... Playing with white has the advantage of the first move... The revelation that the Russian gave up on Sunday in what was in fact a drawn position dominated and overshadowed the third game... The Russian's remarkable and rare oversight was a reminder to human players that their emotions can be a handicap in clashes with machines. Several leading grandmasters admitted that they, too, had initially missed the continuation that would have saved the day for [the Russian]. Deep Blue's programmers also said it had not calculated the moves correctly during the game, something [the Russian] described as "very human from my point of view." ...Chess experts, almost without exception, described Sunday's game as the best performance ever by a computer... [The Russian] was forced by Deep Blue to defend with his black pieces for almost four hours and looked tired and demoralised. "The computer has an advantage....," said [a]grandmaster... of the U[S]. "The computer doesn't get depressed." Subsequent analysis[, which]... began within hours of the game ending in "chat rooms" run by the Internet Chess Club... showed that [the Russian] could have played a series of moves to force what is known in chess as "perpetual check" – one player repeatedly attacking his opponent's king, ensuring none of his other pieces can make further moves and thus a draw is the only outcome.

...[the world chess champion]'s legendary resolve broke down [after his] defeat by the IBM super-computer... that created chess history – the first time a programme has triumphed over a reigning world champion in a classical chess match... Deep Blue, improved and modified from the one that lost to [the Russian] in Philadelphia in February 1996, pushed the champion to... his human... limits... Under psychological stress... [the Russian] gave up after only 19 moves and just over an hour of the sixth and final game... for a final match score of 3 1/2 points to 2 1/2 points... The humbled grandmaster... was "ashamed" but persisted with his view that the match was essentially unfair because [it had] had no access to the computer's pre-match games or any of the IBM printouts during the contest, worth \$US700,000... to the winner and \$US400,000 to the loser... [The loser], aged 34, lashed out at IBM for programming the computer specifically to beat him. [However, many chess experts] said the champion should have played his usual, swashbuckling attacking style instead of the careful, slow manoeuvring [the Russian] undertook to try to outwit the machine... In yesterday's game [the Russian] blundered by allowing Deep Blue to sacrifice a knight and obtain an overwhelming positional advantage.

...The Deep Blue supercomputer's stunning victory over [the reigning]world chess champion... ushers in a new era in top-level chess and casts [humanity]'s relationship with ...i[t]s silicon servants in a new light. [The Russian g]randmaster... said the computer's superior calculating abilities could eventually take the mystery out of chess, by being able to anticipate the exponentially branching consequences generated by every move. IBM scientists, who celebrated their machine's win at an open-bar party at a hotel near the midtown Manhattan game site, said that Deep Blue is not intelligent by any human standard. "Humans have unique qualities. They are creative, they are psychological beings. Machines are just a tool to extend our capabilities," said... the scientist who headed the Deep Blue team. "This has nothing to do with artificial intelligence." A[n a]uthor... who has written on advanced computers, said Deep Blue's win does not mean the machine is smarter than humans. "When we have a computer chess champion, what we have is a computer that plays superb chess. Period. There is no myth we have that playing chess is somehow the key to human intelligence." Even as chess players, machines still have weaknesses, said [another]grandmaster... They are obsessed with having as many or more pieces on the board as an opponent, even though sometimes a numeric disadvantage can translate into a positional advantage. "Computers are very materialistic... There were some evaluations and mistakes that the computer will never overcome."

...SPEAKING for humanity, I am disturbed about "Deep Blue." As you know if you read all the newspapers, Deep Blue is a 1972 movie about a [gal] with an amazing ability to... Whoops! My Mistake! I meant to say that Deep Blue is an IBM computer that recently defeated the world heavyweight chess champion... causing serious chess fans everywhere to pick angrily at the tape holding their eyeglasses together... This was... a severe blow to human pride, especially when Deep Blue – after telling the media that it was going to Disney World – was seen instead at a trendy Manhattan night club, drinking 400 million glasses of champagne a second, fondling the cash registers, boasting loudly of its victory and making insensitive remarks about [the world's #1 golfer]. The question is: Does Deep Blue's victory mean that computers have now reached the level of human intelligence? And what, exactly, do we mean by "human intelligence?" Can we say that the beeping supermarket computer that recognises and totals our purchases as they slide across the scanner is displaying "human intelligence?" Of course not! The supermarket computer is way more intelligent than humans, because it knows how to add, a skill that most humans have forgotten by the time they get to the Senior Prom. So we have to concede that in some areas, computers are smarter than humans. But there is still hope for us; there is one area where even the most powerful computers so far have been unable to compete with the human brain, and it happens to be an area that is vital to the very survival of the planet: humour writing[– although] the computer industry has tried to "muscle into" this field. In 1987, IBM assigned a team of its top nerds to a 10-year, multibillion-dollar project to develop a world-class humour computer, code-named "Big Yuk." But this task proved to be very difficult, because computers... do not naturally have a sense of humour. Technicians spent thousands of hours programming Big Yuk – typing in a computer transcript of every episode of *F Troop*, putting Groucho glasses on it, giving it noogies, installing a mechanical arm so it could throw pies, etc – but progress was very slow. And then, finally, the breakthrough came: Early on the historic morning of October 8, 1993, after six years of processing data 24 hours a day, Big Yuk came to life and, in an exchange with a programmer, made what is believed to be the first totally computer-generated joke: Big Yuk: KNOCK KNOCK. Programmer (typically excitedly): WHO'S THERE? Big Yuk: MARCEL PROUST Programmer: MARCEL PROUST WHO? Big Yuk: MARCEL PROUST THE FRENCH NOVELIST (1871-1922) WHO WROTE THE 16-VOLUME CYCLIC NOVEL *THE REMEMBRANCE OF THINGS PAST*. Programmer: OH. Big Yuk: GET IT? It wasn't much, but it was a start. The next breakthrough came nearly two years later, when Big Yuk suddenly asked: "WHAT IS THE DIFFERENCE BETWEEN MADONNA AND A LAWN TRACTOR?" Rushing to the keyboard, the programmer typed in: "I GIVE UP! WHAT IS THE DIFFERENCE?" To which Big Yuk responded: "MARCEL PROUST THE FRENCH NOVELIST (1871-1922) WHO WROTE THE 16-VOLUME CYCLIC NOVEL *THE REMEMBRANCE OF THINGS PAST*" So we can see that computers have a long way to go before they can replace highly trained humour professionals. Oh, sure, I know there have been rumours that some of us in the humour industry are getting lazy and starting to supplement our own output with computer-generated material. I want to state, for the record, that these rumours are totally false. I write all my own jokes with no help from any machine, despite my heavy travel schedule... [SPEAKING of world heavyweight champions, a boxer] predicts a knockout victory over [the titleholder] in their rematch for the World Boxing Association [(WBA)]... title... "My theory in life is destroy or be destroyed. I'm looking to destroy." ...The two fighters appeared together yesterday, with [the fight's]promoter... to announce the May 3 rematch[, which Apeman won when Apeman stopped his opponent] in the 11th round last November in a stunning upset... [Apeman] reportedly will receive \$US35 million... for the fight, with [his opponent] getting \$US20 million. [Apeman] would make more money than any athlete for any event, beating [his opponent]'s \$US30 million pay day for fighting [another boxer] in 1995 – his first fight after serving three years in prison for rape... [That] 89-second KO... [earned Rapeman \$US]280,898 per second... [Rapeman could join Apeman and a boxing legend] as three-time champions with a triumph. Meanwhile, a U[S] federal judge has refused to toss out insurance fraud charges against [the promoter], clearing the way for a second trial after a jury failed to reach a verdict in an earlier case. [The promoter] was accused of faking a contract with Lloyd's of London to collect \$US350,000 in non-existent training expenses for a cancelled bout.

...On the way to his trial on fraud charges this week, [the boxing promoter] has amassed a string of special awards from national civil rights groups. The NAACP gave him one of its highest honours, the President's Award... [The] Rainbow-PUSH Coalition followed up with its Trailblazer award a few weeks later. The Southern Christian Leadership Conference and the National Council of Negro [Gals] also have bestowed awards. Civil rights leaders say the prizes represent long-overdue recognition for... [someone] who has donated to their causes over the years, but the timing of the presentation, just before [the recipient] faces a retrial... is being questioned... If convicted, [the promoter] could face up to 45 years in prison

and a \$US2.2 million... fine... [The promoter], aged 66, was convicted of murder in 1967[– although the] charge was later reduced to... [humanslaughter –] was acquitted in a 1985 tax evasion case and has been the subject of three grand jury investigations.

...[The promoter] is the ringmaster in the circus of world heavyweight boxing... who shames the fight game... One of boxing's most pathetic moments in its long history of pathetic moments didn't come when [a boxer] broke down in the ring, crying and lapsing into a seemingly catatonic state during a heavyweight showdown... in Las Vegas... when [the boxer], imprisoned by psychological demons, refused to go to his corner between rounds, or when [the boxer] quit throwing punches and started mugging to the stunned crowd, [then]... wandered aimlessly around the ring, his terrified eyes red and bulging. [The boxer]'s emotional unravelling was disturbing, but... it can't match the pitiful event that followed an hour later, when [the]promoter... sauntered through the Hilton casino, huckstering and jiving like there was no stench engulfing the place. Instead of worrying about his troubled fighter's fate, [the promoter] strode merrily past the blackjack tables, his armed bodyguards in tow, smiling and laughing as incensed boxing fans cursed and taunted him. As far as [the promoter knew, the boxer] could have been off somewhere slitting his wrists, but all His Hairness cared about was hugging [an infamous (r:p1467, ln4)] attorney... and mugging it up for the trailing TV cameras. "You're a fraud..." one punter yelled. "Bless you," [the promoter] replied, and... continued blissfully on his way, leaving a trail of angry refundseekers in his considerable wake... [T]he executive director of the Nevada Athletic Commission... was "absolutely shocked" at [the boxer]'s performance... withheld the fighter's \$US3.1 million... purse and promised a fullscale investigation of what consumer masses perceived as another boxing farce. If [the executive director] and the handful of other people who still had a smidgen of rectitude in this sport had any guts, their investigation would cut much deeper. They would investigate why American boxing had about as much regulation as a fight in a Darwin pub, why the farcical alphabet soup of titles were allowed to exist, and why huge television corporations like HBO keep bowing to the omnipotent [promoter], king of frauds. With so many splintered groups, it's no wonder boxing's credibility has sunk lower than the Titanic. [An ex-]heavyweight champion... was so frustrated with the nonsense his sport had generated, [the ex-champion] threw his belt into a garbage bin. Was it the World Boxing Organisation [(WBO)] belt or the W[BA] belt? Who knows? Who cares? [The promoter] billed the bout... [in Las Vegas] as the World Boxing Council heavyweight title, but in reality it had all the impact of a grade school spitting contest. [The promoter] once told Harvard Law School students that "money is the answer to all things, so go get some money," and that's the only reason why [the boxer], a recovering crack addict, was allowed to step into the ring in the first place... It had been obvious for months that [the boxer] was in no shape to fold his own laundry, never mind fight in front of a worldwide paying TV audience... During the weeks leading up to the [Las Vegas fight, the boxer had] remained in out-patient rehab... was under 24 hour surveillance by his own security force, was monitored constantly in his room and even in the bathroom by a drug counsellor and was forced to take a special preflight drug test. Still, [the promoter] insisted the fight go on because it was filling his pockets with millions of dollars... Now all the parties are pointing their fingers every which way... HBO executives say they never wanted... [the] fight to happen... casino operators say they never wanted it. But any one of them could have pulled the plug at any time, only they didn't. They didn't because [the promoter] was dangling gold coins in front of their greedy eyes, and that was all that mattered. A day after the fight, [the boxer]'s urine test was negative, meaning [the boxer] was most likely clean when [the boxer] went crackers. His trainer... said [the boxer] simply snapped and was subconsciously striking back at the corrupt fight game, and maybe life itself... Everyone is afraid of [the promoter], even the big, powerful fighters [the promoter manages. The promoter] forces them to sign long-term contracts – indentured servitude might be a better description – and doesn't allow them to employ their own lawyers or accountants. [The promoter] scams them out of their rightful earnings, cheats fans by putting garbage fights on pay TV and manoeuvring the boxing ratings and the alphabet codes until they are nothing more than a cruel joke. But if [the promoter] dropped dead today, the game would still be a festering cesspool of crooks and shysters... US boxing is filthy because of the people who [are involved with US] boxing. It's that simple... Unlike every other professional sport, American boxing has no commissioner to set standards and regulations, no union to monitor disputes, no pensions or health plans for its employees. With no one running the asylum, it's no wonder [the promoter] has slimed his way to the top... A couple of months ago in Nashville... [the boxer], while training for another... fight, punched out a Christmas tree in a hotel lobby. Strung out on cocaine, [the boxer] entered a drug clinic for the third time, but that didn't stop [the promoter] from signing him up for another fix er, fight. - 1997

THE dubious union of sport and religion ran into some heavy weather last [November] when... "I've Found the Lord"... outgunned... "the Almighty Allah is No 1"... [Apeman]'s post-fight victory interview sounded more like some sermon on the canvas... with an assortment of statements about his "love of God", "the only God". The new world champ even entered the ring... with Phil 4.13 emblazoned on his warmup gown... Clearly, [Apeman] has his faith... As does [Rapema]n, a devout follower of the... same religion that consumed... a young, loud-mouthed, upstart heavyweight champion... [who won the *rumble in the jungle*. NZ's own heavyweight contender, who] has received a massive endorsement with the Main Events stable [which signed] the Kiwi... for another two years... [– his] original four-year deal, signed after his success at the Barcelona Olympic Games, was worth close to... \$[NZ]2 million... – ...also... continually speaks of God, and the Lord... But all this talk of religion and God, does it actually have a place in sport, or is it important, as one American sports writer suggested, that "sport must be keep clear of flamboyant patriotism and exhibitionistic religion"? ...[Apeman and Rapema]n arguably border on going overboard with such passionate, forceful, almost fanatical public displays of their convictions. [The Kiwi] doesn't, not yet anyway, and... fellows like [the All Black (r:p1422, ln31) who has often been called the 'greatest No 7 in the world'] merely quietly carry on with their sporting lives, fitting sport around their religion, rather than religion around their sport, without any signs of compromising or publicising their faith. Religion has been an obscure part of sport for some time. It is a fact that may surprise many, but as relatively recently as 1973, all but five of the then 26 teams in the NFL... held religious services before their games. Even today, numerous NFL teams – and some other professional sporting franchises – carry their own chaplain with them and, as one NFL team owner revealed, "most always [God]'s a Catholic because they take sport more seriously". It was a Miami... Reverend... who gave what now is hailed in America as "the prayer heard round the nation". [The reverend] delivered it before his town's beloved... Dolphins played a crucial game against the Cincinnati Bengals. In his United Church of Christ, the good reverend prayed: "Creator of God: Father and Mother of us all. We give you thanks for the joy and excitement occasioned by this game. We pray for the physical well-being of all the gladiators who run the gamut of gridiron battle tonight... but, knowing that the tigers are voracious beasts of prey, we ask you to be especially watchful over our gentle Dolphins. Limit if you will, the obfuscations of ...the TV commentator[s]... acidulous tongue, so that [the commentator] may describe this night truly and grammatically as it is... A great game, in our great city, played before your grateful children, on whom we ask peace and shalom. Amen." Boxing, of all sports, seems to turn bloodthirsty pugilists towards God and religion more than most. As[one] boxing writer... once wrote: "Boxing is not a metaphor for life, but a unique, closed, self-reverential world, obliquely akin to those severe religions in which the individual is both 'free' and 'determined' – in one sense possessed of a will tantamount to God's, in another helpless." ...For those that didn't know what [Phil 4.13] meant, it stands for... "I can do all things through Christ which strengtheneth me." But... [Apeman (otherwise known as the 'Christian Warrior')] may have jeopardised his long-term chances. [Apeman] made \$US11 million for fighting [Rapema]n, and... Matthew 19:24 is quite clear... □ [The]... Solomon Islands boxer affected by internal bleeding after being knocked out last month, has received a \$33,000 bill from Auckland Hospital. The Boxing Association and the Solomon Islands Government are investigating following revelations that [the boxer] had been injured the week before his fight and might not have been medically fit. An Auckland lawyer representing the Solomon Islands Government... said yesterday that two-thirds of the medical bill could be paid by ACC but [the lawyer] would approach the association and [the boxer]'s sponsor... for the balance.

...[Apeman]’s 11th round technical knockout win over [Rapema]n to win the W[BA title breathed]... life into a sport that was suffocating... The whole boxing landscape changed with... [their November 3] fight. Mismatches went away, and a lot of attractive fights appeared... “People lose,” [Rapeman] said. “Everyone loses... But it’s the ones who come back who really count. When I think about it, I get so much money to fight. How could I not come back?” With the \$US30 m... [Rapeman received for losing, it] has made more than \$100 m... for his five fights since August 1995.

...[*Rapema*]n hits jackpot POUND for pound, in more ways than one... [Rapema]n takes some beating. As the baseball, basketball, football and hockey players of North America put in the hard work for their big bucks, [Rapema]n fought just three times in 1996 and, according to *Forbes* magazine, earned \$US75 million... – more money in one year than any athlete ever. [Rapeman knocked the highest-earning] NBA star... out of the top spot in the... Super 40 list of highest paid athletes. However, [the basketballer], No 1 for four straight years, could be poised for a comeback in 1997. His \$US30m... contract – the largest one-year salary in sports history – will be more than a factor next year. Then there is the box office, merchandise and video income from his movie *Space Jam* that it is estimated could push his earnings past the \$US100m mark for next year... [A] German grand prix racer... who was paid \$US25m... to drive for Ferrari’s Formula One team and made another \$US8m... in other income, is No 3, up from ninth a year ago. The *Forbes* list includes nine basketball players, seven boxers... [(Apeman), who knocked out [Rapema]n for the WBA heavyweight title last month, is No 6... up from No 14 a year ago)]... six football players, five baseball players, four car racers, four golfers, three tennis players and two hockey players. There were... a dozen athletes new to this year’s list... [but again no gals feature] on the list... The salary-winnings figure includes salary, prize money and earned incentive bonuses. Endorsement includes licensing money and appearance and exhibition fees. Income from side businesses and equity partnerships is not counted. *Forbes*... does not say how it treats deferred compensation. - 1996

AS auspicious, propitious meetings go, that in the late 1950s between a... Ohio lawyer... and... the most popular golfer in the U[S – who was ranked 8th amongst all sport earners in 1996 –] ranks as one of the most significant, perhaps the most significant, in sporting history. Their partnership, formed in 1960, changed the shape of sport. [The lawyer], who had been a good enough golfer to play in the 1958 U[S] Open, was working for a large law firm in Cleveland. “I was not enamoured with the thought of spending the rest of my life moving from office to office as people retired or died... I loved golf, I knew... a lot of the players on the tour. I thought if I could figure out a way to use my legal training – contracts, tax and the like – and stay involved with golf, that would be the best of both worlds.” [The lawyer] talked to some of the golfers... about looking at their contracts or trying to get them into exhibitions... “In 1960... [the most popular golfer in the US] said to me that [we should form a partnership because it would] love to have someone take care of all his off-the-course activities, from fan mail to insurance to taxes to estate planning to bill-paying to contracts, so [it] could better concentrate on playing golf,” [the lawyer] recalls. Their partnership, one of the most famous in sport, was sealed with a handshake; it worked instantly and to the benefit of both. [The lawyer] later widened his horizons... [by signing a young Golden Bear,] who was threatening [his first signing]’s standing as the leading golfer in the... [US. The younger golfer] was later to leave... International Management Group (IMG), but by then it was established as the principal sports management group and had set up divisions and branches in many countries. These included China, where [the lawyer] set up the China Premier League in soccer and... owns half the first two Chinese Basketball teams... The success of IMG led to the formation of other management companies, some successful and some not. There was nothing new in what [the lawyer] did. Show business, book publishing and other professions had long had agents, most respected but some seen as shifty, parasitical characters who would get from someone else’s talent what they couldn’t earn from their own. What [the lawyer] did was to extend agency representation into the sports arena, firmly signposting sport as a branch of the entertainment industry. Through his own endeavours, or by the precedents [it set, the lawyer] made sport as “watchable” to millions as anything Hollywood could produce, and made his players (and himself) richer and more powerful. “I’d like to say I had this great vision in 1960[.]” The lawyer... first branched out from golf with [a]skier... in 1968 because [it saw that the skier] had personality and charisma and... skiing, like golf, lent itself to equipment endorsement. In the same year, [the lawyer] moved into tennis... [Today] IMG, which by [now] had branched out from sport and had diverse clients including the world’s leading opera singers, [is] often criticised for being too powerful and for putting its interests ahead of those performers it was paid to represent. This was the price of size rather than of nefarious intent. In many instances, IMG manages the participants, advises the organisers, arranges the television coverage and appoints the sponsors. [The lawyer] runs the world’s biggest agency representing sports stars and the largest independent producer of television sports programming, Trans World International, a company that is also one of the world’s biggest distributors of sports television rights. It is inevitable that conflicts arise. One of IMG’s sponsor contracts is with the Dunhill cigarette company, which sponsors the Dunhill Cup... a tournament between national... golf... teams. IMG also runs the tournament and has a hand in selecting the teams. Selection is based on a player’s standing on golf’s order of merit (a method of worldwide standings devised by IMG) reflecting earnings for the two previous years. But there were complaints in 1996 when players who were not contracted to IMG were not selected, despite having a higher standing than some who were... [As a result of the lawyer’s involvement, golf] went... from being almost a participant-only sport... in the 1960s and 1970s... to being a major spectator sport, with galleries of spectators following the play at competition venues and millions watching on television... [B]ig business discovered golf through endorsements or advertising signage on courses (and therefore on television) and poured money into it. The players benefited, as did their agents... The public gained through this golf explosion by seeing four rounds of high-level competitive golf on television and by having the chance to buy equipment endorsed by the stars. CASHING in on the phenomenon, and on the success of [his original, but ageing signing], a senior golf circuit... was established in 1980 and it was labelled the most successful new sport of the decade. When, in 1987, [a golfer from] Britain received \$NZ243,000 for winning the British Open[, a USer]... won \$119,000 for winning the Senior Open. By 1990, the leading Senior Tour money winner... earned as much in prizes as the biggest winner on the PGA tour... When [the lawyer] first approached the august All England Lawn Tennis Club and suggested that perhaps some businesses might want to be associated with the annual Wimbledon tournament, the club was aghast. In those days, Wimbledon profited by a few thousand dollars a year. [The lawyer] made his proposals, the club accepted them and now Wimbledon makes millions a year... One of the problems with Wimbledon was that it had been promoted around the world by others who cashed in on its prestigious name. [The lawyer] was able to persuade the... club to register its own logo, for example, so it could then charge companies for being associated with it. And, as it turned out, companies were quite happy to pay to be associated with a tournament of such high standing. While [the lawyer] created and exploited a niche in the sports market, [the lawyer] also benefited from two concurrent developments: the sports explosion that followed when leisure hours and leisure spending increased, and the rapid changes in television and technology. The combination rocketed sport into the league of big business. By the mid-1990s, sport was ranked as the 22nd largest industry in the U[S], earning around \$110 billion and outstripping, in dollar terms, the car, timber and air transport industries. Business analysts reported that this upward curve was set to continue; no peak had been reached. An indication of the hold that sport has... was that during the Gulf War in 1990-91, when the purchase of homes, cars, travel and household appliances declined dramatically, television ratings and attendance at sports events kept climbing. During the Gulf War, 780 reporters were accredited by the U[S] military. Two weeks after the war started, 2200 reporters were accredited to... Super Bowl XXV.[The 41st] President... told the N[FL] to go ahead with the game and broadcast it to the troops. Then... retired to the presidential retreat at Camp David to watch it himself... [D]uring the darkest days of the Watergate scandal that led to his resignation in 1974, [the 37th President] was often said to be watching football games on television in the White House. • [The veteran boxer]... who lost the ‘rumble in the jungle’... in Zaire in 1974, is still trying to force-feed the boxing money tree... [The veteran] was... at a news conference on the 106th floor at the World Trade Centre... hustling to

sell tickets to... his next act – an April 26 bout... at the Atlanta City Convention Centre under the sponsorship of Bally's Park Place casino... His latest claim is that [it] is the "linear champion of the world." That refers to a genealogy of the world heavyweight championship that in short means someone can claim the title because [someone is the boxer who beat the boxer who beat the boxer]"... Of course... the... [veteran] leaves out his recent inactivity. After winning the International Boxing Federation and W[BA] titles... with a dramatic 10th-round knock-out in November, 1994, [the veteran] defended his IBF title against [a]German... in April, 1995. But the WBA stripped him of his title, saying [the German] was not worthy of a title fight. And, after many people thought [the German] won that fight, the IBF ordered a rematch. But [the veteran], who... wants to fight at least until... 50, refused and was stripped of that title. Then [the veteran] went to Japan to fight someone... for the little-respected World Boxing Union title. But, "the point is, I know who I am, and... what I've done... And I'm not going to let anyone talk me out of that... I'm really the champion of the world." As [the veteran] says, "You gotta keep selling. If you don't learn to sell, you're probably gonna starve to death." ...[the veteran] doesn't look like [a person who]'s starving to death... But even 106 floors wasn't high enough to avoid stepping in all that fertiliser being spread around... [S]omething called Entertainment, Inc... put a lot of effort... into claiming what this fight and the fighters were not. "[The veteran] is not going to join the Marines after the fight... is not going to stand in his corner crying between rounds, and[is] not going to hit below the belt." ...The... opponent... 31... is "not coming in to just pick up his... \$US500,000... cheque..." insisted... the... promoter... who... would pay the [veteran] boxer... \$US4 million.

...[the boxer who] was an undisputed heavyweight champion in 1973-74, and at 45 became the oldest heavyweight champion when... [the titleholder] was easily outboxing [him until the titleholder] got careless and got caught with the right[-hand punch] to the jaw... weighed in officially yesterday at 114kg for his 80th pro fight. His record is 75-4, with 60 knockouts... [His opponent, who] weighed 104kg... has 30 knockouts on his 36-0 record, but his low-calibre opponents have kept him relatively unknown.

...[a boxer has announced his retirement. The heavyweight who] won gold at the Mexico Olympics in 1968... finishes 29 years later with an 81-5 win-loss record as a professional... [The] son of a railway worker, from a big family and used to a life of crime... has mellowed with age... On to his fifth wife and with nine kids, four of them named [after himself, the 49-year-old will] retire... to Marshall, Texas, to preach in the church... God bless you.

...[a 49-year-old heavyweight boxer, who] announced his retirement after last month's puzzling points-loss... in Atlantic City... can't think of a better way to celebrate the big five-o than getting back into the boxing ring, and is going to ask [the promoter] for a match-up with [another old boxer and, maybe, Rapeman]... "I didn't want to leave the ring with people feeling sorry for me. I don't want everybody saying you were robbed."

...last night... [a boxer] became the WBC light-heavyweight champion while unconscious after [his opponent] hit him twice while [him] was down, leading to a... disqualification... 1m 27s into the ninth round... The stunning ending... left [the loser] with his first defeat after 34 victories, 29 by knockout. The new champion is 27-0 with 18 KOs... [The loser, who] is a former IBF middleweight and super-middleweight champ... earned \$US3 m... [The winner] earned \$US385,000... In another fight... the only US Olympic Games boxing champion from the Atlanta Games, made his professional debut with a fourth-round decision... [in his favour. • Yesterday a boxer who] is reported to be getting a \$US5 m... purse for challenging... the holder of the lightly regarded International Boxing Council middleweight crown... said... money had not prompted his comeback.

...HOW the mighty have fallen. [A former] world heavyweight... champ... put in an application for a job as a school guard in... Maryland. The pay rate was \$10.49 an hour and, with a nickname like Big Daddy, [it must have a chance. In related news, the next WBC]... heavyweight title defence... has been confirmed for Atlantic City on July 12. [The titleholder] will have a part share of a promotion which could net him... £2 m... while the [challenger's] package will be £1.25 m... [In comparison, Apeman and Rapeman] each will receive... \$US30 m... for their... rematch next month... There were reports th[e challenger] would receive \$US5-10 m... less... and... was upset with not receiving parity... [the] promoter... said yesterday.

...[Rapeman's] wife... is pregnant with their second child... "With more fights and... \$US30 million... purses, I'll have another child... Every fight is a different future for my children. I base my life for my financial gain..." [said the boxer who's already] made enough money to last a lifetime...

Boxing hits an appalling new low... The Sound and the Fury? Try the Incisor and the Bicuspid... [Rapema]n couldn't fight back, so... decided to bite back. Even in boxing, this is not legal. If there is any justice, [Rapema]n should not only be docked his \$US30 million... purse for yesterday's travesty, [it should also] be barred from his sport for as long as... [Apeman]'s children keep asking him why his right ear looks like a small pizza with a slice missing. Just when you think nothing more grotesque or perverted can happen in the sport of boxing, along came [Rapema]n to send the elevator down to a new sub-basement. It wasn't just that [Rapema]n ruined a potentially great fight... by being disqualified after three rounds... [Rapema]n also nearly provoked a riot inside the MGM Grand Garden Arena by charging toward [Apeman] after the decision. Two dozen Las Vegas police[officers] rushed into the ring and stopped [Rapema]n, who then exited the arena screaming and sputtering at fans who in turn booed and threw beer on him. Other than that, [Rapema]n should be applauded for his fine humanitarianism... In a short interview afterward, [Rapeman] claimed to be upset because Apeman] had opened a large gash over [his] right eye in the second round with a head butt... [The referee] stopped the fight and warned [Apeman] but deducted no points. "What am I supposed to do? ...I have to retaliate. I have children." My guess is, none of us want to be around when one of them spills milk on the floor... After losing the first two rounds, and frustrated with [Apeman]'s strategy of clutching him to prevent big punches landing, [Rapema]n purposely spat out his mouthpiece early in the third round. The first time [Apeman] went into a clinch, [Rapema]n took a small bite out of [his right ear. Apeman] jumped into the air as if someone had dropped anvils on both feet... [The referee warned Rapeman, who] did the same thing to [Apeman]'s left ear in the next clinch. The round ended. After that, all hell broke loose. One reliable report had a ringside handler grabbing the chunk of... ear and putting it on ice for a trip to the hospital and a possible reattachment[while Rapema]n stormed around the ring, acting as if... [it was him who had] been wronged. Something had snapped in him, throwing him into another dimension. Scarily, this could have been the real... [Rapema]n all along, the street thug who couldn't handle being demeaned... [Rapema]n could not intimidate [Apeman] any more than... in the first fight. And... did not want to risk what [it] perceived as the ultimate humiliation, losing to a better [boxer. • His 'prized possession is a young dog of an exquisite Chinese breed, a shar-pei, with an appealingly ugly puglike face, rippling creases of flesh on her back and a body wildly animated by affection. "In China, shar-peis were used for fighting as well as protection. That's the reason, say some experts, that shar-peis have those wrinkles on their backs," Rapeman once explained. "When an adversary bit into them, they could twist round to keep on attacking."].

...In the aftermath of Eargate, in the debris left over from boxing's ugliest... exhibition yet, the question now is whether that will be the last we'll ever see of... [Rapema]n in the ring. The answer, sadly, is no. "It's over," the disqualified challenger was reportedly heard mumbling in his dressing room after the fight on Sunday. "My career is over." Don't bet on it! When the Nevada State Athletic Commission [(NSAC)] holds its hearing in Las Vegas tomorrow, it is likely to fine [Rapema]n for those cannibalistic chomps... Probably the requisite 10[%] of his purse, or about \$US3 million... It will undoubtedly suspend the 31-year-old... too. My guess is probably for a year. Maybe even two. But they won't make it a lifetime ban. As much as some of us think they should, they won't... [Rapema]n will live to bite another day... Why? Money for the first reason. There is no one else out there who can draw that kind of attention or attract such huge crowds. As much as this sordid sport no longer wants to admit it, boxing still needs [Rapema]n. The second reason has to do with the public's morbid curiosity. It has been more than aroused. It has been turned up to a point where it's practically off the chart. The same folk who slow down or stop to see a bloody accident on the motorway will want to see [Rapema]n climb into the ring again. They'll want to know how [Rapeman] will react. What will [Rapeman] do next? How much more bizarre can [Rapeman] get? I promise you, there will be people ready to fork over big bucks to find out. Hey, if [a basketballing cross-dresser] can get away with

it, so can [a moronic rapist]. The more weird they become, the more fans clamour to see them. And take it from me, it doesn't get much more weird than it was at the MGM Grand on Sunday. Watching it at ringside, the whole thing seemed almost surreal... As if the biting incident had not been bad enough, the post-fight scene... quickly turned sour. Gunshots were reportedly fired, although... some insisted it was the popping of a champagne cork... Whatever the cause... panic ensued, with several people injured in the rush to the lobby doors. Desert Springs Hospital later reported it treated 40 people, although not all of them were from the MGM, where the casinos actually shut down for almost two hours on one of the biggest gambling nights of the year... If [Rapema]n is, indeed, forced from the ring, the MGM will not miss that part of it. Neither will all those fight fans who found themselves suddenly scrambling for cover in the post-fight terror and confusion.

...A contrite... [Rapeman apologised to Apeman] and the boxing world yesterday for bringing shame to the sport... [Rapeman claimed to be] getting psychological help and begged not to be banned from boxing for life... [The boxer, who] would accept any penalty short of a lifetime ban... is still on probation for his rape conviction. But authorities said his actions during the fight and his efforts to brawl with police... would probably not be cause for revocation of his probation... The public outcry over [hi]s bizarre actions have reached all the way to [the US]President... who was "horrificed" by the incident... [Apeman], in Atlanta, said [the] apology was ...a good gesture – but... [the champion] has more pressing matters to deal with[, such as]... overseeing the building of a \$22.38m, 20,430sq m mansion next to his existing home. The new house has 17 bathrooms, three kitchens, a bowling alley, an Olympic-sized swimming pool, two five-car garages and a 135-seat movie theatre. It will be part of the lasting legacy to this popular champion. "It's all concrete and steel so it will last forever," [Apeman] says proudly. "Even after I die, I'll probably still be the guardian angel over that house." ...[■ At] the Hollywood Wax Museum in Los Angeles, [Rapeman's effigy has been] moved from the Sports Hall of Fame to the Chamber of Horrors[, where it] now stands near... the... [c]annibal... from *Silence of the Lambs*... maybe that's just the right spot.

...[Rapeman has] entered... sport's Hall of Shamers. Theirs is a banishment rather than an induction... For some of the Hall of Shamers, their acts are a one-off aberration. [An AUS]n cricketer... is the perfect example. Few feathered the ball through the covers like [this AUSn]. His drives were grace and timing personified. But ask 100 N[Z]ers about their lasting memories of [the AUSn] and 99 will remember him as the... skipper who in 1981 ordered his brother... to bowl the final ball of a one-day international underarm... [when NZ] had needed six runs to win... The delivery was not illegal but the spirit of the game was bastardised. As with... [Rapeman's] bites, there was nationwide condemnation. In [Rapema]n's case, there was outrage from... the White House... Over the... underarm[incident, the then NZ PM] Rob Muldoon frothed and chastised... Ugliness and sport have been a double act for years[, perhaps because sports]people snap mentally... In 1995, [a]... soccer star cracked during a Manchester United-Crystal Palace match in England, jumped a perimeter fence and kung-fu kicked a spectator. [The striker] had been sent off but as [the Frog] headed for an early shower the taunts from the crowd became too much. It was an... incident... which earned the now retired star a court appearance and a nine-month ban from the sport... [The fastest person] on the earth[saw] his career effectively ended when... stripped of the 100m gold at the 1988 Seoul Olympics after testing positive to anabolic steroids. Whether it was greed, his hunger to remain on top or just poor advice remains unclear. But overnight [the sprinter] went from hero to zero. Then there was the... American figure skater[who] pleaded guilty to being involved in a cover up plot of an assault on her arch rival... Sport's recent era doesn't have a mortgage on disdainful affairs. In 1919, the potential for money to corrupt and corrode traditional sporting values surfaced in baseball's great betting scandal. The World Series of that year saw the Chicago White Sox and the Cincinatti Reds square off. But behind-the-scenes a well-known gambler... had done a deal with [the]White Sox pitcher... to fix the series. Eight players were to receive a cut of the \$US100,000 action but the fix was plagued by double crossing and ultimately exposure... [A]ll eight received life bans... [One] English rugby league player... is hardly a household name on the world sporting scene. But what [the rugby league] player did on November 2, 1975, in Swansea, outshames... [Rapeman's] chomps... Wales was playing [NZ and a] Cantabrian... had just scored. [The Welsh player] walked up to the prone [Cantabrian] and brutally stepped on the Kiwi's face, gashing his eyebrow and cheek. [The Cantabrian] required 17 stitches. [The Welsh player] required and got a long suspension. [But this was someone] who had been sent off an estimated 28 times during his rugby league playing career. Before last Sunday's... bout, the brutality of [Rapema]n had been well documented. [The boxer] had beaten up... [his former wife and] served three years in jail for the 1991 rape of a [teenage]beauty pageant contestant. This is a [perso]n of excess who committed excesses.

...A fight in which eight contestants will battle in a... 1.8m high, eight-sided... cage for a \$10,000 prize in Wellington next month has been criticised by an anti-violence group. The executive officer of [Guys] For Non Violence... said there was enough violence in society without organised fights... "glorifying violence." The tournament co-organiser... denied that, saying all contestants had to belong to a martial arts club and pass a health test... The tournament[, which]... would have a one-on-one knockout format comprising a first round, semi-final and grand final... is the first of four planned by X-Treme Entertainment, of Wellington. Prizes include... a fully paid entry to the World Cage Combat Championships in Townsville, A[US], next year... Posters advertising the cage fight[, which]... has been rated R16 by X-Treme... state: "Watch some of N[Z]'s best fighters in a no-holds-barred reality fighting tournament." ...Fighters are[only] banned from biting, eye-gouging or striking opponents in the throat... The area controller of Wellington police district... said... "We would certainly be having a look at it,"...

The Attorney-General... wants to outlaw the controversial sport of cage fighting. "These sorts of spectator sports have no place in our society and only appeal to the baser instincts..." [the Attorney-General] said yesterday. The plans for a cage fight in Wellington later this month received another setback yesterday when the Queen's Wharf Events Centre cancelled the booking after seeking legal advice. Wellington police... hoped to have a final legal position about cage fighting early next week. "It... constitutes a very basic offence which is fighting in a public place. That is an arrestable offence and it is also punishable by a \$500 fine,"... X-Treme Entertainment... is also seeking legal advice. [Its co]-director... said that if cage fighting proved to be illegal in its present form, the company would look at making changes. But there was a limit to the compromises which could be made. The ACC sports injury prevention programme manager... said cage fighting appeared to be "tailor-made" for injury. "It is not something that can be compared to other martial art sports, which have clear rules and use protective equipment such as gloves and headgear,"...

PARENTS from two... of N[Z]'s most exclusive single sex colleges – ...St Cuthbert's College in Auckland and Wellington's Marsden School – ...must sign a good behaviour charter before their daughters are allowed to play sport for the colleges... Although there have been no incidents at either school so far, both schools have adopted the programme to make their sports games fair and safe both on and off the field. The Fair Play programme aims to educate spectators, coaches and players about non-violence in sport. The Hillary Commission provides the schools with information kits and it is up to individual schools to decide how they will enforce the programme and whether spectators will be banned after an incident. It is not known how many schools take part in the programme... [but] the Hillary Commission said the Fair Play programme had been running since 1992, with students being rewarded with certificates at the end of each sports season. The commission's code of conduct for spectators included: Being on your best behaviour, not using profane language or harassing players, applauding good play by both teams, not ridiculing a player for making a mistake, condemning the use of all violence and encouraging players to play to the rules... "The theme this year is 'Cheer Hard, Cheer Fair. No ref, No game.'" ...[the] Auckland Regional Fairplay spokes[perso]n... said basketball is the worst sport for spectator problems followed by soccer and rugby. "For some teams, the school name is so important they will do anything to win..." ['It's generally known, of course, that professional hockey players undergo perhaps the roughest initiation of any athletes in the ways of violence. A professional hockey player for the New York Rangers recalled his early days in the Major Junior A League in Canada: "I wanted to shoot and be a hockey player but the coach wanted me to be the head goon and specialize in beating up people" (*The New York Times*, January 9, 1977). Players attack and retaliate on the ice in disregard of the rules with an openness that delights the fans. So clearly we have a problem. Although millions of Americans fear personal danger, they enjoy and

encourage the thrill of vicarious violence through sports and other entertainment.' A similar situation exists in AUS, where 'the worship of guy-dominated contact sports is fuelling stereotypes of guys as violent and macho, says a physical education expert. The lecturer at the University of South AUS in Adelaide said the prominence given to sports such as rugby, league and AFL football was giving guys a message that there was only one way to behave. "What are the common behaviour patterns of these particular sports? Guys display their masculinity by being dominant, physically superior and punishing the opposition." The lecturer said sports such as diving and aerobics did not have the same aggressive traits, but most guys did not rate them as highly as contact sports. "You wouldn't say it's a natural thing because masculinity is socially constructed. It is not that way in every culture. Masculinity that's portrayed in sport is something that our culture values." The lecturer said the macho attitudes became a serious problem when top players acted the same way off the field. "It's dangerous, especially for young children if they see that as a behaviour pattern. These people are examples to society. They are heroes and it can do terrible things if you get footballers up on assault or rape charges." By the way, Rapeman]... **spent his 31st birthday begging...** "I only ask that I not be penalized for life for this mistake,"... From a distance, the crescent-shaped bite made [in Apeman's ear by Rapeman]'s incisors is barely noticeable. And... [Apeman] has no plans to sue [Rapema]n, who is facing penalties from all directions. "His attitude," says [Apeman], "caused him to lose everything [it had] gathered." Just what "everything" means will be decided this week by the five members of the N[SAC]. The state attorney general's office has recommended that [Rapema]n's boxing license be revoked, a step the state has never before taken... [Rapema]n could apply for a new license after a year, but Nevada law allows commissioners to refuse to grant it as long as they wish. Nevada's decision, whatever it is, will be honored throughout the U.S. [because Rapema]n has already said [that his intention is to] not contest it. All this puts the commissioners in a delicate spot. [The]Nevada Governor... was on the phone to them last week. So were a lot of fight fans... the incredible collection of people and finery known as... rap stars and wannabe rappers; Crips and Bloods; pickpockets and deep pockets... CEOS and CFOS; pimps and whores and others who just want to dress like them... [who are] pro and con [Rapema]n. "This is the toughest thing I've ever had to deal with in my life," says[one] commissioner... Enforcing civilized standards is never easy in a sport where acceptable behaviour is to beat your opponent to a pulp, and where unacceptable behaviour has never been bad for the gate. [Apeman] himself once bit an opponent... during a Golden Gloves bout in 1980... Still, the commission is under pressure to hand down a meaningful penalty, if only to sustain the hope that boxing is an industry that can contain its own pollutants. But driving [Rapema]n out of the ring for good at a time when boxing is desperately short of star power would be very bad for business. Even a diminished [Rapema]n remains an invincible money magnet. The fight with [Apeman] brought in a record 1.8 million viewer buys and \$90 million in pay-per-view revenue for the cable channel Showtime. The previous record holder? [Rapema]n's previous fight with [Apeman]... A U.S. ban on [Rapema]n could be a bit like putting trade sanctions on China for human-rights abuses: if U.S. companies can't enter the market, foreign competitors will. In an age of worldwide satellite broadcasts, [Rapema]n can easily take his saleable furies off-shore... for however long it pays. "We have to do whatever is best for the state of Nevada and for boxing," says... [the NSAC chairperson]. It's a statement open to many interpretations.

...[Rapeman, who was] once the "baddest [guy] on the planet," may have nowhere left on the planet to try to prove it after being banned from boxing yesterday and fined \$US3 m... for biting... [Apeman]'s ears... last month. The former heavyweight champ... was not present when the five-member N[SAC] voted unanimously to impose the maximum punishment and revoke his licence to box in the state, effectively banning him from boxing in the U[S. Rapema]n could fight overseas but under terms of his probation... must ask permission to travel outside the U[S. Rapema]n, who once dominated the sport, can apply for reinstatement in one year but if his application for a new licence is denied... must wait another year to try again... The boxing ban goes into effect when the order is signed – probably later this week – and [Rapema]n has 30 days in which to appeal... [Apeman], on holiday in South Africa, said only "No comment," to reporters when asked his reaction. An aide said [Apeman] had nothing to add to his statement when [the champion arrived in South Africa] on Sunday: that as a Christian the champion had forgiven... [Rapeman. In another development, a] New York financial broker... [has] spent \$US18,000... to purchase... [from] a MGM Grand security guard... [Apeman's] ear chunk... which was found by a hotel worker... after the fight. "I know some people think I'm sick, but everybody collects baseball cards and jerseys,"...

[The disgraced] boxer... had plenty of money left even after his... fine and ban from boxing, so [Rapema]n bought a Ferrari... Wide World of Cars dealership employees in Spring Valley, New York, said yesterday that [Rapema]n bought the Ferrari 456 GT[– that]... has a retail price of... \$US250,000... [–] on Wednesday afternoon. "[Rapema]n was very friendly and signed autographs," one employee said... "Sometimes celebrities are difficult but in his case [Rapeman] was as nice as [any person] could be," said... [another. Meanwhile the WBC] heavyweight champion... retained his title yesterday when [a]fellow Briton... was disqualified in the fifth round... for repeated holding... It was the second straight heavyweight title fight in which the veteran referee disqualified a boxer[– it refereed Rapeman's bout against the WBA]... champion... The... referee... did not want to disqualify the fighter, especially since the sport was already tarnished... but... the 7 1/2-5 underdog was warned several times... and had one point deducted from his score in the second round for holding and refusing to fight... The N[SAC suspended the loser] and held his purse of \$US1 million.

...IT WAS enough to make anyone laugh hysterically: a small single column, two paragraph story which insisted that a proposed heavyweight boxing bout between [the WBC titleholder and a Pole] in Las Vegas in October would be staged to: "Restore the credibility and prestige of... [boxing]." Wonders never cease... Imagine it, [a Pole who is] king of the nutcracker suite, being asked to "shoulder the extra responsibility of putting on a fight" to restore credibility to the sport. Who is kidding whom? This nonsense brings to mind that famous quote: "One of the primary things about boxing is lying". Oh, how true! Goodness knows, there has been plenty of lying. Most of it is boxing lying to itself about itself. The heavyweight division today is... a huge joke. From... [a Kiwi's] misguided dreams of one day becoming world champion; to a convicted rapist being paid \$27 million for biting off a bit of an opponents ear; to riots erupting in the ring; to everyone always praisin' the Lord for this and that success; to champions wearing scripture references on their warmup gowns; to... that fuzzy haired... [promoter], your basic everyday hood, manipulating the fight game like a puppeteer. How can anyone take the sport, or at least the heavyweight division seriously? Basically, boxing sucks. And don't expect some Pole that commonly mistakes testicles for a speed bag to restore any respect to it. For the heavyweight division to return to its former glory days – whenever they were – several things require urgent attention. For starters, it would help if there was just one sanctioned and recognised association... What's the matter with having just one association, one world champion, and a bunch of fighters ranked in order of merit beneath him? What's the matter with some structured system of challenging for the solitary heavyweight title? And what's the matter with boxers actually boxing – not biting... low-blowing... holding... head-butting...? ...Believe it or not, many of us actually enjoy a good fight. When it's undertaken in the appropriate spirit and within the rules. It certainly has been a relatively decent sport in the past, if decent can ever be used to describe organised brutality. Heavyweight boxing boasts a rich history filled with memorable eras... where... they just went out and beat each other to a pulp for a purse. Now, though, things have changed. It's more contrived vaudeville than controlled violence. It's exactly the opposite to how one boxing writer once described it... "The obvious difference between boxing and pornography is that boxing, unlike pornography, is not theatrical..." If all heavyweight boxing can serve up is... a Brit and a Pole, neither great fighters, attempting to fly the flag... give me pornography every time... Meanwhile, [the WBA titleholder will be taken on by the IBF titleholder]... in a heavyweight title unification fight at Las Vegas tomorrow... [The promoter will] share... about US\$30 million... in television rights regardless of who wins.

...[the 6th-ranked] contender... is offering [the WBC heavyweight] champion... \$US20 million... for a crack at the title... [The contender], who lost a close 10-round decision to [the titleholder] in May last year, would fight for free if [the titleholder] agreed to donate \$US10 million to a charity of [the contender]'s choice should the Briton lose... The [Briton's] camp has until October 30 to respond. [However, the Brit] is expected to try to unify the heavyweight titles by taking on the winner of... [today's WBA v IBF]'s Las Vegas bout.

...Britain's WBC champion... and the 35-year-old [American] WBA and IBF champion... have agreed to fight for the undisputed world heavyweight title in Las Vegas on April 25... [T]he unification fight... would carry a purse of between \$US40 to 50 million... It would be the first time the three heavyweight belts have been united since [another old boxer] held them all in 1992. Assuming... [the shamed boxer] regains his licence, [Rapema]n could then expect to meet the winner...

With a unification bout... ruled out for the time being... [after Apeman] and HBO, which has the exclusive rights to [the British boxer's] fights, could not agree on terms[. the]... WBC heavyweight champion... will defend his title against either [the boxer who won this year's puzzling points bout against a 49-year-old boxer in Atlantic City or someone else from outside the top 10-ranked WBC contenders next] March, probably in Atlantic City... [This news is sure to disappoint the Kiwi boxer who dreams of one day becoming world champion and is currently ranked '4th on the WBC contender list (plus 6th on the WBO, 7th on the IBF and 12th on the WBA lists').

...Kiwi boxer] continues to chase his American dream... The hunger is still there, the focus to go for number one still burns[, and 'The Terminator'] is still peeved... [about losing by points to a Nigerian] at a time when [the Samoan] was suffering, literally, from a bone chip problem... [on] his elbow... "It was important for me to keep fighting because it was an important time for my career,"... So is [the Samoan] fit to fight? "No," says [the boxer. "The boxer's] in shape to get in shape," says[his] adviser... The about-to-turn 25-year-old... now weighs in at 113kg, well over his ideal fight size of 102kg... [His adviser] admits his charge was too big when [his charge took on the Nigerian] earlier this year. "We concentrated on building up his strength and the extra size dulled his speed." The fight plan remains the same as it did for the [previous] match: Go in hard and fast; hit the arms and body of the opponent to tire him out; get inside the other guy's reach and deliver that knockout blow. [The Samoan]'s defeat in Sacramento... in June gave [the Nigerian] a 17-0 record, with 12 KOs. The... pay-per-view channel HBO were delighted with the spectacle, which generated a heavyweight record 1,730 punches... HBO's vice president of sports, said the fight would enhance both careers. "Did [the Nigerian]'s stock go up? Absolutely. Did [the Samoan]'s stock go down? Not a bit. [The Samoan] stays a top prospect, maybe even THE top prospect, and [the Nigerian] becomes a top prospect,"... at 1.88m... [the Nigerian had an advantage of] 13cms in height and... 3-4cms of reach... over... [the Samoan. It's something the Samoan and his adviser know the former hotel cook will] be up against from now on – the Aucklander will be fighting uphill and over his weight every time as every other serious contender is physically bigger than him. It's a prospect that doesn't daunt [him]. "I know what I want, I know how to go for it. You can't talk about obstacles," [the Samoan] says with the beginnings of a yankee drawl. "Yeah, I know, I'm trying to get rid of it," [the boxer] says of the twang. There's little chance of that... [His] US fight manager, has told the Aucklander [it] needs to get back in the ring, back on television and to keep a high profile in the States.

...[it] does not seem so long ago that [the boxing promoter] was telling anyone who would listen – and sometimes that's anyone within 100 metres, whether they want to listen or not – that [it] was moving to England to live next door to his mate and partner... Now [the business partners] are suing each other. Two heavyweight legals going at it. [The partner]'s record is 32 wins, one draw, no losses, mostly at libelweight; [the promoter], who has defended at taxweight against the Internal Revenue Service and the FBI, has five draws, no losses and a return match pending in January... [H]ow they became partners... and... how those dealings affect the future of... [a British featherweight, is bound to create] an entertaining round in court. Much has been made of [the promoter]'s threat to scuttle [the featherweight]'s trans-atlantic decider... next month...

Britain's most colourful boxer is expected to be a knockout in the U[S] with his clever mix of words and punches... [The boxer wears] the spots of the leopard and has all the killer instinct of the wild cat... goes by the ring title of prince but some say... was born to be king... fights as a featherweight but talks like a heavyweight. Britain's "Prince"... gets the chance to show if [it] is indeed lord of the ring when [the Brit] embarks on a six-bout deal across the Atlantic, starting with a fight against America's W[BU] champion... at New York's Madison Square Gardens on December 18. The pride of England – Sheffield to be exact – has been touted as the best boxer in any division in the world. The British press talk up the cocky [23-year-old] who now boasts an unbeaten record over 28 fights... Even his... opponent seems to appreciate [the Brit], although with only one defeat in 50 bouts, [the 30-year-old] has paid his dues and is now cashing in for the biggest purse of his career... Although [the Brit] is smaller and less experienced[, it]... should be able to stop the American within six rounds and go on to bigger things. But for all the hype that surrounds him, [the Brit] also has his critics. There are those who feel [the Prince] still under-achieves for a boxer of enormous talent, that [it] has been content to sit back and not do the hard work. So [the Prince] has some proving to do, because [it] has been a letdown since winning the W[BO] featherweight title... in 1995. Soon after that win [the Prince] announced his ambition was to bag world titles at six weights. And... would never let wealth get in the way of his work ethic or let his celebrity status go to his head. [The Prince] has been less than his word, spending the past two years treading water – stuck in Britain at 57kg... and matched mainly against low-rent opposition. [The Prince] was once, perhaps, the most refreshing performer in British sport... arrogant, disdainful of opposition and lacking in any sense of self-proportion. But his flamboyance and brilliance in the ring made up for all the debits. And, after all, [the Prince] was only a kid. Those days, sadly, are over, which is why his [US] trip is so important for the [guy] who kilo for kilo, has more power and natural ability than any other boxer. Some say [the Prince] has evolved into a circus act in boxing gloves yet [it] will earn... \$US12 million from his six-bout deal. [The Prince], a Muslim whose parents come from Yemen, is a teetotaler who never touches drugs or cigarettes, but his frequent holidays, love of nightlife and partiality to junk food have taken their toll. However, it is his extra-mural performance that has been most disturbing. [The Prince] can be nice enough in one-on-one encounters, provided the other person is obsequious. But in public, his... gift has given way to a boring boastfulness – summed up in pet phrases such as, "I'm going to be a legend"... Fans frequently complain of his offhand manner, and this has come out even more starkly during press conferences where every question is taken as a personal challenge... [When] asked by one well-intentioned journalist whether [the Prince thought of himself as being] the best fighter in the world[, the 1.6m Brit] replied, without a trace of humour: "What kind of a question is that? I'd like to give you a right beating." Over the past two years, [the Prince] has... twice been caught driving too fast... [– in either his] Porsche Boxster... Porsche Carrera, Lamborghini, Aston Martin Spider, Cherokee jeep, Wrangler jeep, Jaguar, BMW... [or] Mercedes S Class... [–] was involved in an airport confrontation when [the Brit] told a clerk that if his bag was not where it was supposed to be [the boxer] would sort her out with a shotgun... and... punched [a] fellow boxer... in the mouth... at... Heathrow...

Even before... the... Prince... throws his first punch in the U[S], the boxer... is getting the royal treatment... The... cable television network HBO, [which is] bankrolling the bout... at Madison Square Garden... was reported to be spending \$US1 million to introduce [the Brit] to New York fight fans. His face is on a huge billboard in the heart of Times Square and outside the entrance of the Lincoln Tunnel as well as on posters plastered in bus stops throughout the city. While [the Prince] has been training in New York, pop star[s and actors have] stopped by to visit him... "I love it," [the 23-year-old] said of his celebrity status. "I said before I got here that as soon as I got here that I am going to take over and that's what I have done." ...the... [Prince's first opponent, who is] known by the rather modest nickname "The Flushing Flash", made clear his resentment of [the Brit]'s star treatment. "The first round I'm going straight for that mouth. I've been saving up everything for the bell," said... the 30-year-old... [before resorting] to veiled racial insults, saying [the Prince] could look for work as a cab driver or in a convenience store after... [it loses. In further boxing news,] Zambia's new Commonwealth light welterweight boxing champion... [– who] won the title [despite] being floored twice in the... 12th... [and final round –] is critical in a Lusaka hospital... Neuro-surgeons suspect [that the Zambian] has a clot in a blood vessel leading to the brain.

...Two Taiwanese [guys] had their arms torn off at the shoulder when they became trapped during a tragic mass tug-of-war match... in Taipei. There were 780 people in two teams. As well as the two who lost their arms, another... lost a hand... [Incidentally, boxing's infamous ear] biting...

incident was voted top sports story of the year in a world-wide poll by international news agency Associated Press. In balloting among 50 sports editors from all areas of the globe except the U[S], the bizarre... heavyweight fight was a runaway winner... - 1997

Las Vegas yawning as [Rapema]n comeback nears Rarely have ticket sales for an execution been so sluggish. This is not because Americans are squeamish. Far from it. There is never a seat to be had in a jailhouse whenever the long arm of the state switches on the electric chair... But with only a few days to go until [Rapeman has the chance to fulfil his promise] to terminate the life of [a South African], anything from \$200 to \$1200 can still book you a place in the audience. Maybe it is because the [US] public are no longer certain the [Rape]man can deliver. The condemned [South Africa]n, for one, is unconvinced... “[The tosser] said the same things before his fights with... [Apeman] and look what happened to him in those.” It is a matter of infamy that [Rapema]n lost his world heavyweight titles to [Apeman], then his licence to box for making a real meal out of the champion who calls himself the Real Deal. Now [Rapema]n is back again... Comeback No 1... when [Rapeman] re-emerged from three years in prison... sold out the magnificent MGM Grand Garden Arena weeks in advance. Marketing the 16,000-plus tickets for Comeback No 2 is proving trickier. Las Vegas is a city which likes sinful pleasures in excess but no one in the city, unlike the disgusted reaction in Britain, is treating seriously [Rapeman’s prophecy that his opponent] is about to die in the ring. Furthermore, the executives of the world’s largest hotel are having to temper the customer appetite for horror with a concession to better taste. The MGM, with its theme park full of adventure rides as well as its acres of gambling and 5003 rooms, is in the forefront of the drive to attract families to the Las Vegas Strip as well as gamblers to the strip clubs. That image took as heavy a battering as [Rapema]n when gunshots were fired inside the hotel during a riot which followed one of his fights, causing the MGM to think long and hard about welcoming him back... They have done so only by agreement with the promoters, America Presents, that [Rapema]n is not sold as a monster. The television advertisement shows him training with professional dedication, then smiling benignly from the screen... [while eating] a simple breakfast. This attempt at a softer sell is not having the same immediate impact at the box office, even though [the South African], briefly the IBF world heavyweight champion in his own right, is a more credible opponent than... the Irish-American fall guy for [Rapema]n’s first comeback... [I]t is easier to promote [Rapema]n the Freak to the transient population of Las Vegas. The punters come for thrills, not gentle exercises in social rehabilitation. So the next few days will decide whether the controversial decision of the N[SAC] to recertify Rapema]n as sane to fight will pay off... The likelihood, of course, is that the arena will be packed on the night, with... unsold tickets being given away by the casinos to their high rollers... The Showtime cable TV company’s pay-to-view returns... are expected to be as high as usual from the community of American fight fans...

[Rapeman] will take on South Africa[’s]... 30-year-old self-described White Hope... in a scheduled 10-round bout... today... for a paltry \$US10 million... If all goes well... with no repeat of the near riot that shut down the MGM Grand casino after [Rapeman v Apeman] II and cost the hotel a huge public relations black eye, the hotel is ready to sign... the mother of all fights in November – [Rapeman v Apeman] III... MGM say they knew [the Rapeman v White Hope bout] would not be a big seller... But... Showtime, with its loans to help [Rapema]n keep the Internal Revenue Service and other creditors from foreclosing on his properties... insisted on the date... between New Year’s Eve and the Super Bowl... because it has a schedule for [Rapema]n to keep leading up to... [the fight with Apel]man... □... The... [first black South African president has sent the White Hope] a message of support... [The] president – himself a former boxer – ...said... “I wish you luck in the contest... I believe [that Rapema]n and yourself will play your part to perpetuate the honour and glamour of the world heavyweight championship[.]” The White Hope beat a]... German... in 1995 to win the vacant I[BF] heavyweight title, but was stripped of the crown a few days later for failing a drug test.

...[RAPEMA]N has been sentenced to a year in jail for assaulting two motorists after a traffic accident... [The judge, who said the pugilist] “repeatedly speaks and acts compulsively and violently”... sentenced [Rapema]n to two concurrent two-year sentences but suspended all but one year... fined him \$US5000... and sentenced him to two years’ probation after release from jail... [Rapeman] could have received up to 20 years in jail... [However, the] decision could lead to more jail time... and places the former heavyweight champion’s boxing career in jeopardy... Indiana authorities must now decide whether the 32-year-old fighter violated his probation for a 1991 rape conviction. [Rapema]n was released in 1995 after serving three years of a six-year sentence and his probation was set to expire next month... “We are surprised at the severity of the sentence,” said... a spokes[per]son for Showtime which was to televise [Rapema]n’s next bout... The decision came three weeks after his successful comeback against [the White Hope, and Rapeman] was scheduled to fight on April 24 in Las Vegas against an opponent to be determined... The two victims... settled out of court and were against sending [Rapema]n to jail.

...[Rapema]n will face disciplinary action in a Maryland jail today after a violent temper tantrum that could make it harder for him to gain an early release to resume his career. The volatile 32-year-old... had to spend the weekend in isolation after hurling a television against a set of bars at the Montgomery County Detention Centre... [Rapeman has only] been in the... jail for two weeks[after a] judge sentenced him to 12 months imprisonment for punching a 60-year-old... in the jaw and kicking a 50-year-old in the groin last August... [The NSAC] could revoke his licence for good because of the Maryland incident.

...*Unity bout ends in TKO for boxing* [The]WBC champ... thought [it had won, while the] WBA and IBF titleholder... [looked like a person who] knew it was all over, but the judges scored yesterday’s heavyweight clash... a draw. Commentators were perplexed and the crowd booed when the decision went against Britain’s [boxer], who outclassed the veteran American over 12 rounds in what was billed as the bout to decide the undisputed heavyweight champion of the world. “I knew [Apeman] wouldn’t let me leave with all three belts without some funny business,”...

Britain’s [heavyweight champion outclassed his US opponent in New York] only to be denied the undisputed world heavyweight boxing title... None of the few hard blows [Apeman] landed was as harsh as the one delivered by judges, who robbed [the Brit] of victory in a travesty after a fight where his superior size and reach kept [his opponent] at bay. “It looks like the judges were rigged,” said... [the British boxer]’s trainer. “It was a terrible decision.” [A]South African judge... awarded the fight to [the Brit] 116-113 but [the US] judge... went for [Apeman] 115-113 and[the] British judge... called the fight a 115-115 draw... [Apeman] received \$US20 million... twice what [the Brit] was paid... Had [Apeman lost, his promoter] would have lost control of the profitable heavyweight title and lost much of his power. A near-certain rematch instead will try to milk more money from the unification quest... [The British boxer’s trainer] said the outcome shows how necessary federal regulation of boxing has become. [His charge] raced from the ring seconds after the verdict was read, the joy of an apparent victory replaced by stunned anger and frustration... [Apeman] had landed only 68 punches through seven rounds, barely a third of [the British boxer’s] total, and the ratio changed little over the last rounds... The long-awaited fight left a bitter taste in the mouth of a sell-out crowd of 21,284... The draw now confuses... [an Auckland boxer]’s heavyweight title programme... [The Samoan] was to have been second in line behind... [Uganda’s] WBC No 1 contender, for a contest with yesterday’s winner.

...*Whisper of the week: the... Millennium Stadium in Cardiff... is... tipped to stage [the heavyweight] rematch in September...*

Britain’s [WBC heavyweight champion and America’s WBA and IBF champion] will try again to settle the issue of who is the undisputed world heavy-weight boxing champion on November 13. Each boxer is expected to be paid \$US15 [m]illion... in the second re-unification fight.

...IT SEEMS the fighting career of [the British boxer] has distilled itself into one climatic opportunity. Nothing [the Brit] has done in the past or will do in the future is likely to have more influence on his ultimate ranking in the history of the heavyweight championship than how [it performs against Apeman] today. Practically everything [the Brit] has desired in 10 years as a professional is there for the taking in a fight [it’s] equipped to

win. In addition to the status of undisputed world champion, and the immense financial leverage which goes with it, victory will almost certainly earn him another prize [it] has long coveted but had begun to fear was beyond his reach: the acclaim of the American public. They were unimpressed by his tendency to alternate between demonstrations of violent effectiveness and displays of cautious dullness, and automatically sceptical about any Limey heavyweight. They sniffed at suggestions the athleticism of his 1.95m, 108kg-plus physique, the range and jolting power of his left jab and the anaesthetising capacity of his right hand implied superiority over all other big [boxers] of his generation. They pointed out the jab frequently degenerated into more of a pawing gesture than a declaration of authority and the right was too often a potential rather than an actual weapon, a loaded gun rarely pulled from its holster. Then, with dramatic suddenness, attitudes to [the Brit] in the US were transformed. The change had its origins in one of the most depressing experiences the fighter has endured, the night in... New York, last March when scandalously illogical judging distorted his thorough domination of [the USer] in their first fight into a ludicrous draw. Bad decisions are as basic to boxing as sweat and pain but that one was such a glaring, cruel injustice there was indignation all over the US.

...*Surprise, surprise* More than 30 prize fights, including one involving [the]former heavyweight champion [who lost the Rumble in the Jungle], have been fixed or tainted with fraud in the last 12 years, according to the *Miami Herald*. Some fighters took payments to throw fights while others took dives to avoid injury and earn a quick paycheck. The report cited sworn statements with more than 60 fighters, promoters, trainers, managers, matchmakers and commissioners. [The report comes amid accusations that the IBF has 'accepted bribes to fix rankings', and follows last week's announcement that the '8 month inquiry into the drawn decision at the heavyweight re-unification fight resulted in prosecutions for bribery and corruption.']

...*"What occurred once the 12-round event concluded will surely go down in the boxing annals as the biggest fix in fight history."* – Boxing legend[who won the Rumble in the Jungle (r:p1478, ln49 + p1518, ln63 + upstart, p1519, ln44) speaks out on the re-unification] *fiasco*.

...The Greatest [boxer to ever step in a ring (who has been stripped of his dignity by the ravages of Parkinson's Syndrome) was once s]tripped of his world heavyweight title for refusing to fight in the Vietnam War – "I ain't got no quarrel with them Viet Cong" [it said. The boxer] lost three of his best fighting years. [It] returned, minus the blinding speed and razzle dazzle footwork, yet regained his crown, twice, in 1974's Rumble in the Jungle... then four years later... at the age of 36. Asked once to recite the shortest poem [it knew, the former champion] paused, then: "Me? Whee!"

...[A]MUM-of-three... has beaten [the Terminator] to the punch. The pint-sized fighter is gloving up for the first [gals'] world title boxing match in N[Z]. But the NZ guys' heavyweight champion] is still looking for his world title shot. [The mum-of-three], 36, will take on [a]Dutch boxer... in Auckland next month for the [Gals' IBF] welterweight title. Her three children, [aged]18... 15... and 13, and husband... will be at the fight to support her. "They don't seem to mind me boxing, as long as I win,"... The family moved from Kaitaia to Auckland six weeks ago to prepare for [her] challenge. The fight was secured last week after [a local]construction firm... put up the money to bring the Dutch fighter to N[Z] and the \$US20,000 purse (\$12,000 for the winner; \$8,000 for the loser). "It was fantastic to realise it could go ahead,"... said [the mum-of-three. The] black-belt in karate, has fought in four matches, winning two, drawing one and losing one.

...[the Terminator] has been ordered to turn panelbeater in the biggest bout of his boxing career today. In the early rounds, hammering the body of his unbeaten opponent... is seen as essential if the N[Z] heavyweight is to book himself a world title shot... The victor of the... 12-rounder has been guaranteed a title shot by the I[BF with Britain's undisputed world champion]... Irrespective of the result, [the Samoan] will pocket a purse of \$580,000... [The Terminator's opponent today] has won 22 out of his 29 pro fights by knockout.

...I'm a sucker for a boxer's knockout punch. It's the shortest, sharpest and sweetest moment in all sport. Bang. Instant gratification. All [of a guy]'s basic instincts taken care of. One who has a very good knockout punch is [the Terminator. And now it]'s finally on the verge of getting a crack at the greatest prize in sport, the undisputed heavyweight championship of the world. Yet from my ringside seat most N[Z]ers still seem to be cold on him. In any other country [the Samoan] would be feted as the Great Contender... [and] given the keys to the temple. The consensus here is that [the boxer] is a squat Samoan from south Auckland being manipulated in a snake pit of American intrigue and money. Exactly. It's called prize fighting and N[Z]ers are not comfortable with that. Pro boxing is considered to be outside the norm, beyond the circle. And it's why [the Terminator] has not been paid the respect [it] is due. Board sailors, single scullers, triathletes, netballers, three-day eventers and... discus throwers are much nicer to snuggle up to and shower with our gratitude. Even [a tennis player, when it] had a world... ranking scarcely in the top 100, was given better recognition than [the Terminator]. So stick one on 'em, [I say to the Samoan heavyweight]. I'm in your corner, brother.

...[the Terminator] is set to become the \$7m [hu]man. That is the expected minimum fee [the Samoan] will get to fight [Britain's]world heavyweight boxing champion... The cheque will be boosted by a percentage of profits from the TV rights.

...*Payback time in the ring...* The T[erminator] is standing behind the right shoulder of [his]manager... You can't help but know that... where [the manager is, the Terminator] is too. It's been that way... [since] the 19-year-old kid with a bronze Olympic medal in hand was taken up by [the]n 32-year-old... who had, somewhere at home, a silver Olympic medal stuffed in a drawer... [J]ust in case you did not already know – they will take on [a Brit soon] for the heavyweight boxing championship of the world... [The pair] are finishing lunch. [The contender is teasing his manager], who does not really want to do an interview: "You're a big star." [The manager] has been a big star before. At least [it] might have expected to be one. In 1984, [it] came home from the Los Angeles Olympics with that silver, N[Z]'s first Olympic] boxing medal in 56 years. But his Olympics ended amid a near riot and in one of the great controversies in Olympic boxing history. On that August day [the NZer] was in the ring for a semifinal with the favourite, [America's Apeman. The NZer] was never going to win the fight. [It] was, though, and proudly, going to bring home the bronze. But then came what boxing commentators of the time described as an H-bomb of a left hook. [The USer] landed it an instant after the ref had called for the fight to stop. [The NZer], confused, legs staggering under him, was awarded the bout – and the silver. The crowd erupted in a frenzy of booing and threw whatever was nearest: bottles, coins, beer glasses. [The NZer]'s father, his trainer, was hit by a flying stool and was bleeding from a gash in his forehead as the N[Z]ers left the arena by a back door. [The NZer] says now that [it] did not handle the controversy well. "I found it hard to accept the silver medal. I believe I didn't deserve it – I was losing the fight. I was a proud guy, and I'm still a proud guy today and I never want anything that I don't deserve." ...years on, the memory still jars – and that medal is still tainted. "I had the silver medal put around my neck on the podium, and all the Americans booed. I took it off and I never put it on again." That blunt statement gives an indication of the calibre of [his] resolve. As does his response to the people who[, since the world title bout was confirmed,] are "coming up and grabbing me and hugging me. Yeah, the sheer thrill and excitement for them. They're just so rapt that they think that's how I'm feeling. They say: 'Oh, how do you hold yourself together?' Well... the bottom line is that we have achieved something that we've always known: that [the Terminator] would fight for the heavyweight championship of the world." After all, this time it is personal. "Another opportunity for me to live my experience, and to correct it."

...The... T[erminator] stands to earn more than \$9 m... from the... fight in the biggest payday in N[Z] sporting history... "There is a lot of money involved but it isn't what is important to me. Fighting for... and winning the title is what's important... This is my destiny. It must be fulfilled."

...WHEN [the Terminator] steps into the ring for his world heavyweight challenge... [it] will be following in the illustrious footsteps of another N[Z] immigrant who made good with his fists. [The Terminator] has much in common with Bob Fitzsimmons, who won the title on St Patrick's Day, March 17, 1897, with a round 14 knockout. Both came to N[Z] as children, fought their way out of working-class neighbourhoods, and established themselves overseas despite a size disadvantage – Fitzsimmons in weight, [the Terminator] in height – with devastating punching power. Both reckoned it was their destiny to win the world title... Fitzsimmons' story is better than any fictional account that could have been written. Aside

from his David v Goliath-type victory to end... Jim Corbett's reign as world champ – still rated as one of the best fights of all time and the one that set the tone for the huge paydays and moving pictures coverage – there was wife-swapping with his manager... wrestling with bears, lions as pets... Fitz, as [the NZer] was known worldwide at a time when boxing was the number one sport globally, dropped to A[US]n Jim Hall in Sydney when short of money and with a new family, and lost... to "Sailor" Tom Sharkey when O. K. Corral shootout sheriff [Wyatt] Earp unfairly disqualified him – Earp was later said to have won \$10,000 on Sharkey. And Fitz was famous for quotable quotes: "The bigger they are, the harder they fall," is the best known, though rarely attributed to him. Fitzsimmons was the son of an Irish... [miner] of Helston in Cornwall. [Bob] was the youngest of 11 children. When the mines bottomed out and... [Bob's father lost his job, the] family... shifted... to... Timaru, setting up a blacksmith's forge that was to be run by older brother Jarrett and would become Bob's de facto gymnasium where [the budding boxer] built his chest, upper arms and shoulders to the point where [it] scared opponents just by removing his shirt. After bashing up anyone keen for a go in the South Island, [Bob] moved to A[US], struggled for a quid, and eventually agreed to take a fall to the Aussie middleweight champ, Jim Hall. Hall was to go on to the U[S] to fight for the world title held by Jack Dempsey. Fate reversed the result when Hall broke bones in his hand in a bar brawl after being booked to sail to San Francisco, and the fight backers replaced him with Fitz. New Orleans was the capital of boxing then, and the biggest purse ever offered, \$12,000, was put up for the fight in January 1891. Fitz... thrashed Dempsey, repeatedly knocking him down. By round six Dempsey was... barely able to stand. Fitz asked him to throw in the towel. "I don't want to strike you, Jack," [Fitz] reputedly said. Dempsey's reply was: "Well, I would hit you if I could." It ended in the ninth, Fitz winning the money and American citizenship. Next [Fitz] flattened Hall, then defended the first of his three world titles repeatedly to earn... \$42,000 that year. [Fitz] decided to step up in weight divisions and asked titleholder Corbett for a chance. Corbett announced that [it] was retiring and that his successor was to be... Peter Maher. Fitz was happy to face Maher, too. The fight was set for Dallas, Texas, in February, 1[89]6. But the southern state decided that boxing was an unhealthy pastime and at the last minute changed the law to ban the sport, forcing promoter Dan Stuart to shift the bout over the Rio Grande into Mexico. It was one of the first boxing matches to be filmed. Thomas Edison's kinescope camera was used, and paying customers around the country boosted the purse. Gunslinger Bat Masterton was hired to keep the peace in a roughneck crowd that included Mexican bandits, miners and Texas Rangers... In 1897, Corbett agreed to face Fitz and their fight... was the first championship match filmed, \$15,000 on offer for the winner... Fitz... delivered the knockout blow to the midriff in a come-from-behind win. James Bond made it famous but it was Fitz... who "invented" the solar plexus punch when his wife, Rose... [-] his second wife, his first, Alice, having left him for his manager, Martin Julian... Rose was Julian's sister... [-] yelled, "Hit him in the slats, Bob," from the side of the Carson City ring... Fitz never defended the title, instead taking to the stage for a year, a common course for boxers of the time and one also pursued by... the bigger and heavier... Corbett. In 1899, aged 36, [Fitz] lost the heavyweight title to 24-year-old James Jackson Jefferies at Coney Island... Fitz announced his retirement but the money soon ran out given his high-spending style, and by 1900... was back, beating Sharkey in two rounds to avenge the Earp-induced loss. [Fitz] sought a rematch with Jefferies but the younger [boxer] had time on his side and left Fitz to wait. By 1902, when the fight was set for San Francisco, it was too late for Fitz. His speed was gone and [Fitz] was KO'd in the seventh. Not long after, Rose died of pneumonia. Eventually... [Fitz] married for a third time, divorced, and married again, the period marked by heavy drinking. After the failure of his fourth marriage [Fitz] found God and cleaned up. In 1903, aged 40, [Fitz] won the new light heavyweight division... beating holder George Garner over 20 rounds. [Fitz] defended it twice, then lost it in 1905, but didn't cease boxing ...til... 1914, when [Fitz] fell to new heavyweight contender and subsequent champ Jack Johnson. [Fitz] returned briefly to Timaru and was feted as a hero, despite having several times said [it] had no wish to return there... In 1917 [Fitz] was admitted to a Chicago hospital with pneumonia and didn't come out, passing away on October 22. Boxing writers... in their book *The Release of Power*, have computer-ranked heavyweights over the years and list Fitz at No 5 of those who fought in the first half of [the] century, one ahead of Corbett, the first four being Johnson, Gene Tunney, Dempsey and Jefferies. Tom Heeney is the only other Kiwi to have challenged for the title, losing to champ Tunney when the ref stopped the fight in the 11th round of their bout at New York in... 1928.

...[THE BOXER] WAS known as the Hard Rock from Down Under and it took a super[hu]man to beat him – a super[hu]man in the form of the legendary Gene Tunney. His name was Tom Heeney... the ninth child of poor Irish immigrants, and... the last N[Z]er to challenge for the world heavyweight title... on July 26, 1928, at New York's Yankee Stadium. It was one of boxing's most punishing fights... Heeney[, who] was born in Gisborne on May 19, 1898... represented Poverty Bay against the Springboks in 1921, but boxing was the family passion. His father would give lessons to his boys and neighbourhood, and Heeney's brother Jack later became N[Z] middleweight champion. Heeney turned professional in 1921 and soon made his mark, beating the N[Z] heavyweight champion... Heeney left N[Z] in 1924 to follow his career in Britain... When in Britain, Heeney didn't exactly set the boxing world on fire. Two years later [Heeney] went to the U[S], where the NZer intended to continue boxing to pay for his trip home. Then his fortune changed. H[eeney] won a succession of fights and... worked his way up to fourth-ranked heavyweight and secured a title shot in 1928 after a 10-round draw with future champion Jack Sharkey. Heeney would be matched against... a former Marine who was one of the most scientific boxers who ever fought as a heavyweight... Of the challenger the critics said: "Heeney is the immovable object and onrushing force rolled into one, with the heart of a lion and a jaw of corrugated iron." Even Dempsey was impressed. "Heeney has a better than even chance of winning. Only a super[hu]man can beat him." ...Tunney was guaranteed \$525,000 and Heeney \$100,000. But promoter Tex Rickard lost substantially. From 88,000 tickets printed, only 45,890 were sold. The betting odds of 3:1 in Tunney's favour reflected the general assumption that Heeney was out-matched. Heeney had a professional record of 34 fights with 27 wins (10 by knockout), four draws and three losses. Tunney had fought 62 times and lost only on[c]e... The fight was broadcast in what was described as "the most ambitious radio station hook-up in history." Listeners throughout the world would hear Heeney receive, in the words of the press, "the beating of his life." He[eney] started aggressively and... "almost upset the champion with a right to the jaw... The punch landed almost full in Tunney's face as [the champion] was out of balance and the champion almost dived through the ropes near his own corner." But Heeney was then given a boxing lesson as the champion exhibited all his ruthless skill. Heeney's face was opened up in the fourth round and in the eighth... was nearly blind. He[eney] took a terrible beating for three more rounds and was floored by a left hook at the end of the 10th... Heeney gamely came out for the next round but... [the fight] was so one-sided that Tunney dropped his hands and snapped at referee Eddie Forbes: "How much more do you want him to take?" Forbes stopped the bout after 2m 52s of the 11th round. Tunney was generous in victory, saying: "I have nothing but admiration for Heeney's courage. I found the Hard Rock hard indeed... I saw that it was impossible to knock him out with one punch and so I shifted to an attack that would wear him down." Heeney was resigned in his appraisal: "I can't say that [Tunney] is a terrific puncher, but [Tunney] did to me what no other [boxer] ever did. That tells the story." ...It was Tunney who retired after the bout. Heeney married a New York girl, Marion Dunn, and continued boxing for five years. But [Heeney] was never the same fighter – of his 22 subsequent bouts [it] won only five. He[eney] retired in 1933 and set up a restaurant in Miami, where [Heeney] died in 1984... [The latest NZer to challenge for the world heavyweight title is another boxer whose] toughness ...is... legendary.

...IT'S A big step for a boy from a tiny Pacific atoll to compete for the premier prize in sport but [the Terminator] has no worries, no pretensions, no doubts about his chance of taking boxing's world heavyweight title. [The Samoan]'ll win the two world title belts from [the] Briton... because of his destiny, [it] believes. "Have faith," reads the slogan on the jackets and T-shirts worn by... [his support] team. It's the island background from his hometown of Faleatiu and the childhood upbringing in South Auckland that keeps [hi]s feet firmly planted as [it] lines up his opponent[, the... event sure to stop this country and blitz all television viewer records. [The Terminator] always enjoys two homecomings when back from the U[S] after his

fights, one to Auckland and the second to Samoa. Mixing with ordinary people – his relatives, the boxers with whom [it] grew up and trained, the crowd at the Manukau mall – is all part of what keeps [the Terminator] clean, focused, and realistic... “God put me into something I’m good at,” is his reply to any questions about hurting people... Ask about wealth and [again the pseudo-Christian] has a ready patter: “When you drink the water remember the [guy] who dug the well... So I respect all those that some would call the little people. I don’t believe there are any little people. Everyone has a God-given talent and it’s a matter of making the best of it.” [The father of a 2-year-old boy] remains connected to a congregational Christian church in South Auckland... Out of the ring [the Terminator] is quietly spoken, happy to sign autographs and have his picture taken with fans in a way [the Brit, Rapema]n and others wouldn’t dream of. [The Samoan] watches the antics of the likes of [Rapema]n and the only [boxer] to beat him in 37 fights as a pro, [the]Nigerian... locked up after molesting a room-service girl, and learns. “They’re missing something as a human being, they’re not a complete person. I’m at peace with myself.” ...All pre-fight talk is of [the Brit’s] greater height and reach... “I’m not worried about him. It may not be pretty and it may not be perfect but I’m just going to fight, do whatever [the Brit] does better than [the Brit]’s doing it. I’ll be alright, I’m looking forward to it. I’ll be happy regardless of the outcome. We all want to be winners but there can only be one winner. You have to accept that and be happy that you know you’ve done your best. I don’t believe in regrets.”

...A rib cartilage injury suffered in training and the lack of solid pre-title bouts caught up with [the Terminator] in Las Vegas yesterday, with the champ... untested in defending his crown... The Samoan-South Auckland... proved his stamina, his ability to take a horrific hiding, and his sports[per]sonship. There were no complaints afterwards. [The Terminator] never landed a punch that stunned or hurt the champ[, being unable t]o... get through [the champ’s] reach and jab, his corner later putting much of the problem down to a second round blow... that reinjured the rib. [The Terminator] had been caught by a body shot from [his] sparring partner... six weeks ago... saw a specialist in Los Angeles to check the damage, and believed [it was 100%] going into the fight. But the crack from [the champ] early on shortened up [the Terminator]’s attack and defence. [The Terminator] was restricted in his movement... and could not fully extend his arms. [The Terminator] walked away with the crowd’s respect. The fans had booed [the champ] at times because of his cautious, back-wards approach to the fight, but [the champ did all it] had to do, keeping away from danger. Judges gave [him] the victory by scores of 117-111, 119-109 and 119-110. The statistics tell it all. [The champ] threw 674 punches, 300 connecting; [the challenger] threw 413, 110 landing. It was not the fight plan. [The Terminator] was meant to go in hard, turning the fight into a brawl, but never could and admitted later [it] should have taken more risks... [The champ] did not realise [it’d hurt the Terminator] in round two and was wary of the famed left hook right to the end... [The champ credited the challenger] with a hard head. “[The guy] can take a punch well – ...[but it]’s never seen a boxer like [me],”... Which is true. [The champ] prepared with two 12-rounders with... [Apeman] and early-round knockouts of top-10 fighters... [while the Terminator] knocked out lesser lights... What [the Terminator] did do... yesterday was to prove that [it] was better than... any other[boxer] in the top 10, barring [Rapema]n. The result will not unduly affect [the Terminator]’s rating, his push for another title shot or his earning ability in the [US]. Next up is likely to be a square-off with [Apeman]. The champ will go after a huge payday against [Rapeman].

...the WBC heavyweight’s long-awaited meeting with... [Rapema]n is looking unlikely. [The British camp has] ruled out any possibility of a fight for the foreseeable future. A senior aide to the WBC... champion insisted that the show-down “was not going to happen” because the two fighters were contracted to rival television companies. [The Brit has a]... deal with... HBO. [Rapema]n has an agreement with... Showtime... The [British] camp had suggested on Thursday that the fight be screened on HBO, a proposal which would force [Rapema]n to compensate Showtime out of his cut of the purse. [Rapema]n’s manager... said that [the British boxer’s] demands on the split of television cash were “laughable”, adding that it was “clear that [the Brit] does not want the fight”. A compromise seeing both cable companies screening the fight simultaneously also seems unlikely. “It would be virtually impossible, as there is no financial incentive for the companies to do so,” [a spokesperson for] Multi Channel News said.

...Rocky... had better watch out if [it runs into the British world] heavyweight champ... who thinks the actor and his boxing movies are “a bunch of rubbish”... [The boxer] says, “I’d like to spend a little time in the ring with him to show him what the fight game’s really about.” [The champ] resents the way [the actor] got rich portraying boxers as dummies “when most of us are really very intelligent”... [Incidentally, a] German boxer... has won a US\$30 million... judgment against the W[BC], with a Manhattan jury agreeing [the German] was cheated out of his claim to the light-heavyweight championship. The case began in 1998, when the WBC declared its light-heavyweight title vacant after... the belt-holder at the time, considered abandoning the weight class crown to become a heavyweight. [The German] signed to fight [an]American boxer... for the vacated belt and in March 1998 won a split decision to become the WBC light-heavyweight champion. But when [the former belt-holder] decided to return to the light-heavyweight ranks a few months later, [the former belt-holder] was restored to his position as WBC champion without throwing a punch.

...Judging at this year’s national boxing championships beginning in Upper Hutt tomorrow, will be carried out manually ...a[s NZ] Boxing cannot afford an electronic scoring system... An application for funding... [so] the organisation could afford the \$10,000 required... had been turned down.

...[a f]ormer Waitakere college student... should have been told [it] was barred from competing in the Oceania Championships before [the boxer] got there, says an Auckland boxing official... [The] 22-year-old... found himself in court after punching... [the national boxing coach and an AUS]n boxing official... at the champs in Canberra. [The boxer also] smashed the scoring computer before being arrested. [The boxer was angry because it] wasn’t able to compete in the... tournament because [it] had previously competed in “rebel” or unsanctioned tournaments. A[n A]uckland Boxing Association executive member... sa[id]... “I don’t agree with him hitting them but [the boxer] paid for himself to get over there and I think they should have barred him before... g[et]ting there.” ...To register with the N[Z] Boxing Association you have to see a doctor which can cost around \$40 and then pay a \$25 registration fee to the... [a]ssociation. With the rebels you just see a doctor on the day.

...[the Hawaiian who is] the first foreigner to become a grand champion in the ancient sport of sumo wrestling, is to millions of Japanese the epitome of strength. But after 13 years in the sport, the 31-year-old... known... by his wrestling name, Akebono, was so beat up that [it] could hardly go out for walks with his little girl. His knees just couldn’t take it. Because of sumo’s emphasis on size, its practitioners tend to be notoriously unhealthy. And the problem goes far beyond muscle pulls and bruised backs. Knees, ankles and hips are often left permanently damaged under the weight of bodies weighing 180kg or more. Worse yet, years of deliberately cultivating obesity can mean a slew of chronic health problems after retirement... according to... [the] director of the Sumo Association’s health clinic[(*top sumo wrestlers can earn up to six figures, but it comes at a cost – many die of heart disease in their 40s and 50s)]. Akebono, 2.06m and weighing 230kg, is a good example of the toll wrestlers must pay, although his ailments are limited to joints over-whelmed by weight and the daily stresses of training and competing. Promoted to grand champion in March, 1993, the wrestler from Honolulu held sumo’s highest rank for 48 tournaments, the fourth-longest tenure. But injuries, mainly to his knees and ankles, forced him to sit out more than one-quarter of those tournaments, either fully or partially. [Akebono] wasn’t alone. Only three of the top eight wrestlers completed an entire 15-day tournament in March... and all three grand champions were absent. Akebono sat out the most recent of the six annual tournaments, held last month. Over the past decade, the average weight of wrestlers in the top division – the best 40 of the roughly 700 professionals in the sport – has increased 10kg to 155kg. The average Japanese [guy] weighs less than 70kg. The reason is simple: In sumo, the goal is to push your opponent out of the ring or to make him fall over. But as poundage grows, speed and technical prowess diminish, injuries increase, and the sport loses fans. “The biggest sin of overweight wrestlers is they become slower,” said... [the] editor of *Ozumo*, a sumo magazine. “This goes against what fans want to see – speed... agility and excitement.” The Sumo Association acknowledges that it’s concerned... The association has started collecting and analysing health data for each wrestler and is promoting a more individual approach to training. It has also eased weight requirements for prospective pros, opening the door to lightweights... [By the way, e]ight of N[Z]’s best young

wrestlers get a rare opportunity to test their skills against the best when they compete at the world junior championships starting in Sydney today. Contenders from 43 nations... including superpowers India, Russia... the U[S and Iran (which has '5 million wrestlers') will attend the championships].

...Five west Auckland wrestlers are hoping to book their tickets to the world wrestling champs... in Abu Dhabi in the Middle East next February... after this weekend's qualifier in Sydney... To qualify for the South Pacific event they had to place in the top two at the national trials in Wellington... [One of the five westies] is a five times N[Z] champion, the national cage fighting champion and reached No 2 in the world... The N[Z] team's trip to A[US] is funded by an Arab prince who's keen on wrestling. [The prince i]s also paying for all the qualifying tournaments and the world champs plus putting up \$50,000 in prize money at the worlds.

...[the promot]er... has been bludgeoned with a chair, doused with beer, kicked, spat on and even sexually assaulted – or so it seemed – while recovering in hospital from another attack. And [the promoter]'s loving every minute of it. "Other than being a scientist who finds a cure for some dreaded disease, the next best thing in life is entertaining the public,"... As chair[perso]n and owner of the World Wrestling Federation... [it should know. The owner i]s also one of its most loathed on-screen villains – playing himself. Last year, programming produced by [the federation] was beamed into 120 countries, including N[Z], and was translated into 11 languages, reaching an estimated 500 million viewers worldwide. In the American market the [federation]'s regular Monday night biff-fest Raw Is War is now the top show on cable television. Its sister act Smackdown! is credited with singlehandedly saving struggling network UPN from ratings oblivion and possible closure. And if you think [the federation]'s reach is limited to trash television, think again. The pro-wrestling giant also recently boasted an album on the charts – World Wrestling Federation: The Music, Volume 4 – and a book on The New York Times bestseller list – Have A Nice Day! by [a wrestling] superstar... In November, the [federation] dealt a knockout blow to the huge Star Wars marketing machine when it took over as the most dominant player in the lucrative action figure toy market... But it was in October that [the]54-year-old... played his masterstroke – or as they say in the biz, unleashed his bodyslam – when [it] took pro-wrestling to Wall St with a successful public share offering. Investors keen for a piece of the entertainment giant sent [the] shares skyrocketing on their first day of trading, with the price quickly doubling. [The owner], the dyslexic son of an old-style wrestling promoter [the boy] did not meet until [it] was 12-years-old, walked away that day with a personal fortune of \$2.2 billion... [The owner i]s the ultimate proof that anyone can be a billionaire provided they give the masses what they want. And what the 10 million-plus Americans who regularly watch Raw Is War and Smackdown! want might scare the rest of us. Last year, Indiana University analysed 50 episodes of Raw at the request of current affairs show Inside Edition. It found 1658 incidents of grabbing or pointing at crotches, 157 instances of obscene finger gesturing, 128 episodes simulating sexual activity and 21 references to urination. Swearing is common, as are scantily clad [gals] – routinely treated as objects to be threatened, abducted and even hit. [The owner] himself once "starred" in a scene in which superstar Stone Cold... appeared to sexually assault him with an enema tube. More recently [the owner]'s daughter... was kidnapped by wrestlers who staged a mock crucifixion of the struggling young[ster]... Despite the fact that 14[%] of viewers of Raw are aged 11 years or younger, [the owner] remains unrepentant about the content of his shows. "All I can say is that whoever is criticising what we do would not appreciate the television ratings we achieve. But a lot of America really enjoys what we do... We're entertaining you. These are characters. Sexuality is extremely important. People are very interested in sex, and we will exploit that as best we can." Asked whether [it] ever worried whether his pursuit of ratings was leading to increasingly "trashy" storylines, [the owner] replied: "Too trashy? I think trashy is what the president of America did. We haven't done anything like that." In other words – suck it – as the [federation's] slogan goes. But when Coca-Cola and a raft of other big-name sponsors announced last month they were pulling their... advertising because they were concerned about the explicit content of the shows, [the owner] was forced to take notice, particularly when [the federation]'s stock closed under \$30 for the first time since going public. The first Smackdown! to screen after Coca-Cola's announcement was noticeably subdued. There was no overt violence against [gals] and very little swearing or sexual innuendo. But then, in a plot twist as extreme and defiant as anything screened [by the federation, the owner] virtually doubled the controversial content on Raw, Smackdown's cable-TV cousin. That show culminated in a 12-minute, expletive-soaked "showdown" between villain Triple-H and [the owner] and his daughter... Apparently [the owner] was betting on two things. First [it] could push the envelope further on cable than on free-to-air television, because [the owner] could argue more easily that parents could, or at least should, control what their children were watching on cable. Second, for every advertiser who was scared off... there would be five more lining up for access to its main audience – young [guys] aged 18-34. THE key to understanding [the owner]'s success is to recognise that what [it] has done with wrestling is create the ultimate soap opera for boys – both young and old. While daytime soaps and talkshows deliver a regular audience of older [gals] to advertisers, and nightly soaps do the same with younger [gals], no one had really cracked the magic formula for young [guys] until the owner came along. "The owner"... understands how to tell a great story, which is the basis for all TV-character development, and great ongoing storylines that truly captivate the audience." To tell these stories [the owner] first had to do something that caused consternation in the wrestling world back in 1982. [The owner] had to admit that wrestling was fake... While almost every fight fan over the age of 10 must have known as much anyway, not everyone was thrilled that [the owner] took it upon himself to spill the beans. But it proved to be a breath of life for the industry, which was floundering at the time amid poor production values, cheesy characters and repetitive action sequences. Proclaiming pro-wrestling to be "sports entertainment" rather than a sport allowed [the owner] and his writers the freedom to create storylines as wild as anything seen on Dynasty or Melrose Place. It may yet prove his downfall. [The federation]'s ratings-driven obsession with increasingly bizarre storylines has resulted in increasingly extreme stunts. In May last year, wrestler Owen Hart died after plunging more than 21m to the ring during one such stunt. One sports writer warned it was time promoters such as [the owner] realised "wrestling isn't real, wrestlers are". Hart's wife and parents have filed a 118-page claim against [the owner], his wife and [the federation]'s parent company Titan Sports. When asked what they think of the [federation's] founder, many industry insiders express emotions as contradictory and confusing as the [subject] himself. "The owner] saw the future better than any of us," says [one insider. "The owner]'s the most brilliant and most imaginative [perso]n I've ever met. [It]'s also the most unethical."

...A 14-year-old youth who killed a six-year-old girl while imitating a professional wrestler, has been sentenced to life in prison without parole.

...[NZ's top heavyweight] has told how boxing saved him from jail. Speaking to the *Sunday News*... [the Terminator said it] was heading for a life of crime on the streets of south Auckland. "Boxing was a lifesaver for me... It changed my life completely. It kept me out of trouble big time. I'm very thankful that boxing came into my life when I was hanging out with the wrong crowd. It took me from a road to hell to a road to heaven."

...I SEE that [an]Auckland city councillor... has got her knickers in a knot. [The councillor] hates the choice of [a boxer] to front the council's anti-tagging campaign. [It] said last week, no doubt with a cat's bum, that someone who beats the daylights out of people for a living is a poor role model for the young... Personally I reckon [the Terminator] is an excellent choice. The T[erminator] is a decent caring [person] with strong religious beliefs and [i]s devoted to his family. Sure [it] makes his living out of boxing but what's wrong with that? There are plenty of worse jobs in the world and not all of us win first division in genetic lotto and get born into wealthy families. [The boxer] knows the risks involved in his career choice.

...The punch that robbed [Britain's world heavyweight champion] of his crown looked powerful, but the heavyweight champion probably went down because [it was pooped. The champ's] fifth-round knockout by [a]little-known American... last Sunday shocked the boxing world and came after [an AUSn gal] boxer... was knocked out in a bout in Christchurch. [The AUSn] was in a comfortable condition in hospital yesterday after coming out of a drug-induced coma on Wednesday. Initially, her condition was critical... The bouts have again focused attention on injuries from

the ancient sport. Few studies have been done on punching power and experts say many variables are involved in a knockout punch. How tired a boxer is can be important. The BBC called [the American]’s powerful right-hander that decked [the champ] the “Punch of the Decade” – but it may not be. One caustic commentator of the bout noted that [the champ] looked tired in the second round. “[It] was puffing and panting like a horse on his way to the knacker’s yard.”... An Auckland University biomechanics expert... said the punch that felled [the champ] spun his head to the right. It was the worst kind because it made the brain bounce back and forth in the skull... [A retired] Auckland neurosurgeon... also... said damage to the brain was caused by the head swivelling with the force of a blow. It did not necessarily relate to how strong the blow was. Early in a bout boxers could withstand punches to the head, but when they tired a similar-strength blow could fell them. [The retired neurosurgeon], who wants boxing banned, said the effect of a head punch on the brain was like a bowl of jelly being tossed around. The jelly would break into small cracks. In a similar way, nerve fibres and blood vessels in the brain could be damaged from a strong blow... [The retired neurosurgeon says the blow that felled the champ] would have killed a few thousand brain cells – but the danger for boxers was more from the many bouts they fought. Long term, professional boxers often suffered dementia... They had little self-restraint, boasted and often “talked nonsense.” A recent British study on punching measured small groups of elite, intermediate and novice boxers. An elite boxer applied a mean force of 4800 newtons using the rear hand, while an intermediate applied 3722 newtons and a novice 2381. A [New] Auckland University physicist... said a cricket ball hitting a batsman’s head at 140km/h... would impact about 1500 newtons force, a thumping cricket shot over the boundary 8400 newtons, and a 1500kg car hitting a tree at 100km/h, 1 million newtons... [Yesterday the] NZ Boxing Association president... said amateur boxing’s injury rate was low and overseas studies showed injuries were more prevalent in other sports. “There are more punch-drunk soccer players.” Amateur boxing was safer than professional boxing because gloves were now designed to absorb more of the blow... the rounds were shorter... and... [there were]... better controls of matchups.

...[a] British boxer... defends the ancient code... [by proclaiming:] “Sure there have been injuries and deaths in boxing – but none of them serious.” ...Panama’s Pedro Alcaraz spent much of his last day alive like any other tourist in Las Vegas. [The Panamanian] watched pirates do battle on the Strip, had lunch atop the tallest building in town and fed some coins into slot machines. The night before, [the Panamanian] had taken a beating before being stopped in the sixth round of the biggest fight of his boxing career. Yet now [it] was in remarkably good spirits, joking and laughing, posing for pictures and signing autographs for the occasional tourist. “I know I lost the title, but I didn’t lose everything... I’m going to try to win another world championship for Panama and my family.” Late in the evening, Alcaraz grew tired and said [it] had a slight headache. [Alcaraz] went to bed, knowing [it] had to get up early for a flight back home... A few hours later, [Alcaraz] was found dying on the bathroom floor of his hotel room, his brain so badly swollen that its blood supply had been cut off. Alcaraz had been battered by punches to the body and head, but through tears of dismay complained to a ringside doctor only that his ribs hurt. Two other doctors who examined him in his dressing room found nothing out of the ordinary. Now they’re wondering why his brain swelled as it did so many hours afterwards – and whether his death means doctors have to rethink everything they know about head injuries in boxing. Boxers die in the ring – five of them in the past two decades in Nevada alone. When they do, though, they leave the ring on a stretcher; they don’t die 36 hours later, without showing the usual symptoms... Alcaraz was getting \$US40,000... to defend his W[BO] super flyweight title, a belt lightly regarded most everywhere but in Panama, where a rich history of boxers... has given way to lean times. At home, Alcaraz was known as “Rockero,” a nickname given to him because [it] used to shave his name into the hair at the back of his head... Alcaraz returned to Panama one last time, where [it] received a mournful farewell. Panamanians filed by his open casket placed next to a deserted boxing ring at... [a] gym on the outskirts of Panama City. A year earlier, thousands had filled the gym to cheer Rockero as [it beat a] Nicaraguan... in a split decision to win the WBO title. The fight helped Alcaraz to become boxer of the year last year in Panama, where the sport is second only to soccer. Now his fans and fellow boxers cried together. “I am sad and I am crying because I loved him like [it] were my son,” [the gym’s owner] said. “What happened hurts a lot.” ...[In related news, the] regulatory body of British professional boxing has gone into administration following a court case against them by... a boxer who suffered brain damage in a 1991 world title fight. “In layman’s English, it means they’ve gone bust,” said a spokesman for the administrators. [The brain-damaged boxer] had sought £1million... in damages, arguing that suitable medical facilities were not on hand at the ring during his fight with [the] world champion... and that it took too long to get him to hospital. [The boxer] won the case for compensation in September, leaving the British Boxing Board of Control facing bankruptcy if it loses an appeal.

...[a 28-year-old] remained in a critical condition yesterday but the surgeon who removed a blood clot from the English boxer’s brain was pleased with his progress... The boxer failed to rise from the canvas after Sunday’s title fight against [a] South African... was stopped in the 12th and final round. [The Pom], who was defending his I[BF] featherweight belt, was knocked to the canvas late in the previous round by three vicious left hands. His trainer... defended his decision to send [the boxer] out for the 12th, but admitted it was a mistake. “In hindsight [my boy] should have been pulled out at the end of the 11th. But we haven’t got that gift,”... [The boxer]’s plight prompted renewed calls in Britain for the sport to be banned.

...Subscribers to the theory that the human race is evolving may not have found their cause greatly advanced by the latest calls for a ban on boxing. If history has shown anything, it is that people – given half a chance, a superiority complex, and enough sheep-like disciples to follow them in their moral crusade – will try to ban almost anything. Never mind the colossal failure of prohibition, and the scarcely-believable attempts to ban things such as homosexuality and the Maori language. It seems some of us haven’t learned from our errors and are hell-bent on heading down the same dead-end street. It seems that every time a boxer sustains a serious injury, a clamour erupts from various medical associations and other well-intentioned individuals wanting to ban the sport once and for all... [A] recent incident concerned[an Australian] boxer... who... reportedly suffered serious concussion and was taken to hospital, where doctors placed her in a drug-induced coma. Inevitably, her case has led to calls for a ban on boxing from the A[US]n Medical Association, which appears to spend half its time trying to outlaw the sport. They were echoed by the strong chauvinistic fraternity, who just want to ban “[gal]” boxing. These are the guys who reckon the noble art is being given a bad name by the inclusion of [gals] who, they say, are not as tough as [them] and that it’s not [feminine] to fight. This is, of course, complete tosh. As long as it’s alright for [guys] to smash the living daylight out [of] each other, it must also be okay for [gals] – and, for that matter, paraplegics... if they so wish. On the other hand, medical associations around the world tend to abhor boxing generally and morally. They point out that it is the only sport which requires its participants to knock their opponents’ swede in order to win[– or, in other words, is ‘legalised assault’]. They, at least, have a point in terms of liability and within the environment of blame in which we now live. Today, some poor person must always be held accountable for an accidental death or injury, something British rugby referees have recently found out to their cost. But ban it? No one will ever ban boxing. Send it underground? Certainly. Increase the number of dodgy promoters? Without doubt. Throw away the gloves and go bareknuckle? Every chance.

...Anyone who thinks bare-knuckle fighting is sport, think again. The 1996 world champ... of the US... died... yesterday... after being knocked unconscious by... [a Ukrainian. The USer] never woke up after the injuries... received in a bloody, no-rules contest staged before 6000 spectators in Kiev’s Palace of Sports... “There is nothing criminal about this story,”... the Ukrainian Home Affairs Ministry said. And nothing moral either.

...A no-holds-barred fighting competition that has been banned in both Christchurch and Wellington will take place in Auckland tonight. In what critics call a human cock-fight, contestants will punch, kick... and wrestle each other until one falls unconscious or slaps the floor in painful submission... A senior boxing official is appalled that “Rage – Ultimate Fight Night” at the ASB Stadium is going ahead... [The] Boxing Council spokes[person]... said no-holds-barred tournaments were not sanctioned by the boxing and wrestling fraternity and carried an extremely high risk

of serious injury for fighters... [However, because] such competitions were promoted as martial arts tournaments they were exempt from the Wrestling and Boxing Act. This meant any street thug or bar-room brawler could get in the ring... “We managed to stop this thing in Christchurch three or four years ago but the police really have to step in.” ...police are concerned about such fights [but will only] investigate if they receive a complaint... Police... acted against a... tournament in Wellington... [in 1997, although the NZ] *Herald* has since learned that the tournament went ahead at an undisclosed venue... Earlier this year a fighter was beaten to death in a no-hold’s-barred contest... [The competition’s promoter] said the death in the Ukraine was an isolated incident where an inexperienced fighter had taken part in an unregulated tournament.

Excavations on the island of Crete indicate that boxing flourished there 3600 years ago. Homer’s epics mention the sport, and boxers often participated in matches held in the Roman Colosseum. Interest in the sport grew in England in 1719, when James Figg reigned as champion. Bouts then were bare-fisted... rough-and-tumble... and [often lasted for ‘over 100 rounds’]... Boxing changed after 1865, when the marquess of Queensbury proposed a new set of rules to make the sport more skilful and less bruising. Boxers [now] fight... with padded gloves... in a ring 16 to 24 ft. square, with rounds of 3 min. each and a 1-min. interval between rounds.

IF YOU are a parent with a young sporting child and wish the best financial future for the child, forget golf. Forget tennis. Get the kid... some boxing gloves... or... a basketball... Hoopsters and pugilists dominate the high income bracket of modern sport in *Forbes* magazine’s Super 40 list of the world’s highest paid athletes in 1997. Of the 40... 11 are NBA stars, seven are boxers, only four are golfers, and a paltry three play tennis. The list boasts not a single jockey, rugby player, league player, cricketer, soccer maestro, netballer, triathlete, or bowler... [The NBA’s biggest superstar] easily tops the combined category where salary or winnings are added to endorsements. With his \$US47m off court earnings his total 1997 earnings are \$US78.3m... The top five earners overall were: [The aforementioned basketballer, Apeman (\$US54.3m), another boxer (\$US38m), Germany’s F1... driver... (\$US35m), and... [Rapema]n (\$US27m). These sums of money, of course, are mind boggling to the everyday worker. They become even more awesome when compared to sporting salaries of yesteryear. For instance, 27 years ago, the total salary schedule of the NBA’s Philadelphia 76ers team was just \$US1,070,000. A year later in the NBA, the average player salary was a mere \$US50,000... Today, [the top NBA star] makes four times that much in a single regulation season game... Taken to its logical conclusion, this means that in 25 years basketball players in [his] class will be earning a few million shy of a billion each year. And you want your Johnny or Billy to grow up to be an All Black? Get your head read! Arguably the most interesting piece of information to come out of the *Forbes* list, however, is... that team participants are now well past gaining parity with individual sport competitors. The... rich list includes 23 team sport athletes compared to just 17 individual sport players. Take out the... boxers from the list, because no caring parent really wants their kid to bob, weave and jab for a living, and the team sport dominance of the rich list is even more impressive – 23 to 10[(or 26 to 7 if motor racing is regarded as a team sport due to pit-crews and drivers often competing as a unit)].

...An Italian court yesterday acquitted [a] Formula One team chief... and five other defendants of [hu]manslaughter in the trial over the death of Brazilian driver Ayrton Senna... None of the defendants was in the makeshift courtroom near the Imola circuit in northern Italy where Senna, one of Formula One’s most outstanding champions, died in the San Marino Grand Prix in May, 1994... The trial began in February and the prosecution alleged a poor weld on Senna’s steering column snapped as the Brazilian ace entered the notorious Tamborello curve, causing him to lose control of his car... at 220km/h... Senna’s steering column [had been] cut and re-welded to satisfy his demand for more space inside the cockpit... It was also alleged by the prosecution that the way the track was maintained could have contributed to the accident... [A former] world champ... and... Senna’s teammate in the San Marino Grand Prix... welcomed the acquittal... [and] believed the decision would help to clear up the sport’s image after periods of controversy[, which include a]... *Formula One driver*... [saying:] “My dream is to win the world championship. Then I want to retire, buy a boat and disappear for 10 years to sail around the world... with two girls who I would exchange for new ones at every port.”

...*Melbourne is revving up to host its second Formula 1 grand prix*... Albert Park has been to... Melburnians... for a century or so, a peaceful oasis of water... black swans... and greenery close to the heart of A[US]’s most commercial city. But all that changed when, after a sometimes bitter struggle, Melbourne wrestled from Adelaide the right to host the A[US]n Grand Prix as one of the 16 grand prix worldwide which make up the immensely rich Formula 1 motor racing series. Adelaide’s last grand prix in November 1995 was as well run and well-liked by visitors and drivers as ever, and deservedly won the award as the best organised race of the series. Only [4] months later, with the A[US]n Grand Prix now beginning the series rather than ending it, the grand prix circus was again in A[US]. Against the fierce opposition of some residents, a challenging circuit had been created, winding for... [over 5km]s around the Albert Park lake. Today, as [labourers] erect stands and corporate boxes around the track just [3] weeks before the... Qantas A[US]n Grand Prix is to be staged here, a gleaming trophy in the Melbourne Grand Prix Corporation’s offices close to the park records Melbourne as staging the best run race of the 1996 series. For motor sport enthusiasts, that race... is remembered as one of the most exciting contests of the year. This year’s race... is shaping to be just as memorable. And the 50-strong fulltime staff at the state-funded G[PC] are determined that this year’s race meeting will be even better run, if anything, than the 1996 event. Unlike grand prix meetings at... other... countries, where the big race itself dominates, with just a few support races, Melbourne is again taking the major race as simply the climax to a spectacular series of events over... [4] days... A field of Ferrari sports cars – which contest a one make series in Europe – is being brought in, motor racing greats from the past... will race some of the greatest cars of the 1940s and ’50s. Air force aircraft and aerobatics teams will perform over the circuit each day, there will be dragster burnouts... 400 yachts racing on the lake in the grand prix regatta, full fields of various single-seater, touring car... sports and GT classes, and a rally drawing hundreds of classic cars from around A[US] which will end at the circuit. Last year’s event drew an A[US]n record sports attendance of 401,000 over [4] days, with the 169,000 who viewed the Grand Prix itself making up the biggest crowd ever to attend a sporting event in the sunburned country. The chair... of the G[PC]... who also chairs Victoria’s major events committee, is aiming for a [4]-day attendance of 500,000 this time with up to 9000 part-time workers in special uniforms there to see to the crowd’s needs. “Those silly people,” [the chair] says, referring to the anti-race protesters whose banners hang across the road from the G[PC] offices, “cost us... 40,000 in attendance last time”... [A]ready pre-bookings for the event indicate [hi]s targets could well be met. Corporate box numbers have been greatly increased, there are extra stands, 11 giant [TV] screens, and many takers for the [4]-day general admission tickets at \$266... Flights into Melbourne are heavily booked, with at least one charter flight having been booked from Auckland... and [4] charter jumbos coming from Japan. “But we don’t want to make it too big... To go for 600,000 would kill it.” ...Last year’s race is credited by the economic experts as having won \$106 m... extra spending within the state as well as generating \$7.6 m... in state tax receipts. The event drew 20,000 interstate visitors and 11,000 from overseas, most of them from N[Z]. About 260,000 used public transport, which carries visitors free from the city to Albert Park... “...We have spent a once only \$60 m... on capital equipment required to run a race which each year of the 10 we have rights for will draw a [TV] audience of... 400 million worldwide, equivalent to \$111 m... each year in advertising promotion. In terms of return, it’s the cheapest investment I’ve ever been involved in... Sydney is spending \$888 m... to stage the 2000 Olympics, a 14-day event...” Grand prix racing has already overtaken soccer as second most widely watched sporting event on [TV], behind only the Olympics... How do... the black swans... react to the thunder of 700 horsepower engines close by their normally peaceful habitat...? ...Says a G[PC] staff member: “They simply take no notice of the racing at all.”

...Formula One’s ruling body has given organisers of the Belgian Grand Prix until the end of December to work around a ban on tobacco advertising or lose the race. A calendar released after a meeting in Monaco of the International Automobile Federation also did not include a

French grand prix... A French court ruled this year that all national television channels were entitled to broadcast a race on French soil, which went against Fia's exclusive rights deal arranged with individual broadcasters.

...The British government's stand against tobacco sponsorship in grand prix racing has turned to ashes. Formula One bosses threatened to take six of the nine grand prix held in Europe to the Far East if the EU banned tobacco advertising. The government backed off, saying the sport's governing body should introduce a voluntary code. Sponsorship by cigarette manufacturers – increasingly desperate to get their message across – is worth about £100 million... to F1. Far Eastern markets tend to have little or no legislation affecting cigarette advertising.

...The [Smokefree Rally of NZ] was a big money-spinner for Manukau City, according to a survey. The... rally centred at Manukau, created the equivalent of 77 full-time jobs, generated \$2.6 million in local income, consumed \$10 million of products and services and generated \$4.5 million in added value (value created by labour and capital... [for sectors such as] the transport and hospitality industries...). The... event put Manukau on the map by being televised to around 1 billion people in 112 countries. It attracted 32 rally teams from 16 countries, 50 local teams, 24 sponsors, 108 international media teams and 98 local media teams... Sponsoring the event cost the Manukau City Council \$25,000 in the provision of goods and services and a further \$20,000 in officers' time... The council sponsored the event to generate income and jobs, provide entertainment for residents and promote a positive image of the city. A quarter of the visitors to the free rally show and ticket-only super stage were Manukau residents.

...Wellington's waterfront car race brought \$3.5 million into the region last year, attracting 20,500 paying spectators... [– including an] estimated 8840 visitors from outside the region... [–] on the main racing day, plus another 5000 non-paying spectators in buildings overlooking the track.

...A YOUNG girl was critically injured in an accident at... the Waikaraka Park... speedway track... in Onehunga... last night... The eight-year-old was hit in the head by a wheel which flew over the three-metre-high perimeter wire fence... during the first race of the regular Saturday night event. The girl was walking on a proper track in front of the main grandstand when the wheel somehow came off a car some 10 metres away and cleared the safety fence. [The]Auckland Stock and Saloon Club vice-president... said the race was stopped immediately and the club's own referees and stewards began an investigation. "The car has been impounded and taken away by police who are also investigating the incident,"... An official from the Occupational Safety and Health organisation was expected to begin inquiries at the track last night or today... [T]he track was licensed by Speedway N[Z] and was inspected weekly by local officials. The car driver, who... had been racing at Waikaraka for three years... was badly shaken by the incident. The injured girl's name was not available last night. Twelve days ago, five spectators – including three children – were taken to hospital after a similar accident at the Western Springs speedway stadium on the other side of the city. A sprint car was hit from behind and started to flip end over end, hurtling the petrol tank over the fence into the crowd on the terraces. Most suffered [only]cuts and bruises... The race promoter... said... that the accident was unfortunate but [it] did not believe safety was in question at Western Springs Speedway. The... [promoter] said in all motor sport there was an element of risk. Making the safety fences higher might not have prevented last night's accident.

...Investigations have been launched into an Auckland speedway accident on Saturday night that fatally injured a young girl – the [2]nd accident involving speedway spectators in two weeks... The height of safety fences would be looked at, but higher fences would not stop all flying debris. Once, in Palmerston North, a wheel had flown over a building and out of the park. "In that case the fence would have needed to be 60ft high."

...A 28-year-old... was knocked to the ground when a tyre came off a car and flew over a crowd barrier at Nelson speedway races at the weekend. A St John Ambulance spokesperson said the service was called to the track about 9 pm on Saturday night to attend to the [victim], who had been struck on the shoulder... [The victim] had seen the tyre coming and turned away from its path but it struck her on her side. The [victim] was "naturally distressed because [it] was in a bit of pain,"... Nelson Hospital s[aid the victim]... was treated and discharged. It was the second similar incident in a fortnight. An... Auckland girl, Katrina Le Sueur, died after a wheel flew over a two-metre-high safety fence...

An 8-year-old girl who died... after being struck by a racing car tyre was walking hand in hand with her younger cousin at the time of the accident. *Katrina Anne Le Sueur* took the brunt of the blow when the tyre jumped a 2m-high safety fence... at Waikaraka Speedway... It glanced off her 6-year-old cousin... who suffered a broken arm and grazing. "[My daughter] is an extremely lucky little girl," said her father... reflecting on the centimetres that spared his daughter... [T]he girls' large extended West Auckland family were [still]in shock and grieving for Katrina and were acutely aware how close the accident came to being a double tragedy. [The 6-year-old's father] said the excursion to Waikaraka had been a first for the two families. They had just arrived and were making their way to their seats, with the two little girls walking several metres in front...

The father of a young Auckland girl fatally injured in a speedway accident last month has told the sport to act immediately on Government safety recommendations or shut down... The Labour Department's occupational safety and health division has investigated the tragedy and three other accidents which happened in the past month. Releasing its findings yesterday, it told speedways to review their rules, build higher safety fences and strengthen wheels to stop them flying off. However, Speedway N[Z] said it did not plan to act immediately because speedways were "flat out" finishing the summer season. That has alarmed the Le Sueur family. Said Katrina's father... "Does that mean the rest of the public has to be put at risk? They've had four accidents in a month, one of which killed my daughter. They should stop if they're not going to do something to ensure spectators are safe." The Government has no power to force speedways to take action. The Labour Department said yesterday that it could only make recommendations, and the Land Transport Safety Authority said it could not control speedways because they were "private roads." [But Katrina's father] said: "That's not good enough. It's not going to affect my family any worse... but they have to do something to protect others."

...A stock-car driver has been charged with the [hu]manslaughter of... Katrina Le Sueur... The decision has shocked the speedway fraternity... [The] 25-year-old mechanic from Mangere, was taken into custody yesterday... and... in the afternoon... was released on bail... [The mechanic] was driving his Torana in a race for vehicles in the budget street stock class when the right rear corner of the car smashed into a safety wall. A few laps later the right rear wheel flew... over a safety barrier... and hit... Katrina... in the head. [Katrina] was walking hand-in-hand with her younger cousin, who was not injured... Katrina... died a day later... Police allege that by continuing to drive the vehicle after the crash [the mechanic] failed to take responsible precautions to avoid danger and therefore committed [hu]manslaughter. Katrina's father... said... "I'm sorry it had to come to this. It won't bring my daughter back, but I'm happy that police have done what they see fit." ...[the dad] still had concerns about speedway safety... "I believe all fences should be angled at 45° to avoid tyres bouncing over the top of them,"... OSH... recommended a series of safety improvements in the wake of... [the] death... Speedway NZ[, which]... has jurisdiction over 21 speedway stadiums around the country... had since met OSH officials to discuss the proposals and agreed to some, such as improving scrutineering, but not others, such as reinforcing wheels... The Speedway N[Z] president... was stunned to hear a driver had been charged with [hu]manslaughter... but... Speedway NZ would "get behind him as much as we can." The... [president] was aware of only one other case where a driver had been charged with a spectator's death... about 25 years ago.

...A LEGAL expert has warned of far-reaching implications for sport after a stock car driver was charged with the [hu]manslaughter of a young girl... [The] Auckland University... associate professor of law, explained: "If a guilty verdict is returned we will be going down a very dangerous line. Would it mean a baseball player could be charged with [hu]manslaughter if a ball flew off the bat and killed someone in the stand? It could even be argued that golfers could be negligent if they hit a wayward shot which strikes someone in the crowd." In 1947, a [spectator] lost a civil case against Cheetham Cricket Club in England after [the spectator] was struck by [one of sport's hardest balls]. The House of Lords ruled the club couldn't have reasonably provided adequate fencing and the player was not at fault because [the batter] was doing what was expected of him.

...Western Springs Speedway... [has erected a] new 4.7m high fence... in the wake of the accident... in which a sprint-car fuel tank flew over the old fence and injured six spectators. The speedway... promoter... says the high-tensile deer fencing creates an extremely strong barrier that should

keep debris on the track... Western Springs has also toughened requirements for the mounting of fuel tanks... [But the promoter] admits the \$10,000 fence, almost 2m above the minimum height required by Speedway NZ, would probably not have stopped the fuel tank from flying into the crowd...

[A mother acted instinctively to block a flying piece of race-car debris hurtling towards her sleeping baby at Western Springs Speedway last night. "I saw one piece tracking its way towards us and thought, 'Oh God, that's going to hit my baby'." The mother stretched out her hand to cover her 7-month-old daughter and the metal, apparently a bar that protrudes from the side of a stock car which flew out of a pile-up, hit her palm then landed in the pram at the baby's feet. The Western Springs promoter would not comment on last night's incident, which follows the acquittal of a 25-year-old Aucklander whose loose wheel killed an 8-year-old girl.] In international news, yesterday the] 25-year-old... who won the 1995 NASCAR Winston Cup series championship... became the youngest driver to win the Daytona 500, leading his two teammates across the line in America's biggest stock car race... after a spate of crashes in the closing stages... With 10 laps remaining, Dale Earnhardt hit the wall along the back stretch. His car, hit from behind by [the]defending race champion... rolled and hit... [a Ford. The Ford]'s hood flew into the grandstands, injuring a spectator. After the restart, [the 25-year-old] took the lead... with six laps remaining. A second crash involving 13 cars took place on lap 197, to bring out the caution flag and ensure... [his triumph. Earnhardt – the 8th placed person on the latest]... Super 40 list of the world's highest-paid athletes... [-] continued his frustrations in the Super Bowl of American stock car racing. Earnhardt has won seven Winston Cup Series championships but has not claimed a Daytona 500 title.

...Gusty wind has forced [an]American... to scrub plans for another test of his jet-powered car as [it] prepares for an attempt at the world land speed record. The British team... have also had their plans affected by alkali dust being swept across Nevada's Black Rock Desert. Neither team expected to be on the course today to test their cars on the temporary traffic lanes laid down to guide the drivers along a 25km course of hardpan...

A British car has broken the sound barrier on land for the first time, 50 years... almost to the day... after [an]American pilot... made the first supersonic flight... in the X-1 rocket plane... [A] Royal Air Force fighter pilot, made two runs in the Thrust SuperSonic Car yesterday but narrowly failed to set the first supersonic world land speed record because the runs were 61 minutes apart – one minute more than allowed by international rules... The menacing black car, powered by two Rolls-Royce engines from a Phantom fighter, raced across... Black Rock desert at 1222.7 km/h, about 10 km/h above the speed of sound. Scores of reporters and spectators heard a sonic boom as the car burst through the sound barrier, leaving clouds of dust in its wake... [The driver], aged 35, could not use the car's two braking parachutes to stop it because they had been damaged by heat from the afterburners, and the car came to a halt 2.4km beyond the end of the 21km track. The team of mechanics rushed to get the car ready to run again[in time but failed]. The car raced back up the track at 1216.2 km/h... Thrust set a world land-speed record of 1142 km/h on September 25, shattering the previous record of 1012 km/h... set in 1983. Team members said they would examine the car and, if all was well, would try again soon for a supersonic world record... Conditions... were perfect yesterday after five days had been lost to high winds and rain... Although there was disappointment at the failure to set a record, they were delighted that they had disproved critics who said it was impossible to break the sound barrier on land because the car would take off... Thrust consists of a pencil-shaped fuselage flanked by two huge jet engines. The 9.1-tonne vehicle has the power of 1000 Ford Escorts or 141 Formula One cars... [The British] team leader... and other team members have worked for years on the project[– the team leader had set the previous record in 1983 –] often battling a lack of funding. Team officials will not reveal the total cost of the project but say it is in the millions of pounds Sterling... [A] veteran American driver who is also trying to set a world land-speed record... came out to the track to congratulate... [the British team leader. The User], who has so far set a top speed this year of 850 km/h... planned to try to reclaim the world land speed record[– and the '£5m' prize that goes with it –] for the U[S]. "We're here for the long haul."

...Brit[ain's] Thrust SuperSonic Car, set the first supersonic world land speed record... yesterday, clocking... a land speed record of 1227.952 km/h... one day short of being exactly 50 years after[a] legendary US test pilot... broke the sound barrier in the sky.

...Lamborghini – motoring's symbol of glamour and temptation – has been chosen as the exotic sports car category for next year's A[US]n Grand Prix, adding another \$A15.6 m... dimension to the event. [26] Lamborghini Diablo SV-Rs, each worth \$A600,000, from the SuperSport Trophy series in Europe, will compete at the grand prix at Melbourne's Albert Park circuit from March 5 to 8. [It isn't yet known if the 'first and only NZer' to win the world F1 driving championship, and world president of the Grand Prix Drivers' Association from 1973 to 1975', will be a starter ('4 NZers have driven in F1'), but confirmed] drivers of the Diablos will include A[US]'s most recent F[1] world champion... and[a] Bathurst 1000 winner...

[Holden's premier driver] didn't win either of the Bathurst races this year but his sponsors were still on a winner. The Aussie touring car legend completed only 52 laps of the 161 laps of the V8 classic at Mt Panorama but received \$A948,409 worth of television cover, second only to [the race] winners... with \$A2,114,343 worth. In the run-up to what was to be [the legend's last race, the legend received 35%] of the total air time. A couple of weeks earlier [the legend] finished sixth in the two-litre Bathurst race. [The legend and his] co-driver... still grabbed \$A865,987 worth of television time. [A]Kiwi... and Aussie... were the television time winners of that race with \$A2,304,544 worth of cover. Their subsequent disqualification after crossing the line first[– because 'one of the co-drivers had driven a few minutes longer than the rules allowed' –] probably rated at about \$A5.

...[the retired Kiwi who was a 'six times world champion' is expected to be rated the 'best of the top 100 riders' of international speedway history when the list is announced next week. Meanwhile, an Aussie] is virtually sure of his fourth successive world motorbike championship and [has declared himself] ready to go for No 5 next year – at a price. The Aussie last weekend won his 40th 500cc GP at Assen, Holland... and... now leads the series by 68 points. Many had expected [him] to retire at the end of this season but [the 31-year-old is] still enjoying racing... [The Aussie] is estimated to earn more than \$6 million a year but... could switch from the successful Honda team if another manufacturer offered more.

...In a desperate bid to climb back to the top in 500cc motorcycle racing the Suzuki factory team are preparing to pay A[US]'s four-time world champion... \$US12 million... to ride for them next season. [The AUSn], who last weekend equalled the most grand prix wins in a season with his 11th victory of the year, had already been offered \$US10 million to ride for Yamaha by a [person] who was once one of his greatest rivals on the track... Since his 500cc debut in 1989, [the AUSn] has ridden 118 grand prix for Honda, notching 45 wins... It is known that the Honda team are prepared to match, or come close to the money Yamaha offered... to keep the Queenslander on their machinery. [However, sources say the AUSn] is unlikely to accept [Suzuki's] offer because of concern about the team structure and because [it] would not have the best bike in the field. Suzuki's last world champion was... in 1993. [That rider] retired in mid-1995 but, in their efforts to return to their former glory, Suzuki are reputed to have offered the Texan \$US10 million to make a comeback... [Incidentally, NZ's 4] world-class motorcyclists will be honoured by the Sports Foundation in Wellington today. [The 2 brothers who are]Motocross specialists... and[the 2] Superbike riders... will be recognised for "branding" their country.

...A new A[US]n motorcycle company has challenged N[Z]'s Britten to a transtasman duel of high-tech racing. The H[H]X1R is a similar concept to the V1000 developed by the late John Britten – a big, V-twin with advanced design features – and [its co-builder, who is an] expat Kiwi... is keen to bring two, with top A[US]n riders, to race one or two rounds of the N[Z] championships. The HHX1R... has only just started racing but is already nearly as fast as the factory-backed Ducati superbikes... The team will only come if it is guaranteed the Britten will be competing, especially in the N[Z] Grand Prix at Ruapuna... in December. [The]Britten team general manager... described the proposed showdown as a great promotion, but his small team need to find sponsorship before they can afford to race this season. - 1997

[When a NZer] returns to the Isle of Man early in June... [it will be] as a guest of the organisers in a special... parade of champions. [The NZer] first met the... Manx Islanders in 1980, when [it] was already an international race hero and before [it] won the first of his three Isle of Man titles. "The

organisers sent me a plane ticket and a fellow from the local tourist board picked me up at the airport... On the way to the circuit [the fellow] stopped the car near an old bridge and asked me to come and say hello to the fairies." [The NZer] had been a bit of a larrikin as a young fella, playing rugby and knocking about with mates in Auckland before becoming an apprentice motorcycle mechanic. Talking to fairies, mythical or otherwise, especially under a bridge, was not something a typical N[Z] bloke did... But [the NZer] had seen enough of the world as a champion motorcycle racer to respect traditions. So [it] wandered off to the bridge and said in his best N[Z] accent, "Giddyay, fairies, how ya going?" ...[in early June the NZer]'ll stop near [the] old bridge on his way to the famous road circuit and [again] whisper to the fairies... [The NZer will also] be reunited with his 1980-winning Suzuki bike when [it] and other former champions going back to the 1960s do a lap of honour... The bike belongs to a private collector in Britain. "There are things about the Isle of Man circuit you can never forget... At 29 and 3/4 miles... it's such a long way that it's sometimes hard to remember exactly where you are. There is one part of it where they grow garlic, and you can smell it. So as soon as I got a whiff I knew exactly where I was and what was ahead of me. When you are doing 140 mph... it's good to know what's coming up." ...[the NZer] left Suzuki for... [the] Yamaha-equipped, Marlboro-sponsored team in 1982 and finished second in the world championship. [The NZer] left the European racing scene at the end of 1982 and thereafter made only sporadic race appearances, mostly in Austral[asia]... Through the late-80s... [it] set up a retail motorcycle shop in Auckland and got his pilot's licence. A couple of years ago [it] sold the shop and went flying, piloting twin-engined aircraft on a... North Island... courier run... Now [it]'s back in the motoring business, this time swapping two wheels for four [by] selling Mercedes-Benz cars... and... must be good at it, because [the guy was NZ]'s top Mercedes-Benz sales[person last year]. To say thanks, head office in Germany... invited him to Stuttgart. That trip comes after the Isle of Man, when [the NZer] says goodbye to his old bike and racing mates, and... the circuit[it]... is still in awe of... "I think about it time and time again. You have either got to be silly, stupid or something, to compete on it. I was the first rider to do six laps in under two hours. That was in my first appearance... Actually, going there and doing reasonably well, without having bounced off any walls or crashed, was pretty good. It would be very easy to become complacent around there. You can make a few bucks, but it's extremely dangerous."

...In the 1960s, says [a] Formula One great... "motor racing was dangerous and sex was safe." It was a time when the sport had a mortality rate higher than that among Battle of Britain fighter pilots. If a car went out of control on a circuit it would be confined only by straw bales. If the car somersaulted over these bales – and missed the spectators who were standing by, unprotected – then it might smash into a ditch, or fly into a tree, a telegraph pole, a wall or bank of earth. The driver's helmet gave no protection to his face or neck, his overalls were not flameproof and [it] wore no seatbelt. The car carried no fire extinguishers and its thin-walled fuel tanks surrounded the driver's body. The car's magnesium wheels would flare like fireworks. Most drivers were devil-may-care larrikins... [who] never went near a gym or dietitian. N[Z]'s only F1 champ] best described how they prepared for a race: "We did the usual things the night before – set fire to the swimming pool and hung... police car... wheels... in trees."

...THE new British American Racing (BAR) team may not be making many moves on the F[1] track, but look for it to be a headline stealer off it at next week's Spanish Grand Prix. It will reveal its team motorhome there – all \$NZ9m worth of it. Seems there is something of a competition among the teams to have the most outlandish motorhomes for the drivers. McLaren leads the way but BAR is set to trump it. BAR claimed the only reason it couldn't unveil its new beauty at last week's San Marino Grand Prix was because of a holdup to some of the finishing touches. It claimed there were only two companies in Britain with paint shops capable of housing the bus. Just another example of the ridiculous wealth needed to compete in motorsport's greatest show. □ [The]... British motor racing tycoon... involved in a long-running battle with the E[U] over how the sport is run commercially – especially when it comes to the allocation of [TV] rights – is about to sell up to half of his F[1] empire for around £1.5 billion.

...At the heart of one of the world's most-watched sports, grand prix motor racing, lies a tale of extraordinary secrecy and of the financial dominance of one [perso]n... On June 28, in the offices of the Federation Internationale de l'Automobile in Geneva... [-] a non-profit-making association that regards itself as the world governing body for four-wheel motor sport... [-] delegates from over 70 national motoring associations, who comprise the federation's supreme general assembly, met... and voted unanimously on a single resolution. It was to approve a deal, recommended by the federation senate, to grant the commercial rights for Formula One motor racing until December 31, 2110 – that is, for more than 100 years – to [Mr One Perso]n... There was no auction – Mr [One Person] was the only bidder... The price for such a sweeping concession: \$360 million, payment of most of which the federation has deferred for many years. With this deal, Mr [One Person], through Formula One Management (FOM, the key trading company in his empire), has, in effect, sole rights to negotiate with and collect lucrative fees from the promoters who put on grand prix races. [Mr One Person] also has sole authority to sell tv rights worldwide for a sport whose 17 races a year each pull in around 5 billion viewers... Over the past three months, the *Economist* has examined the extant filings of every British company of which Mr [One Person] has been a director since 1951. It has also followed the flow of the billions of dollars generated by Formula One through... [the hands of someone who cut it]s business teeth selling second-hand motorcycles. Early in his career, [Mr One Person] showed a talent for financial trickery: after... s[elling] his motorcycle business, [Mr One Person] put about £10,000 rightfully belonging to the tax[department] in his own pocket.

...F[1] teams continue to push the limits at no expense. Benetton has unveiled a \$14m new fitness centre at its British base it hopes will help the struggling team regain a healthy position on the starting grid. The Human Performance Centre, is being run by [a] former Royal Marine Arctic survival instructor... who believes it could make a difference to the drivers' performances. The centre boasts a range of equipment tailored for the requirements of F[1], where drivers can be subjected to hefty G-forces and energy-sapping heat for up to two hours at a time... F[1] drivers often collect nearly 4 1/2 G "and when they go into a corner they actually hold their breath... which shuts the oxygen off from the brain. You imagine that kind of continuous pressure and stress on the body – you're talking about 70 laps of that times 15 corners and they are really pushing hard." ■ STILL with F[1]... nearly 58 billion TV viewers from 206 countries watched last year's title race, setting a record for a third straight year.

...\$US500 m... is spent by spectators each year at F[1] motor races held in Europe. A report says the 11 grand prix... were "probably unrivalled in the sporting world for creating economic benefits at the local level." About 83[%] of the money was spent by visitors from outside the local area...

Jaguar's famous leaping cat livery is set to grace Grand Prix racing next season with the Formula One Commission, representing the 11 teams on the grid, agreeing to the change of the Stewart Ford name. Ford own Jaguar and bought the Stewart Racing Team operation in June for £55 m...

TOYOTA [has] said it will now make its Formula One debut in 2[years], forfeiting a \$26.92m deposit to start racing from next year... [In further F1 news, yesterday the Scottish F1 ace] re-signed with McLaren for next season.

...A Malaysian betting ring may have been behind plots to murder [McLaren's Scottish] racing driver... and [a] jockey... in plane crashes, the *Sunday People* newspaper reports. It says detectives are investigating an underworld tip-off that gangsters caused the plane crashes, just a week apart, that could have killed the sports stars. Their deaths would have made millions for shadowy spread-betting gambling syndicates, the paper says... [The] former British champion jockey, suffered a fractured ankle and bruising in a plane crash in Newmarket, England, last month, which claimed the life of the pilot. The crash forced him to pull out of the Derby, a race that attracts some of the heaviest betting of the year. [The] Scottish Formula One ace... was injured... when his plane crashed as [the Scot] headed for southern France just two days before the Spanish Grand Prix. Both pilots died. [The Scot] insisted on racing and ended up finishing second. A senior police source told the newspaper: "It seems astonishing but our informants insist this has happened. We are investigating. We know these gangs have killed people in Asia to pull off gambling coups." The paper said plane engines were tampered with in both cases... Spread betting is a high-risk method where bettors stand to lose fortunes because of the huge stakes. It is also easily corrupted. Bookies "create markets" based on statistical aspects of a sporting event or championship – anything

from how many goals are scored to how many times the stretcher comes on to the field – and bettors decide whether the punter has decided on too many or too few. [The jockey] races horses for [a]Sheikh... and is well known in the Far East. *Sunday People* said a Far East betting syndicate was also behind the mystery of the Rugby World Cup Final between N[Z] and South Africa in 1995[, which NZ]... lost in extra time... with several players complaining of food-poisoning... The[paper] said a private detective had found the syndicate had paid a waitress to spike the All Blacks' drinks... [• 'Ferrari, which had a 1, 2 finish in yesterday's Malaysian Grand Prix, was disqualified after its wind deflectors were found to be 1cm too small.' The team was also reprimanded earlier in the season after the team's No 2 driver allowed the No 1 driver to win a race by passing him in the home straight.]

...Arranged finishes... next season will lead to the team being banned from at least the next race, world motorsport organisers... warn... There was... uproar in Melbourne in 1998 when [a]Scot... moved aside in the closing laps to let [his]McLaren teammate... take victory... F[1] suffered a body blow at the Austrian Grand Prix this year when Ferrari flouted the spirit of racing, ordering [its]Brazilian... to let his team-mate... win.

...[Ferrari's German driver] was in a race of his own again yesterday as [it] rewrote the F[1] record books in a dramatic and crash-hit Belgian Grand Prix. As so often in his 10 years at the top of motor racing, the 32-year-old German was competing against himself and the danger of losing concentration as [it] steered his Ferrari to an almost flawless and memorable triumph, his 52nd in 159 grand prix since his debut on the same Spa-Francorchamps circuit... Typically, too, [the German] admitted to one moment of near-madness when [it] was caught fiddling with the control buttons in the cockpit of his car and almost lost control... Typically... [the German was] looking for extra performance from his car, while winning his favourite race for the fifth time... since his maiden outing with the Jordan team... [The German was] disqualified after winning in 1994... and... also finished second in 1993... The circuit is nearer to his family home in Kerpen than any other on the calendar... The victory, by a margin far greater than that reflected in the 10s advantage... held over [the]second-placed Briton [who drives for McLaren] at the finish, was his eighth of a year in which [the German] has won the drivers' title for a fourth time and hoisted him clear of [a retired French driver] as the biggest outright winner ever... Unfortunately, on a day marred by the serious accident which caused [a]Brazilian driver... to be evacuated to hospital[, the French driver]... was not around to add his congratulations. [The Brazilian] was driving a... car [belonging to the retired French driver when it] slammed into the barriers on one of the fastest and most dangerous parts of the circuit, and the French[driver] was effectively too shocked to comment... Benetton's... Ital[ian driver] was third, followed by [a]Finn... in a McLaren, [then the German's Brazilian teammate. Incidentally, 'Moet & Chandon is trying to ban winners from shaking and spraying their champagne bottles because the company considers such behaviour to be inappropriate and wasteful']...

Flat out talking – the winner is in first place [The British commentator] is known, affectionately, as a motormouth. His commentary has been synonymous with F[1] racing since his first BBC race call in 1978. But [the Brit], whose litany of verbal spin-outs has earned him a worldwide fan club, is only weeks from retiring... [It] will be missed by millions. Few other sports callers are so renowned, and yet so acclaimed, for their mouth running in sixth gear while their brain remains in reverse. Who else, for instance, could come up with: "And I interrupt myself to bring you this...," or: "The lead is now 6.9s. In fact, it's just under 7s." For lap after lap, each word seems an exclamation, his commentary at full throttle, at full pitch, for what is essentially a spectacle of follow the leader. No wonder they call this 77-year-old... the voice of F[1]. And no wonder [it] has several internet websites devoted to his errors. His mistakes are one of the highlights of watching F[1] on TV. Here's a selection of the high-octane ...isms: ■ "We're now on the 73rd lap and the next one will be the 74th." ■ "I'll stop my startwatch." ...■ "There's nothing wrong with the car except that it is on fire." ...■ "[The driver]'s lost both right front tyres." ■ "And here comes [the driver] in the Williams. This car is absolutely unique – except for the one behind it, which is exactly the same." ■ "With half the race gone, there is half the race still to go." ...■ "And the rain came down and washed the circuit dry." ■ "...and [the German] has just completed lap 77 out of 73." ■ "We now have exactly the same situation as at the beginning of the race, only exactly opposite." ...■ "The McLaren is looking as steady as a rock." And just as [it] says this the McLaren slides round a bend. ■ Monaco, 1981: "You might not think that's cricket, and it's not. It's motor racing." ...■ "[The driver] is slowing down, taking it easy. Oh no [the driver] isn't! It's a lap record!" ...■ "And that just shows you how important the car is in F[1] racing." ...■ "As you can see, visually, with your eyes." ■ "Do my eyes deceive me, or is Senna's Lotus sounding rough?" ...■ "I make no apologies for their absence. I'm sorry they're not here." ...■ "And this is the third-placed car about to lap the second-placed car." ...■ "There's a fiery glow coming from the back of the Ferrari." [Another commentator]: "No, that's his rear safety light." ■ "That's history. I say history because it happened in the past." ...■ "[The driver]'s here again for the first time." ...■ "[The driver]'s obviously gone for a wheel change. I say obviously because I can't see it." ...■ "I've no idea what [the driver]'s orders are, but [it]'s following them superlatively well." ...■ "Ferrari won't be developing their car any more this season." ...[2nd commentator]: "How do you know that?" ...■ "I was there when I said it." ...■ Interview with [the F1] boss... "So... in the 17 years since you bought McLaren, which of your many achievements do you think was the most memorable?" [F1 boss]: "Well, I don't remember buying McLaren."

...□ F[1] teams have contributed to a fund for the pregnant widow of Italian Paolo Gislimberti, the track marshal killed by a flying wheel at the Monza Grand Prix. The fund stands at \$370,000. [The]Formula One boss... tossed in \$100,000 himself.

...The death of a race marshal at the A[US]n grand prix yesterday cast a tragic shadow over... [t]he... world champion[']s perfect start to the Formula One motor racing season... his second successive A[US]n grand prix title and his fifth race win in a row... The Ferrari driver completed the 58-lap journey around Albert Park in 1h 38m 26.533s ahead of [a driver from] Scotland, in a McLaren. Ferrari's Brazilian [driver]... was third... But there was no champagne sprayed on the podium and no celebration among the drivers. By then, word had filtered through that a marshal, from Queensland, had died after a crash early in the race, involving [the winn]er's younger brother... and [a]Canadian... Both cars were destroyed in the crash and parts of [the Canadian]'s vehicle appeared to fly over the fence and into the crowd. All four wheels were ripped off... Seven other people were treated for minor injuries after [the Canadian]'s BAR Honda somersaulted into the wall when [it clipped the German]'s Williams while trying to overtake... It was the second time in less than a year that a marshal had died in a Formula One race. Italian Paolo Ghislimberti died at Monza last season... in the first fatality suffered by Formula One at a circuit since the death of Brazilian world champion Ayrton Senna at Imola in 1994.

...A F[1] investigation into the death of a volunteer... at... Melbourne... is understood to have cleared race organisers of blame over the fatality. A confidential report by the... International Automobile Federation found that the marshal was not at his correct position when... struck by a wheel.

...Investigators have concluded that safety problems in the design of the car, and not a broken seatbelt, caused the death of Dale Earnhardt at the Daytona 500. Citing "reliable sources close to the investigation" who requested anonymity, the *Orlando Sentinel* newspaper said the four-month probe essentially confirmed the findings of an expert who determined Earnhardt died of a sudden head-whip when his car hit a wall on February 18... The... leader among active Winston Cup drivers with 76 career victories[who] also had the most wins at Daytona International Speedway at 34... had to be cut out of his car after slamming into the wall on the final turn of the race while... running fourth... [and] fighting for position. [Earnhardt] was taken to... hospital accompanied by his son... who finished second in the race. Known on the track as "The Intimidator,"... Dale... never regained consciousness after the high-speed collision... The accident happened 800m from the finish of the Nascar season-opener... His death comes at a time that driver safety issues were under increased scrutiny. Three Nascar drivers were killed in wrecks last season.

...US... driver Kenny Irwin [has]died in practice at the... international speedway... the second racer killed in the last two months on the track.

...[this season has seen the 'first US drag racing death in 25 years', and now an investigation is under way to establish the reason why an 'inexperienced racer in AUS died after his vehicle failed to stop and crashed into a wall at the end of the drag-strip.' In related news,] **50,000 people turned out yesterday to pay their respects to Northern Ireland's five-time TT motorcycling world champion Joey Dunlop who was killed in a race in Estonia last weekend.**

...in the first race... at Ballykelly in Northern Ireland yesterday[a NZer won]... his first world championship and the 23rd International Motorcycling Federation world crown for N[Z, but only its second]... motocross world title. ■ ...A 10-year-old boy... Kristopher Andrew Tane Sunnex, of Horotiu... has died after the motorbike [it] was riding crashed into another bike on a private motocross track near Hamilton.

...Police are investigating the Patiki Rd speedway motorcycle crash that killed... 39-year-old west Auckland[er]... Colin "Ultee" Tantau... and sent another rider to hospital... Officers involved with the case are keen to speak to witnesses or anyone who filmed or photographed the incident.

...Motorsport enthusiasts are stunned by the charging of four volunteers over an accident at the Queenstown Classic car race two years ago in which two spectators died. The[y]... face a variety of charges, the most serious of which is [hu]manslaughter. Terence Robert Tubman, aged 35, of Queenstown, and James Bruce Mackie, 36, of Arrowtown, were killed when a Holden Torana driven by [a Blenheim resident] ploughed into... spectators. The pair were in a group of six watching the race when two cars clipped each other. The Torana left the road, was launched off a bank and became airborne. A 55-year-old Christchurch company director was granted interim name suppression when [it] appeared in the Christchurch District Court on [hu]manslaughter charges yesterday[(the same location where the organiser of the Le Race bike road-race that resulted in a death – a cyclist, who believed the course was clear of other traffic, collided head-on with a car – was recently found 'guilty of criminal nuisance'). The director] also faces a charge of unlawful injury and was jointly charged with... a 64-year-old company director of Queenstown... a 37-year-old Invercargill mechanic, and... a 68-year-old company director, with criminal nuisance... They also faced a joint charge of failing to ensure the safety of the public at the... event. All four were remanded on bail without plea to appear in the Queenstown District Court on December 11. Motorsport N[Z's] president... and his staff had been helping police with their inquiries for two years and were "absolutely shocked" at the charges... [The president] said police had requested an international circuit inspector to come to N[Z] to help with inquiries. Motorsport NZ was stunned that police had not waited for that inspector to arrive. The decision to proceed before the inspector's report was "exceptionally harsh" on those charged. Some of those charged had worked as... officials at motorsport events for... 30 years... Motorsport, like many other sports, relied heavily on volunteers. "Volunteers are the heart of N[Z] sport. This really strikes at that heart... This case raises serious questions for officials and volunteers in any sport or leisure activity that includes risk to either participants or spectators." ...Motorsport NZ would back the... officials 100[%] and pay all legal costs.

...A leading west Auckland sports administrator warns sports and leisure groups may be crippled by the prosecution of four volunteer officials... Sport Waitakere[']s chief executive... says holding liable volunteers helping out at... events could cripple a sector already struggling to recruit and retain volunteers... A fighting fund of more than \$100,000 has been raised so far from levies of up to \$10 on most motor-sport licences and events...

MotorSport N[Z] was yesterday fined \$5000 and ordered to pay \$20,000 reparation in relation to two deaths in the Queenstown Classic Road Race... The organisation pleaded guilty to a charge of causing criminal nuisance. Similar charges were withdrawn against four volunteer race organisers who had appeared for a depositions hearing in the... District Court. A count of [hu]manslaughter against one of them was also dropped.

...Fifteen spectators were injured when [a Spaniard's] Ford Focus... crashed in the Rally of Great Britain yesterday. [The Spaniard's] car skidded off the road during the 11th special stage in the Brechfa Forest near Carmarthen, west Wales, and hit the fans in the spectator area. Three of them were taken to hospital by ambulance and two were airlifted by helicopter. "The stage was immediately stopped and cancelled," a rally spokes[person] said. "Ford have withdrawn... [the Spaniard] from the rally because of the serious nature of the incident." [The Spaniard, a t]wo-time world champion... who was fourth at the time, was unhurt... Subaru's [driver]... remains on course to become the first English[person] to clinch the world title. With just four stages remaining, [the Subaru driver]... is second, but... is under no pressure to win. [It] just needs to finish in the top four to claim the title. The championship leader... crashed out on Saturday. The flying Scot barrel-rolled his Ford Focus into a ditch after a high-speed misjudgment on the fourth stage while in the lead. As [the Scot] flew back to Scotland, [it]s retirement left the road open for the [person it] least wants to see win the title... "This is the biggest disappointment of my career," said the 1995 world champion after a morning that started brightly and ended sadly with a trip to hospital. "I feel terrible about it, both for myself and for the whole Ford team..." [The Scot] can still win the championship, but only if [the English driver], winner in Britain for the past three years, finishes lower than fourth.

...IT'S easy to tell which teams have the most money behind them. Under the cover of a rail shed are the top three world championship teams complete with up to 60 mechanics, cooks, managers, media personnel and hangers-on. Outside with large tarpaulins and backup trucks in attendance are the serious overseas and local teams. But around the corner and generally out of sight of most spectators are the hack teams who might be lucky to have mum there to make a sandwich and a mate to change the tyres. While few other sports have such blatant extremes of resources even fewer allow any Joe down the street to line up with five past or present world champions in the same event. There's no way [Ferrari's German driver] would take kindly to sharing the road with Joe in a Formula 1 race if his disdain of other F[1] drivers is anything to go by. The world rally championship rates No 2 behind F[1] as the most popular motorsport. In Spain and Italy it's regarded as the No 2 sport behind soccer and in Finland it's the national sport. Two million people turned out to watch the last Rally of England... and 500 accredited media cover each of the 14 rounds of the championship. Accordingly, it's big business. The Ford team, which is one of the largest with three cars... spends \$120m annually on... [its] campaign. The cars alone are worth \$2m and have a new set of tyres every 50km and a new suspension unit daily. Many of the major car companies have teams involved in the championships – Ford, Mitsubishi, Peugeot, Subaru and Hyundai – because car sales at the local yard often mirror success at rally events. They realise their cars are mobile billboards and their drivers travelling sales[people] – albeit well paid ones... The Ford team[']s Scot has]... three houses throughout Europe... and... commands... [an] estimated \$20m paycheck... But the lifestyle of travelling the world can take its toll and [the championship] is considered by many as a young [guy]'s game. "Our guys spend more time together than they do with their wives,"... the head mechanic with the Ford team... said. "But I can't think of anything else I would rather be doing."

...The Paris-Dakar rally crossed the Mediterranean to the Moroccan city of Nador yesterday and plans to enter the disputed territory of Western Sahara, despite threats from the Polisario Front. The Algerian-backed Front, which claims control of the territory, has threatened to end a decade-old ceasefire and resume all-out war against Morocco if the rally enters the Western Sahara. The rally, which includes 113 cars and 30 lorries, was expected to reach the southeastern city of Errachidia, 600km from Nador, late last night. The 276 competitors set off from Paris on Monday for the 23rd running of the race, a 10,000km trek across southern Europe and North Africa to the Senegalese capital[that, 'since its inception, has resulted in 39 deaths.' The]Polisario Front leader... warned in an Algerian newspaper... that race competitors would be at risk if they entered the territory...

One [person]'s hobby has put him offside with neighbours who don't even live in the same city! [The]Whenuapai icon... built a go-kart track for his own and his wife[']s]... amusement on their Kennedy's Rd property, in May... But the venture didn't have council resource consent – which means [the icon] is now belatedly seeking approval for the track. It seems... [hi]s neighbours on Kennedy's Rd have no objections to the hobby racer's actions. But Brighams Creek residents across the water, in Rodney District, are revved up to block... [his application. The] manager for consent services for the Waitakere City Council, says the concerns of the Rodney residents have to be heard, even though they live in another council's jurisdiction. "The effects of the land's use dictate the decisions made – not where the concerns come from,"... The former winemaker, who sold his business to Nobilo Wines a few years ago, says [it]'s flummoxed by the opposition. On the advice of his lawyers, [the icon] declined to comment further. Contacted by *West Weekly* this week, none of the objectors would comment. But the objections are listed as being over noise and

exhaust fumes. [However, the icon] says all the karts have been fitted with additional mufflers and have passed the council's noise level test. [The icon] is only allowed to use the track three hours at a time between noon and 6pm. No racing can take place on Sunday's and public holidays. The interim restrictions apply until the consent application is heard tomorrow night. A 6-month review of the track is likely, even if consent is granted.

...The latest round in the illegal go-kart track war has been won by the track's owners... The track... was granted resource consent in retrospect at a Waitakere City Council hearings committee meeting last Thursday. The decision has enraged residents in the Rodney District... who say the track is noisy and causes petrol fumes to drift across Brigham Creek onto their property. But the consent has been granted with conditions including restricting... use of the track to between the hours of noon and 6pm. The [owner]s are considering appealing this, plus the committee's decision to ban the use of the track on Sunday's and public holidays. If either side appeal the case would be heard in the Environment Court.

...WAIKAKA (pop 78) sits about 10km from the Otago border in Eastern Southland. It is famous for two things: "The best sheep country in N[Z]," says one local; and for that local] himself, says a one-time Waikaka resident, the Royal Hotel publican known to everyone – even the teetotallers in the district. Which is why, when the Mataura Lawnmower Racing Social Club comes to the township for a peculiarly Southland sort of Sunday, [the local] can sometimes be convinced to hop on one of the totted-up mowers for a few laps of the paddock. Along with the... garage owner, the store owner and the headmaster ("when they can get him"), [the local] helps make up the numbers for Waikaka's celebrity mower racing team... N[Z] cannot lay claim to the invention of motor-mower racing, but it is done in Southland with that indomitable Kiwi DIY spirit: give me a spool of No 8 fencing wire and I'll turn it into something that goes fast and makes a lot of lovely noise. In the U[S] motor-mower racing has its own Websites, statewide race meetings and corporate sponsorship. The Mataura club can't quite compete, although... local businesses are supportive of the end-of-year prizegiving to the tune of watches, bottles of wine and fast-food vouchers... Small town N[Z], if Waikaka and surrounding districts are anything to go by, is littered with the carcasses of that iconic beast of suburbia – the motor mower ...w[hich], in its natural state, is an integral part of the great N[Z] weekend. It's up there with fish and chips on Friday nights and Saturday morning rugby. And it has been for 100-odd years, ever since the British company, Ransomes, started exporting its person-powered lawnmower to a country which embraced it immediately and has never let go. When the motor mower made its debut in the early 1900s, it made it with a satisfactory roar – one which signalled that a [guy] was maintaining his castle. The mower was a [guy]'s tool for a [guy]'s country. A well-used mower smelled good and blokey, too – of grease and dirt and petrol. (In California, the Air Resources Board estimates that lawn and garden equipment users inadvertently spill 17 million gallons of fuel every year – more petrol than ended up in the Gulf of Alaska after the Exxon Valdez spill). But N[Z]ers (like their counterparts in lawned suburbs everywhere) have nurtured a love-hate relationship with their mowers – and an emotion verging on the murderous with their neighbour's mower. Because, as environmental health officers well know, the mowing machine can be used as an instrument of torture in suburbia. But unless your neighbour fires up before 7 am or after 10 pm on a weekday, there's nothing a council can do... [if a guy] (and it will always be a [guy]) takes to his lawn five hours a day, five days a week. There is some good news. It is little known that Aucklanders in residential areas are entitled to make a complaint if the bete noir over the back fence starts slaughtering the daisies before 9 am or after 6 pm on a Sunday. That your neighbour can tootle about the back lawn with a machine that spews petrol fumes and makes a noise like a trailbike is testament to a complete lack of regulations governing the use of the mower – or any power tool you care to abuse in the privacy of your own backyard. [A spokesperson from] the National Institute of Water and Atmospheric Research, says they are simply too difficult to police. "The whole question of, not just mowers, but any off-road vehicles [chain-saws and portable generators come into this category] are basically not controlled – there's no way to control them. And they tend to be very, very horrible." And not just a danger to your blood pressure levels... In the U[S] there are an estimated 89 million pieces of lawn and garden equipment with engines rated at 25hp or less. The Environmental Protection Agency estimates that mowers, trimmers and edgers produce up to 5[%] of the nation's air pollution[(and on top of that are the gases 'emitted by cut grass and other clippings')]. Run a 3.5hp petrol mower for an hour and it will emit the same amount of volatile organic compounds (key precursors to smog) as a new car driven 550km... While smog is not yet a problem in most N[Z] cities, NIWA]... has identified three main pollutants created by mowers in thousands of sections every weekend. The sound of the suburban weekend creates a mix of volatile hydrocarbons (VOC), carbon monoxide... and particulates (PM10). On a fine summer's day in Auckland, mowers will emit 2[%] of the total VOC levels, 1.8[%] of CO levels and 1.5[%] of PM10 levels... Small wonder that the neighbours with the push power mower look holier than thou. And how they'd wrinkle their noses at the mower racers. That you can race mowers at all in, say, Gore on a fine Sunday afternoon is obviously testament to the saint-like tolerance of Southlanders. "The poor [guy]'s motocross,"... And, yes, [just like with racing cars, you don't need a licence to compete (even though 'car racing takes a lot of skill – it's almost like an art' – 'NZ is the only country where you can drive in racing cars on a track before you can legally drive on the road')]. But is it better to let [old mowers] burn out or to rust away? It's no contest for... [the] vice-president of the Mataura mower racing club, whose metallic blue, souped-up mower has been clocked at 50 km/h.

...The days when a plank, old pram wheels and a box were all that was needed for a downhill trolley race are ending in Glenfield. The latest craze to grip youngsters in the North Shore suburb is the [US]-style soapbox derby racer. There is nothing about these machines to even slightly suggest soapbox origins. Their pencil-like, moulded-glass bodies and wafer-thin wheels are the product of 70 years of research and development. They can reach 80 km/h and cost \$2000 to import as kits from the U[S], where the... competitive All American Soap Box Derby has been held since 1934.

...Sands of time give up search for speed... From 1924 until 1927, Pendine Sands... [in] South Wales... was the site of one of the most memorable speed battles in motoring history – a sustained struggle between two giants of motor racing, during which the world land speed record was broken five times. The protagonists were Malcolm Campbell, 39 years old and already famous, and 40-year-old John Parry Thomas, a daringly original car designer and, like Campbell, a highly successful racing driver. Campbell wasn't the first to race on Pendine Sands – motorcycle races had been held there since the early 1920s – but [Campbell was the person] who chose it as the venue to challenge the world land speed record... On September 25, 1924, [Campbell –] ...at the wheel of Sunbeam, powered by a 18-litre V12 engine... [–] created a new world record: 146 mph... Campbell was to maintain a clear lead over his rival... for some time. The second time the record was broken at Pendine Sands it fell to Campbell again, who nudged the speed over 150 mph... in July the following year. But Campbell wasn't to hold the record for long. For Parry Thomas had been working on a rival to Sunbeam – a chain-driven monster called Babs, powered by a 20-litre engine. When [Parry Thomas] took to the wheel of Babs on April 27, 1926, [it] recorded 169 mph... demolishing Campbell's record by a colossal margin. The next day Parry Thomas improved his own record, nudging it up to 171 mph... But the last record to be set at Pendine Sands fell to Campbell in a new car called Bluebird. On February 4, 1927, [Campbell] reclaimed his title as the fastest [hu]man on earth with a speed of just under 175 mph... The final tragic chapter to the story did not take place until the following year. Parry Thomas motored down to Pendine on February 28, but bad weather prevented him from tackling the record until his last day at the beach, Thursday, March 3. At first the attempt seemed to be going well, but travelling at great speed halfway along the beach, Babs suddenly skidded and rolled over before coming to a stop facing the sea and catching fire. Quite what happened no one will ever know. But it seems probable that the car's external chain broke and when Parry Thomas leaned out to see what had happened, the chain struck him, killing him instantly. In deference to Parry Thomas, Babs was buried in the dunes until 1969 when enthusiasts won permission to bring the car back to life. Considering that it had been buried for 42 years, Babs was in surprisingly good condition. Now fully restored, Babs returns to Pendine Sands every summer as the star exhibit at the Museum of Speed, which overlooks the beach. Pendine itself may never again witness new world land speed record attempts, but its racing days are far from over. The beach is the site of new speed attempts by a generation of electrically powered cars, driven by... [the] grandson of Malcolm Campbell. On May 21, 1998, [the grandson] set a British record for electric cars with a speed of 116 mph...

While far short of the 245 mph... world record, [the grandson] and his team reckon that if they reach 200 mph... at Pendine Sands in their redesigned Bluebird, they stand a chance of clocking 300 mph... at Bonneville Salt Flats in Utah, which offers a run twice as long as the beach. So... 7[decades after the]... beach... saw so much glory... all eyes are on Pendine once again...

Speed tragedy tomb raised The... blue fin of Donald Campbell's Bluebird had not been bathed in light since the crisp January day, 3[decade]s ago, when it was catapulted to the foot of Coniston Water in the English Lake District. It was afforded a suitably memorable return as it was heaved back to the surface yesterday. The sun pierced mist over... Coniston, catching the fin as it was raised, and the serenity of the moment left onlookers as silent as those who witnessed the chilling crash that killed Campbell. Yesterday, his family and friends saw for the first time the torn wreckage of the boat in which [Donald] perished, achieving his dream of reaching 300 mph... in his last moments. The son of Sir Malcolm Campbell... Donald... is the only person to have held both land and water speed records in the same year. After attempts at breaking water-speed records in his father's boat, K4, Donald... developed his own boat, the K7, and set seven world water-speed records between 1955 and 1964. [Donald] attained a speed of 276 mph... on Lake Dumbleyung in A[US] in 1964... then turned to the land-speed record but crashed badly in a record run in... Utah... Some believed the crash and his long convalescence affected Campbell's health but [late] in 1964, on Lake Eyre in A[US, Donald] was back racing and set a world land speed record of 648 km/h. Three years later, while trying to become the first person to go over 300 mph (482.8 km/h) on water, [Donald] crashed at Coniston. [Donald] achieved a run of 477.8 km/h but when... c[oming] back for the second leg, the boat lifted out of the water, somersaulted and disintegrated... Campbell's body has not been found, and some of his family, as well as many in Coniston, had wanted the boat, too, to be left undisturbed. Until recently, his widow... was adamant that it should be left as a "memorial" to her husband. But his daughter... wanted the salvaging operation to take place. The raising was carried out in conjunction with the BBC, which is making a documentary about the operation... [A] team of 16 divers took more than five hours to winch Bluebird 46m out of its resting place, in a bed of silt... then tow... it in for 2.4km with a 6m crane attached to a barge... A friend of [the widow said the widow] had agreed to the salvage because, with the location known, it would have fallen prey to trophy hunters. [The widow] is also said to have signed a deal with a Sunday tabloid newspaper to share her thoughts with its readers. A few years ago [the widow] released the diaries of her late husband which revealed a [perso]n traumatised by his repeated crashes and racked with dark despair. [The widow] was criticised for releasing the diaries, but insisted the public had [a] right to know the complete [perso]n rather than a sanitised version. The local people of Coniston say nothing will stop them revering the memory of Donald Campbell, or his resting place... The world water-speed record has stood at 511 km/h... since [an AUS]n... broke the 300 mph barrier in 1978.

...[an AUSn's] offshore powerboat Riviera g[o]t... a polish-up from Boat Show officials... at the Auckland Showgrounds today. The \$3 million, Italian-built racer has a top speed of 224 km/h and will compete in the World Powerboat Championships in Auckland next February. It is expected to be one of the star attractions at the four-day show, which is likely to attract 60,000 visitors, drawn in part by interest in the America's Cup.

A single U[S] team challenging for the America's Cup will bring in economic benefit to N[Z] of \$172.1 million plus GST, according to an analysis prepared by the accounting firm Ernst and Young... – \$116.5 million... to N[Z] as a whole... with \$55.5 million... benefit to Auckland... The chair[perso]n of the Auckland Regional Services Trust... says this overwhelmingly... justifies ratepayer and taxpayer spending on a \$50 million cup base at the Viaduct Basin in... Auckland. [The chairperson] said yesterday that [it] understood there were now 13 overseas challengers for the Cup in 1999-2000.

...The public does not want an Aotea Centre-type "cost blow-out" when an America's Cup base is built... [Yesterday, the ARST]'s strategy consultant, said the public did not really mind it putting money into the proposed Viaduct Basin base. After all, the money would not be coming directly from ratepayers' pockets, but from trust trading profits. But, based on letters and phone calls, people were concerned that there not be a huge cost overrun. The trust has set \$25 million aside to put into the proposed development which is expected to cost more than \$50 million. Because the final number of challengers for the Cup is still uncertain, the actual cost is unknown. The chair[perso]n of the trust... has said it may have to put in more although [the consultant]... did not expect the cost to be "significantly" higher than \$50 million. The trust's financial involvement meanwhile depends on the Government and the private sector bearing a share of the cost. The Minister of Local Government... is expected to tell the trust next month whether it can involve itself in the development, ownership, management and financing of the base. [The minister] is also expected to indicate how much the Government will contribute. The Government has already said that the trust has demonstrated that it has the financial and management expertise to undertake the development without being a burden on ratepayers. The mayors of the region will almost certainly agree to the trust being financially involved, but some want that involvement to go no further. Most sit somewhere in between the Papakura District Council's flat rejection of any trust involvement and the Auckland City Council's relatively unqualified support. They agree on the Cup's importance to N[Z], but want to be sure the trust will be spending money wisely. Most accept the view of the Planning and Development Select Committee, which reported on the so-called America's Cup legislation, that it is unlikely that private sector interests would undertake to co-ordinate or fund fully the development of Cup facilities... This month [the ARST chairperson] said: "It still looks as if we will get our money back..." The... [chairperson] was referring to a... study, commissioned by the trust, which concluded that if a single extra U[S] challenger was persuaded to enter because of the superb facilities, it would create a \$172 million economic impact, and about 3530 jobs. Two-thirds of that benefit would fall outside the Auckland region, surely justifying a "substantial Government contribution." This left... [the chairperso]n of finance... [for t]he North Shore City Council... unmoved... [It] had seen similar reports before "and I would not trust them as far as I can kick them."

...Preparing for the America's Cup is expected to take almost \$2.48 million out of the Auckland public purse by the end of the year. The A[RST] yesterday approved increases in its budget to cover the \$2,476,083, excluding GST. The money is mostly for consultants in planning for the \$50 m... cup base... Just under \$800,000... was spent by the trust in the year ending June 30. It is expecting to fork out a further \$1.68 m... by the end of December, which is when it hopes construction will start on the base for the 2000 yachting event. Legal consultants, costing an average \$250 an hour, are expected to be the most expensive of the consultants, at \$847,569 up to December 31. Engineering consultants with an average price tag of \$1055 a day are next in line, at \$793,727. Public relations consultants' fees, at an average \$162.18 an hour, are expected to add up to \$27,759. Construction, property and Maori consultants, and architects, are also being used... Buying from Ports of Auckland Ltd its work towards obtaining resource consents – such as an assessment of environmental effects – cost \$120,000. Auckland City Council and Auckland Regional Council resource consent hearings are expected to cost \$150,000... A study of the likely economic impact of the America's Cup on Auckland and N[Z] has cost \$30,000. Another, expected to cost \$15,000, is planned. It will look at the regional economic impact... The trust expects the \$2.48 m... costs will be picked up by the company it will set up to build the base – assuming the Minister of Local Government... approves the trust's plans.

...Grand plans for the America's Cup base on the Auckland waterfront may be thwarted by irate fisher[s]... and charter boat operators. They... are determined not to be ejected from their home at the Viaduct Basin and are queuing up to lodge protests against the \$58 m... cup base plan. The fisher[s]... say their 900m of berths is guaranteed in law and they will fight to keep it, while charter boat operators who have already been evicted from Marsden and Hobson wharves... are determined not to be forced further out of the city. The A[RST]... plans... to build a base for the 2000 defence of the cup at the viaduct... do not appear to have provided for the basin's occupants. The waters have been muddied even more by the Auckland City Council, which announced yesterday that it, not the trust, should decide who gets to use the basin waterways. Other contenders for control of the waters are a consortium of... fishing companies and Tramco... which has a conditional deal to buy the land around the viaduct from the Ports of Auckland Ltd. The... Auckland Inshore Commercial Fisher... Association... said what was, after all, "only a boat race" was not worth

the disruption it would cause[to] the city's maritime industries. Not only the fishing boats faced eviction. The host of service industries around the basin would also have to go. If the present users of the area were ejected, there was nowhere on the downtown waterfront where they could be relocated... [T]he head of Moana Pacific, one of Auckland's biggest fishing companies... was confident... the problems could be resolved through negotiation. His company had, however, joined other companies in lodging a claim for water occupation rights to make sure they were not forgotten in the planning process. Fishing companies would take legal action if necessary to protect their rights... [T]he Marine Transport Association, said the needs of the 120 Auckland charter boat operators had been ignored in waterfront planning. The Viaduct Basin was their last hope in the central city. If they were forced to go further out they would lose business. [The] operator... of Sunsail N[Z], said his plans to build a charter boat marina on the city side of the Viaduct Basin had been put in doubt by the America's Cup scheme. [The operator] was granted a resource consent for the 20-berth marina last November but feared that his plans would be stymied by the Port of Auckland's sale of adjacent land to Tramco.

...Less than a year ago we Aucklanders tossed the Alliance majority off the A[RST] for fear they would spend up big at our expense. "Trust us instead," the conservative Citizens and Ratepayers candidates said. "We're not like those congenital spend-thrifts of the Left. We'll squirrel away the region's treasure for a rainy day." But how were we to know the rainy day would arrive almost before [the] Citrat leader... and his team... had time to memorise the combination of the trust's bank vault? Now they're about to shell out... ratepayers' money with an abandon the lefties would never have dreamed possible. And it's all destined to be poured into a big water-filled hole called the Viaduct Basin (not to be confused with Auckland's City's rival Citrat money hole called Britomart Place.) Of course, to be fair, these Citrats are victims of a strange force greater than any they've ever previously encountered. It's called the America's Cup. For... a century this nondescript trophy has been sucking vast sums of money out of the pockets of some of the world's most seriously wealthy business[people]. Now it's reached Auckland and is rapidly getting a taste for Kiwi dollars. I'm sure that's why Team N[Z] chief Sir Peter Blake makes his home half a world away in the South of England. How else to protect his own money from the cup's awesome appetites? But our local politicians are not so cupwise. Like first-timers at Harrah's, they're mesmerised by all the hoopla. It's a sure winner, they cry. Can't lose. We'll get all the ratepayers' money back plus some. In May, [the ARST] team came up with a scheme to build an America's Cup base in the Viaduct Basin for \$38 m... "More, more," cried the cup. So on July 2 the Citrats submitted a \$50 m... scheme, of which the ratepayers were to pay \$25 m... "Not enough," said the cup. So six weeks later the offer had grown to \$57.6 m... of which the ratepayers would pay \$37.6 m... and the taxpayers (us again) would pay another \$10 m... Not to be outdone, Auckland City says it'll chip in an additional \$30 m... to tart up the adjacent land. That's \$77.6 m... of public funds already, just for parking facilities for some boats in a single series of yacht races... years away. All in all, not a bad year's work for a team of politicians elected to protect the region's money. After all, more wasteful politicians might have splurged it on things like regional parks... or... improvements to the creaking sewage system...

The National Government's agenda in 1981 was to convince the nation that sport and politics should be separate. In 1996 the same party can't wait to invest in the economic fallout of the America's Cup. Meanwhile, the money to upgrade our education system is extracted from the Minister of Education... like precious blood from a stone. In a time-honoured N[Z] tradition, brains lose out to brawn as \$10 million of taxpayer money is happily spent on subsidising a yacht race. A fancy luncheon and a smiling minister greet... needy yachties while children are turned away at school gates because of overcrowding. The spinoff for private enterprise from the cup will simply give more clout to those in business, clout which is rarely found behind the education and care of young N[Z]ers. The Government... continues to tell N[Z] that educating future citizens is not a priority... That [i]t... has chosen to bully... and patronise teachers... while courting private enterprise, is a clear indication of their backward priorities. - 1996

[A Team NZ bowperson] has no time on his hands – his prized America's Cup victory watch was stolen from his home on Friday night. [The bowperson] was at a T[eam NZ function]... when his Kohimarama home was burgled and the limited edition Citizen watch was taken. The gold and titanium timepiece... has "No 17 of 500" engraved on its back... [In related news, yesterday t]he Royal N[Z] Yacht Squadron's vice-commodore... and commodore... pack[ed] the battered America's Cup for [its] first-class air trip to London tomorrow for repairs by the jewellers Garrands.

...The [Maori] who attacked the America's Cup... yesterday had his jail term reduced by one year and 10 months. The Court of Appeal quashed the two-year, 10 month term imposed... [by the District Court. The Maori] will serve it once [the offender] has finished an 18-month jail sentence imposed in April for other offending. [The Maori had] appealed... on the grounds that... his sentence... was "manifestly excessive"... The court decision said: "The principal reason given in support of the ground of appeal is the humanitarian or political motivation behind the attack on the cup: [the offender]'s motivations were to him idealistic, moralistic and designed to enhance te tino rangatiratanga (sovereignty) of his people... There were also reasons relating to [the offender]'s personal development."

...The America's Cup, symbol of national pride; smashed... [by an] obsessed citizen who took a mallet to the world's oldest sporting trophy in the name of Maori sovereignty[, has been]... rebuilt, and now [is] touring the country under heavy security. But is it the real thing? "No," says... *Boating* N[Z]: people are queuing up to admire a replica. The claim... has enraged the cup's keeper, the R[NZYS]. The squadron's general manager... laughed when told of the "bloody ridiculous" report. Staff at Garrand's jewellers in London also had a good laugh at any suggestion that they had spent three months repairing a copy. [The general manager] said the security on the cup, which is today on display in Taupo and moves to Napier on Monday, was the best available and had cost Team N[Z] sponsor WestpacTrust thousands... "They wouldn't be doing that for a replica."

...The rebuilt America's Cup finally has a new bullet-proof, hammer-proof, alarmed glass home. But you will be privileged if you ever get to see it. Eight months after the silver ewer was battered by a [Maori] wielding a sledgehammer in the R[NZYS] headquarters at Westhaven, a new German-built case has arrived in Auckland. The heavy glass display cabinet now sits on the exact spot where the attack occurred. It was lifted into the room by crane. After four months of restoration work in London costing £20,000 ([plus 'first-class return airfares from Auckland to London for the cup – which had its own seat – and its two RNZYS minders'), followed by a tour round the country], the cup is now waiting in a downtown Auckland bank vault for the alarm and lighting systems to be wired... Heavily laminated, non-reflective glass is used on all four sides of the case, which has 36 lights around the base where the cup will sit, and a mirror in its ceiling. The squadron paid an undisclosed sum to a German company... which makes display cases for the world's rare treasures... The commodore of the squadron... said viewing of the cup would now be "by appointment only." ...The room where the cup will be kept is about to get a revamp, too. The squadron and Team N[Z]... approached architecture students from the Auckland Institute of Technology to design a modern, museum-type "America's Cup room." Meanwhile, the Government has introduced legislation aimed at crowd control on the water during the cup defence.

...Firefighters from Auckland's city station[who] initiated the high-angle rescue team, which was in the public eye for the first time... when team members abseiled to the rescue of two trapped maintenance workers... atop Auckland's Sky Tower are... [now] focusing on a new proposal, a fully equipped fire rescue vessel which could help spectator and racing boats that get into trouble on the Hauraki Gulf during the America's Cup. Their forward thinking has won praise from Fire Service management, but whether the service comes to the party with money is yet to be decided... The estimated cost was \$350,000 which [firefighters] hoped the emergency services and sponsorship would cover... [T]housands of boats were expected on the gulf during the America's Cup and emergencies were bound to happen. "It won't be a question of whether boats sink but how many... [I]f you have rescues underwater you need as quick a response as possible to save a life." ...many firefighters were already experienced divers but they

would need specialised training. There was also a proposal to set up a confined-space rescue unit as an “add-on” to the high-angle rescue team... [Authorities] plan to impose a 12-knot speed limit on Auckland Harbour and crack down on drunken boaties during the America’s Cup.

...*Madness on the water: how can it be stopped... and who will foot the bill?* ...The regatta venue is closer to a substantial population base than any previous cup clash – within easy reach of 80,000 boats. As Auckland’s Volunteer Coastguard Service manager... puts it, this is the first cup setting where spectators can paddle out on a tractor tyre... Police and race organisers face the daunting prospect of coping with a floating city of more than 100,000 people during the America’s Cup... [T]heir powers on the water may be extended by new legislation later this year. Police plan to discourage drunkenness on Auckland harbour by having officers breathtest skippers as they leave public boat launching ramps. Officers in patrol boats will be on the lookout for “boat rage” and drunken driving... Suggestions of spectator-laden barges being anchored near the cup course have set alarm bells ringing at the prospect of mobile grandstands overturning... The Auckland Regional Council intends to supply three or four 8m RHIBs to swell the number of patrol boats... At least 20 patrol boats will be needed to prevent chaos among spectators... The Navy and coastguard may be asked to assist too, although the latter organisation prefers rescue missions rather than crowd control tasks. Police had 262 officers coping with cup spectators at Fremantle 10 years ago. On the spot training for them began two years out from the event... But... police here apparently believe they can manage with a rostered, specially trained team of 150 officers. The police budget for the 1999-2000 cup, which will be spread over five months or more depending on the number of eventual challengers, is likely to exceed \$9 million. For the Auckland team to start training now, the police would need a further \$4 million. ARC staff thought about setting a minimum size for spectator boats but decided against the idea because of policing difficulties and civil rights issues... Any move by the ARC to introduce standard boat identification and registration – \$30 has been mentioned as a possible fee – is likely to meet resistance from many boaties... The proposed 12-knot speed limit – applying from the Viaduct Basin and west of Brown’s Island to the racetrack – will be two knots faster than that imposed off San Diego where Team N[Z] lifted the Auld Mug... [The harbourmaster] envisages scores of marker buoys being laid to set out lanes, exclusion zones and restricted areas to separate spectator craft and commercial ships from those directly involved in the challenger and defender series... Safety worries mean pilots will face strict rules when flying over the America’s Cup course and the Viaduct Basin. Civil Aviation authorities insist that aircraft permitted over the zones will carry observers charged with ensuring no collisions occur. Helicopters rather than fixed-wing aircraft will probably dominate the inner Hauraki Gulf skies... Most syndicates are expected to hire helicopters to monitor their race progress. Other helicopters will provide television and other media coverage. Estimates of helicopter numbers each raceday vary from 10 to 100, depending on the importance of events on the surface below... Council planners[also] fear the... regatta will bring even more traffic problems to the Whangaparaoa Peninsula.

...A rich Singaporean business[person] is the driving force behind the transformation of a prime piece of real estate north of Auckland... The Whangaparaoa Peninsula development, a 40-minute drive... [from] Auckland and framed by the Hauraki Gulf... will contain a mixture of villas, apartments and waterfront homes, many with their own boat moorings, a boutique hotel, shops, cafes... [It already contains] a golf country club... A school and a retirement village will be added later. Even now, Gulf Harbour has become the “in” place to be with a constant stream of weekend sightseers. Gulf Harbour is actually owned by three [Singaporeans – the] business tycoon... with a \$500 million stake... [is] the major shareholder... When [the tycoon] first saw the site in 1992, [the tycoon] was decisive. “Just get it,” [the tycoon] told an offside. “Don’t even bargain. If we lose this, we will regret it.” The site was put into receivership when its previous owner... went bankrupt during the recession. It had been extensively advertised for 10 months throughout N[Z], AUS, the US] and South East Asia, but attracted little local interest because of the struggling economy. By that time, \$54 million had been invested... in... the then 959-berth marina... [The tycoon] and his partners paid \$17.5 million, and over the years, have... turned Gulf Harbour into a Mediterranean-style development modelled on Portofino in Italy and Port Grimaud in the south of France... [The tycoon] spent the first 12 years of his life in a \$3-a-month rented room with his parents, three sisters and a brother. During the Japanese Occupation, his father was jobless, his mother was washing laundry, and his sister was selling soon kway (a Chinese rice noodle cake). The future tycoon] completed only primary education at a Chinese school, then went to Malaysia to help his brother-in-law sell fishing nets. Later, [the future tycoon] tried his hand at producing aerated water, but the business went bust... then became an apprentice at a hardware store. In 1949, [the future tycoon] bought barrels of paint cheaply from the British army and created his own brand... The following year the Korean War started, and with imports severely restricted, [his] paint business boomed. In 1961, [the tycoon] went into a joint venture with Nippon of Osaka, a major paint company... The oil crisis in 1973 forced up paint prices since they contained solvents made from crude oil. “My fortune was built from these two events – the Korean War and the oil embargo. I was lucky,”... Despite his wealth, his Singaporean office is spartan, decorated with lacquered furniture, plastic flowers and a map of the world. The White Rabbit 2 is his only conspicuous extravagance. The \$56 million... 50-metre, four-deck... piece of floating luxury... requires up to \$1 million... a year to keep it shipshape. The yacht has visited N[Z] twice and will be coming again... [when Auckland hosts the America’s Cup. Speaking of which, t]he America’s Cup village has nailed its first sponsorship – to the tune of \$500,000. The money... from Ports of Auckland Ltd... which is 80[%] owned by the... [ARST,] came... out of a... \$2.1 million... purchase payment by the developer, the A[RST], for part of the basin for the cup village. The... trust’s plan entails a new wharf to replace the Western Viaduct built 150m further into the Waitemata Harbour, as well as reclamations within the basin, the creation of an island for public viewing and corporate sponsors’ tents, and another new wharf off Hobson Wharf.

...The rich and famous will be able to berth their luxury yachts in a marina planned for downtown Auckland during the America’s Cup defence. Ports of Auckland will build a permanent marina with up to 30 berths on the western side of Hobson Wharf, catering for local charter boats and private craft of up to 40m... [T]he development would cost several million dollars. International rates for such large berths were \$5 to \$20 a metre a day... The company would aim to charge at the lower end of the scale. The marina will be built opposite the America’s Cup village being developed in the Viaduct Basin and will consist of interconnecting pontoons restrained by piles in the seabed. A floating walkway will run around its edge. A spokes[person] for the Marine Transport Association... said charter boat operators had long seen a need for a central base visible to tourists. Auckland charter boats were [currently] based in marinas all over the region. “We will be able to market the base and combine advertising.” ...Building is expected to start early next year... [and] will take up to nine months to complete.

...Early indications are that between 40 and 70 mega yachts – virtually small ships from 35m to 80m long – will make Auckland their main destination for the America’s Cup summer of 1999. Some will have their own helicopters. Auckland and N[Z] cannot afford the embarrassment of inadequate amenities for this fleet of foreign-flagged boats... That’s a view shared by marine industry planners who have spent months getting to grips with the implications of events in 1999 and 2000. As one observer put it: “If they are not provided for, they won’t come.” The presence of such craft in Auckland and N[Z] waters is likely to have substantial economic impact. Their owners are very, very wealthy. Their passengers are known to be big spenders... “Guests would pay [a total of] \$US50,000 to \$US100,000 a week to charter these boats.” ...The boating industry expects to benefit handsomely from repair and maintenance contracts. Aucklanders in touch with luxury vessel skippers and agents say the owners, who normally alternate their on-board time between the Mediterranean and the Caribbean and both coasts of the U[S], are looking for new “playgrounds.” With Auckland hosting the cup series, the new millennium in the regatta’s midst and the Sydney Olympics being held later in 2000, the South Pacific beckons. Owners and agents of mega yachts tend to plan their global navigation at least two years in advance. Most of the cup challenger syndicates say they want at least two mega yacht sites available for their supporters and sponsors... Auckland charter company Thirty Seven South Ltd plans to bring at least five mega yachts to the harbour for the cup regatta... and... the Fort Lauderdale-based company United Yacht Transport is interested in ferrying large boats to the South Pacific... Anticipating berthage space demand for charter boats and private craft

up to 40m... Ports of Auckland... has announced plans to build a marina for 30 on the western side of Hobson Wharf... Bayswater Marina Ltd has nine berths for 32m to 45m yachts... City Marina Ltd, a charter boat company with rights to 96m of the Viaduct Basin's edge in the midst of cup syndicate bases... plans to spend \$2 million developing its... dock space for six charter mega yachts as well as eight other vessels from 15m to 25m long. Developers are understood to be eyeing the possibilities of a 10-berth mega yacht marina on the western side of Princess Wharf for which resource consent already exists. Such a structure would have to be substantial enough to withstand buffeting winds and tides in a fairly exposed part of the harbour... [A]n... Auckland city councillor who met mega yacht agents in Monaco recently, said: "What I see as a major problem for Auckland is our 12-foot rise and fall in the tide. Therefore any area we designate as suitable has to have a floating platform. The floating pontoons have to be strong enough to cope..." ...Cup Village plans [also] provide berths for eight to 10 mega yachts on the northern side of the new island to be created in the Viaduct Basin. That number will double if the go-ahead is given to dredge the... sandstone hump off the island's southern flank.

...The Department of Conservation has leased out a chunk of Auckland seabed... The A[RST] has a 99-year lease on 1.7ha of seabed at the Viaduct Basin, which will be reclaimed for the village development. The D[oC] said the viability of the lease had to take into account Maori treaty claims. If one of the seven Auckland iwi makes a successful application to the Waitangi Tribunal, the seabed could be given to the trust and the iwi would receive alternative compensation... [In another development, t]he Gulf Harbour Marina's plans to provide bases for America's Cup syndicates got off to a flying start yesterday when approval was given for massive earthworks. The Whangaparaoa Peninsula – on the doorstep of the... regatta course – proposes a \$9 million... development. Deep channels will be dredged for giant luxury yachts and up to four syndicate bases and a fuel jetty... The Hibiscus Coast area committee of the Rodney District Council... cleared the way for the work, imposing[a] special noise level and requiring the removal of bases after the cup challenge. The committee approved the work without public notification and neighbours' approvals. However, permits were notified for coastal works... Three objections had been received by the deadline on Wednesday.

...The America's Cup is losing some of its lustre in... this country... The cup was losing its lustre for me from the day that [the team's leader] declared the defence would be a Team N[Z] monopoly and decided that challenging syndicates should all be berthed in a central development, the bulk of the cost... to be born by ratepayers or taxpayers. It had crossed my mind that too many of the logos on Black Magic at San Diego were producer boards or state corporations but I wanted to believe the cup was... frivolous capitalism, a plaything of private enterprise, an amoral competition of high finance, rule-bending and technology, not sport. But [the team leader]'s designs for the defence would not wait for market-led investment. They bore no relation to the kind of economy N[Z] is today. No domestic syndicate may contest Team N[Z]'s ability to mount the best defence. No marina, of which there are plenty around the harbour and gulf, [will be allowed to provide] the most efficient facilities with the best chance of sustainable returns after the regatta... because [the defender]'s team, with their victory spawning hubris, was set upon a base where syndicates that had previously guarded their design secrets like gold would work cosily alongside one another. The international yachting fraternity could turn the carnival into a sporting event, which might be nice but it might not be the America's Cup. Nor will it be profitable. We know that because no commercial investor, not even the Ports of Auckland Ltd, would finance [the team leader]'s vision in the Viaduct Basin. The A[RST] will stand the risk. Confirmation of the follies of public finance in such projects came this week. [The team leader]'s people always scorned the notion that diverse marinas could cater adequately for challenging syndicates. Gulf Harbour[, which]... reports that it has been approached by a number of prospective challengers looking for an alternative to the prices being asked for berths in the basin... has just surprised them... The trust could have decided to cut its losses when it realised private enterprise might provide. But... [the] trust has cut a deal with Gulf Harbour under which they will not compete. From Gulf Harbour's point of view that was wise. You can't compete with public finance because it is more easily forgiven when it loses money and can easily undercut you... Your money and mine, at the disposal of the trust, will promote the private marina's new facilities along with the Viaduct Basin. And this is just the beginning... But let's hear it for [the] District Court Judge... who... g[a]ve... a sentence that befits the embarrassment [one Maori citizen] brought to us, or some of us. Not since the African boycott of the Montreal Olympics have I felt such national shame. Most international media had never noticed that we had the cup, but they noticed on March 15. Thankfully they didn't pick up the talk from too many [NZers] that really it was only a cup and, much worse, the scarcely stifled satisfaction of those who had always resented the country's rapture in a rich [person's] toy – the same people, perhaps, who were humiliated in 1988 when a NZ merchant banker mounted a successful courtroom challenge to take on the cup holders in an exclusive competition (i.e., one which excluded other challengers) using a huge and expensive monohulled yacht it had built; then felt immense satisfaction when, after losing in the courtroom, the defender's built a multihulled yacht and made no contest of beating the merchant banker on the water (the merchant banker also helped fund NZ's unsuccessful attempt to win the cup in 1992).]

...The proposed America's Cup office has had its brief broadened... [to include] events from early 1999 to 2001, rather than just the America's Cup... and its budget slashed... The new office's budget is \$2.3 million over four years. Its key role is to ensure that Auckland gets the maximum benefit from the events. It will employ six staff to coordinate public and private sector groups and be the contact point for business inquiries from event promoters, America's Cup racing syndicates, owners of visiting "super yachts" and other visitors. It has been approved by the Auckland Mayoral Forum but the North Shore City and Papakura District councils are sticking to their decisions... not to give any money. The Mayor of Papakura... yesterday reiterated that the public was already putting enough into the America's Cup...

As the city gears up for the razzmatazz of the America's Cup and millennium celebrations, pressure... to secure sponsorship... is mounting on dozens of... national and international events scheduled to take place in Auckland over the next three years... Events yet to secure deals include the World Offshore Powerboat Championships... [a] week-long event, which will be attended by teams from... 30 countries, [that] is expected to cost... \$2 million to run... The... Millennium Golf Tournament, which is being billed as the richest golf purse ever offered in... [NZ –] \$3 million in prize money[–] which will need to be met by sponsors... Local sponsors have yet to be signed up for... the... \$3 million... FIFA Under-17 World Soccer C[up]... According to a brochure issued by Tourism Auckland this week, sponsors have also yet to be confirmed for the World Series Jetsprinting[(following calls 'to get away from using facilities for a single motor-sport', 'a NZ speedway track has temporarily been filled with 10 million litres of water so jetsprints, jet skis and other boats can race there; jetsprints burn 9lt of high octane fuel in the minute it takes to do two laps of the course')], World 470 Class Championships (both in February 1999), ITU Triathlon World Cup (March or April annually), and the Rally of N[Z] (August annually). Local events... looking for sponsors include the Auckland Cup, Symphony Under the Stars, the Boat Show, the Hero Parade, the Devonport Food and Wine Festival, the Auckland International Waterfront Festival, and the Ellerslie Flower Show... [In addition, the] organisers of the America's Cup are... looking for two more major sponsors. Team N[Z]'s costs are already covered by an existing "Family of Five" sponsorship deal with Steinlager, Toyota, TVNZ, Lotto and Telecom. However, another... \$60 million is estimated to be needed to cover the cost of staging the five-month long event.

...America's Cup base chiefs have thwarted a revolt by 17 multinational syndicates... after a dash to New York by two... America's Cup Village representatives. The chief executive... and... the company's sponsorship consultant, set out a new base pricing structure. The revised prices are confidential but include incentives to sign by next month. Originally \$750,000 was asked for. [The chief executive] said his visit had been a damage control exercise to counter criticism of Auckland and a perception that syndicates could be ripped off here... About 40 syndicate delegates in the New York Yacht Club rooms were initially hostile. [The chief executive] found himself having to counter claims such as accommodation in Auckland was at a premium, the inner city had no gymnasiums and that a winding up of the A[RST] might affect the cup event. "Some syndicates were thinking of going to places like Hawaii where it's more expensive and staying there until a month beforehand... They were genuinely

concerned that this [regatta] is not going to proceed because of false information that has been spread. I am relieved we got there when we did.” Four of the nine syndicates which met the Aucklanders for private sessions after the meeting were interested in signing up for... Viaduct development... bases in the next few weeks. [NYYC] members were among the four.

...JANUARY 31 is the next important cutoff point for potential America's Cup challengers. [18] syndicates are paid up cup entrants but there are already whisperings of likely casualties. However, [the]America's Cup Challenge Association president... [has] not been told of anyone pulling out[– though it wouldn't] expect to hear anything until the end of January when the syndicates are required to pay a \$400,000 bond. “In past America's Cups, the bond has been a hurdle which some of the teams haven't met.” The bond firms up syndicates' commitment, meaning organisers of the challengers series can be more certain of fleet numbers when they are negotiating for sponsorship... [E]ven though a team posts the bond, it does not mean it will race in Auckland in 1999. Meanwhile, [the]... Government has been accused of risking big selling opportunities overseas because... [it]s America's Cup task force... has been slow to get organised... The director of the[]NZ Trade Centre... has had little feedback on a bid to make the centre a platform to promote N[Z]-made products... The task force is entrusted, among other things, with promoting trade and tourism during the event... So far no details have been released on how funds allocated for trade promotion will be channelled... [The director] had written to the task force proposing that it consider using the trade centre's facilities... The privately run trade centre is located on the waterfront – in place to be the city's export showpiece during the America's Cup... It has on permanent display some 200 companies and receives an average of 50 visits a day... The office of the Minister for Sports, Fitness and Leisure... who is the interim chair[perso]n of the... task force, confirmed the letter had been received. It said the task force was still at the initial stages of setting up... The letter would be referred to the task force and... be considered later.

...Auckland... would be ready for the... America's Cup... series in 1999-2000... says the new chair[perso]n of the cup taskforce... The former chief executive of... Challenge Paper, who... resigned... in November after 27 years with the company... takes up the role in February... However... the... 45-year-old, who is married with three children... admitted it would be a challenge ensuring that all parties involved in the defence came together to optimise their interests... [The 45-year-old] takes over from the Minister of Tourism... who has been interim chair[perso]n since the taskforce was established by the [PM]'s Millennium Board in July... [The new chairperson] has an active interest in sports management and is governor and executive board member of the Sports Foundation[, and] is also on the board of Mercury Energy and Metrowater.

...Auckland travel company Creative Cruising is bringing one of the world's most prestigious cruise liners to the City of Sails for the America's Cup. The ship... is available because her operator... will have her in this part of the world for millennium celebrations. The liner, at 16,800 tons and 155.8m long, carries 296 guests in 148 luxury suites, all of which look on to the ocean. Creative Cruising is bringing her to Auckland as a floating corporate showcase and luxury entertainment platform for the racing... [The ship] will also be used to promote N[Z] wine and food and will feature local entertainment.

...The financial spin-off to the city from the America's Cup could be as high as \$800 m... a new... \$30,000... economic study predicts... The report notes its conclusions are “broadly in line” with a... study conducted for the A[RST]... last year which indicated the regional economic impact could be about \$600 m... Using “multiplier” figures, the study calculates the “ripple effects” through the regional economy of: • Building the cup village (\$58 m...), • Racing syndicates' spending here in the 1999-2000 series (estimate – \$200 m...), • The increased tourism the event will generate (estimated value – \$110 m... from a 5[%] increase...), • Intangibles such as... international exposure (estimate – \$100 m...). The equivalent of between 4200 and 6800 jobs are [also] expected to be created as a result of the yacht races... [– adding an estimated \$140 m to] \$220 m... of... wages...

The America's Cup... may not be the financial bonanza [NZers] expect, according to an international expert on major sports events. The vice-president of the [US] firm Economics Research Associates... yesterday told members of the [local] tourist industry to be cautious about prospects of what people would spend when they visited N[Z] in 1999 and 2000. In a speech at the Tourism Conference in Christchurch, [the vice-president] said his company had assessed the economic spin-off from many sports events and it was not always good news. Some Los Angeles restaurants closed during the 1984 Olympics because they did not get the customers. Nor did the city's hotels do as well as expected. The... academics had predicted that the America's Cup in San Diego would bring in \$US911 m... in fact the 1995 races brought in less than a third of that. But his caution was shrugged off by the executive director of Team N[Z]... who said the America's Cup would be huge for... [NZ. But] the deputy chief executive of the Tourism Board... said [the] advice was timely. It was important not to put too much into a short-term investment... [The new chief executive] of the America's Cup village is [also] sceptical about the expectations of the financial spinoffs the challenge will generate for [NZ]... However... the chief executive... said... the America's Cup village... company, a subsidiary of the A[RST], had sponsorship commitments for... half of the \$10 m... target... from both [local] and overseas companies... None of the 19 yachting syndicates lined up for the cup races had yet signed up for one of the 11 bases to be built at the... Viaduct Basin... but negotiations were “proceeding quite well.” ...one of his first tasks since being appointed last week would be to set up an office at the... basin... Dredges are now deepening parts of the basin. The mud and sediment, some of it contaminated with heavy metals, is mixed with cement to form “mud-crete” and used to fill the reclamations... The cement seals in the contaminants... The first task... was to bless the... site... “We pray that [God] will guard and guide and encourage all who work here, all who are part of this great endeavour.”

...The A[RST] is bracing itself to lose... on its America's Cup base facilities... When... the project's cost was... unveiled last year, [the]... trust expected to get its money back through the operation and eventual sale of the... Viaduct Basin... facilities – although its chair[perso]n... acknowledged in February that it might wear a small loss. Now, the directors of the subsidiary company handling the development have indicated a possible \$12 million net shortfall to the trust on the company's wind up. The forecast tarnishes the sale and purchase agreement for America's Cup Village Ltd, which legally took over the project from the trust yesterday... [■ Fears] of traffic chaos during the America's Cup challenge will delay resurfacing of the Auckland Harbour Bridge... Work on laying a special polyurethane coating on the bridge's two-lane western and eastern clip-ons was to be completed by early 1998. Despite two years of work and disruption to thousands of motorists, the programme is only 40[%] complete. The NZ Herald learned last night that Transit[]NZ now] was not expecting the work to be completed until the 2000/2001 holiday season. - 1997

Auckland City ratepayers will help to bankroll a free inner-city bus service for the America's Cup – but the regional transport kitty may be off limits. The A[RC]... has agreed to put out a tender for bus company's to run an inner-city loop between Queen St and the America's Cup Village... A free service, with buses running every 10 minutes to link inner-city car parks and businesses with the village, would cost up to \$145,000. It is planned for October[1999 to March 2000], partly to overcome a shortage of parking near the cup village.

...Stagecoach has won a tender to operate double-decker buses up Queen St. The A[RC], with Auckland City, will help pay for the service, designed to help people get to the America's Cup Village. It is expected to cost 50c a ride, with two buses running a loop every 10 minutes. [Now that the problem of parking near the cup village has been partly overcome, perhaps the councils will get serious about trying to overcome the shortage of moorings for superboats near the cup village (which would have the potential to help with the *shortage of hotel rooms* in Auckland during the cup series.)

...With a wave of the public relations wand, the Devonport Naval Base has been magically transformed into “Devonport Cove.” The stodgy old name has been swept aside... for the America's Cup – along with memories of toxic paint waste and limping vessels. At a boat show in Fort Lauderdale, Florida, Babcock N[Z] has promoted space at the “cove” to superyacht owners and secured two bookings. Babcock is seeking Auckland City Council approval to create 20 superyacht berths in a leased area near Stanley Bay... Part of the base would be fenced off and “tarted up”...

Superyachts – the ultimate status symbol of the world’s wealthy – are set to flood into Auckland’s waters next year. The America’s Cup Village said yesterday that it had all but filled the 80 berths set aside for the 25-60m luxury vessels at the Viaduct Basin. It had taken... 50 non-refundable deposits of \$35,000, and had another 30 bookings, some for up to six months. If all the Auckland berths are taken, the owners of the motor and sail boats, who include Middle-Eastern royalty and American billionaires, may moor in Devonport or on the Whangaparaoa Peninsula... [O]ne American business[person]... worth \$4 b... was bringing 292 “key employees” of his company for three months. The staff would continue running the company from Auckland hotels, using the internet and telecommunications... The Government is keen to make hay while the big boys are in town. Trade officials will try to convince the boat-owners to invest in local properties and businesses. A TradeNZ spokes[person]... said it was a more subtle process than just setting up meetings with the owners. “To use the New York expression, you have to start schmoozing with them and develop a relationship.” Most boats... are crewed by a staff of about 10, including cooks, waiters and sailors... Most... will be the private playgrounds of the owners – although the village is expecting one or two to be available for Aucklanders to charter... But chartering one advertised superyacht, the 58m Princess Tanya, would set you back \$350,000 a week – more than the average Auckland home is worth. The [9]-cabin Princess Tanya comes fitted with a spa-pool, gym, sauna, beauty salon complete with beautician and hairdresser, sailing dinghy... windsurfers, water-skis, jet-skis, wave-runners, satellite navigation and air-conditioning. Optional extras on other yachts include helicopters, roll-on cars, casinos and small nightclubs. One Asian owner coming to the cup has asked the village for space to park four Harley Davidson motorbikes. The village chief executive... said N[Z] had never before catered to the types of people that would come over on the boats... [T]he yachts had become the playthings of the world’s richest people in the 1990s, after private planes lost their attraction. The problem with planes... was they lay hidden away at airports and could not be shown off. But... boats were on display close to the centre of town and could easily be used to impress and entertain guests... P&O Services and McKay Shipping have jointly won the contract to service the boats... “If they want Danish butter for breakfast, we will bring it in. If they want fruit and flowers at four in the morning, we will make sure its done.” ...the village would charge owners \$1000 a day to moor their boats.

...America’s Cup Village Ltd this week announced an increase in berthage charges of 36[%] for... the inner Viaduct Basin, for six months from January 1[, 1999]. No figures have been set beyond June 30... Charter boat... owners fear that much larger price increases during the cup racing could push them out, or force them to raise fares so that race viewing is beyond the reach of ordinary N[Z]ers. A group of six charter boat operators will go to the Environment Court to clarify an earlier court statement which said the inner basin was for the use, in the first instance, of charter boats, ferries and tourist boats. The village operator has told the owners they have no long-term right to operate from the inner basin. The cup village chief executive... said: “These people are squatting here, and somehow they think they have a commercial right. They have no rights, they have no licence.” The... [chief executive] said no charges had been set for the charter boats during the cup... [but] the village was happy to accommodate the owners during the cup, as long as they were prepared to pay the going market rates... [The person] who operates the charter boat American Eagle... feared A[CVL] planned to increase his berthage charge by up to 12 times the present rate during cup racing... [to] force him and other charter boat operators out, so high-paying superyachts could take their place. A further price rise would mean... hav[ing] to double... his present charge of around \$50 a head for charter tours... The [chief executive said the] ideal solution would be for the charter boats to move 50m over into the Hobson Wharf, where they already had signed berthage contracts with Ports of Auckland Ltd... [But the operator said that] was tantamount to asking a Queen St retailer to trade from somewhere else during Christmas. Hobson Wharf was unsuitable for passengers disembarking in bad weather. If there was space there, it should be used for superyachts. The court is expected to hear the application early next year.

...CONSTRUCTION was a fortnight behind schedule when [the project supervisor] joined the Village team in late June, 1997. Scary considering it had been going only two months. His solution was simple – put the contract between Village management and [Challenge] Construction in the bottom draw. “We said to them that instead of putting huge penalties on you for overrunning, and in turn you try to protect yourself by claiming for this delay, that delay, and everything that holds you up, we’ll put the contract aside, pay you to speed up and offer a results-based incentive... Everybody, including the subcontractors, started to look at it differently. The contract envisaged a five-day week. Most of the time we worked six, sometimes seven. The weather wasn’t great but good equipment was used and productivity rates were high...” The chief objective was to... double... the harbour[’s]... depth and width. Sandstone beneath the water’s surface was the major obstacle... “There was a lump of sandstone in the water so large, seagulls would walk on it in low tide. It cost an extra \$1.5 million to remove it. The amount of sandstone dredged out would have made an Egyptian pyramid.” The rubbish found beneath the water was hardly pleasant. “We found lots of old logs (a log farm operated there up to May 1997), bits of old barges and boats that had sunk or been dumped, car bodies, old steam engines, hundreds of tyres, and old car batteries, which created high acidity levels in some parts of the water.” For half a century the region was a rundown semi-industrial area. Aucklanders used it as an uncontrolled dumping ground. It continued right up to the 1970s when N[Z]ers finally woke up to the damage it was causing the environment.

...The [person] who controls the public’s \$85 million contribution to the America’s Cup has resigned suddenly without explanation... almost a year before his contract expires[, although the person who]... was based in the U[S] as head of B[IL] operations in] North America... for seven years, before returning to N[Z]... in 1995... would continue to be available as a consultant... [S]ources say there have been irreconcilable tensions between [the ACVL chief executive] on one side and Team N[Z] and Infrastructure Auckland on the other. The chair[person] of the village board... had no successor in mind but would seek a new chief executive immediately.

...ACVL... staff came under close scrutiny yesterday by anxious Infrastructure Auckland bosses in the wake of Wednesday’s shock departure of the village chief executive... [N]ot only... is... [ACVL] without a chief executive, but its contract with the naming sponsor American Express remains unsigned. While the village PR machine is quick to dispel rumours of on-going management difficulties and sponsorship concerns, city leaders are becoming increasingly concerned at ratepayers \$87.5 million exposure in the village... [Furthermore,] American Cup Village suppliers have concerns with the village management but were reluctant to air them for fear of being shut out of lucrative contracts. “It’s not a village, it’s a telephone box,” one supplier said. “I’ve never seen anyone alienate the corporate community and sponsors as much as ACVL management,” another supplier said[, although the] ACVL public relations manager... dismissed the claims... Recent evidence, however, points to mounting concerns with village entertainment as one of the biggest stumbling blocks since [ACVL and AMEX] announced a partnership... last year. Despite AMEX’s worldwide promotion of its village yacht club and a top entertainment lineup, *The Daily News* understands the village has halved its entertainment budget and all but abandoned its planned international entertainment programme. Failure to secure the Maritime Museum as an additional AMEX venue, coupled with ACVL’s failure to gain consent to build a stage and grandstand within the village has also caused friction between ACVL and AMEX... It was also revealed at yesterday’s America’s Cup Taskforce meeting that the cup security budget had doubled, despite a predicted fall in public attendance. It is understood the budget increase comes on the heels of police concerns they could not guarantee security for superyachts and those staying within the compound.

...Alcohol Healthwatch says Auckland police have “rolled over like pups” by endorsing all-night drinking... [at] the Viaduct Basin... [A Healthwatch spokesperson] says there were problems outside Sky City casino when its bars were open all night and the bar hours there had since been cut... The Liquor Licensing Authority is at present hearing an application by four bars located in the basin that want 24-hour licences.

...Four waterfront bars near the America’s Cup village will be allowed to stay open 24 hours. But hospitality will be strictly indoors from 10 pm Sunday to Thursday and from 11 pm on Friday and Saturday... [By the way, a] Telecom cellphone tower is to share space with some of the world’s most endangered birds on Tiritiri Matangi Island in the Hauraki Gulf so boaties can use their mobile phones during America’s Cup races. The

popular visitor destination, which volunteers spent 10 years re-foresting to restore habitats for N[Z]'s rarest birds, has won international fame as an open wildlife sanctuary and scientific reserve. But the Rodney District Council decided a resource consent required for the 15m tower did not need public consultation... The deal meant Telecom will pay the Crown for use of the site. The D[oC] will recover only its costs... A number of conditions would protect wildlife, and Telecom would upgrade roading on the island... [However, the] Auckland Conservation Board is annoyed it was not consulted about the tower either by the council or the D[oC. A]... member of the board, Auckland's statutory public watchdog on conservation issues, said it was a case of a cartel with multimillion-dollar backing bringing pressure to bear. Telecom had [also] been rude and arrogant in correspondence to the board... [Furthermore,] Telecom had ruled Tiritiri Matangi was the only technically feasible site for the tower without stating whether it had investigated other sites[, and] has provided insufficient information on possible effects of radio frequency radiation on the reproductive systems of wildlife such as the little spotted kiwi.

...The AmericaOne team worried that someone would sabotage the N[Z]-made weather buoy they have been using in the middle of the America's Cup course in the Hauraki Gulf... [to] record... wind and wave data... since they signed up [as a challenger]... The \$250,000 buoy, owned by the National Institute of Water and Atmospheric Research... has been badly damaged by vandals who removed covers, cut wiring and smashed solar panels. Not only is it no longer working, its beacon light is broken, making it a navigational hazard. Police hope to take fingerprints from the buoy and from a screwdriver found in the wreckage. AmericaOne... – ...[whose skipper won after] being 1-3 down... in the challenger final of 1992 against N[Z –] ...paid Niwa \$220,000 for exclusive rights to data from the buoy... At the time, the deal was controversial because it was seen to disadvantage [the '85-member' Team NZ] against one of the big challengers... Niwa... said it would cost \$50,000 to repair the buoy. But it cannot be removed from the water until strong winds, which have pounded the gulf for the past week, subside... [□ '11 challengers have now confirmed their entry for] the Louis Vuitton Cup[series, including '5 from the US' (with 'New York's Young America syndicate having a budget of \$NZ80m – second only to Italy's')] Prada...

The America's Cup is self-indulgent self-play by a minority of rich white guys and it beggars belief that the rest of us have to pay for it. Why did taxpayer-built TVNZ, Lotto and Telecom pour millions into the cup on the spurious grounds that it attracts tourists, attracts boatbuilding orders and attracts interest in our little country at the bottom of the world? Last campaign, we were subjected to Eskimos paddling canoes with television sets balanced on the bow, Indians walking the highlands with TVs atop their turbans. Give me a break – if they did have television in either place, the last thing they'd be watching would have been a no-account elitist yacht race from the other side of the world. Move outside San Diego and even the people of the country that gives the cup its name don't know what it is. The other original racers, England, have just come back into the fold after an absence of many years... If the Sirs from Lipton to... the clothiers from Prada to Louis Vuitton, [as well as] the world giants of computer technology want to burn on a yacht race amounts that could save the starving of a sizeable African nation, that's their prerogative. Why are the rest of us expected to blindly bow down and follow? ...If it's so good at raising money, so brilliant for international exposure, why aren't private companies, multi-national corporates into it? Is the cup bill the reason Lion Nathan's Steinlager sells at around \$35 a slab while Aussie opposite Carlton United manages to sail its Victoria Bitter over here to sell around \$5 cheaper? ...Why not sell the cup, lock, stock and start-gun-barrel competition? The proceeds would buy plenty of children's educational TV and quality drama for the state broadcaster, pay for suitable programmes to help gamblers with Lotto or other addictions[ironically, 'organisers are upset that the TAB is planning to take bets on America's Cup races for the first time in the cup's history')], and allow an upgrade of telecommunication services... The world hasn't heard of the America's Cup. A Canadian... sports sociologist... based at Otago University since 1991... believes only in a country as isolated as N[Z], whose world view was until recently shaped by one television company, could a group of rich sponsors so successfully manufacture and sell such a non-event.

...*History of the Cup*... 1851 – ...AS QUEEN Victoria... watched the 30 m schooner America leave 14 British boats in its wake around the Isle of Wight from the Royal Yacht, Victoria and Albert, [the Queen] asked one of her advisers, "Who came second?" [The adviser] replied: "Madam, there is no second." The Queen was not amused. At stake was the 100 Guinea Cup trophy, made by the Queen's silversmith. The race followed the first World Fair in London which proved the catalyst for the event. American clipper ships and pilot boats had proved popular at the fair and were regarded as the most seaworthy and speedy craft in the world. Encouraged by its reputation, [a] New York business[person] persuaded John Stevens, Commodore of the recently formed New York Yacht Club, to form a syndicate and commission a yacht to compete against Britain's Royal Yacht Squadron for money. The British were prepared to only put up their cup. Skippered by William Brown, America strolled home 14km clear of the first British boat, Aurora. The cup was heading to the N[YYC] and was renamed the America's Cup, where it would remain for 132 years... FOR SIX YEARS, the trophy had been in the homes of various syndicate members. It was even suggested to melt it down to make commemorative medals. But George Schuyler, the youngest member of the syndicate, returned it to the N[YYC], stating his desire to see the cup at stake for regular international challenges... TWO DECADES and an American Civil War later, Britain was ready to stage another challenge... or so it thought. Ambitious socialite James Ashbury challenged the N[YYC] with a schooner named Cambria. It performed poorly against the American fleet, finishing 10th, 40 minutes behind the winner Magic. Even the ageing former defender America, which served as a blockade runner during the civil war, defeated Cambria. Ashbury claimed a contest against a whole fleet was unfair, consulted his lawyers who studied the deed of gift, then contested that the word "match" should constitute one-on-one races. Schuyler agreed. Ashbury was back across the Atlantic the following year... But the Americans had four boats... and held the right to decide on the morning of each race which boat would defend the cup against Ashbury's Livonia. Although Ashbury again complained, [the challenger] proceeded to race and was soundly beaten in the first two encounters by Columbia. Livonia won the third when Columbia suffered steering damage, before the Americans restored their superiority with Sappho winning the fourth and fifth races. Ashbury never accepted defeat and said the cup was his. This was regarded as ludicrous and the trophy remained bolted to its plinth in the N[YYC]. Ashbury returned to Britain, became an MP, then a sheep farmer in [NZ. In the next two challenges ('1876 and 1881), Canadian syndicates were runners-up to NYYC; British syndicates came runners-up to NYYC in 13 challenges between 1886 and 1958. In 1962, an AUSn syndicate came runners-up then, after a British syndicate came runners-up in 1964, AUSn syndicates were runners-up in the next 5 challenges, until the Royal Perth syndicate won the cup in 1983. A San Diego syndicate won the cup in 1987 (when NZ made its first challenge in the plastic K27), successfully defended it against a NZ merchant banker's white elephant *New Zealand* in 1988, and again in 1992 – when an Italian syndicate came runners-up'].

...I DON'T know about your place, but I know one bar and restaurant in America where they... de[sp]ise... the... America's Cup veteran from San Diego)... The Back Street is a watering hole in Darien, Connecticut, once frequented by [the veteran] and not far from where [it] had a substantial home. It's also handy to the yachting havens on Long Island Sound. Last October I breezed in and out of The Back Street for a couple of days and nights. "So you're a Kiwi on holiday," said a regular hanging on to a Millers Lite. "I hope you guys win the America's Cup. [The American veteran] is just a goofy draper,"... A bigger gust was about to come. It hit at the heart of [the veteran]'s old relationship with the N[YYC] and how the veteran, an ambitious Californian, didn't get along with the refined and genteel sailing set. [The veteran, the Millers Lite drinker] said, deliberately lost the NYYC's cup in 1983 (Australia II beat Liberty 4-3) so [the veteran] could win it back for himself and eventually turn it into a money-making machine from San Diego. This is the stuff American myths are made of. But this fact I know as true. On the Sunday after Team N[Z] lifted the cup in San Diego, [the veteran] flew east and holed up at The Back Street bar. There [it] negotiated with a land agent what was to be the successful sale of his Darien home. [The veteran] has never been back. This [inspires hope that next year's series] is... the last time [the veteran]'ll see Auckland too.

...Their days on the water may be all but over, but N[Z]'s most faithful America's Cup yachts, NZL10 and NZL12, have a new job as cup ambassadors. The twin boats from N[Z]'s 1992 campaign... [(which) are still for sale, and among the interested parties is [an AUS]n cup veteran[)]... now sit above a sea of cars and under a sky of planes at Auckland International Airport. The yachts were retired from Team N[Z]'s stable after the Road to the America's Cup last summer and will now welcome tourists into Auckland during the cup regatta. The first arrivals to see the boats as they were being towed into their cradles in the carpark were members of Team [San Diego], whose new cup boat will arrive in N[Z] this weekend.

...As entries go, it was a terrible mess. But there was still something to smile at when NZL57 – one of the yachts bred to retain the America's Cup – took its first tentative steps into the wide world yesterday. Four hours after being loaded on to a big rig in Glenfield, NZL57 finally arrived at the Team N[Z] base in the cup village, just 7km away. In between, the yacht became stuck in mud, was almost banned from crossing the Harbour Bridge... – ...[f]ive minutes from... a... deadline... [for] getting the load over the bridge before barriers shifted for rush-hour traffic... the convoy was pulled over by police and told the load was too heavy[; b]ut the police waved the procession through, with a warning that the trucking company could face a hefty fine... – ...and then... more strife: the hull became jammed in the branches of a tree when the boat reached the American Express NZ Cup Village... Yet the Team N[Z] guys were laughing. Bad luck, they say, is a good omen for Team N[Z] boats. They remembered a similar start to the life of NZL32 before the 1995 cup when Black Magic I fell off its truck and into the mud as it came out of the builder's yard. But the shaky beginning did no harm: NZL32 went on to win the cup... Today, work starts on attaching appendages and deck gear, ready for the launch... [of] their new star... early next month. By November, the yacht will be joined by NZL60, which is still upside down in the builder's yard... ■... Applying racing yacht technology to inflatable boats has landed a Henderson firm a top-secret overseas defence contract. Lancer Industries, which makes rigid inflatable boats, is producing a James Bond-type 7.3m boat for an overseas military operation. [Lancer's t]echnical director... is unable to say who the boat is for or how much it is worth – [but the director]... is excited about the crossover from America's Cup technology to the defence industry. "It will be lighter, faster and stronger than any comparable craft and we're using America's Cup scene technology..." ...The company's edge... is its American broker and agent Axxess, which has relationships with large shipbuilders worldwide and negotiates spin-off deals for Lancer. Lancer is also about to deliver two rigid inflatable[s]... to be patrol boats as part of a contract with the Philippines coastguard... [N]Z... has 80[%] of the world market in inflatable oil recovery barges. This was made possible by the Maritime Safety Authority giving Lancer its first order.

...[the Frog] is quick to draw comparisons between America's Cup yachting and Formula One motorsport. And [it] should know. Coming from France[, the Frog] has a strong regard for... that country's last F1 champion. But the Frog] also has a strong sailing background including a 20-year involvement in the America's Cup as a French skipper in two challenges in the 1980s and for the past 15 years as head of Louis Vuitton's link to yachting's greatest quest. The French luxury luggage company sponsors the challengers' series. While [the Frog] won't be drawn into talking numbers, it's a fair guess Louis Vuitton's involvement in the last series in San Diego cost more than \$30 million. And it's that kind of money that sits comfortably alongside the riches of F1. But there's more to the analogy. Ask [the Frog] who will win the America's Cup in 2000 and [the Frog] quickly answers: "The team with the fastest boat. It's like F1 racing in that respect – the fastest car is more important than the driver. Of course the two have to complement each other but a fast car or... boat will always start with an advantage. That's where the Kiwis have an early edge. They had the fastest boat last time. Can they build on that and keep ahead of the rest in terms of development?" [The Frog] says the teams with the bigger budgets have a better chance. "But it is still possible for a team on a mid-range budget [around \$20m to \$30m] to be competitive..." [The Frog] is in Auckland on another of his whistle-stop tours[, and] will visit the City of Sails every two months checking on developments before returning permanently from his Paris base in September... then... will... head a team that could number as many as 150 who will organise the media centre, marketing opportunities, and an Internet site expected to be one of the biggest in the world once racing starts in October. "There seems to be a feeling the America's Cup doesn't start until February 2000. But it really starts with the Louis Vuitton Cup...,"... The Louis Vuitton Cup involves three round-robin series with increasing points values before the semifinals in January 2000 between the six top qualifiers who are then reduced to two for the finals series... The winner of the challenger series will have to come through four months of competition and as many as 60 races to claim the right to sail off against Team N[Z] for the America's Cup... [Learning NZ] conditions and adjusting to them will be the key... While N[Z] starts as favourite in its own waters... [the America's Cup is] a continual development programme. Just like F1].

...PETER BLAKE is a conundrum. The N[Z] Sportsperso[n] of the Year who doesn't live here. A boy from Bayswater who is welcome in the homes and on the yachts of Europe's richest playboy families. A symbol of local patriotism who is such a global citizen [it] leapfrogged the French, even Cousteau's own family, to become leader of Jacques Cousteau's legendary Cousteau Society. The leader of our upcoming America's Cup challenge who won't even be on the boat. Don't worry about that, says Blake over the slightly echoing line from England, his role... is even more important than if [it] were on the water. Why? Because Blake is determined that, for the first time in the cup's 144-year history, a non-American defender will hold on to the Auld Mug for a second time. As [Blake] points out, A[US], the only other country to win it in the first place, lost it straight back to the Americans... For the next 16 months Blake is taking leave from his job with the Cousteau Society to focus on the cup. By Christmas [Blake] and... his... English-born... [wife] will be installed in Bayswater near his mother (his father died this year)... while... [his son, aged] 11... will move to Kings prep... [and his daughter], now 14 (who spent much of her early life strapped into a car-seat in the cockpit of Ceramco)... will commute from her English boarding school... Getting to this moment has been a long haul. Fifteen years selling his dream for N[Z] yachting through the boardrooms of the country. Five times round the world in the Whitbread until the final, glorious win on Steinlager 2. An [unsuccessful but orthodox] attempt at the America's Cup [in 1992 with NZ's merchant banker] watching his every move, followed by the fabulous outright win on Black Magic. From the start his timing was impeccable. Even before... secur[ing] the cup for N[Z], Blake and his mates talked the starched New York-based America's Yacht Cup Committee into moving the timing of the next challenge back a year. Buying time... [also] ensured the cup coincided with the millennium. Auckland receives four months of yachting fame just as the clocks tick over into the next 1000 years. There's been controversy. No defender series. No public idea how Team N[Z] picks the crew] who will battle to keep the cup. But the extra year has let a record 16 yachting syndicates slap their \$185,000-\$370,000 entry deposits on the table, making this the largest America's Cup ever. [As] Blake says excitedly, "N[Z] will be on the world stage. We'll be in the spotlight." Today, although "we don't talk about our budget," Blake concedes it will be "more than last time [\$15 million] but not a great deal more. And a lot less than the others." In America's Cup terms [NZ isn't invest]ing a lot of money... [to] design and build two boats, wave test their models in Britain – and pay personnel[(in comparison, a 'US syndicate is investing \$US28m to build one boat')]... That way, assures Blake in his authoritative voice, "N[Z] will be better off, not by tens of millions, but by hundreds of millions of dollars." ...A lean and rangy 193cm, with a problem haircut... and... a shyness that is often mistaken for arrogance[, the]... boy from Bayswater Beach who grew up sailing a P Class from the bottom of the garden... has the rare ability to stand back, plot a course, then set [people]'s hearts on fire. Like an ad [salesperso]n making a pitch, [Blake]'s a guy who can sell a dream. Not just to yachties who crewed with him, but to tycoons like [the head of Lion Breweries. As a] long-time navigator... says, "[Blakey] doesn't have fantastic sailing skills, or fantastic technical skills, Blakey has fantastic people skills... If you've got a strong, charismatic leader it binds the whole thing together." ...His father was a Navy... [guy who] built that first P Class for the kids to muck around in. Later, when... [Peter] and his brother... started building their own Junior Offshore Group yachts in the backyard shed, the neighbours imposed a 9 pm curfew... Without it, they'd probably have gone on... [using their] sanding machine... until midnight... Although... diverted from the sea long enough to become a mechanical engineer after... [leaving] school, by 1983 Blake was putting

together his first big sponsorship deal... and taking the helm of Ceramco[for his first round-the-world race]. It was a stunning – if hairy – performance on the big, radical boat. Broken mast on the first leg. Ten trophies including the Southern Ocean trophy. The N[Z Yachtsperso]n of the Year award. Ultimately, Blake lost the race, and those who knew him knew [Blake]’d be back. Blake’s next boat, Lion N[Z], was built like a battleship. Steady but slow, [Lion NZ] came second. Then in 1987... [the brewery tycoon] confirmed that Lion Corp would pour \$6 million over six years to build three yachts and [Blake eventually] set off for a fifth time on the beautiful, red-hulled Steinlager 2. It was a tough race, slogged out against... [a fellow NZer, who was the skipper] on Fisher and Paykel. Blake won every leg, and after 33,000 nautical miles, the race itself by 36 minutes. Then... Blake moved on to the next challenge – the America’s Cup. The lessons of the Whitbread campaigns paid off. Although... 1992 [was a] summer of discontent[, by 1995 Blake] had the formula. After three years of... negotiating the fiendish America’s Cup politics, eye-balling [his opponent from San Diego], inspiring and energising his team, Black Magic sailed to victory winning the cup outright without conceding one match. Says [one of his assistants], “That showed us two things about Peter [– our leader] never stops learning... [a]nd... never gives up.” [His long-time navigato]r agrees: “Blakey’s miles ahead of his time...” ...[the brewing tycoon], now a good friend, who has poured well over \$25 million into Blake and his boats over the past 15 years, considers it money well spent: “The reason we went in was because at the time we [N[Z]] were struggling to define ourselves. We wanted to help give the community confidence to go forward internationally and we wanted the company linked in the community mind with winners.” And Blake delivered. “Peter’s been a great ambassador for N[Z] in a very nice, modest, competitive way.” ...[Blake]’s done better than that, making the *National Business Review*’s 1998 Rich List, with an estimated minimum wealth of \$4 million and a “bright financial future.”

...Sailing hero Sir Peter Blake last night vowed to come to the rescue of the ailing organisation of the late Jacques Cousteau... [who’s] image... has taken a beating, with allegations that the Paris-based Equipe Cousteau run in his name by his widow is virtually bankrupt... Sir Peter, whom Cousteau personally chose as his successor to carry out high-profile sea expeditions for the society and to teach children about the importance of marine ecology... was saddened by the latest problems. When the America’s Cup series ends, [the Team NZ leader] hopes to launch a radical rescue plan to solve the society’s troubles[, and] also expects to make a few enemies... “We plan to get stuck into the whalers and some companies that are doing naughty things to the oceans.” The weekly news magazine *Le Point* says Equipe Cousteau has been brought to the brink of ruin by excessive ambition, poor management, slack financial controls and declining membership. Cousteau’s death on June 25, 1997, at the age of 87, ignited an open war between [his wife] and... the son from his first marriage... [The second wife] took over his empire after the commander made a deathbed change to his will. Both sides of the Cousteau family stridently claim to be the standard-bearer of his legacy. Further problems were caused by last week’s publication of an unauthorised biography by [a] French journalist... who says... evidence [proves] that Cousteau was a closet racist and anti-semitic... [A] letter Cousteau wrote to a friend in 1941 complained that [Jacques – who]... mistreated and even killed sea creatures while staging scenes for his films... [–] could not find suitable accommodation because the city was filled with refugees, including “filthy Jews... [who should be] kicked out.” Sir Peter... understood the supposed anti-semitic comments were made as a cover for the secret work Cousteau did against the Nazis.

...Big Apple III, a 45-footer... sailed by a Team N[Z] crew, ended up top boat in the fleet for the regatta... [as NZ] scored their biggest offshore yachting victory in more than a decade last night, clinching the Kenwood Cup in Hawaii. Kiwi boats G’Net and Big Apple III finished 1-2 on handicap after three-and-a-half days at sea in the final race, to wrest the cup from A[US]. It was the first time since 1986 that N[Z] had won the Kenwood Cup, ranked only behind the America’s Cup and the Admiral’s Cup in importance in the regatta world... [T]he... skipper at the helm of Big Apple III, described the win as “fantastic.” “It’s the first international offshore regatta N[Z] have won since the Admiral’s Cup in 1987... We’ve had a disappointing couple of years. But we were very fortunate to have two new Japanese-owned yachts to sail this time.” N[Z]’s leading two boats finished well ahead of the three A[US]n yachts in the 376-mile race... at 9pm yesterday, while Cloud Stackeree, the third boat, only had to cross the finish line for a N[Z] victory. While the final points would not be known until today, N[Z] had built up a phenomenal 102-point lead over A[US] 100 miles from the finish – after going into the race with an 18-point advantage. The Kiwis had revelled in the 20-knot trade winds on the last day after the fleet had flapped around in five knots for most of the distance.

...[‘NZ has won back-to-back world regatta titles’. In related news, there have been calls] to implement safety regulations for powerboats involved in small sailboat regattas... [after a capsized yachtie was injured after it] was struck by [a] propeller... A former N[Z] Olympic yachtie... said the risk of such accidents could never be eliminated but... support motorboats... [sh]ould be... require[d] to have protective cages around their propellers.

...All hope was lost last night of finding two sailors washed away in the tragic Sydney-Hobart yacht race, swelling the likely death toll to six. Searches continued until sunset yesterday for a [sailor] swept from a liferaft from the sinking yacht Winston Churchill about 150km off Victoria. But last night rescuers conceded there was no hope that the two [sailors] still missing would be found alive. They had earlier in the day abandoned their search for English Olympic yachts[perso]n Glyn Charles, washed off the Sword of Orion on Sunday night. Two [sailors] were found dead on the Business Post Naiad on Monday and two other Winston Churchill crew[members], swept off its liferaft by a huge wave, were found dead in the chilly seas yesterday. Two survivors had been plucked from the raft in the middle of the night... With tales of tragedy come stories of bravery, too. [An air] ambulance paramedic... was being hailed as a hero yesterday after... [swimming] through boiling seas to rescue four crew[members] on another Winston Churchill liferaft. All 115 boats have now been accounted for. Two missing boats were found yesterday – one carrying two injured crew who were taken on board the frigate HMAS Newcastle. In all, 50 sailors were rescued and 74 boats retired. An inquiry will be held into the disaster by the Cruising Yacht Club of A[US]. The race media director... said it would look at boats’ safety equipment and the rescue procedures. “We don’t think many yachts suffered structural damage. But it will look at the way the boats were handled... Having to steer in these conditions would be horrendous. Few of us... would have ever experienced anything like it.”

...[a seasoned NZ yachtie] wanted only to get his battered crew across Bass Strait alive. The round-the-world skipper, who admitted to being afraid as towering waves swept crew... across the deck, sailed Sayonara to win the tragic Sydney-Hobart race yesterday, just failing to break the race record. But no one had thoughts of the record for two days. The 23-[strong] crew... had been consumed by the deaths of fellow sailors on the boats behind them. [The skipper], who was married last week, described the horror on board the 28m maxi as it was swamped by three-storey-high breakers, injuring three crew. “Waves were smashing over the boat... [O]nly... the leeward rail where their safety lines took up... [stopped the crew being washed] off the deck... Two of the... guys spent a day strapped into bunks, they were so badly bruised... When I was steering the boat I was just trying to make it safe for everyone... This is as tough as it gets... If we had known it was going to be that tough we would have thought twice about being there. Anyone who isn’t scared in those conditions isn’t human.” The boat’s owner, [a US] software billionaire... gave an emotional speech to a subdued welcoming party as Sayonara tied up at Constitution Dock... “This is not what it is supposed to be about. Difficult, yes; dangerous, no; dying and life-threatening, definitely not. A lot of us are very upset...” Race organisers decided to scrap celebrations for the line-honours winner. The fireworks were doused, the jazz band muted and the finishline ribbon reeled in. [The m]edia director... said it was not appropriate to celebrate while the search was going on for sailors missing at sea. [The skipper will now head to England for the start of the Whitbread Round The World Race.]

...“I’ve never sailed in a field of this quality... there are more medallists and world champions assembled in this fleet than any other regatta in the world, including the America’s Cup[,” says the NZer who skippered Fisher and Paykel in a previous Whitbread round-the-world. The NZer’s sentiments are backed up by a new Whitbread campaigner (the leader of the San Diego America’s Cup syndicate):] “I think [the Whitbread] could take over from

the America's Cup. In the Whitbread, the boats are the same... you don't have to spend \$40m on design. The courses are set, you know the budget, and you know how much you can give your sponsor. It's a lot better deal."

On the docks of Southampton, [the skipper of the Sydney-Hobart maxi *Sayonara*] is trying to put on weight, [the skipper of previous round-the-world yachts such as *Fisher & Paykel*] is cramming in sleep and [a senior Team NZ member] is trying to learn about his boat. Yet there isn't the usual last-minute rush to get ready for the first-leg start of the round-the-world race at 1am on Monday (NZ time)... "It's really quiet compared to other starts. If you go back a few races ago, there would be a mad panic right up to the gun, getting your boat ready... This time most of the boats have been ready for a week – it's all so much more professional now. Today, you spend the last week getting your sleep up, calming down and preparing mentally for any curve-balls in the form of protests." ...Maybe that is because it is a race dominated by laid-back Kiwis. None of the 10 boats in the... Whitbread Round The World Race 1997-98... fleet will fly a N[Z] flag. Yet there are N[Z]ers on all but one of the W60 yachts. There are 36 Kiwis in all, and that number will match the N[Z] head-count in the last Whitbread – which had three Kiwi boats – if [a Kiwi weatherperso]n can avoid being sued by former employers EF Language and head for Cape Town on board [the Team NZ member]'s America's Challenge. All but two of the boats are designed by [a NZ]er... and four of his [fellow Kiwis] will helm them – five when [a NZer joins one boat's all-gal] crew for two legs. No one can equal the Kiwis' experience in circumnavigating the globe – [the ex-*Fisher & Paykel* skipper], on Merit Cup, will be sailing his fifth Whitbread... [*Sayonara*'s skipper thought his boat] was ready to go until the race officials pulled him up. It appears Toshiba, the boat [the Kiwi and the San Diego yachtie] will sail together, is 70kg underweight. With the crazy weight-saving extremes the campaigns go to for the sake of speed – no door on the toilet, no covers on the books – the boats must check in above 13,500kg. [The Kiwi] wants to put more lead in his keel – some of the other crews don't want him to. No changes can be made to the hull or its appendages in the final week... [The skipper of] America's Challenge... had never seen the boat... until a little more than a week ago, when [the Team NZ member] finally signed up. There has been a frantic final preparation for the boat since it arrived in England less than a day before the deadline. [However, many] on the waterfront say [America's Challenge] will benefit from the new points system, where time differences no longer matter. A poor start may no longer mean a bad race... [● The] potential ratepayer contribution to the Auckland stopover for... [the] race has risen from \$120,000 to \$170,000. And the Auckland City Council has agreed to run the event, in January and February... next year... because of a lack of interest from the private sector and fear of the city's losing the event. A council staff report says other potential managers were worried by the short time left and because the "returns do not appear to justify the risk." It also says the 1993-1994 stopover was estimated to be worth more than \$16 million to the local economy... [although that] stopover, run by the Whitbread N[Z] Trust, was underwritten by the Auckland Chamber of Commerce, which incurred debts of nearly \$1 million. However, the chief executive[of the chamber] yesterday described this as an "investment to keep the event in Auckland," rather than a loss. The chamber did not want to be involved this time as "we are not an event manager." ...The council expects to spend up to \$600,000 on the event, with income, in addition to its own \$170,000 subsidy, comprising \$250,000 from Whitbread for the village naming rights, plus other sponsorships, commissions and concessions... The extra \$50,000 from the council had been deducted from its 1997-1998 budget for the... America's Cup office, which is now \$450,000.

...Kiwis endeavour to leave world in [their wake. NZ] will have a diluted presence in the global waters when the Whitbread round the world yacht race starts off Southampton tomorrow. But it's a fair assumption a Kiwi will be among the winning crew when the odyssey works its way back to Britain about May next year. With no money on offer in N[Z], leading Kiwi sailors have had to go offshore for sponsorship and crew positions aboard the 10-boat fleet which will be restricted to the Whitbread 60 class. Maxis are banned. The biggest Kiwi effort will sail under the flag of Monaco... Merit Cup contains the bulk of [its skipper's NZ] Endeavour crew which won the 1993-94 epic... [Its skipper, a maxi specialist] now finding his feet aboard the Whitbread 60s, is again among the favourites... The weather forecasts for the start are for light winds and for the first few days the fleet will be sizing up the opposition... A week out from the start navigators will be positioning their yachts for the run through the north-east trades. At that stage the apparent distance to the finish might not in fact reflect the relative position of the fleet... The 7500-mile leg ...to Cape Town... is expected to take 31 or 32 days. [Merit Cup will] have food for 33 days[('Whitbread sailors burn up 5000 calories per day')]. The first leg of this race has never been sailed before. Cape Town has not been a stopover port since 1985 and [the fleet] have never had marks to round before... The... two... marks... off South America... serve to make the leg longer. [Incidentally, anti-smoking group Ash has complained that 'the Whitbread race wouldn't occur without the millions of dollars of sponsorship from tobacco companies' (this year they're funding Merit Cup, Swedish Match and Silk Cut).]

...The round the world race can't be won in the first few days – but it can be lost... [The] skipper of Silk Cut this time, knows that. In 1993, only a day out from the start... [his] maxi Fortuna... fell into the trap of keeping up too much sail for too long in too strong a breeze. It's a temptation every Whitbread skipper faces when there's a good breeze soon after the start. No one wants to be the wimp who reduces sail first. The big wind that took [Fortuna]'s mast... almost took... [NZ Endeavour's] too... Fortuna was chasing [NZ Endeavour] hard and the Whitbread 60s, revelling in the conditions, were disappearing over the horizon... [NZ Endeavour's skipper] had been below only a few minutes when [his watch captain shook him awake to say that the watch captain] didn't like the look of the mizzen mast and... thought [the crew] should shorten sail. [His skipper's] answer: "It's up to you, you're the watch captain." Back on deck [the watch captain] made the brave decision to reduce sail. Three minutes later Fortuna lost her mizzen mast and her race was effectively over. That's a cruel reward for three years hard work.

...Two Kiwis already written out of plot... The drama on the high seas has turned into a soap opera in the first ad break. [A Team NZ member's] victory dreams have been shattered by a Mexican who's run off with the money. [Another Kiwi and his San Diego racing partner] have broken up – but did [Toshiba's Kiwi co-skipper], now in the jungle, jump ship or was [it pushed? Will the crew of Merit Cup] starve when they are put back to sea? It's called *Around the World in 120 Days* and part one is set against the beautiful backdrop of Table Mountain in Cape Town. [Two NZ]ers... have been killed off after the first episode in the nine-part serial. When they were at sea, the worst dramas which befell the Whitbread fleet were flotsam (a floating swimming pool), fauna (an angry whale) and food – lack of it. On shore, all hell has broken loose. Twenty-four hours after [the other Kiwi] let the yachting world know [it had quit the San Diego America's Cup yachtie's Toshiba, the Team NZ yachtie] and his eight Kiwi crew had no choice but to pack their bags when the America's Challenge camp folded. It appears the problems come from an agent who arranged the campaign's four Mexican sponsors. Financial arrangements for the challenge appear to be in doubt. [The Team NZ yachtie] said that as skipper [it] was not privy to the financial arrangements. But [the NZer] was angry about the boat's forced withdrawal. "The whole thing's over, yet this boat had huge potential... The crew were getting on very well and there was an opportunity to win this race." Ten days out of Cape Town [the NZer] knew there were money problems. There are still faint hopes that the camp can be resurrected... [However, the Team NZ member] is booked on a flight to France on Sunday. A few [of his team-mates] are talking with other syndicates who need extra [crew] for the next leg, while the others are heading back to N[Z. Toshiba's Kiwi], meanwhile, has headed off on safari, leaving behind rumours that half-a-dozen crew members had threatened mutiny if [it] had stayed for leg two. In the wake of these drama's, [the crew on 2nd-placed] Merit Cup are debating what to pack for the next leg in just over a week[(EF Language leads the table with 125 points to Merit Cup's 110 – the two remaining US-backed boats, Chessie Racing and Toshiba, are 5th and 6th with 72 and 60 points respectively)]. One thing's for sure – they won't be so stingy with the food again. The crew are having their first days off since arriving in Cape Town. Within a day of docking, they were back on the water testing sails before the boat was hauled out

of the water. They found nothing alarming. Unlike the Toshiba crew who discovered their mast had a “wide-mouth frog” crack – it had almost sheared in two. While many of the American and European sailors have headed home for the break, there are huge teams of shore crews toiling on the boats, like Formula One racing pits. “I can’t believe how much more effort is going into these boats compared to four years ago,” said [Merit Cup’s skipper]. “Every fixture and fitting is being stripped right down. One break at sea can cost you an arm – and the leg.”

...It could be three months before the round-the-world sailors feel their fingers and toes again... as the damaged nerve endings repair themselves... Snow and sleet are pelting the Whitbread fleet as they fly through the Southern Ocean in sub-zero winds, straight off the Antarctic ice. Frostbite is niggling at the digits of the sailors who now do not go on deck with any part of their body uncovered[– but full] face masks, goggles and polar gloves still do not keep them warm or dry enough... [The defending] race champion... says the most popular job on board Merit Cup is making coffee... Spare a thought for... [the Kiwi bowperson] who was dipped into the sea to grab seaweed from around Merit Cup’s keel. Yesterday was a frightening – and exhilarating – day for the boats at the front of the fleet, with less than 2000 miles to the second-leg finish in Fremantle. Leader Swedish Match suffered 24 hours of freak waves, snowstorms and 60 knots of wind. The boat screamed along at 31.5 knots. “We had some really scary rides that we will remember for a long time,” [the boat’s] co-skipper... said... [● A Kiwi who is] usually happy in an Olympic dinghy, is about to sail around the world-non-stop. Thankfully it will be in a boat a little bigger. The 23-year-old is the sole N[Z]er in an all-[gal] crew planning an assault on the Trophee Jules Verne next month. Their boat has already taken a N[Z] crew, helmed by Sir Peter Blake, around the globe in record time... [The 23-year-old, who] had never sailed anything... bigger than her single-handed Europe dinghy before this... has been talking to the [NZers] who sailed the 28m catamaran when it was Enza, and set a world record of 74 days for the round-the-world trip... The record now stands at 71 days and 14h 18m 8s, set by... [a French crew] in May this year... “The guys are telling me it will change my life – but I don’t know if I want that... I know it’s going to be cold. But my biggest fear is whales around N[Z].” The yacht, now 16 years old, has been re-named Royal & SunAlliance and is painted a striking blue and yellow. Her skipper... signed a £4.27 million sponsorship deal with the life insurance group for the circumnavigation attempt. [The Brit] skippered the first all-[gal] Whitbread crew, Maiden, in 1993. The cat’s 11-[gal] crew have already raced across the Atlantic...

[A pair of Kiwis] – when told they were leading the trans-Atlantic rowing challenge – jumped about so much it was feared they would end up in the ocean. The long-distance [rowers]... had no idea of their race position when told off the Barbados coast yesterday morning they were... 800km ahead of their nearest rivals and heading for a world record crossing of 40 days, cutting 33 days off the old time... set... in 1986... [T]he sole member of their support crew, said the [NZers] had gone ballistic... Since the October 12 race start in Tenerife in the Canary Is the rowers had gone 40 days without talking to anyone[else (and at one stage also ‘didn’t talk to each other for 3 days’). While some competitors had computers... and long-distance telephones... which allowed them to know their positions... the [NZers] were the low-tech, low-budget crew in the race. They gambled on a lightweight boat for the mind-bending 2900 nautical mile slog and it paid off... The [NZers] were to finish overnight... Their quick crossing left race organisers scrambling to arrange finish line facilities at the Port St Charles hotel-marina complex... [The race] chief... was in the midst of pacifying his wife in England. On Tuesday, [it] was supposed to be helping his wife shift to a new home in the English Cotswolds... “They have thrown everyone up the bloody spout... – typical of [NZers]. My house move was supposed to coincide with them still being at sea. I had to leave my wife... [who] is furious... back there... [My wife] thinks the race is fantastic but... won’t be here...” ...Race organisers have shouted the [NZ] team three days accommodation at the hotel-marina complex. Their apartment is just metres from the water – and very different to their 7.1m long and 1.9m wide home of the last 40 days... The Hamilton-based [half of the pair] was the driving force behind the [NZ entry. The rower] mortgaged his home to help finance the venture and quit his job... [scraping] together the entrance fee 24 hours after the entry deadline following a last-minute visit to... [a Hamilton businessperson, who] initially loaned the pair money, then indicated they only had to repay half the amount. But before the race start [the sponsor decided they had to repay] nothing... The victory confirms the pair’s grit and determination. At the start line they had been spooked by their hi-tech rivals – ...[they] hadn’t realised outside communication equipment was allowed. The extra weight obviously cost the other racers dearly.

...[the pair of NZ rowers] almost came to grief on the first and last nights of their record-setting... – 41 days, one hour and 55 minutes... – ...trans-Atlantic row... [A]fter just four hours... they were hit by a massive breaking wave which crashed over their seven-metre fibreglass boat and snapped an oar. They had a spare. On the last night, another huge wave swamped their cabin and had them surfing sideways... For about a quarter of the race... the sea was glassy flat with warm starry nights. In the last half, they spent another quarter... worrying whether fork lightning was going to hit them... Yesterday [the NZers] saw the computer tracks of each boat and noted how theirs was the straightest, by far. “We were very vigilant watching the compass...” ...They hardly talked at sea, not out of spite, but because they were too busy keeping strictly to their row-eat-sleep routine... When winds and sea whipped up they both rowed because they believed their competition wouldn’t. Only for three days did they use their sea anchor... The official prizegiving is this weekend, even though the second-placed of the 24 surviving crews is not expected until next week... The[NZers had] loaded up with freeze-dried meals... They did not fish although marlin swam beside them and they were amazed to find, in the middle of the ocean, birds, some of them landing on the boat for a rest. They were disappointed by the amount of rubbish in the Atlantic and... admitted apologetically that they contributed by dumping food and anything else they thought surplus... [One of them] lost 8kg and [the other] 12kg.

...after completing their... victory, [they]... were displaying a healthy dose of Kiwi ingenuity. For winning the gruelling race... the [NZ]ers won a 250 litre barrel of rum. A few days later they won another... when they took out an around Barbados yacht race. The[y] decided to give one... to the people who helped them. The other fuelled a fundraising party... [that] raised \$2000 – a sum which they needed to pay their phone account... [They now] face another heavyweight challenge – the All Blacks. It seems certain the race-blitzing rowers will be nominated for the Halberg Awards N[Z] sports team of the year honour... Without... [the rowers]’ victory, the All Blacks would have been certainties for the award... Some sporting purists may question the trans-Atlantic event, but the Halberg Trust executive director... has no doubts the rowers deserve to be nominated for the teams award. “As a personal point of view, I would put their achievement in the same sort of league as the Whitbread round-the-world yacht race.”...

A[n AUS]n... was saved by his round-the-world crewm[ates] yesterday in a dramatic midnight rescue from the choppy waters of Bass Strait. Innovation Kvaerner’s bow[perso]n fell overboard during a sail change in 24-knot winds and spent seven minutes in darkness in the sea before being pulled to safety. The Sydneysider’s unexpected dip came as the action hotted up in this previously uneventful third Whitbread leg between [Fremantle and Sydney]. Only 20-odd miles separated eight of the nine-strong fleet last night in the final burst to Sydney. The first boat is expected in port tonight but who it will be is a mystery. Kvaerner, the overall race leader, lost little ground during [the] rescue.

...The first of a yellow rubber-duck fleet that will fill the Viaduct Basin during the Auckland stopover for the Whitbread round-the-world yacht race gets a taste of the waterfront today. About 10,000 \$5 ducks will be raced – propelled by winds and currents – to raise funds for Project Jonah.

...Auckland is preparing to welcome the Whitbread fleet to the Viaduct... with four weeks of partying. The first yachts should arrive from Sydney on January 7... but festivities begin on the 4th, with jazz, Polynesian, Latin and Irish music and dancing. T[VNZ] coverage of the Tasman leg... will be shown on a large screen at the basin. The best vantage points for the sprint into Auckland will be North Head... and Tamaki Dr... [By the way, British gal] MPs were given leave from the House of Commons yesterday to farewell... [the] crew... about to make an assault on the non-stop round-the-world yachting record. The all-[gal] crew... will be on alert... tomorrow for a start from Plymouth when the right weather comes along. - 1997

ANYONE have \$21 million to spare? That's what it will take to get[a NZ] ocean racing maestro... on the start line for an event that could reshape the future of sport. Known simply as "The Race", the anything-goes non-stop circumnavigation of the world, due to start at midnight on January 31, 2000, could be the most exciting thing to happen to ocean racing... The cost is "a big ask"... as "that sort of money isn't available in N[Z]". But the Kiwi, who [is currently skippering] Merit Cup... in the... Whitbread, gives the novel race a ringing endorsement... The Race already has 12 "confirmed" participants... [– including an] American millionaire and adventure racing guru... [who] has already unveiled his mammoth Auckland-built yacht PlayStation, at 32 metres the world's biggest ocean-racing catamaran... [–] and 16 "potential" competitors. But [the Kiwi] believes only around six to eight will eventually make the start, in Barcelona, Spain. The Race will finish in Marseilles, France... [The Kiwi] has a busy year ahead. As well as [finishing the Whitbread and] going on the funding trail for The Race, [it] has the... Laser masters (over 35) world championships in Melbourne... and a year's contract with his Merit Cup sponsors which will have him commuting between N[Z] and Europe. Further down the line is another Whitbread campaign... [T]he round the world race could dovetail nicely with the nonstop French event, and [the Kiwi] would love to compete in both... Another N[Zer – whose America's Challenge pulled out of the Whitbread –] is also trying to put together a campaign for the event...

[An 82-year-old] worries about her son... and his wild adventures. [Mum]'s coming up from New Plymouth this weekend to bid him farewell as [her son] sets off on the double-handed Round North Island race from Auckland. Tales of [a French single-handed round-the-world sailor] flipping upside down in the Southern Ocean won't have allayed... [mum]'s worries, either. So what does [mum think of the 49-year-old]'s plan to build a \$US6 million 140ft trimaran and sail around the world non-stop? "Mum says 'I hope you don't get your money'," [the son] laughs. "I don't tell her half of my hare-brained schemes." [The] veteran of three Whitbread round-the-world races, is getting more adventurous. Like[a] fellow Kiwi skipper... who [is currently skippering] Merit Cup... in the... Whitbread[the son]... is devoting most of his days to searching out big dollars... somewhere around \$US10 million... to support his dream to compete in The Race... [His late]st round-the-world race campaign folded after the first leg through dodgy funding, but [the son] was only employed as the skipper, not the fundraiser. "It was disappointing because the boat was very good. But it was an advantage in some ways because I could come home and get this project underway." [The son] already has plans drawn up for his dream boat... An English designer has worked on it with help from French engineers. The French are experts on multihulls... "We could start building this boat in two weeks..." In the meantime, [the son] is keeping his hand in on the water... [by pairing up with a] fellow Auckland... who sailed with [him] to win the 1997 Fastnet race in England[for]... the Round North Island race starting on Sunday... "This race is probably the biggest national event on N[Z]'s yachting calendar these days," said [the son], who first competed in it 17 years ago. Twenty-three yachts will leave Auckland on the first leg to Mangonui in the Far North... [The race will take] eight to 10 days.

...[the '2nd Global Challenge yacht race, during which identical boats sail around the world in the reverse direction – each boat is crewed by a professional sailor and a group of volunteers (who will pay \$100,000 each for the privilege of participating in the 10-month-long event) – is scheduled to stop at Wellington early 2001.' While on the topic of] round-the-world yacht race[s, you]... can't compare the old days of the... [Whitbread] to the race of today. It's like measuring the Paris-Dakar Rally against a Formula One grand prix. No longer is the Whitbread an odyssey for bucaneeers and paying passengers wanting to taste life on the high seas. Today it's a professional venture... It is nothing like the original race 25 years ago, except that the boats still go round the world in the same direction. When the first fleet left Southampton in 1977, they were crewed by military [personnel], using it as part of their adventure training... [although the] boats were decked out with the comforts of home – fridges, stereos, electric flushing toilets. On Lion N[Z] in 1985, the crew enjoyed two hot water showers, a microwave oven and a table to eat from... [The only person] to win the Whitbread twice, would reward his crew from a cache of liquor stored under his bunk. Today, the barren hulls house... [the minimum of amenities]. Crew eat infamous freeze-dried everything from their bunks, hanging from the sides like shelves. They don't wash. If they get wet, they dry themselves with their tee-shirts. No one is bemoaning the new way of life. Doing away with comforts is part of the extremes of weight-saving measures campaigns go to... The first boat to snare a sponsor had a campaign budget of £30,000. Today, it's over £10 million to get a W60 on the water... When the boats cross the finishline in Southampton in June, the Whitbread will no longer exist. A change of name, to the Volvo round-the-world race, will help the masses to understand that the adventure is now indeed, the grand prix of sailing.

...The round-the-world yacht race may sail right past Auckland in 2001 – and if it bypasses the City of Sails, it is unlikely ever to return. Salvaging the stopover could depend on how many Kiwis buy a Scandinavian brand of car... Volvo... has made it clear that all bidders will be in the running as stopover ports. Auckland, the most popular port-of-call on the round-the-world race since 1977, has not been guaranteed her place on the route and some say it is looking shaky... [T]he City of Sails is up against stiff opposition from Fremantle, Melbourne and Sydney for the Oceania stops. In Sydney's favour is the novelty aspect – Volvo are interested in the idea of the fleet joining the Sydney-Hobart race. [NZ's f]ive-times round-the-world veteran[who skippered Merit Cup to 2nd place in the last race], said the threat of the race bypassing Auckland was very real. "Every four years you hear 'the race isn't coming here.' I never believed the stopover was threatened, but this time it really is... Now that Volvo have taken over the race, there's a commercial issue. Whitbread never worried because they didn't sell their beer here. Other countries are making bigger plays for it than ever before, meaning more dollars are being put in. Auckland will have to play that game to stay in the running." Another Kiwi round-the-world skipper... said... "It has to return. Auckland has kept the race alive for so many years... For commercial reasons, maybe Sydney would sell more Volvo cars. But 100,000 people come down to see the boats in Auckland – Sydney last time was a complete and utter flop. Surely the razzamatazz of Auckland must be better for the race?" So far, the Auckland City Council is the main backer for the Auckland bid... "We're arguing that we have a \$120 million purpose-built facility here which we challenge [Volvo] to find anywhere else in the world."

...Encircled by toys in the basement of... [an] Auckland home lies a mass of maps plotting [the homeowner]'s latest round-the-world odyssey with [the skipper of Merit Cup]. This weekend the navigator and skipper will leave N[Z] for France to launch the new catamaran they plan to sail non-stop around the globe in The Race... Club Med – with its two huge hulls and towering 40m wing mast – will be launched [next month]... The yachting world will hold its breath when [the] boat hits the water. So far the other multihulls launched for this race have... crashed... Is [the skipper]... worried? "Yes... There's nothing to suggest that we won't have problems too. In fact, I guarantee we will have. If we don't then the boat is built way too heavy. But hopefully, with the experienced team we have, we can minimise problems." And they can learn from the mistakes of others. [A]British sailor... made the front page of almost every English newspaper last month when the left bow snapped off his catamaran, Team Philips, on the tow out into the Irish Sea. It is under repair... Polish 90ft cat Polpharma-Warta lost its rig a day away from San Salvador, crossing the Atlantic from Cadiz... PlayStation, the Kiwi-built cat owned by[an US] millionaire adventurer... is in Charleston waiting for a second crack at the transatlantic record. In its original attempt, the boat had to turn back to port on the first night when things started breaking... [Incidentally, an Englishperso]n... plans to launch his bid to row solo to South Africa from Bluff, at the bottom of the South Island, in just over six months. The 57-year-old hopes to be the first to complete the 21,000km journey crossing... via Cape Horn, expected to take up to a year... His project started with a budget of about \$1.5 million, but has since been scaled down... [T]he father of two... [recently] completed a solo crossing of the Pacific from Peru to A[US]... The civil engineer... also... competed in the transatlantic rowing race in 1997 in which [the NZ pair]... set a record for the crossing.

...[NZ's] trans-Atlantic rowing heroes... could be rivals in a solo version of the epic crossing. A French consortium is putting together the event, this time across the Atlantic's infamous northern route. The plan is to race from south of Boston to the Bay of Biscay in France in May next year. The Kiwi duo, who rowed their way into N[Z] sporting folklore... have invitations to compete and are tempted to try the next level... [The Auckland half of the duo] was definitely interested in starting should the event check out... "I... would need a sponsor. You're probably talking around

\$50,000 for that..." [The Hamilton half], who is in the process of putting together a book on their double-handed crossing, said the concept was a huge temptation, but one [it] could struggle to fit into his schedule... [The Hamiltonian] confirmed there was interest from the French entrants in the race to buy the... boat[that the NZers used for the southern route crossing. However, several NZ] consortiums are keen to keep it in this country.

...Phil Stubbs died knowing [that the Auckland] was in line for a N[Z] Order of Merit honour. [Stubbs] and his partner in transatlantic rowing... had discussed the forthcoming accolade before Stubbs' fatal plane crash... The pair had been organising separate craft in the[next] rowing race traversing the Atlantic, but were discussing the idea of a two-boat challenge... Stubbs, aged 36, died when the light plane [the Papakura police officer] was piloting crashed after takeoff on Karekare Beach, west of Auckland... Members of Stubbs' family declined to comment yesterday... [Stubbs had] held many national titles for surfboat racing and rescue and had represented N[Z] in surf lifesaving. [Stubbs] had also captained the national dragonboat team to third place at the Vancouver world championships in 1996.

...rowing's equivalent of the Concorde... returned to... [NZ yesterday after] his convincing world championship single sculls title defence in Canada... [The rower and his wife], who was an outstanding fifth in the [gals'] world... single sculls final, received a tremendous welcome at Auckland International Airport... and [a similar welcome] later at a Ranfurly Shield parade at Rugby Park, Hamilton, before the Waikato-Taranaki challenge. [The 24-year-old indoor-rowing world record-holder] damaged both his single sculls boats before the worlds and opted to row last Sunday's final, where [the Kiwi] set a world-best time and blitzed all his Olympic rivals, in his practice boat... Produced by Rout's Kiwi International Racing Skiffs Ltd, the... first... local skiff[raced] overseas... incorporated ideas from [the rower], his wife and the boatbuilder. [The Kiwi] opted for the local skiffs as a result of their comfort and rigidity... But the greatest confidence would have come from the way [the Kiwi] powered away from his rivals at the 1250m mark to clinch back-to-back world titles... [Speaking of NZ rowers, another Hamiltonian] has sailed into stormy seas by revealing in a book that [it] feared rowing partner Phil Stubbs was going to kill him during their record-breaking transatlantic crossing in 1997. The comment has angered friends and Auckland police colleagues of Stubbs, who died... in December... Angry letters and phone calls to the *Herald* yesterday accused [the Hamiltonian] of "picking on the dead" and saying things "in order to sell a book by a [hu]man whose very success has depended upon the person being maligned." In his account of the 3000-nautical-mile crossing, *The Naked Rower*, which went on sale yesterday, [the Hamiltonian] said the relationship between the two got so bad during their 41 days at sea that... "I really had fears for my life at some stages... It may have been paranoia, but I wondered whether Phil was going to throw me overboard... That's how bad things got." A close... friend of Stubbs... said: "To suggest that [Phil] would be capable of murder defies belief..." [The friend] said Stubbs told friends [it] was disappointed that [the Hamiltonian] had injured his shoulder during the crossing through "overuse, which was totally inexcusable in a person who was meant to have trained hard for the event." [The friend] added: "It says much for Phil that [it] chose not to publicise what happened during the difficult days of the row." But... the... Hamilton[ian said it] was only trying to portray his feelings honestly and... was "not having a go at Phil..."

...When [two NZ]ers... arrive in Barbados today, they will make history as the first [gal's] crew to row across one of the world's oceans. After 50 days at sea, [they]... will complete the remarkable feat of rowing across the Atlantic and finishing fourth in a fleet of 34 boats crewed by [guys. The gals] have made the 3000-nautical-mile journey in a "veteran" boat – Kiwi Challenge, winner of the last transatlantic race with Phil Stubbs and [his Hamiltonian rowing partner]. Last night, the [gals] had... 40 miles to the finish, where the race winners – [the NZ guy pair (one of whom was a late replacement for the Hamiltonian, who 'broke his hand – by punching a guy who was assaulting a gal' – just days before the start)] – have been waiting for the past week... There was a tinge of disappointment for the Kiwi [gals], who had hoped to nab third place but were beaten to the line by... Belgian brothers, expected to finish during the night. It has been an intense battle between the two boats throughout the entire race – at the midway point, the [gals] saw the Belgians' mast light on the horizon. [The gals] have been coaxed along by the N[Z] guys' crew, who beat the A[US]ns on Freedom by three days... Unlike the [NZ guys, the gals] have had favourable weather in the final days of their voyage, pushed into port by trade winds which deserted the leaders. The only other [gal] in the fleet, [a] British solo rower... is still 1800 miles from the finish – expected home in late January. The [Brit's rowing partner (and boyfriend)] gave up early in the race, but the gal decided to carry on alone. The [other solo rower in the fleet, [an] English journalist... withdrew yesterday, suffering from exhaustion. His boat was burned at sea.

...Fire ripped through the... world's biggest ocean racing catamaran... yesterday... The extent of damage was unclear last night... [A] tourist catching some sun... heard two small explosions, then saw crew members scrambling from the starboard cockpit and forward hatch, seconds before flames shot out. The crew tried to fight the blaze with extinguishers but were forced back by the heat... [F]irefighters... took... 10 minutes to bring [i]t... under control... then flooded the hull... An attempt to break the record for crossing the Atlantic... may have to be put off because of the fire... putting the immediate plans of the... boat in doubt... In March, [Playstation] set the record for... distance travelled in 24 hours – 580 nautical miles.

...Somewhere in the middle of the Atlantic, [a NZ]er... last night became the fastest yachting skipper on Earth. [The NZer] shattered the world speed sailing record on the debut journey of his new super-catamaran, Club Med. In 24 hours, the cat sailed 625.7 miles – 45 miles further than the existing record... The boat is also well ahead of target to set another record on this trek, following Christopher Columbus' route of discovery, from Cadiz in Spain to San Salvador. The east-west transatlantic record is 12 days 12 hours, and [Club Med] is already a day ahead of schedule to crack it. Club Med's... 30 knot... speed is polled on land through a satellite system – the 24-hour record still has to be ratified by the World Speed Sailing Record Council before it is official... For [the boat's skipper], in his first multihull adventure, the record run was a poke in the eye for "all the doubters who thought this boat couldn't handle it." The 110ft (33.5m) catamaran... has so far suffered only a small crack in the front beam... Among the three Kiwis in the 14-[member] crew is... a... boatbuilder... who will repair the crack... with glue... once the boat slows down a little.

...[an] English skipper... refuses to curse the radical round-the-world catamaran [it] had to abandon in storm-tossed seas – instead [the skipper] is thanking it for saving the crew. Back on land yesterday after being rescued by a ship in the North Atlantic, [the skipper] praised the 38m boat's design. "I have never seen a storm like this before... Team Philips is the only reason that we made it through the storm. Otherwise, we wouldn't have been here, I'm sure." The boat has been heavily criticised for the structural problems which plagued it since it was launched in March... [But the skipper] was adamant that the revolutionary hulls, designed... to slice through waves, kept the seven-m[ember] crew safe... The crew arrived uninjured in Halifax, Canada, on board German container ship the Hoechst Express, which answered their mayday call on Sunday night... The catamaran, which cost \$14 million, is still floating somewhere off the coast of Ireland. [The skipper] said the central pod of the boat, from where it is steered, was almost crushed by battering waves. When the crew became concerned that they could not control the boat and with a second storm on the horizon, [the skipper] sent out a mayday. The boat was further damaged during the rescue, as it collided with the container ship. As is tradition among sea captains, [the English person] was the last [crew-member] to leave his boat... [The skipper], who flew back home to England last night, would not be drawn on the future of Team Philips... In the meantime, the six boats still planning to start The Race... are all at sea... [A NZ] skipper... is driving his catamaran, Club Med, in an organised matchrace with sister yacht Innovation Explorer on the delivery voyage... to Spain.

...The largest sailing superyacht built in N[Z] is finished and awaiting the owner taking possession. The 53-metre ketch Salperton, built by Henderson-based Alloy Yachts, is worth about \$30 million. Alloy's] marketing director... is discreet about who is playing the bill. "It's a European owner," is all [it] will say... The [managing director]... says about 350,000... work... hours have gone into the yacht... [designed] for up to 11 crew.

...Above the waterline, the world's biggest racing catamaran is a blaze of colour... But down below, it is... as dark as night. The... black carbon fibre... interior of the twin hulls has not been painted – paint adds weight... They are sombre living quarters for the crew... [Around 15%] bigger than Enza[, the]... monster multihull built in Auckland for [a US] millionaire adventurer... is hi-tech to the core... Inside there are four bunks in

each hull, two heads [toilets to the uniformed], a galley in the left side, a navigation station in the right. Between the hulls there is nothing but netting – and a 45m mast from which will fly more than 1000 sq m of sail, enough to cover five houses... [One PlayStation NZ crew member] is a 55-year-old software business[person] born in Waikanae but now living in California. [The NZer] has... broken six world sailing speed records with... [the adventurer, who now] wants to make an assault on... The Race, which starts on New Year's Eve, 2000. Yesterday, [the adventurer] was flying in a hot air balloon over Uzbekistan – narrowly avoiding Iraq. But his face was plastered across a row of big-screen televisions at... the [Viaduct Basin]... spouting a pre-recorded message... "The whole process [design and building the boat]... t[oo]k... exactly four years..." ...Construction of the boat cost \$8 million. The programme's budget is somewhere around \$2.5 million – each year.

...The pursuit of one of aviation's last frontiers – flying a hot-air balloon around the world nonstop – was briefly a head-to-head race... In St Louis, [PlayStation's] millionaire adventurer... lifted off from Busch Stadium, on his fourth attempt to circle the globe. And in Rochford, Illinois, [a second adventurer] left in his white balloon from a 91m-deep quarry. "See you in 10 days," [the second adventurer] said. But three hours later [the second adventurer] was forced down when his balloon lost its helium gas... Anheuser-Busch, a US brewery in St Louis, Missouri, has promised to pay \$1.9 million to the first balloonists to circle the globe non-stop. Under the offer, announced in November 1997, the successful claimants will receive \$960,000 and the remain[der] would be donated to the charity or non-profit group of their choice.

...It was tempting to allow the latest round-the-world balloon fiasco to go unremarked because what took place was just a repeat of the same old story: a promising takeoff followed by an ignominious deflationary spiral into the sea. We've seen and heard it all 20 times before and it does not improve with the retelling. But then one of the balloonists, soggy from his unscheduled dip in the Pacific Ocean off Japan, let out enough hot air to re-inflate his crumpled flying machine. "I'm an engineer, I'm not an adrenalin freak," said [the balloonist], fending off suggestions that... his ilk were a danger to themselves and others. "To me the whole challenge was about building something, designing something, using my skills to... make it as safe as possible and to enjoy the experience." [His] admission that around-the-world ballooning is safe cries out for a response because everyone else engaged in this form of balloonacy says it is the last great aviation adventure and adventures are, by definition, dangerous. Circumnavigation of the globe dangling under a canopy of hot air is not a real adventure. It's just an escapade which is a waste of time and money and it's time Governments put a stop to it. But keeping a bunch of balloonatics anchored to terra firma is not as easy as it might appear. Just ask the Chinese. They have repeatedly made it clear they do not want hordes of balloons cluttering up their skies, but the balloons just keep on coming. Perhaps the Chinese have the wrong approach. Rather than trying to stop the balloonatics by edict, what we should do is introduce an element of danger to turn their escapades into real adventures. One possibility would be to attach a heavy ball and chain to the ankles of all those who set off to fly a balloon around the world. It would encourage all those timid souls who like their adventures safe to stay at home. And it would mean that, in time, all of the others would disappear without trace beneath the sparkling waters of the Pacific.

...A Swiss-Anglo team battled slow winds over the Pacific Ocean yesterday as they prepared for a make-or-break gamble to be the first to circle the world in a balloon... The pilots... would likely move southwards to catch a fast sub-tropical jetstream... not far from the International Dateline.

...A Swiss-English balloon team... last night bec[a]me the first... to fly round the world non-stop... "I am with the angels and I am completely happy," said [the Swiss half, who claimed to have been] grateful for the invisible hand that had guided them... [before cracking] open several bottles of champagne... [The English half] would celebrate with a... cup of tea... [Their flight] director... said... "Some people said we couldn't do this. Some people said we would run out of fuel. They were wrong. We have done it... I'm going to have to start believing meteorologists. I have been calling them liars over the past three weeks, but meteorologists have been fantastic. They have taken the balloon everywhere it had to go, sometimes within a degree." ...the pair notched up the feat as they crossed the 9.27° west line of longitude above northern Mauritania, 20 days after their Breitling Orbiter 3 launched from Switzerland... Earlier yesterday, the Breitling Orbiter 3 set a record for the longest distance flown by a balloon... with organisers saying they clocked more than 31,000km... easily beat[ing] the official distance record of 22,910km and the unofficial distance record of 24,466km set by... [a US balloonist and yacht-owner. The English half], a 51-year-old grandfather, has dreamed of bringing down the towering balloon near the pyramids... in Egypt[... but]... winds were now so good that the pair would almost certainly fly on to land today some 200km south of the pyramids... It is [the Swiss balloonist's] third attempt to... [achieve one of humanity's] remaining aeronautical challenges, a distance of more than 40,000km... [The Swiss balloonist's] long-time... Belgian... flying partner, dropped out after Breitling Orbiter 2's failed mission a year ago... [The Swiss half's] father... aged 77, is also an adventurer who in 1960 set the record for the deepest ocean descent by reaching a depth of 10,911m. [His] grandfather... was a physician and inventor who was the first... to reach the stratosphere in a balloon, in 1931, and invented the pressurised cabin.

...It's all downhill from here... Depression [is setting] in among the world's professional adventurers. Every explorer wanting to conjure up a book to sell faces the same question... What are you going to do next? The problem is not a lack of challenges. There are thousands of unclimbed Himalayan mountains, vast networks of caves[and pot-holes], trackless deserts, impenetrable jungles and thousands of Antarctic square kilometres untrod by cellphone-carrying trampers. What is lacking is anything that the public will admire – and to professional adventurers, the public is everything. It is one thing to go somewhere exotic on holiday, quite another to make a living from it. The problem is that consumers associate adventuring with people with backgrounds like their own. Images of Captain Scott scratching out his last diary entry a few miles from safety after his epic journey to the South Pole, or [of a NZer] telling team mates that [it] had "knocked the bastard off" after conquering Everest dominate the national consciousness. The activities are less important than the sense that the nation is somehow aggrandised by them. [The Swiss balloonist] was specific about his motivation. "People need dreams," [the balloonist] said after an earlier unsuccessful attempt. "They need adventure. We need dreams that carry us forward." How sitting in a balloon for weeks carries the human race forward is not clear, but... [it] had a family tradition to keep up. Luckily, [the balloonist] has three daughters who can become the first [gals] to repeat those feats. [The guy] who built the balloon that carried [the balloonist and a]... former Royal Air Force pilot... round the world, is sanguine about the loss of the ballooning world's Everest. "It's never going to be the same again... We'll sit back and congratulate ourselves for a while and then think about the future." [For the builder], who is the British representative on the International Balloon Commission, [thinking about the future means] contemplating a round-the-world race. Several balloonists who had been counting on... the Breitling Orbiter 3 flight... failing are all kitted out with no record to go for. [The builder's] idea is that they will start at the same place. Whoever gets the furthest will win. [The builder] does not believe that the public is fed up with the hot-air crusaders who buy his balloons. "People watch motor-racing year in and year out... Why not ballooning?" [Because the] idea of an aeronautical [F1 driver] roaring into the sky at the controls of a hot-air balloon is unlikely to make it off the graveyard shift on the smallest cablesports channel. But there is no doubting the public's fascination with people who have eschewed the passion for Nintendo and cyberspace for a shot of good old-fashioned reality. Ironically, it is the digital revolution that has given adventure a late 20th-century boost, allowing couch potatoes to track their heroes on the Internet or follow news feeds direct from base camp. Mobile phone calls are made and received on the slopes of Everest, global satellite positioning systems tell explorers exactly where they are, and the National Geographic Channel will narrate the action. The maestro of this new communications revolution... has abandoned his latest adventure in the Arctic, [which was] faithfully reported by the BBC as though it were consequential. [The maestro] made a fortune from glue, then used his millions to stick together old challenges to make a big new one which [the maestro then] sold to national newspapers and the BBC. The "adventurer's grand slam," as [the maestro] called it, involved climbing the highest mountain on each of the seven continents and reaching all the geographic and magnetic poles, north and south. The Royal Geographical Society would rather see more scientific exploration. "The first guys like Ernest Shackleton were expanding our knowledge, and there's a thread there

running throughout exploration that we'd like to revalue," says [a spokesperson for] the society. A more scientific angle would certainly reduce the pressure on explorers to think up new challenges now that most of the obvious ones are gone. Everest has been climbed by [guys without oxygen, gals] without oxygen, old [guys, a one-legged guy] and boys of 17. A [US] mountaineer... even took all his clothes off and streaked across the South Col at 7924m. Presumably [the streaker] suffered no frost-bite – [the USer] recently became a father – but it can't be long until someone has a go at the whole thing naked. And yet there seems to be no lessening of interest in the mountain. While [a knighted British adventurer] struggled to drum up media interest in his latest expedition to a remote and largely unexplored corner of Tibet, a comparatively unknown [person] from northeastern England... has persuaded the BBC to cover his attempt to climb Everest for the second time, becoming the first Briton to reach the summit from both north and south – a fairly meaningless record on a mountain that has seen more than a thousand ascents... Perhaps only when the first nonagenarian pogo-sticks up Everest wearing only a bobble hat will the media family get round to the real stor[ies of life on Earth? Until then]... we will have to get used to what the Americans call "micro-distinction" – increasingly small improvements on the same old records... [The northeasterner], a legend only in the climbing world, hopes to raise his profile and so increase his sponsorship value by snowboarding down the mountain.

...[a gal] has ridden into the N[Z] snowboard history books by winning a World Cup boarder-cross in Sapporo, Japan. The... Wanaka-based... [gals'] national half-pipe champion became the first N[Z]er onto a World Cup podium.

...[an in-form NZ] skier... charged into the top 15 of World Cup slalom skiing after the latest event in Santa Caterina, Italy, yesterday. [The NZer], a former world No 2, was eighth overall in the two races on soft snow and will now join the elite world group of skiers competing for the... World Cup title in Italy next month. [The NZer] has been troubled by viral illness and injury in the past two seasons, but has improved substantially in recent months and is on course to return to the top tier of [gals]'... downhill skiing.

...[a] Swiss skier... was paralysed in the legs after crashing and slicing through safety netting in a [guys'] World Cup downhill event yesterday... The 22-year-old... who had been fastest on the top part of the icy... piste, crashed at an estimated 120 km/h[, and] was given emergency treatment before being flown to hospital... In October, Fr[ance's] world super-G champion Regine Cavagnoud died after a crash in downhill training...

A... COLORADO... SKI racer has been found guilty of [hu]manslaughter after crashing into another skier and killing him... [In local news.] Westie ski-bunnys may have to look no further than their backyard for a good slope – if an indoor skifield is approved for Silverdale. The Snowstar Group is seeking resource consent from the Rodney District Council to build the country's first snowdome sports arena. If given the go ahead the group would start construction of a 11,600sqm snow hall by early next year. Located on East Coast Rd near the Silverdale motorway exit the facility would also offer a snowsport school, dinning[(sic)] and conference facilities... [A] Snowstar Group spokes[person]n... says the plan is to offer Aucklanders a "one-day vacation" at a fraction of the cost of a mountain skiing holiday. While admission prices have not yet been decided [the spokesperson] has hinted they will be similar to mainstream leisure attractions. The project is based on the second-generation snowdome model used in Europe and a strategic relationship has been formed between Snowstar Group and a large snowdome operator in Europe.

...[a 'NZer has won the gals' section of the US professional jetski circuit', and in Europe a NZ w]ater skier... wrapped up his... [latest] event with a second placing in the British Masters behind [the]US champion... The current world record holder... was third. The Kiwi is confident going into the world championships in Milan next week as [it] has a better record than any of the World Cup field, having cleared 10.75m on three occasions.

...[a NZ-based entrant] will defend his overall and jump titles and [a US-based entrant] will chase an eighth consecutive national slalom waterskiing crown when they compete in this weekend's championships at Auckland's Orakei Basin. Back from his US base, [the Kiwi who came second in the British Masters admits it] enjoys the chance to compete in his own championships away from the pressure of the world circuit. N[Z]'s most successful waterskiier with successive silver slalom medals at world championships... is keen to add another national title to his collection. [It] is using the championships as the starting point to another year on the World Cup circuit which starts with the Melbourne Masters early next month. Then follows stops in Canada, France, Italy, Austria and the US before the world championships in Barcelona, Spain in September. The national championships have attracted more than 30 of the country's best... They will be conducted in two divisions – under-17 and open.

...[First there were surfboards. Then there came skateboards and snowboards. Now comes wakeboards – and they're dealing the same blow to water skis as snowboards have to alpine skiing. Wakeboarding is the fastest growing water sport in the world, according to Ballistics. A wakeboard is smaller than a surfboard but larger than a snowboard. Riders stand sideways on the board and use the wake of a towing boat to initiate a spectacular array of aerial manoeuvres. Because the boards have a larger wetted surface area than water skis, as well as being buoyant, riders can be towed by boats as small as 3.6m powered by just 12hp to 15hp outboards. But the real thrill is to be towed behind heavy, old-fashioned fishing boats producing a huge wake. Snowboarders are turning to wakeboards in droves. Boards cost from \$500 to \$1800. The sport now has its own magazines and a professional competition circuit in the US where top riders can earn up to \$100,000 a year. Wakeboarders like dead flat water']...

Young surfers go Bali-stic [Two]local surfers... are riding a wave of success... [following] their impressive performances in the under-16 and under-18 events throughout the country... The pair are in the N[Z] team for the world scholastic championships in Bali in July... [They] are the first Auckland surfers to make the team since 1991 when [two]Piha surfers... were selected... The pair have also made several pro-series finals in competitions held around the country... Both surfers are hoping to compete in the Pro Junior series in A[US next year] which will be a great challenge... "The competition is a lot tougher over there and competing against A[USn]s will hopefully lift our performances,"... Both are thankful for the support they receive from their sponsors by means of boards, clothes, sun glasses and wet suits. However, products alone do not pay for travelling expenses and entry fees so they are looking for more sponsors to help with costs. But for the next couple of months the boys will be training for their trip to Bali. With world titles up for grabs they want to be as well prepared as possible.

...[a NZ] surfer... has won the \$US60,000 O'Neill Surf Challenge world qualifying series in Anglet, France. His victory is the first by a [NZer] in the series and leaves [him] well placed to qualify for the World Championship Tour. Another... [NZer] finished fifth, his best result.

...Daring surfers ride wave of adrenalin... Guts. That's what it takes to ride waves the size of inner-city buildings and that's what those of us watching from the shoreline might expect to see washed up on the rocks. A[n AUS]n... lives for those days when [it] can slide down the face of unstoppable monsters at 70km/h on a life-and-death knife edge as [it] tries to outrun the biggest waves on the planet... [The AUSn], on the world pro-tour for 10 years until 1995 and with a best placing of fifth, is one of around 20 surfers developing the sport with tow-in riding of massive waves using jet-skis. Two riders alternate between towing and surfing, one hauling the other onto walls of water so big they can't be paddled onto – by the time the crest lifts the board it's too late to make the drop. So the surfer skis behind the jet-ski on a special board... [– which] is narrower at 40cm as opposed to 50cm but thicker and with less of a bottom curvature[; the boards also come]... with foot straps [– and] is shot onto the face, the ski staying on the shoulder to retrieve him after the ride. On January 28 last year on what is called "biggest Wednesday" [the AUSn] was one of eight surfers who braved what many believe is the biggest surf ridden. It was an El Nino-generated swell that registered the biggest movement on Hawaii's offshore warning buoys at 42 feet. The swells jacked to produce waves with faces estimated to be ...80 feet... at a reef called Log Cabins 2km offshore from the famous Pipeline... [The AUSn], in Auckland to promote the film *Extreme*... doesn't fear those waves. "People ask me if I'm scared of anything – of course I am. I'm scared of sharks, I'm scared one of my kids will get run over... I'm scared a bit of death but I don't think I'll die in the surf... I wouldn't go out if I wasn't enjoying it. But sometimes you look around and there are other guys in the line-up with fear on their faces and you wonder what they're doing it for, their sponsors or something." ...So far there has been... one loss of life, Hawaiian... Derek Ho.

...Cold water hurled on new craze Kitesurfers have been warned to move offshore at popular beaches before they cause injury to swimmers. Kitesurfing, also known as kiteboarding or flysurfing, is the latest extreme water sport to hit Auckland's beaches. [The Auckland h]arbourmaster... has received numerous complaints about kitesurfers coming too close to shore and swimmers. "It does get potentially dangerous when the weather gets warmer and swimmers start to use the beaches again... Kitesurfers are a major hazard because they concentrate on their kite rather than what's ahead of them. We are not trying to stop them enjoying their sport, rather we want to see them move further off-shore and keep our beaches safer for all users." ...Local bylaws discourage vessels travelling in excess of 5 knots within 200 metres of shore.

...surfers and windsurfers at many of N[Z]'s most popular beaches will have to wear wetsuits or lifejackets or face \$200 fines. The beaches affected include Raglan, Whangamata, Waihi, Paihia and Waipu Cove. Surfers are outraged and their national organisation has criticised the move, which even covers youngsters using boogie boards... The new rules have been introduced by the Northland and Waikato Regional Councils as part of wider bylaws making it compulsory for anyone on a boat to carry a life-jacket. They will be enforced by harbourmasters who patrol beaches and lakes. Regional councils have been given the responsibility for water safety under a Local Government Act law change and have until 2003 to introduce bylaws. They have to meet minimum national rules being drafted by the Maritime Safety Authority... Auckland has not included a clause covering surfers or other board users in its water safety bylaw, saying the move was unnecessary, but some of the beaches affected are popular holiday and weekend destinations for Aucklanders... [The MSA's] legal adviser... told the *Herald* that wetsuits provided buoyancy if a board user was knocked unconscious and helped to protect against the cold if [the board user] drifted out to sea. Water Safety N[Z] supports Northland and Waikato's new rules. [Its c]hief executive... agreed that wetsuits, which cost between \$80 and \$400, provided protection. But [the chief executive] did not think the rules should cover boogie boarders, also known as body boarders. "Five-year-old kids playing in the shallows with their parents on the body board they got for Christmas should not have to wear a full wetsuit. That's taking it a bit far." Surfing N[Z]'s president... said wetsuits restricted movement a[dding that]... surfers would not wear [them] if it was hot and would refuse to pay fines. "It is the dumbest piece of legislation I have ever heard of... N[Z] will be the laughing stock of the surfing world." ...A draft of the M[SA] national minimum guidelines will be released... ne[xt] year and will be open for public submission... [Incidentally,] February's three-match Tri-Nations surf lifesaving series will go ahead, despite a threat from A[US] to withdraw their team. N[Z] and South Africa have agreed to drop Inflatable Rescue Boat racing from the series... in Mt Maunganui... I[nflatable Rescue Boat] racing, commonplace in all three countries, has been banned across the Tasman following last year's A[US]n championships in Perth when insurance and liability issues arose because of injuries suffered in that event.

...[the Coca-Cola NZ surfing championships to be held between January 9 and 16, will include a body board division' for the first time.]

...Surfing and boogie boarding are among the 10 most popular sports for adults aged 18 to 24... according to the Hillary Commission.

...[surfing has more adherents than rugby or fishing, according to the latest Hillary Commission survey on participation in sports and activities. The commission estimates there are 182,800 board riders – stand-up and prone – compared with 143,100 rugby players and 132,500 fishers. The most popular activity in the country is walking with 1,589,800 devotees, followed by gardening with 1,412,300.] By the way,] Whangamata lifeguards' use of a defibrillator in a rescue yesterday has prompted a call for the heart machines to be available on all surf beaches... [A] 73-year-old was pulled from the surf after a heart attack... [and] the defibrillator was used to jump-start [his] heart... with a 350-joule electrical blast. The... defibrillator monitors patient's vital signs and stimulates the heart when it stops. The machines were introduced into ambulances about five years ago. The technology has since "become smarter, more compact and more idiot proof and can be used in many different situations." ...Whangamata Surf Lifesaving Club is the only surf rescue club in the country to have a defibrillator and yesterday was the first time it had been used. The Heart Foundation is keen to see them on every beach... and [in every] office building. The... elderly [swimmer], from Auckland, was believed to have been without a pulse for four minutes... "Never in my 35 years of surf lifesaving have I seen one come back like that," said the... club president... "[The 73-year-old] was a dead body, and then... began to breathe." ...the club was able to buy the \$5000 machine and associated equipment last October thanks to sponsorship by Auckland-based Sovereign Insurance... [Surf lifesaving c]lubs were dependent on fundraising and sponsorship.

...Heartless thieves are ripping off West Coast surf lifesavers while they're out in the water helping people in distress. [One l]ifeguard... had her car stolen from the Piha carpark two weeks ago... The 20-year-old university student also lost her wetsuit and fins... Her patrol captain... says the theft was especially upsetting because the lifeguards had just finished one of their busiest days of the summer. Over 40 swimmers had been rescued from the surf... Two weeks ago [a] Karekare professional lifeguard... had his car broken into... Thieves were advantaged by the fact that the car park at the very popular Karekare is 400 metres from the clubrooms... [The] president of the Northern Region Surf Lifesaving Association, says these two incidents are just the tip of the iceberg. "The unfortunate thing is that all over the region you get instances of people walking into clubhouses and helping themselves to members' possessions." [The president] says thieves will take anything they can find including rescue gear, fins, wetsuits and sun-glasses. "It's just a kick in the teeth. You go out there spending your own money, putting your body on the block to keep others safe and someone comes along and nicks all your stuff. It's an indictment." But [the president] says beach crime was worse 10 years ago. Rescue equipment such as outboard motors were stolen to order for an overseas crime racket, while local drug dealers targeted radio transmitters.

...[sometimes you need a lucky break to succeed in sport, as was definitely the case for NZ's surf lifesaving champion. The NZer, who is now resident in AUS, is back in NZ to defend his title in the national championships in Mount Maunganui this weekend. "There's not a lot of exposure for surf lifesaving in NZ and I think it's more of a summer hobby sport here. In AUS they get 20-30 hours of prime-time television coverage each year and it rates right up there with the cricket. I can make a comfortable living out of it now and if you're in the top three or four, you can make about a quarter of a million dollars a year." But it wasn't so long ago that the NZer was down and out and just about ready to give up the sport. After taking out the national junior Ironperson titles in 1989-90, his first foray into AUSn competition earned him a lowly rank of 88th. "I thought I had some talent but if that didn't knock me down to size then the Gisborne boys back home sure did." The next year the NZer improved slightly to 68th but hope and finances were fading. However, everything turned around when his father became AUS's Olympic canoeing coach. His father had coached the NZ pair who cleaned up the canoeing gold medals at the 1984 Los Angeles Olympics but grew disgruntled with the sport's administrators here. The offer of a paid job, a car and a flat in Sydney was too good to turn down and it proved too tempting for his son too. "I was broke, I was winning no prizemoney, but suddenly there was something to fall back on. I used him for all dad was worth but I don't think dad minded." With improved results the NZer moved into the elite Uncle Toby's series and gradually moved up the rankings, from 21st five years ago to 11th last season. As a result the NZer has also signed for the \$7.8 million Foster's Oceanperson series starting in May. The Oceanperson takes the top-20 guys and gals from the Tobys and Nutri-grain competitions to the world's beaches. The concept came from TV's *Baywatch* programme, which is the most popular syndicated show in the world. The NZer was one of a group of competitors selected to appear on the show last August, comparing tanned bodies with the actors. The NZer remembers the experience fondly. "They're cool people. They were trying to act what we are and we were just trying to act. They wanted to have the show's star beat the top AUSn competitor in a race but our sponsors made sure that didn't happen as it wouldn't look good for our credibility. I mean, they don't do any of the action. The show's breast-implanted co-star hardly even makes it into the water."]

...THE annual N[Z Ironperso]n race is a mega-sized event in any context. But forget the 3.8km swim... 180km cycle and... 42.2km run. The organisers also face a marathon effort getting everything in place for the field of 714 competitors in Auckland next Sunday. Take the shopping list. [The] director for the American Express event... certainly needs more than a supermarket trolley for this load. There's 2000 1.5 litre bottles of cola, 5200 litres of energy drink, 4500 drink bottles, 15,000 biscuits, 1600 energy bars, 6000 bananas, 200 bags of ice, 7000 sponges, 8240 litres of water and 800 tins of creamed rice. Oh, and don't forget little things like 30,000 paper cups, 9000 no-stopping signs and 3km of crowd control fencing.

...[“THE high sugar content in some of the energy replacement drinks available these days is wreaking havoc on the European cycling circuit. Sucking furiously from their drink bottles as they cycle, some of the top riders are now experiencing major dental damage.”

...“sports and nutrition experts say some high-energy food and sports drinks could be harmful – especially to the health of children and unborn babies. High levels of vitamins A and D, and chromium, copper and selenium can damage the liver or eyes. The alarm follows news that sports foods and drinks will have to carry warnings that they are unsuitable for children aged under 15 and for pregnant people. The popular sports supplements will also be regulated by the AUS NZ Food Authority, which has developed standards limiting the levels of trace elements, vitamins and amino acids found in such products. Health authorities are expected to approve the authority’s standards within the next month. Sports experts and nutritionists have welcomed the move. A Nutrition Foundation council member said selenium and chromium could be extremely toxic in high doses. Her main concern was when “over-zealous parents” gave their children large amounts of supplements instead of an appropriate amount of fruit and vegetables. Some babies suffer from “rebound scurvy,” a vitamin deficiency when they are born, which is caused by pregnant mothers taking large amounts of vitamin C. A sports medicine expert said the introduction of standards and warning labels showed that such high-energy products should not “be consumed willy nilly.” The senior lecturer in sports medicine at Otago University said: “It’s like any medication – if we tell you to take it according to the instructions then 10 times the concentration is not going to be 10 times as good for you.” The managing director of Hansells said his firm would comply with any new standards.”

...“Canterbury’s medical officer of health is “very disappointed” about drink sharing among athletes in light of a meningitis scare which has rocked South Island athletics. The medical officer said it understood there was a lot of glass sharing at a function following the national athletics championships in Christchurch. As a result the medical officer was launching a publicity sweep of all sports organisations warning “don’t share spit.” Vance Latta, aged 25, a top Otago multi-events athlete who had attended the function at the Pegasus Arms Restaurant and Bar where up to 130 athletes gathered and took part in drinking games, died within hours of being rushed to Dunedin Hospital.’ In related news, NZ’s top guy triathlete ‘is staggered the swim leg of next month’s international triathlon is being held in Auckland’s Viaduct Basin after signs warning people not to swim or collect shellfish there were erected yesterday by Auckland Healthcare. The Basin is high on the list of contaminated waters in the Auckland area with positive tests being recorded for salmonella last year. The move heightens pressure for race organisers to find a replacement site for the swim leg. If there is no switch, images of a polluted Auckland will be taken overseas by visitors, or beamed out on television. Healthcare’s public health protection official wants to meet the race organiser this week to discuss the situation. Healthcare opposed the race being held at the Basin last year, because of the poor water quality, but the World Cup triathlon event went ahead. NZ’s top guy triathlete will line up in the April 27-event, wherever it is held, but is mystified why the Basin, for the third year in a row, has been chosen as the venue when Auckland has other locations. “I can’t understand why we should have to race down there. It is ludicrous.” The NZer has already had overseas triathletes asking if the swim leg is being held at the same venue: “No one is keen to do it there because it is so filthy. This is so frustrating for me because I know we could put on such an awesome race. Instead, we have this bad, dirty course.” Previously, the NZer was reluctant to speak out, concerned about creating a negative image for the sport. But it believes there has been ample time for a course change to be made in the last three years. The protection official has spoken to athletes about their concerns and has met with the Auckland City Council’s environmental health section: “I have also discussed the test results we have with the Ministry of Health. They have confirmed the public should be warned about swimming in the area.” One reason for the signs is that swimmers have recently been spotted in the Basin. Healthcare doesn’t want people thinking they can swim there just because it is the location of the triathlon. The warning signs could remain for three years until the area’s sewer-stormwater separation programme is completed. The Basin was the top priority for this work. It is unclear what action Healthcare will take if the race organisers refuse to change the venue. However, the organisation is taking the issue very seriously and if there is no movement it seems certain to take more direct measures.’

...“NZ’s top guy triathlete upstaged the more favoured AUSns to convincingly win the Sydney triathlon yesterday and become the first person to win two World Cup races this season. Largely written off by the media and many competitors last week, the 26-year-old Aucklander grew more dominant as the race progressed. The NZer eventually finished in 1h 51m 28s, beating last year’s winner and collecting \$NZ16,200 in prizemoney. The win in the 10th race of the ITU series puts the NZer just 55 points behind AUS’s world No 1 going into the world championships in Perth in three weeks. The winner in Perth will score 750 points. The NZer, who took the ninth race in the series at Cancun in Mexico a fortnight ago for his first win in two years, believes it is possible for him to improve on yesterday’s performance. Fellow-NZers pulled off creditable performances to finish 20th and 24th respectively. Christchurch’s 33-year-old former world champion battled a recurring ankle injury to finish ninth in the gals’ race.’

...[NZ]’s 2-time [gals’] world champion... has won an ITU Olympic points triathlon race in Brno, Czechoslovakia. [The NZer] finished... well ahead of several ranked triathletes heading for the weekend’s world championships]. A Frog came 2nd and a USer was 3rd.

...a USer] received his first skateboard on Christmas Day 11 years ago. Now the 25-year-old... is a seasoned professional and about to display his talents on a [NZ stage. The 25-year-old] is one of five overseas skaters and two international BMX stars who will be drawcards at the Vans Warped Tour Concert which is[to be] held at Waihi Beach... The overseas competitors will be matched against some of [NZ’s best. However, the 25-year-old] and his fellow American stars come with some impressive statistics. [The 25-year-old] has been on the Vans Warped Tour for five years and... also contested the last three X-Games. In the past four years [the 25-year-old] has had 14 top 10 finishes in major... events, including winning an international championship in Florida in 1997, where [it beat the skateboarder who is] regarded as the best in the world... [Another one of the overseas skaters] will be making his second visit... having competed here two years ago. [This skateboarder] can add the 1994 British Open title to a list that also includes a second place at the 1995 X-Games... It’s a skating and lifestyle celebration that promises to be quite a party... Action starts at 2pm and, for the first time in the Warped Tour history, will continue into the night...

A[n A]vondale skatie... goes through one board every two weeks, and has had “about a thousand” sprained ankles... With 11 years’ experience under his belt, [the]25-year-old... is... rated N[Z]’s number one skater... [C]heck out his form at the Xtreme Air Games in Hamilton this weekend.

As Hamilton looks set to... join several N[Z] cities and towns, like Rotorua, Nelson, Queenstown, Dunedin and Tauranga... in giving skateboarders the shove, the City of Sails maintains that the trendy pastime is a “good, healthy thing.” Councils in the Auckland region say they have no reason to consider banning skateboarding in the city centres. The Mayor of Auckland... says it’s a way of maintaining good health among teenagers. Pressure from people fed up with skateboarders in the streets of Hamilton could see a tough new bylaw introduced by the city council tonight. But a spokes[per]son for the skateboarders said the “draconian” bylaw would simply add a “new thrill” to their pastime. If it is passed, anyone who skateboards on any road in Hamilton... will face confiscation of his or her board and a fine of up to \$500... The proposed bylaw has been thrown out by the... council twice already this year, but concerns by Garden Place retailers over danger to pedestrians, verbal abuse... and noise have put it back on the agenda of tonight’s meeting... [However], a Hamilton business[per]son who wants the council to build an inner-city skate facility for the youths, [agree]d a bylaw would not deter the thrill-seekers. “They will still skate, and they will go faster than the police.” [The businessperson] said skateboarders were prepared to issue a self-enforced “no-go zone” 5m from shop fronts in Garden Place until they got their own facility. Until then, it was impossible to stop them using Garden Place. “They don’t want to go somewhere out in the backblocks where they run the risk of being beaten up.” There were four council skateboard facilities in Hamilton, at Te Rapa, Chartwell, Melville and Hillcrest, but none near the central city. As well, none [of the facilities] met the requirements for “street skaters,” who preferred a flat concrete area with obstacles to the traditional skateboard bowl... The council was investigating building an inner-city skateboarding facility and had surveyed skateboarders on their needs.

...By early next year young people on the Hibiscus Coast will have no excuse for being bored. A... youth centre is being built at Oweria to provide a place for sports, cultural activities, socials and meeting friends. The patron of the Hibiscus Coast Youth Council... said the centre would start

with around 500 members paying an annual subscription of \$5... [T]he club aimed to be accessible to all young people, and, through a director, would offer activities that they wanted... At the moment youth in the area say there is little to do apart from hang out in the streets, beach, gym or takeaway bars, or catch buses to Takapuna or Auckland city in search of amusement... In the past two months \$200,000 has been raised for the project, with individual donations of up to \$80,000 bumping up the total. However, another \$200,000 is needed to finish the centre... [A] retired builder, is donating his labour to build the facility... [T]he police youth aid officer for the Hibiscus Coast to Wellsford area... was confident the centre would go a long way towards providing entertainment for young people in the area... [The constable] said the local youth population was increasing, and with it the problems of boredom such as graffiti and wilful damage... [While on the topic of bored youths, s]kateboarders lost the streets of Hamilton yesterday, after city councillors approved a bylaw banning the sport from the inner city... From next Wednesday, skateboarding will not be allowed on any... road, in the central city... - 1996

Central Auckland retailers are fed up with the antics of skateboarders and in-line skaters and want them banned from Elliot St and other pedestrian precincts. The Auckland City Council, however, wants to avoid a bylaw [– even though]... furniture installed by the city council was being wrecked by skateboarders riding on it... Design techniques, such as lugs on seat edges and strategically placed rubbish bins, are being used in parts of the city to prevent skateboarders damaging street furniture... [A] jewellery shop owner and spokes[person] for the Heart of the City business association, said... [h]is members want a bylaw modelled on that of Hamilton... [The spokesperson] commended council-funded skateboarding areas and said the association was not against skateboarders[, but]... the speedsters were deterring potential customers from shopping in the central city.

...[a 'Palmerston North resident finished third in the 300m road time-trial at the world speed skating championships in Santiago, Chile, yesterday. The NZer covered the distance in 24.71s, 0.3s behind the winner and just 0.05s behind the second placegetter. His bronze medal was the first senior world medal won by a NZ skater since 1986. It was his first top-three finish at a senior world event, after a fourth placing in the track event this week. An Auckland competing at his first junior world championships finished fifth in the 300m time-trial, but was 0.01s away from a bronze medal.' Another NZer] was starving after winning the world Mistral boardsailing championships in Fremantle late last night. [The NZer], who claimed his second world title of the year... [– after winning] the world raceboard championships in France earlier in the year... – ...was so nervous going into the final day of the Olympic class championships that [it] could not eat a bite for 24 hours. "I was running on empty, it was so nerve-racking," [the NZer] said after clinching the world title in the final race... [Our country also collected] bronze in the... [gals' fleet. NZ's top gal boardsailor] once again had to finish in the shadow of... [her main rival from Hong Kong. The NZer] slipped from the lead overnight as her friend... jumped from third to win the title[(an) Italian... was second[]. The NZer's brother]... and former world champion... [was] 10th in the... [guys' fleet. NZ] scooped three medals on the final day [with a] teenager... winning bronze in his first major world regatta...

[A teenager] never got to hold the bronze medal [it] won at the world boardsailing championships in Fremantle. Within hours of being told... [it had come third] the 20-year-old from Ohope was yesterday relegated to fifth... [It] was in no way to blame for losing the medal. A[n A]rgentine sailor... lodged a protest after the final race in Perth... complaining... [of being] knocked off his board by the downdraft of a helicopter. [The Argentine] won his case and was promoted from fifth to third. [The NZer then] missed out on fourth place by countback to [the previous] world No 1... of Portugal... [The] new world champion... was upset for [the 20-year-old], who had deserved his original placing. "It's a foul-tasting end to the regatta, when it has to go to the protest room... I've never heard of redress being given for interference from a media boat or helicopter... But it's awesome that [the 20-year-old] is in the world's top five. It was so close that I could have sneezed and ended up 10th." ...[Speaking of successful protests, s]kateboarders are free to roam Auckland's inner-city streets after the failure of retailers to have them banned... A bylaw was considered unworkable and a survey of Elliot St retailers revealed that most did not support a ban, preferring measures such as education and the development of skateboard facilities. No accidents had been reported and only three complaints registered from customers about skate-boarders. - 1997

The death of a Wellington skateboarder has prompted police to call for changes to the Land Transport Act. Christopher Wood, aged 22, a Victoria University student, suffered head injuries after falling from his skateboard at the intersection of Kelburn Parade and Salamanca Rd last week. [Christopher] was taken to Wellington Hospital intensive care unit, where [the skateboarder] died on Monday. [A Wellington i]nspector... said Mr Wood's death showed that the act, which took effect on March 1 this year, was not working. The act reclassified skateboards as vehicles but did not state whether they were allowed on the road... "I don't think the legislation has gone far enough." While the act did not directly ban skateboards from motorways, [the inspector] felt they fell within the same area as horses and bicycles, which were prohibited. [The inspector] said police regularly had problems with skateboarders on Wellington streets. Last June, a 21-year-old skateboarder was seriously injured in a collision with a rubbish truck near the Willis St motorway on ramp. On Tuesday night, [the inspector]... had spoken to two 16-year-old youths who had been weaving in and out of traffic on Willis St in the dark. "They were so lucky not to have been hit by cars. Many are not aware of the dangers." [The inspector] said skateboarders were regularly fined up to \$750 for misusing a skateboard under a Wellington City Council bylaw. However, that did not stop skateboards being used on streets. [A spokesperso]n... said the council was investigating whether to ban skateboarders from city streets.

...The Accident Compensation Corporation is monitoring the use of lightweight scooters after a spate of accidents overseas. A [U]S consumer protection agency said this week that nearly 9500 Americans, mostly children, had been taken to hospital this year after scooter accidents. The statistics had prompted the ACC to issue guidelines for scooter use, says a spokes[person]... It had no record of scooter accidents here, and was studying overseas data. "It's relatively new. We have not had a chance to see what injuries are coming through, and whether we can target something specific to them,"... ACC wants users, parents, schools and retailers to try to minimise the risk of injury... Users should follow transport bylaws, and should wear protective equipment such as helmets and wrist guards. Skateboarding was probably the closest activity to scootering in terms of accident risk... In [the last financial year], ACC processed 441 skateboard injury claims and paid \$568,000 in compensation. A Land Transport Safety Authority spokes[person]... said scooters were in the same vehicle category as... in-line skates... and... skateboards... [■ If you worry about your child getting injured, perhaps you should encourage it to ignore its skateboard and instead take up a BOARD game – for example, Monopoly. Then, perhaps, one day your child will become a world Monopoly champion? This year]s... world Monopoly championships [are] now under way in Toronto... Thirty-nine... players, all national champions... – ranging from students... [(including an] 11-year-old, who dispatched her older sister in Puerto Rico's national championships[)]... and bus drivers to computer programmers... an economist... and a horse breeder – are taking part in the three-day competition. It's all for a chance to win \$US15,140... the total amount in play money in a Monopoly game. Invented in the Depression era by an unemployed sales[person], Monopoly is one of the most popular board games in the world. The game, which has been translated into 26 languages, has players navigating a board in a bid to become real estate magnates through buying and selling property.

...[WE'RE not sure if this one qualifies as sport, but it was sure worthwhile for a 30-year-old from New York city. The New Yorker recently earned \$US25,000 for winning the world scrabble championship in Washington, DC.]

...*Grey cells go for gold at mind games* They may lack the biceps of boxers, the thighs of cyclists or the torsos of gymnasts. But thousands of "athletes" at the Royal Festival Hall in London this week excel with a higher part of the body: the brain. The world's first Mind Sports Olympiad has brought together seriously clever people from around the globe to compete in more than 30 exercises in mental skill – chess, bridge, backgammon, crossword and

jigsaw puzzles, gin rummy, etc. Then there are the lesser known games – for example, Owari, Entropy, Continuo, Abalone, Twixt, Skat, Rummikub, Zatre, Dama. The event, which runs until Sunday, was the brainchild of two chess grandmasters and a British memory-guru and motivational speaker who has published 19 books on the power of the mind. “For thousands of years there have been physical championships,” the memory-guru says. “It seemed odd that the world had focused for so long on the body and not on the brain. Mind sports were in danger of being an enclave of those who were intellectually superior, but it’s for everybody. It’s egalitarian. Everyone has a brain.” Leading “sportspeople” in each category are taking part – players from more than 30 countries, including the Mongolian draughts team, the Kenyan Scrabble team and the Japanese Othello champion. Anyone can compete, in one or more events. Mirroring the Olympian pentathlon and decathlon are pentaminds, entering five games, and decamenthletes, entering 10. The top pentamind will win a flight on Concorde as well as a medal. The oldest contestant is aged 88 (in the IQ competition) and the youngest is a girl aged six (chess). □ **If the world’s leading chess federation gets its way, the game will be included in the Olympics – as long as the competitors agree to drug tests. The Federation Internationale des Echecs, the organisation leading the push, has already begun testing for substances banned at the Olympics in a bid to boost its credentials. That has upset some players, who call drug-testing in chess illogical and a logistical headache.**

...Do team sports have a place in the Commonwealth Games? The Games have traditionally catered for individuals, but team sports are taking hold... The 16th Games are the first to have admitted team sports and for many people cricket, rugby, hockey and netball do not fit comfortably into the Games ethos. Their ammunition belts have been stoked by the failure of leading cricket nations like Pakistan, India and South Africa to select all their top players. And England, the home of cricket, has decided not to turn up at all. Why should a sport, which has made a second-rate commitment to the Games, have a future at the event? *...When the decision to admit team sports to the Games was made about four years ago... a long-time [NZ Commonwealth] Games team selector... and another selector... [from NZ] were firm opponents. A major... concern... [of the long-time selector, who] is on the board of the [NZ] Olympic Committee... and... has a long Commonwealth Games history having won two weightlifting bronze medals... was that by having sports teams in their lineups, smaller and poorer countries would not be able to send such a diverse range of competitors... [suggesting] sports such as track and field, judo, weightlifting and boxing could suffer... [The long-time selector] believes Malaysia, in conjunction with the [Commonwealth Games] Federation, moved too far and too fast down the team sports way... The sports programmed for the Manchester Games in 2002 feature only one sport, netball. However, this could be reviewed... [The long-time selector] would support the Games being limited to 14 sports with four positions being reserved for track and field and swimming plus two team sports... The Games were once limited to eight sports plus the regulars of track and field and athletics. Team sports, such as cricket and rugby, do not need the Games. But for smaller sports – like judo and badminton – the competition is an important exposure vehicle. For the smaller sports, which aren’t... [going to be at] the Kuala Lumpur event... it must seem the team sports have gatecrashed the Commonwealth Games at their expense.*

...[NZ’s national] swimming coach... believes his sport is being subjected to harsher standards than others as officials pledge to “get tough” for selection for this year’s Commonwealth Games in Malaysia. In the wake of the [NZ] team’s disappointing display at the world championships... criticism of the sport has come from several corners, including [the] Sports Foundation chief executive... [The coach] was prepared to accept criticism for the [disappointing world championships] showing but... was critical of the inclusion of rugby and cricket at the event, saying neither deserved to be a Games sport. “I’m not going to stand back and watch swimmers not go to the Commonwealth Games when I know they’re taking an under-strength rugby team and a cricket side that is at the bottom of the world rankings... Swimming is a sport that has medalled at every Olympics since ’88 and it’s important we don’t react too harshly to one bad showing.” [By the way, ‘Auckland’s mayor is leaving town for the crunch month of the next local body elections to help to lead NZ’s Commonwealth Games effort. The NZ Olympic Committee yesterday announced its appointment of the mayor as chef de mission for the Games in September and the 2000 Sydney Olympics. The mayor, who reiterated that it intended to seek a fourth mayoral term, said the voluntary games job would keep him away for much of September, “when most of the campaigning is on” for the postal elections in the first half of October. “I will be campaigning with my campaign team, in absentia.” Asked if his planned absence indicated a belief that it could sleepwalk to victory, the mayor replied: “I’m expecting I will have a good campaign team on the ground.” The mayor agreed his absence might damage his re-election chances but added that his involvement in the games might also boost his chances. “It’s 50-50, politically.”]

...“Hello. Is that the Commonwealth Games village? Can I speak to the mayor? The mayor’s not there? Tell him I have to speak to him about Britomart. His campaign’s not looking good.” That may be the sort of nightmare message the Mayor of Auckland has set himself up to receive by accepting the mantle of NZ chef de mission for September’s games in Malaysia. The decision could be the biggest gamble of his political career by taking him offshore for the high point of his fourth battle for the mayoral chain. It could leave him vulnerable to political attacks from a strong contender – assuming one signs up. Election campaigns ignite numerous small fires that demand public responses from candidates, let alone the biggies like, say, if something did go wrong with the Britomart project, of which the mayor is a key supporter. His reputation for avoiding or ignoring the media could worsen. “The mayor could not be reached in Malaysia yesterday,” may become etched into reporters’ computers. His aim to be mayor for the 90s could crumble overnight, with someone else picking up the plum job of leading the Queen City through the America’s Cup, the millennium celebrations and the visit of the US President at the APEC summit. On the plus side of his gamble is the potential for reflected glory from Kuala Lumpur gold – publicity that his campaign budget could never buy.”]

...Wellington’s bid for the 2006 Commonwealth Games looks a shambles, but as [the] National Affairs Editor... reports, it’s not dead yet... The... leader of Wellington’s troubled bid... jokes about assassination attempts. It’s been a tough... year for the veteran Wellington city councillor. A practising midwife, the city’s deputy mayor... is used to broken sleep and fractious council politics, but confesses to “lots of 2am nights” at present because of stress. Not only are the bid’s finances shaky, but... [the] chair of the Games bid... has damaged the bid to an extent still being assessed with widely reported comments on Commonwealth delegates seeking sporting assistance in apparent return for supporting Wellington, and outbursts on a contract for television rights favouring rival bidder Melbourne. On her home patch, last weekend’s messy departure from the bid of [a] highly-respected local events organiser... has sent shockwaves through the capital’s tightly knit political circles, where events and entertainment are becoming big business. If Wellington’s campaign fails, the deputy mayor... stands a good chance of coping most of the blame. [The deputy mayor] can still manage a lovely smile, but behind the scenes the bid committee is this weekend scrabbling for traction. It is seeking corporate donors who were elusive even before the latest troubles, a new figurehead to replace [the departed organiser] and to repair unity among the nine local bodies which comprise the bid. If unsuccessful, a three-year-effort... may collapse for want of a bit of mayoral discipline and perhaps as little as \$150,000... Competition from Melbourne is fierce. The state of Victoria, with a population the size of [NZ], is sports-mad, even by [US] standards. They want the Games if only because Sydney got the 2000 Olympics, and [Victoria’s] Premier... wants them as badly as anyone. Melbourne has an official budget for its bid of \$7 million but its chair... – [a] personal friend of [the Premier and an AUSn] media mogul... – has told Wellington bid participants they have... \$15m to spend. By comparison, Wellington’s bid is led by a band of in-fighting, small-town politicians with a projected budget which was a little under \$1.5m – now [shown to be] less than \$1m – and until last week was being run from an office above [the organiser’s] garage... And where the [NZ] Government has been lukewarm at best about Wellington’s chances, the [Premier’s] administration has thrown the weight of its highly successful Melbourne Major Events Company behind its bid. The MMEC, which pulled the biggest ever crowd to a Bledisloe Cup rugby game in the home of Aussie Rules and stole Adelaide’s Grand Prix, is so fearsomely successful that [AUS]ns joke about Melbourne securing rights to the Sydney to Hobart yacht race. [NZ’s] Tourism and Sport Minister... was so impressed [that it] established Major Events [NZ], “modelled on similar organisations in [AUS]...”. Major Events NZ, however, was barely established when it was tasked with assessing the Wellington bid... [D]elays created by dealing with [MENZ] cost Wellington several crucial months last year... [Then MENZ]’s analysis blew

holes in prepared budgets, predicting a loss of up to \$66m and forcing Wellington to plan a smaller event[(the 'Wellington bid now caters for 3000 athletes compared to Melbourne's 4500')]. With forecasts running from a \$7m profit to a \$24m loss, [the minister] agreed to underwrite losses of up to \$11m, but only on the understanding "risk management of a very high standard" will be required if public money is at stake. However, the suspicion persists that this is not a mega-event the Government wants, in part because official advice suggests the Commonwealth Games[– last staged in NZ at Auckland during 1990 and previously at Christchurch in 1974, but never before at Melbourne (although Melbourne has staged an Olympic Games, which NZ has never staged, and Commonwealth Games have been staged at Sydney in 1938, Perth in 1962 and Brisbane in 1982) –] are almost an anachronism. [Wellington's] mayor... has sold the Games as a showcase for the city's growing potential as an events centre[(the city boasts '12+ venues – all existing')]. "We're looking seven years out and in seven years this city's going to need big events even more than it does now,"... [But] the Games' tradition as a friendly celebration of post-colonial fellow feeling sits uncomfortably in an age of promoters who assess whether they are "an appropriate product for N[Z] in the global events marketplace". For one thing, their financial viability is weaker than many alternative large events, and their focus offers little of the valuable international leverage the America's Cup might be expected to show. We may [have been] happy to spend \$500,000 for... [the Foreign Affairs Minister's successful] campaign to head the Commonwealth Secretariat, but the Commonwealth itself is dominated by African, Caribbean and poorer Asian states. Not much tourist potential there to justify backing the bid for the Games. The Government offered no more than a \$500,000 loan to help the bidding process, and denied Wellington the lobbying clout of... diplomatic posts, which Melbourne has been able to use. Not that the Games are necessarily bad business, especially in A[US], where they outrate the Olympics on [TV]. Aussie athletes habitually clean up[the medals at Commonwealth Games] and fellow citizens lap it up, which explains why Channel 9 has agreed to pay \$57m for television broadcast rights for a Melbourne Games... A[US]n TV rights might drop closer to \$30m[for a Wellington Games], but that still represents half the \$60m Wellington believes it can earn from global TV sales. Most of the rest of the \$150m needed to run the event would come from \$40m in international [TV] sponsorships, \$20m in domestic sponsorships and... \$15m ticket sales. In other words... viability... [isn't] hinged on last-minute ticket sales. Also, the 2006 Games will be the first under a new regime whereby major sponsorship and rights deals will be handled not by the host city, but by an international agency appointed by the Commonwealth Games Federation... Even if Wellington's bid survives the... councils have far to go yet to show they can keep their promise not to leave ratepayers with a fat bill if a larger than expected loss occurs[, and 'the CGF won't make its final decision until 1999. The Christchurch City Council, which last year withdrew its bid to host the games, has agreed to back Wellington's bid (that has an estimated cost of capital works needed of \$16m, compared with the \$26.2m spent by Auckland in 1990'), though most] crucially, perhaps, the N[Z] Olympic and Commonwealth Games Assn] will refuse to endorse the Wellington bid – a formal necessity if it is to go forward to the final vote in October – without stronger guarantees than currently exist for the total Games budget... On the other hand, the... \$50,000 trip by three bid members to a meeting of 17 Caribbean countries next month presents an opportunity to start repairing the damage... [caused by the deputy mayor's widely publicised inducement allegations... Indeed... [the mayor] continues to wax perky because [it] reasons the recent fuss will hardly have penetrated the consciousness of most of the delegates who will make the final decision. "These guys live in places like Jamaica and Guyana. They aren't reading the *Evening Post*..." [The mayor] clings to the notion that smaller, poorer Commonwealth countries will end up being turned off by Melbourne's Olympics-style bid... [as] they may... decide that by plumping for a glitzy Games in Melbourne, the chances of holding them in Kenya... or Jamaica will become a disappearing dream. Like Commonwealth heads of government meetings, the "Friendly Games" will become the preserve of just a few countries wealthy enough to stage them... That strategy is all the more compelling now Wellington is trying to win without actually inviting the 69 Commonwealth country delegates to visit N[Z]. That would have cost \$750,000... [I]f all else fails, there is always a minimalist option – to write a bid and present it... hoping simply the Games will fall into the city's lap. As... the... Wellington Central MP and Act party leader... points out, that is exactly what happened when Auckland won them in 1990. "I... know what a mess the Auckland bid was when they actually put it in (six years earlier, in 1984). They didn't intend to win it. They did it as a trial run." However, African nations liked the then Labour Government's stance on apartheid and rewarded Auckland, creating a scramble to provide the facilities. "Wellington has been much more careful... I say we should hang in there and stop squabbling. I... have absolutely no doubt Wellington could be the best... Games ever."

...Forget the Asian crisis, the plunging ringgit, talk of a [Last] World country or second-rate facilities, the XVI Commonwealth Games will do Kuala Lumpur and the Malaysian people proud. They justifiably boast some of the finest stadiums in world sport... The 90,142-seat Main Stadium, part of the 175ha National Sports Complex (cost \$500 million), is magnificent. There have been concerns that the canopy-like cover keeps the heat on, not off, the athletes but with only scheduled morning and evening competition any problems will surely be overcome. The adjacent hockey and athletics complexes are just as impressive. The futuristic athletics centre... is a state-of-the-art facility... The open sides allow whatever breeze [there is] to help allay the sometimes oppressive heat... A tour of other venues – the air-conditioned gymnastics stadium (13,000 spectators) and the smaller squash venue are also enveloped in the vast Bukit Jalil complex which is within easy walking distance of the equally imposing Games village – underlines the determination of organisers to provide second-to-none facilities for the athletes... 20,000 volunteers [were] chosen from 48,000 applicants... to play a part in "their" Games. Their task? Hour after hour walking the streets leading to the main stadium swishing a spindly broom to keep the roads spic and span... [● A NZer who once had a Games] gold in her grasp... [has died in] Hastings... aged 55...

FOR me as a fellow competitor... SYLVIA POTTS... will be remembered for her evenness of temperament and her willingness to help others, even at the time [when Sylvia] was competing. I was still playing hockey when I started to run 800 metres and [Sylvia] was at her best when I was on the way up. In 1972 when I was at my peak [Sylvia] had gone over the top... [Sylvia] was a 100 to 800m runner – not quite quick enough to be a top-line 400m runner. Sylvia was national record holder for a short time and it was her record I broke in the 800m... Athletics has flamboyant personalities... but [Sylvia] wasn't that type of personality. [Sylvia] was a straightforward, good journey[person] and... did well at every event [the athlete entered. Sylvia] competed in the 1968 Olympics in Mexico, then the 1970 Edinburgh Commonwealths and the '74 games in Christchurch... [when Sylvia] was chosen to carry the baton into QEII Stadium... [Sylvia was also] a good coach, and her contribution to athletics was marked by getting the N[Z] Order of Merit last year and an International Amateur Athletics Federation[(IAAF)] award for her work as an administrator. Everyone remembers that 1500m fall in Edinburgh, of course. It was a fairly new event for [gals. Sylvia] trained for those 1970 Games in Taihape. As you go through the place there's a dirty old rugby field on the way out of town. You're up to your knees in mud all winter long... – there was no going overseas or training at high altitude in those days. So when [Sylvia] said of her fall [just metres before the line while leading] at Edinburgh: "I was absolutely exhausted and I couldn't go any further" there was good reason for that. Everyone can have thoughts about "What if..." or "What would have been..." but [Sylvia] never harboured regrets like that. I knew her for years... socially as well as athletically and as a competitor... and in all that time... Sylvia... never spoke of it. [Gals] didn't go anywhere in those days unless they were with a chaperone. Sylvia and [gals] like her were breaking the ice for the others. [Furthermore, Sylvia] promoted the sport in a fundamental way – just go out, compete and do well... Potts learned in January that [it] had cancer. S[y]lvia... will be sadly missed – but... was too good to be missed for falling on the bloody line in 1970.

...[NZ's 50km walker] remembers little of the last-lap stumble that cost him gold. The Hamiltonian was just four minutes – 1000 shuffled steps – from the greatest moment of his sporting life when his dream of glory collapsed in what was the most heart-wrenching moment of the 1998 Commonwealth Games. But last night, replenished with electrolytes after a quick trip to hospital... [the walker vowed to] see another Games – Manchester 2002 – before ending his career. His dream of Commonwealth gold is as fierce as ever. Looking back at the race [the walker admitted to having] simply made a mistake in the fast pace [it] had set and... would take a lot from that as a learning experience. With three laps to go [the

NZer] was not feeling well and the ice cap on his head and frequent intake of water were not helping. But on the last lap... [the NZer still thought his body could] make it. "I was conscious that the finish line was just around the corner. I had thought my pacing was all right to get me home. Obviously I was wrong." [The NZer] started feeling light-headed, then went blank [– although the walker] remembers collapsing, trying to stand and not having the coordination. "My legs just wouldn't go." ...[the walker] started to think about having another go but accepted [the]NZ chef de mission[']s... help and his decision to call for medical attention. [The walker] was delirious and remembers talking a lot, but not what [was] said. "I've made a few apologies to people. All sorts of things were coming out." Such was his confused state of mind that [the walker thought it had actually] won the gold medal. "I was in the medical tent and I... was going, 'I know what it's like to touch perfection now'." ...Sadly, the athlete described by N[Z] team management as the most professional, focused and well-prepared member of their team was in another world... At the finish line waiting to savour and share victory with his star pupil, [the walker's] long-time coach and friend... was talking happily of the greatest day in his life. A couple of minutes earlier [the coach had handed his pupil] his last bottle, shouting, "Go get it." An official hurried over. "You N[Z]?" the official asked. The coach] nodded. "Your boy has stopped." [The coach] turned white, ran to the tiny television monitor and fought back the tears as, in disbelief and absolute horror, [the coach saw that his pupil], who had led for 49km and who had had a 6 1/2 minute lead, was on the ground... "Why, why?" implored [the coach as it] tried to make sense of the unfolding drama. "My best day has just become my worst." By the time [the coach] headed back down the course, [the walker] had already, thankfully, been pulled from the race at the insistence of [the chef de mission], who had just arrived and was heading to join team members waiting to celebrate N[Z's six]th Games gold. "...The heat had hit him like a ton of bricks... I had to make a decision," said [the chef de mission], "They asked me if [the walker] was allowed to go on or not. I could see... the... 1954 Vancouver marathon drama revisited... all over again. There was no way that was going to happen. His life is worth more than 1000 gold medals..." ...[in 1954 an English athlete had] the marathon gold medal in his reach... [but collapsed] in the stadium... [Yesterday's] gold medal went instead to Malaysia's... [representative], continuing the run of success for the host nation at the Games. N[Z]'s other walker... was the 10th and last finisher.

...Judges have been given the power to disqualify walkers in the final stage of a race even if they have not been warned [for simultaneously lifting both feet off the ground]three times beforehand, the I[AAF] said yesterday. The rule change, adopted by the IAAF Congress... comes into force immediately... [In news from the Commonwealth Games, a director's son has proved it] is one Kiwi who can fly... His 10.19s in the blue-ribbon event of the Games and the 10.17s personal best [it] ran to qualify rank him as one of the fastest Caucasians of all time. [A] Pole is first in that club with 10s flat, run in 1984... [An AUSn] ran a personal best of 10.03s to finish fourth yesterday and may be the first white... to join the 19 [athletes] in the sub-10s club, [which currently contains]Africans, Afro-Americans or Caribbean runners like yesterday's winner... His 9.88s was a Commonwealth Games record... The win meant a lot to the diamond earring-studded 24-year-old, who thanked God and country by first sinking to the track then draping himself in the Trinidadian flag. The sprinter was the first Trinidadian] athlete to win gold for his homeland since the Kingston Games in 1966.

...RED-FACED Commonwealth Games organisers have been giving away free tickets in a desperate attempt to save the Friendly Games from becoming the "Empty Games". Malaysians have stayed away in droves and even those who do bother to show up discover start times and events have been changed at the last minute. Fewer than 50% of the target 1.28 million tickets have been sold, leaving Kuala Lumpur with a record number of athletes and events – ...4208 athletes and 2460 officials... – ...and a record number of empty seats. Even [a Trinidadian]'s... much hyped attempt at the 100m world record failed to excite Malaysians. Organisers claim 58,000 tickets were sold for the Game's top event but only 37,000 turned up... Now in a last ditch face-saving attempt to rouse support before the games close tomorrow, tickets to the athletics... now cover the whole day instead of being sold separately for morning and evening sessions. Entry was free for the semifinals and finals of boxing and the last three days of shooting. With Malaysia hoping for a spectacular Games to support its bid to stage the 2006 Asian Games and later the Olympics, embarrassed officials admit the problem lies with the lack of popularity of Games sports in Malaysia. "There are certain sports which are not popular in Malaysia," said [the]operations director... "I've been involved with track and field for 40 years and we never get more than... 3000 people at an event." Officials have also resorted to juggling figures to play down the games flop, with [the]marketing director... claiming the number of tickets sold was nearer 66%. "Now some events are free we have reduced the number of tickets to 950,000 for sale, out of which 600,000 have been sold,"... It has cost Malaysia nearly \$NZ130 million to stage the Games... A sellout... would have earned around \$18m. The only sessions to have a capacity crowd were the finals for cricket, netball, [guys'] hockey, badminton, swimming and ten pin bowling. There are still hundreds of tickets available for the closing ceremony... Kuala Lumpur[is] the first Asian city to host the Commonwealth Games in their 68-year history... Even hardened boxers have moaned about fighting in the 12,000-seat... stadium devoid of atmosphere with fewer than 50 paying customers and about 200 athletes and officials during the preliminary rounds. "Something has to be done to get more people here," complained [an]England super heavyweight...

[A] GIANT weightlifter... turned into [NZ]'s incredible hulk as [it] shattered Commonwealth Games records and hauled in three gold medals... last night. The 27-year-old Aucklander... cleared a total of 367.5kg in the 105kg division... [to win] the snatch... the clean and jerk... [and combined totals. Earlier a] fellow Aucklander... won two bronze medals in the 105kg class. [The bronze-medallist], previously a triple jump and bobsleigh international, overcame the effects of a painful gum abscess to strike the medals in a hotly contested competition... [The multi]-skilled athlete... lost nearly 5kg as a result of his illness... It was a good day for the Kiwis yesterday... [A shooter] was another multi-winner, adding a bronze medal in the air pistol event to her two silvers... The third-seeded Kiwi... [gals'] badminton pair... were beaten 15-8 4-15 15-9 by the seventh seeded pair... who responded to their parochial home crowd... [in] their doubles semifinal but [the Kiwis] still claimed a bronze medal... [A gal] bowler... hit form yesterday to claim a bronze in the singles. N[Z] took a bronze squash medal [in] mixed doubles... There will be more medal glory today when the... [gals'] hockey team will be in a playoff for bronze after losing a thriller 3-7 to A[US] last night.

...For a disturbing few days it looked as if rugby was going to be the only salvation of N[Z]'s ambitions for gold at the Commonwealth Games. Fortunately it did not quite come to that, but whichever way you look at it, the introduction of sevens was a roaring success. It was, after all, one of the few things that the A[US]ns did not win. It was also a big breakthrough for rugby in a new arena of competition... Sevens will certainly be retained as a Commonwealth Games sport at the next venue... and you can bet on it if Wellington hosts the Games in 2006. All the world powers in sevens are Commonwealth members and that makes sevens a winner in the Games' strategic development. It is probably the only way a country like Samoa or Fiji [– which lost the final to NZ (although at least one Fijian was in the gold-medal winning team) –]will be able to get a medal and that, too, is an important consideration. Having cracked the Commonwealth Games, there is no reason to suppose that sevens cannot become an Olympic sport... [NZ]'s 35-medal haul... was backed up by the usual spate of top 10 finishes, including eight dreaded fourth placings – four in swimming, one... in the shot put, a couple in gymnastics and... [one] in the decathlon. The big disappointment was lawn bowls. From 24 medals at stake they grabbed only one... Track and field too had their share of disappointments with a number of athletes failing to even reach their pre-Games selection criteria. [However, tenpin] bowls was the only one of the 15 Games sports not to win a medal... Cycling and shooting were again the biggest contributors... with seven and eight respectively[, and one shooter]'s bronze taking him to 10 – the first N[Z]er to reach that milestone. It all added up to value for money, according to [the NZ] Sports Foundation boss... "The games gave our athletes invaluable exposure to top-class competition." ...It cost an estimated \$3.7 million from various sources to send 218... athletes and 80 officials to Kuala Lumpur... "Ultimately how a team performs is judged in gold medals and N[Z] finished up with eight, double the number won in Victoria[, Canada,] four years ago..." [NZ's

eight golds placed us sixth on the medal table behind AUS (80 – of 213 – golds and 198 medals in total), England (36, 136), Canada (30, 99), Malaysia (10, 36) and South Africa (9, 35). In seventh place was India (7, 25), followed by Kenya (7, 16) and Jamaica (4, 6).]Besides those who won medals, [the Sports Foundation boss] was encouraged by other aspects... [T]he netballers, who lost the final 39-42... fired a warning shot across A[US]'s bow that they were a force to be reckoned with... It was the same with the [gals'] hockey team, who showed they were definitely top-four prospects for the... Olympics...

The most significant result of the Commonwealth Games for the future of sport in this country has been the debate that has emerged about the amount of funding sport needs if our top performers are to remain competitive on the world stage. On one hand the chief executive of the Sports Foundation... has categorically stated that unless there is increased funding we simply cannot expect our athletes to win medals. On the other hand, the... [PM] has equally clearly said there would be no additional Government funding of sport. It is time sports fans took up the challenge... and made this issue a political one. Our Government hardly pays lip service to sport. In terms of funding, the amount it puts in from the tax take is a pittance... When you compare the amount the Government puts into sport to that provided by the A[US]n and English Governments you cannot help reaching the conclusion that N[Z] politicians do not value sport... [A]n effective sports lobby... needs to... embarrass the bureaucrats... to get sufficient funding to put our athletes on an even playing field with the Aussies and English... Surely some... cash... should be provided out of the health budget. If there were more people actively involved in sporting and recreational pursuits there would be... a host of [articles for sports journalists – such as myself – to continue writing about]... and... less need for the ambulances at the bottom of the cliff in the form of hospital admissions... What is wrong with giving athletes the best possible conditions to achieve their potential? That should be the aim of any Government that allows its young... [people] to represent their country on the sports fields of the world. It is archaic and totally unrealistic to suggest that somehow you are meant to get to the top of the sporting world by working at a full-time job, training in inadequate surroundings, competing without the best of medical and nutritional advice, avoiding overseas competition while all the time slipping into a personal financial mess. I am not saying that we will get to the top of the sports world by chucking money at our athletes. What I am arguing is that this country benefits greatly in all sorts of ways from sporting success and that such success will continue to be haphazard until we make a commitment to sport.

...The doom merchants say N[Z] sportspeople will never be able to foot it with the Aussies until we have an academy like the A[US]n Institute of Sport... The A[IS] has super pill status here – a body which if replicated would immediately resolve many of our sporting ills. After N[Z]'s poor medal tally at... Kuala Lumpur[– the tally compared with those from 'Brisbane and Edinburgh (1986) when NZ sent only 113 and 128 athletes respectively, and trails the 58 medals won at Auckland (224 athletes) and 41 at Victoria (133) in 1994' –] the immediate cry was for an AIS-type setup in this country... By inference, the knockers are also suggesting N[Z]'s 17 sports specific academies are inferior to the A[US]n system. The AIS in Canberra and its satellite state institutes, which tend to specialise in different sports, are a fine network. But they come with a price tag of millions of dollars – sums which only fill the dreams of N[Z] sporting administrators... The Kiwi academies are mainly funded by the... Sports Foundation with some private sector backing... [The recent] injection of \$10m public money, [brings] the Sports Foundation budget to \$15m... Between \$3.5[m]... and \$4 m... of foundation funding goes into the academies each year. Whatever the... [funding levels, however, it is unrealistic to compare NZ's setup] with the Aussie setup. A[US] has had 22 years of sustained sporting investment. The AIS was established after the green and golds failed to win a gold medal at the 1976 Olympics in Montreal... [– which, ironically, were weaker than usual because] the Muldoon National Government... [had] made possible the All Black tour of [South Africa in] 1976, which led to more than 30 countries boycotting the... Olympics... "It is not simply a case of setting up academies and by tomorrow we will have champions... Give it another 20 years and give us sustained funding..." The gap between [AUS and NZ]'s medal hauls is also population-related... As a result of... [AUS having] close to five times this country's population... Kiwis will never close the achievement gap... A[US] is aiming for 60 medals at Sydney 2000 – just short of our total from all Olympics. We have a target too: to better our best medal tally of 13... N[Z] has won 74 Olympic medals, 44 since 1980, and 446 Commonwealth medals...

COMMONWEALTH GAMES meetings had a forerunner in the Festival of Empire in 1911, in London. The first full meet, however, was the Empire Games held at Hamilton in... Canada, in 1930... NZ won three gold medals... four silver medals... but no bronze... At the second Empire Games in London in 1934, the great Jack LOVELOCK won the gold medal for the one mile... NZ also won two bronze medals... NZ won a total of 24 medals at the 1938 Empiad in Sydney – five gold, seven silver... After a break of twelve years caused by [WW2], the Empire Games of 1950 were held at Auckland and the NZ team won a total of 51 medals – ten gold, 21 silver... With the name change to British Empire and Commonwealth Games, the next festival was held at Vancouver... and the NZ team won 19 medals – seven gold, seven silver... The British Commonwealth Games, as they then became known, were held in Cardiff in 1958, and NZ won 19 medals – four gold, six silver... [I]n Perth in 1962... NZ won 32 medals – ten gold, 12 silver... NZ won 26 medals at the British Commonwealth Games in Kingston in 1966 – eight gold, five silver... The 1970 games were held in Edinburgh and NZ won 14 medals – two gold, six silver... In 1974 Christchurch was the host of what are now called the Commonwealth Games. NZ won 35 medals – nine gold, eight silver... The 1978 Commonwealth Games were held at Edmonton... and NZ won 19 medals – five gold, six silver...

RHODES SCHOLARSHIPS... for Commonwealth countries and the US were established according to the terms of... [the will of] a wealthy 19th century, British capitalist and colonial administrator, Cecil John Rhodes... [who was the PM] of Cape Colony in the 1890s, but resigned following complicity in the illegal Jameson Raid into the Transvaal, then a Boer Colony, in 1895... Rhodes Scholarships... enabled [students] between the ages of 19 and 25, selected for all-round ability, to study at Oxford University... [The latest NZ recipient is 'one half of only three pairs of NZ brothers to be awarded the coveted prize. When the 22-year-old Aucklander takes up his scholarship at Oxford University next year, working for a PhD in English and Latin, his older brother will just be completing its three-year stay there. Not content with completing a masters degree and making academic history, the 22-year-old is also writing poetry, drafting a novel and leading NZ's own Aussie Rules team.'] THOMSON, James Allan (1881-1928) was NZ's first Rhodes Scholar... in 1904... On his return to NZ in 1911... Thomson... was appointed palaeontologist with the N[Z] GEOLOGICAL SURVEY... and... later... became director of the Dominion Museum, a post... held until his death from tuberculosis. [Thomson] helped establish the Department of Scientific and Industrial Research... There was mostly one scholarship a year until 1926, since then there have been two allocated in most years. [Gals] became eligible in 1977. Scholars have their transport to Oxford paid, and are given a personal allowance during the term of the award (usually two years). They are chosen by a committee, which is chaired by the Governor-General... [No scholarship was awarded in 1933 or between 1942 to 1945. One of the two scholars selected in 1940.] Murray William Speight, [later]... died of wounds in Italy... [WW1 also affected the scholarships –] Henry Stokes Richards, [selected in 1915, was]... killed before taking up the scholarship... Athol Hudson[(1916) was] killed in action before taking up the scholarship... Among NZ Rhodes Scholars who have later become famous were Arthur Espie PORRITT (1923) and John Edward LOVELOCK (1931)... Porritt was a brilliant athlete. While at Oxford University [Porritt] captained the NZ team to the Olympics at Paris in 1924, where [Porritt] earned a bronze medal for third place in the 100 m final. This was the Olympiad on which the hugely successful film, *Chariots of fire*, focused but Porritt's real name was not used, unlike those of the other 1924 athletes who were represented. [Porritt] captained the NZ team at the 1928 Amsterdam Olympics and managed the NZ Olympic team to Berlin in 1936. [In addition to being a chairperson] of the British Empire and Commonwealth Games Federation, and a member of the International Olympics Committee [(IOC), Porritt – who]... served with the Royal Army Medical Corps in [WW2 –] became... the 11th Governor-General of NZ... the first NZ-born[Governor-General], serving from December 1967 to September 1972... LOVELOCK... (1905-42) was the first of NZ's world-beating middle distance and long-distance runners...

[B]orn near Reefton, son of a battery superintendent in the mines at Crushington... John... won a scholarship to Timaru Boys' High School, another scholarship to the University of Otago where [John] studied medicine and then... became a Rhodes Scholar... [John] was a successful doctor, becoming assistant director of a department of the Manhattan Hospital in New York, which specialised in the treatment of poliomyelitis[, but] was killed when [the retired athlete] fell from the platform in front of a train in a New York subway. Lovelock set a world record for the mile of 4 minutes 7.6 seconds, during a visit to Princeton University, in the US, in 1933... His most spectacular performance was at the Olympic Games in Berlin... when, before 120,000 spectators, [the NZer] won the 1500 metres in 3 minutes 49.8 seconds. This was a world record and... NZ's first track and field gold medal.

OLYMPICS are about winners and losers, records and heartbreaks – and controversy. N[Z], sharing a place on that stage for 88 years, will tomorrow be the first country in the world to celebrate centennial Olympic Day... Driven by increased despondency over what [the French person] saw as invading commercialism... Baron Pierre de Coubertin presided over a congress attended by 13 nations – with the written support of 21 other countries (including N[Z]) – in Paris in 1894. [The Baron] revealed his dreams to revive the ancient Olympic Games as a four-yearly contest between amateur athletes from around the world in selected events. The era of the modern Olympics was born... On July 19 in Atlanta... [athletes will once again] chase a golden dream. [However, commercialism], despite de Coubertin's hopes, has become all-enveloping. It wasn't always like that... The ancient games... were held in Greece from 776BC. There was only one race, a sprint; the prize, an olive wreath. [Gals] were not only forbidden from taking part but barred from watching as naked [guys] chased glory. These games were abolished in AD394. The first "modern" games were held in Athens in 1896 – four years earlier than de Coubertin's plans to host the Olympics as part of the Paris International Exposition. Some 311 contestants (all [guys]) from 13 nations competed in nine sports. The first Olympic champion was... James B. Connolly, from Boston, who hopped, stepped and jumped 13.71m... [– in comparison, the winner of] the Barcelona triple jump gold in 1992... leaped 18.17m. The 1900 Paris Olympics were disappointing, tagged a "comic opera." [A] Briton became the first [gal] Olympic champion with her tennis victory... Among the 19 [gals] of the 1206 competitors from 26 nations was Margaret Abbott – America's first [gal] Olympic champion. Unfortunately, Margaret died in 1955 unaware that the golf tournament [the USer] had won was part of the Olympics. The games were held in America for the first time in 1904 when 681 [guys and 6 gals] journeyed to St Louis. N[Z]ERS were part of the Olympics for the first time in London in 1908 – 14 years after the secretary of the N[Z] Amateur Athletic Association... had met de Coubertin in 1892 and later became N[Z]'s first member of the IOC. NZ's three competitors... were lumped in with the Australasian team... [T]rack walker... Harry Kerr... won bronze in the 3500m... There were another three Kiwis in the Australasian team at Stockholm four years later. Swimmer Malcolm Champion swam in the world record-breaking 4x200m freestyle golden relay team. Anthony Wilding... took tennis bronze... The first really acrimonious Olympic controversy came six months after those Stockholm games when popular decathlon and pentathlon (discontinued in 1924) champion Jim Thorpe was stripped of his medals and trophies. An investigation found that in 1909 and 1910 [Thorpe] had been paid \$25 a week to play minor league baseball thereby, in the strictest definition of the word, becoming a "professional." The second placegetters in both events refused to accept the trophies sent to them by the IOC and in 1983 – 30 years after Thorpe's death from a heart attack – the Olympic Committee lifted the ban and presented the gold medals to his children. N[Z] sent its first stand-alone team... to Antwerp in 1920. Single sculler Darcy Hadfield finished third (behind American John Kelly, Grace Kelly's father) to win N[Z]'s first Olympic medal. The Olympics returned to Paris in 1924 with a record 3092 competitors from 44 countries. N[Z] again had four representatives. The return was the same – one bronze medal, won in... [the guys'] 100m by Arthur Porritt. Lord Porritt, who later had a... 35 year... term as... surgeon to the royal family, was bemused [at being someone who] had achieved so much in his life but was best remembered for "something which had taken less than 11s." N[Z]'s first Olympic gold came four years later in Amsterdam when [a] 22-year-old welterweight (67kg) southpaw boxer... battled bravely with an injured hand to beat [an] Argentinian... on points. The 10,000m gold was the last of a record nine won by Finnish athlete Paavo Nurmi – his first was in the same event in Antwerp eight years earlier... There were solitary medals at the next two Olympics – silver for rowers... in the pair oar at Los Angeles in 1932 and from that epic Jack Lovelock 1500m victory in Berlin four years on [the 'Berlin gold medallists were each given a tree seedling – Lovelock's oak, planted in his old school yard, is one of 17 still growing around the world']. No medals came the way of the seven-strong Kiwi team in London in 1948 but three medals, including a breakthrough gold for... [NZ gals with a] record-breaking long jump, resulted from Helsinki in 1952. The first, and still only, Southern Hemisphere Olympics in Melbourne in 1956 attracted a record 52 N[Z]ers but a total of only 3342 competitors. For A[US]'s nearest neighbours there was double gold – ...in the 50km road walk and Sharpie class yachts... There were 83 countries and 5348 competitors when the Olympics returned to Europe in 1960 when... [two runners gave NZ] sport its finest hour with their heartstopping 800m-5000m double... [A third NZer] completed the three-medal haul with marathon bronze. Four years on three medals became five – again in athletics and yachting – with the redoubtable [800m gold-medallist from 1960 winning NZ]'s first double gold with his Tokyo 800m and 1500m triumphs. [Another NZer] ran third in the 1500m – the only time N[Z]ers have collected two... medals... in one event. N[Z] rowers returned to the dais for the first time in 36 years in 1968 with their coxed four victory in Mexico. N[Z] won bronze in the [guys'] marathon and... one of the same colour with N[Z]'s only Olympic shooting medal. The 1972 Munich Olympics are tragically remembered for the Palestinian guerrilla attack on Israelis in the Olympic village and at Fustenberg Airport. There was some sport, even if staged under a cloak of sadness. Kiwi [rowers] confirmed their standing with gold in the eights and silver in the coxless four. [A NZ runner] surprised himself with the 1500m bronze. Two golds – one expected... in the 1500m... the other one of the biggest upsets of Olympic history... [when] the hockey team... won a transtasman clash 1-0... – marked N[Z]'s appearance at Montreal in 1976... Kiwi rowers continued their medal run with bronze in the eights... [and a runner] grabbed silver in the 5000m... Apart from a token canoeing presence and... this country's only Olympic modern pentathlete – N[Z]ers stayed away from the... 1980 Moscow Games ['because NZ joined a widespread boycott of the event, led by the US, over the Russian invasion of Afghanistan']. They hit back four years later – in another weakened games [caused by a widespread boycott of the event, led by Russia, over the US boycott of the 1980 Games] – in Los Angeles with eight... golds (three for... [one canoeist]), 11 medals in all and an impressive eighth placing on the medal table among a record 140 nations... [An equestrian] followed his 1984 triumph with back-to-back gold in Seoul in 1988... [NZ's canoeists] also repeated their Los Angeles K2 500m victory while [another NZer (r:p1555, ln27)] turned bronze to boardsailing gold. It wasn't as good four years ago in Barcelona. [The boardsailer's] sister... continued a family tradition with her gold – N[Z]'s only 1992 victory. Yachting picked up four of N[Z]'s 10 medals... Only five countries have been represented at every Olympics in the modern era – A[US], Great Britain, Greece, France and Switzerland – and all will be sending teams to Atlanta this year... [along with] upwards of 10,000 competitors from 180 countries[, plus thousands of sports reporters and photographers]... De Coubertin, one of only six presidents of the IOC and who died in 1937, would surely squirm if [it] had ever thought that decisions would be made on purely "commercial" grounds... But that will all be forgotten next month. Let the 1996 games begin!

...IT'S [nearly] time for the Olympics a[gain] and... when you have just about every sport except marbles being accepted into the games, I think rugby should get an invite. I have nothing against sports like beach volleyball and synchronised swimming but you would think either rugby or rugby league would be somewhat more popular, especially when union ranks right up there in terms of being one of the most played team sports. The fact that both rugby and league are professional would not now be a factor with the Olympics already having the U[S] NBA dream team and some of the world's best [professional] tennis players... To me, it's great that people who are recognised among the best athletes in the world are

there. I can think of nothing better than being in an Olympic final and going for gold... I love watching the world's best compete against each other and I think the Olympic Games are a time when everyone allows themselves to get a little bit patriotic. I will be following the British athletes and obviously [Britain's top sprinter]'s attempt to win back-to-back Olympic gold medals in the 100 metres will be a highlight.

...[a] sprinter... ran... "the perfect race"... when [the USer] clocked 19.66 seconds for the [guys'] 200m yesterday. The 28-year-old Texan with the unique upright style wiped out... [an Italian]'s 17-year-old record of 19.72 seconds with a furious curve run at the US Olympic trials. It was the second time in two days that [the Texan] had run faster than [the world] record, but an assisting wind of 2.7m per second had negated a record for his 19.70 second effort on Saturday. The wind today was 1.7 mps, under the allowable 2.0 mps for record purposes. "I just wanted to make a spot for myself in track and field history," said... [the Texan, who] now hopes to become the first [guy] to win the 200 and 400 metres at the same Olympics at... Atlanta... [The Texan] claimed gold in both events at last year's world championships and duplicated the feat in the US trials, winning the 400 metres last Wednesday in the third fastest time ever run, 43.44 seconds... [The Texan had] dropped out of the 1992... Olympics 200-metre semifinals after suffering from food poisoning... [Incidentally, Atlanta's Olympic organisers expect to come] in more or less on budget at \$1.7 billion[('Barcelona's Olympics cost \$1.6 billion, Seoul's cost \$3.1 billion and Los Angeles' \$469 million')]. They promised the Games would not cost the U.S. taxpayer a penny and won huge sponsorship from corporations... Coca-Cola is the major sponsor... in Atlanta. Some industry analysts suggest their bill could be as much as \$2 billion... There will be modest profits [- 'projected at \$30 million (Barcelona made \$6 million, Seoul \$350 million and LA \$250 million in profit)'] - but Atlanta will be left with a legacy of Games-related projects worth hundreds of million of dollars.

...Atlanta turned on a ceremony that did the city proud in launching the centennial of the modern Olympics... yesterday... However, [NZ's]... Olympic team had to put in some unexpected last minute training to get to the... opening ceremony... on time... An organisational hitch left the... team of 103, including the 70 athletes who elected to march, in the holding pen 500 metres from the stadium entrance when their name was called. That meant a sprint through the sultry Atlanta heat to get to the stadium. "It was a real mess-up," said [the] team chef de mission... "They got the timing all wrong and ran short of countries to march on... to the entry gate." ...The highlight of most opening ceremonies is the lighting of the Olympic flame and there have been many dramatic moments. But Atlanta equalled any of them. The flame was passed from [a] quadruple gold medallist... to [the US professional] heavyweight boxing champ... [Apeman, who] ran into the main stadium and then linked arms with [Greece's] 1992 hurdling gold medallist... - linking these Games with the birth of the Olympics in Greece. They ran the rest of the lap and passed the torch [- which, prior to very Games, 'travels from Greece, and ends up in the host city to light the flame that burns throughout the competition' - on to a] champion swimmer... and, at the base of the tower, [the swimmer] passed it to a figure cloaked in darkness. The spotlight descended and the mystery [figure] was revealed - ...the... [heavyweight boxer who] won a gold medal in 1960 and went on to become the greatest figure in sport. But these days, as could clearly be seen yesterday, the 54-year-old is a shell of his former self due to the effects of Parkinson's Syndrome. One hand quivered uncontrollably as [the winner of the Rumble in the Jungle] lit a fuse which climbed to ignite the flame in the Olympic cauldron. His central role yesterday was all the more poignant as [the boxer] had thrown his own gold medal into the Ohio River after being the target of racial taunts shortly after his triumph in Rome. The ceremony was watched live by 83,100 people and by a record world TV audience of 3.5 billion[(some of whom will have taken their annual holidays to coincide with the games)]. The scale of the four-hour extravaganza was staggering. A 22,500 square metre blue rug covered the entire field (the largest rug ever made, spectators were told), the 5500 performers used 1.6 million sequins on their costumes. Baron Pierre de Coubertin... said a century ago: "It is above all through the ceremonies that the Olympics must distinguish itself from a mere world championships." The Baron would have been well satisfied in Atlanta yesterday.

...a few days before the start of the centennial Olympic Games... I hired... a plump, elderly, black Atlantan... outside the Olympic Media Centre... to take us on a half-day tour of the city's much-hyped crime zones... [A]s we pass through the oak-lined streets of up-market Cascade Heights, [our driver] stops to point out the mansion of... "the black boy... baseball superstar... that beat Babe Ruth's home-run record." Only a mile or so further on, we pass a row of boarded-up shacks that until recently were occupied by crack cocaine dealers. Like hundreds of similar haunts in the city, the crack houses have been systematically closed by police in the lead-up to the Games. Some have been stripped of all surrounding vegetation, the bare earth evoking a napalm attack, leaving the dealers and their customers nowhere to hide. In such trouble zones, police or security guards are positioned at almost every corner. It's part of the massive public relations exercise designed to make Games visitors feel safe, with a security force of 30,000... - ...14,000 Army troops... 10,000 private security guards... 4500 public safety personnel with... the State of Georgia Olympic Law Enforcement Command... 1500 members of the Atlanta Police Department... and [about] 1100 foreign law enforcement volunteers... Long regarded as the most enlightened city in America's South, Atlanta is 67% black, yet aspects of the pre-Games "get clean" campaign make some blacks uneasy and others openly hostile... Poor blacks are being penned into their neighbourhoods to keep them out of the public eye... Tumbledown houses near Olympic venues have had a quick spruce up to hide the poverty that exists among 28% of the population... The most controversial is the controlled movement by Georgian authorities of about 15,000 (mostly black) "homeless" people from inner-city haunts to outlying areas. It began months ago with a programme called Homeward Bound, in which fringe-dwellers were offered one-way tickets out of Atlanta... but only if they signed an agreement not to return. When that failed, the homeless were shifted to parts of Atlanta beyond the glare of Games publicity. In a supreme irony - even by U[S] standards - many of those being hustled out of sight came to Atlanta hoping to land [one of] the 85,000 Games-associated jobs advertised in recent months... [At least the] 120 inhabitants of death row in Atlanta... are breathing a little easier; for the duration of the Games, executions have been put on hold. Less than an hour's drive from the gleaming new Olympic stadium, the Jackson state prison, a squat brown fortress surrounded by lakes and parkland, holds Georgia's dirty secrets: [guys] condemned to electrocution on the basis of evidence which would surprise lawyers elsewhere in the world. Not, of course, that most Georgians feel they have anything of which to be ashamed. In the "worldwide capital of human rights," as Atlanta described itself in its Olympic proposal, the hot subject of debate is whether... a murderer, should be allowed to donate his kidney to... the retired Cobb County detective who led the investigation which put him on death row and who is now on a dialysis machine. A body of Georgia opinion - about to be backed with a federal law suit - holds that condemned prisoners should have their organs "harvested" before death, as happens in China. "There is rarely any question about the guilt of these people, virtually none," [the] state attorney-general... insists. "...There aren't any innocent prisoners on death row... That is a myth... I take pride in the fact that the people want the death penalty. Go visit the family of the murder victim, and then write the truth: that these guys on death row are the pits." Guys like... the next in line for execution, who lost his final appeal to the Supreme Court at the end of last month. [The inmate] was condemned for the rape, sodomy and murder of Joy Ludham, a 19-year-old student, whose body was fished from a creek in Houston County... in December 1981. The horror of that crime is matched only by the horror that [the inmate] could ever have been convicted. FOURTEEN days before the discovery of her body, Joy... - who knew [the inmate] - had disappeared. But [the inmate] had an unusual and unbreakable alibi. According to [the person] who conducted the autopsy, Ludham had been dead for less than five days. For 13 days before the discovery, [the inmate] had been under continuous police surveillance. [The coroner then] changed his mind. Ludham might... have been in the water for 14 days. On his revised evidence, [the inmate]'s conviction rests. Yet astonishingly, [the coroner] had no medical training... was merely a crime lab technician used to checking fingerprints, not the state of a corpse. When the athletes go home, [the inmate] will die... The... [state attorney-general] does not accept the proposition that the death penalty is racist. The great majority of convicted murderers are sentenced not to death, but life imprisonment. But in a state which is two-thirds white, 12 of the 20 prisoners killed in the past 20 years have been black. Two-thirds of its murder victims are black, but 85[%] of those on death row have been convicted of killing white victims. After 220 years, Georgia has yet to execute a white person for the murder of an African

American. In 1776, the U[S] Constitution created the world's first codification of human rights. The American way of killing should not be discriminatory, while death penalty trials must meet the standards of legal "due process" – in other words, they must be fair. The reality is that the American debate on crime has ceased to care about such niceties. For poor, especially black poor, defendants justice sometimes seems not so much a lottery, but more a closing steel trap. There is no legal aid in Atlanta: no system by which a [perso]n on trial for his life can expect the state to fund the lawyer of his choice. In even the most complicated cases, defendants without personal wealth must make do with attorneys chosen by the judge – often lawyers with no criminal experience. Their errors are rarely put right on appeal: time and time again, U[S] law makes defendants pay for their lawyers' mistakes with their lives... Often, says... a Yale law professor and director of the Atlanta-based Southern Centre for Human Rights, the death sentence is awarded "not for the worst crimes, but for the worst lawyer." ...Statistically, of course, this remains one of America's most dangerous cities, with a million emergency calls to police a year, and a murder every two days. Yet at every likely area we visit, the vice dens and drug houses have been boarded up, defoliated or ripped down... On Jonesboro Rd, a young black... lounges on a busted sofa outside a dilapidated shopfront. Above him is a sign: "No loitering [sic]. No drugs. No alcohol". [However, teenagers] hunker by the roadside doing drug deals. [Our driver] says we shouldn't leave the car or even stop in these parts, so [my] photographer... has been snapping scenes through an open window. The trouble starts when a group of youths notice the camera as we pass; when we do a U-turn and head back towards them – a dumb move, without doubt – they rise as one and start to move. "They're getting rocks!" [the photographer] calls from the back seat, but by then it's too late. The first one shatters the rear window... FOR A few moments, it's like one of those dreams when you try to run but can't. The cab is littered with glass... and... youths are loping all around it, hurling fist-sized rocks that smack against the bodywork like bullets. "Go!" someone yells, breaking the spell... The driver accelerates for a couple of hundred metres then, inexplicably, hits the brakes. Gasping for breath... [the] gospel singer and lifelong Christian... reaches over and scrabbles at the glove box in front of my knees[, and]... drags out a silver .38 revolver. Then... spins the wheel and guns the old Buick back towards the black kids still clutching at their rocks at the roadside... "No doubt 'bout that," [the driver] says when asked what [it] is doing. "I'm gonna kill that bastard that hit my car." ...[the photographer] and I experience the surreal, time-lapse sensation that accompanies real shock. I remember thinking: "[The driver] can't be doing this – [because the driver is] a gospel singer... one of the... Sunbird Boys!" Then we're both yelling for him to turn up a side street, where several black-clad security guards are visible. The security [guards] listen to what happened for about three seconds then rush off after the youths with an evil-looking Great Dane on a chain. "Stay right there..." one of them yells. "Don't get outta the car!" ...[but the photographer suggests]: "...let's just get the hell out of here... we'll fix up your window, mate." ..."Well... OK." As we drive slowly away, I ask... if [the driver] really would have used the gun. "Oh, for sure..." Minutes later, we're out on the wide bright highway passing the Georgia Dome. Jets from all over the US scream in packed with happy tourists bound for the Games. [The driver] sticks his head out of the window and grins at the sky. "Welcome folks," [the driver yells at the planes]. "Welcome to Olympic City!"

...Angry N[Z] rowers blocked an Atlanta street outside the Olympic village [yesterday] after their scheduled bus shuttle to training did not turn up. The Kiwis had been waiting for 90 minutes and decided something had to be done or they would not get to Lake Lanier, 90km north of Atlanta. They walked out on to the road... and sat down on the hot concrete. They were joined by rowers from other countries, including Russia, Ireland and Italy. Rowing's head body, the International Rowing Federation, said the transport system was in crisis.

...Atlanta scrambled to put its Olympic organisation back on track yesterday after technical problems, faulty transport and huge crowds threatened to bring the world's biggest sporting event to a standstill. The... nightmare Atlanta has feared most since winning the games – traffic chaos – has... come true. Buses serving venues are late or fail to appear at all, timetables are worthless, and at one venue... athletes... confronted police. "The other morning there were 250 rowers sitting out in the road. They just got so frustrated... [– but weren't as frustrated as the athletes who actually 'missed their events because of holdups'],"... City freeways were relatively clear, but Atlanta's subway system [has] struggled to cope... Organisers blamed the city for failing to deal with traffic in central Atlanta... Inside the venues, things were little better. The much touted results service, employing state-of-the-art technology and the central plank in the city's boast to stage the games, was a huge embarrassment. Media organisations said they faced a major crisis because organisers were unable to provide a viable results service. Olympic veterans said it was the worst fiasco they had ever seen. Although results were appearing promptly on scoreboards at the various sports venues, at the main press centre in downtown Atlanta they were either unavailable... or incomplete... [(wrestling) results gave no clue how each bout had finished...], riddled with errors... like boxing results reporting that the referee had stopped the fight in the fourth round, although Olympic bouts last only three... while results for straightforward sports such as soccer were incomprehensible... [In another development, two] Britons have been arrested as part of a massive campaign against ticket touting. They were picked up by police in a full-scale sweep of Olympic city where "black marketeers" have arrived from all over the world with the aim of making fortunes from peddling marked-up tickets.

...the 48-year-old president of the Atlanta Olympic Committee, admits [telling] one white lie when leading his city's bid to be awarded the 1996 Olympics. "I was asked what the average temperature of Atlanta was during July and I told them 71°. I forgot to mention that that's at 4am,"... The temperatures during the day are well in excess of 100°. The other statement... which has proved most wrong concerned price-fixing. [The president] said there would be none of the shameful price-fixing in Atlanta that occurred at Barcelona. But going into the Olympics, hotel prices... skyrocketed. Rooms normally \$174 now go for \$575... and those at \$60 are... \$225. [The president] is on an annual salary of \$US669,112 and has got to meet every important head of state in the world since Atlanta was awarded the Games in 1990. The price: Two triple by-pass heart operations.

...in 1948, the BBC took a fateful decision. It paid a princely £1500 (\$60,000 in today's money) for the right to telecast the Olympic Games to a domestic audience... the first time a television network had paid the I[OC] for the privilege. But not the last. The rights to this year's Olympics raised \$1.3 billion from broadcasters round the world... Sportsfests generate audiences beyond the wildest dreams of television companies... [T]wo-thirds of [hu]mankind... are likely to... watch... some part of the 1996 Olympics... The top eight television programmes in America are all sporting events... Sport has a special quality that makes it unlike almost any other television programme: immediacy. This... has created a symbiotic relationship between sport and television in which each is changing the other. Television and the money it brings have had an enormous impact on the Olympic Games, including on the timing of events and their location. For instance, an Asian Olympics poses a problem for [US] networks: viewers learn the results on the morning news... [USers] are rare in following four main sports... [– gridiron,] baseball, basketball and ice hockey[–] ...rather than one. America is also uncommon in having no publicly owned networks. As a result, bidding wars in other countries, though just as fierce as in America, are different in two ways: they are often fought between public broadcasters and new upstarts, many of them pay channels; and they are usually about soccer. NOTHING better illustrates the change taking place in the market for soccer rights than the vast deal struck this month by Kirch... The... German group... spent \$3 billion for the world's biggest soccer-broadcasting rights: to show the finals of the World Cup in 2002 and 2006 outside America. That is over six times more than the amount paid for the rights to the World Cups of 1990, 1994 and 1998.

...[“did ya hear that tonight people can pay to listen to records being played by DJs, including] DJ Hitler or something...” “Hitler with a HIT space LA...” “[Perhaps]... they just play war movies all the time. Backwards, so maybe the Germans win or something...” “Maybe [they] could get a videotape of that synchronised swimming routine.” “...those stupid synchronised swimmers from France who were doing... an interpretation of Auschwitz in dance.” “Goose-stepping into the pool...” “...what an abomination.” “I saw a videotape of their practise... on CNN... Their nose plugs sat under their nose like a Hitler moustache...” “No! Really?” “I don’t think it was done on purpose but [that] was the effect... We didn’t have a video player set up in the newsroom.” “So we didn’t capture that one... Why didn’t you... that would’ve been the greatest moment in sport, ever...”

...[by giving NZ] swimming its greatest moment, and first gold medal[at an Olympic Games pool, the NZer who won]... the 200m freestyle... put his country ahead of the U[S] on the medal table – for 12 hours at least. If [his] coach... is right, there are more swimming medals to come. Today, [the gold medallist] swims the 4x200m freestyle relay and tomorrow the 200m butterfly – the event in which [the swimmer grabbed NZ]'s first swimming silver four years ago. On Wednesday [the swimmer] will attempt to complete the 200m/400m freestyle double. [The coach] has maintained all along that the 400m might be [his] best event... the victory yesterday... was the ideal 50th birthday present for [his father, although his father] was lucky to be there to collect it. Eighteen months ago [his mother and father] tossed a coin to see who would be in Atlanta. [His mother] won and the house was mortgaged to pay for the trip. [The father] eventually made it to Atlanta thanks to his co-workers and employees at The Warehouse.

...[an] Irish swimmer... won her second gold of the Atlanta Olympics yesterday in controversial fashion, while [a] Turk... broke a world record on the way to making history in the 64kg weightlifting event... [The Bulgarian-born Turk] became the first lifter to win three gold medals in successive games... [A Russian who is] unbeaten in major championships since 1991... became the first [guy] since... Tarzan... to win the 100m freestyle title twice... Johnny Weismuller... went on to star on the cinema screen as Tarzan after winning in the 1924 and 1928 Olympics... [The Irish swimmer] is no Tarzan, but [the lass] is Hollywood material, the classic rags to sporting riches athlete of these Olympics. Unknown before the games, [the swimmer] won Ireland's first [gals'] gold in Sunday's 400m individual medley, a victory that was also her country's first title in the pool. Despite protests from the U[S], Germany and the Netherlands, [the Irish lass] was then allowed by the I[OC] to switch from the 200m to swim in yesterday's 400m freestyle, even though the official entry deadline had passed. Her qualification in the morning heats cost [the US's] winner of four Olympic titles, a place in the final. [The USer] was incensed... "I am someone who plays by the rules... I have learned that life is not fair. Today proved that point." [US] anger was cooled somewhat when [one of their girls], aged 15, won the third [US] gold in the pool in the 100m backstroke... Russia's [guys] also triumphed in the gymnastics hall, winning the team gold... with 576.778 points, a comfortable 1.239 points better than China. The gymnastics crowd can now turn their attention to their "Magnificent Seven" – the [US gals'] team – who bid today to overturn a slender Russian lead after the compulsory routines... The three-way showdown – Romania are also in with a good chance – could provide one of the high points of the games. In the fencing hall, [the] Olympic champion... of France, and [his opponent from] Cuba, decided to indulge in a spot of boxing. They had to be separated by police when they clashed off the piste after the Cuban was ousted from the foil tournament... Courage was required at the yachting venue in Savannah where the Tornado class, among others, was hit by a severe lightning storm in an area recently affected by Hurricane Bertha. Some sailors abandoned ship for safety reasons... The Tornado heats were cancelled.

...And the losers, by unanimous vote, are the Atlanta officials... Olympic Games organisers were reeling under a storm of criticism yesterday as... transport and communications chaos worsened. Angry team managers... from 197 countries... lashed out at the I[OC], which curtly told local organisers to get their act together... Two of the biggest rowing stars at the Games, the Britons... quit the athletes' village in disgust at transport problems. Ukrainian, British and Polish rowers hijacked a bus heading for a hockey venue. Meanwhile, a powerful consortium of 88 European broadcasters said they wanted back some of the \$NZ363.37 million paid for rights to the Games. The European Broadcasting Union said working conditions were so bad it could not deliver acceptable programmes to viewers and listeners. Atlanta has been getting an earful from everybody ranging from volunteer bus drivers housed in condom-cluttered flop houses and spectators crammed into... trains to... workers struggling with a multimillion-dollar results system that collapsed before it even started to work. The bizarre results system awarded Asian records to all 36 weightlifters who took part in the 64kg snatch. The lucky lifters included 10 Europeans, five Latin Americans, two Americans, an African and a Canadian. Even more fortunate were [the lifters from] the Solomon Islands and... China. According to the results they failed to register a lift. But what the heck, they got Asian records too. Atlanta's computerised information service listed [a] Ugandan lightweight... as just 57cm tall. A light-heavyweight... of Sierra Leone, was credited with being just 1cm taller. Not so underplayed was... a Tanzanian boxer... in the light-welterweight division... said to be 6.35m tall... Two athletes had been injured after colliding with rubber-wheel "trams" and carriages in the villages. "Their ankle sprains were sufficient enough to put them out of the Games." ...Local organisers [have] hit back at criticism, saying athletes were to blame for transport woes inside the Olympic village. They accused them of dangerous driving in the golf carts provided to nip about the village... [However, NZ's] swim coach... said... "People don't understand how bad conditions are at the pinnacle of competitive sport, which is what the Olympics are... You've got to sleep in little beds, in tiny rooms. Our 16-year-old girl... swimmers are having to share unisex shower facilities with their [guy] team mates as well as the Kiwi rowing team... It's really hard for these kids, many of whom have never been overseas before... Security is incredibly tight and a lot of these young swimmers don't understand the necessity of all the checks..." [The coach] believes one of the reasons the highly fancied A[US]n swim team have performed so badly is because they have been in the village too long. A[US]'s head coach... was criticised by [his] leading swimmer... for moving into the village... 10 days before the games... N[Z] moved into the village two days before the opening ceremony.

...[the reigning] champ... will start the defence of his 100m track title this week determined to end his career on a high – even though [the Brit] has totally lost faith in the Olympics. [The Brit], who only decided to run just before the games, believes the Olympic movement has sold out. [The Brit] did not take part in the opening ceremony and has yet to set foot in Atlanta after training with the British team in Florida. But the British team captain found himself under fire yesterday – for bothering to turn up at all. [His country's former] national director of coaching... said: "[The defending champ] is not going to make the final... [Furthermore, all] this nonsense about 'will [or won't the runner] go?', it does the sport... and... him no favours. It certainly doesn't do Britain's sprinting youngsters-in-waiting any favours." The 36-year-old[sprinter], who fell out with [the former coach] after a row over Britain's Barcelona relay team, had said last season that... "To be honest, I think the Olympics are losing their ideal... It started off as a great way for athletes to prove they are the best. Now, there is all this talk about paying them... I still think the Olympics should be totally prize or money-free. Once you win at the games, the sponsorship and everything else comes through. They brought in the Dream Team, they brought in the tennis – I think they have lost it." [The sprinter] is not the only one. Britain's 1956 Olympic steeplechase gold medallist... who organises the London marathon, boycotted the games after arguing: "All the freedom of the games has gone now. There is pressure to succeed at all costs..." Few track and field stars can quite put their finger on why the Olympics retains an aura at all... [T]he 1500m world champ... says... "I have never said a career without an Olympic title is a failed career. It's a dream to win the Olympics, you make history – but if you are world champion then no one can take that away from you. I would never say an Olympic title is more important than a world title.[Like it says in the movie *Cool Runnings* (about a team of Caribbean Olympians): 'A gold medal is a wonderful thing but if you're not enough without it you'll never be enough with it'."

...[a] Canadian... crowned a day of drama with a world record in the [guys'] Olympic 100m final yesterday after [Britain's defending Olympic] champion... was sensationally disqualified... [The world champion Canadian cemented] his place as the fastest [hu]man on the planet... [by clocking] 9.84s in a sumptuous showdown between the cream of world sprinters... Eight years after the Seoul Olympics, [the 28-year-old]'s success eased Canadian conscience at having [another 100m gold medallist] disqualified and banned... [Furthermore, his effort broke a dominance of the 100m record that has been maintained by six successive US sprinters since] 15/10/68... It also meant that for the second successive Olympics the U[S] failed to finish in the medals in an event they used to regard as their own. The race was preceded by scenes of confusion with three false starts... [The Brit] broke first... and... [last. The oldest guy] in the field... left the starting line-up only after a protracted period of confusion and remonstrations with officials, [which included] throwing his shoes in a bin... The Briton was later involved in a potentially ugly scene with [the silver medallist after the Namibian]

and other sprinters in the race accused [the deposed champion] of not showing them respect. "I am very upset with [the British runner]," an emotional and tearful [Namibian] said later. "The way [the old guy] behaved affected my race absolutely. If I had false-started twice[– instead of just once –] I would have left immediately..." The scowl on [the British runner's face as the 36-year-old] walked away without defending his title was in stark contrast to [the Canadian's] unconfined joy at becoming the... first [guy] since... 1968 to set a world record in an Olympic 100m final... [The Canadian], one of four Caribbean-born [sprinters] in the final... ignored questions about [his compatriot's 1988 disgrace].

...a 36-year-old grandfather who is set to retire at the end of the season... boasted yesterday that... Britain's biggest track name... was still the best athlete in the world although... [the] British star... had lost his Olympic sprint title through disqualification. The day after... the Atlanta 100m final... [the British runner even denied jumping] the starter's gun. "I felt that I had the perfect start... [However,] I don't just stop being the greatest athlete in the world just because I lose one race..." said... [the] Olympic silver medallist... in 1988... [who] became world champion [in 1993] and has been European champion since 1986. His disqualification... in front of a full house... was vintage... [egotism – the British runner] refused to accept it and delayed the re-start for several minutes until the referee... ordered him from the track. [But the British runner] stayed in the arena, and performed his own lap of honour after the race... [later claiming this act] was for the fans. "They knew they had been robbed of a much better race than the one that went on... For me, I was the people's champion out there."

... "In lane three, the world champion, world record-holder and 1996 Olympic 400m gold medallist... ranked No 1 in the world in the 200m and the 400m for four years, something no other runner has done for even one year... representing the US..." So the planet's greatest sprinter is introduced... on to the stage for the centennial Olympics 200m final... That might have warned [his] seven fellow-finalists, who needed alerting. But they are not worried, though they would be if they knew that [the USer] is... afraid... For six months up to this point, the hype and pressure on him has been... well, [the USer] can't even begin to describe it... [The USer] is afraid of failing, but... thrives on the feeling. The higher the stakes... the better... [the USer performs. The USer] settles into his blocks nervous, but pumped, and switches into what [the USer] calls his "danger zone," when his eyes stare so hard you expect the air to burn, and his mind goes into battle mode. It is able to block out the mugginess, the haze around the stadium from the breaths of a house of 83,100 roaring in anticipation, the two blimps in the black sky above, the fact that this historic attempt was made possible by his pushing the IAAF to accommodate him by changing the Olympic 200m-400m schedule... The PA... comes back: "We've just seen [a French gal] do the 200-400 double, now [the USer] is trying to become the first [guy] to do so." More pressure... Another mighty cheer. The announcer again: "Sssssshhhhhhh." And guess what? 83,100 people hold their breath. Bang. [The USer], in his golden slippers, stumbles from his blocks in a blizzard of flashes... not so much an avalanche gathering speed, but a thunderbolt... [His] legs whirl like a beater and his spine is as straight as an ironing board... [The USer knows his body] is running faster than ever, but not by how much... Fifteen metres from the end... his left leg [begins] cramping, but... his [body]... is flying to the line... the time: 19.32s... [chopping] 0.34s off his world record[(the '33rd world record broken at these Olympics as the human "body is pushed ever closer to its limits")]. His margin of victory is 0.36s, the largest in an Olympic 200m final since his hero, Jesse Owens... [won] 60 years before. [The USer], an everything-has-to-be-just-so kind of guy, skips and leaps in excitement, pointing at himself just to remind you, if you had not figured it out, that [the sprinter is the centre of attention]. Lost in the euphoria is the fact that... the... [Namibian who ended his streak of winning] 21 consecutive finals in the 200m... less than a month ago and was the 100m runner-up last Monday... [came] second in 19.68s... an African record... the 100m bronze medallist... from Trinidad and Tobago... [came] third in 19.80s, and [a Barbados runner came] fourth in 20.14s, [both times being] national records. After walking, not running, around the orange track and embracing the crowd's adoration, [the USer] said: "I wanted history and I got more than I expected. It's unbelievable." It sure is.

... Wesley Methodist Church in Papatoetoe is putting its prayers behind... one of... [its] parishioners... as... the... boxer... takes on[a] Nigerian... in the semifinal of the Olympic super-heavyweight division. [The church's minister] said the congregation members were pinning their hopes on a gold medal. "We had no idea how good [our boy] was... I am very proud that one of our local people is on the Olympic stage." The congregation had supported [the boxer before the giant] left for Atlanta. Tongans back home are also hoping that a major celebration is on the way... [The] deputy editor of the bi-monthly magazine *Matangi Tonga*, said people were feeling excited and proud. "Our people have picked him as a winner all along, even though... [n]o one else gave him a chance. Some overseas sports commentators said [our boy] didn't have a snowball's chance in hell. We are saying that hell has frozen over." Tongan radio broadcast a message on Tuesday encouraging the people to fast and pray for [a] victory.

... It is a long time since I have felt so emotional, choked up, about a sporting victory as I did when [a NZ swimmer] touched in the 200m freestyle... I remember choking up in 1952 when [a NZ gal] won her gold medal long jump at Helsinki. The late Teddy Isaacs was sports editor of the *Otago Daily Times* and... had done so much to encourage [her] to aim for the Olympic Games, recognising quite early that [the local athlete] was a special competitor. I still recall his exultation when [the athlete achieved all Teddy] had predicted. That... [athlete] was no "one-shot" phenomenon. [The gold-medallist] was a great all-rounder who won Commonwealth gold in her specialty event as well as in the shot put and discus, and won representative honours at provincial and Island level in netball, as well as being a N[Z] basketball representative. That was then... now, a young... [guy] has been a paragon of self-denial in reaching for the stars to become the nation's greatest swimmer by topping his Commonwealth and world titles with Olympic gold. In doing so [the swimmer has, like the long-jumper] before him, injected a "feel-good factor" into all of us. We share in the reflection of his glory from Atlanta, and it will carry us along until the next time a Kiwi emerges to write his own and N[Z]'s name indelibly into the international register of athletic achievement. It is easy for we couch potatoes to applaud and to bask in the warmth of victory. But we should not forget those years of early... mornings... at Moana Pool, winter and summer, the gruelling kilometres of conditioning, the gym work to build muscle strength... [plus a] minimal social life because sleep and rest became more important than personal enjoyment. The shortage of funds requiring belt-tightening by... his parents... The... four year... plan was to tour the major swimming meets to build experience against the world's best. It cost a great deal in terms of... cash and sacrifice, but the whole of N[Z] saw the outcome. Yet there is a certain irony in it all. We all... shall remember... [his] swim whenever the Olympics are recounted in future. But once that excitement recedes, cold reality returns. There is no real pay-off from swimming as there is in rugby or tennis... No millionaire status; perhaps an endorsement or two. Little enough to balance the constant training, constant travelling, constant expense. The... recognition becomes a trophy on the sideboard.

... [THE] DOWN to earth Kiwi... doesn't give the appearance of caring too much about the financial rewards that could come his way following his stunning double gold... success in Atlanta. But [the swimmer would] know exactly where [his effort stood if it] came from Asia. Gold medal winners from Singapore will be rewarded with... \$1m. In Taiwan, they'll dish out \$523,000 for gold, \$287,000 for silver and \$161,000 for bronze. In South Korea gold medallists will be paid \$1150 a month for life, while Thailand will pay gold medallists \$345 a month for 20 years... By contrast, every A[US]n who wins gold gets \$57,000... The U[S] will pay athletes \$20,000 for gold, plus \$32,000 for divers, and \$64,000 for swimmers and weightlifters. Britain and Brazil make no payments. And... for her three golds... [an Irish swimmer also] receives... nothing... from her country...

N[Z]'s medal winners, their glittering trophies swinging round their necks, headed the Olympic team as they disembarked from their flight home at Auckland Airport early yesterday. The team was officially welcomed by some of the country's sporting greats... "We're waiting to see our golden boy," said airport staff on the tarmac, forming a second wave behind the officials to cheer their hero... [Later on in the day, emotional] welcome-home festivities overwhelmed the Dunedin Olympic swimming champion... reducing the double gold medallist to tears... during his thank-you speech... in front of more than 20,000 fans... About 12,000 people jammed footpaths or marched through town in a hastily organised civic

welcome to Whangarei's gold and bronze medal winning Olympic [equestrian. Unfortunately, it appears that NZ had]... too many underachievers at Atlanta, reflected in how few actually put themselves into medal contention. [Its total of '6 medals placed the NZ team 29th overall, although the 3 golds meant NZ was 26th on the official medal table, just ahead of South Africa (5 medals) and Ireland (4), which was 8 places ahead of Britain (15 medals but only 1 gold). A total of 21 countries won just one medal, and for 5 of them – Burundi, Costa Rica, Ecuador, Hong Kong, Syria – that medal was golden. The US topped the table with 44 golds (101 in total), followed by Russia (26/63), Germany (20/65), China (16/50), France (15/37) and Italy (13/35). However, the NZ team would have found some comfort in the fact that when the 79 medal winning countries were ranked according to medals won per head of population, NZ was 7th (1:580,000). Ahead of NZ on this table was Hungary (1:490,000; 12th on the official table with 7 golds and a total of 21 medals), Cuba (1:438,000; 8th; 9/25), AUS (1:434,000; 7th; 9/41), Jamaica (1:410,000; 39th; 1/6), the Bahamas (1:270,000; 62nd; 0/1) and in 1st place – due to the silver its superheavyweight boxer won – was Tonga (1:97,000; 66th). When countries were ranked according to golds per head of population, Ireland came 1st (1:1.19 million), Cuba 2nd (1:1.21m), NZ 3rd (1:1.22m), Hungary 5th (1:1.40m), AUS 7th (1:2.00m) and Jamaica 9th (1:2.51m). None of the top 6 countries on the official table featured amongst the top 12 on either of the population based tables, nor did the Ukraine, South Korea or Poland (9th, 10th and 11th respectively in the official top 12).'] Another interesting table might have been one that compared #medals won to \$invested in each Olympic team.]

...HIS new mobile phone keeps ringing... "Every day, they call... They want 250,000 rand (...\$[NZ]85,000) in cash and say they will kill me, kill my wife and children if I do not pay." ...Three months ago [the runner] was living among the poorest of the township poor in a corrugated-iron shack... built[by] himself, doing odd jobs in a coal mine... Nobody told South Africa's first black Olympic champ... that, once [it] took the marathon gold at Atlanta, everybody would want a piece of him – from those who want his time to those who want the money they think [the runner has]... Nobody told him... that this would be part of the price of making history... "I go here, I go there... I have to do this and do that, but all I want to do is run." A few days ago, [the runner] was overwhelmed to meet [South Africa's first black] President... but sounds as bemused by all the adulation from the majority as [it] is alarmed by the threats of the minority. Then there is the unedifying wrangle between those who would control his destiny. So confusing. Could [the runner] have imagined this as [it] stood on the podium in Atlanta, his dream fulfilled? The world wondered who [the runner] was, this diminutive figure who had prevailed in the closest finish in Olympic marathon history. "It was for my country, for my President," [the runner] explained, coming across as the antidote to Atlanta's dreadful [pro tennis players] and Dream Teams. There, this humble, dignified [hu]man told a story to give a feel of that soaring spirit which had seen him, seemingly deadpan and emotionless, crush the will of the world's best endurance runners. Three months earlier, back at home in Bethal, in Free State province, three armed thugs hijacked his van, fired in his face and forced him to jump from the moving vehicle. The scar from where the bullet sliced across his chin was nothing, but the back injuries suffered in his desperate dive from the driver's seat made him think his Olympics had gone. But [the runner] fought back, as astonishingly as [it] had done three years earlier, when the rites-of-passage ceremony through which young Ndebele [guys] have to pass – a form of circumcision using a spear – was apparently so badly botched that [the runner] was left dangerously ill. That [the] runner recovered to father two children was perhaps a greater triumph than any Olympic win. Atlanta should have been the end of this remarkable [hu]man's trials; but it seems to have been the beginning. At first, the celebrations – the all-night parties, the roadshows, even the blood of a slaughtered ox left to run outside his house as a mark of respect – amazed him. Then the exhausting schedule of appearances became too much. [The runner] also discovered that "I won gold for South Africa, but some people in South Africa hate me and are jealous". Stories of undreamt-of riches... had already spread. A smart new home was to be built, far from Bethal, as a gift by the mine that employed him, [the runner] had received a 250,000 rand... hand-out from South African sports bodies... was getting 10,000 rand... for an hour's speaking engagement, a new contract with a major agent... could net him... \$1m in two years. It was all true – but at that point [the runner] had seen little of the money. It did not stop the threats. [The runner] feels they stem from a Bethal business[perso]n who was rumoured to have organised the previous attack on him. One newspaper reported that a gang member claimed [the runner] would be assassinated because "the business[perso]n did not want anyone to be richer or more successful than him." [The runner]'s employers moved him and his family to a temporary safe house nearer the Koornfontein mine... [and] the mine's resources manager... reassured him that nobody is likely to attack an authentic township hero because of the likelihood of bloody retribution, but the country's violent culture has already seen a renowned football coach and a boxer murdered this past year. "They can do what they say," [the runner said. Occasionally, the runner] sounds a bit like a lost soul, in the lucrative new world... encountered in Atlanta, [and it] actually is. Less than 24 hours after his victory, [the runner] had signed a contract for [someone] to become his new agent, apparently having forgotten that [the runner] already had a legally binding, long-standing agreement with a [South African agent. The new agent insists that his intentions were honourable, but the old agent] is among those wanting to know how a semi-literate individual, unaccompanied by any legal representative, could possibly have understood what [it] was signing. Indeed, [the runner] has since signed an affidavit admitting [that it] "did not understand" [the new agent's offer and confirmed the existence of] a "valid agreement" with [the old agent]. But last week [the runner told me the new agent] was his agent. It is a complete mess. Athletics South Africa... the sport's governing body, has set up a temporary group along with officials from the mining company and the government of Mpumalanga – [the runner's] place of origin – to manage his affairs until it hears from prospective agents and decides which should look after him. The ASA insists this shows it has [the runner]'s interests at heart. But [the old agent], who worked happily with [the runner] for five years, insists the ASA is only interested in controlling its prize asset... Could [the runner] be forgiven for feeling [that it] would have been better off never having landed his dream? "No, it has been difficult but I am happy to be Olympic champion,"... Anyway[, the runner]... can see light at the end of the tunnel... Last weekend [the runner] ran a low-key half-marathon in Swaziland, the first race [it] has managed to fit in since the Games. "It is good to run again,"... No bodyguards, no threats, no pressure, just the simple joy of racing. [The runner] has never asked for any more than that. [Editor's note: The 'marathon – the principal event of modern Olympic Games – is named after Marathon in Greece, where the Athenians in 490 BC successfully defeated the invading Persian army; news of the victory was announced in Athens by an unnamed courier who ran all the way from the battle field, a distance of 26 miles 385 yards (42.195 km), and fell dead on arrival.]

... 'A large part of the invading force of Persians sent by Darius the Great had been trapped by a smaller Athenian force under Miltiades; the remainder fled to their ships. Not only Athens but all Greece was saved for the time. The news of victory was brought to Athens by Pheidippides.' Modern-day Athenians are engaged in a different kind of battle – one to win] the 2004 Olympics... [– and their chances of success would seem to have improved dramatically following the publication of a p]etition signed by intellectuals, writers and environmentalists protesting against Rome's bid... [that said:] "The waste, the useless public works and squandering of public money during the 1990 soccer World Cup [in Italy] are all too fresh in the mind."

...Harrah's Sky City has announced a four-year sponsorship deal worth over \$1 million for the Special Olympics Foundation... [to assist with providing] sports training and competition to people with intellectual disabilities and special needs... At a presentation in Auckland yesterday, the Sky City managing director... said an annual base fee of \$200,000 would be given to cover the foundation's costs in national and international competitions... The foundation sends a N[Z] team to the Special Olympics World Games[, which have been] held every four years in the U[S since the games were]... founded... in 1968... Sky City will also underwrite a biannual fundraising national torch relay of Special Olympians and provide promotional material. Its 2500 workers will have opportunities to become volunteers in the foundation's activities... [The managing director] hoped the sponsorship would bring deserved recognition for the 3500 athletes and their volunteers. The foundation chair[perso]n... welcomed the sponsorship, saying it would be invaluable in helping intellectually disabled athletes lead a more rewarding life...

[‘After being born with spina bifida, a NZer was not even expected to walk. However, in Christchurch this weekend, the 35-year-old ran those predictions ragged with a gold medal performance in the 100m sprint for guys over 30 at the National Special Olympics. The 35-year-old, one of 1000 intellectually disabled athletes competing at the Games at QEII stadium, ran for the four-person Waiheke Is team – the smallest of the 41 taking part. “The Games have really given me something to aim for,” the 35-year-old said. “We train for weeks on Waiheke, and it’s really changed my life-style.” Now, the 35-year-old watches his diet and rarely drinks. It paid off, too, with a silver medal in the 50m and a fourth in the 200m. One of his teammates (24) was competing in her first Special Olympics and was “loving it”. With the assistance of crutches, the 24-year-old took part in the 50m dash, 100m walk and softball throw, but was unplaced. Competitors are arranged in ability groups, giving everyone a chance of winning. The 60 top Special Olympians win the right to compete for their country at the International Games in North Carolina’. □ The ‘founder of the Special Olympics for the mentally retarded, and sister to assassinated US President John F. Kennedy, is in critical condition at Johns Hopkins Hospital in Baltimore. Two weeks ago the founder, aged 79, underwent a five-hour operation that removed a benign pancreatic tumour. Although doctors had expected a full recovery, the founder was readmitted to hospital last week.’

...‘Even before the teams appear, the crowds are hooting, pumped by thumping music and Mexican waves that flow endlessly around the stands at the Olympic Park Dome. They have been queuing for more than an hour, with their NZ, British and AUSn flags, bright yellow Brazilian caps and anything else with colour and flair, stomping their feet as decibel levels soar to brain-hammering limits. As the Wheel Blacks and their German opponents roll out on to the court, tracked by team mechanics with their racks of spare wheels, the roar is deafening. This is gladiator stuff. They may have changed the name from murderball, but the crowd want it all – and the players are ready to give it. The teams file out, high-fiving each other before lining up in mid-court, eyeing each other in the opening stages of the Paralympics wheelchair rugby series. The Germans are expected to fold under the weight of a stronger, faster, Kiwi team, but no one has told them that. As the Wheel Blacks perform the haka, the Germans glare back, rhythmically pounding the wheels of their chairs. No one can accuse Germans of cultural sensitivity, nor are they easily intimidated. The crowd thunder out the countdown from 10 to zero, the horn blasts and within seconds one Wheel Black belts through the path cleared by his team-mates and they go one up. The Wheel Blacks follow with another lightning goal and it’s all on. A German slams the first goal-scorer behind the rear axle, the Kiwi hits the floor and the German is sinbinned for one minute: a few minutes more, and the goal-scorer is over again. This is brutal, and the crowd love it. So does the goal-scorer. It grins broadly, high-fives the German who took him out, and races back into play. Welcome to wheelchair rugby, one of the big hits at the Paralympics and a rapidly growing sport that has already created a semi-professional league in the US and is exploding throughout Europe. It began 23 years ago in Canada as a contact sport for tetraplegics – like wheelchair basketball with punch – involving chairs with rounded armour that protects the legs and at the same time acts as tackling rams. Picked up by the Americans, the sport evolved into a blend of rugby, basketball and American football, accelerating around the court in brilliant spurts of speed, dazzling tactics and chair-hammering tackles. Four players are on the court at any one time, with up to eight substitutes. Players are graded with a level of disability on a points system from 0.5 to 3.5, with a maximum of 8 points for the four players on the court. Balls can be carried, dribbled or passed – but must be bounced at least once every 10s – and goals are scored by carrying the ball over the opposition goal-line. “There’s a bit of rough and tumble, but only a few broken bones,” the Wheel Blacks’ coach says. “Mainly it’s just cuts and bruises and the odd concussion. The equipment is designed to protect the players as well as to support their roles, but obviously it can’t protect them from hitting the floor. They learn how to fall, like rugby players learn how to tackle, and how to absorb a tackle.” The chairs, weighing just 13kg and lightning fast on turns and acceleration, are far more vulnerable: at \$4700 each, they have a life expectancy of 12 months. The Americans have dominated the sport for years through a 1300-player pool and its sponsored league. Three Wheel Blacks have been recruited by the US league, and a fellow Kiwi also plays in the US. The Wheel Blacks won their first matches, against Britain 46-37 and Germany 47-30.’

...‘EARLY IN APRIL 1987, Birgit Dressel, one of West Germany’s finest Olympic-level athletes, felt a stabbing pain in her lower back after shot put practice. Birgit consulted a doctor who gave her a painkiller injection, but the pain persisted. Pills, suppositories and more shots followed over the next day and a half, all to no avail. Her condition worsened dramatically. Birgit was rushed to Mainz University Hospital, where more than two dozen baffled specialists worked desperately to help her – in vain. By afternoon her lips and fingernails had turned blue, and a whitish crust had formed on her mouth. Birgit was transferred to the intensive-care unit, but none of the tubes, blood transfusions or forced respiration had any effect. That night Birgit died, aged 26. The details of her story did not emerge until September. But when they did, the world of amateur sport went into shock. Over the previous two years Birgit had been swallowing, injecting and inhaling some 100 different drugs in her single-minded pursuit of a gold medal in the 1988 Olympics. Her quest had been fruitful up to a point – in that time Birgit had rocketed from thirty-third to sixth place in the world heptathlon rankings. But the miracle of her improvement was mostly chemical, as was her death. Her body poisoned, her blood breaking down, Birgit died a slow, ghastly, mysterious death, which pathologists could only broadly qualify as a “toxico-allergic incident.” Birgit Dressel’s agony was horrifying proof that a major crisis is upon international athletics, and that crisis is drugs. “Drug abuse has become the biggest single problem facing sport today,” says a former British world champion in the 800 and 1000 metres. Indeed, estimates are that perhaps 50% or more of world-class athletes are using illegal substances to enhance performance. The methods, the ribbons and the record books are being stained by chemicals. A NZer who recently retired as a world-class rower has revealed that it was pressured by a sports official early in her career to use drugs to build up her small physique. “I was told that other past and present NZ athletes had already done this.” The rower refused and went on to win two Commonwealth Games gold medals and bronze medals at the world rowing championships. But a West German Olympic runner and one of Dressel’s colleagues, has declared that: “There are some disciplines where it is difficult to qualify for the Olympics without drugs.” Ever since athletes ate mushrooms and other substances at the Greek Olympics in the third century BC, competitors have sought extra boosts. It was only after WW2, though, that chemical science began to be applied to sports. The human cost, though, is often sickness and even death. The director of the Austrian Institute for Sport Medicine estimates that some 70 high-level athletes have died as a result of doping in the postwar period. Until the mid-sixties, athletes who cheated turned mostly to amphetamine-based stimulants. A member of the IOC Medical Commission described the toilets at the 1964 Tokyo Olympics as being “littered with vials and syringes.” Amphetamines, however, are easily detectable in urine samples and quickly became obsolete in international competitions when drug testing was set up for the first time at the Grenoble winter games. So competitors began the search for alternative substances. The wonder drugs they found were anabolic steroids, which work not by pepping up an athlete’s normal body, but by virtually creating a new one. Massive intakes of anabolic steroids or of testosterone helped muscle development in miraculously short periods of time. But as they build up in one direction, they destroy in another – tendons grow comparatively weaker while the muscles balloon. In the worst cases, the result can be burst Achilles tendons, smashed knees and muscles ripping right out of their girdles. So it was for the Swedish wrestler, a regular steroid user, whose back muscle gave way at the Munich Olympics, and the Finnish Olympic weightlifter whose left shoulder muscle burst during a national-level competition in 1975. The effects are extremely hard on gal athletes. Whether natural or synthesized, masculine hormones can make a gal’s body think it is a guy: hair begins growing on the body and face; the voice deepens, the clitoris enlarges; menstruation stops, and with it fertility. The longer-range damage in heavy users may be even worse: liver cancer, kidney damage, heart problems, and, for adolescents, arrested growth. ● In November, a British Olympic silver medallist pleaded guilty in San Diego to taking part in a multi-million-dollar-a-year drug ring in America specializing in anabolic steroids. Other steroids rings were uncovered in Britain, the Netherlands and France. In the same month, three Polish athletes scheduled to participate in the world powerlifting championships in Fredrikstad, Norway, were caught at the city’s railway station with almost 9000 doses of steroids. Their case paralleled that of the two Soviet weightlifters caught by Canadian customs agents with \$9000 worth of steroids in 1984. In late January this year, Norwegian customs officials arrested the very person who had won the Fredrikstad competition. The world champion of Belgium had \$52,000 worth of steroids and testosterone in his car.’

...NZ's] Customs Department... seized more steroids in the first six months of this year than it did for the whole of 1995[, when just two]... bodybuilders were... arrested... [T]wo large steroid seizures had been made... one of 42,000 tablets and one of 45,000 tablets. But that did not necessarily mean more steroids were being brought into the country, nor was customs making more effort to find the drugs... "Because it's not a controlled drug, as far as Customs is concerned, it is not a priority for our investigative resource,"... [Yet] Customs officers expected to intercept large shipments of steroids "reasonably frequently. We would have seized... half a million doses of steroids over the last six years or so,"... The... anabolic steroid tablets Dianabol were available from Thailand for 3c to 7c each, depending in the quantity bought, and were selling in N[Z] for \$2 to \$3 each. The other form of the drug was injectable steroids, mainly meant for veterinary use... That steroids were not... covered by the Misuse of Drugs Act, meant the penalties were less of a deterrent if someone was caught... Steroids are covered by the Medicines Act, and are illegal only in certain circumstances. Customs officials must determine that steroids are being imported "without lawful purpose" before the drugs can be seized.

...[The NZ Herald stakes] out the battle lines... in... the... efforts to detect... performance-enhancing drugs... FROM the benches it may look like pure glory. But from the athlete's perspective, qualifying for the Olympic Games resembles nothing so much as a prison drug raid. "It's tremendously embarrassing," says [a US Olympian]... "You've just given the performance of your life. Your family and friends think you're going off to sign some sort of official documents. But you're headed off to the bathroom so that two international sampling officers can watch you pee into a cup." Drug use is nothing new in Olympic sports; Soviet weightlifters discovered the benefits of steroid hormones back in the 1950s, and the... IOC... has been trying since the late 60s to enforce bans on various chemical aids. In recent years, most sports federations have instituted year-round spot-testing programmes in an effort to keep competitors clean. Yet with every advance in pharmacology, the opportunities for cheating grow richer. The chemical arsenal now includes everything from... stimulants to genetically engineered growth hormone. No one knows just how many athletes use banned substances, but experts use words like "epidemic" to describe the problem. Says [an]Olympics chronicler... "Drugs are the single biggest threat to the Games." [However,]Olympic officials insist they're getting better at catching cheaters. For... Atlanta... the IOC set up a \$4.5 million testing programme, complete with a staff of 400 and the most sensitive mass spectrometer ever used in competition. Unfortunately, the [testing]technology always lags... behind[the drug-making technology]. "Drug testing is a joke," says one steroid-dealing coach who spoke on the condition of anonymity. "The people who are smart and have the money to pay for drugs can easily pass." Indeed, getting around the rules has become an official government mission in some countries. Under East Germany's notorious State Plan 14.25... 1000 scientists, trainers and physicians spent much of the 1980s developing better ways to drug the nation's athletes. Most Olympians suspect that China has since followed suit. In 1992 and 1994, Chinese athletes came out of nowhere to shatter world records in several sports... captur[ing over]... a dozen gold medals. Then international sports officials sprang unscheduled urine tests on the national team and found that 11 stars – including[a]swimming medallist... – were on steroids. The International Federation of Swimming couldn't prove that the Government was involved, but suspicions still abound. Olympic rules bar a half-dozen classes of drugs, but the biggest menaces are the testosterone-based anabolic steroids. Just as a natural rise in testosterone turns scrawny boys into burly [guys], steroids administered by pill, patch, needle or salve can dramatically increase an athlete's bone and muscle mass while reducing fat stores and boosting the blood's oxygen-carrying capacity. Steroids are used in medicine to treat everything from anaemia and osteoporosis to Aids-related wasting... After years of steroid-enhanced training, [a]Canadian... ran 100m in a record-breaking 9.79s at the 1988 Seoul Olympics. Since getting caught and swearing off drugs, [the Canadian] has yet to clock in under 10s. Steroid abuse can be hard to conceal, for testosterone does more than strengthen the body. [Gal] users often develop tough skin, deep voices and beards. A [guy] taking high doses may find his breasts swelling and his testicles shrivelling as the overload tricks his body into stopping production of sex hormones. And any user risks... baldness, a problem that normal testosterone can trigger... Athletes are quick to spread rumours when they see these signs. But busting someone requires a positive urine test, and those are hard to come by. TODAY'S tests are highly sensitive to designer steroids such as Anadrol and Dianabol, which differ chemically from anything the body produces... But the tests can't tell synthetic testosterone from... natural... – and since people's natural testosterone levels vary widely, high readings alone prove nothing. Testers have tried to get round that problem by looking for abnormal ratios of testosterone to epitestosterone, a related hormone. But the smart cheaters know they can spring that trap by taking the two hormones together. Scientists at the Olympic laboratory at the University of California Los Angeles are now joining international efforts to develop a trump card: a test that recognises synthetic testosterone by the amount of carbon 13 it contains. Every Olympian may face that test [in future]... Meanwhile... a research scientist... says... "One can take a good moderate dose of testosterone and not be found positive." Steroids may be hard to police, but the IOC can't even test for human growth hormone (hGH), a natural substance that drugmakers now produce through genetic engineering. Secreted by the pituitary, hGH fosters bone growth and muscle development during childhood and adolescence. Used as a drug, it can combat dwarfism in children. It may help enlarge some adult muscles (along with the heart, liver and kidneys), but it isn't known to improve athletic performance – and a year's supply costs... \$30,000. Even so, experts say the black market is booming. "When we've... busted people for anabolic steroids, we have also found hGH," says one federal drug-enforcement official. Why would anyone take something that is dangerous, illegal and possibly useless? "Because the competition is so high," says... a fellow in sports medicine at Vanderbilt Hospital in Nashville. "People are looking for any kind of edge." ...To reap any reward from testosterone or [hGH], an athlete has to use it regularly, but a new drug called "epo" can serve up a quick blast of superhuman energy just when it's most needed. Cyclists and runners have long known they can get an edge by storing their own blood and injecting it just before a race. By placing more red cells in circulation, such "blood doping" lets the body carry and burn more oxygen. Epo, a synthetic version of the hormone erythropoietin, produced similar effects by speeding the body's own red-cell production to... 10 times the normal rate. Unfortunately, the sudden onslaught of red cells can make the blood so thick that the user's heart stops in the heat of competition. Researchers suspect epo has killed at least 18 Dutch and Belgian cyclists since 1987, but Olympic officials have yet to start testing other athletes for it. Mass screening... [is] costly and impractical, since it involves drawing blood. And because epo breaks down within hours, testing wouldn't catch many cheaters anyway. For now, at least, death is the only penalty abusers have to fret about. These are but a few of the temptations athletes now face. New tests may someday render today's drugs obsolete. But as that happens, the pharmacological arms race will only escalate. "What bothers me most," says... an epidemiologist at Penn State University and author of a book on steroids, "is... it degrades sports into a biochemical challenge." The challenge is to keep the playing field level as pharmacology advances. Foolproof year-round drug testing might solve the whole problem, but that's a distant hope. And until it's realised, the incentive to cheat will remain as strong as a steroid-inflated bicep. - 1996

It was the talk of the Olympics... the drug the testers can't detect... Start with a daily injection, then every second day. These dosages are best taken over six weeks when the athlete is not racing because the stresses of competition combined with the treatments can cause illness. Later, say during the Tour de France cycle race, the rider might have a weekly top up. Returns? About a 10% increase in power and a huge boost in recuperation. A few hours after a 200km stage in the French Alps, watered, fed and massaged, a cyclist on EPO feels ready to race again. Downside? It can kill... Synthetic EPO was developed in 1988 to help patients with kidney disorders and almost as soon came rumours of its use in endurance sports, then of the deaths in Holland of several cyclists... [T]he last N[Z]er to ride the tour, says that although details and names never became known, the story is widely accepted. Dutch riders, so it goes, began experimenting with EPO without the guidance of a doctor. It is easy to get in Europe and can be bought from some pharmacies. "They started getting results and thought that more is better without realising the dangers," says [the NZer] who rode the Tour de France in 1987, '94 and '95... "Years ago you would never have heard of bike riders dying of heart attacks, then all of a sudden

there is one... every couple of months... You can't explain them away through just hard racing." ...As the athlete's heart drops to 35 beats a minute in sleep... this rich dark stain... turns... the blood... to ooze. The heart, recovering from the exertions of the day, must work harder to pump it around. Sometimes it gives up the ghost. [A]French professional... and... a stage winner in the 1992 Tour de France, caused a sensation last October when [the cyclist] told French television use of... EPO... was widespread. [The French cyclist], who retired in 1995, [claims to have been] offered it but refused. "Everyone knows that... today it is widely used by amateurs as well." There was pressure on riders to take it, not just to improve their chances of winning but to keep their jobs. "I'm not saying you lose your place in a team when you don't take it, but in some way you are discredited in the eyes of your manager. You are considered as a rider without a future, who is not sufficiently competitive." [The French cyclist also claims to have been] told by a team director that without EPO there was no hope of breaking into the top 50 riders in the world. [The NZer] agrees and says the widespread use of EPO and of... hGH... was a key reason in his decision to retire last year. After a season in Europe as a 22-year-old in 1987, [the NZer] spent the next seven years racing in the U[S] where the sport's lower profile and corresponding prizemoney meant drug-taking was rare. [The NZer] was shocked with what [it] found on his return to Europe with the Motorola team. "In 1987-88 I could hang in on the climbs with some of those top guys. In the Tour of Switzerland I was going over the top of the climbs with some of the stars. I was right there,"... But in 1994, as a stronger cyclist: "It was like 'phew, not even close...'. No one even uses those gears I was using back then." ...wider use of the hormones... came through the Italian teams where doctors studied dosage, identified the "safe" proportion of red blood cells and modified the athletes regular blood samples. [The French cyclist] says riders take aspirin each night to thin the blood for fear of going to sleep forever, while [the NZer] tells of a news report in Italy about a team doctor who awoke several riders and rushed them to hospital after becoming alarmed at their dangerously high red blood cell counts. "There were other stories where guys would get up in the night and ride the home trainer to get the heart rate up and blood circulating... then... go back to sleep." Because cycling is such a hard sport – and no race is tougher than Le Tour – drugs have long been associated with it. Strychnine was mixed with wine in the early 1900s and cyclists would sniff ether from handkerchiefs during the tour up to four decades ago. Britain's world champion Tommy Simpson is the only rider to have died during the tour from the possible effects of drugs... collaps[ing] from dehydration in 1967. But amphetamines were believed to be the reason [the British cyclist] didn't realise his danger – [it] died with a bottle of water on his bike. The problem is certainly not cycling's alone. The Atlanta Olympics are considered to have been awash with EPO and hGH. That only two positive drug tests were revealed was no surprise. Those hormones cannot be detected in urine samples, the only type taken at Olympics. And *Sports Illustrated*, in its April cover story demonstrated how steroids can be adapted by a simple process to beat the testers... As much was acknowledged by... [the] director of an I[OC]-accredited drug testing laboratory, who told the magazine "the sophisticated athlete who wants to take drugs has switched to things we can't test for". As a result of the EPO furore cycling this year became the first sport to introduce blood tests. A limit of 50% has been set to the proportion of red blood cells in the blood. Trouble is they will now all push their levels to this limit.

...PRE-RACE blood testing for a key drug has helped make the world track cycling championships in Perth a more even contest and particularly boosts the chances of countries like N[Z, the country's cycling] coach... says. In a radical move designed to wipe out the use of... EPO... the International Cycling Union ordered... [the move. The NZ coach] said the results have been obvious with a number of teams, particularly Italy, losing the huge dominance they had at the Atlanta Olympics... "You just have to look at the Italian 4000m pursuit rider... and ask how [it] could ride 4:15 at Atlanta and now... can only do a 4:27... The same with their pursuit team – they have gone from 4.00 to 4.11. It's brought everything back to reality." ...The experimental blood testing used in Perth has been introduced for "health reasons" in that any riders testing positive for EPO would be pulled out of their event in the interests of their health and would not face any long suspension... Riders in the N[Z] pursuit team... finished seventh on Friday... [and the team coach is] expecting a big showing from [a]Dunedin rider... in the 40km... points race tonight. "The... good thing for him is that [the Dunedin rider has got another NZer] in there to help him,"... [The other NZer] earned a start in the race as Oceania champion and will ride solely to assist [the Dunedin rider] by acting as a pacemaker to pull him into contention for the sprints, which occur every 10 laps of the 160-lap race. [The Dunedin rider] finished fifth in the world cup standings after picking up second and third placings in the two events contested. [Editor's note: Pacemakers are often used at athletics events in an attempt to create records – or, at least, ensure fast times – and are even used for distances as low as 800m (which sometimes means that spectators get to see the leading runner drop out of a race while being far enough in front to possibly win it – and raises the question of whether its victory would be recognised if a pacemaker ever decided to continue running until it reaches the finish-line?).

... 'though you may have thought testing of athletes had got on top of the problem, the reality is the cheats still win. The seizure of a small chemist's shop worth of performance enhancing drugs at this year's Tour de France suggests the pro cycling circuit is awash with illegal potions, yet no one in the race tested positive. "We can't guarantee they are clear of anabolic steroids," says the chief executive of the NZ Sports Drug Agency. "All we can say is that on a certain day they were clear." The chief describes drugs as the cancer of sport and believes a small but "significant" percentage of NZers cheat, while overseas the problem is "large scale". A former pro cyclist, who took banned substances, says European teams used drugs that couldn't be detected and carefully topped riders up to the limit for those that could. Some teams used sophisticated machines to test athletes' testosterone. Doctors are well paid, some earning hundreds of thousands of dollars from percentages of their star clients' earnings. The money and pressures of top sport drove it and for that reason, the cyclist believes illegal performance-enhancing drugs will inevitably come to the All Blacks. The challenge for detection agencies is to find tests for the likes of EPO. Work to find a test is ongoing but there is no guarantee one will be available in the immediate future. A recent announcement by AUSn authorities of a breakthrough is overly optimistic. Last year the NZSDA did 994 tests. Nine were positive for stimulants and one for marijuana (tested only in motorsport where it is a safety issue). Of most concern was that a weightlifter and a rugby union player were positive for steroids and have been banned by their sports for two years. The rugby player's sample taken at a Sevens competition was positive for metenelone. The offender's penalty was upheld at appeal though the tribunal accepted that the player believed it was not taking a forbidden drug. Stanozolol was found in the weightlifter's sample, taken weeks after it broke national snatch and clean and jerk records, which qualified him for the Commonwealth Games. Then NZ's expatriate Russian pole vaulter lost his Commonwealth Games silver medal after failing a drugs test, which was followed by the jailing of a NZ Commonwealth Games decathlete for trafficking in Ecstasy. But the drugs cancer doesn't mean clean athletes can't foot it on the world stage, says NZ's triathlon coach. For evidence, the coach says look no further than the recent world triathlon championships in Switzerland at which NZers were 2nd and 4th in the guys' race and 3rd in the gals'. "We say to our athletes that there are things you can do which are just as (effective) as taking drugs, such as altitude training (which increases the oxygen-carrying capacity of the blood). You might have to work a little harder at it but there is no need to be intimidated by athletes who potentially are on EPO." This has involved flying across the world for month-long training camps at such places as St Moritz in the Swiss Alps. The use of altitude simulators, where athletes breathe air containing half the amount of oxygen at sea level, is expected to become important because it is cheap and doesn't involve leaving the country. The coach is trialing a machine brought to NZ by a scientist who worked on the Russian space programme. After using the machine for an hour or two a day for three weeks 10 athletes showed an average increase in red blood cells of 4% and a similar improvement in performance. Although this sort of training may be more hit and miss than EPO injections, it is legal and safer. An AUSn's Festina team was chucked out of the Tour de France after managers admitted systematically doping riders. They had no choice. Days earlier, during a border search, the team's masseur was found with 235 vials of banned drugs including EPO. The AUSn cyclist, who has not failed a dope test, denies knowingly taking drugs and after questioning by French investigators signed an admission that the team doctor had given him EPO without his knowledge. The response of other teams to the search was to conduct sit-down protests in the middle of some of the tour's stages. Despite the controversy that erupted when an Irish swimmer, at the

ripe old age of 26, improved beyond the belief of doubters to win three gold medals at the 1996 Olympics, those games were officially the cleanest. The IOC sanctioned exactly two positive drug tests out of a pool of 11,000 athletes of whom 2000 were tested. This compared with five positives at Barcelona in 1992 and the all-time high of 11 at the '84 Games. But it would be naive to believe Atlanta was the cleanest Games since systematic drug testing began in 1972. "There were issues at Atlanta which were troubling to agencies. Several positive tests, uncovered by new more sensitive equipment used for the first time, were not acted on because of concerns about legal challenges. And traces of bromatan, a drug relatively new to testers appeared in the urine samples of Russian and other Eastern European athletes. It has no medical benefit but has long been used by the Russian military to keep troops alert. Competitors were stripped of medals but had them returned on appeal, the athletes successfully arguing the chemical hadn't been properly listed. Testers know "drug gurus" have them beat, a former director of drug testing for the US Olympic Committee told *Sports Illustrated* magazine after the games in Atlanta. "They know how to get in under the radar. Athletes are a walking laboratory and the Olympics have become a proving ground for scientists, chemists and unethical doctors." It takes two weeks for water-based steroids to leave the system. Random tests could be beaten by keeping an athlete's ratio of testosterone to epitestosterone just below the legal 6:1 ratio. This still provides a super-charged athlete – almost all of the population have a ratio of about 1:1. The level was set so high because of the risk of law suits from athletes claiming to be among the 1% who have a natural ratio of 5:1 or higher. Drug agencies are informed by labs only when an athlete fails a test. "There might be a whole heap out there at 5:1 which would be of concern to us. We don't know because the lab is only able to report that as a negative." The Irish swimmer, for example, could have used drugs to boost her testosterone yet kept it within the legal limit. The swimmer passed four tests at Atlanta but innuendo from US swimmers focused on her significantly more muscular body since being trained by her husband – a Dutch shot put and discus thrower banned in 1993 for an illegal testosterone level. The Irish swimmer, who in four years cut an immense 20 seconds off her 400m medley time – an improvement matched by no other world-class swimmer, let alone at an age when swimmers are usually dead in the water – said it was all down to weightlifting, diet, technique, attitude and sweat.'

...the Irish Olympic swimming champion 'plans to challenge a ban received this year after her urine sample was found to be contaminated with whisky.'

■ 'Drug taking in the Olympics has been around since at least the 1904 Games when marathon winner *Thomas Hicks*' handlers kept dosing him with strychnine, brandy and egg white during the race. Hicks was not disqualified, and happily accepted his gold medal drunk.'

...AN AUSN] OLYMPIC swimmer... would vigorously defend allegations [that it] used marijuana, his lawyer... said yesterday. [The swimmer], 22, reportedly tested positive for the drug[, which]... is on the I[OC's] list of prohibited substance[s]. The AUSn]... Olympic Committee... president... said three athletes had returned positive tests for banned substances but... would not name them or their sports... Only yesterday, the [committee] stepped up its war against drugs in sport by ordering its 41 member federations to adopt a universal anti-doping policy. As part of the objective, any doping offences which occur within the Olympic movement will be heard by the Court of Arbitration for Sport in Sydney. Effective from December 1, the maximum penalty for drug use will be a two-year ban. However, because [his] test occurred before the new policy[, the swimmer] faces only a three-month suspension if found guilty... [The swimmer], who won silver in the 100 metres butterfly at last year's... Olympics, was expelled from the A[IS] earlier this year for breaches of conduct. [The swimmer] was also involved in a fight outside a Canberra food outlet in which [it] suffered a dislocated finger and bruised face.

...Quiz time, folks. Question: In one word, who runs the Olympic Games? Answer: Chemists... [T]he drug issue is again becoming the focal point with Aussie's top swimming coach... firing a few shots at the Chinese, and Athletics A[US]'s head coaching appointee... [The swimming coach] reckons the responses the Chinese are getting from their athletes en masse just don't happen in the real world. A couple of years ago China banned four swimmers after they tested positive. Chinese officials said shortly afterwards they had toughened the country's anti-doping rules. [However, what's] happening with Chinese swimmers and the world records they've created over the past couple of weeks could give more than A[US's] swimming coach] cause for concern. Meanwhile, [Athletics AUS's head coaching appointee] has been fingered for being personally involved in systematic athletic doping while... East Germany's throwing coach in 1982-88 and head track and field coach in 1988-89. [The East German] had conceded performance-enhancing drugs were used in the former communist country at the time but denies any direct involvement. Aussie athletes don't want a bar of [him], suggesting any gold medals won by them... would be tainted with suspicion of drug taking. You can work this one out for yourselves, but while [the appointee] was East Germany's head track and field coach at the Seoul Olympics they won the [guys'] shot put and discus, and finished first and second in the decathlon. Their [gals] were first and third in the javelin, first and second in the discus, second in the shot put, second and third in the heptathlon and in 17 track and field events mounted the dais 17 times. A panel of prominent A[US]ns is currently reviewing [his] appointment. While they're at it, they may like to look in their own glass house. [Their Olympic silver] medal cyclist... returned a positive test. [An AUSn sprinter] failed a drug test. [An AUSn gal world] swimming record-holder... also failed a drug test. So did [a] former Romanian, and now Aussie-based former world... discus record-holder[for gals]. And just have a look at the make-up of their weightlifting team – they're primarily East Germans. The drug battle will NEVER be won and only a fool would accept otherwise. I would imagine that world records in most track, and all field events, would have been spiced up with something out of a syringe or a capsule... And what about those times of 10.49 (100m) and 21.34 (200m) of Flo-Jo? Well, if you want to believe in the tooth fairy, then be my guest.

...A[gal] rugby... player was the only person found to have taken banned drugs during the N[ZSDA]'s testing from July to September. The A[US]n, tested after the Bledisloe Cup curtain-raiser at Carisbrook in August, was positive for the stimulant pseudoephedrine. The N[ZRFU] accepted the unnamed A[US]n had inadvertently swallowed the drug in a cough medicine and suspended her for two weeks. The NZSDA made 253 tests, 148 out of competition... up almost 50[%] on... the July-Sept... period... last year thanks to a bigger Government handout... [T]he... sports... tested were... rugby, with 49... weightlifting (28), powerlifting (22), soccer (13), athletics... rowing... swimming (10[each]), cycling (9), boxing... netball... skiing... volleyball (8[each]), aerobics... triathlon (7[each]), badminton... bodybuilding... hockey... judo... league (6[each]), softball... squash (5[each]), canoeing... rollerskating (4[each]), touch... wrestling (2[each]), bobsleigh... ice racing... trampolining... yachting (1[each]).

...NZ] sport's drug testing agency is to beef up its watch on top rugby and rugby league players. And other sports will be surveyed to identify areas of concern. Over the past nine months, the N[ZSDA] has conducted around 500 tests on athletes competing in or training for sports ranging from athletics and canoeing to judo and snooker. Nine positive tests were returned – five for stimulants and three for marijuana, along with one "no show" by a bodybuilder, deemed to be positive. Each test costs about \$600. The agency, funded from the sport, fitness and leisure vote, is keen to push the number of tests to 1200 annually but it needs more money. If government won't pay it may seek funding from individual sports, starting with rugby. N[Z] rugby's clean bill of health – in the face of two recent positive drug tests in South Africa – did not mean testing procedures here were inferior, said [the agency's] director... rising to claims made by the South African rugby authorities. "I have no doubt our procedures are as good as any in the world... We are in the mainstream of testing internationally, whereas there is no independent agency in South Africa and all testing is done by the S[ARFU]. We can test where and when we want." Rugby officials are not sitting back despite 44 negative tests in the nine month[period]... Since then a further 16 [negative] tests have been undertaken... "Our rugby testing has so far been at the highest level... but we hope to expand that if additional funding becomes available... We are having ongoing discussions with rugby officials, who are keen for us to continue testing." ...There were 21 negative tests on rugby league players in the nine month[period]... The agency does not normally test for recreational drugs unless asked to by a sporting body. That was the case when three motorcycle riders returned positive tests for marijuana. "We were approached by Speedway N[Z]... The tests were conducted at a meeting in Palmerston North and I understand the riders have been dealt with." The agency plays no part in the penalty landed down to dopers; that falls to the governing body of the guilty competitor's sport. [The director] is concerned that [an AUSn] cyclist... received only a \$1000 fine after testing positive to ps[eu]doethadrine. "The I[OC] has a maximum

three-month ban for a first offence of this type but a second offence – as in [this] case – carried a maximum of two years... Unfortunately cycling, tennis and football [soccer] did not sign the 1994 agreement [ratifying those bans] with the IOC.”

...there are real concerns the weak-kneed actions by the IOC and IAAF in lessening penalties for drug cheaters will let back the cheats. In halving the four-year ban they have taken away any deterrent factor. Two years is nothing. Athletes will be prepared to take the risk knowing they can be back competing... in time for the next World Championships and Olympics. If they are caught, the money they can now earn is more than enough for them to take their battles to the courts. I refuse to believe athletes who say they don't know how banned substances were found in their system. As well as dealing to the athletes, their coaches and doctors should be put out for life.

...A snapshot of life with steroids has come from a study of 100 users in N[SW] by the National Drug and Alcohol research centre, reported in the University of NSW publication *Uniken*. According to the centre's research, the typical steroid freak is [a guy], employed on a good salary, well-educated – two-thirds are at universities or other tertiary institutions – and began using the drugs in their mid-20s. Despite the horror stories of side effects, typical steroid users are likely to worry about their health, live on strict high-protein, low-fat diets... But they still mould their bodies by injecting anabolic and androgenic steroids... And while the objective is the body beautiful, they are willing to risk anything from baldness and pimples to liver tumours in pursuit of their ideal. The steroid freak can choose from up to 60 different types of steroids, paying between \$A100 and \$A2500 for a course... Injection is preferred because it places less stress on the liver than eating the drugs. Muscle is the motivation. Users... will have worked hard at... [trying] to boost their body size, improve their appearance, and lift sporting prowess... Most will have been weight-training for three years before turning to steroids to push size and strength beyond natural limits. The... researchers say the users live in an unspoken body-image culture supported by gyms, body-building magazines and some sporting organisations which push the side effects into the background.

...Two leading Brazilian... WATERPOLO... players have tested positive for the anabolic steroid nandrolone, the Brazilian swimming federation has confirmed... If the results are confirmed... [the] pair... who together have formed one of the most lethal Brazilian attacks of recent years... seem certain to miss the world championships[. (Note that it's thought nandrolone 'may be produced naturally by the body – especially when under stress.')]...

The Internet site that sells banned steroids and offers tips of avoiding detention of performance-enhancing drugs... will be investigated by the FBI... [But the site's owner] said his business was legal. "I'm not selling anything (department store) Wal-Mart wouldn't sell,"... Androstenedione and other products... Power International of Virginia... sold were "naturally occurring substances" licensed by the F[DA] as food supplements.

...[Lifter still going for gold A NZ resident's insatiable desire for world powerlifting records has him on the road again. The sprightly 63-year-old, already holder of five world marks, leaves tonight for the world championships in Oregon after a year preparing for a hoped-for sixth. In 1974 the lifter, then representing England, won a second weightlifting gold at the Christchurch Commonwealth Games. The lifter came back to live in NZ. His last Olympic-style lifting was at his 1980 national championships comeback. These days his energies remain solely with powerlifting and, in particular, the dead lift. "If I'm persuaded I'll do the bench press as well," said the 63-year-old, who found his way into the *Guinness Book of Records* by lifting 610kg – more than 11 times his bodyweight – in the three powerlifting disciplines. "My bodyweight then was around 53kg. Now it's up close to 60kg." The lifter now spends much of his time lecturing in NZ and around the world on preventing back injuries. This week the 63-year-old gave employees of The Warehouse a lifting lesson.'

...Stretching to loosen up muscles before exercising is a waste of time in preventing injury, say researchers at the University of Sydney in Wagga Wagga. Trials on 2600 Army recruits over a year found no evidence that stretching prevented injury. "We were able to rule out even a quite small effect of stretching," said an Army physiotherapist. The physiotherapist told *New Scientist* magazine that stretching was assumed to prevent injury, "but there is no evidence to suggest it did." The physiotherapist suggested that stretching after exercising could be helpful or if muscles were particularly tight.'

...masses of young body-conscious gals are putting themselves in danger of painful bone disease, fractures and infertility through over-exercising. Medical experts estimate that thousands of NZ gals are at risk of developing osteoporosis because they are hooked into poor diet and strenuous exercise and stop menstruating. Osteoporosis NZ launched a national series of seminars at the weekend to warn gals against obsessive training programmes. An Auckland endocrinologist began the series at the Auckland Institute of Technology North Shore campus, targeting active gals, dancers, sports professionals, teachers, trainers and coaches. About 10% of her patients were aged between 14 and 20, compared with only 1% a decade ago. "There's been a change in the number of young gals involved in sport and training programmes have become more intense," the endocrinologist said. Triathletes, runners, gymnasts and ballerinas often went through vigorous exercise programmes and felt they needed to conform to a lean body shape. A top aerobics champion, who has achieved results in her sport despite not fitting in with the norm, said: "It's very hard in aerobics because the judges have a mind-set about what they think gals should look like. I knew I could never look like that, but I've achieved anyway and that's because I look after my body. If you eat well you can train longer and harder." But the endocrinologist said many athletes strived for low body fat, not realising that their performance could suffer because of insufficient energy supplies. This often led to their ovaries shutting down, lowering oestrogen levels which helped to keep bones strong.'

...Every little girl has fairy-tale dreams of being a ballerina or twirling across the ice on skates bathed in spotlights as millions watch. Professional skating is big-time athletics. Brutal competition, relentless ambition – ambition that can become obsession. Everyone expected fierce competition between two US Olympic ice-queens but nothing like the vicious attack on one that was swift and chilling. A guy stepped out of nowhere, struck her knee a crippling blow with an iron bar and left her screaming in agony. Skating fans were mystified, then horrified to learn the attack had been plotted by the ex-husband of her arch-rival because the ex-husband hoped to back his ex-wife and cash in on the millions his ex-wife would make if it won the Olympics. Many refused to believe rumours the arch-rival was involved. Then came the shocking truth – the arch-rival confessed it knew about the plot and helped cover the plot up. The arch-rival was sentenced to three-years probation, given a \$US100,000 fine and was barred from organised skating forever. Life off the ice has been hell for the arch-rival. Her best job was working as a gardener for \$4.75 an hour. Incredibly, the arch-rival and her ex, who served eight months for his crime, proved once again that they're ice-cold when it comes to making a buck – peddling a hard-core porno tape they claim they shot themselves on their wedding night.')

...It's *not* just a game. Research has confirmed what staunch supporters of sport have known all along. Not only is top sport something to be admired for itself but it can also serve as a model for other sectors of society, especially business... Early results of a study involving some of the world's top sports organisations, including the All Blacks, the A[US]n cricket and netball teams, the German national soccer team and Chicago Bulls basketballers, have identified the... 10... "magic keys to sustained peak performance." ...Uppermost was a passion to win... [T]he study's findings could have major implications for business. Business had long been fed a diet of military models but the researchers, all sports enthusiasts, "really believe that the sport of business is a more attractive metaphor than business as battleground. In sport we surely find peak performance and amazing talent, creativity and stamina,"... The study was presented to a Strategic Planning Society conference in London this week...

I CAN see the loathsome London marathon from where I am sitting. As I write this, otherwise civilised human beings are gasping and straining their way along the ugly tarmac of our capital, trying to prove they are fit... How pointless and wearisome it is... It is our car-borne society's absurd response to the fact that we have designed a world in which we are actually expected not to use our muscles without prior appointment. I know people of my age or younger who react to the idea of a half-mile walk as if [it was] suggested that they... [walk] to the South Pole... I would pay good money to get out of running 26 miles, and my one visit to a fitness gym left me even more bored than the film of *The English Patient*, itself a marathon of pretentious tedium just short of brain damage.

...The New York Marathon has been run and won. But despite perfect conditions the winning times were outside the long-standing race records. Why? Money. For years, marathon records were continually broken as top track runners hit the roads and chased big dollars. Not any more. The

track athletes have become the rich elite... The top track athletes can expect \$100,000 just for starting in four Grand Prix meetings... Television is driving the show. A recent three-year deal worth \$US20 million has guaranteed that – and, sadly, kept the marathon's glamour in the past... I'm sure that among the current crop of middle and long-distance track runners there are some who would be capable of close to a two-hour marathon, but really there is no incentive for them to do so... Why would any top Kenyan, Ethiopian or Moroccan want to flog themselves for 26 miles and 385 yards around the streets of New York in the hope of winning – and marathon running is a lottery – \$US50,000 when they could win \$250,000 and a couple of gold bars in minutes rather than hours on the track? ...The... New York [Marathon's prize]... money now is no better than when [a NZer] won... in 1981. The best time there, 2h 08m 01s, was run by [a]Tanzanian... in 1983 and the world's best – 2h 06m 50s – was run in April 1988 by [an]Ethiopian... In that same nine or 10-year period, the 10,000m track time has come down by two minutes. The best runners of a decade ago would be lapped once or perhaps twice now – if they could even get a start at a top track meet.

...[a 'Kenyan improved her own world gals' best time by 4 seconds to win the Berlin marathon in 2h 20m 43s yesterday. Her compatriot won the guys' race in the 3rd best time ever. The course holds the world's best marks for both sexes.]

[ahead of the 2nd place-getter –] heralded what could become the next great era in N[Z] marathon running... In retaining the title [the teacher] won last year and making it [3 from 3] in his attempts at the distance, [the teacher] further underlined his class... In beating 2h 19m, [the teacher] also earned a year's driving behind the wheel of a new BMW... In finishing eighth in 2h 35m, [a former NZ] cycling rep... and Commonwealth Games gold medallist... won the veterans' class by 10m 01s... The [gals'] race was a come-from-behind triumph for [a]48-year-old... who ran 2h 45m 57s – almost five minutes faster than her 1994 winning time... [The Wellingtonian], who stopped counting her marathons after 30 but reckons [her legs have] now run around 80, was aiming for 2h 48m and was overjoyed with both her victory and time as [it] headed off to implore [the]BMW managing director... to relent and give her the keys of a car for at least six months. [The Wellingtonian] was less than four minutes outside the [gals'] target time and pleaded with [the managing director] to "give an old duck a car – think of... the publicity you would get."

...Auckland wants more people to join the jostle on its crowded streets. But just for a day. Oh, and bring your running shoes. The quintessential Auckland event, Round the Bays, has begun a recruiting drive... Yesterday the main sponsor, Nestle, issued the Mayor of Hamilton... a challenge to rustle up... runners from the Waikato. The waterfront run needs 65,000 registered runners to beat San Francisco's Bay to Breakers as the biggest event of its kind in the world, a title [Auckland] last held in 1982. While 80,000 people took part in this year's [race], only 50,000 were registered... Hamilton contributed 140 busloads of entrants. [The mayor, who hasn't] done a Round the Bays, is keen to take part in the... charity run.

...[Worldwide jogging trend all started in Auckland 80,000 adults and children take part in Auckland's Round the Bays. Auckland's favourite fun run has its origins in the glory days when a pair of Kiwi runners won gold at the 1960 Olympics. In 1962 their coach, together with a veteran Empire Games triple jumper, advertised for anyone keen to join a new club – 15 responded and the world's first jogging club was born. From there the craze grew. A US athletics coach visited, was impressed and took the concept back home – and incidentally helped found shoe giant Nike. In 1973 the joggers club took jogging to a wider audience by hosting the first Round the Bays. They were expecting 500 to turn up and were astonished by 1200 entrants. Someone who helped organise that first run remembers that it and fellow race marshals were at the race start to assist handling the unexpected crowd, but they were also needed at the finish of the race. Their only option was to belt along the race course as fast as they could to get to the end ahead of the masses. That first race was 16km, starting from the Auckland Town Hall, down Queen St and to St Heliers. These days, due to the huge numbers, the race starts at Mechanics Bay and is 8.4km long. For years Round the Bays was the largest fun run in the world, but it was overtaken by a San Francisco run that has more registered runners. The call is for all runners to officially register next year. Registration is of added importance because money raised goes to charity. In the last 11 years \$3.5 million has been given to charities. Proceeds from the next race will go to the Starship Foundation. For an entry form see Friday's *Western Leader*, or call into our office or your nearest Mad Butcher store or the internet (www.roundthebays.co.nz). For the best fun after the race join the Mad Butcher Suburban Newspapers team. You get a special team T-shirt, entry to the team tent for a party, with sausage sizzle and refreshments.

...When you jog along Auckland's streets you're celebrating the history of sport. Jogging was invented here. An Auckland journalist is even credited with coining the name "jogging". The journalist was one of the pioneers who helped found the Auckland Joggers Club. The concept of running for fitness was inspired by the supercoach of NZ's gold medal performances at the Rome Olympics. The supercoach believed his training techniques of strengthening the heart by relaxed running could benefit anyone, not just athletes. Businesspeople starting to feel the ill-effects of middle-age spread, smoking and alcohol – and all too many of them suffering heart attacks – began asking for help. The supercoach was always happy to give advice. Then in 1962 on a flight from Christchurch to Auckland, the supercoach sat next to an Auckland city councillor – and later mayor – himself a former Empire Games triple jumper. That's when things really took off. By the end of the flight the councillor was a convert to jogging and quickly gathered together a group of 15 prepared to give it a try. The Auckland Joggers Club was born. The supercoach helped athletes win 18 Olympic medals in different sports throughout his coaching career, but rates his role in creating jogging as one of his greatest achievements. The supercoach says it got more pleasure out of helping an overweight person turn their life around than any of his Olympic moments. A Blockhouse Bay resident is living testament to the power of jogging. It was overweight and inactive when it started jogging in the 1960s. Now at 74 it still runs five days a week, still does half marathons and recently had a medical check – "and I'm A-1", it says proudly. From 15 Aucklanders jogging has of course become international and involves millions. Originally the Auckland Joggers Club catered for joggers only, however over the years walking has become very popular and now walkers form a large part of the club. While the main emphasis is on recreational jogging and walking, many members take part in half marathons and marathons throughout the year. Why jog/walk alone when you can train with Auckland Joggers? Joggers and walkers meet on Tuesdays at 5.30pm and 5.45pm, Thursdays 5.30pm, and Saturdays 8am, at their centrally situated clubrooms in the Cornwall Park Sports Association facility in Puriri Drive (Cornwall Park' being an ideal – and safe – location for both road and cross-country running).]

...A LEGAL letter claims [a NZ]er... was assaulted and defamed during the British cross-country championships. In a bizarre incident, the Wellingtonian was hauled off the course just 15 metres from the finish when... in third place. [The NZer] (27) had been granted permission to compete in the event, but following the race... was offered no explanation for being forced out, though it is understood it may have been because [the NZer] was wearing an Adidas (her sponsor) running strip rather than her club uniform. The race at Luton was backed by rival Reebok. [The NZer]'s father... – a barrister and a senior lecturer in law at Victoria University – has already sent two letters to the British Athletic Federation. [The father] believed the incident amounted to an assault and battery of his daughter, while... her reputation had been damaged with onlookers and athletes having concluded [the NZer] must have done something illegal or improper... Her father said it was also the responsibility of the starter to check that athletes met race regulations, but nothing had been said to his daughter... [The father] has told the BAF that [his daughter] would have the right to claim damages. Unless there was a genuine apology from the federation, [the father] planned to take the matter further. "They have committed civil wrongs... Even the police have limited circumstances where they can lay hands on you." ...The federation's London-based solicitors have said they do not believe there was any substance to the allegation that [the NZer] was forcibly removed from the race. They also dispute the

defamation allegation. But the BAF... [– which is faced with being placed] into receivership with debts of more than \$1.27m... [–] said it regretted the incident and any misunderstanding that had occurred. In a letter, it apologised for the way matters unfolded and how they had to be handled during the race. • **Next Weekend**, [the Wellington mountain runner will represent NZ] at the world cross-country championships in Turin.

...[‘A Napier resident chalked up his 11th NZ running title with an emphatic victory in the gruelling national mountain running championship on the Black Birch Range in Marlborough on Saturday. Running 12km to a summit of 1700m, the winner blitzed the field after halfway to finish in bitterly cold conditions – recording 1h 6m 45s for the journey, which compares well with the world champion’s winning time of 1h 5m 36s on the same course two years ago. The winner, aged 30, will continue his mileage buildup in a bid to make the Sydney Olympics in the marathon. In the gals’ championships it was sweet success for a Christchurch resident, after illness forced her out of last year’s event. The winner had a neck-and-neck race with the 1996 champion in their climb of 1000m. However, the Christchurch resident, who has won the NZ cross-country, 3000m and 2km steeplechase titles within the past eight months, proved the stronger over the closing stages. The junior gals’ winner qualified for selection to the world championships by retaining her title.’

...‘Wellington’s world champion is a strong favourite to win the guys’ section of the world mountain running championships tomorrow in Sabah, Malaysia. Also highly favoured is another Wellingtonian, who was third in the gals’ section last year. NZ has a 15-strong team including 5 juniors’. By the way, a] **Kenyan-born Dane...** [has] slashed the world indoor 800m record for the second time in three days... clocking 1m 42.67s... on Saturday... [The Dane] earned \$US100,000... for his day’s work, getting \$US50,000 for the victory and a further \$US50,000 as a world record bonus.

...one nation has dominated the world of distance running... [for] more than 30 years... The athletic talent produced by Kenya is quite staggering. In the 1990s alone there have been nine different world and Olympic champions and world recordsetters. The latest star to emerge could be the most remarkable yet... [T]he most inspiring distance runner of 1996... has already signalled with a string of outstanding performances this year that [the 5000m world record-holder] could be a star of the world athletics championships in Athens... [Last year] Zurich saw the... [Kenyan run] the second fastest [10,000m] time in history. A phenomenal world record over 3000m in Rieti, Italy, followed and in Milan, [it then beat the] 10,000m world recordholder... in the grand prix final, a win that netted the richest prize in the history of athletics, a cool \$250,000 as the overall winner of the grand prix series... The 3000m world record... set in Rieti showed that [the Kenyan] was capable of breaking eight minutes for two miles... 40 years ago, it was felt that no [hu]man would ever run one mile in under four minutes, yet here was a [guy] who had the capacity to do it twice, without pausing for breath. And so it proved. A fortnight ago in Belgium, [the Kenyan] set a world best time for the two miles, running 7m 58.61s... [His] phenomenal run came on top of an outstanding effort in Rome in June when [it] became the first [person] this year to run the 5000m in under 13 minutes... It was another indication of the potential of this shy 21-year-old. His reaction was brief but confident. “I think I can go even faster,”...

[Canada’s] 100m world record holder... has declared himself the fastest [hu]man in history and branded “a joke” his... showdown with [the 200m world record holder] to decide who is faster. “I’ve become the fastest human that ever walked the planet,”... the... [Canadian told his opponent] during a televised conference to promote their... 150m match race in Toronto’s SkyDome... “If there was going to be a fastest [hu]man in the world title you would not be part of this race,” taunted... [the runner who reached] a top speed of 43.6 km/h... [during] the 100m... in Atlanta. “You are not even top-10 ranked in the US in the 100m... at 23 miles per hour[(37 km/h).” However, if the 200m runner’s time of 19.32s is divided by 2 it gives an average of 9.66s/100m – and the USer]... covered the second 100m in 9.20 – significantly faster than... [the Canadian’s best of 9.84s/100m (although the Canadian’s time was derived from a standing start). Furthermore, although the 100m runner may have achieved the fastest speed, it was only for a short distance. Being able to maintain speed over a longer distance (e.g., 400m) is undoubtedly a greater test of the body’s sprinting ability. Anyway, they will merely be proving who is the fastest out of the people who are immoral enough to devote their lives to athletics training (i.e., if, hypothetically, every living human had the opportunity to undertake full-time athletics training – and did so – would it be reasonable to assume that somewhere amongst the nearly 6 billion worldwide human population exists at least one person who is capable of running straight, anti-clockwise or clockwise, faster than the Canadian’s 43.6 km/h or the USer’s 19.32s/200m?). In related news,] Atlanta’s maligned organising committee went out of business yesterday with a break-even budget and the unshakeable belief that its myriad problems will not be the legacy of the games. The board closed the books on a \$US1.7 billion... budget... which doled out more than \$US541m for construction of venues and \$US315m on employee salaries. Left is about \$US39m to cover remaining construction projects and several lawsuits. Once those debts are paid, any remaining money will go to the U[S] Olympic committee.

...Whatever happened to the Olympic ideal? The belief in competing for the joy of it has been perverted by greed, commercialism and self-interest. Most of the competition happens off the fields as companies vie for TV rights, naming rights and apparel endorsements while cities desperate to be host venues have turned the selection process into a gravy train for bloated bureaucrats. In the latest episode, Olympic chiefs have struck a deal with the sporting goods industry to avoid sponsorship rows over kit upsetting the Games. One of the biggest problems for competitors – apart from the opposition – is their national team kit sponsor can be a rival to their clothing sponsor. At last year’s... Olympics a [gal] athlete had to strip in front of [other] athletes and officials just before a race because [the athlete was told that it] was wearing the wrong kit. Expect any time to see the Olympic symbol of five interlinked rings become a row of dollar signs atop a Nike ‘swoosh’...

[A US track] star... has parlayed his unprecedented 200m and 400m Atlanta Olympics victories into a six-year, \$US12 million... contract with Nike... that’s \$1 million more a year than Nike gives to the entire US Track and Field Federation... [In addition,] the contract... includes performance incentives that could be worth additional millions. [The sprinter] couldn’t be reached for comment. But in a statement released by [his agent] said: “I have been with Nike all my career, and I am delighted that they have made such a significant commitment to both me and to track and field, giving me every reason to stay with them for the remainder of my competitive career.” [The sprinter], whose appearance fees for races in Europe topped \$US100,000 last summer, made \$US500,000 to \$US600,000 a year under his old contract with Nike. Including endorsement deals with Bausch & Lomb, Coca-Cola, General Mills, Hasbro and Mobil Oil, [the sprinter] made about \$US3 million from all sources last year. That was about twice the \$US1.5 million [the sprinter] made in 1995, and [his agent hopes the sprinter will] double his 1996 income this year. “Of course, that is with the expectation that [my boy] will win the \$US1 million match race...,”... [T]he world record holder in the 200m, is scheduled to race... the Canadian who won the 100m dash in a world record time at the Olympics, in a 150m race to settle the question of who is the world’s fastest...

THE concept is right out of the heavyweight boxing ranks. Two rivals who publicly despise each other... are ready to rumble. Only this battle will be on an athletics track, not inside a ring. Tomorrow in Toronto’s Skydome [the world’s fastest 100m and 200m runners] will burst out of the blocks in a “sprint for a mint”... The fact that the winner will take away \$US1.5m and the loser \$US500,000 is almost a sideshow because there is so much pride and ego involved... Their rivalry burst right out of the sultry heat of Atlanta last year, fuelling the prospect of this race. Both claimed to be the fastest [hu]man around and [the Canadian] was particularly bitter that his 100m effort was overshadowed by [the USer]’s 200-400 double. [The 100m gold medallist felt his effort] was cast aside in America because [the 100m gold medallist is Canadian. His opponent] had the perfect answer: “Let’s forget the fact that [the Canadian] was born in Jamaica. If [the Jamaican] was raised in Canada and trained in Canada, [the Jamaican] would be Canadian. But [the Jamaican] has a home in Texas and benefits from American college coaching. [Therefore this] race isn’t between Canada and the US, it’s between [two Texas residents]...” Ironically the two train about 160km apart in Texas... “I am naturally faster,”

said [the Canadian] during a frenzied press conference in Toronto yesterday. But [when the USer claimed to be] willing to put both appearance fees and prizemoney up in a winner-take-all bet[the Canadian] declined to take the challenge, saying that running was his job now. [The Canadian] also denied reports that [his preparation] was suffering from a knee injury – “I’m bigger, stronger, heavier and faster (than a year ago).” ...[the USer] is probably favourite – [and was confident enough] to concede the inside lane...

The contest between two world-record sprinters in Toronto... has been hailed as the way forward for athletics... The... contest... over 150m... will set a record for hype and prize money. But it gets no marks for novelty. Such confrontations go back at least 300 years. Samuel Pepys wrote in his diary in 1663 about a race on Banstead Downs between the Duke of Richmond’s foot[person] and another runner. Members of the upper-class often arranged such running-matches between their servants. Running for wagers became known as pedestrianism and it was so popular that by the mid-18th century several runners were making a respectable living from it. The biggest purse went to Captain Barclay Allardice, who in 1809 collected the equivalent of \$600,000 for a win at Newmarket racecourse. In the mid-1880s, there was tremendous interest when Walter G. George, a top British amateur runner, challenged William J. Cummings, a Scot invincible in professional athletics, in two series of three races, over one mile, four miles and 10 miles, for \$470. Exploitation was rife. In 1887, a match between two sprinters, Harry Gent and Harry Hutchens, ended in chaos because each of the rival gangs wanted to arrange for their [runner] to lose. The spectators were so angry they set Lillie Bridge stadium on fire. This led to a crackdown. In one case, a professional, who had posed as an amateur, was prosecuted for fraud and jailed for a month, with hard labour. The final nail in the coffin of pedestrianism came in 1906 with the Street Betting Act, which outlawed wagering at sports events.

...A... sprint showdown between Olympic champions... spluttered to an anti-climatic conclusion yesterday when [the USer] pulled up lame... [while his opponent] had a two-stride lead and was still accelerating...

[A US sprinter] earned half a million dollars despite failing to finish, while [an Ethiopian jogger] broke a world record but did not earn a cent in a bizarre weekend of track and field... [T]he 10,000m gold... [medallist’s 2]-mile clash with... the Olympic 1500m... [champ had also] fizzled out early when [the] Algerian dropped out... The winner would have received \$1.4 m... if [the Ethiopian] had broken 8 minutes... The Ethiopian failed by 1.08 seconds... Events off the track at an IAAF council meeting in Athens probably had more significance for the main sport of the Olympic Games. Exasperated by the U[S] governing body’s failure to resolve three outstanding drugs cases, the IAAF announced that it was banning [two named US athletes] and a third American, whose name was not released. [One of the named athletes], a double world champion at the inaugural world championships 14 years ago, has vehemently denied using banned substances... [H]er husband... and lawyer... greeted the decision with outrage. The IAAF said the suspended athletes would not be allowed to compete at the U[S] championships this week, where the team will be selected for the world championships... The seeds have been sown for another prolonged court battle between aggrieved athletes and the[ir]... governing body.

...Thanks to laser technology, fans... at the world athletics championships... in Athens... [-] a city where it can... take half an hour to move 100 metres... [-] will be able to see for the first time what speeds the likes of [the Olympic] 100m champ... and his rivals are hitting. The laser could be an important step in making athletics more attractive to spectators in the stadium and [TV] viewers... It could certainly answer the question about whether [the Canadian or the] 200m and 400m Olympic champion is the fastest human on the planet... Like police[officers] trying to catch speeding cars, organisers have placed lasers at the end of the straights and will aim them at the lower backs of the athletes – the best place for an accurate reading of peak velocity... Until now speeds have been analysed by studying video. The fastest times in the... 100m have been about 12m a second...

For the first time athletics has come of age and broken away from money under the table to openly paying prizemoney. The winners... at the world track and field championships... will collect \$US60,000. Second is worth [half that] and third \$15,000. And we’re talking here of the average athlete. The superstars... can expect much more by the time their bonuses (from shoe contracts) are taken into account. Should [a NZ gal] win the discus [the Polynesian] might not be in the big dollars league but victory would certainly enhance her future appearance fees on the world circuit. With the two best throws this year, [the NZer] deserves to be a clear-cut favourite. Her chances are certainly better now the Eastern Bloc athletes are basically drug free. While world records are continually being broken, the [gals’] discus mark – the 76.80m set by [an] East German... – has stood since 1988. The biggest hurdle for any thrower is qualifying. Ask N[Z]’s best javelin throwers... how difficult they found being restricted to three qualifying rounds at 9am when you are used to six rounds later in the day. Anything can go wrong... Because of their week-long intensity, the world championships are probably harder than the Olympic Games. But athletes are more relaxed and tend to perform better... knowing they have to wait only another two years for another chance whereas many may have only one Olympics. I [- the 1500m gold medallist at the 1976 Olympics –] certainly treated my only world championships as just another meet... With only appearance fees, I did not regard those championships [the first] as significant... [At this year’s championships, NZ] has one of their strongest teams ever and surely the best chance ever of a medal at this level.

...[a NZer]’s discus triumph at the world track and field championships in Athens has... propelled her to new riches: the title clinched a \$95,000 prize, and appearance fees at future international meetings will net up to \$25,000. But those close to her say the 22-year-old Aucklander will keep her feet on the ground... Her coach for the past two years and Mayor of Auckland... said the secret to his protegee’s success was her attitude. “[Her monotonous training schedule involves throw after throw.] seven days a week, three times a day.” The regime slipped yesterday, though... “I said to her, ‘Training tomorrow?’ And [my protegee] said, ‘No way. Retail therapy.’” Her win brought special delight at the N[Z Herald], where the thrower has worked as a part-time advertising researcher for more than two years. The executive director of Wilson and Horton... was impressed by her “presence and charm” when [it first] saw her interviewed on television. When [the executive learnt that the thrower] did not have a job, [it] offered her one. The champion herself hopes that her win will inspire others, particularly Pacific Islanders. “If my win means more Polynesians are encouraged into sport, that’s good,”... said[the thrower, who]... was supported in Athens by her mother... and one of her four aunts. The rest of the family will be at Auckland Airport at noon on Wednesday when the golden girl is due home.

...The long and the short of it is... N[Z has 2] world champ... discus throwers. When [a NZer] won discus gold on one of the great sporting stages... [another] was already celebrating her own victory. The 1.4m Auckland [gal] won 12 gold medals, including the masters discus title, at the World Dwarf Games in England. The 48-year-old draws inspiration from her taller yet younger hero... [who] won with a third round throw... in Athens – N[Z]’s first-ever medal at the... world track and field championships... which is ranked just below the Olympics. Her winning throw... [also] landed her a healthy bonus with the N[Z] Sport’s Foundation. Along with the \$95,000... collected for [her victory, the foundation’s boss confirmed the thrower] will pocket a \$50,000 personal grant. “[The thrower] is... at the top of the world, paying back the faith we have shown in her. As well as her personal grant – spread over four quarterly payments – [the thrower] will have access to the \$620,000 of general funds allocated to Athletics N[Z] by the foundation...” ...the foundation has supported [her since the thrower] was selected for the World Junior Championships in Seoul in 1992.

...COULD I have told you months ago [that NZ’s discus thrower] was going to win gold at Athens? Of course not. So many things must be working perfectly for an athlete to become a world champion – especially [in] the competitive track and field arena. There were a record 200 countries participating at the world champs, making them bigger than the Olympics. The worldwide TV audience was 3.3 billion. Only [the discus thrower] could have known that all was right with her world... could have felt that indefinable sense of lightness and confidence that is present in great sportspeople when they are on top of their game. The Sports Foundation had more than a hunch her best was due to emerge. That is why we continued to support her... despite [her] poor showing... at the ‘95 World Champs... It would have been easy to have withdrawn support and backed someone else... As [the discus thrower] was striking gold... and four other N[Z]ers were finishing in the top 15 in their events, a couple of other Kiwis were having a tougher time of it at Athens... There have been a number of calls in the media for... funding to these athletes to be

reduced, or even cut. But just as it was with [the discus thrower] a year ago, that's not how we read it. They've both shown too much potential to be cast aside at this stage of their careers... [□ The indoor 800m world record holder] shattered the oldest world record in track and field and two more world marks fell at the Weltklasse Grand Prix meet yesterday. While no world records toppled during the nine-day world championships that ended... last Sunday, the rewards on offer at the Zurich meet provided great motivation. For breaking a world record the prize was \$US50,000... plus 1kg of gold... [The] 24-year-old Kenyan-born runner who is now a citizen of Denmark, smashed... [the] 16-year record in the 800 metres with a time of 1m 41.24s... [after tying an English runner's] 1981 mark of 1:41.73 in Stockholm earlier this... [year. Another Kenyan-born runner, who shares the Dane's first and last names but is] no relation to the 800m runner, shattered the 3000m steeplechase record with a time of 7:59.08... [T]he... mark of 7:59.18 held by [a fellow Kenyan has stood] since 1995... a 24-year-old Ethiopian, completed the... gold rush... by bettering his own 5000m record with a time of 12:41.86s, improving on his 1995 mark of 12:44.39... [The Ethiopian], who is also [the] world record holder... in the 10,000m[, had hoped]... to crack the 12:40 barrier... The race was so fast that... [the German] who finished fifth, still set a European record of 12:54.70... [The 5000m] world champion... of Kenya... finished second in 12:44.90, a national record, while his compatriot... was third in 12:49.87. Another world record was nearly shattered by [the] world champion... of Morocco, in the 1500m. [The Moroccan] posted a time of 3m 28.91s, the fastest this year... [An Algerian] holds the world record of 3:27.37 set in 1995. [A USer] fought off a strong challenge from... [a fellow USer, who was] the bronze medallist in Athens... to win the 400m in 44.31s... ...[while NZers] bathed in the reflected glory of [their discus thrower]'s world athletics championship title... a battle of Olympic proportions was being fought on the playing fields of Greece. Yes, it's on again, the quadrennial bun fight to see which city hosts the Olympics, and Athens... is... in contention for 2004. The athletics championships offered the Greek capital the chance to show itself a worthy contender. It has some opposition. A letter to the *International Herald Tribune* pointed out that Athens was one of the most polluted capitals in Europe, its transport system is tragic and its planned airport would not be ready for a decade. And that was from an Athens resident. From another direction came more arrows: Athens was too unstable to hold the games, it had economic and political problems and the organisers of the athletic championships were "mediocre..." So said the... Italian... president of the IAAF... – and it should come as no surprise that Rome is also a contender... The Greek Foreign Minister, naturally, was not pleased with the Italian athletics supremo. [The minister suggested that the Italian] had "violated the basic rule of athletics by mixing politics with sport." [The minister] would appear to be living in a dream world. The Italians condemned the Greeks for trying to turn the games bid into a national issue: "We Italians deal with the Olympics with great self-control, great attention and a sense of responsibility." Now that really is rubbing Greek noses in their Olympic history. But [the IAAF president] is also dreaming if [it] thinks Italy does not need the games for nationalistic reasons... Three other cities are left in the running – Stockholm, Buenos Aires and Cape Town[– from the original '11 cities. Despite an internationally renowned archbishop throwing his weight behind Cape Town's bid (saying a first Olympics in Africa would give the continent much needed self-respect, and benefit not just his own country but all of Africa) – and the fact that an Olympics has never been held in the continent of Sth America either – all] reports suggest that it will not be Buenos Aires' or Cape Town's day. Stockholm, capital of calm, stable, gentle Sweden – it gave its name to the syndrome that leaves hostages enamoured of their captors – could be a natural compromise between the bellicose Mediterranean states. However, someone definitely does not want Stockholm to have the games. Since May, seven of the city's sports arenas have been attacked by arsonists. In June, the Swedish [PM], a strong supporter of Stockholm's cause, had his home burned and this month a bomber destroyed the press box of the 1912 Olympic Stadium, memorial to Stockholm's previous games... The Stockholm attacks are certainly a more forthright demonstration of disapproval of the games bid than the Athens' letter-writer's method. However, the sentiments of the bombing's claimants are similar: that Sweden, with its welfare state system under pressure, cannot afford to host the Olympics... [H]ow many cities *can* afford the hidden costs of holding the Olympics?

...*War of the rings*... ODDSMAKERS pick Rome. Sentiment favours Athens. Symbolism says Cape Town. Athletes support Stockholm. Geography sides with Buenos Aires... Unlike recent Olympic votes, there are no overwhelming favourites and no obvious losers this time... [but the] contest has been tainted... by mudslinging... and a series of bomb attacks and terrorist threats... The decision will come [next month], when 109 members of the IOC vote by secret ballot at the Beaulieu Palace in Lausanne. Several rounds of voting are expected before a winner emerges. The candidate with the fewest votes is eliminated after each round until one achieves a majority... Athens (1896), Stockholm... and Rome (1960) have all staged the Olympics before. Cape Town and Buenos Aires hope to bring the games to Africa or South America for the first time. [However, there] is strong sentiment for going back to Europe... the cradle of Olympism... after 12 years away from the continent. After... the summer games... in... Barcelona 1992... the last Winter Games in Europe will have been those in Lillehammer, Norway, in 1994... Rome has long been considered the front-runner and remains the London Bookmakers' favourite at odds of 4-6... Rome's chances remain strong... and... the... Italian city may also be hard to beat when IOC members consider where they and their spouses would prefer to spend three weeks. With that in mind, Rome is offering to turn the Via Veneto area – symbol of the Dolce Vita of the 1960s – into a private playground of hotels, shops and restaurants for Olympic officials... Buenos Aires, making its fifth bid, is probably the long shot of the five... [although] Cape Town officials repeatedly point out that Africa is the only continent represented by the five Olympic rings that has never hosted the games. Cape Town's biggest asset is [South Africa's first black] President... who will be in Lausanne to push the bid... But [the biggest asset] will no longer be in power in 2004, raising uncertainties about the future. That could turn away some IOC voters, as could South Africa's high rate of violent crime... Sweden's reputation as a safe country has been shattered... Responsibility for the[bomb] attacks was claimed by a group calling itself We Who Built Stockholm. Saying the Olympics would be a waste of taxpayers' money, the group [has] threatened to turn Stockholm into a war zone and "make the 1972 Olympic tragedy in Munich look like a kindergarten tiff." IOC members have generally been reluctant to go where they don't feel secure. But [the] IOC president... and other members have suggested the violence could actually rally votes in Stockholm's favour.

...Intrigue, speculation and tension escalated yesterday as the five cities bidding for the 2004 Olympics began frantic last-minute lobbying of IOC members in advance of tomorrow's vote. As the... IOC... opened its 106th session... [violence], including a small firebomb attack outside the Greek Olympic Committee offices in Athens on Sunday, has prompted extraordinary security measures... For the first time in memory, metal detectors have been installed in the entrance hall of the IOC hotel in Lausanne... [NZ's] IOC member... is predicting a close race... "Rome does have one big advantage in having a permanent National Olympic Committee staff of 3000. They have a weekly income from soccer each week of six million lira." ...[NZ's representative] makes his own decision... The NZ Olympic and Commonwealth Assn] has no contact with [the representative] or any input into his decision. No country has a representative on the IOC – all members are there as individuals. The National Olympic Committees (including NZ's) have no say directly or indirectly on the decision.

...[Yesterday the IOC], impressed by Greek humility and an impressive resolve to prove their ability to stage an Olympics to meet the standards of the 21st century, awarded Athens the... 2004 Olympic Games... ahead of favourites Rome... Negative campaigning can rebound, and so it proved... Italy's world athletics chief... exploited every chance to decry the organisers... of... last month's athletics world championships in Athens... in a clear attempt to convey to IOC members the Greeks weren't up to staging top international sports events... When the third European candidate, Stockholm, dropped out after the third round [of voting] almost all its supporters switched to Athens. "That was a clear snub by the Europeans to [the Italian]," an experienced Olympic observer said. "They were sending him a message." Rome... may find it difficult to get the Olympics in the near future as few people expect the IOC to vote for another European bid... Many IOC members felt Cape Town could be ready in a few years...

[and even the] president of the Italian Olympic Committee, said: "The 2008 games will be in South Africa." ...There were no sad faces in Greece as the Greeks threw raucous street parties with bouzouki and Latin music mixing with ouzo and champagne to celebrate the decision. Athens came alive, with cars racing around with horns blaring and thousands dancing in squares and waving Greek flags as the city staged a fireworks show. National monuments and city buildings were lit up. Elderly... [people] took to the streets with their grandchildren in an outpouring of national pride... "This is like a dream come true," said... one Athenian frantically blaring his car horn in a traffic jam at the central Syntagma square. "The Games return to where they belong, and Athens is proud to host them." "The Athens Olympics will be a hard answer to all those who want to commercialise the Games. We will portray our culture, which is synonymous with the Olympic ideals of peace and fair competition,"... a housewife said... [The PM agreed, saying:] "This is a great opportunity to give a new spirit to these Games, to avoid commercialism and to restore the noble contest,"... Market analysts said the news... combined with an expected injection of infrastructure investment, should send Greek stocks soaring.

...Greek stocks, bonds and currency markets have risen sharply in the aftermath of Athens' successful bid to host the 2004 Olympic Games. "The market may be overreacting, but we are definitely on the buying side," one broker said. "We are buying banks, information, telecommunications, cement and construction shares, and basically any good company." Investors bought Greek securities in anticipation that the I[OC] decision would bring a seven-year economic boom to the country, [and the city with a 'population of 772,000']... Institutional investors had sold shares in the run-up to the decision... Investors said they expected the stock market to continue to rally, though bonds and the currency market may not... The Greek drachma rose to 283.30 per [US\$1]... Greece's Athens 2004 Committee... said it would handle the Olympics on a budget of \$US1.35 billion... plus \$215 million for emergency spending... ['The organisers will hire 5700 unemployed Greeks on short-term contracts to meet their staffing needs of more than 6000 by the start of the Games. Apart from paid staff, the organisers will also deploy 45,000 volunteers.' In local news, one] of the last monoliths of sports administration, the N[Z] Olympic and Commonwealth Games Association, was last night dismantled into a streamlined working committee... In a historical moment, the association moved swiftly into a more businesslike and professional era when the votes were cast at the annual meeting in Wellington. When the voting was over, the association's unwieldy ruling body of 41 members who represented their individual sports had metamorphosed into a compact seven-strong board operating under the new name of N[Z] Olympic Committee... The restructuring... followed a review of the association's operations over the past three years – with the intent to produce a better decision-making process. Representatives of the 41 member sports will now meet twice a year, as a council, to pass on their views to the executive committee.

...Question: Rugby Union last featured as an Olympic sport in 1924. Which country won the gold medal? Your time starts... now! Sorry, patriots, [it was not us – perhaps because the All Blacks weren't there. It's the US]. The history of rugby at the Olympics is nasty, mean, brutish and short. It was haphazardly present from 1900 to 1920 as an exhibition event, and at Britain's insistence featured on the official programme in Paris, 1924. In the final, France was totally outplayed (well, beaten up)... One French player actually went into shock, but before being carried away managed to leap from his stretcher to avenge himself on an American. The French crowd turned ugly and assaulted the [US] team, who took to their heels and were lucky to escape with minor injuries. Baron de Coubertin decided enough was enough. Interestingly, on the Web at least, the U[S] is still very much involved in the sport... At members.aol.com/wags40/mar.html, meet the Minnesota Valkyries... They... offer a handy "Spectator's Guide to the Ruffian's Game." ...Players of Olympic standard may need to consult Rugby Head Injuries, a South African guide to the boggled brain... My choice for the after-match function is scorpions.simplenet.com/ingoal, the InGoal Rugby Bar in Caracas, Venezuela, which offers "Rugby, Beer, and Something Else," the last item wearing a very low-cut gown. They play rugby videos all night and field their own team... which boasts of "champagne rugby,"... and... outrageous uniforms... But let's return to N[Z] to *Rugby News* (www.rugbynews.co.nz), the Bible of the sport, and the official NZRFU page (www.nzrugby.co.nz), its high altar. Fittingly, this last site has just won a top Web design award for its superb assembly of headlines... action shots, teams, fixtures, results and commentaries... It also offers Terabyte's Rugby CD-ROM, and player posters at \$14.95.

...Ballroom dancing, rugby and surfing have received formal recognition from the I[OC], but they will have to compete with two dozen other sports seeking inclusion in the games. Other recognised sports include acrobatics, mountain climbing, billiards, golf, karate, korfbal, netball, orienteering, roller skating, basque pelota, polo, bowling, racquetball, water skiing and squash. A further 11 sports federations have applied for IOC recognition and 18 others have made initial approaches. The idea of ballroom dancing in the Olympics has been sneered at by some purists. But it has a large following and the IOC considers it a legitimate sport, comparable to icedancing in the winter Olympics... With the programme for the 2000 games in Sydney virtually finalised it appears that the earliest any new sports could be included would be at the... games in Athens. Two new sports, triathlon and taekwondo, have already been added for Sydney and the IOC last week approved the addition of [gals'] waterpolo, trampolining and whitewater canoeing in Sydney – where 'dancesports will be demonstrated'. The... IOC president... is scheduled to meet later this month with various golf organisations... to discuss that sport's Olympic prospects.

...IT IS writ in stone. The 2000 Olympics will be "the most harmonious, athlete-oriented, technically excellent and culturally enhancing Olympic Games of the modern era"... – these... commandments are carved in concrete in the Sydney Organising Committee of the Olympic Games foyer. The committee has put the arts up there with sport and the Olympic spirit. "And that's just how de Coubertin... would have wanted it," enthuses... [the] general manager of Sydney's Olympic Arts Festival... "[The Baron] wrote tons about the Greek notion of mind and body harmony. It's only since Helsinki in 1948 that the arts have been non-competitive." Kicking the tetrad off is Festival of the Dreaming – a celebration of indigenous cultures – which starts today. Next year sees A Sea Change, highlighting the cultural blends created by migration. Reaching the World in 1999 offers A[US]'s artists to the world. Then the Harbour of Life will mix international and local artists. But will anyone notice them? It's been an unfortunate feature of other Olympics that the absolute domination by sport forces everything else to the sidelines.

...A[US] is learning the new face of terror: venal as often as ideological, but always as deadly and frightening. In the next three years, as Sydney gears up for the 2000 Olympics, police and security officials fear this face will become even more familiar. Last Friday terror came as the biscuit giant Arnotts began hauling its products from supermarket shelves in Queensland and N[SW] after threats of poisoning by a criminal demanding action against allegedly corrupt police. On Saturday, a bomb destroyed an empty home in the exclusive Sydney suburb of Woollahra. It was detonated behind the Turkish Consulate-General – reviving memories of the 1980 Vauluse assassination by terrorists of the Consul-General, Sarik Ariyak, and his bodyguard. The problem for police and security forces, which in A[US] work together in a national anti-terrorism plan co-ordinated through the federal Attorney-General's office, is that terrorism has become an open club – anyone can join, with any weapons they choose... Last [month, 'Aboriginal activists threatened to ruin the Games if the federal government goes ahead with an 11% cut in funding next budget']...

'Aboriginal leaders say they'll escalate plans to protest during the Olympics after a leaked Government report said that no more than 10% of Aboriginal children were removed from their families to be raised as whites from the 1920s until the 1960s. "All bets are off," was the response of the Olympic campaign delegate to the Metropolitan Aboriginal Land Council. "Aboriginal people will rise up in this country and show the world how racist AUS is." Before the statement, Aboriginal leaders had said they would draw the world's attention to their plight at the Olympics through a protest embassy. But the Aboriginal and Torres Strait Island Commission chairperson said the games were now "in jeopardy. We didn't want to target the games but we have nothing to lose now.'" In another development, lawyers representing 'hundreds of US and Japanese band members who'd been invited to perform as part of the Sydney Olympics opening ceremony – until local band members complained – are considering suing the organisers for breach of contract'...

AUS[ns] are whingeing because clever N[Z] companies have already struck gold at the Sydney Olympics. Auckland's Opal Pacific has won a licence to produce official Olympic jewellery. Its submission was "streets ahead of the rest," said... a spokes[person] for the Sydney Olympics organising committee. N[Z]-made Line 7 has been selected for its leisurewear and [another NZ company] has won the right to make official Olympic

keyrings and spoons. But A[US]ns don't reckon it's fair and Sydney talkback radio stations yesterday fielded a barrage of calls moaning that official 2000 Olympic Games jewellery had "Made in N[Z]" stamped on the back. "...We won the Olympics... and companies here should be benefiting," one [caller] complained. Opal miners at Lightning Ridge, Dubbo, are also unhappy to be sending opals to Opal Pacific... But [the spokesperson] said that under CER (closer economic relations) the organising committee had little choice but to use a N[Z] company if it was the best... Another... official said: "It's provoking a bit of a backlash... but we are hoping it will die down once people understand the issue involved."

...Tourism chiefs are worried N[Z] is not doing enough to promote itself to people planning a trip Down Under for the Sydney Olympics. A[US]n tourism is already running multimillion-dollar campaigns in some countries to ensure it maximises tourism earnings from the sporting event in 2000. But N[Z]ers have been slow to cash in... [However, the NZ] Tourism Board... is still in the middle of developing a strategy for promoting big events – like the Olympics, the America's Cup and the millennium celebrations... The N[Z] manager of the A[US]n Tourism Commission... refused to comment on how our promotions compared with A[US]'s, but... said the commission had already launched several campaigns. In one, the commission will spend \$US10 million on luring [US] residents to the Olympics and encouraging them to extend their trip to other parts of A[US].

...Toxic waste exceeding international safety levels by more than 1000 times has been found on land near the... Olympic site. Sydney Olympic officials said yesterday the waste was found in soil contaminated by corroded drums of dioxin dug up during work at North Newington, adjacent to the vast Olympic construction project. N[Z] laboratory tests of the dioxin found a toxic waste equivalent of 1540 parts per billion (ppb), but there was no trace of the most deadly dioxin, 2,3,7,8-TCDD, which had been found previously... The [US] safety level for all dioxin in surface soil is 1.0 ppb, based on its potential to cause cancer. The same level applies in N[SW]... The... site was used as a toxic waste dump from 1949 to 1976.

...Samples taken from an illegal stockpile of toxic waste at Homebush Bay, bordering the 2000 Olympics site, have shown that it contains dioxin contamination 60 times worse than the world's first major dioxin accident 20 years ago... [when, in] Seveso, Italy... a chemical factory blew up... Greenpeace said yesterday... [as it] transferred the contents of the stockpile of 50 drums to chemical-proof containers and then to an on-site storage area made out of converted shipping containers... [that:] "The 'Green Olympics' is beginning to look a distinctly muddy shade of brown... Unless the NSW Government cleans up this area properly, athletes and visitors from all over the world will come within metres of a site which has unacceptable levels of toxic waste." Results of another Greenpeace sampling programme show dioxins are entering the food chain at Homebush Bay. Samples of a common table fish showed dioxin[at] 10 to 15 times the acceptable levels... Last week the games' environmental watchdog, Green Games Watch 2000, which is a conglomeration of environmental lobby groups, issued its first report card... It said Sydney was failing to meet its commitment to stage the world's first "green" Olympics with its audit giving... organisers "barely a pass" at five out of 10. But[the] Olympics Minister... said the NSW Government disputed some of the review's assessments and believed the games were meeting all necessary guidelines.

...When Sydney's planners began looking for an Olympic Games site, the only block of land within city limits that was large enough had been used as a toxic waste dump for close to 30 years. Buried in substandard landfills was household rubbish, industrial waste... and byproducts of the brickworks and abattoir that had occupied some of the site. There were also disused [WW2] ammunition dumps and naval bunkers. Now, the same 760ha site sports an underground rail loop and a variety of stadiums in varying stages of completion. Soon there will be landscaped tracks and gardens, cycleways, an athletes' village, bus and ferry terminals. Sydney is spending \$A2112m on the site, which will be home to all the 28 Olympic sports barring equestrian (Horsley Park), canoeing and rowing (Penrith Lakes) and track cycling (Bankstown). Organisers are expecting 10,600 athletes and coaches – they will be housed in a new 2000-dwelling suburb – and a global media contingent of... 6000 who will take over a warehouse that is now the distribution centre for the Grace Brothers chain of department stores. Already the huge steel arches that will hold the roof over the 112,000-seat stadium have changed the skyline in Sydney's west. The world's largest mobile crane was shipped down from the port of Newcastle in more than 100 pieces to lift the 300m-long roof arches 59m above the stadium floor. A 12m-wide spiral accessway climbs the seven floors to the top of the stadium, allowing wheelchair access for the disabled and vehicle access for supplies of food and drink. Next door, the 12,500-seat swimming complex, the world's biggest, is already in use. The building is so big it cannot be air conditioned because that would alter the water temperature, so each seat has its own unit pushing cool or heated air upwards towards roof vents. Under construction are a 50,000-seat show-ring that will open for Sydney's Royal Easter Show next year and be used as a multi-purpose arena at the Games; a 10,000-seat tennis centre that will become home to the N[SW] Open; a 15,000-seat hockey stadium; ...two warm-up tracks... and... a golf driving range... put in to make money and allow athletes some leisure... The workforce has hit 1200, with the state and federal governments committed to spending around \$420,000 a day for the 1048 days until the Games open on September 15, 2000... The spending has already generated controversy – \$6.2m went on a wharf at Homebush Bay that was designated for use by athletes. Last week it was revealed that the wharf is for VIPs and those regarded as needing extra security, with the only athletes likely to be welcomed ashore there [being] the ones who carry star status, such as... the US Dream Team basketballers. [US TV] networks had their first look at the site recently, and decreed that all telegraph poles and power pylons had to go so as not to spoil the view, the underground cabling adding \$80m to the cost. Sydneysiders have recently been treated to the bizarre sight of bargeloads of huge Moreton Bay fig trees floating down the northern beaches. The trees are being relocated from Brunswick Heads on the north coast to form a 2km-long avenue leading to the Olympic site. And a tiny amphibian, the green and gold bell frog, forced planners to reverse a scheme to fill the old brickworks quarry and instead prompted them to build a tunnel to allow the little breeders to migrate. The endangered species were removed from the quarry to a nearby wetland, but kept hopping back to mate... The planners are hyper-sensitive to environmental issues... Water will be collected from roofs to irrigate the gardens and flush toilets; everything is solar heated, and natural lighting is used wherever possible; wetland areas will filter stormwater runoff before it enters the bay; woodland... areas have been developed with the aim of encouraging bird and animal life back to the area where it was once abundant. There is only one thing they appear to have forgotten – accommodation for the visitors. The state government is calling for tenders for a 250-bed plush hotel but so far that's it. If you're planning to be in Sydney in September 2000, book the friends' and relatives' beds now.

...Visitors to Sydney will be lumped with a 5[%] hotel bed tax from [next month], to help the N[SW] Government pay for the 2000 Olympics. A planned 10[%] accommodation tax, which drew fire from the I[OC], will now be phased in over 12 months instead of introduced in full...

PLANNING to attend the Winter Olympics in Nagano in Japan next year? Be prepared for some major traffic problems. Police are gearing up for what could be some of the world's longest traffic jams, stretching 120km. Because of the many narrow, curvy roads in Nagano, jams regularly reach 60km or more during the ski season but with traffic expected to double during the Olympics, chaos is predicted.

...A record 2593 athletes from 67 countries are planning to compete in... Nagano. The U[S], with 207, said it would send the most... followed by hosts Japan with 166 and Switzerland with 163. Bermuda, Brazil, Iran, Luxembourg and Uruguay plan to send one athlete each. The number of countries attending is equal to the record number of participating nations set at the Lillehammer games... and includes three countries which have never competed in the winter Olympics before – Azerbaijan, Uruguay and the former Yugoslav Republic of Macedonia.

...PORTABLE phones appear almost everywhere in Japan these days... As of October 31, a total of nearly 34 million various types of portable phones were in use... according to the [Japanese] Post and Communications Ministry... but their use won't be allowed by spectators at the Winter Olympics in Nagano... Portable phones and pagers are on a list of 19 items banned from spectator seats... says... an official of the organising committee. At Olympic sites, the sounds of ringing and conversation could disrupt sports like figure skating, which need silence... Among other banned items... are weapons, dangerous objects and pet animals. [Among items not banned are journalists – '8000' are expected to cover the Games.

...a NZer] can barely remember her last summer. That's not surprising considering it was 1985[, when the NZer] was 12. Since then, life has been a constant calendar of winters as [the NZer] developed from a mad-keen skier into [NZ's premier gal] snowboarder through continuous training and competing in both hemispheres. Last week was no different. When many Kiwis were finally pulling their swimsuits from their drawers, [the snowboarder] was packing her thermals and heading to France where the new World Cup... season starts on Friday... If [the snowboarder] can stay free of injuries and continues to improve her impressive form of the past two World Cup seasons, [it] stands a good chance of lining out in [NZ] colours when the Winter Olympics are held... in... [Nagano. The NZer] is ranked 36th in the world after an injury plagued 1996-97 season[but] needs to break into the top 25 to be in line for the Olympics where qualifiers will be named on January 18. Helping her Games quest is the rule that says one country can't have more than four people qualify, which will eliminate some talented Europeans ([the NZer] is inside that quota on her present ranking). On the other hand, an Olympic season will bring added competition to the slopes of Europe and North America... "It will really hot up this season... A World Cup event usually has 60... racing and... that's a competitive field. To have it trimmed to 25 for the Olympics really turns it into a showcase." [The NZer] has 12 events in France, Austria, Italy and Canada to stake her claim... [A fellow Kiwi recently beat her] to claim the K2 challenge at Cardrona, near Wanaka... but [NZ's top snowboarder] recovered to win her fifth national championship and be named N[Z]'s inaugural snowboarder of the year... While [NZ's No 1 snowboarder] enjoys the highest profile in the sport here, [the No 1] is not alone in her Olympic dream. Several Kiwis, including [Cardrona's K2 winner], will be in Europe battling for those rankings. [The No 1] says just making it to a World Cup startline is a victory in itself, given the money and assistance leading racers from Europe and North America enjoy. Her campaign will cost around \$30,000 for six months. There's little reward for that with only a handful of... racers earning major prizemoney. Still, that's only about one tenth of the costs facing a World Cup alpine skier... Snowboarding's debut at Olympic level will come in two categories. There is the halfpipe in which competitors make radical moves, hanging upside down in the air as they blast off banks in freestyle mode. And there is the giant slalom, the alpine discipline which has competitors racing down a near vertical slope, twisting through gates in a race against the clock... [NZ's No 1] loves to dabble on the half pipe, but the slalom and giant slalom is where her talent lies. "It's important to have work and play – slalom is my work, freestyle is my play although I'll probably do more of that in the future." ...A lot of the sport's public focus goes on the freestylers rather than the alpine racing. Consequently, that is where the money lies, through the exposure of big-selling magazines and videos... In a sport that is only starting to blossom competitively, [the NZer] realises the competition will only get better and, significantly, younger. Some of the leading snowboarders are converted World Cup skiers, now approaching 30. The next crop of leading talent is around 20 but [the NZer] (24), believes the sport's future beyond Nagano lies with the teenagers starting to come out of snowboarding schools and academies in Europe. "...I'm pleased I managed to get in now! The ultimate to me would be the Olympics... Once that is done, I'd look at continuing international racing for another couple of years while at the same time developing a coaching role. I'd like to be involved in that area for the 2002 Olympics." ...A lack of coaching in N[Z] has been a hindrance to the sport competitively. [NZ's No 1] is looking at developing a N[Z] Snowboard Academy in conjunction with Mt Aspiring College at Wanaka which already runs ski programmes.

...IN THE absence of the Olympics or Commonwealth Games, 1997 shaped up as a lightweight sporting year. But that didn't prevent some heavyweight performances by N[Z]ers, both at home and overseas... The Winter Olympics are upon us in February and [NZ's Austrian-born skier] showed in 1997 that [it] will be a real threat there, gaining another World Cup victory in the [gals'] slalom to finish with a world ranking of No 2... Like our yachts[people, NZ]'s equestrians compete under the constant pressure of their excellence. For consistency [one of the group of NZ's international horse-riders] was superb to again finish the year ranked No 1[, while NZ's senior equestrian (r:p1560, ln58)]... claimed the big individual prize at Burghley to wipe out his unfortunate withdrawal from Badminton... N[Z]'s badminton team... whitewashed A[US] in the Whyte Trophy test series... Hockey made significant strides during the year with both the [guys' and gals'] teams qualifying for the World Cup to ensure they are back in the international top 10... N[Z]'s top triathlete... refound his form this year to... finish second in the world championships in Perth and ended the year ranked No 2 overall... [Another NZer] produced a water-skiing highlight by claiming N[Z]'s first world championship medal with silver in the [guys'] slalom... The year ended in style with... a trans-Atlantic rowing record and the Herculean (or should that be Xena-like) performance of [the 22-year-old NZer who clinched] gold in the [gals'] discus at the world athletics championships in Athens... [Discuss is] an event in which athletes tend to peak in their early 30s... [Her] improvement under... a... new coach, [Auckland's mayor, who is a] former Commonwealth Games discus champion, was startling... [This year, the thrower lost] just one meeting and... [won 15. Her] performance was undoubtedly the finest individual effort of the year and will surely be rewarded with N[Z]'s highest sporting accolade when the Halberg Awards are held in Auckland on February 13.

...N[Z]'s world champion discus thrower... has finished 1997 in elite international company – ranked No 6 among the world's [gal athletes. The NZer] gained the honour in a special poll taken by the authoritative international magazine, *Track and Field News*. Regarded as the sport's bible, the [US] publication was rich in praise of... [the NZer. In discussing her] No 1 ranking in the discus, the magazine said: "In an event long dominated by the old Eastern Bloc, what a shocker to see [the NZer] add more than a dozen feet to her old best in becoming only the second Kiwi ever to score in the event (the other was... No 10 way back in '62)... The top 10 achievement is an honour missing from the N[Z] athletics scene since... the 1970s. The magazine named [a NZ middle-distance runner as its best guy] athlete for 1976 following his Olympic gold medal winning effort... Denmark's [Kenyan-born runner, the first guy] to set three world records in the 800m in one year, was the top ranked [guy athlete for 1997]... The magazine's judging panel, made up of 10 astute media and athletics people from five countries, had [a US] speed queen... at the top of its overall [gals' list].

...in tonight's opening episode of *Powerade Blood, Sweat and Fears* (7.30, TV3)... [the commentator says, "Ooh, that athlete] doesn't look too comfortable,"... as the All Black clings to a web of ropes high above ground at an outdoor pursuits centre. But [the commentator] might be describing a viewer confronted with yet another sports/entertainment show full of athletic stunts. This style of television is a growth industry. They're making *Gladiators* in Britain, [the US and AUS]. TVNZ is screening another Aussie import, *Test Of the Toughest*. Next Thursday *Mountain Dew On the Edge* returns to TV2, with (says the publicity) "five athletic Amazons who take on the most adrenalin-pumping adventures ever." The hype is standard. *Blood, Sweat and Fears* – or *BSF* as it's known at TV3 – is "N[Z]'s ultimate sporting challenge." But this show will deliver what it promises, says[its] executive producer... "It's not just people doing bungy jumping. It's a serious search for N[Z]'s best overall athlete. We've got All Blacks, Warriors, Olympians. No Neville Nobodies." ...The athletes earn the "talent fees" they were paid... Full-on and star-studded it may be, but wasn't TVNZ's *Clash Of the Codes* like that? "Perhaps it is a rip-off of *Clash*," says [the executive producer]. "Perhaps it's a rip-off of *Mastermind* and *The Krypton Factor* and *Mountain Dew*. It's a conglomerate of all those shows, taking the best elements and putting them in one show. People who say they are making ground-breaking television are usually kidding themselves. Everyone's stealing ideas." ...[the executive producer] reckons there is now so much sports coverage that viewers don't have time for magazine-style sports shows, hence the canning of TV3's *Mobil Sport* and TV One's *Sportsnight*. (The latter has been absorbed by an extended version of the mid-evening news show *Tonight*, which will devote 15 of its 45 minutes to sport when it returns on February 3.) "People still want to see the athletes off the field, but not necessarily being interviewed about sport... We have to look further afield and push into the entertainment market." ...There are 27 [athletes in *BSF*], three competing in each of nine shows. The nine winners go on to three play-offs, which leaves three athletes in the final... Although there's a sports quiz segment, this is a very physical show. Bowls champions... [– like the guy and gal who are both '3-times world champs in this sport' –] need not apply.

...N[Z] teams have qualified for today's four gold-silver medal playoffs in the Asia-Pacific bowls championships in N[SW].

...*'champ happy despite cash imbalance* NZ's latest world champion was not willing to let one of sport's biggest inequities spoil the occasion as it accepted a crystal bowl for winning the gals' world indoor singles bowling title in Ireland. The winner of the guy's world indoor championship will pocket \$60,000. "That's the way it is," said the 56-year-old after beating her Irish opponent in a five-set final early yesterday morning. While the winner is assured of being invited back next year to defend her title, there is some doubt on how a second NZer will be found to accompany her. Gals' superbowl tournaments in NZ last season were a pay-as-you-go matter, with only nine centres hosting preliminary tournaments. Bowls NZ is considering the future of the event, but is adamant an indoor champion will be found to ensure NZ's double challenge next year. In the meantime, the 56-year-old will put her crystal bowl alongside the medals it has won at Asia-Pacific championships, Commonwealth Games and world championships. It would be nice if there was a cheque to go with it. But gal bowlers have long lived in the considerable shadow cast by their masculine counterparts.]

...In lawn bowls... [people] play well into their 60s... But... after 17 years of bowling, [a 41-year-old NZer has] already amassed "a lifetime" of achievements. [The NZer] was the world pairs champ... and had represented his country at three World Bowls, two Commonwealth Games and two Pacific Championships. Because [it] was playing top-level bowls, instead of working, [his] bank account was getting low and his first child... was soon to be born. "Having a young family, there were other things I had to think about. I was seriously thinking of throwing bowls away and getting back to work. Bowls wasn't paying the mortgage,"... [The NZer] would have – if [it] had not caught the beginning of a new professional wave in international bowls... [W]ith the support of the NZ Sports Foundation, [the 41-year-old] jumped on the bandwagon as more and more money tournaments started up. His career has kicked back into life. Instead of thinking of giving up, [the NZer] can now consider bowling full-time and earning a good living. The... wave takes a bigger leap this month with the staging of the first tournament in a new world singles circuit (called the World Bowls Tour) that could mushroom to 10 events a year. [The NZer] will be... at the... International Open in Preston, England... as a seeded player in an elite field of 32. In the first world ranking list, compiled mainly on singles performances at the last five world indoor championships, [the NZer] has gained a lofty 10th position. And as long as [the NZer] stays in the top 16 [it] will be invited to all the WBT events, in England, South Africa, A[US, NZ] or Hong Kong, and play for up to \$200,000 each time... [There are no other NZers in the top 32, but '7 NZers are in the top 100.'

...It was deja vu for NZ at the world men's bowls championships in Johannesburg as the Kiwis conspired to let the symbol of bowls supremacy, the Leonard Trophy, slip through their grasp. The fours were beaten 23-19 by eventual winners Wales in the semifinals to take the bronze medal, and then NZ's singles player lost his final match in section play. The NZer needed to beat Hong Kong's representative in his final match of section play to reach the semis and secure a historic first Leonard Trophy for NZ. However, after holding an early 7-4 advantage, the NZer dropped a four on the next end to surrender the lead and never regained it – ending NZ's planned party celebrations. In 1988, despite winning the fours and triples and taking silver in the pairs, NZ were pipped by England for the trophy. Ireland beat AUS by seven shots in the singles final. The Irish bowler, who won gold in the pairs in 1996, was too strong for the AUSn, racing out to a 15-3 lead before taking the match 21-14. However, the AUSn's performance in the singles secured the trophy for AUS. It was the first time an AUSn team had won the trophy since the inaugural world championships in Sydney in 1966. Earlier, the AUSn destroyed a Pom's dream of securing a hat-trick of singles titles when it beat the English champion 21-16 in the semifinals. The Kiwis end the tournament with the triples gold and bronze medals in the pairs and fours. In athletics news, a US sprinter failed to fire on the track but[the] promoter... rated the athletic legend's trip to N[Z] a huge success... "I would do it again tomorrow. [The USer] was an inspiration... [and] was the catalyst for creating a fantastic event,"... One of the greatest figures in world sport to come to this country, [the USer] attracted a huge crowd... estimated... at close to 10,000... to the... Classic meeting on Friday night... [However,] the paralysing finish was sadly missing... [from] the winner of nine Olympic gold medals [who has been] rated the athlete of the century... His legs looked heavy and his action rough as [the 35-year-old] headed towards the line in his first race [in four months. The USer] eventually finished second last, clocking an extremely slow 10.76s... As they filed out of the stadium after the 100m, most fans seemed content that they saw the legend even though [it] raced poorly... "The feeling I got was that the result was immaterial. People wanted to salute a real champion." ...Last year's Classic meeting was watched by fewer than 1000 people. "We needed to get athletics back on centrestage and prove to the cynics it could pull people,"... said[the promoter], who is president of the events host, North Shore Bays Amateur Athletic and Harrier Club, [and]... is committed to bringing more big names to future meetings. [The promoter would also] be delighted if [the 35-year-old USer could return.

...a 21-year-old NZ] sprinter... finished a close third in the 100m final at the Sydney Grand Prix featuring... [a] 35-year-old... American Olympic legend... on Monday night. The Dunedin runner clocked 10.43s, behind... [an AUSn (10.37s). The 35-year-old] finished equal-seventh... but left a record crowd of 11,928 cheering for more as [the USer] completed a lap of the track after the race. Despite his disappointing showing... [the USer] felt his Sydney race was much better than his effort at last weeks'... Classic where [it] also finished seventh... The young[NZ] sprinter was happy with his... placing in "a very classy field" and will have a chance to improve at the Melbourne grand prix event next month and at the A[US]n championships later in February. On a good night for [NZ athletes, a NZer won the guys'] javelin with his last throw[, an athlete from]... Christchurch won the [guys'] high jump on a countback[, NZ's]... Olympic long jumper... was pushed into second place in her event... [and a runner who is] Sydney-based... finished third in the... [guy's 400m. Incidentally, as Wellington's] Commonwealth Games Society chief executive... headed to Kuala Lumpur for a meeting of the Commonwealth Games Federation[yesterday], it was hard not to give him a rabbit's foot... Lord knows, with the outbreak of calicivirus, there will now be a surfeit of such feet and [the chief executive] could use his share... to secure the right to stage the 2006 Commonwealth Games... While Johannesburg has pulled out of contention, Melbourne is still in the hunt... Wellington's dilemma is to convince the C[GF] that it is a better venue than Melbourne. Some task that! ...it's not that Wellington isn't capable of hosting a major event. It has staged car street races, test matches and ferry sinkings. All with spectacular success... It's not that Wellington isn't a nice place to host a major international event. It may well be, except for the prospect of... [having] to get there by plane or ferry... [and having] to stay there, what with the wind and foul weather... It's just that... well... [who] in their right mind would want to go there, to visit or compete, unless they had to?

...The Minister of Sport... has taken a bold step in creating Eventscorp, a company through which N[Z] will bid for the great events of the world to be staged here. However, bidding for any event is an expensive business. It is a field fraught with dangers and with the potential to waste millions of dollars, for the occasional win. The key will be how well the country pitches for each event, with its sights [currently] set high on the... 2006 Commonwealth Games... There are, I believe, six or so winning strategies for any group taking on a challenge like that. The first is to use every piece of skill and expertise available from anywhere in the world, to win the bid. Sydney threw its net over as wide an area of expertise as it could reach to catch foreign ambassadors, advertising and marketing experts, politicians, business people, sportspersons – anyone who could improve its chances of winning the Olympic pitch. Sydney had 80 people involved in just putting together the final Olympic presentation in Monte Carlo. The speeches were written and the presenters trained by professionals, while others critiqued and role-played the components of the presentation until it was as good as it could get. The second strategy is to focus purely on those who will make the decision... Get to know them far better than the competition might... Thirdly, decide in advance why you will be appointed and have that fixed in your mind as the strategy for the pitch. Sydney's key message never changed: Professionally organised games for the athletes in the friendliest city on earth... ['The city promised the Olympics' best-ever accommodation to house 22,000 athletes, officials and media, and an environmentally friendly "Green Games"'] Fourthly, win it in advance. Don't rely on the final presentation to win your bid... win major pitches during the bid process. The final presentation is a confirmation of what is already in the minds of the decision-makers... Fifthly, never ignore the emotional. Any bid to bring an event to N[Z] would have to deliver a package that highlights the character of its people, its atmosphere, its creativeness and friendliness, as well as appealing to the rational side of the decision-makers by showing N[Z]'s technical abilities. Most pitches these days rely too much on the rational, while ignoring the emotional. Yet

people buy with their hearts not their heads. That's why Sydney involved schoolchildren and athletes in its bid. The videos, too, were carefully designed to have huge emotional impact... The sixth point is to go two or three steps further than your competitors. Pay attention to every single detail. Sydney created the Monte Carlo presentation room... in Sydney for dress rehearsals... By the time they reached Monte Carlo, the Sydney team had done its presentation four times... Only hours after Canada lost its bid to host Expo 2005 to Japan, [a Calgary businessperson]... consoled a group of Canadian organisers at a victory dinner turned wake atop the Loews Hotel in Monte Carlo... "You made the finals and that's not easy... you should be proud of the way you played the game," [the businessperson] told the emotionally spent team after they got the bad news. His company, QC Data, was Canada 2005 Exposition Corporation's first corporate sponsor and had, earlier in the day, discreetly picked up a \$40,000 luncheon tab at the ultra-exclusive Monaco Yacht Club, where a last-ditch effort failed to convince Bureau International des Expositions delegates that Canada was the better Expo choice... Seven times zones to the west in Calgary, other supporters handled the loss with equal grace. About 2500 people stood in the rain on Olympic Plaza to watch the televised results. And the day after Calgary lost, Air Canada and PanCanadian each placed full-page ads in the *Calgary Herald* congratulating citizens and organisers on their efforts. "I don't want to be too altruistic but what we did, we did for the greater good of the city," says... [the] publisher of the *Herald*, a \$250,000 Canada 2005 sponsor. "If we had to go back and do it all again we'd go back," says... White Iron Productions, which donated about \$85,000... In all, Calgary's unsuccessful bid is estimated to have cost \$C5.5 million... Calgarians believed their vision for Expo 2005 would translate into the city's biggest ever event. Expo 2005 could have netted about \$1.2 billion in economic benefits and 60,000 person-years of employment across the country... On reflection, it seems Canada's efforts to win Expo were doomed from the outset. After losing bids for the 1988 Olympic Games and part of the 2002 Soccer World Cup, organisers from the Aichi prefecture, Japan's manufacturing heartland and home of the mighty Toyota Corp, set their sights on Expo 2005 eight years ago. They used their considerable economic, social and diplomatic clout to win votes. The morning of the BIE vote, persistent rumours circulated that they had offered blank cheques to... delegates to ensure their support. "If there's any bitterness it's at the process and how you have to play the game,"... Still, [QC Data's owner] isn't completely discouraged. [It's already] given a \$100,000 cheque to [the] Canada 2005 chair[perso]n... for Calgary's next Expo bid.

...[Wellington has] 'pulled out of seeking the 2006 Commonwealth Games.' While on the topic of Commonwealth Games, the medal table sagged under the weight of the 87 golds won by A[US]... in Victoria. Host country Canada came a distant second with 40. The sight of this torrent of precious metal flowing A[US]'s way caused an acquaintance to remark: "Well, they've just gone out and *bought* success, haven't they?" Certainly the funding the Aussies began devoting to their high performance sports programmes jumped phenomenally after their poor showing at the 1976 Montreal Olympics. By the 1980s, they had the \$100 million A[IS] up and running, and were pumping a further \$77m annually into high performance sport development. So was my friend right? Is money all it takes? ...Without wanting to sound like an economist, I'll answer that by saying "yes", and "no". "Yes", because money is now an entrenched part of the winning equation. Without money, nothing can even start to happen... [However, money] in itself is no guarantee of success. If it was, Saudi Arabia and Brunei would dominate the sports world... One of the Sports Foundation's over-riding philosophies is to "outsmart, not outspend"... Beyond... this, there are... things like capacity for hard work, passion and guts. And that's where we're lucky. They're qualities that have defined N[Z] champions in the past. I know they'll be there for us in the future.

...Brewing giant Fosters have announced they will spend \$A10 million... to help A[US]n athletes prepare for the next two Olympic Games. The Fosters Foundation will target up and coming athletes, with some money going towards established competitors... [In local news, a n]ational swimming champion... has her sights on competing at the Sydney Olympics, but training costs could price her out of the water. The youngster is a member of one of two Glenfield swimming clubs whose future is in doubt because of a proposed leap in pool user charges. The Glenfield Aquatics Swimming and Synchronised Swimming Clubs say they will have to close if the North Shore City Council withdraws their pool use subsidies – a decision which would force costs up 250[%]. The council said the rise would put the clubs' charges on a par with those paid by other user groups. This would increase the clubs' annual pool hire from \$22,000 to \$74,000... The president of the 60-member [swimming] club... said the jump would put the cost of competitive swimming beyond what parents could afford... [The 16]-year-old... holder of the national 1500m freestyle title[will] face... a jump in training costs from \$100 to \$270 a month[, and] would also have to pay \$20 a week for entry to the pool... The chair[perso]n of the community services committee... said the increase was part of a city-wide review of operating costs of council sports facilities.

...[User charges proposed for sports fields in Waitakere City have received an angry response from sports clubs. Athletics is just one code affected and both regional and local clubs say goodwill between sports clubs and the Waitakere City Council will be lost. Waitakere is the only city in the region that does not charge for sports fields (apart from the Waitakere Stadium). While some might question why ratepayers should pay for others' sporting activities, a member of Lynndale Athletics Club in New Lynn says it goes much further than that. Councils treating sports clubs as a cash cow don't take into account the important social spinoffs sport has for the whole community. "There's a lot of young people around New Lynn and I'd rather have them down at the club on the weekend, doing athletics, than tagging our clubrooms." ● 'Health and safety officers are investigating an accident at Henderson Aquatic Centre where a boy's foot was jammed in the pool's moveable floor. The accident happened while the pool level was being raised. The boy was taken to Starship Hospital with cuts to his feet. Ambulance staff say the injuries were minor. Waitakere City Council's public affairs manager says procedures for changing the pool level are being reviewed. "Floor levels are raised and lowered several times a day. When the level is being altered, people are moved away from the side. In this case, for whatever reason, the young fellow hadn't moved away or wasn't moved away from the side and got his foot caught. We have various policies and quite clear procedures in place that we thought were adequate. Clearly, they were not." More than 5 million people have used the pool since it opened 13 years ago and this is the first accident of its type.]

...The family of a South Carolina girl whose intestines were pulled out by the powerful suction of a swimming pool pump is to get \$US25 m... in damages from the pump's manufacturer. [The girl was 5] years old in June 1993 when [it] lost about 80[%] of her small intestine and... 70[%] of her large intestine, and has since undergone a series of operations. [The girl] was playing in a wading pool at a recreation club when the suction of the pool's filter pump pulled her against the uncovered intake with such force that her father and three other adults could not pull her free... The family has reached separate settlements with the pool club... [In local news, t]he cost of a dip in Auckland City pools is likely to rise... because of mounting costs, including hefty Metrowater charges... Pool operators have benefited from a 50[%] rates remission but w[on't] receive this for the portion now taken out for wastewater... The Tepid Baths' annual water bill is increasing from \$15,000 to \$25,000, plus another \$18,750 for wastewater... The YMCA, manager of the Tepid Baths since September, has asked the Auckland City Council for permission to charge \$4.50 when renovations are completed... This is in line with what other city councils are charging... [with the exception of] Manukau... and... Papakura[– where public swimming pools will still be free to use]... Auckland City Council staff have recommended that the community services committee accept the general 50c rise at its meeting today... It would be the first price hike for adults since 1994. Child, family and other concession charges... [including] senior citizens and community services card holders... would not change... [T]he YMCA aquatic facilities manager... said[their] rates... would remain around \$2... Pt Erin Pool, also run by the YMCA, would continue to charge \$3.50[for adults]. The Newmarket Olympic Pool already charges \$4.50... In a recent customer survey, 80[%] of respondents rated value for money at the pools as "very good" or "excellent," compared with 76[%] in 1996.

...The Auckland City Council would be prevented from selling the Olympic Pool in Newmarket under draft legislation returned to Parliament yesterday. The select committee that analysed the Newmarket Land Vesting Bill, a local bill put forward by the council, said it had been told of

“great concern” about the sale of the pool. It was considered a valuable local asset. [In related news, NZ’s junior water polo team was ‘beaten by their hosts in the final of the International Youth Cup at Sao Paolo, Brazil. NZ beat Argentina 10-5 and Brazil beat the US by the same score in the semifinals.’

...the ‘new junior world champion diver is set to make an even bigger splash on the international scene, according to her coach. It’s been a year since her family moved up from Wellington to enable their gifted 14-year-old to train under the renowned former Chinese national coach. And his pupil has come on in leaps and bounds. “The 14-year-old is a great NZ hope in the future,” says the coach, who coaches at the Waitakere Aquatic Centre. “Maybe the diver has a chance to win a medal in 2004 (Athens Olympics).” High praise indeed for the person who caused a huge upset in the girls’ 14-15 years platform event in Germany earlier this month, beating leading Canadians, Americans and Chinese divers after qualifying second in her heat. The NZer scored 335.65 points in the final – 10 clear of her nearest rival. The 14-year-old is just the second Kiwi to win gold at a junior world championship (the first was 17 years ago). Her coach predicted a bright future for his pupil when it won a gold medal at the AUSn age-group championships in April.’

...‘Yes, the best divers in the world are scared when they stand at the top of the 10m platform, backs to the water, hanging on by their toes and their heels letting them know how much nothingness is behind them. They hit the water at around 55 km/h and they have all blown it often enough to know what happens when you don’t enter with the cut of a knife. It hurts. Hospital treatment is routine. Strained necks, backs, shoulders and wrists are to be lived with. At the Sydney aquatic centre yesterday, the US diving team’s “Siamese twins” were training in preparation for the first competition in synchronised diving. “It’s scary up there,” says one twin. “You know all the time you can get hurt.” The diver ripped a tricep muscle that put her out for months after a fifth at the world championships, but came back to win the US nationals. The pair have collided mid-air and tumbled and entered badly and painfully, but have not broken anything so far. There are eight teams entered in the synchronised diving. Chinese 16-year-olds are favourites for the gals’ gold’...

‘The Sydney International Aquatic Centre has been given the thumbs up from spectators. Since its opening in 1994 more than five million people have been through the centre. The pool has been designed to promote fast times. The minimum depth of two metres minimises reflected turbulence and the water temperature is maintained at 25 degrees by gas heating and recycled warm air. Energy efficient zoned air conditioning keeps air warm at pool level around the athletes and the air cool in the spectator stands.’ By the way, the world of sport has produced a myriad of explanations for positive drug tests, but the three Russian swimmers charged by the International Swimming Federation have come up with a new one. [Russia’s] European 50m freestyle champion... European 4x200 freestyle relay gold medallist... and... European 4x100 medley relay silver medallist, unwittingly ate the steroid metandione in a cake baked by a colleague so the Russian Swimming Federation still intended taking them to... the... world champs in Perth...

China’s top... swimmers and their coaches have revealed their successful formula – gelatin from a donkey’s hide and wolfberries, date soup and ginseng root – to counter allegations that drug cheats are headed for... Perth... in January. Like the... runners and their turtle’s-blood-and-slug-paste tonic, swim coaches said the only stimulants used are based on Chinese medicines. The issue has been hard to settle since only swimmers ranked top-50 nationally are tested and the Chinese have a knack of turning up unranked soup-powered champions.

...[the] US backstroke champion... was one of a large group of the US team whose training... at the Wollongong University pool in advance of the world swimming championships in Perth next month... was interrupted for a drugs test. [The chief] executive of the Perth organising committee... said 500 swimmers would be tested. “We had a very pleasant surprise this morning and I hope they are heading right over to the Chinese headquarters tomorrow,” [the US team]’s head coach... said... [Incidentally, earlier this month a]thletes from 24 Islamic countries... [participated in the gal]-only games... which were dominated by the host country. Iran took first place in the second Islamic [Gals’] Games with 58 gold, 55 silver and 37 bronze medals. More than 1000 athletes competed in 12 sports... during the games, which were watched only by [gal] spectators.

...A furore has erupted over sex-testing Olympic athletes. A campaign to abandon gender testing has upset Olympic officials, who fear it will be impossible to hold separate events for [guys and gals]. One... official said: “Sex is like a weight in boxing. If you can’t be sure that someone belongs in a particular category, you may as well give up the whole difference.” Apparently, some pesky Norwegians are behind the anti-testing push because it’s illegal in Norway to insist on sex tests. About one in 400 [gal athletes tested at the Atlanta Olympics were, according to initial results, guys –] but, reassuringly, all were cleared by subsequent physical examinations. All the heat seems to be going on the [gal] competitors but I’d suggest there’s a few [guy] ice dancers out there who’d have cause to fidget nervously with their sequined trousers at the mention of a sex test. - 1997

...the... granny, is a pretty startling sight. Her muscles ripple, her legs bulge and any self-respecting bricklayer would be proud to sport her shoulders. Her physique is, in fact, so extraordinary for a 56-year-old [gal] it is perhaps not surprising her fellow competitors at the recent World Veterans Athletics Championships became convinced [the USer] must be a [guy]. The rumour mill spun out of control until miffed members of the A[USn and NZ] teams launched an official complaint demanding proof of [her] sexuality. But after an embarrassing physical examination, it was conclusively proven that [the USer] – a mother of two who has been married for 30 years – is not a bloke. This controversy has drawn attention to the bizarre but usually hidden world of veterans’ athletics, but it has also highlighted the huge and ever-growing number of physically active oldies. When I went to the Gateshead International Stadium to meet [the USer], the scene that greeted me was like a weird snapshot of the long-living future. Lycra-clad grannies stalked the arena, baring wrinkled flesh in skintight cycling shorts, while Scandinavian octogenarians scuttled around the running track like demented ants. In person, [the USer] is smaller than [it] seems in photographs, but... sparkles with life, warmth and good ol’ American friendliness. [The USer] worries about how her hair looks and applies frosted pink lipstick artfully. Her legs make me jealous. [The USer] may be nearly 30 years older than me but I would gladly settle for her peachy skin and perfect muscle tone and, although her neck is thick and her upper torso bulky, her manner is very feminine. “I’ve become a bit of a star, haven’t I? ...I hate the reason why this fame came about, but it has probably been the best thing that could happen, because usually nobody would know I exist.” But wasn’t [the mother of two nobodies] upset at having to undergo an intimate physical examination – as bad as being strip-searched – to prove... [her gender]? “Yes, I was very upset... To begin with, I thought they must be talking about someone else. There are [gals] here who are much bulkier than I am. You should see some of the shot putters, they are huge!” Has anyone ever doubted her gender before? I ask a little nervously. “No... never before in my life has it crossed anyone’s mind that I might be a [guy]. My body shape is genetic; my mother had broad shoulders and slim hips, too...” There is an uneasy silence. Then [the USer] says, “Well, I suppose there have been times at the swimming pool” – [it] works as a swimming coach in the summer – “when I’ve had my bathing suit on and... kids – little kids – don’t always know whether I’m a [gal or a guy]. They ask me, or I’ve heard them say, ‘Mommy, is that a [guy]?’ But that’s usually because their mom is big and fat, rather than lean like me.” So is [the USer] admitting that the AUS]ns and Kiwis might have a point? “No, little kids are different...” [The USer] believes the sexuality allegations were made maliciously because [it] is a “new girl on the block” beating some of the more established competitors. “Somebody has got... a grudge, or sour grapes, or... a lack of perspective on what this event should be about... I had been doing rather well, I had gotten bronze in the heptathlon, and set the world record in the 100m. I was running against some A[US]ns – I’m not mentioning any names – and a couple of them were not doing as well as they had thought they would... Friends of mine have sat behind A[US]ns referring to me... and saying that what I am doing is impossible. But it is totally possible – I train hard, about two hours every day. I have been blessed with a good physique. I am just accomplishing things they don’t like. To them it is as if I have just come out of the shadows.” Incredibly, [the USer] did not take up athletics until... [passing] her half-century on earth. “When I turned 50 I made a decision I was going to make my next 50 years the best...” [The USer] did so in style, by attending an event called the Grand Canyon games – “a kind of Arizona state Olympics” – where [it] entered the sprints. “I won three golds... so I thought... that was pretty good... My family were so proud... I was raised to do things a lot of girls didn’t do: I played baseball, I did balancing acts and gymnastics. I was a tomboy... People tell me I could have been an Olympian,” [the 56-year-old] says proudly, but a little wistfully. “They see what I can do now, and they say that I would have

been good enough. I was a very fast runner in my teens. We used to race in the playground and I was always the fastest – I'd beat boys and girls." So why didn't [the teenager] train? "It never occurred to me. If you don't have competitive sports at school, which as girls we didn't, you don't know how good you are and there was nobody to talent-spot me. There were [gal] Olympians, but they were drawn from a very select group of people, not from a high school in a small town." ...[the USer then] tells me proudly [about often being] stopped in the street by young [guys] who admire her muscle tone. "Young [guys today love gals] who look after their bodies and stay fit. Their compliments are a tribute to me... – these young [guys] flatter me by admiring my body." ...We talk for a while about how [gals] with children often tend to neglect their own hobbies or interests. "Yeah... too many... particularly of my generation, do that, but life is too short to be put on hold... You have to shoot for your dreams. Don't just sit back and think, 'I don't have any talents', or, 'I won't be good at it', or, 'It'll be hard'. So what? Try. If you don't have dreams, life is pretty boring."

...A 56-year-old American who set two world sprint records for her age-group at... [the] world veterans' athletics championships has been stripped of her medals and suspended for two years after testing positive for an anabolic steroid. The I[AAF said the USer – who]... was at the centre of controversy during the championships after [N]Z... and A[US]n team officials accused her of being a... [guy (but the mother of two) passed a gender test()] – ...tested positive for methyl testosterone at... [the] championship in Newcastle... The American was stripped of her gold medals and world records for the 100m and 200m[, and] also lost her silver medals in the pole vault and sprint relay and bronze in the heptathlon.

...[a former European gals'] shot put champion who claims the... anabolic steroid Oral Turinabol... pills [the East German] was fed by her trainer and doctor effectively turned her into a... [guy is now suing them. The] transsexual who has legally changed his name... [from] Heidi... is still agonising about whether to undergo the harrowing process of four operations to acquire [a guy's genitalia]...

The trainers[, officials and medics behind the sporting prowess of... communist East Germany have been checking their mail far more than usual lately. Hundreds of them are under investigation for their role in one of the largest pharmaceutical experiments in history – the systematic state-sponsored doping of... athletes, some as young as 10... over a 20-year period... It was win at all costs but the costs are now becoming known in the form of life-threatening medical complaints to the human guinea pigs... The athletes, often... were told the little blue pills they took each day were vitamins. They were, in fact, potent cocktails of anabolic steroids that could play havoc with their bodies... The clandestine programme – known as State Plan 14.25 – was straight from the pages of [a] Cold War thriller... The scale is unprecedented. By 1975... 2000... [athletes] were being given drugs. The... experiments quickly paid off in the pool and on the track – ...the country of just 17 million people... joined the U[S] and Soviet sporting giants in the big time. The side effects read like a horror list of ailments and illnesses... [A]t least 12 [guy] athletes... have had breasts surgically removed. Many of the East's former sporting heroes have remained silent, fearing the scandal could damage their reputations and... even lead to them losing their medals. But others have come forward... [One victim] won her first swimming competition when... six. Quickly identified as a star in the making, [the girl] was sent to a sporting academy where her mentors would hand her boxes of "sweets" filled with brightly coloured pills. "Every athlete had their box with their name on it..." ...Her career was ended by spinal injury when... 14 and now... the... guinea-pig suffers from back pain, breathlessness and infection of her over-sized lungs. Despite the strapping shoulders, her doctors have told... [the girl who, at] 11... could weightlift 29kg... cannot lift anything heavier than 250 grams – "That's a block of butter," [it] says in despair. [The guinea-pig] also blames the drugs for at least one miscarriage. "Like me, most of the victims of this doping programme never stood on the winners' platform... An incredible number of children were sacrificed so that at some point one of them could rise to the top." ...[■ An AUSn has asked an East German who 'cheated her out of her ambition and dream to win gold 25 years ago to hand over the relevant medal.'] British athletes defeated for Olympic gold medals by East Germans found to have taken steroids are [also] trying to have the cheats stripped of their titles.

...An East German swim federation doctor accused of doping young swimmers in the former Communist state has been convicted of causing bodily harm. A Berlin court found [the doctor], 72, guilty of giving illegal substances surreptitiously to 58 teenage swimmers between 1975 and 1984, and handed down a 15-month suspended sentence. [The doctor] was also ordered to pay a fine of 7500 marks... [The doctor] was head physician of the mighty East German swim team that produced an astonishing number of world champions.

...Two days out from the start of the world swimming championships, drugs are top of the sporting agenda... The investigation into systematic doping of athletes in the former East Germany has claimed another victim, with Germany's head coach... [being] banned from attending... [His] exclusion came after a stunning admission that [the coach] had been involved in steroid doping programmes. FINA called [the coach] to appear before its board, didn't like his explanation of events, so immediately revoked his accreditation for the games and ordered him to appear before its doping inquiry panel... In Berlin, state prosecutors this week alleged [the coach] provided banned substances to swimmers between 1986 and 1990 without telling them about, or sufficiently explaining, the side effects... [The coach] expressed sorrow for what [it] had done, but added that... [no coach had] a choice under the authoritarian East German system of the time... FINA was stunned... "[The coach] gave an explanation... [which involved being] forced to do it... which is likely to be true... but still, with the rules we have... should have reported any kind of violation of the doping rules to FINA, and... never did, and... could not do it, obviously," said... [FINA's secretary. The coach] had "broken down" on learning of the FINA decision... "His first reaction yesterday was, 'I will leave'. The team urged him to stay," [a team spokesperson said. The coach] is banned from the world championship venue but might still be able to function as team director... [The spokesperson] said at least one other coach from another country at the eighth FINA world swimming championships... was... [The] former 1500m world champion... trained with the German squad at the Challenge Stadium yesterday and will compete in the 200m and 400m freestyle events. Meanwhile, A[US]'s head coach... yesterday renewed attacks of alleged Chinese doping. "It's bloody crazy to shut your eyes and refuse to do something, saying 'you haven't proved anything yet'..." China's sudden resurgence in swimming threatens to give the Chinese... a near-monopoly of gold in Perth but the A[US]ns are anxious to avoid a repeat of the 1994 world championships in Rome in which China won 12 of 16 [gals'] events only to have seven of its swimmers test positive for steroids at the Asian Games a month later. In an ironic twist, the FINA Congress in Perth this week is expected to halve its four-year ban for first-offence dopers... [● A f]ormer Aussie coach[']s... attempts to have the new sharkskin swimsuits banned from the Olympics has found no favour with swimming's governing body... [The former coach] believes it is not fair that swimmers from poorer countries cannot afford the \$1500 suits.

...China's powerful team arrived... yesterday and quickly rejected accusations that their stars were drug cheats. [The team] chief... said Chinese swimmers had undergone... 650 doping tests in the past year and a further 460 other tests out of competition... Asked to respond to remarks made by [AUS's chief coach, China's coach] replied: "When we say anything, we should have facts." ...China has always denied systematic doping despite 23 positive steroid tests since 1990... Meanwhile... Fina, has decided to maintain a minimum four-year ban for anabolic steroid offences... following challenges in the courts... Fina had been under pressure to... [come] into line with other major sports... and... reduce the length... to two years.

...The German Swimming Federation yesterday won a West[ern AUS] Supreme Court injunction against Fina's ban on [its] team coach... from poolside at Perth. Meanwhile... continuing his tirade against Chinese swimmers... [suspected] of turning in drug-enhanced performances[, an AUSn]... anti-doping campaigner... has called on the public to turn their backs on winning Chinese swimmers at medal ceremonies.

...Chinese swimmers... either ignored journalists' questions or said they did not speak English when approached for comment on yesterday's customs seizure of suspected human growth hormones from... [a breaststroker]'s luggage at Sydney airport. Test results on the 13 vials of liquid will be known today... The discovery of the vials prompted calls by A[US]n swimming officials and athletes to expel China from the championships... However, [a]... Chinese journalist has angrily defended the team, claiming... the team were very upset with the unfriendly atmosphere in A[US], and the substance found should not have been said to be growth hormone until this was proved... [The journalist suggested AUSn] authorities could even frame China. "...if you take... the thing in the bottle... to your laboratories you can change it, you can frame us..." [A former] Chinese Olympic athlete and now [the US] diving team coach... said Chinese journalists... had told him the substance found was a natural herbal remedy used to recuperate after sickness or over-exercise. "It's made from honey and a quite popular thing,"...

Tests yesterday confirmed that a substance found in the luggage of a Chinese swimmer... was... human somatropin, an undetectable growth hormone used to boost muscle strength... said... a spokes[person for the AUSn] Customs Minister...

The Chinese swimming drug scandal [- which included '4 team members testing positive for banned substances' -] has overshadowed the unravelling of a far more potent doping regime... Fresh allegations erupted yesterday about widespread drug use among A[US]'s top athletes, including those at the A[IS]. Under the spotlight is synthetic insulin growth factor, or IGF1, which is indistinguishable from a substance the body produces naturally. Channel Nine's *Sunday* programme yesterday revealed that A[US]n Federal Police had investigated illegal distribution of IGF1, including allegations it had been bought and used by individual athletes and coaches associated with the institute... [T]he head of the federal government's Therapeutic Goods Administration in Canberra, told the programme there were signs that IGF1 was going to the elite sports market unlawfully. It was also claimed on the programme that up to 80[% of AUS]'s elite athletes took performance-enhancing drugs, some using IGF1... [The] Institute of Sport director... disputed the claims... But... [a] former national sprint champion and 1996 Olympic competitor, who was not identified... gave first-hand knowledge of IGF1 in elite sports. "Just the fact that it was undetectable was like a godsend to everybody, it was a real buzz around the community," said the sprinter who... never tested positive for drugs. "I was just worried about improving my performance," [the sprinter] said, adding that [it] never feared the potential harm of taking the drug... which has similar effects to insulin in stimulating muscle growth... "Leading into the Olympics of '96, almost everyone I knew was involved at some stage with IGF1... especially within the power/strength disciplines." A former A[US]n champion shot-putter... now a trainer, revealed that one black marketer bought IGF1 from GroPep, an Adelaide-based company, which is the only significant manufacturer of it in the world... GroPep's managing director... had heard that up to 1000 athletes might be using IGF1, possibly paying up to \$A1000... for a small vial. But [the managing director] said they were probably being deceived... GroPep made only one gram - about one-fifth of a teaspoon - of IGF1 each year and exported 90[%] to research laboratories outside A[US]... ostensibly for veterinary trials... "The total amount of IGF1 produced worldwide could never support even a tiny fraction of those who claim to be using it. Athletes injecting themselves with what they believe is IGF1 are almost certainly injecting only water with perhaps a small amount of glucose or salt."

...For... years [a US] swimmer... has been seeking vindication for a devastating Olympic heartbreak. At the 1972 Munich Games, a 16-year-old... was unceremoniously stripped of an Olympic gold medal after testing positive for a banned substance that was an ingredient in his asthma medication. After all these years, U[S] Olympic Committee officials said they are "welcoming him back into the Olympic family and recognising him as one of the most gifted athletes ever to represent the US in international competition." The... [16-year-old] won the 400m freestyle... in 4m 00.26s, beating [an AUS]n... by one-hundredth of a second. Two days later, his medal was taken away when traces of the banned substance ephedrine turned up in a post-race urine test. [The] asthmatic... was first prescribed Marax, then a common medication for asthma treatment, in 1971. [The swimmer] continued taking it, unaware that it contained ephedrine, a drug banned by the IOC. Although the youngster duly disclosed his use of Marax on medical forms distributed to all Olympic athletes, US officials failed to relay the information to the proper authorities on the IOC's medical commission. No one on the US staff ever admitted responsibility for the failure. "It was their [American medical officials'] responsibility to let me know there was an illegal substance in my prescription... and either get it cleared or find an alternative. They failed to do it. I was only 16, I relied on those officials to tell me what I could take, but somehow I ended up paying the price. I guess it was easier to hang a 16-year-old kid out to dry than to tell the truth." [The swimmer] thus became "the first American athlete since Jim Thorpe to have a gold medal taken away," [and]... also became the first swimmer to test positive for a banned substance... [In 1972], drug testing in sports was in its infancy and the... Munich Olympics were the first Games with comprehensive doping tests... Several days after [the 16-year-old] was stripped of the gold medal, the ephedrine was out of [hi]s system and [it] swam in the prelims of the 1500m, an event in which [it] held the world record, and qualified easily for the finals. "While we were in the Ready Room five minutes before the race, [my] coach... came in and told me the IOC would not let me swim. [My coach] was crying. I was devastated,"... The following summer, [the asthmatic] competed in swimming's first world championships in Belgrade... In a re-match of the 1972 Olympic race, [the USer] once again defeated [his AUSn rival], this time in a world record time of 3m 58.18s, becoming the first swimmer to crack the four-minute barrier in the 400m freestyle. [The teenager said it] needed to prove to everyone that [it] was "legitimately the best." ...[the swimmer], now... an assistant swimming coach at the University of Arizona, hopes the action will mark the first step on a road that will one day lead to his being recognised as the legitimate 1972 Olympic champion in the 400m freestyle... "What I want is for the IOC to acknowledge its mistake and correct the historical record... There's a medal out there with my name engraved on it, and I'd like to have it back."

...The IOC knows it needs governments to help pay the enormous cost of staging the Olympics. But, for much of its... [life], the organisation has been fighting to ensure that it and its member sports should be able to run their sporting events free of political interference. This week's meeting in Seoul marked another step in the complex relationship between sport and state around the world. At its highest levels, the IOC is acknowledging it needs government help to fight the use of performance-enhancing drugs... [The] IOC president... told an international press conference in Seoul... just what performance-enhancing drugs mean to world sport. "It is... a very big problem... We think it is... dangerous for the future of sport,"... In recent years, [the IOC president had]... been talking about this being the golden age of sport... It is now clear that when [the IOC] holds a three-day conference on the subject in Lausanne in February it will produce a number of requests to governments around the world to pass legislation tightening controls on trafficking in performance-enhancing drugs, to increase co-operation between governments in fighting the international trade in performance drugs and to standardise penalties around the world.

...The president of the I[OC] says that certain performance-enhancing drugs should be allowed in the Olympics. Why the outrage? [The president] was just admitting the fact that without the assistance of such drugs no athlete would be able to compete fairly at the modern Olympics, and the cost of trying to detect these drugs is exorbitant. All top sports are being enhanced by the advances in modern performance drugs. Anyone with a basic knowledge of human physiology and an interest in sports can see the extreme physical developments that occur... Professional contracts include weight-gain clauses which relate to above-average increases in lean body mass, obtainable only if the athlete uses chemical enhancement. The old adage "the team with the best chemist wins" has never been more true and the Olympic Games can be seen as the pinnacle of drug-assisted sport. Controversies like the... Chinese swimmers or... [Canada's twice]-disgraced... sprinter... are classic examples of the hypocrisy that exists within modern sports. The team making the loudest protestations are usually thankful they have not been caught themselves. Only the pharmaceutically unsophisticated get caught... The only sports[person] penalised in this world is the truly honest competitor who wishes to achieve a personal best without chemical assistance and as we know that sports[person] rarely wins gold. The Olympics should be declared a drug-friendly zone, which would openly admit what everyone already knows, and therefore allow every competitor a fairer chance... [□] [T]he world's fastest

druggie[’s hopes]... of another comeback – at the age of 36 – have been dashed after an Ontario appeals court refused to lift his lifetime ban for steroid use... on the 10th anniversary of that notorious run at the Seoul Olympics in 1988...

As drugs are now rife in sport... so too are the excuses given by offenders. Here, then, is a selection of drug cases, and the excuses, in recent years, ranging from the bad to the wacky... The 1992 Olympic 100m champion was caught for ephedrine. [The Brit claimed it] had ingested the stimulant in some ginseng tea... bought in the Far East. [The Brit] got off, then sued a journalist who had alleged [the sprinter] had used drugs throughout his career... The first of our off-the-wall candidates[was t]he British athlete... nailed for a mix of anabolic steroids and clenbuterol. The excuse? [The Brit] claimed it must have been in the *shampoo* [the Brit had drunk. The Brit] was banned for four years, failed another test in 1997, was banned for life, then reinstated on a technicality... The second of our oddball selections[is the] Japanese billiards player... caught with the anabolic steroid methyltestosterone in his system. Quite correct, [the Jap said, claiming it] was taking the drug not to help his potting on the baize but to improve his performance in the bedroom, where [it] was experiencing some problems of a very personal matter. Found guilty, [the bedroom-dud] was booted out of the Asian Games... The most celebrated case of all[is t]he Canadian sprinter rocketing to the tape in a world record 9.79s in the 1988 Olympic final. The following day [the Canadian] was kicked out in disgrace, having tested positive to stanozolol. [The Canadian] claimed an American rival spiked his drink. [The Canadian] returned to competition in 1991, but failed another test in 1993. [This time the Canadian] claimed his stutter may have been responsible for his high testosterone reading. Set aside the fact that [the Canadian] was a cheat, the [1988] Olympic final is still a stunning example of what drugs can do. Try driving your car from a standing start for 100m and see how long it takes... [□ The USer who won] the gold medal in the shot put at the... Atlanta Olympic Games... and[a US] sprinter... have been suspended indefinitely for drug use.

...Triple Olympic gold medallist Florence Griffith Joyner, the [US] sprinter who holds the [gals’] 100m and 200m world records, died at her suburban home yesterday at the age of 38. Police said a post mortem examination would be conducted, but [the retired sprinter] was believed to have died of a heart attack similar to one... suffered in 1996 on a plane bound for St Louis. “We were dazed by her speed, humbled by her talent and captivated by her style,” [the US] President... said in a statement... Griffith Joyner, the wife of [the] 1984 Olympic triple jump champion... and sister[-in-law of a] famed heptathlete... made an incredible mark on the world of athletics, both through appearance and performance, but her achievements will be forever clouded by suspicions of drug use... Before the 1988 season, Griffith Joyner’s best [100m] time was 10.96s – not even in the then best 40 marks of all time... In the quarter-finals of the U[S] trials in Indianapolis in July that year, [Flo-Jo] recorded an astonishing 10.49s... – creaming an unheard of 0.27s off... [a compatriot]’s 1984 mark... There was talk of an illegal wind and faulty gauge – it timed the following wind as 0.00 km/h – but the record stood. Two months later [Flo-Jo] erased any doubts – at least about wind assistance – when [the USer] won the Olympic final in 10.54s, smiling all the way to the line. The nearest anyone has come to it since was... 10.65s this month... In the 200m, [Flo-Jo] demolished the world record not once but twice in less than two hours en route to Olympic gold. Her pre-1988 best of 21.96s did not rate in the top 20 runs on the all-time list. Yet in the Olympic semifinal and final, [Flo-Jo] slashed an outrageous 0.37s off the previous mark shared by [two] East Germans... a world record which had stood for nine years. The awesome improvements, particularly coming days before [a Canadian 100m runner]’s positive drugs test, inevitably raised suspicions... Constantly badgered on the question, [Flo-Jo] said: “I am totally opposed to drugs,” adding that [the USer] supported the introduction of random testing without warning both on and off the track. Discussing Flo-Jo’s muscular physique, [her husband] said: “Someone said my wife looks like a [guy. That person has] obviously never seen my wife.” Certainly there had never been any doubt about her ability to catch the eye. [Flo-Jo] was known for her self-designed fancy running uniforms and long fingernails.

...Flo-Jo’s... death will do more for drug-testing than drug-testing ever did. What are [Canada’s disgraced sprinter] and many others thinking today? When you watched [her] rippling down the 200m track at the Seoul Olympics... in the world-record 21.34 seconds that still stands to this day, you knew the others were not competing on a level playing field... Funny how the developments in training, the extra medical attention, the professionalism[and] the money that is available today have not lifted anyone to do better than Flo-Jo. Split seconds really count in the sprints. These races are over almost before you can say, “The [gals’] 100 metres final at the Kuala Lumpur Commonwealth Games.”

...A former training partner of... [Flo-Jo] is convinced the sprinter took a cocktail of drugs to make her the fastest [gal] on earth... the... former Commonwealth silver medallist hurdler[who is now the]... British athletics team manager... trained regularly with [Flo-Jo] in the build-up to the 1988 Seoul Olympics... [and] was amazed at the transformation... “I am [still] astonished by the way Flo-Jo, a very good athlete in her own right, changed so incredibly from the slightly overweight, sluggish sprinter I was easily able to beat in training in California... into sub-11s form that... summer... In 1987-88 I met a nurse who... was working in a Californian hospital in what we called the Valley... The nurse insisted that Flo-Jo was coming to the hospital regularly to be given a five-part cocktail of drugs, including steroids and testosterone... When I mentioned it to one of my coaches, who must have been looking out for some quick money, [the coach] contacted the local press and I was told there was at least £25,000... in it for me. That was quite a lot of money to me at that time but I definitely wasn’t interested. I was just an athlete, training hard. I also knew that when it came to drugs of any kind round there you could easily get a hit[-guy] dealing with you and taking you out.” ...Meanwhile, [Flo-Jo’s] brother-in-law and former coach... blasted the media for tarnishing her memory. “It has never been proven that Flo... ever used anything illegally... I blame the media for allowing false rumours to spread and write them as if they are fact,”...

Leave her alone... [say] the defenders... of... [Flo-Jo, who] left this world never having failed a drug test. Unless some evidence crops up in the autopsy, [Flo-Jo] has to be innocent until proven guilty. Sure her improvement looked suspicious... [– it] was faster than the [guys’] record for a host of countries... – ...but if we convicted on that count there would be a lot of innocent people in our jails... However... in his book *Inside Track*, under a chapter headlined Year of The Steroid, [a US Olympic sprinter and long jumper (r:p1578, ln30)] said of Flo-Jo: “...Her physical appearance alone – muscles popping – made a lot of people wonder. Then there was her voice [which] was much deeper than it was in the past.” ...[Furthermore,] a... medical director with the A[US]n Commonwealth Games team, said her death was consistent with the possibility of steroid abuse... But... a long-time proponent of legalising medically-controlled drug use... doubts steroid use would have caused her heart attack at 38, a decade after[her second] retirement... Flo-Jo... who... [had quit running and returned] to working in a bank and as a beautician... [in 1986, having won an Olympic silver in the] 200m at Los Angeles[, returned]... to serious training and [came] second in the 200m at [the 1987 world championships].

...a US] Olympic track star... died from suffocation during an epileptic seizure and there was no indication [that Flo-Jo] had ever used steroids, a pathologist said... [yesterday. In related news, the IOC] boss... is... under pressure to step aside from control of a new body aimed at stamping out illegal drug taking... No delegates were prepared to demand directly that the 78-year-old Spaniard step aside during yesterday’s opening day of a key world doping conference, but it is becoming clear that some leading officials believe the doping body will look more independent without senior IOC figures in charge... [The new body] will help to run random drug tests worldwide, the most effective way of catching cheats.

...The... IOC... leadership suffered a further blow yesterday as... [it]s drug summit foundered in disarray. Credibility of the IOC came under attack for a second straight day at the world anti-doping conference, with athletes and officials questioning its legitimacy... “In Canada and indeed throughout the world, there is a high degree of cynicism... scepticism and... mistrust in the IOC as an organisation,” said... a former world champion kayaker from Canada... “For the first time in the history of the Olympic movement, the voice of the members is very... loud,” said[the] Italian IOC member... Despite the revolt, [the Italian] said the members remain in full support of [the IOC president, who] will put his leadership to a vote of confidence at [an emergency IOC session in six weeks]... At the conference, the IOC ran into... trouble [when officials] backed off on proposals for a fixed minimum two-year ban for serious drug offences. Despite calls from leading athletes for tougher sanctions across all sports,

the conference moved to allow federations to impose shorter penalties in “exceptional circumstances” for fear of being overruled by civil courts. The creation of a \$US25 million... international doping agency was held up by continued wrangling between governments and the IOC over who would control the body... [The] IOC vice-president... said the IOC was ready to give governments a 50[%] role... and... expect[s] them to contribute financially.

...The... [IOC] is threatening to cut countries that fail to agree to drug testing programmes out of the Games financial divvy-up. [An IOC executive] member... yesterday said... “I am not sure you can hold a cheque under their nose and say sign the medical code or else. But you have to have respect, and maybe this is the last chance for good will.” ...[in another development, the AUSn] Olympic Committee president... [declared that the] IOC’s new anti-doping code was defective and didn’t go far enough to prevent the use of drugs in sport[, although the president]... believes the fight against doping... would be compromised if the proposed International Anti-Doping Agency was not set up immediately.

...*Consistency vital in war on drug cheats*... The Kiwis are playing the Kangaroos at North Harbour stadium. We win. The N[ZSDA] officials move in after the game for the random drug tests. The two Kiwi players are clean. One of the [Kangaroos] tests positive for pseudoephedrine. Under the A[US]n policy at the time the Kangaroos’ player received no penalty. But if [the offender] had been a Kiwi[, it] would have got up to a three-month suspension under the N[ZSDA]’s drug policy. Is that fair? No way... In A[US] many sports organisations look likely to follow the model anti-doping policy prepared by the A[US]n Sports Commission. This policy provides a number of exceptions, including cases where the drugs were taken for a genuine medical reason or in cases beyond the athlete’s control. The [NZ] [Hillary] Commission policy does not contain these exceptions. So, in that respect, A[US]n athletes probably have more room to move. N[Z] laws, though, are tough on those who conduct tests – practically any glitch by the tester and the athlete can get off whether guilty or not. The A[US]ns will let an athlete off on a technical glitch only if it raises serious doubts about the accuracy of a test result. And who knows what list of banned drugs might apply? If a sports organisation hasn’t updated its list in accordance with the latest I[OC] list then what might be OK for one team won’t be for the other. Surely when teams play each other the same rules should apply to everyone? Isn’t that what sport is all about? Put everyone on a level playing field and let the athletes’ skills and determination decide the play? ...the... [IOC’s] world conference on doping in sport... [looked] at problems such as those mentioned – the need for “harmonisation”... of sports drug policies and penalties between different nations, different sporting codes and different levels of competition. And a fair application of sports drug policies and penalties. Is it fair that an “over-the-counter” drug has a minimum two-year ban with no other factors considered? For an older pro-cyclist, that could mean the loss of mega-bucks and the end of a career, whereas in amateur wrestling it could mean only the loss of a title and leave enough time to train for the next Olympic Games. The conference on doping heard... from representatives of governments, national Olympic committees and international sports organisations... that it was vital to establish an independent international anti-doping agency... To work properly, the agency would need the cooperation of amateur and professional sports, international and national sports organisations, Olympic, Commonwealth and world championship competitions and everything in between. How could this work in practice? ...there have been calls for independent sports drug tribunals to apply the new consistent international policies (if and when they arrive). That would take decisions on penalties out of the hands of the sports organisations and... presumably... would [also] remove the pressure and conflict from the sports organisations who must often be torn between what is for the good of their sport and what is in the best interests of their athletes... [A] leading academic in... sports law, suggests... the Court of Arbitration for Sport could be such a tribunal. It is independent, competent and there is widespread confidence in its integrity. It could provide unified and final decisions for all sports and athletes: not just those in the IOC. However, the location of the court’s registries and other practicalities means that it would probably only be economic to use it at the international level or for final appeals from national bodies... It is a tough call. It means that sports organisations lose some control over their sport.

...[medical] scientists have scored a major breakthrough in the fight against drug abuse in sport by coming up with a new method of testing for the presence of... hGH[via a pin-prick. By the way, the relevant authorities have begun ‘testing racing pigeon poo for performance-enhancing drugs’]...

It has been called the Magic Potion in some circles... [The NZ Herald] looks at... *the legal alternative to performance-enhancing drugs...* [A]n article in *Sports Illustrated*... estimates that at least a quarter of professional baseballers, basketballers and ice hockey players[in the US] use it, while the ratio climbs to around half for[gridiron] football... at least half the All Blacks are[also] into it. The same goes for the Auckland Warriors. Athletes in the power disciplines lap it up and for any aspiring sports[person] eyeing the dollars of the professional era, it could be the difference between signing on the dotted line or signing on for the dole. It is called creatine... [and] as far as the medical experts can tell, there is not a heck of a lot wrong with it. And it is not new either... Elite sports people have been using the product openly since the early ’90s, with [the British 100m champion]’s efforts at the 1992 Olympics attributed, in part at least, to creatine use. Since then it has spread through the ranks of sportspeople... In many cases it significantly improves performance. It serves up a tasty trifecta for athletes, making them bigger, faster and stronger. They are also able to recover better and to exert themselves in bursts of energy more efficiently... Creatine is a nutrient made in our bodies from a combination of three amino acids and, essentially, it provides our muscle cells with the energy they need for quick release of energy or exertion... What scientists and doctors have found – as far back as 1981 when its benefits were cited in an article in the *New England Journal of Medicine* – is that the body’s natural creatine levels can be supplemented to maximise benefits... But there’s a catch. Creatine supplements don’t work for everyone... “It has a 60[%] success rate so for 40[%] of people it does nothing,”... If your natural creatine levels are already high, it appears that taking it will have little or no effect. But if your natural levels are low, the results are dramatic... [Now] creatine... is... going mass market... According to the *Nutrition Business Journal*, US sales of creatine products were \$US50 million in 1996. Last year that figure rose to \$100m and the magazine expects sales to top \$200m this year... [But] scientific data is in short supply, although all evidence thus far tends to indicate the product is safe... [However, the NZSDA] executive director... would like creatine banned... The agency warns athletes under 18 years against using creatine... “...I wouldn’t recommend it among young players simply because their bodies haven’t finished growing,”... said... [a sports dietitian. Side effects among adult athletes] have included cramping, dehydration, diarrhoea and dizziness, although often these are a result of incorrect dosages and experts say can be diffused by drinking large quantities of water... Creatine is taken usually in powder form, with recommended dosages involving a loading phase of between four and six teaspoons a day – usually for a week – and then maintenance of about a quarter of that... “...It’s just one of the ingredients in the supplements recipe... along with all the other stuff like proteins, carbo fuels and vitamins...” A recipe that, it seems, can take you to the big time... [Editor’s note: Body-builders,] when... training for competitions[, eat]... six or seven meals of chicken, rice, oatmeal, fruit or potatoes a day...

[A NZ r]unning legend... says... one of the saddest aspects of the drugs in sport issue was the attitude of some Americans. “I understand that when some kids were asked that if they could take drugs which would guarantee them an Olympic gold medal – but as a result they would be dead within five years – they said they would willingly take that risk. That’s scary.” ...The triple Olympic gold medallist returns to his home in Dallas... tomorrow after a week in Auckland in which [it] was guest of honour at the... Institute of Sport dinner and fundraising auction[, where t]en young sports[people]... were awarded scholarships... [The legend] twice broke the mile record (in 1962 and 1964) during the 21-year-period it was lowered from [a Brit]’s 3m 59.42s (the first sub-four minute record) to [another NZer]’s first sub 3m 50s... mark... [The legend] does not expect to see a mile run in under 3m 40s in his lifetime. Talk of 3m 30s... is ridiculous. “The body... [p]articularly, the lungs... are not designed to go that fast,”...

[The current guys’] world champion... and... indoor world record holder at 60m... smashed the 100m track record yesterday, clocking a sizzling 9.79s. In a brilliant display, the American took 0.05s off the previous record... set by [a] Canadian... in the Atlanta Olympics final... Inevitably, the new time echoed back to the 9.79s set by [the ex-record holder’s compatriot] at the... Seoul Olympics before the athletics world came crashing round the [compatriot]’s ears. That time was erased from the record books...

Since one of the darkest days in Olympic history, the official world [guys'] 100m record has been... [gradually whittled down to the same mark]. But the 9.79 seconds clocked by a drug-fuelled [Canadian]... in the 1988 Seoul Olympics final, subsequently struck from the record books, had not been bettered... before yesterday when [an American] electrified a modest Grand Prix athletics final with a time of 9.78s... The 27-year-old American is... now unquestionably the fastest [hu]man in history. In 1994, on a grass track, [the American] clocked 9.96s to win the Junior Colleges title, easily a world record for a junior. [The American raced against a compatriot when the compatriot] clocked a world record of 9.85s in Lausanne in 1994... In 1996 [the American] watched from the stands as [a]Canadian... set his record of 9.84s at the Atlanta Olympics[, but]... was in the field when [yet another American's 9.79s was] set... in Athens... [The new world record holder]'s training partner[, the]... Olympic double sprint champion... [who] clocked 10.88s in the... [gals'] 100m race to take the gals'] overall Grand Prix title for the second time, was delighted at her friend's success. [However, the disgraced Canada]n's malign legacy to both the Olympic movement and his sport still lingers. At the end of a week when it was confirmed that a second sample taken from [the]new world steeplechase record holder... was positive, [the gals' sprint champion] was asked about the suspicion inevitably attached to world records. "I think it's really unfortunate... You have such an incredible performance today and you have someone who will immediately suspect something. I think we are all here today to celebrate something outstanding..." [The 27-year-old]'s triumph spoiled the 28th birthday celebrations of Morocco[o's] 1500m world recordholder... as the triple world champion saw the \$US100,000... snatched from his grasp as overall Grand Prix champion. Half an hour after completing his lap of celebration, [the Moroccan] watched open-mouthed as [the American sprinter] soared in to finish equal on points... The American took the cash jackpot on the tiebreak for breaking a world record this season.

...[an Aucklander] is back on her throne after becoming the first N[Z]er to win a World Cup... [The NZer] may no longer be a world champion, but a World Cup discus crown is more than good enough for the Queen... of N[Z] athletics, who] overcame atrocious conditions and a world-class field... in Madrid to earn a pay-cheque of \$64,000 and truly reignite her international career. Competing shortly after a hailstorm saw temperatures plummet, [the NZer] threw a best of 62.47m to push [the]European champion... of Greece, into second and [the]reigning world champion... of Russia, to third. [The NZer] became only the third Oceania athlete to win a gold medal in World Cup history, following A[USn gal]s... who won the javelin [a few years ago], and... the long jump title at the inaugural World Cup in 1977. It marked [the NZ]er's most significant achievement since... w[inning] the world championship in 1997... N[Z]'s world junior champion... 17, coped remarkably well in top company when [it] bettered her own national record to finish sixth in the shot put, beating her previous best of 17.73m on all three of her valid throws... [T]he other N[Z]ers came]... fifth in the [gals'] long jump... ninth in the [guys'] 200m... and... seventh... in... [the guys'] hammer throw...

Four Avondale youngsters have a shot at some of the best athletes in the Pacific region in Sydney next month... [The members of the] Avondale Athletic Club are off to the Pacific school games. All four will compete for N[Z] in the shotput and discus and [one] will also run in the 100m. "They are going there for experience," says [their]coach... More than 250 N[Z] competitors are going to the school games, which draw athletes from 49 countries for swimming, diving, gymnastics, athletics and special olympic events. This year is the first time any of the Avondale club's athletes have qualified... They qualified... after impressive results at the secondary school nationals and the Colgate Games.

...The 12th Masters Games swing into action in Wanganui this weekend with 2099 competitors engaged today and a further 2119 tomorrow. The event runs over nine days and features 57 sports – the largest multi-sports competition held in N[Z]. There are a record 7800 competitors from nine countries, including 174 from overseas. The previous Masters Games record was 7640 in Dunedin... last year. The oldest competitor is Wanganui[s] 96-year-old indoor bowler... who drove his car to the Games village yesterday to officially check in... Notable competitors include [the]twice world rowing double sculls champion[s]... who will row together for the first time since the Atlanta Olympics; [a]64-year-old former Olympic yacht[ie and a]... former All Black captain, coach and manager... who is chair[per]son of the Hillary Commission[, both]... playing golf...

Rivals in struggle... [A Cantabrian] held a 38s lead over [its]arch-rival... after the latest stage of the Mizone Endurazone multisport race yesterday. While the duo crossed the finish line together at Hokitika Beach, for the first time in the 2998km, 28-day race from Bluff to Cape Reinga, a veteran outclassed the younger athletes and led into the transition zone. [The veteran] was in his element on the road cycle and clearly demonstrated why [it] has won the World Masters Triathlon five times. With one of the biggest days of the race under their belt – the Franz Josef Glacier – competitors are now focused on tomorrow's "double marathon" Taramakau run. [The arch-rival] is the favourite for this stage – an experienced mountaineer and serial winner of the Coast to Coast and Kepler Challenge – but [it] is just focusing on one day at a time... [The Cantabrian] was nervous about the Taramakau leg. "I've been trying to create a buffer over the last five days leading into that stage..." [A Canadian] again rode into the transition ahead of... the [gals'] race leader, but [the race leader] came back on the kayak leg and developed a healthy margin over her Canadian rival.

...*Endurance racers battle on* [The arch-rival and the Cantabrian] dominated the storm-swept 18th stage of the multisport Bluff to Cape Reinga race yesterday. [The arch-rival] won the 105km stage from Whakapapa to Taupo after an overnight storm and heavy rain forced a change of course. Floods on the Tongariro River ruled out the river kayak and competitors instead had a 25km mountain bike ride, a 57km road cycle race, a 21km kayak on Lake Taupo and then a final 2km road run. [The arch-rival] won in 4h 19m 7s... That reduced [the Cantabrian]'s overall lead to 21m 42s.

...While most of us are happy watching sport on the box, there is another group of N[Z]ers who love nothing more than pushing their bodies to the limit. Whether it be gruelling multisport events or daring adventure races, it seems we just can't get enough of them. The multisport event from Bluff to Cape Reinga attracted more than 70 competitors who are more than happy to spend a month running, biking and kayaking the length of the country. For those of us who thought the 3km school cross-country was a mission, just the thought of 30 days of exercise is enough to bring on the stitch. But N[Z]'s multisport legend... who seems to live for endurance events, says 2998km of running, biking and kayaking is simply "fun." A seven-time Coast-to-Coast champion, [the Cantabrian] is leading the Mizone-sponsored Endurazone, which... takes in some of N[Z]'s best scenery... "It's the journey that excites me... It's such a satisfying goal." The Coast-to-Coast was the first multisport event of its kind in the world and after 20 years is still the biggest and one of the best. The South Island event starts at Kumara Beach on the Tasman Sea and ends at Sumner Beach on the Pacific Ocean. Competitors cycle 143km and complete a 26km mountain run to cross the Southern Alps and then kayak 67km of the Waimakariri River. The top competitors take 10h 45m to cover the 236km, and the slowest time recorded was 24h 30m. More than 1000 people have already entered for the 20th anniversary race next year. Another event not for the faint-hearted is the Southern Traverse, now in its 11th year. The adventure race, held around Queenstown, is a non-stop, five-day gut-buster, which includes mountain trekking, biking, paddling and abseiling. The main difference between adventure and multisport events is that adventure races tend to be non-stop, forcing competitors to charge on through the night. Intensely challenging, the races are as much a test of will, teamwork and mental discipline as they are a measure of physical strength. The Southern Traverse is now part of an international circuit of adventure races which have been set up to support and provide a qualifying platform for the world championship adventure race. The first world championship event was in Switzerland this year and combined mountain biking, trekking and rafting with glacier walking and abseiling. The concept of adventure racing was developed in N[Z], where]... there are now several adventure races a year, ranging from the Southern Traverse to 20- to 30-hour weekend expeditions.

...Four South Islanders won their second successive Southern Traverse endurance race yesterday. The Propeller-heads team[, which combined people from]... Nelson... Motueka, and Canterbury [– including the seven-time Coast-to-Coast champion –]crossed the finish-line at Lake Tekapo yesterday morning, having completed the 365km trek across Canterbury's icy hinterland in 96 hours 33 minutes. When the Propeller-heads

completed the final 34km kayak across Lake Tekapo... their nearest rival team, Nokia, of Finland, were still at least four hours behind. The remaining 38 teams were left struggling in their wake strung out over 130km. The Propeller-heads collected \$US40,000... for winning.

...BUOYED by his remarkable victory in the Primal Quest in Colorado, [Canterbury's] multisport legend... may base himself in the U[S] next year. While multisport and adventure racing has its roots in N[Z], the sport has begun to take off in the States and [the Kiwi] is keen to take full advantage. [It] led the SoBe/Smartwool team to victory last week against the best lineup of adventure racers for the richest prize offered – \$500,000. They crammed just 3 1/2 hours of sleep into 72 hours of racing, crossing the line in Telluride... nine hours ahead of [US] team Montrail with the A[US]n-Kiwi combination of pre-race favourites GoLite 30 minutes back in third... The big prize and the altitude – the average was as high as Mt Cook – made this the toughest yet for the remarkable Kiwi competitor... [The Kiwi, who himself was] still suffering from a lung infection, said... the other crack Kiwi combination of Team Seagate lost their chance when [two of his *Propeller-heads* team-mates and the person who led the gals' Mizone Endurazone] all suffered from a virus. "With typical Kiwi drive they stuck at it despite being really ill and to come... fifth was amazing." It won't be a matter of resting for [the winner, who] is contemplating another race before returning to Christchurch in [two weeks. It] will then prepare for the Raid of the North, teaming up with [his Endurazone arch-rival and an AUS]n... for the race in the Yukon next month... [The Cantabrian] intends defending the Mild Seven title in China in November with [the AUSn, the arch-rival and one of his SoBe/Smartwool team-mates –] although before that [it] might be tempted to race October's Eco Challenge in Fiji. "...you have to make your own raft – which really appeals to the engineer and inventor in me." [The Cantabrian] has only one regret with arguably the most impressive win in a career littered with success – that [it] could not share it with a Kiwi team. "I missed racing with my Kiwi mates. When you are pushed to the limit it's nice to have familiar faces around who understand you,"...

COME IN [you Cantabrian], your time is up. That is, your time in the wilderness, much as you love it out there. This magnificent [guy] of the mountains, terror of the terrain, warrior of the waterways must finally be acknowledged for what [it is – NZ]'s most accomplished sports person... Period. It's fitting really. Fitting that this powerfully squat, slightly balding, incredibly intense 38-year-old from Christchurch earn the respect [it] deserves. For a [guy] used to battling the waters wild, it's time for him to revel in a place we know as the mainstream... [First it] charged home to his seventh Coast to Coast Longest Day title, and [his] fifth on the trot. To do so [it] beat a champion of champions lineup, including [his arch-rival, who is the] race recordholder... The[y]... were at it again, going head-to-head in the month-long length of N[Z] race... before... they... teamed to claim the Outdoor quest in China... [The Cantabrian also won] events such as the Gold Rush in Central Otago and the Motu Challenge in the Bay of Plenty... And there's more. [The Cantabrian's a guy] who lives and breathes his sport, but speaks his mind. When [a promoter] brought his big-money Eco Challenge to this country and, with N[Z] government money, placed it rudely in the window occupied by our own Southern Traverse, [the Cantabrian] was ropable. Bugger it, [the Cantabrian said, the 38-year-old] was taking his ball of talent and going [on the Southern Traverse]. It was a similar thing with the world championship adventure race in Switzerland. [The Cantabrian] didn't like what they were doing with it, so... said "stuff it" I'll find somewhere else to race. [The Cantabrian]'s a character, too, and his tastefully naked romps with [the] race director... before the Coast to Coast are now becoming standard fare. But, as revealed just recently, [the Cantabrian]'s also compassionate. [The Cantabrian knows when it] crosses that line first, there's equally deserving people following him home. "Now that I've beaten him it's kinda sad," [the Cantabrian said when it] finally reached Cape Reinga to secure victory over... [his arch-rival in the Endurazone. His] accomplishments... of the [p]ast 12 months... as superb as they have been, are nothing that should surprise us. Heck, this guy has been setting a standard in multisport adventure racing and endurance events for years. It's just that for so much of that time, the great Kiwi sporting community has tended to tick that box esoteric, shrug and move on to the athletics, golf, tennis, cricket and rugby they're all so familiar with for their idea of achievement... [The Cantabrian is] a... champion sports[per]son and a champion bloke. A [guy] who deserves to be honoured, for all the esoteric nature of his pursuit, as the best there has been...

The most successful Olympian was [the] Ukrainian gymnast... who won 18 medals between 1956 and 1964. [The Ukrainian] shares the record for the most gold medals – nine – with [a Finnish running legend, an]... American track star [(r:p1583, ln53) and] an... American swimmer...

Golden Kiwis vividly recall glory days... For 20 years after winning the 1500m... in Montreal, [a NZer] did not see the special piece of gold [it] won in that epic final. On his return from the 1976 Olympics, [the first sub-3m 50s miler] consigned his medal to a bank vault for safekeeping. Only recently has [the runner] kept it at his South Auckland home. Occasionally, in the hope of inspiring budding Olympians, [the runner] brings it out "to show young kids." On Tuesday, [the runner] will quietly reflect on the day... when [it] stopped the watches at 3m 39.17s to win his first and only Olympic or Commonwealth Games gold medal. A day earlier... 16 N[Z] hockey players will be just as low-key as they reflect on the day they struck gold in what remains one of the biggest upsets in Olympic history. The hockey players have already celebrated, however, marking... their 1-0 win over A[US] with a nostalgic reunion in Wellington on Thursday. Unlike [the runner], who carried the weight of an expectant nation as [it] took on and beat many of the best – an African boycott in protest at the All Blacks' tour of South Africa that year robbed the field of what some reckoned were his only serious challengers – the... hockey team were the real longshots... [(having had] a rocky ride to the final – the... [NZers] won only one of four pool matches... in a tournament which brought together the great hockey-playing countries such as India, Pakistan, Germany and Holland[, the team beaten 2-1 by NZ in the semifinal)]... Yet, within a 24-hour period, N[Z]ers were twice stopped in their tracks. First, by a scratchy radio broadcast of the hockey final as their team clung to the precious one-goal lead... given [to] them with 28 minutes to play. Second, a day on, came the television drama as [the runner] hung on to win a race which... years on [it] recalls virtually step-by-step[, including]... his... victory lap...

It takes a while to find [the NZ]er's name in the columns of athletes that make up the "Golden Memorial" outside Montreal's Olympic Stadium. But, finally, there it is – sandwiched between Cuba's... 400m, 800m[double-gold winner] and the great... Fin[n, another double-gold winner] (5000m, 10,000m) – "1500m... NZL." The memorial, a circle of flags fluttering wanly above an unspectacular collection of brass plaques, seems a miserly nod towards the finest achievements of the XXI Olympiad – an after-thought put up a full 10 years after the 1976 Games... I had expected something more: a hall of fame perhaps, with photos and sporting memorabilia... Certainly a pin-up of [the first perfect gymnast. But the 1500m winner]... himself is not surprised at this half-hearted acknowledgment. "I would say that it's been a nightmare for the Quebec Government and I think they wish they had never done it [hosted the Games], because they're still paying for it today." That is true. The futuristic stadium, once proudly hailed as the Big O, has become the Big Owe, damned privately and publicly for its ongoing legacy of debt (the Games had been slated to cost \$310 million when Canada won the hosting rights in 1970, but wound up as a \$1.5 billion albatross) and as a sporting venue. Home these days to Montreal's hapless Expos baseball team, the Olympic Stadium was recently described as "arguably the coldest, least hospitable venue in North American professional sports." ...Futurist and high-tech, the "Stade Olympique" was a marvel of early 70s architecture and engineering. But industrial disputes and lack of money meant it did not meet its potential. Its much-vaunted retractable... roof, for example, never really worked...

The saga of Montreal's Olympic Stadium continues with [workers] preparing to replace the Kevlar roof, installed in 1987 and expected to last 25 years, with another made of Teflon. The... [s]tadium was built for the 1976 Summer Games with an original budget of \$154 million, but when the building is eventually paid off in 2006 it will have cost... taxpayers more than \$3.1 billion. No wonder it has always been dubbed the "Big Owe."

...The sports stadium is the secular cathedral of our time, according to one of their foremost designers... [The designer], Brisbane-born and educated, London-based for 20 years, is a visionary for stadium architecture which today is part public sculpture, part civic amenity and largely a magnet for advertisers to maximise their potential audience through the massive television audience. Speaking from Sydney where [the designer] has been climbing over the site of the new... \$A690 million... Stadium Australia, the main venue for the Sydney 2000 Olympic Games... and... the

biggest [stadium] in games history... which his company... design[ed] (along with... the... WestpacTrust Stadium in... [Wellington,] the new Wembley Stadium, the stadium which will replace the now demolished Cardiff Arms Park and Britain's Millennium Stadium in London), [it] sees these structures performing a social function as much as a sporting one. They are, [the designer] says, the only places where as a society we come together with 30,000 or 40,000 complete strangers and in those couple of hours bond as a community. "There is no other thing we do where you get that number of people together on any regular basis... Now they are very much part of the sports, leisure and entertainment industry and the money people would spend at a sports event is the same they would have spent if they had gone to Disneyland or a multiplex cinema. When sport was amateur people went or didn't, purely based on seeing the team play and perhaps winning. But a sporting business can't build a multimillion-dollar enterprise on whether a team might win or not, so you have to build a leisure and entertainment business to attract people." As befits a [person] who has written one of the few texts on the subject[, the designer]... traces the history of [sports stadium] development through four distinct generations. THE first simply accommodated large numbers of spectators with little concern paid to comfort or ancillary facilities. Televised coverage in the 50s effectively reset consumer expectation (close-ups and replays, informed commentary in the comfort of home) so second-generation stadiums were obliged to accommodate greater emphasis on customer comfort through improved food and beverage service, big screen replays and better lines of sight. And then came Disney. "That company built a critical mass of facilities... so people would want to come as an entertainment in itself. What they proved was you could entertain an entire family group with all getting slightly different value..." Today we are witnessing the birth of the fourth generation... – and it again will be driven by television and technology. And commercial imperatives... [The designer] cites how it is now possible to access play from Lord's cricket ground in London through the Internet for little outlay. Yes, the digital image isn't that good at the moment, but it's only a matter of time before your home computer will receive pictures as sharp as your television, with up-to-date statistics, various camera angle options, commentaries in different languages... THE big issue then is who owns the image being beamed out, and what value can be put on it. By way of example [the designer] cites a badminton match in the new Wellington stadium which might draw a live audience of only 5000. But broadcast that signal to Beijing or Djakarta where 50 million people may want to watch the games... "The Whitbread round-the-world yacht race, which is a total non-spectator sport, actually had more hits on its Internet site... 474 million... than the Atlanta Olympics..." But if it's going to be so comfortable and informative at home, why would anyone go to the real thing? [The designer] speaks of fourth-generation stadiums having screens on the backs of seats providing action replays, match statistics and headphones to hear commentaries, of Internet facility to access information on players or historical data, of small cards to enable punters to book next weekend's tickets, receive messages... or order from commercial services. It all sounds a bit like flying executive class. It might also be a day free from advertising at the match as virtual advertising – computer-generated product placement which doesn't exist in reality at the ground[grounds prepared for important games often contain so many painted logos that is it difficult for television viewers to follow the ball!]) – starts to become more common. It's a brave new world of entertainment, sport and commerce – and it's arriving already. Which raises a question for Auckland, a city with sports stadiums but shamefully lacking a decent concert venue. Can a city be oversubscribed with stadiums? There's no logic to the numbers, [the designer] says. His company built a 40,000-seat stadium in a city in Malaysia with a population of just under 200,000 and they fill it regularly. And some cities are sports mad. Melbourne will probably end up with more sports stadiums than any other city... The stadiums of the future can do no harm looking at the past. Will these electronically future-proofed sports cathedrals last as long as the Coliseum? "The Coliseum was probably the best and biggest example of a great stadium. Its useful life stretched 500 years, it was... well designed, with a range of seating. They understood the concept of sight lines, had a changing of angle of tier to the seating and even had a closing roof. And you were close to the action. It had a sophistication we are trying to get back to several thousand years later." ...Meanwhile... Wellington's new stadium appears to have priced itself out of the market for league's Tri-Series, with the N[ZRL] kicking the stadium trust's business plan for a Great Britain-Kiwi test to touch. If the October 29 game was played there the N[ZRL] would lose money... and that was not acceptable... Christchurch, Palmerston North and Rotorua remain possible venues.

...A[US] has a four-year plan to use the [2000 Olympic G]ames to fix attention on [the country] as a prime holiday destination, backed by forecasts that the Olympics will attract an additional 1.6 million visitors by 2004... And it is predicted that these visitors will bring with them an extra \$A6 billion... in tourism dollars... With the help of \$A13 million provided in last year's federal Budget for games-related promotional work, A[US] is also bringing thousands of journalists to the country and has launched a "Meet in 2000" campaign to promote the nation as an international convention centre... While the Olympics will be used as a hook for pre-games promotion, the main thrust of A[US]'s international tourism drive will remain the light-hearted \$A150 million three-year campaign that began appearing in N[Z] this year... The campaign, which will reach an estimated 300 million people worldwide, shows A[US]ns as laid-back, golf-playing, koala-hugging, beach-loving and welcoming suburbanites... The promotion started in... [NZ when the] All Blacks... were used... in a campaign... through 140 McDonald's restaurants around N[Z]...

JOYOUS Wallabies lingered... for 30 minutes... in the rain, savouring a... 28-7... victory they never anticipated at Olympic Stadium last night. Not even the optimists in the Wallaby squad were expecting victory but the 21-point margin [– 'a record against an All Black team' –] was like a fantasy for the gritty... under-strength... side that returned from two losses in astonishing style... [(although the Wallabies' score included) a record seven penalties... kicked [by their fullback; both teams scored one try]]... A world record 107,042 crowd... – plus millions on TV worldwide – watched the Wallabies retain the Bledisloe Cup... [I]t was... one of rugby's genuine upset results... [and virtually] a reversal of the All Blacks 43-15 victory over the Wallabies in their... clash at Eden Park last month... [The Wallabies were missing their] star first-five... and [their] skipper... The... All Blacks'... [skipper said his team] were proud to have won the Tri-nations but admitted: "We've got a lot of building to do... for the world cup... in the UK..." ...Last night's game pumped \$18m into the A[US]n economy... The Aussies... offered to pay the NZRFU \$500,000 to play an unplanned third Cup test next year – but... [NZ declined. In related news, the Wallabies' most prolific try-scorer] has accused his former teammates of being too greedy in the countdown to the Rugby World Cup. In his newspaper column... [the ex-teammate] said the Wallabies were too concerned with the bonuses they'll win if they bring... the world cup... home... The Wallabies' players association says the \$600,000 being offered... to... the... 30-[member] world cup squad... by the A[RU] is not enough... The All Blacks will receive \$30,000 each if they win the... world cup final in Cardiff.

...N[Z] lost their mantle as the world's best under-19 rugby team at Stadium A[US] last night. The curtain-raiser to the Bledisloe Cup[and final Tri-nations series] test ended in dramatic style when [NZ's] halfback... was held up over the tryline from a last-minute scrum move. [The halfback had] dived over the line but was rolled onto his back by... [AUS's No 8. AUS] weren't in attendance... [at] the under-19 World Cup in Wales earlier this year... so last night's match was deemed an unofficial final. The [NZers] appeared on course to keep their unbeaten run when they hit the front 16-13 with 25 minutes remaining... But on one of the few times the A[US]n forwards were able to apply pressure, [their] hooker and captain... drove over for the final scoring play of the game with 12 minutes remaining... [Incidentally, the NZ gals'] hockey coach... is not impressed that his A[US]n counterpart... has selected the strongest possible squad for next week's Oceania Cup test... With the exception of the Champions Trophy... [the AUSn coach] has this year been using tournaments to develop players, but has changed tact for the... test against N[Z].

...a NZ] hockey star... can tell the spinal surgeons tomorrow night that they were wrong. Five years ago [the surgeons said the NZer] would probably never play the game again... Tomorrow night, [the] 27-year-old... will earn her centenary cap... against world... champions A[US]. Even though back surgery stole a year from her career, the girl who grew up on a farm in Ranfurly, Central Otago, has become one of the world's favourite hockey players... [V]oted sports personality at last year's World Cup, [the NZer] will play her milestone match in her old home city of Dunedin. In another five years, [her] milestone will be memorable to others only if N[Z] win – it's been 20 years since the Kiwis beat... [AUS. The game is part of] a bizarre qualification process for... [the Sydney Olympics. AUS] are already there – as Olympic hosts and undisputed world No 1.

But still N[Z] have to beat them in the three test home-and-away series for the Oceania spot, or face a second-life tournament in England next March. [Unfortunately, there] won't be any favours for mates... The A[US]ns arrived in Dunedin yesterday with their star line-up[. after] a difficult European tour... "They aren't going to come here and throw it..." [The 27-year-old, NZ]'s top striker, has had a roller-coaster career since... [being] chosen to play her first test as a 17-year-old schoolgirl in 1990... In 1994... lower back pain... got to the stage where [the striker] had to have a discectomy – where two-thirds of a disc in her lumbar spine were removed... [The striker] still gets niggles in her back, but... does an hour of stretches every morning... [The striker] joins her... captain... (109 caps)... [and two other team-mates] (136) and... (138) [caps respectively]... in the small, exclusive club. N[Z] will fly to Sydney on Thursday to get ready for the last two tests in the series, played at the Olympic hockey venue at Homebush... Holland (European Nations Cup winners), Argentina (winners of a Pan-American tournament) and Korea (Asian Games winners) have already qualified... South Africa should qualify through Africa with unfancied Zimbabwe the only team standing between them and an Olympic berth. Should N[Z] have to go to the qualifying tournament, they will be up against teams such as Britain... India... China... and... the U[S]. In other sports news, a Kenyan has broken an English runner's... 18-year-old world best for the 1000 metres – the longest-standing world record in [guys'] track athletics – at a Grand Prix meeting in... Italy. [The Kenyan, who was the] silver medallist over 1500 metres at [the] last... world championships, ran two minutes 11.96 seconds to shave 0.22 seconds off [the old] record in the little-run distance.

...the world's leading athletes have signed a petition to have next week's international meeting in Moscow moved because they fear for their safety in the wake of the country's economic meltdown. [The guys' world] 100 metres champ... [is] among those who also feel that, with [\$]millions... in prize money at stake, it "would be like waving it in the peoples' faces" at a time of crisis... [By the way, t]he Sydney Olympics will cost \$A500 m... more than expected and all NSW government departments will be ordered to chop spending to meet the shortfall. Most of the hidden costs are for extra transport, police, health and other services, details of which were revealed in a report to the cabinet budget sub-committee just before Christmas. The new budget is \$4.9 b... but the Sydney Organising Committee [(SOCOG)] expects to make a small profit on the Games... 50[%] of tickets... would be sold to the A[US]n public in the first six-week allocation... The most expensive tickets are the top-priced Opening and Closing Ceremonies seats at \$A1362... with the cheapest just \$A19 for preliminaries to sports like softball... 70[%] of the Olympic tickets are under \$A60.

...Sydney Olympics organisers expect to raise more than \$A200 million... from ticket sales at the opening and closing ceremonies... More than 80[%] of tickets for the two ceremonies at the 110,000-capacity Olympic stadium will cost \$A1382. The ceremonies are expected to be sellouts and will contribute more than one-third of budgeted total ticket sales of \$A600 million, a record for an Olympics. [A senior IOC] member... who heads the IOC Co-ordination Commission overseeing Sydney's preparations, has described the budget forecasts as "ambitious but feasible." There are almost 10,000 seats in the cheapest category costing \$A105, and less than 9000 in the B and C categories, priced at \$A985 and \$A505... SOCOG has already reported better-than-expected sales overseas, with \$A250 million in orders, although that includes many of the tickets for the ceremonies...

THE highest paid employee of the Sydney Olympics organising committee reportedly received more than \$1.88 million in a Swiss bank account after forged invoices were used in dealings involving an international Olympics sponsor. Documents published in Spain revealed [that the employee], believed to be paid \$536,000 a year for organising the televising of the 2000 Games, received the money in 1991 and 1992 when... doing a similar job for the Barcelona Olympics. [The IOC] president... was surprised by the revelation and would order an investigation if need be.

...[the IOC president] has sent letters to all cities which bid for Olympic Games from 1996 onwards, asking for any evidence of corruption in the bidding process... The national Olympic committees have until February 15 to respond. At a crisis session at its Swiss headquarters last weekend, the IOC's executive board agreed to suspend six members and decided to reform the bidding process in time for the award of the 2008 Games. One of the six members has since resigned but others have vowed to fight the executive committee's recommendation to have them expelled at a full IOC session in March... The Olympic scandal has prompted soccer governing body Fifa to take action to prevent similar trouble. It issued clearly defined guidelines to the eight countries bidding for soccer's... World Cup – with a limit of \$US100... on gifts, but no restriction on foreign travel. Fifa... has urged... [the eight bidders] to show restraint in their campaigns in the 14 months leading up to the vote... Rocked by the... bribery scandal, IOC bosses [also] agreed last weekend to broaden their probe into corruption in the selection of host cities... [T]he Canadian IOC member heading the investigation, said "an indefinite number" of new targets had [already] been added to the probe. The Japanese Olympic Committee [has even] appointed seven of its executives to investigate the bidding activities of the city of Nagano for the... Winter Games.

...Nagano Games officials have been unable to keep the "sacred" Olympic flame burning as it makes its way around Japan in advance of the Games opening ceremony next month. The embarrassment of the repeated snuffing of the flame is front-page news in Japan and television networks have called in experts of all kinds to explain what might be wrong. The guesses range from high winds, to faulty gas supplies in the torches, to runners holding the thing the wrong way... [■ Athletes] competing at the Nagano Olympics will be fed from high-tech lunchboxes that use a chemical reaction to cook their contents. A pasta dish rests on a sachet of liquid – lime crystals and water – that react when a tag is pulled to allow them to mix. The reaction heats the water, creating steam that mixes with the water content of the pasta to produce – eight minutes later – a piping hot dish of pasta with bolognese, tomato, basil or pepperoni chilli sauces.

...The I[OC] has continued its bizarre and increasingly frequent habit of adding unusual minority sports to its programme, yesterday deciding to take the first steps of "recognising" sumo wrestling, body building, speedboating and motorcycling. The International Sumo Federation claims a membership of 78 countries but it's hard to see much global interest in the ritual-steeped fatboy routines. And if they're looking for headlines, body building could be a sport to provide plenty, but will the IOC be happy?

...[from the IOC] pre-Nagano meeting comes news that rugby has little chance of making a comeback at Athens in 2004... "There is a feeling that it is not international enough yet," inside sources said.

...[the All Blacks won't be at the 2004 Summer Olympics, but their No 11] could slice the ice... at the 2002 Winter Olympics... after being approached to power the N[Z] bobsleigh team. "Designer bob teams" are common overseas with nations using high-profile athletes to provide a V-8 motor for their sleighs and also boost the profile of the sport... [The US has used a] former Chicago Bear... and his Dallas Cowboys counterpart... in the past while the British had called up top track and field athletes... [The No 11] thinks the idea is "cool" and "fun" but... emphasised it was early days. The 24-year-old All Black loves action – [the winger already] has a passion for grunty cars and powerboats – ...[so] careering down the curved bobsleigh track would definitely appeal... Bobsleigh is regarded as one of the biggest adrenalin rushes in sport. The approach to [the winger] followed a brainstorming session involving the convener of Ice Sports N[Z, who]... said it would be the ultimate to have the 118kg... [winger] in the bobsleigh[– because the winger] had the physical attributes to be an ideal brake[person]. The brake[person] provides the initial thrust to power the machine off the start line... There is also an important sponsorship link which could open doors. [The winger] has a personal contract with adidas and... the sporting giant... is also a major player in bobsleigh, sponsoring German, Swiss and Austrian programmes and supplying spiked footwear... N[Z] qualified two pairs and a four-[member] bob for the 1994 Calgary Olympics and[has] a pair for the games in Nagano.

...Bobsleigh has been part of the Olympics since the first winter event in 1924 and was developed in search of the ultimate thrill – often referred to as Formula 1 on ice... [Indeed, off]-season sees crews practising with a sleigh running on wheels... Runs are timed to the 1/100th second. Performance during the first 50 metres generally determines the outcome... All crew members except the driver crouch down, reducing air resistance... [The Nagano track,] the first artificial ice track ever built in Asia... stretches for 1,700 metres, has 15 curves and a difference in

elevation of 113 metres. It is the only course in the world to have uphill sections... [Bobsleigh riders will share the track with luge riders.] Lugers adopt a face up prone position, steering with their calves by pressing against the outside of the front runners... As the luge picks up speed, the competitors lie back raising their heads only enough to see ahead... Maximum speed reaches around 120 km/h. Even 1/1000th of a second counts in the luge competition. Every attempt is made to reduce air resistance through streamlined clothing, equipment and the perfect posture... [Ironically, the] Japanese like their winter sport slow and steady. Curling events at the Games are sold out, while thousands of tickets still remain for the "Dream Teams" [guys' ice] hockey tournament that features, for the first time, multimillionaire stars from the American National Hockey League. Nearly 1.1 million of 1.3 million tickets have been sold, but the expected crush for hockey[, which isn't]... played in Japan... hasn't happened.

...Security concerns have won out over divine guidance for IOC officials. A chapel attached to a hotel where they'll operate from Saturday until the closing ceremony... has been turned into a security command post to protect dignitaries. Out go religious articles, in come communications equipment. Out go priests, in come uniformed police... [While on the topic of the Winter Olympics, NZ's] most famous ski champion becomes[a] Constable... from Thursday, swapping the slopes for domestic fights and car chases. The 27-year-old, who put N[Z] on the international skiing map when [it] won a silver at the 1992 Winter Olympics[– becoming 'the first person from the Southern Hemisphere to win a medal in the Winter Olympics' –] graduates from Porirua's Police College this week. [It] began thinking about a police career... [after retiring] from international skiing in 1995.

...The scandal over Japan's successful bid for the... winter Olympics [has] flared up again with reports that there was hard evidence Nagano organisers had spent up to \$12 million on lavish entertainment for Olympic officials as part of its bidding campaign. The Mainichi newspaper story is yet another episode in the widespread and worsening scandal over the Olympic Games bidding process... [● A] British investigative journalist... has written two books in the 1990s on Olympic corruption – *The Lords Of The Rings* and *The New Lords Of The Rings*. The past week's revelations appear to have vindicated his campaign...

WE SHOULD have seen it coming... [T]he sprightly octogenarian whose tough talking traumatised the I[OC] last week, has been threatening for years to shine light into the organisation's darker recesses. In 1991... [the octogenarian] argued IOC members should no longer take relatives along when visiting candidate cities. This was ignored. Ostensibly, [the octogenarian] sought to curb the costs of Olympic bidding. But there was a subtext; [the octogenarian] disliked the way some members exploited bidding cities. [The octogenarian] returned to the theme a year later. Asked if the IOC should fear for its reputation [the octogenarian] responded: "Quite simply, yes." [The octogenarian then] disclosed that "about five" members had accepted gifts which exceeded the limits in the IOC rules and... [it] had "had serious words" with them. This month [the octogenarian] appears to have lost patience with... [the IOC president's] apparent reluctance to clean up the organisation... [The octogenarian]'s attack on IOC "villains" who have "blackmailed" bidding cities has triggered further allegations involving bids from Anchorage, Atlanta, Melbourne, Manchester, Quebec and Sydney. [However, the president claims to be surprised and has] never heard of allegations [that] members of his IOC solicit goodies from cities hoping to stage the Games. All 100-plus of them are, [the president] frequently asserts, "100% clean." ...[the 78-year-old president] has controlled the IOC for 18 years. Perhaps his memory is clouding. Come back with me a dozen years to when the Swedes campaigned for the Winter Olympics. They too got hit by the sleazy demands of IOC members. I know this – and can prove it – because I've been delving in the archives of the bid committee based in Falun in central Sweden. It's a treasure trove for Olympic sceptics. I've heard rumours some IOC members pressure bidding cities to arrange the education of their offspring. One particular [member's] name comes up routinely... Off-record Olympic officials whisper the best interests of... Swaziland's... [IOC member]'s eight children are always high on his list of Olympic priorities. Tucked away in the Falun archive was a copy of a letter, dated February 28, 1986, to [Swaziland's IOC member] written by... the Swedish national Olympic committee. Sweden had lost repeated bids to stage the Games and was desperate to please IOC members – and vulnerable to any shake-down artist... The letter... [reveals] how these squalid Olympic deals are done... "As [we] have some good and friendly contacts in our Ministry for Foreign Affairs as well as in the Immigration Office and in the Ministry of Education, [we will do our] utmost trying to persuade the authorities concerned to accept an application from your son." ...The Falun bid leader during two attempts to secure the Games was... a prominent Swedish business[person] of impeccable integrity[, who says:] "The matter was eventually arranged and [the Swaziland member] was informed... We learnt later that all the bidding cities had been asked the same question." To the best of my knowledge, [the son] did not take up the place. "Perhaps [the son] went to the Sorbonne," joked [the bid leader], revealing his bitterness that Albertville in France defeated Falun for the winter Games of 1992... [The Swaziland IOC member's] lapse bears out one of the many allegations made by [the] dissident senior IOC member... in Lausanne... [However, the octogenarian, who is] as quick of mind as ever, [mainly] railed at his IOC colleagues for soliciting college scholarships from the organisers of the 2002 winter Olympics in Salt Lake City. A confidential document [shows that] around \$770,000 was spent on college places for relatives of African IOC members. Subsequently it's come out[that] visiting IOC officials received \$54,000 worth of secret, free, medical treatment. That was followed by a spate of admissions from cities around the world who've bid for the Games in recent years, that improper demands had been made of them by IOC members. [The octogenarian], who has become increasingly depressed at the unchecked corruption at the IOC, put the blame squarely on his colleagues... rather than on the shoulders of the would-be Olympic hosts, for initiating impropriety... But yesterday [the Swaziland member]'s name was raised again when it was disclosed in Salt Lake City that his son... was given a job at the city hall in 1993 and attended the University of Utah. The scandal has infuriated [the IOC president] who always insists... that any investigation must be confined to the shenanigans in Utah. Back in the Falun archive I found more evidence of unseemly activities by the IOC and of how they have covered them up. The committee flew 37 IOC members and retinues of family and friends to the city at Easter 1985. Their purpose: to inspect the Falun sports facilities. The King and Queen[of Sweden] hosted dinner when they arrived – and next morning two Asian IOC members immediately left for home, declining to view any facilities. There's long been rumours of IOC members soliciting sexual favours from the hostesses who work for every bid. In Falun it became more than a rumour. The IOC caravan moved on to Stockholm where, late at night in the Grand Hotel, an African IOC member approached two of the Falun hostesses for sex. Rejected, [the member] grabbed a third [hostess] in a lift with the demand "Get your clothes off and I'll vote for your city. Don't – and I won't." [The third hostess also] declined but was still in tears the next day. [The bid] leader... reported the incident to a senior IOC member who assured him action would be taken. Another Swedish sports official wrote privately to... [another] senior IOC member, [who was a] member of the IOC's executive board and the [guy who the IOC president] appointed last week to investigate and report on the Salt Lake scandals... [The executive board member,] who negotiated the television deal which has tied NBC, the American network, into an Olympic contract up to and including 2008, worth \$7 billion to the IOC... claimed: "Salt Lake is the only time we ever had that kind of hard evidence available." Like [his president], his memory may also be clouded[– because his] confidential reply to the Swedish official, written in November 1986, can be found in the Falun archive... "It is always with regret I hear some IOC members may have made improper personal requests from candidate cities. I expect if specific examples of this (with names) were reported to the IOC, the IOC could then be in a position to take appropriate steps. Without formal requests, however, it is difficult to do anything. That's a judgmental matter I leave to you." [Clearly, the person] tasked to conduct a searching inquiry in the 1990s, showed scant determination to root out the truth of allegations made in the 1980s. But they didn't go away. Two years later [Sweden's bid leader] published a book about Falun's treatment by the IOC. In it [the bid leader] catalogued the offensive behaviour of some IOC members, including the attack on the hostess. The IOC, expecting the usual panegyric from supplicant cities, had it translated into English. When [the IOC president read it, the president] was incensed. The minutes of the meeting reveal that: "The president requested the advice of the board members as to whether the IOC should compose a letter addressed to the Swedish national Olympic committee, expressing its surprise and

dissatisfaction over the text of [the] book.” Here’s the advice of one of his most senior members: “[The member (who will be investigating Salt Lake City’s bid)] was of the opinion it would be wise to take no action,” says the record. The board concurred. But action was taken. [The IOC president] sent an unequivocal message to the sex monster... [appointing] him to represent the IOC on official missions. Among the countries that has had to roll out the red carpet for him in recent years is Sweden. The problem today is not the IOC members but the IOC itself. It is an anachronism in an age when the ballot box has reappeared from Lithuania to Vladivostok. Flying in the face of this desire for democracy is the IOC. [Its president], who learned his authoritarian ways as sports minister in Franco’s fascist Spain, has sole right to appoint new members. They are not elected from their national sports bodies, and this wealthy, secretive organisation is not remotely accountable to sport – nor the wider world. Recent... appointments have included [a recently deposed Indonesian dictator’s] close crony... worth \$5.7 billion and probably the world’s biggest rainforest logger, and... [the] boss of Korean conglomerate Samsung [– who was] convicted in a Seoul court two years ago of paying bribes to a former state president. We may cherish the Olympic Games – but there’s little need for the IOC. The latest disclosures show it incapable of carrying out its self-appointed mandate to foster idealism. It’s time for a... democratically elected body which makes its accounts and decisions open to public scrutiny and is more attuned to our aspirations for the coming century.

...The I[OC] official who blew the whistle on Olympic corruption said yesterday the 2002 winter Games could be in jeopardy because of the Salt Lake City bribery scandal... [I]t was possible the Games could be moved elsewhere or cancelled if Salt Lake could not raise enough money because of eroding public and corporate support... Salt Lake organisers... [still] need... \$US350 million... to meet their projected \$US1.45 billion budget... [However,] IOC leaders have said Salt Lake City will not be stripped of the Games, and [the octogenarian] acknowledged that it would be difficult to move to another venue only three years out from competition. But... [the octogenarian] noted that there was a precedent. Denver relinquished the... winter Olympics after Colorado residents voted in 1972 against financing the event. The games went to Innsbruck, Austria... Lillehammer, in Norway, site of the 1994 winter Games, would be an alternative this time, or... Nagano, in Japan... [T]he IOC’s senior member... also said two Salt Lake officials who resigned last week apparently tried to cover up cash payments made to IOC members during the bid, although [the octogenarian] again described the Utah city as a victim of a corrupt system.

...[the] bribery scandal... has prompted the I[OC] to offer to throw open its Lausanne headquarters and display all gifts received from bidding cities over the years... In further developments, [the] Salt Lake City Mayor... who took a high-profile role in landing the Olympics, announced that [it won’t] seek re-election for a third term... Another four-year term would have made... [her] the mayor during the 2002 Games. According to Canadian newspaper reports, organisers of an unsuccessful bid by Quebec for the 2002 Olympics plan to sue the IOC for compensation for the \$14.8 million they spent trying to win the Games... Manchester, which has lost two bids for the Olympic Games, has begun a £5 million... compensation claim... [A] deputy mayor of Stockholm... wants her city to claim compensation as well. Stockholm... which lost... the 2004 summer Games... spent about 147 million Swedish crowns (\$[NZ]35.8 million)... A [US insurance] company... is threatening to... protest... [by pulling] its multi-million dollar advertising deal with NBC, the television giant which has the biggest rights contract... with the IOC... The... Sydney Olympics Organising Committee director... said yesterday that [it intends to] resign as a consultant with a hotel owner involved with the 2000 Games. But [the director], who is also one of two A[US]n members of the I[OC], denied that his position as a consultant... constituted a conflict of interest.

...a damning new report on the Salt Lake City bribes scandal... said [AUS’s IOC member and the] Guatemalan IOC member... and their families, made four visits to the U[S], including a trip to the Super Bowl. The trips were paid for by [the] Salt Lake City bid committee president... at a total cost of... \$36,440... The 300-page... ethics panel report... blamed... the bid committee [president and] vice-president... for the scandal...

A city sells its soul for the Games... If you were to go looking for the most wholesome place in the U[S], there is no question that the journey would end in Salt Lake City. Out there, at the foot of the Rocky Mountains, discos don’t serve liquor and politicians proclaim their fitness for office by boasting that neither cigarettes nor coffee have ever touched their lips. Life in God-fearing Utah is purer than the driven snow – the same fluffy, powdered snow that the city’s fathers still hope will make the 2002 Winter Olympics a huge success. That is, of course, if the runaway scandal concerning bribery... and hookers has not already spoiled the celebration of sports[person]ship beyond any hope of redemption. As Olympic sponsors such as Coca-Cola make nervous noises about withdrawing their... more than \$US200 million... [of] financial support for the Games, and the FBI presents evidence of tax evasion and graft to a grand jury, some of the same people who fought for years to bring the Games to Salt Lake are now calling on their city to give them up. “What lessons do our children draw from this? That cheaters prosper? Our city has done wrong. We are disgraced and we must make amends,” said a prominent civic leader. In Salt Lake City... the sense of shock and betrayal would not be much deeper if the Mormon Tabernacle Choir had been caught harmonising in a house of ill repute. And the allegations are indeed disgraceful. In order to land the Games, which officials estimate will pump all of \$US10 billion... into the local economy, Salt Lake City’s organising committee appears to have handed out cash and favours with a recklessness that would put the most daring luge rider to shame. The impression of impropriety starts at the top with... [the IOC president], who jetted into Utah with fellow officials to inspect preparations and left with a pair of engraved Colt pistols and a handsome rifle worth more than \$US2000. When the gifts were revealed last week, [the IOC president] professed his total and absolute innocence. Of course [the president] was aware that no Olympic official was allowed to accept a gift valued at more than \$US150, [the president] said. But it would have been rude to refuse, and anyway the weapons were destined to be placed on display at the I[OC]’s headquarters, not his private gun rack. The embattled [president], who is resisting calls for his resignation with the support of delegates from Ireland and several other sympathetic countries, may well survive the scandal. Other committee members will not. In the five weeks since allegations of vote-buying and graft were aired by... a Swiss delegate and senior member of the IOC executive board, hardly a day has gone by without more dirt spilling into the open. The organisers of the Atlanta Games recalled how IOC officials had dropped aggressive hints about their willingness to accept a little baksheesh. In Sydney, officials told of delegates asking, “What are you going to do for us?” ...And that was just the start. As four separate investigations of the... Salt Lake City... bidding process... swung into action, it emerged that... members of the bid panel had used their official credit cards to hire escort girls for visiting delegates. Escort girls! The righteous locals find it hard to believe that such exotic creatures actually existed in their strait-laced town, one state legislator demanding to be told if the same credit cards had been used to pay for the scarlet [gals’] plane tickets when they were flown in from “out of town... from Chicago or Los Angeles or somewhere like that.” If Salt Lake City can find any comfort amid the wealth of embarrassments, it must surely be that it is not alone. After Barcelona won the 1992 Summer Games, there were widespread whispers that hookers and payoffs had swung the decision. In Holland, where Amsterdam was also accused of enlisting call girls in its unsuccessful quest for the same Games, a cynical columnist suggested that Dutch prostitutes had a lot to learn from their Spanish counterparts. Even as far back as 1964, when the Games were in Tokyo, IOC members were accused of cavorting with geishas. Yet despite all the complaints, the IOC did nothing to clean house until the Salt Lake City affair brought everything out into the light of day. Now, as the cities that lost to Salt Lake mull lawsuits against the IOC, the rot may have spread too far to be cured... [□ Auckland] denied African requests for university scholarships and countered a \$100,000 A[US]n bribe during bidding for the 1990 Commonwealth Games, while... the... veteran Games administrator... who masterminded Christchurch’s 1974 Games, said the only favours they handed out were tiki, which they stressed were symbols of virility, and Kiwi lapel pins... N[Z] visited all the Commonwealth countries in the build-up to the 1970 Games in Edinburgh, where the decision between Melbourne and Christchurch was to be made... “We had a couple of good parties in Edinburgh but that was about it. No one asked us for serious favours. We had a lot of tikis and we sold the story that if you wore them around your neck long enough magic things would happen to [gals and guys] and so forth. These were plastic tikis worth about 10c. So we gave away a lot of them and Kiwi pins. There was one African delegate we gave a few [pins] to in

1966 when we were making an earlier bid for Christchurch to host the 1970 Games. [The African] was in construction and... used to put the kiwis in the concrete basement of every building for good luck.” [Editor’s note: ‘HEITIKI is the most prized of greenstone neck ornaments among Maoris. There are variations in style but the small symbols are basically similar. Often referred to as tiki, it is generally accepted that the heitiki is a fertility symbol. The most popular theory says it is a representation of a human embryo, most probably a still-born child which Maoris consider are specially strong spirits because they have been cheated of life. There is a theory too that the symbol is associated with Tiki, the Maori god of creation. The amount of work and skill involved in making a greenstone symbol with stone and wooden implements and using sand and water as abrasives was extraordinary. Bone and wood heitikis were not unknown, but the greenstone heitiki is by far the most valued, even today when machine-tools are used.’]

...Chinese newspapers gave wide coverage yesterday to the admission that two African nations were promised money by A[US] on the eve of a vote to decide the host city for the 2000 Olympics. It reflected the fact that Beijing is still seething at the... IOC... decision more than five years ago to award the games to Sydney by a slim margin of only two votes. The... A[US]n Olympic Committee president... said at the weekend that the... bid committee offered the two IOC members... [from] Kenya and Uganda... \$A52,500... for use on sporting projects. The *Beijing Daily* focused on Manchester’s threat to seek compensation from the IOC over the failed English bid to host the 2000 Games in light of the bribery claims... Meanwhile... [the] *Times* of London has launched a bitter, front-page attack on [the IOC president], describing him as “monstrously self-aggrandising.”

...The Olympic bribery scandal threatens to overwhelm the most powerful [perso]n in world sport... THE staff of the mayor’s office stood smartly to attention as their visitor descended from the three-car train, chartered exclusively to transport him in comfort to their city... [The president of the IOC], appeared unimpressed, however. Dismissive of the red-carpet reception, [the IOC president] asked to be chauffeured immediately to the Hotel Kokusai 21, where the Nagano Olympic Committee was paying \$5400 a night to put him up in the city’s most prestigious suite. It was May 1991, and Nagano, a city then little known outside Japan, had spent at least \$33 million on its bid for the 1998 Winter Olympics; too much to take chances. During [his brief visit, the president] would be feted with the finest food, offered every comfort and given a \$27,000 Japanese sword... A portrait of a dancing geisha, of similar value, was thrown in for good measure; though the Olympic committee said later this had been “a personal gift” from the artist. [The president] must eventually have been impressed. Nagano won the bid – and a return visit from the president who, during the [Nagano] Winter Olympics, stayed at the Kokusai for 30 days, at a cost to the Nagano Olympic authorities of... \$165,000. It is a style to which... [the] IOC president for the past 19 years, has become not only accustomed but renowned. When [the president] visits Seoul, which hosted the 1988 Summer Games, [it] stays in a cavernous, gilded suite at the Shilla Hotel for \$7500 a night. [The president] has stayed there 17 times since 1985. It is a style, too, which has been adopted by the 114 other members of the IOC, whose membership... is by invitation only... [T]hey do not receive a salary, but receive lavish expenses, often paid for by cities increasingly desperate to win Olympic bids. The Olympic movement has turned into a vast money mill, with cities, sponsors, television companies and ultimately athletes locked into a series of ever-expanding circles of self-interest... To pay for all the extra infrastructure each Olympiad requires, the... successful host city... must attract the large, corporate sponsors. The sponsors, in turn, require publicity – and publicity means television. To gain the global audience that validate the billions paid for the television rights, the broadcasters need to show records being broken. All of which puts tremendous pressure on the professional athletes. They know a record-breaking performance at the Olympics will make their reputations – and their fortunes. Hence the willingness of so many to turn to [performance-enhancing] drugs. The result is a sorry circle of corruption with the IOC at the centre. It is something the world has long suspected, but until recently could not prove... [The IOC president emerged from Spain’s] fascist era with his reputation intact and was named ambassador to the Soviet Union by the post-1975 democratic government before being chosen IOC president in 1980. [The president] has steadfastly ignored calls to introduce greater democracy into the IOC, saying a firm hand at the top was necessary to maintain unity. As [the president] handpicked members of the IOC, [it] invariably prized personal loyalty or aristocratic status – [the president is himself] a Spanish marquis – over management skills or athletic credentials. While [the president steadfastly] claims to avoid personal extravagance, [his] peripatetic first-class travels and penchant for exchanging gifts have forged an enduring jet-set image. Perhaps most of all, his vanity stands out even among the numerous political leaders and millionaires [the president] counts among his friends. [The president] has campaigned openly for the Nobel Peace Prize[to be awarded to himself] and turned the new \$40 million Olympic museum in Switzerland into something of a personal monument exhibiting the gifts and artefacts [it] has collected on travels around the world... [T]here are pictures of... [the president] with the King of Spain, with [the 40th President of the US] and... with the Pope... [The IOC president – who has a fondness for being interviewed by gal journalists] in Barcelona’s proudest department store, somewhere between the... French knickers... underwires and the girdles... [–] had planned to stand down at the time of his 80th birthday... Ever since... [announcing] his retirement date, there have been manoeuvrings by his potential successors... “The key is not that the crisis occurred, but how you deal with the crisis,” proclaimed the person who has managed to project himself strongly as the [IOC member] most likely to succeed... [the president. But] the past month... has been... the time of deepest crisis in the IOC’s 105-year history... As in ancient Greece, the future of the Olympics is in the lap of the gods.

...Everywhere you go there are people with easy, ready-made strategies to save the world from the corrupting influence of the Olympic Games. One of the most popular – advanced by [the AUS]n Opposition Leader... this week – is to hold the games permanently in Greece, thus preventing unseemly competition between rival cities eager to host the ancient event. Without the competition we will be mercifully spared the spectacle of ambitious city officials falling over each other to attract the locusts of the [IOC]... As a bonus we will get the chance to return to the simple, pristine ideals of the ancient Olympics, unsullied by money, politics, anabolic steroids, synchronised swimming or beach volleyball. Instead of corruption and these ludicrous novelty events, we will be able to watch athletes undrugged and unclothed... Rather than receiving gold medals, cash prizes and sponsorships, the victors will be crowned with wreaths of wild olives which will fade along with the memories of their great deeds, thus putting sport in its proper place as merely the transient flowering of youth. Unfortunately, when confronted by a dose of cold reality, idealism like this crumbles faster than an IOC member can snatch a first-class return fair to Salt Lake City. If [AUS’s opposition leader] or any of his fellow Olympic idealists ever rifle through the history books they are in for a few rude shocks. Shock No 1: Money was just as important then as it is now. Athletes and their trainers were professionals and well rewarded by their cities with cash payments, free tickets to shows and free meals. Shock No 2: In 332 BC – 2330 years before [a Canadian sprinter was thrown out of the Seoul Olympics] – an Athenian athlete was thrown out of the games for cheating. Shock No 3: The ancient Greeks were on the lookout for novelty events just like their modern counterparts but instead of embracing twee sports like synchronised swimming, they wanted more brutality. An especially nasty novelty event was the Pancratium... a mixture of boxing and wrestling. The ancients would stand around whoopin’ and hollerin’ while the competitors in this event – often young boys – would beat each other to a bloody pulp. Arrhachion... was so dedicated to the Olympic ideal that... [the] famous Pancratium exponent... fought on until his opponent throttled him to death. Shock No 4: Even with the games in a fixed position people still managed to compete for the right to hold them. For instance, in 365 BC a mob called the Arcadians decided that they, and not the Elians, should control the games. Instead of making their point with a few free dinners and a night at a Grecian bordello, they took up their swords and seized Olympia by force. So all things considered, there is not much to choose between the ancient and the modern. The next time the Greeks hold the games is in 2004. If they’re wise, they’ll make it the last.

...Olympic leaders were told by athletes yesterday that they had lost their credibility in the eyes of the public as they prepared for one of the most important meetings in their history... After three months of turmoil, the whole of the IOC membership is set to vote on whether to expel six members for breaking rules on taking gifts from Salt Lake City... Four other members have already quit over the affair... Each of the six... [from]

Ecuador... Congo... Sudan... Mali... Chile... and Samoa... will be given 20 minutes to defend themselves in front of their colleagues. [The]IOC president... is likely to know in the first hour of the meeting whether [the Spaniard] still holds the most powerful job in world sport... Few seasoned observers believe his job is in any serious danger. Most of the candidates for his position would not want to step into his shoes at such a turbulent time. Meanwhile, Salt Lake City organisers say they have decided to cut back their IOC hospitality budget for the 2002 Games by \$US1 million.

...A Salt Lake City business[person] has pleaded guilty to tax fraud in the first criminal case coming out of the federal investigation of the city's winning bid to host the 2002 Winter Olympics. [The businessperson] admitted helping the son of South Korea's Olympic Committee member obtain permanent resident status by setting up a sham job at his now-defunct communications company... [In related news, the] US Olympic Committee has unveiled a \$US9 million... plan to rebuild its image... [The committee's executive] director... said the new programme, to be launched on a national Olympic Day on June 24, would be aimed at restoring "a trust between the people of the world and the Olympic movement, a trust that is now held up to ridicule by our most popular entertainers." The USOC would focus on past triumphs and future gold medallists to present the best image...

[A former] US Secretary of State... and [the]former Los Angeles Olympics chief... have been picked for a panel... created to help clean up the mess... [left] in the wake of [the IOC's] worst scandal... Such prominent individuals could help convince critics from the corporate world to the US Senate that the IOC is serious about changing its privileged ways... IOC 2000 was set up last month as the committee's primary engine for change after the Salt Lake scandal, in which six members were expelled... The commission will have 20 to 24 members, half from the IOC and half "leading personalities who understand sport". The panel will essentially form a new version of the Olympic Charter, the IOC's century-old bylaws... [The IOC president] will head the commission and appoint its members, two points attacked last month by critics... who felt the panel needed more independence. But with [the former US Secretary of State as] a member, the IOC reform panel gains instant credibility because of his long record of states[person]ship and diplomacy... After leading the... games to athletic success and a \$US225 million surplus that convinced cities and sponsors that the Olympics were a good investment, [the former Los Angeles Olympics chief] served as... the... US Major League Baseball commissioner.

...[IOC] leaders have agreed to lower their age limit to 70 and force members to face re-election as they attempt to clean up the organisation after the biggest corruption scandal in Olympic history. On the first day of a two-day meeting of all IOC members, the committee yesterday voted to drop the retirement age by 10 years for new members despite some opposition. A proposal to make members face re-election every eight years surprisingly sailed through the session, which also voted to allow future presidents to be elected for an eight-year term with the right to stand for a further four years and agreed to add 15 active athletes to the committee... The athletes representatives are expected to come from elections carried out by their peers, although an IOC selection body must approve their candidature. The... rank-and-file [IOC members have, however,] united against overhauling the process for electing Olympic host cities... [by stripping] the general assembly of voting rights... The proposal is due to come up for a vote by an emergency IOC session [in about six weeks. An Italian IOC member said last night:] "It's impossible the general assembly will approve this proposal... I'm sure the executive board will have to find a new solution before then. If they lose at the session, it would be a disaster for the president and the executive board." ...[the Italian added that] an "overwhelming majority" of... other[member]s made a counter proposal: a small group of experts should narrow the field to two or three finalists 24 hours before the vote and let the full assembly choose the winner.

...The [IOC] has decided to make cities pay to bid to host the Olympics. [The]IOC sports director... yesterday said that from the next campaign – the race for the 2010 winter Olympics – it would cost US\$100,000... to apply to stage the Games and \$US500,000 for each candidate that reaches the final stage of the process. The money will be used to fund the IOC's selection procedure... [By the way, when an AUSn IO]C Committee member... was called before the [IOC] to explain his acceptance of \$A60,000 worth of hospitality from the organizers of Salt Lake City's Olympic bid, many believed [the AUSn] would be exonerated. But last week an [IOC] report delivered a "very serious warning" to [the AUSn].

...the AUSn ex-]Olympian and besieged Games official... [who] received a very serious warning for receiving over \$US60,000... in hospitality and gifts from Salt Lake organisers... failed to take his ex-wife into account when [the IOC member] denied having received a gift of jewellery from a Greek business[person] ahead of Athens' bid for the 1996 Olympics. The *Sydney Morning Herald's* front page was yesterday dominated by a photograph of his former wife... wearing the necklace and earrings in question. At the same time the *A[US]n Financial Review* carried photographs of the \$A10,000... jewellery showing distinctive Grecian details. For [the IOC member], honoured at the highest levels by both his Government and the nation's sporting administrators, the pictures seem likely to be the last straw. The pressure on [him] to resign will almost certainly become unbearable if only because some sacrifice is needed to purge Sydney of the stain that its bid for the 2000 Games has left on the national image. The toll on the balding, bespectacled 67-year-old is already apparent: footage of the harried, monosyllabic [IOC member] dodging television cameras or pushing his way through the media press have become nightly staples on the evening news. On Thursday night, as reporters pressed him on the jewellery claims... [the IOC member] was close to tears and said of his former wife's claims to have the jewellery: "I'm staggered... I'm really shattered." It looks like becoming a sad finale to an otherwise distinguished sporting life. In his youth [the IOC member] was... a five-time national surf-lifesaving champion, winner of 26 national canoeing titles and a member of the A[US]n canoeing team at the 1960, 1964 and 1968 Olympics. [It managed AUS]'s Olympic team at the 1980 Moscow Games, chaired or sat on a range of national and state organisations... was the 1980 Sports Administrator of the Year and was appointed a Member of the Order of A[US] three years later[, having]... joined the IOC in 1982... In 1993 [it] was inducted into the A[US]n Sporting Hall of Fame. Until [the IOC member] resigned from the \$A140,000-a-year job earlier this month, [it] was a member of the A[US]n Olympic Committee, and still holds a \$A50,000-a-year directorship of the Sydney Organising Committee for the Olympics... by virtue of his IOC membership, although [the member] has suspended himself from the Sydney board. His world has unravelled through a combination of foolishness and flexible ethics, a failed marriage, and lingering animosities from Melbourne's failed bid for the 1996 Games.

...OVERWHELMED Sydneysiders sick of hearing about Olympic scandals plan to be out of town for the 2000 Games, according to a new survey. Constant negative media coverage... has turned the tide of enthusiasm in Sydney, with just 18% of those surveyed saying they would like to attend a Games event. "We hear about the Olympics every day and there can be a saturation point..." said [the]Centre for Visitor Studies research manager... For the first time since the biannual survey began in 1995, the number of people intending to leave Sydney crept above those planning to attend the Games... 20% intended to leave town for the duration of the Olympics, compared with 8% in the first... poll... [Incidentally.] Melbourne city councillors have voted themselves, staff and guests all-expenses paid trips to the Sydney Olympics at a cost of nearly \$A180,000... Two of the nine councillors voted against, saying it was too expensive. A report to the council said the trips aims included promoting business in Melbourne.

...One way ticket... The [person] who copped most of the blame for the Sydney Olympics ticketing fiasco has left the organising body, SOCOG. [The person] was under siege after it was revealed in October that [the person] had kept back from the public ballot 840,000 of the best tickets ...and Reebok boot Reebok International is suing SOCOG in a row over an exclusive deal with the Games organiser. The sporting goods giant said it was terminating its contract with the organising committee for signing contracts with competitors.

...Not a bomb A classic Mercedes-Benz built for German Ernst Heinkel, who developed the Heinkel bomber during... W[W2, will] be... on show in Sydney during the Olympic Games... [I]mported into A[US] in 1989 and bought at auction in 1994 for \$630,000... [t]he car, a 540 K Cabriolet B, powered by a supercharged 5.4-litre V8 engine, was built in 1936, the year that Nazi Germany introduced the Olympic torch relay.

...AT SOME POINT DURING THE Olympic torch's 27,000-km journey around A[US] next year, one of its 10,000 bearers might like to try this: carry the torch upside down... [The] director of Sydney firm Blue Sky Design, which last week unveiled the Sydney 2000 torch, swears the elegant, triple-layered device will remain alight for "at least a few minutes" if inverted. It can also be carried with the flame pointing forward rather than backward, though the designer says that "would look silly." As well, the 1-kg aluminium and stainless steel torch – or, more accurately, all 10,000 torches... [(each worth \$200)]... as each runner will carry an individual one lit from the preceding torch – is wind and rain proof.

...A change in wind direction... would prevent swirling gusts from hounding athletes competing at the Olympic stadium during the Sydney Olympics, the stadium architect says. Athletes who ran at the stadium at the weekend in the national athletics championships raised concerns about wind conditions, which created unpredictable gusts, assisting some heats and hindering others. [However, the stadium's] designer... said the swirling effect was the result of a southerly wind, but [during the month of] September the wind... blow[s] from a different direction.

...[an Olympic] storm is brewing over A[US]'s most famous beach. Residents of Bondi, in Sydney's eastern suburbs, are incensed their favourite stretch of sand will host the popular beach volleyball tournament... claiming locals and tourists will be blocked from using the beach for up to nine months... Bondi Beach was an automatic choice when it came to choosing venues for the 2000 Olympics. Since the N[SW] government bought the beach from private owners at the turn of the century, the sands of Bondi have ingrained themselves in A[US]n culture... When it was confirmed last August Bondi would be hosting Olympic beach volleyball, reaction among locals at first appeared positive. "Bondi Beach is the A[US]n beach," said... the... then mayor... "It's an A[US]n icon. The large majority of our Bondi residents are very excited to have the opportunity to show off their Bondi to the rest of the world." But just last month a large majority of those Speedo and bikini-clad Bondi residents stood on the beach during a protest rally hurling abuse at Olympic organising representatives and vowing to stop the tournament going ahead. The catalyst for this change of heart is the growing awareness a portion of the beach, including its famous surf lifesaving pavilion, are to be effectively annexed by the Olympic family... The plan is to [block] off a four to five hectare section of the beach... [with] a two metre high wire fence[. then]... build a temporary 16 metre high 10,000 seat stadium and centre court as well as eight training and warmup courts... At just over a kilometre long, the narrow strip of beach at Bondi is already fenced in on one side by the surf of the Tasman Sea and on the other by a promenade of restaurants, pubs and hotels... [R]esidents argue the limited space on the beach must be open to all. The trouble for the organisers is beach volleyball was one of the most popular spectator sports at the... Atlanta Games on account of... the fact [that] the only Olympic competitors which wear less clothing are horses. The Bondi residents' solution of moving the beach volleyball tournament 29km inland to a woodchopping venue is the equivalent of asking the Swiss to hold the Winter Olympics on artificial ski slopes instead of their alps. However, Olympic organisers have to tread carefully in the battle for Bondi after a dreadful... year... One solution for Olympic organisers is to appease Bondi residents by offering to spruce up and renovate their buildings with the A[US]n Government footing the bill. A similar arrangement was made with residents near the Olympic sailing venue, who were none to pleased to be temporarily losing use of public facilities. In the best traditions of the modern Olympics, a well placed "donation" or some "financial assistance" should ensure Bondi Beach is indeed a venue at the 2000 Sydney Olympics.

...N[SW] is bringing in tough new fines for littering. One aim is to ensure Sydney is at its sparkling best for the Olympic Games... [The NSW] Premier... said the state Government planned to introduce on-the-spot fines of up to \$A750... Present law allows for a \$A200 on-the-spot fine for all littering offences... [T]he city had been grappling with the problem of littering for some time. An increase in advertising and more reliance on takeaway food had contributed to the mess. The state Parliament will vote in the coming session on a package to crack down on people throwing rubbish on to streets, parks and beaches... Placing advertising material on car windscreens will also be prohibited... \$A1.5 million would be spent on a public education campaign to reinforce the anti-littering push. "It's not related to the Olympics but I would like to see [Sydney] looking fabulous by the time of the Olympics... I would like people to be leaving Sydney saying, 'Those A[US]ns are proud of their country, they keep it so clean.'" ...Under the new scheme, there would be three categories: • Littering with small items such as bottle caps and cigarette butts, \$A60 fine. • General littering with items such as fast food containers or bags of rubbish, \$A200 fine. • Aggravated littering for dropping items such as glass or metal that endangers the community and environment, \$A750 fine.

...Greenpeace has given Sydney Olympic authorities a pat on the back over the clean-up of 400 tonnes of dioxin-contaminated soil recovered from the site of the 2000 Olympic Games... Sydney's Olympic Coordination Authority (OCA) said the soil... should end up clean enough to grow vegetables after a two-stage treatment process... As part of [the] \$A137 million... clean-up... the OCA [is using] a new technique to destroy the dioxin, effectively by reversing the chemical process and returning it to its constituent parts... [A] Greenpeace toxic pollution campaigner... said the treatment system could set a model for dioxin clean-ups around the world – dioxin-contaminated waste is usually either incinerated or put into landfill... Final treatment of the soil will start... today... [In further news from overseas, a] pole vaulter... died yesterday after landing on his head during an indoor athletics meeting in Minneapolis[– raising the number of 'pole vaulters who have died in the US over the past 2 decades to 20 (mostly due to head injuries'). Kevin]Dare was a student from State College, Pennsylvania. Officials will decide today whether to continue the meeting.

...[a young Aucklander] has been jumping for joy after winning four medals at the trampoline nationals held in Invercargill. The 14-year-old from Mt Albert won two gold and two silver medals. [It] was first in the open... section, and first in the synchronised section for his age group... [The teenager] is a member of Extreme Trampoline, based in Henderson. The club has only been going since April last year. But the fledgling team collected 26 medals at the tournament... "We only took 11 athletes as it was so far away, but we still bought home a large proportion of medals,"... [The teenager] started trampolining when [it] was six-years old[after getting] hooked on the sport's adrenaline and energy. "It's really, really different to other sports... It can be kind of scary but that's one of the reasons why I like it." A recent series of injuries has not faded his ambitions to compete in the 2008 Olympics. [The teenager] has a reoccurring back injury, and has been in a neck brace three times as a result of bad landings.

...No need for Sporty kids to be down in the mouth... SOUTH Auckland Health is giving away \$5000 worth of free mouthguards to local sport and schools... [The] group manager of Middlemore Hospital, said that mouthguard sharing has become a problem because sports clubs are getting tougher on enforcing their compulsory use. "A lot of children want to play sports, but many sports won't let them play without a mouthguard... I personally have witnessed children swapping mouthguards at games. It's important that wearing mouthguards is enforced for injury prevention purposes, but this encourages swapping and sharing among children whose families cannot afford them." [The manager] warned that sharing mouthguards can be more dangerous than going without because it can spread ordinary sickness like the common cold and more serious diseases like meningitis... In an effort to stamp out the problem, South Auckland Health and the Mangere Community Health Trust came up with the free mouthguard scheme. They hope their initiative will reduce resource and medical costs for Middlemore Hospital and the South Auckland community... South Auckland Health has purchased about 3500 mouthguards which come with a dental warranty.

...YOU'VE... had to pay the dentist's bill because your daughter forgot to wear her mouthguard for hockey... You've also... had to buy your little son his size six soccer boots. You've queued behind the Japanese golfer at the first tee... [You've paid your gym membership. You've visited the health shop to stock up on pills and powders to supplement your diet, which you've increased to compensate for all the energy you expend at the gym. You've] been in Dunedin on a test rugby day... And there have been plenty of times when you have wondered: "Just how much money is sport worth to our country?" Now it's official – the sport and leisure industry is one of the most dynamic sectors of the N[Z] economy. It now contributes \$1.75 billion... each year... Specific economic impact reports have been done before on one-off events like Bledisloe Cup tests and their value to host cities. But this report, *The Business of Sport and Leisure – An Update*, which was requested by the Hillary Commission, charts the economic growth of the sporting dollar across a broad spectrum from 1991 to 1996. It's an intriguing paper that reflects the importance of sport in N[Z]... And, as... sport

[in NZ] increasingly becomes more professional, there's nothing to suggest the trend hasn't continued since the completion of the report... There's only one downward trend and that, in itself, reflects a considerable economic saving. Claims from sporting injuries against ACC dropped by \$900,000. And sports fatalities fell from 77 to 66. The report suggests the costs associated with these deaths represented a net decline of \$12.8m (from \$44.4m in 1991...). But for sporting tourism, household expenditure, employment and manufacturing the trend was up... An estimated 19,200 people were directly employed in the sport sector in 1996 – manufacturers, importers, retailers of sports goods, greenkeepers, professional players and coaches. And indirect employment – sports journalists, sports lawyers, programme publishers, event organisers – lifted the total to 31,055, an increase of 26% since 1991... 1000 jobs were [also] created in the tourism industry related to outdoor and adventure activities... [T]ourists visiting N[Z] primarily to watch or play sport spend \$120m a year... [though 3/4]ers of all tourists took part in some kind of sport or physical leisure activity. "N[Z] is famous around the world for its sports achievements. Sport gives a strong international brand..." says... [the] Hillary Commission chief executive[. who adds the report]... shows that while sport is largely driven by volunteers, it is also a dynamic commercial sector and great investment for government... [However, w]hile the commercial arm of the sport and leisure industry is booming... [- the] sector... made up 60% of the total contribution for 1996... [-] and the number of jobs in the industry as well as the number of volunteers have increased, the report shows central government's contribution has declined in real terms. Central government expenditure on physical leisure in 1996 is estimated to be \$168m, an increase of just \$3m from 1991. This is considerably less than the... \$340m the sport sector generates each year in taxes... Local government expenditure on sport and recreation at community level has risen by just over 7% in the same five years, to an estimated \$338m in 1996.

[The Labour Party wants central government to] provide \$2 million a year for 200 sports scholarships worth between \$5000 and \$10,000 each so promising athletes can pay for coaching or get overseas experience. [It also wants to boost] the Hillary Commission's annual budget by \$2 million and [give] an additional \$1 million to the Sports Foundation. Announcing the policy package at the weekend, Labour's sports spokes[person]... said the aim was two-fold: to ensure N[Z] maintained or bettered its international sporting achievements, and to encourage participation at all levels.

...[a worker], aged 22, of Bucklands Beach, t[oo]k... a break yesterday on Mission Bay beach. But exuberant youngsters turn[ed] her paddle in work clothes into more than [it] bargained for. Thousands had packed the beach to feel a \$2 million project between their toes. The beach has been transformed with 30,000 cu m of sand from Northland. - 1996

Wellington City Council is considering spending \$4 million on a new beach... a new headland and trees for shelter... at Oriental Bay.

...The long-awaited New Brighton Pier in Christchurch opened yesterday to the praise of the 2000-strong crowd, despite continuing controversy over the \$4 million cost... [■] Two Mangere boys took on big business [recently] to successfully create a \$22,000 playground on an empty reserve. [The boys], aged 13, and... 12, collected signatures around the Cranmere Crescent Reserve, ran raffles and approached the Manukau City Council and businesses for funding. The pair were low-key about their success, but said a lot of people were surprised when the colourful equipment was installed. There was assistance from Youth Resources N[Z], a charitable trust for 10-to-13-year-olds, which helped the boys plan the project and prepare proposals. The trust's district manager... said... "Businesses see the kids and think it's a big joke – 'come back with an adult.' But they have a claim in the community,"... Companies from across Auckland have since donated materials and time. [The boys], who have just finished form two at Southern Cross Middle School, are already planning their next project – painting a bus stop with Maori and Pacific Island designs.

...A NEW sport and business initiative to be launched this week is budgeted to benefit N[Z] codes by as much as \$5m. Sports Plus is a private funding programme based on partnerships between... sports and major corporates... [which] provides a realistic alternative to having to rely heavily on government funding through the Sports Foundation... Squash launches the concept this week but cricket, golf, lawn bowls, gymnastics, swimming, basketball, indoor bowls, touch, netball and softball are all set to follow. The sports will gain commissions when their members purchase certain goods and services from the participating companies... AMP, Telstra/Call Plus, Air N[Z], National Insurance, Caltex, Sport Magazines, Moore Business Systems and NZ Guardian Trust... The commission percentages range from 1% to 10%... [T]he conservative budget... [of] a \$5m input... is based on a 5% penetration of the memberships of the sports who are part of the concept[. which]... will also provide individual magazines for each sport... [In related news, a]fter battling over who would manage the North Shore Events Centre, the North Shore Council has done a u-turn and given the facility to the centre's elated trust board. The trustees have been lobbying for more managerial control so they can get outside grants to complete and extend the five-year-old indoor sports centre. The centre was part of the council's North Shore Leisure business unit and the profits of the debt-free facility went into council coffers. The trustees were stunned at Monday's special council meeting when [a] councillor... proposed to sell the Glenfield centre to a reconstituted trust for \$7 million. The sale would be in the form of an interest-free suspensory loan, which would be written off after seven years if the trust met the council's performance requirements... [The trust's chairperson] was delighted by the 18-to-one vote in favour of the proposal and said ratepayers would no longer be liable for the centre's performance... [The chairperson] said a further 1800 seats would bring capacity to the "magic" 5000 and there were plans to add another basketball and netball court to the current three so national competitions could be held. The extensions have been conservatively estimated at \$3 million. "We've never had access to profit, so it was very difficult for capital expenditure to be planned because we were at the council's mercy,"... However, the one dissenting councillor... said the deal was "irresponsible and lopsided." "What concerns me is this Alice in Wonderland situation where we first give away a \$7 million building, which returns \$372,000 to the council each year, when we can't afford maintenance on the community buildings we keep... But we spend \$180,000 to upgrade it to pristine condition before we give it away and give \$300,000 a year for five years..."

...Top sports[people]... could pocket up to \$250,000 under the latest... Sports Foundation initiative. The foundation will release details of its \$79 million, five-year plan at functions in Wellington today and Auckland tomorrow... The incentives to N[Z]'s best athletes follow last year's amalgamation of the Sports Foundation and the Hillary Commission's high-performance unit. These bodies now sit around the same table with representatives from the N[Z] Olympic Committee as a high-profile funding organisation... Of the \$79 million, \$54 million would come from the public sector (the Hillary Commission through the Lottery Grants Board and a \$15 million Government vote). The remaining \$25 million will come from the private sector, headed by B[IL], Air NZ, TVNZ and the National Bank, who will underwrite about \$7 million needed to cover administrative and marketing costs, and the foundation's 80 corporate members. Sports have been split into four levels, with the Olympic Games, World Cup rugby, cricket and netball at the highest level. Of the available funds, \$22 million... will go to coaches and coaching academies, the same amount to athletes and teams, with a substantial proportion being handed out in personal grants, \$18 million... for international competition and \$10 million... for sports science and... technology. Initial applications must be received by May 2. The first \$13 million to \$14 million to be allocated will be decided on June 20 and announced on July 1 – the start of the foundation's new funding year.

...gifted N[Z] athletes... who want nothing more than to devote themselves to reaching the top in their chosen sports have something to celebrate. The... Sports Foundation's Five Year Plan... firmly shuts the door on the days of attempting to take on the world on the smell of an oil rag. It ushers in an era in which business, sports science and other support mechanisms are all harnessed at unprecedented levels to help our top sportspeople achieve optimum results... [H]ere's how the plan would affect... one of our top cyclists: • Personal grant: Because [the cyclist] finished in the top 10 in the world in her chosen event (...[coming 7]th in the individual pursuit at the Atlanta Olympics), [it] would now be eligible for a personal grant of up to \$30,000 a year... The total value of a package for an athlete like [her] over the next four years could be up to \$150,000. For... athletes in the top three in the world... the package will be nearer \$250,000... The personal grants are performance-based. • Education

Scholarships: [The cyclist] is going through Auckland University with the aid of an education scholarship... the result of a joint venture between the foundation and Maine Investments... Most athletes w[on't] earn a living from their sports, and for this reason providing educational opportunity is vital. The plan aims at nearly doubling the scholarship funding pool. • Sports Science and Medicine: [The cyclist] will be able to benefit, at no cost to herself, from the regional sports science/medicine scheme that will be administered by Sport Science N[Z. The]... foundation will be injecting... \$1 m... per annum into sports science and medicine, and the regional programme helps make it easily accessible to athletes. • Advisory support: The foundation has put in place a service providing media advice, personal and career advice for... athlete[s]... • Employment opportunities: The foundation is working with one of N[Z]'s large corporates in developing an employment programme. Athletes will be offered full-time [jobs] and career development opportunities with time off for training and competition. • Medal Reward Scheme: If [the cyclist] comes home with a medal from the Sydney Olympics, [it] will benefit from a financial reward scheme soon to be put in place. This acknowledges the personal sacrifices that go into such an achievement, and the fact that this success is shared by all N[Z]ers... Without question, this level of funding is a huge incentive for athletes. Coaches, for too long the forgotten heroes behind many a N[Z] sporting success, are the subject of renewed emphasis in the plan. The foundation will encourage and assist sports to employ full time high performance coaches. The target is that by the[end of next] year... 20 sports will have full timers in place. Coaches, like athletes[('750 NZ sportspeople currently receive financial support')], will be eligible for personal grants.

...a record \$16.15 m... from the Hillary Commission and... Sports Foundation... takes the total funding package... to be spread among 58 sports... this year to \$17.5 m... made possible by a grant of \$3.7 m... by the L[GB and an] extra... \$4.2 m... from the Government. The commission[, which] also takes 20[%] of the Lotteries Commission profit... will soon... announce[e] a further \$[1.55 m in]... donations and sponsorships from businesses.

...RUGBY'S reign at the top of N[Z] sport is threatened by both netball and golf... Figures supplied this year to the Hillary Commission by national sporting bodies show rugby's playing membership rose to 123,481 during the last 12-month period. Netball's tally was 118,870, while the combined total for [guys' and gals'] golf was 116,025. The membership totals should not be confused with sports' participation numbers. Many people do not belong to clubs and do not come under the umbrella of national bodies. Golf, with its huge army of green fee players, is a prime example. In terms of participation numbers, survey results indicate it and swimming are the dominant sports, easily outstripping rugby... The other top 10 sports, based on membership figures, are (in order) cricket, soccer, touch, bowls, tennis, basketball and rugby league. League's figure and cutoff for the leaderboard is 42,300. Soccer's fifth placing is misleading. While a sport like netball has counted its youngest players (since last year), soccer's membership numbers do not include players under the age of 10. Soccer N[Z] estimates there may be between 80,000 and 100,000 in this grouping. If they were included, soccer would surge to the No 1 position, while rugby would also profit from better counting of its young and nipper brigade... Touch has been a sporting success story. In 1988, it reported 24,000 members but four years later the code's numbers had swelled to 70,284... The struggling sport in the top 10 is bowls. This year's membership figure was 67,000... In 1987, the bowls' membership was 86,997.

...Finding out the No 1 sport in N[Z] may be academic, but it means a lot... Sport is all about numbers – whether it's the sprinter trying to crack 9.5 seconds for the 100 metres, the All Blacks scoring a converted try and nothing the... points they need to win a test match, or [a cricketer] scoring his first test century. Around the country scoreboards project the drama. But always, behind the tries, the boundaries and the deuces, there is another numbers game being played out. It transcends sporting boundaries – pitting different codes against each other. It is the battle for playing numbers. As with on-field sport, the battle spits out winners and losers. It also comes complete with its own minefield... All sports are required to supply... [numbers of] affiliated... members... to the Hillary Commission, where the numbers are a factor in funding. Unfortunately, the figures paint only a part-picture... A commission sport and physical activities survey last year of 18-year-olds and over suggested... 416,000 had played golf during the previous 12 months, while it projected swimmers – including beachgoers – numbered 773,700. In comparison, rugby fell well short... For most sports, the important consideration is playing number trends. Membership figures, supplied to the commission since 1987, provide clear messages on what is occurring on the countries fields and courts. The gold medal awards go to touch and water polo. At the other end of the scale, the racquet and bat sports of squash, badminton, table tennis and softball have been major sufferers, along with outdoor and indoor bowls. The touch phenomenon is the ultimate dream for the administrators of rival sports... [B]y 1993... membership... had peaked at 85,256 and has settled at an extremely solid 75,000[, but]... there were also estimates of 50,000 people playing the sport outside the system... Undoubtedly, the touch boom is one explanation for the drop in those playing softball. Membership has waned from 36,028 in 1987 to... 20,790. Not only are the sports competing in the same summer period but they also pull players from a similar demographic group. An additional worry for softball is that other team sports are reporting increased or stable membership. Overall, the suggestion is that team sport numbers fell 7% between 1987 and 1997, but the commission suspects figures supplied in the late 1980s were overstated... The comparable drop for individual sports is 23%... Commission research and information... said team sport meant there was more incentive to be part of a club structure, whereas many individual sportspeople obviously preferred the option of competing when it suited... SPORTS with rising numbers appeared to have two major benefactors. The first was television, with its resultant creation of heroes and stars for the young. Rugby league, basketball and ice hockey benefited from this scenario. League, compared to its viewing population, has never been a high-participant sport. But its membership has swollen on the back of high TV exposure over the last 10 years. In 1987, membership was 27,750... In the same period, basketball jumped from 31,500 to 47,244, while ice hockey went from 278 to 1184. A problem for both ice hockey and ice skating – which has also enjoyed a small numbers hike – is getting rink time... The availability of pool time is... affecting [swimming]'s growth. "Some of the clubs have really big waiting lists because they simply can't get the lane space,"... Among the young, there... appears to be a "hip factor" – the second benefactor – especially with water polo and surfing... Badminton's 1987 reported membership of 16,441 almost halved, although... the sport's administrators believed it was healthier than the figures indicate – research indicated the total at nearly 95,000... [B]adminton had a recruiting and marketing plan, and its challenge – as with many sports – was to get players linked to clubs. SQUASH has fallen considerably since the days when [NZ's world No 1 gal and top-10 ranked guy] were regularly in the headlines. Membership is... 20,000 down on the 1987 total of 47,279. One explanation may be the sport was something of an over-achiever and that a moderate falloff was always on the cards. However, the degree of the falloff is hard to explain, with squash seemingly suited to the hustle and bustle of the modern era. A game – a hard workout – is all over in less than an hour. [The sport's new national] executive director... wants to reverse the trend and in the last year numbers rose by... 1600... [T]he sport may have suffered from players not wanting to pay affiliation fees and/or be involved in activities such as fundraising. Last year's commission survey suggested 161,600 adults had played squash during the previous 12-month period. The table tennis slump is dramatic – membership of 51,813 collapsed to 5753 this year... Gymnastics provides an interesting case study... [I]n 1987 it was reporting membership of 63,418... Back then, gymnastics counted children in school programmes. It is estimated... 49,000 (non club members) are [currently] involved in Kiwigym and playgym activities. However, it also appears young girls are no longer growing up wanting to be the next [gal to obtain a perfect 10 score at the Olympics]. Trampolining and sport aerobics has now come under the gymnastics umbrella and should help to boost numbers. Of the middle-of-the-road sports, athletics membership has declined slightly... though there are a number of non-[affiliated] people competing in half marathons and marathons. The sport was undoubtedly hurt by triathlon... Despite N[Z]ers dominating the equestrian stage[– 'after his third place at last weekend's Blenheim horse trials NZ's double gold winning Olympian (in 1984 and 1988) maintains his lead in the world equestrian riders rankings over the second-placed Kiwi, who failed to complete the Blenheim three day event with both his mounts, while NZ's reigning Olympic and world champion is in third place despite being out of action with a broken thigh bone suffered at Burghley' –] pony club numbers have tended to decline while the equestrian fold has been relatively stable. Cost could well be a factor with the former... [but this might be addressed now that the Sports Foundation has announced that it will be investing] \$2m... into equestrian sports during the next three years... Plugging into what

the X generation – the children of today – want was crucial. And flexibility was likely to be a buzz word as sports battled for market share. An example could be club subscriptions. Rather than having a black and white situation of people either belonging or not being a member of a club, sports may introduce a halfway-house scenario where, say, a basketballer or cricketer pays per game. This rate per game would have to be high – to still provide encouragement for people to become club members – but it could help reduce the numbers dropping out of official competitions... [By the way, entries] are now being received for the N[Z] *Herald* junior sports awards, which recognise sporting excellence but also consider athletes who have overcome disability... The awards, which offer five \$1000 training grants and engraved medallions, are open to sports[people]... under 20 and living in the *Herald's* circulation area. A full description of the performance(s) to be considered – up to 400 words – and personal details, including full name, date of birth and address, should be forwarded to N[Z] *Herald* Junior Sports Awards, P.O. Box 32, Auckland... no later than December 31. - 1997

Who would be a hot young sports star these days? [The NZ Herald] takes a look at the pressure being faced by the prodigies of the world's fields, fairways and courts... HOW much peace can \$60 million a year buy. Just look into the eyes of... the troubled 21-year-old Brazilian soccer star who, just before the World Cup in France, appeared to have the world, among other things, at his feet. Not enough is the answer. "How long are you going to chase me? What kind of life is this?" [the No 9] pleads to a camera[person] who tracks him back in Brazil. At a time when [the 21-year-old] should be enjoying the prime of his life, [it] seeks only solitude and escape... Welcome to the world where boys become [grown-ups] before the prying eyes of the masses... It is a sporting story fast becoming a cliché. Young star rises at a giddy rate and is then shot down as... [it] fails to cope with all the attendant pressures and sacrifices that join the ride. Fame and fortune become huge burdens... Sport at its highest level is like the owner of a seedy strip club. It welcomes you eagerly into its fold, it massages your ego and takes you to places you have never been to. And then it strips you bare and places you under the spotlight. The old hands can deal with it. But... the young stars... are unprepared and, inevitably, their careers reach a crisis point... [The Brazilian soccer star]'s crunch time appeared to be... [the] World Cup final in Paris. A billion people held their breath and waited for him to illuminate the occasion, but all they got was a lacklustre performance and a flurry of conspiracy theories... [The star had] had a fit and swallowed his tongue. His coach omitted him from the starting lineup and then U-turned in the face of a player revolt. [The star] had fought with his camera-friendly girlfriend. There was pressure on him to play by sponsor Nike. [The star] had been taking painkillers all tournament[and was] soon to face a major knee operation. All [the star] was saying was that [it] had suffered "a fit for 30 or 40 seconds" and woke up "with my whole body in pain". Its cause is unknown, but the pressure of expectation could be as good a theory as any... [The soccer star's Nike stablemate], too, has found out that becoming the world's most popular golfer, the chosen one of a generation, is anything but a stroll down the fairways... [The young guy] who can no longer go anywhere in public, whose presence is in the midst of a corporate tug-of-war... is receiving messages that his own life may be in danger. What price fame, we ask you? The list goes on, and on. [The]English soccer player... cruelly dubbed Stupid Spice and whose red card may have cost his country its World Cup chances... has [also]received death threats and needs police protection to attend training... In cricket, [the West Indies' captain] certainly had his wobbly moments after becoming, at a tender age by his sport's standards, the greatest bats[person] of all time... Tennis has too many cases to list... In basketball, the NBA is littered with egotistic young stars whose attitude and self-worth have pundits predicting a gloomy future for the world's most popular league. Even in N[Z], the syndrome of the young star has its victims... [I]n the wake of his double gold medal-winning performance in Atlanta, [NZ's most successful swimmer] seemed unwilling or unable to cope with the pressures that followed and has treaded water since, while squash player Jade Wilson is the ultimate tragic example of a young sports person unable to deal with the difficulties [it] faced, taking her own life... [A sports] psychologist... who works both with Canterbury rugby and N[Z] cricket in player co-ordination roles, says the phenomenon occurs largely as a result of sophisticated talent identification thrusting young sports people into roles they are not ready for. "These days we're identifying these people earlier which means we basically imprison them a little bit earlier... [- although our country has yet to become as obsessed with sports success as 'China, which has 2900 sports schools whose pupils were selected at age 4 and 5'] It's probably what every youngster dreams of when they're knocking on the door – gaining superstar status. When they actually get there all they seek is their so-called normal... carefree teenage... existence because they are so pressured." ...[the psychologist] describes a spiralling scenario where these young superstars lose control of their destiny, become public property and a commercial commodity and in many ways have their spirit stifled. "You have to be a pretty strong person to be able to live with it... Not many can... It makes you say thank God I'm Joe Bloggs who can go about my business in the world... The expectations for [the young golfer] are so high that... [everyone] just expects him to win. We are putting something on his back that is probably bigger than [anyone] should actually have. When [the golfer wins, it was] supposed to; when [it] doesn't, people ask: 'What is wrong with [him]?' They might ask: What is wrong with sport? ...[the All Black No 11] is perhaps the closest N[Z] has to a... [figure comparable to the golfer. The No 11] is still the most popular figure in the game but on the field... is struggling to come to terms with the giddy future... mapped out at the 1995 World Cup... The giant winger has so many people pulling him for a piece of the cake his manager... is almost giddy dealing with it. [The manager] fields a dozen offers a week for sponsorship and deals involving... the world's most popular rugby player... and 10 times that for signatures, photographs and appearances... "We're talking big money... [My client] wouldn't have to play rugby if [the No 11] didn't want to... could have just walked away from rugby last year (when [it] had his medical problems). But... [my client didn't. My client] climbed Mt Everest once, [and is] prepared to climb it twice." ...[the manager admits his client] was ill-equipped for what [the No 11] faced, going almost straight into the All Blacks out of boarding school... Throw in things such as his secret marriage[, his subsequent separation] and his kidney problems and already, at just 21, [the winger] has been through the wringer... "[My client is] one of the most natural human beings you'll ever meet, and one of the nicest even-tempered guys. Of course... all... the talkback callers... hurt... him. [My client] pretends to shrug his shoulders but I think [the winger has just] got resolve now. [Having] been knocked down so many times, it becomes a bit easier to accept."

...With the age of professionalism now well and truly established within the realms of many N[Z] sports, the topic of athlete remuneration will only grow as a talking point. For many years now sport has been a business. However, it was very convenient for administrators, event organisers and others to bring out and wave the flag of amateurism. Of course, amateurism for so many sports had ceased to exist decades ago. As we move through our aspiring careers, the reasons for participating change. At first we participate because Mum and Dad make us or, for the lucky ones, because we just like it. Once a level of excellence is obtained we move to wanting to represent our country. Eventually, when we realise that this is our "life" and we are dedicated and committed to it, we seek to make a living out of it. From here, we normally seek sponsorship, extremely difficult to start with, but with some ease as we begin to make the headlines. I have followed with interest the debates that take place about such people as [a former All Black reserve who turned to league] and the payments they receive. Oh yes, it's fine to see him as an overpaid second-grader now but you need to look back a few years and see why [the All Black reserve] was able to command the salary [it] now enjoys... Firstly, [the player] received a large contract because the Warriors management believed they needed him, whether for his football skills or his public persona, to ensure that the fans would come. They also needed the likes of [the team's highest-paid player and a British international forward], to ensure the team would be good and they would be able to sell their reputations to the many and varied sponsors. No sponsors are willing to sign a team for big dollars unless they are able to use the names and reputations of these athletes to promote their products... It's never a gift, they are business professionals looking for a return on their company's investment... Secondly, television rights are a huge issue these days, and in advance the sports group need to be able to say, "We have signed or are signing [so-and-so], etc"... I think a key point that is missed here is that athletes have a right to

some security too. You may say in [the ex-All Black reserve's case that the player] is a television star, so [it is] doing OK and doesn't need his Warriors contract money. But we don't see CEOs of major companies paying us back when our shares bottom out, so why should many expect that [the player] should return his contract payment. It was not him alone who caused the problems the Warriors[faced in the club's formative years]... Unless you are one of the very few [guy] superstars (such as [the recently-retired All Black captain]), the day you are of no value to a company, the day you play your last game or run your last race, you are of an exponentially decreasing value. There is no loyalty out there, it's the big business world, and I have seen many a great athlete struggle long before I have seen major companies such as Adidas, Nike or Reebok go under.

...South Africa's athletics controlling body has become the first federation in the world to offer... athletes monthly salaries. Using \$US1 million from a private sponsor A[SA] will pay 17 of the countries top performers each month and award bonuses based on world rankings... [In local news, NZ] athletes will receive rewards if they win medals at the... Sydney Olympics in 2000. In an incentive package organised by the N[Z] Sports Foundation and the N[Z] Olympic Committee, gold medallists will get \$50,000, silver medallists \$40,000 and bronze medallists \$30,000. There will only be one payment an athlete, regardless of how many medals they win.

...KIWI Olympic winners won't receive cash bonuses. [The]Sports Foundation boss... said the organisation decided early on athletes would... receive financial windfalls[but has since changed its mind]. "Our money is going into helping athletes prepare,"... Instead [of receiving financial windfalls, NZ's] gold medallists will receive a new car from team sponsor Holden. Other country's Olympic winners will receive: ■ A[US]: \$17,500 gold, \$10,000 silver, \$7500 bronze. ■ Barbados: \$100,000... \$53,000... \$32,000... ■ Italy: \$80,000... \$60,000... \$40,000... ■ Spain: \$125,000... \$75,000... \$18,000... ■ US: \$27,500... \$25,000... \$19,000... ■ Romania: New car for gold medallists. ■ Germany: \$34,000 gold, \$23,000 silver, \$16,000 bronze, \$9000 fourth, \$7000 fifth, \$6000 sixth, \$5000 seventh, \$2400 for other places.

...KAZAKHSTAN will reward athletes returning from Sydney with medals – \$242,250 for gold, \$121,125 for silver and \$60,565 for bronze... [Incidentally, a] new study shows that with every shout of "gold... for A[US]" at the Sydney Olympics, taxpayers will have forked out about \$A40 million... People might think that's an obscene amount of money but not the president of Sports Medicine A[US]... who believes Federal Government funding has been incredibly successful at the elite level. The study looked at estimates of Government funding in each sport from the past five Olympics. [Although pleased with the results achieved by elite AUSn athletes, the president] lamented a fall in fitness levels in the general community. "As more and more A[US]ns become participants in sport it improves the health of the nation, but that hasn't happened,"... [The president] called for the Government to earmark extra funds specifically to improve the A[US]n participation rate in sport.

...A rumour around Auckland is that Viagra is becoming available as eye-drops so old [guys] can take a long, hard look at themselves. Nice idea, but last weekend's sport suggested the behaviour of young [guys] should prompt more introspection than that of their elders. I've always enjoyed Francis Bacon's essay "Of Youth and Age," in which [Francis says: "Young guys], in the conduct and manage of actions, embrace more than they can hold; stir more than they can quiet; fly to the end without consideration of the means and degrees... use extreme remedies at first." Reads like a report of a modern football match. A small thing in favour of our rugby and league players is that none is yet as churlish or self-inflated as the top professional soccer players in Europe whose petulance on and off the field is hilarious. Fake euphoria makes them behave like small children. Soccer stars have known for some time what our rugby and league players are just now learning – that behaving badly on the field is acceptable as long as adequate contrition is expressed afterwards. The abjection of their remorse could not disguise the fact that the league and rugby players who lost their heads during last weekend's matches lacked elementary self-control and thus strength of character. The media in Europe encourages, on and off the field, these soap-opera lives in which minor emotions provoke manic gestures, followed by hangdog remorse. Money and media may have enhanced team sport as entertainment, but money and fame have debauched whatever qualities of character it may once have encouraged. I'm not quite sure what was meant by the saying attributed to the Duke of Wellington, "The Battle of Waterloo was won on the playing fields of Eton," but most people I've talked to think it meant that the English dedication to team games developed character in their children. (The saying, by the way, was attributed to the duke by a French writer 40 years after Waterloo, and the Duke's descendants refuted it.) Only a fool would advance the claim nowadays that team sports are character-building. Implicit in "character" are dogged courage in the face of difficulty, self-reliance and self-control, whereas the zeitgeist as the second millennium closes is to express your every feeling as it surfaces and worry about the consequences later; to cry foul when referees miss cheating by the other side but to cheat yourself where there's a chance of getting away with it. Success in individual sports such as track and field, cycling and boxing was once impossible without a depth of character. You couldn't blame anyone but yourself... if you couldn't hold on in the straight with another athlete, or if your punches were too slow... It required guts to hang on and win, or to take a beating with dignity, and with no excuses available. But things have changed in these sports too with corrupt administrators, drugs rife and the extreme tolerance of thugs like... [Rapeman. Concerning old guys], perhaps it's only fair to end with another quote from Bacon's essay: "[Guys] of age object too much, consult too long, adventure too little, repent too soon, and seldom drive business home to the full period, but content themselves with mediocrity of success." ...[□ 93%] of children aged 5-17 in N[Z] are regularly involved in sports... says the Hillary Commission's... 1998 National Physical Activity survey. [The commission's] chief executive... says there is a drop off in participation among teenaged girls (from 94 to 84[%]) but this is much lower than thought – to have that many previously being physically active is world-leading stuff.

...Size does count as big money dished out... RUGBY, netball, cricket and golf are the major recipients with the Hillary Commission announcing grants of \$4.7 m... to national sports bodies under its [annual]funding schemes... part of a \$15.5m spend by the commission. The major investment goes to the... Sports Foundation, with \$10.8m for the coming year. The foundation is charged with turning that money into top international performances by N[Z]ers and will announce its individual grants to sports bodies this week... Meanwhile[the]... Commission general manager... said the \$4.7m grant to sports and leisure bodies was reflective of their management and membership developments... "The bigger sports tend to be well managed and because they have so many members, they deserve some public investment..." ...The allocations were split between 82 national bodies... [with the top 4 receiving grants ranging from '\$320,000 (rugby union) to \$200,000 (both cricket and golf – though golf's total didn't include the \$95,000 handed to the NZLGA), while the lowest grant was \$2500 (luge and dragon boating'). There] were a couple of success stories from the latest round of funding. Karate N[Z]'s grant had risen from \$6,000 to \$20,000. The Gymnastics Association grant had increased from \$86,000 last year, to \$116,000... ['Skiing (\$130,500) came ahead of swimming (\$130,000). Other grants included table tennis (\$40,000), croquet (\$25,500), darts (\$17,000), gliding (\$14,000), archery (\$8000), ice hockey (\$5000) and AUSn Rules (\$4000). Organisations for disabled sportspeople received a total of \$164,500.'

...a NZ] sporting icon... was last night choked with emotion as [it] pondered the future of his fundraising trust to help disabled children. A new sports award, set up by the Sports Foundation, is to start early next year. The winner will be announced about a week before the long standing Halberg Awards. Sir [Sporting Icon] said the rival event would undermine the Halberg Awards, the major fundraiser for his trust. "The proposal is to run the foundation's award before our dinner and there will be huge confusion in the market. If we don't have a good awards dinner and don't run a profit, I know our programmes for our children will be at risk." The trust provides sporting opportunities for disabled children across the country from its revenue of about \$1 million a year. The trust chair[perso]n... yesterday quit her Sports Foundation board position because of the conflict. "I don't think there's room in the market for more than one supreme sports award. No matter what you say, the new award is going to diminish our project,"... [The] former world squash champion, said the timing of the foundation's awards... had to be a battle of the television networks. TV3 was a key supporter of the new awards, whereas TVNZ televised the Halbergs... The trust had invited the foundation to sponsor categories of the Halberg Awards, but that offer has been declined... The foundation chief executive... said the concept could only enhance the

Halberg Awards. The new award was aimed at raising the profile of all top sportspeople and was not meant to be competitive. The foundation... would not release its award details... But information leaked to the *Weekend Herald* reveals they will have a "people's choice" format where the public votes from a list of 20 candidates through an 0900 phonenumber and mail-ins.

...On behalf of the Trustees of ASB Trusts, I am pleased to present the eleventh Annual Report to the people of the Auckland/Northland region. This report of the... Trusts' operations records a vintage year for donations. Total donations to the... region exceeded \$32,000,000 – nearly \$10 million more than last year. The Trusts were able to sustain donations at this level because of prudent investment policies which returned 9.5% on the diversified investments of the Charitable Trust and an increased dividend from ASB Bank paid to the Community Trust... The Trusts have made donations to organisations which address themselves to urgent social needs, provide constructive leisure and sporting activities for young people, and enrich the fabric of life in the varied communities in our region... In the past year [the Community Trust] made... 249 donations totalling over \$6.4 million... to improve local sports and recreation venues, to assist disadvantaged and disabled citizens, and to meet the educational needs of children and young people... [10 donations were for \$100,000 or more, with the largest (\$350,000) going to the] Auckland Philharmonia Orchestra Society Inc... [and the lowest (\$500) going to the] NZ Federation of Accordionists Inc... [Other donations included \$4000 to the] Auckland Bridge Club Inc... [\$13,700 to the] Waiheke Pottery Society... [\$80,000 to the] Houhora Big Game & Sports Fishing Club Inc... [\$29,000 to the] Cleveland Volunteer Fire Brigade... [\$4,160 to the] NZ Society of Genealogists – Howick... [\$1,500 to the] Manganui Community Library... [\$32,700 to the] Whangarei Steam and Model Railway Club Inc... [\$15,761 to the] Glenfield Community Toy Library... [\$35,400 to] Triangle Community Television... [\$20,642 to the] Waitakere Multiple Birth Club... [\$10,000 to the] Boots 'n' Blue Jeans Club... [\$3,900 to the] Camp Fire Club of Glen Eden... [\$1,650 to the] Whangaparaoa Residents and Ratepayers Assn... [\$8,640 to the] North Shore Theatre and Arts Trust... [and \$5000 to the] Hokianga Historical Society... [The Charitable Trust made 378 donations totalling \$26,287,485', mostly to schools, hospitals and community social services groups. However, some sports and arts organisations were included.] Particular highlights have been donations to North Harbour Tennis [\$1,500,000] for their new Tennis Park at Albany... and... to the... Eden Park Trust Board [\$2,200,000] for the new North Stand... [Another two organisations received a donation worth over \$1,000,000. 55% of donations were for \$20,000 or less and a further 18% were over \$20,000 but less than \$50,000]. Donations withdrawn from prior periods [totalled \$429,885]... Thanks to more than a decade of partnership between the Trusts and the community a huge variety of projects has been sustained... Total donations to community and charitable organisations in our region since 1988, when the Trusts began, are now \$184,000,000 to 5,843 organisations. At the same time the capital base of each Trust has increased in value... In order to comply with the requirements of the Inland Revenue Department, the ASB Bank Community Trust and the ASB Charitable Trust must be separate entities... The Community Trust's assets were \$44,000,000 at inception and they now have a book value of \$166,400,000. The Charitable Trust began with \$252,000,000, the proceeds of the sale of 75% of ASB Bank. That sum was invested in funds diversified by asset class and geographical area, and the capital of the Charitable Trust is now \$440,000,000... The Trust's shareholding in ASB Bank Ltd has increased in value from \$142,150,000 to \$163,850,000 being 25% of ASB Bank Ltd's ordinary shareholders' funds... [Furthermore, the] \$100,000,000 general reserve in the Charitable Trust has been maintained... Expenses for the two Trusts were below budget. The ratio of expenses to income for the combined Trusts was 2.8%. Joint expenses are allocated between the Trusts according to the number of applications processed, and each Trust bears its own specific costs... Each Trust continues to inform the public of its activities through appropriate news releases, publication of annual accounts and donations lists, and newsletters. Lists of donations are released every six months... There are no staff changes this year. Enquirers continue to be astonished at the way the Trusts operate, with so few staff. That is due to the quality of the six staff, and... the Secretary Manager. All Trustees appreciate the staff's commitment to the work of the Trusts... Last year... three Trustees... retired... The Minister of Finance reappointed... [two people], and three new Trustees joined us.

...MEMBERS of a West Auckland community grants committee are being asked to consider resigning. The resignation call was made to all 12 elected representatives... [– including 5] who have not yet had the chance to attend a committee meeting... [–] on the Te Aawaroa/Waitakere Community Organisation Grants Scheme (COGS) in letters from its National Advisory Committee. The COGS committee is one of 41 publicly elected nationwide to oversee the allocation of Internal Affairs funds... There has been disagreement within the committee and the... [– t]he committee approved grants totalling \$8662 to four trusts registered to [one member –] ...and behaviour at meetings... [In related news, n]ext year will be tough for sports... and community organisations dependent on dwindling sponsorship dollars. Sports without a high television profile are hardest hit as their corporate sponsors cut costs in light of predicted economic doldrums... [T]he executive director of the Swimming Federation... says less sponsorship [already] means swimming is becoming a user-pays sport. Overseas tours that once cost competitors... \$500 each will rocket to \$2000. Training for lifesavers patrolling beaches from Raglan north is also suffering. The general manager of Northern Lifeguards... says prizes and incentives for the under-14s have gone and education and exchange programmes for adult lifesavers have been cut to the bone. Power N[Z] remains lifesaving's main sponsor, but its top billing means other firms are reluctant to provide money. Companies want to see direct benefit now... "The feel-good fuzzies were a thing of the 80s." Arts organisations also view next year with trepidation.

...Oil giants cut arts cashline CASH-STRAPPED oil companies are pulling out of corporate sponsorship, leaving [arts] organisations... without major backers. Shell has just pulled out of sponsoring the Royal N[Z] Ballet after 18 years of funding a dance student and ballet season each year. It has also stopped funding the N[Z] Debating Championships, saying it is reviewing all spending because profits are down. Mobil will not televise the Mobil Song Quest next year, to cut the costs of its most expensive corporate deal. This year, Caltex cut back its sponsorship of the National Opera of Wellington. And the Symphony Orchestra is struggling financially because of flat corporate sponsorship... BP stopped supporting the orchestra about two years ago – hence the demise of the BP Pops concerts... Arts organisations say high-profile events like the America's Cup and the Millennium are competing for the corporate dollar and big companies like B[IL], which also used to back the ballet, are shifting offshore... [The Royal NZ Ballet's] chief executive... said dancers were in mourning after learning Shell was pulling its sponsorship. The ballet has cancelled a programme for next year for financial reasons... [The] Cultural Affairs Ministry chief executive... said [it] was aware the national ballet and orchestra were struggling to maintain their corporate sponsorships[, but] would not reveal if they had sought extra government funding to break even... [The chief executive] said a survey commissioned by the ministry this year assessed cultural sponsorship in view of business changes and high-profile events like Apec and the America's Cup... Of the 70 businesses the ministry surveyed, 42% thought cultural sponsorship would decrease over the next three years, citing the state of the economy, major sports events and the lack of commercial value in backing the arts.

...Sponsorship goes out of fashion... About now Auckland University's School of Executive Programmes was to run a three-day course on sponsorship. But lack of interest killed it. "The market was agog with indifference," says[the school's] director... Arts and sports organisations can only agree as the corpses pile up in the graveyard of yesteryear's popular events because they could not find a sponsor. Here lies the Smokefree Fashion Awards, the... Challenge Ceramics Awards and the [Challenge] Marathon. For the first time in 35 years... Challenge has no sponsorship deal on its books, despite receiving a weekly average of 20 applications. Gone, too, is the Electricity Corporation's involvement in the Katherine Mansfield memorial fellowship, the 34-year relationship between WestpacTrust and Chamber Music N[Z]'s annual school concert, and this newspaper's backing of the Auckland Philharmonia and the WestpacTrust rescue helicopter. Opera in the Park will not go ahead in Auckland if a new sponsor cannot be found to replace Schweppes, which has ended its two-year sponsorship deal worth... \$250,000. [Its p]romoter... says the

decision was made in A[US], “where they don’t know the event.” [The promoter] has approached 35 local firms, which have all turned him down because they expect a tough market next year. Christmas in the Park (Coca-Cola) and Starlight Symphony (Sky City) are still going ahead. [‘However, the Twinings Sky Show – an air and fireworks spectacle that for the past two years has drawn thousands of people to the Waitemata Harbour edge – has been cancelled (a number of air shows have been cancelled in the past few months, with promoters citing mounting costs as the problem – the RNZAF’s 60th anniversary was canned and a big Hamilton event called Flight 97 postponed until 1999’).] *Crimescene* will not be on television next year, N[Z] Insurance having withdrawn its sponsorship... Mobil Oil... can receive up to 50 requests for sponsorship each week. But, faced with price wars, Mobil is slashing its budget. Gone are... the Wellington International Festival of the Arts and the Christchurch Arts Festival. Under review... is the 40-year-old Mobil Song Quest... Similarly, Caltex Oil is reviewing its 6-year-old sponsorship of... the Parafed National Games and road safety campaigns. Mystery surrounds the sponsorship market... A study published this year by Creative NZ estimates... 30[%] of the \$100 million invested in visual arts each year comes from private sources... [A] sponsorship adviser... surveyed the top 200 firms in 1996 and found... half claimed to be sponsors. But a number... gave donations, which is not sponsorship... Both the Hillary Commission and Creative N[Z] have been frustrated in attempts to[do] research... Companies regard... sponsorship deals as commercial secrets. Non-profit organisations receiving... money do not talk... about it either...

TALKFESTS are not everybody’s cup of tea. Some truly are a waste of time. But last year I happened to attend four good ones. For me, 1997 was the Year of the Talkfest. All four talkfests emerged from one big fact of our recent history: during the past generation, N[Z] has become independent. Historians give many dates for the birth of the independent N[Z] nation – 1856 (when the colonial Parliament got up and running), 1867 (when the last really powerful Governor left office), 1908 (when we were promoted from “colony” to “dominion”), 1915-6 (when nationhood was “earned on the slopes of Gallipoli”), and 1947 (when we belatedly endorsed the statute which recognised dominions as independent nations)... The hard fact is that, while we were technically independent from 1908 or 1947, we were economically and culturally dependent on Britain until the 1960s. In 1973, it was not us that left home, but Mother Britain – [who] ran off and joined a Franco-German commune known as the EEC. Even 1973 was only the beginning of the end. As late as 1982, during the Falklands War, the [PM of NZ] (Rob Muldoon) could write an article for the *Times* of London entitled “Why we stand by our mother country.” ...In the past few decades, N[Z] has shifted from economic and cultural dependence on Britain to having its eggs in many baskets. “Muldoonism” and “Rogernomics” are merely aspects of a painful process of decolonisation... The good thing about 1997... is that people are at last beginning to realise it. One talkfest was... a conference on British-N[Z] relations – past, present, and future. It was part of the remarkable “Link” programme, which this year has celebrated 50 years of the British Council’s work in N[Z] by supporting literally hundreds of activities. As I... [– the] Professor of History at the University of Auckland... – ...understand it, the Link did not try to turn back the clock to the days when N[Z] saw itself as the Britain of the South, nor... did it advocate continuance of the traditional brain-drain of N[Z] talent to Britain. Historically, we have had a lot of our people in Britain’s top jobs... I was disappointed when [a NZer] missed out on the leadership of the British Labour Party. Having a [NZer become PM] of Britain would have made a great last line for the book I am working on... What the Link programme did do is recognise that the way forward is not to write Britain out of our past or our future. N[Z] is a joint owner of British history... [T]he... Poms speak some of our lingo and share some of our history, and we are quite used to each other’s funny little ways. It would be stupid not to use these facts to maintain an enriching relationship, as long as it is based on equality and mutual understanding. Scottish devolution raises another interesting possibility. The population of N[Z] is proportionately more Scottish than the population of the United Kingdom. I have therefore suggested to various British authorities that they give us Scotland. So far, this has gone down like a lead balloon. But historians are used to their ideas taking a while to catch on... My second talkfest... was the Population Conference. Born of coalition politics, it may have been the right thing done for the wrong reasons. But talkfesters take what they can get. It was really an immigration conference... Perhaps the most interesting thing about who we think we should let in is who we think we have already got. Some population talkfesters did not seem to realise that N[Z] is already ethnically diverse, and has been for almost 200 years. The first Indian immigrant arrived about 1810... German immigration dates from the 1840s, and a recent study claims that several hundred thousand N[Z]ers have some German descent. Maori genes are quite American, courtesy of 30,000 New England whalers who sowed their oats here in the first half of the 19th century... My third talkfest... was a Foresight Project workshop. The project was recently launched by the Ministry of Science and Technology. It is intended to help them design their long-term research investment priorities and to encourage planning for the future. The Foresight talkfesters painted a dramatic picture of this future, starring an “information tidal wave.” New technology is hugely increasing both the amount of information and the means of access to it. This is not just some computer boffin’s heaven. It will change almost everything, from milking cows to making spaceships. New ideas become conventional wisdom in a couple of years or less. The speed of change is increasing exponentially. The Massachusetts Institute of Technology claims that 80[%] of the systems, processes, services and products that today’s 5-year-olds will experience and use as adults have not yet been thought of. Future-shock prophecies, of course, are old hat... [But try to spend] an hour on the Internet. You can access the equivalent of a thousand libraries in an instant. After a while, you don’t even notice which country the particular database you’re using originated in. There are few borders, few limits. The mounting tide of information and globalisation faces us with a big challenge. Unprocessed, it will drown us. Information, as is, where is, is no use to anyone. To convert it into knowledge... we need to interpret it, understand it, use it. To do this we need to plan and build skills, or “competencies,” of various kinds – surfboards which will allow us to ride the information tidal wave. This is bound up with another challenge: who the hell are “We”? ...MY final talkfest... was a workshop at Te Papa Tongarewa, the new Museum of N[Z], which has risen like an architect’s wet dream on Wellington’s waterfront. Long a victim of the Tall Papa syndrome, the museum is almost up and running, and it’s looking pretty good. With a bit of luck, N[Z]ers will soon start seeing it less as a Wellington advantage at their expense and more as their cultural embassy in Wellington. The workshop issue was whether Te Papa had a responsibility to help make its message through the research and scholarship of its staff, or whether it should concentrate on communicating its message to as wide as possible a public. The conclusion, thank God, was that it had to do both. Heritage is not only about preserving a sense of the past, but about growing it. We cannot afford to have an institution the size of Te Papa standing on the sidelines and communicating knowledge without helping to grow it... NEW ZEALANDNESS is a tangled web of culture, art, slang, sport, heritage, identity and many other things, all of which need to be developed as well as preserved... Looking both ways, we see that there is no time, in the past or the foreseeable future, when New Zealandness... has been more important. Yet how much do we invest in researching and developing it? There are important bits and pieces here and there, but the short answer is: not a lot. Why, some ask, should the public help fund N[Z] arts, television, film, kapa haka, museums and the rest? There are many answers. One is another question. Why should the public fund a N[Z] Government. If we are not prepared to meet the political and cultural overheads of being a nation, we should take our culture direct from California by satellite, contract out the Government... and be done with it. The Treasury may say we cannot afford to subsidise a cultural infrastructure. If things are really that grim let’s contract out the Treasury, and invest the savings in cultural futures. The present is one of the very few great turning points in N[Z] history. The future will have risks, dangers and difficulties... [but] we need to manage it so that all N[Z]ers have a chance of surfing the information tidal wave, rather than just a fortunate few. The good news from the past is that we have survived tidal waves of change before, and come out the other side comprehensively transformed but still recognisably Kiwi. All pasts were futures once. [‘So what are the major political parties offering the arts? They agree that we define ourselves and the world around us through our art and cultural pursuits. Labour: “The arts are vital to our view of who we are and how we see ourselves and the world.” Alliance: “A vibrant and diverse cultural life is an important indicator of the health of a society.” NZ First: “Great

countries have great artists." National is "committed to maintaining and enhancing the excellence of NZ's cultural sector." But despite the fine words, arts policies have a low profile. The Christian Coalition doesn't even have one, though they "support, uphold and encourage the arts." Neither has Act: "The Government's role in people's lives should be reduced. The arts is not a core function of government so it is unlikely that we would increase funding or support.""]

...The arts will develop in spite of politicians As one of the 10 members of the Heart of the Nations strategic working party, my gripe at the Government is probably best expressed in part of a letter I wrote last week to [the Associate Arts] Minister... in which I said how dismayed I was by the response to the report. "It's not that I think for a moment you had any obligation to agree with the report or unreservedly accept its proposals but I do believe its authors were entitled to the dignity of a considered and intelligent appraisal and not just patronising, offhand sniping through the media... I've read press and radio clippings of your comments and nowhere can I detect any coherent indication of where you think the report deviates from the terms of reference, or which figures are supposed to be inaccurate, or where it spends too much time in the past. It would have been good to have the courtesy of an intelligent response before you began your public campaign against the report." And still there's no coherent response. The comments from the associate minister have been largely confined to catchcries. The Government... wanted something "evolutionary not revolutionary." There would be no "restructuring for the sake of restructuring" and "we asked for fish and chips and they gave us a fishing-boat and a flour mill." All very metaphorical... And so, by the end of this week the discussion about the report had narrowed to whether or not it had recommended the abolition of Creative N[Z] and whether that would be a good or bad thing. Yet there is little mention of C[reative] N[Z] in the 150-page document which makes policy and, yes, structural recommendations covering the whole \$10.8 billion arts and culture industry... Many people have asked me whether I'm disappointed by the Government's determination to shelve the report and ignore its recommendations. My answer is that I've been around long enough to be insouciant about this sort of thing and, anyway, I believe the need to develop the arts and culture sector is so economically compelling it will happen anyway. Unfortunately it will now take longer and grow more haphazardly, more Topsy-like, than if the Government attacked the issue more... well, yes, more creatively.

...Hopes for a regional fund to foster major arts and cultural projects in Auckland are all but dashed. Auckland and Manukau Cities remain alone as potential contributors to a regional trust following a decision yesterday by North Shore to pull out of the partnership – a move which has led Manukau to rethink its position. The North Shore City Council voted to keep its... \$1.6 million... share of the \$10 million Infrastructure Auckland released to councils when it replaced the Auckland Regional Services Trust last October. It was originally intended that the one-off lump sum would be spent on "significant projects in the Auckland region in the areas of arts and culture." ...An umbrella group representing 70 arts groups lobbying for the regional fund said North Shore's move was disappointing, yet understandable... Regional arts groups [had] argued that pooling the money would prevent the \$10 million being frittered away. But Government legislation did not allow for this, prompting Auckland[']s Mayor... to seek an amendment allowing local authorities to transfer their shares into a joint trust. Parliament has yet to consider the law change.

...Underfunding has left artists fragmented, dispirited and leaderless, says a new report... commissioned by Creative N[Z] and a Hamilton arts trust and released yesterday... It... says Creative NZ needs to do more to promote local art and artists, and suggests that it forms partnerships with the public and private sectors... Creative NZ receives \$4.4 million a year in grants from the Government and the rest of its income comes from the L[GB]. Last year this was \$20.2 million. The visual arts share of this has fallen from \$2.77 million in 1990 to \$1.72 million in 1996. The... report recommends that the agency increase its funding of the visual arts and give priority to study travel, grants for individuals, capital and equipment grants, workshops, residencies, publications, public exhibitions, marketing initiatives and community projects... It also recommends the formation of a national organisation to develop programmes and initiatives on behalf of Creative NZ... Several categories of artist interviewed, including those in mid-career, craftspeople, contemporary Pacific Island artists and Maori, said they felt alienated by Creative NZ. Artists also... criticised... its plan... [for the new national museum – Te Papa – to absorb] the National Art Gallery... widely perceived as a retrograde step for the visual arts... Artists [anticipate] a deliberate move away from the [gallery]'s tradition role of collecting and promoting N[Z] visual art, a cut in finance available for the buying of contemporary artists and the loss of a venue dedicated to visual arts. In the 1991 census, 1788 people called themselves artists – a 51[%] drop from 1986. But they have few opportunities to exhibit, the report says. Of the more than 600 galleries and museums in N[Z], only 33 larger ones appeared to have an interest in [local] contemporary art, and only seven of those were dedicated to acquiring and showing it.

...I LIKE to think that I'm not a complete barbarian. Certainly some things pass me by. When I visited a modern art gallery in London recently I tried to keep an open mind and thoroughly enjoyed it. Modern art is not my thing – big bosomy blowy [pictures of gal]s and French impressionists are – but most of the stuff was interesting. One piece of art stumped me though. It was a big wall screening an image of a thin, pasty white [guy] with a motley beard dancing to music you couldn't hear... in a bare room with just a tiny purple dinosaur figurine on a ledge in the background. Oh, and [the pasty guy] was naked. Admittedly, his penis was the size of a small dachshund. But a big organ isn't art, it's the luck of the draw. I stood and stared for a while, along with a dozen other people, and tried to look contemplative. But this artistic work's merit still escaped me. I'd hate to think how much they paid for it. And I have to say that Colin McCahon's piece that Te Papa has just bought for more than a million goes right over my head too... [(a) \$3 m... scheme honouring west Auckland's artistic past and future is being launched today[– t]he McCahon French Bay House Restoration and Residency Project aims to restore the humble home once lived in by [the renowned NZ] artist... and his family[; i]t also plans to build an artist's residence and a studio on the same property[)]... Black canvas, white writing. Can I say that if Te Papa can spend that much on art to retain our cultural heritage... can... it... explain why we should be grateful? And perhaps... explain the nude... and the dinosaur too.

...Academics, cultural commentators and those who would know best are often in denial that we most often measure our lives in the detritus of our times... Biscuit tins and cheap royal memorabilia, a pounamu pendant or cartoon characters singing "we are the boys from down on the farm..." may seem inconsequential, but they have cultural relevance and, for better or worse, have shaped us, both as individuals and as a nation. All of which is accepted in Te Papa, where a seemingly tawdry collection of items in a junk shop comes alive while a screen shows a melange of sometimes disparate, sometimes connected, cultural images... [T]his exhibit, perhaps slightly cynically entitled *Golden Days*, whimsically blurs the barriers between reality and fiction, as well as between our lofty self-image and the discomforts of what is more true about us... We will take from these images what we will... We were never "the way we were." That's condescending to our intellectual, social and cultural complexity. Te Papa addresses that. To hear again the hierarchical argument that certain art should occupy privileged positions is to fall for the notion that art is somehow morally uplifting. If that were true our galleries would be staffed by local versions of Mother Teresa and Gandhi. But already in criticisms of Te Papa we are hearing the view that somehow Great Truth is revealed in quiet contemplation of a... [painted drawing] or a Maori carving. Art and artefacts don't work like that. They are more subtle, more full of nuance. Great Truths are rarely Zen-like in their revelation, but art incrementally prepares the mind for other possibilities. A walk around Te Papa – and a word to the wise, put aside plenty of time[(the building, which 'could fit 250 average-sized houses inside and still have room', and was the 'largest project of its type in the world at the time' of construction)] – reminds us of our complexity at a time when most would seek simple solutions or revealed truths. Yes, there are problems with Te Papa: the exterior goes through architectural mood swings and you can't see the coloured glass panels looking good in even five years time. Having seen buildings magnificent and mundane across this planet, most of us won't feel the need for anyone from the Architects' Defence League to tell us otherwise. But given the right light and angle, it makes a marvellous postcard. And anyway, its local competition is a Warehouse and a BP service station... And yes, at around \$315 m... it has been expensive. But, as we all know, money evaporates and within a year few will recall the exact figure. And yes, it is in Wellington. For those in other regions who would have wanted a slice of that multi-tiered money cake that must smart. But

this is the national museum and it is the capital city[, as well as being the central city of NZ]. Get over it Auckland... It also seems churlish to note that the present display on the Chinese in N[Z] looks a little parsimonious and static. But it is no less moving for that and – in the light of last year’s anti-Asian racism which seemed alarmingly easy to foment – an important inclusion. If it looks anxiously inclusive, then so be it. It is better than denying we are as much victims as products of our time. One day we too will look as curious to those who follow us as we do in Exhibiting Ourselves... In 1940 people queued for six hours to see... tacky replicas of the Crown Jewels... Crazy, but... European N[Z]ers can live with that. To some minor extent Te Papa does perpetrate the myth of European soullessness. If our European ancestors look buttoned-down, well, they were. People will find their contemporary spirituality where they will. As someone who... in the late 50s... attended an Auckland boys’ school where we in the lower forms were untroubled by any reference to N[Z] history, I delight in seeing a Hello Sailor single in a museum. It might not have the gravitas of a Maori or Polynesian artefact, but it makes sense to me. National museums are less about what is in them than what you bring to them. And there are things you simply won’t get. Me, I cringe at the sight of a stone dumped in the forecourt which “celebrates the many journeys and identities of all communities and peoples of N[Z].” Uh-huh... So there is no one Te Papa. But then... has there ever been, or is there now, one N[Z]? We cannot fully comprehend the past despite our best intentions; we can only observe it from our own cultural remove. We see this world from our own disadvantage point, as the Treaty of Waitangi display acknowledges. Here... and elsewhere, Te Papa has already, and doubtless will continue to provoke that most knotty of intellectual activities – cultural debate. In that, Te Papa is active as much as... interactive. No bad thing, I would have thought. It’s quite some museum that affords you meditation on a McCahon, the opportunity to follow an immigrant’s story, stand in jaw-dropping awe of a great waka, allow kids to dig for fossils – and still let you say, “let’s do the Time Warp...” And anyway, a N[Z]er wrote that...

[The NZ Herald] finds the German capital redolent with history, full of museums recalling just about everything of note that ever happened there, much of it gloomy... AT 145m, it was the longest tunnel ever dug by the legions of desperados determined to get to the other side of a concrete slab wall. The tunnel, dug at a depth of 12m, took 10 months to construct. And when it was finished, 57 refugees made their escape in a night-time dash for freedom. One [person] hid his fiancé in two suitcases placed next to each other. [The fiancé] had to stay there for 70 minutes while [her partner] made it across the border control. Another [person] converted his car’s large petrol tank to carry a friend inside. An engineer and his family got to the West in a homemade balloon. These and hundreds of other tales are at the heart of the Checkpoint Charlie Museum exhibition on the construction in 1961 and fall in 1989 of the Berlin Wall, and of life in the East and West of that city in between. It is believed that 239 people died trying to escape and more than 3200 were arrested. But 5075 escape attempts were successful. Little remains of the Wall now and it is hard to believe it once cut through 193 streets. At Niederkirchner there is a 200m stretch. Mostly the Wall is marked by two rows of slightly raised stones that wind across the roads following the old route. Many locals, my student guide tells me, miss the artwork that brightened the Wall on the western side... Berlin has about 160 museums and they are not always user-friendly for English-only speakers... Those interested in contemporary art should visit the New National Gallery, which has an exhibition on 100 years of German art. Among the usual suspects you think a 5-year-old could have painted are some striking works... At the Old Museum on the city’s museum island you walk through crowded rooms of innovative art before arriving at an exhibit on Nazi propaganda and the art the Nazis found offensive... At Niederkirchner the Wall borders an old Nazi building where Jews and leftists were interrogated, documented and sent to concentration camps. It is a bleak place of concrete, dirt and brick and, on an oppressively cold, darkening November afternoon, the sheer awfulness of that period of German history hangs over it like a shroud. The gloomy realities of the past are always around the corner. November 9 was a night of celebrating 10 years since the Wall’s collapse but historically it marked the Crystal Night, when Jewish synagogues were destroyed... The hard-edged... new Jewish Museum Berlin in Lindenstrasse won’t hold an exhibition until next year but already is drawing crowds and running guided tours of the remarkable architecture... It is an enigmatic, wilfully obstructive building; you can walk around its angled forms looking in vain for an opening. The entry is in fact next door in the old Berlin Museum, and the visitors start the tour in the basement. What a basement! Space and light are used to manipulate emotions and the overwhelming feeling is one of disorientation. There are three tilted axial corridors with light cutting through the black ceiling slightly off-centre. In the... garden, 49 concrete pillars are tilted at 12 deg angles to project an unconscious confusion. [The architect] has avoided obvious symbols and statements such as the Star of David. The Holocaust Tower is powerful in its simplicity. Holes in the walls let in the outside temperature. A small ray of light peeks from the very top. In strong sunlight the tower can take on a yellow hue. On a dreary snow-laden November day it has a numbing chill...

French follies... – ...France rues the architectural legacy of its latter-day pharaoh... The four 80m-high towers, shaped like opened books, loom out of the sprawling complex on Paris’ Left Bank. Pigeons peck on the ground below... [D]rizzle blows along the River Seine and swirls around the empty expanse. Behind the sludgy brown windows, there is no sign of life. This is the National Library of France, a supposed nerve centre of French culture. But it is a dead and uninviting place, loathed by local residents, shunned by browsers and students alike, a \$3 billion behemoth that gobbles up so much cash in running costs – \$300 million a year – that its desperate managers have had to cut back on buying books. “Look at it. They only finished it two years ago, but it already looks old,” said a local. “It looks like a high-rise council estate from the 1960s.” ...its 36-year-old architect[’s]... idea: four storage towers of glittering transparent glass, with underground reading rooms, rather like monastery cloisters, surrounding an interior pine forest. Doh! As any librarian could have pointed out, books do not like light and heat. So [the architect] was belatedly obliged to install wooden panels behind the windows to block out the sun, making the towers look like dark, unfriendly hulks. After the project was completed, five years behind schedule, library workers found they had to make a 300m walk just to get books from different sections. The work areas are prison-like, cramped and windowless, with harsh neon lighting. Water has leaked into the basement from the Seine, and for the first year of its life, the library’s \$180 million computerised book retrieval system was a disaster, taking hours to deliver books and sometimes even crushing them... Yet the library is only one of a series of architectural disasters bequeathed by Francois Mitterrand, who during his 14 years as President of France pushed ahead with prestige projects on a scale that would have stunned the ancient pharaohs. Mitterrand... – [who] died in 1996 – ...made no secret about his eagerness to leave his stamp on the French landscape and used to the full the discretionary powers of the presidency during his 1981-85 stay in the Elysee Palace. “In every town, I feel like an emperor or an architect,” the President wrote in a book, *The Wheat and the Chaff*... Not since the 19th century, when Georges Haussmann drew up his boulevard system, has anyone left such a mark on Paris... Among the worst Mitterrand bequests have been his opera houses. The Bastille Opera, derided as “the Camembert” or “the Loo” for its shape and use of lavatory-style tinted glass, was supposed to be an arts magnet for the masses. But the cost of building it (\$900 million) and then maintaining it has been so great that productions are few and tickets are way too expensive for the poor. The Lyons opera house, opened only in 1993, was ordered closed this month as an emergency measure after inspectors ruled that its stage and machinery were dangerous. Like its partner in Paris, the building has been swathed with netting to stop chunks of glass or stone cladding from tumbling on to pedestrians... Mitterrand’s biggest scheme was a massive concrete arch on the city’s northwestern perimeter worthy of the ambitions of Romanian dictator Nicolae Ceausescu. Boxy, monolithic and with tiny windows, the “Grande Arche” is visible from miles around but is rarely visited by Parisians or tourists. It has suffered fabric weaknesses and disfunctions that have cost a fortune to fix. From the Grande Arche, you can gaze down a long avenue to the Arc de Triomphe, which leads to the Champs-Elysees and finally to the Louvre museum. There, in an imaginative stroke that stirred great controversy but is now almost universally praised, Mitterrand installed a glass pyramid, designed by [an] American architect... to bring light down to a subterranean exhibition space.

...New York’s breathtakingly updated planetarium is set to become an architectural landmark. GET OUT of the cab a little early. Walk through Manhattan’s Upper West Side – ...all rich brownstones... trees and dog runs, bathed in shabby gentility. Then step from the snows of Central Park, turn a slippery corner to your left, and behold one of the new wonders of the world. The Rose Centre for Earth and Space, opened a few weeks

ago, has already been hailed... as “perhaps the purest piece of monumental architecture built in the U[S] since the Washington Monument,” and compared, rightly, to [a US architect]’s Louvre pyramid. [Another US archit]ek’s vision, realised in... six years at a cost of \$US210 million... is a beautiful, astonishing creation, a feast of superlatives. Technically, it’s a planetarium, an upgrading for the rundown Hayden Planetarium that sat on the same site for decades, but that’s like saying St Paul’s Cathedral in London is technically a church. A sphere, the cleverest... in the world, sits, apparently hanging in air, inside a glass cube so thin, so... transparent that it seems, in bright sunshine, not to be there at all. Inside, the American Museum of Natural History has created the most stunning, hi-tech, effective displays of our universe ever to exist... [T]he exhibit designer... wanted to create a “sense of aesthetic awe.” At a time when the language is so perverted that a... sneaker or a perfume is described as “awesome,” [the architect and the designer] have succeeded magnificently, and a quaint, half-forgotten museum is now set to become one of New York’s biggest attractions. The planetarium sphere is impressive enough – the most advanced... supercomputer projector in the world fires a filigree of light at a darkened skin inside the dome, recreating the thousands of stars in our galaxy and beyond... Outside, though, the sense of awe increases. Walking down the “rings” between sphere and glass, calibrated to represent time since the Big Bang – every step you take is 75 million years – and coming to the last step, where the relative longevity of [hu]mankind is represented by a strip the width of a human hair, it’s hard not to find it almost funny.

...It cost \$US405.90 to make the Star-Spangled Banner in 1813 but \$US13 million... from [a French]fashion designer... will help restore the flag that, though tattered and faded, is a powerful symbol of American liberty. [The US]President... and his wife, [while]standing near the three-storey flag hanging in the Smithsonian’s National Museum of American History, announced [the fashion designer]’s donation yesterday as part of a turn-of-the-century project to “save America’s treasures.” “Now it’s standing there, a little worse for the wear, but quite ready to be restored,” [the] President... told preservation advocates gathered in the museum’s flag exhibition hall. “And in that sense, it is a metaphor for our country, which is always ready to be restored.” For [his wife], the visit to the banner was the first stop on a four-day bus ride to historic sites in Maryland, New Jersey, New York and Massachusetts to encourage grassroots interest in preserving America’s past. “We’re going to ask every [USer] to help preserve the artefacts, the documents, the monuments, the sites that tell the American story,” [the First Wife] said. The Star-Spangled Banner inspired the patriotic poem by Francis Scott Key that became the US national anthem. Key wrote it after watching the giant red, white and blue flag survive a night of British cannon shot as it flew over Fort McHenry, near Baltimore... on September 14, 1814. The 9-by-12m banner was made of wool bunting and... woven by professional seamstress Mary Pickersgill and her 13-year-old daughter, Caroline. With 15 stars and 15 stripes to represent the number of US states at the time, the Star-Spangled Banner is showing its age. It is deteriorating from decades of exposure to light, pollution and temperature fluctuations... About a quarter of the bottom of the flag has been ripped away. A large red “V” is in the middle of the flag, apparently an “A” that was added to it by the wife of Lieutenant-Colonel George Armistead, who was Fort McHenry commander during the war of 1812 and who saved the flag. The [fashion designer] helping to save the flag now... was hailed as a hero for the... \$US13 million donation – a good part of the museum’s overall goal of \$US18 million for the flag’s preservation. It will take \$US5.5 million and three years to preserve the flag itself. A further \$US6.5 million will be used to renovate Flag Hall and install the new exhibit and the rest will be used for educational programmes and an endowment for care of the flag. The project is believed to be one of the largest single textile conservation projects ever undertaken by a US museum. The banner will be cleaned stitch by stitch. It will be moved in October to a climate-controlled laboratory.

...A Maori cloak begun more than three years ago for a Far North marae remains unfinished because of a shortage of native bird feathers. The caretaker of the Te Huia Tupuke Marae... [is] anxious to see the korowai completed as the Kaeo marae [does] not have a proper cloak. “We’ve only got a tiny one which is used as an ornament on the wall.” More than a year ago [the caretaker] applied for feathers from Te Pataka o Tai Tokerau, the cultural materials committee, but had no luck. The committee distributes feathers which are plucked by volunteers from dead birds in workshops organised by the D[oC]. Maori groups can apply to the committee to obtain the feathers for cultural purposes... [The caretaker] was never told why her application failed... [A] local weaver... had had to make use of the feathers from birds such as turkeys, chickens and pheasants... [However,] another local... had the necessary experience to weave the top of the cloak with a special design to represent the whakapapa (genealogy) of the marae. [The caretaker] planned to reapply for the feathers if her marae committee supported that... “It would be nice to have something from our native birds.” ...The materials committee chair[person]... said repairing old cloaks got priority.

...From a tin shed out the back of Nelson, to an international showcase for Kiwi talent, the Wearable Art Awards have come of age... GAINING permission from the Reserve Bank to drill holes in more than 1000 5c coins is not a typical brief, but that is what one designer had to do for an entry in this year’s Montana N[Z] Wearable Art Awards. Other artists turned to nails, chip packets, human hair and Weetbix to style creations. One used painted silk organza worth \$4000. And spare a thought for the model in the Bizarre Bra category who has to wear a “growing bra” that features something alive. Organisers won’t spoil the surprise by saying what, exactly. One presumes it isn’t a leech. The highlight of the Nelson Arts Festival, the Wearable Art Awards run on three nights... The award’s founder[, who]... ran the first show to promote her gallery... has seen the event grow from 50 entries... to 400 entries this year... and now entrants can win \$50,000 in prizes. Impressed by her efforts, the N[Z] Tourism Board has asked [the founder] to stage similar shows in Bangkok and Singapore. In Nelson, more than 7500 tickets to the... Awards sold out in a week, seven months before the event, with a number of spectators coming from overseas. Despite the title of the awards, whether a creation is wearable is not the point. “They are simply walking works of art,”... [However,] if you’re looking for something you can actually wear, a new category this year recognises a combination of design flair and wearability... [Speaking of wearable art,] Taupo’s annual tattoo expo is... [t]o the unstained observer... a crash course in another culture. The event is one of the largest and most popular tattoo shows in the country, say regulars, who inject thousands of dollars into their vividly coloured skin and can’t wait to expose it. On Saturday, about 900 people filled the smoky bar... [of] the historic Spa Hotel... to listen to Meat Loaf and check one another out. The highlight is the show-and-tell competition, when attendees take to the stage, pulling aside long peasant-style skirts, leather vests and crocheted tops to reveal heavily decorated thighs, biceps, backs, necks, wrists and breasts[(you won’t see tattooed genitalia displayed here, but you can on the Internet). A g]overnment worker... of Auckland, as bright as a box of crayons from his collarbone down to his elbows and knees, is a cheeky entry with his maniacally grinning butt tattoos: Chucky to the right and Chucky’s bride to the left... says about 12 almost fully tattooed [guys] like himself follow the expo circuit and don’t even count the cost of their obsession. And if watching [guys] fondly rubbing cartoon-covered stomachs becomes a little overwhelming, there are other attractions. This year, [a]Japanese tattooist... joins the party, bringing his traditional tools and designs with him... Instead of the noisy machine used by most tattooists, [the Nip] dips metal rods tipped with needles into tiny pots of ink and punctures the skin by hand, using a gentle tapping motion. Forgoing the angry reptiles, voluptuous Native American girls and lurid unicorns offered at other stands, [it] produces serene mountain scenes and Samurai warriors. In another corner, Samoan artists sit cross-legged on a platform and apply traditional armbands, using a sharpened comb made from pig’s tusks. Three [people] work together – two to stretch the skin and one to apply the ink by hand... [Someone] who lies on a mat, arm outstretched as if giving blood, says their method is much less painful than most. But others at the expo like the pain. They say it’s addictive... A[n a]ward-winning A[US]n tattoo artist[’s]... booth sticker reads, “The pain is the passage, the tattoo the rite”. [The AUSn] is working on a Christchurch [resident]... applying a court jester to his neck. [The human-canvas] reclines in a chair, placid and unflinching although [it] was drinking the night before and that has made his skin more sensitive. His composure is impressive, but two teenagers from Hawkes Bay take the prize for pluck. Th[e 13]-year-old... and his 14-year-old brother... are by far the youngest competitors at the show. They may not yet have much in the way of arm musculature but they already sport large, old-school tattoos that demand respect – a shark curled around a skull for [the elder

brother] and a fire-breathing dragon for [the younger brother]. “It’s something we always wanted,” says [the 13-year-old]. “A lot of [our classmates] are very impressed.”

...THINKING of tattooing your toddler? Check out the US website www.babyink.com. “Baby Ink – where we believe that it’s never too early to start expressing your unique personality through professional, high-quality body art.”

...*Laser zaps up egos as it zaps away tattoos...* [The 37-year-old]’s life has changed in the past six weeks – since a laser started zapping her tattoo. The 37-year-old is one of the first people to use a South Auckland service aiming to improve people’s lives and self-confidence by removing tattoos. The Mangere Health Centre received its \$200,000 laser machine six weeks ago and has 1400 people lining up to get their tattoos removed... [(t)he machine was bought with help from the Mangere Community Health Trust and the Sky City Charitable Trust, which gave \$100,000 towards its cost)]... It is the first such community scheme in the country. Doctors at the clinic are experimenting with the intensity of the laser because the majority of their clients are Maori and Pacific Islanders and their darker skin makes it more difficult to remove tattoos without trace. [The 37-year-old] burst into tears when [it] had her first treatment. “There was just this great feeling of freedom – people see your tattoo and automatically make an assumption of what you’re like,”... The clinic’s doctors said... many patients had been unable to get work because employers had not wanted them to have visible tattoos. “It’s an ego trip to help people – it makes us feel really good.” The laser bombards the ink in the skin, breaking it up into little pieces that are then engulfed by white blood cells and carried into the lymph glands. The clinic head... said people with darker skin needed more treatments using a less-intense laser because they risked the laser attacking their high-melanin pigment. [The head] said there was no literature around the world on the difficulty but early results indicated the clinic’s method was working. The average age of people on the waiting list is 40, and most got their tattoos at the age of 16[– many having given tattoos to themselves using crude tools. While on the topic of *self-mutilation*, allergic]... reactions to body piercing have sparked fears of serious diseases caused by an unregulated industry. Piercing enthusiasts risk hepatitis and Aids, and doctors report that dermatitis and skin rashes are erupting because cheaper metals are being used to permanently puncture navels, eyebrows and less visible regions for decoration. The problem has been linked to nickel, which this month’s *New Scientist* magazine blames for a steep rise in allergies. The magazine says that despite E[U] guidelines on nickel levels in jewellery, many of the adornments being worn are causing problems on the Continent. Similar problems are being experienced here. An Auckland dermatologist... said the rashes were due to people wearing studs in areas where skin was more sensitive... Similar allergies resulted when button jeans or suspenders became popular. The rubbing of metal on the skin caused it to become inflamed. A professional Auckland piercer... tried not to use nickel-based metals. Stainless steel and silver leached significant amounts of nickel, so [the professional piercer] tended to use alternatives such as titanium for jewellery. [The professional], from Body Piercing Specialists, said there was a need for laws to govern the piercing industry because of the risk of infection and allergies if piercers had poor hygiene practices. People should be fined for causing injuries or infections rather than expecting professional piercers or GPs to fix up the mess afterwards, [the piercer said. ‘Last October, *NZ Doctor* magazine reported that body piercing might be exposing a new group of people to diseases like hepatitis C. In the US, there has been a dramatic drop in the incidence of hepatitis C among those most at risk of catching the disease – intravenous drug users. Despite this, the incidence of the disease has not dropped and health officials are blaming the growing popularity of body piercing and tattoos. A *Consumer* report says some teens get pierced by friends, at street markets or in shops with poorly trained practitioners, so “contamination is likely”’ (in addition, ‘tongue studs can chip or otherwise damage teeth, and if they come loose can block air passages’, plus they ‘destroy taste buds’)...

‘Walking through the city the other morning I was jolted from a reverie by the sight of a bloke having coffee at a footpath table. A pointed metal spike was sticking half an inch out from the flesh below his lower lip. Above it were other assorted rings and spikes. If the bloke had kissed his mother goodbye when it left home for whatever it does each day between coffee breaks, it would’ve left her with severe lacerations and some loss of blood. The bloke had enough metal in his eyebrows, lips, ears and nose to bring out the lethal deterrent squad at London’s Heathrow Airport if it went through the security gate. Had someone else done to him what it’d done to himself, cruelty and torture charges would’ve followed. I wanted to hear the bloke talk or laugh or put the cup to his lips because I suspected it would sound like a Jamaican steel band. Would the bloke laugh if I had said, “G’day Bo Jangles”? No, probably not. I wanted to ask him how his mangled mouth felt and what it all meant; but his demeanour wasn’t that of a bloke interested in quiet discourse on the psychopathology of self-inflicted wounds. When the bloke looked up with hostile eyes, I moved on. The next day I had met an attractive and personable young gal with a row of rings through her bottom lip as repellent as the coils of razor wire on top of the wall at Mt Eden prison. When I told a friend, the friend said sententiously, “Teenage revolt, that’s what it is,” which is a bit like saying the Hamah is a religious group. Will I ever adjust to protrusions of metal and threads of steel in young bodies? When I was young, tattoos were regarded as a form of self-mutilation. Now I think of them not as offensive in themselves but aesthetically as ugly (most of them) or pleasing (a few). But safety pins through the nose and cheeks and rings through the navel and even more private places is all a bit like thumbscrews for fun or electrodes on the genitals for kicks. It’s tinged with madness. At one time, self-mutilation attracted the blokes with the long-sleeved canvas jacket. They took you away for your own sake.’ •] **AN axe-wielding French artist in Colombia took a swipe at himself, chopping off his pinkie... Images of the artist then using his bloody stump as a paintbrush unsettled the nation when they reached the capital.**

...more than 80 artists [are] challenging the public perception of mental illness through art. [Thei]r paintings... will move around Auckland... as part of Mental Health Awareness Week next month. The... exhibition[, which] has been set up by the Project to Counter Stigma and Discrimination Associated with Mental Health... started yesterday at the Aotea Centre... [A]rt displayed outside mainstream galleries was often considered amateur, but the... exhibition [– which] can be seen later next month at the Holy Trinity Cathedral in Parnell and then the South Markets Arts and Crafts centre in Manukau City... [–] aimed to change that notion. “You don’t see these people’s work anywhere and often the artists don’t actually place any value on their own work because no one else has placed value on it,” [a spokesperson for the project] said. “Only through places where it is valued do some people begin to realise their work is of value.” ...Painting helped... [a patient who was s]uffering from depression... regain her confidence and concentration after being made redundant two years ago.

...*Artists come out of dole-drums...* [An Auckland] has sold almost \$5000 worth of art produced while legally claiming the unemployment benefit under a government scheme being extended to other unemployed artists from tomorrow. The government has yet to decide what proportion of the profits made by [the] Auckland... 34, will need to be paid back as it allows developing artists to go on the dole. A[n Income Support] programme means unemployed artists... will not be forced to take other work if they describe themselves as artists or “cultural workers” – a new category covering the unemployed in the arts – and can persuade a case worker they are working on a suitable project. Thousands... could be eligible for the scheme. The department has contracted the Dunedin Higher Trust, which piloted the dole scheme for artists, to decide what net earnings artists can make and ensure they report those. [The] Associate Arts Minister... hoped [the department] would treat artists like seasonal workers, with any earnings broken down over the period they were developing the project rather than on a weekly basis. The unemployed can earn \$80 gross a week.

...Passion and conviction drive [a NZ artist whose]... styles range from personal portraits to Biblical perspectives. [The artist recently] moved from New Plymouth to Titirangi where [it] hopes to hold exhibitions. “I... reached as far as I could in New Plymouth and I... think people need to see this art...” [It] believes God has given her a gift to glorify Him and help others. “When people look at my art, some are moved to tears... and some think it’s pretty controversial.” Her main mediums are acrylic and watercolours and her favoured style is surrealism. With the picturesque surroundings of Titirangi... and... the down-to-earth friendliness of west Aucklanders[, it]... can focus single-mindedly on her artwork, while raising her son...

The City of Angels seemed just like it had been portrayed on [TV] – hazy, big, and with lots of cars driving... very fast, on endless freeways patrolled by CHiPs... Mercifully, with a guide from the Los Angeles Convention and Visitors Bureau and a bus driver who had mastered lane- and

freeway-hopping, we were able to enjoy the tripping about as well as an eclectic array of places to see... One stop couldn't have been further from the madding crowd. We drove skyward to the Getty Centre – a... 44ha campus housing the collections of oil baron J. Paul Getty, and several research and educational institutes set up by the trust which has administered his vast wealth since his death in 1976. I imagined that walking around this beautiful complex... was like strolling around the acropolis... when it was new. Its grandeur was awe-inspiring – and that was even before getting inside. The centre is in the foothills of the Santa Monica Mountains and to retain its dominance the trust bought all the surrounding hills. Only a school, built many years ago, breaks up the green background to the white stone citadel. Known simply as “the Getty,” the museum and its 34ha of extraordinary gardens attracted 800,000 visitors in its first six months, after expecting to get 1.3 million in the year. Overseas visitors are advised to book well ahead. Admission is free but visitors arriving by car pay \$5 to park in a seven-floor building. They then board a driverless electric tram for a five-minute ride to a central plaza where they step out on to the fossil-filled Italian limestone called travertine. More than 92,000 sq m... was used as paving and wall cladding, after 290,000 blocks – ...16,000 tonnes – were brought from a quarry near Rome where it had lain for... 80,000 years. The museum consists of [5] two-storey pavilions housing changing exhibitions and the expanding permanent collections of pre-20th-century European paintings, drawings, illuminated manuscripts, sculpture, decorative arts and 19th- and 20th-century American and European photographs. The Getty Trust is so rich that to maintain its tax-free status it has to spend \$NZ4 million a day, making it the envy of art collectors the world over. L[A] has more museums a head than any other city in the U[S]... And like New York... more than 150 live theatres.

...Last week... New York's... wisdom was being called into question by, of all things, the halved carcass of a sliced pig... – a smallish sow sliced from snout to tail by [a] bad boy British artist... and preserved, with all its internal organs on display, in a tank of formaldehyde. A year ago, when it went on display in London as part of a deliberately shocking exhibition of post-modernist art, [the] pickled porker created a furore, as did other exhibits including a dung-splattered portrait of the Virgin in African robes and black face. Now the exhibition has crossed the Atlantic to New York, where it is about to open at the formerly staid Brooklyn Museum. New York's Catholics, who make up by far the largest block of the state's... voters, are outraged that their taxes are being used to support such sacrilege. From St Patrick's Cathedral to the pulpits of a hundred local churches, Catholic clergy have denounced the exhibit in general, and the Virgin in particular, as a calculated affront to their flock's most sacred beliefs. [New York]'s... Mayor... did not miss this opportunity to bring home the [political] bacon. In a series of ferocious public statements, [the mayor] first denounced the museum's board of directors and then threatened to yank \$US17 million in public funding. Finally, as [New York's] Cardinal... sang his praises from the pulpit, [the mayor announced that it] intended to evict the museum from the city-owned building where it has operated for more than a century... It was a weak performance[, however, because 'although US government departments aren't obligated to fund the arts, they aren't allowed to rescind funding because of an official's personal views.'

...since New York's mayor made his statements about one of its exhibits, the struggling Brooklyn Museum of Arts has had record crowds']...

A “surprised” video artist... won Britain's... Turner Prize with a black-and-white silent film tribute to comedian Buster Keaton. His win upset the pundits, as a[nother a]rtist... had been hot favourite with her unmade bed surrounded by soiled underpants, condoms and champagne corks. Her work inspired a protest by two Chinese artists who jumped on it semi-naked and tried on[the] underpants... The organisers of the £20,000... prize claimed th[is year's] event was one of the best in the award's 15-year history. It attracted... 60,000 viewers. The prize thrives on controversy. Last year it was won by [the] artist... whose elephant dung-marked Virgin Mary painting sparked outrage when it was shown in New York.

...a[n a]vant-garde Copenhagen art museum has been fined over a exhibition which gave the public a choice of killing goldfish by liquidising them in kitchen blenders... Ten mixers were lined up on a table, each containing a single goldfish. The choice of whether or not to switch on the current and turn goldfish into cold fish soup was left up to the public. Several fish died when some visitors found the temptation too great. [The creator] explained his art by saying that it confronted people with a fundamental choice. “It asks the question: do you want to kill, in order to show that we are masters at all times to decide between life and death?” The show caused uproar in Denmark... [Incidentally, a] piece of modern art due to be erected in Nottingham could prove fatal to passing pigeons. The highly polished steel mirror sculpture is due to be installed outside a theatre in the centre of the city. Scientists say that when the sun hits the mirror a beam of light will be created powerful enough to “barbecue” birds in flight, blind drinkers in the theatre bar and set light to litter and trees. Planning permission is being sought for a shade to shield the mirror from the sun.

...THE processes of sculpture [(or '3D-art')] are manifold. Sometimes they involve formal relationships, or the juxtaposition of materials. Sometimes a work derives its meaning from the dislocation that occurs when an object is moved... [A] sculpture in this year's Elam Sculpture Show consists of half a sackful of empty cicada shells... [A 3]rd-year student, spent every weekend last summer collecting the shells in the Titirangi bush... “...The work is... about the idea of continuation, change and transience. It's not about death because the cicadas have gone on to something else. It's also... about summers and memory.” [The artist] emptied her sack at the base of one [of] the elegant pillars in the old Unity Hall, the site the students selected to display their year's work. [30] students from first year through to masters level... contributed... to the exhibition, which in itself is a comment on the life of the building. The Sunday School Union was built in 1924 in Queen St above the town hall and its listing – category B with the Auckland City Council and category 2 with the Historic Places Trust – acknowledges the significance of its elegant neo-classical architecture... The sculptures occupy every nook and cranny... [One student] utilised the globe lightshades by inserting shapes inside them. [Another student] has imprinted the white tiles of the... urinal with stamps of hands showing sign language. [A third student] refers both to the building's history and to Ezekiel's valley of bones in her work called *Mother Hubbard's*, which consists of porcelain bones. It fits into an alcove under the stage. Finding [a fourth student]'s meditative branch in a bottle, called *I think it would have been a good idea*, requires climbing a shaky ladder in the wings of the stage. The title is Mahatma Gandhi's response when asked in London what [the little Indian] thought of Western civilisation.

...[Artist creates Indian Dream Machine to deliver message of peace An artist has built a huge plastic motorcycle on a Puketona farm, alongside State Highway 10 near Kerikeri. The model is 4m high and 10m long, and took about nine months work. The artist, 23, intends selling it to raise funds for her next project, a huge plastic wave to be built in the Coromandel. The artist has named the Kerikeri sculpture, modelled on a 1942 Indian motorcycle, the Indian Dream Machine. “I wanted to portray a symbol or message of peace with my work and creative imagination,” said the graduate of the Elam School of Fine Arts at Auckland University. “Peace is about seeing and believing.” Passing motorists stop to look at the arresting sculpture and tourists photograph it. Blue lights inside the motorcycle make it glow at night. The plastic parts were formed in a purpose-built moulding device and assembled piece by piece.’

...‘Why did an artist's untitled work win the premier award in the Visa Gold Art Award Competition whose finalists are now on display at the New Gallery? After all, it is not a painting but a collection of pieces of blanket. The piece is a very worthy winner but, whether we agree with the award or not, we must not be quick to condemn it for not being an oil painting. Contemporary art takes many forms and the found object has a part to play in modern expression. The blankets that make up the work are various shades of pale yellow that inescapably evoke the charitable institutions of past time. The pissy stains on them also evoke the innumerable anonymous, sad and sick people who sheltered between these blankets. Is this enough to make a work of art, to select the right blankets? Each piece of blanket carried the red cross, a symbol with many levels of connotation. The red cross is on the banner the resurrected Christ carried when it descended into the limbo of Hell and rescued the worthy souls there who die before the Redemption. In modern times it has become the international symbol of mercy and help. The crosses on these blankets are not bold red crosses but unassertive fading pale crosses made by stitching. The stitching signifies repair – the repair of rents and tears in material and clothes and, in surgery, the healing of wounds. If we agree that these things are valid artistic expressions then we would agree with the judges that the work deserves the award because it addressed an aspect of the human condition in a multi-layered way. Other entries are more intelligent but less evocative. The show as a whole is a brief guide to the state of art in NZ’...

'*Dreadful load of old tosh* THE frail little catalogue which limps along with the VISA GOLD ART AWARD exhibition – at The New Gallery, Auckland, until the 6th; The City Gallery, Wellington, from the 9th – claims more than 500 artists offered their efforts to the judges, tempted by \$18,000 in prizemoney and a chance to blaze their career paths onward. It's a grim statistic for visual art in this country, because it suggests this scrawny collection represents the best. If so, the worst must be dismal indeed. The shock is not that the winning work is a collection of sparsely embroidered squares cut from old, yellowed blankets, but that so much of the work on display is superficial, poorly made, visually bland and embarrassingly pretentious. In the midst of this, *Untitled 1995-1996* is an understandable, if lightweight, winner. At least it has visual traction, and invites more involvement from viewers than most manage. The theme for the exhibition could be "sightless" so meekly do the works call to our visual sense, with the exception of *Screen*. It displays a level of complexity and sophistication which should be a minimum standard for a trophy of the size of the Visa Gold Award. Just putting stuff in a gallery does not make it art.'

...The world's art market was thrown into turmoil last week... in the wake of a scandal over alleged collusion... by... Sotherby's auction house... with its great rival, Christies... over sellers' commissions... [The US] shopping-centre magnate who holds a controlling interest in Sotherby's, stepped down as chair[person] in one of the worst crises in the company's 256-year history[, and the gal]... who has run the auction house since 1994, resigned as president and chief executive. There was speculation that the resignations might be part of a deal with the U[S] Justice Department...

PM admits art faking – but says others do it too... [NZ's PM says it] is not the only politician to submit a fake painting at a charity art auction. The P[M] was forced to apologise yesterday after it became known that [the PM] had passed off as [its] own a painting by someone else which sold for \$1000 at auction... [However], an art auctioneer with 35 years' experience, said last night that [it] had never known a celebrity painting not to be genuine. [It] had conducted many charity auctions and sold works donated by P[M]s, which were usually simple works. "You don't buy it as investment art but as a bit of fun or decoration." [A]Wellington lawyer... said forgery carried a penalty of up to 10 years' jail... But in the unlikely event that [the PM was charged, it]... would certainly get off with a warning because there appeared to be no intent of personal gain. Another possibility was diversion, which could require [the PM] to paint an authentic picture for the buyer... [The PM was unavailable for comment last night as it was presenting t]he laureate awards[, which]... are among N[Z]'s biggest, and the only private awards to cover a range of art forms.

...[a] Herald Island photographer... has found himself on the other side of the camera after winning a major art award. [The photographer], 58, is one of five artists to get \$30,000 and his own hi-tech website as a winner of the Art Foundation's laureate awards. [The photographer] says previously to be considered an artist, you had to work with paint on canvas. "Now there is a greater appreciation that a serious artist can also use a camera." The award will help [the photographer] finance his new book of 40 photos, to be released in January next year. It is his second book...

Over the past nine years, [the] designer, printmaker and owner-operator of The Green Bay Press, has taught almost 1000 enthusiasts how to make their own books... Some have gone on to market their work. Others have simply made a book as a kind of therapy. Cooks, lawyers, doctors, teachers, writers and artists are among those seizing the opportunity to express themselves... They will often make books for special occasions, like birthdays. They will make a special book for family recipes. Record family history. Or document a journey. [The designer] was first inspired to make a book 11 years ago, when [it] collaborated with 10 poets, illustrating their poems with her own lithographs. There were 50 copies of [t]his book made, priced at \$800 each. The publication, which involved 20 people in all, went on to win an art award. [The designer] was subsequently awarded a study grant to look at similar books in America. For [the designer], who has rarely travelled overseas, the seven-week trip was liberating. [The designer] captured its essence in a book... made for the journey... It contains detailed written accounts and is decorated with travel debris – boarding passes, sugar sachets, postcards, meal tickets, an old gum wrapper, a matchbox, a safety pin. Anything that triggers a memory. "It's the small... pieces of design that have the immediacy of whipping you away and transporting you back. It's evidence. And when things look black later – there is still that evidence that things can be different. They can be better." It took her a week to fill the book on her return. Time that [the designer] regards as an integral part of her journey. "Often you are left with nothing but the book to talk to... And it will talk back to you."

...If you want to make... [a] Cockle Bay... artist... laugh loudly, just tell her about the tagger who marked a street of parked cars, hedges, walls and buildings with one long silver stripe. [The artist who] loves tagging... sees the city as one big book and graffiti as the lovely writing inside. But then [the artist], smiling behind her wire-framed specs, sees books everywhere. [The Cockle Bay resident] describes herself as an artist who works with text. Her passion for packaging words was first revealed eight years ago, when [it] exhibited 92 canvases smothered with words, painstakingly printed with hand-carved blocks. They were created over a frantic 10-month period when [the artist] was a mature student at Elam School of Fine Arts. Her interest continued... later[leading to] a book... made... with chunky plastic pages. [The artist then] went on to spray 104 obsolete reference books with tar and bolted them shut. And right now, [the artist] manufactures angry political posters in her... studio[before] paying professionals to slap them on walls around town... sort of copying the taggers [it] admires so much – and "using the city as a book." Unfortunately for her, some passersby take a fancy to [her] black, white and red posters. They try to peel them off walls and take them home. [The artist], now a post-grad student, does not like that at all. "I want people to be angry... I want to provoke a reaction[," says the artist], who keeps up to 45 ducks in her garden... loves Marilyn Manson "for his violence,"... sees schools as prisons and abhors the abuse of power and corruption of money...

THE first – and lasting – impression of Auckland is no longer the beauty of its harbour – nor the dominance of the skyline by that vulgar tower. What you remember is the mindless visual pollution of every exposed surface by a form of vandalism which the locals call "graffiti". This is the wrong word for it. "Graffiti" (which comes from the Italian word for "scratchings") has a long and honourable history. It is as far removed from what you see everywhere in Auckland as *Shortland Street* is from real drama. If it means anything, it is a testimony to the Polynesian discovery of the aerosol paint can. True graffiti is the street version of the cryptic crossword and as such can be a source of amusement and edification. There was a time in my life when I depended upon it for both. I used to be fascinated by the satire and social comment found on the walls of London's underground... The best work is obviously composite... with a sting in the tail. "Arms for Biafra" or "Arms for Serbia" had a post-script written by another: "Arms for Venus de Milo". A wayside pulpit text carried an interesting addition: "The meek shall inherit the earth", to which was added, "If that's OK with the rest of you". I am told that the best Kiwi graffiti is found in toilets. I am not prepared however, to fossick through the overlay of filth in order to find it. Some graffiti is far from being inconsequential. Take the action of a Roman soldier with a sense of the ridiculous and a gift for irony. [The soldier] scratched upon the gible of a dying rabbi: "Jesus of Nazareth. King of the Jews". It must have been a source of great laughter. The authorities certainly found it very funny. Two thousand years later, the words live on... but nobody is laughing.

...A determined vigilante armed with a paint brush is exasperating... property owners. For the past couple of months... [someone] has been following the trail of taggers in New Lynn and Henderson and splashing over their scribbles with paint. Property owners reckon the coverup job is worse and the Waitakere City Council wants a quiet word with the painter.

...Taggers, who cost Auckland City an estimated \$1 million a year in clean-up expenses, fall into three categories. Some are members of youth gangs and gang prospects. Some are streetkids. And some are merely bored individuals, often from good homes, who can give no reason for their behaviour when apprehended. A community worker in West Auckland describes tagging as "absolute rebellion and defiance of every social system." [The community worker] describes those apparently mindless scribbles as smoke signals from the tribes of a subculture, communicating far more than a simple "I wuz here." ...A new report from the City of Hamilton [identifie]s the motives of graffiti vandals... in a long list that includes "lack of self-esteem, artistic expression, territorial claims, adrenaline, excitement... power and fame." ...Messages and innuendoes, challenges and

roll calls can all be detected in the tags by those in the know... but as soon as the authorities start to catch on, the taggers change their rules completely... There are no easy answers to the problem which [the]Auckland City Council anti-graffiti officer... describes as a “quality of life” crime. “The quality of life of citizens is definitely affected when they have to see their tagged fence every time they leave home and every time they return,”... [T]agging gangs – known as “crews” – of up to 200 youths determined to put their mark on the city[(train) carriages and rail stations were a particularly popular target])... were causing millions of dollars of damage a year when the N[SW] police established a Sydney-based nine-officer graffiti task force in 1988... Besides defacing public property, the taggers were also committing robberies and theft to obtain their paint supplies. The squad met the challenge by taking a pro-active approach to the problem, working mainly on 6 pm to 2 am shifts when their quarry was most active. Suspected crew members were searched on sight and offenders were charged with causing malicious damage. “The maximum penalty is two years in jail, but being juveniles they didn’t really get that,” said[a NSW] Detective... Graffiti infringement notices were also introduced, with fines of \$100 for adults and \$50 for younger offenders... Another move was to provide places where taggers could spray legally – “even the railway stations came to the party by allocating areas for graffiti.” ...But [the squad] was disbanded in September last year after police chiefs decided to make district stations responsible for dealing with graffiti on a local basis. Now just one officer in the N[SW] police crime data section is responsible for gathering intelligence from wall scrawlings around the state, mostly by photographs sent in by colleagues... In California – where cleaning up graffiti is estimated to cost \$3.2 billion a year – state legislators are proposing to make tagging a federal crime. The California Department of Transportation spends \$US3.5 million of its annual budget on removing sprayed slogans from the city of Los Angeles alone... Adopt-A-Highway schemes focus on removing graffiti on roadside walls and fences within a week of its appearance. The programmes seek sponsors to keep sections of highway free of graffiti, usually for a minimum period of two years. The work can either be done by the sponsors or subcontracted to certified state highway contractors. About 60[%] of the sponsorship comes from the community, with business accounting for the remainder.

...*Writing’s on the wall: wipe out graffiti crime*... Graffiti-plagued towns and cities will remain under siege until taggers are made to clean up their own mess, says the Minister of Police... “Graffiti puts people to a great deal of inconvenience and cost... [but it] will be very hard to deal with until we learn to... [give] real responsibility to the kids who do it,”... Communities needed to get together with officials to tackle the continuing urban headache... Authorities in Auckland are now spending more than \$2 million a year scrubbing out the tags and messages left on buildings, bridges, fences – in fact, anything that does not move... The Mayor of Waitakere City... said his council was looking for new ways to eliminate the tags... The best results so far have come from community-based projects where strategies can be specifically designed for conditions. The major police effort has been enforced by community constables supporting these projects. This weekend, two community projects are taking place in Auckland. Taggers are being encouraged to use their artistic talents in a positive way with a “throw up” competition for a road safety logo, to be created on car bonnets, at the Pasifika Festival. “Throw up” is a taggers’ term for creating a tag. In Glen Eden, volunteers are gathering at the community centre in Ceramco Park on Saturday morning and will proceed from there with paint and brushes to white-out the whole area. Removing graffiti as quickly as possible has been identified as the best strategy in keeping the environment tag free. “Removing the tag thwarts the aim of the tagger, whatever their motives,” says [Auckland City Council’s anti-graffiti officer]. “If you leave it, it is in the nature of the game that others will add their tags. And the longer it is left, the more positive the taggers’ feedback.” “Record, report and remove” has become the anti-tagging catch cry. A photograph of the tag can be forwarded to the police when the report is made. Many councils are now offering a hot-line to ring for help, with free paint and even a free paint-out service. “We’ll never get rid of tagging. It’s here to stay. But we’ve got to keep on top of it,” says [the]Northcote and Birkenhead community co-ordinator... In her ward, a fully equipped van and trailer is permanently at the ready, sponsored by local businesses and[operated] by trained volunteers. Most graffiti in the ward is removed within 24 hours. Vehicle maintenance, paint and utensils and safety items cost the community less than \$4500 per annum and the project had achieved a 93[%] drop in evident graffiti. While the van was out six times a week at the beginning, it is now required on average only twice a week. Education programmes have to run hand in hand with the clean-up projects. In Auckland City a Tag Drag video is shown in schools and emphasises the enormous cost of cleaning up after taggers and how the expense eats into resources that could be better spent in the community; the anger in the community caused by tagging and the need for respect for other people’s property; and how young people can better use their creative talents. In West Auckland, a Tag Free Project has concentrated on working with individuals identified as chronic taggers, and on the painting of murals – which invariably remain tag-free. Catching the culprits, who usually work in the early hours of the morning, is not as easy as the nature of their crime – a mark as individual as a fingerprint – might indicate. A tag might be copied by a rival to get them in to trouble, or be made in a different style “to irate” its original owner. Marking out territory, like the average suburban cat or dog, is only the most innocent motive for tagging... “You could draw an analogy there if you want to animalise taggers rather than anthropomorphise the cats and dogs,” says... [a] Lynfield veterinarian... Known taggers over the age of 16 are most likely to be charged under the Summary Offences Act which deals with “low level” crimes like loitering – and urinating in public. The maximum punishment under the act is three months in prison and a \$1000 fine. If tagging activity is deemed to be “a danger to life” such as painting out traffic signs, the perpetrator can be charged under sub-section 4 of the Crimes Act and jailed for up to five years. Those under 16 years are dealt with under the Children, Young Persons and Their Families Act.

...[Hard evidence is being gathered on prolific young taggers and parents may be forced to pay for their children’s crimes. Distinctive tags, familiar to many besieged business owners and residents, are being digitally documented and stored in a crime-fighting database by Auckland City Council’s new graffiti prevention officer, who hopes to catch the culprits and make them and their parents responsible for the damage. The council’s law and order committee intends to reduce the cost of graffiti cleanups by making offenders pay and is co-operating with other councils to fight graffiti across the region.]

...[an average 1800 tags a month are now being removed in Waitakere City, thanks to local graffiti-busters, the Tag Out Trust. The trust keeps daily records of the number of tags it removes from city properties. It is working with local police to “bring justice to the offenders.” The trust now plans to attack west Auckland’s rail corridor, where graffiti has yet to be tackled. The Tag Out Trust was founded by ex-Keep Waitakere Beautiful members who both believed the graffiti problem could be beaten. The trust had humble beginnings in 1996 – one employee with a vehicle and trailer (purchased with the help of the Portage Licensing Trust), removing graffiti in residential New Lynn. Success led to a partnership with the Council and the contract for removing the city’s graffiti. The staff later expanded to three: two with vehicles and trailers fully equipped for removing tags and the third working exclusively with young taggers “repaying their debt to society”. The operators cover the city five days a week and aim to remove all new tags in no more than 30 hours. Waitakere is now more tag-free than its neighbour, Auckland City. Residents are asked to paint out graffiti quickly, preferably with dark colours. Planting shrubs at the front of your property also helps. Businesses are encouraged to keep a sample of their paint colours on site for operators to use.] • [The Western Leader is offering a \$200 reward to find out who tagged the primary school, cars and a garage in New Lynn with bright yellow paint.]

...[A dangerous new form of graffiti is appearing in Waitakere. Etching or scratching on glass is an overseas trend that takes graffiti one step further. Vandals scratch names or noms de plume on business windows with tools readily available in most backyard garages. Plate glass windows, worth up to \$20,000, can be destroyed in seconds. Internet sites put up by the scratchers explain the techniques used and document damage caused in attacks. Glen Eden’s railway station is among buildings where glass has been damaged. The problem is also causing concern in Auckland City, where the council’s special law and order committee has been briefed on the issue. Council staff say they have already noticed scratching attacks on glass-walled bus shelters. An Auckland city councillor says etching is dangerous. Deep gouges in large sheets of glass can cause the panes to collapse at any time. The owner of a glass shop is concerned at the potential for damage. “It certainly is a problem when people start scratching glass. If the scratch is deep enough to feel there’s no way of removing it except by replacing the glass.”]

...‘A new kind of tagging is weakening glass windows and raising fears that someone may get seriously hurt. Vandals are using glass cutters to etch tags into windows. West Auckland’s Neighbourhood Support chairperson says the practice, which leaves glass dangerously weak, may be caused by a television programme highlighting the technique used in the US. Business owners are left out of pocket as etching damage is not covered by insurance. A Te Atatu Peninsula shopkeeper whose premises have been damaged says: “I would like to string them up, we should bring back the stockades.”’

...‘Children as young as eight are using aerosol cans as blowtorches to burn graffiti into walls. The Fire Service is worried about the dangerous trend where the spray from aerosol cans is lit. An Auckland fire region youth liaison officer says using a spray can to set a fire or burn graffiti into walls is not uncommon, but a recent increase in the number of incidents and the decrease in age of offenders is a concern. The Child Safety Foundation’s executive officer is not surprised at aerosol cans being used as blowtorches. The foundation had similar concerns about novelty lighters being used as flame-throwers.’

...‘Private detectives staking out graffiti “hotspots” in Auckland have laid charges against an alleged serial tagger, who will be asked to pay more than \$21,000 compensation to the Auckland City Council. Council officers are preparing a “victim impact report” and say the arrested person is alleged to have committed 40 acts of wilful damage in a case now before the courts. Private detectives have been employed by the council for two months after the council adopted a “zero tolerance” for graffiti programme. The council’s graffiti prevention officer believes a core group of about 80 taggers are responsible for most of the graffiti in Auckland. Since February it has caught 27 taggers ranging in age from 9 to 23. Five face charges.’

...The graffiti blight which has scarred Auckland... is under tight control in the tourism mecca of Rotorua. The city, populated by 67,000 people and visited by 1.2 million tourists a year, is relatively tag-free, according to the police... and... tourism bosses... The administration manager for the Rotorua District Council... says it takes a hardline approach by hiring contractors to remove tags from public property... [via] sand-blast... or paint... within 12 hours... costing the council about \$30,000 a year... The community relations co-ordinator for Rotorua police... says... “The youth culture in Rotorua is not as advanced as Auckland. We do not have the night life and all its associated vices. The kids do not have the same idol worship of the black American culture and the mini-gangs’ tied-up bandannas, the clothes, the music and the graffiti.” A smaller population and seven constables with close ties to their community means the police often recognise the taggers’ mark or signature... [B]efore Christmas, three 13 and 14-year-olds were made to remove their own graffiti after police recognised their nicknames.

...[‘ROTORUA’S amateur cycling club captain is heartbroken – tagging is all over the town’s velodrome, which took 10 years to build.’ In further news from Rotorua, the city’s] Maori Arts and Crafts Institute... is being accused of refusing to honour an agreement over financial compensation... [with] its neighbour, Whakarewarewa Village... The Rahui Trust... which represents the villagers... says it was to receive 9[%] of the money tourists are charged to go through the institute and the world-famous Whakarewarewa thermal village... [The chairperson] of the trust... said the institute had rejected out of hand the trust’s claims for payment of arrears estimated at \$331,158... and... the... 9[%] annuity was made null and void... “We had an agreement where we were to receive 50[%] of the gate takings. However, when it came time to sign it was only 9[%]. Now we are being told we will receive nothing.” ...[the chairperson] said it was ironic that it had been the villagers who first started guiding tours around the thermal valley, before the Government established an institute in the 1920s... [T]he institute had offered to finance completion of Te Rau Aroha wharekai (dining room) at Whakarewarewa Village, but that funding would be in settlement of past grievances. The wharekai plays a vital role for the people of the local tribe, Tuhourangi. When a tangi is held at Wahiao marae in the heart of the village, protocol dictates that those who arrive to pay their respects are fed. But in recent years, the villagers have had to use a local art gallery and cafeteria to feed their guests... [V]illagers had recently put a gate behind the village at the back entrance to the institute, and if things got any worse they would lock it to visitors to the institute. [An institute spokesperson claimed to be unable to] comment.

...A \$5.2 million museum is being proposed for the Tauranga waterfront. The Tauranga District Council is worried about the decline in visitors to the Tauranga Historic Village, its rising rates subsidy and the deterioration of artefacts in its damp 17th Ave premises. Six significantly old buildings from 17th Ave would be moved to the new site in Dive Cres, which would house 20,000 artefacts unable to be displayed at the village. Proposed are a Maori cultural centre, a 3D simulator show with a marine ecology theme, and a restaurant.

...A \$750,000 restoration project beginning in Hamilton today is expected to help create a “cultural precinct” in the city. The Hamilton City Council is converting a historic but nearly derelict building in Victoria St into an arts and cultural centre. The former post office, situated next to the Waikato Museum of Art and History and close to popular cafes and restaurants, will house galleries, classrooms and artists’ studios... [Incidentally, a] petition demanding government and regional funding for the financially stricken Museum of Transport and Technology (Motat) has been presented to the Auckland Central MP... About 18,500 people signed the Keep Motat Moving petition, requesting legislation along the lines of the Auckland War Memorial Act which would require the region’s councils to pay the museum a levy. Auckland contributes \$870,000 annually, Manukau has given between \$15,000 and \$20,000 for each of the past three years, and North Shore gave \$10,000 this year. Waitakere, Papakura and Franklin give nothing. The petition coordinator... said the “honed” and efficient museum was just coping on its operating budget of \$1.6 million... Without extra funding, the museum in Western Springs could maintain its extensive collection but could not restore about 30 large containers of other relics, for which it would need a total of 20 staff and a \$3.5 million budget. [The MP is] “disturbed” by the number of deteriorating collections around the country and would present the petition to Parliament for consideration. [Motat could increase its gate prices, but that would have a negative impact on visitor numbers. (Editor’s note: Entry to the Auckland War Memorial Museum is free – excluding special exhibitions.)

...‘A venerable institution emerges from a five-year refurbishment programme Few Aucklanders would know that a single prostitute was once responsible for 4% of all gal crime in their city. Or that drunks used to fall, with alarming regularity, into an open sewer that ran down Queen St. A piece of that sewer – called the “brook of abomination” at the time – has been preserved and is now on display in the spruced-up Auckland War Memorial Museum (constructed to commemorate locals lost in WWI). The sewer and details of the one-gal crime wave can be found in a new exhibition on the history of Auckland called City, one of two permanent displays developed as part of a \$43 million project to redesign the galleries. The five-year effort was capped off on Saturday with a free festival called Real Treasures – Real Tales, which drew one of the museum’s biggest-ever crowds. Saturday’s festival was to thank Aucklanders for their patience while the work was taking place – and to show them that the museum was once again fully open. Visitors praised the improved facilities and new exhibitions. Most of the \$43m spent on the galleries is hidden, invested in discreet beams and buttresses meant to save the relics from earthquakes.’

...‘Auckland Museum has a cultural fortune but no money to display it IGNORE the spray-painted tagging on the metal door and mind the rat poison on the floor. This is the bazaar of the bizarre and the beautiful that Auckland Museum can’t afford to let you see. Stacked up like Grandma’s garage, tenfold, a suburban warehouse contains the millions of artefacts the museum does not have the space to store. Pile after pile, row after row of old things sitting around getting whiffier. Things Grandma wouldn’t want in the house anymore, but couldn’t bring herself to throw out because they are, after all, family heirlooms. Except that Grandma is unlikely to have a slightly smelly stuffed polar bear and a musk ox. Or the world’s most highly developed collection of ancient stone tools from around the Pacific. In one corner of this antique dealers’ treasure trove are cardboard boxes, stamped fragile, containing the country’s pre-eminent applied arts collection. Statues such as a Graeco-Buddhist figure from Pakistan dating back to 300AD are swathed in wrapping paper away from the public eye. There’s enough military equipment to mount a small-scale invasion. Oh, and don’t mind the dripping sound – there’s a leak in the roof, right over the bound volumes of newspapers dating back to the 1900s. But the staff have flung a plastic sheet over them. They’ll be right. Downstairs, through another steel door and past yet another burglar alarm pad, it gets dingier. Just when you thought it couldn’t. Right there on the shelves

by the door, hundreds of preserved fish stare out from jars. It's called the wet fish collection – a school of creatures plucked from the seas around NZ over the past 100 years.'

...a marine biologist... has dedicated 30 years of his life to the Auckland Museum, but fears... [being] among the 28 staff who[are to] lose their jobs today. A draft press release obtained... yesterday said the Museum Trust Board would cut 17 fulltime jobs and 11 part-time jobs, including two of the three marine department positions. The museum has 100 equivalent fulltime staff. The... museum expects the... layoffs... will... bring its operations within budget. That is no comfort to [the marine biologist], who joined the museum's marine biology department straight from Auckland University... [and] never imagined that cost-cutting could some day close down what [it] feels is one of the world's most respected marine collections... The... collection has 700,000 specimens... In his early fifties, [the marine biologist] is concerned about job prospects after specialising so narrowly, but his greatest concerns are for the younger scientists and technicians "with families and futures" and for the collection itself... [- although] the greatest loss would be the knowledge [himself] and his colleagues carried in their heads: "That wisdom is part of what makes the collection live. It takes a long time to gain." ...only 10 to 20 people in N[Z] had his skills. A further 100 could be "brought up to speed." Much of the research funding comes from the Lotteries Board and the Foundation for Research, Science and Technology. The museum funds the 2 1/2 salaries and essential working costs. The museum director... last night... was disappointed that the *Herald* was quoting from a "stolen draft statement." The museum wanted the chance to first talk with its staff. The small marine department was one of 20 being reorganised into public programmes and professional services divisions... to achieve greater administrative efficiency and to enable the museum to apply resources where they were most needed. Records, maintenance and exhibition design would be contracted out, [the director] said.

...The troubled Auckland Museum has put its hand out to the region's local bodies for a... grant to cover unexpected losses and the redundancy costs of 28 jobs. The museum confirmed the request yesterday, but declined to say how much it was seeking. But minutes of a meeting held last Friday by the "college" of local authorities which pay levies to the museum put the figure at \$1 million. The seven councils paid \$5 million this year, but would have to satisfy the new request by cutting spending from their own budgets. This raises doubts whether the museum's bid will succeed as some councils, such as Papakura, may be unwilling to find extra cash for the institution. The funds plea comes six weeks after the museum announced the job losses, which it forecast would save more than \$700,000 a year...

Three key local bodies appear likely to bail the troubled Auckland Museum out of a \$700,000 shortfall this financial year. Auckland, Manukau and North Shore city councils will meet today to consider propping up the ailing facility... However, the Papakura District Council is refusing to contribute its \$26,126 share of the bailout. Its mayor... said the "overspending" of ratepayers' money was deplorable and heads should roll at the museum... [H]is council would take the issue to the Audit Office because the extra levy was the "final straw." ...Draft figures leaked in a report... this week show the predicted \$603,000 loss for the year to June 1997 has escalated to more than \$1 m... The loss [will be] further inflated to \$2.7 m... after \$1.6 m... is set aside for depreciation... The director of the museum... said the... board is also considering introducing... entry charges...

The Auckland Museum is considering charging entry fees as part of moves to keep the cash-strapped facility afloat... If tourist charges were introduced they were unlikely to come into force until late next year... The museum would continue to charge between \$5 and \$12 for exhibitions and was looking at on-selling shows and equipment nationally and overseas. Other revenue-making plans include charging children \$3 and adults \$5 for a special cellphone that provided access to commentaries on displays... The museum was also considering charging for access to photographic and other resource material[... in addition to]... contracting out curatorial expertise to companies such as Watercare Services and to local and regional councils... The museum says local body levies are inadequate for it to maintain its activities... [● Last night representatives from four] out of seven local councils... approved a \$1 million bailout for the... [m]useum... The contributions range from \$441,003 for Auckland City to \$23,275 in Franklin. But the... [\$1m figure includes] Papakura... council's \$26,126 share... Waitakere City is yet to vote on its share, which would be \$106,970.

...Auckland museum supporters are to petition Parliament for an overhaul of the institution's funding. They want a multimillion-dollar endowment and to refocus the museum's scientific mission. At a meeting last night, about 50 of the supporters, who have rallied behind the Auckland Museum since its funding crisis was revealed in July, backed the petition proposed by... a natural historian at the University of Auckland... [The] Emeritus Professor... said the museum had been disabled in some of its core research and public functions by the funding crisis, which could be reversed by an endowment of up to \$200 m... [The] Professor... said allocating some of... the Auckland Regional Services Trust[']s... \$1.8 billion in assets or reserves could leave the museum as a free-standing institution not reliant on funding from Auckland ratepayers. With a professionally managed endowment the museum could be run in the same way as many famed museums around the world. The existing museum board would see the petition as impertinent and unlikely to succeed, but with unity and persistence "we will convert a grim situation into victory for the citizens of Auckland and the museum,"... The meeting heard that the museum had a deficit of \$2 m... [However, the museum] will receive a \$415,000 grant from... the Getty Foundation[... which] is believed to be the first from the Los Angeles-based organisation for the conservation of a historic N[Z] building. The museum's executive director... said the money would help the \$1 m... exterior restoration of the building.

...[Veteran declares war on museum expansion plans] A returned serviceperson who survived 90 wartime air operations is on another mission – fighting what it describes as creeping commercialism at the Auckland War Memorial Museum. The former Pilot Officer – who served with the 75th Squadron as a rear gunner on Wellington bombers – is marshalling opposition to expansion plans that include a rooftop restaurant and events centre with panoramic views of the harbour. The veteran is opposed to any alcohol being consumed at the museum, as it stands on consecrated ground. "The museum is trying to cater for the '5pm entertainment trade. They only want people from the upper echelons. Ordinary NZers are not encouraged to join the museum." But the museum's director says the veteran must be the only person in the world to have concerns over the development. The veteran's claims of commercialism and gentrification are completely misleading and grossly misrepresent both the project and the museum's position. The director says the restaurant and coffee shop are only small parts of the development. "The veteran is conveniently overlooking the fact that there's just under a couple of thousand square metres of collection storage which enables us to bring the most important collections of NZ patrimony from inadequate off-site storage on site where they will be properly cared for and accessible by the public. The veteran also overlooks the fact that all the workshops for the maintenance of the museum's displays and its exhibitions programmes are part of this project. There's educational facilities with classrooms, tutorial rooms, studios for children, plus a theatre for the museum's educational and museum programmes." The museum has applied for resource consent for the \$46.5 million development project. The project is likely to start next year, which marks the museum's 150th birthday. The museum recently completed stage one of its redevelopment, a five-year restoration project that included seismic strengthening, new power, plumbing, drainage, heating and ventilation, and new exhibitions.'

...We had survived the last of the robotic dinosaur attacks. Now 20 of us, white-knuckled thrill seekers, hurtled down a near-vertical 18m drop at the culmination of the "Jurassic Park ride" at Universal Studios in Los Angeles. As the finale, we were all soaked as we bottomed out in a huge shower of spray. I wondered where the boundaries of "the museum experience" now lay, or would lie in the future. Hartlepool, a depressed former ship building town [i]n... Britain, was no one's idea of a tourist attraction. But now we, along with some 200,000 other visitors a year, were thoroughly enjoying a brand-new maritime heritage attraction, the Historic Quay and Hartlepool Museum[– which, thanks to a Tory] Government funding initiative, this formerly barren and derelict dockland has been turned into... This time I pondered the vagaries of government policies that saw a new museum as a political and economic investment, but cut back operational funding for older museums. The viability of the maritime museum that opened in Auckland in 1993... [- which I am] the... director of... [-] was predicated upon attracting 300,000 visitors a year. It was therefore salutary to discover that one of the world's greatest maritime icons, Nelson's flagship at Trafalgar, HMS Victory... attracts 370,000

visitors a year. The target for Auckland was clearly too ambitious. Visitor numbers for other maritime attractions bear this out with perhaps one exception. The relatively new Merseyside Maritime museum, in the revitalised Albert Docks in Liverpool, attracts 450,000 visitors a year, which is a remarkable achievement. What is the key to this success? Firstly, this museum is part of the National Museums and Galleries on Merseyside. This means central government funding. Equally important, it means the museum is managed and marketed as part of one organisation that administers eight sites. Considerable efficiencies of costs are clearly achievable. Secondly, this Maritime Museum has created a stunning new exhibition, "Transatlantic Slavery: the African Holocaust." This moving, dignified and challenging exhibition, developed in consultation with the local black community, lifts the lid off Liverpool's role in the slave trade. This exhibition is so important because of the way it explores the great human story behind the maritime artefact. For Auckland, a comparable exhibition we should do would be the... 1951 Waterfront strike, and the story of the generation of conflict between labour and management, the port authorities, the shippers and the suppliers. To a considerable extent, N[Z] history is maritime history. A real challenge for a museum like ours, which receives very limited public funding, is to fund serious and non-commercial exhibitions like these. That is what public funding is for, and we don't have enough. A third strength of the Liverpool museum was its exhibition on... [WW2]'s "Battle of the Atlantic," the story of the convoys and submarines, the corvettes, ciphers and codes. In fact almost every other maritime museum in Britain traded in some way on the... colourful and dramatic story of warfare at sea that every British school child, and many overseas visitors also, already know. What a challenge it is for N[Z] museums, where many of us don't even know our own history, to... exhibit the evidence of this history... As far as I could ascertain, the only special exhibition that really made money was the Titanic exhibition at Greenwich. All other programmes are lucky to break even. You have got to have them, to offer local audiences something new, but unless you are a well-funded museum, you cannot afford them. Museum directors at dinner parties regularly receive the conventional wisdom that "Of course what you need is more interactives, and more virtual reality". So it was with considerable interest that I visited "Nauticus" in Norfolk, Virginia, the ultimate interactive maritime museum/science centre experience. At Nauticus you queue to get into the Aegis theatre, where electronic naval warfare is simulated in a recreation of the command centre of a modern... destroyer. Together with the skilled actors, we sink the enemy submarines, shoot down the hostile aircraft, and identify friendly ships. Elsewhere visitors play at designing ships on computers, and, in my case at least, be told that their design is no good and their ship will capsize straight away. Interestingly, Nauticus has only attracted 20-30[%] of the visitors predicted. It has proved very expensive to run, and has had to be re-funded several times. Coming back to N[Z] from overseas, I am always impressed by how good our museums are, especially when you take account of our population size. Our exhibits address great stories, which are still not as well known as they should be... The voyages of the ancient Polynesians led them to be called "Vikings of the South Pacific" but actually they were the greatest voyagers of all "non-urbanised" societies. The emigrations from Europe to the other side of the world were epic stories of adventure. N[Z] played its part in many great naval battles of the [20th century, while] the flotilla to Mururoa was a modern day crusade. The cheek of challenging for, and winning, the America's Cup is another story that must be told. Pride in our own history and pride in our museums go hand in hand. The National Maritime Museum... is seeking increased public funding to carry out our core functions of preservation, education and furthering of knowledge. The museum could be marketed even more effectively as part of a "National Museums of Auckland," which attracted central government support... [■ AUS]n telecommunications company Telstra has signed a five-year, \$1 million sponsorship of the Museum of N[Z].

...an AUSn pensioner who claims to be a direct descendant of the 19th century Aboriginal leader Yagan is taking the federal and West A[US]n Governments to court to prevent a taxpayer-funded delegation retrieving the warrior's head from Britain. [The alleged descendant] used his own money to have a lawyer lodge an injunction application in the W[A] Supreme court last week... The court adjourned the hearing of the injunction until Friday – days before a delegation of up to 10 Perth-region Aborigines is expected to fly to Britain to ceremoniously accept the... head. [The alleged descendant] said yesterday... "It's a lot of blackfellas making a mockery of traditional law and wasting a lot of taxpayers' money while they're at it... Why does it take 10 of them to pick up a head? Two people would be too many." [The alleged descendant] claims that the British Burial Act 1857 was breached when Yagan's head was exhumed without his permission from the pauper's grave where it had been for 33 years... [According to the alleged descendant] none of the proposed delegates is a direct descendant... and therefore [they couldn't] give permission for his grave to be legally disturbed... Yagan was shot dead by a bounty hunter in 1833. His head was smoked and sent to Britain where it was kept as a curio until it was dumped by the Liverpool City Museum in the pauper's grave along with a Maori head and 20 stillborn babies in 1964.

...A MAORI head unearthed in an English cemetery this month is destined for a life away from the public eye – in a box at Wellington's Museum of N[Z]. Despite this, Cabinet has[given approval for the] Maori Affairs Minister... [to] lead... a delegation to Liverpool to reclaim the head. The taxpayer-funded trip is expected to include at least one of [the minister]'s staff and two Maori elders. The head itself may also need its own seat on the trip back. Believed to be that of a [warrior] in his 50s – the head was found with a mummified Peruvian baby in a box dug up... during a search for the skull of Aboriginal warrior Yagan... Liverpool City Council is legally required to rebury the head but has said that, given the circumstances, it would return it to N[Z]. The Auckland Museum ethnology curator... said it was 15 years since Maori heads had been seen in public. "After the Te Maori Exhibition, we were asked by the Maori people not to display human remains and we haven't." There were four heads at Auckland Museum and probably about 20 around the country. All were kept in special storerooms. About 120 heads are believed to... still... be held in overseas museums... although many[more] are... in private collections... [A] Maori expert, the late Maui Pomare, repatriated 40...

In the gloom of the old national museum's Uru Pa, to the thrum of karakia, the son... [of Maui] Pomare, helped to load boxes of mokomokai, or preserved Maori heads – complete with bared teeth, intricate blue-black moko and thick coarse hair – on to trolleys and wheeled them into Buckle St. [Maui's] daughter... and ...he[r] mother... waited at a specially prepared vault at the new museum, Te Papa Tongarewa. There, in the dark hours before dawn, more karakia welcomed the heads to their final resting place. After journeying the world, they were home at Te Papa – our place. This scene was one of the closing chapters in a complicated drama set in motion by the late Maui Pomare... For 23 years before [Maui] died in 1995, [Maui] had devoted his enormous energy to tracking down and bringing mokomokai back home. Pomare's view had been that the heads, although slain and preserved by his ancestors and freely sold as "trade heads" in return for guns between 1770 and 1840, should be returned to their turangawaewae. Single-handedly Pomare set about tracking them down through... places as scattered as Dieppe in France, to Stockholm, to the Peabody collection in Salem in the U[S]. All the time his affinity with preserved heads deepened[, and once Maui even believed it]... saw a tear trickle down the cheek of a head as it was shut back in a drawer in a foreign land. Over the years Pomare was joined in his crusade by three major players: his wife, who "put him back together" when [Maui] arrived home after tracking and collecting heads; [an] ethnologist and former assistant director of the Auckland Museum...; and ethnomusicologist and film director Dalvanus Prime. After Pomare's death... the three took over his crusade, becoming the guardians of the mokomokai. As [the ethnologist] explains, "The idea was that mokomokai would become 'unknown warriors,' the mana for the museum. Maui called them Te Toi Whakairo [the source of art]." The repatriation of mokomokai was not considered a Government policy. There was no official Government statement of intent on record. Pomare found it difficult to obtain funding for repatriation trips. A documentary... which was to trace the history of the head trade and efforts at repatriation, was repeatedly turned down for funding. But the coalition Government changed that. [The coalition's] Maori Affairs Minister... has links with mokomokai, particularly the head of his ancestor Paraone Kawiti, which Pomare traced to either Austria or Switzerland. [The minister], who was obviously committed to getting it back, wanted to help in a repatriation crusade and had recently planned a trip – with cabinet approval – to London. However, unlike Maui Pomare who had been uniquely placed to persuade museums and private collectors to return mokomokai to his homeland, [the minister] was a newcomer to museum protocol. Pomare, by contrast, had for 14 years been chair[person] of the National Art Gallery and Museum Council, giving him influence at the

highest levels of international museum culture. [Maui was also] a high-ranking Maori and – perhaps more important when it came to obtaining access to mokomokai from royal and great house collections – a descendant of the aristocratic Woodbine Johnston family of England. Woodbine Johnston, who had been sent by Queen Victoria to liaise with Maori tribes, married a Maori. Their daughter, Miria Woodbine Johnston, who became Lady Pomare, was Maui's grandmother. Despite a background that goes back to Sir James Henare, [the minister] had few academic qualifications... [However,] Government backing may well cut down the 12 years of negotiation Pomare estimated it took to get one head back home. Today, after 15 years of effort, just 37 heads from European museums are back in N[Z]... "There are still 127 kicking around in foreign museums and probably another 70 in private collections." ...For hundreds of years before Captain James Cook arrived in N[Z], warring cannibal Maori tribes had preserved the heads of chiefs – both enemies and those of their own tribes... Trade in preserved Maori heads started at the end of the 18th century... Mokomokai became highly prized by Europeans for their beauty and historical value. The going price for two heads was a musket. As an example of its value, a musket was worth two tonnes of potatoes or a shipload of dressed flax. Trade in heads was so lucrative that some tribes got into purpose production – tattooing slaves taken in battle before slaughtering them and drying their heads... [(a) hole was dug in the earth and heated with red-hot stones and then – the eyes, ears and all the orifices of the head, except the windpipe being carefully sewn up, and the brains taken out – the aperture of the neck was placed over the mouth of a heated oven, and the head well steamed; t]he process was continued until the head was completely free from moisture and the skin completely cured[)]... By 1831 trafficking had reached such "scandalous" proportions that Governor Darling of N[SW] put a stop to it by imposing a fine of £40 on anyone trying to sell a preserved head. Nevertheless, it was apparently still possible to collect mokomokai as late as 1865. Before the ban was put in place it is estimated that about 250 heads were sold...

[Northland Maori hope the historic return of two preserved heads from the Auckland Museum will set a precedent for giving back mokomokai around the country. It was understood to be the first time a museum has handed back preserved heads to Maori. Curators have regarded preserved heads as artefacts, but the Auckland Museum Trust Board decided they were human remains that should be returned for burial if their origin was known. The chairperson of the Whatitiri Maori Reserves Trust, who had worked for over a decade to have the two chiefs' heads returned, said it was fortunate that missionary William Colenso and Major-General Horatio Robley had recorded their origin. The chairperson said the homecoming of the Ngati Rua chief Kokou and Ngati Ngiro chief Moetarau to Poroti, 20km west of Whangarei, had been portentous. Just before the entourage arrived about 3 am on Saturday a mist that had enveloped the marae lifted. But the chairperson said there was tension among descendants who felt unhappy at the time it had taken to get their chiefs back. The heads had been stolen 160 years ago from local burial caves. There was also empathy for other Maori who still awaited the return of such taonga.]

...The preserved heads of two Northland Maori chiefs who died in battle early last century were to be laid to rest early today in an overnight ceremony near Whangarei. Hundreds of descendants had gathered at the Maungarongo Marae at Poroti yesterday to welcome the warriors home and agree on the final resting place. The Ngati Rua chief Koukou and Ngati Ngiro chief Moetarau were highly regarded leaders and renowned warriors. They died at a battle at Otuihu Pa, near Opuia, in 1837, when helping to defend the Taumarere faction of Ngapuhi from the iwi's Hokianga warriors. Major-General Robley reported later that the heads were preserved at Te Puna. The heads were stolen from the Whatitiri burial caves, and an iwi member had recognised them in an Auckland curio shop in the 1850s. "But unfortunately they had already been purchased by a ship captain who took them to England." They ended up in the London Royal School of Medicine but were later exchanged for Moriori cranium caps and returned to NZ in 1883. The Auckland Museum had displayed the heads until the 1950s when it decided that was no longer appropriate, and they were stored. The museum director said that while koiwi (human remains) had been returned to Maori in the past, it believed this was the first time mokomokai had been handed back. The museum had another two mokomokai but their origins were not known.]

...*'Ancestor' back where it belongs...* Te Arawa Maori welcomed home their ancestral carving Pukaki in a Rotorua lakeside marae ceremony yesterday – 120 years after its misappropriation. The carving, representing the chief Pukaki with his wife and two children, was returned to Te Arawa by the Auckland War Memorial Museum on advice from the Auckland tribe Ngati Whata. "An ancestor of ours has returned where it belongs," said the chairperson of the Arawa Maori Trust Board... "This is indeed a proud day for us, a day to remember and one we can look on with joy." Originally gifted by Te Arawa tribe Ngati Whataue to the Crown but "diverted" to the museum, the taonga travelled the world in the *Te Maori* exhibition and was a museum showpiece. A thesis on its history by a former Rotorua Art and History Museum curator, [who is also] a descendant of Pukaki, led to its return. The chair[person] of the Auckland Museum Trust Board... said once its history was revealed there was only one thing to do... On hand to witness its return were senior tribal elders, the Governor-General, [the]... Treaty of Waitangi Negotiations Minister... and the Mayor of Rotorua... The carving was carried to the Rotorua District Council building for display. Earlier, a ceremony marking its departure from the Auckland War Memorial Museum was disrupted by a [guy] with a tattooed face who stood in front of the carving and refused to let it be handed back. The [protester] told more than 100 people gathered that it should stay in Auckland. However, [a]Te Arawa kaumatua... speaking Maori and English, calmed the [protester and it] eventually stood aside... Pukaki... was one of the greatest fighting leaders of Ngati Whakaue. His mana was so great that [Pukaki] was represented through carving four generations after his death.

...A new, intimate urban space called Quay Park, next to the old railway station, boasts shallow waters for paddling in, sculptural shapes for a constant visual feast, seats for tired legs, and grass for lazing about on. Opening soon, this \$1.5 m... treat courtesy of the Ngati Whata is an oasis amidst the developments planned on the old railway land recently bought back from the Crown, between Quay St and Beach Rd. A ceremonial entranceway soars 14m, topped by symbolic fishing nets frozen in mid-fling; stylised bone fish-hooks top the four poles and are repeated in the specially designed street lamps. The lake-side seats are serpentine wave forms and others are concentric fragments of the koru form – both seating arrangements allow more social contact than the straight park bench ever could. A shallow stream and lake strewn with boulders will be irresistible on hot days. There's a small stage on the far side of the water for anxious parents to watch from or entertainers to perform on. The materials used in the park are from all over N[Z], including... marble and white pebbles from the South Island. [4] pohutukawa and two totara, all 80 years old and in the way of a new road alongside the old railway station, were moved a couple of hundred metres to the park. For[an] Auckland landscape designer... working on the... park in the heart of the city was the stuff of dreams, particularly as... [the designer, who] has been landscaping for 35 years... was given a completely free rein... His work has been widely published overseas: most recent and most important, a [4]-page feature in the *Harvard Design Journal*, with a photo of his work gracing the cover. "I could earn a hell of a lot more if I went overseas and designed for international hotels or something, but there would be no sense of specialness. This comes from the heart. And it speaks of Auckland..."

...Y[ou're alone]. Well, almost. The footsteps of the pretentious and well-heeled echo around you – but you wait for them to fade before attempting to absorb the first exhibition. An eternity seems to pass. What does it all mean? Finally the curator approaches, and explains that the "post Warholian interpretation of the inherent futility of life" got moved yesterday... [W]hat you've been staring at for... 20 minutes actually *is* the fire escape. Sound familiar? But are Kiwis really so flightless when it comes to affairs of the palette? Could those clumsy potato letters we all painted in primary school be the closest most N[Z]ers will get to understanding the broad strokes of inspiration and gritty passions of the art world? Maybe not. A recent survey by the Cultural Affairs Ministry showed 84% of N[Z]ers consider themselves cultured. But in a snobby twist, the average kiwi considers him or herself to be an intellectual giant – and thinks the rest of the nation are actually boorish dolts; those who took part in the survey believed that only a measly 12% of the country shared their interest in the arts... [Statistically, 6% of the population, or] 200,000 people... visit Auckland city's art gallery every year. [But according to a] senior gallery assistant... quite a few of them turn up by accident... "A lot of people walk around the gallery looking very intently at the plaques beside the works, and end up walking from plaque to plaque rather than

work to work. That's probably one of the big indicators that people aren't quite sure what's going on... they've just wandered in." Wandering out of Auckland this month was *WHITE OUT*, an exhibition of contemporary art that examined "concerns for limited-action processes and ambiguous objecthood, and the shaping nature that social site and architectural space have... through the language of minimalism and conceptualism." ...Only one problem: People couldn't find it. "Some people spent only... seconds in that room – they thought it was an empty exhibition. Mind you, all the works are obviously white as are the gallery walls, so it's pretty hard for them to see what's going on. And, of course, there are no plaques for them to read – just one generic plaque that covers the exhibition. The New Gallery tends to be the more problematic for most viewers... because it houses the contemporary collection, and contemporary art is obviously the one that stumps people the most." Across the road at the main gallery... 60,000 people had no trouble either finding or enjoying Charles Goldie's turn-of-the-century portraits – a statistic [the assistant] says can be attributed to the fact N[Z]ers find it easier to admire "an obvious degree of manual dexterity which isn't always present in contemporary art". But there are still worrying signs that climbing the steps to basic art knowledge is proving too confusing for many. "One incident that springs to mind was when one of the technicians left a ladder in our street-front display area, and somebody came in and asked for more information about the 'ladder installation' in the window. [That somebody] actually quite liked it[and] thought it was part of a series... Another person asked why the ladder kept reappearing, while the other installations were only there once – [that person] knew it was the same ladder, so [had] obviously looked at it pretty hard too." While someone's yet to ask which test match flanker Vince Van Gogh lost his ear in... the staff with one of the largest Colin McCahon collections in the country aren't holding their collective breath for sanity to arrive. "The thing people always say about McCahon is 'My five-year-old could do that'... Hearing visitors describe some of the work as 'it looks like a kid scribbled that' is something we're confronted with on a daily basis. Other questions include what makes it art... or just what is it generally." Not that the visitors are the only ones making the faux pas in this giddy world of form and fresco... "Normally, people don't ask whether works are hanging upside down. The instances when they've done that, they've actually been right... We could tell, because it was the artist who'd come in to tell us, which was a little embarrassing." Spend some time "absorbing" art with... a lecturer in the philosophy of art at Canterbury University, and the mood can be infectious. After 25 years in the game, [the]Professor... says seeing the occasional red-face in the gallery is nothing unusual. "Art is always a bit ahead of the game, ahead of people's ordinary expectations. That's not part of the problem, that's part of the fun. No doubt about it – art loves to hide[(and when art feels bold, it likes to hide buildings and other large objects under sheets of fabric or plastic in order to momentarily create a new sculpture)]! Maybe asking Fisher and Paykel to sponsor that *WHITE OUT* exhibition would have made it easier to find." [The]Professor... says the intention of more avant-garde works has always been to baffle popular audiences. "The ladder syndrome's an ongoing story. My brother put some ketchup on cornflakes, glued them to a piece of cardboard and hung the whole thing up with an exhibit of modern art at UCLA... [I]t stayed up for three days. And that was 35 years ago! These days, those kind of stories and pranks are a dependable part of the art world... The essential point of art is that it gives pleasure. There's wonderful modern art – the trick is to spot it among all the rubbish and dross. Actually, there's no trick at all. It might be intimidating at first, but just walk into your local gallery and see what you can enjoy. Keep your mind open when you're looking – but not so open that your brains fall out – and use your eye to try to identify what parts give you pleasure. Deciding you like something because it's been praised by critics or important people is a very bad idea. In art, as in life, we all have to make up our own minds,"... The alternative? Fake it. "Some people get very good at mimicking art gobbledygook, and there are plenty of points to be scored with curators and naive members of the opposite sex if you can roll out a sentence like... 'I love [this artist]'s paintings. They are diffused with a lugubriousness recognised only as languor, along with a sardonic laconicism sanctifying the destructive authority of Foucault's strategic reversal of the inevitable progress toward aesthetic meaning'. But not everybody's taken in by this balderdash." [A]Wellington critic and collector... concurs... Kind of. "On one hand, I think the art world is something you can inform yourself about and develop more mature opinions on as you move along, but I don't entirely agree with the idea there's nothing more to it than walking in and seeing what you like. There's very few other places where you would assume to do something like that. If you're interested in the sharemarket, you take financial advice; if it's racehorses, you study the form and talk to the punters." One of the surprising reasons many N[Z]ers may feel afraid of art is they already enjoy what they see – they just don't understand what's going on. (Kind of like getting arrested by a really stunning police officer). "Responding to something in terms of how it looks is one of the main criteria for understanding and appreciating art, so it should be visually rich. But it should also be conceptually rigorous, and communicate ideas that you find interesting, even disturbing. I think what people find intimidating about art is they don't immediately switch on to the ideas being conveyed. It's like a conversation. Once you tune into it and hear the things people are talking about, you get really interested. But if you're sitting there thinking, 'God, what is this trying to say? Is this talking to me about death? Existentialism? Am I meant to be getting a spiritual kick out of this?' then the approach itself can often be the barrier." We may, or may not know art in N[Z], but we know what we like. And at the end of the Degas, says [the critic], that's what matters. "The average Joe Bloggs in N[Z] is very interested in the arts and culture in general. It's what we live and move in. [Joe Bloggs] may read about the more shocking stuff in the papers once in awhile, but everyday we're all absorbing the real thing in one form or another."

...[in 1967 an Auckland writer] left his home in Titirangi... on a brief trip to the South Island. In his absence, strange goings-on of the artistic kind were afoot. [The writer] had been muttering for a while now about getting rid of his old bar... However, Colin McCahon disagreed. Now, with [the bar's owner] out of the way, [McCahon] seized the day. Creeping into [the writer]'s home with his paints, McCahon set to work. When [the writer] arrived home, the writer found a genuine work of art where his bench had been. "You can't throw it out now," McCahon told his friend... "I remember Colin saying to me. 'That bar could be your pension one day'," [the writer] remembers. "I'm sure [Colin] didn't realise how prophetic that comment would be." ...for 30 years, the bar sat in a small room at the bottom of [a] Titirangi garden. Now for the first time, the bar (official name: *As There Is A Constant Flow Of Light We Are Born Into A Pure Land...*) will be seen as part of [Te Papa's] *Dream Collectors* exhibition...

Five projects will represent N[Z] in September's Festival of the Dreaming, the first event in Sydney's Cultural Olympiad. The projects have received just over \$390,000 from the L[GB] to feature in the first of four annual cultural events... The largest grant, of \$178,884, goes to the Traditional Maori Performing Arts Committee in Wellington. It will enable Rotorua's Ngati Rangiwewehi, the title-holders from the 1996 Aotearoa Traditional Maori Performing Arts Festival, to present cultural dance items. Auckland's Te Toi Marama Trust receives \$113,879 to stage two outdoor concerts... *Nga Pou Wahine*, a play by [a]Paekakariki playwright... will be performed at the Sydney Opera House by Auckland's Nga Moemoea a te Rangatahi, which receives \$56,810. Toi Maori Aotearoa receives \$21,096 to enable four artists to take part in an artists' camp and literature event, and the N[Z] Film Archives gets \$19,960 for a showcase of Maori film over the past 60 years.

...The Government has no commitment to the future of the arts, says the Labour cultural affairs spokes[perso]n... Her comments followed the issuing of figures showing the Ministry of Cultural Affairs applied for \$7.927 million to finance new initiatives in the 1996-97 budget round – for the Film Archive, Film Commission, Creative N[Z] and the ministry itself. In addition, it asked for \$10.390 million in 1997-1998, and \$14.390 million in 1998-1999. Funding for \$1 million was approved for 1996-1997 and 1997-1998, and \$1.5 million for 1998-1999. "The... Government is unwilling to give any hope to the cultural sector[, which it]... doesn't see... as[being] useful or important... They've decided to give the least amount... they could get away with, and then increase it to \$1.5 million in a year which is, after all, an election year..." [At least the spokesperson has support from the new Minister of Cultural Affairs, who claims that: 'The Government should spend more, business should spend more and the public should spend more on the cultural arts.'

...a former] Minister of Cultural Affairs... [says] arts funding has declined in real terms by 14[%] since 1992... Creative N[Z] yesterday allocated arts funding of nearly \$3 million but says that 80[%] of grant applications are turned down. This compares with a 50[%] strike rate five years ago.

Creative's bosses have welcomed... a ministerial review of funding... announced at the weekend... The review will examine the balance between direct Government funding of the arts body and its main source of revenue from the L[GB]. Annually, Creative gets about \$20 million from the board and \$5 million from the Government. The arts council chair[perso]n... said Creative was pushing for total Government funding because of concern over the grants board's future. Possible deregulation of the gaming industry and buoyant TAB and casino businesses have arts bosses nervous. "We feel very vulnerable... We are gaming-dependent. It's an untenable position. But I'm a wee bit like a Swiss bank. I don't mind where the money comes from." [The chairperson] also wants an increase in Creative's budget to \$36 million, an amount deemed a "proper contribution from the public sector to the arts. Arts funding hasn't kept pace with inflation, let alone with the expectation in the community." The latest round of grants applications will see Auckland's all-[guy] contemporary dance group Black Grace on the international stage. It gets \$72,000 to perform at the Festival of Dreaming... this year and to rehearse a new two-hour dance for next year. Other recipients of grants... include the Auckland Ballet (\$40,000 for *Romeo and Juliet*)... \$55,000 for two new works and an existing choreography... [to the dance group] *The Human Garden*... and... \$35,000 [to an author] for a novel. Last month nearly \$1 million in funding was allocated by Creative's Maori and Pacific Island arts boards.

...Auckland artists and art institutions... have done well in the latest funding round announced by the Arts Board of Creative N[Z]. Grants worth more than \$2.7 million were shared among 224 artists and organisations. The cash covers less than a third of the numerous applications – about 100 more than last year... [At least 11 Auckland artists received] grants of between \$20,000 and \$2000... [while a local fine] art photographer... is one of four mid-career artists to receive the equivalent of a year's salary – around \$35,000 – to enable them to work as fulltime artists next year. The others are [an artist] who works with computers and video[and a] sculptor... both of Wellington, and... a documentary photographer, of Taranaki... [Her] grant will support a project called *The Other Half* in which [the photographer] plans to explore the effects of a car accident in 1977 which left her with severe head injuries... [The Auckland photographer's grant will enable her] to leave her job making prints in a commercial photographic workshop and develop new directions in her work. [The Auckland, who] graduated from Elam in 1982, majoring in photography[, held an] exhibition of more than 10 years of her work... at Lopdell House earlier this year. Much of her work has been of objects and environments, such as the interiors of houses, which [the artist] has created especially for the camera. Her most recent interest is incorporating text into photographs, by photographing written versions of dreams, both her own and those of others, about art and artists. Some have been written in pencil on cardboard and photographed close-up with a large-format camera, giving a very textured result. Others are written directly on to a large negative. Far from being boring – as the cliché about other people's dreams has it – the result, says [the Auckland], is a photograph of "an interesting little narrative with entertaining and funny juxtapositions." ...[the] Wellington lecturer... plans to work on an interactive computer installation and digital video disk called *Space Invaders*. [His fellow Wellingtonian] first attracted critical attention through her series of life-sized ceramic figures called *Nga Morehu* (the survivors). [The sculptor] will use her grant to develop work in stainless steel for a project entitled *The Immigrant Series*... The Auckland City Art Gallery has been given \$30,000 towards the funding of Maori guides to provide interpretation of the history of the paintings of... Charles Goldie... The gallery also received \$20,000 to support artists' projects. Other public institutions to receive funding include [a]New Plymouth... gallery for a commissioned work by [an]Auckland artist...; the Dowse Art Museum in Lower Hutt for a publication about [an]Auckland glass artist...; the Fisher Gallery, Pakuranga, for a body of new work by [an]Auckland fibre artist...; the Auckland Museum for a touring exhibition of stone sculpture by [an]Auckland sculptor...; and [an Auckland] gallery for a catalogue on the work of [an artist] whose new paintings will be exhibited there next month. The A[US]n Centre for Photography receives \$10,000 towards an exhibition in Sydney and Brisbane of contemporary photographic and video art from the South Pacific. A representative of the arts board said that this was because about 50[%] of the artists represented were from N[Z]. Auckland also... scooped the pool... [during the] handout of grants by the Pacific Islands Arts Committee... One of the grants will be used to transform the Pacific Hall of the Auckland Institute and Museum next month. Six visual artists will create a new audio-visual installation using wooden sculptures, water, lighting, flax coverings, performance and sound... Auckland comic duo The Brownies were offered \$14,000 to support a national tour after sell-out performances in four cities this year... Other grants... include: • \$10,000 to Pacific Nation Records to record and release an album. • \$5000 to the Tongan Community Trust to host the National Tongan Talent Arts Festival...

Te Waka Toi... the Maori arm of Creative N[Z]... announced its annual funding yesterday, with most of the money (\$702,290) going to Toi Maori Aotearoa... a Wellington-based national arts organisation which develops and promotes Maori art... and Taki Rua Theatre[, which]... promotes the Maori language and supports and encourages Maori playwrights. Te Waka Toi's chair[perso]n... said they were able to fund only 28 of 102 applications because of the limited budget of \$1,389,242. Other grants were: ...• \$20,000 to Tangata Records, of Auckland, to produce a CD series of Maori music. • \$15,000 to Ngati Kuri Trust Board, of Kaitiaia, to support orators teaching tribal history. • \$3000 to [a Maori] to attend the 25th annual storytellers convention in Tennessee... • \$150,000 for the 1998 Aotearoa Traditional Maori Performing Arts Festival in Wellington.

...Festival combines arts and profits... Making money out of art is a battle anywhere in the world, says... the artistic director of Wellington's N[Z] Festival of the Arts. After almost 30 years in the business, [the director] has plenty of first-hand knowledge. Riding the narrow line between what audiences find popular and challenging (always allowing for the kind of artistic stretch that gets the highbrows along) is what [the director] knows best. His challenge? To woo artists from all over the world to Wellington, which... is no problem. "This is a very, very big and high-quality event – not just in N[Z], but in world terms too." More importantly, "You've got to give the artists' a good time" – give them a reason to travel from the other side of the globe. And this is no problem either, because Wellington, with its natural amphitheatre wrapped round a stunning harbour, provides the perfect setting for a festival. "From about 6 o'clock in the evening there are squillions of people in the streets... [creating] a huge buzz in the city. The artists really enjoy that buzz." Then there's... the system of official welcome – the powhiri which "comes as a shock, but a fantastic experience" for overseas performers. Born in Birmingham, [the director] started his artistic career at the Cockpit Theatre. It was the early 70s, the Cockpit was part of London's exciting fringe theatre culture and the young [midlander] put together a long contact list of some of the most exciting talent in Europe. After seven years [the midlander] decided to take on a challenge and, with [a]friend... created a partnership that brought theatre companies, ballets and even circuses (including the A[US]n Circus Oz) to London. This was when [the midlander] developed the kind of commercial nous so necessary when directing an event like the N[Z] Festival which, after three years of losing money, started making some in 1992. It was particularly successful last year – the first under [the midlander's] directorship... Financially... the... [director]'s challenges are tough. Unlike most arts festivals on the world circuit there is little Government funding here and organisers rely heavily on corporate sponsorship, ticket sales and the culturally-minded Governments like those of France, Germany and England who pay a substantial percentage of travel costs in an effort to export their culture. "We have to sell over 200,000 tickets to break even – basically one to every person in Wellington... And we've done that over the last two festivals." It's also helpful if some of the acts that [the director] chooses can be sold to one of the other arts festivals that fall around the same time, such as the Hong Kong Festival (of which [the midlander] is also international programme director), the Festival of Perth and the Adelaide Festival... [□ Three] crucial reviews under way will have a huge impact on the arts and their funding in [NZ] for the next decade...

On the same day recently that a television commercial assumed, "The world our children grow up in may be harsher than ours..." I read a memoir by[a] novelist... describing London immediately after... W[W2] on her arrival from South Africa... "...what strikes me most about that time... is... the contrast. On the one hand, the low spirits... but on the other, an optimism for the future so far from how we are thinking now it seems almost like the symptom of a general foolishness." That overriding optimism following the Depression and the war lasted through the 1950s here too. Everybody seemed to decide the world needed to be put to rights. But isn't it appalling that at a time when every Western country has

never been materially richer; when more people have more “things” to gratify their vanity and their senses, everyone accepts an inevitability that life in general is to become harsher. So what went wrong? One of the problems was the overly zealous and ill-directed social engineering of the kind of social democracy we had in this country, even if the actual plunge into pessimism was precipitated by the sudden loss of full employment in the early 1970s. My favourite among the many economic absurdities of that time was the egg entitlement scheme which made it illegal for anyone to set up a poultry farm without buying the right to produce a certain number of eggs from someone else who was reducing production by that many. But the great truth extrapolated from the economic arthritis of the 1970s is that any attempt at social engineering is destructive and undesirable. So, the apostles of the harsh new world tell us, we cannot tolerate social engineering. This nonsense could be a subterfuge on their part, a deception, but I suspect it’s a blindness imposed by ideological thinking. For example, a phrase in a recent Arts Council publication tut-tutted at one type of funding as possibly social engineering. Does the council not see that giving any grants to any artists is precisely that?

...Two months ago the Arts Council of N[Z] – rather quaintly known these days as Creative N[Z] – put out a modest document called “In Pursuit of the Arts.” It contains some statistics which should be better known: N[Z]ers (in the year ended March 1996) spent \$1.9 billion on cultural goods and services. Some 48[%] of Kiwis count reading their favourite leisure activity and all of us spend \$3.8 million a week on books. Fully 81[%] of the population states they are interested in culture and cultural activities and 77[%] believe that such activities should receive Government funding. So one can fairly assume that three-quarters of ordinary people are interested in how the Government subsidises the arts... The first... [of t]hree crucial reviews now in the pipeline... is the major review into arts funding announced by the Minister of Cultural Affairs... Compared with other countries, a disproportionate amount of Creative N[Z]’s funding (some 85[%]) comes from gaming... The... report is expected early 1998. The second is an internal review by Creative N[Z] of its strategic plan, the policy document nitted out three years ago. All potential applicants must be interested in the so-called “people goals” and “arts goals” of this document because those dictate how the two arts boards of Creative N[Z] go about making their decisions. The third review, under discussion at arts boards meetings, is looking at the actual process by which grants are allocated. The problems go back to the ideologically driven brave “new environment” imposed with minimal consultation on the arts community by Creative N[Z] three years ago. In the name of accountability, efficiency, transparency and cost-cutting (though this last is not really admitted as such) the “new environment” promised a “cross-disciplinary” scheme that was “bicultural” and “multi-contestible,” based on a new, superior, cheaper and incorruptible method of assessment. The old QEII Arts Council way of allocating so much to literature, so much to visual arts, to music, theatre, dance and so on, vanished. Now we are... pitting, apparently, children’s writer against composer, theatre company against sculptor, orchestra against choreographer against publisher against film-maker. Who decides – and how? Now there’s the rub. The peer panels of old have given way to two ministerially appointed arts boards, doggedly determined to do it all themselves and relying on a suspect marking system and staff in-house advice. We do not have the “peer assessment mechanisms” required by the 1994 Arts Council Act. How can the Society of Authors accept the arts boards as peers qualified to make artistic judgments when not a single member has any discernible knowledge about literature or, indeed, much arts expertise at all? We... the N[Z] Society of Authors (PEN Inc)... argue that as “stakeholders” we should have a part in the selection of assessors for each sector, who should then sit as panels sharing their specialist knowledge. Their rigorously debated judgments should form the basis of the arts boards’ final decision. At present assessors work in isolation marking applications solely on “excellence” on a scale of 25 points (and maybe settling a few scores along the way – it’s possible). At the end the grants lists become public and the arts community makes its own assessment of where the money is going. With four granting rounds now completed, these are the complaints I have most frequently heard from all three arts sectors: The single business model does not work across the board. Literature, visual arts and performing arts need differing policies and mechanisms. Many individuals and organisations are so discouraged by the austere, unfriendly business jargon of Creative N[Z]’s documents and letters that they are not applying at all. New and emerging artists are missing out badly. So are fragile areas like youth performing arts and children’s writing. Funding single projects discourages risk-taking and confidence in forward planning. Creative N[Z] has responded by blaming inadequate funding and the act which binds it, or by implying that the only voices doing the grumbling are those who missed out.

...As envelope-opening occasions go, it doesn’t quite have the impact of the Academy Awards. But for the applicants in the annual Creative N[Z] arts funding round, what was lurking in the letter box yesterday could have spelled either survival or disaster. Many arts organisations were left wondering how they would cope after learning of cuts of... just under 10[%]. A cut had been expected, but of around 5[%] – the amount by which C[reative] N[Z] had reduced its overall budget. Among the hardest hit are Wellington Sinfonia (down \$87,000), Dunedin Sinfonia (down \$56,000), and the Auckland-based company Theatre At Large (down \$51,000). The Choral Foundation is down \$40,000, Downstage Theatre [(\$40,000)], Christchurch’s Court Theatre [(\$40,000), Chamber Music N[Z] (\$39,500), Opera NZ (\$30,000)]... the Museum Director’s Federation [(\$30,000) and Wellington’s Circa Theatre \$20,000... Pressure on funds had been added to by C[reative] N[Z]’s decision to maintain its funding for the Royal N[Z] Ballet to the same level as last year. However, C[reative] N[Z] no longer annually funds two organisations[–] ...Auckland’s Watershed Theatre Trust, [and an Auckland dance company (though the dance company’s choreographer]... got \$20,000 for study trips to New York and Europe[–] ...freeing up \$600,000... The Arts Board also allocated 197 project grants worth \$3.05 million. However, it had received 737 applications for more than \$12.6 million, and many worthwhile projects had missed out... Even those who count among the winners are unlikely to be dancing with unalloyed joy.

...The board’s allocations were, on average, 10[%] lower this year. [But]Auckland Theatre Company got a 19[%] increase... to \$390,000. Artspace, which exhibits new work by visual artists, was allocated \$225,000, and the Auckland Philharmonia received \$1,035,000, up \$3500... Other grants included... \$40,000 to the Rockquest Trust for the secondary school rock music competition. [● The battle of the bands final is on tonight.

...‘A MILLION dollar revamp of Glen Eden Playhouse is set to thrust west Auckland into the theatre limelight. Acts that use Auckland City’s Aotea Centre and the North Shore’s Bruce Mason Centre can now add west Auckland dates. The former town hall and movie palace closed on Christmas Eve after getting resource consent for the major changes. The renovation includes a pit for a 20-piece orchestra, a balcony, a revolving stage, plus new changing and scenery rooms. The Glen Eden players committee has set up a trust board to apply for grants to fund the renovation, with one already from the ASB.’]

...Ares, the Greek god of war, ma[d]e... a brief call on the Auckland City Council last night to put some steel into a plea for a new \$2 million home for drama. Actor Kevin Smith strode before councillors in a costume... to plead for a new venue for the Watershed Theatre. The popular drama group lost its Viaduct Basin stage last December when the building was sold... [In related news, t]axpayers had been told the Museum of N[Z] – ...a museum made... more expensive [because it was built] on an earthquake faultline... – [would]... cost \$280.6 million but latest figures show it will be \$317.2 million. [However, the] museum says there has been no increase in the cost in real terms. The financial controller... said the \$280.6 million was the cost of the building in December 1991 dollars... The difference resulted from an inflation adjustment and inclusion of exhibition costs in the figure. “They are not new costs. They had been budgeted for but had not previously been shown as part of the museum construction costs,”...

The Minister of Cultural Affairs... said Te Papa had been built under budget, and... the... museum’s... chief executive... said in the annual report that during the year Te Papa had a net surplus of \$776,000, about \$1.65 million better than budgeted. Income for the year was \$1.098 m... greater than budget... The building project expenditure was \$6.126 m... under budget and the exhibitions project was under budget by \$4.138 m...

The Museum of N[Z] spent... \$24,000 on its Christmas party last year but rejects criticism from Labour that it was “grossly lavish expenditure.” The party at the waterfront site in Wellington was for 270 guests at \$88 a head, although the Manurewa MP... who sought information on the party, believes only 150 attended at \$165 a head... “Taxpayers do not give over their precious money in order for nameless bureaucrats to have a

boozy knees-up.” However, [the]museum... said last night that no apology was being made for the amount spent. It was part of the museum’s effort to raise... \$49 million towards its costs. It had already raised... \$12 m... so it could be argued that the party cost had come from that budget. “The philosophy behind it is to spend a bit up front at this stage with the view of raising \$49 m...” Anyone familiar with fundraising on that scale knew it was what you had to do to bring in the dollars. The museum was operating in a new environment and corporate fundraising was part of it.

...*Sour words over identity of brand new museum* The... Museum of N[Z] has stamped a new \$200,000 brand on its new national treasurehouse, raising ministerial eyebrows and public debate... The reactions have been mixed. The Minister of Cultural Affairs... was surprised and concerned at the cost of developing the logo... [A] Labour MP... was appalled at the cost of the new brand when it simply abbreviated the official name and added what [the MP] believed was a baffling... message. On the other hand, Wellington designers have approved the brand as a cost-effective investment for the museum. The museum’s chief executive... welcomed the public debate but indicated her own surprise at the minister’s comments. [The chief executive] said the Government had asked the museum board to come up with a combined total of \$49 million to top-up capital and operating costs, and then find \$4 million in yearly revenue. Given such a commercial task [the chief executive] said it was “very interesting” that the minister objected to a proven commercial strategy to raise money. The brand development had cost between \$110,000 to \$120,000 over two years, including focus group research. Another \$80,000 would be spent on introducing the brand to museum stationary. [The chief executive] said the money came from a total marketing budget of \$1 million, and a total museum budget of \$70 million this financial year.

...Virtual bungi-jumping and virtual sheep-shearing[, which] includes virtual blood – if you make the wrong move... [–] are part of the high-tech armoury of lures for non-traditional visitors[to] the Museum of N[Z]... Two... rides will also be on offer. One goes back to N[Z]’s past, featuring Maui fishing up the North Island and being blasted out of the volcano which formed Lake Taupo. The other ride will be a futuristic Wellington. [A special] effects expert... who worked on the hit A[US]n film *Babe*, and[a NZ film] director... have helped to develop the computer-generated exhibit. Time Warp... [is] the only part of the museum to have entrance charges... \$15 for an adult and \$11 a child for both rides. Other features... are the 88m-long natural light gallery on level five. It will host what... the... museum communications manager... said would be probably the most comprehensive exhibition of N[Z] paintings. Maori, Pacific Island, early settler, natural history and kiwiana provide themes of other exhibits, most of which use interactive computer technology. The museum also boasts a 330-seat theatre, a 320-seat conference room, several cafes, a restaurant, and a painstakingly recreated walk through native bush, including artificial caves and lava flows.

...*GREAT EXPECTATIONS*: It is unrealistic to expect 700,000 visitors to the Museum of N[Z] a year, says a Victoria University tourism professor. [The p]rofessor... warned that Wellington must not be over-reliant on the museum as a drawcard... [after s]ome tourism operators... lauded the museum as a tourism windfall for Wellington... “Very few people travel just for cultural motivations,”... Shopping comes before culture for visitors to N[Z], according to a Tourism Board survey for 1996... 86[%] went shopping compared with 54[%] visiting museums.

...BARCELONA’S museums have reported a 30[%] increase in visitors last year. The Picasso Museum is the most popular with 822,674 visitors, followed by Barcelona Football Club’s Museum which attracted 729,000. The Museu Nacional d’Art de Catalunya welcomed 303,000 visitors and its new Gothic gallery, which opened this year is expected to further boost numbers. The Museu d’Art Contemporani de Barcelona attracted 240,000 visitors. Meanwhile, a new \$140 million theme park called Isla Magica, based on Spanish voyages of discovery, has been built in Seville.

...Spain’s new Guggenheim art museum opened to the public in Bilbao last night, offering a symbol of hope to a population weary from decades of industrial decline, soaring unemployment and violence. Spain’s King... officially inaugurated the fantastically shaped building under heavy security on Saturday, just days after police foiled a plot by Basque separatist guerrillas... to bomb the ceremony. As elegantly dressed dignitaries arrived at the gallery, some 500 Basque separatists demonstrated outside the museum they call a symbol of [US imperialism. However, hundreds] of Bilbao residents crowded at the entrance, bubbling with excitement about the international spotlight on the northern Spanish city. Most stopped by a growing mound of flowers and candles marking the spot where ETA (Basque Homeland and Freedom) rebels shot dead a police[officer when the officer] tried to question two [people] unloading flower pots from a van parked near the museum. The pots contained remote-controlled explosives... Many Basques see the museum as a cornerstone of Bilbao’s urban renewal... Others feel the \$US160 million... price tag is too high and the focus is too much on non-Basque culture. The museum’s exotic profile, with undulating walls of shimmering titanium, has electrified the world of art and architecture. Some experts have called the building... the greatest[constructed] this century. Others have likened it to a giant cauliflower. The facade hints at the original snail-shaped Guggenheim museum in New York. [By the way, a gorilla has exhibited and sold some of its paintings. Elephants are also regarded as artists (indeed, many zoos – including Auckland’s – sell elephant artwork as a means of raising funds)!]

...*Portrait of the artist as a young girl* It’s possible those who would serve [the girl] best do her the biggest disservice... [The] agent for this young painter from Los Angeles – still a week short of her 12th birthday – has coined the “Mozart with a paintbrush” phrase, which resonates more for its LA hucksterism than its illumination. And such simplistic boosterism is contagious. Television news here fell into convenience labelling by calling her “a visiting child genius.” Such claims – in part, but not entirely, confirmed by her exhibition at the Downtown Hilton Gallery – obscure what [the 11-year-old] is, a precociously talented painter who happily accepts some critics have noted similarities (not always flattering) between her work and that of Picasso... and [others]. Then there’s the cuteness factor of painting in “magic slippers,” and the fact that her work here – as with the recent exhibition of John Lennon drawings at the Hyatt Regent – is exhibited beyond the critics’ usual circuit. After her appearance in[television] interviews, the Romanian-born [girl]’s self-assurance has been seen as media-groomed, another debit in the ledger which would prefer children to be more inarticulate... (Her work has grossed more than \$NZ7 million and [the girl has] been profiled by *Newsweek* as well as frequently on [US television, so it] is media-aware.) ...Yet, in person, [the girl] is alarmingly charming. Just back from shopping – [where it] bought a jade fish hook – and excitedly chatting about having seen Maori carvings in Rotorua, [the young genius] settles down to answer questions while fiddling with a hair-tie like any other 11-year-old... Her mother... and father... would seem to be the levellers: [mum], down to earth and unassuming, says they have moved their daughter into a private Christian school, not to separate her from her peers but because they... [want her to] graduate with a good grounding in all subjects as well as having a religious framework. While downstairs in the gallery buyers are being escorted around the works by agents, [the girl] sits upstairs sipping juice, fiddling with her jade necklace and talking... about discovering lithograph techniques... sculpture... and... incorporating Maori motifs... They will allow her to expand her style[, although]... seeing other artists’ work – Picasso... and those others in the litany of names most often trotted out – doesn’t directly influence her... And the money being made downstairs? It doesn’t matter to her whether her works sell or not...

A new biography of Salvador Dali reappraises his achievements as an artist but, [the NZ Herald’s critic insists, the artist] was basically a berk thinly disguised as a genius THE world is about to be exposed to... the life and achievements of the memorably eccentric painter and cultural troublemaker Salvador Felipe Jacinto Dali... and his pointed moustache... Again. On the eve of the release of... *The Shameful Life Of Salvador Dali*, and a series of rare films which will screen on the BBC’s *OmniBus* programme in Britain, it’s timely to recall why most serious art observers loathe Salvador Dali. Where to begin? His support of fascism? His love of Franco? His world-class greed? His spectacular immorality? The fact that [the artist] signed hundreds of thousands of blank sheets of paper so nobody will ever again be sure of what is and what is not a genuine Dali? [Someone once] came up with a suitable anagram of his signature – “Avida Dollars.” Personally, I loathed his contrived appearance more than this uncontrived greed. Many artists have eventually sold their souls without making it anything like as obvious as Dali. You could almost argue there is something impressive about his honesty in affairs of the dollar. Dali did not invent the trade in empty signature; [Dali] exploited it energetically. But the dumbly obvious way in which this... awkward boy from Spanish Catalonia deliberately constructed what [it] took to be a fascinating image

for himself had more serious consequences. The silly moustache. The wild-eyed stare. The ridiculous cane. The absurdly macho way of wearing his coat slung over his shoulders as if it were a matador's cloak. This dramatic personal makeover was driven by a shallow belief that geniuses looked a certain way... A society that was still learning always to judge books by their covers – the single most distressing and unhelpful development of the media age – was receiving early and insistent tuition in its bad new ways. The camera adored Dali because [the artist] made its life so much easier. His deliberately photogenic image freed photographers of the need to be any good at their jobs. A chimpanzee with an Instamatic could hardly have failed to take an “interesting” picture of this human photo opportunity waiting to happen. Since [Dali] never went out in his civvies, [the artist] could never be photographed in a state of unpreparedness. Dali made himself into a kind of logo, instantly recognisable in any situation... the Nike tick made flesh. And... the... camera age repaid him by turning to him for illustration and amusement much too often. So why an article on this superficially photogenic fraud, of whose work [a journalist], confronted by a Dali retrospective in his *Postcard from Paris* television show, pointed out: “It was impossible not to burst out yawning”? There are two reasons. The first is that the new biography is written by... [someone whose writing] must be taken seriously... No Spanish writer before him has dealt as directly with [Dali's] failings... Spain is lucky to have this clever Irish [scribe] as its chief cultural apologist in the anglophone world. [The scribe, who] lives near Granada and has been a Spanish citizen since 1984... is a writer with the clout to organise ambitious television programmes to accompany his texts. *Fire in the Blood*, his BBC series on Spain, was a rare... example of a wide-ranging investigation of a foreign culture mounted solely because its author lives there and has clout... The second reason it is important to deal with Dali is because his popularity is of a kind that appears horribly significant at present: Critics hate him, but the public does not. It worships him. If there is one cultural development that absolutely must take place in the art years ahead, it is a bridging of such gaps. We simply cannot afford another century in which the tastes of the public and those of its aesthetic commentators are as dramatically divergent as they have been during the years of modernism. Dali is certainly one of the century's signature artists. Bad surrealism inspired by his example – involving distorted nudes, warped landscapes, sagging watches, mysterious chessboards – is one of the few modern-art styles that can be said to have achieved true popularity. Thus I made myself read [the Irish scribe's] biography with as open a heart as I could manage, and for the first third of it at least I was rewarded with the intriguing story of an artist who was annoying, yes, arrogant, yes, but also fantastically determined and perversely honest... An easy blusher, Dali conquered his own shame by admitting to it shamelessly. The most spectacular example of this confessional freedom was his admission of an insatiable appetite for masturbation. [Dali] made countless pictures about it. Wrote about it. Talked about it. And, I suppose, made it easier for us to accept that everybody does it. (I'm trying hard to be charitable here. My uncharitable view is that admitting endlessly to being an obsessive masturbator was a tried and trusted Dali tactic for gaining attention that withstood repetition.)... Basically, time after time, Dali painted colour photographs of weird dreams. Or what appear to be his weird dreams. Of course, real dreams have none of the sensational clarity of a Dali. Indian restaurant tigers don't leap out of the mouths of throbbing penis fish and attack sleeping nudes with bayonets in real dreams. Real dreams are never as silly as Dali's. They are grounded in less glamorous emotions, in duller memories. Only on the cover of Iron Maiden albums and in the gothic jottings of schoolboys could such contrived ramblings be mistaken for real dreams. [The Irish scribe] is good on the young Dali[, and] points out that [the artist] was what people in Britain would think of as a notably spoilt child, a concept Spain apparently does not share. So young Dali terrorised his household with his whims, and could even be found depositing his turds about the house in places chosen for their maximum annoyance to his mother. Such a child was allowed to grow into an approximation of an adult without the application of any effective correctives. Small wonder... [that Dali] was frozen, unpleasantly, in the perpetual grimace of adolescence... [taking] pleasure in saying, doing and painting exactly what [the artist] wanted without a thought for the feelings of others. His one time mentor, the founder of surrealism, Andre Breton, accused him of “systematic vulgarisation” in the second half of his career. This is, indeed, what happened. Once [Dali] took up with his beloved Gala, another human being so lacking in basic human kindnesses and scruples that earlier ages would certainly have torched her as a witch, there is a noticeable dropping of standards – first moral, then communal, then aesthetic. The two of them cheated, stole, smirked, mocked and maddened in tandem... When Dali finally fell out with his family it was because [the artist] inscribed a picture with the words: “Sometimes I spit on the portrait of my mother for the fun of it.” These are not forgivable acts, and this was not a salvageable career. - 1997

“...there are so many... [things to do] in Auckland right now... [so how] important is it that we come along and see this [exhibition of yours]? ...In your opinion... [why] is it important for us to have art...?” “Tricky. I guess as a cultural... outlet... otherwise you just get commerce and business... it's a way of releasing a lot of ideas out there... in a freer more creative way...” “So... when you talk about getting ideas out, would you say that you believe yourself to have things that the rest of the world needs to see...?”

...what is an artist in this world but a servant, a lackey for the rich and powerful. Before we even begin to work to fill this craving of ours we must find a patron, a rich [person] of affairs, or a merchant, or a prince, or a pope. We must bow, fawn, kiss hands to be able to do the things we must do or die. We are harlots, always peddling beauty at the doorsteps of the mighty.

[The artist – or, to provide a more precise definition in this instance, the cartoonist –] says his job is a full-time holiday.

WHEN [A SINGER]'S latest song, “We Didn't Start the Fire,” and his fourteenth album, *Storm Front*, both hit No. 1 during the same week, it was a rare double chart-topping triumph. Yet [the singer], whose budding musical career in the sixties prevented his completing high school... has had financial setbacks. Part of the problem, the singer/composer admits, is that “artists are historically knuckleheads” when it comes to money... [“The number of highly paid entertainers who have declared bankruptcy is staggering. A community relations director has assessed the situation as follows: “The majority of entertainers can't handle success. They are not equipped for success. You have a situation where the entertainer who is used to living hand-to-mouth suddenly gets more money than it can spend.” Yet, according to the singer: “We (artists/entertainers)] don't do what we do for money. It's because... we don't have high school diplomas, and it's the only thing we can do.”]

Unless the Auckland Symphonia can turn fully professional by next year it is likely to disintegrate. The prospect of full-time employment has helped to keep the players together for the past four years but hopes of attaining that goal are receding. The orchestra has been unable to raise more than about \$19,500 a year locally, including \$16,000 from local bodies. - 1972

A call for the Auckland Philharmonia to receive a fairer share of national arts funding was made yesterday at the orchestra's education programme launch[, when concerts] and workshops designed to give hands-on experience to primary, secondary and university students from Taupo to Whangarei were announced... The Music Works '97 programme, sponsored by the *N[Z] Herald*, will give budding conductors a rare opportunity to practise with the 63-piece... orchestra. Young composers will also gain valuable orchestral experience along with a studio quality tape of the Philharmonia's rendition of their work... The Philharmonia president... welcomed the opportunities provided by sponsors' support, but said that towns like Rotorua and Whangarei deserved more than a once-a-year visit... [T]he Auckland Philharmonia should be allowed to tap into regional touring funds previously reserved exclusively for the *N[Z] Symphony Orchestra*. A 1996 report recommending that those funds become

contestable had been ignored by the Government... “But we are hopeful that the new minister will have another look at that... so... we can go... where the NZSO don’t... go.” Both the Auckland Philharmonia and the NZSO were fulltime professional orchestras, but the Philharmonia received \$1 million each year from Creative NZ while the NZSO now attracted \$13 million... 40% of the Philharmonia orchestra’s income came from the box office...

The past couple of weeks... have been something of a musical trade fair. Both major orchestras have strutted their stuff in showpiece series aimed at attracting subscribers... Four nights of Beethoven with the Auckland Philharmonia verses three nights of Brahms with the NZSO. It’s the sort of battle that could give competition a good name. The best news... is that both bands are... [seeking] to expand the Auckland classical music audience. The Auckland Philharmonia is more adventurous, increasing the number of seats on offer 52.4% – up from 23,100 seats to 35,200. The NZSO is offering a more modest 14.3% increase to 24,000 seats. Together, that’s an additional 15,100 seats on the highly competitive Auckland entertainment market. And given the older age bracket of most concertgoers, a highly priced segment of the market. Strangely, such considerations do not seem to have concerned the NZSO’s marketing experts, who have increased prices up to 43%... compared with the Auckland Philharmonia’s modest 6... to 12% increase. Even odder, the NZSO price rises are most swinging for subscribers to the smaller five-concert series – the one you would expect newcomers, and those most worried about price, to gravitate to... All of which is no doubt music to the Auckland Philharmonia’s ears. A per-concert price for a “premier” seat in the NZSO’s 10-concert series is \$49 compared with \$39 for the same seat with the Philharmonia... No doubt the NZSO puts a premium on its reputation as the senior orchestra. But without entering into the “who is better musically” debate, the reality is the Philharmonia runs rings round the NZSO when it comes to attracting Auckland audiences. The last fortnight’s battle of the bands was a perfect example. The Philharmonia’s Beethoven series sold out weeks beforehand by direct mail. The NZSO, despite the advantage of NZ’s biggest classical drawcard [in NZ’s premier] pianist... and endless advertising, was reduced to offering a free ticket for every one bought... [E]ven then there were plenty of empty seats. In such circumstances, lifting one’s prices so dramatically does seem an odd thing to do.

...As a business[person] I fully appreciate economic reality... Through personal involvement with the Auckland Philharmonia, I [also] know how hard the orchestra works to bring music to many hundreds of thousands throughout the upper half of NZ. I know how limited their funding is compared to that of the Wellington-based NZSO. I know about the hard work of the musicians, many of whom hold down several jobs... With many demands on money and... the ongoing demands of scarce resources... the Government faces difficult decisions... But in Government, as in business, there is a danger of focusing only on dollars: “knowing the cost of everything but the value of nothing.” That danger is inherent in the present debate over funding for the NZ Ballet... The ballet’s dancers work under similar conditions [to the orchestra’s musicians]. And I know about the great efforts they have made to take dance, not just to the major centres, but to smaller cities like Timaru. An important cultural institution like the ballet should not be under threat. Instead, we must all look to the future and consider more than just the financial imperatives... I am not suggesting an open cheque-book. Businesses like ballet and opera companies and orchestras must be efficiently managed and extract maximum advantage from scarce resources. However, our children and our [grand-]children will be badly served if we fail to provide appropriate financial support now to the arts – [as they are already badly served (or are likely to be) by our continuing failure to provide appropriate financial support to educational, medical and other infrastructural services. An advantage for the arts is that funding services which only a minority want to use (e.g., those providing ballet and orchestral or operatic music) is easier – and ultimately cheaper – than fully funding services which everyone wants to use!]

...an old] mate... rang yesterday sounding... glum... Seems [my mate] has spent the winter on a fruitless search for a new major sponsor for his annual Symphony Under the Stars free concert in the Domain. If [my mate] does not come up with a new sugar daddy by the end of the month, [my mate] will have to call the show off. I knew things were serious. Only someone in really dire straits would come to a journalist with their money problems. I thought I had best humour him. What was in it for me if I invested? [My mate] sighed. That was all anyone wanted to know these days. Banks, insurance companies, brewers. Now me. Everyone... was looking for “front-end benefits.” It seemed the brownie points which a big company could earn from such sponsorship in terms of corporate image and warm fuzzies were no longer enough. Not for A[merican] brewers Fosters, which backed the concert for its first four years... All of which is rather a pity. For there is something about these mass feel-good events which really appeals to Aucklanders. No doubt the “free” bit has a lot to do with it, but whatever the reason, we do flock together for them, whether it be... summer musical extravaganzas... the Santa Parade, the Round the Bays jog or in recent years, dare I mention it, the Hero Parade... People who would not be seen dead at the opera or a symphony concert happily flock along with blankets and chilly bins to join their high-brow neighbours. They might number 200,000 or even 300,000. Who knows? It is a lot. Crime around the city apparently plummets for the night, while at the Domain itself, we somehow manage to be as well behaved as a Sunday school picnic, despite large quantities of BYO wine. The first Domain concert came in January 1990 as part of the... [Bank of NZ’s] 150th birthday celebrations. [My mate] received the concert in January 1993 after his plans, as Dragon Boat Festival organiser, for an orchestra in the harbour concert refused to float. [So my mate] came up with Opera in the Park instead. It was a spectacular success. The next year [my mate] added a symphony concert as well, then in 1995 a Christmas extravaganza. Last summer, the opera concert was replaced by a broader-based “Showtime” concert. Now the symphony concert seems doomed, unless a sponsor suddenly appears. [My mate] will not talk numbers but word around town is that each concert costs about \$500,000, of which the major sponsor finds about half. For that, they would get... well... an awful lot of brownie points. And yes, I am sure we would all start shopping with them as well.

...Opera-goers heading for tonight’s extravagant version of *Aida* under Auckland skies are being promised the best performance of its international tour so far. The production... was premiered in Singapore... before going on to Perth. Although those performances won fine reviews, the executive producer... is expecting even better things at Ericsson Stadium. “The cast have come together for their third city, so they feel they’re an ensemble, rather than a group of individual soloists...” [His] upbeat assessment extended to the 450 extras. As in Singapore and Perth, they are local volunteers, many with no theatrical experience. “When you think that, 10 days ago, these people were wandering around the streets of Auckland going about their normal business, it’s quite amazing... The commitment, enthusiasm and willingness to learn quickly among the extras here is the best... We’ve put this show on with less rehearsal time and that’s mostly attributable to the attitude of the Auckland people.” The principals, who include... [a US tenor and a] Scottish soprano... will be backed by 190 musicians and a 200-voice choir. An audience close to 30,000 capacity is expected, and ticket prices range from \$70 to \$190. [The producer also] said there were more “butterflies” this time round, mainly because the performances in Singapore and Perth had been indoors. [But the] forecast for tonight is for a continuation of recent dry... conditions...

The scene is right out of an ancient civilisation – Egyptian statues, pyramids, chariots and giant cauldrons. But the money that 30,000 people paid to witness it at Ericsson Stadium... last night was cold, modern cash – a cool \$3 million worth. While most enjoyed a great night under the stars, for some opera buffs lured to the one-off performance of *Aida*, it was not money well spent... [The NZ] *Herald* received some angry cellphone calls from people seated on the playing field at the stadium[, and the] police confirmed that queues of people besieged the ticket office during the interval demanding their money back.irate members of the audience protested that... [they were unable] to see well. People who had travelled from across the North Island to catch the lavish production abandoned their expensive seats during the interval for the cheaper terraces with a [better] view... One... who would not be named but had paid \$135 for his ticket, said that unless refunds were granted [it was his intention to] take a class action suit to stop organisers exporting the show. “You can’t sell tickets to a show which [patrons can’t see.]” A doctor... had spent more than \$1000 in ticket, travel and accommodation expenses for him and his two friends, who had travelled from Wellington. “Everyone is really hacked off. The cheaper seats on the sides [had] far better views,” said [the doctor]... The promoters could not be contacted for comment.

...The executive producer of *Aida* rejects claims that some people could not see the one-off opera performance... “I... sat in all seats before and during the performance... I defy anyone who says they couldn’t see the show,”... [However, many members] of the audience... [defied him by saying] they could not see... [Amongst them was a doctor who] had spent \$1000 on eight tickets to celebrate her 15th wedding anniversary... [T]he night out was a “terrible rip-off and a disaster.” ...They could see only... 5[%] of the show and gave up their seats during the first act to perch on concrete steps... [Furthermore, a] handful of disgruntled opera-goers received refunds on Friday night, and up to 50 people were given other seats... Contrary to earlier media reports, [the executive producer] said tickets would not be automatically refunded. Each complaint would be considered on its merits.

...*Opera fans keep up complaints chorus*... More than 30 disgruntled fans from around the country... have contacted the *Herald* describing the... *Aida*... event as a scam, fiasco, an absolute disgrace and a rip-off. “Such a scam is the stuff riots are made of,” wrote [a resident] of Mt Eden, who paid \$125 for her seat on the playing field. [A resident] of One Tree Hill, agreed. “The promoters of the concert should go down on their knees to thank the Egyptian gods that I and the rest of the audience on centre field did not rebel on the night and become show stoppers.” ...Most [of the disgruntled fans] were angered by comments by the executive producer... who on Monday rejected complaints that people could not see the show.

...[an e]xtravaganza supremo... was offered ground-level seats to the one-off performance of *Aida* but refused because [it “knew it] wouldn’t see anything.” [The supremo], who designed the Auckland Commonwealth Games opening and closing ceremonies, said that each row of seats on the ground level at Ericsson Stadium... should have been at least 150mm higher than the row in front to give everyone a reasonable view. “I saw it coming... After going to the [Wacko (r:p811, ln28) concert on November 9 last year – which cost me ‘\$75 (it cost just \$4.50 for the best seats in the house at his Wellington Town Hall show in July 1973’) –]I knew we wouldn’t be able to see anything at *Aida* when the seats were on a flat surface. The seats should have been raked... A 300mm height difference between rows would have been perfect...” ...Those [members of Friday night’s audience who are] seeking refunds received support yesterday from the Consumers’ Institute, which suggested that aggrieved out-of-towners might also be entitled to compensation for travel and accommodation... Disgruntled... opera fans should know in the next few days if they will get refunds...

You get what you pay for? Not always, according to a group of people who paid up to \$190 for seats at the Auckland production of *Aida* last month – many claim they would have had a better view in the \$75 “cheap seats.” Patrons who complained after the production that they couldn’t see the action on stage have had their claims for a refund turned down by the producers. Global Entertainment Pte Limited said they should have got a refund while they were at the show. However, a consumer watchdog organisation says disgruntled patrons can take the matter further under the Consumer Guarantees Act. The law says that a service – such as seating at a performance – must be fit for its purpose. “If you buy a ticket to a show and there is no proper sight-line to the stage from your seat, you are entitled to your money back,” says a report in the latest issue of *Consumer* magazine. “This applies unless you were specifically told when you bought your ticket that the seat would have a restricted view.” The magazine advises that the best course of action is to complain at the time and ask to be reseated – but other options are available. “If this fails, take the matter up as soon as possible after the show. If you still receive no satisfaction, you can take a case to a Disputes Tribunal,”... As well as the cost of the ticket, consumers can claim for consequential loss, such as the cost of getting there – a significant cost for those who travelled from as far away as the South Island... The Consumers’ Institute has fielded an unprecedented number of calls from disgruntled *Aida* patrons.

...Disgruntled *Aida* patrons have vowed to mount a legal battle to get their money back after the show’s producers refused any further refunds... The chief executive of the Consumers Institute... said Global Entertainment’s claim that only those who sought refunds at the show were entitled to get their money back was “nonsense.” ...However... [the chief executive, who] was appalled by the way the promoters and producers had handled complaints... advised patrons to battle the Auckland-based promoters, rather than deal overseas with Singapore-based Global Entertainment... Representatives from... [the companies] could not be contacted for comment yesterday. A spokes[perso]n from a public relations [firm] representing the companies, said the *Aida* marketing manager... had “gone to ground.” His telephone was disconnected on Monday.

...[a lawyer has] filed papers in the High Court at Auckland on behalf of at least 1500 ticket-holders who went to the... opera at Ericsson Stadium. ...[an] Auckland sharebroker... isn’t short of a bob. [The sharebroker] could afford to retain the best legal counsel in the land to represent his interests – and doubtless has done so when... [necessary. But when the sharebroker] wanted his money back after a bad night at the opera, [the sharebroker] went, without lawyers, to the most modest court in the country and asked it to find in his favour. And last week it did. The Disputes Tribunal referee... found that the respondents... were “jointly and severally liable”... and ordered them to refund the \$1120 [the stockbroker spent on 7] tickets for... Verdi’s *Aida*... None of the respondents was represented at Thursday’s hearing although the lawyers for Ticketek, which sold... the tickets, had sought to have the matter adjourned. They wanted the dispute heard in the district court or, alternatively, adjourned until the action brought by [a] lawyer... on behalf of some 1888 ticketholders has been heard in the High Court. But the referee would have none of it. [The referee] is allowed by law to proceed “on the evidence available” and so, after trolling through the hearing room and asking aloud whether anyone was there for the respondents... did just that... For... [the] sharebroker with Merrill Lynch and a member of the board of Wilson and Horton, the victory was a triumph for simple fairness. [The sharebroker] had never wanted to be part of the class action being taken by [the 1888 ticketholders’ lawyer], who is seeking refunds and damages on behalf of her clients. “I had no desire to get damages. That was completely irrelevant.” [However, the stockbroker had suffered embarrassment] on the night because [it had] taken several guests – two from Perth – to the performance... Ticketek has argued that it acted simply as an agent of the producer and had no control over the seating arrangements, but [the stockbroker claimed to have] gone to great lengths to find out what the view would be like from various vantage points[and] was told by a Ticketek representative that the seats... eventually bought would have a good view of the stage. “I wouldn’t have gone near the place otherwise... I don’t like being taken advantage of. If they make a cock-up, they should fix it.” This is unlikely to be the end of the matter. The respondents have 28 days to pay... or appeal the order. Ticketek’s lawyer... said his client had appealed against other Disputes Tribunal orders. Part of their argument is that the High Court is the correct forum for the resolution of the disputes over *Aida*. [The stockbroker], for his part, is happy with a pragmatic and legally low-tech solution to a practical problem. “Why should I spend thousands in legal fees to get back a few hundred?” ...Many who have fumed at the law’s delays would sympathise. [The High Court] proceedings had been filed three weeks ago but the case was unlikely to have a result before early next year.

...[an] Auckland opera buff... is still waiting for his \$756 refund for tickets to the much-maligned musical extravaganza *Aida*. [The sharebroker] took Ticketek to the Disputes Tribunal and won. The ticketing agency appealed and [the broker] won again... but “we have yet to see the colour of their money.” Ticketek’s lawyer... said the owners of the production, Global Entertainments, had confirmed they were liable. “Any payment to be made will be made by the promoters.” ...Ticketek has appealed against four tribunal decisions and, including [the broker]’s case, had lost two.

...Global Entertainments is preparing to face the music over the *Aida* fiasco... [A] lawyer acting for Global, said yesterday that the company was legally responsible for any liability arising from court action – not Ticketek... • Through an editing error, Ticketek’s lawyer... was quoted yesterday as saying Global had confirmed that it was responsible. [The lawyer] had in fact said that if there was any liability it would fall on the promoter...

The refund cheques have started trickling out to the people who got less than they bargained for at the... production of *Aida* but... lawyers for the show’s ticketing agents and promoters would rather not talk about it. They deny that’s because they want to stop the trickle... turning into a flood.

...OPERA buffs have the chance to see a series of fine performances in the magnificent Sydney Opera House, thanks to a study tour package from Adventure World Travel and the University of Auckland... Fly Qantas to Sydney, stay at The Castlereagh Inn for a week and enjoy evenings filled with music. The operas you’ll attend are: *Iphigenia in Tauris*, *Werther*, *Madame Butterfly* and *Eugene Onegin*. You will also spend a night listening

to the Sydney Symphony Orchestra. The \$2370 fee includes a pre-trip preparation course, return airfares, shared twin room (single room supplement \$285), breakfast, transfers and concert tickets... [Incidentally, Madrid's] opera house has reopened after a \$203 million facelift. The high-tech Teatro Real now has one of the best acoustics of any opera house in Europe. It also has the latest set-changing technology and can seat up to 1600 people. Tickets for ballet, opera and concerts range from \$10 to \$200.

...A British parliamentary committee yesterday accused the bosses of London's Royal Opera House of mismanagement, saying the Government should take over and appoint a "philistine" with financial skills to replace them. A damning report on the recent management of the opera house praised its high artistic standards but said its board and chief executive were incompetents who should quickly leave the stage... [In particular,] the House of Commons culture, media and sport committee... accused the board of "disastrous misjudgment" in failing to find an alternative venue during a two-year closure period while the Victorian theatre in the Covent Garden district is rebuilt. Since the theatre shut its doors in July, the opera and ballet companies have shuttled between venues where their box-office receipts have been disappointing. The committee also harshly criticised the Arts Council, which distributes state funding for culture and also National Lottery grants, for failing to insist on tighter management before it awarded a £55 million... lottery grant for the theatre's rebuilding. The report dismissed the idea that the theatre should "go private" and run itself without public funds, relying instead on wealthy sponsors and patrons like the Metropolitan Opera in New York. Instead it should lower seat prices and improve access for the public... The committee report urged the Secretary of State for Culture... to step in and assume responsibility for running the opera house. [The secretary] has already launched an inquiry into the future of the theatre, headed by... [a] former director of the National Theatre. [In further news from Britain, 'in a theatre open to London's often rainy skies, a troupe of actors is beginning a risky experiment to discover what Shakespeare's plays were like when first performed 400 years ago. The Globe Theatre, a \$68 million replica of the wood-and-thatch arena which Shakespeare part-owned, is the realisation of the dream of US actor-director Sam Wanamaker, who died of cancer in 1993, just as the wooden framework was being put in place metres from the site of the 20-sided original on the south bank of the Thames, opposite St Paul's Cathedral.']

...The writing was on the wall from the moment *Always* was nicknamed *Briefly* by dismissive London reviewers. This week the A[US]n musical featuring British king Edward VIII's ill-fated 1930s romance with Wallis Simpson lived down to its reviews and closed after just six weeks. Costing \$NZ7.5 million to stage, *Always* had to run 24 weeks to recoup its cost. But it was panned and the audiences stayed away. "Do any of us need the stress of this show in our lives?" asked the *Independent* newspaper. "If Never were a place, you'd want to take it there..." Others called it banal, bland... repetitive and heritage kitsch... [Yet the] producers said in a statement: "We are delighted that our audiences have greatly enjoyed the production and are very sad that we are closing earlier than anticipated." London's theatreland is packed with musicals – 17 are running at present, filling about half the West End theatres. But only top-class American imports and shows... by... [London's favourite producer (responsible for shows such as *Evita* and the reworked *Phantom of the Opera*)] are surefire winners. In 1992 a Norwegian musical, *Which Witch?*, about a young girl denounced as a witch who falls in love with a bishop, closed after 10 weeks after a savaging from critics. "They should have stuck to herring boats," said one.

...A new study confirms what producers have always suspected, and feared – critics can make or break a Broadway show, especially those who work for the *New York Times*. The study, which also examined how factors such as advertising, prices and star power contribute to success or failure, found that a good review from the *New York Times* extended a production's run by 76 performances and increased attendance by over 10,000 adding nearly \$US500,000... to box office receipts. The study... conducted at the University of Georgia's Terry College of Business by [a] marketing professor... found that the *Times*' [most infamous critic] had earned his nickname, the "butcher of Broadway." [The butcher], who reviewed Broadway shows during the 1980s and early 90s, "played a very critical role and had a significant impact over and above the newspaper itself." But there will always be critic-proof shows. [The butcher] rubbished... *Phantom of the Opera*, which is going strong nearly 10 years later. [Speaking of operas, 'five people have received a full refund and 27 have received a partial refund for their *Aida* tickets in the Auckland District Court']

...[a] promoter's ignominious fall from grace was completed yesterday when... [the person who once mingled] with pop stars, the rich and famous... was sentenced to 3 1/2 years' jail... [after being] found guilty of 25 counts of fraud... [for] swindling money off investors to prop up his failing businesses... Today... [the promoter], aged 53... will sit down to breakfast with fellow prisoners... [T]he Serious Fraud Squad prosecutor, had told the Auckland District Court how the [promoter] who... brought top acts to N[Z], including... the Eagles... and... Fleetwood Mac... had carried out a campaign of deception involving more than \$2.5 million... [The defence said its client had] left school aged 15 with no qualifications and set about his dream of making a name for himself in the... world... of musicians and superstars... As a youngster, [the fraudster] learned to play the drums and guitar... but... never went any further than being a session musician... and took up the role of promoter. Things began to turn sour for him in 1993[, the year that the promoter] turned to crime to bail his companies out of financial crisis... "[Our client] was besotted by a dream." ...[By the way, Auckland's] Womad festival... cost ratepayers at least \$750,000 more than planned. Sources told the N[Z] *Herald* yesterday that the Womad – World of Music, Arts and Dance – cost the Aotea Centre \$1 million. Attendance was only half the 45,000 anticipated for the event at the Western Springs park, partly because of a clash with the *Classical Spectacular* concert at the North Harbour Stadium. There was also a blow-out in some set-up costs, the sponsorship target was not met, there were problems with the weather, and some patrons slipped in for free... but the [Aotea Centre's] chief executive... said last night that Womad was a "big success" that had been well received and had "wildly exceeded our expectations in some respects." ...[the chief executive also] said Womad's losses would be offset by the centre's other activities, so it was still on target to stay within its \$4.8 million... budget, provided mainly by the Auckland City Council. His predecessor... who resigned in 1993 amid controversy over a string of production losses... yesterday... was "hot under the collar" about the centre's apparent return to entrepreneurship in staging big events.

...Before the plans are off the drawing board, multi-million dollar venues for sports, theatre and music events are enthusiastically sold to the public. But a little further down the track when the bills are mounting, it is the public who must sometimes bear the brunt of any financial... blowout during construction and operating losses once the facilities are up and running. The latest project to hit the headlines over financial woes is the \$41 million North Harbour Stadium... [Fortunately for North Shore ratepayers] and patrons... the... group of seven members... [that comprise] the North Harbour Stadium Trust... could have liability should the financial standing fail to improve. [However, a] North Shore City councillor... yesterday could not rule out that the council would have to "come up with the goods" after guaranteeing \$12 million of loans for the trust... [But the councillor] did... consider that the stadium had a better chance of "trading its way out" than two council facilities – the Bruce Mason Centre and the North Shore Events Centre... In its first year, the Bruce Mason Centre is heading for a \$117,000 loss, but... with maintenance, depreciation and administration costs, the bill to the council was likely to be about \$700,000... [Furthermore, there] are serious doubts the North Shore City Council will be repaid the final \$2 million of a loan to complete the... [theatre] and conference centre in Takapuna... Seven years after it opened, Auckland's Aotea Centre is still council-funded and would be in trouble without local authority subsidies. While its annual report showed that the 1995-1996 year was the best since the centre opened... Auckland City Council has no plans to reduce the \$4 million subsidy it pays to the centre. Waitakere City Council adds \$77,000 and Manukau City Council \$10,000. The Aotea Centre had budgeted to lose \$3.3 million on its operations before levies and depreciation, but it actually lost \$2.267 million, less than in any previous year. Last month, it was revealed that the... Womad... festival... cost the Aotea Centre – and ratepayers – at least \$750,000 more than planned. The chief executive of the Auckland Chamber of Commerce... said that some facilities provided more than just the events they housed. Every time a venue like the Aotea Centre was full, the cash benefits spread wider – travel, accommodation, transport, retail and restaurants... [The chief executive also pointed out that] the North Shore Stadium was essential for Auckland so that every rugby game was not played at Eden Park and every concert was not on the Auckland side of the harbour bridge... [■ Some

councillors are concerned that the] make-over for Auckland's grand old lady is costing a pretty penny. Restoring the 86-year-old Auckland Town Hall over the past two years has cost \$32.8 million, in addition to an earlier \$1.8 million for the clock tower. It is now in line to have a further \$1.8 million approved for fit-out costs... The restored and refurbished town hall... [- which] comes in three pieces... the great hall, concert hall and, in the apex, the council chamber and adjacent meeting and function rooms... - ...will be formally opened on Friday week...

Over the years I've learnt it's better for the old blood pressure to try to treat the annual rates demand as a positive rather than a negative event. Why overexcite yourself imagining how many councillors you could... toss into the Great Hole of Britomart? It's so much easier to part with your money by pretending it's all destined for a sensible and worthy project like the renovation of the Town Hall. Last Friday, before writing out my cheque, I decided to ease the process by donning a hard hat and persuading the project manager... to show me around the nearly complete rebuild. Just to make sure my \$32.8 million was being wisely spent. Absence, they say, makes the heart grow fonder. And who would have thought at the time the old hall closed just how much we concert-goers were going to miss it. At that stage, years of neglect and the superior creature comforts of its glitzy newer neighbour, the Aotea Centre, had made it an unattractive entertainment space – even though its concert-hall acoustics were much better than next door's. A great sound was all very well. But did it have to be accompanied by skateboarders outside and warm cask wine at the interval in the overcrowded, sauna-like atmosphere of the notorious supper room? Little did we know then just how awful the barnlike acoustics of the only substitute venue, the Holy Trinity Cathedral, would be for musical events... The first thing you notice is how little things have changed – on the surface anyway... It seems my money is being buried within the walls and ceilings – 150 tonnes of steel reinforcing, air-conditioning ducts, the latest in electronic cabling, lighting, that sort of thing. What had to be pointed out were the sound-proofing sheets of glass covering the outside of the hall's stained glass windows and the false, sound-proofing wall on the Aotea Square side... The experts say this will make the hall slightly, but hardly noticeably, more reverberant. Fingers crossed on that one... Orchestral music require[s] a longer reverberation time than speech, which... architectural firm... Jasmax had enabled in North Shore's Bruce Mason Theatre, where the ceiling was made out of hinged hollow core doors, and the space above became part of the room... "That increased the room's volume by about 20[%], increasing the reverberation time from 1.2s to 1.7s, which is considered enough to improve orchestral clarity[.]" said Jasmax's... managing director... As for creature comforts, they're everywhere: bars on every level, foyer spaces, kitchens, lifts which reach to the bottom of the[underground] Aotea carpark and up to the top floor of the hall, and, most importantly to us of the shrinking-bladder generation, plenty of toilets... One feature that will impress [gals] is that they have been allotted more toilets. "[Gals] are always worse catered for. We've done international studies on queuing for toilets and have bettered the building code requirement." ...On that positive thought, I'll write out my rates cheque right now.

...Matching his and hers mayoral toilets at the Auckland Town Hall have been restored to their 1911 glory, but the loos are just for looks: health regulations rule out their use. The mayoral toilet next to the council chambers and the toilet on the next floor were to be demolished, but[the] Auckland City Council conservation and urban design manager... thought the toilets were worth keeping because of their "close association to important bodies." ...keeping them was a novel concept because the main thrust of the... restoration was on increasing utility. Elsewhere in the town hall, a secret [WW2] communications centre has become a storage room. Discovered last year, the hideaway was not recorded in original town hall plans... [Unfortunately,] \$60,000 has to be spent on further sound-proofing work... follow[ing] complaints that the noise of people gathering in the Queen St foyer was disturbing opening-celebration audiences in both the great hall and the concert chamber. As an emergency solution, the magnificently restored tiled floor is temporarily being covered once more with noise-dampening carpet. Signs and recorded messages last night asked people "to refrain from conversation" while in the foyer areas... [S]ound-lock doors would be installed on the foyer entrances of both halls... to solve the problem permanently... Council sources said it had been identified earlier in the project, but both the Historic Places Trust and the council's heritage planner were understood to have vetoed plans to alter the internal doors for soundproofing... The restoration project manager... would not discuss the problem... [of a \$15,000] party on the ratepayers... being planned for workers involved with the restoration... It would be for... staff, and... families, of the main contractor, Downer Construction, and the sub-contractors... 2000 people might attend.

...The Auckland City Council has given the nod for a ratepayer-funded... party for workers restoring the town hall.

...a steeplejack... fell from the top of the... Town Hall clock tower yesterday. Antony Edward John Kiernan, aged 37, died instantly when [the steeplejack] fell about 40m – hitting a balcony on the way down – and landing on the concrete below about 1.20 pm[as people] in Aotea Square watched in horror... There was nothing emergency services could do for him. The Heightbusters employee was one of two abseilers fitting lights to the clock tower for Mercury Energy... It is understood that Mr Kiernan, who has a wife and children, is from Torbay, England, and had been in the country only a few months. Police said [Mr Kiernan] was wearing a safety harness and was trying to attach it to a rope when [the steeplejack] fell. The Labour Department's Occupational Safety and Health division is to begin an investigation today. [A freelance] photographer... did a photo shoot with Mr Kiernan on the tower on Tuesday. "[Mr Kiernan]... struck me as very methodical." ...The commercial abseiling industry is in shock... [In related news, a]bout 40 people were injured when a sound and lighting tower collapsed in a packed stadium at the start of a concert in Santiago, Chile, by British rock group Deep Purple. The band played on.

...After having \$34 million spent on it in two years... [an] airier, less sombre Town Hall is one of the gains as Auckland revives the Aotea segment of its main street... The re-opening of[the] town hall... is... the first of at least four big steps toward creating an entertainment precinct around Aotea Square. Steps to follow include turning the Civic Theatre into a live theatre and Force Corporation's plan to build a... 12 cinema screen... centre between the Civic and the square... Further forward, there are plans to expand the Aotea Centre and a large convention centre may be built, big enough to cater for banquets for 1600 guests and plenary sessions for 2000 people. These plans would offer the precinct the flexibility it does not have with existing facilities... [The] Aotea Centre chief executive... said the changes brought a "virtuous cycle, because one of the big issues in Auckland is security, and if you've got 10,000 people out there, you feel safer walking across the square. There will be about 14,000 entertainment seats in the precinct by the year 2000, compared with... 7000 now, most of which are low-class... You're going to get a different set of economic realities. I liken it to Lygon St in Carlton, Melbourne..." There are two property elements in this vision of the Aotea Square precinct. One is the value and earnings of the various facilities, some of them public, and the other is the spin-off in rising value and the changing nature of surrounding streets. [The CEO] said over the four months *Phantom of the Opera* is at the Aotea Centre, 60,000 formal travel packages (people booking coach or airline travel specifically to go to the stage show) and 90,000 hotel and motel room nights had been booked. "We're filling a couple of hotels every weekend and the hospitality industry is finally starting to understand what it's all about, having these venues..."... Construction cost overruns were a blight on the birth of the Aotea Centre, but stage events such as *Phantom*... and changes quietly implemented at Aotea's Herald Theatre have improved its performance. [The CEO] said the Aotea would probably never recoup its capital cost – but... is more optimistic about getting a real return from the refurbished town hall... Town hall rent will be 5[%] of capital value, and the different way of operating the building should mean it will pay its way. "I'd be surprised if we didn't amortise on a 40-year basis the cost of the capital of the town hall..."... The old buildings up the street from the town hall, excluding the Sunday School Union, are also expected to get a facelift. One of them, the old Classic cinema, will [be the home for] Comedyfest, opening next month... [In another development,] Sky City has a hotel and banquet proposal for its additional site between Federal St and Albert St... [The]Auckland City Council project manager... said these developments would bring "a vibrancy, and an opportunity for a variety of dissimilar events to be held, including free entertainment on the square." ...But perhaps the key to all of these [visions] is the proposal for an exhibition centre backing on to the Aotea Centre extension, with the potential to be used as a stadium. That would bring the kinds of event Auckland misses by not having the appropriate venue to be included on an international

entertainment circuit, such as *Disney on Ice*... [According to Auckland's mayor:] "If you look at all the major cities, you will find when they get to a certain size – about one million people – they tend to build an entertainment centre."

...Entertainment promoters are ecstatic over the suggestion by the Mayor of Auckland... to build a 15,000-seat covered stadium in the central city. An Auckland City Council property committee will meet behind closed doors today to decide whether to invest in vacant land beside the central railway station. [The mayor] said investors would be consulted over a possible partnership for a \$70 million multi-purpose stadium. The council did not propose to build the centre itself. Promoters say such a facility is long overdue and the promoter of the free summer park concerts... said it was a "fabulous" idea. "Of course we need it, and the piece of land by the railway is just perfect... Auckland has a very unpredictable climate and you can't bet on outside events." ...[the] managing director of IMG, which promoted *West Side Story* and *Riverdance*, [claimed to be] aware of shows that would have come to Auckland if a covered stadium was available. "We were looking at the Israeli Philharmonic, but you can't do it in the 2200-seat Aotea Centre. The costs would be astronomical and ticket prices would make it elitist. But with 15,000 seats the price comes right down,"... The council has... a stadium fund and... the site would be split and sold in the next few weeks if the council did not buy it whole... [T]he council must decide if it would create a land bank to enable a year-long investigation. If a stadium did not prove feasible, the land could be sold again later...

[Auckland City ratepayers may help to fund a \$65m entertainment centre adjoining the central railway station. Promoters of the stadium, that will seat up to 14,500 people, want a mix of city council and private funding to underwrite the venture that could generate returns for its owners from as many as 150 events a year. An economic impact report calculated the centre would be worth \$65m a year to Auckland and generate 1266 jobs. The report also estimated the centre would create new city businesses worth \$20m a year and a further 399 jobs. The cinema entrepreneur behind the project, who is investigating stadiums in AUS and the US, said the centre could be configured to handle ice skating, Davis Cup tennis, equestrian tournaments, rock shows, operas, rodeos, moto-cross and Miss Universe contests. Its capacity could be reduced to 4000 with the use of an acoustic curtain without any loss of sound quality. "Most international cities of one million people have centres like this. All we've got is a tent," the entrepreneur said, a reference to the Mt Smart Supertop.]

...The contest to provide Auckland with a 15,000-seat indoor stadium is heating up. The Auckland Regional Council parks committee entered the ring yesterday with a plan for an arena at its Mt Smart Sport and Entertainment Centre. The plan updates a concept outlined in August. The council cleared the way for more work on its scheme after a cinema entrepreneur published a \$65 million, 14,500-seat project on Auckland Railway Station land last week. It is understood that Auckland can only sustain one such venue, but four proposals are under consideration. Besides the railyard and ARC visions are schemes for a cultural centre at Queen's Wharf and an arena at Western Springs. The city council has earmarked \$20 million as a contribution for an indoor stadium.]

...Auckland City Council may take a multimillion-dollar plunge into the stadium industry this week by investing in vacant land beside the central railway station. The mayor... suggested yesterday that the council could put up to \$30 million into a \$70 million... purpose-built stadium. The... [mayor] believed a stadium could be ready in four years. The council has been in a race with the A[RC] for an indoor Auckland stadium. The regional council considers Ericsson Stadium the best location... [I]t has adequate parking and easy access and would not generate noise complaints. But [the mayor] said the railway property had advantages over Mt Smart, with bus and railway services and nearby entertainment options.

...An indoor stadium near Auckland's waterfront is a strong possibility after the city council decided last night to buy 4.9ha of land near the railway station. The council has plans for a 16,000-18,000 seat entertainment stadium, convention centre and car park, but... intends sitting on the land in the meantime while it embarks on feasibility studies for the stadium-convention centre plan... The council... will investigate all its options in the city before committing itself to the site... Other possible sites, such as Ericsson Stadium, will be investigated and the Hillary Commission will be called on for an independent appraisal of the region's sporting and entertainment needs. From there the council intends calling for expressions of interest in the project. By attaching a convention centre to the stadium, council planners believe they can link Auckland into the convention industry. The Aotea Centre will be considered for an extension so it can hold conferences, and Sky City Casino is also in the running.

...The historic Civic Theatre's... upgrade appears to have escaped the Auckland City Council budget knife. The project, after seeming a likely candidate for the fiscal axe, is expected to get \$8 m... when the council pulls together its draft annual plan in the next few weeks. Sources said this would be the first instalment of a \$34 m... council commitment to the 68-year-old theatre's refurbishment. Besides the upgrade, an announcement is expected this month on development of an entertainment complex on land adjacent to the Civic. The sale of the council-owned land helps to offset the cost of the Civic upgrade. The adjacent \$50 m... project for a cinema and entertainment complex was signalled last June, but an A[US]n property investor involved in the Queen St development withdrew. The cinema and property company Force Corporation has remained in the frame, and has pulled its Village theatres in with rival Hoyts Cinemas for the 12-screen development. Confirmation of the Civic funding has buoyed Friends of the Civic, a group which has been lobbying for the restoration of the landmark theatre. But the group remains concerned at delays in starting the refurbishment plan. Its spokes[person said]... that the property would continue to deteriorate while the upgrade was deferred.

...Details of \$34 m... restoration plans for Auckland's Civic Theatre were released yesterday. [The NZ Herald] looks back on the theatre's colourful 68 years... Venture into the Civic Theatre in central Auckland and you will find almost a ruin. Barely two thirds of the artificial stars work, and there are holes in the ceiling where workers have put their feet through the plaster. There's been no fresh paint for... 20 years, and some statues are missing. Even so, it's worth looking inside... [because the] Civic will soon close... When it reopens in 1999 for live shows, some famous features will be missing. Hidden from the audience's view will be the archway and the larger-than-life panthers... Acoustics are a problem... so a new steel-mesh ceiling will replace the "starry sky." ...But the romantic Eastern decoration can be uncovered if users want to use it... Fire and earthquake-proofing, at a cost of \$19[m, is the main expense, and] will include fibrous concrete to replace cracked cement and rusty reinforcing... Apart from the building's deterioration, the Civic's main problem is lack of patronage. The place is full only during the Film Festival or for one-off events... This year's festival was probably the last at the Civic... Using the new-look Civic for a film festival will be difficult... Broadway shows will be staged in the [new-look] theatre, which will feature seating for 2400 patrons... Some patrons will treasure the few remnants of a bygone age... [but if] you have a gold-plated elephant, horse or urn in your cupboard, the chances are it comes from the Civic... and the Auckland City Council would like it back, no questions asked. The... Civic's early shows were extravaganzas, with the Wurlitzer pipe organ emerging from below the stage, followed by an orchestra on a separate platform... "It will take us three times as long to complete the renovations as it did to build the theatre,"... The Civic[which] went up in just 33 days... was built in 1929 by cinema chain proprietor Thomas O'Brien[who] went broke nine months after opening night and left for A[US] – with, rumour has it, a week's takings and a cashier. The cashier bore him four children, and [Thomas] died in Melbourne in 1959. The Civic's heyday was... [during WW2]. After films, bands played in the Winter Gardens nightclub until the early hours while [US] soldiers danced with local girls. It was then that [one local girl] danced naked apart from a feather hat and gold paint. The performer's lesbian lover was murdered by her husband, a musician in the orchestra... The nightclub lasted well into the 1960s, when there was a singles night on Fridays and couples only on Saturdays. Other big events included boxing... [The] Auckland City Council's projects manager... remembers the Civic from his days as a rocker in the early 1970s, watching bands like the Rolling Stones. "You had to stand on the seats to see. That's when they got broken."

...The budget to restore and upgrade the Civic... could be on the verge of a 17[%] increase. Auckland City Council officers have proposed increasing the budget approved... last year to \$39.8 m... This follows the completion last month of the Town Hall's restoration... on budget – but a

fit out budget approved just before it re-opened added a further \$1.8 m... The Aotea Centre... was the council's most notorious recent cost overrun. It cost \$128.5 m... compared with an estimate of \$63 m... when the project began in 1984. Restoring the Civic was expected to cost... \$10 m... in 1993... A council meeting on Thursday is scheduled to vote on... 14 items which account for the extra \$5.8 m... The dearest is an additional \$1.8 m... for inflation and contingencies. Others are a \$1.2 m... acoustic separation of the Wintergarden functions area from the main auditorium to enable simultaneous use; \$1.2 m... for fitting out five bars, a VIP-functions room... and increasing the auditorium's seating capacity from 2150 to 2500... Much of the proposed extra spending... would create more revenue... [for Auckland, which] IS the events capital [of NZ] heading into the new millennium... [] Force Corporation will begin the extension of the... St James Theatre... precinct over Queen St once it has completed its new entertainment centre next to the Civic... Revamping the St James would provide a link through to the art gallery and... library, not in itself a great change in property use, but creating a more interesting and hospitable thoroughfare between public facilities and privately owned retail spaces.

...Concerts in February by [an]English singing star... [- best known for her association with *London's favourite producer* -] will open Wellington's newly refurbished St James Theatre... which is undergoing a \$21.4 million... refurbishment... But it will cost from \$150 to \$300 a ticket to see her.

...Fans of the piano [guys] will have... to... [shell out] from \$80 to \$171... [to see their heroes] share the bill... at Ericsson Stadium, the promoter says. But... [the] co-promoter... says there will be "no comparison" between the[ir]... extravaganza and... the... performance of Verdi's opera *Aida*. The ripples are still spreading from that open-air performance... [T]he 2.5m-high stage will be... three times the size of *Aida's* and will incorporate a huge "thrust" to bring the stars closer to the punters. The scale of a modern rock tour means big audiences (and big ticket prices) are financial necessities and so the question of whether you'll get a good view - or any view at all - becomes particularly pointed. We had no such worries at [the British piano guy]'s first N[Z] concert on October 29, 1971. Clutching tickets which... cost \$2.50 (well, someone had to pay the star's exorbitant \$20,000 fee), we ambled across the infield grass at Western Springs to take our plywood seats in the third row. (We would not have dreamt of sitting in the front two rows: they were reserved for the high rollers who had shelled out \$3.60, but, [seated] barely 5m from the... piano stool, we were laughing.) That was the first of the big outdoor concerts. They expected 18,000 but almost twice that number came, which must have been a relief to [the] promoter... who (as w[as]) breathlessly reported at the time) mortgaged his *home* to finance the show. But [the promoter] took the risk, [it] told us, because [it] wanted to see [the Brit]... "at his peak [*Goodbye Yellow Brick Road* had just been released] rather than in a couple of years."

...Tickets with a top price of \$171 go on sale on Monday for an Auckland concert by two of the world's most popular piano [players - one from England (r:p1172, ln31) and the other from the US (r:p1615, ln53)]... The pair will perform separately and together with their respective bands in a four-hour show at Ericsson Stadium on Saturday, March 7... [The promoter,] Frontier Touring, acknowledges the price is high but said that... tickets for the Eagles were \$110... [and] "for the same show in Sydney, Adelaide or Melbourne, you'd be paying \$240 - and those shows all sold out." The top price is for a reserved seating area in front of the stage... general admission tickets are \$80... In an unusual arrangement two separate touring companies and the artists' record companies will pool resources for the *Face to Face* tour... [The] managing director of Sony Music NZ, said yesterday that [the US piano player and singer] was the company's third biggest selling album act behind Pink Floyd and [another US singer (r:p1617, ln16)]. The US piano player's total NZ] sales of 550,000 copies over his 15 albums suggested one in every two homes had a... album or CD... [of his. The] managing director of Polygram Records NZ, [the English piano player's] record company, said [its artist], who has released more than 40 albums with sales of over 150 million copies worldwide, was its third-biggest selling act, behind [a Canadian rocker and Irish band] U2...

If hubris was a sound, it is the hiss of air between clenched teeth of [US] promoters pushing the world's most expensive rock tour - U2's PopMart. Last week, rumour was rife that the Irish group had cancelled its homecoming Dublin date for financial reasons. Not true, as it happened, but in the U[S], where patchy audiences have been underwhelmed, two shows have been cancelled, and the group's management is blaming "media negativity" for poor attendances. PopMart may be becoming FlopMart. It is not just U2. The deflation of PopMart is sending shivers through the elite handful of mega-rockers, the giant... bankable acts such as REM, and the Rolling Stones - who this week announced plans for a [6 month, 33 city tour of the US to promote their latest album, *Bridges to Babylon*] (their last tour, to promote *Voodoo Lounge* in 1995, reportedly earned them more than \$400 million')... - and Metallica, on whom the industry has cruised. Rock album sales in the U[S] have been flat-lining for the past three years while the new boys of electronica and dance are fast making inroads into the territory where dinosaurs once roamed. The irony is that... U2's lead singer, knows this. *Pop*, their latest album, brought a reinvention of their old bombastic sound, under the alien influence of bands such as the Prodigy and Leftfield. It was courageous - but punters have turned off in their tens of thousands. "There is a reason why rock'n'roll music is not selling the way it used to," [the lead singer] told the *Washington Post* at the beginning of the PopMart tour. "It's boring. There is no surprise. That's one of the reasons we called the record *Pop*, because we were so angry at the word 'rock'. We were looking around and saying: 'What's happening here?' This is 30 years old, this music, and the sound. The feeling coming from all these groups, just seemed so tired." So *Pop* and its son PopMart - ...with its "ironic references" to capitalist excess - is U2's answer. "It's some kind of new medium, hopefully... Is it Broadway? No. Is it a new development? I really hope so." The problem is, it wasn't - and punters just aren't buying it. Despite the impressive, expensive technology, the show treads some familiar paths and the album dropped out of the U[S] No 1 slot as quickly as it arrived. A primetime ABC special on the making of the tour was one of the lowest-rated non-political documentaries ever shown on [US] network television... the *New York Post*'s]... rock critic... believes U2 are victims of their own hype. "They did too good a job in telling people that what they were doing now was drastically different. They hammered it too hard for their long-time fans." ...Observers also suspect the public's appetite for extravaganzas such as PopMart has waned. In the absence of nostalgia-fuelled stadium tours over the past two years, there has been a growing number of festivals at which four or five bands perform for far less than the steep \$57 a ticket that U2 are charging. Lollapalooza, launched on the premise of numerous acts, alternative stages and grunge-counterculture ethics has redefined punter expectation. A similar phenomenon has been apparent in... [Australasia] with the Big Day Out concept. While there will always be a place for stadium rock, increasingly it is starting to look like an anachronism for its target audience. And if it's not cheap to go to, it's certainly not cheap to mount. The \$96 million cost of keeping PopMart on the road for 14 months pays for 75 trucks carrying 500 tonnes of equipment; a 4-megawatt sound-and-light show; 250 staff on board 16 buses; and a Boeing 727. The profits should have been equally monstrous. The accountants had hoped ticket sales alone would net \$240 million.

...grunge is dead: it's time to dance again... It happened slowly, almost imperceptibly. First, record sales levelled out... Soon... the minimalistic rock that reinvigorated the industry in the early 1990s... [-] one of the most influential musical movements since the 1960s British Invasion... [-] had become just another footnote in pop history... "...Of course it had to happen," says... the co-founder of Sub Pop Records. The company's low-key breakthrough came with Mudhoney's 1988 release, *Touch Me I'm Sick*, which many consider the first grunge record. Then Nirvana, from Washington state's rural southwest coast, transformed the musical landscape. Kurt Cobain's tortured lyrics and Nirvana's merciless rhythms tore to shreds the bloated heavymetal and pop scene of the 80s. Then came hits from Soundgarden, Alice In Chains, Hole and the Screaming Trees. Seattle reigned. Trademark flannel shirts, knit caps and torn jeans found their way to fashion runways. Goatees and body piercing seemed ubiquitous. The beginning of the end came in 1994, when 27-year-old Cobain's body was found at his home. Drugs were part of the disintegration. Alice In Chains was forced to cancel a 1994 tour after [the band's] singer... admitted his battle with heroin addiction, a drug that had taken its toll on other Seattle musicians, including Cobain. Another bulwark toppled in late 1994, when... Sub Pop Records... sold 49[% of itself]... to Warner Bros for \$NZ31.5 million. Since then, some of the city's most influential clubs... have closed their doors or changed formats. Then in April this year, Soundgarden shocked fans by calling it quits. The Screaming Trees had folded in March. Alice in Chains has not released an album in two years... "Alternative rock had a good run, but it's over. People want to dance. The days of standing around moshing are long gone."

...The thriller is gone for [the former star of the *Jackson 5* (r:p1621, ln30)]. Maybe the years of tabloid headlines caught up with him, or [the *Peter Pan* of music] made one squeal too many. But the self-proclaimed King of Pop's... quasi-new album [(it contains 5) new songs and [8] remixed songs that first appeared on the 1995 disc, *HIStory: Past, Present and Future – Book 1*)]... is in unfamiliar territory; sinking down the charts past dozens of hotter stars. The numbers aren't pretty. *Blood on the Dance Floor*... debuted at No 24 on the album chart and sank to No 43 in its second week. Right now, it's at No 65. The album has sold 79,000 copies in the U[S], according to Soundscan, a New York company which tracks record sales... And the first single... was only [the]... singer's... second song in the past 15 years not to make the Top 40... It's a long tumble from *Thriller*, the album that sold 24 million copies in the U[S] and made hi's moonwalk and equinned glove cultural touchstones of the 1980s... The young fans who bought *Thriller* grew up and [their hero] did not grow with them, said... [the] senior vice-president of the 97-store Tower Records chain... [The singer], who's a lot more successful overseas these days, blames radio stations and MTV for abandoning him and not giving his new music a chance, his spokes[person]... said. "It frustrates an artist, as far as not being able to exhibit his talent,"... Compare [hi's] slump with the successes of his contemporaries, like the Wu-Tang Clan, the rappers from the New York borough of Staten Island whose double album sold 612,000 copies in one week earlier this month. [The singer] trails the Spice Girls, teenage Jackson 5 imitators Hanson, the Bee Gees and Squirrel Nut Zippers on the chart. Even [a former *Beatle* (r:p1409, ln39) – hi's former duet partner on *The Girl is Mine* –] has been in the Top Ten for two straight weeks with his new album. All the weirdness has been too much for many customers, said... an executive for the New Jersey chain Compact Disc World. There were the accusations of child molestation, the plastic surgery, the quick marriage to – and speedy divorce from – [the daughter of Elvis] Presley, the hasty marriage in A[US to a] nurse... and equally swift birth... of their son[(the 'first pictures of whom they sold for \$1/2m')]... and at some point during the pregnancy, [the singer] was left to deny a report in a London tabloid that the couple used artificial insemination and that [his second wife] was paid \$US528,000... to carry the baby... [The executive] expects to return many unsold copies of [the singer]'s new album to Epic Records... Instead of hyping [their artist], Epic has kept quiet about his album. Many fans don't even know the album's out... [The singer], meanwhile, has turned into something of an expatriate... spending his summer on a concert tour in Europe, where *Blood on the Dance Floor* hit the top of the charts[, and plans to build]... a \$NZ822 million... "world of childhood"... amusement park... [The singer] hasn't performed in the U[S] for several years. The *HIStory* album sold three million copies in the U[S] and 25 million elsewhere... [The singer]'s fans would return if the music were good enough, said... [the] senior talent editor at *Billboard*... [However, his spokesperson] sees the overseas performance as an indication that people like [the singer]'s new music if they get a chance to hear it. "The powers that be have decided that they don't want his records to be played... [in the US]. I guess because of all the adverse publicity... they made a decision that [the singer] shouldn't receive airplay." ...[the singer's chiselled nose was further rubbed in the dirt when veteran] acts the *Rolling Stones* and [a '60s folk-rock idol] scored hits as their latest albums entered the top 10 of the U[S] pop charts. The Stones' *Bridges to Babylon* debuted at No 3, becoming the group's 39th album to make the top 200. [The folk-rock idol]'s *Time Out of Mind* entered at No 10, becoming his first album since the 1979 gospel-tinged *Slow Train Coming* to make the top 10.

...[Why are we not at all surprised that Wacko claims his new album was written by God? The self-proclaimed King of Pop says it feels guilty putting his name on songs and, when writing them, it's in the hands of the Almighty. After everything that's gone before, such talk doesn't move us.]

...[Music fans can breathe a sigh of relief. The King of Pop has announced his abdication. "I've no desire to go on another major tour and I don't want to keep doing album after album." Instead, it hopes to star in his own version of *The Nightmare of Edgar Allan Poe*. Presumably it would need little make-up.]

...Wacko is 'on tap to play Peter Pan, the boy who wouldn't grow up, in a major movie. Is this typecasting or what?'

...[Speaking of Wacko, you know how his nose looks like it's about to fall off any minute? Well, part of it did when Wacko was on stage at Madison Square Garden recently! The night certainly didn't go as the waning superstar had planned anyway, but to have his fans know it wears a prosthetic schnozz because too much plastic surgery's wrecked his own, was a huge blow (no pun intended). Wacko hides the fake bit of nose with make-up, but while dancing, we hear the self-proclaimed King of Pop caught his little finger on his fragile nose, sending part of the prosthesis flying into the audience. Yuk!]

...Wacko 'lives in a \$25m mansion with 120 staff to cater to his every whim. But the besieged Prince of Pop's cocooned and cushioned world is about to come tumbling down. Once rich beyond his wildest dreams, with a fortune estimated at over \$90m, Wacko is teetering on bankruptcy. Next week marks the beginning of an explosive court case between the pop star and his former financial adviser, who says the Gloved One owes him \$21m in fees. The adviser described Wacko as "a ticking time bomb waiting to explode at any moment" and claims that the millionaire has frittered away so much money it is now propping up his extravagant lifestyle with multi-million-dollar bank loans it cannot pay back. Wacko even has his famous Santa Barbara ranch, Neverland, up for sale with a price tag of \$40m. But there are no takers. "It's not that the advice Wacko gets is bad," says one of his bankers. "It's him. Wacko's his own worst enemy. Wacko has simply been spending more money than the singer's been making." Another major drain on his finances are lawsuits. According to one source, Wacko has faced 1500 during his career. Apart from the 120 people Wacko pays to run his ranch – including county fire officers for Neverland's own fire department – Wacko supports a 13-strong retinue to care for his children born through artificial insemination to his second wife'...

Wacko's 'second wife has filed for divorce. The nurse cited "irreconcilable differences" as the reason for the split. The divorce petition said both parties had reached a confidential agreement regarding property and debts. But they did not say if a custody agreement had been reached for their two children'...

'THE news of Wacko's divorce from his second wife has stunned the show-business world. Yesterday, at his heavily guarded mansion, Neverland, Wacko rejected allegations that it had been a sham marriage. When the news of Wacko's shock union with the blond sizzler was first announced, his fans rejoiced in the belief that their hero had finally, and despite the barriers of wealth and fame, reached puberty. "It was the most wonderful moment in my life," recalled a spokesperson of the Ohio Guild of the Official Wacko Merchandising Association, "to think that Wacko had found Mrs Right. Every night for several months I dreamed of my hero bearing his wife over the threshold of Neverland, smothering her from head to toe with his favourite disinfectant, removing his face mask and then, in a moment of the most touching intimacy, presenting her with a test tube of his very own sperm," at which point the spokesperson's face crumpled with woe and it was led away. Yesterday Ms Right herself made a brief statement when cornered by reporters outside a Los Angeles bank. "My concern is with my darling children, junior and the other one – a girl, I think," said the distraught Ms Right, patting at her eyes with a sodden cheque. "But the marriage was doomed. At first I thought I had found true love, but at 37 I was too young." Refusing to comment further, Ms Right retreated into the bank on the arm of her financial adviser. Sources confirm that two children were indeed born to the couple. The children themselves have denied rumours that they lead a bizarre existence of obsessive hygiene. Two-year-old junior, speaking from an oxygen tent, said, "My sister and I lead ordinary, germ-free lives in Neverland. For my own part I would like to add that it is a great privilege to be the son of a 41-year-old who likes playing the same games as I do. I am hoping to take control of his financial affairs soon and, with the help of my lawyers, to meet my mother." Bodyguards then hustled him away for fumigation. The boy's father himself faced the cameras in a hermetically sealed jumpsuit, but explained to the throng of journalists and photographers that it would be making no further statements about the separation from the mother of his children – whom it believed may have been AUSn – because it had important business matters to attend to. A spokesperson for the Association of Overpaid Medical Advisers to Aging Popstars threw light on the issue. "Wacko's marriage was broken by the strains of his condition, a condition caused by a volatile and addictive mix of wealth and publicity. It is exacerbated by his participation in a profession founded on adolescent idolatry." Extensive research has revealed that Wacko's condition has become increasingly common among the idols of youth culture as they reach middle age. Symptoms vary but most victims suffer from severe bouts of inappropriate clothing. Other clinical indications are hair implants, plastic surgery and a pathological delusion that the clock stopped at the date of the release of their first platinum disc. "Many of the most successful artists in the pop and rock business have suffered from this condition. Some indeed have

died from it and in an industry based entirely on image, early death has actually enhanced the artist's mythological status, and guaranteed continuing post-mortem sales."

...It really makes me wonder why any gal would want to give birth to a baby sired by Wacko. I pity his children, and they will undoubtedly grow up without ever knowing how normal people behave, or what the word "family" means to most of us. I wasn't surprised to learn of his bizarre parenting practices, or that the singer is afraid of touching his children for fear of the germs that they carry. Unfortunately, Wacko has the power to control the destiny of these kiddies who will never experience the love of an ordinary mum and dad. It's unfortunate that Wacko has more than enough money to buy himself out of any lawsuit that might be taken against him for custody. Wacko certainly hasn't got the skills to rear any of them.

...Isn't it amazing how Wacko is allowed to get away with the bizarre treatment of his children, whereas if the singer was the average Joe Bloggs, CYFS or the American equivalent would have removed them from his care long ago. Money speaks, but it apparently doesn't save children. What are we coming to when the average family can be torn apart for sometimes quite silly things, but the rich and famous can do whatever they like to whomever they like?

...I think that the way Wacko's bringing up his children is sick. It's bad enough that Wacko does not want to catch germs, but it's truly pathetic that the singer won't even touch his own children for fear of this, as we all know children love to be cuddled and shown how much they mean to us. Children are not dolls, and it's sad to think this is how Wacko's are treated and what kind of sick, selfish people are having his babies and then being paid to stay out of their lives? Who is the crazy person who has just had his third child? I am about to become a new mum, and there is no amount of money in the world that would keep me from my child. People like that do not deserve the miracle of being able to have children.

...the Gloved One's ex-wife has deepened the mystery of his new bub's origins. In a line straight out of her ex-husband's song *Billy Jean*, the ex-wife has declared, "The kid is not my son!" The ex-wife insists it wouldn't breed another little wacko for quids, saying it's been hard enough trying to see her other children. Their mother must give a full month's notice before any visit to Wacko's Neverland ranch, and has to be disinfected before touching her kids. ■ Wacko's other ex-wife's recent nuptials in Hawaii were almost a wipe-out! We told you her actor boyfriend proposed just three days beforehand. Well, turns out it was a re-proposal. Weeks earlier, the couple were on board his yacht off Catalina Island, and Elvis' daughter was sporting a dazzling diamond engagement ring. But they got into a fight over the amount of booze the actor was drinking, and Elvis' daughter tossed the \$130,000 sparkler into the sea, telling her beloved that the engagement was off! Elvis' daughter helicoptered back to LA while the actor hired divers who spent two days searching for the rock, to no avail. The sheepish actor had to pop the question again, and a new (and bigger!) diamond helped seal the deal.'

...*The King's daughter will soon inherit his fortune, but... has to push her mother out of the way first* WHEN [the daughter of Elvis] Presley celebrated her 29th birthday recently, [it] didn't party hard with her famous buddies. Instead, [the daughter spent the day the way it]ll spend her future – surrounded by accountants and business gurus. Gone will be the exotic Versace couture gowns [the daughter] favours for *Vogue* modelling stints. In their place will be sober... suits, as [the daughter] pours over complex documents. This year represents her graduation as heir... to the... Presley fortune. A host of anxious Presley administrators – including her mother... – are holding their breaths to see if the unpredictable young beauty will be able to cope as head of a \$400 million empire. Foremost among concerns is whether [her] devout membership of the Scientology movement could threaten the booming Elvis industry her mother sweated to create... from the \$5.4 million Elvis left behind... "The church demands a lot of money from members, which would devastate the Elvis Foundation... [The daughter has already] paid a lot for renting a luxury suite at the Hollywood headquarters which costs \$2,000 a night. [Unfortunately, you] can't tell her the church is no good." [However, sources say the daughter] was pressured last year into accepting board recommendations that limit the amount of money the trust can give to charities or religions... According to a[nother] deal struck when [the daughter turned 20, her mother] will get \$33 million once the young heiress has control of all \$400 million... "[The daughter] becomes one of the world's richest [people] on her 30th birthday, but now... needs to prove [her ability to] handle it or years of hard work will be down the drain," says one Presley Foundation executive... [While] taking on increasing responsibility within the estate... [the daughter is] also taking steps to smooth her troubled personal life. [Currently, it] is... living happily ever after – again – with her ex-husband... in a new Clearwater, Florida house. The love nest is close to the local Church of Scientology, where the pair are receiving marriage counselling... [The daughter] had originally hoped for a ceremony around Christmas, but that dream was foiled by her [other] [ex-husband... His surprise baby announcement... forced [his ex-wife] to cancel her own plans... On her 28th birthday [the daughter] received \$66 million worth of stock in Graceland Enterprises and The Elvis Aaron Presley Residuary Trust Fund – funds dispersed by the Trust's board of directors. This year, [the daughter] received a second \$66 million instalment... In the past year, [the daughter]'s managed her \$66 million responsibly... [avoiding] lavish spending. Before... [buying the] sprawling Florida property, [the daughter] had paid around \$3.3 million for a mansion – but saved millions by buying in a less pricey area of Los Angeles.

...*Elvis died 20 years ago this Saturday... a bloated victim of a vacuous, kitsch-laden system – but to his millions of devoted fans, the King will live forever* NEWSPAPER headlines regularly scream "Elvis – the truth". And readers murmur "again". The truth about Elvis can be told in one sentence: [Elvis] made black music white and thereby invented rock'n'roll... made a succession of dreadful films, had a lot of sex, took a lot of drugs... [(while... doing his national service in Germany[, to]... keep... troops alert on night-time manoeuvres, army staff handed out amphetamines which, for Elvis, quickly developed into a habit[)]... grew fat, created a Las Vegas cabaret act of excruciating awfulness, and then died... of a "rest-room overdose". Purely as an artistic history, there is nothing to be said after about 1958. John Lennon[, who once said]... that before Elvis there was nothing... rightly said Elvis died when [Elvis] went into the army. By then this "white boy with black hips" as *The New York Times* called him, had combined the urban and rural rhythms of the black South with the country twang of the white West to create the rebellious music of newly affluent white youth. Other, better artists – from [a folk-rock idol] to Nirvana's Kurt Cobain – took the idea and ran further with it... [I]n Presley's ludicrously overcooked ballads, one hears not a genius or "The King,"... yet, in spite of... that, who could deny that Elvis lives? After death the reputation of most artists waxes and wanes, but the King's only waxes. For a start [Elvis] is not, of course, dead. Sightings are reported daily – [Elvis is even] booked to appear at an Elvis festival in Ottawa later this year – and churches have been established to honour the risen Elvis. Is it mere coincidence that when [Elvis] died, seated on the lavatory, [Elvis] was reading a book called *The Scientific Search for the Face of Jesus*? Elvis has become the kitsch Christ of a peasant religion. And, like Christ, [Elvis] was tortured by an ungrateful world. "I believe in my heart," writes... [someone] on the website of the If I Can Dream of Elvis fanclub of Massachusetts, "God was there with him and [Elvis] knew it so [Elvis] went peacefully to his new home in heaven. Lots of bad things were said and written about him but [Elvis] never let anyone down... was always there for everyone, even his enemies. Too bad they did not love him enough to do the same." ...That Massachusetts shrine website lists reasons why Jesus and Elvis are one – Jesus H Christ, to cite one, has 12 letters and so does Elvis Presley. And the First Presbyterian Church of Elvis the Divine – daily prayers and consumption of his favourite banana pudding – is a smart gag. But these sniggering elites also laugh at Christianity. You cannot be this kind of joke to the rich and smart unless you are, first, very serious to the unsophisticated poor. There is no doubt that the conviction that the King lives and the transformation of every rhinestone and every fat cell into a sacred fetish amount to a real popular faith, a mass longing for transcendence through the medium of a [hu]man who, like Christ, is seen as both ordinary and unique, and whose "death" has come to be the prelude for an ultimate transfiguration of himself and the world... Books still pour from the presses – one of the latest is written by... [someone claiming Elvis] was her first boyfriend; another is a hatchet job based on numerous interviews with those who knew him. The Internet is littered with hundreds, perhaps thousands, of devotional sites. His records still sell, every screwed-up out-take having been digitally remastered for CD, while MGM is set to release 18 videos of his films. And... a shop called Elvisly Yours in Shoreditch, east London... acts as a global clearing house for every possible species of Elvis memorabilia. "There was Elvis and the Beatles," [the owner] says, "and that's it. If you don't like Elvis, you don't

like music. His music relaxes you. It makes you feel at home... appeals to all classes and cultures. There are Indian Elvis impersonators and we supply Japan..." It was [the shop owner] who broke the British stranglehold of Memphis-based Elvis Presley Enterprises (EPE) [in a crucial High Court case in which the benignly indulgent Justice... concluded that Presley, neither in life nor death, could claim ownership of his name and appearance. Both belonged to the world... For... [a Dr who] used to teach literature and cultural studies at the University of Mississippi[, and 3] years ago started the International Conference on Elvis Presley... Elvis was the central protagonist of post-war social change... EVEN HIS later Las Vegas period represented a form of cultural innovation. His jump suits, capes and high collars inspired [a British singer] to create Ziggy Stardust and ushered in the sexual ambiguity of glam-rock. Elvis was a post-modernist, a mixer of discourses and signs, who now forms a legitimate focus of highbrow academic attention. "The media made a joke out of this," [the Dr]... says, "but they don't realise how big this has become academically." ...If, as artist... Elvis... cannot bear the weight of all this academic significance then, as phenomenon, [Elvis] certainly can... ON SATURDAY, 43 N[Z]ers will join the tens of thousands making a pilgrimage to ...h[is]... grave in Memphis.

...Thanks to the marvel of marketing, Elvis... is more profitable today than... when [Elvis] died... The grateful town [Elvis] made his home... reckons [Elvis] is responsible for most of the tourist industry's \$US1.8 billion... annual revenues and 37,000 jobs. Graceland, Elvis' home from 1957 until his squalid death in the bathroom, drew 700,000 people last year. There are five gift shops... An exhibition hall and a hotel are planned. In addition, a vast market exists for Elvis books, conventions, memorabilia, college courses, bumper stickers (I brake for Elvis), velvet paintings and other essentials. The newest money-spinner is Elvis Presley's Memphis, a \$4 million restaurant that features memorabilia and southern cooking, including Elvis's favourite: fried peanut-butter-and-banana sandwiches. The place has been packed since opening on July 24 and eight more are planned... How was a fading star transformed into a perpetual money machine? A few hints: • A premature death. Essential. Ageing icons don't sell... but youngish dead ones do [see Marilyn Monroe and James Dean]. • Control the brand. Elvis and Elvis Presley are registered trademarks, which E[PE] protects with a ferocity Disney would appreciate. EPE has contracts with more than 100 licensees, who make everything from confetti to Elvis dolls. Images of middle-aged Elvis are conspicuously absent, and EPE lawyers drive items such as bottles of allegedly genuine sweat off the market. (A British court ruled that names could not be copyrighted, but EPE's trademark remains safe in America, its largest market.) • Tackiness sells. How many people go to Graceland just to see the green shag carpet and the Jungle Room? Lots, and they pay \$18.50 for the tour. The Elvis regalia industry also capitalises on schlock. The world's... 50,000 Elvis impersonators favour the Las Vegas jumpsuit look, particularly in Aloha blue and gold lame. These costumes retail for \$500 to \$3000... not count[ing the] wig, sunglasses, boots and a TCB (taking care of business) choker. • Keep the music coming. Just because Elvis is dead does not mean [Elvis] can not keep recording. RCA, which owns the rights, has released more than 20 albums of Elvis' music since 1977, including a recent four-disc, \$69.95 compilation of out-takes, home recordings and assorted bits and pieces. RCA hunts out such material. It also re-issues, re-masters, re-packages and re-releases Elvis with bewildering ingenuity. In the next four months, it expects to sell \$40 million of Elvis music in the U[S] alone. Not bad for a boy who was born in a two-room shack in Tupelo, Mississippi (admission \$4).

...consider... the boy from a Mississippi shack... who was elected King by popular mandate... Today marks the 20th anniversary of the death of Elvis Presley, a 20th-century icon elevated – or reduced, depending on how you look at it – to fridge-magnet and beach-towel status. [Elvis is so famous that the singer] has ceased to exist in any meaningful way and is now erased of nuance and personality, existing mostly in caricature, parody and a few familiar songs... [although his staunchest fans declare otherwise:] "...we await the second coming. Elvis will be coming back and the impersonators are merely his prophets." ...those Elvis fans have double reason for celebration this weekend. The King's now sold one billion recordings.

...[an 'Elvis Presley impersonator was yesterday shuffling his white *Blue Suede Shoes* in Queen St in a warm-up for tomorrow's entertainment in Aotea Square. "Just seeing the smiles on people's faces makes it all worthwhile. People really lighten up when they see someone impersonating Elvis for fun." The NZer was inspired by watching the AUSn Elvis champion perform. "I thought, 'Hey, I could do better than that.'"]

... 'is there anyone left alive who hasn't done Elvis? Ever since Elvis appeared to die back in 1977, there's been no shortage of impersonators. Even when the resemblance to the king is less than breath-taking, crowds flock to pay homage. Children are presented – perhaps for healing – and for youngsters the king seems to have attained that special status usually accorded only Donald Duck or Mickey Mouse. It's interesting to see how, as time passes, the king has metamorphosed into whatever we want him to be. Elvis himself said, "The world's a stage and each must play a part." And for some, that's not hard to do. "I think it's getting stronger now. Every year we're getting heaps of younger people coming into it – so with them coming in..." Well, it becomes a religion. If only Elvis was still around to see it. Perhaps all this adoration is reaching him, somewhere, and making him less *Lonesome Tonight*?"

... 'Elvis has finally found a NZ home – in the land of Holdens, heavy metal and black T-shirts. West Auckland is to become home to the King when the country's first Elvis Presley memorial is unveiled in Henderson in time for his birthday on January 8. The Auckland-based Memories of Elvis Fan Club has long been frustrated by the lack of a Presley monument and members decided to take matters into their own hands by ensuring that, while the King is gone, it is not forgotten. The club's secretary said: "While NZ has a very strong Elvis following, Graceland in Memphis is just so far away and most of us will never be able to afford to get there. This memorial will give us somewhere where people can go and pay tribute to the world's greatest performer." A fan had donated the money for the project, so it would not cost West Auckland ratepayers a cent. The Henderson Community Board has agreed to let the club put up a 1.7m-high solid granite monument – incorporating a silhouette of Elvis from his *Hound Dog* days, a guitar and a gold record – to the King of Rock 'n' Roll at Cranwell Park. A Waitakere City councillor, who is also a board member, said it was appropriate to let the monument be built out west, given the area's large fan base and numerous unconfirmed Elvis sightings since his death in 1977. "Frankly, I think it'll be a good tourist attraction. It'll be one of those things that will attract people from overseas, as well as those locals who believe they saw him at Pak 'N Save last week," said the councillor.'

... 'Even by US standards, what ELVIS' former doctor is doing is utterly tasteless. The doctor, who lost his licence for giving The King too many prescription drugs, has mounted a travelling exhibition of the pills Elvis was abusing. This ghoulish sideshow has drawn 10,000 people, paying \$12 each'...

Elvis Presley fans can follow their idol into the grave by bidding for an eternal resting place in the crypt that housed his body for 46 days and nights in 1977... The successful bidder will be able to accommodate seven relatives and friends in the crypt... in the Abby Mausoleum in the Forest Hill Cemetery in Memphis... However, the honour will not be cheap. Bidding... starts at \$1.2 million... □ A[n A]merican blues legend [who has more justification than Elvis to use the title] *King* gave his beloved electric guitar Lucille to [the]*Pope*... yesterday, in a gesture celebrating his meeting with the... Pontiff. The 72-year-old artist handed over the guitar, his faithful touring companion of some 50 years at a star-studded audience for singers and musicians performing in the Vatican's upcoming fifth annual Christmas concert... The Pontiff's meeting with [the blues legend comes after the pope met a folk-rock idol] at a concert in September. The Roman Catholic Church once branded rock music a child of the devil.

...[a singer 'may have sold 16 million copies of her album, but only Hollywood holds the power to make her God. The angst-ridden star is playing the Supreme Being in the controversial new comedy *Dogma*. The movie's provoked a storm of protests from Catholics for its violence and anti-Papal stance.']

...*Lock up your parents. The band they love to hate... is coming...* [T]he antichrist superstar... [of rock – also] known as "the God of F***!" [– is an]... honorary member of the Church of Satan. His stage act includes self-mutilation, lewd sexual acts, and occasionally, loss of life for hapless beasts[, and on one occasion the shock-rocker 'accused an audience of not being crazy enough shortly before two people were stabbed']... Outrageous Florida shock-rocker Marilyn Manson brings his controversial band of the same name to Auckland this month for a show that has brought censorship pressure across America from parents and Christian groups. "It just inspires me to try harder," croaks Manson. "We've had extreme

protesting from right-wing Christian and political groups. They've all tried to stop us from playing, and they've only succeeded in making us stronger. Love and hate are equally powerful emotions, so as long as they hate us, our fans love us. The best thing for them to be is apathetic, but they're too ignorant to realise that." ...[hi]s fundamental Christian upbringing and his exposure to his grandfather's perversion – allegedly jerking off to porno movies while playing with his train set – motivated the youth to undergo... a personality transformation. Reacting to the hypocrisy [it] saw in his circumstances, [the youth] renamed himself Marilyn (after the sex goddess idol) Manson (after the notorious psycho-killer) and fashioned a weird and perverse visual image around the [stage] name. Now 27, Manson has lived with his creation for more than a decade, and his group has followed suit. Each member has a monicker that conflicts star icon with serial killer: MC Gacy, Ginger Fish and Twiggy Ramirez. With their potent horror imagery and music equal parts Nine Inch Nails-style... industrial-edged hard-rock, and glam and gothic-influenced, the group have found a fervent audience in disaffected young [guys] who respond to the similar nihilism of groups like Tool and Korn. For all the band's shock value, it doesn't take much digging to reveal the individual Marilyn Manson as a dress-up freak who happens to have his own moral agenda. Shucks, [the 27-year-old] even cares... "My fans see that I'm a person that's seen and done a lot of things, and has experienced a lot of the same problems that they're having, and they see that I've used it to my advantage. Maybe that gives them motivation and hope." ...Tellingly, [the 27-year-old] names his favourite books as... *Antichrist*... *Cat in the Hat*... *Charlie and the Chocolate Factory*, and... *Devil's Notebook*. Oh, and the *Bible*! "It's something I spent a lot of time learning when I was a kid, and ended up realising that Christianity was more oppressing than it was liberating, so it wasn't really for me... It seems like a good idea to love everyone, but if you do it really cheapens the value of love." As an advocate of social darwinism, [the 27-year-old] says the only really valued attribute is intelligence. "I pick my friends by what they have to contribute. I think artists and writers and anyone that has an opinion and cares enough to speak their mind is intelligent." ...His group's latest album... is "about searching for something to believe in... and in the end... you can only believe in yourself." ...At times [the 27-year-old] looks like the demonic cousin of a character from a Dr Seuss book, with his exaggerated lipstick and strange postures, [and it actually] sees himself as the Antichrist... The word "apocalypse" [also] gets bandied about a lot on the record. What can [the 27-year-old] mean? The end of the world? "The apocalypse I'm looking for is on the mental level. Of course there are times where I'd love to see a physical destruction of the world in some of my more hopeless moods. But the apocalypse that I would like to see is almost a positive one, because it's a killing off of the old ways, a getting rid of the idea of God or the mainstream... To me the idea of an antichrist is about individuality and personality. Christ is really just a figure for all of those things to oppress us..." But isn't Christ the ultimate figure of rebellion? "I think Jesus Christ was the very first rock star. And... [I'm] the very last one." Amen.

...[Can] you believe we have to share the planet with [a] chanteuse... who... frankly declares... "I'm blessed. The Creator is on my side and has anointed this project. I'm a singer, a dancer, an actress, a visual artist, a sculptress and interior designer: these are the things that the Creator has made easy for me. I'm constantly growing and evolving, even during this conversation." ...[Incidentally, a South Auckland] hitmaker... – who appears under the name OMC – has just scored another big leg-up in the difficult world of making it internationally. This week [it] appears on the cover of *Billboard* magazine, subject of a lengthy profile recounting his successes so far, notably his *How Bizarre* hit single. That song... jumped from... 113 to 95 on the *Billboard* top 200 and the album of the same title has sold 83,000 copies Stateside according to Soundscan, the official computer-collated sales chart. It is now 79 on the *Billboard* top 200 album charts, well above... *Blood on the Dancefloor*, which has spent the same amount of time on the... [US charts. T]he single was being played by 137 top-40 stations and a further 22 modern rock radio stations. The video for *How Bizarre* is in "stress rotation" on MTV and medium rotation on VH1, the... most important music channels in the U[S]. OMC also appears on the soundtrack of *Bean: The Ultimate Disaster Movie*... in a version of... *I Love LA*... That song will be the first single released from the soundtrack... and will coincide with live OMC appearances in the U[S]... OMC is scheduled to open for the [US] tour of UB40 after a series of... dates in Canada.

...The... latest sensation... from the... musical melting pot that is South Auckland has... been compared to... [the] Supremes... Their first single, *Show Me Heaven*, was released through Sony earlier this year to an enthusiastic response. Since then they have been playing live almost every weekend... The girls are all Samoan and... their hopes are high. "With God's help we want to get to the top. We want to have successful pop songs, but... [in] five years I want to see at least 100 people that I've brought to the Lord through my music – and if not, I'm leaving," [one of the teenage girls]... who have known each other since intermediate school... jokes. "This is like the Ma-V-Elle ministry." These dreams are echoed by the others and it seems they are pretty determined to make them a reality. "We've gotta be strong these days and stand up for ourselves – we can't trust anyone but God... If we do it in the name of Jesus and delight ourselves in the Lord... then we will be given all the desires of our hearts and may even change the world." • *Ma-V-Elle open for Boney M at the Downtown Convention Centre tonight and... at the Ericsson Stadium on Saturday.*

...The soaring, seductive... biggest-selling [gal] performer of the 90s and one of the most successful recording artists of all time, will tour Australasia... in January 1998 for a series of concerts on the first leg of her *Butterfly* tour, which... includes... [her only NZ show] at... Ericsson Stadium... [on] January 30th... with the average ticket price probably less than \$100... Described as a uniquely beautiful voice, with incredible range, emotion and control, [her] "instrument", has been responsible, in just seven years, for selling over 80 million records. Even before the recent release of the *Butterfly* album... her seventh[... the singer]... had become the first [gal] artist in history to have three studio albums each sell in excess of eight million copies. With Honey, her twelfth [US] number one hit, [the singer] has achieved more chart toppers than any other [gal] in the rock era. In the annals of the *Billboard* Hot 100, only singles have ever debuted at number one and, as the *Billboard* Bulletin puts it, "[this singer] owns half of them". In N[Z], her achievements have been no less startling. Her[first] six albums... racked up a total of 19 platinum plaques, with *Music Box* – one of the all-time best selling albums in N[Z] music industry history – accounting for six of those. [The singer], who drew larger audiences than the Rolling Stones in Japan two years ago, comes to N[Z] at a time when her life, in all its aspects, is undergoing great change. In May [the singer] separated from her mentor and husband of four years, [the] Sony Music president... Shortly after... the 27-year-old... dispensed with the services of [her] manager... and attorney... "I haven't been out much in reality. I was right out of high school [when] I started. I got my record deal and made my album and I haven't stopped since. I've more or less lived in the recording studio, that's where I've grown up. People might see it from the outside and not realise how much work it really is doing this and maintaining this kind of thing... Nobody can make the public buy records. My talent is a gift for which I am grateful and I am lucky to do something I love so much for a living... I started singing when I started talking... It's something I've always wanted to do... Every night I prayed to God about becoming a singer... [but] I had to believe that I could do it or it wouldn't happen..."

...The world's biggest-selling[gal] performer... has cancelled the only N[Z] performance... planned during her Australasian tour. The promoter... said it was necessary to cancel... as the venue was unsuitable. The show is designed for weather-proof facilities but there was no indoor venue available at the planned time... The... Melbourne-based promoter... says... Auckland... [is] in desperate need of an indoor arena that could seat an audience of 12,000 to 15,000 fans... [However, the director of] the Supertop at Ericsson Stadium... disputed that, saying the venue had hosted some of the world's top acts successfully... Ticket refunds were available from point of purchase.

...[It's my party and I'll drink if I want to! The washed up singing star has spent a few days vacation on the island of St Barts in the Caribbean after yet another stint in rehab. The 27-year-old was splashing out with some of the \$NZ97 million pay-out it received from Virgin Records when they dumped her.]

...In the pop charts of the late 80s, no one can have been so lucky, lucky, lucky as... SAW... But six years after they last wrote hits... two members of one of Britain's most successful modern songwriting partnerships are taking the third to court in a multi-million-pound battle... The[2/3rds

claim that the 1/3rd], the business brain behind the phenomenal success of SAW, has not paid them their due as... two-thirds... owners of the recordings and is not properly exploiting the lucrative... back catalogue. The court action is the latest salvo in an increasingly bitter battle between the SAW trio, who produced more than 100 hits in the 80s... for... Bananarama and [a number of other acts – including Britain's 'most famous living Christian (according to a poll of Brits that placed the incumbent pope in second place'), who will shortly be heading off 'on a summer holiday' to celebrate his 40th anniversary in the music business (including a concert at Auckland's North Harbour Stadium on February 7th, accompanied by the NZSO)]... The three members of SAW are reputed to have made more than \$207 million from [the]songs... They were [also]named songwriters of the year three times in a row... [However, one of the 2/3rds], who still write... with [each other], has not spoken to [the 1/3rd] for three years – except through their lawyers... [T]he discord extends to their A[US]n teen prodigies... None of the three has disguised his dismay at the pair's commercially disastrous changes in direction: [the guy half of the AUSn teen prodigies] launched a stage career and [the gal half] adopted a raunchy image that has brought her a cult following among gay [guys]. "It all started going wrong after [the former *Neighbours* stars] left," said one record company insider. The two are long past their sell-by dates in Britain, but international sales, remixes and compilation albums are still thought to generate nearly \$NZ6.8 million a year. Some estimates value the pair's back catalogue of seven albums and 35 singles at \$27 million... The colossal sums at stake in global pop were illustrated last week with reports that 1997's pop phenomenon, the Spice Girls, expect to earn \$24 million by the end of the year.

...The Spice Girls... have taken two of the top honours at the annual Brit pop awards... They took the award for best single of the year for *Wannabe*... *Say You'll Be There*... won top video, with the raunchy quintet telling fans: "We are proof you can win with a little help from girl power." ...The ultimate girl band, who have topped the charts in 31 countries, hit the big time... [after] going to No 1 in America with their first single, a prize that eluded the Beatles... [T]hey had to share the Brit Award limelight at the glittering gala with the Manic Street Preachers, a Welsh rock group making a triumphant comeback after the disappearance of their 28-year-old... alcoholic and anorexic... lyricist[, whose]... empty car was found abandoned on a motorway near the famed Severn Bridge... in 1995... But for the booming \$NZ11.6 billion pop industry, the Spice Girls... [- who] arrived an hour late... and stayed only 40 minutes... [-] were the stars of the night with their raucous, scantily dressed dance routines... Hype abounds in the pop world but this time it has been justified; the Spice Girls headed a bumper year for the industry with album sales topping 200 million for the first time in 1996 and sales heading for a 10[%] rise this year... After 30 years in the pop business and sales that have now topped 100 million, the Bee Gees were given a special "outstanding contribution to music" award. The British-born [AUSns], once kings of the disco famed for their falsetto voices, gold medallions and flares, then treated the audience to a medley of their greatest hits...

THEY are the pop sensation of the decade, selling millions of records since bursting onto the music scene... Since then, it seems, we have learned everything about them. Everything, that is, except what we wanted to know: Could they sing live? Sceptics doubted the hugely-hyped group would ever perform without a backing tape. But they were proved wrong at the weekend when the Spice Girls performed their first live concert... The Spices... were introduced to thunderous applause on the cult U.S. TV show *Saturday Night Live* – watched by more than 20 million viewers... [- and] had the unmistakably raw sound of a live performance but it was, unmistakably, the sound of real talent.

...A new release by the *Spice Girls* has knocked... [the] *Candle in the Wind* tribute to the Princess of Wales off the top of the British singles charts... *Spice Up Your Life*, makes them the first group to reach No 1 with their first five singles and the first to enter the charts at No 1 four times in a row... A year ago they were merely flavour of the month. Today, the Spice Girls' product range reads like a supermarket chain's. The British Patent Office is grappling with... 100 applications for trademarks bearing the Spice Girls moniker – for everything from shaving cream to beer.

...Bootlegging has gone street-legal. In an extraordinary thumbing of the nose at the music industry – and the mightier Spice Girls – a firm of top London lawyers has been hired by a video production company to make an unofficial Spice Girls video. The Spice Girls, who have blocked previous unofficial releases, are furious but appear powerless to do anything about it. *Spice Power*, which sells at £10.99... is racing up the video charts. Its producer, Visual Corporation, anticipates sales of 50,000 copies, but... [the Spice Girls] won't see a penny. Earlier this year the band's management took out an injunction against the release of another video, but this time it has backed down. "They threatened to act, but we told them to bog off..." said [the lawyer] who headed the legal team... The team was hired by Visual to exploit what they believe is a lucrative loophole in the law – the release of unofficial videos which cannot be accused of "passing off," do not infringe copyright and do not require the "performing rights" of the artist. The bigger the act, the more money to be made: already Visual have rushed into the market with unofficial Oasis and Boyzone videos. It is a development that is alarming the music and video industries which have invested heavily in combating piracy. Retailers expressing caution at the legality of selling the videos are being reassured... [by the legal team that they will] not infringe the law. After tracking down worldwide footage of the Spice Girls through news agencies and the Internet... the video producer, sat down for several days with... [the] legal team to watch it. Judging the legality of each second, they produced a 45-minute documentary which... features no performance by the Spices and no songs. What it does have is interviews with a former stylist, with... [someone] who once ran a studio where they rehearsed, a former voice-coach and a Spice astrologist. There is footage of [one member]'s former incarnation as a game-show beauty, courtesy of Turkish television, an extended series of clips from an interview granted to Britain's Channel 5 and footage of the band giving or receiving awards. Perhaps strangest of all, however, is an interview with the former manager of the... football team near London, for which Sporty Spice used to play. The team is filmed in action, but not with Sporty – which would have been a "performance." "We can show one of them walking down a street, or even two of them, but if there were four of them and they broke into a dance step we wouldn't – that might be infringing their performing rights,"... □ *The Spice Girls'* new single *Too Much* has charged to the top of the British charts, leaving the fab five thumbing their noses at critics who had forecast their imminent demise. The[y]... took the... No 1 spot from the *Teletubbies* – a group of cuddly creatures on children's television who were bidding to top the holiday charts with *Eh-Oh*. *Too Much* was released to coincide with the royal premier last week of the Spice Girls' movie, *Spiceworld*.

...*The great rock'n'roll Swindle*... As rock'n'roll enters its sixth decade, Britain's pop stars are rebelling against music bosses who they say are working them too hard. When... Radiohead[']s singer] blacked out and collapsed on stage in Germany a couple of years ago, the physician diagnosed exhaustion, exacerbated by laryngitis. Radiohead had been on a gruelling world tour, promoting [their album] *The Bends* and [the singer], who had periodic bouts of illness, had requested medical help. But... was urged to continue... "The doctor gave me some drugs and said I was fine to play but then I collapsed. Afterwards I found out that the doctor was paid by the promoter." [His] collapse hinted at a phenomenon that is well recognised throughout the industry – that bands are being pushed to their boundaries. Already this year cancellations by Babybird... and... the Verve... have been blamed on illness and the strain of endless touring. Some... like... Placebo, an up-and-coming indie act, accept that to make it in the big time you have to make sacrifices... "[T]hings are moving at a very fast pace now, but if there's ever a time to be moving at a very fast pace, it's now. Perhaps we can relax in a few years." However, in a surprise announcement, the... organisation that represents British music management, has called for a radical rethink of the record industry after complaints from a number of bands and their managers about being... asked to produce what they claim is an exhausting supply of bonus tracks, remixes and alternative b-sides. Heavyweights in the industry... have challenged the record companies' practice of releasing multiple versions of singles, all with different b-sides. They argued that this practice, used to boost the sale of singles, is... leading to sub-standard material and is undermining the credibility of the charts... The [management organisation] will push for major changes in the singles market when it meets officials from the British phonographic industry. It's likely that the [organisation] will try to have the singles market revamped so that there are only two record formats for singles – a CD single and seven-inch single, with one a-side and one b-side each. A separate 12-inch vinyl chart, solely for dance music, is also likely to be proposed. At present, it's not uncommon for the same single to exist in a variety of similar, but distinct formats, including CD-1, a 25-minute CD with 4 tracks, CD-2 – another 25-minute CD with the same

single and three different b-sides, and a 40-minute CD – with the single remixed several times. The same single is also typically released on cassette – with up to 40 minutes of remixes. Bands don't necessarily receive royalties for these b-sides... "When a band gets signed to a recording company, it's typically for albums and singles alone... But with this practice, record companies are getting up to an extra 16 tracks a year free of charge in their catalogue which they can then put out as[a] b-sides album on a box set. Often these b-sides are material that the bands are not even 100[%] happy with." ...Record company sources have defended the practice of releasing multiple formats of a single. They argue that bonus tracks often involve little or no extra work for bands, because "they are often live tracks, interviews or b-sides that have been previously recorded." ...EMI Records argues that record companies[are] issuing multiple versions of b-sides... because of consumer expectations. "The view of the public is that the capacity of the [CD] is such that only giving the public the traditional a-side and b-side isn't giving them value for money." Ironically, singles sales have enjoyed a huge revival in the past two years as record companies have become more sophisticated with their marketing plans and increased efforts to use singles as a promotional tool for album sales. Britons buy more singles a head than any other nation, except Japan, and sales are greater than at any other time except 1982. Last year, there were... 50 million singles sold in Britain, nearly 23[%] more than in 1995... However, the manner for securing those sales continues to be a niggling source of debate within the industry. Rather than based on sales to the public, singles are recorded on the number of sales to record stores. This has promoted the practice of record companies providing record stores with free stock and the record stores slashing the prices of singles... [The] manager of the Brand New Heavies, bemoans this practice. "It means that there's a great advantage to major labels who can afford to give away a large volume of product, but independent labels and less established artists who want their records sold at full price cannot compete." A record industry response to all these allegations is that "bands should realise that no one makes any money from singles. They're just a vehicle, through radio, to draw attention to the album." ...With record companies adopting a different stance, the controversy... could lead to a long and bitter fight between the [organisation], managers, recording artists and record bosses.

...Some of the top names in British music appear in a "hit list" this month... [A] galaxy of rock and roll megastars [have been] forced to hand over... almost \$NZ57 million... to settle tax claims after an elite... Inland Revenue Department... unit successfully challenged a series of tax schemes... to shelter mega-earnings from tax rates of up to 60[%]... The full list of stars targeted reads like a compilation album from British pop music's hall of fame. It could be titled *Now That's What I Call Tax Avoidance*... The pop millionaires were guaranteed confidentiality in return for paying up and the Revenue Special Office team who did the deals were sworn to secrecy under the Official Secrets Act. However, the *Observer* has established the details behind many of these remarkable deals... The largest settlement uncovered, for almost \$6.8 million, was made by the Bee Gees... [One Bee Gee] alone paid \$4 million. The rest was shared by his brothers... At least \$6 million was paid by members of the Rolling Stones... The Stones were targeted after their 1982 and 1990 world tours when investigators received free concert tickets in the line of duty. [The band's drummer]... and bassist... claimed to live across the Channel. [The bassist] emphasised the point musically in his 1981 solo hit *Je Suis un Rock Star* in which [it] declared "I live in France." "Mais non," declared the department... [The band's singer] claimed to live on the Caribbean island of Mustique... Many stars moved either themselves or their savings offshore, especially under Labour when the top tax rate was 98[%]. Non-residents pay tax only on income received in Britain. But in the 80s the department tightened up the rules and taxed anyone with a British property... Almost \$5.7 million was paid by the members of original heavy rockers Led Zeppelin. And more than \$4.5 million was paid by... Genesis members. A \$3.4 million settlement was made by a company owned by... members of Dire Straits... [Two members] of the Who handed over a similar sum... [A guitarist] who won a Grammy award last week, settled for \$2.5 million as did the members of Deep Purple after the department probed \$15.8 million in overseas royalties. The Sex Pistols, the punk pioneers featured in the *Great Rock and Roll Swindle*, handed over \$565,000... Other targets... included the Smiths, whose hits include *Heaven Knows I'm Miserable Now*, the Kinks, whose *Sunny Afternoon* contains the line "The tax[collector]'s taken all my dough", and... [the] saintly founder of the Boomtown Rats... Investigators... were often helped by the stars' ineptitude or mistakes in failing to be paid in accordance with cleverly worded contracts. In only a minority of cases did the tax[collectors] come away empty-handed... Faced by their Special Office fans, the pop stars probably felt like those in the hit musical *Les Miserables*. They were not alone. The show's composer... must have been exactly that when the department claimed up to \$3.4 million from his royalties.

...[the singer who once called himself Ziggy Stardust, and] whose hits in a 30-year career include... *The [Guy] Who Sold The World*... has been named Britain's richest rock star with a personal fortune of £550 million pounds... putting him ahead of... [a former Beatle (r:p1622, ln13)] for the first time... In the first survey of its kind, *Business Age* said the former Beatle had earned £520 million... [and his] wealth continues to grow despite the fact that the Beatles broke up more than a quarter of a century ago... while[a Welsh] heart-throb balladeer... was third with £275 million... Unlike many other rock stars who saw their wealth slip away in a haze of drink and drugs, [the richest rock star, who]... broke new financial ground this year with a \$US55 million... Wall Street bond issue secured against his back catalogue... took firm control of his finances during the 1980s, putting behind him the excesses of his earlier years... The magazine compiled the list by examining the company accounts, record sales and other earnings of all major British pop acts over the past 35 years. [4th on the list was the singer from Genesis (£220m); the British piano player was 5th (£200m); the Rolling Stones' singer was 6th (£135m) – while the band's guitarist was 10th (£96m) and its drummer 20th (£50m); the recent Grammy award-winning guitarist was 7th (£120m); another former member of the Beatles, George Harrison, was 8th (£105m) and the band's drummer was 12th (£93m); in 19th place (£52m) was Britain's most famous living Christian; in 16th place' is Mr 'Da Ya Think I'm Sexy' who married NZ's most famous model.

[–] amused their children... The Monaco spree comes just days after... [the couple] rubbed shoulders with another royal family... when... [it] was clear the couple was well rested, [having] arrived in London in grand style aboard the floating resort, the *QEII*, having stayed in its \$20,000 penthouse suite normally reserved for royalty and international dignitaries. Add to this "destination everywhere" holiday itinerary the family's wild party trip to Dubai in April and their whirlwind N[Z] visit in February. In December, [the singer also took his wife] and the children to Rome... "They go on a circuit around... the year, taking the cruise, visiting Ascot then going to a Mediterranean destination. The amount of money they spend depends on how many people they take with them, but the *QEII* would have cost about \$200,000 as would the trip to Monaco. And their visit to N[Z] cost them around \$100,000. They always go first class, so it's big bucks every time they go anywhere."

...[NZ]'s own supermodel has joined the ranks of former rock wives. This may have an adverse affect on her children, especially her eldest daughter] who turned five last month and is obviously enjoying growing up with all the trappings of Hollywood[. 'Meanwhile, mum's having problems with her planned nude layout for *Playboy*, having been told the \$2m deal's off until it loses weight and gets toned. They've given her 2 months to shed at least 5kg.'

... 'The idea that a rich and powerful movie star would be besotted with a gorgeous Kiwi supermodel comes as no surprise to anyone. However, the supermodel was quick to let us know that the movie star was not among her admirers. Our cover story last week had a gal purporting to be a friend of the supermodel's discussing the movie star's infatuation. The "friend" went on to explain that the supermodel would have nothing to do with the movie star and was standing by his estranged actress wife, with whom the supermodel shares a passion for protecting endangered animals. The supermodel has contacted us and explained that it has never met the "friend" quoted in the story, nor has it met either of the actors. New Idea will not interview the "friend"

again, or use stories that quote her. We would like to sincerely apologise to the supermodel and any of her family who may have been embarrassed by this story.'

...a Kiwi 'has been falsely linked to drug use by an internet site that dishes dirt on the stars. But the supermodel's NZ agent has begun moves to have the site closed down and its creators sued over the cruel lies. "My client has taken on a couple of magazines before successfully. These lies are so far from the truth. The supermodel would never do anything like that. This internet site would best be described as the contents of a garbage can." The supermodel has also closed down websites before which slurred her. "There was one site where they put her head onto a naked body. This latest site says its claims are 'based on hearsay, rumour and gossip' – that about sums it all up." The site – A List – casts slurs on the lifestyles of more than 100 international celebrities. It attacks their sexuality and makes accusations of drug and alcohol abuse. The agent said the supermodel – who has a young son and daughter from her failed marriage to a British rocker – was into healthy living. ■' The British rocker who dumped his first wives 'reckons long-term relationships are "impossible" and that marriage vows should be rewritten every year, "like a dog licence". Says the rocker, 56, "I think the vows should be changed because they've been in existence for 600 years – when people only used to live until they were 35. So they only had to be with each other for 12 years. Then they would die anyway." The rocker goes on to admit that the most painful moment of his life was when his Kiwi supermodel wife walked out on him. "I don't think anything could have prepared me for the heartache because it cuts so deep. I couldn't even play football with my mates. It was like they didn't exist."

...following 'a false pregnancy scare', a footballing mate of the British rocker 'is engaged to the rocker's former supermodel wife – but the mate has confirmed it was once expecting a baby with an All Saints singer. The mate has backed the singer's claims – in her soon to be published autobiography – that it was once pregnant with his baby but had an abortion. The pair fell in love four years ago, but their relationship fell to bits after the abortion which, says the singer, drove her to the brink of suicide. The couple had been delighted at the prospect of having a baby together. "My partner put his hand on my belly and told me, 'This baby is saving my life'." The singer claims that her manager was furious and told her the future of her band depended on terminating the pregnancy. But, says a friend, "her partner told her they were going to have the child." However, the pressure on the All Saints singer was too intense and it gave in to her manager. Says the friend, "When the singer told her partner, the partner was brilliant and told her it would support her whatever the singer chose. The singer was in New York at the time and her partner flew to be with her." The singer has since had a baby with one of the *Oasis* brothers.']

...not since the 1960s has there been a band as popular as Oasis, which has sold more than 16 million albums in two years. [The wife of the most infamous *Oasis* band member], who, as a teenage actress, said [it was her intention] to become "more famous than anyone and anything," is now almost as famous as the 23-year-old [husband] himself. Her rise from humble beginnings – powered more... by tenacity than talent – has provided some revealing insights into the gritty but glamorous world of the rock wives and their influence, for better or worse, on some of the most enigmatic icons of popular culture. What is less clear is why this intelligent [actress] should have become addicted to the unstable institution of the rock marriage in the first place... [The actress grew up in] the predominantly middle-class suburb of Hounslow, where... her... mother... who... was... resolved to keep her as far from the underworld as possible... sent her daughter to a convent school. [However, the mother, who was] a public relations officer... wasted no time in building [her daughter]'s early career. At the age of four, [the daughter] played... in *The Great Gatsby*. At seven, [the daughter] starred opposite the actress best known for portraying *Cleopatra*; at nine... was the Birds Eye "peas girl", adorning millions of packets of frozen vegetables. A steady stream of exotic modelling jobs followed. So it was that when [the daughter] reached her mid-teens, [the daughter] found herself moving in circles that enabled her to live out the fantasies entertained by millions... [of schoolgirls, culminating in her marriage to a 1960s pop icon]. But marriage to [the middle-aged musician proved to be] a disaster. Undeterred, [the daughter married the] multi-millionaire lead singer of the Scottish rock band Simple Minds, four years later. They lived in splendour and had a son... but the marriage fell apart after two years. By now, [the daughter] had lost all her closest family. Her mother had died after a long struggle with cancer and her brother had mysteriously disappeared. [The daughter] was therefore vulnerable when [it first met her next husband] on a plane in 1994, before Oasis had grown from Manchester pub musicians into stadium stars commanding up to \$7 million for a concert. "I fell for him but [the singer] ignored me,"... says [the daughter, and the singer] snubbed her again backstage after a performance by... The Pretenders, [whose lead singer is another ex-wife of the singer from *Simple Minds*.

...the *Grammy* award-winning guitarist's ex-wife 'has the love of her two new children and a successful business of her own, but the Italian actress still remembers as if it were yesterday the day when her four-year-old son with the rock star plunged to his death from the 53rd floor of a New York building. If it had not been for the tragedy, the actress believes it might one day have rebuilt her relationship with the guitarist. "I think about Conor all the time. It seems incredible that this thing could have happened." But the actress is still angry with the cleaner whose decision to leave a window open cost Conor his life. "We can never be sufficiently protected from the ignorance and incompetence of people surrounding us and, unfortunately, we sometimes have to pay for their shortcomings. But this is a very high price to pay. Not even seeing them dead would give satisfaction. Something happened and nothing can redeem it." The tragedy was especially painful for the guitarist, because it'd recently split up with his wife and had also just begun to appreciate the importance of his relationship with his son. "Conor's dad had understood that a new world was opening up for him, had finally decided to accept his responsibility whereas before it hadn't known how to fit this person into his life. Conor's dad had told me just the day before the accident that it wanted to commit himself to creating a really important relationship." Instead, grief at their loss would create an unbridgeable chasm between the parents. The two parents reacted in starkly different ways to the tragedy. While the mother wept for hours, the father seemed incapable of expressing his emotion, remaining silent and immobile, "like a statue". The one outlet open for the rock guitarist was his music, and his tribute to Conor, *Tears in Heaven*, gave expression to feelings that would otherwise have remained bottled up inside him. Conor's mother has always found the song too painful to listen to, but was impressed by other songs composed by her ex-husband after the tragedy. "I was really struck by the powerful way they transmitted these emotions. But in human terms, the guitarist was zero, nothing. I remember him showing no emotion whatsoever, while I was a lake of tears." The guitarist was not easy to live with. When they met, the guitarist was married to George Harrison's ex-wife. Things weren't helped by the guitarist's fight against drink and drug addiction. The guitarist would disappear into an alcoholic limbo characterised by prolonged silences. The couple split up when the guitarist had an affair with someone introduced to him in New York, ironically, by his Italian actress wife's best friend. The actress, who once featured in a string of Italian sex comedies, claims her ex-husband was also intolerant of the noise and disorder caused by the presence of a young child. And, strangely, music was effectively banned from the house.'

...because they don't have enough staff, UK police let an illegal 3-day rave continue on council land – despite receiving 1000 noise complaints.' By the way, today is the anniversary of] the Noise Control Bill['s introduction to NZ's] Parliament... by the Minister of Health... [The 1982 bill gave police] and local body noise control officers... the power to jointly seize and impound stereo or other equipment creating excessive neighbourhood noise.

...The city that never sleeps may finally offer its frazzled citizens a break. The New York City Council has enacted a new law that triples the fines for repeat offenders of the noise code. Sample maximum fines for some Big Apple annoyances: blaring nightclub music, \$US24,000... dogs that bay at the moon and everything else, \$US525; car alarms that don't quit, \$US750; loud televisions and stereos, \$US1050; and nuisance honking of car horns \$US2625... [In further news from the US, a series] of anti-violence rallies and peace patrols in tough city neighbourhoods are to be launched in the wake of two murders in the... gangsta rap music scene. On the surface, the war between east and west coast rappers seemed to be cooling. A February truce meeting called on a TV show brought together [a]New York record mogul... and [a]Los Angeles rap icon... to call for an end to the bitterness and hatred between the coasts. But on radio airwaves, among record executives and fans, speculation is that not everyone was paying attention. New York rapper Christopher Wallace – whose stage name was Notorious B.I.G. and nick-name was Biggie Smalls – died in a drive-by

shooting [a fortnight ago after Wallace] and his entourage exited a *Vibe* magazine party in L[A]. The 24-year-old's death came almost six months to the day after west coast rap star Tupac Shakur (25) was gunned down on the Las Vegas strip. That killing is still unsolved. The motive for each case is unclear... [However,] Wallace, a self-admitted former crack dealer in... Brooklyn, was considered a Shakur rival. Shakur had accused him of involvement in a 1994 robbery in which Shakur was shot and lost \$57,000 in jewellery. Wallace was angered at Shakur's claim... on an album that... [it] had slept with... Wallace's [partner]... who was then pregnant with Wallace's child... After Shakur was shot, industry observers and fans wondered whether an all-out war was imminent... In the rap world, where stars boast of living the thug life, the killing was "life imitating art"... The beef between the rival coasts centred largely around who created the hard-core style of rap music known as gangsta rap, a genre whose graphic language and vivid descriptions of violence have made it one of the best-selling vehicles in recorded music... The gangsta persona extended to record executives as well. Death Row Records, home to... Shakur, was led by... [a] 136kg... 31-year-old... who built an intimidating reputation among colleagues based on his alleged ties to the Bloods street gang and a barely controlled violence. [The 31-year-old], who was in the car with Shakur when [Shakur] was shot, has been accused of using baseball bats to settle business disputes[, and is currently] serving a nine-year prison term for violating probation on prior assault charges... [M]any thought... gangsta style was on the way out in favour of a new, positive attitude... but... [a guy] who writes about rap for *Vibe*... says Wallace's death will make gangsta rap even more appealing. "People might think this is one more nail in the coffin, but what it does for the kids involved in gangsta rap is it makes... the gangsta lifestyle... even more attractive." ...Others... said the Smalls and Shakur killings had spurred "young people to do their own evaluation: Is being a 'gangsta' that glorious? Is it really cool to be dead?"

...When the Doors' singer Jim Morrison died – bloated and bearded – in a bath in Paris in July 1971 it wasn't the end, it was just the beginning. Instead of a rock band with limited life expectancy, now you had A Legend. A decade after his death, Morrison was on the cover of *I* with the headline "[Jim's] Hot... Sexy, And... Dead" and at the time... Elektra Records, the band's label, was saying, "the group is bigger now than when Morrison was alive. We've sold more Doors records this year than in any year since they were first released." ...Since Morrison's death, on any given day a dozen kids... who were in day care when... Jim... died... gather at his graffiti-covered grave in Paris' Pere Lachaise cemetery, following scribbled signs on the other tombs which point the way to... the... "wild child, full of grace, saviour of the human race"... They drink wine, smoke joints, leave offerings and exchange Morrison rumours; [Jim]'s alive and living in New Orleans... in the Arizona Desert... in Africa with Elvis... [T]hree decades on, one of those best placed to comment is still mystified at the longevity of the Doors... [The Doors' drummer] lives lightly with The Legend, and a formidable legend it has become with Morrison – forever young – cast as the young satyr crippled by his intellect and emotional shortcomings. As [an] English writer... noted in his *Dark Star* Morrison biography, "Morrison... [(who)] assimilated ideas from writers such as... William Blake, Baudelaire and Nietzsche, and took the band's name... from the title of Aldous Huxley's psychedelic voyage *The Doors of Perception*... was the sexiest bookworm ever to pick up a microphone... an inspired lyricist and one of the most celebrated pop icons of the Sixties." But any intelligent reading of the Doors' story reveals Morrison as a great plagiarist... a drunk and an amateur human being in the latter days of his short – dead at 27 – life. As [the writer] says, Jim got out before [Jim] was found out. Morrison is only considered a poet by those who don't read poetry, but belatedly got his wish. His occupation on his death certificate was given as "poet." It's also a curious irony that most of the band's biggest hits (*Light My Fire*, *Love Her Madly*, *Touch Me*, *Love Me Two Times*) were written by... the band's [guitarist. The Doors]... stood outside the rock of their period. They owed nothing to the sunny hippie culture which had exploded out of San Francisco, played rambling blues with none of the economy of bands such as the Rolling Stones and had only the most tangential connection with the dark New York scene. Even their line-up was peculiar... [- a] classically trained... keyboard player; a)... guitarist raised on Chicago blues; and a)... jazz drummer... Today [the drummer] – who... is writing a novel ("about the Sixties, of course")... – ...sometimes goes out with a spoken word show playing drums and reading from that autobiography which is subtitled, in case no one got it, "My Life with Jim Morrison and The Doors." ...The... [drummer] jocularly notes his response to a recent – if hoary – question about the difference between the Sixties and the Nineties in rock. "I said, REM got \$80 million [for a recording contract] and we got \$5000 way back when. But then I thought, money is not evil per se, it's an energy and REM is into Rock the Vote and human rights in Tibet and artists with conscience should have more money, then they can show the business[people] how to use it. But you gotta put your money where your mouth is. So I challenge all you rich rockers out there..." And [the drummer] laughs in the sure knowledge that [it] is one of them.

...[Life's very rich pageant When *Mojo* magazine slammed R.E.M. on the cover of last month's issue it came with the headline, "The Final Act?" And the article's inside piece – under the headline "Be Seeing You?" – noted the band had recently dispensed with its longtime manager, and had come off the *Monster* tour which had almost killed them (in the case of the drummer, quite literally). As the article speculated – what future for this band, and will they gradually turn into the Rolling Stones? Those question marks around the heading and banner proved necessary however because, as Warner Brothers hunkered down at their conference in Anaheim, California, the unspoken topic of speculation was "who will R.E.M. sign with?" Their contract with Warners was up after delivery of the new album and the bidding war had begun in earnest. Amongst the suitors for the collective R.E.M. signature on a contract were heavy-hitters Sony, Capitol and SKG. Another contender was Outpost, the label run by R.E.M.'s producer. Insiders however tipped the front-runner in the bidding war to be DreamWorks, the new label which is helmed by a former Warners chairperson and a former Warners president who had long personal associations with R.E.M. during their Warners tenure. There was a very loud sigh of relief in Anaheim, however – indeed, thousands of delegates leapt to their feet and broke into a standing ovation – when the band's legal adviser walked on stage and interrupted a speech by the current Warners chairperson with a telegram. The band had decided to re-sign with Warners for another five albums. The telegram was very simple: "We've always said we'll only do this as long as it's still fun, and right now, it feels like we're just getting started, so let's keep going." The relief Warners felt must have been tinged with some perspiration however because, if industry sources are to be believed, the band re-linked the contract for a whopping \$US80 million – that's \$US10 million more than the benchmark deal Virgin made with Wacko's sister back in January. Representatives from both the band and Warners naturally refuse to discuss the detail but it seems R.E.M. will be paid a \$US10 million signing bonus, a \$20 million advance against sales of the albums already in the Warners catalogue – plus a 24% royalty rate on the retail sales of each album sold. An Auckland music industry lawyer says this last factor would be the second highest rate behind Wacko's purported 28%. The average rate for new artists is 12% and a good top-of-the-scale would be 18%. If all that sounds pretty hefty, there's more. The contract covers live albums and ownership of the album masters reverts to the band seven years after the contract ends. That means they can renegotiate another contract for the same material which will then be valuable back-catalogue. The contract was apparently struck after two 14 hour sessions. The big question is: are R.E.M. worth it? Well, few of the superstars who have received huge deals in the 90s – notably the Virgin singer, her brother and Metallica – have returned the profits their respective companies hoped for. And R.E.M. aren't getting any younger. They've already whispered they aren't keen on more tours. That said, R.E.M. would seem a better bet than most: they haven't lost touch with their college radio roots while scooping up Grammy awards and their sales record so far has been mighty impressive. Their last three albums collectively sold nearly 10 million copies in the US alone and, in the words of the late Kurt Cobain – "they've dealt with their success like saints." The stability of the band line-up – reinforced rather than ruined by the difficulties of the *Monster* tour, it appears – must be reassuring for the Warners management team also. And perhaps the reason for that telephone number figure lies in the top of Warners. The band was threatening to quit the company – along with other top acts – when the corporate in-fighting prompted the departure of its former chairperson and president, both much respected and admired within the company and industry at large. Within Warners however, the dust has settled. Also, record companies like to have their label leaders, sometimes even if they are expensive and don't offer the returns you might expect. And maybe the R.E.M. figure isn't quite as big as it looks on paper. As

the band's legal adviser says, "there are so many different ways to analyse this. It's not exactly what will be in the final agreement." Other industry attorneys point out there will be hidden provisions that will claw it back from the bald \$US80 million figure. Still – a bald figure is a bald figure. And one of the baldest, R.E.M.'s – "I am world leader pretend" – singer, just got to not worry where his next meal was coming from.' In local news, 'Tadpole's' debut album, *The Buddhafinger*, entered the charts at No 2 a month ago. The cut-off figure from when the band starts making any money will be when about 25,000 units have sold. So far they've sold about 13,000. Their month-long national tour kicks off with an all-ages gig at the Mandalay tonight'.

...NZ's first CD pressing plant is under construction in Auckland and due to begin production in April. The Ponsonby plant will have the potential to press five million CD-Rom and compact discs a year and manufacture new DVD digital video technology. The \$3.3 million project belongs to locally owned Software Images with technical support from A[US]'s Pacific Mirror Images, a division of the... PMP Communications Group. Software Images copies, packs and distributes floppy discs, CD-Roms and CDs for computer, music, education and promotional markets. [The company's m]anaging director... said the plant would mean more control, better service, reduced freight costs and faster turnaround than overseas CD production. An estimated 12 million CDs are generated overseas each year for the N[Z] market and Software Images handles 1.8 million... "If we're sourcing from the U[S] or the U[K] it can take two weeks to restock. It's a guessing game, but with local production there's no guessing involved – you just order when you need it,"... said... [the] A&R manager with BMG Music... But... [the] manager of Stebbing Recording Studios, said Software Images was taking a significant risk. Competing at the right price would be difficult in a market with several established agents and major record companies who had their own plants. [The 'cost of a CD to the local industry is \$2.50' at present, but when the local 'CD maker opens for business the price will be \$2 per unit for a run of 1000' (yet musical CDs typically retail in NZ for \$29.95!). And AUS] was beginning to reach excess production capacity which would drive costs down[even further. However, Software Images' managing director]... said his business alone, with more than 50[%] of the available market, justified the investment in the plant. "And we have a real competitive advantage over A[US]'s labour market. One of their key weaknesses is being trapped into high labour rates for non-standard working hours, whereas we have a lot more flexibility,"... [The managing director] predicted the plant would boost the company's export business into the Pacific nations from \$250,000 to several million dollars annually within three years. And they would be poised to capitalise on the expected arrival late next year of DVDs. DVDs, or digital versatile disks, are tipped to replace video. With a capacity of up to 17 gigabytes, they offer digital quality video with [multiple] features...

Creative Technologies of Singapore, one of the world's largest multimedia card manufacturers, is returning to its core business with new sound card and DVD (digital video disc) products. The products mark a u-turn for Creative after its disastrous foray into CD drive manufacturing which saw the company post a \$US38 million loss for the 1996 year... [A] Creative regional sales manager, described the company's 1995-1996 move into the highly competitive CD drive market as "one of the worst decisions we could have made". Creative invested a lot of money in a manufacturing plant but because of the pace of technological change, was unable to keep up with the innovations and ended up selling CD drives which were far slower than the latest offerings... DVD is touted as the "next big thing" in interactive multimedia because it allows far more data to be stored on a disc the size of a standard CD. A DVD disc contains up to 17 gigabytes, making it a very attractive option for movie delivery and the logical successor to the VCR and video cassette... In performance terms the new DVD can read CDs at the highest 20 speed access rates and is fully backwards compatible with any CD ROM disc... The Creative DVD bundle is priced at \$799 plus GST. - 1997

A combination of the Internet and new technology which squeezes music files down to one-tenth of their normal size is winning an army of fans and giving unsigned bands a chance to market themselves to the world... A number of audio formats have emerged, including RealAudio and LiquidAudio, but the most popular and effective to date is MP3, a compression technology that shrinks sound files for delivery over the Internet while retaining quality. Thousands of Internet sites around the world host MP3 files and there is even an MP3 Top 40. In the US students at some campuses are no longer buying music – they are using fast Internet access to share illegal copies of the latest-release albums and chart-topping songs... Files are downloaded to disc-direct from Web pages... All you need do is type the name of the song you want in a search engine and chances are it will be there free for the taking. Once it is downloaded you need special software – also available free on the Internet – to play the files. Winamp, for example, the most popular music player, has more than five million users. Once files are downloaded they are often e-mailed between enthusiasts or copied in bulk to CDs using computer CD-writers and shared with friends. MP3 compression typically reduces songs from 50Mb to 5Mb, allowing up to 140 songs to be saved on a recordable CD where previously you might only get 15. One of the main perpetrators of the on-line music revolution is MP3.com... which offers over 6000 free songs from 2000 artists... The MP3.com Website is visited by about 150,000 people daily... Pirated material is the major concern... [R]ecording companies have been caught off-guard by the proliferation of illegally copied songs. There is currently no means for the major labels to protect copyright, extract royalty payments for songwriters or maintain control over traditional distribution channels... [T]he Recording Industry Association of N[Z], representing the major record labels here, says it has not licensed anyone in N[Z] to put its music files on the Internet and any attempt to do so is a breach of copyright. It has written to a number of Internet service providers and individuals threatening legal action... In a single session... [an Aucklander] who is setting up his own MP3 site for N[Z] musicians, provided the N[Z] *Herald* with a list of illegally copied material from well-known artists at sites frequented by local MP3 addicts... sites where there were hundreds of people queued up waiting to download songs from Abba, the Beastie Boys, Blur and Bush to the Doors, Marilyn Manson, Prodigy, Queen... and the Village People... Kiwis were regular visitors to such sites and often had 300-400 files on their own hard discs or hosted on their Websites. Unless Internet users develop a conscience or there is a major global blitz by record companies, MP3 will continue to be a growth industry. In fact the format has become so popular that specialised hand-held players have been built. The latest device geared to make MP3 mobile is the Rio from Diamond Multimedia, currently at the centre of a major controversy. The Recording Industries Association of America (RIAA) attempted to sue Diamond Multimedia. It achieved a short-term injunction preventing the release of the small playback device but this was overturned in October. The court ruled it was not a recording device but a computer peripheral. Diamond Multimedia this month counter-sued the RIAA. The first local shipment of \$599 Rio players sold out in two days and Christchurch-based distributor Dove Electronics is now dealing with a major backlog of orders from major retail chains around the country. The current version takes 60 minutes of music on a re-recordable flash Rom disc and a disc capable of two hours of CD-quality music is due out early next year. Earlier this month, the world's major record companies and technology firms announced the creation of the Secure Digital Music Initiative, which will begin work next year on an open specification to protect copyrighted music online. Numerous discussions are under way with MP3 groups and other on-line music formats. After two years of development DMOD (Digital Media On Demand), an independent initiative, has been launched. This allows electronic commerce and encryption for secure purchase and distribution of online music. [Much like the services which allow them to phone up and hear the latest songs (at a 'cost of 10p per song in Britain'), consumers] can listen to a low-quality MP3 stream of songs then download a CD-quality version for about \$1 with 50c automatically transferred to the artist's account... According to the London-based research firm Market Tracking International, Internet-related sales of music will increase 20-fold to \$US550 million... or 1.25[%] of the \$US44 billion total music sales, by the year 2000... The idea of world music is taking on new meaning as anyone, anywhere, has a chance to offer his or her wares but the big labels will still try to transform what appears to be Internet anarchy [– which, 'if allowed to continue, could destroy the music industry' –]into the ultimate proving ground for their next wave of artist investment.

... "Music's one of the only things where people can pay the same for a diamond or a piece of shit," [a singer] growls. "It's mad! It really blows my mind that albums are the same price, regardless of their quality. If it was anything else it would inevitably have a premium attached to it. For that

reason we have to care about what's happening to music..." Judging by his solo effort, *Alone With Everybody*, [the]... lanky 28-year-old... obviously cares enough about his music to have crafted a remarkable collection of rousing anthems. It's an epic album, one that kicks off where the Verve's last album, the seven million-selling *Urban Hymns*, left off. But it also has more solemn undertones, as its main themes of life, love and loss prove... [A]t the height of their success, the Verve... self-destructed, amid rumours of drug abuse, infighting and mental illness, with [the band's] guitar maestro... quitting on the eve of a crucial American tour. Although they soldiered on for a few months with [a] legendary pedal steel guitarist... as a replacement, it was a matter of when, rather than if, they would call it a day. The moment they did, [the singer confirmed it] 'd already begun work on a solo album – a bold move, given his beloved band's premature demise. "Actually, the most difficult thing to adapt to is seeing my name, rather than the Verve, on everything... Coming to terms with that has been weird... It's funny." Despite [hi]s jocularly, it's clear the Verve's untimely end still saddens him. And why shouldn't it? After all, [the singer] devoted most of his adult life to making them the best band in Britain, only to see everything fall apart the moment they began to achieve that. However, his regrets are tempered by the knowledge that going solo has finally given him the scope to make the type of album [it]'s always wanted. "With the Verve, everything was always a tussle. There was always tension. But when I was doing this album, everyone was there to help me create the best record that I possibly could... That meant I could try to make things perfect – not in the classic sense of the word, but in a kind of cracked-lens sense of perfection... I scrutinised everything to a very fine detail on this record... It was important to do that because every little part of it creates the whole, so you have to be aware of all the different parts to understand the finished thing and to create tunes that work on different levels and satisfy different needs – songs that can be banged out on the radio in the middle of the day, or be played at four o'clock in the morning. That's what it's all about... Good bands, good music, and good songwriters making great music, and spinning everything on its head to inspire other people to go off and do it again – go do it better." □... WHAT'S that [Smiths'] song, *We Hate it When our Friends Become Successful*? We don't, actually. Some of us thought it really, really nice that [a] 52-year-old... picked up so many Grammys last week. And it was one in the eye for you youngsters out there (anyone under 40, if these Grammys were to be believed) who reckon you rock out. Sorry kiddies, making great music just ain't what it's about. What you need are powerful friends – and [the 52-year-old] has those. Now on Arista, the... [52-year-old] had the best hype-machine money could buy for his *Supernatural* album, his first for the label. But, like most people who have heard the album, my guess is the awards to [the 52-year-old] were more from an industry saying thanks to... [Arista's] head... honcho... for the good work [it]'d done down the decades and a salute to the might of his marketing machine. And Grammy awards are like that. [A former member of the *Police*] gets best pop album for an album that wasn't that popular? [Sonny Bono's former wife] for best dance recording? Yes, Grammys are suspect affairs. In 1988 they instigated a new award: best hard rock/metal act. As Guns'N'Roses and Aerosmith stormed the planet, they gave it to... Jethro Tull... But what do reviewers know? My comments about *Supernatural*... – which now comes with a gold "nominated for 11 Grammy awards" sticker – ...ended, "too uneven to be hailed as the comeback [the musician] was doubtless hoping for on his new label." Sales of five million-plus units suggest I was wrong. But sales figures are seldom an indication of artistic quality. And Grammys certainly aren't.

...More Grammy filth exposed... Altogether now – *Steely Dan*? Well, if the notoriously out-of-touch Grammy voters thought they were doing something for family values and declining standards by not voting for... *The Marshall Mathers LP*, then the last laugh might go to the winning jazz-rock duo... (combined age 104 years). The pair took their name from that of a metallic dildo in a drug-soaked book, *The Naked Lunch*, by William Burroughs, dead junkie writer and notorious wife shooter. By the way, Steely Dan's winning album, *Two Against Nature*, is to be found in a local bargain bin near you. We say get in – before the revival – and the parental advisory stickers.

...JUDGE YE NOT: "When those people get up at the Grammys and say, 'I thank God,' I always imagine God going, 'Oh, don't – please don't thank me for that one. Please, oh, that's an awful one! Don't thank me for that!'" – U2 singer... in a pre-Grammy interview. The band won three awards (best song, best record of the year and best vocal performance by a duo or group) for the single *Beautiful Day*. Their album, *All That You Can't Leave Behind*, was released too late for consideration, though it apparently still made God's "best of the year" list.

...Can't play the guitar? With a lot of nerve and little shame you still can be a rock star... without playing a chord... [A North Islander] had never been on a plane or travelled abroad. His life changed when his girlfriend put his name up for the national air guitar competition. "I went on stage and just made a complete fool of myself," said... [the] 28-year-old meat factory worker. Within minutes [the father-of-one] was the air guitar champion of N[Z] and got a ticket to compete at the annual world championships in Oulu, a Finnish city about 320km south of the Arctic Circle. Dressed in heavy metal T-shirt, leather trousers and Union Jack-capped shoes, [the 28-year-old] twirled his long curly hair to hard rock band Pantera, winning squeals of delight from the 2500-strong mostly Finnish crowd. [The 28-year-old] came second, conceding first place to last year's winner, [from Britain]... whose simple performance to *Fell in Love With a Girl* by The White Stripes went down well with the jury... The art of playing air guitar goes back to the 1970s, when breathtaking electric guitar solos by bands such as Pink Floyd and Led Zeppelin inspired teenagers throughout the world to grab their tennis rackets and mime their idols, swinging and prancing around their bedrooms... The first air guitar championship was held in Oulu in 1996. The prize is a real electric guitar. Twelve finalists from eight countries contested the final.

...The Avondale College Jazz Combo is standing proud after winning... first place in the group combo category... [of] the London Bar Secondary Schools Jazz Competition... The college's head of performance music... says the win is a great accomplishment because six members had never played jazz before joining the combo... The seven-piece group played... jazz standard[s]... *Blue Bossa*... *Autumn Leaves*... *Billy's Bounce* and... *Chameleon*... g[iving] members the chance to play a good cross-section of jazz styles. "Playing jazz gives them the skills as a reading, improvising musician. When they get into jazz they don't look back. We've had a lot of them [former students] go overseas." Avondale's past pupils include[a] bass player... who lives in New York and has played with jazz greats such as... [*Chameleon's* creator. The group's p]ianist... 15... would like to follow in his footsteps. "I might go to America. But I'm still deciding because I've got two years left at school. I've got lots of ideas of what I want to do."

...University goes top of the pops in degrees... WANT to be the next [international pop sensation]? ...Then Auckland University is the place for you. Next year the university is offering a degree in pop music. The N[Z]-first will give degrees in performing arts and will mix theory and practical so students get to play and develop their music, and learn how to make money out of it. [The p]opular music programme co-ordinator... said pop music was a multi-billion dollar industry with a wide range of job opportunities including reviewers, managers, producers, teachers and festival organisers... The degree also majors in Pacific Island performing arts... Graduates should get both practical mastery, and a cultural and intellectual perspective to develop art meaningfully in a national and international context. It could take 10 years before the degree becomes widely-recognised among employers and although it is new, parts of it are based on similar international degrees and standards... Creative N[Z] research suggested that although technical training in performing arts was available there was a need for more focused leadership across all fields of performing arts. The new Ministry of Education curriculum also calls for more training in the performing arts.

...Who puts the pop charts together and how are songs rated? ...the Recording Industry Association of N[Z] is responsible for compiling each week's Top 50 music charts across the country. The two charts – albums and singles – are compiled slightly differently. Albums are based entirely on sales from as many music stores in N[Z] that wish to submit their data each week. "Because we aim for a wide selection of stores, we believe we get a better picture of what is popular,"... Singles... [charts feature] a combination of both sales and radio airplay. "Singles were very popular, but now most people prefer to buy the whole album, it's a worldwide trend."... Some types of music, such as R'n'B, sell more singles, so the results were skewed toward this type of music until radio airplay was added two-and-a-half years ago. 'Gold' stations, who play classic hits, don't count – after all the top 50 charts would be full of the Beatles and Elvis Presley – but student radio stations do submit their playlists' data. [The compiler] says her job is to feed the numbers into her computer, which does all the calculations for her, and presto – out comes a chart of our favourite music.

...Curiously, NZ was the only country... Afroman's *Because I Got High*... went to No 1... It's up to you whether you regard... this song... as a pro-pot anthem or a humorous anti-drug song but this song must be one of the funniest gimmick songs of the year. Things are looking up for Afroman... who no longer sells his CDs out of a cardboard box on street corners in LA[, and] also no longer smokes dope. "I've got places to go, people to see, shows... I'm content, and I really don't need it now, so I don't smoke it anymore." ...[Incidentally, a Texas resident has been] sentenced to 99 years in prison for killing a musician who didn't know a song. The guitarist was shot in the head when [it] couldn't play... The Turkey.

...*Pop sham led to tragedy* IN February, 1990, the two-m[ember] American pop sensation Milli Vanilli were mobbed by adoring fans in Queen Street, Auckland, when opening a new record store. One lost his glasses in the melee but... wasn't willing to risk life and limb to go back and get them. But the 'manufactured group' who won a Grammy Award the same year for their 14 million-selling album *Girl You Know It's True*, were sharing a terrible secret. The pair... – childhood friends – couldn't sing. Their entire album was recorded by somebody else, although the pair never let on and took full credit for the record's huge success. Their sad downfall is told in *VH1's Behind The Music: Milli Vanilli* on TV3 at 7.30pm, Wednesday. A highlight of the documentary is an interview where [the pair]... recall praying they wouldn't win the coveted Grammy they'd been nominated for, as they were terrified of being exposed as lip-synching frauds. The musical sham finally ended when a lyric tape jammed during a live concert, and the pair couldn't continue the stage show. To make matters worse, their producer then had an attack of conscience and went to the media. The whole sordid story ended up splashed all over the news. Sadly, the stress of the scandal, which spelled the end of... [their] short career in the music business, is blamed for Rob's long bout of drug and alcohol abuse. Tragically... Rob Pilatus... [recently] died of a drug overdose... aged 33. "Milli Vanilli was not a disgrace," says [the surviving member], who is still struggling to revive his career. "The only disgrace is how Rob died – all alone, internally destroyed from the rapid rise then sudden fall."

...*Send in the clones*... The mop tops, Liverpudlian accents and yeah, yeah, yeahs make the crowd jump. But this isn't the Cavern, it's live music at The Playhouse on Aotea Square, and everyone's twisting and shouting to the four-piece band in the corner. It's a glimpse of a trend that's been hanging round the fringes for years, but now is taking centre stage. And it's a sign that rock'n'roll is way ahead of science when it comes to cloning. If you're looking for the ground-breakers in reproductive technology, don't bother fossicking around Italian laboratories or Waikato farms, just head for the pub. Odds on, you'll come across one of the many tribute bands that are constantly being spawned. Over the next month or so, Aucklanders will have the chance to see performers pretending to be... The Backstreet Boys... N'Sync, U2, Pink Floyd, the Bee Gees and... Abba... will probably be knocking around somewhere as well... At times, the duplication goes off in very strange directions, and the line between fantasy and reality blurs. Take the U2 band, Rattle and Hum, playing in Auckland this... weekend. Their repertoire of U2 hits includes *All Along the Watchtower*... and *Helter Skelter*... which makes them, well, a cover covers band. Further, they've picked up on [U2's singer]'s work to cancel [Last] World debt and are fund-raising for the... campaign. Is the next step for the fake [U2 singer] to have meetings with a fake Pope... to gain... fake... publicity for the campaign? It's odd how the aura can flow from the celeb to the clone... By the end of last weekend's Abbey Road gig, some young guys at the front were reaching out to touch [one clone]'s guitar... One of [hi]s theories for the popularity of tribute bands is that people want to feel what it was like to experience the Beatles or Abba... [(the brunette Abba, and 10,000 others born in Norway during W[W2])... were part of [a] nazi programme to create the perfect aryan race using German SS officers and specially chosen Norwegian[s])... "They want to feel like they're back there. They knew all the words and it was like they were back in the 60s for a while... It's no different really than going to Anne Hathaway's cottage, or something, because they wanted to go where Shakespeare lived." ...Once [Abbey Road]... started imitating the Beatles, they began to get more money and much bigger audiences... The tribute bands that work best have an element of unattainability. Either they're super-hip, legends, or broken up... "Tribute bands are very popular these days," says... Showtime Management A[US, which] is bringing the Britney and D'Boyz tour to 23 towns and cities around N[Z] in the next month. "You get to hear your favourite performers' songs and to groove with friends in a fantastic atmosphere. It's surreal." Surreal, and some might say... a little tragic, all this mimicry. Especially of teen popstars whose fame comes as much from their looks and marketing as from their music... In the end, however, it may be just another sign of the unoriginal times we live in.

...IF you have any doubts about the dangers of genetic engineering just look at the latest bunch of teen music stars. Somewhere in the US there is a laboratory churning out clones... The next thing you know, people will be labelling their cds with GE warnings. Aside from a little ab definition, there's not... much between pop princess Britney... and [her rival, the]pop genie... Both are blonde... and have well-choreographed dance numbers to go with their bubble-gum tunes. The boy groups are similarly indistinguishable... Take five guys of assorted hair colour and image and is it Boyzone or Five? G[E] in music isn't new – it's just in the 70s the genes were actually related. There were the Jacksons... Nolans and... Osmonds.

...Oh baby, baby, teen pop sensation Britney... has it all: drop-dead gorgeous looks, a possible royal romance with Prince[ss Di's eldest son], a successful music career and more than \$20 million in the bank. It seems the 18-year-old American dream queen can do nothing wrong. And Britney's proved [it]'s no one-hit wonder, picking up four Billboard Music Awards including the hotly contested ...[G]al... Artist of the Year. "Never in a million dreams could I have imagined all this," says the curvy teen. "All my hard work has paid off. This shows the value of diligence, perseverance and sacrifice." Britney was destined from an early age to become a star. "I began singing when I was a baby – before I could talk even. I was always... belting out numbers with my little hairspray bottle as a microphone..." Her professional career began at age 11 on *The Mickey Mouse Club*, alongside other child star prodigies like... [the pop genie], who is now her bitter rival for the lucrative teen market. After two years on the famous TV show Britney returned to school, but the pull towards her dream of superstardom was overwhelming and before long [it] was signed to a record company and on her way to success... Long gone is the innocent, naive child star, replaced by a sophisticated, raunchy pin-up who projects an image far more worldly than her teenage years. One big topic of conversation among fans is the rapid increase in the size of her assets... But the star will neither confirm nor deny whether [it] has had her breasts enlarged. "This is too personal a question to answer. At my age, a girl's body goes through many natural physical changes, although this is not something I wish to discuss. Besides, I have never thought there was anything wrong with breast enhancement." Nor is [the teenager] worried about flaunting herself. But the girl who made school uniforms and pigtails sexy by wearing them in her music videos has to tailor her appearance to strict rules imposed by her record company... Her hot provocative look, to the dismay of parents, has been copied by teenage girls all over the world, but Britney says just because [the teenager] has adopted a sexy image it doesn't mean [the teenager] is automatically a naughty girl. While [Britney] doesn't necessarily believe in staying a virgin until marriage, [the teenager] does feel that "even if you meet the right person you should wait until you really love him". Currently Britney is hooked up with[an] 'N Sync band member... who ironically was one of her Mouse pals on the Disney show. But [the Mouse pal] could be down the road if [Britain's] dreamy Prince... follows through on his promise of a Valentine's Day date. His Royal Highness is said to be besotted with the gyrating pop queen to the point where his dorm room at the prestigious Eton school resembles a Britney... shrine. After such a whirlwind year, the pace is set to hot up even more for the young star, who is the first teen to sell more than six million CDs. There will be more tours, more songs and... provocative videos.

...*FACT*: Britney... [has] splashed out a whopping \$450,000 on... pressies for her family. Lucky Mum got a \$120,000 Mercedes.

...*Coke wars*... Britney... could well lose her \$220 million deal to promote Pepsi after being caught out drinking Coca-Cola... in Sydney.

...[The Spice girls have dashed predictions of their imminent collapse by signing a new contract with Pepsi worth \$NZ1.3 million. Pepsi has already paid the group \$2.61m for a television advertisement, the rights to distribute one of their singles, and a concert for Pepsi competition winners in Istanbul. The news counters reports that the Spice Girls were about to dive into oblivion almost as quickly as they shot to fame. Newspapers were full of reports they're spent as a marketing force amid rumours of tensions and bust-ups within the group, accusations of over-exposure and attacks on the quality of their album.]

...‘The Spice Girls have topped Britain’s pop charts with the biggest selling album since 1990. A list compiled by industry *Rock Accounts 99* showed sales of their 1996 debut album topped \$62 million. Second was the British piano guy’s soundtrack from the Disney cartoon *The Lion King*.’

...Britain’s piano-playing p[op] legend... is set to earn millions from the world’s first internet pay-to-view concert. The show, to be run in partnership with Microsoft, will take place at Turkey’s 2500-year-old Great Amphitheatre at Ephesus. Web users will pay \$24-\$34 to watch the show live but will require high-speed connections to obtain high picture and sound quality. [The piano-player] is thrilled at the prospect saying, “No TV special gives you access to this kind of worldwide audience and television can’t offer the interactive benefits that viewers can get on the web”. ■ ...It may be a while since they had a number one hit, but the SPICE GIRLS are number one in pop music’s chart of top earners. They raked in more than \$100 million between them last year. The girls obviously have good advisers as they legally saved millions in tax by not having their incomes paid to them directly. Instead, their earnings are paid into a network of interlocking companies.

...THEY’RE bigger than the Rolling Stones ever were and now the Spice Girls have their sights set on knocking [an older singer (r:p1176, ln69) – some people are prepared to pay ‘\$25,000 to obtain tickets over the Internet for her next concert’ –] off her pedestal. The girls who made *Girl Power* the most popular saying among teenagers the world over have made pop history with their ninth number one single[, which]... means they go one better than The Rolling Stones... Another one would put... [the Spice Girls] neck and neck with [the older singer], who has 10. But they’re still five number one singles behind [Britain’s most famous living Christian] and seven short of the Beatles and Elvis Presley – who share the top spot. And the girls hit our screens again this week when they perform live at Earls Court in London.

...[‘*Spicy taste going bland*’ The Spice Girls, whose second album came out last week, have brought “pop-marketing” – a mix of music, publicity and business – to new, lucrative heights in their short history but commentators say they could soon burn out from over-exposure. The phenomenally popular group, Britain’s biggest at the moment, keeps popping up everywhere from television to deodorant ads in what is seen as a reflection of their unabashed bid to market their new album. But it will not stop there. The latest spin-off product’ is a booklet titled SPICE GIRLS THE HOTTEST BAND AROUND (which contains the following quotes: ‘I feel alive when I do mad things’ – Scary Spice; Posh Spice is ‘a self-confessed designer label girl whose favourite pastime is shopping’; ‘Anyone who says they flash at people “just for fun”’ – Ginger Spice – ‘can’t have a lot to say!’; ‘When Sporty Spice was 15 or so, Sporty remembers modelling herself on hair, large dungarees, Reeboks and a dollar sign dangling round her neck. “A bloke’s best chat-up line with me would be an invitation to a football match”’; ‘The other Spices say that although Baby Spice has a totally innocent face, and can smile and dimple her way through anything, Baby Spice is the wickedest of them all!’). ‘To deflect critics who write them off as brainless airheads brought together to sell products to pre-pubescent ingenues, the Spice Girls have also made a pitch to the older generation. They are helping to promote the sale of poppies for Poppy Day to commemorate the end of WW1 and to finance charity work by the British veterans’ organisation, the Royal British Legion. But much of their exposure comes from pure advertising to sell consumer products. A number of companies have scrambled to link themselves with the pop group, who so far have signed contracts with eight firms to promote everything from soft drinks to supermarkets to telephone companies. This promotional deluge, orchestrated by the group’s guru and manager, has reduced their music to almost a secondary role. Though touted at first as embodying a feisty “girl-power” to inspire adolescents as they face the new millennium, the five are seen more now as sexy, made-to-measure instruments catering to all the latest fads. “Has any music property ever been as cynically and wholly exploited as the Spice Girls?” asked an article in *Marketing Week*. With disarming frankness, Ginger Spice for one held out no illusions over how long the group would remain No 1, as the rumours of a possible break-up started to circulate. “Of course we realise it is a fickle world. We’re pleasing ourselves and we always bear that in mind.” The group’s producer, who is one of the top names in England’s pop music industry, was more blunt. “They are well aware of the fact they have a two-year career and are making as much money as they can.”

...‘A week is a long time in the fickle world of pop music, as the Spice Girls have discovered, with a vengeance. One of the hottest British groups since The Beatles started the week by sacking their manager. They were then booed off the stage in Barcelona on Thursday after a row with photographers about being filmed while performing, and suffered a media backlash at home. “All is not well in Spice World” concluded the *Times* at the weekend after the feisty quintet were also hit by disappointing album sales. “Girl Power starts running out of steam,” said the *Daily Mail* tabloid. But the “Fab Five” insisted that the ultimate girl gang with attitude was not finished yet. A romance between their manager – a publicity-shy figure known as Svengali Spice – and “Baby Spice” was believed to be behind the decision to drop him.’ To top the week off, thieves] caused \$3 million in damage in a raid on Ginger Spice[’s]... luxury pad... ransack[ing] the house and nick[ing] \$12,000 worth of jewellery and appliances... The 28-year-old star... was so shaken [it] couldn’t go back to the London flat and is looking for a new home. “It was a truly terrifying experience... You never think it will happen to you...,”...

POSH SPICE... has been dropped by Virgin Records following lukewarm sales of her[solo] singles and self-titled album. The album cost \$15 million to make and sold only 50,000 copies... [However, Posh isn’t likely to be too concerned, having just] sold the rights to her autobiography in a deal that could be worth more than £1 million... – a record for the memoirs of a British celebrity. Penguin... who commissioned the book, said [it] could not comment on a British media report that the company had paid Posh Spice well over £1 million for her story, but predicted the 100,000-word book would be a certain hit. “[Posh]... is probably Britain’s most famous celebrity today. [Posh] is Britain’s new Princess Di... It is a really extraordinary story to read the story of the girl next door who wanted to be famous and made it, but when [it] got there it was a nightmare.”

...[Posh Spice] has ‘fessed up [that it]’s somehow managed to spend over \$150,000 this year just on her hair. Her posh locks have veered wildly between cropped and long of late but, really, how much could hair extensions possibly cost in London these days!

...Famous plumbs[to] new depths... They dangled from the tree like so many coloured bangles. “Hello,” they giggled, as they swung from the tree limbs with the utmost of ease. “What,” the gaggle of pre-teens requested, “do you do for a job?” They learn young, these future party girls, what questions to ask at social gatherings. [The response] was... journalist. This reply caused a cacophony of squeaking which led other passersby to glance up – and to wonder, no doubt, when monkeys postering as small girls had moved into the neighbourhood. “Have you ever,” they breathed, mouths collectively open as though waiting for a tasty nut to be tossed their way, “met anyone famous?” Adept in the art learned at the knee of many a “celebrity” interview, where answering a question means first defensively establishing the context, [the journalist] answered: “Depends what you mean by famous.” They didn’t need to consult: “TrueBliss, of course. Have you ever met TrueBliss?” The answer was no. And that was that. They learn young – these tree climbers of the present, social climbers of the future – how to show utter contempt. Turning your back while up a scrawny, winter-stripped tree is a trick difficult to do with any great elegance; but they managed it. And if they’d had a banana skin handy to throw, [the journalist] had no doubt they would have thrown it... TrueBliss may like this story. Their puppet-masters may enjoy it, too. But I worry about the Blinded-out ones. Especially in the wake of a recent study by two psychologists from London’s Institute of Psychiatry. “Fame: The Psychology of Stardom” contains a lesson in the dangers of your own hype. It deals with actors, particularly soap stars, who suffer from the frighteningly named “possession syndrome,” and can no longer separate their characters from real life. Method actors... get most confused. “They get started by doing this deliberately, absorbing themselves... But it gets out of hand.” ...if the psychologists are really interested in a state of confused identity, they might like to head this way to take a look at the... TrueBliss... phenomenon... TrueBliss... are (at least on the evidence of their having to get weekend jobs) under-paid bit players in someone else’s fiction posing as documentary. It would be nice to think that they, like the Spice Girls to whom they bear absolutely no resemblance except that they are... [five gals,] will... sack their managers. Given that thus far the couple of [gals] on the show with any input (the voice coach who advised them on contracts and the stylist who advised them on shoes) have walked or been pushed... it seems unlikely *Girl Power* is the slogan of this [serial-documentary, which follows the process of trying to create a successful group

by selecting five unknown singers from hundreds of hopefuls – a concept inspired by]... America's answer to the Beatles... the pre-fabricated four... [known as] *The Monkees*... This week we saw them watching us watching them. It's a new low in the definition of "famous." And of manipulation.

...[the singer] has her dad's nagging to thank for her making it into all-girl pop group TrueBliss. The talented singer from Wellington would never have... auditioned for the group, along with 549 other hopefuls from around N[Z]... otherwise... A few weeks later... the assistant manager of a music store... left her job, family and friends behind to move to Auckland, joining the four others who'd made it into the group. The whole process is the subject of the TV2 show *Popstars*. "I never thought I'd get in – not at all," admits... the... Canadian-born... [20-year-old], who's been singing since [it] was little. "There were so many talented [girls] there and I was cynical about the whole weight issue. When I made it down to the last 15, I just thought they had put the token fat girl in." ...[the] size 16-18, says although her weight shouldn't be an issue, it is. "I do have a problem with it, because I have been smaller. I want to do something about it. I stick out like a sore thumb in this situation. I'm quite paranoid about it. I worry people think I'm letting the band down because I'm bigger. People have said, 'Why's [that girl] in the band? [That girl]'s fat'. It shouldn't matter but it does to so many people. Who said all-girl bands have to be skinny?" But what upsets [the 20-year-old] most about her size is trying to find nice clothes which fit – a frustrating battle which has seen her in tears in clothing stores on TV. For the band's media launch, [the 20-year-old] had to get her suit from a [guy]sweat store. "People in some shops make you feel bad because of your size. They look at you like you don't belong there. Why should I have to lose weight to find clothes that look good? It's so frustrating but it's not just me – I represent so many [people]... Something has to change and if I'm the only one who'll stand up and say something about it, then – damn it – I will." [The 20-year-old admits it] hasn't had any pressure from the other girls or the band's management to lose weight. "The only pressure is from myself..." For [the 20-year-old], who has sung in school choirs, church bands and two groups in Wellington, being part of TrueBliss is a dream come true. "This is what I dreamed of doing ever since I was a little[girl]. It's just the best... I wake up and think this is so cool. And if this is the best it gets, that's fine. I'm just going to enjoy the moment. It's something I can relive 50 times with all my children and grandchildren." So will TrueBliss be N[Z]'s answer to the Spice Girls? "If we're anywhere as successful as them, that would be brilliant," [fat girl] says. "We have that potential. So many people want us to succeed."

...[the NZ Herald talks about] *superstardom with... a tanned... Spanish supercrooner... [labelled the] essence of testosterone...* I[t's probably] the kind of phonecall bored housewives from Morrinsville dream about. It's easy to see why. [The crooner] is making me feel like the only [gal] in the world. Sort of [I'm a guy]. "Hello... You're beautiful! How is the weather? Beautiful? Now is the best time of the year, no? You prepare a house for me, I want to live in N[Z]... with my five girlfriends." The heavily-accented English gushes down the phone with all the warmth and exuberance of a vintage red from Spain's famed Rioja valley. Fatherhood (his fourth child, this one to a [25-year-old Dutch model... arrived last September) has clearly been good for [him]. "I have a new baby – you can hear... no? [It] looks very much like the gardener, but it's okay... you're a cutie, aren't you?" I'm blushing before I realise [the crooner] is actually talking to his new baby... But one thing is certain. Had I momentarily been the new love in his life, I would not have been the last. The Latin crooner has built a billion-dollar career on a lifelong passion for wine, [gals] and song, and – some say – little else. "Listen, my critics are over already... What happens is after 30 years – so many albums, so many concerts – they get old... [and] die... But I love them because they teach me in the beginning. When I was a young artist, I didn't know how to sing, and now I'm maybe the best singer ever in my language. And when you are the best singer in your language, you don't give a shit for the critics any more?" Indeed, if it is all built on personal magnetism, critics who label [his] music as "bland" or oozing "suave mediocrity" might be better off asking themselves, "Where can I buy a magnet like that?" Since 1974 the smouldering singer has sold... 200 million records in six languages, received enough gold and platinum records to armour-plate a small aircraft carrier, and is listed in the *Guinness Book of Records* for selling more albums than any other recording artist in history. So why stop charming people? "You have to understand that I was born this way, that God gave me this facility and I took advantage to really provoke (sic) my life as much as I could. I learn through the years like a painter. I'm singing for the last 30 years and... I c[ould] be your father, but I look like your son! It's not easy to make an interview in the telephone, but I love it." And the other things this 54-year-old heartthrob loves most in life? "First – surviving... Second, to be very healthy so I can make love three times a day. In the weekends four! You know what I do? I change myself. I drink more water, I make wee-wee every... one and a half (hours)... like a baby... I discipline my life to the limit, so I will be able when I'm your grandfather to be on the stage still... [Third, I love to sing... It was not always the case. At the age of 19, a car accident shattered the then promising goalkeeper's contract with legendary soccer club Real Madrid, and almost claimed his life. In rehab, a doctor's assistant handed [him] a guitar as a means of exercising his fingers, and entertaining himself on the long road to recovery. Three decades later, his 44th album *Tango* recently spent 14 weeks atop Argentina's charts, and has already gone gold or multi-platinum in 19 countries. "If I wouldn't have a car accident, I would[n't]... be... able to reach 30,000 people in N[Z] now and maybe 30,000 people in Finland tomorrow, you know what I mean? The hardest thing for me is to continue learning, to be better as a singer... I just want to reach a bigger level. I still have 10 or 15 beautiful albums to do." It could just be the bad line... from poolside in the Dominican Republic... but – for one ecstatic instant – you can almost hear his predominantly [gal] fan base breathing a collective sigh of relief. Yet [the crooner] laughs at reports that [it] closes his eyes and thinks of making love with certain [members of the audience when it] sings. "No... what is that? Which paper said that? I'm going to make a legal suit! Forget it! When I close my eyes, it's just a natural thing... [However,] I love when the people go to the concert, and after they make love like crazy with their husband, their wife or their girlfriend – but I'm too tired to be in the middle! ...I'm an artist... don't get confused! ...I'm a good lover too, but I'm a better artist! One thing about the [gals], I love them but I respect them very much. Don't think that is everything in my life..." Singing... consumes him with the unbridled compulsion of a full-blown addiction. "The only problem is I need a cure, and the cure is the people. So I'm addicted, but... [being] on stage is the answer. When I go on stage, it's the best doctor I can have... Probably, when the lights go off, I get a little sick, so I go back the next day to another stage!" Following in Papa's footsteps, his son... (21) has also found solace – and success – on stage as an international singer and heartthrob in his own right. As yet, there are no plans for the pair to release a duet dedicated *To All The Girls We've Met at Parent-Teacher Evenings Before*. "No, [my 21-year-old son is] doing amazing on his own. If I gave advice to him, I might be wrong. One day for sure though, if I am alive! And now I have my oldest son... which is 24 years old, who is also doing a great album. I tell them... [you] have an opportunity to touch [lots of beautiful, young gals] and it gets better 30 years from now." With the next call on his 0900 Frustrated Housewife line about to come through, our time together is nearly up... Like some spell-bound fourth former, I don't want to be the first to hang up. "I don't have much time now because I'm not so young. I'm only 39 years old. How old are you? 25? You are a baby! You have a baby already? You never been married, no? Don't get married, don't be crazy! Okay, I love you... A big kiss for you, a big kiss for N[Z]! I see you in February 14." ...● [The crooner] plays the Christchurch Town Hall as part of *The Festival of Romance on February 12, then stars in a Valentine's Day concert at the Mission Estate, Napier*...

Aucklanders paid \$190 for a seat at an opera they couldn't see, \$170 for a spot on a football field with [two piano players. The NZ Herald] asks why... ONCE, you couldn't get it for love or legal tender. The good old days when the swill 'til 6, the 2.30 gallops and beating the Boks filled in Mondays to Saturdays. When rainy, lonely Sundays in Auckland were for "cutting your throat," as one wretched visiting American writer wrote. This was N[Z], BE – before entertainment, before phantoms at the opera, rivers of dancing and rock'n'roll. But that was then. This is now... and we're spoilt for choice. We're wonderfully awash with amusements, kings of comedy, cheesy crooners, ripened hippies, monumental musicians and Irish dancers. Of course, they've come at a cost – and we're paying more than ever before... Buying a programme can add another \$30 to the price of the night out, though most are between \$15 and \$20. But forget the damage to the credit card. You've got to think value for money. It's all a

matter of feeling the quality, according to the [person] who flogs the most tickets between the Cape and the Bluff: Ticketek[']s general manager... "If you were sitting up front in the \$171 seats... you got something that you couldn't get five years ago – the quality of the sound, lighting and performers... [– so] you're paying more, but... getting a far more refined product." But it's more than just posh production values pushing up the prices. All that overseas entertainment rolling through your town has to be paid in hard currency bought with a soft Kiwi dollar. The... promoter... who gave us [the piano players claims to be] paying a third more to bring American acts to this country than... eight months ago. Other promoters sing the same song. Says Frontier Touring... "When you're talking a million-dollar US guarantee to an artist, a couple of points' drop in our dollar can mean hundreds of thousands of dollars." But pricing a show is a complex formula in which the talent's tariff is only one, if often the most significant variable (between 20 and 50[%] of the cost). While our dollar's dive means more expensive entertainers, nearly every other cost of putting on a show... has also increased. Venues alone have gone from 7 to 8[%] of the cost of an event to between 10 and 12.5[%] over the past few years... It's worse in Auckland. The continued non-appearance of the kind of entertainment centre every major city should have – a covered, seated venue holding between 10,000 and 15,000 punters – means ticket prices in the Queen City can be higher than in other parts of N[Z]... Take... the singer who... [starred in London's production of] *The Phantom of the Opera*... [and] will be putting tears in middle-aged eyes in October. In Auckland top-range tickets are selling at the heart-stopping price of \$150. In Christchurch they're going for \$110. The difference? Auckland's Aotea Centre holds 2000, Christchurch's WestpacTrust Centre holds 7000. The equation is simple... There would be an enormous price advantage if we had a "decent entertainment centre," and it would service up to 85[%] of entertainment needs, says... Pacific Entertainment... [which, with] other industry players... has lobbied local authorities for such a venue for more than three years. "They haven't been able to anticipate the needs of people who like entertainment. I think in the past it's been dismissed as frivolous... and that the be-all-and-end-all to satisfy the market was the provision of a very expensive Aotea Centre. The feeling was, 'Give us the Aotea Centre and our problems are over forever.' Wrong. It's the same old story. Auckland is last as usual." A covered venue has been proposed for the former Railway land on Quay St with a seating capacity of at least 12,000, though it's yet to progress beyond the drawing board. If it happens, Auckland – the equal of Sydney by number of shows and seats sold (as well as ticket price comparable) – will finally have what promoters and the public need. While they wait for the price advantage a large entertainment centre will offer, promoters look to other ways to save money and make a good return – say, 5 to 7[%] of the gross. By shaving 1[%] here and there on deals with artists, caterers, advertising, accommodation and so on, a better profit can be made. If a promoter's lucky (or organised, or aggressive), [it]... could also pick up a fist-full of folding stuff from bank interest earned on fans' money. Though sometimes the artist takes this cash. It works like this: tickets... go on sale six months before the concert. The punters' dollars must go into a trust account which cannot be touched by the promoter until the gig has gone. But the promoter can contract the ticket company to invest the money in an interest-bearing account in the meantime. Hey presto, money for nothing. This particular strategy has recently worked swimmingly for the oldest rock-n-roll band in the world, the Rolling Stones, according to this month's issue of the English music mag, *Q*. By postponing the British leg of their *Bridges To Babylon* tour (claiming, perhaps disingenuously, that punishing tax rates financially disadvantaged their crew), the Stones are set to earn around \$NZ1.35 million of pre-tax interest on the interest from ticket sales. Smell like ro't'n'roll? Well, it's legal, apparently. And it can be used to benefit punters by subsidising ticket prices... ANOTHER method for cutting the final ticket price is for promoters to side-step ticket company charges by selling seats themselves. Ticketek charges a booking fee of up to \$2 on every ticket it sells. For sales made by phone it adds a service charge of \$6 a transaction. However those planning to find peace, love and understanding at the reincarnated Sweetwaters Festival... won't have to find that extra, thanks to the Internet. Nearly 38,000 people have registered interest in tickets by e-mailing the Sweetwaters Website. They will be e-mailed back on Monday asking if they want one of the 40,000 tickets available. Result: [none]... of the \$139 goes into booking fees and service charges because the money changes hands over the Internet. It will be the same for concert-goers who registered interest using the festival's 0900 phone number, though they'll have to pay by ordinary mail. Says... [the] managing director of the three-day, four-night festival: "When we looked at it there was an added cost to the punters of close to \$500,000, if you aggregated it. It seemed like an unnecessary cost." ...So how much is too much? ...a teen act like the Spice Girls would be priced lower to match the pockets of the young audience (and their parents)... But... [i]f it's "quality" it will always sell at a higher rate, says... [a promoter]. And they always sell. That's the paradox, the highest-priced tickets go first. "I've been selling tickets for 23 years and it's always the same..." No wonder. Nothing beats the best seats in a town for trying to forget those rainy, lonely Sundays.

...From the people who brought you the big washout came the big sweat-out at Ericsson Stadium... yesterday. The Big Day Out was welcomed back after a year off with gusto by a 30,000-plus sweaty crowd. There was no escaping the humid temperatures – whether inside the Supertop or the aptly named Boiler Room, or outside on the main stadium pitch. The heat sent large numbers of people into the stands and queues formed for hoses and taps to fill bottles and cups. Meanwhile, the brave and shirtless melted together in front of the stages... It was a far cry from the BDO of '96 where rain turned the dancers' mosh pit into a mud pit. Yesterday's 12-hour feast of local and international bands on five stages brought a crowd of a wider range of ages than past events, from pre-teens to middle-aged. Multi-coloured hair, tattoos and body piercings were de rigueur... But for... a group of ten... friends... an all-over coating of blue food colouring was not just a fashion statement... the colouring [enabled them] to keep track of each other in the crowds. "It works. You stand up in the stadium and look into the crowd and spot the others,"... As with previous [BDOs], tattooing and piercing were a big hit, with 65 piercings in just over two hours. Also popular was... [someone] from Wellington, selling three capsules for \$10. The police, too, took a keen interest in him. But the natural ecstasy... was given the all-clear. "I think the kids want to enjoy themselves and have an experience of high energy and dancing to the music without the risk of drugs," said [the salesperson]. "The police said 'great, sell heaps of it,'..."

Ticketing firm fails to sell... The curtain finally fell on fledgling high-tech ticket agency ETM yesterday after its liquidator failed to negotiate a deal to sell the business to an A[US]n ticketing company. The 10-month-old ETM stopped taking bookings at 2 pm. [The l]iquidator... had tried to sell ETM to Ticketmaster Seven, a joint venture between US-based Ticketmaster and A[US]'s Channel Seven broadcaster... Ticketek... said... [it] made only a few cents a ticket and the market here was not large enough to sustain two general ticket agencies. "The margins are very low." ...ETM[']s chief executive... said the 42 staff had been laid off and were owed about \$200,000 in wages. The company's sole shareholder, UBS Capital of New York, had walked away from a moral responsibility to pay the wages bill... ETM, which had exclusive deals with venues such as the North Shore Events Centre, the Bruce Mason Centre, the St James Theatre and Wellington's WestpacTrust Stadium, had sold tickets through electronic kiosks (most based at Warehouse stores), over the internet and by phone. A concert by Californian rock group No Doubt scheduled for the St James... has been cancelled, leaving about 200 ticket-holders to be refunded... [The liquidator] said there was a 10[%] shortfall, about \$9000, in the trust account holding money from ticket-buyers and promoters[, but the liquidator]... was confident that ticket-buyers and promoters... would not be left out of pocket. The prospects for the company's unsecured creditors was less certain, but... it was too early to put a figure on their losses.

...The Headhunters gang are big losers... Sources told the N[Z] *Herald* that the gang had been hired as security guards for the... Sweetwaters... festival by [a]former... site manager... But when [the organiser] found out, the sources said [it] "hit the roof" and bought the gang out of the contract with a \$10,000 payment and 100 festival tickets worth \$13,900. Following the financial collapse of the festival, now in liquidation, the cheque could not be cashed. A source who knew the gang said they would not be happy. "They are not the sort of people you bounce cheques on." Members of the Henderson-based gang could not be reached for comment yesterday. Their likely loss is small compared with the exposure of others involved with the event. The *Herald* has learned that a group of Tauranga investors hold a debenture for \$650,000 over Sweetwaters and star attractions UB40 could be out of pocket more than \$200,000. [Another British act] is believed to be owed \$180,000. The security at Sweetwaters

was something of an event itself. It was carried out largely by about 200 unlicensed volunteers working for a company called Show Security, which had [the organiser] as sole shareholder. That company is also in liquidation. An Otahuhu company, E'Ventures, was subcontracted by Show Security to provide 79 licensed security guards for the three-day festival, and yesterday said it was owed \$130,000. A company spokes[person said "every guy] and his dog" who volunteered had been allowed to wear the green Show Security T-shirts, and police had stopped several on site for being unlicensed, including one... with a knife strapped to his leg. While there were no serious security problems, the spokes[person] said his staff were not given any food, drink or resting place by the organisers and had to rely on the goodwill of stallholders. The company had seen documents that showed Sweetwaters organisers thought they could save \$50,000 by using volunteer guards... The Manukau City Council said yesterday it would make every effort to recover about \$188,000 owed to it by Sweetwaters organisers for the use and work on the Puhinui Reserve festival site... The festival liquidator... would lodge a formal complaint over the collapse, and... was liaising with the fraud police, police and the Companies Office.

...*Sweetwaters creditors left to face the music* [The organiser]'s deep, resonant voice drips like honey down the telephone, the only venue in which [it] has time to meet. The seductive charm that won him devotees who would have given their lives for him, and luckless creditors who almost have, remains unshaken. And that is despite talk that the Headhunters are among the creditors who want a word with him. There is one simple reason why [the organiser]'s attempt at reviving Sweetwaters lost a lot of people a lot of money – not enough people turned up. A myriad of explanations are offered for that, from his getting the wrong date for Auckland Anniversary weekend to not having a top-billing artist to draw a new generation. Yet Sweetwaters veterans who returned to the festival after its 15-year absence, to see many of the same artists they saw 15 years ago, say this one was the best. But by mid-week the mood on the Puhinui site was ugly. At least one angry creditor punched the wall alongside... [the liquidator's face. The organiser]'s own life was said to be in danger and the talk was, although [the organiser] denies it, that [the organiser] had gone into hiding. Certainly unanswered cellphones – cut at the first murmur of liquidation – fuelled the impression that Sweetwaters organisers were on the run. Estimates of the debt kept rising from \$750,000 to over \$4 million. At least one travel agency said it was \$250,000 out of pocket, Oasis Catering lost about \$300,000... and... the Manukau City Council \$120,000... None has much expectation of being paid... After negotiating through his lawyer... about the story angle (what really happened to turn Sweetwaters... into an unmitigated financial disaster), and whether [the organiser] could see it before publication (no), a late afternoon meeting in her Ponsonby office was substituted for 10 minutes on the phone. Although "trapped inside the legality of what I can and cannot say," [the organiser] promised to be truthful. Yet the details of what must be one of the most public and embarrassing liquidations of recent times escape him... [It] believes 25,000 people were at Sweetwaters, but... does not know how many tickets were sold. [The organiser] does, however, have a clear idea how many [were given] away on demand to artists and their friends – 10,000... [Before Christmas the organiser told a NZ *Herald* writer... that [it] had sold 26,000 tickets and needed to sell 31,000 before [it] could access the trust account. [The organiser now] admits it is a promoter's traditional tactic to create demand by exaggerating sales. Nevertheless, [the liquidator] has found no such trust fund. [The organiser] says there was a fund into which money from ticket sales was deposited. "It was called a trust fund, but it wasn't." ...Yet industry sources say [the organiser] should have known by Christmas that the festival's success was doubtful... [T]he manager of Real Groovy Records, says his shop sold 72 tickets for Sweetwaters, compared with the 2563 it sold for Big Day Out. "When they were telling people they'd sold 26,000 we'd sold none... It was obvious to us it was going down the gurgler." What surprised [the manager] most was that no one from Sweetwaters ever asked him how ticket sales were going. Although [the organiser] originally shunned established vendors such as Ticketek, instead selling through the Internet, Post Shops, compact disc stores and recording companies, by December [it] had changed his mind. Ticketek[']s general manager... says [the organiser] approached him to handle ticketing, but they could not reach agreement because Ticketek insists on exclusivity. What's more, it is Ticketek policy to keep money from ticket sales in a trust fund that is not released until a day after the event. If there is post-party unhappiness, the trust fund is left undisturbed until a court order is granted. Naturally that policy creates problems for promoters needing to access a steady cashflow. And it was in December, too, that a group of Tauranga investors... granted the Sweetwaters company a \$650,000 debenture. As holders of a fixed debenture they take precedence as the lead creditors... [But if] the debenture-holders were contemplating filing for receivership, they were pre-empted by [the organiser]'s voluntary liquidation. The advantage of doing it yourself before someone else does it to you is that you maintain more control of the process by selecting the liquidator yourself. The disadvantage is the suspicion it creates among creditors. Early on, [the liquidator] was accused of being too friendly with [the organiser], and creditors talked about removing him... [However, it] says these situations are usually created by rival liquidators working through creditors to get the job. [The liquidator] suspects a number will be out to get what should be one of the highest profile jobs of the year. Last evening [the liquidator] said the creditors' plight was worsening. Although still unable to provide figures, "the loss is getting bigger and their number is growing." [The organiser] is not wholly unacquainted with his present predicament either. Sweetwaters began in 1980 with a \$180,000 loss, but a profit the following year paid those creditors off. In 1983 its original backers – [the organiser and two others]... – sold the festival to... [the person] who headed the sharemarket darling of the day, Euro-National. [The new owner] registered the company Sweetwaters Festival Ltd. His festival in 1984 also lost money and the event disappeared from the landscape. But last February [the organiser] registered his own company called Sweetwaters Festival Ltd and announced plans for a new event. [The owner] went to the High Court to try to stop him, prophetically, as it turns out, fearing the loss of good will attached to a name [linked to the owner, who] lost in court.

...Air N[Z] was forced to fly Sweetwaters performers home for free after... [the organiser]'s credit card was declined. The... music festival, held two weeks ago... attracted 158 bands... "quite a few" of [whom had flown Air NZ] from overseas and from within N[Z]. The organiser]... opened a cheque account the week before the festival and paid performers and suppliers knowing [there was] no money in the account. [The organiser had] asked bands and the Manukau City Council, to whom [it] was asked to pay an \$80,000 bond, not to bank their cheques until the Monday after the festival because of cashflow problems. All his cheques bounced. [The *Sunday Star-Times* understands [that the organiser] put the airfares on his credit card and Air N[Z] was not aware the payment had been declined until the performers had arrived in Auckland. They were flown home after the festival as a sign of goodwill from the airline... Air N[Z]'s communications spokesperson... said yesterday... "All tickets were honoured... But I'd rather not comment on the financial side of it..." [The spokesperson] added most would have travelled economy, but a few flew business class.

...A security firm already stung by the collapse of Sweetwaters may again be out of pocket... E'Ventures Ltd is owed \$131,000 after the music festival went bust and a further \$40,000 after being employed by [the liquidator]... It has guarded the site since the three-day event ended... The company is refusing to leave, or let anyone into, the festival's Puhinui site until it gets paid... ● Large numbers of music fans attend... music events like the Big Day Out... – a very different concept from the seated concerts of the 1960s... There have been music idols for each generation since radio, film and TV brought music to the masses. However, mass hysteria wasn't witnessed until the 1950s, when rock'n'roll stars like Elvis... came along. His brooding good looks, swivel-hipped movements and catchy rhythms drove fans, many of them teenage girls, wild. They[']d get so excited they'd scream themselves hoarse, become extremely emotional, wet themselves and even faint! Parents watching or hearing about this phenomenon were often outraged. It was beyond anything they had experienced... Rock concerts have long been a source of anxiety for many parents. No one likes to think of... tender eardrums [being] pounded by unbelievably loud music... [or] their child being squashed in a hyped-up crowd...

NINE fans were crushed to death at... a... concert in Denmark... The disaster occurred in muddy... conditions yesterday... [T]he crowd crushed the victims against the open-air stage at the rock festival near Copenhagen. Three others were seriously injured and 26 needed hospital treatment.

...Three Swedes, three Danes, a German and a Dutch[citizen] were crushed and trampled to death on Saturday by a panicking crowd during one of Europe's biggest... rock festivals. Investigators are trying to establish how the [victims – all guys –] died... during a performance by the American band Pearl Jam at Denmark's Roskilde festival... The event continued into yesterday despite the deaths... [However, t]he Seattle-based Pearl Jam, shocked by the event, cancelled scheduled shows in the Belgian town of Werchter and in the Netherlands because of the tragedy, their manager announced... The British groups Oasis and the Pet Shop Boys also cancelled scheduled evening concerts out of respect for the victims and their families... It was the first serious incident reported at the 30-year-old annual festival[, which]... this year attracted more than 90,000 people to watch acts play on eight different stages... Witnesses... described the futile attempts made to control the crowd. "I felt that something was going to turn nasty because lots of people were in a trance and didn't listen to calls for them to behave... It was impossible to contain them."

...["It's on!" *Rolling Stone* announced in a jubilant stop-press. "It will be a little Woodstock and, even more exciting, it will be an *instant* Woodstock." The same message went out all evening over scores of rock radio stations, turning the migrant tide towards Altamont. A few people did not share the general euphoria. "They'll never do it," said the promoter, speaking from his stores of untapped experience. "They should call it off or it'll explode in their faces." Others, casting a horoscope for the event as had been done for Woodstock, were dismayed to see that on Dec. 6, the Moon would be in Scorpio, portending a time of chaos. Exactly who first had the idea of hiring Hell's Angels as a security force, no one can remember now. Some say it was the Grateful Dead's manager. Darkness was falling rapidly. As the cold intensified, fires were lit from the remnants of the raceway fence, or from garbage. A pall of smoke, rancid with singed wax paper and burning Cellophane, drifted up and settled around the still darkened stage. Doctors working in a nearby medical tent asked for extra light, but were told that might spoil the impact of the singer's entry when it came. More than ever on this tour, it'd been the band's habit to delay, piling up the tension, the expectation, the half-adoring rancour at this new demonstration that they couldn't give a damn. Round the stage, a rumour circulated that they were long since ready but the singer wanted complete darkness so the stage lights would show off his costume and make-up to best effect. Backstage, the Stones' helicopter pilot claimed to be too nervous for his machine to wait until the end of their performance, as arranged. However, the Stones' bodyguard promised to hold the pilot there at gun-point if necessary. When the Stones finally materialised, in a demon-red spotlight blaze, so did an escort of Hell's Angels so dense as to be almost obliterating. The singer, wearing an orange and black satin cloak and his Uncle Sam topper, had literally to fight his way to the low stagefront. The Angels were no longer protecting the stage: they had commandeered it for a display of their own power in which the Stones figured only as semi-captive mascots. Half-way through that good tempered Rock 'n' Roll number, Carol, pool cues began flailing among the faces close to the singer's silver boots. Out in the darkness beyond the smoke-red arena, the guitarist's chords were finding their mark. Boys and girls stripped naked in the dank cold, flinging themselves forward against the cracked leather cordon as puny white martyrs, almost begging to be surrounded, beaten, stomped, kicked and, in once case, stabbed to death. In the stage-front area, film-crews, each with an Angel "shotgun" guard, avidly recorded all there was to see. Now came the moment when the singer's intuition deserted him or his vanity became overmastering. Either way, the result was incredible stupidity. Folding his cloak around him, the singer stepped forward in the mincing gait, evolved for this most presumptuous of all his masquerades. "Please allow me to introduce myself," sang Satan across a landscape whose authentic hellishness the singer could not, or would not, see. The effect was as sudden as if the ground had opened up. Faces down to the singer's left collapsed sideways under the tossing assault of Hell's Angel staves. Satan, cut off in mid-verse, grasped for words that would return him to the hippy plane. "Brothers and sisters, come *on* now. That means *everybody* – just cool out." The beating down of pool cues paused as if in answer to his exhortation. "Okay, I think we're cool now. We can groove." A shaky little joke revealed his continued failure to grasp the situation below him. "We always have something very funny happen when we start that number." Something, not very funny, *was* happening, the incidental purpose of which seemed to be to stop Sympathy for the Devil ever from getting beyond its first few bars. "Er – *people*," the singer began again. "Who's fightin' and why? What are we *fightin'* for? San Francisco, this could be the most beautiful event. Don't fuck it up." The Stones' singer stood there, a forlorn, flat-footed figure, punctured with the uncomprehending dismay of finding himself totally ignored by an audience. (The singer has never been totally ignored by the opposite sex. Since October, 1967, the Stones' management office had been in Maddox Street, close to Piccadilly. A small, top-floor suite, formerly maids' quarters in a Georgian house, it was far from the opulence with which the Beatles had surrounded their new business family. It had been the best the Stones' staff could do after weeks of being turned down by landlords all over the West End. They got Maddox Street only by luck, through a friend of a friend, by pretending it was to house a music publishing company, and by scrupulous avoidance, at all times, of the phrase "Rolling Stones". At Maddox Street there would be none of the slackness and promiscuity which characterised the Beatles' Apple workforce. The Stones singer liked to know everyone was doing things – for him, of course – with total efficiency. When, on rare occasions, his eye alighted on a secretary for reasons other than stenographic, the ensuing business was conducted as discreetly as a Bourbon king with a scullery-maid. Only the girl's flushed face and half-unhinged false eye-lashes would give the game away. To Maddox Street, along with the equally-apportioned Rolling Stones fan mail and hate mail, were diverted the frequent ivory-white envelopes, hand-delivered from hotels like the Connaught or Dorchester, and containing fulsome appeals to the singer. It was natural that a spirit as flirtatious as his should enjoy the wooing and being the embodiment of a fantasy at least as potent as Rudolf Valentino'.)]

...The crowds of dusty backpackers who streamed home from the Woodstock... site at Rome, north of Manhattan, caused no trouble, perhaps because they were so exhausted from their revels of the night before. All the same, to anybody over 40, the notion that words like "riot," "dangerous" and "Woodstock" belong in the same sentence remains extraordinarily hard to accept. Old habits break hard, and three decades of myth-making about the original Woodstock have left such an indelible mark not even arson can entirely destroy it. This Woodstock, like the first, was supposed to be about peace and love – not T-shirt vendors being beamed with iron bars, or parking lots full of semi-trailers going up in flames. Even the organisers, unlike the police, had trouble acknowledging what their own eyes had seen. "You can't call what happened a riot," insisted [a]co-promoter... to the press on the morning after... "It was just a few kids acting up at the end. This festival reaffirmed all the values of the original. I'm not going to let this little bit of trouble stop me from regarding [this year's] Woodstock... as a success." And then [the co-promoter] cut off questions before anyone could ask about the trucks that were still smouldering, or the mobile bank looted of more than \$US170,000, or the 21-year-old college student whose spine and legs had been crushed when the mob tipped a mobile home right on top of him. As for questions about gang rapes, [the co-producer] wouldn't touch that one at all. As the smoke clears, the one certain thing... is that the crowd was prepared to honour only one of the original festival's cherished myths – the obligation of youth to trash whatever their parents stand for. In 1969, the Baby Boomers did it with paisley prints and ostentatious pacifism. Last weekend, their own kids did it with tattoos... and... violence... "You don't understand," the news cameras caught an older concertgoer pleading with a knot of youths on that final night. "I was at the first Woodstock and this isn't what it's all about! You're ruining it!" The kids [the older concertgoer] was lecturing seemed nervous at first. This [person] was in her late 40s, old enough to have been one of their mothers and thus due at least a meagre measure of respect. But then they began laughing, first sniggering at her talk of harmony and soon bellowing war cries of incoherent aggression just inches from her face... before the mob danced back to the flames. Perhaps, if [the older concertgoer] had been just a tad more honest about her own generation, [Monday night]'s orgy of destruction might have made more sense. It certainly did to [the]former Who bassist... who played the first festival and returned for the second with his new band. "It was a disaster in 1969, none of this crap about how beautiful everything was. What I remember was mud and delays and overdoses everywhere... I remember a fridge backstage stocked with orange juice that was laced with acid, and nobody bothered to warn anybody about it." Plenty of others, however, continue to prefer the gilded myth to grim reality. Ironically, their numbers include several members of Rome's town council, whose members have been downplaying Monday night's... chaos with almost as much energy as the promoter despite the fact that their municipal budget has been blown to kingdom come by the unexpected costs of coping with 300,000 visitors. "We tried really hard to persuade the Pentagon not to shut the old B-52

bomber base where the festival was held,” said [a local businessperson]... “It’s not a rich area up here, so when the bombers left, it seemed like a good idea to stage a rock festival. We need the money.” It is an irony only an old hippie can love: The town wanted to keep its B-52s, the same planes that rained death and destruction on Vietnam, yet they settled for the direct descendant of the pop festival... [which made a singer] famous for his anti-war song, *Fixin’ To Die Rag*. As for commercialism and the profit motive, those twin bugbears of the 1969 gathering, they helped stoke the fires. At the first Woodstock, only fools paid to get in since it was so easy to jump the fence. Last weekend, the site was sealed from the world behind a 4m cyclone wire fence patrolled by 1200 security guards who seem to have cared not at all what mischief members of the crowd embraced just so long as every single visitor had parted with \$150 for the price of admission. “Ripoffs everywhere,” fumed... a 29-year-old college dormitory supervisor. “All I saw was people making obscene amounts of money. You know, you couldn’t get a drink of water from a fountain because the lines went for miles. So if you were thirsty, it was cough up \$4 for a small bottle of water or pass out. Do you know how much water you drink when it’s 100 degrees and there is no shade?” By Monday night when the trouble started, the festival’s medical area had treated more than 5000 cases of dehydration. At the original Woodstock, the pacific protocols of a stillborn Youth Revolution acted as a brake on the crowd’s worst impulses. Fornicating was fine; fighting wasn’t. On Monday night, those constraints no longer applied. “It was all the young guys who caused all that trouble. They were just awful... Everyone was drinking and the mood was really ugly. These young guys were just roaming around, completely smashed, tearing everything to pieces.” ...“There was a number of situations where there was a total passing around of [gals] in the lines [of guys],” admitted the festival’s first-aid director... “No one was screaming for help... some of the... [victims] were unconscious.” Another witness, a T-shirt vendor, told how at least a dozen young [guys] took turns with a girl “who looked about 16... was out of it... and vomiting, but the guys didn’t care,”... adding that [it] was too busy trying to protect his wares from looters to intervene. One common point shared by the first Woodstock and its successor is the opportunity both provided for right-wing moralisers to lament the rending of America’s cultural fabric. In 1969... [the] then-vice president... cited the nude bathing and drug[-]taking as evidence of the nation’s decline. This time it is [an] ultra-conservative presidential contender... who has been beating the drum. “The belief then was that one chooses a moral code to suit one’s own personality and lifestyle. In the phrase of the day, ‘Do your own thing,’... Well, that’s the way the original Woodstock generation brought up its own kids and the end result isn’t pretty. The sins of the fathers, that’s what we’re seeing.” To be fair, [the presidential contender] is a zealot and for every rampager, there were hundreds... who simply wanted to get out of the way. All the same, it’s hard not to hear echoes of the riot’s soundtrack, the song that came on the PA system not long after the Red Hot Chili Peppers wrapped up the festival’s final set. It was a Gen-X anthem by the band Cracker that boomed through a night fired with smoke and sirens, the song with the catchy little chorus that goes, “Don’t [stuff] me up with peace and love.”

...*All you need is love? Not when it comes to running a record company, the Beatles discovered...* THE Beatles faced a screaming audience for the last time at San Francisco’s Candlestick Park in August 1966. After that they retired as a live band. It was inevitable. As [the drummer] said of their touring years: “It was the worst time and the best time of my life. The best time because we played a lot of good music. The worst time... [because] it was like 24 hours a day without a break: press, people fighting to get into your hotel room, climbing 25 storeys up drainpipes. And it never stopped. If it had carried on I personally would have gone insane.” If they had done nothing else in their lives, their achievements to that point were extraordinary. In America alone they had clocked up 19 million-selling records and 18 number one hits in a two-year period. They were the first artists to sell a million copies of an album in Britain – 64’s *With the Beatles* – and played to 55,000 fans at New York’s Shea Stadium, a huge audience even by today’s standards. But it was driving them crazy, so they retired into the recording studio and the suburbs around London. They took interesting drugs, made even more interesting music (the albums *Revolver* and *Sgt Pepper’s Lonely Hearts Club Band* are considered among the most innovative in rock) and... [went] to India for a meditation retreat. The pop world went about its business – the Monkees became ersatz mop-tops – and the Beatles decided to go into business. Well, sort of. In early 68 they announced their own multi-disciplined company... Apple – which had divisions for records, film and publishing – was a spiritual attempt to give power to creative people, not cost accountants. This was capitalism with a conscience – and very colourful clothes. [The band’s richest surviving member]... – germs from a bout of flu that caused him to cancel a recent gig... [are being sold by] a British fan... who claims [it] caught the bug from... [the] former Beatle... when [they]... met this month[; after two]... days on the ebay.co.uk website the germs had received only two bids, the highest for \$5.76... [-] had a phrase for it: “Western communism.” [The member] admitted later... it... had no idea what [the phrase] meant, but it caught the optimistic mood of the late 60s. Apple was launched by John Lennon and [the richest surviving member] at a press conference in New York. They said they wanted talented people to send in their art and ideas and... Actually no one had thought of the next bit. Apple was swamped with manuscripts, films, homemade recordings, ludicrous proposals and begging letters. Hippies and hucksters gravitated to the company’s London offices and all were made welcome. Business decisions were sometimes made by throwing the *I Ching*, liquor and marijuana were freely available, and an American chapter of the Hells Angels turned up for the Christmas party. George Harrison... [- who recently] fought a frenzied knife[-wielding intruder] in his... 120-room mansion in Oxfordshire... “I could feel the strength drain from me[and] thought I’d been fatally stabbed[”] ...summed it up aptly. “Apple became a lunatic asylum.” Within a year the Beatles had tired of it, the accountants returned, and everyone became serious again. Love wasn’t all you needed, it appeared.

...*All you need are 14 songs* The new Beatles compilation album *1* is taken from their 27 U[S] and British No 1 singles. Which got us to thinking: what would be the make-up of the same album based on the N[Z] charts? Well it would be only 14 tracks long, mainly because although there were plenty of radio hit-parades there were no official pop charts before 1966 – the beat boom years when they first stormed the globe, touring here in 1964... Meanwhile, the Beatles are ready to “dot.com together” again for the launch of their first official website[which]... goes live on Monday... They have entered the information superhighway with the world’s top internet designers offering a magical mystery tour around their 27 No 1 hits.

...TALK about a backbeat. Not only are the Beatles’ toppermost of the poppermost yet again with their “new” album going straight to No 1 in N[Z], they’re helping to bring old folks back to the record shops. Their collection of chart-toppers *1* has been on sale for a week and has already gone triple platinum, selling 50,000 copies... EMI NZ... said... “To sell that many in a week is incredible. This could be our fastest-selling album ever,”... The album... notched up 319,000 sales in its first week in Britain. It has gone... No 1 around the world... EMI... believe it will beat the record set by... [Wacko]’s *Thriller*, which has sold 45 million copies. [□ ‘They may’ve split up decades ago, but 1996 turned out to be their most lucrative year to date. Sales of the Beatles albums, *Anthology 1* and 2, reached 13 million copies, while sales of back catalogue albums reached six million copies that year according to the Beatles publicist, who paraphrased an infamous quote from John Lennon by saying: “The Beatles are now bigger than the Beatles.” Gross record sales, TV rights and video sales earned \$NZ1107.34m that year, the majority going to record company EMI. The Beatles’ cut was split between the three surviving members and John Lennon’s widow. *Anthology 3* is due to be released on Oct. 28’, to be followed by an ‘anthology book costing \$NZ147’.]

...The Beatles told the world in the 1960s that *All You Need Is Love* and now the three surviving members of the Fab Four say the song is an appropriate anthem for the new millennium... [The Fab Three have joined each other] in a promotion drive for the relaunch of *Yellow Submarine*, three decades after the classic Beatles’ animated film was made. The film, [which ‘was animated because the Fab Four were contracted to do a set number of movies but no longer wanted to act’, and was] first released in 1968, has been digitally restored, and will go on sale worldwide on home video and video disc mid-September... [T]he group’s drummer and a rare voice on their records, sang lead vocals on *Yellow Submarine*. “That

song's given me a career... Everybody can sing that song; even foetuses know that song." [In related news, 'plans to build a £10 million Millennium wheel in London have been approved. The 150m high project, to be built on the Thames opposite Parliament, will be the world's biggest ferris wheel.'

...*The British PM* has a vision of a vibrant country that challenges and rewards its citizens. Too bad lots of Britons don't live there yet... When [the PM] speaks of "new Britain" as "the model 21st-century nation," [it] does not have Birmingham in mind. The rusty birthplace of the Industrial Revolution... is a post-industrial sprawl struggling to get back on its feet. So when the city hosted the G-8 summit in May, [the PM]... brought new Britain to Birmingham... gave the summit itself the enforced informality of a corporate retreat... treated the world's press to a sleek, high-tech media centre... and... took all his fellow heads of government [plus] their wives to a glitzy concert led by the pop group All Saints. If only for those few days, [the PM] swaddled a bastion of very old Britain in the shiny foil of "Cool Britannia." [But for] anybody who looked closely, Birmingham had an important story to tell... For all his talk about new Britain, and for all the blather from others about Cool Britannia, much of the country remains old and uncool... The tensions that exist in Britain, however subtle, may not say much about [the PM]'s popularity, but they say a lot about the country. Labour's extended honeymoon cannot disguise the fact that an old Britain and a new one exist side by side. Older industries are taking a pasting. Interest rates have risen six times since Labour took power... driving up the value of the pound and persuading foreign customers to look elsewhere... Unemployment is edging up for the first time in two years. Britain remains Europe's healthiest big economy, but its growth has begun to slow. And wage inflation has risen 5.2[%], summoning up the 1970s demon of stagflation, where a recession meets rapid price rises. For good measure, a study published in May... said that output per worker in Britain is 40[%] lower than in America and 20[%] lower than in Germany. "The British economy is experiencing boom and bust at the same time," says [a] Conservative MP... The new Britain is a place of high-tech industries, whopping bonuses in the financial sector, and peppy polenta-eaters alive to foreign influences and making plenty of money in imaginative new ways. All of that can be found in once unlikely places... from Glasgow and Edinburgh to... Bath and Bristol. Still, when Labour's theorists want to typify their new Britain, there is no doubt what place comes to mind. "The image they want to project is very... London-based," says... [the] director of research for the Greater London Group at the London School of Economics. "You can see why London matters so much to new Britain. London may be laid-back, dynamic, multicultural and liberal; the overwhelming majority of Britain isn't." Outside London, the long, and doubtless necessary, restructuring of the economy continues to hollow out old Britain. The number of hotel and catering employees (300,000) long ago overtook that of coal miners (13,000). But old Britain also includes the rural shires, which, like the manufacturing towns, can feel left behind by the talk of prosperity in [the PM]'s speeches, in spite of Government retraining schemes. A perceived urban bent in the... Government's policies has already created a rift between [the PM] and rural Britain. The Countryside Alliance, rallying around such issues as fox-hunting, has managed to organise two impressive recent protest marches on London; the larger drew 250,000 people. Last year farm incomes in Britain plummeted by nearly 50[%], according to the National Farmers' Union. The strength of sterling has hurt agricultural exports and made imports look like bargains. Farmers are quick to blame [the PM] whenever a bit of rural Britannia bites the dust. That was what happened last month when the Banbury livestock market in Oxfordshire went out of business. It was the biggest in the country and had been trading since 1086. The Government could have saved it, says... [the] editor of *Country Life* magazine, but it didn't. "That sort of example makes people think that this Government doesn't really care much what happens outside London." In a way that is beginning to be dimly understood, "London" is turning into a problem. London dominates Britain and yet is the least British place of all. Its economy, driven by the City, is at the heart of an international web. For many Britons, the capital is another country. In London during the first three months of this year, the number of homes that sold for £2 million or more was three times greater than in the same period a year earlier. The price of the average London residence is now more than twice its equivalent in Liverpool or Newcastle. A ballooning service sector – especially in finance – guarantees that white-collar workers in London earn 25[%] more than their counterparts elsewhere in the country... Which brings us to Cool Britannia. Somewhere on the road to modernisation, [the PM]'s "new Britain" project got mixed up with what sounds like an overused ad campaign. [The PM] has himself never uttered the phrase, except to say [that the PM] didn't coin it. "Cool Britannia" turns out to be a dangerous phrase; it can be used to dumb down [the PM]'s whole campaign to modernise the economy, deconstruct the welfare state, adopt constitutional reform and rebrand the nation with a "clear identity and role for ourselves in the outside world." The biggest potential Cool Britannia albatross of them all sits along the Thames in Greenwich, in east London. With a price tag of between £750 million and £1 billion, the Millennium Dome will not only be the world's most expensive building but the perfect monument to [the PM]'s success or failure in moulding old and new Britain into that model nation [it] likes to talk about. Now a giant structure shielding 20 acres of dirt from the rain, the space is meant to house an ambitious high-tech multimedia exhibition. It will be a celebration of... "our past achievements and confidence in the future," as [the PM] said in a topping-off ceremony at the site last month. [The PM] promised that, when its time comes, the Dome will out-Disney Orlando and out-Eiffel Paris – and be "the greatest day out on earth." Birmingham will be watching: it lost out to London in the competition to become the home of the Dome... [By the way, a] survey of... 700... British children... by the Scripture Union showed 10[%] linked the end of the century with... [the pop star who has celebrated his engagement to a NZ supermodel by signing a '4-album deal reportedly worth £80m (a record for the British industry')... and his hit song *Millennium*, while only 1[%] thought it had anything to do with Christianity, said the *Times* newspaper. The results will come as a blow to church leaders campaigning for the millennium to be celebrated as the 2000th anniversary of the birth of Christ.

...Don't believe the hype. [The] Kiwi-supermodel-turned-actress... and the newly crowned king of pop... are still an item. Reports out of London this week claimed [the Kiwi had dumped the singer]... But last week, the 28-year-old held his head up high when [it] returned to the UK for the first time in months in a blaze of glory... ha[ving] just signed a... [£80m 4]-album deal... Britain's biggest ever and... second only to [Wacko's £multi-hundred-million deal]... "I'm rich beyond my wildest dreams," [the 28-year-old] crowed... The... 32[-year-old Kiwi], currently in London working for the Born Free Foundation... linked up with her... boyfriend...

[A Kiwi]'s romance with ...a... bad boy [Brit] looks like it's over, after [the singer] treated her appallingly when [it became convinced the supermodel] was pregnant. Sources close to the couple say [the Kiwi] was visibly upset when [the singer] grilled her on the subject. Finally, [the Kiwi decided it]'d had enough and walked out. According to... [hi]s former right-hand [aide] in LA, the singer was told about [her] supposed pregnancy by an American model... [The aide says that the singer]'s angry reaction finally convinced the Kiwi beauty that [the singer] wasn't for her.

...[NZers are more proud of their country's beauty and its sporting heroes than they are of their culture and heritage, a new survey says. The research, done by the Millennium Office to find out NZers' attitudes towards celebrating the millennium, found 88% of those surveyed agreed they were proud of the country's beauty. But only 36% strongly agreed they were proud of the country's Maori heritage and culture and only 38% strongly agreed they were proud of its European early settler heritage. Other popular themes among those surveyed were the importance of the family, pride in NZ being the first in the world to achieve something and a sense that NZers' achievements were all the more impressive because it was a small country. Millennium events most likely to draw crowds were leisure and recreational events and neighbourhood street parties. Those least favoured were heritage and cultural events and telethons.'

...Wellington, which has 'the largest carillon in the country – weighing a total of over 70 tonnes' – 'may ring in the millennium with the largest tuned bell in the world. A private trust wants people to give 1c and 2c coins, along with donations, to be melted down and included in a bell weighing up to 50 tonnes – 32 tonnes heavier than the world's biggest bell, which is in New York. The NZ Millennium Trust wants the giant bronze bell to give Wellington and NZ a global focus on New Year's Eve. "It's as simple and elegant as possible," the project director said. "The technology has been around for 6000 years. It's long-lasting." The bell, which is expected to be about 4m high and between 4m and 6m at the base, would be made in the US and cost about \$1 million.

The clapper, which strikes the bell, would weigh about two tonnes and may be made in Asia. At a recent meeting, Wellington City councillors were asked to consider a site for the bell. The mayor suggested ringing it from the new regional stadium before moving it to a more permanent site.'

... 'Auckland could celebrate the new millennium with a "simulated eruption" on Rangitoto. This is one suggestion by the Auckland City Council as it tosses up whether to mark the year 2000 with fireworks' – like Sydney, which is planning to spend '\$1m on a New Year's Eve fireworks display' – 'or capital works. The council would need to get approval for the eruption from the DoC. The council has been approached by the organisers of an international telethon, due to screen on CNN, which wants to kick off the 36-hour event in NZ. However, the council had not yet decided on a budget for the celebrations. But the bill for a range of millennium works projects – suggestions included running all city power lines underground and building broadwalks – could total more than \$1m. A laser show was suggested, but the council's promotion manager said that was a sore point after complaints about the Sky Tower opening celebrations. Other options include a flyover by restored military aircraft, and a dawn concert combined with a Maori blessing by Ngati Whatua.'

...the] Gisborne millennium concert looks headed for further trouble this week with a rival promoter considering suing and the concert's former production manager saying the show is doomed. The delay in deciding whether the country's most expensive show will go ahead has put an Auckland millennium concert in jeopardy. Frontier Touring... said it had dropped Portishead... and [an ex-Supreme, along with another US singer, from] its Bastion Point concert because Gisborne organisers, the Year 2000 Festival Company, offered it [Britain's richest rock star (who you can n]ow... bank on [– the]... singing superstar who already has his own Internet provider... has just opened an online bank[, which, a]s well as all the usual financial services... has a hip range of cheques and credit cards emblazoned with [hi]s name and image[] and NZ's most successful band – which is reforming to honour the millennium –] ...Split Enz. However, [the]Year 2000 chair[perso]n... last night denied this. "We have had various proposals put to us in recent weeks, but in terms of that claim, that's not correct." ...Now [the two US performers] would not be coming but Frontier was trying to renegotiate with Portishead. Tickets for the Bastion Point concert had been due to go on sale... [two months ago but were] delayed because of the chance to get [the British singer] and Split Enz. Frontier would now approach the artists directly and would consider its legal position... Meanwhile, [the]... Festival company has put off a decision on the Gisborne concert while it searches for a substantial backer – it is understood it needs \$2 million to continue. If a backer was found, new cheaper tickets would be announced. Tickets were available from Ticketek for \$599, \$499 and \$399 but sales were suspended last Friday... According to figures the Festival company made available to Frontier six weeks ago "just under 800 tickets had sold through Ticketek". The slow sales have raised questions about whether [the British singer] is losing his appeal. The 80,000 [the singer] drew to Auckland's Western Springs in the 1980s is a N[Z] record but many in the industry say the rock icon of the '70s... no longer has the pulling power. When was his last decent song? asked *Pavement* magazine... [Its] editor... said too many middle-aged promoters chose performers they liked and were out of touch with the leading edge of modern music. Young people, who were most likely to endure the discomfort of an all-night concert and travel and accommodation hassles, wanted a millennium party[, but:] "The last thing they want to do is sit around and listen to... old has-beens,"... [The] director of The Sequel which promotes music festival The Big Day Out, [agreed that] the Gisborne line-up was unlikely to appeal to young people[, while the editor of]... *Rip It Up* music magazine... also found it odd promoters originally tried to attract 70% of the audience from overseas when one of its star bands Split Enz was virtually unknown offshore... [Two of the '70s rock icon's] fans who have no doubt about his pulling power – an English couple who paid \$3600 for two concert tickets – [are] outraged they have been kept in the dark as the future of the event hangs in the balance... In May, festival directors flew to London to present them with their... front row centre... tickets in the penthouse suite at... [NZ House. One of them] has seen 118... concerts [by the]... rock god... ■ The... fiftysomething rock legend... looks terrific, his voice is strong, [it]... has a solid marriage with [a]model... and still has millions of music lovers going gaga over his tunes. But... [y]ears of continual drug abuse have ruined his memory and [it] can't remember the lyrics of some of his songs and has to read them from a book on a music stand at shows.

...Gisborne's millennium concert featuring... [the NZ opera singer who performed at Princess Di's wedding, a '70s rock icon] and... Split Enz is almost certainly doomed, says the organiser... as last-minute attempts to find a financial backer had failed. Ticket sales have been slow, with only 2000 to 3000 sales at \$400 each. Late last week, the Year 2000 Festival Company said it would drop ticket prices to between \$100 and \$150... [T]he company had put \$2 million into the concert over several years... [Unfortunately,] the company had contractual arrangements with... the main acts... "Pressure from those acts and those contractual arrangements are heavy and we have only got a few days to satisfy details of those contracts." ...Obtaining a financial backer had not intentionally been left so late, [the organiser]said... "The nature of the whole event was funds up-front to meet commitments, and revenue at the end once the event had occurred." ...the company had not yet talked to a liquidator.

...The... Government is looking at salvaging something from the ruins of Gisborne's millennium concert with a free dawn concert featuring... [the opera singer and the NZSO. The NZ PM] has been asked to step in after... the promoter of a mega-concert featuring the... diva... conceded the event was doomed. [The promoter] is expected to pull the plug today on the concert... [O]ver the next few days the Government would consider ways to guarantee a new centrepiece for Gisborne's millennium celebrations. [It is looking at spending 'about \$800,000.']

...The millennium spotlight is turning on Auckland after the official collapse of Gisborne's mega-concert... "But certainly it's not the norm." ...Figures from market strategists... predict overseas visitor numbers will rise from 248,200 in the March... quarter to 262,000... The international visitors who do arrive... due to millennium [celebrations]... are likely to go to... Queenstown... and... the Chatham Islands... [However, the] Chatham Islands events manager... said less than a third of the 65 accommodation beds on the Chathams had been booked. "We were expecting everything to be booked up by now,"... [Incidentally, p]olice are working to make sure the party of the millennium does not become the riot of the millennium. No officers will be allowed leave over the New Year and leave for Defence Force staff after December 27 [i]s also... banned.

...Emergency service workers who could find themselves stretched to the limit on New Year's Eve want extra money for the millennium celebration. Firefighters are so far seeking the biggest payout – triple time, a day in lieu and other incentives for working on December 31. While police officers are still deciding what compensation they will seek, health workers want double time over the three days from New Year's Eve, plus days in lieu. The nurses' union has negotiated a millennium payment for workers in Gisborne but said other hospitals were resisting after being told by the Government they should not offer incentives. Northland Health has told the N[Z] Nurses Organisation that staffing levels would be increased on December 31, and "at this stage, our owners' expectation is that premiums will not be paid." [Its] chief executive... had been advised by the Crown Company Monitoring and Advisory Unit that "there would be no extra money to pay millennium payments."

...Employers are buckling under pressure from staff demanding extra money for working during millennium celebrations, with payments of up to \$500 a shift[and 'some Gisborne workers being offered four times their normal rate']. While firefighters and other workers in emergency services are still haggling over extra pay for New Year's Eve and New Year's Day, staff in television, power, water and paper companies have won big compensation payments... [P]ayments of \$200 to \$400 have been negotiated in big paper plants such as Kinleith and Tasman Pulp and Paper... One power company is giving anyone on call a mystery weekend for two, worth about \$1200. A survey in June reported that only 15[% of NZ] companies planned to pay extra, but as the millennium gets closer, more employers seem to be doing deals... In what appears to be the first across-the-board deal in a big company, T[TVNZ] will pay any staff working from 6 pm on New Year's Eve or all of New Year's Day an extra \$375 a shift. And although the statutory holidays of January 1 and 2, which fall on a Saturday and Sunday, have been switched to Monday the 3rd and Tuesday the 4th for most workers, TVNZ staff will get all four days treated as statutory holidays. Although the number of staff needed has not been decided, TVNZ... said it would be a "large number" of the 1400 employees because of the state-owned enterprise's millennium coverage and potential Y2K problems... [I]t had been a business decision. "It's an extraordinary time, and we will be placing extraordinary demands on our staff over that time." ...the broadcast media lead organiser at the Public Service Association who revealed the deal yesterday, called on other employers to follow suit... And... [the] secretary of the Professional Firefighters Union, said it was difficult to understand why firefighters should not receive something similar. Firefighters want triple their hourly rate... and one day's holiday for every shift worked. Nurses want double and triple pay, and a \$500 flat payment for all on-call staff... Hospitals had seemed amenable to payments for support staff, but no agreements had been reached. Rest-home workers were getting double time and a day in lieu... [However,] many restaurant workers were being told there would be no extra payment.

...Battles over millennium pay are set to begin in earnest following news of the first wave of deals... The Council of Trade Unions... warned companies to decide quickly if they were offering incentives... – to stop tales of huge windfalls raising expectations... About half of the 123 businesses which have told the Northern Employers and Manufacturers' Association they would be open had agreed to give workers extra incentives... Some employers... were touchy on the issue... "Companies are trying to keep it to themselves," said the Information Technology Association... about payments to computer staff on standby for Y2K bug problems. "They don't want the market buoyed up unreasonably." Reasonable, in the case of Ports of Auckland, means nothing extra, while at Telecom, [the] communications manager... did not know what specific arrangements had been made. Telecom was a 24-hour business, and staff usually worked public holidays[so it] could not see why New Year's Eve would be any different. Most shop workers are likely to get most of the big night and the next day off, but The Warehouse will be open on New Year's Day, giving workers double pay and a day off in lieu... [Most 'workers in Victoria will also get a half day off while New Year's Eve will be a statutory holiday in Britain.' • A NZ] Press Association report in yesterday's N[Z] *Herald* incorrectly referred to a \$200 to \$400 payment for Tasman Pulp and Paper staff working on New Year's Eve. The company's human resources team leader... said the payment was part of a deal done two years ago to turn the mill into a 365-day operation, and related to working Christmas and Boxing Days. Staff did not get extra for the New Year.

...firefighters [are] threatening to abandon duties during the millennium celebrations after the Fire Service rejected demands for big overtime payments... Prison officers are [also] expected to fiercely contest news they will get no extra payment... However, [the]... Order of St John chief executive... questions why staff, or anyone for that matter, should be paid any extra for working on... New Year's Eve... A survey of other employers has found... McDonald's is closing its Invercargill outlet early on New Year's Eve and flying 23 staff to Queenstown to boost the outlet there. They will stay in the tourist town for eight days, with their accommodation paid. They will also receive a bonus. Like McDonald's, fellow fast-food giant KFC will only have a handful of outlets open late on New Year's Eve... Many restaurants surveyed by the *Sunday Star-Times* will close reasonably early on New Year's Eve. Most say it won't be profitable to stay open because they are too far away from where the crowds will be; they will probably have to pay staff double or triple time; and the owners themselves want to go out and party... Ansett [NZ and Air NZ] have yet to decide what they will do for staff. The Airline Pilots Association is not seeking extra pay, but wants a commitment from employers that they will look after families of pilots on duty if there are Y2K problems... [In related news,] Split Enz have given the organisers of Auckland's Bastion Pt millennium concert until the end of the week to confirm that it is on. The ultimatum follows the withdrawal of [a British] international rock star... from the concert... [The '70s rock icon] is believed to have been put off the Auckland celebration after a planned millennium concert in Gisborne, at which [the icon] was to be the main attraction, collapsed[– although it 'gets to keep the \$200,000 deposit paid to him in advance by the promoters']!

...Two guys] have lost enough money in recent weeks to make grown [guys] cry. Six-figure stuff. "Devastated" is a word readily used by the pair, [who are] well-known in... Ashburton, where much of the finance was sourced for the now defunct all-night millennium concert at Gisborne. They and the other 80 investors from the Ashburton area who put up the bulk of the \$2 million are unlikely to get a cent back. They say it won't impact on their businesses as it has for... [the Auckland businessperson] who 15 years ago dreamt of staging a super millennium-night concert in Gisborne and today is gutted and broke... All three directors feel bitterly let down by government agencies, particularly the Millennium Office[which]... liked the idea of a large concert at Gisborne but wouldn't help financially. "Grating" was a printable word for how [one of the Ashburton businesspeople] felt about the Government's latest move to spend money to ensure [NZ's premier diva] performed at a dawn concert in Gisborne. His company had paid a non-refundable deposit to [the diva to ensure it] was booked for Gisborne. "There was some pressure on us with [the diva] because her organisation told us [it] was considering several American offers. If we hadn't acted when we did we may not have got her at all... We sought \$1m from the Millennium Office last November. We thought we met all the criteria we needed for funding. We would have been showing off N[Z] to the world because we had negotiated international television rights. Our application was rejected. We were advised that because our event was going to be a success, the funding was not necessary." Another approach to the office in April was also rejected. In May, things started to go wrong. A hitch over the \$US1m international television deal meant the company didn't receive an expected initial payment of \$US250,000. The money was needed as a down-payment to tie up [a British rock icon] and Split Enz. Management of those performers became edgy and wanted their money on time; word got out there were problems and the "snowball"... began to roll... By the time desperate attempts were being made... to find a \$2m top-up to the \$2.5m already spent, payments to contractors and to Split Enz... had been missed... It was the beginning of the end of [the] dream... The failure, coming after the collapse of Sweetwaters... is expected to further damage N[Z]'s reputation. Other notable duds include the Mountain Rock festival and Neon Picnic in the late 1980s, which left Roy Orbison stranded at Los Angeles Airport and debts approaching \$1m.

...WANT to get away from the city for millennium celebrations but [a '70s rock icon] was never going to be your cup of New Year's cheer? More inclined to dancing the night (and the day and the next night) away with 5999 of your new best friends? Well there's always the *Gathering*, the award-winning annual festival that's now the pilgrimage-to-Mecca of N[Z] dance music. Tickets for the... event at Canaan Downs, Nelson Bays, go on sale today, the early availability because organisers figure people will be planning what they want to do on New Year's Eve sooner. The... event... goes from midday, December 31, to midday, January 2, and will feature more than 50 live acts and 120 DJs... In Auckland, tickets are available from Marbecks and Soulsonic record stores or can be booked online on the *Gathering* website... which also provides travel and camping information. And organisers promise you won't wake up to some government-subsidised dame and her backing band shouting in Italian at dawn...

Tickets to Rotorua's Lakeside 2000 – a Knight With A Dame concert have been selling fast... By yesterday there were only about 50 of the premium \$120 seats left and about 500 of the 2200 \$90 seats. The 5500 \$45 seats in the stadium terraces were also selling fast. There are also 10,000 \$20 tickets, and organisers are allocating 20,000 free tickets to people on the Rotorua District Council electoral role... [T]he huge demand

for seated tickets meant allocations to sponsors had been reduced... The January 22 event at the Rotorua International Stadium features... [a knighted Maori performer and NZ's premier opera singer – who will be having an extended stay in her homeland following her performance at Gisborne's millennium celebrations. While on the topic of millennium celebrations, t]he sparkling Waitemata could twinkle at night... with plans to light up the Auckland Harbour Bridge. The city icon could glow for the Apec conference, the Year 2000 celebrations and beyond under a millennium project being investigated by a joint-venture group representing councils, Transit N[Z] and Takapuna-based Power N[Z]. A decade after a similar bright idea was sunk by bickering councils and power boards, a report to the Auckland City Council promotions committee signals similar funding hurdles to meet the estimated \$1.6 million cost... A funding request from the ASB Trust has [already] been turned down... [However,] North Shore City has indicated it will contribute \$80,000. Auckland could be expected to contribute between \$100,000 and \$170,000. Transit says it will look at matching the councils' combined contribution. With a lighting company putting in \$220,000 and a base funding of \$300,000 from the Millennium Board, [only] \$600,000 would need to be found from sponsorships... [T]he promotions committee chair[perso]n, said it would be wonderful to illuminate the bridge. But as an Auckland Now candidate who stood on a back-to-basics platform, [the councillor] would be happy for the private sector to pay the cost... [Another group has talked] about decorating the bridge in lights. The chief executive of Tourism Auckland... said lighting up the harbour bridge would be far more beneficial for Auckland than a one-off millennium event. Anything that brought the two sides of the city together would be a good thing from a tourism point of view... Council officials from both Auckland and the North Shore declined to talk about the proposal.

...The Auckland City Council has dropped plans to light the Harbour Bridge... blaming negative publicity about advertising signs for driving away sponsors. The Mayor of Auckland... said last night that [it] had spent hours yesterday trying to persuade the key sponsor, who was promising about \$1 million for the \$1.8 million lighting project, to stay on board. ...creating an indoor stadium or buying a park are two options being considered by the Auckland Regional Council to mark the millennium. It has formed a millennium project committee to evaluate proposals on the encouragement of the Auckland 2000 Committee and the Government's Towards 2000 Task Force. They want the ARC "to consider some project which will provide enduring benefit to NZers – particularly young people – well into the millennium."

...Plans for an... Auckland SuperDome seating 12,000 were unveiled yesterday. Auckland[']s Mayor... signed a heads of agreement with A[US]n company Abigroup to build and run the indoor arena at Quay Park, in downtown Auckland for 30 years. It will then be handed back to the council. The SuperDome... will be the largest indoor sporting and entertainment arena in N[Z]... Christchurch's indoor arena has seating for 8800 people and the North Shore Events Centre can seat 4700. The giant glass-and-steel structure will have state-of-the-art sound and lighting, a food court and restaurants. It will also be the largest indoor banquet facility in Auckland, with seating for 2500 people. The council has agreed to give \$50 million towards the SuperDome from the sale of its airport shares or a mix of loans and money put aside for the project. Abigroup will meet the rest of the estimated \$80 million cost... Abigroup does not want a repeat of the problems at its A\$200 million... 21,000-seat SuperDome at Homebush in Sydney, which was shut out of hosting top-earning acts. The stadium ran up a \$4 million operating deficit in the first half of this financial year. Abigroup's development manager... said the business plan for Auckland would involve about 100 events a year, including conventions and non-ticket events such as religious rallies, which had been a huge success in Sydney... [Last night the mayor] said the council needed to do more work on a \$77 million convention centre project alongside The Edge[Theatre at the back of the Aotea Centre], but... could see Sky City's new centre filling the gap over the next 10 to 15 years... [However, Abigroup's development manager] said... Auckland should not build an international convention centre until it could compete with Sydney... "[And t]he waterfront should be that place, anchored by the SuperDome." ...All going well, the SuperDome would open in 2005.

...A HUGE sport and entertainment venue proposed for downtown Auckland should not harm the future Waitakere Sports Complex, says [the stadium's] development board chair[perso]n... Plans for an \$80 million Auckland Superdome, with seating for 12,000, were unveiled last week... But [the chairperson] doesn't think the proposed venue will pull business away from the \$21m Waitakere venue which, with seating for 5000, should be built by March, 2004... Auckland[']s Mayor... is unwilling to compare the Superdome with the Waitakere Sports Complex, or the 4700 capacity North Shore Events Centre. "This is a world-class, high-tech venue with all the bells and whistles. It will hold very big rock concerts... and the like,"... [The mayor] hopes the Superdome, which needs unconditional approval by early next year if it's to go ahead, should be finished by the end of 2004. "I'm 95[%] certain it's going to go ahead,"... says[the mayor, who]... is more optimistic than the council's recreation and events committee chair[perso]n... who says that the Superdome is unlikely to make a profit for a decade... "these facilities don't tend to be cash cows".

...Auckland City dwellers facing a 17[%] rates rise pay a "patently unfair" share of the cost of facilities enjoyed by people from throughout the region... Auckland pays more than \$1.5 million a year for the zoo, for example, while the region's six other territorial authorities contribute just over \$100,000 among them. Yet more than 60[%] of the 287,000 local visitors the zoo expects this year will come from outside Auckland City. [The 'Waitakere, North Shore and Manukau City councils each provide an average of 18% of the zoo's annual visitors but only an average of 1.7% of its annual funding.'] "I admit that what exists is patently unfair in terms of justice and equity from the point of view of those who fund regional facilities," said... Manukau[']s mayor... However... Manukau ratepayers were constantly telling his council to stick to funding services within the city, and [the mayor] could not see it spending more regionally while looking at a hefty rates rise... [The mayor of] Waitakere... agreed that not enough was done collectively to fund regional facilities... Of the cities, his contributes the least to facilities over its borders. "We are not stingy, but what we [have], we generally like to spend on ourselves,"... [The] North Shore mayor... said his council and residents helped Auckland City's economy by supplying it with a large labour force... But... a survey of 575 people from Manukau, Papakura, Waitakere and North Shore showed overwhelming support for their paying more for regional facilities even if this meant their facing an extra 4[%] on their rates. "Their residents are happy to fund some of our facilities so it is something the councils have to grapple with in their own budgets..."... said... the Auckland City Council attractions committee chair[perso]n, who... estimates that Auckland City spends more than \$13 million a year on attractions widely used by other councils' ratepayers. Her figure excludes the Auckland Museum, which is financed by a levy on all the region's councils. If other facilities were funded the same way, Auckland would save at least \$7 million. [Other examples of unfair funding are the 'Aotea Centre (Auckland City provides 98.2% of its \$4.44m annual funding but only 31% of its audiences, whereas North Shore City provides 0% of its funding and 21% of its audiences); the Auckland Art Gallery (Auckland City provides 100% of its \$4.9m funding but only 56% of its visitors – North Shore provides 19% of its visitors); Motat (Auckland City provides 97% of its \$987,000 funding but only 33% of its visitors – Manukau City provides 2% of its funding and 23% of its visitors); Youthtown (Auckland City provides 62% of its users and 100% of its funding – although it is used by 16% of Waitakere City's ratepayers); the Auckland Philharmonic Orchestra (Auckland City provides 83% of its \$279,000 funding and 39% of its fans; Waitakere City – 0%/11%; North Shore City – 3.3/26; Manukau City – 13/21').]

...existing professional orchestras are blowing hot and cold over the emergence of newcomer, the Auckland Chamber Orchestra. "We have to get away from this feeling of competition," says... [the] Auckland manager for the N[Z]SO and the NZ] Chamber Orchestra. "It's like cafes or dress shops, the more you have the more patrons you attract – hopefully." But in Dominion Rd, at the headquarters of the Auckland Philharmonia, the welcome, if that is the right word, is through gritted teeth. In the tough commercial world of entertainment, "everything's competition, even a new ten-pin bowling alley," says [the Philharmonia's] general manager... "It's fair to say it's not competition for us at this stage because it doesn't exist

yet. An orchestra doesn't exist until its first concert." [However, the general manager dismisses the ACO] as an "amateur" group competing with the St Matthew's Chamber Orchestra for audiences, not with the Philharmonia whose competition comes... from the NZSO]. The new orchestra plays its debut concert in... [two months as] part of a concert series being promoted by the Edge to encourage audiences to the town hall concert chamber. It enters a battlefield where the fight for sponsorship, public subsidies and audiences is intense... [A]s music director for the past three years of the now defunct Auckland Sinfonietta, [the ACO's conductor] knows this as well as anyone. The death through lack of funds of... [the Sinfonietta] – to be officially wound up... [next week] – was the impetus behind setting up the new group. "The Sinfonietta had nothing planned for this year and I wasn't going to sit still,"... If the Auckland Philharmonia, which performs around 120 times a year, appears to be over-reacting to the news of the [ACO]'s proposed four-concert series, the twitchiness is perhaps understandable. The Philharmonia's audience growth over the past two years has been below expectations leading to a loss for the second year in a row of more than \$100,000. Not significant... on a budget of \$5.2 million unless "you do it too many times in a row." Lurking off-stage is the NZSO]. This year the NZSO... will play 18 concerts in Auckland. And [its] chief executive... is determined to increase the national orchestra's share of the Auckland music market. This means either taking audiences from the Philharmonia or expanding Auckland's orchestral audience. Both orchestras know from experience how tough that latter task is. On the re-opening of the revamped town hall [in 1997], both bands moved from the Aotea Centre to their traditional home... Both tried to entice new audiences with expanded seasons and special deals... The response from Aucklanders has been underwhelming... [A]udiences for the Philharmonia's Thursday-night subscription concerts average about 1100 in the 1550-seater hall. Attendances at the repeat nights of three of these concerts have been "abysmal." A survey of customers last year pointed to the disgruntlement of some with the inferior creature comforts of the newly renovated town hall. This led to a return this year, for four concerts, to the acoustically inferior... 2100-seater... Aotea Centre. The first of these concerts attracted a virtually full house... More than 1700 had booked for the full four-concert series. Next year, [the Philharmonia's general manager] plans to move more of the concerts back to the Aotea Centre... The Aotea Centre costs \$13,000 a night to hire, the... town hall, \$9,000... so economically there's not a lot in it. "Though if you can fill it, it obviously pays to use the Aotea Centre." A year ago, [its Auckland manager] said the NZSO would be staying put in the town hall. "It would be a shame to walk away from it when it's such a perfect venue." Now [the Auckland manager] says that next year the NZSO could also be doing some concerts in the Aotea Centre... [T]he Philharmonia's "brilliant" sales for its Aotea series "just go to show the patrons like comfort above all else." Since the NZSO's return to the town hall "we've had more complaints about the venue than we've had compliments. Acoustically it's obviously the only place to be but when comfort and sightlines and all that kind of thing are included, the Aotea has it all over the town hall." ...The wariness of the Philharmonia towards the newcomer is also historical. The [ACO]'s predecessor... on at least two occasions, threatened to take traditional accompanying work away from the larger orchestra by quoting a lower price for the job. The most recent occasion was in March when... the dying Sinfonietta bid for the N[Z] Ballet's *Peter Pan*. To get the job, the Philharmonia had to agree to reduce its tender price to below cost, then find a sponsor to cover the difference. [The music director] says the Sinfonietta was not to blame for what happened with the ballet. "As I understand it, we gave a quote for a smaller group and that quote was used to beat the larger group..." [The music director] sees his smaller band as providing a service. "If another arts organisation that itself is struggling needs only a 25 or 30-piece orchestra, that's the niche we can help... If someone wants to hire only 25 musicians and we can supply 25 while the Philharmonia price is for 60, is that undercutting?" The [ACO] will be providing work for the city's 100-strong pool of freelance musicians who are paid per performance, "keeping them in form playing serious classical music they can get their fingers and brains into. That's good for music in Auckland... We've got to have lots of music with people talking about it and comparing and having their favourites. Having that diversity of activity is really good."

...The NZSO] has chalked up a \$1.52 million loss for the year ended June... The financial crisis was revealed to players in a letter signed jointly by [the orchestra's] chief executive... and a Public Service Association official. [The chief executive] refused to discuss the crisis except to say "times are tough." However, [the] Minister of Culture... has discussed the problem with [the chief executive and the NZSO board chairperson] and asked them to report back with recovery plans. But a Government bailout is unlikely. "I do believe the national orchestra should live within its... \$14 m... budget," which includes a \$10 m... annual grant... Just three years ago the Government bailed out the NZSO] with a \$1.25 m... handout to cover old debts and a \$2 m... boost to the band's annual grant... "They were told by the Government to go out and get corporate support," says Labour's arts spokesperson. "Well, if its chairperson... with all his huge business contacts and skills, can't get corporate support, I think it's a job beyond anyone and at that point there's got to be a major review of funding." [The spokesperson] said an excellent, international-level touring orchestra was crucial for music in N[Z]. Because of inadequate funding, the NZSO had been in breach of the touring requirements in its act for most of the past 10 years. "If the Government is not willing to give them adequate funding, then the act will have to be changed." [The spokesperson] refused to commit a future Labour Government to increasing the grant, but said: "I can confidently say we will not shirk that responsibility." ...[Ironically,] the orchestra's financial road has been rocky... [since] 1988, when the Labour Government cut the NZSO loose from the umbilical cord of state broadcasting... [I]t suddenly became a state-owned enterprise, told to return a profit and to hustle for extra funds... [A PSA] organiser... confirmed the union was working with players and management in a cooperative attempt to negotiate a "more flexible" employment contract.

...Is there now any need for a national orchestra? ...Listening to the NZSO] broadcasting Beethoven live from a Wellington concert on Saturday night, I couldn't help wondering what... the... founders of our national orchestra would make of its financial crisis. Undoubtedly they would be proud that their dream of a quality national orchestra had been achieved and had survived for more than 50 years. As for the rows over funding, well that would make them feel right at home. After all, the orchestra's inaugural year budget of £40,000... in 1947 did balloon to £100,000 by 1950 arousing much wailing and gnashing of teeth. What, I suspect, would disappoint them, is the dog-in-the-manger attitude that many NZSO supporters take when the issue of state funding of orchestras is raised. Unlike them, [the NZSO's founders]... didn't see the creation of a world-class status symbol as the goal. They saw a national orchestra more as a way of expanding musical education to a nation starved of culture by, among other things, six years of war. It was a vehicle to help to educate audiences and also a training ground for musicians. For many years it was just that. For many, the touring national orchestra was their first introduction to live orchestral music. For me it was a schools' concert in the Auckland Town Hall in the late 50s. I still recall the thrill of recognition when they burst into the march from the movie *The Dam Busters*. But school concerts – outside Wellington, that is – are now a thing of the past, as is much of the old touring programme. When priorities had to be set, the role of educator and bringer of music to the masses [(i.e., the taxpayers who fund it)] no longer ranked. Increasingly the *raison d'être* for the orchestra became that of sacred icon. It was the status symbol that politicians and Wellington bureaucrats – however Philistine their own tastes – held up to overseas visitors to prove how cultured we were. And a fine and enjoyable status symbol it is. But can we afford it? More to the point, is it the best way to distribute the \$10 million of Government funds we spend on it? I suspect not. For a start, a considerable proportion of this money goes not on music-making but on travel costs. In the bad old days players travelled by train, stayed in seedy boarding houses and grabbed dinner after a concert at the local piecart. These days the 100-strong group flies everywhere then dines and overnights in quality hotels. Adding to the cost side of the ledger is the political decision to headquarters a national provincial arts troupe in a smallish provincial town – Wellington – when half your potential audience lives within an hour or two's drive of the nation's main city – Auckland. Fifty years ago a national orchestra made sense. Both financially and artistically it was all the country's resources could sustain. The situation is now different. Good musicians abound and professional city orchestras draw loyal audience support in Auckland, Wellington, Christchurch and Dunedin. Compared with the NZSO these bands get a pittance from the Government. Yet in many ways they are now doing the educative work the original national orchestra was set up to

do. So where do we go from here? ...A large cash injection would be one welcome – but unlikely solution. Another would be to celebrate the past successes of the national orchestra model but agree it is time to move forward... to the direct state-funding of three city-based orchestras – one each in Auckland, Wellington and Christchurch. Each would serve its city and adjacent areas. The NZSO, shed of its national touring obligations, could become the Wellington orchestra. Opponents of such a revolution dwell on the death of a fine orchestra. But the... Auckland Philharmonia is proof enough that a city orchestra can be first class if it wants to be... A less dramatic solution... involve[s] the full NZSO touring only to Auckland and Christchurch to perform huge, showpiece works that the Auckland Philharmonia and... the Christchurch Symphony Orchestra... do not have the resources for. Complementing this, the NZSO would also have smaller touring ensembles which could travel to smaller centres more economically.

...The multi-talented National Youth Choir won the coveted top prize at the international Musical Eisteddfod in Wales on Saturday. They had earlier won best mixed choir, and edged out three other international groups in the final... [to earn] the title Choir of the World... [Their] manager... said the win showed the 41 singers, aged between 18 and 25, were right up there with the best in the world. It was the culmination of three years' hard work. Since Saturday the choir had been asked to sing in South America, and [the manager] expected more invitations to flood in... The choir, halfway through a five-week tour of Europe, will travel to Vienna before taking part in another competition in Slovakia... The choir took the title with a selection of four unaccompanied songs performed over 15 minutes. First was *Haere Mai*, a Maori welcome piece which included elements of dance and haka... [T]he singers were "a little nervous" before facing the capacity crowd of 5000... A few hours after... taking the £3000... prize, the choir celebrated at the Trevor Arms, a small hotel in the northern village of Rosset. Welsh patrons, especially a group out on a hens' night, were keen to hear their talents. As well as singing some of their choral standards, the choir improvised with popular favourites, including... a rendition of... the Beatles number... *Hey Jude*... But celebrations had to be toned down after guests sleeping in the hotel complained about the noise.

...If you drink and listen to concert music you're a bloody idiot There is one major flaw in the plan of the Edge's supremo... to allow people to drink during concerts in the Aotea Centre and Auckland Town Hall... Only a year or so back we were celebrating as one of the triumphs of the Town Hall renovations the miraculous sound-proofing of the Concert Chamber and the Great Hall. Millions of dollars worth of double-glazing and false walling had been installed so... skate-boarders, unruly drunks and sirening fire engines would no longer disrupt the sweet sounds within. [The supremo] was as enthusiastic about the transformation as the rest of us. Indeed, when it was discovered that because of inadequate insulation noise was bleeding into the main hall from the foyers outside, it was [the supremo] who ensured funds were forthcoming immediately to rip out the faulty doors and build new ones. Having conquered the disturbances from without, it is ironic that [the supremo] is now keen to encourage his audiences to take glassware with them into the auditoriums. [The supremo] argues that it is not a bid to sell more of his awful house wine. Rather, it's an attempt to take the pressure off people caught at the back of the queue at the bar during the interval stampede. Instead of having them knock their drinks back quickly, they'll be able to sup them sedately back in their seats... I can almost accept this sedate supping as being a harmless enough exercise for those nearby, although where they're expected to rest the glasses during the sedate supping is anyone's guess. But it's the disposal of the glassware afterwards that is the real worry. In the movies they have little loops in the back of the seat in front of you to store your popcorn and cola. [The supremo] is suggesting you store the empties under your seat. These are obviously the thoughts of someone who has never sat through a concert in the cramped, creaking and shifting... seating of the Town Hall and Concert Chamber stalls. In that setting, if you don't kick over your own wine glass, the chances are the person stretching their legs in the row behind will. With no carpet on the floors to deaden the noise, a wine glass or three hitting the dust each night is all it would take to ruin everyone's night out... The Edge chief executive... is very surprised that only 15[%] of those polled supported the idea, compared with 76[%] against and 9[%] who said maybe. [The supremo] is also surprised the opposition is evenly spread, with audiences for musicals just as negative to the idea as high-brow orchestra-goers. But [the supremo] shouldn't be. If it was a dine-and-dance or a cabaret evening the audience was after, it could go off to a club or a restaurant with band. We music-lovers go along for the music and the music-making. Part of that music is the silences and the quiet bits. We want to be swept away by what's happening up on the stage, not jolted back to reality by a glass being kicked over. Believe it or not, most of us can even get through an hour without the craving for a glass of Chateau Aotea.

...["I crave amphetamines. Today I'm not taking them and I don't intend to take them tomorrow, but it's something I can't help. The least mood altering thing that I might take my system cries more, more, more. It's like one's too many and a thousand's not enough," says 1960s country music star J. Cash...

In 1952, as an entire country drunkenly ushered out the debris of an old year and festively celebrated the emergence of a new one, the biggest star country music had ever produced was dying on a lost highway going nowhere. Hank Williams was in the back seat of his baby blue Cadillac, cuddled up in a bed of morphine, chloral hydrate and alcohol. Hank was on his way to a New Year's night performance in Ohio, only Hank didn't know it. Hank was very quiet, too quiet even for his chauffeur, who finally turned around to ponder his famous and pathetic employer, but it was too late. The long night's journey to death was over. Aged only 29 years old, the singer had died of a broken heart and an inability to find a livable place somewhere between stardom and mortality.'
