The right whale is so-called because in the early days of whaling it was the right whale to catch... because it swims slowly and when killed it floats, being buoyed up by its very thick blubber... [F]aster whales... could only be hunted with the introduction of bigger and faster boats... [150] years ago the Greenland right whale was called 'the whale' or the common whale, because it was so numerous... Right whales were... virtually wiped out before hunting them was abandoned... Grey whales are very slow, usually swimming at 2-3 knots... As they also come very close inshore this makes them very vulnerable to hunters... In 1840 there were estimated to be around 25 000 grey whales but soon after this there was very intense hunting all along the... west coast of North America. By 1875 it was unusual to see more than 50 migrating whales at a time, although they used to be seen by the thousand... By 1936 the world population was thought to be as low as 100-200. Then the governments of America, Japan and Russia came to an agreement on the future of the grey whale and declared it a protected species. This... together with the animal's high rate of reproduction, has resulted in a gradual build-up of the population... [W]hales... evolved over 100 million years ago from primitive land mammals... Their nearest relatives belong to the ungulates (hoofed mammals)... Their lung capacity is half as much again as that of a land animal and in addition they fill their lungs to capacity. Land animals, including ourselves, use only half the lung capacity to change only 10-15% of the air in the lungs with each breath. A[whale or] dolphin changes up to 90%... The... *Book of Whales* published in 1900... [states that] the false killer... whale... is rarely seen and the little knowledge we have has come from stranded animals... They are probably not so rare as once thought, if only because of the large numbers that have been stranded at different times... in many different parts of the world... Whales are extremely intelligent so it is surprising that they should allow themselves to get into a predicament which is nearly always fatal... It has been shown that some dolphins and presumably many other whales have an extremely efficient echo location system for detecting prey or other objects but apparently cannot use it as an echo-sounder to gauge the depth of water under them, for the system cannot detect objects below a line running horizontally from the jaws. So it would be possible for a whale to come dangerously near the shore in murky waters without realising it... There is another suggestion that mass strandings occur through the herd panicking... Stranded whales have been towed off beaches, but all to no avail as they have promptly swum ashore again. Apparently they react blindly to the distress calls of their stranded companions... *A larger number than usual were stranded on British coasts during the last war... probably due in part... to anti-submarine activities...* For hundreds of years pilot whales have been hunted in the islands to the north of the British Isles. The hunts... depend on a school of pilot whales being sighted near the shore. The alarm is given and a fleet of small boats pulls out to carefully shepherd the school into a bay. The whales panic and rush into the shallows... [where people] waiting on the shore immediately set on the whales with knives and lances... The capture of a school of pilot whales, was an absolute windfall to the islanders, and even now there are wild scenes following the slaughter... *The largest animals that have ever lived... blue whales can grow to 100 ft long and weigh as much as 135 tons, the equivalent of 30 elephants or 1600 [humans]... Only an aquatic animal could achieve such a vast size, where the water can support the body...* Blue whales are usually solitary... but[, like]... many other kinds of whales[, they]... come to the assistance of their fellows in distress. Where whalers sight two blue whales they know that it is best to shoot the [cow] first because the [bull] will not desert her, and so can be caught easily. On the other hand, the [cow] will desert the harpooned [bull] and so be lost to the whalers. Whale dives usually last for seven or eight minutes, but blue whales can stay down longer. Their... power is shown by stories of harpooned whales towing catcher boats even though their engines have been running full speed in reverse... To supply energy to their huge bodies blue whales must be voracious eaters. When cut open in the whaling factories their stomachs are regularly found to be crammed full of krill... How the whales find krill in sufficient quantities is rather a mystery... Even with our advanced electronics... no system has been built sensitive enough to detect krill... [In the late 1930s] there were an estimated 100 000 blue whales at large in the oceans. [By 1969,] no more than 1 000... [K]illing blue whales has been banned. Let us hope this ban came in time, for blue whales breed very slowly and there may not be enough left to keep the species from dying out... [While most whales live by eating krill, another shrimp species,] the whale louse... anchors itself to a whale's skin[, remaining]... in one spot for the rest of its life, eating the surrounding flesh until it is lying in a cavity. The young ones settle down close to their parents and in the end, masses, formed by thousands of whale lice, cover large patches of the[whale's] skin... Eskimos and other people living around the Arctic Sea catch narwhals... for their meat, blubber, hide and tusks. The hide, known as muktuk, is prized for thongs because it remains supple when wet or frozen and is eaten raw as a source of Vitamin C, which is in short supply in the rest of the Eskimo's diet... *The few teeth in the young narwhal are lost in the adults except the left upper canine which is retained by the [bulls] and grows into a long tusk...* ['up to 3m in length'] *Very rarely both upper canines grow into... tusks...* The tusk is unlikely to be a weapon because narwhals are not aggressive... Narwhal tusks were first brought into Europe by the Vikings... Not surprisingly the beautiful, twisted horn became linked with the legendary unicorn... [O]nly in the mid-17th century was the famous 'unicorn horn' reidentified as belonging to the narwhal.

Sailing off the south-east coast of NZ, James Cook saw several whales... [in 1769. In] 1791 Capt Melville of the British whaling ship *Britannia* saw "upwards of 15,000 whales in the first 10 days of his voyage...". Such reports naturally brought attention to the potential of whaling in NZ waters... The British whaling ship, *William and Ann*, probably the first such ship to hunt for whales off northern NZ, visited Doubtless Bay[in 1792]. The visit (and that of the *Britannia* to North Cape in 1793) were in fact unauthorised trials of whaling in NZ waters because they had not been licensed by the East India Co... which had a trading monopoly in the East... [In 1798 the] British Parliament passed an Act opening the waters of A[US] and NZ to British whaling ships by limiting the restrictions the East India Co could enforce. The company fought hard to maintain its long-held rights for fear that the whaling captains would also set up commerce within... [its territory. Between] 1800-06 British whaling ships... operating in NZ waters took home oil worth £200,000[a]... very large figure... for the time. British whaling was crucially important in the foundation of NZ... [In 1816 a] method was developed for making gas from whale oil, increasing the demand for NZ oil... [(‘whale oil is used in cosmetics but its qualities can be mimicked by the use of oil from the jojoba plant’). In 1833 the] British whaling ship *Betsey* used "prussick acid" on her harpoons in an attempt to find a quicker way of killing whales... electricity was tried in 1852... The [US]... ship *Florida* tested a new bomb-lance whaling gun in NZ waters...

[during 1859. S]uch experiments were endeavours to avoid the dangerous practice of lancing whales from boats... The industry's loss of killed whales was heavy and wasteful. A... captain claimed to have lost 200 out of 300 [his ship] had killed in one year... By the 1840s, the depletion of the seal populations had [already made that]... *brutal*... industry uneconomic... In 1845, the seal ship *Three Brothers* returned from NZ's west coast with a meagre cargo of 140 skins... The record voyage was probably in 1806 when the *Favourite* arrived in Sydney with 60,000 skins... By... 1850... the effect of intensive whaling in south-west Pacific waters was[also] being felt. Catches of the right whale had fallen dramatically. In this year, oil worth £28,000 was shipped from Sydney compared with £150,000 every year from 1832 to 1841. Many [US] whaling ships were now using NZ merely as a base to buy provisions and recruit [crews] for fishing the Arctic summer... [During the 1920s to 1930s, whales had been] caught... in big nets held by floating barrels. The nets slowed down the whales and made it easier to kill them... Along with a number of countries with whaling industries, NZ signed an agreement[in 1937] to create a more powerful convention controlling whaling. Among several species, it banned the killing of the right whales which had been the mainstay of the early... NZ industry. For other whales, the agreement provided protection for... [cows with calves. In 1948 the IWC was founded and in] 1964... the last whale [was] killed from a NZ ship in NZ waters... In this year... £27,000 worth of ambergris... which... whalers had discarded... as a useless substance[, was]... sold to France... The Dunedin whaling ship *Splendid*... had... captured a sperm whale containing a lump of ambergris weighing 636 kg... [in 1880. Over the previous 50 years the whole US] whaling fleet... brought back little more than this total. ['Used as a fixative in perfumes', t]he... ambergris ought to have been worth £89,000 but its huge size depressed the limited market and it realised only £25,000... [In] 1818 Samuel Marsden landed the first horses... in NZ... The first thoroughbred horse was landed at Wellington... [during] 1840... New Zealanders took part in the relief of Kimberley[(*Feb 15, 1900*)], apparently the only troops to reach the town without losing a horse – evidence of good march discipline... The South African (Boer) War created a heavy demand for NZ horses as cavalry replacements... The first national sale of yearlings was held at Trentham Racecourse... [during] 1927... - THE NEW ZEALAND BOOK OF EVENTS

HORSE racing will disappear from vast areas of [NZ] under a new funding policy which has sparked the resignation of senior officials[, who]... say... the changes... will see... [c]rippling rises in track and trial fees... [- forcing] more owners and trainers out of racing... [-] and... predict... a complete breakdown of the industry's infrastructure. From August, the Racing Industry Board will starve dozens of venues of the income needed to run... meetings, allocating the money instead to a network of mostly metropolitan tracks which it believes will lead racing into prosperity... Racing clubs lost \$2 million in 1995-96 and, with a similar forecast for this season, [the] RIB... said urgent action was imperative to build up a viable network of strategic venues to maximise returns to shareholders. A survey of owners had shown that there were not enough rewards to aim for – so stakes had to rise at premier meetings. By reallocating available money, the number of premier race meetings would go up from 25 to 35 and the minimum stakes would rise from \$12,000 to \$20,000... "If we'd wanted to wipe out racing in [some] areas we wouldn't have issued licences..." - 1996

There is little money to be made from owning racehorses, judging by figures released by the[NZ] Racing Authority. The authority's study of returns to owners... showed that only 9.6[%] of horses won enough to cover their owner's expenses... 35.5[%]... of trotters and pacers win... nothing... [Interestingly, the study also] found that 38.7[%] of thoroughbred horses won nothing.

...Four legs worth \$US5 million each kept track watchers enthralled in Tokyo yesterday morning. The world's best racehorse, [which was] bought this week by Japanese breeders... was given his final gallop for tomorrow's... \$US4,000,000... Japan Cup... [The trainer of] Oceania's representative... was hoping it stayed fine... Rain is forecast for tomorrow's race and this is the best news the connections of the European horses have had since arriving in Tokyo... [However, a] crowd of... 190,000 is expected[, and more]... than one international horse has had its chance extinguished by becoming worked up by the incredible crowd noise around the parade ring.

...family and friends thought [the Aucklander] was losing his marbles when [it] and his brother-in-law paid \$100,000 for a racehorse in 1995. The normally conservative Rothesay Bay [resident] had never owned a horse before and, like most Aucklanders, went to the races only three or four times a year. Today, however, [the Aucklander] is living the dream of every racehorse owner – [it]'s in Japan with his horse Ebony Grosve, tilting at one of the world's richest races, the \$4.5 million Japan Cup... Knowing nothing about breeding, [it]'d left the choosing [of a horse] up to his partner and[a] Te Awamutu trainer... and they ended up spending their kitty on two Centro yearlings at Karaka... [They] had taken a fancy to another youngster during their two days wandering round the sale yard, however, and insisted on staying to see what [it] went for – the yearling was the very last lot in the 520-horse catalogue... But as the bidding opened the[re]... became potential buyers, deciding they'd have a go for the son of Grosvenor and an A[US]n mare Dusky Rosa if they could get him for \$50,000... With the bids going up by \$10,000 a time, they had to counter at \$100,000 for one last try – they did, and the horse was theirs... "We're not allowed [by our wives] to go to auctions any more,"... The... Centros have since been given away as useless, but the \$100,000 mistake is... already the winner of more than \$1.4 million. "The penny dropped the other day how lucky we are,"...

Napoleon once said: "I don't care how good my generals are, I want them lucky." That's what[a] trainer... desperately wants from[his] jockey... aboard Ebony Grosve in... [the] Japan Cup – a lucky ride. Ebony Grosve is a habitual back runner and Japan Cups are traditionally not won from the back of the field... A rock hard track would not suit Ebony Grosve either. [The horse] could finish only 8th in the Melbourne Cup at his last start, but [the jockey] said the 3200m distance stopped him. "...This 2400m will suit him much better."

...Ebony Grosve... finish[ed] third-last in the Japan Cup yesterday... Rain on Thursday had made the track near-perfect for the... 4-year-old. According to [the trainer], however, the rain made Ebony Grosve's task that much harder. "It really helped the European horses because they need the sting out of the track,"... Ebony Grosve will now return home and be spelled. [Editor's note: travel sickness can sometimes end a horse's racing career (e.g., the NZ horse *Bonecrusher*) – although, for successful racehorses, this merely ushers in a breeding career (which, for horses whose racing careers weren't ended by travel sickness, could mean being a 'shuttle stud' – e.g., a stallion who services mares for half a year in France and the other half in NZ).]

...A \$36 million infertility claim over... stallion Cigar is due to be paid today. Leading underwriters... w[il]l... hand over the money for the dual American Horse of the Year, who was retired to stud but failed to get a single mare in foal... The cheque will be shared by[Cigar's] owner... (\$9 million) and 75% shareholder Coolmore Stud (\$27 million)... Cigar shares the modern day record for 16 consecutive wins with Citation.

...[OBITUARY] Dancing Brave – the horse they thought could walk on water – may've flopped in his first big test (the 1986 English Derby) but it was his run in that year's Prix de l'Arc de Triomphe in Paris which made him a racetrack legend. Syndicated for \$30 million, it produced over 30 stakes winners'...

An 'American jockey broke the career money record for a rider when it won the US\$500,000 Sword Dancer Handicap at Saratoga in New York on Saturday. His mounts during his 29-year career have won US\$264.5 million, eclipsing the US\$263 million won by a rider who retired last month.'

...the leader of the NZ harness] drivers' premiership with 77 wins from 430 drives... [i]s... followed by [the person] with 69 wins from 378 drives.

...with no shoes[, an]... ugly, scrawny... "old miner's pit pony"... from Soweto carried a N[Z] schoolgirl to gold in... the FEI International Children's Jumping Competition in Cape Town... at the weekend... The... Edgecumbe rider... cried... [after eyeing] up her "dud" mount among the other top-quality horses at the... showjumping competition... All 36 horses and rider combinations for the event were drawn from a hat... [H]er

team-mate drew one of the favourites to ride... “[The horse I drew] wasn’t that pretty and I was disappointed at first... When I hopped on[the horse] took off on me, but I just kept working on her.” ...the 14-year-old... has been riding since[the age of] two and is no stranger to working with “dog tucker” horses... [– her] family pony... was bought from the knacker’s yard for \$45... Five days later the unprepossessing mare had stunned the horse world with her performance and helped... [its rider] to become the first N[Z]er to win the title... Since winning... [the NZer, who] is now on safari... has become the darling of the South African press, appearing on television and in newspapers... This was the second time [the NZer] has competed in the competition. Last year, in Colombia, [the NZer] was third in both qualifying rounds but her hopes were dashed by a disastrous ride in the final... [Incidentally, p]olice on the North Shore are the latest to become mobile on horseback. Two horses have been bought with a \$10,000 grant from the Lion Foundation, which distributes hotel gaming-machine profits. The hooved patrol joins mounted units in central and South Auckland. Police say the horses are popular in image-building and play a valuable role at big concerts and sports events. - 1997

Vienna’s council is to pass a law making the city’s hallmark carriage horses wear nappies to stop them soiling the streets... [In local news, t]he country’s newest indoor sporting complex, the Tipapa Equestrian Centre... has quickly won the backing of leading competitors. N[Z]’s 3 leading showjumpers... and[our] teenage dressage sensation... have had a workout in the... \$3 m... arena and declared it superior to any indoor equestrian facility in the Southern Hemisphere. [One of the showjumpers], a former British... representative, said it was better than any indoor facility in Europe... [T]he floor area measures 75m x 55m and includes seating for... 2500 spectators. Tipapa is hosting the Pacific League final of the Volvo Cup from January 29... Meanwhile the death of another eventing rider has prompted [NZ]’s leading equestrian to say it] cannot wait for his career to end. [Hi]s friend Jemima Johnson was killed while competing in a trial in England on Saturday... the fourth rider to die while eventing this year.

...A young jockey was killed in a fall when his mount collapsed during a race at Benalla in north western Victoria yesterday... A TAB source... said the horse involved[, which]... was the favourite, El Branco... also died... [It] had a heart attack during the race, causing... Andrew Gilbert... aged 19... to fall off. [In further news from overseas, ‘three horses had to be destroyed after the annual Grand National steeplechase at Aintree in England.’

...‘up to 100 horses a year die on Dublin’s roads. Whereas children in most cities have dogs, or skateboards, children in Dublin’s housing projects tend to have horses. There’s a constant battle between pound officials responsible for rounding up the horses, which are allowed to roam free by their owners – creating a hazard for motorists – and the owners, who believe they have a right to have horses (yet have no money or private land). Tighter controls are being introduced to protect the horses.’ Speaking of Irish horses, ‘Shergar, the racehorse once regarded as the nearest real-life equivalent to Pegasus, was machine-gunned to death by the IRA after a bungled ransom attempt. ■ ‘It has long been alleged that Phar Lap was murdered in the US, but it is now generally accepted that the champion racehorse died from a bacterial infection which still claims more horses than can be cured.’]

...After all the conjecture of officials and experts, vets and theorists, it was the poet who got it right. In a book released this week titled *Phar Lap*, [the]authors... seem to have answered the mystery of the big chestnut’s death once and for all. Of all the speculation surrounding the sudden death of “the racing phenomenon of the century” – colic, poison, even a gangster hit – the closest and most succinct appears to be[from a NZ] poet... who wrote in his 1991 poem *Phar Lap* that the horse “died of absence.” Big Red, as [the horse] was loyally known in N[Z and AUS], fell at dawn in a foreign field – an Anzac spirit to the last. [Phar Lap] died painfully and prematurely at 5 am on April 5, 1932, in a stable at Menlo Park, 32km south of San Francisco. It was two weeks after [Phar Lap] had beaten America’s best horses in what was then one of the world’s richest races, the \$US50,000 Agua Caliente Handicap in Mexico. Phar Lap was foaled in Timaru... and grew to a gigantic 17.1 hands. Inside an initially awkward frame beat a huge heart. Weighing 14 pounds (6.3kg), compared with the average racehorse’s heart weight of 9-10 pounds, his heart became the symbol of both his athleticism and courage. Named Phar Lap – Thai for lightning – by A[US]ns... who bought him in 1928, [the horse]... was unplaced eight times... [i]n his first nine races... Then it began – from his following 42 starts, [Phar Lap] had 36 wins... [D]espite death threats... [a]fter his win... in Agua Caliente[, Phar Lap]... was moved to Menlo Bay. The news of his death spread around the world... the cause of death... [un]certain... Phar Lap’s vet... said in his post-mortem examination: “The signs present those of acute gastric enteritis brought about, in my opinion, by[a] toxic substance. The... [identity] of which I am unable to say.” The doubt was soon joined by speculation and conspiracy theories, fulfilling public hankering for answers and scandal. [The book’s authors] have refuted every theory in turn. Let us consider... the... poem...: “*Even after [Phar Lap] died in America/ of intestinal typhany... /They say that for five days [the horse] ate/ pasture sprayed with lead arsenate...*” This was long the prime suspect. Trees near the stables had been sprayed a week earlier and lead arsenate was found in Big Red’s organs... As the authors point out: “The search was for a smoking gun, but should have been for a time machine. The veterinary profession in 1932 had not discovered the disease that killed Phar Lap.” So what caused the disease? Stress makes a horse more susceptible to bacterial infection and, in almost all cases, “the horse has travelled significant distances in the preceding weeks.” It seems... [Phar Lap] journeyed too far from home for his own good.

...Contents of a diary kept by the trainer of legendary Phar Lap appear to confirm theories the horse’s poisoning death may have been accidental. There have been various theories, including intentional poisoning, regarding the 1932 death of the... [horse] who won 37 of 51 races... The diary reveals staple ingredients used to treat Phar Lap included arsenic and strychnine, both deadly poisons if used incorrectly. [Phar Lap] also received treatments containing cocaine and caffeine. A popular tonic of the day was Fowler’s Solution, which was arsenic-based and administered to Phar Lap throughout his racing career. Arsenic could build up in the body with repeated use and eventually become deadly... [Y]oung Tom Woodcock, who accompanied Phar Lap to the U[S] and Mexico, was likely to have administered certain medicines to the horse to help him overcome the journey... “What we do know is that Phar Lap made a brilliant recovery from the arduous voyage [from the US to Mexico] and a cut hoof, which probably required further treatment, after [Phar Lap] arrived in Mexico and won the Agua Caliente Handicap on March 20, 1932, at that time the richest race in the world.” Two weeks later, Phar Lap died in Woodcock’s arms after making a 1000km float trip back to California.

...Pick the 12 best horses of the century, said the editor. It’s a bit like naming the 12 bravest on the Titanic – who is there around to pass judgment? But in racing there are icons. Ask the public to come up with the best horse N[Z] has produced in 100 years and it’s a bottle of champers to a wet bus ticket the majority will say Phar Lap. [It] certainly generated the most publicity. And in the middle of a crushing 1930s depression, when the world needed every hero it could generate, artificially or otherwise, Phar Lap earned every accolade. [It] was a superstar... establish[ing] a Melbourne Cup benchmark which will not be broken – [Big Red] won the fabulous race in 1930 with 62kg and no horse has carried more to victory since. The last victory before his tragic and premature death was almost certainly [hi]s best. The Agua Caliente Handicap... was run in New Mexico only because at that time gambling was illegal in the U[S]. Phar Lap was so devastating in winning, despite foot problems, that a recent authoritative U[S] poll rated him the 32nd best horse to race [there]... this century, the only non-American horse to make the list. All that from one appearance. Phar Lap did not race in N[Z]. If... you asked the insiders who was the best... to race in N[Z], there is only one answer – Kindergarten. Only a handful reading this will have seen Kindergarten in his heyday in the early 40s but of those who did, without exception... claim him as invincible. Unstoppable. Simply the best of the best before and since. What a shame travel outside Australasia a[t] that time did not allow the likes of Kindergarten to prove themselves on the world stage. One who did was harness racing’s great Cardigan Bay, who did more for trotting in the 1960s than anyone could ever have dreamed of... When [it] arrived in the U[S] it] was immediately matched against world champion pacer Overtrick in a three-race series. Cardy lost it 2-1, but there was never more than a neck in it and what you need to remember is, Overtrick was at his absolute pinnacle while the old fella had a lot of miles in his legs. It was a moral world championship of sorts. Balmerino, Show Gate, Mainbrace, Bonecrusher, Rising Fast – all great galloping champions of the modern era... The veracity of their talent cannot be questioned, but of

the horses of the early part of the century, was their talent as good? Their records say so, but how good was the opposition? ...There is no doubt there were some great early N[Z] racehorses, but it is nonsensical to compare them with the present horse. One... worthy of mention was Carbine. Okay, [Carbine] didn't fit into the century, [winning it]s Melbourne Cup in 1890, but... was such a champion [it] cannot be dismissed. There is sound argument Carbine will always be the greatest racehorse produced by N[Z. NZ]'s annual foal crop, minuscule compared to many major racing countries, is a major disadvantage in producing a steady stream of top-class horses for the international stage, yet that's exactly what we have been able to do. The secret is the climate. Over the centuries it has produced nutrients in our soil which remain the envy of many nurseries. Couple that with horse[person]ship equal to any in the world and N[Z] is right up there in the production of a sound, well-priced young horse. Racing is like a stage play and, like any play, a powerful closing act is important. And that's where Sunline comes in... What a way to end a century.

...Kiwi mare Sunline confirmed [it] is ready for an American campaign after a runaway win in the all Aged Stakes in Randwick yesterday... [7 days after] Sunline failed by a whisker to set a modern weight-carrying record for a mare in the \$A2.5 million Doncaster Handicap at... [the same track, t]he brilliant mare scored the easiest Gr1 victory of her career when [it] had four lengths to spare... Sunline has now won five Gr1 races...

SUNLINE was being hailed as the world's greatest mare... after completing back-to-back wins in Melbourne's Cox Plate. TV coverage of her seven-length win against the best horses racing in Australasia was beamed to 200 countries... [The] win was her seventh in Gr1 company, equalling Maybe Mahal's record established in 1979[, and]... rocketed her earnings to \$8.2 million[, making her]... Australasia's biggest stakes-earner [ever]...

AUS[us]ns adore a champion and Sunline is their sweetheart... "...Sunline is the greatest horse in the world," said one... on Saturday... There was no argument from the standing-room only crowd that packed Moonie Valley... If you wonder why Sunline is so good, you have to accept the theory that although talent is important, the difference between champions and near champions is attitude. In athletes, human and equine, the last 5[%] comes not from the body, but the mind. And in terms of attitude, Sunline is the world champion. Get in her way and you are going to know about it, probably by losing parts of your body. On this campaign aimed at Melbourne, Sunline has taken the tip off... [her co-trainer]'s finger, broken the face and hand of [her] devoted strapper... and generally bullied anyone else who was looking like getting in her space. [Sunline is also] like that with her equine rivals. [The mare] hates being beaten[and] is so competitive [that it] has to be worked solo on the training track. That sheer bloody mindedness and determination to win are also what can beat her on the track. It makes her race more fiercely than is tactically wise...

Sunline proved last night that... [it] is as good as any of the world's thoroughbred mares by beating the Hong Kong horse of the year, Fairy King Prawn, in the \$2.65 million Hong Kong Mile. Sunline's narrow win earned \$1.35 million and brought her total winnings to \$9.65 million... The only realistic challenge left for Sunline now is the world's richest race day in Dubai on March 24, which features the \$US6 million Dubai World Cup.

...purchase[d for]... \$40,000... Sunline could become the racing world's highest stakes earner in the next 12 months. The... N[Z] racehorse could nearly double her \$10 million earnings by winning her next two main missions, the Dubai World Cup in March and October's Cox Plate... That would put the five-year-old within \$5 million of the record \$25 million earned by T M Opera O from Japan, which has won the world's highest overall stake money. Second highest is the \$22 million banked by American-owned and trained Dubai World Cup winner Cigar, who is retired.

...Sunline is going to Dubai, but not for the Dubai World Cup. In a shock announcement last night, [her trainer] revealed Sunline will miss the... world's richest race and run instead in the \$US2 million Dubai Duty Free. "We simply can't get her ready for the... World Cup... It's 2000m on a dirt track which, the way they race, will be more like a 2400m slog..." The Duty Free is a 1777m race on grass, a turning track inside the dirt track which should suit a front-running horse like Sunline... Part of the problem for the Sunline camp has been a four-hour stopover on the tarmac in Singapore, when it is not possible to maintain air conditioning on aircraft... What Sunline will do after Dubai will depend on how [it] races there. "If [Sunline] performs well we will look at England or America and if [it doesn't it'll] return home[.]" "□ Disgruntled Press Gallery punters have convinced themselves they've found a way round the ludicrously low \$50 limit on the annual Melbourne Cup sweepstake. First prize is \$50 plus \$15 gratuity. (Now that the law is better known, the Finance Minister, who won \$80 in last year's gallery sweepstake, may be required to repay the balance.)'..."

Settling back into his office chair yesterday for his umpteenth interview of the day, the Cambridge Stud owner reflected on the attention [it] has received since... Brew won the Melbourne Cup... The media started calling minutes after Brew... [-] the gelded son of the stud's champion sire, Sir Tristram, and Japan Cup winner Horlicks... [-] crossed the line... [But the owner doesn't] mind the attention – it shows the standing N[Z] horse-breeding commands worldwide. The... Melbourne Cup and the weight-for-age Cox Plate, won by Sunline, were Australasia's two biggest races... "These sort of victories are what the industry here works for every year,"... said [the NZ] Thoroughbred Breeders Association chief executive... It meant buyers would be attracted to N[Z] yearling sales, and it boosted export possibilities... [E]xports in the March year had reached \$110 million and the industry had the potential to do better... When Brew crossed the line on Tuesday, [the owner] went outside and placed two red roses on [Sir Tristram]'s grave. The win provided Sir Tristram with a world-record 45th group one success, and the horse has now sired three Melbourne Cup winners... ● [After our interview, the owner paused]... at the grave of Sir Tristram to remember what the great horse has done for the [NZ] horse-breeding industry. Nearby, Brew's dam... look[ed] after her new foal and perhaps a future champion, sired by Zabeel, a son of Sir Tristram.

...A N[Z] bred colt set a Hong Kong International Sale record when... sold for HK\$3.8 million on Friday night[, one of 6]... colts and geldings from N[Z] that fetched an aggregate HK\$12.9 million... [The] colt had been bought at N[Z] Bloodstock's... Yearling Sale at Karaka... for \$310,000 in February.

...Fusiachi Pegasus is the first favourite since 1979 to win the Kentucky Derby... This is the colt who caused a brief delay at the starting gate at the Wood Memorial, who reared and threw his exercise rider and who has been known to stop and just look around... But [the colt] was all business on this 27deg day and before 153,204 cheering fans – the second largest Derby crowd in history... The time of 2min 1.12sec for the 1 1/4 miles... was tied for the sixth fastest... Derby... So gentle... was the colt, purchased for \$US4 million... as a yearling, that[the] jockey said... the colt... broke like a pony from the starting stalls. Fusiachi Pegasus was the highest priced winner by far in the Derby and his victory came a year after the race was won by Charismatic, who once ran with a \$US62,500 claiming tag. The winner's purse yesterday was \$US700,000. "You never know where a Derby winner is coming from," [one] trainer... said before the race. "Some cost 15,000 dollars, some cost 15 million."

...[the person] who sits on the executive of Thoroughbred Racing N[Z] as the trainers' representative, has been a driving force behind the present investigation into a ratings-based system. Calls for introduction of the ratings method, used extensively overseas, [re]gained momentum last weekend... [His successor] knows first hand the frustrations of having a single handicapper, seemingly accountable to no-one, framing weights... When [the representative] complained to Wellington, [it] was not even granted a reply. "For years, trainers have wanted some avenue of appeal over the handicapper. [90%] of the time the handicapper is right but it's a fundamental part of democracy – even the lowest rapist or murderer has the right of appeal." ...[the representative was] told no other country had appeal bodies[, but] later discovered South Africa and France did have. Earlier this year... the committee reviewing the classes and handicapping responded that... a ratings-based system... wouldn't work in N[Z]. "They said while it worked in some Asian countries, racing was too diverse between the North and South Islands." ...[however,] research of his own... found the ratings system was also used in France, England, South Africa and the U[S]. "The committee didn't tell us that and you couldn't get more diverse than the West and East coasts of the U[S]." ...Apart from being a transparent handicapping system, where horses earn and lose marks for

each run, with their ratings updated the day after every meeting... the Auckland Racing Club chief executive... says it enables horses to be competitive for a lot longer... “...Horses who are no longer competitive in a certain class, because of such things as age, can drop a class and remain competitive. This retains... name horses, which the public follow, and provide[s] additional enjoyment for a longer period for owners.” ...In June last year, the Hong Kong Jockey Club went a step further, removing all mention of horses’ classes. [● Said recently on TV: ‘If someone took away my horses I wouldn’t know what to do. They’re my most important things, my most important friends’! QUESTION: how many friends will happily let you ride on their backs? A more important question might be: If horses are such competitive racers, why do they need jockeys (and why do jockeys need whips)?]

...Only riderless Willie Tee could keep up with Eric the Bee at Riccarton on Saturday... Eric the Bee, at barely 15 hands high the smallest horse to win a Grand National Steeplechase since Aurora Australis in 1930 – and the first Riccarton-trained winner in 66 years – produced an almost perfect racing display for [its]rider... “Our biggest worry over the final stages was that the riderless horse... would do something to upset Eric,”... ■ [Willie Tee did *upset Eric*, by overtaking it at the line. But Willie Tee wasn’t recognised as the winner – so the punters who backed it lost their money!]

...While horse-racing might be the sport of kings, polo has a reputation for being the sport of upper-class twits, mostly found nosh-noshing and gurgling in flash corporate marquees. What’s more, it’s a lark favoured by the charmless [heir to the British throne, plus] that frightful heel... the champagne Charlie who once kissed [the prince’s wife] and told, and the world’s fattest fat cat, the Sultan of Brunei... [Polo is] not the sport for wage slaves... [T]he cost of playing (as just 50 out of 300 do in the Auckland club) is a gasp-inducing equation involving \$1000 for club fees, the acquisition (up to \$700 untrained, \$20,000 trained) and upkeep of six ponies, plus transport (plus champers)... [T]his... is a sport traced back... to ancient Persia. Its warlike tribes[people], so legend has it, used the heads of their fallen enemies for balls.

...[the heir to the British throne’s ‘mistress went fox-hunting at the weekend just hours after Parliament voted overwhelmingly to ban the sport. The mistress was pictured with the Beaufort hunt in Gloucestershire, her favourite hunt and one of Britain’s most affluent. Although MPs voted by 411-151 in favour of a bill to ban hunting with hounds, the Government has refused support so it has no chance of becoming law.]

...*Bloodsport opponents outfoxed* Despite a majority of MPs in the House of Commons being in favour, and overwhelming support for an end to fox hunting throughout the country, the sport has been given a reprieve in Britain after the Government effectively killed off a ban by ruling out giving an anti-hunting bill the necessary parliamentary time. A spokesperson for the Hunt Saboteurs said the decision came as “no surprise to us and gives hunt saboteurs even more reason to exist in future.” Animal rights activists said they would step up their campaign of disruption against hunting. The season began two weeks ago. The bill proposed having maximum 6-month jail sentences and fines of up to £5000 for foxhunters and those who allow hunting on their land.]

...*The Animal Liberation Front stole more than 50 hunting beagles from the grounds of Wye College in Kent last week. And four letterbombs have been sent to potential victims. One, near Congleton, Cheshire, slightly injured [a girl], aged 6. This week, the front claimed responsibility for setting off a car bomb outside the home of a fox hunt supporter near Oxted.* [□ ‘Foxhunting originated at least 700 years ago. Originally organized to kill foxes as pests, it developed into a popular sport among horseriders in England and the U.S., and reached its greatest popularity in the 18th and 19th centuries.’]

...‘British farmers have devised a novel scheme to outsmart hungry foxes – by making their lambs glow in the dark. Researchers discovered that coating lambs with phosphorescent paint laced with a foul-tasting substance discourages hungry predators during the lambing season. “Foxes will quickly come to associate the light with a terrible taste,” said a spokesperson for the manufacturers of the new Repel spray.’ By the way, Princess Diana hates] **hunting** and had hoped her boys would never take up the sport. But the hard-faced look on [her eldest boy]’s face made him look, according to some commentators, a typical cold-blooded upper-class snoot rather than the shy, down-to-earth teenage heartthrob [the prince] usually appears... But while [the]Prince... rode into a royal row... [after being] pictured fox hunting, [royalty can enjoy]... a pheasant shoot... without causing a ripple amongst animal welfare groups. Perhaps that’s because pheasants are bred specifically to be blown to smithereens by the upper class. [At a] recent shooting session... on the Royal Family’s estate at Sandringham in Norfolk... the luckless birds... [were] pursued... all over the farm fields.

...*Bad Will hunting...* It must have seemed like the ideal way to spend a day off from school – an opportunity to escape from family, studies and the media, as well as enjoy some rare freedom and independence. However, for Britain’s anti-bloodsports campaigners, [the young prince]’s decision... provided the excuse for yet another attack on the controversial sport of fox-hunting – and an unprecedented dig at the teenage royal himself. In one tabloid newspaper, under a banner headline which branded the young prince “arrogant”... the head of operations for the League Against Cruel Sports, fumed, “Hunting is a form of animal abuse. We’re very surprised [the prince] has decided to ignore the public outcry of last month, after [the prince] went hunting with his father. The palace can’t have failed to have registered the outcry and they know this issue is a political one. [As second in line to the throne, the young prince] shouldn’t be involved in politics.”

...*The political battle in Britain’s unhappy hunting grounds is as much about class divisions as animal rights...* Britain’s foxhunters are in no mood to go to earth in the face of renewed attempts to ban the sport they love. At the Essex and Suffolk Hunt... all looks much as it has done for years... But the peaceful scene hides the anger and frustration... At stake is one of the most traditional country pastimes – hunt[ers] galloping behind a pack of hounds after a fleeing fox. [Britain’s P]M... took the hunting world by surprise last month when [it sai]d... on national t[v] that his... Government would attempt to ban foxhunting before the next election... Hunt supporters were stunned. They thought the issue had gone away... when a bill to ban hunting with hounds failed in the House of Commons. But it has not disappeared, and the taciturn people of rural Britain who live for hunting are again preparing to take up the fight to preserve a way of life that is hundreds of years old. “We’re hunting Labour,” said... [the master hunter] of the Essex and Suffolk, [whose attitude]... is... typical of... [those] who work... 300 packs of foxhounds, staghounds, bassets, harriers and beagles in Britain... The Countryside Alliance, Britain’s main pro-hunting pressure group, estimates... a ban on hunting would cost the equivalent of 16,000 full-time jobs... Hunt workers believe they are victims of class prejudice – the mistaken belief that hunting is the preserve of the rich... They... [say] smartly dressed hunt[ers] are targets for opposition which Labour would never dare direct at the foxhunts run by former coalminers in... Wales.

...The battle to ban hunting may appear half won. But seasoned anti-hunt protesters, gathering in the Cheshire village of Lache Denis for one of northwest England’s biggest[fox-hunting] meets, were threatened by complacency. As the hunt[ers] thundered off over the village’s wildflower meadow to jeers of “your days are numbered” and “one last time,” activists were privately worried by a turnout of about 40 protesters compared with 150 last year. “Most people think the struggle’s over so they don’t turn out,” said a former member of the League Against Cruel Sports executive committee. Pro-hunting organisations claimed more than 325,000 people demonstrated their support for hunting at the 300 meets, some of which were marked by clashes with protesters. A... free vote on fox-hunting is due to take place within weeks, when MPs will be able to opt for one of three options: an almost total ban, compulsory licensing or self-regulation. The bill is likely to encounter opposition in the House of Lords[, even though opinion]... polls consistently have indicated that a majority of Britons oppose using dogs to hunt down and kill foxes. But many rural Britons say city-dwellers don’t understand the need to control the fox population – or the importance of hunting to rural economies... As a result, the hunting debate has escalated... into a thorny political issue... Cheshire still bears the tensions left when a saboteur died after colliding with a truck carrying beagles several years ago and this week’s event was not without its flashpoints. A [protester] appeared to be hit by the wing mirror of a vehicle minutes after tempers flared when one of the hunt’s 36 hounds was trampled by a horse and injured... Hunt supporters were undaunted... [A] village resident for 30 years, insisted that the hunt had a social role to play. “An hour outside and then into the pub – that’s the way it’s always been here... I don’t see why the fuss. They never catch nowt anyway...” ...There are signs that the Government may be preparing itself some “wobble room” if a ban proves too costly in political terms. But if it does come to a ban, a letter in the *Times* newspaper had a possible

solution. “George Templer (1781-1843), master of the South Devon Hunt, also kept a pack of foxes with which [the master] used to hunt rabbit and hare... Is this the way forward?” ...■ Although hunting has a low profile in N[Z], the sport continues to be well supported here, with 29 clubs spread from Invercargill to Kaitiaki... Clubs hold up to 26 hunt meets a year and protests are unheard of... The prey is hares, rather than foxes.

...Through the dawn mist of a cold English morning, a procession of expensive, high-performance cars wends its way along a country lane en route to a day of “sport”. The... convoy[of]... Jaguars and Mercedes i[s]... flanked by vans which echo to the sound of dogs barking. This is the start of a hunt, but not one in the traditional sense. The quarry isn’t pheasant or partridge, and the well-off passengers won’t be putting on red coats in search of a fox. Instead, they will trespass on farmland, threatening... with violence – in at least two cases with guns – ...anyone who tries to stop them. Then their dogs will spend the day ripping hares to pieces for stake money of up to £20,000... This is modern-day hare coursing, a pastime that used to attract poachers but which is now the sport of criminal gangs... [A]lthough the sport itself is legal... [-] and the British Government appears indifferent to the... [hares’ plight -] the trespass on farmers’ land is not, nor is the unlicensed betting... Tragically, it is a growing trend, which many police forces, armed only with Victorian legislation, feel almost powerless to prevent. And, all the while, it is a trend which is driving Britain’s brown hare population to dangerously low levels... The brown hare gained protection after the Rio Convention on biodiversity in 1992. “But we’re doing nothing to save it. I have written to... [the] Minister of State at the Department of Environment, Food and Rural Affairs... three times asking for action, but I haven’t even had the courtesy of a reply[,” said the chairperson]... of the Mammal Society... In the meantime, [the]... RSPCA is reluctant to distinguish between “legal” hare coursing at events such as the Waterloo Cup at Altcar, staged with the permission of landowners, and the “illegal” events staged without permission... However, it acknowledges that the “illegal” events are causing numbers of brown hares to fall because they are killed not only by the coursers, but also by farmers who cull them to prevent coursers invading their land.

...Thousands of greyhounds are hanged each year in Spain after the end of the hare coursing season, an international animal charity said yesterday... Skeletal remains... of gaigos – the Spanish word for greyhounds – were... commonplace. There was also evidence of hanged dogs being set on fire, with melted nooses hanging above fresh bones and ash on the ground. The... dogs which raced badly were typically hanged low down a tree. The slow death was known as “the piano player” because the animals would frantically scrabble their legs in a vain attempt to touch the ground. Dogs which raced well were hanged higher, resulting in a quicker death. Gaigos unwanted after the... season may also be stoned, tied up and left to starve, staked in a pond to drown or thrown into wells... It is not illegal to kill a dog by hanging in Andalusia and Extremadura, where there are no animal protection laws. In Castilla y Leon, a law threatening a fine of ...\$30,0 to anyone hanging a dog has yet to be enforced... [In local news, a] newborn fawn was found hungry, terrified and dehydrated wandering through central Rotorua after [it] had been kept by the hunter who shot her mother. “[The fawn] was... very, very stressed... crying and looking for mum,” said [a]shocked and sickened SPCA inspector... The Society for the Prevention of Cruelty to Animals is trying to track the hunter, aged about 20, to lay cruelty charges. The SPCA believes the [hunter]... took the newborn red deer fawn from the wild, carried it around Rotorua in a car, swung it by its legs, kept it in a flat and did not feed it adequately. Rotorua SPCA staff spent hours trying to track down the animal after receiving complaints last week of the tiny deer being forced into the back of a vehicle... Attempts to rescue the animal from the flat where the [hunter] was keeping it failed. The... breakthrough came when it was discovered wandering through the city last Thursday... [T]he fawn must have freed itself and got away... Its damaged right back leg had to be put in a splint... The leg injury was partly nerve damage, causing the hoof to curl backwards. A rope burn had started to heal. The SPCA had taken the fawn to a farm to be reared with another the same age. It will not be returned to the wild. “We’ve saved her once. We don’t want her to be shot.”

STAG hunting was banned on more than 15,000 acres of National Trust land last week – 24 hours after... a £165,000 scientific study it commissioned... branded it cruel. The Trust also called on the... [British] government to commission an urgent review into the suffering of other animals hunted for sport. Its refusal to renew licences for hunting deer with hounds on the land near Exmoor, the Quantock Hills and New Forest from the end of the month was hailed by animal rights groups as a significant step towards outlawing the practice... [Meanwhile, sheep in the] New Forest are using commando tactics to... ram raid lush lawns and gardens. Many residents protect their gardens from the sheep, which graze on common land, with... cattle grids... But the lure of grazing heaven inspired unsuspecting ingenuity in one flock. Mimicking the way soldiers cross barbed wire entanglements, one sheep lay across the grid, allowing the rest to walk across its body. “I couldn’t believe my eyes,” [said a villager.

...‘sheep and pigs are being stamped with postcodes to combat rustling in Yorkshire.’ Incidentally, ‘a US animal rights group wants any would-be gopher hunters to keep their paws off the critters. It wants a ban on bounties paid for gopher feet during the annual Viola Gopher Count this week. “I don’t know how primitive the community is, but the gophers, in my estimation, have some moral rights to not having their feet chopped off in a celebration of the town,” said the president of Friends of Animals. The 126-year-old Gopher Count has grown into a kind of reunion in Viola, Minnesota.’ ● It is during this time of year that large numbers of southern Europeans engage in their annual pastime of trying to shoot down birds migrating between northern Europe and Africa!

...“When a person wantonly destroys one of the works of its own species, we call it a vandal. When it wantonly destroys one of the works of God, we call it a sportsperson. How anyone can profess to find animal life interesting and yet take delight in reducing the wonder of any animal to a bloody mass of fur and feathers is beyond my comprehension.” It seems that each year I write of such things. I do so not in the belief that my writings will change a thing but because it gets it off my chest. I know the arguments that will be mounted in favour of this barbaric practice – the bonding of mates in the mai mai, the thrill of the hunt (and the kill), the service they do in reducing the numbers of ducks who plague the countryside, blah, blah, blah! Those arguments don’t equate, of course, for visually implanted in my mind is the picture painted by another writer: “And one by one, driven to exhaustion, trapped by fence and bewilderment, under an immaculate sky, the creatures died. They died, not in mercy, not in the majesty which was their due, but as the least of life, accursed of nature. They died in the dust of insult and the spittle of lead.” ● ‘The issue for the country’s estimated 50,000 gamebird hunters this season is not numbers but the forced transition from lead shot to non-toxic alternatives. The reason for the change – which follows similar moves in AUS, Britain, Canada, Denmark and Finland – is the effect of lead on waterfowl and the environment. Opponents of change say the incidence of lead-shot poisoning in waterfowl is minute and the transition is simply a political move to placate “green lobbying”. They also believe the new steel shot lacks killing power’]...

Two Otago duck-shooters who wanted to make up for fellow hunters’ low kills have... each admitted one charge of hunting or killing absolutely protected wildlife (grey teal) and two charges of killing in excess of the daily limit. A Fish and Game Council prosecutor... said a ranger who visited a pond on an Ida Valley property... found the [duck-shooters] with 154 mallard ducks, 13 shoveller ducks and three grey teal. The daily limit per hunter was 20 for mallard and five for shoveller... They took responsibility for shooting the three grey teal, accepting that they took insufficient care in distinguishing them from other species. The defendants, both first offenders, had written letters apologising to the... [council,] admitting their breach of the law. They were each fined \$300 on the grey teal charge, and \$250 on each of the two other charges. They were also each to pay a solicitor’s fee amounting to \$600, and court costs of \$285... [Now for some news from the other end of the country, ‘a crowd of 3500 turned out to the Counties Rodeo to watch cowboys compete for titles in bull riding, steer wrestling and calf roping. More than 30 rodeos are held in NZ every year. Bull riding, where the rider must stay on the bull for 8 seconds holding a rope with one hand, is considered the ultimate challenge. A plucky Pukekohe 12-year-old’s introduction to calf riding lasted all of 3 seconds.’ Don’t expect to see him competing at this year’s World Bull Riding Championships...]

The South Island] landscape may not seem quite the place for buffalo to roam but it will be if[a couple of] farmers... have their way. The[y]... have bought a pair of plains bison, the buffalo of Western movies, from a North Island breeder to provide the cornerstone of a business venture. The bull

and heifer join elk and wapiti deer on the [ir farm. They]... hope to import about 50 heifers from Canada to build up their herd. Then it will be a matter of enticing other farmers to breed bison so they can get enough meat for a boutique meat market, supplying restaurants and hotels. A North Island breeder killed a steer last year for a restaurant celebrating Independence Day, and the skull alone fetched \$300 because it was sought as a trophy. Mr [Farmer] said bison were a pleasure to farm. They were very docile in the paddock, and... just like in the movies, they loved to run.

...BENEATH the limestone bluffs of southern Sulawesi, Indonesia, the... half a million Toraja people... still stage their animist ceremonies of life and death, employing a cast of thousands and taking months to prepare... For centuries the Toraja... tended their rice crops, their buffalo and pigs and practised their... religion, unhindered. With Dutch colonial rule in 1906 came missionaries, seeking to establish a bulwark against proselytising Islam. Aluk Todolo, the old... ways of this class-conscious society, lost some influence but were not destroyed. Now... in... the never-ending quest for ethnic authenticity, European tour groups marvel at the ancestral skulls lodged in their cliff-top eyries high above the rice fields. Yet Toraja funerals remain spectacles worthy of... the thousands of solemn, colourfully costumed participants bearing offerings, undaunted by monsoonal downpours... or even the relentless probing of whirring video cameras... Perhaps the producers of... Hollywood epics found inspiration afresh here among the mass sacrificial slaughter of protesting buffalo, which seems necessary to speed the souls of departed Toraja to their resting places... Another day, another village, another funeral. This time the scale is more intimate than the earlier, sombre epic. In bright sun... we witness the clumsy savaging of buffalo after buffalo, blood spurting as the tormented beasts pursue the wielder of the knife until finally collapsing in twitching heaps. [● 'A pet bull that killed its 79-year-old owner near his Kaikohe home on Thursday night will be eaten by guests attending his tangi. The body of retired farmer Hetaraka Aperahama was discovered beside a shed near his home about 7 pm after neighbours noticed that his six pet cattle were behaving strangely. Kaikohe police said the cattle were found standing around Mr Aperahama's body while the only bull in the herd stood over him. A senior sergeant said all evidence indicated that the bull had attacked Mr Aperahama and the beast would be destroyed.']

...BUM STEER: A Colombian banderillero [wa]s gored in the unkindest way after being sent in to help finish off a bull when the matador failed with his 'coup de grace'. [The banderillero] was taken to hospital with, unsurprisingly, internal injuries. Last heard of, [the banderillero] was in a stable condition. [□ '100-150 matadors are gored in Spain every year, and 4 have been killed in the ring over the past 15 years. But the odds are stacked against the bulls. A 25-year-old matador, who earns more than \$1 million annually, has already killed over 700 bulls.']

...attempts by the Spanish Government to ban practices such as shaving their horns and drugging bulls prior to bull-fighting contents, and thrusting swords through the back of their necks – which prevents them from throwing their heads back – during fights, have caused matadors to go on strike.'

...The choice between seats in "sol" or "sombra" was irrelevant at Spain's first bullfight of the season, where the immediate concern was to dodge the winds from the sierra that chilled your fingers in what should be a sun-soaked fiesta. But the burly breeders, managers and matadors' agents huddled to supervise six fighting bulls being unloaded from the lorry into ringside pens were preoccupied by more serious worries. They fear mad-cow (vaca loca) disease will ruin their livelihood. Tiny, unprepossessing Valdemorillo, 30km northwest of Madrid, enjoys a brief burst of fame every year when a make-shift iron bullring is rigged up for the opening event of the bullfighting calendar. It is an important occasion, eagerly awaited, but this year it was steeped in gloom tinged with panic. The organiser of the week's festivities, was devastated to learn, shortly before the first beast of the afternoon was let into the ring, that the health authorities had decided all the bulls must be taken away for incineration after they were killed by the matador's sword. "It's terrible news, couldn't be worse. I've lost all the money from selling the carcasses, and I have to pay the transport and incineration costs. I'm ruined, and they've offered no compensation," the organiser mourned. The entire bullfighting world has been shaken by EU rules dictating that the meat from animals more than 30 months old must be tested for BSE or else be destroyed. Fighting bulls are 6 years old and the industry says it is impossible to test the 39,000 to be fought this season. This was day one, and BSE was already making its contribution to the rich repertoire of taurine insults. "That one's got 'vaca loca'," a spectator shouted. Steam snorted from the bulls' nostrils as they laboured in the wintry air, but there was little excitement, despite squeals of encouragement from small children thrilled at the gore and the howling trumpets. Spain's top bulls commentator, who sat in the high back row of the little ring because the commentator reckons it's the best spot, said: "I always thought the bulls were drugged, but the taurine world is very corrupt and closed and no-one speaks openly. We must analyse the animals to find out what's wrong. But now with incineration we'll never know whether they're drugged, ill, have shaved horns or anything. It's a rotten business." Afterwards we strolled along the hill to the tombola stalls blaring cheesy music in the twilight. A dour Asturian sold grilled blood sausage and cups of arguardiente, and wondered how much longer the corrida, Spain's national festival, would last.'

...There was human blood on the] streets of Spain last week, and plenty of it. Assassins from the Basque separatist group ETA shot dead a judge on a busy thoroughfare in central Madrid, and a Basque business[per]son also received a point-blank bullet in the head as [it] marched in a carnival in the troubled northern region. In Granada, in the south, a car bomb claimed the life of... [someone] who worked as a barber for the air force. But even as this new rash of terrorist murders swept the country, a contingent of Spanish and international media was zooming in on an altogether different victim of violence: a small grey donkey scheduled to play the lead role in a bizarre piece of street theatre staged annually in Villanueva de la Vera, a village in the rugged tobacco-and-olives countryside of Extremadura some 200km southwest of Madrid... Surrounded by dozens of... [villagers], many of them drunk[and]... firing shotguns charged with confetti into the air, the animal was pushed, pulled and wrestled through the narrow streets. An overweight rider, apparently on the verge of an alcoholic coma, lurched precariously on its back... In the end the donkey shed no blood... But in a nation where, at fiesta time, bulls are stampeded through the streets at night with flaming rags attached to their horns, where chickens strung by their legs from wire have their heads ripped off by [people riding horses], and where goats have been thrown from church bell towers, the running of the donkey has come to symbolize the maltreatment of thousands of animals in Spain each year, and the growing local and international campaign to end it. Villanueva's mayor... claims the donkey is not maltreated, defending a fiesta that was celebrated without fuss "for about 500 years" until the sensationalist British press heard about it 10 years ago... The people of Extremadura are known for their hospitality, but so much negative attention from *los Ingleses*, as they tend to dub all the outsiders, caused hackles to rise, and there was some pushing, shoving and kicking. One villager said: "I want to ask the English, what about your mad cows, eh?" ...But tradition cuts no ice with the British-based International Donkey Protection Trust, which has ridden to the donkey's rescue, and there are few animal lovers more militant than the British.

...80 animal rights [campaign]ers and hunt saboteurs were arrested in a weekend of violent protests against farming and blood sports in Britain.

...At least one cuddly, fur-wearing creature won't be receiving much compassion from animal rights campaigners this winter... [Her] crime? Inappropriate evening wear. Three years after appearing in... an "I'd rather go naked than wear fur" ad, [the supermodel] incited howls of outrage... [for sauntering] down a... catwalk earlier this year draped in... sable. "[The supermodel]'s shown... more beauty than brain cells," hissed... [the] campaign director of People for the Ethical Treatment of Animals, based in Norfolk, Virginia... [PETA] declared the leggy, 27-year-old mannequin a turncoat... In reply the model complained to the press about being too young to fully comprehend the implications when... [signing] up with the rights campaigners. "Well, that's the risk if you deal with celebrities," says... [the] executive director of Citizens to End Animal Suffering and Exploitation. "A celebrity is also a human being. It's nice if you can convince them to support a good cause, but I guess they have to stay in business, too." [The] defection is the latest loose thread in a slowly unravelling celebrity coalition that once fur-ociously battled for animal rights... Why are so many celebrities doing a pirouette on fur? One reason, according to industry watchers, is the recent splintering on the issue of animal testing... Many in the Hollywood community are breaking their promises "because they're such supporters of finding a cure for Aids..." says... the Fur Information Council in Washington, a fur-lobbying organisation. On the runways, the furry stuff is seen in trims, recycled linings: even that throwback to the 50s, the full-length mink coat, as the fashion world returns to the bygone days of glamour and elegance... Having already prowled its way down the runways of Milan and Paris, fur is certain to find its way on to the backs of slinky supermodels during the upcoming fashion

shows in New York. *Vogue* magazine, that benchmark of chic, paraded fur across 16 pages of [a recent] issue: priceless attention for an industry that has earned about \$NZ1.92 billion annually for the past five years... Animal rights groups vow to redouble their focus at the grass-roots level...

Security at scores of Oregon mink farms remained tight yesterday after thousands of mink were released from their cages on a fur ranch, allegedly by animal rights activists. At least half the animals... were expected to die from exposure, fighting with each other or trauma. Many were baby mink that had been separated from their mothers; [some] had been crushed by human feet... At least 2000 of the 6000 to 8000 baby mink released were confirmed dead, said... [a spokesperson] for Fur Commission, USA, which represents mink and fox farmers[, as]... were... 400 of the 1600 adult... mink... Children were warned to avoid the mink because the animals are aggressive when cornered and highly susceptible to rabies... There have been no arrests and no one has claimed responsibility, but the act was similar to animal releases in the past for which the underground Animal Liberation Front have claimed responsibility. The group's web page says "the... [ALF is conducting] a non-violent campaign, activists taking all precautions not to harm any animal." In March, five Michigan residents were arrested for allegedly releasing 1500 minks into the wild from a fur farm in the Canadian province of Ontario. More than 400... died, due to cold, fighting among themselves or being run over by cars.

...[Animal rights activists freed almost 8000 minks at a breeding farm 400km north-west of London. Police said most stayed contained in the farm compound but 2000 had escaped to the countryside. They warned local residents to keep doors and windows closed as the minks would attack pets, and said motorists should avoid the area. In August, owls at a nearby wildlife sanctuary were killed when 2000 mink were "freed" at a fur farm near Ringwood'...

'The House of Commons has banned fur farming in England and Wales, to the applause of animal rights activists.' 'Humane Society International maintains that over 40 million animals worldwide are raised in cages and killed for their fur annually. "Not only are these poor animals killed inhumanely, but they suffer numerous physical and behavioural abnormalities, induced by the stress of caging conditions," says the marketing director for the society.'

...3 animal rights activists have been arrested following an anti-fur protest outside Hartley's fashion store in High St, Auckland. The protesters claimed the store was selling rabbit fur from animals farmed in appallingly cruel conditions in China. Some of the rabbits were skinned alive, the group said.'

...An Auckland butcher who is one of the latest victims of the [ALF's] vandalism attacks is pleading for public help to expose the... gutless... culprits... [His window was] smashed by front members at the weekend. It will cost more than \$1000 to repair. The front also admitted the vandalism of four other businesses in Auckland at the weekend, and now claims to have caused damage totalling \$150,000 in the Auckland region alone this year. The... [ALF,] which targets businesses it claims profits from animal abuse, uses other tactics such as gluing locks and daubing graffiti as a form of "economic sabotage." The National Bureau of Criminal Intelligence is monitoring the groups' activities, and says the members are dangerous because they are motivated by a deep belief in what they are doing.

...The A[LF] is a shadowy group which claims responsibility for a series of recent attacks... [on] butcher's shops and beekeepers... in Auckland. Unlike members of the anti-abortion lobby, who are prepared to be arrested for their beliefs, ALF members carry out their "actions" anonymously. Attempts yesterday to contact members of the ALF in Auckland failed. Other animal rights groups said the front was a loose group of international activists. It had no formal membership but vegetarians or vegans who followed its guidelines could call themselves ALF members. "You won't get anyone to admit to you that they're members of the ALF,"... said... [the] national president of the Royal N[Z] Society for the Prevention of Cruelty to Animals[, which - although]... many SPCA members were vegetarian or vegan... [-] did not in any way endorse the ALF... Despite this anonymity, police say they have a fairly good idea who some of the key members are. The... [NBCI's] threats assessment unit had been watching the ALF for some time. "These are not just yahoos we can just dismiss... If people believe strongly enough in a cause, and you only have to look at Ireland... it can lead to violence, including murder and arson,"... said the [head of the] bureau... While the front's activities in N[Z] had been confined to vandalism and wilful damage, in Britain[- where the ALF recently caused 'more damage in one year than the IRA' -] people had been killed in the name of animal rights... A group calling itself Auckland Animal Action said yesterday that no one had ever been hurt in N[Z] by ALF actions. Their spokes[person]... could not be contacted, but in a written statement... said that his group supported last Saturday's attack on "12 animal businesses around the Auckland area." ALF members were reacting to scenes of "animals raised in misery on factory farms, even when thousands of N[Z]ers have signed petitions against such practices," [the statement] said. "They have seen baby calves ripped away from their mothers within days of birth and killed so that humans can steal the milk that should have been theirs..." [The statement pointed out that] political lobbying took too long to get results; the ALF wanted the torture to stop now. "Although AAA campaigns legally, we obviously see the need for tactics such as this. All movements in the past that have struggled for some form of liberty, like the anti-slave movement, have used similar tactics."

- 1997

IN THE EARLY HOURS of May 21 last year, a group calling itself "Noah's Ark" broke into three National Institute of Health and Medical Research laboratories on the outskirts of Lyon, France. The intruders anaesthetized... then kidnapped 38 monkeys and 18 dogs, plus rabbits, rats, ferrets and other animals, while television cameras rolled. The attack halted research that had already led to a test for vision deficiencies in newborn babies. Mourned... [the] director of one of the labs: "A whole year's work is wiped out." Members of the... ALF... broke into a laboratory used by the Institute of Psychiatry at the Bethlem Royal Hospital in Beckenham, Kent, in February 1988. They "liberated" 80 rats, and stole documents giving the addresses of the lab's staff - whose homes were then defaced with paint. The institute, which had been seeking to learn about behavioural patterns and development, announced that all animal research would cease and its resources... "redeployed for economic reasons." The peace of Bristol University's Senate House was shattered by a bomb blast on February 23, 1989. The university had been a frequent target of demonstrations by activists, for using animals in experiments in its search for new drugs against Parkinson's disease, schizophrenia, and a virus that causes tumours in children. In this case, however, Bristol University did not give in, and continued its experiments. The animal-rights movement has held the biomedical research community under siege for years. The movement's modern prophet is... a professor of philosophy at [AUS's] Monash University, who became a visiting professor at New York University in the mid-1970s and was able to promote his ideas throughout the U[S]. But the movement's roots go back more than a century. In 1875, Britain's... Society for the Abolition of Vivisection declared: "Vivisection is monstrous. Medical science has little to learn, and nothing can be gained by repetition of experiments on living animals." This sentiment is endlessly parroted by contemporary "activists." It is patently false. Since... [1875], animal research has led to vaccines against polio, measles, mumps, whooping cough, rubella, diphtheria (...British antivivisectionists delayed use of the diphtheria vaccine there from 1925 to 1940, during which time the disease killed 53,558 people). It has meant eradication of smallpox, effective treatment for diabetes and control of infection with powerful antibiotics. Using bacteria injected into mice, researchers developed a new drug - ...tested on horses - that now controls river blindness, an ancient disease transmitted by flies that affects some 17 million people... The cardiac pacemaker, micro-surgery to reattach severed limbs, and heart, kidney, lung, liver and other transplants are all possible because of animal research. In the early 1960s, the cure rate for acute lymphocytic leukaemia in a child was [4%]. Today, because of animal research, the cure rate exceeds 70[%]. Since the turn of the century, animal research has helped increase our life span by nearly 28 years. And now animal research is leading to dramatic progress against AIDS and Alzheimer's... Animals themselves have benefited. We are now able to extend and improve the lives of our farm animals and pets through cataract surgery, open-heart surgery and cardiac pacemakers, and can immunize them against rabies, distemper, anthrax, tetanus and feline leukaemia... We should see even more spectacular medical breakthroughs in coming decades. But not if the animal-rights movement has its way... How effective has the... movement been? Very. British opinion polls suggest that roughly one-half of the public opposes all forms of vivisection and most of the

remainder accept it only reluctantly. In the U[S], recent polls reveal that more than 70[% of USers] support animal research – but about the same number believe the lie that medical researchers torture their animals... [‘Most animal experiment work is done under anaesthesia.’ In the US], the movement is spearheaded by... PETA... whose leadership insists that animals are the moral equivalent of human beings. Any differentiation between people and animals constitutes “speciesism,” [which they consider to be] as unethical as racism. Says PETA[’s] co-founder and director... “There really is no rational reason for saying a human being has special rights...” [The director] compares the killing of chickens with the Nazi Holocaust. “Six million people died in concentration camps... but six billion broiler chickens will die this year in slaughterhouses.” [The director] has been quoted as saying that meat-eating is “primitive, barbaric, arrogant,” that humans have “grown like a cancer. We’re the biggest blight on the face of the earth,” and that if her father had a heart attack, “it would give me no solace to know his treatment was first tried on a dog.” The movement insists that animal research is irrelevant, that researchers simply refuse to move on to modern techniques[or ‘they’ve been using animals for so long that they don’t know anything else’]. “The movement’s big buzz word is ‘alternatives,’ meaning animals can now be replaced by computer and tissue cultures,” says... [the] associate dean for research-medicine at the University of Western Ontario. “That is nonsense. You cannot study kidney transplantation or diarrhoea or high blood pressure on a computer screen.” Adds... [the] head of the Department of Pharmacology at Oxford University. “There is a simple test of the importance of animal work: open the *British Pharmacopoeia* at any point, and at the entry so found, ask, ‘Could this have been developed without animal experiment?’ Whenever I have tried it, the answer has always been ‘No.’” How then have the animal-rights activists achieved respectability? By exploiting the public’s rightful concern for humane treatment of animals[, and because it]... has taken the research community about ten years to realize that it is not dealing with moderates. It is dealing with organizations like... Trans-Species Unlimited, which trumpets: “The liberation of animal life can only be achieved through the radical transformation of human consciousness and the overthrow of the existing power structures in which human and animal abuse are entrenched.” - The ‘Animal Rights’ War on Medicine

Medical research depends to an unhappily great extent on experiments with live animals and primates are the most valuable of all animals for this because they are so closely related to [humans]. Experiments performed on rats or dogs are much less likely to be applicable to [humans]... Ideally, the great apes would be the ‘blueprints for [humanity]’... but gorillas, chimpanzees and orang-utans are rare and difficult to obtain. The Old World monkeys are the next closest to [humans], and among these the macaques are the most suitable. They are... imported by the thousand every year... By 1965 the annual ‘consumption’ of primates... for use in laboratories... in... Europe and the U[S]... was put at a quarter of a million. Many wild populations are already showing signs of drastic reduction as a result... Another scandalous situation is the lack of breeding programmes. If an adequate number of monkeys are born in captivity then – given an economical use of experimental animals – there need be no... drain on wild populations. But such is not the case... Steppe lemmings... were first bred in the laboratory 30 years ago... [T]he species has only a small number of chromosomes and the[y]... are easily distinguished. The lemmings are therefore an asset in the study of genetics and especially the genetics of cancer. [Other] advantages... are that the animals are... smaller than guinea pigs and therefore require less space[, are]... easy to feed and maintain, are docile in nature, and have no unpleasant odour. Moreover, they breed rapidly and grow quickly... – which is hard luck on steppe lemmings.

Emotions, such as fear, anger, startledness, pain and pleasure are being studied experimentally today in animals... [because m]any of these experiments would be extremely difficult or impossible with human subjects.

Vivisection could perhaps be justified morally if animals were different from humans, if they felt less pain and were less worthy of concern. But the practice is justified by some... p[eo]ple p[re]cisely because they are identical to us. Such philosophical niceties can have been of little interest to the animal experimenters who carried out 3.5 million pieces of research on living, struggling creatures in 1988... Britain has only nineteen inspectors to regulate millions of experiments and tens of thousands of premises licensed for vivisection. Their 7,000 visits each year allow them to see only the tiniest fraction of experiments. We do know that two thirds of the experiments they witnessed were performed without any kind of painkiller. Two million of the 3.5 million experiments were performed by drug companies replicating earlier trials or by industrial firms seeking to create new food additives, pesticides or household cleaners; 86,000 animals were subjected to ionizing radiation, while 1,000 were submitted to ‘physical trauma to simulate human injury.’ ...All British drugs have, by law, to be tested on animals. The pro-vivisection Research Defence Society argues: ‘Faced with a severe illness or a critically ill relative, most people would not hesitate to have their doctor prescribe an animal-tested medicine. Likewise even an ardent anti-vivisectionist would not want to see his [sic] pet dog die if an animal-tested antibiotic could save its life.’ But animal testing is not the medical panacea its supporters claim it to be. Penicillin... would never have been developed if it had been tested on... animals... Other drugs that have produced horrifying side effects, including Thalidomide... Opren... and Clioquinol... were said to be safe after extensive animal testing. Indeed, when [a p]rofessor... tested Thalidomide prior to its release, using cell culture, [the professor] found it to be teratogenic... but the medical and scientific world chose to ignore his advice in favour of the evidence provided by animal experiments. The W[HO] argues that only 200 drugs are necessary, yet there are nearly 20,000 licensed (i.e. tested on animals) on the UK market. Far from being pioneering forms of medication, most are merely slightly altered versions of commercially successful pharmaceuticals produced by rival firms... Legal ‘safeguards’ mean that tests are duplicated in different countries... The advances in health that are claimed to be the result of vivisection by the R[DS] – such as longer life expectancy, reduced infant mortality and a decline in diseases such as polio, tuberculosis, diphtheria and pneumonia – have been achieved largely through changes in lifestyle, including the introduction of better sanitation, housing and nutrition... Even for supposedly vital experiments there are alternatives to animal cruelty... Rabies vaccine can now be cultured from human cells, whereas the first vaccine, developed by Pasteur in 1885, involved killing hundreds of rabbits. Since 1970 the Hadwin Trust for Humane Research has invested... in developing alternatives to animal experiments in work on cancer research, rheumatism, liver failure, drug side effects, cataracts and diabetes... Pythagoras noted, ‘For as long as [humans] massacre animals, they will kill each other’... [R]espect for human life is enhanced by respect for the life of other species.

It is difficult to estimate the numbers of animals used... for experiments... In 1876 it is thought there were under 1,000 animals being used for research in the UK. The figure today is between three and four million. Most of these animals will be destroyed after the experiments... Use of experimental animals in the U[S] is... estimated in the region of 70[million] to... 120 million. Worldwide the total is probably somewhere around 500 million... The animal rights movement is said to be the fastest growing reform movement... [M]any... who believe in the... movement are not only against experimenting on animals, [they] also believe that meat eating, zoos, hunting, even keeping pets is wrong... Both animals and humans feel pain, hunger and fear[, but]... should all animals be treated in the same way? Is it all right to kill a rat because it is a pest, but not right to kill a fox by hunting it? Is it right to experiment on a mouse, but not on a dog or a chimpanzee? Is it right to breed animals, like pigs, for food, but not right to breed animals for experiments? ...Is urgent human need more important than animal rights? ...Animals have been experimented on for over 2,000 years... If animal research is not allowed for multiple sclerosis, kidney failure or epilepsy, for example, then either humans must be experimented on or there can be no research at all... Some say that if we accept that it is right to experiment on animals in order to benefit millions of humans, then it might be right (and logical) to experiment on human beings for the same reason. This logic led to humans being experimented on by the Nazis... during... [WW2:] Is there any possibility of obtaining from you two or three professional criminals to be placed at our disposal? These tests, in the course of which the ‘guinea pigs’ may die, would be carried out under supervision. They are absolutely indispensable to research

into high-altitude flying and cannot be carried out, as has been so far attempted, on monkeys, whose reactions are completely different. [Letter... to Himmler, Nazi head of Gestapo, 1944]... Some people say that not all experiments on animals are useful or accurate, but the alternative does not have to mean experimenting on humans... FRAME (Fund for the Replacement of Animals in Medical Experiments) is an animal welfare charity that... is... developing alternative methods that can replace animal experiments safely without restricting scientific progress.

An animal rights group plans to protest today at a Cancer Society Daffodil Day fundraising auction in Christchurch. The Anti-Vivisection Society said it would take the action because it opposed the Cancer Society's promotion and funding of vivisection... 300,000 animals were used in N[Z] experiments every year, based on national animal ethics advisory committee figures. Last year, four anti-vivisectionists chained themselves together and occupied the Cancer Research laboratory at the Auckland Medical School, in protest at drug trials on animals. [● 'A strict vegetarian is under attack for speaking out in support of animal testing to help cancer treatment. The former Beatle's wife recently died of cancer, aged 56. The pair were strong animal rights supporters and had always been against experiments on animals. But in a BBC Radio 2 interview, the musician said tests on animals to beat cancer in humans were "absolutely necessary." His u-turn came after his wife had to take drugs thought to have been tested on animals to treat her breast cancer. His wife had been kept in the dark about how the drugs may have been tested on animals. The Cancer Research Campaign was delighted the musician had made his "brave statement" and hoped it'd influence people to see the sense in animal testing of "very nasty chemicals." An actor and patron of the Humane Research Society also supported the musician's stand. The British Medical Association said some animal testing was acceptable to develop a better understanding of diseases and how to treat them. But the Animal Rights Coalition said supporters of testing on animals were "talking rubbish." Animals reacted differently to humans and thus there was no benefit. "Because of who the musician is thousands of people will be taken in by his words."]

... 'the three UK companies still testing cosmetics on animals have volunteered to give up the practice accounting for less than 1% of all testing on animals in the UK'.

...NZ] scientists have developed a radical system for creating vaccines that will save[the lives of many] laboratory test animals... At the cost of more than \$2 million, with additional grants from the Public Good Science Fund... a Wellington company... which makes mainly sheep and cattle vaccines... developed two systems of ensuring vaccine potency and testing the presence of antigens using fewer mice... [Previously, the company] used... about 250 mice for each batch of vaccine... about 30,000 [NZ mice are tested on each] year. It is expected to save more than a quarter of a million mice worldwide each year once the test is adopted as an international standard... A spokes[person] for the National Animal Ethical Advisory Committee... [described] the breakthrough as a "good example of what can be achieved when scientists put their minds to doing something" about animal welfare... [Unfortunately,] the company was held up waiting for approval by European countries of its antigen test. Canada and the... U[S still haven't] approved the potency system. [By the way, 'in recent years, grain farmers on the prairies have struggled from harvest to harvest. But a few neighbouring farmers are making a good living by collecting the urine of pregnant mares (PMU), which is prized by pharmaceutical companies for its estrogen content. Depending on the estrogen content, the urine is worth \$US15 to \$23 a gallon. Although millions of gals depend on horses for their daily dose of estrogen, PETA – the world's largest animal rights organisation, with about 450,000 members – recently decided to make a "focus issue" of PMU farming, which it considers cruel on two counts: the treatment of the pregnant mares, who are kept indoors for six months in stalls; and the fate of the foals born every spring. PETA has objected to the beef and dairy industries for years and has still barely touched America's culinary conscience, but PMU could be an easier battle. People seem more sympathetic to the suffering of a species that is often a pet. One friend told me that her first spoken word was *horse*, adding, "I lost my virginity wearing a little red bathing suit and riding a horse bareback." Jung describes how pregnant peasants once sought out stallions to nuzzle their genitals and induce labor. Only a horse could be so virile and so obliging. PETA prefers to emphasize less sexy subtext. This issue "goes right to the heart of motherhood, right to the heart of human guys dominating vulnerable gals of all species." Last summer, in the first of what promises to be many PETA publicity stunts, three people were arrested at a demonstration at the Philadelphia headquarters of the makers of Premarin, North America's leading estrogen-replacement drug. The same company has just announced plans for a \$123 million expansion of its estrogen-extraction plant']...

MELBOURNE researchers say an artificial artery they have developed from a cow's ureter works better than anything used around the world. It is the first time a tube not originally a blood vessel has been taken from an animal and used to replace damaged human blood vessels... [I]mmediate use would be repairing damaged leg arteries, often caused by smoking... but the prosthesis might be adapted for cardiac surgeons to use in bypass surgery... Meanwhile, a [local research group has undertaken]... an audit of heart donations to identify factors which, if addressed, might increase the number of transplants. Criteria for accepting hearts for transplant which could be relaxed include donor age and findings from echocardiograms, the... report says. The audit also found that the number of transplant operations was limited by the availability of donors. Between December 1987 and October last year, 267 hearts were offered to the cardiac unit at Green Lane... The average age of donors was 31 years and 61[%] were males.

...A whole new generation of artificial hearts is being developed that could help ageing baby boomers with serious heart disease and children born with heart defects, say researchers. Fourteen years after... the first... [operation to transplant] a permanent mechanical replacement heart – the Jarvik-7 – ...smaller, more efficient artificial hearts[are] being tested in animals. Human trials should begin by the end of the decade... While heart failure is the only cardiovascular disease on the increase, the number of hearts available for transplants has peaked, the researchers say. Since 1969, when the first artificial hearts were used as temporary measures, and since the 1980s, when the Jarvik system was tried and abandoned as a permanent replacement, researchers have tried to develop a system small enough to fit into the chest cavity. That meant developing a portable power source and replacing the cumbersome pneumatic pump that characterised the Jarvik. The two systems under development have accomplished this... Both systems deliver power through the skin. Along with some miniaturisation, the size problem was addressed by having the hearts pump through a single ventricle, alternating sides... Thousands of patients have already received what is known as a left ventricular assistance device. The device leaves the natural heart in place, using it as a reservoir for blood. A mechanical device is attached to replace the pumping action of the left ventricle. The present generation of devices is used only to keep patients alive until a heart transplant becomes available. But many recipients, sometimes waiting more than a year for a transplant, have done well with the portable systems.

...Medical doctors and agricultural scientists are working together to study the effects of human heart failure through experiments on sheep. Yesterday, at a laboratory resembling a cardiac intensive-care unit, a cardiologist from Waikato Hospital precipitated a heart attack in a sheep. The sheep will now have its weakened heart tissue injected with a growth hormone and then the tissue-repair process monitored... The project is part of a joint effort by two leading research centres, the Waikato academic division of the Auckland Medical School and the crown research institute, AgResearch Ruakura. The doctors say people with kidney failure, thyroid problems and heart conditions should eventually benefit from the project, which was looking at muscle biology, nutrition and reproduction... The researchers were seeking more funding but had been buoyed by a \$50,000 grant from the Heart Foundation. They have also received assistance from the Waikato Medical Research Foundation and Med-lab. A Ruakura scientist... said the Ruakura ethics committee had regularly reviewed and approved the experiments... [The chairperson] of the national Animal Ethics Advisory Committee, which watches over local ethics committees, said... [the] experiments would have been looked at by a veterinarian, members of the RSPCA and lay people... "It sounds as if, potentially, it is a very useful piece of research." ...[however, a spokesperson] for Save Animals from Exploitation... was sceptical about the impact of the studies on human diseases.

...Luck is often a big part of research but it usually comes hard on the heels of a lot of painstaking work. Again that has proved the case for the Waikato researchers who stumbled on a world-beating discovery just when they thought they might be staring at failure. Working with mice... scientists at AgResearch... were trying to turn off or knock out a gene which affected milk production. But they found that the... gene, known as STAT5b, which is present in all mammals, including humans... interacts with growth hormones, allowing [guy] growth to outstrip [gal] growth. Easily recognisable as the growth spurt [boys] have at puberty, the scientific term is “sexual dimorphism.” ...Now there is more work to be done. Researchers are already looking at implications for meat production, especially reduced fatness, fibre production, lactation, immunity and more. And N[Z] has a new export. Stunted mice have already been sent to US laboratories.

...This week... Ruakura Agricultural Research Centre... scientists gave us news of a genetic finding which could deliver new breeds of super stock. In late July the centre, with its neighbour Waikato University, announced the discovery of a key gene which allows... [guys to outgrow gals. Furthermore, while the NZ] public has heard of the two major breakthroughs in which Ruakura has finished first in an international race for acclaim[it] has not heard of the many times Ruakura has been pipped at the post. There are no prizes for coming second in this contest but it does mean that top-notch science is being done [at the centre]... One of the reasons for the... [success] is the network between the different science groups on the campus which enables a discovery to be translated into an improved animal, usable technique or product within a few short years. In its simplest form the network allows one scientist to identify a gene, another to inject it into a cell and on into an embryonic animal, and yet another to produce multiple numbers of the animal. Work under way at Ruakura could mean that around the turn of the century a range of designer animals could roam our farms all with production features desired by almost any number of different markets. There could be cows which give more milk, containing less water and fat but greater protein. Some milk... could contain nutritional or pharmaceutical properties which would be easier for sick or old people to digest, or prevent babies suffering diarrhoea. The fat from the milk could be softer. That way no extra processing would be needed to achieve spreadable butter. It is a joke now but maybe one day that naive city kid could stroll up to a cow and get chocolate milk from one teat [and] strawberry from another... [I]f present work is successful, the country's possum numbers may... drop... because Ruakura scientists... have... figured out a way to reduce the amount of milk possums produce[thus lowering]... their ability to raise young... Courtesy of the reproductive technologies group... the sex of sperm and embryos would be known, enabling genetically improved animals of the desired sex to be reproduced by only the top cows... [D]airy farmers would only need between 20 to 30 of their top cows to breed replacements for the herd. That meant wombs to rent. The rest of the herd could be implanted with beef cattle embryos... Once genes had been identified which, say, produced the marbling of fat in beef so desired by the Japanese, cattle could be bred with that trait... [A]nimals... could even have in-built defences against pests – a sheep, for example, that was unpalatable to the blowfly... It is, as they say, all in the genes... [In international news, the Scottish scientists who] made headlines in March last year when [they] cloned sheep from cells taken from embryos and cultivated them in a laboratory... have produced the world's first clone of an adult animal. The clone, a sheep named Dolly, was now seven months old and was showing every sign of normal development. The team at Edinburgh's Roslin Institute said that the breakthrough would provide a massive boost to the battle to understand human and animal diseases... But it acknowledged that there was no scientific reason why the technique could not be used to produce... identical copies of adult humans, raising fundamental concerns... [I]n... the film *Boys From Brazil*... copies of Hitler are created from one of his hairs.

...To clone Adolf Hitler, say, they would first have to get some living cells from Adolf I... [I]t could be technically possible to produce his look-alike genetic twin, Adolf II. But looks are not enough. This baby would be just the start. The next step would be to re-create the social environment which Adolf I grew up in. This of course means Vienna in 1889. Tricky, that. First of all, rebuild the place, then get to work on the people. Paid actors just won't do. Geneticists will have to clone an awful lot of people, from emperor Franz Joseph and Sigmund Freud, down to the mother of Adolf I, and his classmates. Since each of them was a product of their own particular social setting, their friends and family will need to be cloned as well. This is only the beginning... W[WI] had a massive effect on the psyche of Adolf I, so if Adolf II is to be identical [they] will need a repeat of that war. [Adolf II] probably won't be fooled by virtual reality, so they will have to create the real thing. This will involve a lot of cloning, and a lot of killing, and the rest of Europe could get a little annoyed at having to go through the whole business all over again. Just what or who will emerge from all this? Will Adolf II be a psychopathic megalomaniac? Maybe, but maybe not. [Adolf II] could simply turn out to be an introverted Viennese house painter, a great disappointment to his sponsors... If the aim of human cloning is to produce truly identical human beings, it simply won't work. On top of this, cloning would be a lot more expensive and a lot less fun than the traditional old-fashioned low-tech form of reproduction.

...The successful cloning of a sheep proves it is possible to clone dead humans who have been frozen according to strict guidelines, the Scottish researchers who cloned the animal said yesterday... [T]he Roslin Institute team had previously warned there was “no way that we can clone from a frozen animal or human.” However, they said yesterday that this referred to animals or humans placed straight into freezers after their deaths.

...Just weeks after British scientists... said humans could soon be cloned, claims have emerged that just such a clone is alive and well and living in Belgium. Doctors accidentally cloned the unidentified child, now aged four and living with his parents and twin brother, during infertility treatment for his mother, Britain's *Sunday Times* newspaper reported yesterday. But the unintended end-result, which was detailed in a science journal at the time, failed to capture popular coverage. The Belgium cloning occurred as doctors tested a new method of assisting the implantation of a fertilised egg into the womb. Scientists had rubbed the frozen egg with a glass rod – a process they discovered three weeks later had caused the egg to split into two embryos after it was placed in the womb... [C]loning a human... is illegal in many countries, but not in Belgium.

...China's cloning experiments have resulted in the production of eight animals from embryonic cells since 1993, a... Beijing... scientist... said yesterday... “The results were published in technical journals but not [through] the Xinhua news agency so very few people know about it... We have succeeded in cloning rabbits, pigs, goats and bulls...” ...the Government had given... the Academy of Agricultural Sciences' Institute of Animal Sciences... more than one million yuan... for the[5-year-old] project... The research was unlikely to be continued because of a lack of funds...

[Britain's] Agriculture Ministry is to stop funding the project that produced Dolly... [T]he *Daily Telegraph*... yesterday... quoted a ministry spokes[person] as saying: “If they have researched what they were supposed to have researched, then that's it. The funding will... end.” The... cloning team was said to be despondent, fearing redundancies and scientists being poached by rival teams from abroad as they seek to catch up...

Researchers have produced two monkeys with a procedure similar to that used to clone a sheep... The cloning of the rhesus monkey is less dramatic than the cloning of the sheep because primitive embryos were duplicated, rather than adult animals. But it marks the first time the technique has been used to produce animals so closely akin to humans... The... monkeys... are being raised by... surrogate mothers and will probably live... 20 years. Researchers want to see how the animals reproduce... Because monkeys are so closely related to humans, the Oregon research adds fuel to the growing controversy over the creation of life through science... This week[the US] President... banned federal funding of cloning and German[y's] Research Minister... called for a worldwide ban on cloning human[s]... Danish scientists trying to produce cloned cattle said they were halting experiments pending a full debate. The scientists behind the technique, developed at the Roslin Institute and PPL Therapeutics Plc, told British MPs this week that work with human eggs would be “distressing” and “offensive.”

...Breakthrough... technology cloning lambs with a human gene... is similar to techniques already under way on a backwater [NZ] farm. Scientists at the Roslin Institute in Scotland, who produced... the world's first cloned sheep, announced yesterday that... [NZ has] two cloned lambs... [which] had also been genetically altered to carry a human gene. This transgenic process allows animal milk to contain a blood-clotting protein that can be extracted for use in treating human haemophilia. The modification has been hailed as... it allows humans to benefit from cloning technology. Yet... similar genetically modified sheep are already grazing Waikato paddocks. On a small farm at Whakamaru, 140km south of Hamilton, this year's

lambling season... saw the birth of a flock of transgenic lambs which carry human material in their genes. The material has made them produce a human protein, hAAT, in their milk... [which] is being tested for use in treating cystic fibrosis and the lung disease emphysema. Although... [AgResearch] was close on the heels of the [Scottish] breakthrough when its renowned scientists cloned two lambs this year, the leading agricultural centre has not yet produced transgenic sheep like those at Whakamaru. The Whakamaru farm manager... said that when the transgenic lambs were born... tissue sample was sent to the farm's owners in Scotland for DNA analysis... "Some of the 100 lambs are transgenic, but we don't have an exact number yet – we know it should be roughly 50[%]." ...The genetic research was done in Scotland... Semen from transgenic rams at East Mains in Scotland was imported about a year ago for breeding with local ewes in quarantine at Whakamaru. - 1997

A public hearing will be held today on an application by a Scottish company to "field test" sheep which have been modified with human genes... Today's hearing in Wellington before the Government's Environmental Risk Management Authority is part of a bid... [by] PPL Therapeutics... to build its development flock to between 1000 and 1500 animals... But critics are expected to argue that because the hAAT was produced from the use of human genes in sheep, there[is] an extraordinary risk that the processing of the protein in the sheep's mammary tissues rather than a human liver could go wrong. Whatever went wrong could then be transmitted to other sheep, or to humans... The company originally wanted to develop a production flock of 4000 milking ewes, with a manufacturing plant on the farm to extract human protein for pharmaceutical use... Overseas, PPL... is also working on pigs that carry human genes to make animal-to-human organ transplants possible.

...THE world held its breath... [in 1967 when a South African] medical pioneer was bucking the odds. Exhaustive laboratory research and textbook theory gave no guarantee for this historic operation – the world's first human heart transplant. The patient lived for 18 days before dying of pneumonia... 30 years later, human organ transfers are reliable and commonplace, saving the lives of thousands of previously doomed patients. But there's a crisis building: organ donation is slipping further behind growing demand for life-saving operations... The chronic shortage of donor kidneys, hearts, lungs and livers is forcing the medical community to seriously consider an alternative, highly controversial, source for transplant organs – the common pig... Raising genetically altered... pigs for human transplants is set to become a multi-billion dollar industry. Some estimates put the annual world demand for these pigs at 100,000 a year. There is an annual shortfall of 25,000 organs needed for transplant just in the US... With the most common cause of sudden death in the US being gunshot wounds, surgeons there have greater access to organs than their [NZ] counterparts. Vehicle accidents and cerebral haemorrhage victims are the most common source of organ donation in... [NZ, but 'the supply of donor organs has decreased since we started wearing seatbelts', and] surgeons had access to only 42 donors declared brain dead last year. Yet at any one time, 350 desperately ill patients are waiting for kidneys, 10-14 for a healthy heart, and 4-6 for lungs. N[Z] averages 10 organ donors per million people, while the US has 21, UK 14.5, A[US] 10.3... and Spain – where organ donation is promoted through public campaigns – 29... Many European countries have adopted "presumed consent" legislation to meet organ demand. Everyone is automatically an organ donor unless they exclude themselves. But health professionals in N[Z] are sceptical that public opinion would accept this legislation because of cultural objections. The taking of organs from a dead person is tapu (forbidden) to most Maori. While 70% of [Pakehas] and 50% of Asians and Pacific Islanders support organ donation, only 5% of Maori agree to requests... While the first tentative attempts to transplant animal organs to humans – starting in 1964 when a chimpanzee heart was unsuccessfully used – were considered weird science, advances in research over the past decade make the goal realistic... Pigs are preferred over chimpanzees and baboons because they are more available and their organs are roughly the same size and work like human organs. To minimise exposure to disease, the genetically altered pigs are removed from the womb by Caesarean section. They are hand-raised by humans in a sterile environment and are never allowed to suckle or come into contact with their dam. Despite the outcry from animal welfare groups and warnings of high risk of cross-over diseases from pigs to humans[, the]... director of the [NZ] Liver Transplant Unit at Auckland Hospital, believes limited clinical tests will soon take place in the US on humans... "[However, pig] livers continue to produce proteins after transplantation that are incompatible with humans." ...[furthermore,] British scientists last year found that a virus, called porcine endogenous retrovirus (PERV), whose genes are found scattered throughout a pig's genetic make-up is shed by pig kidney cells. In cell culture, it can infect human cells... [A] renal physician at Auckland Hospital[believes] someone will soon transplant a pig organ, without waiting for all the pre-clinical issues of rejection and infection to be resolved. "Technically, any surgeon can transplant a pig organ. Rejection is the big issue. We still lose 20% of [human] kidney transplants to rejection... [and] there is a risk now of transplanting infections, such as hepatitis B and tumours, in human to human transplants." ...Around 14% of wealthy Saudi Arabian recipients of kidneys bought in India are reported to have Aids.

...[to find an AIDS vaccine, 10 monkeys were injected with a test vaccine, then they and a group of non-vaccinated monkeys were injected with a strong dose of a virus which is the monkey equivalent of AIDS. All of the non-vaccinated monkeys died, but only one of the vaccinated monkeys did. The test was repeated using different strains of the virus.' Incidentally, 'the Professor of Neurosurgery at Case University in Cleveland, Ohio, wants to perform the first human head transplant. "It's over 20 years since I successfully transplanted the head of a monkey on to the body of another. The monkey could see – his eyes followed you round the room – and eat, and bite you if you were stupid enough to put your finger in its mouth." Unfortunately, the monkey couldn't move. It was paralysed from the neck down. "How to connect the spinal cord to the new head is a difficulty I haven't tried to solve. It's an immensely complex problem. But it'll be solved, in my view, and before too long." The question of who exists after the head transplant raises profound questions about the nature of personal identity, but the professor doesn't have much time for them. "I think everyone accepts that personality lies in the brain." The most common reaction to the idea of a head transplant is simple: It isn't merely a question of how could anyone do that, but why would any sane person want to? "Yes, I am aware of that," says the 70-year-old. "But that's a very uninformed reaction. There was a very similar reaction when organ transplants first became possible nearly 40 years ago. And I've no doubt that within the next 50 years, head transplants will be as common as kidney transplants are today."']

...A South Auckland company forced to halt pig cell transplant trials on humans... hopes to resume its work with insulin-dependent diabetics... Diatranz halted human trials when fears arose overseas that pig virus – ...or PERV – might cross species to infect people. But the firm says an international research paper published in the American *Science* journal today has found no evidence of the virus in 160 patients from several countries who received a variety of pig tissues[, including 'eight Parkinson's Disease sufferers who have had pig cells (obtained from pig fetuses) injected into their brains to replace damaged cells'. 'Insulin-producing pig cells continued to produce insulin for at least six months and patients were able to reduce their insulin intake']... The Ministry of Health still ha[s] to give approval for human trials to resume... [on six NZ] patients...

While regulators are still assessing the risks of allowing a milking herd of 1000 genetically modified sheep, a call has come... [from] AgResearch... for field tests of engineered dairy cattle... [which] would have three gene modifications... One change would add extra copies of milk protein genes, copied from goats or cattle, to boost the percentage of casein produced by cows. The higher the concentration of casein... the more suited... the... milk... is to cheese manufacturing. Another would insert the human myelin basic protein so... myelin, the fatty covering that insulates nerve cell fibres in the brain and spinal cord... could be extracted from milk... for treatment of... the degenerative nerve disease multiple sclerosis[, and maybe even]... rheumatoid arthritis... A third trial would produce a "gene knockout" in transgenic cattle with deletion of the gene that controls beta lactoglobulin... the main whey protein in the milk of cows and many other animals, but[which] appears not to occur in human milk... At least two of the types of engineered cattle would also carry "marker" genes showing resistance to the antibiotic neomycin.

...the Environmental Risk Management Authority yesterday... approved, with controls, AgResearch's experiment to insert a human gene into cows to produce human protein myelin in their milk... The... Greens co-leader... was disappointed at the decision... Overseas research showed that myelin could be made synthetically, [the leader] said, and AgResearch claims that it could be used to treat multiple sclerosis were unproven.

...A British company may have just provided N[Z] with a leg-up into the most profitable era it has ever known. Or it may have begun a process which will eventually erode whatever prosperity the country has so far achieved... PPL Therapeutics has won approval... to breed 10,000 sheep with a human gene on a central North Island farm... Boom or bust – what does N[Z] stand to get out of the PPL deal...? The chief executive of Meat N[Z], says biotechnology is part of the fifth wave of the industrial revolution and the country's livestock producers need to ride it for their lives... The... chief executive... of... AgResearch... [also] believes that such work will keep N[Z] on top. "...we need to thoroughly test every avenue which may help in keeping our industries at the leading edge." ...But... Auckland University['s] associate physics professor... strongly disagrees... Putting the human gene into sheep crosses new boundaries and violates "the exclusionary mechanisms of nature at a molecular level... I see this as a continuation of our stuffing around with the basis of nature. We have really interfered in a way which we don't understand, degrading everything as a result of our agricultural practices and now this is a way of doing it in a more uncontrolled way. We ought to jump off this bandwagon altogether and go organic... In the end, my reaction to the judgment is that money talks. It is because, according to PPL's assessment, it is a billion-dollar-a-year industry. If it was a hundred-dollar-a-year industry, it would never have gone ahead." ...[In another development, dotting NZ] pet-owners are lining up to have their animals immortalised through cloning. An... [Aucklander] is desperate for a laboratory to preserve cells from her treasured 13-year-old dog... who is dying of cancer. [The Aucklander] is one of six people to approach the AgResearch centre... [The Aucklander] said yesterday that if scientists could offer cloning at a reasonable cost within a few years, [it would enable her to] order a... duplicate[dog]. The idea came to her two weeks ago... [after reading of the centre's] cloning expertise... the clamour for cloning pets had[also] been prompted by the birth of... a clone of the last surviving Enderby Island cow... However, [the head of the cloning team at AgResearch] did not like the idea of cloning pets and Ruakura was not offering the service, though that could change... In the [US], a Texan millionaire is paying a university more than \$10 million to clone his collie-Alsation within two years... Clones have the genes of their origin but not the personality, which is formed by environment.

...the cloned sheep that contain... human genes, will have to be milked for the medicinal proteins[their bodies] produce... But scientists at the[US] Department of Agriculture have found a more copious source of bodily fluids... Writing in the journal *Nature Biotechnology*... [the scientists] said they had genetically engineered mice that produce human growth hormone in their urine. This could lead, they hope, to herds of genetically engineered animals that produce useful drugs in the inevitable byproduct of any creature... [T]he technology only recently became possible, when researchers at New York University discovered a gene that is expressed only in the lining of the bladder. [The Department of Agriculture] group took the gene, known as uropalakin, and replaced part of it with the gene for human growth hormone... because it is easy to track... Like all genetic engineering technology, it is hit-and-miss and not all the mice "expressed" the gene and not all produced the hormone. But it worked well enough. [The head of the group] thought the approach could eventually be better than techniques that aim at milk. For instance[, there]... are two problems with the milk approach. Firstly, only [gal] animals can produce it. Secondly, breeders do not even know if they are producing the required product in the animals' milk until they are old enough to be mated, produce a baby and be milked. This can take years. But urine is produced by all animals and very early in life... [The scientists] also hoped it would be easier to purify proteins from urine – which is basically salt water – than milk[, and that]... the animals could one day be manipulated so their waste was less polluting. "The single biggest problem in animal agriculture right now is waste management,"... Such a development could make a problem into a solution. Animal waste from intensive factory farms is blamed for the blooms of toxic *Pfiesteria*, a water-borne organism that kills fish and may make people sick when they come into contact with it.

...['stem cells may be used to grow replacement teeth.' Already.] French doctors have grown skin with hair follicles using stem cells taken from adult mice, a potential breakthrough for treating baldness, severe burns and skin cancer, the National Institute for Science and Medical Research said.

...A Greek doctor working in Japan claimed a medical breakthrough yesterday with rats and mice that produce human sperm... [T]he key to success was the use of the animals' own eye cells in the operation... Previous attempts to grow human spermatogonia in rats and mice in Japan and the U[S] had failed due to the animal's white blood cells attacking the human transplant within the testes. But when some of the animals' own eye cells were implanted in the testes they killed off the white blood cells... [The Greek doctor] said there was much work ahead before it could be applied to humans. "I have to conduct many experiments before determining that these sperm can function properly,"... [A Japanese professor who supervised the doctor's] work, said it was "up to society to decide" whether to use such sperm for humans. "It is beyond our judgment..."

...Andi, the first genetically engineered monkey, was introduced to the world yesterday... [The] rhesus monkey, was born in October after scientists in Oregon manipulated his genetic makeup to include a gene for a green fluorescent dye. The American scientists used the dye, extracted from a jellyfish, as a marker to show "proof of principle" that monkeys can be genetically modified. They intend to produce monkeys with genes added or taken away so as to emulate human diseases such as breast cancer, Parkinson's or diabetes. But the development has raised fresh ethical concerns about the direction of genetic research, with some top scientists calling for strict controls on experiments. [● A 'US artist has commissioned a rabbit crossed with jellyfish to turn fluorescent green in certain light.'

... 'spider silk is comparatively stronger than anything humanity has made', but collecting sufficient quantities of it from laboratory spiders is inefficient. Now 'a scientist has replaced a goat gene with a spider gene in the hope that goats will produce the required enzyme in their milk. The enzyme would then be extracted from the milk and used to create artificial spider silk, which could be used, for example, in bridge supports and bullet-proof vests.' Editor's note: At least one medical researcher has pointed out that 'we use genes to cure disease now – so we don't need to do tests on other animals']...

RESEARCHERS at Stanford University in California say they have developed a new and improved "virtual frog" so squeamish students can dissect it over the Internet without the blood and gore associated with an actual laboratory. The Frog Island web site... lets users view the computer-simulated frog from any angle, or hit a command that turns its skin transparent so its internal organs... muscles... and skeleton are visible... [In further medical news, an AUSn]-designed artificial heart pump will be tested on patients for the first time within weeks... The temporary insertion of an inert device would fulfil regulatory requirements that it was anatomically correct... "This is a landmark step because it takes us out of research and development and into the clinical trial process..." the managing director... of... MicroMedical Industries said...

Patient with experimental heart pleasing surgeons... Four days after last week's groundbreaking surgery to implant... a... softball-size... self-contained... battery-powered titanium-and-plastic... artificial heart... device... known as the AbioCor, ...the patient was awake and able to communicate with his family... The patient, in his mid- to late-50s, suffers from diabetes, chronic renal and kidney failure and had had multiple heart attacks. Even to qualify for the experimental surgery, [the patient] had to have been given an 80[%] chance of dying within 30 days... [T]he... surgeon who performed the... seven-hour... operation, said there was a chance the patient could live well beyond the 60 days that is the initial goal of the experimental surgery and even go home... Only about half of the 4200 Americans on waiting lists for donor heart transplants received one last year... Since the operation, [a]Jewish Hospital spokes[perso]n... said the hospital had received "many many calls" from heart patients...

It is a story so awful, it is almost beyond belief. A family of seven dwarfs rounded up by the Germans and sent to Auschwitz to be gassed with millions of their fellow Jews. They were saved only because... Dr Joseph Mengele... wanted to perform experiments on them... "It was torture, but we knew as long as [Mengele] had an interest in us, we were safe..." ...[but t]hey feared when the experiments were finally over, they would be pushed into jars of formalin and exhibited for all to see... [However, in] January 1945, as the Germans were losing the war, Mengele... fled

Auschwitz... Mengele had arrived in Auschwitz in May 1943 to be the camp's chief doctor, responsible for the selection process. [Mengele] became known as the Angel of Death, because of the obsessive, savage experiments... [the] SS officer... was conducting on his captive human guinea-pigs.

...BEHIND every new miracle drug that makes headlines... are the people who volunteered to be its guinea pigs. Today, there is wide agreement that the system created in the 1970s to protect those pioneering test subjects is failing at a time when the number of medical trials is exploding. In fact, the U[S] government does a better job keeping track of the 299,011 actual guinea pigs[– plus '338,574 rabbits, 246,415 hamsters, 82,454 dogs, 72,331 pigs, 52,327 primates, 26,035 cats, 34,046 sheep, 47,967 other farm animals and 146,579 other animals' –] used in research, according to the latest count, than its human subjects. No one in government or industry knows how many people are involved in medical tests each year – let alone how many are killed or injured, or exposed to unsafe or unethical practices. But it is clear that those who are most desperate for a medical miracle are the most vulnerable to medical exploitation. This month, for the first time, four US government reports concluded the system must be fixed. "People are getting hurt every day by seriously bad research," said... a professor of medicine at Stanford... [who is] a member of... [the presidential] bioethics advisory committee, which is preparing a separate report on protecting human test subjects. "This is about therapeutic misconception. It's basically coercing patients by lying to them. Maybe it's under the guise of trying to help people, but the bottom line is everyone is winking their eyes at each other. But the patient doesn't realise this." ...For the most part, federal officials say, people who volunteer to test drugs in the US are treated well. Regulations require that human studies be reviewed both for scientific and ethical merit, and that each participant be told of the risks before being allowed to participate. But... market forces... [stretch] protections to the breaking point. The pressures increase in privately sponsored research... [– from] 1975-80, almost all human research was done at university medical centres and sponsored by the government[; today]... most of those who volunteer as test subjects are in privately funded studies[(which)]... tend... to move more quickly than government-based research...[.]. The number of people in an average... trial has doubled in the past 14 years, to 3567 per trial... One current trial has 50,000 participants. In addition... trials have become more complex, with an average of 146 procedures performed on each patient.

...[*Testing the trial testing* In developing a new drug, there are few quick fixes. First, an original design has to be dreamed up. Then its potential needs to be demonstrated in test tubes and laboratory animals. After that it must go through three separate phases of clinical trial on human guinea pigs. In the US it takes, on average, \$86 million and over 9 years to go from the first human tests of a substance to final regulatory approval. Figures from Europe are similar. And for every five compounds entering the initial stages of human testing, only one will get to market. The consequences for failure can be stark, particularly for small companies. No regulatory agency or drug firm wants the blame for another thalidomide tragedy. Until recently, the US FDA was famous both for its stringency and its slowness. By the late '80s it was taking over 2 1/2 years, on average, to trawl through all the data from the clinical trials of a drug before approving it. New cancer medicines often reached British patients more than half a decade before US doctors were allowed to use them. The justification for this was thoroughness. But there is little evidence that Britain was courting more risks by being swifter. Indeed, a study found that the recall rates of drugs after they had been approved for sale were only slightly higher in Britain (4%) than in the US (3%). Things improved somewhat after 1989 as a result of special "fast-track" rules introduced for Aids drugs. Then, in 1992, Congress gave the FDA 5 years to speed up its act across the board, and the power to collect over \$300 million from drug companies to help. But no amount of bureaucratic reform will make the trials themselves any faster. If anything, recent pressure has been the other way. New drugs approved by the FDA in 1994-95 spent an average 7.7 years in trials on people – over twice as long as such tests took in the '60s. There may, however, be a faster way. Tools such as trial computer simulations are still in their infancy, but their potential to streamline things is considerable. And they have a bonus – in virtual reality, unlike the real reality found in clinics, nobody gets hurt when things go wrong.]

...[the co-director of the Chimpanzee and Human Communication Institute at Central Washington University, says: "Chimps are not human, but equally there's no giant leap between them and us. Instead, it's a rather fuzzy distinction. Here in the US it's legal to put a chimp in a 5 foot by 5 foot by 5 foot cage for life, feed it, water it and give it a toy. There's something terribly wrong with that given what we know of their social behaviour and cognitive ability." They don't need to have haircuts, but 'like humans, each set of fingerprints is unique and under a microscope their blood is virtually indistinguishable from ours'](we have been said to share 98.5[%] of our genetic sequence... [with] chimpanzees... though a study published this month has revised this down to 95[%]). Furthermore, 'when chimpanzees meet after having been apart they greet each other by touching or even clasping hands and kissing; some are ideal mothers, caring for their babies zealously, others are over attentive, and their babies are "spoilt", and yet others neglect their children']...

WHAT distinguishes people from animals? A soul, insists the priest. An innate ability to distinguish right from wrong, declares the philosopher. Lippie and high heels says my three-year-old daughter. The priest's answer is the obvious one, although most scientists would not agree. After all, a uniquely human soul and evolution seem incompatible. If chimps and people shared a common ancestor just 5 million years ago, why did we acquire souls while they didn't? Make-up and shoes are more like it, a scientist would say. Well, technology, anyway. (I assume that's what my daughter meant, rather than only [gals] and transvestites were real people.) In other words, it's the human tool shed that separates the [guys] from the monkeys. This definition has always been a little suspect (otters build, don't they?), and there's something distinctly uncomfortable about suggesting nuclear weapons and smoke-belching factories are what separate us from the dumb animals. But now the technology gap seems to be closing... [US] chimpanzees have been seen wielding knives (no guns, yet)... OK if we have to jettison technology and souls as the great dividers, at least we still have our moral high ground. Our compassion, our code of ethics, our belief in equality – these are the pinnacles of humanness. Dream on... The high moral ground is made of very crumbly earth. In *Atlantic Monthly*, [an] evolutionary biologist... writes it's high time this myth of superior human morality was busted. For example, that trademark of humanity – selfless behaviour – is, in reality, always highly selfish... Take mateship. A mate won't dob in a mate... Not so, says... [the evolutionary biologist. Mateship was] designed by evolution purely to look after the individual. In biological circles they refer to it as the prisoner's dilemma. Two crooks are busted and each faces a choice. Either rat on the other and obtain legal immunity or admit nothing... If they both... [talk], they both get locked up. And if only one talks, of course, only one goes to jail... If they both keep quiet neither goes to prison... Purely in terms of self-preservation, what is the best choice? To obey a code of honour that says: don't dob in your mates... [The evolutionary biologist] goes on to say religions are not special either. In essence they are merely power hierarchies. Religious followers are told to submit to supreme beings, not to question beliefs and to indulge in self-sacrifice. Similar power structures exist throughout the primates and mammals. Basically, there are those that like to lead and those that love to follow the leader. An extraterrestrial visitor wouldn't be able to pick the difference between us worshipping a supreme being and a pack of subordinate wolves cowering to a leader... I wonder what[an alien] would make of scientists submitting to supreme knowledge? ...□ ...Regarding the article "Apes are people, too right," the premise that apes be given human rights... while sounding all very good and well, may be overlooking what is truly important to these animals and their natural habitats. Human rights acts have not prevented in this century... the suffering of millions of human beings at the hands of others. If we make the killing of... [great apes] akin to murder, will it stop such acts from occurring? And it must be noted that murder, rape, cannibalism and even tribal genocide have all been documented among the great apes, particularly among our closest relatives, chimpanzees[(e.g., someone 'who studied them in the wild has given a very graphic description of a chimpanzee catching a young baboon and killing it by holding its back legs and smashing its head against the ground')]. As pseudo-human beings will they have to face the consequences of such actions in courts of law?

...[*Apes are people, too right* Orang-utans and other great apes are close cousins to humans – so close that a growing number of NZ scientists and legal experts think they should be accorded basic human rights. Using the Bill of Rights as a model, the great apes should be given the right not to be treated in a degrading or cruel manner, and the right not to be used in medical experiments. A senior law lecturer at Canterbury University, citing the recent news that

the British Government has decided “as a matter of morality” to ban experiments on great apes because of their cognitive and behavioural characteristics, says that giving rights to the great apes is an idea whose time has come. A senior lecturer in psychology at Massey University believes the apes have a good case. “We give children basic rights, so it’s fair and reasonable to do the same thing for the great apes.” Scientists have discovered that, emotionally and intellectually, orang-utans and other non-human great apes are very similar to young human children. They recognise themselves in photographs and mirrors, a sign of self-awareness, and they have “theory of mind,” the ability to imagine what others are thinking – and hence the ability to consciously deceive others. They can match human pre-schoolers in reasoning tests and basic arithmetic and they enjoy pre-school level painting and drawing. They can also learn rudimentary language – a captive orang-utan in the US has learned to use sign language (his 150-word vocabulary is comparable to that of a human child aged about two and a half). What about fears from farming interests that giving rights to great apes might open an animal rights floodgate? “Very unlikely,” says a senior lecturer in philosophy at Canterbury University who studies human and animal consciousness. “The argument for great ape rights has nothing to do with animal rights. It’s based on the special mental traits that would automatically entitle them to rights if they were human. Sheep and cattle just don’t have those traits.” The philosophy lecturer thinks ape rights might even help to reinforce human rights by making it more difficult to justify denying rights to people. The world’s zoos and research laboratories are believed to hold about 250 orang-utans. Six are at Auckland Zoo. ■ The owner of a zoo in Kyoto, Japan, was arrested after dressing his three children in monkey suits and trying to pass them off as rare Sumatran orang-utans...!

...FROM the time they were born in Africa, [the three chimps] were destined never to live their natural lives. Separated from their mothers shortly after birth, they were hand-reared at Regent’s Park Zoo in London and shipped to N[Z] when they were... two. When they arrived at Auckland Zoo in 1956, they were feted like celebrities and played to packed houses. They were... the star performers at the chimpanzee tea parties. Dressed like little hairy people they pursed their lips, delicately sipped from enamel tea cups and scoffed goodies. Every now and again they would throw tantrums or engage in messy food fights, much to the delight of the[ir] audiences. But the party days are long since over. Today the three star performers, known affectionately... as “The Old Guys”, can be found in the old part of Auckland Zoo whiling away the rest of their lives in concrete cages behind heavy iron bars reminiscent to many zoo visitors of a human Alcatraz. Standing outside their steel-barred cage, the same sentiment is echoed hundreds of times by visitors... “Poor old chimps,” said a small boy on his dad’s shoulder. “Why can’t they be with the other ones?” Just a few hundred metres away is... a thriving colony of younger chimpanzees who enjoy the salubrious and spacious surroundings of the Chimp Arena – a simian paradise containing a running stream, toi-toi, flax and other shrubs without a steel bar in sight. Even the walls of the arena are emblazoned with jungle murals... High atop their perches on the 10m wooden pillars which crown the fun-packed jungle gym the members... have a panoramic outlook over the entire zoo where they spend hours watching the comings and goings of other animals and human visitors. Here, the blue sky is their ceiling... Grass and the earth forms the floor beneath their feet – not cold concrete. So why don’t the party chimps live like this? The problem is, they don’t really know they’re chimps. Taught by... human caregivers at an early age to ape their mentors, they were products of a zoo system that pandered to popular demand. And that demand was for chimpanzee tea parties... “Today, we’re more enlightened. We know it’s more important for people to see chimps and other animals nursing their young in natural surroundings, not performing as imitation humans.” Even as partygoers, the three chimps had a brief career. Once they became too big, they had to be “retired” because adult chimps become uncontrollable and unpredictable. With strength in their arms four times stronger than a human, they could cause serious injury to their keepers and anyone else in close proximity... Having been reared by humans, they have not learned “chimp language” and tribal social ethics. As a result, they are unable to communicate with other chimps... “When the Chimp Arena was first constructed in 1980, we tried to integrate the party chimps with the younger chimps,”... [O]n alternate days, [the party chimps] were allowed access to the great outdoors while the younger chimps were kept inside. The older chimps reacted strongly against the natural conditions. Being used to hard concrete floors, they couldn’t understand why dirt stuck to their feet and kept stopping to scrape it off... Walking on grass upset them – it was soft and spongy and wasn’t reassuringly solid like concrete. Intensive studies of the party chimps showed that when they were outside their cages they were insecure, apprehensive and antagonistic towards each other. They either didn’t eat their food or bolted it down quickly and nervously. On the days they were in their cages, they were relaxed, engaged frequently in grooming each other and munched their food at leisure. It was also hoped the younger “natural” chimps could teach The Old Guys the chimp language and social mores but it wasn’t to be. Chimp society is fiercely hierarchical... with [one dominant adult] maintaining control and discipline. All the other... members of the tribe submit to him and indicate their submission in various ways. They leave food for the dominant [chimp] who is the only [guy] in the tribe permitted to mate with the [gals (though, in some tribes, ‘chimpanzees are promiscuous – when a gal comes on heat all of the guys mate with her, no matter what their social standing’)]. They respectfully lower their eyes or avert them when the dominant [chimp] performs his “bluff display”, careering around screeching, hooting loudly, throwing things and beating his chest... saying: “Hey... I’m bigger and stronger and louder than you... So you had better respect me and back off!” Efforts were made to integrate the party chimps with the younger chimps by... [hoping that one of them] would submit to... the dominant... [member of the younger chimps. “But the party chimp] just didn’t understand what was going on... When [the dominant chimp] roared around making lots of noise... [the party chimp] just thought it was great fun and imitated him, which [the dominant chimp] naturally interpreted as a threat to his position.” The ongoing and unresolved aggression between the two... caused considerable anxiety to the [gals] in both groups so a decision was made to resolve the integration issue once and for all. One day the two... were put together while keepers stood by with hoses and fire extinguishers just in case things got out of hand and they needed to be separated. Although the brief encounter lasted only 10 minutes, from the moment they met [they] fought non-stop. The older [chimp] came off the worse... “At no time did [the party chimp submit to the dominant chimp]... Occasionally, we thought [the party chimp had] had enough when there was a lull in the fighting... Then [the party chimp would] just walk up to [the dominant chimp] and slap him across the face and it would be all on again.” If [the party chimp] was forced to live in the Chimp Arena... [it] would probably be killed in a short time. And there was no chance [the party chimp] could become... dominant... “[The party chimp doesn’t even know it’s] supposed to try and be dominant and make a take-over bid,”... [The party chimp also] had another much more personal problem [– it] was sexually dysfunctional. It was clear from all outward appearances that his sexual equipment was in perfect working order when... aroused. But... [it] never learned to mate by watching [a dominant chimp. Even if the party chimp had mated with its party companions] and they had produced babies, the... [mothers] wouldn’t know how to look after them. Rearing babies is[another] learned behaviour for chimps and they never had other chimp mothers to show them. In [the Chimp Arena] there are two baby chimps and both mums and the kids are doing just fine. Wellington Zoo has one former tea party chimp among its colony of 13 – the second largest in Australasia. The colony lives in a natural environment... The party chimp... integrated well with the natural colony... “[It] was young enough to learn chimp language and had minimal exposure to the tea party experience...” ...The zoo’s other party chimps died before the integration programme began... In party-going chimpanzee terms... life is still good [for The Old Guys]. They keep mentally stimulated, by solving puzzles to obtain food... and from the platform at the top of their cage... have a view of the city and the llamas next door. In the wild, chimps live to about 40 years of age – “The Old Guys” are already in their 40s. In the wild, they’d probably be dead by now, but with regular medical checkups, healthy food cut up for them and an easy lifestyle, the pensioner chimps will probably live to around 60. “It is all very sad because we have done this to them. We have deprived them of a normal life... Instead of having two groups of chimps, we could have decided to quietly [get rid of The Old Guys] because they didn’t fit in with the politically correct impression of a modern zoo. But there’s no way we could do this. We owe them an obligation to see out... their days in comfort.”

...Delhi residents are under siege from monkeys because of a shortage of trappers... – tranquilliser guns have been ruled out as many trappers oppose them for religious reasons... Residents have barricaded their houses with grilles and wire mesh to stop the marauding monkeys grabbing food from their fridges... “At times it seems as if we are inside a cage and the monkeys are like visitors to a zoo...” complained one resident.

...[Veterinarians at the Warsaw Zoo have prescribed three hours of television viewing a day for their chimpanzees in an effort to ward off the winter ennui. “They have ropes, tyres, a hammock and old clothes to tear up, but they get bored with all of it after a while this time of year.” The monkeys will sit still, eyes glued to the TV set, for up to 40 minutes at a time, and zoo officials believe the treatment is working. One day, however, the chimps suddenly appeared to regard the TV more as a jungle gym, jumping all over the set. “Maybe they just didn’t like the programme,” their keeper theorised.]

...Just a week ago, the future looked grim for Lola, an ageing NZ circus chimp facing death. Now an international campaign means Lola may leave the confines of her 12m trailer and return to her ancestral home in an African jungle. A chimp sanctuary in Zambia is keen to take 32-year-old Lola, of Ridgways Circus, Auckland, and her young son, in response to a quest by the International Primate Protection League to keep her alive. Last year, a report commissioned by the Ministry of Agriculture recommended that Lola be put to sleep. Lola had become ill and depressed after her partner, Charlie, was put down a year before. Her quality of life at the circus was also questioned: her trailer was too small and “very rundown looking,” according to a report by the primate expert at Auckland Zoo. However, Ridgways Circus will fight off any attempts to send Lola and her son to a chimp sanctuary. A spokesperson said Lola and her son were part of the circus family and they were reluctant to part with them. The circus was interested in their welfare, but is concerned the chimps would not adapt to a new environment. “These chimps are worth millions overseas and we wouldn’t want anything dodgy to happen to them.”]

...The transition from circus life to animal sanctuary has proved less than smooth for Buddy, the orphaned chimp. His handlers report that Buddy has been showing signs of behavioural problems and aggression towards other chimpanzees at his new home, the Chimfunshi Wildlife Sanctuary at Ndola in Zambia... However, Buddy was learning to curb his aggression and was gaining acceptance among his fellow apes... Buddy’s problems might have arisen because of his circus background and such animals often found it difficult to acclimatise after their release. During rehabilitation... chimps... were encouraged to play and forage for themselves. Buddy is the 3-year-old offspring of N[Z]’s oldest circus chimp, Lola, who died in Samoa just three days short of when [the chimp] was to be set free... [The NZ] organisation Save Animals From Exploitation (Safe)... rescued Buddy from an overseas circus. Thousands of N[Z]ers have made donations to meet the \$80,000 cost of Buddy’s relocation to Zambia.

...To [the person] who was ‘fuming over chimps’ (TV Guide, May 12-18, criticising TV2’s *The Chimp Channel*): I did not see any cruelty being dished out to these chimps. They were absolutely hilarious. As for the two cigarettes, did the chimps smoke them down to the butts? Has there been scientific proof two cigarettes will kill? [The letter-writer] may be appalled at this show, but I am equally appalled at his/her lack of humour.

I observed animals rights activists protesting against using a chimpanzee for entertainment. As activists of integrity, I assume that when the protesters are not outside Maungawhau School fair they are protesting outside the gate of every house in N[Z] which keeps a cat, dog or budgie. And of course they don’t own or exploit any such animals themselves. [These people apparently long for the day when] all the cats are saved from the oppression of living in a house and are enjoying the freedom of the bush with its possibilities of injury without veterinary care, and competing for limited food supplies such as our native birds... No, wait, we’ll ship all the cats, dogs, [introduced] birds and so on back to their native countries and let them fight it out in the wild there. I’m sure [the chimp in question would also] be much better off in Africa competing for limited food and space with other chimpanzees... [The chimp will] just love fighting, not usually to the death... for the right to be dominant... in a troop to which [it] tries to attach... [itself (unless it’s a troop of bonobos – ‘pygmy chimpanzees, who are predominantly vegetarians and led by gals, are more peaceful than their violent cousins from the northern side of the Congo River, who eat anything and are led by a dominant guy’). And if the chimp] loses such fights [it’ll] love being an outcast at the mercy of predators such as hyenas and lions – if disease or starvation don’t get [it] first. After all, it’s natural – right? - 1996

It may not be the jungle, but... the Auckland Zoo is far more of a natural environment than it was for the inhabitants when it opened 75 years ago today. In 1922, the lions, bears and wolves lived in a bleak and barren site of concrete enclosures and wire pens. But now the zoo prides itself on education and conservation, and attracts 400,000 visitors annually. It will be... celebrating the anniversary... tonight... with African music and dancing in [recognition] of Pridelands, a \$3 million development... [planned for animals like] lions, giraffes and springbok...

Auckland Zoo has failed to get big sponsors for a new \$3 million enclosure and is pleading for a lifeline from the Auckland City Council. The zoo faces a \$500,000 shortfall for the 6ha Pridelands enclosure and a director... says [the zoo] hopes to get a \$220,000 advance from the council... Without the money the zoo will not be able to buy flamingos and the enclosure will lack finishing touches... [T]he \$280,000 shortfall would be met by deferring work and juggling internal funds.

...Operation Roar is being launched this week to raise \$200,000 to bring in two rhinos... flamingos and three lions which will all become part of Pridelands... Donors to Operation Roar will get a memento of their generosity: zoo passes and small wooden animals or, for donations of \$45, [their name on] one of the 15,000 brick pavers which will make up the main Pridelands viewing plaza. These will be... laid alphabetically so donors can readily find their spot... The money isn’t to buy the animals but to help cover transport and quarantine costs. Such wildlife is no longer for sale and zoos give each other animals in a co-operative arrangement designed to ensure the survival of the wild animals.

...[‘THE argument for zoo’s captive breeding programmes as illustrated in *Our World* (TV1, January 6) is just so dumb. In essence it was propaganda to try and quell the growing protest of zoo “exhibits”, an ugly word today as it was in Victorian times. It was shown with the 6 baby tiger cubs stolen from their poor mother at only 2 to 3 weeks, brought up by a stupider species who arrogantly proclaim these babies will contribute to their survival in the wild. 1. No release is ever intended as all their home habitat is being destroyed. 2. Human-reared “domesticated” wild animals could not cope with survival in a jungle.’]

...a couple who live in a Moscow apartment have bought] six-month-old tiger... cubs from a Russian nature reserve and earn money for their upkeep by loaning them to television stations for appearances... [By the way, a] lion... that escaped from a theme park and was roaming near central Florida’s tourist meccas was spotted by game officials near Walt Disney World yesterday. Trackers kept... [the animal] under observation. But they did not want to move in yet because heavy rains had made conditions difficult in the undeveloped tract of land where... [the] 202kg African lion... had taken refuge. The Florida Fish and Game Commission warned that [the lion] was scared and hungry. “This is not a tame animal and I would not want to confront it.” The... declawed... two-year-old lion... got loose while handlers were repairing her cage[, then]... jumped a 2.7m fence... JungleLand Zoo... staff hoped for [a] safe return. “Of all the cats, [this one] is the most laid back... [It] seems to enjoy people and always puts on a show.”

...Two leopards imported from Britain died in a French zoo from a feline form of “mad cow” disease... They had been fed on cow carcasses in Britain... [In local news, a]n endangered red panda has been gassed to death at Auckland Zoo after [getting] into a nest box being cleaned with chlorine... Tashi – a familiar face to television viewers around the world this year after the birth of her cubs was captured by cameras – died from lung damage... [A] cub... also suffered lung damage but is recovering in the zoo’s hospital. The zoo director... said the keeper thought [there were] enough barriers to keep the pandas out while the nest box was being sterilised... and... [only] left the enclosure for 30 minutes... Since the death senior staff have held an internal investigation and formed a group to review the use of chlorine around the zoo... [T]he zoo generally favoured steam cleaning... but occasionally used [chlorine] for heavy-duty disinfecting. In future bolts and locks would be installed to keep animals away

while it was being used. “It’s very... unfortunate, but we always learn a lot from these incidents.” Staff were heartbroken over the loss... but were positive there would be little setback to the captive breeding programme... [T]he zoo... hoped... [it] could find another mate for [Tashi’s partner] before the... next... breeding season[. Editor’s note: ‘Himalayan raccoon, fire-fox, fox-cat and cat-bear are other names used to identify this beautiful and appealing carnivore. The cat-bear is the original panda but that name is now used by popular consent for its larger black and white bear-like relative’]...

It was a conversation that rocked [the businessperson] to the core. Dining at a lavish restaurant in... Phnom Penh, the A[US]n... listened in horror as some Korean tourists ordered bear paw soup, which would require the limbs of a live sun bear to be hacked off. “I was disgusted... [at] the thought of these sweet little creatures being cut up while still alive.” [The AUSn] stepped in and, for \$600, negotiated to buy the animal whose paws were destined for dinner... [T]oday... Victoria – as the luckiest bear in the world is now known – and two of her friends... are... pampered residents of Sydney’s Taronga Zoo, where they are part of a captive breeding program designed to replenish the depleted numbers of sun bears throughout the world... [(only an estimated 5000-10,000 survive in the jungles of Asia)]. The three bears’... rescue... has given [the AUSn] a new direction and purpose in life. Eight months later, [the businessperson] leads a dedicated band of A[US]ns... waging a war against... unscrupulous animal traders and restaurateurs across Asia in a bid to stamp out the trade in endangered species for human consumption... [D]espite laws banning the trade in Cambodia... the Fook Lum Moon Wildlife and Seafood Restaurant in Phnom Penh... provides bear paw at \$US100 a time[. It] also offers leopard and soft-shelled turtles. “B[ut] bear hand is the best meat,” says... [the] Chinese-American... restaurant manager... “Next best is bear meat from the body.” ...Often the mutilated creatures are kept alive so their remaining limbs can be severed to feed a succession of diners. - 1997

[A NZer], who has spent the past five years building bear sanctuaries in Thailand, Hungary and Turkey for the World Society for the Protection of Animals (WSPA), will be in Pakistan next month without a fixed plan to tackle the country’s bear-dancing and bear-baiting industries... The self-styled international gypsy estimated that there were 500 dancing bears in Pakistan and around 150 were used for bear-baiting, where the animals have their teeth and claws taken out and have to fight pitbull dogs at weddings and other festivals for entertainment... [B]oth activities were illegal in Pakistan, although with legal loopholes and some authorities unwilling to stamp it out, confiscating the bears would prove difficult... [T]he hardest part of his work was dealing with officials who said one thing yet did another. However, the [NZ] attitude of getting involved with every part of the project and “if you won’t help me, then go and stop me” were his secret weapons... The society... [which] hopes to build a sanctuary in Islamabad... has been planning the Pakistan project for three years. It will have a budget of up to \$US150,000... for the venture.

...[the bear]’s chained up through his sensitive nose and made to walk on *red hot* plates, whilst the back of his legs are *hit* in time to music. Onlookers *taunt* him and force him to drink beer. Why? Because they’re teaching him to ‘dance’ for tourists who pay to watch his *agonising* waltz. WSPA rescues ‘dancing bears’ and takes them to sanctuaries where they can be free of pain and suffering. But we can’t carry out our *life-saving* work without the support of people like you. *Your gift of just \$25, or whatever you can afford, will help cut the chains of innocent animals.*

...N[Z]ers have helped give... bears their liberty... For 10 years... Lizzi... th[e] European brown bear has been crammed into a cage so small [it] can hardly move. One of 21 bears kept in similar horrific conditions in a village near Budapest... [since] the Hungarian wildlife film industry... went bust[, Lizzi]... spends her time either pacing in what little space there is or simply lying on the excrement-covered floor. In the cage next to her, bears tormented by boredom and frustration have ripped up the concrete floor... Until recently, her future was so bleak, it seemed the kindest option for Lizzi was to be gently put to sleep. However, by the time you read this, Lizzi will be roaming a four-hectare haven... [- with] pools for her to swim in, trees to rub against... and... grass to roll on... [- after] the plight of the bears came to the attention of British-based charity WSPA...

Chinese authorities have removed nine Asiatic black bears from bile production farms... and handed them over to the International Fund for Animal Welfare... An... estimated 10,000 black bears... [are kept on] the farms, where they are killed and their bile extracted for use in Chinese medicine[, but an]... agreement between... Hong Kong groups led by IFAW and the Chinese authorities... [means such] farms are being closed down.

...The failure by medical researchers to treat seriously the theory that Aids could enter humans via polio vaccines has significantly increased the danger of fresh plagues of deadly disease caught from animals, says... [the] author of *The White Death*... [P]olio vaccines are still produced worldwide in monkey kidneys, and there are now plans to grow flu vaccine in monkey kidneys... There is no disputing the risk. The only inquiry into the Aids theory, by America’s prestigious Wistar Institute, concluded it was possible for a monkey immunodeficiency virus to enter humans via a vaccine, although the probability of Aids appearing during polio immunisation was “extremely low.” ...The perils have also escalated sharply with the rise in medical transplants of animal tissue and organs to humans... With one person in every 10,000 in the [First W]orld now awaiting a transplant, researchers have been forced to turn to animals for spare parts. So far there have been more than a dozen attempts to implant baboon or chimpanzee kidneys and baboon or sheep hearts into humans, plus regular transfers of tissues from pigs and cattle. Animal transplants are also due to increase significantly with the breeding of special pigs designed to reduce the immune rejection of a foreign organ, with the qualified blessing of leading medical ethics bodies... Clear warnings of cross-species infection have already tragically appeared: • Monkey handlers and laboratory workers killed by a herpes virus harmless to its simian carriers. • Canine parvovirus, which killed millions of dogs worldwide. Many veterinary virologists believe it appeared in 1978 during experiments in which live cat virus was injected into a tissue made from dog cells. • The contamination of Salk’s vaccine by the previously unknown SV-40 monkey virus. • Ebola and Marburg viruses – the latter named for the German town in which laboratory workers using African green monkey kidneys died from a violently haemorrhagic fever...

Residents of Kostroma, 320km north of Moscow, have been warned not to buy mutton or rabbit meat from local vendors after thieves broke into a laboratory and stole animals that had been injected with syphilis. The experimental animals had been infected with venereal disease in order to try out new drugs... [Incidentally, 95%] of the wild rabbits in South A[US] were killed by the accidental release of the deadly calicivirus last November. The Commonwealth Scientific and Industrial Research Organisation said most were between three and six weeks old and died within 48 hours of infection. N[Z] is considering a controlled release of the virus and plans to see if the disease would harm native fauna.

...New fears have been raised about the safety of... native birds if the Government approves the use of rabbit calicivirus disease, now rampaging through wild rabbits in A[US]. Two leading... experts in caliciviruses have criticised official assurances that birds will not be affected by the disease and given a warning that so little is known about the virus there can be no certainty that it will not spread to species other than rabbits. They have also raised the possibility that the disease could eventually infect humans, following confirmation of... RCD... antibodies in a Mexican laboratory worker and the ability of other caliciviruses to cause disease in people. The views of... [the] virologist at Oregon State University College of Veterinary Medicine, and... [a colleague from] the Centre for Paediatric Research at Eastern Virginia Medical School, have been rejected by researchers and officials promoting the release of RCD to control rampant rabbit populations... Four kiwi were inoculated with comparatively high doses of RCD last year to test their susceptibility to the disease. All produced antibodies, but did not show clinical symptoms of RCD or pass the disease to rabbits, and were declared safe from the disease... [But the virologist], who has undertaken ground-breaking research into calicivirus, told the N[Z] *Herald* that evidence of the vulnerability of birdlife to RCD was such that “if I were in N[Z] it would immediately raise a very big flag for me.” [The virologist] said proponents of RCD had described the antibody levels found in the test kiwi as “low” – despite the fact that one had an antibody score 10[%] higher than that of an experimentally infected rabbit – and that the... level of virus given to the kiwis was still a relatively low dose for trials designed to check for cross-species transmission... [T]he fact that the kiwi developed antibodies showed their systems recognised

calicivirus as a foreign protein, indicating they had calicivirus antibodies before testing: “You know it’s not RCD, but these agents cross-react among themselves, so th[is]... tells you that they are probably susceptible to calicivirus infection – then you turn around and hit them with this rabbit thing, and the antibodies go right on up.” ...other bird species had shown evidence of calicivirus infection, including a calicivirus disease in fairy terns, and British researchers were now considering the likelihood that infected birds carried RCD across the English Channel.

...The bomb began ticking in April last year on remote Wardang Island, 5km from the old windjammer harbour of Port Victoria, on South A[US]’s Youke Peninsula: a rabbit outside the enclosures of high-security biological control experiments was found dead. Alarmed at the implications scientists shut down the trials and killed the experimental animals. Within nine days of their resumption in September the virus spread beyond the electrified compound of the experimental station, and with unsuspected speed leaped to the mainland and raced through pastoral areas, slaying millions of rabbits... For a nation plagued by rabbits since Thomas Austin released a dozen for sport in 1859, the balance of concern swung in favour of a killer more effective than anything since the early success of myxomatosis, and away from cautions of potential harm to native wildlife and the possibility that predators starved of rabbit may turn to vulnerable and endangered species. The environmental and economic toll exacted by rabbits is enormous: ...estimates of the total cost to A[US] range from \$NZ172 million to \$700 million a year. According to a study produced last year for the National Federated Farmers, an 80[%] reduction in rabbits would increase agricultural production by 3[%]... With its hand forced by the accidental release of... RCD... and armed with scientific assurances it would attack only European rabbits, the A[US]n Government earlier this month approved its release... N[Z], afflicted with a similar scourge of rabbits, is [still]... evaluating its proposed introduction... But... [a US virologist] is critical of the A[US]n tests, saying they... were carried out on animals at time intervals that “virtually ensure negative results”... [The virologist] is also concerned that because RCD cannot be propagated in laboratories the virus has to be extracted from ground-up livers of diseased rabbits, causing problems for diagnostic and experimental work. Its rapidly-changing nature is a further worry. Already, European researchers have reported the emergence of new types of RCD beyond the control of existing vaccines. And... the escape from Wardang Island confirmed RCD’s ability to evade control: “The mechanisms of transmission are not fully known. Everything from fomites to flies, aerosols to birds, are suspect... The wisest course for N[Z] to take would be to just cool out for a while, and see what comes down in A[US]... But my own gut feeling is that if the release is delayed until you can learn what you need to know about the agent, you won’t release it.”

...In the remote outback of Central A[US], the rabbit, arch-enemy of pastoralists and environmentalists for generations, has found an unlikely ally in the arid land’s traditional owners. As governments around the country begin final preparations for the release of [RCD] some Aborigines have opposed the widespread destruction of what has become a major food source for people living semi-traditional lifestyles. Remote communities across the Anangu-Pitjantjatjara lands, a huge region covering parts of far north South A[US] and southern N[T]... which often were already struggling to meet food requirements now faced additional costs of buying from stores which may be up to hundreds of kilometres away... [In local news, f]armers hoping that no rabbits will be left across parts of... [the] South Island by next Easter have applied for the use of... RCD... M[AF] has called for public submissions on the application, and by late yesterday about 400 had been received in Wellington. Submissions close Monday... The... Royal Forest and Bird Protection Society opposes the... application... because it [i]s not possible to properly weigh up the risks and benefits...

The German Animal Protection League has announced a \$NZ50,000 reward for significant clues leading to the capture of one or more horse mutilators... Since the first case of horse mutilation west of Berlin in 1992, at least 319 horses have been attacked. Police say 89 have died of their wounds. Attacks have occurred in all but three of the 16 German states... Attackers have mutilated the horses by slashing their throats, or stabbing them in the eyes, heart, shoulder, stomach or genital area. Some horses have been shot to death. Others were driven from their pastures into oncoming traffic on busy highways, causing accidents that killed one person and injured several. Because the random attacks take place in rural sparsely populated areas, the criminals escape before police arrive... Possible motives for the attacks include sadism... or personal animosity toward horse owners... [However, i]n the south-western state of Baden-Wuerttemberg, police have identified a clear pattern in the attacks: sexual perversion... [I]n all the attacks in the upper Swabia region, genital mutilation occurred and some of the victims were pregnant mares... [The] director of forensic psychotherapy at the Bavarian University of Ulm, [who] helped police in the investigations... told the *Schwaebischer Tagblatt* newspaper... “Most of these criminals are lonely, introverted... Their actions are clearly driven by aggressive and sexual impulses. Horses are victims because of their pronounced genitals, which are easily noticeable.” ...A 40-year-old... who once worked as a horse caretaker has been arrested in Baden-Wuerttemberg. Police say [the suspect] has admitted attacking at least nine horses because of his hatred for [gals]... There is no national database on horse attacks... [and, so far, only one perso]n has been convicted... The convicted [perso]n, who cannot be identified under German law, was sentenced in February to 11 months’ probation. Attacks on animals are legally considered the same as property damage.

...A former[Canadian] dog-breeder whose punishment of her Irish setter left the animal next to dead could get her pet back as soon as tomorrow – and the authorities can do nothing about it. The elderly [dog-breeder]... tied... the three-year-old purebred... to the bumper of her car... then dragged it 500m along a gravel road to teach it a lesson... after it left her yard on Saturday... “It’s the worst injuries I’ve ever seen on a dog,” said [a spokesperson for]... the Alliston Humane Society... Despite broken bones, gashes and serious burns to 35[%] of her body, Holly is expected to live. Although criminal charges are pending, the Humane Society is powerless to seize the dog when it is released from the vet... “In Ontario, as long as the owner is willing and able to care for the animal, the law requires they get the animal back,”... [By the way, a] commercial to be unleashed on British cinema screens aims to bring home to dog-owners just how antisocial it is when their dogs foul pavements. Under the slogan “You Wouldn’t – Don’t Let Your Dog!” it shows a jolly, middle-aged [guy] open the front door on a beautiful morning, walk out into the street, drop his pyjama trousers, squat down and foul the pavement. As passers-by look on in horror, the [guy] calmly relieves himself before walking back up the path to his smart Georgian house, pausing to greet his neighbour... [Aimed] to shock... the... sequence was filmed... for... Islington Council... - 1996

Officials from the country that strives to be a model of tidiness are... impressed with the Waitakere City Animal Welfare Centre[, where a pilot programme gives]... animal welfare officers greater powers, both to control animals and protect their welfare... A new council dog policy announced yesterday will further bolster the officers’ powers over the city’s 13,500 dogs and their owners, and institute tighter controls. Policy measures include instant fines of up to \$400 for owners of improperly controlled dogs, exercise areas mapped out for West Coast beaches, and a ban on dogs within 10m of children’s play areas... [O]ne of the four Singaporean delegates... said they looked at animal control centres in the cities of Wellington, Manukau, Auckland and Waitakere, but the latter impressed them the most. The Singaporean Government would use the Waitakere centre as a model for a new, privatised animal welfare centre for the island, which is home to... 40,000 dogs... “We have two separate sections for control and welfare but I think it’s more efficient to integrate... and we... want to put more emphasis on responsible pet ownership.” A Waitakere City councillor... said staff at the purpose-built Waitakere centre handled 6500 complaints last year, most of them about dogs, although many were of a minor nature. About 1800 animals were impounded each year... [‘The centre caters for about 2000 animals a year. Among current inhabitants are cats, rabbits, goats, and a hen which had been abused with its beak cut off. The bulk of the animals, about 1200, brought in to the centre are dogs. About 60% are returned to their original owners, 20% are adopted and the remainder are destroyed.’ • An] increase in the dumping of pets has left[Auckland] SPCA staff reeling. Last month, 1583 unwanted animals arrived at the SPCA Village in Mangere – up 25[%] on a year ago... [Over] half the animals brought to the refuge had to be destroyed – 223 cats, 568 kittens, 48 dogs and 55 puppies. The executive director... said the increase had stretched finances and put staff under stress. “That so many little, innocent animals have been put to sleep has stretched human limits to the maximum. It is very sad and nobody likes it.” Recent extensions at Mangere left no shortage of accommodation, but condition, age or temperament

precluded keeping many animals. At the Rotorua SPCA, staff refused to let people take home pets as surprise Christmas presents. Previously, too many had arrived back in the New Year because they were the wrong shape, colour or size. But since January 1, Rotorua has still received 35 unwanted animals, compared with 15 last year. At the Waikato SPCA, 105 homeless animals arrived between Christmas Day and January 8 – up from 32...

[‘Founded more than 120 years ago, the SPCA charter was to provide comfort and hope to abandoned kittens, abused pups, and battered working animals. Instead, they have become society’s garbage collectors, well-intentioned killing machines and the main method of animal control. How can animal shelters seriously expect society to value pets when it has become the number one cause of death for our companion animals, argued *The Animals’ Voice Magazine*. “The monumental scale of mercy killing healthy animals only reinforces a public mindset that pets were disposable and worthless.” At Auckland’s SPCA, where more than 50% of the 12,872 animals received last year were put down, dozens of newly dead kittens, pups, adult cats and dogs are crammed into the shelter’s industrial freezer as they await final disposal. People don’t think twice about abandoning animals. “Last Christmas Day a family obviously heading away on holiday drove up, dumped the family puss and her new-born kittens at the door and headed off.” They’ll probably get another kitten when they return from holiday. “That drives home how scant life can be for some people. You have to seriously question their mentality and ask: Would they do the same thing to each other? It’s a callous betrayal of trust that makes me more determined to change attitudes. We have a contract with our pets, that we will take responsibility for them until they die.” But the executive director of the Auckland SPCA’s strategy to enlighten the careless and uncaring doesn’t include horror stories. Experience tells him that bludgeoning people with horror stories doesn’t work. The director has seen too many trusting pups beaten to pulp. So the director won’t tell you that some people’s idea of fun is exploding a young cat with fireworks. Or about the too friendly puppy doused with petrol and set alight; the pregnant cat hung by wire until its neck broke then having every bone smashed in her still warm body. The director could reel off dozens of stories about farm animals left to slowly die in the agony of neglect. And it doesn’t help to recall the countless instances of unwanted family cats tossed out of fast-moving cars with no more consideration than a hamburger wrapper. But his sidekick, the Auckland SPCA’s chief inspector doesn’t hold back his disgust. “These people are pillocks. We had a case of kids jamming a kitten in bicycle spokes and slowly cutting it to pieces while peddling around the street. But cruelty to animals is mostly by adults and we only see the tip of the iceberg.” The director shares a fond quote, from Leonardo da Vinci: “The day will come when people such as I will look upon the murder of animals, as they look on the murder of humans.” □] **The SPCA will again be licensed to kill... unwanted, surplus and injured... animals after an agreement is finalised with vets... But the SPCA must have a veterinarian’s consent to give the unwanted pets and feral cats a lethal injection... The Rotorua SPCA clinic[recently] admitted... it had... found out that under the Animal Protection Act it was unable to kill animals unless they were sick. Every SPCA clinic in N[Z] had been breaking the law.**

...For the fifth year in a row, the Government has deferred the task of revising animal protection legislation and the SPCA says N[Z] has fallen behind much of world thinking on the issue... “It’s not that animal welfare isn’t considered important, it’s just that there’s no room on this year’s agenda... [I]t’s now down for consideration next year[,” says]... the Minister of Agriculture... whose portfolio encompasses animal cruelty and rights... (last year, ‘the PM was among guests at a feast in honour of the South Pacific Forum in the Marshall Islands when turtles were burned alive then dissected while their heads and flippers still moved’). It’s now 37 years since the Animal Protection Act was last reviewed and the SPCA says public attitudes toward cruelty to creatures have changed in that time. The penalties are out of date and inhumane treatment of crustaceans... and fish is not covered by existing legislation... In N[SW], legislation has just... provid[ed] for a fine of up to \$10,000 and two years’ jail for anyone who serves live crustaceans, “screaming prawns” or slithers of still-quivering raw fish... The RSPCA’s chief executive in Sydney... tells of complaints of Asian diners picking the flesh from lobsters with their shells cracked but still alive and moving on the plate. Under [the] new legislation, ...SPCA inspectors will be able to raid restaurants to stamp out the practice... [Although] an 18-year-old trainee hairdresser from Waitakere... [claims to have been] offered the chance to “check the cray dance,”... [for] \$60... Auckland Chinese restaurateurs deny that they’ve ever done such a thing and a Japanese tour guide who takes parties throughout the country... [is] unaware of live servings of any form of fish. This does not preclude serving strips of raw flesh, sometimes marinated or eaten after dipping in sauces, or the selection of a live crayfish, kept in a tank, which comes back steaming within 15 minutes... [T]he SPCA... says crayfish should be killed by putting them in a deep freeze – “they painlessly go to sleep.” Drowning them in fresh water is cruel and can take a long time. Throwing them in a pot of boiling water is equally hideous – “how would you like to be boiled alive? ...We were told about live crayfish being served to Japanese tourists in a Queenstown restaurant. We got in touch with the owners, put our case, and they stopped... [W]e haven’t had any cases of ‘screaming prawns’ or ‘drunken prawns’ in which live green prawns are soaked in alcohol and then set alight. They’re a Chinese specialty [readily available in China]. The screaming is the noise the prawns make when set on fire.”

...An alcoholic... pensioner in wind-swept Kazakhstan has found... an unlikely friend and drinking partner... by coaxing a rare, black cockroach to become addicted to vodka, according to the country’s official *Kazakhstanskaya Pravda* newspaper. The unnamed... [pensioner] places a few drops of the fiery spirit on the table each morning and watches the insect emerge from a hole in the wall to imbibe the liquor... Breakfast completed, [the cockroach] spends a day of inebriation sitting on the window ledge, tenderly watched over by his master... Scientific interest in the story has... been aroused. It was previously unknown that cockroaches could become addicted to vodka... [However, an] entomologist in the region told reporters that cockroaches have a high capacity for adaptation, and could easily learn to enjoy alcohol... The serious side to the tale is that it is evidence of the extreme isolation of retired people in a country where many pensioners remain unpaid and the number of alcoholics is extremely high.

...the latest pet craze in the state of Queensland[is] giant cockroaches nearly 8cm long. The whopper roaches are 30 times heavier than the typical A[US]n house roach, are wingless and eat only dead leaves... “Macropanesthia rhinoceros” are very robust, and kids can pick them up and cuddle them by hand, then put them back in a box... [In local pet news,] 65 birds and 150 of their unfeathered friends flocked to... Auckland[’s]... Three Kings Domain... yesterday... for a party... Most of the birds could talk... [B]irds had different conversational abilities, depending on their breed and upbringing. “Some would have a grasp of about 20 sentences.” ...it was obvious that some were brighter and better behaved than others. “The cockatoo has the brain of a two and a half year old [child]... They need disciplining and, depending on the owners, you can have good birds and naughty birds.” The annual party is an opportunity for bird owners and fans to get together and discuss bird rearing techniques... [A]lmost all of the birds were hand-raised and... domesticated. In spite of all those feathers, the party was a no-fly zone. “All their wings are clipped.”

...a new law in Sweden... protect[s] budgies... Keeping them in caged solitude, legislators have ruled, is intolerably cruel. Owners failing to provide them with mates now risk up to 12 months in jail. Such companions can be of either sex because it’s believed budgies share a characteristic with sheep. British researchers claim that 10% of rams are gay – preferring other rams to ewes. But... [one bird – which, at 17 years,] is believed to be the oldest budgie in Sweden... [-] will not get a partner of either sex... [The budgie’s 82-year-old owner is] determined to safeguard his celibacy – even if it lands her in prison... [In further news from Europe, a ‘magnetic front’ has been] blamed for disorienting tens of thousands of racing pigeons that flew the English Channel... to mark the British Racing Pigeon Society’s centenary... Dead pigeons were strewn along roadsides in France.

...ONE OF the more poignant items on the shelves of Masterpet’s 4000-item Wellington warehouse is a small cardboard coffin that retails for... \$5. The days of burying your budgie at sea with the help of... a flush button are long gone... [B]ird-lovers in the ’90s find it reassuring to know that Tweetie can have a decent funeral before... [fluttering] off to that great, wooden perch in the sky. Strange? Not really, says... [Masterpet’s managing director, who is the] owner of a German shepherd... and two cats... Pets are people, too. “We get a lot of lovely letters from customers signed with the cat’s or dog’s name. Photos, too. So here I am, corporate director, writing back to [a cat or dog]! But it’s a nice feeling.” [His brother and co-

director, who also] has a mongrel... and two cats... and... has been playing catch in the pet business since... packing rabbit pellets at the age of 12, can only agree. "The vets have the sad side of this industry... the cat's been run over, the dog's sick. It's very stressful, but at the pet shop it's all about giving, it's all about love." Kiwis love their pets... [The NZ] pet accessories trade is worth an estimated \$40m-\$45m annually. Throw in food, and you're talking closer to \$250m... "It's like buttons. No one gives them a second thought, yet it's a massive industry. ['Pet food is a \$9b industry in the US.' The owner of US petfood] brand... Hartz Mountain... has two armed bodyguards... [and] is one of the 20 richest people in... the U[S]... His father was a German Jew who emigrated with a couple of German roller canaries shortly before the war, and couldn't get any seed in New York to his liking. That's how [his family] got into the business. You can talk about the money if you like, but it isn't something that turns us on. It gets down to the bond a person has with an animal. There's three types of pet owner: Those who see their pet as an animal, and we have very little to do with them. Those who see their pet as a pet, and we see a lot of that and, finally, those who see their pet as a family member – they're the people we love to deal with." The peculiarities of that unique bond... were no more apparent... than during the '87 crash. As the brothers watched other businesses slip into receivership, Masterpet grew 20%... and expanded. "It was embarrassing. You'd go into the pub for a few beers and be surrounded by people talking about how bad business was. The best thing to do was to keep quiet and nod your head... It seems that when the economy's down, people tend to spend more money on home pursuits such as gardening or pets." ...co-owner of Wellington mobile service Posh Pets, can recount similar experiences... "During the crash, we didn't notice any downturn... Some owners would laugh and tell us they were buying expensive shampoos for their cat or dog, but couldn't afford to buy any for themselves." For some, money is no object... "One... very wealthy [owner], had this very pampered corgi that was getting old and arthritic, so [the owner] bought a four-poster waterbed to ensure her dog enjoyed a warm, comfortable existence. It was in his own room with matching velvet curtains and the like... [Another owner] actually built her dog its own bathroom just so we could bath it every six weeks. I mean... the bathroom... belonged to the dog... I didn't ask [the dog if it] knew how to use anything else in there... I figured the toilet was installed for us." The business grooms up to 10 animals a day, five days a week, and the four-legged fervour is a passion that crosses all social and economic barriers. "We have people living in State houses who have their poodles or German shepherds cut six-weekly, which is not cheap. I feel like saying don't worry about paying, but they love having their pet look beautiful just as much as wealthier people do... I could be biased, but there's a softness around people that like animals that often isn't there otherwise. Maybe it's there because they love animals." Love 'em... and eventually leave 'em. In nearly a quarter of a century of "cat sitting"... [the] owner of Auckland's Aristocat Cat Motel – ...[priced] at \$7.50 a day... [-] has witnessed scenes of parting grief unlikely to assist any [player] in his quest for All Black selection. "We've had... [guys] bawling in here... I was surprised by that at first, but you soon learn that young couples or single people with no children have a very, very deep bond there... One [owner], who picks up and feeds strays, took five wild cats into her house and shipped them to A[US] after deciding to move] there. They were here for about three weeks while [the owner] was packing, and [the owner] came to see them every day. I think it's about \$400 each to get them from here to Brisbane. Some people would think [the owner] was mad, but cat people have a different perspective... The ones that were away for a year used to send postcards to the cat saying mummy and daddy are on the beach here or will be bringing you back a nice present. Of course, we... send postcards back from the cat – saying we're having a good time... and we've made friends with such and such a cat. We'd just put the name and then the cat's paw as a signature, but probably only cat people would understand that." Undoubtedly, says [Masterpet's co-director], the pet in question would have been buckled up securely in the backseat of the Pajaro when his "parents" did finally arrive to pick him up. "Car harnesses are huge at the moment... our sales double every year." Last month, Masterpet announced a 50% acquisition of leading independent A[US]n company Pets International – making it the largest pet supply company in Australasia[, and its co-director]... says the story behind those soaring sales is almost Biblical. "It's all about giving and receiving. People who treat their pets well get it all back – 10-fold and unreservedly. If you come home late on a Friday night and trip over the top stair, the dog'll still be there licking your face, even if the wife's not talking to you."

...[Look at the little fella, just sitting there wagging his tail at me! Sometimes I take my dog for granted, but there's no doubt about it – dog is guy's best friend! You know why I like you so much, Snert? You're loyal, you're brave, and you're a lot of fun! Plus, you can't talk!]

...respective members have ceased talking to each other following 'the cat-fight between the Fancy Cat Club and the Club for Fancy Cats.' Incidentally, Fancy Feast is the name a local petfood manufacturer is using to market a range of individual-serve, gourmet meals for cats...

'Britons are now allowed to obtain kidney transplants for their pet cats, joining countries such as AUS and the US.' ■ Colorado lawmakers are supporting legislation to elevate the status of its two million cats and dogs (spread among 1.6 million households) from property to companions. The measure would allow people in Colorado to sue veterinarians and animal abusers and seek damages for "loss of companionship," up to \$US100,000. At present, pet owners can seek only "fair market value" in a lawsuit. If passed, the measure would be the first such companionship law in the nation. The Colorado measure is opposed by the state Veterinary Medical Association, which contends the proposed changes would increase the cost of veterinary care.'

...in the US, 'total annual veterinary care expenditures are \$3.012 billion for dogs, \$1.573 billion for cats, and \$330 million for horses. The nation's pet population has remained fairly steady in recent years: 54.6 million cats, 52.5 million dogs, 12.9 million pet birds and 6.6 million horses. While the number of horses has remained steady, that of cats and birds rose slightly, and that of dogs declined. However, dogs remain the most popular of pets, with 38.2% of all households owning at least one, followed by 28.4% of all households owning a cat.' ● 'Dogs provide companionship in 35% of homes' in NZ.

... 'only a third of NZ's house-pets are wormed regularly, making them more prone to other diseases and posing a threat to children'. ■ 'France's pet population of 35 million – over twice the number of French children – is spread over 55% of the country's households. These domestic animals eat more meat annually than all Spaniards put together. In Paris, 40 animal clinics are open day and night, compared with five in 1975. Animal ambulances have appeared, and there are even canine taxis. A therapy centre for dogs and cats offers bone and muscle treatments, as well as exercises on moving carpets for pets that have grown arthritic and obese from lolling around. And dog-sitter agencies will watch over your canine for about the same rates that baby-sitters charge.'

... 'doggie daycare is the latest accessory for over-worked pet owners to keep neighbours and councils at bay. Petulant pooches who bark as soon as your back is turned can now spend the day with their mates at a pet centre in Massey. Pets can also be dropped in for the night if you're planning a big Saturday evening out and don't want your precious pet redecorating your living room while you paint the town. Dogs home alone can cause "heaps of problems" and stories of ripped curtains and eaten shoes abound. Cats are also catered for but the centre's manager says they're more uptight and don't settle in so easily'...

'A five-star hotel specialising in catering to "poofy little dogs" is booming as Aucklanders go on holiday. The Airport Pet Hotel promises a better class of service for pets which are considered more human than animal. Weekly guests have their toes clipped and their hair unknotted, washed, brushed and cut by staff. They are then given a quick rub-down followed by a blow-dry. Music soothes them through the ordeal. Games – including the perennial favourite, catch – are played in outdoor dog runs. Pets can expect their own favourite gourmet foods as well as house specialities. The hotel, which was based on European concepts, costs \$16 a day for a small dog through to \$28 a day for a large dog. The hotel has room for about 70 dog and 40 cat guests.'

... "Maddie's is like a home, not a kennel," says the editor of *Animal People*. "It really is a radically new direction and believe me, it's going to be copied around the world." There appears to be no stopping the "no-kill" animal shelter movement – which guarantee a home for all healthy cats and dogs. Of the 5000 shelters in the US, more than 700 call themselves "no kill" and the crown jewel, with a price tag of \$US7.4 million, is the gleaming Madison Pet Adoption Centre. Just about every detail of the centre is a departure from the norm. From the outside it looks like a fancy corporate head office. Inside,

dogs are assigned to “apartments” filled with tables and chairs, framed artwork and little refinements like candlesticks or tea settings. Every one of its 21 rooms for dogs has its own TV and VCR. The hustler and sweet-talker who transformed a run-down, deeply indebted San Francisco SPCA into a model shelter for the world has his critics, however. Most of them argue that the term “no-kill” is misleading and, worse, pits shelters against each other. Most US facilities fall into basically two categories: Government-run agencies which must take in all strays, uphold local ordinances and collect dangerous animals, and the private, non-profit shelters like San Francisco SPCA which do not have to accept all animals brought to them. A past president of the American SPCA has been one of the hustler’s most outspoken critics. In a newsletter last year the critic said no-kill is “more hoax than fact,” pointing to the more than 4000 dogs and cats euthanised by the city’s animal control centre last year. “The no-kill policy is everyone’s fantasy. No one wants that better than me. But realistically, how are you going to find 40,000 new homes for animals in New York City. I think it’s a wonderful idea, but I think the hustler’s dreaming.”

... ‘The well-to-do dog in New York has a life many a human would envy. In fact, many of their owners think they *are* human!’

... ‘*Pets are the ones who aren’t human*’ It seems that any service provided to humans must be extended to the animal world. There are pet cemeteries with a choice of headstone and burial tailored to the animals’ needs. Pet psychologists and animal behaviourists will unravel the reasons that pampered poodle turns wild whenever the postie delivers. There is cat Prozac for the feline who finds the stress of inner-city living just too much. Do you think those dinky but expensive tins containing gourmet food are designed to appeal to cats? No, manufacturers promote them because they appeal to pet owners’ vanity. The mind boggles as to what will be next? Pet restaurants? Let’s face it, we’re going to the dogs. Concerned that her beloved cocker spaniel might pine while its master was at work, one owner employed her mother to care for the obese canine during working hours.’ Editor’s note: ‘there are 14 million overweight dogs and 16 million overweight cats in the US.’ Part of the problem can be traced to the fact that ‘petfood manufacturers are in the business of selling petfood but, mostly, the owners are just very well trained by their pets.’ Although, ‘basically, dogs don’t know when to stop eating’, it is boredom that makes pets (and other animals – especially pigs and humans) eat too much. However, ‘studies have shown that dogs visiting resthomes alleviates boredom’ among the residents, and probably also for the dogs, for whom boredom is more of a problem than cats – because dogs are usually larger and more powerful (which means they can be more destructive), and they are more like human children (which means they are more likely to feel lonely or anxious if left alone). Unfortunately, most dog owners find it comforting if their pet gets excited when they arrive home – ignoring the fact that this proves how miserable the dog was prior to the owner’s return (and ‘animals are genetically created to hide pain’). A final point is that most dogs will be friendly just for the sake of being sociable, whereas most cats will only be friendly because they want food. ■ Tests conducted by the University of Michigan claim that while a dog’s short-term memory lasts no more than five minutes, a cat’s can last as long as 16 hours’.]

... *it’s reigning cats, not dogs...* Cats are... outnumbering their canine counterparts, according to a survey by a pet-food manufacturer... The survey... showed that every household owns 1.6 cats – that’s one million cats in the country – putting N[Z]ers at one of the highest cat-per-person ratios in the world. But dog numbers have fallen 10[%] in the past two-and-a-half years, and there are now only 600,000 in the country... [T]he biggest drop in dog numbers was on small rural properties outside big cities. A reason for this could be that many farmers used four-wheel bikes for stock work instead of dogs... [B]usier lives might... also... be influencing people not to have dogs as pets.

...A shamefaced father... took a... Yorkshire terrier to an animal shelter last week because his children preferred their Tamagotchi pets... [T]he children, both under 10, were... happy to get up in the middle of the night to tend to their cyber pets but would not feed or walk the puppy.

...WE ARE being overrun by cyber critters. While many N[Z]ers are now on the fourth and fifth generation of Norns, and thousands of others are coming to grips with the... Tamagotchi, Fujitsu Interactive is about to unleash the most lifelike cyber creature yet... Fin Fin is a super-cute part bird, part dolphin that lives on the magnetic planet Teo. Unlike other, often temperamental, cyber critters, it doesn’t pack its bags and leave home when disciplined. Nor does it die if you don’t feed it, as both Norns and Tamagotchi do. Fin Fin lives in the wild and must be tamed. It gets upset if you ignore it, but it will just be reticent about getting close. Although it is not reliant on humans, it thrives on making friends. Fin Fin needs to be talked to... You must actually speak to it through a special microphone called a Smartsensor. You don’t hatch Fin Fin, you have to find it and coax it closer with soothing words and soft whistling from the whistle provided... If there is a sudden loud noise or you speak in a harsh tone or too loudly, Fin Fin will fly away in fright. Despite the fact that this is nothing more than a computer program... the... brilliant graphics, smooth animation, overall “cuteness” of the character and its reaction to various stimuli was enough to entice even the most cynical family members to talk to the computer... Fujitsu has not included a breeding program, although in future releases it is looking at providing Fin Fin with a mate and a baby. Fin Fin is expected to be released in N[Z] later in the year. Warner Bros Interactive launched the first cyber-pet game, called *Creatures*... After receiving widespread market acceptance in Australasia and Europe, it is being launched in the U[S] this week. The *Creatures* software came with a separate disk containing six eggs. Each of the eggs had to be hatched and the resulting creature (called a Norn) had to be reared, trained and bred from to keep the colony expanding. There are now more than 100 sites on the Internet dedicated to *Creatures*. Players are even offering surplus Norns to other “breeders” to give them an opportunity to introduce new “genetic strains” into their colony. Bandai... announced it would create a full colour version for the Nintendo 64, which is expected to be released here sometime next year.

...CHILDREN who are hooked on those bizarre Tamagotchi “virtual reality” pets – and who grieve when they die – are being reassured there is electronic life after death... Bandai is selling a sophisticated version which, after its final farewell, transforms into a “virtual angel” – with delicate wings. And, the company emphasises, angels never die... [As for original Tamagotchis, the person] who runs a 10-hectare pet cemetery at St Blazey, Cornwall... markets funerals with cyberpets being interred in tiny pine or wicker-work coffins... for... about \$12... □... Psychologists warn extreme grief suffered by many youngsters... [over] the death of virtual reality cyberpets... can be magnified by feelings of guilt over having neglected the electronic beasts – by failing to “feed”... or tend to them properly. That’s why... a counselling service[is] now available in N[Z].

...Move over classroom mice and pet goldfish – virtual pets are taking over schools, but not without a fight from teachers. Since arriving in [NZ], the computer pet games – which require feeding, toileting and rest – have bred loathing among many teachers. The virtual pet dies if it does not receive constant attention and that thirst for attention is why several principals refuse to let them enter the school gates... “We don’t need children running to the toilet as an excuse to go and feed their pets... It was driving the teachers nuts and interfering with the children’s learning,”... said... [the] principal of Murrays Bay School[, which]... banned the toy three weeks ago... The principal of Ponsonby Primary School... banned the toys after they created havoc in the playground. “The biggest problem we had was when a boy accidentally killed a girl’s pet – we had a little stress over that one,”... Also enforcing a ban is... the head of Pinehill School... who confiscates virtual pets found at school. Doting pet owners could collect their toys on Friday afternoons as they left school... That attitude surprised the principal of Green Bay Primary... who said[its] teachers tried to encourage pupils to play with their pets at appropriate times... The head of Whangarei Primary... added that the virtual pet craze was just one of many fads for children. “We seem to have seasons with toys and this is just a new season.” ...Originally created in Japan for children who did not own pets, the toys are most popular here with children aged about 10. The distributor... has sold more than 10,000 of the beeping “animals.”

...A Wellington school which banned virtual pet toys... after their constant beeping in class interrupted lessons... has allowed them back after several “died” when left at students’ homes... The pet can be resurrected – by pushing a reset button – but owners have to rear it from scratch.

...[as millions of bored schoolchildren across Asia throw out last year’s bleeping “virtual pets,” a grisly new obsession is sweeping the Philippines – which allows children to infuriate their teachers at a fraction of the cost. The cool new fad is spider wrestling. Many hundreds of children are hooked on

the gruesome craze, which education officials say is spiralling out of control. They warn that youngsters are cutting class to hunt for spiders, betting away large sums of pocket money, and fighting over gambling debts. A superintendent of the Department of Education, Culture and Sports, said: "Of course children always have some kind of gimmick, but this is different. It's been going on for months and we just can't seem to stop it. It's become a very serious problem." Even parents and other adults were now getting carried away with the eight-legged combat fetish – in which two spiders are forced to fight to the death. The favoured creepy-crawly contestant is the large brown wolf spider, which is prized for its aggression. Scientists have warned that because a single spider could kill up to 30 harmful pests a day there could be a negative impact on agriculture if the spider wrestling doesn't stop.' While on the topic of spiders, 'after four years with Bob the tarantula as a pet, three Christchurch brothers must make do with a plastic replica. Six officials descended on their home after a tip and took away the hand-sized spider to be destroyed. Their father said four police officers and two MAF staff broke into the suburban Aranui house when no one was at home two weeks ago and pepper-sprayed the family dog. The police had a warrant to search the house for the spider. "If they had waited 10 minutes, they could have knocked on the door and been let in." Tarantulas are classed as an illegal import, although they are not harmful to humans.' ■ 'Sunday News has six Furby Babies (which retail at \$69-\$79) to give away. Launched in NZ last week, the interactive, animatronic pets have 25% more vocabulary and 233% more phrases than the traditional Furby and react to light, touch, sound and motion. 30 million Furbies have been sold worldwide.'

...Cute robo-dog Poo-Chi is powering up to poach Furby fans. The latest virtual pet barks, sings, dances and plays with other Poo-Chis. Created by the makers of Furby, Poo-Chi can move its head, ears, legs and mouth, and senses light, sound and touch. Just like a real puppy, the palm-sized plastic pet learns as its owner plays with it. But unlike genuine dogs, it doesn't need vet treatment, registration, walks, food, water or toilet-training. "The only thing Poo-Chi needs is batteries," said a spokesperson for toy firm Hasbro. "It's a great toy for someone who can't have a real dog and, unlike the first robot dog, which cost \$4500, Poo-Chi doesn't bite parents in the back pocket." When Poo-Chi was released in Japan, kids snapped up 100,000 in three hours. Poo-Chi goes on sale in NZ in 2 weeks, price \$79.95. Sunday News is giving 5 readers the chance to become NZ's first Poo-Chi owners and beat the shop queues.'

... 'Forget your cute, cuddly kitty or puppy. Tomorrow's pets are more likely to be made of plastic or metal, have microchips instead of hearts, and brains equal to a human's. "The 1980s was the age of PCs," said the inventor of the Aibo (Artificial Intelligence Robot) at the launch of the latest model. "The 1990s is the age of the Internet. But the 21st century will be the age of digital creatures." 'Aibo can tell the difference between a friendly pat and a scolding slap. It shows that it is "happy" with a wag of its tail, and performs tricks such as sitting and begging.' 'You can pick one up for about \$6000. Software giant Sony says sales are going well in Asia and the US.' The company 'hopes mechanical dogs will replace real dogs and eventually be one in every house.'

... 'In the past few years young children had thrown their puppies into swimming pools, which is why some animal rescuers believe children should be banned from buying pets. They want NZ's government to follow British moves. In Britain, ministers have bowed to pressure from animal rights groups and raised the minimum age for buying pets from 12 to 16. In NZ, there is no minimum age for buying pets and the SPCA is split on whether the government should introduce an age limit. Auckland SPCA's director said young children rarely bought pets without their parents' permission and a domestic pet was usually cared for by the family. Cases of pet abuse were usually those where children harmed a pet that was not their own. The idea of introducing a minimum age for pet ownership is supported by the National MP who has been pushing for dangerous dog breeds to be banned since the mid-1990s.'

...**Top-level push for ban on bad dogs** Moves to ban so-called pit bull terriers from N[Z] were initiated last night following the death of a Bay of Plenty [resident who was] mauled by a dog originally identified as the type... The National MP for Waipareira... [is] writing to the Minister for Local Government... to ask her to take the banning steps provided for in the new Dog Control Act, which came into force last July... [O]ther MPs had tried to have the breed and cross-bred derivatives banned outright... [when the act was introduced. The act] enables courts to declare, based on evidence from any member of the public of aggressive or intimidating behaviour, that a particular dog is dangerous. That places security and costly registration requirements on the owner, any breach of which can lead to fines of \$1500 and destruction of the dog. [The National MP] envisaged little of the difficulty being experienced in Britain enforcing a ban on pit bulls under that country's new Dangerous Dog Act... But the difficulty of identifying the breed and the cross-breed variants... remains a problem... [P]it bull terriers should not be confused with English bull terriers or Staffordshire terriers, says [a member of the NZ] Kennel Club. Both the latter had been represented in N[Z] "since the year dot," and were specified and registered with the club... [T]he pit bull, on the other hand, was a comparatively recent development in the U[S. The member added]... that television images of pit bull terriers ripping apart [an adult in the US] led to demand for the dogs in N[Z]. "We'd never heard of them until 1989 when there was that article on television... Then everyone wanted one. They are not even a registered breed with us, and that is part of the complication of trying to ban certain breeds. In Britain, certain experts are making fortunes in court giving evidence about what constitutes certain breeds, and I believe two cases have gone to the House of Lords." [The member] predicted similar troubles for Queensland which, after a spate of attacks, has also recently placed bans on so-called pit bull terriers. It requires present owners to keep their dogs muzzled and to have them neutered in the hope that the breed will eventually die out. N[SW] is also considering action against the pit bull terrier... [The National MP] said that opposition to having a ban included in the act had come from a colleague, [the National MP for Whangarei], who was reported by the N[Z] Press Association yesterday as confirming that there were costly legal disputes in Britain over the ban. "The British have overbearing legislation which does not really deal with the problem," [the Whangarei MP] said. "I start off on the basis that there are very few bad dogs but far too many bad dog owners. It makes more sense to ban the bad dog owners than the dogs that have been turned bad by these people." ...[the Whangarei MP is supported by the Kennel Club member]. "Dogs can go insane like anything else, but to a large extent it is true" that problem dogs are the result of problem owners... [If dog owners can't] control their dogs... they should seek professional help. That might result in the dog being placed "in an environment better suited to its instincts." ...Singling out a particular breed of dog as dangerous is not supported by [the person] who runs animal control services for councils in the Auckland region. Advice literature his company puts out says: "Any dog with teeth can and will bite under some circumstances[(e.g., 'when a young child accidentally stands on its paws')], and any dog that displays aggressive behaviour will bite someone eventually." [The control adviser adds]: "Dogs have been selectively bred for 30,000 years not to bite people. Anyone that does is a renegade and it can be from any breed." [The adviser also] implies as strongly as... [possible] that savage, aggressive dogs are reflections of their owners. "If a dog is properly conditioned, socialised and controlled, it won't cause problems... If a dog does cause problems, it hasn't had the benefit of those things." ...In a 40-year career of handling dogs professionally – as a member of the Royal Army Veterinary Corps and as Dog Master for the... [RNZAF Police, the adviser] had not escaped being bitten. "I've got a few interesting scars... but in every case I was at fault. I knew the warning signs, and I pushed the situation too far." ...if challenged or attacked by a dog... [don't] face him head on or look him in the eye. (Don't run or scream)... Try to control him by sternly saying: No! Down! or Go Home! ...If you have something in your hand, get it between you and the dog, and use it as a bite object... If you have a child with you, don't pick the child up as [the dog] may think you are harming... [the child]. Keep the child behind you... Never attempt to end a dog fight by yourself[– as the Bay of Plenty victim had]. You need two people with some strength and agility... One person should approach each fighting dog from the rear... Grab the tail or hind legs and lift them from the ground. Each dog should then release its grip and they should be easily parted... [● '15 dogs and items described as dog fighting paraphernalia have been seized from two remote farming locations in Northland by Bay of Islands RSPCA inspectors. The seizures have led to charges being laid against one Northland resident, the first time dog fighting-related charges have been filed for prosecution in a NZ court. An inspector said yesterday that 14 of the dogs seized were pit bulls or pit bull crosses. The other was a cattle dog which inspectors believe could have been used as a bait. Six dogs were quite severely scarred and had bite wounds. The other 9 were

not as badly scarred or wounded but were emaciated and in poor condition. "People are generally apprehensive about giving us information leading to the conviction of a person for dog fighting through fear of repercussions," said the society's Bay of Islands prosecutor, who believes dog fighting is becoming a serious problem throughout the country and that many animals are encouraged to fight to the death. "That is abject cruelty."

...*Agent in war on animal cruelty* For the past 13 years, Saunders – an assumed name – has changed his identity more often than one can remember. Trained in covert SAS role-playing techniques and schooled in evidence-gathering by the police, Saunders is an undercover agent for the RSPCA. His job, in the society's special operations unit, is to infiltrate the shadowy, organised gangs who abuse animals for kicks. "There are certain sections of the population who get their thrills from seeing a dog's muzzle ripped apart. Most of them are low-life stereotypes, but there are also guys with respectable jobs, who wear suits to the office and drive BMWs, who share the same blood lust." For 10 years Saunders was a uniformed inspector. The idea of taking a more covert role in tackling animal cruelty came from Saunders himself. His bosses gave him the go-ahead. But with the publication of his autobiography, Saunders is bowing out of covert operations and returning to the regular duties of a chief inspector. After more than a decade, his face is becoming a bit too familiar. But there is a real sense of weariness, too. For every case cracked and every conviction secured, there were perhaps two dozen investigations that fell apart. Working alone, with meagre resources, Saunders was ultimately no match for the villains – and the RSPCA has not yet decided whether to replace him. 'The villains' activities can directly affect other members of the community because pet dogs are often kidnapped to become – or help train – fighting dogs...

'\$2,000 cash reward for the return of or information leading to the return of our Staffordshire Bull Terrier, missing from Otahuhu. Gemma is a much loved family dog who has a very kind nature and will befriend everyone. If you know of any new dog in your area, please contact us – NO QUESTIONS ASKED.'

... 'LONDON POLICE have launched a worldwide hunt for a burglar who cat-napped a rare puss. His owners paid \$3000 for the 2-year-old fluffy Ankara Turkish Angora, who commands a stud fee of \$2600 and could've earned up to \$750,000 during its life. A gal drove off in a car with a foreign numberplate after stuffing the cat in a bag.' In local news, 'a Glendene resident fears a cat killer could be living in her neighbourhood. An anonymous letter was left in her mailbox warning that her cats would be "punished" if they strayed into the author's home. The letter, signed "brassed off neighbour", says her cats will get the same treatment as a "bushy ginger cat". An animal fitting that description recently disappeared. Two of her cats also disappeared about 6 weeks ago and the resident fears her other three are in danger. They have recently become very frightened of strangers. "I'm very worried. They're innocent animals."'

... 'TOOT the dog sure got his 15 minutes of fame. The mongrel who killed a much-loved 14-year-old moggy became a folk hero. Sentenced to death for cat-killing, denied a last gasp appeal in the high court, Toot was spirited away to begin a new life far from home. I don't know what it was about the little guy that made him such a favourite. Toot did, after all, murder the cat. But a lot of Kiwis felt the death penalty was too harsh and that the dog should be given another chance. It's all over now and gradually we'll forget about Toot – unless one of my callers gets his idea of a bumper sticker off the ground – If you don't like cats Toot!' In related news, a 'Dargaville resident has admitted charges of animal cruelty after biting off a kitten's head in front of its owner.'

... 'the Porirua father who slit the throat of a dog that attacked his 3-year-old son, is to face a charge of animal cruelty. The suspect killed the bull mastiff with a hunting knife after the attack a week ago. His son, who was treated in hospital for wounds to his face and eyes, is expected to make a full recovery.'

... 'A Rotorua boy savaged by two large dogs in Linton Park thought it would not survive their ferocious attack. The 8-year-old's clothes were ripped off in the mauling that took place over 20 minutes. The boy needed more than 200 stitches after receiving extensive wounds to his upper legs, buttocks, groin and arms, as well as puncture wounds to his neck that narrowly missed his jugular vein. Two boys who saw the attack alerted a neighbour who rushed to the boy's rescue. By the time the police arrived the dogs had run off. The bull mastiff was later destroyed but the German shepherd was still on the loose yesterday.'

... 'a pitbull named Zeus – "king of the dogs," according to his owner – has brought calamity upon its species. Ten years after the rest of Europe started clamping down on attack dogs, Germany has finally done away with bureaucratic pussyfooting and declared war on the most vicious breeds. Tens of thousands face summary execution in the coming weeks after Zeus killed a child last Monday. Television stations interrupted programmes to report on the tragedy, which came as politicians were mulling over tactics against attack dogs for the umpteenth time. The federal Government had said it was powerless because dogs were a regional matter. With the exception of Bavaria, which had imposed a breeding ban some years ago, regional governments were gingerly moving towards measures that would not offend the powerful dog-loving lobby. But the shock of the Hamburg killing, followed by protests in the city, brought procrastination to an abrupt end. The Hamburg Government, which was just in the process of trying to make leashes and muzzles compulsory for the most dangerous breeds, changed tack. Pitbulls and their like must now undergo "aggression tests"; those that fail will be put down. The tests are likely to be extended nationwide. Even in Berlin, the dog capital where no restaurant will dare to put up a "no dogs allowed" sign, attitudes are hardening. Federal politicians are also beginning to respond, as every day brings headlines of fresh maulings. Owners violating Hamburg's new law will face fines of up to DM100,000 and three years in jail. That should stop the carnage eventually, but in the interim there is a new problem. Owners worried about the huge cost of licensing have started to turn their "killing machines" out on to the street. In just one day in Berlin last week ten were tied to trees and two were roaming free.')

... **under a "diversion" scheme adopted by the Waikato District Council[, cash-strapped] owners of dogs caught acting aggressively – rushing or biting – for the first time will now be offered the choice of paying a fine... of up to \$200... or fronting up to an approved dog education course. Owners who choose to pack themselves off to obedience school... will have to pay course costs of \$25 to \$70.**

...['*It's a dog's life* ONE of my neighbours has a dog. I've never met my neighbour, or his dog, but I hear them all the time. The neighbour is shouting words at the dog like "beg" and "shut up", while the dog works itself into a frenzy of barking. One of these two is an idiot, but unfortunately the dog is stuck with him. A Wisconsin animal behaviourist who specialises in treating aggressive dogs – many of whom have become so because they have owners who don't have a clue how and why dogs behave – believes there's a problem in the relationship because we are primates and they are canines. Things we do – such as looking directly into a dog's eyes, facing them head-on, and patting them vigorously on the head – may be fine in the primate world but for dogs those actions are aggressive and upsetting; in other words, biteworthy. ■'] 'The owners of two vicious dogs which attacked and killed 33-year-old Diane Whipple in the doorway of her San Francisco apartment last year were respectively found guilty of murder (the first conviction of murder in California based upon the actions of a dog) and manslaughter yesterday, ending a grisly trial which transfixed and horrified the famously liberal city.'

...NZ 'dog owners fearful of not being able to meet the cost of proposed new laws are considering having their pets put down because they didn't want to break the laws, MPs were told yesterday. The poor and elderly feared Government plans for all dogs to be micro-chipped and leashed in public places, and certain breeds would have to be muzzled in public, while all dogs must be securely fenced – in a way that gives visitors unimpeded access to one door of the house – would be beyond their means' ('a schoolgirl was recently savaged about the face by a dog after the girl had entered a property to sell raffle tickets').]

...*It can be a dog's life owning a pooch under today's restrictive laws and the complications are about to get worse... FROM Footrot Flats to sprawling cities, the dog's relationship as [humanity's] best friend is being tested to the limit... Having a dog can turn a person into a social leper overnight, banished from popular weekend spots and forced to carry the dreaded pooper scooper. The last bastion of freedom for Rover may be a roam in a designated dog exercise area with a pack of other mutts... [A]nd if Rover's pitbull characteristics has earned him a place on the dangerous dog list, [the mutt] will have to wear a muzzle during his romp. Only a few years ago owners could get away with walking a dog in the city, on popular beaches and parks, without a leash. If their pooch squatted to relieve itself, they could... look the other way... But the silent*

revolution began... last year, with the introduction of the Dog Control Act. This brought in a national standard for dealing with dangerous dogs, problem owners and dogs that wander, bark or bite. Now, Rover's midnight wanderings could cost an owner as much as \$400 and the pooch only has to wander as far as next door. That is a \$200 instant fine for being on another person's property and another \$200 if a dogmatic ranger catches Rover relieving himself. Worse, if a dangerous dog is caught at large without a muzzle, the fine is \$400. But that's only the beginning of a dog owner's problems. Local authorities have brought in their own regulations to manage their canine populations. And as dog officers flex their new powers, owners may feel they are the ones wearing the choker chain... In Christchurch... plain clothes... "pooch police"... will visit areas where dogs are known to hang out and capture their motions on film, through Poohcam... [– although the] Privacy Commissioner... said the council would have to adopt a protocol similar to that of the police... such as signs saying the park was subject to surveillance... [M]ore significantly, the council can, by resolution publicly notified in at least one newspaper, declare any public place a no-go zone, restrained dog area or dog exercise space[. The council does, however, plan to create 'the country's first park specifically designed for dogs']. Dogs in cemeteries have come in for special attention from several local authorities, including the Rotorua District Council. Its by-law forbids owners to walk their dogs through graveyards because of complaints that they are "desecrating" graves by fouling... The council takes 700 dog cases to the district court each year and estimates it wins 98% of them. Kapiti Coast District Council is seen as a leader in the "get tough on dogs" brigade, following the fatal mauling of a 59-year-old Rangiora freezing worker by a stray dog last April. It is formulating a dog control by-law that would... insist all dangerous and "delinquent" dogs were implanted with an identifying electronic chip. Kapiti Coast is also proposing a demerit points system, under which owners would be penalised with greater restrictions and extra costs for pound stays for repeated offences. "Some dogs turn up in the pounds on a frequent basis..."... But Tasman District Council near Nelson is going against the tide. It has agreed to ease its dog control policy because of public criticism that it was too restrictive.

...The star of... [a TVNZ] programme... lost control of one of her two pet Weimaraners [– which regularly appear on the show –] ...while exercising the animals... at Cornwall Park in central Auckland... It attacked a newborn lamb, killing it. [The star, who currently is in AUS], said in a statement that "as an animal lover I'm devastated by what happened. All dogs have hunting instincts but that doesn't make me feel any better about [the incident]..." Park rules stipulate that all animals must be kept on a leash... The park farm manager... would not comment on any action against [the star] or the dog... A dog control manager, said farm managers and police were authorised to shoot animals found harassing sheep. "It's a regular occurrence that dogs among stock do get shot... If we get called in to investigate, we would prosecute the dog owner." ...A [TVNZ spokesperson] said the animals would continue to [appear on the 5.30pm show. Editor's note: 'The Dog Tax, a measure protective of Pakeha sheep owners, was passed in 1881 to control the number of dogs owned by Maoris. The dispute came to a head on Apr 29, 1898, when Hone Toia led 200 armed Maoris to Waima, Hokianga, challenging the authorities to fight over the issue. A colonial force of 120 soldiers armed with field guns was dispatched.' 'But when they arrived they found that the MP for Northern Maori, Hone Heke's nephew (also called Hone), had already put down the so-called rebellion.'

...an Oklahoma, USA, resident was bitten by a police dog during a drug bust last year and retaliated by biting the dog back. Now the suspect has been bitten again, this time in the wallet. A judge has ordered him to pay \$US2263 to the police to cover the dog's veterinary bills.'

...a pensioner] was admitted to hospital in Christchurch yesterday after he was mistakenly bitten on the arm by a police dog chasing a suspected burglar, and suffered "moderate to serious" injuries. Police staff visited the [pensioner] in hospital and apologised to him... [Incidentally, a] 70-year-old West Aucklander... has been forced to send his beloved crippled dog into hiding to save her from the SPCA. The animal welfare organisation, backed by the strong arm of the law, wants to destroy... [the] German shepherd... but... [its owner insists the dog] has at least a couple of years left in her – an opinion backed by his veterinarian. [The dog], who is 10... has a degenerative spinal condition which has left her back legs useless... [To outsiders the dog] makes a sorry sight pulling herself along on her front legs. And [her owner] has to use a sling to take her for short walks and toilet stops. A Laingholm neighbour apparently became concerned and contacted the SPCA, which called in a veterinarian of its own. The advice was to have [the dog put down. However, the owner] refused to let an SPCA inspector take the animal on Tuesday night and by the time the inspector returned... with a warrant and two police officers, the dog had been taken to a secret location... [The owner] was shocked when police showed him a warrant accusing him of cruelty to animals and started searching his house... [D]espite her useless back legs, [the dog] was in good health and enjoyed life. "[My dog isn't] suffering any pain – just a bit of frustration – [it] still wants to go racing around." [The owner] said the dog should not be written off just because... [it was disabled. "My dog] has all the problems of a paraplegic person – [it] has to be looked after and cleaned and given special treatment and I'm prepared to do that." ...Auckland SPCA's] director... had called for a report and did not want to comment...

[Ratepayers will subsidise Auckland dog owners by more than \$2 million this year. The bill is high because thousands of dogs are unregistered. Picking up and impounding strays is a costly business. Dog control in Auckland and Manukau costs nearly twice what is recovered from owners']...

A noisy Manukau City dog pound in Papakura District is driving locals to distraction and the two local authorities look set to battle it out in court. Manukau plans a \$600,000 extension... increasing the 70 kennels to 100... and[an] upgrade to reduce noise, but Papakura wants the Ardmore kennels closed. Noise readings show barking... reaches 65 decibels at... about 20... neighbouring properties... five or six nights a week... The limit is 45 decibels... [Meanwhile, the] Otumotai... dog in trouble for barking, is on parole for 6 months. A Tauranga District Council committee decided yesterday to defer banning the pet from his... home. The owners of the four-year-old spaniel-huntaway cross... [had] appealed against the removal order, saying it was tantamount to having [the dog] destroyed. Now they have won time to work with dog control officers on a solution to the problem. The target of noise complaints since March 1995, [the dog] has had electric-shock treatment, his nose sprayed, been neutered and had his voice box surgically removed. But... [his] bark had "unfortunately returned" despite the operation, [and although] its volume had been reduced by two-thirds... still at least one person in the neighbourhood has continued to hound the council about him.

...A seven-year-old black kelpie... has made N[Z] history by becoming the first dog to be saved from death under the Bill of Rights... [The kelpie's home has a] fenced backyard but in March last year one of the seven... children left the front door open. [The kelpie] ran out to the footpath... [and allegedly bit a passing pedestrian. The kelpie's owner claimed it only sniffed the pedestrian. However, the pedestrian] complained to the Manukau City Council, which took... [the owner] to court. Neither [the owner], nor his lawyer at the time, could attend the hearing so... [they] asked for the hearing to be adjourned. But [the] request went missing and the hearing went ahead. The judge decided [the kelpie] should be destroyed... [The owner] appealed the decision... [and the] family have been waiting since January to hear if [the kelpie] would be destroyed. But there was relief on Wednesday when their[new] lawyer... succeeded in getting the High Court at Auckland to overturn... the Auckland District Court... decision... Under section 8 of the Bill of Rights, [the lawyer argued the owner] "had a right not to be deprived of life", which in this case was the life of his dog... Under the Dog Control and Hydatids Act 1992, a judge "may" order a dog be destroyed, but this was replaced by the Dog Control Act 1996 last July, which states a judge "shall" order destruction. As [the] incident occurred before the second Act it was argued [the kelpie] didn't need to be destroyed. "If this incident happened again now, there is no doubt that dog would be dead," said [the successful lawyer.

... Fargo was facing a death sentence after being accused of biting a pedestrian. But his owner was sure the five-year-old bitzer was being mistaken for another dog. "Fargo's absolutely useless. We've been broken into twice and Fargo hasn't made a sound. Fargo's more likely to lick someone to death than bite them." But it took a year of legal wrangling and three hearings before the Taupo district council let Fargo off a dangerous dog tag. At the final hearing

the council ruled Fargo was probably mistaken for a stray dog roaming in the area. Fargo's owner is delighted with Fargo's reprieve but says the battle to save his dog was very stressful and costly. "A lot of people probably wouldn't bother fighting the council but we were prepared to fight it all the way."

...a 'Blockhouse Bay resident wants justice. The resident returned from a holiday to find his pet dog Missy dead and a note from animal control in his letterbox. The dog was being looked after by friends while the owner was away. "One day while they were out two dogs entered the property and mauled her to death. Our neighbour called animal control." A witness said the control officer was not able to get on to the property because of the two dogs, believed to be a Staffordshire bull terrier and a pitbull terrier. The apparent owner of the animals later arrived and was asked to restrain them. "The apparent owner was told to wait with the dogs while the officer went to get some leads but instead hauled them over the fence and just ran off," said the animal control manager, who admitted finding him will be difficult. Missy's owner says the officer should've made more of an effort to get the apparent owner's personal details.'

...a National MP, who earlier] **this year chaired a parliamentary select committee investigating dog control[plans to]... push through legislation to ban... the future importation of pitbull types, including dogo argentino, filo brasileiro and the Japanese togo... despite a nationwide backlash from local authorities...** "So many attacks go unreported. I know of one pitbull which ran through a glass door and ripped a [gal's] cat to shreds in her kitchen,"... Pitbulls are [already] banned in the Mackenzie Country and Timaru, but councils in Auckland, Tasman, Napier, Wellington, Southland, Dunedin, Christchurch and Buller have said they will not support a ban. The councils believe a ban could lead to pitbull owners deregistering their dogs, with the breed sold on the black market... Buller District Council's animal inspector... said since Te Puke [resident] Koro Dinsdale was mauled to death... allegedly by a pitbull, the dogs have already disappeared from the district's register. "We've got nine registered but we know for a fact there are 14 – the owners told us their dogs had been shot... [However, a] labrador that is long in the tooth is just as likely to attack someone as a pitbull..." ...Wellington Dog Control[']s... chief inspector... said the present Dog Control Act was workable and it would be stupid to enforce a ban on pitbulls. "...The Government should look at creating a national register of all bites and attacks. For us not to have one is ridiculous,"... Local Government N[Z]... was also against the ban... "The councils may not want a ban but 80% of the [public do]," said the MP. Unfortunately, the]... Kapiti Coast District Council, which decided to ban pitbulls early this year, has now run into legal problems. Several vets in Kapiti have refused to sit on a panel that would decide if a dog was a full pitbull... One dog control officer... [claimed to have taken] a picture of a pitbull to a council meeting and not one councillor could identify it. "It just shows you that people could be attacked by a dog and say it's a pitbull when it isn't."

...A... Pukekawa... dog breeder was in a... Middlemore Hospital... plastic surgery ward last night after being mauled by one of his own... dogs – a rare breed the Government has been considering banning from N[Z]... A Westpac Rescue Helicopter crew[-member]... said the attack was so savage it was thought [the 37-year-old] could lose his arm... The attack has alarmed the chair[person] of a parliamentary multi-party dog control group... "This is disastrous. I had heard that a guy out that way was advertising these man-eaters and now [the breeder] has been eaten by one,"... [The breeder] told medical staff who treated him at the scene that [his were] the only two full-grown dogos in the country. [The breeder had]... broken his own rule of not breaking up a fight between... them... That morning, [the breeder] had advertised in the N[Z] Herald, offering the first dogo argentino litter for sale in the Southern Hemisphere... [The pups were 'expected to fetch \$3000 each.'] The dogo argentino breed – large white dogs with black spots – were once used to guard slaves in Argentina and are banned in Britain and... [AUS. The NZ] Government working party has recommended outlawing them, along with three other "dangerous breeds"... [Its chairperson claimed to know] of several fila brasileiro... fighting... dogs... being bred in N[Z]... "...I demand that my colleagues act now to ban these before a child is killed,"... On Saturday afternoon, a 7-year-old boy from Port Waikato was also airlifted to Middlemore Hospital after being bitten by a dog on Sunset Beach and almost losing an eye.

...[a wandering Staffordshire bull terrier-cross charged at a 4-year-old playing on the footpath outside his home in the Auckland suburb of Pakuranga, bit his face and dragged him across the path, shaking him like a rag doll. The boy needed extensive stitches and two months of plastic surgery at Middlemore Hospital but, in addition to losing a tear duct in his left eye, is likely to be scarred for life. According to a recent study by Otago University's Injury Prevention Research Unit, over 5700 NZers are bitten severely enough by dogs each year to need hospital treatment. Dog experts say people foolishly buy "guard" dogs without thought for their inbred aggression. They expect them to fulfil an ambitious role – part status symbol, part protection, part family pet – and are stunned when the animals turn on their children or passers-by. For the police, power boards and NZ Post, dangerous dogs have become such a problem that regular seminars for employees are held on how to avoid attack. But youngsters are most at risk. Children under 10 are most likely to require hospitalisation after a dog attack and four times more likely to suffer injury to the head or face than adults. The menace from dangerous dogs is exacerbated by the huge numbers unregistered, many of them strays. Although by law all dogs must be registered with local councils, the Auckland SPCA estimates that at least half the dogs in the greater city area aren't. In Manukau City alone, which has 20,000 registered dogs, the council reckons as many as another 6000 are unregistered including 150 classified as "aggressive and dangerous." Too often these animals end up in SPCA shelters or city pounds where each year throughout the country some 50,000 are destroyed because their owners can't be traced. To improve dog-owner identification, many authorities favour supplementing or replacing the existing registration tags that can be attached to a dog's collar – and easily lost – with a more permanent device such as the microchip implant. A vet can insert the chip, the size of a grain of rice, without anaesthetic under the loose skin on the scruff of the dog's neck. Every microchip carries an individual code that is "read" by passing a scanner across the animal's skin. The reading, fed into a computer, can identify the owner within seconds. Since the National Central Animal Registry, one of two companies marketing microchips in NZ, introduced their Trovan chip in the middle of last year, over a thousand owners have paid around \$75 for their pets to be fitted with it and entered on a central register. The Auckland SPCA inserts the rival Destron chip in dogs they place for adoption. Several local councils soon hope to introduce implants, but would prefer one standard national system.'

...'Legislation introduced in AUS means a \$45 microchip must be inserted into every kitten and puppy. Owners face a \$600 fine for breaking the law, which exempts working dogs – including greyhounds.' Speaking of which, 'those too old or too slow to race in the US (where greyhound racing brings in \$3 billion annually) are shot, bludgeoned to death, starved or left to rot in fields. Mass graves have been found.' In local news, [l]ocal authorities do not want to be forced into banning dangerous dogs, such as the rare Argentine breed that mauled a Waikato dog breeder. And the S[PCA] says the renewed call to outlaw four "dangerous" breeds is driven by hysteria... The SPCA head... said: "Tomorrow, there will be an attack by a Rottweiler and people will say that's another one to put on the dangerous dogs list."

...[a 'Rotorua meter-reader says it should be nicknamed dog tucker. During his six years with TrustPower, it has been bitten from his shoulders to his shins. "When you go on to a property you always run a risk. They hear the rattle of the keys and come running." The meter-reader has been recovering at home from his latest attack – by a rottweiler that jumped over a gate to get to him before the 55-year-old had entered the property.' □ The] Government is poised to prohibit the importing of four dangerous dog breeds and to put strict controls on those already in the country... The package... [– which requires no] legislation... as all the measures can be achieved through regulation... [–] would cut the number of these dogs to "as close to zero as possible."

...A victim of American pit bull terriers and a breeder agreed on one thing yesterday – new regulations banning breeds of dogs could not work... And local bodies – charged with dog control – are "bitterly disappointed" that they were not consulted about the... [new regulations. The chairperson of the NZ] American Pit Bull Terrier Club, said there were 7500 American pit bulls in the country and a further... 60,000 dogs... looked like them.

...[Bandogs – considered the ultimate fighting guard dog – are being sold in this country for between \$1500 and \$5000 each. The giant dogs are bred by crossing a pitbull terrier with a Neopolitan mastiff. Fully-grown bandogs weigh up to 55kg, and combine the great strength and size of a mastiff with a

pitbull's speed and fighting instincts. Popular in ancient Roman times, they were used to fight armed gladiators to the death. Some Neopolitan breeders make pup buyers sign contracts saying they won't cross-breed with pitbulls. A decade ago, the importer of the first Neopolitan mastiff described bandogs as "monsters." The Waitakere MP who has a dangerous dogs bill before parliament, wants to see bandogs added to the list of dangerous breeds. "I can't understand why anyone would want a dog which is capable of killing. The government must act, as there's a great deal of concern about dogs like this."]

...Let me begin my discourse on dogs by saying that... a... good rule of pet procedural thumb is to forever remember that doggie, although a tail-wagging joy, is a carnivore who never stops fantasising about food. So you do not, for instance, amuse yourself by... [getting] on your hands and knees and [pretending] to be interested in its dinner... You don't tell doggie it's going to the vet until it gets there... [However,] doggie needs to understand precisely what constitutes good behaviour on its behalf and precisely what happens to canines who never catch on... [If] a dog can't overcome its desire to bite... then it can expect to find itself on the wrong end of the big needle... I say this because we do not want cabinet to falter at banning... dangerous breeds... Your correspondent has never entirely understood why the decision to ban dangerous canines has proved so spectacularly difficult. There is something slightly obscure about the logic which says that citizens who are maniacal enough to like the idea of a vicious dog ought to be allowed to have one. But there you go. Nobody particularly wants to be eaten, but we keep the possibility alive.

...Good on the Government for moving to ban... nasty, vicious breeds of dog from this country and destroy most if not all of those already here. And good on Auckland's local authorities for passing bylaws banning dogs from beaches for most of the day[during summer months] and ruling that they be on a leash at any other time. These days it seems that many people have much more concern for animals than they have for people... [– like the gal] in England who chucked her partner out after [the partner] took her dog for a walk and allegedly lost it. I suspect that having competed with a dog for her attention for long enough, [the partner] had wrung its neck... Now I've got nothing against dogs. I can spend hours marvelling at the intelligence of sheep and cattle dogs as they do their thing on farms or in dog trials; and I have tremendous respect for guide dogs, police dogs... and the like. Nor do I have any complaint about well-bred, well-fed, well-groomed, obedient dogs. The thing about all those animals is that the dog is [the] servant... It is cared for, trained, appreciated, maybe even loved, by its owner – but the owner is always in command of the dog, not the other way round. [Like Confucius – who said, 'a human can not live with the birds and the beasts; if I do not live with humans, with whom shall I live?' –]I have always felt sorry for those unfortunate people who seem unable to form any close human relationships, to whom an animal becomes more important than any person and who becomes obsessed with the affections of a dog or a cat or even, these days, a ferret. And for those who need to have a vicious, snarling [people]-eater to give them some sense of power... But, in spite of all the foregoing, I do have some sympathy with the 19th-century French writer... who wrote: "The more one gets to know [humans], the more one values dogs." [By the way, 'some unions at Air France say they have called for a pilots' strike tomorrow to protest the punishment of a captain for refusing to allow a guide dog to accompany a blind passenger into the cabin.'

... 'using dogs to guide the blind started in Germany at the end of WW1 and soon spread worldwide. The first breed used were Alsations – only bitches are used to cut out the risk of fighting – and although other breeds (boxers, Labradors, Border collies) have been tried, the Alsatian is still the most favoured.'

... 'For every guide dog there are more than 100 people waiting.' One of the fortunate few – 'now on her third guide dog, Puzzle, which it has had for four years – is getting ready for the Blind Foundation's annual Guide Dog Appeal. Some of the proceeds will fund the Guide Dog Puppy Development Programme, which starts when the dogs are seven weeks old. Puppies are matched with volunteers who socialise with them so they get used to everyday situations. The dogs start four to six months of intensive training when they are 15 months old. They receive up to five weeks further training after being matched up with owners.'

... 'Henderson town centre will be full of dogs and marching girls this Saturday as the annual guide dog appeal gets into full swing. This year the appeal is based around three badges featuring two guide dogs and a stud for breeding the right type of dogs for the job. Each badge costs \$2. The Royal NZ Foundation for the Blind needs around \$22 million each year to provide its services for blind and sight-impaired people throughout the country. Just over half of this is provided by the government and other sources but the rest, including just over \$2 million a year for guide dog services, comes from fundraising. It costs around \$22,000 to breed, train and match a guide dog with a blind or sight-impaired person. Today is International Guide Dog Day and volunteers will be collecting in shopping centres and on the streets. Volunteers to help with collections are needed. Badges can also be bought at most supermarkets, The Warehouse, NZ Post Shops and Shell service stations, or you can ring the foundation on 0800 DOG DAY (0800 364 293)' to 'sponsor a dog for 50c a day.'

... 'Nasa turns heads wherever it goes. That's his only problem, says his Massey owner. Nasa is a guide dog whose good looks and personality sometimes make his sight impaired owner late, as people often stop to admire him. As well as being a guide dog, Nasa's also been a model, posing in the Foundation for the Blind calendar. Nasa's owner is the foundation's Auckland and Northland special events co-ordinator, and as such has been organising the annual Guide Dog appeal tomorrow and Saturday. The foundation trains 22 breeds as guide dogs, with the number changing yearly depending on funding. Each guide dog can take up to 18 months to train. A volunteer puppy walker teaches the dog how to socialise before it returns to guide dog services for training.'

... 'A partially sighted Massey resident is trying to catch whoever shot his guide dog. Leo, a German short haired pointer cross, was shot in the leg with a slug as they walked along Don Buck Rd last Thursday. "It sounded like a car backfiring and a split second later Leo let out a whimper. I knelt down to comfort him. Leo was holding his paw up in the air and I felt blood." Leo is recovering well but might now be startled by sudden noises. His owner has limited vision during the day but Leo is his lifeline at night. Anyone with information on the shooting should contact Massey police station'...

'There aren't too many people who can say their dog saved their life, but an Aucklander is one of them. Earlier this year, the blind triathlete was on a pedestrian crossing with her guide dog, Fletcher, when the Aucklander suddenly felt a big tug on the golden Labrador's harness. Then the Aucklander was hit by a car which had failed to stop in time. It came to a halt on her lower right leg. The Aucklander was seriously injured but it could have been worse. "The police prosecutor would have run over my hip and I could easily have been killed but Fletcher instantly leapt back like a kangaroo," says the 43-year-old. Fletcher is her third guide dog and the best one the Aucklander has had. "Fletcher's my best friend. Fletcher sleeps next to me. When you go blind, a huge door shuts, but Fletcher opens the door in so many ways," says his owner, who lost her sight at 22 through illness.' ■ '244 NZers have guide dogs'...

'Guide dogs for the blind are a well-known sight and now they're being joined by hearing dogs for deaf people. The dogs are trained to nudge or paw their deaf owner when they hear an important sound, such as a fire alarm, telephone, door bell or alarm clock. The dog then leads its owner to the source of the sound so they can investigate. Dogs can be of any breed, and there is even a dingo trained as a hearing dog. Donna the Dingo has proved invaluable for an AUSn deaf couple and is given the same rights to enter food and retail premises as guide dogs. However, Kiwi hearing dogs don't have the same rights'...

'What a difference a dog can make! Bonny has given a cerebral palsy sufferer a new lease on life. Dogs like Bonny make simple everyday tasks possible for those with restricted movement in their arms and hands. Assistance Dogs also bring companionship, confidence and an increased sense of wellbeing. Assistance Dogs aren't yet available in NZ, but the organisation welcomes applications from NZers who'd like a dog, or can help bring the scheme here.'

... 'Members of the cute beagle pack that sniff out contraband at NZ airports are our latest export. MAF has just sold three of the super snouts for around \$15,000 to AUS's quarantine service. NZ has a beagle-breeding programme, which means at times it has more dogs than it needs. AUS, with which NZ authorities work closely on quarantine issues, doesn't. Detector dog teams had been set up based on similar programmes in the US, Canada and AUS. However, NZ officers have now trained dog handler teams in Argentina, reviewed detector programmes in Hawaii, and consulted and trained staff in various Pacific Island nations. The NZ hounds, which can detect the scent of fruit in a bag three weeks after the fruit has been removed, had been an

outstanding success. If a working dog becomes sick, or a handler resigns, up to eight replacement dogs would begin the required three months of training. Usually half failed the course but recently there had been nearly a full pass rate, which had created the dog surplus.' Dogs are also 'trained and employed to sniff out dry rot.'

...Dogs are the main victims in a vicious war which has broken out between the truffle gatherers of central Italy. The dogs are specially trained to sniff out the pungent black and white fungi which are highly prized by the gourmets of Europe... About 1800 registered truffle gatherers operate in Umbria and competition has been especially fierce this season, because the summer was so dry that truffles are scarce. The price has soared... A well-trained dog is worth its weight in truffles and police believe that someone is seeking to put the opposition out of action by killing them... At the weekend two dogs died of strychnine poisoning... bring[ing] to 30 the number of dogs who have died since the... truffle... season...

THE CHRONICLE of [hu]mankind's great achievements has been the account of an individual's dogged pursuit of a noble cause or distant prize. For... [a] Dunedin scientist... and his colleagues, the noble quest is a small, dark, wrinkled fungus that grows... as much as half a metre... underground and only a trained pig or dog can sniff out. For them, the search has all the lure and magic of Jason's fleece or Pizarro's El Dorado. [Their] quarry is the truffle, one of the rarest – and ugliest – culinary ingredients on the planet... [The Dunedin group] are conducting a daring experiment in the South Island, seeking to become the first to produce the delicacy commercially in the southern hemisphere. Truffles were written about as far back as 1600 BC... [but while] once they were in plentiful supply in large parts of Europe, truffles are a scarce resource today. Traditional beds have been destroyed by acid rain, deforestation and two world wars. Annual production of the variety acknowledged to be one of the kings, the French Perigold black truffle, has fallen from around 1000 tonnes at the turn of the century to just 40 tonnes by the end of the last northern winter... If N[Z] could cultivate them... there would be big potential to supply out-of-season markets. Moreover... the ingredients truffles need to grow include temperate weather conditions and alkaline soils, and... N[Z] has plentiful supplies of both... [I]n the past two years, an inferior truffle from China has found its way into European markets... Several other countries had tried to cultivate the fungus artificially since the 1960s. In California, growers harvested their first truffle only after eight years of trying. And information was hard to come by. In Europe, cultivation techniques are fiercely guarded from one generation to the next. [However, the Dunedin group] knew that an early challenge was to "infect" the roots of oak and hazelnut seedlings – the tree species under which truffles are naturally found – with Perigold black truffle. After two years work, [the group] had managed to produce several hundred seedlings with good infections on their roots... Once a seedling is planted... the fungus spreads rapidly over the root system... Since 1987, [the Dunedin] group and the growers have spent \$2 million trying to grow Perigold black truffles, planting some 8000 infected seedlings on 32 truffieres. Success has been sporadic. A few truffles were found in 1993. Then, in 1995, several scores of kilos of white truffles – another highly prized variety – were harvested on... [a North Island property]. Ironically, none of these had been cultivated, and probably grew from infected plants brought into the country years earlier, but they proved that reasonable harvests were possible in N[Z]... Of the relatively few truffles unearthed in N[Z] to date, some have been sold to local restaurants for up to \$3000 a kilo. In Europe, where fake truffle rings are rife and poaching common, prices are even more exorbitant. A kilo of Perigold can fetch up to \$9000 in retail outlets like Harrods of London [and 'as much as \$22,500 per kg in Japan']... High prices mean buyers internationally have to watch for skulduggery. In France, truffle have, on occasion, been sold with buck-shot to increase their weight... ['The Europeans traditionally used pigs to find truffle, but have switched to dogs in recent years.' 'Pigs are also] used for truffle hunting in... N[Z] but I prefer to use dogs because they're easier to control... We only use [our pig] as a last resort... because [it] tends to eat the truffles before we can harvest them.' [Unfortunately, some 'people with a taste for haute cuisine are ending up in hospital after mistaking poisonous puffballs for truffles. The *Medical Journal* reports how a 51-year-old Ashburton resident picked some of the puffballs from beneath an oak tree in her garden and fried them in butter in the hope of enjoying a taste of the finer things in life. Instead, the resident was rushed to hospital suffering blurred vision and low blood pressure. Since then doctors have reported three similar poisonings around the country and have appealed to the public to leave truffle hunting to the truffieres. The National Poisons Centre knew of a further four adults and four children who had been poisoned by puffballs after mistaking them for truffles. "The odd thing is these puffballs look nothing like black truffles."'] • 'Demand for NZ's first commercial crop last year of Perigold black truffle was so high that the up-market Petit Lyon restaurant in Wellington wasn't able to secure any. That success prompted Truffle Investments Ltd to plan to raise up to \$3.6 million to establish two new truffieres near Gisborne, while Oakfield Truffiere Ltd is seeking \$1.8 million to buy one 8ha property. At present Oakfield's truffle farm comprises 400 trees and the proposed new farm will be planted with 4000 trees.'

...If your mutt likes to piss on your favourite wee tree, consider buying it 'the latest pet fashion – doggy knickers. The trendy pooch underpants were created in Nelson, where they are already selling like hot pants. Called Rip-Offs, the fancy pants with adjustable velcro sides come in 3 sizes and colours.'

...Relationships don't always work out. It's tough, for example, when the canine friend you thought would be a partner – be there for you at the end of a long day, keep you company on long walks, perhaps fetch your slippers – instead uproots the garden, shreds the furniture and disrupts the neighbourhood. "The fault can lie in an inappropriate initial choice of breed," says the NZ Veterinary Association president. "Often people choose a pet on impulse. They take a pet they think they'd like, and end up with one they can't live with." Sometimes potential pet-owners could use a match-maker. Now there is one – SELECTADOG. It's a programme that provides would-be owners with information to help decide which breed will best fit into their lives. It takes account of such factors as the owner's type of accommodation, the availability of recreational space, the amount of time and money the owner can spend on a dog, and whether the dog will share a house with young children. The program has information on 99 different dog breeds' ('there are about 225 breeds of dog').

...The classification of breeds of dogs tends to vary according to the author. A physician to Tudor monarchs during the 2nd half of the 16th century divided all breeds into high-bred, country and mongrel. By the 18th century 35 breeds were listed. Today we can reckon at least a hundred distinct breeds, the number rising considerably if all named varieties are included. They can be grouped as: sporting dogs, hounds, working dogs, toy dogs and non-sporting.'

...dogs really may be a human's best friend, especially if the human suffers from depression, panic attacks or claustrophobia, according to a German magazine. Dogs are able to sense the onset of such problems before they openly emerge, then instinctively try to cuddle up with their masters.'

...DON'T be surprised if Rover starts reading your *Sunday News* instead of fetching it. Dogs are getting smarter, scientists say. Overseas studies have found dogs may respond to human gestures better than other intelligent animals such as chimps. Researchers found canines could understand about 40 expressions. "Dogs are incredibly able to pick up the subtleties of body language," said an animal behaviourist. Canines have also evolved to share our emotions. The New Scientist journal says dogs have evolved so far from their wolf ancestors, that they can relate to their owners. That's because they are so used to living with humans they now think they are part of the same species. DNA tests have proven humans domesticated dogs over 100,000 years ago.'

...Humanity's] best friend was probably also [its] first friend, for the evidence suggests that dogs were the earliest domesticated animals. Partly as a result, dogs are also the domestic animals that have been most changed by people. Dozens, if not hundreds, of recognisable breeds have been established by humans choosing, with more or less deliberation, which of their canine companions would reproduce, and which would not. Although geneticists have long been interested in the resulting diversity of physical form, they have recently turned their attention to the parallel diversity of behaviour. Now that they have done so, researchers from Southampton University in Britain[have] concluded that what makes dogs behave differently is how much they have grown up. It is widely agreed among geneticists that many of the features which make dogs different from their wild ancestors, wolves, are the result of paedomorphosis – the retention into adulthood of juvenile features. The more paedomorphosis a

dog displays, the less wolf-like it appears... The researchers decided to concentrate on aggressive and submissive signals because they found that these could be stimulated fairly easily, for example by introducing food, toys and unfamiliar dogs into a group. They identified nine aggressive signals and six submissive signals in at least some of the... 10 different breeds... [they] looked at... but only one breed... the Siberian husky... showed all 15 of them... [T]he extremely un-wolf-like Cavalier King Charles spaniel... exhibited only two. When they asked a group of independent experts on morphology to assess how wolf-like each of the breeds they had studied appeared, they found that the degree of wolfish looks a breed exhibited correlated with the number of different aggressive and submissive signals shown by that breed. And when they compared their results with the order in which these signals first appear in growing wolf cubs, they found that the behaviour patterns of the least wolf-like dogs are those that appear earliest in young wolves. Arrested physical development, in other words, correlates with arrested behavioural development. There are, however, some suggestive deviations from the pattern. Gun dogs... tend to be more wolf-like than their physical appearance might have suggested. And, perhaps surprisingly, the wolf-like German shepherd was not as lupine in its behaviour as its looks suggest it ought to. But German shepherds are only secondarily wolf-like, having been deliberately bred to look that way in the relatively present past. How the loss of particular signals affects the social lives of dogs is not yet clear. In some cases signals seemed to mean different things to different breeds. Golden retrievers, for example, used several signals in play that German shepherds and huskies apparently reserved for real conflict. There is thus the potential for misunderstanding between dogs of different breeds.

...[Cry “*CRUFTS*,” and let slip the dogs of war! An international dog-grooming champion – who has been showing at Crufts for the last 30 years, and has won her class countless times – has a habit of sneaking beauty products and frilly cushions into her Surrey home with the price tags carefully removed. The potions and fripperies are not for her, but for her 10 beloved poodles (who have their own heated waterbed). While her husband is only too well aware of her devotion, the wife doesn’t think her guy – who gives driving tuition in performance cars – would appreciate learning that his wife parts with up to £50 for a single bottle of dog shampoo. When it comes to preparing for Crufts, the wife can get obsessive. Preparation for the cream of dog shows is an all-year affair. Long ears are kept tied up in blue plastic bags to stop them getting stained. The dogs are regularly washed, dried and combed, a process which takes half a day. Then there’s the fortnightly clipping. “I have friends who think I’m crazy, but I think they’re crazy, because they just sit at home and do nothing. They get very bored and very miserable, and their marriages aren’t very comfortable. My husband tolerates my obsession about showing dogs because I tolerate his obsession about motor racing.” Another couple go to dog competitions every weekend. In their dining room is a proudly displayed family portrait – the couple surrounded by eight dogs. “We never really had the time to have children,” explains the husband, who organises dog shows for a living.’

...‘two mongrels are reportedly rolling in it after inheriting \$1 million from their owner – to provide for them while they remain alive – while the owner’s two sons from his first marriage failed to receive a cent. The owner left the remainder of his \$4m estate to family friends. Any money left when the dogs die is also to go to friends. The estate was last week contested in the High Court at Auckland by the sons and the owner’s third wife, who was left \$200,000.’

...‘They’re no ordinary farm dogs. For three years, they were worth \$1 million – until the courts took the money off them in a long-running legal battle finally settled last week. Their rags-to-riches tale attracted international attention. An Auckland farmer whose identity is suppressed by the court, left \$1m of his estate to provide for his much-loved working dogs, whom the farmer had owned since they were pups (they are now both aged about seven). The bulk of his fortune was left to two sons of family friends, one an infant. His own sons, aged in their 30s (one of whom had assets worth about \$500,000), who had little contact with their father while their father was alive and are estranged from the farmer’s third wife, were left nothing. The trio contested the will and while the dogs weren’t required in court, they had a lawyer to look after their interests. The High Court decision saw the money taken off the dogs and redistributed among the family. In her decision, the judge said the money set aside for the dogs was totally unjustifiable, “even for the most aristocratically raised dogs”. However, the judge said that as the dogs were valuable farm assets, the court expected the widow to treat them appropriately, “that their registration and veterinary fees and all other luxuries they have come to expect will for the duration of their lives be met out of her own resources”.’

...‘*No paradise for dogs of Fiji* Outside the shielded luxury of rich tourist resorts, are images travellers, particularly pet lovers, prefer to forget. Forlorn, sad, even intimidating, the stray dogs are not a pretty picture: mangy, malnourished, scrawny and disease-ridden, often marauding in savage, semi-feral packs. Their escalating numbers are not only a Pacific Island problem; the same dilemma faces emerging economies in many parts of the world.’

...‘*What was the origin of the saying “Every dog has his day”?* Phraseologists say Cervantes apparently unleashed this dog within the weighty tomes of Don Quixote, written between 1605 and 1615. But great bard William Shakespeare may have piped the Don in 1603 with *Hamlet*, with “the Cat will mew, and Dogge will have his day.” Two centuries after, the phrase was well ensconced in the lexicon landscape, with George Barrow writing “youth will be served, every dog has his day, and mine has been a fine one.” Scholars are confident our learned scribes were never aware of the only occasion in the world where dogs literally have their day. In the Himalayan valleys there is a traditional festival for our four-legged friends. The Kashmir Indians call this Khich Mavas and the Nepalese call it Swana Boli. For a day dogs are adorned with garlands of beautiful flowers and feasts laid out for even the lowest of strays’.]

...The old Thai saying “Temple dogs never starve to death” is in danger as [the] deepening economic crisis takes its toll on Buddhist temples, traditional sanctuaries for stray and abandoned dogs. More Thais are dropping off their pet dogs... as they become unable to feed another mouth at home, says... [the] abbot of the Watklang Temple on the northern outskirts of Bangkok. But with more than 300 dogs in his care now, [the abbot] says feeding is becoming expensive... “I used to feed the dogs twice a day but these days we can only afford one meal a day for them... One temple said that even its monks did not have enough food to eat... So they transferred over 50 dogs to my temple. I love dogs and I will never turn them... [away,] but I want to appeal to people who leave their dogs with us to bring also food for them and share some of our burden.” ...[Meanwhile,] Thai loggers are feeding amphetamines to the elephants which haul timber out of the country’s jungles in a bid to speed up their work rate... [and] sustain nighttime log-hauling... before the monsoon rains start... the... secretary-general of the Friends of the Asian Elephant Foundation... said yesterday... The quagmires caused by downpours can stop... the... illicit timber... [operations. A] volunteer at Lampang’s elephant hospital, said that... 10 animals had died of overwork and exhaustion. The hospital has also tried to treat some... abandoned animals for amphetamine addiction.

...[a] local resident... said that... two elephants dragged a third that was injured 5km into... the Bankura forest area... in West Bengal and protected it for three days... [T]he companions tore tree branches and carried water in their trunks to the elephant[, which had been] hit by a train... Yesterday, a team of veterinary surgeons and forest officials reached the forest to treat the injured animal... [T]hey were kept at bay... until the two guarding elephants were chased into the jungle. The injured elephant was then shot with a tranquilliser gun, and examination by a surgeon found that its hip bone had been fractured... The medical team was unable to raise the elephant on its feet. The team returned to Calcutta after giving it saline, stimulants and cortisone. [A] forest officer... said: “We have made a temporary shade to protect the pachyderm from sun and rain. We are hoping that the companions will return and try to raise it back on its feet.” The medical team will visit the elephant again if need be...

Police are hunting the “sickos” who poured fuel over... Christchurch’s favourite sea elephant, and may have tried to set him alight. The attack... the third of its kind... had left... [the mammal – which] has visited... 11 times in the past five years [–] ...looking the worse for wear, said[a] Marine Watch co-ordinator... who spends many hours each week monitoring [the sea elephant]... “My patience and the patience of the D[oC] are wearing very thin. N[Z] is a leader in marine conservation and for something like this to happen is just sick.” ...burnt patches on [the animal’s] skin had a strong smell but it was hard to say if it was petrol... “[The sea elephant] usually goes on a bit of a rampage in the evenings, but when I was there last night [it] was very, very, quiet.” Another inspection yesterday revealed further lesions, which left... the possibility of infection. New Brighton police were in the... area until 2 am on Sunday but saw nothing. The offenders would be liable to charges under the Marine Mammal Protection Act...

['Too many seals resting on beaches are being attacked by dogs, says a marine mammal veterinarian. "Dogs left to run free on a beach can have an effect on wildlife. Owners need to remember this and keep dogs under supervision. The seal population is under enough pressure without the worry of dogs." Young fur seals were landing on west coast beaches as they dispersed from their birth sites after weaning. Their presence was expected to be more common than usual because the prevailing La Nina weather was thought to cause food shortages at sea.' In international news, **the plight of the so-called "Bridgeport puppies" [has] sparked outrage at the puppy trade... 100 puppies... from a... nursery in Missouri... were headed for pet stores along the [US] East Coast when [an] accident occurred... The Connecticut Humane Society received... 5000 offers from throughout the world to adopt the 10-week-old pup[s, which]... were found in filthy, overcrowded cages in the back of... [the] truck wreck... But only applicants from within the U[S] will be considered because of US animal quarantine laws... [The] truck... driver... was charged with cruelty to animals and put on probation for two years.**

...['A Californian telephone repairer, convicted of hurling a lap dog to its death in speeding traffic outside San Jose International Airport, has been sentenced to the maximum of three years in state prison after the judge in the case said it saw no real sign of remorse. The repairer, aged 27, said it reacted instinctively after the bichon frise bit his hand.' In related news, an 'unemployed 19-year-old appeared in a NZ District Court yesterday, charged with wilfully committing an act of aggravated cruelty for deliberately running over a gaggle of geese in his car, killing six of them.'

...['They are a common sight the world over – the people who keep dozens of animals and are often teased by children. "Public health professionals should recognise that animal hoarding may be a sentinel for mental health problems or dementia, which merits serious assessment and prompt intervention," said a researcher for the Tufts University School of Veterinary Medicine. His team looked at 54 cases of people reported by 10 animal control agencies and humane societies across the US. The median number of animals the hoarders kept was 39, but some kept as many as 100 animals in their often filthy homes. "These people actually believe they are on a rescue mission to save the animals." Most – 76% – were gals, 83% were middle-aged or older and half lived alone. They collected dogs, cats, birds and farm animals, and in 80% of the cases the animals were found dead, malnourished or injured.'

...[a NZ] district court judge has expressed frustration at being unable to ban a farmer who had been convicted of animal cruelty from continuing to raise calves... [because the] Animal Protection Act did not permit such orders for first offenders... [The farmer] was yesterday sentenced to five months' periodic detention and fined \$3000... [after being] found guilty... of eight out of 13 counts of neglecting to supply enough food and water to animals in his care. During a three-week defended hearing, the court heard that in August 1995 SPCA inspectors visited the two Te Kauwhata farms run by [the farmer] and found dozens of emaciated calves, either dead or dying, on boggy, barren land... Authorities had sought \$35,000 from [the farmer] to cover the cost of cleaning up his farm and bringing the prosecution, but [the judge] said the probation report made it clear [the farmer didn't] have that kind of money. Less clear was whether this was because of mismanagement or because his savings had been diverted to a family trust. [The judge said the farmer's] sentence needed to send the message to farmers that "callous indifference" towards stock would not be tolerated.

...['a Central Otago farming couple have been ordered to pay \$210,000 for ill-treating sheep at their high-country properties, Bonspiel Station and Peak Valley, and failing to ensure their needs were met. The Dunedin District Court judge also banned the couple from commercially farming sheep for 5 years.']

...TOUGH new animal welfare laws, which could see people charged with aggravated cruelty facing fines of \$50,000 and banned from owning a pet for life, are being proposed... [A] Labour MP... hopes his Animal Welfare Bill will be passed into law by mid-1998... eight years after consultation on the idea began... The bill, which... covers animal research and trade... also... [changes] the way animal actors... are treated on film sets... outlaws the docking of dogs' tails... [- about] a quarter of the 12,000 dogs registered through the... N[Z] Kennel Club... each year are tail-docked... [-] the debarking of dogs... the declawing of cats... and the castration of some animals... The same rules will stop animals being used for entertainment in bars, such as drinking live goldfish and "wild cow" milking contests... sheep and calf riding... [or] roping... contests at rodeos... and ['paint a sheep', 'catch the rooster or "greasy pig" competitions.

...['The SPCA is being roasted by Auckland's Pacific Island community for comments made about backyard killing of pigs. Pacific leaders took exception to a claim by the Auckland SPCA's executive director in the journal *Animals' Voice* that there is an "increasingly wide-spread practice of clubbing pigs and in many cases skewering them with metal from end to end and putting them, still alive, on a fire." The director conceded yesterday that roasting pigs alive was "not something that is widespread," and admitted talking about an incident from some years ago. Pacific Choice sold up to 2000 whole pigs a year, while the "Mad Butcher" sold about 3000 whole pigs a year, and the manager of the Aussie Butcher in Mangere estimated that backyard killing had halved in the past decade. However, Mangere's Whole Body Meats knew seven piggeries that each sold around 100 live pigs a week for backyard slaughtering.']

...A funeral is not a dignified one in Tonga without dead pigs. Those were the words of... elders preparing the funeral for a N[Z]-born bishop in the Pacific kingdom tomorrow. The Most Rev John Hubert Macey Rogers had two final wishes just before... [dying] in Auckland last week... at the age of 81... The first was... [to] be buried in the main... Catholic cemetery in Tonga, where [the bishop] worked for 31 years. The second was that no pigs – large or small – should be slaughtered as part of his funeral... His body will be flown today to Tonga where tens of thousands of mourning [RCs] await, fulfilling his first wish. However, his second wish will have no such luck. Church sources say that hundreds of pigs are to be killed for the funeral, expected to be one of the largest held in Tonga in recent years. Pigs play an important part in traditional Tongan funerals, especially when the King and Queen of Tonga, most of the nobles of the realm and cabinet ministers are expected to attend. It is customary that large pigs are exchanged between the guardians of the deceased, in this case the Church, and the dignitaries that attend the funeral. Bishop Rogers... was one of the most influential [individuals] this century in terms of shaping modern Tonga, especially in the field of education and religion. Church elders maintained that although there was respect for the bishop's will, [the bishop] deserved to be put to rest "like a great, notable Tongan... And that means pigs will be killed in [the bishop's] honour." Bishop Rogers... who was made OBE in 1978 and CMG in 1979 was recognised as a scholar of the Tongan language and customs. Those close to him said that during his last days [the bishop] spoke nothing but Tongan. Nurses had to bring in a Tongan interpreter to understand what Bishop Rogers was saying. From 1973 to 1977 [Rogers] was Bishop of Rarotonga with responsibility for Niue. [Rogers] became auxiliary to the Bishop of Auckland in 1977 with special responsibility to Polynesian communities.

...['Tribal warfare and vast cultural differences kept a group of church workers on their toes in Papua New Guinea. The group from New Lynn's Church of the Nazarene spent 15 days in the southern highlands of Mendi, constructing a church building. While they were there, 15 people were killed in a neighbouring village caught up in a war. The cultural changes included gals always having to wear a dress and being careful not to step over food in the market place or else it would have to be thrown out. The group communicated in pidgin English and they say local generosity was mindboggling. The villagers worked nonstop with them to put up the church building and, in return, the group gave them tools and clothes. At the opening ceremony, the church workers had to stop the villagers from presenting them with more gifts and pigs – generosity which would have forced them into huge debt. "Pigs are very much the currency and are absolutely precious. The villagers have a very simple way of thinking. Life is about getting enough pigs to get married and growing enough sweet potato to survive. However, some of them are incredibly well educated, having returned home after gaining education overseas."']

...['What has become of NZ's good keen pig hunters? Their numbers are falling away because young guys these days are too citified and soft, some old-timers believe. With fewer blokes heading into the bush to bring home the bacon, the wild pig population is exploding in some remote areas and the animals are dying of starvation. It's nature's way of culling, says DoC's Waikaremoana area manager, who oversees pig hunting in Te Urewera National

Park. An archetypal Kiwi outdoorsperson and friend for more than 30 years of the legendary Barry Crump, agrees that many young guys of today are “softies” who prefer to buy their pork from the shop. But the 63-year-old has some sympathy for them. Access to wilderness areas for hunting has become heavily restricted. Hunters – especially with dogs – now find National Park, Maori, forestry and privately owned land increasingly closed to them. The editor of *NZ Pig Hunter* magazine estimates NZ still has at least 25,000 serious pig hunters and up to 30 clubs. Modern day pigs are wily and not easy to catch.’]

...A farm near Rotorua has been effectively quarantined after a rare parasite... *Trichinella spiralis*... which can cause a fatal disease in humans was found in a pig. A... [MAF spokesperson] said the response would involve slaughtering all pigs on the property. Two other farms have so far been identified as taking pigs from the Mamaku farm, which was served with a restricted premises notice preventing anything moving in or out. The farm is not a commercial piggery but a “backyard” operation carrying a small number of pigs. The alert began late last week when a live pig from the farm was home-killed. The buyer submitted samples for testing. The parasite, last recorded in domestic pigs in N[Z] in 1974, was confirmed by the Meat Industry Research Institute in Hamilton and later by a [MAF] parasitologist. The disease it causes in humans is called trichinosis... The last recorded case was in 1965. The chief executive of the Pork Industry Board... assured consumers that pork and pork products were safe if brought from reputable outlets... Meanwhile, [the PIB]... is seeking an urgent meeting with... the... Agriculture Minister... to stop its breeding farms... in Christchurch and Palmerston North... being sold... The sale has been recommended by Parliament’s primary production select committee. It wants the farms... sold by September 2000... But the board argues that there are very few players who might be interested in buying its company, which could mean the eventual sale price could be driven down... About half of the replacement pigs coming into the national herd come from the company – of which... the board’s chief executive... is also chair[person – with the remainder coming from] PIC New Zealand... [The] PIC chief executive... [– who confirmed that his company] would not be a potential buyer... [–] dismissed the board’s concerns and said there were at least two large private pig farmers who could be interested in the purchase, as well as an A[US]n company.

...PROTESTERS will line the streets of Palmerston North this week against[an AUSn] pig farmer... who... came to the attention of Animal Rights Activists here last year. Undercover camera footage... of the Bunge Meat Piggery in Corawa, N[SW]... revealed 80,000 sows, most of them pregnant, living on bare concrete in metal crates with no room to move except to stand and lie down. Some had bleeding prolapses infested with maggots. Other pigs were filmed with infections and open sores. Others were crippled. In November last year, around 30 activists chained themselves to the piggery and a N[SW] MP tried to remove piglets in protest of cruelty to animals. [The pig farmer] has been invited to N[Z] by the P[IB] to lecture about using science to maximise profits in the pig industry.

...[‘The SPCA is getting a shake-up from its new president, with promises of a tougher line on intensive farming of pigs. The Royal NZ SPCA, the national body that represents the more than 50 SPCA branches throughout the country, has been criticised in the past for shying away from controversial intensive farming practices. Pork producers have agreed to phase out sow crates, but differences remain over how long they should take to do so. The industry is aiming for 2012 while the SPCA wants them gone by 2006 at the latest. The Green Party is bitterly disappointed there was no money in this year’s Budget to encourage pork farmers to get rid of sow crates, as happened in Britain when the industry agreed to phase them out. About 20,000 adult sows in NZ were locked in the crates, which measure 200cm by 60cm. “If that happened to a dog, the owner would be prosecuted,” said an SPCA officer.’]

...European farm ministers[have] agreed on rules for “pig hotels” – rest centres for farm animals on marathon journeys across the continent. They set a basic eight-hour travel limit for cattle, pigs, sheep and other farm animals, after which they must be unloaded and allowed to rest for 24 hours before continuing their journey... Ministers hope the rules will ease the pain of millions of animals which are crammed into trucks for trips of up to 50 hours... Sweden and other northern nations have [welcomed the new] transport conditions... but those in the south, such as Italy, claim the new rules will raise costs, making imports of live animals uneconomic, and will throw tens of thousands of people out of work...

Declining livestock numbers are expected to save N[Z]’s bacon on the world environmental stage... In a speech... last night... [the] Minister for the Environment... said our hopes of meeting the internationally agreed target were dashed by less-than-expected forestry planting... But now declining emissions of another greenhouse gas – methane – would keep our tally respectable... Sheep numbers are 47 million from a 1985 peak of 70 million [(not ‘including the estimated 40 million lambs born that year’)]... and continue to decline; beef cattle are down to 5.2 million from 6.3 million in 1975.

...[‘The Government has ruled out introducing a “flatulence tax” on every sheep and cow, a spokesperson for the Research, Science and Technology Minister said yesterday. Federated Farmers raised fears of the tax after learning that the Government had looked at the issue in detail as a way to reduce greenhouse gas emissions from agriculture. Farm animals produce nitrous oxide and methane through dung, urine and flatulence. The cost of the “flatulence tax” to farmers (levied at 9c for each sheep and up to 72c for each cow) was estimated at up to \$5 billion a year. The minister’s office said the most likely ways through which a reduction in emissions could be achieved were selective breeding of animals and research on how cows and sheep digested food.’]

...‘A giant underwater belch of methane gas 55 million years ago helped mammals take over the world, say US researchers.’ Incidentally, ‘the invention of refrigeration opened up the world for NZ’s primary products. The world’s 1st shipment of frozen meat left Sydney in 1880. The first attempt to ship frozen meat from NZ had to be abandoned when the refrigeration machinery failed but by the end of 1884, 30 steamers and 6 sailing ships had been fitted with refrigeration for the NZ trade.’ ‘NZ’s 1st freezing works opened in 1887.’ But it wasn’t until ‘1958 that the first shipment of beef cattle left NZ for the US.’

...[a] downturn in beef prices is leading to the lowest number of cattle going through the country’s freezing works in the last decade. Falling returns from the U[S] market meant fewer dairy calves were reared on for beef production in the spring of 1995. That has shown through as a smaller number of two-year-old cattle ready for slaughter. A total of 1.9 million cattle are expected to be killed in the year to September 30, compared with the highest recent kill of 2.289 million in 1989. However, farmers have been holding back animals, hoping prices will lift. As a result older, heavier beasts are now going through the works. So... beef produc[tion] this year is only expected to be down 2.6[%] at 499,300 tonnes.

...[‘Beef is the most fortifying and nourishing of all red meat (good quality beef is 97% assimilable – provided it is not eaten to excess – and, since it leaves little residue, is easily digested; cows’ meat is inferior to that of bullocks). The English have long specialised in rearing and feeding cattle for beef. The Durham-Manceau crossbreeds, Charolais, Limousin, Gasconne, Normandy and Salers are good for fattening. Prime beef is bright red in colour, firm and elastic to the touch. It has a fresh smell; the fat intermingles with the lean, peppering it with white or slightly yellowish grains of fat. Blotting paper applied to the surface should never be covered with greasy spots, as in the case of horse meat. In France, beef is graded according to breed, age, state of fattening, work done and sex of the animal. French beef is classified in three categories according to its market value, which depends on how firm and fine-grained the texture is, as well as on the proportion of sinews and fat’. By the way, f[at cuts of meat exported from... N[Z] are causing crippling health woes and early deaths in the Pacific Islands, says a medical researcher... [The] senior lecturer in epidemiology at Auckland University, said it was time N[Z] became responsible about what it shipped overseas. “We... may have caused more deaths... than the last 20 years of... French nuclear testing in the Pacific...,”... Mutton flaps made up a big chunk of the Tongan diet... It was often popular because it was cheap, even though a third of it could be fat... [The epidemiologist] said Tongan importers realised they needed to take responsibility as well. But this was often difficult when the incoming meat was not well labelled and fat content was often unknown. A spokes[person] for the Meat Producers’ Board... said N[Z] offered a range of export cuts and countries chose what they could afford... “It’s really a question of people’s incomes and what represents value to them.”]

...the double profit sheep farmers took from their lambs is fading fast... [T]o cash in on high prices and demand for meat – particularly from... [Britain] after mad cow disease – N[Z] farmers fed their lambs well. The lambs put on plenty of meat but they grew coarse wool to match... Seduced by the double-profit, farmers overlooked the long-term trend: consumers around the world want... finer wools... [A] move back in microns will take several years. However[, although]... fine wool Merino growers are... receiving prices estimated to be 28[%] up on those of last year... immediate indications are... that many farmers will... continue to put more emphasis on meat production, especially when there are good prospects of receiving more than \$50 for a well-grown lamb as opposed to less than half that for the annual wool clip from their crossbred animals.

...The old cliché of N[Z] living off the sheep's back has never been further from the truth... DESPERATELY low wool prices for farmers are about to trigger major reforms [within the NZ] wool industry... A typical breeding ewe... is returning its owner about \$15 a year net... It's barely sustainable... And farmers are getting edgy... Gone are the days when farmers came to town every year to watch their main wool clip being sold at auction and stopped off on the way home to buy a new family car or tractor. The glory days of wool are over, at least for the moment[('in 1991, wool's share of the total textile fibre market was around 4%, down from 20% 60 years earlier; in 1996, total world fibre output was estimated at 43.7 million tonnes, of which only 3.3% was wool')]. Leading the reform process is a new project by the... Wool Board to discover how and where to maximise value added to wool along the production line... Farmers' hopes of a revival in wool prices rest almost exclusively with the... Wool Board's ambitious Fernmark branding strategy. It was launched three years ago when the board broke away from the A[US]n dominated International Wool Secretariat (IWS), which developed the Woolmark. In contrast to the Woolmark, which promoted wool as a fibre in a generic sense, the Fernmark programme emphasises the unique qualities of the 195,000 tonnes of N[Z] wool produced each year. The board receives around \$40 million a year from farmers, through levies collected at a rate of 5% on the sale price of their wool. Since launching Fernmark... through its operational arm, Wools of N[Z], the board... has already invested more than \$150 million establishing the brand on the world market... Federated Farmers... says... [WNZ now] has less than two years to deliver a measurable improvement in returns for woolgrowers' investment...

The statistics for the first quarter... show a worrying 25[%] drop in exports to... [Britain], where the Wool Board has been quick to point to the success of its Fernmark branding strategy in increasing sales. However, the value of exports is up 30[%] on the same time last year, with a 5[%] lift in volumes... [E]xports to China more than doubled in the... [quarter], with sales of 557 tonnes... For the whole of last season China bought 3200 tonnes of fine wool[, making the country our]... largest buyer of... fine wools... Germany was the largest market with exports totalling 4940 tonnes...

In more bad news for the wool industry, sales of Nepalese hand-knotted carpets made from N[Z]'s clip have dropped sharply because of the downturn in the German economy. Nepal has been one of the few willing buyers for coarse wools of 39 microns or more which have been described as being almost unsaleable this season. But... the German market [is Nepal's] major buyer of hand-knotted carpets... Nepal's largest export industry... [T]here had been a tenfold increase in Nepalese rug sales to the U[S] recently... But they are still 85[%] dependent on Germany... Nepal was N[Z]'s seventh largest wool customer last season taking 8600 tonnes... “...80[%] of their wool comes from N[Z],”... said... W[NZ]'s corporate communications manager[, who]... was in Nepal recently on his way back from the N[Z] China 25 conference... To firm up links between the two countries, W[NZ] is bringing two Nepalese officials to this country early next year... A major British wool promotion has just been carried out in Nepal in an attempt to interest manufacturers in some of that country's coarse wool clip... • At last Thursday's Napier and Christchurch wool sales prices fell to their lowest level this season with the market indicator reaching 437c/kg. Exporters reported no major buyers and a high 31[%] of the offering was passed in because it did not reach farmers' reserve prices.

...Chinese and Nepalese importers have defaulted on up to \$20 million of N[Z] wool, raising fears that depressed prices will drop further... “This is not the sort of thing we need...”... said... [the] executive director of the Council of Wool Exporters... “None of the wool has been shipped but it has been scoured to a specific order and will have to be resold into a softish market.”...[the director] was at a loss to explain why there had been a sudden rush of defaults on around 40 wool supply contracts. One possible reason in the Chinese market was the tightening of border inspections by customs officials trying to police tariff and VAT duties. The crackdown seemed to mean that even well-respected customers appeared not to want to handle N[Z] wool... China, may take less than 20[%] of exports this season... [I]n the past selling season[Chinese] sales dropped to 27[%]. Yet the chairperson... of the... Wool Board... said last week that it would not necessarily be good for N[Z]'s wool sales to China to rise again to their high of 39[%] of the clip. If more work was put into lifting consumption in other countries, there could be better returns... However, [the CWE director] said wool exporters had little choice but to keep dealing with China in the hope that quality programmes put in place... over the past few months would help in concluding deals in the future... A task force of wool industry players has just been put together to try to deal with what the board says is the major problem of the coarsening N[Z] cross-bred clip. Wools over 38 microns are now considered... unsaleable... “...unfortunately, N[Z] farmers are shifting production to the undesirable 39 micron and stronger range[while their competitors are heading in other directions. For example, ‘Alaskan farmers are trying to domesticate the musk ox, which produces a wool that is eight times warmer than a sheep's and can be combed out instead of being shorn.’” In related news, a ‘new world record for shearing sheep in 9 hours (720 – 4 more than the previous record)’ has been set at the Golden Shears...

‘End of the golden fleece The choice facing hundreds of sheep farmers is stark – they must get out of their ailing wool-growing business and dispose of their flocks, or face death by a thousand slow cuts. The advice is contained in a hard-hitting rescue plan for NZ's \$1.5b wool industry, drawn up by the Wool Research Organisation of NZ. Gone are the days when almost universally we covered our floors and ourselves with wool. Not only does wool make up just 3% of worldwide fibre supply, but synthetic manufacture has undergone huge technological innovations which mean it can be produced at lower and lower prices which set the level for all fibre sales, including natural wool. Each NZ sheep produces more wool on its back than any other in the world, but that has not saved it from the same fate as its cousins across the globe. In most countries, sheep numbers are mostly static or, as in NZ, dropping.’

...The closure of the Wanganui wool scour... begs a question... As the national sheep flock contracts[, what]... is the industry doing to secure its future? ...The executive director of the C[WE] blames the industry's... huge overcapacity... on Government subsidies... which... [had] boosted sheep numbers... to... 72 million in the early 1980s... The majority of scours are owned by exporters who have tended to diversify into other areas of the wool industry as scours are not readily adaptable to other processing options. The proportion of wool which is exported from this country scoured has risen from about 60[%] 15 years ago to around 80[%] over the last four... years. This figure has slipped in the last season as buyers prefer to receive greasy wool and handle the fibre in their own country. Most notably the Chinese... have moved towards blending their own wool... “But N[Z] scouring technology is way ahead of the rest of the world and scourers are super efficient in terms of processing and... they are continuing to make... investments... in new technology.” One notable example is Wool Services International's new scour at Belfast, near Christchurch, which is one of the largest and most modern in the world. [The scour's managing] director... looks forward to the day when increased demand for wool will mean it can be run 24 hours a day, seven days a week. But... with recent closures in both[the] North and South Islands... there are only around 13 or 14 scours still in business... [T]he... Waikato Federated Farmers' meat and wool chair[person]... says there have to be advantages in increasing the amount of wool scoured in this country not only from the value-added point of view but also because of growing concerns about dip chemical residues left in fleeces which can cause pollution problems in overseas waterways if scouring takes place offshore. W[NZ] acknowledges the overcapacity in the scouring industry and also is keen to compact the procedure wool must follow on its way from the sheep's back to the consumer.

...a group of... [AUSn businesspeople] has made a bid to buy A[US]'s wool stockpile. The A[US]n Wool Group wants to take over the 1.4 million bales of wool left after the A[US]n Wool Corporation withdrew from market intervention in 1991 and delay its sale until market prices improve...

[I]t was not expected that the bid would have any significant effect on N[Z] wool sales or prices. The... stockpile is made up of wool between 22 and 24 microns, a range in which little N[Z] wool is produced... Meanwhile, [an 'AgResearch scientist says the AUSn green blowfly is likely to spread throughout NZ next year, causing major problems for farmers forced to change their dipping and shearing routines. "Central Otago farmers only dip their sheep once a year so an outbreak of flystrike might be pretty bad. Their sheep aren't under intensive care so some of the early signs could be missed." Because of its rapid movement south since arriving on Northland farms, it is thought that the blowfly is using vehicles such as stock trucks to hitch a ride. It is believed that the fly was introduced in the 1970s, possibly because of the large number of goat imports at the time. There was also an increase in small boat traffic across the Tasman. For many, the sudden increase in flystrike problems has hastened their move out of sheep and into cattle, with little indication that they would change back. Fighting the effects of the fly involves an integrated pest-management programme. Pesticides which cause no environmental harm based on bacillus thuringiensis bacteria and plant extracts are under development, with work concentrating on a suitable carrier liquid which will allow the toxins to remain active over a long period. There is also the possibility that if the gene producing the toxin could be identified in the bacteria it could be separated out and introduced to another bacterium already present in the fleece. In addition, a lot of information about parasitic wasps which attacked the AUSn green blowfly had been collected. These wasps were naturally occurring but it was not known how widespread they were throughout the country. One of the wasps breeds in cattle dung and the answer to flystrike might be increasing cattle numbers to encourage its buildup, in the hope it would then switch to the blowfly as its host. Large bin fly-traps can be used before fly emergence in November to help reduce AUSn green blowfly numbers,' while 'a group of Marlborough farmers has reduced the incidence of flystrike 30% by putting small yellow buckets of offal around their farms. AgResearch has supplied the buckets, which have clear lids and plastic piping. They're used at the rate of one to 50 or one to 100 head of stock.']

...Genetic engineering has joined the battle against A[USn green] blowfly. A molecular scientist at Massey University... has been given a \$75,000 grant from W[NZ] to work on a response to the pest, which has caused major flystrike outbreaks since its arrival nine years ago... [W]ith the help of a gene discovered by Greek scientists[, the NZer] aims to integrate proteins into the blowfly's DNA that could prove fatal to [gal members] of the species... [I]t would take up to two years to find out whether the gene would jump to the... blowfly and then more work would be needed to see if [gal blowflies] could be killed in this way. Farmers' use of insecticides to control the fly is meeting resistance from overseas wool processors.

...[sheep farmers] are under attack... from an animal welfare group that says [they're maintaining a practice which] is cruel. Wellington SPCA says drug-induced early lambing means the animals born in winter often suffer painful deaths in the cold... [L]ambs should be born in spring as nature intended. "What farmers are basically saying is because they can make better money from this they can put animals' lives at risk." Sheep farmers were criticised... in Europe five years ago when severe snowstorms killed millions of newborn lambs and pregnant ewes and pictures of the carcasses were shown on television... But Federated Farmers defended the practice... [of] using... Regulon, which... activates the ewe's breeding cycle.

...[a 'farmer was shocked to find the heads of 32 of his ewes in a ditch at the weekend. The heads had been dumped after the sheep were slaughtered in a nearby saleyard paddock and their carcasses stolen. The 4-year-old in-lamb ewes – part of a mob of 51 sheep in the saleyard – were worth \$80 to \$100 each.'

... 'A flock of about 20 sheep are the survivors of a vicious dog attack at a Mangere farm. An SPCA inspector and a veterinarian were cornered by a dog as they went to put down sheep that had been mauled. A second dog continued to maul and kill the remaining sheep. They were able to call the police from a cellphone and the dogs were shot. "One dog didn't die immediately and the officers followed the trail of blood back to the dog's home. Animal Control were called to uplift the dog and take necessary action against the owner.'" • In the 'US, a 10-month-old pup was hit by a car then shot by a police officer to put her out of her misery. Presumed dead, the dog was put in a vet's freezer, where it was found two hours later, sitting upright in an orange plastic bag.'

... 'Sheep farmers plan to protest today outside the US Embassy in Wellington and the consulate in Auckland, following yesterday's announcement by the Minister for International Trade that the US President would probably place trade restrictions on NZ and AUSn lamb. NZ's strategy now was to limit restrictions to a 20% tariff on extra lamb volumes for four years, which was proposed in March by the US International Trade Commission. The minister had hinted that NZ was unlikely to take the US to the WTO – as suggested by his PM last week – unless the decision breached the organisation's rules. NZ had argued for free trade but realised the US was under heavy domestic political pressure, with 31 senators writing to their President demanding trade protection. However, NZ's free-trade credentials could suffer from a Pork Industry Board move this week to apply for import protection under the WTO rules – although the PIB chief executive said the two cases were not the same as NZ pig farmers were trying to compete against heavily subsidised Canadian and AUSn pork. The minister wasn't worried that the country's 17,000 lamb-exporting sheep farmers could suffer from the actions of 500 pork producers.'

... 'The PIB says rapidly rising subsidised imports have cut local prices, at a cost of \$18.5 million, and halved incomes of local producers. In May, the board applied for a temporary safeguard, embarrassing the red meat industry because it had accused the US of hypocrisy over trade protectionism after its sheep farmers sought the same trade restriction against NZ and AUSn lamb. The PIB had to rethink its application in July after the Ministry of Commerce questioned the industry's position under the Closer Economic Relations agreement with AUS.' 'A 6.5% duty already applies to US pork'...

'The US is poised to deal NZ a double blow by imposing tariffs on our lamb exports and backdating them to January 1 this year. NZ and AUS are ready to move swiftly against the US by taking a case to the WTO as soon as the punitive rates are officially announced. But a WTO case usually takes about two years. The PM expects the US decision to be announced in two or three days. The tariffs have only to be signed by the US President, who left Washington yesterday for the G-7 summit in Germany. They include a 9% tariff on last year's volumes of trade, reducing to 6% then 3% in the subsequent two years. A 9% tariff on last year's volume, 21,000, would cost \$12 million. This amounts to about \$1 a lamb. But more punitive for an expanding trade is the 40% tariff proposed on any lamb exports above existing volumes. Nearly 4000 tonnes of lamb were exported to the US in the first quarter of this year.'

... 'One in two Americans has never tasted lamb. Last year, each American consumed 43.9kg of beef, 39.4kg of chicken and 32kg of pork, while lamb touched the scales with a tiny 450g – about one lamburger. But each year, American sheepfarmers lose about half a million sheep and lambs – about 1400 animals a day – to predators, mostly coyotes but also cougars, bears and wolves. The closest NZ would come to that would be the couple of dogs that go bad and maul sheep, maybe once a year and often on small blocks close to towns. It is seldom a problem on farms. The two countries' sheep industries differ in many ways. The American sheep flock numbers about 7.8 million but is owned by 75,000 farmers spread across every American state. The average flock size is 100. In NZ, the average flock size is 2830. The farming styles are as far apart as the numbers. In 1995, the editor of NZ's *Meat Producer* magazine, visited America to look at sheep farming. The editor wrote of biblical-style scenes in Wyoming. American producers have responded to NZ lamb producers looking to raise their returns through extended marketing in the US by calling for protection. However, the real blow to the American producers, say AUS and NZ, was the 1993 repeal of wool subsidies that funded much of the industry's promotional activities. The repeal had the expected result: marginal producers left the industry and production contracted. "In short, increased imports are a result of the domestic industry's contraction, not a cause of it."

...the 'year for NZ farmers has just got better, with confirmation that the US has agreed to abandon import quotas on NZ and AUSn lamb. Although widely expected, the decision by the US to drop quotas from mid-November was greeted by the meat industry yesterday as a significant victory. Last month, the WTO ruled the tariff violated international trade rules and gave the US 90 days to remove it. However, the NZ and AUSn Governments agreed to extend the deadline to give the US more time to persuade its sheep meat industry to agree to remove the tariffs' – which 'have cost NZ \$20 million so far.' In further meat industry news, scientists] have developed innovative new processing strategies to help deliver more consistently tender meat to consumers... [T]here were many factors which affected the eating quality... the main influences[being] the physiological state of the animal and the

method of processing... A[US]n research has shown that... [while] there was strong inheritability of high meat yield there was little that could be done to improve tenderness through breeding... The new controlled-temperature chilling regime, along with an acidity level for the meat which did not exceed pH 5.8, gave better hygiene, better colour in the meat cabinet, less product variability and a reduced chance of tough meat... [T]he Meat Industry Research Institute... had shown local market beef processors were chilling their carcasses too quickly to meet the standards of... quality... which had applied to export lamb for the past 12 years.

...The primary production select committee reported the Producer Boards Acts Reform Bill back to Parliament yesterday with the recommendation that carcass grading, which is compulsory at present, be phased out... Secondly, dairy farmers with a herd of more than 100 cows will, if the House passes the bill, be able to vote in elections for Meat Board members. The latter move is part of a switch to a multiple-voting system which will benefit large landowners... who until now have had only one vote... Changes to the acts controlling the meat, wool and pork industry boards were seen as being well overdue when debate started five years ago on updating their roles... Compulsory grading had acted as a barrier to innovation and its removal would allow meat companies to develop other ways of specifying the product customers wanted...

[On average, each NZer consumed] 45.3kg of beef and lamb last year. Now... the Beef and Lamb Marketing Bureau plans to launch a Quality Mark in the... [NZ market using] \$3 million of farmers' money... [The BLMB's general] manager... likened the mark to the Woolmark, which still adorns many garments – a symbol of purity and quality. To qualify for the new beef and lamb Quality Mark, the meat must be produced, processed, transported and stored to present, minimum standards prescribed in an agreement with the bureau. Regular, independent audits[will] ensure those standards [are] being met. The standards also covers animal welfare and food safety issues. But in spite of the mark's impending launch... the jury [is] still out on whether to exclude beef treated with growth hormone promotants (HPGs). For the 10% of N[Z] farmers which treated their cattle with HPGs [– instead of using the standard practice of 'hastening the fattening of animals destined for the butcher by castrating them' –]the possible exclusion[is] a two-edged sword... [The treatment offers] them a \$55 average gain in net profit from finished steers to heavier weights in the same time as untreated animals[, but]... they could miss out on the premiums available for beef which [qualifies] for the mark. Ironically, HPG-treated animals [are] also leaner, another factor high on the consumer priority list. The bureau's small board has been wrestling with the decision for months. At this stage, HPG-treated beef [remains] eligible to receive the mark, provided it [meets] the quality standards. The debate [has been] fought solely on the consumer perception that the product was not safe. Endless research worldwide[has always] cleared HPG-treated beef for human consumption... One study showed that a non-pregnant [gal] produces 90,000 times as much of the same hormone found in 500g of beef from an animal treated with HPG. Another showed that a 100g serving of cabbage contains more than 400 times the hormone level as that same 500g steak. Yet another, that a glass of milk [has three to five] times the number. No problem associated with eating meat from an animal implanted with HPGs [has] ever been documented. Only the E[U] has heeded the message from its consumers [to ban] HPG-treated beef from importation or sale. Its import ban has been challenged by the U[S] through the WTO court on the grounds there was no scientific evidence to support any restriction. In N[Z], beef treated with HPGs has been consumed for about 25 years... All five HPGs licensed for use in this country have been assessed by the W[TO] and the US FDA... The... launch of the [Quality Mark represents] an important milestone for[local] producers, wholesalers, retailers and consumers. It [follows] the bureau's largest and most successful promotional campaign – the Iron Campaign. That has reinforced the message that red meat is the richest source of accessible iron. Within three years of launching the mark, the bureau [aims] to increase... consumers' real expenditure on beef and lamb by 6%. "It doesn't sound like much but it would be a huge turnaround on recent trends," said [the BLMB's general manager]... Two market segments exist among N[Z]ers. There is the traditional meat eater and a second segment of mainly [gals] under 35 who see beef and lamb as old-fashioned, boring and unhealthy. The Iron Campaign has successfully changed the perception of the second segment. "They now see beef and lamb as something they should eat, but the aim is to move it to something they want to eat"...

We're all familiar with the TV advertisements that tell us seven out of 10 [NZ gals] don't get enough iron, leaving them tired and lacking in energy. But not all parents know iron deficiency can be a danger to the youngest member of the family as well[, and 'a study of 142 Auckland infants has found that 27% were deficient in iron']. A healthy, full-term baby is born with enough iron supplies to keep her healthy for the first six months of her life. From then on, it's important a baby's diet provides enough iron to maintain that level... The... [BLMB] says by the time a baby reaches seven months, [it] needs more iron than her dad. Iron provides energy necessary for physical and mental development... [A]n inadequate iron intake, especially from nine to 24 months, can have significant and permanent effects on mental and motor functions... A baby who is iron deficient will... [also] be restless, irritable, may have problems sleeping and be prone to pick up infections... You need to be aware if your baby is a 'milkoholic' and loves cow's milk. It's an important source of calcium but has a low iron content, and too much can fill up babies with an already small appetite, not leaving enough room for other important foods... It's also not a good idea to let your babies and toddlers drink tea because it inhibits the absorption of iron... There are two types of iron in food. Haem iron is easily absorbed and found in red meat and, to a lesser degree, in poultry and fish. Non-haem iron is not so easily absorbed by the body and is found in some fruits, vegetables, breads, cereal and legumes. ['The type of haem iron found in lean beef and lamb is up to eleven times easier for our bodies to absorb than the non-haem iron found in spinach.']From four months, baby cereals that have iron added to them are a good start. By about seven months, your baby is ready to be fed minced lean lamb, chicken, liver or kidney and egg yolk. A few months later, minced or finely chopped lean beef and flaked, boned fish can be added to the menu.

...Babies who are fed infant soy milk formula are receiving large doses of plant hormones at... six to eleven times the level shown to affect the menstrual cycle of... [adults, says a US researcher. T]he hormones, known as isoflavones... [– which] mimic the... sex hormone oestrogen... [–] "must have some biological activity in the infant" but there was not enough evidence to know if this was beneficial or harmful... The isoflavones... have been credited with reducing hormone-dependent diseases including cancer, osteoporosis and heart disease in Asian countries, where soy is a regular part of the adult diet. However, scientists in several countries have been investigating the safety of the hormonal effects since N[Z] researchers raised the question three years ago... About one in 60 babies born in N[Z] each year is fed on soy formula, usually because they are allergic to dairy foods... [Speaking of hormones, b]eef from cattle treated with [HPGs] will get the Meat Board's new... quality mark in spite of consumer resistance to additives. But a board executive said yesterday that the acceptability of hormone-treated cattle in the domestic market could be reassessed if supermarkets found their customers wanted it excluded... The quality mark would not get off the ground without the supermarkets... The board is spending \$10 million over the next three years on[promoting] the mark... About 10[%] of the national beef kill comes from cattle treated with hormones... Of this, about half is exported to countries that do not object to the hormones, particularly the U[S].

...in good news for N[Z]'s beef producers the WTO... [expects the US], which takes... half of N[Z]'s \$1 billion annual beef exports[, to import 10%]... more... this year... [T]he predicted increase... will mean the U[S] will replace Japan as the world's largest importer of beef... The report also predicts a 2[%] increase in... consumption in the E[U], with estimates that... over 7 million tonnes of beef will be eaten... There was a 7[%] drop in European beef consumption last year... N[Z]'s beef exports to the U[S] have increased by 15[%] in the past year... [Now all] eyes will be... [waiting to see if NZ's] beef... sales are... affected by Asia's[economic] woes... Any dip in consumer demand will come straight out of the farmers' final payout.

...Falls in South-east Asian share and currency markets have slowed sales of chilled N[Z] beef, meaning... the North Island meat industry... is again facing serious over-capacity problems. A Kereru farmer... told a Hawkes Bay Chamber of Commerce forum that the \$50 million buy-up-and-close deal for the six North Island... Weddel N[Z]... plants by the meat industry consortium Trial Run Holdings had been for nothing. [The farmer]

predicted that another meat processor could topple. [In reply, the] executive officer of the Meat Industry Association... said that while the industry had 25[%] over-capacity in the North Island, the situation was not as acute as in the two years before Weddel's [1995 collapse. The executive also] said it was acknowledged in 1995 that the Weddel plant closures[only] gave the industry a temporary reprieve of two or three years.

...The most tense game of high-stakes poker could not match the state of play between North Island meat companies. Caught between falling stock numbers and seemingly ever-rising processing capacity, the companies are holding their cards very close in a match of wills. The outcome could have some scooping up the rewards while others walk into the sunset of business oblivion. Raising the stakes recently, Progressive Meats of Hastings announced that by Christmas it should have a new plant at Gisborne... Affco, in turn, said its East Coast operations would be second to none when its Wairoa plant reopened in the first week of October after a \$5 million refit... The industry has replaced, in just four years, the capacity removed by the consortium which bought and broke up the six plants of the failed Weddel company. It has led farmers, meat company managers and industry observers to predict that [another company] is going to roll. Various companies are nominated as likely victims but naming names tends to raise the stakes. Once farmers fear a company is shaky they are reluctant to send their stock to it and, whether accurate or not, the prophesy of failure can then be fulfilled. Though most companies are restructuring to weather the storm, they try to keep that quiet too, because it can be perceived as weakness and set the demolition ball rolling. It was the way Benmore Products of Auckland was perceived after[its] managing director... sold his majority interest in Waikato Beef Packers of Morrinsville to Hamilton-based Greenlea Premier Meats. [The managing director] said the move had made his company stronger and... could now "tough it out with the best of them." ...While a recovery has been predicted in both returns and numbers the M[AF] said it was likely to be "weaker and shorter" than in the past because of market competition from Argentina and Uruguay in N[Z]'s main beef export market, the... [US. ■] Universal Beef Packers is[also] challenging the meat industry's over-capacity bogey with a \$4 million expansion of its two-year-old... \$8.5 million plant in... Te Kuiti... The Taiwanese-backed company... expects the new facility to be producing three tonnes of beef jerky a day by early next year. The managing director... said the jerky operation would mean the company... would send 20[%] of its total boneless production to Taiwan for a monthly contract for 60 tonne of the popular Asian bar snack of dried beef.

...More than \$10 million is owed to creditors of... Benmore Products, which went into voluntary liquidation on Thursday[, and the]... Commerce Commission is claiming \$20 million in fines from the failed meat company... for allegedly rigging prices with [14] other North Island meat companies... in 1995... But... the... general manager of the commission... could not envisage the maximum penalty... on each of four claims of collusion... being imposed... [A] maximum figure of \$12 million[is] tipped by meat industry sources... [Incidentally, the] town of... Taumarunui... has still had no word from the meat company Affco... about whether it will re-open the[local] processing plant that employs 260 workers and is a major funder of other services, including the Taumarunui water supply... The company[, which saw]... net... operating profit[fall] to \$9.79 million from \$26.45 million a year ago while revenues rose to \$966.68 million from \$889.47 million... had told staff they would be briefed early this month...

Collapsed meat-processing company Paramount Export is claiming \$2.8 million in damages from the Meat Board and others. Its recently appointed receiver... alleged Paramount's problems were attributable to the Meat Board's refusal to correct a "bureaucratic" mistake last year, resulting in the company's E[U] meat-quota entitlement being significantly reduced... Paramount... owes some \$1.8 million to unsecured creditors... Its main asset, a meat-processing plant at Taumarunui, has just been sold to Wallace Corporation[, which]... also owns Walford Meats, a beef plant at Waitoa in the Waikato... [The company said it] would invest \$1.5 million in the Taumarunui plant by the end of next year... Meanwhile... a... \$2 million donation that the chair[person] of the Farmers Fighting Fund says was promised by the Meat Board has hit a snag with the board calling off a scheduled presentation... [T]he board had intended to donate[the money] interest-free for five years, but when it studied its legal framework it believed it could run into difficulties if the plan went ahead... The... [fund's chairperson] hoped other producer boards would look at similar proposals... "The fund is a vital part of keeping agriculture secure and boards do have reserves of funds,"... However... the senior vice-president of Northland Federated Farmers... raised objections to the fund at its launch in his province last week. [The vice-president] argued that federation members could pledge a lesser amount to the fund than their annual subscription, resign from the federation and have access to the same services. [The vice-president] was also concerned about the wide variety of claims which could be lodged for fund money... [The fund's chairperson] said it was unfortunate that [the vice-president thought that] way... "No one likes to put their hand in their pocket... They would prefer that someone else did..." ...But [the fund's chairperson]... agreed there might be a better title for the fund and suggested the rural protection fund.

...In a major about-face, the Meat Board is reviewing its decision to give its new domestic quality mark to meat treated with growth hormones. Shortly before noon yesterday, the board spokes[person]... rejected a call by[a] safe-food activist... for a reversal of the "foolish" decision. But, six hours later, [the board] said the issue would be reviewed next week... [T]he Safe Food Campaign lobb[y's] convener – who... has been calling since last year for... meat to be labelled as containing... H[PGs –] ...told the board that... if the board accepted hormone-treated meat under its quality mark it would breach a fundamental consumer right to know what was in the food they ate. Consumers already suspicious of meat after the "mad-cow disease" scare would not accept the bland reassurances of board officials that hormone growth promotants were safe. They would be sceptical "when they become aware of international scientific research that implicates growth hormones with cancer and serious sexual and reproductive abnormalities." ...the [board's chairperson had]... said... that hormone growth promotants licensed for use in cattle in N[Z] left infinitesimal residues.

...of[the] five HPGs approved for use here[, estradiol], progesterone and testosterone are called "natural" hormones, since they occur naturally in humans and in food animals. Zeranone (Ralgro) and trenbolone acetate are synthetic hormones. Used properly, pellets are implanted in the animal's ear. That allows the hormone to release gradually. At slaughter the ear is cut off and discarded. If the hormone is injected, rather than implanted, particularly into muscle, there is a risk that too much residue could end up in the meat – as has happened overseas... [Z]eranone residues in veal and poultry have been linked with premature sexual development and ovarian cysts in infants and children, and breast enlargement in [adult guys], in Puerto Rico, Bahrain and Italy. Zeranone (widely used in N[Z]) should not be given to bulls that will be used for reproduction or to dairy animals, say the manufacturers. They say it can be used in lambs, although again farmers are warned not to implant breeding animals or to use the hormone within 40 days of slaughter... [J]ust a year after [an] EU working group reported no possible consumer harm a group of gastroenterologists from Israel published an article in *Nutrition and Cancer*... arguing that products like zeranolone (the parent compound of zeranol) have teratogenic, mutagenic and carcinogenic properties. The researchers' concern was less about overt poisoning from residues (although this has happened) than with the long-term health effects of repeated exposure to low concentrations of some of these chemicals, and possible insidious metabolic effects. Some scientists have continued to express concerns... [that HPGs] disturb the complex pattern of normal hormonal balance in the body... [Furthermore,] synthetic hormones... have a rather sorry history. One of the earliest to be used as an animal growth promotant was the... steroid diethylstilbestrol (DES). After some decades of use DES was found to be carcinogenic – and is now banned in most countries.

...The Meat Board has reversed its decision to give a... domestic quality mark to beef... treated with [HPGs after] an outcry by consumer lobbies...

A vocal group of farmers is livid at the Meat Board's U-turn... The change of heart came after several supermarket chains... said they would not accept such meat... The board believed the decision was in the best interests of farmers, because "if the consumers will not buy the farmers' product, there is no market, no return and ultimately, no industry." ...farmers could still sell their treated beef. It just couldn't carry the quality mark... But... the... Federated Farmers meat and wool section chair[person]... said that the board had neglected its duty to represent the interests of farmers, who funded the board through levies on stock killed... [T]he board had made the turnaround decision on the same day a W[TO] decision was made public which, in effect, said there was no scientific reason to ban the hormones. The U[S] and Canada had taken the case – with scientific

support from N[Z] – against Europe, which[still] refuses to import beef from hormone-treated cattle... [In another development], the councillor secretary to the E[U] Commission said AUS[felt nervous about the agreement N[Z] had reached with the E[U] on equivalent standards in meat inspection and certification. “They fear the consumer will doubt [that the AUS]n product is as good,”...

A FEW WEEKS AGO, WHEN A COW DIED from anthrax in A[US]’s north-central Victoria, farmers around the towns of Tatura and Stanhope treated it as happenstance. By week’s end, with 89 cattle dead, more than three dozen farms quarantined and one person in hospital, that early fatalism has long gone. “This is the most unusual and most serious outbreak that we have experienced in A[US] in the last 30 years,” says[a] veterinarian... of the Canberra-based Bureau of Resource Sciences. Spores of anthrax – a virus that mostly infects farm animals, but can also be transmitted to humans – have lain dormant in A[US]’s alkaline soil for decades. It is thought the disease may have resurfaced in Victoria as topsoil was turned to dust by recent extreme heat. Infected animals at first appear distressed and lose their appetite. Before the farmers have a chance to respond, the livestock die of blood poisoning. In humans, the symptoms are severe inflammation or pneumonia. Anthrax can be fatal if untreated – in Thailand last week, the Bangkok *Post* reported the death of one [person] during an outbreak blamed on undercooked, contaminated meat – but penicillin is usually an effective counterweapon. In A[US], where there have been no recorded deaths from anthrax this century, doctors... are... confident that no one will be affected by tainted live-stock products. Officials said meat from the contaminated area would not be sold until the quarantines were lifted, and humans have never contracted the virus through contaminated milk. Still, it has been a time of caution. To prevent further spread of the disease, carcasses of infected animals were burned in huge pits with 500-kg logs. And a livestock vaccination campaign was begun after the first cow died: within six days, 16,000 cattle on 157 properties had been injected. By last weekend, a few cases were still being reported, but the outbreak seemed to be contained. Slowly, the hidden killer was returning to the soil.

...Scientists in Kenya are trying to establish whether the anthrax bacteria is responsible for a... mysterious... epidemic... [which has killed at] least 143 people... since... the start of severe flooding... [By the way, ‘the annual pilgrimage to Islam’s holiest sites at Mecca begins on Thursday. The hajj includes the feast of the sacrifice, Eid al-Adha. Saudi Arabia opened a huge slaughterhouse yesterday and presented it as the “world’s biggest.” The 500,000 sq m Muaissem slaughterhouse cost 470 million rials (\$NZ257m). With its 10,000 workers, the complex is designed to slaughter 200,000 cattle and sheep a day in line with Islamic tradition. The sacrifice – in memory of Abraham’s readiness to sacrifice his son to God – is not obligatory, but most pilgrims elect to do it. For nearly a decade, the Saudis have been creating facilities for the sacrifices on an industrial scale and have spent tens of millions of dollars on abattoirs. Before that, the pilgrims either slaughtered the beasts themselves or hired butchers on the spot to perform the deed, and the plain ran with blood.’

...NZ’s slaughterhouses face temporary closure because ‘120 of the 150 veterinarians employed by the key MAF Verification Agency are set to take strike action. The Meat Industry Association’s executive director says serious damage could be done by the 120 vets, who are among the highest-paid group of civil servants in the country. A MAF vets’ base salary is around \$55,000 to \$65,000, but with allowances like overtime about 75% of the vets get more than \$80,000 a year gross. 15% get paid more than \$100,000. The vets also get shift, standby and meal allowances, although the executive director observes dryly that in the interests of advancing negotiations they are prepared to drop their sock and gumboot allowances. The vets’ union, the National Union of Public Employees (Nupe), say they want a 10% increase for the first year and 4% in each subsequent year, as well as less overtime. Federated Farmers says the vets are a gold-plated elite who are holding to ransom the industry and the jobs it provides. Meat companies are already losing contracts overseas because of the lack of certainty over the industrial situation, although the association will not say how much companies are losing. However, its executive director says the vets’ counterparts in the private sector get 20 to 25% less pay. Internationally there is a shortage of qualified vets, although MAF says the agency is fully staffed. This shortage affected NZ too, said Nupe’s secretary, pointing to the fact that last year MAF recruited overseas for vets in Zimbabwe and Britain.’]

...About 20 Iraqi veterinarians who left their war-torn homeland to start a new life in this country are stunned to find they cannot practise here. The Veterinary Council of N[Z] refuses to let them sit an exam that would give them the right to work. It says they cannot sit the exam until Baghdad University sends written confirmation that its veterinary qualification meets N[Z] standards. But the vets say the chances of getting this information from Iraq is virtually nil... because the authorities refused to help vets get jobs overseas... “If they just let us sit the exam we could prove... we are qualified,” said [one of the vets], who has been battling the council ruling for two years... Ironically, the[y]... were accepted into N[Z] on the tough points-based immigration system because of their sought-after qualification. N[Z] has a shortage of vets, mainly in rural practices.

...[an] Alliance MP... has asked the Government to help a group of Iraqi veterinarians gain work here. The vets were owed some assistance, having been allowed into N[Z] because of their sought-after occupation, only to discover their qualification was useless here... “I don’t think it’s fair to let them in, then leave them sitting in limbo.” ...The Immigration Service said the rules had been changed since this group of Iraqi vets were allowed into N[Z]. Vets seeking to emigrate here now had to gain registration before their application for residency could be approved. [In related news, ‘the 120 vets who have closed many of the country’s export meatworks and put about 9000 workers out of work with no pay, yesterday refused the eleventh-hour pay settlement from the MAF. The Agriculture Minister said the continuation of the strike was extremely disappointing. “They have chosen the time of the year when they can do the most damage possible. And it is costing hundreds of farmers millions of dollars. It is costing the meat industry millions. It is costing thousands of meat workers income they cannot afford to lose. And it is costing rural communities. The fact is that the union’s current demands amount to more than 30%. I regard this as particularly generous for a public-sector workforce which is already earning an average of 30% more than their equivalent private-sector colleagues. It is very, very difficult to understand why the union thinks it can justify another 30% on top of that.”’]

...International meat marketing is full of “crooks and vagabonds”... says... the Meat Board’s... former chair[person, who]... told the primary production select committee that food safety would continue to be the biggest problem in the international market[, where perceptions]... were often more important than facts with buyers... “There is huge trust in the N[Z] classification system as a minimum specification... One meat market wanted to buy... from Uruguay where the price was 10[%] lower... But they purchased from us just because of the grading system.” ...[the former chairperson] urged the continuation of generic promotion of red meat which other submissions to the committee have questioned. [The former chairperson] used the example of South Africa where... little promotion of beef and lamb had been carried out. “In South Africa, sheepmeat and beef are now perceived as poor quality products which are bad for your health,”...

GROWING concern over food safety is forcing a culture shift among... [NZ farmers. U]ntil now food safety had been someone else’s problem – a world away. That changed early last month during the debate over... hormone-treated beef... Meat processors have already responded. Farmers have not... Unless farmers here move quickly to address this glaring omission in the food production chain, particularly for meat[, NZ]... risks losing valuable market access to more consumer-oriented competitors... Some farming leaders believe N[Z] is already well behind its closest competitor in guaranteeing the safety and quality of its red meat from the farm gate to the table... [The chief executive fears NZ] is risking its clean green image by not moving fast enough to guarantee the quality and traceability of its food... “N[Z] has an enormous, clean image. But one glitch and the whole house will fall over.” ...The impact of a new law in Japan, giving food distributors total recourse on any food problems right back to the farm gate, has already been felt across the Tasman. At the peak of the prolonged drought last year, several desperate farmers fed their cattle on

cotton trash, the product left over after the crop is harvested in the paddock. Testing of the beef when it entered Japan showed the meat contained residues of a chemical used for controlling a caterpillar which attacks cotton plants. It cost the A[US]n Government \$100 million in compensation. "Insurance companies in A[US] now recommend farmers should have no less than \$10 million public liability insurance,"... Individual cattle passports from farm to retail outlet are a reality for beef farmers in E[U] countries. The US and AUS] are about to launch their own trace-back systems... Food safety disasters like BSE in Europe or E Coli outbreaks in Japan will ultimately drive N[Z] farmers to follow the lead...

The US Agriculture Department has announced the largest recall of US ground beef products in history... [A]n Arkansas-based meat processor, is recalling 544,000kg of frozen hamburger after possible contamination with a deadly strain of the E. coli bacteria... Meanwhile, a US Department of Agriculture inspection team was due in South Korea to inspect tonnes of beef from Nebraska[that was also] found to be contaminated with the... bacteria... South Korea last Monday slapped a temporary freeze on imports of Nebraska beef.

...The [President's] administration, acting a week after a record U[S] meat recall, has asked Congress for the power to order a recall of tainted meat and to fine companies breaking the law... [In local news, the] Government plans a compulsory ban on the use of sheep and cattle in feed meals for livestock because of fears voluntary controls... called for 18 months ago... have not been effective.

...PETER HALL DIDN'T NOTICE WHEN the proteins in his brain started to change. [Hall] noticed other things: a vague depression, general anxiety, sudden mood swings. But blaming any of that on brain chemicals wouldn't have occurred to him. The proteins in Hall's brain *were* changing, however. Ordinarily made up of tiny strands of intertwined amino acids, the complex molecules had begun to assume a very different shape, collapsing into sticky sheets. Before long, these gummy structures began to clump sloppily together, creating pits and divots where there had once been vital brain tissue. Within months Hall was delusional and bedridden. Not long after, [Hall] was dead. Hall, who was 21, was one of nine Britons felled in 1996 by a brain disorder linked to exposure to... BSE... The appearance of this degenerative disease... set off panic as Europe slammed its doors to British beef, and travellers anxiously cast their minds back to London vacations, trying to recall whether they had ordered the fish or sausage. The scare died down after the British government destroyed tens of thousands of cattle, removed infected feed from the food chain and promised to step up slaughterhouse inspections. Mad-cow disease has stopped turning up in the new generation of cattle, and the crisis is generally considered to have passed. That conclusion may be premature... [C]oncern is building in both Europe and the U.S. that the mad-cow problem may be larger than it seems. This week the science journal *Nature* published a paper on the possibility that last year's outbreak might only be the tip of an epidemiological iceberg, and that tens of thousands of Europeans are unknowingly infected and could die... Moreover, a number of researchers in the U.S. aren't convinced that some of the conditions that led to the mad-cow breakout in Britain might not exist in the U.S., leading to the same spread of the BSE pathogen. Making things even harder, scientists still can't agree on what that pathogen is – a first step in figuring out how to treat the disease if it does surface. "The only thing that stands between us and an epidemic," says... [the] director of molecular virology at the Veterans Administration Medical Center in Baltimore, "is unmitigated luck." ... "The cheapest way to get protein into cattle is to feed them scraps of animals left over from slaughter," says... [the] author of the soon-to-be-released book *Deadly Feast*... which traces the history of BSE and similar diseases. "When British cows started to get sick, this practice wasn't banned. Instead the industry was merely required to avoid using parts from animals known to be infected. This was hardly foolproof, and it was inevitable that some diseased flesh would still be eaten by cows and enter the[human] food chain." When Britons started falling ill last year, some scientists concluded that that was just what happened. If cattle feed was indeed the indirect avenue of the recent infections, it could spell big trouble, since most Britons ate from a contaminated meat supply for at least 10 years. Just how many got bad beef is what the *Nature* paper tried to determine. Using a complex epidemiological model, the study concluded that the outlook for the beef-eating population is unclear... The researchers caution that too little is known to make confident projections, and in Britain the paper has had little impact. Beef consumption is about where it was a year ago... Ironically, the *Nature* paper generated concern in the U.S., where not one case of mad-cow disease has been diagnosed. "I hope we're not on the same course as the British," says [the director], "but we could be." What concerns [him] and others is that the U.S. agriculture industry, like its British counterpart, recycles animal scraps, turning them into both cattle feed and garden fertilizer. Should even one cow develop the disease spontaneously – something that is known to occur in nature – the pathogen could quickly spread through U.S. herds. In order to prevent that, [the] U.S. Food and Drug Commissioner... is proposing a new measure – set to take effect later this year – that forbids using cattle parts in animal feed but still permits them in fertilizer. The government concedes that switching to protein substitutes like soy would cost U.S. feed producers up to \$48 million a year, and the industry insists that the final figure would be much higher. Whatever the price, however, [the commissioner] believes it's worth it... Whoever is right, it's in no one's interest for the debate to go on too long. There are 44 million head of cattle in the U.S., and 7 million are killed for food each year. If just one of those slaughtered cows turns out to be a mad cow, the illness that's now an ocean away could establish its first beachhead on[U.S. shores. The scare may have died down in Britain, but the issue of 'compensation for victims has not yet been addressed' by the government (r:p1035, ln43) – which 'placed meat inspectors under the Official Secrets Act; ordered the slaughter of affected cows but said it would only pay 50% of their value, in order to stop cheats (many farmers then sold cows to the human food chain rather than lose 50% of their value); and, for years, had repeatedly told the public they faced no harm']...

Britain's Labour Government has promised a full inquiry into "mad cow" disease as anger mounts over the way the crisis has been handled since it began... The Deputy Agriculture Minister... told Parliament: "People are dying and it is incumbent upon the Government to take all possible steps to find out why this came about." ...[CJD] has already killed more than 20 people... [Farmers are also angry] following the latest decision to ban British and imported beef on the bone... [-] wiping oxtail soup, roast rib of beef and T-bone steak off the national menu... [-] because of a small risk of mad cow disease transmission through cattle bone and marrow. Farmers accused the Government of overreacting, even though the ban does not become official for another week... Nearly 1000 farmers besieged docks in Plymouth... planning to stop Irish trucks they suspected were carrying beef from France – and found the vehicles packed with vegetables. "It was definitely not a waste of time," said... [the vice-chairperson] of the Devon county section of the National Farmers' Union, who was allowed by police to examine the cargoes. "It proved that beef could come through this port." ...police arrested five farmers... as they tried to blockade the port of Dover with tractors and meat trucks... Both press and public are clamouring for explanations about what is going on. Some traders say they will continue to sell boned beef; supermarkets have stripped their shelves. The... [National Farmers' Union] president... accused the Government of "piling burden after burden on the struggling beef chain" and warned that farmers were at breaking point... [□ A 70-year-old Aucklander] is dying in hospital from suspected [CJD]... Three other cases have been recorded[in NZ] since the Ministry of Health made CJD a notifiable disease a year ago.

...Auckland mortuary staff are banning autopsies of suspected... CJD... victims. CJD... can be confirmed only from microscopic examination of infected brain tissue. But Auckland Hospital's lack of an isolated theatre for infectious diseases places staff, medical students and transplant organs at risk of infection at the School of Medicine facility. The last CJD autopsy was carried out in April last year, but only after heated discussions between the victim's family and hospital management... The absence of conclusive evidence of the rare, degenerative condition... stresses the need for post-mortem examinations, for surveillance reasons... [argues the chairperson] of the panel that advises the Government on BSE and CJD... Upgrading the mortuary... [to the standard of] mortuaries in Wellington and Christchurch... is estimated to cost \$1 million but arguments continue over who will pay... The University of Auckland owns the mortuary, which is run by the Forensic Services Management Board... British figures show that since 1990 almost 70[%] of suspected CJD cases have had autopsies. Official N[Z] data is unavailable, but estimates are that only 25[%] of clinical diagnoses of CJD have had autopsies. Since 1980 about 50 N[Z]ers are suspected of having died from CJD.

...N[Z] patients with lung and circulation problems have received blood deprivatives donated by a Briton who died of [CJD]. The Ministry of Health yesterday refused to release details of the blood product or the patients, saying it would send letters to 120 people who had received it. But N[Z] *Herald* inquiries revealed the blood was included in a product used to scan people's lungs. The agent is injected to show the blood flow through the lungs of people with blood clots or lung disease... The ministry was told about the product[, which was among]... 53,000... donations... sent to 46 countries... late last month... A ministry spokes[person]... said... the... risk of developing CJD from a blood product was extremely low... recipients need not be alarmed and were being traced as a precaution. [Incidentally, 'doctors in Britain believe that an 11-month-old girl, whose mother died of new variant Creutzfeldt-Jacob disease (vCJD) this year, has the symptoms. They say the baby probably contracted the disease in the womb. If the child's disease were confirmed – by post-mortem examination – it would be the first known case of vCJD being transmitted from a mother to her baby.'

... 'One mad-cow mystery has been solved: the disease broke out a year earlier than first thought. The implications are startling; so far BSE has led to the deaths of 170,000 cattle. If the disease had been identified a year earlier, the number of cases might have been reduced by a third – and later measures taken to protect public health would've been more effective. Why did nobody spot BSE earlier? Mainly because it happened in cows, not sheep. The tale begins around Christmas 1984 when a Sussex farmer noticed one of his dairy cows had developed an arched back and was losing weight. Over the next few months his vet noticed more cattle with "spooky" symptoms – one of them tried to charge him on her knees. By the summer of 1985 the farmer had lost 9 cows, and nobody knew why. The 10th cow was passed to Government veterinarians; on Sep. 19, after it had been killed and dissected, a junior pathologist at the Central Veterinary Laboratory noticed lesions – actually tiny holes – in the cow's brain. Holes in animals' brains aren't news in Britain. For over 200 years British sheep have suffered from a spongiform brain disease called scrapie. But until the junior pathologist's diagnosis, scrapie had never been seen in cows. The junior pathologist's own bosses missed the significance of her observations and maintained that some sort of poisoning was responsible. It was not until November 1986 that the central lab recognised from other cases that British cows now had a new form of spongy brain disease. One consequence of BSE has been to throw light on the farming and food-processing industry. In the wake of the disaster, standards of food safety and cleanliness have been tightened to levels that the British Government now claims are among the highest in the world. The aim is to get British beef accepted once again as a wholesome food.'

... 'British farmers and politicians are delighted at the lifting of a EU ban on their beef exports, but some scientists say the danger of mad cow disease persists. The British PM pledged his support to farmers, but said that getting sales back to where they were before the ban was imposed would take time. The effect of the ban on the meat industry was devastating. At the Reading cattle market, a 10-day-old calf that would have sold for £50 at the start of 1996 fetched just £1 yesterday. British meat will probably not be on sale in Europe until next spring, after EU inspectors have checked abattoirs and farms'...

'An Irish dairy farmer has been sentenced to five years jail for deliberately introducing madcow disease into his herd in 1996 to collect compensation. The farmer had stood to gain 75,000 punts (\$NZ191,000) following the slaughter of his herd. Another Irish farmer is also before the Irish courts in a similar case and two others are under investigation. The Government has so far paid out more than 40 million punts in compensation for the slaughter of over 57,000 of the country's cattle. Under the scheme to combat BSE, all of a farmer's cattle are destroyed after an infected animal is discovered.'

... 'A damning indictment of the system of government that kept the public in the dark about Britain's worst human and animal health crisis was delivered yesterday by the £27 million BSE inquiry. The obsession with preventing panic led to long delays in protecting consumers and the farming industry from the disease. "Officials and ministers followed an approach whose object was sedition." While individuals were criticised in the 16 volumes of the 4000-page report, the vast weight of censure fell on the tortuous workings of the Whitehall machine. "The Government did not lie to the public about BSE. It believed that the risks to humans were remote." The report added that: "Confidence in Government pronouncements was a further casualty of BSE." 80 people have officially died of the disease and no one knows how many more cases will follow. Families of the victims are in line for payouts of at least £100,000 as well as help caring for those with the disease under new measures announced by the Government. The report stated: "Some say that it offended against nature to feed animal protein to ruminants. Some say that it was not surprising that a plague was visited upon those that tampered with nature in this way."

... 'Britain offloaded tens of thousands of tonnes of potentially infected cattle feed on the Last World after deciding it was too dangerous to give to its own herds. The meal and bonemeal (MBM) was exported after March 1988. In July that year, the Conservative Government banned its use in Britain, and a week later officially told the EU, then the EEC, of its fears. By 1991, sales of MBM to Europe stopped. At the same time, exports of MBM to the Last World had soared to 30,000 tonnes. It was not until March 1996 that MBM was banned worldwide. No one knows how many cattle may be incubating BSE.'

... 'Outbreaks, many of them thought to be under-reported, have already occurred in the Falkland Islands, Oman, Canada, Denmark, Portugal and France.'

... 'The French Government and press are shocked to find that some European countries are imposing partial bans on French beef imports, in defiance of EU rules. Italian farmers are taking the law into their own hands, by blocking and searching trucks entering Italy from France, while the Italian police stand by. Mad-cow psychosis is now sweeping across European borders, with an incubation period of hours rather than years. Beef sales in Italy have fallen 20% even though no "native" BSE cases have ever been found in Italy. Spanish beef sales have fallen by 15%, and prices by 30%. Spain reported its first BSE case on Thursday. Yesterday, Switzerland announced a ban on imports of breeding cattle, Germany said it would propose extending to all animals a ban on feedstuffs suspected of spreading the disease and Britain announced it would extend spot checks on imported beef. And yet, despite all the evidence of the harm done by half-measures, first in Britain, and then in France where beef sales have plunged by at least 40%, the EU is still baulking (for "economic reasons" according to the farm commissioner) at imposing, Europe-wide, the kind of measures which could eventually eradicate BSE and shore up consumer confidence. This week EU Agriculture Ministers imposed compulsory BSE testing on older "at risk" animals. The European BSE epidemic is an extension of the British epidemic, spread largely by the morally unforgivable – even if legal – dumping of thousands of tonnes of suspect animal feed on the continent after it was banned in the UK in 1988. If the present consumer psychosis persists, or deepens, EU countries will be obliged to take stronger measures, whether they like it or not. Experience suggests that it would be safer, more prudent and even, in the end, cheaper, to take such measures now.'

... 'Europe's mad cow crisis has spread to Germany with the discovery of the first suspected cases of BSE in German herds. The Agriculture Minister called for nationwide testing of cattle. Germany had previously insisted its cattle were free of the sickness that has ravaged farms in Britain and France.'

... 'NZ's Ministry of Health has moved to ban imports of beef products from Europe as new fears of BSE spread across the continent. Last month, the EU imposed a six-month ban on MBM and decided to take two million older cattle "out of the food chain." But this has not convinced NZ and AUSn authorities'...

'America has no mad-cow disease scare, or at least not yet. Beef consumption is as high as ever, thanks in large part to the ubiquity of fast-food burger chains. Last year, Americans spent \$US110 billion feeding their burger and fries habit. Mad Cow? Most fast-food customers have not even heard of it. Does this mean a burger eaten in the US is a burger eaten risk-free? If you read the startling new best-seller *Fast Food Nation*, you certainly would not think so. In fact, once you reach the end of the book, the chances are you will never want to eat hamburgers or any other form of industrial minced beef again. The author describes in horrific detail how the ever more mechanised cattle and meat-packing industry is exposed to risk of infection by virulent pathogens. Cattle are fed the processed waste of dead animals, including pigs, horses and poultry, as well as myriad plant byproducts such as sawdust and old newspapers. Faecal material regularly spills into the meat, either because it falls off improperly cleaned hides as they are pulled off or because the minimum-wage workers who pull out the intestines accidentally dribble some of their contents. Aside from faecal material, shipments of raw meat can also include anything from insects and metal shavings to urine and vomit. What compounds these problems is the extraordinary consolidation of beef

production in the US, largely under the influence of giant fast-food chains who want every one of their patties to look and taste exactly the same. Just 13 meat-packing companies control the industry, and their considerable lobbying sway in Washington – particularly with the Republican Party – has virtually allowed them to dictate their own industry. A century ago, when hamburgers were not yet identified as the quintessential American meal, one food critic likened the minced beef patty to “getting your meat out of a garbage can.” As the author writes: “Today the US Government can demand the nationwide recall of defective softball bats, sneakers, stuffed animals and foam-rubber toy cows. But it cannot order a meat-packing company to remove contaminated, potentially lethal ground beef from fast-food kitchens and supermarket shelves.” Food industry experts grimly expect some kind of public health disaster if the system continues unchecked in its present form. It does not help that Government-funded school meals include beef bought in bulk from the cheapest, least health-conscious suppliers.’]

...A foul-smelling poultry farm that almost closed a school has itself been forced to shut down. The... Environment Court has ordered the farm... to cease operating... The board of Buckland Primary School had considered closing the school because it felt the obnoxious smells were affecting the children’s ability to learn... [A]t times... the... children were... forced to put t-shirts over their faces... [The farm’s] closure ends a five-year battle between Franklin District Council authorities and the owner over a failure to comply with a resource consent for extensions to the operation, which included strict conditions. Health inspectors told a hearing at the court last month that numerous dead chickens were left lying on the ground and live ones were walking over the... corpses. Most had been dead for long periods because they had decomposed badly, shrivelled and turned black. Eggs had to travel over the dead bodies to the ledge at the front of each cage. Other written evidence said that grass on some neighbouring properties was blackened with flies drawn in by the stinking chicken manure illegally piled at the farm... [The owner] was ordered by the court two years ago to remove all chicken manure off the... property... Neighbours who lived up to 300m away told the court that on the worst days they were reluctant to hang out the washing or open windows, making the heat in the summer unbearable. A parishioner at a local church said the strong smell of manure made her gag during services. The Sunday school was forced to close... [Meanwhile, the] Northland Regional Council is prosecuting a Dargaville meat-works following ongoing complaints about its smell... A regional councillor... said the company had emptied one effluent pond and deepened the other, but the people who lived around the meatworks were still reporting offensive odours. It is the second time the company... has been charged with breaching its resource consent.

...A large spill of fatty scum into the lower Waikato River... from a blood and bone factory has disgusted neighbours of the Tuakau plant. Riverside residents are calling on the Environment Waikato regional council to force the animal rendering plant, Waikato By-Products, to clean up its act. The group is also angry emergency calls to the council were not acted on for several days after the discharge of foul-smelling sludge.

[D]airying... leads to more fertiliser and effluent run-off... The Taupo District Council and the regional authority Environment Waikato are considering measures to protect water quality of the lake, which is good at present[– unlike many of NZ’s other freshwater lakes and rivers, which are potentially unsafe to swim in or drink from because of the runoff from adjacent or upstream farms.

...[A] Pokeno dairy farmer[– who]... converted his 60ha dry stock unit to dairying seven years ago, grazing 164 cows on it and a 20ha runoff... [–] is a convert to nitrogen use and this year will be part of a trial using 60kg a hectare with a 40-day rotation. After three years in the more summer milk programme [the farmer] told the Grassland Association conference it was clear there was more profit involved in getting spring grass management right first... [His farm’s] milk production has more than doubled... from 6642kg three years ago to 13,249kg last year.

...A four-year trial on Waikato dairy farms has shown that nitrogen applications are by far the best bet for boosting milk production. While the increase in milk solids from nitrogen applications was similar to that from feeding turnips and maize silage, nitrogen, at \$54 a hectare, cost half the price of turnips, and maize silage left farmers out of pocket to the tune of \$123 a hectare... Nitrogen was used on nine farms and found to be profitable on eight of them at an average production cost of 6c a kilogram of dry matter. It was found that delaying the nitrogen application of 60kg a hectare until after the spring surplus allowed the feed to be carried directly into summer and cut silage-making costs... This year nitrogen application trials are continuing on five farms. Comparisons are being made between a 20-day rotation and a 40-day rotation... [In related news, ‘one in five dairy farmers in some regions are failing to comply with the law covering the discharge of effluent, says the latest Environment BOP monitoring report. The report comes in the wake of a Fish and Game claim that “dirty dairying” is dangerously polluting waterways. That claim, made as the country’s dairy farmers gathered in Rotorua last week for their national conference, drew strong protests and rebuttals from dairy farmers. Yesterday, the Rotorua-Taupo Federated Farmers dairy section chairperson called for those farmers who were not complying with the law to “clean up their acts”’.

...‘Lake Taupo farmers have won a temporary reprieve from pollution-control measures threatening to limit animal numbers and stop them switching from sheep and beef to dairying. Support for the move has been flagged by the Government through the Environment Minister. Booming dairying profits are spurring widespread farm conversions, mainly in the South Island, where water pollution and irrigation draw-offs from key salmon- and trout-fishing rivers anger conservationists. But North Island sheep farmers are not immune to the lure of higher returns. There have been 5 large conversions to dairy herds around Taupo, with a 6th looming. Although this may not sound like an industry out of control, dairying is by far the biggest agricultural producer of nitrogen, both through chemical fertilisers and livestock effluent.’ By the way, ‘as dairy farmers revel in a bumper annual milk payout, shoppers are about to pay the price. 95% of NZ milk is exported, so the world price set the benchmark for local supplies. NZ Dairy Foods’ chief executive said his company had to pay the going rate for milk. “We’ve simply got no option. If I don’t move, we lose lots of money and my shareholders expect a return.” The company has told supermarkets to expect the price of cheese to rise 30%, butter 21% and milk 11%. That means a 1kg block of cheese could rise by more than \$2 to \$12, a 500g pack of butter could cost \$2.50 and a litre of milk will rise to \$1.72.’ Editor’s note: Due to government subsidies, a pint (600ml) of milk sold locally for 4c in the early 1970s. As subsidies were removed, the price rose to 20c in the early 1980s, then to 50c by the late 1980s. A pint currently costs 85c.]

...Dairy Advisory Bureau figures show that while our production increased by 12[%] over the past season[, and we’ve been]... exporting plenty of dairy products[, NZers]... have been drinking less and less milk for several years... In 1981, N[Z]ers drank an average 112.5 litres of fresh milk per person... By 1990, it had dropped... to 97.4 litres a head... Key factors include the increase in immigrants, particularly from Asia, who are not big milk drinkers, the trend towards eating out, and aggressive marketing by the soft drink industry... [T]he Market Milk Federation of N[Z]... has said the milk industry’s future depends on how well it develops the habits of children and teenagers over the next decade, and convinces them of the health benefits of drinking milk as adults. [■ The ‘breakdown of standard NZ milk is: 4.8% fat, 3.6% protein, 4.79% lactose, 86.12% water and 0.69% ash’. ‘Even though milk is about 87% water, it is commonly called the most nearly perfect food since it contains so many vitamins, minerals and proteins needed by our bodies. (About 4% of whole milk is fat. Fat separated from milk is called *cream*. Cream can be churned until parts of it become solid. This solid is called *butter*. Cheese is made by solidifying the proteins and removing the water found in milk. Other dairy products are ice cream and sherbet. Casein is a dairy product made from milk protein that is used for plastics, glue, water soluble paints and some textiles.’.)

...‘NZers are drinking less milk, despite research suggesting low-fat dairy foods can help lower blood pressure. NZ Dairy Foods’ nutritionist said NZers now drank less fresh milk than people in AUS, Britain or the US – where blood-pressure research and findings on osteoporosis had caused the Federal Government to lift its recommended daily calcium intake. About 100,000 NZers took ACE inhibitor medications for high blood pressure.’

...Milk is losing the] battle for young consumers... [A 5-year-old from] Naperville, Illinois, is living proof that the \$US19 billion... milk industry is losing ground in [US grocery stores. The 5-year-old] prefers juice to milk because “I like the way it tastes.” ...The milk industry has an image problem, especially with its primary consumers: kids. They think Coca-Cola is hip. Paperboard milk cartons, with two-colour graphics and photos

of lost peers, are not... For children, “milk is a Volvo. It’s very safe. There’s nothing wrong with it, but it’s boxy. Coke is a sports car.” For dairy farmers, milk’s falling share of the beverage market and the high cost of feeding herds have put the squeeze on less-efficient producers. On average, [USers] last year drank 92 litres of milk, down 18[%] from... 1975, according to the Department of Agriculture. Meanwhile, juice consumption jumped 32[%] to 33 litres... and soda demand almost doubled to 196 litres... A milk industry study found that 20[%] of the beverages consumed by children between the ages of one and five is soda. Recognising that fact... Dairy Management Inc, a producer-funded group... started a “Got Milk” campaign to exploit the product’s association with certain foods, such as chocolate-chip cookies... “We are trying to make milk cool, dress up its image,” said... [the] vice-president of milk marketing at... Dairy Management... But changing long-held perceptions will be difficult.

...[NZ’s] Dairy Board estimates it has lost \$40 m... so far because of the financial turmoil in South-east Asian markets, but says that strong sales performance has clawed back \$27 m... [The board wouldn’t] know until May next year how far prices would drop because of the change in demand for dairy products. The board sold almost \$1.4 b... worth of milk products through the region last year, with Malaysia being the largest market... In the Philippines it has recently boosted sales to \$90 m... a year through an advertising campaign which gives more prominence to the product’s N[Z] origin... Its full-cream milk powder which had a 16[%] share of the market now is the market leader with 40[%]... ahead of the Nestle brand, Nido... [T]he board was [also] keeping a careful eye on its important North Asian markets which accounted for \$628 m... of sales last season.

...The Dairy Board is building a \$21 million factory in China as the basis of a projected \$50 million consumer products business it plans to develop there during the next five years[, giving]... the board a toehold in what would be the world’s largest economy in 15 to 20 years... The factory [will be built] in the Guangzhou economic and technical development zone... The zone’s administrative committee, East-West Investments Services, will hold 5[%] ownership of the factory]. The joint venture has taken two years to negotiate... The factory will make processed sliced cheese for McDonald’s outlets in China. It will also pack in sachet bags full-cream Fernleaf milk powder and calcium-enriched Anlene milk powder imported from N[Z]. The board has already... developed a 25,000-tonne ingredients business in China over the past five years, selling products to bakers and confectionery makers. That was[annually] worth \$70 million. During the next eight years the board would be reinvesting the profits from the consumers products business into developing other opportunities within the 27 distinct markets it has identified in China. [● The board expects to ‘send \$7.7 billion worth of products overseas next year, accounting for 25% of NZ’s exports and about one-third of the world’s free trade in dairy products’.

...[The] Dairy Board has been named as N[Z]’s largest company in *Management*[’s]... top 200 companies index, with a turnover of \$6.1 billion, 15[%] up on last year. It owes its top position to changes in... Challenge’s structure, but on a world scale... ranks higher than Reebok... and Mattel.

...Preparing for the future is the basis of successful dairy farming... So, bringing the debate out into the open about the future structure of the dairy industry is a sensible step to take... [NZ] Dairy Group, the country’s largest dairy producer, did so last week when [its chairperson] proposed splitting the Dairy Board into a statutory licensing arm and a marketing body... For some farmers, moving away from the shelter of single-seller legislation will require a leap of faith. As the sole exporter of the country’s dairy products, the board has served them well. They will also need to trust their dairy companies to work together for the common good which will mean putting aside provincial pride and deep-seated suspicion of the competition... But the dairy industry is evolving at a pace that leaves even the best-informed farmers bemused. For a start, they have to adjust to a new image – the board to which they feel intensely loyal has just officially been named the country’s largest company... The board, driven by its belief that most of its 14,500 farmer shareholders will want to stick together, might metamorphose into a corporate entity... [D]airy companies... will[then] have to work together like never before, putting the industry’s future ahead of their own payouts and balance sheets. Farmers will have the task of keeping the companies true to their promises about openness which shareholders in publicly listed companies expect as a right. And the dairy industry will have to take heed of one fact of corporate life it has not yet had to consider – the ultimate power of investors to take their money out of the collective enterprise... Insiders say the industry still has a long way to go to work out exactly what future it wants... Dairy farmers will want to make sure... their investments in land, cows, processing... and the board’s marketing functions are protected in the best way possible. But all are eager for a[continued] increase on the depressed returns of the past few seasons [that have seen]... farm values... drop by up to 20[%]...

‘NZ dairy farmers are paid for high protein and solids content, and not milk yield alone. Thus it is unlikely that any cow here could ever match the remarkable performance of a USer’s black and white (Holstein-Friesian) who, in one year, yielded a fantastic 25,000 litres of milk.’ ‘The average milk yield of a British Friesian cow is 900 gallons (4000 litres) in one lactation.’ From one ‘NZ Holstein-Friesian has flowed more than 120,000 litres of milk – enough to pour a glass for every fifth NZer. While the Friesian’s ability to pump out vatfuls of rich, frothy milk accounts for the greater part of its value, the farmer here also gets a bonus in the form of good quality beef. A 4-day-old bobby calf of a Jersey dairy cow is worth about \$45, but a Holstein-Friesian brings up to \$70. Friesians for fattening into beef or veal can sell for \$130 and 8-week-old calves fetch \$220. A newborn calf lives on its mother’s milk for about six months. Even when a farmer takes the newborn calf away to feed it powdered milk from a bucket, the cow’s body continues to make milk for a lactation period of about ten months, until shortly before the cow gives birth again and the cycle resumes. A cow can give birth throughout the year. As farmers have a set quota of milk to supply each day, their aim in husbanding the herd is to maintain a consistently high level of production, with cows drying up, calving and giving milk in strict rotation throughout the year.’ Incidentally, h[undreds of bloated cows were last night howling in agony in Southland after missing two milkings because of power cuts... when gales blew trees on to power lines... Most... [of the] 15,000 homes and properties in the region... were back on full supply yesterday but up to 100 rural consumers were expected to have to wait for their power to be restored... [S]haremilkers... said their cows had not been milked for 24 hours and were now pretty uncomfortable. “They’re up at the gates bellowing, waiting to be milked,”...

[‘During a trial of a robotic milking shed – which enables cows to enter the shed whenever they want without needing human assistance – some cows used it three times a day and the most popular time was midnight.’ By the way, m[jilk transport moved into a new era when the first train-load of milk arrived yesterday at the Kiwi Co-operative Dairies site at Whareroa...

The \$35 million cheese... casein and butter... plant opened at the former Tui Milk Products company’s Longburn site near Palmerston North in 1995 is being disassembled and packed off to Taranaki by its new owner, Kiwi Co-operative Dairies – with the jobs of its 360 workers.

...[‘the shape of NZ’s richest export industry hinges on a finely balanced vote by the nation’s 14,000 dairy farmers today. Proponents of the mega-merger of the largest processing companies were cautiously confident yesterday of winning the needed 75% approval, but with little to spare. The dairy industry is facing its greatest change since the Dairy Board was set up nearly 80 years ago. After weeks of intensive lobbying, dairy farmers will be asked to approve the merger of Hamilton-based NZ Dairy Group and Taranaki’s Kiwi Cooperative Dairies to create a \$12.5 billion giant, GlobalCo. It would be the biggest merger in NZ’s history and create a company twice the size of Telecom. The farmer’s decision could be fateful for the whole economy. GlobalCo would process and market 95% of the output of the industry that accounts for 7% of NZ’s GDP. Opponents of the merger, spearheaded by the Farmers for a Better Dairy Deal group, say the giant company could become “fat and lazy,” holding retailers, consumers and farmers to ransom by controlling milk supply.’

...‘AT THE old Te Aroha butter factory GlobalCo is a world away. The faded, wooden building on the edge of the Waikato town is far from this week’s gleaming arrival of NZ’s biggest company. Only rusting equipment and a stainless steel tanker body parked on the grass next to the Waihou River remain from its dairy heyday. But for a 73-year-old the factory his grandfather built in the early 1930s – and the one the grandson closed half a century later – is part of GlobalCo’s heritage. Its rise and fall mirrors the cooperative and competitive urges which have seen the dairy industry evolve from hundreds of small farmer groups – 474 in the mid-1930s – into one huge national company. It is the fifth merger the 73-year-old has been involved in during 30 years –

including 20 on the Dairy Board – of dairy industry politics. Any farmer will tell you it is the most bruising brand there is. However, the 73-year-old believes the latest merger will be better for farmers' business, allowing them to compete in a world market populated by multinational heavyweights. Across the green Waikato plains to the southeast, another dairy farmer – who has shared a similar farming heritage – has deeper concerns about what could be lost in the corporate devouring of dairy companies. "I have some real fears about having everything in one basket. If you get a crook chief executive or a board that can't handle it, or one that is out of touch with its owners, they do that at the risk of the total industry. That's really scary."]

...Up to half of the 1200 small-scale dairy farmers in the Waikato may have to change the way they are farming, says a M[AF] report... With above-average management skills and a lower level of debt loading, there was a positive outlook for the next... 10 years for 40ha dairy farmers. But the equity in their farms... erode[d] as land values dropped. For farmers with below-average management skills, it was likely they would already be facing a cash deficit, and the erosion of equity could be more serious. "These farmers should make a conscious decision on their future," [the report's]... author... said... T[his]... might mean selling the farm, introducing a sharemilker, or looking at uses[for the land] other than dairying...

Entries have opened for the Auckland sharemilker of the year competition with local farmers being encouraged to match the growth in entries in other provinces. Northland increased its competition entries by 50[%] last year, Bay of Plenty by 30[%] and Waikato by 22[%]. The regional competitions as well as the national final are being sponsored by the BNZ this year. The BNZ Auckland rural business manager... told the launch of the competition that the bank had a high respect for hardworking... sharemilkers: "They are the sort of people we want to bank." [Unfortunately, aspects of 'their work – such as stress and long, unsociable hours – have been blamed for a sharemilker committing suicide in the South Island' recently...

'His wife was in Hamilton running errands so the King Country sharemilker had no alternative but to take his two young sons to the cowshed last October. That, combined with a freak accident, led to the death of his elder son, says the coroner. Gus (4) was crushed to death on his father's rotary milking machine – the first death of its kind in NZ. Occupational Safety and Health investigators concluded Gus had been trying to get to his father – who was lubricating a turntable which had been sticking – when the boy climbed through a cow bail on the rotary table and on to the loading ramp. As the table rotated, Gus got caught in a 10cm gap between a stationary upright and the bail. A teat cluster holder swept him into the gap and Gus was crushed'...

'Two cows running loose on State Highway 10 caused havoc in traffic near Kerikeri, putting a driver in hospital and wrecking at least one car. One animal was killed when it charged head-on into a southbound car near Kapiro Rd. A few minutes earlier, another cow was put down after it had hit a second car.' In international news,] **Italian farmers blockaded Milan and Venice airports in a dramatic extension of their protest against tough E[U] milk quotas, as talks with the government to resolve the growing crisis ground to a halt. Farmers have been hit with \$336.5 million in fines, which have to be paid by the end of the month, for exceeding milk quotas in the 1995-96 season.** [Meanwhile, 'Japan's largest dairy producer has apologised for tainted low-fat milk that has caused 6500 people to suffer food poisoning. The problems were caused by a bacteria-laced tank valve at a milk packaging factory in Osaka.'

...powdered or 'dry milk is not the equivalent of raw milk. It is usually made from Grade B milk. That's why it's so cheap. Grade B milk has over 10 times the bacteria count of Grade A milk. Furthermore, pasteurization kills the bacteria, *but does not remove them*. Some researchers have raised questions about the effect of these dead "bugs" in the body. They may cause nausea, vomiting and diarrhoea in some susceptible children.'

...the NZ] Milk Corporation moved yesterday to allay fears over milk contaminated with cleaning fluid being sold in South Auckland. The corporation said it was confident it had retrieved all suspect bottles in the affected area... The corporation had isolated the contaminated product to two crates and had withdrawn all the bottles left on the shelves of the two dairies... that are believed to have sold the Anchor blue-top milk... leaving about 10 in circulation. More than 20 1-litre plastic bottles had since been recovered from[local] residents but none of the milk showed any sign of the... cleaning solution. A corporation spokes[person] said... the nature of the cleaning solution was not yet known, except that it was alkaline... [T]he corporation would investigate the solution and how it got into the bottles... [In the meantime, dairy] farmers already depressed by... lower [farm values] and high overdrafts have been further shaken by news of a suggested link between a protein in milk and diabetes.

...World-leading research to be unveiled to an international audience in Palmerston North today links the onset of insulin-dependent diabetes to a protein contained in milk from 80[% of NZ's]... three million... cows... The large number of cows producing A1 is the result of many years of breeding to obtain milk with more protein and less fat... About 5[%] of people are genetically vulnerable to the insulin-dependent form of the disease, and up to 1[%] of the population finally develop it... [T]he Dairy Board confirmed last night [that it is bracing] itself for fallout from the disclosure... The board... is urging people not to be put off drinking milk by a problem potentially affecting only a "tiny" proportion of the population[, but it]... suggests testing newborn children for predisposition to the disease to ensure they drink only milk containing another form of protein, known as A2, for which it is obtaining patents for potential derivative products... [Unfortunately,] genetic tests costing several hundred dollars [are only 60%] accurate, so there could be no guarantee that a person showing a negative result would not develop diabetes. [Furthermore, a] northern regional health authority spokes[person] said the issue of funding for such tests could not be resolved without proof of a causal link between milk and diabetes... Some[scientists also] say the theory is not proven and that it is dangerous to alarm people until there is firm evidence. Others say... [the] research shows the question urgently needs to be answered... Although N[Z] is the world's largest dairy exporter, an international trend to higher-earning, protein-rich milk... means... most countries have similar proportions of cows producing the A1 strain of casein... [which] spells potential trouble for dairy industries in most other countries as well... The latest research shows that milk is the chief "villain," but... other milk products containing protein [should be avoided by] those... who are susceptible... However, butter with its high fat content is ironically not such a strong suspect as a diabetes cause... [A professor] of the Auckland Medical School and Child Health Research Foundation, whose research was partly funded by the Dairy Board, is calling for cows yielding the suspect milk to be replaced... [But getting] rid of the A1 protein... is a much more difficult and expensive proposition than it sounds... [The professor] is conducting a study of predisposed Auckland children to learn whether A2 milk will slow the onset of the disease. This follows his collaboration with the Dairy Research Institute in a project which included a study of mice predisposed to diabetes. His work began... [after the discovery] of much higher rates of diabetes among... Samoan children living in N[Z] compared with those who stayed in their home country. This led to a study of world statistics showing a correlation between diabetes and milk consumption by children... [under 15. The incidence of diabetes in NZ – where '100kg of milk is consumed per person per year – is 10.1 cases per 100,000 people under 15. In Samoa, the corresponding figures are <10kg/year and <1/100,000. In Finland, 185kg/year and 35.3/100,000.'] Notable exceptions were Icelandic youngsters and those from the Masai of Africa, who drank lots of milk from "ancient" breeds of cows which produced A2 rather than A1 varieties.

...Stocks of special milk will be available to N[Z]ers susceptible to insulin-dependent diabetes... As the furore over the preliminary findings... [that suggested a] link... between a milk protein and the disease... abated yesterday, dairy officials vowed to increase supply of a milk without [the] implicated protein for those most at risk. But the special milk is likely to be given out only on a doctor's referral, and the patient will probably have to pay for it... Food such as bread, biscuits, muesli and other baked [items have also] been identified as containing the A1 protein, although in considerably smaller quantities than dairy products... The professor has, meanwhile, hit back at medical colleagues who have questioned his work and the way it was released. "There's been knee-jerk scepticism and I would expect better from my scientific colleagues than to make statements like that." [However, the professor claimed to have] no problems with international colleagues and... was asked to speak around the world. An overseas colleague yesterday said [that the professor] was internationally respected for his work.

...Dear old Federated Farmers – will they never learn? When... [a professor from] the Auckland Medical School discovered that a milk protein might cause diabetes in some people the chair[person] of Federated Farmers brushed aside the idea of breeding cows that would produce less

protein. Okay, the... theory is yet to be proved. But everyone knows how customers react to the whiff of a health scare... So dairy farmers face a marketing challenge. More than that, they face a mental challenge. They must look back coldly on a century of truly amazing growth and ask whether one wrong turn means that most of their cows now produce food that can hurt people – and hadn't they better breed harmless cows, and pretty damn quick? The Federated Farmers [chairperson] didn't see it that way. No, no, no. There were too "many millions tied up in dairy genetics." In other words: "Don't expect us to change." This is the first argument used by the [people] who owned buggy-whip factories: "Don't try to tell me them machines of Mr Ford's is ever gonna replace horses. I ain't gonna risk my money by switchin' to makin' them magneto things." Now imagine what would have happened if [the professor had only] pointed the finger at biscuits. In no time the biscuit [makers] would be putting on cosmetics for television and practising how to look like caring, responsible citizens: "Don't worry, folks. We've dumped all the bad flour. We've cleared the supermarket shelves. New flour shipments are on the way. Next week we'll have new products on the shelves, good ole wholesome biscuits – and every one made with a mother's care. Delicious, too, just like you've always loved them." But that wasn't the Federated Farmers way. Bristling. Defensive. Surly. Resentful. That's how they woo customers. Every cow-cocky in the country can get on his or her benders and thank God for the Dairy Board. It bounced up, confident and comforting. It promised cleaned-up milk within a year. No problem. Dairying has to survive. Otherwise we'll all be on the dole, but without any money to pay ourselves.

...Bottle feeding of babies can lead to adult diabetes... The warning applies not just to infant formula or cow's milk, but even expressed breast milk fed in a bottle... Research... in Arizona... has found that... breast-fed... babies usually filled their stomachs on the thin, sweet foremilk produced by their mothers and only took the fatty hindmilk if they needed it. In bottles the fat was mixed through the milk so that babies got more of it. Bottles were also easier to drink from, and babies could easily take more than they needed... [Consequently, b]ottle-fed babies were often overweight, which was a strong risk factor in the development of non-insulin-dependent diabetes... [T]he Arizona results had nothing to do with research by [an Auckland professor]... into possible links between cow's milk and insulin-dependent diabetes, which affects children.

...[M]ilk is rich in a complex sugar called lactose. This is more slowly absorbed than most sugars, and is handled better, except by people who are allergic to milk. They are usually lacking in *lactase*, the enzyme required for the digestion of lactose.' It is also 'best to steer away from dairy products, especially in the first year of life, if there is a history in the family of eczema or asthma. Whether we're meant to drink cow's milk is an interesting question. Cows have four stomachs compared to our one, and they've got different enzymes.' By the way, 'Brazil has discovered 28 cattle infected with foot-and-mouth disease. The cattle, which have been ordered destroyed, were found in Rio Grande do Sol near the Argentine border. Authorities have quarantined the area. The disease first appeared when officials destroyed 3000 cattle this month after 10 smuggled Paraguayan cattle grazing on Argentine pastures were found with anti-bodies for the virus. Argentina is the world's fourth-largest beef exporter, and Brazil has the largest herd with 170 million head. It has suspended imports of live cattle, pigs, sheep and goats from Paraguay and put troops along the 1000km border to block entry of suspect animals or meat products.'

... 'Britain is braced for food shortages at the supermarkets as an outbreak of foot-and-mouth disease (FMD) in pigs continues, with a countrywide ban on all movement of farm animals. The week-long ban imposed at the weekend closed all British livestock markets and abattoirs, prohibited hunting and also halted imports of live animals. The worst fears of Government vets were confirmed as the number of sites where FMD has been identified rose to six. It also emerged that at one farm in the northeast the infection had been present for "2 to 3 weeks" – longer than previously thought and enough time for it to have spread the length and breadth of the country. Some of the major supermarket chains urged consumers not to panic buy. The Agriculture Minister also asked that consumers not alter their shopping patterns. The international fallout from the disease outbreak gathered pace as Thailand and Romania joined the list of countries outside the EU which have banned pork and live animal imports from Britain. The European Commission has already imposed an export ban on British meat and live animals. Ireland has called up 300 troops to help police patrol its 386km border with Northern Ireland to keep out meat and livestock.'

... 'Britain yesterday announced a £152 million compensation package for farmers hit by FMD, as experts detected the highly contagious animal virus in new areas. After an emergency meeting with the PM, the Agriculture Minister also extended a ban on all livestock movement in the country for at least two weeks. As the disease continued to spread relentlessly, Britons were forced to curtail their leisure activities. The Government introduced powers allowing local authorities to place countryside footpaths off-limits and close areas of the countryside to everyone but essential workers. Key sporting events such as horse racing were cancelled for fear the movement of people could spread the disease. Saturday's Six Nations rugby international between Wales and Ireland in Cardiff has been postponed. The Irish Government requested the postponement, fearing fans returning from the match could carry the virus back to Ireland – which is so far free of infection – on their shoes or clothes. FMD can be passed on in animal faeces and borne by the wind in fine droplets for kilometres. Although not dangerous to humans, it can be passed on by people through breathing or sneezing. The promise of a compensation package for farmers is unprecedented. Farmers whose infected livestock were slaughtered were paid the market rate for the animals. But until now, those who had suffered financial losses because of the restrictions on movement had received nothing. Across the English Channel, France sealed off farms today and began a massive slaughter of 20,000 sheep imported from Britain. A farmer in the western Mayenne region, said: "This is terrible. They should do blood tests first. We're not certain these sheep are sick."

... 'At their 11ha farm on the Belgian coast, a farming couple are staring ruin in the face. Because 12 of their goats were imported from Wales last month, the couple have been ordered to destroy all 160 of their animals as alarm spreads about Britain's FMD outbreak. A personal catastrophe for one farmer is symptomatic of a wholesale crisis for the continent's agriculture, one which could eventually topple the common agricultural policy (CAP) that has played such a crucial role in the development of the EU. Britain's FMD outbreak comes just as Europe is battling against the effects of the BSE crisis. Brussels estimates that the BSE crisis this year will leave a mountain of unwanted beef of around 785 million tonnes. A cattle destruction scheme to dispose of 2 million cattle across Europe has had to be extended to include a further 1.2 million cows under a second plan, which allows the storage of tested meat. With two diseases to combat the central pillars of the 40-year-old CAP are beginning to crumble. The European Commissioner for Agriculture is prepared to admit publicly for the first time that the aims of the CAP, enshrined in the Treaty of Rome, are "not a good basis for future-oriented agriculture policy." The CAP was founded under an agreement in which German industry came to pay for French agriculture. Memories of food rationing and wartime hunger were still alive in the minds of millions of Europeans, so the aim was to encourage farmers to produce more food. Initially, the policy worked: food became more plentiful all year round, the EU became self-sufficient in all but tropical fruits, and from the point of view of the most efficient farmers the CAP was a goldmine. But from the late 1970s the combination of guaranteed prices paid to farmers and "modern" factory methods started to generate food mountains that by the following decade looked obscene. Worst of all, 80% of the money was ending up in the pockets of the biggest (and richest) 20% of the farmers. The cost of generous support for 9 million farmers now exceeds a crippling \$NZ90 billion a year, nearly half of the bloc's entire budget.'

... 'Eurotunnel workers were to disinfect all vehicles arriving in France from Britain after the FMD epidemic gripped the whole of Britain yesterday when outbreaks were confirmed for the first time in Scotland and Northern Ireland. More than 25,000 animals from confirmed sites have been slaughtered and their carcasses burned. One estimate suggested the outbreak could cost Britain £2.6 billion – almost as much as the entire annual subsidy to the farming industry. With much of the countryside already shut down, Britain's biggest landowner, the Forestry Commission, officially closed all its forests to the public for the first time in its 80-year history. Britain's leading dogs' show, Crufts, has been postponed. With supplies of British meat running out, the Government and industry leaders were to meet overnight to draw up emergency measures for limited numbers of healthy livestock to be slaughtered under controlled conditions to supply shops. The Agriculture Minister has come under pressure to explain why it did not respond to a warning last May that passengers from Nigeria and Ghana were bringing in potentially infected meat. This included entire butchered deer and dead monkeys carried in suitcases.'

...‘The British Ministry of Agriculture is investigating the idea that animal rights activists planted FMD in an attempt to discredit farming practices. As more cases of the disease were confirmed, a ministry source said the ministry believes terrorists could have copied the twisted scheme from the James Bond thriller *On Her Majesty’s Secret Service* – in which the evil Blofeld threatens to contaminate the world with the virus. “Many people in the department think it is no coincidence that farming has suffered swine fever and FMD outbreaks within nine months of each other after years of healthy herds.”’

...‘British farmers are fighting death squads sent on to their land to kill their stock as FMD continues to spread. Britain has started killing healthy farm animals in a desperate bid to keep the disease at bay. The action is also a bid to get importers like America to ease their bans on imports of meat and livestock. But the action has sparked a rural revolt. “There are a lot of farmers who won’t tolerate anyone coming in and slaughtering healthy animals.”’

...‘Britons in France have been bracing for an anti-British backlash triggered by the FMD outbreak, which comes smack in the middle of a scare about mad-cow disease, also a UK export. The double British whammy is costing European farmers billions of dollars in lost markets at home as well as abroad. But the atmosphere is not angry. It is one of resignation and deep despair, almost the response of an exhausted bull in the last stages of a bullfight’...

‘Portugal has banned bullfighting in a bid to stop FMD. Spain – where bullfighting is really big business – has taken no action against the sport. Portugal’s National Union of Bullfighters said it would meet government officials this week to look at other action – including extensive disinfecting of animals – in a bid to get the ban lifted.’ In Britain, ‘dogs starved of exercise are being put on diets. Demand for low-fat pet food has soared since FMD closed much of the British countryside to dog-walkers. A Sainsbury’s supermarket spokesperson told the *Mirror* newspaper that sales had risen 400% in the past four weeks’...

‘Britain’s blazing FMD funeral pyres risk giving people the human form of mad-cow disease, the British Government has admitted. Other assessments have suggested that E.coli and salmonella might also be released. However, the Ministry of Agriculture Fisheries and Foods (MAFF) has not consulted local environmental health officers about the safest place to put the pyres to avert health risks. MAFF and other experts say the risk of people contracting CJD and other diseases from pollution arising from pyres is “very low.” But since everyone agrees that the epidemic itself poses no threat to human health, the cure appears to pose more danger than the disease. Meanwhile, British tourist chiefs say the holiday industry could be devastated by grim pictures of the diseased livestock being burned on the giant funeral pyres. “We are very concerned about what the FMD outbreak is doing to Britain’s reputation overseas,” said the British Tourist Authority. “Overseas visitors bring in about £13 billion every year to this country. Now people are either waiting to see what will happen or deciding to go elsewhere.” By the end of last week, according to MAFF figures, 7624 cows, 41,796 sheep, 3649 pigs and six goats had been burned’...

‘At least one million farm animals will have to be slaughtered if the British Government is to have any chance of containing the FMD crisis, says Britain’s National Farmers’ Union. But other estimates of the mounting epidemic suggest the kill may be double the figure.’ ‘The disease, though non-fatal, does have devastating economic consequences as the animals take a long time to recover. If vaccines were used it would mean British exports to disease-free countries would be banned. Vaccines are not effective against all strains, so outbreaks would occur anyway. In 1967, an outbreak lasted from October 23 until June 3, 1968. The virus, which thrives in winter months, is killed by heat and sunlight. In NZ,’ ‘the government also prefers to kill rather than vaccinate animals’...

‘The news organisation CNN has infuriated NZ border officials. CNN, which claims 50 million viewers worldwide, put a story on its website last Friday falsely listing NZ and AUS as countries suspected of having cases of the contagious stock illness ravaging Britain. NZ did not have FMD and never had.’

...‘Britain may deploy napalm flamethrowers – infamously used during the Vietnam war – as an emergency measure to help to destroy the carcasses of condemned animals. Maff is keeping the option open because of local shortages of the timber railway sleepers used for animal pyres and the difficulty of transporting them, and the large amounts of coal needed to burn with them, to remote areas of the countryside.’ In another development, ‘on Thursday Ireland became the third other European country, after France and the Netherlands, to confirm an outbreak of FMD. Irish food and animal exports were worth about \$US5.65 billion a year, about 10% of total export receipts. An estimated 60,000 jobs in agriculture and tourism are now at risk in the country’...

‘Britain’s Tourism Minister claims that FMD has not closed down the countryside, yet the vast majority of Britain’s country houses are shut. For the moment rural tourism appears to be on hold. Cancellations are soaring, while losses are estimated to be running at £100 million a week. The epidemic represents a body blow to an industry worth £12 billion a year, which supports about 380,000 jobs, and it is now threatening the agricultural show season.’

...‘What would 7500 rotting sheep carcasses smell like? Nobody could guess, and when the moment came the foreign press corps, camped on a perimeter road around Great Orton airfield in Cumbria, struggled to find the correct adjectives. It was a sick, heavy smell that seemed to cling to clothes and hair even when the wind had shifted and sent it another way. The Cumbria Tourist Board has just £20,000, raised as a fighting fund by local businesses, to counteract the latest images of “Wordsworth’s Lake District” that are being beamed around the world. Yesterday, as the number of cases rose to 634, the Government said it might reverse its policy and vaccinate livestock against the disease. According to a report in the *Times*, the Agriculture Minister will tell MPs today that the source of the outbreak was most likely smuggled meat thrown out by a Chinese restaurant that ended up in pigswill on a farm in Northumberland.’

...‘A million animals have been killed or are facing slaughter and the tourism industry is expected to lose up to \$NZ35 billion, but to Londoners the FMD crisis is out of sight and barely in mind. The pyre smoke does not reach the capital’s bars and offices, so conversation is as usual on football and the latest *EastEnders* development. Londoners are insulated from FMD not only by geography, but by their restaurant menus and supermarket freezers. The Masai, a cattle-breeding tribe in Kenya, have expressed more concern about FMD’s livestock-destroying effects. Representatives have volunteered their own expertise – and a cow urine and salt remedy – for combating the blight they call oloirobi.’

...‘Startling new evidence of scams practised by farmers to profit from the FMD slaughter has been uncovered on the day that a cull of 4000 sheep on the Brecon Beacons in Wales began. The investigation provides the first hard evidence that farmers are being offered diseased sheep for sale, so that they can infect their own flocks and claim hundreds of thousands of pounds in compensation, funded by British taxpayers. The investigation also reveals an official document showing how the Government allows farmers to make huge profits from cleaning up their farms, by hiring their own equipment to the Department of Environment, Food and Rural Affairs (Defra) at exorbitant rates. Even ministers are unaware of the extent of this officially sponsored scam, though they are nominally responsible for it.’ ■ ‘Rare breeds of cows, goats and sheep – familiar from 16th century paintings by Dutch masters – are threatened with extinction by the FMD epidemic that has struck the Netherlands. The few remaining specimens of the Groningen Blaarkop, the Brandrood and the Lakenvelder could be caught up in the slaughter of barnyard animals. Today, the last 100 Schoonbeker sheep left in the world are due to be destroyed.’

...‘PET sheep hidden in a Scottish house for fear they would be slaughtered because of FMD were finally killed yesterday. They didn’t have the disease’...

‘Grunt, the rare NZ Kune Kune pig which rose to stardom in a hit British children’s film, is facing the chop because its owner had visited a farm infected by FMD – even though the owner wore gloves and disinfected boots, and the pig isn’t infected. The fate of the pig now rests with the British High Court.’

...‘The British Government has made its highest compensation payout for a single animal culled during the FMD outbreak – £50,000 for a pedigree breeding ram. The prized Swaledale sheep was put down after the disease broke out close to the farm where it was grazing. The payment would have compensated the owners for the ram’s track record and future losses. “This animal was never destined for the supermarket shelves.” Controversy over the costs of the FMD crisis emerged after newspapers reported that 37 farmers whose livestock was slaughtered were to receive more than £1 million each.’

...Defra said the 37 claims – one for £4.2 million – were still being considered. The *Independent on Sunday* had said the EU was threatening to withhold millions of pounds over allegations of fraud in compensation claims. The news came as an economist said that vaccinating animals would have been at least £3 billion cheaper than slaughtering them in the compulsory culls ordered by the Government.

...‘Closing Britain’s countryside over FMD was wrong and should not happen again, the British Government admits. This week, the Food and Farming Minister said that criticism of the response to the outbreak was justified. “Undoubtedly there are some things that with hindsight we would do differently or better.” ‘The Government estimates the tourist and leisure industries lost up to £5.3 billion.’ In related news, **the rabbit calicivirus disease... was released in Sydney yesterday as pet owners were urged to have their rabbits vaccinated against it. The Agriculture Minister... released 20 rabbits infected with RCD in the Cattai National Park on the city’s outskirts in a bid to aid the spread of the disease in the metropolitan area. The virus was first officially released in N[SW] at Wagga Wagga... last October, as part of a national initiative to decimate A[US]’s feral rabbit population.**

...*The war against feral rabbits might not yet be won, but a biological weapon is giving farmers hope...* [One NSW] sheep farmer estimates that in the past decade rabbits have nibbled him out of hundreds of thousands of dollars in lost production... But now, thanks to... [RCD, the farmer] no longer sees hundreds of the pests romping, bouncing and eating their way around his 1,600-hectare spread. Last Thursday, on a tour of the property, [the farmer] saw just one... “It’s just a great load off my mind that my sheep have plenty to eat.” The destruction unleashed by wild rabbits in A[US] is formidable: they ruin topsoil, endanger native flora and fauna, and imperil farmers’ profits... All told, they chomp \$A600 million off GNP each year in crop and soil damage... Unlike cattle and sheep, rabbits uproot the plants they eat, making regeneration harder. Says... [the] chief veterinarian officer at the N.S.W. Department of Agriculture: “Rabbits are the worst environmental disaster that A[US] has ever faced... [They] must be gotten rid of.” ...like a bad house guest, they have long overstayed their welcome... [T]wo... rabbits... can become 184 in just 18 months. RCD, however, changes the equation. Since the virus’ escape... from a quarantined lab... in October 1995, and its subsequent controlled release into infested areas, rabbit numbers in some districts have fallen by... 95%. Although RCD is not a complete solution – for some reason, the virus is less effective in rabbits under eight weeks old – it provides hope for many beleaguered ecosystems... Its lethal nature is impressive: the virus killed 64 million rabbits in Italy in six months. Forty-four countries worldwide are now using it. “It’s just a bonanza,” says... [the head of the] Otago Regional Council in [NZ]’s South Island, where the virus may be let loose later this year... Ever since rabbits were brought from England[to AUS] and released as game in the 1840s, farmers have waged war upon them. But most forms of culling are hugely expensive. The disease myxomatosis... [– which, incidentally,] can take weeks to kill, [whereas with RCD] it is all over within 30 to 40 hours... [–] wiped out 99% of the pests after it was introduced in 1950, but its effectiveness waned as rabbits became resistant to it. While it is impossible to gauge [AUS’s rabbit population] accurately – estimates range from 200-300 million – it is known that even after a 70% reduction, rabbits can return to their previous numbers in a year.

...The deadly... disease which is wiping out millions of rabbits in A[US] was released after inadequate research, say European and American scientists. They say there was no guarantee the disease could not jump species... The A[US]n Animal Health Laboratory disagrees. “Our testing of [RCD] is the most comprehensive study that we know of into the host range for an animal virus,” the deputy director... said. But... [a virologist] from... Oregon State University... said even if the tests were perfect, they could not foresee what would happen if the virus mutated. More concerns arise from the consequences of [RCD] in Europe, where it appeared out of the blue in the mid-1980s. In Britain, polecats and some birds have been affected. In Spain, where rabbits are the main food for at least 29 predators, red fox litters have declined and the imperial eagle... is... suffering.

...Giant eagles in A[US]’s outback have become a menace... now that a deadly virus has killed off the hordes of rabbits that the birds used to feed on... [RCD] has cut the rabbit numbers by up to 95[%], sending the eagles to the highways looking for roadkill. Motorists report terrifying tales of having their windcreens smashed and steel roofs torn off by eagles trying to flee from their meals as vehicles approach... [Near] Broken Hill... an eagle... crashed straight through [a van’s] window. The driver fled as the bird tore the cab apart looking for a way out... [● A Pukekohe rabbit farmer claims to have] obtained British vaccination information that rabbits suffered horribly from the effects of [RCD] – they convulsed and suffocated to death... Virus replication and tissue damage trigger uncontrolled clotting of the blood which blocks off small blood vessels in all body organs...

An Auckland company which put plans to export rabbit meat on hold when... RCD... was accidentally released... from research facilities to the A[US]n mainland... is to put pressure on parliamentarians to prevent its introduction in this country. Landcare Resources Ltd... is to press for time to prove its claim that rabbit meat and fur can make valuable export items, and the trade could control animal numbers in the South Island high country. The company... says that the commercial potential for rabbit products from a country free of RCD has never been properly assessed... “We are[also] sitting pretty without myxomatosis...” ...prices from \$12 to \$14 a kilogram could be earned from local sales for human consumption... inferior parts of the carcass are in strong demand from petfood companies... and... rabbit fur is coming back into fashion overseas... The company’s plans for capturing rabbits would involve putting traps on runholders properties. Rabbits would be billeted with farmers to control animal numbers to local body specifications... Expert reviewers who are studying the application to import RCD are due to make their report by the end of this month. The matter will go to the M[AF] and then to the cabinet before being made public.

...[MAF] yesterday rejected the idea of importing [RCD. The NZ Herald]... burrows into the reasons behind the decision. More than a century ago the country’s head rabbit inspector told Parliament that despite improvements in poisoned grain, no comprehensive method of destroying the pest had been found. The inspector concluded that without such a breakthrough “the annual destruction of rabbits must be a continuous tax on the country.” Central South Island farmers – taxed to their limits by the pest through the intervening generations – thought their prayers had finally been answered with the sudden arrival of [RCD] in the 1980s... The virus kills by enlarging internal organs... and causing respiratory and heart failure... The [person] charged with deciding whether [RCD] should be let loose in N[Z] knows long-suffering farmers will be upset and angry at his refusal... But the Director-General of Agriculture... said there was not enough information about how [RCD] spreads and how effective it would be in N[Z] to give approval... In two years A[US] had[not been able to pin-point how [RCD] had jumped from the quarantine island and how it spread after that, although insects, notably the bush fly, were top suspects. N[Z] had fewer insect varieties which could perform a similar role... Part of the mystery surrounding the virus goes back to its 1984 origins when it was first reported in a shipment of German Angora rabbits three days after arrival in China. Subsequently millions of Chinese rabbits were infected. Scientists do not know why, but... the... shipment[may have been] exposed to a new agent from some unknown animal source in their food or environment... It quickly spread... to... Europe... [There] is virtually no evidence of [it causing] harm to other species... [However, the director-general – who] assessed the health risks posed... to humans as “low but not zero,” and... [the] issue of rabbit predators switching to native prey ...as a “manageable problem[” – points out that while]... the low-level threats were not reasons for declining to import the virus, they could not be ignored, particularly when put against the doubts about its benefits. Those question marks made an illegal introduction of the virus dangerous and counterproductive, compromising the chance to use it more effectively in the future.

...Agriculture border officers will be on alert for any attempt to smuggle in... [RCD] after it was officially rejected as a pest-control method... The decision... to reject the virus could also be challenged in the High Court by the applicant group of regional councils and Federated Farmers... The chair[person] of the applicant group... called the decision astonishing... “Even if it did not work, nothing would be lost by attempting it.” ...[furthermore, it] created a perpetual border and surveillance problem against the virus’ unauthorised or accidental arrival... costing at least \$300,000 a day... Agencies would have to maintain a continual state of readiness to eradicate the virus if it arrived, but such attempts would fail... [Yesterday t]he Minister for Biosecurity... said all concerned should work together to examine all methods of rabbit control.

...The *Clutha Leader* understands that the chicken cholera experiment at Clydedale gives little or no prospect of success. [However, good] results for destroying rabbits have been obtained in Queensland by poisoning water with the intestines of rabbits which had previously died of chicken pox... [By the way, opinions] differ about how and when rabbits were introduced to N[Z] but the consensus is that they came from Europe and Africa. The R[CD] Application Group claims N[Z]'s first rabbits were released by Captain Cook in 1777 but they died out. An old *New Zealand Heritage* magazine says missionaries introduced rabbits into Northland in the 1820s. A couple of decades later they had reached... Southland. Another view is that acclimatisation societies introduced European rabbits as a game animal in the 1850s. The pioneers who brought in the animal would have had little idea of the damage the rabbits were to wreak on the landscape more than 100 years later.

...Legions of [NZers] have considered the only good rabbit to be a dead one and have pursued that goal with missionary zeal. Several times they have had the pest nearly beaten. But when it comes to the incredibly fertile rabbit, near enough is not good enough... Early attempts at control were[also] frustrated by a conflict of interest. Rabbits may have been one [person's] plague but they were another's harvest. Between 1870 and 1945 an average of 13.3 million rabbit skins and 1.8 million carcasses were exported each year. Farmers licensed or paid rabbiters to battle... rabbits... The rabbitier sometimes took his pay simply in the right to kill and often paid the farmer a share of his profits. In those circumstances it was not in the rabbitier's interest to kill off his quarry and many farmers enjoyed the financial rewards. The result was, effectively, rabbit farming. Apart from the native falcon, there were no natural enemies to slow the rabbit explosion. European solutions were sought. Ferrets arrived in 1882 and the Department of Agriculture bred large numbers to release. The department also advertised widely in the British press for live stoats and weasels. Between 1884 and 1886, 4000 ferrets, 3099 weasels and 137 stoats were liberated. Run holders joined in the breeding of the predators. Domestic cats had already been used. The predators failed to stem the rabbit tide... It was the settlers' land development practices – in particular the heavy grazing of tall tussock, which rapidly converted many areas into rabbit-friendly environments. Nowhere was this more so than in the grasslands... east of the main mountain divide running up the South Island... Between 1850 and 1880 these virgin tussock grasslands were invaded by sheep. In Otago, for instance, sheep numbers increased from 59,000 to 694,000 in 1861. Fire was used to create the short grassland needed for sheep. This made very attractive conditions for rabbits, especially when heavily grazed by sheep. Over-stocking, of both sheep and rabbits, was extreme. Between 1877 and 1884 sheep runs totalling 628,000ha were abandoned in Otago... In 1876... the Rabbit Nuisance Act [had been] passed. Rabbit boards were set up and paid for by landowners, who also had to do rabbit control work. In 1886, Government subsidies were introduced... Until the 1940s the main control methods were poisoning with phosphorus or strychnine, shooting, trapping and fumigation of burrows with chloropicrin or smoke. Weak rabbit control and the run-down of farms during... [WW2] meant that by 1947 the rabbit problem had again grown. With the Rabbit Nuisance Amendment Act 1947, known as the "killer policy," total war was declared on the rabbit. Farmer levies were matched by a Government subsidy. Rabbit and rabbit products were... decommissioned by a progressive levy on all sales. By 1953 the levy rose to 66.6[%], and in 1956 trading in rabbit products was totally banned. By 1960 live rabbits could only be kept by hospitals, zoos and research centres. It was said there was even a move to ban the sale of stuffed toy rabbits. At the peak of the crisis, when the hillsides seemed to move with rabbits, farmers flocked to join the crusade. The first battles were won rapidly... In the early 1950s the poison of choice was arsenic. By the mid-1950s sodium monofluoroacetate (1080) became the standard poison and aerial application revolutionised rabbit control. The early successes were so spectacular that a total eradication policy was adopted in 1959. But complacency was growing among farmers despite strident annual reports calling for greater effort. In 1968 most boards were just cropping the rabbits which remained at low density, except in a few hot spots... That year was the peak of the boards. There were 210 of them. A few years earlier questions had been raised by a visiting U[S] ecologist... about the wisdom of around 2000 rabbit board members meeting to decide the activities of 1000 rabbiters at an annual cost of \$19 million. Others came to share his view and in 1968 the Agricultural Pest Destruction Council was formed under a new act. Rabbit boards became pest boards with responsibility for a wider range of pests... In 1971 the total eradication policy was officially abandoned and replaced by one of control. In 1979 pest board spending was \$10 million, of which the Government contributed 65[%]... In 1983 the Agricultural Review Committee reported... rabbit populations were generally at acceptable levels... Among its recommendations were that Government funding should be phased out except for those areas where environmental qualities were threatened. A separate review of regional government and resource law overtook the reorganisation of pest destruction. In 1989 it became a responsibility of the newly formed regional councils. Rabbit management had to compete for funds with other community demands. Only... parts of [the South Is]land... continued to receive Government support via the Rabbit and Land Management Programme. In 1993 the Biosecurity Act came into effect. It required the benefits of undertaking pest control to exceed its costs and the benefits of control through a regional pest management strategy to exceed those of individual action. In June 1995 the Rabbit and Land Management Programme was axed and the Government cut its \$3 million a year contribution. In 1996 the total annual cost of rabbits to the economy was estimated to be at least \$23 million... There was also an estimated \$8 million of lost production due to rabbit grazing[– although r]abbit products... generate \$5 million worth of sales each year...

The war against rabbits in N[Z] is old... Farmers' threats to take matters into their own hands and release deadly diseases against the wishes of the Government are equally longstanding. In the 1980s, South Island farmers were begging to be allowed to use myxomatosis to wipe out rabbits – cute and cuddly to city folk, vermin to farmers... Some threatened to illegally introduce a myxomatosis-infected flea. That controversial disease, which causes a slow and painful death, was introduced in the early 1950s. Government action in 1977 outlawed its use. During the 1980s and 1990s, university research has been carried out on destructive agents from rabbit bait, including oral contraceptives, to the use of wild cats and ferrets as possible agents of destruction. The idea of using special grass as a contraceptive was discussed. In Auckland, Cornwall Park rabbits were gassed in their burrows. Lobbying continued for myxomatosis but, in 1992, a joint A[US-NZ] research project began into the potential of a new viral disease, rabbit haemorrhagic disease – later branded [RCD]. Myxomatosis was ruled out[again] in 1993 and farmers looked to [RCD] for salvation... At the end of 1995, the Government gave approval for [RCD] to be imported for testing, to the concern of wildlife lobby groups. By early 1996, farmers and regional councils were clamouring for permission to[also] import the virus. Despite pleas not to smuggle [RCD in, NZ] farmers facing huge rabbit control bills talked openly of encouraging someone to go to A[US] and fetch it. Government delays in making a decision led to more talk of an "accidental" arrival... Last month the Government said... N[Z] would not import the disease. Yesterday it was... announced that it had arrived.

...An Auckland company which planned to exploit the commercial potential of [RCD]-free rabbits in export markets says it has had the rug pulled from under it with the discovery of the disease in the South Island[, although]... it... contends that if the spread of the virus could be brought under control or it could be eliminated, there are... still... good prospects to build a valuable trade. The company had orders from A[US] for 16 tonnes of rabbit skins... as well as interest in meat sales to Asian countries... [A]s well as selling the meat and skins from rabbits there could be a lucrative trade in tissues not infected with the virus for bio-research purposes... Japan and the U[S]... used... rabbit brains and blood... in human health research... Another company... was set up out of Christchurch to process rabbits two years ago and sales have already topped \$800,000. Yesterday it... sent its staff home and told customers it could not deliver orders after the M[AF] told it to stop processing. The risk of the disease spreading to the North Island was also concerning workers at the country's largest commercial rabbit operation, The Shearing Shed in the Waikato.

...A[USn] monitoring of RCD] suggests its surprise appearance in N[Z] may not be as devastating to the nation's rabbit population as expected. The latest surveillance shows that the success of the disease has been highly variable in cooler areas with rainfall of more than 300mm a year,

which would encompass most of N[Z]. In semi-arid and arid areas of A[US] the disease has been far more effective, killing up to 95[%] of rabbits. However, immunity among young rabbits is causing major problems and where the kill has been high, predators are turning to native wildlife. Researchers also believe longer-term effectiveness will decline as the virus weakens and rabbits' resistance strengthens. This is a trend which, in 40 years, has reduced myxomatosis death rates from an initial 90[%] to as low as 10[%]. RCD]... was found in rabbits in the Cromwell area on Tuesday and five farms there have been quarantined... [However], irritation is growing in the Cromwell area at MAF attempts to contain... [t]he virus... The ministry's brief is to eradicate the disease and possibly recover the cost of containing RCD from those responsible for releasing it.

...South Island farmers suspected of importing the... disease want an amnesty from prosecution in exchange for information on how the killer rabbit control broke out. They say they will only help authorities to gather information... if they can be assured they will escape punishment. But... [MAF has] indicated the Government could not be seen to be condoning the breach of the Biosecurity Act by turning a blind eye. About 80 farmers met [the Minister of Agriculture] last night at Cromwell... The minister pleaded with the group for information... But his pleas were mainly met with wry smiles and chuckles... A team of eight police officers and a MAF investigator have [already talked] to people within the... quarantine zone.

...Rejoicing farmers who spread the illegal [RCD] may yet feel the clutches of the law – despite yesterday's announcement that they would escape prosecution under the Biosecurity Act... Legal experts argue... [MAF's] decision to let farmers off the hook was based on too narrow an interpretation of the law. Police stood down from the Operation Lowburn probe into the release of [RCD] are privately livid... their hands are tied... They returned to regular duties yesterday after public statements from M[AF] chiefs... that there were no provisions in the act to prosecute people for spreading the disease... But pressure building in political and legal circles could yet see the police operation reignited... Labour's biosecurity spokes[person]... said it was an outrage that people could admit to having deliberately spread the virus and escape penalty... [Even] the Biosecurity Minister... said farmers who spread the disease had put the country's agricultural lifeblood at risk. "We simply rely on millions of people entering this country to be honest, and farmers rely on that more than most,"... [But the] Minister of Agriculture... last night defended the decision... Prosecuting farmers for being accessories after the fact was extreme. "I think we've actually got more important things to do. Obviously whoever broke the Biosecurity Act and brought this virus into the country is not being let off the hook... I hope the police are directing their efforts to try and find out who that was." ...Anyone found guilty... of importing the disease faces a maximum prison term of five years or a \$100,000 fine.

...Agricultural officials looked resigned last night to... [RCD's] conquest of the whole of N[Z]... Acknowledging that the disease had probably spread over hundreds of thousands of hectares[, MAF]... lifted a controlled-area designation on the five farms where the outbreak was found... Although there has been no official confirmation that the disease has spread to the North Island[, MAF's] chief veterinarian... said the indication from farmers was that it had already been released. [A] [Mackenzie Country farmer... who helped spread the virus, said hundreds of farmers throughout the country now had stocks, distributed through the back country network... [C]arrots intended for a 1080 poisoning programme in the Mackenzie Basin would instead be laced with RCD to help its spread... The 1080 poisoning programme is [actually considered by many to be] ineffective. "What happens is some rabbits eat the (1080) bait and die. But rabbits are pretty resourceful. Other rabbits see them dying after eating the bait and don't go near it. You see it happening... The calicivirus on the other hand will take out a whole generation of bait-shy rabbits..."

...[a] Central Otago... farmer... farms 5000 merino sheep – and up to 70,000 rabbits. Walking at his... property, near Cromwell, you creep across a carpet of rabbit dung, sidestep warrens and watch the hillside come alive as colonies of rabbits bolt for cover. Dust blows from barren land dotted with the stumps of gnawed tussocks. His experiences show why farmers have gone to such incredible lengths, ignoring restrictions on importing... [RCD] and helping it to spread rapidly through the South Island in an orchestrated campaign of agricultural disobedience... These are desperate [people] fighting for their futures... [who] see RCD as their saviour... Rabbits have... cost him \$100,000 over the past two years, \$80,000 more than the next biggest expense on his farm, shearing. [The farmer] has paid the bill to keep afloat... Today [the farmer] has on hold a 1080 poisoning programme, costing \$25,000... "It's \$25,000 I haven't got...,"... So to the mild-mannered... farmer, RCD equals an immediate saving of \$25,000.

...[a Christchurch meat] processing company stands to lose a rabbit export order worth more than \$100,000... The 600 carton order was shipped to the U[S]... earlier this month... and is due to arrive in three weeks. "There's now a big cloud over it. It's a matter of waiting to see whether the U[S] authorities will let it in... If they don't, then that's the end of business. It is a lot of money to lose." ...the company had [already] lost a \$1000 export order to Tahiti. The five cartons of meat rejected at Christchurch airport had to be dumped... U[S] importers switched from A[USn] to NZ] suppliers following the outbreak of RCD across the Tasman two years ago... [A rabbit] skin processor... who handled up to 3000 skins a week, was also uncertain about the future of his family business, just north of Christchurch. [The company] collects and dries the skins of rabbits killed for meat... Most of the skins ended up as Akubra felt hats in A[US]. The problem] was, if shooters were no longer killing for meat markets, the company would not be getting pelts for processing. It was unlikely professional hunters would keep shooting for 20c a pelt... "The 20c for a rabbit skin wouldn't pay for the bullet to shoot them." ...a... North Canterbury... rabbitier... [who has] cut out a living shooting... rabbits... [for] 36 years... said... "Rabbitiers were [already] the lowest paid workers in N[Z],"... Meanwhile, Christchurch firearms shop Gun City said business had picked up. "Hunters are realising how valuable shooting is as a sport. And this has reminded them that they better go out and have a crack... But in the long term, they are confident the animals will survive. To them, RCD stands for Rabbit Control Dream."

...*Kill rabbits with bullet, not virus* We had rabbit on the dinner menu the other night – not the stringy, tasteless Chinese import half the size of a bobby calf, but a young buck shot on a King Country farm with a single .22 bullet... As youngsters, we roamed the hills above Te Kuiti at every opportunity to hunt rabbits with a .22 rifle. More often than not we returned empty-handed, cursing the vigilance of the rabbit control officer who had roamed the same patch only a day or two before. Rabbit control officers – and rabbit boards – are now part of rural history. And the rabbit has returned. Farmers, I'm afraid, can blame themselves for that because, once the rabbit population was brought under control, they objected to paying the rabbit board levy... All the talk about calicivirus, and its danger – real or implied – to livestock, has triggered discussion on other forms of rabbit control. Bring back rabbit boards, I say. Bring back a bounty on rabbit tails to encourage youngsters to take a stroll into the hills with some prospect of profitable gain. [Which 'reminds me of the time when a certain rabbit board ordered 28 tins of poison. Somewhere along the line, the letter I in TIN became an O. You can imagine the consternation when 28 tons of poison was delivered!']

...Conservation officials are gearing up to protect native species from predators as rabbit populations are hit by [RCD]... The Minister of Conservation... hoped to decide on Monday how to respond to the threat of rabbit-starved predators... switching to endangered native animals... [T]he full department programme to protect all 29 species... susceptible to predator switching... would cost [up] to \$3 million, but with the slower spread of the outbreak so far the initial response would not cost that much... At most risk from the 29 species... is the rare black stilt. Only a 100-strong population of the ground-nesting birds remains along rivers in the MacKenzie Basin where farmers have been spreading the rabbit disease.

...A colony of rare Argente de Champagne rabbits in Christchurch will be among the first to receive vaccinations for... [RCD]. Keepers at the Willowpark Wildlife Reserve would be devastated if their charges succumbed to the virus. Fewer than 80 Argente de Champagne rabbits are left in the world and all but 10 live at the Christchurch reserve. The remainder live in captivity in the lower North Island... The rabbits, also called silver rabbits, originated in France, but died out there when [RCD] was released 10 years ago. Fortunately, a colony had been released on to one of the Auckland Islands about 110 years ago by a humane society, to ensure that shipwrecked sailors would at least have food. When... [DoC] decided to return the island to its natural state five years ago, the rabbits were saved... The director... said the reserve was not in a panic, because the rabbits were kept in virtual quarantine anyway, but they would be vaccinated as soon as possible... The president of the Veterinary Association...

said 5000 vaccine doses would be distributed to veterinary clinics in the next couple of days, with South Island clinics receiving priority... M[AF] had earmarked another 5000 doses, and 5000 would be kept in reserve.

...A M[AF] staff member has been suspended after claims [the staff member] was involved in spreading... [RCD. A]nother staff member went to MAF bosses with the allegations on Friday. Police have been called in to investigate... However, it was understood the suspended worker had not supplied RCD to the farmers and was not involved in its importation. [MAF's] chief veterinary officer... said the only samples of RCD held by MAF were destroyed last year after being tested to see what effect the virus would have on kiwis. The suspended worker was not involved in the tests, carried out by two people unconnected with MAF... [Two kiwis] were killed to check the results... the other two[are] in the Kiwi House in Whangarei.

...a Northland tribe[that] sanctioned the use of... [4 kiwis for RCD experiments is] annoyed the disease had been introduced in the South Island... "While the kiwis injected with the disease were not affected we don't know what affect it will have on other animals,"... South Island Maori... said the introduction of animals and plants by early European settlers had done huge damage and the... virus could be a continuation of that practice.

...I am, like many rural N[Z]ers, enraged by the release of... [RCD]. This is not because I am upset by the killing of little furry bunnies. Those of us who live on farms are not likely to be sentimental about rabbits, any more than we are about possums or rats. These introduced pests cause problems for us and we shoot, trap, or poison as best we can... But most of us don't believe that introducing another pest is a long-term solution to any problem. I have another reason for being deeply angry. As a teacher I try to teach respect for law and for democratic process. How can I do that in a society where respected adults selfishly do what they want, without regard for law or for the consequences of their actions for other people? I would like to see all tax-avoiding, greedy, resource-gobbling creatures trapped... or suffering some deserved disease – but that doesn't give me an excuse to go and put poison in their water supplies. I'd like to protect high country tussock too – but that doesn't give me an excuse to introduce scrapie to rid the hills of sheep. The farmers or their cronies who have released this virus have deliberately poisoned other people's land... and damaged other people's livelihoods... However, the main reason for my anger is my sense of the futility of this action. What will happen when rabbits develop resistance, as they will? I'm old enough to remember my grandfather... talking about how myxomatosis would fix the rabbit problem... We need a coordinated approach in every rural area to managing... the rabbit (and possum, rat, ferret, stoat, cat, goat and deer) populations from increasing... Otherwise our children and grandchildren will be facing the same issues and maybe even more virulent plagues.

...A[n anxious] magician took his star rabbit to the brink of the calicivirus killing fields... [to avoid cancelling] two sellout shows in Oamaru and risk youngsters' wrath... "The shows were planned months ago, we had to push on. I couldn't let down all these kids and you can't have a magic show without a rabbit,"... His seven-year-old star showed no signs of stage fright although it was involved in an uncanny disappearing act at the end of the performances. "We usually let people meet him after the show but we had to keep him backstage in quarantine,"... The magician did not have time to vaccinate his co-star before heading south... [The secretary]-treasurer of the N[Z] ring of the International Brotherhood of Magicians... said about 70 magicians nationwide used rabbits. "I can sympathise with South Island farmers but... I'd be devastated if the rabbit didn't come out of the hat – they are pets as well as workers." ...getting replacements could be a problem. "You have to train them, they have to be non-aggressive. They need a lot of handling and care." His rabbits... will be vaccinated this week. [□ So far, 'three pet rabbits have died in Dunedin.']

...AN 0800 number for ordering the [RCD] vaccine was mistakenly made public last week... [T]he company that distributes the vaccine, said it received an average of 30 calls a day from pet owners wanting the vaccine [during the] week. The phone number was set up exclusively for vets wanting to order it... "We won't run out of vaccine,"... said [the company's project manager, who] did not want his company identified, fearing... "untoward reaction... The problem was we didn't know how many pet rabbits there were in N[Z]. We took a guess and ordered 20,000 and we still have 5000 in stock." It is up to vets to set their own charges for the vaccine, which is produced by Auckland company Cyanamid (NZ) Ltd. [A] Auckland Veterinary Centre vet... said only three rabbit owners have had their pets vaccinated at his practice, which has 30 doses at a cost of \$18 each... [The] Shearing Shed manager... said the Waitomo-based tourist attraction would have to pay \$1500 to vaccinate nearly 300 German angora rabbits and a further \$2000 a year for booster shots... But the... [manager] could get enough vaccines to inoculate only 50 of her rabbits. "We had to do our breeding stock first, especially our bucks, because they can produce more rabbits." ...Formerly known as Rabbit World, the business shears the rabbits for tourists and then processes the fibre into yarn... Meanwhile, concern... that calicivirus poses a threat to humans and may spread to hares is drawing a mixed response from scientists, politicians and lobby groups... The case of a Mexican laboratory assistant who ate and even slept with infected rabbits and developed high antibodies was not cause for alarm, the chair[person] of the RCD application group... said last night... [because] the case was not a sign of infection. The environment group Friends of the Earth believes the case raises unresolved scientific questions. Both groups, however, have been unable to get more details of the case from the Mexican authorities. An epidemiologist at Lincoln University... believes the extent of the risk to human health is unknown and that the only human research – carried out in A[US –] was "weak, poorly designed and done under the pressure of time. It appears that after virus exposure the rate of RCD antibody production doubled as did the rate of reported illnesses, suggesting but not proving a human health risk,"... [A] public health medical senior adviser... said even if the disease appeared to pose a low risk to humans now, it could change as it spread and was likely to mutate... [C]alicivirus was present in commercial rabbit farms in China, England and across Europe, but health authorities were satisfied the virus posed no risk and rabbit meat continued to be consumed.

...The cabinet has postponed a managed release of calicivirus until next week... Ministers had insufficient information to decide on any firm action and called for three urgent reports for next Monday's cabinet meeting on how to handle management of the disease... M[AF] will report on the merits of a managed release; the Ministry of Research, Science and Technology will report on what research needs to be done to support management options; and... [DoC] will provide more information on predators' switching from rabbits to native animals. Parties interested in using the virus as a control tool... have been invited to Wellington tomorrow to discuss the matter with the Minister for Biosecurity[, who]... acknowledged it was no longer feasible to eradicate the virus from N[Z] and there was an urgent need to gather more information about[its] circulation... Information to date suggested... that only minor "rabbit-to-rabbit" spread had occurred... But the agriculture spokes[person] for Act... a former president of Federated Farmers... said any lengthy delays in spreading the disease could see a once-in-a-century opportunity slip away. "The short shelf-life of RCD... means that the window of opportunity to obtain a maximum kill will only exist this spring and summer,"...

The uncertain killing power of the illegally imported... [RCD] may force the Government's hand... at the cabinet meeting on Monday... to bring in a known virulent strain from A[US]... The Minister of Agriculture... told Parliament that the Government could not wait the three to six weeks needed to identify the illegal strain, let alone the six months to gauge its virulence. If the existing strain... had low killing power such delays would allow rabbit populations to build an immunity to the disease, creating the "worst of both worlds." ...After a parliamentary select committee briefing earlier yesterday, [MAF's] chief veterinary officer... said some South Island farmers spreading the disease might have inadvertently made it useless. [RCD] was a temperamental organism, capable of being inactivated by heat, refrigeration and dilution in water. Farmers might... not be applying high enough concentrations of the virus on baits to create lethal infections. Rabbits which did not get a fatal dose could build up immunity... A managed release of a known strain would allow better information on how it was behaving in N[Z] conditions. It would also allow... [DoC] to run its predator control programme in tandem with declines in rabbit numbers to prevent... [them] switching to endangered native species.

...The Crown Law Office said yesterday that it was illegal to spread... [RCD], an opinion which opposes legal advice released by... [MAF] last week. But the development has not dented... South Island... farmers' enthusiasm for spreading the illegally imported disease... [However, the PM]

has signalled Cabinet is tomorrow likely to approve full-scale introduction of... RCD... [Meanwhile, the Education] Minister... has been playing down reports Cabinet ran a sweepstake on how long it would take... [RCD] to be illegally released... [Act's leader said the minister] told him of the sweepstake's existence during a brief airport encounter last month... "[The minister]... had taken six weeks, and then we discussed whether or not [the minister had] won, but that was difficult to determine, because we don't know when it did come in. It indicates that despite the decision not to import the virus, the ministers did not think for a minute that would stop it..." [The minister's spokesperson said his] comments had been a joke...

M[AF] is still asking North Island farmers not to spread... [RCD] for another two weeks until the Government legalises it... Despite farmer reports that stocks of the virus... had been sent across Cook Strait, all... tests of dead rabbits on North Island farms have been negative... As expected, the cabinet yesterday approved the legalisation of [RCD]... Details have yet to be worked out but the responsibility for producing and spreading the disease will continue to rest with farmers... The Minister for Biosecurity... said there were compelling reasons to legalise the disease now it was clearly established in the South Island. Farmers had to be given clear advice how to handle the virus safely and effectively... [The minister also said that] his confidence in... [MAF's] legal advice had been "seriously shaken" after it initially overlooked the illegal spread clause in the Animals Act. From now on [the minister] would seek a second opinion on legal issues dealt with by the ministry. An... R[FBPS]... director... said the ruling... made N[Z] "look a bunch of buffoons when it comes to biosecurity." ...In the meantime, it is still technically illegal to spread the virus...

[MAF] has taken disciplinary action against legal officers who gave mistaken advice on the legality of spreading... [RCD]. The ministry's deputy director-general... said yesterday that the legal advisers had received a "strong message," but the matter would not be taken further... The Minister of Agriculture... acknowledged... the advice had helped because it allowed farmers to front up about the spread of the disease... [In another development, the] Minister of Conservation... said... more would be spent on protecting native birds from the consequences of [RCD] only if monitoring showed a serious problem. Predators... would be trapped at 15 sites where [RCD] was active, at a cost of \$572,000, and a further 39 sites... monitored... [A] farmer... who conducted an aerial survey of the... Mackenzie Basin... region yesterday... noted that hares, birds and sheep were all alive and well in areas littered with rabbit corpses. "It looks to be totally species-specific." ...[the farmer] accidentally injected his hand... while infecting healthy rabbits. But [it isn't] worried: "We've had the stuff over our hands and... cuts. I'm still healthy... Never felt better..."

...The Health Ministry is planning to test whether... [RCD] can infect people. The ministry will compare a completed study of blood donors in two rural areas to a study of people exposed to the ...virus in infected areas... The ministry is carrying out the study in conjunction with the Wellington School of Medicine... as... a precautionary measure only... Health officials... [are sticking] by their assurances to the public based on an A[US] study that revealed no evidence of risk to humans. But had [that] study been seasonally adjusted... says... [a] Christchurch epidemiologist... it would have shown an increase in illness symptoms, including gastro-enteritis, diarrhoea and hepatitis, for people exposed to the virus... • [MAF] has not disciplined its legal advisers for mistaken advice over the farmers' spread of the calicivirus, as reported in the N[Z] *Herald* yesterday.

...Friends of the Earth, other environmental groups, rabbit breeders and rabbit processors [are] considering legal action to challenge the proposed controlled spread of [RCD]. The public has until 5pm next Wednesday to comment on the Government's [proposal]... Meanwhile, the... National Centre for Disease Control... fears a massive reduction in rabbit numbers from a further release of the virus could lead to the spread of bovine tuberculosis through infected ferrets.

...While MPs and lobby groups thrash out the issue, a self-employed Wairarapa pest controller is advertising his services to spread... [RCD]. The pest controller would assess interested farms for \$35 an hour and spread the virus for \$50 an hour... "It's... what I do. My job is killing rabbits and possums... I want to make it clear I am not selling the virus, let alone giving it to people to lay themselves. The \$50 per hour covers my time, any incidental costs and the additives used with the virus, not the virus itself." ...[the pest controller] estimated it would take... four hours to lay the virus on a farm of average size. The... Wellington Regional [Council's]... biosecurity manager... was concerned about [the pest controller's] intentions. It was a bad time to spread the disease, as up to 90[% of doe] rabbits were now pregnant. Young rabbits would not die and might build up immunity.

...Regional councils face a potential legal minefield if they become involved in the release or spread of... [RCD]. Next week the Auckland Regional Council will consider dropping any involvement with [RCD] unless the Government indemnifies it against legal challenges. Environment Waikato... is understood to be considering a similar stance... If the virus were a contaminant under the Resource Management Act, individuals could challenge any farmer who released [it]... Agriculture officials would talk to the Ministry of the Environment about using [RCD under the RMA]...

Because of legal obstacles... Environment Waikato will take no part in any managed release of... [RCD, and will even] opt out of providing information to farmers wanting to spread... [it. The ARC] has... also... decided not to become involved... [Incidentally, RCD] monitoring has confirmed rabbit kills of 69[%] on some... Central Otago... properties where it has been used as a biocide and there[']ve been lower kill rates where it has spread naturally as a biological control... [- 'a meagre 20% at some sites.' I]n all cases [RCD's] spread... appeared to slow after about 40 days.

...[MAF] has... revealed that interim results from local diagnostic tests had not shown up any new viruses or bacteria from the South Island's so-called "kitchen whiz" [RCD brew. MAF's]... acting chief veterinary officer... said the result also ruled out the spreading of Q fever from... A[US]. The fever is caused by bacteria carried by ticks. It leads to infections of varying severity in farm animals, rabbits, rodents and other domestic animals, as well as sometimes-fatal lung infections in humans... [However,] the Association of Scientists... said no one would know what the interim results meant until... [MAF] produced the final results and showed how it got them... [In related news, local] health authorities are beginning an anxious watch for symptoms of a rare bird flu which has spread to at least four people in Hong Kong... A 54-year-old [guy] has died of pneumonia caused by the virus, which first struck in May with the death of a 3-year-old boy, and a 13-year-old girl is fighting for her life in hospital. The other known case is... a 2-year-old boy who recovered. Experts... rushed from the U[S] at the weekend to investigate... [the] human cases of the highly lethal A strain of H5N1 influenza, previously thought to strike only birds. Last night they were locked in emergency talks with Hong Kong officials on how to combat such an exotic new health threat... The experts, from the... Centre for Diseases Control in Atlanta, fear the possibility of a world pandemic before they have time to develop a new vaccine... The flu virus becomes lethal only when it changes its genetic composition enough to deceive human immune defences... An Auckland Healthcare disease surveillance specialist... said there was no evidence so far to suggest the flu had spread from one human to another "which is reassuring. But on the other hand if it is a totally new virus in humans there is a potential for it to cause widespread and quite severe disease, because no one has immunity to it." ...humans might catch the new strain by eating poultry or eggs.

...Chicken flu is but one of... the 150-odd diseases that jump... from animals to humans, with more being discovered each year... [A professor] from Hong Kong University – one of the authors of a W[HO] study examining the influenza triangle between birds, pigs and humans – has said pigs can catch viruses from humans and birds, and it is thought they act as "middle [agents]" in spreading the virus from bird to human. If a pig infected by a human virus then caught a bird virus, "both viruses could infect the same cell and the virus could rearrange itself genetically to infect humans"...

History is rich in examples of diseases which are passed on from animals... to people: bubonic plague, tuberculosis, brucellosis, salmonella... rabies... and the common-garden flu. They're lumped under the heading *zoonoses*... In N[Z] farmers catch leptospirosis from the urine of cows but, unlike the other examples, that disease is not spread from farmer to farmer. The influenza virus in Hong Kong has scientific experts worried... It is a... strain of flu... that is avian – found in birds... Such viruses are found in ducks, chickens and wild, migratory birds... They lack the right antigens, or immune locaters, needed to lock on to receptors in the human throat cells and find their way into our respiratory tracts, causing... sore throats, fevers, coughs and bronchitis... While officially harmless to humans, new strains of bird flu are deadly to birds. A month before a 3-year-

old boy died, a severe outbreak of flu among Hong Kong's New Territories killed 70[%] of the birds on three farms. Two months before that another outbreak decimated the chicken population in a rural part of Guangdong, the province bordering Hong Kong... The issue that has the experts worried centres on a tiny spike, visible only with an electron microscope, known as the "H" agglutinin. Each time the flu virus evolves into a killer it undergoes what the virologists call "antigenic shift,"... By evolving a new agglutinin, the influenza virus effectively buys time to mount an overwhelming attack before our immune defences can develop the right antibodies to neutralise the strain of flu. The virus that killed up to 40 million people during the 1918-19 pandemic had an H agglutinin virologists named H1. The next big killer, dubbed the Asian flu, which... killed millions in 1957, had changed its H agglutinin to what was labelled H2. In 1968, when the Hong Kong flu swept the world, causing schools, businesses and services to grind to a halt while the new strain laid everyone low, the virus was found to have an H3 agglutinin. Interestingly, there were far fewer deaths in 1968... [-] 46,500 people, including 45... in Hong Kong... [-] because another significant feature, the "N" antigen, was the same as the one found in the virus responsible for the 1957 pandemic. Although no one had exactly the right antibody to fight the virus in 1968, many people had antibodies close enough to give them a chance of surviving the virus. The[latest] bird flu virus... has a new "H" agglutinin, now identified as an H5... Every February world influenza experts meet... at the W[HO] head offices... in Geneva... and try to predict which virus will next wreak havoc. Once they agree on the most likely type, they set to work developing a vaccine so adequate supplies will be in place before the flu season begins. Even so, getting enough vaccine ready and distributing it around the world, let alone organising mass vaccination programmes, will be a mammoth task, especially given the speed with which influenza can now travel the world. An infectious diseases physician at Auckland Hospital... said that at this end of the world we could be lucky. Since summer is not the time that flu spreads, we can watch what happens in the Northern Hemisphere winter. But our isolation is not necessarily a protection. "The problem with predicting epidemics is that you can't, and certainly not new ones." And this particular virus has a component which is totally different from those which WHO experts routinely monitor.

...Ten hospital staff who treated Hong Kong's first confirmed victims of the deadly bird flu have developed symptoms, sparking fears the virus can be spread through the human population. Tests have not yet confirmed the presence of the virus among any of the staff... However, the Hong Kong Health Department has put out a bulletin... advising anyone with flu-like symptoms to have tests immediately... [T]he new virus is sensitive to the anti-viral drug Amantadine, but the drug has serious side-effects and it is feared the virus may develop resistance if Amantadine is overused. The four world laboratories designated to develop influenza vaccines... have been asked to start work this week on the new virus.

...Hong Kong braced itself for an epidemic of bird flu yesterday as an American expert predicted the disease would spread around the world. As three new cases were reported, medical authorities... opened a special isolation ward and provided more facilities for viral testing. They ordered restrictions on the importation of poultry from mainland China. They also ordered a massive cleanup of the biggest wholesale poultry market...

There were few buyers yesterday as Hong Kong's poultry markets reopened after a three-day cleanup... Wholesalers said business had fallen between 70 and 80[%] and prices had halved... The Hong Kong Government told the world last night... that... the territory was safe for tourists.

...Hong Kong farmers say they want 1.2 million chickens slaughtered in an effort to reduce public concern over the... "bird flu." Farmers said they have been unable to feed their chickens after prices plummeted when demand slumped. The plan to slaughter all chickens in the territory has been submitted to the Agriculture and Fisheries Department. Chicken farmers could face losses totalling \$HK30 million... if the plan goes ahead... But a department spokes[person] dismissed the plan as "unnecessary and unhelpful" because 90[%] of the chickens consumed in Hong Kong were from China. A 13-year-old... Chinese girl... died in hospital yesterday, the third victim of the virus.

...Thousands of Hong Kong families are boarding planes to all parts of the world, looking forward to spending their two-week Christmas break with relatives and friends. But they could unwittingly be bringing a Christmas present no one wants... Many of those who caught planes this weekend were coughing and sneezing, but few were cancelling plans to travel... Most assume their illnesses are just normal bugs always around at this time of year... As yet, it is not 100[%] certain the virus has changed enough to be able to transmit itself from human to human. What is known is that the first few cases were unrelated and most had clear evidence of contact with chickens... But the fifth case, that of[a] 5-year-old girl... has the experts worried. [The girl] attends the Lei Tung Lutheran Day Nursery at Ap Lei Chau, where inside, everything is bright, clean and festive. But out in the playground, overshadowed by 30-storey Government housing towers, the children pick their way among dumped feathers, raw meat, paper rubbish and even syringes. That rubbish, flung out of the tower block windows despite decades of public education to stop this Hong Kong habit, could ultimately be the catalyst for the virus spreading... A couple of days... [after the 5-year-old] was admitted to hospital... a 2-year-old boy and a 3-year-old girl – who both live in [the 5-year-old's] family's cramped Government flat came down with similar symptoms... What makes these three children so special is that this is the first time the illness has affected people in close contact with one another.

...A mass slaughtering of chickens will begin in Hong Kong today as part of efforts to contain the... "bird flu." ...chickens from... 100 markets and stalls throughout the territory would be killed and burned... The announcement followed the first convincing evidence that bird flu can pass from human to human... About 30 people... have... [now] been infected... with the... virus... [and 4] killed... Hospitals throughout Hong Kong have been besieged by thousands of people suffering sore throats or coughs... [Tomorrow, WHO] experts will check southern China for signs of the disease...

In markets and farms across the territory... [of] Hong Kong... yesterday... workers began killing 1.3 million chickens and unknown numbers of ducks, geese, quail and caged pigeons... but officials said they would also be counted to ensure their owners were properly compensated... Stalls at a market in the crowded Mongkok district were splashed with blood as vendors slit chickens' throats and hung them up to drain their blood before throwing them... into a bin. The bins were delivered to... Government health inspectors... who refused to touch the birds, getting the poultry sellers to load the bodies into garbage bags. These were then topped up with a few spadefuls of "bleaching powder"... The full bags were heaved into a dumpster, ready to be taken to... eight landfill sites... where the chickens will be buried along with a load of disinfectant... The operation drew loud howls of protest from vendors... [A]n international health expert warned that the cull [would] not guarantee an end to the lethal bird flu[, but other critics]... have attacked the Hong Kong Government, saying it was slow to order the poultry kill. "The first case was announced in August..." said... [one legislator. Some people] say the Government misled the public, citing... [the Health Director's] statement earlier this month that eating chicken was safe... N[Z] health authorities say it is too early to restrict travel to Hong Kong but they are working... with... A[USn authorities] on a contingency plan in case the... bird flu turns into an epidemic... This included heavy surveillance and the ability to quickly introduce quarantine strategies to combat transmission of the disease. [On a positive note, 'a harmless chicken virus is poised to save millions of human lives and help alleviate poverty worldwide. The chicken is the staple source of protein and income for hundreds of millions of villagers and urban poor – yet 80% of all birds die from Newcastle diseases. Now a joint AUSn-Malaysian research effort has developed an effective vaccine to protect chickens against NDs.'

...America's] largest poultry processor... has pleaded guilty to giving [a] former Agriculture Secretary... more than \$US12,000... in illegal gifts in 1993 and 1994 and agreed to pay \$US6 million in fines. [By the way, 'pity the 2 million vegetarians living in the US at Thanksgiving time.' While they contemplated consuming 'Tofurky, a seasoned stuffed roast made from tofu and wheat gluten, or "drummettes" – drumsticks made from tempeh, a fermented food made from cooked soybeans' – their meat-eating compatriots devoured about '50 million turkeys, or one sixth of all turkeys sold in the US each year.']

...A type of bacteria that may stricken and sometimes kill people who eat undercooked chicken or turkey is becoming more common... says the New York Times. Estimates put the number of[human] cases of the disease caused by the germ campylobacter... [– which infects 70 to 90%] of all chickens... [-] at... 8 million a year in the U[S] and deaths at 200 to 800... [The] use of antibiotics known as fluoroquinolones to treat the infection in chickens has created strains of drug-resistant campylobacter in humans. Scientists believe the public is more aware of salmonella than the more

widespread campylobacter because the latter is hard to pronounce and spell and there is no simple laboratory test to detect it. For both germs, the safety advice is the same: cook poultry thoroughly and wash anything that has come into contact with raw poultry or its juices... [In addition,] swear off “sunny side up” partially fried eggs because... the risk of becoming ill from salmonella in eggs had increased four-fold since 1980... “Eggs used to be safe but now they are the leading cause of food poisoning outbreaks in the country,” said... the Washington-based Centre for Science in the Public Interest... The group was petitioning the F[DA] to require a warning on egg cartons that would read: “Caution: Eggs may contain illness-causing bacteria. Do not eat raw. Cook eggs until the yolk is firm.” ...45 billion eggs are produced each year in the U[S] and while the consumer watchdog acknowledged only a small fraction are contaminated, they stressed that consumers have no way to tell which eggs may be tainted.

...A Chilean ecological group has sounded an alarm about “mutant” rats, more than 50cm long, that have attacked barnyard animals in a suburb of Santiago. The... Ecological Council of Maipu, believed the rodents had grown so large because they fed on droppings of hormone-fattened poultry... [Speaking of *Rattus norvegicus*, Britain] now has more rats than people, an estimated 60 million... Newly privatised water companies were not co-operating with local authorities in baiting sewers and the result was that the rat population had risen alarmingly... Complaints of rat infestation averaged 1421 for every local authority in the country last year... “If rats can chew through plastic sewer pipes, they can easily chew through plastic water supply pipes... it has the potential for spreading disease[.]”... said... the Robens Centre for Public and Environmental Health.

...The kiore or Maori rat has been suggested as a new dinner delicacy... The rat used to be the main source of protein but had since been replaced by domestic animals such as pigs, sheep and cattle... Maori were also made to feel ashamed for having valued and eaten an animal such as the kiore when Europeans looked upon the rat as vermin. The Crown, not knowing the importance of the kiore, was trying to eradicate it because of its perceived threat to other native plants and animals... [Incidentally, a farmer who is] the father of a friend of a friend... was out hunting rabbits when, just as [the farmer] pulled the trigger, something flew through his sights. It wasn’t a bird... but the family cat leaping a tall bush in a single bound to pounce on what [the cat] thought was prey. Unfortunately pussy wasn’t faster than a speeding bullet and copped it in the neck. “Oh well, shame to waste a loyal friend,” the farmer decided [and] knocked up a warm, if a tad unfashionable, hat out of the ex-tabby. Now the mystery is, why didn’t [the farmer] fully apply the waste-not-want-not principle? Why not eat the moggy? Nothing wrong with cat meat. Full of protein, no doubt tastes a little like chicken and in some parts it’s considered a delicacy. But for some reason, in the Western world people won’t go within hissing distance of hearty feline fare. And it’s not just cats. [‘In China a breed of dogs (Chow dogs) is specially fattened for the table’ (they may be lucky dogs – some Chinese people believe the best way to make ‘dog meat tasty is to hang a dog up and beat it to death’), and there are many other] species that never make the menus of even our most experimental restaurants yet are considered yummy in other parts of the world. It’s one of the great mysteries of anthropology. Why does every society – and they all do – have a list of taboo foods? It’s not as if the unpalatables are inedible. When it comes to dining preferences, one culture’s trash is often another’s treasure... There’s been no shortage of theories over the years for humankind’s finicky eating habits. One has it that food taboos develop in a culture for very practical reasons. Take cows in India... [C]ould it be that it’s not so much the cow that’s cherished but the cow pat? The locals use the animal’s dung for fuel and even as bricks for their homes. Only a fool would eat his building supplier. As it happens the cow-ban came into force around 200AD, just as there was a population explosion in the region... [A] US anthropologist found a variety of food taboos in just a small region of the... Amazonian... rain forest... [While other tribes] won’t touch the stuff... the... Parakana’s favourite tucker is tapir and tortoise meat, but don’t serve monkey or any large birds. It’s like offering cat or rat to a Westerner.

...A last-minute appeal from the humane society persuaded organisers near Peru’s southern coastal town of Canete to cancel a festival of cat cookery intended to celebrate a local saint’s day. Just as the highly advertised festival began... and[with] 50 plump cats ready for the grill, health authorities arrived... The tradition... goes back to the 18th century... “Because cats are supposed to have nine lives, some believe it will make them live longer.” One Canete inhabitant... explained to a local television station that stray cats are the best, “because they have more flavour.” - 1997

...Taiwan’s 1.5 million stray dogs... are either buried alive, drowned en masse or made into soup.

...Wild... dogs... birds, cats... and even rats are being tested for bird flu as Hong Kong’s chief executive admits there have been inadequacies in his Government’s handling of the crisis... Fears that the virus may be transmitted to other animals surfaced when dumped bags of chicken carcasses were torn open and the contents eaten by cats, dogs and rats... If the virus is found in cats and dogs – never popular with the Hong Kong Government which bans them from public housing – they may be the next on the mass extermination list... However... [thousands] of chickens escaped the mass slaughter ordered... last Sunday... Others, including 8000 on a farm in Tai Po... were spared when Agriculture and Fisheries Department officers ran out of gas and forgot to return to complete their grim task... [T]here are unconfirmed reports that one person in Guangdong... has died from the virus, while several other people are seriously ill... Ducks and geese have[also] been found to be infected...

Thousands of ducks at a farm in... China refused all food and drink after staff separated the[m from the drakes. The pinning ducks]... started eating and drinking as soon as they were reunited with the drakes the next day... Ducks and drakes do not normally live and play together, and are not normally known for their loyalty to each other... [In related news,] Alfred Hitchcock gave us *The Birds*. [Another director] gave us *The Swarm*. Now, Naples, New York, is giving us the flies. The upstate town is teeming with thousands of houseflies that hatched after damp weather combined with hundreds of tons of chicken manure spread on a 7ha farm as fertiliser. Officials have declared part of the town of 1200 people a public health hazard, and some residents have fled their homes. “It’s just a horror, a plague. It’s biblical,” [one] resident... told a local television station... [The f]armer... who spread the manure... was abiding by environmental regulations when... plough[ing] his fields... Now [the farmer]... is offering to pay for a private pest control company to treat the... infested homes[. But s]ome residents... say they are [still] considering legal action against [hi]m...

DNA tests have shown that at least one of three deaths in New York City originally blamed on St Louis encephalitis was caused by a closely related bird virus, West Nile Virus, previously unseen in the Western Hemisphere... The West Nile Virus and the St Louis encephalitis virus are transmitted through the bite of a mosquito that has become infected by feeding on an infected bird... New York City health officials [have begun] mosquito-control measures... [While on the topic of bird viruses, Britain’s *Daily Express* newspaper has reported] that... Hong Kong[’s]... bird flu virus... originated from migrating birds from Siberia, citing experts saying that some 60,000 birds made their annual migration to Hong Kong.

...pets entering Britain will have to wait another two years before they get their special “passport” which will put an end to the six-month quarantine for all immigrant pets. The... British Agriculture Minister... w[ill] announce to the House of Commons this week the relaxation of century-old laws designed to keep rabies out of the country. Critics of the legislation say it is obsolete, given the effectiveness of modern veterinary measures, including inoculations... While a six-month stay in quarantine... costs between £1500... and £2000, the new system... [– which initially will be restricted] to animals from rabies-free countries, mainly European... [–] does not promise to be cheap or hassle-free. An owner taking an animal into Britain or abroad for the holidays will have to have an electronic chip implanted under its skin and a “passport” to guarantee its identity and injection history. The cost in Britain would be £160 to begin with, plus £60 for annual rabies booster injections and a £20 “visa.” The animal would... have to be checked by a foreign vet 24 hours before re-entering Britain and declared free of ticks, fleas and other parasites... [Incidentally, chickens are celebrating] a decade as Britain’s favourite meat... According to the latest figures from the British Chicken Information Service, the value of chicken bought by households... reached £1.65 billion... last year, exceeding beef sales, and was more than pork and lamb combined.

...Britons, already concerned about diseased beef, added poultry to their dietary worries yesterday after a court heard how [people have] sold hundreds of tonnes of chicken deemed unfit for human consumption. A jury at Hull Crown Court found three defendants guilty of a multimillion-

pound scam to sell heavily disguised pet food to butchers, traders, restaurants and supermarkets across Britain between 1993 and 1996. Two others had pleaded guilty before the trial... Five other defendants were acquitted. The court heard how... [h]ealth inspectors found containers of smelly, badly bruised poultry covered in faecal matter, flies and feathers. Large quantities of salt – used to remove slime from the meat and freshen its appearance – were also discovered... 1000 tonnes of turkey and chicken were recovered... “This investigation was potentially only part of a much wider problem,”... said... [t]he officer who led the investigation... “As it proceeded officers became aware that similar scams were operating throughout the country.”

...A friend of mine grew a breast recently. Just one, but one is more than enough when you’re a heterosexual [guy. Red-faced, the friend] trundled the breast off to a doctor, who exclaimed, “What... have you been eating?” A catalogue of all the things [the friend had] for dinner quickly fingered the culprit... those size 18 or whatever fowls that are all the rage. The doctor pointed out that you can grow giant chickens only by genetically altering them with the... sex hormone estrogen, so my friend stopped eating them. As quickly as it had appeared, the unwanted mammary vanished. I have no interest in eating chickens, small or large, so I’m not directly involved in the breast-producing poultry scandal. But I have enough sense to know that the damned things shouldn’t be on the market without clear labels warning [guy] diners that they are likely to grow breasts... It is an unspeakable outrage that our employees in Parliament, acting as usual in gap-toothed ignorance of the facts, have failed to send... [the] Genetic Food Modification Protection Bill to a select committee and on its way to becoming law. The purpose of... [this] bill was modest enough. All [its sponsor] wants is to give consumers the right to know whether their food is part of the dubious experiments into genetically modifying the reproductive processes of the plants and animals we eat. [The sponsor would] like to stop the false labelling of such food. If you deliberately leave vital information out of your label on a food product, information which could affect a customer’s decision to buy the stuff or leave it on the shelf, you are certainly perpetuating a falsehood... [However, the sponsor also] wrote to the Commerce Commission, pointing out that misleading the public is a breach of the Fair Trading Act. The commission replied that in their view failure to label is not misleading – but they added that their view is subject to judicial review. So [the sponsor] is now in the process of raising money to finance an expensive request to the High Court for a declaratory judgment on the meaning and scope of the Fair Trading Act... ■ [Yesterday]... the story of Tegal loading fluffy little boy chicks into a shredder hit the headlines. The excuse was that it didn’t hurt a bit, and besides, everyone knows [boy] chicks are good for nothing.

...Staff at a chicken factory were ill-prepared for the job of destroying thousands of newly hatched chicks in a machine, investigators say... But the... M[AF] inquiry... also concluded that Tegal had done nothing illegal. The use of the... shredder... was not against any law governing animal welfare... Tegal’s North Island operations manager... said last night that killing would resume given the positive findings of the investigation... [After t]he factory in New Plymouth had recently changed from a broiler chicken operation to a hatchery as part of a reorganisation of Tegal operations[... a]... staff member made an anonymous complaint about the “maceration” machine but other staff were also concerned... Staff were also worried about the arrival of a bigger... “instant fragmentation” machine over the next few days... The Tegal employees had been used to killing chicks which were “not viable” or sick, but the hatchery operation meant thousands more day-old [boy] chicks would have to be destroyed because they would not be needed for egg laying... The... Wellington SPCA animal welfare manager... said slaughter of [boy] chicks by “maceration” was highly efficient, but that was probably not what was making N[Z]ers squirm. “The industry calls them ‘hatchery waste’ – that typifies factory farming in N[Z]. In some ways you could say the [boy] chicks are the lucky ones – they don’t end up in a battery cage... But the question is whether it’s ethical to slaughter 2.5 million chicks per year. From a wider point of view, I don’t think it should be accepted.” ...“N[Z]ers intuitively know we shouldn’t be killing animals for anything other than vital needs,” said... [a] Save Animals from Exploitation spokes[person]n...

For N[Z]’s 2.2 million battery hens... crammed inside a tiny wire-floored cage... continually pecked by frustrated cage mates... denied... sunlight... and fresh air[, and fed a diet of]... mash... it’s a living hell. Help stop the madness. Pledge your support by calling... SAFE... toll free 0800 SAVE US.

...Egg McMuffins are off the menu for N[Z] animal-welfare lobbyists, who have joined an international campaign to improve conditions for the chickens that supply McDonald’s restaurants. The fast-food giant told all its U[S] egg suppliers this week to smarten up their act by providing bigger cages and to stop “debeaking” birds... Now N[Z] animal-welfare campaigners are urging the local McDonald’s to follow the American lead... [However, the c]ommunications director for McDonald’s N[Z]... said a U[S] expert had recently audited animal treatment in this country. “The review findings showed the McDonald’s (NZ) egg supplier visited had some of the highest standards witnessed internationally...” Another McDonald’s spokes[person]n said N[Z] laying hens were not “debeaked” as they were in the U[S], while the... executive director of the Egg Producers Federation of N[Z] said chickens in this country were “not stocked to the same density” as those in the U[S]. Beaks were trimmed, but not cut off completely as they were overseas. These arguments do not wash with local animal welfare groups... [A spokesperson for SAFE] said it was ridiculous to claim that battery hens here were treated any better than those overseas. “The cages used in N[Z] are the size of a piece of A4 paper – you can’t get much smaller than that.” ...350,000 N[Z]ers had signed a petition calling for battery hen farming to stop.

...Giving vent to a personal prejudice, I put it to... the writer and presenter of... *The Life of Birds*, the 10-part series which starts on TV One on Saturday and the reason for this... interview... that birds don’t have very big brains. It almost seems to ruffle his feathers. “You hang about... they’ve got extraordinary good brains.” And [the presenter’s] off, explaining... with typical vigour and clarity just how clever our feathered friends can be. A human being couldn’t, as soon as it walked, find its way across a couple of seas and a desert to... exactly the same place where its parents are... That’s what a cuckoo can do. Then there are the crows... They carry walnuts to... traffic lights and place them in front of cars to be cracked... In biological terms, [birds are] more successful than [us]... “They live in places where we can’t live; they are much the most widely dispersed of any kind of creature.” They beat insects hands down... because insects[– which ‘have come to exist in far more forms than are found in any other animal group’ –] can’t live on the sea... As the maker of acclaimed wildlife... series, including *Life on Earth* and its successors, *The Living Planet*, *The Trials of Life* and *The Private Life of Plants*, [the presenter] has had plenty of opportunity to grapple with such issues... His resolute defence of bewinged creatures finally falters, if only slightly, on the topic of pigeons. “I can’t pretend that I’m in love with pigeons... At least I can’t say that they’re stupid... well, no, they’re pretty stupid.” [The presenter] laughs heartily at this admission, but can’t help repeating the point that pigeons are efficient organisms. It’s egocentric to try to judge them by human standards, [the presenter] says. Excessive reference to the human perspective – verging into syrupy anthropomorphism – is, of course, a common failing of [TV] programmes about animals. A wondrous range of emotions is attributed to various cute little bundles of fur or feathers... [However, his] work with the BBC Natural History Unit has set standards by which other wildlife programmes are judged... Much of the first episode of *The Life of Birds* is concerned with the unique bird life of N[Z]... *To Fly or Not to Fly*... looks at the evolution of birds from dinosaurs and how isolated islands... allowed flightless species including the kiwi and kakapo to survive.

...An Oxford University scientist’s efforts to extract DNA from a dodo have annoyed former colleagues in N[Z]... A team of British researchers, led by [the] former Wellington scientist... have raised the prospect that the bird whose name is synonymous with extinction can be resurrected. [The team] plans to recover fragments of genetic material from the dodo’s preserved head and foot kept at the Museum of Natural History. But last year, while in N[Z], the scientist[] described work by Otago University researchers on moa DNA as “*Jurassic Park*-style fantasy.” ...[the scientist, who] has started to rebuild the dodo’s family tree by testing the DNA of African and Indian pigeons to which it is thought to be related... laughed off hopes of creating a genetically engineered “mostrich” – a... transgenic... cross between the moa and the ostrich[– then]... also dismissed attempts by the Otago team and Japanese colleagues to inject DNA from an old giant moa femur into chicken embryos... “We reckon [the scientist] was hacked off

at us treading on his toes as [it] sees himself as the authority on moa.” ...The Otago researchers stopped [their] project because they ran out of funds. [By the way, ‘several theories of the association of moa and humans have been put forward. Some people believed the moas were dominated by a race of people whom they called the “Moa-hunters” and who long preceded the Maori. They hunted the moa for food and used its bones to make tools and ornaments. Moa eggshells were placed in ceremonial burials. These people were apparently peaceful, for no weapons belonging to them have yet been found. Most sites of the moa-hunter period so far discovered are situated along the South Island’s east coast, usually near a river mouth. With the virtual extinction of the moa c.1500AD, the camps were abandoned, the occupants apparently turning to a fishing economy. This period, provisionally termed “Intermediate”, is complex and little understood. In some localities moa-hunter artefacts occur with moa bones; in others the artefacts are of moa-hunter type, but moa bones are absent, or there is a distinct break between typical moa-hunter and Classic Maori occupations. The Classic Maori culture was that encountered by the early explorers. Nowadays, all these types (moa hunter, “Intermediate”, and Classic Maori) are considered to belong to the one people’.

...a *Jurassic Park*]-style Moa Park might be a possibility in the future but with today’s technology it would take several hundred thousand years to get all the necessary genetic information together... [W]e have computer animation to create a life-like simulation of the huge bird which once roamed the land... But when it comes down to the nitty-gritty, there’s only the bones, eggs and a few Maori rock drawings to go on. Zoologists and palaeontologists say there were 11 species of moa, ranging in size from the 3m-long *Dinornis* to tiddlers not much bigger than turkeys. The popular image of Maori herding hundreds of moa to mass slaughter is not true, the experts say. Sites such as the Wairau Bar, where hundreds of skeletons have been found, were natural traps where individual birds perished over hundreds of years... Maori mythology is strangely silent about the moa, suggesting the name was a latter-day invention. The lack of references also implies the “marvellous source of protein” was reduced to drumsticks in a short space of time... [Moa]s were probably easy meat and homo sapiens likes nothing better. The bones of dead birds do tell tales... and so do suggestible humans once their creative juices start flowing. Sightings of the monster bird began soon after[a] British scientist... put all dem bones together in one skeleton in the 1830s... *The Mighty Moa* (TV One, 8.30 pm)... examines all those tall tales and the ones sworn to be true from those who claim to have experienced an avian visitation... A [couple have described seeing a]... large feathered creature... at water’s edge [while fishing] in a Fiordland sound... [and] a pioneer, spotted her bird in 1884. A descendant of the no-nonsense Scot... is inclined to believe her... [H]owever... a... group of young Maori scholars were early moa pranksters, mocking up a photo of Maori hunters aiming... spears at a suspiciously unruffled model.

...police on the hunt for 12 escaped emus thought they were on a Jurassic Park mission... [T]he emus escaped on Thursday night while being transported from Moutere... to be killed. With the help of [an] emu farmer... police rounded up most of the emus. A further three were found yesterday but two others died, believed to have been hit by vehicles. [One c]onstable... was relieved to finish the job unscathed. “Emus can be vicious if they are not handled right,”... [Speaking of AUSn wildlife, s]cientists believe they can use cloning to bring back the legendary Tasmanian tiger, thought extinct for more than 60 years. [The AUS]n Museum director... says a live clone could be created from DNA taken from a preserved baby tiger found in a basement storage room in the museum. The 133-year-old specimen was... preserved in alcohol rather than formalin, which would have destroyed the DNA for cloning purposes. The tiger was driven to extinction by hunters who considered the animal a threat to livestock.

...JURASSIC PARK could yet come alive in A[US] with plans to use cloning to revive an extinct wolf... [The AUS]n Museum director... said... his... plan was reinforced yesterday when six other baby Tasmanian Tigers, also known as the thylacine, were revealed in other museums. The cubs’ discovery ensures a greater gene pool and boosts the animal’s chances of future survival... The last known Tasmanian Tiger was captured in 1933 and died in a zoo in the Tasmanian capital of Hobart in 1936... [Incidentally, an AUS]n company is the first in the world to determine the sex of camels before they are born. And with [gal camel]s fetching up to \$A5 million... each in the camel-racing mad Middle East, the new technique could reap millions of dollars in export earnings, Queensland[’s] Primary Industries Minister... said yesterday.

...[‘abandoned over a century ago in an alien land, the outback camels not only survived but prospered: 60,000 or more now roam AUS’s deserts – the last big herds of wild camels on earth.’ In related news,] a vet from Britain, took... the cama for a photo opportunity to celebrate his first birthday this week. [The cama], who is part camel and part llama – was bred by scientists trying to recreate the animal that evolved separately into the North African camel and the South American llama when continents shifted 30 million years ago. [● ‘A species is defined, basically, as a group of animals that cannot breed with another group, but in all definitions there are exceptions. The most familiar exception is represented by the mule (the offspring of a mare horse and a stallion ass) and the much rarer hinney (the offspring of a mare ass and a stallion horse). Both are sterile and cannot themselves breed. Mules have been used as beasts of burden since ancient Greek times, being extremely sturdy animals and, unlike a horse, able to recover quickly from being worked to the limits of their endurance. Their tougher hide makes them less liable to suffer from saddle-sores and chafing, while they are relatively insensitive to disease. Their ability to live on coarse herbage and very little water, rivals, if not exceeds, that of the camel. The milk of an ass contains more sugars and less cheesy matter than cows’ milk and is reputed to be particularly good for tuberculosis. *The now extinct North African race of ass, Equus asinus asinus, probably gave rise to the donkey, referred to today as the domesticated ass. Zebras and wild horses also belong to the genus Equus.*’]

...Singapore has barred the entry of horses as well as live pigs from Malaysia out of fear of a... deadly virus... which could be related to the Hendra virus that killed two people and 16 horses in A[US] in 1994. The horse ban has stranded some racehorses that... were set to go to Singapore as part of the regular Malaysian racing circuit.

...[a] Singapore slaughterhouse worker died yesterday... amid fears that a deadly pig-borne virus had spread from Malaysia... Malaysia’s Health Ministry said it would mobilise the... Army to kill 64,000 pigs in Negeri Sembilan to check the spread of the virus, which first broke out in Perak.

...Malaysian troops have stepped up a cull of 300,000 pigs to stop the spread of a virus that has killed more than 50 people and prompted an Opposition leader to call for the Health Minister to resign... All the victims have lived on or near pig farms... The operation was mounted in response to an outbreak of Japanese encephalitis, which is latent in infected pigs and spread to [humans] by mosquitoes. All the soldiers involved in the cull are non-Muslims as pigs are considered unclean in Islam... Authorities had planned to shoot about 35,000 pigs a day over 10 days, but only 1200... were killed on Saturday largely because of a lack of mechanical diggers needed to bury the carcasses. Residents of three villages have been evacuated and the area cordoned off to prevent people being hit by stray bullets... [but authorities are] expected to use carbon monoxide to help kill the... remaining... pigs en masse... There were an estimated two million pigs in the country before the outbreak... [In local news, the MAF] has halted imports of foods containing significant amounts of animal products from Belgium, France and the Netherlands. Last week it was discovered that some Belgian farmers had used animal feed containing... dioxin. Belgian imports have been banned worldwide... The dioxin is thought to have spread to animal feed through contaminated fat from a Belgian fat and oil processing company... [A spokesperson for NZ’s] Ministry of Health, said... pork, poultry, dairy, egg and beef... products... from the countries affected... would be detained until the importer could provide assurances that the goods had not originated from the contaminated animals... M[AF] said dioxin occurred naturally and its elimination was impossible.

...Imported food is not routinely tested for dioxin and chemical contaminants because the Health Ministry puts the onus on the country of origin and importers... The ministry said that while it had ultimate responsibility for testing food the job of testing was too big... Yesterday supermarkets were still being cleared of foods possibly polluted with dioxin after 1400 Belgian farms were found to have used contaminated animal feed.

...Belgium has accused the world of overreacting to its dioxin-in-food scandal as it prepares to lift restrictions on most of the foods it had pulled off the shelves. But the E[U]... retained its ban on all products made with Belgian poultry, eggs, pork and beef. Many other countries maintained wholesale bans on such products from across the EU. EU Health Ministers spoke of their “grave concern about the loss of trust among citizens,” squarely blaming Belgium, said... the German Health Minister. Belgium[’s] Health Minister... defended his country’s handling of the crisis... “This could happen anywhere in Europe. Maybe this has happened already... but we didn’t see the peaks we had in Belgium,”... The Belgian Government

reportedly knew of the dioxin contamination a month before informing the EU two weeks ago... The Belgian food industry association said the crisis had cost the country \$US500 million... and consumer confidence in Belgian products has been harmed across the globe.

...The humble Kiwi meat pie is under threat from A[US]n bureaucrats. The Canberra-based A[US-NZ] Food Authority says food standards for pies are too old and restrictive and it wants to scrap rules about how much meat must go into a pie... [Local] pie-makers... who sold about 20 million pies last year... say relaxing the rules will allow inferior A[US]n pies to flood into the country[, which will] damage sales and consumer confidence... [The c]onsumer advocate... is[also] appalled. “Any honest N[Z]er who buys a meat pie expects to get a pie with a decent amount of meat in it – not a load of other, cheaper ingredients. The existing regulations ensure people get what they are paying for and now they want to remove them.” ...“Our industry is furious,” said... [the] director of Ponsonby Pies. “...Last year the A[US]ns granted us an export permit but said we can’t have more than 5[%] meat in our meat pies. As we have a minimum of 95[%] quality meat in our pies, we couldn’t comply.” ...The planned pie revamp would include abolishing the minimum-meat content – 25[% in AUS and 70% in NZ] – and allow previously banned types of offal such as... the brain, liver, spleen, pancreas, tongue... tripe... pig’s cheek and snout to... pose as meat... An authority spokes[perso]n... said pie manufacturers would still have to use some meat in their pies so as to call their products meat pies. If they did not they risked breaching fair trading laws.

...Remember when the *Beverly Hillbillies* first appeared on TV? I recall being fascinated by their favourite food – hog jowls. I didn’t know what hog jowls were, but they sounded disgusting. That was in the 1960s when crusty meat pies cost... about 12c. (I just thought you would like to know that.) Today, thanks to the A[US]ns, I know what hog jowls are, and they actually are disgusting. And crusty meat pies cost around \$1.80... Pies are an icon, an institution, an integral part of Kiwi life. I don’t know when our meat pie was born, but it was probably long before I was. I recall being shocked as a youngster when I heard from visiting Canadians that they didn’t have crusty meat pies in their country. How could a nation be so backward? The extraordinary thing about our pies is how little they have altered, within my memory anyway. In fact, they are one of the few products that have remained unchanged over at least half a century... However, this glorious [icon] is in terrible danger of being destroyed by the A[US]ns. Some Canberra hillbillies... have the gall to assert that our pies have too much meat in them, and they want us to discard our rules on minimum-meat content. Not only that, they want us to allow... cheap A[US]n pies of dubious content[to] flood the NZ market... So when the... foreign pies... [arrive,] don’t be fooled by the statement “Contains selected pig cheek meats” – that’s just a load of old hog jowls.

...A... Hastings dairy owner, is angry and has hired a lawyer because five members of his... Muslim... family were exposed to bacon... found... in a vegetarian pizza from Pizza Haven... [The dairy owner] said Muslims were not allowed within 40m of pigs or pork products and the family were horrified when his mother bit into a piece of bacon under some cheese in her slice. Yesterday, the Pizza Haven national operations manager... apologised to [the dairy owner] and offered him free pizza, but the devout Muslim... [– who] was unable to go to a mosque for the next 40 days, until the bacon had left his body... [–] wanted to be reimbursed for the family’s trip to Saudi Arabia next April when they will spend 40 days being cleansed. “That is the only place we can go to ask forgiveness. I have committed a big sin... I would rather die than eat a pig.”

...[the 16-year-old] is prepared to hunt animals and fish – if it were a matter of survival... [However, at the age of] 13... her diet... altered drastically. [The teen] stopped eating meat, eggs and dairy products, discarded leather shoes and became a vegan... [H]er friends are all vegetarians too. They have formed their views influenced by the lyrics of punk music and an anarchist bookshop, where [the 16-year-old] works as a volunteer. [It] loves cooking vegan food, supplementing her main diet of lentils and pulses with vitamins and occasionally taking iron tablets to battle anaemia. [The 16-year-old] and her flatmate spend... \$60 a week on food. Her flatmate will not eat honey, but [the 16-year-old] has not yet found a reason to go so far. “I think that’s kind of extreme... but then I haven’t educated myself about it. If I saw someone treating bees cruelly...” Some vegetarians carry their protests even further. They won’t wear wool or silk, for instance[, and ‘fruitarians live exclusively on fruit and vegetables (believing humans should feed only on that which can be eaten in the natural state in which it grows’). The 16-year-old] wears wool because... it would be cruel not to shear the sheep here... Her brother... who is 21, shares many of her views... [b]ut... is not quite so strict with his diet... occasionally eat[ing] free-range eggs and sometimes fish – [‘it’s okay to eat fish ‘cause they don’t have any feelings’ – though the brother] strongly opposes the fishing industry. “...if I’m hungry at the time... fish... [is] an easy option.” ...[their] strong political views do shock some people. But they enjoy quiet support from their parents... [who] have become largely vegetarian, too, though [dad] occasionally indulges in... steak at the pub and [mum] still likes cheese and milk with her tea. “These kids are politically pure, if you know what I mean,” says [mum]. “And I actually agree with all the things they... say... I like the way they want to change the world. They see it as a crusade.”[So did Mahatma Gandhi, who wrote: ‘I do feel that spiritual progress does demand that we should cease to kill our fellow creatures for the satisfaction of our bodily wants.’] For many other vegetarians, their eating habits simply evolve from a strong sympathy for animals. [One] turned her back on meat 21 years ago, at the age of 12. [Her family] had pet bantams... It didn’t seem right to eat their relatives... red meat... [was] soon banned... too. “I equated the meat... with the dead animal. I didn’t like the idea of animals being killed.” Her fervour grew... [to avoiding] anything made from animal gelatin, marshmallow and jellybeans included... Leather shoes were forbidden although [the 33-year-old has] had to relent because even though “they don’t kill vinyls for shoes” it was hard to find decent ones for fashionable adults... [Her] protective feelings for animals extend down the chain to insects: [the 33-year-old] has only once killed a mosquito... [H]er vegetarian partner... [does] any killing that may be required... “Obviously I do care for people... But animals don’t have a voice as such and... are my passion.”

...[‘Batgirl – the flying mammal impersonator – is involved in many animal rights organisations, and has five dogs in a house where “everything’s vegan and animal-free.” Before *Batman and Robin*, her biggest role was the lead in the comedy *Clueless*’.

...a steer] has been slaughtered at a Catholic school in Brea, California – to teach children that meat doesn’t come from a supermarket.

...VEGETARIANS with a craving for the forbidden taste of meat are indebted to [a] Brisbane ex-butcher... [– who] turned vegetarian in 1985 while still a butcher, but realising the potential of a meat-like substitute, worked on soy alternatives... [T]ruckloads of soy beans have been sacrificed in the making of his Longa Life range of Not Chicken Breast, Not Pepperoni... and... Vege Hot Dogs... The soy bean’s disguise as meat is pretty convincing... [T]he Not Chicken’s poulet impersonation in a Thai curry is scary... Longa Life also caters for vegans, so some products are dairy-free. Others have been made for Chinese Buddhists who also refrain from eating onions and garlic. And some vegetarians with a sweet tooth who shun lollies because of the use of animal-based gelatine will find gelatin-free eatings[(e.g., cornflour starch jellybeans)] at health food shops... The Sanitarium Health Food Company now owns Longa Life. [Its nutrition] manager... says the range is a healthy alternative to meat for many, including those warned by doctors to eat fewer saturated fats because of high cholesterol levels. [Editor’s note: ‘Carnivores have claws, no skin pores (they perspire through their tongue), sharp front teeth for tearing but not flat molar teeth for grinding, strong hydrochloric acid in their stomach and an intestinal tract three times their body length (so rapidly decaying meat can pass out quickly); herbivores and humans have no claws, perspire through skin pores, no sharp front teeth, stomach acid twenty times less strong than a meat-eater and an intestinal tract ten to twelve times their body length.’

...after surgery a NZer] was left with just 30cm of intestines – compared to a normal 720cm... Stretched end to end, [a human’s] entire digestive tract measures... over nine metres... Food stays in the stomach for two to four hours before passing through to the small intestine, which takes between one and four hours. It then takes at least a further 10 hours to pass through the large intestine. However, when you have a stomach bug, toxins cause extra fluid to be produced from cells lining the stomach and small bowel. This rapidly speeds the transit of food... The intestines are essential for breaking down food – which otherwise becomes toxic and poisons the body.

...ARE vegetarians healthier, or sicklier than the rest of us? The debate has raged for years. Some say they are less likely to get cancer and heart disease. Others say they are more likely to be pale and anaemic. [A spokesperson for] the Nutrition Foundation... believes that human beings were not designed to be vegetarians. But never mind. A “serious” vegetarian can be perfectly healthy, if the nutrients they reject in meat are picked up elsewhere... “The people who take vegetarianism seriously and learn about it will manage fine... Of course it’s much easier to eat animal food. But then N[Z]ers eat too much animal food anyway.”

...red and white clover – once a mealtime favourite of [the farmer’s] scourge, the rabbits – have taken hold... on the slopes of the Pisa range on the outskirts of Cromwell... [Striding] over familiar territory... that... [once] was pockmarked and barren... there is a spring in his step, as [the farmer] scrunches the vegetation underfoot... “Last year it wasn’t worth putting stock here, but now I’ll be able to move some lambs in.” This sustained growth among the parched brown ridges of craggy schist is enough to convince [the farmer that it was the right decision] to let loose “rabbit juice”...

Immunity to [RCD among rabbits is worrying South Island regional councils]... In the Mackenzie Basin, where the virus had been used as a biocide, 90[%] of the rabbits had been wiped out, but... half... of the... remaining[rabbits] were immune... Tests at one North Canterbury biocide site showed 73[%] of the surviving population was immune... with up to 90[%] immunity recorded in some... Otago... populations.

...Bids to control the persistent threat of renewed rabbit plagues with ...R[C]D... may have been doomed even before they started. Scientists now believe a non-virulent form of the disease may have already been in N[Z and AUS] when the lethal plague leaped the fence at a high-security laboratory in South A[US] in 1995, and in 1997 was illegally introduced to N[Z] by South Island farmers... [In related news, a] mite which kills honey bees has been found on a South Auckland property. Hives on three other properties have also shown signs of being infected with the mite varroa jacobsoni. A full-scale survey to determine how far the mite has spread will begin today.

...MAF... officials have quarantined... beehives... from Wellsford to Hamilton... to check for an invasive bee mite... The mite’s discovery threatens a \$1.8 million industry supplying mite-free bees to the northern hemisphere. All live bee shipments were immediately halted... “The mite, which is about a centimetre long, eats parts of the larvae, leaving bees without wings or mutilated in some other way. They... can’t fly and the hive is left with troublesome and useless bees... [T]he possibility of it spreading to the wild colonies is the real concern,”... says... a Waitakere beekeeper...

The cost of the hunt for the bee-killing Varroa mite will top \$250,000 today, as... 15 search teams... widen their quest for the pest... On Saturday, the M[AF] declared the entire North Island a controlled area, prohibiting any movement of bees, hives and beekeeping equipment for at least two weeks... So far 21 apiaries have been confirmed with the mite... Nearly 200 apiaries containing close to 2000 hives had been inspected.

...The nation’s beekeepers are finally getting recognition for their substantial business activities and the vital pollinator role of their bees, valued at billions of dollars, which underpins the rest of the agricultural sector. They are hating every minute of it. That’s because it has taken the invasion of the bee-killing Varroa mite to highlight this essential component of the rural landscape... Bee imports have been banned for about 50 years to reduce the risk of diseases and pests contaminating N[Z]... The industry’s major players number only around 200 but its ranks are swelled to 5000 by part-timers and hobbyists. It has fought hard to eliminate its biggest problem, American foul brood disease... Beekeepers were the first group to painstakingly create and run their own pest-management strategy under the new Biosecurity Act and the natural methods employed have attracted admiration worldwide. It seems especially unkind that an industry which has worked so hard on biosecurity should be let down by systems it has supported. And, inevitably, the blame for the mite invasion has been laid at the doors of the M[AF]... Only last year, Parliament’s primary production select committee noted that the ministry had been restructured seven times in the past decade and that more was ahead. The committee questioned “whether the public is best served by the energy and effort that has gone into restructuring rather than the provision of services.” The Varroa mite is likely to have been around for five years before its detection last week. There are fears it will not be the only economically significant pest or disease which has gone unnoticed while the ministry’s desks and chairs were being rearranged.

...A... blitz is being planned on the deadly bee mite. The [MAF] will tomorrow ask cabinet for another \$1.35 million to combat the varroa jacobsoni... But some experts say it will be impossible to eradicate the mite... So far 85 sites have been confirmed as infected with the mites.

...Genetic engineering could solve the... bee-mite crisis, says a leading beekeeper... [M]ites overseas are building up resistance to chemical control and attempts to eradicate them have failed... A gene from mite-resistant Asian bees could be introduced, which would allow bees to... survive the mites... Honey production collapsed in Mexico five years ago after a mite infestation, and N[Z] faced the same experience... [A] Kaitoke beekeeper... said the [MAF] had handled the bee-mite crisis badly. Infected hives had not been destroyed because beekeepers wanted compensation. “It’s hugely irresponsible leaving these hives... More than irresponsible, it’s stupid.” Eradication was a realistic option for N[Z], an island country. Compensation for lost hives could be discussed later... MAF has now inspected 29,334 hives... and found infestation on 162 properties...

Beekeepers fearing for their livelihoods as the hunt for the invading Varroa mite enters its fourth week have called on the Government to say how it will compensate them. Yesterday, [a] live bee exporter... near Rotorua, killed 10 million bees worth \$100,000 by gassing them. [The exporter fears his company]... Arataki Honey... will get no compensation for that loss, or for the \$500,000 in business lost since the trade was halted... [A MAF spokesperson said the exporter] could apply for compensation under the Biosecurity Act. But [the spokesperson pointed out that the exporter] had chosen to destroy his bees so that the place where [his company] packaged them could be taken off the list of infected premises, allowing exports to Canada. Meanwhile, Manawatu beekeepers say MAF has created a disease risk by allowing the re-use of anti-mite pesticide strips in their hives.

...Beekeepers have good reason to suspect they have been stung by the Government decision to spend \$40 million managing the Varroa mite, rather than spending \$50 million to attempt to eradicate it. They rightly wonder what sort of management it is that comes with an admission that it will only slow the spread of the bee-killing pest nationwide, keeping it out of the supposedly mite-free South Island “for as long as possible.”

...At least two big suppliers of bees for kiwifruit pollination will not be sending hives to the Bay of Plenty this spring for fear their... mite-free apiaries will become infected. The pullout... raises concerns that the \$600 million kiwifruit crop will not be adequately pollinated... About 80,000 hives are used to pollinate kiwifruit, of which 60[%]... are used in the B[OP]. It is estimated that 16,000 hives are based in the bay, suggesting that 32,000 are needed from outside the area... [K]iwifruit marketer Zespri Group, said there was no detail on how many beehives were available...

The... varroa mite... first found in South Auckland... is now believed to have killed off all wild bee colonies across the city. The same devastation... is expected to occur in the Waikato and B[OP]... In up to six years it could wipe out all wild colonies in the North Island... said... a member of the HortResearch apiculture team... Home gardeners keen to get vegetable crops or fruit trees pollinated would have to rely on bumblebees, flies or wasps, or get hives from beekeepers... Higher costs of managing hives is expected to force many of the country’s 4000 hobbyist beekeepers to give up their pastime... Controlling varroa now costs... [the equivalent of] \$14... for every one of the estimated 300,000 hives nationwide.

...The Agriculture Ministry’s economic impact assessment has estimated the cost to the country if [varroa] spreads throughout N[Z] could be \$900 million. A varroa control line, which stretched from Taranaki across to Gisborne, w[hich w]as put in place to check its southward spread to bee populations... has... been breached. Seven hives in Uriti, 34km northeast of Waitara, have been confirmed with infections of the bee parasite.

...Bees evoke romantic images of flowers and humming orchard hives presided over by veiled eccentrics steeped in arcane lore. What a pity the reality is so different. People and honeybees have a long history together. They pollinate our crops, their ecology is essential to the whole flowering world, and they provide us with honey and wax. But what do they get out of it? A life-sucking parasite... *Varroa jacobsonii*. The spread of the mite in honeybee hives around the world is a consequence of globalisation, free trade and the commodification of nature. Britain has about 35,000 beekeepers. Most are hobbyists, but together they keep up to 200,000 colonies, each containing between 5000 and 80,000 bees. Each colony can

produce up to 50kg of honey. Those beekeepers who have not yet got Varroa in their colonies soon will have. Its spread is inexorable. Varroa came from east Asia, where it is a parasite on the Asiatic honeybee. This bee co-evolved with the mite. When Asian countries switched their honey industry from their native, mite-resistant *Apis cerana* to the more productive but more vulnerable European honeybee *Apis mellifera*, Varroa also switched. Thanks to the international trade in bees, Varroa spread throughout *Apis mellifera*-dominated beekeeping, arriving in Britain in 1992. Since then it has spread through apiaries and feral colonies throughout England and Wales and is now heading north into Scotland. British honeybees are generally a mixture of types bred from bees brought in from around the world. Most are “Italian” bees introduced during the 19th century. Many are now imported from NZ (ironically, NZ’s ‘first bee hives were imported from England in 1839’), where Varroa has just struck.

...The British cannot wait to welcome our bumblebees while the A[US]ns are desperate to keep them out. The short-haired bumblebee, *Bombus subterraneus* [which was introduced to NZ]... more than 100 years ago for pollinating red clover... may be reintroduced to Britain, where it has been declared officially extinct... [T]he last sighting was in Kent in the early 1980s. A 95[%] decline in Britain’s meadows and pastures since 1945 was blamed for wiping the species out there... But the A[US]ns have declared war on another... species, *Bombus terrestris*... the most common and widespread... [of] the four species now found here... It was introduced [to AUS from NZ] seven years ago, and is now threatening native insects and plants in Tasmania... [The species appears] to be taking resources away from native bees... The senior curator of invertebrates at the Tasmanian Museum and Art Gallery... said bumblebees were capable of island-hopping across Bass Strait, but [they] were more likely to be smuggled over because they were sought after as a hothouse pollinator. The bumblebee is a prohibited import, with penalties of up to \$50,000 and 10 years’ jail for introduction from overseas. But bumblebees can be carried across Bass Strait from the A[US]n mainland without restriction.

...Over the past few summers a number of readers have queried whether bumble bees have become more common. In some districts it is possible their numbers in the wild have been boosted by their use in the horticulture industry for pollinating greenhouse crops such as tomatoes... and runner beans. Where growers once used hormone sprays or hand-held mechanical vibrators to pollinate their crops, many now employ commercially reared hives of bumble bees. The hives are not cheap but the bees work all day without a break, seven days a week. As they are much more efficient pollinators, larger and more perfectly shaped fruit are produced. Most of a commercial hive’s bees stay within the greenhouse but some find ways out... In the garden it is fascinating to watch as it rolls around in the dense coronets of stamens of single rose flowers... Intermittently the bee buzzes loudly and the magnitude of the sound vibrations alongside ripening anthers is believed to rupture them causing fresh pollen to be released. The bumble bee’s furry body is the perfect pollen trap and grooming hairs on its legs allow the insect to gather it from the body hairs into pannier-like pollen baskets... on the hind legs. Unlike honey bee hives which contain tens of thousands of worker bees and last for many years, bumble bee hives are started from scratch each year. At maturity towards the end of summer, most contain only a few hundred bees. Fertile queen bees overwinter in holes in the ground and in spring each one seeks out a suitable nest site... Before laying eggs, the young queen collects pollen and nectar. The nectar, stored in a small flask moulded from plant waxes, provides her with sufficient energy food while... [brooding] her first batch of 8 to 10 eggs laid on a large ball of pollen... [T]he eggs hatch in about five days. The grubs feed on the pollen ball and, as this is consumed, the queen forages for more protein rich pollen and energy rich nectar to nurture them. It takes... two weeks... for the larvae to mature when each one then spins an ovoid silk cocoon to pupate in. At the same time the queen lays a second batch of eggs on a fresh ball of collected pollen. The pupae emerge as adult worker bees after 11 days and have a life expectancy of... two months during which they serve the queen... They clean the hive and defend it, against wasps and other intruders intent on robbing honey or larvae, by stinging them repeatedly. Most of their labours are spent gathering pollen and nectar to feed the second and subsequent broods laid by the queen. This releases her from foraging duties so she can concentrate her efforts on laying and brooding more eggs some of which... will become next year’s queens and... drones to fertilise them.

...[the queen receives only one insemination, which the queen stores for several years. As the queen lays eggs it is able to control which ones are fertilised. The fertilised eggs become queens and the unfertilised ones drones.] ‘Honey bee workers usually decide when their queen should be replaced – approximately once every two years.’ □ Two researchers at the Free University of Berlin say bees can measure the distance from their hive to a food source by counting landmarks... [like] bushes or trees... as they fly past them.

...The French government has launched an investigation into an outbreak of what’s being referred to as “mad bee” disease – a malady that is killing millions of honeybees in the west of the country. Beekeepers say that... the insects are becoming disoriented and failing to return to their hives after pollinating sunflowers. The disease first appeared last summer and is being blamed on the increased use of pesticides, which some beekeepers say destroys the insects’ sense of direction. It is estimated that 60[%] of the famed honeybees in the region have perished since last June. Agricultural authorities in the affected areas have suspended the use of the suspected pesticide Gaucho, which was introduced in 1994.

...A truck carrying millions of bees overturned on a Maine highway, leaving its cargo buzzing around the wreckage and closing down the road for nearly eight hours... Firefighters sprayed the spilled hives with water to calm the bees as they loaded the scattered containers in to another truck. “The bees thought it was raining and they wouldn’t leave the hives,” said... the police department in Falmouth, where the accident took place.

...Sixty people attending a funeral in Mexico’s western state of Nayarit were attacked by a swarm of African honeybees that suddenly emerged from a nest in the ground... Victims were treated at a local hospital while police chased off the bees using a mixture of insecticide, soap and water. [● The ‘African killer bee is taking over the Amazon rainforest’ and is also rapidly spreading north. It is expected to soon reach the lower states of America.

...‘In tropical America stingless bees of the genus *Trigona* (not closely related to the Old World honeybees) make large colonies in hollow logs and similar places and they used to be domesticated for their honey by the Maya Indians of Mexico. *Bees have been kept for their honey by humans for many hundreds of years. Throughout most of history this has been mainly a matter of inducing them to make colonies in hollow receptacles of various kinds and then robbing them of their honey. Until recently their breeding has been entirely uncontrolled and even now they are not domesticated in the same way as dogs, cattle, or even silkworms.* The natural food of bees consists of nectar and pollen, the nectar supplying the energy-producing sugar and the pollen being a source of protein. The bees also make honey from nectar and store it for food. The larvae are fed partly on a mixture of nectar or honey and pollen and partly on a secretion from various glands of the young workers, the substance that is often called “royal jelly”. Bees will readily drink a solution of sugar in water and are often fed on this during winter by bee keepers who take most of their stored honey but are also concerned to keep their bees alive.’

...‘until recently, honey was the only sweetener humans had.’ Today, NZers are said to be the ‘biggest consumers of honey per capita in the world. NZ beekeepers mostly feed their bees a sugar liquid so they don’t need to store honey for food’. ‘The industry is worth \$30 million annually, \$8 million of which is generated by exports.’ A major growth area for the industry is ‘bee pollen – “the perfect food” (it contains all of the 22 nutrients we need each day)’...

Bee pollen has ‘more protein than meat, calcium than milk and iron than spinach’. ‘By collecting pollen for ourselves, we don’t starve the bee. Specialised collection mats placed at the hive entrances ensure enough pollen is available to the bee while allowing us to benefit from its health-giving properties’...

IT IS four years since [a NZ] honey researcher... made world headlines by finding that a mystery substance in manuka honey could kill the bacteria thought to cause stomach ulcers. His work prompted scores of researchers to turn their attention to the potential medicinal effects of this ancient food and now [the NZer] looks set to capture the world’s imagination once again. His latest finding is that honey may be a new weapon in the war against antibiotic-resistant “super bugs”... [The] Associate Professor in biochemistry and co-director of Waikato University’s Honey

Research Centre... last year... sent samples of manuka honey and a Waikato pasture honey to the Institute of Environmental Science and Research in Wellington where... it... [was] tested... against eight strains of MRSA (methicillin-resistant staphylococcus aureus) – including several that commonly cause outbreaks in N[Z]. The results were extraordinary: “All the strains... could be killed by honey... at 4%... The one (strain) that was resistant to all the antibiotics was sensitive to honey diluted 100 times, which gives you an idea of the potential.” However, they came as no surprise to [the co-director], who has... known for years that certain types of honey pack an anti-bacterial punch 10 times as powerful as your average toilet disinfectant. [The co-director] presented the findings late last month at a major wound care conference in A[US]. “...Antibiotic resistance is a real problem. I had a large number of people asking me for advice on how to use it on wounds and several people interested in running comparative clinical trials, which is what I was really hoping for.” ...it’s been an uphill battle to get the therapeutic potential of honey acknowledged by the medical world... [A]n intensive care specialist at Middlemore Hospital, has shown a keen interest... but cautions that... “If a patient is colonised in the nose or some other part of their body or generally over the whole of their skin, then application of honey would not be suitable.” ...[the co-director] is careful to point out... the work that catapulted him to international attention didn’t prove as promising as... hoped. His follow-up study... on ulcer patients infected with *Helicobacter pylori* found that manuka honey didn’t actually kill the bacteria, although there was some suggestion it reduced patients’ pain... [But] the super bug aspect is only a small part of honey’s potential as a frontline medicine. Its most promising use to date appears to be as a general wound dressing, and... in dressing burns, or wounds created by harvesting skin to repair a burn... “If you get better, quicker healing, that area is available for harvesting again in a short time, which may reduce your hospital stay... but it’s also a... lot cheaper than conventional things.” While the... wound care conference was abuzz with talk about honey dressings, it’s actually nothing new. The first use of honey as a salve can be traced back thousands of years to ancient China, Assyria, Greece, Egypt and Rome... Honey fights bacteria in three ways: Its low pH retards bacteria growth; its high sugar content sucks moisture away from bacteria... but doesn’t dry... the wound... out, which makes for rapid healing and minimal scarring...; and most importantly it contains an enzyme which, when diluted, creates hydrogen peroxide – a highly effective anti-bacterial agent... [Manuka honey contains] a fourth, and even more powerful, anti-bacterial factor... Strangely... honey... remains an innocuous substance. While... the recommended carbonic acid concentration to clean your toilet (5%)... would burn your hand, you can stick honey... [with] ten times the... strength of... carbonic acid at 5%... on an open wound without so much as a tickle... [Honey also] seems to have a powerful anti-inflammatory effect which... [may have] something to do with an anti-oxidant content... Another Waikato scientist... has been looking into the possibility that honeydew honey may promote the growth of healthy bifido bacteria in the large intestine, which is thought to have a range of health benefits. Honeydew comes from the beech forests of the South Island and is actually made of the dung of tiny insects that feed off the sap of beech trees – ...bees make honey out of droplets of liquid they collect from the insects’ backsides... The Honey Research Unit is gearing up to... carry out a study on combining honey with milk to see if it will enhance calcium absorption, testing honey as a hang-over cure and there’s even a study under way to test honey as a treatment for bobby calf scouring. But there’s a big catch. Honey varies so wildly from batch to batch and region to region in anti-bacterial potency that if you buy any old jar from the supermarket and expect it to soothe your sunburn or clean up your cuts, chances are it won’t have the active ingredients... The beekeeping industry has recognised this and some hives are already testing their honey, producing labels with the words “active manuka honey” to alert customers. The result for the consumer is that prices are rising. Manuka honey is already in short supply, ironically because until a few years ago no one wanted to produce it... [B]ee-keepers used to feed manuka honey back to the bees because people didn’t like it. Now it’s quadrupled in price up to \$12 a kg] and there are tales of wealthy Asian honey dealers offering bee-keepers a small fortune to supply them with every drop they can produce... The jury is still out on the overall health benefits of honey, but seeing as it’s Sunday, it may be worth paying heed to a message in the Bible. In preaching the birth of the baby Jesus, the Bible states the child shall be fed butter and honey “so [the child] shall know to refuse the evil and choose the good.” Bearing in mind what we now know about the effects of butter [– ‘as bad as cigarettes on the heart’ (and ‘healthy people should only use cream, used for butter, sparingly, while sufferers from liver complaints should not eat it’ at all) –] maybe it’s worth heeding the advice... [The co-director still] believes honey has got a big future – if not as a cure-all, then simply as a healthy, natural food. [However, in the opinion of someone else: ‘honey should be used as a *condiment* – not a food. It provides almost pure carbohydrates in the form of sugars. This is “good news” and “bad news”. Honey is better for you than table sugar, but sugar is not an essential nutrient – your body can make sugar from protein and fat – and honey is so rapidly absorbed that the carbohydrate hits you all at once. If you have a need for immediate explosive effort, that’s good. If you are not extremely active physically, that’s bad – carbohydrates that aren’t burned up immediately get stored as fat.’]

...Knowing nyet about business, four out-of-work Russian immigrants started their own company collecting bee venom, and are now starting to collect business awards... [One couple] left their East Siberian home of Irkutsk two years ago to start a new life. They were attracted, as biologists, to N[Z]’s environment as much as wanting to secure a future for their 11-year-old son... But despite a combined experience of more than 40 years in the biophysics world, the pair, like many of their highly skilled immigrant friends, struggled to find work. Melding their expertise with a long-held interest in beekeeping, they decided to go into business with [two friends]... The plan was to extract venom from bees for use in the growing number of health products used to treat pain, blood disorders, neurosis, asthma and skin problems. Only a lack of business skills, local knowledge and finance held them back. Based in New Lynn, the partners approached the business agency Enterprise Waitakere, which helped them to set up a company structure, secure a loan, market their product and establish contacts in the pharmaceutical industry... [T]he company has [now secured a NZ] patent for its method of venom collection and is doing business with six[NZ] companies which use venom in their products. A deal with an overseas distributor is on the verge of being signed, which could open the company up to the lucrative North American market.

BEAUTY is always sure to cause a buzz, especially when you’re dealing with glitzy, big-name European cosmetic labels... A small two-person business from suburban Auckland that trades on the healing and beautifying qualities of honey, mixed it with some of the world’s top beauty houses in selling their wares... [at] last week’s international beauty fair in Hong Kong... [The pair] discovered, somewhat to their surprise, that other, far older cultures than ours were not so aware that you can do things with honey other than spread it on your toast. Like, use it as... a laxative or cure for diarrhoea, or... as a balm for rough hands... and... a lipstick for chapped lips... “The worth of honey as both a medicine and beautifier has been known for thousands of year[s], so... we were a little surprised,”... [Honey’s medical properties] had been forgotten... with the advent of antibiotics during [WW2]... Extended use of honey’s medical qualities would open up the possibilities of an even greater money spinner for the honey industry. But benefits may then flow more to larger drug and pharmaceutical companies than bee-keepers or consumers.

...[a beekeeper] of Plimerton, north of Wellington, will keep one hive on his property while a Porirua District Court judge decides if... an earlier injunction... to make [the beekeeper remove every hive can be enforced]... On July 8, [the judge convicted the beekeeper for] keeping bees without a permit... The conviction followed complaints over three years by residents to the Porirua City Council about [spots of yellow] bee excrement on their houses, cars and washing... - 1996

N[Z]’s largest maker of products that contain bee pollen and royal jelly is angry about a warning the Ministry of Health issued yesterday. The Acting Director-General of Health... had said evidence now existed of extreme reactions to products containing bee pollen and propolis... [which had been reported in AUS, NZ] and in international literature... [I]t was previously thought adverse reactions were limited to people with asthma or allergies who had consumed products with royal jelly... The ministry is seeking comment on a proposed food standard requiring mandatory

warnings on all food products that contain any of the three substances... At least three deaths in A[US] were thought to be linked to royal jelly, which is usually consumed in tablet form to relieve stress and give energy... But the managing director of Comvita N[Z]... said the health warning was “potentially libellous” and the company would certainly take action.

...Up to half a tonne of... [i]llegally imported pollen seized in Christchurch could have contaminated... N[Z]’s population of roughly 87 million bees... says the M[AF]... The breach comes under the new Biosecurity Act... Investigations could take some weeks and it would be months before charges, if any, were laid against... a Christchurch health product company... N[Z] is one of a few countries in the world free of European foulbreed disease[, which]... could be introduced by the bees being exposed to the pollen... [Incidentally, the] honeybee population across Bosnia has been nearly wiped out by unseasonable snow which blanketed the country. The insects had just come out of hibernation when the heaviest late-season snowstorm of this century struck earlier this month. It is likely that many crops will fail because there will be no bees to pollinate them.

...[‘VERS A SOIE – This rather unusual foodstuff was very well thought of in the “Celestial Empire”, if we are to believe the account of a French missionary in China: “It is some centuries since our farmers in the Midi took up the production of silkworms, but I know they have never dreamed of using any of them for nourishment. In China it is not the same thing at all. I have often seen Chinese people eat silkworm chrysalids, and I have eaten them myself. I can state that they constitute an excellent stomachic, strengthening and refreshing at the same time, which delicate persons often use with successful results.” COCHENILLE – Insect used to prepare a red dye called carmine (used for colouring in cooking and cake-mixing). The best-known cochineal is that of nopal (cochineal cactus). Gray cochineals are the most sought after, but there are also black varieties. The gal insect is used after it has been fertilised and before the complete development of her eggs. The bugs are put in the oven on metal sheets for a few moments, or plunged into boiling water, and dried.]

...because ‘maggots only eat dead flesh’, they are being used by some doctors to assist with the repair of open wounds...

‘L is for leeches. After an historical lapse in popularity they are being used again, this time after plastic surgery when they help skin grafts and reduce fluid by sucking out blood and pus.’ ‘The tiny parasites used by doctors to treat a variety of ailments before the advent of modern medicine, can also help relieve the chronic pain of osteoarthritis, say researchers. The blood-suckers produced faster pain relief for patients than conventional drugs. Leeches remove blood through a tiny incision in their teeth. Their saliva contains analgesic and anaesthetic compounds, as well as hirudin, an anti-bloodclotting agent.’

...‘Leeches are most closely related to earthworms – which some leech species feed on – and are hermaphrodite, but cross-fertilisation is the general rule. Leeches are usually collected by agitating the water and netting them as they floated up, but another method was simply to wade barefoot.’ “‘If there’s anything in the world I hate, it’s leeches,” said Humphrey Bogart, wading a stream in *The African Queen*. But the widely unloved insects are making an astonishing comeback. When a leech bites into flesh with its 300 sharp teeth, leaving an inverted Y-shaped mark, it injects a powerful anaesthetic; the patient feels no pain. As it starts sucking, the leech secretes a cocktail of substances that act as an anticoagulant, to ensure the blood’s purity and keep it flowing. Even though the leech will suck for only 20 to 30 minutes, “bleeding” may continue for several hours or so, clearing the most challenging blockage. A surgeon helped pioneer the modern use of leeches in Britain – against strong opposition from colleagues reluctant to take a “backward” step – when stitching back a patient’s severed finger in 1979. NZ doctors, too, have been using leeches on plastic surgery and microsurgery patients. Middlemore and Waikato hospitals get their leeches from a Dargaville family, who collect them from dams and ponds on their property. Found in many parts of the world, leeches come in around 650 species, from one-centimetre-long slivers to specimens that reach a jumbo 45 centimetres when fully extended. These annelids – not all bloodsucking – breathe through the skin, have two hearts and can go for months between meals. Some have suckers at each end of the body.’]

...As the days grow longer and the mercury rises, millions of little bloodsuckers are slowly but surely marshalling their forces against family pets. But there is one [person] who aims to stem their tide – Doctor Flea, otherwise known as... [the] associate professor of parasitology at Kansas State University, [who] has been in Auckland to talk to vets about new tactics in the battle against fleas. [Doctor Flea] breeds up to 50,000 fleas every week, all for use in deadly experiments aimed at working out better ways to kill them... [T]he flea’s rapid life cycle makes it a parasite particularly well-adapted to survival. New products have to be developed every couple of years as the beasts develop resistance. [● ‘Most fleas will feed and breed on a variety of hosts; the human flea *Pulex irritans* is found also on pigs, and the hen flea *Ceratophyllus gallinae* feeds on a great number of different birds and can live on mammalian, including human, blood as well. Fleas are very greedy feeders and only digest and assimilate a fraction of the blood they suck up, the rest being passed out of the intestine unchanged. It is thought that this apparently wasteful habit may have been evolved to provide a supply of dry coagulated blood for the flea larvae which are feeding in the nest of the host. Fleas are regularly caught and eaten in small numbers by their hosts, usually in the course of licking, cleaning and preening.

At the present time the manager of a flea circus would be faced with two difficulties – finding an audience and a sufficient supply of human fleas for his performers. The manager would have to be content with dog or cat fleas, which are not as easy to feed in captivity.’

...‘Britain’s only working flea circus has opened its doors, reviving one of the great curiosities of Victorian entertainment. A psychologist from the University of Hertfordshire, brought the show back to life – but using mechanical fleas – to stimulate interest in the bloodsucking creatures. Flea circuses arrived in Britain in the early 19th century and quickly became popular attractions on street corners. Fleas can jump up to 25cm, the equivalent of a human being leaping as high as the Statue of Liberty. The insects dazzled crowds with their feats of strength. Tiny strips of metal were sometimes glued to the twitching legs of two fleas glued to a table, giving the impression of swordfighting. “The Victorians loved dressing up animals and presenting fleas as historical figures. You would have one flea dressed as Napoleon glued to the back of another flea acting as his horse.” The original flea circuses remained popular until WW2, when they were replaced by mechanical flea circuses – using magnets, motors and threads instead of living fleas. There are around 2500 species of flea, the most common being the cat flea. Most species of bird and mammal have their own flea, which live on their bodies as adults.’

...‘In Greek mythology, the Cyclops were a group of one-eyed giants. One of the best known freshwater copepods has been called Cyclops because it has only one eye on top of the head. The Cyclops or water-flea are common in all freshwaters, particularly in stagnant ponds, and they may be active there even in the depths of winter. Copepods form the food of a variety of fish. Free-swimming ones are sometimes the intermediate hosts for certain parasitic worms (the parasitic larvae living within the crustacean cannot complete their development until eaten by a fish, in which the life cycle is completed). *Cyclops* swims with the front pair of legs on the underside of the body. It can also glide slowly by the action of the leg-like second pair of antennae on the head while the body limbs are held to the sides. Some copepods swim by alternately bending and straightening their bodies.’ By the way, reports] say that a group of dolphins saved a [human] from drowning after [the human] panicked in the surf while snorkelling... near Durban... “The sea was murky and I was very scared. Then the dolphins swam up to me and nudged me all the way to the breakers,”... [The] Natal Sharks Board chief scientist and dolphin expert... said that, while there are occasional reports of dolphins rescuing people, “I am sceptical they have sympathy for humans.” - 1997

References to dolphins are frequent in classical literature, and they appear regularly on Greek... coins and mosaics. The stories connected with them are usually of their relationships with [humans], often aiding someone in distress. Arion of Lesbos, for instance, was... on his way back from a music competition in Sicily, when his shipmates, jealous of his prowess at singing and poetry and envious of the valuable prizes [Arion] had won, conspired to throw him overboard. Arion picked up his cithara, the instrument on which his fame was based, and played so sweetly that a school of dolphins came to listen. Then, before his enemies could bind him[, Arion] leapt overboard and was carried to safety on the back of one of the

dolphins. Another story... is the account by the Roman naturalist Pliny of the dolphin of Hippo. Hippo was a North African port and... boys there had a sport in which they allowed themselves to be carried out to sea by the... [local river. The boy] who went farthest was the winner. One day one of the boys found a dolphin playing about him, swimming around and, eventually, under him to lift him onto its back. The story of this incident got around... and crowds flocked to see the dolphin who became very tame, allowing people to swim around and pat it, but only giving rides to the boy it first befriended. This story was treated as a fable until in 1955 a bottlenose dolphin appeared off the N[Z] town of Opononi... The story of the Hippo dolphin ended sadly, as did that of 'Opo', but for a different reason. The townspeople of Hippo became tired of acting as hosts to all the visitors who flocked to see their famous dolphin and it was secretly harpooned. How times have changed, that a centre of tourism should deliberately destroy its chief attraction to regain peace and quiet! ['At the height of the 1955-56 Christmas holiday season, when hundreds of people crowded the beaches at Opononi, Opo would appear almost every day and frolic with bathers. Opo established a special relationship with some children it seemed to recognise, allowing them to stroke her and even giving some of the smaller ones brief rides. Towards the end of the summer, the government decided to accord Opo the same kind of personal protection given Pelorus Jack – a dolphin who for 24 years regularly accompanied ships travelling between Nelson and Wellington, and, until disappearing late in 1912, attracted many tourists who'd take the ride just to see the world famous animal (so famous and beloved was Pelorus Jack that the Risso's dolphin became the first individual sea creature protected by government on 26 Sep, 1904, under the Sea Fisheries Act) – and on 8 Mar 1956 the Fisheries (Dolphin Protection) Regulations became law. Opo hadn't appeared that day and the next day NZ went into mourning when Opo was found dead, jammed among rocks where the tide runs from a large rock pool. One theory is Opo was stunned by the deliberate or accidental but certainly illegal use of explosives']... **It is not unusual to see a school of dolphins or porpoises playing, and the common dolphin seems to be the most playful species...** It is an impressive sight to watch dolphins playing and it is made all the more so by the way dolphins join together to play... Their behaviour... appears to be... just for the fun of it, rather than for a strictly useful purpose as is most behaviour[, although dolphins also]... pack together at times of danger... [A pregnant] cow slows down and at the moment of birth... is accompanied by two other cows. These swim one either side of her, their role being protective, especially against sharks, who may be attracted to the spot by the smell of blood lost during the birth process... They also assist an injured member of the school by one ranging either side of it and, pushing their heads under its flippers, raising it to the surface to breathe... It has often been said that if whales cried out in pain we might be less ready to slaughter them. Scattered reports suggest that in fact they do precisely this. Freshly captured bottlenose dolphins placed in the tanks in Florida's Marineland have been heard through the thick plate glass windows to cry with shrill notes of discomfort and alarm. At sea similar distress calls have been heard from injured... whales, porpoises and dolphins... A dolphin's eyesight is not particularly good. Yet... [tame dolphins can] *leap... some 30 ft into the air to take fish accurately, which proves that[their] eyes are... quite useful out of water...* Moreover... presumably they have partially stereoscopic vision. The sense of smell is, however, either non-existent or almost wholly so. Hearing is the main sense, apart from taste and touch. This is acute and is especially sensitive to high tones. It is probably second only to the hearing of bats... They sleep at night and are active by day, although each feeding session is followed by an hour's doze[('the two hemispheres of a dolphin's brain work independently; for 8 hours the entire brain is awake, then the left side sleeps for 8 hours, and when it wakes up the right side sleeps for 8 hours – thus, the dolphin gets 8 hours sleep without ever having to stop physically'). Cows] sleep at the surface with only the blowhole exposed... The [bulls] sleep a foot below the surface, periodically rising to breathe... [T]hey can stay submerged for up to 15 minutes... air can be released from the blowhole while the animal is still submerged... In captivity a bottlenose will eat 22 lb of fish a day, yielding 237 calories per pound of its body weight, compared with the 116 calories/lb taken by [humans]... Common dolphins are among the fastest whales... they can swim at 20 knots (24mph) for a considerable length of time. Faster speeds have been recorded with dolphins swimming in ships' bow-waves, when they hold their bodies at an angle, using them as surf boards... [T]he cheetah is... the chief claimant to the title of the world's fastest land animal... One record that has been widely accepted is for a cheetah running at 71 mph, over 700 yards while timed with a stop-watch... Later writers have put the maximum speed at 60 mph... In the 1920's, cheetah versus greyhound races were staged at Harringay, in London... [On]e cheetah clocked only 45 mph. But for those who would like to think cheetahs can really run faster, there is the consoling thought that... [having] failed to catch the hare in the first dash, the cheetah sat down to watch the fun... Cheetahs can make good, but expensive pets, being affectionate and playful... It seems cheetahs attack only frightened animals. One story tells of four cheetahs trying to frighten a young warthog. The warthog refused to flee and the frustrated cheetahs left it, to kill an impala. If this is true, it is good evidence that pet cheetahs should be treated with caution. It would not do to run away from one.

Children are innocent and teenagers fucked-up in the head Adults are even more fucked-up and elderlies are like children Will there be another race to come along and take over Earth... maybe Martians could do better than we've done We'll make great pets...

...back in wild west times they used to call... Dodge City... the wickedest little city in America. Now the only evil thing about the place is the smell. This is the capital of the world's beef industry... "...we will kill approximately 15,000 cattle in a day." "I had a friend who used to work in an abattoir who said that the animals knew when [their] time was up. Do you think that's true?" "...yes... the smell of blood kind of... [unsettles them. I]t's a distinct smell." "...do you inject them and give them hormones and things like that?" "...yeah, when the cattle are first brought into the feedlots... they are given anti-biotics and aspirin, so to speak..." "...when I see this L... [always] wonder if there is a planet somewhere where there's people who are much smarter than us who keep human beings in a pen..." "I guess there could be a place like that." "...maybe that's where we will go when we die. Ever worry... that... there'll be all these cows sitting in armchairs going, 'That's the guy!'"

One has to respect the animals, and... I admire and consider many... mammals superior to the human being.

Exploitation or enslavement of other animal species is directly linked to the belief that human beings are superior (e.g., 'the genus *Homo* is distinguished from other animals by superior mental development'). However, if having slaves is a sign of superior mental development, some ant genera must be more intelligent than gorillas! Furthermore, both ants and humans will go to war, whereas 'gorillas will rarely attack, unless severely provoked, and rarely do they war amongst themselves' ('home ranges of gorilla troops overlap extensively, [but] there is no defended territory'; 'remember 1986 when Jambo the 25-stone gorilla proved that it was just a big softie and came to the rescue of an injured child who had fallen into the gorilla pit at Jersey Zoo? – the gentle giant died of old age in 1992, aged 31'). In addition, the 'almost exclusively vegetarian gorilla' has superior physical strength ('a 400lb gorilla in his prime would probably have the strength of 7 or 8 Olympic weightlifters'), as does the elephant, while 'pound for pound beetles are the strongest creatures on Earth, lifting up to a hundred times their weight'; cheetahs can run faster, Komodo dragons have superior acceleration ('Komodo dragons can accelerate to 45 mph in 2 seconds'); bats have superior ears; dolphins have superior lungs; dogs have a superior sense of smell; owls have superior eyes; and 'according to experts, the human mouth is one of the dirtiest in the animal kingdom, coming second only to the camel.'

Who really exhibits superior mental development – the person who thinks it is superior enough to use whatever it considers to be inferior to suit its own purposes (and, perhaps, believes that killing an unaware animal with a long-range rifle is proof of its superiority); or the person who knows it is superior and proves it by trying to use its brain to learn how to satisfy its own needs without having to exploit less intelligent, or less fortunate, people and species?

Of course, at any given time there will always be a ‘most intelligent’ species; on Earth at present this is [the human species]. And this species will inevitably have its lineage wherein a trend towards greater intelligence is apparent. But that is not to say that all, or even many, species are endowed with an inbuilt tendency to grow more intelligent with time. One of the oddities of human intelligence is that its level of advancement seems like a case of overkill. While a modicum of intelligence does have good survival value, it is far from clear how such qualities as the ability to do advanced mathematics, create complex music or develop rich language structures ever evolved by natural selection. These higher intellectual functions are a world away from survival ‘in the jungle’. Many of them were manifested explicitly only recently, long after [humans] had become the dominant mammal and had secured a stable ecological niche. This raises the interesting question of when these abilities were selected for. Most biologists believe that the structure of the human brain has changed little over tens of thousands of years, which suggests that higher mental functions were selected long ago and have lain dormant until recently. Yet if these functions were not explicitly manifested at the time they were selected, why were they selected? How can natural selection operate on a hidden ability? Attempts to explain this by supposing that, say, mathematical ability simply piggy-backs on a more obviously useful trait are unconvincing... The record of human history does not suggest that mathematical or artistic genius has produced more successful breeding populations... The case of the A[US]n Aborigines is intriguing. These people remained almost completely isolated from the rest of the world for 40,000 years until the arrival of the Europeans. Yet they are... essentially indistinguishable from Europeans in their artistic, linguistic and musical abilities and, when educated, in their mathematical ability too. This suggests that... the ‘math’ gene and others were selected... more than 40,000 years ago, and... for countless [years]... remained... ‘unexpressed’...

A[US]N children are among the 218 worldwide who... [ma]y never learn the surprising and controversial facts about their conception. All were fathered artificially by geniuses – or by strangers selected for their exceptional intelligence... [M]illionaire Robert Graham... was an optometrist who made his fortune engineering shatterproof lenses for spectacles – now used by 100 million people. But his international fame stemmed from the sperm bank... founded in 1980 near Los Angeles... called... the Repository for Germinal Choice... [Its dono]rs included respected scientists... Are [their children] measurably more intelligent[?] ...Mr Graham hoped so – but was never able to provide tangible proof. [Bob] was found dead in an hotel bath, apparently after hitting his head in a fall, during a meeting of the U[S] Association for the Advancement of Science... [in] Seattle, February 13... aged 90... Among those who helped him create babies... was [a] Nobel laureate... whose belief about the “genetically inferiority” of black people had already caused fierce controversy... [In related news, a]ccording to a Newspann published... yesterday, a daunting and potentially powerful number of... A[US]ns have no problem with the phraseology of the independent MP-cum-eponymous party leader from Queensland, busy carving out a career resurrecting White A[US] from the trash can of history. The... poll, taken after... [her] One Nation party was launched two weeks ago, found the new party has already won the same level of support as the Democrats – the third force in A[US]n politics – and could win Senate seats in Queensland... [T]he attention gained by the launch of... One Nation... has been heightened even further by this week’s publication of the anonymously-authored [*One Nation’s leader*], *The Truth*, which among other often bizarre claims alleges Aborigines were habitual cannibals, killing and roasting older [gals] and children... The... claims of cannibalism have stirred a debate not many A[US]ns were aware existed, with a flurry of anthropologists arguing the case for and against cannibalism... One of the historians quoted in the book... angrily distanced himself from the publication, complaining his work had been taken out of context[, before noting]... that cannibalism had occurred among many races[(‘the word comes from Carib, a tribe reported by Columbus to indulge in the practice; it occurred in the Paleolithic period, and ancient Greek writers mention *anthrophaghi*, “people-eaters”; usually done to gain a dead enemy’s strength, occasionally vengeance was the motive, rarely hunger’). A] visiting professor of anthropology at Macquarie University, added support in an article written for the *Sydney Morning Herald*, in which [was] quoted a number of serious studies, including a 1964 publication reissued by the A[US]n Institute of Aboriginal and Torres Strait Islanders. This described the ritual eating of portions of dead people as part of the mortuary process, and the eating of bodies of people killed in war or executed as punishment for a serious offence... [F]urther... work... suggest[ed the practice of] infanticide, often of the first-born and usually by the mother, in which many of the victims were eaten... [But a] James Cook University historian... disputed suggestions Aborigines had been cannibals, telling ABC radio there was no credible supporting evidence in historical anthropological literature. Either way, [One Nation’s leader] looks the winner... “What we are seeing is a struggle for the moral high ground using the method anthropologists call the politics of embarrassment... The aim is to soften up your opponents by making them feel bad about themselves or their ancestors.” [The ‘leader “sees it as the beginning of a resurrection.”] However, most analysts expect the leader and her party to be just another bright but brief phenomenon in a century-long shower of similar political comets from the right.’

...“A lot of people have had enough,” says One Nation’s leader. “Enough of what?” “Enough of all the things they’ve had enough of. You just don’t understand and I get misconstrued all the time.” “I want to know what you’d do if your daughter came home with an Aboriginal and said, ‘I’m going to marry this person’?” “Don’t be bloody ridiculous. My daughter’s not mixing in those circles.” “But how can you stop the course of true love?” “Are you implying you know what my daughter’s up to and I don’t. I’m not liking this line of questioning. We’re meant to be talking about serious issues; about your heroin needle abusing, welfare and public housing bludgers, and all the bad drivers that come from other countries. We want to, well, send them all back.”]

...an enormous fish... [saying ‘Racism Stinks’ invited visitors] to a Sydney fish market... [yesterday. To the AUS]n Human Rights Commissioner... it seemed apt – [because the person] who has whipped up a racist fervour in the country owns a fish and chip shop. The campaign is part of a hard-hitting attack on racism in the wake of fierce debate sparked by [the fish and chip seller, who is also the leader of One Nation]. The row topped off what has been a bleak 12 months for race relations in A[US]. A national inquiry into indigenous children “stolen” from their families up until the late 1960s to “assimilate” them into white society shocked the nation. And the nation’s race relations record was again spotlighted as the toll of Aborigines found dead in jail soared to record levels... Studies show that a \$NZ440 million programme over six years has failed to stem the number of deaths... Conventions on the Rights of the Child and on Elimination of Racial Discrimination were also being violated, with life expectancy for indigenous people... [being] 15 to 20 years... lower than other A[US]ns, while] infant mortality, unemployment, homelessness... and... poverty... [were] significantly higher... Only 33[%] of indigenous children finished school compared with a national average of 77[%]. The commissioner – in NZ]... to meet officials here – has taken the brunt of the fallout. [The commissioner] spent much of last year trying to “hose down” the furore sparked by... [One Nation’s] anti-Asian immigration and anti-Aboriginal funding views. But [the commissioner] said the outspoken MP’s popularity was merely a symptom of A[US]’s fears about unemployment and the state of the economy. “I think Asian immigrants and Aboriginal people have been scapegoated yet again,”... Incredibly, it took a federal parliament bipartisan motion condemning racism to cool things down... Since [WW2, AUS] has grown from a land of seven million people of almost purely British and Irish descent into a multi-hued melting pot of 18 million, almost a quarter of them born overseas. The transition generally has been smooth, unmarked by the sort of sporadic violence toward immigrants in parts of Europe and the U[S]... Last year, almost 100,000 newcomers settled [in AUS], more than half of them from Asian countries...

New findings by the authoritative Queensland Development Report reveal that since [One Nation’s] xenophobic Independent MP... rose for her maiden speech to the federal Parliament last year, Asians have looked elsewhere for their holidays. The Gold Coast, the 40km coastal strip that has become A[US]’s top tourist drawcard, suffered most... As the number of hotel rooms rose... in the March quarter... by 12[%], occupancy plunged 10[%]... Overall, the number of Asians visiting Queensland in the period rose... 7[%], compared with annual growth of between 17... and 40[%] for most of the decade. Reuters reports that A[US] yesterday stepped up its official campaign to counter [the One Nation leader], unveiling a special kit

to combat what it calls myths and distortions about immigration and race... The kit gives a detailed rundown on the immigration programme... It also explains the White A[US] policy, which restricted immigration to whites and was abandoned only in the 1970s.

...The A[US]n Archives exhibition, titled *Between Two Worlds*, reveals a dark chapter in A[US]’s past when it attempted to breed out Aborigines... Black and white film shows rows of Aboriginal children with blank faces, dressed in striped uniforms reminiscent of nazi concentration camps, and others bent over sweeping the dirt with their bare hands... Today, thousands of Aboriginal people face a life of family breakdowns, drug and alcohol abuse, violence and mental anguish they say is directly linked to being taken from their parents... [B]etween one in three and one in 10 Aboriginal children were forcibly removed... [I]ncomplete or destroyed records mean the exact number is unknown, but it may be as large as 100,000... Many... were used as slaves and one in 10 was sexually assaulted... “[The stolen children who have themselves become] mothers say to us, ‘I’m a rotten mother. I don’t know how to cuddle my baby,’ and then add, ‘The only time I have ever been cuddled was when I was being raped.’” ...[the] Social Justice Commissioner... has just completed a year-long national inquiry into the Stolen Generation... [which] is now before the Government and is expected to formally charge A[US] with attempted genocide and call for... compensation, possibly millions of dollars... A[US]’s churches have apologised for their part... They admit their role was to break the Aboriginal spirit. “People believed that if we were going to make good Catholics... out of the Aborigin[es]... we had to take them away from what we would have seen as pagan influences...”

CASE NO 1... who was removed in 1967, had been told his parents were worthless. “...They made... my mother... sound... bad... [and] stupid, you know... And when I... first met... her[my mother] was so beautiful... I walked into my mother and we hugged and this hot, hot rush... filled every part of my body... That was my first feeling of love and it only could come from my mum. I was so happy – and that was the last time I got to see her.” The unnamed witness’ mother died two years after their one and only meeting. “When my mother passed away I went to her funeral which is stupid, because [I wasn’t] allowed to go see her... when... [my mother was still alive].” CASE NO 2... was also taught to reject... [her] Aboriginality. “We were told our mother was an alcoholic and... a prostitute... [who] didn’t care about us. They used to warn us that when we got older we’d have to watch it [or else we’d also] turn into sluts and alcoholics...” CASE NO 3 The method of removal was often as devious as it was cruel, as related by three girls taken from their mother in 1935 and sent to Sister Kate’s Orphanage in Perth... “I was in the post office with my mum and auntie and cousins. They put us [all] in the police ute and said they were taking us to Broome... But when we’d gone [about 10 miles] they stopped the car and threw the mothers out[, then]... drove off while our mothers were... running and crying after us. We were screaming in the back of the car. When we got to Broome they put me and my cousin in the Broome lock-up. We were only 10 years old.” CASE NO 4... was four when... taken away from a native camp in... 1949 and sent to Sister Kate’s... “Because my parents were fair in complexion, the authorities decided us kids could pass as whitefellas... We were told Sunday was visiting day when parents came... For [my brother]... and I that was a patch of lies because our family were not allowed to visit. We spent each Sunday crying and comforting each other as we waited for our family... [T]hey told me my family didn’t care or want me and I had to forget them. They said it was very degrading to belong to an Aboriginal family and that I should be ashamed of myself. We used to get whipped with a wet ironing cord... To wake us up in the morning we were sprayed up the backside with an old-fashioned pump fly spray... While I was in my first year at high school I was sent out to work on a farm as a domestic... The... [farmer] used to come into my room at night and force me to have sex. When I returned to the home... I went to matron and told her what happened. [Matron] washed my mouth out with soap and told me not to tell the other kids. When the next holidays came I begged not to be sent to that farm again, but they said I had to. This time... [the] farmer and one of his workers raped me several times... and... I was... bashed and slashed with a razor blade on my arms and legs... When I returned to the home I got a belting. They told me I was bad and a disgrace and if anyone knew it would bring shame to Sister Kate’s Home. I ate rat poison to try and kill myself and got another belting.” [CASE NO 4.] then 13, was subsequently found to be pregnant, which earned her another belting. “...My baby was taken from me just as I was from my mother.” [CASE NO 4] was... denied access to her child... Perth’s King Edward Hospital told her there was no record of her having had a child. In 1972... Sister Kate’s... told her... the... baby had died... But... [that was a] lie. In 1996, [CASE NO 4] was reunited with her daughter. CASE NO 5... “When I finally met my mother through an interpreter [my mother] said that because my name had been changed [my parents] had... never heard about me. Every... morning as the sun came up the whole family would wait. They did that for 32 years until they saw me again.” ...[CASE NO 6 One day in 1941 an Aboriginal] mother lost eight of her children. There was no farewell: the[y]... were taken by welfare officers while [the mother] was at a funeral[. The children were] separated and sent to institutions across N[SW].

...yesterday the performer] who was the champion of her race and champion of the world... [after winning] two Wimbledon tennis titles was as close to her people as [the Aborigine] has ever been... [The performer was listening at the AUSn] Reconciliation Convention in Melbourne... to the hard truth of what happened to Aboriginal children [like herself] who... were taken from their families “for their own good.” ...[during the conference, the] head of the inquiry... said... any notion that the children were removed for their own good... was nonsense... [The inquiry head] defended the claim that the... policy... was a form of genocide... [and again] called on the... Government to compensate... [the victims. Incidentally], a parliamentary committee heard yesterday... [that] Aborigines could be better represented in the N[SW] Parliament if they were allowed non-voting seats... Guaranteed seats was the only effective way to ensure representation. Many Aborigines in rural communities did not see any point in voting... The assistant director of electoral education for the A[US]n Electoral Commission... said having guaranteed seats... was a positive step, but could be seen as “tokenistic” if they were allowed to vote... [A US] system allowed two “tribal members” to sit in the House but have no voting rights.

...Aborigines yesterday celebrated the 30th anniversary of becoming A[US]n citizens with a “call to arms” against the climate of racism and a demand for their rights to be enshrined in the nation’s constitution[, creating]... a legal pact or treaty with white A[US]... On May 27, 1967, A[US] passed a referendum granting Aborigines citizenship and the right to vote. Until then, Aborigines were governed nationally under flora and fauna laws. But the celebrations... were a mixture of hope... that A[US] was on the road to reconciliation... and sadness that Aborigines remained the most disadvantaged group in society... [T]heir lives have improved little since 1967, and... many of their hard-fought rights are now being eroded with a rise in racism and political indifference... [Some] Aborigines believe that if the 1967 referendum were held today it would be defeated.

...A group of Northern Territory Aborigines yesterday lost a High Court case which could have paved the way for compensation for the... stolen generation. The High Court... ruled there was no constitutional right of action against the... laws and ordinances which applied at the time... [But an AUSn] National University constitutional law expert... said the case... [was only] the first step in a long battle... [O]ne of the applicants... [also] said the fight was not over yet... Meanwhile... the Opposition... Leader... said stolen generation cases would be best decided by an administrative process involving the federal and state governments, rather than the courts, with compensation from the \$A1 billion... Federation Fund.

...[yesterday t]he Attorney-General... said that the Government opposed compensation. “The Government can see no equitable or practical way of now paying special compensation...”... [Furthermore, the Attorney-General] rejected the genocide finding, saying it was “flawed and wrong” because the assimilation policy was not intended to destroy a racial group... [The Government’s position is supported by the leader of One Nation, who says] Aboriginal people stolen from their families as children... should not be compensated... [because they] were in many cases taken for their own good... and... if people felt traumatised by the experience, monetary compensation would do nothing to alleviate that trauma.

...[the One Nation leader claims to have received] reports of a stockpile of weapons in Cape York Peninsula and evidence of Aboriginal gun running and involvement with terrorists... "There... have been exchanges of weaponry for a carton of beer,"... Last week, [a]Queensland National Party backbencher... warned that farmers in far north Queensland were... arming themselves... [with] banned assault rifles... for a race war.

...the... race-row politician[']s... party... is in turmoil after disillusioned members launched a rebel party, a former... supporter... who has been accused in Parliament of having links with the right-wing League of Rights, said... yesterday. Concerns about the party's direction... the dictatorial power of the party's core leaders... and ultra-right-wing politics prompted the formation of the new Australian One Nation Party... [In addition, the old One Nation's] popularity has steadily slipped to about 3[%] from a high of... 10[%]. By the way, AUS's]... Government stood by its refusal to apologise to Aborigines of the... stolen children generation yesterday when it unveiled a \$A63 m... package to address the lingering consequences of past Government policies. [The]Aboriginal Affairs Minister... told a packed press conference, also attended by local Aboriginal leaders, that while it was impossible to change the past, past wrongs should be acknowledged and responsibility taken for them. The package of practical assistance included \$A16 m... for 50 counsellors to help people going through the family reunion process... a \$A11.25 m... national network of family link-up services to assist individuals... \$A1.6 m... for an oral history project and \$A6 m... to develop indigenous family support programmes. - 1997

An A[US]n railway company has publicly apologised to a group of Outback Aborigines who were put in a train's baggage compartment after a passenger apparently complained about their smell... The 23 members of the remote Coonana community... had travelled 350km in the back of a truck from the Tjuntuntjarra community to meet the train... The Coonana community co-ordinator... confirmed yesterday that a confidential agreement... had been worked out... [but] would not comment on any possible financial compensation... [Now for some other news from overseas, officials] declared a state of emergency and temporarily halted handgun sales to try to maintain an uneasy calm in urban neighbourhoods of St Petersburg, Florida, after a white police[officer] shot dead a black motorist and black residents rioted... Police said the[y]... shot the motorist because they believed [the motorist] was trying to run them down after his gold Pontiac lurched forward... But some witnesses said the driver had done nothing to prompt the shooting... [O]ne witness told... a local television station... the driver had his hands in the air... The riot began shortly afterwards at the intersection where the shooting took place... "We're tired of... what's happening out there to our brothers," [said a]... resident... Community leaders called for calm and attributed the violence to small groups of you[ths]... who were roaming the streets setting fires... and... looting... "These things are spontaneous, it just ignites," [t]he... mayor... said. "It's a kind of wake-up call that you have a lot of work to do."

...[a r]etired military chief... has given marching orders to the Republican Party Convention... - branded by its enemies as a rich [white guy]'s club - to be more compassionate and tolerant, a "big tent" capable of attracting all Americans... "And... [l]et us... all... work together for our common goal - restoring the American dream." ...It was [the general]'s first major speech as a Republican and was a hit from the first line... By the time it was over, [the general] had been interrupted more than 40 times with applause. The cheers did not stop even when the Gulf War military commander hit on positions that many Republicans bitterly oppose - the right... to have an abortion... immigration... and the need for affirmative action programmes to help minorities... "[The general]'s going to be the first black President and I am glad [the general] is a Republican," said one North Dakota... delegate... [T]he first African-American to rise to chair[perso]n of the Joint Chiefs of Staff, told the audience how his parents emigrated to America 70 years ago in search of a better life and found it even though they were black "and treated as second class citizens."

...Auckland has failed to impress half of recent Asian immigrants many of whom feel unwelcome. A new survey... shows that Auckland is still the magnet for those coming to N[Z], but its pulling power may weaken if hostility continues... Auckland's environment comes out as the major crowd puller. Aucklanders, however, are proving to be a key liability, with about one in five immigrants concerned about racist remarks from locals.

...The boorish actions of the crowd were not surprising from a town which still prevents blacks from playing golf with other club members at the weekend, and yesterday was refusing black autograph hunters entry to the All Blacks' hotel. As the caddies at the golf club said, the change in Government has meant no change in apartheid attitudes in outback Kimberley.

...An apartheid police chief told South Africa's truth commission his [officers] killed black activists rather than arrested them and believed they had Government approval. The testimony from[the] retired police brigadier... heaped further blame on the country's political leaders for apartheid atrocities after evidence on Tuesday directly implicated[an] ex-President... in the bombing of a building used by black activists in 1988.

...[a former] South African President... has declared [that it is his intention to] never apologise for apartheid and denounced what... the 80-year-old... called an unforgiving assault on the Afrikaner by the country's new black rulers... [A] Truth and Reconciliation Commission, intended to heal the wounds of apartheid... has heard from police officers that... [the] ex-President... almost certainly knew about the torture and murder of black activists... [The ex-President claims to have] never associated himself with "blatant murder" but... conceded that there may have been instances... where individuals had "exceeded the limits of their authority. I cannot be expected to take responsibility for the actions of such individuals." - 1996

[Five security police officers], whose ranks range from warrant officer... to brigadier... are appealing to the Truth and Reconciliation Commission [(TRC)] for amnesty for their roles in the killing... of [a black couple]. They were part of the ruthless force that defended apartheid... [One of them] is giving his testimony in that matter-of-fact way that must be genetically implanted into would-be police[officers] at birth... They... knocked down the doctor and his wife and beat... them to death, making it look like a robbery. I am looking at [the doctor's son] at this moment. This is when pain turns to numbness... [The police officer] describes the aftermath and accuses, of course, a general of asking for a cover-up... The commission, headed by [the Archbishop 'who won the 1984 Nobel Peace Prize for his non-violent struggle against white rule'], is the brave attempt to turn the country that was the embodiment of institutionalised racism into the rainbow nation that is the vision of [its first black President]... It is difficult to quantify the damage... decades of apartheid did. There are the dead: The children shot at demonstrations, the tortured[, the victims]... of necklacing, the dreadful punishment ANC supporters meted out to suspected traitors [that involved] hanging... a burning car tyre around their necks... victims of the black-on-black war, nurtured to an extent by the regime, the "eliminated" - ...how... members of the security forces describe murders of the opponents of apartheid - and those who simply disappeared. There are the generations denied proper education, health, housing, denied basic human rights, denied dignity, all because of the colour of their skins. Now South Africa is trying to heal itself. Other torn nations - Rwanda and the former Yugoslavia, for instance - have gone down the Nuremberg road to war crimes tribunals, with scant success so far... [The] Archbishop... tells me: "If retributive justice is the last word, these countries have had it. There must be forgiveness." The commission... must, in the terms of the Act of Parliament that established it, propose... "the ways and means and institutions which will ensure we don't repeat the ghastliness we have experienced." ...[the Archbishop, who] is ill with prostate cancer and is considering treatment options... freely confesses his weariness. His minders attempt to pace his engagements. And what a burden [the Archbishop] carries. As well as granting amnesty to individuals... who confess to... [being] guilty of planning, perpetrating [or] failing to prevent political violence... between 1960 and 1994... and recommending (limited) reparations to victims, "the commission sees as part of its role the establishing of a new moral order in our country"... [The Archbishop] is deeply satisfied that some of the truth of apartheid has started to emerge... "Many people thought all these things would never come out. (The proponents of apartheid) thought they were in control. We kept telling... these guys, in the dark days of apartheid... that... [truth] will one day prevail over lies. They thought this was just a slogan... We said... 'You have... already lost and we are too nice to you. We invite you to join the

winning side.' And they thought we were sloganeering again. But all history points to the fact that... it's not the Hitlers of the world who ultimately prevail... [E]verybody must know that ultimately, because this is a moral universe, God must prevail." ...[the Archbishop tells a story about the person] who, when asked for forgiveness for the murder of a loved one, said: "I'm not God. You will get your forgiveness in heaven." But [the Archbishop, who is] an optimist... says: "The wonder of this country is that many... people having had similar traumatic experiences, demonstrate an incredible magnanimity. There is the daughter of [someone] who was killed, who said: "We are ready to forgive. We just want to know who to forgive." ...[However, some blacks say] angrily: "The freedom fighters... should not... be compelled to apply for amnesty[too]. They were fighting... against crimes against humanity. They were only responding to the atrocities of apartheid." It is this argument about... means and ends that [the Archbishop]... has been having with the ANC... [I]n its final report, due to be delivered in March next year, the commission will make a moral judgment on the apartheid era and will make an assessment of whether the ANC's liberation struggle was that rare animal, a just war.

...[South Africa's TRC has labelled apartheid a crime against humanity, but says some actions by the ruling ANC against white rule were gross violations of human rights. "The Commission finds the ANC accountable both politically and morally for the commission of violations committed during the course of the armed struggle," the Commission said in a preliminary finding revealed in court documents yesterday. The findings were contained in a letter to the ANC in August warning the former liberation movement it would be implicated in human rights violations and giving it 15 days in which to respond.]

...In dramatic testimony before the [TRC, the ANC] admitted... it committed gross human rights violations in its fight against apartheid. These included bombing campaigns... which killed innocent civilians and summary executions in its military camps... in Angola... [22] people were either shot or beaten to death in 1982 after being "convicted" by tribunals of mutiny, rape or murder... It also conceded that it was slow in condemning the practice of "necklacing"... It was the second time... the ANC has appeared before the [TRC] and, in contrast to its first appearance last August, this time it faced tough questions from the... senior legal adviser... The ANC's 139-page submission gave a full list of the operations ordered by its military wing... [T]he ANC's former president... had personally authorised a 1983 car bomb in Pretoria which killed 29 people and wounded... 200. When asked why... the ANC had not adhered to the Geneva convention against targeting civilians... the [current] Transport Minister... answered "...when a military installation was in a commercial or civilian area that constraint had to be relaxed. We were very mindful that the tactics of the apartheid regime were drawing us into a morass where the rules of the games were likely to reduce an honourable struggle and besmear it."

...[South Africa's President] used a caustic farewell speech as ANC leader yesterday to lambaste rich whites for clinging to their ill-gotten gains[, proclaiming that]... some whites thought national reconciliation meant compensation for the loss of political power by [getting] guarantees of their wealth and economic muscle... [Coinciding with the] Reconciliation Day holiday, [the President then] warmly hugged his ex-wife... only minutes after appearing to attack her political ambitions, in a marathon four-hour speech to his party conference... [D]elegates... could... nominate her as future deputy party leader. But... [in 1992 the ex-wife] was convicted of kidnapping... [four] youths from a Methodist manse... [in 1988, and last] week... two of her acquaintances [who had testified that the ex-wife] was not present during the assault on the... [kidnap victims – one of whom] was accused of being a police informer, [and] was subsequently murdered... [– told the TRC] they had lied in court and that [the ex-wife] was present and took part in the attack... One of the assault victims... [had testified to seeing the ex-wife] stab Stompie to death... [The ex-wife, who describes such stories as being] "a fabrication"... has not applied for amnesty and can be prosecuted. Some of the victims are already talking about laying private criminal charges against her. The commission may also recommend that [the ex-wife] is not fit to hold public office.

...Almost 8000 people applied to the [TRC] for amnesty... before the deadline expired on Saturday... [M]ore than 1000 last-minute applications were received... Amnesty will be granted to all those who... can prove... [their] human rights abuses and political crimes... were ideologically motivated. Those who have failed to apply, face penal or civil charges. Since the commission was set up last year, 39 amnesties have been granted and 788 requests rejected. The ruling A[NC], which has taken collective responsibility for violence committed as part of its campaign to end apartheid has submitted the highest number of applications of all the political parties. The National Party, which ruled from 1948 to 1994, opted instead for individual responsibility. Only two [National Party] ministers have come forward...

The resignation of... the National Party... leader... [– whose release of his eventual presidential successor] in 1990 and the lifting of the ban on the A[NC] and other organisations unleashed seismic demographic forces that swept the once all-powerful National Party and its leader off the centre stage of... [South African politics –] marks the end of a tumultuous era... [His presidential successor], who shared the 1993 Nobel peace prize with him, said... [his predecessor] deserved an honourable place in history... The leader of the Zulu nation... added his voice to the appraisal, saying: "...I really respect him..." Even ultra-rightists acknowledged... [his] important role in transition... by branding him a traitor to the Afrikaner nation... "His betrayal of his own people is unmatched in history," the Boerestaat (White Afrikaner State) Party leader... said, adding that it had been high time... [the former President quit. The former President hoped] the move would help the party which designed apartheid[to] finally escape its guilt-laden past... History will ultimately judge whether... the... former... President... is viewed as a great reformer or simply someone who gambled all of the family silver and lost... Meanwhile, [another National Party President, who]... headed... the state security council... in the... 1980s... is defying an order to appear before the... [TRC because the leader] would not go on his knees before... "a circus. The Afrikaner only goes on his knees before God,"... The commission chair[person]... had threatened to lay charges against him but later said the commission had made a technical mistake in its subpoena and could not do so. Legislation setting up the commission makes provision for a two-year jail term for those who defy its subpoenas.

...[yesterday, an unrepentant 'former chief of South Africa's defence forces claimed to have been serving God and country, and called the TRC a witch-hunt.' However, the] AWB... has apologised for human rights violations and racism by its supporters since its inception in 1973.

...The [white] supremacist leader... who once promised to lead the Afrikaner people into a heroic death or victory against black majority rule... exploded with anger yesterday when a... court convicted him of trying to murder a black employee... by beating him repeatedly about the head, neck and shoulders with a pipe or club... The beating was punishment for falling asleep while on duty... as a security guard. [The employee] spent a month in hospital and suffered severe brain damage... Dressed in grey camouflage... [the supremacist] bent double and banged his fist on the dock as it became clear the magistrate would rule against him, and... when the verdict was announced... bellowed at the magistrate... "The law, justice and God marks you. The struggle of the nation continues!" ...Afrikaner Resistance Movement (AWB) supporters... cheered as their fiery leader charged out of the court, drowning out the magistrate who did not finish reading his ruling. "Today the war has started," [the AWB leader] told reporters outside the courtroom in Potchefstroom... But the defiant right-wing leader later returned after a lunch adjournment[– because police]... on duty had threatened to arrest him[– at which point]... sentencing was postponed... Bail was set at 2000 rand... but was then reduced to 1000 rand when[the] weeping... AWB leader... [claimed to be] a "poor farmer with a wife and child." ...[the AWB leader once] became the subject of derision after falling off his horse at a gathering in Pretoria... His movement of swaggering, gun-toting neo-Nazis [– their flag is an unashamed imitation of the swastika –] suffered a major blow when, in March 1994, a force of about 500 went into the former black homeland of Bophuthatswana in an ill-fated attempt to prop up its unpopular black... leader[who], like the right wing, was refusing to join the country's first all-race elections in April 1994... The episode ended in about 50 deaths, including the killing of two rightists shot dead by a homeland soldier as they begged for mercy in a scene broadcast around the world. [The AWB leader], however, hailed the campaign as a "brilliant victory." [A] Stellenbosch University political analyst... thinks differently. "Since Bophuthatswana, the AWB is no longer seen by Afrikaners as... [having integrity." The AWB leader could once] claim, with credibility, that the Afrikaner people would follow him into a last apocalyptic battle, rather than

succumb to government by blacks. His notions of racial purity and the divinely ordained destiny of the Afrikaner folk no longer chime with the new realities here.

...Next year, for the first time in the... 75-year history... [of the] University of Witwatersrand[–] the renowned seat of white liberalism during South Africa's apartheid years... [–] most of its students are expected to be black, many of them from communities with poor high schools, some requiring remedial education... A new leader has been chosen to confront these challenges and to complete the transformation of this nation's premier seat of higher learning into a truly African university... But racial strains remain, with blacks frequently feeling alienated within the system. "When some of these kids come... into a residence... [at] this university, they have never slept in a bed... there is an enormous cultural switch, and to expect them to feel fully oriented... is naive." There is[also] concern over falling academic standards as admission criteria are lowered to admit disadvantaged students. A cash crisis looms as more impoverished students require financial aid. And pressure could force the government, which is committed to affirmative action, to increase the number of entrants without increasing funding.

...*Racism goes underground in the new South Africa*... Two weeks ago I... a black journalist from Britain, now living in... one of Johannesburg's predominantly white suburbs... arrived home... to find a note slipped under my cottage door. It read "You poor sick little kaffir girl!" and was unsigned. Panic engulfed me at the thought that I had ignited so much rage in someone during my 10 months in South Africa that they had scrawled my first hate mail. It was not, however, the first time that I had been called a kaffir – an Afrikaans word with the same emotional charge as "nigger". In 1990, during my first trip to this former bastion of segregation, I was thrown out of a pub by a burly Afrikaner who furiously informed me that "kaffirs are not welcomed." That was two months after [the guy who is now the President was] released from his 27-year incarceration but the framework of apartheid still stood strong... The recent resignation of South Africa's national rugby coach... after the revelation of a taped conversation in which [it] called black people "(expletive) kaffirs," says so much about how this troubled country has changed in six years. Not that people no longer use the K-word (as it is now politely called), but it is no longer socially acceptable to do so openly. Words like *bantu*, *native*, *boy* and *girl* (for adult blacks) have quietly gone underground too, but [the coach] is not alone in believing racial bigotry is okay. A wealthy [Afrikaner], assuming I was also white because of my English accent, recently privately vented her feelings on the phone about how "the bloody blacks were contented living in their squalid townships before do-good liberals interfered." Despite [the President's] attempts to unify his people under a non-racial banner, it is clear that fundamentally attitudes remain the same among some whites. The only difference is that they can now be prosecuted for expressing them openly... Even the police, once the tools of oppression used by racist politicians, have put on the public coat of non-racism... Had [the coach] not resigned, the rugby authority said [it would've] been sacked for bringing the game into disrepute... The most damaging aspect of the affair is the embarrassment that it must have caused [the] President... who so proudly donned a rugby jersey... after the national Springbok team's World Cup victory. But rugby has always been a symbol of white oppression or supremacy, depending on which side of the fence you stand... The average white citizen is struggling to deal with racism at a gut level. Most have had little experience of dealing with black people, except as servants or labourers... All are at pains to assure me they did not know of the catalogue of murders and human rights violations carried out in their name by successive apartheid governments... It is as if the nation's whites have been afflicted with shared amnesia... To... [many whites] rising crime levels (something blacks have lived with in townships for decades)... [are] a euphemism for black encroachment into their once sheltered suburbs... [Yet] in rural communities... diehard Afrikaners continue such practices as beating black workers into a coma, or even to death, without charges being laid by the local police... [I]t is still rare for black and white people to mix socially... something I am used to from Britain... I came to live in South Africa to escape the sophisticated racism in Britain and was reminded of 1960s London as experienced by my Jamaican parents. I went to view a flat... advertised in a newspaper; on opening the door the landlord literally rocked back on his heels... At once the flat became unavailable. Another white... landlord confided to me by phone: "I rented it to blacks in the past, but they messed it up." I responded: "I'm afraid this is where I tell you that I am black." There was a pause, then... "Yes, but you're a different type of black." It is not just whites who are thrown by the new multiracial society. A friend's... [mother's] black maid would go into a spin each time I was invited for a meal... "It's hard for her to deal with seeing you at the table. It's not the norm in her eyes and [the maid] doesn't like the change." I am reliably informed that a black maid with a black 'madam' loses status within her community in the new emerging social hierarchy. There is also new racism, as expressed by the Coloured communities, who under apartheid enjoyed a degree of privilege but now say they are being discriminated against by the black majority Government's affirmative-action policy. "Once we were too black, now we are too white," they complain. Their protest vote for the formerly oppressive National Party has kept the Western Cape a strong Afrikaner stronghold. Affirmative action – the Government's policy to redress historical disadvantages by setting quotas for black recruitment in companies – has become a symbol of both white and Coloured rage because of the premium it puts on black professionals who can demand high salaries... [I]t is true that many receive inflated salaries beyond their worth... As for the mystery writer... after a process of elimination that Sherlock Holmes would have been proud of, I deduced that the culprit was a 52-year-old dog psychologist whom I had profiled that week for a newspaper... [The dog psychologist didn't like] the tone of my article...

[Graphic footage of police dogs savaging three unidentified blacks – said to have been illegal Mozambican immigrants – while six laughing white officers urged them on has thrown South African racism into sharp relief a month before nationwide local elections. The National Police Commissioner ordered the immediate arrest of the officers after the state-owned South African Broadcasting Corporation gave officials a private preview of the evening broadcast. Filmed by a BBC camera operator travelling with a police unit, it showed the victims being driven to a field. For an hour, they were repeatedly savaged by four dogs in what was billed as a dog-training exercise, while they screamed and begged for mercy. They were beaten when they tried to fend off the dogs. "I find it difficult to believe that such a naked display of racism and brutality could still occur in our democracy," said the Safety and Security Minister' ...

'A 5km trail of blood, still visible along the tarred roads of Sasolburg, paints a picture of the latest chapter in South Africa's unresolved race wars. The blood was that of driver Mosoko Rampuru, who at the weekend was dragged, by a wire tied to his ankle, behind his white employer's pickup truck until his body "was just skeleton." His boss, aged 44, has been remanded in custody on a charge of murder, as questions are being asked about the incident. Rampuru's colleagues said that since the 37-year-old had started working for the 44-year-old in January, the two had never fought over anything, and that the white employer did not have a reputation for being a racist. In a country still entertaining profound racial divisions, many attacks that could be termed racist take place on remote farms – where black farm labourers still ride in the back of pickups while the boss's dog sits regally on the passenger seat.'

... 'A black claims it was beaten with a sjambok (heavy whip) then tied behind a pick-up truck, dragged and left for dead by a Belgian diplomat – whose immunity is now under scrutiny – his son and four others. "The sjambok and the dragging behind a truck has been a characteristic of racist whites in South Africa for decades. We're appalled at even a suggestion that one of our number could be involved in something like this," the Belgian embassy said.' Incidentally, the fight against South African] racism was born long before the 1960 'no Maoris, no[rugby] tour' campaign... a book reveals... Major General Sir Howard Kippenberger incurred public anger in [NZ during 1949 after suggesting] the All Blacks should not tour South Africa that year if Maori players were excluded... *Kippenberger – An Inspired... Commander*... tells how Sir Howard nearly resigned as national president of the Returned Services Association over the controversy his comments created. "I am not going to acquiesce [to] any damned Afrikaners saying they cannot go... To hell with them... If the South Africans cannot welcome Maoris in the team, then it is our duty to the Maoris not to send a team." In direct reference to the Maori soldiers who fought... [under him in WW2, Kip], said: "I cannot forget that no one objected to the Maoris representing N[Z] on very different fields from rugby." Veteran anti-apartheid protesters hailed Sir Howard's stance as brave... possibly... heralding... the anti-apartheid movement which developed later... [The book's a]uthor... said the 1949 tour debate was acrimonious and took its toll on Sir Howard. But

on “this issue, Kip was way ahead of his time and once again demonstrated courageous leadership while under fire from all quarters.” ...Among Maori players[eventually] excluded from the team w[as]... the best first five-eighths in the country... later[becoming a] Minister of Police.

...[NZ's] Race Relations Conciliator warned yesterday... [that local race] relations are at a dangerous stage and will not improve until the fractured relationship between Maori and Pakeha is repaired... [However, the conciliator] had not seen any signs of an extreme nationalist movement, modelled on [South Africa's AWB or AUS's One Nation] Party, taking hold here. But the country could not afford to be complacent... [For example, although] the... Auckland... region boasts it is becoming more ethnically diverse, ethnic groups are living in clan-type neighbourhoods... [This meant that some] suburbs are becoming browner, while others are fading to white... [In another example,] Porirua parents are sending children out of the city for secondary schooling because of white flight... Four secondary schools in Porirua – all with rolls of at least 60[%] Pacific Islanders and Maori – could take up to 1000 more students between them. But at the same time there is a waiting list for[nearby] Tawa College... Many children are[also] being sent out of the city to schools in Wellington, Kapiti and Hutt Valley... The principals... were reluctant to comment because the issue was sensitive, and... publicity would compound the problem... “You cannot do a [balanced] article without saying that[if] it is not [racism], why are they doing it?” ...[the conciliator's] office hoped to create a new reference point for race relations, starting with a \$125,000 plan to mark the office's 25th anniversary this year... Visits from his counterparts in A[US], South Africa, Britain and Canada would... be part of the plan. Ultimately it would lead to the formation of a new race relations strategy for the next century... The... Conciliator... also... said the office funding of \$1.3 million a year worked out at be about 36c for each N[Z]er and should be boosted to \$2 million... [□ When NZ's] first census was taken... [in] 1851... unless you were a Pakeha [guy] earning a certain amount, you didn't count. [According to the latest census, NZ contains: '2,594,691 Pakehas; 535,374 Maoris; 173,178 Pacific Islanders; 160,280 Asians; 14,667 Others and 151,713 Not Specified']...

Race is a dirty word in polite society today. But does that mean it has no meaning? On one level it obviously does, given that definitions of individuals' race will affect their lives in so many ways... [and the US] Congress is debating how many different racial categories should be listed on forms for the next census... Assigning race is a highly subjective act. One U[S] study found that 34[%] of census participants changed racial groups from one year to the next... But does the word have any scientific validity? ...Sadly, scientists do no better than the rest. In attempting to categorise races they have relied on definitions of individuals' inherited physical characteristics – skin colour, hair type and physique. This has produced a welter of contradictory categorisations. In 1962[a US] anthropologist... argued that there were five human racial sub-species: the Australoid, Mongoloid, Caucasoid, Congoid and Capoid (...the “Bush[people]”... of southern Africa).[His categories were similar to those of a 19th century German, who divided modern humans into: 'Caucasian (white), Mongolian (yellow), Malayan (brown), Ethiopian (black) and American (red).'] Other scientists have proposed the existence of as many as 50 different races. Yet others claim that... race is a short and superficial coda to the long song of human evolution. [‘Inter-breeding of races has occurred widely in recent and probably also prehistoric times; hence, so-called pure races are non-existent.’ ‘Tribes and nations are social groupings not biological.’] Genetic evidence also reveals the essentially homogeneous nature of modern [hu]mankind, at least compared with other animals. Consider the common chimpanzee of central Africa. It has three sub-species, “races” that are almost 10 times as different from each other, genetically, as are the African, European and Asian divisions of Homo sapiens. In fact, there is more genetic variation within one human race than there is between that race and another... Categorising... by race can be a deeply misleading business... But... our awareness of these superficial differences... [and the subsequent] evolution of races... is a relatively new event... For most of our existence we had not attached importance to the notion, and it was only when we came to the age of European exploration in the 15th century that one set of people encountered another that looked starkly different. Before then, explorers travelled mostly on horseback. It never occurred to them to categorise people, because they had seen everything in between... In other words, racial groupings are simply the end points of old trade routes.

...[‘For 300 years Africans were kidnapped and shipped to the Americas in enormous numbers to be bought, sold and worked like cattle. After the Civil War US blacks were officially freed from slavery but well into the 20th century most black people were still not free to live where they chose, to eat, travel shop or play where they wished, to work at decent jobs, to get a quality education, or to vote to change the laws that oppressed them. The US was a racially and economically segregated society, and the captives of segregation were the former slaves' descendants’]...

Go into any big city in the U[S] today and you will find many black people living in squalor – illustrating that... [over] 130 years after the abolition of slavery, the country still has a distinct underclass. That is bad news, and some experts say it is worsening. The good news is that the... [country] founded on the principle of equality... is arguably making progress in removing legal, political and economic roadblocks to the advancement of blacks and other minorities. Since the Supreme Court outlawed separate black and white public schools in... 1954... the country has banned every form of overt discrimination... Thousands of blacks have been elected to political office, and [the] retired... first African-American to lead the armed forces, is considered a potential President. [The incumbent] President... will celebrate these gains when... [marking] the 40th anniversary of the integration of Central High School in his home town... on Thursday. Nine black students were protected by... 1200... federal troops when they broke colour lines there in September 1957... The [six gals and three guys will] triumphantly re-enter... the building on Thursday as [the President holds] open the door... Even a cursory look at the state of [US] race relations shows the situation is multi-faceted and highly complex, incapable of easy measurement. Adding to the complexity is the fact that the country is increasingly multiracial, with a fast-growing population of Hispanic and Asian Americans. Still the divide most perplexing the country remains the one between whites and blacks, who constitute 13[%] of the population... The poverty rate for blacks is nearly three times that of whites, and only about half as many earn a college degree... [A] Harvard Law School professor... was sceptical the U[S] would ever be completely colour-blind. “Perhaps the most discouraging thing to me is the poor quality of political leadership on these issues, with nothing but platitudes from people who ought to know better. It's not rocket science – it's harder... We are talking about people's perceptions and attitudes and how to change things.” ...Another... [problem is] the issue of affirmative action, a system of preferences in higher education admissions, hiring and Government contracting for disadvantaged minority groups. Launched in the 1970s, the programme has sparked a powerful political backlash. In California citizens voted last year to abolish most forms of affirmative action.

...Moving to confront racism, [the] President... said yesterday... [at] the University of California in San Diego... [that] it was time “to build one America” without segregation or prejudice... [The speech capped] a week devoted to race issues as the state has become the focus of race debate in the US. Whites in... California, where voters have passed measures against immigration... accounted for just 54[%] of the population in 1995 and are expected to lose their majority in 2002 to the fast-growing Hispanic and Asian communities... Californians passed a bill in 1996 barring the children of illegal aliens from public schools... California is also the site of the 1991 race riots [– sparked by news ‘that a jury had acquitted four Los Angeles police officers of charges in the beating of a black motorist (in another fateful decision, LA police had pulled back from the affected south LA area just as the violence accelerated; rioters furiously assaulted hapless Asians, Hispanics and whites who tried to escape’) –] and the home of... the black football star whose 1995 acquittal in the murder of his ex-wife laid bare racial divisions and prompted [the President] to begin thinking about what action to take. In the past week, the President formed an advisory board on race relations, scheduled four townhall style meetings and appointed the first Asian American to head the Justice Department's civil rights office... [However, the] Republicans controlling Congress are likely to fight funding for any new social programmes for minorities and are unlikely to back down on their anti-immigration stand... A recent... poll found 76[%] of whites believe blacks are treated equally... but only 46[%]... of blacks... said they had the same chances as whites.

...W[hen the 13-year-old's father en]-rolled his son in a martial-arts class, [the father] wanted his... boy to know that "the world isn't always kind" and to "be prepared for the bully that may be coming, because kids can be monsters." But [the father] had no way of anticipating that when the world turned ugly for his son... there would be three bullies, not one. Nor did [the father] know that they would be so monstrous: slamming [the boy's] head against a wall, beating him into a coma and leaving him lying in an alley before going home to brag about how they had taken care of the "niggers" in their neighborhood... By last Friday, a week after the attack, [the boy] had yet to regain full consciousness... at Chicago's Cook County Hospital... While a parade of politicians and community leaders filed past his... bed to pay their respects, the rest of the city wrestled with feelings of profound disgust, anger and shame evoked by a crime with unusually symbolic weight. The suspects in the attack[, aged]... 19... 17... and 18, live in Bridgeport, a neighborhood near Chicago's old stockyards that has given the city five of its last eight mayors... But in addition to its political pedigree, Bridgeport is also renowned for intolerance and bigotry... This is... where Irish and German gangs fought pitched battles in the streets during the 1850s... But... [since] 1980, when low real estate prices began drawing Chinese and Mexicans into Bridgeport, the ethnic texture of the place has changed dramatically... Some whites are determined to protect their dwindling enclave with an unwritten set of rules governing which avenues minority residents can walk on, which parks their children may play in and what time they must be off the streets. The rules are enforced subtly... [or] in more brutal fashion... "Here the No. 1 issue is color," says... the Bridgeport Volunteer Centre... director... "If you don't learn the rules fast, you could be dead." ...[another boy] has been studying the rules ever since his family became one of the few black families to move to Bridgeport in 1994. Even so, [the 15-year-old] has been spit upon, chased, beaten up "dozens of times,"... and had a beer bottle broken over his head. "I feel like we don't belong in our own home,"... Which seems fine by those whites in Bridgeport whose greatest fear is encroachment from the Stateway projects, part of a stretch of high-rise ghettos on Chicago's South Side where the porches are caged in steel mesh, 70% of the residents are under the age of 17, and, in the words of... a... mother, "You just keep the kids inside the house and pray." That ghetto is what [the 15-year-old's] family moved up from when they came to Bridgeport. It is what [the 13-year-old] may return to, if and when [the boy] recovers... "...part of the tragedy of this event," declares... a historian at Columbia College who grew up near Bridgeport... "[is that this isn't just] a Bridgeport problem. It's a... [national] problem. And if we don't solve these problems on the South Side of Chicago, we're not going to solve them anywhere."

...A judge supports new tests on the rifle purportedly used to kill Martin Luther King Jr in 1968 – a move that could lead to a trial for the civil rights leader's convicted assassin. The ruling pumped fresh energy into the conspiracy speculation that has dogged the tragedy for three decades. But it is problematic whether [the assassin]... will ever get his day in court. [The assassin], aged 68, is gravely ill with liver disease that may kill him in a matter of weeks. Moreover, the judge's ruling, which itself will likely be challenged, was only a recommendation that a state appeals court take up the ballistics test issue... [The 68-year-old]'s lawyers had argued that sophisticated new tests involving the use of an electron microscope could show that the rifle on which [their client]'s fingerprints were found was not the murder weapon... Because [their client had pleaded guilty, the client] avoided a trial and possible death sentence. [The client] was sentenced to 99 years in jail, but changed his story almost immediately and said that a mysterious accomplice actually did the shooting... But... a... congressional panel concluded that [the client] was the sole assassin. - 1997

In... 1963... Dr King and other black leaders decided to focus on what they called the most segregated big city in the U[S -] Birmingham, Alabama... The black leaders planned a highly visible demonstration of their demands for equality. On April 12... Dr King... and a thousand others marched toward downtown Birmingham. The marchers were in deliberate violation of an order by[the Birmingham] Police Commissioner... expressly forbidding mass demonstrations... [M]ass arrests began... King was held for 24 hours in solitary confinement, until President Kennedy personally interceded with Birmingham officials. Two days later King's brother... [led] another large demonstration. [The]Police Commissioner... was on public record as being strongly opposed to the civil rights movement. His police met the demonstrators with a show of force rarely seen in [the US]. Police dogs attacked unarmed and unprotected marchers. The Fire Department was called in to help suppress the fire of freedom. The force of water from their hoses was like a battering ram... This kind of response to the peaceful black struggle for equal rights was not new but now the confrontations were broadcast across the nation on... [TV. Millions of viewers] saw firsthand that the demonstrators remained non-violent while the police were unrestrained in their use of life-threatening force... On May 2... a large group of black children joined the... protests. After a speech by King they moved toward downtown. Again the police began making arrests... Before the day was over almost a thousand children were in jail. A day later another thousand children joined the march. This time the authorities resorted to violence[again]. The marchers were blasted with fire hoses, beaten with clubs, attacked by police dogs and gased. At last on May 10... under pressure from the Federal Government and... outraged world opinion, the leaders of Birmingham accepted the demands of the freedom marchers. There was little time for celebration, however. That night both King's motel room and his brother's home were bombed. Having witnessed the abuse of power by Alabama authorities... Kennedy... [declared:] "The events in Birmingham and elsewhere have so increased the cries for equality that no city or state or legislative body can... choose to ignore them." ...Kennedy agreed to push landmark civil rights legislation through Congress... But... [as the President] at last committed himself to passage of the Civil Rights Act his popularity dropped dramatically. [The]President and Mrs Kennedy arrived by plane in Dallas. They began a motorcade in open limousines into the heart of the city and there... J. F. K... was shot and killed. The nation and the world were in shock... Dreams were shattered. The first president in a century to hear the demands of black America and respond with a message of hope had died, just as Lincoln had... A year later King would write, "While the question of who killed President Kennedy is important, the question of what killed him is more important... [I]n a sense we are all participants in that horrible act that tarnished the image of our nation. We have created an atmosphere in which violence and hatred have become popular pastimes." ...Under the new... [President the US] would become involved in a major war in Vietnam. The country would be divided as never before. New forces in the civil rights struggle would emerge, including many who thought King obsolete in his insistence on peaceful protest and his belief in the inevitable unity of all races[into] one brotherhood... In 1964, for the first time, King experienced violence directed against him by blacks... During an appearance in Harlem [King] was assaulted by black Muslims... Both King and Malcolm[X] knew that if the non-violent movement did not succeed the alternative would be militancy. However, in February... 1965, Malcolm X was assassinated in New York City... Later in 1966... King encountered hostile Black Power militants who wanted to respond to violence... with violence of their own... Later that same year Los Angeles was shattered by the Watt's riots. In five days of violence 34 people were killed and hundreds of millions of dollars worth of property was destroyed. Then, in July 1967, Detroit and Newark experienced devastating riots of their own. Dozens were killed, thousands were left homeless... [During] this turbulent social and political climate King realised [it was no longer possible for him to] remain silent on [Vietnam]... Despite the council of major advisers, who warned that voicing opposition to the war would alienate some of the civil rights movement's most powerful allies, King... wrote: "...I could never again raise my voice against the violence of the oppressed in the ghettos without having first spoken clearly to the greatest purveyors of violence in the world today, my own government... Do you realise that [when]the Vietnamese people proclaimed their own independence in 1945 after a combined French and Japanese occupation... they quoted our Declaration of Independence... [However,] our government refused to recognise... [their independence and is supporting a leader] who fought with the French against his own people and who said on one occasion that the greatest hero of his life is Hitler..." King was criticised on many sides for his stand... [but in 1968 went on to say: "For years people] have been talking about war and peace but... no longer can they just talk about it. It is no longer a choice between violence and non-violence... It's non-violence or non-existence... I've seen the promised land. I may not get there with you but I want you to know... that... [mine] eyes have seen the glory of the coming of the Lord... It is time for America to repent for the Kingdom of God is at hand... God is not interested merely in the freedom of... black... and... brown... and yellow [people but]... in the freedom of the

whole human race and the creation of a society where all... will live together..." One day later... King stepped out on to the balcony of his hotel room in Memphis... From across the way a... shot was fired... King fell dead, murdered at the age of 39... a leader with a lifetime of yet untapped potential...

There is a black leadership vacuum... "The Charmer"... was touring nightclubs as a calypso singer... [before reading the] book, *Message to the Black[person] in America*. It taught that whites were devils created by an evil wizard... [and] said: "Separation of the so-called negroes from their slave masters' children is a must." That became an article of faith for... the... leader of the Nation of Islam... [who once] said... Jews... are "blood suckers" and... Hitler was a "wickedly great [person]". And, worst of all, Jewish international financiers had bankrolled Hitler. "Little Jews died while big Jews made money... Little Jews [were] being turned into soap while big Jews washed themselves with it..." That was in 1995, shortly before the Million [Guy] March in Washington carried... [The Charmer] into the front rank of [US] black leadership... I attended a rally in Washington last year... The message that night was basically the one... delivered [in 1995]... "...we can organise black [guys] to... pool our resources intellectually and financially, to create job opportunities for our people, to lessen the burden of crime and violence..." ...One in four black [guys] between the ages of 20 and 29 are in jail or on parole. [Editor's note: Unfortunately, most of the crimes so-called blacks commit are against other blacks (e.g., 'every year in the US, more blacks are murdered by other blacks than by whites' – and 'blacks make up nearly one half of all homicide victims with a rate per 100,000 black guys of 61.1, compared to the white guy rate of 8.2'). This suggests that, while it isn't fair for so-called whites to proclaim that blacks are inferior or generally worse behaved than themselves, given the chance, many blacks – especially black leaders – are unable (or unwilling) to behave better than most whites. Indeed, given the chance, most blacks try to be, or live like, whites (according to one black: 'the only colour is green – go out and get some money')! However, recent Olympic Games seem to prove that blacks are better at running than whites, who, in turn, are better at swimming than blacks – perhaps because blacks have, traditionally, lived in desert regions whereas whites lived in coastal regions; or maybe because blacks have had to do more running than whites, who, if they weren't involved in chasing blacks, had time to play in water. But it's illogical to apply the labels BLACK and WHITE to humans because members of the species are either very pale brown (or a shade of pink if the skin has been exposed to the sun), very dark brown or some shade inbetween (interestingly: 'when a child is born into this world it has no concept of the tone of skin it's living in') – although fire, and decay, can make human bodies become the same shade of black...]

'The names Negroid and Negro, from Latin *niger*, "black," refer to the dark skin pigmentation, which results from a relatively high concentration of the pigment melanin, present in all human skin.'] Black skin may be healthier than white, according to an A[US]n researcher... be[cause]... melanin, might help fight off infectious organisms... During the Vietnam War, American soldiers from a variety of racial backgrounds were sent into the Mekong Delta. White soldiers were three times more likely to contract "jungle sores," a skin disease caused by the bug *Streptococcus pyogenes*, than their black comrades... No one knows precisely why skin colour varies. A popular theory is that the extra melanin in darker skin protects against cancer and sunburn in hot climates. But some parts of the body which are hardly ever exposed to sunlight, such as the genitals, throat and nasal passages, are packed with melanin cells. And some animals, such as gorillas, have dark skin even though they are covered in fur and live in shady forests. Furthermore, studies have shown that melanin does not protect well against UVB rays. The theory that dark skin might be more than a sunscreen arises from observations of insects, which are known to use melanin to defend themselves against infection... Mammalian melanin is contained inside bubble-like capsules called melanosomes. Larger, more numerous melanosomes make for darker skin... [The] Sydney biologist... believes melanosomes... act like lysosomes, the "bubbles" within large white blood cells which entrap and kill invading organisms... ["The AUSn's] hypothesis... solves a lot of problems with... other theories,"... said... an evolutionary ecologist from the French scientific research centre, CNRS... [Speaking of other theories, near Jasper, Texas,] is an armed... "Christian Identity"... commune – Mount Enterprise – where [a radical reverend]... teaches... 100 followers... [that] Aryans are God's chosen, while Jews are "Satan's offspring" and blacks are "mud people."

...Recently, one of America's biggest militia training camps, Camp Pulwell, was set up at Double Bayou, south of Jasper[, Texas, where a member of the]... Ku Klux Klan... [-] a private social club... [formed in the US 'Bible belt' during 1865 by several] veterans of the Confederate Army... [-] taught guerrilla warfare... until[being] jailed for murder. ['Although originally intended to defend the southern way of life against northern attempts to change it, the KKK rapidly became devoted to keeping the Black population from attaining equality, and adopted terrorism and murder as a means to that end. The original Klan was outlawed by Congress in 1871'. 'The head of the Klan was called the Grand Wizard while each member was called a Ghoul. Klan activities included riding by night on horses with muffled hoofs, wearing white robes and masks. In 1867 the Grand Wizard was the famous Confederate cavalry commander, Gen. N. B. Forrest, who gave the Klan an elaborate organization and control. Lawless local groups, however, often committed violent acts which did not have the sanction of headquarters, and Forrest resigned and ordered the Klan disbanded in 1869. In the wake of the 1954 Supreme Court decision outlawing segregation in the schools, attempts were made to revive the Klan, but instead several splinter groups appeared']...

The nights fall hot and humid on the Texas Bayou in summer... The scent of pine trees lingers through the dusk and into the darkness, lit by a big Texas moon. Bright enough to see the colour of a [person's] skin at a distance. It was no different the night James Byrd went to two appointments: a bridal shower for a niece and a friend's anniversary party on the eastern side of Jasper, a timber and bass-fishing town... Everyone in Jasper knew James Byrd[, who]... had shuffled in and out of prison for petty offences... Even his own family knew Byrd was not a great success... His luck was changing though. [Byrd had] found a place of his own, and... was a trumpeter and pianist[. Byrd actually] played at both gatherings... Byrd had no car and always walked home... [S]ome time around 2.30 am, a truck painted with grey primer stopped for him. Two of the three [white guys] in the truck were from Jasper, the third from Sulphur Springs to the north. One of the[m had been]... sent to boot camp for burglary in 1994, progressing to prison[, and]... the Klan... after failing a restitution programme... [Another had been] jailed for burglary but[was] paroled last year.

...A sheriff... knew pretty quickly that the accident... [being] investigated was no hit-and-run – especially after a cigarette lighter with three interlocking Ks was found along the bloody trail... Byrd... [had been] chained to the back of [the] pickup truck... and his body ripped to pieces as [it] was dragged for 5km... [An] unemployed labourer, is the first of three... [people] charged with the crime to stand trial... [The prosecutor said the] 24-year-old... was an angry racist who... sports a tattoo showing a black [guy] being hanged from a tree... [and] wanted to form a hate group and "needed to do something dramatic in order to gain, in their warped world, respect for his newly formed gang... After they tore... his body to pieces, they dropped him right in front of a church and cemetery to show their defiance of God... [and] everything that most people in this country stand for." ...The jurors... – ...11 whites and one black... [-] were given photos of Byrd's battered remains, which... were missing the right arm, neck and head... [They] will decide today whether... [the 24-year-old goes back] to prison for life or dies by lethal injection... The defence did not dispute that [its client] was involved in the murder but said the state had not proved kidnapping. Under Texas law, an additional felony must be committed in conjunction with a killing for a capital murder conviction... [The defendant] pleaded not guilty but was convicted on the basis of circumstantial evidence – much of it his own writing – that showed both his racist beliefs and his links to the crime... [The defence attorney blamed his client's] prejudice on a bad experience while in prison... from 1995 to 1997... Journalists have besieged [the defendant's father], a widower retired from a plywood mill who [came] to court in a wheelchair, carrying a bottle of oxygen to cope with his emphysema... "It hurts me deeply," the... father... wrote in an apology to... Byrd's... family, "that a boy I raised and considered to be the most loved boy I knew could find it in himself to take a life... That ain't the boy I knew,"... His son had grown up around black children, [the father]... had good friends who were black[and also has] two black goddaughters... The murder shocked [USers] for both its brutality and its overtones of the racist lynchings of a past era... [A forensic] pathologist... said... Byrd... fought to survive while... chained by his ankles... "[Byrd] was attempting to keep his head off the pavement... [and] would have been

very tired... trying to do a lot of things, trying to keep the pain from being so severe,”... Byrd’s head and right arm and shoulder were torn from his torso when [it] struck a concrete drainage culvet. “It’s my opinion that [Byrd] was alive up to that point.”

...As the verdict was announced... a middle-aged black [gal] ran from... the... courthouse, thrust a clenched fist into the air and exclaimed: “Guilty...! This white [guy] is going to pay... Can you believe it? Oh Lord, First degree!” The TV cameras caught the gleeful, exhilarated note of her surprise. [The gal] seemed stunned that [a] tattooed thug, former jailbird and committed racist... had actually been convicted of dragging... James Byrd... to his death... Among the black members of her audience, the sense of shared joy was palpable, almost as if they were sharing the grand prize in a lottery. To the rest of America – and here you should think White America – the verdict had always been a stone cold certainty... Forty years ago... the result almost certainly would have been different. Few white [people] paid the price in those days of burning crosses and bombed churches. But not today, not after all the progress this country has made to repudiate its past. Or so white wisdom goes.

...America’s Original Sin, that’s the way founding father James Madison described his new-born nation’s deal with the devil, the compromise reached by abolitionists and Slave Staters that determined just what a black man’s existence was worth. [2/3]rds of his master’s, as it happens, for that was how census takers were instructed to count blacks until the Civil War, when the debts accruing from that inequitable bargain had to be redeemed in blood... “I’d never fight with a Negro by my side. Rather I should die a thousand times,”... wrote... Mississippi[s]... senior Democrat... a former Grand Kleagle of the K[KK], who has opposed every black nominee to the Supreme Court. No one is calling for Byrd’s resignation...

With prayers and chanting, [a]veteran American civil rights leader... led off a highly charged two-day march from the Mississippi town of Kokomo on Saturday to demand the reopening of an investigation into the death of a local teenager. Raynard Johnson, aged 17, had been found hanging from a pecan tree in the front garden of his home on the evening of June 16, leaving an image that brought to the surface all the old fears and tensions of the segregationist South. The police and medical authorities said that Raynard’s death was suicide. But his distressed family and local people firmly believe otherwise. They maintain that... [the] exemplary pupil, easy socialiser and willing worker... was lynched in a racist killing for consorting with local white girls. If that could be proved, it would be the first documented lynching in Mississippi for 40 years.

...One of the vanished traditions of America’s Deep South is the “blackfruit tree,” which sounds innocent enough until you realise it was, quite literally, a killing joke... That euphemism for a lynching... is not heard much these days, not now that the Klan is but a withered and whittled relic of its racist past. The U[S] still has a long way to go before Martin Luther King’s dream is realised: one need only visit the educational ghetto of an inner-city school to see the next generation of second-class citizens in the making. But lynchings, the last of which occurred in 1964, are now a memory. These days, when [people wearing] sheets burn a cross, they generally need the police to protect them from far larger mobs of protesters. In Dixie, a redneck with a rope just cannot get any respect. Except, perhaps, from... a... [black reverend] who claims to believe that night riders are still at large in the tiny town of Kokomo... Two weeks after the teenage star of his high school football team was laid to rest, [the reverend] marched through Kokomo with 5000 protesters to demand that the “real killers” be found and punished... Yet, [there]... was no physical evidence of a struggle... nor any sign that Johnson’s wrists had been bound. The circumstantial case was equally persuasive. The tree is but four short steps from the Johnson’s front door and in plain view of neighbouring homes. It was a hot night, plenty of people were on their porches and a group of children played at the end of the quiet street... For the past month the furore has refused to subside. History certainly gives America’s blacks every reason for paranoia, especially in the South, where pictures of lynchings were once sold as postcards with wry captions like “Down in Old Kentucky.” So many blackfruit postcards were in circulation that the northerners who ran the US Post Office introduced the very first federal prohibition against racial slurs in 1908 by banning them... But to... [the reverend – who] took time off from campaigning for [the]Democratic presidential candidate... [-] the past remains very much alive. Or perhaps, with the polls showing that black voters are less likely to vote than ever before, the past is merely useful. Either way, some very curious decisions are being made regarding Johnson’s death. When the FBI requested an opportunity to examine [hi]s computer in the hope of finding a suicide note, his parents turned them down with [the reverend]’s full support: The Feds might tamper with the hard drive, even pen a bogus suicide note to cover up for the “real”... killers... Why [the reverend] should be so keen to ignore the evidence, to fan such suspicion, is a question whose answer is known only to him and his conscience. But perhaps... the cat... [was] let... out of the bag when [the presidential candidate] hailed his fellow Democrat as a [perso]n who would “play a vital role in my Administration.” What could be more vital for a presidential underdog than getting out the vote – even if it means sowing the seeds of racial paranoia and fear?

...“We have justice in Texas,”... the... Nation of Islam firebrand... said... on the day the verdict came down in Jasper... “Now we await justice in New York.” New York? Surely not the enlightened Big Apple, the town that sent so many white volunteers to stand beside Martin Luther King when [the civil rights leader] confronted Dixie’s police dogs and fire hoses. If there is one town where racist outrages are unthinkable, it would seem to be the liberal and tolerant New York. And yet... it [is] difficult to dispute that [the firebrand has] a point. In Jasper, the enemy was one of the usual suspects: the redneck rowdies from Central Casting with their pickups, gun racks and Confederate flags. In New York, the perceived enemy wears a different face – one crowned by the flat blue cap and silver shield of the New York Police Department. Over the past year... police shooting blacks have become an almost weekly event. Four black Eagle scouts are pulled over for no apparent reason and cops open fire when the anxious young driver allows his van to roll slowly backwards. Another black... makes the mistake of asking a cop for directions and is rewarded with[a] beating that puts him in a coma for two weeks and leaves him blind in one eye. A black undercover cop is mistaken for a subway mugger and shot without warning by a white officer, who then stands over the bleeding body and fires another bullet execution-style into his colleague’s back... The latest crop of incidents began when an unarmed Ghanaian migrant was shot 19 times by four undercover detectives who were combing a Bronx neighbourhood for a serial rapist... The... entirely innocent [Ghanian’s]... one mistake was to reach for... identification in his wallet. The jumpy officers mistook the black shape for a gun and squeezed off a total of 41 shots in less than four seconds. The very next week black anger received another boost when a white Harlem cop was exonerated of causing the death of a black teenager, whom [the cop] suspected of having bought a... bag of marijuana from a kerbside pusher. Unable to catch up with the youth’s bicycle, the cop threw a flashlight that knocked the kid from the saddle and fractured his skull. Finally, on the night before justice was done in Jasper, a carload of cops responded to a domestic dispute and gunned down the angry husband as [the black] pulled a mobile phone from his back pocket... [● Last Friday] was... the first day of New York City’s crackdown on discriminating cabbies... The clampdown is in response to a complaint by [a black] actor... after several taxis drove past him.[The] Mayor... said that as part of Operation Refusal, undercover police and taxi commission inspectors who catch drivers bypassing blacks would be issu[ing citations. The operation’s]... first hours... netted six cabbies... [Their licences could be] suspended and their cabs temporarily confiscated.

...angry protesters marched down Manhattan’s Fifth Avenue yesterday, denouncing the acquittal of four white police officers in the shooting death of an unarmed African immigrant. Carrying signs that read... “KKK Cops,” and shouting “Whose Streets? Our Streets,” about 2000 people of all races and ages paraded... a raucous display of dissatisfaction over the verdict a day earlier. Demonstrators blocked traffic in the heart of the city’s posh retail district and shouted epithets at police... who lined the route... Defence lawyers argued the... officers of the N[YPD]’s elite Street Crime Unit... shot in self-defence... The Fifth Avenue protest was the third of the day against the verdict in the death of... Amadou Diallo, which had already inflamed racial tensions in the city... [Earlier] in Harlem... some demonstrators cried “Murderers, murderers” and “Shoot the police.”

...A generation’s worth of obfuscations, official coverups, racial prejudice and denial will weigh on a courtroom in Birmingham, Alabama, today as one of four K[KK]... members accused of carrying out a notorious church bombing at the height of the civil rights struggle in 1963 comes to trial at last... [The suspect], now aged 62, is accused of the murder of four black girls... The bombing, which left 20 others injured, was the single most violent act committed against the burgeoning civil rights movement in the American South. The outraged public reaction to the deaths of... Cynthia

Wesley, Carole Robertson, Addie Mae Collins and Denise McNair, aged 11 to 14... was a major factor in hastening the passage of legislation outlawing segregation and recognising the full citizenship rights of African Americans. When it came to prosecuting the perpetrators, however, the wheels of justice moved with painful slowness... The F[B]I moved in, fingering [the suspect] and three other Klan[members] in a report filed 20 months after the bombing, but its findings were buried and the case was officially closed without a single charge being filed. (Much later, a Justice Department report found that the prosecutions were suppressed on the orders of FBI chief J. Edgar Hoover himself). Changing political winds in Alabama encouraged the state to reopen the case in the 1970s, leading to the successful prosecution of Robert Chambliss... Chambliss was sentenced to life in prison in 1977 after his own niece testified against him, and... later died behind bars. For many years it seemed the other three would get off scot-free... But a meeting between local black church ministers and the new FBI station chief in Birmingham in 1993 led to the discovery of long-buried evidence including incriminating tape-recordings of... [the suspect. While Birmingham's 70%] black majority has welcomed [the latest] trial as a necessary act of atonement for the past, the white, right-wing talk show hosts who dominate the local airwaves have chosen either to ignore it or to echo the complaints of [the suspect's lawyers that their client] is being picked on as an easy, politically convenient target.

...Black students at the University of Iowa last month began receiving e-mails with the most vile and vicious Klan-style taunts. These soon escalated to death threats and physical attacks... And as the e-mails continued their poisonous work, a black... opened his dormitory door one morning to find a splattered... note... that... suggested... black people – the term used was more offensive – had no business taking a living from white folks' mouths. The campus, which prides itself for equality, was outraged. So were politicians and church leaders. Police assembled a task force and the university's president led a candlelight vigil against "white hate" in front of 3000 students. The media agonised over what one paper termed the "ugly, racist eruption." Rewards were offered and "diversity consultants" summoned... So there was relief last week when the college community learned the culprit had finally been caught. Relief and embarrassment, because the alleged author of the racist notes... is a second-year dental student who was among the first to console victims. What's more, [the alleged author] is black. Suddenly, the earlier pronouncement by [the gal] college president... that "white [guys] are the root of most evil" began to seem premature. Her remark also showed an ignorance of the many bogus hate crimes that have taken place across the US over the past year of so... Why this should have come about is a matter of debate since the idea of minorities creating victims of themselves does not mesh with the view that there are enough genuine pale-skinned predators to go around. But what if there aren't? What if the death of the black hitchhiker dragged behind a pickup truck in Texas... [was just an] isolated incident...? What if America really has cast off all but remnants of its racist past? Where do the diversity consultants and racial separatists go then?

...In what prosecutors describe as rejection of the South's racist past, a jury... consist[ing] of 11 whites and one Hispanic... yesterday found [a white supremacist named] Lawrence... aged 32... guilty... of capital murder in the killing of James Byrd... [and sentenced him] to death by injection... His prison buddy... was found guilty in February and sentenced to die, while [a third suspect] is to be tried next month.

...The British Government was embroiled in controversy yesterday because it blocked publication of leaked extracts of a report said to accuse Britain's largest police force of racism. [The]Home Secretary... won a High Court injunction stopping... publi[cation of an]... independent inquiry into the way... the Metropolitan Police... investigated the... murder of a black teenager... Stephen Lawrence, [who was] stabbed to death by a gang of white[s while] waiting for a bus in Eltham... six years ago. No one has been convicted for the killing. Five [youths] were arrested, but three were acquitted and the cases of the other two never came to trial. The... inquiry was asked to find out why the police investigation was so badly handled.

...[the] Interior Minister... was unrepentant... yesterday after trying and failing to gag a leak of an explosive report... The career of... the high-flying chief of London's police, could be shattered when the report... is officially released tomorrow... [It] describes racism in the London police as pernicious and institutionalised. It recommends that the police should no longer be exempt from the Race Relations Act... The case of Stephen Lawrence... has severely damaged public confidence in the police among ethnic minorities. Because of police bungling, nobody has been successfully prosecuted for his murder, despite evidence pointing to the likely killers, who have all proclaimed their innocence. In the House of Commons... [the] Home Secretary... was... accused... of "an unjustified and autocratic course of action" which had led to a humiliating climbdown... [A Tory] dismissed as ludicrous... [the Home Secretary's explanation that the injunction was meant] to protect Parliament as well as the feelings of those involved, and accused him of a major error of judgment... [In reply the Home Secretary] told legislators the circumstances were exceptional and... prior publication of a judicial inquiry report was not remotely in the public interest[, then] promised an inquiry into the leak and declared: "The claims that the freedom of the press has been challenged by this injunction are absurd." But newspaper editorials... were scathing and accused the Government of hypocrisy... The tabloid *Sun*... denounced [it]... under the headline: "Is this the most ARROGANT cabinet in history?"

...Crime suspects in Britain face being tried twice for the same offence if important new evidence is discovered. The proposed law change is part of a radical overhaul of race relations in the wake of a damning report criticising London police for a bungled investigation into the murder of... Stephen Lawrence... The raft of measures... include... a proposal to extend current race legislation to all public sector bodies, including police forces, enabling officers to be prosecuted individually for racism[, plus]... measures to boost relations between the police and ethnic minorit[ies]...

Scotland yard officers revealed that police throughout Britain were liaising over their efforts to protect ethnic minority areas after the second [bomb] attack in London in a week. Seven people were injured in the Brick Lane attack, which followed a bomb in Brixton a week earlier that wounded 39 people. A number of far right-wing organisations have claimed responsibility... One of the groups claiming responsibility, the White Wolves, sent death threats to a number of black... and... Asian... organisations several days before the Brixton bombing... The group has published a pamphlet explaining how to manufacture bombs, and advocated attacks on ethnic minority targets to provoke a "race war."

...at the weekend... [a] young British engineer who launched a two-week nailbombing campaign against minority groups in London... received life sentences for each of... three murders and three further life terms for each of the bombings... A baby boy with a nail lodged in his skull, a young bride dead along with her unborn child, amputated limbs and horrific injuries from flying glass are among the legacies of his hatred.

The British *Daily Mail* newspaper is the envy of tabloid rivals after taking an audacious stand to demand justice for a black youth stabbed to death in an alleged racist attack. "Murderers," the *Mail* declared on its front page on Friday above the photographs of five young white [guys] it accused of killing Stephen Lawrence despite failed criminal actions against them. The newspaper invited the [accused] to sue if they dared.

...Pacific Island police officers do not speak out about racism in N[Z]'s force for fear of losing their jobs, says a Samoan inspector who is considering quitting... after losing another promotion... The post... [of] cultural adviser... at police national headquarters... went to a senior sergeant two years his junior, leading the career officer of 25 years to question the integrity of a selection process which expected him to answer questions in Maori. "...They did not specify that they wanted a Maori cultural affairs adviser." ...Many Pacific Islanders had left the police force because of racist attitudes... [which were] so subtle that "the administration is probably not even aware that it is being practised... I've had junior staff coming to me as recently as Friday about being called racist names. I've had commissioned officers come and tell me what happens inside their... meetings. I've become a dumping ground for... these guys [who] don't know where else to go." [By the way, if you *don't know where else to go* these holidays, consider Samoa – a place that will 'turn you into a kid again. You will be compelled to find a fallen coconut, or two, or three, and find yourself standing within a spit of one of the Alofaaga blowholes on the southern coast of Savai'i. Throw the coconut in when a wave is about to hit the rocks, and watch it shoot a hundred feet into the sky atop a huge, roaring jet of water. The pillars of water remind you of the inside of a piano and the keys that dance as they are struck. Savai'i is Samoa's island of lore, said to be the home of two legendary fishers – Maui, who hooked NZ, and Lata, who fished up Tonga.']

...Samoans and Tongans would get along much better if they knew they originated from the same place, an anthropologist has said... "It will take away a lot of the ignorance that they have of... [seeing] each other as being completely different,"... [B]oth peoples came from Manua, a group of islands in American Samoa... [T]heir collective leader was the holder of the Tuimānu'a title. Generations later a leader of the southern islands called the Tuitonga refused to pay tribute to the Tuimānu'a and part of the kingdom became independent. Eventually the southern islands and their people came to call themselves and to be known by their neighbours as Tonga – which means islands and people to the south... "When the Tongans later broke out on a conquering spree, they took over neighbouring islands including all of the Samoan islands but not Manua[, which]... was still considered by the Tongans as the sacred centre,"... Links between the Samoan and Tongan islands continued even after the Tongans were driven from Samoa... [While on the topic of prejudice, a white] Blenheim labourer... aged 23... who... swore at... two Indian... [gals,] spat on the ground in front of them... and called them overstayes... has been... fined \$400, to be paid to ...his [victims]...

An attack on a Somali refugee family... was a "day of shame for Christchurch," says [a] local MP. Three [people] smashed windows in the... family home early yesterday... [Last month] youths threw bottles through windows and threatened the family.

...When Somalis get beaten up by [Pakeha] racists, there is no shortage of public outrage. But anti-[Pakeha] behaviour such as the widespread bullying practised by gangs of Maori girls in schools is somehow regarded as fair enough, because it is only payback for all those years of "colonialisation". I'll never forget the disgraceful way the "kill a [Pakeha]" statement on the Auckland University campus was excused,[then] swept under the carpet because it had been uttered on a marae. An awful lot of other people won't forget, either. The statement should have been punished, with maximum publicity, to reassure everyone that anti-racism laws are enforced even-handedly. The context in which it was uttered, and approved by the audience, gave it far greater significance than if it had been shouted, for instance, at my supermarket checkout counter... There is always a... catalogue of ignorant prejudices against people... [seen] as "different"... by... normal society... I thought of this a few days ago... in a supermarket, when I saw a Samoan... lifting a small girl by her hair. The child... had committed some crime or other. The angry... [Samoan] proceeded to drag her behind her... [while heading] for the door. The throng of mostly [Pakeha] people watched all this with varying degrees of disapproval. No one did anything, but their unspoken race-oriented... stereotypes and prejudices were being confirmed as I watched.

...A Somali was kicked and abused by a group of... Maoris – [six gals and a guy – in the Christchurch]... suburb of New Brighton [on]Wednesday... the third such incident in the city in five days... "A [Pakeha] girl tried to intervene but they took no notice [before also abusing] her,"... The Somali[who]... had a terrible life in his homeland, living with war... asked... why they were doing this to him... "...It is a good land here and a good life. But there is a sickness in [your society," the Somali] said... The Waimakariri MP... said yesterday that such incidents of racial violence were a shameful reflection on N[Z. The MP] was investigating law changes so that race-hate crimes carried their own harsh penalties... "Doing so would send a strong message that such behaviour is not tolerated by society at large. Currently the charge used is either assault or disorderly assembly." ...Members of [the city's white] Road Knights gang have appeared in court 50 times this year, and 23 have been sent to prison... One Road Knight associate was arrested... [for fighting with] Polynesians at the city's court buildings... minutes after [it] had appeared in court charged with fighting.

...skinheads ripped off a... Pakistani[s]... traditional Muslim headwear... then ran off with her baby in Christchurch on Saturday... The[y]... pushed the... seven-month-old... in her pram... around the Bishopdale mall, letting it free-wheel out of control... The... police yesterday described [the] attack as deplorable. "It was a straight-out racist-motivated attack on a defenceless young mother and her baby. Such cowardly behaviour is just not acceptable,"... After the attack, the three youths watched the... English-born Pakistani, who moved to N[Z earlier this year]... return to her car and followed her home. "They were driving very close behind me and I was scared they would hit my bumper... Last year, some racist comments were made to me, but nothing like this. It never happened in Britain, where there are a lot of our community. There are not many of us out here."

...A crowd of about 300 did nothing yesterday as a group of... about 10... skinheads abused and taunted a black English[person] and his family at the Christchurch beach suburb of Scarborough. The family's regular Sunday walk along the promenade in the late afternoon ended abruptly when the... [skinheads called the] bank officer of Nigerian origin... a "nigger." They then punched him, hit him with a bottle and made Nazi salutes... [P]olice were appalled at the lack of response from the crowd. "The only people who helped were a Polynesian [guy and a gal who was] an off-duty police[officer]." The victim... who has been in N[Z] since 1992... would normally have ignored being abused as a "nigger" but... [made] a stand for his... 5-year-old daughter... and 2-year-old son... "I have learned to live with this but I[had] hoped it would not happen to my children..."

...The Race Relations Conciliator has warned of the danger of apathy in fighting racism after the alleged attack by skinheads... although [the conciliator] would not comment on the case as it was before the court... [F]ear might have stopped people from helping the... [Nigerian said the conciliator, but the conciliator] was "most concerned that maybe people didn't care." It was easy to intellectualise about race relations and for people to say they respected other races, but it was important people just did not stand by when racism occurred... "Perhaps a new generation... needs to be reminded that evil can flourish where the good do not speak out." ...Two [of the skinheads] appeared in court yesterday... [The police] opposed bail for both... saying each was already on bail for unrelated alleged offences. After seeing a summary of facts... [the judge remanded one of the skinheads] in custody for another appearance tomorrow. [The other skinhead] was given conditional bail to appear again on Monday. Four [more skinheads] facing the same charge... [of] disorderly assembly... will[also] appear in court tomorrow... [On a positive note, the Nigerian's family] have been overwhelmed with messages of support. "It has been lovely that so many people care," the victim's wife... said yesterday... The family have received letters, cards, flowers and offers of outings. [The victim], who suffered from shock after the attack, returned to work... yesterday... "[Our daughter also] wanted everything to be normal again and wanted to go to school on Monday... [but] doesn't want to go back to the beach again."

...A DARK cloud of racism has taken much of the shine out of Canterbury's boast... We are ashamed, guilty and full of remorse[, which is why bouquets] of flowers are piling up outside the... house... of... a [Nigerian]... assaulted... at a local beach... [W]e can't understand how... some 300 onlookers... did nothing... Perhaps it was fear of retribution from gang members, or perhaps the reasons... [are] more frightening. A century ago, Russian physiologist and Nobel Prize winner Ivan Pavlov discovered our "conditioned" or acquired reflexes... Pavlov's discovery has led to brain-washing and the menace of subliminal advertising. We may condemn it, but we cannot deny it... In certain situations, such as being in a crowd, we can easily become anonymous and lose all sense of responsibility. The Nazis used this technique to capture the most intelligent people in the world.

...[9 skinheads are] arrested after an attack on Fijians at a petrol station... The list of... racist incidents in Christchurch... makes an awful litany... [for] a city that prides itself on being gentler and better behaved than the rest of... [N]Z... – especially Auckland... [D]oes the city have to confront... [an] awkward reality – that they are the surface of an ugly vein that runs from the heart of the respectable Ch[-ch character? A]... sociologist... who has looked at... supremacist activities in N[Z] over the past year, concluded that while [Pakeha] violence against "niggers" might be an aberration in most of the country, it has become intolerably high in South Island towns such as Ch[-]ch, Timaru and Invercargill. "Having lived in Ch[-]ch most of my life, I'm aware there is a lot of covert racism, and I think it is getting worse," said [the person] who runs marae programmes for unemployed... [people]. One explanation is that [Pakeha] kids get nasty down south because they can get away with it. "[Pakeha] kids on the rampage on a beach or in a suburban mall know they are not likely to encounter a Polynesian gang around the corner." [Ch-ch is overwhelmingly white]. In the 1996 census 86.2[%]... described themselves as European, compared with the national average of 74.8[%]. Just 7.2[%] of the city is Maori... Pacific Islanders make up 2[%]... After an influx in the mid-90s, Asians are Ch[-]ch's only ethnic group where the proportion – 4.2[%] – is

close to the national level. As well as being [predominantly white], the Garden City is also pretty poor... second only to Dunedin for poverty. [60%] of people over 15 earn \$20,000 or less, and one in five live on benefits. Some say those statistics explain racist violence. "It's a poor-[Pakeha]-trash reaction," said... [the] Ngai Tahu leader... who used to live in Ch[-]ch. "People who see themselves pushed into the same social conditions as Maori resent them... see themselves competing for jobs[, etc]..." More often, Ch[-]ch racism was "inadvertent... Often people down here literally don't know they are being racist... There is a level of hostility that is tolerated in the South Island, and that sort of intellectual racism frees up people in a way for the sort of attacks we saw at the weekend... We can tut-tut about bad behaviour, but when it's okay to hold ignorant opinions and okay to publicise them, it's very difficult to counteract." A leader of the city's 2500-strong Korean community... [also] believes the main problem is ignorance... The city council and the police have developed a strategy to deal with the skinhead problem over the past 18 months. When police investigated the skinheads, they found some surprising facts. While skinheads circulated white supremacist literature, some of the police line-ups found Maori and other Polynesians in their groups. To Ch[-]ch's Mayor... this suggests that a group mentality rather than racist beliefs is holding them together... "But really I don't know... Normally you can put yourself inside someone's head and... see what makes them act the way they do. But in this situation I... just can't see how people can act like that." ...[a Ch-ch] Labour MP... wants community leaders to support a public vigil... "In Germany and other countries where racial attacks have happened, leaders have organised public vigils in solidarity with victims,"...

A Havelock North family were the victims of an apparent racial attack on Monday night when an explosive device blew a hole in their front door. A 19-year-old youth has been arrested... The last straw for the families... was when one family member... was... dragged... by her hair into a garage... [by] three Maori teenage girls... where they punched her repeatedly in the stomach and back and tried to strangle her... [The] 20-year-old... was taken to hospital with bruising and a cut below her eye. The three... aged 13 and 16... are being dealt with by the police youth aid section... The Lower Hutt coordinator of the Refugee and Migrant Service... said that when asked... why they had done it, [the girls] said the Iraqis laughed and spoke too loudly... The refugees, who asked not to be named, said they were having no problems in their new neighbourhood but asked that the area not be identified.

In related news,] the Council of Christians and Jews and the Council of Christians and Muslims have swung behind an anti-racism rally organised by the Race Relations Office. The Unity of Diversity Rally, [will] be held on Wednesday, World Human Rights Day...

The Auckland... Race Relations Office... said[last night] there was no way to measure whether Nazi-type groups were on the rise. "But God forbid that they are." ...[the office was commenting on an article that alleged w]hite supremacist gangs striving for... Hitler's vision of Aryan domination are spreading their web and claiming support across the country. [The article said] Auckland is emerging as a key centre for Nazi sympathisers, despite common perceptions that Christchurch is the country's hot-bed for racism... Police intelligence sources are alarmed by some of the gangs' literature and activities, and worried by the links some have... At least one organisation, based in West Auckland, is establishing links with supporters in other main centres and recruiting from a racist underground... [The] group, called Unit 88, aligns itself with survivalist extremists in the U[S]... With a structure based on the German dictator's feared SS, group members are expected to swear an oath and be ready to bear arms to protect their race. Unit 88 was founded in Wellington but recently moved its headquarters to a Te Atatu warehouse... Police sources say the group has affiliations with the Fascist Union and several gangs, including a whites-only South Auckland motorcycle gang whose pad features portraits of Hitler and other leaders of the Third Reich... Authorities are also noticing more skinhead gangs springing up in the city's schools. The increase in anti-social activity is going hand-in-hand with a rise in "white power" material on the Internet, which contains more than 100 objectionable sites.

...The number of... sites inciting racial... hatred has doubled in a... year, to... 250, according to the... New York-based... Anti-defamation League.

...The Race Relations Conciliator is threatening to use the power of the courts... [via] anti-racism provisions in the Human Rights Act... to halt the covert activities of... Unit 88... The... [conciliator] is alarmed at the crudely produced literature the group disseminates... [using] press machines at its headquarters... "This is racism in its most blatant form. We should all be reminded what happened in Europe when this kind of philosophy was pursued in a large-scale, organised way. Let no society stand by and tolerate even the hint of a similar occurrence." Unit 88's landlord... said yesterday that the gang... moved in several months ago. "They rented the place and said they were a club. They have caused no trouble to anyone." ...[the landlord] had no problem with having such a gang at his warehouse. "It's none of my business [what they do]. It is nobody's business. They are no worse than the other gangs around." Meanwhile, N[Z]'s white supremacist gangs are believed to be hooking into the Internet to keep in touch with... [the] four international skinhead groups – High Resistance, Nordland, Blood and Honour and Hammerskins... Gang members were usually middle-class and lower-class young [Pakeha guys]... "In any country there will always be a group of people who see skinhead as attractive... It's an image for social inadequates... The kids are usually smashed on cheap cider and amphetamines," said... London-based Searchlight[, an]... international anti-fascist organisation... [which] received regular reports about skinhead activities in A[US] but only occasionally about N[Z].

...Unit 88... is... repackaging past evils for the consumption of modern-day society... Symbolism is everything when you are a Nazi... Take the name, for example... After the war, when anything linked to the Third Reich was banned or frowned upon, Nazis began using the figure "88" instead of saying "Heil Hitler," H being the eighth letter of the alphabet. Like other skinhead groups around the world, Unit 88 is riding on the back of such history. And modern technology is making their task easier. The Internet has emerged as one of the best tools for spreading the Nazi word... In the old days, they relied on crude leaflets... [or] "oi" music... for the spread of their propaganda. Now extensive information about the glories of Nazis' past is available... at the touch of a button... Southern Cross Hammerskin, an A[US]n-based gang, runs one... website... "Hammerskin is the fastest-growing white power movement in the world," says the... skinsite... "We have loyal members in every country... where our Northern European forefathers have staked their claim. We promote white pride, white loyalty, white heritage and white power. It is our birth right." Unit 88, which is believed to be connected to the group Blood and Honour, uses the Internet to fill the pages of its magazines and leaflets. It reproduces quotes summing up the group's aims: "If you worship your enemy, you will be defeated. If you adopt your enemy's religion, you will be enslaved. If you breed with your enemy, you will be destroyed... We have no time for armchair racists or pseudo-Nazis or anyone who would bring our sacred beliefs into disrepute. We see national socialism as the only hope to secure a worthwhile future for our race. For Blood and Honour."

...Before a... swastika flag, a dark force gathers... [as 50 youths] induct new members... Heads shaved, they make the Nazi salute... [T]his is not a scene from Europe where extreme-right political groups are sprouting again: this is West Auckland... Meeting weekly... members vow to be Aryan warriors, dedicated to... Hitler's vision of white domination. "We should prepare ourselves for an inevitable Government breakdown..." says... the group's leaders. "We have a youth division. We want to teach them to keep their blood pure, to keep ancestral lines pure. This is not racist – this is purist." ...A member of the Fascist Union... [- who, i]n 1970... formed... the N[Z] National Socialist Party and advocated the establishment of a private army of stormtroopers[, then 7]... years later... was convicted on a charge of publishing a pamphlet with intent to incite ill-will against Jews after a test case brought under the Race Relations Act[, and]... earlier served an 18-month jail sentence... for setting fire to an Auckland synagogue... [-] said the groups were trying to turn youths away from drugs and crime... [T]he groups dissociated themselves from incidents such as the attacks in Christchurch, but they were not totally against violence. "If you want to mess with us, we will hand it back... We have been labelled as dangerous, violent, lunatics. If being free-thinking people with our own ideals and beliefs, who look after our own folk and meet any attack with equal measures makes us those things, so be it... We may not change the opinion of the masses, but we will seek the enlightened few."

...It is understood that gangs including Black Power, the Mongrel Mob and the Headhunters... have reacted with anger to the discovery of a white-power supremacist movement on their turf... and have promised to mete out street justice... to put a stop to any race-hate violence from Unit 88. "We are not going to tolerate these guys getting up to Christchurch antics," said a source... "I would not be surprised if somebody went... to visit [their warehouse]," said a member of the Henderson police.

...A neo-Nazi gang has abandoned its West Auckland headquarters... leaving remnants of its... beliefs[... such as]... SS... symbols... and... a K[KK]-style mask... [which says:] white pride world wide... Visits from rival gangs convinced Unit 88 to leave, but the... leader of the Fascist Union and mentor of the gang... has a dire warning about the danger they still pose. "They are going to start a war if they keep doing what they are doing,"... [The mentor,] who had intended teaching... the young [guys] involved with Unit 88... his own trade of printing... blamed rival gangs for an attack on one of his properties in Panmure. Doors were kicked in on a storage shed and printing machines were damaged following publicity about his involvement with the gang. It is understood Unit 88[members] dispersed... under cover of darkness on Wednesday and were given instructions to lie low and regroup in about a month... Waitakere police, said officers were trying to track down the leaders... "We just want to talk to them about what they are doing and what they intend to do and, obviously, difficulties they might be experiencing... from other gangs..."

...Criminal charges may result from the distribution of a Fascist Union leaflet in Christchurch last weekend... which depicted immigrants as rapists and child molesters. The Race Relations Conciliator... had spoken to police and would soon decide what action... [to take. U]nion members who had distributed the leaflet could be prosecuted either under the Films, Videos and Publications Classification Act or the Human Rights Act, which forbids incitement of racial disharmony. A conviction under the latter legislation could result in a fine of up to \$7000 or three months' imprisonment. [Incidentally, 'a born-again Christian minister is on a 2-week speaking tour of Auckland churches and schools. The 40-year-old from Oklahoma has been invited to NZ by Christian groups, to tell about his conversion. The minister once was an apostle of hate – an imperial wizard in the KKK, preaching his gospel of white supremacy on America's TV talk-show circuit. His message was all the more menacing, as the hulking Klansperson was a professional wrestling champion. Since turning his back on the klan, the minister's travelled the world denouncing the feared racist group and taunting it via the internet. "When key words on search engines bring up klan websites, they put up mine as well." The minister leaves next week to preach in AUS'...

'Outrage over the KKK setting up in AUS has prompted the NZ police national headquarters' threat assessment unit to contact their counterparts to make sure there is no danger of the race hate group extending its links across the Tasman. A Massey University specialist on racist groups said a few copycat KKK groups were operating in the South Island, but they were "not a threat and not linked with the Klan." While police tended to play down the presence of supremacist groups because they did not want to give them publicity, the professor said exposing the existence of the neo-Nazi group Unit 88 in Auckland had forced the group to close its operations. A Sydney resident has been expelled from the One Nation party after claiming to have set up KKK branches in NSW, Victoria and Queensland. The "Klavern" had a growing membership base of about 70 members, the "Exalted Cyclops" said, and was actively seeking recruits over the Internet. One of the American Klan's "imperial wizards" said on radio in the US yesterday that it would soon visit those branches.' ■ 'Police were last night to attend a meeting called by the "Taree KKK", inviting Taree residents on the NSW mid-north coast to stone an Aboriginal mission. A leaflet distributed around the town over the past week invited residents to a "rock-a-thon" at Purfleet, which houses about 300 Aborigines. The local superintendent, who is still trying to identify the "Taree KKK" leader, said the situation arose after Aboriginal youths threw rocks at passing cars at night.'

...*The white supremacist KKK has turned its attention to AUS* America's KKK, entering what its own propaganda describes as its sixth cycle, has burst out internationally with a sophisticated recruiting drive threatening a global assault on the non-Aryan world. Recovering from the battering it took in the aftermath of the 1960s civil rights crusade, the Klan has regrouped and is using the World Wide Web to pursue its ideal of white supremacy beyond its former boundaries of the American south. The revelation that at least two orders have, or are about to, set up branches in AUS follows similar electronic recruitment that has already seen the Klan become active in England, France and Spain. According to Klan-watchers in the US, the revival of white supremacy has accelerated with the end of the Cold War and its dangerous, but clear, certainties, and with the rapid globalisation of economies and societies. The language has not changed since the lynch mobs, although all Klan sites carry statements of peaceful activism. "The Imperial Klans of America are a legal and law-abiding organisation that will NOT tolerate illegal acts of any sort. If you commit an illegal act your membership will be suspended and you may be banished." But the Klan's agenda is chilling: drug testing for all welfare recipients, the death penalty for drug dealers, quarantine of all Aids carriers, no more immigration, ownership of US land and industry only for USers, end free trade, the end of affirmative action and banning gun control groups as unconstitutional. The strength of the Klans in the US is documented by Klanwatch. It lists 43 Klans, with more than 160 branches. A leading US analyst of the Institute for Research and Education on Human Rights, told the Klanwatch publication *Intelligence* that white supremacy had become a broad movement, picked up by mainstream Americans who see the US as a European civilisation under threat of racial swamping by "non-European peoples."

...*'Europe is looking on anxiously as Germany, after Austria, struggles to contain a rising wave of neo-Nazi violence directed against foreigners, asylum-seekers and Jewish sites.'* 'The number of neo-Nazis in Germany has climbed sharply, says a German Government report on the far-right. The *Bild* newspaper says the study found membership of far-right groups up 11% to 53,600, and those ready to commit violent crimes up 9% to 8200.'

...*'The electronic visitors' book of Sebnitz, a picturesque town nestling among pines near the Czech border, oozes hatred. "I want the Wall back," declares one entry. "Then the whole of East Germany should be carpet-bombed." Says another: "A Nazi town like Sebnitz must be burned to the ground. You have brought disgrace to Germany." The disgrace is the death of a 6-year-old boy named Joseph. Fifty of Sebnitz's youths, with 200 people impassively looking on, beat him because of his dark skin. They tortured him, poisoned him and tossed him into the town swimming pool. And then they marched to his mother's house shouting: "Seig Heil." But that is not what makes West Germans reach for their mental "Nuke the East" button. They are shocked by what happened next: nothing. Sebnitz closed ranks, the local police declared Joseph's lynching an accident, and prosecutors shelved the case. Only now, after three years and under the weight of damning evidence gathered by the boy's mother, have they been forced to admit that they lied.'*

...*'In the five states of the former East Germany which became part of the Federal Republic under reunification in 1990, ignorance and mistrust of foreigners became ingrained by a century of turbulence and totalitarianism: imperial rule, the Weimar Republic, Hitler and Communism. Then there is the easterners' lowly status in their own country. Far from being lauded as heroes for overthrowing the Communist dictatorship, East Germans are widely derided in the West as dimwits, reactionaries or obese bludgers who spend their days watching satellite TV. Despite tens of billions of dollars spent on infrastructure and employment incentives, the East remains an economic disaster zone. Joblessness in the East hovers around 18%, double that of the West, while incomes for those in work are only about two-thirds of Westerners. Angry and frustrated, many of the young have deserted their homes in search of work in the prosperous West. Those who remain are bored, sullen and rootless – easy targets for the National Democratic Party, which with 6000 members is the biggest neo-Nazi group. The Government is mulling whether to outlaw the NPD and two other far-right groups, the German People's Union and the Republicans.'*

...*the founder and retired leader of Germany's far-right Republican party... [– a former] beerhall orator who fought as an SS officer... in [WW2 –] was quoted this week as saying [it] had held close contacts with a large number of top-ranking officers in the German Army... The revelation comes amid charges... levelled... in Parliament... that... [the] Defence Minister... had failed to prevent right-wing extremists from infiltrating the Army.*

...*Just three months after the German military was embarrassed by a homemade video showing soldiers pretending to carry out rapes and killings, more tapes surfaced yesterday with scenes of Army officers giving the Hitler salute and talking about killing Jews... as well as[containing]*

anti-foreigner and anti-American slogans... Music with extreme right wing lyrics is heard often in the background... [The] Defence Minister... ordered an investigation into the newly discovered videos, made in 1994 and 1995 by soldiers from the same mountain battalion that produced the other video. The newest tapes are sure to [cause further] embarrassment for the German Army, which has only recently been assuming a more active role abroad after the legacy of... [WW2]. The tape that surfaced in July was made in 1996 as an apparent prank during breaks in training for assignment to the Nato-led peace force in Bosnia... Four of those identified in the videos are active soldiers... while four others are in the reserves. One lieutenant was relieved of duty yesterday and forbidden to wear his uniform pending the investigation. A... sergeant major is already facing disciplinary action for other offences... [The videos have] intensified questions about the general character of Germany's [armed forces personnel], and particularly over the effectiveness of the draft as a means of curbing militaristic impulses.

...None of this would have come to light if not for the willingness of one soldier to eventually turn on his friends. [The soldier] hired an agent and tried, anonymously, to bring the video to German t[v]. The private channel Sat-1 acquired the tape and made a much-hyped TV documentary... Its broadcast last month followed a series of other troubled incidents in which German soldiers firebombed a residence for foreigners... and... wielded baseball bats against some Turkish immigrants... There have also been reports German ultra-rightists are putting out calls on the Internet, urging neo-Nazis to join the army... [The Defence Minister has] called for legal changes that would allow the army to review the criminal records of new recruits... to screen out active neo-Nazis or violent thugs... [It is already] illegal in Germany to incite racial hatred or glorify Nazi symbols...

Opposition politicians called on... [Germany's] Government yesterday to explain to parliament how a convicted neo-Nazi leader was invited to give a speech to a training course for German Army officers. The Defence Ministry said it had launched an investigation into how... [the] former lawyer who spent eight years in prison for a racist bomb attack, had been able to speak at the Army's prestigious staff college in Hamburg in 1995... The ministry pledged to establish whether course organisers had known of [the former lawyer's] background when they invited him to speak... The embarrassing revelation was the latest in a series of cases linking the post-war German Army, the Bundeswehr, with right-wing radicalism... [that] have damaged attempts by... the Minister of Defence... and... [the] Chancellor... to persuade Germans, wary of the military because of the country's Nazi past, that the Army deserves a central role in both civilian society and international operations. [The minister] has insisted the cases are isolated incidents... But as recently as last week, the Defence Ministry opened disciplinary proceedings against six paratroopers who decorated a room in their barracks with pictures of Adolf Hitler and pre-war Army flags for a drinking party.

...The son of a former German minister has been quoted as saying there were many neo-Nazis in the Army who gave the outlawed Hitler salute at drunken parties... "During one exercise, an officer made a derogatory comment about foreigners and others joined right in. They were saying shocking things like... 'Throw the foreigners out'." ...Despite[the Army's] efforts to weed out those soldiers with far-right sympathies, the number of right-wing incidents has risen sharply. A total of 130 cases in the 340,000-strong Bundeswehr... have been reported this year, up from 72 in 1996.

...neo-Nazi gangs... provide an important test for democracies. Fascist movements were established at the turn of the century [- 'originally begun in Italy, 1919' -] in opposition to the democratic and socialist movements of the period... The nazism of Germany came to define a particular form of fascism which justified genocide in the interests of racial purity... Now in the 1990s, neo-Nazis... range from parties who seek political office... to the shock troops of skinheads who feel quite at liberty to intimidate those who are culturally different... Their willingness to indulge in violence... ranging from verbal attacks to murder... has contributed substantially to the 5000-plus racially motivated attacks recorded each year by the German internal security service... The former communist societies of East Germany, the Soviet Union and Yugoslavia have supplied new converts and movements... There are 55 active neo-Nazi bands which have played at 70 concerts this year in Germany... [B]ands such as Kraftschlag ("power through violence") Saccara ("total race war") and the German nationalists of Sturmwehr are some of those peddling race hate towards Turks and other ethnic minorities... The authorities have conducted a big crackdown, and a quarter of a million recordings of neo-Nazi music have been seized in northern Germany alone in recent months... [But] the racism... neo-Nazis... advocate will not be easily dislodged from the community.

...A report... says that Britain has one of the highest rates of racially motivated crime in Western Europe - a situation as desperate as that experienced by minorities in Germany[- a]nd... the level of such crime is increasing... Between 1989 and 1996, the number of... reported crimes... almost trebled to 12,199... Human Rights Watch... believes that the true figure is about 32,500 assaults and 26,000 acts of vandalism. Nearly one in five crimes suffered by members of ethnic minorities is linked to the colour of their skin. The report lists 14 racially motivated murders between 1991 and 1994... H[RW] also received evidence that a... black [person] had been arrested by police after being assaulted by his white neighbour and his wife threatened with a knife... The report adds: "Most shocking are the number of reports of vicious and racist treatment at the hands of the police themselves... Cases of severe police brutality remain far too common. H[RW] cites the deaths in custody of 10 black people. A 1996 inquest found that Shiji Lapite had been unlawfully killed after being arrested. The group criticises the Police Complaints Authority's decision not to bring charges against the officers involved. The Crown Prosecution Service also decided not to prosecute. A post mortem found that Lapite's voice box had been crushed as a result of a stranglehold and th[ere were] 45 other injuries, including bruises and abrasions to his head and face. The officers concerned... claimed Lapite became violent after being stopped, but a Home Office pathologist found no bruises on the [officers] and both admitted kicking Lapite in the face. In November 1992, Leon Patterson was found dead, covered in bruises, in his cell in Denton, Greater Manchester. A cleaner found blood smeared on the walls and... floor... An inquest verdict of "unlawful killing" was later replaced by one of "misadventure to which neglect contributed." ...[the chairperson] of the Commission for Racial Equality, said the report backed up what black organisations had been saying for years. "...Some people feel that they are living in terror. Any society should be ashamed that these things are happening."

...[For the first time in history black faces - and the darker hues of eastern Europe - are a regular sight on Irish streets. They are often victims of ridicule and abuse. Dublin, Cork and Limerick are now infamous for racism. New editions of best-selling tourist guides will warn visitors of the problem. Attacks are increasingly common. Last year a black Briton left Ireland after being stabbed in a race attack two months after his father had suffered a similar assault. Three months before, a 16-year-old Nigerian asylum-seeker was slashed across the face, and the chairperson of the African Refugee Network was beaten by a white mob. No one has been successfully prosecuted for a hate crime in Ireland. Faced with official indifference, refugees feel alone. They also fear the state they have appealed to for help. "For ethnic minorities it is difficult to have faith in the authorities when they see racial attacks go unpunished and even unrecorded," said the co-ordinator of the refugee charity Comhlámh. Ireland is enjoying the biggest economic boom in its history. Trappings of wealth are everywhere. The country has climbed out of decades of recession to become officially richer than Britain. With the boom came immigration. After long being one of the most homogenous societies in Europe, Ireland is facing an influx of foreigners, putting race on top of the political agenda. In 1992, 39 asylum-seekers arrived in Ireland. Last year, there were almost 11,000. Following Britain's harsh asylum laws, Ireland drafted its own versions: benefits were scrapped and replaced by a tiny allowance; hostels were created to house refugees; the right to work or education was denied. Some believe the hardline stance is leading to a catastrophe. "Right now our economy is strong and we're still seeing the emergence of racist problems," said the director of Amnesty International's Irish section. "If we have a serious economic downturn I think we know what the reaction to immigrants will be then."]

...British code-breakers were providing a detailed picture of the systematic slaughter of Jews across Europe from as early as 1941, newly released secret records revealed yesterday... of their relatives were shot or “liquidated”... had not been released earlier... A spokes[person] for... the Government Code and Cypher School... said it was only considered safe to release the material in 1993, and it had taken years to process all the information.

...Hitler planned to slaughter hundreds of thousands of Allied prisoners of war as... [WW2] came to an end, newly discovered documents reveal. [The] interview with the Nazi air force chief, Hermann Goering, [was] unearthed in the U[S] National Archives... Goering, who was sentenced to be hanged at the Nuremberg War Crimes Trials but killed himself... [with a cyanide pill on the day of his execution], told his interrogators that Hitler had wanted to renounce the Geneva Convention if the war had lasted another three months... Although historians said Goering had a major role in Hitler’s anti-Jewish policy, [Goering] feigned shock at seeing photographs of Dachau concentration camp and said all the Nazis wanted to do was remove Jews from German high society... Hitler... was not swayed by Goering’s arguments that, with the Nazis in retreat and many German prisoners in Allied hands, any order to kill Allies was likely to backfire... “It was pointed out... that German (prisoners) in allied hands would have to expect the same fate. To this the Fuehrer replied that those millions were of no use to the war effort anyway but that after his proposed action there would be no deserters from the German army. The German people, said [Hitler], would fight to the last [person.” However, an]... Aucklander... who was a prisoner in Germany, believes had Hitler got the chance to order his planned atrocity his troops would have rebelled... because... Germans who guarded prisoners... were already making plans for when they lost the war... [and] most had lost the heart to fight or kill. “They wouldn’t have done it at all. They were being nice to us.” The... [Aucklander] was captured in North Africa in 1942 and spent the... war imprisoned in Bavaria. After escaping and being recaptured, [the Aucklander] was put in a prison camp with Russians who... bore the brunt of Nazi brutality. Of the more than five million Russians captured by the Germans on the eastern front, only two million survived.

...[an elderly couple sit] in Moscow’s Terletski Park... Both are in their 80s and are veterans of W[WW2], as confirmed by the ribbons they wear this May afternoon. It is the anniversary of victory... over the Nazis who invaded their country in 1941. Right in front of them... is a surprising sight: a red flag with a white circle flaps in the breeze atop a well-kept one-story building on the edge of the park. Inside the circle is a stylized swastika. Even more surprising is what the old campaigners think about this, and about the... crew-cut [boys] strutting near the building dressed in black uniforms, the swastika [‘f. Skr. *svastika* = well-being’] repeated on their sleeves. “The sight of that flag is unpleasant... but they say their swastika isn’t the same as the German one, that it’s really the ancient Russian symbol, and that their black uniforms represent the cassocks of monks who once fought to defend Mother Russia.” Says the [other veteran]: “These boys do no harm. They keep drunks and hooligans away. People in the park feel better protected now.” “These boys” are members of the local branch of a nationwide paramilitary movement called Russian National Unity. RNU’s rapid growth reflects the alarming fact that “national socialism” is blooming in Russia, feeding on the failure of democratic reform and falling standards of living... Started in 1990, [RNU] is now the best-organised and most conspicuous of about 85 radical nationalist groups that have sprung up. RNU claims thousands of active members... plus influential support from the armed forces and the powerful Interior Ministry (MVD). Much of the training it offers Russian youth comes from former and active members of the MVD, the KGB and the military. Many of them are recognized by local authorities. In Terletski Park the black-shirts wave to the police, from whom they have nothing to fear. In fact the RNU has a contract with the district authorities to help patrol the park as auxiliary police, or *druzhinniki*. Hence the veteran’s mention of hooligans – never mind that recently the same *druzhinniki* savagely beat demonstrators at an anti-fascist rally in the park... Money does not appear to be a hurdle for the RNU... “We help some people resolve their problems, within the framework of the law, of course. They pay for the service. Purely business.” ...[Russia’s] President... has said that by the end of this year Russia’s creaking armed forces will have to discharge some 200,000 [personnel], including 70,000 officers. By law, many... will be due an apartment, plus a minimum of 20 months severance pay. Given that the state is broke and will not be able to deliver these entitlements, it is no brainteaser to work out to whom the disgruntled officers may turn... The Stavropol... RNU leader... boasts: “Soon, this regime will fall like a ripened pear. There will be none but us around to pick it up.” Back in Moscow... [the movement’s overall leader] sings the same tune, claiming the RNU will be essential “to restore and keep order under the conditions of chaos, anarchy and mass riots” that are to descend on Russia... [Both] insist that any likeness to Germany in the 1930s is, as they say, purely coincidental... [One denies being] a follower of Hitler... [but] can’t resist quoting from a book [it] describes as “a must for any intelligent [person,” *Mein Kampf*: “Whoever controls the streets controls the politics.” It is a message some old people on park benches have forgotten, and some younger Russians may have yet to learn... There are no prizes for guessing the [RNU’s] enemy: world Jewry and the [US. □ ‘Russian nationalists undertook pogroms (anti-Semitic riots accompanied by massacres and pillaging) in 1881 and 1903, with the tacit approval of tsarist officials, and, in 1918-21, in non-Bolshevik-controlled areas.’

...‘In 1929, Einstein said: “If my theory of relativity is proven correct, Germany will claim me as a German and France declare I am a citizen of the world. Should it prove untrue, France’ll say I’m German and Germany that I am a Jew.”’ ●] The Anti-Defamation League, a Jewish group, yesterday honoured a German leader for his efforts to end intolerance and prevent future hate crimes... “My gut says... I despise all that is German... yet I stand here today, Mr President, proud to honour you...,” said the league’s national director... who was born in Poland in 1940... [and became] a survivor of the Holocaust... [after] a nursemaid... baptised him and raised him as a Catholic... Earlier this year, in a bid to heal old wounds, [Germany’s President] declared the January 27 anniversary of the liberation of... Auschwitz concentration camp a national day of remembrance... pointing out that most Germans did nothing in the 1930s while the nazis built up a “totally irrational” racial ideology that led to the extermination of millions of Jews...

A... Catholic church, designed to recall “a horrific wound to all humanity,” opened yesterday in [a]... town near the former Nazi death camp of Auschwitz-Birkenau. St Joseph’s parish church in Oswiecim was sponsored by the Italian Church in memory of... up to 1.5 million people... murdered in Auschwitz... and of 40,000 Italians who died in various Nazi camps during... [WW2]. “I pray that this sanctuary will always recall not only the drama of the victims of hatred, but also the mystery of God’s love, which banishes death and opens the gates of resurrection,” Pope John Paul said in a message read... at the consecration... [The Pope has also] condemned anti-Semitism in an address to Christian theologians in the Vatican, and acknowledged that many Christians failed to live up to their faith when the Nazis tried to exterminate the Jews... Jewish organisations have often objected to the erection of Christian... symbols on or next to the former camp, which remains the world’s largest Jewish cemetery. But the new church is away from the site and has not drawn opposition from major Jewish bodies[, even though the]... foundation stone comes from a wall where the Nazis shot some... [Jew]s. Murals on the austere interior show human figures standing on earth and others ascending skywards.

...The Pope has said several times recently the Church should use the start of the third millennium in the year 2000 as a chance to make an “example of conscience” and seek forgiveness for past errors and sins... The “Roots of anti-Judaism in Christian Circles” symposium focused on religious attitudes towards Jews in Christian teaching in the past... and how this affected history. Both the participants and the Pope acknowledged that “wrong interpretations” of the New Testament relating to Jews had circulated for too long and had engendered sentiments of religious hostility that fuelled anti-Semitism. It was not until the 1960s that the Church repudiated the concept of guilt for Christ’s death and eliminated the phrase “perfidious Jews” from a Holy Week liturgy. [By the way, last year ‘hundreds of demonstrators from Berlin’s robust alternative scene spat venom at the Pontiff during his parade down the famed Unter den Linden boulevard towards the Brandenburg Gate, symbol of Europe’s Cold War divide. The Pope had appeared unperturbed by two paint bombs that splattered his car and cries of “Get lost” and “Go to hell”. The Pope had started the day by saying Mass for some 100,000 people at the Olympic stadium that Adolf Hitler built for the 1936 games, intending it to be a showcase of Aryan superiority. The Pontiff beatified two priests who died after being persecuted by the Nazis, but the step had again thrust the Church’s public silence about

the Holocaust into the limelight. The Pope had dropped parts of two prepared speeches defending the Church, but won praise from German Jews by telling them for the first time that too few Catholics dared stand up to Hitler.' During the war, 'the archbishop of Cologne told Germans: "We command you in the name of God, to fight to the last drop of your blood for the honour and glory of the country."' However, the '*Confessing Church* was formed in Germany by evangelists opposed to Nazism and the Nazi-supported German Christian Church Movement.' 'Karl Dibelius (1880-1967) was suspended from church duties as general superintendent of the Kurmark following a 1933 sermon to Nazi leaders stating that "the dictatorship of a totalitarian state is irreconcilable with God's will", although the German Lutheran continued to support the Confessing Church despite being forbidden to speak or publish.'

The National Front leader, who regularly denies claims of anti-semitism and racism, said today's church leaders should not feel responsible for what people did half a century ago... "People would do better... ask[ing] forgiveness for their positions on abortion... or on the... problem of immigration and France's survival,"... French Catholic prelates will make a formal declaration of "repentance" today for the Church's wartime support of the collaborationist Vichy regime that enacted anti-Jewish laws... In Bordeaux, the authorities carried out the Nazis' dirty work with particular enthusiasm... By seeking forgiveness, the... Church is following belatedly in the footsteps of the state which, in a statement by [the French]President... on July 16, 1995, admitted for the first time that French authorities had played an active role in the... deportation of... 76,000 Jews... to Nazi death camps... For the country's 650,000 Jews the apologies are a case of better late than never.

...Half a century after 50,000 Jews from... the... port[of Salonika] perished in Nazi concentration camps, Greece [has built] a monument to honour their memory in a move targeted to mend ties with Israel... The Greek President... unveiled the... bronze sculpture[of] a cluster of bodies with their hands up in despair... in a moving ceremony attended by the Israeli Health Minister... three senior Greek ministers, a U[S] Congressional delegation and representatives of Jewish communities from around the world... Greece, which has close relations with most Arab states, was among the last Western nations of officially recognise Israel in the early 1990s, and has since been at odds with Tel Aviv several times over mostly trivial issues. Among the most noted disputes was a refusal by a former Greek Foreign Minister... to attend the Auschwitz commemoration events in 1985 after Poland raised among others the flag of the former Yugoslav Republic of Macedonia, with which Greece is at odds... [In related news], the World Jewish Congress said yesterday... [that t]he attic where Anne Frank hid for two years was "plundered" by her Amsterdam neighbours just hours after the Frank family were taken off to Nazi death camps... In a new report, the group said that... the estates of most Jews deported and killed... were systematically stolen... 110,000 Dutch Jews died in the Holocaust – between 75 and 80[%] of the community and the highest percentage in Western Europe... "The bottom line is that some sectors of the Dutch population willingly participated in the theft of Jewish property, and after the war the Dutch took only reluctant and partial steps to return the property to its owners,"... The[WJC's] executive director... said the Franks were betrayed by a Dutch informant[whose]... name is unknown... But [the director] also... added... that... "things have to be kept in perspective: Germans and [their] collaborators were the murderers, not [the] French, Swiss, Dutch." ...The attic... was made into a museum in 1963.

...The Anne Frank Foundation yesterday angrily denied reports that neighbours looted the family's secret hiding place after their 1944 arrest... A... spokes[person]... said the Franks' belongings were taken out of the house by Dutch collaborators working for a removal company "within two weeks" of the family's arrest... "...We have historians here... so it would be... strange if we were not to know... [what] was true..." ...Although Anne's diary survived the war, the rest of the property was never recovered by... [her father,] the only member of her family to survive the Holocaust. - 1997

Jewish revenge groups have killed since the end of... W[W2] more than 1000 nazis in Europe who were involved in the genocide of six million Jews, according to an Israeli documentary to be screened today. The programme, called Eye for an Eye, will show for the first time witness reports from members of the "revenge groups" set up in Palestine before the creation of Israel... They will not be identified and their faces will be masked. Among the revelations is a plan to kill six million Germans by poisoning the water in several Germany cities including Munich and Nuremberg. But the plan was finally abandoned, according to one of the leaders of the revenge groups... However, in a separate plan his group did succeed in poisoning thousands of former SS members detained in prison camps... The programme did not say exactly how many people had died. Another, smaller group succeeded in 1946 in getting the only known photo of Adolf Eichmann, one of the main architects of the Holocaust. One of the group's members seduced Eichmann's mistress to get the picture, which was then used to track him down and identify him in Argentina where [Eichmann] had gone into hiding. Eichmann was kidnapped by an Israeli commando unit and later tried and hanged in Israel in 1962.

...Ten of the leading Nazis met their end by... [hanging] this day in 1946, 19 days after being found guilty in Nuremberg in the first war crimes trial in history... The trial... of... 21 top-ranking Nazi defendants... had begun 11 months earlier... and was presided over by an International Military Tribunal with a judge and one alternate from each of the four major Allied nations – Britain, France, the Soviet Union and the U[S]... The 21 prisoners... were tried for conspiracy to wage war and crimes against peace, violations of the laws of war and crimes against humanity, which included deportations, exterminations and genocide. Outlining the case against the defendants... the chief [US] prosecutor told the court: "We propose to punish acts which have been regarded as criminal since the time of Cain and have been so written in every civilised code." ...Hanged were... Hitler's foreign minister[; the]... armed forces chief of staff[; the]... chief of the concentration camps[; the]... minister for Nazi-occupied territories[; the]... governor of Nazi-occupied Bohemia and Moravia[; the]... governor of Nazi-occupied Poland[; the]... Nazi governor of The Netherlands[; the]... chief baiter of the Jews in *Der Sturmer*[; the]... slave-labour administrator[; and the]... armed forces chief of operations... Rudolf Hess, Hitler's heir-apparent until [his flight] to Britain in 1941, supposedly to seek a separate peace, was sentenced to life in jail. [Hess] died after 41 years at Spandau Prison... Others sentenced to life in prison were Hitler's economics minister... and[the] commander-in-chief of the German Navy[, while his successor – who also became 'Hitler's appointed successor after the latter's suicide (and immediately arranged for Germany's unconditional surrender)' – received 10 years. The]... weapons minister, drew a 20-year sentence... The 22nd defendant, Hitler's deputy... was tried in his absence and condemned to death. Some say [Hitler's deputy] was killed trying to escape from Hitler's bunker in Berlin in May 1945 but controversy raged for years, many insisting [the deputy] escaped to South America... The trial was at the... Palace of Justice – the site of Hitler's mass party rallies... Although Nuremberg had been devastated by Allied bombing, the Palace... still stood, as did the nearby prison. - 1996

IT WAS a soft summer day in Lausanne, Switzerland... People chatted and laughed in the shade of umbrellas at a cafe. But at a corner table, two [people] discussed the most ghastly information ever revealed in the history of the world. One... was... the 31-year-old director of the W[J]C office in Geneva and the most important conduit for accurate information on what was happening to the Jews in Europe... When the Germans invaded Russia in June 1941, the number of documents in [his] filing cabinet became horrifying. Special Nazi killing squads systematically rounded up all Jews in town after town and shot them, as many as 10,000 at a time... The other was... [the] press secretary of the Swiss Federation of Jewish communities. The news [the press secretary imparted to the director] that day – August 1, 1942 – was hard to believe. An important German industrialist with access to Hitler's headquarters had learned of a secret plan to... kill every Jew in every country controlled by Germany. "...Even newborn babies... Unless we can get Roosevelt and Churchill to threaten massive reprisals." [The director] gave a short laugh. But the sound was closer to tears. "Did your informant have any idea how this should be achieved?" "The U[S] consul is your friend... Tell him what we have learned." ...by December 1943 nothing had been done... Then on December 23... [the director] received... a licence... [from] the US commercial

attache in Bern... approved by President Roosevelt, authorizing [the attache] to transfer the first \$US25,000 to rescue Jews from Nazi persecution. "At last!" [the director] said quietly. But [the attache] could not contain himself. "...you have achieved what no-one else in the world has been able to do! It is a complete reversal of US policy." What [the director and attache] did *not* know was that this document was the result of a conflict that had come close to exploding into a disastrous scandal for the Roosevelt Administration. On July 22, 1943... [the] head of the W[J]C in New York... had finally managed to discuss [the director's] plan with the President, who told his Secretary of the Treasury... to implement it at once. But the State Department... dragged its feet. Finally[, the]... assistant general counsel at Treasury, and... [the] director of the Division of Foreign Funds Control, were assigned to investigate further. They prepared a memorandum for [the Secretary of the Treasury] tracing the State Department's incredible history of blocking plans... to help save European Jews. Their report charged that the State Department was guilty "not only of gross procrastination and wilful failure to act, but even of wilful attempts to prevent action from being taken to rescue Jews from Hitler." ...Armed with these searing words, [the Secretary of the Treasury] urged Roosevelt to form a special US government agency... Thus... [the Geneva WJC director] had received his licence. And on January 22, 1944, Roosevelt created the War Refugee Board... In the 18 months of its existence, the WRB saved some 200,000 Jews. But the rescue efforts were no match for the Nazi death machine. Between May 15 and October 30, 1944, more than 70[%] of the 800,000 Jews in Hungary alone lost their lives. Now that Germany was being defeated on all fronts, [the director] became convinced that, in their fury at losing the war, the Nazis would kill all the remaining Jews in the camps. Desperate, [the director] went to see... [the] permanent delegate of the Czechoslovakian government-in-exile to the Geneva-based League of Nations, and delegate of the Czech Red Cross... [The director] insisted that... all... [of the countries who had] government representatives... in Geneva... work together, not only to pressure the Nazis to "keep the camps intact" – which meant no more killing – but also, through the International Red Cross Committee (ICRC) and other channels, to organize trucks of food and medical supplies to immediately follow the liberating Allied troops into the camps. The [representatives] agreed. Hitler had indeed ordered that all surviving Jews in the camps be murdered before the war ended. But Heinrich Himmler, seeing the ICRC's demands as a convenient means of currying favour with the Allies, countermanded the Fuhrer's orders. On March 12, [Himmler] signed a document promising to hand the camps over intact to the Allies. When the Allies liberated the camps, they found that some had indeed remained intact.

They were plucked from Nazi extermination camps, spared death because they worked as slaves to help fuel the German war machine. As their attorneys filed class actions lawsuits against German and Austrian industrial giants... including Daimler-Benz, Audi, BMW and... Volkswagen... the survivors yesterday recalled their ordeals – how they loaded cement on their backs and felt their freezing hands stick to sheets of aluminium. "In the factory, they stayed behind me with a stopwatch and if you didn't produce enough, you were sent to... be killed," said... a 74-year-old...

Lawyers for Nazi-era slave workers walked out of a US State Department meeting in Washington yesterday in protest against a bid by German industrial companies to pre-empt their talks... German companies could be shielded from future claims in return for paying compensation to the slave labourers. About 600,000 people may be eligible to collect from the German fund, thought to be worth \$US1.7 billion... a sum... claimants' lawyers said was inadequate... The exact size of the outstanding claims is unknown, but insurance industry analysts say it could be... \$4 billion.

...A Ford Motor Company subsidiary in Nazi Germany used slave labour extensively during... W[W2] to produce thousands of vehicles for the German Army, says a U[S] magazine. By 1943, half of Ford Werke's workforce was foreign captives, including French, Russians, Ukrainians and Belgians, *The Nation* magazine reported. In August 1944, 15 prisoners were brought from... the infamous death camp... Buchenwald... The revelations come after Germany and the US agreed last month to set up a \$US5.1 billion... compensation fund for people the Nazis forced to work... Ford has refused to take part in the settlement talks. Its director of global operations... said: "Because Ford did not do business in Germany during the war – our Cologne plant was confiscated by the Nazi Government – it would be inappropriate for Ford to participate in such a fund."

...Historians and lawyers researching lawsuits for former prisoners of war have found evidence that major U[S] car manufacturers collaborated with the Nazis... "There are many indications that there were surreptitious contacts taking place" between the car makers and their German affiliates even during the war... said... [a] Washington lawyer... who is involved in a class-action suit against... Ford Motor Company... [S]imilar legal action could be taken against General Motors... [A] book scheduled for publication next year will accuse... General Motors... of playing a key role in... Hitler's invasions of Poland and the Soviet Union... "General Motors was far more important to the Nazi war machine than Switzerland," [the book's] author... told the *Washington Post*... [The] Nazi armaments chief... had told him in 1977 that Hitler "would never have considered invading Poland" without synthetic-fuel technology provided by General Motors... Both General Motors and Ford... have vigorously denied that they assisted the Nazi war machine or that they significantly profited from the use of forced labour[, and]... insist they bear little or no responsibility for the operations of their German subsidiaries, which controlled 70[%] of the German car market at the outbreak of war in 1939...

Almost two years ago, the Ford Motor Company revved up its publicity machine and sponsored an uninterrupted broadcast of *Shindler's List* on one of America's television networks. There would be no ads to cheapen... [the] epic, Ford proclaimed, explaining that the Holocaust was simply too sacred a subject to be demeaned by bubbly plugs for soap, sedans and soda pop. The decision drew the sort of publicity that money cannot buy as editorialists and TV writers hailed the car-maker for selfless public service. In the office of [a] New York lawyer... however, the deluge of superlatives landed with... the echo of a guilty conscience... [The lawyer was] presiding over a growing mound of recently unearthed documents that chronicle the dark history of both Ford and General Motor's complicity in the rise of Hitler... Nor was [the lawyer] alone in noticing the irony. According to [the US] author... who has spent almost 20 years working on a corporate history of GM, Hitler might never have pursued his expansive ambitions without the active assistance of the US auto industry. As with Ford... GM's top executives not only knew about Hitler's plans, they also preferred not to notice that their production lines were [operated] by slave labourers and the inmates of concentration camps. But... it is Ford's hidden past that has been dragged into the open... "...Ford... has always maintained that it had no choice but to go along with the Nazis, that it was powerless to resist, that it was just following orders. Well, all of that is a lie and we... can prove it. And we can also prove that Ford profited from slave labour directly and indirectly." ...A notorious and virulent anti-Semite, Henry Ford seldom missed an opportunity to revile Jews for all manner of improbable crimes against Christian humanity. In the 1920s [Ford] put up the money to publish and distribute *The International Jew, A Worldwide Problem*. This was a hate-filled omnibus, which Ford for a time distributed through his dealers... "Ford was the most prominent [US] anti-Semite of his generation. By saying that, I'm not telling you anything you couldn't find in any library,"... Less well known... were... Ford's close personal ties to Hitler, who not only hailed the master of mass production as "my greatest hero and inspiration" but also kept a signed photo of the auto magnate above his desk. In 1938, months before [his invasion of] Czechoslovakia, Hitler awarded Ford the Nazis' highest civilian decoration. It is small wonder the Fuehrer was so kindly disposed towards the... industrialist: [Henry]... provided... considerable assistance... in slowing White House efforts to prepare America and its beleaguered allies for the looming war with Germany. In the late 1930s... Ford consistently resisted pressure from President Franklin Roosevelt to convert some of his US factories to weapons production. Yet at the same time [Ford] was instructing his German subsidiary to put its plant at the complete disposal of [the person] who orchestrated Hitler's rearmament drive. In 1940, with the Battle of Britain looming and London being pounded by the Luftwaffe, Ford countermanded at the last moment a plan drafted by his subordinates and the White House to produce Merlin engines for RAF Spitfires... The evidence paints a very different picture from the one presented by wartime propaganda. In those days, Ford liked to point to the stream of bombers pouring off the production line at its Willow Run aircraft factory, then the largest and most efficient... in the world. If you were to judge solely by the morale-boosting posters in its factories' washrooms, Ford was nothing less than another gleaming weapon in... America's "arsenal of democracy." What nobody but a handful of Ford

executives could have known was that in June 1943, the Nazi manager of Ford's Cologne operation... made a secret flight to Portugal for a clandestine meeting with Ford managers. A... year earlier... the US Treasury Department had grilled Ford for illegal contracts with its subsidiary in occupied France. The supposition[was] extensively probed but never brought to court... Then there were the more tangible benefits. Until America declared war, Ford was an active participant in an agreement... that supplied Germany with rubber, industrial chemicals and the technology to produce synthetic fuels... [T]hose items were available from other sources, [but]Ford's assistance made it that much easier to circumvent a variety of embargoes and import restrictions. For Ford, the rewards continued after the war... "When the war was over and the allies rolled through Europe, Ford found... its plants had been extended... to accommodate Nazi war production," the lawyer said... "Wait, it gets better. Ford also obtained [\$]millions... in damages from the US Government after the war as compensation for the damage inflicted by bombing raids..."

...A N[Z]er has been compensated for being used as... W[W2] slave labour by German car manufacturer Volkswagon. The N[Z]er, whose identity is not known, was among 219 people compensated from a \$23.4 million fund that Volkswagon set up... The company estimated that the Nazis forced 17,000 people to work in its factories from 1941 until the end of the war... [Incidentally, t]he story of a poet whose grave is in west Auckland features in the next television series of *Epitaph*... As the toast of Munich society during the early 1900s, the wealthy Jewish writer... Karl Wolfskehl... was one of many young poets in Secret Germany, a society following the teachings of aristocratic mystic Stefan George. Wolfskehl fled Germany when Hitler gained control in 1933 and, after a brief time in Italy, emigrated to N[Z] with his young lover... The couple mixed with many NZ literary greats... before his death in 1948. Friends planted a cypress tree at his Waikumete grave as a reminder of his homeland and inscribed the words *Exul Poeta* (Poet in Exile) on his stone. Researchers later drew links between Wolfskehl and German brothers Claus and Berthold Stauffenberg who tried to kill Hitler in 1944. The brothers planted a bomb that injured the dictator and were executed after the botched assassination attempt. Many scholars now believe the pair, who were both members of Secret Germany, were inspired by a Wolfskehl poem written during the 1930s.

...NEO-Nazi vandals have desecrated Jewish graves with obscene graffiti. Headstones have even been daubed with swastikas. The vandalism – in west Auckland's Waikumete Cemetery, where survivors of the Holocaust are buried... [and a] memorial to the victims [is located]... – has appalled... a... 73[-year-old former]... slave labourer in Auschwitz concentration camp... His ordeal – including being a Nazi medical research guinea pig – was in last week's *Sunday News*... ■ ...The very public demolition of [a]historian... by a British judge[last week] was long overdue. The judgment was an obvious outcome of [the historian]'s weird rejection of proven history on the Nazi holocaust, his often stated belief that Hitler was innocent of the ultimate solution which took millions to concentration camp gas chambers. [The historian] and I have clashed several times on his outrageous and insupportable theories – first during my time on Radio Pacific and later in print in 1993. Then, angry reaction in particular from the Jewish community forced him to abandon a lecture tour here. [The historian] was – and no doubt still is – totally unrepentant.

...[a labourer] had a list of every... Jewish synagogue in N[Z]... a machine gun and a manual on how to build a bazooka... The Foxton labourer... was making explosives when police and customs raided his home. Now... [the labourer] sits behind bars... [after being] jailed... last month... for three years... But the 46-year-old... may never have been caught if it wasn't for the vigilance of customs staff. Mail centre officers noticed a stream of... survivalist magazines heading for [the labourer]. They warned police. "We don't know what sort of sinister activities [the labourer] was planning," said... [a] NZ Custom Service's manager... "But there was so much material on terrorist activity and assassination that alarm bells rang."

...The rasp of automatic rifle fire ripped out of nowhere at the children playing in the North Valley Jewish community centre, Los Angeles, wounding five... On giving himself up to the FBI... the... neo-Nazi... told agents... that his shootings... were "a wakeup call to America to kill Jews." ...Two weeks earlier, arsonists torched three synagogues around Sacramento... leaving behind leaflets that blamed Jews for the war in Kosovo. The reason for the stepped-up violence, experts suggest, is an old one: members of hate groups blame Jews for all that is wrong in their lives.

anti-Semitism [is a]late 19th-century term describing hostility towards Jews and/or Judaism... The Graeco-Roman period produced some anti-Jewish literature and activity, but only with Christianity did a consistent anti-Judaism appear. This originates in the New Testament, which subtly transfers the blame for Jesus's death from politically-motivated Roman and Jewish rulers to the Jews en masse as a specifically religious grouping (eg 1 Thessalonians 2.14 – 16). As the Church became Gentile and ignorant of Judaism, this trait intensified in... Medieval times. Because they had murdered Jesus, Jews were thought to have forfeited the covenant; they were likened to Esau... and to Cain... In art Jews were portrayed as ruthless, godless, and the embodiment of evil; in folklore they engaged in ritual murder of Christians, desecration of the Eucharistic Host, and plots to overthrow Christendom. Further, their commercial and money-lending activities encouraged comparison with Judas who betrayed Jesus for silver. At the Reformation, Luther hoped the Jews would accept his reading of the Hebrew Scriptures. When they did not, he was enraged and in 1542 published a tract called... 'On the Jews and their Lies'... calling for synagogues to be burned and Jewish worship prohibited. Even after the Enlightenment prejudice remained embedded in Western culture and fuelled modern anti-Semitism. In this the focus shifted from the religious to the racial, so that Jews were considered a social menace responsible for society's ills. This culminated in the Nazis' Final Solution to the so-called *Judenfrage* ('Jewish problem')... From the inception of the Nazi regime in 1933 Jews were deprived of civil rights, persecuted, physically attacked, imprisoned, and murdered. With the gradual conquest of Europe by Germany, the death toll increased... By the end of the war in 1945, more than six million Jews had been murdered out of a total Jewish population of eight million in those countries occupied by the Nazis. Of these the largest number, three million, were from Poland. Other minorities (gypsies, various religious sects, homosexuals) were also subject to Nazi atrocities, but the major genocide was against the Jewish people... Since [1945] there have been important changes. Jews themselves have gained political power in order to prevent a repetition of the Nazi holocaust, while many Christians have acknowledged their... role in that tragedy.

European Jews were traditionally the subject of persecution by the Christian majority, partly as a result of religious prejudice but also because of jealousy of Jewish commercial success... In medieval England, Jews were particularly familiar as money-lenders, their activities being publicly regulated for them by the Crown... (In private, Christians also practised money-lending, though forbidden to do so by Canon Law.) Thus the name of Jew came to be associated in the popular mind with usury and any extortionate practices that might be supposed to accompany it, and gained an offensive sense in some contexts... ['In late medieval times Jews were excluded from many lands, notably England, 1290; France, 1306; Spain, 1492; and Portugal, 1497.' However,] the Jewish community[itself] tended to maintain a separate and highly distinct identity.

[The *Sephardim* were descendants] of Jews who lived in Spain and Portugal before 1492... Subsequently they migrated to Northern Europe and the Americas, where during the 16th and 17th centuries they kept distinct from other Jews (especially those from Central Europe), considering themselves innately and culturally superior.

...middle-class [Pakehas] are bewildered by all this belligerency... and... impatience of modern Maori leadership[, muttering]... darkly about "truculence" and "arrogance". Little do they realise that the present posture may well be a consequence of early missionary teaching. The Old Testament, with its strong prophetic and tribal emphasis, had an instant appeal to Maori who saw themselves as the descendants of the Biblical Israelites and thus God's chosen people. They were not alone in this belief. As early as 1819, Samuel Marsden [– who 'held the first Christian religious service in NZ on Christmas Day, 1814' – was writing of being]increasingly inclined to identify Maori with one of the lost tribes of Israel...

To be God's chosen people brought immediate solace to a people who were deprived and depressed. They could accept their present fate as that of God's biblical "Suffering Servant" and look forward to all that was to come... The success of the Mormons among Maori in the '50s was partly due to their belief that a dark-skinned tribe of "labanites" would suffer this "curse" until they, by their own moral regeneration, became "exceeding fair and delightsome" [(although 'Mormon's renewed their ban on dark-skinned priests in 1970')...] The development and growth of Rastafarianism [amongst Maoris] is an embellishment of the same theme: The present "Babylonian captivity" will be followed by "A return to Ethiopia".

Ethiopia ("burnt face") was the name given by the Greeks to the people of the southernmost part of the known world. Homer divided the region into eastern and western Ethiopia... Ethiopia was the biblical Cush, or at least part of it... [Its earliest recorded civilisation, known to the ancient Egyptians as Punt, dates from the 2nd millennium BC. In ancient times Ethiopians were often confused with Indians.] According to tradition, Ethiopia's former rulers were descended from Menilek (Menelik) I, a son of King Solomon and the Queen of Sheba (Saba), thus giving rise to the imperial title "Lion of Judah." ...Jewish and Phoenician travellers seem to have visited Ethiopia...

Miriam and Aaron spake against Moses because of the Ethiopian woman whom he had married: for he had married an Ethiopian... - Numbers 12:1

In 1990... Jews comprised 2.4% of the U[S] population... The Jewish... population has consistently dropped from the early decades of the century when they formed over 5%. The main reasons for this decline are the rise in the immigration of non-Jews and growing intermarriage with gentiles.

At 60 [the guy is] in good shape; at 27... [the gal is in better shape – although the guy muses that the gal] was "this kid eating out of garbage pails on the streets of Korea"... His father is 96, his mother 93... Mother, boldly lipsticked and red-frizzed, says: "I... don't think it's right to go out with an Asian girl. That's why the Jews will some day be extinct." [The Asian girl], standing right there, laughs. "This is the lunch from hell," says [the son].

Israel was branded a "racist apartheid" state yesterday by thousands of non-governmental organisations meeting in South Africa... The forum accused the Jewish state of "systematic perpetration of racist crimes including... acts of genocide and ethnic cleansing". It called Israel "a... state in which... apartheid as a crime against humanity has been characterised by separation and segregation... and inhumane acts". The declaration, adopted by 3000 NGOs in 44 regional and interest-based caucuses, shocked Jewish groups. Jewish delegates walked out... The Israeli Government delegation to the... parallel U[N] World Conference Against Racism attended by 153 Governments in the Indian Ocean port city[of Durban]... blasted the... Forum's... language as an incitement to hatred of Jews... Resolutions at NGO forums have no binding authority, but they increasingly influence the final declarations adopted at the UN governmental meetings they precede... The harsh anti-Israeli language in the NGO Forum's final declaration injected new Middle East tensions into the... UN conference... The U[S], Canada and Israel sent only junior level delegations to the UN racism conference, attended by about 6000 delegates, in protest at what they see as anti-Israeli bias. Washington had already warned it might withdraw before the conference closes... unless offending language is removed from draft texts... [T]he father of South Africa's multi-racial democracy, made an impassioned call for delegates to put aside differences and act to rid the world of... an "ailment of the mind and the soul".

[...] We march according to eternal laws We are on the way to a distant future We don't just want to fight better than past generations We want to produce the future generations to ensure the eternal life of the German people.[...] It's]... 1933. The National Socialists come to power and the German people take the first steps down a new road. They will be asked to put their trust in a set of ideas based on race, military strength and authoritarian government... State radio put across one idea above all else. "...the greatness of the German people. Propaganda gave people a big boost in confidence for the first time." ...Millions of ordinary Germans allow themselves to be persuaded that they are a special people with a special destiny... "For a long time we believed everything that came over the radio. Young people were most excited by the propaganda. Over 90% of us were behind everything that went on." ...The Nazis created a historical myth to support their ideas. Pure-bred Germans were naturally superior because they were the descendants of noble medieval knights from a less degenerate age... Germans were told their... Aryan... ancestors had been a uniquely advanced... cultured race... "I personally was in the SS... [We were told that] we shall be the future aristocratic spinebone of the German nation. Well I thought, wonderful, no? I felt myself very much flattered by being chosen for this..." The SS had begun as Hitler's bodyguard. Now it had become the spearhead in the drive to confirm the German people as the Master Race.

The Master Race is a brilliant idea. I only wish we'd thought of it first.

There is nothing wrong with wanting to create a *Master Race* or superior society if, unlike the Jews and Nazis, your plans include everyone!

There is neither Jew nor Greek, there is neither bond nor free, there is neither [guy nor gal]: for ye are all one in Christ Jesus. - Galatians 3:28

And [Peter] said unto them, Ye know how... it is an unlawful thing for a... Jew to keep company, or come unto one of another nation; [well,] God hath shewed me that I should not call any [perso]n common or unclean. - The Acts 10:28

And I saw an... angel fly in the midst of heaven, having the everlasting gospel to preach unto them that dwell on the earth, and to every nation, and kindred, and tongue, and people... - Revelation 14:6

The above verse gives the impression that the New Testament *Revelation of St John the Divine* – 'written in a time of persecution (A.D. c.95) it foretells future glory through a series of visions and dreams' – is anti-racist, but it can also be linked to racist beliefs:

And in the midst of the seven candlesticks... [stood] the Son... His head and his hairs were white... as snow... and they... which have not defiled their garments... shall walk with me in white: for they are worthy... And I saw... a white horse: and [the one] that sat on him had a bow; and a crown was given unto him: and [they] went forth... to conquer... AND I saw an angel come down from heaven... [who] laid hold on the dragon, that old serpent, which is the Devil, and Satan, and bound him a thousand years. And cast him into the bottomless pit, and set a seal upon him, that [Satan] should deceive the nations no more, till the thousand years should be fulfilled: and after that [Satan] must be loosed a little season.

Hitler had promised to build a Third Reich, successor to the Holy and Hohenzollern empires, which would last a thousand years.

Third Reich [was the] official Nazi designation for the regime in Germany... from January 1933 to May 1945, as the presumed successor of the medieval and early modern Holy Roman Empire... (the First Reich)[– which, 'in true apocalyptic style lasted about 1,000 years' ('in 1806, to forestall

Napoleon's assimilation of the Holy Roman Empire – established by Charlemagne, 800 – into the empire of the French, Francis II resigned as Holy Roman emperor and the empire was dissolved') –] and the German Empire from 1871 to 1918 (the Second Reich).

Bestes farouches de faim fleuves tranner, Plus part du champ encontre Hister sera. En caige de fer le grand fera treisner, Quand rien enfant de German observera... [says part of the second] Nostradamus... quatrain... There can be little doubt that Hitler is implied; who else could be so well described by the last line, the German who observed no law? ...Commentators before 1930 understood the Hister to be the river Danube, from its Latin name Ister. But Hitler recognized himself in these quatrains by the mid 1930s and Goebbels made great propaganda out of them in the pre-war party years. Evidence for this is found in many sources, chiefly... [the] book 'Nostradamus and the Nazis.' ...if Hitler's attention had not been drawn to the Prophecies and the connection between Poland and Britain, would [Hitler – who, in his early life, 'showed a readiness to live in a world of fantasy' – have] gone to war...? ...It is essential for thinking [people] to believe in free will, to believe that [their] future can be changed by thought and action. Prophecy denies this and declares that all futures are immutable and fixed, that nothing [a person] strives towards is relevant, as it is already preordained by whatever governs his future, be it God or Destiny. I believe that [hu]mankind must have free will; but also I must admit the disturbing fact that although I can dismiss ninety-five per cent of Nostradamus' predictions as historical coincidence, there remain a few quatrains which are hard to reconcile with this. What about the... verses giving the actual month and year of any occurrence, such as that which describes the obscure treaty between the Persians and the Turks in October 1727...? I find this type of quatrain difficult to explain away completely... In order to avoid being prosecuted as a magician, Nostradamus writes... [about deliberately confusing] the time sequence of the Prophecies so that their secrets would not be revealed to the non-initiate[(note that someone else writes: 'In order to afford a wide margin of free activity to future humans, prophecies ought to be stated in somewhat abstract terms'). His]... verses are written in a crabbed, obscure style, with a polygot vocabulary of French, Provençal, Italian, Greek and Latin... This... convinces me that Nostradamus' inspiration was certainly partly visual and [his quatrains try to] describe... in his limited vocabulary the puzzling glimpses of a future... Nostradamus... didn't always understand. - The Prophecies of Nostradamus

It is obvious that many prophecies are of such a nature... that, if they were clearly understood previous to the event, they would prevent their own fulfillment, and so cease to have been prophecies. What they foretold would never have occurred. - Oracles of Nostradamus

WITH less than three years before the apocalypse allegedly predicted by... Nostradamus takes place, interest in the doomsday prophet has skyrocketed... [N]ot even the 16th century astrologist and doctor could have foreseen that his prophecies would cause goosebumps through thousands of websites. Nor could [Nostradamus] have envisaged a more sinister plot would result from his... scrawls, which have been interpreted as predicting... the rise of Hitler and President Kennedy's assassination. In 1989 a bearded [Jap] in a long white tunic made the pilgrimage to see[a] Nostradamus expert... at Lyon's municipal library in frantic search of information on the spiritual soothsayer... [Later this pilgrim] would become famous as the leader of the Japanese sect Aum, which [was responsible for the] gas attacks on Tokyo's metro in March 1995. [The pilgrim] was convinced that a number of Nostradamus' prophecies directly concerned him... Nostradamus was most popular in times of crisis, war and revolution[, but has]... never been so popular as now... The number of books published on the philosopher... has shot from seven a year in the post-[WW2] years to about 100 a year and more than 800 websites today... According to... [the] author of *Nostradamus: Historian and Prophet*... Nostradamus should not just be recognised for his clairvoyance. [Nostradamus] also discovered sterilisation methods four centuries before Louis Pasteur... [while treating] victims of the plague in the south of France. The medical graduate of Montpellier's university, later to be appointed King Charles IX's physician, would bury the infected corpses under quicklime, burn their clothes and walk the streets with essence of beech. But there is no agreed authoritative interpretation of [his] verses... They are so vague they can be made to mean almost anything by wishful thinkers or religious sects. And despite the... July 1999... doomsday scenario, his predictions go on for nearly 1800 years after that date.

...TWO-and-a-half years after a poison gas attack on a Tokyo subway... the religious cult leader charged with carrying it out is still active and rebuilding its following. Authorities say that of the 427... members arrested after the gas attack, 138 have rejoined... many after serving prison terms... At least 1000 people, and perhaps twice as many... belong to Aum Supreme Truth and continue their devotion to[its] self-proclaimed guru... who is in jail and on trial for mass murder... The guru, who claims to be Jesus Christ, is also charged with a series of other gas attacks and murders police say constitute Japan's worst crime spree... More than 40 cult members are missing, and many are presumed to have been killed in cult rituals... [By the way, floating] a company to raise... \$11.35m... to fulfil a religious prophecy is fairly unusual – but that's exactly what gemstone explorer Diamond Rose hopes after listing on the A[US]n Stock Exchange last week. Diamond Rose[']s executive director... said her motivation for establishing the company was to find the 12 gemstones of the hoshen (breastplate), worn by the High Priest in the Temple of Jerusalem 3000 years ago, as described in the Bible... [T]he idea to find the gemstones was based on prophecies from the late New York Rabbi Schneerson... [who told the executive director]'s brother, a decade ago that... the mining magnate... would find gold in Western A[US] and also that the hoshen stones were in that country... Completion of the hoshen is said to signify the beginning of the Messianic era, according to the Talmud.

...a book... published... on Thursday claim[s] that the *Old Testament* contains a secret code that 3000 years ago foretold the Holocaust and the assassination of Yitzhak Rabin. The book says the code, found... by an Israeli computer expert, also foretold many other of history's major events and warns of an atomic war that could bring the end of the world in 2000... Its author... took all the words in the *Torah* and eliminated the spaces between them, turning them into one continuous strand, 304,805 letters long. This is the way the sages say Moses received the Bible from God. Using a computer, [the author] then searched the strand of names and phrases using a skip code that adds every fourth or 12th or 50th letter to form a word. [The author] said... several experts... verified... [that] the code brought together interlocking information – for example with the word Hitler came the word Nazi, with Kennedy came Dallas... [– and] suggests that the code might be the "secret book" promised in *Daniel* and *Revelation*... "...You know, Isaac Newton... tried to find the code in the *Bible*, and... considered it more important than his theory of the universe." ...Trumpeted with full page adverts in the big US newspapers, *The Bible Code* has been snapped up in Hollywood by Warner Brothers, which sees it as a perfect vehicle for those who like their *Raiders of the Lost Ark* flavoured with large doses of Nostradamus-style predictions. - 1997

The many eager active interpreters of the Nostradamus works are... worth considerable study by a student of abnormal psychology. Happily bypassing any and all arguments against their notions, they freely move in and out of their looking-glass world with shining eyes and determined steps. Their fixation is amusing to some and distressing to others, but it is an example of the same kind of obsession that often obstructs the pursuit of valuable knowledge and wastes developing minds that might have been the Curies and Einsteins of a generation... Belief in astrology and other forms of divination, which waxed and waned over the ages, became very strong again in the 16th c... The church dismissed and condemned such practices because they brought into question the doctrine of free will and implied a predestined future for everyone that might not be changed, even by prayer. Without free will, sin is impossible. Without sin and the prescribed penalties, the need for the church becomes less clear and less persuasive... Though in France the Inquisition never attained the ferocity it displayed in neighbouring Spain... Michel de Nostredame had excellent reasons for fearing the wrath of the Inquisition... [– facing] disgrace, imprisonment and loss of property if convicted of heresy... Furthermore, it was accepted that all thoughts, actions and abilities came either from God or from Satan. The art of living as a Christian was the art of sorting out which was which, a process that required ecclesiastic advice. [Nostradamus was lucky that most Christian authorities thought a] former Jew was

hardly likely to have God-granted powers... Though many printed copies of his works exist, beginning with a treatise on cosmetics in 1552... – ...Nostradamus... advised on cosmetics, beauty aids and deodorants for Renaissance [gals], who as a rule bathed only twice a year and wore the same underclothes for months on end... – ...there are no known written manuscript copies of any of his works. The very first editions of his prophetic writings are lost and we must depend upon the accuracy and integrity of those who transcribed them. Numerous known forgeries have been published, some to prove points not originally intended by the seer and others merely to take financial advantage of a public hungry for anything in any form bearing the Nostradamus name. Typographical errors, transpositions, changed italicization, punctuation and capitalization, altered spellings and “improvement” on his writings have bastardized his works to the point where proper scholarship is difficult... [A] complete edition said to have been produced at Lyons in 1558 – a few months before Henry[II]’s demise – probably did exist, but owing to the many bad guesses made by Nostradamus (in Centuries Eight through Ten) about his sovereign, all copies might have been destroyed... We need go no further than [his] early local activities at home in Salon to see just how bad a prognosticator... Nostradamus... was. Unfortunately for his reputation, we have a detailed account of a horoscope... for a High Justice in Salon... and the statement of that [perso]n’s son that shows *not one* correct astrological prediction by Nostradamus. [Indeed, Nostradamus] was strikingly wrong in every respect, especially in missing the subject’s death date by twenty-one years... [Despite the lack of] success of his initial... [efforts], Nostradamus... decided... to... [produce related] books. Since... Nostradamus... was already trained in astrology – it was a required subject at Montpellier – and [Nostradamus] claimed descent from the Jewish tribe Issachar, a family that was said to have “understanding of the times,” the idea of an almanac was obvious. An almanac is a periodical calendar of predicted events, combining such astronomical facts as moon phases with astrological speculations. In 1550, his expectations of success were more than met when the first of his yearly almanacs was published. In 1555, he printed the first, short edition of his book of prophecy, the *Centuries*, and with that publication, his lasting fame was more than assured... At almost the same time when Nostradamus was penning his first almanac, a prominent Italian scholar named Francesco Guicciardini was observing: How happy are the astrologers! who are believed if they tell one truth to a hundred lies, while other people lose all credit if they tell one lie to a hundred truths... *Rule Number 1: Make lots of predictions, and hope that some come true. If they do, point to them with pride. Ignore the others.* Over a four-year period, researchers examined predictions offered by major psychics working for the *National Enquirer*, the supermarket tabloid. There were 364 predictions, of which a total of *four* were correct. This means that the psychics – all of them top-rated professionals – were 98.9[%] wrong. They are still in business, except for one who died. Judging from his record, death was probably unexpected... [Nostradamus] set up for a gift that [Nostradamus] did not possess, and soon found the imposture was far more lucrative than the dull routine of medical practice, as in those times the superstition of the public was unlimited... In the prose section of the *Centuries*, Nostradamus wrote very clearly and in excellent French, unlike the crabbed, mystical words and construction of the quatrains. *Not one* of the many predictions contained in the prose was correct, and they were all made for dates that are now past, except the end of the world, which is happily placed in the year 3797, according to some, and in 1999 by others... [V]arious interpreters – six of the major figures in the field – believe they have each solved one of the Nostradamus puzzles, and they all have quite different answers. At best, only one can possibly be right... Some interpretations of the Nostradamus material are so very obvious and applicable that they cannot be denied; some are so far-fetched and convoluted that no reasonable person can accept them. I must declare frankly that I have no belief in the popularly held notion that Nostradamus or anyone else ever had or now has any supernatural prophetic powers. My rather considerable professional experience and my common sense dictate against such a belief, but I will always yield to facts and probabilities that oppose my admitted yet understandable prejudice when those facts are properly derived and set forth... In spite of great care exercised by cautious researchers, historical misconceptions become established and are difficult to correct... But... the Believers prefer to accept what is given them, rather than looking to original sources. - The Mask of Nostradamus

A source of endless dispute... [in Christian] theology, the doctrine... of... *predestination*... has been interpreted in many ways. It was first fully articulated by Augustine during his controversy with the Pelagians, who upheld the doctrine of free will. The Protestant Reformers Luther and Calvin defended the doctrine, though in varying degrees. Jacobus Arminius rejected the Calvinist view of predestination, and argued that the divine sovereignty was compatible with human free will... [because] “predestination is open only to believers.”

[According to the] prominent and very influential Christian writer, Origen... the power of the human will is not rendered useless because of God’s foreknowledge of the acts that will be ours in the future... One can only wonder if Origen was aware of a rather earlier writer, Confucius... who declared that Heaven sends down its good or evil symbols, and wise [people] act accordingly.

Following the Book of Genesis 1.26-8, Jewish tradition views humans as formed in the image of God, giving them a special dignity within the created order. As such humankind has dominion over the earth but with it the responsibility to act as a faithful servant. However, such accountability implies free will, and Judaism maintains that people are free... to trust God or reject him[, and]... to act justly or wickedly... Nonetheless... Judaism... also affirms that God guides the overall destiny of humankind towards an ultimate good.

...[contrary to the beliefs of] a priest... traditional morality is... neither the invention of nor a monopoly of the West; its standards have been set for thousands of years among all societies which have any claim to be civilised... Its main directions are... to have customs and... laws that regulate social relations, and so make human conduct predictable rather than merely self-willed... Until modern times, no serious thinker doubted that such judgments of value were rational... expressions of objective truth; that to live by them was to be in accord with the way the universe really worked. So thought Plato... and Confucius... Unless there is some objective standard overarching us all, we have no grounds for disapproval when Catholics and Protestants blow each other up in Ireland, or when Hutus and Tutsis massacre each other... they are after all, just acting out the values they have created. For them, as for [that priest], “good” means nothing more than “what we have been conditioned to like”... Ideas about “modern” moralities are no more than confused thinking... No human can invent a new value, any more than it can invent a new primary colour... - 1996

British philosopher Sir Isaiah Berlin, one of the century’s greatest thinkers... has died aged 88... [Hi]s main contribution to philosophy was the idea of “value pluralism,” the idea that human beings are so different that there can be no one overall set of values... “[Berlin wa]s not a political thinker so much as a moralist who insists on the irreconcilability of goods such as liberty or mercy – you can only have one at the expense of the other. Every time you choose you lose,” [his] biographer... said... Berlin, who spent most of his academic career at Oxford, inherited his father’s love of Russian literature, which inspired him to produce one of his most famous works – *The Hedgehog and the Fox*. In the essay, devoted to... Tolstoy, Berlin put forward the idea that there were two kinds of thinkers. “There exists a great chasm between those, on one side, who relate everything to a single central vision... and, on the other side, those who pursue many ends, often unrelated and even contradictory... The first kind of intellectual belongs to the hedgehogs, the second to the foxes.” ...Berlin... decided to give up philosophy after... [WW2] in favour of political thought. “Philosophy can only be done by very clever people. It’s rather like mathematics. To be a second-rate mathematician is no good... In the end, I... didn’t think that I’d ever be good enough... because I didn’t lie in bed awake at night thinking of solutions to agonising philosophical problems.”

...[I']ve been studying philosophy for many years and have yet to find an acceptable definition of right and wrong actions. What is within... and... outside... the law... is straightforward enough... But to determine whether a particular action is definitively right or wrong is way too hard... - 1997

The free will *versus* determinism argument has been with us for a good many thousands of years. Basically it is not a soluble one inasmuch that, if our actions are predetermined then we will either believe or not believe this according to our particular determinism; similarly, if we have free will we can believe it or not according to how we use that freedom... There is really no good proof one way or the other: all one can say is that, the greater the belief in freedom, the greater the progress of a civilisation at the time that the belief is strongest.

The general belief that all events are caused, or the result of determining conditions, is called the *Thesis of Determinism*... Most of us believe that events which occur in this world are not, in general, random or spontaneous happenings, but... the result of causal processes... [I]f a car won't start, if a bush fire occurs, if someone is in pain, then there is something which causes each of these things to happen, even though in many cases we are ignorant of what these causes may be. Even many things which we ordinarily call *chance occurrences* are not thought to be uncaused... We... call the fall of [a] coin a chance occurrence, but we don't mean by this that nothing is responsible for bringing about how the coin actually falls... down heads rather than tails... so far as we know nothing prior to the toss favours one outcome rather than the other... Another common belief is that at least sometimes people freely choose to act as they do: we act of our own free will in a certain way. For example, at 11.00... I may decide to have a cup of coffee. I want a cup of coffee, but I could go without one, and under these conditions it seems reasonable to say that my choosing to have... coffee is a free choice. There was nothing which forced me to have [it]... This is in contrast to... a caffeine addict whose craving compelled her to imbibe coffee at 11.00. We can say that a free act is one which the agent has freely chosen to perform. A free choice... [is] one which, given exactly the same situation, could have been different (hence it is not determined by the situation in which it occurs)... This belief that at least some human actions are free, and are the result of free choices, is very important to our ideas about when we can hold someone morally responsible or accountable for their actions. The connections between moral responsibility/accountability and free choice are far from simple, but it seems reasonable to say that we do not hold someone morally responsible for doing something which could not have been avoided... We certainly often believe, and act as if we believe, that people's decisions and choices can be blamed on their nature and their background. What makes us the people we are, and makes us do the things we do, is our environment (past and present), and our bodily makeup. But if our heredity and our environment together determine what we are and what we do, how can this be reconciled with the belief that at least sometimes we act freely and can be held morally responsible for the things we do? ...I suggest that the idea of moral responsibility, based on some notion of 'free' choice or action is in fact not a coherent notion, and that we should accept the... position that human actions and choices are determined and that people are not free and hence not morally responsible for what they do... Being morally responsible is not the same as being moral or being (morally) good... It is sometimes suggested that if Determinism with respect to human choices is right, then we should give up any attempts to decide what we are going to do and simply sit back and 'let the wheels of causation roll on'... [T]his is put as the claim that Determinism is really Fatalism... Fatalism is taken to be the claim that everything that has happened or will happen in the world was determined by the way the world was in the beginning... In this sense the future is already written... [H]owever... if one takes Fatalism to involve the claim that human beings are powerless to affect the way things happen, then a Determinist is not committed to this view. A Determinist holds that human thoughts, beliefs, wants, intentions and decisions are part of the causal processes determining what happens in the world. They are caused certainly, but in... turn they are causes and have effects on the world. So a Determinist is certainly not committed to the idea that people should just sit back and allow things to happen. On the contrary, we should do what we can to bring about those things which are desirable and good and to prevent any disasters we can foresee. Admittedly this looks like a strange position: to hold on the one hand that what will happen can't be changed, but to also say that one should try and affect what happens in the world. Indeed, such a position would be irrational if we knew what was going to happen and were trying to change this. But we do not know, in general, what will happen. And our intentions and actions may be a necessary condition for bringing about certain things.

Things To Come... is... H.G. Wells' adaptation from his own novel... [*The Shape of Things to Come*] – a relentlessly bleak view of the future from his 1930s perspective. Critics described it as a "leviathan among films... a stupendous spectacle" and a chillingly accurate prophecy of the future. Wells predicted war in 1940, followed by plague, rebellion, a new class-based society and the first rocket ship to the moon.

In 1895 Wells wrote a sci-fi novel entitled *The Time Machine*. Stories about time machines usually highlight the fact that time travellers have to be careful not to alter past events – because doing so could prevent future events, including their own birth. Although the past can't be altered – unless it really does become possible to travel back in time ('according to Einstein, the only way to go back in time is to exceed the speed of light') – it is theoretically possible to alter the future: because once a prediction has been made, someone just needs to do what was stated in order to make it come true – or try to prevent it!

A [gal] told British Rail [it']d had a vision of a fatal train crash involving... train... number: 47 216. Two years later, an accident of the kind... predicted occurred, all the details matching except one. The engine's number was 47 299. Then a keen train spotter noticed that 47 299 was not the engine's original number. It had been renumbered – from 47 216... Rail authorities had tried, and failed, to ward off Fate by changing the number.

...[A] LOGICIAN... wrote, "There can be no doubt that, however unlikely an event, if we... try for long enough, we will meet with such an event..."

...in 1967... a book *The Year 2000*... emphasised the view that 'economic trends [i.e., growth] will proceed more or less smoothly through the next thirty years and beyond', although this book is one of the rare examples which does also look at the possibility of thermonuclear war. The world of the year 2000 portrayed in the absence of such disaster, however, is one in which... the basic world situation is like that [of 1967], only bigger (and by implication better)... – everyone building in the image of the U[S] of the mid-1960s. More hamburgers... fast cars... neon lights... wealth... and so on. To be fair, the book also looks at... the... implications... of technological change, including increased nuclear proliferation, but by and large it leaves the unsuspecting reader with a feeling not only that such a future is possible, but that it is pretty well inevitable. Several other futurologists find this sticks in the throat, and the view has been widely expressed that *The Year 2000* was really a deliberate attempt to influence public opinion and steer the world towards this possible future... [T]here is no doubt that... forecasting... has been taken seriously and has influenced policy making by both government and big business in the US. The dangers are obvious – by presenting any one view as 'the future' we may make it inevitable, since we all begin to act in the way laid down by the blueprint... The... worst aspect of doomsday scenarios is that by their apparent inevitability they encourage a *laissez-faire* attitude in which people live it up while they can, for tomorrow may never come. - Future Worlds

Plato and Aristotle... could not imagine, much less predict, the changes in our understanding... that came to pass in the centuries that lay ahead. If some seer had prophesied the occurrence of these changes and the consequent improvement in human affairs and institutions, they would have dismissed him as a dreamer. They would have been quite right to do so in terms of their very limited vision of the possible. What I have just said about Plato and Aristotle in antiquity applies in the same way and for the same reason to the wisest of thinkers of the Middle Ages... None of them

could have imagined or would have predicted what has become actual for us in the twentieth century... The impossible is that which cannot be done and, therefore, should not be attempted... Nevertheless, the... dividing line between the possible and impossible is extremely difficult to determine. Drawing it correctly depends on our knowledge of past and present realities. The extent to which we know all relevant facts helps us to judge correctly what possibilities the future holds. The extent of such knowledge changes from time to time. Our judgment about the limits of the possible is consequently better than that of our ancestors. Must we not, therefore, concede that succeeding generations will be able to make even more accurate judgments about future possibilities? ...This being the case... present views of the possible may be as woefully inaccurate as that held by our ancestors... [and perhaps we ought] not impute to our successors... the still too limited vision of the possible that we hold today.

...from ancient times to the present, prophets claiming special powers have surprisingly predicted similar events. This strange and awesome ability to see what might come [– or to rehash previous visions –] has always fascinated and frightened [hu]mankind... In the real world a prophet can be the neighbour next door... From the very beginning [the Afro-American] showed signs of a gift that would come to dominate her life. [The Afro-American] reportedly was born with a thin membrane, or veil, over her face – a traditional African omen of psychic powers... Even as a child [the Afro-American] possessed a powerful gift. “I just knew people’s... hearts, and I didn’t like knowing it, because in a lot of ways it was hurting for me. You know, somebody says that we really like you, but then I would know inside that they didn’t.” As [the Afro-American matured, the gal] struggled with the constant attention [her abilities] received, yet family and friends pressured her to show off her rare talent... [The Afro-American says that by] her twelfth birthday... her psychic energies overwhelmed her physical body. “...[the Afro-American] used to fall into a sleep that would sometimes last almost a week, and her family didn’t know what was wrong with her.” ...[the Afro-American] endured numerous hospital stays as her family searched for the cause of her mysterious sleeping episodes. “I spent a lot of time in hospitals, a lot of time with specialists, had brain scans, all sorts of tests.” ...It took a doctor from the Caribbean to diagnose [her condition. The doctor] traced her trance-like states back to her African ancestry, where psychic children often undergo similar experiences... “...the people call them moon children...” As [the girl grew older, her] physical symptoms dissipated, but [the Afro-American] continued to battle the emotional shadow of knowing the future. Then one day [the Afro-American] received a vision of romance that would become bitter-sweet. “Before I met... [him], I was shown what... my... love-partner... looked like, and I was told that [this love-partner] would be the last... in my life. Well, I met him... at a party... I’ve never loved anybody like I loved this [person].” All lovers are spared knowing when fate will separate them; all except prophets... What [the Afro-American] saw was a wrenching vision... [of her lover’s murder. The Afro-American] struggled to block images of [her lover’s] death but... was compelled to continually experience the anguish of losing him forever. “I’d refuse to be still. If I kept moving then I wouldn’t have to hear or see anything.” [However, time] had run out. [Her lover’s] fate was sealed... Today [the Afro-American] seems at peace... [and claims] to use her psychic gifts to help others with personal matters. But [the Afro-American] also focuses on global concerns. [The Afro-American sees hu]mankind facing profoundly difficult problems. “It’s been a very Frankensteinish type of world that we as a people have created. By 1997-1998 there’s going to be a lot of turmoil, a lot of trauma, where people are going to become more violent in regards to their beliefs...” But [the Afro-American] also sees a future of hope and promise, both for [hu]mankind and the world. “...things are really going to turn around...” ...Some predictions appear inevitable, unstoppable, cast in stone; others are conditional and subject to change. Turn of the century Germany was a nation of peace and enlightenment. Wonders like the electric light and telephone offered a new age of promise... As was the custom of the day, the wealthy would entertain their guests with mediums... who could tell them about love, finance and adventure... It was during this tranquil time that a popular soothsayer... prophesied... [– like] Cassandra, the ancient Greek prophetess... [–] not the calm of the present but rather the ordeal of wars to come, and a time when civilisation as we know it might disappear... [The soothsayer, who] was perhaps the most famous German prophetess of that time... foresaw a war in which millions would die. When [WWI came about, the soothsayer’s] fame suddenly spread throughout Europe. One prediction had come true but there was another. A second war which would dwarf the first, and this time [the soothsayer described someone] who would set Europe on fire. “[The soothsayer warned about Hitler, saying that ‘this person] who would replace the... kaiser... will lash the whip’... [B]efore Hitler took power, people in Munich in the twenties used to note that [Hitler was ‘this guy] who used to run around with a bull-whip.’” ...[the soothsayer] also foresaw the future consequences of such... [a person when writing], “The iron crown will press... heavily on [the German people] for many years to come.” “Even to this day the Holocaust... and other war crimes still haunt the German people.” ...Of our near future [the soothsayer] wrote, “We will live in an age of ill-will, error and decay... A peculiar generation will exist on this Earth which does not carry an inner growth but only death for the whole race. Whatever the country in which they live, they are all united by an ancient law which provides that they wither and die.” “[The soothsayer] describes a kind of people that will be born among us which are almost like cannon-fodder for Armageddon... It’s somehow necessary these people... incarnate into our world and then fulfil their destiny... of self-destruction...” [The soothsayer also] describes the coming of an ecological disaster which will decimate humanity and leave only a handful to build the... new... world.” ...It’s believed in... [her final prediction the soothsayer wrote, “]When the sun will rise again... in golden glory a new generation will arise in the course of time and create a new [humankind.]” ...Scattered across the villages of Central America, a race of prophets has existed for over 2000 years. Their predictions[which] seem to have been strangely accurate[also see]... our generation... hurtling to what may be catastrophe. Reportedly, their calendar marks the precise day of our destruction... “On December 21st, which is the winter solstice, in the year 2012, the Maya have prophesied – in their books that go back to the 1st century BC – that there will be a... very large change. We will enter the Fifth Age.” The Fifth Age may mark the end of history. It’s the final cycle of a pattern the Mayas believe is repeated throughout the eons... “What happens in each of the Mayan creations and destructions of the world is that lots of the beings that belonged to the previous world survive. They go on living and they serve as a sign to the next people who come along of what happened to those who forgot the calendar.” The Mayan calendar is rooted in historical events... “Calendar priests would record the important events of their time on long books made of papyrus. That was the way they could then predict what would happen... in the future...” The Mayas practiced an ancient form of astrology using birthdates to guide their entire lives. “If you were born on a... day that said you were a doctor, then you were a doctor. If you were born on a day that said you were a thief, you were a thief.” ...According to legend... Mother Earth and her children sought revenge... for the harm [humanity had] inflicted on Mother Earth... Tools turned on their creators... “Everything the people had made... and... their domestic animals, rose up against them. Their dogs... [and] turkeys now talked to them and lectured them about what they’d been failing to do... and their houses caved in on them.” Mayans believe that... we too will suffer for mistreating nature. But instead of facing primitive tools, our enemy will be[modern] technology... “...Imagine all... those things you’ve got plugged [into] you house... deciding they don’t like you... [and trying to] attack...” ...“...the Old Testament, Book of Revelations, Nostradamus... the great pyramids[and the] Mayans... all seem to indicate that this particular cycle of evolution on Earth [is] coming to a finale...”

...this volume of the LIFE SCIENCE LIBRARY... recount[s] the evolution of the calendar, which began with a lunar device made by Sumerians 5,000 years ago to forecast the times for agricultural activities and religious ceremonies, right up to the proposed World Calendar, which seeks to establish rationally months and quarter-years of equal length, primarily for business usage... Unlike lower organisms, [a hu]man’s built-in rhythms do not keep... in time with the seasons, so [i]t... has been forced to anticipate changes in nature by keeping written tracks of time through calendars.

Quetzalcoatl... Plumed Serpent of the... Aztec civilization... traditionally known as the god of the morning and evening star, later as the... inventor of books and of the calendar, and as the symbol of death and resurrection... Legend said... [it']d return in another age, and when Montezuma, last king of the Aztecs, received news of the landing of Cortez and his [soldiers] in 1519, his first thought was that Quetzalcoatl had indeed returned.

...the Spaniards, reaching Mexico in the 16th century, found little evidence of Mayan culture and destroyed all remaining written records except four codices. Although the Mayan language is still spoken, the written pictographs of these codices and architectural remains have not yet been decoded, except for certain astronomical signs. These reveal use of a numerical system, including the concept of zero, superior to that of Europe before the 10th cent., and an intricate calendar, with a 365-day year, capable of designating any day in a period of 30,000 years.

They were steeped in the belief of a cyclic recurrence of everything and the Maya in particular were engrossed in specifications of the length of the cosmic period and of its sub-divisions. To illustrate the practical impact of the defeatist outlook generated by the idea of eternal recurrence, a reference to a well-documented detail from the last days of the Maya empire should be instructive. One Maya tribe, the Itza, was, due to its remote location in the Yucatan peninsula, still free of Spanish domination as late as 1618. Then two missionaries decided to convert the tribe, centered on the town of Tayasal on the Western shores of Lake Peten Itza. Canek, the ruler of the Itza, told the missionaries that the time of their surrender had not arrived yet. It would, however, inevitably come in eighty more years with the onset of the fateful age, Katun 8 Ahau. Having received this priceless information, the Spaniards waited patiently until March 1698, when Captain Martin de Ursua appeared with 100 [soldiers]... With hardly a shot fired, the hundred Spaniards overwhelmed 2000 Itza canoe[ists] and 5000 Itza footsoldiers. They fled in a panic generated not so much by the muskets of the Spanish as by the awareness that the wheels of eternal recurrence had just turned into the phase of total catastrophe. It was in their effort to determine the length of the various phases of the cosmic cycles or Great Year that the Maya practised most their finest scientific feat, the vigesimal system of counting... [T]he idea of the Great Year was the dominating feature of the world-view in all great ancient cultures... [T]he Ancients believed... that at the end of... the Great Year... everything would begin again, in a new cycle which was identical with the old... The Hindus of old had fully perceived that the eternal recurrence was a treadmill out of which there was no point trying to escape. This treadmill exercised such a stranglehold on Hindu thought that even the Buddhist program to escape it by achieving Nirvana could not effectively remove its mesmerizing perspective... [T]he decimal system and positional numbering, as developed by the Hindus, found its most prominent use in giving in ordinary years the length of the various Yugas, some of which were supposed to last millions or billions of years... In some cases time was counted in *Kalpas*, or days of Brahma; one Kalpa is 4 or 5 billion years... The 4 yugas constituted 1 mahayuga, or 4,320,000 years; 1000 mahayugas equalled 1 kalpa; 2 kalpas formed 1 day of Brahma, and 1 life cycle of Brahma was equal to 100 years of Brahma, or 311 trillion... ordinary years. This was the largest unit of time to which the Hindus were driven by their preoccupation with eternal cycles... The morbid preoccupation of the Hindus with assigning specific figures to the length of the Great Year is closely related to expressions of utter despair which turn up with great frequency in their ancient literature... This desperate outlook had to appear... in view of the fact that it was agreed among the ancient Hindus that the Kaliyuga, or the worst of the four ages[('the period at the end of the *kaliyuga*, the degenerate age, is called the *pralaya* – it translates as doomsday in eschatological thought; the sun sets the celestial and terrestrial worlds plus the underworld on fire, and when they are totally consumed a huge deluge ensues and the universe turns once again into the ocean of chaos from which it was born in the first place; it is the period in which Brahma sleeps dreamlessly until his next awakening, which will initiate the next cycle of 4 *yugas*, a process which will continue interminably')], had got underway only a few thousand years ago. Since it was to last 432,000 years, what else could be generated by a look at the future than a radical despair? This pessimism sets also the tone of the world-view of the cultures of the pyramids, the... Egyptian, and the... Babylonian... - Cosmology, History, and Theology

...study of the nature, movements, and distances of the celestial bodies... probably originated in Babylonia c.3000 B.C. among priests, who carefully observed movements of the moon, planets and other heavenly objects in an effort to foretell human affairs. They formulated a calendar based on the phases of the moon, and charted the paths of sun and planets through the belt in the heavens which the Greeks later named the Zodiac.

Astrology, long seen as applied astronomy, was developed by the Greeks and reached Christian Europe via the Arabs. It was a utilitarian science linked to medicine and agriculture, and also an ambitious philosophical system resting on the belief that the stars influenced the entire sublunar world. By studying eclipses, comets, and the movements of the planets in the zodiac, astrologers felt able to predict such effects as wars, plagues, and the weather. They found a key to a person's whole life in his horoscope... a forecast of a person's future from a diagram showing the relative positions of the planets etc... at his birth. In the Renaissance popes such as Paul III (1534-49) were enthusiastic patrons, and many rulers employed court astrologers for both political and medical assistance... A papal bull of 1586 condemned judicial astrology, and the Protestant reformer Calvin was hostile, but its decline was slow and many leading scientists in the 17th c. thought it had at least a residual basis of truth. Though it had lost its intellectual standing by 1700... it... has survived to the present day.

As might be expected, such a popular notion as astrology has been seized upon by religious and political activists. No fundamentalist group denies that psychic or divinatory powers exist. To disavow the methods by which these powers are established as belief systems, they would undermine and bring into question the methods whereby they have established their own dogmas. These groups take one of two attitudes about astrology: Either it is the work of the devil, and thus evil though possibly true, or it is proof of God's wonderful design, and undeniably true... About 130 B.C., the Greek philosopher Hipparchus discovered the precession of the equinoxes, thereby revealing that the astrologers had been assigning the wrong sun-signs to their clients, among other errors. The astrologers of his day ignored this fact, as those of today still do. This discovery, along with the Copernican revolution in 1543, should have killed astrology as an academic subject for good.

Beginning in ancient times in Babylonia... and perhaps about the same time in the Orient, astrology spread over the Near East and Europe. Astrologers were venerated as scholars and prophets, and as recently as the 15th cent. in Europe were regularly consulted on personal matters and affairs of state. Although now in disrepute among scientists, astrology... [is based upon] the belief that the... varying positions... of the heavenly bodies... influence human affairs... [The] practice of attempting to foretell events in people's lives by occult methods... existed in ancient Mesopotamia and was brought from Asia to medieval Europe by gypsies. It is today illegal in many states and countries.

Just 30[%] of... respondents... in a [NZ] survey... said they accepted Darwin's theory that humans evolved over millions of years, yet more than 40[%] believe fortune-tellers can predict the future... "When astrology and fortune-telling have more credibility than the greatest discoveries of modern science for a sizeable proportion of the populace, the education system has fallen down badly," [an]Associate Professor... said yesterday.

A fortune-teller in Italy... has been charged with criminal association for helping a hold-up gang decide the most auspicious days for robberies... 25 gang members... enjoyed a run of luck that yielded about 11 billion lire... from 1990 to 1995. - 1996

As Chinese opera singers wail in high-pitched falsetto, the... rows of formally attired fortune-tellers... of Hong Kong's Temple St night market whisper prophecies to clients: "Don't be too tense. Wait for a while, see how things turn out. You deserve better, things will change." It could be a prescription for Hong Kong itself, still settling down as a Special Administrative Region of China... This picturesque, lantern-lit street of musicians, seers, hawkers and prostitutes helped to inspire a symphony marking the historic transfer and is a magnet for poets and film-makers who see it as a shadowy cross-roads, or... a place of dreams, for the common people... But... soothsayers... who... will read your... face... or... hand [- 'palmistry, fortunetelling in which the various lines in the palm of the hand are supposed to indicate a person's character and destiny, was practiced perhaps as early as 3000 BC in China' (incidentally, 'when a Miami grocer went to a palm reader for help with his personal problems, the grocer was told they were the result of the "evil" in the money the grocer had earned and saved, so the grocer was instructed to bring his money to the palmist to have it "exorcised," which the grocer did; sometime later the grocer went to the authorities complaining of still having his problems, but not his life savings of \$20,000') - or use]... caged birds which will peck out your destiny from a pile of envelopes... have seen their own future and are not sure it's bright. - 1997

ON A BRIGHT morning in Liverpool, England, [a gal] locked herself in a dim, soundproof room, lay on a couch and used red lights, dark goggles and hissing radio frequencies to lull herself into a dreamlike state. Two minutes' walk away, [another gal] shut herself in a brightly lit cubicle... switched on her computer, and a random image - an orange-and-white striped balloon sailing over fields and a river - appeared on the screen. [The second gal] screwed up her eyes and tried to "send" it to... [the first gal. A] psychologist, was observing anxiously. This was the first time [the psychologist] had tested the power of telepathy. After a minute or two [the psychologist] was amazed to hear [the first gal] begin to describe in detail the picture... "There's a ball... I see a bouncy blow-up ball with orange and white on it. It's an aeroplane." [The psychologist] clenched his fist. "It's a direct hit... It's as if her mind can see what her eyes cannot." [The psychologist] wondered if the sceptics could be wrong and whether extrasensory perception might, after all, be a sixth sense... When receivers have described what they have seen, they will be asked to choose the correct image from a group of four. By guessing, people would on average pick the right one 25[%] of the time. If the success rate exceeds 33[%], the psychologist says it will prove telepathy exists... Scientists who study telepathy and the paranormal are usually dismissed as New Age spoon-benders who spend too much time watching *The X-Files*. But... ESP has baffled scientists for centuries. Greek philosophers struggled to explain how soothsayers and clairvoyants could predict the future. During the Cold War, researchers with the CIA tried to use ESP to uncover Soviet military secrets... [The psychologist] is "very excited" by the pilot studies, but still has doubts. "It looks very positive, but people are good at fooling themselves into believing they are psychic and deceiving other people too. Many of those who claim to have 'the gift' have been exposed as frauds..." ...Orthodox scientists say that no matter how impressive the early statistics may appear, there is something unnatural going on behind the goggles and the hissing head-phones... "It's illegitimate - absolute nonsense. They say they have statistical evidence - oh, yawn... Extraordinary claims require extraordinary evidence and they have none." The criticism angers... [the] co-director of the Research Unit at... Liverpool's John Moores University... who has spent 20 years studying transpersonal psychology. "There's more to consciousness than the brain itself... How many people have had... [near]-death experiences? How many... have dreamt about something before it happened? We are not a bunch of wishy-washy cranks. We are combining spirituality with science." ...levitation and telekinesis [remain] an enigma to scientists, despite extensive research[. □ 'A psychic healer's powers were repeatedly tested and accepted by Russian scientists then, in 1986, a Russian court became the first to validate a psychic. Russia's military worked on using parapsychology to have control over large groups of people. At least \$30m a year is spent developing psychic warfare']...

There is little - make that nothing - that the psychics got right in their predictions for the *National Enquirer*, the *National Examiner* and other tabloids. So says the *Skeptical Inquirer*... Undaunted by their 1997 misses, the psychics are polishing their crystal balls for 1998.

...I see a large phone bill... [An] unemployed New Plymouth [resident] ran up an \$832 phone bill by making 54 calls... to psychic phone lines... in just three days. But none of the psychics [the 33-year-old] spoke to predicted [their client] would end up homeless and in court... [However, some may have stated that] unpaid calls will incur collection costs... Some lines automatically disconnect after a set time period, so they can't be held responsible for people running up huge phone bills... Last month, [the 33-year-old]... pleaded guilty to obtaining credit by fraud and was sentenced to 50 hours community service... • N[Z]ers have been ringing 0900 psychic phone lines for 10 years and Telecom claims there have been very few complaints. Yet there is no official organisation to recognise genuine New Age professionals and nothing in place to prevent anybody from setting one up... To set up an 0900 number, customers pay a \$200 application fee, \$55 connection fee and \$20.83 per month line rental. All figures exclude GST. In addition, Telecom earns 45c per minute from each call the line receives. If it's that easy, then what are the consequences for the public? "They're very bad," says... an... Auckland clair-audio[, who]... finds it frustrating there's no guild for genuine New Age professionals... [The Aucklander] claims to have met people who have no psychic powers but have been hired as phone psychics and told simply to "follow their gut".

...PSYCHIC READERS WANTED For rostered work on high profile, busy 0900 phone line. Free psychic training offered.

Readers can listen to... [a] recorded summary of their stars for this month and next... You can also listen to your Money forecast for the next 12 months. All you need do is dial 0900 33533 and... enter in the access code number for your star sign... Calls cost \$1.50 per minute incl. GST. - 1996

A bleak future may be in the stars for an Auckland-based horoscope hotline which gives callers the same taped reading regardless of their astrological sign. Subscribers are charged up to \$2.99 a minute for the 0900 service, which instructs them to key in their astrological signs to hear daily readings or a weekly "overview." However, when called by the N[Z] *Herald* yesterday, the reading remained the same for the 12 signs - Aries through to Pisces... Despite numerous calls on the earthly plane... the astrologer who records the horoscopes... could not be contacted... One disgruntled dialler... a Gemini and mother of five from West Auckland, used the hotline for several months before... [becoming] aware of the repeat readings... [A]fter contacting her local *Western Leader* newspaper, [the mother] was promised free readings for her children. "[The astrologer] said you don't actually expect people to ring up other horoscopes..."... A Commerce Commission chief investigator... said the horoscope line could be in breach of the Fair Trading Act if the service provided was misrepresented. [The investigator] said no complaints had been received... [In related news, some people] believe auras are powerful energy fields portraying the human spirit. Others say they simply don't exist... While I can't claim to have seen auras personally, I confess open-mindedness. Years ago, my 12-year-old son came home from school and asked if everyone saw colours around people. Instead of booking him in for an eye test, I quizzed him further. [My son] perceived red around teachers when they were angry. Blues and greens when they were in better moods. Amazing aura stories abound. One teacher was a student's nightmare. [The teacher] could see a streak of lemony green horizontally over the top of peoples' heads whenever they lied. Then there was the [guy] who was shopping on the sixth floor of a department floor in the U[S. Just as the guy] was about to step into the elevator [the guy] was suddenly repelled. Even though the cubicle was well-lit and filled with people, it seemed dark. [The guy] told the lift operator to go on without him. The doors closed and the cable snapped, killing all occupants. The [guy] later realised why [it]'d felt so uneasy. The people in the lift had no auras, a sign of imminent death... If only I could walk into a room and sort out the saints and devils. [A spokesperson] for the N[Z] Skeptics Society... reckons I can rest easy and buy my son a pair of glasses. "Auras are absolute garbage,"... [His] main argument against the existence of auras runs like this: If a [perso]n stands behind a door and

moves gradually into a room, presumably [the person's] aura is visible before [the person] is. No psychic in his experience has been able to detect how close a person is to the edge of the door by seeing the aura first. Nevertheless I didn't turn down the chance to visit... a Papatoetoe [resident] who photographs the energies around people. [The resident] sold half his house nine months ago to buy the electro-magnetic field photographic system, originally from the U[S. The resident]... charges \$25 a photo plus analysis... I was... rewarded with an unflattering array of reds, greens and yellows... What colours would [one] expect to find around saintly people...? "Pinks, lilacs, purples... Jesus Christ would have been white or gold."

...ALL A young [gal] of substance used to need to sustain an aura of health and self-confidence was a hairdresser and a manicurist, plus the occasional consultation with a beautician about what shade of lip-stick to use. To that list should now be added a personal fitness trainer, a colonic irrigationist, an aromatherapist, a reflexologist and, of course, a psychic. Diana, Princess of Wales' recent helicopter trip... to visit [a]Romany-born medium... near Chesterfield... is proof that crystal balls are back in fashion... Given that [the medium] is the psychic who once [predicted that Diana's sister-in-law would marry J. F. Kennedy's son], it is to be hoped the princess got her money's worth... The only noticeable demographic trend is that almost all the interest in psychics comes from people between the ages of 25 and 50... Diana is plumb in the centre of this age band – arguably the most stressful time in work and relationships... Not surprisingly, in California you can contact dead pets as well as dead people... Whether mystic, psychic, clairvoyant... or... astrologer... the futures trade is easy to mock. One Fleet St editor, sacking the writer of the paper's horoscope column, famously began his letter: "As you will no doubt be aware..." These twilight activities – not illegal, but not wholly approved of – have come under a pincer attack from scientists and [the]church... A Church of England report published last year claimed astrologers and fortune-tellers were becoming "new gods"... The report concluded people were drifting into a "pick'n'mix spirituality". The Vatican has gone further, condemning horoscopes, astrology, palm-reading and clairvoyance as sinful. Scientific objections are that the whole business is harmless but mindless hocus-pocus... [One physicist (r:p957, ln10)] has declared that predicting the future is impossible... Researchers who have studied psychics are not impressed by their methods. According to... [the] senior lecturer in psychology at Goldsmith's College, London, "Most alleged psychics are very intuitive people who pick up clues from the client. They may believe they have paranormal powers, but they are simply skilled readers of body language." In a technique called overlap, the medium picks up the first syllable of a response and interrupts before the client can finish. Tapes of the late Doris Stokes showed a client saying "There's my sis..." at which the medium cut in reassuringly with "sisters". Reassurance and friendship are the core product. It has been claimed that [the Chesterfield medium suggested Diana] do the *Panorama* interview in 1995, and helped her to prepare for the questions. That is not strictly in the line of duty for a psychic, but [Diana] has described her sessions [with the medium] as "profoundly comforting". [The medium] has said: "I am very... loyal. My job is like being a priestess." [Diana's sister-in-law] was perhaps less lucky with [her former medium], under whose plastic blue pyramid... [the] Duchess of York... poured out the secrets of confessionals. [The medium] spilled the beans in a book called *The Duchess of York Uncensored*, and deflected criticism by claiming it was good for the duchess to get it all out in the open. The duchess subsequently turned to [the Chesterfield medium, whose talents the duchess recommended to Diana]. Apparently the duchess calls [the medium] all the time [and Diana, who]... used to call about three times a week... now calls almost every day.

...Do you feel that there is more to life than you're achieving? Are you satisfied with where you are and where you're going? The answers to all your questions can be solved by consulting the ancient Tarot. For thousands of years people have lived by the fall of the cards. Kings and Queens ruled their dynasties by the insight the Tarot can offer... Call... Insight Tarot... now and see what the future holds for you. - 1997

Tarot... emerged about 1440 in Italy as playing cards but were given a Hermetic interpretation by Gebelin in 1781 and from then on were used more commonly... as a medium of divination... A Tarot pack has 78 cards, including 56 cards in four suits (wands, pentacles, cups, and swords) of 14 each, plus 22 other freelance trumps (major arcana cards) which feature deeply symbolic pictures. Divination is based upon the sequence of the cards, the interpretation of the major arcana cards, and clairvoyance resulting in an insight into the character and destiny of the person concerned. Ostensibly there are usually four main reasons for consulting Tarot cards: money, a life-crisis, love, and family matters.

Early European cards were called Tarots (tablets of fate), or *tarocchi*. These were picture cards used for fortune-telling or instruction. The earliest such cards are the rare *torocchi di Mantegna*, engraved... in 1470. This 50-card pack has five groups of 10 cards each... From the tarots of Mantegna evolved the 78-card Venetian tarots... [T]his... pack was increased to 97 cards to form the Florentine minchiate deck.

Tarot cards are thought to go back to the 12th c. in Europe, though the earliest surviving set is from 1390... Renewed interest in the occult has led to a recent revival in the use of tarots[. 'I Ching' ('an ancient Chinese manual – originally used for divination – with symbols known as the eight trigrams and sixty-four hexagrams that were symbolically interpreted in terms of the principles of yin and yang'), 'rune stones' (which use 'marks – having mysterious or magical significances – based on the earliest Germanic alphabet'), and *Ouija* boards (which are)... marked with the alphabet and other signs with a movable pointer to obtain messages in spiritual seances[; 'made and sold by toymakers in the US but not by their counterparts in Britain').

The]... study of the occult significance of numbers... [– which ‘appears to have been a universal phenomenon among numerate peoples’ – is called] *numerology*...

...numerology calls upon the numbers 1 to 9 to explain your destiny. According to numerologists, life operates in cycles of nine. Love, work and adventure can be predicted by tapping into your personal month cycle. To find your personal number, just add the day and the month of your birthday and the current year to the present month. Then just keep adding up the numbers to reduce them to a single digit.

We all have a *destiny path* number. To find yours, add up your birthday, month and year, and reduce the total to a single digit. So, if your birth date is February 17, 1959[, you first get]... $1+7+2+1+9+5+9=34$. Now add 34 together (3+4...) and 7 is your *destiny path* number... If your numbers add to 11, 22 or 33, *do not* reduce them to a single digit as these numbers have a special destiny meaning.

Discover your perfect love match with the help of numerology... Any partner's[destiny path] number which reduces to 9 when added to yours is great. Any number which reduces to 7 when added to yours is excellent long-term. Any number which reduces to 2 when added to yours is ideal. Any number which reduces to 5 when added to yours is irrational but exciting.

...ancient Greeks believed... numbers were magical principles governing the... universe, with... number [1] as the spirit from which everything rose.

...numerology is based on the Pythagorean idea that all things can be expressed in numerical terms because they are ultimately reducible to numbers. Using a method analogous to... the Greek and Hebrew alphabets (in which each letter also represented a number), modern numerology attaches a series of digits to an inquirer's name and date of birth and from these purports to divine the person's true nature and prospects.

number... is the mediator between the divine and the earthly. So, if one performs various operations with numbers, these operations also affect the things related to these numbers... In the Pythagorean system, numbers from 1 to 10 had specific symbolic meanings as well as meanings in geometry, arithmetic, astronomy, acoustics, and thus in music... Among the symbols represented by 1 were the first principle, God the creator, the east, unity... immortality, the right side, the day, the sun, and equality. The number 2 signified divisibility... the mortal, the left side, the night, the moon, inequality... diversity... and matter. The odd numbers above 1 were [masculine], the even numbers... [feminine]. ‘According to the Pythagorean system nine represents Deity. As the odd numbers are the fundamental notes of nature, it is understandable how they came to be considered far more important than the even numbers. In Chinese lore the even numbers are *yin* and inauspicious, with the *yang* odd numbers as auspicious.’] The number three, equalling 1 + 2, represented perfection and stood for all reality... There are sacred trinities in many religions... However... [among] American Indians, the sacred number is 4... In addition to the occult meanings of numbers, another principle is basic to numerology – that of gematria, or cryptograph. In Hebrew, consonants are used as numerical signs, but by providing them with vowels, one can often read them as words and can read words as numbers. A combination of gematria and Pythagorean number symbolism formed the basis of the number magic of the medieval Cabala. This allows special readings of the Hebrew Bible to find secret or hidden meanings in the text.

Jewish magicians assigned every name a numerical equivalent, to which they attributed great mystical significance: for example, the number of God was eight... In folk magic, seven is usually a lucky number. A [7]th child, it is said, possesses the power to foretell the future and cure diseases.

The typical number, *seven*, is employed as the symbol of perfection, or completeness. - The messages to the seven churches

Hippocrates divided the life of [humanity] into seven ages, as did Shakespeare... traditionally... *seven*... [was] a number of mystic significance. The symbolism may have originated in the motion of the seven “planets” (including the sun and moon) known to the ancients. The Biblical statement that the earth was created in 7 days more recently intensified the mysteriousness of the number[, which is also ‘known as the number of harmony’ (since *harmony* means ‘a combination of musical notes’ as well as ‘the apt arrangement of parts’, it seems appropriate to point out that there are 7 musical notes – A to G; note further that there are, allegedly, ‘seven deadly sins’, while the world is divided into ‘seven seas’, plus it has ‘seven continents’, and supposedly contains – or once had – ‘Seven Wonders’)]. In nearly all religions, notably Christian and Buddhist, the number seven recurs frequently.

AND the LORD said unto Noah... Of every clean beast thou shalt take to thee by sevens... and of beasts that *are* not clean by two... Of fowls also... by sevens... For yet seven days, and I will cause it to rain upon the earth forty days and forty nights... And it came to pass at the end of forty days, that Noah opened the window of the ark... And [Noah] sent forth a... dove... to see if the waters were abated from the face of the ground; But the dove found no rest... [After] seven days... Noah... again... sent forth the dove... And the dove came... [back with] an olive leaf... so Noah knew that the waters were abated... And [Noah] stayed yet other seven days; and sent forth the dove; which returned not again unto him any more... [O]n the seven and twentieth day of the month, was the earth dried... Now Jericho was straitly shut up... And the LORD said unto Joshua... seven priests shall bear before the ark seven trumpets of ram's horns... and go round about the city once. Thus shall thou do six days. And... [on] the seventh day ye shall compass the city seven times... And... when... all the people... shout with a great shout; the wall of the city shall fall down... - Old Testament

...to the seven churches which are in Asia: Grace *be* unto you, and peace, from him which is, and which was, and which is to come; and from the seven Spirits which are before his throne... I turned to see the voice that spake with me. And... I saw... in his right hand seven stars... and *there were* seven lamps of fire burning before the throne... AND I saw... on the throne a book written... [that was] sealed with seven seals. - New Testament

The New Testament consists of 27 books. From this plus, presumably, the belief that Jesus will come a SECOND time, some people have decided that two sevens – represented numerically as 7 & 7, 27, 72 or 77 – are symbolically linked to the Messiah. (By the way, ‘our sun has a brightness magnitude of 27.’)

...BROTHER... 77... HONOR[S]... HIS MAKER... AND... HA[S] MERCY ON THE POOR. - SECRET 77

...if... God is seven... then the Devil is six...

Here is wisdom. Let him that hath understanding count the number of the beast: ...his number is Six hundred threescore and six. - Revelation 13:18

...in the fifth verse of the same chapter: ‘And there was given unto him a mouth speaking great things and blasphemies, and power was given unto him to continue forty and two months.’ If the French alphabet is treated like the Hebrew system of enumeration[–] by which the first ten letters represent the units, and the next ten the tens, and so on... [– by turning] out the words *l'empereur Napoleon* into ciphers on this system, it happens

that the sum of these numbers equals 666, and Napoleon is thereby seen to be the beast prophesied in the Apocalypse. Moreover, working out in the same way the words *quarante-deux*... the sum of these numbers again equals 666, from which it is deduced that the term of Napoleon's power had come in 1812, when the French Emperor reached his forty-second year.

Fear of spiritual evil has caused the loss – on paper... – of one of the newest streets in L[A]. The latest official guide boasted on its cover that it included 666 new streets. Appalled locals protested that 666 is “the number of the Beast”. The cover has been reprinted to read: “665 new streets”

...life brought no sense of direction until I started to write. In my first book I introduced *the child*. Little by little I nurtured the thought that I was glamorizing him. Then sometime near the end of 1973, after contemplating this and the preaching, teaching, and writing of others, my mission became apparent for the first time. It was to prepare the world for *the child*. Life would be given to the “beast from the sea” (Rev. 13:15). It was a stinging revelation, but did not come in a thundering vision. Perhaps the realization came after thinking about horoscopes: since my Grand Trine is in earth signs, I had to be the earth beast. Or maybe it began after reading about numerology? ...This child, who was born during the new moon and planetary alignment of February 5, 1962, also is *not* actually against Christ or any religion. But the... [*child*] will lead us through [a] tumultuous period... Soon my doctrine and version of history will be accepted, especially among the British nationalities... We are slowly making the progression into the coming of a new age; it cannot be stopped. Actually, basking in the splendor of both the old and the new, we can feel the aura of the ensuing period while still under the influence of the last one. The center-point will arrive in approximately A.D. 2,040... Earth will again be blessed with a demigod in the age of Sagittarius, about A.D. 6,300. - THE FALSE ANTI-CHRIST

666 is sometimes called ‘three sixes’, which can be represented numerically as 36, which – according to numerologists – can, in turn, be written as $3 + 6 = 9$ (furthermore, $3 \times 6 = 18$, while $1 + 8 = 9$). Genesis 3:6 describes humanity's first sin – and, because Eve was allegedly the first ‘to know evil’, some guys have taken this to be a justification for regarding gals as devils. Genesis is the first book of the Bible, and its last book seems to provide further justification:

AND there came one of the seven angels which had the seven vials, and talked with me, saying... Come hither; I will shew unto thee the judgment of the great whore that sitteth upon many waters: With whom the kings of the earth have committed fornication, and the inhabitants of the earth have been made drunk with... her... wine... I saw a [gal] sit upon a scarlet coloured beast... having seven heads and ten horns... And upon her forehead was a name written... THE MOTHER OF HARLOTS AND ABOMINATIONS OF THE EARTH. - Revelation 17:1-5

In the book of Revelation, the opposite of the devil is more often described as being ‘Alpha and Omega, the first and the last’. Being opposites themselves, *first* and *last* can be described as a *yin* and *yang* pairing – as can the numbers 6 and 9.

Now from the sixth hour there was darkness all over the land unto the ninth hour. - St Matthew 27:45

The fact that 3 and 6 are missing if the numbers 2, 7, 4, and 5 (see above) are rearranged into their proper sequence, may be unrelated to the matter at hand. However, it might not be irrelevant to point out that if 6 and 9 can be described as a *yin* and *yang* pairing, so can 666 and 999 – plus, therefore, 36 and 39.

The number 39 is closely related to the number 40 – because 39 can be ‘rounded up’ to get 40 (which *recurs frequently* in the Old Testament). However, there are 39 books in the Old Testament. Incidentally, Earth is third among ‘the collection of nine planets in orbit around the Sun’; Earth's ‘average distance from the Sun is 93 million miles’; and ‘Earth has an equatorial radius of 6,379km (3,963miles)’. Furthermore, when a digital clock says the time is 9.30, the small hand on a manual clock will be pointing to the 9 and the big hand to the 6. Consider also the following equations: $96 - 69 = 27$; $3 \times 9 = 27$; $3 + 9 = 12$; $39 - 27 = 12$.

nidanas [are the]12 links in the chain of the Buddhist notion of dependent origination. Being interdependent, these links condition, and are conditioned by, the other links in the chain. The 12 links are: spiritual ignorance; constructing activities; consciousness; mind and body; the six sense-bases; sensory stimulation; feeling; craving; grasping; existence; birth; and aging and death. Thus the ultimate root of the twelfth link, aging and dying, lies in the first link, spiritual ignorance... [T]he 12 links are behind the basic problem of suffering, and the end of suffering will come when there is an end of spiritual ignorance, craving, and the other links of the chain.

The Chinese identify a cycle of 12 years, and each is given a name: year of the Dragon; Snake; Horse; Goat; Monkey; Rooster; Dog; Pig; Rat; Cow; Tiger; or Rabbit. Astrologers combine these years with the 12 zodiac signs (e.g., people born during July 1999 will become Cancer-Rabbits), and assume that people who have the same combination will exhibit similar characteristics, or lead similar lives.

Apart from there being 12 months in their calendar, the number 12 was hugely symbolic to the Jews.

The symbolism of the twelve tribes plays a special role in the *Temple Scroll* from Qumran... According to the so-called *Community Rule*... twelve [people] out of the whole of Israel played an important part in the group that is described... These twelve... were called the “House of Holiness for Israel,”... The [twelve members] were supposed to be distinguished by “perfect holiness”; to them fell the authority to teach because all special knowledge from the literature in scripture was supposed to have been imparted to them. They were thought of as the circle of founders; it is said of them that they were supposed to set themselves apart from the other, sacrilegious people, “and [they] shall go into the wilderness to prepare the way of Him”... They are characterized as a “precious corner-stone”... Their sheer existence atoned for the godlessness of Israel... Their relation to “Israel” is clearly discernible everywhere. The only question is whether this circle existed in reality or only on paper. The twelve[disciples] with whom Jesus surrounded himself were also unquestionably representatives of the renewed Israel... Similar to the way the twelve in [the Qumran text] are called a “foundation,” in Revelation 21:14 the names of the twelve apostles are inscribed in the foundation stones of the new Jerusalem.

...that great city... descending out of heaven from God... had a wall great and high, and had twelve gates, and at the gates twelve angels, and names written thereon, which are *the names* of the twelve tribes of the children of Israel... and... of the twelve apostles of the Lamb... And the... length and breadth and the height of... the... city... are equal... [at] twelve thousand furlongs... and the city was pure gold, like unto clear glass. - Revelation 21

The book of Revelation also refers to two numbers that are multiples of 12. The first, number 24 (12×2), is related to the words ALPHA and OMEGA – they being the first and last letters of the Greek alphabet, which consists of 24 letters. The second number is 144 (12×12 , or 12 to the power of 2).

The Revelation of Jesus Christ, which God gave unto... me... John... to shew unto his servants things which must shortly come to pass... Blessed [are they] that readeth, and... that hear the words of this prophecy, and keep those things which are written therein: for the time is at hand... [Him] that

is unjust, let him be unjust still: and [him] which is filthy, let him be filthy still... Behold... the first begotten of the dead, and the prince of the kings of the earth... cometh with clouds; and every eye shall see him... To him... will... God... give to eat of the hidden manna, and will give him a white stone, and in the stone a *new* name written, which no [person] knoweth saving him] that receiveth it... I looked, and, behold, a door was opened in heaven: and the first voice... I heard *was* as it were of a trumpet talking with me, which said, Come... and I will shew thee things which must be hereafter. And immediately I was in the spirit: and, behold, a throne was set in heaven, and *one* sat on the throne... And round about the throne *were* four and twenty seats; and upon the seats I saw four and twenty elders sitting, clothed in white raiment; and they had on their heads crowns of gold... The four and twenty elders... worship him that liveth for ever... saying... O Lord... thou hast created all things, and for thy pleasure they are and were created... And I saw a strong angel proclaiming with a loud voice, Who is worthy to open the book [(r:p1124, ln58)], and to loose the seals thereof? And no [person] in heaven, nor in earth, neither under the earth, was able to open the book, neither to look thereon. And I wept much, because no[body]... was found worthy to open and read the book... [Then] one of the elders saith unto me, Weep not: behold, the Lion of the tribe of Juda, the Root of David, hath prevailed... And I beheld, and, lo, in the midst of the... elders stood a Lamb... having seven horns and seven eyes... and on *his* vesture... [was] a name written, KING OF KINGS, AND LORD OF LORDS... And [the Lamb] came and took the book out of the right hand of him that sat upon the throne... [Then] the Lamb opened... the seals... [When the Lamb] had opened the sixth seal... I saw four angels standing on the four corners of the earth, holding the four winds... And I saw another angel ascending from the east, having the seal of the living God... saying... to the four angels... Hurt not the earth, neither the sea, nor the trees, till we have sealed the servants of our God in their foreheads... [A]nd *there were* sealed an hundred and forty and four thousand... twelve thousand... children... [from each] tribe... These are they which were not defiled... for they are virgins... After this I beheld... a great multitude, which no [person] could number, of all nations... kindreds, and... tongues, [standing] before the throne, and before the Lamb, clothed in white robes... And one of the elders... said to me, These are they which came out of great... tribulation, and poverty... They shall hunger no more, neither thirst any more... For the Lamb... shall feed them, and shall lead them unto living fountains of waters: and God shall wipe away all tears from their eyes. AND when... the Lamb... opened the seventh seal, there was silence in heaven about the space of half an hour... [Afterwards] I saw another angel fly in the midst of heaven, having the everlasting gospel to preach unto them that dwell on the earth... Saying with a loud voice, Fear God... for the hour of his judgment is come... And there followed another angel saying, Babylon is fallen... the kings of the earth, who have committed fornication and lived deliciously with her, shall bewail her, and lament for her... saying, Alas, alas that great city Babylon, that mighty city! ...And the merchants of the earth shall weep and mourn over her; for no[body]... buyeth their merchandise any more; The merchants of gold... silver... precious stones, and pearls, and fine linen... and silk, and... all thyne wood, and all manner vessels of ivory, and all manner vessels of most precious wood, and of brass... iron, and marble, And cinnamon, and odours, and ointments, and frankincense, and wine, and oil, and fine flour, and wheat, and beasts... and horses, and chariots, and slaves... For in one hour so great riches is come to nought... for the former things have passed away. And [the one] that sat upon the throne said, Behold, I make all things new... there shall be no more... crying, neither shall there be any more pain... And... I John saw the holy city, new Jerusalem... prepared as a bride adorned for her husband... And the city had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it... And the gates of it shall not be shut at all... And there shall... [not] enter into it any thing that defileth, neither *whatsoever* worketh abomination, or *maketh* a lie: but they which are written in the Lamb's book of life... In the midst of the street... *was there* the tree of life, which bare twelve *manner* of fruits, and yielded her fruit every month... Blessed *are* they that... may have right to the tree of life, and may enter in through the gates into the city.

In the Old Testament there are many references to sacred groves and to the setting up of altars in these groves and under trees, notably oaks... In the faith of ancient Egypt, the numerous deities were frequently supposed to inhabit trees, chiefly the sacred sycamores... The concept of the tree as a god's dwelling place a[ls]o a[pp]ears in Persian mythology: the cyprus was considered especially sacred... Tree worship was widespread in India; Gautama Buddha was reputedly incarnated as a tree spirit... 43 times... The concept of the tree as the universe is best known in its Scandinavian form, where the ash, Yggdrasil, represented the world tree... But the idea is found in many other parts of the world... Many oracular trees are mentioned in the Old Testament, such as the 'tree of the diviners'... mentioned in... Judges (9:37); 'the tree of the revealer' in Genesis (12:6)...

According to... Daniel chapter four, the heaven-high tree was cut down. However, the stump was left, and bands of iron and copper... put on it. This would keep the stump from growing until it was God's time to remove the bands and let it start growing again. But how and when was God's rulership cut down? In due course, the kingdom of Judah... became so corrupt that [God] allowed King Nebuchadnezzar to destroy it, to cut it down. This happened in the year 607 B.C.E... No longer was there a government to represent God's rulership in the earth. Thus, in 607 B.C.E. a period of time began that Jesus Christ later referred to as "*the appointed times of the nations*," or, "*the times of the gentiles*." (Luke 21:24...) ...What was to happen at the end of these "appointed times..."? Jehovah was to give the power to rule to the One "who has the legal right." This One is Jesus Christ. So if we can find out when "the appointed times of the nations" end, we will know when Christ begins to rule as king. According to Daniel chapter four, these "appointed times" would be "*seven times*." ...How long are these "seven times"? In Revelation chapter 12, verses 6 and 14, we learn that 1,260 days are equal to "a time [that is, 1 time] and times [that is, 2 times] and a half time." That is a total of 3 1/2 times. So "a time" would be equal to 360 days. Therefore, "seven times" would be 7 times 360, or 2,520 days. Now if we can count a day for a year, according to a Bible rule, the "seven times" equal 2,520 years. [(Numbers 14:34; Ezekiel 4:6)]... So by counting 2,520 years from... 607 B.C.E... we come down to 1914 C.E... In that year W[W]I began. Never in history had there been such a terrible war... Yet only 21 years after that war ended, W[W]II began. And it was four times as destructive as W[WI]. Those two wars... should be enough to show that we really are living in the time the Bible foretold as the "last days." Yet some persons may say: 'Such things as wars, famines, pestilences and earthquakes have occurred often throughout history. So it would not be hard to foretell that they would occur again.' But think: The Bible not only foretold these things, but indicated that they would occur on a *worldwide scale*. Also... Jesus said: "This generation will by no means pass away until these things [including the end of this system] occur." ...He meant the generation of people who were living in 1914. Those persons yet remaining of that generation are now very old. However, some of them will still be alive to see the end of this wicked system. So... we can be certain: Shortly now there will be a sudden end to all wickedness and wicked people at Armageddon [('derived from the field Megiddo, where the Israelites defeated the Midianites and the Canaanites, and where Saul fell before the Philistines')]... "ARMAGEDDON" ...is a frightening word to many. Often world leaders use it to refer to a possible World War III. However, the Bible speaks of Armageddon as the place of a righteous war fought by God. (Revelation 16:14, 16...) This war of God will prepare the way for a righteous new world. Unlike the wars of [humans], which kill both the good and the bad, Armageddon will destroy only the bad. (Psalm 92:7)... After Armageddon, God's kingdom will be the only government ruling over the earth. Satan and his demons will be gone. (Revelation 20:1-3)... The departing Jesus... ascended to heaven... in his... invisible... spiritual body... (1 Peter 3:18). Thus his return also would be invisible, in a spiritual body... [T]he expression "every eye will see him"... means that everyone will then understand or recognize that Christ is present... [H]is return does not mean that [Jesus] literally comes back to this earth... [Jesus] does not need to leave his heavenly throne and actually come down to earth to do this... Christ and his 144,000 faithful anointed followers will rule... for a thousand years... So Judgment Day will be 1,000 years long... During Judgment Day those who survive Armageddon will work to make the earth a paradise. Into this paradise the dead will be welcomed back. (Luke 23:43). ['The Last Judgment is not to be confused with the personal judgment received by each soul immediately after death; when Judgment Day arrives, each soul will be reunited with his original physical body']... Scientists have long known about the human

body's power to renew itself... They say that, under right conditions, humans should be able to live forever... Yet, is it really God's purpose that people live happily on earth forever? If it is, then everlasting life is not just a wish or a dream – it is sure to come! ...Since the earth was made to last forever, then [humans] should also live forever. Surely a loving God would not create humans with a desire to live forever and then not make it possible for them to fulfil that desire! [(1 John 4:8; Psalm 133:3)] ...those who survive Armageddon... will have pleasant work to do, and they will be able to see and enjoy the results of their labours... If a house has a maker... surely the more complex universe must have a Maker too... [W]here there is intelligence there is a mind... And... where there is a mind there is a brain and a body of a definite shape. So, then, the great mind responsible for all creation belongs to the great Person, Almighty God. Although [God] does not have a material body, [it] has a spiritual one... Since God is a person with a spiritual body, [it] must have a place to live... [God] is in the heavens... Yet his holy spirit, which is his invisible active force, can be felt everywhere. By means of his holy spirit God created the heavens, the earth and all living things... To create these things, God did not need to be present in body. [God] can send out his spirit... to do whatever [it] wants even though [God] is far away... No doubt everyone whom you know has a name. God also has a personal name to set him apart from all others... We learn God's name from the Bible, where it appears about 7,000 times. For example... Psalm 83:18 reads: "That [people] may know that thou, whose name alone is JEHOVAH, art the most high over all the earth." ...Some persons are surprised to see God's name in their Bible. This often is because their Bible is one that seldom uses God's name... 'But why,' you may ask, 'is God's name not used in every place that it occurs in the original Bible text? Why are the titles LORD and GOD generally used in its place?' ...[because there] are those... that argue that the word "Jehovah" should not be used because it is not really the name of God. - You Can Live Forever in Paradise on Earth

Jehovah [is the term] used since the 11th century as a form of the Hebrew name for Israel's God 'Yahweh'. It is formed from a combination of the Latinized consonants of the Hebrew word *YHWH* (the name for God) with the vowels of the Hebrew word *Adonai* ('Master, Lord'), this combination being necessary to prevent correct utterance of the term *YHWH*, which is considered too holy to be spoken... *Jehovah's Witnesses* [are a] millenarian movement organized in the USA in 1884... They adopted the name... in 1931; previously they were called 'Millennial Dawnists' and 'International Bible Students'. They have their own translation of the Bible, which they interpret literally, and view themselves as entirely distinct from orthodox Christianity, claiming that their intent is to 'shock, rattle and defrock' the traditional Church. Mistrustful of the claims of Protestant and Catholic Churches, whose ideology they see as false and deluding, they believe in the imminent second coming of Christ. They avoid worldly involvement, and refuse to obey any law which they see as a contradiction of the law of God – refusing, for example, to take oaths, enter military service, or receive blood transfusions... They... meet in... Kingdom Halls, and all 'witness' through regular house-to-house preaching.

...formerly called Russellites... *Jehovah's Witnesses*... follow the teachings of Charles Taze Russell... pastor of Brooklyn Tabernacle from 1909, who preached that the second coming of Christ had occurred invisibly, 1874, and was to be followed by chaos and a millennial period during which salvation would be awarded to many now alive[('the Jehovah's Witnesses have made no fewer than eight prophecies that the end of the world was nigh – in 1874, 1878, 1910, 1914, 1918, 1925, 1975 and 1984 – the last failure prompted the group to give up playing this game')]. The sect... propagates its views by radio, pamphlets, records, and its organ, *The Watch Tower*, distributed by members. Each member is considered a minister.

...Jesus taught us to pray: "Thy kingdom come. Thy will be done on earth, as it is in heaven." ...When God's Kingdom comes, what will happen to this hate-filled world? "The kingdom," will "crush and put an end" to all the corrupt governments of this world. (Daniel 2:44)... Concerning God's new world... "The righteous themselves will possess the earth, and... reside forever upon it." (Psalm 37:9-11, 29; Proverbs 2:21,22) What a glorious time that will be! ...Even dead ones will live again, and the entire earth will be transformed into a literal paradise. [(Isaiah 11:6-9; 35:1,2; Luke 23:43; Acts 24:15)]. To live in God's new world, we must love one another... (1 Thessalonians 4:9)... Jesus emphasized that, next to love of God, love of neighbor should govern our lives. (Matthew 22:34-40) But has any group of people ever truly loved their neighbors? Early Christians did! ...What about today? ...*Encyclopedia Canadiana* observes: "The work of Jehovah's Witnesses is the revival and re-establishment of the primitive Christianity practised by Jesus and his disciples..." ...Witnesses allow nothing... to cause them to hate their neighbors. Nor will they kill anyone, for they have figuratively beaten their swords into plowshares and their spears into pruning shares... The Witnesses, in fact, are noted for taking the initiative to help... neighbors... No wonder an editorial in California's *Sacramento Union* noted: "Suffice to say that if all the world lived by the creed of the Jehovah Witnesses there would be an end of bloodshed and hatred, and love would reign as king." A writer in Hungary's *Ring* magazine remarked: "I have come to the conclusion that if Jehovah's Witnesses were the only ones living on the earth, wars would cease to exist, and the only duties of the police... would be to control traffic and to issue passports." Admittedly though, a huge, worldwide change will be needed if all people are to love one another... For further information or a free home Bible study, please write to Watch Tower, using the appropriate address...

Knock! Knock! Hurry to the door. Two serene-faced people... are standing there. One... says: "Hello, we... thought we'd visit to..." "Are you Jehovah's Witnesses?" They nod. So you say: "Sorry." And shut the door... They are brave, devoted and dogged... these Witnesses. Brave, because in countries that refuse citizens the right to be pacifists they go to jail rather than let themselves be conscripted... Devoted, because they accept it as a duty to preach from door to door even though [at] house after house, the door is shut in their faces. And somehow they are still... believers even though their founder predicted that Christ would return in 1914, that all unbelievers would then be killed, that 144,000 of the super-pious would be vacuumed up into Heaven and that earthly life thereafter would continue in godly peace for evermore. Once, because I think people ought to be allowed to believe anything as long as they hurt no one, I joined in a letter-writing campaign to have... Witnesses freed from the prisons in which brutal Governments had locked them... And... I also... once wrote to the Jehovah's office... telling them to keep all their people away from my place. But still they keep coming. They even seem to have come into the house while I was away. The other day... I found a Jehovah's pamphlet on the floor. I have no proof of how the pamphlet got in the house. But I cannot push it under the closed door. So maybe it arrived by divine intervention... The pamphlet says that The End is Nigh. If they're talking about my patience, they are dead right. The end... may even have arrived already.

...I don't normally commit plagiarism but occasionally another journalist has an idea so good that it's worth ripping it off and spreading it around the planet immediately. Such a one is [the journalist] who recently telephoned... British bookmakers, and asked them to quote the odds on... 10 different ways for the world to end... [T]he results were splashed across the Sunday magazine of the *Independent*... What immediately got your attention was that the trendiest new ways... got the shortest shrift. The end of the world through overpopulation, for example, was given odds of 25 million-to-one against. That means... if you laid a bet of £10 on that proposition... and you turned out to be right, they would pay you... £250 m... when it happens. Are they being generous, or just cunning? Well, if you consider how the bookies have defined the end of the world, you begin to see the method in their madness. They will only have to pay out if, between now and 2097, the world should fall to a population of only 1000 people... Among the disasters that might get the world down to that number, the final cause quite literally cannot be overpopulation... The same logic relegates a couple of other favourite doomsday scenarios to the also-rans. Pollution is a million-to-one... drought is 100,000-to-one... and climate change and famine both come in at 75,000-to-one... Then there's the fashionable disaster-of-the-week, the "coming global anarchy." ...at

50,000-to-one... (generous, to my mind, as it's even harder to see how anarchy could wipe *everybody* out). And there's the end of the world through the natural processes of the universe – the Sun goes nova, we are sucked into a black hole, there is another Big Bang – which they dismiss as a million-to-one... [Excluding the] good old Four Horse[rider]s of the apocalypse[, that]... leaves three major contenders, and very interesting ones they are. "It Came From Outer Space" is taken quite seriously – 500,000-to-one against an alien invasion before 2097, but a mere 10,000-to-one against a massive meteor strike like the one that probably took out the dinosaurs 65 million years ago. Pestilence does even better: only 5000-to-one against new diseases arising that virtually wipe out the human race. And war comes in far ahead of the rest of the field, at only 500-to-one... Now, you can discount all this as wild speculation untamed by market discipline since... the... odds-makers... know that they would never really have to pay out. If the world were down to 1000 people, it is highly unlikely that any of the [insurance] firm's partners would be numbered among the survivors, nor any of the punters who laid bets with them either. And in any case a world as sparsely populated as that would have stopped using money. - 1997

In the past, it was held that [the end] would come through supernatural causes and it was accordingly expressed in mythological terms... The difference now is that the end of the world, if there is to be an end, is seen as coming about through, in some sense, natural causes. - *The End*

Nuclear war, holes in the ozone layer, disease, genetic engineering, asteroids and supernovas – any of these things may bring human history to an end... [A]re we in imminent danger of extinction? [One writer has assessed] the risks facing the human race and concludes... from the undeniable fact that we are a very young species... yes, we probably are... 'There have been upward of fifteen thousand generations since the start of human history – yet here am I, in the one and only generation which will have no successors!' - THE END OF THE WORLD

Despite the fact that there have been more than 24 generations of humans, for some reason the latest one (14 to 30-year-olds during 1997) is called *Generation X*. This title means that 'generation next' must be Generation Y, and implies that the generation after that – Generation Z – will be the last!

...as... Jesus... sat upon the mount of Olives, the disciples came unto him privately, saying, Tell us... what *shall be* the sign of thy coming, and of the end of the world? And Jesus answered... unto them... in the last days perilous times shall come. For men shall be lovers of their own selves, covetous, boasters, proud, blasphemers, disobedient to parents, unthankful, unholy, Without natural affection, trucebreakers, false accusers, incontinent, fierce, despisers of those that are good, Traitors, heady, highminded, lovers of pleasures more than lovers of God; Having a form of godliness, but denying the power thereof: from such turn away... Take heed that no [one deceives] you. For many shall come in my name, saying, I am Christ; and shall deceive many... [Y]e shall hear of wars and rumours of wars... nation shall rise against nation, and kingdom against kingdom: and there shall be famines... pestilences, and earthquakes, in divers places... the sun... shall... be darkened, and the moon shall not give her light, and the stars shall fall from heaven... [S]ee that ye be not troubled: for all *these things* must come to pass... [I]n the last days... the mountain of the LORD'S house shall be established in the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it... [T]he nations... shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more... [T]his is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put my laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to me a people: And they shall not teach... Know the Lord: for all shall know me, from the least to the greatest. For I will be merciful to their unrighteousness... [T]heir sins and... iniquities will I remember no more... [The] new *covenant*... hath made the first old. Now that which decayeth and waxeth old is ready to vanish away. - The Bible

...you say it's going to happen now but when exactly do you mean... I've already waited too long and all my hope is gone... - HOW SOON IS NOW?

THE END of the world is approaching... This characteristic phrase, which opened the royal proclamations during the tenth century, might have been written today. At present, there is a general and universal physical fear, with only one question: "When shall I be blown up?" The idea of the end of the world has recurred again and again in the past, and yet the earth has not ceased to exist... The history of the "end of the world" is interesting, for it is also the story of the human mind face to face with its own destiny; and in these days of despair, a review of this history reflects certain aspects of contemporary human behaviour. During the early ages of the Church, the belief that the end of the world was at hand was universally spread among Christians. In Nero's reign, the great fire at Rome occurred (A.D. 64), which some ancient writers assert was ordered by the notorious Roman emperor. In order to remove the odium of the conflagration from himself, Nero tried to throw blame on to the Christians, and many of them were put to a cruel death. So much cruelty and madness, so many catastrophes, and so many horrors were crowded into the years A.D. 64-70 that there was every indication that the angel of death had spread his wings over the world. There were innumerable prodigies – comets, shooting stars, eclipses, showers of blood, monsters, earthquakes and pestilences... [However, though] there seemed to be ample warning, [and] the Apocalypse, which was written by St John in A.D. 69, seemed to announce the second coming of Christ before that generation passed away, the world's end did not take place... Once more it became necessary to interpret the words of the evangelists. On this occasion, the coming of Christ was put off until after the fall of the Roman Empire, and thus considerable margin was given to the commentator... [Henceforth,] belief in the end of the world was perpetuated from year to year and from century to century. Every catastrophe and rare phenomenon in nature was regarded as a precursor of the final cataclysm. The belief was so profound that terror haunted the human soul, and preachers successfully worked upon the dread apprehension. But as generation after generation passed, it became necessary to define once again the general and universal tradition; and this time the end was expected in the year 1000 [– because many] sects believed that Christ would reign with the saints for a millennium before the day of judgment. The belief took on an exaggerated and sensual form with many, who anticipated a day of general rejoicing for the elect and a reign of pleasure... In the year 999 an "invading army" of pilgrims went to the Holy Land to await the Last Judgment at Jerusalem. And during the thousandth year, the number of pilgrims increased. Most of them had sold all their possessions or given them away. Shooting stars or thunderstorms reduced them to panic and prayer. The end was prophesied for the [24]th of March... by Druthmar, a monk... Terror was so great on that day that the faithful sought refuge in the churches, remaining until midnight before the relics of the saints, in order to die at the foot of the cross. From this period date many gifts to the Church; lands and goods were given to the monasteries. The end of the tenth century and the beginning of the eleventh was a truly bizarre and fearful period. A widespread and fatal infectious malady, in which the flesh of the victims decayed and fell from their bones, swept through... Europe. Then came years of famine. "The... poor gnawed the roots of trees, and many were in such extremity as to devour human flesh. The strong fell upon the weak in the public highways, tore them to pieces, and roasted them for food. Children were enticed... into byways, where they were devoured... Famished children killed their parents, and mothers feasted upon their children. One person exposed human flesh for sale in the market place of Tournus, as if it were a staple article of food... [That person] was burned at the stake. Another, stealing flesh by night from the spot where it had been buried, was also burned alive." The end of so miserable a world was both the hope and the terror of that mournful time... [T]he fatal year 1000... vanished into the past, [but] the problem of the world's end (though uncertain and vague) remained. Fostered by the belief in prodigies and the devil, it was to endure for centuries in the popular mind where it is still harboured today. The idea of the end of the world was not confined to the Church alone. In 1186, astrologers terrified Europe by announcing a conjunction of all planets in the constellation of Libra... which indeed occurred... [A] writer of that period, says... "The astrologers of the East,

Jews, Saracens, and even Christians, sent letters all over the world, in which they predicted, with perfect assurance, that in the month of September there would be... the destruction of all things. But... the event very soon belied their predictions.” In 1198, another alarm was raised when it was announced that Antichrist had been born in Babylon and... all the human race would be destroyed. A curious list could be compiled of all the years it was said that Antichrist had been born; the years might be counted by hundreds... In Germany, Stoeffler, a very celebrated astrologer and one of the most famous European mathematicians, prophesied a great flood, as in the time of Noah, for the year 1524. The prediction was based upon his calculation that Saturn, Jupiter, and Mars would meet in the constellation of Pisces... in February... Everyone in Europe, Asia and Africa to whom these tidings came, was filled with a sudden overwhelming fear; and as the ominous day approached, the degree of fear and stupidity grew. Trade and commerce stopped... peasants ceased to cultivate... fields. Work, everywhere, came to a standstill. No debts were paid; and money was spent on riotous living, though some grew the more pious as February drew near and their wet grave loomed closer.

...a comet will fall from the sky followed by meteor showers... tidal waves... and... faultlines that can[']t sit still followed by billions of dumbfounded [people]... some say the end is near... we'll see Armageddon soon... I... certainly hope we will I sure could use a vacation from all this stupid shit...

[‘Showers of stars caused by a passing meteorite occur about every 33 years’, and thousands of NZ] skywatchers witnessed the spectacular Leonid meteor storm early yesterday... It filled Asia’s night skies with flashes of light and sandblasted satellites with comet debris but caused no major damage, satellite operators said... Nasa said preliminary reports indicated that the storm produced about 1000 meteors an hour, in line with expectations, but far below the 150,000 meteors an hour seen in 1966... [In related news, insurance] firms are being warned of an astronomical line-up of planets which could wreak havoc on Earth... on May 5, 2000 – the Earth, sun, moon and five planets come into line for the first time since the Pharaohs ruled Egypt. Some experts fear the gravitational pull will be so intense that it will cause major natural disasters... [G]eological evidence suggests... the... 4000BC... line-up... was accompanied by tidal waves, earthquakes and volcanic activity. The line-up of Jupiter, Saturn, Uranus and Neptune in 1812 came as the Northern Hemisphere suffered freezing summer temperatures, wrecking agriculture and causing widespread famine. In 1962, during a five-planet alignment, 20,000 died in an Iranian earthquake... Normally cautious insurance companies are taking the threat so seriously they have consulted a leading risk expert... But N[Z] astronomers and geophysicists rubbish... [the] Doomsday claims. “The effects of this line-up will be minimal,” said[a] seismologist... of the Institute of Geological and Nuclear Sciences... [T]he Auckland Observatory, said the tide might be a few millimetres higher but added: “It will be a non-event. We had a line-up of seven planets in December and no one noticed anything untoward.”

“The Bible... said countless times the generation that sees Israel come back in and regain their land after being dispersed throughout the world will be the generation that knows... this is the end time.” ...there’s a name given to this ominous event – The Three Days of Darkness... A husband and wife living in Texas take the warnings... with deadly seriousness... [and] plan to survive... “There’s no predictions that say... any place will be completely safe...” However[, urban]... areas may deteriorate into chaos. [So their] advice is to move into the country... and return to nature... They have buried their means of survival – a fibreglass bomb shelter – in a remote and secret location, hidden away from prying eyes... where a year’s stockpile of food and water awaits them. “The modern disaster shelter is designed not only for... some type of exploding device falling on it but... [also] for gunfire, earthquakes, tornadoes... There isn’t any question in our minds that we are going to need this. The question is when. Better to be five years too early than one day too late.” ...Drawing upon the technology of prefabricated housing, modern bomb shelters can be manufactured in factories, then trucked over back roads... The cost of a shelter... is less than that of a luxury automobile. But will we need to tunnel beneath the earth in order to survive? More importantly, if we do, what kind of world will be waiting for us when we crawl out from under the ground?

...let the Sun shine in... this is the dawning of the age of... harmony and understanding sympathy and trust... peace... and love... - Age of Aquarius

Astrology ages occur every 2000 years... and we’re on the cusp, coming out of the Age of Pisces, the age of thought, religion and philosophy[, into the]... Age of Aquarius[, which] is about organisation on a global scale... [and] old systems giving way to a kind of new world order.

Final orders... [please], I have it on good authority the world is about to end. Trust me, this hotline to the truth wasn’t from a trenchcoated bloke on Queen St with an END IS NIGH sandwich board. It came from primetime television – the fountain of all wisdom – on something called *Mysteries Of The Millennium*... The show’s first words were (from someone of deadly serious countenance) “the end of the world is coming in the next 20 years.” Pretty unequivocal... Most confusing for the viewer, however, was the exact manner... - 1997

Is it the end of the world, or simply the end of the world as we know it?

“Is this the beginning of the end, sir?” “No, just the end of the beginning.”

Evolution is the only way forward, so just when we think we’ve found perfection we begin anew.

A new religious movement... [called] *Children of God*... also known as the Family of Love... emerged out of the Jesus Movement... in California in 1968... It opposed the materialism of both the capitalist and communist systems and believed that, in the millennium that would soon appear, those two systems would disappear and the future would be left to the Children of God and like-minded godly people.

Once the earth was established, the gods created [humans]. Three times the human race became too self-opinionated and had to be destroyed, at about 2000-year intervals. They were destroyed by the fire, the waters, the winds. Now the present human race, who were made by the gods from the beloved maize plant which is still the sustenance of mankind, are being tested. The end of this universe will come from a terrible earthquake. Whether after this fourth sun, the earth will be re-populated by another better race remains to be experienced in the future.

The concept of a future Golden Age – either one recoverable from the past or a completely new age – has... been present in some religious traditions. It is partly bound up with the idea of a future millennium at the end of this age, to be introduced by a figure-to-come: the Jewish Messiah, the Second Coming of Christ, the Muslim Madhi, Maitreya Buddha, or the Kalkin avatara of Vishnu.

Every 25,000 years our Solar System completes one orbit around Alcione, the central sun of the Pleiades, a constellation at a distance of approximately 400 light years from our Sun. In 1961, science discovered a photon belt which encircles the Pleiades... Our sun, and Earth with it, is entering this photon belt between now and... 2011. This photon belt is the cosmic ‘trigger force’ to shift Humanity from third level into fourth level density, from Separation into Oneness. Thus, the magnitude and beauty of this event Earth is preparing for defies any description. Earth and

Humanity are aligning for its birth into Christ-consciousness – the union of Star Light with Matter – the marriage of Spirit with separated Selves. As the night transforms into a new day, so is the Age of Darkness giving way to the Age of Light... the greatest event ever to grace... Earth and her children. Terms such as New Age, Superconsciousness etc., are but different labels for... the same occurrence... the ‘end-time’ of the prophecies...

History is held to be divided into distinct periods or dispensations in which God works in a particular way. The present, sixth dispensation, the age of the Church, will end with the Second Coming of Christ.

Seventh-day Adventists... believe... in the imminent second coming of Christ... and... hold... with sabbatarian groups, that the 7th day, not the 1st, is the Sabbath specified in the Bible.

...the... movement began in the USA with William Miller (1781 – 1849) who predicted Christ’s return (and the end of the world) in 1843-4... Seventh Day Adventists... believe that the Second Coming of Christ is delayed only by a failure to keep the Sabbath...

What do you get for a 6000-year-old planet that has everything[but peace]? ...A 17th century biblical scholar... calculated that the Earth began at 6pm, October 23, 4004 BC, which makes today the globe’s 6000th birthday... Bishop James Ussher... also noted that the Earth would end after 6000 years... Ussher announced his findings after meticulously calculating his way backward... [I]t is interesting to note that modern scientists [have] found significant dates with a similar pattern to the 4004BC date. These include... 40,004BC, the date humans migrated from Africa; 400,004BC, modern humans evolved from Neanderthals... 400,000,004BC, the year our ancestors crawled out of the sea – although some of us remain like fish out of water... [F]or the world to be 6000 this year it must be remembered there was no year zero. Hence 4004 plus 1997 minus one equals 6000.

...HEAVEN and Earth were created simultaneously 6000 years ago... at... 9am. That was the view propounded by British mathematician Dr John Lightfoot... well before Darwin published his work on evolution. No one has ever established in which universal time zone [Lightfoot had] been researching, or why the creation clock had apparently been ticking 510 minutes before the momentous event, but Lightfoot was confirming the birth date identified by another Cambridge [fellow]... James Ussher who based his work on the number of generations in the Old Testament. - 1997

...ancient scholars tell the story of the natural order in the Old Testament. It is told allegorically. For example, the “day” mentioned is only a symbol of a period of time – not 24 hours as time is measured today... Geologists... divide... earth’s history into six major periods of time, or *eras*.

It is possible that, in God (or universal) time, life on Earth has existed for just one second. According to some Hindus, one God day equals 8 to 10 billion years (r:p1121, ln26-7). However, what if we combine the first and last books of the Bible to get the proposition that one God day equals 1000 human years? If we then take Jan. 1, 4004BC, to be the start of the 1ST DAY, when ‘God created darkness and light’ (in that order), the day ended Dec. 31st, 3005BC; the 2ND DAY ended Dec. 31st, 2005BC; the 3RD DAY ended Dec. 31st, 1005BC; the 4TH DAY ended Dec. 31st, 5BC; the 5TH DAY ended Dec. 31st, 995AD; and the 6TH DAY, when ‘God created humans’, ended Dec. 31st, 1995. This would mean that the 7TH DAY, when ‘God ended its work’, began Jan. 1, 1996 – or Jan. 1, 1997, if we don’t count the year 0 that goes between 1BC and 1AD (‘the ancient Egyptians, Greeks, Romans and Babylonians all evolved number systems, although none had a zero, which was introduced from India by way of Arab mathematicians in about the 6th c. AD and allowed a place-value system to be devised on which the decimal system is based’). Either way, the creation of humans has only recently been completed.

God created humans in Genesis 1:27 and again in Genesis 2:7! Clearly, Genesis 2:7 and everything after it picks up the story DURING the 6th day (i.e., prior to the commencement of the 7th day – Genesis 2:1-3) – but let’s assume that the second creation is an allegory for the people who survive God’s *Day of Judgment* (i.e., those who are like God – r:p945, ln43). Compared to pre-20th century cities, late 20th-century cities are, in many respects, heaven-like – consider their glass tower blocks (r:p1125, ln65) and electric lighting (r:p1126, ln30). It could be part of God’s plan to only destroy bad humans, leaving the cities intact for the good humans (who might, for example, number 144,000 people – r:p1126, ln16 – which, during 1997, equals 1-out-of-every-7 people living in Auckland; or 1-out-of-every-40,000 people living on Earth). The chosen survivors could then repopulate the Earth – unless they have become immortal, as Jehovah’s Witnesses and similar sects anticipate, in which case they won’t need to have sex (at least for the purpose of reproduction).

THE first hint that the secret of immortality might have been discovered emerged with the “masters of the universe”: among the stockbrokers on... Wall Street. A couple of weeks ago they began to call the Washington office of *Science*... wanting to know more about rumours of the discovery of a wonder substance that could stop the ageing of human cells. They had heard the journal was about to publish definitive evidence that... telomerase could make... cells continue to thrive and divide into new cells long after they would normally have decayed... [– meaning] it could be possible to extend the life span of human cells indefinitely[(‘human bodies were designed to live long enough to produce off-spring; once their job is done, their body becomes redundant’)]... From the prospect of eternal life the brokers saw a killing to be made. A... stock market... company called Geron... held the patents on telomerase... As the news leaked, a press conference was abandoned and *Science* lifted the embargo on the research. “Scientists find clue to the secret of eternal life”, said the headlines. Others described the Peter Pan effect that could deliver the fountain of youth... Shares in Geron soared... Had scientists really found the anti-ageing elixir that has been sought-after for centuries? Immortality was, for the moment, confined to a test tube, but experts held out the potential of extending life spans to well beyond the biblical three-score years and 10... Understanding how a cell grows old goes back to the 1960s when... a... pioneer of the study of ageing, introduced the concept of a cellular clock... [that] ticked away as the cell divided over and over... [A]fter about 100 divisions the clock stopped and the cell went into a sleep-like state. At this point it was neither dead nor actively dividing. [The pioneer] called it cellular senescence. The opposite to this state was when a cell, taken from the body and grown in the test tube, divided continuously. Scientists dubbed them “immortal cells” and the most famous are cancer cells taken from... a Baltimore [resident]. Billions of her cells are alive in laboratories around the world, continuing to divide profusely, and through them... [the resident, who] died in 1951 at the age of 31... has attained a curious sort of immortality. How to transform a senescent cell into an immortal cell, without making it run out of control into a deadly cancer, occupied the minds of a succession of [post-’60s scientists]. Among them was... [someone] who became fascinated by the role played by the structures at the tips of chromosomes called telomeres. These can be likened to the plastic tips of shoelaces and are designed to stop the chromosomes from “fraying” when cells divide... [The scientist and an assistant] constructed a theory that the cellular clock... was in fact the telomere... [and] proposed that as the cell grew old with each division, the telomere shortened until it came to a point where it would not allow the cell to divide cleanly any more... They then suggested that the clock could effectively be stopped by an enzyme... [whose] presence in a cell prevents the telomere from shortening... They showed that telomerase occurs in 85% of cancerous tumours as well as immortal cells growing in test tubes. The implications became obvious: block telomerase and it might help stop cancer cells proliferating; add telomerase to ordinary cells and it might extend their life span. The scientists and their backers were sitting on a potential goldmine and Geron was established to exploit their ideas and raise money for further research. The breakthrough they were waiting for came last year when other scientists managed to isolate and clone the gene for the active part of telomerase... [which allows scientists] to transfer the gene to cells that would

not normally produce the enzyme... Other scientists, however, were not convinced... [A] professor of zoology at the University of Idaho and an expert on ageing, said the research had been oversold. It showed only that telomerase was important for maintaining cell division, which is not the same as keeping cells, or people, young. "Very few people die because their cells don't divide any more. They die because their cells won't stop dividing in cancer,"... Britain's leading expert on the theory of ageing at Manchester University, said cellular senescence was just one aspect of ageing. For example, telomeres don't get shorter in brain cells. Ageing of the brain is probably due to the cells being damaged, causing a loss of function,"... At a recent gala to celebrate the 30th anniversary of... the "cellular clock"... [theory's] publication... an informal poll revealed that most scientists... no longer believed it was the key to ageing. Instead, scientists are pursuing different leads on why we grow old. Genes evidently play a role because experimental animals, such as fruit flies and worms, can be selectively bred to have long life spans. Fruit flies genetically engineered to have protection against harmful chemicals in the body (free radicals) can live up to twice as long as normal... The history for remedies for ageing in humans is littered with wild ideas such as injecting mashed monkey testicles, eating algae salads or (for [guys]) sleeping between two virgins. By comparison, the discovery of telomerase and its properties is a giant advance. But its first practical application is likely to be more prosaic, and perhaps more useful, than expanding life span. Geron is already researching ways to use telomerase for early diagnosis of cancer. Detect the enzyme and it may indicate cells turning cancerous. [Geron] is collaborating with drug companies on methods of making highly specific anti-cancer drugs that will kill the rapidly dividing cells in a tumour but leave healthy cells unharmed... [T]he Alliance for Ageing Research, a non-profit-making research body, said telomerase could be used to postpone old age. "This is not about engineering the 200-year-old... [person], but the potential for extending the health span of humans could be very far-reaching... [The research] raises the curtain on an era in which control of the process of ageing will be harnessed to human benefit..."

...death reigned from Adam to Moses, even over them that had not sinned after the similitude of Adam's transgression, who is the figure of him that was to come. - Romans 5:14

Christian belief in immortality is due to *Genesis* 3:22. However, whereas the traditional Christian translation from Jewish into English says 'now, let the [hu]man take also of the tree of life, and eat, and live for ever', at least one Jewish translation says 'let [hu]man'. Thus, the verse may refer to an individual ('adam, the Hebrew word for [hu]man, sounds like and may be related to the Hebrew word for soil or ground, *adamah* - see Gen. 2:7), or individuals, or it could mean the species.

By eating from the Tree of Knowledge, [the humans] had become... like the Unique One among us, meaning that [they] had become unique among the terrestrial ones, just as God is unique among the celestial ones, for now [the humans] can discriminate between good and bad, a quality not possessed by cattle and beasts. Because [the humans have] this unique ability to know good and evil, and [their] desire for sexual gratification had become enhanced, there was a new danger. If [the humans] kept the capacity to live forever, [they] might well spend all [their] days pursuing gratification and cast away intellectual growth and good deeds. [They] would fail to attain the spiritual bliss that God intended for [the]m.

...the God of Abraham, and the God of Isaac, and the God of Jacob... is not the God of the dead, but of the living. - St Matthew 22:32

With infinite variety, one generation makes a living commitment to the next.

While it is impossible - except in fantasy - for an individual human to literally become immortal (other than by living on in the memories of future generations), the ability to produce new generations means that it is theoretically possible for the human species to exist forever.

Nothing seems to kill me no matter how hard I try...

[The] *Christian concept of... [an] afterlife...* is enshrined in the credal statement 'I believe in the resurrection of the body and the life everlasting', which opposes all ideas of the survival of the soul alone, reincarnation, or extinction.

The belief in a soul helped make life on Earth more acceptable, even if hard, for life became then only an incident in a long journey.

Christians bury the dead so souls can one day be reunited with their resurrected bodies. While those dead were wrong to believe that they will literally come back to life then live forever, for as long as their graves (or at least their headstones) continue to exist, they will live *on in the memories of future generations!*

There are one million graves in the town's cemeteries and the... Colma... council is planning to tax each one \$US5... a year for eternity. Cemetery owners would have to pay that tax for everyone already buried on their grounds. That [will] double the present price of a funeral to \$6000. - 1996

The lavish lifestyle enjoyed by Malawi's former President Kamuzu Banda will follow him to the grave - in the form of a \$US37,000... coffin. The cost of the gold-plated coffin, imported from the U[S], has baffled many in impoverished Malawi. "Why spend so much money for [something] which will be put under the earth?" asked one. The official who bought the coffin said it had a 75-year guarantee. [□ 'In NZ, where 22,000 people (or 25% of the dead) are buried each year, a bottom-of-the-line casket costs \$300. "Of course, the higher the price, the higher the profit."']

... 'the death business is competing hard for our dollar', which partly explains why 'the Hollywood Memorial Park Cemetery - where some of the biggest names in movies are buried - has found a buyer interested in a futuristic use of history. A new corporation called Hollywood Forever Inc, won court approval in February to purchase the cemetery for the all-cash price of \$NZ690,000. The company says the acquisition will help it to market its major product - virtual-reality tombstones. These tombstones are not stone at all, but computer screens that flash messages or show home movies. The many tourists who visit the 100-year-old 25ha cemetery behind Paramount Studios will be able to visit kiosks or theatres to view computer-stored biographies of the dead.'

...A contribution to the World Wide Web keeps memories of [the] dead... alive. As a teenager, [the contributor thought it] 'd be great if people could go to a cemetery and press a button to see a video recording of what the... dead [person]... was like. The idea stuck when [the contributor] became an artist with an advertising agency, and was rekindled when his firm started offering web sites. The result: World Gardens, a virtual cemetery which lets loved ones pay their respects to the departed. "The... site offers a lot more than an obituary. Unless you are really famous, your obit is really short. This is highly personalised. Someone in the family gets to write the story. World Gardens is not a place of death, but a place to celebrate the life... of those we love..." A friend or relative of the deceased can buy a "tombstone"... for \$54. In addition to sharing normal obit-type information, photos can be posted as well as information about the funeral service and even *Bible* passages. Visitors to a gravesite can send a "virtual flower" arrangement... along with their thoughts. The page remains active for three months, then a plaque is placed in the site's "mausoleum."

...The family of a [body] buried at a Lower Hutt cemetery are upset that a council mix-up has led to a plaque being placed on the wrong plot... Mr Taputoro died in June last year and many people travelled a long way for the [plaque's unveiling]... But they found no stone on the grave, as had been promised by the stonemason. The stone was found next to an empty plot, three graves along... The funeral director... said the sexton had given the stonemason the wrong information. The incident gave him little confidence in Hutt City Council records of where people were buried. A... spokes[person] said yesterday that... [the] council... was 100[%] sure the mistake was a one-off. "It won't happen again..." The council would pay for Mr Taputoro's plaque and to have it put in the right place. It was also apologising to the family and would consider compensation for travel and accommodation costs... [F]ollowing the discovery in 1995 that 40 headstones were in the wrong place, the council had employed a researcher to triple-check the location of all graves and develop a computer database... [● Cemeteries] are clamping down on the use of natural rocks for personalised headstones in a move welcomed by stonemasons. Each year, the Christchurch City Council is approached by families who want to use a boulder, with a bronze plaque, to mark a grave... Until now the council has agreed but is about to toughen its policy because it says the rocks don't last... [They] tend to weather, crumble and grow moss and lichen. But granite was resilient to the elements and recommended by the Master Monumental Masons Association... [Its] president... said the push towards using granite only was not an attempt to protect the stonemasons' profits... [T]he council will... still... consider... individual requests... The country's largest cemetery, Waikumete in West Auckland, only allows headstones made of marble and granite to legal specifications... and... they were... kept in rows... looking uniform and tidy... North Shore Memorial Park at Albany also rejects rock monuments... [O]ther requests rejected included a V8 engine for a headstone and motorbike handles. They were considered too much trouble to maintain once families stopped regular visits. Anything goes... at Wellington's 100-year-old Karori cemetery.

...The spirit of a... recently buried [mother] is expressing unhappiness about partying at a neighbouring grave in the Maunu Cemetery at Whangarei... The family is considering exhuming the body and having it reburied at Totara North... [T]he family was also furious at the removal of toanga from the grave, especially a 1.5m-tall figurine treasured by [their mother. "Mum] is visiting some of her grandchildren and telling them [about her unhappiness] and this is upsetting the children." ...on Christmas Day when members of the family went to... [the] grave there was a party at a nearby grave including loud music and alcohol. The next day [the family] found butts of marijuana cigarettes around the grave. The family had tolerated it because "everyone has a right to grieve in their own way. We said nothing even though this offended us." ...[the neighbouring grave's widow, who claims to have] spent most days since the burial at the cemetery with her three children... admitted there had been drinking at the grave but said it was "not hard-out... Sure, some of my husband's mates have... had a few social drinks with him and played some of his favourite songs but that's all... this is a public place and we should be allowed to do what we like. I've paid for my husband to be here..." [The widow] denied that articles had been taken from graves. A Whangarei District Council spokes[person]... said a security firm had been employed to patrol the cemetery.

...[a grieving mother who found a tortured tethered chicken next to her son's Waikumete Cemetery grave wants other cultures to respect all mourners. "Part of its back had all its feathers plucked and cuts, like it had been sacrificed. Those responsible are mourning just like I am but when it comes to hurting other animals it isn't on." Her husband complained to the SPCA who collected the chicken which had broken free and died by the time they arrived. No charges have been laid even though another mutilated chicken has since been left at the grave. The mother – who's 19-year-old son Jamie was killed in a car crash on March 12 – says the Asian family also leaves food on the grave, which attracts rabbits, rats and dogs, scatters rice around and burns paper money. A spokesperson for Auckland's Hong Kong Information Centre says putting food at the grave is a Chinese custom like westerners laying flowers or Buddhists burning joss sticks. Scattering rice on graves is part of a ceremony much like Hallowe'en, and money is burned for the spirit to spend. The spokesperson is unaware of live animals being left by graves but an Auckland University Chinese historian says it could be a family's own interpretation of the custom.]

...every society has found a distinctive way to say goodbye... The Merina tribe of Madagascar... give their ancestors a party by exhuming them several years after death, [and] the mat that wrapped the corpse is considered an object of fertility. To have sex on it is highly prized.

...As creepy as exhumation may seem to most of us, the... Ministry of Health... last year received 37 applications... Most were approved... [although the ministry]'s disinterment guidelines for legally raising the dead have a gruesome footnote: "It is not usual to grant licences between one month and one year after burial because of decomposition during this period. If a body has been embalmed, this limitation will not apply."

...Soviet hero Vladimir Lenin[']s... body... is to have another makeover later this month. Every 18 months... Lenin's mausoleum closes for several weeks to enable embalmers to thoroughly refresh the body... [S]cientists immerse Lenin's body in a tub of chemicals for several weeks to hydrate it.

...Lenin's body, like his legacy, may live on for centuries. A scientist who helps in the annual embalming of the Soviet founder's body has been quoted as saying the mummified figure can be kept in good condition as long as the regular treatments continue... Since the Soviet collapse, the Russian Government has considered the possibility of burying Lenin and taking away his goose-stepping guards, but nothing more has been done. [● 'Stalin's mummified body was on display with Lenin's in the Red Square tomb until 1961, when it was moved to the cemetery within the Kremlin walls.'

...57% of Russians believe it is time to bury Vladimir Lenin, who died in 1924 and whose embalmed body has been on show in Red Square ever since. Before his death Lenin asked to be buried next to his mother in St Petersburg.' However, 'Stalin wanted Lenin's body preserved for all eternity to stand as a symbol of the lasting power of an ideology which, ironically, was against religious symbols.' In related news,] a writer and editor for Marvel Comics in America has been immortalised in print. After... Mark Gruenwald... died [his body] was cremated and his ashes... combined with ink[, which]... was used to print the 12-part comic series Squadron Supreme as a single volume. The 100-page book goes on sale... this week.

...Vikings sent their fallen warriors off on burning ships to Valhala. Now... [there's] a new way... to bid a fond farewell... Space, the final frontier[, could become the] final resting place. That's what [a] company, Celestis, is promising. It means Celestis will send your remains into orbit. "If you, or a loved one, have ever longed to journey in space, now you can buy that dream." For \$4800 that is... Once in space the... 1/4 ounces of personal dust... will orbit the planet at an altitude of 350 nautical miles. They'll stay up there for roughly a year before a fiery return to Earth. The idea was irresistible to [the person] whose late husband... created the series Star Trek. His ashes will soon boldly go where no ashes have gone before.

...Timothy Leary, the 1960s guru of LSD and 1990s icon of the Internet, was to take the ultimate trip today when his ashes were blasted into space with... Spain's first satellite... Leary... a... former Harvard professor who... died of prostate cancer aged 75 last year... urged a generation of [USers] to get high on LSD so they could "turn on, tune in and drop out." ...The cremated remains of Leary, whose final request before dying was for "one last far-out trip," will be launched into orbit with those of *Star Trek* creator Gene Roddenberry and 22 other space enthusiasts for the world's first space funeral. "This is a way for people... to participate in the opening of the frontier and connect with the star-filled night sky," said... [the] head of Celestis, the Texan company organising the venture... The lipstick-sized capsules containing seven grams of remains will be released into space and will orbit the Earth for anywhere between 18 months and 10 years before gravity pulls them back into the atmosphere where they will burn up in a flash of light. Family and friends accompanied the ashes of their loved ones to Madrid before they were transported to the Canary Islands for take-off... [In local news, the] funeral directors' national organisation is trying to persuade members to stop collecting bodies for no charge after a sudden death. By law, when a person dies suddenly the body has to be taken to a mortuary for an inquiry and the police pay removal costs... Timaru police say two local funeral service companies... owned by the same directors, have been collecting bodies for... [them] for no charge. The director... did not wish to discuss the contract with police. His business did 70[%] of the funerals in the region and it was important to keep that advantage. In the past, Timaru police paid an hourly rate and a mileage rate for body removals – a trip to Mt Cook used to cost about

\$1000... The president of the Funeral Directors Association... was concerned about the motives behind offering a free service. "The fact that they aren't charging is a way of encouraging touting for business. It's obviously [done] to make contact with the families first to try to take advantage of a situation that is grossly against our code of ethics,"... Several local funeral directors agreed with their association's stance against free collections and feel it is unfair trading... The police removal contract, which expired last October, would be up for tender in the next few weeks. - 1997

A Florida lawsuit says a university, a funeral home and a body-removal company illegally allowed a dead... body to be used for embalming classes... Miami firm Robles Law Centre... said Professional Transport Systems took Madeline Post's body to Lynn University, where it was embalmed by students, despite stipulation in the Posts' contract that [Madeline] was to be cremated. The transporter's fee for providing the bodies enabled him to undercut competitors... [L]awyers say other funeral services may have similarly mishandled as many as 600 corpses.

...A crematorium operator in Georgia was arrested after dozens of decomposing corpses were found stacked in storage sheds and scattered in woods... When investigators asked... why the bodies weren't cremated, [t]he... 28-year-old... employee... told them the crematory incinerator wasn't working... Officials said the number of bodies found could be in the hundreds... Some of the bodies have been delivered to the Tri-State Crematory within the last few days, and some bore hospital toe tags. Others had apparently been there for as long as three years... Some of the bodies were found in rusty coffins, which could be up to 10 years old... that appeared to have been buried and disinterred... Georgia[s] chief medical examiner... said authorities suspect [the operator] may have provided ashes from wood chips to clients who asked for their loved ones' ashes.

...Customers are flocking to an American company that turns human remains into diamonds. LifeGem Memorials has patented a 16-week process that involves purifying ash at 3000C before further heating and pressuring into a diamond, ranging in cost from £2500 to £14,000... The news comes amid a boom for crematoriums in Britain, a rise that can be attributed to escalating burial costs... 70[% of Brits are now]... cremated.

...Sydney police are investigating a blunder in which a funeral parlour cremated [a guy's body that] was supposed to be buried and placed the body of a centenarian [gal] in his coffin instead. The mix-up made by Sydney's Caring Funerals was confirmed when authorities exhumed the body of 100-year-old Daisy Jane Jones, who was supposed to be cremated. [In local news, 'one of society's unspoken procedures hit the news following fallout between two families. Zyon Pauling, aged 21, and his 27-day-old baby, Victoria Rose, were buried in the same Masterton grave after dying in a car accident in 1995. Then the baby's mother was granted a disinterment licence, meaning both bodies would have to be dug up. The decision appalled Zyon's family. A bout of legal punch and counter-punch resulted in a High Court injunction, on the eve of the baby's planned exhumation, putting the move on hold.']

...The mother of a [body] buried next to the soon-to-be exhumed remains of Zyon Pauling and Tori Williams... [- who] were killed in a 1995 car crash... [-] is worried that her son's remains... [which may've] been shifted by water flowing under the cemetery... could be accidentally disturbed.

...A CEMETERY is on the move. But there is no mystery plot. More than 100 graves will be dug up and shifted from the 100-year-old Matamau cemetery, near Dannevirke... to make room for improvements to a dangerous corner on SH2.

...Graveyards in Johannesburg are running out of space as the Aids epidemic takes its toll. Some cemeteries have been closed... while others are nearing capacity... The problem is expected to get even worse, as Aids-related deaths in South Africa are predicted to increase from about 120,000 [annually at present]... to between 354,000 and 383,000 in 2005... Cemetery authorities were considering drastic measures including multiple "stacking" burials in the same plot and recycling of graves, where corpses would be dug up after 20 years to be replaced with others.

...Latvia's capital city, Riga, will make a killing – so to speak – from reselling gravestones and plots... for... as much as 75 lats (\$[NZ]52.67) each.

...If you've given up the search for a long-lost uncle's grave, software... may be just what you need... Cemtrack... incorporates aerial shots of... cemeteries and enables staff to pinpoint where a person is buried and which burial sites are reserved... At Waikaraka Cemetery, where nearly 20,000 people are buried, visitors regularly return to the office unable to follow the A4 map... [Cemtrack] will also make cemetery planning easier.

...[the person] who initially pushed for the idea... is confident eco-burials will catch on in Waitakere City, even if people are a little slow in coming forward. Only two people have been buried in a special 20-plot section of Waikumete Cemetery since the scheme was launched... [4 years ago. But the pusher] is still getting calls from a number of people keen to include the eco-burial option in their wills. The concept sees bodies buried without embalming in a biodegradable coffin. A tree is planted on the plot... as a lasting, living memorial... instead of the traditional plaque or headstone.

...A 22-month-old girl suffered a broken ankle when a headstone fell on her during a... visit to relatives' graves... [at] Christchurch's Memorial Park cemetery... Cemetery staff declined to comment... The toddler had come out of plaster around a broken wrist only the day before, [her] grandfather... said yesterday. Moments before the incident... his daughter had almost damaged her ankle after stepping in a hole... [■ In May, a 9]-year-old was killed during a cemetery visit in Ohio when [the boy] jumped on a grave and the tombstone fell on his head.

...A... Wairoa plumber... who unearthed a skeleton... in a shallow grave... "ran like a robber's dog" when [the plumber] saw the skull... "We saw the legs poking out first but did not realise what it was until we unearthed the skull. But 'come to think of it all the earth is a graveyard, you never know when you're walking over prehistoric bones and heads']"... Police believe the skeleton is old and there are no suspicious circumstances... [The] plumber and drainlayer for 23 years... had never come across anything like that before.

...certified dead and lying on an embalming table... Hine Hou "Susie" Kaiwahia, aged 61... bled heavily for four minutes when embalming began, and her head moved after being sprayed with disinfectant, Wellington Coroner's Court was told yesterday... The coroner... adjourned the inquest until next year because of the unavailability of counsel. The doctor who signed the death certificate was expected to be the first to give evidence.

...Police are seeking members of a goth-style group of heavy-metal... fans after a Christchurch grave was dug up and a... skull removed last week.

...A fourth person has been charged over the desecration of a grave at Waimairi Cemetery in Christchurch... [In international news, the] body of Italy's most powerful banker has been stolen and the thieves are demanding more than \$8 million from his family for its return.

...THE sexton who stole 81 rings from bodies at the New Plymouth crematorium has admitted his... "despicable"... actions... had devastated his family and offended the community... [T]he 62-year-old sexton... will be sentenced on Wednesday... After [hi]s arrest, the police set up a viewing room for relatives to identify the rings... [T]he task... was difficult because many were similar-looking gold-bands – only eight had been matched. Rings that could not be identified would be cremated in private ceremonies throughout Taranaki... [The sexton] had worked for the New Plymouth crematorium for seven years... [P]eople in the funeral business were horrified... A manager for an Auckland crematorium said sextons were responsible for the coffin after it was delivered to the crematorium by the funeral director... Funeral directors occasionally discussed with families the benefits of removing jewellery for keepsake purposes... [The 62-year-old], who made about \$2500 from selling the rings, would repay \$1200...

A... cattle-rancher in Montana took care of his heirs by installing an ATM in his tombstone... to make sure his grave had regular visitors.

...Some things in life just don't tot up... Every baby gets a free ticket into this world – yet it costs an arm and a leg to die! ...As of January 1... burial fees at Waikumete Cemetery have increased \$75 for the first time in four years... [The 3%] fee increase... covers inflation. One of the most upmarket choices for everlasting peace is to buy a plot on the cemetery's eastern berm for \$2850... [The cemetery's] manager... describes it as "some of the best real estate in Auckland" with sweeping views towards Rangitoto Island. Cheaper plots in other parts... – such as the lawn or the Hebrew and Muslim quarters – cost from \$1300 to \$1800... [The manager] says that compares reasonably well with other Auckland cemeteries. But the bills quickly mount up once you add digging fee... casket... memorial plaque or headstone, flowers and funeral service. Three out of four people choose to be cremated, [but]... even a modest, "no frills" cremation costs about \$1700 – ranging up to \$4000... Low income earners may be eligible for a means-tested grant from WINZ of around \$1200. But if you die in an accident, your family can seek ACC compensation worth around \$3000.

...There are fears that Waikumete Cemetery could become a huge drain on council coffers... [A Waitakere councillor] thinks the entire Auckland region should contribute towards looking after the 115-year-old cemetery, not just Waitakere City Council... It provides \$250,000 a year for maintenance at present. But that cost is likely to escalate in coming years as little more than weed control is being done in the oldest parts of the cemetery... [The councillor] told the works and services committee last Friday[that t]he government should pass legislation to impose a levy on other councils, so that Waikumete becomes a regional asset... The graveyard is the final resting place for more than 70,000 people and home to more than 500 species of plant. Burial space in the 108ha cemetery is expected to run out by the year 2031, when income from the sale of plots will grind to a halt. A memorial trust fund set up from the proceeds of land sold for residential development in Sunhill Park also pays for its upkeep.

...Graves are so overgrown at Waikumete... that elderly folk are taking to clearing the weeds themselves... [● Waitakere] City Council is looking to spend... \$525,000... on a new cremator at Waikumete... The three cremators date back to 1952. Two are expected to last no more than three years, while the third has broken down and is now being used for spare parts... Private operators today are allowed to provide the service, and the council is required to provide a cemetery within its district under the Burial and Cremation Act 1964. But it no longer has to provide a crematorium.

...A local funeral director[ha]s bid to set up a private crematorium... says one... Waitakere... councillor. Morrison Funeral directors has applied to the Auckland Regional Council for resource consent to discharge air contaminants from a crematorium at 239 Lincoln Rd. [The c]ouncillor... himself a former funeral director, says a private crematorium would threaten the financial viability of Waikumete's council-run crematorium... Morrison is one of two funeral directors in the west and represents a "substantial" chunk of business at Waikumete. Without this business the council faces closing or leasing out its crematorium, or expanding into the funeral business... [The councillor] says setting up in competition with private funeral directors may be the only way to offset the rates increase it would take to keep Waikumete's crematorium open.

...[The Far North may never get a crematorium, says a funeral director whose application to build one in Kaikohe was turned down as insensitive to all cultures. The proposal to build near a McDonald's food outlet prompted widespread community concern, said the council hearings committee chairperson'.]

...Funeral processions are becoming victims of road rage. Auckland funeral directors tired of vehicles cutting between hearses and mourners are encouraging family and friends to dispense with corteges and make their own way to cemeteries... It's not like the days when everyone would stop...

FAMILIES HAVE MORE SAY IN FUNERALS THESE DAYS Things are changing in the area of funerals and how they are conducted. A more personal approach is now sought by most people as opposed to the old-style funerals where funeral directors and clergy were in charge...

New firm plans funerals to die for FORGET churches and sombre hymns – when you get the country's wackiest funeral planners sending you to the next world, anything goes. *Lives Less Ordinary* has been set up... to cater for those unwilling to endure a "factory funeral" [by an Aucklander whose motto is]: "Have a great life and top it off with a great death." Already, one client has planned a send-off based on the ballet *Swan Lake*. The casket will have a swan's head on the front and the church will be filled with dry ice, to give the illusion of a swan floating on a lake... "...Whatever people want we can try to arrange. But it'll always be tasteful, and never illegal." One [client] wanted his pallbearers to be strippers, but... changed his plans... when [it was pointed out that] his family might be offended... L[LO] also send reminders from beyond the grave. "...it could... be a chance for someone to have the last say." Like the [client] who had a dispute with his neighbour over a tree which was eventually cut down... [The client] wants a tree sent to his former neighbour every year on the anniversary of his death... [T]he idea came to... [the Aucklander after attending] the funerals for [3] friends... "They'd led full, wonderful lives but their funerals didn't reflect that at all..." ...So how would [the Aucklander] like to be farewelled? There'll be plenty of music from her favourite artist... champagne and a natural, eco-burial. "I like the idea of nourishing the earth."

...One of the absolutes of life is you will die. For some, where they are buried does not matter; for others it's the most important decision. One of the most sacred objects to the people of Tainui is their burial place and mountain, Taupiri. Royals and chiefs lie side by side other members of the tribe. So sacred is the mountain, members of the tribe never pass it without some form of acknowledgment... to... remember their ancestors... On the eve of Tainui signing their deed of settlement in 1995, more than 100 members met at Taupiri at midnight to sit with their ancestors, many of whom had fought for the return of the land, to quietly... share the moment with them... [One] Tainui descendant... said... "Taupiri plays a big part in my life because I know when it is my time to go I will be surrounded by those I love and will be remembered by those I leave behind."

...Moses the servant of the LORD died... in the land of Moab, according to the word of the LORD[, who]... buried him in a valley... over against Beth-peor: but no [person] knoweth of his sepulchre unto this day. - Deuteronomy 34

Fortunately for Moses, the lack of a known sepulchre hasn't prevented him from being remembered by (i.e, becoming immortal to) subsequent generations.

The Epic of Gilgamesh [(‘a Babylonian poem named after its Sumerian hero’ – is about humanity)’s search for the meaning of life... i[t]s futile quest for physical immortality, and ...i[t]s acceptance of the philosophy that the only human immortality lay in doing great deeds. - Guardians of the Universe?

HUMANITY'S HOT 100... [is] the argument-provoking list compiled by *Life* magazine, in the first of what is sure to be myriad attempts during the next two years to isolate the events and people who have shaped us in the past as we move towards millennium madness... A team of two dozen consulting scores of experts judged Thomas Edison – inventor of the telegraph and talking pictures – as the most important person of the past 1000 years... But there are some notable omissions and the order of the list has caused some immediate irritation, if not exactly consternation... The criterion used was that those selected had to "change more than just a corner of the world...". The magazine conceded an "embarrassing paradox" – the list is overwhelming "[guy-oriented] and pale", with all but 17 of those included being of European extraction and with only 10 [gals featuring]... There are no N[Zers or AUS]ns on the list... [T]he magazine ranked Christopher Columbus... [2nd]; then protestant reformer Martin Luther; and astronomer and physicist Galileo... At five, there is... Leonardo da Vinci; at six Isaac Newton... at seven, circumnavigator Ferdinand Magellan; at eight... Louis Pasteur; at nine, Charles Darwin... and at 10, Thomas Jefferson... Shakespeare comes in at 11... before Napoleon Bonaparte and Adolf Hitler... Henry Ford... [comes in at 15, followed by] Sigmund Freud... Karl Marx... [is at 18, just ahead of] Nicolaus Copernicus... Albert Einstein [is at 21, ahead of Mohandas Gandhi, but behind] Orville & Wilber Wright... Ludwig van Beethoven [comes in at 33, behind Rene Descartes but ahead of Thomas Aquinas and] Abraham Lincoln... Among those who have shaped recent history, there are [South Africa's President, who at 91, follows]... Walt Disney... Among the events that *Life* ranks as shaping the millennium, there is the world's first... application of imagination... the... novel, *Tale of Genji*, in 1008... and 100 years later the development of gunpowder weapons... the first known restaurants (1120)... the birth of fashion (1350)... public banking (1407), the brewing of coffee (1450), the first slaves brought to the New World (1509)... and the bottling of Coke (1886). - 1997

NAZI dictator Adolf Hitler... who triggered a global war that killed nearly 50 million people, is the century's... "most significant person – good or evil"... [The] failed Austrian street artist and beer hall agitator who died at 56 by his own hand in Berlin's ruins after vowing a 1000-year Nazi reign, topped a national survey of more than 100 US history departments... The historians [also saw WW2] as the century's central event, ahead of [WW1 and] the 1917 Russian Revolution... space exploration [came in at] sixth place.

People can become immortal for bad deeds. The most infamous figure of all, however, is a fictional one – though some people still doubt that (‘the greatest trick the Devil ever pulled was convincing the world it didn’t exist’) and plenty of individuals have imagined themselves to be an incarnation of this entity!

[Aleister] Crowley... became interested in the occult while an undergraduate at Cambridge at the time of the ‘magic revival’ of the late 19th century, and was for a time a member of the Order of the Golden Dawn... Expelled for extreme practices, [Crowley] founded his own order, the Silver Star, and travelled widely, settling for several years in Sicily with a group of disciples at the Abbey of Thelema... Rumours of drugs, orgies and magical ceremonies involving the sacrifice of babies culminated in his expulsion from Italy. In 1921 a series of newspaper articles brought... the notoriety [Crowley craved – Crowley] liked to be known as ‘the great beast’ and ‘the wickedest [person] alive’ and certainly many who associated with him died tragically, including his wife and child... [Incidentally,] Christian and... Jewish... post-biblical literature... develops the idea of[the] demonic or fallen angels mentioned in Genesis 6.

In traditional Catholic belief every human being has a guardian angel. The existence of angels was reasserted by the Pope in 1986... The devil, or Satan... the supreme spirit of evil... in Jewish, Christian and Muslim theology... is mentioned only in the more recently written books of the Old Testament... Jesus recognized as a reality the kingdom of evil, of which Satan or Beelzebub was the prince. In the Middle Ages the devil in popular superstition assumed the attributes of the horned fertility gods of paganism, and was regarded as the god of witches.[Furthermore, it was commonly believed that people who were physically or mentally ill were possessed (so a hole would be drilled in the victim’s skull – usually causing death – to let the evil spirit escape).] The belief in a personal devil was strong during the Reformation, and the movement’s leader Luther regarded himself as the object of a personal Satanic persecution. With the development of liberal Protestantism... came a strong tendency to deny the existence of a positive spirit of evil, and to explain the devil as merely a personification. However, the traditional conception was never abandoned by... Catholic[s]...

The word “devil” is derived from the Greek *diabolos* (“slanderer”), while “Satan” is taken from the Hebrew word *shatan* (“adversary”)... [T]he Old Testament concept of Sheol as the abode of the dead involves no ideas of punishment or connection with Satan... The first clear reference to Satan... appears in the Book of Job. There, however, [Satan] is represented as the accuser who is admitted into the presence of God with the heavenly host and who tests [humans], with the permission of God. Neither the name Lucifer nor the account of the fallen angels appears in the Old Testament, although New Testament statements such as those in Jude 6 and II Peter 2:4, appear to refer to such a tradition. The fall of Lucifer is an important part of Christian teachings, for it explains the origin of the Devil and depicts evil as prideful disobedience to Divine Will... The early Christians identified all pagan gods and spirits with the Devil and thus considered their worship devil worship. This tendency has continued to the present in Christian missionary work. Baptism... often includes a ritual of exorcism with the individual forswearing the service of Satan... During the Middle Ages... witches... were thought to gather at “witches’ Sabbaths” to worship, by means of obscene rites, the Devil in the form of a black goat. Another example of devil worship or Satanism was the Black Mass... a blasphemous performance of the[Catholic] Mass... The Devil was the subject of many medieval legends, the central theme of which was the diabolic pact: the Devil promises wealth, power, youth, or beauty to a... [human] in exchange for the sale of his or her soul after a given term, usually seven years. The pact was signed in blood. As proof of such a pact, witches were thought to have a “Devil’s mark” on their bodies. The intervention of the Devil in everyday life was felt to be a concrete reality, and such a pact could be an explanation for the worldly success of some... and the failure of others. Furthermore, it was believed that the Devil could be conjured up easily by drawing his picture or speaking his name. Thus, many innocuous substitute names were developed, such as the dickens and Mr. Scratch. Many famous persons were believed to have had contact with the Devil and... been tempted by him, a frequent theme in the legends of medieval saints... While folkloric representations of the Devil may be humorous at times in the way they manifest the triumph of good over evil and the dangers of sin, the medieval view of the Devil was utterly serious. It formed the central concept in the activities of the Inquisition... In 1489 two German Dominican monks... published the *Witches’ Hammer*... which... showed how to make witches confess their dealings with the Devil. The... Devil is also evident in European folklore and folk customs. In Austria [the Devil] accompanies St. Nicholas on December 6, to punish wicked children, while the saint rewards the good ones... Representations of dragons in folk pageantry are also interpreted as references to the Devil.

Islamic theology is rich in references to Iblis, the personal name of the devil, who is also known as... ‘aduw Allah (“Enemy of God”). In the Qur’an, Iblis first appears in the story of the creation of the world. [Iblis] alone of the angels refuses God’s order to bow before Adam... [Iblis] is then cursed by God; his punishment is to come on the Day of Judgment, but until then [Iblis] is empowered to tempt the unfaithful (but not true believers). Iblis next appears as the tempter of Adam and Eve in the Garden of Eden... The devil was also an important figure in certain syncretic religions. In Gnosticism the devil was often called the Demiurge (the Creator) and in Manichacism the Prince of Darkness, as well as other names.

Those picture-laden volumes that line the shelves of those stores frequented seemingly only by [guys] who are either still growing into – or never grew out of – the comic-book habit. *Spawn*... is... super-agent Al Simmons who, after dying on the job, strikes a lopsided deal with Satan – [Al] gets to live, kind of, and see his beloved wife occasionally... if [Al] leads the... devil’s army in his world-wrecking campaign.

...IN a country renowned for brutal murders going back to Jack the Ripper, it takes a lot to set a new record, but Britain managed it recently when it convicted its youngest girl murderer. [The killer] was detained at Her Majesty’s pleasure for slaughtering a happy-go-lucky 18-year-old – Katie Rackliff – in a frenzied knife attack [that the killer] later described as a sexual high in which [the girl] “enjoyed putting the blade up her”. In any circumstances, it would be a shocking crime, but what makes this case so extraordinary is that the killer was only 12 years old when... [the crime was committed, and] would have got away with it had [the girl] not bragged about the killing more than three years after the event when... in detention for another crime. The case has received the full tabloid treatment in Britain, enhanced by unsubstantiated claims in some newspapers that... [the girl] was raised in a cult of voodoo including witnessing... [someone] being burned alive and the ritualistic killing of animals. [The girl], now 17, received a life sentence for the crime after a jury decided that her bizarre diaries describing the murder were not – as the defence suggested – the product of a fanciful imagination, but the genuine revellings of a self-described natural-born killer. The case drew parallels with the murder in 1993 of Jamie Bulger, the two-year-old... lured from a shopping centre and killed by two 10-year-olds. Britain is again asking whether the moral fibre of society is tearing apart... or whether some kids are just plain evil. As *The Independent* wrote in an editorial: “Lacking a map to understand the mind of a... child who murders, apparently for semi-sexual pleasure, we grab any clue that offers the relief of comprehension.” ...Such cases have prompted British researchers... to look at the impact of societal factors such as television and video violence, education policy and so on... [W]hile there is some anecdotal evidence of a rise in anti-social juvenile behaviour, the statistics are ambiguous and the reasons complex... If anything, offenders were less likely to be able to easily view violent videos because they generally came from poorer homes and did not have televisions in their bedrooms... The official figures actually point to a decline in crime among young offenders... but this is thought to be a reflection of police giving more informal warnings. While the rate of expulsion of schoolchildren has risen – from 3000 a year to 11,000 over the past four years – this could also reflect a change of policy, with schools deciding they “don’t want to keep these sort of kids”... [T]here is a

“small subset” of children who are subject to high-risk factors, such as a “neuro-psychological miswiring”, or extraordinary personal circumstances. “Some people start with a poor set of cards.” Such a description applies to [the girl]... The image that emerges is one of a girl who came from a back-ground of dislocation and violence, but who appeared to be a normal, well-adjusted student – until [a]fellow pupil... was discovered in the school cloakroom critically injured after [the girl had] plunged a knife into her chest... [Some of the girl’s] family history is known from a court case in which her mother was convicted of pouring boiling oil over... [her stepfather. Her] mother... was a Belizean-born factory worker, and her father – an American police[officer] – vanished within a year of her birth. [Her mother] married a Jamaican soldier serving with the British Army, and moved to Britain when [the girl] was five. Her parents split up and [the girl] was briefly fostered, but soon returned to her mother’s home between hanging out with a teenage gang. Although not confirmed, [the girl] claims to have been raped at the age of nine. Despite all this, [the girl] initially performed well at school... [and] was described, a few months after murdering Miss Rackliff, as sociable and talented... Somewhere along the line, however, it is clear that [the girl] had decided to take her revenge on the world, writing in her diaries that [it was] “payback time”. It began with animals, including lopping of the head of the neighbour’s dog and, possibly, frying live hamsters... “Killing for me is a mass turn-on and it makes me so high I never want to come down. Every night I see the Devil in my dreams – sometimes even in my mirror...” ...in one macabre diary rhyme, [the girl]... appears to show an slight element of remorse. “Look at me, I’m nothing but a disgrace. To my family, I shall no longer show my face. I am a sad specimen of human life. Oh, why did I use that knife?” Any sympathy is, however, lost on Rackliff’s family. Her father... would have preferred to see [the girl] hang. “I hope [my daughter’s killer] rots in hell,”...

[The person who is] accused of murdering [an] Auckland prostitute... and two other sex industry workers allegedly said that Satan was... “telling me to kill all the filthy bitches.” ...[the accused] sent a letter to the N[Z] *Herald*... signed NBK – said to stand for natural born killer – [which]... warned of further killings... [The letter was now] part of the crown evidence... [H]is lawyer... conceded a prima facie case in respect of all charges, saying that his client’s psychiatric state would be raised at trial.

...A... Wisconsin [resident] is suing her former psychiatrist for malpractice, claiming that [the psychiatrist was convinced the resident] had 120 personalities – and... charged her insurance company... \$US300,000... for group therapy... [His] treatment... left her suicidal and haunted by false memories. Her supposed personalities included a duck, Satan, and angels who talked to God... [In related news, two] convicts in Baton Rouge Louisiana, say it is unfair that they are not allowed to pray in the inter-faith chapel of the state prison while members of other religions can. They just happen to worship Satan... [The convicts] have filed suit in a Federal court on grounds that their religious rights were being violated.

...Two... Catholic churches in Picayune, Mississippi, have posted guards to make sure parishioners swallow the communion wafer and do not pocket it. Fans... and... organisers of rock concerts in Cairo over the last three years, are being held in custody under interrogation by State Security forces. They could face charges of contempt for religion, for which the maximum penalty is three years in prison. Religious leaders accused them of renouncing Islam... [or] apostasy... which is punishable by death. The nation’s Parliament passed a motion condemning what it called “deviation from the traditions of Egyptian society.” Government newspapers claim the “Satanists” sacrificed cats, took part in group sex... and... called up the devil on ouija boards... Incriminating evidence includes Black Sabbath albums and posters and T-shirts with Gothic symbols like skulls and inverted crosses. The papers say fans obtained these from foreigners bent on spreading the devil cult... The Mufti... the leading exponent of Islamic law, said the “Satanists” were apostates from Islam but as they were so young the right approach was to ask them to repent. “If they renounce their beliefs, they can be pardoned. But if they persist in their error, we should carry out the penalty prescribed by Islamic law,”... [D]etails from the interrogations... suggest many of the fans were in it just for the sex and drugs or even just to shock their parents... “I don’t have anything to do with Satanism,” said one of them. “I... used to go to feel up the girls when they were dancing.” ...Most just... said... they liked the music... and... imitating foreigners... But... one informant... told prosecutors: “Satan permits quick pleasure, things forbidden by other religions.” [In related news from ‘Africa, the mistaken belief that albino body parts have magical powers has driven thousands of albinos (believed to be harbingers of disaster by some communities) into hiding, fearful of losing their lives and limbs to unscrupulous dealers who can make up to US\$75,000 selling a complete dismembered set. The surge in the use of albino body parts as good luck charms is a result of “a kind of marketing exercise by witch doctors”.’ ‘Body parts – such the heart – are also highly valued by witch doctors if they have been removed from a child while the child was still alive’.]

...A [NZer] living in A[US] is accused of murdering her 4-year-old son in an exorcism ritual while her husband was in N[Z] for his father’s funeral. [The wife], aged 34... was... ordered to undergo... psychiatric assessment... [after it ha]d said: “I believe, in my heart, Jesus is my lawyer.”

...Biblical backing for ritual... In the... New Testament, Jesus cast out the Devil from those who were possessed. Since then, exorcism – banishing the Devil from people or places – has been a part of Christianity and also appears in other religions. It entered popular culture with the 1970 movie *The Exorcist*, which showed... the battle of Catholic priests to save... a young girl possessed by demons... The practice traditionally involves prayer and laying on of hands. In modern times, mainstream churches have concentrated more on emotional healing. The Catholic Church prints a manual with a sanctioned exorcism rite, the *Rituale Romanum*, which includes instructions on specific robes to be worn, scriptures to be read... [A] representative... said the Church believed people and places could be possessed by the Devil – and exorcisms were occasionally carried out in N[Z].

...The pastor who carried out the exorcism of a... 37-year-old Korean known as Joanna... who died in a Mt Roskill house believes that... [the v]ictim will... be resurrected this week... Speaking through an interpreter, [the]... Korean Assembly of God minister, said... [it] did not believe that... [Joanna was dead. The pastor] had performed many successful exorcisms and described... [Joanna]’s death as “a great opportunity for a miracle... God... [had told him that it] was just taking her to heaven to show her so [the alleged victim] could come back and tell everyone what [her eyes] had seen.” ...The... [pastor] said Joanna was “tormented by demons” while staying with friends... and that [Joanna] had cooperated during the ceremony... [The p]astor... wants police to assist Joanna’s resurrection by allowing ...h[is] group, called Lord of All, to... pray over her body... The police are now investigating the death to determine whether charges will be laid. They are... still trying to contact relatives[, and are]... awaiting medical reports to reveal whether the [Korean, in NZ] on a visitor’s permit, had any health problems that could have contributed to her death... [An] Assembly of God spokes[person]... said... the... probationary minister for nine months... had been suspended after the incident.

...The minister suspended by the Assembly of God church after an exorcism in which a [Korean] died will be allowed to continue preaching if [it] apologises and shows remorse. [The]Pastor... said God had told him the [37-year-old] would rise again within a month of the exorcism. The deadline passed on Tuesday... Members of the [pastor’s group had originally] prayed and waited for the 37-year-old[’s]... resurrection for six days, before police removed the body for an autopsy. Police have yet to release the [dead perso]n’s name or the results of a second autopsy.

...A Mt Roskill pastor has been charged with [hu]manslaughter after the death of a Korean... during an exorcism in Auckland last month... [The pastor], aged 37, entered no plea when... appear[ing] in the Auckland District Court yesterday. [The pastor] was remanded in custody and is due to appear again early next month... [In another] bizarre exorcism gone wrong[, a]... pretty American cheerleader was killed by her mother and sister... Another sister, [aged] 15, was in the Long Island house at the time of the killing, but had been ordered into another room by her 39-year-old mother and 20-year-old sister while they smothered Charity... [The 15-year-old]’s statement says: “Charity knew the demon was consuming her and that it had to leave her body. Charity said, ‘It hurts, get it out.’ Mum told her that [they were] not going to let it take her. Mum put her mouth

to Charity's mouth and told her to blow the demon into her and [Mum] would try to kill it. It didn't work." ...Charity who had been off sick from school for a week-and-a-half with the flu, had grown so fragile and weak [that the 17-year-old] could barely put up any resistance as the amateur exorcists... pinned down... [her] arms and violently suffocated her with a plastic bag... for two hours – ending only when [Charity] stopped breathing... The girls' grandmother, who lived with the family... raised the alarm... When police arrived, they were greeted by the bizarre spectacle of... [the mother – who] had embraced the Santeria religion [(a little-known cult which holds the belief there is a bitter conflict between good and evil in humans)] – ...and her two [surviving] daughters chanting, praying and reading Doomsday passages aloud from Revelations in the Bible while listening to Frank Sinatra records. Investigators at the weird scene say the body was placed at the foot of the stairs to make her death look like an accident. According to... one teenage neighbour... Charity had told a [guy whom the]... popular, bright and friendly[student]... believed to be homosexual that [it] wasn't gay. Instead, [Charity told the guy that it] was possessed by a demon and... just needed a bath in salt water. If only a bath had been the answer to Charity's problems... ■... Occult-style exorcisms aren't the preserve of American fanatics. In 1993, 49-year-old Joan Vollmer was killed in Antwerp, Victoria, by her husband... two other [guys and a gal]. All four were convinced... [Joan] was possessed by demons... Police said the shocking exorcism was tortuous and went on for four days before [Joan] finally died... For two days her body lay in the remote farmhouse while the macabre group prayed for her "resurrection"... Her attackers all received convictions over the crime, and two were jailed.

...A WITCH [has been] found guilty of killing her lover's wife in an act described by the prosecution as a human sacrifice birthday gift to her lover. [The witch] (36) was convicted of first-degree murder, kidnapping, conspiracy to commit murder and kidnapping, and murder for financial gain. The jury will decide whether to recommend the death sentence or life in prison. [The witch]'s lover... awaits trial on the same charges... Prosecutors said... the two plotted the killing so [the lover] could avoid a costly divorce... Sherri Dally (35) a daycare operator in Ventura, California, was abducted from a carpark in May 1996. Her... stabbed and beheaded... remains were found 26 days later.

...Blamed for just about everything, witches have been consistently portrayed as [gals who are] ugly, evil... and... old... *The Crucible* – first the play and then the film – has gone some way to setting the record straight... [The] compelling accounts of the witch trials of Salem, Massachusetts in 1692 show... ['superstition crowding out reason and righteousness crushing good in the mad rush to root out evil.' The people of Salem were] caught up in a morass of mass hysteria, their persecution stemming as much from jealousy, revenge and fears of non-conformity as any fears that [their victims] connived with the Devil to do harm. The [gal] spirituality movement of the past two decades has decried the patriarchal persecution of the past. It has reframed witchcraft as "[gal] wisdom" and rituals as a way of re-attuning with the rhythms of the natural world. So the tide is turning – although when the Pope called... the European Commissioner for human rights, a witch last month, it was hardly goodness or wisdom [that the Pope] was attributing to her... Everyone believed in witchcraft in the past... Witchcraft was a way of making sense of things that happened... Today witchcraft is seen as fantasy, but it was once part of mainstream society to such an extent that governments passed laws about it... But while the general population differentiated between white and black witches [i.e., witches who seek to do good or evil], those in power made no distinction... Witches in Britain were tried under both church and secular law, with the last recorded witch trial in 1717. By 1736 the Witchcraft Act downgraded witchcraft from a crime of occult power to one merely of deceit... The Inquisition... also brought the torture and killing of some witches – but not the millions some in the [gal] spirituality movement, intent on reinstating witches as good, have suggested died at the stake. Some have gone so far as to liken the treatment of witches to that of Jews during the Holocaust... As with the "witches" of Salem, those executed in England were hanged, not burned... [The professor] of the History Department at Auckland University... estimates 60,000 were killed during the height of the 16th and 17th-century witch-hunts and perhaps 100,000 overall. There was little persecution of witches in the medieval period... and over a 200-year period only 17 people were indicted of witchcraft in Sussex; but on the borders of France and Switzerland, [witches] accused of spreading the plague... were executed en masse... Witches are no longer common, but they still exist... [There are] hundreds of practising witches in NZ. □ Members of]... a Hungarian coven are facing a possible spell in prison for tax evasion. The Hungarian Witches' Federation was set up as a small religious denomination in 1992, but according to[a] public prosecutor... it also offers costly "religious" services for which it ought to be paying taxes. The federation charges as much as 80,000 forints (\$[NZ]666) – double the average Hungarian salary – for "charm removal" and 21,000 forints for common-or-garden "sorcery." Other specialities include "magic initiation," "astral projection," "technomagic," "work magic" and "mummy magic." [The prosecutor] took the witches to court after allegations that they had been extorting money from gullible victims. - 1997

BLOOD from a slit in his victim's throat trickled into a small cup... [The] 22-year-old... raised the vessel to his lips. Convinced [it] was on the brink of immortality, the... killer was about to fulfil a sick dream: to become a vampire... A year earlier, the remains of Welsh pensioner Mabel Leyshon were found mutilated at her home... [Mabel] was stabbed 22 times before her heart was removed and put in a saucepan on a silver platter next to her body. Pokers were placed at her feet in the shape of a cross. Last week the killer, [aged]... 17, was refused the right to appeal his conviction. [The 17-year-old] was obsessed with vampires and drank his victim's blood in a quest for immortality... [The 22-year-old] claimed the character Akasha from the movie *Queen of the Damned* – starring late US singer Aaliyah – had visited him and promised immortality if [it] murdered someone... The chilling murder of Thomas McKendrick in a small Scottish village was brutal and ritualistic. [Thomas] was sacrificed to satisfy a lust for blood and an obsession with the occult. Yet his killer's fixation with bloodsuckers is far from unusual. Vampirism is a rapidly growing youth cult and its followers are increasing in numbers... [T]housands of websites have sprung up on which vampire fans can trade material and chat about matters occult... In cities throughout Britain, vampire societies meet weekly and act out scenes from their favourite movies... Vampire films and magazines are thriving, while specialist shops meet the outlandish clothing requirements of those who fantasise about being Dracula.

...Count Dracula was not an evil and mysterious monster as legend would have it – [the count] just had rabies, according to a Spanish doctor... [The doctor] says the similarities between rabies sufferers and Dracula the vampire as described in folklore are too great to be coincidence... [S]ymptoms of the advanced form of rabies – in which the virus attacks the brain – include an aversion to bright light, water and mirrors... and... an apparent liking for blood and sex[, while]... muscle spasms in the neck could make rabies victims... vomit blood. Some suffer violent impulses which inspire them to bite people, while others get erections which "last for days," [the doctor] writes in the journal *Neurology*... [T]here was also evidence of a major outbreak of rabies in Hungary between 1721 and 1728, when the Dracula legend first gained momentum.

...in recent years [Halloween]'s been on the increase in my neighbourhood... Yet again, it's the swallow-all march of American culture, not that anyone remembers why Halloween exists... Last year we had a bunch of little goblins – five to maybe 10-year-olds – turn up at the door demanding a handout. They were complete strangers to us... and there wasn't an adult in sight. Who was looking after them, and who's to say that I wasn't a gun-toting, psycho child molester as well as grumpy about being bothered after a tough day at the coal face? We were long overdue for a supermarket trip so there was no fruit or lollies in the house. I was thoroughly annoyed when the beloved, stuck in a corner and unsure how to react, gave them money. I was also annoyed that kids... can invade privacy and demand people take part in something they may be completely against, for whatever reason. (There are enough door-to-door salespeople and members of the flock banging on our door as it is.) ...Down-country, two Rotorua [gals]... took their opposition to practical action, producing "Halloween-free house" signs for letter boxes. Great idea – ...I must get one for next year... [I thought a year ago. T]hen I heard about little brats heaving... water bombs into houses when they didn't get their own way.

...HALLOWEEN (All Hallows Eve) is the night when graves are meant to open, the dead walk and the sea yields up its dead – not an especially wholesome thing to celebrate and hardly suitable for children. It is one of the big-three black masses in the witchcraft calendar and as such should

only be of interest to those who practice it. Then there's the safety aspect – broken glass in sweets, razor blades in apples. I'd rather my children don't risk receiving those, just as I'd rather they didn't knock on doors after dark saying what amounts to "give us lollies – or else". This is behaviour I try to discourage all other days of the year. Halloween is a relatively recent introduction to NZ and most of our oldies don't expect it. An old neighbour, living alone and a little deaf, opened her door to three children in black robes and scream masks. They were her next-door neighbours but totally unrecognisable, so [the old girl assumed it] was experiencing one of the well-publicised home invasions and suffered a trauma-induced asthma attack requiring hospitalisation. There is nothing particularly nice behind the traditions of either Halloween or Guy Fawkes.

...REGARDING 'Oldie hospitalised after kids' Halloween scare', [the letter's author]... is correct in saying that the tradition of 'trick-or-treating'... is wrong for NZ. Like a lot of other traditions, it is grossly commercialised and overhyped... But I disagree with her statement about it being "one of the big-three black masses in the witchcraft calendar." To start with, Hallowe'en is the eve of All Saint's Day in the Christian calendar. The concept of witches celebrating black masses is a Christian one to discredit those who worship other than their patriarchal God. Satanists, who are not necessarily witches, hold black masses. There is a difference. As for the witchcraft element... Halloween, known as Samhain to Pagans and Wiccans... is but one of four major and four minor celebrations of the circle of the year. Samhain is a time of reflection, of looking back over the last year and of remembering those that have died. By the way, in N[Z] we celebrate Samhain in April, close to Anzac Day.

...October 31, Samhain, is a celebration of Saman (Lord of Death), a Celtic pagan festival before the season of the dark winter and [one] of the eight witchcraft high days. Saman returns with the souls of the wicked and spirits roam the countryside destroying unharvested crops. The Druid priests made their annual demand for a sacrifice to help them communicate with the spiritual realm. Where a sacrifice was given, a hollowed-out pumpkin with a candle made of human fat burning inside was exchanged to bring good luck. If no sacrifice was given a hexagram painted in human blood was put on the door, with a curse that someone in the family would die.

...Four [gals and one guy] died after they were beaten... tied to a tree and... set alight in the southern Indian state of Andhra Pradesh by villagers who suspected them of witchcraft, say police. The incident took place in Thimampur... The recent deaths of two villagers, one... mentally ill... had triggered fears of witchcraft... [Incidentally,] tourette's syndrome... was often put down to demonic possession... until recognised last century...

At 6 sharp every night... the... villagers of Kareng Sari set up camp around the rice paddies to protect themselves from nightly... attacks. They are armed with homemade weapons, machetes and sickles, all make-do replacements for unreliable police[officers], they say. Simple farmers protecting their homes. You would never suspect them of being cold-blooded killers. But, according to police reports, such simple farmers are responsible for at least 169 brutal murders in a wave of mob killings that have riveted... Indonesia. By the admission of residents themselves, villagers in East Java have been conducting a campaign to cleanse the countryside of alleged black magic practitioners. Like the plot of an *X-Files* episode, the killings were initially dismissed as fiction but are now the focus of several conspiracy theories casting blame on everything from Indonesia's defunct communist party to supernatural "ninjas" targeting devout Muslim leaders. Security officials are at a loss for an explanation, but admit... the killings may be a troubling side-effect of Indonesia's "reformation" fever that sparked widespread rioting and looting last May – old grudges are being hashed out and brutal vigilante justice is ruling the day... "You ask why it happens. It happens because of deeply ingrained social reasons and it is not easy to undo," says Banyuwangi's Police Chief... "Every year we have one or two killings of this sort and there is no clear law on this sort of thing. For one killing we can arrest a whole village but the masses support the killings and they won't be satisfied by these arrests." After arresting over 100 suspected villagers recently, Banyuwangi police were besieged by 500 angry neighbours... demanding the release of the suspects and protesting that the assailants had done nothing wrong. "How do I deal with this? ...Every officer that steps out into the field is rejected by the people. There are more people supporting the killings than stopping them." ...that... pattern... certainly fits the village of Kareng Sari... Two weeks ago, hundreds of Kareng Sari villagers beat their neighbour, Pak Roelsan, to death in front of his family... "Everyone knows [Pak] was a witch doctor spreading sickness in the village," explains [the] village leader... But when pressed further, [the leader] reveals that Pak... made unwanted advances on a young girl who eventually accused him of rape... Pak[allegedly] then cast a spell causing the girl's father to grow sick... "But we aren't worried about witch doctors here... any more." The occasional murderous mob is frightening enough, but why have the number of vigilante killings jumped so high? ...the numbers have jumped by 900[%]... Military officials have blamed the recent killings on revenge-seeking children of communist cadres murdered in 1965... when villagers, under the tacit approval of Indonesian armed forces, slaughtered hundreds of thousands of suspected communist party members... Most of the[latest] victims are, however, members of Nadhlatul Ulama, the nation's largest Islamic organisation. Nadhlatul Ulama's chair[person]... criticised the military for dragging its feet on the investigation... But for all the political blustering, it would be more unusual if the victims were not members of Nadhlatul Ulama. After all, 98[%] of East Java's population profess to be devout Muslim Nadhlatul Ulama members. If it is not the communists and it is not rival political factions, then who or what has sparked the killings? ...As [one writer] says in his play – ...evil [people] can be redeemed but the wilfully stupid are with us always.

... "I always knew I was a witch... My mother and grandmother were witches, although my mother didn't cast spells very often. I do remember how [mum] put a particularly difficult boss' name into a jar of honey though, to sweeten him up." ...The mystical A[USn's]... two daughters – Samantha, 12, who is not named after the Bewitched character, and three-year-old Zephyrina – are already following in her footsteps... [T]he witch is no tree hugger – but... does like to give them a tippie of beer... [when celebrating] the mid-winter solstice... "It's a way of encouraging them to grow [during]... the longer days..." ... With her auburn ringlets and slanting green eyes, [the AUSn] is pure witch. But there's no black robes or pointy hats. Just a simple, expensive cream silk suit and a patterned silk scarf... [The AUSn] is a fan of the new witches and wizards on TV and in books. "Charmed is a great TV show, because it shows young, beautiful witches working for good..." ... [The AUSn] never uses her powers for evil because any bad done to another is returned to the witch threefold. But the same applies to good... [Her] books of spells and her own fortune telling Oracle, based on the druid symbols for the different phases of the moon, are also working wonders for magic – with huge international sales.

...WHEN... [the owner of] Dragonspace... was a young... girl [the owner] wanted to be a missionary... Her mother lived a strict Christian life and from the age of five to 15 so did... [the girl, until being] kicked out of the church because of the wild parties [the girl] and a friend said they had gone to – in fact they were only making it up to impress... [As a] bare-footed 45-year-old – with brownish-blond dreadlocks, neck dangling with silver amulets, hands and arms bedecked with symbolic rings, stones and bracelets – [the owner] is spreading the word about an entirely different kind of belief system: Witchcraft. Having appeared on television, radio and in press all around the country (even to the extent of appearing on a *60 Minutes* documentary about witchcraft) [the owner] could well be considered a spokes-witch, a representative of the estimated two to three thousand N[Z]ers who practise her craft. One possible reason for her notoriety is that... her Auckland shop... is easily accessible and visible... And, depending on what you believe, another reason for her profile may be the result of a business deal... made with "the Goddess" about six years ago. The Goddess is the principle[(sic)] deity in her religion; a simplistic definition might be Mother Earth or Mother Nature. "I was in my garden when I decided to make a business deal with the Goddess. It was a five-year contract and I said to her: "if you help me with my business I will promote you any which way I can." The Goddess seems to have kept her side of the bargain... [The owner] has been a bit busy to renew the initial... contract... The religion [the owner] practises... sees her speaking with the Goddess... and... communing seriously with nature, on a daily basis. [However, the owner] doesn't consider herself religious in the accepted sense – "I try to tell the truth and do right but like everyone, I say and do things I shouldn't do..." But being a witch does in fact seem very much like being a devout... Christian or Buddhist. "I think... [that having] some form of spiritual belief system is like having security. It brings a kind of peace. And this religion is about beautiful things in every day life. There's

no guilt and no blame... From 16 to 21 I was running wild... I have done the hippie thing and the punk thing and I think you pick up a little of every phase you go through.” ...Her first step toward finding an individual spiritual solution was a foray into numerology. Then... tarot cards. In 1988 [the owner] and her husband sold everything they owned and went off to find adventure in the U[S, where the owner] found a book that told her everything [the owner] wanted to know about witchcraft. “As I read I was thinking ‘yes, that’s me,’ and ‘that’s me too.’” [The owner] came to understand... that... [it] was a witch... At the age of 40... now a self-trained and self-initiated witch[, the owner came back to NZ]... made her pact with the Goddess and opened Dragonspace... All of the products in the shop are home made... [using] a mixture of ancient European magic, New Orleans voodoo and even African and Indian lore... Although [her husband] had always sympathised with his wife’s occult learnings, at first [the husband] wasn’t that interested in joining in... but now [the husband] takes an active part in making up the spells and potions and considers himself a witch too. The couple’s son, now 20, isn’t that interested in his parent’s beliefs. As [for Christians, the owner] has, as one might expect, had her problems with them. “I have had whole churches praying for my demise,”... That can’t be pleasant? “Well, no. I suppose they are cursing me really. But it’s just hysteria and darkness and fear... I’m not anti-Christian. It’s certainly not about Satan or black magic. It’s about the earth and learning to worship ourselves... A lot of people will probably spin out at me saying this but I am quite sure if I saw Jesus Christ on the street today [Jesus] wouldn’t stone me... [Jesus would] pat me on the back and say: ‘Good girl, good on you.’” That’s because the spells [the owner] casts are not about asking the Devil for goodies but more like... [writing] a letter to Santa... As to black magic... the closest [the owner] comes is the love potions sold in the shop. There are... rules... “According-to-free-will-for-the-good-of-all-and-harm-none.” Black magic is about altering someone’s free will and also about intent. If a customer uses a spell to hold their lover they are manipulating that person’s free will – even if the intention is good. I[nterestingly] if you ask... why [the owner] doesn’t wear make-up [it will] tell you about black magic. “What so many of these companies do is a kind of black magic. Black magic is about intent and manipulation and what is advertising but manipulation? Their intent is not to adorn... but to make money. Their intent... is rotten as far as I’m concerned...” So, is [the owner] saying that making a profit is bad? Then surely [the owner] herself is guilty of commercialising her religion, devaluing witchcraft and earth magic by selling and publishing its secrets? ...“[It’s not]... about money... I am... doing this for the sole purpose of promoting the Goddess, putting her in the market place. It’s about waking people up to the fact that the Goddess is back.” Obviously the publicity is working. Dragonspace was the first, but there are now eight or nine occult shops around the country.

...[zombies (‘soulless people raised from the grave by voodoo sorcerers) are being sold into slavery’ in Haiti, and police] in Brazil yesterday arrested two voodoo priests – a [guy], 71, and his girlfriend, 22 – for the murder of a six-year-old boy who bled to death in a black-magic ceremony.

...South Africa’s first summit aimed at curbing witchcraft-related deaths opened... yesterday. About 200 people gathered... in Northern Province, where witchcraft-related crime is most frequent. Police statistics showed that between April 1994 and February 1995, 97 [gals and 46 guys] were killed, accused of being witches or wizards... Last year, 18 suspected witches were killed. Victims were usually aged between 55 and 72. The murders happen mostly in the rainy season, when poorly educated rural people accuse the victims of directing lightning at rivals.

In primal and especially African societies witchcraft is often used to explain mysterious calamity and death. The psychic power of a witch is often unconscious in contrast to that of a sorcerer, which is more premeditated and evil. In medieval Europe from the 14th century onwards witchcraft was seen as a satanic heretical religion involving a pact with the devil, and it was condemned by a papal bull of 1484. Accusations that witches engaged in black masses, flew on broomsticks, had personal devils as ‘familiars’ and so on spread, and by 1700 it is estimated that over 200000 people had been executed for witchcraft, and outbreaks of witch-hunting, like that at Salem Massachusetts in 1692, became notorious... The... Church often accused those who did not conform to Christian tenets of being Satanists.

...Belgian police have raided the headquarters of a satanic cult and linked it with the child sex ring which has rocked the country. They have three victims of satanic rite abuses in safe custody... They reportedly testified to suffering terrible cruelty during secret ceremonies and said they were forced to torture young children... The newspapers maintained that the well-established organisation used stolen children or children “made to order” by carefully selected families who sold infants to satanic sects as soon as they were born without registering the births.

...there are Satanists in the Manawatu and elsewhere. Though not the Satanists of popular imagination, they do hold beliefs and practice rituals that set them well apart from the mainstream of N[Z] society... Mention the dictionary definition of Satanism – those who worship Satan with blasphemous parodies of Christian prayers – or the fearful sociopath dreamed up by [fiction writers, and they are] adamant that the order takes no part in such activity. “We repudiate those types altogether on the basis that these people aren’t mentally balanced. We want balance and exclude people who have an unnatural interest in inflicting pain upon others for the pleasure of it. [Humans are] part of nature and anything that is out of tune with nature is anti-Satanist... Who has defined Satanism since the Middle Ages? It’s the Church. Surely the best people to define Satanism are Satanists.” ...[another local Satanist says:] “Christianity is a blasphemous parody of earlier religions, the Sumerians and Mesopotamians. The Bible is full of rewrites from the scriptures of earlier civilisations.” ...priests in the order, agree that they have met people who conform to the stereotype so powerfully portrayed in film and by some churches... “If they believe in the Devil and the upside-down cross and perform blood sacrifices we can be sure they are not Satanists. They could be called Christian Satanists. Most are drug addicts and their concept of Satanism exists only within the bounds of Christianity.” ...The order’s definition of Satan harks back to a pagan deity predating the rise of Zoroastrianism... [Christianity took on Zoroastrianism’s] dualistic view of the universe and... Satanists remain adherents to a pagan polytheism. Unlike the neopaganism of New Age earth religions, the Satanists seek as their patrons those that have come to be called the dark deities. So while the order describes itself as Satanist, that has come to be a collective term that encompasses deities from different pantheons, Lucifer, Pan, Kali, Helas and others. [One local Satanist] sees them as present in this world as separate incarnations. [Another] has a more abstract viewpoint... “Satan is an entity, but is more an aspect of the forces of nature. It’s semantics, but Satan is God and anti-God. [Satan] is the force of nature that encompasses all the polarities that the cosmos operates on.” By polarities [the Satanist] means dark and light... evil and good, yin and yang... Their Satan is not a deity to be worshipped, but rather a path to self-realisation... [which they – and, probably, anyone who believes that being ‘left-handed is a sign of the devil’ (e.g., the ‘9-out-of-10 people’ who aren’t left-handed – ‘50% more boys than girls’ are left-handed) – call] the Left Hand Path... “Through training and self-development, you bring yourself to the stage of union with the godhead. The deities we follow are patrons who can teach us. Satanists aim to fulfil [humankind’s] potential.” One of the locals... came to Satanism through an early interest in philosophy... [being] attracted strongly by the writings of German philosopher Friedrich Nietzsche; in particular, the philosopher’s belief that [hu]mankind needs to continue to evolve culturally as well as biologically. Nietzsche used the term “herd religions and moralities” to describe beliefs that encourage cultural stagnation... Satanists... are individuals who describe their moral beliefs as the freedom to do anything as long as it does not infringe on another person... “We acknowledge that we have a duty towards other people, the culture and nation. We are not individuals who act regardless of the social collective.” - 1996

In his *Antichrist*, Nietzsche [– who introduced the concept of a ‘super[person] (an ideal superior [person] of the future, able to be evolved from the normal human type)’ –]describes Jesus as a psychological type, hypersensitive, prone to suffering and dreading it above all else. Thus reality was intolerable to him, [and Jesus] could accept it only as a parable, a sign. The world [Jesus] lived in was not a real world, but a world of vague, intangible symbols. Hostility, opposition, the resistance of concrete things were intolerable to him. For Nietzsche this explains why [Jesus] did not

contend with the world, and “resist not evil” is the key to the gospel. In this maxim Jesus’ personal incapacity for struggle is set up as an ethical principle. The only true reality is the inner reality, which is called life, truth, light. The kingdom of God is a psychological state. It is not expected, but is present everywhere and nowhere. It is a state of beatitude which cannot be demonstrated by miracles or by scripture, which offers no promise or reward, but is its own proof, its own miracle and reward. Its proofs are inner lights, feelings of pleasure and self-satisfaction. The problem is: How shall I live in order to feel that I am in heaven, at all times divine, the child of God? For this sense of beatitude is the sole reality. Jesus is not a hero or a genius, but more in the nature of an idiot.

“I was just trying to be... good...” “And you ended up daft and stupid, didn’t you?”

...Jesus... walked upon the water and... sank beneath your wisdom like a stone...

...there goes the fool... here comes the wise... - What The World Is Waiting For

The... LORD... shall give you a sign; Behold, a virgin shall conceive, and bear a son, and shall call his name Immanuel... [T]he child shall know to refuse the evil, and choose the good... Therefore the... government shall be upon his shoulder: and his [titl]e shall be... The Prince of Peace. Of the increase of *his* government and peace *there shall be* no end... from henceforth even for ever. - Isaiah 7:14 - 8:7

According to Christians, Jesus is the Messiah prophesied in those above and other Old Testament verses. However, Jesus – whose loyalty to his friends is questionable (r:p861, lns32-3) – seems to have denied that the title *Prince of Peace* applied to himself (r:p861, ln22). Consider also the following verses:

...as Jonas was three days and... nights in the whale’s belly; so shall the Son... be three days and... nights in the heart of... earth. - St Matthew 12:40

...[because] of the resurrection of Christ... his soul was not left in hell... - The Acts 2:31

...and [Jesus] cast out many devils; and suffered not the devils to speak, because they knew him. - St Mark 1:34

...people were amazed, and said, Is not this the son of David? But when the Pharisees heard *it*, they said, This *fellow* doth not cast out devils, but by Beelzebub the prince of the devils... Jesus knew their thoughts, and said unto them, Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand: And if Satan cast out Satan... how shall then his kingdom stand? - St Matthew 12:23-6

Jesus’ alleged trip to hell and familiarity with devils might not be a justification for linking him directly to *the prince of the devils*, but his speech doesn’t disprove the link either! In a game of chess a player might sacrifice a smaller piece (eg., pawn) in order to capture a larger piece; and in the practice of war it isn’t uncommon for a General to sacrifice large numbers of soldiers in order to capture an important piece of ground.

...you need to be prepared to give a little in order to gain a lot.

Sometimes you have to lose the battle to win the war.

In response to claims that their idol was the prince of the devils, modern-day Christians might remind Jesus’ critics of his miraculous conception (r:p895, lns6-11). However, the idea that *a virgin shall conceive* – which could simply mean that someone became pregnant during the act of losing her virginity – has been diluted by the development of artificial insemination and test-tube babies (perhaps Mary was impregnated artificially by aliens?).

A British insurance firm is offering insurance against “virgin birth by act of God[”] ...following the success of its alien impregnation... policy which it sold to 300 women in just one week. Virgins pay £2... a week and will be offered (£1m) if impregnated... “Virgins are genuinely concerned with the approach of the second millennium. Accordingly, we consider it our duty to provide coverage to help allay these concerns... All claims will be assessed by a panel of independent experts who do not include members of the church from whom we have received a frosty response.”

...My father was a doctor in the days when doctors made house calls... morning and afternoon as well as most Saturdays and some Sundays... [Dad] also got up in the middle of the night to deliver the babies of all his patients... Medicine was his profession but obstetrics was his passion. And long before it was legal [Dad] gave contraceptive advice – and contraception, too – to [gals] under 16. His view was that a youngster intent on sex needed reliable contraceptive equipment and knowhow more than hellfire homilies. I place him in no danger by divulging his crimes now; [Dad] long since went to a place where the phone doesn’t ring in the middle of the night. But [Dad] came to mind when I saw the news item last week about the... insurance broker offering cover against “virgin birth by act of God.” Unready young mothers-to-be used to respond with horror when Dad gave them his professional opinion that they were in the family way. They assured him solemnly that they had not engaged in any sexual act; [Dad] assured them, slightly less solemnly, that, throughout human history, pregnancy had never occurred in the absence of a sexual act – “with one celebrated exception.” What, though, would [Dad] have made of the enterprise which... will insure you against becoming the second celebrated exception? I suspect [Dad] would have enjoyed sitting on the “panel of independent experts” who will assess claims. With good humoured scepticism [Dad would’ve] disallowed every claim and saved the insurers a fortune... Having already sold... policies... against being impregnated by *aliens*, I figure they’re just laughing into their lunchtime champagne cocktails as they dream up the next lurk. Beats working... Who’s interested in my insuring them against being beaten at snooker by [a blind person?] ...Just send the cheques... We’ll take care of the paperwork later. - 1996

WELCOME to the all-[gal] world. Scientists have discovered a way of creating virgin births in animals by inducing pregnancy without the presence of sperm. The technique will be used initially to produce... calves... without the expense of maintaining bulls... by a form of “immaculate conception”... Instead of two sets of chromosomes – one each from the mother and father – they will all come from the mother, creating only [same-sex] off-spring and effectively dispensing with the need for... [sperm. T]he research, which is no longer conducted in the UK because of ethical disapproval, will revolutionise the rearing of farm animals, providing limitless generations of milking herds... Once perfected, it could be applied to any other species... Limited research on non-viable human eggs left over from infertility treatment in the UK has found they will begin dividing spontaneously, but... experts believe there are ethical and medical objections to extending it to humans because of the dangers of in-breeding.

...A THEOLOGICAL controversy has erupted in Israel over a ten-month-old... heifer, produced by artificial insemination from a bull in Switzerland... [The] farm animal named Melody[is] believed by some Jews to be the first red heifer born in the Holy Land in two millennia. Yesterday the beast was whiling away its time in the farming village of Kfar Hasidim in northern Israel, blissfully unaware of the furore that it has provoked in a country where it is seen by an extreme minority as an extraordinary portent for the new millennium. Some Israelis claim it is the

harbinger of the Messiah, while others demand that it be killed before it sparks new Middle Eastern violence on a scale greater than anything seen in recent decades. "The red heifer is one of the most important signs that we are living in a special time," says... [the] leader of an ultra-nationalist Israeli group... There are fears that some Jewish extremist groups will interpret the birth... as a sign the time is right to rebuild the... ancient Jewish Temple, destroyed by Romans in AD70... on the site that[now] houses some of Islam's holiest shrines.

...[two Jews tried to climb the Western Wall, Judaism's holiest site, because a water stain on one large stone has led some ultra-Orthodox Jews to believe the Messiah is on his way. Worshippers discovered the stain four days ago. The water might be coming from a buried pipe or well at the Temple Mount]...

I know when I'm being taken for a ride... [P]rank... however, is not a word much used in N[Z]... Until I went to England I always thought it was Chinese for a piece of wood. If we don't use "prank" we certainly don't talk of "prankster". This is a pity because life has taught me God is the supreme prankster and the Bible is alive with a comic sensibility. [Now 'I don't want to start any blasphemous rumours but I think that God's got a sick sense of humour'. For instance, in] the Psalms we are told God "laughs at the wicked" because [God] sees their downfall. Noah, like Jonah, is pictured as an inept buffoon... When Sarah at the age of 89 gives birth to a son, [Sarah] names him "laughter" (Isaac)... although bearing a child at that age could hardly have been a laughing matter. [Also not laughing are 'Waikato farmers after being hit by a black beetle plague. The beetles in their larval stage are a big problem because they eat the roots of grass and other plants, laying waste to grazing paddocks. Millions of South African black beetles swarmed into Hamilton and other central Waikato towns on Wednesday night, covering businesses and homes in a thick, black carpet. But it seems few of the insects were alive yesterday. The manager of the Ulster St United Video, who had vacuumed a "thick carpet" that built up outside his front door, said the bugs were still trying to crawl into his shop at midday on Thursday. "It's only been a week since the last cricket raid. Now these have turned up."]

...[Plagues of locusts across AUS are threatening sowing and yields in some of the country's richest cropping areas – and pose an even greater threat to maturing crops in a few months. The locusts are unwelcome by-products of good rains through AUS's usually parched outback areas, breeding grounds estimated to span more than 200,000 sq km. Able to soar up to 500km on a good windy night, they have moved relentlessly through the flowering deserts, into arid pastoral land, and now into cropland – where they are multiplying in unprecedented numbers, officials say. "Our gal locusts are plump, chockablock full of eggs and laying them all over the place," said a spokesperson for Agriculture Western AUS. "All they have to do now is survive winter."]

...Swarms of locusts... [have] hatched in Mozambique, then travelled through Malawi, Namibia and Botswana before arriving in... [South Africa's] Cape Province, causing extensive damage to crops and pastures... [A]bout 30,000 swarms, comprising about 10 million locusts each, have so far been killed by government pest control efforts... Madagascar has[also] been hit by a plague of locusts that threatens to sweep the island nation.

...Massive swarms of locusts... estimated ...at as many as 200 locusts a square metre... have chomped their way through crops in south-western parts of Chad. Recent rains amid lush vegetation prompted the hatchings... Agricultural officials say that days of air attacks on the swarms with pesticides have done little to reduce the number of the ravenous insects.

...ravenous insects are arriving[in Cameroon] from countries to the north, already hit hard by the swarms... [Cameroon has] launched a massive effort to fight[the] millions of locusts that threaten to devour crops... Already this year, crops in the drought-stricken country have been decimated by the passage of migratory birds... elephants and hippo[s]... Swarms of locusts[have also] crossed into Yemen and officials expect more to come from... the Sudan[where '11 people died and 1685 were hospitalised with breathing difficulties after a swarm of grasshoppers gave off a strong smell' ...

Albania ha[s] announced that 25 of the country's 26 regions have been hit by swarms of locusts. The Adriatic nation has suffered from invasions of the hoppers for the past three years... A plague of locusts has [also] descended in north... China's wheat belt, devouring 107,000 ha of crops. - 1997

And there came out of the smoke locusts upon the earth... And it was commanded them that they should... hurt... only those... which have not the seal of God in their foreheads. - Revelation 9:3-4

The desert locust (*Schistocerca gregaria*) – the locust of the Bible, which is found in dry and semi-arid areas of Africa, the Middle East and India – is perhaps the most destructive insect known to humanity. The spur-throat grasshopper can eat its own weight in a day.

Although the term 'locust' is loosely applied to any large tropical or subtropical grasshopper, it is better restricted to those whose numbers occasionally build up to form enormous migrating swarms which may do catastrophic damage... [T]hree species are of special importance... Both the red locust and the African migratory locust have their own control organisations which effectively prevent plague outbreaks. The desert locust, however, presents a real inter-national problem which has yet to be solved... [L]ocusts can exist in two phases: a solitary, grasshopper phase, or a swarming locust phase. When the grasshoppers are crowded together they change their behaviour, and, if kept like this for a generation or more, also change their shape and colour... Solitary locusts come together only for mating... When they first hatch young solitary locusts disperse and unless some environmental factor forces them together they never do begin to associate... It is known that structural changes between one phase and another are associated with relative differences in the insects' hormonal balance. Mutual stimulation leads to greater activity... Because an urge to keep close together is induced by development in the gregarious stage they march together in bands... When they set out, they move only a few yards a day, but they hop for up to a mile in the later stages... [when they become] airborne and move much faster. Weather conditions too can lead to the development of gregarious locusts and swarm formations. Scattered flying locusts fly downwind towards frontal systems of converging airflow and thus tend to accumulate in rainy areas... If all the locusts in a swarm only 2 miles square were to breed successfully, in only four generations there would be a severe infestation of the whole 196 million square miles of the earth's surface... [(By the way, Earth was recently hit by a plague of plastic grasshoppers – courtesy of the McDonald's restaurant chain.)] Plagues eventually come to an end due to adverse weather... Between plagues lasting 6 or more years there are equally long recessions when only solitary locusts are to be found... [The 17-year locust is not a grasshopper but a cicada. Also known as 'the loudest insect voice', their muscle-induced calls] can be heard a 1/4 mile away and, close to, can make ordinary conversation impossible... [Cicadas] do... not... appear in a district only once in 17 years, as there may be several broods in different stages of development... More than 1500 species are known throughout the world. [NZ has a cicada that 'comes out every 7 years, but there are 7' broods]... The breeding period... [can be] checked by observation of nymphs in captivity.

Moses... came ...to Pharaoh, and said unto him, Thus saith the LORD God of the Hebrews... let my people go, that they may serve me. Else, if thou refuse... behold, to morrow will I bring the locusts into thy coast... [T]he LORD said unto Moses, Stretch out thine hand over the land... - Exodus 10

...Moses stretched out his hand over the sea; and the LORD caused the sea to go back by a strong east wind... and made the sea dry land, and the waters were divided. And the children of Israel went into the midst of the... dry ground: and the waters were a wall unto them on their right hand, and on their left. And the Egyptians pursued, and went in after them to the midst of the sea, even all Pharaoh's horses... chariots, and [cavalry]... And the LORD said unto Moses, Stretch out thine hand over the sea, that the waters may come upon the Egyptians... And the waters returned, and covered... all the host of Pharaoh... [until] there remained not so much as one... Thus the LORD saved Israel that day... And Israel saw that great

work which the LORD did upon the Egyptians: and the people feared the LORD, and believed the LORD, and his servant Moses. - Exodus 14:21-31

According to Exodus 1:11 the Israelites *built cities for Pharaoh*. This means that some of the Israelites could have been skilled engineers – unless only Egyptians held such positions. At the very least, however, some would have picked up basic engineering skills while labouring on Pharaoh's construction sites. Their skills might have been sufficient to allow them to construct a floating platform which was strong enough to allow a large number of humans to simultaneously cross the sea – but not a large number of humans plus horses, chariots and armaments! Alternatively, the Israelites may have been able to make the platform become unstable after they had completed their crossing. Some historians have suggested that what really occurred was 'the Israelites were on high ground and the Egyptians on low ground when a huge wave from a volcanic eruption in the Mediterranean swept through where the Suez Canal is now situated.'

Whether or not Moses, with God's help, performed miracles isn't important – of greater relevance is whether or not Moses actually existed (if the answer is *not*, that would explain why no one can ever find his bones – r:p1134, ln44!)

HOLY MOSES! ...IN his latest incarnation Moses is a cartoon character... DreamWorks Pictures trumpet their version as "a story... we can relate to in our time." It presents Moses as a [guy] "who must come to terms with his past, his heritage and his faith." After this ringing affirmation, it is ironic that the first response has been one of doubt. Moses may not have existed. Biblical scholars have long been aware that, outside the scriptural text, there is not a shred of historical evidence for the exodus of the Israelites from Egypt and their subsequent conquest of the Promised Land. Nor is there any mention of Moses in a contemporary document. The Egyptians, who kept good records, make no reference to the employment of Hebrew slaves. Archaeologists can find no evidence that in about 1800BC Palestine suffered a big invasion and the ethnic cleansing of its inhabitants, as described in the *Book of Joshua*. Nor is there any sign of foreign occupation. A significant number of scholars now believe that most of the ancient Hebrews were... apiru (outlaws, refugees), native Palestinians who fled the collapsing Canaanite city-states to settle in what is now the West Bank (where we first hear of "Israel" on an Egyptian stela of 1207BC). They may have been joined there by other apiru who had escaped from the Pharaoh's corvée under the leadership of Moses and adopted their liberation theology. We shall never know for certain. The actual events that may or may not lie behind the obviously mythological account of the Exodus... are lost beyond recall... The practice of reading the biblical stories as strictly factual is itself modern; the doctrine of the literal truth of scripture was first developed by [US] Protestants in the late 19th century. Hitherto, Jews, Christians and Muslims had all encouraged and even relished highly symbolic or allegorical exegesis; they did not share our concern for historical accuracy. Like the biblical writers, they were more interested in what an event... meant than in what actually took place. One could say that until an event has been mythologised (liberated from its historical setting by means of ritual and stylised narrative), it cannot be religious. St Paul mythologised the historical Jesus and created Christianity... The Passover ritual makes the Exodus a current event, and insists that every Jew must regard himself or herself as belonging to the generation that was liberated from Egypt. Thus, well-meaning scholars who have tried to explain the miraculous crossing of the Sea of Reeds by pointing to the frequent flash-flooding in the region have missed the point. The biblical writers deliberately described this event as a myth... The myth has... provided millions of people with the spiritual energy to fight oppression. Moses... has been an inspiration for Martin Luther King and to Christian liberation theologians in South America, as well as to Jews... We can all relate to Moses the Liberator, who bravely commands Pharaoh to "let my people go!" We can admire the Moses who courageously pleads for his people, when his irascible God threatens to exterminate them for worshipping the Golden Calf. We can see Moses' ascent of Mt Sinai and his meeting with God as a moving emblem of the mystical past... But all these readings are selective. The biblical story provides us with many different portraits of Moses, some of them morally dubious – even wicked. What... are we to make of Moses the Grand Inquisitor, who permits the Levites to massacre 3000 of the Israelites who worshipped the Golden Calf. According to the *Bible*, Moses introduced an intolerance that has, since his time, been one of the besetting sins of monotheism. In the pagan world, religious persecution was almost unheard of: another deity could always be accompanied within any pantheon. But Moses' jealous God commands: "You shall not have any other gods before me." The inquisitions, persecutions and crusades that have scared Jewish, Christian and Muslim history show the human cost of such an exclusive theological vision... To this day, religious people cite... biblical precedents to justify a policy of extermination... [R]eligion, like any human activity, can be abused. It can be used to give a divine seal of sacred approval to some of our most obnoxious prejudices and policies – and Moses is the first person in the Bible to succumb to this temptation. Moses does not seem to have been universally beloved in his own time. Throughout the 40 years in the wilderness, the people [Moses] had liberated were constantly simmering with resentment and in a state of incipient rebellion. At one point, a small cabal led an uprising against Moses and his brother Aaron, demanding more egalitarian rule. Moses quashed this with his usual brutality: the ground opened and swallowed the three conspirators at his behest (*Numbers* 16:33). The biblical writers were quite open about Moses' failings... [Moses was] slow of speech, often timid and indecisive, and given to fits of depression and sullen rage. [But some] scholars believe that the bad press Moses gets in the *Bible* reflects a later conflict between rival priestly dynasties: the priests of Jerusalem, who claimed descent from Aaron, and the priests from Dan and Bethel, who were descended from Moses. Moses remained a controversial figure for centuries after his death, before... finally[achieving] the reputation of being the greatest of all the prophets, since [Moses] alone had spoken with God face to face... Moses... reminds us of the difficulty of the religious quest and that our most sacred traditions can be deeply flawed. But this is, perhaps, too complex a vision for a cartoon.

...*Unholy Moses*... Hollywood [has rewritten] the Bible... for the new animated feature film, *The Prince of Egypt*... It deals with the conflict between love and duty and whether one [person] can make a difference. [However, liberties] were taken with the biblical story in the interests of dramatic entertainment. So the Pharaoh's wife rather than his daughter finds and adopts Moses, allowing [Pharaoh's son] Rameses and Moses to grow up as brothers... Dreamwork's co-founder... who spent 10 years as head of Disney Studios in a golden box-office era of *The Lion King*, *Aladdin*, *The Little Mermaid* and *Beauty and the Beast*, says... the film-makers talked to 680 experts, ranging from Christian, Jewish and Muslim religious leaders and theologians to archaeologists, historians and other scholars... [to avoid anything that might be] considered sacrilegious... So... a line... "You can work miracles when you believe" was changed to, "There can be miracles when you believe." The movie ends with the parting of the Red Sea... So what about a sequel showing why and how Moses got the Ten Commandments? DreamWorks say... the rest of Moses' story is too hot to handle... Jews and Arabs are still fighting over the Promised Land, after all... Can The Prince of Egypt lead DreamWorks to the promised land?

...BATMAN might wear tights and have a fast car but... can't divide the waters of the Red Sea. Superman may have x-ray vision but... can't turn water into wine or make a blind [perso]n see. Fear not. Moses, Jesus and the rest of the biblical cast are about to feature in the greatest story ever drawn. In a bid to attract readers who would normally never open the Good Book, the *Bible* is being turned into a graphic novel by a *Judge Dread* comic-strip artist... [The] veteran graphic artist and regular contributor to *2000 AD*, the weekly comic-strip anthology, has been working on *The Graphic Bible*... for nearly five years... [and] has reinterpreted in comic form every book in the Bible... But it has been difficult, especially when Lion, the [US] publisher of the 250-page book, said some of his drawings were too graphic. "They thought Eve was showing too much in the Garden of Eden. Sadly I had to... cover her nipples up." Drawing Jesus was also difficult, especially the Crucifixion scenes. "You've got to have blood in comics, lots of blood. In fact, I think we might have gone overboard there." ...It is the latest sign that the archetypal unread bestseller is in the process of a makeover... Canongate, an Edinburgh publishing house, is targeting the holy writ at another niche market. It is to publish 12 books of the *Bible*... with literary introductions by acclaimed[contemporary] writers... The *Pocket Canons Bible* series... [emphasises] the original's literary

pedigree, not its religious content... Shortly after publication of *The Graphic Bible* later this year will come *The Tabloid Bible*, said to include “all the word-plays and cheeky sensationalism of a tabloid newspaper.” ...*The Tabloid Bible* includes an agony aunt, the weather and sport. “Did Aliens Cause Multi-Chariot Pile-Up?” reads the headline on a report of the light that dazzled the Apostle Paul on the Damascus road.

...[‘whereas religion usually represents a group effort at control through common beliefs in personalized powers, magic (the practice of attempting to control things or events by mystic or supernatural forces) is cultivated by individuals as a secret art, often for socially disapproved ends, and assumes a compulsive or necessary relationship with less personal powers, so that a certain ritual or charm must achieve a specific result. Those who practice magic, variously termed sorcerers, witches, medicine or witch doctors, are qualified solely by evidence of their capacity to achieve results. Among primitive peoples the witch doctor is priest, physician and scientist. More advanced cultures, especially those with organized religions, generally frown on magic, but the practice is never completely eradicated. In modern society the word magic is used for a form of entertainment otherwise known as sleight-of-hand’...

A magician who] has sawed assistants in half and made people disappear with ease... is finding his latest assignment impossible: how do you make a television show vanish? The Auckland entertainer wants TV3 to pull the plug on a programme which reveals the secrets to age-old magic tricks. *Magic’s Biggest Secrets Finally Revealed* is due to screen on Thursday. It features a masked magician who unveils the illusions behind such classics as... pulling rabbits from hats, and making large objects disappear. [The Aucklander], a professional magician and past president of the Society of Magicians, said the programme was taking the magic out of magic shows. “If people are interested in magic, there are ways of finding out – books in libraries have information and there are clubs... This... mass exposure... show is revealing things to people they do not necessarily want to know...” TV3 said yesterday it had no intention of dropping the programme from its schedule. “It has already screened to a huge audience in the US...” said the network’s director of programming. [Incidentally, ‘pollsters tell us that approximately 34% of USers believe the Bible to be literally true, word for word. When you reflect that this belief includes walking on water, rising from the dead, angels, ghosts, demons, unclean spirits and a miraculous cure for the blind, it’s clear that there is an enormous mass of ignorance’ there. According to a local poll, 40% of NZers]... believe in spiritual miracles.

...An investigation into claims that a teenage girl is blessed with miraculous powers has found no “obvious evidence of chicanery” and deserves further study, a... Catholic bishop says. [The girl, aged] 14, has been in a coma... after... nearly [drowning] in her family’s swimming pool in 1987. Since then, thousands of people have flocked to the [family’s] home... west of Boston, in the belief that [the girl] can heal the sick. “There are inexplicable manifestations of oils and other substances emanating from religious objects in the... home...,” said... [the bishop. However,] a psychologist on the investigation team... said they may never be able to explain the happenings as either natural or divine... Believers who visit the... home said they had seen statues... of Jesus Christ and the Virgin Mary appear to weep... [and] move while others say they have seen Communion wafers stained with blood in her presence... Some visitors say the girl takes on the suffering of others...

IN early October last year, [a]mother of three... descended into her own silent world, where, accompanied only by horrendous nightmares, [it] would stay for five months... [D]octors are at a loss to explain why [it] lapsed into a coma... only days before her 51st birthday... ‘While everyone else was gearing up for Christmas celebrations... doctors were asking us for permission to turn off [her] life support,’ her husband... recalls. ‘They told us on at least four occasions that there was no hope. But there was no way I was giving up on her... Then, one day in late February, [my wife came]... out of the coma... One of the... doctors... said the only explanation... why [my wife] was better... was that it was... a miracle...’

...A [guy] is in Middlemore Hospital after flying from the U[S] especially to have his stomach slashed during a religious ritual on Saturday night. The 40-year-old Sunni Muslim was one of about 200 who gathered in the Otahuhu Seventh-Day Adventist Church when the Rativ ritual was conducted about 11.30 pm. During the ritual the [guy] was cut deeply with a blade described as a machete and then prayed over by the group in an attempt to heal him with sacred readings. The priest who wielded the machete was his brother. A member of the group called an ambulance after the wounds failed to heal quickly... Counties Manukau police have not decided whether any charges will be laid a[s]... the Indian... was a willing participant... [A]n Islamic scholar and former president of the Federation of Islamic Associations of N[Z], was angry about the incident and called it a “religious stunt.” ...[the scholar], from Mt Roskill, said it was an attempt to copy miracles attributed to Islamic saints and sufis about 800 years ago[, but added that]... such rituals had no place in mainstream Islam, and likened the slashing to Christian faith healing.

...[the f]aith healing doco... *Hallelujah Healing* (...TV1... September 3...)... made my skin crawl. Two questions. Why weren’t people cured 100% instead of slightly? Jesus didn’t do partial cures? Jesus also healed some non-believers, so why was that bloke (playing golf) claiming those who weren’t healed didn’t believe enough? What a classic case of brainwashing. I should know. I’ve been there and, praise the Lord, got out quick!

...I recently saw *Hallelujah Healing*. I would like to confirm that God still heals today, as I have had many divine healings, the most notable being my deformed leg and foot grew immediately as a result of prayer. I also saw the blind see, the deaf hear and the lame walk... This[letter] is just to encourage readers that Jesus hasn’t been asleep for 2000 years and is still a God of compassion and justice, for those who will believe.

...Medical schools are offering courses in spirituality, religion and health as studies say prayer can help people feel better and live longer. But researchers say that prescribing prayer is probably premature... [A] group of nine researchers and chaplains... say the... studies... had not been well designed, produced vague conclusions and generated sometimes conflicting results... Because there was no evidence of “a solid link between religious activity and health,” doctors had no business prescribing religion...

The latest scientific experiment on prayer has failed to find any evidence that it helps to heal the sick. Doctors in the U[S] have found that heart patients who were prayed for by groups of strangers recovered from surgery at the same rate as those who were not... But church leaders say the experiment was crude. The Bishop of Durham... said: “Prayer is not a penny-in-the-slot machine... This is like setting an exam for God to see if God will pass it or not.” ...the Rt Rev... said the Old and New Testaments said “very clearly” that you must not put God to the test.

...*Signs From God: Science Tests Faith*, got me wondering... [W]hat can scientific testing really tell us about such supernatural events as statues weeping blood, apparitions of the Lord and the stigmata? ...A[n AUS]n journalist... has been examining such mysteries for several years and his findings have put paid to... his credentials as a sceptical journalist... [The journalist] believes the increasing rate of natural disasters in the 90s are linked to the visionaries’ messages that such events are warnings from the Lord that [hu]mankind must repent. But the main point of the scientific testing... was to prove that the phenomena and claims of the visionaries were not fraudulent. Certainly, putting a religious statue which appeared to weep blood through a CAT scan proved it had not been tampered with and analysis determined human blood was oozing out of it... But for all they demonstrate the existence of medical and scientific improbabilities, the tests raised more questions than they answered... The Lord may indeed move in mysterious ways. But why does [the Lord] fiddle about making gilded holy pictures glitter... or shadowy copies of human artists’ images of Him and His mother appear on mopped floors? Science can’t answer these queries, although a fair proportion of the programme was devoted to attempts to recreate the purportedly divine artwork mysteriously appearing on rose petals. Religion, after all, is a matter of belief...

The... University of San Diego[’s]... Brain and Perception Laboratory... decided to study why the human brain is susceptible to feelings of religious belief. What they found has come as a revelation: it seems that we are all wired to receive the messages of God. All you need do is tune... into skull radio... This is difficult to explain, to say the least. “It is not clear... why such dedicated neural machinery for religion may have evolved.” ...Although the team is anxious to quell fears that it has reduced God to a few molecular gyrations, it was paradoxically quick to dub the part of the brain under scrutiny the “God molecule.” [The team leader] seems almost frightened by his own discovery. “We are skating on very thin ice,”... But [it] obviously does not see spiritual belief as simply one more challenge that is solvable by science: “The exciting thing is that you can even begin to

contemplate scientific experiments on the neural basis of religion and God.” So why do these findings make me pause? ...In *Mao II*... [it is written] that, “The future... is passing into the hands of the crowd.” [The author] seems to be saying that the power of individual thought and action has waned in the face of collective “easy belief.” This rush to join the credulous mass is fuelled by a diet of news that presents “an unremitting mood of catastrophe... where we find emotional experience not available elsewhere.” The remaining void is left to be filled by cults and gurus, and, as we have seen, our brains seem receptive to such blandishments. All of this could spell danger. Religious wars around the world show how despicable actions are justified by belief. And, who now, amid our cynicism about politics and tradition, do we take seriously? [The author] answers... “Only the lethal believer, the person who kills and dies for faith.” Does our biology contain a blueprint for this fatal illusion? It may be so.

...gullibility is enabling fraudsters to scoop fortunes. Former jailbirds... who formed a pseudo-religious group in Naples, claimed they could enable believers to chat on the phone with God – for \$50 a minute... The “voice of God” was provided by homeless wino[s]. Clients of another fraudster were]... guaranteed... they could become saints – for a fee of \$2500. Before being nabbed, [the fraudster had] raked in more than \$100,000.

...Two of the most fascinating articles to appear in the *Herald* lately were... the piece by a philosopher... wh[o]... said that determining whether actions were definitively right or wrong was way too hard – and... the [piece]... about the “discovery”... that part of the human brain is “wired” to receive the messages of God[, which]... is reported to have come as a “revelation” to the scientific researchers... Well, it will certainly be no surprise to any believer in God... for we have known about the divine connection since Adam and Eve woke up in the Garden of Eden. We know, too, that... “Skull radio” did not evolve. It was placed in us... at the time of creation... It is the means by which any[one]... who wonders if God exists can find out in the privacy of their own minds. It is simply a matter of... asking. If the request is sincere, the answer will come – as it has come to millions of... [people] over the millennia. No churches, no religion, no *Bible* – just one on one with God, a privilege to which every... [hu]man born is entitled. As to the fellow who says that determining right from wrong is too hard... I say it is[n’t]... In fact, it is so easy that it escapes most of us. Which is dangerous, because upon our continued ability to discern good and evil depends our survival. Any word or action which derives from patience, kindness, generosity, humility, courtesy, unselfishness, good temper, tolerance or sincerity is automatically definitively right. Any word or action which derives from pride, covetousness, lust, anger, gluttony, envy or sloth is automatically definitively wrong. It’s just that simple.

...*Is God Listening?* ...[the gal] stopped praying for a winning lottery ticket years ago... But when [the gal] learned that her sister... needed a kidney transplant, [it] began praying for a donor. *This*, [the gal] thought, *is worth praying for*. Less than one year later [her sister] has a new kidney, courtesy of a [donor] who heard of [the sister’s] plight and was so moved that [it] had herself tested; [the donor] was a perfect match. Coincidence? Luck? Divine intervention? [The gal] is sure: “It was a miracle.” For those blessed with faith, there is no doubt: [hers] was an answered prayer, pure and simple. After all, Christ urged his followers to petition the Father for their needs. “Ask and you shall receive... seek and you shall find, knock and the door will be opened to you.” In a world where public cynicism seemingly knows no bounds, trust in God persists. In a recent *Newsweek* survey, 54[%] of American adults said they prayed every day (29[%] more than once a day). [87[%] said they believe God answers their prayers at least some of the time. An astounding 86[%] said they accept God’s failure to answer their prayers. And only 15[%] said they have lost faith – at any time – because their prayers went unanswered. And their prayers keep coming: for health, safety, love and, to a remarkable degree, for others... At Oral Roberts University in Oklahoma, a prayer ministry takes requests by phone, fax, and e-mail round the clock. If you’re Jewish and can’t make it to Jerusalem, an Israeli company offers an e-mail service with direct delivery of prayer requests to the Wailing Wall. Such practices, quite frankly, embarrass some religious intellectuals. [One professor] of religion... points out that many faiths encourage their members to believe there is value in asking God to intervene in a crisis, but they don’t want to cross the line and say, “Yes, God can intervene in the world.” ...a vision of a God who is able to act but won’t can be unsettling. Jews continue to ask how an event so horrific as the Holocaust could have happened; this can generate scepticism about the power of prayer. Petitionary prayer is not foreign to Judaism, but most rabbis prefer to pray for wisdom, not relief... So how do the faithful know that God really answers prayers? It depends on your point of view. If you believe, no proof is necessary; if you don’t believe, no proof is sufficient. [A professor] of philosophy... kept a prayer list with hundreds of names, often of people [it didn’t know]. The professor] prayed for their jobs, their health, their children, and after observing a remarkable set of healings, concluded that personal prayer works. So when his grandmother was 87 and fell deathly ill, [the professor] sat at her bedside in “serious prayer.” To his delight, [his grandmother] recovered. In May 1995 when his wife of 23 years was told [it] had stomach cancer, [the professor] prayed more anxiously than ever... His wife died. But before... d[ying, the wife] told her husband, “God spoke to me. Three words: I love you.” ...[My wife] had doubted God’s love all her life... I trust [God] to have a good answer to my prayers. That’s not the same as knowing what that answer will be.” For nonbelievers, prayer of any kind is folly. In a book titled *The Demon-Haunted World: Science As a Candle in the Dark*[, an]... astronomer... included prayer along with astrology, spoon-bending, ESP and witches as examples of the persistence of irrationality. Although his belief in the existence of black holes was based on only indirect proof, [the astronomer] felt there wasn’t any evidence of a God who answers prayers... But then how does one explain miracles? ...Late one night in America, a [girl] decided to take a shortcut home up a steep, unlit path. Then [the girl] heard fast footsteps behind her. An instant later a [guy] was upon her, tightening her scarf and ripping at her pants. At home ...he[r]... mother woke from a deep sleep, seized with fear that something terrible was about to happen to her daughter. [The mother] immediately knelt down beside her bed and prayed. For 15 minutes [the mother] begged God to protect her daughter. Convinced [it] had won God’s protection, the mother returned to a sound sleep. Back on the stony path, the would-be rapist suddenly ceased... and fled down the hill... To... scientists like [one physicist]... of the University of Adelaide, an inexplicable event is only inexplicable because we don’t yet understand it. Still, while the scientific community may have no way to prove an act of God, there are some – doctors, for instance – who are convinced... [‘A Californian RC priest says it was told it had terminal cancer 16 years ago. “I was in denial and then when I was alone, it felt like God was asking me whether I still trusted him. And I said yes.” Later when the priest was praying with other Christians, it felt emotionally drained. The person quoting the prayer walked up and told him that God had cured him. “I went back to the doctor and the cancer was gone. It was so dramatic that it converted the doctor.” Several doctors] are designing tests to try to confirm... that prayer can significantly improve a patient’s health... [“What I learnt was to use my mind to control my body. This was using a meditative state of mind, and I realised that this is what we call prayer – people using their own consciousness. Then I began to go to the literature and see if there had been any studies done and I was astonished to discover over 130 studies that show, basically, that prayer works when you test it in a very rigorous scientific way. I regard this as one of the best kept secrets of modern medicine.”] One of the most intriguing experiments began in September 1996 and will eventually involve some 60 patients at an American arthritis and pain treatment centre... Some participants have already experienced extraordinary short-term results. “There’s something weird going on here, and I love it,” says one patient. At the start of the experiment [the patient] had 49 tender joints. After four sessions with a hands-on praying minister, [it] had only eight. Six months later [it] no longer needed pain medication. [But the study] director... an associate professor of medicine, doesn’t expect that all patients will get equally positive results... Indeed, one of the great problems in asking God any favour is that... when [God] favours some and not others, it appears [God] plays favourites. Is God unjust, or does [God] only appear that way? The question is as old as the Book of Job, and believers have been wrestling ever since with the answer God gives there: “Who has a claim against me that I must pay?”

...[‘An Auckland couple are refusing to allow urgent treatment for their 12-year-old and are relying instead on divine intervention to cure her. The girl underwent an operation last week for lymphoblastic lymphoma, a malignant cancer that mainly affects the lymph nodes. But her parents are now refusing to allow her to receive chemotherapy. Doctors say that without the treatment the girl will die. The girl’s mother told the High Court at Auckland yesterday: “If we trust in the Lord, the Lord will heal our daughter. That is why we are refusing any treatment at all.” An aunt told the judge that her nephew, who

received treatment for asthma until aged 14, had been cured by the power of prayer. “We stopped taking him to the doctor. We stopped using the inhaler. All we do is pray.” Now the nephew was a healthy, strong 16-year-old. The judge adjourned an application by Auckland Healthcare Services Ltd for the girl to be placed under the guardianship of the High Court, and for the court to consent to medical treatment. Legal counsel is being appointed to represent her.’

...‘Can children refuse medical treatment on the grounds of religious belief? Adults have the right to refuse or have medical treatment withdrawn. On the face of it NZ law in the Bill of Rights Act 1990 and the newly published Code of Health and Disability Services Consumers’ Rights regulations enacted under the 1994 Health and Disability Commissioner Act, state that every person, child or adult, has the right to practice his or her religion and the right to refuse or withdraw from medical treatment. But as Auckland University’s senior lecturer in medical law says: “Children don’t have the same rights as adults.” The Guardianship Act, which applies to children up to the age of 20, gives the courts the power to act in the best interests of a child under its guardianship and it prevails over other acts. Perhaps the most authoritative ruling has come from a Court of Appeal decision in April which upheld the court guardianship of a three-year-old boy whose parents, members of the Jehovah’s Witness Church, refused consent for the boy to have a blood transfusion. The court said the rights of the parents to express their religious beliefs cannot be exercised to the point where their child’s health or safety is at risk.’

...a Scottish person] went to bed with a headache and woke up speaking with a South African accent... Doctors say [the Scot, who is] in her 50s... had suffered a minor stroke and now has Foreign Accent Syndrome, a rare condition... Only 12 previous cases have been reported... Patients with the condition suffer damage to the left side of the brain which controls speech. Therapy can help but most patients find the condition distressing because their friends and family find it difficult [to come] to terms with... [Meanwhile, a]n image of a revered doctor and candidate for sainthood that appeared in an x-ray of a boy’s stomach has [continued to] baffle... Venezuelan doctors... The x-rays were taken after [the] 10-year-old... was rushed to hospital with back pains... [The boy] was later released, apparently fit and well... “It may have been gases in his stomach but the image is very clear... of a [guy] with a moustache dressed in a suit,”... They said the ghostly image bore a striking resemblance to Dr Jose Gregorio Hernandez, a bowler-hatted 19th century doctor who healed the poor for free and is credited with miraculous powers. - 1997

A judge in Como ruled that an 83-year-old... who beat his wife after mistaking her for a ghost should not stand trial, Italian media reported. The [husband] was awakened in the middle of the night by his 76-year-old wife shuffling around in the dark... clad in a white dressing gown...

Ghosts and other hallucinations may be caused by the brain trying to make sense of dwindling signals from diseased or failing eyes. Studies that have monitored patients’ minds found that even people who have had both eyes removed “see” ghostly visions of distorted faces. Others with a range of eye diseases report seeing knights in armour, people in Edwardian costumes or... W[W1] uniforms, and apparitions wearing hats or helmets... [T]he images were not of people they knew, which could begin to explain why reports of ghosts were often from elderly people. But people with perfect eyesight could experience seeing apparitions, [a doctor]... of the Institute of Psychiatry told the British Association.

...Mobile phones are killing off ghosts. Apparently paranormal events, which some scientists put down to unusual electrical activity, could be drowned out by the phone call and text message noise. Sightings had dropped from two new ghosts a week three years ago to none...

A survey has lifted the veil on an unexpected secret – many scientists believe in ghosts. The survey... found that most [scientists] were not willing to rule out the possibility that “some houses are haunted by ghosts”... and that “in the past aliens from some other planet have landed on Earth”.

...Ever woken up feeling there’s an evil presence in your room, yet you’re unable to move or call out? Scientists believe sleep paralysis could be responsible for many ancient reports of attacks by witches and modern claims of abduction by aliens. Sleep paralysis is caused by a faulty connection between the brain and the body as we drift in or out of sleep – half of us will experience it at least once.

...A bizarre, dream-like paralysis experienced when people wake from a deep sleep can cause some to believe that have seen a ghost or even to have been abducted by aliens, a... Harvard University... psychology professor... says. Susceptible people experience the paralysis – they are semi-conscious yet incapable of moving – and sometimes hallucinate so vividly they genuinely believe they are victims of a supernatural event...

Ghosts have nothing to do with supernatural experiences, but are simply the result of brain damage, says a Swiss scientist. The process is similar to the experience of “phantom limbs” – the sense that an amputated limb is still present, according to [the] neuroscientist... of the University Hospital in Zurich... Some people actually saw their double, often as a mirror image, and this could be the result of damage to visual areas of the brain which affected the way people sensed their bodies... Out-of-body experiences, where people “see” their body from the outside, might be caused by temporary overactivity of certain brain regions... [T]hese experiences were generated as a result of damage to the parietal lobes, the regions responsible for the distinction between the body and surrounding space.

A novice skydiver whose parachutes malfunctioned survived an 1100m fall and his wife credits a “flock of angels” for cushioning his fall... “God and his little flock of angels helped on the way down,” [the] wife... said yesterday, as her husband lay in hospital at Fort Worth [with]... a broken neck, a cracked vertebra... a fractured pelvis, a broken hip, a shattered femur, a collapsed lung, a ruptured bladder and broken ribs. - 1996

There have been many instances of people surviving parachute malfunctions (deep, soft snow is particularly good at cushioning falls), but only a feeble-minded person would assume that a *flock of angels* was involved. If every person whose parachute malfunctioned had survived, then angels might be the reason – but if, for example, only one out of a thousand people survives a fall caused by parachute malfunction, it is far more plausible to give the credit to statistical probability (the same goes for praying – i.e., if one prayer out of every thousand gets answered, it’s more likely to be a proof for the existence of coincidence than the power of prayer)! Other alleged miracles could also have equally mundane explanations (i.e., examples of ‘raising the dead’ could just be instances of people coming out of comas; examples of ‘walking on water’ could just be instances of people walking on tidal flats or other submerged land). This raises a valid question: do those people who await the coming of the Messiah (Christ or Saviour) expect this figure to be able to perform miracles? If it is taken into consideration that many people are alleged to have been able to perform miracles (‘records of miraculous cures are common in all religions’), whereas the coming of the Messiah is a one-off event which has yet to occur, perhaps a true Messiah doesn’t need to perform miracles in order to convince others of its identity (i.e., miracle-working is a tool used by people who don’t know how to prove God exists otherwise, and by anti-Christians – who use miracles to deceive others into thinking that they are the Messiah)? Such an argument would, at least, seem to confirm that Jesus of Nazareth wasn’t the Messiah (r:p1140, ln19 + p898, ln8-9).

A... bearded white [person] suddenly appeared from nowhere in Peru. The Incas called him Ayar Manco Capac... also known as Virococha... [(a term originally used to describe ‘the Inca creator deity, as supreme being’). Virococha] brought great benefits to the Incas, as well as spiritual assistance, including the solar cult. Before... [leaving, Virococha] set up a great cross on a mountain [and] told those left behind that... messengers [would be sent] to protect them and to renew their knowledge. Viracocha, like Jesus, was a healer and is also credited with walking on the waters.

Some scientists maintain that the origin of life was a singular event but, nevertheless, a natural one... [Exactly] what is meant by this... it might be supposed [is] that, if an event occurs only once, the distinction between miraculous and natural disappears.

Our modern understanding of greatness and uniqueness is especially characterized by ideas of personal originality. Here our views differ demonstrably and quite clearly from those of the New Testament. For example, stories there of miracles... that the Old Testament told of the prophets are carefully retold – thus, the awakening of the dead in Mark 5:21-43 (Elijah and Elisha in 1 Kings 17:17-24 and 2 Kings 4:18-37), and the feeding of the multitudes in Mark 6:35-43 and 8:1-9 (Elisha in 2 Kings 4:42-44). The point is that the greater and more significant someone is, the more... [that person] resembles other great persons (of the past). The more similar one is to them, the more certain also is his or her legitimacy because it concerns the same handwriting of God. That is to say, precisely because one is a “copy” and of the same kind confirms his or her significance. The more intensively a great person realizes everything that one knows about others, the more his greatness is confirmed... Jesus was not a political-military messiah, but rather a prophetic one whose dignity was established “charismatically.” ...In contrast to statements from the Old Testament, in Qumran there are clear references to the fact that “the” end-time Messiah or at least one of the messianic figures can derive his dignity by God’s gift of the Spirit. These texts are of particular importance in answer to the question of how Jesus could be called the Messiah at all. As the Qumran texts attest, one was able to call an essentially charismatically oriented bearer of authority “Messiah.” ...In the Qumran texts there are a wide variety of expectations concerning the Messiah or messiahs. Some texts deal with a single figure, others with two or three end-time representatives of God... Besides a Messiah from Aaron (for the priests) and from Israel (for the lay people), in addition still another prophet was expected... [F]or first-century Judaism it was quite possible to expect two or three messianic figures (with separate responsibilities)... In Qumran texts the Old Testament passage about the star of Jacob (Num. 24:17) is also associated with two different persons. The star of Jacob is explained as a reference to the “Interpreter of the Law,” [while] the scepter that shall rise out of Israel is identified with the “Prince of the whole congregation” (CD 7:18-21; Vermes, 89). There seems to be no connection here with the New Testament. The star seen... in Matthew 2 is not Jesus; it only points to him... Some of the texts from Qumran combine at least two of the figures... into one. They envisage a Messiah... “out of Aaron and Israel.” The coming Messiah was thus expected to be... of priestly extraction... Jesus... did not, as far as we can tell, fall under the commandment, only later imposed, that rabbis must marry, but rather... under the earlier traceable tradition regarding the virginity of prophetic figures, as it is reported in the Jewish tradition about the prophets Elijah, Ezra, and Daniel... To a certain extent, Jesus would have borrowed characteristics from every prophetic figure, every seer, wise [person], and martyr that was known, because everything good and helpful that had legitimated those sent by God must and could now be incorporated in him... Must God be appraised like a doctrinal candidate who is expected to demonstrate new ideas? ...would that not... distort... what we mean by “God”... Wherever God is at work, clearly repetition is legitimate.

...I miss you but I haven’t met you yet I know your habits but wouldn’t recognise you...

Jesus may have been an incorporation of past figures, but the society Jesus lived in – and those of the past figures Jesus is alleged to have borrowed characteristics from – shared most of the same characteristics. However, although many people living in the later stages of the 20th century give the impression that they still think and act like people who lived at least 2000 years ago, First World societies are vastly different to those of the past – including societies from the early stages of the 20th century. Therefore, is it legitimate to expect a coming Messiah to be a *repetition* of Jesus and the ancients, or is it more feasible to expect such a figure to be an improvement on them and everyone who has ever lived on Earth?

Because of the part played by the church in remaking a Western world that had fallen into barbarism, and because the entire spiritual life of Latin and Germanic Europe is permeated with motifs originating in Christianity, all Christian churches seem to have something in common. This common element forms a bond between the many... churches that have fought each other to the death... and even the indifferent who have grown up in the Christian world... Thus, insofar as the Western world is Christian, the Christian element, when it is not usurped by limited groups from the... Catholic Church to the Protestant sects, can only be the Biblical religion, which encompasses all Christian faiths as well as the Jews and those who believe without a church, and even in some way those who expressly abjure all faith. Biblical religion thus becomes the all-embracing whole, reaching through the millennia from Abraham to our own day; no Westerner can disregard it, but no one is entitled to claim it for his own possession. Every[one] who lives in a bond with the Biblical religion finds his[or her] sustenance in it, selecting and stressing what [are his or her] wishes. It is only when all the figures of the Biblical religion have been forgotten that the Christian West will be at an end.

Religion is slow to change, partly perhaps in contrast to the change about it, but also because it cannot ‘up anchor’ from its historical roots and cannot completely overturn its theories in the way that science can. If this sometimes leads to impatience perhaps one should temper this with the thought that ultimately the structure and organisation that is the Church must make the final sacrifice and make itself redundant.

Historical research consists of fitting together many scraps of information into a greater shadow of the reality we seek. That silhouette is often soft-edged and is cast upon an uneven surface, a ghost that answers our questions faintly and sometimes in lost idioms. The greater the quantity of information we have, the better and the more independently reported that data is, the clearer and more three-dimensional is the shadow we can summon from former times.

If it were possible to meet Jesus and the major biblical prophets in order to compare them to the way the Bible describes them and their feats, most if not all of the biblical descriptions might prove to be exaggerations. If the Messiah is to be a repetition of Jesus and the ancients, will it also prove to be less grand than the messianic figure described in the Bible? If, like the ‘Wizard of Oz’, the Messiah proves to be less than what people expect (e.g., nothing more than ‘a liberator of humankind, or someone who [just] shows humans the way to spiritual salvation’), will the people who await its arrival be disappointed? But, if the *Messiah doesn’t need to perform miracles [to prove] its identity*, how will it do so instead? Via a temple of proof (i.e., a law court)?

...Jesus and his lawyer are coming back...

Jesus won’t be *coming back*, but do the people who await a Messiah still expect this figure to literally be *the son of God* (i.e., do they expect a God, a half-god-half-human, a whole human, an angel or an alien – e.g., a super[person] like the fictional Clark Kent)?

...careless Ethiopians have gone astray they... [are] praying... night and day... for a god to come from outer space...

...I turn on the radio... [and] the TV I sit and I listen to what we’ve achieved Somewhere out there... him who’d come here... again... hears our call...

...can you come back soon We wish you could We think we’ve gone too far on this ship of fools... spirit... let the sun shine on me when I sing the last song I will give you even my body... - The Cult

If the people who await the coming of a Messiah expect it to be a *spirit*, do they also expect the Messiah to be re-born in a human body at the time of the human's birth, or simply enter the body at a pre-appointed time?

...I'll be coming back because someone somewhere is waiting...

If the people who await the Messiah expect it to be born (or re-born), do they also expect it to be born from a virgin (or someone who became pregnant when *losing her virginity*); do they think it will be a first-born child, second child, seventh child, last child or something else?

I went away to see an old friend of mine His sister came over... [and] laughing like crazy... said Jesus had a twin who knew nothing about sin...

Do the people who await the coming of a Messiah expect this figure to know *nothing about sin*, or do they expect it to know about everything; or just about everything that is necessary for a Messiah to know?

Before [the child] was born you said [the child] knew all the secrets of life and death and then at the moment of his birth an angel came... and sealed his lips. - KEY LARGO

Do the people who await the coming of a Messiah expect this figure to literally have 'the keys of hell' (Revelation 1:18), or do they think that the word KEY merely implies someone with 'a solution to a problem'?

This is... for the [perso]n who couldn't remember – a track called Walls of Jericho...

...you're gonna manifest the mystery you[ve] got a magic wheel in your memory... angels are dreaming of you... - Cotton Crown

Do the people who await the coming of a Messiah expect this figure to know of its identity from birth or to find out later? If later, do they, for example, think the Messiah will find out while it is still a young child (as in Tibetan traditions), at 25 years of age (as per Hindu theology) or 24?

...Isaac (1642-1726)... [had] the greatest single influence on theoretical physics until Einstein. His most productive period, which [Newton] called his *annus mirabilis* (1666-7), was when Cambridge University... was closed because of the plague... Albert (1879-1955)... [- who 'revealed the first real spark of genius when 12 years old' -] published several remarkable papers... [in] 1905... one dealt with the photoelectric emission in terms of Plank's quantum theory of light, for which [Einstein] was awarded the 1921 Nobel Prize for physics, another dealt with the Brownian motion in liquids and demonstrated that this effect was caused by the action of molecules, and a third described his Special Theory of Relativity, postulating a constant velocity of light which led to his famous equation relating mass and energy... the basis of atomic energy.

What 'about thirty years of age' (St Luke 3:23), or 36 (thereby linking the Messiah to the BEAST mentioned in Revelation – r:p1125, ln19), or older?

...clap your hands if you know... Charlie Brown... [alias] Jesus was born on an Indian reservation 100 years ago Christmas Day...

If the people who await a Messiah expect it *to find out later*, how do they expect the Messiah to find out? Via a *light that dazzled* it, or via its name being *written in stone* (r:p1126, ln3)?

...how would I know that this could be my fate...

The mark! ...[this person]'s the chosen one... whom the ancient parchment prophesied would lead us to glory...

...tell me I'm the chosen one...

Do the people who await a Messiah think that it is a predestined figure or that, at the appointed time, God will select the best candidate?

...if you want me to I will be the one that is always good...

Do the people who await a Messiah expect it to be *always good*, or just on important occasions (r:p874, ln56)? Do they know what it means for a human to be perfect, and do they expect the Messiah to always be like that?

...I wish I was special... I wanna perfect body I wanna perfect soul I want you to notice when I'm not around...

...you are... perfect... without you everything falls apart...

Unification Church [is a] religious movement founded... in 1954 in Korea, known popularly as the 'Moonies'. Combining elements of Taoism and Christianity, its teachings are... [that the] purpose of creation was to establish a perfect family... Now is the time for a sinless messiah to return to earth and bring the kingdom of heaven.

...the Unification Church [is] led by the controversial... [guy who is] derided as a kook by critics but hailed as a messiah by devotees[(who call him 'the only perfect person on Earth')]. Actually, its official name is now the Family Federation for World Peace and Unification. The church, always sensitive about public image (members hate being called Moonies) is having a makeover. The aim? To make the leap from oddity to mainstream respectability, by stressing its role as a bridge between religions rather than the only true religion... [But its] confronting nature, combined with the [leader's] family's lavish lifestyle, has brought the church bad press in recent years[(including accusations of 'wife and drug abuse' made against the leader's eldest son by the son's ex-wife)]. It will have to broaden its message if its wants more respect... The church denies it, but the apparent change in focus is due to the fact that [the leader] is now 79 and will soon pass on to... "the spirit world." This will leave his church without the charismatic figurehead who has been its motive force for more than 40 years[(the leader 'claims that when it was 16-years-old Jesus Christ appointed him to establish the Kingdom of Heaven on Earth')]. Outwardly, the church is sticking to its trademark events, best exemplified by its mass weddings. [The latest one] was held two weeks ago in Seoul, sealing 360 million couples around the world in new or renewed wedding vows, according to

church figuring... 40,000 couples, many of whom met their partners only days before the ceremony, [were] crammed into Seoul's Olympic Stadium, which [was] done up to resemble a giant wedding cake... But there are problems. [The leader] has handed power to members of his family, which has reportedly caused ructions within the movement. The church's sprawling business interests are also reportedly on the slide. - 1997

Has perfection a place in an imperfect world?

...this is no place for you... - THREE JOHNS

If the Messiah finds out its name via it being *written in stone*, does this mean written on a headstone (i.e., the Messiah has to die before its identity is revealed)? If the people who await the coming of a Messiah believe it will still be alive, do they expect it to be a virgin (r:p1146, ln20)? If not, do they expect it to be married (i.e., have a partner like Adam – but will this partner be the opposite or the same sex) or single – and, in that case, will it be lonely?

...if it's lonely where you are come back... you can [stand] beside me... and I won't tell no one your name...

...you're not alone I'll wait till the end of time for you...

And... [him] who once was the saddest and loneliest little boy you could find, now had all the friends in the world.

...miracles... still happen now and then... we'll be waiting... with... arms unfurled... for you Welcome to our world... knock and the door will open...

His father was a poor working [person] who had so much difficulty in feeding his large family that [the father] found it simplest to abandon... [his eldest boy, who was] fifteen years old... after a farewell meal in a tavern at the city gate, leaving him provided with this piece of advice: 'Go... little one, and perhaps this evening or tomorrow some fine house will open its doors to you. Go with what God has given you.' The boy, thus abandoned, could have knocked on the door of a carpenter or a locksmith. Destiny led him to... the meanest of cookshops. A precarious beginning! But... [his] great desire to work, his wise intuition of the secrets and resources of his art, and his serene authority revealed him as a person of exceptional quality. Very soon... [the boy] who... began work... as a kitchen help... [was being] called the... Cook of... cooks... and the King of... kings...

Do the people who await the coming of a Messiah expect this person to be a cook, a carpenter, doctor (i.e., healer), politician or preacher?

***Quietism* [is, in] a general sense, the belief that God works only in a person whose being is completely passive or quiet...**

...so in a manner of speaking I just want to... find a way to tell you everything by saying nothing...

...words end in disaster... you showed me silence can speak louder than words... - THE SOUND

Actions speak louder than words.

...some people tell me home is in the sky in the sky lives a spy I want to be more like the ocean no talking all action...

***Silent brides of Christ...* [Ou]r... reporter... was entering a foreign world where there's no television, no radio, no newspapers and visitors aren't allowed behind the barred doors. But this was no prison – it's the cloistered life of... Auckland's Carmelite monastery... The spiritual disciplines of the Carmelite order are particularly austere. The nuns take a vow of silence, and spend much of their day in prayer and contemplation. "Even during mealtimes, the nuns are silent – except for the one who reads prayers... For two one-hour periods every day they can talk to each other. And can they talk! They share gossip about their families and all sorts of things, and often they end up talking over each other." - 1996**

If it wasn't for their twice-daily talk-fests, an observer might assume that Auckland's Carmelite nuns believe *it is better to remain silent and be thought a fool than to open one's mouth and remove all doubt!* Preachers obviously don't accept *the belief that God works only in a person whose being is completely quiet*. They are also unlikely to accept that, as a general rule: it pays to distrust the words of anyone who is being paid to say them!

...I have a vision... I'll be a... preacher so I don't have to work...

...that doesn't mean that you can preach me your lies...

...I will lie for you beg and steal for you I will crawl on hands and knees until you see... I will die for you... 'cause I believe in you...

Lying often appears to be easier than telling the truth. However, sometimes it is necessary to lie in order to protect the truth, which isn't the same thing as lying to distort the truth – the former being known as *white lies* while the latter are called 'black lies.' But even in a world which is full of violence, and contains numerous atheists or people whose religious beliefs are related more to fantasy than reality, taking a vow of silence seems extreme. Wouldn't it be more prudent to just remain silent about certain issues?

Do the people who await the coming of a Messiah expect God to talk with it *face to face*, or less directly – via dreams, perhaps?

...let me put you in the picture let me show you what I mean the Messiah is my sister... [I know cause] I had a dream...

Do the people who await the coming of a Messiah expect it to be a guy, gal or something else (e.g., a hermaphrodite or transsexual)?

...it's been years since you were here Have you disappeared... - Everything But The Girl

...we've been waiting so long... for Mary to come along... - MARY-CHRIST

Founded in England c.1750... the United Society of Believers in Christ's Second Appearing... migrated to New York, 1774, under the leadership of Ann Lee, whom they believed to be Christ in his second and [feminine] incarnation... The sect[, which was also named *Shakers* –] ...derived from a kind of dance once forming part of their ritual... [–] has almost entirely disappeared.

Do the people who await the coming of a Messiah expect it to be economically and materially rich, poor, or somewhere inbetween?

...at least when Jesus does come back [it]’ll have a bit of pocket money. When... Ernest Digweed passed away, [t]he... Palm Springs, USA, [resident]... left his entire estate to Jesus Christ. [Ernest] instructed state trustee officers to invest the money in bonds, guaranteeing JC a total of \$615,820 by the end of the century. Two people have already filed for the money, insisting they are Jesus reborn.

...*Two faces of a messiah*... [Microsoft’s chairperson] has been hailed in books and on countless magazine covers as the messiah of the Information Age. The... [chairperson is who 78%] of American parents hope their children will grow up to emulate, according to one poll... According to *Brill* magazine, the American media watchdog, Microsoft’s public relations machine employs more than 300 operatives whose primary job is to make sure that [the chairperson] gets as much good ink as anybody who happens to be the richest [perso]n in the world can reasonably expect. Given the sophistication of Microsoft’s products... [– and the fact that] time and again, each and every competitor with the potential to shake Microsoft’s hold on the software market has been quite deliberately bought out, run off or ruthlessly sabotaged... [–] the aw-shucks hokiness of the message can be disconcerting. And it is doubly true when you consider... [the chairperson’s] personal fortune... According to the *Wall Street Journal*, [Microsoft’s chairperson] is at least half as rich again as the original Rockefeller, the much-despised John D, after adjustments for inflation. Yet the flow of press releases and media manipulations make [Microsoft’s chairperson] come across as some corn-pone combination of Honest Abe Lincoln and a distillation of the latest bestseller on the art of spiritual self-improvement. If [the chairperson] is rich, it is because [the chairperson] earned it. And isn’t that the American Way? If [the chairperson] is powerful – but not too powerful, mind you – it is because [the chairperson] has the wisdom to be trusted with power. But basically, [the chairperson] is like you and me, just a whole lot richer.

...*Moses had 10 commandments; [Microsoft’s chairperson] has 12...* Microsoft’s chair[person says in]... *Business @ the Speed of Thought*... that only managers who master the digital universe will gain competitive advantage... The successful companies of the next decade will be the ones that use digital tools to reinvent the way they work. To make digital information flow an intrinsic part of your company, [t]here are 12 key steps... The more consumers adopt the Web life-style, the closer the economy will move toward Adam Smith’s perfect market in... which buyers and sellers can easily find one another without taking much time or spending much money. [Unfortunately, i]f you’re a middle[perso]n, the Internet’s promise of cheaper prices and faster service can “disintermediate” you, eliminating your role of assisting the transaction between the producer and the consumer.

...The [perso]n who tops the world rich list has a fortune said to be worth... \$[NZ]158.3 billion... The... head of the Wal-Mart supermarket chain... of 4000 stores... founded... with a single shop in Arkansas 39 years ago... takes over as No 1 on the... rich list from [Microsoft’s chairperson]. For three years the Microsoft founder beat all comers with a fortune that rose to \$185 billion last year, but plunged to \$131 billion this year as technology stocks slumped... Anyone aspiring to join [the owner of Wal-Mart] and the others on the world’s top 50 rich list needs at least \$15 billion. A[US]’s richest... fails to make the cut with his \$8 billion. So too do the richest N[Z]ers – who look positively strapped for cash beside the likes of... [the Wal-Mart owner (whose fortune is] worth... about 50[%] more than N[Z]’s GDP and Microsoft’s]... boyish, bespectacled, badly barbered genius...

Do the people who await a Messiah expect it to be physically beautiful, ugly, or average looking; right-handed, left-handed (‘spiral staircases in medieval castles ran clockwise because all the knights used to be right-handed – when an invading army would climb the stairs, they wouldn’t be able to use their right hand which was holding the sword because of the difficulties of climbing the stairs; left-handed knights would have had no troubles, except left-handed people could never become knights because it was assumed that they were descendants of the devil!’), ambidextrous or armless?

It was implied on lines 47-8 of the previous page that the Messiah won’t be a preacher. However, in most dictionaries the word MESSIAH follows the word MESSENGER. What if the Messiah is merely a messenger? This proposition is supported by the fact that, like Hinduism’s ancient religious books, the Bible was largely compiled from stories that had previously been retold verbally. But if a group of people playing ‘Chinese whispers’ – in which one person whispers a short message into the ear of an adjacent person, who whispers it to the next person and so on until it returns to the original speaker – can’t do so without altering the message, by how much would long stories that have been passed from mouth to mouth for decades or centuries be altered?

Like myths, fairy tales and ballads spread in earlier cultures, [modern] legends travel far and wide. They pass from person to person by word of mouth, told as real-life experiences that happened recently to a friend or a friend of a friend. Where do these stories originate? When investigated, most leads simply evaporate. But [modern] legends live on, both for their entertainment value and because they gratify our desire to know about bizarre... and potentially dangerous incidents that *may* have happened... [However,] when it comes to... legends, truth *can* be stranger than fiction.

‘...how could the Bible be from God when it was written by [humans]?’ you may ask. True, about 40 [people] shared in... the actual writing of the Bible with the exception of the Ten Commandments, which were written personally by God on stone tablets by the direct action of his holy spirit. (Exodus 31:18) However, this does not make what they wrote any less the Word of God. The Bible explains: “[*People*] spoke from God as they were borne along by holy spirit.” (2 Peter 1:21) Yes, just as God used his powerful holy spirit to create the heavens, the earth and all living things, [God] also used it to direct the writing of the Bible... So... the Bible is *God’s Book*, not the book of the [people] who were used to write it.

Similarly, the Koran is not Muhammad’s book but Allah’s. Muhammad undoubtedly expected the Koran to supersede the Bible (‘the world’s greatest book’). If the Messiah won’t convey whatever messages it has verbally, maybe it will do so via a book (i.e., the one mentioned in Revelation 5:1 – r:p1126, ln8). In other words, maybe God will use the Messiah to write a book which can supersede both the Bible and the Koran (note: if it is taken into consideration that knowledge can be written on paper, which can be sourced from trees, the phrase ‘tree of knowledge’ – Genesis 2:17 – could imply a book)?

...how long shall they kill our prophets while we stand aside and look Some say it’s just a part of it we’ve got to fulfill the book...

...I think about a world to come[when] the book... written in pain... by the golden one... who questioned what we were here for... [heralds] the start of the coming race... [because that] solid book... cannot be found today...

DIY religion – by the book... A DEEP and meaningful new book... [by a NZ]-born... author... examining topics like morality, ethics, sex and spirituality, will be released this week. It purports to help with “finding true value in your life”. The publishers hope it will be a bestseller and it may well be. Why? Because it’s very similar to another book that’s been on the bestseller list for years – the Bible. - 1997

Altogether, according to the Bible Society, the [‘most sold book’ of human history (estimates range between ‘50 million’ and ‘over 200 million’ copies) – and ‘the first large European book to be printed via Johannes Gutenberg’s method of using movable metal type (c.1455), which remained the basis of printing until the 20th century’ –]has been translated into 349 languages and the New Testament into 841. Never until now, however, into the broad dialect of Yorkshire, where people delight in being tough, plain-spoken folk... *Ee By Gum, Lord!*, as the version is called, could almost be in another language... [T]he Lord’s Prayer ends with “An’ all t’ Pahr, an’ all t’ Glooary, Fer ivver and ivver.” ...Jesus calming the waves on Galilee becomes: “Jesus stood up an’ seemed ter bawl aht a sooart o’ command ter t’ wind an’ t’ waves – an’ by gum! Bit bi bit, t’ storm bated.” ...The Gospels were translated, if that’s the word, by... a Methodist lay preacher and former language teacher... [who] says that the robust Yorkshire speech was the equivalent of how the people of Galilee must have sounded, using the down-to-earth language of fisher[s] and farmers. - 1996

...speak to me in a language I can hear...

Would a Messiah’s book be able to speak to everyone or only the people who can read the language in which it is written? If the latter premise is true, in what language would it be written? Japanese, perhaps?

Between approximately 2020 A.D. and 2037 A.D., Japan will become like “Jerusalem” of today or “Mecca” of the world. This period will be the golden age of Japan. The country will be praised all over the world as the land where God’s Truth was first revealed... My own soul shall teach Laws during the period of about 50 years from the end of the 20th century into the 21st century, and then, from heaven, shall instruct various Guiding Spirits of Light on earth. I shall reincarnate again on earth 2,800 years from now. Many of you shall see me again at that time... In the early 25th century, still another Great Light[. alias] Jesus Christ... will reincarnate on the earth. - The Laws of Gold

A west European language would, however, seem to be more appropriate than Japanese for a Messiah’s book due to the current world-wide influence of such languages and the fact that none of the major religious documents were originally written in any of them (whereas Japan already has its *Kojiki* and *Nihon Shoki*). The author of such a book might then be expected to be born in a country that uses one of those languages. French, perhaps?

They drive too fast, guzzle more than their share of vin, scoff huge amounts of fatty cheese and all quite shamelessly. God must be French... otherwise how can they get away with so many sins? - 1997

Paris... [has] long regarded itself as the centre of the world... - 1996

Civil religion tends to grow with and boost aspirations of nationalism, especially where traditional religion declines. Typical was the religion instituted in France during the period 1793-4, by Robespierre. This had its own rites and liturgies, celebrating the French Revolution, the revolutionary state and significant events and people in it. The growth of nationalism in the 19th century saw patriotism in various European countries and in the USA develop with quasi-religious fervour. Phrases like ‘la belle France’, ‘Mother Russia’, ‘God’s own country’ (USA), ‘the American Way of Life’ and dates like 14 July in France and 4 July in the USA evoked a religious response and appropriate celebration.

Apart from calling itself *God’s own country*, the US also regards *itself as the centre of the world*.

EVEN GOD LOVES AMERICA

If the people who await the coming of a Messiah expect it to be born in the US, what city is it most likely to be born in? Los Angeles? LA is, after all, called ‘the city of angels’ by some people. However, other people call it ‘Lost Angeles’! Perhaps they expect the Messiah to be born in Salt Lake City?

...the Church of Jesus Christ of Latter-day Saints[was] founded at New York (1830) by Joseph Smith... who claimed to have discovered, through divine revelation, the ‘Book of Mormon’, which [Smith] translated, relating the history of a group of Hebrews who migrated to America c.600 BC; this work is accepted by Mormons as Scripture along with the Bible. A further revelation led [Smith] to instigate polygamy, a practice which... was abandoned in 1890. Smith was succeeded by Brigham Young... who moved the Mormon headquarters to Salt Lake City, Utah, in 1847.

[The] *Book of Mormon*... [is an] account of an ancient American people to whom Jesus Christ appeared after his ascension[which] teaches Christ’s future establishment of the New Jerusalem in America.

The digital parent... of family tree-making... is the Church of Latter-Day Saints... An important part of belonging to the church requires members to track and log their families as far back as they can. The church... has been collecting these records since 1894 and storing them... on computer... at the Family History Library in Salt Lake City... The church now has the most complete set of records of millions of names and families world-wide... There are 29 Family History Centres in N[Z] with more on the way. By comparison there are two in Sydney and only one in London. [Incidentally, ‘GOD’S OWN COUNTRY’ is a euphemistic phrase for NZ, now used ironically, and sometimes shortened jocularly to Godzone.]

...The first... world gathering of indigenous Christian[s]... in Rotorua has not been without controversy. The planning of the mammoth task that is bringing together... 2000 people from 32 nations has been questioned by some religious leaders who objected to not being consulted... [But the] story of how the gathering ended up in N[Z] is intriguing and... for the non-believer, it’s pretty heavy. In 1994 a Sioux chief... attended a conference in Israel and asked if God was calling a world... conference for Christians on indigenous people and if so where. The chief asked for feedback and over the months it came flooding in... 100 groups and people responded worldwide through visions, dreams and... reading the *Bible*. “The answer was God was definitely calling a world conference,”... The visions unanimously showed it should be held in 1996, and the feedback about where it should be held pointed in one direction. Vital pieces of information kept coming up in the visions... It was an island, the island was in a great ocean and it was in the outermost parts of the earth. Then there were visions of a land with a white cloud. “I said, ‘Oh, it’s N[Z]... We are an island,[and] we are in what is called Te Moana Nui Kiwa, the great ocean of Kiwa.” Also N[Z] was the furthestmost inhabited land from Israel... “Then I said... ‘The Maori name for our country is Aotearoa, which means the land of the long white cloud’, and they were just startled.” - 1996

...the... origin... of... AOTEAROA... is attributed to Hine-te-aparangi, wife of the legendary Maori navigator, Kupe. [Hine] is said to have called out ‘He, ao!’ (‘A cloud!’) on sighting land... and Kupe decided to enshrine this declaration in the name of the new land. Other interpretations of the meaning are ‘long white world’, ‘long bright world’ and ‘long, lingering daylight’... [By the way, the] *SOUTHERN CROSS* is a small constellation seen from the southern hemisphere, whose four main stars form the tips of a cross... The constellation was first reported in Europe by Vasco de

Gama in 1497, after his voyage round the Cape of Good Hope, and it became a widely-used navigation reference throughout the 16th century. The naked eye can discern 34 stars in the constellation on a clear night... but modern telescopes can pick up thousands of others... According to a proclamation of 1869, it was to be 'the distinctive badge of the Colony' of NZ, as represented by the four five-pointed red stars on the... NZ flag...

When NZ's Mt Ruapehu erupted in June 1996, air currents turned the ash and smoke into a long cloud that appeared white in newspaper photographs (r:p1126, ln2). Other interesting coincidences involving NZ are the words MANA (r:p182, ln47 + p849, ln39; 'presumably, ancient coins carried the *mana* – "magical power" – of the king') and MANNA (r:p1126, ln2; 'a substance miraculously supplied as food to the Israelites in the wilderness – Exod. 16'; 'manna isn't something that can be inherited so much as it has to be earned'), plus Revelation refers to a place which is called a *whore* (r:p1125, ln25 + p182, ln64), and the 'forbidden fruit' which Eve gave to Adam in the Garden of Eden is usually identified as being an apple (r:p582, ln3).

Envoy to Eden... [The] recently appointed... U[S] Ambassador to N[Z]... stands there in her brown checked dress, gold silk scarf, smile as wide as the Mississippi and launches into a speech that makes th[e] sober-suited Auckland Chamber of Commerce crowd grin too. "I'm the ambassador to paradise... N[Z] is the most magnificent country. It is so beautiful. It has such a conducive atmosphere. And the people are so very nice." [● 'The settlement and later the province that straddles the isthmus between the Hauraki Gulf on the east coast and the Manukau Harbour on the west coast of the North Island were named after the first Earl of Auckland, George Eden, who was Governor-General of India when NZ's largest urban area was founded.']
...It's been hailed The Garden of Eden and would be Adam and Eve's are in for a heavenly time at [a newly listed Auckland address]... From the white picket fence (that's to keep the serpents out) to the... plethora of mature... shelter[ing]... trees... the property is a true garden of delights.

Adding to the notion that NZ is *The Garden of Eden* is the point that the serpent ('serpents, which dwell unseen beneath the earth, and symbolized occult knowledge – 2 entwined serpents represent the light and dark sides of the mind, knowledge and intuition' – are now portrayed as common snakes) 'lost his place in paradise (Gen. 3;14-15)' while snakes lost their place in NZ ('geologists working at a fossil lake in Central Otago have unearthed a treasure-trove of fossils between 18 and 14 million years old, including snakes – the first evidence of snakes having lived in this country') – though there are eels and worms. It is illegal to bring snakes into NZ (the Central Otago discovery 'begs the question of why we don't let snakes in when they were here before us').

A metre-long snake found in Christchurch in a shipping container from Indonesia has been identified as a pope's tree pit viper. The snake, common throughout Southeast Asia and India, is poisonous but not usually lethal, according to[a] Ministry of Agriculture and Forestry expert... It is the second snake found in N[Z] in eight days, sparking concerns about border security. Usually, only one a year is intercepted... Last Tuesday, a metre-long... eastern brown snake – considered the second-most-lethal species in A[US] – was found near a Wellington shipping container park. [While on the topic of snakes, 'perhaps the most revolting parasite of all is a little-studied creepy-crawly known as the pentastomid. Pentastomids can, depending on their species, grow up to 15cm long. Surviving for up to 15 years, they live by the hundred, covered in a thick gunk like a large plate of spaghetti and sauce, in the lungs of pythons and vipers. Nor are pentastomids restricted to snakes. People can get them by eating underdone snake meat.'

...humanity's 'fascination with snakes is illustrated by the number of religious beliefs, myths, legends and folktales associated with them. In many religions snakes were often looked upon as beings with mystical powers. In some cases they were worshipped as gods of fertility (or as their representatives) or as the source of good fortune. The Greek god Zeus was thought often to assume the form of a serpent when it visited earthly beings. The ancient Hebrews were surrounded by people who worshiped snakes. Apparently in an effort to counter this influence the snake was taken by the Hebrews as a symbol of evil. This tag has followed snakes throughout all later Jewish and Christian religious history and still colors the views of both Jews and Christians. Yet all snakes did not fare so badly in the Bible. Jesus, though warning of a "brood of vipers" (Matthew 12:34), also admonishes his disciples to "be wise as serpents" (Matthew 10:16). This phrase probably indicates something of the respect and awe with which these animals were held in those times. The professional snake collector, who is usually after poisonous species, carries a snake hook or a set of snake tongs to pick up the animals it finds. A person searching for a harmless pet snake, however, needs nothing but keen eyes, his hands, and a cloth bag to put the snake in. Only a few kinds of snakes make good pets. Some snakes, of course, are poisonous, and many of the harmless kinds are too active or nervous to thrive under captive conditions. Still others require such exotic and unusual foods that their needs cannot be met by the pet owner. Nevertheless, thousands of snakes are kept as pets in the US and Europe']...

The Humane Society of Delaware County found a small dog reported missing by a local resident – unfortunately, it was inside a 3m Burmese python... found... under [a neighbour's] basement steps... with a telltale bulge in its middle... An x-ray confirmed the python had swallowed the dog.

...A metre-long pet snake that disappeared from its Finnish owner's apartment... has turned up in a neighbour's toilet... A plumber repairing a leak in the toilet on the ground floor found the reptile, which had slithered down three flights of pipes to its new home. Fire[officers] dismantled the toilet to rescue it... [In local news, i]s the Freeman's Bay python a snake in the grass or just a shy serpent? A team of four M[AF] staff with tracker dogs... scoured an area of Beresford St... yesterday without a sniff of the reptile. They were looking for a carpet or diamond python up to 2m long, after children found a snakeskin... It was possible the skin had been planted as a hoax, but was being treated seriously at this stage.

...The animal biosecurity director at the M[AF] needed a lowly university lecturer to tell him that his staff's search for the "snake" slithering through the Auckland suburb of Freemans Bay since the end of October was a wild reptile chase. The skin shed by the putative peripatetic python was, it turns out, the lining from a coat which the "hugely embarrassed" academic had dug out of mothballs for a Hallowe'en party... We're inclined to wonder how safe MAF is keeping us from reptilian invaders when its staff can't tell the difference between a python and a party outfit...

[The host of] *Ruby's American Pie*... outdid herself when [the comedienne] joined religious snake-handlers in their church. These devout Southerners are convinced they must hold serpents because the Bible tells them so. One dear [old Southerner] had a video of her husband being bitten by a snake during a church service. [Her husband died. But the husband] is in a "happier place" – so that's okay. Most of the people in the congregation had fingers and parts of fingers missing from snake bites. These people are devout enough to put their limbs on the line for Jesus. This was all grist for [the host]'s mill. Her raised-eyebrows-to-camera technique had so much use [the comedienne] must have developed eyebrow hernias. But the beauty of stupid fanatics is that you don't have to turn away from the camera to roll your eyes. You can just look them straight and say, 'boy, are you stupid' and they will simply smile that smile of the truly thick and say, "yes ma'am, I reckon you got that darn right"... [Speaking of snakes, t]he quick reactions of a crane worker spelled the end yesterday for yet another unwanted A[US]n stowaway. The 70cm snake was caught on an Auckland wharf after the worker saw it inside the locking hole of a container [the worker was shifting. The worker] immediately dropped the container, trapping the snake by its tail... A pest control company killed the reptile, and it was put in a bucket to be sent to Lincoln University for identification. The black and grey snake is the third to arrive in N[Z] in just over three weeks.

...Some of the most poisonous snakes in the world are swimming to our beaches, and the M[AF] says they are protected because they made it to our shores of their own accord. But... a... poisonous snake has been killed after being found among a cargo of used-car batteries from A[US] – the fifth snake discovered in N[Z] this year... Snakes... were difficult to fumigate... They were hitchhikers, and would crawl into a container to get out of the rain or cold... M[AF]'s cargo and vessel clearance manager... says... "Usually snakes get squashed in transit, and it's too cold here for them."

“[NZ is] a gorgeous country, but... the weather in Auckland... [isn't] that great... it's cloudy all day long...,” says... the... [US] star of the... series *Hercules: The Legendary Journeys*, which [is filmed] in and around Auckland.

Although NZ is *the furthestmost inhabited land from Israel*, if you were to drill a hole from NZ that went straight through the centre of Earth's core, when you came out the other side you would be in Spain; and if you had begun drilling from Auckland, you would come out near the city of Malaga.

[The] port city and capital of Malaga *provincia*, in the *comunidad autonoma*... of Andalusia, southern Spain... was founded by the Phoenicians in the 12th century BC, conquered successively by the Romans and the Visigoths, and taken by the Moors in 711. Under Moorish rule it became one of the most important cities in Andalusia. When the caliphate of Cordoba disintegrated, the kingdom of Malaga was founded, ruled over by emirs who named it “terrestrial paradise”. After several unsuccessful attempts, the Christians took the city on Aug. 19, 1487.

Auckland was once the capital of a colony of the British Empire. Not far from Malaga is a last bastion of that empire.

[The] fortified town and rocky headland (the Rock of Gibraltar) at the southern tip of Spain... forms the only outlet of the Mediterranean Sea to the Atlantic. It is a British naval and air base of great strategic importance... The site has been in British hands since it was captured during the War of the Spanish Succession in 1704 and formally ceded to Britain by the Treaty of Utrecht (1713)... Since... [WW2] Spain has forcefully urged her claim to the territory. Remains of what was later called Neanderthal [people] were first discovered in Gibraltar in 1848, but were not recognized to be this species until the discovery of other remains in the Neander Valley in 1857.

Gibraltar and... Mount Acho (the ancient Abyla) on the North African coast of Spanish Morocco... were known to the ancients as the Pillars of Hercules... [‘To the Romans it marked the end of the world, *ne plus ultra* – no more beyond.’] On Gibraltar can be seen the Barbary apes, the last monkeys to be found in a wild state in Europe.

Apart from Gibraltar, barbary apes are to be found in a few parts of Morocco and Algeria where there are wooded mountains and rocks. Not only unique as a monkey in Europe, the barbary ape is also the only macaque found in Africa. All other macaques are found in Asia... Whether the barbary apes of Gibraltar really belong there and are the last survivors of a population whose fossil remains are to be found across Europe, or whether they were brought across the Straits of Gibraltar by [humans] are questions that are debated by zoologists. One thing is certain, they did not make their way across the Straits by a tunnel, as legend once had it. Whatever their origin, the apes are now living a semi-domesticated life. The present population is very small. Having dropped to seven in 1942 it rose to 30 by 1955, mainly through the custodians importing more monkeys from North Africa... The continued existence of the barbary ape on Gibraltar is due to a superstition that sprang up when the French and Spaniards attacked the Rock from 1779-1783, that if the apes left the Rock, then the British would lose it. As a result, the barbary apes are accorded the same care and protection as the ravens of the Tower of London, which are surrounded by a similar legend. During... 1942 Winston Churchill sent a cable ordering the population to be maintained at all costs... The official interest in the colony is taken to extremes... There was a celebrated occasion when the Secretary of State for the Colonies was asked in the House of Commons whether the allowance paid for the apes' subsistence was sufficient. Members were pleased by the reply that the daily allowance had been increased to fourpence a day per ape to meet the rising cost of living... A junior officer of the Royal Artillery is Officer in Charge of Rock Apes, and, with a NCO to assist... cares for their welfare and maintains a record of their births and deaths, trials and tribulations. Sometimes the leader of the group becomes too much of a despot, terrorising both his subordinates and his human guardians, and has to be presented to a zoo. This is a job for the officer in charge, who is unlikely to have the skills of a game hunter that the task requires. That his success is watched by higher authority probably does not help.

Britain's Rock of Ages... MOMENTS after your arrival in Gibraltar, the road into town abruptly takes on the expansive dimensions of an airport runway. Three mildly befuddled observations pass through your mind: that it is an airport runway; that, indeed, a Boeing 737 is indicating an imminent take-off in your direction; and this may be the biggest blunder you've made in some time. In fact, no. In Gibraltar, space is so tight that jets and cars must periodically share paved space. Just 6.5 sq... k[m]s, Gibraltar is a little piece of Britain on the southwestern tip of Spain... English is the official language, pounds and pence the currency. The 27,000 people of Gibraltar are a blend of British, Spanish, Genoese, Portuguese and Maltese stock. Most were brought in as dock workers and support staff... in 1704... “Often they married Spani[ar]d[s]... from nearby villages, so English became the language of business and education, and Spanish the language of the home.” ...In the centuries after Britain took over, the colony grew into an important... [military] base, but with Britain's decline as a global power, the Rock's strategic importance has grown attenuated. Today Gibraltar is an awkward relic of empire, a cultural anomaly on the Spanish mainland... To Spain, Gibraltar is an irritant of long standing. As one Spaniard explained: “Imagine if a foreign power occupied part of your country, had troops and police there and subjected you to passport controls on your own soil. Wouldn't you resent it?” It is an argument that Gibraltarians have heard to the point of exasperation. “Spain has no more right to Gibraltar than to any of its former holdings,” says... [the] opposition leader of Gibraltar's House of Assembly. “We have not been part of Spain for nearly 300 years. California was Spanish as recently as the 1840s – shall Spain have it back as well?” In 12 centuries Gibraltar has spent less than 300 years in Spanish hands; little wonder that its control has taken on almost mystical significance to that country. To underline its resentment, Spain closed the border in 1969 and kept it so for 16 years. Phone lines were cut, and mail from Gibraltar to the town of La Linea, just a few hundred metres away, had to make a 3500-k[m] detour via London. Those cut off from family and friends could communicate only by shouting across a barren no [perso]n's land between security fences. Despite the border's reopening in 1985, Spanish customs officials still commonly order exacting searches of... [vehicle]s, which can cause hold-ups for hours. Most Gibraltarians see it as harassment. “It is totally counterproductive, since its only effect is to increase our hostility towards Spain,” says... the chief minister... “There have been 14 major sieges in the history of modern Gibraltar,”... the genial Oxford-educated biologist and historian who is director of the local museum... told me as we made our way down 350 steep, narrow steps along the eastern face of the Rock... – 430 metres of Jurassic limestone that rises nearly sheer from the sea... In 1907, long before these steps were cut, a British soldier... somehow made his way down this forbidding drop and discovered a cave that... is still exciting archaeologists. Roughly 20 metres high and... 30 metres deep, Gorham's Cave is the sort of cavern you find in adventure stories: full of moist stalactites, hanging ferns and cobwebs... “This is... one of the ten best caves in the world, in archaeological terms. It has a history of human occupation that stretches back 100,000 years... It's been used by everyone from Neanderthals (there's reason to believe that Gibraltar was their last refuge before extinction) to Phoenician and Carthaginian sailors, who stopped to make offerings to their gods to ensure safe passage through the strait.” If Gibraltar is a haven for archaeologists, it is no less so for botanists. Some 530 species of flowering plants are native to the Rock, including four found nowhere else... [But although] Gibraltar receives some four million visitors each year, most come only for a few hours, to tour scenic St Michael's Cave, photograph the famous Barbary apes... and perhaps do a little shopping. “It's a great shame... because there's nowhere with a history quite like Gibraltar's, and most of it escapes them.” ...In the 1980s, grandiose plans were laid to turn Gibraltar into a financial services centre and tap into the lucrative tourist industry of the neighbouring Costa del Sol. Waterfront apartment blocks and stylish marinas were built,

while beside the harbour arose a gleaming \$260-million office complex called Europort, with flats, shops and a 16-storey hotel. Unfortunately, the new buildings came on the market just as Europe was sinking into recession. The hotel still hasn't opened, though most of the flats and shops are now occupied after being empty for several years. Of the alternatives that lie ahead in Gibraltar's uncertain future, none was expressed more eloquently to me than by... its minister for trade and industry. "Either we can slowly bleed to death, as many people fear, or Britain and Spain can resolve their differences and we can become an example of European cooperation at its best. We have a unique history. We are a blend of cultures. We are a shining example of tolerance. In a tiny place, we are everything that Europe is trying to be in a big place..."

...Most of the Rock's 4 million annual tourists... together with visiting cruise ships sustain the economy of this duty-free colony – Europe's last colonial outpost... [T]he 1967 referendum to determine opinion about the maintenance of British links found that of the 13,000 who voted, only 44 sought change. Today, locals insist the population of around 36,000 has not changed its mind about the benefits of Britishness. Said... a driver...: "I prefer to be British even though I've never been to Britain. Too bloody cold. But I spend a lot of free time in Spain because on the Rock you get giddy driving round in circles all the time." No wonder. For the Rock – all 4 sq km of it – has a claustrophobic aura. One Gibraltareno confided: "It's a bit like Alcatraz without bars." Yet visitors love this intimacy. Everything – including the Rock – is easily accessible. To ascend, you either drive up the snaking road or ride the cable car and walk back, as I did. Keen hikers can plod both ways... When you reach the cable-car station high above the Mediterranean, simply dodge the apes cavorting around the restaurant and head for the lookouts... You can also walk down to the Apes Den and St Michael's Cave. This very beautiful limestone cave has fantastic acoustics and has been used as a concert hall... At day's end, when you sit in one of the small plazas off Main Street sipping real British beer and eating imported British pies with a Best of British fork, you wonder if Gibraltar's gushing Britishness is too passionate to permit an amicable coupling with Spain. I asked a friendly waiter... what [it] thought about the Rock's destiny. "The... Rock will remain British as long as it is inhabited by the apes... That's why we look after them so well."

...THE apes of Gibraltar, more famous than the Rock's human inhabitants, are breeding too fast and becoming such a threat to humans that the colony's parliament has voted to impose birth control... [The person] in charge of the ape question for the... Gibraltar Ornithological and Natural History Society... who knows every ape by name, said that in five or 10 years the population of 180 will have to be reduced by one-third.

A population explosion among Gibraltar's legendary Barbary apes may force officials... to cull them... Their numbers have soared to more than 200 on Gibraltar's rocky heights, which experts say should ideally house only 20... [The] director of Gibraltar's Natural History Society, has suggested that the excess population be exported to Morocco, where the species... has disappeared... [In related news, the local human] population has continued to grow slowly to about 3,770,000, according to Statistics [NZ. Amongst the increased number is a]... 39-year-old New York-based... [actor, who] is in heaven. Or, actually, Auckland – which is not usually thought to be a near approximation – shooting a film called *Heaven*, [which is based]... on a novel by [an] Auckland writer... *Heaven* is the... second feature from [a NZ director]...

An] underrated... jockey... used a magnificent piece of... [riding on] his way to victory in Saturday's \$A1 million Victoria Derby aboard *Second Coming*... [The horse's trainer], a former N[Z] *Herald* racing journalist, selected *Second Coming* from a South Island sale for \$27,000... [after it had previously been] sold at Karaka for just \$12,000... The colt... was not fancied against the big name three-year-olds because of his so-called inferior breeding... The big question facing the [trainer] after the race was whether to pay up the \$50,000 payment to start *Second Coming* in the Melbourne Cup... [The trainer] is enjoying wonderful success in A[US and spoke] after the win... [of] considering relocating a major part of his team of 25 in Adelaide to Melbourne... Meanwhile... the... abrupt decision by... [the Minister of Local Government, Gal] Affairs and Cultural Affairs... to quit her three ministerial posts has been seized as an opportunity by the [PM]... and the Deputy P[M]... to reduce the size of the executive to 24[(rp1126, ln6). The ex-minister, who now]... will simply be the Epsom MP... said... that the "ad hoc-ery" of Government process and the failure of proper consultation in the coalition thwarted her in doing her job... [H]er move is a protest and [the Epsom MP] hopes the Government will go through a "learning curve" as a result. "And I'm happy to be the victim." ...however[, her]... behaviour has reinforced the snide view around Parliament that [the Epsom MP] is a drama queen... [who has produced] just the kind of coalition-destabilising sideshow... [the MP has criticised. H]er departure poses major problems for the coalition... Every time [the Epsom MP speaks, the MP] carries the force of National's biggest majority in the country. Yesterday [the Epsom MP] demanded that the coalition "lift its game." In National's ranks, such language is code for [the PM] to lift his game and start providing real leadership. But it is the rapid mushrooming of dissent which makes the coalition's one-seat cushion look ever more vulnerable... Yesterday's rapid reallocation of portfolios held by [the Epsom MP and the former Associate Minister of Health] to existing ministers was a bid by the coalition to look decisive... [In news from London, the] *Times*... says th[at changing NZ's]... name to Aotearoa would be useful for children's stamp collections and help the Olympic team to be one of the first to march in opening ceremonies. A Treaty of Waitangi claim lodged in 1991... proposed the renaming[, and earlier this year a prominent NZ businessperson said the country]... should use the millennium celebrations as an opportunity to change its name... The newspaper ran a news item and an editorial on the proposed change, but did not pass judgment on whether it backed the former British colony adopting a new name[, although the]... newspaper cautions against the unpopularity of a name change, and the confusion for geography and history... [However, the *Times* also pointed out that: "NZ"]s delegation would sit in the front row of the U[N]."

...A] WORLD acclaimed conflict resolution mediator... believes N[Z] has the potential to create an important role for itself as a global peacemaker. Twice nominated for the Nobel Peace Prize... the director of the Washington-based Conflict Partnership Centre... has mediated troubles in more than 60 countries... Facilitators were dominated by the world's big military nations, regional powers or the U[N]. "In most of these cases, the intervening nation often has its own 'agenda' based on its perceived vested interests. The results often do not provide the most effective and sustainable conflict resolution for the parties directly involved." N[Z]'s geographical location meant it had had few significant roles in international conflicts to date... This meant it was less likely to be accused of bias, if it took up the role. It was also internationally recognised and respected for its courage in standing up to other, bigger nations, in pursuit of its commitment to its nuclear-free policy. The establishment of bodies such as the Waitangi Tribunal, which [the director] has also been working with, showed an awareness of the need to address disadvantages or wrongs inflicted on ethnic or indigenous groups – a component in many conflicts around the world.

...[a USer] has some good news and some bad news. The bad news is that the dawning of the Age of Aquarius has been delayed. But the good news is the new age of peace, love and harmony will happen before the new millennium. Last year, [the USer] was predicting that the Age of Aquarius would dawn this month if 144,000 people gathered at Auckland Domain to create a "light-house of consciousness and energy" and "open the stargate." ...Unfortunately, [the USer] doubts that enough people will turn up. "Judging from the tone of things [a critical mass] isn't going to happen... I think we'll get it by 1998 but I know we will do it by 1999." ...The 43-year-old retired Seattle business[perso]n's desire to find "heaven on earth" began eight years ago after a life-changing experience in an American Indian sweatlodge, a sort of spiritual sauna. [The USer believes NZ] is ideally placed to instigate a global consciousness – "Godzone is a special nickname" – because as the first country to see the sunrise it forms the "umbilical cord to the universe." Would-be participants at [this] month's One Earth Global Rainbow Gathering of One at One Tree Hill can expect dancing, chanting, songs and meditation before an attempt on Heaven's Gate is made at 4.44 pm.

...[TWO companies are squabbling over the rights to the first sight of dawn of the next millennium at the Chatham Islands. A partner in the Millennium Adventure Company (MAC) and founder of the *Guinness Book of Records* has bought territorial rights to Hapeka Hill on Pitt Island in the Chatham group. His co-partner said the company was preparing to auction TV pictures of the event. "The pictures of the first sunrise are an amazingly powerful symbol of

the world.” But their claims of exclusivity have been challenged by a former AUSn tennis coach and director of First Light 2000 (Chatham Islands), also based in London. The director claims it bought rights to 5 strategic peaks and headlands on the east coast of the Chatham Islands, including part of Hapeka Hill. “The argument about what hill or headland on the Chatham Islands encounters sunrise first is to a great extent worthless simply because we are talking about milli-seconds and Hapeka Hill at that time of year is invariably covered in fog. Our company controls the rights to a higher hill on Pitt Island which would arguably see the sunrise before Hapeka. But the simple fact is that the whole east coast of the Chatham Islands will see the sunrise at the same time.” The notion of buying exclusive rights to the sunrise has been branded ridiculous by the Royal Greenwich Observatory, which notes the first rays of sun will appear at a group of rocky islands near the Antarctic. “It really is a joke,” said the observatory’s professor of astronomy. “It is all a publicity stunt.”

...“TV rights to the first rays of light of the new millennium on the Chathams have been sold. AUSn TV giant Channel 7 bought rights to show the event exclusively to AUS for an undisclosed sum. FirstLight 2000 claims the deal is the final proof that the dawn of the next century is a money-making event. “It’s nothing less than a vote of confidence from the world of TV. We haven’t done a deal with a NZ company yet but there’s certainly interest there.” The deal was a victory over the other company which would be broadcasting from the Chathams. “We consider we’ve won the so-called battle of the sunrise.” The network is keen on showing a Moriori ritual planned for the morning. “The one that has been handed down for centuries of an elder handing weapons to a young boy, who then hands them back. It is symbolic of the pacifism of the Moriori who believe acts of violence are the exclusive domain of the gods.”]

...The descendants of a crusty Chatham Islands pioneer from Lincolnshire control most of Pitt Island, a rocky, peaty island which, by dint of a line on a map, happens to be the first inhabited place in the world to see the new day. This fact means little to the 50 or so people who live there but to foreign impresarios it’s a goldmine. Their eyes are fixed firmly on January 1, 2001, when the people of Pitt will be the first to see the new millennium. And, with an eye for an opportunity, they’re also planning to market Dawn 2000. The potential for chaos is enormous. Competing film crews, wealthy sightseers and hungry promoters could turn Pitt into the circus of the century. Instead Pitt Islanders plan on inviting a few people prepared to spend a lot of money to see the millennium dawn. The bulk of the profit will come from television rights. The big island, Chatham, is a two-hour flight from Wellington or Christchurch. From there it’s a hop in a Cessna across the strait to Pitt. Rangiauria, as the Moriori called Pitt, is the only other inhabited island in the Chathams. It has no harbour and before the advent of air travel the only way to get there was by braving the treacherous rocks at Flower Pot Bay. The odd-shaped rock with iceplants on top which gave the bay its name was accidentally destroyed when the entrance channel was widened, but many other aspects of the island’s early life can still be seen. Frederick Hunt settled with his family on Pitt in 1843. A handful of Moriori, whalers and sealers were the other inhabitants. Hunt... ran the first flock of sheep on the Chathams and was renowned as a whisky smuggler, taking liquor from Nantucket traders and slipping it into N[Z] in barrels marked tallow to avoid customs... [T]he wild sea which surrounded the island brought... disaster to the family. Boats were wrecked and children drowned, but the sea also yielded a rich bounty and kept visitors at bay. News that a couple of journalists from Auckland wanted to visit was not greeted enthusiastically until the publican from Chatham Island guaranteed they were not yuppies. It was just as well. Without local support a mainlander would be lost on Pitt. There are no roads, no shops and no transport... ANY preconceptions about inbred clans on remote islands should be abandoned; the people of Pitt are smart, articulate and travelled. [One of Hunt’s descendants and her husband] own the hill from which the sun can be seen four minutes before it is spotted from Eastern Point, the easternmost point of Pitt. (It can probably be seen sooner from the Star Keys or even the more distant Forty Fours – named for their latitude – but these islands are little more than inhospitable rocky outcrops.) ...[the wife] and her sister... ([who is married to the husband’s] brother...)... have been described... as the matriarchs of Pitt... part of a large family who lived a pioneering lifestyle long after the rest of N[Z] had moved on. In her teens [the wife] was sent to... the mainland, to train as a nurse. [The nurse] worked in the South Island for several years but, as for so many of her family, the pull of Pitt was too strong to ignore. [The nurse] returned and married... and bought her cousin’s farm, 400ha of grassy slopes running from Mt Hapeka to the sea... [■ A] focus group appointed by the Minister of Internal Affairs... [has] recommended that a “Year 2000 Millennium Commission” be established... with a \$40 million budget... to... take a co-ordination and funding role in helping to plan events to capitalise on N[Z] leading the world in seeing the sun rise on January 1, 2000... [However, the plans] could be shelved before they are even considered... Instead, a charitable trust may be established to handle the Government’s contribution to nationwide millennium celebrations.

...BOOK THE babysitter and cellar the champagne, the millennium is nearly upon us and the party preparations have begun. As of April 5 this year, there were 1000 days to go until the dawning of the new century. Worldwide, people are gearing up for what will probably be one of the biggest parties of our lifetimes. And, as the first country to greet the new day, N[Z] is going to play a starring role... although whether we really are first to see the sun is still a matter of some debate. The race has long been on to establish where exactly the sun will first rise on the new millennium and to secure the ancillary rights. Apart from Antarctica (and who wants to celebrate the new millennium in an icy wasteland) and without counting Kiribati’s dubious moving of the international dateline to make Caroline Island... [(the archipelago’s easternmost island, [which has been]... renamed... Millennium Island)]... the first to greet the new dawn or even Greenwich’s insistence that time starts there with Greenwich Mean Time – Pitt Island... is the place to be. At least, so says the M[AC] which has bought rights to the eastern side of... Mt Hapeka and claims to have the backing of the international scientific community through a research paper to be published by the Royal Geographical Society in London. Of course, where the millennium takes place is not the only issue. One of the sticking points is its actual date. Officially, 2001 is the dawn of the new millennium, because of the absence of a year zero – but the year 2000 is a round figure, which, like 1999, lodges in the brain a lot easier. There are also historically noted discrepancies in the calendar year to deal with too, for example when Julius Caesar’s calendar was replaced by the one we use today, six days were dropped. Meanwhile, [a member] from British ambient pop group The Orb is a staunch campaigner for the fact that “time is out of whack” stating the case for Jesus Christ actually being born back in 4BC because of the pinpointing of the proverbial bright star in the sky at around that time. According to [the musician], the new millennium should be celebrated this year. All of which is a moot point to countries such as Japan and China who operate on a different calendar and pay no heed to the millennium – and it’s not as if all civilisation blinked into existence in 1AD. THE MILLENNIUM is a mark that is very much in the mind – particularly if you’re living in the 21st Century environs of London... or... New York... And, at this end of the world, the millennium runs the risk of being marketed into the ground... According to colleagues... the founder of the *Guinness Book of Records*... is obsessed with facts and figures and believes that the millennium is the world record of all world records. [The founder] reportedly quit the *Guinness Book of Records* to concentrate on what [it] sees as the culmination of his career and intends to assemble a special *Millennium Book of Records*... Time capsules will be planted at the foot of Mt Hapeka to be opened in the year 3001, offering families the opportunity to record their existence on Earth for future generations. Visitors to the site on the big day will be strictly limited to 100 and M[AC] hasn’t ruled out VIP sponsors... FirstLight[, MAC’s rival,] plans to fly 750 revellers to the Chathams, paying up to \$25,000...

[The rival] companies will battle it out in London this week... [as they] make presentations to the BBC... for exclusive rights to[show] the millennium sunrise... [in Britain. MAC’s partners] go to great pains to stress that they are not just in it for the money and that the lion’s share will be ploughed back into the Chatham’s... Gisborne, meanwhile, as the first city in the world to experience the millennial dawn, plans to put on N[Z]’s biggest party ever, according to organisers Club Odyssey’s End. “We’re very happy for anyone who’s doing anything in the Chatham’s, Tonga, Kiribati or any other place because it all adds to the magic... However, to sell the worldwide television rights to see the sun rise for millions of dollars, you need the infrastructure of a city.” Odyssey’s End is promoting the millennium as a “festival of light” and aims to attract up to 70,000

people, including many overseas visitors through a subscription service. It will provide “sleep stations” for those who can’t handle the all-night pace. [Odyssey’s project] director... recognises a potential split between locals and... the... “client audience” and intends to appease that with a mardi gras... which will wind its way through the streets of Gisborne toward the main arena, where the floats will lock together to form the main stage, which will boast specially commissioned dance troupes and some of the world’s top rock stars. At midnight... [Odyssey] promises a spectacular fireworks display... [The director] wants people on a high at midnight before bringing them down for the dawn, which will be presented sans pyrotechnics and followed by low-key events such as a parachute jump composed of all the world’s flags. ODYSSEY is unrepentant about courting the world’s media and large corporate sponsorship. “If you look at the progress of [hu]mankind over the years, it’s by and large a technological progress... There’s no evidence that [humanity] has evolved morally. We still screw up in the ways that we’ve always screwed up. Where we’ve changed is through technology and that... is mostly funded by commerce. Commerce has... played a role in every major achievement of [hu]mankind.” ...Worldwide, the millennium itself is in danger of becoming old hat, with writers and musicians falling over themselves to get in first... [A NZ] science fiction writer living in London says: “The millennium has been so heavily trailed that it feels like it’s already happened. Inevitably the reality will be disappointing. I suspect there’s a self-conscious element to it all – like people feel obliged to believe weird things might happen. It’s already being played out in an ironic frame of mind – people will muster their caravans on isolated hilltops to await the coming of God or the aliens, but more as a joke than anything else.”

...In 1769, Captain Cook became one of Gisborne’s first international tourists when [the navigator] chose it as the first place in N[Z] to land. Just 228 years later [Gisborne is] poised on the edge of a new South Pacific tourism boom – the new... millennium. The Government recently set up the N[Z] Millennium Board to plan and co-ordinate events nationally for the year 2000 and provide the infrastructure for the expected increase in tourists. But each region needs to plan locally, too... Gisborne... ha[s] been planning ...s[ince w]e established our Millennium Trust in 1995 to co-ordinate and fund events in the region. Next month we... launch a Gisborne Tourism Marketing Board... 230,000 people visit the region each year... 20,000... from overseas... These visitors... come to Gisborne for many reasons: to enjoy the climate, to admire the scenery, to explore the Urewera National Park, to look at Gisborne’s role in both Maori and Pakeha history, to enjoy special events such as the upcoming Gisborne Opera Festival, or simply to relax in our vineyards. We believe we have the planning in place to... be recognised by the Government as an official millennium site. The recent announcement by Internal Affairs that sunrise on January 1, 2000, would hit Te Mata Peak before Kaiti Hill in Gisborne has not altered our marketing of Gisborne as the first city to see the sun. We are determined that Gisborne will always have its place in the sun.

...Gisborne’s disputed claim to be the first city to see the sunrise has been backed up by a computer programme the Carter Observatory in Wellington uses... [But] Mt Tapuae-O-Uenuku, in Marlborough, could claim a place in history as the first place in N[Z] to see the dawn of the new millennium. A Blenheim business[perso]n... has put a cat among the millennium pigeons with a claim that the much-hyped dawn of the year 2000 will hit “Tappy” at 4.40 am N[Z] time. That is exactly the same time as Mt Hikurangi, near the East Cape, Gisborne.

...N[Z]ers should unite behind Mt Hikurangi as the first point to see the new millennium dawn, [the]Millennium Office director... said yesterday. Mt Hikurangi... Te Mata Peak in Hawkes Bay and Mt Tapuae o Uenuku... all have their backers.

...With various... bits of N[Z] tussling over which will first see the millennium, it’s not surprising that television is also looking to cash in on a once-in-1000-years event. There’ll be plenty of televised cork-popping as the century ticks over, but the coming event has already inspired an American series which promises to be darker and more terrifying than even the worst post-celebration hangover. *Millennium*, on TV2 on Monday, is a creation of... the [person] behind *The X-Files*. Even if the deadpan weirdness and strange atmospherics of that show leave you cold, *Millennium* and its hero Frank Black... could well bring you under its creepy spell. Actually, this makes *The X-Files* look like a sitcom. Its horror is courtesy of psychopaths surfacing as the clock ticks down to 2000. Black is a retired FBI [agent] who belongs to the “Millennium Group” – a shadowy organisation dedicated to fighting “the growing forces of darkness.” [Black] has an uncanny ability to see the world through the eyes of the serial killers [his group] stalks, helping him to solve crimes of unspeakable violence. [The actor who plays Black] is probably best known to N[Z]ers for a beer commercial, but... might also be recognised as the android in the films *Alien* and *Alien III*. At least one American writer has compared... [Millennium with programmes such as] *Twilight Zone*... and... *Night Gallery*... [T]here is a seriousness and style here which is common to those classic old series. There’s no way, however, that the subject matter would have made it on to the small screen back in the 60s and 70s... In the first programme one poor chap is buried alive, his lips sewn shut, with only a severed head for company. [□ ‘The Doomsday cult death toll rose to almost 1000 last night with the discovery of another mass grave in Uganda. The latest grave was found in a cult member’s house at Kanungu, near the headquarters of the Movement for the Restoration of the Ten Commandments of God. About 500 people were burnt to death at the church in what was originally thought to have been a mass suicide. But in the wake of the grisly discovery of burial sites, police are now treating it as mass murder. The tragedy now rivals the 1978 Jonestown deaths (when the infamous American pastor Jim Jones led 914 followers to take a cyanide-laced fruitdrink) as the largest cult mass killing.’

...‘The US government is preparing for possible violence from cults, guerrillas, hate groups and end-of-world zealots as 2000 approaches. Law enforcement officials are working on contingency plans to cope with everything from cyber attacks to bombs at New Year’s Eve parties, though they say they lack knowledge of any specific, credible threats. Groups with similar views to apocalyptic cults such as Heaven’s Gate might deem the rollover to 2000 “a good time for them to make their mark on history,” said the person who retired last November as head of the FBI’s domestic counter-terrorism arm. The head of a new FBI-led interagency centre to protect critical US infrastructure cited a fringe view among white supremacists that the world is on the verge of a final apocalyptic struggle. This required the faithful “to prepare for the second coming of Christ by taking violent action against their enemies,”]...

Anyone expecting the second millennium since the birth of Jesus Christ to be marked by momentous or cataclysmic events, had better brace themselves. Historical evidence indicates it will occur around October – 1998... If those prophets of doom are right – watch out!

...An elite corps of information workers will survive and prosper as the world plunges into a ferocious “new Dark Age” of unemployment, hopelessness, resentment and rage, according to one of the world’s foremost authorities on the impact of information technology... His radical forecasts challenge... and disturb... [The] Professor of Information Systems at the London School of Economics... is variously described as “the foremost prophet of the 21st century” or, more simply, “Angell of Doom.” Among his forecasts: • Offices will virtually disappear, causing a worldwide “meltdown” in commercial property prices... Disposing of offices will eliminate rent, power bills and insurance. If a physical office is needed, it will be hired by the hour from hotels, railway stations and airports. “With employers no longer tied to a single location, the workers are defenceless... Those lucky enough to still be in work will have to work harder, for more hours each week, for less pay, in less secure jobs – and they had damn well better be grateful.” • The near future would see entrepreneurs, innovators and knowledge workers (a group [the p]rofessor... lumps together under the term “alphas”), paid increasingly enormous sums in the battle between global corporations and nation states for world economic dominance... [T]op “alphas” in the banking and computer industries were already paid so highly they were evolving into a distinct “super class,”... • The surge in job losses sweeping the Western world was not the result of a temporary downturn in the economic cycle... Politicians claiming otherwise were lying or mistaken. Unemployment was the result of “a structural change, a new order.” It would keep rising and the shakeout would last two generations at least. “The lights are going out for whole categories of employment and for wide sectors of society... The ‘soon-to-have-nots’ have nothing to lose and... will riot. This is what happened in Paris in the winter of 1995... Only recently it happened in South Korea, Belgium and Germany... The Unabomber would prove the first of many such terrorists to oppose the information revolution... “Crime will

be the only option open to losers who are surplus to requirements of the legitimate economy. Disgruntled losers will organise attacks against business in general.” [The p]rofessor told... delegates at a recent conference in Barcelona run by Amadeus, a computerised airline reservations system for travel agents... that efficient agents would prosper in the midst of all this chaos and frenzy. Rich alphas would keep plenty of money for security and travel... “That means far more business for you... The rich will get richer and the travel business will be one of the most important factors in the economic advancement of this global elite.” The professor forecast security forces would be hired to crush resistance while traditional police work, such as solving crime, would be contracted out. “If you can’t be a knowledge worker, then be a politician,” [the professor] advised those seeking a career. Nation states would split apart but city states... and “hot spots” of technological innovation would survive. The alpha section of society would travel widely between these, “to maintain these human networks.” The future would see a tax-free world ruled by global corporations. The taxation base would decline as companies used electronic techniques like “disintermediation” and “dematerialisation” to make earnings effectively vanish. Under-reporting of taxes and falling tax revenues would proliferate worldwide... “Soon, under-reporting of taxes will snowball into the total migration of a state’s taxation capacity. Strapped for cash, governments will tax anything in solid form: taxes on fuel, food and clothes will inevitably rise. So will property taxes.” ...“frantic” tax[collectors] were working to devise a means of taxing data flow by volume, “just like... with whisky.” Such efforts... were doomed to failure. “To alphas, all taxation is theft... It is the state obtaining money with menaces; government is merely legitimate organised crime. Even the mafia doesn’t charge 60[%]. All taxation, all regulation, is extortion. Tribal leaders can no longer intimidate the entrepreneurial elite in their society. There is no justice in equality. The call for ‘fairness’ is the mere whingeing of failures and parasites.” ...top alphas employed as captains of industry should stop being embarrassed about their enormous salary levels. “You are being underpaid... It is the politicians who should be embarrassed; they are vastly overpaid. Do we even need them?” Liberal democracy was “an artefact of the machine age, an ideology from a time when the masses were needed,”... The masses were now superfluous. What will follow democracy? The professor quotes Voltaire: “The best government is a benevolent tyranny, modified by an occasional assassination.” - 1997

...in the darkest times darkest fears are heard and from the safest places come the bravest words... - *new dark age*

Dark Ages [is] a term denoting the obscurity or barbarity of the period between the fall of the Roman Empire and the high Middle Ages in the West... [T]here was political fragmentation, a hiatus in city life, a lack of major learned centres, and an emphasis on waterways rather than roads. The Devil was accorded great power, symptomatic of an age which made peculiarly little distinction between nature and the supernatural[, thereby]... inhibiting... human development. The Dark Ages may be said to have ended when St Anselm became the first medieval thinker to deny that the Devil had a rightful dominion over [humans]. The term *Dark Age* has been applied to a similar period in the history of Greece and other Aegean countries from the end of the Bronze Age until the beginning of the historical period, when the region seems to have been heavily depopulated, its material culture stagnant, there was no building of palaces or fortresses, and the art of writing (associated with the palace bureaucracies) was apparently lost... but some features such as ship-building and the extraction of silver, and strong oral tradition resulting in the emergence of the Homeric poems as we have them, are at variance with the generally humble picture of Dark Age Greece and suggest that it has been painted too black... [Incidentally,] *Manichaeism*... a religious system with Christian, Gnostic, and pagan elements, founded in Persia in the 3rd c. by Manes... was based on a supposed primeval conflict between light and darkness, teaching that matter is evil but within each person’s brain is imprisoned a particle of the divine ‘light’ which can be released by the practice of religion, and that Christ, Buddha, the Prophets and Manes had been sent to help in this task... [In Persian myth, *Mithras* was] a god of light, truth, and the plighted word, whose titles include ‘Saviour from Death’, ‘Victorious’, and ‘Warrior’. These partly explain his attraction for the Roman world, its army, merchants, and those hoping for immortality, and made his worship the principal rival of Christianity in the first three centuries AD... *Lucifer*... [or] the Devil, whose fall from heaven... early Christian writers thought was alluded to in Isaiah 14:12 (where the word *Lucifer* (L, = light-bringer) is an epithet of the king of Babylon). [In poetry, *Lucifer* refers to] the planet Venus when it appears in the sky before sunrise, the morning star.

The night is far spent, the day is at hand: let us therefore cast off the works of darkness, and let us put on the armour of light. - Romans 13:12

[In] a few writings from Qumran... there are children of light and children of darkness, to which correspond spirits of light and spirits of darkness, spirits of truth and spirits of wickedness. At their head are the prince of light and the angel of darkness, respectively. Human beings then walk either paths of light or paths of darkness... The children of light are supposed to “hate” the children of darkness, that is, they are to separate and distance themselves from them. An end-time struggle of destruction will be carried out against the children of darkness... [C]lose... analogies to many early Christian statements are present... Above all, this is true for Paul... In his speech of exhortation, Paul reminded the churches that they are children of light and do not belong to the darkness (1 Thess. 5:4-11... Rom. 13:12), and... suggested to his opponents in Corinth that Satan had disguised himself among them as an “angel of light” (2 Cor. 11:14)... In John’s Gospel the dramatic struggle between darkness and light... is mentioned repeatedly... Jesus exhorts those with him to walk in the light “that you may become sons of light” (John 12:35-36). In Luke 16:8 Jesus contrasts the “sons of light” with the “sons of this world.” ...How are these... similarities to be explained? ...[it] could be that light is a “concept of enlightenment” that is bound to an acquired understanding... conversion (to the true God) is understood as a transition from darkness into light... Thus, one also speaks of Abraham and Job, who are converted to the God of Israel and to Judaism... with the result that after deep darkness they have now seen the light. In his conversion Paul also sees Jesus as light... [E]arly Christianity was first and foremost a radical religion of conversion.

For a [gal who claims it]’s eaten less than a month’s worth of food in the past six years, [it] looks pretty good. Her skin glows, her blue eyes are clear and [her body i]s slim but not gaunt or... wafer-thin. This 42-year-old “breathanarian” from Brisbane claims [it] has reached a state of being where [it] does not need or want food for nourishment. According to [the AUSn, it] lives on light – not the physical light we see – and is a qi master (qi, pronounced “chi”, means universal life force... what a Christian might call God...)... [The AUSn] claims to be one of over 100 million qi masters on this planet. A qi master has the ability to tap into spiritual sources of life energy... [The AUSn] wants to “stop the slaughtering of life on this planet”... [It] also claims to have the solution to world hunger and improving world health... Last week, [the AUSn] visited N[Z] to lecture at a three-day, \$300-a-head conference, the International Gathering for Higher Consciousness. Her lectures were delivered as prosecutors in Scotland questioned the part her teachings played in the death of... Verity Linn (48)... who died of starvation... Verity Linn is not the first victim of breathanarianism. Two years ago... Lani Morris, died after attempting to convert to the movement... German kindergarten teacher Timo Degen, also died after not eating. All three had tried fasting, not having any food and most fluids for 21 days... The three-week fasting programme is outlined in [the AUSn]’s book, *Living on Light*. It was the programme [the AUSn] used to make her own conversion six years ago. But... in her case, the fast followed over 20 years of preparation... “[The AUSn] is talking a load of rubbish,” [the]... former chair of the N[Z] Nutrition Foundation... says. “If a person has liquids, they can survive without food for 30 to 45 days. They would die within two weeks if they didn’t have water.” Human beings need food to produce energy... “Without energy, our hearts would stop beating, our brains would stop thinking and our lungs would stop breathing. [The AUSn says it] can live on light. Well, plants can live on light but they have a specially developed system to convert light to energy.”

...Nutritionists dismiss as fantasy a[n AUsn's claim that it doesn't need to eat. [The] new-age spiritualist... says [it] receives nutrition from an internal power source... The [AUsn]... drinks only tea and water, [but]... admits to eating cake occasionally to be sociable. However, the Nutrition Foundation's past-chair... says... "Everything in life must have energy put into it... We can't accept that her story is correct, although [the AUsn] may believe it to be, by some peculiar twist of her thinking." [The] Dr... was concerned about the deaths [of people following her] teachings...

MY FATHER DIED TWICE. THE FIRST TIME WAS IN AN AMBULANCE AS [my father] was rushed to the hospital after suffering a heart attack. His heart had stopped beating for several minutes before the paramedics were able to revive him. Afterwards [my father] described a vision [my father had while being] without a pulse... [My father] saw his brother Joe, who had passed away some years earlier, dressed in flowing white robes sitting on a kind of throne at the top of a hill. As my father approached, Joe was laughing uproariously and waving his hand, urging him to turn around and go back. The second time my father died was about three years later. Again, it was his heart that failed him. This time, though, his brother Joe wasn't there to wave him back to this world. What my father encountered in the back of that ambulance was a classic example of a near-death experience (NDE). According to statistics compiled by the International Association for Near-Death-Studies, some 35-40% of people who have had a close brush with death later report a NDE. They commonly tell of a feeling that the "self" has left the body, a sensation of moving through a dark space or tunnel, a vision of golden or white light, and the receipt in some form of the message "your time is not yet come." Are NDEs evidence of life after death, or are they just... one of the mind's greatest illusions... the last, desperate projections of the dying brain? [Such a brain might automatically switch into a dream-like mode that searches the subconscious for any information which can explain its current state of existence. If a person has previously heard about NDEs, that could be the first piece of information extracted from the person's memory, which then translates it via a dream. However, 'when our bodies start to shut down during the process of dying, our eyes are active even though the eyelids are shut. This may explain the tunnel of white light reported by people who have NDEs' – especially if their eyes are sensing sunlight or operating theatre spotlights through closed eyelids (note also that if you close your eyes after focusing on a bright light, your eyes will continue to register an impression of that light-source for up to a minute, if not longer). Unfortunately, w]hile modern science can explain why we age, it tells us very little about why we die, much less about what happens – if anything – after death. "In death, science is pitted against an impenetrable information barrier," says... an astronomer and physicist who has written several books on death and dying... [The physicist] suggests there are two events that approximate death: the [NDE] itself and the memory loss suffered by victims of Alzheimer's disease and traumatic brain injury. "Losing your memory is perhaps as close as we can come to death without actually dying... The person is dead because the memories are gone." And memories are the only things that give meaning and identity to our lives. If the difference between life and death is a question of memory, could death's sting be parried by replacing the fragile human memory with an infallible computerised one? In his book *Design for Dying*, completed earlier this year... psychologist and LSD guru Timothy Leary explored various strategies for achieving immortality. One of the most promising tactics... is to transfer an individual's consciousness into a supercomputer before death. This could be done by using multimedia technologies (video, audio, CDs) to record all your thoughts, feelings and experiences [in] a computer equipped with artificial intelligence. The result: a real-life ghost in the machine. Endowed with all your memories, the new computerized "you" would be able to chat and interact with people just as you would – except it would be doing so long after you had died. The idea is not as far out as it seems. According to... futurologists at British Telecom's Advanced Research Department, computers (or "soul catchers") with storage and processing capacities equivalent to the human brain will be developed within the next 20 years. "We will be able to transfer human minds into some machine form... Perhaps our only chance of making full use of such technology is to become part of the technology itself." But are these intimations of immortality real? The silicon soul described by Leary is actually not a captured consciousness at all, but an elaborate, interactive home video library. As useful and entertaining as that might be, it's a far cry from life after death... Many people don't require hard evidence about what's on the other side. They are satisfied with the explanations provided for millennia by the world's religions.

...*Questioning the Millennium* [– the latest offering from]... an eminent zoologist, whose books on various, often tangential and recherche, aspects of biology and geology have established him as one of the best popular science writers of our time[–]...predicts... "there will be an orgy of millennial books," inspired by an apocalyptic angst that... [is] "speculative, boring, and basically silly." ...[so why is the zoologist also] writing about such an intrinsically daft subject as the millennium? [The zoologist] does not, it scarcely needs saying, attach any importance to the entirely arbitrary calendrical calculation that makes midnight, December 31, 1999, the end of one millennium and the beginning of another. Neither is [the zoologist] very interested in speculating on the psychological source of the anxiety that such arbitrary transitions seem to inspire. No, his interest lies in the very arbitrariness of the calculation, and the confirmation it provides of an aspect of [humankind that the zoologist] finds as endearing as it is ridiculous: the determination to impose a neat order upon the messy realities of nature and then to attach to that order an entirely spurious significance. To take the messy realities first: the earth spins on its axis, the moon revolves around the earth and the earth around the sun. Nothing messy there, you might think, except that God (who Galileo... and many others have supposed to be a mathematician) has, in his infinite wisdom, refused to make any one of these events a... neat arithmetical multiple of the other. The moon... does not take 30 days to circle the earth, but 29.53059; similarly, the earth takes not 365 days to go round the sun, but 365.242199. "What a bummer," [the zoologist] remarked. And so it has proved for anyone who likes to believe that a day is a day, a month a month and a year a year... [The 'Jewish Calendar' normally has 12 months, but it has 13 months in leap years which occur 7 times in every cycle of 19 years (the years were reckoned from the Creation – 3761BC).] Julius Caesar introduced the system of counting one year in four as a leap year, whose extra day took care of the pesky 0.25 of a day that was added to every multiple of 365 days... But this did not solve the problem, since the fraction by which a solar year falls short of 365.25 meant that the calendar kept accumulating seven extra days in every thousand. To solve this problem, Pope Gregory XIII decreed that the day following 4 October 1582 should be 15 October and that, henceforth, the calendar should lose a day once every hundred years, so that 1700, 1800 and 1900... were not leap years. The advances of this system were not admitted by the British until 1752 (when Parliament was forced to decide that September 2 should be followed by September 14), and the Russians did not accept it until after the fall of the Tsar (which is why the "October" Revolution is or was celebrated in November). The Orthodox Church still refuses to accept it... But what about this number 2000, how do we arrive at that? Well... it is all the fault of Dionysius Exiguus, a sixth-century monk who, at the Pope's behest, introduced the system, according to which years are counted backwards and forwards from the estimated date of Christ's birth. Unfortunately, Dionysius made two errors: first, [Dionysius] got the date of Christ's birth wrong... and second, [Dionysius] did not allow a year zero between 1 BC and AD 1. Fierce debates on this question were held at the end of the 18th and 19th centuries, and, because of the presence of logical die-hards, the 20th century did not officially begin until January 1901. [The zoologist's] sympathies in this debate are with popular, rather than learned, opinion... [Popular opinion is that] if this means the first decade... [of the] new millennium... will begin on January 1, 2000, and... [have] only nine years, then so be it. In this, [the zoologist] is influenced by the affections of his son, who... is one of those extraordinary people, who, though classified as autistic, possess the amazing talent of calculating the day of the week on which any date falls. Such calculations are bewilderingly complicated; not only do they have to wrestle with the arbitrariness of the Gregorian calendar, they also have to deal with that additional piece of human absurdity, the seven-day week, a division that has no basis in nature whatever.

...The reason the world is preparing to mark the end of the second millennium is that... [w]hile compiling a table of dates for Easter... Dionysius Exiguus (Denis the Short), a monk and astronomer from Scythia, now south-west Russia, decided that... it made more sense to count the years from the birth of the Christian Church's founder than from the start of the reign of the Roman Emperor Diocletian, as had been the rule. His system of

Anno Domini (AD: “In the year of our Lord”) failed to catch on at first and was rescued from obscurity two centuries later by the Venerable Bebe. The custom of naming years in the Christian era came into common use in ecclesiastical circles in the Middle Ages, but was not adopted for civil use until much later. Thus the approach of the year 1000 caused little fuss among the populace, still counting time in terms of the reigns of kings and emperors. And the rest of humanity was advancing to a different drumbeat. Even today about 40 other calendars are in use around the world, all beginning at different epochs and with the start of the year occurring at different times. On January 1, 2000, it will be 7508 by the Byzantine calendar, 5760 by the Jewish, 4636 by the Chinese, 1921 by the Indian (Saka) and 1420 by the Islamic (Hegira) calendars... Too much for you? If the answer is yes, then... [I suggest you try to relax by w]ondering about where to spend the once-in-a-lifetime end-of-century bash...

Upwards of three million people dressed in white will greet the new millennium on Copacabana Beach, sending flowers and floating candles into the Atlantic as offerings to Iemanjá, the Afro-Brazilian goddess of the sea and fertility. At the stroke of midnight, the seashore will be lit up with fireworks in what the city is calling the world’s biggest beach bash.

...The Chathams may be the first and Auckland may be [planning] to rock, but the big millennium bash is going[to go] down across the Tasman. Sydney is steeling itself for a street and harbour party for 1.2 million people... This is... too much for many party-hardened Sydneysiders. According to... the *Sun-Herald*, at least half the city intends staying well away from celebrations ranging from a... fireworks display... above the harbour as a flotilla of giant illuminated sea creatures cruise its waters... to... the Queer Time party for gays... [The plans are] so big... that country towns throughout N[SW] have [scaled down their plans and complained that [this is necessary because Sydney will]... siphon... too many resources.

...A British couple saved nearly £10,000... by booking... two first-class tickets to Sydney in 1983 for £999 each. The tickets now cost £5773. A British Airways spokes[person] said the [couple] bought the tickets to attend a millennium party thrown by a friend who is now over 90 years old.

...THE new century is almost here and the English-speaking world still hasn’t decided what... to call the first decade. To wit: We’re coming out of the 1990s and going into the... what? The 2000s? How do you say that? No doubt most people haven’t thought much about this looming linguistic crisis – too busy arguing about whether computers will work or when the new millennium really starts. But it’s no small thing to those who need such a shortcut. Imagine the news anchor comes on one night and says: “The government predicted today the US economy will decline sharply in the middle of the... uh... Double Ohs...” ...A survey of language mavens, dictionary editors, dialect experts and futurists... came up empty. “You know, the person who comes up with this name is going to be significant,” said... [an] historian and author of *Don’t Know Much About History*. [The author] prefers the term Decade One – presumably D1 for short... [The] editor-in-chief of the US Dictionaries Programme for Oxford University Press, which publishes the authoritative *Oxford English Dictionary*, said his advice is to wait and listen. “...as a lexicographer [I]... wait for people to start talking and then hold a microphone out... Something likely will catch on...” We know what you’re thinking: Why don’t we just use the same term they used for the first decade of the 20th century? Well, it turns out no one knows what term was used back then... Some historians think the concept of referring to decades as discrete units of time didn’t develop until after [WW1]... Other historians say the terms used 100 years ago are so archaic as to be unintelligible to modern audiences... The Voice of America, which broadcasts to more than 80 million people, is running a... worldwide contest... on its weekly Wordmaster show... to find a name for the decade... [Speaking of contests, an] Auckland radio station is looking for 100 “loving couples” to hit the sheets... to produce a New Year baby... [It will host] the couples at a hotel... [where they’ll be] greeted with oysters... champagne and even personal lubricant... [The contest] has attracted international media attention.

...Turn off the telly, dim the lights and slip into something more comfortable – if you want to have one of the first babies in the new millennium an early night is in order for around April 9. As N[Z]ers watch the sun rise on January 1, 2000, our babies will be the first to be born into a new millennium... Fertility Associates, said while only 8 or 9[% of mothers] delivered on their due date, conception on April 9 would give the best chance of a New Year’s baby through spontaneous labour. None of [their] clients had yet asked for help to conceive a millennium baby. And those looking at helping nature offer a baby on January 1 will face ethical issues of opting for a Caesarean and staffing problems as medical professionals eye up a holiday. The general manager of National [Gal’s] Hospital... did not think it was justifiable to use public money to fund elective Caesareans at “three seconds after midnight.” [However, if] people wanted to pay and the baby had reached full term, it might be another matter... [The] chief executive of Wellington maternity services provider Matpro... [recommends booking] a midwife before getting pregnant and to prepare for a home birth... There have been suggestions that [some people] may fly in from overseas to have their babies here.

...IT started out as a cute idea. Now, so many couples hope to deliver a child at midnight on the millennium that Beijing is urging them to think again. The rumour started circulating in December: babies born just past the stroke of midnight on January 1, 2000, would win prizes, perks, even a “passport” from the W[HO]. Soon the notion of having what the media dubbed a Century Baby took off... But officials of the WHO do not issue passports and were not terribly amused. The prospects of a sudden baby boom would hardly advance their efforts to control the global population. Even as they denied the rumours, promoters around the world came forward with real offers. Millennium babies will win a car from a newspaper in Russia, and 100 francs from local authorities in France. Couples from Beijing to Paris are already aware that the best time to conceive a Y2K kid is on about April 9 – an evening the British press has dubbed “bonk night.” Only in China, what started as a silly rumour has put superstitious parents on a collision course with officials, who fear that even one hyperfertile night could end up overwhelming delivery rooms, crowding schools and generally aggravating the burdens of the world’s largest population... The political bosses have softened enforcement of the “one-child” policy, first imposed in 1979 and implemented by workplace overseers who charted menstrual cycles and forced sterilisation or abortion on [people] caught trying to have a second child. These days Beijing emphasises education, and allows rural parents to have a second child if the first is a daughter. It also does what it can to censure Chinese parents who have resorted to aborting, abandoning or killing baby girls to make sure they have a [boy]... But the concern is that parents are turning the harsh legacy of family planning into a new, millennial end. The *Beijing Youth Daily* reported... that a 27-year-old... has sought out an abortion [in order to] try again – this time for delivery on the morning of January 1, 2000. Soon the media was reporting new rushes on abortion clinics in one city or another... Unfortunately for China’s family planners, midnight on January 1 is not the... best opportunity for superstitious mothers. The most auspicious of 12 lunar cycles in the Chinese zodiac is the Dragon, and the next Year of the Dragon begins on February 5, 2000. Instead of trying to bear a child on January 1, 2000, in the middlingly favourable Year of the Rabbit, many... couples are now expected to try for a “Dragon Baby.” “The year of the Rabbit is not a great year – so why risk it?” said one WHO official, “especially since the year of the Dragon is the best for having babies.” What could promise a brighter future than a millennial Dragon Baby? A millennial marriage, with a Dragon Baby, too. Plans for weddings at midnight on January 1 are well advanced in various Chinese cities, including ceremonies that will unite 2000 couples in Beijing and 5000 in Shenzhen. Chinese entrepreneurs see “immense commercial opportunities” in these mass weddings, according to *Securities Times* online, which noted that one firm has registered the name “millennium wedding destiny” for a line of cigarettes, clothing and souvenirs. Promoters declare that a “thousand-jubilation dragon year” such as the one coming up won’t happen again for 3000 years.

...PICTURE THIS. The year is 2017... [A US talkshow host] shuffles around her enthusiastic inter-galactic audience with typical aplomb. A sullen, angry teen sits alone on stage... staring into space. The title of the show? My parents made me the millennium baby, and ruined my life. It may be a prophesy tinged with the desperate hysteria of daytime talkshows, but few would-be parents are tuning in to take it seriously. And why should they? As far as potential ‘mummy and daddy millennia’ are concerned, crystal balls are not currently high on the list of required anatomy. “I think it’s all good fun,” laughs [a spokesperson] from Fertility Associates. “There’s no harm in it, and the likelihood of anyone who’s trying to have the first baby on January 1 actually succeeding is extraordinarily small. One of the wonderful things about biology is it just happens. When

you try and make it happen on purpose, you almost invariably fail. Going about it as scientifically as possible, a [gal] ovulating on April 9 will have about a 20% chance of conceiving that day..." But a quick surf on the Internet reveals 'baby 2000' fever in all its nappy-clad glory: websites clogged with contests, advice on building 'sperm-friendly' environments, a Millennium Conception Kit (including candles and massage oils for only \$95) and chatrooms filled with clucky hopefuls known only as 'wannagirl2' or 'babybmine'. It's enough to make you take your menstrual cycle into Cash Converters. But [a] social psychologist... believes there may be more to this 'rugrat race' than meets the eye. "Is this about being 'first' or being 'special'? Because I'm not exactly sure they're the same thing. While there is glamour and guaranteed media attention associated with success here – and how else do ordinary people get that kind of attention? – I get the feeling that people imagine this would be a special child, somehow blessed or better equipped to thrive than a child born in 1999." While leading scientific minds have already ruled out the possibility of the millennium baby being born wearing matching red underwear and cape, in light of the current fuss, [the psychologist's] claim is hardly ridiculous... [A] breakfast DJ... is the driving force behind Auckland ZM's 'Big Night of Love', an event offering 100 couples the chance to buckle themselves into a top hotel for 24 hours... "...It's not a silly radio prank, it's actually something with a really nice spirit to it. So far only the... head of the Christian Heritage party, has come out opposed to it..." [The DJ] hasn't been tempted to join the action. Yet. "I'm not in a relationship right now, but one guy from Te Awamutu has offered himself as a 'stand-in' in case there's any fights... [B]ut I don't perceive any problems. We have entertainment planned for them, and I'm going to bring Scrabble along in case anyone gets bored." ...Like the rest of the world[, Users]... are hard at it to be the first to conceive – even stealing [the DJ's] idea... In Washington... [a] radio show is hosting a contest on April 9 and footing the bill for 10 married couples... One Norwegian town plans to hold an "erotic week" to encourage couples to try to conceive... A British television network reportedly touched off protests from church officials with its plans to track couples through Baby Race 2000, and ethical debates are raging on the Internet about the quest for a millennium baby... Ironically, the exhausted winners of 'millenniumania' may discover hospitals – just like the suddenly blank cockpit of a 747 or a portalo queue in Gisborne – may not be such a great place to be when the clock rolls over.

...EVERY portalo in N[Z] has been booked for Gisborne late[r this] year, claim the locals... Gisborne has beaten off all pretenders to be recognised as the first city in the world to see the sun rise on January 1, 2000... Most available beds in the town have been booked for the past two years. The showgrounds will be turned into a giant tent city to accommodate the 9000-strong worldwide First Son religious group that put a deposit on the venue three years ago. There are plans to construct a major hotel... "[This] year will see an amazing lift in Gisborne's economy... The town is being jazzed up. More trees are being planted, the city's three bridges have been lit with multi-coloured lights. Even the town clock has had a facelift."

...The east coast's laid back surfing city is gearing up for an influx of visitors... The population is expected to more than triple... Visitors who can't find rooms or who balk at high prices may be offered cheaper accommodation by local Maori. The Ngati Porou Millennium Committee is working out how the tribe will welcome the new century... Mt Hikurangi is the spiritual mountain of the Ngati Porou people. Within the area are around 50 marae and they are likely to be approached by the committee to get their response to opening their doors for visitors. About 30,000 people are expected at each of two music festivals: the one-night Odyssey's End party at the local stadium and the three-day Te Kowhai festival 15km out of Gisborne. Other events include... a tall ships festival, motorcycle, caravan, cycling and hotrod rallies; yacht races, a triathlon and a cavalcade led by 22 teams of bullocks which will travel to the East Cape lighthouse.

...WOULD you pay \$1000 for a motel unit in Gisborne for the millennium? It is new, sleeps 14 people, has a kitchen, large spa bath... and cable TV, too... is within walking distance of N[Z]'s party of the century[, and]... usually goes for \$55 a head. [M]arket forces... have hit Gisborne motels with all the subtlety of a cyclone. A storm of publicity broke over the East Coast town when the [NZ] *Herald* reported that a room was offered for \$900 a night. Within hours the Minister of Tourism... whose Government has championed the ability of "the market" to get things right, was warning moteliere against ripping people off. But local motels are struggling to decide what is a fair price for the town's 3000 beds when there are an estimated 180,000 visitors due to arrive to see the sun rise on January 1, 2000... Some... Auckland[ers] wanted accommodation at any price.

...Gisborne is poised to lose its airport's full air traffic control service. The Airways Corporation and Air N[Z] say the service is too expensive and want to pull the plug... But the Civil Aviation Authority has ruled the airport must have the full service to cater for the influx of millennium revellers. One solution may be a temporary return to full air traffic control over the end-of-year period. But[the] Gisborne Airport manager... said that was a costly option and no-one yet knew for sure how many party-goers would fly in for the millennium. "It's like crystal ball gazing in a dirty river. We've got no idea who is coming... If full air traffic control is withdrawn, it has the potential to be a major headache. It could also be difficult re-establishing a full service all over again – everything from staff training and operations. How much time would we have to do that and who would pay for it? There are so many variables. It puts everybody under a lot of pressure." Air NZ and the Airways Corporation want to replace the existing air traffic control with an alternative system known as Unicom. Declining passenger numbers and a six-fold increase in charges for full air traffic control facilities are behind the combined move... [In addition, to] satisfy safety standards... so that it can take 757 wide-body jets capable of carrying more than 200 passengers... the runway needs to be extended by 140m at a cost of up to \$900,000.

...Police planners expecting 150 extra personnel in town for the millennium thought they had their accommodation problems solved when they got an offer from the Gisborne Children's Health Camp. "On paper it looked great... Dorms, showers, kitchens the lot... but... the... beds are short, the toilets... half-size, the shower heads come up to the average cop's navel and there are no shaving mirrors." [The police are] still considering the offer and the cost of trucking in proper beds and improving the ablutions... It is disconcerting that more financial assistance has not arrived for a city which has had a bad economic run from the downturn in forestry and agriculture and the shutdown of industries based on rural activity. The Gisborne District Council has only 19,000 ratepayers yet they are carrying a \$3 million-plus cost for a party for the rest of N[Z]. The... mayor... is concerned but also cautious about criticism at this stage because [it] remains hopeful of outside assistance. The Department of Internal Affairs has consulted with Government agencies about infrastructure costs although as yet there are no firm figures on the table... "To be fair we haven't hounded [Government] as yet but that's not too far away. We need help and... assurances we'll get it." An example is power supply. Gisborne has only one transmission line through the hills from Lake Waikaremoana. If that should fail, or there are intermittent disruptions – and the three electricity agencies serving the region... give no unequivocal guarantees – it could be disastrous... The effects on 35,000 people would be bad enough – on more than 100,000 impossible. So as a precaution the council is advertising for tenders for temporary standby generators to be sited at pumping stations. But should it be required to pay? [The mayor] believes not – "it's the suppliers' responsibility and we've got to negotiate that in the very near future." The N[Z] Millennium Office, based in Wellington, is not authorised to contribute one cent for civic infrastructure, yet it has set aside \$1 million for Gisborne's dawn event celebrations... In addition, the office has committed \$400,000 to support greeting the sun at Mt Hikurangi, which... along with the beach scene, will be part of TV3's internationally televised coverage. The bureaucratic argument is that Gisborne stands to make a lot of money... [-] \$3 million a day... working on a conservative 60,000 visitors spending \$50 a day... [B]ut commercial undertakings do not provide the bulk of the council's funds. They come from the ratepayers who are billed on average between \$1200 and \$1300 a year... Gisborne residents are in two minds about the event. They are happy to be the centre of international attention but some are dubious about the impact on their pockets if there is no proper recognition from central Government that Gisborne is funding the nation... The impact of the event on daily life in Gisborne and health and safety precautions will be detailed in a millennium booklet. It is expected that simple things like jumping in the car to drive to the dairy for bread and milk will be virtually impossible because of congestion... [T]he three highways in and out of Gisborne can carry a daily maximum of 5000 vehicles according to Transit N[Z]. It's expected about 40,000 vehicles will be in the city for much of

the celebrations... Telecom is increasing capacity in and out of Gisborne by 65[%], including four new cellphone transmission sites and looking at bringing in additional temporary, trailer-mounted mobile sites... "Then there's the weather. What if we get a cyclone (the Weather Office says there's a 15[%] chance). Can you imagine hundreds of campers with tents flattened and flooded and nowhere to go..." ...[In related news, a] Northland waka builder has been given permission to chop down three kauri trees to build a double-hulled canoe for the millennium celebrations. The two live trees, with trunk diameters up to 1.5m, and one dead standing tree would be taken from the edge of an old logging track in the Herekino State Forest... The Director-General of Conservation... said the decision to allow [the builder] to take the trees, which were hundreds of years old, from a conservation area had been carefully considered. "In this case we are talking about helping to continue the now-rare art of building a double-hulled waka from traditional materials." ...[the builder] would use the waka to educate young people in voyaging and the navigation techniques of his Maori ancestors. "These waka are to Maori what sailing ships like the Endeavour are to European history." The approval was not intended to open the floodgates or set a precedent; rather the project was a one-off with national and international significance. [The director-general said it] had mixed advice on the application, including opposition from the Northland Conservation Board... The... [builder] was relieved to finally gain approval... [after] asking for kauri since 1994 when [his request] was turned down by the then Minister of Conservation... but now... had to move fast... "It's a bit late and I might not have it ready for Gisborne..." [When the 'plans of four tribes to build ocean-going canoes for a millennium celebration were stymied by bureaucratic delays back in Sept, 1997, the builder – whose traditional voyaging canoe Te Aurere sailed to Hawaii in 1995 – said it was now too late to fell the kauri trees needed for the canoes']... The 66-year-old plans to sail the waka... – with the double-hulled Te Aurere in support – to New Caledonia for the eighth Pacific Festival of Arts.

...the... western tip... of Savai'i, Samoa's... enchanting... island... will be the last place in the world to see out the millennium... [– arguably an appropriate honour for the nation whose name means 'sacred centre of the universe'. 'A committee representing 12 South Pacific countries has accepted the Samoan claim to be the last place to say goodbye to the 20th century. Samoans are hoping that being behind the times will be a money-spinner. As the rest of the world nurses a giant New Year hangover, Samoans will still be living in the previous year. They want tourists to come and see out the old. The South Pacific New Millennium Consortium – formed to discuss ways to make the event profitable to the region – also agreed that while the first stroke of midnight on December 31 would occur in Tonga, the height advantage of Gisborne and the Chathams would give them first sight of the sun's rays on January 1'...

A] RUSSIAN state will enter the millennium 10 minutes before the Chatham Islands and a N[Z]er will market it to the rest of the world.[The] First Light founder... has approached the Russian government for rights to the last millennium midnight when the state of Chukotka will enter the year 2000 two minutes before Tonga... "It's going to come as a bombshell, but a fact is a fact..." said [the founder]... However, the Chatham Islands would still be first to greet the first millennium sunrise because in Chukotka it got lighter later as it was the middle of winter... [The founder] hopes to market the Chatham Islands sunrise and Chukotka as a millennium double[, and]... plans a feature event where two people would stand on the dateline in the middle of the frozen Bering Strait and shake hands. Temperatures are expected to be around -15°C. "I want a Russian... and someone from Alaska... shaking hands. With the ending of the cold war between Russia and the U[S], the shaking of hands across the dateline will be a symbolic gesture for peace and reconciliation in the third millennium..." The event will be illuminated courtesy of satellite reflected sunlight[(although this artificial sunlight – which has more in common with moonlight – 'will only operate for bursts of a few seconds' and 'illuminate a 3 sq km area'). Editor's note: 'Morioris, the original settlers in the Chatham group, were for several centuries among the world's most isolated people, limited in their ability to venture into the ocean because of the lack of trees on the Chathams. They were decimated by an invasion from the NZ mainland in 1835...

2000 Morioris were living on the Chathams when they were discovered in 1791, and they were at the Archaic stage of Maori culture – hunting for and gathering their food. They were victims of Maori aggression throughout the 19th c. and, because of this and other causes such as disease, the last full-blooded Moriori is said to have died in 1933. One early theory claimed that Morioris were already settled in NZ at the time of the Maori arrival here, and were driven to the Chathams by the more aggressive newcomers. It is now commonly held that the Chathams were settled from among the South Is Maoris.'

... 'After the battle of Haowhenua – which had stemmed from rivalry for lands in the conquered south-west coast region of the North Island – Ngati Tama and Ngati Mutunga, fearing further aggression, decided to emigrate to the Chatham Islands, reported to be inhabited by a peaceful people. They commandeered the brig *Rodney* at Port Nicholson (Wellington) on Nov 5, 1835, and in two trips transported 900 adults and children plus supplies and canoes to the Chathams. The native Chatham Islanders or Moriori had already been decimated by contact with European diseases and by the loss of their staple for food and clothing, the fur seal, the work of European sealers. Now it was to happen again; those who resisted the invaders were killed. The survivors retreated to the bush and carried on a guerilla campaign; many died from starvation, but there was intermarriage and some Moriori settled in NZ when some of their conquerors returned there. In 1861 the Chathams population included at least 160 Moriori and some half-caste Maori/Moriori.'

...A feud between Moriori factions could lead to around 300 people who consider themselves Moriori having their ancestry claims rejected... thus [causing them to] miss... out on fisheries income and Treaty of Waitangi settlements... Moriori people, believed to number 2000, are saddened that the dispute has flared so soon after the Waitangi Tribunal found that they, and not Maori invaders, had ancestral rights to the Chathams.

...The Crown must pay Chatham Islands Moriori compensation for appalling, brutalising slavery under their Maori invaders, the Waitangi Tribunal has recommended... in a long-awaited re[port]... Its failure to stop the slavery, imposed by two Taranaki iwi who invaded the Chatham Islands in 1835, was a breach of the Crown's obligations under the Treaty... The tribunal found that the Crown knew of the plight of the Moriori... [– who] were forbidden to marry or to have children[–] ...but... did not intervene... Among the [tribunal]'s main findings were that the Native Land Court adopted criteria set by the Crown that... award[ed 97%] of the land to Ngati Mutunga and only 3[%] to Moriori... A... princip[a]l... claimant... the chair[perso]n of the Moriori Tchakat Henu Association of Rekohu... [– who is a descendant of t]he last known full-blooded Moriori, Tame Horomona Rehe, also known as Tommy Solomon... [–] described the report as "a beacon lighting up our future."

You know there's different ways and different days... like the moon passing through a phase Time will come for a change Brand new sun will shine its rays World will turn and begin to learn... South-Sea shores can not be ignored... What was before is opening doors... - Light Of The Pacific

Do the people who await the coming of a Messiah expect it to be light-, medium- or *dark-skinned*?

Was Jesus dark-skinned? ...*Son of God*, a new documentary television series co-produced by the B[BC], considers the... question... in its attempt at a scientific investigation into the Messiah of Christianity. For the series, a computer-generated image has been created to suggest what Jesus' face may have looked like. The result is a dark-skinned, curly-haired [guy] with a round, robust face and a stout nose – a sharp contrast to the fair-skinned and fine-featured image familiar in European art since medieval times. The new image was created by a forensic artist at the University of Manchester using... a... 2000-year-old skull... from Israel. Cues on hair and skin tone were taken from frescoes of Jewish faces painted in the third century... The idea of a darker Jesus is becoming more accepted by Catholics – a dark-skinned Jesus was selected... for a special millennium-edition of the American weekly, *National Catholic Reporter*. The series goes beyond the skin-tone question... It also questions whether Judas betrayed Jesus to the Roman authorities, suggesting that a mistranslation could mask the fact the Jesus worked with Judas to provoke his own arrest.

Do the people who await the coming of a Messiah expect it to be racist, sexist, elitist or somebody who loves everyone?

...Lord we don't need another mountain there are... enough to climb... we don't need another ocean... [or] another field... what the world needs now is love... not... just... for some... but for everyone...

LOVE IS A... [field study for] psychologists, a preoccupation of teenagers, and the gift of doting grandparents. There have been more books, songs, and poems written about love than perhaps any other single subject. It is necessary for physical and emotional growth, and essential for mental health. Yet despite its importance and the volumes written about it, there seems to be little agreement as to exactly what love is. Sir Walter Scott claimed, "love is heaven," while Shakespeare said, "love is blind," and Conrad Aiken stated, "love is bitter." In recent years, love has been defined as everything from "a warm puppy" to "not having to say you're sorry." Perhaps... John Masefield summed it up best when... the late English poet laureate... wrote, "we make Love what we choose." It might be likened to a Rorschach ink blot that looks like something different to everyone who views it. Less romantic but equally significant, a large number of people... act as though love is a commodity that can be bought and sold.

There is a widely held belief that the price of deeply understanding the complexities of nature is paid out in the currency of alienation... an inverse square law exists, it is said, between... genius and... capacity to love... Isaac Newton is pointed to as the most dramatic illustration of this theorem...

If it is assumed that the Messiah will *be an improvement on* Newton (r:1146, ln32), the Messiah could be both a *genius* and have the *capacity to love*. But would a Messiah know everyone – as Christianity suggests – and, if so, is it valid to expect a Messiah to love *everyone*? EVERYONE includes people who might not want to be loved, or are unlovable because they have a manner which is, selfish, moronic or evil! It is okay to CARE ('feel concern or interest') about everyone but, much like it is stupid to hate people you don't know, it is pointless to LOVE (feel 'warm liking or sexual passion' for) people you don't know.

If a... [person] loveth not his brother who... [can be] seen, how can [that person] love God whom... that... [person] hath not seen? ...If we love one another, God dwelleth in us, and his love is perfected in us. - THE FIRST EPISTLE GENERAL OF JOHN

Do the people who await the coming of a Messiah expect it to worship or *love God*, and do they expect to be able to worship the Messiah?

...all fall down before the... one... [who] eclipses the sun Prostrate yourselves before the new Messiah... there to [be] idolised by all for all time...

While [Jesus] spake these things unto them, behold, there came a certain ruler, and worshipped him... And, behold, there[also] came a leper and worshipped him... Then they that were in the ship came and worshipped him... [Next] came to him the mother of Zebedee's children with her sons, worshipping him... Then [another person] came and worshipped him... Thou gavest me no kiss: but this [person] since the time I came in hath not ceased to kiss my feet... [Whoever] loveth son or daughter... [or] father or mother more than me is not worthy of me... And when I had heard and seen, I fell down to worship before the feet of the angel which shewed me these things. Then saith... the Spirit... of the Lamb... unto me, See *thou do it* not: for I am thy fellow-servant, and of thy brethren the prophets, and of them which keep the sayings of this book... Bear ye one another's burdens, and so fulfil the law of Christ. For if a [person] think himself to be something, when [really that person is nothing, that person] deceiveth himself. But let every [person] prove his own work, and then shall [every person] have rejoicing in himself alone, and not in another. - New Testament

Let every [person] be respected as an individual and no [person] idolised... For the most part I do the thing which my own nature drives me to do. It is embarrassing to earn so much respect and love for it. - Einstein

...for many around the world it was Mahatma Gandhi who... symbolized the true meaning of freedom and independence. "People would try to touch Gandhi's feet in respect. [Gandhi] never allowed that. [Gandhi] said don't bow before another person..."

The Nine Billion Names of God.

According to... Edward S. Deevey... 36 billion... *Homo sapiens*... must have come and gone through the 3000 millennia before... [they first] appeared in the fossil record, [another]... 30 billion primitive people lived and died before the agricultural revolution that came at the beginning of history, about 100 centuries ago[, and]... the number of people that ever lived in these 100 centuries was about 25 billion. By 1600, the world population [– which 'around the end of the Stone Age in Europe (about 7000 B.C.) stood between 5 and 10 million'; 'in 4000 B.C. was estimated at no more than 100 million; and had doubled by the birth of Jesus' –]had increased to about 500 million... Since 1600, another 15 billion [humans have] come and gone.

The previous dozen or so pages don't prove anything about the Messiah, but they do show that lots of different ideas exist about what a Messiah will be like, and how, when or where a Messiah will come. A Messiah could satisfy none of the ideas, just one, or a combination of two or more complimentary ideas. Indeed, the large number of different ideas creates an even larger number of possible permutations, of which the Messiah only has to satisfy one. Theoretically, the larger the number of permutations an event has, the greater the probability of that event occurring. The odds of a Messiah coming today would be about 1-in-6 billion, but if the total population of human history is taken into consideration, the odds may be at least 1-in-100 billion. In other words, there have now been over 100 billion chances for the event to happen once (and the number of chances increases every day)!

Not everyone who lived in 1997 was waiting for the Messiah to come and, if the Messiah was to come, not everyone is likely to be pleased (e.g., people who are about to die via disease or old age; people for whom the coming of a Messiah would disprove the basis of everything they have ever believed in).

[The director of *Jesus of Montreal*] is, in essence, working the well-worn idea that if Jesus were to come back today, the same thing would happen to him all over again. Except that what [the director] seems to be saying is that Jesus actually does come back or recur, constantly; that [Jesus] was a particular type of extreme personality recognisable to us all, and that the historical Jesus was probably just another of these characters, accidentally promoted after his death in a way which [Jesus] himself would never have imagined possible. [Such]Jesuses are simply those idealistic and completely committed people who turn up in our lives from time to time and make us uncomfortable and briefly aware of the compromises we have made for the sake of a quiet and "reasonable" life. And if they lean too hard on the wrong people, as they so often do, they get hurt.

[In the film] *Touch... Juvenal*... is a modern Jesus Christ. His touch can heal. Although [Juvenal] does not fit the saintly mould ([Juvenal] has sex), when news of his miraculous powers leaks out, everyone wants a piece of him. Bill Hill... an evangelist forced to sell cars since... los[ing] his church,

believes there is good money to be made in Juvenal's gift and... wants the saviour on his payroll[(Juvenal could heal the sick fulltime – there would be a never-ending demand to exploit economically – and when Juvenal gets sick of healing the sick, Juvenal can heal himself!)]. Hill persuades Lynn Faulkner... a baton-twirler with his former church, to infiltrate Sacred Heart, the alcohol rehabilitation centre where Juvenal is working. But the plan goes askew when the couple decide they want to get to know each other better – including the Biblical sense. But Hill is not the only one chasing the good shepherd. August Murray[, a]... fanatical leader of an ultra-conservative group that wants to put the Roman back into Catholicism, sees Juvenal as a sign sent from God to turn his small band of followers into a national movement. But [Murray] has a problem with Juvenal's love life and believes a loaded gun is the way to straighten things out.

...*The Second Coming*... [is about] a Salford video shop worker who goes missing... after a night out with friends, including Judith... a [gal it]'s always fancied. Forty days later, Steve turns up – declaring himself the Son of God. Fine, you might say. A drama about some eccentric, believing himself to be the Messiah. What could be offensive about that? The thing is, [Steve]... is the Son of God, this is the Second Coming, and if the world doesn't listen to him there will be Armageddon... “I first had the idea for this eight years ago. It started with an image, which I never used in the end, of the sights on a rifle. They look like a crucifix and I thought that if the Son of God came back to Earth now, [it]’d be shot rather than crucified...”

...In [a NZ director's] debut feature film, the alienated Wellington street-kid Grace... is taken in by the unemployed carpenter Gerald... who feeds her, gives her a roof, provides pleasant companionship – and then tells her [Gerald is an alias for] Jesus Christ. *Saving Grace* explores all the major possibilities of this situation. Gerald could be a benign nutter; or... a dangerous nutter; or [Gerald] could be Jesus Christ.

...Everybody liked Jesus Everyone wanted to hang out with him Anything [Jesus] wanted to do [Jesus did; Jesus] turned water into wine and if [Jesus had wanted to Jesus] could have turned weed into marijuana or sugar into cocaine or vitamin pills into amphetamines[; Jesus] walked on the water and swam on the land[; Jesus] would tell these stories and people would listen... If you were blind or lame you just went to Jesus and [Jesus] would put his hands on you and you would be healed... [Jesus] could have played guitar better than Hendrix [and Jesus] could have told the future [or] could have baked the most delicious cake in the world[; Jesus] could have scored more goals than... [or] danced better than... [anyone;] Jesus could have been funnier than any comedian you could think of... [Jesus] told people to eat his body and drink his blood... But then some people got jealous of how cool [Jesus] was so they killed him But then [Jesus] rose from the dead... danced around and went up to heaven I mean that's so cool...

...if only I could be as cool as you...

...be your own personal Jesus Someone who hears your prayers Someone who cares... Someone who's there...

If everyone could be their own Messiah, there might be no need for a Messiah to come. Is it possible that a Messiah will never come? After all, if their behaviour around lesser personalities (e.g., sports, screen and pop stars) is anything to go by, how would most of the rest of society cope with being in the presence of a Messiah; and how could anyone be expected to cope with receiving the type of attention a Messiah would attract?

Snatched holiday snaps, intimate phone calls, half-clothed princesses – hardly a day passes without the private lives of Britain's rich and famous making public newspaper headlines... Unfettered by the kind of privacy laws enjoyed by France and tempted by a rich diet of scandal flowing from the royal family and an array of pop stars, Britain's press has been warned more than once that it “is drinking at the last chance saloon.” ...But the tabloid press may[finally] have gone too far when it ran three scandalous stories about the royal family, one which turned out to be a hoax... video purporting to show Princess Diana frolicking with her former lover... one... a false story about [her] 14-year-old... [son]'s first girlfriend... and the third was halted by a court order... [N]ot usually known for public pronouncements, [the British PM's wife has] supported calls for tougher privacy rules. “I don't think the public has a right to know everything and be everywhere,” said [the wife], whose family was snapped by paparazzi photographers during their summer holiday in France... [The] Queen made a rare bid for privacy in August when [the monarch] banned four freelance photographers from taking pictures on her Balmoral estate in Scotland during her annual summer break. The same month, Princess Diana, the most photographed [gal] in the world, took out an injunction against a freelance photographer who [the princess] said was hounding her.

...THE photographer branded a stalker by the Princess of Wales says [it] will go to court to fight an injunction banning him from approaching her... insisting [it] was merely a freelance photographer doing his job... In a 1000-word affidavit, the princess alleged [the photographer] had followed her car on a motorbike, hurled abuse and pushed her when [the princess] tried to remove a film from his camera... A friend of the princess said the unprecedented ban was a one-off response to a specific problem, and not the first move in an effort to fend off photographers altogether.

...A newspaper advertisement featuring the Princess of Wales dressed in leather and wielding a whip has sparked a protest by Buckingham Palace, which said it violated a rule prohibiting the use of images of the Royal family for commercial purposes without permission... Meanwhile... Di's enemies have accused the princess of deliberately ruining her mother-in-law's 70th birthday treat – despite ...he[r] latest sacrifice for a seriously ill child from the [Last] World. It was a stunt guaranteed to remove public scrutiny from her cellulite and focus it back on the part of her anatomy of which [the princess] is truly proud – her heart. With TV cameras in attendance, Princess Di... donned a surgical mask, cap and gown and entered the operating theatre of west London's Harefield Hospital... Di... proved [the princess] can do no right in the eyes of her palace enemies, who were quick to query whether [the princess] needed to witness the gruesome reality of heart surgery on the boy [Di]'d helped save. And that's not where the back-stabbing ended. Di's enemies say that in the same week [the princess] publicly displayed the caring side of her nature, the Queen of Hearts put on a private show of the less attractive part of her character... [The] Queen... who rarely gets the chance to eat out like ordinary people, had been looking forward to a special meal... [for a] 14-strong party... at the Waterside Inn near Windsor... But the day before her birthday a British newspaper printed a story revealing the Queen's plans and posing such a security risk that the family was forced to cancel the restaurant booking at the last minute. The name at the top of that story was... the [perso]n who has long been known to be the one royal reporter with a direct line to Princess Di... Neither Princess Di... nor ...he[r] sister-in-law the] Duchess of York had ever been on the invitation list.

...“Despite doing this movie... *The Madness Of King George*, a[nd]... despite doing... TV's *Prime Suspect*... I'm certainly not on any 'A' list... If anything I'm on the 'X' list, nobody cares about me...,” says the o[ut]spoken actress... who... is unrepentant about the controversy [it ha]s caused by publicly calling... Princess Di, whom the Americans adore... “an empty-headed bimbo”... in... a US magazine... “I actually find Di... really nauseating... and half crazy, poor thing. [Di] has an unbearable stress and pressure about her, the likes of which we can't really comprehend. It's compounded especially because [Di] doesn't have any mental resources to deal with life's challenges. [Di]'s incredibly stupid to start with.”

...FOR Princess Di, the news must have been a wonderful... present. Tantamount to a reprieve for a prisoner on Death Row. The Archbishop of Canterbury has announced that the name of the princess is to be removed from the prayer for the royal family in the Book of Common Prayer.

...A British Conservative Party magazine says Princess Di... is damaging the royal family and... asserted that it was time for [the]Princess... to be separated “irrevocably” from the institution... The magazine of the right-wing Conservative Way Forward group criticised Di[s]... “voracious appetite for the privilege and attention” that followed her 1981 marriage to... the Prince of Wales...

The royal divorce became effective on Wednesday, but already the Prince of Wales' business manager... has written to more than 40 of Di's... favourite stores and suppliers to say that after next week [the prince] will not pay any more of her bills... It means that the Princess of Wales will become personally responsible for her own finances for the first time in 15 years. The quick closing down of access to the royal accounts does not seem to have surprised some of the recipients of the letter... "I think under the circumstances it is straightforward book-keeping practice," said... [the] general manager of... the Bond St milliners who made some of the Princess' hats at prices ranging upwards from \$[NZ]1300 each. - 1996

[Princess Di once sold clothes it no longer wanted and used the money to go to the cinema and buy magazines.] Today a sale of 79 of... [Di's] glamorous cast-off gowns sold for more than \$US3 million[, and]... an additional \$US2.5 million was raised from the sale of catalogues and gala dinners... a record price for charity... A blue silk velvet dress Di... wore for a state dinner... at the White House, in which [Di] danced with... the... star of the hit film *Saturday Night Fever*... sold for \$US222,500... a record for a costume... The most controversial dress... was bought by a Scottish collector. The black silk crepe dress Di... wore on the night her ex-husband... admitted on British [TV to having] had an affair... brought in \$US74,000... [(Incidentally,) after the charity auction... [Di's] designer wardrobe would[still] be worth £3.5 million, fashion watchers said. It is estimated that [Di owns another] 95 ball gowns, 176 dresses, 178 suits and 54 coats.[) The chairperson of the]... auctioneers... would phone the Princess in London to tell her of the sale's great success... Proceeds will go to the Princess' favourite charities, including breast cancer research and the fight against Aids... [■ Yesterday, Di knelt] among schoolchildren outside the Hindu Temple in Neasden... to raise money for the Leprosy Mission, of which [the Princess is patron.

...last week came news that 'pictures of Princess Di which were estimated to be worth £1/4 million had been purchased from a schoolgirl for £15,000.' Now rival news groups are offering up to £500,000... in a bidding war over pictures of the Princess... and film producer Dodi Fayed kissing and cuddling on a Mediterranean cruise... London papers, certain that love is in the air for the princess, reported that Di... and Fayed... flew together to Nice in southern France last week where they boarded Fayed's father's luxury yacht... The report said Italian photographers followed the yacht and took compromising pictures of the couple... On the eve of her departure for Bosnia... on a visit designed to high-light the plight of victims of landmines... Di... refuelled speculation [of her being] romantically involved with Fayed by dining with him... Wearing a blue button-through dress and accompanied by one of his bodyguards, [Di] was driven in Fayed's Mercedes to his apartment next door to the Dorchester Hotel. Shortly afterwards, trays of food were brought into the apartment block, owned by Fayed's father... [who also owns] Harrods... The *Daily Mirror* yesterday quoted unidentified friends of the princess saying [Di] has told them: "It's time I started getting a life. Dodi can provide everything I need."

...As... Princess [Di]... embraced landmine victims... the *Sunday Mirror* tabloid splashed a series of pricey pictures of her cuddling... Dodi Fayed aboard a boat in the... Mediterranean. In one, the couple appeared to be kissing. But who could say? Although the *Sunday Mirror* reportedly parted with £250,000... for the pictures by an Italian paparazzo photographer, many were so grainy it was only just possible to make out the two figures... [Newspapers have been] desperate to be first to produce evidence of a new [guy in Di's] life. It is the first time the public has seen the princess, now 36, romantically involved with anyone other than... the Prince... of Wales... But even indistinct photos of [the heir to the British throne's] ex-wife mean boosted circulation figures – the *Sunday Mirror* reportedly printed 200,000 extra copies – and, predictably, some of Britain's other tabloids tried to spoil the big scoop. Most blatant was the *News of the World*, which produced several old pictures of Fayed canoodling with his... ex-wife... It also produced a computer-generated copy of one of the *Sunday Mirror* pictures. [Di's] office has declined to comment on her friendship with Fayed, 41... Yesterday Di... met two boys from opposite sides of Bosnia's ethnic divide to hear how they lost their legs in landmine accidents... When the princess visited [one boy's] family in the village of Klokotnica... his mother... [claimed to have] never heard of Di... and thought some sort of general would be paying her family a visit. [The mother] seemed bewildered by the posse of photographers lined up two-deep in front of her corn plants.

...[a jilted] model... has claimed millionaire Dodi Fayed made love to her by night while romancing... Princess [Di]... by day. In early editions of Britain's top-selling Sunday newspaper the *News of the World*, the 30-year-old [User] alleged the Egyptian playboy shuttled between her and Di... on a recent Mediterranean holiday. [The model] said Fayed... told her [of] wanting her to have his baby during passionate moments on a yacht across the bay from the yacht on which the Princess was [sleeping]. "I was blissfully unaware that the [guy] trying to father my child was setting his sights on Di...,"... [The model] believed Fayed wanted to retain her as a lover even if [the playboy] succeeded in wooing the Princess. When [the model discovered her lover] had been seeing Di... [it] claims Fayed tried to persuade her not to force him to choose between... them, asking "Can't we work this out?" "[Dodi] did not want to end it with me, nor had [Dodi] any intention of giving up... the Princess... The truth is [Dodi] wanted us both,"... [The model] is believed to have earned £200,000... from *News of the World* for exclusive rights to her story. [The model is also] suing Fayed for £1 million for breach of contract, claiming... they were engaged for six months and that [Dodi] effectively broke his promise to marry her by his meetings with Di... But in an interview published in the *Independent on Sunday*, Fayed's ex-wife... says... [the model claimed to have] broken off the relationship with Fayed two weeks before [the model] launched the breach of contract lawsuit. [The ex-wife] told the paper [about bumping into the model] in a Los Angeles restaurant, adding: "[The model] said 'I broke up with him. I've had enough'. But... 'I've kept the ring – I'm no idiot'. The next thing I know is [the model] is on the news crying hysterically and flashing the ring and [talking about] suing Dodi. I thought it very curious." Di... flew to Greece on Saturday with a [gal-]friend for her third Mediterranean holiday in two months. Meanwhile, there were claims yesterday that Fayed has a double, who has caused trouble for him by seducing [gals], offering roles in films to movie stars and running up debts while claiming to be the Harrods heir. The imposter – [a merchant sailor] – was now serving a two-year prison sentence for impersonation in Canada, the *Sunday Times* reported... [By the way, Di wa]s the controversial star of her own street scuffle. The Sun newspaper has pictures of Di... demanding film from[an] award-winning photographer... [who]'d snapped her outside a west-London gym. [Di] then asks a passer-by for help, stands by as [her helper pins the photographer] to the wall and grabs his film... [Di's helper says it] went to her aid because his mum brought him up to be... good.

...A young millionaire who organises parties and balls for the teenage children of the rich and famous [claims to have] turned down "potloads of cash" for pictures of [Princess Di's eldest son] in an intimate clinch with a girl... after Di... begged him not to sell the photos. [The millionaire] promised to keep them safely locked up until the future king is at least 90.

...in a break with... tradition[, Di's eldest]... is to be confirmed by the Bishop of London rather than the Archbishop of Canterbury... Buckingham Palace... rejected suggestions... the decision could be seen as a snub for... [the archbishop], who is currently on a "sabbatical" break... [but] is a leading member of the evangelical wing of the Church of England, with its so-called "happy-clappy" style of worship... "The Bishop of London is Dean of the Chapels Royal so it is entirely appropriate that [the bishop] should be asked to officiate,"... [□ T]he Royal Chapels are open Monday to Friday 9am-4.45pm, adults \$10, under-16s \$2.50... The nave and cloisters of Westminster Abbey are open weekdays 8am-6pm, admission free.

...The Princess of Wales is an increasingly confused [perso]n. That's not only the view of royal onlookers who watched her bizarre antics during her recent Riviera holiday... it's also the astonishing opinion of the [guy Di] has been desperately wooing! Now an insider has lifted the lid about the amazing row that caused the breakup of Di... and [a] Pakistani heart surgeon... and led to her strange behaviour in the past weeks. While [Di] has been snapped apparently having the time of her life... those in the know have been describing Di... as "overwrought and driven crazy" since [the surgeon] gave her a tongue lashing, accusing her in front of friends of having a "warped" personality and being incapable of telling the truth. "Her smiles in public hide a real hurt," says an intimate friend of the couple, who has witnessed their affair from its beginnings more than 18

months ago. Witnesses were amazed at the venom of the normally mild-mannered doctor, who rarely raises his voice and is usually a model of decorum... In a blistering tirade, [the surgeon] called the Princess “congenitally stupid” and added sarcastically that [Di] had the “brain the size of a gnat’s penis”... “At one stage [the surgeon] started imitating her ‘poor little princess’ whine and... fumed, ‘You are not a sweet, wronged [perso]n. You are a sad, deceitful cow!’” Di... retaliated by being seen publicly with[a] twice-married, multi-millionaire Indian business[perso]n... at London’s exclusive Harry’s Bar and Annabel’s nightclub... [The India]n invited her and her boys to holiday with him at his Thai villa in Phuket, [but Di] rejected the offer and accepted one from... the controversial Egyptian[owner of Harrods instead. In January the surgeon had given]... weight to... engagement rumour[s by presenting]... her with a stunning \$20,000 ruby ring – one [Di] has never worn in public – a few weeks before [Di] left for her four-day mercy mission to highlight the suffering of the war-torn African nation of Angola... Just weeks after... [that the] doctor... had a swift change of heart[, bowing]... to family pressure [by breaking] off their engagement... It has left her heartbroken and given her confidence a battering.

...Di... has discovered the one London newspaper that doesn’t regard her as headline material. Publicly reading the *Financial Times*... [while wearing a] Harvard University sweatshirt... heralds yet another image change for the gym-junkie princess... [who looked] quite the intellectual.

...[buy our magazine for your copy of] the... pictures the world has been dying to see... IN THE most sensational photographs ever taken of Princess Di, her... body language says it all: “I’m in love and I don’t care who knows it!” Di said just weeks ago [it was her intention to] shock the world – and [Di] has... Our intimate pictures show Di, at ease with her new, rounded figure, happy to let her swimsuit straps slip... [while sunbathing] beside her lover... Di... looks like a [gal] who is... relaxed, and getting plenty of passion! “I have never seen her look so happy and fulfilled,” says one of her closest friends. “I just pray it lasts.” ...Di met... Dodi at a polo match 10 years ago... [and their] families have always been close... The romance developed last month when Di and her sons... holidayed in the south of France with Dodi and his father... No-one[had] suspected this affair[, so initially] the focus was on Di’s relationship with... [Dodi’s father], a thorn in the side of the stuffy British establishment... There were even pictures of Di hugging [Dodi’s father on his] yacht’s deck... It can now be revealed that on returning to London, Di was whisked away to Paris in a Harrods helicopter to Dodi’s father’s hotel, The Ritz. [Di] slipped into the famous hotel late at night and was taken to the \$12,000-a-night Imperial Suite, with a vast bed that’s a copy of Marie Antoinette’s at Versailles... The Queen[– who once decreed that Di’s name ‘was never to be mentioned in her presence’ –] is said to be “relaxed” about [Di’s new relationship] and wants Di to find a stable union. [The Queen’s eldest son] would be delighted to see Di happily remarried. It would make it much easier for him to... [remarry. His sons] just want their mother to find inner peace. [The] Pakistani Heart surgeon... [– who is] rumoured to have been in love with Di – has also given his blessing... They all seem to recognise Di’s destiny... After these amazing photos were taken, rumours of an early wedding raged, with Dodi flying to Los Angeles to look for an engagement ring. [Dodi] has already bought Di jewellery... The princess has no royal duties after November. If they marry, [Di] would become Mrs al-Fayed, but retain her title as Diana, Princess of Wales. It seems likely they would live at his Beverly Hills mansion. Or they could choose to spend a great deal of their time at the magnificent Paris palace, now owned by [Dodi’s father], but once the home of the Duke and Duchess of Windsor[and ‘30 servants’]. The opulent furniture of the Windsors is now being cleared out and sold and it would be the perfect chance for Di to decorate the beautiful home to her own taste.

...an interview given two months... [ago showed that Di] did not expect to remarry... [Di] doubted anyone would take her on because of the glare of publicity... “...I have so much baggage. Anyone who takes me out to dinner has to accept the fact that their business will be raked over in the press. Photographers will go through their dustbins. I think I am safer alone.” ...Di... also expressed... [regrets about not becoming] Queen if and when her former husband... assumes the throne. “We would have been the best team in the world... I... would have made a good Queen of England... [because ‘I lead from the heart, not the head.’ Furthermore,] I could shake hands till the cows come home. And [the King] could make serious speeches.” ...[however, Di added that her ex] was “a follower,” born to the wrong job. “[The Prince of Wales] would have been so happy with a house in Tuscany, being a host to artists.” ...the *New Yorker*... told... that... Di... was investing all her hopes for the future of the British monarchy in her[eldest] son... “I think it is too late for the rest of the family... I’m hoping [my first-born] will grow up to be... smart...” ...[● Di’s] former private secretary... [–] the latest in a string of royal aides to jump ship... [(Di and her private secretary] parted company... after a row over who should pay for their luxury holidays together[; the secretary]... who earns \$56,000 a year, thought her boss was taking care of the... \$19,000... bill... for their... trip to the Caribbean[– has described]... life at Kensington Palace [as being like:] “...a slowly spreading pool of blood seeping out from under a locked door”...

Surgeons battled frantically for two hours yesterday in a vain bid to save the life of... the Princess of Wales, after a horrendous Paris car smash... Ambulance workers initially managed to revive the Princess at the scene of the accident. But by the time [Di] arrived at La Pitie-Salpetriere Hospital’s intensive-care unit nearly 90 minutes later her heart had stopped. Surgeons cut open her shattered chest... [but three]-and-a-half hours after the accident, they gave up hope. Di... died at 4 am... Her millionaire companion, Dodi al-Fayed, died instantly when the black Mercedes-Benz they were travelling in slammed into the wall of a tunnel... just north of the Eiffel Tower... after being chased through Paris by photographers on motorcycles. The driver of their car, a security agent at the Ritz Hotel, was also killed – apparently after losing control. The fourth person in the car, one of... [Di’s] bodyguards, was injured and freed from the crushed wreckage by rescue workers who cut the roof off... The force of the crash crumpled the roof of the Mercedes to door-high level and pushed the car’s radiator back into the front passenger compartment... It was supposed to have been a romantic evening in Paris... followed by a drive... to a private villa across the River Seine. But the discrete weekend ended in tragedy... Last night world leaders spoke of their grief at the loss of “the people’s princess,”... As the news travelled round the world, people who had come no closer to the “Queen of Hearts” – as [Di] asked to be thought of as after her marriage split – than a magazine cover or television broadcast listened and watched in shock. The world literally stopped – in the same way that the death of John F. Kennedy stunned hundreds of millions of people in 1963... As Britons woke to the news, passing motorists yelled abuse at a posse of... photographers gathered outside Buckingham Palace... Tearful mourners, gathering in small groups under grey skies, blamed the news media for her death. Britain’s racy tabloid newspapers, which have devoted blanket coverage to [Di’s] romance with Dodi this summer, came under attack... “[Di] was such a lovely [person. It’s disgusting that Di] wasn’t just left to live her life... How far do you have to go to get freedom?” Others called for new laws to curb the excesses of the tabloid press. “I think the Labour Government will have to take notice of the strong public outcry to bring the press under control,”... [The] British Foreign Secretary... said her death “would be doubly tragic if it does emerge this accident was, in part, caused by the persistent hounding of the Princess and her privacy by photographers.” [‘The princess once leapt 6 metres off her hotel balcony into deep snow while being hunted by paparazzi during a holiday at an Austrian ski resort.’] In Cape Town, the Princess’ brother... [claimed to have] always believed the press would kill his sister, but... never imagined they would take such a direct hand in her death... It had been a love-hate relationship between... [Di] and the paparazzi who, since [Di] was courted by [the Queen’s son] as a shy 18-year-old, have dogged her life... In Rome the Italian known as “Mr Paparazzo” said [Di’s] death showed there were no longer limits of good taste in his profession but... faulted Di... and Dodi for apparently fleeing photographers. [Mr Paparazzo], aged 72, was the inspiration for the photographer in [the] landmark 1960 film *La Dolce Vita*, which immortalised the genre of photographers who pursue the rich and famous. “...There is a limit where someone should say ‘stop’. You shouldn’t let it go this far,”... Parisians braved the traffic roaring through the Pont de l’Alma tunnel to lay white flowers at the crash scene... The flowers... and asters, lay in stark contrast to the traces of broken glass and rubble which bore witness to the violence of the collision... French radio said at least some of the

photographers[who had chased the Mercedes] took pictures before they helped and one of them was beaten at the scene by horrified witnesses. Four French photographers were arrested and questioned in Paris after the crash. Di... and... [Dodi] had been the focus of frenzied media attention for the past month... Only last week, Di... lashed out in an interview published in the French daily *Le Monde*. "The press is ferocious... It pardons nothing. It only hunts for mistakes. Every motive is twisted, every gesture criticised. I think that in my place, any sane person would have left [Britain] long ago. But I cannot. I have my sons." Now... [her sons], who were due to meet Di... at Kensington Palace today, have no mother... "the boys"... aged 15, and 13 in two weeks, were spending their summer holiday with... [their father] at the royal Balmoral estate in Scotland... before returning to school... [T]hey are reported to be devastated... The princes were born into the limelight but have had a tough childhood, growing up in a royal family far more open to publicity than ever before and with parents whose marital troubles were daily fodder for the tabloids. [The eldest son, who is] second in line to the throne after his father, was his mother's confidant and adviser. [The eldest son] has grown to loathe the paparazzi as much as his mother did. Two months ago, Di... said the photographers got him "freaked out." ...Criticism as the "hooligan prince" when... a young boy for his tearaway antics[the eldest son was recently]... hailed as a future royal star... Tall and slim with a shock of blond hair, [the eldest son] has become something of a heart-throb among teenage girls – recently featuring at the top of polls for the most handsome royal... Living with parents who are unhappy and then divorce is never easy for children. Yet, according to... the *Daily Mail's* royal correspondent... "both boys have emerged as pleasant, polite and well-adjusted." But how they cope without the mother they loved so much will be a much deeper test of their characters... Early today... [their father] was preparing to fly to Paris with [Di's] two sisters on a special jet to bring the body back to Britain... What started out as a fairytale over [the heir to the British throne's] search for a bride had ended so suddenly. Millions of [gals] copied her hairstyles, her ruffles and frills, and adored the glamorous gowns. People everywhere admired her spirit, style and courage. They all listened to her bare her soul and her personal pain on television. For 17 years [Di] brought the common touch and a Hollywood-style glamour to the royal family.

...Di... was a thorough blue-blood. Both sides of her family were aristocratic, and included four direct links to King Charles II and one to King James II. Her father... was directly related to the Churchill family... Little was known about Di... born on July 1, 1961, before her engagement... [when Di] was universally described as appearing to be just another quiet, rather unsophisticated upper-class girl, not a great conversationalist, but with a propensity for laughter... At her prep school, Riddlesworth... where [Di] was sent after her parents' divorce, Di... won prizes, not for the brilliance of her academic work but for being "the girl who tried hardest." Following Riddlesworth Di... attended another conventional girls' boarding school, West Heath... where [Di] led a happy if academically undistinguished life. [Di] attended an exclusive finishing school in Switzerland but returned after only a few months suffering from homesickness. Her father bought her a \$200,000 flat in Kensington which Di... shared with three flatmates. [Di] worked as a part-time cook, then a nanny, and finally a kindergarten teacher[which was her occupation when Di]... became associated with... the future King of England... From [that] moment... every move made by this shy girl has been scrutinised and publicly documented, from the self-confessed bulimia, self-mutilation, the consulting of psychics, and illicit affairs to her vitriolic divorce... If there is one image which captures the complexity of... [Di] and her public life it was that famous photograph taken in India in 1992. Behind her the Taj Mahal glistens – Emperor Shah Jahan's symbol of undying love built to the memory of his wife – and in the foreground [Di] sits alone, her emotional isolation apparent. It was a powerful, emotive image which became a symbol of her estrangement from her husband... Yet there was also the sure knowledge Di... was acutely aware of the message her pose would convey and the public sympathy it could engender. Over the last decade... [Di] emerged as acutely conscious of the power of the media. However, like so many in public life who initially court and charm the press, [Di] discovered to her cost that [not all press is good press]... From the time [Di] first appeared as a blushing ingenue who had captured the heart of the... Prince [of Wales], her shyness was endearing, and her willingness to become part of a British fairy tale reinvigorated the royal family. Twelve years younger than [her fiancée, Di] married him with all due pomp at St Paul's Cathedral in 1981. "I'm amazed [Di] was brave enough to take me on," [her fiancée] said... at the time of their engagement. [The prince] would be even more amazed in later years when [Di] courted the media when it suited her purposes... [The] unofficially sanctioned biography *Diana: Her True Story* exposed her depression and alienation within "The Firm." Her lengthy, revealing television interview in November 1995 was a calculated and well-rehearsed attempt to become "the queen of people's hearts." But they were things [Di] could manipulate. The rest – and it was daily – was out of her control. As her marriage fell apart and media interest accordingly increased, [Di] found herself the recipient of unwelcome attention: her holiday in the Caribbean in January 1993, as [her husband] was moving his possessions out of Kensington Palace, resulted in dozens of published photographs of her frolicking in a bikini. In March the same year [Di] confronted photographers in Austria who were following her and her two sons; five months later in London [Di] shouted at a freelance photographer... "You make my life hell." The litany of woes and intrusions into her personal life continued, notably the "Squidgy" tapes and... photographs of her in [a] London gym, published in November 1993. The following month [Di] announced her intention to bow[out of public life. "I was not aware of how overwhelming that [media] attention would become." In March the next year [Di] was... reduced to tears by photographers' attention while holidaying in Austria. In May [Di] was photographed sunbathing topless in Spain (photographs were subsequently bought by a Spanish magazine, which acquired the right but would not publish). But there was a sense that [Di] was also the architect of her own misfortune... When... [someone] went public with his story of being [her] lover for five years [Di] was reportedly devastated – as [Di] was when an official biography [of her ex-husband revealed the prince] had never loved her and was forced into the marriage by his father. Her fightback came with *Diana: Her New Life*... but [Di] was undone when her infatuation with[the] English rugby captain... was revealed and [Di] was cast as a marriage-wrecker. Her high profile meant her every action was reported: [Di] stood accused of "flirting" in Pakistan, was subject to stalkers, had her credit card refused at a fashionable store in Knightsbridge and was labelled "an actress, a schemer" by the former Archbishop of Canterbury.

...Two of N[Z]'s biggest weekly magazines, which were due to publish stories today about... Princess [Di]... and her lover... have withdrawn copies from sale... Under the headline "You've gone too far, Di...", *New Idea* was to publish a report on an angry... [Prince] of Wales... blasting his ex-wife for flaunting her new lover in front of her sons... *New Idea*... said they had pulled the issue... from the shelves at the eleventh hour... as a "sign of respect to Di... and the royal family" and it would have been inappropriate to publish the article... Although some copies... would have slipped through, letters had been sent to all retailers asking for them to be returned... [New Idea] declined to say how much the exercise would cost. "The most important thing... was... not to do anything that could hurt the family,"... [Gal's] *Day* offered "hot new photos" and "all the intimate details" of Di... and Dodi's affair, quoting a shipmate of the Harrods heir who claimed [to have seen "Di seduce Dodi." ...[Gal's] *Day*... said stores would not sell the magazine today out of respect for... [Di], but it was unclear last night whether it would be on sale later in the week... [Gal's] *Day* has also cancelled all... advertising promoting its scoop photos... All mainstream media changed their regular programming to cover the event. TV One extended its usual half-hour Sunday bulletin to 107 minutes, TV3 screened a... special at 8.30 pm and some radio stations abandoned their regular programmes to focus on the tragedy... TVNZ has shelved a documentary spotlighting... the 25-year liaison between... the heir to the British throne... [and the gal the heir claims to have always loved more than Di] which... was to have screened tonight on TV One. A documentary on a charity auction of the Princess' gowns, *Diana's Dresses*, scheduled to follow[it], has also been pulled. Both programmes have been replaced by a BBC *Panorama* documentary fresh off the satellite from Britain called *Diana: The People's Princess*, which will screen from 8 pm. And the network has dispatched [a presenter (r:p246, ln49)] to London to file reports on the tragedy and its aftermath. [The presenter] is expected to make his first broadcast from the British capital tonight. TV3... has roped in[its] former *20/20* reporter... who left for Britain earlier this year and is temping on BBC World, to provide reports for its... 3 *National News*[which drew 12%] of all viewers for its half-hour news bulletin at 6 pm on

Sunday. [The 2-hour special from 8.30 pm drew 10%]... Sky News attracted... 5[%] of all viewers in Auckland on Sunday afternoon for live reports on the tragedy... Sunday night's *One Network News*... advertisement-free special... garnered the highest ratings of any programme so far this year... peaking at 35[%]... "It would... have been unprofessional to have associated advertisers' products with [Di's] death... TVNZ lost a large amount of money as a result of this decision, but... it was the right thing to do." Meanwhile TV4 said it was unaware until after it had screened that *Whoops Apocalypse*, a film satire on nuclear politics, contained a subplot concerning a fictional kidnapping of the Princess of Wales. TV4... said any connection between the Princess and the spoof, which screened on Sunday night, was "regrettable." ...[Ironically, tonight's] *Inside New Zealand* documentary, *Fame* (TV3, 8.30 pm), looks at how celebrity has changed the lives of local lens-pullers and asks the stars about the perks and drawbacks.

...During her life... [NZ] magazines featured Di... a lot – her picture appeared in the top [3 gal] magazines 267 times this year alone. The[y]... also ran... Di on 25 covers and featured her in 54 articles... [They have helped a] signwriter... fill... 1500 scrapbooks with clippings... [about Di's] life...

The function of any magazine editor is to discern the kind of material his or her readers want, then do the best job possible of delivering it to them. For the *N[Z Gal's] Weekly* in the early 1980s that was a relatively easy task. Readers adored the royal family. They couldn't get enough of the royals, and in particular the gorgeous young... Di... Indeed, with a print run of 300,000, the issue featuring her 1981 wedding... was an all-time best-seller... The arrival in *N[Z]* of the first real competitor in the [gal's] weekly magazine market – the celebrity-oriented *[Gal's] Day* – coincided with the first signs of trouble in the royal marriage. The *N[Z]* edition of *New Idea*, which also featured celebrity material, appeared soon after and within 12 months the three... magazines were locked into a fierce battle for readership. *[Gal's] Day* in particular was – and still is – a bold magazine; exploiting the private lives of the rich and famous is its stock in trade. The royals were by no means exempt. [Di's] marital difficulties proved grist to the mill. Surprisingly, perhaps, the *N[Z]* public reacted favourably. Circulation... rose as a result. This left the *[Gal's] Weekly* in a terrible dilemma. Should we follow the same route? Should we enter the bidding war for the "royal scandal" stories on offer to us from overseas? We couldn't be seen as wimps. On the other hand, in accordance with our readers' expectation, we had traditionally supported the royals. Added to that was our reputation for scrupulous fairness. We decided to take a moderate line. We would feature reliably sourced news stories involving troubles on the royal front but would steer clear of what we perceived to be any form of cruel exploitation. *[Gal's] Day* continued on its merry way. The paparazzi pictures involving... [Di's sister-in-law's] toe-sucking incident provided a further boost to a magazine that was, in circulation terms, by now outperforming the *Weekly*. The lesson was all too obvious. And herein lies the crux of the problem. A magazine must pay its way. Publishing history is littered with instances of magazines that fail to do so and consequently go to the wall. Can an editor therefore afford to take the moral high ground? If the public demands scandal do you give it scandal (provided of course your budget runs to the exorbitant fees demanded for "scoop" stories)? It is said that people get the government they deserve. Sadly, something similar applies to our relationship with the media. As we have seen, however, the cost in human terms can be appalling... When I think of that beautiful, tragic [figure], I remember how... [for] seven years, under my editorship... we cashed in – however mildly – on the details of her troubled life. And I have to admit my conscience bothers me.

...In our shock at the news few have delved beyond expressions of sadness at the loss of the biggest star Britain has ever produced. Yet [Di's] death symbolises vital issues we face at the end of the 20th century and should send a message to us all to engage with our consciences... Di... was not stalked because [Di] supported people with Aids or those who survived land mines. [Di] was stalked because [Di] was perceived to be... [someone] of extraordinary beauty and a leader in fashion. [Di] was stalked because [Di] represents what the world promotes as the myth of pure beauty, an ideal which leads [gals] to anorexia, cosmetic surgery and serious forms of human butchery in an endless search for a myth of beauty which has been reinforced worldwide... The real killer of Di... was the materialism of the late 20th century which is the true motivation behind the beauty myth and which values the price of a lurid photo more than the right to privacy, the adoration of outer physical beauty even when we know the hideous human price this has exacted... Di... has died a martyr not only to the overt causes [Di] supported, but to the hidden deaths of thousands who follow the beauty myth at the expense of their inner freedom, a myth which supports the largest money-earner in the western world behind war and drugs. Ironically, in her death [Di reigns as Di] never could have done on the throne. Her memory has the power to invoke deeper questioning of whether we want to continue to be slaves to material superficiality and what price does this exact on us all?

...The Princess came to visit us only once. [Di] arrived in Auckland on her first big tour with her husband of 21 months and their 10-month-old baby... in April 1983... Back then there was no talk of bulimia, suicide attempts, no hint of unhappiness in the marriage. [The Princess] was still Shy Di, sitting quietly during after-dinner speeches peering up at her husband from beneath a thick, sweeping fringe. We were listening to him but we were watching her. [Di] seemed to be in post-honeymoon bliss and we were on honeymoon with her. For two weeks we travelled through *N[Z]* with them, watching closely. [The Prince] touched her affectionately as they walked about... The walkabouts became a familiar pattern. We trotted behind interviewing people who had just had royal contacts. "What did the Princess say to you?" (No one was interested in what [the Prince] said.) The reply usually went like this "Uh... um... I can't remember. But wasn't [Di] BEAUTIFUL!" Some, with tears streaming down their cheeks, couldn't even manage that. We, the cynical press, thought they were all a bit silly. That was until we met Di... in person. [The first time we met our ruling monarch in person was in 1953 – 113 years after NZers became royal subjects.] At the beginning of each tour, the royals throw a private party for the press. Everyone relaxes and it is all off the record. We stood crammed in a reception room... Without warning, Di... bounded down the staircase with [the Prince, who] went one way [while the Princess] went the other. I was standing with two *Herald* photographers and [a] fellow journalist... The team had been feigning boredom. They would be glad when it was over. Suddenly there [Di] was, looming – all 1.78 metres of her – perfect translucent skin, huge blue eyes, beautiful teeth. Striking. The [guys froze. So Di] and I started to talk – about [her son] and his legs. "Did [the baby] get sunburned in A[US]?" I asked her. "I noticed his legs were red when you arrived at the airport." (Well, what else do you ask a princess when the other members of your group are standing with their mouths open?) Like any new mum, [Di] launched enthusiastically into the topic. "No, no. [The baby's] just learned to crawl and [is] rubbing his legs." This was serious royal news. The heir to the throne had just learned to crawl and I couldn't report it. [Di] and I chatted on about [her son] and her time in *N[Z]* and still the [guys] gaped. And then [Di] was gone. Still the [guys] said nothing, until one of them burst out laughing, pointing at [the other journalist's] left hand. Oozing between the fingers... clutching a wine glass were tiny columns of squashed sandwich, lodged there to free up his right hand as the Princess arrived, arm outstretched... That was the effect [Di] had... At the same party [Di challenged a royal newshound, who was] known for his trademark binoculars which [were] trained on the Princess, about his reports that [Di] spent vast amounts of money on clothes. And how, [Di asked, did the newshound know that Di] sometimes wore thermal underwear? "I have visions of you... lying on the footpath with your binoculars..." It was about then that [her husband's] press secretary, with a deft movement at her elbow, ushered the pink-cheeked Princess out of the room, smiling his best diplomatic smile, as [Di] asked "Have I gone too far?"

...We stood in a forlorn huddle, heads bent, while the fury of [the Prince of Wales's] press secretary thundered over us in the lobby of an Auckland hotel. [The press secretary] wanted to know who in the rat pack, the hard-bitten mob whose members earn a crust chasing royals for British newspapers, had broken the rules in a big way. It was April 29, 1983, nearly the end of the Prince and Princess of Wales' first and [last tour of NZ] together. Earlier in the day we had been at Waitangi watching [the royal couple] take a historic ride in a giant Maori waka. The media were left behind on the shore and two inflatables full of police made sure onlookers stayed clear. It was a moment for [the Prince and Princess] to be away from the crowds and the photographers. But one [photographer], determined to get one over his colleagues, had given... a... Maori... [girl], who

would be riding in the canoe, a small automatic camera to take close-ups. During the journey, the [girl] stood up and started clicking. [The Prince] asked her about the camera and [the girl] quite innocently told him what [the photographer had asked her] to do. The incredulous look which passed between [the Prince and Princess] was enough to reduce the girl to tears, an incident which upset the Princess... more than the dirty tactics. The shy former kindergarten teacher... was learning fast that the... [press has] no rules, no sense of fairness, no manners. And yet no one understands better than the royal family the importance of the press pack. Without them, their tours, charity work, international diplomacy and good deeds would go unrecorded. To a certain extent the press and the palace need each other. [The]Prince... understands that. When the British photographers went on strike during a Wellington walkabout, in protest over restrictions laid down by a media liaison officer, [the Prince] noticed their inaction as the royal Rolls passed by and... moved quickly to solve the problem... Di... loved and loathed their attention. [Di] used them skilfully when it suited her; they reduced her to tears when it didn't... But while the paparazzi may keep their lenses hidden for [a few days while the world mourns for Di], it won't be long before they are defiantly back. Those of us who watch royals from afar may not admit we have bought, or even looked at, the magazine or newspaper which publishes their work. But if [one] was put in front of us, how many will turn away? ...Two [US] tourists... said that as they passed through the Alma tunnel in a taxi they saw the body of a blond... hanging out of a shattered window with her head twisted to one side. Five photographers were within centimetres of the dying Princess taking photos... *Le Monde* quoted reports that photographers had shooed away the first people who tried to aid the victims so they could get unobstructed shots... And as rumours circulate about how much the photographs of the fatally injured Di... and dead Dodi... will fetch – so far, as much as \$US1 million... – it will be only a matter of time before they are on public view, and then the Internet. The editor who writes the biggest cheque is counting on the inquisitive and ghoulish side of human nature which makes us slow and stare as we pass car accidents. Out there is a natural audience which will be shocked at the thought of paparazzi chasing celebrities and then photographing the resulting accident. There were those who were shocked at the photograph-in-death of another 36-year-old glamour icon, Marilyn Monroe, when [her body] was laid out in the morgue, stripped bare of makeup. But it was published; it had a market and still does. According to... [the] executive director of the *National Enquirer* (‘remember, *gossip* is just another word for *news*’), the pictures show the bloody princess and dead Dodi in the back seat of the car wreck. There will be a market, be it in France, Italy, Germany or Spain. If nothing else it will confirm that [Di's] beauty endured even in death... the world's most photogenic face apparently emerged unscathed from the crumpled Mercedes.

...A photograph... purporting to show the dying Princess... in her wrecked car is a fake, French police and emergency services sources maintain... [R]escuers in the picture were not wearing the gear of the French emergency services, and a three-digit emergency phone number appearing in the background was not a French number. The colour photo, distributed on the Internet... and published in black-and-white... by the Paris daily *France-Soir*... was... put together by a group which calls itself Rotten... [Incidentally, a NZ] *Herald* photographer who covered the Paris fashion circuit for six years, says French paparazzi often used motorcycles to pursue their car-bound prey. “That’s the big thing in Paris – because the traffic is very difficult they frequently operate in teams of two, one riding and one sitting on the back with a camera and a flash taking photos through the windows.” ...British newspapers agreed to stop hounding the Princess for a time, “but by the same token they would still buy in pictures if somebody else had them – and... pa[y] big money for them... [Freelance photographers] can earn phenomenal amounts of money... a million [NZ] dollars a year would not be unheard of among some of the elite... and they do it, they chase her hard, because they know there is a ready market for it in the UK. It’s no good the British papers throwing up their hands in horror and saying ‘this is wrong, we shouldn’t be doing it and we are going to give it up,’ while they are still prepared to buy them.” [The NZer], who worked for an agency specialising in celebrity coverage before beginning a 22-year career in British newspapers, said France had strict privacy laws “which the French paparazzi seem to believe don’t apply to foreigners and in particular to British royals. They would not treat French politicians and... celebrities in the way... they have been treating [US] and British celebrities.” ...The... [NZ] soprano... opera star... [who] sang at the 1981 wedding of the Prince and Princess of Wales... [and] had met the couple many times since then... was devastated about the death... “I stayed up all night following the story, I couldn’t believe my ears... I have experienced the same intrusions... When will it be controlled?” ...Ironically, [the]... Auckland squash coach... who used a hidden camera to photograph Di... working out at his London gym in 1993... said yesterday... “I’m very saddened – it was such a tragedy,”... Lawyers for the princess[had] filed for breach of contract but, faced with the prospect of days of cross-examination about her own use of the media, reached a settlement which... required the destruction of negatives and the payment of the princess’ fees, leaving ...h[im] with proceeds of photographs already sold – a figure of more than \$1 million. [‘□ On radio on September 28, 1996, an AUSn psychic – who spoke to Di nine times between February 1994 and this month, said, “I don’t feel Di’ll reach 40. Di’s going to be in the wrong place at the wrong time. Di could be involved in an accident; I feel in a car, connected to Paris or France.”’]

...Di’s] death bears tragic echoes of the car crash 15 years ago that killed another “fairytale princess” – Princess Grace of Monaco... [– the former US] film actress Grace Kelly... Princess Grace’s[youngest] daughter... who was aged 17 at the time, was also in the vehicle[but survived. Grace’s] death cast a pall over the tiny principality. Princess Grace had married [Monaco’s ruler] in 1956 in a marriage that blended Hollywood and royalty.

...[a] Hollywood actor... wants laws to curb press “harassment” of celebrities... “It happens all over the world, and it has certainly gotten worse. You don’t know what it’s like... It is harassment under the guise of, you know, ‘We are the press, we are entitled,’... when people are having a private moment, they should be allowed to have a private moment.” The “substantial” prices paid for pictures of celebrities caused the aggressive behaviour, the actor [(r:p701, ln44)] suggested... Other celebrities are going to violent extremes as they fight back against the paparazzi... In Washington, [the US]President... and his wife... were “profoundly saddened.” “[We]... knew... Di... and... were very fond of her... Our thoughts and prayers tonight are with her family, friends, and especially her children,”... [US] television networks devoted hours of live television coverage to report [Di’s] death and interview people who remembered her. The... Princess had frequently demonstrated her fondness for the U[S] and often visited... [T]he father of Dodi, said the deaths were “appalling and quite needless. The world has lost a Princess who is simply irreplaceable.” In Calcutta, India, Mother Teresa expressed sorrow... “Mother has heard the news and... is very sorry. [Mother] is praying for her and we are all praying for her,” said a statement from the Missionaries of Charity... The U[N] said the world had... lost an important ambassador of goodwill...

The world’s telephoto eye was still watching, but this time there was no shouting and no smiles as the... body of Di... returned to the land [it] might have ruled as Queen... The skies themselves seemed to make way for her arrival, the clouds parting like an honour guard. Once the plane had landed it nudged towards the welcoming party hesitantly as if weighed down by its tragic cargo... Eventually the plane... hatch opened revealing a glimpse of colour, the Royal Standard clinging to the hard, square outline of the coffin. It seemed an unforgiving shape, just a box, with none of the curve or sparkle of the [person] whose body lay within. The silence of the air was cut... by the sound of distant traffic – which rumbled on as if to prove that the clocks never stop, even for the death of a Princess... The bearers of the body inched their way to the hearse. They stood, swivelled on their heels, and clasping tight with their white-gloved hands, lowered the coffin as smoothly as a hydraulic pump. A bit of the flag was still spilling out and had to be tucked in – just like the train of one of [Di’s] more lavish ball gowns... And then, on the final day of August, the sky darkened and the wind whipped harder. It felt like the last day of summer, and the beginning of a long winter.

...Di... will receive a funeral at Westminster Abbey on Saturday befitting her status as the mother of a future King, but not the state funeral usually reserved for monarchs... [There will also] be no lying in state. At the request of both the royal family and [Di’s family], the coffin will lie privately in front of the altar of the Chapel Royal at St James’ Palace until the funeral. The palace is the home of [her ex-husband. Di’s] coffin was moved earlier yesterday to the Chapel Royal, where mourners were being invited to sign a book of condolence... Four books of condolence will be...

accessible round the clock until midnight Friday... “Although there is no lying in state, obviously we want to ensure that as many of the public who wish to share in the grieving,” a palace spokesman said... Invitations would go out to 2000 people for the service. At the end of the service, the coffin... and members of the two families will travel by road to... Althorp, the home of her family... where the body will be interred privately. The route from the abbey will be announced later... [Di’s] millionaire companion was buried just hours after the Paris car crash.

...The Princess... declared just hours before [her death of having] found true happiness with Dodi... and planned to withdraw completely from public life. Confidants said yesterday that they had never known her so content and fulfilled... Calls for tougher laws to safeguard celebrities from media hounding have come from around the world following the Princess’s... death. In France, the Government wants new international laws to protect notables on their own soil and abroad. The French Minister of Culture... said French privacy laws were the strictest in the world but photographs taken in France and banned from publication there were often published in other countries. Anyone taking a picture of an individual in a private place – including a car – without their permission can be jailed for two years and fined up to 300,000 francs... But those fines may be too low and, while the French media needed to follow a code of good conduct, readers had to be aware of their role in buying pictures, [the minister] said. French media have also agonised over whether they bear responsibility for the crash. An editorial in the conservative daily *Le Figaro* said: “Everyone knows the solution. It would suffice for celebrities to renounce savouring glory, for magazines to give up massive print-runs, for the public to stop wanting to see what’s hidden.” The left-leaning *Liberation* ran a cartoon showing two pallbearers about to lower a coffin into a grave packed with photographers. “Okay, one more photo,” says one. “But it’s really the last,” the other adds... In Germany... privacy is protected, though more by precedent than by penal sanction. But judges oversee a law protecting citizens’ “personal integrity,” which means that details of private lives cannot be made public without permission unless deemed strictly relevant to public matters. Photographs are similarly restricted under German copyright. In both France and Germany such laws are rarely infringed, and judges do act to uphold them. In Italy, things have become even tougher for the prying or prurient. It can be against the law to publish certain types of private information even if the public has a clear and serious interest. New laws bar any report of a person’s sexual activity, religion, race or health without the subject’s consent... [K]inds of private dope can be reported without permission when it affects an official’s public activity but not in other circumstances... Italy’s new rules are partly a reaction against what some Italians see as the excessive zeal with which private lives have been exposed in pursuit of recent corruption scandals. But Italians may be right to be cynical about the new laws. Italy had privacy laws before, which did not seem to provide much protection to the innocent. And many Italians are now worried that the new restrictions may make it easier, once again, for crooked politicians to fend off justice. Some European countries manage without privacy laws. In Finland and Sweden, breaking rules on photography and intrusion reporting can lead to prison. But Sweden’s media face few curbs. Still, trespass laws stop journalists entering private property without permission; and, as in Germany, you must not disclose private information that could undermine the subject’s “integrity.” Unlike German judges, however, Swedish juries are highly reluctant to rule against disclosure. The Swedish press, like Britain’s, also has its own code of conduct agreed on by journalists and publishers and watched over by an ombudsman who inveighs against breaches of privacy. The Swedish media generally obey such strictures, partly because they fear that harsh laws would otherwise be brought in... Some legal eagles argue that Britain’s common law – the unwritten principles upheld by courts – already protects citizens’ privacy, but this is contentious: few cases are brought to court... Britain says questions have to be raised about media coverage of the Princess but first the families and the nation must grieve... [Ironically, for] the British newspapers who have been reviled for hounding... [Di], her death proved to be the biggest story of all. Staff of the national newspapers worked through the night to bring out special editions... The *Sun* devoted 22 pages to coverage and tributes, plus a 24-page supplement celebrating her life... In a full-page editorial the *Sun* stated: “Like a candle in the wind, the flame that burned so bright will burn no more.” ...The newspaper made a plea for the Press not to be blamed... “Even the harshest privacy laws... would not have stopped the terrible... event...” it said.

...Stamps carrying the image of Princess Di... sold out in Hong Kong within an hour of her death being announced. The stamps, issued in 1981 and 1989, had face values of \$HK6.50... and \$8.80 but were changing hands for up to \$150 and were expected to soar further... [In local news, NZers] created a huge demand for the wrap-around special edition of the *N[Z] Herald*, which sold out yesterday. As a further tribute... tomorrow’s *Herald* will carry a commemorative portrait of Di... in colour. The portrait... measures 55 cm by 76 cm or the size of two pages of the newspaper.

...Shock and sorrow at the death of... [Di] turned to anger and violence yesterday as *N[Z]ers* vented their feelings on the media. A... photographer was assaulted in Christchurch, some retailers refused to sell the... [*NZ Gal’s Weekly*, which] was the only [gal] magazine to publish yesterday... and Aucklanders telephoned [similar] magazines to complain about articles... Services for those wanting to express their grief... will be held throughout the country... tomorrow... [and] on Thursday... A collection will be held for those who wish to contribute to the charities the Princess supported... People can also sign and write messages in condolence books in the reception area of the British Consulate... or in Government House in Epsom from today. The books will be sent to England after... [Di’s funeral. Last night (NZ time), the] Paris prosecutor’s office said it was determined to discover “the exact unfolding of the facts” that led to the crash... Prosecutors have considerable leeway in considering what, if any, charges to lay against the paparazzi who were in pursuit of the Princess when the crash happened. Even if they are cleared of any direct role, France has a “Good Samaritan” law that makes it a crime to fail to help someone in danger. Charges they could face would include... obstructing a police officer and endangering the life of another person. A special criminal brigade that usually handles important cases such as terrorist attacks was leading the probe... Police are concentrating their efforts on questioning the seven paparazzi... detained at the scene. They have seized... 20 rolls of film... A lawyer for... [Dodi’s] family is demanding... the photographers be investigated for [hu]manslaughter... A bodyguard lying injured in a Paris hospital could be authorities’ best hope as they struggle to reconstruct the crash... The bodyguard... who was sitting in the front seat with Di... immediately behind him, was wearing a seat belt [and] was also protected by [an] air bag... Europe 1 radio said [the bodyguard] had not yet been questioned by police because [it] had not recovered sufficiently from his... head and lung injuries which were not life-threatening... [However, the] former British paratrooper who served in the Middle East and Northern Ireland... cannot talk... His mouth was so mangled his lips and tongue were torn away.

...The last day in the life of Di... was precipitated by a series of errors... The first was the illusion that by leaving Sardinia they could escape their predators... Di... had been upset by events in Sardinia, which at the time of writing remain unclear... [But there] was no escape now on the planet from paparazzi with satellite phones and networks of paid informants, including members of France’s police force. Error... two was worse – Dodi’s decision to place their lives in the hands of a non-professional driver at the wheel of a car which demands skill, especially at high speed... Dodi had... ordered their usual chauffeur to drive one of the decoy cars, making this decision, perhaps, because the driver’s face was familiar to the waiting paparazzi... The third error was the failure of Di... and Dodi to fasten their seat belts... Next came the fourth error. The paparazzi on their... motor scooters were on to their quarry immediately. Dodi was in charge, urged on, perhaps, by an anxious Di... Anyhow, eager to escape the intimidating persistence of their pursuers, Dodi ordered the driver to move fast enough to lose them. Just what speeds were reached may never be known... One witness... driving his car as the Mercedes overtook him... described hearing the sound of the car’s engine shifting into neutral – missing the change, in other words... This was just before the car entered the downslope into the tunnel which passes under the Alma bridge. Another witness... described two thunderous impacts, so loud that [it] thought at first of explosions. One may deduce that the first was when the car struck the central reservation at 150km/h at the mouth of the tunnel. The second would be the car bouncing on to the right-hand barriers, at a lower but still huge speed. Impact No. 3, when witnesses first registered the sound of broken glass and the screech of tearing metal, came when the car struck the 13th pillar supporting the Alma Bridge above. The choice of a bullet-proof car turned out to be a double error. Not only was it hard

to drive, its armour plating hampered rescue efforts. At 12.27 am, the first witness telephoned for the emergency services... Rescuers cut through the reinforced pillars supporting the windscreen before peeling back the roof. This took more than one hour from the time of their arrival on the scene.

...[Di's] last words... were "Leave me alone, leave me alone," the French daily *Le Parisien* reported yesterday. The newspaper, quoting an unidentified doctor at the accident scene, said Di... uttered the words as an emergency medical crew set up strong lights around her and began treating her. Moments earlier, as doctors and other rescue workers first approached her, [Di] said repeatedly, "Oh my God," as paparazzi snapped pictures nearby... "[Di] was very agitated, half conscious." Just after Di... asked to be left alone, the team of doctors lowered an oxygen mask on to her face... After Di... was given blood transfusions and other emergency care, [Di] was put in an ambulance. But the emergency workers ordered the ambulance to go so slowly, to avoid bumps, that the 10km trip to the Pitie-Salpetriere Hospital... took an hour... A further delay occurred when, less than a mile from the hospital, the ambulance crew ordered the vehicle to stop and administered further treatment... The trip took so long that the French Interior Minister... and the Paris police chief... feared the ambulance had become lost en route... ['At that time of night, the drive from the Alma tunnel to the hospital normally takes between 5 and 10 minutes.' By the way, the four] young Maori who performed a haka before astonished mourners outside Buckingham Palace are standing firm in the face of anger at home over their actions... "All we did was pay our respect in the best way we know how." Their performance provoked calls of outrage to talkback radio stations in N[Z] yesterday. Many callers felt the haka had been stage-managed for television cameras, and some were angry that the four were wearing shirts promoting alcohol.

...Disclosures yesterday that the... driver had a "criminal" level of alcohol in his blood... as well as traces of an anti-depressant drug... identified as Prozac... took some heat off the photographers... Judicial sources said a post-mortem test... showed... Mr Paul... had... 1.70 grams of alcohol per litre of blood, more than three times the legal limit... But prosecutors denied widespread reports that the speedometer... was stuck on 196 km/h, almost four times the speed limit. It showed zero... The 2.81 six-cylinder car, which sells for between \$160,000 and \$170,000, had a top speed of about 215 km/h.

...[a Palestinian businessperson] in Kuwait wants... to pay more than \$US1 million... to buy the car... "I like Di... and I want to keep a memory of her,"... But [the businessperson] said the crumbled remains of the 1994 Mercedes S-280 could also prove a good investment that might sell for \$5 m... or \$10 m... in five or ten years... [Meanwhile, the Prince of Wales's] lover... has cancelled a charity ball as a mark of respect for the Princess of Wales... [The ball,] planned... as a fundraiser for the National Osteoporosis Society... was widely seen as a first tentative step into public life for... [the lover] after years spent as an object of press and public scorn... [In another development, the fiancée] who... was dumped by Dodi... in favour of Di... told NBC: "Why didn't we just stay together? None of this would have happened..." ...[the ex-fiancee] has dropped her lawsuit against Dodi...

The high-speed crash that killed [Dodi and Di] has launched a legal tug-of-war that could involve millions of dollars in damages... [The] father of Dodi, joined... Mr Paul's family... [in] a civil suit against... seven photographers... yesterday... and appeared determined to fight evidence that Mr Paul was drunk and speeding... as blame for the Paris car crash turned increasingly towards the car's driver - whom... [Dodi's father employed. A spokesperson] said the family had no evidence that the driver was drunk... [while] a lawyer for the family... said two frames from a photographer's roll of film seized at the crash site showed Mr Paul startled by a camera flash. The film is being held by police and was not made public... Friends and colleagues painted contradictory pictures, some describing [Mr Paul] as a teetotaler and others as a drunk... [who] tried to disguise the extent of his drinking... [by grabbing] glass after glass at Ritz functions and [hiding] the empties behind curtains or pot plants. "Everyone could see what [Paul] was doing but no one in authority ever said anything about it... As... Paul... drank more [Paul] became more embarrassing. It was totally wrong for a member of the Ritz staff to be seen drinking heavily with guests, but somehow Paul got away with it... [S]enior managers... have had plenty of warnings about Paul's conduct. It seems absolutely staggering that [someone] like this should be selected at short notice on a Saturday night to drive the mother of the future King of England. The bosses must have been out of their minds." ...One Ritz colleague said... Paul did not have the special police licence required to drive limousines... while friends in his home town... said... Paul... had a passion for speed, owning a 1100cc motorbike... British papers... carried reports of the former air force officer's life as a bon vivant, a [perso]n who enjoyed whisky after work and boasted of his... working... life... [as] deputy security chief of the Ritz hotel... The *Daily Mirror* printed a front-page picture of Mr Paul smiling and with a drink in hand. A late call asking him to report back to chauffeur Di... and Dodi would have been difficult for his inebriated ego to resist, the paper suggested... The *Mirror*... said... [Dodi's dad] could be sued for compensation by his son's bodyguard... and by... [Di's sons] for the loss of their mother - although this was thought unlikely. Such a claim would depend on whether insurers blamed the crash on the Ritz, said the paper.

...All over London yesterday... people blaming the odious paparazzi for the death of their Princess were jolted on to a new target by headlines which screamed "DI'S DRIVER DRUNK." ...Londoners, their noses in the latest newspaper revelations, broke the unwritten rule of tube travel by speaking to the stranger beside them to lessen the impact of the news... "Three and a half times over, I heard." "Five times, I heard... two bottles of wine." "No, it was whisky. Half a bottle... Lucky the bastard didn't survive. You know what I mean?" But almost as quickly as talk of drunken driving had arrived, the angry mood of the city calmed, and the reality of life without Di... returned complete with sombre undertones. At St James' Palace... mourners queued for up to five hours to enter their thoughts in the condolences book... But there was no blame on blood-alcohol levels or paparazzi here; just the patient silence of the people grieving for a [person] the nation did not really know, but professed to love almost as much as their own flesh and blood.

...To the world, they are Kings-in-waiting. To Di... they were simply "my boys." Now they face a torment impossible to imagine: coping, before the eyes of the world, with the grief of losing their mum... [The eldest] is reported to be insisting[on being allowed to] walk... behind the gun carriage bearing [Di's] coffin on its journey to Westminster Abbey[, claiming]... it is what his mother would have wanted. A senior Buckingham Palace source said the Prince had shown great courage and maturity and was determined to have his say in the funeral arrangements. Church leaders, the royal family and protocol chiefs are working around the clock to make the funeral... a unique and modern event... The... funeral service... will be televised live around the world... to... [an] expected... worldwide audience of 2.5 billion... and[in NZ,] will be carried by [both TVNZ] and TV3. More than a million people are expected to line the route from St James' Palace... to Westminster Abbey... Extra trains will be laid on to bring people to London to pay tribute to the Princess... The day presents a dilemma for 7000 couples. They are all due to get married in Britain on Saturday and an insurance company has offered to pay compensation for services cancelled out of respect to Di... Cricket's NatWest Trophy final... at Lord's has been moved to Sunday and all sports have announced rearrangements as a mark of respect. Leading rugby matches, all horse racing meetings, a boxing world title fight and many other events have been cancelled... [However, Scottish] football has defied the British Government and plans to go ahead with a World Cup match against Belarus[, which]... was apparently willing to play the fixture on another day... Banks and shops will close on Saturday, although one major retailer said it would stay open and dedicate its profits for the day to charities linked with Di... Buckingham Palace said yesterday that an official memorial fund had been set up to take donations for... the... nearly 100 charities... Di... had headed... The Diana, Princess of Wales Memorial Fund would be coordinated and administered at Kensington Palace, her London residence.

...The death of Elvis Presley created a huge market for lookalike impersonators, but the Di... doubles who commanded... fees ranging from about £450... for a couple of hours work to £2000... per day for foreign assignments... might be forced into early, and perhaps permanent, retirement... [A] London celebrity lookalike... agent... suggested it might be... five years before a [Di] could make a public appearance without drawing complaints about bad taste... A rival lookalike... agency... said [its] 15 Di... lookalikes were not only facing no work, but also much grief, because many people in the celebrity double industry developed a strong sense of identity with the star they spent years learning to copy. Before... [Di] died,

her doubles had... appear[ed] at all sorts of social functions... [S]ometimes they were too good. Britain's... *Sun*, was humiliated last October when it published pictures that purported to show Di... frolicking with her one-time... cavalry officer... lover... The "princess" turned out to be a Di... double.

...What will they do without her? ...Di... boasted the world's most instantly recognisable... face... No other media icon... came close... Her image on the cover sold millions of extra newspapers and magazines around the world... But the attractions of this elegant clotheshorse... turned compassionate charity worker did not stop there... Every time [Di] sipped a mineral water, reached for her training shoes or ran for her car, the exposure was worth a fortune in free advertising... The magazine *Majesty* once calculated that Di... generated £14.5 million... worth of free publicity a year for... products... "Like Midas, [Di] helps turn any product or service or store or restaurant... to gold," said the *Independent on Sunday*... Di... was the first to admit packaging was everything. "You see yourself as a good product that sits on a shelf and sells well and people make a lot of money out of you," [Di] said during a heart-on-sleeve television interview... [The author of] *Diana Her True Story*... became an instant millionaire... But those days now are gone. [One media] commentator... told the *Independent*: "...Maybe when [Di's eldest son] leaves school and people write about his girlfriends, [the young prince] could become a [guy] version of his mother. But there is no other figure like her." ...[■] Dodi gave Di] a ring worth £130,000... just hours before the two died... a British newspaper said[yesterday.

...Di's] last gift to the British press... was to send newspaper sales soaring. The top-selling *Sun*... sold a million copies more than its usual four million yesterday, according to industry executives quoted by... its... News International... stablemate... the *Financial Times*... The *Guardian*... increased its usual output by 50[%], the *Daily Express* by 20[%] and its sister paper the *Daily Star* by 10[%]... The sales came despite public anger at the media... As... editors in Germany... rejected calls to restrict publication of intrusive pictures of celebrities, Germany's mass tabloid *Bild* ran a front page photograph of emergency workers trying to burrow their way into the wrecked car... *Bild*, which has a daily circulation of four million, declined to say how much it paid for the picture, which was taken from the rear of the car before it was cut open... [A spokesperson] for Axel Springer Verlag in Hamburg which publishes *Bild* and Berlin's *B.Z.* ...said that the company did not feel responsible for [Di's] death. Asked about the comments made by [Di's] brother... that publishing companies that trade in paparazzi photos had "blood on their hands" [the spokesperson] said: "There has been quite a bit of hypocrisy... in trying to portray prominent people as victims. You cannot close your eyes to the fact that prominent people use the press for their own purposes." Newspapers in Italy... also rejected accusations that the press had bloodied its hands[, and an]... Italian film director... said... "The whole world, even the highest levels of Italian Government, has idolised Di... as if [Di] were a saint, even though her humanitarian work was due to a skilful public relations strategy... It's a shameful scene of general stupidity,"...

Orders to buy the remaining copies of Christie's catalogues for [Di's] 79 dresses auctioned in New York... have soared since her death. The dresses, which fetched \$US3.2 million... are destined to become even more valuable with time, especially since they are her only personal belongings that the public can buy... While a Di... postcard may cost as little as loose change, pieces of limited-edition ceramics commemorating key events in her life are[also] expected to soar. "I have some real nice pieces... Next week I will take them out and increase their prices by 33[%]," said the]... owner of Britannia Past, a store in Kennebunkport, Maine, that sells royalty commemoratives.

...Grim-faced Britons dressed in black mourning attire, are leaving souvenir stores empty-handed... of memorabilia depicting their cherished Di... "Before her death, no one was paying any attention to Di... souvenirs and all of a sudden [Di] has become a hero and we don't have anything left," said... a souvenir store near Buckingham Palace. Since Monday, coffee mugs, plates, key-rings, postcards, "anything with Di... on it is going like hot-cakes." ...And flower stalls close to the focal points of national mourning have been unable to meet an unprecedented surge in demand, as the bouquets outside Buckingham and St James' Palaces have blossomed into deep carpets... The church of St Mary the Virgin was open to the public yesterday afternoon to allow wellwishers to lay flowers against the... railings of the... Chapel where Di... will be laid to rest. [Di] will be buried close to her beloved father... and among 20 generations of her forebears... Hundreds of mourners also paid their respects outside Althorp House yesterday. Police marshalled cars down country lanes, unaccustomed to heavy traffic, while people jumped out of their cars to pay their respects before being moved swiftly on. At the gates of the... 121-room Althorp House... to... [which Di] moved with her family... when... [aged] 14... a sign read: "House closed." Among the flowers onlookers left messages. One said: "For Di... A beautiful Princess who has gone to the stars." ...The overwhelming feeling of villagers was one of extreme sadness, though glad that Di... would be buried at her family home... [But other residents of Di's] home village fear... mourners will flock to their community for decades after [Di] is buried there and... turn it into an Elvis-like pilgrimage... Great Brington, a village of 200 people... is just 1.6km from where... [Di] is to be buried on Saturday after a ceremony in Westminster Abbey.

...Westminster Abbey, the central London church consecrated in the 11th century, is where the 1000-year-old British monarchy has traditionally... [been honoured]. The abbey... lies across a busy road from the Houses of Parliament... and is one of the top tourist sites in London with more than two million visitors a year... [The] Queen and her parents were married in the abbey, as were[two of] the Queen's children... [39] sovereigns have held coronations in the abbey, beginning with the Norman invader William the Conqueror in 1066. The only monarchs not crowned there were Edward V, one of the Princes murdered in the Tower of London in the 15th century, and Edward VIII, who abdicated in 1936 before his coronation... A church has probably stood on the site since the 7th century... Henry III rebuilt the abbey in the 13th century in the French Gothic style which remains today. The abbey was designed specifically for its role... as it enabled the whole lantern area to be transformed into a coronation "theatre"... [17 sovereigns] are buried at the Protestant abbey, along with 12 husbands and wives of sovereigns and a number of their children... Elizabeth I, who died in 1603, was the last monarch to have an elaborate tomb built in the abbey but six further monarchs were buried in the vaults below the chapel... Many other famous Britons are buried or remembered there – the nave has a floor tablet dedicated to war leader Winston Churchill... The last major funeral in Britain, that of Churchill in 1965, took place at St Paul's[, where Di was married.

...Di's] mother... had a strong but turbulent relationship with her... The "fragile" relationship... was said to have deteriorated sharply last May, when... mother... gave interviews to *Hello!* magazine detailing... [Di's] childhood... bulimia and her marriage. At one stage, [Di]... was thought to have contemplated legal action... [Di's mother] (61) lives isolated from the world in self-imposed exile on the remote Isle of Seil, a couple of ferry crossings from Iona, off the west coast of Scotland... [But her] conviction for drink-driving last year was... given extensive publicity. According to a friend of... [Di], the publicity over the court case deepened an already "sulphurous rift"... [but the mother's] parish priest... and a close friend, insisted that at the time of... [Di's] death, the feud had been settled... [However, Di's] death means... the rift between the two most popular members of Britain's royal family will never be healed... [T]he Queen Mother first welcomed her eldest grandson's bride into the royal family and tried to train her in the traditional royal restraint... Now 97, the Queen Mother... turned bitterly against Di] after her marriage failed]... It is a cruel irony for the "Queen M[other] – who once said: 'our work is the rent we pay for our room on the earth' –] ...that Di... the royal rebel, achieved both popularity and accessibility only dreamed of by the other members of the family... Aware that [Di's] overwhelming popularity held dangers for the monarchy, the Queen Mother tried last year to make a public rapprochement... [by inviting] Di... to join her at a royal event as the divorce terms were being worked out. But the[y]... could not even meet one another's eyes... The two had known each other since Di... was a child – her grandmother... was a [gal]-in-waiting to the Queen Mother[, who]... is said to have been instrumental in persuading [her grandson] to wed the demure 19-year-old, who was thought young and malleable enough to be shaped into the perfect, uncomplaining royal wife... [T]he Queen Mother... taught Di... the arcane intricacies of royal protocol and it was at her house that... [Di] stayed on the eve of [Di's] splendid but fated wedding... The[y]... had much in common. Both came from aristocratic, but not royal backgrounds, and had to learn the role to which their husbands had been bred. The Queen Mother... welcomed "the breath of fresh air" pretty Di... brought to the royal family's stodgy image. But her

approval waned as the Princess increasingly chafed at the demands of her royal role... To the Queen Mother, Di... as a royal wife should have borne in silence any problems in her marriage – even if her husband was cold and distant and in love with another... Seeking to limit the damage Di... could inflict on the increasingly unpopular royals, the Queen M[um] fought to persuade the family to keep her in the fold after her divorce... “That way we can control her more,”...

Has everyone said all they want to say about what swine those photographers are? Right then. Now let us look at the other side... We need to cross to Buckingham Palace and go back to 1952 or thereabouts. The new reign is hitting its stride. Everyone agrees that [the new Queen] looks radiant and [her husband] talks blunt salty common sense. And everyone agrees they are bringing... a breath of fresh air to the job. Only a *breath* of fresh air? Golly, it is more like a force nine gale. They are stripping away the monarchy’s fuddyism, opening it up to the common touch, getting close to the people and, though no one is crass enough to say so, milking their popularity for all it is worth. Back in 1952 not everyone agreed that it was a good idea. The fuddies said the Queen was losing control... [R]unning the family business the way George V and George VI did... [meant not courting] their subjects. They were distant and majestic. They sought no popularity, they exacted awe. The Georges froze out tittle-tattle. So the Queen’s uncles were able to lead rackety and disordered lives – and nobody cared because nobody knew. The papers contained no jokes about the Duke of Gloucester’s drunkenness, nothing about the Duke of Kent’s struggle with cocaine addiction, not a word of Edward VIII’s friendship with Nazi leaders. As for Queen Mary, no long lens caught her hand closing over a pretty bauble in a jeweller’s shop and dropping it into her handbag. The [new Queen and her husband] chuckled overboard this benign but kindly, apathetic acceptance of the royal family. In vain the fuddies tried to explain that when you invite praise you license prying and criticism. The fuddies were right. The press gave up fawning and simpering from a distance and started looking more closely. Scandals came tumbling out. Princes and princesses began badmouthing their spouses and chattering about their adultery... Di... and [her husband] at their worst epitomised the British adage that the natural weapon of a [gal] in affairs of the heart is revenge, that of a [guy], indifference. Their private war was not unusual for existing; it was unusual for being made so public and so personal by an institution that has depended on mystery and distance from the populace for its authority... Now that... [Di] has died the British press is baying for the Windsors to unbend more, to hug and weep in public. But – however badly – it has already tried that tack. It may now see the wisdom of a return to a facade of dull and dogged duty and reputations so proper and boring that no photographer would want to waste a stakeout... on them.

...“The royal family have been hurt by suggestions that they are indifferent to the country’s sorrow at the tragic death of the Princess of Wales...” ...Last night’s statement... [by] the Queen’s press secretary... follows a barrage of media and public criticism of the Queen and the royal family for its apparent coolness in the face of a massive outpouring of national grief after [Di’s] death... “Your people are suffering. Speak to us, Ma’am,” said the *Mirror*... The fact that the royal family had earlier issued only two brief statements since Sunday – neither in person and neither paying tribute to Di... – had fanned criticism of a monarchy seen as out of touch with the public mood. Critics have also asked why there is no national flag at half mast over Buckingham Palace like most other public buildings across the country – dismissing arguments that only the royal standard can fly above the palace and only when the Queen is in residence... The... *Sun* newspaper said in its... front page headline: “Where is the Queen? Where is the flag?” ...The Queen, [her husband] and the Queen Mother were to travel by train overnight for the funeral... but after last night’s statement they are now expected to arrive sooner in London... [The PM] tried to stem the tide of criticism, appealing to people to respect the royal family’s grief. But few were impressed... Even the usually loyal *Times* warned: “There are times in the history of every institution when its rules matter less than its raison d’être. For the British monarchy, this is one of those times. Failure to gauge correctly the expectations of the public could turn a melancholy mood into an ugly one.” ...[already, an award]-winning columnist... in the *Independent* [has called on the Prince of Wales] to renounce the crown and recommended that the monarchy end with the death of his mother... “The royal family are... behaving as if a revolution is taking place outside the gates of Buckingham Palace. And they may be right,”... “Whatever they do is wrong,” said... a biographer of the Queen. “If they show emotions it’ll be called hypocrisy, if they don’t they will be denounced as cold. The flag at Buckingham Palace did not even come down for Sir Winston Churchill. Are we really saying the princess was more important to the nation than Churchill?” ...[the press secretary] said the Queen would make a personal statement on television today... [Incidentally, a Pakistani,] aged 39... who had his photo taken with Di... when [the princess] visited his village in May has killed himself over her death... Police found the photograph in his pocket.

...Harrods has unveiled a shrine to... [Di] and... Dodi... Curtains were drawn back on window 20 of the imposing shopfront to reveal a black satin backdrop framing[their] photographs... Between the... two... photos, white lilies cascaded down and on to the window itself... The last time London’s flagship luxury store produced such a display was after the death of Winston Churchill... [By the way, a flurry] of bizarre conspiracy theories have sprouted on the Internet and crept onto some news media about the death of Di... most of them morbid and many demonstrably wrong. Conspiracy theories began appearing within hours of her death, including that [Di] was faking her death to escape the media. Others had her rubbed out by the makers of land mines. [Libya’s] leader... said the British and French secret services arranged the accident because they were annoyed that a British Princess might marry an Arab...

Death may have been the price... [Di] paid for giving up official British police protection when... [seeking] to make a new life for herself away from... [her husband. Di only] continued to use police protection officers when... with her two sons... British security experts said that if trained members of the Royal Protection Squad had still been looking after her, [the crash] would not have happened. A British police spokes[person] said driving – or reporting for any kind of duty – under the influence of alcohol was a disciplinary offence. An independent expert was scathing about the level of protection... accorded to “the world’s No. 1 celebrity”... “Had that been my assignment I would expect to be sued,”... [T]he Mercedes car carrying Di... should have been followed by another car with two more trained bodyguards and possibly even a third car, also with two security [officers]. The chase cars should have contained medical equipment and the bodyguards should have been trained in resuscitation skills. Following cars would also have been able to deter some of the paparazzi photographers on motorcycles.

...[someone] driving just ahead of the car in which... [Di was travelling claims to have seen] a motorbike swerve directly in front of the Mercedes, making it lose control... “I immediately pulled my car over to the kerb but my wife said: ‘Let’s get out of here. It’s a terror attack.’” ...[however, an] unnamed French photographer said the pursuing paparazzi was about to give up the chase when the Mercedes entered the tunnel ‘because we could not keep up.’... Henri Paul, had boasted “you won’t get us tonight” to [photographers as the car] left the Ritz. The car jumped traffic lights and skidded a few times in the bid to shake off the paparazzi... [T]he daily *Le Figaro* reported... [that the paparazzi] “...pushed back and blocked the [first] officer from coming to the aid of the victims,”... Until more police could reach the scene to help... all the officer could glimpse of Di... was “a blonde head,” the report said... [In response, some] of the photographers... have said they called ambulances and police immediately after the crash... But the *Journal du Dimanche* said... “so far, their mobile telephones have not retained any trace” of calls to emergency workers... The [7] photographers arrested at the scene were yesterday placed under formal investigation – a step short of being formally charged... for involuntary homicide and for not helping the victims – a move denounced by one of their lawyers as theatre justice... LS Diffusion... whose paparazzi took pictures of the car and ran while [7] of their colleagues were detained by police, said... [its] photographers were in a state of shock and now realised what had happened, but their instant reaction as professionals had been to shoot pictures of the car. “The first reflex for 99[%] of professionals is to do their work, film or take pictures, and if its blood, its blood,”... A French photographer... who... was in hiding... has admitted... [taking] pictures of the mortally wounded Princess... [after pursuing] her on a motorcycle... “[Di] was moving about. Okay, we took a few pictures... without thinking. But what should I do? I am not a doctor or a fire[officer]. My job is to take pictures. But it was so tragic... My friend and I said stop and then we drove away.” The paparazzo... [claimed to no longer have] the film because it belonged to the agency that employed him... Asked if... [it felt]

in any way responsible for the accident, the photographer said: "No... We are not guilty because that is part of the game of life." ...[one of the arrested photographers claimed to have] got there after the police and rescue services... [and, therefore,] was not among those chasing Di... "The first thing I saw was Dodi lying on the pavement with rescue workers trying to revive him... When I regained my composure, I took out my camera and began shooting. I think I got five or six shots off before a police[officer] grabbed me... What happened was horrible, but what has happened to us is also very unfair." ...Another... [claimed to have] taken a few shots of Di... at the Ritz, the super-luxurious Paris hotel where... [business is suddenly] booming... then gave up and headed for a friend's house. His route took him by the tunnel at the Pont de l'Alma. Noticing an accident, [the photographer] left his car and began to snap photographs. Minutes later [the photographer] was in custody. A news photographer who has covered gunfire in Beirut and tanks in Tiananmen Square, [it] was still shaken... by allegations [of his bearing] responsibility for Di[']s... death.

...The *People's Daily*, the flagship newspaper among China's tightly controlled media... asks "who are the real 'assassins' that cruelly killed Di...?" and answers with a stinging attack on Western media... "Under this false, mistaken precept of '[guy] bites dog isn't news, dog bites [guy] is,' in the midst of the 'free' competition for gold and silver, many western news media strive to expose private, secret things. Most publish news of sex, murder and crime and other scandals, use shocking methods to titillate the audience and seek huge profits without regard to social responsibility and effect... With Western press freedom, there's no freedom of privacy to speak of for Di... and others." Meanwhile, in a surprise decision, Japan said yesterday no member of its imperial family would attend the funeral despite an invitation for the country's crown prince and princess to go... A spokes[person] for Japan's Imperial Household Agency said there were "various reasons".

...[Di's] funeral will be one of the biggest live events ever televised... The BBC said it would use 100 cameras tomorrow to cover the funeral procession to Westminster Abbey, the service and the route the... cortege will take to her final resting place... The corporation will use all its available outside broadcasting equipment as well as hired equipment. Ironically, the previous biggest BBC outdoor broadcast was [Di's] wedding... ITN, the BBC's commercial rival, plans to deploy almost 400 journalists and technical staff [operating] 50 cameras, including 19 in Westminster Abbey... TVNZ and TV3 have extended their coverage... following the decision to lengthen the path of the funeral cortege through London. TVNZ will broadcast the BBC's coverage from about 7.30 pm, while TV3's feed of the ITN coverage will start at 8 pm.

...THE mournful bell of Westminster Abbey tolled each minute through London's sunny autumn morning... The bell was the only sound, save the wheels of the gun carriage bearing [Di's] body in the Royal Standard-draped coffin, as the funeral cortege made its way to the abbey... In death the "people's Princess" was clothed in a formal, long-sleeved black dress [Di] bought a few weeks ago but never got to wear... With her... were the rosary beads bestowed by... Mother Teresa... As the gun carriage passed... Buckingham Palace, [where] the... Royal family[was] assembled outside, the... Queen, her eyes red-rimmed, raised a handkerchief to her face, looking utterly distraught... [Di's] two sons... joined their father... their grandfather... and [Di's] brother, to walk the last 40 minutes of the procession... Behind the mourners came... 500 charity workers... [In front] mourners sobbed and cried, throwing flowers in the path of the coffin... About 30,000 mourners camped out in central London overnight, to secure prime spots... London's Metropolitan Police implemented a mammoth crowd-control exercise... The police closed off almost 100 roads around central London... Almost 27,000 officers were drafted in to cope with crowds of up to [a] million and to steward in the hundreds of celebrities at Westminster Abbey... They included singers[, one of whom (rp731, ln1)]... took his place at a black grand piano to sing... *Candle in the Wind*, his 1970s tribute to Marilyn Monroe... with new words... beginning "Goodbye England's rose".

...frozen forever in her golden youth... Di... now enters the realm of myth: The land of contradictions. [Di] was a saint and a jetsetter, a media victim and a wily manipulator, a feminist icon and the little girl lost... [Di] was a party animal and Our [Gal] of the Minefields... the greatest royal and the royal outcast. It's a tangled mix, but perhaps that is why... Di... became First [Gal] of the World... Even cynical republicans concede that [Di] touched many lives: The floods of grief and flowers prove it. About the reasons, however, the pundits disagree... On one thing everyone seems to agree: The global fascination with Di... would not have existed if [Di] had been plain. If [Di wasn't physically] beautiful, people would never have taken such an interest. "That is the nature of the world," says... [the] senior lecturer in [Gal] Studies at Victoria University... [The] senior lecturer in film and television at Waikato University, reports a conversation among teenage girls. "Their teacher asked them, 'What about [Di's ex-sister-in-law, who's] been doing charity work too, all her life.' And the girls said, 'Oh, but [the ex-sister-in-law isn't] beautiful. Who wants to see boring old photos of boring old [royals]?' " The Waikato lecturer does not want to seem grumpy and cynical, but "I'm mildly disgusted by this outpouring of somewhat unreflective stuff over the past few days... The 'People's Princess' dined in the Ritz and drove out in a Mercedes Benz. One of the people? [Di] had choices a lot of us don't have... [Furthermore, Di didn't just do] charity work... out of generosity - [Di] also did it to get her photo in the paper..." While [Di's ex-sister-in-law] did a lot of charity work without seeking publicity, "Di... courted the media all the way, every inch of her life. The notion that [Di] was a media victim is a bit self-serving." ...[the Victoria lecturer] finds nothing to criticise in this. Di... knew that a photo of herself... was going to create a lot of publicity for a good cause... [However, the Victoria lecturer] says... the... cult of Di... also reflects "the profound alienation of people in modern society. We don't really communicate as we used to - we sit around and watch television, and many people are extremely lonely... many people... [feel] closer... to... the characters... [on TV] than the members of their own family." Di... was a real person in a real-life soap opera, and people felt they had got to know Di... by seeing her on television over many years. Why should a supposedly non-political figure like Di... embody these hopes? [A]Wellington writer and academic... says there is "perhaps a desperation in large parts of society needing something that is good or someone they can admire because there are so many people they can't admire".

...[Di's] death reveals more about us than we think as surging grief gives way to a growing mythology and the creation and veneration of a secular saint... [P]erhaps we are expressing... a need within secular society, for the sense of the sacred... In Britain especially, forms of "folk religion" have quickly sprung up... Individuals suddenly identifying with a community (Union Jacks on the front lawn); the pilgrimage to a holy shrine; and the offering of prayer (messages in the books of condolence). Most remarkably, these condolence books appeared in supermarkets, hardly an institution renowned for attempting to meet the emotional and spiritual needs of a community! Helpfully, the folk religion allows communal grieving in a culture lacking in such outlets. This shouldn't mask its downside. It offers only a spurious and short lived comfort divorced from the remainder of the mourner's life (and sometimes deludes and endangers those caught up in the worst of its excesses). The temptation for those less affected, is to despise these tendencies as feeble signs of ignorance. But perhaps instead, we should recognise them as evidence of deep and unfulfilled spiritual longings in a society whose material gods speak no language that can carry us through such times... Though a young [gal] of 36, not a young [guy] of 33, and through a car crash rather than a cross, Di... becomes an icon in death. Figures like Di... remind us that our lives have some meaning that is beyond ourselves. We try to replace the sacred, but have we turned to lesser gods?

...Di... was, as so many of the tributes have mentioned, the most famous [gal] in the world. As such, her life had a special meaning [for other gals]. In a period of profound social changes affecting [gals], her marriage into royalty shot her into intense public scrutiny about how a modern [gal] and wife would behave. Di... became an icon because... [Di] symbolised the dilemmas and choices for modern... [gals, whose] concerns for Di... and how her life would turn out [were often concerns] for themselves. It is strange that it should be so. After all, this was a [gal] from a privileged background who, [at the time of her marriage], had experiences confined to an elite set with limited political and social outlooks. It was hardly an auspicious origin for a [princess] of the people... Like many feminists I wore a Don't Do It, Di! badge in the weeks preceding her wedding - one of the few occasions, it has to be said, when feminists got it spot on. But on the day, I gave in and watched the wedding entranced, with the same sound and commentaries issuing from a thousand windows around my home. In the ensuing years, I became more, not less fascinated... For...

others who have grown up with Di... the Princess will now be a series of historical facts rather than a vibrant human being. That's why... [one mother – who, as an 8]-year-old schoolgirl[waited patiently] in the roadside sunshine... [for just] a glimpse... at the... Princess... [- is] committing as much of it as... [possible] to tape. “If I have a daughter later on... I'd like to be able to pass them on down to her. Every little girl dreams of a fairy princess.”

...Di... was, it was often said, though not so much of late, a fairytale princess... For the young prince had been seeking a bride: but, as with princes, a pure bride of noble breeding. And these were in such short supply in the kingdom that some despaired of his ever finding one. Our first proper view... [of this fairytale princess who] failed all her exams at 16 and left school... was the one of the nursery assistant, shyly pretty, caught in the playground, innocent of the sunlight that would make her skirt entirely diaphanous. It was a... 20th century fairytale moment... And, as we all ought to know by now, 20th century fairy tales do not end happily. None other has come close to matching the life and death of Di... in its twists, turns, heroes, speculations, confirmations, villains, stark reliefs and immense, unrelenting profile in which every quality, every event was endlessly exaggerated and simplified for the century's easier digestion... In a segment endlessly replayed throughout the tortuous doings that were to follow... in February, 1981... the... [newly engaged couple] were asked if they were in love. “Of course,” replied Di... in an embarrassed rush. “Whatever love is,” replies the Prince, in an embarrassed rumination... The first time [Di saw the Prince of Wales in person], her immediate reaction was “God, what a sad [person.]” When the Prince had] proposed to her, Di... laughed nervously and “I remember thinking ‘This is a joke’ and I laughed and said ‘Yeah, OK.’ [The Prince had] found the virgin, the sacrificial lamb and in a way... was obsessed with me. But it was... hot and cold. You never knew what mood it was going to be.” ...Much has been made of the contrast, particularly in light of the revelation that the Prince... was conducting at the time, and continues to conduct, a relationship with... an old girlfriend who had married someone else. Not so much has been made of other subsequent revelations about [Di's] worries about the match, even up to the eleventh hour, when [Di] had to be persuaded to go ahead by her sisters, with their only half-joking warning that the souvenir teatowels were already on sale... [T]he nation, buoyed up by the earlier celebration of the royal jubilee, remained in the mood for pageantry, and the wedding, on July 29, 1981, was carried off with style amid genuine public interest and happiness... The differences between the couple in ages and interests did not excite much comment. Royal marriages had never dwelt overmuch on compatibility. Duty remained the watchword... [C]learly, Di... enjoyed the attention, whether or not, as the pop psychologists argue, this was to compensate for the lack of attention [Di] suffered as a child. Clearly too, what [Di] saw as lack of private attention from her husband contrasted cruelly with the unending public attention... The Prince, unhappy in his marriage, took refuge in his old round of holidays and country pursuits, and with his old mistress. The Princess, as with any princess, took refuge in her children and her charities... Then... came... [allegations that Di] had thrown herself down the stairs at Sandringham while pregnant with... [her first child,] had slashed her wrists with a razor blade, a penknife and a lemon slicer, and... had once thrown herself against a glass cabinet. It was also disclosed that the Prince kept in touch with [his old girlfriend] even while on honeymoon on the royal yacht, Britannia. It was a disclosure allied to the one that Di... had found an inscribed gold bracelet intended as a gift from the Prince to [his old girlfriend] only days before the marriage... In December of... 1992... the Prince and Princess announced their formal separation. This brought no respite from the line of allegation and disclosure, growing ever more public and ever more tawdry as the opposing sides, authorised or not, attempted to create two hard, clear, and opposing images. The Prince was portrayed as a weak, heartless, hidebound figure, bullied by his father, overwhelmed by his responsibility, dominated by his selfishness. For her part, the Princess was seen as neurotic, unbalanced, frivolous, flighty, in the thrall of fame and frocks. There was something in both characteristics... In 1994... in a television interview... the Prince told... [everyone about his unfaithfulness. Consequently, her being] the innocent party in the marriage break-up was felt to be a crucial part of the Princess' popularity. When, before the separation, the “Squidgygate” tape recordings had surfaced, allegedly detailing a [private] telephone conversation between Di... and a lover, the story was widely disbelieved as a malicious invention – much more so than the... [taped recording between the Prince and his old girlfriend], in which the Prince... inter alia, appeared to be favouring reincarnation as a tampon. In 1994, too, the publication of... *Princess in Love*, supposedly detailing her five-year affair with a former army officer... was similarly derided. But, in another extremely shrewd piece of PR timed for its influence on the couple's possible divorce and its custody implications, Di... gave an interview the next year... to the BBC TV *Panorama* programme that held the nation gripped with its combination of intensity and artlessness assisted by an artifice that by now seemed second nature. Asked... “Were you unfaithful” with [the army officer], the Princess replied “Yes.” [Di also] agreed that the Squidgygate tape was genuine... There was the winning, telling soundbite: “We had three of us in this marriage, it was a bit crowded.” And there was the typically overblown soundbite, that [Di] would never be Queen of the country, but... would like “to be a Queen... in people's hearts.”

...Linked for centuries in what may be the globe's most sophisticated love-hate relationship of nations, Britain and France must now sort out together the consequences and meaning of the death of [Di]... French justice... will be... shaped by the knowledge that the world is watching and waiting for convincing judgments of responsibility. These judgments may provide solace... for the British people. The inquest and probable trials will be played out against the long history of two nations that simultaneously admire and disparage what is different in their national culture, while cloaking strong, underlying political similarities. London is 320km from Paris, as close as Washington is to New York. But, outwardly, British and French societies are still separated by a giant gulf as well as by that narrow channel. Their sense of mutual ambivalence has been forged on the battlefields of Orleans... Dunkirk and elsewhere. Europeans believe that geography is destiny... Beyond its legal findings, the French investigation will unavoidably trace for the British how [Di's] final hours were an exercise in symbolism run amok in the European firmament. Killed in a French road tunnel in a German sedan, this British Princess died beside her wealthy Arab companion. Among the first to reach the accident were [US] tourists... who were then promptly interviewed on [US TV]. This scene occurred four months after British voters had decisively rejected a Conservative Party leadership that, rightly or wrongly, was widely seen as having isolated Britain on most European questions while seeking a smaller role in the world. A pulp fiction novelist commissioned to work the themes of globalisation into a plot would... not have the nerve to try that scenario. Only reality, and today's integrated economic, social and communications structures, could fashion it. There are even macabre echoes of colonialism in this event. Di... died with [the guy] whose Egyptian-born father owns the Ritz... in Paris and... Harrods... in London. The source of the wealth that enabled [Dodi's family] to acquire leading cultural icons in each capital is mysterious... And, as if to drive home the point about the British and French interconnection – with each other and their former colonies – [Dodi's family] also owns the villa in Paris where the Duke and Duchess of Windsor lived in gilded exile. More than either nation usually likes to admit, the French and British have shaped significant parts of their national characteristics by rubbing up against each other in conflict and cooperation... The force of circumstance... that... melds the British and French in mourning and weighing the death of Di... could lead to the rediscovery of a much broader agenda they share as nations.

...[at Di's] funeral they... played the same music, *The Burial Sentences*, as was sung at [another notable] funeral... The year was 1806, and the person Britons were mourning was Admiral Horatio Nelson, hero of Trafalgar and darling of the nation. Nelson was the first victim of Britain's paparazzi. His bravery in battle coupled with his exploits at home captured the imagination of an emerging popular press... Nelson... was mobbed in the streets, and at times resorted to subterfuge to escape the media pack... Nelson had even, on his last night on British soil before sailing into battle against France, sneaked out of the back door of a hotel to avoid waiting reporters. For [the person] who has devoted most of his life to Britain's greatest naval hero, the outpouring of public emotion which accompanied... [Di's] death was like stepping into one of his own history lectures. “For years I have been telling people about the open grief which accompanied Nelson's death, but it was difficult for people to imagine in stiff-upper-lip Britain. Now everyone has seen it.” ...in Auckland as a guest of the British Council to give a lecture at the National Maritime

Museum tonight[the person]... attributes Nelson's enduring fame at least partly to his untimely death. "[Nelson] died at the peak of his career, at the scene of his greatest victory. [Nelson] was a charismatic figure, the son of a humble country parson who had risen through the ranks to become a great leader in battle at a time when Britain needed heroes. The army was being regularly beaten by the French and the naval victories won by Nelson and his fellow captains gave the people hope. And by dying when... [Nelson did, Nelson] didn't have time to let the people down." ...[Speaking of letting the people down, a] Channel Four report said the Queen – who resented the damage done to the royal family's prestige by Di... during [her] protracted split with [the Queen's eldest son] – ...originally insisted that the... royal family have nothing to do with [Di's] body. "It was made very clear... that the Queen... did not want an air force plane to bring back [Di's] body... and... on no account [was it] to be brought to any of the royal palaces... [T]he Queen's desire was for her to be taken to a private mortuary and then to a private funeral," the programme said... [However,] the Princess' former husband... told the Queen the royal family could be booed at [Di's] funeral if the palace did not bend protocol to give her a fitting farewell... then had a blazing row with... the Queen's private secretary, and "told him to impale himself on his flagstaff." ...It was only when the Prince was flying to Paris to pick up his ex-wife's body that [the Prince] managed to talk to the... British [PM, who agreed]... that the body should be laid out at St James' Palace and the funeral service take place at Westminster Abbey. But the programme said the royal family then ran into serious problems when... [Di's] brother, learned of the Queen's initial wishes. Only after [the PM's] office intervened did the two sides start to talk to each other... The source of the story was a senior official close to court circles... Buckingham Palace dismissed the story[– which]... is a blow to a palace in damage-control mode... [–] as "a ragbag of nonsensical speculation." ...Another source told the programme that just 55 minutes before the Princess' body was borne into Westminster Abbey... close family members were still arguing over who should be walking behind the coffin.

...The battle of words over [Di's] final hours does her no service... It is shameful and pointless to have [it] paraded in front of the world's media... [Ironically, the] funeral of Di... was not the only occasion on which the Queen and [Di's brother] had encountered each other in Westminster Abbey. The first was 33 years ago at his christening. The Queen was – is – his godmother, and made all the... pledges of responsibility that are customary on such occasions. What Her Majesty must have felt on being given a lecture on family values by [her godson at Di's] funeral defies all imagination, or certainly mine. Never can the famed rigidity of her countenance have been more necessary – or more difficult to maintain.

...Booksellers and antique shops have done a roaring trade in Princess of Wales memorabilia since her death, but the rest of the royals have stayed on the shelf... [I]n sudden death... Di... became an image of regal perfection and that myth will haunt the House of Windsor for a long while. The mortals who must now perform in her shadow will never match up. In that prospect some are now seeing the end of the monarchy. I wish it were likely but Mexican wave theory says otherwise. The crowd might hope its demonstration will drive the performers to do better but it almost never does and the crowd does not really expect it. The game goes on and the crowds keep coming back. It will be especially so for the monarchy, for it is astonishing how little people really expect of the royals. How often have we seen the Queen come to a fairly momentous event, mount the rostrum and give a speech that makes not the slightest effort to match the occasion. Nobody minds. Every Christmas people turn to the television for her message knowing they will see a blank stare at the teleprompter as [the Queen] stiffly reads a stream of unmemorable phrases. It doesn't matter. They'll tune in next year. This time of course the palace blew it. No, let's be honest, the Queen blew it. [The Queen] now has far more experience in the monarchy than her courtiers, has spent far longer in public life than any politician advising her. [Therefore, the Queen] ought to be well-attuned to the country's mood. It should not have taken her five days to emerge from Balmoral and show an interest in the tributes to her estranged daughter-in-law. But hold the tumbrels. The remarkable thing was not so much the Queen's remoteness, or even the public criticism of it, but the number of people... who immediately and completely accepted her excuse. They readily agreed that comforting her grandsons precluded any public duty during those days... It doesn't take much for royalty to recover. A walk to the Buckingham Palace, a bow to the passing coffin... [plus a few *crocodile tears*]. By the time the funeral started the family was winning... The resilience of the monarchy rests in the fact that it does not actually need to do or say anything. It need only *be*. The only popular demand is that it be there as long as possible. "Long live the King," has been the cry down the centuries... It doesn't matter that we never really know the personality under the crown.

...An opinion poll yesterday provided some welcome relief for the royal family... by indicating that most Britons still support the monarchy. The... poll, published in the *Sun*... said 73[%] of those surveyed backed the royal family. The approval rating soared to 82[% if Di's] eldest son... were to become the next King rather than his father... Almost a third wanted the Queen to step down in [her grandson's] favour... The poll[also] showed that 22[%] felt the Queen was doing a bad job – 63[%] approved of her record – while 39[%] felt less favourable towards the royal family since [Di's] death. The *Sun* said the poll suggested the Queen had acted just in time last Friday when [the Queen] made a live broadcast praising Di... The poll held out little joy for [the Queen's son, suggesting the Prince of Wales] would find it impossible to sell the idea of marrying his long-term lover... Back in July, 45[%] of those polled thought [the Prince] should not become King if they married. After [Di's] death that figure shot up to 66[%]. However, the] Prince gained widespread approval for the caring way [the heir to the throne watched over his sons] during the funeral. [The Prince] has... cancelled all his public engagements for the next week to give him time to adapt to his new role as a solo parent. Planned trips to Prague and Berlin have been put off as [their father] tries to invent the role which will allow the boys the kind of freedom and contact with the public their mother wanted, combined with the duty and tradition of the monarchy... Meanwhile... the South African-born minister who took [Di's] graveside funeral service, has revealed workers used a compass to ensure that [her body] was buried facing the rising sun... [on the] island... in the middle of an ornamental lake on the family's... estate... [Di's] family has allowed the world a glimpse of the... bur[ial plot]... "There is a carpet of flowers 12 feet... wide stretching across the island... You cannot see the grave itself because it is submerged under the flowers," said... one photographer...

[Di's] family has appealed to Britons to stop bringing flowers to her home in the hope they would join a carpet of blooms that now covers her grave. Thousands of people flocked to the rural Althorp estate after seeing pictures of the Princess' last resting place on a flower-strewn island where [Di] used to play as a child. "It is turning into a problem and it is getting worse. People seem desperate to get their flowers to the gates of the estate because they believe they will be taken to the island... We are now concerned for public safety, both near the gates and in the surrounding lanes." The family asked people instead to make contributions to the memorial fund set up to funnel money to charities associated with [Di]...

While the politicians and press agonised and analysed, the crowds... said it with flowers. "Di... more royal than the royals," said a sign attached to one bouquet... "It was you who should have been queen," said another... Admirers... brought more than a million bunches, and the British Government has now come up with a solution for disposing of the ['10 to 15 thousand tonnes of flowers. Once each bouquet has been separated from its plastic wrapping' the] wilting tributes will be used as compost in the greenhouses at Kensington Palace. The Culture Department... announced that park officials and volunteers would start gathering up the bouquets from today. The department promised that other places would be designated for people still wanting to leave floral tributes. Flowers that are still fresh will be given to hospitals and old people's homes, as will gifts that have been left, such as soft toys. Cards left by mourners will be kept until... [Di's] family have decided what they want to do with them.

...[every] day... about 3000 people queue to sign condolence books... and... hundreds of bouquets are... laid outside... Kensington Palace... Florists' sales have swelled by \$129.16 million... Meanwhile, a Sardinian tourist... aged 20... who stole a... white teddy bear, which had been left by a child at St James' Palace, for his girlfriend... was sentenced to a week's jail for what the court called a "particularly mean and unpleasant theft."

...Several people have broken into... Althorp estate... in search of souvenirs from the grave of Di... [T]he *Sun*... said estate staff had caught all the intruders. Meanwhile, the *Daily Mail* reported yesterday that lawyers representing the Princess' memorial fund had applied to patent 26 of the most famous pictures taken of Di... as well as the... nickname, Diana, Queen of Hearts... [and] her title... "Diana, Princess of Wales." ...if the

application was successful, her charity fund would be able to control the use of all Di... images on goods ranging from books to clothes and memorabilia, and stop unscrupulous traders from using her image... [It would also mean that \$m]s from the sale of Di... souvenirs will go to charity, rather than to [Di's sons]... an expert in trusts, says: "In effect, we are talking about a huge gift from the princes to the charities." ...The necessary licensing powers[... including registering the]... trademarks... in the princes' names... are expected to be approved by the British High Court... Souvenir-makers would then have to be licensed to the [princes'] trustees, who would monitor their goods to keep out anything tasteless or offensive... The boys would retain ownership of the trademarks and... have the power to take over administration of them when they are older or if they decide the fund has been badly managed. "This move is good for protecting the memorabilia and it's also good PR for the palace,"... [T]he lawyers say they want[ed] to clarify the princes' position after "misleading" reports that they would make a fortune from a flood of memorabilia.

...An issue of special stamps commemorating Di... was put on hold yesterday at the request of her family. The British Post Office rushed ahead with preparation for the issue after [Di's] death... choosing five recent photographs of her. The royal family was consulted and a publicity leaflet for collectors printed. A few of the leaflets[... which could also become collectables...] were even accidentally sent out... The Post Office still hoped to issue the stamps at a later date. Leading stamp collectors[have] appealed to... Diana's family... to allow the stamps to be sold. "Postage stamps would make a wonderful... tribute... and would be collected by philatelists and non-stamp collectors throughout the world for years,"...

120 million sets of the stamps... marking the life of Di... go on sale in... February and [are] expected to raise... £7 m... for her favourite charities.

...[Copies of the official video, *Diana: The People's Princess*, are on sale, with a charitable donation made from every purchase.] In addition, *Diana – Her True Story*, is to be republished with a final chapter, while a photographic celebration... *Diana – A Tribute*, is available in a fortnight.

...IT MAY be just two weeks since the death of... Di... but the first of seven books written as a tribute to her will hit... bookshops this week... *Diana, Princess of Wales: A Tribute*[is expected] to sell like hot cakes... The 96-page book... includes 100 colour photographs... "There has been very little interest in terms of books on Di... in the past five years... but... [there's] been such a huge demand... in the last few days... for [A *Tribute* that the printers] ran out of paper...,"... [Amongst the other books on Di which will be released before Christmas is] a Ladybird book for children.

...the Rolling Stones... are among 10 rock stars who have agreed to perform on... [a] tribute album to be released before Christmas. Tribute concerts will take place in London and New York next August... [The] tribute album... will also feature... [the] reworded... musical tribute to... Di... Due out... on September 19, the song is the B-side to a single promoting [its singer's] forthcoming album... Music industry experts say the rewritten *Candle in the Wind* could become the biggest-selling single of all time... proceeds will [go to the Princess of Wales] memorial fund...

Shops in Britain sold out of... *Candle in the Wind*, yesterday just hours after it went on sale... Some stores tried to limit customers to just a few copies each, but others imposed no limits and some customers left stores with scores of the single... Some 250,000 copies had been produced for Saturday's launch, but a million more are being readied for sale next week... It is tipped to surpass the 1980s hit *Do They Know It's Christmas?*, made to raise money for Ethiopian famine relief, which sold 3.6 million copies... Music industry sources expect the... reworked version of... [*Candle*] to raise £10 million... Britain's Labour Government has promised to forego tax on sales of the song so that all the proceeds will go to the fund...

The[NZ] Government... which has contributed \$50,000 to the fund... will not follow Britain's example and forego GST on sales of *Candle in the Wind*... Polygram Records, which is distributing both an album-length compact disc of the entire funeral service and the... single on CD and cassette, last night expressed disappointment... [A] Polygram marketing manager, said that all[of its] proceeds from the recordings, apart from the \$1.60 manufacturing costs, would go to the fund. Retailers would decide if they on-sold at cost or charged a margin and donated some or all of it.

...The... major[US] discount retailer... Minneapolis-based Target Stores... said it was not donating profits from sales of the single... *Candle in the Wind* '97... to [Di's] memorial fund because the company already donated to charities across the country... The company said it would give \$US38... million this year... [In local news, more] than 100,000 copies... were sold yesterday, making it the biggest-selling single in N[Z] recording history.

...*Candle in the Wind* has become the best-selling British single... There has been 3.8 million copies sold in Britain... It was the fastest-selling single of all time in the U[S], with more than 3.4 million copies bought in the first week. So far 26 million copies have been pressed around the world[, not including the 540 fake] copies of the CD... seized by customs in Melbourne.

...Extraordinary how potent cheap music is, wrote Noel Coward in *Private Lives*... Coward... would have been moved to repeat... the line... if [Coward had] been around last week to see the rewritten *Candle in the Wind* become the fastest-selling single in history both here and abroad. It's probably just as well that the divine Mr C didn't survive to see the reception accorded the song. If [Coward] had, the affront to his delicate aesthetic sensibility would probably have killed him. Every piece of music has its moment, of course, and the funeral of the Princess of Wales was the moment for *Candle in the Wind* Mark II. The spare and unornamental version played during the service dragged from the world a racking sob... The tears in our eyes blinded us to the fact that [the singer] had unceremoniously hijacked his own song, taking the tribute to the screen star for whom it was penned and dedicating it to another icon (what price the sincerity of the original now?). It worked in the magic of the moment. But that moment (rearranged, reorchestrated and recreated in the studio) and committed to a compact disc has become something else altogether. Listening to it at all, much less owning it and listening to it repeatedly, is rather like being reminded over breakfast of how loose your tongue became at the restaurant last night when you insisted that the occasion deserved another bottle of wine. Now I am not a hard-hearted old cynic... It's wonderful that profits from sales of the new song will benefit the late Princess' favourite charities. But it would have been better still if we'd supported such worthy causes without the specious excuse of a sentimental song... [By the way, an] English member of the European Parliament hopes to persuade law-makers to nominate Di... for the Nobel Peace Prize. The [US] Senate has nominated Canada's Foreign Minister... for this year's prize for his work to ban land-mines, and anti-mine groups have been nominated... [However, it] is too late to nominate the princess' work for this year's prize [and Di] cannot be nominated because the Nobels are not awarded posthumously.

...the British Home Office has said the royal coroner carried out an autopsy on the princess but has refused to comment on reports... [that Di] was six weeks' pregnant... [A]n emergency service doctor told [Time] magazine an associate at the scene said Di... was drifting in and out of consciousness, at one point saying... [I'm] six weeks' pregnant while making a rubbing gesture on her stomach... Meanwhile... Britain still cannot shake off the pall of mourning that has hung over the country... Family doctors across the country have reported an increase in patients coming forward suffering from emotional and physical symptoms associated with grief... "People who never met [Di] are feeling a deep sense of loss..."

Family planning services in Britain are expecting a baby boom following public grief over the death of Di... [P]eople often react irrationally when suddenly confronted by an outpouring of emotion, and forget to take adequate precautions against pregnancy. A doctor was quoted as saying... a record number of demands for the "morning-after" contraceptive pill[were fielded by his clinic] on the weekend of... [Di's funeral. In related news, five French] paparazzi took legal action yesterday against the publishing house... [which is releasing a] book on the death of Di... entitled *Ils l'ont tuee* ("They killed her"). The photographers who... have been charged with [hu]manslaughter and failing to assist people in danger... claimed [the] work seriously impinged on their right to the presumption of innocence... [They] asked for a ban on all copies of the book already printed and on all future copies of the book that include the passages cited in their case. They have also sought \$27,000 each in damages.

...a Paris court has rejected an attempt by seven French photographers and a motorcyclist to cut passages from a book about the fatal, high-speed crash... The court ruled [that the] book did not directly implicate the eight... [Incidentally, a] former royal correspondent said many things about... the notorious and rich biographer of Di... All of them were unflattering... The enmity that five years ago greeted the publication of *Diana: Her True Story*... was matched only by the accompanying surprise. How could... an unknown hack, have landed the biggest scoop in journalism since Jesus briefed the disciples? (And the repercussions cannot be overestimated. Inside a year the Queen was paying income tax for the first time, the Civil

List was slashed and people were talking about the end of the monarchy.) How could [Di, being someone] with the world waiting on her call have chosen a tabloid scribbler... These questions are once again doing the rounds of Fleet St amid the controversy surrounding the publication of [a] hastily updated work, the snappily titled *Diana: Her True Story In Her Own Words*... In the introduction to the new tome, [the scribbler] forecasts that much will be written about the princess. This... “is not only right and proper but eminently desirable.” From a [person] who was once quoted as saying that “[I] could happily live off the ashes of the House of Windsor for the next 20 years,” who has made an estimated \$7.5 million out of his writings on [Di’s] life, who has been translated into 29 languages and sold in 80 countries, this statement may seem a little, shall we say, rich. But [the scribbler’s] solemn aim is, [in his own words], only to record the innermost thoughts of his subject (who, conveniently, no longer has a say in the matter) for posterity. Doubtless it was with this weighty duty in mind that [the scribbler] penned an opinion piece for the *Sun* a couple of weeks before Di... met her untimely death. “I now know why [the] Prince... spent his time talking to his vegetables... because [the Prince knew it would be possible to] get more sense out of them than the fruit [the Prince married.]” The scribbler also temporarily stepped away from dry analysis of past events to make a prediction. “In a few months, Di will get the hump with Dodi when [Dodi] swaps her for a pack of 20 Camels.” ...On [the scribbler’s] study wall... in... his \$2.5 million home... is a treasured cartoon. It depicts a mother and father who have just finished reading their daughter a fairy story. “Well,” says the girl “if the prince and princess don’t live happily ever after, who does?” “The author,” they suggest.

...AS THE world is divided into have and have-nots, the washed and unwashed[, Di’s]... death has separated us yet again, marked out by new parameters. There are those who are permanently saddened by the sudden turning off of a brilliant light. These are the people who are uncritical of... [Di’s] faults, who forgave her artful exploitation of her spectacular world-wide popularity to achieve her ends... They felt the impact of her death as if it was a physical blow, even though all but a few had never... met her or talked with her to judge for themselves... They acknowledged... the way her presence in the world had enlivened it, enhanced it, romanticised it and even improved it a little by focusing attention on the loathsome British trade in landmines for export to [Last World] countries... Then there are the others, the people who are now breaking cover, week by week, with laughter at Di... jokes, with thoughtful essays on the essential emptiness of the life of any royal personage, no matter how glamorous. They instruct us with lofty observation on the lack of real significance of the doings of members of the Jet Set, royal, semi-royal, former royal or otherwise... The fact is, of course, that [Di’s] death was a momentous occasion... As a lifetime journalist, I rate it professionally as the biggest news event of my career. It was the biggest news story... since the elimination of an entire city proclaimed the arrival of the nuclear age. Clearly the two events are not of comparable importance. But the news value of an event is not determined by its significance; it is defined solely by the number of people who are interested in it. [However, ‘I don’t think we’ll see that type of press attention for another person ever again.’

...the British] Press Complaints Commission has asked editors to adopt “the toughest set of industry regulations anywhere in Europe.” “Motorbike chases, stalking and hounding are unacceptable – and editors who carry pictures obtained by them will be subject to the severest censure,” said the commission’s chair[person]... “I have found that editors across the industry have been of the same mind – times have changed, and we want to change with them,”... Editors have already agreed not to pursue [Di’s] sons... who are back at boarding school... When the code is finalised, editors will have to justify the behaviour not only of their staff, but of any freelancer whose material they use, and if they expose someone’s private life they will have to show there is an “overriding” public interest... However, work continued on details of the code, including conflicts between “overriding public interest” and personal privacy – questions which are acute in coverage of Britain’s royal family and Government officials. No timetable was set for when a final code would be issued... The self-regulatory body is composed of newspaper editors. It acts only in response to complaints from the public and has no powers of enforcement. Broadcasters... are subject to statutory regulation.

...A thorough examination of media practices and transgressions was one of the expected outcomes of the death of Di... Yet in this country the... director of the Newspaper Publishers’ Association said “the[NZ] media do not need laws to stop paparazzi-style tactics because we don’t have a paparazzi-style culture.” On this point many would take issue. We may not have paparazzi but we are arguably moving towards a paparazzi-style culture. The description of our media as increasingly “tabloid” is a frequently voiced criticism... Observers have noted a transition in [TV] news from descriptive journalism, designed to provide information and affect knowledge, to a mode of journalism based on a narrative or storytelling approach... designed to evoke personal vicarious experience. Alongside the narrative style is the trend to more mediated journalism, the journalist tells you the story rather than hearing it from those whom the news item is about. This has led to greater editorialising and subjectivity in news coverage. The language of news is also on the move – from impersonal to the loaded, personalised and stylised. A murder is no longer a murder but “this brutal murder.” Presumably, notes one critic, this is to differentiate it from... [murders] where the victim is offered a choice of weapons [or] a few kind words. In television the visual and aural idioms are also influenced by entertainment values used to “enhance” the news. One news station in the U[S] even employed a composer to provide custom written music to underscore its nightly cavalcade of mayhem. There is also the question of the value system emphasised by entertainment-driven news and current affairs. A study of a personality-driven “soft-news” programme in the U[S] found it to be rather distinctly incomplete. It promoted values of personal success revolving around recognition, achievement, financial success, excitement and physical attributes. But are we not being badly, or at the very least, inadequately served when our media focus so intensely on the personal joys and tragedies of famous people? This kind of “news” displaces other issues and there is surely an important difference between the public interest and what interests the public. We are substituting ratings-driven entertainment for information which might be useful to us... The collective guilt exhibited after the death of Di... indicated that the public realised that their interest in her, fed by a tabloid press, had gone too far.

...After... [Di’s] death, the international paparazzi – in Italian it means “buzzing insects” – were vilified for stopping at nothing to get the picture they want. They swiftly ran for cover... Now that high-paying tabloid editors claim they won’t use aggressively intrusive photos, are the paparazzi an endangered species? As... a Los Angeles-based British photographer explains, several “stalkerazzi” are quitting the business, not for moral reasons, but because the payoff just isn’t worth it any more... [W]orld market prices for paparazzi shots [have] dropped significantly. The days of being [able] to start a bidding auction off between photo-editors at \$40,000 are over. “If you haven’t got the London market to sell to, it’s much more difficult to justify spending \$5000 on a trip to get a picture – you have to make a profit and it’s not going to be worth the expense. It’s strangling me,”... A few years ago [the expat] usually wouldn’t sell an exclusive photo for less than \$10,000... *The Sun* recently used... [one of his photos] without his permission. “They paid me just \$29... So right there is a newspaper removed from my list of clients”. Photo editors, [the expat] adds, now have computer data banks that detail exactly how much they last paid you... The day [the expat] first thought about “retiring” was when the *National Enquirer* informed [freelance photographers they] could claim an expenses allowance of only \$56 a day for food, which meant the end of luxury hotels and restaurants... [At Christmas the expat goes] to Aspen, Colorado, to ski with his celebrity prey... always... stay[ing]... at the Ritz-Carlton, where a standard room costs \$760 a night. Including lunch and dinner... [the expat spent] up to \$1500 a day... “The new tabloid editor philosophy is to live away from your target in a cheap hotel, and try to creep around and get a picture of them... The way I operate is to live with them... at the same five-star hotel... [and let somebody else] pay the bill... I’m gonna go this year... But I’m going to stay in a private house...” ...at his own expense... For his annual Aspen jaunt, [the expat uses] his state-of-the-art \$84,750 computerised transmitter... [that] can send a photo negative to London in... two minutes. His jeep has a special rack for transporting his customised coffin-like telephoto lens cases. His prize lens – the length of a baby elephant trunk – has been specially customised from a professional astronomical telescope... One of the most respected professional jackals today is the Canadian... whose main prey is [a singer-actress. The jackal] moved to Miami with her in 1994. Recent high-pay days were the first photos of [his main prey] and her baby and a picture of [another celebrity “]with cellulite over her bum”. “Editors are asking more questions,”... following the death of... Di... “They want to know where you got them. Now some editors – especially in London – won’t touch a photo if they think

it's intrusive". [US editors, the jackal] adds, don't usually ask. For years, trespassing was considered in the line of duty for tabloids, which would have a company lawyer and thousands of dollars ready in bail money at hand for a major "event" story should any photographer get caught. A notorious example was at... [a 1991 celebrity] wedding at... Neverland ranch, when a squad of sharpshooters from the *Enquirer* dressed up in kangaroo suits... [The jackal says, "In a way I'm intrusive, in a way I'm not – I don't physically intrude... I don't shoot on properties any more... but my lenses are long enough to get the picture." His trophy telephoto lens is a 1000mm, whose make [the jackal wouldn't divulge] because it's such a specialised item of hi-tech equipment. "It's very small... Like a tourist camera. I've had to change my style a bit... [as] editors in London... want to see that... the picture... [was taken in public." The jackal] gives the example of his recent *News of the World* shot of [an actress from the 1970s TV series *Charlie's Angels*]. "It was a public event, so I went in real close with the lenses. Getting her looking real old was the story." ...Probably the most infamous celebrity stalker in LA is... a ruthless professional who reportedly earns – pre-Di... – at least \$1 million a year and has been described by *American Photo* as "the most dreaded paparazzo in Hollywood"... [Mr Infamous] is widely credited as having been the first photographer to exploit the photo-opportunities of being chained to the outside rail of a helicopter... When I met him, at Santa Monica airport, [Mr Infamous] was on standby to jump into his \$1.7 million helicopter – of which [Mr Infamous is only] co-owner – to get a snap of [a celebrity (r:p385, ln17)] going into hospital on a stretcher. The helicopter is equipped with a police-style million-candlepower laser beam and a device that enables him to wire photographs to London from his back seat – while in mid-air. Disasters are also a... specialty... [of Mr Infamous, who] bemoans the sliding standard of the paparazzi [since] so many "scumbags"... latched on to the fact absurd profits [were] to be made from pushing a button... "So much of what passes for paparazzi these days is a bunch of morons standing in front of restaurants. To be good, you have to get in and burn celebrities right at their tables"... The idea photo editors feel any post-Di... guilt is risible. In [his] mind, the tragedy has simply provided them with an excellent excuse for being cheap. "There's not one of them who wouldn't buy a \$5000 picture for 50 bucks if they had a chance." ...But for [him], it's always been about having fun as much as making money. Some years ago, *Vanity Fair* crooned that the marriage of [an] actress and... sculptor... "was so private that not one paparazzo showed up". In fact, gatecrasher Mr [Infamous]... hired a tuxedo – sat through the wedding ceremony in a front row seat, chatting away to an unsuspecting [member of the Rolling Stones – then] ended up selling his batch of unofficial wedding photos around the world for... \$170,000. In the post-Di... world, they probably wouldn't be worth the Kodak developing paper they were printed on... [Speaking of Di.] French investigators are concentrating on finding a... white Fiat Uno made between 1983 and 1989 which may have played a key role in [her crash].

...an advertisement featuring a supermodel driving a car] at speed and crashing is being withheld in Britain amid fears it would cause [people to become] upset... The commercial... [which] promotes Citroen's rival to the Ford Escort and Vauxhall Astra... is being screened in Germany...

[NZ's] Broadcasting Standards Authority has turned down a complaint... from the Monarchist League, about a 3 *National News* interview with [a British] comedian... in which [the interviewer] said: "Yeah, we're a bit republican down here." The authority... [said the comment] could not be considered inaccurate or unfair... The authority [also] declined to uphold... [a]nother... complaint that... remarks on the royal family... w[ere] offensive, inappropriate and discriminatory... Two viewers, from Gore and Wanganui, [had] complained about a... interview... [during which someone] said: "The trouble with [Britain's] royal family is that they're Germans." [Editor's note: 'A North German tribe, originally inhabitants from a district called *Angul* – now Schleswig-Holstein – migrated to England in the 5th c., founding kingdoms in Mercia, Northumbria, and East Anglia, and finally gave their name to England and the English.' 'In 1917, with anti-German feeling running high during WWI, George V changed the family name to Windsor from *Saxe-Coburg-Gotha*, the name of the British royal house from the accession of Edward VII (1901), whose father Prince Albert, consort of Queen Victoria, was a prince of the German duchy Saxe-Coburg and Gotha.']

...The prestigious Free University in Berlin is offering a course on... Di... The course consists of 12 conferences with the theme, "Myth and Politics – Diana, from the Princess of Wales to the Queen of Hearts." ...Meanwhile[, protests]... are mounting... over the cost of the probe into... [Di's] death... after it emerged that up to a fifth of a Paris police squad have been assigned to the investigation... Concern has been raised in particular after a huge operation was launched last week to question the owners of up to 40,000 Fiat Unos – the make of car which police believe may have hit [Di's] Mercedes shortly before it crashed... Officials justified the resources being used, saying a big drugs case would use more, and dismissed accusations that the chance of finding the Fiat in question was "minuscule"... [□ The tribute song] *Candle in the Wind* '97... was declared the world's biggest-selling single yesterday after 31.8 million copies had been distributed around the globe... [It] took just 37 days to... overtake... the previous global record seller, Bing Crosby's *White Christmas*, which has sold an estimated 30 million copies worldwide... over the 55 years since [that] record's release... in [third place, with 17 million sales, is] *Rock Around The Clock* [by] Bill Haley and his Comets...

[A singer] has handed over a cheque for £20 million... to [Di's]... memorial fund – the first instalment of royalties from his worldwide number one hit *Candle in the Wind* 97... It [has] sold 33 million copies... [so far – no surprise! What's surprising is that] the Queen plans to move members of her family... including [her sister] and various cousins... out of Kensington Palace and convert it into an art museum and a memorial to its former resident... [T]he proposals were likely to be announced early next year, the... *Sunday Times* said yesterday... The Queen, who has not yet informed family members of the plan, would pay for them to be rehoused... There was no comment from Buckingham Palace... [In another development, the previous British PM] has been given the role of legal guardian to protect the inheritance of [Di's] children... The matter of her will is complicated and sensitive because her divorce settlement, reported to be around £17 million, was based on the assumption [Di] would live until [the age of 85].

...the Prince of Wales] has decided to abandon legal moves that could save his sons millions of dollars in inheritance taxes following the death of their mother... his office said yesterday... In Britain, inheritance tax is 40%. The prince's... solicitors were considering trying to get a court to overturn... [his] divorce settlement because... Di... did not change her will after her 1996 divorce... to take account of her greatly increased wealth. In her will, Di... had estimated her wealth at £1 million... but when [Di] died... her estate was worth £21 m... There is a 1987 legal precedent, in a case called *Barder vs Barder*. If a court [had] agreed to overturn the settlement, [the prince could] then have... put... the money... into a trust for his sons, thereby avoiding the huge tax bill... In another matter relating to [Di's] financial legacy, the *Sunday Times* said... [Di's] solicitors... plan... to seek compensation from companies exploiting her name by selling unauthorised memorabilia. Buckingham Palace played down another report in the newspaper... [by saying] there were no plans to convert... Kensington Palace into an art gallery and memorial... The 7000 pictures in the royal collection are currently spread around the royal residences and "it simply wouldn't be appropriate to allow them to be moved into one place,"...

The family of Di... is planning to sue... [Dodi's father] for at least £8 million... over her death... the *Sunday Times* said yesterday. The sum is the amount of the inheritance tax bill on the £21 million [Di] left to her sons. It said advisers to the Princess' estate were also considering a claim for a further £25 million that would have accrued on her wealth had [Di] lived to old age. - 1997

Officials said copies of [Di's] will would be available to the public... ['for £2 each'. T]he BBC reported yesterday that... the bulk of [Di's] will would be held in trust for [her] two sons... Other beneficiaries were [Di's] 17 godchildren and her former butler... who receives £50,000.

...Diana's mum... was devastated last week when thieves ransacked her cottage... taking thousands of pounds of family heirlooms. At the time of the raid, [Diana's mum] was away in London giving evidence in the trial of Diana's butler... who is charged with stealing from Diana's estate.

...Theft charges against Princess Diana's butler... have been dropped[, avoiding the problematic scenario whereby 'the Queen – the head of the Crown – would have been required to give evidence to defend a person the Crown was prosecuting'!]. The case collapsed after the Queen remembered

[the butler] had told her [it] was keeping Diana's things for safekeeping... The prosecution decided there would no longer be a realistic prospect of conviction...

Buckingham Palace was under pressure last night to explain why the Queen took so long to reveal that [a] former royal butler... had told her [it] was safe-guarding some of the late Princess of Wales' personal possessions... Did the Queen "forget" the vital evidence of [the butler]'s conversation once [the monarch] had been told that [the butler] had sold Diana's property? Is [the monarch] suffering from more general amnesia, in which case her constitutional position might be imperilled? Do legal cases involving the royal family benefit from consideration of privacy and courtesy not extended to ordinary people? ...While no members of the royal family were called to give evidence, Diana's mother... and her sister... did testify.

...The Princess of Wales' family yesterday launched advanced ticket sales to her grave site, publishing a telephone number for the public to call and announcing the entry price – £9.50... [for adults,] £7 for senior citizens and £5 for children... Would-be visitors to the... grave... were invited to call now to book tickets for the northern summer... More than 220 telephone lines have been set up to handle the expected deluge of callers.

...Telephone operators battled yesterday to deal with a flood of Britons booking tickets to see the secluded island where... Di... is buried... [Her] family have decided to open the estate to 2500 visitors a day between July 1, the Princess' birthday, and August 30, the eve of the anniversary of her death. Meanwhile, [Di's brother's] legal battle against the British Government for allegedly failing to protect [her] family's privacy will be heard by the European Commission on Human Rights... Commission officials said it would examine the complaint, laid in 1995, and, if it accepts the validity of the argument, would try to broker a solution. If no settlement can be reached, the case may be sent to the European Court on Human Rights. A final ruling would be binding on Britain... [By the way, Di's eldest son] has told his father [of his lack of interest in becoming] king... The tabloid *People* quoted senior palace aides as saying... [the] Eton College... schoolboy... [who intends] to... study... for[an] art history degree... [at] St Andrew's University in Scotland... had become more resistant to the prospect of assuming the throne since the death of his mother... "When... [the son] looks at the Royal Family all... [the] second in line of succession... has seen in recent years is misery... That feeling is deep-seated and [the son] gets angry and tearful about it." The *People* said [the son] had argued with both Di... before [her death and with his father] over his reluctance to be king... The teenager[who] can legally become king on... his 18th birthday... has appeared only rarely in public and, in contrast to his more extrovert younger brother... has looked shy and ill at ease facing photographers... [The eldest son is also] said to be angry and upset at the commercial exploitation of his mother... The... [eldest son] is reportedly behind a campaign by his uncle... to have the activities of the Diana Memorial Fund wound up within two years. At the weekend, [the uncle (Di's brother)] described the fund as tacky and said it was degrading [Di's] memory by allowing her name to be used commercially... The Prince's major irritation is reported to be with the fund managers' licensing of [his mother's] name to appear on tubs of Flora margarine in return for £1.25 million and on lottery scratchcards... "...His view is that they have already raised something like £100 million and that is enough." The chief fundraiser for the memorial fund, [Di's] butler... had "very strong and definite feelings" about the subject, which [the butler] could not discuss. "But the memorial fund will continue to go forward." The fund president... [who is one of Di's sisters], has reportedly told him that the fund cannot be wound up while it is raising £1 million a week. The fund's managers recently took out a 20-year lease for a London headquarters provided free by a Japanese corporation. They admit that the margarine endorsement was a lapse of judgment and have since declined to endorse products until endorsement guidelines are drawn up.

...THE DIANA WARS... T[he earth] had barely settled over... [Di]'s island grave before the mud-slinging began. Di... may have been at peace, but the nation was not. Social civil war broke out the moment [Di's brother] fired his funeral broadside, a withering fusillade aimed at the House of Windsor and the fourth estate. In the early days this seemed a conventional aristocratic feud... but... [recently several] families of the godchildren were reportedly disgusted by the arrogance [Di's family has] displayed in their handling of... the... sensitive issue... of the... [will. T]he family altered ...[i]t to include a £50,000 bequest to her butler... while her godchildren, who between them had been bequeathed a quarter of her possessions, were given only a token item each... Noticeably, [Di] left nothing to charity... [S]worn enemies... of... [Di's brother have] sneered at the cost of tickets for tours of Althorp, described as "tasteless" a pop concert held near the site of her grave, queried the amount [the brother] was giving to his sister's charity and most cruelly, criticised his memorial to her as "vulgar". Nor were they alone in their assault. The Archbishop of York expressed his belief that the family's temple shrine merely [encourages] the cult of Di... arguing that this near-deification was unsuited to the memory of a [person] who put others before herself. The moral high ground was rapidly slipping from the ninth Earl of Spencer... [and accelerated after the earl chose] to have the hearing [for his divorce in] South Africa rather than in Britain to save money... ignoring the fact that it would be heard in public. In court, [the earl] was depicted as a drunken, cruel, arrogant adulterer who had told his wife... [about wanting] a divorce while [having a] bath... The shield of Di... was now of little protection to her brother as [the earl] parried... blows about his plans for Althorp... [V]ictory in the War of Diana's Memory... [became complicated when Dodi's dad] launched a pre-emptive strike, planting his family flag on the territory of her unexplored future, arguing that his clan... brought her true happiness and love in the last weeks of her life. At first [Dodi's dad] seemed to have a formidable armoury[claiming]... Di... and his son... had been about to announce their engagement... [Di] was pregnant... and that in consequence there had been a conspiracy to kill them... It soon became clear, however, that [Dodi's dad], for all his expensively deployed weapons could not withstand the close combat required. His claim that Di... spoke... affectionate words... before... dying... was officially denied by the French authorities... Content to wound rather than cripple or kill, [Di's family]... unaccountably chose to hold their fire... [and] opted... instead... for a war of social attrition... They made it clear that they were "deeply upset" over [his] attempts to convince the world that Di... was murdered... This phoney war ended in a full-blooded confrontation in Paris... After eight hours in the courtroom, where [Di's] mother studiously and coldly ignored Dodi's [dad, the latter] launched an all-out offensive, riding head-long into the valley of social death... As the [families of Di and Dodi], in their own ways, self-destructed, the House of Windsor gradually clawed back the ground that it had lost during the onslaught of the funeral week... [Dodi's dad] soon fell victim to the Windsors' remorseless campaign[including ending]... his 12-year sponsorship of the Windsor Horse Show, usually attended by the Queen... [T]he Royal House, the fountainhead of all honour, was[also] able to argue convincingly that it had enabled [Di] to become an international icon. It was the royal family, too, which held the greatest prize, her sons... If the Spencers were keepers of her mortal remains, it was the Windsors... the family that had cast her aside[which] now stood guardian to her living image, the future king. In life the royal family had rejected Di... stripping her of her title of honour, ordering her name be excluded from the prayers for the royal family said in church, and thwarting her ambitions on the world stage. In death... [Di] underwent a process of "reverse Stalinism", being airbrushed back into the bosom of the royal family as though [Di] had never been away, as if all the difficulties of the early 1990s had been just a bad dream... [But] the lingering suspicion felt by many [is] that behind its public face the family, though affected by [Di's] death, rather wished the slate of history could be wiped clean of her memory.

...They were the photos that intrigued millions of devoted Princess Di... fans worldwide. There [Di] was on the sparkling waters of the Mediterranean looking tanned, happy and relaxed in the company of millionaire playboy Dodi Fayed... Only days earlier, Di... was crushed when... [a] top heart surgeon... finally ended their two-year relationship... Now, a British television documentary has revealed how the spurned but desperately in love princess used Dodi and the media in an attempt to win back [the Pakistani heart surgeon]... Whether Di... would have won back [the heart surgeon] and found the love [Di] craved will never be known. The... [heart surgeon] did not cooperate with the documentary makers, [and the]... crash that killed her... put an end to her plan. The last act of love between the couple saw [him] discreetly attending Di[']s... funeral...

Two new television documentaries screened in Britain last week have renewed a welter of theories about... [Di's] death... For the nerdish, nervous and plain nutty around the world, [Di's] death has been the JFK assassination to the power of infinity... There are 36,000 Websites positing and

discussing Di... conspiracies. A few of these are come-ons for porn or tacky souvenirs but... [what] follows is a sample of the ideas of the... world's population who believe [Di's] death was not accidental. WHY THEY KILLED HER • Di... was killed by the New World Order, a faction... [which] planned to marry Di... to [the US President, with the President's wife] to be eliminated through divorce or murder. But on her last visit to the White House... Di... informed [the President that they] would never marry... so [Di] had to go. • Di... was killed to set an example to future members of the royal family who might consider stepping out of line... • Di... was killed because the present royal family is an imposter, and the House of Windsor is a fraud. On the other hand, the lineage of... Di... goes back to Charles II... Having dubbed the royals "cold, distant, and uncaring", Di... was in a position to call upon the people to... raise an army to... overthrow them... So again, [Di] had to go... • Di... and Dodi... were killed because they were about to shift a huge amount of cash into banks in Germany and Austria, and this would have upset international bankers. • Di... was killed because the new Labour government wanted to save money on her security. • And, of course, Di... faked her own death, like Elvis. ISN'T IT QUITE ODD? • That Di... was placed in a closed coffin so there was no proof of there being a body, and that her burial on an island in the middle of a lake prevents the possibility of grave robbers discovering the truth? • That... the car in which [Di] died had been previously involved in a car-jacking incident and could have been tampered with? ...WHAT REALLY HAPPENED • Di... and Dodi were told that, in order to avoid photographers, they would leave the Ritz from the rear and then drive their car a few blocks and climb into a truck. Once aboard, agents killed them with lethal injections, injected alcohol into Henri Paul and then crushed the car in a mobile hydraulic press before dropping it off in the tunnel. • Di... and Dodi were not even in the car that left the Ritz. They were killed in the hotel and locked into a pre-crushed car... • Agents laid down a chemical slick in the tunnel. The famous second car – which, mysteriously, has never been found – carried agents of British intelligence. It came up behind the Mercedes and hit it. The slick did the rest... • The... site of the crash... Pont de l'Alma... is significant... It is not only that the word *pont* is connected with Pontiff – ie, the Pope – the spot is also an ancient pagan sacrificial site that was used in the time of the Merovingian kings (500-751AD) as an underground chamber. What any of this signifies is not clear, but a rogue faction in MI6, powerless to prevent the assassination, did manage to arrange for the deaths of Di... and Dodi to happen at Pont l'Alma, knowing that this would send a signal to the select and pave the way for the creation of a Saint Di... [A]ny day now, imaging will be used by the MI6 mavericks who opposed the killing of Di... to create "miraculous appearances" of her. Children at various locations will be randomly selected to witness "saintly apparitions". They will receive a "message from Di...", leading to... [her sons] becoming akin to two living Jesus Christs. It will be the start of a new religion by which the plotters will control the world... AND FINALLY • Now here is a conspiracy theory: what if all these conspiracies on the Internet are just a smoke-screen put up by the Establishment to let us think the issue is being properly discussed while they keep us from the real truth...?

...The Age of Di... has not ended but rather has just begun... CHAUCER wrote of a pilgrimage to Canterbury in the Dark Ages. In 1986... [people] sang of going to Elvis' home at Graceland. This... summer morning, we are going to Dianaville... Five of us... [in] the minivan... come from California, the sixth is an English chum... It is a sentimental journey, but no one is sad... I still dream about Di... I hardly knew her; we met only a few times. But [Di] changed everything about my life – where I lived, how I earned my living, how I dressed... It is almost 17 years since I visited... Althorp... Back then, the... Earl... and his porcelain countess... grinned proudly at tourists who paid £2... to see what Di... called home... [Tickets now sell] for £9.50 each [– 'more that it costs to see Buckingham Palace or the Tower of London', although Althorp 'could have charged double that.' The assembled] press... offer to buy them. Fat chance... Press cards are powerless here... Today, about 2500 Dianaphiles... will also spend... 20 quid each on food, guide books and oh-so-tasteful souvenirs. Do the maths. Though [the earl] spent £2 million getting Dianaville ready for its debut season, the belted earl is not exactly tightening his belt these days... Our first mission is to the lake with our fragrant bouquet. Here awaits the mock-Greek "temple" which serve[d] as a memorial to... deceased family pets... [T]he tiny central island[also] hosts a sculptured urn, surmounted by a flame. It... does not mark the grave; very few know the exact location of that... The fifth earl paid £3 for [Di's] little Grecian folly in the 1880s. Tinting it up with fresh paint, the present earl added inscriptions from his own famous eulogy and from [Di's] lips (such as: 'Everyone needs to be valued; everyone has the potential to give something back, if only they have the chance'). Between the dedications, like a Wedgewood silhouette, is her innocent profile. Some clergy screamed "paganism" when similar shrines appeared all over the world last September. The "cult of Diana" lingers, but Althorp's display is a triumph to political correctness. To Christianise [his temple, the earl] cleverly stuck a golden cross on the roof. As instructed by an attendant, we remove cellophane from our flowers and join the little throng of flower-bearers at the temple. Like sacrificial offerings, yesterday's bouquets are already compost in a neat heap to the side. I lay our tribute between the fluted columns... I try to focus on her memory but in the jostle of visitors I have no sense of her presence. Instead, I am arrested by the next bouquet, which has a plastic kiwi tucked into its petals. There are 2500 people here today and I end up beside an Auckland couple. The wife adored Di... They go to Paris, next. To see the Alma Bridge tunnel... Like mine, her husband is just along for the ride. Indeed, visitors today are 80[% gals], mostly 40 years-plus. Two... plonk varicose thighs down on a bench and contemplate the island, sighing: "I can't believe [Di's] really here." Crunching back to the house, we line up to view... [family treasures, including] one of the richest private art collections in Britain. The gallery is somewhat diminished these days. Devastated by death duties, the previous earl quietly sold off £1 million worth of antiques... little dream[ing] that 16 years later, an armful of his daughter's dresses would fetch more at auction than his precious van Dyck... Recent events altered the mezzanine gallery. A super-realist canvas of Di... hangs above a portrait of her brother. "Normally it's only pictures of the earls and their [wiv]es here," says a guide. "But they made a special exception for the princess." ...We... enter... the sniffy bit of the tour... film of [Di's] earliest days... We see how Di... learned to be the world's most photogenic... [gal] – posing coquettishly was a foolproof way to get attention from her camera-mad papa... In a bathing suit, Di... gyrates and twirls a scarf like Salome, both balletic and burlesque. Shy Di? Hardly. We watch the fractured flickers several times over, for it is amazing to see Di... inventing herself; creating the monster that would slay the world before it slew her. Everyone gasps to see her accidentally flung on her head while playing with her mother. We are spared the screaming fit that must have followed... The same reel shows us the stoic acceptance of a poor divorced kid in uniform, packed off to yet another costly boarding school. In the next room we read school reports that confirm the rotten time [Di] had of her education. A... 17[%] in a 1973 maths exam earns her teacher's comment: "I fear numbers mean nothing to Di..." ...Her gowns are displayed on faceless mannequins... [One of my companions] goes back twice to the Gown of the Century... "It still has the innocence of a fairytale wedding..." This, says [my companion]... "is the happiest day of my life." ...we head up the hill to St Mary's Church... In the family pew, an earl's daughter sang the same cheerful hymns the world heard at her funeral... knelt and prayed for things that mattered to an insecure schoolgirl... probably pray[ing] for love. And... found it at last, not in the arms of a husband, but from people like us, who... somehow loved a nice, quiet, country girl to death.

...The millions who mourned the death of Di... are... dependent, says the Dean of Westminster... who conducted [her] funeral service... people's fascination with the Princess... "...was... irrational, but not in the sense of madness or stupidity... There was displaced guilt as members of a world society which, through the massive projections which they had put on the Princess, generated the specific circumstances which led to her death."

...In his book, *50 Ways to a Healthy Heart*... a friend of Di... who performed the world's first heart transplant... said... [Di] could be alive today if [Di]d been rushed to hospital... "...they made a mistake in not rushing her to hospital quicker because her... internal... bleeding could only be stopped by surgery..." The suggestion that... [Di] had a chance of survival is supported by an account by... a doctor travelling in the opposite direction to Di... [The doctor] described the Princess as "in the best shape" of the... crash victims, including... the bodyguard who survived his multiple injuries... [However], Di... chose not to wear a seatbelt. No matter how rich and beautiful you are, no one can protect you from stupidity.

...The only person who could have been blamed for the deaths of Di... and... Dodi... was the driver of their car... the *Sunday Mirror* reported. It based its findings on excerpts from the official report into the Paris car crash... [which] began soon after [Di's] death... and was completed last week... The investigation heard evidence from about 160 witnesses and cost £6.4 million... [A] French lawyer for... [Di's] bodyguard... said the report... is a whitewash in that those responsible at Etoile Limousines and the Ritz for allowing Henri Paul to drive the car should stand trial... [T]he French Ministry of Justice... [has shown] a reluctance... to take action against... [those parties. The bodyguard's] British lawyer... said his client planned to sue [Dodi's father] in English courts for failing to adequately protect him during his employment.

...Di... was not killed by careless driving... [but] by careless road design. If the pillar which her car hit had had a proper guard-rail around it, her car would have simply bounced off and [Di] would probably have survived with a few bumps and grazes... This is the opinion of the researchers who spent months investigating the accident. As usual, the accident started with human error, and, as usual, the fatalities could have been avoided if the correct steps had been taken by road-safety authorities. However, as far as the... road safety establishment is concerned, because an accident starts with human error, the cause of a fatality is human error. Its reasoning continues that if human error caused the accident, then we should increase the penalties for drivers who make mistakes. As we can see from the Di... example, the basic assumption behind this reasoning is absurd. You may not be able to stop chauffeurs drinking and speeding, but you can design both cars and roads so that the consequences are not fatal.

...France's state prosecutor has recommended dismissing charges against nine photographers and a press motorcyclist implicated in the car crash that killed Di... judicial officials said yesterday. The prosecutor decided there was insufficient evidence to pursue the charges... The recommendations are to be sent to... [the] Judge... who is investigating the accident... [The judge] is expected to announce soon that the... investigation... is over. Then [the judge] will be able to determine whether to proceed with charges against the 10 suspects or dismiss them... [The judge is expected to do the latter, but] may ultimately decide to charge several of the photographers for failing to assist a person in danger... [In related news,] the British tabloid the *Sun* [is offering] a \$775,000 reward for information leading to the arrest of the murderer of... Jill Dando...

JILL... woke up with a list of a thousand things to do. It was a day for catching up with friends, family and the minutiae of life, so often pushed aside by the demands of a hectic career in television... Fate decided otherwise. When [Jill] drew up outside her home at 11.32am, a killer was waiting. [Jill] locked the car and walked towards her front door [but] never got inside. The murderer put a 9mm semi-automatic pistol against her head and fired a single bullet. [Jill] fell to the ground, with her head turned around in surprise... [Jill] did not even have time to scream... A witness heard only the sound of her gasping in shock... Why would anybody want to murder Dando and how could they have known [Jill] would return that Monday morning to a home [Jill] visited so erratically... since effectively [moving] in with... her fiancé... since their engagement...? ...Dando was devoted to the BBC1 programme *Crimewatch* and there are suggestions [Jill] may have been targeted by a criminal who wished to make an example of her... But... BBC sources say police have made no moves to examine *Crimewatch* case records... [and a] former commander of Scotland Yard's robbery squad, is dismissive: "[Jill] was just a presenter. [If a criminal] wanted revenge [it] could have killed the witness or the police[officer] who put him away." ...Was it, then, a crime of passion by a former lover or someone hired by him? The most recent records show that of 217 [gals] killed in England and Wales in 1996, all but 30 knew the killer... Detectives are questioning her friends, family and former lovers for leads... The ruthless manner of the "execution" works against the possibility of the killer being an obsessed fan or stalker. However, the trigger was there for a sexually motivated killing: jealousy... Dando was unthreateningly beautiful... the girl next door... sexy, but in a way that reinforced rather than challenged the social and familial order. As [Jill] herself put it: "I'm lucky I don't attract perverts or porn freaks. I must have a wholesome look about me." ...[yet t]he latest cover of the *Radio Times* has her in a leather-clad pose, with an unfortunate back page advert for the Mystery and Thriller (book) Club, saying: "Couldn't you just murder?" ...In the aftermath of her death, comparisons have been made between her and Di... as if the curse of modern celebrity could provide an answer. But[– though they were the same age –] Dando was no global icon and, so far, no evidence has emerged of a tragic flaw in the make-up of the former head girl from Weston-Super-Mare, who rose through local newspapers to become a \$1.2 million-a-year presenter... Dando was to marry... in the autumn and had signed a \$600,000 picture deal with *OK!* magazine for the wedding.

...a former cavalry officer, who... [was] a former lover of Di... is auctioning the newspaper rights to his memoirs of their affair for over £500,000.

...[the Prince of Wales] has vowed to take on... Di[']s former lover, to protect his heartbroken sons and their mother's memory. [The former lover], who is considered Britain's most hated [perso]n, has already published one book about their affair and is set to finally destroy Di[']s... reputation with further revelations about their passionate relationship... [via] 64 steamy love letters from Di... Extracts from the book are due to be published within weeks by a British newspaper that paid a reported \$1.25 million for the rights. The most shocking revelation in the book is tipped to be [hi]s claim that their affair started long before the date [the former lover]'s always admitted, the summer of 1985. According to leaks from the book, which have appeared in American newspapers, [the former lover] claims their affair started before [Di's second son] was born in 1984. And, in one of Di[']s letters, the Princess is alleged to have written ...one look at the baby and you'll know it's ours. [The Prince of Wales] and the Queen are furious and seeking to place an injunction on the book. 'This could turn into a pretty unsavoury legal battle,' says one royal insider. 'The copyright of the letters was owned by Di, and it passed to her estate. But in law, [the former lover] owns the ink and paper they were written on. [Therefore, the former lover] could draw from the contents of the letters without quoting them directly, and that will tie the lawyers in knots.' The Princes are devastated by the revelations... [The younger Prince] reportedly turned to [the Prince of Wales] in tears and asked: 'Aren't you my daddy?' [The Prince of Wales] dismissed it all as rubbish. [The elder Prince], according to the American newspaper *Globe*, phoned [the former lover] to plead: 'Please reject the money and save your honour...' ...[however, the former lover believes it] has no reputation left to lose...

Di... died believing her lover... was the father of her... younger son... But [Di] never realised that [her ex-husband] knew this too, [that the Prince] had been aware [Di had met her lover] the year before her second son was born. Di... confessed to a... friend that [the royal couple] had problems with their sex-life, and that [the Princess] faked orgasms when they made love. By the time they returned from their honeymoon, there was little physical contact, and soon afterwards Di... discovered [it] was pregnant... Throughout [Di's second pregnancy, her husband] never let on [it] knew Di... had taken a lover... hop[ing] Di... would enjoy a short fling and return to him after the child was born... It was with some trepidation that [the Prince] went to see the baby... His worst fears were realised – the baby had rust-coloured hair... Di... later claimed... his reaction killed her love for him.

...[a f]ormer cavalry officer... has denied [it is the father of Di's youngest son]... "...I can absolutely assure you that I am not... When I first met Di... [her youngest son] was a toddler..." ...A book by Di[']s... former police bodyguard... also rubbishes the rumours. [The guard], who worked with her for six years, said the gossip used to upset the Princess... "The nonsense should be scotched here and now... [The baby] was born on September 15, 1984. Di... did not meet [the officer] until the summer of 1986, and the red hair gossips so love to cite as proof is, of course, a... trait[of Di's family]."

...PRINCESS Diana's brother is selling family treasures to raise more cash. [The]Earl... plans to auction more than 300 items from... his ancestral home... The earl said it would be "difficult to part with objects long associated with my family". But [the earl] wanted to use the cash to develop a museum set up in Di[']s memory, and to buy modern art for... Althorp House... The furniture, paintings and books from 10 attic rooms at the mansion should raise around \$6 million. Up to 20 carriages will also be included, the biggest collection ever offered for sale.

...PRINCESS Di[']s... mum... was snubbed after the fatal car crash that killed her daughter... [Di's mum] was left out of funeral arrangements and ignored by the royal family[, which]... had not even bothered telephoning her to offer sympathy or... support. [Di's mum] also... was only told

about Di[']s death an hour before the media, but could not tell friends until the public announcement. [Di's mum] was even more upset when [it] heard about funeral arrangements through television news... "It really seems... ironic to me that having buried two children, for entirely different reasons, I was not able to see or touch or hold them when they were dead." ...In the Express article, [Di's mum] blamed... the... therapists... [who] had convinced her troubled daughter [that it] was a disappointment to her parents because [it] was not born a boy... for Di[']s unhappiness.

...DIANA: STORY OF A PRINCESS[(7.30pm tonight on TV3) is a 4-part documentary about... [the] Princess of Wales. *Part 1. Exploring Di[']s childhood, her work as a nanny and her first meeting with [the Prince of Wales]. It looks at the media pressure on [the Prince] to propose to Di... and her unhappiness when [the new bride] moved into Buckingham Palace... In letters... by [the] Prince... to a [gal] who was his lover for 16 years – before, during and after his marriage to Di[(and, no, it wasn't his current mistress!) – the Prince]... complains about having to marry a virgin and wishes [it] had "a wife in every Commonwealth country"... It's clear... [the Prince] was a serial cheater and led Di... like a lamb to the slaughter.*

...Books written about popular people after their death often tidy up their hero's image and leave out the tacky bits – and never more so than with Di... So a new children's book by an English author and illustrator comes as a refreshing change... *The Happy Princess* (RRP \$7.95... half of the revenue from the book will be donated to the Teenage Cancer Trust in the UK...)... doesn't try to avoid the unflattering or upsetting aspects of Di[']s life. The author... wrote the book after [it] noticed that children were struggling to come to terms with her shocking and untimely death.

...is... DI... in Heaven or Hell? ...Two English Sunday School teachers last week sparked a furore by telling youngsters... Di... went to Hell... because [Di] had not repented for her "immoral lifestyle". In N[Z], the comments are rejected by many church leaders... [One] Canon... labelled the English teachers' remarks "absurd, medieval nonsense", [which made him] want... "to throw up"... [However,] the head of the Anglican Church[in Britain] from 1974 to 1980... echoed... [the words of the] Sunday School teachers... [by labelling] the Princess of Wales a "false goddess" with "loose sexual morals,"... [and] said... the nationwide grieving and admiration for Di... had turned Britain into a godless nation.

...At last! A memorial fountain to honour Di... is to be built on the bank of the Serpentine lake in Hyde Park, London, one of her favourite spots. The \$8.3 million tribute should be finished next year... [Incidentally, fashion] experts have voted Princess Di... the best-dressed person ever.

...We've made a shrine for Di... The scarlet dress... [purchased for] \$44,000... in a Christie's New York auction... has become a shrine... in the LA home... [of] a passionate collector of Di memorabilia. "Both my kids say I'm crazy... They keep asking me, 'Why don't you have a normal house?'" [Their mother], who appears in the BBC documentary *Diana's Dresses*, says her house is normal, except for the wall-to-wall Di... showcases in one bedroom... "I've always been a collector. I started collecting Victorian memorabilia. Then... because I thought [her]s was such a romantic fairytale wedding... I began accumulating Di... dolls and miniature dresses. And then came this real dress, the piece de resistance of our collection."

...WHEN Princess Di... died, Foxton Doll Gallery[']s owner... was devastated – but out of the sadness came a 1000-hour labour of love to recreate... Di[']s wardrobe. The owner[has been a royalty fan since [the owner was a] child, but it was Di... who really made an impression on her – and [the owner] has more than 20 scrapbooks of the late princess to prove it. [The owner] met Di... when [the princess] came to Wellington in 1983. "[Di] stood and talked to us and I felt [Di] was so interested in what we had to say. I really felt I had made a friend. [Di] had the ability to make you feel the most important person in the world." ...While... the... [owner] makes her own porcelain dolls, [the owner] felt it would be too difficult to produce a doll that adequately resembled the princess but decided to put her sewing skills to the test by recreating tiny versions of 18 of Di[']s world-famous dresses... One day [the owner] wants to complete the collection with Di[']s wedding dress which [the owner] saw in England in 1982.

...Lawyers for the estate and the Diana Princess of Wales Memorial Fund have sued the Franklin Mint in US District Court in Los Angeles, claiming the firm is profiting from her likeness... [by] selling Di... dolls, plates and pendants... without their permission. They had asked [the] District Court Judge... to issue an injunction on the mint, stopping further sales of memorabilia until the lawsuit was resolved. But [the] Judge... rejected that request yesterday, saying a jury would have to decide if the charity owned the rights to the Princess' name and likeness in the US...

Lottery cash could be used to plug the funding gap left after the Diana, Princess of Wales Memorial Fund froze all its... grants... The fund... was forced to cancel payments to its beneficiaries amid a bitter and costly legal wrangle with a U[S]-based souvenir firm... About 120 good causes and 500 jobs worldwide are now under threat... Meanwhile... Franklin Mint, showed no sign of backing down from its £15 m... "malicious prosecution" action against the memorial fund. The suit stems from an unsuccessful court [case]... by the fund... to stop the mint producing Di... dolls...

Dead or alive, Di... sells newspapers and magazines and they have given the anniversary of her death wall-to-wall coverage. "Exclusive" photo montages vie with "Scented Diana Candle" offers for the reader's attention... [T]he same tabloids who were accused then of hounding "The People's Princess" to death are now being urged – yet again – to tone down the coverage... From clerics to rock stars, newspaper columnists to opinion pollsters, the message is the same – let her rest in peace... A poll in the *Daily Telegraph* showed that only 6[%] of Britons planned to observe the anniversary... One year after being gripped by mass hysteria over her death, the British are showing signs of "Di... fatigue."

...[thousands] are expected at... [Di's] former home, Kensington Palace, today on the anniversary of her death but no one expects the emotional outpouring of 12 months ago. And the royal family will be relieved. They could do nothing right then; the institution seemed shaken to its insecure foundations. While Di... was alive [Di] consummately outmanoeuvred the whole of the House of Windsor, and their popularity declined as hers soared. After [Di] died, they plummeted in public opinion, in what looked then like a freefall to destruction. A form of pseudo-republicanism swept Britain but the public did not really want to get rid of the royals, it just wanted them to become more like Di... The Queen, who until then had been a figure of muted affection, with her hairdos and matching handbags and her stout Corgis and her gloves that [the Queen seemingly] never takes off, became a figure of hostility. People... allowed themselves briefly to wonder about the taxes they pay towards the upkeep of this unemployed... – [excluding]... 2500 engagements a year – ...and vastly rich family. But the hysteria has abated; the media and the Government need the royal family and the royal family need them, and... since [Di's] death they have been gradually, quietly coaxing the British public back into line. [Di's] death has enhanced the family's popularity, said senior Buckingham Palace sources, mainly, they believed, because the Princess was no longer there to hog the limelight... The main beneficiary... has been [the Prince of Wales]. "The Prince has not suddenly changed... It's just that with the Princess no longer here his role as a father is more obvious and people can understand him better." ...[the Prince] lays his hand on his younger son's shoulder and a credulous nation sighs in approval... [E]ver mindful of the Di... gap... the royals... have enthusiastically rehabilitated... the tabloids... [The Prince – and '50 members of the British press' – went to] South Africa and in a triumphantly tacky photo opportunity posed with [its] President... and the Spice Girls[then]... went to a... HIV clinic in Nepal... [His eldest son] answered a bland media questionnaire. The Queen... went to a pub (for seven minutes)[and] was pictured in front of McDonald's... Unbelievably, this PR machine seems to have worked. Last year, 40[%] of the public thought [the Prince of Wales] would make a good King, but now well over 50[%] approve of him, and that support is rising. Britain overwhelmingly supports the continuing existence of the monarchy... The people need the palace, the palace needs the people.

...500 staff... make the palace tick... When the Queen is away, her servants will play – and how! Shocking tales of drug-fuelled sex orgies among Buckingham Palace staff have sparked a new royal scandal – ...pos[ing] a new threat to the future of the British royal family. [A former aide] claims the Queen would often turn a blind eye as... staffers would sneak guests into wild sex parties at the palace... Sometimes... the royals would attend bashes where gay... staff camped it up in [gals'] clothing. "Parties would happen two or three times a week and were attended by pot-washers and royals alike. Princess Di... used to come dressed in jeans and T-shirts. The Queen encouraged the wildest parties... At one point it became so bad... [that the] Deputy Master of the Household... ordered the palace bar shut down. Staff were serving the Queen almost drunk." ...The strange relationship between royals and servants goes on – culminating in the probe... into palace staff selling royal treasures for profit. An aide reveals

how trucks regularly turned up at Highgrove packed with gifts from fans. [The Prince of Wales took what it] wanted – then staff scrambled for the rest. The leftovers, including ornaments, clothes and gifts from children, were incinerated. “It was a waste on a sad and sickening scale,”...

From the moment [it] wakes up to the moment [it] sinks into bed at night the Prince of Wales... has his every whim catered for. It has been that way since the... [prince] was born. As a... child [it] was hopelessly spoilt by a retinue of royal staff. And as an adult... has come to expect the same special treatment... When the prince has to provide a urine sample for his doctor, his aide assists him in what most would regard as a humiliating task. This is hardly a lifestyle becoming of... the future head of a slimmed down, up-to-date, socially attuned monarchy... At present the prince... [– who ordered] many unwanted official gifts presented to [him] and Di... on royal tours [to be] burned by staff... [–] employs more than 80 full-time staff that cost him... \$8 million in wages... [●] In the *Mail on Sunday*... a former palace valet... claimed... “I was raped by [Princ]es’ servant”...

A convicted rapist... has resigned as an Officer of the Order of the British Empire (OBE) at the request of the Government. A spokes[person] from the P[M]’s office said a letter was received this month from the Queen accepting [his resignation. The rapist] received the honour in 1977 for services to the community in his position as a general practitioner. The former Christchurch deputy mayor was sentenced to six years’ jail... after admitting rape, sexual violation and 11 indecent assault charges dating back 30 years... [■] Cabinet is to make a decision soon on the honours system, with knighthoods and damehoods set to be scrapped. [The P[M]... said yesterday that N[Z]ers... should be recognised with N[Z] honours...

NZ[ers] with titles are an endangered species... But many of them seemed unfazed yesterday by Government plans to do away with knighthoods and damehoods and replace them with a N[Z] honours system. “Things change,” said[one] Sir... “We severed our apron strings from the old country many years ago. I hope we have a wider plethora of awards given to deserving people.” ...[a] Labour Party stalwart and former Pencarrow MP... who turned down four chances to become a dame... partly because it was not egalitarian... said it was better that people were remembered for what they did for others rather than their titles... [However, a f]ormer Court of Appeal judge Sir... was not in favour of abolishing the titles. “I don’t think people should seek to have a title as such, but if it’s bestowed on them I think they can be proud of it and other people respect it...”

...N[Z] will scrap the titles of “knight” and “dame” from the honours list. The decision, which has been approved by Buckingham Palace, will mean none will be named in the [next] Queen’s Birthday list... [The P[M]... defended the lack of public consultation, saying that had already occurred with the 1995... advisory committee on the honours system, which recommended scrapping knights and dames... But the P[M] predicted public opinion would have moved on “quite a long way” since then... [The PM] also... said knight and damehoods... overshadowed the country’s highest honour, the Order of New Zealand, along with the host of other awards recognising community service... The O[NZ]... is restricted to 20 living members. Introduced in 1987, it has never carried a title... Cabinet ministers may be next in line to have their titles chopped. The P[M]... yesterday floated the idea of dropping the “honourable” from in front of their names... [The PM] had already taken advice on that, although there was a complication with the title of “Right Honourable,” which comes with members of the Privy Council. “That’s a debate we now need to have.”

...[the] Queen... will get her third makeover in 46 years in N[Z] next month. The Reserve Bank will follow its A[US]n counterpart and begin minting coins with the Queen’s new effigy. But new coins now in circulation in A[US] show a dour, double-chinned image of the... Queen. A plot by A[US]’s republicans? Not likely, said[a] NZ Reserve Bank spokes[person]. “The Queen”... approved the portrait herself, so we can’t... argue with it.”

[The M]ayor... and five councillors took down the portraits of the Queen and the Duke of Edinburgh from the council chamber... [The mayor] said yesterday that the framed photographs were too old and [it] wanted to stimulate council debate on what should replace them on the wall behind the mayoral chair... They may be replaced by Polynesian art or the Treaty of Waitangi... [A member] of the Monarchist League of N[Z], said the move was “arguably insulting to the Queen,” unless her picture was put up elsewhere in an equally prominent place.

...Most N[Z]ers want to help God save the Queen. Republicans apparently have a long way to go to convince the country to dump the Queen as head of state. The latest... series of surveys reveals that 63.2[% of her NZ] subjects remain loyal... Such strong support for Her Majesty sets N[Z] on the opposite side of the republican argument from A[US]. Across the Tasman, a majority of respondents to two big polls in 1997 indicated they were willing to turn their backs on the royals.

...A[US]ns will vote late next year... on whether to cut 200-year-old constitutional ties with Britain... [The AUSn PM] has promised that if the majority... vote for... [it] the country would become a republic by January 1, 2001.

...Republicans have unveiled a new secret weapon for their campaign for an A[US]n head of state: [the Prince of Wales’ girlfriend! One]... friend once observed: [“The Prince’s girlfriend] is quite happy to jump off her horse and into an evening dress without a bath.” [The girlfriend is also] capable of raucous laughter at a disgusting joke. The agrarian goings-on of the blue-blooded classes involve quite a lot of jumping, and [the girlfriend] herself has often quoted with approval a saying of... her great-grandmother, and mistress of King Edward VII: “My job is to curtsy, and then jump into bed.” This scandalous precedent provided her with a memorable chat-up line shortly after... [meeting the Prince] in 1970 – “My great-grandmother and your great-grandfather were lovers – so how about it?” ...The prospect of the girlfriend... becoming Queen of A[US] sparked a renewed sense of anti-monarchic feeling at the national conference of republicans in Canberra yesterday... [T]he issue highlighted how A[US]ns had no choice over who became[their] Queen... Britain is engulfed in a new debate about whether [the girlfriend will marry the] Prince... and one day be accepted as Queen after the pair were photographed in public as a couple for the first time late last month.

...Relations between[the] Queen... and her[eldest] son... have hit a new low because [the Prince of Wales] is refusing to bow to her demands and ditch[his] long-time companion... The... *Express on Sunday*... said the Queen and her senior aides were concerned by what they saw as [the Prince’s] plans to ease [his girlfriend] more and more into the public eye... Last week... [the couple] took the unprecedented step of issuing a joint statement denying they had cooperated in a biography... which claimed Di... had made death threats against [her ex-husband’s girlfriend]. “Relations are so strained that [the Prince] last met the Queen face to face... [almost three months ago]. It is understood they never spoke last week despite the furore generated by the... book,” the newspaper said... [●] Di’s death means the] Prince... is himself not barred from remarriage. However, [his lover]’s former husband is still alive and it would be impossible for her and [the Prince] to pretend their adultery had no effect on her first marriage.

...[the Prince of Wales] is beginning a marathon weekend of 50th birthday parties that show the split between his public and private lives. Last night, [the Prince] was to be at Buckingham Palace for an official celebration – with 850 guests – hosted by the Queen. Today, the Prince will be guest of honour at a glittering reception for a sprinkling of European royals and his friends in high society, showbusiness and politics. The bash at his Highgrove country residence will be hosted by his long-time lover... The Queen... has no intention of attending and others in The Firm will also be conspicuous by their absence... [Instead, they will probably go to] Windsor Castle where [the Queen’s daughter has organised] an evening to mark the 21st birthday of her son... In reality, there should be no clash because [the Queen’s grandson]’s birthday does not fall until November 15.

...Why does the Queen have two birthdays? ...it has long been the tradition to celebrate the Sovereign’s birthday on a day during the summer. This is because so many sovereigns, most notably Queen Victoria, had their birthdays in winter – not the most pleasant time of the year for the public to be out celebrating. Official birthdays became separated from actual birthdays when King Edward VII decided to celebrate his in the summer instead of his true November birthday. Since 1805 the Sovereign’s “official” birthday has been marked by the Trooping the Colour ceremony, normally held on the second Saturday in June... Unlike the U[K], Kiwis have the first Monday in June as a public holiday in honour of the Sovereign... [The] Queen... was actually born on April 21... B[y the way, the]... Queen turned a blind eye to [her husband’s many]... high-profile...

affairs, but was “insulted” by his choice of... [lover] from 1955 to the mid-’70s... It began when [the Queen’s]... first cousin... was in her 20s and [her husband] in his late 30s... “You could set your watch on a Thursday afternoon because at 2.30pm, Princess A... would arrive at the palace. The pool was reserved for [the Duke of Edinburgh] until 3.30pm.” ...The Queen had lived with that secret since... [being] told in the late ’50s, and [her husband] refused to end the affair. The last thing [the Queen] needed was for the world to know... It seems extraordinary [that the Duke] should have led such a life yet describe Di... as a harlot... in a series of letters... – no wonder [the Duke] was worried that their contents might reach... the press.

...[after Di’s death, the Queen commissioned an inquiry into what people thought of the royal family and their role in society.’ Now t]he Queen is caught in the middle of a profound disagreement between... the conservative Duke of Edinburgh[, who is] advising the Queen that the family should hold to their long-established traditions... and her three sons[, who want]... to speed the pace of reform and safeguard the monarchy by keeping it in step with public opinion... The split emerged at a recent meeting of the “Way Ahead Group” of senior royals and their advisers, where a radical suggestion was made to restrict the title “Royal Highness” – now held by 18 family members – to the monarch and his (or her) immediate heir...

With the approval of [the] Queen... the House of Lords agreed yesterday it was time to bring equal rights to the British monarchy and end 1000 years of... [sexism] by giving a monarch’s first-born daughter the same claim to the throne as any first-born son... By tradition, a son has first rights even if... preceded by a daughter... [The current Queen] succeeded her father to the throne because [the then princess] had no brothers and was the elder of two girls... The... change would likely have no impact on the succession for generations: the Queen’s heir... has no elder sister and his heir... has no sisters at all... The 40 lords, not usually the vanguard of change, greeted news of the modernisation plan with approval and praise... Primogeniture... ensured that [guys] ruled in the days when kings were warriors and power was held through force of arms. But the half-dozen... [British queens] include two of history’s most remarkable sovereigns[– Elizabeth I, who] took her turn at the throne... after her brother and elder sister had ruled and died[; and] Queen Victoria, who was an only child... when her uncle died without surviving legitimate children... in 1837...

[England consisted of ‘independent kingdoms until that of Wessex, established in Hampshire in the early 6th c., became dominant in the 9th c. Under Alfred the Great (king of Wessex 871-99) and his successors, the kingdom of the West Saxons formed the nucleus for the Anglo-Saxon kingdom of England. An ineffective monarch, Edwy (king from 955) alienated a large part of his kingdom during his short reign, and, after Mercia and Northumbria had renounced him in favour of his brother Edgar in 957, Edwy ruled only over the lands south of the Thames. One of the strongest of the Anglo-Saxon kings of England, Edgar succeeded to the throne on Edwy’s death two years later. Although Edward the Martyr successfully succeeded his father Edgar in 975, the youthful king was soon faced by a challenge for the throne from his half-brother Ethelred, who eventually had him murdered at Corfe in 978. Succeeding his murdered half-brother, Ethelred proved quite unequal to the task of confronting the Danes, resorting to the payment of tribute (Danegeld) to keep them from attacking, and losing his throne briefly (1013-14) to the Danish king Sven Forkbeard. Having succeeded his father as king of Denmark in 1014, Cnut (Canute) became king of England after the murder in 1016 of Ethelred’s successor Edmund Ironside, ending a prolonged struggle for the throne. As king, Cnut presided over a period of relative peace, depending more and more on English rather than Danish advisers. Cnut is most commonly remembered for the occasion on which the king demonstrated his inability to stop the rising tide to fawning courtiers who had told the king it was all-powerful. An illegitimate son of Cnut, Harold I first came to the throne when Cnut’s legitimate son was absent in Denmark at the time of his father’s death in 1035. When the other royal claimant, Alfred the Aetheling, was murdered a year later, Harold I was formally recognized as king, although Cnut’s legitimate son Harthacnut returned to the kingdom when Harold himself died in 1040. Famed for his piety, Ethelred’s son Edward the Confessor (king of England 1042-66) was dominated through much of his reign by his wife’s father Earl Godwin, and in later years took less and less interest in affairs of State, effective control falling to Godwin’s son, who eventually succeeded Edward the Confessor (who had no children) as Harold II. The last Anglo-Saxon king of England, Harold II was faced with two invasions within months of his accession. Harold II defeated and killed his half-brother Tostig and the Norse king Harald Hardrada at Stamford Bridge, but was himself slain at Hastings by William, Duke of Normandy, who took the throne as William I. The illegitimate son of Robert (“the Devil”) Duke of Normandy, William “the Conqueror” claimed that Edward the Confessor had promised the throne to him and that Harold II had agreed to be his “liege person”. William I successfully repressed a series of uprisings in the following years, and imposed his rule on England, introducing Norman institutions and customs (including feudalism and administrative and legal practices); the effect on English culture was considerable. Known as Rufus because of his ruddy complexion, William II, son of William I, reigned 1087-1100. His death while out hunting may well have been at the hands of an assassin rather than by accident. On the death of his brother, the youngest son of William I was able to seize the throne in the absence of his other brother Robert on Crusade. Henry I campaigned successfully in France (1111-13 and 1116-20) after conquering Normandy in 1105. At home his reign was characterized by the development of the royal administration and the restraint of baronial power, but after his only son William drowned in 1120 there were problems with the succession, and although Henry extracted an oath of loyalty to his daughter Matilda from the barons in 1127, his death eight years later was followed almost immediately by the outbreak of civil war. Stephen, grandson of William I, seized the throne of England from Matilda a few months after Henry’s death. More popular with the English nobility than his rival, Stephen forced her to flee the kingdom, but failed to restore royal authority in a time of great domestic unrest and was eventually obliged to recognize Matilda’s son, the future Henry II, as heir to the throne. The first Angevin king, Henry II (reigned 1154-89) restored order after the anarchy of the disputed reigns of Stephen and Matilda, added Anjou and Aquitaine to the English possessions in France, established his rule in Ireland, and forced the king of Scotland to acknowledge him overlord of that kingdom. These successes were overshadowed by his feud with Thomas a Becket, who disagreed with him over the relative rights of Church and Crown and was eventually murdered by some of Henry’s knights. In the last years of his reign much trouble was caused by his four sons who intrigued with France in particular to raise rebellion against him. Soon after succeeding his father, Richard “the Lionheart” left to take part in the Third Crusade. Richard defeated Saladin, but failed to capture Jerusalem, and was captured on his way home by Duke Leopold of Austria. Held captive at the behest of Emperor Henry VI, Richard was released in 1194 only after the payment of a huge ransom. After staying in England for little more than a matter of weeks, Richard embarked on a campaign against Philip II Augustus of France, eventually dying from wounds received at the siege of the castle of Chalus in 1199. Nicknamed John Lackland – because, unlike his elder brothers, Henry II’s youngest did not receive a large fief from his father – John I was recognized by both England and Normandy on his accession, but lost Normandy and other areas of France by 1205. At home, his despotic inclinations caused him to fall foul of both the Church and the barons. His refusal to accept the papal nominee Stephen Langton as Archbishop of Canterbury led to England’s being placed under an interdict in 1208, and to his own excommunication. His character, a mixture of brutality, cowardice, and sloth, caused him to be generally hated and despised. The English barons opposed his high-handed methods of raising money and forced him to sign Magna Carta in 1215; when John ignored its provisions civil war broke out, and John died on campaign a year later. Until John’s son Henry III declared himself of age to rule personally in 1227, his regent the Earl of Pembroke kept the rebellious barony in check, but afterwards the king’s ineffectual government, characterized by financial mismanagement and a dependence on unpopular foreign favourites, caused widespread discontent, ending in de Montfort’s defeat and capture of the king at Lewes in 1264. Although Henry III was restored following the defeat of the rebels a year later at Evesham, the king was by this time little more than a figurehead, real power resting with his son who eventually succeeded him as Edward I in 1272. After coming to the throne Edward (nicknamed “the Hammer of the Scots”) did much to solidify the central administration weakened by his father’s fecklessness, but soon became involved in the wars which were eventually to impose a dangerous financial burden on the realm. His campaign against the Welsh prince Llewelyn ended with the annexation of Wales in 1284, but from 1291 onwards Edward became increasingly preoccupied with his attempt to impose feudal superiority on Scotland. There Edward dealt

successfully with a revolt in 1296 but a second uprising dragged on from 1297 until 1305. On his way north to deal with a third revolt in 1307, led this time by Robert the Bruce, Edward died, leaving his weak son Edward II (the first Prince of Wales) to deal with a situation which was to prove beyond him. Early trouble with his barons led to civil war, and two years later Edward II's defeat by the Scots at Bannockburn further weakened his position and the king temporarily lost power to Thomas, Earl of Lancaster. With the help of new favourites, the Despensers, Edward II eventually managed to overthrow and kill Lancaster, but his wife, Isobel of France, allied herself with the exiled Roger de Mortimer, who invaded England and deposed Edward II (who died soon after, almost certainly at the hands of murderers) in favour of his son in 1327. Edward III assumed personal control of his kingdom in 1330 by executing de Mortimer. Edward III restored order and reconciled the baronial opposition, but was soon involved in the wars which were to dominate much of his reign. Edward III resumed his grandfather's policy of undermining Scottish independence by supporting the pretender to the Scottish throne Edward de Baliol, and started the Hundred Years War with France. Although Edward III won dramatic victories in both theatres, final victory eluded him, and following his premature decline into senility in 1377, effective government fell into the hands of his unpopular fourth son, John of Gaunt. Though Richard II, son of the Black Prince (name given, for unknown reasons, to Edward Plantagenet, eldest son of Edward III), behaved bravely when still a minor during the Peasants' Revolt, Richard II proved a weak king, heavily dependent on favourites and on his uncle John of Gaunt. In 1386-8 noble opponents of his administration, known as the Lords Appellant, successfully removed many of the king's confidants. Ten years later Richard II exacted revenge, executing or banishing most of his former opponents, but when the king confiscated John of Gaunt's estate after the latter's death, the dispossessed heir returned from exile in 1399 to overthrow the king (who died in prison in Pontefract Castle, apparently of starvation) and reign in his place as Henry IV. One of the Lords Appellant, Henry IV established the Lancastrian dynasty. His reign was scarred by rebellion, both in Wales where Owen Glendower was briefly successful in establishing Welsh independence, and in the north where the powerful Percy family raised several dangerous uprisings. Although Henry IV defeated and killed Hotspur (Sir Henry Percy) at Shrewsbury in 1403, the Percy threat did not abate until the head of the family was killed at Bramham Moor in 1408. Henry V, son of Henry IV, reigned 1413-22. Having shown early military prowess in his father's wars against the Percy family and the Welsh, Henry V renewed the Hundred Years War soon after coming to the throne and won a resounding victory over the French at Agincourt in 1415. By the Treaty of Troyes (1420) Henry V was named successor to Charles VI of France and betrothed to his daughter Catherine of Valois. When the Dauphin repudiated the treaty Henry V took the field against him but died of dysentery, leaving a difficult inheritance to his infant son Henry VI, who eventually proved scholarly and kindly but prone to bouts of madness and unfit to rule effectively on his own. During his reign the Hundred Years War with France was finally lost, and the royal government, in the hands of a series of regents and noble favourites, became increasingly unpopular through corruption and inefficiency. In the 1450s opponents coalesced round the House of York, and, after intermittent civil war, Henry VI was deposed in 1461 by Edward IV. Henry VI regained his throne briefly in 1470-1 following a Lancastrian uprising, but was deposed once again following Edward IV's victories at Barnet and Tewkesbury, and died within days of his deposition, almost certainly murdered by the victorious Edward IV. His rule was characterized by vigorous and successful attempts to reform royal government, although in his last few years Edward IV seems to have given way to some extent to personal pleasure. Edward V, son of Edward IV, reigned 1483 but was not crowned. Illegitimized following his father's death, on debatable evidence of the legality of Edward IV's marriage, the youthful prince's throne was taken by his uncle Richard III. Historical opinion on the popular picture of Edward IV's brother as a bloodthirsty usurper is still divided; what is certain is that, after suppressing several plots in the early months of his reign, Richard III ruled with some success for a brief period before being defeated and killed at Bosworth in 1485 by Henry Tudor, who then took the throne as Henry VII. The son of Edmund Tudor, Earl of Richmond, Henry VII inherited the Lancastrian claim to the throne through his grandfather's marriage to the widow of Henry V. Threatened in the early years of his reign – which lasted until 1509 – Henry VII eventually established an unchallenged Tudor dynasty, dealing ruthlessly with other claimants to the throne. As king, Henry VII continued the modernization and strengthening of royal government commenced by his Yorkish predecessors, although his attempts to increase royal revenues made him increasingly unpopular. Henry VII's son, Henry VIII, reigned until 1547. Though Henry VIII's reign began in a burst of Renaissance splendour, costly wars, internal rebellion, and general mismanagement in his last years left England in a weak and uncertain condition. During the brief reign as a minor from 1547-53 of Henry VIII's son, England was effectively ruled by two Protectors, the Duke of Somerset and the Duke of Northumberland. Although the young and sickly Edward VI had little direct influence over the policies pursued by his guardians, his Protestant beliefs contributed significantly to the establishment of Protestantism as the State religion, a development which was to survive the Catholic reaction which followed under his elder sister and successor, Mary I. Having gained the throne after the brief attempt to install Lady Jane Grey – the granddaughter of Henry VIII's sister – in her place, Mary I began the series of religious persecutions which earned her the name of "Bloody Mary". Mary I, who married Philip II of Spain, died childless, however, and the accession of her Protestant sister Elizabeth I in 1558 guaranteed that England would not revert permanently to Catholicism. Although frequently courted, Elizabeth I never married and indeed owed much of her popularity and success to the cult of the Virgin Queen created around her. Her reign was dominated by the threat of a Catholic restoration (eventually leading to the execution of Mary Queen of Scots, daughter of James V) and by war with Spain. Her reign also witnessed a great flowering of national culture, particularly in the field of literature. Having survived a long and difficult minority, James I (James VI of Scotland), son of Mary Queen of Scots, had largely succeeded in restoring royal authority in Scotland before inheriting the throne of England on the extinction of the Tudor line in 1603. James I was a difficult and at times erratic monarch, and although the king managed to avoid serious trouble in the deepening constitutional and religious crisis in his new kingdom, his lack of decisiveness and the fecklessness of his declining years, when government was effectively in the hands of his favourite the Duke of Buckingham, left his son Charles I a difficult and potentially explosive legacy. Charles I became king in 1625. His attempt to rule without Parliament (1629-40) eventually failed when Charles I became involved in war with Scotland, and the Long Parliament proved so uncooperative that an open breach and war between the two sides followed in 1642. The king was finally defeated and surrendered to the Scots in 1646. Handed over to Parliament in 1647, Charles I escaped and negotiated with the Scots to fight on his behalf in return for religious concessions, but the Royalist forces were defeated at Preston (1648) and the English army demanded the king's death. Charles I was tried by a special parliamentary court and beheaded in London in 1649. After the king's execution, Oliver Cromwell became Lord Protector of the Commonwealth, an office Oliver held from 1653 until his death in 1658. After Charles I's death, his son, Charles II, was crowned in Scotland, but was forced into exile after the defeat of his invading army at Worcester in 1651. Charles II remained in exile on the Continent for nine years before being restored after the collapse of Cromwell's regime in 1660. Charles II displayed considerable adroitness in handling the difficult constitutional situation left by the preceding two decades of strife, but his failure to produce a Protestant heir left the future of the Stuart dynasty in doubt after his death in 1685. James II (James VII of Scotland), younger son of Charles I, was an accomplished soldier and sailor in the reign of his elder brother, but lost the support of many of his subjects soon after his accession as a result of his strong Catholic views and his attempts to reassert royal absolutism. Although James II put down the rebellion of the Duke of Monmouth in 1685 the king was deposed three years later in favour of William III and Mary II, and failed to regain his throne despite military action in Ireland and Scotland in 1689-90. James II died in exile in France, leaving the Jacobite claim to the throne in the hands of his son James, the Old Pretender. William III (known as William of Orange), son of the Prince of Orange and Mary, daughter of Charles I, was Stadholder (chief magistrate) of the Netherlands from 1672 and married Mary, daughter of the future James II, in 1677. In 1688, William III landed in England at the behest of disaffected politicians, deposed James II, and, having accepted the Declaration of Rights, was crowned along with his wife early in the following year. The last of the Stuart monarchs, Anne, daughter of James II, eventually succeeded her brother-in-law William III on the throne in 1702, there presiding over the Act of Union which completed the unification of Scotland and England. Although Anne was pregnant eighteen times none of the five children born alive survived childhood, and by the Act of Settlement the throne passed to the House of Hanover on her death in 1714. The great-grandson of James I and Elector of Hanover from 1689, George I was unpopular in England, the language of which the king never learnt, and George left the administration of his new kingdom to his ministers, devoting himself to diplomacy and the interests of Hanover, but despite all

this the relatively easy suppression of the Jacobite uprisings of 1715 and 1719 demonstrated that George was generally preferred to the Catholic Old Pretender. George II, son of George I, reigned 1727-60. Like his father, George II depended heavily on his ministers, but took an active part in Britain's entry into the War of Austrian Succession and successfully led his army against the French at Dettingen in 1743, the last occasion on which a British king was present on the field of battle. In the latter years of his reign, George II largely withdrew from active politics, allowing advances in the development of constitutional monarchy which his successor George III was unable permanently to reverse. The grandson of George I reigned 1760-1820. Unlike his two predecessors George III took great interest in domestic politics and attempted to exercise royal control of government to the fullest possible extent. His determination to suppress the American Revolution dominated British war policy 1775-83, but in 1788 the king suffered a serious bout of insanity and thereafter his political influence declined. This insanity became permanently incapacitating in 1811 and his son, later George IV, was made regent. As Prince of Wales, George IV's dissolute lifestyle had already gained him an unsavoury reputation. His attempt to divorce his estranged wife Caroline of Brunswick just after coming to the throne caused a great scandal and further damaged his reputation. William IV, known as "the sailor king", succeeded his unpopular brother George IV in 1830. Brought up in stifling seclusion, Victoria succeeded to the throne on the death of her uncle, William IV, and went on to have the longest reign in British history. Victoria initially showed qualities of determination and obstinacy coupled with a pleasure-loving disposition. After her marriage to her cousin Prince Albert in 1840 Victoria became more serious, more conscious of her responsibilities, and more businesslike; Victoria took an active interest in the policies of her ministers in both home and foreign affairs, ably advised by the Prince, who persuaded her that the Crown should not be aligned with any political party – a principle that has endured. Her death was rightly felt to be the end of an era. Victoria's son, Edward VII, who reigned 1901-10, was known as "the Peacemaker" for no very good reason. His reign, however, was a period of peace. An extrovert and something of a playboy, Edward VII was kept away from the serious conduct of royal affairs during the long reign of his mother, but although Edward VII played little part in government upon finally coming to the throne, his popularity and interest in public appearances generally increased the prestige of the monarchy. Edward VII died suddenly in 1910 before his plans to create a large number of new peers could have any impact on events. Edward VII's son George V, who reigned until 1936, proved to be one of Britain's most popular sovereigns, winning great respect for his punctilious attitude towards royal duties and responsibilities, especially during WWI. George VI, son of George V, reigned until 1952. George VI came to the throne on the abdication – in order to marry the American divorcee Mrs Wallis Simpson – of his elder brother Edward VIII, who was not crowned, and despite a retiring disposition became a popular and respected monarch, playing an important part in WWII...

George VI's wife, the] **Queen Mother** could be asked to move out of Clarence House, her home for nearly 50 years, as part of a plan to pay off her £4 million... debts. In an unprecedented move, [the Prince of Wales] faces the daunting task of proposing an emergency cost-cutting package to his 98-year-old grandmother... [If the Queen Mother] moves into neighbouring St James's Palace[, the prince] and his sons... could then have the option of moving into Clarence House. The cost cutting plan... includes proposals to mothball one of the Queen Mother's five homes, the Castle of Mey in the north of Scotland, and sell rarely used cars and some of her 10 racehorses. The Queen Mother will also be urged to cut down on her lavish lifestyle, which includes a taste for vintage champagne, designer hats and clothes, handcrafted jewellery and expensive dining out. Instead of permanent servants at each residence, it will be suggested that [the Queen Mother] have a smaller staff travelling with her between homes.

...the *Queen and other members of the royal family couldn't get by without their army of servants* Their titles range from the sublime – Mistress of the Robes – to the ridiculous – Yeoman of the Plate Pantry... At the last count, there were about 1000 ...servants... looking after the royal family and their homes. Together, they outnumber their charges by about 15 to one and cost British taxpayers nearly \$6 million a year in salaries alone. In Queen Victoria's day, it was deemed necessary for the monarch to have her own Royal Cobweb Cleaner and Official Spider Catcher. These days, such arcane indulgences no longer exist, although the Queen does retain her own piper, a tradition started 156 years ago... "I regard it as an honour – it's the highest point you can get to as a piper..." says... the 10th holder of the post... who's... duties include playing for 15 minutes under the Queen's window... at 9am sharp... each weekday... Confusingly, [the piper]'s also a Page of the Presence, which means [the piper]'s responsible for meeting the Queen's visitors at the Grand Entrance to Buckingham Palace. But, despite being required to follow the Queen around the country in the course of his work, [the piper]'s not responsible for the royal luggage. That's the job of the Travelling Yeoman, an indispensable aide who goes everywhere with the Queen and looks after her and her entourage's baggage – which can amount to five tonnes on foreign trips... When [the Queen] travels abroad, her luggage is sealed in tamperproof containers which not even Customs officers are permitted to open... Since becoming sovereign... the Queen[, who]... does not hold a passport... has visited more than 325 countries... The... domestic team which runs the royal residences is led by the Master of the Household – normally a former military [officer] who receives a hefty five-figure salary with rent-free, furnished accommodation thrown in. [The Master] commands a... 300-strong... battalion of staff which includes... a steady stream of unpaid [gals] in waiting – really glorified secretaries. The real nitty gritty of domestic chores falls to the Housekeeper and her... staff. Their duties include such prosaic tasks as letting out the royal bath water... and squeezing toothpaste from the tube with a special silver key to minimise waste... However, the most bizarre job of all must be Royal Vegetable Counter. At every dinner party held by the royal family, a senior catering assistant counts the number of Brussels sprouts on each guest's plate to ensure no one has more than the Queen... Then, there's the Royal Flower Arranger...

[YESTERDAY] THE QUEEN accepted her 3,435,758th bouquet of flowers... And... [j]ust days after creating a furore by wringing a pheasant's neck during a shoot, the QUEEN made a statement by wearing a jaunty hat decorated with, yes, you guessed it, pheasant feathers. Meanwhile... THE QUEEN has registered Sandringham and Balmoral as trademarks in a move which will allow her to sell her own merchandise under their brand names. Among the proposed items for sale are... venison, glassware, household utensils and clothing.

...before... Windsor Plc appears as the financial vehicle to take the British monarchy into the new millennium, an ancient money trail will have to be scrutinised... Almost everything pertaining to the crown has links with other aspects of British life. Some commentators... used words such as "mystical" and "magical" to try to describe ancient relationships that defy rational analysis. This means that even ideas for change which on fairness grounds seem inarguable are not always straight forward. Take the proposal to change the 1701 Act of Settlement that prevents the heir marrying a Catholic. It is, in 1996, an insult to millions of Catholics in Britain... and everywhere else where the Queen still reigns. Yet many see this as the start of the disestablishing of the Church of England. [The Prince of Wales], not his mother, appears to favour this further step... [The Prince – who is known to 'wear a traditional Muslim robe, called the djellaba, while relaxing and studying the *Koran* at home' – would] like to be [called the] "defender of faiths" rather than "defender of the faith." But the consequences of ending the church-crown relationship are hard to foresee. It would dilute the Coronation Act, which depends on mystery for its potency. It would affect the House of Lords, where 26 senior Anglican bishops sit by right. Some observers think that, with its privileged relationship abolished, the C[ofE] – which has heaps of problems of its own – would gradually subside to little more than a sect. What then of the great cathedrals, one of the glories of England? Then there's the even older succession custom... [Changing] the succession system... would mean daughters, when first-born, would succeed to all other titles from great dukedoms down. Many would ask, why not? But it would mean huge opposition from still very powerful vested interests. Another question: if it's absurd to prefer son over daughter, isn't it equally absurd for the first-born automatically to scoop the jackpot. The crown, unlike other inheritances, can't be divided. But if it's to go to the ablest, who decides? It's the financial issues, however, which are most labyrinthine... (the Defence Department, for example, pays... £[8.69m]... for the Queen's flight; the Department of National Heritage... [pays £20.54m] for the upkeep of her palaces)... [After '£1.52m has been refunded to Treasury from the Civil List, £7.9m goes to the Queen, £0.64m goes to her mother and £1.9m is divided between 9 princes, princesses and dukes' – excluding the]... Prince of Wales, [who] is separately funded from revenue earned by the vast Duchy of Cornwall, whose

assets extend far beyond the county of Cornwall itself... [B]efore 1710 the monarch used the [Crown E]state's revenues not just for royal living, but also to fund civilian Government. Government was, of course, rather cheaper then... There has... been some resentment that the Queen and her circle have been talking secretly for some time about a new carve-up of what many feel is really everybody's money. Sooner or later, in this less deferential age, changes will have to be argued openly rather than leaked in what looks like a kite-flying exercise.

...[THE QUEEN is to become the first monarch to pay for her own stamps and postage. Palace postal costs are estimated at \$NZ300,000 a year which, until now, have been met by the British taxpayer.' Her 'financial adviser, the Keeper of the Privy Purse, said the Queen wanted to lighten the load on the taxpayer.' In another development, 'the British Government's top legal adviser has called for a repeal of the ban on Catholics ascending to the throne.']

...Can a Catholic remain a loyal subject to a divorced king? A Catholic theologian... writing in this week's *Catholic Herald*, accused the Queen of setting aside Christian values for "secular moral relativism" in urging her heir... to divorce Di... "The monarchy... has become identified not with order but with instability; not with... Christian ideas of sacrifice and duty but with the quick fix,"... [said the former CoFE] priest who converted to Catholicism... [However, the] assistant secretary of the Catholic Bishops' Conference... said... "The Church recognises that civil divorce in some situations is the lesser of two evils,"... The debate is a reminder of strained relations between Catholics and the state harking back to King Henry VIII's failure to obtain a Church-sanctioned divorce from Katharine of Aragon. A furious Henry broke from the Roman Church, and established the... [CoFE in 1534. In related news, yesterday the Sydney] throngs who once would have showered the Windsors with adulation... were instead clamouring to cheer the progress of... [the US President. T]he elite were scrambling over each other for a place at the [President's] side... the final affirmation of America's political aristocracy as a new royalty for A[US]ns picking at the remaining shreds of the imperial umbilical cord.

...[the] Republican candidate... d[idn't] have enough royal genes in his ancestry to become the... President... a leading British genealogist said yesterday... after *Burke's Peerage* probed his background for any signs of blue-blooded ancestors. The upper-class bible for Britons checking on their family trees has researched the ancestry of every U[S] President back to George Washington. It said the candidate with the most royal genes has always been the victor. "[The incumbent President had] the advantage in this [year's] election not only because [of being] related to the British royal family through [the 13th century] Simon de Montfort but because [the President] is a direct descendant from Robert I of France,"... [The Republican candidate's] sole link to the blood royal was to the 13th century King Henry III of England through the Harrison family... Through the family, [the Republican candidate] was also related to... President William Henry Harrison, noted for the longest inaugural speech in history delivered in rain, sleet and snow. Harrison died... weeks later in 1841 from pneumonia... "[His]... descent from Henry III is, however, illegitimate."

...[Many believe the reason royals long ago were called blue bloods is because the silver from the goblets, plates and utensils they used would react with acids in their food and drink to affect their skin, giving them a blueish colour – a medical condition called argyria. Silver is a powerful natural antibiotic that has been used for thousands of years, with no harmful side-effects ever observed (earlier this century, people put silver dollars in their milk and wells to ward off spoilage and illness). It has been suggested that one reason the upper class did not succumb to many of the plagues which almost wiped out entire villages was because they used silver utensils. Churches did, and still do, use silver goblets for communion.' By the way, 'most outsiders who marry into the British royal family come in for some criticism (e.g., the Duchess of York), but the Duke of Edinburgh was spared that, in part because his blood lines are more royal than the Queen's own. The duke, who is of German origin, of a Danish royal house transposed to Greece, and sixth in line to the Greek throne, also had an intellectual, inquiring mind which was then so uncharacteristic of the British royal family that the Queen's husband appears to have decided to play it safe and play it down (perhaps an even more striking incongruity is to hear how much the duke would like to have been a theologian – and has published two volumes of argument on theological issues with one of the deans of Windsor; in fact, his great-aunt was a canonised saint – Aunt Ella was thrown down a well by the Bolsheviks during the Russian Revolution and survived three days there, singing hymns – and his mother became a nun.)]

...Researchers from... the Technische Universitat Berlin and... the Plant Protection Research Institute in Stellenbosch, South Africa... discovered that bees have royal blood lines just like the great families of Europe... Queen bees mate with many of the [guys] in a hive, but... the family lines of most [guy bees] die... out after a few weeks. The same families tend... to survive... and [the gal bees who take over come] from these dominant lines.

...A leading authority on titles is unable to support a suggestion that N[Z], and particularly Auckland, is home to large numbers of the European nobility... [Someone] said after a court case in Auckland this week that there were many European bluebloods in N[Z] who kept a low profile. - 1996

A British documentary team claims to have... uncovered a secret marriage of King George III, made before [George] succeeded to the throne and before [his marriage to] Queen Charlotte. The team... found documents which show that the marriage produced two sons, one called George Rex. "In 1797, George Rex sailed into Cape Town and was given a royal warrant... Rumours abounded that [Rex] was the legitimate heir." The programme also interviews a... descendant of George Rex and, as such, is... a rival to [the Prince of Wales] for the British throne.

...The Queen of England can look beyond her own fractured family for more exotic heirs to the throne – all the way to the tiny Pacific atoll of Niue and even to the heart of the All Black backline. A British documentary team has uncovered... King George's clandestine marriage to Yorkshire draper Hannah Lightfoot... which produced... three sons – George, John and Henry. The story goes that the mother and her children were banished to South Africa and given large amounts of money to keep quiet about their royal connections. Although the family were erased from the royal histories they were given the name Rex, which is Latin for king. Later in life the three sons went their separate ways – George stayed in South Africa, Henry went to Utah, and John to A[US, eventually becoming] an early Governor-General... Long-time Niue Premier, the late Sir Robert Rex, and his great-nephew, [the incumbent] All Black centre... apparently have blue blood running back to George... The link is well documented in family circles... [However], the son of... Sir Robert... said his father... never talked about his lineage. His father's books and documents relating to the Rex line were treated as "sacred." While [the son] still lives in Niue, his daughter... is studying in Auckland – one of 300 to 400 descendants of George Rex living in N[Z]. Some descendants... say King George's "madness," thought to be schizophrenia, has been passed down through the generations. The way they play rugby in the Northern Hemisphere suggests that the royal rugby genes developed a good deal later.

...The Queen's English may be coming Down Under... A visiting linguistics expert... says the way N[Z]ers speak English might become the way the rest of the world speaks it. N[Z] English was probably the most recent variant of the language to develop around the world... "Until about 100 years ago there was no such thing as N[Z] English... Take dialects and accents from all parts of the British Isles and place them down on the other side of the world. Stir them around for a couple of generations and a whole new way of talking this language of ours [develops]. It's a pleasant way of speaking English, it's very innovative... particularly in the sound system. N[Z] English seems to be showing the way other varieties of English will be going in the future." ...A study of old broadcasting recordings revealed that N[Z]ers of the 30s, 40s and 50s spoke a very different English to the language uttered today... Kiwis [now] pronounce the short "a" in bat like a short "e." The "i" in kit is becoming more like the "u" in but, while the short "e" vowel is moving towards the short "i" in fit... [Modern NZ]ers tended to say "Sudney" instead of Sydney, and pronounce trap as "trep,"... [L]inguists did not know why this was happening... [However, many NZ]ers are uneasy about their own voices, and increasingly prefer North American... accents... and... the 'dreadful Aussie accent,'... to their own. Research by [an] Otago University anthropologist... looking at how attitudes to N[Z] and other English accents had changed over the past decade, suggests N[Z]ers are still "culturally insecure." His study showed that someone with a broad N[Z] accent is still regarded as a "no-hoper drop-out" or a "cow cocky-labourer type of person."

...The New Zild accent may cause some to cringe but an ace exponent of Kiwi English... the [MP] who strikes fear into the hearts of the elocution police, has spoken out in defence of the Antipodean take on the mother tongue... "I think we're culturally insecure generally, but I don't think our accent is top of the insecure list," said [the MP and ex-radio broadcaster], unashamedly swallowing her vowels. Indeed, the MP's comments rendered phonetically would read, "I think wear cultyourilly insicure genrilly, but I don't think our accint is top of the insicure lust." [The MP] said people should celebrate their accent. "The N[Z] accent is distinctive. What we do with our vowel sounds is completely different to A[US]." ...The Kiwi accent now has such cachet that actors often sound "more N[Z] than anyone actually is,"... An English linguistics expert[']s prediction that NZ English)... was probably how other varieties of English would be spoken in the future... delights [her. "NZ] leads the world in bad pronunciation."

...The Queen is said to have been hurt by the attempt by the [NZ PM to steer his country towards republicanism. A] former cabinet minister... in his biography published yesterday, discloses the topic of a May 1994 executive council meeting attended by himself, fellow National ministers... and the then Governor-General... "The Queen was very disappointed at the [PM's] outburst... Her Majesty thought [the royal family] had a good relationship with N[Z]..." Buckingham Palace declined to comment at the time... but the British Government has always insisted that it is for N[Z] to decide whether the Queen remains its head of state... [The PM accused the former minister] yesterday of breaking his oath. A spokes[person said the PM] was "dismayed and disappointed that [the MP] has decided to break a solemn oath... [sworn] on a Bible when [the MP] became an executive councillor." The sworn oath by members of the executive council... promises not to directly or indirectly reveal matters debated in the council.

...[a gambler convinced that the Queen will abdicate by the end of next year has placed the largest royal bet ever taken. The Welsh punter, aged 50, stands to win £72,500 if the Queen steps down, having placed a £2500 bet. A leading British bookmaker says the royal bet "doesn't usually attract more than £20." Earlier this month, the *Guardian* newspaper called for a referendum to determine whether Britain should become a republic once the Queen dies.]

...friends of the Prince of Wales (who 'was once so deeply depressed by the trauma of his marriage breakup that it was on the brink of suicide – according to the shocking revelations of Lord Goodman, a solicitor and adviser to the royals who died in 1995) say the prince has become convinced it will be the last of the line. "The monarchy will end with me. I don't believe my eldest son will ever be king," the prince recently confided.)

...the Prince of Wales was giving his youngest] son... a few tips in the finer arts of tobogganing at Klosters in the Swiss Alps yesterday. But [the prince] had more serious matters on his mind. British papers quoted him as admitting that [his recent activities] had let the royal family down. [The prince] was responding to a survey that showed... [36%] of... Britons thought [the heir to the throne] would make a bad king... The Mori poll also found that only 8[%] believed the royal family had high moral standards, and only 10[%] thought they were in touch with ordinary people.

...two-thirds of... two million Britons yesterday voted to keep the monarchy after an extraordinary two-hour [TV] talkfest on the future of the ancient institution. Scotland was the only part of the kingdom to vote against it. But many observers believed the fact that Britain's main commercial... network would even hold such an event was in itself another nail in the coffin of the beleaguered royal family. Moreover, the results of a conventional poll conducted as part of the programme indicated widespread unease about the present form of the monarchy and its future after the Queen's death. ITV called its programme *Monarchy – The Nation Decides*, and hyped it as the biggest live debate ever staged on [TV] and a "unique royal referendum." ...3000 people... were taken to a Birmingham convention centre as the live audience. There was a [gal who']d turned her home into a royal shrine, a [guy who's] replayed the Queen's 1995 Christmas message every day since, and another [guy] who venomously denounced the royals as "corrupt parasites." There was also an unidentified [gal] who criticised the Queen "for dissolving A[US]'s Parliament in the 1970s." Facing them was a panel of expert and not-so-expert partisans from both sides of the fence. The heaviest hitter on the royal side was... [a] novelist... who... ended a particularly hammy defence of the Monarch by threatening the republicans with "off with their heads." ...Overall, the... poll... figures were not... unexpected. Despite all the unease about the younger royals, there is... considerable suspicion about the alternatives.

...should [AUS] have an A[US]n head of state, chosen by... [AUSns]? ...The point of a monarchy is that the monarch comes by a sort of genetic lottery. No one decides who is to be King or Queen. Every now and then a baby is born who, barring accidents or inappropriate passions, becomes it. Theoretically, everyone has an equal chance to be born to the job. That, incidentally, is the source of the old doctrine of the divine right of kings – the view that, by being born to the throne, an individual had a mandate from God[– and hence can do no wrong.]

...It has been said that: 'The monarchy and the House of Lords and the honours system are important to the rich because they do prop up and legitimise the class system. However, breeding, as far as people is concerned, is arrant nonsense, with the single exception, maybe, that the more highly bred you are probably the more stupid you are.' 'Sexual excesses and cerebral shortcomings dog the royals', but t]he reforming zeal of some individuals of the Commonwealth concerns me... Human society is a very fragile organisation and much easier to destroy than to improve... I lived 35 years in a country that had suffered from three revolutions during the 20th century... In Russia an unthinkable social experiment was undertaken. The result: the massacre of the best people of two generations, the countless material losses and the collapse of a country which had been established by our fore-fathers over 1000 years. After the ideological blinkers had fallen from our eyes we could compare the facts of our history. It distresses me to realise that before the October Revolution Tsarist Russia was making steady progress in economic development. If the reforms had stopped at constitutional monarchy the outcome would have been different... By comparison with other democratic countries this system is more stable. Nobody who has got to the top by democratic machinations could announce himself the only one capable of expressing the interests of the nation. Those who express dissatisfaction over the behaviour of the members of the royal family do not understand that there is no need to have a super[hu]man king. History knows many examples of famous rulers who were responsible for endless misery for their countries... If a monarch has only average intelligence [that monarch can still fulfill its] role. Having been trained from childhood [an heir] knows about his duty and is prepared for it. [A monarch] does not need to lose his dignity in the search of power. [A monarch] has his "position" for life and hence cares about the results of his activity for the long term, not about what voters might say at the next election... Humanity has experienced throughout history many kinds of government. None is ideal. But it would be possible to suggest that the evolution of the checks and balances of the constitutional monarchy, is still the most acceptable form of government... [Indeed, in his book '*Leviathan*', one of the great classics of political philosophy (whose title refers to a kind of total state, instituted to end the war of every person against every person'), 'British philosopher Thomas Hobbes argued that simple rationality – and his view of human motivation – made absolute monarchy inevitable.'] Is having a sense of history and tradition something to be thrown on the scrap heap? ...The clever learn by the mistakes of others, fools learn by their own mistakes...

EARLY this month, a train arrived at the central railway station in Yekaterinburg pulling a green, armoured wagon containing several heavy safes and some medical equipment. The special car was sent by Russia[']s President... to carry to Moscow the bones of the murdered Czar Nicholas II, his wife, Alexandra, and their children, family physician and servants. The return trip was meant to open the last act in one of Russia's most... painful historical sagas, that of the imprisonment, execution, secret burial, discovery, identification and, finally, reburial of the Romanovs, the country's last imperial family. But local officials refuse to give up the remains. Following much negotiation and the hurling of insults between Moscow and Yekaterinburg authorities, the train left bearing only the bones of Anna Demidova, Alexandra's loyal [gal]-in-waiting. The tug-of-war adds yet one more indignity to the many visited on the family, which in their last moments of life suffered pitiless torment in the basement of an Yekaterinburg mansion. For six years the nine skeletons... [whose] crushed skulls and jaws attest to brutal murders... have been examined for authenticity, and dates for a royal burial have been set and discarded repeatedly... [A] geologist... who was part of a team that discovered the remains [says.] "It is immoral that in six years they have not yet been buried." But some Russians suspect the bones are not authentic and there is debate on the Czar's place in history. This affects burial plans. Politics enters in: Who is to blame for the murders? Was it Lenin or zealous local

officials? Plus the far-flung Romanov family is divided over... how they ought to be buried. And, of course, whoever gets final control of the Czar's remains obtains an instant tourist and pilgrim attraction. So Yekaterinburg, Moscow and St Petersburg, the czarist capital, vie for the privilege.

...I'd arranged for a friend in Manchuria, a professor of history, to... accompany me to... trawl the uncatalogued eunuch records in the Forbidden City[("barbarians" were not allowed to enter this section of Peking until modern times)]. As we entered through the west gate, we passed the hut – derelict now – where desperate boys used to submit themselves for castration. "[90%] success rate," commented the professor approvingly. But how does one judge success if you've lost both your penis and your testicles, your urethra's bunged up with a cork and you're doomed to spend the rest of your life bent and mincing – and leaking so badly that the world can smell you 250 metres away? How could [our target eunuch] Sun... have let himself be castrated when... [aged] eight, by his father, with a shaving knife, in the kitchen[of their] home? Sun, said the professor, came from a poor family. His father was a pancake-seller who had lost a lawsuit and faced bankruptcy. So the boy volunteered to help the family by having himself "cleansed". [Sun] had been tremendously impressed the previous year when a rich and powerful palace eunuch, born in his village, had returned in a cloak of sea-otter, with a retinue of servants and a carriage full of presents, to open a new temple. If that's what a eunuch was, then young Sun was ready for the cut. Alas, [Sun had] left it too late: The days of eunuchs were already over. When at last Sun... was admitted to the imperial service – as a pipe-stoker in the eunuch's opium den, in 1917, aged 15 – the boy Emperor Puyi had already abdicated and the imperial system was slipping into a wretched and decadent limbo, imprisoned within [the Forbidden City's] high walls, while outside China stumbled into the 20th century. In 1924, the Nationalist Army marched into the Forbidden City and, in a bloodless coup, expelled the court – Emperor, Empress, consorts, concubines, eunuchs and all. Many of the eunuchs, facing isolation, even starvation, in the new world outside, leapt to their deaths in the moat; others sought sanctuary in the temples. Sun... never forgot that morning, November 5. "I was working for the Empress at the Palace of Concentrated Purity. The Son of Heaven arrived earlier than usual to play shuttlecock with the Empress, but Her Majesty was still in bed, so I woke her, dressed her quickly and sent her out to play. They had a happy time and when they finished their game they came back to the palace for an apple... The Empress... had taken the first bite when the Nationalist soldiers rushed in to drive us all out of the Forbidden City for ever, and the apple... dropped to the floor, with the Empress's teeth marks still in it." In the mid-'30s... Sun... and seven other young eunuchs rejoined the former Emperor Puyi in the Japanese puppet state of Manchukou. "At first I thought it was a privilege," Sun once recalled, "But soon I realised it was nothing to be proud of. Puyi was very scared of the Japanese and imagined they were trying to poison him. We eunuchs had to taste all his food before [the Emperor] would eat anything." Looking after the Empress was no less demanding. By then the beautiful Wan Rong, abandoned by her boy-loving husband, had resorted to opium. Sun was one of two eunuchs who fed her habit, kneeling to carry her smoking set from one side to the other. [The Empress] died of her addiction in misery and madness in the Everwhite Mountains. [□ When 'China's first emperor died at the age of 47, his wives were buried with him in his tomb, which was built by 700,000 workers, so the emperor wouldn't be lonely on the other side.']

...Li Shuxian, widow of China's last emperor, who began life as the son of heaven and ended it as a gardener to the communists, has died of lung cancer in Beijing... aged 73, according to the Xinhua news agency. [Li] married Aisin Gioro Pu Yi in 1962... [Li] met Pu Yi... while... working as his nurse in a Beijing hospital after the 1949 communist takeover... Pu Yi described [their marriage] in his autobiography... *From Emperor to Citizen*... as the start of a new life. "On May 1, I and my bride... started our own home, and this ordinary home was, to me, something extraordinary,"... Pu Yi... who was known as the Emperor Xuan Tong... ascended the Dragon Throne in 1908 at the age of 2 1/2... but... was deposed in 1911... Pu Yi... was captured by the Russians at the end of... [WW2] and handed over to the communists in 1950... [T]he communists... jailed... [him, then released him] under an amnesty in 1959, [after which Pu Yi] worked... in the Beijing Botanical Gardens... Pu Yi's empress... whom [Pu Yi] married when they were both just 17, died... in an asylum in 1946... Pu Yi[, who] died of cancer in 1967 at the age of 60... also married one consort, who divorced him... two minor consorts[and] kept at least one concubine... At least one half-brother and half-sister of the last emperor are believed to be still alive... The[royal] couple had no children, and Li... once said in an interview that her formerly imperial husband was impotent.

...A soon-to-be-published book claims the Queen [of England and her sister] were artificially conceived because their father, George VI, could not procreate naturally... [I]t took "embarrassing" artificial insemination administered by a doctor... The claims, splashed across the *Express* newspaper in a front-page report, seem likely to spoil celebrations of the Queen Mother's... birthday today.

...A gossip-laden new book about Britain's royal family[, which will be 'banned from being sold in Britain (although Britons will be able to access it via the Internet')], lands this week in [US] bookstores, rushed ahead of schedule... [Its author is said to be] unhappy with the decision to move up the publication of *The Royals* – 502 pages of the family's alleged sexual dalliances, closeted homosexuality, questionable birthrights, domestic violence, drug abuse and bad taste jokes... A few of the juiciest tidbits benefit from a clever backhanded introduction. For example... "No evidence has been found to verify the suspicion" that a royal family member was the illegitimate child of a Welsh maid.

...the... *Mirror* newspaper[has] quoted an unidentified aide to the Prince of Wales as saying [the Prince] was enraged by opinion polls commissioned by the media after his ex-wife Diana's death... [which] showed that many people wanted him to step aside as heir to the throne in favour of... [his eldest son – who] is claimed, on the basis of no evidence, to have qualities his father does not. It is assumed [the boy] is more like his mother, more charismatic. The people are no longer prepared to wait. They want an instant star, a boy king, even if it means pushing aside the once-adored Queen and her son. There is no appreciation that this break in succession to suit the public... would undermine the whole meaning of the monarchy... "The monarchy is hereditary, not something that can be passed over on a whim..." ...The aide also said [the Prince] believed that the commissioning of polls was a calculated attempt to whip up public feeling against him. Meanwhile, [the Prince's girlfriend]... is seeking legal action to stop two photographers from stalking her... [The girlfriend] has complained that the freelance photographers have made her life a living hell by pestering her at her new home. Her [boyfriend] fully supports her actions.

...the] warts-and-all expose book about the royal family will be available in N[Z] next month... *The Royals* is being printed in... [AUS] and will... sell... for \$34.95... However, Whitcoulls may refuse on moral grounds to stock... the book... In the past the company had refused, on moral grounds, to stock *Sex*, [a coffee table] photographic tribute to erotic arts... Whitcoulls' subsidiary, London Bookshops, will sell the *The Royals*...

Embarrassment may have led N[Z] police to play down [a local] assassination attempt on the Queen, says a friend of the anti-monarchist... "It was beyond their ability to accept that some lad from Dunedin, their home town, was capable of even having the thought of wanting to shoot a member of the royal family,"... [However, police] yesterday denied they covered up [the anti-monarchist's] plans to kill the Queen in 1981, saying her life was never in danger... Nevertheless, police regarded [the anti-monarchist] as a high risk and tracked him during royal visits – including banishing him to Great Barrier Island when the Queen visited two years ago... His internment was concealed at the time... Dunedin police found drawings and plans which [the anti-monarchist] hatched to kill the Queen in the Dunedin Octagon. On the day, [the anti-monarchist] changed his mind and went to the top of a building in the university and museum area. Frustrated... [at not obtaining] a clear line of sight because [of being] too far away and blocked by buildings, [the anti-monarchist] fired a shot into the ground. In his statement, [the anti-monarchist] said: "I couldn't be bothered any longer waiting for the Queen so I... [aimed] the rifle... at... nothing in particular and fired... I have no idea where the Queen was when I fired the shot."

...[*Royal security alerts* A leaked report reveals 6000 mentally unstable people have stalked the royals since 1994. London's Metropolitan Police is responsible for guarding the Queen and other major royals through its Special Operation 14 squad, part of the Royalty and Diplomatic Protection Department. Of the department's 450 staff, 50 protect the royals at their houses. The Special Escort Service protects them when on the move. All are accurate shooters and expert close-combat fighters. Even this level of security cannot protect the royals all the time – as the following incidents show:

1966: The Queen's car falls victim to a block of concrete while in Belfast. Armour plating protects her. 1974: Attempted kidnapping of the Princess Royal in London. SO14 members overpower the gang. 1981: 6 shots fired at the Queen during Trooping the Colour. Soldiers grab the culprit. 1982: An intruder famously manages to get into the Queen's bedroom. Queen raises alarm after chatting to him. 1994: A demonstrator fires a starting pistol at the Prince of Wales in Sydney, AUS. Bodyguard immediately steps in front of prince. In the past 12 months an AUSn writer has paraglided into the grounds of Buckingham Palace (it was arrested immediately) and an intruder triggered the alarm system after climbing the 3-metre railings at Buckingham Palace'...

Yesterday] **Buckingham Palace... forecast spending in 1998-99... [at] £42 m... – a cut of 39[%] over eight years earlier...** [The palace also] **squashed speculation that the Queen is planning to abdicate...** "It's an extraordinary idea, abdication, generation-skipping. It isn't going to happen,"...

It was 50 years ago today that the Duke of Edinburgh... and... [the then] heir to the [British throne became husband] and wife. The couple's golden wedding anniversary was the occasion for members of the local monarchist league to kick up their heels. This they did last Saturday evening with a concert at the Anglican Cathedral, which featured music appropriate to the occasion – ...a handbell ensemble. It seemed as good a time as any to talk to the members of the world's most far-flung royalist group and wonder whether they didn't feel as if they were pushing a heavy barrow. Not at all, says the league's articulate and unflappable spokes[person]... "In fact, we're not pushing anything. We are just advancing the status quo. It's not for us to justify the monarchy, it's for those who want to change it to justify change and say why it should be."

...six European kings and eight queens... gathered in London yesterday for a theatrical celebration of... [the Queen of England's] golden wedding anniversary. The Queen, wearing a shimmering gold gown, and [her husband] were serenaded by love songs at a glittering gala concert around a Shakespearian theme of courtship and marriage at the Royal Festival Hall... The concert came at the end of the first two days of celebration. Earlier the Queen and [Duke] were guests of honour at a banquet hosted by the Lord Mayor of London at the historic Guildhall... [To]night... the royal couple and representatives of heads of state from around the world... attend a special anniversary service at Westminster Abbey...

The Queen marked her golden wedding anniversary yesterday with a pledge to respond more closely to what Britons tell her. After a thanksgiving service at Westminster Abbey, where... [the Queen was] married in 1947, the Queen looked back over her marriage and spelled out her vision of the future... "I believe that there is an air of confidence in this country of ours just now. I pray that we, people, government and royal family, for we are one, can prove it to be justified and that Britain will enter the next millennium... [as] a truly United Kingdom." ...[the banquet was] hosted by... Britain's 10th [PM] since the Queen took the throne... The [PM], who has urged the House of Windsor to be less aloof and adapt to a more caring Britain, told her: "You are our Queen. We respect you and cherish you. You are simply the best of British." ...In the evening, the Queen hosted a ball for her royal guests at Windsor Castle, which has been meticulously restored after a huge fire in 1992.

...Windsor Castle has opened its doors to the public for the first time since the completion of a £37 million... restoration... It has been completed five years ahead of schedule and £5 million under forecast. Windsor... is the Queen's favourite residence. But there was an outcry when it was suggested after the blaze that the restoration should be carried out at public expense. Instead the Queen agreed to fund the work and opened Buckingham Palace to the public each summer to raise money. Extra funding came from public works grants. Nine of the state rooms were left unrecognisable by the blaze, which started in the former Chapel Royal during general maintenance work at the castle. These rooms include the 55.5m St George's banqueting hall, which has a new hammer beam oak ceiling, prepared from 140 trees, to replace the destroyed Georgian ceiling[, and the castle now has a 'laser fire alarm system'. The Queen's youngest son's]... Ardent Productions has chronicled its restoration... for a television documentary... The Duke of Edinburgh, the Prince of Wales and the Duke of York tell... their memories of the devastating fire in the programme. The Queen was not interviewed... [but, according to her youngest son, the restoration – which involved '4000 craftspeople from 200 specialist companies' – was "[quite simply the greatest project of its kind ever undertaken,"... [● The British Government has commissioned a new royal yacht for £60 million, with tax-payers footing the bill. One MP described it as being "good for the prestigious image of Great Britain, and [for Britain's shipyards] – because] building the new yacht will create hundreds of jobs in an industry which has shrunk by two-thirds since the mid-sixties." ...[but s]ome designers believe private investment would have produced a more luxurious vessel and cost the taxpayer less. "You're going to get [a] ship that's going to be upstaged by... ships... own[d]... by many other people around the world including the leaders of other countries who are far smaller and less significant than ourselves and that, I think, is a bad sign for our country."

...The royal yacht Britannia is set for a reprieve from the scrapyards in a... \$[NZ]127 million... refit financed by private firms under a novel "timeshare" scheme. The... elegant three-masted symbol of a once mighty empire... [which] has steamed more than one million miles in her career... was due to be decommissioned at the end of 1997 but Britain's... Labour Government... may now opt for a complete refit that could give the yacht a 20-year lease of life... The ship could pay for herself [by] being rented out to firms for up to 70 days at a time. But the royal family would have first call on her. With her crew of 236... Britannia cost British taxpayers about £8 million a year to run.

...The Queen has agreed to abandon plans to replace or overhaul Britain's 44-year-old royal yacht Britannica after the government decided it would cost too much... [E]ven if private finance could be found for either a new yacht or a refit, annual running costs would be \$NZ30 million.

...The future of Britannica, which is to be decommissioned at a ceremony attended by the Queen and [Duke of Edinburgh] at Portsmouth on December 11, has still to be decided. Suggestions range from a museum to an exhibition or conference centre... [The Queen's daughter] has called for the... yacht... to be scuttled at sea... The Princess said it would be impossible for anyone to maintain the yacht in its present pristine condition... "Do you realise that the brasses are cleaned every day – not every month or every week... Nobody could do that,"... [the Princess confessed when speaking to] *The News*, Portsmouth's local paper... The... yacht... received an emotional welcome when it sailed into Portsmouth for the last time last weekend, following its farewell tour of British ports...

Britannica will be sold for less than £100,000... – its scrap value – when it takes up its final berth in either Edinburgh or Manchester... [T]he ship, which hosted the Queen's honeymoon and that of [the Prince of Wales], was to be sold off cheaply to allow its new owners to spend properly on its upkeep... Its gleaming brasses... polished woodwork, and... distinctive deep blue paintwork, would have to be properly safeguarded... said... [the] Minister of Defence... The royal family has not yet decided whether it will lend furniture and other items when it goes on public display.

...The Queen disembarked from... Britannica for the last time yesterday... Officers... stood to attention on deck as a sombre-looking Queen, who wiped away a tear, and her family left the 6000-tonne vessel, which... has sailed... the equivalent of more than 40 times round the world.

...It is one of the most exclusive clubs in the country, probably the world. The Order of Merit was founded by Edward VII in 1902 and ranks among the highest orders of chivalry. The award is restricted to 24 people from all walks of life who are judged to be top achievers. And the honour is the personal gift of the sovereign... [One person unlikely to ever be honoured is Dodi's father, who] is set to construct a glass pyramid on... HARRODS... roof where... the store's... [owner] intends to lie after his death... like an ancient Pharaoh. Many will see the bizarre scheme as a snub to the Establishment which has, so far, refused to grant him a British passport. The Egyptian tycoon, I can reveal, intends to invest an estimated £20 million in the project. It will include a vast Valley Of The Kings escalator to take shoppers up to his... tomb... "When I go, I will be mummified... I will be lying down in the pyramid so that anyone can come and visit me upstairs and look at me, where my soul, my spirit, all the time, can filter down." The canny entrepreneur, who bought Harrods in 1985... is currently engaged in a bitter war with the Conservative Party over cash-for-questions... allegations... [The owner of Harrods] contributed to the defeat of the Conservatives in the May 1 British elections... [because of the allegations that the owner] had paid senior Conservatives to ask questions for him in Parliament.

...[a] British business tycoon has issued a series of High Court writs accusing the Harrods owner... of offering him a \$US17 million... bribe... and ownership of the royal shirtmakers Turnbull and Asser if... the [tycoon]... would lie to a parliamentary select committee to support the London

department store owner's allegations against the former Home Secretary... [The Harrods owner claimed the Home Secretary] once accepted a \$US2.5 million bribe from [the tycoon] to start an official investigation into the[1985] takeover of Harrods. There had been a bitter ownership battle for the top store between [the tycoon] and the Egyptian multi-millionaire... [The tycoon] also alleges... security staff [employed by the Egyptian] plundered his safe-deposit box at Harrods looking for documents that could be used to blackmail him to back the allegations against... [the Home Secretary. The Egyptian has denied all] the allegations... Scotland Yard is investigating... [In further news from Britain, 'this week the Government announced a funding freeze for the royal family which froze payments until 2011 and required the Queen to pay for her own porters, cleaners, 100th birthday telegrams and golden jubilee celebrations'...

'The Queen's Golden Jubilee celebrations in 2002 may be sponsored by (horror!) an ice-cream manufacturer. Around \$NZ\$85 million is needed, and established firm Wall's may put it up – in exchange for its logo appearing on stands around London.'

...as the Queen plans 'for her 50th Jubilee tour of NZ, a journalist's three-part series at last reveals the real Queen. Today: Who does the Queen love more, her kids or her corgis? THE Queen's ancient retainer chose his words carefully. "I think I could say," ventured the Crown Equerry in charge of the Royal Mews, "that, like myself, Her Majesty prefers animals to human beings. For one thing, they don't talk as much." How astonishing, I remarked to her assistant private secretary, that after decades of state visits and walkabouts, the Queen should still be better at dealing with horses than people. "The Queen is just as good with dogs," retorted the secretary drily. The Queen's preference for four-legged creatures is obvious to all those who know her well. Asked by a courtier 30 years ago what the Queen missed most when it went abroad, the Queen replied, "The dogs." For the Queen, remarked a veteran gal-in-waiting, "it has always been dogs and horses first, even before the children". "The Queen talks to the dogs when you're there, but not to you," complained one of the Queen Mother's gals-in-waiting, and if anyone, including herself, is bitten by one of her dogs, the Queen makes it plain that it is never the animal's fault. Courtiers who care nothing for either dogs or horses often feel thoroughly beached in the royal palaces. "At Windsor weekends," sighed one of the Queen's former private secretaries, "there is no conversation except about horses. They ride it, race it, drive it and talk about it incessantly from morning till night. If you know nothing about the horse, you're useless. At Buckingham Palace, thank God, the conversation is more about politics, but that's not to say there's no horse talk." In all this, of course, the Queen is little different from any number of other countrygals. In her case, however, the fact that the Queen is infinitely more at ease with animals than with people has a deeper significance than mere natural preference. For a person who is so constantly surrounded by people that it scarcely knows what privacy is, and, who, for well over four decades, has been the principal player in a seemingly endless round of ceremonial duties, it is not too much to say that her dogs and horses have helped to keep her sane. With them, this flawlessly, obsessively dutiful monarch who feels that it must watch every word it speaks and must never in public allow the mast of regality to slip, can be entirely herself. With them, the Queen has no role to play, no dangerous, revealing words to stifle. "The animals are not going to repeat what the Queen says – they don't even remember it, so they can be trusted," said a former private secretary. Dogs and horses, what is more, neither know nor care who the Queen is. So, with them, all the trappings of monarchy and human expectation fall from her burdened shoulders and the Queen becomes, for an hour or two, an ordinary person. "One of the Queen's problems," said the widow of a much-loved courtier, "is that nobody, except her husband, can be quite themselves when they are with her. The day you're natural with the Queen is the end of the monarchy. If you were not to get butterflies in your stomach when you met her, the Queen would be just an ordinary person. But how awful it must be when nobody can be themselves with you." Even her favourite private secretary, the late Lord Charteris, that most unselfconscious guy, told me that it had never been able to forget that his boss was the Queen. The same goes even for regular guests at Balmoral. "There are times when I've been almost totally relaxed in her presence there," said one, "but, even then, you'd still be minding your Ps and Qs. The Queen enjoys being teased but you'd hesitate to risk doing it. You're always second-guessing yourself in that way, because it would be so awful if it went wrong."

... 'Ten months of the year are spent preparing the grounds of Balmoral for the Royal family's annual visit. Not only must the formal gardens around the house be neat and tidy – with fresh bedding plants in the borders and stands of fuchsias and pelargoniums around the entrances – but the kitchen garden must be primed to produce a constant supply of vegetables and fruit for the royal table, as well as a succession of cut flowers and potted plants. "It's not easy working to such high standards so far north," says the head gardener'...

You can visit Balmoral, the[British royal] family's Scottish home, when the royals aren't there. It's a bleak mock-Gothic pile, surrounded by dark, claustrophobic woods. The gardens are not large, but they are filled with memorials to the royals erected by other royals... The concerns of the outside world seem a long way away... [Incidentally,] the Queen... takes 18 to 19 weeks' holiday each year.

...the... Windsor family... live by the support of the masses. Put bluntly, it is the Queen's job to understand her people quite as well as the editor of the *Sun* does, and, unlike the editor of the *Sun*, to understand which of their instincts deserve respect. If [the Queen doesn't, it] should employ people who do. But [the Queen] never has. Everything that we hear from Buckingham Palace suggests that [the Queen] is surrounded by stupid, blind, stuffy, self-promoting, rivalrous, gin-drinking courtiers who haven't realised that a modern constitutional monarch exists no longer by right but only by consent and free will... [L]ast week... the *Independent*, said: "Something[has] snapped... in the relationship between throne and subjects. For the first time in modern history the Crown[has] been[] openly challenged and forced to respond quickly and ignominiously to the people..." ...Even now they probably have little idea of how perilous their position has become. The last great crisis the Windsors faced was the Abdication[– when a] playboy king, enamoured... with a range of ghastly political views, made way for a [king] of impeccable dullness.

...The Boring Institute in New York has issued its annual list of the 10 most boring celebrities. Top was [a] lesbian actress... closely followed by the British royal family.

...THE Queen is set to screen her Christmas TV message live in a bid to show the monarchy is moving with the times... Viewing figures have been slipping and executives hope the new format will bring in larger audiences... TV bosses and Royal aides believe [the Queen] comes across much better in live performances... but going live will mean breaking into her family's own festivities... In previous years the Queen recorded her speech a few days before transmission.

...Many of those who became Queens of Britain must have wished they had not... one or two others went mad... "For Queens... there was the pressure of the double standard. A King was allowed to take mistresses, bring them to Court, acknowledge and ennoble their children. A Queen must either be very chaste, very clever or very rash; for infidelity... was treason, and the penalty was severe," says... *Queens of Britain*... The bad news for Queens starts with Queen Isabella of Angouleme, who married King John in 1200 at the age of 14. The king was besotted with Isabella but also, sadly for her... insanely jealous. Once when [John] suspected – without much reason – that [Isabella] had taken a lover, [the king had the alleged lover] hanged, and his corpse suspended over her bed. Isabella was later accused of treason, fled to a French abbey and took refuge in a "secret chamber"... for two years until her death in 1246... Another Isabella – of France, Queen to Edward II – took part in an even gorier saga. [Isabella II] is widely thought to have organised the murder of her husband – a homosexual – who was impaled on a red hot poker. Her son Edward III succeeded him. Edward III then had his mother's lover, Roger Mortimer, hanged at Tyburn. Joanna of Navarre, Queen to Henry IV, survived her husband but after his death her son, Henry V, had her arrested in 1419 on a charge of being a witch. [Joanna] was kept in close confinement and stripped of all her possessions, even spare clothes. Later her son, dying of dysentery, relented and had her released. The Kings of England were a randy lot, always on the lookout for extra-marital activity. When Elizabeth Woodville was asked by Edward IV to be his mistress, her reply was almost exactly what Anne Boleyn said years later to Henry VIII: "My liege, I know I am not good enough to be your Queen, but I am far too good to be your mistress." ...[Anne] became the Queen... Henry's first wife... Katharine of Aragon, who married Henry... in 1509, couldn't provide him with a... [son] so was ousted from Court, had her jewels confiscated and was not allowed to see her daughter, Mary. [Katharine] was banished to

“grey and cold” Kimbolton Castle, and died there in 1536 still in love with [Henry]. His second wife was nowhere near as fortunate. Anne Boleyn married Henry in 1533 and had only three years left to live. Had [Anne] given Henry an heir [Anne] might have lived longer. [Instead Anne] bore him a daughter – who became the famed Elizabeth [I] – then suffered a miscarriage. But it was late enough in the pregnancy for [a penis] to be seen in the embryo. No fool, [Anne] remarked: “I have miscarried of my saviour.” But at the worst [Anne] could only have anticipated divorce... “It was her misfortune that divorce was a word Henry was heartily sick of. [So Henry] accused Anne of adultery...” But unless [Anne] had gone stark raving bonkers, would [Anne] have committed adultery with no fewer than five [lovers, one of whom was] a musician at courts, another her own brother? ...in *England under the Tudors*, [it says] of the ill-fated Queen: “Anne and five [guys] were put to death by due process of law because the king wished to marry again. Of all the victims of Henry VIII, Anne Boleyn... has had almost no sympathy; yet by her death and the manner of it [Anne] deserves it. Henry had now so far discarded scruple, that to get his way [Henry] was prepared to appear as a cuckold and a victim of witchcraft.” On May 17 1536, Archbishop Cranmer declared Anne’s marriage to Henry void, two days later... [Anne] was beheaded not by the axe but by a sword wielded by an expert imported from France for the task. Told of this and assured there would be hardly any pain [Anne] said: “I have heard that the executioner is very good. And I have a little neck.” ...on May 30 Henry married Jane Seymour. After Jane’s death – in her bed, not on the block – it took two years for Henry to find another wife. [Gals] of high position were, not surprisingly, a little chary of a liaison with the King... One, according to legend, responded to his approach: “Had I two heads I would risk it, having only one I dare not.” Catherine Howard did dare and became his fifth wife. [Catherine] has been described as a “beautiful, vivacious, tiny girl of 20” but proved to be “a silly, wanton, sex-hungry girl who was willing to risk her head for pleasure that her husband could not provide in the abundance... desired.” ...in *Royal Heritage*, [it says]: “Foolishly misled by the torrent of presents the King deluged her with, [Catherine] behaved with complete indiscretion. This was even more foolish because [Catherine] was a Catholic. Presented with the unsavoury facts about the Queen’s behaviour by the Archbishop of Canterbury, the King’s idolatry turned to hate.” Much of the evidence against her was rigged, much obtained after the [guys] allegedly involved were tortured. [Catherine] was beheaded in the Tower, at the same place and on the same block as Anne... Her ghost is said to haunt a gallery in Hampton Court. Caroline of Ansbach was treated like a Queen by George II, but even so [George] played around a bit. There is a rumour [that Caroline] hand-picked his mistresses, making sure they were uglier than herself. On her deathbed in 1737 [Caroline murmured that George] should marry again. In a reply that scored full marks for honesty and zero for tact, the king replied: “No, I shall have mistresses.” Another Caroline – of Brunswick – was queen to George IV. Once popular, a series of affairs in Italy turned the public against her. London crowds on one occasion jeered: “Go back to Italy”. When George was to be crowned in 1823, Caroline, not unreasonably, thought [the future Queen] would be a part of the ceremony. [Caroline] turned up at Westminster Abbey only to [have] the doors... slammed in her face... on the King’s orders... “As [Caroline] tried this entrance and then that, the crowd... hooted and laughed. Utterly humiliated, [Caroline] went home and within 19 days was dead. Most accounts agree that the final rebuff broke her heart.” Alexandra of Denmark, Queen to Edward VII, put up with his infidelities. As [the King lay dying, the Queen] made... a gesture of “exceptional magnitude”. “[The King] had a number of mistresses, the actress Lillie Langtry among them, but his current love was a Mrs Keppel. Alexandra sent for her to be at his bedside. What further proof of love could a... [Queen give?]” While on the topic of British queens, the current one[’s youngest son] – who once said ‘you have no idea how precious anonymity is until you’ve lost it’ – has won a \$6.25 million deal to host his own show on... [US] TV. The... 33-year-old’s production company is to make... six... documentaries on famous US families... The Prince was signed up after CBS bosses were impressed by his programmes on the Royal family[. At the top of the list of prospective targets for the Prince is likely to be ‘a dynasty so powerful that people all over this planet call them America’s royal family. Booze, drugs, sex scandals, a rape trial, murder, assassination, that’s America’s longest-running soap opera – Camelot. The dynasty started with a ruthless, whisky-smuggling, wheeler-dealer who flaunted his mistress right in front of his wife; who taught his boys that if you had money and power, the opposite sex were there for the taking. Not even your own wife could stop you. John learned dad’s lesson well. As a senator and then president, John flaunted countless affairs in his wife’s face. But America never knew about his wild sex life. It was shamefully covered up by the star-struck White House press. John knowingly shared one lover with a Chicago mafia boss who ended up with a bullet in his head. Ironically, while JFK partied with a gang mole, his brother Bobby – the Attorney-General – was screaming about wiping out the mob. And the brother’s were sharing Marilyn Monroe. Marilyn died of a drug overdose. Some called it suicide. Some say Marilyn was killed because the actress had threatened to go public about the Kennedy’s. The dynasty started to crash and burn in the ’60s. JFK was assassinated, then Bobby. JFK’s widow, Camelot’s pretty princess, horrified millions of admirers with her marriage to a crude, toad-like Greek billionaire, 23 years her senior, her non-stop shopping spree, and her laughter during his funeral 7 years later.’ Editor’s note: *Camelot* was ‘the seat of the legendary court of King Arthur. Some historians believe Arthur was a chieftain who led the Britons against Anglo-Saxon invaders and died at the Battle of Camlan, A.D. 537. First mentioned in early Welsh and Celtic literature, the warrior king evolved through song and story into the noble Christian monarch described in the famous *Morte d’Arthur*, by Sir Thomas Malory. Arthur ruled wisely and well with his unfaithful queen, Guinevere, who became the mistress of Lancelot, the most renowned knight of the Round Table. The story as told in *Morte d’Arthur* describes her as the daughter of the king of Cameliod. After Arthur’s death Guinevere retired into a nunnery’...

USers ‘have always secretly wanted their own posh set of royals – so much so they had to invent their own with the creation of the Kennedy’s Camelot.’ ...[JFK] had a secret, never annulled 1947 marriage to a Palm Beach socialite plus scores of love affairs that were escalating in his last days in the White House, according to a new book... The book, *The Dark Side of Camelot*, also alleged that the late President had close ties to organised crime, paid up to \$US2 million... in bribes to win a key 1960 primary and was heavily involved in plots to kill the President of Cuba... The book... to be published today... quoted... Secret Service agents as saying... that... [JFK] had suffered from venereal disease for more than 30 years. - 1997

Nine years into US President Kennedy’s official first union, with Jackie Bouvier, rumours began circulating of an earlier marriage to [a]blonde Chicago divorcee... JFK admitted dating her twice but friends have recalled a marriage ceremony on July 12, 1947. As the story goes, JFK’s powerful father Joe used his clout to make the records of the wedding to the twice-divorced [blonde ‘disappear’.

...a] Kennedy cousin... has been convicted of beating neighbour Martha Moxley to death in 1975 when they were 15 – a crime that opened a window on to a world of privilege and raised suspicions that his family ties had protected him. [The cousin] could get 10 years to life in prison for murder... Martha’s battered body was discovered under a tree on her family’s estate in the gated Greenwich, Connecticut, community of Belle Haven. [Martha] had been bludgeoned with a golf club – later traced to a set owned by [the cousin’s] mother – and stabbed in the neck with the shaft of the club. According to testimony, [the cousin] had a crush on Martha and got upset his attractive blonde neighbour seemed more interested in his older brother... an early suspect in the slaying. Prosecutors had a... case with no eyewitnesses and no forensic evidence such as DNA that could directly connect [the cousin] to the slaying. Instead, the case was based almost entirely on people who said they had heard [the cousin] confess over the years. Among them were several former classmates of [the cousin’s] from the Elan School, a drug and alcohol rehabilitation centre in Poland Spring, Maine... The defence argued that Elan students were berated and beaten until they told administrators what they wanted to hear.

...The KENNEDY clan has made a move to end the bitter dispute with the parents of CAROLYN BESSETTE over compensation for the air crash involving their two daughters and JFK JNR. The family has offered... over \$30 million as a final settlement. But... [Carolyn’s parents], aware JFK Jnr’s estate was worth more than \$535 million, are holding out for more. They want \$51 million or they’ll bring an embarrassing wrongful death suit to court... [Speaking of family feuds, the British Queen’s eldest and youngest sons] are barely on speaking terms after the extraordinary row over filming [the Prince of Wales’ eldest son] during his first week at University. The Earl of Wessex... was forced to apologise after his

company, Ardent Productions Limited, broke a media agreement and allegedly “stalked” [his nephew] at St Andrews in... Scotland, while making *The A-Z of Royalty*, a programme for American cable television... [The Prince of Wales] was said to be “incandescent with rage” and telephoned [his brother], with one newspaper claiming [the Prince of Wales] demanded, “How could you be such an idiot?” ...[the answer is perhaps supplied by] the publisher of *Burke’s Peerage*, [who] says... “The simple fact is that [the earl] is not very intelligent. [The earl] wouldn’t have survived for five minutes on his own ability. [The earl]’s not very talented at anything in particular, yet... can be amazingly arrogant and wants to be treated like royalty when it suits...”

...Buckingham Palace last night angrily condemned as “premeditated cruelty” publication of a topless picture of [the] royal bride-to-be... in a British tabloid. The *Sun* splashed a photograph of a TV presenter... yanking her bikini top to reveal her breast. Rival newspapers claimed the *Sun* paid up to \$750,000 for the photo... [taken] more than 10 years ago... [The bride-to-be] said the scandal would ruin her wedding to the Queen’s youngest son... “This has ruined my engagement. This [wedding] was supposed to be the happiest day of my life,” the *Daily Mail* quoted [her]... as saying. It said [the bride-to-be] felt “utter betrayal” at the expose and [the fiancée] was “totally disgusted and livid.”

...They may have impeccable pedigree, but even the royal family are not averse to helping the camera lie. [The r]oyal photographer... admits [it] doctored photos of... [the Earl of Wessex’s] wedding because... the... [Prince of Wales’ eldest son] looked too glum. But now it has emerged that the... [family] all got the beauty treatment normally reserved for supermodels when they appear on the covers of glossy magazines. “[The earl didn’t think the Prince of Wales’ eldest son] looked absolutely his best... [f]or the official photograph of the groom’s family with the newlyweds... so digitally we were able to put in another picture of him from one of the other shots where [the prince] is smiling and laughing,” said [the photographer]... But wedding pictures issued yesterday underwent further tinkering. [The Prince of Wales’ younger son]’s doleful look became a cheerful smile; the Duke of Edinburgh was given a more open smile and his head was moved to the right to give a clearer view of the Duke of Gloucester behind him. The Prince of Wales’ open-mouthed look was swapped for his more usual lopsided smile... the Duchess of Kent’s strained expression became a happy grin... the Princess Royal’s daughter... look[s] at the camera... [the] bridesmaid... aged 5, no longer looks glum[, the Princess Royal]’s son... and[the] pageboy... have improved smiles, and the Queen looks directly into the camera, her smile replaced by a more regal gaze.

...The Earl and Countess of Wessex are deep in right royal troubles. Hot on the heels of the... ‘sheikh’... tape scandal, [the earl] and his public relations queen wife are once again in the news following revelations they are living beyond their modest means... Between them, the royal pair earn \$[NZ]960,000 a year – many times more than most Brits – but their outgoings are a whopping \$4.15 million. The \$3.19 million shortfall is mainly due to the enormous repair job needed to keep... their elaborate 57-room residence, Bagshot Park, which has been... [their] home since they married... running, and the Crown is footing the bill. Taxpayers are peeved that they have to shell out for [the earl] and his wife to live in the lap of luxury... What galls the British public even more is the fact that the couple have rented the property from the Crown for a fraction of what it would cost anyone else. On the open market... the biggest private home of any member of the nobility... would come with a price tag of \$45 million... but thanks to the fact that his mother, the Queen, is the landlord, the Wessexes are living in a palace for a pauper’s fee – \$3000 a week. “A business would pay at least \$1.5 million a year to turn it into a prestigious company headquarters...,” says a leading real estate agent... [The earl] signed a secret 50-year lease on Bagshot Park in 1997, planning to use the estate’s stables as a base for his television company, Ardent, but now the English taxpayers are calling for the details of the agreement to be made public and want justification for the alleged \$6 million shelled out by the Ministry of Defence for renovations of the former Army property. The company responsible for doing up the mansion has recently gone under as a bill for extra renovations demanded by [the earl] totalling almost \$2 million remains unpaid. They blame the [earl]’s “dithering”... Although [the earl and countess] have always prided themselves on being ordinary working folk, it would seem they may need to start cutting costs to keep themselves out of the red. It is no secret that [the earl]’s business pursuits have been less than fruitful and the recent dramas surrounding [his wife]’s company will no doubt have an impact on her end-of-year returns, meaning the couple may have to bid farewell to their lavish living quarters.

...*Royal couple on strike*... [The Earl of Wessex] and his wife, [who]... receive £141,000... a year from the state to compensate them for costs incurred while on royal duties... have boycotted public royal duties for the rest of the year in protest at the way a probe ordered by the Queen into their finances is being conducted, Britain’s *Observer* newspaper reported yesterday. The inquiry came after... the... Countess... embarrassed the royal family by admitting to an undercover journalist there was an “unspoken benefit” for the clients of her public relations firm as a result of her royal status. [The countess] also made indiscreet comments about... [the British MP.] his wife... and... the Queen...

If Edward VII had chosen the crown instead of Mrs Simpson, [his niece]’s life would have been that of a minor royal enjoying country pleasures, moderate comfort and privacy. But... Edward... didn’t... Head of state in Britain and 15 other Commonwealth nations, [Britain’s Queen] signs bills passed by parliaments. In Britain, where [the monarch] reigns but does not rule, [the Queen] is entitled to see government papers and be briefed by the P[M. The Queen] opens parliaments and buildings, patronises charities, represents Britain on state visits overseas and aims to be the non-party political focus of national unity. “I have a feeling that, in the end, training is the answer to a great many things,” [the Queen] says. “You can do a lot if you have been properly trained. And I hope I have been.” ...Latest estimates suggest [the Queen] is worth \$[NZ]825 million but this does not include royal palaces, art and other treasures from the Royal Collection, heirloom jewellery and the Crown jewels, all of which are held by her as sovereign and not as an individual. If these were included, it is said [that the Queen] would have a fortune of more than \$39 billion. [The Queen] receives a private income from the Duchy of Lancaster – an estate held in trust for the sovereign since 1399 – which amounts to approximately \$17.1 million a year... The[other] modern queens of Europe [also] are... formidable force[s] of... wealth... and... influence...

The late Queen Wilhelmina... blocked a refugee centre for Jews fleeing the Nazis... *De Telegraaf* said... yesterday... [The] director of Westerbork, a Nazi camp-turned-museum – discovered a March 14, 1939, letter from the Queen in which [Wilhelmina] objected to plans to house Jewish refugees near the Het Loo palace in the central Netherlands. “The monarch didn’t want any Jews in her backyard,”... The refugee camp was proposed for a tract of land within 12km of the palace... After... Wilhelmina... lodged her protest, the Dutch national tourism agency also complained, saying a refugee camp would disrupt the atmosphere of the area and discourage campers and other visitors. The Royal House could not be reached for comment yesterday... Wilhelmina, the grandmother of [the current Dutch] Queen, sealed her place in history by serving as a symbol of hope for the Dutch during five harsh years of Nazi occupation... [By the way, a son and mother] are attempting to establish themselves as rightful monarchs of European Christendom... [The son] has changed his name by deed poll to incorporate a huge glob of text that reads... “His Imperial and Royal Highness Prince...” There’s not really space to write... all... of ...his... self-aggrandisement... here[, but the son]’s also persuaded his mother to adopt a similar identity. It’s all part of their masterplan to claim the titles and privileges of Charlemagne, and make Teddington, a leafy suburb of south-west London, the centre of a new Holy Roman Empire... Founded in AD 800... the Holy Roman Empire expanded from an initial powerbase in the German states to encompass territories in Italy, Bohemia and Burgundy. It also claimed sovereignty over lands east of the Balkans, although nobody east of the Balkans ever took much notice. Voltaire’s remark that it was “neither holy, nor Roman, nor an empire” was broadly true for most of its 1000-odd year history. In 1806 it was formally dissolved by Francis II, who feared that Napoleon might grab the title for himself. The dissolution, however, is not going to put off the Wettinbergs – or whoever they really are. [The son] is not asking anyone to believe that royal blood flows through his veins... Von Wettinberg is not the name of an ancient family of Mittel European nobles – it’s simply a word [the son] has plucked out of the air. Von Knackwurst would have done just as well. [The son]’s quite up-front about being an ordinary bloke... who has

decided that, as nobody has been Holy Roman Emperor since 1806, and as the title was elective rather than hereditary, there's nothing to prevent him from legally establishing himself and his mum as the Royal Electoral House. Nothing but an appreciation of the ludicrous nature of the project, that is. Last month they took out an advert[in] London's daily *Independent*, cramming several thousand words of royal proclamations into the public notices column. "All and Singular Believers in Christ, Sovereign Powers and Courts of Europe" were informed of [the son]'s usurpation of the empire. "[My son]'s informed the Pope," says M[um], proudly... Is life in Teddington so catatonically tedious that a boy and his mother have to resort to fantasies like this? Well, there's a hard-nosed objective to the Wettinberg project. "It's an opportunity to set up societies, an opportunity for the conference of titles..." says the son d[uring] our interview, over coffee in the Royal Garden Hotel, Kensington – where else? ...Now, I feel, we're getting to the reason why his mother chose to blow £4000... on an advertisement. Might [her son], perhaps, be in the business of title-selling? ..."I will never sell any titles or honours whatsoever at all... If you were a very wealthy [perso]n you could give me a hundred thousand. But if I didn't particularly like you I wouldn't give you a title." And what if you really liked me... what would happen then? "Well, if you wanted a title, then you would give me a stipend. Or a gift. You must realise that you are not buying the title. Say if you were interviewing a really famous person, you would give them a gift. You're not necessarily paying for the interview, you're paying for his time and his patronage." I fear, however, that the Wettinbergs will have trouble finding people thick enough to surrender their cash in return for the favours of the Teddington branch of the Holy Roman Empire. Title-selling is a minor but lucrative and legitimate business in this country. Excel Multimedia in St Albans offers to make the punter laird of a "souvenir plot" of Caithness land for only \$300. Noble Titles of Sussex have nine titles on offer. For \$30,000, you can be lord... of Kidbrooke (a suburb of south-east London within gobbling distance of Eltham). For \$13,500, you can go over to Stubbington, Hampshire, and encourage people to tug their forelock and call you "squire." "Our company's service," their brochure reassures potential customers, "is based on the fact that the English legal system allows titles to be claimed and registered, if it can be proved that there are no living heirs... Technically, we are able to register a 'possessory title,' which can be sold on for a fee." Basically, if you can find a reference in the *Doomsday Book* for a Lord Feckless of Scunthorpe and nobody holds the position today, you can assume the title and sell it on to some brag-hungry third party... Surprisingly, [the son]'s... looking forward... – because of the publicity it would generate, I suspect – ...to [being challenged by]... another pretender. I could start the ball rolling myself and use this space to announce my own accession to the emperorship, claim the duchies of Swabia, Franconia and Thuringia for my goldfish and establish a rival empire downriver at my flat in Greenwich. But I don't think my mother would go along with it.

...[a] West Midlands furniture sales[perso]n... 56, has laid claim to the crown of a tiny Welsh island. Bardsey Island measures 3.2km by 1.6km and has just five residents, including a shepherd and a nun... [T]he grandson of the last ruler, King Horace, heard that the trust which oversees the island was considering crowning [an] opera star...

Tonga's all-powerful royal family are facing a test of credibility following the emergence of a 13-year-old love letter... [The] King... departed for China yesterday, leaving behind his bachelor son... aged 51, as regent and a swirl of rumour surrounding [his daughter]... Already the richest [gal] in the kingdom thanks to her control of a satellite slot leasing company, [the Crown Princess] is reputed to be in a power struggle with her brother. The widespread circulation among politicians of a 10-page love letter signed "P" to a one-time N[Z] police officer has caused a sensation in Tonga. The letter was purportedly written by the Princess and contains details of a relationship [the Princess] had with the unidentified [officer]. So far the royal palace and the P[M]'s office have refused to comment on the letter, which journalists in Tonga have authenticated... [but refused] to publish... It details the stress within the royal family over succession to the throne... [The] Crown Prince... has no... [son]s and neither has [his sister]. In the letter, [the sister] explains that her marriage had been arranged... "...the purpose of such a marriage as mine is to beget a son to ensure the line of Tuita. I have as yet to fulfil this obligation. So when you hear that I have become pregnant or given birth again, it's not that I have forgotten you (for I never will), it's just the normal performance of such duties that are expected of me." [The Princess], aged 47, is the King's only daughter and has four daughters and an adopted son, but under Tonga's constitution, the King must have a [masculine] heir.

...JAPAN's Crown Princess... has given birth to a girl, bringing cheer to a nation mired in... economic gloom, but raising questions about whether a [girl] should be allowed to ascend the Chrysanthemum Throne... ['Only guys can become the monarch (and their wives must walk 3 feet behind them'), but no son]s have been born into the imperial family since 1965... The princess miscarried [two years ago] after a media circus which some blamed for the unhappy outcome of her first pregnancy... Both [the princess], 37, and the baby... were doing well, said court officials[yesterday].

...Nepal is in shock as it struggles to come to grips with the murder of King Birendra and seven other senior members of the royal family. They were reportedly killed by[the] 29-year-old Crown Prince[, who]... then shot himself... at a dinner party on Friday... There was said to be opposition within the family to the Prince's choice for a wife. The massacre was the latest blow to hit the impoverished nation of 22 million people[. 'The Nepalese believe their royal family is descended from Hindu gods, so for one of them to have committed such a violent crime is hard for them to accept']...

Nepal's caretaker king could decide whether to switch off life support for his nephew, who lies in a coma after apparently killing eight royal family members... Three others were injured[, not including the]... Crown Prince... who... has been named King in keeping with Nepal's constitution. But [the Prince] is said to be clinically dead... [T]he late King's brother, has been appointed regent and will become king if [the Prince dies. Someone]... who worked as a liaison officer in the Nepal embassy in Germany for 10 years and now lives in Wellington, said yesterday that [the Prince] was "into arms and martial arts," and had several times got him to buy guns... "[The Prince] wanted to be able to draw [his gun] out like a cowboy." Speculation about a motive centred on a dispute between the Crown Prince and his mother over an arranged marriage. [The] Queen... is believed to have disapproved of [her son]'s choice of bride... the daughter of a former Government minister. [The Prince] was reportedly drunk at the family dinner, and his mother asked him to leave the room. The prince returned armed with two automatic rifles. After spraying the room with bullets, [the Prince] left the room but... shot himself in the temple when... confronted by place officials, according to the *Nepali Times*... Nepal's first official comment [had said] that the accidental firing of an automatic weapon was to blame... In keeping with Hindu tradition, the bodies of the dead were cremated on Saturday... The body of the King, revered by many in the nation as the reincarnation of the Hindu god Vishnu, was carried by 12 pall-bearers around the pyre three times before it was lit... Soon afterward, the pyres of the Queen, Prince Nirajan... and... Princess Shruti... were lit... Civil servants were ordered to shave their heads in a traditional Hindu mark of respect while the country began a 13-day period of mourning... At a memorial for the royal family in Auckland yesterday, [the first NZer to climb Mt Everest] said the late King was greatly admired by the Nepalese[, and]... the president of the N[Z] Nepal Society, said the Nepalese royal family had provided their country with stability and unity.

...So outrageous has been the court circular from Nepal this week that it has captured the neurotic imagination of a world that nevertheless has no idea at all what to do with the information it is receiving. It is tempting for Westerners to peruse the mounting architecture of bizarre developments with our minds geared firmly into "boggle," and then to assume that cultural differences are behind our failure to make any sense of the terrible news. But the looks of angry incomprehension on the faces of those Nepalese who turned out to watch their new King... processing through the streets of Kathmandu are confirmation that the inability to grasp these extraordinary events is utterly universal. Nothing can keep the conspiracy theories down as people tell stories to each other that will somehow make the slaughter of a family more understandable, more palatable. The temptation to see the unrest and unhappiness as the reactions of a poor, largely illiterate and mainly unsophisticated populace can quickly be dismissed, though. Our reaction to the death of... [the] Princess of Wales... was, after all, comparable. There may not have been riots, but there was plenty of anger, and hordes of conspiracy theories. This royal tragedy involves the murder of nine relatives, the injuring of two others, and finally the suicide of the 29-year-old... who until last Saturday was Crown Prince of Nepal, and who spent one weekend, in a coma, as its King.

As the news of the mass murder broke, the Deputy P[M named the Prince] as the killer. This was quickly retracted, and instead the P[M] suggested that the deaths had been the result of accidental automatic gunfire. The explanation was utterly unbelievable, of course. But the Nepalese constitution regards the King as above suspicion, and the murder of his father, even by his own hand, meant that automatically [the Crown Prince] was King. So this lame excuse was obviously the course the P[M], appointed by the King, felt protocol obliged him to take. Further, the Nepalese believe their King to be an incarnation of... the Hindu God whose duty is preservation of the divine order in the world, guardian of humanity, and protector of dharma, or righteousness. Accusing such an incarnation of mass familial murder is bad dharma indeed. Right at the epicentre of these extraordinary, history-defining events, is an insane but wholly human story and one that does not seem to be so terribly unbelievable... This is a tale of thwarted expectation, generational confusion and the clash between tradition and modernity. Here is a young [guy] brought up in splendour in a nation of great poverty, living his whole life with his father as God and King and in the knowledge that [it] too will be God and King. Far from being schooled in the serious problems his nation faces, and the tensions racking it, [the Prince] is sent to Eton, one of the world's most exclusive schools, in one of the world's most affluent countries. Here [the Prince] gains an education in privilege, Western-style, and a reputation as a stroller on the wild side. As well, incidentally, [the Prince] sees at first hand the break-up of one of the most influential and most emotionally dysfunctional arranged marriages in modern royal history. Why shouldn't [it – a prince, god, educated person and] witness of royal marital disaster – return home certain that [it] knows far better than his family how his life should proceed? The refusal of his family to accept his chosen love was probably the first time that [the Prince] had faced the total rebuttal of his wants. [This] was a post-modern Prince who found himself in a position unallied to any of the norms [it] had come to expect his life to conform to. Like young people the world over, [the Prince] cracked under the contradictory pressures of his existence. No one could possibly have predicted that his anger would be so absolute, his solution so final, or his resolution so spectacular. But the fact remains that far from being too fantastic to believe, the events in Nepal follow a terrible logic that beneath the shock and repulsion form a shape we all recognise, but would prefer not to. Bad Dharma indeed.

...“*THERE'S A ONE-EYED YELLOW IDOL to the north of Khatmandu*” begins the tragic poem by J. Milton Hayes about a lovelorn soldier who risks and loses all – including his life – for the [gal it] loves. Today, the line of the poem that many A[US]ns learned in primary school resonate with a bitter irony... It was no secret in the tiny Himalayan kingdom... that Dipendra, the 29-year-old Eton-educated son of King Birendra and colonel in chief of the royal army, was madly in love with... a beautiful part-Indian princess and the daughter of Nepal's former foreign and finance minister... Alas, theirs was a forbidden love. Prince Dipendra's mother, the fervently religious and overbearing Queen Aishwarya – dubbed “the wicked queen” because of her scheming – vehemently opposed her son's choice. In line with anti-Indian sentiment in Nepal, [the queen disapproved of the girl-friend]'s half-Indian background and felt her Nepali family was too low caste to make a future queen, despite the family being a branch of the queen's own Rana clan. Queen Aishwarya tried to end the affair, sending her son out of the country to London and Sydney, and putting forward two other girls as would-be consorts. The queen was strengthened in her resolve by the dire predictions of court astrologers and a ...old prophecy, which said that the ruling Shah dynasty would end after 11 generations. The ancient prophecy was made on the eve of the battle for Kathmandu in 1768 to King Prithvi Narayan Shah, King of Gorkha and founder of the current dynasty, who conquered the city and united Nepal, which had for centuries been divided into many principalities. Crown Prince Dipendra, who was aware of the prophecy, was the 12th generation Shah. The astrologers are believed to have told the royal family that their rule would end if the crown prince married before June 27, 2006. They warned against him marrying before the age of 35 and said that [the prince and his girlfriend]'s union was ill-fated because their horoscopes were not “cosmically synchronised”. For the besotted... poetry-loving... Dipendra, a [perso]n who had been denied nothing in his entire life, the news was shattering... What no one could have foreseen was that the prince's passion, thwarted by the wishes of his family (and it is rumoured, his fury that his younger brother Nirajan, 22, would be made Crown Prince if [Dipendra] continued to defy the queen), would end in the world's worst case of regicide since Russian Tsar Nicholas II and his family were slaughtered in 1918... In three bursts of automatic gunfire, the soldier prince sprayed 90 bullets around the room, hitting his father, his mother, his sister... and his brother... The shots could be heard 300 metres away but, according to press reports, Gurkha soldiers, posted as palace guards, stood rooted to the spot, obeying their orders not to intervene in royal affairs. After gravely wounding his father, the Prince then disappeared, returning a few minutes later carrying a nine-millimetre Glock pistol. As the wounded royals lay dying and others hid behind furniture, the Crown Prince picked out the King and Queen and shot them at point blank range in their faces before returning upstairs where [Dipendra] was finally challenged by the guards. [Dipendra] put the pistol to his head and shot himself. Although critically wounded, the Prince did not die immediately. Rushed to hospital, [Dipendra] lay in a coma on life support...

KING Hussein of Jordan is being kept alive by artificial means after his family decided against switching off his life support system. “...There is no way to consider lifting the life support,” said a palace source, adding it would be left on for “whatever time it takes”. The 63-year-old king had been pronounced clinically dead hours after returning from a last-ditch trip to the Mayo clinic in the US[, which failed to stem his final stage lymphatic cancer. The source said the family, including[the] Queen... and the king's sons, had gathered at the King Hussein Medical Centre on the outskirts of Amman, and that differences on religious ethics had kept them from disconnecting the life support machine. The decision meant further uncertainty for the country Hussein guided through 47 years of war, revolution and assassination attempts, and for a region losing one of its most committed and adept peacemakers. Among those at Hussein's bedside was... the army major-general and eldest son named as successor by Hussein just 10 days ago after his first return from the Mayo clinic... [Yesterday the Israeli PM said his] whole country was praying for Hussein, echoing comments made earlier by[the] US President... The... French President... called him a great ruler who had “inspired the respect of all world leaders for his contribution to peace in his country and in the region”. Throughout yesterday about 100 Jordanians kept vigil outside the hospital. “We cannot stay in our homes when [our king] is sick and our hearts are crying... If crying would help we would flood the street with tears.” ...Hussein's peace with Israel earned him acclaim abroad – but the distrust of many Palestinians who fled to Jordan from land taken over by the Jewish state in the Arab-Israeli wars of 1948 and 1967, and who now outnumber East Bank Jordanians. Nevertheless, many of those Palestinians, who still lead a refugee existence, said they had lost a champion in Hussein. “We pray for him. We are very worried about our future. What will happen to the Palestinians here if his heirs decide we are unwelcome in Jordan?” ...In a moving eulogy at... the funeral of the assassinated... Israeli leader Yitzhak Rabin... Hussein recalled that his grandfather was also the victim of an assassin [and, to] the astonishment of his listeners... expressed the wish that... [it would be his destiny to] meet the same end.

...The defining moment in his life was the assassination of his beloved grandfather, King Abdullah, as the 16-year-old Hussein walked alongside him into Jerusalem's al-Aksa Mosque. The incident impressed on him that [kings] lived in a cruel world which required courage and alertness if [one] were to survive. [Hussein] himself would be the object of... [12] assassination attempts, including an attempt by a Syrian fighter to shoot down the private plane [Hussein] was piloting. Survival also meant a Byzantine shifting of national alliances over the years in order to assuage or defy potential enemies more powerful than Jordan. In 1967, [Hussein] could not resist the pressure of his own people and other Arab states and joined in the Six-Day War against Israel even though [the king] knew it would likely bring disaster. The war cost him Jerusalem and the West Bank... The assassin's bullet never found Hussein; [the king] was destined to die a noble death in the service of his people, loved also by his former enemies.

...Syria's power brokers moved swiftly yesterday to ensure a smooth succession after the death of President Hafez al-Assad robbed the country of its all-powerful ruler of 30 years. Parliament, dominated by the ruling Baath Party, quickly amended the constitution to permit the succession of Assad's 34-year-old son... a British-educated eye doctor and Army colonel... A political source said last night that the party leadership had since met and recommended [the son] for the leadership... If the nomination were approved, Parliament would issue a decree for a referendum in which

voters would be asked to accept or reject the nomination... Under Assad, Syria carved a regional role beyond what might have been expected from its weak economy and under-equipped Army, such as dominating Lebanese policy and refusing to sign a peace treaty with Israel... Whether Syria can maintain its grip on Lebanon and resist Western and Israeli pressure... if [Assad's son] chooses to follow his... policies... remains to be seen.

...Allies and adversaries of Syrian President Hafez al-Assad mourned his death yesterday, some pledging to press forward for Middle East peace, some voicing concern for the future of the region. Israel, the long-time adversary of the wily leader once dubbed the "Mr No" of Middle East diplomacy, struck a conciliatory note. "The Government of Israel understands the grief of the Syrian people following the death of President Assad," said a statement issued by... [the PM]'s office. "Israel worked in the past for a peace deal with Syria and will continue to work for this in the future with all future leadership." ...Lebanon, where Syria is the main power broker, declared a seven-day mourning period... In Egypt, which incurred Assad's wrath for becoming the first Arab state to sign a peace treaty with Israel, [the]President... ordered three days of state mourning.

...Back in 1948, four years before... [being] overthrown by a military coup, King Farouk of Egypt remarked: "The whole world is in revolt. Soon there will be only five kings left: the King of England, the King of Spades, the King of Clubs, the King of Hearts and the King of Diamonds." How wrong [Farouk] was. The King of England – or rather the Queen, in her present incarnation – is still there, but the British monarchy is in serious trouble. On November 6 A[US] votes in a referendum that could make it a republic, and even in Britain there is a relentless long-term decline in popular support for the monarchy. But in the Arab world the institution of monarchy still seems to be in the rudest of good health. The stories are straight out of the *Thousand and One Nights*. [An eldest son] comes to the throne in Morocco last month after decades as his father[']s... understudy, immediately pardons 7988 convicted criminals and promises to eradicate illiteracy (60[%]) and unemployment (two million) in his North African kingdom. [Another eldest son] comes to the throne in Jordan a few months earlier after decades in the shadow of his father Hussein, and dresses up in shabby clothes and a false beard so [it] can drive a taxi around Amman and hear his subjects' secret complaints. ("God bless you, Your Majesty. Now we realise that it was only your evil advisers who misled you.") ...And this is the sophisticated end of the Arab world. At the other end, out in the Gulf, there is not even the facade of parliaments and elections (with the honorable exception of Kuwait). The kings and sheikhs rule by divine right. Sometimes they do it well and sometimes they do it very badly, but they do it on their own... It is very striking that not one of the 20-odd Arab countries... is a working democracy, and that many are monarchies as absolute as those of Henry VIII of England or Louis XIV of France.

...THE identity and secret crime of one of the world's most infamous prisoners – "The [perso]n in the Iron Mask" – has been uncovered by a Californian historian after a decade of painstaking research. [The person] was a... minor... royal valet... Estache Dauger... jailed for telling court secrets as a warning to all "palace sources" ever tempted to talk to the media. And [the prisoner] did not wear an iron mask... "The only record that suggests the prisoner wore an iron mask is about as credible as a recent sighting of Elvis Presley,"... At most, Louis XIV's victim was made to wear a velvet covering when [being] moved to the Bastille in 1698... says... [the] professor of Western civilisation and early modern European history at the University of California at Santa Barbara, [who]plans to end almost 300 years of speculation later this year when [the professor] travels to France to... put paid to the story (given currency by Voltaire and then Alexandre Dumas) that the prisoner was the Sun King's own older twin brother and the rightful heir to the French throne... "Voltaire was a publicity hound [who claimed to know] everything." ...The story has appealed to successive generations and[was] most recently... rewritten as a vehicle for Hollywood's[latest] heart-throb... There have been numerous theories on the identity of the [person] who spent 34 years behind bars, under threat of death if [the prisoner] so much as... [mingled] with other prisoners or ever... spoke to his jailer... [The professor claims to have] documentary evidence linking a terrible secret to Dauger's employer... So what was the secret? [The professor] is being coy about that until his work is complete and published. "I don't want to be remembered as the last in a long line of crackpots who claimed they had the right answer only to find out later I was wrong... Besides, then I could sell it for a lot of money..."

...[Louis XIII was an insubstantial king who'd virtually handed control of the country over to Cardinal Richelieu. Richelieu became the king's inseparable friend, confessor and protector. Others who tried to gain influence or authority ended up in exile or on the scaffold. Supported by his musketeers, Richelieu concentrated power about himself and his central government, destroying the power of the old high-ranking nobles and replacing them with ministers from bourgeois professional families elevated to the peerage. But there was a fly in the ointment: for King Louis XIII was uninterested in sex, love and the opposite sex in general, and there was no prospect whatsoever of an heir being produced. Waiting in the wings was Gaston of Orleans, the king's hated brother, first in line to the throne, and head of the group of nobles who opposed Richelieu and all the cardinal stood for. "I avoid love," said Louis XIII. "His affections were purely spiritual", commented a contemporary, "and his enjoyments always chaste." The one thing Louis XIII disliked more than sex was Spaniards: and in 1615, for political reasons, Louis was forced to marry Anne, the daughter of the King of Spain, confusingly named Anne of Austria. It was not a recipe for domestic bliss. The royal couple detested the sight of each other, and it took Richelieu four years to persuade the king to try to consummate the marriage. The king and queen spent one uncomfortable night together, and the queen later miscarried after an accident. Other reconciliations were tried, but with no effect. The couple stayed literally miles away from each other, and no child was born. Their dislike was deep, lasting and mutual. In 1630 Louis nearly died, an episode which brought home to all concerned the real possibility that Gaston might take over the throne. Nobody wanted that, certainly not Louis, who had already suffered attempts by his brother to unseat him, and least of all Richelieu, who knew that if Gaston became king it would certainly lead to his own death. Gaston had already tried to have him murdered. Richelieu's deputy Mazarin, too, would have been in great personal danger if Gaston took charge, as would all the ministers. Queen Anne would have lost all influence. Yet the royal couple simply could not produce an heir, and both were growing older. The fault seemed to be the king's. The queen was not short of admirers; but the king was colourless, always ill, unattractive, uninteresting and suffered from a wasting disease which seems to have made him impotent. But then, early in December 1637, after twenty-two years of marriage, came a curious event. Louis XIII went travelling with Cardinal Richelieu and Francois de Cavoye. A few weeks later the king made a public announcement that it was commending the provision of a son and heir to the Virgin Mary: it was almost as if Louis acknowledged that the matter was now out of his hands. Nine months later, the Queen gave birth to the future Louis XIV. Francois de Cavoye's eldest son was not very responsible, spending most of his life in debt. After the death of his father, Eustache d' Auger de Cavoye came across a family secret, which Eustache used to try and blackmail the king. In 1669 Eustache mysteriously disappeared. So it was that Eustache came to be the guy in the mask. We also know what Eustache knew, and must have ruefully reflected upon in his prison: that Louis XIV, and all the kings that succeeded him, were no more the rightful kings of France than was the gaoler who brought dinner every day. People were more likely to ask questions about a guy in a mask than about an ordinary prisoner. Rumours began to emerge from Provence about a mysterious captive who was masked because it looked like someone. It was this dilemma that led to the cover-up operation, and the "tall stories" about a prisoner in a mask that were told to mislead and confuse enquiries. The alternative versions of the masked prisoner story that were spread by ministers and others were cleverly close to the truth. Some, such as that planted by Barbezieux on Madame St Quentin, identified the masked prisoner as the illegitimate son of the queen. This is almost true – Louis XIV was. But what immediately springs to mind in this context is the child of some embarrassing liaison between the queen and a visiting duke, not surrogate fatherhood. Similarly, other stories told of the king's secret twin, a version picked up by Voltaire and Dumas. Anyone checking the descriptions of Louis XIV's birth would know that no twin could have been born without it becoming public knowledge.'

...*'essai* at the French royal courts was the ceremony of tasting the king's food and drink. The fear of poison in the Middle Ages gave rise to the complicated ceremonial attending the sovereign's meals. For drinks, the ceremonial was equally complicated. The same ceremonial took place for the queen. By special favour, Louis XIV bestowed the same prerogative upon the *dauphine* (the wife of the heir to the throne). The service which dealt with the kitchens of the royal household is termed BOUCHE DU ROI. *Bouche du roi* included dealing with food supplies, the pantler's office – which had

charge of everything concerned with the king's tableware, bread, and accessories of the table – and the royal butler's office. These services, under certain kings, at times employed over 500 people. There were heads of service, their assistants, keepers of table-service, equeries, master cooks, cooks in charge of roasting, soup cooks, pastry cooks, *galopins* or kitchen errand boys, water-carriers, fuel-carriers, armchair-carriers, ushers, *sommiers*, heralds, valets of *sert-d' eau*, and washers-up. They were exclusively concerned with the king's table and were distinct from the common service, which catered for the officers and certain members of the royal household. The queen, the dauphin and the dauphine all had their separate kitchen services, bringing the total of servants to a very great number. The officials of the royal household were all members of the aristocracy until the end of the reign of Louis XIV'. By the way, s]o many workers died during the construction of his palace at Versailles that Louis forbade any mention of the subject in his presence.

...[*Versailles*, a town SW of Paris, noted for its palace, of which the central part was built by Louis XIII and the wings and other edifices by Louis XIV. The palace's active life terminated and its *raison d'être* was gone when in October 1789 the Paris revolutionaries forced Louis XVI to leave for the city.]

...Science is no lover of legend. It takes a scalpel to mystery, wielding it with the same clinical relentlessness as a breadknife in the hands of Hannibal Lector. This week the power of the laboratory dealt a fatal blow to another myth, an end as sad in its way as the news that the Loch Ness Monster was always an optical illusion or that the Dead Sea Scrolls were written in ballpoint. DNA tests carried out on a scrap of mummified heart, preserved in a crystal urn in France's royal chapel, undid the 2[-century]-old dream of monarchists and romantics alike. The heart, they confirmed, came from the uncrowned King Louis XVII, who died in agony in a notorious Paris prison at the height of the French Revolution... "These results support very strongly the official version that Louis XVII and not a substitute died in the Temple [prison] in Paris on June 8, 1795," concluded the study. Louis' parents were the ill-starred Louis XVI and Marie-Antoinette, guillotined before baying crowds at what is now the Place de las Concorde in 1793... The 10-year-old boy... survived just 18 months before dying of tuberculosis in the Temple, alone... But even before the boy's demise, rumours swept the country that a *Scarlet Pimpernel* figure had somehow spirited him to exile abroad. Genetic specialists... of Belgium's Louvain University and... Germany's Muenster University, compared the heart with locks of hair taken from his executed mother and her two sisters, Johanna Gabelda and Mada-Josepha, and with DNA samples taken from two living relatives, [the]Queen... of Romania and her brother... The sequences were "identical," with only the remotest chance of error, they said... The material they analysed is called mitochondrial DNA – scraps of genetic material that are passed on only in the egg, not the sperm, and so are inherited from one's maternal ascendants. A new and highly accurate technique, it has been used to confirm the identities of the Russian imperial family, slain by Bolshevik revolutionaries... In 1993, it posthumously debunked the claims of a German watchmaker, Karl Wilhelm Naundorff, one of more than 30 [guys] who came forward to say that [they were] Louis XVII. If the tests had been negative, that would have meant one of two things: that the heart – removed from the boy's cadaver by a prison doctor – had been swapped, or that Louis XVII had indeed escaped his tormentors. The latter possibility would have caused enormous ructions among French monarchists, a struggling cause after being out of power for a century and a half. It would have meant that Louis XVII may have had descendants who would have a much more legitimate claim on the throne than the present royals. The senior branch of the French royal dynasty died out in the 19th century, leaving the junior branch, the Orleanists, as claimants to the crown.

...the LORD spake... saying, Sanctify unto me all the firstborn, whatsoever openeth the womb... *both* of [hu]man and of beast: it is mine... *for* the firstborn... is the beginning... THIS is the book of the generations of Adam... Adam lived an hundred and thirty years, and begat a son in his own likeness, after his image; and called his name Seth... Adam... begat[more] sons and daughters... [before Adam] died... And all the days that Adam lived were nine hundred and thirty years[(though, because the Jewish calendar wasn't introduced until 3761BC, Adam's age could've been measured by a system that, for example, meant every modern year is equal to 7 old years – like dog and cat ages – in which case Adam really died at the age of 132 years)]... Seth... begat Enos: And Seth... begat[more] sons and daughters[before Seth died]: And all the days of Seth were nine hundred and twelve years... Enos... begat Cainan... [then begat more] sons and daughters... [before dying, aged] nine hundred and five years... Cainan... begat Mahalaleel... and begat[other] sons and daughters... [before dying, aged] nine hundred and ten years... Mahalaleel... begat Jared... [then more] sons and daughters... [before dying, aged] eight hundred ninety and five years... Jared... begat Enoch... and[more] sons and daughters... [before dying, aged] nine hundred sixty and two years... Enoch... begat Methuselah... and[other] sons and daughters: And all the days of Enoch were three hundred sixty and five years: And Enoch walked with God: and... *was* not; for God took him. And Methuselah... begat Lamech... and[other] sons and daughters... And Lamech... begat a son: And... called his name Noah, saying, This *same* shall comfort us concerning our work and toil of our hands, because of the ground which the LORD hath cursed... Noah was a just [person] and perfect in his generations, and Noah walked with God. And Noah begat three sons, Shem, Ham, and Japheth... And God blessed Noah and his sons... and by these were the nations divided in the earth after the flood. AND the whole earth was of one language, and of one speech. And it came to pass... [that] Shem... begat Arphaxad... Arphaxad... begat Salah... Salah... begat Eber... Eber... begat Peleg... Peleg... begat Reu... Reu... begat Serug... Serug... begat Nahor... Nahor... begat Terah... And Terah... begat Abram... and Haran... [but] Haran died before his father... [died. T]he name of Abram's wife *was* Sarai... But Sarai was barren... NOW the LORD had said unto Abram, Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will shew thee. And I will make of thee a great nation... in thee shall all families of the earth be blessed... Abram went down into Egypt... and Lot the son of Haran... went with him... And... when [Abram] was come near to enter into Egypt... [Abram] said unto Sarai... Behold now, I know that thou *art*... fair[in appearance]: to look upon: Therefore it shall come to pass, when the Egyptians shall see thee, that they shall say, This is his wife: and they will kill me, but they will save thee alive. Say, I pray thee, thou *art* my sister... for my sake; and my soul shall live because of thee... [T]he Egyptians beheld... that [Sarai] *was* very fair. And the princes also of Pharaoh saw her, and commanded her before Pharaoh: and... [Sarai] was taken into Pharaoh's house... And the LORD plagued Pharaoh and his house with great plagues because of... Abram's wife. And Pharaoh called Abram, and said, What *is* this *that* thou hast done unto me? why didst thou not tell me that [Sarai] *was* thy wife? ...now therefore... take [Sarai], and go thy way... [So] Abram went up out of Egypt... And Abram *was* very rich in cattle, in silver, and in gold. And [Abram] went on his journeys from the south even to Beth-el, unto the place where his tent had been at the beginning... And Lot also... [But] the land was not able to bear them, that they might dwell together: for their substance was great... And there was strife between the [herders] of Abram's cattle and the [herders] of Lot's cattle... And Abram said unto Lot, Let there be no strife, I pray thee, between me and thee, and between my [herders and thy herders]; for *we be* brethren. *Is* not the whole land before thee? separate thyself, I pray thee, from me: if *thou wilt take* the left hand, then I will go to the right; or if *thou depart* to the right hand, then I will go to the left. And Lot lifted up his eyes, and beheld all the plain of Jordan, that it *was* well watered every where... *even* as the garden of the LORD... Then Lot... journeyed east: and they separated themselves the one from the other. Abram dwelled in the land of Canaan, and Lot... pitched his tent toward Sodom. But the [people] of Sodom *were* wicked and sinners before the LORD exceedingly... And there came two angels to Sodom at even; and Lot sat in the gate of Sodom: and Lot seeing *them* rose up to meet them; and [Lot] bowed himself with his face toward the ground. And... said, Behold now, my lords, turn in, I pray you, into your servant's house, and tarry all night, and wash your feet, and ye shall rise up early, and go on your ways. And they said, Nay... we will abide in the street all night... but... [Lot] pressed upon them greatly; and they turned in unto him, and entered into his house; and [Lot] made them a feast... they did eat. But before they lay down, the [people] of the city... compassed the house round, both old and young, all the people from every quarter: and they called unto Lot, and said unto him, Where *are* the [two] which came in to thee this night? bring them out unto us, that we may know them. And Lot went out at the door unto them, and shut the door after him. And said, I pray you, brethren, do not so wickedly. Behold now, I have two daughters which... [are virgins]; let me... bring them out unto you, and do ye to them as *is* good in your eyes: only unto these [strangers] do nothing; for therefore came they under the

shadow of my roof. [But the people] said, Stand back... And they pressed sore upon... Lot, and came near to break the door. But the [two angels] put forth their hand, and pulled Lot into the house to them, and shut to the door. And they smote the [people] that *were* at the door of the house with blindness, both small and great: so that they wearied themselves to find the door. And the [angels] said unto Lot... we will destroy this place, because the... LORD hath sent us to destroy it... [W]hen the morning arose, then the angels hastened Lot, saying, Arise, take thy wife, and thy two daughters, which are here... and... bring *them* out of this place... lest thou be consumed in the iniquity of the city... Escape for thy life; look not behind thee, neither stay thou in all the plain, lest thou be consumed... Then... rained upon Sodom... brimstone and fire from the LORD out of heaven... But [Lot's] wife looked back from behind him, and... became a pillar of salt... And Lot went up... and dwelt in the mountain, and... dwelt in a cave... with... his two daughters. And the firstborn said unto the younger, Our father is old, and *there is* not a [guy] in the earth to come in unto us after the manner of all the earth. Come, let us make our father drink wine, and we will lie with him, that we may preserve seed of our father. And they made their father drink wine that night: and the firstborn went in, and lay with her father... [who] perceived not when [his daughter] lay down, nor... arose. And it came to pass on the morrow, that... they made their father drink wine that night also: and the younger arose, and lay with him... Thus were both the daughters of Lot with child by their father. And the firstborn bare a son, and called his name Moab: the same *is* the father of the Moabites... And the younger... also bare a son, and called his name Benammi: the same *is* the father of the children of Ammon... [Abram had] looked toward Sodom... and toward all the land of the plain, and beheld... the smoke of a furnace... [So Abram] journeyed from thence toward the south country, and... sojourned in Gerar. And [again Abram] said... his wife... *is* my sister: and Abimelech king of Gerar sent, and took [Sarai]. But God came to Abimelech in a dream by night, and said to him, Behold, thou *art* but a dead... [person, for Sarai] which thou hast taken... *is* [another's] wife. But Abimelech had not come near her: and... said, Lord, wilt thou slay also a righteous nation? Said [Abram] not unto me, [Sarai] *is* my sister? and... even [Sarai herself said, Abram] *is* my brother: in the integrity of my heart and innocency of my hands have I done this. And God said unto him in a dream, Yea, I know that thou didst this in the integrity of thy heart, for I also withheld thee from sinning against me: therefore suffered I thee not to touch her. Now therefore restore the [husband] *his* wife; for [Abram] *is* a prophet, and... shall pray for thee, and thou shalt live... And Abimelech took sheep, and oxen and ...servants, and gave *them* unto [Abram], and restored him... his wife... AFTER these things the word of the LORD came unto Abram in a vision, saying, Fear not, Abram, *I am* thy shield, *and* thy exceeding great reward. And Abram said, Lord GOD, what wilt thou give me, seeing I go childless... Behold, to me thou hast given no seed: and [no] one born in my house is mine heir... And when the sun was going down, a deep sleep fell upon Abram; and... the word of the LORD *came* unto him, saying... Know of a surety that thy seed shall be a stranger in a land *that is* not their's, and shall serve them... NOW Sarai... had an handmaid, an Egyptian, whose name *was* Hagar. And Sarai said unto Abram, Behold now, the LORD hath restrained me from bearing: I pray thee, go in unto my maid; it may be that I may obtain children by her. And Abram hearkened to the voice of Sarai. And... Hagar... conceived: and... her mistress was despised in [Hagar's] eyes. And Sarai said unto Abram, My wrong *be* upon thee: I have given my maid unto thy bosom; and when... [my maid] had conceived, I was despised in her eyes: the LORD judge between me and thee. But Abram said unto Sarai, Behold, thy maid *is* in thy hand; do to her as it pleaseth thee. And when Sarai dealt hardly with her, [Hagar] fled from her face. And the angel of the LORD found her by a fountain of water in the wilderness... And... said, Hagar, Sarai's maid, whence camest thou? and whither wilt thou go? And [Hagar] said, I flee from the face of my mistress... And the angel of the LORD said unto her, Return to thy mistress, and submit thyself under her hands. And... I will multiply thy seed exceedingly, that it shall not be numbered for multitude. And the angel of the LORD said unto her, Behold, thou... shalt bear a son, and shalt call his name Ishmael... And [Ishmael] will be a wild [person]; his hand *will be* against every [person, and every person's] hand against him... And Abram was fourscore and six years old, when Hagar bare Ishmael... AND when Abram was ninety years old and nine, the LORD appeared to Abram, and said unto him, *I am* the Almighty God; walk before me, and be thou perfect... and thou shalt be a father of many nations. Neither shall thy name any more be called Abram, but thy name shall be Abraham... As for... thy wife, thou shalt not call her name Sarai, but Sarah *shall* her name *be*. And I will bless her, and give thee a son also of her, and [Sarah] shall be *a mother* of nations, kings of people shall be of her. Then Abraham fell upon his face, and laughed, and said in his heart, Shall *a child* be born unto him that is an hundred years old? and shall Sarah, that is ninety years old, bare? And... God said, Sarah thy wife shall bear thee a son indeed, and thou shalt call his name Isaac: and I will establish my covenant with him for an everlasting covenant, *and* with his seed after him. And as for Ishmael... Behold, I have blessed him, and will make him fruitful, and will multiply him exceedingly; twelve princes shall [Ishmael] beget, and I will make him a great nation. But my covenant will I establish with Isaac, which Sarah shall bear unto thee at this set time in the next year. And... God... left off talking with... Abraham... [Eventually] it came to pass that God did tempt Abraham, and said unto him... Take... Isaac, whom thou lovest... and offer him... for a burnt offering... Abraham rose up early in the morning... saddled his ass, and took... Isaac... and... wood for the burnt offering... unto the place of which God had told him... Abraham built an altar there... laid the wood in order... bound Isaac... and laid him on the altar upon the wood. And Abraham stretched forth his hand... with... the knife to slay his son... THEN... the angel of the LORD called unto him out of heaven, and said... Lay not thine hand upon the lad, neither do thou any thing unto him: for now I know that thou fearest God... And the angel of the LORD called unto Abraham out of heaven a second time, And said... I will bless thee, and... I will multiply thy seed as the stars of the heaven, and as the sand which *is* upon the sea shore; and thy seed shall possess the gate of his enemy. And in thy seed shall all the nations of the earth be blessed; because thou hast obeyed my voice... And Abraham gave all that [belonged to him] unto Isaac... And it came to pass after the death of Abraham, that God blessed his son Isaac... Isaac was forty years old when... Isaac... took Rebekah to wife... and Rebekah his wife conceived. And the children struggled together within her... so... [Rebekah] went to enquire of the LORD. And the LORD said unto her, Two nations *are* in thy womb... two manner of people shall be separated from thy bowels; and *the one* people shall be stronger than *the other* people; and the elder shall serve the younger. And when her days to be delivered were fulfilled, behold, *there were* twins in her womb. And the first came out red, all over like an hairy garment; and they called his name Esau. And after that came his brother out, and his hand took hold on Esau's heel; and his name was called Jacob: and... the boys grew: and Esau was a cunning hunter... of the field; and Jacob *was* a plain... [person], dwelling in tents. And Isaac loved Esau, because [Esau did share] of *his* venison: but Rebekah loved Jacob. [Now it so happened that] Jacob sod pottage: and [one day] Esau came from the field, and... said to Jacob, Feed me, I pray thee, with that... red *pottage*; for *I am* faint... And Jacob said, Sell me thy birthright. And Esau said, Behold, *I am* at the point to die: and what profit shall this birthright do to me? ...[so Esau] sold his birthright unto Jacob. Then Jacob gave Esau bread and pottage of lentiles; and [Esau] did eat and drink, and rose up, and went his way: thus Esau despised *his* birthright... [W]hen... forty years old... Esau... took to wife Judith the daughter of Beeri the Hittite, and Bashemath the daughter of Elon the Hittite. Which were a grief of mind unto Isaac and Rebekah. AND it came to pass, that when Isaac was old, and his eyes were dim, so that [they] could not see, [Isaac] called Esau... and said unto him, My son... Behold... I am old... Now therefore take, I pray thee, thy weapons... and go out to the field, and... make me savoury meat, such as I love, and bring it to me, that I may eat; that my soul may bless thee before I die. And Rebekah heard when Isaac spake to Esau... And[after] Esau went to the field to hunt... Rebekah spake unto Jacob... saying... my son, obey my voice according to that which I command thee. Go now to the flock, and fetch me from thence two good kids of the goats; and I will make them savoury meat for thy father... And thou shalt bring *it* to thy father, that [Isaac] may eat, and... bless thee before his death. And Jacob said to Rebekah... Behold, Esau my brother *is* a hairy [person while] *I am*... smooth... My father peradventure will feel me, and I shall feel to him as a deceiver; and I shall bring a curse upon me... not a blessing. And his mother said unto him, Upon me *be* thy curse, my son: only obey my voice... And Rebekah took goodly raiment of her eldest son Esau, which *were* in her house, and put them upon Jacob... And [Rebekah] put the skins of the kids of the goats upon his hands, and the smooth of his neck... And... Jacob... came unto his father: and [Isaac] said... who *art* thou, my son? And

Jacob said unto his father, *I am Esau thy firstborn; I have done according as thou badest me: arise, I pray thee, sit and eat of my venison, that thy soul may bless me.* And Isaac said unto his son, *How is it that thou hast found it so quickly, my son?* And [Jacob] said, *Because the LORD thy God brought it to me.* And Isaac... blessed... Jacob... God give thee of the dew of heaven, and the fatness of the earth, and plenty of corn and wine. Let people serve thee, and nations bow down to thee, be lord over thy brethren, and let thy mother's sons bow down to thee, cursed *be* every one that curseth thee, and blessed *be* [every one] that blesseth thee. And it came to pass, as soon as Isaac had made an end of blessing Jacob, and Jacob was yet scarce gone out from the presence of Isaac... that Esau... came in from hunting... And Isaac his father said unto him, *Who art thou?* And... Esau... said, *I am thy... firstborn... son...* And Isaac trembled very exceedingly... And when Esau heard the words of his father, [Esau] cried with a great and exceeding bitter cry, and said unto his father, *Bless me...* also, *O my father...* for... Jacob... took away my birthright: and, behold, now [Jacob] hath taken away my blessing... Hast thou not reserved a blessing for me? And Isaac answered and said unto Esau, *Behold, I have made him thy lord... but... by thy sword shalt thou live, and... it shall come to pass when thou shalt have the dominion, that thou shalt break his yoke from off thy neck...* Esau... *is...* the father of the [*'people living in an ancient region south of the Dead Sea' who are called*] Edomites... Now the sons of Jacob were... Reuben, Jacob's firstborn... Simeon... Levi... Judah... Issachar, and Zebulun... [by] Leah... Joseph, and Benjamin... [by] Rachel... Dan, and Naphtali... [by] Bilhah, Rachel's handmaid... Gad, and Asher... [by] Zilpah, Leah's handmaid... AND it came to pass... that Judah... saw... a daughter of a certain Canaanite, whose name was Shuah; and [Judah] took her, and went in unto her. And [Shuah] conceived, and bare a son... called... Er. And [Shuah] conceived again, and bare a son... called... Onan. And [Shuah] yet again conceived, and bare a son... called... Shelah... And Judah took a wife for Er his firstborn, whose name was Tamar. [But] Er... was wicked in the sight of the LORD; and the LORD slew him. And Judah said unto Onan, *Go in unto thy brother's wife, and marry her, and raise up seed to thy brother.* And Onan knew that the seed should not be his; and it came to pass, when [Onan] went in unto his brother's wife, that [Onan] spilled *it* on the ground... And the thing which [Onan] did displeased the LORD; wherefore [the LORD slew Onan] also. Then said Judah to Tamar his daughter in law, *Remain a widow at thy father's house, till Shelah my son be grown...* And in process of time... Judah... went up unto his sheepshearers to Timnath... [When Tamar] was told Tamar... put her widow's garments off from her, and covered her with a veil, and wrapped herself, and sat in an open place, which *is* by the way to Timnath; for [Tamar] saw that Shelah was grown, [but Tamar] was not given unto him to wife. When Judah saw her, [Judah] thought her *to be* an harlot; because [Tamar] had covered her face. And he... said... *I pray thee, let me come in unto thee; (for [Judah] knew not that [the covered person] was his daughter in law.)* And [Tamar] said, *What wilt thou give me, that thou mayest come in unto me?* And [Judah] said, *I will send thee a kid from the flock.* And [Tamar] said, *Wilt thou give me... thy bracelets... signet... and thy staff...* [as] a pledge, till thou send *it*? ...[Judah gave them to] her, and came in unto her, and [Tamar] conceived by him... And Judah sent the kid... to receive *his* pledge from the [harlot's] hand, but... found her not... And it came to pass about three months after, that it was told Judah... behold... thy daughter in law... *is* with child by whoredom. And Judah said, *bring her forth, and let her be burnt.* When [Tamar] was brought forth, [Tamar] sent to her father in law... the signet... bracelets, and staff... saying, *By the [person], whose these are, am I with child...* And Judah acknowledged *them*, and said, [Tamar] hath been more righteous than I; because that I gave her not to Shelah my son... And it came to pass in the time of [Tamar's] travail, that, behold, twins *were* in her womb... and the midwife took and bound... the... hand... [that] came out first... [However,] *the one...* drew back his hand... [until] his brother came out... called Pharez. And afterward came out... Zarah... that had the scarlet thread upon his hand... Now these *are* the generations of Pharez: Pharez begat Hezron, and Hezron begat Ram, and Ram begat Amminadab, and Amminadab begat Nahshon, and Nahshon begat Salmon, and Salmon begat Boaz, and Boaz begat Obed, and Obed begat Jesse... NOW there was a certain... [resident] of mount Ephraim, and his name was Elkanah... And [Elkanah] had two wives; the name of... one was Hannah, and the name of the other Peninnah: and Peninnah had children, but Hannah had no children... [which made] her fret... And... Hannah... was in bitterness of soul, and prayed unto the LORD, and wept sore. And... Hannah... vowed a vow, and said, *O LORD of hosts, if thou wilt indeed look on the affliction of thine handmaid, and remember me, and... wilt give unto mine handmaid a [boy] child, then I will give him unto the LORD all the days of his life, and there shall no razor come upon his head.* And it came to pass, as... Hannah... continued praying before the LORD, that... the LORD remembered her. Wherefore... Hannah... bare a son, and called his name Samuel, *saying*, *Because I have asked him of the LORD.* And... Samuel grew, and the LORD was with him, and did let none of his words fall to the ground. And all Israel from Dan even to Beer-sheba knew that Samuel was established *to be* a prophet of the LORD... AND it came to pass when Samuel was old, that [Samuel] made his sons judges over Israel. Now the name of his firstborn was Joel; and the name of his second, Abiah: *they were* judges in Beer-sheba. And his sons walked not in his ways, but turned aside after lucre, and took bribes, and perverted judgment. Then all the elders of Israel gathered themselves together, and came to Samuel... And said unto him, *Behold, thou art old, and thy sons walk not in thy ways: now make us a king to judge us like all the nations.* But the thing displeased Samuel... Samuel prayed unto the LORD. And the LORD said unto Samuel, *Hearken unto the voice of the people in all that they say unto thee: for they have not rejected thee, but they have rejected me, that I should not reign over them...* Samuel told all the people the words of the LORD... This will be the manner of king that shall reign over you: [Your king] will take your sons, and appoint *them* for himself, for his chariots, and *to...* run before his chariots. And [your king] will appoint himself captains over thousands, and captains over fifties; and *will set them* to ear his ground, and to reap his harvest, and to make his instruments of war... And [your king] will take your daughters *to be* confectioneries, and... cooks, and... bakers. And [your king] will take your fields, and your vineyards, and your oliveyards, *even the best of them*, and give *them* to his servants. And... will take the tenth of your seed, and of your vineyards, and give to his officers... And... will take your... asses, and put *them* to his work. [Your king] will take the tenth of your sheep... And ye shall cry out in that day because of your king which ye shall have chosen you; and the LORD will not hear you in that day. Nevertheless the people refused to obey the voice of Samuel; and they said... *we will have a king over us.* That we also may be like all the nations; and that our king may judge us, and go out before us, and fight our battles... And the LORD said to Samuel, *Hearken unto their voice, and make them a king...* NOW there was a... mighty... Benjamite... whose name was Kish... [who] had a son, whose name was Saul... and *there was* not among the children of Israel a goodlier person than [Saul]: from his shoulders and upward [Saul] was higher than any of the people. And the asses of Kish... were lost. And Kish said to Saul... *Take now one of the servants with thee, and... go seek the asses...* [T]hey passed through mount Ephraim... but they found *them* not. And when they were come to the land of Zuph, Saul said to his servant... *Come, and let us return; lest my father leave caring for the asses, and take thought for us.* And [the servant] said unto him, *Behold now, there is in this city a [prophet] of God... all that [the prophet] saith cometh surely to pass: now let us go thither; peradventure [the prophet] can shew us our way that we should go.* Then said Saul to his servant, *But, behold, if we go, what shall we bring...?* for the bread is spent in our vessels, and *there is* not a present to bring... And the servant answered Saul again, and said, *Behold, I have here at hand the fourth part of a shekel of silver: that will I give...* Now the LORD had told Samuel in his ear a day before Saul came, saying, *To morrow about this time I will send thee a [person] out of the land of Benjamin, and thou shalt anoint him *to be* [king] over my people Israel, that... my people... may... [be saved] out of the hand of the Philistines: for I have looked upon my people, because their cry is come unto me.* And when Samuel saw Saul, the LORD said unto him, *Behold... whom I spake to thee of! this same shall reign over my people...* Then... all the people went to Gilgal; and there they made Saul king[, offered]... sacrifices of peace... and... Saul and all the [people] of Israel rejoiced greatly... SAUL reigned one year; and when... Saul... had reigned two years over Israel, Saul chose him three thousand [soldiers]... *whereof* two thousand were with Saul in Michmash and in mount Beth-el, and a thousand were with Jonathan... the firstborn... son of Saul... And Jonathan smote the garrison of the Philistines that was in Geda, and the Philistines heard of *it*... Then came the word of the LORD unto Samuel, saying, *It repenteth me that I have set up Saul *to be* king: for [Saul] is turned back from following me, and hath not performed my commandments.* And it grieved Samuel; and [Samuel]

cried unto the LORD all night... And Samuel came no more to see Saul... nevertheless Samuel mourned for Saul... AND the LORD said unto Samuel, How long wilt thou mourn for Saul, seeing I have rejected him from reigning over Israel? fill thine horn with oil, and go, I will send thee to Jesse the Beth-lehemite: for I have provided me a king among his sons. And Samuel said, How can I go? if Saul hear *it*, [Saul] will kill me. And the LORD said, Take an heifer with thee, and say, I am come to sacrifice to the LORD. And call Jesse to the sacrifice, and I will shew thee what thou shalt do: and thou shalt anoint unto me *him* who I name unto thee. And Samuel did that which the LORD spake, and came to Beth-lehem. And the elders of the town trembled at his coming, and said, Cometh thou peaceably? And [Samuel] said, Peaceably... come with me to sacrifice. And... [Samuel also] called... Jesse and his sons... to the sacrifice. And it came to pass, when they were come, that [Samuel] looked on Eliab, and said, Surely the LORD's anointed *is* before [me]. But the LORD said unto Samuel, Look not on his countenance, or on the height of his stature; because I have refused him: *for the LORD seeth* not as [a hu]man seeth; for [humans] looketh on the outward appearance but the LORD looketh on the heart. Then Jesse called Abinabad, and made him pass before Samuel. And [Samuel] said, Neither hath the LORD chosen this... Jesse made seven of his sons to pass before Samuel. And Samuel said unto Jesse, the LORD hath not chosen these... Are here all *thy* children? And... Jesse... said, There remaineth yet the youngest... [who] keepeth the sheep. And Samuel said unto Jesse, Send and fetch him: for we will not sit down till [your youngest son] come hither. And [Jesse sent for his youngest son], and brought him in. Now [the youngest son] *was* ruddy, *and* withal of a beautiful countenance, and goodly to look on. And the LORD said, Arise, anoint him, for this *is* [the chosen one]. Then Samuel took the horn of oil, and anointed [the youngest son] in the midst of his brethren: and the Spirit of the LORD came upon David from that day forward... But the Spirit of the LORD departed from Saul... And Saul's servants said unto him, Behold, now, an evil spirit from God troubleth thee. Let our lord now command thy servants... to seek out... [one] *who is* a cunning player on an harp: and it shall come to pass, when the evil spirit from God is upon thee, that [the harpist] shall play... and thou shalt be well. And Saul said unto his servants, Provide me now a [harpist] that can play well... Then answered one of the servants, and said, Behold, I have seen a son of Jesse the Beth-lehemite, *that is* cunning in playing, and... a comely person, and the LORD *is* with him. Wherefore Saul sent messengers unto Jesse, and said, Send me David thy son, which *is* with the sheep. And David came to Saul, and... it came to pass, when the *evil* spirit from God was upon Saul, that David took an harp, and played... so Saul was refreshed, and was well, and the evil spirit departed from him... And Saul sent to Jesse, saying, Let David, I pray thee, stand before me; for [David] hath found favour in my sight. And... [David] became his armourbearer... NOW the Philistines gathered together their armies to battle... with Israel... by the valley of Elah... And Saul and the [soldiers] of Israel were gathered together, and... the three eldest sons of Jesse went *and* followed Saul to the battle... But David went and returned from Saul to feed his father's sheep at Beth-lehem... Now... the Philistines stood on a mountain on the one side, and Israel stood on a mountain on the other side, and *there was* a valley between them. And there went out a champion out of the camp of the Philistines, named Goliath, of Gath, whose height *was* six cubits and a span... And [Goliath stood in the valley] and cried unto the armies of Israel... Why are ye come out to set your battle in array? *am* I not a Philistine, and ye servants of Saul? choose you a... [champion] and let him come down to me. If [your champion] be able to fight with me, and to kill me, then we will be your servants: but if I prevail against him, and kill him, then shall ye be our servants... When Saul and all Israel heard those words of the Philistine, they were dismayed, and greatly afraid... And the Philistine... presented himself forty days. [Meanwhile,] Jesse said unto David... Take now... an ephah of this parched *corn*, and these ten loaves, and run to the camp to thy brethren; And carry these ten cheeses unto the captain of *their* thousand, and look how thy brethren fare, and take their pledge... David rose up early in the morning, and left the sheep with a keeper... and ran into the army, and came and saluted his brethren. And as [David] talked with them, behold, there came up the champion, the Philistine of Gath... out of the armies of the Philistines, and spake according to the same words: and David heard *them*... And David said to Saul... thy servant will go and fight with this Philistine. And Saul said to David, Thou art not able to go against this Philistine to fight with him: for thou *art but* a youth... And David said unto Saul, Thy servant kept his father's sheep, and there came a lion, and a bear, and took a lamb out of the flock: And I went out after [them], and... slew both the lion and the bear... The LORD that delivered me out of the paw of the lion, and out of the paw of the bear... will deliver me out of the hand of this Philistine. And Saul said unto David, Go, and the LORD be with thee... David... took his staff... and chose him five smooth stones out of the brook, and put them in a shepherd's bag... and his sling *was* in his hand: and [David] drew near to the Philistine. And the Philistine came on and drew near unto David; and... when the Philistine... saw David, [Goliath] disdained him, for [David] *was but* a youth... And the Philistine said unto David, *Am* I a dog, that thou comest to me with staves? And the Philistine cursed David by his gods. And... said to David, Come to me, and I will give thy flesh unto the fowls of the air, and to the beasts of the field. Then said David to the Philistine, Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the LORD of hosts, the God of the armies of Israel, whom thou has defied. This day will the LORD deliver thee unto mine hand; and I will smite thee, and take thine head from thee; and I will give the carcases of the host of the Philistines this day unto the fowls of the air, and to the wild beasts of the earth; that all the earth may know that there is a God in Israel... for the battle *is* the LORD's... And David put his hand in his bag, and took thence a stone, and slang *it*, and smote the Philistine in his forehead[– ‘Goliath was too big to miss’ – and Goliath]... fell upon his face to the earth... So David prevailed over the Philistine with a [long-range offensive weapon]... David ran, and stood upon the Philistine, and took his sword, and... cut off his head therewith. And when the Philistines saw their champion was dead, they fled... And when... David returned from the slaughter of the Philistine... Abner, the captain of the host... brought him before Saul with the head of the Philistine in his hand... AND it came to pass, when [David] had made an end of speaking unto Saul, that the soul of Jonathan was knit with the soul of David, and Jonathan loved him as his own soul. And Saul took him that day, and would let him go no more home to his father's house. Then... Jonathan stripped himself of the robe that *was* upon him, and gave it to David, and his garments, even... his sword... bow, and... his girdle. And David went out whithersoever Saul sent him, *and* behaved himself wisely: and Saul set him over the [army of Israel, and David] was accepted in the sight of all the people, and also in the sight of Saul's servants. And... when [the army] was returned from... [Elah the mothers and daughters] came out of all the cities of Israel, singing and dancing, to meet king Saul, with tabrets, with joy, and with instruments of musick. And... [the musicians] answered *one another* as they played, and said, Saul hath slain his thousands, and David his ten thousands. And Saul was very wroth, and... said, They have ascribed unto David ten thousands, and to me they have ascribed *but* thousands: and *what* can [David] have more but the kingdom? And Saul eyed David from that day forward... But all Israel and Judah loved David... [So] Saul said to David, Behold my elder daughter Merab, her will I give to thee to wife: only be thou valiant for me, and fight the LORD's battles. For Saul [thought], Let not mine hand be upon him, but let the hand of the Philistines be upon him. And David said unto Saul, Who *am* I? and what *is* my life, *or* my father's family in Israel, that I should be son in law to the king? But it came to pass at the time when... Saul's daughter should have been given to David, that... Merab... was given unto Adriel the Meholahite to wife. [But Saul's other] daughter... Michal... loved David: and they told Saul, and the thing pleased him. And Saul said, I will give him her, that [Michal] may be a snare to him, and that the hand of the Philistines may be against him... And Saul commanded his servants, *saying*, Commune with David secretly, and say... the king hath delight in thee, and all his servants love thee: now therefore be the king's son in law. And Saul's servants spake those words in the ears of David. And David said, Seemeth it to you *a light thing* to be a king's son in law, seeing that I *am* a poor man... And the servants of Saul told him... [what] David... spake... And Saul said, Thus shall ye say to David, The king desireth not any dowry, but an hundred foreskins of the Philistines, to be avenged of the king's enemies. But Saul thought to make David fall by the hand of the Philistines. And when his servants told David these words, it pleased David well to be the king's son in law... Wherefore David arose and went... [with his soldiers], and slew of the Philistines two hundred... and David brought their foreskins... [So] Saul gave him Michal his daughter to wife. And Saul... was yet the more afraid of David, and Saul became David's enemy continually... AND Saul spake to Jonathan... and to all his servants, that they should kill David.

But Jonathan... told David, saying, Saul my father seeketh to kill thee: now therefore, I pray thee, take heed to thyself until the morning, and abide in a secret *place*... And I will... commune with my father of thee... And Jonathan spake good of David unto Saul his father, and said unto him, Let not the king sin against his servant... because... David... hath not sinned against thee... For [David] did put his life in his hand, and slew the Philistine, and the LORD wrought a great salvation for all Israel: thou sawest *it*, and didst rejoice: wherefore then wilt thou sin against innocent blood, to slay David without a cause? And Saul hearkened unto the voice of Jonathan: and Saul sware, As the LORD liveth, [David] shall not be slain. And Jonathan called David, and... brought David to Saul, and... was in his presence, as in times past... [until] the evil spirit from the LORD was upon Saul [again, as the king] sat in his house with his javelin in his hand: and David played with *his* hand. And Saul sought to smite David even to the wall with the javelin; but [David] slipped away out of Saul's presence, and... fled... THEN came David to Nob to Ahimelech the priest... Now a certain... servant... of Saul was there... and his name was Doeg, an Edomite, the chiefest of the herd[ers] that *belonged* to Saul. And David... fled that day for fear of Saul, and... came into the forest of Hareth. When Saul heard that David was discovered... the king sent to call Ahimelech the priest... and all... the priests that *were* in Nob... And the king said unto the [servants] that stood about him, Turn, and slay the priests of the LORD; because their hand also *is* with David... But the servants of the king would not put forth their hand to fall upon the priests of the LORD. [So] the king said to Doeg, Turn thou, and fall upon the priests. And Doeg... turned, and slew on that day fourscore and five persons that did wear a linen ephod. And [in] Nob, the city of the priests, smote [Doeg] with the edge of the sword... [adults], children and sucklings, and oxen... asses, and sheep... [But] one of the sons of Ahimelech... named Abiathar, escaped, and fled after David. And Abiathar shewed David that Saul had slain the LORD's priests. And David said unto Abiathar... I have occasioned the *death* of all the persons of thy father's house... THEN... David... [was] told... the Philistines fight against Keilah, and... David enquired of the LORD... And the LORD answered him and said, Arise, go down to Keilah; for I will deliver the Philistines into thine hand. So David and... his [supporters], *which were* about six hundred... went to Keilah, and fought with the Philistines, and... smote them with a great slaughter. So David saved the inhabitants of Keilah. And it came to pass... *that*... Saul... was told... David was come to Keilah. And Saul said, God hath delivered him into mine hand; for [David] is shut in, by entering into a town that hath gates and bars. And Saul called all the people together to war, to go down to Keilah, to besiege David... [However,] David knew that Saul secretly practised mischief against him... [So] David... and his... [supporters] arose and departed out of Keilah... And it was told Saul that David was escaped... And Saul sought him every day, but God delivered him not into his hand... Saul... pursued after David in the wilderness of Moan. And Saul went on this side of the mountain, and David and his [supporters] on that side of the mountain: and David made haste to get away for fear of Saul... But there came a messenger unto Saul, saying, Haste thee, and come; for the Philistines have invaded the land. Wherefore Saul returned from pursuing after David... AND it came to pass, when Saul was returned from following the Philistines, that... Saul came to the sheepcotes by the way, where *was* a cave; and Saul went in to cover his feet: [but] David and his [supporters were] in the sides of the cave. And the [supporters] of David said unto him, Behold... the LORD said unto thee... I will deliver thine enemy into thine hand, that thou mayest do to him as it shall seem good unto thee. Then David arose, and cut off the skirt of Saul's robe privily... [A]fterward... David's heart smote him... [for cutting] off Saul's skirt. And [David] said to his [supporters], The LORD forbid that I should do this thing unto my master, the LORD's anointed... So David stayed his servants with these words, and suffered them not to rise against Saul. But Saul rose up out of the cave, and went on *his* way. David also arose afterwards, and went out of the cave, and cried after Saul, saying, My lord the king... Behold, this day thine eyes have seen how that the LORD had delivered thee... into mine hand in the cave: and *some bade me* kill thee: but *mine eye* spared thee; and I said, I will not put forth mine hand against my lord; for [Saul] *is* the LORD's anointed... And it came to pass, when David had made an end of speaking these words unto Saul, that Saul said... to David, Thou art more righteous than I: for thou has rewarded me good, where I have rewarded thee evil... wherefore the LORD reward thee for that thou hast done unto me this day... [N]ow, behold, I know well that thou shalt surely be king, and the kingdom of Israel shall be established in thine hand. Swear now therefore unto me by the LORD, that thou wilt not cut off my seed after me, and that thou wilt not destroy my name out of my father's house. And David sware unto Saul[, who]... went home... and... sought no more again for him... But Saul had given Michal his daughter, David's wife, to Phalti the son of Laish... [So] David... communed with [a widow called] Abigail, to take her to him to wife... David also took Ahinoam of Jezreel; and they were both of them his wives... And David dwelt... in... Ziklag... [Unfortunately, one day] David and his [soldiers] went up, and invaded the Geshurites, and the Gezites, and the Amalekites... and smote the [inhabitants], and... took away... sheep... oxen... asses... camels, and the apparel [of the dead]... AND it came to pass, wh[ile] David and his... [soldiers were still away], that the Amalekites... invaded the south, and Ziklag, and... burned it with fire. And... [took the wives and children] captive, that *were* therein: they slew not any... but carried *them* away... So David and his [soldiers] came to the city, and, behold, *it was* burned... and their wives... their sons, and their daughters, were taken captive. Then David and the people that *were* with him lifted up their voice and wept, until they had no more power to weep. And... David was greatly distressed; for the people spake of stoning him, because the soul of all the people was grieved... for [their wives,] sons and... daughters... [Therefore] David enquired at the LORD, saying, Shall I pursue after this troop? ...And [the LORD] answered him, Pursue: for thou shalt surely overtake *them*, and without fail recover *all*. So David... pursued... and... behold... [the Amalekites] *were*... eating and drinking, and dancing, because of all the great spoil that they had taken... And David smote them from the twilight even unto the evening of the next day: and... recovered all that the Amalekites had carried away... NOW the Philistines fought against Israel [yet again: and the soldiers] of Israel fled from before the Philistines, and fell down slain in mount Gilboa. And the Philistines followed hard upon Saul and... slew Jonathan, and Abinabad, and Melchi-shua, Saul's sons. And the battle went sore against Saul, and the archers hit him, and [Saul] was sore wounded... Then said Saul unto his armourbearer, Draw thy sword, and thrust me through therewith; lest these uncircumcised come and... abuse me. But his armourbearer would not; for [the armourbearer] was sore afraid. Therefore Saul took a sword, and fell upon it. And when his armourbearer saw that Saul was dead, [the armourbearer] fell likewise upon his sword, and died with him. So Saul died, and his three sons, and his armourbearer, and all his [soldiers], that same day together... NOW it came to pass after the death of Saul... [that the people] in the cities of Hebron... anointed David king over the house of Judah... But Abner... took Ish-bosheth the son of Saul, and... made him king over... all Israel. Ish-bosheth... *was* forty years old... and reigned two years. But the house of Judah followed David. And... there was long war between the house of Saul and the house of David: but David waxed stronger and stronger, and the house of Saul waxed weaker and weaker... And it came to pass... that Abner... had a concubine... [from] the house of Saul... and *Ish-bosheth* said to Abner, Wherefore hast thou gone in unto my father's concubine? Then was Abner very wroth for the words of Ish-bosheth, and said... as the LORD hath sworn to David, even so I do to him; To translate the kingdom from the house of Saul, and to set the throne of David over Israel and over Judah. And [Ish-bosheth] could not answer Abner a word again... So all the elders of Israel came to the king to Hebron; and king David made a league with them in Hebron before the LORD: and they anointed David king over Israel. David *was* thirty years old when... [his] reign... began... *and* [David] reigned forty years... And the king... went to Jerusalem... [and] took the strong hold of Zion... So David dwelt in the fort, and called it the city of David... And David went on, and grew great, and the LORD God of hosts *was* with him... And unto David were sons born in Hebron; and his firstborn was Amnon... And David sent messengers to Ish-bosheth... saying, Deliver *me* my wife Michal, which I espoused to me for [two] hundred foreskins of the Philistines. And Ish-bosheth... took her from *her* husband... Phaltiel[, who]... went... along weeping behind her... And David took *him* more concubines and wives out of Jerusalem... and there were yet[more] sons and daughters born to David... [But David was not satisfied with all of his wives and concubines, for] it came to pass in an eventide, that David arose from off his bed, and walked upon the roof of the king's house: and from the roof [David saw a gal] washing herself; and the [gal] *was* very beautiful to look upon. And David sent and enquired

after... [her]. And *one* said, *Is not this Bath-Sheba, the daughter of Eliam, the wife of Uriah the Hittite? ...David sent messengers, and... [Bath-sheba] came in unto him, and [David] lay with her; for [Bath-sheba] was purified from her uncleanness; and [then Bath-sheba] returned unto her house. And... [Bath-sheba] conceived, and sent and told David... I am with child. And David sent... [for] Uriah the Hittite[, who was among them that David had sent] forth to battle... [against] the children of Ammon, and besieged Rabbah... And when Uriah was come unto him, David demanded of him how... the war prospered. And David... [made] Uriah... eat and drink before him; and... made him drunk: and at even [Uriah] went out to lie on his bed with the servants of his lord, but went not down to his house. And it came to pass in the morning, that David wrote a letter to Joab, [the captain of his army], and sent it by the hand of Uriah. And [David] wrote in the letter, saying, Set ye Uriah in the forefront of the hottest battle, and retire ye from him, that [Uriah] may be smitten and die... And when the wife of Uriah heard that... her husband was dead, [Bath-sheba] mourned for her husband. And when the mourning was past, David sent and fetched her to his house, and [Bath-sheba became his umpteenth] wife, and bare him a son. But the thing that David had done displeased the LORD... [So 'Jehovah punished him with trouble in his household for the rest of his life.' T]hus saith the LORD; David shall never want a [hu]man to sit upon the throne of the house of Israel...*

Despite that last sentence (and p1198, ln46-7), most Christian nations adopted rulership by a king, whose title and power was handed to the eldest son – even though the theory behind this practice is discredited by the fact that David was a last-born child! But although David wasn't a firstborn child, David was a direct descendant of Noah, as was Jesus (or, if Joseph wasn't Jesus' dad, his siblings). This suggests that major religious figures of the future (e.g., a Messiah) could be from the same family. Many people living at present might be related to Jesus via his (half-)siblings or cousins – or, perhaps, by Jesus' own children?

In 1972, B.B.C.'s *Chronicle* telecast... 'The Lost Treasure of Jerusalem?' This was followed in 1974 by 'The Priest, the Painter and the Devil' and in 1979 by 'The Shadow of the Templars'. The response to these programmes was remarkable. A vast number of people became enthralled with the story of the nineteenth-century French priest who, in his mountain village at the foot of the Pyrenes, discovered *something* which enabled him to amass and spend a fortune of millions of pounds... What really lies at the core of the discovery... is not material riches, but a secret... of explosive and controversial proportions, which radiates out from the little Pyrenes village to encompass the whole of... contemporary politics and the entire edifice of the Christian faith... On June 1st, 1885 the tiny French village of Rennes-le-Chateau received a new parish priest. The cure's name was Berenger Sauniere... a robust, handsome, energetic and, it would seem, highly intelligent [person] aged thirty-three. In seminary school not long before [Sauniere] had seemed destined for a promising career. Certainly... something more important than a remote village in the eastern foothills of the Pyrenes. Yet at some point [Sauniere] seems to have incurred the displeasure of his superiors... And it was perhaps to rid themselves of him that his superiors sent him to... Rennes-le-Chateau. At the time Rennes-le-Chateau housed only two hundred people... No doubt it was a blow to Sauniere's ambition. Nevertheless there were certain compensations. Sauniere was a native of the region, having been born and raised only a few miles distant, in the village of Montazels... Between 1885 and 1891 Sauniere's income averaged, in francs, the equivalent of six pounds sterling per year – hardly opulence, but... [together] with gratuities provided by his parishioners, it appears to have been sufficient – for survival, if not for any extravagance. During those six years Sauniere... had wanted to restore the village church... Consecrated to the Magdalene in 1059, this dilapidated edifice stood on the foundations of a still older Visigoth structure dating from the sixth century. By the late nineteenth century it was, not surprisingly, in a state of hopeless disrepair. In 1891... Sauniere embarked on a modest restoration, borrowing a small sum from the village funds. In the course of his endeavours [Sauniere] removed the altar-stone, which rested on two archaic Visigoth columns. One of these columns proved to be hollow. Inside... [Sauniere] found four parchments preserved in sealed wooden tubes. Two of these parchments are said to have comprised genealogies, one dating from 1244, the other from 1644. The two remaining documents had apparently been composed in the 1780s by one of Sauniere's predecessors... the Abbe Antoine Bigou... The two parchments from Bigou's time would appear to be pious Latin texts, excerpts from the New Testament. At least ostensibly. But on one of the parchments the words are run incoherently together, with no space between them, and a number of utterly superfluous letters have been inserted. And on the second parchment lines are indiscriminately truncated – unevenly, sometimes in the middle of a word – while certain letters are conspicuously raised above the others. In reality these parchments comprise a sequence of ingenious ciphers or codes. Some of them are fantastically complex and unpredictable, defying even a computer, and insoluble without the requisite key... [Sauniere had also] immersed himself in the turbulent history of the region – a history whose residues were constantly present around him. A few miles to the south-east... for example, looms... a peak... called Bezu, surmounted by the ruins of a medieval fortress, which was once a preceptory of the Knights Templar. On... another peak... a mile or so east of Rennes-le-Chateau, stands the ruins of the chateau of Blanchfort, ancestral home of Bertrand de Blanchfort, fourth Grand Master of the Knights Templar... The... Templars... were the archetypal crusaders – the storm-troopers of the Holy Land, who fought and died heroically for Christ in their thousands. Yet... at the end of their two-century-long career, these white-garbed champions of Christ, were accused of denying and repudiating Christ, of trampling and spitting on the cross. In Scott's *Ivanhoe* the Templars are depicted as haughty and arrogant bullies, greedy and hypocritical despots shamelessly abusing their power... they are depicted as vile satanists... [by] other nineteenth-century writers... More recent historians have been inclined to view them as hapless victims, sacrificial pawns in the high-level political manoeuvrings of Church and state. And there are yet other writers, especially in the tradition of Freemasonry, who regarded the Templars as... custodians of an arcane wisdom that transcends Christianity itself... On virtually every point... the accepted accounts of the Templars... raised more questions than they answered. They not only collapsed under scrutiny, but suggested... that something had been deliberately concealed and a 'cover story' manufactured, which later historians had merely repeated... Most people today speak of 'Christianity' as if it were a single specific thing... Needless to say 'Christianity' is nothing of the sort... [However, if] there is a single factor that does permit one to speak of 'Christianity'... that does link the otherwise diverse and divergent 'Christian' creeds, it is the New Testament, and... more specifically... the accounts of Jesus known as the Four Gospels... So far as popular tradition is concerned, the origin and birth of Jesus are well enough known. But in reality the Gospels, on which that tradition is based, are considerably more vague on the matter. Only... Matthew and Luke... say anything at all about Jesus's origins; and they are flagrantly at odds with each other. According to Matthew, for example, Jesus was a aristocrat, if not a rightful and legitimate king – descended from David via Solomon. According to Luke, on the other hand, Jesus's family, though descended from the house of David, was of somewhat less exalted stock... The two genealogies, in short, are so strikingly discordant that they might well be referring to two quite different individuals... According to Luke, Jesus, on his birth, was visited by shepherds. According to Matthew... by kings. According to Luke, Jesus's family... are said to have journeyed – for a census which history suggests never in fact occurred – to Bethlehem, where Jesus was born in the poverty of a manger. But according to Matthew, Jesus's family had been... residents of Bethlehem all along, and Jesus himself was born in a house... This contradiction cannot be rationalised. There is no possible means whereby the two conflicting narratives can both be correct, and there is no means whereby they can be reconciled. Whether one cares to admit it or not, the fact must be recognised that one or both of the Gospels is wrong... The more one studies the Gospels, the more the contradictions between them become apparent... Given these discrepancies, the Gospels can only be accepted as a highly questionable authority, and certainly not as definitive. They do not represent the perfect word of any God; or, if they do, God's words have been very liberally censored, edited, revised, glossed and rewritten by human hands. The Bible, it must be remembered... is only a selection of works, and, in many respects, a somewhat arbitrary one... it could well include far more books and writings than it actually does. Nor is there any question of the missing books having been 'lost'. On the contrary they were deliberately excluded.

In A.D. 367 Bishop Athanasius of Alexandria compiled a list of works to be included in the New Testament. This list was ratified by the Church Council of Hippo in 393 and again by the Council of Carthage four years later. At these councils a selection was agreed upon. Certain works were... cavalierly ignored. How can such a process of selection possibly be regarded as definitive? How could a conclave of clerics infallibly decide that certain books 'belonged' in the Bible while others did not? Especially when some of the excluded books have a perfectly valid claim to historical veracity? ...In 1958... [a] Professor... of Columbia University discovered, in a monastery near Jerusalem, a letter which contained a missing fragment of the Gospel of Mark. The missing fragment had... apparently been deliberately suppressed – at the instigation, if not the express behest, of Bishop Clement of Alexandria, one of the most venerated of the early Church fathers. Clement... had received a letter from one Theodore, who complained of a Gnostic sect, the Carpocratians... Theodore apparently attacked them... [for] interpreting certain passages of the Gospel of Mark in accordance with... principles that did not concur with the position of Clement and Theodore... Clement replies to his disciple as follows: You did well in silencing the unspeakable teachings of the Carpocratians... Such... are to be opposed in all ways and altogether. For, even if they should say something true, one who loves the truth should not, even so, agree with them. For not all true [things] are the truth, nor should that truth which [merely] seems true according to human opinions be preferred to the one truth, that according to the faith. It is an extraordinary statement... In effect Clement is saying nothing less than, 'If your opponent happens to tell the truth, you must deny it and lie in order to refute him.' But that is not all... Clement... freely acknowledges that there is an authentic secret Gospel of Mark... then instructs Theodore to deny it... What was this 'secret Gospel'...? Clement answers the question by including a word-for-word transcription of the text in his letter: ...'And they come into Bethany, and a certain [person], whose brother had died, was there. And... Jesus... went off with her into the garden where the tomb was, and straightway a great cry was heard from the tomb. And going near, Jesus rolled away the stone from the door of the tomb. And straightway, going in where the youth was... Jesus... stretched forth his hand and raised him... This episode... is, of course, the raising of Lazarus, described in the Fourth Gospel... [T]here are... however... some significant variations. In the first place there is a 'great cry' from the tomb before Jesus rolls the rock aside or instructs the occupant to come forth. This strongly suggests that the occupant was not dead and thereby, at a single stroke, contravenes any element of the miraculous... If Mark's Gospel was so drastically expurgated, it was also burdened with spurious additions... Clearly if Mark's Gospel was so readily doctored, it is reasonable to assume that the other Gospels were similarly treated... [Incidentally, according] to the Fourth Gospel... Jesus... states plainly that Lazarus's 'death' has served some purpose and is to be turned to account: 'Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep.' (11:11) And four verses later [Jesus] virtually admits that the whole affair has been carefully stage-managed and arranged in advance... [Indeed,] Jesus's reaction to... news... that Lazarus is ill... is distinctly odd. Instead of returning post-haste to the succour of the [person Jesus supposedly loves, Jesus, stays 'two days still in the same place...' (11:6)... If such behaviour is bewildering, the reaction of the disciples is no less so: 'Then said Thomas... unto his fellow disciples, Let us also go, that we may die with him.' (11:16) What does this mean? If Lazarus is literally dead, surely the disciples have no intention of joining him by a collective suicide! ...The explanations of the matter would seem to lie... in the... rituals... [of] Palestine of Jesus's era. They often entailed a symbolic death and rebirth... a rite, which is now called baptism... And Jesus himself uses the same terms at the Last Supper... Palestine in the first century was a very troubled corner of the globe... More than half a century before Jesus's birth, Palestine fell to the armies of Pompey, and Roman rule was imposed. But Rome at the time was over-extended, and too preoccupied with her own affairs, to install the administrative apparatus necessary for direct rule. [Rome] therefore created a line of puppet kings to rule under her aegis. This line was that of the Herodians – who were not Jewish, but Arab... But the final authority was Rome. This authority was implemented according to Roman law and enforced by Roman soldiery – as it was in Britain not long after. In A.D. 6 the situation became more critical. In this year the country was split administratively into two provinces, Judaea and Galilee. Herod Antipas became king of the latter. But Judaea – the spiritual and secular capital – was rendered subject to direct Roman rule, administered by a Roman Procurator based at Caesarea. The Roman regime was brutal and autocratic. When it assumed direct control of Judaea more than two thousand rebels were summarily crucified. The Temple was plundered and defiled. Heavy taxation was imposed. Torture was frequently employed, and many of the populace committed suicide. This state of affairs was not improved by Pontius Pilate, who presided as procurator of Judaea from A.D. 26 to 36. In contrast to the Biblical portraits of him, existing records indicated that Pilate was a cruel and corrupt [ruler], who not only perpetuated, but intensified, the abuses of his predecessor... In A.D. 6... a Pharisee rabbi known as Judas of Galilee had created a highly militant revolutionary group... [which] became known as Zealots... By the time of Jesus's mission, the Zealots had assumed an increasingly prominent role in the Holy Land's affairs... Long after... Jesus's... Crucifixion, Zealot activity continued unabated. By A.D. 44 this activity had so intensified that some sort of armed struggle already seemed inevitable. In A.D. 66 the struggle erupted, the whole of Judaea rising in organised revolt against Rome. It was a desperate, tenacious but ultimately futile conflict... At Caesarea alone 20,000 Jews were massacred by the Romans... The aftermath of the revolt in Judaea witnessed a massive exodus of Jews from the Holy Land. Nevertheless enough remained to foment another rebellion some sixty years later in A.D. 132. At last, in 135, the Emperor Hadrian decreed that all Jews be expelled by law from Judaea, and Jerusalem became essentially a Roman city... Jesus's lifetime spanned roughly the first thirty-five years of a turmoil extending over 140 years. The turmoil... engendered the psychological and cultural adjuncts inevitably attending any such sustained defiance of an oppressor. One of these adjuncts was the hope and longing for a Messiah who would deliver his people from the tyrant's yoke. It was only by virtue of historical and semantic accident that this term came to be applied specifically and exclusively to Jesus. For Jesus's contemporary's, no Messiah would ever have been regarded as divine. Indeed the very idea of a divine Messiah would have been preposterous if not unthinkable... The term – whether in Hebrew or Greek – meant simply 'the anointed one' and generally referred to a king. Thus David... became, quite explicitly, a 'Messiah' or a 'Christ'. And every subsequent Jewish king of the house of David was known by the same appellation. Even during the Roman occupation of Judaea, the Roman-appointed high priest was known as the 'Priest Messiah'... For the Zealots, however, and for other opponents of Rome, this puppet priest was, of necessity, a 'false Messiah'. For them the 'true Messiah' implied something very different – the legitimate *roi perdu* or 'lost king', the unknown descendant of the house of David who would deliver his people from Roman tyranny. During Jesus's lifetime anticipation of the coming of such a Messiah attained a pitch verging on mass hysteria. And this anticipation continued after Jesus's death. Indeed the revolt of A.D. 66 was prompted in large part by Zealot agitation and propaganda on behalf of a Messiah whose advent was said to be imminent... It was this mundane political term that was applied to Jesus... Only later was this designation... 'Jesus the Christ'... contracted to 'Jesus Christ' and a purely functional title distorted into a proper name... The Gospels state that many of the disciples – Peter, for example – were married. And at no point does Jesus himself advocate celibacy... And if Jesus did not preach celibacy, there is no reason either to suppose that [Jesus] practised it. According to Judaic custom at the time it was not only usual, but also mandatory, that a [son] be married... And it was as obligatory for a Jewish father to find a wife for his son as it was to ensure that his son was circumcised... Except among certain Essenes in certain communities, celibacy was vigorously condemned... [O]ne... first century... Jewish writer even compared deliberate celibacy with murder, and... does not seem to have been alone in this attitude... If Jesus were not married, this fact would have been glaringly conspicuous. It would have drawn attention to itself, and been used to characterise and identify him... If Jesus were indeed as celibate as later tradition claims, it is extraordinary that there is no reference to any such celibacy. The absence of any such reference suggest that Jesus, as far as the question of celibacy was concerned, conformed to the conventions of his time and culture... The hypothesis of marriage becomes all the more tenable by virtue of the title of 'Rabbi', which is frequently applied to Jesus in the Gospels. It is possible, of course, that this term is employed in its very broadest sense, meaning simply a self-appointed teacher. But... if Jesus was a rabbi in the strict sense of the word, a marriage would not only have been likely, but virtually certain. The Jewish Mishnaic Law is quite explicit

on the subject: 'An unmarried [person] may not be a teacher.' In the Fourth Gospel there is an episode related to a marriage which may, in fact, have been Jesus's own... To this wedding Jesus is specifically 'called' – which is slightly curious perhaps, for [Jesus] has not yet really embarked on his ministry. More curious still, however, is the fact that his mother 'just happens', as it were, to be present. And her presence would seem to be taken for granted. It is certainly not in any way explained. What is more, it is Mary who not merely suggests to her son, but in effect orders him, to replenish the wine... quite as if [Jesus's mother] were the hostess... There is further evidence that the wedding at Cana is in fact Jesus's own... 'the governor of the feast called the bridegroom, and said unto him...' (John 2:9-10; our italics.) The... words... seem to be addressed to Jesus... An obvious conclusion is that Jesus and the 'bridegroom' are one and the same... If Jesus was married, is there any indication in the Gospels of the identity of his wife? ...there would appear to be two possible candidates – ...who... apart from his mother... are mentioned repeatedly in the gospels as being of his entourage. The first of these is Magdalene – or, more precisely, Mary from the village of Migdal, or Magdala, in Galilee. In all four Gospels... [her] role is singularly ambiguous and seems to have been deliberately obscured... In the Gospel of Luke... [Magdalene] appears relatively early in Jesus's ministry, while [Jesus] is still preaching in Galilee. It would thus seem that [Magdalene] accompanies him from Galilee to Judaea – or, if not... at least moves between the two provinces as readily as [Jesus] does. This in itself strongly suggests that [Magdalene] was married to someone. In the Palestine of Jesus's time it would have been unthinkable for an unmarried [gal] to travel unaccompanied – and, even more so, to travel unaccompanied with a religious teacher and his entourage. A number of traditions seem to have taken cognisance of this potentially embarrassing fact. Thus it is sometimes claimed that the Magdalene was married to one of Jesus's disciples. If that were the case, however, her special relationship with Jesus and her proximity to him would have rendered both of them subject to suspicions, if not charges, of adultery. Popular tradition notwithstanding, the Magdalene is not, at any point of the gospels, said to be a prostitute... When first mentioned in the Gospel of Luke, [Magdalene] is described as [someone] 'out of whom went seven devils'. It is generally assumed that this phrase refers to a species of exorcism on Jesus's part... But the phrase may equally refer to some sort of... ritual initiation. The cult of Ishtar or Astarte – the Mother Goddess and 'Queen of Heaven' – involved... a seven-stage initiation. Prior to her affiliation with Jesus, the Magdalene may well have been associated with such a cult... Magdala, was the 'Village of Doves', and there is some evidence that sacrificial doves were in fact bred there... [T]he dove was the sacred symbol of Astarte. One chapter before [it] speaks of the Magdalene, Luke alludes to a [gal] who anointed Jesus. In the gospel of Mark there is a similar anointment by an unnamed [gal]. Neither Luke nor Mark explicitly identify this [figure] with the Magdalene. But Luke reports that [the figure] was a... 'sinner'... If the Magdalene were associated with a pagan cult, that would certainly have rendered her a 'sinner' in the eyes not only of Luke, but of later writers as well... Quite clearly... Magdalene was a... [person] of means. Luke reports... that her friends included the wife of a high dignitary at Herod's court – and that both... together with various others, supported Jesus and his disciples with their financial resources. The [figure] who anointed Jesus was also a [person] of means... The whole episode of Jesus's anointing would seem to be an affair of considerable consequence. Why else would it be emphasised by the gospels to the extent it is? ...One must remember that anointing was the traditional prerogative of kings... From this, it follows that... the [person] who consecrates him in that august role can hardly be unimportant. In any case it is clear that the Magdalene, by the end of Jesus's ministry, has become a figure of immense significance. In the three Synoptic Gospels her name consistently heads the lists of [gals] who follow Jesus, just as Simon Peter heads the list of... disciples... Throughout the Gospels Jesus treats the Magdalene in a unique and preferential manner... And, of course, [Magdalene] was the first witness to the empty tomb following the Crucifixion. Among all his devotees, it was to the Magdalene that Jesus first chose to reveal his Resurrection... But the Gospel of Philip is more explicit: 'There were three who always walked with the Lord; Mary his mother and her sister and Magdalene, the one who was called his companion.' According to one scholar, the word 'companion' is to be translated as 'spouse'. There are certainly grounds for doing so, for the Gospel of Philip becomes more explicit still: '[...] And the companion of the Saviour is Mary Magdalene. But Christ loved her more than all the disciples and used to kiss her often on the mouth.' The... other... possible candidate for Jesus's wife... is... Mary of Bethany, sister of Martha and Lazarus... [H]er family are clearly on very familiar terms with Jesus... The point becomes clearer in the 'secret' Gospel of Mark... As... Jesus... approaches... the tomb... where Lazarus lies... Martha... greets Jesus... alone. One would expect Mary, her sister, to be with her. Mary, however, is sitting in the house – and does not emerge until Jesus explicitly commands her to do so... It would be plausible enough for Mary to be sitting in the house when Jesus arrives in Bethany. In accordance with Jewish custom, [Mary] would be 'sitting Shiveh' – sitting in mourning. But why does [Mary] not join Martha and rush to meet Jesus on his return? There is one obvious explanation. By the tenets of Judaic law at the time, a [wife] 'sitting Shiveh' would have been strictly forbidden to emerge from the house except at the express bidding of her husband. In this incident the behaviour of Jesus and Mary of Bethany conforms precisely to the traditional component of a Jewish [husband and wife]. There is additional evidence... It occurs, more or less as a *non sequitur*, in... Luke 10:38-42... [where] it would seem apparent that Jesus exercises some sort of authority over Mary... [However, if] Jesus was indeed married[, Jesus could have had more than one wife – although, to confuse matters, the]... medieval Church regarded... Magdalene... the [gal] who anoints Jesus... and... Mary of Bethany... as one and the same person... [In] John 21:20-24... the... 'beloved disciple' has been explicitly instructed to wait for Jesus's return. And the text itself is quite emphatic in stressing that this return is not to be understood symbolically in the sense of a 'second coming'. On the contrary, it implies something much more mundane... that Jesus, after dispatching his other followers out into the world, must soon return with some special commission for the 'beloved disciple'. It is almost as if they have specific, concrete arrangements to conclude and plans to make. If the 'beloved disciple' is Lazarus, such collusion, unknown to the other disciples, would seem to have a certain precedent... In any case... it is not unreasonable to assume that these plans included the care of Jesus's family. At the Crucifixion [Jesus] had already entrusted his mother to the 'beloved disciple's' custody. If [Jesus] had a wife and children, they, presumably, would have been entrusted to the 'beloved disciple' as well. This, of course, would be all the more plausible if the 'beloved disciple' were indeed his brother-in-law. According to much later tradition, Jesus's mother eventually died in exile at Ephesus... There is no indication, however, that the 'beloved disciple' attended Jesus's mother for the duration of her life... If the 'beloved disciple' did not go to Ephesus, what became of him? If [the 'beloved disciple'] and Lazarus were one and the same that question can be answered... According to tradition, as well as early Christian writers, Lazarus, the Magdalene, Martha, Joseph of Arimathea and a few others, were transported by ship to Marseilles. Here Joseph was supposedly consecrated by Saint Philip and sent on to England, where [Joseph] established a church at Glastonbury. Lazarus and Magdalene, however, are said to have remained in Gaul... Magdalene died at either Aix-en-Provence or Saint Baume, and Lazarus at Marseilles after founding the first bishopric there... [In addition,] tradition subsequently maintains... [that Lazarus was] set ashore at Marseilles, together with his sister – who... was carrying with her the Holy Grail – the 'royal blood'... Is there any evidence in the Gospels that Jesus actually did have children? There is nothing explicit. But rabbis were expected, as a matter of course, to have children... Indeed, it would have been unusual for [Jesus] to remain childless whether... a rabbi or not... But there is evidence of a more... specific kind. It consists of the elusive individual... identified in the Gospel of Matthew... as Jesus Barabbas... [An individual named simply Barabbas also features in the Gospels, who] popular traditional depicts... as a 'thief'. But... Mark and Luke agree that Barabbas is... a Zealot... guilty of insurrection... According to Luke... Barabbas... had been involved in a recent 'disturbance'... in the city. History makes no mention of any such turmoil in Jerusalem at the time. The Gospels, however, do... [T]here had been a civic disturbance... when Jesus and his followers overturned the tables of the money-lenders at the Temple. Was this the disturbance in which Barabbas was involved, and for which [Barabbas] was imprisoned? ...According to modern scholars, the 'custom' of releasing a prisoner on the Passover did not exist. But even if it did, the choice of Barabbas over Jesus would make no sense. If Barabbas were indeed a common criminal... why would the people choose to have his life spared? And if [Barabbas] were indeed a Zealot or a revolutionary, is it hardly likely that Pilate would have released so potentially dangerous a

character, rather than a harmless visionary – who was quite prepared, ostensibly, to ‘render unto Caesar’. Of all the discrepancies... and improbabilities in the Gospels, the choice of Barabbas is among the most striking and most inexplicable. Something would clearly seem to lie behind so clumsy and confusing a fabrication. One modern writer has proposed an intriguing and plausible explanation... Barabbas was the son of Jesus and Jesus a legitimate king. If this were the case, the choice of Barabbas would surely make sense. One must imagine an oppressed populace confronted with the imminent extermination of their spiritual and political ruler – the Messiah, whose advent had formerly promised so much. In such circumstances, would not the dynasty be more important than the individual? Would not the preservation of the bloodline be paramount, taking precedence over everything else? ...If the line survived, there would at least be hope for the future... [Furthermore, ‘Jesus Barabbas’] may be a corruption of ‘Jesus Berabbi’. ‘Berabbi’ was a title reserved for the highest and most esteemed rabbis and was placed after the rabbi’s given name. ‘Jesus Berabbi’ might therefore refer to Jesus himself. Alternatively, ‘Jesus Barabbas’ might originally have been ‘Jesus bar Rabbi’ – ‘Jesus, son of the Rabbi’. There is no record anywhere of Jesus’s own father having been a rabbi. But if Jesus had a son named after himself, that son would indeed have been ‘Jesus bar Rabbi’. There is one other possibility as well. ‘Jesus Barabbas’ may derive from ‘Jesus bar Abba’; and since ‘Abba’ is ‘father’ in Hebrew, ‘Barabbas’ would then mean ‘son of the father’ – a fairly pointless designation unless the ‘father’ is in some way special... It is certainly not impossible that Barabbas was Jesus’s son. Jesus is generally believed to have been born around 6 B.C. The Crucifixion occurred no later than A.D. 36... But even if... Jesus... died... when... only thirty-three... [Jesus] might still have fathered a son. In accordance with the customs of the time, [Jesus] might have married as early as sixteen... Yet even if [Jesus] did not marry until aged twenty, [Jesus] might still have had a son aged thirteen – who, by Judaic custom, would have been considered [an adult]. And, of course, there may well have been other children too. Such children could have been conceived at any point up to within a day or so of the Crucifixion... If... Jesus... [had] survived the Crucifixion, however, the likelihood of offspring would be still further increased. Is there any evidence that Jesus did indeed survive the Crucifixion – or that the Crucifixion was in some way a fraud? ...Whatever the trespasses for which Jesus was crucified, his apparent death on the cross is fraught with inconsistencies. There is, quite simply, no reason why his Crucifixion, as the Gospels depict it, should have been fatal. The... Roman practice of crucifixion adhered to very precise procedures. After sentence a victim would be flogged – and consequently weakened by blood loss. His outstretched arms would then be fastened – usually by thongs but sometimes by nails – to a heavy wooden beam placed horizontally across his neck and shoulders. Bearing this beam, [the victim] would then be led to the place of execution. Here, with the victim hanging from it, the beam would be raised and attached to a vertical post or stake. Hanging thus from his hands, it would be impossible for the victim to breathe – unless his feet were also fixed to the cross, thus enabling him to press down on them and relieve the pressure on his chest. But, despite the agony, a [person] suspended with his feet fixed – and especially a fit and healthy [person] – would usually survive for at least a day or two. Indeed, the victim would often take as much as a week to die – from exhaustion, from thirst, or, if nails were used, from blood poisoning. The attenuated agony could be terminated more quickly by breaking the victim’s legs or knees – which, in the Gospels, Jesus’s executioners are about to do before they are forestalled. Breaking of the legs or knees was not an additional sadistic torment. On the contrary, it was an act of mercy – a *coup de grace* which caused a very rapid death... There is consensus among modern scholars that only the Fourth Gospel rests on eyewitness account of the Crucifixion. According to... [that Gospel, Jesus was] on the cross for no more than a few hours before being pronounced dead. In the Gospel of Mark, even Pilate is astonished by the rapidity with which death occurs (Mark 15:44). What can have constituted the cause of death? Not the spear in his side, for the Fourth Gospel maintains that Jesus was already dead when this wound was afflicted on him... [T]he Fourth Gospel... declares that... Jesus, hanging on the cross... thirsts. In reply to this complaint [Jesus] is proffered a sponge allegedly soaked in vinegar... Vinegar – or soured wine – is a temporary stimulant, with effects not unlike smelling salts. It was often used at the time to resuscitate flagging slaves on galleys. For a wounded and exhausted [person], a sniff or taste of vinegar would induce a... momentary surge of energy. And yet in Jesus’s case the effect is just the contrary. No sooner does [Jesus] inhale or taste the sponge than [Jesus] pronounces his final words and ‘gives up the ghost’. Such a reaction to vinegar is physiologically inexplicable. On the other hand such a reaction would be perfectly compatible with a sponge soaked not in vinegar, but in some type of soporific drug – a compound of opium... or belladonna, for instance, commonly employed in the Middle East at the time... Such a stratagem would not only have saved Jesus’s life, but also have realised the old prophecies of a Messiah... According to Matthew, Mark and Luke, the Crucifixion is witnessed by most people... from ‘afar off’... It would thus seem clear that Jesus’s death was not a public event, but a private one... performed on private property... Needless to say a private crucifixion on private property leaves considerable room for a hoax... [F]rom... a distance, it would not have been apparent who in fact was being crucified. Or if [the victim] was actually dead. Such a charade would, of course, have necessitated some connivance and collusion on the part of Pontius Pilate – or of someone influential in the Roman administration. And indeed such connivance and collusion is highly probable. Granted, Pilate was a cruel and tyrannical [ruler. But Pilate] was also corrupt and susceptible to bribes. The historical Pilate, as opposed to the one depicted in the Gospels, would not have been above sparing Jesus’s life – in exchange for a sizeable sum of money and perhaps a guarantee of no further political agitation... What is more... Pilate... acknowledges Jesus’s claim as ‘King of the Jews’... And, perhaps most important of all, [Pilate] grants Jesus’s body to Joseph of Arimathea... a flagrant breach of procedure... This clearly attests to some complicity on Pilate’s part... According to Roman law at the time, a crucified [person] was denied all burial. Indeed guards were customarily posted to prevent relatives or friends removing bodies of the dead. The victim would simply be left on the cross, at the mercy of the elements and carrion birds... In the Greek version... of Mark’s Gospel... when Joseph asks for Jesus’s body, [Joseph] uses the word *soma* – a word applied only to a living body. Pilate, assenting to the request, employs the word *ptoma* – which means ‘corpse’. According to the... [original] translations... then, Joseph explicitly asks for a living body and Pilate grants him what [Pilate] thinks, or pretends to think, is a dead one... On what grounds does... Joseph... receive it? ...There is little information about Joseph of Arimathea. The Gospels report only that [Joseph] was a secret disciple of Jesus, possessed great wealth and belonged to the Sanhedrin – the Council of Elders which ruled the Judaic community of Jerusalem under Roman auspices. It would thus seem apparent that Joseph was an influential [person]. And this conclusion receives confirmation from his dealings with Pilate... According to... the Gospel of Peter, a copy of which was first located in a valley of the upper Nile in 1886... Joseph of Arimathea was a close friend of Pontius Pilate... Medieval tradition portrays Joseph of Arimathea as a custodian of the Holy Grail; and Perceval is said to be of his lineage. According to later traditions, [Joseph of Arimathea] is in some way related by blood to... Jesus’s family. If this was indeed the case, it would, at very least, have furnished him with some plausible claim to Jesus’s body – for... Pilate... might... with the incentive of a bribe... grant the corpse of an executed criminal to... the dead... [person’s kin. Lazarus’s family were also] wealthy, maintaining a house in a fashionable suburb of Jerusalem large enough to accommodate Jesus and his entire entourage... Basilides, an Alexandrian scholar writing between A.D. 120 and 130... claimed that the Crucifixion was a fraud, that Jesus did not die on the cross, and that a substitute – Simon of Cyrene – took his place instead... As late as the seventh century the Koran maintained precisely the same argument... In December 1945 an Egyptian peasant, digging for soft and fertile soil near the village of Nag Hammadi in Upper Egypt, exhumed a red earthenware jar. It proved to contain thirteen codices – papyrus books or scrolls – bound in leather. Unaware of the magnitude of the discovery, the peasant and his family used some of the codices to stoke their fire. Eventually, however, the remainder attracted the attention of experts; and one of them, smuggled out of Egypt... proved to contain the now famous Gospel of Thomas... Taken as a whole, the Nag Hammadi collection constitutes an invaluable repository of early Christian documents – some of which can claim an authority equal to that of the Gospels... And at least one of them may include material that is even older than the four standard Gospels of the New Testament... What is more, certain of these documents enjoy a claim to a unique veracity of their own. In the first place they escaped the censorship and revision of later Roman orthodoxy. In the second place they were originally composed for an

Egyptian, not a Roman, audience, and are not therefore distorted or slanted to a Romanised ear. Finally they may well rest on first-hand... or eyewitness sources – oral accounts by Jews fleeing the Holy Land, for instance, perhaps even personal acquaintances or associates of Jesus, who could tell their story with an historical fidelity the Gospels could not afford to retain... In one undated codex, for example, the Second Treatise of the Great Seth, Jesus is depicted... escaping his death on the cross by dint of an ingenious substitution. In the following extract, Jesus speaks in the first person: '[...]I did not succumb to them as they had planned... And I did not die in reality but in appearance... it was another, Simon, who bore the cross on his shoulder. It was another upon whom they placed the crown of thorns... And I was laughing at their ignorance.[...]' ...Perhaps the most famous and profoundly radical of the [supposed] heresies was Manichaeism – essentially a fusion of Gnostic Christianity with skeins of earlier Zoroastrian and Mithraic traditions. It was founded by an individual named Mani, who was born near Baghdad in A.D. 214 to a family related to the Persian royal house... Around A.D. 240 Mani commenced to propagate his own teachings and, like Jesus, was renowned for his spiritual healings and exorcisms. His followers proclaimed him 'the new Jesus' and even credited him with a virgin birth – a prerequisite for deities at the time... In A.D. 276, by order of the king, Mani was imprisoned, flayed to death, skinned and decapitated; and, perhaps to preclude a resurrection, his mutilated body was put on public display. His teachings, however, only gained impetus from his martyrdom; and among his... [teachings Mani had] maintained that Jesus did not die on the cross, but was replaced by a substitute... If our scenario was accurate, where did Jesus go then? ...According to certain Islamic and Indian legends, [Jesus] eventually died at a ripe old age, somewhere in the East – in Kashmir, it is claimed most frequently... According to... the documents found by... Sauniere at Rennes-le-Chateau... Jesus was alive in A.D. 45, but there is no indication as to where... For the purpose of our hypothesis, however, what happened to Jesus was of less importance than what happened to the holy family – and especially... his children... During the fifth century this lineage appears to have intermarried with the royal line of the Franks, thus engendering the Merovingian dynasty. In A.D. 496 the Church made a pact with this dynasty, pledging itself in perpetuity to the Merovingian bloodline – presumably in the full knowledge of that bloodline's true identity. This would explain why Clovis was offered the status of Holy Roman Emperor, of 'new Constantine', and why [Clovis] was not created king, but only recognised as such... By 752... Pepin[... the son of]... Charles Martel, Mayor of the Palace and grandfather of Charlemagne... had... [brought] the region of southern France known as Septimania... fully under his control... This area had long contained a large Jewish population... In 768 a... Jewish... principality was created in Septimania... which paid nominal allegiance to Pepin but was essentially independent. A ruler was officially installed as king of the Jews. In the romances [this king] is called Aymery. According to existing records, however, [this king] seems, on being received into the ranks of Frankish nobility, to have taken the name Theodoric or Thierry... According to most researchers... Theodoric... the father of Guillem de Gellone... was... [from] the Visigoth-Merovingian family tree descended from Dagobert II and... a Visigoth princess whose father was called Bera[... an]... unmistakably Semitic name... Theodoric... was recognised by both Pepin and the caliph of Baghdad... and, albeit grudgingly, by the pope... as 'the seed of the royal house of David'... Why would an individual of Merovingian descent be acknowledged as... [such] unless the Merovingians were indeed... of the House of David... When the Church colluded in Dagobert's assassination, and the subsequent betrayal of the Merovingian bloodline, it rendered itself guilty of a crime that could neither be rationalised nor expunged. It could only be suppressed... Despite subsequent attempts to conceal it, modern scholarship and research have proved Guillem's Judaism beyond dispute... When Charlemagne's son, Louis, was invested as emperor, it was Guillem who placed the crown on his head. Louis is reported to have said, 'Lord... it is your lineage that has raised up mine.' It is an extraordinary statement, given that it is addressed to a [person] whose lineage – so far as later historians are concerned – would seem to be utterly obscure... Guillem was more than a warrior. Shortly before 792 [Guillem] established an academy at Gellone... one of the first known seats in Europe for the cult of the Magdalene... In the ninth century the bloodline of Guillem... had culminated in the first dukes of Aquitaine. It also became aligned with the ducal house of Brittany. And in the tenth century a certain Hugues de Plantard – ...a lineal descendant of both Dagobert and Guillem... – became the father of Eustache, first Count of Boulogne. Eustache's grandson was Godfroi de Bouillon, Duke of Lorraine and conqueror of Jerusalem... in 1099... If the Merovingians were indeed descended from Jesus, then Godfroi... had, in his conquest of Jerusalem, regained his rightful heritage... According to Guillaume de Tyre, the Order of the Poor Knights of Christ and the Temple of Solomon was founded in 1118... [by] one Hugues de Payen, a... vassal of the count of Champagne... [who], unsolicited... had... presented himself with eight comrades at the palace of Baudouin I – king of Jerusalem, [and younger brother of] Godfroi... By 1100 Jesus's descendants... in Europe... would have known their pedigree and ancestry... In... 1143 Peter the Venerable of Cluny, in an address to Louis VII of France condemned the Jews of Narbonne, who claimed to have a king residing among them. In 1144 a Cambridge monk, one Theobald, speaks of 'the chief Princes and Rabbis of the Jews who dwell in Spain [and] assemble together at Narbonne where the royal seed resides.' And in 1165-6 Benjamin of Tudela, a famous traveller and chronicler, reports that in Narbonne there are 'sages, magnates and princes at the head of whom is... a descendant of the House of David as stated in his family tree.' ...But [Jesus's descendants] might not have been able to prove their identity to the world at large; and such proof may well have been deemed necessary for their subsequent designs. If it were known that such proof existed, no effort would have been spared to find it. This would explain the role of the Knights Templar – who, under a cloak of secrecy, undertook excavations beneath the Temple, in the so-called Stables of Solomon. On the basis of the evidence we examined, there would seem to be little question that the Knights Templar were in fact sent to the Holy Land – with the express purpose of finding or obtaining something. And... they would seem to have accomplished their mission... and to have brought... what they were sent to find... back to Europe. What became of it... remains a mystery. But there seems little question that, under the auspices of Bertrand de Blanchfort... something was concealed in the vicinity of Rennes-le-Chateau for which a contingent of German miners was imported, under the most stringent security, to excavate and construct a hiding place. One can only speculate about what might have been concealed there. It may have been Jesus's mummified body. It may have been the equivalent, so to speak, of Jesus's marriage licence... or the birth certificates of his children. It may have been something of comparably explosive import. [It might be] all of these items... Once installed on the throne of the kingdom of Jerusalem, the Merovingian dynasty could sanction and even encourage hints about its true ancestry... The king of Jerusalem would then have taken precedence over all the monarchs of Europe, and the patriarch of Jerusalem would have supplanted the pope. Displacing Rome, Jerusalem would then have become the true capital of Christendom, and perhaps much more... For if Jesus were acknowledged as a mortal prophet, as a priest-king and legitimate ruler of the line of David, [the patriarch of Jerusalem] might well have become acceptable to both Muslims and Jews. As king of Jerusalem, his lineal descendant would then have been in a position to implement one of the primary tenets of Templar policy – the reconciliation of Christianity with Judaism and Islam. Historical circumstances, of course, never allowed matters to reach this point. The Frankish kingdom of Jerusalem never consolidated its position. Beleaguered on every side by Muslim armies, unstable in its own government and administration, it never attained the strength and internal security it needed to survive... The grandiose design floundered; and with the loss of the Holy Land in 1291 it collapsed completely. The Merovingians were once again without a crown. And the Knights Templar were not only redundant but also expendable... In order to establish themselves, therefore, the Merovingians were obliged to resort to more conventional measures... dynastic intermarriage... political machination, intrigue and, if feasible, an overt seizure of power... On... occasions... these procedures came frustratingly close to success, and were thwarted only by miscalculation, by force of circumstance or by the totally unforeseen. In the sixteenth century... the house of Guise very nearly managed to seize the French throne. In the seventeenth century the Fronde very nearly succeeded in keeping Louis XIV from the throne and supplanting him with a representative of the house of Lorraine... In was in the eighteenth century, however, that the Merovingian bloodline probably came closest to the realisation of its objectives. By virtue of its intermarriage with the Habsburgs, the house of Lorraine had actually acquired the throne of Austria, the Holy Roman Empire. When Marie Antoinette, daughter of Francois de Lorraine, became

queen of France the throne of France, too, was only a generation or so away. Had not the French Revolution intervened, the house of Habsburg-Lorraine might well, by the early 1800s, have been on its way to establishing dominion over all Europe... Sauniere's predecessor... had concealed, and possibly composed, the coded parchments on the eve of the Revolution – and then fled to Spain, where, shortly afterward... Antoine Bigou... died. It is thus possible that... the [Swiss Order of] Prieure de Sion [– the last protectors of]... the Merovingians – ...for a time at any rate, did not know precisely where the parchments were. But even if they were known to have been in the church at Rennes-le-Chateau, they could not easily have been retrieved without a sympathetic priest on the spot – a [priest] who would do Sion's bidding... If the parchments, moreover, referred to something else – something concealed in the vicinity of Rennes-le-Chateau, such a [priest] would have been all the more essential. Sauniere died without divulging his secret. So did his house-keeper, Marie Denarnaud. During the ensuing years there have been many excavations in the vicinity of Rennes-le-Chateau, but none of them has yielded anything... As for the parchments found by Sauniere, two of them – or, at any rate, facsimiles of two of them – have been reproduced, published and widely circulated. The other two, in contrast, have been kept scrupulously secret... [It has been] stated that they are currently in a safe deposit box in a Lloyd's bank in London. Further than that we have been unable to trace them. And Sauniere's money? We know that some of it seems to have been obtained through a financial transaction involving the Arch-duke Johann von Habsburg. We also know that substantial sums were made available not only to Sauniere, but also to the bishop of Carcassonne, by the Abbe Henri Boudet... [A] poor parish priest himself [Boudet]... would clearly seem to have been a representative of the Prieure de Sion; but whether the money issued directly from Sion remains... unanswered... It might equally well have issued from the treasury of the Habsburgs. Or it might have issued from the Vatican, which might have been subjected to high-level political blackmail by both Sion and the Habsburgs... We cannot point to one [person] and assert that [this person] is Jesus's lineal descendant. Family trees bifurcate, subdivide and in the course of centuries multiply into veritable forests. There are at least a dozen families in Britain and Europe today – with numerous collateral branches – who are of Merovingian lineage... Most of these houses could presumably claim a pedigree from Jesus; and... at some point in the future... one... [of their members may] be put forward as a new priest-king... If the Prieure de Sion intends to 'show its cards', the time is ripe for it to do so. The political systems and ideologies which, in the early years of our century, seemed to promise so much have virtually all displayed a degree of bankruptcy... Because of their small-mindedness, lack of perspective and abuse of office, politicians no longer inspire confidence, only distrust. In the West today there is increasing cynicism, dissatisfaction and disillusion. There is increasing psychic stress, anxiety and despair. But there is also an intensifying quest for meaning, for emotional fulfilment, for a spiritual dimension to our lives, for something in which genuinely to believe. There is a longing for a renewed sense of the sacred that amounts, in effect, to a full-scale religious revival... There is also, increasingly, a desire for a true 'leader' – not a Fuhrer, but a species of wise and benign spiritual figure, a 'priest-king' in whom [hu]mankind can safely repose its trust... There are many devout Christians who do not hesitate to interpret the Apocalypse as nuclear holocaust. How might the advent of Jesus's lineal descendant be interpreted? To a receptive audience, it might be a kind of Second Coming... But... [so] far as we personally are concerned, Jesus's lineal descendant would not be any more divine, any more intrinsically miraculous, than the rest of us. This attitude would undoubtedly be shared by a great many people today. We suspect it is shared by the Prieure de Sion as well. Moreover, the revelation of an individual, or group of individuals, descended from Jesus would not shake the world in the way it might have done as recently as a century or two ago. Even if there were 'incontrovertible proof' of such a lineage, many people would simply shrug and ask, 'So what?' - THE HOLY BLOOD AND THE HOLY GRAIL

Even if there were 'incontrovertible proof' that someone was a direct descendant of Jesus, the information could be irrelevant! The generations of Adam – to which Jesus and such a descendant belongs – only deals with the firstborn son until reaching Noah. But Seth (r:p1196, ln33) wasn't the firstborn son of Adam.

...Adam knew Eve his wife; and [Eve] conceived, and bare Cain... And [Eve] again bare his brother Abel. And Abel was a keeper of sheep, but Cain was a tiller of the ground. And in process of time it came to pass, that Cain brought of the fruit of the ground an offering unto the LORD. And Abel... also brought of the firstlings of his flock and of the fat thereof. And the LORD had respect unto Abel and to his offering. But unto Cain and to his offering [the LORD] had not respect. And Cain was very wroth, and his countenance fell. And the LORD said unto Cain, Why art thou wroth? and why is thy countenance fallen? If thou doest well, shalt thou not be accepted? and if thou doest not well, sin lieth at the door. And... it came to pass, when they were in the field, that Cain rose up against Abel... and slew him. And the LORD said unto Cain, Where is Abel thy brother? And [Cain] said, I know not: *Am I my brother's keeper.* And [the LORD] said... the voice of thy brother's blood crieth unto me from the ground. And now *art* thou cursed from the earth, which hath opened her mouth to receive thy brother's blood from thy hand; When thou tillest the ground, it shall not henceforth yield unto thee her strength; a fugitive and a vagabond shalt thou be in the earth. And Cain said unto the LORD, My punishment is greater than I can bear. Behold thou hast driven me out this day from the face of the earth; and from thy face shall I be hid; and I shall be a fugitive and a vagabond in the earth; and it shall come to pass, *that* every one that findeth me shall slay me. And the LORD said unto him, Therefore whosoever slayeth Cain, vengeance shall be taken on him sevenfold. And the LORD set a mark on Cain, lest any finding him should kill him. And Cain went out from the presence of the LORD, and dwelt in the land of Nod, on the east of Eden. And Cain knew his wife; and [Cain's wife] conceived, and bare Enoch. And [Cain] builded a city, and called the name of the city, after the name of his son... And unto Enoch was born Irad: and Irad begat Mehujael: and Mehujael begat Methusael: and Methusael begat Lamech. And Lamech took unto him two wives: the name of the one *was* Adah, and the name of the other Zillah. And Adah bare Jabal: [who] was the father of such as dwell in tents, and *of such as have* cattle. And his brother's name *was* Jubal: [who] was the father of all such as handle the harp and organ. And Zillah... bare Tubal-cain, an instructor of every artificer in brass and iron... And Lamech said unto his wives... I have slain... a young [person]... If Cain shall be avenged sevenfold, truly Lamech seventy and sevenfold. And Adam knew his wife again; and [Eve] bare a son, and called his name Seth: For God, *said* [Eve], hath appointed me another seed instead of Abel, whom Cain slew. - Genesis 4

Because everyone in the world except for Noah's family was allegedly drowned by the *great flood*, it would seem to be valid to presume that a direct line of descent from Cain doesn't exist in modern times. However, the Bible states that Adam and Eve were the first humans, yet also states that Cain had a wife, while neglecting to mention where this wife (or the ones that *shall slay* him) came from! Furthermore, God – who was in large part responsible for Abel's death (i.e., God made Cain jealous of Abel by favouring him – even though Abel seems to have disobeyed God's decree that humans use vegetation for meat instead of killing other animals) – marked Cain so no one would kill him and, although the Bible records Adam's death, it doesn't mention Cain's. Another point is that various artisans are described as being the descendants of Cain, which implies that some of his descendants existed after Noah's flood. This scenario (bearing in mind that every biblical character from Adam to Noah is probably fictional) is supported by the fact that references to a great flood aren't unique to Judaism.

[The] *Gilgamesh Epic*... narrates a story of the Flood that has striking parallels with the biblical account.

Various details of the Mesopotamian story of the Flood are so similar to those of the Biblical account that there can be no doubt about the dependence of the latter upon the former. The overall theme of the traditional tale is very different, however, in the two versions. Not only does the

Bible remove the polytheistic setting of the... *Gilgamesh*... story, but also the central theme is no longer eternal life. (The hero of the Biblical Flood, Noah, dies in due course.) Instead, the story depicts the righteousness of God in his historical dealing with [hu]mankind. Sin is severely punished in history, though a remnant is saved to mark a new beginning... In the ancient Middle East, only Israel and Mesopotamia seem to have had the Flood tradition. However, the story of a great flood in which all but a select few were drowned appears in a wide variety of forms in many different cultures... as widely separated as those in Greece, Polynesia... the Arctic Circle region... and Tierra del Fuego...

In some Inca myths, Viracocha... (or Huiracocha)... is seen setting up the sun and moon from Lake Titicaca, destroying the first disobedient world by a flood, and allotting the nations their respective locations, bases of livelihood and places of worship in the remade universe.

When Zeus flooded the earth in wrath at the impiety of [hu]mankind, Deucalion and his wife Pyrrha took refuge on the top of Parnassus... a mountain of central Greece, which rises above Delphi... (or built an ark in which they were carried there). When the flood had subsided, to repopulate the world they were advised by Zeus (or by an oracle) to throw stones over their shoulders; those thrown by Deucalion became [guys], and those thrown by Pyrrha [gals. *Manu* is]... the archetypal first man of Hindu mythology, survivor of the great flood, and father of the human race... [T]he flood that forms part of Chinese mythology was not a retribution for sin.

...some... wait for Jesus and some... wait for Cain...

The statement *from the face of the earth... shall I be hid* implies that Cain's descendants could exist in the world but go unnoticed. However, it is possible that some of Cain's descendants have been noticed by the world, but their line of descent from Cain hasn't been recognised (the line of descent may even have been hidden from the descendants themselves – who, theoretically, might constitute over half of the human population at any point of time). It is also possible that somebody (i.e., a *major religious figure... e.g., a Messiah*) can be a descendant of both Cain and David.

Einstein was greeted like a new Messiah and idolised by millions... there is no other physicist whose name and face are so universally known.

Einstein[was] a great scientist and possibly the smartest [hu]man of all time.

EINSTEIN... [was] by general consent the greatest theoretical physicist who ever lived... Einstein[, who] was born... to middle-class Jewish parents in Ulm, Germany[, disliked school]... because of the mindless drilling that prevailed. [Einstein] much preferred to study at home, especially geometry and books on popular science. At the age of 12 these studies came into conflict with his deep religious feelings when [Einstein] realized that the Bible could not be literally true. To that shock [Einstein] ascribed his lifelong distrust of authority.

[Einstein] was a self-confessed lone traveller; his mind and heart soared with the cosmos, yet [Einstein] could not armour himself against the intrusion of the horrendous events of the human community. Almost reluctantly[, Einstein admitted having]... a “passionate sense of social justice and social responsibility.” His celebrity gave him an influential voice that [Einstein] used to champion such causes as pacifism, liberalism, and Zionism. The irony for this idealistic [hu]man was that his famous postulation of an energy-mass equation, which states that a particle of matter can be converted into an enormous quantity of energy, had its spectacular proof in the creation of the atomic and hydrogen bombs, the most destructive weapons ever known... By the age of 12 Einstein had decided to devote himself to solving the riddle of the “huge world.” Three years later, with poor grades in history, geography, and languages, [Einstein] left school with no diploma...

‘I was 16 when the image first came to me. What would it be like to ride a beam of light? ...I had no idea, but the question stayed with me for the next 10 years. Simple questions are always the hardest, but if I have one gift it is that I am as stubborn as a mule.’ Albert Einstein once [claimed to have spent his] whole life trying to understand the nature of light. More than any other scientist, [Einstein] succeeded... The Einstein that we know is the familiar, wise old... otherworldly genius. But new revelations from his papers, notebooks and love letters, have revealed the younger [Einstein], who at the turn of the century made discoveries about light, space and time that have transformed our view of the Universe... [The discovery that electro-magnetism is] a fundamental force of nature was the greatest breakthrough of 19th century physics. Within decades it produced a technological revolution... [Albert's] father... set his sights on this booming new market[, and]... started a factory in Munich to manufacture generators and electrical appliances. [Therefore] Albert grew up surrounded by electricity, its machinery and its mystery. [Albert] and his sister... enjoyed a comfortable childhood, despite the riskiness of their father's business endeavours. But in 1894, overwhelmed by competition in Germany, Hermann Einstein was forced to shift his factory to... Italy. The Einstein family followed, leaving Albert alone in Munich to complete the school year. ‘I hated my school in Munich[, where school-masters strutted]... round like officers, whipping the troops into shape. I searched for a way out... finally it came to me. The next time the teacher scolded me I went to my family doctor and obtained a certificate. It seems I was suffering from nervous exhaustion and needed to leave immediately.’ ...Einstein's plan was to abandon school and take the entrance exam to one of Europe's top technical universities... But Albert was without a school diploma, and stateless, for [Albert] had renounced German citizenship to avoid military service. So, when [Albert] failed his entrance exam, Albert agreed to his father's demands that [his son] complete his schooling in [Switzerland]... To Einstein it seemed a setback, but as it turned out it was here that [Albert] first experienced what it might mean to be a scientist. “[Albert] has this great stroke of luck... [of coming] into an excellent school system with a new physics laboratory...” In the laboratory Einstein first came to grips with the physics which lay behind electrical technology... With a simple bar magnet Einstein explored the patterns formed by iron filings swept up by the lines of magnetic force, and... was taught that light itself is an electro-magnetic wave travelling through space. ‘That was when... that image [of] riding a beam of light... came to me.’ This was the first of Einstein's famous thought experiments. [Albert] created deceptively simple scenarios to explore the most complex concepts. If light were a wave, [Albert] reasoned, then no matter how fast it travels, it ought to be [possible for a hypothetical observer to] catch up with its peaks or valleys. But then, Einstein wondered, what would [the observer] see? Would the light stand still? Would time stand still? Would [the observer] ride that same peak of light forever? ...At 16 Einstein could not find the answer to his questions. [Albert] was not yet a trained scientist. But as his year... came to an end, [Albert] had to turn his thoughts to practical concerns... Following his graduation... Einstein enrolled at the... Federal Polytechnic in Zurich. It was one of the leading technical institutions in Europe. Its laboratories were second-to-none. Einstein could have obtained the best education there, but... avoided regular attendance in class. [Albert] preferred to spend his time at his favourite haunts... Einstein would stay in the cafes for hours, sipping coffee and talking with his classmates – among them the one [girl] in Einstein's course. Her name was Mileva. [Mileva] had come from Hungary to... one of the few European universities open to [girls]. “Being bright at school [Mileva] was taught by her teachers to go further. First [Mileva] went to a boys' school because, of course, the boys could go further than girls at that time. And then... some of her teachers told her that a school was opening in Zurich where girls were admitted, which was quite unusual... [Mileva] probably was a kind of realisation of a dream for [Albert, because Mileva was free. Mileva] had no family on her back, [so] had to take care of herself... In a sense [Mileva] was freer than [Albert] was.” Gradually Albert and Mileva came to feel that they were two of a

kind... For Einstein... study with Mileva, walking beside the lake and thinking about physics... were the important things in life... 'Fortunately there were only two examinations, which meant, for the most part, I could do as I pleased. Of course, it certainly helped to have a friend who attended the lectures faithfully.' That friend was... a brilliant mathematician who gladly provided Einstein with his notes. But even with [his friend's] help, Einstein did have to attend a few classes... Einstein's papers... produced a portrait of a truly infuriating student. "We have here his college record and... by the third year... it says that a reprimand has been issued to Einstein through the administration because of a lack of diligence... in the... physics lab... I think that that's a way of saying [Albert] was lazy... We also have as an indication of that a very fat 1, which is... essentially the lowest grade... To be fair, [Albert] also gets in[the] electro-technical lab that same year a 6. So... [Albert] has already developed that which is his hallmark... that is [Albert] turns his attention and is assiduous in those areas where [Albert] wants to, and other areas [Albert] just ignores." That kind of arrogance brought Einstein into direct conflict with the head of the physics department at the institute... 'You are a clever boy, Einstein... but you have a great fault. You never let yourself be told anything.' 'Of course, I wasn't going to be told anything by [him]. As far as I was concerned [the head] thought that physics had stopped 70 years ago. When I came up with experiments of my own [the head] wouldn't hear of it. What could I do? Just sit back and hope that [the head] didn't know what I thought of him?' The experiments Einstein wanted to perform turned once again on the unsettling problem of light. His image of riding a beam of light had told him that very odd things must happen at the speed of light. Einstein's contemporaries focused on the fact that light travels in waves, which implied that light must move through some type of substance – just as waves on a lake travel through water. "...there was really one big mystery – that if light was a wave phenomenon it must propagate in something; it must be the... vibrations of something. And... they called this something the ether... [I]t really was, for the 19th century, the foundation of physics." The ether, it was thought, filled every corner of space. The ether was designed to make light behave itself, to make its motion conform to everyday experience. In ordinary circumstances it's easy to analyse motion... Speed is relative here on Earth – one can add or subtract velocities depending on which way you move with respect to another moving object... We can measure the speed of [a] ship relative to [a] lake. We can also determine the speed of [a] sailor across the lake – a little faster than the boat when [the sailor] walks forward; a little slower than the boat when [the sailor] walks back towards the stern... But the great mystery was would... speeds add and subtract where light is concerned? Researchers tried to measure the speed of light through the ether using the Earth as the laboratory. The Earth orbits the Sun at 20 miles per second, racing through the ether as it goes. That would set up a wind as the ether rushes past the Earth and, if light travelling through the ether matched ordinary experience, then a beam of light moving with the ether wind should move faster than a beam of light travelling in the opposite direction – against that 20 mile per second breeze. Unfortunately, every attempt to measure such variation in the speed of light failed. With every experiment, the speed of light remained rock steady, unchanging in any direction. Einstein dismissed the notion of an ether long before any other physicians could accept such a radical step. But if there were no ether the message was clear – the speed of light was... an exception to all the laws of motion that governs what happens here on Earth. It made no sense, but Einstein was in no position to figure it out. In 1900 [Albert] graduated, but his battles with [his teachers] cost him the university job [Albert] had expected. And in [Italy] his father's firm had collapsed. Now [Albert] desperately needed an income... 'I honoured all the physicists from the North Sea to the southern tip of Italy with an offer of my services. Not one responded.' And amongst a growing sense of crisis, Mileva became another bone of contention. "Einstein's parents were at first formally against Albert marrying Mileva. [Mileva] was too independent... his mother said '[Mileva is] always going to be in her books and not cooking for you', or something like that... [Albert's mother said things like 'I'm] going to die if... [you marry this girl.' Maybe Albert's mother] would have died if [Albert] had married any [girl]? ...still, this one obviously was not the right one." 'July, 1900. Dearest [Mileva], I promise I will not tolerate my parents opposition to you. When you failed your exams I went into mama's room. [Mama] asked, "What will become of your little [Mileva] now?" "My wife," I told her. [Mama] threw herself on the bed. "You are ruining your future! If [Mileva] has a child you will be in a pretty mess." At this point my patience finally gave out. I denied completely we were living in sin.' ...his mother's fears would come true. Within weeks the news reached Albert – Mileva had become pregnant. For the next few months, Mileva remained in Zurich to retake her exams, while Albert travelled throughout Switzerland to a series of temporary teaching jobs... 'Dear [Mileva], when you are my... little wife, we will diligently work on our science together, so we don't become old Philistines. Everyone but you seems foreign to me, as if they were separated by an invisible wall.' In the autumn, Einstein found a temporary tutoring job... north of Zurich. By now visibly pregnant, Mileva could not be seen with him in the same town. [So Mileva] hid... three miles up the river. Lost amongst the tourists at the famous Rhine Falls, the couple would steal time with each other. Mileva would always have to compete for Albert's attention... [After Mileva] failed her exams for a second time, which ended her hopes for a scientific career[, Mileva] left Switzerland to give birth at her parent's home in Hungary. The couple could not marry unless Albert got a real job... [Eventually Albert got a job] at the Swiss patent office... in Bern... In his new home Einstein resumed the serious study of physics... [Mileva, meanwhile,] remained with her parents, and in January 1902 gave birth to a daughter named Lisa, a child who's existence has only recently come to light... But as a new Swiss civil servant Einstein could not risk a scandal. Keeping the child could have cost him the job that had been difficult to get. After months of wrestling with the problem, [Albert] and Mileva made their decision – Lisa was given up. "It wasn't cruel, it was just something convenient that many people did. Einstein and Mileva intended to take the child with them later on when they could... get married... This was a very ordinary plan... at that time." Einstein never saw Lisa. [The child] fell ill and subsequently all record of her disappeared. The same year that Lisa was born, Hermann Einstein fell ill. When it became clear that his father was on his deathbed, Albert rushed to Italy. "Einstein had a very complicated relationship with his father[, who] was the weaker of the two parents. [Albert] felt very guilty about having demanded and received money from the father in the times when the father had progressively failed in... business... [Albert] also felt guilty because the father had proved to be a failure – something that [Albert] had set his mind never to be..." 'My father's failures ruined his health. That's what taught me how cruel life is – the endless chase just to fill our stomachs... This marked a turning point for me. I came to understand that... the... essence of a [hu]man of my type lies in what I think, not in what I feel.' A few months after Hermann's death, Albert and Mileva were married... After returning from the wedding supper, Albert had to wake up his landlord – [Albert] had forgotten his key. At the patent office Einstein was[a] probationary technical expert, 3rd class. A secure job, ideal for the least likely bureaucrat in the Swiss civil service. "...[Albert] had to work... eight hours a day... six days a week... [but was still] able to consolidate the work in such a way that [the budding scientist] could turn to his physics work, either on the side or under the table." 'You might not think so but the Patent Office was a far better place for me than a university. Had I become a lecturer I would have been forced to produce papers as fast as possible, no matter how trivial...' ...Mileva became increasingly isolated. In 1904 [Mileva] gave birth to their first son... Now Einstein's ideas about physics really started to gel. Questions of light and motion ten years in the asking were coming clearer. By 1905 Einstein simply accepted that the speed of light was absolutely constant everywhere in nature. But that left the problem of motion... Speed is simply a measure of distance travelled in a unit of time, and Einstein realised that if the speed of light never changes then something else must vary. 'What if,' Einstein asked himself, 'the speed of light is constant but the flow of time is not.' It was an instantly radical thought. To everyone but Einstein, time was absolute, unchanging, the steady beat of the Universe. The idea that the tick of time could waver... that time is not the same for all of us; that it flows at a different rate for someone moving and for someone standing still... was exceedingly difficult to accept, even for Einstein... Einstein staged his thought experiment alongside a railway track. 'Set up two poles,' [Albert] said, 'and then measure the distance between them; find the mid-point and mark it. Using a right-angled mirror it is possible to see both poles. Imagine that lightning bolts hit the two poles at once. The observer beside the track could see them both in his mirror and would be able to confirm that the two events occur at exactly the same time. But how would the same event look to an observer on a train [who] also has a two-sided-mirror...? ...At the instant [the passenger] reaches the mid-point

between the two poles lightning strikes again... [The passenger] does not see the events as simultaneous [but instead] sees the lightning strike the pole that [the train] is moving towards first. Light takes time to move from the pole to the mirror, and in that time the train travels towards the forward pole. The light has a shorter distance to cross to reach his eye. So the two observers – one moving; one standing still – cannot agree when the lightning bolts hit the two poles.’ That confirmed what Einstein intuitively grasped – that time is relative. ‘There is nothing mysterious or unreasonable here. All my theory does is show that time flows at different rates for each of us. But very few believe me when I tell them it’s that simple.’ It took Einstein five weeks to move from his first insight that time varies to the finished form of what we now call the Special Theory of Relativity. His theory showed that the faster you move the slower your clock ticks – compared to that of a stationary observer. “...and [Albert] even says that if you took a clock round the equator, and you had a... clock at the pole of the Earth, the one that went round the equator would be going slower than the one going at the pole...” Which means, hard as it may be to believe, that time actually passes more slowly on the drive to work than it does while sitting at a desk. Lengths also shrink as speed increases. In a car travelling at 30 miles per hour changes in time and length are imperceptible, but if you drive at 90% of the speed of light you would shrink to 44% of your usual length – from the point of view of someone watching from the side. And here, finally, was the answer to Einstein’s first question about light – what would happen if [someone] could ride a beam of light? Nothing, for [someone] never could. At the speed of light itself, length shrinks to zero and time stands still... On the 30th of June, 1905, Einstein submitted his new theory to the *Annalen der Physik*, the leading German physics journal... The paper stood alone. There were no references to earlier works; no footnotes... Throughout 1905 Einstein overflowed with ideas. Even today it’s called... Einstein’s miracle year. [Albert] completed breakthrough works on the quantum theory of light, exploring light’s particle nature, and on the existence of the atom. Then, in what was almost an after thought... applied special relativity to mass and energy... [to get his equation] which means: the energy contained in any object is equal to its mass times the speed of light squared – an enormous number. ‘Every gram of matter contains a tremendous amount of energy, but if none of that energy escapes none... can be observed. It’s like a fabulously rich [person] who never spends anything – no one can tell how rich [the person] is.’ And if mass contains energy, then energy has mass. Every second the Earth is struck by 2kg of sunlight. As remarkable as Einstein’s discoveries were, the world didn’t seem to notice at first. A 25-year-old patent clerk who worked on physics in his spare time had altered our understanding of the Universe. ‘Why was I the one? Normal adults never stop to think about such concepts as space and time – these are things children ask about. My secret is I remained a child. I always ask the simplest questions... [For example, could] God have created the Universe any other way, or had [God] no choice? And, how would I have made the Universe if I had the chance?’ It was... Einstein’s astounding ambition to read the mind of God, and... Albert... succeeded time and again... But as his... papers reveal, there was a price that [Albert] and those closest to him had to pay for every triumph. ‘I have learnt to isolate myself from the unpredictability of human relations. Life tends to get clogged up, especially marriage.’ ...Still in his twenties, the humble clerk was no longer a scientific outsider. [Albert] now corresponded with the greatest physicists of his day... Einstein’s theory encompassed all of physics, except one crucial gap – gravity. ‘Max Planck warned me not to work on the theory of gravity. “The problem was too difficult,” [Max] said, “And even if I succeeded, no one would believe me.” But I took it on anyway... The first Theory of Relativity was child’s play compared to the problem of gravitation.’ Gravity seemed straightforward enough. A kilo of... anything will move the scales the same amount because the Earth’s gravity pulls on them all in exactly the same way. Yet, what the Earth does to make itself felt... that no one knew. Isaac Newton had shown that gravity governs the motion of the Solar System as well. But how? That was the mystery – how is it that the heavens stay on track? What is it that orders the Universe as a whole? Gravity treats every object the same, no matter what it is made of... [or] how big it is. There were no exceptions to give Einstein a place to start. ‘Then, all of a sudden, it occurred to me... the happiest thought of my life: if a [person] falls from the roof of a house, [that person] will not feel his own weight.’ Einstein put the idea another way[by asking:] ‘What if someone were in a lift when the cables snapped?’ [That person] would float, weightless, as [his body] and the lift both free-fall at the same rate in the Earth’s gravitational field. Next Einstein changed the scene: ‘What if the passenger were in a rocket ship far from Earth?’ [The passenger] would still float, with no gravitation field to hold his feet to the floor. But what would happen if the rocket began to move? As it accelerates, the floor of the rocket rises. On its way up it would catch the passenger, and to him it would seem that gravity was holding his feet to the floor. And if gravity and acceleration feel the same, Einstein concluded, perhaps they are the same – and there is no difference between accelerating in outer space or standing in the Earth’s gravitational field... [Albert] realised that the equivalence of acceleration and gravity could form the basis of a revolutionary new theory. “If I had the opportunity to ask Einstein one question, I would ask him how [his faith] could... be so sure... that the dear Lord required that the relativity part of... his theories... be satisfied throughout nature, everywhere and at all times...” Einstein worked with ferocious concentration, to the exclusion of all else. Over time [Albert] gave less and less attention to... his wife... When they courted, [Albert] had promised they would be scientific partners – two against the world – but Einstein’s [priorities] had changed. ‘I am not much good with people, and I am not a family [person]. I want my peace... it makes me happy.’ In 1911 [Albert] became a full professor at the German University at Prague... a major step up the professional ladder. But for Mileva... with a second son to care for, Prague felt like exile. ‘Mileva felt... ever more pushed to the side... [and] less important... the division of labour was that [Albert] do the scientific work and... [Mileva] the domestic side of things... [T]he pretence that they had tried to maintain over the years fell apart completely.’ “...[Mileva] had failed in her ambition... [of] becoming a new kind of [gal]... in a world of [guys]...” Recently discovered letters reveal an uneasy mix of pride and concern. ‘I am very happy about his success, which [Albert] has really earned. I only hope and wish that fame does not exert a detrimental influence on his human side... Not much time remains for his wife. I... am starved for love and I almost believe wicked science is guilty.’ ...[Albert, for his part, wrote:] ‘When I think seriously, day and night, I cannot easily engage in loving chatter. In the same way, one can’t play the violin if [one has] just been working with a large hammer.’ ...Science would always come first – especially gravitation. Einstein... now asked: ‘If acceleration and gravity are equivalent, what happens while accelerating that reveals something new about gravity?’ As the rocket accelerates, a ray of light shining through the window hits the other side at a lower point than it entered. To a passenger, the light appears to curve. If acceleration can bend light, then – by the equivalence principle – gravity must do the same... For five years gravity became his sole obsession... In 1911... [a conference] in Brussels brought together Europe’s finest physicists. Einstein was the youngest to attend... There was one person who missed Einstein’s triumph – Mileva. ‘It must have been very interesting. I would have loved... to have listened a little, and to have seen all those fine people. It’s been an eternity since we’ve seen each other. Will you still recognise me?’ Einstein wanted domestic comfort, not an intellectual partner... Mileva’s isolation deepened, and on a visit to Germany Einstein met a cousin... who came from a town and background similar to his own. Einstein saw in Elsa a chance for a domestic life free of demands and conflict. “...[Elsa] shared a lot of the traits that... [Einstein] would have identified with very strongly... unaffected pleasure in the simple things in life... enjoyment of food and drink...” ‘Dear Elsa, thank you very much for your letter. There is no book on relativity comprehensible to lay[people]. But what do you have a cousin for? If you ever happen to be in Zurich then we, without my wife, who is, unfortunately, very jealous, will take a nice walk and I’ll tell you about [the] curious things I have discovered.’ ...In 1912 Einstein... moved to Zurich to teach at the... polytechnic where [Albert] and Mileva had studied. [Albert] had been an undistinguished student. Now [Albert] was coming back a full professor of theoretical physics. Here [Albert] embarked on the most intense effort of his life – the gravity problem... [A] former... teacher... ‘...translated it into mathematical terms, whereupon even I couldn’t understand my theory.’ ...his old teacher had the key insight – space and time are fused together into a single 4-dimensional picture of the world. ‘...three numbers – length, width and height – allow us to record the position of all objects. Now add time. With this 4th dimension we’re able to record any event in the Universe...’ ...As the idea of space-time sunk in, Einstein realised [it was possible to] go one step beyond. “...Einstein hit on the idea that this wasn’t a rigid, straight space-time, it must be curved,

and it must have variations of curvature within it.” [Albert] asked: ‘What if the shape of space and time could warp and curve – what would happen then?’ His answer – gravity happens. “Einstein’s brilliant idea... that makes the whole thing work, was the fact that it is... matter and energy that drives the bending of space and time. Throw a rock in a pond, for example... ripples start to form... Therefore the presence of a rock creates ripples in space and time that we call gravity.” Space-time without matter is flat. But add a rock or a star and the whole picture changes... The enormous mass of the star causes a huge dent. Anything that passes close enough will roll down and around that warp in space-time. That’s gravity – the straightest path through the curves in space-time created by matter and energy. It was this insight that showed Einstein how gravity holds the Earth in orbit – the Earth simply follows the warp in space-time created by the Sun. Einstein published an early version of his new theory of gravity in 1913. There were still gaps in it but [Albert] impressed the one audience that mattered. In that year... Germany’s leading physicist travelled to Zurich with a colleague to offer Einstein a job in Berlin. ‘[They] looked me over as if I were a prize hen, but I didn’t know if I could lay another egg...’ It was the climax of a career. Berlin was the world’s leading centre for theoretical physics. Without doubt the former patent clerk had arrived. But for Mileva the promise of Berlin held no attraction. The marriage lay in shambles... Einstein resumed contact with Elsa... ‘Dear Elsa, it isn’t easy to get a divorce if one does not have any proof of the other party’s guilt, so I treat my wife as an employee who I can not fire. I have my own bedroom and avoid being alone with her. But how nice it would be if one of these days we could share a small, unassuming household.’ By then [Albert] and Mileva were completely estranged, but the family moved to Berlin in April 1914... [J]ust three months later Mileva gave up. [Mileva] and her sons returned to Zurich... ‘It’s still a great sorrow to me that I have been cut off from my sons. I even thought of seeking custody... but it was out of the question. Mileva poisoned the minds of both boys against me. [Mileva] was impossible to live with. Jealous of everyone [and] everything. How could I have married her?’ “...[Albert admitted to being a bad] father... Einstein wanted to really make a go of it in the first marriage but one has to... ask what [Albert] was prepared to sacrifice to make it work, and there I think [Albert] fails rather miserably.” Amidst the private turmoil, Einstein faced his first public moral challenge. In August 1914 [WWI] began. ‘Europe, in all her insanity, has started something unbelievable. In living through this so-called Great Epoch I find it difficult to believe that I belong to such an idiotic, rotten species. [The] species that actually boasts of its freedom of will, heroism on command, senseless violence and all the loathsome nonsense that goes by the name of patriotism.’ When 93 leading academics... issued a manifesto in defence of German aggression, Einstein helped launch a counter petition urging peace. It got three signatures. [Albert] withdrew to live and work in isolation on the outskirts of Berlin. [Albert] turned again to his theory of gravity. [Albert] faced one last hurdle – [Albert] could not solve the mathematics of curved space-time. The problem had stumped him for three years... “...[Albert] was at times desperate and... [eventually] turned to a friend to help him with the mathematics, because... [Albert no longer knew] where to go.” The friend... tutored Einstein in the complex geometry of curved surfaces... [and] gave Einstein the tool... needed to complete his analysis of gravity... By the autumn of 1915 [Albert] was ready to put the theory to the test. The orbits of the planets were understood with extraordinary precision, with one exception. Mercury’s orbit shifted slightly, unaccountably, every year. “...on the basis of this theory, which [Albert] had invented out of nothing in a certain sense – out of his view of how God would have had to make the Universe to make it right – [Albert was] able to calculate this very real, small effect, and get the right answer...” “And I believe at that moment Einstein said: ‘I don’t care what the world will say – I am right, because the Lord has told me’...” ...The calculation vindicated Einstein’s radical idea that space-time is curved. Mercury, the inner-most planet, shifts its orbit as it travels around the dent in space and time created by the Sun... Even light must follow all the curves in space and time, mapping the shape of the Universe as a whole. Einstein’s theory drives the scientific story of creation – the Big Bang; the expanding Universe... The great sweep of modern cosmology derives directly from... the General Theory of Relativity – Einstein’s theory of gravity. “...We are just stunned, even decades later, that [someone] could come out with that theory back in 1916. I would say [Albert] was 50 years ahead of his time.” Eight years of sustained effort took their toll. Einstein collapsed, near death, in 1917. His illness marked him[, but Albert]... was nursed back to health by his cousin Elsa. This relationship had cooled during the war, but now [Albert] needed her. ‘I have gained 4lbs... thanks to Elsa’s good care... [Elsa] cooks everything for me.’ Her influence showed in Einstein’s renewed attention to his appearance. Finally, in 1919, the couple decided to marry. Einstein’s divorce settlement with Mileva revealed characteristic self-confidence. [Albert] promised her the money from his Nobel prize, despite the fact that [Albert] would not win the award until 1922. The spring of 1919 was special for Einstein. A silent film explained Einstein’s breakthrough to the public. General Relativity predicted that starlight passing close to the Sun would curve around the warp in space-time created by the Sun’s mass. That bending of the light would make the star seem to occupy a different position in the sky to an observer on Earth. This could only be seen during a total eclipse of the Sun. A British expedition travelled to the South Atlantic in 1919 to photograph an eclipse. It would be the first public test of Einstein’s theory. May 29th dawned overcast over the Atlantic, but then the sky cleared and in the shadow of the eclipse the starlight warped around the Sun. Gravity bends light, exactly as Einstein had predicted... The eclipse results were announced in November. Literally overnight Einstein had become world famous – the first scientist-celebrity of the 20th century. This was the birth of Einstein the icon – the embodiment of scientific wisdom; a friendly, incomprehensible sage. “...The world was in a chaos because[of] the war... nations were tired, empires had fallen, and there comes this little [guy] who says, ‘I proclaim there are new laws of the Universe.’ It was an historic moment... against the background of confusion. It’s like Moses coming down the mountain...” Einstein... was more than a scientist – [Einstein] was a symbol of the hope for peace... No scientist had ever received such public adulation... When Einstein and fellow superstar Charlie Chaplin crossed paths, the two compared notes. ‘With fame I have become more and more stupid, which, of course, is a very common phenomenon... Charlie Chaplin had it right. When [Charlie] and I met we were surrounded by people calling our names. “What does it all mean?” I asked him. “Nothing,” [Charlie] replied.’ Not quite nothing. Einstein did enjoy some of the pleasures that fame can bring as [Albert] began to step out in Berlin society... Throughout the 1920s Elsa revelled in her husband’s increasingly prominent position, but Einstein drew sharp lines between them. They had separate bedrooms, [Elsa] was not to enter his study and Einstein kept company with other, younger [gals]... “Einstein wanted sex without complications. [Albert] also wanted relationships with his closest family members without complications...” ...‘My friend... has lived happily with the same [wife] for the whole of his adult life. I failed twice, rather disgracefully. I can love humanity, it seems, but when it comes to close personal ties with... [individuals] I am a horse for[a] single harness – not cut out for tandem or team-work.’ But for important causes Einstein would break his solitary rule. After... [WWI Albert increasingly allied] himself with a group [Albert] had left behind in childhood – the community of European Jews. Anti-semitism was spreading virulently in Germany. Some German scientists even attacked him for what they called “his immoral, Jewish physics.” In response, Einstein ever more publicly identified himself as a Jew... ‘I am a Jew, certainly, but not a practising one... And yet... I’ve come to realise that behind... everything is an order that we glimpse only indirectly... In this sense I am a religious [person].’ Einstein’s deep belief in the order of nature led him to ponder the mystery of light; to reach his Special Theory of Relativity... But his faith that nature must make sense set him on a collision course with the next great breakthrough in physics. In 1927... [a conference] brought Einstein together with the leading proponents of the revolutionary theory of Quantum Mechanics – the description of nature at the very smallest scale. While Einstein had focused on the large-scale structure of the Universe, younger scientists... explored the atom and the tiny building blocks of energy and matter... These researchers found that uncertainty and randomness govern the physics of the very small. Einstein loathed the notion that there was anything uncertain about nature. ‘I don’t deny that Quantum Mechanics is useful, up to a point, but I am convinced there is a deeper theory that will replace the uncertainty at the centre of it... God does not play dice with the Universe...’ “It is [with] a certain arrogance... that Einstein says ‘God does not play dice’. How does [Albert] know...? You can’t know what the Lord has [hidden] up his sleeve.” Einstein never warmed to Quantum Mechanics, despite a life-time of arguments... [Albert] had grander ambitions – a theory that would unify the fundamental

forces of nature within a single, comprehensive picture. Few of his contemporaries thought such a unification possible... Unified Field Theory is what Einstein believed would subsume Relativity and Quantum Mechanics within a single formulation – simpler and more comprehensive than either. [Albert] sought his unified vision for the rest of his life, but alone, in exile. By 1932 Hitler was on the verge of power in Germany. Einstein himself had already received death threats and, as [Albert] had as a boy, [Albert] once again prepared to flee Germany. ‘I’ve never really belonged to any country or state, to my circle of friends or even my family. My isolation is often bitter, to be sure, but I’ve never regretted it. If I am cut off from the understanding and sympathy of others, I am also independent of their opinions and prejudices.’ Early in 1933 Einstein [– ‘with a price of 20,000 marks on his head’ –] and Elsa set sail for the U[S]. They never returned to Europe... [Albert] moved to the quiet college town of Princeton, New Jersey, and settled quickly into a routine – walking every morning to his office at the Institute for Advanced Study, and returning in the afternoon to his modest home... [Albert] never learnt to drive. In America Einstein gave free reign to his eccentric streak... Einstein always refused to play the role of the proper professor, but the good humour masked growing isolation. In 1936 Elsa died after a brief illness. [Albert] wrote to a friend that... ‘[Elsa] was more attached to human beings than I.’ Einstein never saw Mileva again. [Mileva] died in 1949. His [younger] son, a schizophrenic, remained confined to an asylum in Switzerland until his death in 1966... [His elder son] became a professor of Engineering in California, but saw his father only rarely... Einstein passed the [WW2] years quietly, although [Albert] wrote a much publicised letter to Roosevelt urging nuclear research, but... had no role in building the bomb. After the war, the outside world would seek him out for views on causes of all sorts... [Albert was even offered] the presidency of the new state of Israel... Einstein declined. Science still came first. Finally, in the spring of 1955, Einstein’s heart began to fail... - HORIZON

EVEN FOUR DECADES after his death, an exceptional fascination is evoked by the name of Albert Einstein... but Einstein is much more than a subject for specialists in the history of science... BORN on March 14, 1879... [Einstein’s] parents and relatives, anxious to perpetuate the family name, were no doubt pleased that the first child was a boy. But as often happens with young couples who are facing parenthood for the first time, their joy was clouded by concern and even anxiety. “When [Albert] was born” his younger sister wrote many years later – “Mother was alarmed at the sight of his exceptionally large angular occiput and at first thought [their child] was a monster.” The physician reassured the twenty-one-year-old mother... that this peculiarity would soon disappear, and a few weeks later the size of the baby’s skull was indeed quite normal, though a rather square occiput remained a lifelong characteristic... In the [birth certificate] column provided for religion, both parents and child were recorded as “Israelitic.” - ALBERT EINSTEIN A BIOGRAPHY

Although... Einstein... was not associated with any orthodox religion, Einstein’s nature was deeply religious. Merely to come into his presence was always a profoundly spiritual experience. Although [Einstein] felt that belief in a personal God was too specific a concept to be applicable to the Being at work in this universe, [Einstein] never believed the universe was one of chance or chaos. The universe to him was one of absolute law and order... When Einstein was five years old, his father showed him a pocket compass. The little boy was deeply impressed by the mysterious behaviour of the compass needle, which kept pointing in the same direction no matter which way the compass was turned... [Einstein] felt then that “something deeply hidden had to be behind things.”

With primitive [people] it is above all fear that evokes religious notions – fear of hunger, wild beasts, sickness, death. Since at this stage of existence casual connexions is usually poorly developed, the human mind creates for itself more or less analogous beings on whose wills and actions these fearful happenings depend. One’s object now is to secure the favour of these beings by carrying out actions and offering sacrifices which, according to the tradition handed down from generation to generation, propitiate them or make them well disposed toward a mortal... Fathers and mothers and the leaders of larger human communities are mortal and fallible. The desire for guidance, love and support prompts [humans] to form the social or moral conception of God. This is the God of Providence who protects, disposes, rewards and punishes, the God who, according to the width of the believer’s outlook, loves and cherishes the life of the tribe or of the human race, or even life as such, the comforter in sorrow and unsatisfied longing, who preserves the souls of the dead... The Jewish scriptures admirably illustrate the development from the religion of fear to moral religion, which is continued in the New Testament. The religions of all civilised peoples, especially the peoples of the Orient, are primarily moral religions. The development from a religion of fear to moral religion is a great step in a nation’s life. That primitive religions are based entirely on fear and the religions of civilised peoples purely on morality is a prejudice against which we must be on our guard. The truth is that they are all intermediate types, with this reservation, that on the higher levels of social life the religion of morality predominates. Common to all these types is the anthropomorphic character of their conception of God. Only individuals of exceptional endowments and exceptionally high-minded communities, as a general rule, get in any real sense beyond this level. But there is a third state of religious experience which belongs to all of them, and which I will call cosmic religious feeling. It is very difficult to explain this feeling to any one who is entirely without it, especially as there is no anthropomorphic conception of God corresponding to it... The religious geniuses of all ages have been distinguished by this kind of religious feeling, which knows no dogma and no God conceived in [humanity’s] image; so that there can be no church whose central teachings are based on it. Hence it is precisely among the heretics of every age that we find [people] who were filled with the highest kind of religious feeling and were in many cases regarded by their contemporaries as atheists, sometimes also as saints... How can cosmic religious feeling be communicated from one person to another, if it can give rise to no definite notion of God and no theology? In my view, it is the most important function of art and science to awaken this feeling and keep it alive in those who are capable of it. We thus arrive at a conception of the relation of science to religion very different from the usual one. When one views the matter historically one is inclined to look upon science and religion as irreconcilable antagonists, and for a very obvious reason. The [person] who is thoroughly convinced of the universal operation of the law of causation cannot for a moment entertain the idea of a being who interferes in the course of events – that is, if [the person] takes the hypothesis of causality really seriously. [Such a person] has no use for the religion of fear and equally little for social or moral religion. A God who rewards and punishes is inconceivable to him for the simple reason that a [hu]man’s actions are determined by necessity, external and internal, so that in God’s eyes [a human] cannot be responsible, any more than an inanimate object is responsible for the motions it goes through. Hence science has been charged with undermining morality, but the charge is unjust. A [hu]man’s ethical behaviour should be based effectually on sympathy, education, and social ties; no religious basis is necessary. [A human] would indeed be in a poor way if [it] had to be restrained by fear and punishment and hope of reward after death. It is therefore easy to see why the churches have always fought science and persecuted its devotees... It was the experience of mystery – even if mixed with fear – that engendered religion. A knowledge of the existence of something we cannot penetrate, of the manifestations of the profoundest reason and the most radiant beauty, which are only accessible to our reason in their most elementary forms – it is this knowledge and this emotion that constitute the truly religious attitude; in this sense, and in this alone, I am a deeply religious [hu]man. I cannot conceive of a God who... has a will of the type of which we are conscious in ourselves. An individual who should survive his physical death is also beyond my comprehension, nor do I wish it otherwise; such notions are for the fears or absurd egoism of feeble souls. Enough for me the mystery of the eternity of life, and the inkling of the marvellous structure of reality, together with the single-hearted endeavour to comprehend a portion... of the reason that manifests itself in nature... To enquire after the meaning or object of one’s own existence or of creation generally has always seemed to me absurd from an objective point of view. - Einstein

According to Einstein, *cosmic religious feeling – the highest kind of religious feeling – is very difficult to explain*. This compliments statements such as that of Darwin – *the whole subject [of God] is beyond the scope of [humanity]’s intellect* – and a species can’t be expected to fully explain or understand God... while its knowledge of the Universe remains incomplete.

During a visit to Auckland this week... the... senior astronomer of the Royal Observatory in Greenwich, said that in... 1998, two groups of astronomers discovered that the expansion of the universe is accelerating. Experts then realised that there must... be another huge source of energy to counteract gravity – which they called “vacuum energy”... [A]stronomers were also “embarrassed” to find that the current theories of the origins of the universe explain only 3[%] of what is now believed to exist in space.

Humanity is unlikely to be able to physically prove anything about God until it also possesses the knowledge to explain 100% of the Universe, but until that time – which may never eventuate – humans can assume the beliefs of the most god-like members of their species are most likely to be nearest to the truth.

It was stated previously that *the more a person knows, the more god-like it must be*. However, what if we were to divide existing human knowledge into two separate sets – information that is IMPORTANT and information that is TRIVIAL (using *worth to human society* as a guideline). Now consider someone who knows so much that its brain is full to capacity, but every piece of information it possesses is contained within the latter set. No one who is sane would call such a person *god-like*. Therefore, when it comes to being god-like, it is the QUALITY of a person’s knowledge – not the QUANTITY – that counts (and how the person USES its knowledge – otherwise, most human-made computers would literally be more god-like than any human!).

Although sociology and related subjects currently have the most *worth to human society* – certainly more than cosmology – if the contents of the set of IMPORTANT information were to be rated in order of ultimate importance, knowledge of God would have to head the list (after all, although it might seem unimportant for humans to know the truth about God – at least while they continue to know so little about the Universe, and even their own planet – while the truth remains unacknowledged by the majority, no one can justifiably be accused of, or prevented from, distributing mistruths about God). *Knowledge of God* can be further rated according to age (i.e., modern concepts of God are more likely to be correct than older concepts). Hence, we can conclude that everyone who is less god-like than Albert Einstein (despite being a bad husband and father, and who knows what else, Einstein was undoubtedly the most god-like person of his generation) ought to accept his beliefs – regardless of whether or not they understand them. This means believing in the *Thesis of Determinism* (r:p1119, ln9) or the *law of causation* (every event is caused by a previous event, which in turn was caused by a previous event, and so on [note: because the Universe undergoes change, it isn’t true that *for every action in the Universe there is an equal and opposite reaction*]), which is a technical way of saying that nothing in the Universe occurs by chance (or as Einstein would say: *God does not play dice with the Universe*).

God is not an entity that exists outside the Universe (deism), or is contained within it – God and the Universe are the same thing (i.e., the Universe is God’s body – pantheism). Furthermore, because everything in the Universe is inside God, nothing can have more of God in it than anything else (i.e., god-like people and ungod-like people have equal amounts of God in them – the difference is that one type behaves in a manner befitting a god, or at least a human, while the other behaves in a manner befitting a lesser, non-human species; note that a large person isn’t more godly than a small person because it has more bulk – although it is *very difficult to explain* how two differently sized people can contain equal amounts of God, apart from pointing out that people don’t consider their gall bladder to be less a part of themselves than the much larger liver, unless the latter was transplanted into them). Because parts of the Universe regenerate continuously (r:p960, ln51), the Universe, and therefore God, can be called IMMORTAL. Because God is immortal, it doesn’t need to totally reproduce itself – so God doesn’t have genitals and, therefore, isn’t gender-specific. In addition, God is impersonal (i.e., God doesn’t love any human, or any planet, more than any other – ‘only insofar as we love can we know God’s love’; God doesn’t feel *jealous* – as is stated in Exodus 20:5). Although the Universe contains brains (e.g., inside humans), God itself doesn’t have a human-like (i.e., organic) brain, which means God can’t decide to alter what is going to happen in future (i.e., God doesn’t have *absolute* control over its bodily functions) and, therefore, everything that happens has been predestined.

I am the Lord, and there is no... God beside me: I girded thee, though thou hast not known me... Shall the clay say to him that fashioned it, What makest thou? ...I have made the earth, and created [people] upon it: I... have stretched out the heavens, and all their host have I commanded... I form the light, and create darkness: I make peace and create evil: I the LORD do all these things... This saith the LORD, the Holy One of Israel, and his Maker, Ask me of things to come... - ISAIAH 45

...Thus saith the LORD... I know the things that come into your mind, every one of them. - EZEKIEL 11:5

Recall that Jesus allegedly said: *the words that I speak unto you I speak not of myself: but the Father that dwelleth in me*. This and other quotes (r:p861, ln18 + p1149, ln53-4), in conjunction with predestination, means that the act of PRAYING is like taking *coals to Newcastle* squared (note that because God can control a mind while it is conscious, it follows that God must be able to control the subconscious part of a mind, or a mind that is unconscious or dreaming; note further that every written word is, literally, *the word of God*, and no one but God can claim to have ownership of anything because in reality no one but God has created anything)! It also means that, in theory, God has the capacity to tell everyone the same thing at the same time. Historically, however, this has not happened (i.e., in the past God has used one person to speak to the rest – hence, it should be safe to assume that God is still using this method today, and will continue to do so into the future) – primarily because the law of causation precludes it from happening.

How does God manage to bring about whatever has been predestined if it can’t interfere directly with the Universe? The simplest explanation is to say that the Universe is activated via ENERGY (if it were possible for some parts of the Universe to be more god-like than other parts, this would mean that the closest god-like entity to Earth is the Sun’s centre) – which, incidentally, is also immortal!

...energy is neither created nor destroyed in any given physical system... Although one kind of energy may be converted easily into another, such as potential to kinetic type or chemical to electrical, the total energy always remains the same... Electricity has become the servant and messenger of the modern world... help[ing to] reveal the innermost secrets of the stars, atoms, and of life itself. Electric charge is one of those things that can be measured, thought about, and used, but cannot be defined in terms of anything simple. For, like space, time, and mass, there is nothing simpler in nature... the best way to define it is to observe what it does. An electrically-charged object exerts a force upon another charged object at a distance.

Electrical connections control... every action our brain takes...

It turns out that the human brain is pretty close to[its] limit right now. This means that we cannot expect genetic engineering to produce a gigantic increase in brain size... At present, the limitation set by birth... [so] that a baby’s head be able to pass easily through the birth canal... is partially overcome by having a substantial portion of human brain development take place in the first nine months of life, rather than in utero... Artificial

intelligence, on the other hand, suffers from no such biological restrictions. In fact, we can learn a great deal about intelligence by understanding the way a computer works.

In Newtonian mechanics, science comprehended the realm of ordered simplicity; in nineteenth-century statistical mechanics, the realm of disordered simplicity; in twentieth-century quantum electrodynamics, the realm of disordered complexity; and now... equipped... with the megabyte power of the computer... science confronts the realm of ordered complexity.

We can think of God as being like a computer using a continuous program (a program which, when the computer's power switch was first activated, created a universe – that can be viewed by an external observer on a monitor attached to the computer – and, while the switch stays turned on, or the power source remains constant, maintains the universe's existence). Contained within the computer's memory banks is a record of everything that has occurred in this universe in the past and will occur in the future – but nothing ever occurs out of sequence (i.e., the program never suddenly jumps back into the past or forward into the future – although various characters created by the program may be able to find out what will happen in the future or happened in the past; therefore, when characters claim to be talking to the dead or recalling past lives, they are merely tapping into the record of historical experiences and personalities).

Apart from external forces (e.g., wind, gravity) – which can activate both animate objects (e.g., humans) and inanimate objects (e.g., rocks) – animate objects are activated by a form of energy that is called the LIFE FORCE (*qi*, *mauri* or *creative energy*) or UNIVERSAL SOUL (if this soul exists in inanimate objects – i.e., pervades every atom in the Universe – it must in such instances be dormant; or have *potential* force – as opposed to having *kinetic* force). The Universe doesn't contain billions (or trillions) of immortal souls – as is promoted by all of the major faiths – but just one. This is why Einstein didn't believe in life after death (the soul – which contains a record of a person's life – does continue to exist after a body dies, but this in no way resembles the Western concept of an afterlife or the Eastern concept of reincarnation; the record has no more life than characters in an old movie or TV show).

Unless an individual is as god-like as Einstein (or is more god-like), or has personally experienced one or more events for which no other explanation could be given, that individual may have difficulty accepting everything is predestined – especially if the individual doesn't want to accept that when bad things happen to it or others this is, effectively, because of *God's plan*. However, if God isn't controlling everything which happens, it means the majority of humans (i.e., social creatures with highly developed brains) are freely choosing to perform all of the stupid or evil things that they have done in the past – and continue to do! The theory of predestination is further supported by the fact that any plans God has devised for Earth or elsewhere could be undone by the actions of self-determining individuals (what if, for example, God had planned for the Messiah's mother to be 'born during a London thunderstorm on Black Friday, July 1934', only for her to be killed a decade later by a 'German robot bomb'?).

Although predestination means that humans and other animals are like puppets, a god-like person accepts responsibility for its actions – even though Einstein stated *that in God's eyes a human cannot be responsible* – because, in most instances, it is able to think about its actions before performing them (while the god-like person accepts that God was responsible for making it have those thoughts, it has the sensation of being responsible for making its own decisions). If a god-like person is in a situation where it doesn't have time to think about what to do, or lacks the experience to make the right decision (or doesn't know of an experienced person to gain advice from), and the decision it makes proves to be a mistake, the god-like person tries to learn from that mistake to avoid repeating it (and, by informing others of its lesson, it may prevent them from repeating that mistake – a process that compliments the *law of causation* and any plan God might have). Note that even though a god-like person accepts it has the potential to learn about its future (r:ln12), it doesn't try – because it doesn't want to know (finding out about your future is like watching a football game when you already know the result). Instead, it tries to identify what it wants to happen, then plans how to make it happen (in the knowledge that if its plans are successful, this is because they were meant to be successful; if its plans are unsuccessful, this is because they weren't meant to be successful – or they are incomplete, and thus need to be reworked). Note also that a god-like person doesn't worship God (such an act implies that God is *vain*; it also means revering something that is *evil* – r:p1212, ln45).

If humans aren't meant to worship God then why did God create them – what purpose do humans serve? To be able to appreciate itself and its own existence, perhaps? To date, humans are the only Earthlings to conclude: *I think, therefore I exist*. God can only THINK via the brains of suitable lifeforms (although, it is worth noting, God only needs one human in order to appreciate its own existence); and – although God can see what it has created on Earth via the eyes of non-blind, non-human Earthlings – humans are the only Earthlings capable of seeing beyond Earth or, at least, understanding what lies beyond Earth; and of understanding that God is behind the creation of everything.

The immediate purpose of humanity is to exist and to recreate themselves (i.e., the purpose of each generation of humans is to ensure that there will be future generations). In recreating themselves, humans are gradually becoming more god-like in their thinking and behaviour (r:p898, ln23) – or at least certain individuals are. Hence, becoming god-like as a species could be considered humanity's ultimate purpose.

The glory of God is [humanity] fully alive.

Without the history of [humanity], God would be alone and lifeless.

Why has *the history of humanity* contained – and continues to contain – so many extremes of happiness and suffering? Perhaps recognising evil (or the consequences of evil – e.g., creating suffering) – and, consequently, choosing to be good (creating happiness) – is necessary for the development of the species? For most of humanity's history, the species has been linked directly to the cycle of life that includes every other Earthling species. No one would argue that life in the wild is associated more with suffering than happiness ('nature can be so cruel')! Technology has, however, enabled humans to disassociate themselves from much of the struggle for survival necessary for the maintenance of Earth's food chains, and continues to eliminate, or minimise, other forms of suffering (e.g., humans can now cure most of the diseases or handicaps that afflict them; can shelter or protect themselves from climatic extremes and many forms of natural disaster). Although some people imitate nature – by being *cruel* – there is no reason to believe that this will always be the case (e.g., humanity has the potential to further disassociate itself from the wilderness and, therefore, to further eliminate human suffering or cruelty). If every Earthling can currently be classified as one of 'God's children', maybe humans will one day be classified as God's adults?

...you were a mystery no one could help me solve... now I know about you... no more doubts no more fears no more guessing...

Much of the suffering currently experienced by human society can be indirectly attributed to God and directly attributed to the fact that the majority of its members don't *know about* God, or about many other forms of knowledge and understanding that should be considered basic for a modern human to have.

We have bred generations of youngsters who end up believing anything. - 1997

TREE

...in my life I've got nothing to believe in...

Crawling on the bathroom floor wondering what I'm living for ODing on some pills escaping life with cheap thrills... thought I had something to say but now it[ha]s gone away... - THE DUM DUM BOYS

...a while back... I was absolutely certain I'd figured out the meaning of life and I put it on paper. A few years later, I've come back, but... it's [like it was] written in another language... I used to be the sort of kid that could see dragons flying along the motorway. I used to cry when people killed whales. Now I just say, "F--- the whales", and all I see on the motorways are these white crosses. I'm 14 years old. Doesn't that worry anyone? Doesn't it worry anyone that... ['the problem of unhappy children plagues Western society' and m]any teenagers have succumbed to... pain, pressure and fear in a desperate plea to rid themselves of so many unexplained questions, which have haunted them so much they would take their own life.

...*Bleak view of life in teenage novels worries doctors...* A study of 94 novels chosen as "notable" by the Children's Book Council of A[US] finds that humour is rare, and devastating loss is the norm. T[he]... acting director of Child and Adolescent Mental Health Services for the Central Sydney Area Health Service... and colleagues... considered 269 characters in the books... About 78[%] of characters suffered a loss such as the death of a family member or close friend... While 180 characters were distressed or had psychiatric symptoms, 26 characters had suicidal thoughts and 10 killed themselves. [The acting director] said that while literature might not be the main medium for young people, the possible effect of the negative portrayal[s]... on vulnerable teenagers should be considered. "We... may well ponder whether the genre has crossed the threshold from realism to nihilism... I think it might be time for authors and health professionals to... exchange viewpoints on the subject."

...Consider what we mean by intelligence – or, more particularly, ponder the notion that a tally of correctly ticked boxes is the measure of a child's potential. IQ tests, we call them, the "Q" standing for quotient, a term from mathematics for the result when one number is divided by another. It's as if there are only so many smarts to go around, and the experts' computations are the only way to decide who is blessed with how much. Now contemplate [the] 8-year-old... whose recent attempt to end his short and miserable life is an indictment of the conceit that it is possible to calibrate intelligence with the oracular accuracy the experts claim. More than that, what happened to [the 8-year-old boy] poses a grave question about the experts. How could so many intelligent people be so stupid? America first heard of [the boy] almost six years ago when, at least according to his mother, [the boy] picked up a violin and began to play. At 3 [the boy] had mastered chess, and by 4... was enrolled in a Stanford University correspondence course. At 6, an IQ test made it official: with a score of 298, [the boy] was "the greatest genius ever to grace the Earth", said[the] Denver psychologist... who graded it. There were talk-show appearances and speaker's fees. Grants and scholarships flowed in. Eager publishers offered six-figure contracts for books that [the boy] was to write all by himself – a piece of cake for a 6-year-old who had aced a college course on Babylonian history and read the *Iliad* at bedtime. A foundation was established to help ensure the prodigy would some day make an immense contribution to the world. And now? Well, if one takes the word of the Colorado child-welfare authorities who removed [the boy] from his mother's care, the alleged genius is nothing but an average kid. The only thing that makes him stand out from the pack, they say, is a pronounced learning disability... [A neighbour had previously blown] the whistle on what... [it] witnessed over the back fence. [The boy's mother] was forever riding her son... hectoring him to master lessons that went on long into the night. The authorities took note but declined to conduct a comprehensive investigation. With all those experts assuring them [the boy] was different, welfare officials decided normal rules of child-rearing did not apply. Then, one night in November, [the boy] was rushed to hospital after his mother found an empty medicine bottle in his room. That was when the world's brightest boy began to seem anything but. Officials... turned up a host of anomalies, starting with the IQ tests the mother cited as proof of her boy's genius. In most instances... the mother had graded the tests herself. On those rare occasions when they were taken under supervision, [the boy] had sat on her knee while filling in the answers. So how to explain the extraordinary scores? After all, if the answers were provided by the mother, then [the mother] must be a genius, too. Not so fast, [investigators] cautioned. In every case, [the mother] knew which test was to be administered – knowledge that would have allowed her to find the answers on the internet. [The boy] is now living with a foster family... "His recent suicidal gesture," states a psychological appraisal submitted as evidence in the ongoing custody case... [-] the true believers[who] clamour to have [the boy] returned to his mother... say... history demonstrates that societies always fear the things they cannot comprehend... [-] "exemplifies his inability to continue the existence that has been assigned by his mother, the gifted community and, most likely, by himself"... [In local news, t]he parents of young people who have committed suicide have launched an aggressive campaign to raise public awareness about the issue... The no-holds-barred campaign, sponsored by an anonymous corporate, will use full-page ads and posters in bus shelters. The advertisements will have catchlines such as... "Too many kids hang around every week – unfortunately it's not around bus shelters," and give information and statistics. But the Ministry of Health has opposed the campaign, saying the messages are ambiguous and could have the wrong effect.

...*Families fight back* OVER the past 20 years – during which N[Z] has pursued a code of silence around suicide – our youth suicide rates have soared to among the highest in the [First W]orld. Every week an average of nearly three young N[Z]ers kill themselves. Meaning every week three families are wrecked. And every week three wider circles of friends, schoolmates and the community absorb the shockwaves caused by another sad, impetuous, senseless death... But now 12 brave families who have experienced the pain of losing a loved one to suicide say it is time to face up to reality and speak out in a bid to stop other youngsters taking their own lives... "We want to change everything at the top of the cliff so that kids never get to the suicide stage," says [the group's spokesperson]n... who lost her 17-year-old son Aaron three years ago. As a first step, [the group]... hopes through fund raising, a link with Rotary, and the use of volunteers that it can get[other] groups going throughout the country.

...They find the first one after less than a quarter of an hour, just off the narrow path... In less than an hour the dead [body] is wrapped, sealed and wheeled on a metal trolley to the car park where they are gathering this year's harvest from the Sea of Trees. The Aokigahara Sea of Trees is a remarkable place, and in different circumstances it would be known for any number of interesting things. In a country overrun with development, it is a genuine wilderness, one of the few virgin woods left in Japan. Wild mushrooms grow in its mossy cavities; looming above it is the thrilling and immaculate shape of Mt Fuji, Japan's most famous and most sacred mountain. But Japanese know Aokigahara for one reason alone, and there is nowhere else like it in the country, probably nowhere in the world. Every year, people come here in their scores with the sole aim of committing suicide. As they have done every year for the past three decades, a small army of police, volunteers and attendant journalists arrive for an annual search to bring them out... In the 70s, about 20 bodies were discovered by walkers or police over a year... But 10 years ago, the number began rising and 57 corpses were found in 1994. Last year, there were more than 70... The four found in the latest annual search... brought this year's

tally to 48... Most of those who succeed in killing themselves here do so by hanging, although some take pills and booze and, during the winter, there are those who simply lie down in the snow. Why here, apart from the practical reason that it is an easy place to disappear? The answer goes a long way back. In the 19th century, feudal Japan suffered bitter famines. Aokigahara was one of many places where poor families used to come and dispose of infant and elderly mouths which they could not feed by the simple means of leaving them out in the open to die. [More recently, a w]riter... published a famous novel, dramatised on television, called *The Pagoda of the Waves*, in which a character comes to die in Aokigahara. A notorious book called *The Suicide Manual*, which achieved alarmingly high sales a few years ago, recommended it as the perfect place to end it all. In the carpark, [a]Buddhist monk... provides another explanation. "The spirits are calling people to kill themselves – the spirits of the people who have committed suicide before,"... said [the monk, who together with] 50 monks from his temple came for the first time to construct a temporary altar in the car park and to pray for the repose of the troubled spirits of Aokigahara. For as long as recorded history, the area has been dotted with various places of worship, both conventional and unorthodox... The great mountain is itself a giant deity of the indigenous Shinto cult; in the whole of Japan, there is absolutely nowhere that is more symbolically Japanese than Mt Fuji. And nothing is more symptomatic of Japan's present state of national health than suicide. Finland and Hungary have higher suicide rates, but of the big industrialised countries no population is more prone to self-destruction than the Japanese. [Two years ago], the annual number exceeded 30,000 for the first time. Last year, it rose to 33,048. The profile of the victims, and the timing of the suicide boom, corresponds with those of Japan's economic crisis, which began in the early 1990s and which has affected most of all the middle-aged and the middle-ranking whose corporations, small businesses and investments have been stricken by restructuring, bankruptcy and collapse. Railway stations in Tokyo have taken to placing mirrors along platforms – the idea is that the sight of a person's reflection will prompt the would-be suicide to think again, pause, and save the transport companies a fortune in delays and clean-up costs. The ministries of Labour and Health and Welfare have asked for funds to be put aside for measures to combat suicide. Everyone knows that the only reliable way to reduce the suicide rate is an economic recovery – and that even in boom times, the number of Japanese people who can find no alternative to taking their own lives[('suicide rules out every other solution to your problems')] is higher than any comparable country.

[For Japanese guys, 'the supreme honour is to die in battle'. If they fail to achieve that, the next best thing is a self-inflicted death (*harikari*).

...yesterday, a] 16-year-old... student committed suicide by harikari in front of Fukushima railway station in Japan, watched by 200 people.

...['A 40-year-old Thai yesterday killed herself by jumping into a pit of over 100 crocodiles, shocking crowds of onlookers at a Bangkok reptile farm.']

...Abnormal levels of a key brain chemical may predispose depressed people to commit suicide, and measuring levels of this chemical may enable doctors to identify those most likely to take their lives, researchers say... [Washington's] Columbia Presbyterian Medical Centre said yesterday that studies by a number of researchers have shown that levels of serotonin, an important neurotransmitter protein in the brain, are 20 to 25[%] lower in patients who are at high risk of suicide. Serotonin is particularly active in a part of the brain that controls inhibition, and a lack of the neurotransmitter, or its related chemicals, lowers the amount of control a person has over actions... By identifying those most likely to kill themselves, such patients then could receive more aggressive care to help them control suicidal impulses through a variety of medications now available... Identifying people who are seriously planning suicide has long been one of the most difficult challenges for doctors who work with depressed patients. People who have a dedicated plan to commit suicide often are able to disguise and hide their intentions. Also, doctors often fail accurately to gauge how serious a patient's suicide intentions are. For instance, studies in Finland and England show that about half of all people who commit suicide see a physician in the 90 days before they kill themselves, but only about 25[%] of them receive adequate care. Suicide is the eighth leading cause of death in the U[S] ('the national suicide rate per 100,000 grew from 11.6 in 1970 to 12.2 in 1989; the rate was 21.4 and 7.1 for White guys and gals – 12.2 and 2.4 for Blacks') and 'the 12th leading global cause of death, with about 950,000 people annually dying of self-inflicted injuries'].

...The partner of an Auckland[er]... traumatised since her rape two months ago has condemned Social Welfare as harsh and uncaring. [His partner] attempted suicide on Sunday – the day after her 24th birthday... [H]is partner had wanted him to take six months' leave from his Power N[Z] job to help her to get over the ordeal... When [the partner] approached Income Support Service's Waitakere office to apply for the unemployment benefit [the partner was told the couple] must spend all of his savings, then wait 10 weeks before the dole would be paid... [They] would be given "limited assistance" of \$118.74 a week for the 10 weeks – but that was money which would have to be paid back. The [partner] said the couple had no savings and... believed the financial pressures had contributed to... [the 24-year-old's] already stressed state... [The mother of] four sons... was in a stable condition at Auckland Hospital yesterday after taking an overdose of pills... [In related news, f]ive young people from the town of... Marton, population 7300... have killed themselves in the past six weeks. The... Mayor... felt "frantic"... [upon hearing about] the latest death... of a... [girl] aged 17. As well... three suicide attempts have been reported to the police in the past three months... "I ask again, is there anyone out there who can help to stop the anguish and pain being suffered here? ...this town is in trouble... We need all the information we can get from experts throughout the country. I hope they hear my plea and contact us..."

...Young people are killing themselves from an earlier age, says an expert on youth suicide... [T]he most disturbing trend in N[Z] was an escalating number of 13-year-olds attempting suicide... but the reasons for the trend were not clear, [the expert] told a seminar at the Auckland School of Medicine... [The expert], who recently completed a doctorate on youth suicide, said N[Z] still had the highest youth suicide rate in the world for [guys] aged between 15 and 24. It had the third highest rate for [gals] in that age group... [The expert] was hopeful that the services related to youth suicide would improve under the new mental health commissioner... who had been closely involved with her research.

...N[Z]'s high youth suicide rate could drop if teenagers received more help to cope with stress, anger and low self-esteem, Barnardo's says. The child welfare agency has been testing a course for teenagers under stress at three Nelson schools this year... At 39.9 per 100,000 of population, the rate... for [guys] aged 15 to 24... had doubled since 1985... [to become] the third highest in the [First W]orld... Suicides among young [gals] had remained at five to six per 100,000...

Young British... [gals] are turning increasingly to suicide... They are starting to follow young [guys], whose suicide rate has soared in the past 20 years, reports the *Times*. The department of social work at the University of Southampton says figures show the suicide rate generally among [gals] has dropped in Britain over the past two decades, but in the 15 to 24 age group it has risen sharply. The rate has also risen among 25 to 34-year-olds... [One professor] thought the rise was caused by their emancipation. "Young [gals] feel about work now as young [guys] have always felt. They feel they need to be in employment and successful. Young middle-class mums are employing child-minders so they can hold down their jobs. Then they grieve and feel guilt. Their bodies are telling them to be mums and their minds are telling them to go out and be breadwinners. The accumulation of all these stresses and pressures is leading them more to suicide." - 1996

Why did [Sarah] have to die? ...Sarah... was only 16... when... [the Aucklander] decided enough was enough and made a noose of her scarf... There's the waste of a young promising life but what hurts the family almost as much is their own sense of helplessness. They watched the once vibrant teenager become a thin and sickly girl, who, as her mother noted in her diary, "hardly ever smiles these days". Despite their efforts they were unable to steer Sarah through what... was her only bad patch in her life... Faced with little option... [the family] had accepted that the... counsellors... knew best... "If [Sarah] had got the right support I'm sure [my daughter] would have got through it..." ...her... [mother] recalls how Sarah... would skip down the hall of their modest brick state house, clap her hands and announce: "When are we going to get some fun?" It was

her mischievous sparkle the family likes to remember. "Sarah was the light of our family," said her elder sister... "[Sarah] was the most enthusiastic of all of us..." [Sarah] was perhaps also the most sensitive. The bad and sad of society were not lost on her. But her introspection and melancholy had not been cause for alarm... Sarah had the looks to follow [her sister] into modelling but it seemed more likely [Sarah] would have found a career where [it would be possible to] use her artistic talent. [Sarah] had filled a notebook of pencil, ink and crayon sketches which showed real ability... [However, her] jottings suggest... that [Sarah] was depressed about what to do with her life and unsure whether it was worth entering the game. "Basically, we live a short disappointing life and then we die," [Sarah] wrote in her notebook during her last year. "We fill our lives with shit things like careers and relationships to delude ourselves that it is not all totally pointless..." ...[Incidentally, w]isdom teeth can lead to depression and even suicide, say... researchers at the University of Leiden in the Netherlands. The phenomenon is most visible in people in the 15 to 25 age group, when people are most likely to cut their wisdom teeth. The likelihood of depression is stronger when the upper... wisdom teeth are pushing through.

...Shocking new... figures show that... suicide... now rates as the second most common cause of death among young N[Z]ers, behind road crashes[, although more]... than twice as many Aucklanders die by their own hand as are killed on the roads... [O]ne in four N[Z] teenagers has tried or thought about taking his or her own life... The latest figures, for 1995, show a leap to 156 suicides and 1310 hospital admissions from failed attempts... Based on the 1995 figures, N[Z] has the second highest suicide rate for [guys] aged 15 to 24 behind Finland... The results... of... [the] Injury Prevention Research Centre survey... have been presented to the Government as part of its national youth suicide strategy, due to be released tomorrow. The Minister of Youth Affairs... has led Government agencies in preparing the strategy to slash the rate and identify contributing factors... [The strategy is] dependent on budget funding but [the minister] was confident the money would come through... This year a National Health Committee research team produced guidelines estimating an average-sized secondary school could expect 20 students a year would attempt to take their lives... Schools are the most logical sites... to attack suicide... because young people can be easily accessed individually and in groups... [Suicide is already] an issue that young people talk about a lot... But... [public] awareness needs to be raised.

...The suicide-awareness programmes that were available to schools should not be undertaken... Teaching school students about suicide[– 'the #2 cause of death in the world' –] may serve to increase the problem, a Ministry of Education and National Health Committee research team said... It called instead for schools to promote healthy environments where students could develop self-esteem. It urged schools to address and manage difficulties facing young children and to improve the recognition of emotional distress.

...IT'S A peculiar paradox for a journalist – how to write about whether or not to write about a particular subject, because to do so might have fatal consequences... A top N[Z] suicide researcher's quest to quell media coverage of suicide cases – because... it can provoke copycat suicides[(a 'number of similar attempts were made the day after a suicide featured on' a popular local soap opera)] – does not sit easily with the hallowed freedom of the press and the public's right to know. While... guidelines for minimal and "muted, cautious" reporting are left to the discretion of journalists and editors, one publication aimed at deterring youth suicide has been canned for fear that its contents could have the opposite effect.

...N[Z]'s restrictive laws on the reporting of youth suicides may contribute to the country's high youth-suicide rate, says a body representing newspapers in the Commonwealth... Unless the coroner rules otherwise, all that can be reported is that someone died and there were no suspicious circumstances... The Auckland office deals with at least one suicide every fortnight where young people – with no history of mental illness – have decided to end their lives. [Last year 'the Mental Health Commissioner backed a call for a review of the law covering suicide inquests. The commissioner said coroners had an important role in preventing suicides. They had access to information not available to anyone else. The commissioner did not know if publishing details of coroners' findings would increase or lessen the chance of copybook suicides.'

...yesterday a psychiatrist 'said it was worrying that the suicide of Nirvana lead singer Kurt Cobain, which at the time prompted a significant increase in suicide crisis calls, was applauded by a 15-year-old character in the recently released AUSn novel *Shoovy Jed*.'

...With his death, Michael Hutchence joins the long list of rockers who have taken their lives. The most recent high-profile casualty was Nirvana vocalist and guitarist Kurt Cobain, who shot himself in the head... in April 1994, aged 27... According to Cobain's suicide note, "I haven't felt the excitement of listening to, as well as creating, music... for many years now." As with Hutchence, [Cobain] left a baby daughter. Like Cobain, Joy Division singer Ian Curtis built a career on songs filled with angst, paranoia and death... [Curtis] hanged himself in his Manchester... home in 1980... One of the more spectacular exits can be claimed by Johnny Ace, one of the most popular balladeers of the 1950s. [Ace] died back-stage at Houston City Auditorium on Christmas Eve in 1954, while playing Russian roulette. [One of the more surprising suicides was that of 'Freddie Prinze. At 21, Prinze "was one of the biggest stars in the US, earning hundreds of thousands of dollars and being pursued by every starlet in Hollywood." At 22, Prinze was dead. Like Marilyn Monroe, Prinze was love-starved and unsure of himself when younger, and continued to feel that way even though millions of people professed love for him and showered him with gifts and money.'

...When Isambard Kingdom Brunel built his monstrous Clifton suspension bridge in Bristol... the [son of the French engineer who had 'invented a mechanical method of producing ships' blocks – regarded as the first example of automation – and the first tunnelling shield, with which was built the first tunnel under the Thames between 1825 and 1843'] failed to predict the tragic consequences... [T]here have been well over 100 "falls" in Brunel's shadow during the past 20 years... alone... People come from as far as London, Oxford and Shrewsbury to step off this... 85m... landmark. Few survive... [A]bout 300 suicides each year (one-20th of all cases in England and Wales) are leaps from a staggering height... Jumpers average 35 years old, and [guys] are twice as likely to leap as... [gals, who] are more likely to commit suicide when suffering from pre-menstrual syndrome, according to a Swedish study... (interestingly, more [gals] attempt suicide, but more [guys] succeed)... Napoleon, however, made a complete botch of suicide. When 3000 French troops were slaughtered during the last engagement of the Peninsula War at Toulouse in 1814, the ill-fated emperor swallowed a vial of poison prepared two years before... Unfortunately for him it was stale, and [Napoleon] was forced to retire alive and shamefacedly to Elba... Sociologist Emile Durkheim called suicide "contagious." And so it is... A wave of European suicides followed the publication in 1774 of Goethe's *The Sorrows of Young Werther*, in which a romantic... [youth] shoots himself. Now, similar imitative behaviour can follow soap opera suicides (apologies to Goethe)... [A]ggressive behaviour is often the key. In a confidential inquiry into suicides among the mentally ill, completed by the Royal College of Psychiatrists last year, a third of people who took their own lives had displayed past evidence of aggression... The paradox is that it seems almost impossible to know how to prevent a suicide from taking place... Back in the 1950s suicide was a criminal offence.

...In war torn countries around the world, young people fight desperately for survival, while in N[Z] they increasingly opt for death by their own hand to relieve the emotional burdens life has to offer. These are stresses caused by hopelessness, depression, neglect and abuse, accompanied by adolescent hormonal changes. At the same time, our teenage crime rate continues to grow, gaining in momentum in its blood-curdling levels of violence. Teenagers are raping, killing, holding up dairies and banks at gun point, and stabbing taxi drivers for loose change. Where has it all gone wrong? Adolescence is the turning point where many young people decide to go one way or the other... [T]he Principal Youth Court Judge for N[Z], deals primarily with the accidents at the bottom of the cliff[, witnessing]... daily the results of a long entrenched destructive cycle. By the time our youth reach him, many have lost their boundaries and have no sense of right and wrong. However, [the judge] emphasises strongly that more of these children are sinned against, rather than the sinners... "What surprises me is how well some of these children do, not how badly they do..." For those not so responsible, it seems that since the 1989 introduction of Tomorrow's Schools, education has lost its tracking system... There is no follow up from primary school through to high school, so if a child disappears from school, it goes largely unnoticed. Without some form of tracking, the most at risk children stand little chance of receiving any form of help... [M]any children are left to fend for themselves... [■] More

young people are roughing it on the streets of Auckland, according to the city's community welfare agencies... [T]he numbers under 18 had doubled... The... city missionary... said that once young people were on the streets they stopped learning and were vulnerable... to... abuse... "I think we haven't as a society taken seriously the problems that many young people face day by day..."

...Youthline[– the teenage version of Lifeline –] has accused the Auckland City Council of failing young people after bureaucrats recommended it miss out on a \$5000 grant... for help with its volunteer development programme... In 1995, a tough policy was introduced that excluded health, education, welfare and counselling groups and employment initiatives from receiving discretionary grants. The council sees these as Government responsibilities... In total, 121 groups are seeking almost \$850,000, with only \$180,000 available... down sharply from the almost \$1.2 million distributed in 1994-1995.

...[the number of young people helped by a free nationwide telephone counselling service is limited by a lack of funds. Only a fraction of calls made to Youthline's crisis line service can be answered. Youthline estimates that for every one of the 20,000 calls answered by volunteers annually, 11 callers don't get through. In human terms, says the service, more than 200,000 calls for help go unanswered every year. To meet the demand, Youthline is launching its first-ever annual appeal this week. Funds will be used to double Youthline's free crisis service from 12 to 24 hours daily. Five thousand envelopes will be sent to households throughout NZ during the week.' By the way,] Selwyn College students[– who are also fed]... up with waiting for politicians to act on youth suicide and despair[– have]... decided to take the matter into their own hands... [by organising] a workshop... for fellow teenagers to work through the pressures and problems they face.

...Suicides in Auckland have reached epidemic proportions, giving the police and the Auckland coroner grave concern... The number of Auckland people taking their lives has almost doubled since 1995... [A s]ergeant... said the... 68 suicide reports during the past five months... had no common denominator – they involved people from all walks of life, all ages, both sexes and different cultures... The Otahuhu inquest officer... said that three to four years ago cases would have involved almost solely teenagers. "It now goes through the whole gamut of ages and it's pretty horrendous."

...the... principal investigator with the Canterbury Suicide Project... says suicide... is the result of many factors, but 90% involve a diagnosable psychiatric condition... [Of such conditions,] the Anxiety Disorders Foundation of N[Z] (formerly called the Phobic Trust)... [estimates that] disabling anxiety, social phobia and obsessive/compulsive disorders affect about one in every 30 children...

Between 10 and 20[%] of people who attempt suicide are referred to their GP with no other follow-up care, says an Auckland psychiatrist... That is despite research showing people who have previously inflicted harm on themselves are 20 to 30 times more likely to commit suicide than the rest of the population... [O]ne crown health enterprise referred more than half such patients back to their GPs with no other care.

...[GPs] have hit back at official concern that they are failing to detect suicide warning signs in... patients. They say... people are taking their lives because of long delays for specialist help... [In another development, a South African] psychologist... who set up practice in N[Z] four years ago... said... [yesterday that:] "There are 50 different suicide prevention programmes running in N[Z] but there is nothing for the caregiver..." [So the psychologist]... has designed a course "Caring for Caregivers". It aims to teach caregivers... [like the Aucklanders who'd] had enough after a member of her family attempted suicide for the 11th time late last year... how to recognise traits in someone who may attempt suicide and how to understand them when they are in suicidal distress. The course also teaches the caregivers self-development and how to... cope with suicide.

...Southland's high suicide rate is partly due to the lack of light, says an Invercargill psychologist... Turning on... more bright lights at work and home was one way of... [reducing] the region's... suicide rate... "People don't believe me when I tell them they don't need me, they need electricity."

...There is no mystery about the huge increase in the number of people taking their lives in the past couple of years. Suicide is simply another downside... of the society we have chosen for ourselves – or, rather, that has been chosen for us... We no longer place any emphasis on virtues, which are timeless and unchanging, but sprout on ad nauseam about values, which we can, at the drop of a difficulty, adapt to suit ourselves... In such a society is it any surprise that... [people] of all ages, but mainly young people, commit suicide – the ultimate ego trip, the final expression of utter selfishness and its brutal companion, self-pity? I think not... And where is the surprise in reading of young [guys] who top themselves because they have been jilted by their girlfriends? Many young people today are so desperate for human love – something they've heard about but never experienced – that when they find it, or one of its counterfeits, and are then suddenly deprived of it, they decide that life isn't worth living.

...['Maoris do not commit suicide.' According to Maori tradition, 'the body should not be wasted'; 'the body of each member is regarded as belonging to the whole village and, therefore, a person who commits suicide is stealing something from the rest of the village'.]

...Suicide is likely to have been part of Maori culture before European colonisation – and... unrequited love or shame... was at the heart of it, a medical researcher says... There was no information about suicide rates before Europeans arrived but Maori oral history and early ethnographic evidence revealed it did exist... The notion that suicide rates were low before colonisation and high as a result of it did not appear to be correct... Now both Pakeha and Maori [guys] had high suicide rates by world standards... However, [the]... rate for Maori [guys] aged 15 to 34 was half that of Pakeha... [guys, and] suicide rates among Maori dropped markedly after the age of 24 while Pakeha rates continued to rise... [T]his difference indicated there was a possible protective effect related to the esteem of elders in the [Maori] community. Suicide in custody was a particular concern. About 23[%] of Maori suicides occurred in custody, as opposed to 2.2[%] for Pakeha.

...The Department of Corrections has earmarked \$2.3 million to build 82... special cells... in prisons around the country... to stop prisoners committing suicide... as part of a national strategy to reduce the suicide rate. Among other initiatives are a new computer system... and new agreements with mental health providers and the police in identifying and treating suicidal prisoners. Safe cells have no projections or surfaces that would enable prisoners to do themselves harm. They also have television monitoring... [In addition, staff] were being trained to recognise the warning signs... Suicidal Maori prisoners displayed different symptoms from Europeans... [The] assistant general manager of public prisons, said that staff were... traumatised by prisoner suicide. "The impact... is far-reaching... it's around an institution for months." ...[meanwhile, the] Government has allocated \$8.8 million over the next three years to help high-risk young people.

...A visiting expert on suicide... said [NZ's G]overnment... could not afford to blindly throw money at the problem, [then added that] there were enough written reports and recommendations to begin pilot programmes here years ago... [The expert, who left NZ for AUS] four years ago after working for the Ministry of Youth Affairs, [and now] manages the Statewide Youth Suicide Prevention Project... says... the [AUSn Government has] invested about \$45 million in research and services for suicide prevention in the past year, at both national and state level... "I'm not saying what the A[US]ns are doing is perfect, but successive N[Z] Governments have been warned and have sat on their hands." ...[AUS's youth suicide] rate has quadrupled over the past four decades[, but young NZers still]... kill themselves at twice the rate of... [their AUSn counterparts. It has been suggested that NZ] should lower the voting age to 16 to show young people they are valued...

The Ministry of Youth Affairs is working through hundreds of submissions for its proposed suicide prevention plan... and hopes to report to the cabinet early next month... An Approach for Action aims to tackle the problem on five fronts: promotion of well-being; early identification and help; critical support and treatment; support for families and friends after suicide; and information and research. While many people involved with youth suicide applaud the efforts... they doubt whether [the Youth Affairs Minister] will get the resources to make a difference... The minister... has asked for patience as [it] puts together the plan... The minister said the problem was urgent but finding a solution was "a really big ask." ...The Government has been repeatedly criticised for dragging its heels over the problem, which claims the lives of hundreds of young N[Z]ers each year.

...The grieving for young... [NZers] who have ended their own lives has become a wailing. The... mothers and fathers... and friends who wish they'd understood[cry] out "enough!" We have made the word tapu too long. We avoid talking about suicide but it is a curse on our youth and

they are our future. We... need to talk about it, not blame ourselves or the Government... [– although,] compared with other public spending[, the]... price the Government has placed on this problem... [is] hardly enough to raise a ripple in the pond. Death is big. When someone takes their own life... it's too late... to ask... questions... We live in one of the most wonderful places on Earth... [However, is] it possible that... because we have... images of another heavenly dimension... our children... think... [the sooner they die the sooner they will go to an even better place? (The mother of a recent suicide victim recalls 'lying in bed in the evening in their Howick home and talking to Aaron through the wall. A question that Aaron asked her just days before his death, still teases her mind: "Mum, what's heaven like?") After all, many adults think] **DEATH itself is a wonderful and positive experience...**

With their bags packed as if for a trip, most of them carrying a passport and driver's licence, 39 members of the American Heaven's Gate cybercult apparently died in shifts. One group consumed a fatal mix of phenobarbital and vodka – the next tidying up before taking the recipe... One day after a tip led them to the macabre scene – decaying bodies clad in uniform-like black clothing and brand-new black Nikes, and all but two draped in large, purple shrouds – authorities said they had not yet delved into the reason behind the mass suicide... the largest... in [US] history... But one of the bodies provided a powerful and significant clue: the corpse of Marshall Heff Applewhite, a 66-year-old self-styled messiah who for years journeyed the nation... [T]he dead were 21 [gals and 18 guys], ranging in age from 26 to 72... "This seemed to be very well planned,"... said... the... San Diego County Medical Examiner...

Their plans... included leaving videotaped farewells from each of the victims who explained their motives and actions, said[the] San Diego Sheriff's Commander... The sect's legacy also included web sites that... provided a good, convenient source of income, allowing them to run... the rented... \$2.2 million mansion... they considered their monastery... and... to... describe their faith... [T]he teachings of Applewhite and Bonnie Lu Trusdal Nettles... promised the faithful would be rescued from earthly evils and transported by spacecraft to their reward. Nettles died in the 1980s. The couple first came to national attention in the autumn of 1975 when they persuaded two dozen people in the Waldport area of Oregon to abandon their possessions and leave on a journey of metamorphosis that would lead them into eternity. They preached that 2000 years ago "crew members of the Kingdom of Heaven" sent one of their own to Earth in the form of Jesus Christ. Jesus' "sole task" was to "offer the way leading" to the Kingdom of Heaven to those who followed his teachings... With society controlled by "Luciferians" and the Earth destined to be "spaded under" in preparation for a new civilisation, the sect believed their salvation lay in... a one-way trip... aboard a UFO trailing comet Hale-Bopp, a journey that could only be made through death.

...Two former members of the UFO cult which committed mass suicide in California last week said yesterday they were confident the group had beamed up to a space ship as their leader had promised. [One of them], whose wife... was... [amongst] the 39 people who killed themselves... was sorry [about missing] the suicide... "I wish I had the strength to have remained... and continued to be a part of that crew... [which will 'go to nourish and tend various gardens and planets in the literal heavens'.]" His daughter... who was abandoned by her parents when they left to join Mr Applewhite in the 1970s, told CBS... "I don't believe [mum] committed suicide. That's a strong word to use... This was something [my mum] worked all of her life to accomplish. [Mum] graduated to the next level... that is enough for me to let her go with peace." ...Meanwhile, the first book about the suicide is about to leap off the printing press. A division of HarperCollins Publishers has announced that its as-yet untitled paperback will have a first printing of 500,000 copies... [□ Under] the terms of... a bizarre insurance policy taken out by the cult members... each... stood to receive \$US1 million... in the event of alien abduction, alien impregnation or death by alien attack. The annual insurance policy was taken out... last year... But a verdict of suicide from the US coroner would invalidate any claims against... the... British... underwriting agent... [who was also associated with] policies against... virgins becoming pregnant through immaculate conception.

...I... typed in the Heaven Gate's web site address for another macabre look. My computer blinked for a minute then returned an error message saying the site was unavailable. The message read: "This means the named host probably does not exist." ...A FEW weeks ago, the kooky hog-wash on the internet could be dismissed easily as part of the entertaining nonsense that occurs when you open up a publishing platform to anyone. But as San Diego authorities get rid of the odour of death... serious questions are being raised... Applewhite... rejected conventional religion... in favour of a mutant science... [by interpreting] the Biblical reference to the Kingdom of Heaven as referring to an advanced civilisation in outer space... "Religion is less than truth... it is an abuse of truth... If the extent of your religious background was *Star Trek* – that in itself could be the best background you could have, if you could accept this as Truth, if you could accept this as reality... Our 22 years of classroom here on planet Earth is finally coming to a conclusion – 'graduation' from the Human Evolutionary Level..." ...Fantasy... is the oldest form of literature there is. Sci-fi, though, is a product of the last two or three decades... [In addition,] unlike any other previous communication system, the net enables myths to quickly take on the appearance of fact... Type a subject like "paranormal" into an internet search engine and you are soon connected to those trying to push their often unusual point of view. Millions of net users will experience no problem. They are stable and intelligent enough to tap into this information database and make a sound judgment on what they find. It is only the minority, those introverted souls already willing to try anything to improve their dismal existence, who can fall under the spell of a misguided cult leader or unusual philosophy. Especially vulnerable are those lacking social skills who spend their entire leisure time in front of their flickering computer screen switching between playing the increasingly realistic fantasy... games and surfing the net. They are in danger of losing touch with real people in "the real world" in the same way that long-term prisoners do. There are[already] some who consider the internet itself is... a great terrestrial god.

...As the last comet of this century and one that astronomers rank as a great comet for its brightness, Hale-Bopp holds a special appeal for end-of-the-millennium groups, some of whom believe it presages the end of the world. Some of the more imaginative postings on the Internet link the comet's visit with everything from the coming of the Messiah to extraterrestrials arriving on Earth... The Heaven's Gate site made no mention of the coming millennium, but[one] trend spotter... predicted that similarly bizarre behaviour would only increase... [P]eople may use this "millennium fever" as an excuse for more mass suicides and irrationality.

...Officials piecing together the grim story of the Heaven's Gate cult suicides have released more bizarre details. Among the revelations was the fact that some of the... [guys, including 'their god'] Applewhite, had been castrated... and that one was the brother of a star of the 1960s *Star Trek* television series – itself the object of a cult following among fans of science fiction and fantasy... [T]he group had been trying to make a science-fiction movie about its bizarre beliefs... Entitled "Beyond Human: Return of the Next Level,"... the cult's screenplay featured motherships, alien abductions and clashes between bad reptile-like aliens and benevolent ones for control of the Earth... The *Washington Post* reported yesterday that Applewhite was fired from his post as music professor at Houston's Catholic University of St Thomas in 1970, after administrators learned [Applewhite] was in a homosexual relationship with a student. The... depressed and ashamed Applewhite checked into a psychiatric hospital the following year and asked to be "cured" of his homosexual desires. It was there that [Applewhite] met Bonnie Nettles, who became his spiritual companion... The couple renounced all sexuality and sought to purge it via their cult. Coroners have completed autopsies on 30 of the victims and... [their families] prepared yesterday to bury their loved ones, ending one chapter of a tale that mixed... science fiction... religion and... computers... in a... deadly brew... [In related news, a] relationship forged in cyberspace led to the double suicide of a... 24-year-old... from Chicago[who] was in the midst of a sex change... and a 21-year-old [guy] from Orillia, Ontario, the first time they met in person... A report from the Canadian Press news agency said the [pair] were found in bed with soft music playing... [and] they died of an overdose using a drug recipe found on the internet.

...ON SATURDAY, MARCH 22, around the time that the disciples of Heaven's Gate were just beginning their quiet and meticulous self-extinction, a small cottage in the French Canadian village of St.-Casimir exploded into flames. Inside the burning house were five people, all

disciples of the Order of the Solar Temple... [Left outside at] the last minute were the... [three teenage children of two of the dead. The children's grandmother was another of the dead]. As many as four times, the[disciples had] swallowed sedatives, then arranged themselves in a cross around a queen-sized bed, only to rise in bleary frustration when the detonator failed. Finally, they blew themselves to kingdom come. For them that would be the star Sirius, in the constellation Canis Minor, nine light-years from Quebec. According to the doctrines of the Solar Temple, they will reign there forever, weightless and serene... Since 1994, 74 members of that group have gone to their death in Canada, Switzerland and France.

...Princess Grace of Monaco belonged to the Order of the Solar Temple... the Sunday Times reported, quoting producers of a documentary on the cult... According to the documentary... the princess... was initiated into the order only a few months before her death... [and] gave nearly \$US10 million... to the sect... [However,] the allegations... were "sick fantasies," a Monaco spokes[person] said.

...Fifty-three... Solar Temple... members killed themselves in October 1994. The... tragedy of faith is that its promise of a better world can outweigh the value of the current life. The last posting from Heaven's Gate... [showed that] their fear of the future conquered their fear of death... The first of the modern wave [of cult suicides] occurred in April 1993, in Waco Texas, where at least 71 members of David Koresh's Branch Davidian cult died in a fiery shoot-out with federal authorities... THE PROTOTYPE cult self-destruction occurred in November 1978, in Jonestown, Guyana, where more than 900 followers of the Rev Jim Jones met their deaths.

...From the time of St Paul, some elements of Christianity have indulged an impulse to subjugate the body. But like Judaism and Islam, it ultimately teaches reverence for life and rejects suicide as a shortcut to heaven. The modern era of cultism dates to the 1970s, when the free inquiry of the previous decade led quite a few exhausted seekers into intellectual surrender. Out of the rubble of countercultures came such groups as the Children of God... the Divine Light Mission... and the Unification Church... On Nov. 18, 1978, the cultism of the '70s arrived at its dark crescendo in Jonestown... where... members of Jim Jones' Peoples Temple died at his order, most by suicide... "Jim Jones' last words to his followers were 'We will meet in another place' and his followers drank the poisoned Kool-Aid because they thought they were going to heaven," said [a] cult expert... and... co-author of the book, *Snapping: America's Epidemic of Sudden Personality Change*. [The co-author] calls the cult process a death spiral that takes place in three stages. First a person is enticed into the cult where his personality will be "snapped." ...In the second stage, the convert is isolated, deprived of sleep and subjected to mind control techniques and indoctrination reinforced on a daily basis. The idea is to... make them totally susceptible and vulnerable to command... The third stage... is the confrontation – real or imagined. In the case of the Jonestown mass suicide... people died because a critical [US congressperson] had flown in to see Jones' jungle compound. - 1997

AT THE edge of Evergreen Cemetery overlooking a dusty suburb of Oakland in California is a small granite gravestone. It is inscribed simply, "In memory of the victims of the Jonestown tragedy." Nearby is another stone, set flat in the dry earth, that gives some small sense of the scale of that tragedy. It was put there by a [guy] whose wife, five daughters, two sons and sister all died on November 18, 1978... On Wednesday two groups will gather on either side of the U[S] to remember the victims... and to continue their search for answers to why they died... Of the 911 [USers] who died... after taking grape Fla-Vor-Aid laced with cyanide, 234 are buried in a mass grave in Evergreen Cemetery. Most were among the 260 children who died and, lacking dental records, were never identified. It took six months to find a cemetery that would accept the bodies, which had been turned away from communities across northern California. Even in Evergreen, there is nothing that mentions the number of children buried there. Plans for a memorial wall fell apart over whether to include Jim Jones' name among those who died... The People's Temple still grates on exposed nerves of horror and incomprehension in California... The People's Temple has become the archetypal cult, its members seen as the brainwashed victims of an unhinged [person] who believed himself to be the reincarnation of both Jesus and Lenin and turned his charismatic power into a force of destruction. After Jonestown, new religious movements could no longer be benign. They were all seen through the prism of the Jonestown suicides. In 1955, Jones founded the People's Temple Full Gospel Church in Indianapolis... A decade later, Jones, haunted by a vision... of a nuclear war, moved his congregation to Redwood Valley in northern California, which *Esquire* magazine had listed as among the safest places in the U[S] in the event of an atomic attack. That year the church had just 86 members... Always obsessed by the threat of nuclear war, Jones had sent some members to the former British colony of Guyana in 1974 to begin work on Jonestown, a 2400ha agricultural commune... In 1977, Jones' church came under increased public scrutiny with news articles based on testimony of defectors accusing him of physical and sexual abuse. The group enlisted the help of the Bay Area congress[person] Leo Ryan, who travelled to Jonestown in November 1978 to investigate allegations that people were being held there against their will. Along with a group of television and press reporters, [Ryan] spent a day at Jonestown, being shown around and entertained with a show in the evening. Only some two dozen people chose to leave with him, but these defections of long-standing members pushed the increasingly fractious Jones and his inner circle over the edge. One [follower] tried to stab Ryan, who was only superficially hurt but decided to leave Jonestown immediately. A group of [followers] followed Ryan back to the airstrip and opened fire on the plane, killing... [Ryan], three journalists and one of the Temple members who had chosen to leave. Shortly after Ryan was killed... the suicides began. Jones told his followers that Guyanese troops would soon arrive and would kill their children. On the tape of the suicide [Jones] rants about the betrayal of those who had left, suggesting that to prove their loyalty to him, his followers must die now... Some accounts suggest that 70 adults and 260 children were murdered... first... – the rest went willingly to their deaths... Later a temple leader, Sharon Amos, who was in the Guyanese capital of Georgetown, slit her throat and those of her three children. The final suicide came a few months later when the Temple spokes[person]... shot himself in a motel room in California. In all 923 people died... 'We got tired. We didn't commit suicide, we committed an act of revolutionary suicide protesting the conditions of an inhuman world.' – Jim Jones' last statement... The standard analysis, produced in dozens of books soon after the event, portrayed Jones as an evil genius surrounded by a compliant harem... For five years before the suicides, Jones had been conducting rehearsals for the suicides, known as "White Nights." These were mostly tests of loyalty to him that built up a mindset that loyalty meant sacrificing one's life...

A rise in pensioner suicide is being blamed on society's failure to treat older people as human beings... [A visiting AUS]n lecturer in ethics and religion, says American studies point to a... growth in the aged industry, where people were "warehoused" and treated like a commodity, ...since 1980... Previously care was more family based and personal... [S]peaking to nurses at a national gerontology conference in Auckland, [the lecturer] said suicide was also triggered by depression following the death of a spouse, heavy drug dependency and fear of impending death.

I've had a lot of old people ask me to give them a tablet to put them to sleep for good. I've become a strong supporter of euthanasia... The worst thing is being dribbled or spat on, that's worse than being shat on... *Do you have a job worse than the nursing assistant? Then write to us*. [Incidentally, the Orlando resident]... who became a quadriplegic when her mother shot her in the neck has been given the right to end her own life by a Florida judge – a ruling that may see the mother charged with murder... The shooting occurred in March when [the mother heard the daughter] and her boyfriend talking about putting her in a nursing home... [● A severely disabled person] died yesterday after asking officials at a hospital here [it] had lived for 32 years to unplug his ventilator. Bill White, believed to be one of the longest surviving quadriplegics on a ventilator in the US, died at Strong Memorial Hospital. [A hospital spokesperson]... said: "There's a great sadness there. And yet, people feel maybe a strange sense of gratification as well, because this is what Bill wanted." ...White (50) needed 24-hour care and rarely left his bed... [after breaking] his neck in a high school gymnasium... Under New York law, patients may discontinue life-saving treatment.

...Paralysed by a bullet to her spine and barely able to speak, Georgette Smith nevertheless was able to make her views clear: [the 42-year-old] did not want to live this way. [Georgette] died yesterday, one day after a Florida court granted her wish[– having deemed her mentally well enough to make the decision –] and gave permission for the ventilator that was keeping her alive to be disconnected. For her family, the ordeal is far from over... Even though Smith made the decision to die, prosecutors are likely to charge... her... frail and ageing mother, already charged with the shooting, ...with murder, creating a highly unusual – and perhaps unprecedented – case... Legal experts said the prosecutors were within their duties to upgrade the charge but the civil liberties lobby said a strong case could be made that the cause of Smith's death was the removal of life support, not being shot... Before asking to die, Smith gave prosecutors a videotaped deposition from her hospital bed. It will be... the evidence...

Michigan's Oakland County prosecutor... said on Monday that the injection appeared to have been a clear case of homicide. CBS News, usually resistant to giving material to police, was subpoenaed to hand over the videotape. The... [pathologist] dared prosecutors to arrest him immediately after the *60 Minutes* programme on Sunday showed an edited version of the videotape... The fiery... pathologist wanted either a court battle to settle the long-running issue of the legality of euthanasia or to be left alone by police... 52-year-old Thomas Youk... who suffered from amyotrophic lateral sclerosis... nodded his head when asked if [it was his wish] to end his life... Mr Youk... was [also] shown signing a consent form agreeing to the lethal injection.

...When a doctor hastens the death of a terminally ill patient, the end is not always easy or peaceful, researchers report in the *New England Journal of Medicine*. The scientists from the Netherlands, where physician-assisted suicide and euthanasia have been legal for years, found that such efforts often went awry. When patients tried to kill themselves using drugs prescribed by a doctor, the medication did not work as expected in 16[%] of... 649... cases. In addition, technical problems or unexpected side-effects occurred 7[%] of the time. Problems surfaced so often that doctors witnessing the attempted suicide felt compelled to intervene, to ensure death, in 18[%] of cases. Even when the doctor was directly performing euthanasia... complications developed in 3[%] of the attempts. Patients either took longer to die than expected or, in 6[%] of the cases, woke from a drug-induced coma that was supposed to be fatal... The new study... introduced a new element into the U[S] debate over physician-assisted suicide[s] by a pathologist (who 'has been present at over 45 suicides' and 'been cleared of criminal wrongdoing in 3 trials involving 5 deaths')...

THE ASSISTED-suicide crusader... who dared prosecutors to charge him, was convicted of second-degree murder [yesterday]... After deliberating for more than 12 hours over two days, a jury rejected [the pathologist's] arguments his intent was not to murder Thomas Youk... who was confined to a wheelchair and had difficulty breathing and eating. The 70-year-old retired pathologist, who represented himself during the trial... faces a minimum of 10... years and a maximum sentence of life. Some members of the handicapped-rights group Not Dead Yet who have been critical of [the pathologist's] assisted suicide activities quietly sobbed in the courtroom. The jury also found [the pathologist] guilty of delivery of a controlled substance, which carries a prison term of seven years... [The judge ordered that the pathologist be] released on a \$US750,000 bail... [The pathologist], known to some as "Dr Death" during his nine-year crusade, said last November... [His lover], who claims to be a reformed character, appealed for parole last week to the House of Lords. That decision is still pending.

...A tragic young victim of motor neurone disease in Britain was yesterday granted his wish to be allowed to die when [t]he... 19-year-old... loses his final means of communication... with the world around him... – the blinking of his left eye... A High Court Family Division judge in London granted doctors a declaration that they would not be acting unlawfully in withdrawing life support from the... [19-year-old – who is] one of the youngest people to be afflicted by the fatal nerve condition, which cripples the body but not the mind...

A climbing mishap 21 years ago left [a Christchurch resident] a tetraplegic. His spine snapped after a headlong fall down a crevasse at the top of Tasman Glacier... His eyesight is failing and since the death of doting wife Elizabeth in 1995 [the tetraplegic] has taken a dim outlook on life... Robbed of feeling in his fingers and with no effective muscle control, his fit, well-built frame has wasted away in a wheelchair and [the ex-pat Brit] is reliant on 24-hour care from nurses. His clipped southern English... accent is now whining and gravelly, the legacy of a tracheotomy to clear a huge infection after his chest collapsed... "I'm a condemned body. It's like living in a house that's falling down,"... Yet although his body is wearing out, [the 59-year-old] notes a cruel irony: one muscle won't give out. His heart is too strong to grant him "merciful release". So for three years [the 59-year-old] has asked politicians to show compassion and pass a law enabling him to legally end his life by voluntary euthanasia. While the A[US]n euthanasia debate gained publicity last week when[a] terminally ill cancer patient... made a televised plea to die, [the Christchurch patient's] attempts to spark debate here have had little impact... This month his latest letter, dictated to a nurse, was posted to[every one of NZ's] MPs, hoping to find one who would initiate a bill to enable discussion. By last week 60 had replied. Some quoted the Bible in refusing support, most were non-committal... [The patient, who] describes his day-to-day existence as a form of torture... seeks an act giving adults of sound mind the right to put an end to painful suffering by merciful means... [The patient] has to be washed and toileted, and turned during the night. The physical pain is numbed by codine tablets... Ironically, his fight for the right to die is his only reason to live.

...A pioneering A[US]n doctor who wants to set up "how to die" clinics in N[Z] has unveiled plans to set up the world's first floating euthanasia clinic. A ship will drop anchor off A[US] and administer lethal injections or drug dosages to terminally ill patients who wish to die with dignity. [The]Dr... plans to buy a Dutch-registered ship so that [it] can circumvent A[US]n law. The Dr... will take advantage of impending legislation in the Netherlands to legalise euthanasia... The Dutch Upper House will begin debating the euthanasia legislation tomorrow but the vote is seen as a formality after the Lower House approved the bill in November. Dutch authorities have turned a blind eye to the practice for decades anyway. Mercy killing is also tacitly tolerated in several other countries, including Switzerland and Belgium, but none has yet legalised the practice. The US state of Oregon has legalised medically-assisted suicide where the doctor gives the patient legal drugs but does not administer them. [The]Dr... rose to prominence when [it] performed euthanasia on four terminally ill patients after the A[US]n Northern Territory... legalised the practice in 1996.

The N[T] Supreme Court yesterday upheld the world's first voluntary euthanasia law in the face of a challenge brought by a coalition of doctors and church and Aboriginal leaders. The court found that the law was within the territorial Parliament's power, but opponents say they will appeal to A[US]'s federal High Court, asking for a ruling on whether the right to life is protected by the constitution. The territory's assisted suicide law, allowing the terminally ill to die by lethal injection or pill if they meet strict conditions... [– t]he patient must be 18 or over, obtain the signatures of two doctors and a psychiatrist, and undergo a seven-day cooling-off period before[receiving] the... fatal drugs... [–] came into force on July 1. But

it has not yet been used, with doctors unwilling to approve applications in the face of the legal challenge and separate legislative threats in the territory and national Parliaments. Doctors have been warned that they could face murder charges if they help a patient die and the law is later overturned... but doctors have admitted the practice occurs unofficially... The law... is overwhelmingly supported in popular opinion polls.

...After a meal and a relaxing drink with his doctor on a warm Sunday afternoon, death came quickly to cancer sufferer Mr Bob Dent in the world's first legal assisted suicide. Mr Dent's peaceful death with family and friends in his Darwin home has ignited debate about whether... the dying should endure their agony until death comes naturally. The Government that runs this remote outback territory represents less than 1% of AUS's 18 million people, but its... law legalising assisted suicide has far-reaching impact in A[US] and overseas, supporters and critics agree... Mr Dent himself fuelled the debate with an emotional plea from beyond the grave for A[US]'s federal Parliament to reject... a private bill that would see the... Parliament use its constitutional powers to override the territory law... In an open letter released on Thursday but written on the eve of his death by computer-delivered lethal injection, Mr Dent said... "The church and state should be kept separate. What right has anyone because of their own religious faith, to which I don't subscribe, to demand that I behave according to their rules and endure unnecessary intractable pain. If you disagree with voluntary euthanasia, then don't use it, but please don't deny me the right to use it... If I were to keep a pet animal in the same condition as me... I would be prosecuted." ...While... between seven and eight out of every 10... [AUSns] support... the law... Aboriginal, medical and other community leaders, say killing can never be legalised, warning abuse would follow and the weak would suffer.

...It has been a long time since the consciences of A[US]n lawmakers have been so sorely troubled: today they resume the debate on euthanasia... This is no ordinary political squabble. Conventional and party loyalties have been thrust aside in an issue that has bracketed the... [PM] with the Leader of the Opposition... against similar cross-bench forces opposed to intervention in... the Northern Territory... right-to-die legislation... Outside Canberra, the leaders of [other AUSn] states and territories have condemned... [opposition to the bill], more for the principle of the right to frame their own laws than for the right to die... [By the way, a] son of the first person to die by legally sanctioned euthanasia, collapsed yesterday with what was understood to be a stress-related disorder... [The son] was admitted to hospital the day after... [giving] a press conference to announce [a reversal of his] support for mercy killing[. Editor's note: 'Mercy killing of animals has long been common practice, while mercy killing of suffering and incurable human beings has been advocated in various societies since ancient times (Plato favoured it for the aged)'...]

The AUS[n] House of Representatives has adopted a bill to quash the world's first voluntary euthanasia law... The Senate is not expected to vote on the bill until next year but if it backs the anti-euthanasia bill... the Northern Territory... law would be rescinded. The national Parliament can overturn laws in A[US]'s territories, but not its six states. - 1996

A... second person... has... [committed] suicide under the Northern Territory's voluntary euthanasia law... [The] 52-year-old... who was suffering from a rare form of cancer which causes the skin to disintegrate... and[left her] unable to stop scratching herself... [declared] 'Peace at last'... [while using] a computer-driven device to self-administer a lethal dose of drugs... The controversy around the law meant that it took several weeks for Mrs Mills to find a local cancer specialist to support her after travelling to the Northern Territory from South Australia. In the end... Janet... found... one after "begging" for help at an emotional news conference last month... Mrs Mills[, who died with her] husband and her son... beside her... said in a letter written the day before her death... "I hope that anyone else wishing to use this act does not have to go through such a long battle to find a doctor to help them. The whole thing was very hard on me and my family... I believe that euthanasia is the greatest thing for people who are sick with no chance of getting better. It... stops people from suffering when they don't need to. I hope this law survives and is able to help others... who have found the suffering has become too great. It should not be overturned by the politicians in Canberra but given a chance to be made to work in the way it was intended." ...A backbench bill to overturn the act... is expected to go next month to the Senate, where it faces greater opposition.

...A 69-year-old... has become the third A[US]n to commit suicide under the Northern Territory's euthanasia law... A spokes[person] for the National Coalition for Voluntary Euthanasia... said medical specialists were becoming more comfortable using the controversial law. All the safeguards had been met and it showed the law was working well... [However, a spokesperson] for the Northern Territory branch of the A[US]n Medical Association... said... "To be killing patients under a circumstance where the law is challenged both in the Parliament and the High Court strikes me at the best as preemptive and at the worst as enormously foolish,"...

Only... weeks ahead of a Senate debate that may kill it before it is born, a new bill to create... A[US]'s second voluntary euthanasia law was yesterday introduced to the parliament of the A[US]n Capital Territory. The... [bill's sponsor] said mercy killings were already a fact of life and no legislation could prevent their taking place[, therefore it] was preferable to bring them into the reach of expert advice and stringent safeguards... [B]oth supporters and opponents of euthanasia... agree that... about 5000 A[USn] people are[dying with their doctors' help a year. But pro-lifers argue that if euthanasia remains legal... [the] trickle... will... become a flood... [of killings. However, a spokesperson] from the Coalition of Organisations for Voluntary Euthanasia... believes national legal euthanasia will eventually arrive... "A[US] is a democracy and when you have 75[%] of the people supporting voluntary euthanasia, eventually the politicians listen,"...

[Yesterday, AUS]'s... Senate asked one of its committees to report on the voluntary euthanasia issue before a vote this month on a bill which would quash the suicide law in the remote Northern Territory. Four people have committed medically-assisted suicide since the law came into operation last July – the most recent a 70-year-old Sydney [resident] who died at the weekend. The committee made no recommendations because politicians will be allowed a conscience vote on the issue... However, it said Aboriginal communities opposed the right-to-die law and may be driven away from quality health services through fear of dying. Aborigines already have a significantly lower life expectancy than white A[US]ns. "Aboriginal attitudes to euthanasia may have been affected by a belief that the Western health system was part and parcel of a generally antagonistic culture which, with the additional spectre of euthanasia, could lead to the further demise or even genocide of A[US]n Aborigines," the report said.

...Speaking after the second reading of the controversial... anti-euthanasia bill narrowly passed the Senate last night by four votes... the Northern Territory's... Chief Minister... said the vote broke the conventions of the commonwealth's Self-Government Act for the NT and would severely damage territorians' confidence in the federal Parliament... "We thought we had put the bad old days behind us... This could be the beginning of a series of interventionist type activities by different groups right across political lines who seem to have an agenda... quite at odds with the people who elected them." ...Asked if the vote was the end of euthanasia in the NT, [the chief minister] said: "It would appear to be." ...The world's only voluntary euthanasia law is looking terminally ill[, but euthanasia]... proponents have predicted that it is now simply a matter of time before South Australia, or another state government, enacts a right-to-die law that would lie beyond Canberra's reach...

Fallout from the federal Parliament's abolition of the N[T]'s euthanasia law spread yesterday to the A[CT], and provoked calls for the abolition of the Senate by the Victorian Premier... [T]he ACT... Government is examining advice by its solicitor that the new federal law may also override its Medical Treatments Act. Under this act doctors are protected from prosecution if a patient dies from an overdose of painkiller, provided the doctor intended relief of pain rather than death. It also allows doctors to abide by a terminally ill patient's request to be allowed to die naturally by the withdrawal of life-extending medical treatment, a provision existing through common law or statute in most states... If... [the] legal advice... is correct, doctors using the ACT law could now face 10 years' jail... Meanwhile... the... Governor-General... has rejected pleas from two terminally

ill people to delay signing the new federal bill into law... [T]he Darwin euthanasia advocate whose equipment has been used by four people to kill themselves... told the *Sydney Morning Herald* that... of the... 60 people who had asked him for help to die... about [a] third were not... terminally ill.

...[AUS's] euthanasia campaigner... said yesterday [it] had designed a "coma machine" to give terminally ill patients a guarantee that they would never regain consciousness after an infusion of pain-killing drugs. [The] Dr... who helped four people die through computer-delivered injections under A[US]'s short-lived voluntary euthanasia laws, said his new device would expose the hypocrisy of laws which allowed doctors to induce death through drugs infusions under the guise of treating pain... A[US's] national Parliament quashed the N[T]'s world-first euthanasia law in March...

The decision by the... [AUSn] Senate to overturn a N[T] law allowing assisted suicide by the terminally ill should give comfort to proponents of euthanasia in N[Z]. What looks like defeat is, in fact, a kind of victory, even if it feels a little hollow at the moment. That's because the opponents, in flexing their constitutional muscle, have cast into sharp relief the political and moral bankruptcy of their position... One politician who... [is] a leading member of a Christian morals faction... said... that we have no business attempting to alter... the... human experience... of... pain and suffering... That's an argument of such spuriousness that it would be funny if it weren't so sad... [What next for] the simpleminded fundamentalists who saw fit to overturn this perfectly constitutional piece of legislation...? ...Seatbelts in cars deny us all the ennobling experience of flying headfirst through the windscreen in a car accident; refrigeration denies us the pleasure of food poisoning; umbrellas keep us unnaturally dry. If they truly believe that pain is an experience to be embraced, perhaps the opponents of euthanasia will spurn anaesthetics when they next lie agape in the dentist's chair or cast away their inhalers when they next have an asthma attack... It is not in the nature of those who support euthanasia to impose their ideas on others. It's a shame that the same cannot be said of those who overturned this far-sighted law... The events of the past[year] seem certain to trigger a push for full statehood for... A[US]'s sparsely populated north.

...A... NT... MP is planning new legislation which... would circumvent the federal ban and once again allow euthanasia in the territory... "What I am suggesting is to draft new legislation which does not permit voluntary euthanasia, but in such a way that breaking that law would invite only minimum penalties,"... [The MP suggested imposing] a fine of just \$A50... Meanwhile, the Dutch Government yesterday proposed new measures in an attempt to stem an upsurge in assisted suicide. Between 1990 and 1995, the number of people requesting an assisted suicide rose by 33[%] in the Netherlands, reaching an estimated 3600 in 1995... Some 80[%] were cancer patients who probably had less than a week to live. A further 950 seriously handicapped babies, patients in a coma or old people suffering from senile dementia were put to death without explicitly requesting it... Yet the Dutch admit that it is not possible to be totally sure how much involuntary euthanasia is practised in their country because many doctors (anonymously) admit to falsifying death certificates... No matter what legislation is in place, there will always be members of [the] profession who will circumvent it... The real... dilemma is... that legalised killing can[create lazy doctors ('Dutch doctors haven't learnt about things like good pain control and so it becomes an easy way out', plus it puts] elderly people under unacceptable overt and covert pressure, particularly from their relatives.

...I agree that legalised guidelines, as practised in Holland, are not enough – they obviously can so easily be circumvented[, and Dutch doctors are 'now terminating patients for such complaints as chronic depression.' However, the writer who]... admits to being aware of the pressures of some families on their elderly relatives... should also be aware that if legalisation of the "living will-advanced directive" were acceptable, these pressures would not exist. Only the patient's request would be acceptable.

...[In Holland, has "a right to die" become "a duty to die"? Here is the shocking story: WHEN Dr Z examined a 50-year-old at a clinic, the doctor knew immediately that the patient did not have long to live. Cancer had spread beyond her breast to her bones, liver and lungs. Carefully, the Polish-born oncologist explained to the patient that it could reduce her pain with drugs, and offered her a hospital room. Dr Z sensed, however, that the patient was fearful of Holland's policy allowing doctors to end the lives of the terminally ill. "I am a Catholic," the patient said. "My religious beliefs would never allow me to accept euthanasia." Dr Z assured the patient that it would take care of her, and finally the patient agreed to be admitted to the hospital. After 24 hours of morphine treatment, the patient was free of pain. Though the patient knew death was close, it was at ease, able to see her husband and family. Later, however, a nurse phoned Dr Z at home with distressing news. After Dr Z left the hospital, another doctor had entered the patient's room and asked her husband and sister to leave. The doctor then ordered an increase in her morphine dosage, but refused to confirm the order in writing. Within minutes the patient was dead. Dr Z demanded an explanation. "It could have taken another week before the patient died," his colleague told him. "I needed the bed."

... 'IN THE INTENSIVE-CARE unit of a Dutch hospital, a patient lay with chronic leukaemia combined with pneumonia. His hands and feet were bound, and the patient was being respirated with a tube in this throat. A young doctor appeared and said, "I assume that if your heart fails, you don't want to be resuscitated." The patient could not talk, but shook his head vehemently left to right, the only movement the patient could make to indicate that indeed it did want to be resuscitated. Despite the seriousness of his illness, the patient knew it still might have years to live. But the doctor misinterpreted his gesture, said, "That's assumed then," made a note on the patient's chart and moved on. The patient was in panic. Fortunately, by means of gestures, the patient was able to tell its son, who was able to correct a potentially fatal error. This is one example of how increasingly casually doctors deal with the ending of life by withdrawing medical treatment – also known as passive euthanasia – in the Netherlands. There are many others. A professor of criminal law at the Free University of Amsterdam was on a commission that, in 1990, looked into the practice of active euthanasia. Of an annual total of 130,000 deaths, doctors had reported that euthanasia was carried out at the request of the patient in 2300 cases. But the commission ascertained that, in more than 1000 cases, doctors had ended a life without an explicit request. The professor is not happy about the power Dutch doctors now have over life. "From dossiers and personal contacts, I know how many mistakes have been made concerning euthanasia and how many weak physicians there are. Some are beginning to talk about euthanasia before the family or patient have even thought about it." In the absence of adequate legislation concerning euthanasia the Dutch judiciary determines what is permitted, and sentencing practices have become ever more accommodating. On this subject a former Secretary General of Justice says, "Ten years ago physicians would have been jailed in cases of euthanasia that the public prosecutor now deals with as a matter of routine." In 1994, a new step was taken in the famed case of a psychiatrist who had supplied a lethal amount of medication to a 50-year-old who was divorced and had lost her two beloved sons. The mother said it no longer wished to live and called on the psychiatrist to help her commit suicide. The psychiatrist did. Immediately after his "medication," the psychiatrist surrendered himself to the authorities. Two courts decided that the psychiatrist had not committed any penal offence. The Supreme Court eventually considered him guilty, but imposed no punishment. The judgment made quite clear why. According to the Supreme Court, physical suffering in the terminal phase of an illness was no longer the only criterion for permissible suicide. Mental suffering could also be a criterion. The case became world news and stirred public opinion on assisted suicide in the Netherlands' which, **apart from Germany before... [WW2], is... the only country that has a lengthy experience of the practice of euthanasia...**

[The Dutch Health Minister is not opposed to allowing suicide pills for very old people who are tired of life. Her comments came just days after the Dutch Upper House passed a landmark law legalising euthanasia, making the Netherlands the first country to do so and sparking worldwide controversy. The new law – which makes children as young as 12 eligible for euthanasia (patients as young as 16 can seek euthanasia in consultation with their parents, and children aged 12-15 must have parental consent) – allows mercy killings under strict rules, one of which is that the patient must be facing a future of unbearable suffering and without hope. Although it recognised a practice tolerated in Holland for over 20 years, the law ignited outrage in some other countries. Some compared it with the policies of Nazi Germany, which systematically killed handicapped adults and children.]

...following the introduction to NZ of string-pull plastic bags that, once fitted, have to be cut open if a user changes its mind about dying, 'the head of the Salvation Army said euthanasia was "a horrible prospect – Hitler did it". A recent Massey University survey showed over 70% of people supported doctor-assisted suicide for someone with a painful, incurable disease. When a Wanganui resident who was charged last week with the attempted murder of her dying mother spoke last month, it was still waiting to hear whether police would take any action. The former intensive-care nurse kept her silence during a 10-month police investigation into her mother's death. With the publication last year of her book about her mother's death, *To Die Like A Dog*, the nurse said it knew it had laid herself open to charges, but it was a risk it was "willing to take," so strongly did it feel about the need for law change. Her arrest came on the same day that legislation forcing a conscience vote on voluntary euthanasia was introduced to Parliament. The nurse said the experience of the US state of Oregon, where doctor-assisted euthanasia has been legalised, showed people wanted only "reassurance that help is there if they need it".]

...Pioneers are eccentrics almost by definition, but their obsessions can change everybody's agenda. Last year, two [people], both nicknamed "Dr Death" in their home countries, finally put euthanasia centre stage as a moral and political issue... [The US's Dr Death had] faced trial three times, and three times the juries ignored the strict legality and found him not guilty. But... as the appeals percolate[d] upwards to the... Supreme Court, [the retired pathologist attracted]... the attention of the big guns. "Creating a new 'right' [to assisted death] will endanger society and send a false signal that a less than 'perfect' life is not worth living," wrote Cardinal Joseph Bernardin, Catholic archbishop of Chicago... just days before... [dying naturally] of cancer. "The law exists to protect life. When it begins to legitimate the taking of life, one has a right to ask what lies ahead for our life as a society." Many [US] states routinely take the life of convicted criminals[and, of course, the Catholic Church is infamous for once legitimising the taking of life – and deliberately inflicting obscene suffering on its victims in the process –] but let us not quibble. When the Catholic Church, the A[MA] and 29 other organisations write to the Supreme Court asking it to condemn Dr [Death]'s actions you can truly say that... euthanasia... has[been] put... on the national agenda... From the beginning, civilised states have taken decisions about life and death out of private hands. This did not mean an end to killing: the state reserved the right to kill its own citizens for various transgressions and to kill foreigners in wartime. But private individuals were forbidden to kill each other. There were always exceptions, however... [S]uicide is inherently an unpunishable crime... [Indeed,] some cultures have seen it as an honourable option for people in difficult circumstances... Other cultures deplore it, even ban it – but in practice most people everywhere regard it as none of the state's business. We may own nothing else but we do own our own lives... It only gets tricky when people cannot commit suicide without help. Even then, it is not a legal problem most of the time. If you are dying in agony and you have family or friends and a sympathetic doctor, then an accidental overdose or an empty oxygen tank can cut things short... There are thousands of genuine "mercy killings" each year and it is very rare for somebody to be prosecuted... But... [given] the infinite varieties of human greed and malice, we are rightly reluctant to grant any individual the right to administer death to another. [The two Dr Deaths we]re not doing it for profit or revenge – but some time, somewhere, someone might... One way to deal with this would be to emulate the pragmatic Dutch, who left the anti-euthanasia law on the books but stopped enforcing it... More than 50,000 Dutch now carry a "euthanasia passport" which tells medical staff that the carrier has written a "living will" setting out the circumstances in which... [the carrier] should be allowed to die.

...Why do many Christians, though by no means all, oppose voluntary euthanasia? The... essence of [Jesus'] message was compassion for [hu]mankind, summarised as love of God and love of one's neighbour. Organised Christianity has retained this message but it has become much entangled with the picture of God as the terrible and vengeful father figure depicted in the Old Testament. God is seen as a stern judge who will send misfortunes to sinners, particularly in the form of plagues, illnesses and famines. Naturally, if illnesses are sent by God we must be careful how we deal with them. The traditional view is still implanted in many of us, though we may not be aware of it. We may minister to the sick but if we help anyone in long agony who wishes to die God will be angry with us for interfering with his ordained plan. This may seem to be an exaggerated view, but how else are we to account for the callous treatment of some dying people approved by many professing Christians? ...Those people who oppose voluntary euthanasia should appreciate that they, just as much as anyone else, may desperately desire to end a life which has become intolerable... One of the best short accounts of the situation came from the late Reverend Leslie Weatherhead, who wrote: "I sincerely believe that those who come after us will wonder why on earth we kept a human being alive against his own will, when all the dignity and meaning of life have vanished, when any gain to anyone is clearly impossible[– unless *anyone* is a private hospital or church which stands to lose a source of revenue if the human being dies –] and when we should have been punished by the state if we had kept an animal alive in similar conditions."

...an associate fellow of the British Psychological Society... asks "Why do Christians oppose voluntary euthanasia? ...then goes on to answer his own question with a summary of the history of religion which I, as a practising Christian find so warped as to present a travesty of Christian belief... Suffering, like love and death, is... a mystery which we, as human beings, must all experience... Christian faith affirms hope not despair... Of course, questions of religious faith have little meaning for those who have none and they will resist what they see as an imposition upon them of this faith and its implications[as enthusiastically as some of my fellow Christians have set about imposing it!] But what do those who have no religious faith put in its place? I suggest that those who advocate euthanasia are substituting a blind faith that their human judgment is infallible... Considering that the history of human affairs constantly demonstrates the fallibility and imperfection of human judgment, one may well conclude that the supporters of euthanasia launch themselves upon a far more hazardous leap of faith than the Christian who believes in a[n]... all-loving... God... In the light of recent and present failures in N[Z]'s "underfunded" public health institutions, is it unreasonable to regard with apprehension the interest now being shown by medical and political authorities, here and elsewhere, in... [euthanasia]? After all, suicide is a cheaper option than long-stay hospital care or expensive life support systems.

...A British former medical director of the U[N] has admitted helping at least 50 people die in "mercy killings." ..."They wanted to die – I helped them,"... Aside from... morphine overdoses, [the director] supplied sedatives to put patients to sleep, and a plastic bag to tie over their heads and asphyxiate them. Under British law a doctor who "aids, abets, counsels or procures the suicide of another" can be jailed for up to 14 years... [The director had] decided to speak out to provoke a debate.

...Britain's leading paediatrics group yesterday issued guidelines advising doctors when they should let seriously ill children die... The report suggests treatment should be stopped if the child is brain dead, or in a permanent vegetative state and unable to relate to the outside world. When treatment delays death but does not alleviate suffering, or if the pain is unbearable and the child will survive with severe mental or physical handicaps – then it may also be appropriate to stop treatment... [However], the head of the British anti-euthanasia group Alert, warned that it could be particularly dangerous to set up such a frame-work for children because they sometimes made remarkable recoveries... [In local news, the] Minister of Justice... has floated the possibility of giving judges the discretion to impose prison terms for "mercy killings" significantly shorter than the present 10-year minimum for murder.

...Severely injured patients should have the option to die rather than burden relatives and the health system, a specialist says in the wake of a landmark court ruling. The call from [the]... consultant neurosurgeon, follows a decision allowing food and fluid to be withdrawn from an Otago patient. It is the first time[in NZ that] food and water have been cut to someone not in a persistent vegetative state. While the brain-damaged patient had limited reactions, specialists described his condition as hopeless and irrecoverable. The patient, aged in his 60s, had been in hospital for 15 months after a car accident when sustenance – given through the nose – was withdrawn. [The patient] died four days later. [The specialist, who was]... in charge of the [patient]'s care, said... the request to cut support came from the [patient]'s family and was backed by health professionals... [because] all the ethics stacked up on one side. "Why should we continue inflicting this treatment on someone who's obviously not at all keen on what we were doing?" ...Continuing support was often wasteful and degrading to the patient. Most ended up living in long-term nursing care for

many years[, at a cost of]... about \$4000... for a month, [the specialist] said. “I will suggest to a medico legal conference next week that [withdrawing support] is a recourse we should not shy away from,”... However, others urged caution in the wake of the decision. A specialist at Auckland Hospital said the judgment related only to the Dunedin patient’s case and every case had to be judged separately.

...In [his] world, euthanasia will never be an option... The... Otago-trained doctor[, who is now]... medical director... of St Christopher’s Hospice in London... [and is] in Auckland for Hospice NZ’s conference, said the vast majority of patients did not want euthanasia, although a few asked him about it... The... [NZer] draws the distinction between “the deliberate killing of patients who are suffering” and the idea of withdrawing treatments which are keeping them alive unnecessarily. People did not seem to have a problem with the latter... [But] there are treatments and support which can salve the fear and pain of dying. It’s called good palliative care... The... [Dr] said... hospice was a philosophy not a place. - 1997

A hospice is a special kind of hospital that cares for the dying. Modern hospices began in the late 1960s and usually have a Christian foundation. Although many of the nurses may be Christian, the patients can be of any religion or none. The staff not only look after the patients, they also help the relatives to cope with the death. The atmosphere is a warm and caring one, where the patient and family are encouraged to talk about dying, to feel at home and see each other as often as possible. The staff relieve the patient of as much pain as possible... It has been estimated that over 20% of hospital beds are occupied by the elderly who are unable to wash and feed themselves or speak to people. Some argue that these people would surely prefer to die quietly and painlessly and not be kept alive by medical science. Other people have been so badly injured in accidents that they are only kept alive by life-support machines. Relatives may be caused more unhappiness by seeing their loved one kept alive in this way than if they were allowed to die with dignity... The following is an extract from a play, *Whose Life is it Anyway?* After a serious accident, Ken is paralysed from the neck down and is faced with total dependence on a life-support machine. [Ken] claims the right to make his own decisions about his life... [which, for him, involves being] discharged from hospital. If [that happens, Ken] will die within a week. KEN: Of course I want to live but as far as I am concerned I’m dead already. I merely require the doctors to recognise that fact. I cannot accept this condition constitutes life in any real sense at all... [W]hilst I am... [in] this hospital... everything is geared just to keeping my brain active, with no real possibility of it ever being able to direct anything. As far as I can see, that is an act of deliberate cruelty... The cruelty doesn’t reside in saving someone or allowing them to die. It resides in the fact that the choice is removed from the [person] concerned... I find the hospital’s persistent effort to maintain this shadow of life an indignity and it’s inhumane... Dignity starts with choice. If I choose to live, it would be appalling if society killed me. If I choose to die, it is equally appalling if society keeps me alive... [E]uthanasia... literally means ‘to die well’ or ‘a good death’... Should badly deformed babies... be kept alive at all costs? Doctors must try to preserve life, so how can they approve of abortion? Are the rights of an unborn child more important than the health and rights of the [mother]? ...Abortion is simply the ending of pregnancy before birth. It can happen naturally, when it is called ‘spontaneous’ abortion, or a ‘miscarriage’. Most conceptions[, perhaps even]... 80%... abort in this way[– ‘most in the first few days’]... Deliberately expelling a foetus has been practised for over 3,000 years... It is a very emotional subject and people, countries and religions have strong feelings for and against... Abortion in Britain is not available ‘on demand’. Until 1967 all abortions were illegal unless the mother’s life was in danger... If they had the money some private clinics carried out the (illegal) operation. If they were poor they... often... had to visit... unqualified persons... Thousands did visit these ‘back-street’ clinics. Many suffered permanent ill health as a result. A number died. In order to stop these illegal abortions, the 1967 Abortion Act made abortion legal in England, Wales and Scotland in certain circumstances... The Act did not give a time limit, but it was linked to a 1929 Act that made it a criminal offence to destroy the life of any child capable of being born alive. This was believed to be at 28 weeks... There is no time limit, however, if the [mother’s] health is seriously at risk, or if the foetus is... seriously physically or mentally handicapped... It is up to the doctors to decide whether any of these things will happen. A doctor can refuse to give approval if it is against his or her conscience. One doctor’s opinion about the risks... will often differ from another doctor’s. It is still easier to get an abortion if a [mother] has money and goes to a private clinic, than it is if [the mother] tries to get one on the National Health Service... In April 1990 MPs reduced the time limit for abortion to 24 weeks [because, since] the 1967 Act, medical advances have meant that a small percentage of babies born at 24 weeks can survive... [I]n 1981... 162,454 abortions[were] carried out in England and Wales... Risk of injury to health of mother... [was the reason] given on... the... form... 158,499... times... The USA allows abortion on request up to 12 weeks, though each State has the right to decide on this... In 1988 there were 1.6 million abortions – about one-third of the total number of registered conceptions. In France abortion is available on request up to 10 weeks. About 1.5% of [French gals] have abortions. An ‘abortion pill’ was launched in 1989 and many thousands of [French mothers] each year use it to have very early abortions. The Netherlands allows abortion on request up to 24 weeks. It has the lowest abortion rate in the West – 0.6% of [Dutch gals]. In Eastern Europe, where contraceptives are difficult to find, abortion is the main method of birth control. Although accurate figures are difficult to obtain, it is estimated that 18% of [gals in the former Soviet Union] have abortions... In the Republic of Ireland... [and] also... in Northern Ireland... all abortion is illegal, and so is giving... advice about it. However, in 1988 almost 4,000 Irish [mothers] had abortions in England. Unofficially there were perhaps thousands more... About a third... [of the] almost three million legal abortions in... England and Wales... [during] the twenty years between 1968... and 1988... were carried out on [mothers] who were visitors or not resident in England and Wales... For most people, whether they are religious or not, an important question is: When does life begin? ...Some people believe that... life begins at conception. This means that... from the very moment when the sperm fertilises the egg the embryo has the same rights as anyone else. They believe that to destroy the embryo is the same as murder. Other people, with equal concern, argue that the state of the embryo in the early weeks is so unlike that of the newborn child that to abort it is not murder... The moment at about twenty weeks when the baby moves used to be called the ‘quickening’ and in some religions was the moment when the unborn baby has ‘life’... Abortion is never taken lightly. It can be distressing for the mother, the doctors and nurses. The argument... [concerning] the rights of the unborn child... [includes the fact that it] is impossible to know how valuable their lives might be... Many people argue that it is every [mother’s] right to choose whether or not to have a child... It is her life that will be most affected – her health, her freedom... Every child should be a wanted child. Every mother should be a willing mother... [‘To bring into the world unwanted children is one of the most awful crimes of which the parents can be guilty. It brings a curse to the child, to the parents and to the world.’] No one wants abortion but it is better than misery or poverty. Legal abortions early in pregnancy are easy and... safer than childbirth... Anti-abortionists have no right to impose their morality on the rest of us. They have no right to say that they know better than the [mother] concerned what choices [the mother] can make about her life... No... rape[-victim]... should be forced to have a child...

Since my stay in a Chinese village in 1980, when I saw [mothers] in their third trimester of pregnancy forced to undergo abortions, I have written extensively about China’s coercive population-control programme. I have interviewed many Chinese about their experiences. But... [one] story was different. “My wife is seven months pregnant with our second child,”... [the person] on the phone... told me. “The Chinese government has been trying to force her to get an abortion.” I was astounded... [The] call... was... from Phoenix, Arizona. [The husband] was a student at an American university... [who] was selected by the Chinese eight years ago to pursue a doctorate in mechanical engineering in the U[S]. His wife, a nurse, and his four-year-old son had to remain in China, to ensure that [the husband would return. The wife] chafed at this separation from her husband and, four years later, applied to join him in America. Such requests are seldom granted. [The wife], however, was in good standing, and her unit, the Walfantia Bearings Factory, endorsed her application. [The wife] and... son arrived in America a year later. [The husband] completed his PhD degree in March 1986 and the US government allowed him to stay for an additional 18 months of training... [The couple] were looking forward to

returning to China. [The husband] had been promised a professorship, while [his wife] was told that a good position awaited her at the factory. Then in late May last year, [the wife] became pregnant, even though [the wife had] had an IUD inserted after the birth of their son, as mandated by Chinese birth-control regulations... [H]is wife “was very responsible about going in for the required pelvic examinations each quarter. The IUD was always in place.” The couple rejected the idea of an abortion. Back home, [the wife] had assisted in forced abortions. Now those experiences came back to haunt her in nightmares. They wrote to [the wife’s] factory, asking the population-control official for an exemption... [Unfortunately, during the past year the] Communist Party General Secretary... [had] reaffirmed the “technical policy on birth control” and officials were ordered to redouble their enforcement efforts. The regulations call for IUD insertion after one child, sterilization after two, and abortion for [mothers who are] pregnant without official permission... I... also... heard shocking accounts of infanticide of “illegal” newborns... The [couple] soon received a letter from... [the wife’s] factory’s personnel officer [which said: “]Second children are absolutely banned. If a [mother] insists on having the child, all the workers of her factory will be punished. No salary increases will be allowed, and the factory will be disqualified from production contests. [The mother] herself will be placed on probation, and receive only minimum living expenses. Do not lose any more time. Fix this problem as soon as possible.[”] Without further delay, the [couple] applied to the US Immigration and Naturalization Service for permission to stay in the US. They also left their flat... “[My wife] was afraid that even in the U[S] we might be watched by agents of our government,”... As efforts to pressure the [couple] continued, Chinese officials turned to their next of kin. [The wife’s] elderly mother was paid nightly visits and warned of the terrible consequences for the entire family if [the wife] did not abort... In desperation, [the husband] wrote to his mother-in-law that [her daughter] had gone for the abortion. [The mother-in-law showed the] letter to officials, ending the nightly visits. But then [the husband] made a serious error. [The husband] wrote to his Chinese university, the Dalian Institute of Technology, hoping that colleagues there might be more forgiving of their situation. Unfortunately, the Walfantia Bearings Factory found out... and the pressure was on again... “[After explaining the birth-control policy to you in our last letter, we were sure you would fix your problem right away. But from your husband’s letter we know that your pregnancy continues. We have been severely criticized by the birth-control departments and ordered to send you this extremely urgent letter of warning. The Walfantia Bearings Factory is now working on a major government-sponsored expansion. If our birth-control programme allows even a single second birth, the factory will not be permitted to advance. The strenuous efforts of our 20,000 employees towards this goal will have been in vain... The consequences for you are unthinkable. You would be condemned by all the employees of the factory. How could you bear the losses you would cause and suffer? ...If you have real difficulties [getting an abortion in the U[S]], return to China immediately. There is no time to waste. To your health!”] ...On February 24, 1988, the application... to remain in the U[S] was turned down on the recommendation of the State Department because they did not prove “a well-founded fear of persecution upon return” to China. The next step: deportation. The decision provoked strong reaction. [A] former under-secretary of state [declared], “It’s unconscionable that our government should abet this barbaric act of state intrusion into the most intimate sanctum of human life.” ...IN EARLY AUGUST, the [couple] were finally granted political asylum... The [couple’s name for] their daughter... means beautiful and smart but also stands for America, land of her birth.

The Republican Party has called for a ban on abortion in the U[S] even in cases of rape, incest or to save the life of a mother. The party overwhelmingly adopted the platform at the opening session of its national convention in San Diego yesterday... The party wants the passage of a “human life amendment” to the U[S] Constitution which would give full human rights to fetuses... The platform also includes a tough new provision on immigration that would overturn a 128-year-old guarantee of citizenship for any child born on U[S] soil. ● ‘The number of abortions in the US rose from 586,800 in 1972 – around the time of Roe v Wade – to 1,590,800 in 1988. The rate for every 1000 gals increased from 13.2 to 27.3 – the states with the highest abortion rates were California (45.9) and New York (43.3), while the lowest were South Dakota (5.7) and Wyoming (5.1) – and the ratio per 1000 live births from 184 to 401; the relative figures were 21.2 and 333 for Whites, and 57.3 and 638 for Blacks. Of the total abortions in 1988, 14,000 were performed on girls under 15 years of age, and 393,000 on girls between 15 and 19; 83% of the abortions were performed on unmarried mothers and 11% after the lapse of the legally permitted trimester.’

...an MP introduced a Bill to restrict the time span during which people in Britain could have abortions. In March 1988 the Green Party supported an emergency motion to the spring conference supporting the existing 1967 Abortion Act and opposing the MP’s Bill. The Green Party stated that it was “opposed to any amendments to the Act which would further restrict the reproductive freedom of gals”. Greens believe that it is a mother’s right to choose.’

...a British mother [with eight fetuses in her womb... has rejected doctors’ calls to have... [up to] six... of the[m] aborted... Doctors say that chances of all eight being born alive and undamaged are nil but [the mother]’s deal with *News of the World*... means that the more babies... who survive, the more cash [it] will get for her story[, although the paper’s]... executives... deny this amounts to a per-baby rate... “If all goes well over the next year, we are talking about £1 million in sponsorship, syndication and deals,” her publicist... said... yesterday... [A l]egislator... said the newspaper deal was “quite revolting and quite improper and was the worst kind of cheque-book journalism.” [The father’s] mother... criticised her son... [in] the *Daily Mail*: “I love [my boy] but this is all wrong. We are talking about human life but [my boy] sees only the money [it] can make.”

...An ethical controversy over whether a British [mother] should be allowed to abort one of her healthy twin fetuses took a bizarre turn yesterday when it was revealed that the termination had already taken place. The 28-year-old single [parent], who already has one child, had told her... Queen Charlotte’s hospital... doctor [that it]... could handle one more child, but not two. [A]*Sunday Express*... story sparked three days of heated debate in the media and members of the public offered £50,000... to the anonymous [mother] to have both babies. But a curt statement by hospital officials made it clear that the offers, if not the debate, were misplaced... The hospital declined to say exactly when the abortion had been carried out. Media reports put it variously at about four weeks ago or as far back as March. The announcement shocked anti-abortionists, who only hours earlier had won a court injunction to gain more time to campaign against the abortion.

...The Vatican’s official newspaper, *L’Osservatore Romano*, yesterday condemned the controversial abortion in Britain of one of two twins.

...Another pregnant... Brit... wants to have one or both of her twins aborted. The mother-to-be, who is 20 weeks pregnant, claims her house is too small for two more children and insists... her husband cannot afford to bring twins up... It is not thought that any abnormalities have been discovered in either twin... Pro-lifers have launched a fund-raising campaign in a bid to stop the latest plan to abort a twin... [They have already got] about £80,000... [rom] the first... campaign... The Abortion Act requires two doctors to believe that continuing a pregnancy will cause greater risk than its termination. The British Medical Association said that the act would not allow for abortions on the grounds of financial hardship alone.

...Several British doctors stepped into a growing debate over abortion today, declaring that [mothers] who want to terminate their pregnancies should not have any fear that the foetus is suffering. In a clear message to anti-abortion groups which have presented videotapes of fetuses twitching and apparently grimacing in the womb, the doctors said unborn babies could not feel pain... Babies showed reflexes to what could be painful stimuli, they said, but did not have enough brain development to register this consciously... Doctors used to say that newborn babies could feel no pain, but studies have since shown that they do. The abortion debate has come to the fore in Britain since... [news about an RAF employee winning] compensation after being forced to have [an] abortion to keep... [her job followed] recent reports of a [mother] who had one healthy twin aborted but kept another. A second [mother] who took fertility drugs announced [it was her intention to] try to carry eight fetuses to term... Anti-abortion groups have been very vocal in their opposition, demanding a rethink of Britain’s abortion laws. [● ‘SWITZERLAND’S parliament has voted to legalise abortion after eight years of debate.’]

...South Africa's... President... has signed [his country's] new abortion bill, clearing the way for one of the world's toughest abortion laws to be replaced with one of the most liberal. Despite strong protests from opposition parties and anti-abortion groups, the law gives girls of any age the sole right to decide whether to have an abortion... [In local news, health] officials are struggling to cope with a soaring demand for abortions. In some areas abortion rates have jumped by as much as 20[%] since last year. That despite a \$17 million campaign launched in May to cut the rate. About 5400 Auckland [mothers] are expected to have publicly funded abortions... [this] year... at a cost of \$3.2 million... Abortion services in Hamilton are reported to be under huge pressure, forcing hundreds of [mothers] to travel outside the region... [S]ome... go... private. It costs almost \$700 to have an abortion privately... The Family Planning Association said it was disappointing that the number of abortions was rising so steeply. The association's clinical spokes[person]... said the cost of contraception and doctors visits often led to unwanted pregnancies. The Ministry of Health signalled earlier this year that the morning-after pill would likely be available over chemist counters, but this was yet to start... National figures for previous years show [that, statistically, 'Asians have the most abortions (about 1-in-3 Asian pregnancies are terminated compared to about 1-in-4 Maori pregnancies and 1-in-5 Pakeha pregnancies'), and] the largest number of [mothers] having the procedure are in the 20-24 age bracket.

...Giving general practitioners the power to approve abortions could achieve what people on all sides of the debate have long been trying for – a reduction in the number of terminations... A recommendation in a select committee report on the work of the Abortion Supervisory Committee states that all medical practitioners should automatically become certified consultants, and therefore able to authorise the 13,000 abortions that take place in [N]Z each year. At present GPs have to apply to become consultants, and most certified consultants are obstetricians and gynaecologists who also perform the abortion operations... [The deputy chairperson] of the Medical Association and a practising GP who refers up to four [mothers] a week to consultants[says,] "I have sent patients off who I felt haven't needed an abortion and said so in my referral letter, but they've ended up having one anyway..." One doctor described a case of a [mother] who wanted an abortion mainly because [the mother] wasn't ready to have a baby, but the doctor knew the "right time" would not be far away and advised against a termination in his referral letter. Two consultants, who had never previously met the [mother], approved the abortion. "[The mother] became pregnant again a month later when [the mother] realised it wasn't such a bad idea after all." ...The Government pays certified consultants \$87.50 for assessments of [mothers] wanting terminations, totalling \$2.5 million a year. The select committee suggests this money could be better spent on education and improved contraception, inferring that GPs would not be paid as much as consultants. This does not wash with [the deputy chairperson]. "If I'm expected to go through a process, at the end of which I must be able to confidently assess whether a [mother] should have an abortion, I won't be doing it for a normal ante-natal fee." ...Everyone agrees, however, that money needs to be channelled into education as the best way of reducing unwanted pregnancies... The select committee report told how a shortage of certifying consultants in smaller centres is mainly the result of many suffering harassment. Consultants have their practices picketed and covered in graffiti, are telephoned at all hours of the night, and their children are sometimes harassed at school. One practitioner spent \$12,000 in legal fees trying to remove protesters from his surgery. - 1996

Tens of thousands of anti-abortion protesters marched[through Washington, DC.] on Wednesday for the... 24th... anniversary of a land-mark... Supreme Court decision... legalising abortion... known as Roe versus Wade... The demonstrators... [shouted] slogans including "Stop Abortion Now" and "The Real Choice Is Life." At the same time, pro-choice advocates marked the anniversary with a luncheon... The... Vice President... and First [Wife]... were scheduled to meet abortion-rights advocates... later in the day... [While on the topic of abortion, according to a] recent article... pregnant [mothers] vacillate between "wanting" and "not wanting" a child... "Before... [the mother realises it is pregnant it] is just your usual happy-go-lucky young [gal]" but "from eight to 12 weeks when [the mother] is sick, tired, depressed and worried the baby is definitely not wanted. (This is the stage when most abortions are performed.) ...In the middle months [the mother] gradually realises that [it] will be able to cope. In the last month, with swollen legs, varicose veins and apprehension, the baby is once again unwanted. During labour – very much unwanted. Five minutes after delivery the baby in its mother's arms is deliriously wanted. Seven days later, with engorged breasts, painful stitches and a crying baby, it is once again unwanted..." To many of us, the tone and substance of the article will seem incredibly arrogant and patronising. Does [its author] really believe that [mothers] want or want a baby simply as a reaction to their physical or emotional well-being? I can assure... [the author] that the great majority of pregnant [mothers] do not... decide to terminate a pregnancy without considering in some depth just what it will mean in their particular circumstances to give birth to this particular child. When, some 60 years ago, Dr Dougal Baird pioneered a domiciliary birth control service in Aberdeen[Baird] was able to prove that ignorance and poverty were why, in the words of the song, "the rich get richer, the poor get children." Nurses visiting these impoverished Scottish [gals] in their own homes explained how they could, if they so wished, avoid unwanted pregnancies by using the contraceptives freely provided. The... enthusiastic response indicated that poor [gals] actually wanted fewer children than their richer sisters... Those who decide to limit the number of their offspring are likely to be those who believe that any child brought in to this world deserves the parenting that will best enable it to reach its potential. Bringing up a child is the most difficult and rewarding job in the world. Many of us believe that taking on such a demanding job should always be a considered decision, and one that only the [mother] herself can make. Ideally, [the mother] is able to do this together with the child's father, but for some this is not feasible... Most remarkably, and very peculiarly[some people are prepared to kill in order to promote their pro-life philosophy]... On such reasoning, I rest my case.

...An anonymous letter purported to be from a militant Christian group called the Army of God claimed yesterday that it had planted the bombs that exploded recently in an abortion clinic... The first blast shattered one side of an office building housing the Atlanta Northside Family Planning Services centre in a suburb known as Sandy Springs... four people were inside at the time but no one was injured. A little over an hour later a garbage container in the corner of an adjacent parking lot exploded, knocking people to the ground and injuring several at the scene... The FBI could not say whether the letter was genuine... But investigators said they were aware of a radical anti-abortion group called the Army of God, which has been known to circulate bomb-making manuals as a means of advocating violence against abortion clinics. The Army of God letter threatened "total war" against the federal Government and promised further attacks... In Washington, [the]President... condemned the [group]... "Nobody has a right to use violence in America to advance their own convictions over the rights of others... We will punish those responsible..."

...Investigators continued their search for possible links between a bomb that exploded... in Atlanta on Saturday and two other unsolved bombings which have shaken the city over the past seven months... Police found a second bomb in a backpack hidden among some bushes in an adjacent parking lot... [The latest] attack bore similarities to [the]... January double-bombing at an abortion clinic and the deadly Centennial Olympic Park bombing last July. That fact led a senior FBI official in Atlanta to speculate that investigators could be dealing with a serial bomber.

...[one of the FBI's 10 most wanted fugitives was charged yesterday with the 1996 Olympic Park blast and two other Atlanta bombings. The Attorney General said the criminal complaint charging the 32-year-old carpenter was being filed in federal court. An affidavit detailing the case against the carpenter was filed under seal and not made public. The carpenter had previously been charged with bombing an abortion clinic in Birmingham, Alabama, which killed a police officer and severely injured a nurse. Now the carpenter is facing five further charges, all are for malicious use of an explosive in violation of federal law. For months, hundreds of FBI and state and local agents have been searching for the carpenter, who is believed to be hiding in the rugged wilderness of western North Carolina around the Nantahala National Forest. The carpenter was last seen on January 30 near his North Carolina home, where his truck was abandoned. The FBI is offering up to \$US1 million for information leading to his arrest. "A dangerous fugitive is a danger to everyone," the FBI Director said. Immediately after the Olympic Park bombing, which killed one person and injured more than 100 other people (in addition, a Turkish camera operator died of a heart attack while responding to the blast), investigators had focused on the security guard who discovered

the bomb. But the security guard was never charged. Eventually, the FBI publicly ruled him out, but the security guard said his life had been ruined by the massive media coverage. His lawyer said yesterday that the former security guard would not comment on the charging of the carpenter in connection with the bombing.'

...in 1994 Dr Barnett Slepian wrote to a newspaper predicting that the tactics of non-violent anti-abortion lobbyists could encourage murder. And in a TV interview, the father of 4 worried about how his family would cope if his work ultimately led to his death. At the weekend the 52-year-old obstetrician-gynaecologist was killed by a sniper who fired a bullet through a window in his home. His death – the first fatality among 5 sniper attacks on upstate New York and Canadian abortionists in the past 4 years – came just 4 days after local authorities warned physicians who perform abortions of possible attacks.']

...THE methods are extreme, but the prolonged campaign of terror against US abortion clinics is slowly achieving its goal of closing down the industry... Many doctors are... unwilling to become martyrs for the principle of [mother's] choice... In North Dakota there is only one doctor left who is willing to perform abortions... The number of counties where abortion is available has fallen by a third. In the Deep South, abortion doctors are extinct outside the biggest cities. The result is a fall in abortions from 1.6 million to 1.4 million a year – or in the eyes of the pro-life militants, a "rescue" of 200,000 babies a year, an outcome they regard as a triumph. Almost a third of all abortion clinics reported attacks last year... More [doctors] are likely to stop performing abortions after the double bombing of a clinic in Atlanta[, which]... was on a new scale of violence... Sometimes doctors are shot, or stabbed with their own implements... Two receptionists were murdered at clinics in Brooklyn, Massachusetts, in 1994... Fire-bombs are more dramatic. They cause panic among other businesses in the building. Insurance becomes a nightmare and it becomes nearly impossible for the clinic to lease space. Costs are driven up until the abortion procedure, which costs an average of \$415, becomes unprofitable... Who is responsible for this [terror campaign? A spokesperson for] the National Abortion Federation in Washington, says that it is an underground network based in Oregon and exonerates "justifiable homicide" of doctors. It has a secret cell structure modelled on the IRA and Middle East terrorist groups. Mainstream pro-life organisations have denounced the violence and have been waging their own struggle of passive resistance. Pro-life activists have spent more time in prison for their convictions than the civil rights activists of the Sixties. There have been 72,000 arrests for picketing abortion clinics since 1987. Some campaigners have been jailed for up to two and a half years for non-violent protest that mostly involved quiet chanting and prayer. In terms of grass roots protest, day in, day out, they are the biggest movement of civil disobedience in America this century. In 1994 Congress passed the Freedom of Access to Clinic Entrances law, making peaceful picketing a federal crime with a penalty of 10 years in prison... The move caused outrage by singling out prolife activists for draconian punishment. The bill has probably ensured the escalation of violence. With the avenues of peaceful protest blocked off, passions have gone into guerrilla warfare.

...I'd like to discuss abortion today. And survive... I would like to propose... that abortion is here for a while [yet]. And as a sexually active [gal] who doesn't want to get pregnant but doesn't always act like it, I feel I have light to shed... Intensity about abortion has permanently diminished. Even the annual TV news finger-pointing session about abortion lacks the vicious commitment of say, a Roe v Wade... [L]egal abortion is now quietly, deeply, widely sanctioned by the individual mind, and working in perfect concert... at society's most sophisticated levels. I might add – I recently told a close... chum how trustworthy the withdrawal method was... I sense, even in my own petite brain, a lack of commitment to reducing... abortion statistics[, which show that NZ now]... has the fourth highest abortion rate in the [First W]orld at 17.7 for every 1000 [gals] aged between 15 and 44. Countries with higher rates are Sweden (18.3), A[US] (18.5) and the U[S] (25.9 in 1992).

...[NZers] under 25 are to be offered free sexual health advice and checkups in a bid to cut unwanted pregnancies and abortions. The Family Planning Association will also offer free visits for [gals] of all ages for up to a year after an abortion to cut the number of repeat... terminations.

...MPs have to share some of the blame for the spiralling abortion rate that saw one in five N[Z] pregnancies terminated last year, says a watchdog panel. The Abortion Supervisory Committee yesterday accused MPs of ignoring its advice for 20 years and called for cross-party leadership and courage to take up the challenge to reduce the need for abortions, which hit an all-time high of 14,805 last year. Figures made public by the committee also revealed that: most Pacific Island [gals] have one abortion some time in their life; three out of four abortions take place in Auckland; and that a 12-year-old girl needed an abortion in 1996... [In addition, there were] 12 abortions for 13-year-olds, 47 for 14-year-olds... Most [mothers who aborted] were "never married" – 8810 or 59.5[%]. Almost half had no other children... For... 15 [mothers]... it was their... seventh, for three their eighth and for one at least her ninth abortion... The leader of the Christian Heritage Party... called for the committee to be replaced. "They have no idea how to control the situation and are failing miserably in their responsibilities. Ultimately, the Government must close the abortion clinics and instead turn their attention to helping those [mothers] who, for whatever reason, cannot keep their babies." [Incidentally, the]... number of teenagers putting their babies up for adoption dropped from 635 in 1970 to 118 in 1996... Family specialists believe the reasons for the decline include... the growing acceptance of single-parent families... increased support from them... and... the greater availability of abortion...

More abortion clinics are needed so [mothers] are not forced to travel far from home, the Abortion Supervisory Committee says... Auckland clinics were used by central and upper North Island health authorities, which put pressure on services... [In related news, m]idwives have defended a rural homebirth in which a baby died after a warning that the birth could become complicated... Isabell Grace Riddell suffocated during birth after being delivered by three midwives at Taupiri... Her parents went ahead with a homebirth despite a Waikato Hospital obstetrician's recommendation for a caesarean section because the baby was in breech position – coming out bottom-end first... Emergency care would have been more readily available in a hospital and the risk of death greatly cut... But the College of Midwives last night said such a suffocation could occur in all births, at home or in hospital. The suffocation, caused by part of the placenta coming off the uterine wall, was not related to the breech position... [The p]arents... yesterday said they were caught between midwives and obstetricians and were not fully informed of the homebirth risks... The case prompted the Hamilton coroner to call for an unborn child's safety to override its mother's right to choose how her baby is delivered... "The law preserves the right of unborn children to be born and protected from harm unless it can be shown that there is an overriding legitimate right." But it was not clear whether the mother's rights to decide how to give birth outweighed the baby's safety: "In my view the mother has no such right... Unborn babies' rights needed to be made clear during a review of the Health and Disability Commissioner Act in October,["']...

An abortion watchdog panel appointed by Parliament is calling for a review of the 20-year-old abortion law and thinks its role to license doctors and termination clinics could also be scrapped... [The person] who chairs the Abortion Supervisory Committee, said... the committee should be dumped and the health system empowered to oversee abortions. Her comments came after the Minister of Health... told a pro-life group at Parliament this week that [the minister] would investigate cutting the \$2.7 million paid to the committee and certified doctors to assess abortions. The Minister of Finance, [who is] also a pro-lifer, said the abortion system was no longer working and money was being wasted... The P[M says it]... remains committed to a safe and free abortion service[, but]... believes there is little prospect of Parliament reforming the licensing system...

NOT content with destroying the health system, the three "Bs"... [of the National Party] have turned their attention to abortion services. There are too many abortions, they say, without stopping for a moment to think why this might be... [One of them, the] Minister of Health... wants [mothers] to have support to decide to have the child. This is barely credible given the way this Government has stripped supports away from ordinary people. Many... solo parents have suffered benefit cuts and work-testing. Other disincentives to motherhood are in the pipeline. The implication of these policies is that the job of bringing up children is not valued by the Government... [The minister] is wrong to say the Contraception, Sterilisation and Abortion Act was designed to restrict abortions. It sets up grounds for abortion and regulated abortion facilities... The lesson of history is that if legal services are not provided, desperate [mothers] will find other ways... [B]efore safe, modern facilities were set up, [mothers]

died through backstreet abortions or dreadful things they did to themselves... [T]he present increase, while it has multiple causes, is occurring at a time when people are struggling financially and feel insecure about the future. It was a similar increase during the Depression that led to the MacMillan Inquiry in 1936. At that time it was estimated there were 4000 abortions a year, which puts the 14,800 of 1996 into perspective. Between 1927 and 1935, 223 [mothers] died of septic abortions in N[Z]. Contrast this with the fact that no [NZ mother] has died from an abortion since the CS&A Act was brought in 20 years ago... [By the way,] Cambodia yesterday legalised abortion in a bid to end deaths from illegal operations.

...[mothers] who have abortions or doctors who perform them may soon face the death penalty if a tough new bill passes through... the Philippines... Congress. [Gal] rights groups are planning to lobby against it but the Department of Health has thrown its support behind Senate Bill 2249 which aims to define abortion as a "heinous" crime on a par with murder or rape... [□ The] Irish High Court has cleared the way for a 13-year-old rape victim to travel to England for an abortion. Last week, the Children's Court ruled the girl, who is 13 weeks' pregnant, could travel for an abortion but the decision was appealed by her parents. [However, 'a pregnant under-12-year-old rape victim has chosen to have her child.'] - 1997

I can think of one very compelling case in particular where a [perso]n had every good reason for an abortion. [That person] was forty-one years of age when... [it became] pregnant for the fourth time. Her two oldest children were fully grown teenagers, and her third child was ten. Her husband was in his sixties. Her elderly mother was living with her, and ailing. Times were hard. There was a war on, and rations were modest. [That person] really was in despair as to know how [it] could cope with another child. [That person] wept for weeks when the pregnancy was confirmed, and felt deeply depressed... [but] gritted her teeth and carried on. The baby was born in due course. And that baby was me... I am very glad I was born...

Scrimping and saving for months, I finally got the money together to spend two months overseas. First stop would be Munich in Germany, then England and Ireland. The trip coincided with the last month of my brother's work contract in Munich, so I would spend a month on my own, then tour the UK with him... [I]n Munich I found castles, palaces and museums... It made for an enchanting time, but wasn't as special without someone to share it. This all changed in the second week when I was lunching in a picturesque "biergarten". Someone ran past my chair to "accidentally" push me off my chair and, in the confusion, stole my wallet. I never saw my money again, but the theft paid off, as I met... a stunning blond, blue-eyed German... [who] saw it happen and helped me through the police interview and cheered me up later with a meal and a beer. By that night and a few drinks later... I realised we would have to meet again. We swapped numbers and for the next two weeks I had an expert guide of Bavaria. It was magical and I soon realised we had something special. In the days before we were due to depart, me to Britain with my brother, him to see his sick mother in the country, we spent as much time together as possible. On our last night, we made love and whispered of plans for a future. I left Germany feeling exhilarated, hoping I'd found what I'd always wanted. While travelling I wasn't able to contact [my lover]. I still couldn't get through to him by the time my holiday ended, or for the next month when I got back home. Misgivings that I'd been used crept into my head and I soon gave up on finding him. By this time, I realised I was pregnant. Considering my single status, financial situation and the treatment I expected from my family and friends about being a single mum, I made the harshest decision of my life and decided not to bring the child into the world. While it was hard, I survived and began to heal. About three months later, there was a knock at the door. It was [my lover]! ...his mother had died soon after [my lover] reached her and [it]d remained there to make arrangements and be with his family. As soon as [my lover] returned to Munich, [it] borrowed money to travel to N[Z]... While I was happy to see him, I was racked with guilt. It was wrong, but I couldn't think of jeopardising our relationship, so I didn't tell him what had happened when I thought [my lover] was out of my life. It's been four years and the fairytale has continued. [My lover] has a visa... and we have a house and marriage, but have been trying for a child for nearly six months... I went for tests and found out that, due to complications from the termination, I can't have kids. I still haven't told... [my husband, who I know will be] devastated...

So abortion is again back on the menu, with [the Gal]'s Affairs Minister... saying the Government is unlikely to make good its promise to overhaul "outdated" abortion legislation before the next election. While[the] Justice Minister... has instructed officials to draft legislative changes to remove the need for two consultants to approve each abortion, right-to-life proponents are cranking up their objections to possible changes and to the law as it exists. But in a similar way to the economic upside that is now being attached to divorce – that it doubles the market – researchers are now redefining the economic and social consequences of abortion. Abortion used to be a purely moral issue. The debate surrounding termination centred on the individual's right to choose. The last time this subject hit the headlines, the leader of the Christian Heritage Party... suggested that realistic foetus photos would jig the consciences of [mothers] contemplating abortion. The opposition, of course, countered with the usual well-reasoned, [mother]'s-right-to-choose argument. But that was the extent of the dialogue – the same old moral high ground, reasons and refutations trundled out for the umpteenth time. But perhaps the moral equation has at last reached its use-by-date. New research in the U[S] has come up with a unique angle. Becoming known as the abortion bonus, the research centres on the correlation between abortion rates and the startling drop in crime in major American cities. Abortion may account for as much as half of the decreases in the American crime rate, say[the] researchers... They add that the 1973 *Roe v Wade* ruling means that many people who might have become crooks in the 1990s were never born. The... theory holds that a high proportion of the [mothers] who received legal abortions after 1973 might otherwise have given birth to unwanted, economically deprived children raised in single-parent or dysfunctional families – the type of background that often produces delinquents... Are the American researchers suggesting that, as a species, we are spontaneously controlling the quality of our populations through termination, or are they saying that there is a surreptitious conspiracy to manipulate entire populations? Either way, we moderns are in good company. After all, *Mein Kampf* was predicated on control of the gene pool. Plato's philosophy was that bad elements should not be allowed to reproduce, and *limpieza de sangre* – the purity of blood – was the justification for the Inquisition. Extrapolating the concept of abortion as a population-control tool, whether conscious or otherwise, sparks a number of interesting ideas. On one side it removes a cast of people who are traditionally economically dependent on the state, draining tax revenues without replenishing the wider community in an economically tangible way. Downstream, this removal releases resources from such areas as policing, incarceration services and education and frees them to be used in effective community creation. Perhaps abortion is not solely a sign of moral decline but an example of the momentum towards upscaling and improvement – a morphic desire by the general population to create a better population. If so, you would think the environment that is gradually being created by rampant abortion would suit many anti-abortion advocates very well. White, upwardly mobile, stable, well-mannered and well-behaved taxpayers would prevail. On the negative side, successful abortion campaigns, while reducing demands on resources and our fragile ecosystem, might actually increase the abuse and damage. One of the key findings of the[latest UN] GEO... report was that environmental degradation is known to be caused by excessive consumption by the... middle classes, the most excessive consumers since history began. So whether rampant abortion is a bonus or a hindrance to the development of society, the latest findings will enliven and perhaps revive a debate that has been mired in simplistic notions of right and wrong.

...Dozens more [mothers] are seeking help from a Catholic anti-abortion centre since the Church offered them financial help. In April, the Catholic Bishop of Auckland... publicly pledged to give every possible help, including financial aid, to [mums] undecided about the future of their unborn child. Since then [the bishop] has not had to carry out his commitment to personally support any [mum] deciding to have her baby throughout the child's life – [the bishop believes few] would want that level of help anyway. But [the bishop] has been delighted by a 100[%]

increase in the number of [mums] contacting the Catholic-oriented Family Life Pregnancy Centre, increasing from around three appointments to six a day. "I knew if there was a critical need people would respond. We've seen a good increase due to the greater publicity – I think word's really getting around." The initiative followed a similar cash pledge in Britain by the Archbishop of Glasgow... who claimed that more than 100 [mothers] had been encouraged not to have abortions... [■ A guy] has pleaded guilty to offering \$3.6m over the internet to anyone who killed an abortion provider.

...Abortion opponents who created... Wild West-style posters... offering a \$US5000 reward for information about a "Deadly Dozen" doctors... and a Web site listing the names and addresses of "baby butchers" were ordered to pay \$US107 million... in damages by a federal jury that said the tactics amounted to illegal threats. Planned Parenthood, several abortion doctors and a clinic had sued the activists under the U[S] racketeering statute and a 1994 federal law that makes it illegal to incite violence against abortion doctors or their patients... Unlike previous cases brought under the 1994 law, this one did not involve any physical confrontations or explicit threats. Because of that, the... activists contended the Internet site and the posters were protected by the First Amendment. But... [after] five days... the... jury [disagreed]... As part of the tight security surrounding the case, the judge said the names of the eight jurors will never be made public. The defendants, who included more than a dozen individuals and two anti-abortion organisations, said they would appeal. Some said they would not alter their tactics. And they said the other side would be hard-pressed to collect, because they had transferred their assets to make themselves "judgment-proof." "This is a moral and constitutional outrage," said one of the defendants... At issue was a Web site called The Nuremberg Files, which lists hundreds of abortion doctors accused of committing "crimes against humanity" and invites readers to send in doctors' addresses, licence plate numbers and the names of their children. When three doctors were killed... [- including] Dr Barnett Slepian... – ...their names were crossed off like items on a grocery list while those who were wounded were listed in grey... The defendants maintained they were simply political protesters collecting data on doctors in hopes of one day putting them on trial as the Nazi war criminals were at Nuremberg. They said they could not be held accountable for the violent actions of others.

...UP to 200,000 Polish [mothers] have abortions each year despite the country's strict anti-abortion law, according to a report by the Federation for [Gals] and Family Planning... [In further news from overseas, a] monstrous pattern of mass rape is beginning to emerge[from Kosovo]...

Serb police found only [adult gals] and children when they took over the western Kosovo village of Dragacin in late April. All the [adult guys] had fled or joined the Kosovo Liberation Army. So the Serbs crammed the... [villagers] into three houses. At night the captors would come and shine flashlights in the [gal]'s faces, discussing who was pretty and selecting a few to take away. Hours later the chosen [ones] would return. Nothing had happened, they said: the Serbs had only wanted them to serve coffee... So "Anita" (not her real name) wasn't too worried the night... the unmarried 20-year-old... was picked – at first. But the Serbs didn't want coffee. One police[officer] raped her while four others sexually abused her. After they finished, they handed her some lollies. [Anita] threw them away. Back at the house [Anita] told the other [captives] what had happened. "I said, 'Why didn't you tell us?'..." [Anita] was glad to learn [it] wasn't pregnant... Anita... got her period in May, a week after the Serbs shipped the [villagers] of Dragacin to Albania. Many villagers demanded immediate vacuum abortions, without waiting for a pregnancy test. Some had been raped within the previous three days; they got morning after pills in special UN kits. The Vatican last week reiterated its condemnation of all such efforts, no matter how desperate the [mothers] are. "The 'morning-after pill' does not exist," declared[one] Monsignor... "This is an abortion." The reaction from [gal]'s groups has been furious. "The Vatican is out of touch," said [a spokesperson for] Marie Stopes International, a group that provides birth control and abortion counselling in [Last] World countries. Relief workers are only slowly determining the scope of the Serbs' crimes against [gals] in Kosovo. Much of the problem has been kept hidden by victims too humiliated to talk. Albanians tend to ostracise [gals] who have been raped. "Our counsellors see [gals] all the time and know they were raped," says [an official from] the Albanian Family Planning Association. "...But they're just unable to talk about it." ...Nato has alleged the existence of "rape motels," which Serbs also used in the ethnic cleansing of Bosnia[and the FPA official]... tells of a 16-year-old girl in Malisevo who... was gang-raped by Serbs in front of her younger siblings. "They were doing the worst thing they possibly could to these [gals]," says the... official. "What could be worse than bearing the child of the Serbs who murdered your husband and brothers?" The Vatican disagrees. "We must distinguish between the act of violence and the reality of new human beings who had no control over how their lives began," says... a close adviser to the Pope. During the Bosnian war John Paul II took a similar stance against abortions for Muslim[s]... who had been raped by Serbs. In Kosovo the church has gone further by explicitly denouncing the morning-after pill as an abortion-inducing treatment. The W[HO] and most physicians insist the pill is a contraceptive, since it works before the fertilised egg has been implanted on the wall of the womb. Although the Vatican ordinarily opposes artificial contraception, an exception was made for nuns in the Former Belgian Congo during the upheavals of the 1960s. "In the Congo, it truly was a defence against the very real possibility of rape," said [the Pope's adviser]. "In this case, it is not a defence – it is an afterthought. After the pregnancy has occurred... after the life has begun."

...West Auckland health professionals are welcoming the decision to allow over-the-counter sales of the emergency contraceptive pill from early next year. Often referred to as the "morning after pill", it is used to prevent pregnancy within 72 hours after unprotected sex – although the earlier the better... [A] registered nurse at Wai Health... does not believe it will make people more casual about sex. "I can understand that stance, but I don't think in reality that'll be how it is." ...Under the new legislation, pharmacists and registered nurses must do extra training before they will be allowed to sell the medicine. At the moment, [gals] need to get a doctor's prescription... [C]hurches have responded cautiously to the news.

...The morning after pill would be more accurately described as an emergency abortion pill... [if the] Family Life Pregnancy Centre[had its way]... First, because pregnancy begins at fertilisation not its implantation, and second, a chemical abortion is still an abortion... Apart from the ending of an innocent human life, what about the longer term (effects) from these extremely high doses of synthetic hormones? [One r]esearcher... fears that an increase of hormones due to conceived babies that were aborted in their first week of life will increase the risk of breast cancer... [Of greater concern, perhaps, is that a]t the inaugural Abortion Providers Conference of N[Z a] Dr... showed the failure rate for the morning after pill to be more than 25[%]. Other studies indicate that the actual failure rate is as high as 40[%].

...Official approval for the abortion pill RU-486 is likely in about two weeks. It is understood that the controversial French drug has been recommended by the Ministry of Health's medicines assessment advisory committee. All that remains before it goes on the[NZ] market is to decide on packaging. RU-486 has caused controversy all over the world since it was introduced in France more than 10 years ago. It is[also] available in... many[other] European countries and parts of Asia. It is intended for [mothers] up to eight weeks pregnant and is an alternative to surgery.

...It used to be that having an abortion meant undergoing surgery. Now it looks like N[Zers]... may have a choice about the type of abortion they want, with an abortion pill to be introduced soon... Invented in 1980[using]... RU-486 or Mifepristone... involves taking the pill... prescribed by a doctor, and returning up to two days later to take a second drug. Mifepristone stops the embryo developing by blocking the hormone progesterone, which is essential to maintaining pregnancy. But Mifepristone does not expel the embryo by itself so, 36 to 48 hours after taking it, the [patient] must return to the clinic to take prostaglandin, a drug (currently legal) which will complete the abortion by inducing contractions, forcing the embryo out of the uterus in the manner of a miscarriage. In other countries, after taking the second drug, the [patient] must remain at the clinic for the next four to six hours in the hope [it] will miscarry in the clinic. Otherwise, the miscarriage occurs at home... It is not yet clear in N[Z whether a patient] would have to remain in the clinic until the embryo has passed, which could take more than a day for some... [patients], according to F[IPA NZ's clinical spokesperson]n... A follow-up appointment is necessary in the next two weeks to make sure the abortion is completed... [Mothers] up to

nine weeks pregnant can take the abortion pill but it is most effective before seven weeks... After [nine weeks], the body produces higher levels of progesterone and the drug is not powerful enough to stop pregnancy... Common side-effects include bleeding, menstrual-type pain and cramping, which are comparable to those of [mothers] who miscarry... As a relatively new procedure, the long-term safety of the abortion pill cannot yet be confirmed. [However, t]ests since 1982 have not revealed any evidence of long-term health effects and it is thought that, given the very short time [patients] are exposed to the drug, such effects are unlikely... There are some [people] who won't be medically suitable for the abortion pill – mostly due to adverse effects to the prostaglandin – including [patients] with heart disease... At present, a legal surgical abortion is free and it is expected there will be no cost attached to the abortion pill either... ● The number of [NZers] choosing to have abortions is increasing every year.

...15,206 [NZ mothers] had abortions in 1997[, accounting for '22% of registered pregnancies']... 2962 abortions... were carried out on girls aged between 11 and 19 years[, including 56]... aged 14 or under... [A spokesperson for] the Parkview Clinic, Wellington... said successive Governments had ignored advice from specialists pleading for compulsory education to help reduce the rate... Recommendations from the... Abortion Supervisory Committee... included compulsory sexual health education in primary schools and a huge campaign using various media, including youth television and magazines. In the Netherlands[, where people can obtain]... free terminations on demand... the abortion rate was half of N[Z]'s because the Dutch had compulsory education... and... free contraception... [Although the] Minister of Youth Affairs... was not available for comment... the Ministry of Youth Affairs... plans to consult young people directly on ways to solve the problems... Young people's access to information needed to protect themselves from pregnancy and STDs is a focus area... [L]ast year, nearly 300 girls under 15 were treated for a sexually transmitted disease. A further 6843 aged 15 to 19 with STDs sought help from clinics nationwide... [This age group] made up 21[%] of all patients attending STD clinics... However, it was believed the real number of youngsters with STDs was much higher.

...Teenage girls should have easier access to the morning-after pill as a form of contraception, the Minister of Youth Affairs believes. A background paper on N[Z]'s high teenage pregnancy, abortion and [STD] rates reveals that policymakers want a review of access to contraceptives and of sex education in schools. The recommendation raises the possibility of a... review of the Education Act... The paper said that, in general, parents were reticent in discussing sexuality with their children and many young people were also missing out on learning in school about sex. No sex education is allowed in schools unless boards of trustees agree to it and, even then, parents are able to exclude their children from classes. Going on 1996 figures, half of N[Z]'s schools do not offer sex education. The paper warned that if boards did not consult parents adequately, decisions could be dominated by a "vocal minority" who were opposed to sexual education. "Ironically, no parental consent is required if a young person chooses to access the same information from other sources... but by this time the young person may already be sexually active." ...The ministry was forced to release the in-house document to the Christian Heritage Party under the Official Information Act. [The party's leader] said... boards should be applauded for making informed decisions not to implement the sexual education curriculum[, adding that]... the report failed to acknowledge that the morning-after pill was a "form of abortion" and did not place enough weight on abstinence and adoption... [However, the paper had said that] abstinence-only programmes were not highly effective because sexual exploration was an inherent part of adolescent development.

...ONE in 10 N[Z] children has had sex by age 12, a new survey has found... [The medical researcher]'s study also shows almost four out of 10 Kiwi kids have lost their virginity by 14[, and 30%]... were drunk at the time... [The] Health minister... is so disturbed by the survey [it] is considering introducing sex education to younger children. "This has to be a wake-up call to everybody," [the minister] told *Sunday News*. "There are things the government can do. We are facing human nature here. But we have to ensure these kids have information and education. But it is also up to communities and parents." The survey was carried out among 1000 Hawke's Bay schoolchildren. Medical experts believe the results are mirrored around N[Z], and represent a trend towards kids having sex younger. The last major survey was in 1987. It found only 1.7[%] of 12-year-olds had had sex. [The medical researcher, who] presented her findings last week at a conference in Christchurch... says parents should be worried.

WHEN [A] DUNEDIN MOTHER... drove home from work one Friday last year to fetch her handbag, [it] heard music coming from the bedroom of her 13-year-old daughter... [The mother] looked in and was stunned to discover [her daughter] naked on the bed having sex with a boy... brought home from school. [Thi]s story is not unusual. According to a 1986 study by... a community-medicine specialist in Wellington, nearly one in three 15-year-old girls in Hutt Valley secondary schools – which could mean as many as 18,000 15-year-olds nationwide – have already had sexual intercourse. The percentage increases by age. A survey of... sixth- and seventh-form students at a North Island school by three psychologists found that 39[%] had already lost their virginity. [(In comparison, 'only about 15% of Japanese girls lose their virginity when aged 16; 18 is a typical age and, these days, it is very rare to find a Japanese virgin over 21 years old.')] The North Island poll also] found that of the sexually active kids, only 41[%] used birth control... According to a 1991 Department of Health paper, N[Z] has one of the [First W]orld's highest teenage pregnancy rates... But pregnancy is not the only risk in premature sex. There is also the risk of contracting a[n STD] that can result in chronic infection, infertility and in the case of AIDS, death. What's more, premature sex can disrupt the normal process of gradual self-discovery that takes place in early adolescence. Who are the youngsters behind these statistics? Medical, mental-health and educational experts have pinpointed... [that they are] often uninformed... "It's wrong for adults to assume that kids today know more about sex than they did when they were young," says... a human relations and sexuality educator for the F[PA]... Many parents worry that discussing sex will only encourage adolescents to become sexually active. But the evidence seems to prove otherwise... "Kids from homes where there is open discussion about sex are more likely to act responsibly when they become sexually active." ..."I thought you couldn't get a baby the first time you did it... Afterwards, my boyfriend said nothing would happen to me and I believed him..." says [a] 15-year-old... who now has a ten-month-old baby... Experts say many very young sexually active teenagers engage in mythical thinking about sex... Most are ignorant and are afraid to talk with parents... "Kids tend to stop asking their parents sexual questions at the age of nine or ten – they get their information from peers." ...Girls are often sexually active because they fear unpopularity. For many, having a boyfriend is vital to their self-esteem. And some feel sex is the price they have to pay for it. [One girl] fell victim to this pressure when... 13. "My schoolfriends always spoke knowingly about sex and I felt left out... So I did it with a boy I liked, then wished I hadn't... We don't speak to each other now." ...Boys may also use sex to win favour among peers. "My friends teased me that I didn't have the guts to go all the way with a girl," says [one boy], who had his first[sexual] experience at 14. "But afterwards I didn't feel better about myself. I worried my parents would find out and that the girl would get pregnant." ...Sexually active girls are likely to be dating or spending time with older boys. "Because they mature much faster, sexually active girls of 13 are usually two or three years younger than their boyfriends," says... [the] manager of a marriage guidance service in Dunedin... Some parents try to prevent sexual activity by not allowing their kids to date or by imposing strict curfews. "This can be a futile strategy... Children can have intercourse on the way home from school or when you go out." ...THE BEST WAY for parents to prevent their children from engaging in premature sex is to help them understand that they have a bright future – a future that can be easily damaged by experimenting with sex too soon... Young teenagers need to understand that by moving gradually into adulthood – building friendships, holding hands, experiencing a first kiss, discovering a new interest or talent – they will give themselves time to achieve the self-knowledge and self-respect that are the essence of true maturity.

Working-class girls have customarily been trapped in a position of chronic maturity – ...apprenticed to housework, child care and other 'labours of love' while still at school. Waged work may have echoed many of the features of their domestic servitude, but it also offered them a brief interlude

of economic independence before marriage and this is now being drastically threatened. Unemployed daughters are under enormous pressure to go on 'making themselves useful about the house' in return for their continued upkeep. For many girls, the only way out of this impasse lies in early motherhood – though not necessarily marriage. Getting pregnant and becoming a single parent may not be a calculated choice, but it's a way of qualifying for council housing. As one girl put it to me, it may be out of the frying pan into the fire – but at least it's your own hearth!

TEENAGE girls in California are being pushed by local authorities into marriages with... [whoever got them pregnant. The] head of Orange County's social services department, believes the scheme will go some way to tackling the explosion of teenage pregnancies and make [guys] think twice about engaging girls in under-age sex... California has the highest rate of teenage pregnancy in the U[S]... 70,000 babies are born to teenage mothers every year and the state spends \$7 billion a year supporting them. In nearly 80% of cases, the fathers are adults... Critics have derided the scheme – introduced with the full backing of the... juvenile courts in Orange County – as "medieval"[(although the scheme doesn't involve having the brides 'sleep with the local squire (chief landowner), not their husband, on their wedding night')]. They argue the authorities should concentrate on bringing criminal charges against the... [dads instead. One critic], who runs a shelter for teenage girls, said: "We're talking about official approval of a criminal act of child abuse. Guys in their 20s and 30s are pros at manipulating naive girls looking for love they never had at home." ...Some... social workers have rebelled against the policy. Five supervisors have written to [their department head] complaining "it is illegal and unethical for our agency to be involved in any way in the marriage of minors to adult perpetrators"... The scheme has also incensed California's governor... who earmarked \$52 million this year to tackle teenage pregnancy. "It's not macho to get a teenager pregnant... But if you lack the decency to understand that yourself, we will give you time to think about it in jail." ...Under Californian law, children as young as 12 can get married so long as they have a special licence and the approval of their parents. Outside marriage, an adult engaging in sex with a person under 17 can be prosecuted for child molestation or sex with a minor, which carries sentences of up to eight years' jail[– but the]... head of Orange County's sexual assault unit, admits it is difficult to prosecute in such cases because few girls will press charges. Fewer than 350 cases of unlawful sex are brought each year in California. Public anger at Orange County's response to the problem was summed up by a question posed in a letter from a professor of social work printed in the *Los Angeles Times*: "Will Orange County Social Services create a dating service for abusive [guys] to cycle them into relationships with troubled adolescents?" ...Among the young mothers who have already been pushed into marriage is... [one aged 13], who was encouraged to marry her 20-year-old boyfriend... several months ago. According to [her boyfriend], social workers threatened to arrest him for child molestation but then suggested that if the couple married, no charges would be brought. His wife [claims to be] happy with the marriage and... loves her husband, who works cleaning tables in a restaurant. "[My husband] just talks to me real fine," [the wife] said, her teddy bears arrayed on a shelf behind their bed... [In related news, the] Dutch government is reviewing its five-year-old law allowing child sex from 12 years upwards... [It] is thought... the age [of consent will rise to 14. ■ Prior to '1893 the age of sexual consent for NZ girls was 12 years. It has been 16 since 1896'.

... 'there is no age of consent in Cuba, where, due to their overcrowded homes, people are resourceful when it comes to finding places to have sex – they even make love on railway lines, often with fatal consequences. Schools and churches are the most popular after-hours trysting spots.'

... "Just say no until you're married," was the only contraception advice... in sex education classes at her Catholic girls school. The 19-year-old – seven months pregnant and single – wishes [someone had taught her] more about condoms and the contraceptive pill. "...it's not easy to say no to guys. There are a lot of guys out there who are really interested in sex." The possibility of teenage pregnancy did not even come up during the sex education classes, taken by a... [guy] teacher fond of quoting from the Bible... [T]he only reference to contraception was that any protection from pregnancy was a sin and that the Catholic church was against abortion... [The young mother] came from a home where talking about sex was forbidden. Discussing sex was a taboo subject in her mother's Samoan culture... [H]er parents had disowned her when they learned of her pregnancy and her relationship... with her boyfriend... had broken up... Now living at the Salvation Army's Bethany Home in Grey Lynn, [the young mother] said her dreams of going to university had been sacrificed for life on the domestic purposes benefit. "Sex education is important so teenagers know what they are getting themselves into – if I had known how much [an unplanned pregnancy] was going to change my life I would have been more careful." ...Other girls from her school had also had unplanned pregnancies... The lack of sex education at the Otahuhu school reflects the results of an Education Review Office report which stated this week that many schools were not allocating enough time to sex education. The Minister of Health... commissioned the report to find out whether schools were meeting the needs of students. "If this is an indication of how sexual and reproductive health is being taught in school, it appears patchy at best and seriously inadequate at worst," the minister said. Sex education issues are supposed to be introduced as part of the health syllabus taught in N[Z] schools from Form 1 to Form 7. Overseas research suggests that effective programmes require at least 14 hours teaching per year... [A 12]-year-old... said [her class] had just one 3 1/2 hour session last year on puberty. The Colwill School pupil said... it was important to start discussing these matters before youngsters started experimenting. "I know a girl at my school who had sex when... 12... got pregnant... and... has had a baby at 13. If [that girl] had known more about safe sex that might not have happened."

...['Each year, more than 15,000 AUSn teenagers become mothers. Twenty years ago, according to the AUSn Bureau of Statistics, this figure was about double what it is today. But despite the significant decline, unplanned early pregnancies (as many as 90% of teen pregnancies are accidental) still cost the community – financially, socially and in terms of personal hardship. With contraception now so simple to use and so easy to obtain, why is unplanned pregnancy still such a problem? And what can we do to prevent it? Many people think the solution lies in curtailing the sexual activity of teenagers. But the adolescent sex drive being what it is, young people are not simply going to stop having sex. Numerous studies have shown that not informing teenagers about sex, or making it hard for them to get contraceptives, doesn't stop them from having intercourse – it just makes them less likely to do it safely.'

... 'Safe-sex message from the past In 1873, when Rochester buried a time capsule filled with seed catalogues, maps and coins, someone managed to add something not on the official list: a condom, made of sheep intestine, found tucked into a book.' ● 'The world's oldest condoms are to go on show in Holland. The contraceptives made of animal and fish intestine and dated to 1646 were excavated from a medieval toilet in Britain's Dudley Castle in 1985'.

...the UN] has added the [gal] condom to its anti-Aids weaponry... A [US] firm... last week signed a three-year deal with UNAids... to provide[such] condoms at lower prices... Already on sale in 14... [First World countries for an] average... cost... of \$[NZ]4.30... the... condom could make its appearance in the... [Last World for] under \$NZ1.40... A... study showed that the condom, which is more than 95[%] effective if used correctly, is widely accepted by [gals]. "It doesn't appear to alter sexual pleasure, in contrast to the [guy] condom,"... A feasibility study of 160 countries showed a potential market for seven million [gal] condoms in 1997... The [gal] condom is the only product controlled by [gals] offering protection against... [STD]s and unwanted pregnancies. [By the way, 'a new paint-on invisible condom is being developed in Canada. Clinical trials are under way on the liquid which is applied to the gal's genitals. Body temperature turns it into a waterproof gel which can prevent STDs, HIV and even pregnancy.'

...46%] of all abortions last year in N[Z] were from failed condoms... [C]ondoms do not offer protection from two [STD]s – herpes and genital warts[('the genital wart virus affects at least 75% of the sexually active population at some stage of their lives, although they may not know they have the complaint – the virus can lie dormant for 40 years and be reactivated late in life'; 'in the early 1980s, genital herpes was the scariest STD around – incurable, painful, highly contagious and marked by recurrent outbreaks of weeping blisters, it was described as the scourge of the decade until Aids began to kill people in their thousands – and threatened to undo the sexual revolution; while genital herpes may have disappeared from the lay headlines,' it is

again 'on the increase nationwide – about 400 new cases were reported in the past year – a Christchurch doctor said yesterday'). These conditions last for life... [B]oth British and [US] research show that girls under 17 who have sex, have twice the likelihood of getting cervical cancer. Scare tactics? No – just the facts that our teenagers need to know. On this basis I was astonished to read in last Wednesday's *N[Z] Herald* an article... that politicised and trivialised the importance of sex education... Our programme includes contributions from Grapevine and Parenting with Confidence. Their... excellent... booklet "*Sex with Attitude*"... [-] funded by the Minist[ry of Health -] ...is given to all students at Avondale College.

...The Avondale College principal and anti-abortion evangelical Christian[- who is]... National's Owairaka candidate... [- said FPA material had been] banned... from his school[, and also]... undercut his party's attempt at a liberal sex education message yesterday by... [saying that] the state should stop funding the association because it promoted promiscuity... Earlier yesterday the Minister of Health... took the opposite line, praising the association and saying [that, if the ministry remains hers, it is her intention] to see compulsory sex education in schools... [A]t a breakfast celebrating its 60th anniversary[, the minister added that the FPA]... has "a proud record in producing well-targeted material for many school programmes." ...Incidentally[, the mother of the]... Alliance candidate for Owairaka... convened the first meeting of the association...

Sex with ATTITUDE These days we all know a lot about sex, ...right? But you probably want to know more. If you don't, *somebody* must... because every month bookshops sell a truckload of books, packed full of information on sex – how to do it, how to get it, where to do it, who is doing it, what to wear for it and recipes for breakfast after it! ...In much of the media today, sex is portrayed as a casual, physical act...

The country's youth are getting most of their sex information from television, says an Auckland University researcher. Mothers came sixth on a list of sources indicated by young people – ...[including] friends, books, pamphlets and videos... [G]irls were more likely to get information from friends instead of their mothers, but boys tended to opt for their fathers or a youth group after TV and videos. Most alarming was that four of the top five options for information involved no discussion or clarification of the subject... [Boys] were more likely not to discuss sex, but... 20[% of the boys] who did not discuss sex with anyone said they wanted to discuss it... [In international news, s]ince the start of the year, the prosecutor for Gem County... has, in a bid to reduce teenage pregnancies, revived a 75-year-old law banning fornication... Fornication is a fine, antique word. So antique, in fact, that[one] 17-year-old... had to look it up... [after] being charged with committing the act... [The 17-year-old] was convicted in May, given a suspended one-month jail sentence, and ordered to take "parenting" classes. Two weeks later [the 17-year-old] gave birth to a son. Her 16-year-old boyfriend was also convicted of fornication, put on probation and sentenced to community service. [Her] case... and... other[s have]... ignited a furious debate... Undeterred, [the prosecutor] is pressing ahead. The little courthouse... in Emmett, a farm-and-timber town of 4900 people in bucolic north-west Idaho... has seen a stream of teenagers, parents in tow, as they admit their misdeeds (most... in this conservative, Mormon-flavoured part of [the US]... do) and receive their punishment. Others, no doubt are honing up on their birth-control literature. - 1996

[NZ FPA] officials say a sex education pamphlet for young people contains inaccuracies, inconsistencies and biases. The association, whose own publications have attracted controversy, has just completed a review of *Sex With Attitude*, a booklet by... [a] group... which describes itself as a community organisation with a Christian underpinning... [The FPA] could not recommend use of the document – published with the aid of \$109,000 of government money – and has listed areas of concern. These included the use of scare tactics and advice that feelings are not to be trusted... misinformation about homosexuality... and... about condoms... ...Sex education has proved to be a contentious issue at every turn. It seems each time new material is released for young people, someone somewhere lets fly with their disapproval... In the wake of the salvos, the *N[Z] Herald* asked several teenagers... about... the... pamphlets available... [One boy], aged 13... preferred *The Word*... which... is produced by... [the FPA,] to *Sex With Attitude*... because it covered all of the topics without repetition... and... *Sex With Attitude*... was "coming down your throat like a teacher... don't, don't, don't." ...[another boy], aged 14... thought... *The Word*... was the best of the booklets... [because:] "It's a dictionary. It basically had everything..." ...[a girl of 15 also liked] *The Word*... because... *Sex With Attitude*... did not contain the sort of facts which interested her... [● Free] contraceptives and advice for young Christchurch patients are now as close as their family doctor. Pegasus Medical Group doctors, representing more than 90[% of Christchurch's] GPs, say they are taking action to lower the rate of unwanted pregnancies and [STDs] in young patients. The project manager... said the move was prompted by concerns that patients under the age of 21 faced too many barriers to the means of preventing pregnancies and protecting sexual health... [T]he project was the first time all people under 21 had access to such a programme, regardless of income.

...Help is on its way for Auckland teenagers facing the trauma of hormone-driven growing up years. The country's first specialist youth service will open tomorrow in South Auckland to handle medical, sexual and mental health problems... Although based in... Manukau, the service's three staff members will travel around central and West Auckland and provide advice to medical professionals up to Northland... An adolescent health specialist... said the service was long overdue... The... \$300,000... service is being financed by North Health and the Auckland Medical School.

...The future of a sexual health clinic at Pukekohe High School is in doubt with a small group of parents pushing for the facility to be closed. The school's Parent Teacher Association will host a public meeting tonight to debate whether the Government-funded service should continue to operate on the premises. The principal... said a minority of parents were opposed to the F[PA]-run clinic because it offered pupils contraceptive pills, condoms and counselling without the consent of parents. "They can go to their local doctor and do the same," [the principal pointed out. The principal] was worried that teenage pregnancy rates and [STD]s would increase if pupils' access to contraceptive advice was cut. [The principal] believed that some parents had been influenced by a [US]-based anti-abortion group called Family Life International, which is sending a representative to the meeting... The F[PA] approached the school last November to set up a service there. The school trustees agreed to the proposal in February and the clinic began operating in March as part of a North Health pilot programme on sexual health and awareness. North Health contracts the association to provide free clinics in areas where access is difficult. [The principal] said that while students had access to a medical centre in Pukekohe, some could not go there because of transport, financial or personal reasons. Students felt more comfortable attending the school clinic, run by a F[PA] nurse for two hours every Monday. However, the contract expired on October 1 and the service is due to be reviewed. The board of trustees is likely to consider the matter next month.

...100 parents have met to consider whether... a... Government-funded... sexual health clinic at Pukekohe High School... should continue to operate... The principal... said the school was in a difficult position because the clinic run by the F[PA] offered contraceptives and counselling to students who were otherwise at risk of pregnancy... [Ironically, t]he Minister of Youth Affairs wants free contraceptives at schools as a key part of the drive to promote safe sex among teenagers. [The minister] said last night that free condoms should be available to school students. [The minister] was also keen to see the range of free oral contraceptives expanded for [girls], and suggested it was time to think about sex education for younger children... "Research tells us that sexuality education is most effective when delivered before sexual activity begins... [A]lthough we may not like it, some young people are starting to experience sexual activity as young as 11 or 12 years old. We need to make sure they are safe... We need to champion the condom culture... They need to be available in places where young people meet, such as schools... and... youth clubs..." However, [the minister expects]... that her free condoms in school push would be strongly rejected at some schools. Individual school boards would make the decision... Her proposals would first need to go through the Ministry of Health. The ministry had already started a sexual and reproductive health strategy which it was reviewing... [The minister] rejected arguments that early sex education and access to contraceptives will boost sexual activity and unwanted pregnancies... The president of the School Trustees Association... was aware of two boards which had approached students about

making condoms available at school. The students rejected the idea, saying they already had adequate access to contraceptives... The Minister of Education... is reluctant to step into the condom's-in-classrooms debate[... saying]... the issue... was something for the Minister of Health to address.

...Free condoms in schools, as advocated by the Minister of Youth Affairs... could lead to a rash of water bombers and vending machine vandals, says a Wellington principal. But... the head of Upper Hutt College... welcomed the minister's suggestion that free condoms be available from one-stop health shops, GPs and health clinics.

...TWO five-year-old boys are being chauffeured to a party. One... says to the other: "I had a dream I was sexing with a girl." Giggles and snorts cocoon them until the other thinks of a comeback that goes one better. "Well... I had a dream I was sexing Robert." Big ears at the wheel is riveted. Has my son just come out? ...These boys in short pants have all their baby teeth, yet already they are talking about losing their virginity. I brace myself for a late 20th century panic attack – a "what's the world coming to?" spasm. But then I remember getting engaged to [a boy] in kindergarten and scenes behind the shelter shed and soon I'm... relaxed about the fact that sexuality is more exotic these days and we don't eat chops and two veg much either. We have never been comfortable mentioning young children and sex in the same sentence. Sex is perceived as dirty, children as pure, and the most enduring taboo in modern society keeps the two at a distance. A mother may feel uncomfortable when her three-year-old son presses his groin into her body or begins to play with her breasts in a way which [the mother] thinks crosses the border of curiosity into a country that is very confusing. But it is [guys] who feel most insecure about cuddling youngsters or bathing with them because of a climate in which we suspect the worst... "Who's that [guy] in the bath with the children?" one well-intentioned chemist asked a customer who'd come to collect holiday snaps. Workers at the [NZ FPA] report that as sex abuse issues are better publicised, more parents have become concerned that natural affection and interaction will be misinterpreted. Our focus has been on adult behaviour, with the protection of children properly accorded the highest priority – but perhaps that has distorted our response to the range of normal physical and sensual behaviour exhibited by the very young. The five-year-old who dreamed of sexing Robert has a thing about rubbing soft tummies and the older [it] gets the less comfortable I feel about having him pull up my skirt for a stroke. When [my son] told me recently the previous night's babysitter had a really silky tummy, I wondered whether this 20-something trainee nurse would cry sexual harassment. How do we read and misread children's sexuality, and has the explosion of information and images changed the way youngsters conduct themselves? In her book *A Mother's Eye*, [a]n author... recalls how it was in the '50s. "Boys were told that if they touched themselves their penises would fall off... Children were not told the facts of menstruation, of birth. If I asked a question my mouth was washed out with soap." The giant leap in knowledge is summed up best with the joke told by one sex educator about the father who says to his son: "I found a condom on the patio." The boy wrinkles his nose and asks: "What's a patio?" MOST modern parents can deal with the facts, and if we can't there are now picture books for children as young as three which tell it plainly enough... *Mummy Laid an Egg* has childlike drawings of the way mummies and daddies fit together. "Children's stories and questions are certainly more explicit than they were 10 years ago," says... [the education spokesperson for the FPA], who draws on more than 30 years' experience in the field. "We are in the middle of a communications explosion and children are exposed to more explicit images earlier on. They can now see couples in bed together on television or read headlines or hear radio reports about sex. Some also have access to videos or the Internet." Educate early and often is the message of most experts in the field. Storks and cabbage patches are passe and parents are discouraged from using pet names for genitalia to avoid ambiguity. The example often given is of the child who complained to her teacher that "Joe wants to play with my bear" and the teacher distracted with homework merely delivers a sharp lecture on the need to share. It is easy to forget the dramatic changes in attitudes towards sex and the openness which flows from this enlightenment. We now talk freely about gays, lesbians, Aids, condoms, anal and oral sex, and sex change operations. Modern lifestyles have also contributed with increased use of electronic babysitters and high rates of family breakdown, prompting parents to search for new partners and engage in a different level of affection than might otherwise be shown in a well-established relationship. The re-partnering of parents can contribute to a whole other level of sexual tension. In... [the] novel *The Good Mother*, a custody battle turned on the daughter's description of touching mummy's boyfriend's penis, a simple moment of curiosity in the bathroom which became monstrous with meaning in court. Reproduction is the easy bit. It's technical and everything has labels. What people still find terribly confronting is how to convey the idea of sex as pleasurable and its role in a relationship. There are sex shows on television and relationship manuals galore, but many adults are coy about discussing sexuality. They can barely articulate their feelings to a partner let alone talk appropriately with an adolescent or younger child. In a three-part documentary called *Myths of Childhood*, [a] psychotherapist and author... described the relationship between sex and childhood in society as weird. "We live pretending we don't have a body. Children as far as I can tell have not learned yet how to read those [attitudes]. They simply find sensuality. They love physical experiences." Some of us will recoil at the sight of a two-year-old breastfeeding because we may perceive a blurring between sustenance and sensuality. Others may protest against images of naked children for fear they stir sexual desire. What we find hardest to accept is children masturbating or receiving sexual pleasure from physical stimulation... [– even though, according to the *Encyclopedia Britannica*, 'boys and girls are physically capable of experiencing orgasm from infancy, and children who engage in masturbation or sex play may achieve this sensation of sudden and intense pleasure'. The] author of *The Mask of Motherhood*, describes the trouble individuals have adjusting to sexual norms that feel wrong even when they sound right. "While my mind is fully committed to a joyous acceptance of my child's sexuality, my gut remains wary. I find the sight of a masturbating child almost unspeakably difficult to accommodate. I do the next best thing: I deny." [A child] psychologist... says sexuality begins early with the pleasurable sensations of sucking a thumb in the womb or a breast nipple during feeding. "There starts to be an idea of what one person can do to another." [The child psychologist] says excessive masturbation may signal a child's disturbance through withdrawal into this self-absorbing, comforting activity. CHILDREN do not experience sexual desire in the same way as adults, but are curious about their bodies and those of others and enjoy... having different parts of their bodies touched. It is normal and healthy for young babies to explore their bodies, including their genitals, in a pleasurable way, and towards the age of three interest in genitals will increase. "Seeing a three-year-old masturbating really shocks most parents. They think: 'Oh my God, that must be wrong. What is happening to my child?'" says... [the] manager of the professional support team at the Auckland Kindergarten Association. "But it's actually very normal. We see sex play in children as young as two. For them it's a little like finding out how a pen works. It arises from natural curiosity, not because they want to start sexing each other." Three to five-year-olds begin to want to know about where babies come from, how bodies work, and body differences between the sexes. Sexual play such as "show me yours" and doctors and nurses are quite common and some children may mimic adult sexual behaviour they have seen on television. How teachers react to displays of pre-school sexuality depends on the situation and the community in which they are working. "Teachers need to be aware of arguments about morality... But if the child is just wanting information I think it's best to give an honest answer." In [NZ] there is presently no national sex education curriculum to satisfy the curiosity of primary school age children. Some schools cover the subject, others don't – officially we are still using the 1985 Health Education Syllabus which doesn't introduce "real" sex education until Form One. Filling the gaps, [FPA] has published a brochure, "Grab the Moment", and produced a video dealing with sexuality education for children aged eight. They also run workshops at schools for children and their parents. And the Ministry of Education is working on a new syllabus which will introduce general sexuality education at an earlier age (probably Standard Three or Four). For pre-schoolers, all chartered early childhood services subscribe to a child protection policy which concerns itself mainly with preventing sex abuse. A national kindergarten curriculum teaches general life skills and well being. But no sex education, in terms of biology, is included. "Kids might ask about the life cycles of caterpillars," says one pre-school teacher. "But that's as far as it goes." The push for an early start to sex education and special programmes to teach about "good touching" and "bad touching" worries some parents on the grounds that this may alarm children unnecessarily

by identifying potential threats to their personal security. Educators insist this kind of instruction empowers children to feel good about their bodies and gives them a sense of control. They battle against the view that five-year-olds will be queuing up for condoms once they conquer the facts of life in kindergarten. [The FPA education spokesperson] has a stock retort for the worrywarts. "There's a difference between ignorance and innocence. And if you think sexuality is dangerous, try ignorance." [The spokesperson] tells the story of a mother who came to one of the FPA's workshops after her nine-year-old daughter told her [it] didn't want to get married. When asked why, the little girl replied [that it] didn't want to die of Aids. "Somehow [this girl] had connected marriage with... Aids or HIV... I believe this highlights the need for parents to take responsibility for their children's education. Otherwise they are leaving it to chance – their children will get their information from other sources." But knowledge alone is not enough to prepare young people for adult sexual roles and relationships. Closing the gap between children's technical knowledge about sex and the development of successful personal relationships is the next frontier, something that may be addressed by the new national curriculum under construction. The emphasis will be on sexuality, not sex says [the FPA]. Sex education is about the biological facts. Sexuality education takes a more holistic approach and also looks at family and lifestyle issues. The nine and ten-year-olds who went with their parents to a recent family life workshop in Sydney certainly knew the facts. They were taught to tell testicles from a scrotum and knew the difference between vaginas and vulvas. The children drew lifeseize outlines of themselves and filled in the pubertal changes, creatively gluing on cotton wool, sheepskin, egg cartons and toilet rolls. But when the instructor introduced the notion of love, a boy at the back pretended to stick his fingers down his throat as if gagging at the thought. His friends snickered on cue.

...[the FPA] has won a Sexuality Education Award – despite N[Z] having one of the highest teenage pregnancy and abortion rates in the world. The award, presented by the World Association for Sexology at its world congress in Spain, described the [FPA]'s... "innovative and groundbreaking"... sex education resources as the most outstanding of the 20 countries that entered... [The] FPA resource manager... said... "Contraception is just a small part of our programme." ...the association was recognised for four courses: Grab that Moment for parents of children aged from birth to eight years; Pleased To Be Me, for children aged 11-13; The Next Step, for the same group; and Challenges and Changes, for adolescents.

...comparative research of school health programmes in different countries has shown that those countries with low adolescent pregnancy rates are those which introduce age-appropriate sexuality programmes at a young age. "N[Z] has the second highest adolescent pregnancy rate among [First World] countries in the West... The present programme reflects the conviction based on the research evidence that clear information about sexual matters should be given to young people before they reach the age when they begin to form sexual relationships." This defence of comprehensive sex education echoes the flaws in comprehensive sex education itself. It is propaganda dressed up to look scientific. Many countries with little or no "age-appropriate" sexuality programmes have low adolescent pregnancy rates – Japan, Singapore, Korea and Poland. The truth is that pregnancy rates are the result of a complexity of cultural phenomena rather than the result of the existence or the non-existence of "age-appropriate" sexuality programmes. Even the term "age-appropriate" is specious. It sounds scientific but there has been very little research done anywhere in the world to determine what "age-appropriate," in the context of comprehensive sex education, actually means.

...New research has found that girls in the U[S] enter puberty at a younger age than ever, possibly because they are exposed to more products containing... [gal hormones – such as] beef, plastics, hair care products and insecticides [-] ...according to a doctor who highlighted the trend... [B]lack girls begin puberty shortly before age nine on average, while white girls began just before age 10. Before age eight, 27[%] of blacks and almost 71[%] of whites already have begun developing breasts, growing pubic and underarm hair.

...Limited sex education for[N[Z] primary school children could be on the cards – but parents will be able to object and remove their children from the class... [The Education] Minister... says parents don't want sex education to be made compulsory in schools[, so his ministry] will not support moves in that direction. The sex-in-schools debate looks set to be rekindled... [because the] new health and physical education curriculum... includes more specific references to sex education than the current curriculum and includes programmes for new entrants upward... Christians are concerned, saying most children in standards three and four, aged around nine and 10, are too young... The executive director of the Catholic Education Office... said children as young as nine were not intellectually ready for sex education... [However, the FPA] says sex education needs to be taught younger... [The association's] manager of medical services, said a study from the U[S] underlined this. Of almost 2000 girls in the study, 34[%] of African-Americans girls and about 8[%] of European girls had public hair at eight years old and some got their period at [the age] of nine.

...health officials[in the US] have endorsed the[new generation] morning-after pill... The FDA found it safe and effective but has not granted[US] approval until manufacturing and labelling questions are solved... [‘In 1988, 57.9 million US gals used contraceptives (of these, 36.7% used nonsurgical contraceptives, such as the pill, IUD, condom and other methods’). In local news, the standard] contraceptive pill is to become free... from March 1. The cost-free brands are Norimin... and Femulen... [However, to obtain them gals] still had to see a doctor for a prescription and pay a \$3 prescription fee... Poorer [gals] are exempted under a "special authority" and can get full subsidy on any brand they choose. But health officials are considering taking the special authority away, which will force [gals] to use Norimin and Femulen if they want free pills... [While poorer gals] had open access... drug companies could keep their prices high, knowing the Government would pick up the tab. The plan was to fully subsidise a range of contraceptive pills... when prices fell. The issue is likely to cause further friction between Pharmac and the drug industry...

The Governor-General... has questioned... the Minister of Youth Affairs'... call to put free condoms in schools and decried a moral breakdown. Lessons of modesty and self-restraint should come before messages of safe sex, [the Queen's representative] said last night.

...The majority of teenagers were not sexually active and that needed highlighting in teaching manuals and Government publications... says the Minister of Health... in rejecting a proposal to put free condoms in schools... [T]he Government had no plans to fund free condoms... [The minister] was concerned about the messages being sent... Young people had to think about sex responsibly so they did not just act on impulses. "...any Government-funded programme needs to give young people choices, but not the choice to become sexually active." ...The proposal... [was] raised by the Minister of Youth Affairs... at the weekend as a key to promoting safe sex among teenagers.

...[‘SAFE sex promoters have a new vehicle – taxis. Timaru's condom's-in-cabs campaign has been so successful it may be followed by taxi companies throughout NZ. The Erection for Protection campaign run by Timaru's public health office gave local cab firm Budget Taxis 2000 condoms in July to supply free to customers. "It was the most entertaining promotion I've had," said the co-owner of Budget Taxis. The company's trade rose during the campaign and a new campaign will be launched for the Christmas holidays.’

...two contraceptives boasting lower failure rates are now available in NZ – an improved intra-uterine device (IUD) and a new emergency contraceptive pill, which has a 1% failure rate compared with the 3% failure rate of the old morning-after pill. The new pill used the same hormone, progesterone, but had no oestrogen. "You get less nausea and vomiting because it's usually the oestrogen which causes that." The FPA says the contraceptives are revolutionary, with the IUD also acting as a hormone replacement therapy which is successfully reducing heavy bleeding and period pain. The IUD's stem contains hormones which are released into the uterus every 24 hours and as well as regulating periods, overseas studies show the treatment could be a viable alternative to a hysterectomy. The IUD, Mirena, has a failure rate of 0.3% and costs \$280 but can be used for up to five years. Gals who suffered side-effects from the contraceptive pill were less likely to suffer them from the IUD, which is primarily designed to prevent thickening of the uterus and stop sperm from meeting the egg.' In related news, a study in 1994 found that many [gals] on oral contraceptives became pregnant because they forgot to take the pill, found it a hassle or had busy lifestyles[, and]... one in five N[Z]ers having abortions were of Pacific Island ethnicity – a huge proportion given that they were a minority group... [Next month] North Health, will launch a three-year pilot programme to try to cut Pacific

Island abortion rates... The pilot is limited to South Auckland... due to budget constraints. It will cost about \$300,000 a year... [However, the NZ] First MP for Te Tai Hauauru... said... [the problem was that:] "In many Pacific Island cultures, sex is tapu. It is not talked about and teenage pregnancy is not tolerated. The consequence is the trauma of abortions for too many of our [teenage islander girls]."

...Talking to your children about sex may seem embarrassing – but the sooner you start, the easier it becomes. You might be tempted to wait until they reach high school age or until puberty begins but even very young children can pick up all sorts of information about sex from the world around them. That information is often confusing, misleading or wrong. British FPA surveys have shown being forthright with kids about sex can help reduce the risk of them contracting an STD, of having an unwanted pregnancy and even of being sexually abused. It's also important to discuss methods of contraception'...

Under the Contraception, Sterilisation and Abortion Act... no one was allowed to instruct anyone under 16 about the use of contraception. This turned out to be complicated: how could you talk about contraception without talking about how to use it? And what if a question came up and half your class was under 16? This law was often misinterpreted to mean no sex education for people under 16. The Act was repealed in 1990.

...[the movie *Riding In Cars With Boys* is based on the memoir of a gal whose unplanned teenage pregnancy in the 60s became the defining event of a miserable, hard-knock life. The central character recounts her turbulent, often resentful relationship with her son and with his goofy, dropout father, who the mother was forced to marry and who became a junkie. Should be required watching for teenage high school students.' By the way, 'a baby girl, six weeks old and unnamed, was left lying beside a rubbish bin in an Auckland street yesterday. The baby appeared to have been abandoned after an argument between her parents as they drove through Avondale. The screaming baby was found by a family who handed her to the police. Not long before, a couple had been seen driving along Rosebank Rd. The passenger was trying to get out of the car as it was moving, screaming to the driver to let her go. When the car stopped further down the road, the passenger escaped and ran back towards the Avondale shops. The car drove off and the child's mother arrived at the police station soon afterwards with a toddler. They and the baby were taken to Starship children's hospital where the baby was kept for observation overnight. The mother had minor grazes from trying to escape the car. Avondale police are seeking the driver. A charge of abandoning a child carries a maximum 7-year jail term.'

...[last weekend someone] found a live newborn girl in a toilet bowl at Walt Disney World in Orlando, Florida. The baby's head was sticking out of the water and the umbilical cord was wrapped around her neck. The 3.2kg baby was taken to hospital where her condition was described as good.

...OF ALL the stories of newborn baby dumpings, [the latest] is the most chilling. [A] New Jersey teen and her boyfriend arrived at her high school senior prom at 7.45pm on June 6. By 8.15pm, authorities say, [the teen] had delivered a healthy baby boy, killed him and stuffed him in a plastic bag in the bin. Then... went back to the dance. No-one, apparently, even knew [the teen was pregnant. The teen,] now charged with murder, has been portrayed as monster or mad-[perso]n, but her story may not be as bizarre as it sounds. Last Monday, work[ers] found the body of a newborn girl, umbilical cord and placenta still attached, stuffed in a plastic bag under a house in central Auckland. The house was just a few hundred metres away from the Bethany Centre... where young, unmarried mothers-to-be come to terms with their pregnancies... The dumping site may well have been a poignant pointer to the factors which led a desperate and probably very young [person] to abandon the baby... The house where the Polynesian baby was found was used for church gatherings by the Samoan Assembly of God... [M]any young island [gals] did not have the social skills to cope when they were vulnerable and many were coerced into sex by boyfriends who, though brought up with the same rigorous religious rules, operated under the age-old double standard... The disgrace of a pregnancy in an unmarried young [islander] is greater if her father has high social status or the baby is the result of rape or incest – for which [the young mother] is often blamed. Hiding pregnancies and abandoning unwanted newborns – often on the plantations – are fairly regular events in Samoa... A young [mother] driven to abandon a baby could be in great fear of punishment or the shock of the birth could pitch her into a state in which [the young mother] was incapable of functioning logically. The law recognises this in the Crimes Act provision for infanticide which says a [mother] can be acquitted of killing a child under 10 [days] "on account of insanity caused by childbirth or lactation." ...[Bethany's] director... had seen [mothers] lapse into catatonic shock for a few hours after childbirth[, and] had also seen young [mothers] who did not connect the act of sex with pregnancy.

...Sex. It's everywhere. It's used to sell everything from cars to shampoo to yogurt. Hollywood can't make films without it [whereas, in comparison, Bollywood films can't be made with it – even though at least 22 Hindu temples in India feature 'thousands of intricately sculptured figures engaged in an alarmingly explicit variety of gymnastic sexual positions and auto-erotic pursuits']]. None of us would have been born without it. And yet some people argue that young people shouldn't receive information about it at school... When a child is small, parents are the first teachers. The attitudes they display towards sexuality will shape the child. At school good programmes build self-esteem, respect for others, decision-making, and negotiating skills – essential ingredients in building relationships with other people. They also provide young people with information that will allow them to take care of their reproductive and sexual health throughout their lives. The F[PA] does not claim that sexuality education will eradicate [STD]s, teenage pregnancy and abortion. These are related to community attitudes, education and the availability and cost of services. But [US] and British research has shown that sexuality education can have some positive results for teenagers including delaying first intercourse... [– 50% of British gals] describe the experience of losing their virginity as "disappointing" or "awful" –] ...having fewer partners... not being pressured into sexual activity, protecting oneself against... [STDs] and... unintended pregnancy...

[*HAVING A BABY 'IN YOUR teens: ADVANTAGES* ■ Energy for night feeds and play. ■ Lots of time to focus on baby. ■ Fewer career demands. ■ Negligible generation gap. ■ More flexible about lifestyle changes and parenting. *DISADVANTAGES* ■ Missing life experiences. ■ Greater chance of relationship with child's father failing. ■ Less chance of finishing training or higher education. ■ Reduced financial security. ■ Forced to grow up too quickly. *HEALTH AND FERTILITY* Not only is your fertility at its peak, but the risk of birth defects is lower than at any other age and the chance of miscarriage is only around 14%. This is the age when your body bounces back best after pregnancy. During labour, however, there is an increased risk of caesarean section, possibly due to the reproductive system not being mature enough for childbirth' ('having a baby when the body isn't fully developed for it can cause all sorts of ruptures – e.g., of the bowel – during birth; girls suffering from such complaints in Ethiopia generally don't receive medical care'...

'The proud father places a protective arm around mother and child as if to proclaim to the world, "This is my family and I will care for them." It's a familiar portrait of private joy, replayed daily in maternity units everywhere. But scratch the surface and this touching tableau reveals a disturbing reality. For the baby's father is only 12, a child himself, who regards parenthood as an amusing diversion from the tedium of school. "My mum woke me up in the middle of the night to say my girlfriend was in hospital having our baby. I thought it was really great because I'd get to have a day off school. Really, all I wanted to do was go back to sleep. I'm very happy about my son, but if Manchester United win the league, that will make it a perfect year." The 12-year-old, believed to be Britain's youngest father, lives with his single mother (38) in a Bedfordshire council house. His girlfriend lives next door with her mother (46) and her father (49), an unemployed forklift driver and a convicted sex offender. When his girlfriend became pregnant, the boyfriend was at first too afraid to tell his mother. When his mum found out, a war of words ensued between the two families amid claims the boyfriend "had been led astray" (the girlfriend has admitted her boyfriend was not her first sexual partner). But an uneasy truce seems to have descended, as long as it's in the mutual financial interest of the families to co-operate. Meanwhile, the welfare of the baby appears to have assumed secondary importance. Bedfordshire social services have said they are content to allow the girlfriend's parents to bring up the infant, despite her father's criminal conviction. In the meantime, while the girlfriend talks of keeping her family together ("Despite our ages we wanted this baby and we'll love him like any other parents. When I found out I was pregnant, the last thought on my mind was that the father was only 11. I still can't get over all the fuss," the girlfriend said from her hospital bed.) the boyfriend offers little cause for optimism that this could be a very long-term relationship. "I want to get my life back to normal. I hope to stay close friends with my son's mother for as long as possible. Things are okay at the moment and nothing has gone wrong," says the 12-year-old, apparently

unaware of the enormity of the situation it now faces. The news that the 12-year-old, then 11, was to be a father by his girlfriend, who was then 15, first hit the headlines last August.’]

...News of... Britain’s youngest known father... has raised eye-brows in N[Z]. But those who work with teenage parents in this country say some of our youngsters may not be far behind... [A] social worker tutor, said... [t]he youngest father [it] had encountered was 13, but there were probably lots of 11-year-old boys who were sexually active... A 12-year-old boy is the youngest father the... Bethany Centre in Auckland... has dealt with, but [a spokesperson for the home] said it was not uncommon for 13-year-old boys to impregnate their girlfriends... Government statistics show that in the 1980s several girls aged only 11 had legal abortions, and at least six aged 12 have had terminations since 1990.

...WE HAVE an alarming teenage suicide rate. The authorities, not wishing to add to the problem by exciting the imagination and inviting experimentation, pleaded in the past for a low-key approach. I can understand this. What I can’t understand is why the same logic does not apply to the other great teenage problem: Unwanted pregnancies... Being instinctive, the practicalities of sex should be discovered and its purport discerned without tuition... People will gather information, misinformation, conceptions and misconceptions from the environment in which they live... The most fortunate children will receive [sex education] naturally and imperceptibly from the time of their birth as part of family life... Direct teaching at school is not easy. There is evidence that proves... [some] sex educators project their own guilt and inadequacies. In Britain, there has been great concern about a teacher who has launched the slogan “Masturbate for Britain”.

...[although children do get some basic sex education at school, they will benefit enormously if you as parents are willing to talk about sex with them. Step up efforts to prepare your child for the bodily changes which are imminent. Girls need to know more about periods than just that they happen once a month and boys need to know wet dreams are normal. Talking about masturbation should be on the agenda for both sexes as some children may have experimented already and may be afraid it’s harmful’. Incidentally, a] Tauranga school... installed... a fixed location... security camera... six months ago to “look after school property,”... without telling... students where it is. Otumoetai College... did not... reveal where the camera was because [the principal didn’t] want to risk it being vandalised. The use of security cameras in schools is spreading. Fraser High... in Hamilton... [is] proceeding with plans to install... two security cameras and Tauranga Intermediate will install seven security cameras in its new administration block.

...Behind the barbed wire, children play ball in a school yard. Not in the Bronx, or South Central LA, or Soweto – this is education behind the lines, or at least behind 2m-high fences, in parts of South Auckland. Conventional schools striving to serve their communities are having to erect harsh barriers to keep some in those communities at bay – and protect what little stability and resources they have. At least four school boards have opted for high-perimeter fences topped with barbed wire to keep unwelcome visitors and vandals out. And it works. The schools have found their pupils are much safer and their damage repair bills are slashed drastically. Some teachers have been encouraged to stick with these struggling schools and more money is available to spend directly on children’s learning. Almost gone are the days when teachers and pupils arrived to find the school walls daubed with graffiti, windows smashed, classrooms trashed, young trees and plants snapped, fields littered with broken glass or delinquent intruders beating up students and even teachers.

...A 5-year-old who assaulted staff was shut out of school last year as the suspension and expulsion of students hit a new peak. While the total of 10,000 was double the number in 1992, lawyers advocating for young people say the real total may be closer to 20,000 when informal suspensions are included... [A] large number of students were informally suspended from several different schools by the time they were nine or ten... Overall the behaviour that led to the most suspensions last year was continued disobedience followed by physical assaults on other students, verbal abuse of staff... substance abuse... and... theft... Other facts: • Boys made up 72.6[%] of... suspensions, with the largest group being 14 and 15-year-old boys. • Of the... suspensions, 3471 were for an unspecified period of more than three days. [By the way, ‘an Oklahoma high school has suspended a student after accusing her of casting a magic spell that made a teacher sick. But the assistant-principal’s act has prompted the American Civil Liberties Union to file a lawsuit on the 15-year-old’s behalf charging that her civil rights have been repeatedly violated after notebooks the student used to write horror stories in were seized and the student was barred from drawing or wearing signs of the pagan religion Wicca. The lawsuit stated that because of the “unknown cause” of the teacher’s illness, the assistant-principal told the girl “that it was an immediate threat to the school and summarily suspended her.”’]

...‘A 13-YEAR-old student who’d been sent home for bad behaviour returned to his school and shot dead a 35-year-old teacher, who was married with three children. It happened in front of a classroom full of children, just minutes before classes ended on the last day of the school year. The student had been suspended earlier in the day from Lake Worth middle school in Florida for throwing water balloons.’ In local news, ‘bad behaviour in schools has soared again, with record suspensions for arson, vandalism, alcohol abuse, smoking, theft, attacks on staff and students. The Minister of Education conceded last night that the numbers were “out of control” when close to 12,000 suspensions are being imposed each year.’]

...An article in the N[Z] *Herald* yesterday incorrectly stated that 12,000 children had been expelled from N[Z] schools last year. A total of 10,000 students were suspended... in that period. On present figures, the Youth Law Project expects more than 12,000 students to be suspended this year.

...suspensions are up 24[%] on the same time last year... an education lawyer with the Youth Law Project, said... “...we can’t say that young people have been 24[%] naughtier than last year.” [The lawyer] called for more consistency and objectivity in relation to suspensions, and saw an independent suspension review panel as the best way to achieve that.

...Schools will get clearer directions on how to suspend pupils under legislation the Government intends to introduce in the parliamentary session starting next week. The Minister of Education... said there was no law at present covering suspensions, although there were ministry guidelines. The new law would see school suspensions monitored by the Education Review Office...

Thirty-four Fraser High School students have been suspended for bunking class to protest against their principal’s plans to use security cameras... The mass suspension is the biggest in N[Z] – and a youth lawyer says it is illegal... [However, t]he... principal... made no apologies for his swift action in suspending all... of the... students [who had] marched through the Hamilton school on Wednesday afternoon disrupting classes and ignoring police and teacher requests to stop... The school board supported the measures... [In response to comments made by the chairperso]n of the Auckland Council of Civil Liberties, [who]... said the cameras invaded children’s rights... ...A 14-year-old Hauraki Plains College student suspended for refusing to shave his moustache will probably shift to A[US] because his family doubt they can enrol him at any other school in the area. [The student] was suspended indefinitely after meeting the school board on Thursday... His mother... said the moustache was tidy and did not interfere with his learning. “Once [my boy starts shaving my boy] will be doing it for the rest of his life. I don’t see the need for him to start this early.” [The mother, who said it]... would like to take legal action but... could not afford it... knew of a [girl] pupil with facial hair, but the school was not enforcing its policy on her. The head of the school board could not be reached for comment yesterday, but a letter written by the deputy principal... said [the boy’s] stance was “disobedience which is a harmful example to other students...”

...[‘the Commissioner for Children has publicly decried the suspension of students who have violated school rules. What on earth can the commissioner be thinking? Is the commissioner thinking? The commissioner has spoken about the right of children to an education. As a teacher I can assure the commissioner that the right of the children to an education is consistently prominent in my thoughts. That right is most often denied children by the actions of their peers. When 27 students in a classroom are denied the education that is their due by the severely disruptive behaviour of three or four of their fellow students, I must consider the rights of the 27 at least as much as the rights of the four. The problem is not too many suspensions, but too few. If more disruptive students were expelled, the majority of students would receive a far better education. As the Education Minister and many others have pointed out, suspended students have not been denied an education. They can attend another school or, if need be, the Correspondence School.’]

...yesterday t]he Commissioner for Children... said his staff would meet the Minister of Education... in the next couple of weeks to discuss the idea of an educational law tribunal. [However, the minister] said the continued increase in suspensions was a response to the abandonment of corporal punishment in schools and to the changing social climate.

...What we want can change what happens in schools. For ages, people thought corporal (physical) punishment was okay, even necessary, in schools. There are still people who think this is the way to keep students under control, and even to make them learn. But so many people didn't agree with that approach, the Education Amendment Act 1990 was passed to stop anyone employed by a School Board of Trustees... from using any force, by way of correction or punishment. This means no more caning or strapping, hitting with a ruler, or throwing things at... [the] 220,000 secondary school students... [that] there might be... at school here in NZ... [on] any one day...

School's out for the day for... Auckland college students but school's been out of bounds for more than 2,000 students around the country so far this year. Topping the Education Ministry's suspension list: nearly 530 pupils suspended for fighting...

TEACHERS may need self defence courses to cope with classroom violence as physical attacks by students continue to mount... Self defence classes are not part of the national curriculum for trainee teachers... Teachers are taught about how to deal with difficult children but not necessarily how to defend themselves. The Ministry of Education reports 35 students have been suspended for assaulting teachers so far this year... A further 273 students were temporarily banned from school for verbally abusing teachers. During the last six months of 1996, 107 students were suspended for violence against staff... The... Post Primary Teachers Association president... claimed very few teachers would not have been assaulted in the past five years... "In a sense these kids are making a call for help but it's hard to see that in the middle of a scrap,"... [The president] claimed violent attacks on teachers had steadily increased since 1991 but publicity had waned because schools "don't want their name in lights. The issue is being hushed up because of intense competition to attract prospective students and teachers,"... Meanwhile, the Special Education Service says... [it]s psychologists visit schools on request and its eliminating violence programme had been adopted by about 50 schools.

...Avondale College[s] principal... says the school's non-violence policy discourages students from venting their anger physically and programmes help rehabilitate wayward students. "We have a behaviour code which ensures students respect themselves, others and property... Any breach of the code is disciplined. Students know right from the start that if they fight at school they will be suspended..." ...Western Springs College[s] principal... says... "The majority of students... suspended for physical violence are new to the school and don't re-offend... The kids are very aware of our anti-violence policies – we reiterate them constantly." The college runs support and social education programmes for students and families.

...[A GROUP of children at a Colorado primary school received a week's detention after they were caught using their fingers as imaginary weapons during a game of soldiers versus aliens. The principal says the game violated the school's zero-tolerance policy towards violence.' In further news from overseas, a] 12-year-old... in China's Hunan province... beat his teacher to death after [the teacher] told his parents of his misbehaviour at school...

Trustees and teachers were alarmed yesterday about the vicious attack on a Northland deputy principal by two senior students, and warned it could be the start of things to come... [The] horticulture teacher at Opononi Area School, was kicked, bashed and hit over the head with a spade by two brothers after... [telling] one off for wearing a beanie hat... The Minister of Education... deplored the attack but did not think a large number of extra teachers would solve the problem. The principal of neighbouring Northland College in Kaikohe[, where beanies]... were also banned... said yesterday... schools were increasingly dealing with students who were anti-authority... Violence in the community was mirrored in schools and teachers had to deal with it... The president of the School Trustees' Association... said boards should write policies and run anger management programmes for problem students...

One of the worst tasks facing members of a secondary school board of trustees is sitting on the discipline committee. A trustee is conscious that with the media highlighting the number of pupils suspended from schools every year, some educationalists, lawyers, and others are questioning the ability of lay people to decide a student's immediate future. At the same time teachers are putting up with increasing discipline problems in the classrooms. A discipline committee meeting is very intense. That is as it should be – after all you are dealing with people. An incorrect decision can have wider repercussions than we care to think about. But a correct decision means that a student will not only have been punished but also educated, and can go on to academic as well as sporting and cultural success. To the general public headlines such as, "Assaults keep west students out of schools," are further evidence of declining moral standards in society, the state of youth today and a failing education system... [Incidentally,] the Occupational Safety and Health service... says... [s]chool managers, like any other employer, must ensure working environments are safe for teachers... The comments follow an alleged assault... at Opononi Area School on Wednesday... [A]ll employers are obliged to notify the service of any incidents of violence in the workplace...

More than two-thirds of secondary teachers have been abused or threatened in the past year[, including 10 who]... had suffered serious physical sexual harassment... according to a teachers' union survey... While the study found N[Z] teachers were less likely to be sworn at or threatened, the rates of physical assault were higher than those documented in comparable U[S] studies. Young, often [gal], teachers felt particularly intimidated... More than 90% of teachers... believed families were under increasing pressure, but successive social and economic reforms had whittled away the support systems that were previously available. Schools had become the "one-stop shop" for youth problems, frustrating teachers' ability to teach and placing them in danger... And 87.5% of teachers had personally perceived a decline in student motivation.

...Schools have been the focus of many news reports... t[his year]... Teachers report increased workloads in recent years. They say the stress of teaching is quite enormous and more teachers are needed to enable them to do their jobs effectively... [Meanwhile, the] number of students suspended has nearly doubled... Suspensions are either definite, for a period of one to three days, or indefinite, often meaning expulsion... Some schools provide separate classes, counselling or home visits to suspended students but most schools don't have the resources to give as much support as they would like... [('Rotorua Intermediate hired a counsellor to help troubled students out of its own pocket after expelling five kids last year – so far this year it hasn't expelled a single student and is urging the government to rethink its policy on only funding counsellors for secondary schools as many intermediate kids needed help so problems were dealt with before their teens; the school is considering sending a bill for the counsellor's services to the government; the education ministry said under current rules, schools could apply for flexible funding that would help cover the cost of a counsellor'). If an expelled] student is under 16 it is the principal's responsibility to try to place the student at another school. Many schools are reluctant to enrol at-risk students, so they drift from school to school and their problems get worse... There could be as many as 2000 children not enrolled at any school. We have no system for tracking down children who leave primary or intermediate school and don't enrol at either intermediate or secondary school. Legally, parents are required to make sure their children attend school until they are 16 years old. Parents can be prosecuted and liable for fines of up to \$15 for every day their child is absent. However, only 50 parents have been prosecuted since 1989 because most schools can't afford the costly legal bills... Recently the Labour Party called for the government to prosecute the parents of truants... a[nother] growing problem in[NZ] schools. There are two kinds... *Hard core truants* usually have many problems to deal with at home and school. They hate school and may not be enrolled at any school. *Casual truants* see others wagging and, having tried it once and got away with it, they'll start skipping school whenever something goes wrong. A Massey University study identified 73 different reasons why kids play truant... Police and welfare agencies only become involved if truants are caught in the act of crime... [– but 'Waitakere police are cracking down on truancy in a bid to reduce petty crime (Operation Scamp is being co-ordinated by police from the community affairs and youth aid divisions; a youth aid officer says the last sweep on truancy, carried out in Henderson four or five years ago, saw a corresponding drop in burglaries, shoplifting and car conversion'). T]ruants get bored

and... quite often... need money... they... do not have... 80% of young offenders under the age of 16 are truants... Most rural schools reported low or zero levels of truancy, saying children living in isolated areas came to school for company. It was also harder to wag when the school bus picked up and dropped off students at the gate. - 1997

SOME west Auckland college classrooms were emptier than normal on Friday after a radio host encouraged children to wag school... Henderson High[']s principal... has laid a complaint with the Broadcasting Standards Authority over the... chat host[']s... comments endorsing National Wagging Day... on March 19, "we should all be able to enjoy our lives and if you take a day off school, what the heck"... [The radio station's] chief executive... says the views expressed by [the chat host] are not supported by the station. "As a radio station we are definitely not supportive of children taking a day off school... It is most unhelpful to schools who spend a lot of time trying to ensure students turn up to school."

Schools ask why students wag Recent comments by a retiring principal that troublesome truants should be allowed to leave school at 13, and a boost in funding for anti-truancy programmes next year, raises the question of what prompts children to turn their backs on school. Dargaville High School[']s principal... says enabling schools to shut their doors to disruptive students who don't want to be there would return the problem to parents and society, who... should have the responsibility for dealing with such youngsters rather than schools... Those working with truants say that... [t]ruants come from all socio-economic groups, possess a range of personality traits, and a Massey University study has identified 73 different reasons why kids skip school. They include having no friends at school, having friends who pressure them to truant, parents keeping them home to help with child-minding, feeling like a failure at school, bullying[('about 12% of NZ children wag school because they fear fellow students'),] and abuse from teachers. The Ministry of Education... has added \$1.6 million to the \$6 million previously budgeted to fight truancy over the next three years, and has started the Non-enrolled Truancy Service (Nets) to try to trace... about 2000 students... who are lost between schools. - 1996

They have been dubbed the lost generation. Thousands of children who are regularly absent from the classroom, some who do not go to school at all. They are a growing underclass that new research by Otago University suggests are seven times more likely than their peers to grow up to rob, rape and steal, almost three times as likely to be unemployed and, even more disturbing, five times more likely to become parents before the age of 21. It is a world that... [one] truancy officer... knows well. The 34-year-old South Auckland[er]... started wagging school when... 11 and had quit [school] altogether by... 14[], when it[] was made a ward of the state... and... sent to borstal... [before graduating] to prison and serv[ing] six years for a string of armed robberies and burglaries. After... [being released it] went into the Army, then teachers' college... [I]t was then that [the former truant] "began to feel for the youth." [The former truant] joined the Otara student attendance programme set up by the local Maori wardens almost three years ago. Now [it] is part of a team of three that scours the streets, liaises with schools and confronts parents. How many children they should be looking for is anyone's guess. No official statistics exist on the number of truants – or even the number of children that are in school every day in N[Z]... So what is being done? ...Until last year no one was responsible for finding those children who dropped out between schools. Under political pressure, the Government set up... Nets... to find the thousands of children who were missing. It had a \$450,000 budget for the financial year... and employs 25 part-time workers... Its detractors argue that the scheme is an ambulance at the bottom of the cliff. They say the only effective way to keep tabs on the 700,000 school children in this country is to set up a national database to track them through the system. Schools are required to remove a child from their roll after 20 consecutive days absent. They are not required to inform the [Ministry of Education] and... the student is a "non-person when they leave that school." Tough laws that allow the ministry, schools and the police to prosecute the parents of habitual truants are used irregularly because of the legal costs involved... Truancy officers were abolished under the Tomorrows' Schools legislation in 1989 which passed responsibility for chasing truants on to schools. Eight years later there are just 70 truancy programmes set up by school boards of trustees across the country. Almost 1700 of the 2700... schools have no truancy schemes.

...STUDENTS are helping to select staff to head an innovative... project aimed at stamping out truancy in schools. There are no truancy officers in this programme being pioneered in Dunedin schools. Today's politically correct version are "mentors", staff who will help students overcome problems and stay in school for longer. Mentors are jointly chosen by the organisers of the Community Intervention Project and students, at least one of whom has a history of truancy... The project was started last year by a group of police, five schools, health and welfare agencies and the Dunedin Multi-disciplinary Health and Development Unit. Due to its success, it has been extended this year to cover all Dunedin schools and more than just chronic truants. The pilot has funding of more than \$100,000 from the Ministry of Education and four other agencies.

...A pioneering truancy scheme in Hamilton has received extra funding from the Ministry of Education to help... the other 67 ministry-funded truancy schemes... to... follow... in its footsteps... [T]he service was awarded the... \$14,000... contract in recognition of its high quality and success... [Furthermore, the ministry] will spend \$3.7 million next year on community truancy schemes, compared to \$1.6 million this year.

...Truancy is a big problem in N[Z] schools. But cash shortages would prevent us copying a solution being pioneered at Portland Oregon. Parents are paid \$3 for each day they make certain their kids turn up for class. The bonus for half days is \$1... [L]arge families are making big money.

...truancy... [in Japan] means an overhaul of the education system is imminent, say analysts. The Ministry of Education said that... 94,245 students at elementary and junior high schools across the nation were deliberately absent for at least 30 days during the year to March 1997. That represented a 15[%] jump from a year earlier and the fifth consecutive annual increase... Some students gave bullying... as the reason for their absence... Bullying, or "ijime," is widespread in Japanese schools where students pick on a colleague, who is humiliated and sometimes beaten. In some cases, money is extorted from the victims, and some of them decide to commit suicide. Officials also said more students were now going to private tutoring schools, known as "juku," even cutting regular classes so that they could pass the entrance examinations of celebrated universities, widely seen as the first step to climbing the ladder for success in Japan... "Unless schools recover a flexible, liberal education and become more attractive, the number of truant students will further rise,"... said... a school counsellor... The ministry sent school counsellors, including doctors of clinical psychology, to a total of 1065 schools this year. But such an effort has so far failed to show visible results... As another effort to reduce truancies, the ministry has called on schools to cut the number of classes following criticism that a hard curriculum would depress students and bear more dropouts. But some analysts said such measures appeared likely to backfire as students were now required to receive necessary credits in a much shorter period. Cutting the number of classes without reviewing the volume of study would mean no spare time for students, [they] said.

...JUN HASE WAS A GENTLE, HAPPY BOY WHO loved to visit with friends and family in the Kobe suburb of North Suma. Six weeks ago, while walking to his grandfather's home, [Jun] stopped at a park and then vanished. The fate of the missing 11-year-old soon made national headlines and triggered a media frenzy. Three days after his disappearance, everyone's worst fears were realized: Jun had been murdered. His severed head – the eyes gouged out and the mouth split open ear to ear – had been placed in front of a school gate. The unknown killer shattered the community's sense of security further with a written threat to murder again as "revenge against the compulsory education system and the society that created it." The crime was shocking enough. As Japanese wondered what demented soul could be capable of such an act, they were shaken to learn last week that the prime suspect is a youth himself, a local 14-year-old who allegedly... confessed to Jun Hase's killing after... [being] summoned by police for questioning about reports that [the 14-year-old] had mutilated and killed cats and other small animals... Earlier [the suspect] had reportedly boasted to friends [that it was his intention to] do "something big" to take revenge on the school, from which [the suspect] had been suspended... for fighting. Confirming suspicions of local residents, police now say the suspect... may be linked to two unsolved incidents in

mid-March. While searching the youth's home, investigators reportedly found a note... which... describes attacking two children. One victim, Ayaka Yamashita, 10, died of head injuries a week after... [being] assaulted with a metal pipe. Fifteen minutes after that attack, in the same neighbourhood, a nine-year-old was stabbed and seriously wounded... Anguish over the crimes is most acute in North Suma, where many people know the suspect and his victims... The sites where Jun's head was discovered and Ayaka was attacked have become shrines... Police say that the suspect... lured... Jun, a playmate of his younger brother's... to a nearby wooded hill with the promise of a game[, then]... strangled the boy and, the following day, returned to... saw... off Jun's head and mutilate... his body... According to media reports, attributed to police sources, the suspect carried Jun's head home in a plastic bag and hid it for two days... "I can't believe that a junior high school student may have been involved in such a savage crime," says [the] Education Minister... Such disbelief was echoed around the country as people struggled to come to terms with what had happened. After the horror had subsided, politicians and academics voiced fears that the problem may be deep-rooted and malignant. "This is a sign warning us there is something wrong with our society and the education system," says... a University of Tokyo education professor. "Because of pressures at home and in school, children are not developing normally, and this has resulted in serious youth violence." ...In the wake of the Kobe incident, politicians are discussing... a review of the Juvenile Law. Currently, offenders under the age of 16 cannot be jailed... If the Kobe suspect is found guilty, the stiffest punishment [the suspect] would face is a three-year stint in a reformatory. Critics want the law revised to allow the justice system to bring criminal proceedings against the errant youth. "As long as you're under 16, you can kill 100 people and never have to face criminal proceedings," says [a] Nihon University criminologist... The case has kindled a heated debate on the decline of youth morals and family values. TV talk shows endlessly discuss why the suspect may have gone astray... Friends in elementary school describe him as bright and popular. But after entering his junior high school, a strict test-oriented institution, the youth reportedly grew withdrawn and uncommunicative. [The suspect] was bullied and then became a bully himself. His mother complained to a neighbor last year that her son had returned home from school one day in tears after a teacher had harassed him and instructed other pupils to ignore him. Around this time, [the suspect] began torturing cats and pigeons and collecting horror books and videotapes, as well as survival knives. After a school fight... in which [the youth] knocked out two of his opponent's teeth, [the suspect] was told by his teacher not to return. At what point the boy may have turned into a murderer is not known. But experts caution that Japan's pressure-cooker education system is churning out numerous despondent young people, similar to those who joined the Aum Shinrikyo cult that carried out the deadly 1995 sarin gas attack... High schools do little more than force-feed facts to students and subject them to countless rules and tests... At home, there is little family life to speak of, with a father always at work and children attending after-school cram centers. "Children today are not allowed to argue, make mistakes and go through the necessary stages of development," says the [professor]... "So we have many seemingly normal children who are withdrawn, violent or afraid of school."

...Violence in [NZ] kindergartens and pre-schools has forced some parents to keep their frightened children at home, and others have been asked to remove their children for being disruptive. Psychologists and the Office of the Commissioner for Children say bullying among preschoolers is rising. An early-intervention psychologist for the Special Education Service... knew of cases where children had destroyed property, poked one another with scissors, hit teachers and constantly used explicit four-letter words... A senior advocate at the Commissioner for Children's office... said bullying was "endemic in all educational institutions."

...An international study which tested the maths and science levels of nine-year-olds in more than 40 countries also asked them questions, ranging from how much television they watched to whether they had been bullied. "Disturbingly, proportions of N[Z] students who reported having been bullied... were amongst the highest in the world. Negative relationships were found between the frequency of bullying and... achievement in maths and science,"... The study showed N[Z] pupils were below average in maths, and barely average in science... The senior manager at the Ministry of Education... said that with evidence bullying was having an impact on pupils' learning, the issue could no longer be swept under the mat.

...[Some NZ schools are coming under fire for not doing enough to protect children and teachers from violence. A Youth Law solicitor says there is an alarming lack of action on bullying in some schools, and has called for law changes to introduce penalties for failing to ensure student safety.]

...Playground bullying is so rife in NZ that if schools do not take a stand they could soon face incidents such as US-style school shootings. "We don't want to get to the stage here where, like in some parts of America, teachers will only work in schools which have metal detectors to stop the kids bringing weapons in." The warning is contained in a new study, which found that a quarter of all NZ schoolchildren are bullied. The study, by an Auckland University researcher, is the first in NZ on bullying. Teenagers told of having their money stolen so the bully could buy lunch, being beaten up after playing well at rugby and tackling the bully's friends, and getting kicked around and taunted "for no reason at all." Bullies were more likely to be Maori or Pacific Islanders, the victims Pakeha or Asian. Girls and boys were equally likely to be bullies. The researcher said the results were alarming but reflected international trends, then added that teachers were not always supportive and many teenagers thought it was a waste of time reporting bullying because teachers did nothing to fix the problem. "Being bullied has a big impact on people's lives. Many adults are easily able to recall incidents from their schooldays and violent youngsters are more likely to have a criminal conviction by the time they're 24. It's a real problem and it's got to stop."]

...Sticks and stones may break bones but words break spirits, according to researchers looking at a programme to eliminate violence from schools. University of Auckland staff spent a year gathering information on the use of the Special Education Service's "Eliminating Violence – Managing Anger" programme in three at-risk Auckland schools during 1995... [S]tudents were asked to define violence as part of the study, with many highlighting the damaging nature of verbal assaults. Some students reported that "this verbal battering from other kids was much more pervasive and harmful than the physical stuff." The students were also asked about being bullied and being bullies. Two-thirds said they had been the victims of bullying, while just over half said they had bullied another child.

...Bullying affects children more than divorce... says a study published by the Commissioner for Children's office. The co-author of the research... presented the findings to Wellington teachers as part of a joint police and Telecom campaign to stop bullying. The study surveyed... children between the ages of 11 and 13 from a cross-section of schools in the... North Island. About 75[%] reported being physically or emotionally bullied in the past nine months. The only experience that rated higher as "the worst things that had happened to them" was the death of someone close.

...Bullying and victimisation were a significant factor in a 15-year-old... boy's life in the months leading up to his suicide... [H]is parents... hoped the issues relating to the bullying their son suffered... would help people understand the serious effects bullying could have. Matthew[, who] was the nephew of the Minister of Health... had attended Otago Boys' High School in Dunedin until the end of last year[, but] transferred to James Hargest [High School because of] being bullied at Otago... Earlier this year boys from Otago Boys' High were in Invercargill on a sports exchange with another school and sought Matthew out. They threatened to beat him up and took his skateboard... Soon after, Matthew started getting threats from a boy at James Hargest... Matthew had boarded with [a] family for about two months while... [attending] James Hargest... On June 25... Matthew... [complained about] not feeling well... and would not be going to school. [The owner of the house] left... but returned home at 11.50 am... went to Matthew's bedroom and found him... slumped over to one side and a rifle belonging to the [the householder] lay across his chest.

...Bullying, teacher assaults on students, and the principal verbally abusing staff are among serious allegations outlined in a report on Te Kao Area School in the Far North... [which] caters for new entrants to form seven. All the students are Maori except for one Pakeha... The Education Review Office... did a specific-compliance audit of the school in response to a request from the trustees... [that] found disharmony among board members, between parent representatives and the principal, and between the board and some employees... The report concluded that the school's governance and management had deteriorated to become a serious risk, and more students were seeking schooling elsewhere... The... E[RO] has

recommended that the board of the remote 76-student school be replaced by a commissioner. It also wants the Secretary for Education to consider the benefit of providing other educational arrangements for the secondary students, such as attending Kaitaia College, 70km to the south.

...[‘St Stephen’s School in Bombay has made positive changes in the past year, but much remained to be done, says the ERO. A report last June condemned the school for an “undercurrent of violence,” poor academic standards and ineffective management. In its latest report, the office says the all-boys Anglican Maori boarding school has “improved substantially” in all areas. But the board was still far behind in developing proper policy, procedures and management systems to run the school. The report said the board had failed to meet its legal obligations to the Crown and the new principal was doing much of its work. It recommended a management consultant be brought in to work with the board and develop a five-year strategic plan. “Considering that there has been a huge turnover in staff, a change in the management and new routines at the school, we’ve done amazingly well,” the principal said. It pointed out that Maori boarding school boards faced unique problems because smaller rolls meant they had a narrow range of parental expertise to draw on. Parents often lived far away from the school and could not afford the extra expense incurred in serving on the board. But the principal was confident his school’s board members were up to the job.’ In related news, a] 15-year-old student... quit school in disgust after Te Kuiti High School failed to act against the teacher who assaulted her. The student should have been sitting school certificate this week but fear and mistrust of school authorities led her to abandon classes about six months ago. “If I had hit the teacher I would have been suspended immediately – instead the school did nothing,” [the ex-student] said yesterday. Her mother said the board of trustees was more concerned with protecting itself than providing a secure environment for her daughter. [The mother] complained to the police when it became apparent the board would not act against the teacher[, who] was ordered to do 200 hours’ community service and pay the student \$2000... [after appearing] in the Hamilton District Court this week. [The judge said the teacher] lost control after... hear[ing] laughing during a prayer in a Maori class... [The teacher] pulled the girl off a chair by her hair and slapped and kicked her... The Te Kuiti High chair[perso]n... said the board would probably have sacked [the teacher if it] had admitted the assault instead of claiming self-defence. After a disciplinary hearing it ordered her to do an anger management course and gave her a final warning.

...Teachers’ groups are discussing the prospect of establishing a fidelity fund to help colleagues in legal battles... when [they] faced accusations of incompetence or misconduct... It would involve teachers paying in a set amount each year... [T]he Post Primary Teachers Association already helped teachers in some situations but a professional body could discipline those who were out of line... “It’s all about proving to the community that we are concerned about issues of competence and conduct.” ...the High Court at Wellington cleared the way for four former students to sue Victoria University over the quality of a course, while elsewhere several teachers face charges of [student] abuse. But the Principals’ Federation, which already has a legal benefit insurance scheme, does not support the fund idea. Its president... said most teachers were already covered by their union. The Minister of Education... was pleased teachers were trying to make the industry more professional but cautioned them to be aware of the risks associated with fidelity funds. Submissions on the ministry’s green paper, Quality Teachers for Quality Learning, close today... [By the way, c]hildren are reading more, stealing fewer school library books and getting up to less mischief – thanks to a project that puts books into homes... [Even] public library membership had risen at one of the pioneers of the scheme, Camberley School in Hastings. The school, in a high unemployment area, is 75[%] Maori, with most of the remainder coming from the Pacific Islands. After five years of the scheme, truancy had virtually disappeared and... the cost of cleaning vandalism up and fixing damage had dropped from \$15,000 a year to about \$1500. Parent interview night attendance had increased from about 50[% to 90%] this year... Financed by corporate... sponsors, such as Mainfreight[, CHH]... and the Ministry of Education, 380,000 books have been given out to children... in 150 schools, mainly in poorer, provincial parts of N[Z]... The ministry donated \$250,000 to the scheme in 1996, and \$900,000 more over three years was announced in this year’s budget... Students tested before and after the programme started in their schools had improved their reading skills by 35[%] more than they would have without the programme. They could recall 81[%] of the book titles given them... [and.] despite their children receiving free books, parents were also buying more books for them.

...THE computer revolution is giving young people a head start in life which otherwise would take them years of hard work. They grew up with computers and arcade games and understand the logic behind them while their parents floundered along behind. And the Net, being a new medium, means that Web designers and programmers have the status of a lifetime’s work in the industry even though they have been employed in it for only a couple of years. This gives smart young entrepreneurs the chance to get ahead fast and make money. Three Selwyn College seventh-formers are doing just this... “It just comes naturally,” says [one] as they speak business-talk about their... company, Pulse Media... These three are typical of the young chasing the opportunities and riches of a new industry... “It’s hard enough dealing with all the decisions teenagers have to make in their life, let alone making decisions as a company director,” says... [the managing director, who] began using a Commodore 64 at the age of 7 while his classmate started on a computer at 5... Pulse Media is a Web design and multimedia production company formed under the Young Enterprise scheme. Explaining what they do is the difficult part. Other teenagers who have set up companies under the scheme can easily show products they have made and are trying to sell.

...An alarming lack of general knowledge has been shown by a survey of [ex-7th formers]. Half did not know when... [NZ entered WW2]. One in seven did not know the sun rose in the east... [Almost 10% of both sexes] had no idea what a fallopian tube was[– 3%] thought it was part of an underground railway system... Only one in five could place the American Revolution, the French Revolution, the Korean War, and the Vietnam War in chronological order... Overall, [the 1st-year university] students got only half the answers right. One... got only one correct answer and 10 scored only two. Through sheer chance a monkey should be able to get three or four answers right... “Humans should have a bit of a head start.” No one got all 14... The findings were published yesterday in the Canterbury Students’ Association magazine, *Canta*... [The survey also] highlighted an alarming ignorance by some... in their areas of interest. Nearly 10[%] of English students, for example, could not identify a noun... “This is stuff people should know without having to think about it... [and the people questioned are] supposedly the top 10[%] of the education system.” ...[unfortunately – or fortunately, depending on your point-of-view – lack of general knowledge isn’t confined to NZ students: confused] schoolchildren in the former Soviet peninsula of Crimea think Napoleon or Adolf Hitler led the 1917 Russian Revolution... A fifth of final-year students said “kommunyaki” – a derogatory word for communists, rather like “commies” – organised it... The Soviet state founder, Vladimir Lenin, might have repeated his famous phrase “study, study and study once again.” Or worse. The children[even] showed a lack of knowledge about him, which would have been suicidal in some periods of Soviet history... Less than half the... group approved of Lenin... The findings highlight a generation gap in the former Soviet Union. Older people, including those in Crimea, were out in force last week to mark the revolution’s 80th anniversary.

...[although many of the survey respondents may have deliberately given wrong answers, as] editor of... ‘Canta’... [I feel able to state that] Kiwi youth are in trouble. Statistics illustrate that. The problem is a lack of soul, or depth, in our young people and ignorance of the real goal of education, which is to understand ourselves and the world so that we may seek a good life... Universities in N[Z], for example, no longer require all students to attend courses in traditional subjects like philosophy, theology, history or languages – subjects that would give them great insight into their personal lives and the state of the world, giving them the potential to seek a more fulfilling life and contribute fully to society... Too many of our young are shallow. They must be told that there is more to a wealthy, satisfying life than chasing money and buying things; that beauty of the mind is as worthy as that of the body, if not more so... Capitalist faith has both infected and been encouraged by our education system and this has led to our young people’s shallowness. Many parents, themselves products of the same system, lack the depth to correct things themselves.

...News that barely half of the University of Canterbury students who took part in a survey could recognise the first Labour [PM of NZ], even when his name is given to them as one of four in a multiple-choice list, will not surprise many academics. University students represent the best and

brightest young N[Z]ers, but in presenting university-level material to them, lecturers these days can assume nothing. So far as reliance on general knowledge goes, it's always back to square one... How did we arrive at this point? As a philosopher, I'm used to the accusation that contemporary philosophy has no effect on society: but it certainly makes a difference in education theory. The abandonment of teaching a broad base of factual knowledge in schools is part of a policy fashionable here and in the U[S] and Britain for ...a... generation. The attack on general knowledge[, or the] 'dumbing-down' of the education system... comes from both ends of the political spectrum. From the politically correct left of the teachers' colleges, we are told the "traditional notions of memorisation, recitation, and even sitting quietly are, in the words of one educational theorist, characteristic of a "closed authoritarian system" that stifles children's natural creativity and enjoyment of learning. But the political right, with its vocational view of education as business training, is equally for dumbing down. It too preaches a message of "relevance" – not to the social designs of the left, but to the economic life of business. The vital and richly textured life of the mind is of little use to the practical aims of commerce. Both sides of this political divide are united in the delusion that knowledge is advancing so fast there's little point in teaching information that will soon be outdated. The Internet, that chaos of disorganised and often dodgy information, is supposed to be our children's salvation. The computer is yet another false god of education theory. Surfing the Internet for solid information is a time-wasting exercise for youngsters, compared to reading a well-organised text. Information, no matter its quality, is not... knowledge until... it is part of a human mind and its outlook... A few years ago I complained to a former education official that students came to university seeming to know little in the way of specific information, such as, I remarked, the year of the French Revolution. "They don't need to know that," [the official] snapped... The idea that any ministry official, business[person], politician, or teacher might somehow know in advance what students need to know, and that it doesn't include the year of the French Revolution, should give us pause. One teacher told me that... students were better prepared today and that [his generation] was taught lots of "useless" things in school. Asked to name some of the useless things... [the teacher] had trouble remembering, which seems to indicate [that the teacher] had not actually learned them at all. Educating for skills instead of content, what is called "learning how to learn," has amounted to a kind of knowledge replacement therapy practised on our unsuspecting young. Except that I'm not certain what all that factual knowledge has been replaced with. (It's certainly not any familiarity with spelling and grammar.) ...As Aristotle so eloquently stated... "All [humans] by nature desire to know." It's a message I wish could get through to the Ministry of Education... Developing mastery of content – facts and information – excites young minds to want to know more. Knowledge forms a system of endless interrelationships. The more you know, the easier it becomes to absorb new knowledge. Self-confidence and self-esteem are not conditions to be reached in order to gain knowledge. Just the reverse: it's actually knowing things that gives young people confidence and self-esteem... [Incidentally, t]he Government's decision to put off raising the school leaving age to 17 will save it at least \$90 million... In documents released... by the Minister of Education, the... Department of Labour... said there were wider social and economic costs to consider in keeping the leaving age 16[, such as providing] benefits and assistance to those who did not receive "a sound educational foundation"... An explosion of more than 74,000 extra secondary school students is expected in the next decade and the Government papers show that keeping all students at school until they are 17 would add a further 16,867 to rolls during the next three years. Teacher training is already struggling to keep pace with demand, and nearly 900 extra teachers and 90 managers would be required to handle the increased roll generated by a higher leaving age... At present about 20[%] of state school students leave before they are 17, but the figure varies between 5[%] in some schools to 45[%] in others. The Minister of Education... said in a briefing paper to the Cabinet Committee for Education and Employment that students who wanted to leave school were unlikely to benefit from being made to stay another year. Instead they should be encouraged to stay through improved educational environments with more diverse programmes, a greater focus on quality and recognition of cultural and social circumstances. Initiatives to support students who leave school early are being implemented or considered for schools.

...[the younger daughter of the founder of the Body Shop international cosmetics chain says her attitudes to life were born when it left school at 17, worked with a film crew in Brazil and witnessed child labour and slavery first hand. "Now I can't justify spending money on anything when people are dying of malnutrition." Yesterday the founder admitted to being a failure as a mother to her younger daughter. The founder may have a fortune estimated at £410 million but her 25-year-old daughter is living as a drop-out in a run down area in Canada rummaging through skips for her furniture, the *Daily Express* newspaper said. The founder, aged 54, was said to be deeply saddened by her daughter's choice of lifestyle and blamed her radical child-rearing methods for her rebellion. The founder had encouraged her children to grow up too fast by introducing them to the harsh realities of life at too young an age. "Now I yearn for her company. I should have preserved her sense of awe and wonder for longer. I could have shaped that a bit better." However, the daughter told the *Express*: "I think my mum is brilliant, the most radical gal I know. But when I was a kid, I did wish mum was around more." ■ 'The call to lower the NZ school leaving age to 13 was made to provoke debate by a retiring principal, who noted that schools are not resourced to solve the social and behavioural problems which inhibit learning for significant numbers of young people. All First World societies are dealing simultaneously with loss of the work that used to provide purpose, identity and self-esteem for young people who formerly "left school and got a job." "Children learn what they live" is a truth of human behaviour. By the time adolescence is reached, complex family variables of inheritance, opportunity, skills and priorities have shaped a young person's character. For some, supported by skilled, committed parents, education success comes easily and the job of the school is straightforward. For others, even if there is no dysfunction, the gap between family skills and the ever-increasing qualifications that open up desirable future pathways can be totally daunting. Simply letting such young people drop out and roam is not socially responsible. If society does not want such young people to drop out and be a lifelong charge on our country, we must be prepared to pay for ways of bridging this skill gap. Do we, and our Government, care enough for the future of all this country's children to make the necessary investment?'

... 'NZ teachers think they've got it tough? The British Government is about to make teachers legally responsible for the welfare of their pupils after school and when pupils are not on school property. Teachers will be trained to spot potential cases of child abuse, and each school will have to nominate a member of its staff to communicate with the local social services department. Teachers will be sacked if they fail to spot or report any signs of abuse or neglect.'

... 'In some cases family functioning breaks down and severe abuse of children may occur. Although it is difficult to obtain precise figures on how many children in the US are abused, it is estimated that over 500,000 children are maltreated each year. Many of these children have been molested, starved, burned, beaten, cut, chained to furniture or kept in isolation. Most people probably think that no one they know would ever abuse a child or that only someone who is really mentally ill would inflict grievous physical harm on defenceless children. However, child abusers are found in all social classes and all religious, racial and ethnic groups. In addition, there is no evidence of severe mental illness as a major contributing factor in child maltreatment, although abusive mothers tend to be emotionally immature and frustrated. Abusive mothers are more defensive, more anxious, and more aggressive, and less intelligent and less concerned about social conformity than are more competent mothers. Certain characteristics of the child and family also are associated with maltreatment of children. Child abuse is more likely to occur in large families and to children under the age of 3. A higher-than-normal incidence of birth anomalies, physical and intellectual deviations, irritability, excessive crying and a peculiar and extremely irritating cry, fussiness, negativism, and other behaviors that exasperate the parents are found in many of these children. It may be that such problems in children are enough to tip the balance in already stressed families. Parents in these families often have conflicts with each other and are socially isolated. They seem to have fewer friends, relatives or neighbors they can turn to in times of stress. Parents who abuse their children are frequently unemployed, poorly educated, and economically deprived. However, it is obvious that most parents of low socioeconomic status do not maltreat their children. Hence environmental factors might be associated with child abuse. A study found that a high-risk neighborhood had a rate of 130 cases of child abuse per thousand families, compared to only 15 cases in a low-risk neighborhood. It has been suggested that the high incidence of child abuse may be supported by the general acceptance of

physical punishment of children in US culture. In groups in which physical punishment of children is not accepted, such as among the Chinese, battered children are rarely found.’]

...Sure, children are no longer up chimneys or working in coal mines, and we don’t have the problems of child labour and child prostitution experienced in some cultures, but nevertheless [NZ ranks] high in the child abuse stakes. [Furthermore, there exists in our society] “significant emotional and social poverty in families who... do... not know how to care, where fathers [are] distracted in making money and mothers in spending it,”... Barnado’s is one of N[Z]’s largest providers of children and family support services, offering a range of courses on parenting and family relationships, as well as budget advice. They provide a parent help telephone counselling service, as well as individual and group counselling. They also provide a number of services for at risk children, including a foster care service, family homes, a buddy system and a youth skills programme... [A] senior at Barnado’s, identifies three main areas of concern which their parenting programmes seek to address: Communication skills; self-esteem; and alternative methods for guiding children’s behaviour. “Parents are not taking the time to listen and talk to their children. The other pressures of life have resulted in a lack of time for communication... The trend towards Sega games, computer games and watching TV have contributed further to this communication breakdown. Children are not being encouraged to express their emotions, instead they are encouraged to repress them... Repressed emotions eventually explode into rebellion or implode into depression, adding to our increasing crime and suicide rate. Often, when our family counselling service is approached, the focus of the crisis is identified by the parent as being a problem child. In a large majority of cases, when the counsellor goes in and looks at what is really going on, it is more often the parents’ relationship or a lack of communication skills... Often, when a parent has been raised in an abusive family, they will either perpetuate the cycle or go to extremes in order to avoid it, which leaves a child with no boundaries or guidelines,”... As [the senior] emphasises, parenting is not instinctive; it has to be learned, and you learn mainly from the people who parented you... A government funded programme, Parents as First Teachers, was... launched in 1992 to encourage better parenting. Funded by the Ministry of Education and run by the Plunket Society, it provides 9000 places for first time parents and expects to spend around \$9 million this year... Unfortunately, those who need help most, never seek it. For this reason, [the senior] believes self esteem and communication skills should be part of the education curriculum. [‘It’s about up-skilling parents.’ Editor’s note: the human parent ‘cares for its young far longer than any other animal. This is because humans rely on learning and reasoning to care for themselves.’]

...‘Parents rush in where society fears to tread You need a licence to drive a car, get married, own a gun and keep a dog (in addition, the SPCA screens you if you want to take home a puppy). If you want a credit card, you must divulge details of your finances and your employment. You have to fill out a form for a library card, and you need to train to be a builder or a hairdresser. You need to pass exams if you want to be a doctor or a lawyer. But there’s no licence required, no information to divulge, no training, no exams, no screening when you take on the greatest responsibility of your life – that of bringing a child into the world. Our nonchalance regarding the bearing of children has no doubt evolved largely as a result of the prevalence of the practice. Familiarity has made us immune to what an awesome undertaking it is. When you marry your spouse, presumably a grown person capable of looking after itself, you usually pledge your undying love and commitment at a solemn occasion. Yet when you’re suddenly responsible for some helpless newborn baby, you just sling it in the car-seat and drive on home. New citizens of NZ take part in a formal ceremony acknowledging the link with their adopted country and even the Scout and Guide movements require oaths and promises of their members. Surely, it’s not too much to expect of parents. Some sort of ritual involving a vow to eternally love and care for the child would not be out of place just to prove your best intentions and to help to seal them in your heart. Or even a promise to keep the progeny warm and fed would do. Anything is better than nothing. No training or evidence of skill is required to create a baby and raise a child. My computer game came with a 15-minute instruction video but no helpful manual is supplied with a baby. Where kids are concerned, you simply muddle along with a mixture of sheer good luck, trial and error, gut instinct and unwanted advice from the well-meaning. While child-bearing seems to be a free-for-all, there is rigorous screening for prospective parents who wish to adopt a child. These would-be parents must jump through hoops to prove not merely their fitness to be a mum and dad but that they’re practically perfect candidates.’ Which is somewhat ironic, considering that ‘it’s not illegal to be a bad parent.’]

...“Parenting is a very important profession; but no test of fitness for it is ever imposed in the interest of children.” George Bernard Shaw wrote that in 1944, but it applies equally today, perhaps moreso. The old dictums, about children being seen and not heard and spare the rod, spoil the child, have been sent to their rightful resting place. But their departure leaves parents uncertain about what a good parent is and how to be one.

...three girls, two teenagers and one younger, entered... [a] South Auckland... dairy... about 5 pm... yesterday... say police... The youngest was caught stealing by the... shop owner... “There was a bit of a verbal dispute,”... A [gal] aged in her 30s then entered the dairy, assaulted the shopowner and warned her not to “touch my daughter...” The shop owner was not seriously injured but during the assault money was taken from the till... “If this is how parents deal with their kids... it’s a pretty bad indictment on society,” [one constable] said. “What are you teaching your children?”

...Parents need to learn before they can teach their children... For more than a year now scientists in the U[S] have been trying to educate parents, teachers and public officials about how the foundations of social, emotional and intellectual development are all laid early, in the first 10 years of life. Whether a child learns how to soothe herself when... distressed or needs the comfort of others; whether [a child] learns to think abstractly or is mired in the concrete; whether [a child] learns to empathise or never opens her heart to friendships – all are influenced by early experiences. At first glance that message is powerfully optimistic, since it means that a child’s potential is almost unlimited. But there’s a catch... [In contrast to] Dr Benjamin Spock’s mantra to new parents: “Trust your own common sense” – which has been promoted in the US for... more than 50 years... [– a] stream of new research suggests that, for the majority of fathers and mothers, doing the things that maximise a child’s potential is not intuitive. Despite the media attention... many parents have not heard the message, or are confused by it. “There is a wide gap between scientific knowledge and the public’s,” said... the Carnegie Corporation... at last week’s much anticipated White House Conference on Early Childhood Development and Learning... At the... conference, which was televised in 37 states... the President asked, can we educate parents and others so they take advantage of the findings? It won’t be easy. According to a report released last week by the American national research and advocacy group, Zero to Three, 25[%] of parents of young children do not know that what they do with a child can affect his intelligence, including increasing curiosity, confidence and problem-solving ability. And 87[%] think that the more stimulation a baby receives, the better off [it] will be. In fact, talking, reading, singing and playing must be carefully matched to a child’s level of development, temperament and mood, or the child will tune out or even cringe from the interaction. “Only 20 to 30[%] of parents know how to do this instinctively,” said[a] child psychiatrist... of George Washington University. One scientist has documented how the size of a toddler’s vocabulary reflects how much her mother talked to her; the conclusion was possible only because hundreds of children in the study had parents who did not speak to them much and who had small vocabularies. Another team of researchers found that children of professionals heard 75[%] more words per hour than did the children of working-class parents, and more than three times as many words as did the children of welfare parents... Yet there is no reason to believe the welfare and working-class parents loved their babies any less than the lawyers... [L]ove, sadly, is not all you need... Opening the conference[, the President asked]... the Pentagon, whose child care facilities are considered among the best in the U[S], to... make its... facilities training sites where people being pushed off welfare can learn to care for children. Perhaps the Pentagon can fight a couple of land wars and simultaneously save the nation’s children.

...Welfare with ‘tough-love’ hooks... The Hinds County office of Mississippi’s Department of Human Services sits just off a poorly-maintained street littered with cheap liquor stores and pawn shops. This is a poorer part of Jackson, the sleepy state capital of... the poorest state in America in which more than a third of the children live below the poverty line. For the African-American staff inside the welfare office, Mississippi’s salvation

from chronic welfare “dependency” lies in the “tough love” warfare language of... conservative Washington think-tanks. They are the shock-troops implementing the Republican Party’s radical welfare “reform” agenda now in vogue across the U[S]... On the front counter of the welfare office... sit copies of a “personal responsibility contract.” The... staff of Hinds County talk constantly of instilling “personal responsibility” and “self-sufficiency.” [NZ’s Treasurer] uses similar phrases like “reinforcing responsibilities,” “self-reliance” and benefits not being “a one-way deal”... “We hope to provide beneficiaries with a plan that details what the Government expects of them in exchange for help they receive from taxpayers,” [the Treasurer] told Parliament last week. [The Treasurer] talks of ensuring children go to school... [Another minister] thinks beneficiaries should be obliged to get their children immunised. [The Minister of Social Welfare] says the code should apply to all parents. But ministers are coy on detail – and clearly not in agreement on the big unanswered question: What sanctions would apply for failure to comply with the code?

...Differences are emerging in the coalition Government over the planned “code of social responsibility”... The Treasurer... sees the code... as a form of contract between beneficiaries and the taxpayers that would restore the integrity of the welfare system. But the Minister of Social Welfare... does not think it should be restricted to beneficiaries – and suggests parents of young children could... be involved... Parents whose children were involved in petty crime[(e.g., the parents who ‘refused to foot the \$142.80 bill after their 3-year-old threw a stone at a passing car, damaging a passenger window; a Disputes Tribunal referee has directed that the toddler pay the bill; the boy doesn’t have the money, so when it is a liable adult at 18 the bill will be due with accrued interest of 11%’)] might also be asked to attend parenting courses. The code is... viewed as a “toughlove” measure by proponents. But... [one opponent i]s concerned that [the Government] might dictate to parents how they are to raise their children.

...A public eager for details on the workings of the Government’s controversial code of social responsibility... was thrown only crumbs yesterday. The [PM]... and the Minister of Social Welfare... gave little away when talking to a business leaders’ breakfast in Wellington... [The minister] explained to his... audience why a code was necessary. Every day there were examples of people who had stopped taking responsibility... “I’m talking about parents who leave someone else to pick up the pieces.” ...[the minister also] said it would cover all N[Z]ers and could be a foundation for social policy development, but... failed to say how. A similar speech is expected at a business breakfast in Auckland today... [In his speech, the PM said the] business community, which helped to pay for welfare, had to join other N[Z]ers in meeting the challenge... welfare... posed. “I look forward to business becoming a more active partner in tackling social as well as economic issues,”... [However, the] chief executive of the Wellington Regional Chamber of Commerce... was annoyed that the Government expected business to take on an even bigger load.

...More details of... [the] code of social responsibility for parents and beneficiaries will be unveiled this morning... The code has been the centre of controversy after leaked Treasury papers suggested the Government was considering cutting the benefits of people who failed to meet certain parenting standards... [Although the Treasurer has been reported as saying: ‘when we pay parents to look after their children we expect them to look after their children’, the suggestion that benefits would be cut] was quashed by... [the] Minister of Social Welfare.

...[‘unlike most other primates, the young orang is never disciplined by his mother in the wild. Perhaps because orangs must lead a solitary life, there is no need for social rules; no codes for group behaviour.’ Perhaps because humans must live a social life, ‘the Government plans to deliver a 28-page “Public Discussion Document” entitled *Towards a Code of Social & Family Responsibility* to every NZ household.’ By the way, although it is widely acknowledged that ‘punishing parents will not make them better parents – offering them help to raise their parenting skills will’ – ‘parents in the US are being fined or put into prison for the crimes committed by their children.’]

...The British Government... pledged yesterday to “break the excuse culture” with a package of measures to force parents to be legally responsible for their children’s behaviour until the youngsters reach 17. Under [the] proposals, courts will be able to impose orders to require parents to exercise proper control. Failure to comply could lead to fines of up to \$NZ2600 and jail in extreme cases. Local authorities will also be given new powers to set up local child curfews. These will bar children under 10 being in particular public places at night unless accompanied by an adult. The proposals, which should become law next year, represent the biggest shake-up in British juvenile legislation in 50 years. Parents of children under 10, too young to be charged with an offence, can be charged in their place. Children themselves will be forced, in some cases, to apologise to their victims and pay compensation... [In local news, a recent] survey shows that far too few Maori [fathers] are prepared to accept the responsibility of parenthood. They would rather spend the night with their mates in the pub than read stories to their youngsters at bed-time. If the absentee father is a problem for Maori children, pakeha kids have another deprivation: Disappearing grandparents. Through mobility, rehousing, divorce and remarriage[, Pakeha] children no longer inherit an extended family. In a Christchurch school more than half of the 12-year-olds questioned couldn’t say what their mother’s maiden name was. In the modern world grandmas are urged to be glamorous, play golf, do bungee jumps, go on cruises and have affairs. Small children however want grandmas who have white hair, bake pies, knit, tell stories and have lots of time. This is where Maori kids are rich. They live in a world centred on grandparents and full of aunts, uncles and lots of cuddles. Grandparents are honoured because they embody a people’s history and become a living link with ancestors. You won’t find them hidden away in old people’s homes, visited on alternate Sundays. Unlike Anglo-Saxon emphasis on subjective immortality – the self going on – Maori culture is far closer to Bible teaching, with its synthesis of life and death achieved in the here and now... The catch phrase bandied around social circles in the ’80s used to be, “One good parent is better than a good one and a bad one”. It is now more popular to say, “It takes a village to raise a child”.

...Sunday is Father’s Day on the commercial calendar but absent fathers are becoming increasingly blamed for modern social problems... Every news bulletin these days indicates a steady decline in the well-being of our nation. We... cannot solve our rampant social problems without first saving marriages and strengthening families. If children do not learn self-discipline in families that practise self-discipline where can they learn it? The condition of our society merely reflects the condition of our marriages. The responsibility of the state is to preserve and sustain marriages and families, not to facilitate their demise. Yet since no-fault divorce was introduced there has been a succession of legislation that encourages relationships without commitment... No-fault divorce, designed mainly for the benefit of [mothers] and children, has played into [fathers’ hands. Previously, the] fear and shame of bad behaviour being presented in a public divorce court was a major deterrent, especially for... [fathers. Now they] are free to behave irresponsibly, knowing there will be no public accountability. Instead of public divorce courts we now have [mothers’] refuges. The social pressures to be a lifelong father to the children of one wife no longer exist. The cost in human tragedy is horrendous and mounting, while our political leaders play Nero.

...Fathers, especially absent ones, have to do better for their children, says Act’s education spokes[person, who yesterday]... told Parliament... “that we are no longer a child-rearing utopia.” ...180,000 children lived in single-parent families whose sole income was the domestic purposes benefit. “I want to say to the fathers of those 180,000 children that... just because they are not there doesn’t mean their responsibilities have ended... We’ve become so caught up in issues of privacy and a parent’s right to do whatever they like with their children... that we have put at risk the rights of children. It is our problem. Today’s neglected child is the burglar who climbs through your window 16 years later.” [□ ‘4 out of 10 US children live in a fatherless home; 72% of adolescent murderers in the US grew up without fathers.’]

...‘The outspoken head of Nelson’s Specialist Education Services got everybody’s attention when it warned us of an angelic five-year-old who was on his way to prison, and would probably kill on the way there. Who could fail to be moved by the story of a child whose life was over before it had begun? This boy was one of four siblings with four different fathers. His mother had damaged his brain by blowing dope up his nose to keep him quiet as a baby. The child had started school just six weeks ago, but was on the verge of being suspended because of his behavioural problems. The head’s evocative picture personalised the statistics. And now the head’s been fired – even though the former head has admitted the boy does not exist. But it does. There are babies born to mothers who have a different father for every child – a form of biological pick’n’mix. There are children who will never know their fathers.’

... 'All children in NZ are equal before the law. There are no "illegitimate" children in this country. *Paternity* – If a couple are married, the law presumes that the husband is the father of any children born while the couple are together. If you are not married to the father of your child, it is important for the child that the father should be identified in law. The child's rights to financial support and to inheritance depend on proof of paternity. The simplest way to establish paternity is for the father to go with the mother to the office of the Registrar of Births when a child's birth is registered (or some time later) to sign the birth registration papers. Another way is to get a paper signed by the father confirming that it is the father of the child. It is best to get the paper drawn up by a lawyer, and the father's signature should be witnessed. If the father will not sign any paper, the mother can get a paternity order through the Family Court. Even if the father of the child has died it is possible to prove paternity through a declaration in the High Court.'

... '14,000 domestic purposes beneficiaries cannot or will not name the father of their child. New figures show that of the 14,000 people on the DPB, two are mothers with 10 children each, one has nine children, five have eight children and 16 have seven children. The majority, around 11,000, have one or two children. The Act MP who requested the figures says the Government must urgently find out why so many fathers are getting away without contributing financially to their child's upbringing. "If the fathers are being irresponsible, that is not good enough and we have to have a system that makes any parent realise that the moment they are a parent they are basically a parent for life." There is a dearth of information about why so many mothers fail to name the fathers. In some cases, the fathers refused to acknowledge the child or had left the country, landing the mothers with a lower benefit rate. The MP said the Government might have to look overseas to see how other countries dealt with the problem.'

... 'It has been a year of hell but the New Yorker more or less has her life back. No more crying all day and night. The NYer still has her job, her husband and her 7-year-old son. The nightmare, which began last July when her husband confessed it was having an affair, could so easily have ended differently. The husband moved out briefly but was back with the news that his mistress was pregnant and the baby was his. But her instinct for self-preservation and scepticism that her husband was the father combined to save her. What helped her was the booming business of uncertain paternity. There are a growing number of genetic laboratories, which, thanks to recent advances in DNA testing, can tell you for sure who the father of a child is in cases where there might be some doubt (most companies charge \$US475 or thereabouts and results are back within a few days). Take any urban highway in the US these days and you are likely to see many billboards that are barely subtle in their attempt to stir fear and suspicion, especially in guys who may harbour doubts as to whether little Jimmy is really his little Jimmy. There are the ads that appeared earlier this year, for instance, featuring a baby's face with a Pinocchio nose. "Is his mother a liar?" it asked. Like all such billboards, it then offered a freephone number, in this case, "1-888-WHOSDAD." These new purveyors of truth in genetics have reason to be bullish. A variety of studies suggest that somewhere between 5 and 20% of USers are wrong about who their fathers are.'

... 'One in 10 of NZ fathers may be paying child support for children who are not theirs. The North Shore-based national organisation the Guy's Centre said AUSn research indicated 10% of children were raised by guys who were unaware that they were not the biological father. British research suggested it might be 20%. Local tax collectors confirm that payments have been stopped and money refunded after guys proved that the child they were supporting financially was fathered by someone else. But the centre's president said some guys knew a child was not theirs but were still happy to care for or pay child support. The president said it was often a tragedy when guys contested paternity because, if unsuccessful, the father-child relationship could be damaged.'

... '*Children caught in tug of war* CALL me naive but I never imagined in a million years that a child in this country could be snatched out of school by representatives of the state, packed off to a new home and refused the opportunity to say goodbye to her classmates and her mother. And yet that is exactly what happened at an Auckland school. The child was at the centre of a bitter custody dispute, and these things are notoriously messy. The father was awarded custody of the child although the girl had been living with her mother. We don't know the reason why the family court decided in the dad's favour – the judge was in possession of all the facts and made the appropriate decision. But the way the family court ordered the social welfare workers to deliver the child to her father was totally inappropriate. To invade school grounds – a place where children are encouraged to feel safe – to remove the child from the classroom in front of her friends, and to fail to inform the mother that the legalised abduction had taken place is inhumane.'

... 'The young Chinese girl who disappeared from Mt Roskill in May last year had been living a miserable and lonely life since moving to NZ and may have committed suicide, an inquest heard yesterday. The body of 12-year-old Chong Liu washed up on Pollock Beach, in the Manukau Harbour, 16 days after the girl vanished. There was an extensive police inquiry and speculation remains as to whether Chong was murdered, kidnapped or simply fell into the harbour. But although the coroner agreed that her life must have been "intolerable," the coroner excluded suicide as a cause of death because it could not be confirmed. Instead, the coroner – who praised what it described as a thorough and professional inquiry accounting for \$1 million of police hours – ruled that Chong died of "unascertainable causes" that most likely resulted in her drowning. The inquest heard from a child psychologist that the girl lived in a household where "parental neglect, emotional abuse, conflict and dysfunction were evident." Chong would have felt unwanted despite her father's love, and additional risk factors such as cultural alienation, loneliness, inability to communicate and shyness could have pushed her to commit suicide. Chong was left to fend for herself when her father was out and other household members – her stepmother, stepmother's sister, and step-grandmother – hardly spoke to her. Chong often ate meals alone in her room and was aware her father and pregnant stepmother were considering placing her in a home-stay. Chong struggled at school, had only two friends who could speak Mandarin and the girl repeatedly said it missed her mother. Chong was raised predominantly by her mother and grandparents in China but came to live in NZ two years ago with her father, and her new step-mother, as part of her parents' divorce settlement.'

... **Children can be more affected by a divorce than parental death, a British speaker told a children's issues conference at Otago University yesterday...** [The professor] of Cambridge University's centre for family research, said children whose parents divorced were less likely to behave well or do well at school, and generally had lower self-esteem. "Transitions to adulthood for the children that experience divorce is a lot quicker as they move into forming relationships – marriage, cohabitation and becoming parents[–] at earlier ages on average,"... The effects were not limited to children... [A] recent study in Britain showed some... [fathers] whose families had been rocked by divorce in their early lives had lost contact with their children, been socially isolated and were less well off now.

... **WE ARE** so used to hearing gloomy reports about the state of society that the results of the... poll for [Britain's] National Society for the Prevention of Cruelty to Children will come as a great surprise. And a welcome one, for it makes clear that the picture of breakdown and unhappiness so often painted is false. [Although 'each year more than 50,000 British children under the age of five had parents who divorced', the] **great majority of children still experience the feelings of happiness and security that come from a stable home. But though the survey overturns recent conventional wisdom, it also reaffirms some common-sense axioms that have been dismissed as unfashionable. It has discovered, for instance, that children want their parents to exercise authority. Many parents may read this with incredulity, finding it hard to square with their own experiences of life with teenage offspring. But countless generations of parents, luckily unencumbered by modern theories of child-rearing, have been aware that even the most spirited children need and crave a firm framework of rules and guidance. Failure to give them is one of the greatest betrayals of which a parent can be guilty.** - 1997

Discipline is more than punishment – it's helping a child learn what you want IN MY 30 years as a psychologist and educator, I have tried to help parents understand that effective discipline teaches a child why certain behaviour is wrong and how to correct it. The main principle behind teaching children desirable behaviour is simple. When you see a child behave well, reward him with praise, a... hug or a pat on the shoulder – something that indicates you think [the child] is a splendid little person. This process does wonders for a child's behaviour... [A] child wants positive attention from his parents, but if the only attention [a child] can get is negative, [like a dog (which 'often works on the premise that any

attention is better than none – barking incessantly may bring you out into the garden telling him off, but at least it has brought you out into the garden’) a child] will settle for that. It’s better than none at all. Parents tend to pay more attention to children when they misbehave. That only makes children misbehave more, because this is how they can get the attention they crave[(but, unlike a dog, a child is less forgiving if punished for misbehaving)].

Discipline – only a two-minute pep talk away... What is the minimum amount of quality time Malaysian parents must spend with their children each day? Two minutes, says Malaysia’s Deputy Education Minister... This would help reduce the risk of children turning violent or misbehaving... “I am asking for only two minutes, not even one hour. It is not too much to ask.” Violence and arson in schools have recently become rampant in Malaysia, officials say... In a move to beat the chaos, authorities [– who last year were ‘shocked by a nationwide study which revealed the spread of casual sex involving teenage girls (the survey begun in 1994 by the National Population and Family Development Board showed that one in four girls between 13 and 18 years old admitted having experienced sex or being sexually active’) –]are contemplating giving teachers greater power to use the cane, which has become a topic of hot debate in[the] letters page of the *New Straits Times*. One reader wrote: “I used to get whacked when I was in primary school because I talked a lot in class. It was painful and I tried not to cry. But from then onward, I began to respect authority.” [Incidentally, ‘attitudes toward child rearing have changed dramatically in China since the takeover by the Communists. Punishment is less severe and discipline maintained through subtle coercion and pressure to conform to a common standard of behaviour rather than by spanking or physical force. Pressure to conform to the group norm is applied by the family, the school, and the state. Society is placed before the individual.’]

...ISN’T it amazing how far we’ve come as a society? To think only 20 or 30 years ago corporal punishment was considered not only normal, but a good thing... What’s normal about some deviant getting a power kick out of forcing young[sters]... to bend over, grasp their ankles and steady themselves for a good whacking on their bottoms? What’s normal about hitting the hand of a seven-year-old child until it swells because the child doesn’t do their multiplication sums properly? There are many people over the age of 30 who harbour resentment and ill feeling towards teachers in the education system after being intimidated, humiliated and hurt by adult bullies. And I am so glad... [that, unlike the teacher in China who forced a] pupil... to eat 1000 flies as a punishment... [for calling the] teacher a dog behind his back[, NZ]... teachers today use their wits and compassion rather than brute force when it comes to disciplining children. But that’s not to say I agree with the jury’s decision in A[US] to award nearly \$3 million to a snivelling 30-year-old who nurtured his resentment against his school for 17 years before successfully suing the Catholic church. [The sniveller] may well feel [it] was unfairly treated, but seven whacks on the hand should not equal \$3 million. And while I’m glad corporal punishment no longer exists in our schools, teachers should not be judged by today’s standards for something they did 20 years ago.
