...What’s wrong with being old-fashioned? ...the effects of corporal punishment at school may not have been as bad as [is proclaimed]... Takapuna Grammar, when I was a student, used corporal punishment... for serious offences involving school discipline. Six of the best meant bending over and receiving six swipes with a cane or leather belt. I can testify that it hurt – but when a boy emerged after this chastisement [it] was not only more likely to obey school rules but was accepted by his peers for taking due punishment in a [grown-up] manner. The unacceptable behaviour that some teachers put up with in our schools will remain until we return to what over-liberal people would refer to as old-fashioned standards.

...[a letter-writer] and others may have missed the point regarding... corporal punishment in schools. It is not the brutality of caning that is important. It is the humiliation. Sure, I can remember being caned by a zealous sports master at Auckland Grammar many years ago. At the time the infringement (whatever it was) seemed trivial to me. It stung, but not severely so, and the pain such as it was would not have been a deterrent. However, it stung my pride much more, and that was a deterrent... Maybe we should reintroduce the... public humiliation... [of] stocks.

A mother whose son is launching a legal bid to end his parents’ right to smack him has defended the use of corporal punishment for the child. Speaking for the first time ahead of a European court hearing, the [mother claimed to be] astounded that the case was going ahead... [because] the boy, now aged 12, was totally out of control and had run riot since the age of two. The dispute centres on an incident three years ago when the boy’s stepfather beat him with a garden cane after [the boy] tried to stab a[nother] child with a kitchen knife. The [stepfather] was acquitted of assault occasioning actual harm by a British court. But the boy, backed by his natural father with whom [the boy] now lives, hopes to take his complaint to the European Court of Human Rights. If successful, the case could lead to the outlawing of smacking in British homes bringing it into line with many other European countries... The 34-year-old mother of five, now married to the stepfather, said [they] had had no problems with her other children and that the boy’s natural father had been forced to smack him too... [The mother] had lost count of the number of times... the boy’s school... had... called [her] in... because of his disruptive behaviour. Social services, educational and clinical psychologists had all been involved with him at various times. “I think that half of the problems with today’s youngsters is they are not properly disciplined. They know they can get away with things. It was not like that when I was growing up or at schools,”... Both mother and son remained in contact and even holidayed together... But the decision to go ahead with the legal challenge had come as a shock and now put the chance of reconciliation out of the question... Lawyers for the boy will argue the British Government failed to protect the child’s human rights by allowing punishment with the cane because it constituted inhuman and degrading treatment.

...The Archbishop of Canterbury says there is nothing wrong with gently slapping children to enforce moral values. Children who transgressed should be smacked as long as it was “done with love,”... [the] father of four who has five grandchildren... said during a BBC Radio interview... His comments came five months after the... opposition leader in Britain... admitted... smack[ing its children. The politician] said at the time “children must realise there are some things they can’t do.” ...[the archbishop]’s comments... were seen as likely to reopen debate on corporal punishment...

British classrooms, once regarded as a bastion of order, are under the spotlight over a crisis in discipline which has raised a national debate about standards of morality. The focus centred on the Ridings School in Halifax... which was closed by local authorities yesterday after teachers voted overwhelmingly to strike in protest at attacks by children whom they said were unteachable... [E]ducation has become an emotionally charged battlefield for politicians vying for the support they need to win the next general election... Politicians competing for the moral high ground are putting every outburst of classroom anarchy under the microscope. They and the media play up fears that social values are breaking down in once-tranquil Britain. Right-wingers want caning brought back in school... [However, t]he Education Secretary, [who is] at the eye of the classroom storm, was publicly rebuked this week by the P[M when the secretary]... supported a return to caning, banned in Britain in 1985. [The PM], whose own “back to basics” morality campaign badly misfired... said the Government had no intention of bringing back corporal punishment.

...The British Parliament is to vote on whether to re-introduce corporal punishment in schools following a spate of high-profile cases of insolent and disruptive children causing havoc in the classroom. Britain abolished the use of the cane or slipper in 1986 under pressure from the European Court of Human Rights. But the P[M]... bowed at the weekend to pressure from right-wing members of his... Party to reconsider the issue... The vote will take place early next year but [the PM] himself is against the reintroduction of corporal punishment and has said Government ministers must fall into line. Most members of the opposition... are also against the idea and political commentators said the idea... was likely to fail.

...A Kenyan schoolgirl died last week after a caning, despite a ban on corporal punishment in schools imposed after the death of a schoolgirl in July. The 14-year-old was hit on the head with the cane, a newspaper said. - 1996

N[SW] voters want to overrule their Government's one-year-old ban on corporal punishment and bring back the cane, according to an opinion poll published yesterday. The state's Labour Government, claiming overwhelming support, banned the cane from its schools from the end of 1995, allowing private schools a further 12 months to come into line – or face deregistration. But a... survey in the *Sydney Morning Herald* showed that 53[%] of voters believe schools should have the right to cane unruly students... The pro-cane vote, however, varied widely between age, gender and even place of residence. Less than one-third of the 18-24-year-olds surveyed supported the use of corporal punishment, while 65[%] – the highest proportion – of those over 55 said... [yes] to... the cane. Two-thirds of... [guys said yes], compared with 41[% of gals; as did 60%]... of... rural... people... against 49[%] of those surveyed in metropolitan Sydney. The Government, however, remains unmoved. The State Education Minister... told the... *Herald* that community opinion shifted over a period of time and that the poll had shown an increasing number of people were coming to accept that caning was an ineffective way of providing discipline... [● The NZ] public is being naive if it thinks teachers never lay a hand on students, say... [local educators. They've seen kids hit around the head, whacked on the back of the legs, kicked in the bottom and spread-eagled and physically restrained against walls. A teacher who did not want to be named said violence still occurred and in her experience it was younger, inexperienced teachers who were the main perpetrators... But in a bizarre twist, teachers were sometimes asked to hit pupils by parents...

A Motueka school using corporal punishment to discipline its students is breaking the law, says the E[RO]... The principal... said yesterday that the school had replied to some of the office's recommendations, but its response on corporal punishment might not have been satisfactory to the office... [The principal] declined to comment further. Shiloh Christian Academy is a fully registered private school run by the Motueka New Life Centre for primary and secondary school students. The philosophy of the school centres on providing a *Bible*-based curriculum and training students in the principles of Christian living. It is understood that parents sign a form when enrolling a child at Shiloh which gives permission for corporal punishment to be used. But children's commissioner guidelines say teachers cannot hit students even if they have permission from parents. "...the use of force by a school employee against a student at school remains an offence under section 139A of the Education Act," the guidelines say. A... report had now been forwarded to the Ministry of Education for further action... The ministry could strip the school of its registration... The school's founder... was reluctant to talk about the matter, saying it was an "in-house issue" that was being worked through... "We would rather not make it public or discuss it. I don't think it is the public's concern."

...The National Council of [Gals] wants the Government to repeal part of the Crimes Act, which allows parents to... [use] reasonable physical force against children as punishment within the family... "We acknowledge children need to be disciplined but there are other ways of doing it... Adults are not allowed to use force against each other, so why should parents be allowed to use it on their children?" ...[according to the retired] first senior lecturer in environmental studies at the University of Auckland, [if]... children are safely to survive the perils of childhood they must learn to obey adult commands and will probably need well-chosen, careful applications of corporal punishment... "...The Swedish blunder of prohibiting corporal punishment even in the home must not be copied here. And I urge that... this method ...o[f] discipline... be restored for teachers to use..."

...N[Z]'s attitude to corporal punishment lags behind other [First World] countries, says... a professor of psychology at Waikato University[who] has asked the Minister of Youth Affairs... to act on a U[N] report that says that section 59 of the Crimes Act... is contrary to article 19 of the UN Convention on the Rights of the Child... "Most parents, most of the time, can hit their children without abusing them... but who can say at what point a parent will snap? Every child hit is at risk and as a community we have to give up some things for the good of all."

...Thou shalt smack thy child and any attempt to take away that right will be met with widespread civil disobedience, says the Christian Heritage Party leader[who]... is vowing to stir up trouble if the Government takes seriously an international call to ban corporal punishment. Smacking children for discipline is fine, and so is strapping them at school, [the CHP leader] says. "If they try this one they will meet with opposition that will far exceed the homosexual law reforms, mark my words." [The CHP leader]'s outcry has been provoked by the release of a largely damning U[N] report on how N[Z] is complying with the U[N] Convention on the Rights of the Child... The U[N] wants the Government to ban all forms of physical or mental violence, injury or abuse. [However, the CHP leader says NZ] law already guards against that, and the UN and the Government should stay out of people's homes... [otherwise] parents could end up facing assault charges for smacking their own children. Hundreds of thousands of Christians would unite against it, [the CHP leader promised]. God had given the power and responsibility to parents to train their children and while [the CHP leader] did not advocate indiscriminate smacking and strapping, sometimes it was called for. Banning corporal punishment in schools had already been a bad move, [the CHP leader] said. Truancy had gone through the roof, unruly children had ended up on the streets and teachers were leaving because they did not know how to control children.

...The head of the Auckland School Trustees Association is battling to bring back the cane despite chairing the board of a school with an anti-violence policy... [V]erbal or physical punishment is not tolerated... [at] Massey High School... [However, the head] said many schools spent a lot of time and resources, often unsuccessfully, trying to discipline badly behaved students. Some students specialised in trying the system... "Possibly corporal punishment may be effective for them where all the talk in the world won't be." [The head] envisaged a deputy principal being able to "deliver a whack on the bottom" but... [the] comments have left educationists and politicians smarting. The Minister of Education... said the chance of politicians voting to reinstate corporal punishment was "probably zero." But [the minister] conceded that the ministry was concerned about discipline within schools... The Principals' Federation president... said schools' problems with disruptive students were not improving but... hitting students was not appropriate... The executive director of the Independent Schools Council... said corporal punishment was an anachronism.

...The head of the Auckland School Trustees Association has been universally caned for advocating corporal punishment in schools. [The head] will push for corporal punishment in his final report next month as president of the association. [But the head] was given six of the best this week from educational and youth aid bodies unanimous in their condemnation... The president of the Educational Institute... said the teachers' union had thought "barbaric methods of controlling children had ceased." Disruptive children came from homes where they were hit... so "whacking and beating them [at school] would make no difference... [Instead,] more money should be spent... studying why children were disruptive..."

...Research suggests it's hard to know if your child's a bully, but parents often lead by example... [W]hen there's violence in the home, or when they see their parents behaving violently towards others[children]... learn to come to accept violence as just part of a way of life and there doesn't seem anything wrong about going out and hitting another kid.

...If we are a society that considers itself serious about reducing violence, then banning corporal punishment... [is] a necessary and positive step... Though corporal punishment as a quick and easy method of correction seems simple and benign[one]... of the primary criticisms of corporal punishment is that it conveys mixed and often damaging messages about how to deal with conflict, such as: "If someone does something you disagree with, or annoys you, hit them," or "if you have a problem, use violence to solve it." As history shows, the use of violence is not a productive or life-affirming way to solve conflict. The horrors of Bosnia, Rwanda and Iraq are still fresh in the minds of many people and remind us of the devastation and suffering that occurs when negotiation or mediation is not used at an early stage... Lacking alternative conflict resolution skills or outside intervention from those who could provide those skills, each of these countries quickly found themselves falling back on the only system of conflict resolution they knew and, "following in their father's footsteps," took to arms. Corporal punishment, while occurring on a more personal level, is based on a similar model. One party (the child) performs an inappropriate behaviour, the other party (the parent) hits the child, and the child ceases the behaviour. As in a wartime climate, "might is right" determines the outcome... First the child learns that power, and the holder of power, determines the outcome of conflict. The child begins to associate power and outcome as mutually exclusive and learns that... [it] must employ power strategies to gain the upper hand... Bullying, which has become an increasing problem in some schools, is one example of a

child exercising his or her physical power over a peer or sibling. Secondly, it transmits the idea that power management, and not reasoning or communication, is the principal mechanism for resolution... [which] leaves little opportunity for any sort of discussion, for feelings to be expressed or understanding to be achieved. A [bully] does not learn what... [it] has done wrong, or that each side must be heard. Thirdly, the child learns that parties are not equal entering a conflict; that one is superior, the other inferior; and that the exploitation of the imbalance will decide the outcome. Any concept of an outcome of mutual benefit is unattainable; one is the "winner"['], the other the "loser." That message at a personal level is one that plagues society. Inequality continues to cause suffering, from human rights to international business... With corporal punishment the child is the loser and, later, society...

A standard family practice that leads to 90[%] of child abuse cases must be outlawed, say two Waikato child rearing experts... [Only 10%] of child abuse is pathological in origin, and the rest is committed by parents who think their practices are normal, but this time went too far... In their new book, *The Next Generation – Child Rearing in N[Z]*, the psychology professors... continue to promote their uncompromising, and unpopular, views on smacking. The book reviews the couple's 40 years of research into how N[Z]ers bring up children, and addresses what they call the "dark stain" of child rearing – physical punishment... [The book is] their seventh joint effort, since they wrote *Child Rearing Patterns in N[Z]* in 1970... The couples' 1981 book, *Spare the Rod*, advocated a law change to limit smacking... They say N[Z] research confirmed a relationship between... physical punishment and behavioural problems, while American studies showed spanking children was related to suicide, depression... street crime, and impaired relationships... "In the light of awareness of abuse, why does physical punishment remain unquestioned by so many? ...When one knows that the consequences of a custom or practice are harmful, the time for change has come... Most cases of child abuse are not dramatic or bizarre, but simply sordid, grubby and all too familiar... Those who commit them have simply become caught up in confusion, barely coping and in bad habits of child management that have gone on getting worse and worse." ...[in American news, a Cincinnati mother] accused of letting her children live in squalor while... [spending] up to 12 hours a day on the Internet has been put on probation and ordered to take parenting classes.

...[p]arenting courses for prison inmates are being developed to reduce family abuse and violent crime. Around \$250,000 will be spent on the three-year pilot programme for... [three] prisons... "Research shows children with violence or abuse in their upbringing are 30% more likely to commit violence offences than those with more stable backgrounds. We want to better equip parents to provide non-violent family environments for their children, with the result that prisoners will be less likely to offend and so will their children. Not all prisoners lack parenting skills, but a reasonable number had problems in their upbringings." ...controlling and disciplining children without violence would be a focus of the parenting programmes, which cater for nearly 270 prisoners a year. "...45% of [guy] and 65% of [gal] inmates have dependent children under the age of 18."

...One of the richest blessings bestowed on my wife and me is the privilege of having two godsons. They are five and four now... Early on, the parents became aware of the boys' acute sensitivity to the atmosphere in the home. Any hint of dissension between parents caused distress; overt displays of affection brought smiles. The parents soon learned to settle their differences – and they have as many as any other couple – out of sight and earshot of the boys. When the lads are naughty, they are quickly and firmly told the nature and consequences of their misbehaviour. When they become insufferable they might be given a short, sharp, safe smack. And if you call that "violence" then you're nuts.

...Smacking, violence not the same... To think an opposition to violence automatically commits one to oppose all use of physical force is to confuse two distinguishable things... Obviously, we ought to be against violence in interpersonal relationships – including those between parents and children... But the argument against violence is beside the point when the issue is whether the rare smack on the occasion of a child's flagrant disregard of well-understood rules of justice, accompanied by an explanation of why it was deserved, should be beyond the pale... Just as there is a difference between the bald and the not bald, though the difference is a matter of degree, there is a difference between violent and non-violent applications of physical force, though they may shade into one another. It is said that corporal punishment teaches children to be violent. But this gives too little credit to our children's intelligence... Children can understand very well the difference between violence as a means to get one's own way and physical force as a balwark against injustice. It is as well they should learn this as children, since society is not going to give up enforcing the law by physical constraints on violators. And the swat has certain advantages over other methods of rule-enforcement. It can be immediate rather than postponed, it is over quickly and does not poison the air for days and it has a remarkable capacity (if not used too often) to concentrate the attention on what has gone wrong... Though physical violence should never play more than a minor role in the armoury of parental techniques... whomever would forbid it altogether needs better arguments than those that trade on the confusion... that any application of physical force constitutes violence... There are those who advocate as many as 30 swats from a leather strap...

A N[Z]-made video... has sparked outrage on the other side of the world. British child protection authorities have condemned the parental advice tape which uses a character called Sam Smack... [T]he National Society for the Prevention of Cruelty to Children, condemns the video's content of how to strap children "correctly" with a 23cm-long red leather strap as "bizarre" and "incredibly tasteless." The... three-hour video, called the *Safe Smack Parenting Programme*[, which]... also sets out when it is acceptable to smack... is made... by a Hamilton-registered company called Safe Smack Ltd. It will be marketed in Britain by... mail order... [from a former Christian Coalition candidate, who] could not be contacted yesterday.

...The [Hamiltonian] behind a "safe smacking" video promoting the use of a leather strap to discipline children has returned home after a failed marketing bid in Britain, but is vowing to remake the video and release it within weeks... [In related news, a t]eacher-turned-politician... believes the cane should be a punishment option for serious misbehaviour in schools... [T]he Minister of Police and... [NZ] First MP... was not surprised by a N[Z] *Herald* poll showing... 55.6%... support for corporal punishment to be reinstated... [because the minister had] carried out his own poll in 1995 which showed similar opinions... The Labour Government abolished corporal punishment in its last year of office in 1990. [The minister], who was then a Labour MP, was one of four from the party who crossed the floor and voted with the National MPs against the move... [According to the minister,] Parliament's removal of one form of punishment for serious offences had forced some schools to concentrate on... suspensions and expulsions... Nearly 70[%] of people aged over 51 wanted a return to the good old days of teachers meting out justice... Seven out of 10 of those polled who earned less than \$19,000[also] took a hard line and wanted children to face tougher measures... [However, p]eople aged 18 to 30... were against any plans to remove the carrot and replace it with the stick... and... principals contacted by the *Herald* yesterday were not in favour of corporal punishment returning to schools. - 1997

We shouldn't be surprised at last week's *Herald* poll showing that more than half of us want to restore to teachers the right to beat our children. We are, as a species, fond of simple solutions to complex problems and there's nothing quite as simple as violence. I suspect, what's more, that evolution has us hard-wired to extract supreme satisfaction from belting the daylight out of anything that frustrates us. That's why I behave as I do on the tennis court... So let's take it as given that bringing back the cane would make some teachers feel a good deal better. But... at the risk of offending the other grizzled veterans of "the good old days," I have to say that it never did me any good... [M]y form two... teacher (tellingly, we called them masters) was the school's most enthusiastic dispenser of canings and few mornings passed without a hapless pre-teenage boy, white and sweating with fear, shuffled into our form room where the boy would touch his toes and be viciously thrashed by a lean and muscled person almost twice his size. This grotesque spectacle was so commonplace that I was soon able to... barely even flinch... as the thin whiplash of cane ruptured hundreds of small blood vessels in the body of someone who was barely out of childhood. The reasons for the thrashings were sickeningly ordinary... For those who think that things began to fall apart when teachers stopped handing out daily thrashings these reminiscences will cut no

ice... [However,] this I know for sure: I can remember, as though it were yesterday, the... burning in my buttocks when my form two teacher beat me (for clowning around at square leg during a cricket game)... But... I cannot remember a single thing [that teacher] taught me.

...“Not a word,” commands... [the] Children’s Commissioner... as his son approaches the tape-recorder, “about how I used to smack you as a kid or it’ll be all over the *Herald*.” “Nah,” says the 28-year-old... barely breaking step. “[Dad] never used to smack us. [Dad] used to use a belt.” ...The... [perso]n whose job is to lobby on behalf of the country’s most vulnerable... emits a soft groan. But, moments before, [the commissioner had] ‘fessed up anyway. [The commissioner]’s anticipated my reminding him that, in 1992, as Associate Minister of Education in a National cabinet, [it]’d said decisions on corporal punishment should be left to schools themselves. Now, [the ex-minister] wants smacking of children to be outlawed by the repeal of section 59 of the Crimes Act, which lets parents use “reasonable physical force” to discipline. “I’ve changed,” [the commissioner] says simply... What changed his view was becoming a grandfather... “I’m a grandfather of two now, nearly three,” [the commissioner] says with obvious pride. “And we [[the commissioner] and his wife...] became instantly very close to our first granddaughter. I cannot think of any reasons why [it] would require smacking.” Like most people of his generation, [the 55-year-old... looks back on a childhood where physical discipline was accepted. [The boy] would be told to “choose a switch off the tree by the outside toilet,” although discipline was more formal than random and neither frequent nor regular. Likewise, [the commissioner] smacked his own children. But... “wouldn’t do it now if I could do it all again... So I say to those of you who think you have a God-given or cultural or historical right to smack your children: ‘What about giving that away in the interests of saving some lives down the track of children whose parents don’t know the difference between what’s appropriate and not?’”

...Do you sometimes feel you have a teenager from hell? A dose of tough love may be the answer – and groups in three parts of Auckland are holding open information evenings next week, Toughlove Awareness Week, to help parents deal with pre-teen and teenage children whose behaviour is unacceptable. There are eight groups between Orewa and Pukekohe, says[the] regional administrator... and membership in that area totals 550. “Toughlove doesn’t offer a quick fix... but by regularly attending meetings, parents learn to cope.” They are helped to set boundaries, find innovative ways of dealing with bad behaviour and follow through with their own decisions. “Toughlove doesn’t support physical or verbal abuse and does not advocate kicking kids out of home,”... But there has to be authority in the family, “and that’s the parent because teenagers don’t have the maturity or the wisdom to produce a quality home life.” ...[By the way, e]ight years ago nearly 500 members of the Maori [Gal]’s Welfare League rose to their feet and clapped at the suggestion that naughty children deserved a hiding. The... annual conference in Kaitaia had just passed a remit that parents’ rights over the care of their children be reviewed under the Children, Young Persons and Their Families Act. Not all the league members were impressed with the rousing support for physical discipline. But there was concern that parents could no longer discipline their children by hitting them without ending up in court. At the weekend’s 48th league conference at Mangere, in Manukau City, members looked slightly aghast when reminded of that Kaitaia applause over a junior delegate’s call for parents to be able to strike disobedient children. [The league’s] president... said attitudes then were a reflection that many of the members had been smacked as children... [The president] said the climate had changed and [most members now] believed... smacking should be avoided... “We have been making inroads.”

...An anti-smacking campaign is being credited for a dramatic shift in Maori attitudes to child discipline. Research by the [CYPS] shows the proportion of Maori who see smacking as desirable has dropped from 48 per cent to 19 per cent... [■ T]he Government has taken its first cautious steps towards a possible ban on adults smacking children. [The] Social Services Minister... yesterday released documents detailing... [the] issues... The Government is looking at action taken by other countries before making a decision this year.

...Big brother is getting even bigger in N[SW]. This week the state Government began laying down the rules on how, where and with what parents can smack their kids... But as parental and political opposition surged, it was clear the bill would stand a chance of surviving only if it allowed the continued use of kitchen implements and their ilk, and instead concentrated on the set impact of a whacking. It was also clear that the law would fail if it tried to introduce a general prohibition that would enable police or social workers to act against parents seen to deliver a smack to the backside in public... Although the limits need to be established by the courts, parents would generally be able to clip their children on the ear and apply the wooden spoon so long as they did so briefly and without excessive force.

...[the only time my dad ever whistled a particular tune was when my dad was trying to control his temper, and since my dad never did control his temper it was always a prelude to a slap around the head. That is negative conditioning. But for all anyone knew it could have been the perfect trigger for a pathological mind. Some killers rely on the flimsiest of excuses for the most heinous crimes. By all accounts I should be barking mad and very, very angry.]

...a newly released study... shows that children who are severely smacked or beaten are twice as likely to turn into violent criminals.

...[after a ‘16-year-old Amish boy ran away from home to escape daily beatings, 20/20 found that the bishops instruct parents to beat their children to make them submissive (in addition, higher education is forbidden). Every Amish home has a strap in it. Their goal is to get to heaven, and the Amish believe strict discipline is necessary. This explains their increased emphasis on rules over religion.’ (‘The Amish are trapped, by choice, in a 17th century timewarp, and spend lifetimes arguing over what aspects of modern life can enter their world. A community in Kansas was split over the question of whether air could be allowed in tractor tyres. The argument in this community by the older guys has been, “Hey, if you put air tyres on, when are you going to put electricity in your house? You don’t need electricity, you don’t need a telephone.” I guess you don’t really – but maybe you don’t need a horse? Maybe you can just dig your field by hand? The only thing that gets me is that, with all those systems that I’ve encountered across here in the US, if you step out of line and question it you’re out. You don’t even get a postcard. Well, where’s the kindness in that?’) □ It is estimated that ‘90% of American parents spank their kids.’]

...FOR a generation of parents increasingly weary of brattish and unruly offspring, the advice from America’s newest childcare experts... that small children should be seen and not heard... has come as welcome relief... They say that to spare the rod is to spoil the child. In a country long-renowned for the indulgence of its parents – and the appalling behaviour of its spoilt children – their message is hugely controversial... The couple [even] say babies can be spoilt through too much cuddling... The [couple] are traditional conservatives and committed Christians. Quoting freely from the *Bible*, they say babies should be left to cry because: “God did not intervene when His Son cried out on the cross”. The [couple] are responsible for the biggest reappraisal in parenting since Dr Benjamin Spock more than 40 years ago. Their books sell faster than those of any other childcare expert in the world, but their extraordinary popularity has not gone unchallenged. One leading paediatrician said their theories were “the most dangerous I have seen”. There are reports of babies being admitted to hospital with malnutrition after parents ignored babies crying to be fed... [A] Californian expert on breast-feeding... is aware of at least 100 cases of poor weight gain connected with people following the books... The [couple], who are in their 50s and have two adult children, developed their programme through their... family-run company, Growing Families International, [which] is responsible for *On Becoming Babywise* and its sequel. The [couple] seem to have struck a chord by promising that parents who follow their techniques will train babies to sleep through the night within weeks. In doing so, they run counter to modern “child-centred” theories which say babies should be fed on demand. The couple also believe children are born with a predisposition to naughtiness. In courses distributed through churches, they recommend spanking toddlers as young as 18 months for indiscretions such as banging high chair tables. Children up to three should be slapped up to five times. The [couple] suggest hitting children with an implement reserved for the purpose. They warn that a wooden spoon might break a child’s fingers and that a belt could damage skin tissue... They recommend a rubber spatula or wooden paint stirrer... In another publication *Preparing for Parenting*, they scorn the significance of bonding with your baby after birth. “In Biblical times, a new mother did not... attempt... to establish a bond with her child,” they write... [The couple] rarely give press interviews, saying

the “secular media is decidedly anti-God and anti-God’s people”. They also say that babies who fail to thrive on their programme “usually have pre-existing medical problems”... [Their] former church, the Grace Community Church, has publicly distanced itself from the couple. A statement approved by the board of elders denied any Biblical basis for refusing demand feeding. “We... caution young mothers not to adopt any system of parenting... so rigid it requires them to quell the God-given maternal impulse,”... • *Several thousand... Babywise books have been sold in N[Z]...*

Baby and Child Care was published at exactly the right time... 1946... It was the end of the war, babies were booming and people were looking for new ideas. After all, it had been an era when starchy guidebooks told parents not to touch their children – just shake hands with them in the morning... The [author of *Baby and Child Care*] urged parents to trust themselves – “you know more than you think” – and not to be afraid to love their babies. [‘Children who have never felt loved grow to feel worthless, unwanted, inferior. They not only feel unloved, but unlovable.’] The great irony is that [the author] did not practice what [his book] preached... Shockingly, [Dr Spock] never hugged or kissed his sons. Family life, his sons confess... left much to be desired. Archive footage of... Dr Benjamin Spock... in the 60s and 70s is revealing, showing a [person] hooked on fame...

“Paediatrics became an established specialty in the 1880s. The American Paediatric Association was established in 1888... [A]n early president [of the association] published the first text on the care and feeding of infants... [I]n his book [the paediatrician] said that babies should rarely be picked up... The less contact between baby and mother the better. This was... the age of... scientific motherhood.” The scientific method... led to new ways of raising children in the 1920s. “Parents felt that traditional ways of rearing children in... the new, modern, industrial... world were... no longer appropriate... Millions of dollars were poured into establishing scientific study during the 1920s. John Watson... was the first psychologist to apply laboratory techniques to babies. [Watson] published in 1920 what has become a classic study... It was... of a little baby... and his reaction to a white rat... Watson showed that... you could, through his method of conditioning, make a child into anything you wanted to. You could make him fearful or... unfearful... a genius or a thug... You had the raw material, a child was completely plastic – something to be moulded as the parents saw fit... And, since a child could be conditioned to become anything you wanted it to be, [Watson] advocated a brave new world through making brand new human beings... Watson’s study was based on a single experiment, and people were very taken by it because it was the first application of science to babies, but his results have been rejected and the evidence that Watson was wrong... is just overwhelming.” But... many new parents were instructed to follow... rigid paediatric advice... [such as] don’t kiss your children, don’t pet them... “...in those days it was believed that loose schedules [led] to loose bowels. It was one of the reasons why... they insisted upon babies being fed every 4 hours.” ...Spock knew Freudians traced the roots of many adult problems back to early childhood experiences, but Spock – who first came to the attention of the world when ‘his US rowing team won gold at the 1924 Olympic Games’ – took that idea one step further. After learning what certain kinds of early childhood behaviour meant, [Spock] tried to help parents deal with that behaviour before it became a problem for their children in later life. “...the big problem for me during those first 5 to 10 years was there didn’t seem to be any correspondence between psychoanalytic concepts and what mothers were telling me about their babies... Gradually, bit by bit, the things fitted together... By the time my second son was born, which was 11 years after the first, I’d had a lot of paediatric experience, and I was a much more reasonable person – who believed in flexibility [with] feeding schedules, and to go to a baby, of course, if it cries.” ...[Spock] begins the book saying ‘TRUST YOURSELF’. Again and again [Spock] says... ‘don’t worry about what the experts say, don’t worry about what you’re being told.’ ...in fact, the book is full of endlessly detailed advice... [It] goes on for 5 pages about... how to wash diapers, and along the way... will say, ‘don’t drop them down the toilet.’ I mean, this mother who’s supposed to be so competent and trustworthy can’t even be trusted to hold on to the diaper! ...the power... and importance of Spock is that [Spock] is at the very centre of the... most momentous change in American character in the 20th century – the change from thoughts essentially conditioned by scarcity to a character that’s essentially conditioned by abundance... and [Spock] managed a revolution in the guise of acceptable ordinary common sense... It’s hard to realise now that... in 1957... breast-feeding was very uncommon, and it was said ‘American [mothers] lived too high-strung lives to be able to breast feed.’” ...Spock had seen that children can be psychologically harmed if parents constantly try to dominate them and interfere with their wishes. Children either surrender their spirit or rebel, so Spock encouraged parents to let their babies take responsibility for how much food to eat and on when they were ready for toilet training... “...My basic idea is that children are striving – all through childhood – to grow up to become more responsible. Children love to be kind and love to co-operate. This is why a 2-year-old begins trying to set the table. [The 2-year-old] wants to contribute to the family’s welfare... [T]he parent should be very appreciative of the offering... and should compliment the child and say, ‘...you did a beautiful job. If you keep on putting the silver on so well, pretty soon you’ll be able to put the plates on the table.’ ...this is exciting to a child; to think there’s more and more responsibilities, and more and more skilful things to do... [T]his is what we need in our society rather than this fierce competitiveness, and the emphasis on getting hold of as much money as you can. Well, it’s gonna take a long time to change this because America is obviously built on this idea of ambition – get ahead kid...” ...“I remember Ben Spock as... [someone who proved that if] you care about children you’re going to be concerned for peace.” ...“I think... if you love your children, if you love your grandchildren, you ought to be working to get rid of nuclear arms. The Government will get rid of them if enough people say ‘we don’t want trillions of dollars to be spent that way’... In 1964 Lyndon Johnson’s campaign committee asked me to go on radio and television in support of his candidacy... I said ‘I certainly will support him – as a citizen, as a paediatrician and as a spokes[person] for the disarmament movement’... because [Johnson] said ‘I will not send American boys to fight in an Asian war.’ ...I did enough so that... Johnson himself called me up a couple of days after the election to thank me, and... said in this humble-sounding voice, ‘Dr Spock, I hope I prove worthy of your trust.’ ...I said ‘Oh, President Johnson, of course you’ll be worthy of my trust.’ It never occurred to me that 3 months later [Johnson] would do the very opposite of what... [Johnson had promised. In 1972 I decided to run for president myself. My party] didn’t do as well in the final counting as we had hoped – but we were on the ballot in only 10 states. We spent about \$40,000 on the presidential campaign. Nixon spent more than that for balloons at his nominating convention...” ...[‘Something of a revolution occurred in child psychology in the 1970s, when scientists found that babies are predisposed to interact with adults, and to learn how to behave, without any need for reward or punishment. The most graphic example is the tongue-poking test: put out your tongue at a newborn baby, and it will put out its tongue right back at you. Instead of trying officiously to tell mothers how to treat their babies, the people in the van of psychology are now content to observe and learn.’ As a consequence, Spock’s theories have remained popular, and by] the early 1990s 40 million copies of his book... *Baby and Child Care*... had been sold in over 30 languages... more than any other book in history except the *Bible*... Building on his pioneering work, thousands of experts throughout the world collect data on the development and care of children. “All of this material has been integrated and... it points to the validity of the basic points... Spock made: that parental bonding is important; that physical contact... a relaxed, comfortable... parent... [and a] loving approach... is the best way to achieve... happy... well-adjusted children.” - Dr Spock The Baby Doc

...Dr Benjamin Spock... died in March at age 94 – [not long after the latest septuplets] burst upon the paediatric scene.

...[the 7]-month old Saudi septuplets could remain in hospital until they are a year old and the family are better able to care for them, their father said yesterday... But the children’s mother, who visits the hospital twice a day to feed them, would like to take them home sooner than later... The situation of the four boys and three girls... is far different compared with the world’s other set of surviving septuplets, born last November to[an] American couple... of Carlisle, Iowa. The [USers] have as many as 60 volunteers working in shifts at their home to feed and care for their babies. But the... Saudi... parents... have had to rely on the staff of the Government hospital in... Abha and two recently hired Malaysian nannies.

...All [the 30-year-old] longs for is a normal life and to once again resume the career [it] adores: caring for children. But... the A[US]n child-care worker branded 'The Killer Nanny' after [it] was charged with the murder of baby Caroline Jongen in the UK... more than three years ago... fears [it]'ll never be allowed to rebuild her life... [(six-month-old Caroline suffered fitting convulsions[; the nanny], home alone with Caroline, tried to revive her... [by gently shaking] Caroline for two seconds and call[ing her name; the nanny] maintains that the technique was included in her course, [though] current first aid stresses not to shake a baby... 'Given the chance, I'd have done things differently... I panicked, I did what I was trained to do and it had consequences...') - t]three months later, [the nanny]... was in prison[). The AUSn knows it]... will never again work with children, so... recently resorted to a banking career - to no avail. Last month, [the 30-year-old] was asked to resign from Westpac Bank, where [it]'d been working as a teller for eight weeks, after her employers learnt of her UK conviction... 'I'd hoped to tell you that my life was improving and that people had stopped judging me, but sadly that's not the case... I feel frustrated. Nannying was my dream job. I want to... try to find a job that I enjoy as much, although being given that chance feels like a dream at the moment.' Like so many Kiwi and A[US]n girls, the 30-year-old, a qualified child-care worker, loved living in London and her job as a live-in nanny. But like [an] English nanny... in the US, [the AUSn] became responsible for a tragedy.

A Massachusetts grand jury has indicted an 18-year-old English nanny on a first degree murder charge in the death of a nine-month-old boy... [The nanny] has pleaded not guilty to a charge of assault and battery...

An English au pair testified yesterday that... [at no time was] the nearly 9-month-old infant... shook, hit or hurt [while in her care]... "I love kids,"... [the au pair, who] moved to Boston in June last year... told... a packed courtroom... [The mother] and her husband... used their moment in court to portray the beauty in the eight-month life of their "gift from God." ...[speaking of beautiful babies,] tomorrow those winsome ways... [of NZ's] cutest little... faces... will win one of them \$10,000. The five... [competitors - aged between 5 months and 1 year in age -] beat 6000 other entrants to the finals of the Johnson's Baby of the Year Contest... Six judges... will spend several hours in Auckland watching the children play and interact with each other and their parents before deciding the winner. The judging will not be in public.

...In a daring bid, the British au pair accused of killing a 9-month-old baby has chosen to have jurors decide on a charge of murder and refused to have them consider a lesser charge... For jurors to deliver a guilty verdict for murder in the first degree, prosecutors must prove beyond reasonable doubt that the crime was committed with extreme atrocity and cruelty. It carried an automatic sentence of life in prison with no chance of parole. Second-degree murder carried a mandatory life sentence with an option for parole after 15 years. But the judge has some discretion when sentencing for involuntary [hu]manslaughter, defined as the unintentional killing of another through wanton or reckless conduct. Under that charge there is no minimum sentence... [T]he other lesser charges were automatically included... [with] the first-degree murder charge...

[A] British au pair... collapsed in tears after a... jury yesterday found her guilty of second-degree murder... "I didn't do it. I didn't do it... Why did they do that to me... I'm only 19,"... [the au pair] sobbed as... the nine [gals and three guys of the Superior Court] jury, looking pale and haggard after deliberating... for more than 26 hours... left the courtroom... During the three-week murder trial, the prosecution claimed that... the... frustrated and angry... nanny... first violently shook the crying and colicky baby and then slammed his head against a hard surface. [The baby] died of massive head injuries five days later... But medical experts challenged much of the prosecution's case, testifying that the baby's injuries were likely to have been sustained about two weeks before the date on which [the au pair] was accused of causing them. "I don't know what happened," [the au pair's lawyer]... told reporters. "I... don't understand how anyone in their right mind could come to this verdict[.]" The lawyer had been so certain of victory... that... [the lawyer somehow had allowed the au pair] to enter into a sophisticated gamble that has now cost her at least 15 years of her life... "[The parents are] obviously satisfied that the person responsible for killing Matthew has been found responsible," [the prosecutor] said.

...THE parents of [a] British au pair... said on Friday their daughter was an "innocent child" and vowed an all-out fight to overturn her[US] life sentence for murder... The verdict[had] stunned Britain... Sky television, which asked its audience to phone in their views... said 98,677 callers thought the trial unfair and 7443 felt justice had been done. The British government said it would offer all support to the [family and that their daughter] would be visited regularly by British officials in her cell. "This is a tragic case for everyone concerned," said a Foreign Office spokesman[person. The family's local MP]... said... "...I and this whole community will continue to fight for justice..."

...As lawyers for[a] British au pair... prepare appeals against her murder conviction... the case[continues to] rock... two nations... NOTHING last week scared working parents as much as a plump, round-faced 19-year-old... The case has touched off debate about who is ultimately to blame for the death of a child left in someone else's care. To... some conservative Americans the baby's mother... bears ultimate responsibility because [the mother] should have been at home caring for her children. The tragic outcome has been that [the mother], a Boston ophthalmologist in her early 30s, has not only had to deal with losing her young son but has received abusive telephone calls and letters blaming her for his death. One accused her of "greed and poor judgment" in choosing to work while having children at home. The case has led to claims that childcare is too unregulated and that parents often must place their children's lives in the hands of nannies whose characters they know little about... [The 19-year-old, who] arrived in the US in mid 1996 under a US government-funded au pair scheme[, and whose]... training in child care consisted of only a four-day course... claimed that the fatal injuries to the baby may have occurred days or weeks earlier, when Matthew... was not in her care... [However, a police officer testified that the au pair admitted being] "a little rough" with the baby... Au pairs usually receive about \$200 a week in addition to room and board and are treated, in effect, as another member of the family. The au pairs receive a return air fare and are expected to stay for a year. In return, however, they are asked to work long hours at a job for which they may have few qualifications... A N[Zer]... who's worked as an au pair in America describes it as slave-labour... "...people undervalue them, they underpay them, they often overwork them." ...Many young au pairs who go to the US expecting to use the job as a way of seeing the country are disappointed to find themselves stuck in the suburbs, dealing with the daily routines of nappies, bath times and cleaning. Prosecutors say that... [the 19-year-old] found it difficult to deal with the hard work involved. [The 19-year-old] began staying out late at night and was reluctant to get up early in the morning... would leave Matthew unattended while... [doing] the laundry, took long showers and talked for extended periods on the phone. The... [parents confronted her] and gave her a list of conditions, which included a night-time curfew... In Britain, much of the media coverage has been sympathetic towards [the au pair]... *The Guardian* in London said, "It may officially be the State of Massachusetts v [one au pair] in that courtroom, but it's also America v Britain." ...Many people agree... "We hope you are all hanging your heads in shame," said one fax sent to the American ambassador in London and to the state attorney-general in Massachusetts... On Wednesday the judge will consider defence motions to set aside the verdict... and declare [the au pair] innocent or order a new trial... But a Boston prosecutor warns it would be an extremely dangerous and inappropriate precedent for [the judge] to throw out the jury's hard-fought verdict... [even though the judge] has changed jury decisions at least three times in his career...

A... judge considering the fate of a British au pair... has decided to release his ruling directly on to the Internet in the hope of avoiding "the usual media circus," court sources said yesterday... More than 160 Web sites have been devoted to covering the case.

...Prosecutors said yesterday they would appeal against a judge's decision to reduce a jury verdict against[a British] au pair... and... free her, calling the ruling "bizarre" and "arbitrary." ...[the] Middlesex County Superior Court Judge... changed a jury's second-degree murder conviction... to involuntary [hu]manslaughter and sentenced her to the 279 days... already spent in prison while awaiting trial... "I don't know what happened here," said[the] Middlesex County district lawyer... "I have never seen anything like the rapid series of events that occurred today."

...[the lawyer] had spoken to the baby's parents... who had fled the state over the weekend in an attempt to avoid the media, and they were devastated. [However, residents in the au pair's] home town of Elton in England, packed shoulder to shoulder in the village pub, exploded in cheers and exchanged exuberant hugs after learning of the decision... British newspapers celebrated the decision as a triumph for justice in an American legal system slammed only a week ago as harsh and heavy-handed... One juror, contacted by telephone in Dallas, Texas, expressed relief at the judge's decision. "It's something I, and I think the other jurors, can live with,"... [The au pair] won't be going home immediately... The judge ordered her to remain in Massachusetts until the prosecution's appeal of her sentence runs its course... – which could take up to a year.

...The parents of baby Matthew... are stunned by a judge's decision to free the British nanny... "[The judge] acknowledges on the one hand that someone killed Matthew and on the other hand... frees her. It makes no sense,"... the baby's father, told the *Boston Globe*... "What does that say about justice? Does it say that you can fake a few tears and you are forgiven? Does it say that you can kill a baby and that your youth and inexperience with cranky babies counts for more than a child's life? ...[the nanny] killed Matty and[the] Judge... at once admits that and then does not make her take responsibility... If only [the nanny] would say, 'I did this. I'm sorry.' We could go on with forgiveness, without bitterness. [The nanny] had denied us that option,"... Matthew's mother... said. For her part, [the nanny] yesterday issued a statement to thank the judge and express her sorrow at Matthew's death. "I am enormously relieved that[the] Judge... has seen fit to give me back my liberty,"... [However, the] media have laid siege to the hotel where [the nanny] is staying... The... [nanny] has consistently maintained her innocence and her lawyers have said they will appeal the lowered conviction in a bid to clear her name... [The nanny] denied rumours that... her story... had[been] sold to the news media... [The judge,] who succeeded in getting himself kidnapped in his twenties, [and] has never shied away from high drama... can[also] expect... lucrative book offers... [The US] President... backs... the... [judge]'s decision to reduce... [the] murder conviction... the White House said yesterday.

...A British cabinet minister indicated yesterday [that it was his intention to] set lower sentences for two boys convicted of murdering a toddler when they were 10 years old... a case that drew international attention... [The] Home Secretary... was responding to a ruling in June by Britain's final Court of Appeal that [the] former Home Secretary... acted illegally in treating the two boys, now 13, as adult murderers and extending their minimum prison term to 15 years... In November 1993, the original trial judge sentenced [the two boys] to be detained at the Government's pleasure, with a recommendation that they serve at least eight years. The Lord Chief Justice, who heads the Court of Appeal, increased the minimum sentence to 10 years... [before the Home Secretary raised it again. An] uncle of the murdered toddler, said the Government should consider the feelings of the family. "The family is all of the same opinion – that those two should never get out for what they did,"... [By the way, within minutes of a] British au pair... being originally found guilty of murder, America wasted no time in exorcising its mob instincts. "They should fry her," was the reaction on television from one [USer], while the *New York Post's* veteran trial-as-media-carnival columnist... wrote: "This little witch... should go away for ever". Yet on Monday, following a week of howling on both sides of the Atlantic, [the judge saved the au pair] from such a grim fate... More predictable howling has resulted, with the British nanny TV show trial once again holding up a dark mirror to the Caliban of American justice. By overruling the jury, [the] Judge... has placed the U[S] jury system itself on trial. Thankfully for [the au pair], the 65-year-old Superior Court judge belongs to a dangerously endangered species in America: The... polka dot bow-tie wearing, Harvard and Oxford educated, diehard Anglophile. The judge is known in Boston circles for his donnish passion for British colonial history... [H]is... streak of Anglophilia was certainly not shared by the 12 members of the... jury. The tourist image of Boston as the... liberty capital of America... is far removed from the reality... [S]peaking or being English does you few favours in America today. Part of the problem... is that so few people either speak or understand English in America any more. A good example of linguistic confusion in the courtroom was when... [the au pair said "I] popped" the baby on the bed... Regrettably, nobody told her that "popped" in America means either to punch or to have sex. In truth, the jury's problem with [the au pair] was not so much specific anti-British sentiment, but the fact that the U[S] is a great, brash, hulking country whose bulk of non-educated and ignorant citizens are deeply afraid of anything alien to themselves. Her quietly reserved nature, her nervous – almost cocky – giggle, her emotional detachment and her ability to articulate herself is a sure sign in America that you probably have something to hide. "I didn't find her appealing," said [one US] media trial authority... What moved the jury against her, [the media trial authority] said, was having a legal gun-for-hire defence "dream team" led by [the] super lawyer... whose courtroom theatrics helped get [a major black celebrity (r:p1103, lns64-5) off a murder charge] in 1995. In contrast to the \$750,000[defence] team... paid for by[the] EF Au Pair agency, which fears being sued should any [hu]manslaughter charge stick, the prosecution was led by... [someone] whose strong Boston accent the jury could understand... Just as the black[1995] jury chose to believe in the innocence of a black celebrity role model, so the nine [gals in the] Boston jury... chose to believe a Boston mother and doctor. The[Boston] trial buried the old cliché that money buys you justice in America. But while [the] Judge... seems to amplify the[traditional] model of a hard working Boston professional... the parents of the eight-month-old baby... represent the darker side of the late 20th century version of the American middle class dream. Certainly one reason for the extremity of the initial reaction against [the au pair] in America is that the case aggravated the guilt that has become part of the lives of [gals] who choose to put their careers ahead of being a mother at home. Although portrayed by the media as a rich Boston doctor couple, the reality is they are debt-ridden – still paying off medical training – refuse to turn on their heating and, according to [the au pair]'s testimony, washed their baby only twice a week. In her "impact" speech after the verdict, [the mother] revealed herself to be coyly sentimental as well as self-obsessed and almost as verbally unintelligible as her hand-writing is illiterate. "[Matty] was a real butterball," [the mother] said of her baby... whose wrist – despite being a doctor – [the mother] somehow failed to notice had been fractured for two weeks. However reluctant Britain may be to entertain that [the au pair] was a baby killer, the fact remains that something went horribly wrong on February 4 when Matthew was in her untrained care. Many [USers], as a result, are now seething at her lenient treatment. What puzzles [USers] about the uproar over the verdict was how the British public could be so flagrantly convinced its cherubic au pair from Cheshire was 100% innocent. In less shockable US, teenagers, and especially young mothers, are routinely convicted of throttling or drowning small children in their care. Certainly, until[the] Judge... took matters into his own hands, relations between Britain and America hadn't deteriorated more quickly since the Boston Tea Party... [US] TV networks are being besieged by a public which feels outraged over what it sees as the letting off of a [British person] in whose care an American baby somehow died... While British papers seethed with feverish protestations... and small pubs removed American beer from their bars, the *New York Times*... drily commented on how the different perception of the "facts" in [the] trial on both sides of the Atlantic "speaks volumes about how the countries see themselves and each other."

...agencies supplying au pairs to American parents are facing lawsuits over the information they provide. [A] Police Officer... was called to a fire at a home in Thornwood, Connecticut. In the nursery [the officer] found the body of a baby, Kristie... Meanwhile, a young [gal] was screaming hysterically in a foreign language at the entrance to the garage. This was... a Swiss girl working as an au pair... [Kristie's parents] went to extraordinary lengths to hire the right au pair for their precious only child. They were impressed by the almost parental demeanour of the agency which placed [the Swiss au pair] into their home: EF Au Pair of Cambridge, Massachusetts. EF is one of eight agencies which enjoys a monopoly over the recruitment of 10,000 au pairs to America on special visas in a scheme set up by the Government. The... agencies[also] enjoy... "non-profit" charity status. [Kristie's parents received an EF brochure which] was full of smiling European girls pushing babies in buggies, reading to them, nurturing them, even baking European delicacies. EF boasted a "unique matching process." Within a year [the au pair] was on trial, accused of arson and the murder of Kristie. Within another four years, EF would be under the spotlight again... [In the first] trial, the police thought they had a case. Three fires, one in the nursery, were clearly deliberate. "Close on two gallons" of flammable accelerator had been spread around the

upper floor. They believed [the Swiss au pair] had read a German-English language book about an au pair who starts a fire and rescues a child from it to win recognition. EF Au Pair paid hundreds of thousands of dollars for a top Manhattan firm to defend – and clear – [the Swiss au pair]. Now Kristie's parents are suing EF despite there being no criminal conviction... [Their New York attorney claims they] were conned by EF Au Pair's "fraudulent, misleading and false advertising." [The attorney says the parents] were told by EF Au Pair that both of [the Swiss au pair]'s references were checked... But... inquiries in Switzerland found that neither of those references could have been checked because the references did not exist... [In] another case, filed for a trial in January... [next year,] the... court papers expose the au pair recruitment process, allegedly showing it to be a shambles of lax screening and deception of parents. They also blow the myth of the "charity" status... of the agencies, showing them to be part of a system accused of being... "only too ready to cut corners in child safety to save and make money." [A couple from] Carlisle, Massachusetts, took in [a guy au pair] from Germany to look after [their] seven-year-old... and four-year-old... in 1992. They were impressed by the literature of Au Pair in America and felt able to relax in the knowledge that the candidates had been, as the brochure promoted, "fully screened," "carefully selected" and "of good character." In the year that [the German au pair] looked after the children... [the 7-year-old was] sexually molested... almost daily. In 1993 [the au pair] was convicted for assault and battery on a child and deported to Germany. [The parents] sued Au Pair in America and its parent company, AIFS. Two of Boston's most expert children's rights lawyers... began discovering that the agency was well aware it had serious problems with child molestation among its recruits. The issue arose in 1992 because the company's insurer, Continental, was uneasy about continuing its cover for AIFS. The brochures and verbal undertakings made by Au Pair in America to parents assure them that applicants are screened by the company itself through its "London office." But AIFS officials admitted in depositions... that the screening was done by a contracted company in Germany, GIJK. The German company was only paid for au pairs who were placed, not for any who failed to pass the "screening." The interviewers... "therefore had a straightforward financial incentive not to screen out applicants." The result was obvious... Perhaps the lawyers' most extraordinary discovery was that, according to company policy, "negative family history," if discovered, would be deleted because [US] families "would find this information disturbing."

...A nanny has been convicted of murder[ing]... a six-month-old in her care as his parents slept in another room... [The nanny], aged 35, was accused of shaking, beating and suffocating Matthew... in Wheaton, Illinois, in January 1996... [The] licensed practical nurse working for the home health service, was hired to care for Matthew in his home. The boy had a chronic digestive problem and vomited frequently. Defence lawyers contended Matthew died of injuries received before [the nanny] started her shift. The defence was similar to that ordered at the trial of... the 19-year-old English au pair.

...[a federal agency is proposing stricter rules for the US au pair programme in light of the British nanny's case. The main changes would require that host families interview prospective au pairs; and that au pairs have training before going to care for children with special needs'. Incidentally, 'English authorities and the FBI have a question for the parents of the British au pair who has now returned home: What happened to about \$US340,000 from their daughter's legal defence fund? The *Boston Herald* reported that authorities are investigating about \$US270,000 that had been transferred out of the daughter's appeal account in the Cooperative Bank in Manchester. Investigators are also reportedly examining a \$US60,000 payment made to the parents, who are divorcing, by the *Daily Mail*. The money, which the parents said was needed for the fund, was never deposited in the fund. Other allegations relate to a forged invoice which the mother allegedly used for more than \$US15,000 in rent and expenses during the weeks the mother stayed at the Marblehead home of her daughter's lawyer. But the lawyer and her husband deny charging a penny. They say the phoney invoice was written on a stolen letterhead.']

...in an interview in the latest issue of *Time*... [the mother of baby Matthew] said... "How did [the British au pair] become the hero and I become the victim? ...[the au pair] took away Matthew and the judge took away justice." ...the judge's decision demonstrated "a total lack of understanding of child abuse." ...[the mother] "definitely" plans to have another child in the future. "But childcare... that's going to be a difficult issue."

...a caregiver accused of [hu]manslaughter of a 17-month-old baby on January 5, was yesterday committed for trial in the High Court at Christchurch. [The 29-year-old caregiver] also faces trial on charges of administering a noxious substance, namely salt, to an 11-month-old girl two months earlier and of injuring a two-year-old boy... [In international news, the] decade-long battle of a Georgia [resident] to clear her name over the death of her baby half-brother ended last week when her father was convicted and sentenced to two concurrent terms of life in prison... for the 1971 murder... [The father and] his then companion... had blamed [his daughter], two years old at the time, for the infant's death. But... the... [companion] testified last week that [the daughter] had been framed... [Her father had placed her] in the baby's crib so it would look as if [the daughter] had thrown the baby on to the floor... A medical examiner [confirmed] the baby's injuries had been "inflicted or caused by another person" and could not have been the result of a fall. The conclusion was reached after the remains were exhumed... "I'm sorry we had to go through all of this," [the companion] said after the verdict... [The companion and the daughter's father had] married but divorced when [the father] received a life sentence for armed robbery in Florida... where [the father] will be eligible for parole in 2016.

...POLICE in Trinidad have charged a couple with murdering... their children in killings suspected to have been ritual child sacrifices... Police unearthed the remains of... their three-year-old daughter Vidya and son Daniel, who was 17 months old... from small pits behind a house in central Trinidad where the couple once lived. Police also said they had abandoned after four days a search for two more children in the family, three-month-old twins Preya and Ria... Police said the couple had confessed to torturing and strangling the 18-year-old... sister [of the 36-year-old father], whose battered body was found in a cane field... and then led them to... two... [of] the... buried bodies of... their... children... [In local news, the unemployed 34-year-old who claimed to have] murdered his 12-year-old daughter... Peti Taihuka Cherie Kokiri... "for God" was sentenced to life imprisonment... at... the... Gisborne... High Court... yesterday afternoon.

...[yesterday afternoon, 'about 300 mourners packed St Barnabas Anglican Church in Stoke to bid farewell to three "wonderful and happy" sisters. The church overflowed with family and friends for the funeral of Alice, aged 8, Maria, 6, and Cherie, 23 months, who were killed by their mother last Friday. The girls' father remained composed throughout the service but broke down at the end while sitting alone in a hearse. Tributes at the funeral mentioned the girls' happy personalities, thoughtfulness and vivid imaginations. No mention was made of the tragic way the girls died or of their mother, Rosemary, who killed them as they lay in their beds before taking her own life. Rosemary was involved in a custody dispute with her estranged husband. A private funeral for Rosemary will be held today. Last Friday, before the girls died, the Family Court had granted Rosemary custody of the children, and had granted her husband unsupervised access to them. Her father believed the access dispute triggered his daughter's actions. In the wake of the tragedy, a national lobby group has renewed its call for shared parenting custody. A spokesperson for Families Apart Require Equality (Fare) said the Family Court had contributed to a succession of child murders in recent years by encouraging parents to fight over their children, instead of promoting equal and shared parenting policies. In another murder-suicide case, in Wanganui in 1994, three girls were killed by their father after a prolonged custody battle with his wife.']

... 'A scene of unbearable sadness played out in Texas yesterday as five young children drowned by their mother in a bathtub were laid to rest in a funeral service attended by distraught family, friends and neighbours and besieged by television cameras. The small white coffins of Noah, aged 7, John, 5, Paul, 3, Luke, 2, and Mary, six months, were laid out in a semi-circle in the Clear Lake Church of Christ, all of them adorned with angel figures and floral sprays. "I don't think there are words in any language that can describe what has happened," said the church's pastor. Last week's killings were the most dramatic instance of infanticide in recent American history. The mother is in police custody without bail and could face the death penalty if prosecutors choose to pursue criminal charges rather than accept her likely defence of innocence by reason of insanity. The cold, calculating manner in which the mother drowned each of her children in turn and even chased the oldest around the house before dragging him to his death has stunned the American public and raised questions in the media about the circumstances that led to such a startling act. And yet, according to experts in the field, there was

nothing unique about the horror of what the mother did. "Infanticide is far more common than people are willing to accept," said a Chicago area doctor and the author of an exhaustive history of child killing down the ages. "There is a social taboo in place preventing people from looking at the issue as any more than a string of isolated incidents." Two weeks ago, a young mother in Dania Beach, Florida, drowned her seven-month-old daughter and immediately shot herself. Last week, two six-week-old twins were found dead in Orange, Texas, and police have not ruled out the possibility of foul play by the parents. And this week a mother and her three children were found asphyxiated in the family garage in Jacksonville, North Carolina. The doctor says child killings account for more than 3% of all murders in the US. As many as half of all pregnancies in the US are unwanted, the doctor estimates; even after accounting for abortion, which cuts the number in half again, that still leaves more than a million children a year who run the risk of rejection or worse. The doctor estimates that around 10% of all children ever born have been killed by their parents. Infanticide is still very common in non-industrialised societies where abortion is unavailable.'

...infanticide is 'the putting to death of the newborn with the consent of the parent, family or community. It is believed that infanticide is most common among peoples whose food supply is often inadequate; among the Chinese and the Eskimo, it was once common for girl babies to be killed for this reason. In most of the Greek city-states and in ancient Rome a child was virtually its father's chattel – e.g., Roman law granted the father the right to sell, offer in sacrifice, kill, or otherwise dispose of his offspring. In Sparta the decision was made by a public official. If infanticide served as a primitive form of birth control, as many anthropologists believe, then the introduction of contraceptives, abortion, and other methods of population control have helped to replace that function. Although an allusion to the custom of infanticide is made in the biblical account of Abraham's near-sacrifice of Isaac, Christianity, Islam and Judaism, condemns infanticide as murder, and in all countries the act is now a crime.' ■ A] jury took 12 minutes yesterday to find a Wellington [mother] not guilty of infanticide by reason of insanity in the killing of her five-month-old daughter. The [judge said the mother], aged 38... was suffering from post-partum psychosis and the balance of her mind was so disordered at the time of the killing that [it] was unable to distinguish right from wrong.

...A young mother who beat her baby son to death was short-changed by the Income Support Service, the High Court at Wellington has been told. [The mother], aged 27, was placed on two years' supervision for the infanticide of 17-month-old Anaru... on January 28... [T]he defence, said Anaru's father... a Black Power gang member, took Anaru from... [his mother, who has] three other children... and gave him to[the] Black Power leader... immediately after his birth because [the leader] had nine daughters and no sons. It was the untimely removal of her child that laid the foundations for [the mother's] later severe mental disorder. For a time, her[other] son... as well as Anaru, had lived[away] from her home. From October 25, 1995, [Anaru's father] had collected the family support supplement payments for them. [The other son] returned to her when [the father] was jailed for his part in a gang shooting but Income Support continued paying the boys' supplement to [the father]. Despite repeated requests, the payments, which would have given her a further \$110 a week, were not restored... The prosecutor... said [the mother] had repeatedly beaten Anaru for crying, bed-wetting and poor eating habits. Anaru had died from brain swelling but there was a disagreement among pathologists about whether that had resulted from pressure on his neck or the severe shaking... [his mother admitted inflicting] on him... Income Support last night said it strongly disputed the suggestion that it denied [the mother] any assistance to which [the mother] was entitled. The acting general manager... said the first Income Support knew that [the mother] was caring for more than one child was when staff read a newspaper report after her arrest... [During the mother's trial, it was revealed] friends, family and neighbours had turned their backs on... Anaru... Even though they watched [the mother] punch, kick and scream at her child, no one reported the abuse... A friend of [the mother told police about watching] her punch and kick Anaru from the lounge to the toilet[but] said nothing to her because... it was "none of his business,"...

All are responsible for looking out for safety of children... Like Craig Manukau and Delcelia Witika, Anaru's name will now be synonymous with any public or private discussion about child abuse... Like those before, Anaru's death has resulted in an inevitable search for explanations. [The mother's] counsel... has been joined by the Labour spokes[perso]n on social welfare... in a condemnation of the Income Support Service... In response, the Minister of Social Welfare... has shifted the focus of this debate to where it really lies. The issue here, the minister has argued, is why those adults who knew that Anaru was being beaten before [the day of his death] took no action. The Children, Young Persons and Their Families Service was not notified that Anaru was at risk... We need to get over whatever it is that stops us from taking collective responsibility for the prevention of child abuse. It's not just up to those... professions whom we like to blame.

...in the High Court at Auckland[a] baby-battering trial ended suddenly... when a father admitted violently shaking his 7-week-old daughter, effectively turning her brain to fluid... known as shaken baby syndrome... [The daughter] suffered irreversible and profound brain damage and is now a spastic quadriplegic... In addition[the daughter]... had two fractured ribs and severe retinal haemorrhaging... The judge discharged[the] mother... who had earlier denied wilfully permitting the baby to be ill-treated in a manner likely to cause unnecessary suffering... [The mother] allegedly told the police that when angry her husband would throw [her daughter] at her because [the baby] was crying too much and [her husband] had problems controlling his temper... [The mother's mother] told the court of seeing the couple tugging the child in different directions during a row... Yesterday the crown prosecutor... told the jury there was overwhelming evidence that the baby had been abused repeatedly. [□ 'A new study published in the July edition of the British journal Brain, indicates that even relatively mild shaking of a baby can cause death or severe injury.'

... 'Babies can die from brain injuries caused by even gentle shaking, one of the largest and most detailed studies yet has found. Doctors in Britain found that "rough handling" could be enough to damage nerve fibres in the neck that control breathing, leading to the brain swelling also characteristic of violent shaking. The research, published in *New Scientist*, challenges the view that only extreme violence causes "shaken-baby syndrome," and has far-reaching legal implications since convicting people of shaking a baby to death may become more difficult. Lawyers say the findings would have seriously weakened the case against the British au pair who was convicted in America of manslaughter after the death of a baby in her care. The Brit maintained that it was innocent, but American prosecutors said the au pair must have shaken the eight-month-old with all her might for up to a minute to kill him. The Child Safety Foundation of NZ said the study sounded feasible. Parents had been told for generations that they should support babies to stop their heads rolling violently.'

... 'Police are outraged at a "grossly inadequate" community sentence given to a body-builder who broke six bones in a newborn girl's body. They want it appealed. They also want the body-builder's name suppression lifted. Last week, the 28-year-old body-builder was sentenced to 16 weeks periodic detention after pleading guilty to injuring with intent. The maximum penalty is five years imprisonment. After four years on the child-abuse team, one detective said, it was the first time the detective had seen a conviction for injuring with intent not result in imprisonment. In sentencing, the judge said the body-builder inflicted the injuries due to his "frustration" at the pressures of dealing with two young children. The body-builder was also under financial pressure. The injuries to the baby had been caused by "carelessness and recklessness" rather than a deliberate intent to injure, the judge said. "I find this sentencing surprising," said the Commissioner for Children. "A 2-month-old can do no wrong, they just can't. I have no time for this. It's unbelievable."

...an Auckland[er] is furious that the [person] who broke his grandson's bones in 13 places faces only nine months behind bars. X-rays taken in August last year revealed injuries which a Middlemore Hospital surgeon said were usually seen in car crash victims or when someone fell several stor[ys. The baby]... suffered the injuries during the first 11 weeks of his life. On Monday his father... aged 19... pleaded guilty to causing the infant grievous bodily harm with reckless disregard. The charge carries a maximum sentence of seven years' imprisonment. In handing out the sentence... the High Court... [judge said the father] warranted a discount on his sentence... [because of his] guilty plea and... it was a first offence... But [the grandfather] believes "discounts are for supermarkets"... [N]ine months was "not enough time for him to realise just what... has[been] done." ...Although [the baby], now aged 15 months, has made a full physical recovery, medical experts say any long-term effects are more likely to

be psychological... [The judge said the] **sentence was based on previous cases...** **However,** [the judge also said that the father] **showed a “disturbing lack of acceptance, understanding and insight” as to his part in the tragedy.** [■ ‘It has been less than a year since four-month-old Patrick Martin died of sudden infant death syndrome in a social welfare caregiver’s home – a case that made national headlines. The mother had suffered post-natal depression after a traumatic hospital delivery with Patrick. The first-time mother also found breast-feeding difficult and had breast infections. The mother and her husband contacted various agencies for help, including Waitemata Health’s maternal mental health services. Then, desperate for support, the mother admitted that once, when exhausted and upset, it had given Patrick a slight shake and put her hand over his mouth “for a second”. Even though hospital tests showed the baby was unharmed CYFS took the baby into care, arriving at the couple’s west Auckland home with a child protection order and six police officers to remove the little boy from his parents. Two weeks after that night, the parents learned their son was dead. But this tragedy has a happy ending – shortly after losing Patrick, the mother became pregnant again. The couple now have a little girl, who seems entranced by photos of her brother’...

A ‘British survey estimates that 1-in-5 cot deaths are caused by parents smothering the child (NZ estimates are 1-2% at most’). Of greater concern, however, are cases of ‘parents who lie about their children being sick, or deliberately making their children sick, in order to gain attention for themselves – or to look like heroes by putting the problem right (or to play the person taking care of the child’). ‘Covert cameras in US and UK hospitals have caught parents abusing their children while unsupervised (out of 39 cases filmed in the UK, 30 parents tried to suffocate their child; 2 tried to poison their child)’...

‘Munchausen Syndrome by Proxy has been quoted in a number of high-profile NZ cases. The suspects are accused of hurting their own children for attention, and can find themselves stripped of their families or jailed. But do parents diagnosed with MSBP really have it? Does it even exist? What complicates the issue is that at the heart of many of the alleged cases is sudden infant death syndrome (Sids) – a tag that indicates not a cause of death but an absence of knowledge. The director of Britain’s Foundation for the Study of Infant Deaths says that it’s often not possible to distinguish at post-mortem between smothering and Sids. That was the case with a British mother who overcame a diagnosis of MSBP this year. When the mother was acquitted of killing three of her children, there were calls for a review of hundreds of cases of MSBP in which the expert at her trial had given evidence. When the expert was asked – at the appeal of the case of another British mother, who had spent three years in jail for alleged child abuse – to produce research papers to justify his findings on MSBP, it couldn’t because his secretary had shredded confidential material when the expert retired last year. Some of the doctors involved in MSBP cases – such as the British paediatrician who recommended that 7 children be removed from their homes – now face charges of serious misconduct. The expert himself faces being struck off. Although the 70-year-old is retired, his evidence is still used in court. But where once the expert was a vocal crusader for child welfare, it has now fallen silent – consistently refusing interviews; meanwhile the accusations against him continue. But in a BBC report made about MSBP this year, the expert issued a statement in which it sounded unrepentant. “The media is more eager to publicise the dangers of perverts in the park than face up to the uncomfortable fact that most child abuse occurs in the home and is perpetrated by the child’s parents or carers.”’ ‘At least one million children in Britain each year are victims of child abuse, says the National Commission of Inquiry into the Prevention of Child Abuse.’

...an Ohio couple who admitted faking their 7-year-old daughter’s leukaemia to gain about US\$31,000 dollars in donations from 65 people and businesses were sent to prison yesterday. The mother will serve over six years and her husband almost five years. Champaign County authorities said the mother shaved her daughter’s hair, gave her sleeping pills to make it appear the child was receiving chemotherapy, and put her into counselling to prepare for death.’

...an American ‘father has been accused of injecting his son with the Aids virus to avoid paying child support.’

...doctors, b[ar]bers and real estate agents... who fall behind on their child support payments can be barred from practising in New Mexico... It’s part of a new tough policy just announced... And, as additional encouragement to pay up, drivers’ licences will also be confiscated. Nearly 12,000 parents are at risk... [Incidentally, p]hysical violence by children against their parents is increasing, according to a German psychiatrist. Children hit their parents, throw things, kick and spit at them and tyrannise them with demands, said... the Clinic for Child and Youth Psychiatry at the Olga Hospital in Stuttgart. The phenomenon occurs mainly with parents who are socially isolated and have close ties with their children.

...Teenage mothers are more likely to come from families where fighting and physical punishment are commonplace, a new study has found. The researchers discovered that adolescent pregnancy does not occur randomly in the community but in... [teenagers] from families with “psychosocial problems.” ...Their report in the *N[Z] Medical Journal* added: “The potential push to leave the family unit early suggests that the... [teenagers] may actively seek an intimate relationship which provides companionship, absence of major personal disharmony and freedom from physical punishment to counterbalance problems at home.” The... team said adolescent pregnancy appeared to be a particular problem in... [NZ, adding that a]dolescent pregnancy often led to ongoing difficulties for both the teenager and the child... [A] teenage mother’s educational, employment and financial opportunities... [are hampered. M]ore teenage mothers than older mothers were supported by welfare and they were more likely to have repeat pregnancies and poor parenting skills... Their children were more likely to have low birth weight, poor development and behavioural problems... The report said improving the way families functioned was critical... a call backed by the... [FPA, which has just] released a new video and booklet called “Grab That Moment”, to help parents communicate with their young children. [Editor’s note: according to another ‘new study – by a research team at McGill University in Montreal – the most highly creative people come from homes where parents are constantly at each other’s throats. For years psychologists have claimed that creativity is a delicate flower most likely to emerge among those raised by warm and loving parents’...

‘A Vietnamese mum who forced her son to sew up his mouth (as punishment for stealing 32c to buy a comic) has been sentenced to 2 1/2 years in prison.’ By the way, ‘police in the southern California town of Norco have freed a 6-year-old girl they believe has spent almost all of her life chained to a bed in a filthy room filled with human waste. The girl was taken to hospital, where it was being treated for malnutrition. Her mother, aged 39, and grandfather, 76, are being held on suspicion of child endangerment while an investigation is conducted. The girl, found in a foetal position and apparently unable to speak except for grunts and moans, was rescued after the Riverside County Sheriff’s Department received an anonymous call believed to be from a neighbour.’

...‘Police are outraged social workers returned boys to their home where they were living among human excrement. Officers found a 14-year-old riding his skateboard along streets in Mangere, south Auckland, late one night last week. They took him to his father’s home nearby. The father told the boy to go to the basement room the boy shared with his 16-year-old brother. But a police report obtained by *Sunday News* says officers were met with an “overwhelming stench” when they took the boy to the room. The floor was littered with dog droppings and human faeces. “The stench coming from the boy was so overpowering, police staff could smell him from 10m away,” the report said. Neither boy could remember the last time they had bathed or been to school. Police called Children, Youth and Family Services (formerly the Children and Young Persons Service) to find the boys alternative accommodation and were told by a social worker to take them to the police station. There, officers were told by the social worker to return the boys to their father. They refused but a social worker took the boys back. Police are considering charging the father. The Children’s commissioner will check the boys’ safety tomorrow.’]

...The official watchdog of the country’s children has delivered a damning report on the state of the C[YFS], suggesting its work is inadequate... and... that it is in a state of “acute demoralisation”... The Commissioner for Children... praised... C[YFS]’s ability to analyse and manage its finances, but said it did not have the staff or funding to keep up a good service... in [his office]’s report to the... Government, which was not well received by the Minister of Social Welfare... [However, the] Commissioner... said... “It is not suggested that C[YFS]’s problems] arise... from a lack of concern at Government level but rather that there may be a lack of understanding about the nature and extent of demands upon the... service.” The consequences... included: • Case work being closed prematurely, only to return in a more critical state. • Monitoring of long-term placements

[in a home, for example] becoming so light as to be little more than occasional and superficial. • Inexperienced social workers evaluating the seriousness of incoming cases relayed by telephone answering services. Comprehensive records of after-hours notifications were not kept... Notifications of abuse or neglect may not be allocated or may be deferred because of staff shortages... Suitable placement cannot be found for some young people with addiction problems and/or serious behavioural disorders. This appears to be a significant cause of despair among social workers who are aware of the impacts on young people arising from the non-availability of suitable facilities for their care; The professionalisation of social work has not been reflected in starting salaries commensurate with professional status and responsibilities; Experienced social workers are leaving the service in increasing numbers, apparently disabused of the belief that it is possible to provide a safe, adequate service for children under current resourcing levels... 186 staff with five or more years' experience left... [the department] between July 1995 and February this year... Just in case the country has the impression that the state's social work agency is in complete chaos, the Commissioner... at least offers the reassurance that "the adoption service functions smoothly and efficiently." Given that the adoption service is such a small part of the operation, it is hardly the reassurance that the... Government would welcome... [The minister thought] the report was negative and might contribute to the demoralisation of the service that [the commissioner] wrote about... "Most of the issues raised are not new. Unfortunately, what the report does not do is identify many of the new initiatives." ...But [the minister] has picked up on... the commissioner's... push for a register of child deaths to find out more about increasing levels of child mortality and asked for further work on it... In spite of expanding welfare demand, [the minister] said that did not mean the Government's economic strategy was failing. Rather, it showed it must strive for higher economic growth because without it welfare growth would overtake the nation.

...In his hard-hitting report, released yesterday, the country's watchdog for children paints a picture of a service if not in chaos, then at least as dysfunctional as the clients it seeks to help. In a section headed "The stress of funding insufficiency on service delivery," [the report] notes the fine balance required under the Children, Young Persons and Their Families Act: action to safeguard the child but no more than the minimum necessary to do so and no undue interference in the rights and responsibilities of their families... "Initial indications are that for each investment dollar, savings of four dollars are made in the long term. These indications underscore the wisdom of providing early and adequate services for children in need... [But in] the absence of sufficient resources, the interpretation of 'minimum intervention' is likely to be biased to suit departmental shortages rather than the demands of the child's situation." ...The report says one of the factors underlying the demoralisation is the raising of public expectations for a service which is readily accessible and responsive to a broad range of safety concerns. The effect of campaigns to raise awareness, such as the television campaign "Breaking the Cycle" appears to have been "paradoxical." "It is surmised that this campaign very probably led to an increase in notifications made by the public... at a time when intake criteria were narrowing at some sites of service delivery because of financial constraints. Whether or not this surmise is true, it is clear that considerable tensions have developed between expectations and delivery of... protection services." ...The Commissioner... was [also] experiencing tensions between his office and the C[YFS] because of the critical reports that had been written on welfare. [● 'CYFS failed to use \$1m worth of pre-purchased bednights in the past 12 months, an MP said yesterday. The waste of money further showed systematic failures within the department, the MP added. "The Government has been unable to give any guarantees that children weren't left in an unsafe environment while taxpayer-funded beds were not being used." The Acting CYFS Minister told Parliament a contract problem had led to the beds not being used, but it understood "that no child was left in circumstances that they should not have been".']

...Saliel Alpin and Olympia Jetson might still be alive today if CYFS staff had followed the department's policies and procedures, the Government admitted yesterday. An urgent debate into two reports on the death of the half-sisters was held in Parliament, and Opposition MPs said the Government had to take responsibility for the public's loss of confidence in the department. The reports come on top of a highly critical baseline review of the department, the announcement of the resignation of its chief executive and concerns over Masterton CYFS's failure to properly handle a call from the father of Coral Burrows (the 6-year-old who's body was found last month – her stepfather has been charged with her murder). One MP said the Government had learned nothing from previous reports, including the Children's Commissioner's report. "The names of the murdered children have changed, but the same issue remains." The MP did not blame CYFS for the girls' deaths, but it had to be held accountable for some of the "appalling errors of judgment" by its staff. The CYFS supervisor and social worker responsible for the mistakes were no longer working there and only they could explain why they did what they did.'

...A report into the deaths of two Masterton sisters found poor integration of relevant agencies and suggests social workers' familiar relationship with the girls' unstable family could have resulted in standard procedures not being followed. Olympia Jetson, aged 11, and Saliel Aplin, 12, were killed by their stepfather, who is now serving a life sentence for their murders. Police were called to the girls' home 18 times between 1994 and the girls' death and completed 12 family violence reports. These were forwarded to a girls' refuge, but not to CYFS as police decided there were no immediate safety concerns. Despite extensive involvement with the family there were only five records of social workers talking directly to the girls. The chief social worker confirmed that the department had failed to do its job and had apologised to the family. The chief social worker said there were serious breaches of policy where social workers failed to follow Serious Abuse Team protocol. As a result, abuse claims were not passed to the police. It had been unsafe and unnecessary for a social worker to have written to the girls' mother on November 16 wanting to see her about "new information" when the stepfather lived at the address. It was thought the stepfather had intercepted the letter because the mother only saw it a fortnight later, already opened. The mother immediately contacted the social worker and confronted the stepfather, who went on to murder the girls that night. The supervisor had since left CYFS and the disciplined but not sacked social worker had resigned. CYFS's involvement with the family from the late 1980s had been appropriate in the early stages. After the mother began a relationship with the stepfather, social workers had found the children inadequately cared for and physically abused by the stepfather. They were placed with grandparents, but a social worker reluctantly agreed to return the children as the couple had sought counselling and other guidance. The Family Court also had agreed. But many opportunities to help the girls were later lost because no single agency had the whole picture or understanding of the risks and the police, CYFS and other professions did not meet to discuss their concerns. Also, neighbours had not reported violence. On September 3, notes made by Olympia in her school book were forwarded from her school to the social worker. In the notes, Olympia mentioned being sexually abused by her stepfather and two other adult guys. The principal of the school that Saliel attended has called for social workers to become mandatory in all intermediates and for regular medical checks for all young children. The principal also called for the return of child protection teams that disappeared after the 1980s. They had been phased out, the principal assumed, because of cost, but the price of that decision had been paid by young people and their families ever since. The department had been restructured seven times in nine years. The CYFS Minister said outside the House last night that CYFS's response to the latest baseline review would improve the quality of service and provide more support and resources for social workers. Immediate priorities were to employ more frontline social work staff, develop strategy for managing demand, and give greater support for regional delivery of services, the minister said.'

...CYFS has spent \$8.93 million on training 100 of its staff, according to a report by the accountants Coopers and Lybrand. The report, commissioned by the service, is damning of senior management, noting that although the money intended to train 90% of the staff to a competent level had been spent, the management could not detail how most of it had been used. "During the course of our visits and discussions we gained an impression that many staff continue to view professionalism as an 'optional extra' which is in some way secondary to the 'real' work of the service," the 65-page report says. Prepared after Coopers and Lybrand was asked to assess the effectiveness of a "professionalism strategy" begun in 1992, the report has been handed out to staff, minus 36 pages. It is understood only three senior staff in the service have been allowed to see the full version.']

...The head of Social Welfare has attacked a Starship hospital paediatrician for publicly exposing the incompetent handling of two severe child abuse cases by welfare staff... An exchange of letters between... the... Social Welfare director-general... and Auckland Healthcare, which runs Starship, was obtained... under the Official Information Act... In a tit-for-tat swipe, [the director-general] said her staff had noted shortcomings in the health system, including abuse cases not reported to welfare staff quickly enough... The head of Auckland Healthcare... initially defended [his paediatrician], saying the doctor's first ethical priority was the wellbeing of patients... But in a subsequent letter, [the head] said the decision to publicly discuss these "deplorable cases" was not justified. This week, [the head claimed to understand] the frustrations his staff faced, but it was important to peacefully resolve the matter with [the director-general] rather than keep arguing.

...[Auckland Healthcare's health promotion adviser says only 5% of abuse victims seek help from the police or other specialist agencies.' However, last year 'the president of the Principals Association said that the support system for troubled, abused or violent school children is unco-ordinated and a mess. Such students are sometimes having to wait months for help from agencies like the Special Education Service and the Child Development Centre.'

...unregulated] agencies are picking up the slack in the welfare system... The information comes from a report which... officials fought to keep secret. It talks about how a "secondary system" of individuals and agencies has stepped into the breach to help abused... and neglected children... in the belief that... CY[F]S... is unable or unwilling to help... [– or], in Auckland anyway, help only the ones they can't escape responsibility for.

...Hundreds of abused and neglected children are waiting to be assigned a social worker at any one time and voluntary agencies are being forced to help at-risk cases not deemed urgent enough. In a bid to shock people, social workers revealed this week that 6128... children were in enough danger to require state intervention last year. But official figures released by the Opposition yesterday show that 684 at-risk children were not allocated to a social worker when a snapshot was taken of cases awaiting investigation by the C[YFS] about two months ago. Voluntary agencies and children's representatives are alarmed about the delays and say at-risk children are not getting sufficient help because of funding pressures.

...Several decades of social and economic pressures resulted in "a significant and growing proportion of the population suffering severe and persistent disadvantage." [5% of families are] trapped in a cycle of disadvantage – 45[% are] considered at risk of becoming severely disadvantaged. Families coming to the attention of... [CYFS have] a range of problems including low health status, psychiatric disorders, severe marital stress, poor or non-existent child-rearing skills and a strong likelihood of family violence. "Born of this group are some of the most seriously dysfunctional children [and families] in N[Z]." As many as 95,000 children and young people lived in such families and reported violent crimes against children had more than doubled between 1991 and 1994.

...The[UN] child rights committee, sitting in Geneva, says N[Z] should develop a national plan of action for children. It demanded answers from a N[Z] delegation on a range of issues, including this country's high youth suicide rate, the effect of economic reforms and the absence of an official poverty line... The call comes amid a heated response to the release in N[Z] on Tuesday of hard-hitting ministerial briefing papers on the state of the country's child protection and welfare services. The... delegation, headed by the Minister of Youth Affairs, presented the committee with the Government's official report on N[Z]'s compliance with the UN Convention on the Rights of the Child. Child watchdogs monitoring the meetings from N[Z] say the delegation's answers have been "woolly" and "wishy washy." ...the group Action for Children in Aotearoa said the delegation was trying to gloss over an appalling child welfare record... [M]any children lived in crowded, squalid conditions which led to problems of "incest, stealing, children wandering the streets, health problems, the whole social fabric disintegrates." [The] group submitted its own report to the UN late last year accusing the Government of breaching the convention in a myriad of ways. The... [minister] also came under attack yesterday over her stance on child welfare. [The minister] endorsed the Government report, saying that N[Z]'s policies complied with the spirit of the UN convention. However, the N[Z] First MP described the ministerial briefing papers as a "deeply disturbing account of the lives of too many young N[Z]ers." The... Minister of Social Welfare... would not comment yesterday on the UN committee[, which]... identified five positive factors but listed 13 principal subjects of concern and made 13 suggestions and recommendations... The Coalition Government had, however, signalled it was "determined to put children first" and the onus was now on it to do that.

...THE U[N criticism of NZ]'s record on children highlights the confusion of responsibility for their welfare. Once we were very clear about who was ultimately responsible... The state saw children as the future of the nation. Producing children was viewed as a social good. While parents had direct responsibility, the state adopted a larger role as guardian of the welfare of the country's children. Free maternity care, state funding to Plunket, the free kindergarten system, free school dental care, the Family Benefit with the ability to capitalise for housing, state housing, milk in schools, health camps, and school medical officers were just some of the ways the state took care of children. In 1997, only a few of these services survive, and others, such as Plunket, are under threat. The unravelling of the state's responsibility to children had happened imperceptibly because it has been gradual. But it is not accidental. The changed stance has followed N[Z]'s lurch to the right, reinforced by religious fundamentalism. This has led to an exaggeration of individual parental rights over those of the much-maligned "Nanny State". The swing towards parental supremacy began for liberal reasons, but was overtaken by the Right. The pernicious doctrine of "self-interest" underlies the current abrogation of state responsibility. This argues that people will always act to maximise self-interest. The dogma was taken to include people's dependants, even though parents and children's interests can be in conflict. The worst right-wingers take this argument even further. Having children is no longer viewed as a contribution to the future of N[Z]. It is simply a personal choice. By reducing children to personal property, the argument can be made that only parents should provide for their support. Parents have been given the right to choose their children's schools and state funding of private schools means that parents can control the type of education their children get. Parents have been given greater control over state schools and what is taught in them. One consequence of this is that half of state schools deny their pupils the part of the health curriculum that deals with reproduction, even though this is clearly not in the children's best interest. User-pays... policy directions have exaggerated the difference between children of the rich and... of the poor. The social welfare services... had been aimed to cancel the disadvantage of poverty and feckless parents. With the state as benign godparent, children from the most economically and culturally impoverished backgrounds still had a chance. The move back to parental responsibility has allowed the children of the well-off to prosper – although there have been negative consequences for them too... [Emotionally inhibited parents who are well-off but unable to freely express love and affection to their children may offer presents, or money instead (known as The Santa Claus Syndrome). As these children grow up, the equation sticks. Money equals love. Before long the child learns that "love" can be exchanged for money and money can be exchanged for "love."'] The role of the state has dwindled from protector of children to occasional policer of parents. The scrag end of state responsibility is a raft of legislation that drags errant parents into court... Social censure falls heavily on parents who transgress... This moralism towards parents is not backed up with practical support... For N[Z] to win good marks from the U[N] for its record on children, the state would have to resume overall responsibility for children. But that... seems highly unlikely.

...Grassroots help for neglected and abused children is being thwarted by bureaucratic time-wasting, says the director of Parentline... In the annual report for the national group... [the director] said her aim was to bridge the cultural gap between Government officials and the community.

...WELLINGTON SPCA is to train its officers to spot signs of child abuse – to combat the number of animals being tortured by juveniles. The move has been prompted by overseas research which says there is a link between abused children and those who abuse animals and people. Mass murderers like... the Boston strangler... were known to have been cruel to animals as children. "I call it the unholy trinity. You are abused, you abuse animals and you grow up to abuse humans," said [the] SPCA director... "We were determined to do something about this because my officers have seen all sorts of things... We do cross-report (with other agencies), but we want to fine-tune what we see when we go into a house,"... The SPCA received regular complaints about youths abusing animals... Neighbours were often more willing to complain about suspected animal

mistreatment than suspected child abuse... The SPCA... is in the process of setting up a garden in central Wellington where at-risk children could learn about animals, modelled on a similar scheme in the U[S].

...Child deaths from abuse and neglect can be stopped by early intervention programmes, says a... [US expert. The] director of the National Centre on Child Abuse Prevention Research in Chicago, yesterday reinforced the importance of home intervention to Plunket Society conference delegates in Auckland. While one child a month in N[Z] was killed by abuse or neglect, in the U[S] three children a day were killed... [80%] were under five and 50[%] were under one year old. "They are enormously young children whose parents didn't get the help they needed... I believe we can end that slaughter." ...Home visits were the lynchpin of a system of support for families. The U[S] had developed the Healthy Families America programme... Home intervention led to improved parenting, better health care for children, stronger parent-child relationships and families making better use of their resources... Plunket's national paediatrician... said compulsory primary schooling was accepted by society, but ensuring all children stayed well was not... "Children in N[Z] do have freedom but it is freedom to be killed on the roads, to die from meningitis or... [other illnesses, or from] abuse... The lack of adequate parenting education for parents ultimately leads to our high rates of... childhood injury."

...At least a dozen children known to child protection agencies are murdered or commit suicide each year... said... the... Commissioner for Children... [I]n many cases the family lacked a caring, nurturing father figure... Although the... [services were] not to blame for the tragic toll... [the commissioner] wants agencies to identify policies and practices to change so deaths can be avoided.

...A[social] welfare review into the deaths of two Fielding youngsters in a caravan fire last month has begun after confirmation the children were in the joint custody of the department and their mother... A spokesperson for the C[YFS]... would not comment until the review was completed.

...There can be few public scandals greater than children dying or being abused when they are already... under the Director-General of Social Welfare's care. Everyone remembers Craig Manukau, [who was 'kicked to death'] by his father for dancing at a disco... A six-year-old girl with gonorrhoea was sent back to her abusive home after hospital care and left for six weeks before social welfare officials began inquiries[, even though]... Starship hospital staff urgently alerted the service to her [STD and warned that the girl] was at risk at home... Sources around the country have listed similar delays... In [a] second case, a 10-week-old baby – severely brain damaged through repeated physical abuse – was to be put into the care of a convicted sex abuser until hospital staff blocked the move... CY[FS]... refused to answer detailed questions. [The chief] social worker... said both cases were complex and... [it] was unfortunate the concerns were disclosed to the media as complaint procedures existed for dealing with these matters... [T]he six-year-old's family denied knowing how [the girl] contracted gonorrhoea... the girl... continues to live at home while investigations go on... [T]he brain-damaged baby... is in foster care, until a formal family group conference can be held.

...A repeatedly bashed Auckland baby was to be placed in not one but two abusive homes by social welfare staff, health workers revealed yesterday... The N[Z] *Herald* yesterday revealed that the girl – severely brain damaged through repeated violent shakings – was to be put into the care of a relative previously convicted of sex abuse. A nurse involved in the baby's temporary care yesterday told the *Herald* that... [CYFS] then tried to place the girl with a Northland [caregiver] with a history of child neglect. The nurse, who did not want to be named, had little confidence the C[YFS] could make sound decisions given its appalling record in protecting the girl from further harm. It was only the refusal of Starship Children's Hospital to release the girl that blocked the moves... Welfare officials have launched an investigation into staff handling of the... case.

...[the guy 'who helped to get a toddler removed from her parents' home over concern for her safety is relieved the girl's grandmother has admitted it later seriously abused the child. Yesterday in the Whangarei District Court, a weeping 52-year-old pleaded guilty to charges of grievous bodily harm, wilful ill-treatment and endangering the life of the toddler. The grandmother was remanded in custody for sentencing in two months. The charges related to the grandmother's assault on her grandchild, and her omission to supply the child with the necessities of life over 17 days leading up to the assault. The child, then aged 28 months, was admitted to hospital in a coma with severe head injuries, a broken arm, cuts, bruises and cigarette burns to her body. The child was transferred to the critical care unit of the Starship children's hospital in Auckland and was discharged a week ago into the care of CYFS. The *Weekend Herald* is not naming the grandmother or the child because the background to the incident involves the outcome of a family group conference. The guy who first reported the child to CYFS said it was worrying that the child had been harmed since it was referred to CYFS, which had placed her with the abuser.'

... 'A desperate Whangarei grandmother called social workers at least twice for help in the weeks before beating her granddaughter so badly that the 2-year-old is brain damaged for life. The day before the final beating, two police officers played with the little girl at the grandmother's house but suspected nothing because there were no referrals from welfare authorities. Wiping away tears yesterday, the grandmother was sentenced to five years jail. The 52-year-old alcoholic was given custody of the child by the Palmerston North branch of CYFS just two months before the little girl was found unconscious with severe head injuries. The grandmother's lawyer said the grandmother, a victim of abuse herself, had warned social workers of her personal problems, and later told them it was struggling to cope. "The grandmother raised the flag. There were things in her background that made her a risk." No help was offered.'

... 'Just when you thought this country's child abuse record couldn't get worse, along comes news of a 33-year-old Whitianga resident who apparently decided to counter tantrums from a 10-year-old boy, a difficult foster child put in her care by CYFS, with fear. Fear? Make that terror. And then some. Like, threatening to chop his head off with an axe, swinging at him with a baseball bat, tying his hands, smearing him with fake blood, threatening to put a dead chicken around his neck and tying him to a tree. Then, the attacker doused the boy's skivvy with petrol and "to give him a fright" attempted to flick a lighter at him. The fumes ignited and the boy was engulfed in flames. The boy's scarred on his face, neck and chin but "is expected to emerge without major physical or mental harm". You want to bet? Bad enough? What about the sentence? The attacker was jailed for only four months with leave to apply for home detention! No wonder people in the court screamed abuse at her and the sentencing judge, and that the Crown is considering an appeal. In sentencing, the judge spoke of the attacker's "excellent record, particularly with difficult children", how it "snapped because of stress levels exceeding her endurance". Well, those offences and that sentence exceed by a very long way public acceptance levels. So does the unexplained behaviour of CYFS placing a child in need of help and stability in the care of someone capable of that sort of behaviour. Particularly since the department put him there knowing, in the words of the attacker's lawyer, that others had been unable to cope with him ("many, many others", according to the department) and that the child "needed consistent and unflappable caregivers". And there was "urgent need" to find a home for him. Instead, the child was handed over to someone who had not been screened or trained, according to the department.'

...Nineteen caregivers in the past year have had their approval to work for a Government agency revoked after they were found to have abused young people in their care. [Furthermore, the]Social Welfare Minister... said 79 allegations of abuse involving 52 caregivers working for... [CYFS] had been made... More than 1000 service caregivers provided parenting to 2020 children and young people, dealing with some of the most disturbed, hurt and "behaviourally challenged" children. [The minister] said these difficult young people were prone to testing the boundaries imposed on them. This could lead to a higher than average incidence of unsubstantiated allegations, but any allegation of abuse was treated seriously. "The fact that children feel able to report a complaint, when they believe an inappropriate incident has occurred, must be seen positively." ...Social workers investigated allegations promptly and referred them to authorities when necessary... [A]ll caregivers underwent police and medical checks, reference checks and selection interviews from two social workers. Once approved, caregivers were provided with ongoing support from social workers. The minister announced the service would receive an extra \$1.32 million to buy... an extra 38,610... out-of-family bed nights... from agencies... The extra funding would meet increased demand for care for young people who could not be safely looked after by their families... Boosted coffers should[also] help to stop the exodus of experienced social workers, says the Minister of Social Welfare[, who]... last night

conceded that the C[YFS] had a problem with burned-out social workers... [Earlier yesterday,] a Starship children's hospital abuse specialist, said inexperienced staff often had to handle cases beyond their skills. In the past five years [the specialist] has dealt with about 30 violently shaken babies but few cases had resulted in convictions.

...EIGHT years ago [a] baby screamed for attention from the confines of his cot. [The baby] was hungry and his nappies were filthy but no one came. His young, inexperienced mother, herself neglected and abused as a child, left him lying for hours on end every day. Eventually [the baby] stopped crying and his mother felt relief. [Her son] had finally become a "good" baby. Specialists now describe [the child] as "globally retarded." [The child] is short, has a small head circumference and his motor, social, verbal and intellectual skills lag behind others of his age... [The child] was not cuddled or stimulated and it shows... According to... research the brain of a neglected, abused child can be 30[%] smaller than that of a child raised with love and attention. The research is led by... a [US] neuroscientist whose message is simple: "The part of the brain that allows us to feel pleasure and positive emotional connection to others is dependent upon consistent, nurturing experiences during the first few years of life." ...Roughly 85[%] of... core brain structures are organised by the age of three... [L]obbyists believe the implications of the research are so serious that countries which do not act on it will lag behind... "They will be burdened with the huge costs of dealing with dysfunctional people. It means that resources have to be directed to early childhood. It's so important and cost-effective there ought to be no question about really getting into ways of promoting early intervention and engaging the whole of society." The idea that young children can be permanently impaired by negative experiences is not new but the neurodevelopment studies... physically show that it happens. There are three reactions to danger: fight, flight or freeze and the brains of children whose early years have been a battleground know only these responses... [T]he brain grows in a way to enable them to survive in that kind of world. "So they become people who have a short attention span... people with short fuses who don't do a lot of thinking and tend just to react and respond." CRIMINALS who commit spur-of-the-moment murders fit into this category. "They can, without remorse and thinking, quickly kill someone because that's the way they are programmed[.] Abused[.]... girls are more likely to freeze. In a classroom they are not picked up because they are generally good children who do not make a fuss. They... [also] don't learn well. Boys tend to fight or flee. They wear people out, they are hyperactive, difficult, destructive – distracting in the classroom and defiant in the playground. "What's happening is a child sits in a classroom in a state of anxiety because of all that's gone on in his life and at home. [The child] will be watching the teacher's movements [but isn't] listening to the lesson. The teacher only has to approach him and say 'get on with it' and that approach will send him into terror and [the child] will do something like hit out or march out or tear up his book." A residential centre to help children like this is being piloted in Auckland but funding is still in question. The Auckland City Mission initiative is the first in the country to be based on [the neuroscientist's] assessment of traumatised children carried out at his unit in Houston... [The neuroscientist] says... "You can do one of two things. You can reduce the risk of such things happening by attending to children's upbringing. The only other way you can protect society is by clamping down in an authoritarian oppressive way." ...[Incidentally, CYFS] staff are being investigated after allegations that they falsified legal documents, including death certificates. A spokes[person] for the Minister of Social Welfare... said last night that the minister was taking the allegations... very seriously... The allegations were brought to [the minister's] attention early this month by the Act deputy leader... who used parliamentary privilege yesterday to go public on the matter. During question time, [Act's] deputy leader asked if the minister had received any reports indicating that Auckland staff members of the service had "falsified legal documents..." [However, the]Speaker... ruled the supplementary question out of order because it was not directly related to the main question about the case of a bashed baby highlighted in the *N[Z] Herald*. The... Auckland care and protection manager for the service... had no idea what [Act's] deputy leader was talking about and was shocked by the allegations. "I've never heard anything like that, ever. And I would be horrified if anything did happen like that..."

...The deputy leader... failed to produce evidence to back up his claims... last night. [But following] an hour-long meeting with [the Social Welfare Minister] and the Director-General of Social Welfare... the Act MP... would try to facilitate some form of independent forum where his informants could give evidence. [The minister] said... "To make an allegation that the service is rotten to the core is quite serious; to make criminal allegations against staff members is also serious, and I... would plead with [the MP] to put that evidence before the appropriate authority, which is the police."

...Police child abuse teams are taking up to a year to investigate cases as staff struggle with a relentless workload. Team leaders say delays in getting to abuse complaints are similar to those faced by social welfare staff... [Furthermore, training] for police working in child abuse was limited to two courses a year which was unsatisfactory... Abused children generally got a raw deal with the delays in the legal and welfare system... said... [the] head of the Papakura child abuse unit[– who described one case of a]... father jailed for ongoing abuse, including... performing a home abortion using a knitting needle.

...A 32-year-old Hastings [mother] asked her 10-year-old son to make her day by killing himself, a court has heard... [The mother] showed the boy a rope... and... a tree... [to] use... A week before... [the mother] told him how to kill himself using the kettle cord and told him to get a butcher's knife and put it to his heart... The [mother] had five other children, all aged under six. In February the boy had a fight with a sister that left him with black eyes. His mother also punched him in the face, saying no one would know it was her because [the boy] already had black eyes. On another day... [the mother] hit him over the head with a kettle cord because [the mother] was angry at him for not doing his household chores... If [the boy] cried or moved [the mother] hit him again... [The mother] admitted wilfully ill-treating her son... [and] was remanded on bail... for... sentencing.

...[the boy] was 12 years old when [the boy] first came to the attention of... CY[FS]... His mother was an alcoholic and drug addict, incapable of looking after him... No one knew where... [his] father... was. The service found [the boy] a temporary place with a foster family and, as the... C[YFS] Act... requires, organised a family group conference to discuss his future. [His] uncle drove to Auckland from a small North Island town for the conference and offered [his nephew] a home. The law says [the boy's] situation should have been regularly reviewed by the CY[FS]. A plan for his future should have been drafted and applied. Instead, [the boy] drove off with his uncle, and disappeared from the system for the next two years... It was easier to deliver him into the arms of another family member and hope for the best. Predictably... the relationship with his extended family disintegrated. They may have provided food and shelter, but certainly no nurturing, discipline or guidance. For those two years [the boy] never attended school... [and as far as CYFS was concerned, the boy] was simply "out of sight out of mind"... [until this year when], at age 15, [the boy] reappeared in Auckland and was picked up by police for a spate of minor crimes... [His] case is not the most dramatic example of what's gone wrong with the way we look after children at risk[– the boy] has not become a serial rapist... or a pile of ashes in the garden incinerator... How did we get to this? It began, ironically, with legislation lauded by social workers, lawyers and judges as an excellent piece of law... Central to the act's workings is the family group conference, where the child, its family, social workers and lawyers gather to sort out a child's problems or punishment without recourse to court or foster homes. Success is the family finding the solution. Therein, say the critics, lies the fundamental flaw. If the families were functional to begin with, their children wouldn't be wandering the streets aimless and hungry, nor would they be holding forks to the throats of taxi drivers... Critics think it absurd to put a dysfunctional family in a room with a social worker and expect it to emerge several hours later with a plan to fix itself. Inexperienced... social workers are likely to be bullied by dominant family members who may not know how to care for a child but share that fundamental human revulsion at the idea of having their child taken away. Yet the act's proponents – the majority of people working in the field – are convinced... the family... are the only people with a long-term emotional commitment to the child, which foster families will never have. Some problems can be solved... a mother[was] deemed unfit to care for her child. CY[FS] took it into care. Once a psychiatrist got involved, diagnosed the mother's mental illness and prescribed effective treatment, mother was back on the rails and reunited with

her child. Under the old system the state would have taken the child and never revisited the case... However, eight years on from the act's introduction, we still have no qualitative research to tell us whether the overall outcome for children is better under this act than under the old system. Only now are tenders being received for such research... In the absence of solid research on the act's effectiveness, we have to rely on the gut feeling of those who use it every day. Even the majority who like the principle worry about the practice.

...[an] Auckland voluntary youth worker... tells the story of one teenager from a home where mother was an alcoholic and was regularly beaten by her husband who also gave the children cannabis. [The teenager] was sexually assaulted by a psychiatric patient. His parents separated, sharing the children between them. CY[FS] got involved after [the teenager] continually ran away. The first eight hours of the family conference... were spent debating whether [the teenager] was the Grey Lynn or Henderson CY[FS]'s responsibility. After another 13 hours [the] father was given custody. CY[FS] never got involved again, even though [the teenager]'s father beat him. At 18 [the teenager] is now too old to interest CY[FS]. The youth worker] sees him occasionally, working as a prostitute on Karangahape Rd. [The youth worker] reminds social workers about sections 13 and 456 requiring them to seek immediate alternatives for a child whose family is its deadliest enemy. But clearly social workers feel pressure from the department to leave at-risk children with their families for as long as possible... [The] convener of the Auckland District Law Society's family law committee... stresses the policy is not about keeping the child with its abusers, but encouraging other members of the extended family to step in. That hope can be found within the... surge in the number of concerned grandparents applying to the courts for custody. That too rings alarm bells. Even well-intentioned grandparents can be quickly worn down by a child who is out of control. Why are grandparents resorting to court, rather than approaching CY[FS]? Chances are they have approached CY[FS], only to be greeted with voicemail or a social worker who takes a report and is never heard from again. At last count CY[FS] had close to 1000 reports of child abuse on its books that had yet to be allocated to a social worker. Faced with that pressure CY[FS] has to prioritise cases. The tighter it is squeezed, the greater the abuse has to be to qualify for intervention. It is tantamount to telling children their abuse isn't serious enough, come back when it is... Lack of money coupled with years of restructuring has ripped the head and heart out of the department... Many within the service are choosing not to go on trying... Under the Treasury model CY[FS] is funded for its output – for example the number of family group conferences it holds – as opposed to its outcomes, that is how successful they were. It means there is no financial incentive to get it right the first time or to keep on trying until we do.

...“A great place to bring up kids.” For decades now, that phrase has sat as comfortable with mention of N[Z] as All Blacks and roast lamb. People all around the world said it; everyone believed it. But no longer. Today, too many young lives seem blighted, not blessed. Rather than the past rosy image of happy healthy children, we are too often facing the nightmare of suicides, crime, ill-health and [abuse]. Parents see the horizons of their young darkened with prospects of physical and social decay... [The NZ] *Herald* has mapped the anatomy of a threatened generation... We look for the glimmers of hope and discuss the solutions. The week-long analysis starts in your *Herald* tomorrow.

...THE words ring out like an accusation: “The first duty of a state,” they say, “is to see that every child born therein shall be well clothed, fed and educated, till it attain years of discretion.” Only a few words hint that the source – an essay in the collection *Time and Tide*... – is 130 years old. But the sentiment is no Victorian curio: the sad fact is that the words, with a few minor changes as a concession to modern style, would fit neatly into any 90s publication. And they could do duty as a motto for our investigation into the state of the nation's children which begins today. The series makes grim reading at times. The occasional flashes of light seem more like testaments to individual dedication and the resilience of the human spirit than signs that things are getting better. We've found young shoplifters who know all about their legal rights but not much about what's right and wrong[, including]... a master criminal with a rap sheet running to 500 crimes[who's] only 15 years old... To his peers on the streets of south and central Auckland, [the 15-year-old] is the “guru” of crime. To the police [the 15-year-old] is a nightmare who has still to reach his awful potential... [To one of his foster parents,] officials can shoulder most of the blame, because they did not act hard and fast when [the boy] was offending from the age of 10... [T]he unpleasant truth[is] that this is a nation whose children are in danger... What's obvious from listening to the people we've spoken to is that many people regard themselves as surplus to requirements in the construction of the great N[Z] economic miracle. And the focus of this series has confronted us with the uncomfortable fact that some children have never known any other feeling than this: that life is passing them by. What also emerges strongly from the stories is the sense that... [a] child in trouble is the symptom of a society in strife, and time and time again the people working at the coalface are bogged down in procedure and swamped with caseloads... [due to] being underfunded and understaffed... Yet the danger is that we're being penny-wise and pound-foolish... As our writers have teased out individual histories, they have found that they all link together like a Chinese puzzle. Scratch the surface of a truant's story and you soon uncover a family where parenting skills are inadequate. But wait: before you nod knowingly, dig a little deeper. You'll find a family where no one's had a job for 15 years, where one parent's chronically ill or another is an alcoholic[, where the]... first two years of life – surrounded by damaged violent people – have literally shrunk the[child's] brain... They may be other people's kids, but their plight is our national shame. If we do nothing else, the pieces which will appear on our pages over the next week should ignite the rage of all of us on behalf of those too young and weak to fight for themselves. We owe it to them... [Our first article is] about... street kids wasted on solvents... which will burn out their brains before they reach adulthood.

...At the age of 11, the South Auckland boy was offered a bag of glue on his way home from school. All it took was one sniff... Within a year [the boy] was living on the streets. His parents didn't seem to care... Now 18[, the boy]... commits slow suicide beside railway tracks... or in houses which, like him, have been abandoned. His world stops at the bottom of his bag of glue or paint... [The boy] has kids of his own – four of them, who all live with their mothers. It doesn't do to wonder what they'll be doing when they're 11.

...This time last year the 17-year-old was playing netball and getting good grades at an Auckland high school. Then... [the 17-year-old met a guy] who was... a long-term solvent abuser... Now... [the 17-year-old is] squatting in a Manurewa house with... other sniffers... is “in love” and wants to be a mum. The couple are trying for a baby but shrug their skinny shoulders when asked how the solvents will affect their unborn child.

...[a British study has shown the number of serious cases of brain damage from solvent abuse is virtually negligible. The main effect was on the brain, because the fumes were inhaled through the nose and went directly into the blood stream. Sniffers were far more likely to die from accidents resulting from their lack of awareness than the actual physical effects of inhaling. A professor of the Auckland University Medical School says most solvents inhaled by sniffers depressed the central nervous system. They caused users to lose the higher brain functions, including inhibition of aggression, guilt and fear, and produced or facilitated undesirable social behaviour. The professor said solvent abuse generally had its roots in a mixture of child mistreatment or neglect and social disadvantage. Youths turned to solvents because they were easier to obtain than alcohol. Ironically, although alcohol is far more toxic than solvents over a prolonged period, drinking is seen to be socially acceptable while sniffing' (and 'huffing' – sniffing air propellant via paint cans) isn't.

...A party trick went wrong when a guy used a canister of helium gas instead of a balloon to make his voice squeak and suffered what appears to be a stroke, a collapsed lung and nitrogen bubbles in his bloodstream, causing total blindness. A doctor from Brisbane's Wesley Centre for Hyperbaric Medicine said yesterday that the guy had had “a fair bit to drink” last year when it put the hose from a helium canister in his mouth. But instead of speaking like Minnie Mouse, the 27-year-old passed out unconscious. The patient has since made a full recovery. In 1994, a 13-year-old boy who inhaled helium recovered after suffering similar symptoms.' In local news, 'Hamilton's coroner is calling for bigger warnings on fly spray cans after the death of a second Hamilton teenager in less than a year. Last June, Gerard Anthony Versteeg, aged 13, died after inhaling fly spray at a party in Tamahere. The second teenager – whose name has been suppressed at the request of her family – died in February after being found collapsed in the hallway of her Hamilton home. Efforts to resuscitate her failed. The autopsy showed butane – the propellant used in fly spray – in the teenager's blood, and empty cans of

fly spray were found under her bed. The girl died from acute heart failure. A friend said the dead girl had told her it was sniffing fly spray because it gave her a “short buzz.”

...‘It took 2 seconds for a fireball to engulf a boy when it was sniffing petrol by candlelight with six of his mates last Thursday. Today the boy is spending his 13th birthday in an induced coma in Waikato Hospital. The boy has burns to 80% of his body and also has pneumonia. Doctors say the boy will be lucky to survive. His older brother wants his plight to stand as a warning to parents in rural towns. The brother – who admits that it sniffed solvents when younger but gave up after seeing a friend set fire to its eyebrows – says youngsters in Turangi and similar towns turn to solvents because there is nothing better to do.’

...‘When a boy was dragged from a burning shed with his skin running off him like melted wax, few people thought it would live to crack another of his trademark jokes. But the Turangi teenager was determined to prove them wrong. Now the brave youth is warning others of the dangers of solvent abuse’...

‘Social services in Turangi are declaring war on solvent abuse after a local boy was nearly burned to death while sniffing petrol. Local health and community agencies said an anti-sniffing campaign in Turangi two years ago had worked, but they were now faced with a new wave of solvent abusers. Details on the new campaign were yet to be sorted out yesterday.’ By the way, the response to the... *Herald’s* series on the plight of the nation’s children has been overwhelming. The hearts and minds of thousands of people have been touched... [A] voluntary community worker[hopes] the *Herald’s* taking up the cudgels on behalf of young people would see positive results. [The volunteer says it is] important the stories of the many disadvantaged young people were told... Like... the... [story the] police told us about their concern for a 14-year-old runaway prostitute who had been living and working on the streets for three weeks. It took about five hours for Social Welfare to find a place for the girl – from which [the girl] promptly ran away. Police were disturbed to find no one had reported her missing... In Monday’s paper[an] Auckland lawyer... observed the rise in the number of grandparents seeking custody... According to one set of Whangarei grandparents who contacted the... *Herald* after reading that story, the law is weighted unfairly in favour of parents who neglect their children and stacked heavily against grandparents who want to intervene. Their daughter has been in a succession of violent, drug-laden relationships and according to the grandparents is neglecting and abusing the three children. The grandparents knew it “was going to be dynamite within the family” when they decided to make a bid for custody, a decision they made when they learned the children’s respective fathers had the same plan. The grandfather, whom we cannot name while the case is still before the court, puts the total cost of the court battle at \$250,000; money [the grandparents] would rather have spent on helping the children. In Wednesday’s paper we highlighted the plight of... a brother and sister from Otara who have not been to school for a year. They said they dropped out to help their mother care for their siblings... The pair’s grandfather contacted the... *Herald* to say [the family] was upset that the teenagers had spoken with the media about their home life. “If there is something wrong, they should come to the whanau first. We’ve got several members of the family who are prepared to come together to discuss these things because we are here to help these children.” ...The grandfather said the teenagers did little to help their mother and instead “more or less ran her down” when [their mother] was doing her best to cope... [then] claimed the pair had refused to go back to school and said [the girl], who was pictured smoking, seemed to have “more money for smokes than food.” ...A sixth form class from Rutherford High School... was critical of our series for calling them part of a “wasted generation.” ...“Why should our generation be called ‘wasted’ on account of a small minority?...” ...“This minority is not without hope, just without guidance...” ...“Why make them... popular. Show young people how to achieve the best by presenting the best achievements of young people of the same age who just tried a bit harder.”

...N[Z]s not the only nation troubled by the plight of too many of its children. Our... neighbours... have equal cause for worry... This is not a good time to be young in A[US]. In the age of the Aces, the teenagers of the lucky country view life with a blend of pessimism... and yearning for a return to the certainties their parents knew. The term Aces was coined by the... advertising agency Mojo-partners to encapsulate its findings in a survey of the mood of teenagers around the world: it means alienated, cynical, experimental and savvy. There has been no lack of such surveys in A[US] and abroad. All show depressingly similar results: dismay at baby boomer parents who have failed to grow up and who have been betrayed by their own rules and values; youths’ pessimism, even fear, about their own future; cynicism at a society they believe is unlikely to fulfil their ambitions or possibly even their needs... Our children are inheriting a different world. There is no single, or even simple, definition of a “normal” A[US]n family any more, and the units that now cross the new family spectrum are subject to strains and breakdowns at levels unknown to preceding generations. While most children still live with adult couples, there are more step-parents, and de facto, solo-parent and homosexual households. In more than 40[%] of households, both parents work, and almost half the nation’s children under 12 are in some form of child care. The divorce rate is rising – 40[%] of marriages fail over a 30-year period – the number of children born out of marriage has risen from fewer than one in 10 in the 1960s to a quarter of... births, and parents are spending less time with their children – an average six minutes’ play a day, compared with an hour and a half of TV, for example... [R]eported cases of child abuse and neglect have been rising at an average rate of about 10[%] a year for the past decade, and more children are born into struggling families: A[US]’s child poverty rate is second only to the U[S] in the First W[or]ld... One quarter of all job seekers in A[US] are aged 15 to 19; the unemployment rate for teenagers ranges from 20 to 30[%]... Participation in sport – or even moderate physical activities – falls significantly after primary school, while TV, video and computer time has soared to levels higher even than in the... [US]. An exception to the moderate physical activities trend is that] sex... is on the rise... The mean age for loss of virginity is now 16 years... Major cities have reported the rise of turf wars, brawls and stabbings among teen drug gangs... [Juveniles] are “disproportionately over-represented” in breaking and entering and motor vehicle theft – the two most frequent property offences. Boys outnumber adult [guys] for robbery, and girls outnumber [adult gals] in most categories of crime... The number of homeless 12 to 18-year-olds is estimated at 25,000[. □ ‘The tradition of older children looking after brothers and sisters while their parents are out is under threat from a group that wants the legal age for babysitters raised to 16. Auckland-based charity the Child Safety Foundation says the present age of 14 is too young. The foundation wants a law raising the age to also define how many children a babysitter can look after and how long they can be left. A spokesperson for the foundation said the law was too vague because all it said was that 14 was the legal age. The spokesperson said the foundation received calls during school holidays from children who were home alone with younger children and frightened. However, the Social Services Minister is not convinced about a law change, although the minister welcomes debate. The minister acknowledges that there have been some “spectacular” cases where things have gone wrong, for example children left in burning houses. But in those cases it had not been legal to leave the children in charge because they were too young. “It’s usually neglect we’re talking about here – people who have gone to the pub or something and not come home all night and left very young children together. Well, that’s actually a criminal act and that’s covered already”]...]

A five-year-old boy found wandering in central Napier at night had been left in a vehicle while his father went to a bar in the city. Police... found the boy in a shopping precinct about 12.30 am... [T]he... 34-year-old... father... was charged with leaving a child without reasonable supervision.

...Social Welfare is warning parents not to leave their children alone after two incidents in Christchurch... Two girls, aged five and seven, were placed in emergency care with the C[YFS] after the oldest child sought help on Thursday night from a neighbour. Police said the children were left “home alone” in suburban New Brighton and were in a “filthy state.” In the second incident, a 12-year-old boy was found sleeping at 2.30 am yesterday at the Ruru Lawn Cemetery. The boy told police it was his second night there after being kicked out of home by his parents. When police checked, the parents were not at home... The Christchurch area manager of the C[YFS]... could not say how common home alone cases were in Christchurch, but... said... “I personally think that probably we are hearing about it more now because people are becoming more and more aware – more vigilant.” [The manager] said the police were responsible for prosecutions of parents in home alone and neglect cases, and the service did not

normally make recommendations about prosecutions... [However,] Christchurch police said the service was investigating the cases, and police would take no further part unless the service thought it necessary.

...A six-year-old boy was caught shoplifting at Foodtown supermarket in Mangere last night. Police who took the boy home found that his parents were out of town and that his 13-year-old sister was supposed to be looking after him. The C[YFS] was called in.

...POLICE are searching for a 15-year-old babysitter in a home-alone case where... a... four-year-old was spotted carrying his one-year-old sister about 2.20am by a truck driver outside a hotel on State Highway 2... [T]he children believed their parents were at the hotel and they had gone to look for them when they became hungry... [T]he children's mother told police... the youngsters... had[been] left... in the care of a... babysitter [when the mother went] to the hotel about 1.30am... [The mother] returned about 3.30am and after trying to find her children, called police around 5am... The police were still trying to... confirm the story... [and the] children have been placed in the care of the C[YFS].

...New Plymouth police were last night desperately seeking the parents of... a boy aged about 3 and girl about 2... found huddled together at the Kawaroa playground just before dark... on Saturday... Police could not find their parents or guardians in the immediate area, so took the children, who would not talk, to the station. Social workers helped police knock on doors and stop motorists. Radio bulletins broadcast appeals with no luck. By midnight the parents had still not been found and the children were placed with the C[YFS]. By yesterday morning the pair were talking more confidently and gave their names to staff, but could not say where their home or parents were. Their mother was found by police at her home at 9 am yesterday. [The mother] had left them with a friend on Saturday and was unaware the children had been in Social Welfare care for more than 36 hours.

...A mother left her 3-year-old son shut in a bedroom alone without food or water while... nightclubbing... Alerted by a neighbour, ambulance staff and police found the child late last night... covered in urine and faeces... Ambulance staff believed [the child] had been left for more than 24 hours. They said [the child] needed a lot of comforting... The child was taken to Auckland's Starship Hospital and cleaned up... Police were still trying to find the mother early today. The boy was handed to the... C[YFS].

...Neighbours said the boy was violent, spoke in grunts and went through their rubbish like a dog... Yesterday the 23-year-old mother, who... worked as a stripper... sobbed in the Henderson District Court when, after a defended hearing[, the judge]... convicted her of wilful neglect... Henderson police told the court... [that] the toddler... was... [found naked] except for a filthy T-shirt, [and]had dried and fresh faeces on his legs, hands, around his mouth, his head and cheeks... [T]he child was "stunned, frightened and glad to see somebody." ...The flat was clean and tidy – the stripper had made her own bed – but the child's room was a "pigsty." ...The bedroom walls were smeared waist-high in faeces and 75[%] of the floor was littered with dirty nappies, soiled clothing, food scraps and an empty water bottle... His mother walked into the Henderson police station the next day between 4.30 am and 5 am. [The mother] was drunk and gave... a false statement... but would not sign it. Under cross-examination in court, [the mother] said: "I know I shouldn't have left him alone like that, but it didn't enter my head it would harm him." ...the child is[currently] living with his mother under supervision in a residential parenting programme... Henderson... [p]olice were still looking yesterday for the mother of a[n]... 11-year-old... girl left alone without food for three days in a Waitakere City house.

...Welfare staff are impressed at the resourcefulness of an 11-year-old West Auckland girl left alone at home for three days who cooked her own meals... did the dishes... made sure the Ranui house was well-kept... and attended school daily... A neighbour phoned the police on Wednesday night to say the mother had taken a younger sibling and walked out on the girl. Left without money, [the 11-year-old] had run out of food after three days and went to the neighbour's to ask for a meal... [T]he girl was now being cared for in a foster home and was "settled and in good spirits." ...The mother contacted the service on Thursday after... [returning] to find the girl missing and a calling card on her doorstep... The girl's future would depend on a service investigation... [The mother] was likely to be charged with neglect[. By the way, 'in England, Wales and Scotland it isn't illegal to leave children alone in the home, unless there are signs of neglect or abuse']...

A pair of grief-stricken parents in Macau hanged themselves a day after their... children, aged 6 and 5, died in a fire after being left home alone.

...HOLLYWOOD ensured the words *Home Alone* were something to chuckle about. A 10-year-old's mischievous romps while left to his own devices were laughed at by millions. However, in N[Z] the phrase has a more depressing definition. "Home alone" is synonymous with the neglect of children through either a reckless disregard for their welfare or the foolhardy belief "nothing can go wrong" even if mum or dad are just popping to the shops for 15 minutes. The number of cases reported to police – the offence is commonly described as "leaving a child under 14 years without adequate supervision" – skyrocketed from... 45 offences in 1990... [to] 569... in 1996... Occasionally, a case is so tragic it warrants widespread coverage. Take Dylan Hoeta who died in a caravan blaze at a South Auckland motor camp. Dylan (4) was one of six children left without supervision while his parents... went socialising. Mum was convicted and discharged after admitting leaving her... children home alone. Dad escaped punishment because of "insufficient evidence." ...Four children (aged 2-11) caught a bus to McDonalds in Porirua after their mother went to housie... An Auckland couple, known for anti-abortion protests, admitted failing to provide supervision and care for their son... [T]he boy, who had two broken legs, [was] left alone and out of reach from food, water and toilet facilities... [A] 13-year-old boy[was] left home alone for a week in the Coromandel town of Whangamata while... [his] mother... worked in Auckland... A Taupo toddler crawled through a house cat-door and wandered on to the street after [the toddler] and his baby brother were left while their father drank at a local hotel. Police found the father when [the father] was dropped off by a taxi at the station for refusing to pay the fare... The mother of two children found home alone in Hamilton was so drunk [the mother] could not get off the footpath... Such cases are at the extreme end of the home-alone spectrum, and child welfare organisations concede many more parents are guilty of leaving children alone for shorter periods of time, often because of their work. The latter parents, while more understandable, are nevertheless committing an offence under the Summary Offences Act and risk a maximum fine of \$1000... [However, the] home-alone law has been accused of hurting children because fining parents meant there would be less money for the family. Of the 325 cases "cleared" by police in 1995, 168 parents were given a warning while 46 were prosecuted. The remainder were cautioned or referred to youth aid... The... chief social worker... said it was a mistake to think only irresponsible people left their children unattended. [Incidentally, 'my children think it's funny because I have *love* tattooed on my fist – but that's what I thought love was' ...

The] Manurewa footwear factory... [worker] doesn't find it easy to talk about his childhood. But it was rough. [The 19-year-old] has never met his dad; it was his mum who was quick with her fists. Beaten and bullied at school, the Otara youth... came close to heading down the wrong track. What stopped him was his grandmother, the one person who cared enough to keep the pressure on to keep him straight... Without her, [the youth] would... have given in and joined the Mongrel Mob... become involved in "drive-bys and robberies" and joined his mates in prison, mates that didn't have that one person who cared enough, or was strong enough, to stop them... While [his] grandmother kept him straight, the intervention of... KT Footwear... was another factor that changed his life direction. [The company's owner] believed in him and gave him a job... "No one else would have accepted me," says... [the] part Maori... part Rarotongan... [The owner says:] "I'm only a small business. There are huge businesses out there that could open their hearts and give the kids a go." ...the product of a broken, violent Pakeha home, is a fore[person] at the shoe factory... [G]iven part-time work there when... 14[, the Pakeha] used to walk several kilometres from school each day to sweep the factory floor. The few dollars... earned were spent on groceries for his three siblings and solo mother... At 20[, the foreperson] looks back at the time that his father left and says it was a good thing... the fighting stopped... [A] 14-year-old is attending the Waipareira Trust's alternative education unit in West

Auckland and living at a trust hostel... [This 14-year-old] used to get beatings from his dad who [called] him... a “stupid loser” and a “dumb nigger.” Then, two years ago, his mother died. [The 14-year-old became] a tagger... converted cars[... was]... kicked out of several mainstream schools and... [developed] a big anger problem. But [the 14-year-old] is finally recognising it as a problem and is trying to tame it... “I’m sick of being a pain in the arse... I let heaps of people down. I want the people I care about to be proud of me. I used to have a negative mind but even the teachers have said I’m turning positive.” [Another youth] is... about to leave the unit. [The 17-year-old, who] hopes to attend a Unitec course... came from a good family that cared, but fell in with a bad crowd at school... threatened teachers, broke into shops and tagged houses. It was getting caught and being sent to the unit that changed his life... Youthtown in central Auckland[is] a free drop-in-centre for young people. It welcomes kids in trouble with the police... with anger problems... who are suicidal... from dysfunctional families... who don’t know what love is and have never had a kind word said to them. What stops them from self-destructing is developing a special relationship with a caring staff member, or just being in a supportive environment... says... the director... “Often I find it’s just a learning process in an environment where they are appreciated and valued and the self-esteem starts to come up... they start to experience success and acceptance and belonging... these are the sorts of things that... turn people around.”

...Recently, leading members of the Mongrel Mob came and sat around the... dining table... [of the organiser] of the Houhanga Rongo Trust, a Maori term which means reconciliation... telling [him] they wanted a better way to raise their children... [The organiser, who] has been working with Otara children and families for more than 20 years[... asked]... them to describe what an ideal father looks like. Armed with those descriptions [the organiser implored] them to go home and be that father... [O]ne... of those... [fathers] – a gang member not long out of prison – ...decided... to become a teacher. [The organiser] encouraged him to enrol at polytech to learn Maori. From there, [the] father went on to university, topping the sociology class... The gang member’s wife was a drug addict living on the streets... their children... [lived with the organiser’s family. Now the] three children live with [their father]. His wife has joined a drug rehabilitation programme. To [the organiser] it was a simple story of a family taking control of its own circumstances. Through the East Tamaki Resource Centre [the organiser] hopes to draw in more of those families... who see the need to change. [The organiser] is so far resisting going to the Government for finance for the centre. Government funding, [the organiser] says, is unreliable from year to year... A centre supported by its own community has greater hope of long-term survival, [the organiser] believes. A fundraising programme called Operation Boot Strap – the name indicates a desire for Otara to pull itself out of the social and economic mire – is in its early stages.

Hundreds of youngsters are flocking to the centre’s new Lambie Drive complex for help, many of them from outside its anticipated catchment area. Established under the auspices of the South Auckland Youth Resource Service... the centre is contracted to North Health... to assist young people... “at risk,” troubled, stressed or in need of support... “We are a hospital for social ills. We fill a huge void.” ...the centre’s full-time staff of three... were trained to take a holistic approach in dealing with youngsters referred to the centre by teachers, parents or community organisations or those who just dropped in... [E]ven 7-year-olds have been making a beeline for what was once a church... The... co-ordinator for SAYRS... said Government agencies such as Social Welfare, the Police and the N[Z] Employment Service should become involved with the centre.

...Social workers strike today over pay and conditions knowing it will delay the investigation of child abuse cases. Serious home-alone cases and children at immediate risk of serious injury will still be treated as emergencies and removed to safety by managers or striking staff released specially. Notifications of sexual abuse, unless severe, would not be dealt with as emergencies, says the Public Service Association... A South Auckland social worker, who did not want to be named, said staff were striking a blow for children. “It’s time to take a stand about the cuts in services...”

...People who tried to report child welfare problems yesterday were told to “ring back tomorrow,” after 1500 social workers walked off the job... Staff were to return to work today at 9.30 am[... excluding]... several hundred social workers[who] were suspended... The service’s service delivery manager... said... “We certainly are not happy our people have seen fit to express their grievance in this way.”

...Being yelled at, hit, spat on and sworn at is all in a day’s work, say staff of the C[YFS]. The job is intimidating, demanding, stressful and sometimes dangerous... Getting past gang members and into a house to remove a child is no easy task... A survey by the Social Work Association found social workers have been threatened with axes, guns and knives. Violence affected their confidence and their work; they suffered panic attacks, anxiety, depression and sleep disorders; and their work took its toll on their relationships. For this they are paid between \$26,000 and \$36,000 a year, and if they work after-hours they get... [an extra] \$3000 a year. They can also earn performance bonuses of up to \$4000. The maximum possible earning is around \$43,000 but... “It takes 10 years of hard slog.” Social workers say it is not good enough, and mounting frustration led to industrial action which last week culminated in mass suspensions of social workers. Yesterday, the situation had calmed and indications were that both parties would next week head back to the negotiating table. Social workers say they have not had a pay rise for seven years, and they want 15[%] to compensate. Management offered 2.25[%] for 18 months with a lump sum of \$2000, an increase in work hours, changes to the extra duties allowance and a restructuring of the bonus system. Staff claim this means some of them will end up with less money. The pay talks have been stalling for months. But while that is the big issue... it is not the only issue. Under question is the whole philosophy of the service that social workers say is so underfunded they cannot do their job properly... Meanwhile, [three]... youths were still on the run from the Social Welfare home at Weymouth last night after absconding while social workers were on strike. Security guards hired to control residents during Wednesday’s strike could not keep them inside the walls of the Northern Residential Centre. The manager of residential and caretaker services... said youths at Weymouth, and a similar centre in Christchurch where 11 ran away, had been unsettled because of the strike... The youths were no more dangerous than some of the other youths already out on the street, [the manager pointed out.

...1100 juvenile delinquents escaped from two notoriously violent detention centres in the Brazilian city of Sao Paulo over the past 15 days, unleashing a wave of violent crime. Lawmakers and public defenders say the rash of break-outs and violence was a predictable result of torture and inhumane treatment at the detention centres.’ In local news, lawyers say a) locked-door policy at the Northern Residential Centre in Weymouth is illegal and may amount to wrongful imprisonment... They also say the policy is the real reason for the number of absconders from the home dropping by more than half. The N[Z] Herald reported yesterday that the Social Welfare Minister... believed abscondings had fallen because specialist programmes in youth centres and in the community were paying off... Social Welfare was waiting for legal advice yesterday before commenting.

...Body searches of young people living at Social Welfare residential centres are continuing despite a ruling they may breach fundamental human rights... says... a lawyer for the Office of the Commissioner of Children. There had also been complaints that some young people have been required to do “star jumps” naked and bend over naked. Social Welfare denies that star jumps and humiliating methods are used and says searches are carried out only if a staff member believes no alternative exists for detecting items such as drugs... But [the lawyer] said the searches were routine, carried out whenever a young person returned to a centre from outside. And while some of the young people in the centres were there on remand, others were there for their own care and protection. “These kids may have been sexually abused and... they are being exposed to something which they would find quite disturbing and distressing...” The new search powers came into force on February 1 and are among a list of regulations which update the Children and Young Persons (Residential Care) Regulations 1986.

...The Commissioner for Children’s office will take Social Welfare to court if the department refuses to stop degrading body and strip-searches of young people in its care. Social Welfare has acknowledged that the searches are intrusive and degrading but... told the regulations review committee it had extended its power of search because more contraband was being brought into the residences.

...The Government has agreed to curb the powers of Social Welfare staff to make controversial body searches of young people in residential care. But youth advocates say the proposed legislation does not go far enough and fear young people in Social Welfare care and custody will still be worse off than adult criminals being searched for drugs and weapons in jails. The legislative amendment, expected to be introduced to Parliament next year, comes amid revelations that less than 3[%] of the 912 strip-searches and “pat-downs” of young people in residential homes led to the seizure of drugs and weapons... The searches were also criticised by the parliamentary regulations review committee about three months ago. It said the powers should be in law rather than in Department of Social Welfare regulations.

...The Environment Court was asked yesterday to shut two Auckland homes for juvenile delinquents. The Government-funded homes – designed to treat offenders aged between 11 and 15 – have provoked fierce community opposition from their neighbours in Manurewa and Pakuranga. The Youth Horizons Trust is contracted to the Department of Social Welfare to house up to six youths in each treatment programme at an estimated cost of \$100,000 a child annually. Earlier this year, the trust’s project manager... was sent a threatening note and the Manurewa property... was trashed by intruders and had diesel tipped through it. The Sunset Community Residents Association in Pakuranga and the Homestead Community Residents Association in Manurewa want a court ruling that the trust is contravening the district plans and needs resource consents from the Manukau City Council... However the trust’s lawyer... told the court that the homes were residential only as the occupants went to a learning centre in Newmarket during the day. They were therefore permitted as of right under the transitional and proposed Manukau district plans... [T]he Homestead group, told the court that residents were concerned at the potential risk to them and their families if a seriously disturbed young person absconded[, but]... a trust psychiatrist... said... the criteria for the occupants was that they be of minimal risk to themselves and others.

...The Government faces growing chaos in its ailing child protection service. Social workers take strike action tomorrow for the second time in four months... [S]ocial workers at residential homes will join the industrial action... Social Welfare [also] faces legal action by dozens of unpaid foster parents in a tussle which could cost the department millions of dollars. The disgruntled workers[, who] provide emergency care for abused and neglected young people... get... an allowance for each child... [that] covered the basic needs of each child but nothing was left over... and are fighting... [for] backpay for former workers... who had burned out and quit. The service was breaching the Employment Contracts Act by not recognising the around 100 past and present caregivers as employees and claims had been filed in the Employment Tribunal... [T]he workers... were on call 24 hours a day, seven days a week... The service called them contractors but by law they were employees and therefore entitled to a minimum wage and holiday pay. One of them... has run a family home in Otara with her husband... for four years... [The caregiver] got four hours off a week and one weekend a month but often could not take the time because it was impossible to get relief staff. The house took six to eight children but was often overcrowded. “They are all abused children... Most have behavioural problems... You have to really be like a police[officer] and watch them day and night.” - 1997

[The sisters are] aged 6 and almost 4. They are engaging and appealing little girls who are currently reaching normal milestones. They interact well with both adults and other children although they can be demanding and attention seeking at times. The girls have been subjected to extensive neglect and emotional abuse. As a result they need to be placed in a family with a clear understanding of their needs. Caregivers should have the skills and experience to provide a stable and secure environment whilst maintaining clear boundaries... [The sisters] should be the youngest in the family. They need to maintain links with their birth family and prospective caregivers should therefore live in the Auckland Region.

...[th]is... eight year old European... is a lively boy with good conversational skills. [The boy also] is outgoing... responds eagerly to adult praise and attention... likes animals... enjoys games and using the computer. Because of past trauma and neglect [the boy] has some emotional and educational delays and some behavioural difficulties. [The boy] needs a permanent home with caregivers who can offer him warm positive attention and clear boundaries. [The boy] will need to be the youngest in his family and his caregivers will need to assist him in maintaining contact with his biological family. Prospective caregivers must live in the Auckland region and permanency will be secured under the Guardianship Act.

...[this girl] is a European child aged eight[, who] enjoys learning ballet, tap and jazz dancing. [The girl] is a competent swimmer and likes most water and outdoor activities. [The girl] also loves playing with her dolls and reading. [The girl]’s history is one of emotional and physical neglect which has affected her social, emotional and educational development. [But the girl] is now making progress in all areas of development. Fear of failure can be a problem however leadership qualities are evident once confidence is achieved. [The girl] needs parents who can nurture, encourage and help... develop her full potential. Links with biological family need to be maintained[, and the girl] should be the youngest in the family... If interested please contact: C[YFS’s]... PERMANENT PLACEMENT UNIT... Telephone 914 1155 (Business Hours)

...Dozens of Kiwi couples are opening their hearts and homes each year in response to the poignant silhouette newspaper advertisements placed on behalf of children in welfare care. Without this show of generosity and love, these children – rescued from environments where they’ve suffered every kind of neglect and abuse imaginable – would be sentenced to a lifetime of upheaval and uncertainty, due to the temporary nature of foster care. The C[YFS]’s Permanent Placement Unit in Auckland places advertisements for up to 25 children a year. We track the success stories of four Auckland silhouette kids given a new chance, thanks to appearing in the saddest advertisements of all. LINDA* Raising other people’s children is something Elizabeth and Clive* have done for years. Despite having seven kids between them, [and now]... 26 grandchildren, two of which they care for before and after school... they always managed to find the time and energy to take in another needy soul... [When] they responded to [a CYFS]... advertisement for Linda, 10 years ago, the... [little girl] was in desperate need of love... “When I first moved in here, they were just like a real mother and father,” Linda recalls. “I’d help with the work and get pocket money and they’d take me places and organise things for me to see and do.” In just a few months time, Linda, now 21, and her boyfriend will be moving into a home of their own. [Linda] still has regular contact with her birth mother but admits it isn’t easy. “My mother doesn’t care about me but I still ring her up... When I ring, [mum] says, ‘What do you want?’ I was a lovely child but not once has [mum] ever said, ‘I love you’. I know how much [mum]’s hurt me but I don’t feel I can hurt her back...” JACOB* Jacob’s childhood was cut short at an early age when [Jacob] was forced to become a father figure to his baby sister in a home where anger, alcohol and violence were the norm... The burden of that role was finally lifted off Jacob’s shoulders at the age of 10, when, after three years in a foster home, [Jacob] and his sister were placed with different permanent families, allowing Jacob to reclaim his childhood at last. Although [Jacob] has contact with his sister and his mother every month, his father has never applied for access. Jacob’s guardians, Bridget (46) and Neil* (45) have been married 26 years and have two sons, aged 26 and 24. Neil recalls how a visit to an orphanage as a child member of St John’s Ambulance meant [Neil]’d always had a “soft spot” for children less fortunate than himself. “W[hen w]e... saw the ad for Jacob we thought [this] was someone we could help.” The couple’s two sons were more than happy with the plan and have provided additional role models for Jacob, now 13. [Jacob]’s now getting A’s in his grades at school and is proving to have a flair for sport. “The satisfaction you get from seeing his development and having his company is great,” says Neil. MARY* Nobody knew the exact extent of damage to baby Mary when [Mary] first came into welfare care. Low IQ and personality disorders affecting her parents prevented them from caring for her but it would be some time before experts would know if [Mary] had inherited the traits. Mary had been fostered by two different families by the time David (47) and Anne* (40) took her in at 18 months old. Mary is now six. A neuro-development therapist gave her the all-clear at two-and-a-half and, thanks to heroic efforts on Anne’s part, working with Playcentre groups and offering educational support in the home, Mary is now catching up with her peers at school... Mary had become so used to being cared for by different people that [Mary] hadn’t developed the normal feelings of attachment for her age. “[Mary]’d just go to anyone,” Anne recalls. “The first time [Mary] cried after leaving her at Playcentre was a real breakthrough... Normally, mothers are upset when

that happens but I felt really good. It was a sign [Mary] was starting to care.” Mary has knitted so well with her guardians and two older brothers that the family are now in the process of helping another child, who is two. ANDREW* Andrew had been with two foster families and was six years old when [Andrew] first met his guardian couple, Mark and Pauline*. [Andrew] had suffered severe physical and emotional abuse and neglect while in his parents’ care, so much so that, even today, at the age of 11, [Andrew] still finds it hard to express his feelings. “Andrew doesn’t really show much emotion,” says Pauline, “whether... happy, sad or excited. I remember we got him a bike for Christmas once. We were more excited than [Andrew] was...” “But that’s okay,” adds Mark. “[Andrew] may never be any other way. What we do is accept and support him the way [Andrew] is, we allow him to be different.” Although Andrew initially tested his new guardians sorely through disobedience and by throwing tantrums “to see if we would send him home”, the couple now believe they’re over the worse. [Andrew]’s catching up at school, has shown a talent for art, joined a local rugby club and... might want to join the Navy one day. Mark and Pauline responded to Andrew’s silhouette ad after trying unsuccessfully to have children of their own through IVF. An older child was perfect for them, since they’re both in their forties and running a business from home... Andrew’s placement has been so successful that the couple is now going through the process again with another child. “We always said we’d have two children,” says Pauline, “and Andrew made it very clear to us [that the boy] desperately wanted a brother.”

I sometimes wonder – with justifiable concern – what became of... a regular resident at a Social Welfare home where my mother worked many years ago. The last time I saw him [the young boy] had chopped the paws off his foster family’s puppy with an axe... [N]ow... the... foster care system is in crisis and in some areas is verging on collapse, says the Auckland Foster Care Association. Foster families are burning out, then dropping out, according to the [association’s] president... who... has never seen it so bad... In September, the Association of Social Workers called for a national inquiry into what was happening to foster children. It reported cases of children who had histories of sexual abuse and violence being placed in homes with other youngsters[, while ‘more than 150 children have been removed from state foster parents after being physically, sexually or emotionally abused by them in the past three years.’ Other]... examples highlighting the breakdown were: • Social Welfare’s failure to tell caregivers their new foster child was an arsonist. • Some family homes say Social Welfare owes them thousands of dollars. • Family group conferences not called within the specified time frame, leaving children in limbo with temporary foster carers. • A 16-year-old who had not seen his father in 14 years was given a day to move towns to live with him. • Children often abruptly moved without explanation to them or their foster parents... [The president] said the welfare system operated under a lot of intimidation and fear. “Social workers don’t talk because they’re not allowed to. Foster parents don’t talk because... they fear if they complain they will be cut out from doing foster care.”

...Social workers in West Auckland have asked schools to stop sending them all children except likely abuse cases. The Waitakere C[YFS] says it can only take the most urgent cases because it is short of five social workers... The principal of Henderson Primary School... said the [request] meant schools had to make the difficult decision about whether a child was likely to be abused... [The principal] said the service seemed to be no better off after years of restructuring and reports about how it could be improved. [The principal] wondered about a recent newspaper report that the nine highest paid staff at the Social Welfare Department would share a bonus payment of almost \$120,000. “Possibly some of that money might have been better used in improving the salary structure of the people who actually do the work or even employing some more of them.”

...[by] March all of the C[YFS]’s social workers will be trained in new child abuse risk assessment procedures based on a model developed by a Canadian university and called the Manitoba Risk Estimation System... The... system was an excellent model and provided a thorough check-list for social workers to work to... the... former Commissioner for Children... said. “But if the service still has the problems of resourcing and organisation that they have in the past, then any procedure they set in place is not going to work.”

...THE Government is looking at a... initiative to... identify youngsters in danger of abuse, neglect, health problems or becoming delinquents. The proposal... require[s] agencies to co-operate and exchange information more than they have in the past to target families likely to have problems. Once identified, children would be logged through the systems of police, justice, welfare, health, and schools from the time they are born – and in some cases, such as teenage solo parents, before birth. [The]Health Minister... has given officials just four weeks to respond to the policy package, making it a fast-track Cabinet item... Central to the policy is a system of home visits... Teenage parents, those with criminal records or drug problems, or... from already dysfunctional families would be offered extra help... in budgeting, health, parenting and other relevant areas. Police, schools and other agencies would check with other departments about at-risk children’s welfare and progress... [It is hoped that this will prevent] child deaths in... cases where the victims had come to the attention of one agency or another... [– like] Wayne-Marshall Kairau (11)[, who] was murdered and his body burned in a 44-gallon drum in 1993 by his stepfather... The boy had been fathered by his mother’s father and Social Welfare had worked with his family for a year before his death. The search for the boy was hindered by weaknesses in the system of tracking the transfer[of] pupil records between schools... In 1994, Dane Gibson (12) was bashed to death with a concrete paving slab... The parents, who believed [Dane] was possessed by the devil, were found not guilty of murder on the grounds of insanity. Officials from the police, mental health service and Social Welfare visited the family 36 hours before the killing to assess the [parents’] mental state but none contacted the family GP... [Progress of the proposal is, however, likely to be affected by its projected cost of] \$66 million next financial year, rising to \$119 million for 1998 and \$156 million for 1999.

...The cost of child abuse in N[Z] has hit an estimated \$1.5 billion a year – and that figure doesn’t take into account sexual abuse and neglect. A Social Welfare departmental report, released by order of the Ombuds[person], conservatively estimates that 27,000 children a year suffer physical assault and emotional maltreatment... The report’s... costing of abuse put the loss to the economy at \$1200 million and the cost to taxpayers at \$393 million... [for] providing health and foster care and paying for legal enforcement... The report assessed that 18 children were killed by their caregivers and two committed suicide at a cost of \$2 million per life. Physical assaults of 9000 children requiring medical attention were costed at \$50,000 per case and the 2800 with permanent emotional injury were assessed as costing \$200,000 each. Another 15,000 serious abuse cases were costed at \$10,000 each... It is understood the issues of sexual abuse and neglect presented too many problems to be dealt with in the report’s timeframe... Yesterday... the... Minister of Social Welfare... played down the report, saying its figures were all... based on the amounts academic studies show N[Z]ers are willing to pay to prevent child death and injury.

...let’s stop heartbreak and save money[. NZ] can no longer ignore the economic impact of its alarming statistics on children at risk... Of the 23 [richest OECD nations, the UN] Children’s Fund ranked N[Z] as having the sixth highest rate of infant abuse... Early intervention for at-risk families from the time a child is born is the most cost-effective investment that N[Z] can make in the long-term reduction of the welfare bill... In a 20-year study of child-care outcomes... in the U[S] it has been estimated that two years of early childhood care results in savings per child of \$16,415 in reduced welfare costs, \$7082 reduced education costs, and \$3100 reduced crime related costs... This... total of \$26,579 a person... is seven times the cost of one year’s child care... An A[US]n National University cost benefit study of child care showed similar... results. When you consider that it costs over \$50,000 a year to keep one person in jail, and that the vast majority of our long-term inmates are from dysfunctional homes, the advantages of investing in early support for families are obvious.

...“There’s not enough support. The only cases you’ll get to deal with are the most critical ones and you don’t have the time and resources to do anything more than work from crisis situation to crisis situation[.]” says a[... social worker in the fourth and final year of her training... [who will] be reluctant to take a job with the C[YFS], regardless of the scarcity of other positions... The estimated burnout time for a frontline service social worker is said to be four years. “To be frank,” says... the service’s chief social worker... “[this]... is the hardest job. Our people see the worst of it;

they go into the toughest homes in the community and they face getting abused constantly and some people simply... [aren't] able to handle that." Yet there are children who are expected to handle the same environment every day.

...Every year 900 children under 20 die in NZ. Some are battered to death, some kill themselves, some die from avoidable diseases, and some by accident. For the Commissioner of Children... the situation is sickening and unacceptable. The statistics, and the recent deaths of battered babies Veronica Takerei-Mahu, aged 11 months, and Victoria Kayla Watson, eight months, compelled him to... push for a comprehensive child-mortality review system... "What we've got... is a whole lot of information sitting out in a whole lot of different files and no one is analysing its significance..."

...[a former NZ PM] in a new book, *Children of the Poor*, argues that... something has gone terribly wrong in the past 20 years. When I first became a [n MP], local priests... would bring people to see me so I could help with a home, a payment or a job. Now, I take people to the local churches to see if they can help... Last year police reported 272 cases of children under 14 being left home alone... [and] 930 violent crimes were committed by youngsters under 14... Third parties such as the police, the courts and schools are being conscripted more and more to deal with... our collective... failures, only to get the blame for not doing enough... The welfare state is a "third party" attempt to intervene on behalf of society to solve a problem before it explodes and hurts both its immediate victim and others. It is a moral and financial force for good... [Yet some] now see it as the problem. The welfare state does save some from terrible poverty, and their children from second-class citizenship, if run properly. But it has also provided a hammock for some, rather than a springboard out of trouble and into a better future. Civil engagement and popular participation can be brought back to life, giving new meaning to citizens and more control over their lives while at the same time building up more secure, enjoyable and healthy communities. People have a basic need to be part of something larger than themselves, whether through membership of a darts team, trade union, or church congregation. We are wasting too many people. Why not encourage people who are in retirement, or close to retirement, to help us all out? ...Why not encourage some people to retire early, give their job to a young person and then pay them a little to help out in the community... Let's say to young unemployed people... that if you can't find a job we will find you one, or you must... work in the community... If the economy doesn't work for all NZers... it works for none. We are working on the 80/20 rule. The danger is that because... 20[%] are missing out, some reactionaries will want to smash the success of the 80[%]... But it's higher education that is the passport to a better life and a stronger nation.

...Last night's *World In Action* documentary on TV3, *Minds To Crime – The Dangerous Few*, examined every parent's nightmare – that their little monsters will grow into big ones. The hour-long programme put forward the possibility that some children are biologically disposed to criminal behaviour as adults... The case studies were chilling – the three-year-old with a penchant for microwaving cats, the six-year-old who cheerfully told grandma [about killing] her dog. The kids were definitely not all right. Recent scientific research suggested it was possible to identify children as young as four or five as potential prison inmates... [US] studies apparently indicated that hyperactive children with attention deficit disorders [(ADD)] were most at risk of developing anti-social attitudes... [C]hemical imbalances in the brain could be responsible for such juvenile offending. The implications were intriguing – ignore the signs of constant abnormality, said one expert, and there was an 80[%] chance that your child would grow into a criminal. Predictably, medication was touted as a promising treatment, combined with behavioural modification techniques. But what of the other possible factors relating to the criminal tendencies of children? Surely issues such as social deprivation, environment and upbringing had a bearing on the matter. Counselling and pills seemed a simplistic cure-all. Then again, so did the proverbial kick up the backside. - 1996

"Experience... is the architect of the brain." ...The child's early experiences develop all the brain's functions – including the control of physical movement, thought, and emotions... Exactly how this development occurs is not understood completely but it has to do with the way the 100 billion neurons or nerve cells of the brain interconnect. The circuits the neurons establish with one another determine how the brain functions. Without a stimulus from outside, parts of the brain fail to develop properly. "...When a mother holds the infant, rocks it, looks into its eyes and speaks to it, on one level that is a beautiful thing and on another level it's a necessary physical stimulant for the appropriate growth... of the brain,"... says... a... visiting... [US] neurobiologist and psychiatrist... But if a child's earliest experiences are of violence, their brains become abnormally attuned to danger. "The world for this child is chaotic and... terrorising... So it needs to build in as best it can, the machinery to be hyper-vigilant, to scan the environment, to read nonverbal clues – basically, to be attuned to threat." In time the child develops a permanent state of anxiety... The behaviour of traumatised children... is likely to be misunderstood... Too often... these kids are labelled as suffering from ...ADD... and are put on drugs. In some [US] inner city neighbourhoods up to 40% of children are being treated for ADD. "But it's not ADD at all..." ...Abusive parents can learn how to care for their children... "Most (abusive) parents aren't evil, they're just dumb;"... Contrary to the popular myth most physical violence against children is by [mothers. But the mothers], in turn, have been abused by the [fathers]. "We won't make children safe until [mothers] are safe."

...THE new Domestic Violence Act is causing delays in routine family court hearings of up to six months. Family court lawyers say before the Act, cases would take two or three months to get a hearing after they were first listed... Under the Act, applications are regarded as urgent fixtures and are given priority over other family court matters... In the first six months (to December 31[. 1996]) of the Act, 3191 domestic violence protection orders were issued... A [n Auckland family law expert... said routine hearings for matrimonial property disputes and interim maintenance disputes, were the major areas within the Act suffering delays... [as a consequence. By the way, many guys] referred to anger management courses after a domestic violence order are failing to turn up. [The]National Network of Stopping Violence executive officer... said 700 [guys] had been referred to the organisation by the Family Court as a result of the... DVA... [but] only 320 had arrived for an interview and only 25% had started courses... If [someone] failed to attend anger management or anti-violence programmes as directed by the court, they were usually contacted by their course supervisors telling them to attend. If they still failed to turn up, they were summoned to explain. Further failure to attend, or to answer a summons, resulted in arrest... [Yet only one person] had been arrested for... disobeying an order under the act... [But the] Auckland family court deputy registrar... said news of the... arrest appeared to have spread and was "encouraging [other absentees]" to attend courses. [Guys] themselves have applied for around 7% of the orders since the DVA was introduced... Most... would probably be applying for protection of their children from a violent step-parent or partner... The act also allowed [guys] who live in gay relationships to apply for orders against their partner. [The officer] said the fact that 93% of orders were applied for by [gals], should not be forgotten. "Overwhelmingly violence is still committed by [guys on gals]."

...The Department for Courts' latest weapon in the battle against domestic violence is aimed not only at offenders, but victims and their families too. Programmes – starting on July 1 – will be paid for by the department and provided by private contractors... The scheme was announced this week following revelations that domestic violence remained a major problem in... [NZ. The] "proactive" scheme aimed at stopping violence should also reverse the spiral of Legal Aid bills associated with domestic violence. Critics claim the change in legislation means that the Family Court legal aid bill will rise by around \$7 million a year. Ultimately[, however,] the new scheme should reduce that bill as it will be mandatory for offenders to take part... Control over the content and duration of the programme rests with the department: offenders must complete a 30 to 50-hour course and victims will have the option of attending from 20 to 40 hours. The number of offenders attending a course is limited to 16... Similar schemes in Canada and the U[S] have been useful in changing behaviour, said... a... Family Court adviser... "It's not going to make everybody 100[%] better but there's generally been a reduction in reported violence continuing." [In international news, "Punch and Judy have been banned in an English town for promoting domestic violence. Punch and Judy shows have occupied a place in Britain since the 17th century, with children gleefully shouting at the

hump-backed Mr Punch as the puppet relentlessly wielded a stick on his put-upon wife. But the Colchester Borough council said wife-beating was not funny in an era of broken homes and domestic violence. "Young people are very impressionable," said a councillor. "Mr Punch's weapon is, of course, the slapstick," said the coordinator of the Punch and Judy College of Professors. "But we are not actually talking about real violence here. We are talking about knockabout comedy. The same comedy that Tom and Jerry engage in." Maybe the cartoon cat and mouse had better avoid Colchester.'

... 'A people at war with ourselves According to figures from the British Home Office, NZ is now the most violent country in the First World. With 1121 violent crimes per 100,000 people, we outstrip Canada at 979, AUS at 861 and, astonishingly, the US at 610 (the US still leads the murder table, largely because of easy access to guns). Countries such as France, Spain and Italy record only a quarter of the violent crimes in this country. Worse, studies from both Victoria and Otago Universities have found that only a fraction of the violence in the community turns up on police files. What the criminologists call this "dark figure" of unreported violence was also discovered by the researchers responsible for the Dunedin Multidisciplinary Health and Development Study. Statisticians warn that the international comparisons are not absolute because of variations in how crimes are classified or even reported to the police. For instance, where we may record three charges from one crime, the British will record only the most serious crime. But when NZ was included in an international crime survey in 1992 – a study relying on random telephone numbers – we had the highest rate of victimisation for assault and threats and the second-highest rate for assault with force. And that was before the peak in 1995 when convictions for violent crime hit 16,778, close to double the 9548 convictions for violence in 1988. Not only is there more violence than a decade ago, but as Ministry of Justice researchers found, the type of violence is more serious than in the 1980s. And what most concerns those in the field is that every year the culprits get younger. Paradoxically, this rise in violence is accompanied by a growing abhorrence for the type of violence society often sanctioned, such as caning in schools or smacking children at home. In 1996, a Victoria University criminologist led a team looking at the victims of crime. It found that – rather than the entire country drowning in a tidal wave of violent crime – a particular segment of NZers are being repeatedly victimised, accounting for 86% of the violence.'

... Repeat victimisation is a key finding in the first national survey of crime victims made public yesterday. The survey found that [guys and gals] were equally at risk of violence, although [gals] were more likely to be assaulted by a person they already knew. Multiple violent victimisation was common, particularly among Pacific Islanders, and Maori and Pacific Islanders were more likely to be victims of violence... Almost a quarter of Maori... [gals] had to be treated by a doctor after partner abuse, [whereas only 7%] of non-Maori... sought help... but... 94[% of all gals] with recent partners reported that they had experienced at least one type of controlling behaviour... The survey found that one... [gal] in 16 would be sexually violated, and one person in five would be the victim of some type of assault. More than half of all violent offenders were thought to be under the influence of alcohol... [Overall,] the average rate of victimisation was estimated at 0.74 offences a person. However... offending was not spread evenly over the community... [6%] of victims of violence and sexual offences suffered 68[%] of such offences, an average of 12 offences per victim... "The consequence of crime prevention efforts targeted at repeat victimisation would be, at least, to spread crime more evenly throughout the population and thus to dilute its impact on any one individual," the survey says... Sponsored by police, the Ministry of Justice... the Department of Social Welfare, the Crime Prevention Unit, and[some other] Government ministries, the survey was done to provide a measure for crime victimisation, including the extent that offences are reported and recorded, perceptions and fear of crime, and the needs of victims.

... A claim that their [guys] are bred to be macho has angered prominent members of the Samoan community here who say that violence is not condoned in their culture. During a High Court trial in Auckland this week of two Samoans who jumped on a [another guy]'s head, a defence lawyer... said young Samoan [guys] were taught not to turn from a challenge... [and] her client... a 19-year-old member of the Bloods gang... [- who] was jailed for [4 1/2] years for the "cowardly and shameful" attack on a helpless, unconscious young... [person -] had grown up believing that macho culture was acceptable... [The lawyer] has repeated her claim that machismo is rife in Samoan culture, telling the N[Z] Herald that young Samoan violent offenders were over-represented in crime statistics... The Samoan community... [is, however,] divided over whether cultural breeding... [causes it. A Samoan] barrister... was taught to box and wrestle by his father when growing up in Otara, and was told by... members of his family to "throw the first punch," to defend his pride and honour... "If there is going to be a fight, why wait for someone to hit you? That is the attitude. Running away is not an option as you look like a coward." ...[the barrister] is dealing with the implications of "this macho attitude" every day as [the barrister] represents young Polynesian [guys] in the courts. Re-education is vital. Samoan elders needed to declare "enough's enough," convincing parents and the community to condemn machismo, [the barrister] said. But a... Samoan high chief... who is also a South Auckland barrister, said Samoan [guys] are taught to defend themselves – possibly to throw a punch if hit first – but that is it. "...that happens with any race."

...[Pacific Island church ministers are responsible for abusing "more than a few" gals who seek help from Gal's Refuge. Its chief executive said the case of a minister and his wife jailed for two years last week was a "wake-up call" to the Samoan community. The pair were found guilty of 22 assaults and neglect and cruelty towards eight children adopted from Samoa. The Samoan Council chairperson said NZ's court system needed to educate itself on the Samoan ritual of ifoga (forgiveness) when sentencing Samoans for violent crimes. But the chief executive said rituals such as ifoga often made it worse for Pacific gals. "They find the pressure from their family so overpowering that they stay silent for years. I think the chairperson could better direct his advice to his own Samoan guys to stop immediately their ugly behaviour towards their partners and children." More than 1000 Islander mothers and children sought refuge last year. The two Pacific Island refuges in Auckland were always full, "and the people there tell of horrific stories of abuse, physical and sexual. On more than a few occasions the victims have mentioned church ministers as being their abusers." Incidentally, a] **Maori Labour list MP... says many Maori [guys] consider violence to be a normal form of communication. "Proud of their macho image, too many Maori [guys] want to dominate their partners through violence... Maori must have the courage to address domestic violence within their whanau."**

...The film... *Once Were Warriors* shocked a lot of people with its portrayal of violence in a Maori family, but... that portrayal was pretty real... Maori children are 12 times more likely to be admitted to hospital with injuries caused by abuse than other[NZ] children. - 1997

A report, Maori Family Violence in Aotearoa, shows Maori are overrepresented both as victims and perpetrators of family violence... The research was carried out to find what contributed to Maori family violence, its effects and traditional methods used by Maori to address it. There was a lot of debate among Maori over the forms of social control which existed before Europeans came. The report says there was a system to deal with family violence. "Many marriages were arranged to secure land, tribal alliances or strengthen blood ties. A slight or attack on one member of a hapu could therefore be considered an attack on the hapu. The family would then remove the battered [person] back to their hapu and in some instances retribution would be sought... [If the victim was a gal,] retribution could be swift." However, today the collective consciousness of Maori has changed to one of individual consciousness. The Maori community's ability to impose and enforce sanctions against its own people has gone, and in its place has come the practice of shielding the violence and the abusers from possible state intervention. Turning a blind eye has replaced direct intervention. "Although a lot of people know there is violence in the family... nobody really talks about it and they accept it as a fact of life..."

...Maori [guys] who abuse their families should be publicly shamed, says the president of the Maori [Gal's Welfare League. The president]... told... the International Congress on Child Abuse and Neglect... conference in Auckland yesterday that statistics showed 38[%] of young Maori[come] to the notice of welfare officials because of emotional, physical or sexual abuse and neglect... "Poor health, poor education, poor housing, poor social services, poor everything are a reason – but not a good enough reason for us to abuse our children." ...[Island leaders at the conference said] scrutiny of domestic violence in the Pacific is long overdue. They have welcomed a five-year... study into abuse in the Pacific Islands... paid for by the UN] Fund for Population Activities... The Samoan Advisory Council chair[perso]n and Pacific Safer Community Trust spokes[perso]n... said violence

had become ingrained in Pacific communities and culture but there was no excuse for abuse. [The spokesperson] warned that researchers working on the... study would encounter a [guy]-dominated society that saw nothing wrong with violence. That could potentially make the violence worse if [offenders] reacted stubbornly to the outsiders...

Last night, when the 1200-plus delegates and 500 speakers from 52 countries packed up their papers and prepared for the trip home after the 12th International Congress on Child Abuse and Neglect, they would have been well satisfied. Because... among the depressing sordid stories, the professional infighting, overheated photocopiers and endless stuffed croissants... there... was a clear message. To save the children, to stop the abuse perpetuating itself generation after generation, we must intervene early. Speaker after speaker reiterated the same formula... Late on the last afternoon of the conference, a different sort of delegation arrived to add its mana to the occasion. These were people who did not get the kind of help... described. Headed by a... inmate from Mt Eden Prison[, their]... message was one of thanks to the delegates for their efforts in trying to eliminate child abuse and neglect. Their poem, recited in Maori, was heartfelt: *"The sun is like a bright morning star That we will awake to see, One day we will rise above And break these shackles free."*

...Even the most fearsome Maori warrior impressed early explorers and missionaries by the tenderness ...the... supposedly blood-thirsty savage... lavished on his children. "They are kind and hospitable to strangers and excessively fond of children," wrote the artist Augustus Earle in 1827... Yet a[s we draw near to] the start of the 21st century... [- and while] the proportion of N[Z] children hit regularly by adults has dropped from around 90[%] to only one in three in the past 40 years... [-] Maori are abusing their children at three times the rate for European N[Z]ers, and almost twice that for Pacific Islanders[(the abuse rate for Maori is 1.23%, compared with 0.72% for Pacific Islanders, 0.42% for Europeans and 0.12% for Asians)]... Maori and part-Maori children, who are 24[%] of the country's... population aged 17 and under, account... for 47[%] of those accessed... by C[YF]S... And in 1997, according to Health Ministry figures, child abuse claimed the lives of five Maori aged under 15 compared with 12 children overall... A[n a]nthropologist and Maori Language Commissioner... is lost to explain the rash of violent deaths inflicted by Maori on their most precious but vulnerable taonga – their children... [A]n 1862 report by a native schools inspector[said] that Maori were shocked by beatings teachers meted out to their children and were withdrawing them from school. Despite the exaction of utu (revenge) against adult miscreants to maintain the balance in tribal and inter-tribal relations... physical punishment of children was unheard of in traditional Maori society. Rather than confusing discipline with punishment, the overriding priority was to nurture the heart of the harakeke (flax plant) to guarantee new life for the tribe.

...Child abuse was once alien to Maori, claims the Minister of Maori Affairs... Although Maori children in the 1990s were over-represented in abuse statistics, in the past they had been born into a "golden world of affection," [the minister] said... citing anthropological research... "Children were loved and indulged, especially by their nannies. Benevolent child-rearing practices persisted into the first half of the century,"... The... professor of Maori Studies at Auckland University, said the first Pakeha missionaries and explorers had reported tender treatment of children. At that time Pakeha children were often hit, while Maori children were cosseted and spoiled, although they were said to be polite and happy. "What the minister says is historically accurate and that is something that makes me incredibly sad." It was common for Maori heritage to be dismissed as having little to offer in a contemporary world, but this was wrong, [the professor said. A retired professor]... formerly of Auckland University, said... abuse had been extremely rare... and... [the retired professor] had never come across historical accounts of sexual abuse... But the head of the Maori [Gal]'s Welfare League... said grim statistics showed that the abuse now afflicting Maori children was more relevant than a historical debate.

...At a depositions hearing this year, a pathologist said... Mereana Te Mana Motuhake Edmonds... had suffered three major brain traumas before her death, caused by a lack of oxygen to the brain. One, from a severe blow, was received about two hours before... [the little girl died. Mereana] was a happy little girl who lived most of her six years with her beloved Nanny in Hawkes Bay. Then [Mereana] went to stay with her mother – and her life turned into a living hell. From almost the moment [Mereana] arrived to live in Hamilton in December... Mereana was brutally bashed, punched, slapped and kicked. [Mereana] was rarely without bruises, her collarbone was broken and her ribs were fractured. As punishment for wetting her pants or bed, the little girl spent nights locked in a dark shed outside her house or was violently slung into the wash-house. [Mereana was once] kicked so hard [the little girl] lost her sense of balance and was unable to walk around the house without hitting furniture or walls. [Mereana] was often picked up by her hair. Once, [Mereana] was slammed backwards into a hard object with such force that her brain rebounded off the front of her skull. Mereana almost escaped her abusive world. In May last year, plans were made for her return to Flaxmere to live with Nanny. But too late. On May 10... Mereana was found dead in her Hamilton home. Yesterday in the High Court at Hamilton, her mother... aged 32, was jailed for five years on a charge of [humanslaughter. The mother's lesbian partner, aged] 31... was jailed for 18 months on a charge of cruelty to a child... [The judge acknowledged the mother's] psychological problems contributed to her actions. Mereana died as a result of violence. [Mereana] was also conceived as a result of it – [her mother] was raped at 26. In normal circumstances names of rape victims are suppressed, but... [the judge said that] in this case [the mother's] name could be revealed because a charge of rape was never laid. Despite the lack of a criminal conviction, the court accepted that Mereana was conceived by rape. The third of eight children, [the mother] became a solvent abuser at the age of 10 and later a repeat offender[– having starting to live] on the streets after leaving school in the third form. [The mother] has 48 convictions – ...five for assault... Most of her siblings have also been through the courts. A brother in the Mongrel Mob was recently jailed for 10 years... In court yesterday, her lawyer... said [the mother] had conflicting feelings for Mereana. On one hand, [the mother] felt motherly emotions and affections. On the other, her personal problems, especially the rape, made it difficult to care for the little girl... Mereana was enrolled in Hamilton East Primary School. But the school was troubled by her behaviour. On hot days [Mereana] would arrive wearing full-length clothing, then refuse to go swimming. [Mereana] was sometimes too scared to get off the school bus to go home, and would cling, crying, to the legs of one of the teachers. The school notified Child, Youth and Family Services. [The school's b]oard of trustees chair[perso]n... will not say what follow-up came from that call, or how many times the school called CYFS, but is confident the school acted appropriately. But sources told the *Weekend Herald* that CYFS made one call to Mereana's home to ask if there was a problem with her care, and was told by one of the accused that all was well. No other call, no home visit and no follow-up were made. CYFS will not discuss Mereana's case except to say its actions were "appropriate" and would not be reviewed – a decision made by [the] chief social worker... with the Commissioner for Children's backing. Asked if a single phonecall to one of the people alleged to be abusing the child was appropriate, a CYFS spokesperson was "not sure if we're prepared to comment on that."

...The Commissioner for Children will investigate how... CYFS... handled the case of a 6-year-old Hamilton girl beaten to death by her mother... [The commissioner] would also talk to Mereana's school and other groups which had contact with her.

...LITTLE Mereana Edmonds' tragic death may save the lives of other Kiwi kids... Since her [mother's] jailing, nine days ago, the number of cases of suspected child abuse reported by schools to social welfare has rocketed... "There is greater awareness by schools and that is important because we see the kids more than anybody else outside their families," said... [the] principal of Peterhead School, [where]... Mereana had attended... before being moved to her mother's home in Hamilton... [The principal and hi]s teachers had been devastated by Mereana's death. They [also] had to explain to her classmates what happened... Mereana was remembered in a march against child abuse, held at Hamilton on Friday.

...[THE] SOCIAL welfare minister... has vowed to prevent any other youngster dying a horror death like little Mereana Edmonds... [The minister] is chairing a top-level committee of ministers determined to stop child abuse deaths. It includes [the ministers of] health... police... justice... corrections... and... Maori affairs... The ministers will order their departments to work together to end the sickening crimes. N[Z]ers have been appalled by recent child abuse cases, including Wairarapa toddler Hinewaoriki Matiaha, who died after being beaten and sexually assaulted. [The

police still haven't arrested anyone for Hinewaooriki's death, and are shocked that her killer is being protected by family members.']Concerns have been raised over whether the Child, Young Persons and their Families Agency (now Child, Youth and Family) could have prevented the tragedies.

...Three people appeared in the Masterton District Court yesterday charged in connection with the fatal abuse of toddler Hinewaooriki Karaitiana-Matiaha of Carterton... [A] 28-year-old mother of five, her brother... an unemployed 31-year-old, and... a 27-year-old beneficiary, were led into court each handcuffed to a police officer. All three live in Carterton and the [28-year-old and 27-year-old] are aunts of the 23-month-old... nicknamed Lillybing[, who]... was delivered dead to Masterton Hospital... The charges are: [hu]manslaughter by failing to provide medical attention for a life-threatening brain injury; failing to provide the necessities of life, namely medical attention for genital injuries whereby the child's life was endangered... for a haematoma to her forehead and a full-thickness of skin burn to her face and head... and three charges of wilful ill-treatment likely to cause suffering, including scalding... The three were remanded in custody... Applications for bail were rejected by [a JP]...

Lillybing, the 23-month-old toddler shaken to death by her aunt... could have been saved from her brutal fate. Previously suppressed court evidence shows that [the aunt], who yesterday pleaded guilty to the [hu]manslaughter of her niece, asked for help several months earlier... [as it] had "had enough of bashing Lillybing" and "was afraid [it] might go too far." The family decided to send the little girl to her grandmother, but a month later Lillybing was crying for the aunt who once breastfed her. The grandmother... then told [the aunt]: "This bloody kid's fretting for you, take her." Within two months, Lillybing was dead. According to the evidence, the family had agreed that no one else needed to know about the abuse.

...[the Government] would oppose any attempts to introduce mandatory reporting of child abuse, [the]Associate Social Services Minister... said last night... [The associate minister said o]verseas experience was that mandatory reporting brought a big increase in the number of cases notified to the authorities, but most of the allegations turned out to be unsubstantiated. "We don't want to have our officials spending time investigating abuse allegations that aren't true." ...Mandatory reporting also discouraged people from seeking help for abused children because health professionals were required by law to report their suspicions... "If there's anything that makes me feel more sick, it's the idea of a child being beaten and not getting any treatment." ...Much better ways existed of getting every potential abuse situation looked at, [the associate minister] said.

...Parents whose children have more than 10 accidents before they turn 5 will be investigated for child abuse the next time they seek medical treatment for the child. The decision follows [the Accident and Compensation Corporation]'s discovery of 236 children who have each been the subject of claims for treatment for more than 10 accident injuries in the past five years. In the most disturbing case, there were 52 claims for one child. Such cases will now be referred to the [CYF] for investigation... The service is also negotiating with the Royal College of General Practitioners to set up a similar link that may help identify child abuse cases. Other organisations with access to children, such as the Education Review Office, are also being targeted as potential sources of information to identify abuse... The move to exchange information between Government agencies is part of a surge of initiatives to fight child abuse after several highly publicised deaths. The report into the death of 4-year-old James Whakaruru by the Commissioner for Children prompted ACC to search its records last month... [The] Children's Commissioner... felt "quite chuffed" that the... new protocol linking ACC and CYF... had stemmed from his... report. "Someone has sprung into action - little James Whakaruru's life has amounted to something after all." But [the commissioner] criticised doctors who have treated children suffering signs of abuse and failed to notify anyone of their concerns. James... had seen doctors 40 times before... finally[being] killed by his stepfather. "How can you repeatedly treat the wounds of a child that are suspiciously non-accidental, then remember to claim ACC for your work, but forget to tell anyone that there is possibly a child in trouble? ...If you claimed insurance for your car 40 times in five years, the insurance company would be asking you a few questions. Why shouldn't doctors?" ...However, the... Minister of Social Services... said that... it was difficult for doctors always to recognise the signs of child abuse...

Will the horrific death of James Whakaruru finally galvanise us into living less violently, and intervening to stop violence when we suspect it? Those are the questions being asked by remorseful doctors, social workers, police and probation officers after... the Commissioner of Children[']s... damning report on James' death... [The c]ommissioner... yesterday described his investigation as one of the most significant [his office] had done. "It was investigated at my own volition because I couldn't stomach the thought that a young [guy]... went to prison in 1996 for so severely beating a 3-year-old and then came out of prison after two years and beat the same boy to death before [it] could go to school at 5,"... [The guy, now] aged 21, was sentenced to 12 years' imprisonment... for James' [hu]manslaughter. James was punched, kicked and beaten with a steel vacuum-cleaner pipe and a jug cord for refusing to call [the guy] "Daddy." ...None of those who saw James during his brief life of just under five years feels comfortable, in retrospect, with the way they collectively failed to do anything to save him. "It has certainly opened my eyes," says [the]urologist... who gave James an emergency circumcision when his mother brought him in with a torn penis... [when the boy was] aged almost 4. At the time, [the urologist says, it] accepted the mother's explanation that "[James] was playing with some of the other boys and it somehow got cut." [The urologist] has now decided to refer any child with a genital injury to Hawkes Bay Hospital's paediatric non-accidental injury team to check for child abuse... [The] CYF... chief social worker... is... astounded by the number of times just about every agency that came into contact with James failed to carry out checks that were legally required. "We couldn't have designed a scenario that had that many corporate failures." Each agency is now committing itself to make the most of the changes that... [the commissioner recommends. The chief social worker] is trying to ensure the rules are followed, partly by centralising all calls to CYF... offices in an Auckland-based call centre where 30 social workers will handle all calls about possible child abuse. There will be a toll-free number, 0508 FAMILY, and publicity to encourage anyone who suspects child abuse to ring... This will be aimed particularly at... GPs... because [CYF] is concerned that they notify less than 1[%] of all child abuse cases... But the doctors and welfare agencies are just those who bind up the wounds after people get hurt. The bigger questions raised by James' death are: Why do so many of us turn to violence so easily? And when the rest of us suspect that someone is getting beaten up, why are we so reluctant to intervene?

...The mother of James Whakaruru... is daily being judged by people with no understanding of what [it] went through herself, says her uncle... [His niece] had slit her wrists 10 days before James was born in 1994[when] aged 15. Her partner at the time, James' father... says they had just broken up. "I told her, 'F... off!'" ...In a letter to the *Herald* this week, [the uncle] described the shock of learning about James' death. And... had a message for those who criticised the family for having failed to protect the boy. "I pray... that the writers of the articles who apportion the blame to the parents and families of James do not suffer any similar tragedy... James' whanau were not absent in his short life. For me, I was later and I assumed that so much was being done for my moko and my niece. A similar assumption was made by others in the judicial system, social services and medical profession, resulting in not one but two victims being left totally isolated and unprotected... These judgmental comments have... resulted in... [m]y niece... becoming the worst type of outcast viewed by our society and... is being penalised constantly and will be throughout her lifetime. [James' killer] will get another chance in 12 years or less if paroled..." Inquiries by the... *Herald* have revealed that a cut-price Hastings medical centre that treated James nine times... between October 1995 and March 1997... mistook him in its... computer... records for another child... with the same birth date who visited the centre twice in April and July 1995. And it never alerted... [CYF] or any other authority to the possibility that [hi]s... injuries were being caused by child abuse, because [James] was seen on his nine visits by... at least six different doctors... so no one doctor saw the pattern of injuries. The centre... manager... says... "I personally would never remember him. I only saw him once and very fleetingly."

...On the day James Whakaruru was beaten to death in Hastings, the hell was just beginning for a bright, happy 7-year-old on the other side of the world... [A]s James' battered body was buried, Ivory Coast girl Victoria Climbié was brought to England by her great-aunt for a better life in

a golden city. Less than a year later [Victoria] died, miserable and lonely. The pathologist counted 128 injuries on her tiny, malnourished body. [Victoria] had been burned by cigarettes and beaten with bicycle chains, football boots, coathangers and a belt. Boiling water had been poured over her and her toes had been smashed with a hammer. [Victoria] had been bound hand and foot and left naked in a bathtub in a dark, windowless bathroom, sitting in rubbish bags, in the middle of winter. [Victoria] was fed cold food on a piece of plastic, which [the girl] could eat only by pushing her face into it. [Victoria] lay in her own faeces and urine, sometimes for more than 24 hours. Finally, [Victoria] froze to death... "To say [Victoria] was treated like a dog would be wholly unfair," said [a] lawyer... last week as a public inquiry began into her death. "[Victoria] was treated far worse than any dog." What is equally disturbing is the number of times Victoria's case was brought to the attention of the authorities – local councils, social workers, police and health workers and local churches. Many of the dozens of people who saw her suspected abuse, but each time [Victoria] was sent back to her tormentors, her... 44-year-old... great-aunt... and [the aunt's] 27-year-old boyfriend... Just hours before [Victoria] died... social services inexplicably closed her case, satisfied there was no longer any concern for her safety. Now her name, like James', has been inscribed into a country's conscience. It has been called the most horrific case of child abuse in Britain's legal history. The chair... of the inquiry... said it had sent shockwaves through the nation and a wake-up call to social and health services. "I hope something will come out of this which, in respect of at least the memory of Victoria, will ensure that the safeguards for children in this country will be strengthened so that tragedies of this kind do not occur again,"... Like James, Victoria was failed on three levels – by her abusers, by those who failed to intervene and by a system that allowed her to fall through the gaps... The inquiry has identified at least 12 occasions on which Victoria could have been saved... Victoria's mother... who thought [it] had done her best for her child by sending her away from the poverty of the Ivory Coast, says the authorities should have prevented the murder. "It is as though they were complicit somehow because, if they had done their job, my daughter would not be dead... Today this has happened to me but tomorrow it could happen to somebody else." Two days before Victoria died, far away in Carterton, N[Z, an aunt] admitted to a local kuia [it] had been hitting her niece, Lillybing... ■ [Lillybing's]... mother... tried to kill herself... just hours after learning that her step-sister... had admitted killing the girl... [T]he 23-year-old mother of two more children – one the subject of a custody battle and one left with her mother – is lying low in the Wellington suburb of Wainuiomata to escape intrusion and gossip in Carterton... [The mother] had nothing to do with ...he[r] baby's death... and... was cleared by police... Meanwhile, [the]... police plan further questioning over... the sexual abuse of Lillybing.

...several hundred people marched through the Wairarapa town... [of] Carterton yesterday... in memory of Hinewaoiriki Karaitiana-Matiha.

...On Wednesday... Tangaroa Matiu did not jump out of bed like most 3-year-olds. After his hiding the night before, [Tangaroa] was probably aching. Certainly [Tangaroa] was terrified. Only when his de facto stepfather... called did [Tangaroa] limp to the toilet, desperately trying to hide the fact that... his pants... had[been] messed... Minutes later, while [Tangaroa] was frantically cleaning his faeces from the toilet seat, the short but powerful [stepfather] spotted him. As [the stepfather] would tell the police later, [it] was mad, ropeable. "There was kaka – shit – all over his pants, all over the toilet... I told him [you're] really going to get it this time." [The stepfather] meant it. After a few slaps to Tangaroa's head, [the stepfather] grabbed one of his favourite weapons, the orange plastic toilet brush. Seizing it by the brush end, [the stepfather] whipped Tangaroa so hard that the tough plastic curled round his thin legs. "...You shouldn't kaka your pants, you naughty little boy..." While the child cowered on the toilet, [the stepfather] padded to the bedroom [it] shared with Tangaroa's mother... for the white-painted four-by-two-inch veranda paling... used on Tangaroa three days before. The... pathologist's evidence would show that over the next 20-odd minutes [the stepfather] hit the child around 100 times. Favourite spots were places that hurt terribly but would not kill – feet, hands, back, knees, shoulders, scrotum – until [the stepfather] miscalculated and whacked Tangaroa's head so hard that blood splattered the toilet walls. When the child's bottom slipped into the toilet, [the stepfather] hauled him out and hit him again. When the boy's mother came down the hall, far from saving him, [the mother] slapped him a couple of times too, then stepped back to let her boyfriend carry on. Only once did [the mother] say, "That's enough." Next [the stepfather] lifted Tangaroa out of the toilet and carried him by the scruff of the neck to the shower... Tangaroa, who had been systematically beaten and tortured for months, lay moaning in the empty bath, in his own blood and faeces, and started to die... Over the next hour and a half, [the stepfather] attempted to dress the boy's wound with sticky tape, forced sugary water down his throat until [Tangaroa] vomited, listened to his raspy breathing and watched him bleed to death. [The stepfather] refused to get medical help. When Tangaroa stopped breathing, [the stepfather], a confident first aid graduate, attempted CPR. Throughout Tangaroa's ordeal, his mother mostly kept away... Only when [the mother] could see that [her boyfriend's] efforts at CPR were not working did [the mother] drive to the phone box to call an ambulance. The death of Tangaroa Matiu is a glimpse into an ugly underbelly of urban life. This is a world where girls get pregnant at 15 and hand their babies over to their parents. Where, by their 30s, many have several children by a series of [fathers] and move between rented houses with a restlessness born of shattered lives. Where one of the biggest drawbacks for a [guy is a gal's] domestic purposes benefit. Where almost everyone has clumsy blue tattoos – the badge of jail or the streets – on their hands. Where tough brutal childhoods are routine. Tangaroa... died at... a Hardiplank house down a right-of-way in a small development at the tip of the Northwestern Motorway. The local school is shabby, dilapidated. Police cruise the streets, kids wave at strange cars. While five minutes up the hill people lead the good life in smart homes with addresses such as Picasso Place, down where Tangaroa and... his 8-year-old brother... lived life is impossibly grim. It was not always this way for Tangaroa. [His mother's] fourth child by a third father, [Tangaroa] was her signal to get away from violence that had started... when her mother knocked her baby teeth out. By age 13... [the] third of six children, was drinking heavily and regularly running away from home. A year later [Tangaroa's mother] gave birth to [her first son], who was taken away by her parents. Next came [a daughter] – this time to [a] Mongrel Mob member... who knocked out [Tangaroa's mother's] second teeth, pulled knives on her and shot her in the thigh. After eight years, two children, 20-odd breakups and spells with [the Mongrel Mob member] on a coastal trader, that relationship ended too. [The Mongrel Mob member] was granted custody of their children... and soon [there was] a new baby, Tangaroa, from a short affair. Tangaroa was special, according to his mother... [The mother got] a job at Tegal[Chicken] in Henderson and[began] studying business administration... [Then the mother made a friend who's] brother... was fresh out of prison... The brother seemed to offer a chance of a serious relationship. Within a month, [the ex-prisoner] had shifted... in... with her... and the boys... And the hell began. On the old heater, dubbed the "naughty seat," Tangaroa was made to sit while [the stepfather] drew his knuckle down so hard over his forehead that his eyes went black; hidings in... [the] laundry where the child would emerge, nose bleeding and bruised, leaving handfuls of hair on the floor. And no one came to his rescue. Says [the stepfather's sister], who brought her own beautifully dressed children to court: "It's her kid... [Tangaroa] was a really naughty boy... [His mother should have go]t off her fat bum and... discipline[d him]." The stepfather... took over the "discipline" of the boys, becoming obsessed with Tangaroa's toilet training. The brother's were separated, kept in their rooms, banned from playing with their toys. Tangaroa was forced to stand for hours, face to the wall. His mother... was not even allowed in his room. "[My boyfriend] said I wasn't tough enough, that I was always trying to save my boys' arses." ...[the p]athologist... detailed "a minimum of 300 bruises" on Tangaroa's small body... inflicted over weeks. It was not just the head wound that killed him, it was the blood from his battered arms and legs which collected in his soft tissue and was lost to his circulatory system. Almost worse was the psychological hiding that the little boy suffered, shut in his room, waiting for his torturer to arrive... [N]either Tangaroa nor [his brother] screamed... They knew from experience that it would mean more violence – and that no one would come. For once, this was not a systems failure. Doctors, police... and [CYF]... were strenuously avoided, not just by [the stepfather but by Tangaroa's mother] too... The family [had beco]me increasingly isolated. Visitors were warned off, there was no phone – family visits – even to [the sister's] house, ceased... Only

the Corrections Department had contact. Throughout the abuse, [the stepfather had] attended Straight Thinking – a \$7.1 million course designed to teach social skills including apologising and negotiating rather than... acting aggressively. Presumably – the service refuses to comment – his tutors were satisfied with his progress. Throughout the trial, while [Tangaroa's mother] – who pleaded battered [gals'] syndrome – cried intermittently, [the stepfather] sat implacable... in the dock... in his dark suit, bottom lip loose, staring straight ahead... Only his lawyer... g[o]t... a smile: "D'you think I look great...? Not too formal?" "...you look great..."

...It should have been a huge success, riding on a wave of unprecedented public support. A member of the family of a slain boy holds the child's picture and tells the camera that abuse of our young people has got to stop. Instead, the hard-hitting advertising campaign, intended to raise awareness of child abuse, is in embarrassing disarray. The newly formed Children First Foundation's founders are devastated after allegations that the [guy] fronting the ad abused his own family, and the name Whakaruru seems even more stained than it was. [A]TVNZ newsreader... who heads the foundation... was yesterday in tears wondering how something so worthy had backfired... Mr Whakaruru admitted that [it ha]d abused his family and pulled out of the campaign. TVNZ has withdrawn the ad featuring him at the foundation's request...

Save the Children usually conjures up heartbreaking images of skeletal [Last] World children wasting away from disease, famine and drought – a long way away from our doorstep. Now the organisation is stepping in close to home, to help to stop the child abuse plague affecting N[Z] children. In the first venture of its kind, Save the Children N[Z] and the National Collective of [Gals'] Refugees have banded together to help break the cycle of violence. Save the Children will dip into the money it raises from its annual appeal, which begins next Tuesday, to pay to enhance the training of refuge workers to identify at-risk children and to make sure they receive the support and care they need... The Commissioner for Children... said the venture was great news. "This sort of initiative is the positive extension of the horror being expressed about child abuse and neglect by N[Z] society now." More, similar initiatives would occur as adults became as outraged about child abuse as the victims of child abuse had a right to be. □ To donate to the Save the Children N[Z] annual appeal, telephone 0800 167-168.

...Youthline is warning... Auckland residents about making donations to bogus collectors. The group, which provides services for youth, including a helpline holds its annual appeal week until Sunday and has issued... stamped, self-addressed envelopes to be posted back, a[s] there are no door-to-door collectors... To make a \$20 donation to Youthline phone 0900-YOUTH (0900-96884). To make a \$2 donation by text message from an 021 or 029 mobile, enter DON8 and send it to 3668. Youthline will send a "thank you" message in reply. The youth helpline is 0800-376-633.

...a system to track all children from birth is the key recommendation of a report compiled by the former Principal Youth Court Judge... The... Judge[, who] has suggested that options to track and share information about children at risk be investigated... said yesterday that a register of all children in N[Z] seemed the best method... In Britain, concerned doctors and other health professionals involved in a child's welfare could check with a central child protection register managed by each local authority... [the judge said. Hi]s report was commissioned in response to a spate of deaths... of children who had come to CYF[s]' attention... *Herald* records show that at least eight children were killed last year... The Minister of Social Services... said the patterns of child homicides had not changed over the past 30 years, averaging seven or eight a year. Just over half the children killed in the past decade were Maori. While recent improvements were already having some effect, it could be years before statistics would tell a new story... [the minister said. In international news, AUS]'s Catholic Church, damaged by long-running allegations of child sexual abuse, has drafted a national code of conduct for clergy and religious staff aimed at restoring its credibility. The church will now seek comment on the document, Integrity in Ministry.

...[Canadian Indian children at a Catholic boarding school in Ontario were tormented with physical and sexual abuse and forced to wear their soiled underpants on their heads, while others had to eat their own vomit, the *Globe and Mail* newspaper reported. "Eat like a dog," a former student was reportedly told by one of the nuns who ran the school, which closed in 1973 and is now under investigation by the attorney-general. The attorney-general, who began his investigation into the Sainte Anne boarding school three years ago, was "absolutely shocked" by police reports on the school and said it would seek to prosecute those responsible. However, his calls for prosecution have met with some resistance, with some believing only a higher power can punish "servants of God". The school was operated in the small community of Moosonee from 1904 by missionaries. Hundreds of Cree and Ojibway tribe children were allegedly abused by the Grey nuns and the nuns of the Olbate order, according to the paper. Among the 900 people questioned by police, many accused boarding school officials of rape, sodomy and said children were lashed with wire whips. There were even reports of a crude homemade electric chair used to administer electric shock. Parents who sought to pull their children out of the school were reportedly threatened with the end to their social benefits. "This was our holocaust," says one of the alleged victims, who added "they did not kill us physically, but they killed us emotionally and spiritually.""]

...Red Indian camps and other "fun" activities were the happy hunting ground for paedophile Chief Winterhawk. The [Maori]... abused no fewer than seven boys and you[ths]... over 13 years. His council said... that[by] being tohunga... the... [Maori] was regarded as sacred, and youngsters known as "Koro Boys" were obliged to sleep in his bedroom to safeguard his tapu and keep [gals] away... "In keeping with traditions, young boys were selected to encase him physically and spiritually to protect not only his tapu but also others who would unwittingly touch him and thereby expose themselves to possible harm..." ...Yesterday, in the High Court at Auckland, the honorary Indian chief, church minister and former Cub leader was sentenced to preventive detention after being found guilty on 12 charges and admitting a further eight charges of molesting... [boy]s.

...A FORMER Scout leader who ran a paedophile ring has now been accused of sexually abusing patients while [working as] an ambulance officer... with the Wellington Free Ambulance. Ambulance colleagues also complained [their co-worker] sexually harassed them, though [the offender] was never dismissed... [I]t was... his... [involvement] in the biggest scandal to hit N[Z]'s scouting movement... [-] exposed only when one of the former Scouts broke a 14-year silence last September... [- that caused the ambulance officer to eventually appear in court. The ambulance officer, who] joined other Scout leaders in handpicking boys and plying them with alcohol before abusing them... has admitted five charges of sexually abusing children between 1981 and 1985 in the... coastal town of Whithy... At least eight Scouts out of 20 were abused, although police believe others are reluctant to come forward. Police say some parents became suspicious and notified Scouting N[Z]. They say the accused] was asked to leave in 1985 after the parents threatened to go public. But, ironically, Scout bosses awarded him a plaque recognising his time in the service... Scouting N[Z]'s national secretary... said... a new code of conduct had been drawn up to protect children, there was greater supervision of Scout leaders and parents were encouraged to take part in activities. But leaders could still arrange meetings in their own homes... [The three offending leaders lived together, and] their... home... meetings... [involved stripping and bathing] Scouts... in a spa pool...

THE affluent town of Whithy has been hit by a second paedophile scandal after a TV boss pleaded guilty to sexually abusing young neighbours. [The 48-year-old], who ran Saturn's community channel in Wellington, abused three young children... at the same time[that a] Scout leader... was preying on youngsters less than a kilometre away. [The former TV boss], who is married with two children, [and]was the head of TVNZ's film library service until May 1996 before joining the cable TV station... babysat his neighbour's two children, plied them with alcohol and stripped them naked. [The TV boss] also took the youngsters, aged nine and 13, and their friend [on] camping trips where [the TV boss] performed oral sex[, and] organised trips to a villa in Lower Hutt where... there was only one rule... the boys... must walk about naked. The mother of the two boys[, who lost her husband before they]... moved to Whithy... told the *Sunday Star Times*... [her sons] tried to seek independent help but didn't know where to go. "They tried all the agencies, like The Samaritans, but there was no one set up then to deal with child abuse for boys. In the end they gave up. The reason they still went next door is because if they hadn't I would have started asking questions and they didn't want me to know. They felt guilty, as if what was going on was their fault." One of her sons, who now lives in England, confided in his partner last January. [His partner]

persuaded him to tell his mother. “I felt absolutely shocked, sick to the stomach... I immediately went to the police, who were wonderful... [Our neighbour’s] wife is absolutely devastated... [His wife also] didn’t know this was going on. [The wife] is just as much a victim.”

...*Health camp a place of sickness...* Children sent to a Government health camp have been bullied, sexually and physically abused by other children and left with behavioural problems, a *Herald* investigation reveals. A former staff member at the Princess of Wales Health Camp near Rotorua has accused its management of doing nothing to help children when told by staff of abuse. The camp staff are said to lack the skills needed to manage disturbed children. One girl who had been referred to the camp after being sexually abused at home was sent to hot pools for “sulphur steam therapy.” Her fear and shame were never addressed, the ex-staff member said. A confidential report written... by [a] Wellington psychologist... and obtained by the *Herald* said children at the camp were not always safe and sometimes went home with new behavioural problems. An earlier report, by University of Waikato psychology students last November, said children were upset by the bullying and sexual touching that went on – especially at night when there were few staff to monitor the dormitories. But senior management at the camp and the attached school, Te Kura Hauora, have either denied that any abuse occurred or refused to comment. The camp, financed by the Health Funding Authority and the Ministry of Education, is one of seven in N[Z]. Last year the authority said the camps were not a priority for finance and there were more effective ways to help children and families at risk. [The] Health Minister... and the Royal College of General Practitioners[have] defended the camps[, while the] commissioner of Te Kura Hauora, sa[ys] the alleged abuse never happened at the Rotorua camp. [The commissioner] was supported by [the school’s] head teacher... who told the *Herald* the camp worked together to make sure children with abusive tendencies were not admitted to the camp. [The person] who was camp manager for 18 years until le[aving two months ago], refused to comment. [Yesterday, the camp board chairperso]n... – who also oversees the other six camps – said it was not in the public interest to disclose the... report[s].

...It is a wet afternoon... and about 40 boisterous children aged 5 to 12 are crowded into a classroom, the air muggy with the warmth of their little bodies after playtime... [A] shy 10-year-old, is sitting on a small yellow chair, gazing out the window towards the playground, his friend... on the carpet at his feet. [The 10-year-old] has befriended the 6-year-old because [the little girl] is a loner like him and [the boy] protects her from bullies when they play outside. The school principal has praised him for taking care of the little girl, and [the boy] is proud of what [it] has done to help her. [The boy]’s attention is on the teacher, who has begun explaining the afternoon’s lessons, when [the little girl] turns to him, smiles sweetly and takes hold of his genitals. It is the last time [the boy] allows himself to get close to the girl, who has been to Rotorua’s Princess of Wales Health Camp twice before and has a history of sexual abuse. Teachers agree that [the little girl probably thought it] was doing something nice for [the boy] to thank him for his kindness, but the boy, who was admitted to camp because his sick caregiver needed a rest, is devastated. Despite the concerns of school staff, [the boy] gets no counselling and spends the rest of his days at the camp alone, keeping his thoughts to himself. A former staff member, who came to the *Herald* after deciding that [it] could no longer keep quiet, says incidents like this happen daily at the camp, attended by up to 50 disadvantaged and emotionally disturbed children at a time on five-week residential programmes. [The former staff member] believes that the camp is in crisis, a timebomb waiting to explode... [The] Children’s Health Camps board chair[perso]n... who oversees N[Z]’s six other camps at Whangarei, Auckland, Gisborne, Otaki, Christchurch and Roxburgh, said it was well known that the Princess of Wales Health Camp had problems[, but] told the *Herald* that airing those problems would only distress the people concerned... Some... insiders... fear that the day of the health camp – an institution founded by a gung-ho doctor newly returned from war in 1919 – may have passed. When Dr Elizabeth Gunn bet a Wanganui farmer that [the doctor] could put the blush back on the cheeks of malnourished children if [the farmer] supplied a patch of land for tents and enough meat and dairy products to provide three square meals, [the doctor knew it] was on to a winner. Soon [Elizabeth] was inviting children from all over the country to her camps for fresh air, sunshine, folk dancing and discipline. But the modern health camp is a much more complicated institution. Children are rarely sent away to gain weight but because there has been a tragedy in the family, they have a disability, need to learn anger management or are socially awkward. Put 50 children with diverse special needs together in one place and problems will naturally arise... [The] Education Minister is considering closing the[Rotorua] health camp and school after five scathing... Education Review Office... reports in three years pointing to financial mismanagement and sexual and physical abuse. A commissioner appointed to run the school... has made final submissions and the minister is expected to decide in a few weeks. Sources close to the school believe [the minister] will close it and are devastated. They say the problem lies not with the school but with the camp, where staff with no professional expertise make poorly informed decisions. They say the culture at the camp favours dismissing children’s concerns and taking a heavy-handed approach to discipline, punishing children who complain when hurt. They also claim that the school has never had input into the selection of children for the camp, meaning teachers are ill-prepared to deal with an increasingly challenging mixture of students. As for the camp, its HFA contract expires in the middle of next year. It is not clear what will happen, as the HFA announced last year that funding the camps was no longer a priority. Meanwhile, an uneasy standoff remains between the school and the camp, with children caught in the middle. [The school’s] principal... and her deputy... are on stress leave and seeking legal advice. Both taught at the school for more than 13 years and were regarded as excellent advocates for children. A third teacher left for a job in A[US and the] interim principal... – who says abuse has never happened at the school – is working with three part-time staff. [The camp manager recently]... left... after 18 years. The *Herald* understands that [the manager] did not leave voluntarily... Several assessments of the Princess of Wales Health Camp point to wider problems within the movement... The[needy children] know nothing about the problems... and they don’t care. They come [to the camps] for a bit of sunshine, three good meals and attention. Sadly, children like [the 10-year-old boy] are going home with even more problems on their young shoulders than they arrived with... [In related news, t]he legal age for sex should be lowered from 16 to 14 because teenagers are now better informed, says an Auckland lawyer. [The lawyer], who is representing a [guy] charged after allegedly having under-age sex with a 14-year-old girl, made the call for change after it was revealed that a 21-year-old [gal] swimming coach in Wellington could not be charged for having a sexual relationship with a... 1.83m... 13-year-old boy. The boy’s mother is furious that the swim coach, who works for the Wellington City Council, cannot be prosecuted. [The lawyer] said... the inequality in the law... needed to be eliminated[, but t]he real issue was whether 16 was an appropriate age for consent. Children under 13 needed to be protected, said [the lawyer], but children older than that should be allowed to make their own decisions... about when they had sex, and society’s attitudes had relaxed since the laws were last changed in 1961.

...The Crimes Act 1961[, which states that only guys] can be charged with indecent assault on boys... will be changed... [Gals] can be charged with indecently assaulting girls, sexually violating a boy by oral sex or anal penetration, but not with indecencies such as fondling genitals... The anomaly came to light after a 12-year-old was denied ACC-funded counselling after abuse by his [gal] babysitter, because the indecent assault was not an offence under law... [O]fficials would brief... the Minister of Accident Compensation... on whether... the minister... had the power to issue a direction that ACC finance the boy’s counselling... Rape Crisis said that in six years, nearly 300 [guys], 62 in the past year, had asked for counselling for abuse. A senior psychologist with... [CYF] said it was much harder for [guys] to report abuse, particularly if perpetrated by a [gal].

...Remember when children could be hours late coming home from school and cause little or no panic to their waiting parents? But if today’s kids are even an hour late alarm bells ring in the minds of worried mums and dads fearful their child may be the victim of, or involved in, crime. In the last four years 51,927 children aged 13 were held by police – a statistic that prompted calls to make 12-year-olds criminally accountable... Currently before the courts are six young people – one as young as 12 – charged with the murder of pizza delivery[perso]n Michael Choy. On the flip side... a number of youths now aged around 14 will duck trial and penalty after admitting the rape of a girl when [the girl was aged] between 6 and 8 years... □ A BOY of 11 will appear in [a British] court this week accused of the... rape of a 12-year-old[boy. The 11-year-old] is the youngest Briton to be charged with such an offence. The boy was 10 at the time of the alleged rape in Nottingham.

...A study that has rocked Britain shows brothers and stepbrothers commit more sexual abuse in the family than fathers and stepfathers. Their victims are usually younger sisters – and while N[Z] has no comparable study, experts believe we, too, may have a problem of sibling abuse... The study was undertaken by the National Society for the Prevention of Cruelty to Children, a charity that works with British Government social services. Its child abuse survey, one of the biggest done in Britain, [found]... that one in 10 children – mainly girls – had been forced into sex acts when they were under 16 by people known to them. In 43[%] of cases, the perpetrator was said to be a brother or stepbrother... [The survey] also found that a third of victims never talked about the abuse they suffered as children... The sexual acts included exposure, voyeurism, genital touching and intercourse. The *Guardian* newspaper quotes the survey's project leader as saying physical abuse was one of the most significant causes of sexual aggression in young people... [The person] who heads C[YF]'s specialist services in South Auckland... [agrees. M]ost adolescents in the [South Auckland CYF] treatment programme had been physically abused, some severely, and only a minority had been sexually abused... "What adult offenders tell us is that more than half of them started offending in adolescence, so we've got to deal with the problem early or it keeps going[," the head adds. The head believes]... sibling abuse for most people f[alls] into the "unthinkable" category and some families coped by tolerating it as "boys-will-be-boys" behaviour. The girl found it hard to tell on a person who probably had a lot of power over her and... would know her parents might believe her brother if [the brother] denied the abuse.

...Boys sexually abusing their sisters is one of the most serious forms of child sexual abuse. But specialists say that in most countries it is ignored, though it is often more violent than other types and carries on for longer. Experts... say families and professionals in most countries – N[Z] included – sweep the problem under the carpet... by saying... sibling incest... was just "the games children play," or "that's normal behaviour," or "it doesn't do any harm." ...Parents tended to take the brother's side during childhood and later... Yet victims endured deep feelings of loss and betrayal... "The fact that the victim and the abuser have the same parents creates serious complications. The simplest response is to conceal the truth, a solution which does the greatest harm to the victim... Many of the [victims] had spent their complete childhood in constant fear and terror of a brother or brothers. In some cases this even continued into adult life." ...Also denied by society is the sexual abuse of daughters by mothers... Abuse by mothers, difficult to believe though not as common, took many forms... About 2 to 3[%] of... new clients the... Oslo centre... helps each year have been abused by their biological mother, and 8[%] by biological brothers... [S]tudies showed incest [rates were] similar in all countries.

...PRIMARY school parents are horrified a six-year-old sex pest is being put into their kids' classroom. The boy has been withdrawn from his South Canterbury school after five separate incidents in which [it] allegedly abused girl schoolmates. But attempts to place him into a Timaru primary school have been met with outrage. Timaru parents have held meetings to oppose the boy's enrolment and have threatened to withdraw their youngsters. The school is legally obliged to accept the six-year-old – who is too young to be charged by police... [T]he education ministry's Christchurch operations manager, confirmed staff were dealing with a Timaru family. [The manager] said children sometimes engaged in inappropriate behaviour. "...there's been some reaction. I suspect it was inevitable and understandable, but I'm not sure it's helped the process,"...

Five children under seven years old were suspended from schools last year for sexually assaulting other pupils... While there was a "fairly normal degree of sexual experimentation" among young children, precocious sexual behaviour teamed with aggression raised concerns about the child's experiences... Any sexually inappropriate behaviour "rang alarm bells" for schools as a possible indicator of sexual abuse... Schools were seeing sexually inappropriate behaviour more often... The president of the... Auckland School Trustees' Association, said schools needed to act in a way that protected both the young offender and other pupils. "...these children, for the sake of other children at the school, need to be removed until the situation is understood and under control." ...[By the way, a] Northland couple who say their son, aged 6, was raped by a 13-year-old they were fostering will today picket the Whangarei office of the social workers they say never told them about the teenager's history of sexual offending. The couple, who... cannot be named, as this would identify their son, who was 4 at the time of the offending... said yesterday that they promised not to take the C[YF] to court, as long as they got a formal apology... [T]he service's area manager for Northland, said her staff had reported to her that concerns about the youth were passed on to the foster parents. "At the time of the placement, they were fully discussed with the foster father..." ...[however, the foster father, who] caught the youth abusing his son... told the N[Z] *Herald*... "We... would never have taken him in if we had known. The results have been immensely painful for my son, and for the whole family. [My son has] been deeply affected, to the point where we've had to... home-school him." The foster child is now in a special unit for young sex offenders. Once the teenager was caught, a family conference was held, where [the teenager] was confronted by the extended family and forgiven. Last month the Commissioner for Children launched an investigation into why a teenager with tendencies towards paedophilia was placed with a Pukekohe foster family, where [the teenager] regularly raped a 2-year-old girl. The secretary of the Family and Foster Care Federation... said that social workers were not telling families about foster children's emotional, sexual or health problems. As a result, other children were being put in danger.

...ELEVEN foster children were placed in the care of [someone]... whose live-in fiancée is a convicted child sex offender. C[YF] admits it did not carry out proper checks on [the live-in fiancée – who] gave a false name to cover up his criminal past. The mid-Cant[abrian]... was last month found guilty of indecently assaulting an eight-year-old boy. The 28-year-old had three previous convictions for indecencies with boys under the age of 12...

A FORMER care worker[has been] charged with sexual assaults on 13 boys in Britain's biggest institutional abuse inquiry.

...Two [guys] were released early in the inquiry, but freed on police bail. Another [guy] from Liverpool was arrested and released without charge... [D]espite a huge police hunt and worldwide publicity, [Sarah] has still to be found... For the past two weeks Sara[h's mother] has been living every mother's worst nightmare. One minute her 8-year-old daughter... was playing happily in a field. Then [Sarah] vanished... The... family's existence has been shattered as day by day they are subjected to an ordeal of horrifying proportions. Sarah's predicament is unthinkable... The level of public interest has been enormous. It emerged that there had been a possible sighting of Sarah at a motorway service station 400km from where... [the] little girl... disappeared, and when police released a computer-generated image of the [person Sarah] may have been with, they were astonished by the response. Calls were coming in at the rate of 1000 an hour at their peak, some from as far afield as Israel and Greece... "We have been overwhelmed," said Sussex Police[']s Assistant Chief Constable... "All the calls are motivated by a genuine desire to help but obviously most turn out not to give us anything of value. But we would much rather that than no calls at all." The number of children killed by strangers in Britain remains at the same level as 25 years ago – between five and seven a year. But today parents are more frightened than ever of their children going missing, and it is rare to see a young child playing outside unsupervised. Britain's biggest-selling daily newspaper, the *Sun*, has offered a £50,000... reward to find Sarah, and her favourite pop band, Steps, recorded a special video message in the hope [Sarah] would see it. At one press conference, Sarah's grandfather... wept as [it] read letters written by his missing granddaughter's brothers and sisters... As [the grandfather] left the room, police officers and journalists were in tears. Some of the 300-strong police team, who are working around the clock, have become so distressed they have been given counselling. But no one can share, or imagine, the torment of Sarah's family. They firmly believe [Sarah] is still alive, and being held against her will. "I think someone has taken her and fallen in love with her," said [Sarah's] dad... on ITV's current affairs show, *Tonight*. "That's the only explanation I can give." Mum... again appealed to the abductor to let [Sarah] go... But officers involved with the case are less optimistic, and know they are most likely to be looking for a body.

...After more than two weeks of hoping that their daughter... would be brought home to them alive, Sara[h's parents]... could not face the prospect of seeing their murdered child's body. After the 8-year-old's naked body was found in undergrowth in West Sussex, Sara[h's mother] said: "We can't... see our daughter because it's too hard..." [The mother], aged 31, said "death is too good" for the person who abducted her child... "They

watched our family go through something nobody should have to go through. I have no pity for them any more. No pity at all..." Police believe Sarah was lying dead in the undergrowth within hours of being abducted outside her grandparents' home 19km away... A farm worker stumbled across the body on Monday night (NZ time). During the family's 16 days of waiting they bared their anguish to the press in a series of appeals to Sarah's kidnapper and the public to help them get their daughter back. On Thursday they were in front of the cameras again to plead for help in bringing their daughter's killer to justice." ...People on the streets wept as news of Sarah's fate spread. "There is a terrible sense of shock and sadness," said one [person] in East Preston. "There is also a terrible realisation that none of our children are safe, not even here in the English countryside on a lovely summer day..." In Hersham, too, Sarah's death has brought pain to many, not least to... [someone] who lives less than 1km away from [Sarah's family] and whose daughter... is in the same class as [Sarah's sister]. In 1986 in Brighton, [that person's] 9-year-old daughter, Karen... and her friend Nicola... also 9, disappeared. Their bodies were later found in a local park. They had been sexually assaulted and strangled. "Sarah's disappearance affected me deeply... For the first week I just couldn't sleep, thinking about Sarah and remembering Karen. I felt this terrible pain in my chest... My wait lasted 23 hours before Karen and Nicola's bodies were found, and I know how agonising it is. I, too, never gave up hope. You can't... and I still haven't got over [Karen's death]. I never will."

...Police reconstructed the last known steps of missing English 10-year-olds Holly Wells and Jessica Chapman yesterday after ruling out a theory that they went to meet someone they had talked to in an internet chatroom. The Cambridgeshire town of Soham stood still as two actors retraced the last known footsteps of the pair, who vanished a week ago. The... [police... admitted they are still no closer to discovering what happened to the girls. Two [guys], one in his mid-30s and the other in his late-40s, have been arrested. But police played down the arrests, saying the [guys] had been detained because they had failed to co-operate with routine inquiries... The actors, aged 9 and 10, from a Cambridge drama company, were chosen for the reconstruction because of their resemblance to Holly and Jessica. Police went to extraordinary lengths to ensure the girls fitted the roles as closely as possible. As well as being dressed in the same clothes as Holly and Jessica were last seen in, they were also given identical haircuts. The girl playing Jessica was wearing the same jewellery... Walking side by side, the actors chatted and fidgeted with their football shirts, watched by more than 200 local people... They passed dozens of posters of Holly and Jessica in shop windows. The case has generated immense news media interest in Britain and prompted rival tabloid newspapers to offer a US\$1.72 million... reward for vital information. Police have said they are optimistic the girls are alive, but fear they have been abducted... In Britain, abductions of children by strangers are considered rare, but several recent cases have increased concern among parents about the safety of their children. The girls' case follows by months the... kidnap and murder of Sara Payne, 8... by a convicted child molester... A flurry of abductions of girls in... the U[S] this year has spurred similar fears among Americans...

It started with a trip to buy sweets. It ended, tragically, on a scrubby dirt track on the fringes of a Royal Air Force base. The discovery of two small bodies as police searched for Holly Wells and Jessica Chapman was the outcome that the villagers of Soham had hoped they would never have to confront. The find came hours after detectives arrested [a] school caretaker... 28, on suspicion of abduction and murder. His girlfriend... 25, was arrested on suspicion of murder. [The caretaker] had been a part of the investigation since day one, having reported seeing the two 10-year-olds on the night they vanished... [His girlfriend], who knew the girls as a teacher's assistant at their school, joined the appeals to find them, posing for pictures with a card Holly gave her on the last day of term... In Soham, people wept in the streets as the news broke that two bodies had been found... In a surreal twist, church bells could be heard ringing to celebrate the nuptials of a young couple who had unfortunately chosen that day for their wedding. The bells were soon cut short out of respect. In his sermon, the Rev... paid tribute to the dead girls: "No one can doubt Jessica and Holly live in love." It is a message that the people of Soham will eventually take on board – but not for a very long time.

...Holly... and Jessica... whose disappearance and death... made headlines around the world, were probably suffocated and their bodies later set alight, a court was told yesterday... [A] school caretaker... denies murdering the girls but the prosecution has said [the accused] is likely to concede they went to his house on the evening they vanished and died there. [The prosecutor... said it was murder. "Ten-year-old girls don't just drop dead," [the prosecutor] told the jury at London's Old Bailey... The naked bodies of the two youngsters had been dumped side-by-side in a woodland ditch... The bodies were so badly decomposed that the actual cause of death was impossible to establish and the possibility that the pair had been sexually assaulted could not be ruled out... Jessica was still wearing her bead necklace and Holly was wearing a metal necklace, but most of their clothes were discovered in a bin, along with hair from... [the caretaker]. Fibres from the girls' distinctive red Manchester United football shirts had been found on [the caretaker's] clothes and on the carpets of his house. Pollen from the ditch had also been discovered on [his] car and on a can of petrol in the boot... The prosecutor said [the caretaker's] former girlfriend... had conspired to cover up the crime... but... is not accused of murder.

...A[n Arkansas resident] convicted of raping and murdering a 13-year-old boy during sexual bondage has been sentenced to life in prison...

A 14-year-old boy was held captive by a [35-year-old] who chained him up... and abused him during seven days of perverted sex, says the police officer heading the case... The police summary alleges [the offender]... plied... the boy... with alcohol... then made the boy perform oral sex before sodomising him. [The offender also] pierced the boy's scrotum and inserted two rings. The following day... [the tattooed offender allegedly tattooed the boy] around his groin with a... tattoo gun... [The offender] then restrained the boy in a wardrobe, using shackles and chains, and beat him. Once the beating was over, [the offender] is alleged to have poured hot wax over the victim's body... [before sodomising] him again... Over the following days there were further beatings and degradations... It was only when the boy was able to make a furtive telephone call to his home that police came to the rescue. In the High Court at Auckland last week, [the offender]... pleaded guilty to representative charges of kidnap, assault, assault with a weapon and sexual violation of the boy... [The offender] also pleaded guilty to representative charges of violating a 13-year-old boy in 1991 in a similar manner... The officer in charge of the case... described [the offender] as a "calculating, manipulative sexual deviant who preys on teenage boys from single-parent families." In 1996 [the offender] was jailed in A[US] for nine years for arson attacks on a Salvation Army hostel for homeless [guys] and the "devastation" of the business centre of Beaudesert, southwest of Brisbane... [Amazingly, the offender only served a fraction of that sentence. Hopefully our penal system will prove to be more competent! The offender was] remanded... in custody for sentencing next month.

...A 14-year-old girl taken into custody for begging outside a [Tucson, Arizona,] striptease club stunned police by telling them... her Gypsy parents had sold her twice, the first time last year for about \$US11,000 to a family in... Fresno, California... [The girl claimed to have] suffered a miscarriage and was returned to her family for a partial refund. Shortly after... [the girl] was sold to another family for more than \$US5000... [The police have] released... the girl... to her mother's custody... A Phoenix police spokes[person] said: "...they sold her as per tradition of their culture." ...It is not illegal in Arizona for a family to sell a child to another family for reasons other than sex or slavery, the Arizona attorney-general's office said... And although it is illegal to sell another person in California, police in Fresno decided they could not determine that a crime was committed there... Charges against the girl were dropped... [In local news, a] scathing... report states that the sexual and physical abuse of children is given "extremely low priority" by police chiefs – and in some areas "the investigation of child abuse, no matter how serious, did not happen." The leaked document, Police Child Abuse Teams, written... by [a] specialist course co-ordinator... says staff are untrained, investigation procedures are not followed and delays are common. "Due to homicides and other crime commitments, Lower Hutt has not had a fully staffed child abuse team for at least a year, if not longer... The child abuse work simply does not get done." The Lower Hutt abuse team was an example of a national problem... says... [the co-ordinator]. Police policy states that only specially trained staff should undertake child abuse investigations. "This point is totally ignored by the N[Z] police administration and at the moment there are at least 30 police officers investigating child abuse with no training. It is anticipated that number is actually much higher." It was disclosed that at least nine of the 15 child abuse managers had not received any formal

child abuse investigative training... [The] acting national crime manager... said prioritising cases was a fact of life but denied the report's conclusion that... abuse of children... was a low priority... [The manager] was not surprised that so many staff were untrained in an area that involved high stress, a high workload and high turnover. "Would you rather we left the team understaffed while we wait for the training course to come along or would you rather the person commenced and at the first available opportunity receive the training?" [The manager] stood by the child abuse teams, which [it] described as being world class... The report was requested by the Crown Law Office, which is conducting an inquiry into... sex offences against children. [The] Police Minister... would not comment because it "was an internal police issue." Leading criminal lawyers say the report is a serious concern with implications as far reaching as the jailing of innocent people and the acquittal of serious child sex offenders.

...A child counsellor concerned that paedophiles who abuse pre-school children are not being prosecuted is calling for a new "children's court" to be set up. [The counsellor], who has worked with sexually abused children for the past 11 years at New Plymouth's Safer Centre, says the court system is not able to cope with young children testifying. "Over the past 12 months I've worked with 72 children under the age of five who have been victims of sexual abuse, and many of these cases are not going to court because the children are too young." N[Z]'s court system was daunting and paedophiles knew children under five were unlikely to talk about the offending... A children's court was needed to provide a more reassuring environment. A senior advocate at the office of the Commissioner for Children... said discussions were being held with the Department of Courts on ways to improve the court system for young victims. [The advocate acknowledged] convictions were rare when the victim was under five. "We're not saying that people are getting off [criminal charges]... but there needs to be strong consideration given to a new way for supporting children who are giving evidence." [Incidentally, 'three Court of Appeal judges want sentencing policy for sexual violation cases to be reviewed by a full court after being required to reduce a sentence because of a precedent. A 33-year-old convicted last year of assault with intent to commit sexual violation of a profoundly deaf gal, had his sentence reduced from five to four years. The court's decision to reduce the sentence, despite the observation that the attack was violent and the five-year sentence "appropriate," was based on a previous appeal decision on a case it deemed more serious. A 58-year-old who had attacked his 15-year-old granddaughter to "break her in" had his sentence reduced on appeal from five to four years. The court said it had to avoid disparity or there would be an adverse impact on the public's perception of the administration of justice. But one of the judges referred to a need to reflect the seriousness that Parliament intended when it increased maximum sentences for sexual violation to 20 years in 1993.' Editor's note: 'In 1987, one of Her Majesty's judges stated, "The trauma suffered by the girl was not so great." This girl was raped by two burglars, tied up and had a knife handle inserted in her vagina. The two rapists received shorter prison sentences than a third, who had committed only burglary. Recently another custodian of British morals "quite understood" how a father could sexually abuse his daughter while his wife could not perform her "conjugal" duties because the wife was pregnant.']

...Child sex abuse is not the kind of thing you want to read about over breakfast, but the unpalatable issue was [one NZer's] life for eight years, and haunts him still. The former Hamilton sexual abuse squad detective has poured his heartache, observations and experiences into a book, *Is That You, Daddy?* ...The book begins when [the detective] and a girl [the detective] calls Melanie are both seven. "I am enjoying a wonderful family life, and [Melanie] is being subjected to sexual intercourse with her father in the chook run." The comparison of their lives continues as [the detective] describes attending police college while Melanie becomes pregnant to her father and attempts suicide. Eventually, the two stories merge as [the detective] successfully prosecutes the father. Now 48, [the detective] quit the police in 1995 because the pressure of his work became too much... [The former detective] hopes the book, which includes profiles of victims and abusers and explains how paedophiles select children, will educate parents to protect their children. "Adults know how difficult it is to deal with another cunning adult. How do we expect children of 5 to 7 to deal with it? ...These are not the type who leap out of the bushes down at the lake. They are a person who will get to know mum and dad – if they are not already a member of the family. They will become such a friend, they will be called 'uncle' by the children... It will start off with cuddles, then become sexual touching, and will be 18 months to two years before it reaches full intercourse. The child is reluctant to tell on a 'wonderful family friend';" ... [The detective believes NZ] should switch to a "public defender" system in which lawyers are paid regardless of how their client pleads. This would stop the practice of lawyers convincing their clients to deny their guilt... [The detective] devotes a chapter to the Catholic Church, warning that paedophiles can hide within it...

The sins of the fathers... CATHOLIC bishops will consider police checks on all would-be priests to stamp out sex abuse of kids by clergy... at the week-long N[Z] bishops' conference, which opens in Christchurch next Sunday. The move follows a Catholic church-commissioned report in Britain which recommended police checks. It also recommended setting up a national database to record details of all candidates for the priesthood. Twenty-one priests in England and Wales[have been] convicted of offences against children[since] 1995... A *Weekend Herald* inquiry reported the[NZ] Catholic Church had confirmed 38 cases of sexual abuse committed by [people] in its ranks, going back to the 1950s. The church also admitted that its previous way of dealing with offenders – often moving them to other parishes or schools – was wrong. The... [previous way allowed 'offenders to repeat their behaviour on a new batch of victims.' O]n Tuesday, the HIV-positive head of religious studies at a Catholic boarding school... in Northcote... will be sentenced in the Auckland high court... [after earlier pleading] guilty to five charges of indecent assault on students aged 13 to 15... [The 45-year-old] – who trained as a Marist brother and priest but was never ordained – ...is the second... Hato Petera College... staff member convicted of indecencies. [A former c]ultural group head... admitted abusing three students in the 1970s and 1980s.

...John hoped for a calm meeting as [John] confronted the Catholic brother who had molested him... years earlier. But denial from his abuser bred fury. And fury nearly spilled over into violence. "[My abuser] was in total denial, but I said to him, 'You know you did it. God knows you did it.'..." That was October, 1994. John, whose real name is suppressed, had tracked down... the headmaster who sexually assaulted him at a school camp in 1979. When the hierarchy within the Marist order of brothers was made aware of John's allegations against [their member] in 1994, it was not the first time that such allegations had been made. And it would be another two years before [the headmaster] would face justice. Today, John[– who] lives on a benefit in a North Island town[–] ...has just accepted a \$20,000 cheque from the brothers as ex gratia settlement of a civil claim... made against the order and the Catholic dioceses of Auckland and Hamilton. Tight times enticed him to sign the agreement, though... [the] payout was handed over on the condition that neither the order nor the bishops acknowledged any legal liability for [their employee's] crimes. "Their whole attitude, I would have to say, is one of cover up. They have operated in such a way for so long..." ...The Church's failure to accept legal liability has embittered John. At one point, the order's lawyers were arguing that [the headmaster] was not its employee at the time of the abuse... [The headmaster] had first been confronted over his actions in 1979. After complaints involving two pupils, [the headmaster] was removed from the school during the third term as the order investigated... [But] the investigations failed to find evidence to back the complaints. For John, who was relieved to see his abuser go in 1979, there was shock when [the headmaster] returned in the first term of 1980. "...for... a kid, the confusion sets in, and this is where you go off the rails." [The abuser] remained principal until the school closed in 1988. After that [the abuser] taught for a year at Marcellin College in... Auckland, then was appointed principal of St Pius X Primary School in Glen Innes... [The abuser] remained at St Pius... until November 1995, when [the abuser] sought a year's leave to study in the U[S]. The abuser... returned the week before his first court appearance... The... [abuser], who remains a member of the order, was jailed for 21 months on indecent assault charges involving seven former pupils...

A Catholic religious order has paid tens of thousands of dollars to two victims of a paedophile brother in the Church's largest compensation payout to sex abuse victims[in NZ]. Sums of \$30,000 and \$20,000 were paid to the pair... It is understood to be the first time the Church in N[Z] has faced a claim from more than one victim of [the same wearer] of the cloth... The national director of Catholic Communications... yesterday refused to confirm that any payments had been made, citing a confidentiality clause... [L]ast year... the victim of a Catholic priest who committed indecencies was paid \$5000 for counselling.

...Churches scarred by revelations of sexual abuse want to establish a standard system to cope with complaints... Abusive behaviour by priests, ministers and members of religious orders has sullied the images of most denominations in the past... [N]o research had been carried out in [N]Z, but overseas studies suggested up to 15[%] of the clergy are abusers... [The] Catholic church in Scotland has started a hard-hitting campaign... entitled "Saving the Children"... to fight paedophilia among its members... [The campaign urges] priests and parishioners to call the police if they suspect a church member has committed an inappropriate act... [while a] toll-free telephone number has been established for victims of sexual abuse... [The] Catholic hierarchy in... the [U]S... and... A[US]... have been forced to pay millions of dollars in settling claims for... sex crimes.

...A... [NZer] blew the whistle on A[US]'s Catholic paedophiles... then hanged himself in his own church hall... [T]he church ostracised... MORRIE CROCKER... when... the... former rugby player, boxer, soldier, teacher and Catholic priest... went public with accusations that two high-profile Catholics... were paedophiles... For three years [Crocker had] battled for justice and in 1993 went to the press, which splashed the allegations, backed by sworn statements from six... [victims], across its front pages... Friends say the abuse by his fellow Christians and inaction by the church broke Crocker's heart and destroyed his faith... An editorial by [the] *Illawarra Mercury* editor... summed up community feeling: "I could weep for those whose faith has been shattered because they can get neither personal satisfaction nor justice from the hierarchy of the church. [The church] treated him like a leper, preferring to sing the praises of the accused and the jailed rather than applaud the courage of the priest who cut the paedophile clergy off at the knees." ...[known as] the "boxing priest," Crocker was extremely popular... [P]eople in Wollongong went a little crazy after Crocker's suicide, blaming the church for the priest's desperate action. To cope with the grief, [a champion boxer] went to a tattoo parlour and had the words Faith, Hope and Charity etched into his arm, the same message tattooed on his mentor's brawny bicep. Yet his death cannot in all honesty be placed solely at the doors of the church. The death by cancer of close friend and fellow Christian boxer Fraser Toweel had hit him hard, as had the suicide of [one of the Catholics Crocker] accused... Brother Michael Evans... fled Wollongong and committed suicide before [the accused] could be arrested and charged... Crocker's treatment for depression had not helped either. The priest regularly travelled to a Sydney hospital... [to receive] shock treatment and a prescription for Prozac, a drug which has been linked to many suicides. Yet... a friend for 30 years... said his friend was still "the most unlikely person ever to take... [his own life]." If [Crocker] was an unlikely candidate for suicide, then his decision to enter the priesthood also surprised some. Crocker was a rabble-rouser, a hard drinker who could turn the air blue with profanities, and often did... Crocker's decision to join the Army about 1960 was typical: [Crocker] got drunk with some mates and enlisted. [Crocker] hardly ever talked about his time in Malaya fighting "communist terrorists" as his commanding officer... calls them, but [Crocker] was reportedly haunted by the experience... [Crocker] had killed in Malaya and felt guilty about it. His exit from the Army was also typical... Crocker... had a run-in with the English military police and the rumour was [Crocker] had "knocked one around pretty bad." ...It was... unrequited love... that drove his decision... to [join] the church... Crocker often [claimed to have] few real friends but a death notice placed in the *N[Z] Herald* tells a different story. People from all over the country... had been touched by... Morrie Crocker... Bitterness and conspiracy theories still surround his death, perpetuated by the mysterious disappearance of his scrapbook, which contained details of further allegations against three other members of the church... [The second person Crocker accused] was charged, convicted and sentenced to 18 months jail... The priest's crusade became an international story when events in Wollongong prompted the A[US]n Government to establish the Wood Royal Commission on paedophiles.

...Child sex assault criminal trials now comprise nearly half the cases brought before judges in the District Courts of country NSW... while they comprise nearly 16[%] in the Sydney District Court... Most people charged with crimes such as homicide, fraud and robbery tend to plead guilty and avoid a trial... [or] flee to Queensland... However, most people accused of child sexual assault want to go to trial and... [some] cases date back to events more than 10 years ago. Legal and welfare workers believe the rise in child sexual assault cases stemmed from heightened public awareness following massive publicity about paedophilia in NSW during the Woods Royal Commission into the police service and the annual September police sexual abuse phone-in, Operation Paradox... Now in its ninth year, Operation Paradox has seen sexual abuse phone calls climb... to 1,450 last year. Last week's phone-in led to 1,277 calls and police are arresting about 50 people a month... [T]he rise in child sexual assault cases coming to trial also lay in legislative reforms in the late 1980s and early 1990s that eased restrictions on children's evidence. A Department of Community Services child protection specialist... said the higher incidence of child sexual criminal trials in country NSW did not suggest that the incidence of the crime was any greater than in Sydney. "Rural communities are closer knit. They tend to be more supportive of each other and at the same time busybodies. So it is far easier... to find out or see things that can be ignored or hidden in a denser urban environment..."

...Frequently a... NSW... judge will sit in a country court on circuit and hear nothing but child sexual assault cases... There is now a heightened community awareness about a problem that previously dared not speak its name... and[, according to]... a paediatrician... often... [wasn't] taken as seriously as crimes against adults... [M]ore than 40,000 A[US]n children are sexually abused each year; the average age of most victims is 10; 76[%] of the victims are [girls]; most abused children know their attackers; and most attackers are [guys].

...As a lawyer... wanting only correct information... [the gal] labelled the "Shame Dame" for calling on [guys] to fight against child sex abuse... went to a reliable source – a Ministry of Justice report called *Conviction and Sentencing of Offenders*. 'I'm used to dealing with sex abuse issues, but even I was appalled at what I read,'... [The lawyer] learnt: • In... the [most recent year for which statistics were given – 3 years ago – the]re were 2038 convictions for sex offences (rape, unlawful sexual connection, attempted sexual violation, indecent assault, incest, indecent acts, unlawful sexual intercourse, attempted unlawful sexual intercourse and anal intercourse). • 79[%] of those sex offences where the victim's age was available involved victims 16 years and under. • 45[%] of the total number... involved children 11 years or younger... It is generally agreed that convictions represent only a portion of the actual abuse occurring. 'I have been very careful not to hazard a guess as to the actual level of child sex offending... However, if convictions conservatively represent one half of actual offending, we are looking at some 27,000 sex offences on children... during th[e most recent] eight-year period... If convictions represent only 10[%] of the actual abuse occurring, then we are talking at over 137,000 sex offences. It doesn't bear dwelling on... A lot of [N]Z guys would say that they abhor [other guys] who rape kids and that it wouldn't involve [anyone] they knew. But the reality is that there must be ingrained beliefs in the [guys] who rape kids. Th[e]... question I would like [guys] to ask other [guys]: What is going on? Are there issues of power and control...? Having said that, I would never negate that there could be some [guys – and gals] – who have been sexually abused as children by [gals]. But the conviction statistics show us that 99.1[%] of offenders are [guys.]' The lawyer (who has not been sexually abused) remembers the profound impact when as a... 13-year-old [it] read about a girl the same age in another country who was taken away by a group of 40 soldiers and gang raped day after day until [the girl] was eventually raped to death. 'The question I asked then... and the question that I am still asking today is where were the [guys who were]... prepared to stand up... and stop that girl being raped to death?'

...WHEN I got up at around seven on that summer morning in 1981, my son Adam, was still sleeping... On most evenings as soon as I got home from work, I would... tell him stories I made up. That's how Bobby... came to be. Bobby was a little kid about Adam's age – six – a brave little boy who always helped people. And no matter how scary things got for Bobby... dad... would always be there... [Adam's] godfather... had taken him to a movie the night before and kept him out so late there had[n't] been time for... a... story... So when I left for work that morning of July 27, I looked forward to returning home that evening... [M]y wife and I were careful with Adam. We took him to school and picked him up every day... Adam... wasn't allowed to go to the park by himself or to ride his bike in the street... LATER THAT same Monday morning... [my wife] and Adam... drove over to the shopping centre... and... went into the store... [with] the toy department. Right in the middle of Toys was the big attraction: a television monitor displaying computer video games. They were brand new back then... Adam [begged his mother] to let him play the video game... [My wife]

pointed to where [my wife] was going to be... From the video game it was about 20 metres – out of sight, but not very far... Adam... said, “OK, Mummy...” ...my [wife] had been gone a few minutes. Five. Maybe ten. But when... [my wife returned, my wife] didn’t see Adam... [My wife] went... to... a shop assistant. “Have you seen my son[, who] was here just a minute ago.” [The shop assistant] hadn’t... Finally someone called the police. The Hollywood Police Department was right across the street from the shopping centre... The police... asked a few questions and said they would run a BOLO – “be on the lookout for.” ...SECONDS AFTER receiving [my wife’s] call I was in my car speeding to the shopping centre... I knew... that Adam had not simply wandered off. [Adam] was not that kind of kid... I went on local television to plead for information about Adam... We made a poster with a photo of Adam in his T-ball uniform... At the bottom of the poster we included the message: “We are willing to negotiate ransom on ANY terms. Strict confidentiality. DO NOT FEAR REVENGE! We only want our son.” By the end of that first week, we had printed 150,000 fliers, and 50,000 were distributed free by a postal-delivery company... BY THE MIDDLE of the second week... some detectives sat me down at a table and took out a big loose-leaf binder and said, “This is a book of sex offenders who have been released on bail into this community.” I said, “They release perverts?” ...the county forensic pathologist... spoke first. “...they do it all the time. These people get a slap on the wrist. There are guys in this book who have been arrested 14 times and released. They live all over Hollywood.” “What do the guys do?” “They’re paedophiles. They rape little boys and girls.” Then they handed me the book... There were 200 photos. A lot of them looked just like anyone... There was obviously no way to tell a child molester just by looks. Finally, I began to understand what they were trying to tell me. “One of these monsters could have Adam?” “Yes... That’s probably who’s got him.” The next night, for reasons I don’t understand myself, I went back to talk to [the pathologist, who] came right to the point: “You’ve got to accept the fact that Adam might be dead... People who don’t believe that the devil walks this earth have not seen the things I’ve seen. For example, I’ve got four girls up in the morgue, all homicide victims, all runaways, I believe. A couple of them were tortured very, very badly. They range in age from 13 to 16... Florida law says that if no-one claims them after six months, I’ve got to bury them.” “But someone loves them, misses them,” I said. “Maybe, but I’ll tell you something... The state has no official system for finding out. In Florida, coroners do exchange information about unidentified bodies, but that is only on a voluntary basis. And this is not just in Florida, but in the other 49 states as well.” I said, “Do you mean to tell me that the same country that put a [hu]man on the moon does not have a way to identify these children?” “That’s right... There is no such thing as a comprehensive ‘unidentified dead’ file anywhere... If Adam’s in a morgue in Tallahassee... there is the chance that you might not hear about it, and [Adam] could be buried in an unmarked grave.” ...I said, “...What about Georgia? ...New York?” And that’s when it dawned on me. We had to take the search for our lost son nationwide... Shortly afterwards two agents from the FBI walked into the Hollywood police detective bureau... I met them... [and] said, “If Adam is outside the county, it’s not a local matter. And what if [Adam’s] outside of Florida?” They explained that there had to be either a ransom note or some sort of proof that Adam had been taken across the state line in order for them to become officially involved. I couldn’t believe what I was hearing. At one point, I was so desperate I even considered forging a ransom note... TO MY puzzlement, the police were leaning hard on... Adam’s godfather... I kept defending him... But they kept calling him in. Then I found out why: they knew something I didn’t. [Adam’s godfather] had been having an affair with my wife... But I knew that it was a total dead end... [T]hen we got... wonderful news: “Good Morning America” wanted to do our story... BEFORE THE SHOW, we met the two [people] who were going to appear with us. One was... the mother of a little boy... [who] had disappeared on his way to the school bus in New York two years before and had never been found. With her was... the information director for an organisation called Child Fund. It was started by a [mother] whose daughter had been missing for seven years... [M]y wife and I... finally felt we had found someone who was going to help us... [H]owever... what I thought was a sophisticated East Coast organisation – was run out of a little room in a member’s house. It was another one of those horrible revelations, like when I suddenly realised I was in charge of Adam’s search effort... When we arrived at the studio, everyone was so gracious to us. On the air [the presenter] covered everything – Adam’s description, his photo... Like any good journalist, [the presenter] had to include the latest information... I understood that... [The presenter] said, “this morning there has been information that some remains have been found in a canal near Vero Beach.” “I don’t think it’s Adam,” I said... Afterwards... the phone rang... “[Adam’s father], we are so very sorry to have to tell you this, but the remains that were found last night have been positively identified as Adam’s.” ...The phone rang again. This time it was a “Good Morning America” producer. “...I’ve got some really great news. Every talk show wants you. Every radio station. We’ll find Adam. We’ll get his name all over the place.” ...We didn’t know... what to do. We only knew we had to get home. They took us in a car from our hotel to the airport... At the airport, it seemed like there were a million lights and cameras in our faces. I couldn’t understand. What did these people want to see? Two destroyed human beings for the six o’clock news? After we arrived at home, we could hardly get from the driveway to our front door. Reporters were all over the lawn, all over our street. Police had to push them back just so we could get into the house. We walked across the threshold, without our little boy. It wasn’t a home any more. Without Adam in it, it was... [just] a building... Where there had been promise, now there was none. Where there had been an endless wellspring of hope and a limitless future, now there was nothing... We didn’t sleep. We lay on the floor, crying... Around four in the morning there was a knock on the door. Thinking it might be the... police telling us that a suspect had been picked up, I opened it... “...I’m a reporter, and I need to get a comment about Adam’s murder for tomorrow’s editions. My editor said that if I don’t, I’m going to be fired.” At first I just stood there. I wasn’t sure of what I had heard... Then it sank in, and I lost it. “You tell that coward to come over here right now! Because I am going to pound him into a bleeding *pulp*...!” A few days after that reporter’s visit, [my wife] answered the door and found a different kind of visitor. It was Adam’s little friend... [asking] if Adam could come out to play. [The friend] had been away at summer camp... Day and night, all I could think about was Adam... It took every bit of mental energy that I had not to dwell on what Adam’s last hours were like. Because I knew that kind of thinking could destroy me... I decided I needed to keep my mind occupied. The Cornell University campus wasn’t very far... So one morning I went over there... I wanted to find out about the kidnapping of children – how often it happened and what had been done to prevent it. I spent hours in the library using the microfilm collection. One of the things I pulled out was the FBI’s annual crime report. I was amazed to see that there were no official statistics on child abuse, missing children or even kidnapping. Then I found some magazine articles about how the FBI had investigated the disappearance of a \$500,000 horse from a breeding farm in Kentucky. The bureau justified including the case in its jurisdiction, said a spokes[person], “because of the value of the horse” and the likelihood that it had been taken out of state... So what I had suspected all along was true: the bureau could investigate a kidnapping case – even of an animal – without a ransom note or absolute proof that state lines had been crossed... MY wife and I got... 20,000 letters... – prayers and condolences. Mass cards and notices that trees had been planted in Israel in Adam’s name. Eventually we had to rent a ministorage space to keep them... [T]here were... more and more... letters... each day, that said, “I can relate to what happened to you because this happened to me...” It was around then that I got a call from the Washington office of [the] Florida Senator... It was beginning to look into the issue of missing kids... [The] chief counsel of the Senate investigations subcommittee... wanted me to talk about the Missing Children Act that was introduced into the House of Representatives... The bill would require the government to keep a national file on missing children and unidentified dead. [The senator] had introduced a similar version of the bill in the Senate, but they had not made much progress. Still, [the chief counsel’s] gut feeling was that if we helped, we could get this bill passed... Then in November, about four months after Adam died, we found out that [my wife] was pregnant. When our daughter... was born, it was as if the whole country celebrated our happiness. Letters poured in from people who wanted pictures of the baby, from people who were glad to know that [my wife] and I were still together... In October 1982, just 15 months after we lost Adam, Congress passed the Missing Children Act... NOT LONG AFTER... a piece about Adam’s murder ran on ABC’s programme, “20/20.” The show brought a lot of positive reaction. The filmmaker of the segment... wanted to do a full-length documentary about our story... The telemovie, “Adam,” debuted on NBC on October 10, 1983.

At the end of the show, a roll call of 55 missing children's names and pictures was displayed... For three days, over 100 calls per hour came in to the toll-free number that ran after the roll call... 13... missing children... were located and reunited with their families... Seven years after Adam's death, a call came in that changed my life again... Fox television asked me to host a pilot programme for a crime show on their new network... And so "America's Most Wanted" was born. The programme is still going strong. And we *have* caught fugitives – 480 of them to date... **ALTHOUGH** I have helped to bring many... criminals to justice, to my great sorrow, I never was able to get justice for Adam. Back in 1983 there had been a flurry of publicity when papers around the country announced that police had found the [person] who killed Adam... [A] drifter... arrested as a suspect in a fatal arson case in Jacksonville... had told police that [it was him who] was responsible for... Adam's... [death and] between 35 and 50 killings around the country... [The arsonist] had made a confession admitting... [to picking] up Adam outside the Hollywood shopping centre, lured him into his car with toys and lollies, and then killed him. According to Hollywood's assistant police chief... [the arsonist's] stories were "grisly and heinous beyond belief." The Hollywood police announced that [the confessor] would be officially charged with Adam's abduction and murder. But weeks went by. Then months. And years... [The confessor] was never charged. I never received a satisfactory explanation why. I did learn that [the confessor] recanted his confession a couple of times... Bloodstained carpet samples had been taken from the car, on which police scientists could have run DNA tests. But those were lost... [The confessor] was in a Florida prison, facing five life sentences for other crimes... was ill with cirrhosis of the liver and possibly AIDS. I pinned my hopes on a deathbed confession. It was the only thing that could finally put everything to rest... [even though the] police weren't able to find... the rest of Adam's remains... But two days after... [the confessor] died...

California police are reported to have DNA evidence linking [their prime]suspect... to the murder of 5-year-old Samantha Runnion... [The 27-year-old] factory worker acquitted ...2[years ago] of molesting two 10-year-old girls, was arrested at the weekend at a motel... 16km from the two-lane mountain road where Samantha's bruised and naked body was discovered... It was the third highly publicised disappearance of a young girl in the U[S] in recent weeks... [First] 7-year-old Danielle van Dam vanished from her canopied bed in the quiet San Diego suburb of Sabre Springs. After a three-week search, her decomposed body turned up on the side of a road... [Then a] 14-year-old... was abducted from her Utah bedroom at gunpoint – a crime witnessed by her younger sister... [T]he child who witnessed Samantha's kidnapping, gave police a description of the... 27-year-old...

MODERN HISTORY'S WORST murderer... has been released from prison and is free to kill again. In 1979 [the serial killer] became known as the "Monster Of The Andes" when [it] led shocked Ecuadorian police to the graves of 53 of his victims, all girls aged between nine and 12 years of age. However, [the monster] did only 18 years in jail – just two month's prison time for each of his victims. [The monster] was released from prison – Penal de Moreno, in Quito, Ecuador – in... conjunction with that country's maximum 18-year sentencing law for all crimes. The Monster's crimes first came to light... when a river overflowed near the town of Ambato and the bodies of four girls were washed up on its swollen banks. Three of the children had been strangled with such ferocity that their eyes had popped out of their sockets... Three days later [the monster] was captured as [it] tried to snatch another girl... Ironically, his incarceration in Ecuador... wasn't the first time [the monster] had met with retribution. [The monster claims it] had been captured once before after a bungled murder attempt in the Peruvian mountains. "Indians in Peru had tied me up and buried me in sand to my neck and they had poured sweet syrup over my head and were going to let me be eaten by ants. But an American missionary... came by in her jeep and promised... [to] turn me over to the police. "They left me tied up in the back of her jeep and [the missionary] drove away. But [the missionary] released me at the border of Colombia and let me go. [The missionary] didn't attract me because [it] was too old... so I let her go free." ...in 1980, [the monster] pleaded guilty to a total of 110 counts of murder in Ecuador and was convicted on those charges. At the time police said the killer could have been responsible for a further 240 murders of missing girls outside Ecuador, but additional trials in Colombia and Peru would have been too complex and costly to pursue. As a result [the monster] escaped extradition after release, despite openly confessing to the killings during his time behind bars... In 1994, in his only interview while in prison... [the monster], then 43... attempted to explain his killings, comparing his reactions with those of spectators who attend bull-fights to watch the "moment of truth" when the... matador, faces death. "There is a wonderful moment – a divine moment – when I have my hands around a young girl's throat. I look into her eyes and see a certain light, a spark, suddenly go out. It is the exact moment of death and it is enthralling and exciting. Only those who actually kill know what I mean." ...[the monster] took the girls to secret hideaways where [it] had already prepared graves. Sometimes there were bodies of earlier victims lying in the pits. [The monster]... lulled the distraught children into a false sense of security by cradling them in his arms throughout the night... then... would... rape and kill them at sunrise. "At the first sign of light I would get excited. I would force the girl into sex and put my hands around her throat. When the sun rose I would strangle her. It was only good if I could see her eyes..." ...[the monster] was already a convicted murderer before [it] started preying on young girls. [The murderer] slit the throats of three [fellow prisoners] who had raped him as an 18-year-old in a Colombian jail where [the monster] was serving time for car theft. [However, the monster claims to have known] from the age of eight that [it] was going to be a killer, explaining "I was the seventh son of 13 children of a prostitute in Tolima... My mother threw me out when I was eight after... ca[tching] me touching my sister's breasts, and I was taken in by a [guy] who raped me over and over again. I decided then to do the same to as many young girls as possible."

...A Pakistani... [serial child killer] has surrendered, bringing a dramatic end to a weeks-long ...hunt. [The killer]... walked into the offices of Urdu language daily *Jang* in Lahore and said: "I am giving up. Had I surrendered to the police I would not have been able to put across my point of view as to why I killed the children... I have no regrets over what I have done[.] The Pakistani claims to have]... killed 100 children over the past six months and dissolved their bodies in acid-filled containers... [I]n a letter to police, [the killer]... said his victims were young beggars and strays and that [it] killed them in revenge for his arrest and treatment by police on child-abuse charges... Police have arrested about a dozen people in the case so far, including [the killer]'s wife. They said the others arrested... admitted knowing that [the killer] was sexually abusing young boys.

...[a] Judge... made himself the most popular [perso]n in Pakistan this week when [the judge sentenced the suspect] who admitted murdering 100 children to be strangled in a public park, cut into 100 pieces and thrown into a bath of acid. In case that didn't do the trick, [the judge] also sentenced him to 700 years in prison, seven years for each of his victims. [Pakistan's]Interior Minister... wasted no time in pouring cold water on the dramatic sentence, telling reporters: "I'm quite sure this will be challenged in a higher court. We are a signatory to international conventions on human rights which do not allow these things." ...the 42-year-old... sentenced to die in this way, became the author of his own downfall... when [it] wrote to the Lahore police claiming to have killed the children... after sexually assaulting them... "I killed 100 children. I could have killed 500, this was not a problem... but the pledge I had taken was 100 children, and I never wanted to violate this." ...[the 42-year-old] documented his killings with the desiccated passion of the overseer of an extermination camp. Several times since 1985 [it] was arrested on suspicion of child molestation and sodomy, but was never brought to trial. Despite his repeated and gratuitous confessions, and the piles of evidence at his home... [–]r]eporters who beat police to the scene of the crime... found a drum full of acid containing human remains, sacks of children's clothing, and neatly inscribed placards on the walls giving details of the killings and photographs of some of the victims... [– the 42-year-old] changed his tune in court and pleaded not guilty. [The 42-year-old] told the judge that his earlier confessions had been a fake, inspired by western detective stories... add[ing that it] had made up the confessions to bring the issue of absconding boys and paedophilia to the Government's notice. It was an explanation which did not amuse the crowds gathered outside the Lahore court throughout the two-month trial, baying for [the killer's blood. His]... lawyer... said that his client would appeal against the verdict. So instead of ending speedily, in accordance with the judge's wishes, in a spectacular act of public

retribution before the eyes of the victims' parents, the case... is likely to meander through Pakistan's overloaded judicial system for years. If [the killer] is eventually executed, it will be on the gallows... [●] A labourer who raped his 13-year-old niece four times has become the 700th person given a death sentence since capital punishment was restored in the Philippines in 1994... 377 were convicted of rape... None has been executed.

...[A Philippine trial court has sentenced a member of congress to up to 173 years in jail for raping a minor in one of the country's most celebrated sex cases in years. The court also sentenced him to a maximum of 93 years on six counts of lasciviousness with the then 11-year-old girl, who is now in state care. The congressperson was also ordered to pay the girl 220,000 pesos for "moral damage." The prosecution had said the girl was paid 10,000 pesos (\$NZ628) for each time it was taken to his apartment for sex last year and that the congressperson had promised to make her a film star. It was also said that the girl's step-father had offered her for money to a number of people.' In local news, a businessperso]n has been convicted of sexually abusing boys in his care over a lengthy period. In the High Court at Auckland this week, a jury found [the]46-year-old financial consultant... guilty on 16 charges of indecent assault involving five boys aged 12 to 15. [The offender] was cleared on two charges of sexual violation. Before the trial started last Monday, [the offender] admitted charges of sodomy and indecent assault involving another boy. The offending stretched from 1975 to 1993... Two of the youngsters were foster children. At the time of the offending against these youths, [the offender] was married. The couple later split up and [the offender acknowledged that it] was gay, but denied that the marriage had never been consummated... After the verdicts [the offender's lawyer] said outside court: "[My client] had a problem with his own sexuality in the days when the act of homosexuality was illegal. When [my client acknowledged it was gay, it] sought older partners." [The offender was] remanded... in custody for sentencing.

...A Perth Aids sufferer was found by a District Court judge yesterday to have passed the deadly virus on to a 12-year-old boy through unprotected sex. [The Aids sufferer], 30, pleaded guilty to having sex with the child but denied... infect[ing] the Fremantle schoolboy with HIV.

...A POSH Sydney school is reeling after three boys were charged with sexually assaulting boarders.

...Schools attracting foreign fee-paying students were attacked by police and the Office of the Commissioner for Children yesterday as they revealed how they rescued a 14-year-old Korean girl from a year in captivity. The girl, formerly enrolled at one of Auckland's exclusive private schools, was found in Christchurch, where [it] worked in a Korean restaurant and suffered constant sexual abuse from the owner... The girl had been transferred to a Christchurch state school, but did not attend classes. Her plight was discovered in April by police investigating the sexual abuse of a 7-year-old girl – also from Korea – who lived at the home of a [Korean businessperson] entrusted with the care of the two children sent to N[Z] for education... Teachers at the 7-year-old's school became concerned about her behaviour and called in social workers, who suspected sexual abuse. They contacted the police, whose inquiries led to the discovery of the 14-year-old... [The businessperso]n... aged 32, fled the country that night, returning to Korea with his wife and two children. His business, the Seoul Restaurant in Christchurch, has closed. [The businessperson] is wanted on charges of sexual violation, slavery, and indecent assault. Police say they have received cooperation from their Korean counterparts, but the two countries do not have an extradition treaty. The children are now with the C[YF]. Horrified staff of the Office of the Commissioner for Children say the appalling case highlights the vulnerability of foreign fee-paying students and the need for schools that accept them to take more responsibility for them... "All these schools seem to be concerned about is getting their money." It is understood the 14-year-old came to Auckland in 1995... [H]er mother... stopped sending money... to... the... [businessperson, who then] took the girl out of the Auckland school and enrolled her in Christchurch... [The] Immigration Service... said it would be impossible to monitor... [every] foreign student...

The mums and dads of Britain made a Faustian sort of pact. They would sacrifice several years with their children in order to save the little ones' lives. And so those children were dispersed by the millions throughout the countryside and even overseas, to escape the wartime bombing of British cities. But as one of them... says now, "We were safe – but at what emotional cost?" For families seldom mended fully, and grown-up survivors now lament a lost childhood... The ex-evacuees, wherever they may be, are concentrating on their childhood with a particular intensity this year. On September 3 there is a[n]... anniversary service at Westminster Abbey which is seen as a collective effort to harmonise all lingering feelings. For some 1500 of them in this country there will be a June 26-27 reunion in Christchurch, at which names will be entered in a Book of Memories to be taken to Westminster Abbey "so people who cannot go will be represented," says[the] organiser... Many of the 3.5 million evacuees immediately ran away and swarmed back home, as a... fugitive at 7, tells in his 1995 book *Blitz Kids*... The overseas scheme stopped with the sinking in 1940 of the City of Benares, in which 77 Canada-bound children died. [By the way, 'in the 1940s, '50s and '60s, about 10,000 British children, some less than five years old, were sent to AUS and NZ under a government-backed child migrant scheme. Many were told they were orphans. It was a wicked lie. Most of their parents believed they were still in Britain, adopted or in the care of charities. At some places, such as the outback home known as Bindoon Boys' Town run by the Christian Brothers, a Catholic educational organisation, some boys were victims of prolonged physical or sexual abuse. "The brothers were paedophiles and sadists," one victim said. "Little boys were woken up at night and taken from their beds. We'd hear footsteps on the wooden floor and we'd pray they wouldn't stop beside our bed." The abuse was not confined to a single organisation'...

'Britain's Parliament will investigate the cases of thousands of children – the number involved is uncertain – sent to NZ, AUS, Canada and elsewhere from orphanages between 1938 and the late 1960s. Many put through the child immigrant project were told they were orphans. In fact, most had been abandoned by parents, authorities said. On arrival in the former British colonies, the children were housed in camps, orphanages and religious schools. One reason for sending children abroad was the hope they would find better lives away from austere times in Britain, but some of these migrants say they were made to do hard work or were sexually abused. In the past, British authorities have insisted it was the responsibility of the receiving countries to investigate.'

...It was an achingly poignant reflection. "All those babies," the nun said. "They'd always be putting their arms up and you didn't have time to give them any individual love... to love them as I wanted to." Another sister said: "I remember walking into the little girls' dormitory one night and stopping to speak to one. The next thing I knew I had 60 little girls on top of me and that was the tragedy of the place. I just said to someone at the time, 'My god, where are their mothers?'" Some of their mothers were dead. But many children were torn from their parents by the state or by circumstance, and plunged into an existence of appalling deprivation, cruelty and brutality that carved indelible and disabling scars into the psyche. Those scars were unveiled this week in a ground-breaking report by [a]former Queensland Governor... into decades of abuse on children entrusted to Church and Government institutions in Queensland. Most of the children who were flogged, raped, half-starved, not educated and denied even basic health and medical care are now adults. At least 14 of their former tormentors face criminal charges. Fifty survivors are suing the state for wages earned, as wards of the state, which were placed in a trust fund but never paid. And the state Government has admitted responsibility, opening the way for compensation that could reach \$A100 million... as hundreds of former wards seek some recompense for the Dickensian horrors of their childhoods. Most of those horrors were inflicted by the Church... Left-handed children were flogged "to get the devil out of them." ...Sexual abuse was common and in some cases known paedophiles, shifted from other posts by Church leaders, were let loose on children. One notorious chaplain bound and assaulted a 12-year-old boy. "Well, of course, Mother, we knew about[that] Father... when we sent him down here," the acting head of the local Diocese told a complaining nun.

...A Porirua pastor... aged 58... was sentenced yesterday to two years' jail for indecently assaulting an 8-year-old girl... [The] pastor of Titahi Bay Baptist Church since 1994, had earlier admitted in the Wellington District Court that [it] induced the complainant, now aged 34, to perform countless indecent acts... They included oral sex and genital penetration. The secret... was unearthed when the victim, who has permanent name suppression, asked Porirua police in February to revisit the case. [The pastor], who had denied any wrongdoing when the case was first

investigated, admitted his actions during a police interview last month... [In related news, a]n Auckland mother and son... have been applauded by... the C[YF] for their commitment to change... The mother, who did not want to be identified... first contacted... welfare authorities... when her son, then aged 6, disclosed that his father had sexually abused him. Her own childhood had been marked by sexual... abuse, rape and teenage pregnancy. “When I was molested, I wish I had got the help I did for my boy...” ...The child’s parents separated when [the boy] was 5... but the mother... could not settle anywhere or maintain stable relationships, and was totally isolated from her family. [The mother] never spent time with her son... and did not provide adequate supervision. This meant that, at the age of 8, [the boy] was befriended by a paedophile and was again sexually assaulted... “When I got to know him, [the boy] was 9,” said... [a social worker. “The boy] had started to attack his mother, had developed a propensity for fire-lighting, was bullying at school and had attended nine primary schools.” ...But a year after... [starting to] help... the mother and son, the social worker was almost ready to close the case. The mother was resolving her own abuse through therapy, and this meant that [the mother] was more able to respond to her son’s needs and keep him safe... The... sports-mad son, now 10, was much happier... [and] was... thriving at school.

...A 19-year-old... was arrested on Friday, five days after Toesulu, who had just returned home from her first day of school, was found... naked, raped and hanging from a tree... The murder of[the] 5-year-old girl... has left Samoa stunned and demanding the use of its... death penalty. The country has not enforced its mandatory death penalty since independence in 1962; its last execution was in 1951 when it was still ruled by N[Z].

...[an] Auckland detective sergeant... was delighted... [that the person] kept as a sex slave for nine years... could now get on with her life... The [victim] was too scared to go to the police earlier... [H]er uncle... 55, and his wife... 59... threatened to kill her if [the niece] told anyone what they had been doing... The victim... was first raped by her uncle when... [aged] 13, a few weeks after arriving from Samoa. [The niece] became pregnant to him when... aged 15. The Auckland high court heard that her abusers... made her drink Epsom Salts and jumped on her stomach when they found out... The next day [the niece] miscarried. The court also heard [the niece] was beaten by her uncle... Police found out about the abuse in May after [the niece] was beaten so badly... [it] needed hospital treatment. [The uncle], who earlier pleaded guilty to 10 sex charges, was yesterday also found guilty of sexually violating another [gal. The aunt]... was found guilty of [6 charges, but]... was acquitted on a joint charge of raping her niece.

...The one good thing in her miserable life was her job. At work the 22-year-old had friends who saw her as normal. At home [the 22-year-old] was the sex slave and punchbag of her uncle... and aunt... But then her work hours changed, meaning [the niece] would not necessarily be home when [her uncle] wanted to rape her in their south Auckland home. “[Uncle said it] would [now] come every day and have sex with me before I [went to] work. So I gave up my job.” That was the final indignity that forced her this year to run away and end nearly a decade of horrendous sexual and physical abuse that began after [the niece] arrived... at her relatives’ Papatoetoe home from Samoa. On Saturday in the High Court at Auckland... [the uncle] was found guilty of indecently assaulting the 22-year-old’s 18-year-old sister when [the sister] was visiting from Samoa this year... The 22-year-old told the *Herald* that [it] wanted her uncle jailed for “a long time.” ...In the witness box, seated with her back to both accused, [the niece said it had forgiven her aunt but not her aunt’s husband. The aunt, the niece] told police, participated in the abuse because “[aunt] didn’t want her family to know what was going on – this was her way of avoiding having arguments and keeping the family peaceful.” In her defence, [the aunt had] stated to police that even from age 13 the girl wanted sex with [her husband. “My husband] definitely isn’t raping her if [the girl] wants to do it.” The young [victim]’s ordeal began... after family members decided [it] would have a better life and education living... in N[Z]. But just]... two weeks into the victim’s schooling at Papatoetoe Intermediate, the school had a half-day and [the uncle], who was a butcher at a South Auckland abattoir, came to take her home. In the lounge [the uncle] kissed her “tongue to tongue.” Recoiling, [the niece] fled to her bedroom and climbed out the window. However, [her uncle] caught her and administered the first of many “hidings.” Frightened and alone in a new country, [the niece] turned to her aunt for protection. [The aunt] confronted her husband and was told it would not happen again. But two weeks later [the uncle] crept into the girl’s room where [the girl] lay sleeping and raped her, whispering that [it] would kill her if [the niece] told anyone. At first the rapes were weekly, but over the years they increased in frequency to sometimes several times a day... At 15, [the niece] became pregnant... Apparently delighted at the news, [the uncle] left town to make arrangements for her to have the child. While [her husband was away, the aunt] gave the teenager a dose of Epsom salts... told her to lie down and after feeling her stomach, stood on it. A day later the girl miscarried. When [her husband returned, the aunt] told him about the miscarriage. [The aunt] also established the bizarre rule that from then on [her husband] had to ask her permission every time [it] wanted sex with their niece. “A young girl shouldn’t be able to tell an older [guy] what to do – that’s the wife’s job, not the young girl,” [the aunt] told police. About a week after the miscarriage the teenager was raped again. This time [the aunt] held her down. When discussing with police how his wife assisted him in raping and abusing the victim generally, [the uncle] punctuated his statement with the comment: “Good wife, eh?” and laughed.

...The [person] kept by her father as a sex slave for 23 years came close to death before... rais[ing] the courage to tell police... [– inspired, perhaps, by] two trials held late last year[that resulted in a]... retired New Plymouth farmer... aged 77, [being]... jailed for three years and ordered to pay \$50,000 reparation for sex offences [against two young girls] dating from 26 to 56 years ago... [(the oldest ever taken to court in N[Z], which has no statute of limitations)]. The father, now... aged 66, began sexually abusing his daughter when [the girl was 9. The daughter] was 32 before... manag[ing] to escape his control... The verdict came three years after her heart, fitted with a pacemaker, stopped... “The next day I thought if I had died, [my father] would have gotten away with it. I [had] thought non-stop about [telling police] but I didn’t think anyone would believe me. But I realised that if I’d had the strength to survive those 23 years, I had the strength to survive anything... so I did it.” [The daughter], now 40, this week watched a jury in the High Court at Auckland convict her father on numerous charges of rape, sexual violation and indecent assault... The sexual abuse began when the... Auckland... family moved from N[Z] to Vanuatu and her parents separated. The sexual activity became even more bizarre when, aged 22, [the daughter] returned to N[Z] with her father... While working for a bank in Newmarket in 1992, the [daughter] became pregnant to her father but suffered a miscarriage... [The father], who told police his daughter had a “wild imagination,” will be sentenced next month.

...The documented evidence – the fading photographs, the home movies – of [her]... early years makes it look idyllic. There... is[the] pretty young girl with untamed hair, running a bit wild against the exotic backdrop of Vanuatu. *To Hell and Back*... is the story behind those pictures. We already know that [her idyllic life quickly changed, and as a result her father is now] serving a 14-year prison sentence for the crimes... committed against his daughter... [The daughter] and her father had been deported from Vanuatu after independence. They were “undesirables” – a label likely to have been a consequence of the rumours about their “relationship”, whispered about in the tiny township of Vila for years. When it became apparent that they were going to have to leave, [the father]... in one of a sickening series of bizarre moves, forced his daughter to see a doctor to demand a note indicating that [it] was still a virgin. The doctor refused, but did provide a letter that said: “[The girl] did not show signs as such from sexual intercourse.” However, [the girl] had shown signs of abuse from an early age: [being]... described by her primary school teacher in Vanuatu as a child who didn’t smile, laugh or talk. By the time [the girl was 12 it] had been treated a number of times for sexually transmitted diseases. When, 30 years later, [the daughter] tracked down one doctor who had treated her, [the daughter] only had to say her first name before [the doctor said that it] had been waiting to hear from her for years. *To Hell and Back* does not delve too deeply into the story of how... [the father] was able to get away with it for all those years, or how a mother could leave her child to him... Or why a doctor, waiting for a phone call for decades, didn’t make his own phone call decades ago to somebody about a small girl in trouble... [Her father] did not just keep his daughter as a sex slave. [Her father] kept her, for 23 years, in a state of total bondage – which went far beyond the sexual torture [it] submitted her to. His

preferred tools of physical bondage were handcuffs, chains and clamps, while his preferred tools of psychological bondage were many and varied... [Her father] put her head in a padlocked box while... rap[ing her, but the father] didn't need padlocks to ensure that her entire life was lived within a prison.

...The tormented face of a little boy stares out from the overhead projector. His hands clutch the bars that trap him in a dimly lit cellar – the cage where the predator who is sexually abusing him keeps him prisoner. His is the frightened and largely anonymous face of paedophilia... Other more graphic and disturbing images... of children being forced to smile as they are raped and as they have objects inserted into them... are shocking even for the audience of child abuse prevention experts attending the Auckland conference. For those in the community who do not believe in the widespread existence of paedophilia, the pictures are proof. New Scotland Yard and the N[Z] police have boxes and boxes... “The day I understand these people will be the day I'll have a problem[.]” says the person[.]... who heads the paedophilia unit of the London Metropolitan Police Service... But the task of understanding paedophiles is part of what his job is all about. His unit was set up to vigorously detect abusers through sophisticated intelligence methods... Paedophiles are devious, cunning, fixated and well organised. “It is incumbent upon us to try and at least attempt to understand their methods, behaviour patterns and what makes them tick.” The police have identified three major behaviour patterns... The most common is “the seducer.” They court children, give them presents and seduce them but they don't rush. Those with an age preference may identify a boy or girl they want to abuse, then spend several years “grooming” them until they reach the desired age. The [seducer] often holds a position of trust. Parents... are also seduced into allowing access to their children... who... are blackmailed and subjected to violence to keep them quiet. The next pattern is the “introverted offender.” [This paedophile] lacks the interpersonal skills to seduce children and more fits into the stereotype of the abuser who hangs around school playgrounds. Then there is the sadistic offender. There are few of them but they are dangerous. To be gratified they must inflict pain and suffering. “I've got lots of videos... where children are subjected to the most horrendous torture.” ...A two-year-old girl held mid-air by two [guys] and swung like a hammock, while another [guy] raped her and another filmed the scene. “[T]he video particularly focuses on her face as well as the actual rape to capture the screams coming from her[.]” The head[.]... shows a photo of a smiling naked child who is covered in bruises. The smile gives the subliminal message that the child is enjoying what is happening and legitimises the behaviour of the abuser... An Auckland forensic psychiatrist... says there is no psychological test to identify a paedophile, who is medically defined as a person with intense sexual urges and sexually arousing fantasies about prepubescent children. Some are distressed by these desires, and seek help. They cannot be cured, but can learn to control their behaviour with the help of psychological therapy and medication... Also presenting a paper at the conference is an A[US]n law lecturer... of the University of Technology in Sydney... [who] warns of international effects of moves to lower the age of consent... [I]f countries adopt it, a precedent would be set that would simply encourage paedophilia... [T]he... Detective Sergeant... who will lead a new specialised “paedophile unit” being set up in Auckland by police, says offenders defy the public's expectations, which helps them to escape detection... Paedophiles are often narcissistic, well-educated and usually unmarried [guys] who seek out work or activities involving children.

...Mr X's pupils loved their teacher, and [their teacher] loved them. Signs of his devotion to his job included the weekend group outings... [and] classroom resources... bought with his own money – and the... kissing or touching [of] children on various parts of the body... But it had been done in the misguided spirit of “love in its purest form” rather than for sexual gratification... Yesterday the middle-aged [Mr X], who lives at home with his mother and has few interests or friends outside teaching, was sentenced on 18 indecency charges and one count of inducing an indecent act... Mr X was given three months' periodic detention and a two-year suspended jail term... In deciding to keep [Mr X] out of jail, [the j]udge... took into account that [Mr X] was losing the career that had consumed his life, was in poor health, and had been traumatised by the trial... Passing sentence, [the judge suppressed Mr X's]... name, the name of the school and its specific location in Auckland... The charges related to seven of his former pupils, aged 9 to 12 at the time of the offending. The[y]... gave evidence, in person and via videotape, during the two-week trial... Evidence from the victims indicated they were unlikely to suffer long-term effects... “The sad thing is they held you in high esteem, and you let them down.”

...“...Maybe I let him down[.]” the former tutor[.]... admitted in a video interview with police... [in response to accusations] that more than a decade ago... [a boy who] “...saw me as a bit of a role model, a father figure...” ...was... plied with alcohol and ultimately sexually abused... [The] tutor already jailed once for abusing one of his... pupils has been found guilty of violating another young student after lying about his criminal background to land a job teaching life skills to teenagers. The case has again raised questions about the vetting procedures for teachers.

...It would be nice to think that it couldn't happen again. But schools can still hire teachers who left their last job under a cloud, and never know that they're buying trouble. A law change last year requires schools to alert the authorities when a teacher is sacked or resigns to avoid dismissal. But it leaves major loopholes which let bad, or even evil, teachers quietly move on to new jobs... [A teacher has just] been jailed for two years after admitting five charges of indecently assaulting boys – two of whom were pupils at King's School in Remuera, where [the paedophile] taught art for 11 years. [The paedophile] resigned when... confronted about his actions. But the school notified neither the police nor the educational authorities because the distressed parents of one of the boys wanted the matter dealt with privately. About six months later [the paedophile] was hired by an intermediate school in Weymouth... and the principal there is understandably angry that King's had not pushed the alert button.

...WHEN news flew around Newcastle, England, that a [22-year-old guy] childcare worker had been caught sexually abusing children in his care, a [mother] in a nearby suburb became anxious. [The mother] started noticing that her 2 1/2-year-old son became distressed when approached by the only [guy] childcare worker at his Shieldfield nursery... [The mother] asked the boy about it, and [her son] pointed to his penis. [The mother] took that to mean that [the childcare worker, aged 22,] had touched him there, and two days later... told that to a social worker. By the time [the mother] spoke to police the following day, the story had changed. The silent gesture had become a verbal complaint that [the 22-year-old] had touched the boy's bottom. The boy was examined by a paediatrician who concluded there was nothing to indicate abuse. Police and social workers interviewed the child. Did [the 22-year-old] hurt you? they asked. “No,” the boy replied. [The 22-year-old] was suspended anyway. In the weeks that followed, the mother's complaint became more elaborate. Her son had been taken to houses with black doors and abused by strangers inside. [The mother] claimed another worker[at the nursery was involved. That married gal], too, was suspended. The mother told the press that her son's personality had changed. [The mother] spoke to other nursery parents about it and the story gained momentum, until a depraved and elaborate paedophile network had been created around [the 22-year-old and his colleague, 28]. The case became to England what the Christchurch Civic Creche case was to N[Z]...

A Christchurch childcare worker who was] convicted of child-sex offences, has been denied parole for the second time. [The childcare worker], aged 40, continued to maintain his innocence when... [appearing] before a parole board... In its decision yesterday, the board said [his] continued stance meant it had to decline parole. “As the offender has not acknowledged or addressed his offending, the board... had no option...,” said a Department of Corrections spokes[person]n... The board said that, as [the 40-year-old] had continued to maintain his innocence, [the 40-year-old] had not faced the usual consequences of sex offenders, such as attending rehabilitative courses and programmes... “The board is not in a position to go behind the jury's verdict...,” the board said. It postponed [the] case until December, saying it would then probably impose conditions under which [the prisoner] would be released... at the end of two-thirds of his 10-year sentence. [The 40-year-old], found guilty of abusing children at the Christchurch Civic Childcare Centre, said to the board last week: “I cannot accept any parole that you could offer me because the board could only release me as a guilty [person]. I'm not... guilty... I am... innocent...” [The 40-year-old] has twice been refused bail pending a Court of Appeal hearing... The hearing was the result of a petition to the Governor-General requesting a pardon... [His] mother... said the decision was buck-passing, in which nobody wanted to take responsibility and face the repercussions of admitting that the original conviction was wrong. [The mother] feared that her son could be “forced into a corner” by the Parole Board... when it was compelled to free him next year... “[My son] can live

with most conditions but... [is] not going to address something that didn't happen." ...[meanwhile, another] convicted sex abuser... was summonsed yesterday to appear in court on a charge of breaching a parole condition forbidding contact with children under 16. The Department of Corrections said it was reviewing the self-styled guru's residence at the Centrepoint community in Albany... A breach of parole carries a maximum jail sentence of three months.

...[followers of Auckland's disgraced Centrepoint guru are suing the Attorney-General for an unprecedented \$110 million for alleged breaches of religious freedom. The claim has been lodged by one of at least 10 people at the community who describe Centrepoint as their religion and its guru as their spiritual leader. They claim that a committee of inquiry ordered by the Attorney-General in July last year "denigrated and discredited the spiritual leader, his teachings and beliefs and those who follow him." It is also alleged that counsel for the Attorney-General had indicated "no wish for the Centrepoint religion to be protected or preserved," contrary to the Bill of Rights legislation. However, in the High Court yesterday the Crown asked the judge to strike out the \$110 million claim because the matters "simply do not come anywhere near" a breach of rights under the legislation.]

...they proclaim that 'their leader is to them what Jesus is to Christianity' – and, like Christianity, 'Centrepoint is in disarray, with various factions squabbling over the future of the community which has an estimated \$20 million in assets.'

...[a judge has appointed the Public Trust to run the charitable trust that owns the land and buildings at the Centrepoint Community. In his decision the judge stated that "this is not a case about religious freedom, but merely a holding operation to enable the trust to sort out its affairs." The judge did not give reasons for his view that the case was not about religious freedom except to say that this aspect may become involved when there is later an application for a scheme change. No matter what the public might think about Centrepoint's spiritual leader, this case has ramifications for those holding out to practice their chosen form of religion. The Centrepoint Community have lost control over the physical assets of their community and therefore there might be a case for saying this would affect their ability to manifest their religion. The freedom to manifest or express religion has been held in Europe to overrule contrary legislation. It was recently held that the consideration of religious freedom acts as a kind of overlay to the ordinary law of the land. One of the tests of a religion is that there must be a body of spiritual teachings and followers who call that their religion. It is not necessary for there to be belief in a divine being. While in prison Centrepoint's guru produced a substantial body of written work to expand his teachings and despite the criminal convictions still has a number of followers and those influenced by his teaching who live in the community at Centrepoint and claim his teachings as their religion. The judge never really considered the effect of that on the ability of the Centrepoint people to manifest their religion; and his attitude suggests that the judge did not regard the teachings as a religion'...

'The guru endorses paedophilia in teachings to his followers. In an essay published during his 9-year imprisonment on sex and drugs charges, the guru says sexual experience between children and adults is harmless in an ideal world. "It is stupid to confuse our children by telling them certain touching is bad when they know it feels good. It is even more stupid conditioning them to feel guilty about their sexuality in the name of protecting their innocence." Sexual games between children were normal and should be allowed without overt notice being taken of them. In another essay, the guru says psychopaths who cause death are extreme cases and need to be differentiated from paedophiles or other adults who may have nonviolent sexual contact with children.'

...[the guru] and his followers have been paid \$1.35 million to leave the Centrepoint community, which will be rebuilt and renamed. The convicted child sex offender and his 25 adult followers will have no more influence over the Albany commune [the guru] founded more than 20 years ago. [The guru] and his supporters, called the Old Believers, and their children will receive \$49,200 each after costs under a deal which was approved yesterday by the High Court at Auckland... [The judge] said the amount would outrage some people, but fitted the provisions of the Centrepoint Community Growth Trust... The court judgment said the trust had a \$7 million to \$8 million net worth... Seventeen adults and their children[are] still living at the Albany site... which they will lease from the new trust... [The guru] is living in Mt Albert, but could not be contacted yesterday.

...[Having a]convicted child sex offender... living next door has outraged Northcote Intermediate School, which wants answers from Housing N[Z] after finding out who their new neighbour is. [The guru, who ha]s just served a one-month sentence for breaching parole conditions [(during which the guru went 'on a hunger strike in protest at the removal of his computer – a uniform act after four prisoners used their computer to launch a successful escape'),]is living in a Housing NZ flat less than 10 metres from the school's boundary. Yesterday, the 74-year-old Centrepoint founder told the *Herald* [it] had moved into the Lake Rd flat two weeks ago. "I just want to be left alone to live a nice, quite life,"... But Northcote Intermediate... was not told who its new neighbour was and now wants Housing NZ to remove him... [A] Housing NZ spokes[person said the guru]... had been unable to find private-sector housing and had asked the agency for help. "Housing N[Z] recognises the decision to house [the guru] in his current accommodation is not an appropriate long-term solution." ...the probation service knew where [the guru] was living and would work with Housing NZ to find an alternative home for him as soon as possible... [■] Groups representing the abused children and non-resident members of the Centrepoint commune say they reluctantly agreed to pay off[their] disgraced leader... so they could begin helping victims. The two groups, representing about 40 abused children who are now adults, and 50 non-residents, will be part of a new advisory board that plans... [using] Centrepoint assets valued at about \$10 million... to support victims of institutional and cult abuse. Those abused at Centrepoint will be the initial focus...

The abuse experiences some... [gals] recount from their childhood at Centrepoint are horrific. They tell of 12-year-olds being ordered by... [the commune's] spiritual guru... to have contraceptive injections, and of [STDs] they contracted as children (which, years later, some still suffer from). In one of the most severe cases, [a victim claims to have been] systematically abused from the age of 18 months until her early teenage years... [Guys] performed oral sex on her regularly and [the victim] recalls at the age of three being made to orally stimulate them in return. The abuse worsened to the extent that by the time [the victim started school, the victim] was enduring assaults almost daily by [guys] who attempted to penetrate her: "It wasn't like someone trying to rape me. It was all done in such a way that it was supposed to be... good for the children to have this wonderful, loving thing done to them and especially before they were five because if it didn't happen then you'd be fucked in the head for the rest of your life." ...[the victim was eventually] raped once... and, along with other children, forced to watch [the guru] have sex with [adult gals]. At the age of 11 [the victim was even] pressured into taking the drug ecstasy... [Another victim] recalls as an 11- or 12-year-old having sex with [the guru] after school; it was a "task" [the guru had] assigned her because [the guru believed this second victim] had an emotional block... "His wife was there; it was disgusting. I could only stomach it for three or four days. I didn't say no to him. I was too scared. I just didn't go back." ...It was her testimony and that of four other [victims] at the High Court in Auckland... that first brought to public attention the nature and extent of abuse [at the commune]... Despite his... convictions on five charges of indecently assaulting girls aged between four and 15 years old for which [one disciple] was subsequently sentenced to four years' jail... [the disciple, who is a] father of five children... continues to deny that [the adults] did anything wrong. "[Our guru] says that sexual activity initiated by the child and kept at their level is not harmful, and I believe that... Just as I believe that driving at 160km[h] on a safe road is fine..." ...[Incidentally,] up to 15[%] of sexually abused teenagers... suffer the additional pain and trauma of being infected with... [STDs. A US] sexual abuse expert... sa[ys] STDs bring[ing]... guilt, shame and depression to innocent victims... Up to 5[%] of prepubescent children caught a related disease after sexual abuse... Gonorrhoea was a sure sign of abuse in children... Even so, some children were so traumatised they refused to admit to being abused. Accurate clinical results from medical examinations were often vital in prosecution cases... It was therefore a huge concern [to the expert] that about a third of specimens taken from sexually abused patients used to get lost between her paediatric ward and the diagnostic laboratory two floors way... The... [expert] remembered... a... child[who] was unwilling to let [the doctor] physically examine her, despite signs of sexual abuse. The girl later disclosed that her father used to play "dress up," putting on a white coat and using medical accessories to molest her. The girl also used to be sedated, making her naturally wary of a clinical setting. In Africa, rates of [STD]s in young people are at

least double the... [US rates. T]here was an African belief that sexually infected young [guys] could get rid of their diseases by having sex with virgin girls. In the process, they were infecting entire new generations of people unable to fight abuse.

...Yesterday, [a 71-year-old... father of 63 children... was sentenced in the Victorian County Court, Melbourne, to seven years and six months' jail for 20 child sex offences... The offences involved four girls aged between 7 and 11 and occurred between 1987 and 1991 at his Bells Beach compound in Victoria. One of the girls was... [the offender]'s daughter. The other three were the children of followers of the self-styled messiah who came to stay at Bells Beach for weekends and holidays. [A Detective Sergeant... of Melbourne's Sexual Crime Squad, told the *Weekend Herald* yesterday that [it believed the offender] preyed on this one daughter because [the offender] did not realise [the victim] was his own child. "I think it was a case of mistaken identity." ...[the offender] was born in Auckland... and brought up by his maternal grandparents. His grandfather was a carpenter, a trade which the [grandson]... briefly embraced before taking up an apprenticeship as a baker. At 25, [the offender] married his first wife in a Mormon Church, where [the offender] was introduced to the concept of polygamy... Police records show that [the offender] abandoned his baking career to become a constable in 1953. However, the job did not suit him and [the offender] resigned within the year. In 1969, his marriage in tatters, [the offender] decided to seek his fortune elsewhere and moved to Sydney. During the 1970s [the offender] changed his name and began to gather a group of devotees – mainly [gals] – who were attracted to his religion, a hybrid mix of Jewish, Hawaiian and Mormon faiths, and who believed [the offender]'s claims that [it] was Jesus Christ. After travelling around A[US] for some years, [the offender] and his harem of nine wives, who were all at least 30 years younger than him, moved to the Victorian surf mecca of Bells Beach in 1983. It was here in the two-storey house – where the children slept 15 bunks to a room – and in the sheds outside that [the offender] practised his abuse. Describing by his victims as "the controller" who "absolutely terrified" them, [the offender] bought their silence through fear and religion. One of the girls, now aged 18... was petrified of the [perso]n who claimed "his God would punish her" if [the victim] told anyone about the abuse... [This victim] was assaulted hundreds of times over a three-year period until... le[aving] to live with her own father... [The offender] slept with two wives at a time in the same room as the seven other w[ives]. A roster system ensured that sexual attention was shared equally among the w[ives]. It was not until the summer of 1991 that the wives stopped home-schooling their brood and enrolled them at nearby Torquay Primary and Oberon High School... [S]ome time during the following year, one of the girls told a school friend about the abuse and [the offender]'s game was up. [The Detective Sergeant... believed that the wives were unaware of the sexual abuse and... said... they turned against [their husband] when they found out.

...A bishop has received a... three-month suspended... jail sentence for covering up the paedophile activities of one of his parish priests – the first time a senior French clergy[person] has been convicted of a crime since the Revolution... [The] Bishop of Bayeux, was tried in June for failing to tell the police... that one of his priests had admitted sexual acts on boys in his care. The prosecution was the first of its kind in France and forced the Church to revise its advice to senior church[officials] on how to deal with paedophile priests... [The bishop] took no action, except to move [the priest] to another parish. The admission was made outside the confessional but the bishop told the court [it] believed it was covered by the secrecy of his "professional" relationship with the priest[, who]... was later convicted of the sexual assaults... The bishop's lawyer... was surprised by the verdict since... none of these acts took place after [the priest's admission, which meant that]... "no child suffered from the bishop's silence."

...FOR years, rumours circulated about child abuse at Hare Krishna boarding schools in the 1970s and '80s. But ultimately it was the group itself that confirmed the problem, exposing many of the shocking details in the past week. In an extraordinary display of candour by a religious group, the Hare Krishna movement published the findings of an official journal, recounting sexual molestation, beatings, public humiliation and isolation in roach-infested closets. Teachers, administrators and monks were among the abusers. The report was written by an independent sociologist... [who] did not know how many children were abused... sexually, but it was a sizeable number... [The sociologist] said the stage for abuse was set by the Hare Krishna's elevation of celibacy and its belief that only the spiritually weak pursue sex and marriage. "Children were abused in part because they were not valued by leaders and even, very often, by the parents who accepted theological and other justification offered by the leadership,"... Children only had occasional visits with their parents, and letters home were often censored by school officials. By 1986, all... ISKCON... boarding schools in North America were closed except for one in Florida, where a child protection office was established.

...A... [s]chool has banned parents from taking pictures of their children's nativity play to prevent images ending up in the hands of paedophiles... The decision was condemned by the child protection charity Kidscape as an overreaction which "demeans" the issue of child sex abuse.

...[In the American city of Chicago a guy] is facing a trial for raping a nine-year-old girl and pouring bug killer down her throat in a horrific attack.

...[an actor], sickened by recent cases of disappearing children in the UK and US, has bought [her] son... a trendy tracking device. It comes in the form of a watch and costs \$1300, and [the US-based actor] considers the money to be well spent. The Welsh beauty is so enthusiastic about the device, [the actor] told an aide: 'It uses satellites to pinpoint the wearer's location... I will always know where to look for him, even if [my son] decides to wander off somewhere in the house.' '[The actor] may legitimately need help in their pad, considering it's over 900 square metres,' the aide says. 'Now [the actor's joking it] just needs one for... [her husband]' Incidentally, Britain's 1970s glam rock star... was jailed for four months on Friday after pleading guilty to 54 charges of taking and possessing pornographic pictures of children. But [the star] was cleared of... sexual abuse of a young fan in the 1980s. A jury... found [the sta]r (55) not guilty of the four charges of sexual assault and four of indecent assault on the 14-year-old fan. [The sta]r stood smiling in the dock as the sexual abuse verdicts were returned to cheers from the public gallery... His lawyer... accused [the fan] of inventing the allegations for money, saying [the fan] went to the police only after [the sta]r became hot news. The girl first made public her allegations when [it] sold her story to *News of the World* for £10,000... in a deal which included a further £25,000 if [the sta]r was convicted.

...Thai police are battling to gather enough evidence to convict a[n a]lleged child molester... The high-profile case involving the American has outraged Thailand's elite, whose children were allegedly abused by the... former piano player at Bangkok's five-star Oriental Hotel... [The] musician... ran a private piano school, using it as a front for his sex acts, say officers. Despite a front-page confession of paedophilia by [the musician] in last month's English-language *Nation* newspaper, the wealthy parents of his victims... have refused to allow their youngsters to testify, fearing the shame they would have to endure... Lawyers prosecuting the piano player, who... is now behind bars awaiting trial, say convicting [the musician] is the key to denting Thailand's reputation as a sex haven for foreign paedophiles. Although there have been numerous arrests, almost all the offenders escape conviction by paying off officers or arranging bail and then fleeing... This month a British police team specialising in prosecuting sex abusers... has been training 50 police and social workers[who] will work with a new police Child Protection Centre in Bangkok, and selected police stations. The \$US50,000... project is part of an international effort to stem the tide of child-sex tourists. Video recording equipment and special interview rooms to encourage children to testify have also been provided. But in Pattaya, things remain much as they were. Foreign [paedophiles] can be seen on so-called "Gay Beach" arranging rendezvous with the young boys who sell ice cream or with street kids who hang outside bars. Recently a Swede... arrested... after allegedly forcing a boy... to commit an indecent act on him... [was freed] on \$US2500 bail.

...When the heat came on, [the]convicted paedophile... fled the tropical paradise of Goa and slipped back into N[Z], hoping to vanish in the bland suburbia of Upper Hutt. But this week the long arm of the law stretched from the Indian state to the Wellington District Court and collared the 60-year-old former chef, who consented to be extradited to India for trial on multiple charges of running a child-sex ring out of an orphanage... British-born... [associate] controlled his paedophile kingdom from behind the walls of the Orphans Family

Home, where authorities believe 150 children were sexually abused... [The NZer] is no stranger to the paedophile tag. In 1991 [it] was sentenced to nine months' periodic detention, two years' supervision and psychiatric treatment after pleading guilty to six charges of indecently assaulting a 6-year-old and an 11-year-old boy. At the time, [the NZer] offered to undergo chemical castration. Both offences occurred when [the NZer] was on parole from a two-year jail term for similar charges. Goa, a former Portuguese enclave on India's west coast with stunning, palm-fringed, white sand beaches, has long been a magnet for hedonistic travellers seeking sun, sand, surf, all-night dance parties and designer drugs. But for many the lure is not just the beaches or the travellers' scene, it is the disposable sexual commodity – children... Vietnam... as the next destination, says an expert.

...Authorities fear a European based paedophile ring targeting Pacific Island countries has claimed a young Cook Islands girl who was whisked away to Germany. Immigration officials said the 8-year-old was taken by two Germans who paid her parents an undisclosed sum... The authorities were unable to stop the child being taken out of the country, after the parents signed a document giving consent for their daughter to go for three months... [R]equests to German authorities for background checks on the German mother and son had gone unheeded... In the past two years two boys have also been taken by a German... who showered the parents with gifts and money. It is understood there have been other cases... Anti-child-sex campaigners in N[Z] said paedophiles are now targeting poor Pacific Islands as Asian countries clamp down on child-sex activities.

...Opposition to Pitcairn Islanders standing trial in N[Z] for the rape and indecent assault of young girls has been put to a parliamentary committee considering legislation to allow that to happen... [S]peaking... through a satellite phone link... Pitcairn[']s Mayor... said a trial could take years and if it was held in N[Z] the community could not survive it. [The mayor also] said the island did not have a specific age of consent. The select committee is expected to hear further submissions before recommending whether or not the bill should go further in the legislative process...

A parliamentary committee has approved a bill allowing Pitcairn Islanders to stand trial in N[Z] on sex abuse charges, despite opposition from the island and Green and N[Z] First MPs. The foreign affairs, defence and trade select committee has reported the Pitcairn Trials Bill back with minor amendments and Parliament is almost certain to pass it before Christmas... because of [the] difficulties of holding... the trials... on the island, which is more than 5000km east of N[Z]. Pitcairn Islanders have sent a petition to their governor in Wellington after [it] refused the islands' commissioner permission to travel to Pitcairn when sex abuse charges are laid next month. The petition was signed by 17 of the 27 adult islanders, with another six offering more muted support. It reads: "We demand that the commissioner for Pitcairn Islands is with us during the laying of charges..." [The] Pitcairn public prosecutor... and police officers will go to the islands early next month to lay charges of sex abuse and under-age sex against an unspecified number of Pitcairn [guys]. Similar charges will be laid against a Pitcairner living in N[Z]. The[... Pitcairn public defender... and an associate will be in the travelling party to ensure the islanders' rights are protected... Islanders were feeling stressed about the pending charges and were desperate for support.

...Tensions between Pitcairn Islanders and a party of lawyers and police arriving to lay charges of sexual assault surfaced before the party even made it ashore. Three of the police officers in the party are the subjects of a complaint by one of the alleged abuse victims and Pitcairn[']s Mayor... was reluctant to have them on the island. The legal party of 12 arrived on Friday after a two-day trip by charter boat. But all visitors need to be ferried to the island's lone harbour on one of the island's long boats. When they radioed to be picked up, [the mayor] sought advice from [the] Pitcairn public defender... asking if the officers... [- who the victim] claims... asked her to make false accusations against her attacker... [-] should be allowed ashore... [The public defender] advised the islanders to allow the party ashore. "The legal team is ashore and the reception was anything but warm," [the mayor] later told the *Herald*. Within the next few days, many of the [adult guys] on the island will be charged with a range of sexual offences, expected to extend from underage sex to rape and child abuse. It has been three years since allegations were first made... The arrests will end an agonising wait for Pitcairners around the world, who have all lived with the stigma of child abuse while police investigated the claims. The police and... the... ...One paedophile can, and often does, commit thousands of offences involving a huge web of victims – and may never be found out... [A] member of the Auckland Child Abuse Team... [refers to] the police Operation Toast campaign, first based at the Onehunga public toilets. It uncovered a recidivist paedophile responsible for at least 4229 offences carried out on 42 boys over more than 20 years. This [paedophile], who was involved in community groups, the local church and held down a respectable job, had transformed part of his home into a mecca for underprivileged children[, even persuading]... his mother to cook them dinners when [her son] was not bribing them with McDonald's hamburgers. Meanwhile, behind the facade, [the paedophile] was systematically performing indecencies on them... Most frustrating of all, although the [paedophile] had three previous convictions for indecent assault, [the paedophile] was never either jailed or placed on long-term supervision. The warning flag never went up... Also, say those working in the field, people are still not ready to believe that paedophile rings exist... [A] professor of child psychiatry from Leuven, Belgium, described even more insidious attitudes towards child abuse in that country. There, once the initial horror and fuss over the abduction, sexual abuse and murder of... young girls by [a] known rapist... had died down, the curtains of silence began to come down... The police[, who]... had... spent four days inveigling [the 'multiple child' rapist] into revealing the specially constructed cell... built to hold his victims, found that his... ring of accomplices included, importantly, a Brussels member of the judicial police... But... despite a 300,000-strong march in Brussels led by the parents of the murdered children and others still missing, the case floundered... [A] major back-lash had undermined... the [prosecutor's] efforts – and reputation. [The prosecutor] was impeached by the Belgian Supreme Court. His colleague, [the] District Attorney... was subjected to an investigation over alleged leaks. Two journalists who helped focus public attention on the affair lost their jobs.

The police have dug up three bodies in Belgium's biggest and bloodiest paedophile scandal after rescuing two young girls alive from a makeshift dungeon last week and detaining six people. The bodies of Julie Lejeune and Melissa Russo... both aged 8... – who disappeared together in June last year – have been found buried in the garden of a house owned by a 39-year-old electrician... The third body was identified as a former associate of... [the electrician, who] has been charged with the abduction and illegal imprisonment of [one girl], aged 14, kidnapped on August 9, and [another girl], aged 12, kidnapped on May 28. They were rescued on Thursday from a tiny concrete basement prison in a terraced house near the... city of Charleroi. Police had searched the house twice before [the electrician] showed them the hidden entrance. Both girls had been sexually abused. [The electrician] was present at the exhumations on Saturday and was taken away by helicopter to avoid the gathering crowds. [His] second wife... who protests her innocence, will appear before the court tomorrow... Thirteen other children have been abducted in the past six years – seven have now been found dead. The parents of Julie... and Melissa... had travelled the world following tips about the whereabouts of their daughters – including a visit to South America. There was no immediate information about how long the girls had been dead. [The electrician] was detained... after eyewitness evidence identified his van in the area where [the 14-year-old] was abducted during the short walk from the local swimming pool to her home. It is still unclear whether anyone visited the girls or whether they had been left in the dark and without food or water during the three days after the arrests.

...The two girls whose bodies were dug up from a Belgian garden at the weekend had starved to death while their abductor was in custody on an unrelated charge, according to the police... [A] 39-year-old father of three... told police that the girls died... in late February or early March while

[the 39-year-old] was serving a four-month jail sentence for theft... [T]heir parents have attacked the authorities for failing to find them, even though the house where they were imprisoned was searched twice... The prosecutor... said [the 39-year-old]... had given money to his associates to feed the girls during his detention. [The 39-year-old admitted killing one] accomplice... whose body was found with the girls, out of anger that [the accomplice] had allowed Julie and Melissa to die... The parents say the police doubted that there were links between a series of missing children cases and sex criminals. "Julie and Melissa are victims of organised paedophilia, sacrificed by the scepticism which has reigned in Belgium towards groups of evil doers who are capable of kidnapping children... and sexually abusing," said a statement by the parents which was read by their lawyer... "It was paedophilia which killed our daughters but equally it was the incredible generosity shown to paedophiles by those who are responsible for protecting our children." ...[the 39-year-old] and some of the five other people being held by police said they had also kidnapped [two other] teenagers... in August 1995. "Finding these girls is now the priority," said [the prosecutor]. Radio reports suggested that the pair may have been sold abroad... Newspapers published special Sunday editions calling for the reinstatement of the death penalty, which was erased from the statute books in Belgium in June after lying dormant for many years... Melissa's father... hoped the deaths would lead to a change in the law. "I hope Julie and Melissa didn't die for nothing." Belgian law on child rape is relatively mild. A defrocked 73-year-old priest... was sentenced in 1992 to three years detention – to be served in a monastery – after being found guilty along with two others of rape and child abuse.

...Two missing victims of a paedophile ring may have been sold into prostitution in the Czech Republic, according to reports on Belgian television... [which came as public] anger erupted at the fact that [the electrician] had been released for good behaviour 10 years early in 1992 from a 13-year sentence for rape and child abuse. A beneficiary of a controversial early release programme, [the electrician] fooled social workers and psychiatrists who were supposed to keep tabs on him. "His... behaviour was aimed at bamboozling officials," said the Justice Minister... who conceded [the electrician] succeeded, and soon... returned to his search for young girls to prey on. "Bring me a girl and you'll get 50,000 francs..." [the electrician] told accomplices last year, according to the investigating magistrate... In some of [the electrician's houses, more] underground cells and dungeons have been found, some still under construction, built to hold children prior to their transfer... Brussels Free University said there was a growing paedophile trade in Europe as child sex abusers looked increasingly for younger victims out of fear of catching Aids.

...the Charleroi... paedophile[s']... mother... warned... prosecutors about her son's activities in a letter... a year ago, Belgian RTBF [TV] reported yesterday... In part of the letter read out for the cameras, [the mother] said neighbours had complained about "numerous nocturnal comings and goings" not only of cars "but also of two young girls... who passed through the house... where the windows had been blacked out. In these times where... increasing numbers of girls are disappearing, I think that I can do no more than report that these two unknowns were at Jemeppe,"... The tip-off was written "before September 1995" to the Charleroi prosecutor's office, and a copy was passed on to the Namur prosecutor's office. The Namur prosecutor's office sent her a reply, saying no action would be taken over her letter... [The] Charleroi prosecutor... confirmed that such a letter from [the known paedophile's] mother existed but... had no personal knowledge of its contents... [In another development, the] daily *Le Soir* said... some 875,000 Belgian francs... were deposited into one of [his] bank accounts on August 26, 1992, three weeks after the disappearance of... a nine-year-old Moroccan girl, and two days after the disappearance of [a] 16-year-old... Several deposits were also carried out... shortly before the January 1994 disappearance in Antwerp of Kim Heyrman and her brother... Kim was found dead a month later and her brother is still missing.

...Hope that more children missing in Belgium's child sex and murder scandal could be found alive has evaporated after the discovery of two more bodies. "The hope is dead," the newspaper *La Dernière Heure* said yesterday in reaction to the confirmation earlier in the day that the bodies were those of An Marchal, aged 17, and Eefje Lambrechts, 19, kidnapped last year by [the] convicted rapist... The girls were identified by a wristwatch belonging to Eefje, and their dental records... [A] credit card belonging to [the rapist] was found with the bodies... The bodies were taken... to their home town of Hasselt as Belgium went into mourning... [I]nvestigators are still chasing clues into the disappearance of several other children in the widening paedophile scandal, in which nine people have so far been arrested. The inquiry has spread to the Czech Republic, where [the rapist] is alleged to have also carried out some of his crimes, and investigators have contacted their counterparts in Germany and Austria.

...The... paedophile scandal in Belgium has made millions of adults, especially [guys], fearful of showing physical affection towards children... All... apparently natural manifestations of love are now subject to question. "My husband used to go take a bath with our [four-year-old] daughter. But this affair has made me think 'what if [our daughter] talks about it in school?'" said... a 36-year-old... "At my son's birthday party, one of the boys came over, gave me a hug... and put his head in my lap while other parents were there... Because of the [scandal]... I was petrified..." said the father of a five-year-old. Besides killing what faith Belgians had left in the ability of their police and courts to prevent such crimes, the... scandal has shattered a widespread belief that atrocities like this could not happen here. "This is... the loss of innocence for a whole country..."

Belgium's Parliament was meeting overnight to consider urgent steps for rebuilding public confidence shattered by a shocking child sex abuse case and a political murder scandal. Political parties were expected to back the setting-up of a committee of inquiry into judicial bungling in the investigation of the 1991 mafia-style murder of a leading politician and the activities of a paedophile ring. The scandals have shocked the mainly Catholic country of 9.9 million people at the hub of Western Europe and sullied its image as an untroubled backwater famed for good food and beer. High-level corruption has emerged in both cases... [By the way, a Catholic] bishop who covered up widespread child sex abuse in an impoverished part of New Mexico claims [to not have known] his priests were breaking the law. "I didn't know it was a crime," said... the former Archbishop of Santa Fe. In one of the biggest scandals to hit the Catholic church in the US, [the archbishop] kept quiet about sexual abuse of hundreds of young boys by scores of priests in his archdiocese. [The archbishop also] claimed the sexual abuse of a child was a less serious sin than striking a priest. "I certainly had no idea that I had any obligation to bring that type of offence against a person to the authorities' attention,"... His diocese became a haven for paedophile priests, deemed unsuitable to serve in other parts of the US... [T]he scandal... could cost the church \$50 million in compensation to the victims... [However], a lawyer working for the victims, said: "To this day I have grave doubts as to whether there is any sincere remorse on the part of the church hierarchy for what was done to these kids." ...Most people in New Mexico suspect the real reason for [the archbishop's] coverup was because [the archbishop] feared any scandal might jeopardise his chances of being appointed cardinal by bringing into light his own sexual promiscuity. [The archbishop, who] was forced to resign in 1993 after an investigation was launched into the abuse, was sexually linked with 20 young [gals]. The archbishop had a particular taste for devout, church-going virgins just out of high school. "If you're spending as much time as [the archbishop] obviously was chasing nubile young Hispanic[s]... it's not surprising you don't have time to deal with the real problems of your parishioners," said [a mother] whose two young boys were abused by a priest. [The mother told the archbishop] in 1976 that... a priest close to her family, had been molesting her sons. For more than 15 years, the church kept it hushed up. Although her sons have now won a financial settlement from the archdiocese... they were still deeply traumatised... [Furthermore, the priest] was never prosecuted and in 1992... disappeared; [the mother] believes the church knows where [the priest] is. "What I have actually and reluctantly been forced to accept... is that an institution I, a born Catholic, did not choose to believe was corrupt, is completely corrupt and has been for a long time..."

...The Catholic Church is to investigate how a defrocked Hamilton priest jailed for indecencies on altar boys came to live in a church house next to a... primary school without its knowledge... The Catholic Bishop of Hamilton... immediately asked him to leave... town. [The] Bishop... yesterday apologised to the staff and parents of the 270 children attending the school and promised to do all in his power to prevent it happening again.

...An English Catholic priest convicted and jailed for sexually abusing young boys has sparked an investigation into paedophile rings in N[Z]... A report in the British newspaper, *UK Mail*, said... [the] parish priest... was nabbed after using the internet to send the details of his crimes around

the world. The massive amount of data collected by investigating police identified links in six other countries, including N[Z]. The names were passed to authorities in each country. [A]Detective Sergeant... of Interpol N[Z], confirmed... yesterday that the matter was under investigation... However, [the detective sergeant] refused to comment about where the investigation was centred or how many people were involved.

...[the police] are remaining tight-lipped about investigations into an international paedophile... trail which has led to N[Z]. An Interpol spokes[person] said police were continuing investigations but... refused to comment further on Thursday's raid on an East Auckland house... Auckland police and customs officers raided the house and seized a computer and several hundred discs... The seizure was part of Operation Starburst... No arrests were made... Criminal charges might be laid when the analysis... of the computer and discs... was complete. However, a spokes[person for Mothers/Fathers] Against Sex Crimes... said failure to arrest the [owner] would enable him to warn others within the paedophile network... [The spokesperson] said his group devoted much of its time to tracking down paedophiles but the ease of accessibility and lack of physical boundaries made policing the internet increasingly difficult.

...perverts are using the Internet as a sordid travel guide for molesting young girls, a British academic revealed yesterday... Subscribers can pick up details of what activities are on offer, where to go, which pimps to talk to and what the package costs... [Paedophiles] wanting a nine-year-old prostitute in Bangkok had only to tap into the Internet to find a seedy mine of information... [The] Bradford University... lecturer... told the Psychology of [Gals] Conference at the University of West England in Bristol: "I was utterly shocked when I found out how much information was available... The material I studied was not fantasy, you can tell by the details. These... young children are being repeatedly raped and abused by different [perverts] every day. This is just encouraging it." One researcher tapped in and... [became] the 64,411th visitor to the site. One contributor to the web page described a brothel as "the best chance of finding guys selling very young girls – pre-teens." Another wrote: "The establishment made no attempt to dress them as sexy but rather clothed them in young girls' outfits befitting their age. I couldn't restrain myself – I had to have one of them." [The lecturer] said this trafficking must be stopped immediately. "The Internet is not the whole problem. It is just a vehicle."

...Police investigating the biggest paedophile ring uncovered in Poland say that more than 100 foreigners were on the lists of a homosexual contacts service which offered underage boys for sex. Police... said the alleged organiser of the ring, a 44-year-old local government official in the northern city Szczecin, had been formally accused of sexual offences against minors. The ring's existence was revealed by Polish public television's *Wiadomosci* news programme... [A] Lieutenant... said... none... of... the... names on the computer... were from Belgium, which has been rocked this year by child sex scandals... but... included [guys] from... Saudi Arabia... Germany, the Netherlands, Russia, Austria, Canada...

Six members of a Catholic lay order in St John's, Newfoundland, have been charged with the sexual and physical abuse of orphans who had been under their care years ago... [In related news, t]he three-year legal action by former students of the Christian Brothers' Western A[US]n institutions was formally settled in the N[SW] Supreme Court yesterday. The setpiece of the settlement is a \$3.5 million trust to assist the... 260 former students, who will be paid at least \$A2000... each... The Christian Brothers spokes[person]... said the order might take out a loan to meet the commitment... [T]he order was shocked and disgusted by the cases of physical and sexual abuse, but maintained that its leaders had not been negligent.

...A Western [AUS]n victim support organisation has described a payout to... [people] abused as children by the Christian Brothers as "despicable." [A]Victims of Institutional Cruelty, Exploitation and Supporters (Voices) spokes[person]... said the payout was an insult. The 210 [victims], now aged in their 50s, were offered \$2000 each as compensation... [and] the offer... prevents them from taking further legal action... [The spokesperson] said the money was to be put in a trust fund which the [victims] had access to, but criticised the option for the public to make donations... "They're rubbing the [victim]'s noses in the dirt. And they want the public to pay for their disgraceful behaviour... We have exposed the Christian Brothers for what they are, and they have to walk the streets of Perth with their heads held in shame,"...

A 54-year-old Christian Brother stunned the Wood Royal Commission yesterday with revelations that [it] had sexually abused children as young as five in his care over a 35-year period. The [brother], identified as X11, told the hushed commission [it] had abused children throughout Sydney and was still working with children as recently as this June... Details of his work history and private life were suppressed after the hearing...

Children aged as young as eight to 14 were preyed upon by at least three paedophile rings each numbering from 20 to 100 [paedophiles] at three Sydney locations, the Wood Royal Commission was told yesterday... [In local news, a] transvestite and a[nother guy] alleged to have... pushed... a 6-year-old... into a car... on her way home from school... and... taken... her... to a house... [where things] had been done to her bottom which made it hurt... were committed for trial in the High Court after a hearing in the Christchurch District Court yesterday... Several witnesses gave evidence that both of the accused had been drinking in Christchurch bars that day... [E]ach defendant blamed the other for what happened.

...[a 29-year-old] labourer... convicted... yesterday... in the High Court at Christchurch... of raping a four-year-old girl... was jailed for 6 1/2 years.

...A teacher has appeared in the Rotorua District Court charged with sexually violating five girls. The 37-year-old... whose name was suppressed, was remanded on bail without plea... [In international news], French police sa[y a]... 16-year-old boy raped his four brothers and sisters, aged between four and 18, copying the crimes of his incestuous father... The boy and his 40-year-old father were both jailed yesterday.

...AT THE age of five, a tiny girl became the sexual property of at least 10 members of her extended family. From boys in their early teens to [adults] in their 50s, they treated her as "available" for their sexual gratification, the High Court at Napier heard... At the age of eight, M – who medical reports show weighed just 20kg – disclosed... that a 13-year-old boy in Tokoroa had raped her. When police spoke to her, accusations arose against... further... offenders... Police also believe there could have been more abusers than M identified... [Although CYPs] says such abuse is not rare... the... scale of the abuse stunned even... the... Crown prosecutor... "I didn't believe it at first... then I was told how many had admitted it... Short of homicide, it is the most disturbing case I have ever seen..." To reach the homes of the many relatives M was passed around... M attended about 12 primary schools in three years. [A]Hastings Detective... says M's mother was just 16 when [M] was born and couldn't cope so [M] went to live with relatives... [I]t is possible the offenders didn't know about each others' abuse but... M's mother found offender H abusing M years ago and told M's grandfather, who ignored the accusation and the abuse continued. [The detective] believes M's mother and aunt had been sexually abused within the family and some of M's abusers were also victims. "You get an attitude which is almost 'It's a part of growing up – you should accept it. It happened to me and it will happen to you'." M, who has just turned 10[, was]... placed with a foster family and made good progress. But [M] has since started running away and the long-term impact... on M, like almost all abuse victims, is likely to be devastating.

...A MORMON church spokes[person] whose radio broadcasts often decried the evils of sexual abuse has been arrested for investigation into allegations of sodomy of a 14-year-old girl... The director of the church's radio news services... programme *Time And Seasons* was jailed last week after the girl complained to a counsellor... On November 6, the girl was taken to a parking lot behind a radio station, shown pornography, photographed in her underwear and told to perform oral sex... The Mormon Church declined to comment...

A Mormon Church spokes[person] yesterday pleaded guilty to sexually abusing a 14-year-old girl. [The offender], aged 51, from Salt Lake City, could face a maximum penalty of 15 years in prison and a \$US10,000 fine... [The offender] has... been released on bail... [Incidentally, it] was just over three months ago that[the US] President... signed a document that turned American law on its head... [Previously,] a convicted criminal who had served his or her sentence was returned to the community a free person. No doubt they had been punished and that was the end of the matter. Now the President, with the support of Congress and vast public backing, has decreed that one category of criminal will no longer be able to melt quietly back into society. From now on child molesters and rapists may get out of jail but their movements will be checked and, crucially, their

neighbours will be informed of their past. Paedophiles are the new lepers – wherever they go the cry will resound: “Unclean unclean.” The legislation is called “Megan’s Law” after a seven-year-old New Jersey girl Megan Kanka. Two years ago [Megan] was raped and murdered by a twice-convicted sex offender who lived across the street from her. To the neighbours, blissfully ignorant of his past, [the sex offender] was just an ordinary guy. “Today America circles the wagons around our children,” declared the President... “Studies show sex offenders commit crime after crime. We respect people’s rights, but there is no greater right than a parent’s to raise a child in safety and love.” Statistically... 70[%] of child molesters reoffend. The president was echoing the new orthodoxy sweeping the U[S] and Canada: paedophilia is an incurable disease, cause unknown. It could be genetic or possibly the result of social factors... In fundamentalist America many search no further than “evil” for an explanation. If it is an incurable disease, it follows... that, once diagnosed, a “sufferer” should be isolated. Put another way: lock ‘em up and throw away the key. But abuse, short of murder, does not carry a life sentence so [the President] has ruled that the police must notify local people when a convicted sex offender moves in. The civil liberties lobby has objected that this infringes a person’s right to privacy and amounts to additional punishment... The American Civil Liberties Union has warned of dangerous precedents – today paedophiles, tomorrow armed robbers? But faced with a conflict between the rights of a known abuser and those of a child, the public has had no such problem... Such is the support... for tough measures to stamp out child abuse that few politicians have felt able to speak out against Megan’s Law... [However,] a handful of commentators have asked what the point of the law is. The respectable answer is that it allows parents to shield their children, preventing them, for example, from talking to the “sexual predator”... in their midst. The not-at-all respectable answer is that it empowers the community to protect itself, a polite way to describe vigilantes, lynch mobs and assorted petrol bombers who have decided they don’t want perverts in their backyard... Washington State introduced a variant on Megan’s Law six years ago and there have been 17 reported vigilante attacks. In New Jersey intruders nearly killed... [someone] they believed to be a former offender. They broke into the home of a paedophile but attacked an innocent visitor by mistake. The New Jersey police have been issuing community information orders for over a year. At least 30 [paedophiles] have been identified and, according to police, there have been numerous outbreaks of vigilantism. Pickets gather outside a house, usually demanding the resident quit the neighbourhood; many do... New Jersey’s Guardian Angels have done their bit to make life unpleasant for released offenders... The Canadians are taking a similar line... [A] mentally handicapped 39-year-old, was released from prison last year after serving five years for molesting children... Before [his] release Edmonton police provided his address in a computer-dialled message to 3500 homes... [The 39-year-old] returned home to Edmonton... to find a welcome committee. They suggested [the 39-year-old] hang himself before they hanged him. [The 39-year-old] fled to British Columbia only to be similarly hounded... is now in hiding, and has tried to commit suicide. The mother of the six-year-old girl... [the 39-year-old assaulted, said]: “I want him dead... I would really like him to commit suicide.” ...Well aware of the vigilante threat, a number of [US] states are considering laws of their own... allowing the indefinite internment of sex offenders in mental institutions... [But] philosophical opposition has come from lawyers and child abuse experts who fear... many suspected offenders, especially from the suburban middle class, will refuse to plead guilty or plea bargain. Faced with the prospect of being branded for life they will deny everything. It is very difficult, on both sides of the Atlantic, to secure convictions. Parents are often unwilling to put children through the ordeal of a court appearance and only a fraction of cases come to court. In the [US 80%] of such cases are resolved through a guilty plea or plea bargaining (admitting to a lesser offence in return for a shorter sentence)... [T]he New Jersey Civil Liberties Union, raises another pragmatic objection... serial offenders will stay on the run, constantly changing name and moving from area to area. “The concept of rehabilitation is undermined. Offenders will... become more dangerous.” Megan’s Law has unsettled American liberals because of the painful conflict between their hearts and their minds. Yet when Megan’s mother appears on television applauding the new law it is hard to separate emotion from intellect: “This is like a new wave across the country. I’m ecstatic that they put the safety of children over the concerns of paedophiles,”... In Britain, the... anti-paedophile group Action on Child Exploitation... wants tough action to stamp out abuse but stops short of Megan’s Law... [Its chairperson] admits... “My heart tells me I want to know if a sex offender is living next door. But my head tells me that if we start with paedophiles, tomorrow it will be Aids victims. But... if your child is vulnerable you want to know.” - 1996

N[ighbours] of a Wellington[ian] facing sex charges have been warned by police of his presence – even though the courts have yet to deal with his case and... [the] 68-year-old... has no previous convictions. The... [68-year-old] did not know police had been informing some of his neighbours of his charges... The former sales[person]... denies the allegations and said the police action seemed unfair... The incidents are alleged to have occurred in the late 1970s and early 1980s... Neighbours said a... police officer knocked on their doors about 10 days ago[and] said a paedophile... [who] “liked young boys”... was living nearby... [The] Council of Civil Liberties... said police had to balance the right of the individual against public safety, but appeared to have acted prematurely. “This is somewhat indicative of the way police are working these days, which is lazy policing. What happens if a neighbour ends up on his jury?” ...[However, a] Police National Headquarters spokes[person] said no one at Johnsonville or Wellington’s CIB or child abuse team knew of any door to door work in the area... It appeared a lone officer had decided to door-knock the neighbours.

...Police worries about an 82-year-old convicted child molester have led to... 700 copies of... a... warning notice... bearing his name and photograph... [being sent] to parents... Copies have also been sent to the staff of Whangaparaoa Primary School, the local kindergarten and preschools in the area. The police and parents say the [paedophile], who has convictions for assault and indecent assault on young girls, has been approaching children and trying to entice them into his home... [The] Whangaparaoa Peninsula community constable... said the leaflet was intended to protect the elderly [paedophile] from temptation as well as informing parents of the potential danger... The principal of Whangaparaoa Primary School... agreed with the police action[and] said a trespass notice was issued against the [paedophile] two years ago after [the paedophile] began annoying children while walking through the school grounds to visit his wife at a nearby rest home.

...[NZ] police... are being asked to look at an A[US]n proposal to register convicted paedophiles. The Wood royal commission has recommended that compulsory registration with police of all convicted paedophiles be considered, with the legal requirement that they notify any change of address. [NZ’s] Minister of Police... said yesterday... “I believe that parents in this country would also want the maximum protection for their children, and while there may be complaints from civil libertarians, the rights of children not to be abused must be paramount.”

...A publisher planning to launch a British directory of paedophiles has been attacked by probation officers who claim the book could encourage vigilantes without protecting children. [The publisher], who has published the N[Z] version of the directory, said the planned British edition was vital because most sex abusers tend to re-offend. The information, compiled from newspaper clippings and court records, is designed to protect communities from paedophiles, [the publisher] added. The Association of Chief Officers of Probation claimed... the offenders named in the book... will be driven by fear of violence to change their identity or simply disappear. “In this instance our job supervising them and recalling them to prison when necessary would become impossible and the public would then be endangered, not protected.” Those concerns were echoed by [the] Liberal Democrat spokes[person]... who said the private book was “illegal” and called on the Government to draw up a code regulating access to the new official paedophile register being brought in under the Sex Offenders Bill. “The police should be given strict guidelines on access to the register which should be limited to bodies such as Area Child Protection Committees...” But the arguments were rejected by [the NZer] who told BBC Radio 5 Live: “In N[Z], for instance, the book has been extremely useful. It has not been used by vigilantes to burn down or deface the houses of convicted paedophiles who have come out of jail. It has generally been used responsibly by educational groups.” ...[however, the NZ] book was blamed for at least one paedophile’s suicide. An A[US]n edition – *The A[US]n paedophile and Sex Offender Index* – was published on Monday by [the publisher’s partner. The partner]... has shrugged off death and legal action threats and opposition from civil libertarians and legal authorities to

name more than 300 convicted perpetrators in her book... "I've only put these people in a book. It's nothing compared to what they've done to other people... but I'm the bad guy. I say that these people may have a need for privacy, but they don't have a right to privacy – they have been found guilty of a crime and have given up their rights, and the right of the innocent to be protected far outweighs these people's need for privacy."

...["My son is a paedophile – keep your children away from him." These words that would break any mother's heart have been uttered by a Wellington resident more times than it cares to remember. But the mother will keep saying them as often as it needs to in a quest to protect children from her son. "It's hard because I really do love my son, but I think people need to know that a sex offender can be the articulate, nice-looking boy from down the road. Having experienced abuse myself as a kid and being a doctor to a lot of people who have been abused, I know the long-term effects." The mother's experiences of abuse at eight years old sent her life into a downward spiral that included stowing away on a US Navy ship back to America, being pack-raped in the back of a car when hitchhiking, and being deported back to NZ to become a solo mum, prostitute, drug abuser, housewife and divorcee. Her son is back on the street after serving a jail sentence for sexual violation, and the mother fears that her son will offend again. The mother first learned of his sexual attraction to young children when her son was only 13 years old and was caught abusing an 8-year-old cousin. Even then the son had the cunning of a seasonal abuser, threatening the girl that it would cut out her tongue if the victim told anyone. The mother's disgust was tempered with pity for the son it believes was abused by an older guy at a Christian camp. But as much as the mother tried to help her son, the mother was equally vigilant about protecting children from him, stepping in quickly to warn parents, police and whomever else would listen when the son would start lavishing attention on yet another innocent child and unsuspecting family. While most families were grateful and immediately cut off contact with her son, not everyone welcomed her calls. The mother of an 8-year-old boy refused to believe what a stranger was saying about the charming young guy it had welcomed into her home. "That mother brushed me off. My son had primed her for such a call from me, and that mother thought I was lying." Sadly, the paedophile was later arrested for sexually violating the boy, and given a suspended sentence. The distraught mother of the victim then helped distribute posters all over Wellington warning people about a sex offender'...

'A Texas judge has ordered offenders who had had a long probation instead of jail for offences ranging from aggravated sexual assault to indecency with a child, to put "Danger! registered sex offender lives here" signs on their front yards. The convicted offenders were handed the signs and bumper stickers reading: "Danger! Registered Sex Offender in Vehicle" on Saturday. A Nueces County probation department supervisor said checkups would follow. However, the president of the Corpus Christi Criminal Defence Lawyers' Organisation said the signs were unconstitutional. "It's a return to the days of the scarlet letter. This is madness. We will have vigilantes out destroying property." The organisation was contemplating legal avenues to block the judge's action. The judge had called about 55 registered sex offenders to court to be given new probation conditions. 40 showed, 21 got the stickers. "Everybody is looking at you," the judge told them. "You have no one to blame but yourselves." The other offenders were ordered to send letters to all neighbours within three blocks of their homes. The District Attorney said the judge's action was a practical way of implementing the state's sexual offender registration act. It requires offenders to register with local police and have their names and photos posted on the internet.'

...NZ is one of a handful of countries publicly branding dangerous sex offenders in a controversial move to protect communities. Last month the Taupo police warned local schools about an abuser then told other regions that a convicted abuser might be headed their way when the abuser moved on. The US state of Washington was the world leader in setting up notification laws, which have also been adopted in Britain and AUS. In Britain, a new law allows police and the courts to place paedophiles under close supervision, including banning them from playgrounds and near schools. A Washington study had shown that community notification has not led to a drop in reoffending, but the abusers seemed to be caught earlier. Sex offenders would always be part of society said a US abuse worker, who says Governments had an obligation to protect innocent lives by exposing repeat offenders through flyers, community meetings and the media. Original concerns that the laws would raise community fears and vigilantism were unfounded the Seattle sexual assault and trauma centre worker said. In Washington, 11% of all sex offenders were deemed dangerous enough to warrant notification. Less than 4% of that group had been harassed, although most of it was minor. It was important that only selected information was released about offenders, including their name and where they lived. In one US case, the police had revealed an offender's sex abuse fantasies, leading to his house being burned down. If repeat offenders felt harassed, they were less likely to redeem themselves. The goal was to be cautious of them but allow them to prove that they could fall in line.'

...Should NZ establish an official register of paedophiles and other sex offenders? The Justice Minister seems intent upon setting up some means of ensuring that people are not employed in situations where they present a risk to children or others. For a year now his department has been looking for ways to better manage sex offenders after release from custody and the minister expects to receive their paper shortly. A register of some sort would seem to be inevitable if agencies are to keep track of such people. The real questions are who should have access to it and how it should be used. Britain simply keeps a record of convicted sex offenders and requires them to notify the police when they change their address. That does not seem to go far enough. In some parts of the US the police alert parents when a convicted paedophile moves into their neighbourhood. That is going too far. The minister is not contemplating a register that would be available to the public, citing recent events in Britain as evidence of what can happen when such a list is published irresponsibly.'

...Britain's biggest-selling weekly newspaper published the names and photographs of 33 more paedophiles yesterday, despite a continuing controversy. The *News of the World* defended its decision to "name and shame" convicted paedophiles, saying it was in the best interests of children. "More names and photographs of child sex offenders living near you," the front page proclaimed. The paper began its campaign by publishing the names of 49 alleged paedophiles the previous weekend, angering police, political leaders and groups representing offenders and children. "Our object is to enlighten," said a spokesperson for the paper. It also set up a paedophile database accessible through the internet. Protesters supporting the paper rallied in central London yesterday to demand a change in the law to allow public identification of offenders against children. But last week a resident in Manchester was confronted by angry neighbours who thought it was one of the 49 individuals. And in Plymouth yesterday, police had to rescue a couple and their three children from their home after a crowd of about 60 gathered outside, apparently thinking there was a paedophile indoors. Both incidents underlined fears that "name and shame" lists could lead to vigilante attacks and drive convicted child sex offenders underground, making it harder for probation services to monitor them.'

...A stone-throwing mob have protested outside the home of a suspected paedophile in another episode sparked by a British newspaper's controversial campaign to "name and shame" sex offenders. A hundred people gathered outside the suspected paedophile's home in Portsmouth, throwing stones and damaging property, police said yesterday. It emerged that the victim had been named as a paedophile by the *News of the World*. Earlier, police in Croydon, south of London, offered to protect an elderly guy after it became the second innocent victim of a hate-mail campaign which wrongly identified him as a paedophile named by the newspaper. About 300 households close to his home received letters giving his name and address and warning people with children. On Thursday, a 55-year-old who lives in the same area, found that similar letters had been sent to 500 of his neighbours.'

...The *News of the World* newspaper has been forced into a humiliating climbdown as it ended its "For Sarah" campaign of "naming and shaming" paedophiles. The decision to abandon its pledge to identify up to 11,000 child sex offenders followed strong criticism from the police, politicians and children's charities. The publication of 82 names and photographs of convicted paedophiles has led to a spate of violent demonstrations and innocent people being driven from their homes. The worst of the vigilante violence erupted on Friday in Portsmouth when a mob of 150 people wrecked the empty flat of a named offender and set fire to a car. At least six people with the same names or appearance as offenders identified by the newspaper have been wrongly targeted by vigilantes. However, the paper claimed a partial success, pointing out that the Government had promised to give "urgent" consideration to the idea of a national register of sex offenders that would be available to the general public. The paper said it would continue its campaign for such a register'...

'A small but powerful army is on the march. One foot soldier, a boy of 4, struggles to lift a placard that reads: "Paedophiles – don't house them, hang them." A girl aged 3 holds aloft another sign: "Kill paedophiles." These are the unwitting backers of a campaign to rid an area of the child molesters within their midst. For seven nights a vigilante mob hunted down paedophiles, intent on hounding them out. Windows were smashed, missiles hurled, cars overturned and burned out. A police officer was injured. Five families fled. All were innocent and wrongly identified, sometimes because they had the same surname as a convicted paedophile. It was hardly surprising. Many of the 20 targets had been identified purely on the basis of rumour and hearsay. This week's riots in a sprawling housing estate in Portsmouth have earned chilling comparisons with a similar outbreak of hysteria in 17th Century Salem. The allegations of a vindictive child, Abigail Williams, sent 20 harmless citizens to the scaffold. Those who wonder how such an outrage could have happened then should cast an eye over the modern-day witch-hunt which has infected the Paulsgrove estate in recent days. Residents there are now living in fear of their neighbours in addition to paedophiles. Two people suspected of offences against children have committed suicide. James White, aged 54, fled his home in Oldham last month after it was reported that James had been charged with sex offences against young girls. James took a fatal overdose, and his solicitor claimed James was driven from his home by a vigilante mob which scared him to death. John Potter, 49, was a millionaire who had built up the largest Harley Davidson motorcycle dealership outside the US in Southampton. Potter was found at his home with a single bullet wound to the head. Potter had been under investigation by police for allegedly indecently assaulting two 15-year-old boys. And yesterday there was fury when a paedophile convicted of indecent assaults on a 7-year-old girl walked free from court. The judge said the suspect, aged 51, who was "named and shamed" by the *News of the World*, had "suffered considerable adverse publicity," and in those circumstances handed down a 15-month suspended sentence. One of his victims, now 22, was left furious by the latest verdict. "The sentence is absolutely disgraceful. To let him go free opens the floodgates for all paedophiles to plead not guilty at their trial." Many groups have pointed the finger of blame for all this at the *News of the World*. Last week the paper dropped its name-and-shame tactic – a campaign supported by the parents of Sarah Payne, who believe all paedophiles should be sent to prison for life – and condemned vigilante violence. Moderating its stance, it came up with a more considered range of policies designed to protect children which received the support of police and child protection agencies. The paper continues to press for the setting up of a public register which would emulate Megan's Law in America.'

... 'A paedophile shot dead on the doorstep of his London home may have been the victim of a contract killing, say British police. Scotland Yard named the victim as William Bruce Malcolm, aged 44. Malcolm was jailed twice in the 1980s for attacking the same girl before and after his first sentence. In 1994, Malcolm faced 13 counts of rape, indecent assault and cruelty against three girls and a boy but was freed when a judge ruled a mistrial. Neighbours shed no tears for the dead person. "I was shocked when I heard someone had been shot in their home," a teacher said. "But when I heard who it was, it was a relief. It couldn't have happened to a nicer bloke."

... 'The paedophile at the centre of a civil-rights debate is fleeing Napier for a secret location after death threats and a vigilante-type attack. "I fear for my life. I thought Hawkes Bay would always be home, but for my own safety I am getting out of town," the 47-year-old, twice-divorced father who was convicted in 1996 of indecently assaulting a 15-year-old boy, told the *Herald*. Napier police said that on Sunday afternoon three guys kicked in the door of the paedophile's flat and attacked him with a piece of driftwood. The victim required hospital treatment for abrasions to his head. The 47-year-old hit the headlines last month when Napier police threatened to use section 48 of the Children, Young Persons and Their Families Act 1989 to detain youths short-term if they were found on his property. The 47-year-old sought legal advice and claimed police were harassing him. The move also angered civil libertarians, who said the 47-year-old had not broken the law and the teenagers could associate with whomever they wanted. But police said the 47-year-old, who delivers junk mail for a job, had set up his flat like a Club Med for boys and provided them with beer, cigarettes and pornography. If the 47-year-old did not keep away from the youths, they would use their power to keep them away from him. The mother of a 14-year-old boy who used to visit the house, said "Good job" when the *Herald* told her of the attack. "I don't know who attacked him and I don't care. We are glad to see the back of him."

...someone] who beat the alleged rapist of a 14-year-old girl with a builder's spirit level... would be charged with assault because it was unacceptable for people to take justice into their own hands... Rotorua police said yesterday... [after a] Rotorua schoolteacher who twice raped one of his... 13-year-old pupils... was... sentenced to 8 1/2 years' jail... The court heard that... [the rapes occurred when the teacher] was drunk and... the victim had been asked to babysit. [Editor's note: A 'young guy who had recently immigrated to NZ with his mother found out that the son of an acquaintance had been sexually abused by the acquaintance's gay lodger. The immigrant allegedly went to the acquaintance's house while drunk, beat up the lodger then left, after which the acquaintance killed the lodger and told the police that the immigrant had done it. The immigrant, who only had a vague recollection of the events, was convicted of humanslaughter and spent most of the following decade in NZ's maximum security prison.']

...Last year... the Victorian Supreme court, free[d a killer] on immediate parole following his conviction on [hu]manslaughter charges... The... [killer] had been drinking heavily before... [knocking] on Gordon Kerr's door... When Kerr opened the door, [the killer] brought an axe down on his head, again and again, before embedding it in his 68-year-old victim's buttocks. Police found [the killer] asleep soon after, curled in a foetal position... [The killer] was one more victim of predation, forced into repeated sex as a child by Kerr, disbelieved and punished by his parents, ignored by police for 20 years. As his anger burst into bloody revenge in a quiet country town, a much wider revulsion was growing around the nation. This week it took form in the report handed to the NSW Premier... by [the judge handling the royal commission]. For month after month the judge pieced together a sordid portrait of callous, systematic and brutal exploitation of children, of corruption, concealment, apathy, incompetence and denial that seeped across social stratas, through police, schools and the officials charged with the care and well-being of the young and vulnerable, to the Church and youth organisations... A Sydney conference was told... [that paedophiles] allowed to remain free to sodomise young boys and procure girls still not fully formed are unrepentant, serial offenders... [The conference also heard] of 232 convicted paedophiles who had each abused an average of 76 children before they were caught. One, in Queensland, kept a record of 2500 boys seduced over 20 years... [Among the paedophiles was a retired] Supreme Court Judge... [who] committed suicide after his name was raised in Parliament. [The judge] was arrested after exposing himself in a railway toilet, but was released by police and the offence covered up.

...[two people] were dead and another critically ill after what police described as an attempted group suicide by three alleged paedophiles near Brisbane. The [paedophiles], from Armidale in N[SW], were... at the centre of a Child Protection Enforcement Agency investigation known as Operation Diamante... The survivor was a 34-year-old Health Department employee who... was charged on Friday with six counts of homosexual intercourse with a child between the ages of 10 and 16. The... [health worker had been] bailed to appear in Armidale Court on December 1. As a result of the recent Wood royal commission, all Health Department employees are subject to criminal record checks by police.

...N[SW] education officials yesterday ordered 36 teachers suspected of sexually abusing their students from classrooms across the state in a sweeping new crackdown on paedophilia in schools. Allegations against more than 100 others will also be reinvestigated by a former Supreme Court judge following startling revelations in the [report on the] royal commission that teachers warned or reprimanded for sexual misconduct were allowed to remain in their jobs... The exposure of widespread abuse, including the ignoring or covering-up of complaints by education authorities, last month led to the suicide of a secondary school principal. Officials have admitted that it was possible for paedophile teachers to transfer from school to school without hindrance, and... some had even been provided with good references, and... told the royal commission that children remained at risk because the... Education Department... had not monitored 106 teachers reprimanded for sexual misconduct.

...[the Supreme Court judge who headed NSW's royal commission] has recommended... that the age at which [guys] could legally have sex with boys should be lowered by two years to 16 to bring N[SW] into line with other A[US]n states. In tandem with this change, accused paedophiles should be afforded recourse to the legal defence that they believed a 14-year-old victim was aged 16... Gay lobby groups had heavily argued in written

submissions to the inquiry that... [the] judge... recommend a... lower age of consent... [In further news from across the Tasman, a] former State MP... [is facing 29 paedophile] charges relating back to 1973, including... using drugs to stupefy his victims.

...[a former] Nelson city councillor... was sent to jail for nine months for two indecent acts with a young girl, the first when [the girl] was eight years old. A retired senior police officer was jailed for six years in Auckland for three rapes, two indecent assaults and one attempted sodomy committed on his daughter and an indecent assault on his granddaughter... [The] Wellington Rugby Union marketing manager... was given 18 months' jail for indecently assaulting a 15-year-old boy after an earlier jail sentence for indecent acts on boys... [A] 52-year-old Auckland [father], was jailed for eight years on five counts of raping his daughter and one of procuring an abortion by pouring hot water into her vagina after [his daughter] became pregnant to him at 13... Child sex abuse, once unmentionable, is becoming widely recognised as one of our society's greatest ills... Is there more sexual abuse of children in N[Z] these days, or are we just hearing more about it? The experts don't really know, though... [according to the CYFS chief social worker... "Media attention and educational campaigns run by the Department of Social Welfare have resulted in cases being reported to us now that would never have come to light just a few years ago." ...[14%] of the more than 5000 substantiated "abuse notifications" received by the C[YFS] in the six months to December last year related to sexual abuse. Some experts believe that only one case in ten makes it to court, and that the real total runs into the thousands... Incest strikes many people as the most disgraceful form of sexual abuse, but in up to half the cases, the offender is not the biological parent. [The molester] is a stepfather, foster parent or the mother's de facto... In one recent case, a four-year-old Auckland boy had been the victim of attacks by both his stepfather and his 28-year-old mother since [the boy] was a baby. His stepfather was jailed for 12 years; his mother for ten... Why don't the victims of child molesting tell someone? "Often the only adults these children know are their abusive care-givers," explains... [the] chairperson of the N[Z] Child Abuse Prevention Service. "They simply don't know who to tell." Young children can also be confused by sexual abuse. "They have little understanding of what to say or how to react... They are used to seeing adults as people who provide for them and can't comprehend any other sort of motivation for this behaviour." This confusion is sometimes reinforced by threats – "Your mother won't love you any more if you tell her" or "I'll be sent to prison." Often children feel that no-one will believe them, or that the abuse is their fault and must be kept a secret. Unfortunately, if a child does try to tell, even those closest to him or her may not recognise the call for help... Others simply ignore the clues. "They say the child made it up or hope it will go away if they ignore it." One reason for this is that an entire family can be stigmatised by the abuse... Even if action is taken, our legal system does not always protect victims from further anguish in court. The child's testimony is often the only evidence available, and some children find questioning in court intimidating and distressing. Recently a judge threw out a case in Auckland after a child became confused answering questions. "Children are easily bamboozled and frightened by the adult manners and language of a courtroom," explains... a... [CYFS] psychologist... "Lawyers and judges deal with adults most of the time and find it difficult switching to the language of a four-year-old... Children also suffer pressure because of the usual delay of 12 to 18 months before the court hearing, especially if family members are trying to force them to retract allegations,"... Fortunately, changes *are* under way... [A] prosecutor at the Auckland Crown Solicitor's Office, says N[Z] has become a world leader in making the legal process easier for the victims of child abuse. "Police, doctors, lawyers and child-care workers now cooperate more closely in trying to ascertain the truth... Every effort is made to record children's testimonies on video as soon as possible after their first disclosure of an offence." Says... [the] research manager for the Children's Issue Centre at the University of Otago, "Some children still have to tell of the circumstances more times than they would like to, but offenders now have less opportunity to think up a story." When a molestation case reaches court nowadays, children can give evidence on closed-circuit TV or from behind a screen to prevent direct eye contact with the accused. However... some prosecutors still prefer that a child, particularly an older one, give evidence from the witness box, believing this has more impact on the jury... Despite[the] improvements to the legal process, convictions are still difficult to secure... "Where there is no medical evidence or supporting testimony from witnesses, successful prosecution is very difficult... In many cases, the police have to drop the case." In a trial, juries may be swayed into acquittals by the belief that the offence is not serious or that molesters face assault or rape by inmates who despise them. "In fact... child sex offenders in N[Z] are segregated from other prisoners." When offenders *are* convicted, the sentences can be ridiculously light... Therapy for offenders is mandatory in some countries, but its use is controversial... Treating molesters requires skilled therapists. "Child abusers are often very clever at deception... They are great manipulators." But... [the] senior psychologist in charge of the Te Piriti Special Treatment Unit at Auckland Prison... believes that therapy can work. Nearly three years old, Te Piriti has 60 inmates. Its programme is based on that at the Kai Marama unit at Rolleston Prison in Christchurch, where almost 400 self-referred [sex offenders] have been treated in the past seven years. Of these, 95[%] have not been reconvicted since release from jail... "Many of the [sex offenders] I've worked with knew they had a problem but didn't know how to go about solving it... We must spread the word that advice is available outside prisons." Meanwhile... there is an urgent need for counselling services to target adolescents who molest children, often due to their own abuse. "We know that the majority of adult molesters begin offending as teenagers... so it's at this age we have the best chance of succeeding with therapy." Molesters hurt children seriously – sometimes physically and almost always emotionally. Victims may develop bedwetting, regression to an earlier childhood stage, insomnia... Another peril is... [STDs. I]n Sydney a 13-year-old boy sodomised by an HIV-infected [adult] died of... AIDS... in 1994. The effort to spare children such ordeals is taking several innovative forms. One of the most successful is a joint programme between schools and the Police Youth Education Service called Keeping Ourselves Safe. "What if" cards prompt discussion with children, and a range of educational videos is available, depending on the ages of students. One video, Pete and Penny, uses cartoon characters to teach children that they can say no if someone touches them in a way they dislike, and, if it happens, urges them to tell trusted adults... such as a teacher... Educating potential victims is easier than attempting to cure offenders. "It's sad, but the reality is that children have to be able to take steps to protect themselves from abuse," says [the research manager].

...the CYFS] placed a girl in the care of... [a 23-year-old] who has been charged with her sexual abuse and murder... The principal Family Court judge confirmed that the service believed the 2-year-old girl was at risk with her mother and a custody order by the court was made... giving custody of the girl and a 17-month-old boy to the... 23-year-old... [T]he court appointed a senior counsel to check the children were not at risk in the [23-year-old's] care. The counsel had said the children were safe.

...An eight-year-old child placed in a family home by Social Welfare has sexually attacked other children in the house 13 times – the most serious of a number of alarming cases revealed yesterday. [The eight-year-old offender] is not the youngest. Information disclosed by Labour pointed to a seven-year-old who also sexually abused a child in a home where [the seven-year-old] was placed by the C[YFS]. Since July 1 last year... about five... assaults... a week... were recorded in the service's residential and family homes... The Commissioner for Children... said last night that the figures were extremely concerning. "We have to take great care where we place young people where there is a potential for further abuse. It puts themselves and others at risk." ...[In related news, two] 10-year-old boys have become the youngest in Britain to appear in court charged with rape. The pair are accused of attacking a nine-year-old girl in a school toilet in West London.

...TWO boys aged eight and 10 stood alongside their mothers in court as they pleaded guilty to sexually attacking a nine-year-old schoolmate. Police said the boys snuck out of the detention room at Delaware Elementary School in Syracuse city north of New York... and... dragged her into a gymnasium, where the older boy held her down while the eight-year-old raped her. The pair pleaded guilty to lesser sexual counts that carry... up to 18 months in care, with the option of keeping them there until they are 18.

...A 16-year-old schoolboy who raped a 12-year-old girl last year could sexually attack other young [girls unless it] sought psychological treatment, the Chief District Court Judge... said yesterday. [The 16-year-old] appeared in the Dunedin District Court for sentencing after earlier

admitting three charges of rape. On each charge, [the 16-year-old] earned two years' jail, suspended for two years, plus 18 months' supervision with conditions... [● A] youth in foster care[who] raped a three-year-old girl and sexually molested two other children... was now making good progress in a programme for adolescent sex offenders and was considered by a psychologist to be unlikely to reoffend.

...A[n]... expert in teenage sex crimes says that only 50 of an estimated 200 young offenders in Auckland are enrolled in treatment programmes... "...Either they are still out there on the street and no one knows about them or their cases have not been passed on from church groups or social organisations that deal with them." ...Most teenage sex offenders do not get help because of a lack of funding and poor co-ordination between community and Government organisations, says... [the chairperson] of... an organisation which runs Auckland's only treatment programme[, which]... treats teenagers as young as 13... Five specialist programmes are run in the North Island... [A family] therapist with the C[YFS]... said that treatment programmes should be mandated by the court. [The therapist also] said that the secure unit in Christchurch – due to open this year – was essential but did not solve the problem of placement... [The] former president of the National Association for Adolescent Sexual Offender Services, [speaking] yesterday at a symposium of child and adolescent sexual offending held in Mt Maunganui... said that... [contrary] to belief only 28[%] of offenders had been the victims of sexual abuse... A [recent study into NZ] children who rape and sexually abuse other children... discovered[that] 40% of sexual attackers were girls... [M]uch of the findings were similar to overseas research or statistics compiled by others.

...Determining whether juvenile rapists are an aberration or a growing trend is difficult because... "there is no effective data capture. It's almost like they don't rate." ...[one] clinical psychologist... draws a distinction between sexual misconduct by 9- to 11-year-olds and that of older offenders. The younger boys... are what [the psychologist] calls sexually reactive. They imitate what they have seen done to others, or to themselves. After puberty they can become sexually aggressive and turn into true sexual offenders... Their motivations are as complex as any sex offender's. But, generally, as with adults, children who commit sex crimes are driven by anger and a desire to gain control. Rape is seldom about sex. Commonly, child rapists abuse their sisters as a way of getting back at their parents for abuse the parents have perpetuated against them. "One way they get to feel better about themselves is by controlling someone else... [Guys] see being dominant as more acceptable." More acceptable, that is, than being subordinate. While most sexual offenders have been sexually abused themselves, not all victims of sexual abuse become sex offenders. It depends on their own personal attributes... how well they socialise with their peers and their IQ level. Typically the less intelligent and more socially isolated are more likely to perpetuate the abuse cycle... The rationale is simple: the earlier you tackle a problem the easier it is to fix. "I wouldn't work in this area if there wasn't hope," says [the psychologist]. "A lot of these kids are good kids. Sure what they did was horrendous, but they're not all bad." Effective treatment takes two years and ideally includes the young offender's family. A recent evaluation of the programme for young sex offenders operating at the Leslie Centre in Auckland – managed by Presbyterian Support Services – fuels his optimism. Of 14 young sex offenders interviewed two years after completing a treatment programme, none had reoffended. [13] said the programme had shown them how to stop sexual offending. All took responsibility for what they had done... Most importantly for the rehabilitation of sex offenders, they had learned to empathise with their victims. [Auckland's only treatment] programme... runs on a year-to-year contract with the Community Funding Agency... Yet funding remains a constant worry... [T]he bulk of the money comes from the budget tagged for the yet-to-be-completed Christchurch residential centre. Although it is still a year away, [the programme's manager] wonders where the money will come from after it opens. [The manager] argues North Health should offer funding from its adolescent psychiatric care budget, but, apart from a one-off grant that has... been spent, it refuses to do so.

...A... Sydney... youth centre... for... children with behavioural problems... is to close after an anonymous letter said children at the centre were hired to paedophiles for \$A80... The letter, which was tabled in Parliament... also... said a 15-year-old boy with a sexual disease had sex with girls as young as 12 at the centre and a 15-year-old girl at the centre became pregnant and had an abortion without her parents being told... The N[SW] Community Services Minister... announced the closure in a statement, but did not mention the letter's allegations. "It is now internationally and nationally recognised that institutions are inadequate in meeting the very special needs of young people in care,"... [the minister said instead, before adding that] the centre would be sold and profits put back into community services for children.

...SIX years ago [a paedophile] shed the blood of an innocent child... stalked and abducted just 400 metres from her home. Now the former church elder and Sunday school teacher who for 30 years preyed on little girls in A[US and NZ], has won a legal battle to stop police taking a few drops of his own. Police had sought it for the sake of a second grieving mother... [A] blood sample and DNA profile from the convicted child sex killer is the best chance of ending the [mother's] mental torment that began when her six-year-old daughter Kylie was snatched on her way home from a corner shop in Melbourne in 1984. But police have abandoned a Supreme Court application for the sample after [the paedophile] launched a constitutional challenge funded by legal aid. Legal advisers warned police that although blood samples have been taken from other criminals, their bid for [this guy's] blood would be likely to fail... While... legislation was intended to allow such samples to be taken, lawyers said the wording was so vague it allowed defence lawyers to argue it actually forbade random testing... The Victorian government says it will now rewrite its laws to eliminate the loophole... The raped and strangled body of Kylie Maybury was found in a gutter. No one was charged with her murder. There the matter would have remained – one more shocking but unsolved big city crime – had it not been for [the] almost identical abduction in another Melbourne suburb seven years later. This time the victim was Sheree Beasley. Like Kylie... [Sheree] was just six... And like Kylie, Sheree suffered the final indignity, her body forced like a rag doll into a drain on the city's outskirts, until it was found three months later. THE evidence pointing to one [person] being responsible for both crimes was never stronger... The little girl, screaming and still wearing her bicycle helmet, had been seen in a blue Toyota hatch by several drivers... Two witnesses were able to narrow the car down to a... 1985 to 1988... Corolla... Detectives discovered... 800 Corolla hatchbacks in various shades of blue had been built in that period. Every owner was tracked and asked to account for their whereabouts the day Sheree was snatched. From those hundreds of routine interviews appeared... a 54-year-old travelling sales rep... and a [former perso]n of God...

A PAEDOPHILE Catholic priest... has returned to Ireland to face 74 new sexual assault charges after [the priest] was freed from prison in Northern Ireland... after... [having] served four years... for abusing boys and girls during a 20-year span in Belfast. [The priest] was flown to Dublin for a court appearance after charges of indecent assaults and attempted assaults in the Republic were read out in the Limavady court. Outside, a crowd jeered... [the] member of the Norbertine Canons order. Revelations of [the priest's] assaults on the children of friends shook Irish church authorities and the nation's four million Catholics. The shock intensified when the case brought several other incidents involving sexual abuse by clerics to light. A furore about a seven-month Irish delay in processing a bid to extradite [the priest] to Northern Ireland engulfed the government... in 1994. It played a key part in bringing down [that] government in a row over high-level legal appointments. [It is unlikely, however, that rumours of what 'top echelon members of MI5 allegedly did to young boys in Irish borstals' had any bearing on the downfall of Britain's last Tory government!]

...The Roman Catholic diocese of Dallas has been ordered to pay a record \$US120 million... in damages for a priest's repeated sexual abuse of his altar boys. The money will go to ten former altar boys... and the parents of another who committed suicide. It was by far the largest cash penalty ever imposed against the Catholic church in a sexual abuse case. A Dallas jury... decided in a civil lawsuit that the diocese was guilty of gross negligence, malice, conspiracy and fraud in failing to stop the priest... from abusing the children over an 11-year period... and in covering up evidence when the victims complained. It said the diocese bore even more responsibility for the years of abuse than [the priest] himself... "I hope they wake up the Pope tonight with this," said the plaintiffs' attorney... "This verdict sends a clear message to the Catholic hierarchy of the world that this abuse must stop." ...[the bishop] said the church would likely appeal the damages in the hope of finding a final verdict that is "just and appropriate to the facts of the case." The diocese argued that... the... [priest] was suspended as soon as the first youth complained...

[The priest], now defrocked and awaiting trial... routinely spent the night with boys in his charge and, even in public, would “rub them against him” according to church correspondence presented at the trial. Lawyers for the diocese never contested the charges... “This diocese was clearly wrong, but at the time it was making what it thought were reasonable judgments,”... a church attorney, said of senior clergies’ failure to discipline or reassign [the priest] despite repeated warnings... including one in 1985... and... two in 1986... [I]nstead... the church... promoted [the priest] from assistant pastor to pastor... The verdict[, which]... brought a 30-second standing ovation... is a stinging indictment of church complacency and the issue could resurface in courts across the country. Settling pending sex abuse cases could now cost the Catholic Church of America well over \$[NZ]1 billion... The church had already spent up to \$650 million settling similar cases... “This is going to act as a lightning rod,” said... a former Catholic priest who heads a national support group for those abused by priests and claims to have names of 3800 American priests implicated.

...A senior Dallas priest who said... [the] parents of the 11 boys... abused hundreds of times by... another priest... were more responsible than the church for letting it happen... has retired after a public outcry over his comments... The... Monsignor... aged 73... also had words of criticism for the victims. “They knew what was right and what was wrong... It’s hard for me to believe why they kept quiet for so long.”

...[“Dignity” and “reform” – they are two words with very subjective meanings to Catholics these days, particularly in the US, where the sex scandals that have been touching priests the world over are erupting with the particular virulence of an all-consuming epidemic. Though it had been bubbling for years, the present rash of shame began slowly: a court case in New England, another in Arizona, more in California, Washington and then in Miami, where the bishop resigned in disgrace when his dalliances with young girls were brought to light. To date it has cost the church more than \$1 billion in settlements and payouts. Now the church’s disgrace is metastasising, each edition of the nightly news seemingly featuring another priest dashing with face covered past pursuing reporters. In Boston last weekend, the street outside the residence of the local cardinal – a stern, conservative confidante of John Paul II, and America’s most senior Catholic – looked like Camp O.J. as a 100-strong posse of TV crews awaited the announcement of the prelate’s long-rumoured resignation. Instead, after a two-day stakeout, they learned that the cardinal had been summoned to an emergency meeting in Rome, where it was to join the Pope and all of his fellow American cardinals to discuss the rising tide of scandals. The question perplexing Catholics is just what tack the parley will take. Will it clean house, sweep the corrupt from office and beg forgiveness? Or will it bolt the doors, batten down and pray that the storm can be made to pass? Whatever the outcome, the long-serving Boston Cardinal will be able to speak with particular authority at the gathering, for his is the most prominent public face of the church’s problem. No longer the stuff of court cases and lawsuits, his culpability is proven: for years, Boston’s Cardinal knowingly concealed the crimes of his priests. One of them, Father 1, molested scores of boys, while another, Father 2, was protected even after being described by a church psychologist as a psychopath and unrepentant pederast, a rapist of children not yet in their teens. How did the cardinal react? Like his predecessors, the cardinal transferred the predators to unsuspecting parishes, set church lawyers on to accusers and their families and bundled out the hush money. Confession was evidently a sacrament the cardinal administered but disdained for himself. In Chicago, where a series of similar outrages have come to light, a novelist priest claims a similar cover-up may even have extended to murder. “They are a dangerous group,” the novelist said of the church’s molesters. “There is reason to believe that they are responsible for at least one murder, and may perhaps have been involved in the murder of the murderer.” True, the best-selling novelist has a weakness for breathless hyperbole. But these days, even the notion of killers in cassocks cannot stretch credibility too far. In any case, the novelist has another charge to level, one almost as damaging – it twice gave the names of paedophile priests to the city’s cardinal, who did precisely nothing to stop them. What is a Catholic to believe these days, the novelist asks, when princes of the church prefer to see no evil? No such questions trouble the worshippers at St Agnes. The old-school purists gather every Sunday at 11am to hear the Tridentine Mass that was all but banned by Vatican II reforms intended to involve the laity in the liturgy. After the service, several worshippers spoke in tones that mixed regret and vindication as they nominated the 60s-era changes as the culprit, when the church they loved traded its birthright for “a font of novelties”. It wasn’t the abandonment of Latin that did it, they say, for that was but a symptom of the church’s change of heart. With their Mass, the old one, the priest is an anointed intermediary between Heaven and Earth. At a modern service, the priest faces the flock and leads the faithful in an open, shared celebration of the community’s oneness before God. Here is how a regular at St Agnes put it: “The old rite is an invitation to relate to God as an individual sinner. Its replacement says none of us are better or worse than the person beside us. And, since none of us is perfect, no sin is worse than any other.” Modernist Catholics strenuously disagree. In their eyes, the scandals are the consequence of a church that has failed to move far enough. Allow priests to marry and the Children of Mary will be safe. Accept gays and altar boys need not worry. In the meantime, congregations dwindle, the ranks of seminarians shrink. Both sides, however, can take righteous umbrage at the delusional absurdities and excuses being offered by priests both high and low, conservative and liberal. To a Californian priest convicted last week of molesting underage girls, the victims bear the blame. “Girls wanted the challenge of the forbidden fruit,” the priest said. A Vatican spokesperson blames homosexuals. “People with homosexual inclinations cannot be ordained,” the spokesperson said, turning dogma on its head, since the church has always taught that it is the sin, not the sinner, that is repellent in God’s eyes. Nor did the spokesperson address the inconvenient fact that many of the scandals involve heterosexual molestations. And if the spokesperson is serious about banishing gays, why hasn’t it been done? Why, when Boston’s Father 2 had been shipped off to the City of Angels, did the cardinal of Boston’s episcopal envoys stay at the motel the banished priest bought with his gay lover, a fellow priest? The *Los Angeles Times* says the place was infamous for group sex parties beside the pool. And here is another example of the way the cardinal preferred lies to truth. “I can assure you,” the cardinal wrote to the bishop of Los Angeles, “that Father 2 has no problem that would be a concern to your diocese.” Even more breathtaking than the spokesperson’s remarks was this observation from Milwaukee’s Bishop. The problem, the bishop said, isn’t abusive priests but the victim’s unfortunate habit of “squealing.” Added the bishop: “That’s when you have to deal with it.” Now there is no choice.’

...Catholic bishops should avoid telling congregations their parish priests sexually abused someone if they believe the priests won’t reoffend, a Vatican official says. The official, a judge of the Vatican appeal court and dean of canon law at the Pontifical Gregorian University in Rome, writes in the influential Jesuit magazine *Civiltà Cattolica*, which often reflects papal thinking, that church leaders have no legal or moral responsibilities if abuse does occur. “From a canon law perspective, the bishop and the superior are neither morally or judicially responsible for acts committed by one of their clergy.” The official argues that a priest whose past acts of abuse were revealed to his congregation “would be totally discredited in front of his parochial community and in fact would be blocked from any effective pastoral action”. The official also says church leaders confronted with cases of abuse should attempt to resolve problems without going to the authorities. The national-director of the Chicago-based Survivors Network of Those Abused by Priests found it disturbing that the article appeared to be contradicting the Pope’s statement at last month’s Vatican summit on sex abuse. “It seems like the Pope was very clear last month: there is no place in the ministry for these perverts – none. Ever since, we’ve seen church leaders humming and hawing and making exceptions.”]

...Despite more attention being focused on cases of pastors[sexually] abusing their parishioners, many churches still did not know how to deal with the problem... said... a Canadian expert and Baptist minister... [who] works as a professor of theology and ethics at Regent College in Vancouver and two years ago co-wrote a book on sexual abuse within the clergy, *Betrayal of Trust*... [The minister attributes] an increase in clerical abuse... to the rising importance of individual self-expression rather than a focus on community. Clergy... in particular, were guilty of thinking about themselves rather than their congregation when they abused their parishioners... [T]he challenge was to educate priests to be sexually responsible during their training and to ensure that churches dealt with allegations of abuse sensitively and without blaming [the] complainant. “Generally speaking the victim is viewed as this seductress that led the pastor astray but blaming the victim just doesn’t work.”

...A... 27[-year-old], of Westmere, who had been brought up in India to be a Brahmin priest... was yesterday jailed for 20 months for indecently assaulting a nine-year-old girl... [The] missionary... admitted the charge[, although the crown prosecutor]... told the judge that [the priest] had

preferred the bizarre explanation that [his body] had fallen on the girl and ejaculated on her stomach by accident. The] teenager who complained of being sexually assaulted by the Colombian Ambassador... is glad [the ambassador] has left the country. The 18-year-old... student... thought it was strange that an old [guy] sat beside her and her sister in the near-empty... Lower Hutt cinema... but... took no notice of him until [the old guy] made a grab for her.

...A Lower Hutt District Court judge was revealed yesterday as the [person] facing 21 indecent assault charges... The 53-year-old has denied the... charges involving two girls and a boy. The offences are alleged to have occurred between 1970 and 1984. [The alleged offender] was appointed a district court judge in 1985, after three years as a crown counsel in Wellington... The Chief District Court Judge... had learned about the police intention to lay charges against [one of his judges] just before the New Year and discussed the matter with the judge. "We agreed that the only appropriate and responsible course of action until such time as his case was heard and the matter resolved was for him to stand down from all duties on the Bench..." Because the stand-down was voluntary, [the judge has remained] on full pay.

...[a district] court judge... was committed for trial yesterday on eight charges of indecent assault... [F]ive of the charges are described as representative of one or more alleged offences... The evidence of the three complainants was read to the court during the depositions hearing... The complainants were not present. [The judge's] application to cross-examine them was refused. Their identity is protected by law. Three other witnesses – the parents of the girls and a police officer – gave evidence in person. The evidence of the remaining witness was accepted in writing. [The defence] counsel... objected to its admissibility and [the presiding judge] suppressed it in the meantime. Throughout the hearing evidence to which the defence objected was suppressed... [T]he admissibility of the evidence would be decided at a later hearing.

...[a former] police officer... who represented N[Z] at the 1972 Munich Olympics... was yesterday sentenced to jail for... sexual offences committed 20 years ago... on a girl under 16 years. The... girl was 10 when the... rape and indecent assaults... started and 15 when they stopped... [Apart from that offending, the 48-year-old, who] had managed a number of businesses... had an exemplary background... [The cyclist – who] was described as one of N[Z]'s "great hopes" for an Olympic gold... [His counsel had] asked for continued name suppression... [because, with his] high profile in sport, his family would be affected. [However, the prosecutor] said that as [the offender] did not recognise his offending, [the offender] was now asking the court for mercy... [N]ame suppression was not appropriate because if [the offender] had not offended, the matter would not have arisen. [The judge said the offender] had no previous convictions and it was not often someone with his background appeared for this type of offending[, then]... said four years' jail was the appropriate sentence after having weighed up all matters in this historical offending... One of N[Z] yachting's golden boys... yesterday... confessed to child-sex offences... involving a girl between 12 and 16... between February 1992 and October 1993... It was an ignominious fall for... the... 36-year-old drainlayer... who... had... three world titles... was part of the N[Z] team which won the Admiral's Cup 10 years ago... and sailed with Sir Peter Blake on Lion N[Z] to win the round-the-world race... [The 36-year-old also] hit the headlines two years ago when, driving a Team N[Z] chase boat, it] helped to pull the crew of OneA[US] out of the sea off San Diego when their yacht sank. [The yachtie] had a minor role in N[Z]'s campaign, but sailed as 17th [person] on Black Magic in the final race of the America's Cup – his 150kg frame helped to stabilise the boat in windy weather. The N[Z] yachting fraternity were not shocked by yesterday's news – it was more a case of dreading the day when it became public. Many sailors were concerned it would be seen as a slur against Team N[Z], which is preparing to defend the Auld Mug...

[The disgraced yachtie, who] sailed... on Lion N[Z] to finish second in the 1985-86 the round-the-world race... has been sentenced to jail for two years and nine months for sexually abusing a retarded underage girl... His lawyer... said the accused's sexual relationship with the girl began when [the girl] was 14 and continued until last year when... the girl[, who has]... a mental age of about nine... turned 19... The 36-year-old... had shown the girl pornographic pictures before persuading her to perform indecencies... [T]he accused was "basically a very decent human being" who now acknowledged that the girl's age and limited mental capacity made her unable to give informed consent... [The yachtie's] overwhelming obsession with pornography[, which]... was well documented in yachting circles... had led to his offending, which was discovered by the girl's family. As a

result his wife and... 15-month-old... son had left him, his home and business had been sold and [the yachtie] was in a poor financial position. However, [the yachtie] offered to pay reparation to the complainant to show his genuine remorse. [The lawyer said his client's] yachting career was over. "His name... is just worthless at the moment."

...Sexual abuse of intellectually disabled people may be being covered up by organisations caring for them, says the Hamilton West MP, [who]... is launching an investigation into the matter after being involved in several cases and hearing reports of others. But police and providers of services to the intellectually disabled say his concern is ill-founded because organisations have adopted appropriate responses for dealing with allegations of abuse... Police confirmed they were investigating an allegation of an intellectually disabled [patient] in a Hamilton hostel abusing a younger IHC client, but this incident is believed to be separate from the matter [the MP] was working on. The head of the police sexual abuse team... said the [patient]'s intellectual abilities were being assessed and [it] would be charged and appear in court if that was appropriate.

...A former IHC worker has appeared in court on charges alleging [it] sodomised handicapped boys in his care... [The accused, now] aged 34, is alleged to have submitted two teenagers to the indecencies at a Wanganui residential home between 1984 and 1986. The boys, aged 16 at the time, had a mental age of nine... [T]he alleged offen[der]... had not worked for the IHC since 1987 and was now a nurse aid in a... geriatric hospital.

...I[ntellectually] handicapped children will do almost anything for you. That's part of their charm, what makes them so lovable. It's also what makes them so vulnerable. Particularly if a paedophile is left to care for them. What easier target could there be? After all, their disabilities are such they may not know right from wrong. And for those who do, language difficulties often mean they can't tell. Could anything be worse? Yes. What if management was warned eight years earlier but did nothing – didn't investigate, didn't note the complaints and treated those voicing them as tel'tales? That's what happened in the case of... a caregiver... now serving a jail sentence of two years and four months for abusing three young boys, one an autistic [8-year-old. The 34-year-old's] unmasking has left parents of handicapped children who came into contact with him wondering whether their children, too, are victims... In a bizarre twist to the case... the father of two of the boys – spent 14 months in jail after being wrongly convicted of sexually molesting them... As nightmarish as that scenario is, some parents say it was able to happen because IHC deflects rather than acts on criticism... During the late 1980s... a Dunedin schoolteacher... worked for IHC at a home managed by... [the offender] while putting herself through college... Concerned by his taunting of patients and habit of pressing himself against her, [the student] and a colleague complained several times. They thought the police should be called after they found a patient one morning with bruises resembling finger and thumb marks on her... inner thigh. The patient told them "a bad [guy]... hurt her with a stick." [The manager] was the only staff member on duty overnight. Police weren't called and there is no mention in IHC files of these complaints despite it being policy to record them... A comment by an IHC manager that privacy considerations prevented further probing infuriates parents who say once again the obligation to provide patients with safe quality care has taken a back seat... [The offender joined IHC] in 1985 with endorsements from hospitals here and in A[US] and since leaving in 1989 – while under investigation on other matters – taught at two schools on the North Shore... But... wasn't it reasonable to assume IHC, which employed him again a few years ago, had checked his suitability? ...No one seems to have checked [his] IHC file which contained a note saying [the caregiver] was not to be hired without speaking to the west Auckland branch manager... The branch manager who made the note had left IHC... [anyway! The schoolteacher says of her IHC working days:] "There are so many things that went on... We were expected to... show casuals arriving for sole-charge overnight shifts how to give an injection... using an orange... [then] go home and not worry [that] this is a person's life we are talking about. Sometimes (a diabetic patient) would have bruises because they had jammed it into her stomach or used an old needle... I wouldn't give to IHC because some... [staff] they hire are just not interested in helping people." The *Sunday Star-Times* has interviewed more than half a dozen parents... [Two mothers] say in their view IHC has become business-oriented and is not the caring organisation it once was. They paint a picture of an organisation which lacks accountability, has a top-heavy and inefficient management structure and gives little support to parents whose fundraising contributes to the \$110 million a year IHC receives in benefits and donations... "Worse still... IHC management... seem determined to spend an unwarranted amount of time and resources trying to paint a picture of a caring organisation where everything is rosy." ..."To my mind", says... a solo-parent whose step-daughter (25) is in fulltime IHC care, "...parents who put their kid in IHC care know they have failed in being able to look after them. So they go to IHC in a very vulnerable position... All IHC parents are desperate and they fall into two categories: Those who fight for the kids and the other half who are so grateful someone is looking after a mistake of theirs." His fighting... resulted in ACC paying for counselling for his daughter caused by the behaviour of other patients [his daughter] is exposed to, including... a boy... who only wants to masturbate... Some [parents] have brought their children home... Although it meant [her husband] had to retire early, [one mum brought her son (25)] home after 20 years in IHC care... They had been worried for sometime but the decision to bring [their son] home was made last year when [the mother] attended an outing to be told her son had been left at the IHC home as punishment for toileting problems. [The mother found her son] in the care of another patient. "I was appalled..." [Her son was] toilet trained and would not have been wetting himself unless upset, but rather than try to discover the cause [her son] was being punished... "I feel they have forgotten what they are there for – the care of people who can't care for themselves."

...PICTURE this. You are in a courtroom lobby, standing just metres away from [the perso]n who sexually molested your children for three years. Not only that, but you'd been wrongfully convicted of the abuse and sentenced to six years in jail... And you'd just found out [the person]'s been regularly assaulting your children while you were behind bars. That's what happened this month when Michael Smith (36) went to the North Shore District Court to watch[the] paedophile... jailed. "People have asked me if I wanted to kill him... But I didn't. If [that person] died it would be too easy for him. I wanted him to go to jail... to go through the absolute hell I went through. I am just so angry at him." Michael's lawyer... is preparing a compensation claim for the wrongful imprisonment, but says establishing the amount is difficult. "We are looking at a per day figure for the 440 days... spent in jail. How do you compensate someone for those lost months, for being labelled a child molester and for the best part of three years being deprived of your children?" Michael was paid \$7500 in damages after the Corrections Department kept him inside for one day later than necessary when the Appeal Court quashed the convictions in October 1996 after his son admitted his father had not abused him at all... [D]uring a snap debate in Parliament on Tuesday, [the]... Justice Minister... told Labour[']s Justice spokesperson... the father did not qualify for compensation because his case did not involve "a free pardon" or reference back to the Appeal Court by the Governor General. But [the lawyer], who acted for Michael on appeal but not at his trial, said the compensation claim would be filed this week. "Not only is there an appearance of bad faith on the part of the police (who failed to pass on to the defence before the trial that [the] son had retracted his abuse allegation) but the government has relaxed the laws of evidence and this makes it easier to get convictions for child abuse." A civil claim has also been filed against the C[YFS], the police and the family therapist who counselled [the] son for more than a year before [the son] named his father as his abuser. Michael... is not seeking compensation only for himself, but for his family who have suffered just as much. His parents mortgaged their home to raise \$50,000 towards his appeal... Since his release, Michael and his partner... whom [Michael] met in February 1995, have been living together. The boys are very much part of their lives. [The partner]... never doubted Michael's innocence, from the time [Michael] told her of the charges against him. In hindsight, [the partner]... kicks herself for her naive faith in the justice system; her belief that the truth would come out at the trial. For Michael, too, trust has been destroyed. "I don't trust anyone. I don't go near [other people's] kids. I used to be the class idiot at kids' parties, running around picking them up... now I'll be walking down a quiet street and a boy will walk towards me and I have this fear [it]ll claim I've touched him." Michael says since his release, no one has apologised[, confirmed his innocence or]... acknowledged the hell [the 36-year-old] has been through. And someone, [Michael] says, should have to pay for that. ● Michael's name has been changed to prevent identifying his sons.

...[‘an Aucklander compensated for wrongful imprisonment on child abuse charges would have received \$200,000 less under new Government guidelines. The Minister of Justice confirmed yesterday that the cabinet had granted the Auckland \$570,000, as well as announcing that a new policy would limit future awards for non-pecuniary losses in similar cases. Future payments to people wrongly convicted will now be set in three stages. As well as \$100,000 for each year in jail, the person concerned will receive an average of \$100,000 as recognition of suffering. Loss of income will be considered on top of that. In the case of the Aucklander, it received \$400,000 compensation and about \$170,000 in costs.’ By the way, ‘since ACC developed a special sex-abuse unit in 1992, it has accepted over 47,000 victim compensation claims. Around 80% of these were from adults who were sexually abused as children (49% of those claims accepted were for rape). Hundreds of elderly survivors – including 100 gals a year in the Auckland region aged over 65 – are now telling of the abuse they once suffered. Latest ACC figures showed that 74% of the abusers were Europeans.’ However, ‘NZ guys can’t receive compensation for abuse from gals because the law doesn’t recognise sex abuse by gals on guys’ (although that policy may soon change – r:p1271, ln59)!

...‘Lump-sum payments for sexual abuse victims were still available under ACC laws at the time of the Christchurch creche case and it’s understood more than \$500,000 was paid out to 60 claimants, with some families receiving up to \$50,000 for multiple claims relating to the charges.’]

...The spotlight... was... on the convicted Christchurch childcare sex abuser... [during] last night’s 20/20 television feature... The programme claimed a... detective... who played a leading role in the case... was in psychological trouble at the time of the inquiry and that one of the Crown’s child witnesses had confessed to lying to the court... [‘The child’s parents said, “We were told by experts to believe our child. We believed our child then and we believe it now when our child tells us it had lied.”’ In addition, the] programme alleged that[the] detective... propositioned a mother of one of the complainants and had relationships with two other mothers of complainants... The... programme also questioned the impartiality of two jury members. The Solicitor-General is believed to be looking into the allegation.

...The TV3 documentary that raised doubts about the conviction of[a] Christchurch childcare worker... has prompted a complaint to the Broadcasting Standards Authority... [by an] Auckland child advocacy group, Children’s Agenda... [T]he... organisation was concerned about the hysteria caused by the documentary... [T]he executive producer of 20/20 said the programme had evaluated the criminal justice system, and if it was found wanting, that was not the fault of the programme.

...Is the case against... [the Christchurch childcare worker] a miscarriage of justice? ...The child came home from day care and said, “[The guy] showed me his penis.” The alarmed parent called other parents who had recently attended a seminar on ritual sexual abuse, so they knew what to look for. Authorities were called in, and within months a [guy] worker at the centre was arrested on numerous charges, including forcing children to eat faeces and urine, tying them up or locking them in cupboards and taking them to secret locations for games of naked dancing and worse. The abuse had allegedly gone unnoticed for years, before the first child’s comment sparked any fears. The worker became a monster who had terrorised the children in his care, and parents were warned that [the worker] might be merely the beginning of a much wider circle of abuse, through all levels of society. Additional charges were considered against [gal] co-workers at the centre. The worker was not... at the Christchurch Civic Childcare Centre, but... in San Diego[. His] case became one of the most notorious in a rash of ritual abuse cases that flared across the U[S] in the late 1980s and early 1990s. [The Christchurch worker] came under suspicion when a child went home and mentioned “[the Caucasian worker’s] black penis.” The inquiry subsequently unearthed similar allegations of cages, sex-games and secret outings. [The Christchurch worker] is nearly... through a 10-year prison term... But there are mounting doubts as to whether the abuse happened at all or whether the... investigators, determined to “believe the children” at all costs, went down a path unwittingly fabricated by worried parents and suggestive children... In the U[S], ritual and outrageous abuse seemingly became rife... and an industry grew up to identify and support the victims... A jury eventually acquitted [the San Diego worker], and more than a dozen similar high-profile cases involving bizarre child abuse in day-care centres have been overturned by [US] appeal courts since 1990, usually because the children’s evidence was found to be unreliable. Since [the Christchurch worker] was convicted... his supporters have argued that his case marked N[Z]’s introduction to the same hysteria about child abuse, with the same false conclusions... As they see it, [the Christchurch worker] became a target for well-meaning, liberal parents who lost all sense of perspective after they became convinced that abuse was a dirty secret in respectable society that must be outted. In their conviction... they came to believe that [the Christchurch worker] was capable of unspeakable horrors and, to the wider Christchurch public, the gay, flamboyant [childcare worker] fitted the role perfectly... [H]is... supporters... want a retrial, or preferably an outright pardon. They hope that last week’s revelations on TV3’s 20/20 will finally lead to such an outcome... Police this week announced an inquiry into their handling of the case. But [his] supporters want a much wider review. Among their concerns, they cite: • The... sparking of allegations by a sexual-abuse counsellor who has made similar, unproven, allegations elsewhere... • Repeated and allegedly leading interviews of children by Social Welfare investigators. • The quality of the evidence on which four [gal] creche workers were originally charged, before the case against them was dropped. • The withholding of the most extreme evidence from the jury that heard the case. • The lack of any corroborating evidence or unsolicited complaints. So far, the... conviction has stood impregnable to the doubts. The Court of Appeal upheld the conviction in 1994 and the cabinet in 1995 rejected a call for an inquiry... In Christchurch, the case has lost none of its emotional grip. The children concerned are now approaching their teens, but few of the parents have let go of the trauma. To them, the case remains one of the city’s most infamous, and they say that more is yet to be exposed. To others, it is infamous for altogether different reasons... [■ Some of the gal] creche workers accused by some of those confused toddlers of having... exposed their genitals to them in Satanic ritual circles... can no longer go near... any children, or show them affection. [However, the] effect has multiplied like ripples spread from a flung stone... Many of the bizarre fairytales told by the creche children... originated in being cleaned up by [the guy worker] after toilet “accidents”, and having their nappies changed. I... am considered a dab hand at producing a neatly pinned nappy. But there’s no way I would ever touch a naked child again, thanks to the perpetrators of the creche witch-hunt. Other [guys] have told me their attitudes have changed in the same way.

...[‘JUSTICE GONE CRAZY On the morning of May 4, 1991, jurors in the child sex case of Florida v. a 15-year-old boy announced that they’d reached a verdict. After more than three months of trial and scores of witnesses, judgment time had arrived. Sitting in a holding room, the 15-year-old’s heart was pounding. A guilty verdict could mean spending the rest of his life behind bars. It had been one of the longest, most expensive criminal trials in Dade County history. It had everything: lurid allegations of child sex abuse, medical evidence that seemed to buttress the charges and a confession by the defendant. THE FIRST HINT of trouble came early in 1989, when three-year-old Debbie Smith started behaving abnormally. Debbie was having nightmares about the “Big Bad Wolf” and was afraid to be touched. Debbie was also suddenly afraid of a baby-sitter at her family’s church, and refused to go to Sunday School. When Debbie’s mother sought advice from the church, a minister urged her to contact a parishioner and state-licensed psychologist (who had seen only one alleged victim of sex abuse under the age of five before). When the psychologist questioned Debbie, the child did not mention anything about having been abused. Nevertheless, the psychologist suspected Debbie had been. Under Florida law, anyone who sees children professionally and suspects abuse must notify authorities. The psychologist referred the case to Florida’s Department of Health and Rehabilitative Services. A caseworker interviewed Debbie and concluded that the case was unfounded. The fear of the Big Bad Wolf may have been triggered by a video tape of “Little Red Riding Hood,” which Debbie’s parents had played at home. A forensic interviewer in the state attorney’s office also failed to elicit any allegation of sexual abuse. But the inexperienced psychologist still suspected that the 15-year-old baby-sitter had somehow abused the child. During months of therapy sessions, the psychologist encouraged Debbie to disclose if anyone had done terrible things to her and what those things were. Eight weeks into the sessions, Debbie told the psychologist that the baby-sitter had touched her. Debbie was taken to hospital, where an examination appeared to confirm sexual assault. Meanwhile, other mothers had been questioning their kids, and claims of further crimes emerged. One five-year-old girl alleged that the baby-sitter had urinated in her mouth and forced her to eat faeces. A five-year-old boy said that the baby-sitter had flown him to NZ and abused him. A

six-year-old said that himself and his brother had watched a mother give birth. The baby-sitter, the boy claimed, had forced him to eat the infant's arm at the church. The distraught parents spoke to the psychologist, who referred them to therapists who, like her, encouraged the children to provide more details. In July, Debbie's mother called the police, and the case was assigned to a 27-year-old officer who was new to sex-crime cases and was also new to the business of questioning kids. The detective let the therapists dictate the direction of the inquiry. For months, the therapists interviewed the kids and reported to the detective. The alleged crimes became ever more bizarre. One therapist, for example, reported that a five-year-old "has described events where adults were costumed and doing things like killing babies, chopping up animals." The therapist believed that ritualistic activities were actually taking place. THE baby-sitter's family were only vaguely aware of the storm clouds gathering around them. His father had had a distinguished career in the foreign ministry of the Netherlands Antilles before moving to Miami with his wife and their two children. Shortly after 10.30 a.m. on August 28, 1989, the detective and three other police officers arrived at the baby-sitter's home. They wanted to talk to the baby-sitter and search his room for pornographic pictures. His father was shocked by the request, but knew that his son wouldn't collect pornography. "No problem." A slender youth who played football and loved computers, the baby-sitter was getting ready for work. The detective took him outside. Although the detective later denied it at the trial, the baby-sitter testified that the detective told him, "Before I saw you, I knew you were guilty. But now I definitely know you're guilty." The search turned up nothing unusual, but the police still took the baby-sitter to the station. For 40 minutes, the detective asked about church, school and friends. Then, after a break, the parents agreed to remain outside, and the detective stepped up the pace. "Did you do it?" the detective demanded. Angry and bewildered, the baby-sitter denied the accusations, and claimed not to even know Debbie. A juvenile diabetic, the baby-sitter needed regular meals and two shots of insulin every day. Without them, the baby-sitter could suffer from hypoglycaemia. His parents had told this to the detective, who stopped the questioning several times for the baby-sitter to eat. But the baby-sitter had eaten no more than a bite of a sandwich in nearly seven hours when, at 2.30, the baby-sitter admitted guilt. "It just happened. Now can I go home?" The baby-sitter always carried a gluco-meter to measure blood sugar levels. Below 70 was cause for concern. During the questioning, his blood sugar level had plummeted to 50. Although not required by local police policy, detectives elsewhere typically tape a confession, or get a stenographer to take down the suspect's words and present them for his signature. The Dade County detective did neither, and even destroyed his notes without showing them to anyone. "These are things that you absolutely do not do in these cases," says a former Miami Police Chief who calls the detective's performance "inept, incompetent." When his parents returned to the room, the baby-sitter said, "I didn't do it, but they made me say I did." However, the baby-sitter was booked on molestation charges and sent to the Juvenile Detention Centre. A court-appointed psychologist examined him and reported that the baby-sitter exhibited none of the characteristics typically found in adolescent sex offenders. This psychologist concluded that the baby-sitter posed no risk of flight and recommended that the boy be kept under house arrest while awaiting trial, and be tried as a juvenile. Nevertheless, the prosecutors decided to try the baby-sitter as an adult. His name could now be used by the media. The floodgates of publicity opened wide. On November 8, 1989, a grand jury indicted the baby-sitter on eight counts of sexually abusing three girls. At a bail hearing, the prosecution claimed the state had evidence that the accused abused 17 children. The judge denied bail. The church's lawyer had been conducting an independent investigation for the church's insurance company. His team interviewed 600 parishioners and examined the church building. This was a busy church, with people passing to and fro all the time. There were windows between the nursery and crib rooms, allowing a clear view of what was happening. No-one remembered anything that might have led them to suspect abuse. At the conclusion of his probe, the lawyer was convinced they were dealing with an epidemic of false charges. Many of the allegations were simply not credible. Some children claimed the baby-sitter's family had driven them various places in a red truck. The family didn't own such a vehicle. One five-year-old boy claimed to have donned his Superman uniform to fly through a window and rescue his sister from the baby-sitter's clutches. Meanwhile, the family's lawyer got a call from the head of an organisation called Justice for Sexually Abused Children. The head apparently believed there was a Satanic cult at work and that others – most likely the entire family – were involved in an international child-pornography ring. The lawyer shook his head in disbelief. However, the head found a reporter/anchor for a TV station to broadcast her message. In January, the two of them visited the agent who handled pornography cases for the FBI's Miami office. The FBI rarely got involved in a child sex case like the baby-sitter's unless asked, and neither the Metro-Dade police nor the state attorney's office had done so. Although the police had turned up nothing at the baby-sitter's home, the two amateur investigators told Miami's FBI agent that some of the children claimed they'd been photographed or video-taped while engaged in heinous acts. The films may have been transported "interstate or internationally," and that was within FBI jurisdiction. On January 17, 1990, the FBI opened the case and assigned it to the Miami agent. The media focus on the baby-sitter's family sharpened. A helicopter with a searchlight flew over their house at night. In one report on television, an unidentified father told that his two sons had been forced to perform oral sex on the baby-sitter's father. Children were saying that the baby-sitter's mother, too, had played sex games with them. The family were stunned by the dirty rain of unsupported charges now descending on them. Engaged in a ratings war, Miami's TV stations took full advantage of the case. A second bail request was denied, even though the baby-sitter's uncle, a retired justice of the Connecticut Supreme Court, had said that the baby-sitter could go to his home, and always wear an electronic ankle bracelet that revealed his whereabouts. After finding no evidence to substantiate the pornography allegations, the FBI closed its case. The charges being handled by the state attorney's office, however, would remain. The children whose allegations were the basis for the criminal charges had already been questioned by parents, police and therapists who would testify for the state. Nevertheless, the Judge refused to allow the defence lawyers to cross-examine the children, ruling that it would be too traumatic for them. The defence lawyers asked if they could hire a therapist to interrogate the children on closed-circuit TV. The judge said no again. Defence lawyers knew the prosecutors were going to put therapists on the stand who would testify that they believed their patients had been abused. But the judge ruled that the opinion of the caseworker who'd examined Debbie Smith and concluded that no abuse had occurred – was inadmissible because the caseworker was not an expert. The defence lawyers feared they'd lost the case before the trial began, but the baby-sitter remained positive – telephoning his parents every night and reading his Bible, which filled him with confidence. At the last moment, the charges were reduced to six counts of sexual battery against two girls and one count of lewd and lascivious assault. Allegations from a third child – who insisted upon seeing someone turn into a witch and fly – were dropped. THE TRIAL finally began and, after 48 days, the state rested its case. The defence lawyers believed that in the parents' justified alarm, fears had become facts. On the witness stand some parents conceded that they had shared information. One mother even admitted that, after hearing a grisly allegation on TV, the mother had asked her daughter whether that had ever happened to her and received confirmation immediately. The defence cross-examined the original psychologist. Studying the transcripts of the inexperienced but state-licensed psychologist's interviews with Debbie exposed a pattern. To the defence, it was clear that the psychologist had been asking leading questions. The defence also called on experts who testified that young children could be conditioned to make false allegations – which they would later believe to be true – if an "air of accusation" was created. The expert described a study in which children, after being interviewed several times, supplied details about an event that had never occurred. "Over time, they became more confident and added more detail." A doctor testified that: "Emotions have an infectious quality, and children are suggestible." When questioned about the psychologist's tapes, the doctor exclaimed, "This is not therapy. This is a brain-washing process from the word go." The defence set out to refute the medical evidence. One by one, the defence established that the doctors who had examined the children were not specialists in paediatric gynaecology. By contrast, the defence called an authority in the field and a frequent consultant with prosecutors in child abuse cases. Based on his study of the photographs and records, the examinations of the children showed "no physical evidence of sexual abuse." On at least four occasions the judge called the baby-sitter, his parents and lawyers into his chamber to make sure the defendant understood what a guilty verdict would mean: prison. Others pointed out that the baby-sitter would be subject to rape, brutality, even death at the hands of other inmates. The prosecutors offered a plea bargain. If the baby-sitter would confess his crimes, the baby-sitter would go to a treatment facility for sexual offenders, not prison. Then the baby-sitter would be set free. The baby-sitter looked at his mother as tears streamed down her cheeks. "No. I'm not guilty." On May 3, 1991, the jurors retired to deliberate the defendant's fate. When the State Attorney had arrived and the jury had filed in, the

courtroom grew quiet. To each and every count the clerk pronounced an unequivocal "Not Guilty." "The jury has spoken, and we accept its verdict," the State Attorney said. "There was no credible evidence of any sexual abuse," concludes a psychology professor. "The kids initially had *nothing* to say about abuse. Only with the work of therapists over a number of months and constant pressure from parents did any allegations emerge. Then you had an ambitious state attorney who wanted to make a name for herself." The baby-sitter's family applied to the Judge to certify the costs they incurred during the trial so they could be reimbursed. Even though Florida law required it, the judge refused, relenting only when an appellate court ordered him to. CITING HER RECORD in combating child abuse, and saying, "Florida's state attorney has truly put people first," the US President nominated her to be the Attorney General. When the baby-sitter's father heard this, the father sent a letter to the members of the Senate Judiciary Committee; in it the father charged that the state attorney had "abused my son by her actions and robbed him of one year, eight months and one week of his life." No-one called him about it. No senator questioned the state attorney about the case, and the new Attorney General of the US was confirmed by a vote of 98 to 0. The baby-sitter's family moved to Holland. During a recent interview, the boy reflected with quiet anger on his long ordeal: "In my case, the phrase 'Innocent until proven guilty' was turned around."]

"...Did you ever get your hand caught in a mousetrap and have to go to a hospital to have it removed?" one of the scientists asked [the little boy]. "Think hard. Did that ever happen to you?" "No," [the boy] replied. "I've never been to the hospital." A week later, the scientist asked [the boy] the same question. "Yes," [the boy] responded this time. "I cried." In week three... the researcher asked about the mousetrap incident... [once] more... "Did that ever happen to you?" "Yes... My mum went to the hospital with me." By week 11, [the boy] was describing the trip to the hospital in the family van with his parents and brother... point[ing] to his finger where the doctor had applied a bandage... and... describ[ing] the location of the mousetrap by a pile of fireplace wood in the basement. "My brother pushed me into the mousetrap... It happened yesterday." ...[the boy] had never caught his hand in a mousetrap. And there was certainly no trip to a hospital to have a trap removed, his parents assured the researchers who were quizzing pre-schoolers about memorable events... It was time to debrief [the boy] and explain that the mousetrap incident was all in his head. But [the boy] insisted it had happened... "...we don't have a fireplace in our house," his mother reminded him... [The boy's] story was related to researchers gathered for the annual meeting of the Cognitive Neuroscience Society. His case was part of a session on the "memory wars" – disputes about supposed "recovered memories" by adults of long-forgotten sexual abuse in childhood. Similar disputes occur about the reliability of testimony from children who report sexual abuse allegations to investigators or counsellors. No one doubts that many children are sexually abused. And at least some cases of "recovered memory" of past abuse appear to be well confirmed by independent evidence. But in many instances those accused of such abuse vehemently deny the alleged victim's claims. Sometimes the accused is innocent. Yet the accuser may not be intentionally lying. It is indeed possible, modern neuroscientific studies show, to implant "false" memories that are as vivid, or more so, than the traces left by real events. Thus children... can recount various experiences that never really happened... In fact, panels of judges, psychologists, paediatricians or social workers can view videos of pre-schooler testimony and be completely fooled[, a researcher]... of Cornell University told the neuroscience meeting... Such observers are more likely to guess wrong than right about whether a child is detailing a real event. "You could toss a coin and you'd do better,"... Scientists have known for years that people can be tricked into remembering something that didn't really occur, said[a] psychologist... of Harvard University... [E]xperiments conducted over several years on pre-schoolers... showed how trivial suggestions could induce elaborate memories of imaginary events... In the first round of questioning, fewer than 10[%] of the children would say they had in fact experienced one of the fictitious events. But the questioning alone seemed to instil memories that were recalled during follow-up sessions. After several weeks of repetitive questioning, more than half of three and four-year-olds eventually said they had experienced some of the imaginary events. Some of the children... probably said yes just to please the investigators. But other checks suggest that more than a quarter of the children gave false answers that they genuinely believed. And some were very resistant to attempts to explain they never really dropped watermelons from a balloon. While the possibility of firmly believed yet false memories is now well established, it's still unclear how these findings related to real-life problems, such as court cases... And even if the laboratory findings do apply to real-world memory, they won't easily resolve legal disputes. "Cognitive neuroscience doesn't really have the tools to judge in any particular case whether a memory is accurate or inaccurate,"... Research... published last year in the journal *Neuron* showed a slightly greater activity in a small area near the front of the brain during false recognition, but not an adequate difference to use as a lie-detector test... But the research so far, and new studies under way, do have the potential of explaining a lot more about how false memories fool the brain into holding inaccurate beliefs.

...three Auckland medical school researchers... surveyed 69 families where an allegation... of... sexual[abuse]... had been made on the basis of recovered memories, and where the allegation was said to be false by the accused (usually parents) or by other family members. Similar studies have been conducted in Britain and the U[S]. Nearly all of the accusations in the... studies were made between 1989 and 1994. In all three countries many of the families reported they had never been told the specific nature of the accusations... About half the accusers in all three countries claimed they could remember abuse starting before they were five, and 22[% of the NZ] accusers claim memories of abuse before three. Where this information was known, more than 90[% of the NZ] families indicated the allegations were made with the involvement of counselling or therapy... In all three surveys the accusers appeared to be vulnerable people in distress. Many of them were in psychotherapy for unrelated issues when memories of sexual abuse surfaced. Some of the accusers have retracted part or all of their allegations...

FRESH allegations of sex abuse have been made against [the Christchurch creche worker], just days before a bid will be made to have him freed from his 10-year jail sentence. The police will decide this week whether they will pursue the new allegations made last Thursday by a [mother] who says her two children were sexually abused during a two-year relationship [the mother had with the worker] in the late 1980s. Her children were interviewed by detectives during the sex abuse investigation at the... Civic Childcare Centre in the early 1990s. They were then aged five and seven. On that occasion they did not disclose anything. However, since a deluge of publicity about the creche case last week, the children... had spoken of alleged incidents involving [their mother's ex]... The mother... hopes [her ex] will not be pardoned. "I know TV is making him out to be a nice guy but [it isn't true]. We got together at a time when I was down, but now I really wish I hadn't,"... [the mother] said. Legal experts say there would be nothing to stop police investigating and charging [her ex] if they had enough evidence.

...Police have been ordered to pay \$25,000 costs to a teacher acquitted on charges of sexually molesting[girl] pupils, because the investigation was inadequate. [The] judge... said in the Wellington District Court yesterday that police had been wrong to accept general allegations of sexual abuse of three pupils against the Hutt Valley teacher and not investigate further. The costs awarded... were higher than normal to remind police of the need for proper investigations to be done... [In related news, p]olice in mufti and community volunteers have started patrolling Otahuhu and Papatoetoe to protect children from [people] trying to entice them into their car... Six pupils aged from 5 to 11 were approached near schools and reserves in the neighbouring South Auckland suburbs last month... The first abduction attempt happened... when two Maori [guys] approached a 5-year-old boy... Four days later, two Maori [guys] asked an 8-year-old girl playing in Seaside Park... if [the girl] wanted lollies and a lift home. [The girl] threw bark at them and ran to her house. The latest reported incident was on... the final day of last term... [A] Detective Constable... said the [suspects] had frightened the children and seemed to have a clear motive... The police[also] want caregivers to accompany their children between home and school and have asked schools to warn their pupils... The principal of Papatoetoe Central School... said pupils had been told... "We don't want to create mass hysteria but unfortunately there are some very dangerous and crazy individuals out there."

...A South Auckland mother is alarmed that detectives are too busy to interview her 9-year-old son, who was approached by a [guy] fitting the description of a school stalker... [H]er son was approached outside Puhinui School, Papatoetoe, on Thursday afternoon by a Maori... in his 30s who

offered the boy sweets in return for a lift home. The principal was forced to leave a message with police on an answer phone and calls to the Otahuhu police station were fruitless... [The mother] was told to complain to her MP about the lack of police... in South Auckland. [The mother contacted a] Labour MP... which resulted in a call from police saying her son would be interviewed that day. "But then I got another call and was told that police are dealing with an aggravated robbery, a body in a tip and a rape. My child is... not important enough." [The MP] intends to lodge a complaint with the Minister of Police.

...A Christchurch school-girl, kidnapped and raped by a dangerous repeat offender... [who] was on bail on similar charges, is lucky to be alive, her parents say. "I can only describe her as a survivor," her mother said. The 15-year-old... was at the sentencing of her attacker yesterday before sitting her first school certificate examination. Her parents are angry that [the 31-year-old offender] was at large on the... night... their daughter... [was] attacked. Against strenuous police opposition, [the offender had been granted] bail... The Waimakariri MP... said... "There needs to be a wake-up call to our judges and our bail system. When police have records... and... oppose bail, judges must err in favour of the police submissions."

...The mother of an 11-year-old rape victim believes "the Devil himself" crept into her Manurewa house in the dead of night this week [to steal] her daughter's innocence. The attacker slashed the stomach of the girl's father when the parents confronted him in the hallway. Police fear the intruder... could strike again... [They] were almost certain the same [person] was responsible for an incident at a nearby home five weeks ago. In that case, a [guy] crept into the bedroom of a 14-year-old girl but fled when other people in the house disturbed him... [P]olice are now looking at other cases in the area to see if the attacker had struck elsewhere. They are still waiting for DNA evidence. "We don't want to create hysteria, but by the same token we are treating it very, very seriously." ...a... Detective Sergeant... warned families in the area to lock windows at night... The Manurewa community is still recovering from the activities of... a ruthless... sex fiend... [whose] 11-year reign of terror... ended in 1994... [The sex fiend is now] serving a 25-year jail term... The new attacker is described as a Maori in his late 20s... with long black wavy hair in a ponytail.

...[P]OLICE are hunting the person who sold to a TV network video footage of an All Black staggering after a night out. The amateur camera-operator, a convicted child sex offender and fraudster, is wanted by cops after it launched a hate campaign against a Queenstown real estate agent. The agent refused to rent him a windowless building because it suspected his motives. The offender is known to have at least 24 false identities. Less than 4 1/2 years ago the offender was jailed for 4 1/2 years after admitting 20 sex offences against boys aged six to 17. The sentencing judge said the offender had the longest list of convictions it had seen for someone of his age. The then 24-year-old had 185 convictions in addition to the sex charges. A Queenstown police sergeant said: "We are very keen to get a hold of this offender. We're confident it hasn't left the country. We're truly thankful the real estate agent smelt a rat."

...A mother called off a photo shoot after seeing a photographer push her daughter's skirt to her knickerline. The mother had grown uneasy during the shoot because her two daughters... - aged 9 and 11 - were wearing transparent clothing and make-up. But [the mother] was reluctant to intervene because there was a contract stipulating that no erotic photographs would be taken and that the shots would be "heads and shoulders" only. The photographer... yesterday pleaded not guilty to performing an indecent act on each of the girls and sexually assaulting one of them... In evidence handed to the court yesterday, the girls' father said [the photographer] approached him and one of his daughters in a Jervois Rd cafe and [expressed a desire] to photograph the girl. [The photographer] gave them a business card claiming various credentials, including... [being] a justice of the peace. The girls' mother... [had] agreed to the photo session because it was important to her daughters and... seemed "harmless." ...[the photographer] came to their home on the morning of February 1, but... [the mother] subsequently demanded the negatives... and called the police. [The photographer] told the police the photographs were not indecent or erotic and that the girls had chosen the garments... However... [the police] executed a search warrant on a photography laboratory and found full-body photographs of the girls in underwear and transparent garments. They found portraits of other young girls at [the photographer's] Mt Eden bedsit, some of which depicted girls in revealing clothing or naked. A bag of sex aids, including two penis-shaped dummies, were also found. ['The daughters thought the photographs would lead to modelling careers.' 'The photographer had once convinced the mother of a teenager that in order to further her modelling career, the teenager needed to go with him to Sydney - where it had to share his bed each night and endure being sexually fondled, until neighbours grew suspicious and called the police.'

...a New York paedophile has been sentenced to 15 months in prison on a charge [of] travelling across state lines to have sex with a 13-year-old girl [the paedophile] met over the Internet... [The girl] turned out to be an undercover detective with the St Petersburg Police Department.

... "There are more than 600 advertisements on the Internet... inviting paedophiles from foreign countries to [visit Sri Lanka in order to] enjoy sex with children of any age of their choice safely," the independent *Island* newspaper quoted... the Commissioner of Probation and Child Care Services, as saying... A survey in 1986 showed that 36,000 young boys were in the sex business in the coastal districts... "But today, the number should have gone up many times." Non-commercial child abuse is also on the increase in Sri Lanka... The Government last year passed tough new laws aimed at curbing paedophilia and non-government organisations have been running awareness campaigns to combat the menace.

...Suva police are investigating eight more cases of child abuse in connection with an alleged paedophile racket linked to the Internet. A total of 11 children aged between 11-16 have been identified as victims...

An A[US]n accountant facing 26 counts of indecent assault in Fiji has been assaulted by a prisoner at Suva jail while awaiting trial. [The accountant], aged 40, is accused of being part of an international paedophile ring. [The] Commissioner of Prisons... said that... [the accountant was] taken to hospital for examination... [but] would not reveal the details of the medical examination. [The accountant's] arrest has led the police into an extensive investigation... Those being investigated are mostly expatriate workers, including a diplomat who had left the country, and a prominent media executive... [Incidentally, an AUS]n charged with 91 child sex offences, is being held without bail in Miami pending completion of an application for him to be extradited to A[US]. The paedophile, arrested in Honduras on Wednesday after an A[US]n news crew tracked him down and alerted authorities, is considered to be one of A[US's] most wanted fugitives].

...Philippine immigration authorities yesterday imposed a permanent ban on 24... A[US]ns convicted or charged with child abuse, including two... former Anglican priests... [T]he ban was issued at the request of a non-government support group, the Network Against Sexual Abuse of Children.

...South Pacific police have been warned by A[US] to be on the look-out for... [AUS]n paedophiles who, having been] scared off by increasing exposure in A[US] and Asia, were now moving to the islands. The Child Sex Tourism Act, passed in 1994, targets paedophiles in overseas countries. "This makes it an offence with extra-territorial implications for any A[US]n to commit an offence of a sexual nature... with a child under 16. Anywhere in the world, that person can be tried and imprisoned in A[US] for that offence..." ...Pacific traditions meant that neither the parents nor the authorities wished to talk about the subject. "But it's something we have to bring out in the open because it's growing and not going to go away." Fiji's Police Commissioner... is also... determined to combat this newly exposed type of crime in his country. "It's now a political concern in Fiji. Paedophilia is a new word in the Fijian dictionary. For the first time we hear about this. It's most worrying because... [we're] wondering how many cases there are that we're unaware of." ...[By the way, a] Nobel Prize-winning scientist pleaded guilty yesterday to two counts of child abuse for molesting a 16-year-old boy [the 73-year-old] brought back from a research trip in the South Pacific... [The scientist, who] won the 1976 Nobel Prize for medicine for work on infectious diseases and is on leave from his job as chief of the Laboratory for Central Nervous System Studies at the National Institutes of Health in Bethesda... will serve a maximum of one year in jail under a plea agreement... His accuser was one of 56 children, mostly boys... brought back from Micronesia to live with him... according to the FBI... Published journals of his research trips to the South Pacific contain many passages documenting local sexual customs, especially sexual relations between [adults and] boys...

The N[Z] Listener has been accused by the Minister of Social Welfare... of running "creepy and disgusting" child sexual abuse television advertisements for commercial gain. [The minister] has joined Rape Crisis in calling on the *Listener* to pull the advertisement, which shows the

voice-over of a[n adult] and a little girl in a caravan discussing “our little secret.” [The minister] said the only message contained in the advertisement was showing paedophiles how to victimise children. “It shows a complete lack of social responsibility on the magazine’s part...” The chief executive of the *Listener*... said the advertisements... were off screen for now “but we will be running them again.” ...the advertisement was part of a series dealing with themes and issues that affected the lives of N[Z]ers – political incompetence... recreational drugs abuse... and sexual abuse... A spokes[person] for Rape Crisis... said the group had received numerous complaints, including “one [from a person] who rang us and said [it] had vomited after seeing the ad.” Rape Crisis has laid a complaint with the Advertising Standards Complaints Board.

...We collect the rape victim in the morning and take her to the Starship Children’s Hospital so... the... 12-year-old... can be checked to see [if the girl] has been damaged or has picked up any diseases. “Will it hurt?” the girl asks. [The girl] looks scared and lost but... goes through the trauma for nothing. The appointment falls through because a [guy] doctor turns up to carry out the examination – the girl cannot face a [guy] doctor. The day has been complicated further because a new place of safety must be found for the girl. [The girl] was raped by a stranger but when Social Welfare looked into her case they found physical abuse in the home and took her into care. But [the girl] is very disturbed since the rape and has been acting inappropriately at the family home, walking naked into the boys’ room. “We need to shift her,” says... [the] social worker... The frustrations of the day continue as [the social worker] searches fruitlessly for a new place for the girl to live. Beds for children like her are scarce. Sometimes social workers travel all over Auckland to find somewhere for them to go. “That’s just adding to the disruption for the poor kid,”... It takes hours to find a new family home but eventually [the social worker] succeeds. Late in the afternoon we visit an intellectually handicapped family living in the community... [A] mother and three grown boys, who had all been raped and sodomised for years by relatives... in their own home and by strangers in public toilets – they represent the dilemmas of the job. Do you kill them emotionally by splitting them up and putting them in homes where they are unloved but fed, clothed and safe from predators in the community? Or do you leave them together where at least they have each other but are vulnerable? [The social worker] made the decision to leave them together but now has to live with it. One of the heartbreaking and frustrating aspects of this family was that their abusers were never brought to justice... Because of the family’s handicap they do not have the language to articulate or the ability to remember things in order, so their evidence is disjointed and would be inadmissible in court. “So we have these paedophiles roaming around,”... The mother has a trespass order out against the worst offender but “we can’t be there 24 hours.” [The social worker] chats with the family and makes sure there have been no unwelcome visitors, and another exhausting day draws to an end. So what of the day? “This is heavy stuff but it is mild compared to other stuff,” [the social worker] says... The job of a state child protection social worker is about serious and savage abuse and is something they deal with day in, day out. The decisions they make are crucial. When they get it wrong the headlines scream the news. When they get it right the public does not notice... [The social worker] also tells of personal stress... [and sometimes the social worker] drives around all day with dangerous young people in the car. One time [the social worker] got home to find one of her clients sitting in her lounge... [The] young Samoan... goes alone into households that don’t want her there, and has been attacked. The caseload is heavy, the abuse [the social worker] encounters so horrific it can’t be rationalised. “It’s scary if you let yourself get scared. But if you get scared you’ll never go knocking on a door again because you never know what’s on the other side.” [The social worker] does it because when [the social worker] is able to protect a child or help a family, the job is satisfying and [the social worker knows it] had made a difference.

...[yesterday, ‘a sickness beneficiary with a 30-year history of sex offending asked for chemical castration when it appeared for sentencing in the Nelson High Court. The 57-year-old had admitted two charges of sexually violating a 15-year-old boy. The judge said the procedure was serious, but “I realise it’s a very serious situation”. The judge adjourned the case until Friday.’]

...Texas yesterday became the first state in the U[S] to approve surgical castration for repeat paedophiles when[the state’s] Governor... signed the radical measure into law. But castration will be performed solely on those criminals who see it as the only way to stop them from sexually abusing minors, [the Governor] said. Under the new law, repeat sexual abusers seeking the procedure must be over 21 years of age. They have to make a written application to justice authorities and undergo a psychiatric evaluation... [The] Republican Senator... who proposed the legislation... cited the case of a 32-year-old paedophile... who pleaded to be castrated before [it] was released from a state penitentiary last spring. Out on parole, [the 32-year-old] assaulted a minor and was sent back to jail where [it] is awaiting trial. California passed a law in September making chemical castration mandatory for anyone found guilty of a repeat offence of sexual assault of a child under 13 years of age.

...A KIWI is at the centre of one of A[US]’s most gruesome murder cases. [The Kiwi] (23) is one of two [guys] accused of repeatedly raping two schoolgirls... [aged 14 and 16], who were found in a remote Victorian bush with their throats cut last month.

...The Queensland Council of Civil Liberties has demanded an investigation into claims... by two senior Government officials... that police were told to “go no further” in an investigation of a “snuff film” which showed a child being abused and murdered, possibly on the banks of the Brisbane River... In a submission to the Criminal Justice Commission, the civil liberties council quotes... the Queensland Children’s Commissioner... as saying: “I understand that the investigating police had done all of their job, they had very conclusive evidence but when it came to the crunch... they were told ‘no further’.” ...The Police Minister... was disturbed by the... allegation that police had been prevented from investigating a murder, even though they had conclusive evidence... “The police have informed me those allegations have been under investigation for some time...” ...The... [potential scandal comes] after allegations by [a] Queensland Opposition... MP... that [the MP] had evidence of a range of paedophile activities on resort islands in the Whitsunday passage off the Queensland coast and that [the MP] suspected police had protected the racket since the early 1990s. Resort managers reacted angrily to her claims yesterday... [while the] Queensland Premier... said the allegations were more damaging to the tourism industry than a natural disaster. [The Premier called the MP] a “disgrace” for engaging in a “blanket smear” of the region... It is estimated that, across the state, some 420,000 children had been sexually abused – one-in-four girls and one-in-11 boys by the age of 18. [In further news from AUS, ‘a couple have appeared before a court on a charge of allowing an elderly guy to have sex with their young daughter’.]

...Spanish police... arrested ten people on suspicion of involvement in child prostitution... 40 children may have been prostituted by their parents.

...A SPANISH child pornography and prostitution ring used official medical and social services records to draw up a list of vulnerable children as young as five... [Spain’s PM] was “extremely concerned” by the investigation. “There will be new laws so that these sort of people can be pursued and tried more efficiently,”... A local politician and the former head of a children’s day centre were among 12 people arrested in the first stage of the operation... Police said they suspected the ring had been operating for nearly a decade... The gang selected its victims from one of the poorest districts of Barcelona. [‘Parents are thought to have given permission for their children to be prostituted out in return for a share of the takings.’]

...according to the ‘International Labour Organisation, every year more than a million children are lured or forced into the ugly world of sex trafficking, bondage and pornography. They soon lose their human rights, their dignity and their childhood. UNICEF is reclaiming some of these stolen lives. With your contribution we can continue our work, and keep millions of children out of it. Phone 0900 HELP KIDS to make a \$25 donation’]...

Sexually abusing children for profit is “a contemporary form of slavery,” according to the draft agenda of an international conference... The draft, to be adopted today... [by] the World Congress Against Commercial Sexual Exploitation of Children... urges strong criminal sanctions against a range of child-sex-related crimes, including punishment for people who pay for the services of child prostitutes, and says international co-operation is required to stop sexual abuse... Delegates from... 130 countries are attending the five-day conference... the first international meeting of its kind. This month’s excavation of the bodies of girls allegedly killed by a child pornography ring in Belgium added urgency to the effort.

...A string of kidnapped, raped and murdered Belgian children might have been rescued if police and magistrates had worked with, not against, each other, according to a special report published yesterday... The report spares no one in its scathing description of rivalry between the country’s

three different police forces and lackadaisical magistrates... Investigators were slow to get on to the cases, ignored vital evidence, were cold and dismissive towards the parents, jealously guarded key information, had insufficient resources and used them badly and in a completely uncoordinated manner, it said... In October more than 250,000 people marched through Brussels in sympathy with the victims and their parents and in a show of disgust at the system seen by most as incompetent and by some as corrupt.

...Belgian... public anger is still seething over the justice system's failings... The 5000 people who demonstrated in the southern town of Neufchateau may have been only a handful compared to the more than 250,000 who marched through Brussels exactly a year ago. But they gave a clear signal to the Government that deep discontent remains... "We are the employers of the politicians, not the other way round. But they have inverted the relationship." ...Reforms promised by the Government last October are, for the most part, unfulfilled and no one has yet been identified as having bungled the initial investigations of child abductions... An all-party parliamentary committee began work last October on the initial investigations into the... scandal of child sex... and issued an interim report in April. It listed a catalogue of blunders, incompetence and inefficiency by police and magistrates of such a magnitude that it is now investigating whether [the main offender] and his accomplices had protection. The gendarmerie, judicial police and communal police were found to have run parallel inquiries, either not communicating with each other or passing on false information. Key among its recommendations were that [the] Brussels public prosecutor... and [the] judicial police chief... should be removed and that the three police forces should be merged into one national force... [However, critics] said the plan to merge the judicial police into a national force in effect controlled by the paramilitary gendarmerie alone was a recipe for deepening, not reducing, rivalries... The body of a fifth girl was found in February.

...A year after Belgium was rocked by revelations that a convicted sex offender had allegedly kidnapped and killed several children... the international fight against paedophilia has been stepped up... and... paedophiles are running scared... The impetus to deal with the problem has been strongest in Europe where internationally linked child abuse networks have been uncovered in... Britain, Germany, Austria and Poland... In [France's] southern city of Marseille a school principal was charged with not reporting a paedophile teacher. In Spain police last month arrested 12 people after smashing a network in Barcelona which had links with groups in France, the Netherlands and Mexico... The presence among the suspects of a Barcelona town councillor has raised suspicions that the network could have had political protection. In Italy the question of protection by the Naples Mafia of a network which was infiltrated in the region of Torre Annunziata has not been ruled out by the authorities. Some 17 members of the group were arrested in June and accused of sexually abusing about 20 schoolchildren aged between six and nine years and having produced videos for the Italian and international market... The Italian Parliament last month unanimously adopted a law increasing the sentence for paedophile acts from three to 20 years... However, the fight against child abuse is being impeded by a lack of resources particularly since the Internet has become a new method for communication by child abusers... [Furthermore], the suicides of five French people arrested during... so-called Operation ADO 71... of whom two were teachers, and the suicide near Paris of a teacher falsely accused of sexual abuse by one of his students, has led to a big debate in the country about how to tackle the problem... of sexual exploitation[which, Unicef estimates, affects]... more than 100 million young people... throughout the world.

...A Hamilton primary school teacher accused of indecently assaulting seven boys has been remanded for a depositions hearing next month.

...A 47-year-old South Auckland teacher who allegedly molested[girl] pupils will stand trial at the Otahuhu District Court next month on 46 indecency charges... The... former teacher at Manurewa East Primary School, conceded in the Papakura District Court that there was a prima facie case against him[but] pleaded not guilty... The Manurewa [teacher] is charged with... a variety of... assaults... [which] took place from January 23, 1995, to December 15, 1996[including]... rubbing the thigh of one of the girls under a table at a Pizza Hut outlet, touching the bottom of another girl at The Warehouse and touching her breasts during a visit to Rainbow's End theme park. [The teacher] was given bail on condition that [the teacher does] not go within 1km of his former school or associate with any girl under 17.

...As more teachers appear in court on charges of sexually abusing pupils, [the NZ Herald] asks what schools are doing to stop it... [The pupil] was 15 when her school athletics coach kissed her. When [the pupil] rebuffed him the coach[began following her everywhere... and making phone calls to her home every day. When [the pupil] complained to her principal [it] laughed at her and told her to stop being stupid. The school guidance counsellor said the [coach], who had taught at the school for 30 years, was one of his best friends and... didn't want to hear what [the pupil] had to say. The harassment continued for six months, and despite repeated pleas from... her parents, the Waikato school did nothing. [The pupil] gained a non-molestation order to stop him coming near her outside school, but police said [the coach] had not gone "far enough" to enable them to lay charges. It was only when the family turned to the Commissioner for Children's office and the Auckland-based Youth Law Project that the school finally removed the [coach] from its grounds. By then the family had moved to another town... Since then it has been found that [the coach] harassed and molested other students... and police hope to be able to lay charges... While [the pupil], now 19... has managed to put the ordeal behind her and move on with her life – [it] is studying to be a nurse – other victims have suffered lasting effects. One of her abuser's other victims is too disturbed to testify... [The mother of a] Mahurangi student... whose complaint against... another teacher... triggered investigations... [which led to the teacher being] jailed for 17 years on 30 sex charges committed over 21 years... says her daughter is still "shattered". [The daughter] (18) dropped out of further study after moving schools, suffered stress-related problems, is now flatting in Auckland and is due to have a baby this month... The School Trustees Association has noted a 30-40% increase in reports of sexual harassment... [by teachers since the] Mahurangi College... offending came to light. A number of protocols, procedures and kits have been distributed and adopted by schools anxious to prevent sexual abuse of students and [so they] know what to do about allegations. The Commissioner of Children... is due to release a report of his investigation into the Mahurangi College case within the next few weeks, with recommendations on how students could be better protected. But... those dealing with victims... still... see a lag in willingness to believe students and take their concerns seriously. As [the commissioner] says, "Schools have to get past the denial mentality." ...[a YLP lawyer] says seven students have approached her in the past 18 months with allegations of physical assault by teachers, and in every case the school's board of trustees seem reluctant to challenge the teacher's version of events. "The child's view is routinely given little weight, and in some cases the school has not even interviewed the child... The concept of children having a voice is relatively new, and it's a long, slow process to change the thinking by boards and principals... Even though they may have a good procedure in place, they still have to have a will to listen, and listen with an open mind." ...another... lawyer dealing with cases of alleged abuse of students by teachers... [says,] "Boards are understandably very fearful of an employment suit being brought against them (by teacher representative organisations such as the Post-Primary Teachers Association) which can be very expensive. They are less fearful of legal action taken by students. There have been some out of court settlements with students, but these are usually confidential, so boards don't know that student lawsuits can also cost them considerable amounts of money." Mahurangi College settled... out of court, after what... the Human Rights Commission describes as "incredibly difficult and vexed negotiations that went on for months"... [T]he amount of compensation paid is confidential, although [the victim's mother] says it covered their legal fees of \$7000, some out-of-pocket expenses and provided a small amount for [her daughter's future education. Meanwhile, a third]... lawyer... is bringing further action against [the offender] and the school on behalf of six other... abused... students... They are suing for exemplary damages for assault, claiming the school... breached its duty of care; and breach of fiduciary duty, which is similar to that which exists between a doctor and patient, where the offender is in a position of power and control. It is the first case of its kind in N[Z], so if damages are awarded, the amount would set a precedent – \$200,000 has been claimed for each plaintiff... "...it's a timely warning that it's not just the person

who does the abusing who gets sued.” ...Ultimately, vigilance still rests with parents. Hopefully they no longer have to fight as hard as... the... parents [of past victims] to have their children treated fairly.

...A former school teacher who bore the child of her 14-year-old student has been sentenced to six months in jail by a judge in Washington state... [The] King County Superior Court Judge... suspended an 89-month prison sentence on condition that... [the teacher], aged 35... complete a three-year treatment programme and meet other parole conditions. With credit for time already served, [the teacher] could be free in less than three months... [The tearful teacher had] apologised and begged for mercy before her sentence. “I did something that I had no right to do morally or legally... It was wrong, and I... give you my word that it will not happen again.” Prosecutors had sought a sentence of between five and eight years, the standard for child rape... But [the teacher] was supported at the hearing by the mother of her victim, who is caring for their six-month-old daughter... Under conditions of her parole, [the teacher] is not allowed to have any contact with the boy, although officials said [the teacher] was likely to get custody of their... daughter. [The teacher] was a married mother of four and a popular teacher in the Seattle suburb of Burien last year when... [her] eight-month sexual relationship with the boy, who was then 13... began... [Her] husband, who sat expressionless in the back of the courtroom when the sentence was announced, has filed for divorce and moved with their children to Alaska... The boy has denied... [being] a victim and... wants to marry his former teacher. - 1997

...primary school teacher rearrested after being found late at night in parked car with 13-year-old boy whom [it] admitted raping last year...

[The Seattle] teacher jailed for seven-and-a-half years for having sex with[a] 13-year-old pupil [has been returned] to prison after... being found with [her] young lover during parole...

[The Seattle] primary school teacher [is] pregnant again by [the boy whom it] was found guilty of raping...

THE teen who fathered two kids with his teacher... is seeking damages from the school... of \$2 million for emotional suffering, lost income and the cost of rearing the girls. The claims contend the school failed to protect him from [his teacher]’s sexual advances...

THE case of the 16-year-old schoolboy seduced by his teacher has caused a certain amount of titillation. The buxom games mistress instructing the handsome schoolboy in the facts of life has long been the stuff of fantasy. On the face of it, inviting the strapping young student around for dinner then having him for desert sounds harmless enough. Many have said they are appalled at the outing of the tutorial temptress – they say the exposure is unfair. It was a victimless crime, they say. So should [the teacher] have to suffer for the sake of five minutes of pleasure? Quite frankly the words “five minutes” sum up exactly why I prefer my [lovers] older and experienced. But I digress. [About the same time that a Seattle primary school teacher first caught the international media’s attention, a NZ teacher was convicted ‘for having sex with a 9 to 10-year-old boy. The boy was her student and also the son of a friend, who the teacher was staying with – until the day the friend found her son having sex with their lodger. Initially, the mother simply kicked the teacher out, and only went to the police upon discovering that her son was visiting the teacher for more sex lessons at her new residence.’ Why would a 35-year-old gal be interested in having sex with a boy? Perhaps the teacher has a thing about small penises? Editor’s note: It’s been suggested that some guys become paedophiles to avoid *catching Aids*. Another possible explanation is that paedophiles are guys who have *small penises*! However, while this may be true in many cases of paedophilia, recent evidence proves that the generalisation doesn’t apply to every case.]

...*Latest baby rapes open floodgates*... The rape in Johannesburg at the weekend of a 5-month-old-girl... has sent shockwaves through South Africa, prompting a deluge of calls to children’s helplines and claims that sexual abuse on infants is increasing. The baby was yesterday recovering at Johannesburg Hospital after surgeons inserted a colostomy tube in her abdominal wall. Doctors said it was likely [the infant] would require reconstructive surgery. They would not say if [the infant] was being given anti-retroviral drugs to counter a possible HIV infection. Police said a 17-year-old “friend of the family” had given himself up at the inner-city block of flats where the rape took place on Saturday. A second [person] was being questioned. The rape is the latest in a series of attacks on infant girls, including, last month, [a] 9-month-old... who was sodomised by up to six [paedophiles] at her home in Northern Cape. [The 9-month-old] remains at Kimberley Hospital where [it] is doing well. “[The 9-month-old] will soon be transferred to the Red Cross Hospital in Cape Town where [it] will undergo surgery to repair her sphincter,” said [the hospital’s] medical director... The powerful media response to [the 9-month-old]’s rape has prompted police to release details of at least a further 10 reported rapes of girls under the age of 2 since the beginning of last month... South Africa’s ruling African National Congress has called on residents of two Cape Town suburbs to cut down trees and flatten hills in a bid to stop the abduction and murder of small girls in the area.

One morning almost halfway into April... the... six-year-old girl... who had[once] abducted a... three-year-old boy, tied him to a tree in a nearby woodlot and burned him... arrived at school subdued... and... after morning discussion had started... Twice during the half-hour session [the girl] got up and went into the toilet. I worried that [the girl] might be ill because [the girl] looked so pale and seemed so restrained. But the others were clamoring for attention and my mind was distracted. When I was handing out math assignments I could not find [the girl], only to discover that [the girl] was in the bathroom again. “Don’t you feel well today, hon?” “I’m okay,” [the girl] replied, taking the math papers from me and going over to her place at the table... [The girl] was speaking more now... and I was pleased. Later in the hour, just before freetime, I came over and sat down with [the girl] to show her how to do a group of new math problems. I took her on my lap. Her body was surprisingly rigid as I held her. I felt her forehead to see if [it was hot. But it wasn’t. Yet the girl] was certainly acting oddly. “Is something wrong...?” [The girl] shook her head... “I’m okay,” [the girl] reasserted... As the lesson concluded, I lifted her off my lap to the floor. On the leg of my jeans was a widening red spot. I stared at it not fully comprehending what it was. Blood? I looked at [the girl]. “What on earth is going on?” [The girl] shook her head, her face emotionless. “...you’re bleeding!” Down the inside of her right pants leg spread a red stain. Picking her up I rushed into the bathroom and shut the door behind us. Unbuckling the overall straps, I let them fall around her ankles. Wadded into her underwear were paper towels. Apparently that had accounted for the numerous trips to the bathroom earlier. [The girl] had been trying to staunch the blood flow so that it would not come through and show. “Good God... *what* is going on?” I cried, my voice sounding louder and more alarmed than I had meant it to. Fear rose in me as I pulled away the last of the towels from her clothing. Bright red blood trickled from her vagina... [The girl] stood immutable. No emotion ran across her face. Her eyes were blank... [and her skin] was paler than I had thought out in the dimmer classroom light... I wondered how much blood [the girl] had lost. In an attempt to shake her out of her stoicism, I grabbed her shoulders and shook her. “...what happened? You have to tell me...” [The girl] blinked like one coming out of a heavy sleep... “Unca...,” [the girl] began softly, “...tried to put his pecker in me this morning. But it wouldn’t fit. So [Unca] took a knife. [Unca] said I was keeping him out, so [Unca] put the knife inside me...” I went numb. “[Your uncle] put a knife in your vagina?” [The girl] nodded. “One of the silverware knives... [Unca] said this’d hurt a whole lot more and I’d be sorry.” “Oh God... why didn’t you... let me know [girl]?” “...I’s scared to. Unca... told me not to tell... worser thing would happen if I told.” Rushing out of the bathroom carrying [the girl, I told someone] to watch the class... grabbed my keys and raced... for my car... The distance to the hospital seemed interminable. The traffic impossible. Maybe I should have waited for an ambulance. I had no idea how much blood [the girl] had lost, nor... what I could do about it. I cursed myself for never having followed through on my Red Cross training... “...Stay awake,” I whispered, trying to manoeuvre the car and keep a hold on her at the same time. I should have taken someone with me... “I do be awake,” [the girl] muttered... “But it hurts.” “Oh, I’m sure it does, baby... But keep talking to me, okay?” “...My Unca... said [Unca] was going to... show me how grown-up people loved each other... [Unca] said I better know how grown-up people loved. And when I screamed, [Unca] said nobody ain’t gonna never love me if I can’t learn how.” “Your Uncle...

doesn't know anything, lovey..." [The girl] caught her lips in a tearless sob. "[Unca] said that be how you and [your partner] loved each other... said if I want you... to love me, I had to let him show me how..." ... "Oh lovey, [your uncle's] wrong... I love you already. [Your uncle] was just saying that so... [you'd let him] do something... to you [that your uncle] had no right to..." - ONE CHILD

Some paedophiles (e.g., those at the former Centrepont centre) believe that they DO have a *right* to engage in sexual activities with children. Perhaps they think that such behaviour is condoned by the Bible (r:p835, ln50)? After all, the Bible condones another type of child sex abuse!

This is my covenant, which ye shall keep... ye shall circumcise the flesh of your foreskin... Every... [boy] that is eight days old... that is born in... your... house, or bought with money of any stranger... must needs be circumcised... - GENESIS 17

The practice of... severing the prepuce, or foreskin, in [boys]; and a corresponding minor operation in... [girls,] was widespread among ancient peoples, frequently as a rite signifying purification or initiation. This was notably true among the Jews... no uncircumcised [guy] could participate in Passover. The occasion of Jesus' conformity is celebrated as Feast of the Circumcision, Jan. 1, a holy day of obligation for Roman Catholics. In the early days of Christianity the controversy as to whether converts must accept this and similar Jewish rites was settled negatively. [Some maintained that 'by means of the filial relationship to God in the Holy Spirit, all Christians are so near to God that such proximity must not be supplemented by circumcision or purification commandments. Their consideration would indeed mean doubting the effect of the gift of the Spirit.'] **Circumcision is still practiced ritually by Jews and Moslems** [(who 'usually perform it on boys between the ages of 7 and 13')], **and by many others for medical reasons.**

There are *medical reasons* to justify cutting off haemorrhoids when they are causing someone problems, but cutting off a healthy foreskin without the consent of the individual being operated on is an abuse of parental power! A weak defence of the practice is that removing their foreskin may enable boys to gain enhanced sexual pleasure in later life. Such a defence might be used to justify performing *a corresponding minor operation in girls*, but girl circumcisions can seldom be called minor operations and are usually intended to have the opposite effect.

Clitoridectomy... or "[gal] circumcision"... is not foreign to Western culture: as late as the 19th century it was practised in Europe to cure... nymphomania and hysteria. In London, one doctor viewed it as a remedy for... insanity. In the US, the last recorded clitoridectomy was performed in 1949 on a five-year-old girl. Its justification? "Curing masturbation". But it's still believed to occur among some migrant groups in many Western countries, including A[US, which currently has]... no legislation covering it... This operation ranges from *sunna* (the "mildest" form), in which the hood of the clitoris is removed, to *infibulation* (the most extreme)...

..."infibulation"... [refers to] an operation... generally performed on young girls between the ages of four and eleven years... It involves the removal of much of the labia majora, the mons veneris, the labia minora, and often the clitoris, using razors, knives or other sharp objects... "a reed, tube or match stick is inserted into the vaginal opening in order that after the wound heals a small hole may remain for the passage of urine and menses. The girl's legs are strapped together for forty days to allow the wounds on the two sides to heal together by contact... When the... girl is married, a "midwife" or her mother usually has to be called in to "defibulate" her in order to facilitate intercourse. Although, ideally, it is the husband who deflowers the wife, the pain and size of the opening often make this impossible... [Sometimes] a husband attempts to force the opening with various objects, in order to avoid the shame of calling in the girl's mother or a midwife for assistance... When and if the girl becomes pregnant, she must be "defibulated" to facilitate birth, and restitched thereafter... The physiological consequences of such an operation are numerous. And, although there would seem to be a low death rate associated with the operation, deaths are often not reported. There are, however, numerous cases of chronic infection, sterility, tetanus or septic anaemia, haemorrhage, long-term gynaecological and obstetrical complications, cysts, keloids and fistula formation, etc. Nevertheless, the operation and its consequences have changed very little, with the exception perhaps of urban core areas.

In much of Africa... [girls are subjected] to a ritual that [seems] abhorrent to many – circumcision of young girls between the ages of 4 and 12. Traditional communities believed the practice helped preserve girls' virginity to marriage. In the 1980s, 90[%] of Sudanese girls were still being circumcised. "...I was 5 years old and I remember... the pain... I don't think circumcision is good... it is a heritage of [the] Dark Ages... maybe... it suits [that] time but not ours." Governments made the custom illegal and individual mothers tried to resist it, but... [many continue] to face pressure to take their daughters to the local circumcisers... "[My mother] is warning me... that someday [my mother] will circumcise... my [daughter]... I don't want [my] child to be circumcised." It [is] reckoned that each year... 2 million girls in more than 30 countries [are] subjected to genital mutilation.

On a cloudy afternoon last month, thousands of [gals] danced through the shabby streets of Freetown... Most were members of Bundo, a... secret society [for gals] whose initiation rite includes... removal of the clitoris, cutting of the labia or stitching up the genital lips. Uninitiated girls led the throng, followed by elders in a sea of... singing, ringing bells and beating drums. It felt like a party – until the parade reached... [the clinic of] a critic of... circumcision, [at which point the crowd began calling the doctor] *o'gborrka*-uninitiated and dirty. They laid cursed charms at the clinic door and waved placards... Then the mob began to chant, "Let's circumcise her here and now." Practitioners of... circumcision are striking back in Sierra Leone... Since the early 90s, [First World agencies and gal] groups have criticised the practice, arguing that it brutalises [girls] and puts their health at risk. They claim that as many as 130 million African... [gals] have been cut... The [patients] often contract septicaemia, tetanus or gangrene. They may develop difficulty in urinating and chronic pelvic infections. Amnesty International recently recognised... genital mutilation[of girls] as a human rights violation. [First World] countries have begun granting asylum to [mothers] who fear that they or their daughters would be circumcised if forced to return home. For Bundo members, the fear is that African elites, who do not normally engage in the practice, will be influenced by the campaign against circumcision and attempt to curb it. "We will continue to do it no matter what people say," insists... a Bundo elder and the mayor of Bo, the country's second largest city. What are the Bundo protecting? Their secrets, they say. The society constitutes 90[% of the gals] of Sierra Leone and is a powerful traditional institution, respected and feared by the [guy] dominated establishment. Every year Bundo elders take pubescent girls deep into the bush for several weeks to receive *te'foos*, or things that are forbidden to discuss with the uninitiated, particularly [guys]. "All you can know is that when the girls return they are [gals]." In related news, four]... teenage boys died after traditional circumcision rituals went wrong in South Africa's Eastern Cape province.

...[a seventh South African boy has died after circumcision ceremonies, and 100 have been treated in hospitals in the past 10 days for septic wounds. The latest death was in northern Limpopo province, where a boy bled to death and all 35 initiates of one school were treated for wounds.' Incidentally, a] Jewish circumciser who cut a little too deep on an Israeli baby has been sued for \$2.89 million in damages by the child's parents... [T]he circumciser, in an operation five years ago, cut off the top third of the baby's penis. The parents said a graft failed, and they are suing for negligence, resulting in "deep psychological damage." - 1996

Mohels, the practitioners of the ancient Jewish rite of circumcision, appear to inflict less pain on their subjects than do most physicians, possibly because of the tools they use, a researcher says. In a Hartford, Connecticut, study involving 48 newborn boys, the Mogen clamp used by mohels was [also] found to be much quicker to deploy... than the Gomco device favoured by most doctors... The findings were no surprise to... a Los Angeles mohel who has performed more than 10,000 circumcisions... "Doctors are not as comfortable with the whole procedure. A mohel is used to working with a grandmother breathing down his neck,"... A mohel does not have to be a rabbi... most[mohel] circumcisions are done in the home. The researchers concluded that infants should be anaesthetised to reduce the pain no matter which clamp is used.

...The 13-year-old boy... is unlikely to forget his traumatic "rite of passage." The quick flick of the scalpel led to hours of bleeding and an emergency dash to hospital... His father... said the circumcision was done for cultural reasons, but it was important that parents knew complications could arise. The family was told to use cloths, soaked in salted water to stop the bleeding... but... [even though] his son went through numerous towels... the bleeding continued. [The boy] finally blacked out on his way to the toilet... 26 hours after being circumcised by his doctor... The clinical director of paediatric surgery at the Starship children's hospital... said a handful of children were admitted every year after circumcision. Bleeding usually came from a blood vessel which was cut when the foreskin was removed. In rare situations, blood transfusions were needed... [I]ncreased age did not make boys more prone to bleeding... [By the way, child] welfare groups are being alerted to... genital mutilation to prevent African girls from undergoing the... procedure in N[Z]. In a pilot project, professionals including nurses, teachers, police and staff of the C[YFS] are being educated about the practice... The growing numbers of immigrants from African countries which practise mutilation also have prompted training for health workers rehabilitating [gals] who have undergone the procedure. According to a recent report, National [Gals'] Hospital in Auckland has seen at least 39 [gals] in the past year who have been mutilated... Last year, the Government made genital mutilation illegal, except for medical reasons. It is also an offence to make arrangements to take a child from N[Z] for the procedure.

...[NZ] – far removed from countries where... genital mutilation[of girls] has traditionally been performed – is now facing up to the health fallout of such practices. Confronted with growing numbers of refugees from African nations... health workers are increasingly seeing the complications wreaked by the practice, particularly in childbirth... There is scant local information on the practice, but an Auckland researcher... is establishing a database to gauge the number of [gals] and girls who have already undergone mutilation, their health and education needs and the number of children at risk... [A]n estimated 127 million [gals] and girls worldwide had undergone some form of... [genital mutilation. □] Thousands of bees disrupted a... circumcision ceremony in Sierra Leone, putting half the 100 girls taking part in hospital... Hospital sources said that some girls who had been mutilated were also being treated for serious bleeding and fever. - 1997

Unicef has applauded Senegal for becoming the latest African country to ban... circumcisi[ng girls], the traditional operation decried by critics as an unsafe and degrading kind of mutilation. "Senegal's action is of great significance because it reflects the resolve... to end a cruel and unacceptable practice which violates the right of all girls to free, safe and healthy lives," Unicef['s] director... said. The legislation institutes prison terms of up to five years for people who violate the ban... [A]bout one-fifth of the girls in the West African country... ha[ve undergone]... circumcision... Senegal joins Burkina Faso, the Central African Republic, Djibouti, Ghana, Guinea-Conakry and Togo in outlawing the practice. The operation... is considered an important custom in dozens of countries across Africa, Asia and the Middle East, where girls may be seen as unclean and undeserving of marriage if they have not undergone it. Because sexual contact is often painful for circumcised [wives], some husbands believe it prevents their wives from being unfaithful. [‘FGM can also deter girls from marrying outside their community. Yet, today, most younger guys are against FGM and are even choosing to marry “uncircumcised” gals outside their communities because mutilation brings so many hidden problems.’]

...A court has handed down tough sentences in a landmark trial of a Malian charged with mutilating young girls in the rite of... excision. [The Malian], 53, was handed an eight-year term for practising excision on 48 girls, while the mother of... [one girl] who had been mutilated... was given a two-year term for failing to come to her daughter's aid. Twenty-six other defendants, from Mali, Senegal, Gambia and Mauritania, were given suspended terms ranging from two years to five years for abetting the mutilation. The trial, which ended in a Paris court earlier this week, was unprecedented in its scope, seeking to end a string of legal failures to stamp out circumcision among a small minority of France's... citizens... Previous attempts foundered on defence arguments that the parents were... ignorant of French law... [T]he 24-year-old law student who was hailed in court for having the unbelievable courage to tip off the authorities and thus bring about her mother's conviction, praised the jury. "It... means that people will no longer be able to say, 'I didn't know.'["] Excision... robs the [victim] of the prospect of sexual pleasure...

Since [it] was a child, [the now-29-year-old Ghanaian] has lived with a fear that no-one should face. The Ghanaian['s]... tribespeople want to forcibly... remov[e] her genitalia... because they believe it is bad luck for a [gal] to remain intact... [Hence] the need for all [gals] to be circumcised. "I can't... go back to Ghana. My family's been waiting for a long time to catch me. I am scared for my life." [The Ghanaian] is seeking refugee status in N[Z] after fleeing her homeland for South Africa... [The Ghanaian and h]er fiancée... who has be[come] a NZ citizen... plan to marry at the end of this month. The couple met in South Africa in 1995 and has kept in touch since. [Her fiancé had told her that it] would come back to South Africa to marry her, but [the Ghanaian] beat him to it and travelled on her own to N[Z] without telling him first... Following her arrival in Auckland, [the Ghanaian] was thrown into jail and, after spending three months in Mt Eden Prison, is now waiting for the result of her appeal from the Refugee Status Appeals Authority... "When I was in Mt Eden, I thought they were going to deport me to Ghana, so I made up my mind to hang myself before they could send me back..." ...Even now that [the Ghanaian] is out of prison, stark reminders of the threat hang over [her] head. As part of her bail conditions, [the Ghanaian] reports three times a week to the police and must live in an Auckland refugee hostel.

...From a short-term pilot in Auckland, a national programme has emerged to cater for growing numbers of refugees and immigrants from nations where... genital mutilation[of girls] is practised... The [person] behind the Auckland trial and now the national programme... talked to a [gal] fighting for abandonment of the practice in her native Somalia... [at] a recent Inter-African Committee conference in Senegal... [A]t the age of 8 [the Somali] underwent the most radical form of mutilation practised – infibulation. Performed by her aunt in a small village, the procedure was carried out without anaesthetic, using basic cutting tools and thorns. "You know in Somalia, circumcision is such a deep deep part of a girls' life. From the moment we are crawling we know about circumcision, we know that our grandmother and mother and sisters are circumcised and we look forward to it being done. Back then, no one would even dream of not being circumcised." ...[her] struggle with mutilation was a long and brutal one – suffering many of the complications of the practice and losing an older sister who died after the operation. "I have seen girls die after being circumcised, and the harmful effects go on and on, so I do feel much anger about it all, but I have no one to be angry at. You see, mothers always make sure their daughters are circumcised because they believe that this is the best thing for them. Despite the pain, I myself agreed with the practice because I thought that was best for me. For example, if a mother doesn't get her daughter circumcised, her daughter will be an outcast, no one will marry her and everyone would think [the uncircumcised person] is a prostitute – so it is a very difficult situation – we can't be angry at anyone, because the mothers' intentions are good." In her early 20s [the Somali] travelled and studied overseas where [the Somali] discovered there were other [gals] who were not circumcised, and most importantly, other... [Muslims] who were not. Slowly [the Somali] realised "how wrong the tradition was" and committed herself to the fight against the practice. In the early 70s [the Somali] returned to Somalia and... was appointed director of [gal] education... and with a small group of [fellow victims] behind her... began to bring about [enough change that] in 1977 infibulation was declared illegal. Government money was provided to start an anti-infibulation campaign. [However, with] the outbreak of civil war in 1991, the campaign was disbanded... [M]illions of Somalis fled the country, including [the director] who, with her husband, went to Canada... In

1995 [the ex-director] returned home... to... [find] a resurgence of the practice. “I was devastated by what I saw. It seems that we have gone back 40 years. Girls were being infibulated every day with razors and thorns. Two young girls recently died following the procedure and yet still many don’t question it.” ...So, despite civil war and lack of resources[, the ex-director]... and 18 other Somali [mutilation victims] in the town of Kismayo... have set up a... centre providing education programmes... “Our message... is that circumcision is very harmful, that it is bad for our daughters, that it is not part of our religion and we must give it up... My dream is that in my lifetime there will be young girls living in the heart of Somalia who can run free and play without pain, without the cruel and devastating effects of circumcision. Even just a few. Even 10.”

...SOME people think N[Zers – especially NZ guys] – are a shy and retiring lot. But I know better. I raised the subject of circumcision on talkback last week and we could have debated the issue for four days, not just the four hours of my show. Old [guys, young guys, married guys, single guys, religious guys] and horny little toads all had opinions on whether or not baby boys should be circumcised. The discussion came about because there’s a lobby group in Canada trying to get... circumcision[of boys] outlawed. The group, led by a Canadian doctor, argues that while there are laws protecting [girls] from genital mutilation, there are none protecting [boys], and that circumcision is akin to child abuse. There have been outraged reactions from religious groups that insist they have the right to chop their boy children. There’s little chance of getting the government to intervene but they’ve done the trick in attracting attention to the issue – even across the world in N[Z]. It seems the trend is moving away from circumcision and I must admit that if I had a baby boy, I would be most reluctant to have him done. When you’ve gone to all the time and trouble to deliver a perfect child, why chop bits off him? And besides, if [guys] feel that strongly about their foreskins, they can always chop them off later. It’s a lot harder to grow one back. I support the Canadians. Hands off our [boys’] penises!

...In 1967, after a bungled circumcision in which... a... Canadian baby[’s]... penis was effectively burned off, his distressed parents decided to follow the advice of [a]leading sex researcher... and have the baby’s sex “reassigned.” [The baby] would, following further genital surgery and later hormonal treatment, become... [a girl. The NZ]-born sex researcher... assured the baby’s parents that because the primary factor determining a person’s gender identity was not biology but rather the way the child was raised, [their baby] would make a relatively trouble-free transition to girl and [gal]hood. How delighted [the researcher] must have been when the [baby’s parent]s appeared in his office at the prestigious Johns Hopkins Hospital’s psychohormonal research unit. Along with [the baby], they brought his identical brother... who had escaped the surgeon and was therefore intact. What a rare gift to science! The perfectly matched pair could be compared with each other to test the veracity of [the sex researcher]’s theories. Without realising it, the [parent]s had stepped into the heart of a long-running scientific and cultural debate which was heating to boiling point as second-wave feminism took hold in the late 1960s and 1970s: “nature versus nurture.” Was biology destiny? [The NZer], a maverick, controversial psychologist... was already the most famous researcher in the burgeoning field of gender identity and had been responsible for many sexual reassignments on babies born of indeterminate sex. However, the truth, as revealed in [a]New York journalist[’s]... bleakly sensational study of what became of the world-famous “twins’ case,” was that sexual reassignment never worked... In their faithful commitment to [the sex researcher]’s dictum, the [parents raised their child] as an unambiguous girl, encouraging “feminine” attributes such as cleanliness, politeness, doll-playing and the wearing of frilly dresses. But in reality, [the child] never ceased being the dominant, more aggressive of the twins who, even as a girl, would fight off anyone causing trouble for her or her less pugnacious brother. [The child] was from the beginning a social outcast at school: children, with their instinct for the abnormal, intuitively knew there was something not right and rejected her. As the years rolled painfully on, [the child] fell behind with her school work... The years were punctuated with visits to [the sex researcher], who is depicted as a figure from a nightmare: the researcher who looks only to have his own ideas confirmed, and who is unable to accept the clear reality before him. [The sex researcher] continued to pump out academic articles about, and indeed to base his career on, the success of the twins’ experiment, and the case became the cornerstone of many other people’s articles and books about gender identity as well... In N[Z] we are used to thinking in admiring terms of those who, like [the sex researcher], “make it” internationally. Most kindly [the sex researcher] can perhaps be seen as a [guy] of his time, whose thinking and methodology are now largely rejected. [The NZer] was one of those who absolutely eschewed prudery and judgment about sex and sexuality and this led him into some very dicey areas: defence of “consensual” sex between adults and children, for instance; or an insistence on speaking with the... [twins] in extremely graphic terms about sex, and insisting on their rehearsing certain sexual positions, despite their obvious discomfort, embarrassment and active resentment. But from very early in th[e] book... AS NATURE MADE HIM... one has no instinct to be kind to [the sex researcher]. His wilful blindness in the case of [the twin] seems inexcusable; his extreme arrogance and rudeness towards anyone not slavishly falling in behind his theories, simply bullying. For [the twin], the crunch came at age 14. Finally told the truth about herself, [the teenager] immediately began the long road back to becoming a [guy]. By the time [the journalist] first met this famous twin, [it] had become... happily married and... was... living the kind of ordinary life (loving wife, factory job, three stepchildren) that represents a version of paradise to those who have felt themselves excluded from such possibility. In the telling of this deeply disturbing story... is... a powerful plea for there not to be surgical decisions made on behalf of children, who should be left to make their own decision later in life.

...[‘In a study published last week in the *Archives of Pediatric and Adolescent Medicine*, a professor of anatomy and reproductive biology at the University of Hawaii, and a psychiatrist with the Canadian Ministry of Health, report that the twin, whom they called “Joan,” never really adjusted to her assigned gender. In fact, Joan was surgically changed back to “John” in the late 1970s, and is now the happily married father of three adopted children. Almost from the beginning Joan rebelled at her treatment. Even as a toddler, Joan felt different. When mum clothed her in frilly dresses, Joan would try to rip them off. By second grade, Joan had come to suspect it would fit in better as a boy. But her doctors insisted these feelings were perfectly normal, that Joan was just a tomboy. “I thought I was a freak or something.” Although the other kids didn’t know about Joan’s surgical history, they teased her about her tomboyish looks and behaviour. Public bathrooms proved to be a source of particular discomfort. Joan often insisted on urinating standing up, which usually made a mess. In junior high school the other girls finally refused to let her in anymore, forcing her to use the boys’ room instead. By this time, Joan was pretty convinced it was a boy. But no matter what Joan told her doctors and psychiatrists, they kept pressing her to act more feminine. Eventually, Joan gave up trying to convince them. “You can’t argue with a bunch of people in white coats. You’re just a little kid, and their minds are already made up. They didn’t want to listen.” In 1977 Joan decided it had only two options: either commit suicide or live her life as a boy. Finally, in a tearful confrontation, her dad told her the true story of her birth and sex change. “For the first time things made sense, and I understood who and what I was.” Following the second set of sex-change procedures, John’s new doctors advised the family to move to a new town and start over. This time, however, John’s parents rejected the expert advice. People would find out anyway, they reasoned. It was better to stay put and be open about what had happened. Their strategy seems to have worked. After a brief transition, John was accepted by his peers in a way that Joan never was. At its worst, this story could be read as a lesson in scientific hubris. At its best, it’s a story about the courage of one boy who claimed the right to determine his own identity. Unfortunately, no follow-up study reporting that John had rejected his initial sex change was ever published. As a result dozens of other boys may have been needlessly castrated. In defense of the original team, Johns Hopkins says it wasn’t able to conduct a follow-up because the family stopped coming to see its doctors.’

■ Last week John ‘committed suicide.’

...hi]s blue eyes are windows into a life of pain and mental anguish. Since his first teenage yearnings, [blue-eye]’s longed for the thrill of a kiss... and the fulfilment of love and sexual intimacy. Instead, [blue-eyes] has contemplated celibacy, sex change and even suicide. [Blue-eyes] was robbed at birth of the chance to be a normal, functioning [boy] by a bungled circumcision that left life-long damage... In addition to the foreskin, the shaft skin had been removed and the scrotal skin pulled up to the head of the penis. Only shreds of sensitive fraenum (sometimes known as the... G-spot) remained. “...Erections caused pain, and my penis was misshapen and twisted. There were girls I felt attracted to, and who liked me, but I

was so fearful of rejection because of my deformity, I avoided relationships... At university the problem escalated. As my interest in girls intensified, I felt frustrated because I couldn't do anything about it... I often wish I'd never been born. My life has been a living hell," says the shy 26-year-old, who has been paid \$360,000 by an A[US]n doctor. "My right to the intact body I was born with has been violated. As far as I'm concerned, it's a breach of my human rights. I've been assaulted. Someone held me down, then amputated part of my body while I screamed and went into shock. My parents were not told that circumcision had no medical benefit, or the risk of complications, which... amounts to fraud."

...The practice of clipping the foreskins of most newborn boys' penises in the U[S] has come under greater scrutiny now that a powerful group of doctors has declared it "not essential." ... "A parent's consent cannot justify removal of healthy tissue – whether it be a finger, a breast, or a foreskin – without a valid medical reason,"... declared the Chicago-based American Academy of Paediatrics, the country's largest paediatric medical group. "Even though it does have some potential medical benefits... these benefits are not compelling enough to warrant the academy to recommend routine newborn circumcision," the group reported in the journal *Pediatrics*. With studies suggesting circumcision could reduce sexual pleasure, the operation's popularity has dropped since the 1960s when more than 80[%] of boys were circumcised. But the U[S] still conducts the practice on most of its infant boys – 64[%] in 1995... (...13% of A[US]n boys are now being circumcised, up from 11% in 1995... about 60% of [guys in NZ – where]... the surgery... is... performed for \$250 in the "flashy" city offices of a paediatric surgeon... [or for] \$150... at three health clinics in... south Auckland... – ...are now uncircumcised...)... A survey published in January of circumcised American [guys], done by the British *Journal of Urology*, found that 60[%] felt mutilated and about half felt inferior to uncircumcised [guys]. According to the survey, 61[%] complained of progressive sensitivity loss and 40[%] said they had difficulty achieving orgasm... [Incidentally, for every guy] who is worried... about... diminished... sexual... performance... and for every partner who has ever wondered what to do, there now exists a dramatic advance. Many [NZ guys] who suffer from erectile dysfunction, or ED, may soon be able to restore their virility. Effective and with few side effects for many, these new pharmacological remedies are sildenafil (brand name, Viagra), apomorphine and phentolamine... and... drug companies are working on nearly a dozen other new remedies for impotence that are in various stages of development. ED affects millions of [guys] of all ages and circumstances... [I]n up to 80[%] of all cases the cause is at least partly physical... While chronic illness, surgery and medications certainly contribute to ED, there are very particular, modifiable health risks that play a major role. These include smoking and excessive drinking. Therefore, to a large extent, optimum virility depends on certain lifestyle choices you make... For decades it was believed to be a psychological rather than a physiological problem.

...the spiritual interpretation of the function of the orgasm... has always baffled physiologists: 'Just why do... [gals] have a clitoris? It has no function in reproduction. It's just there for sexual pleasure!' ...orgasmic pleasure can be a gateway to experiencing the profound Oneness... (I do not expect a papal encyclical to be forthcoming on this spiritual experience, as the church fathers generally deny the existence of the clitoris...)

"When a [gal] monkey has been inseminated... [it] can wander away without any fear of losing the seminal fluid... If a [gal] of our species were so unmoved by the experience of copulation... the situation would be different. Under the simple influence of gravity, the seminal fluid would be lost. There is therefore a great advantage in any reaction that tends to keep the [gal] horizontal. The violent response of... orgasm, leaving the [gal] sexually satiated and exhausted, has precisely this effect." This behaviour is a facet of the recent evolution of homo sapiens, say biologists. But could the [gal] version still be more advanced neurologically than that of a... [guy? A guy] is thought to need to consume 40kg of food to produce one tablespoon of semen. Loss of the vital substance is considered to be debilitating... The yogi of India believe [guy] pleasure depletes vigour and wellbeing[, but recent studies have shown that guys]... with a high frequency of orgasm had a 50[%] lower mortality risk than those with low frequency... They can lengthen your life, but they don't half play havoc with your driving. That is the conclusion of two teams of scientists who say that even in the best of families, an orgasm can be a mixed blessing. And, in the process, the scientists raised an intriguing question: why does the earth move for us in the first place? Nature is never gratuitously generous, after all, so why did it create the evolutionary gift of an energy-wasting orgasm? It was a particularly pointed question for doctors at the Western General Hospital in Edinburgh who treated a 44-year-old [gal] plagued by continual, uninvited and unexpected orgasms... The team traced... [her] problem to a deformed artery which had damaged the right temporal lobe of her brain. Here, the scientists concluded, lies the nerve tissue that triggers [a gal's orgasm. The patient] was given anti-epilepsy drugs to stop her bouts of inappropriate flushes and moans, while the doctors prepared a paper for the medical journal the *Lancet*... [The paper concluded that guy and gal] orgasms have fundamentally different neurological sources... [Judging] from the only known cases of a [guy] afflicted with a similar condition [to the 44-year-old gal, guy orgasms] are set off by the hypothalamus, a more primitive part of the brain... [than] the temporal lobe... This led them to rate [gal] orgasms as more evolutionarily advanced than those of [guys] – a conclusion that flies in the face of accepted evolutionary wisdom... [Even the contemporary] godfather of natural selection... disagrees [with the Edinburgh conclusions]: "The clitoris and penis are one and the same organ, identical in early form, but later enlarged in [guy] fetuses through the action of testosterone"... Equally, both types of orgasms must have the same evolutionary origin, so whatever the success of their treatment, the Edinburgh doctors' conclusion looks incorrect.

...[Generally, the differences between the human guy and gal orgasms are that the climax in the gal can be physiologically interrupted more easily than can the guy's response, and the guy's orgasm is usually accompanied by ejaculation of semen; both experience momentary muscular contractions during the orgasms, but the gal's effects are usually longer in duration' than the guy's.

... 'as with the penis, the clitoral system erects and subsides about every 90 minutes during sleep. The tips of both have hoods or foreskins, and at the moment of orgasm, guys' and gals' genitals pulsate at exactly the same rate. However, the clitoral network's sole function is as an organ of pleasure. "The penis has two other uses, namely peeing and procreation." Behind the clitoral tip (the equivalent of the top of a penis) is the clitoral "stem", a couple of centimetres long; while leading down from it wishbone-fashion are two clitoral "legs", slender ligaments five or six centimetres in length. These follow the line of the pelvic bone and correspond to two very similar "legs" or "roots" within a penis. This whole structure forms a triangle with the clitoral glans at the top, and the base formed by a traverse muscle on the far side of the vagina. Within it are clumps or "bulbs" of tissue which correspond to similar tissue inside the penis. During arousal these fill with blood and the whole clitoral system swells up or "erects" until, in terms of size, it's roughly equivalent to an erect penis. "The only real difference between guy and gal erections is that guys' are on the outside of their bodies, while gals' are inside."

... 'The *Vagina Monologues*, *Puppetry of the Penis* and now National Penis Day. Three decades ago the "genitalised society" was predicted. But even the predictor could scarcely have imagined the blatant saturation this concept has reached in our culture. The deconstruction of natural modesty has moved into high gear. Not only are any remaining vestiges of feminine and masculine modesty being eroded, we are being desensitised. In the process, we are being dehumanised as well. We are our sexual organs. Our genitalia are being presented as a means of emancipation and empowerment (but the connection between the advancing genitalised society and this fascination feeding a culture of sexual crime and offending is seldom made – perhaps it's time). Ideology masquerading as health is also a vehicle for advocating and normalising alternative sexual expressions.' By the way, Italians] **have been hanging kilogram weights from the ends of their penises to test the efficacy of a new virility drug...** 123 [guys] aged between 33 and 77 took part in the study of alprostadil at the Centre for Impotence and Sterility in Rome... The drug improved blood flow in all patients, more than doubling the size of some... penises... Once the [guys] were given "visual erotic stimulation," the hardness of the penis was first measured using an electronic "rigidometer." Then came the "penile buckling test." If the weight could be carried – no hands – the [guy] passed. - 1997

As many as 200 [guys] a year suffer penis fractures, an injury which announces itself with a loud crack... Once snapped, you're looking at 40 stitches and a splint to put it back together again. Of the unfortunate 200, 64[%] are wounded during masturbation, 12[%] by falling out of bed... The remainder are probably not telling the truth when they say, "It just happened while I was lying down." [While on the topic of penises, 'in NZ one-in-three guys (or 40% of 40-year-olds, and 67% of 70-year-olds) suffer from some form of impotence'.]

...The Government's drug-buying agency Pharmac says it will consider subsidising the impotency drug Viagra... Pharmac said... the condition affects 52[% of guys] aged between 40 and 70. Pharmac's clinical director... [said yesterday that] an application for Government subsidy... [by] Viagra's manufacturer, Pfizer... would be considered on the grounds of the drug's benefit and how it could substantially improve users' quality of life. Special consideration might be given to certain groups particularly in need of the drug, such as diabetics. Viagra will go on sale by prescription in chemists today for \$20 to \$25 per 100mg pill. A weaker 25mg pill will retail at around... \$20 a tablet... Since its release in the US, Viagra has become the biggest-selling prescription drug in history.

...THE SEX drug Viagra has pushed up house prices by 11 times the national average near the... Pfizer... factory... at Sandwich, Kent, UK... The company... has taken on 1,000 workers and aims to take on another 1,000 by 2002. But only 300 new homes are planned... [In related news, AUS]n and Israeli scientists have discovered that Viagra's anti-wilt qualities extend to flowers. The anti-impotence drug can extend the life of cut flowers by about a week, they say, and double the shelf-life of fruit and vegetables... The produce and flowers were fumigated with the Viagra in gas form... [One scientist] acknowledged that, given the cost of Viagra, it was cheaper to buy new flowers, but said that the price would doubtless come down.

...Taiwan yesterday approved sales of the... impotency drug Viagra with a medical prescription... The blue pills were expected to be available in local pharmacies in six weeks at around \$T400 (\$[NZ]23.86) a tablet. The drug has been sold for as high as \$US2500... on the black market.

...It's not... the content of the Viagra ad but the tim[ing -] ...as early as the news breaks. My small daughter keeps asking what 'erection' means.

...SEX SELLS – and this advertising truism has never been more conclusively proven than in the world of pharmaceuticals. Delivering cures for the diseases of the [Last] World is all very well but it doesn't deliver money like the so-called "lifestyle" drugs, which tackle anxieties as much as medical conditions. And the real profit generator is sex, with every major drug company trying to hit the jackpot... Inspired by the phenomenal success of Viagra, more than a dozen firms are developing medications to treat a variety of sexual dysfunction. Among the products in the pipeline are pills for premature ejaculation... and... low sexual desire... In 1995, a fledgling Princeton... firm named Palatin Technologies was investigating a drug that could give people a natural looking tan, even indoors in the middle of winter. Then [guy] test subjects noticed they were becoming sexually aroused. That discovery perked up the company's interest, too. Palatin has since tweaked the drug, removing its ability to tan and boosting its capacity to arouse. Because PT141 stimulates receptors in the brain, it's being developed as a fast-acting nasal spray – for both [guys and gals].

...The development of a version of Viagra for [gals] is "progressing extremely well", says the head of the Pfizer research unit that developed the famous blue pills... The development of Viagra for use by [gals] has been more complex than that for the [guy] pill, and there has been conflicting clinical trial data on whether the pill can help improve [a gal]'s sexual response by improving blood flow to the genitals... [The] senior vice-president and director of the company's British laboratories in Sandwich... added that his team was also working on an improved version of the anti-impotence drug... [The director] said that a Mark II version of Viagra for [guys] – codenamed 369003 – had started phase two trials. It should be more effective than the existing drug, which faces competition from rivals that have claimed their products act faster... Viagra takes effect an hour after being taken and the benefits last for only four to five hours. Users complain that it means sex has to be carefully planned.

...*Rival stands up*... When you think of erectile dysfunction, you think of – what else – Viagra. Introduced less than two years ago, Viagra... [already] tops \$US1 billion... in annual sales worldwide. About 4 million American [guys] take it regularly, generating 200,000 prescriptions every week. But it may soon have competition... Drug companies are racing to expand the options for... erectile trouble... treatment, and TAP Pharmaceuticals, of... Illinois, is now close to the goal. Last week, a federal advisory committee recommended approval of TAP's new erection drug, Uprima. If the Food and Drug Administration follows the panel's advice, as expected, the new pill could reach the market within three weeks. Uprima comes in a lozenge that dissolves under the tongue, delivering medication directly to the bloodstream. As a result, it usually takes effect within 19 minutes, about three times faster than Viagra, which must pass through the digestive system. Uprima does not cause the hazy vision that afflicts some Viagra users, and it may prove less dangerous when combined with heart medications containing nitrates[(at least '16 deaths in the US have been linked to Viagra')]. But Viagra's most common side-effects – flushing, headaches and nasal congestion – may be easier to tolerate than those of Uprima. One in five Uprima users suffers nausea, one in seven has dizziness and one in 30 experiences sudden drops in blood pressure that can cause fainting. During clinical trials, a 33-year-old... who took 4mg in his doctor's office fainted on the way home, driving his car into a fence. That clearly worried the FDA's advisers. Though they voted to approve Uprima at doses of 2mg and 4mg, they thought the product should carry a warning that alcohol could exacerbate its side-effects... But th[e]... studies suggest that it fails more than 40[%] of the time.

Enhance your Libido... When you think of the bedroom, do you just think of sleep? ...You won't be surprised to find out that frustration in the bedroom is not a modern problem. All over the world, hundreds of substances believed to have aphrodisiac qualities have been tested for thousands of years. Now modern research into traditional aphrodisiacs has le[d] to the formulation of two natural supplement blends... The [guy] formula is called Horny Goat Weed Plus and the [gal] formula is named Horny Goat Weed For Her. The names might sound outlandish but Horny Goat Weed is actually the genuine name of a potent traditional aphrodisiac. Horny Goat Weed was discovered in 200 BC. Legend has it that an ancient Chinese goat herder noticed that his flock suddenly became sexually active after grazing in a certain patch of weed. The Chinese consider Horny Goat Weed to be the premier libido supporter for both [guys and gals]. Both formulas combine Horny Goat Weed with a number of other herbs traditionally used as aphrodisiacs, PLUS hormone balances for her or a little extra help with circulation, stimulation and stamina for him.

...Scientists have found a libido gene which, coupled with Viagra, could really get people going... The newly discovered gene... separates [guys] with the most voracious sexual appetite from others who would prefer a nice cup of tea. The discovery could lead to the creation of sex-drive-boosting drugs to complement performance enhancers such as Viagra... "How often you want to have sex may well be determined in your genes,"... said... a molecular geneticist who led the American research team... [The team] found that half of the 250 [guys] studied possessed the high-libido form of the gene in their DNA. The group was far more likely to have sex... than those who had the low-libido variety... – some several times daily...

It's a tough job but somebody's got to do it... ABOUT three nights a week – sometimes more – ...a 58-year-old... won't touch his beloved beer, shuns antihistamines and hops into bed early for a good night's sleep. Sure, [the guy's] retired and on full Army pension, but [it's] got big responsibilities these days and when [this guy isn't] in top form, there's nowhere to hide. Cummings is a porn star, the oldest... in the business. After a 25-year career in the military... [Cummings] has become a major force in an industry that chews up [guys] half his age. To his buddies in the military [Cummings] is a hero... [for] doing a job the average guy (industry insiders estimate 5000 [guys] inquire about job prospects each week) can only fantasise about. Cummings (not his real name) sees himself as about as wild as a box of salt. [Cummings] doesn't even believe his sex drive is unusual – "average" is how [Cummings] describes it. On the other hand, [Cummings is] certainly prolific. In just three and a half years in the

business [Cummings] has performed in some 140 movies. [Cummings] makes no bones about [his motivation for starring] in X-rated videos – and it's not for the money. "Where else could an old, fat, bald guy like me have so much fun with so many beautiful young [gals]?" ...But Cummings does possess something very few [guys] have: the ability to perform on command and in front of cameras, hot lights and several onlookers, often including the boyfriends of his sex partners. Talk about pressure. "That's something 99[%] of these hotshots who fantasise about getting into the business can't do," says... an adult-film producer and owner of Shooting Star productions. It's also one of the reasons why of the 600 to 700 porn actors in California (where an estimated 95[%] of American X-rated films are produced) only about 30 are [guys]. They are the treasured few who have a proven track record of functionality. While [gal] performers are generally considered on the down-side of their careers by the time they reach 25, [guys] – subject to the elusive ability to perform – can stay with the business almost indefinitely. After Cummings, for example, the next oldest [guy porn] star is... 50... [However, older gals are increasingly] becoming more visible in adult video. Shooting Star Video, for example, has a catalogue of more than 50 titles in the 40-plus and 50-plus age groups, a segment that accounts for about 20[%] of the company sales... Cummings' rise to X-rated fame could not have been more haphazard. After his wife of 22 years left him "for [someone] with a full head of hair," [Cummings] found himself drawn to the Californian swing scene. At a party [Cummings] met... a top starlet in adult video. His big chance came soon afterward when [the starlet] invited him to help as a stage-hand for one of her films. On that day a young actor was unable to perform the all-important climatic scene. When the director asked if someone could step in to finish the shot, Cummings volunteered. His Johnny-on-the-spot performance earned him an ovation from the crew and a bit role in a film being shot the next day. [Cummings] has had steady work since. "Word gets around quickly in this business,"... And while people ask if the erection drug Viagra might usher a new wave of senior [guy porn] stars, Cummings is flatly dismissive. "I... don't think Viagra is going to help any old guys break into this business." ...While [gals] typically earn \$US700 to \$1200... a scene... [(the scenes are well set and touch on the artistic with real fake orgasms'), guys] earn about a third of that. Cummings... [is usually] paid \$400 to \$1000 for a three-hour shoot.

...[A 62-minute ode to one gal's fellatio talents, *Deep Throat* was the movie that made pornography acceptable to the average citizen. The film, which opened in 1972 and immediately received favourable publicity (eventually grossing over \$30m), also piqued the interest of the New York cops – who tried to close it down. "Attendance was average until the police handed us all that publicity. The legal reaction is what made the film take off the way it did."]

...The Government's child welfare agency has gone to court to try to stop a... 7 1/2 months pregnant... former stripper... having a pornographic movie made of the birth of her child. The... Deputy Solicitor-General... said the unborn baby was entitled to grow up free of the stigma that would inevitably follow if the movie was allowed to proceed... and... that filming during childbirth... was an infringement of the child's privacy. "What the mother is proposing to do is not illegal, but... would have a negative flow-on effect nevertheless." ...The case is expected to finish today.

...[the] Health Minister... is seeking advice over plans to film a... birth for a porn movie. Justice... declined an application by C[YF] to be given wardship of the unborn child and has instead appointed [the mother] an agent of the court. The [mother and the production company's owner] have been threatened with jail if they do not comply with the order.

...HARDCORE pornography is being filmed illegally in the Waitakere Ranges and at west coast beaches. [A p]ornographic film-maker... admits his company, Vixen Direct, filmed parts of its latest adult movie, *Ripe*, in the Waitakere Ranges without Auckland Regional Council... consent... [and] says both areas are popular with visiting foreign pornographic film-makers, who often use N[Z] actors in their movies... Commercial film-makers must pay the ARC \$1000 a day for filming permits. But [the film-maker says it] can't see why [it] should pay the ARC money to film in public locations[and – since the ARC says any] breach is not punishable by a fine... [– it'll] continue to film wherever [it] likes... "I'm not interested in bureaucracy... My attitude is I'm tangata whenua and I'll do what I like. As long as no member of the public can see it, we can film where we want. I haven't told [the ARC] and I don't consider it any of their business." ...Vixen Direct made national headlines this year when it revealed plans to use a [mother] giving birth in a pornographic film... [The] controversial film... screened at the Berlin Venus Adult Film Festival this month.

German media executives say pornography and soccer are regularly the highest rated programmes... [Meanwhile, a technician's] enjoyment of a hard-porn film seems to have killed huge profits for a firm in France. [The technician] was secretly watching[the film] in a Paris switching centre, which sends TV programmes around the world, when... it... unwittingly hit the wrong button. The film immediately displaced a children's programme in 21 Arab states. Saudi Arabia denounced this "attack on Islamic morals" and cancelled a \$10 million-plus contract with Canal France International.

...It's 4 pm on Friday. Most of your colleagues have gone, and your boss is in a meeting. Feeling bored, you persuade yourself you need to check some data on the Internet. You log on and start searching. As there is no one around, you decide to do something simpler and more entertaining. You request information on the Louvre, and enjoy a stroll around its virtual galleries. But improving your knowledge of European art is probably not what your company is paying you for. And you are almost certainly not the only employee using your firm's computer for purposes unconnected to work. Internet security firm Secure Computing found staff at one major corporation indulging in 400 hours of non-productive surfing a day. [The security firm's i]nternational marketing manager... says: "It's a fair assumption that staff in Britain with access to the Internet spend a daily average of 45 minutes looking at non-business sites. Once you're using the World Wide Web it's very, very easy to get side-tracked." Many Web sites accessed from the workplace contain pornography. When Nielsen Media Research investigated visitors to *Penthouse* magazine's Internet pages, it found that thousands were staff at well-known companies... Aside from the sheer waste of time – and the potential embarrassment of having employees' pornographic predilections made public – unofficial surfing can slow down computer speeds for legitimate users, especially if pictures or videos are downloaded... Last year, a researcher at Birmingham University... was jailed for storing child pornography on the university's computer and distributing it via the Internet. Just two months ago, NatWest Markets in London discovered that 15 of its staff were using the company's system to post pornography on the Internet. Three were sacked and 12 were reprimanded.

...Sex is the main motivation of Internet users, according to a survey in the latest *Web* magazine. Every two seconds, an Internet user consulted a site concerned with sex... [T]he four most popular code words chosen by people consulting the Yahoo search engine were: sex, chat, XXX, and Playboy, in that order. Nude, porno and *Penthouse* were respectively 6th, 7th and 10th... [Incidentally, a] quarter of N[Z]ers caught down-loading or trading explicit child pornography, torture and murder images on the Internet in the past year were boys aged between 14 and 17. The Internal Affairs Department's publications inspector... said that... 25... search warrants had been executed... [for boys in this age group]. Most parents were shocked by their children's behaviour but the parents of one 14-year-old did not seem to care... The boy had 600 explicit pictures, more than half featuring children. Most of the boys had been lured... with promises of money and "fun,"... to the graphic sites by... [paedophiles using] teenage chatlines... "Kids are encouraged to sell, trade and swap images, like swapping baseball cards, perpetuating the whole thing." There was also the chance the youths could become victims if they contacted people they met through the computer...

Free speech ruled in cyberspace when the [US] Supreme Court... dumped the Communications Decency Act, a law aimed at controlling minors' access to pornography on the Internet... [C]ivil libertarians, Internet surfers and businesses, paedophiles and perverts alike welcomed the ruling, which declared unconstitutional the law that made it a crime to transmit sexually explicit material to anyone younger than 18. In his decision, [the judge] found the law was overly vague and would infringe on the free speech rights of adults in the name of protecting children. [The judge] ruled that constitutional free speech protections should apply to online systems as they do to books and newspapers... [The] inspector of publications for

the Department of Internal Affairs in N[Z] said the non-specific and broad nature of the... act was the crux of the problem and enabled it to be overturned under the guise of free speech. [However, NZ's] Films, Videos and Publications Classification Act passed in 1993 made the rules on objectionable material in this country black and white... "There are six things which, if they are depicted or promoted, are automatically objectionable under[NZ] statute. They are: child pornography, bestiality, necrophilia, extreme torture... the use of urine or excrement in association with sexual conduct and the use of coercion or violence to compel somebody into sexual activity." Although child pornography appears to be a loose category, the law defines it as the exploitation of children or young persons for sexual purposes. Any depiction of children in a sexual circumstance, be it performing sexual activity or posing in a sexually suggestive manner, is deemed to be objectionable. The... act defined as a publication anything that can be stored and reproduced under electronic format... [- so the] department's powers extend to the Internet where people trading in indecent material can be traced back to the service provider. The department has the power to obtain the user's details and search his or her home. The department also works closely with the police and the Customs Service, which set up its pornography programme about three years ago. But the department is far from smug or convinced that its roadblocks on the information super-highway can't be bypassed... Children accessing indecent material was a concern and the industry had responded by developing special software to filter out what youngsters might see, but this was merely an interim measure. "Technology and law can only do so much... We have to compromise and come up with solutions that are going to work both ways. We can't restrict people's freedom unduly but we have to find ways to protect children from objectionable material." ...The... Internet Service Providers' Association of N[Z]... said that despite what some paedophiles think, it was no longer "safe" to transfer pictures through the Internet[, although]... parental... responsibility for supervising their children's use of the Internet... was the first line of defence.

...Paedophiles and child porn distributors may find it harder to target young children on the Internet, now guidelines for parents and children have been issued. "Keeping your children safe on-line" and the "Guide to On-Line Safety" will soon be sent to N[Z] secondary schools and computer retailers... Thirty representatives from the police, Customs, I[SP]s and the Judiciary will consider increasing cooperation between agencies and the public.

...set up in 1991 and with branches in 30 countries... Ecpat, formerly End Child Prostitution in Asian Tourism but now known as the Campaign Against Commercial Sexual Exploitation of Children, has turned its guns on how new technology is being used to spread child pornography... The ease and immediacy of computer communications meant paedophiles were no longer isolated and... led them to believe their behaviour could be legitimised merely as their particular "sexual orientation." ...In a statement published after... [last] week's meeting, organised by Ecpat, [which] brought together police, Internal Affairs inspectors, Justice officials... and... I[SP]s... the group said... "There is convincing evidence that many N[Z]ers are regularly downloading child pornography images despite the illegality of this action. Some of this material portrays horrific and disturbing sexual scenes involving... infants." ...N[Z] needed new laws to bring legislation up to date with new computer and on-line developments. I[SP]s however, are concerned they will be asked by law enforcement officials to act as censors for their customers... "We can't censor everything." ...The general manager of the Internet Company of N[Z]... said it was important that people realised the Internet... had all the attributes, good and bad, of the social community... [S]ervice providers, while wanting to be responsible, did not have the capacity or right to be judge and jury. Of billions of transactions every day, only a very small percentage would relate to pornography... The meeting did, however, publish two basic principles that should please many of the Internet providers: the right to freedom of expression and the right to have privacy respected. But the providers were asked to adopt a code of conduct relating to their business as soon as possible. [● 'To find out just how accessible objectionable material is the NZ Herald searched the Internet for, and easily found, a series of nude photographs of young boys in various poses and lists of movies which featured boys naked, engaging in incest, simulating masturbation, urinating, cross-dressing and being raped, as well as writings discussing paedophilia.']

...The porn video *No 1 New Golden Boys*, depicting sexual acts between boys, should not be available for sale or hire from N[Z] video shops, Customs said yesterday... A Canterbury University lecturer... aged 46, was fined \$2000 last week for importing the video from Germany... [But on] Tuesday, the part-owner of a Christchurch video store said his shop held two copies of the video... The shop proprietor, who asked not to be named... agreed... that it was "grossly indecent," but anyone aged 18 or more could hire it legally. A Customs officer... said [the lecturer] was fined for importing, not viewing, the... video... "It does not have a classification..." [However, an] Internal Affairs officer... said the video was six or seven years old and the first in a series of about 36 *Golden Boys* tapes... [I]t was possible some of the other videos in the series could be completely different and approved for hire or sale on shelves because they might involve older [actors].

...Videos, computer software and photographs featuring child pornography, torture and sexual fetishes have been discovered by Auckland police... They also seized \$50,000 of pirated computer equipment from a Manurewa house and have charged [its occupant] with counterfeiting and obstruction. More people will be charged... once police computer experts have cracked codes to see what is on the discs and after the videos have been... [further scrutinised. A] Papakura... Detective Sergeant... said the seized material contained disgusting and bizarre images. "I'm shocked that people would even want to be in possession of some of this stuff." ...It is the first time the... Papakura police sexual abuse unit... has become involved in searching for child pornography... Many of the images had been introduced into the country via the Internet and some computer discs had arrived by post... "Some people are gathering their own libraries of objectionable material and setting up their own web sites." The searches were already having a snowball effect[, which meant that the]... police had increased the number of staff working in the electronic forensics field and were also bringing in overseas experts to help... [In international news,] China has released figures from its latest crackdown on pornography... and they are massive: more than 12 million publications and 1.8 million video discs seized.

...[people who download child pornography from the Internet face up to five years in jail under a crackdown by the British Government. In legislation to be enacted this year, jail sentences would also increase to 10 years for people who created and distributed pornography involving under 16s. A former glam-rocker is serving a two-month jail sentence after child pornography was found stored on his computer.]

...the "glam-rock" singer... renowned for... platform shoes and outrageous costumes[, and]... who sold 18 million records in a rollercoaster career, was... arrested by British police probing child pornography after indecent images were allegedly found on a computer [the star] took to be repaired.

...[A 'FOUNDING Bay City Rollers member has admitted possessing child porn. The former drummer for one of Britain's most famous 1970s teeny-bop acts admitted having indecent photographs and videos of children. The former drummer, now a senior nurse at Edinburgh's royal infirmary, told an Edinburgh court the porn belonged to an American friend. The former drummer said nothing as it left the court with a cap low over his eyes. The former drummer will be sentenced next month. The case came just weeks after another 1970s British pop phenomenon was released from prison after serving two months for possessing hardcore child pornography.' In further news from overseas, France's]... operation ADO 71... [has to date] resulted in 300 people being charged with possession of child pornographic videos which were made in Poland, Spain, the Netherlands and Germany. In June this year 71 distributors and purchasers of similar videos which were shot in Colombia and discovered when French police infiltrated the so-called Toro Bravo network appeared in court. Since July, French police have been trying to pinpoint a school where an erotic film using children was shot.

...writing... a pornographic book about children being tortured cost [a NZer] \$1000 in fines and a \$200 lawyer's fee when [the author] appeared in the Wellington District Court yesterday. The judge said [the author], aged 44, had hoped to sell the manuscript to an overseas publisher.

...[the Marquis de Sade - who was incarcerated for writing about sodomy, necrophilia and other topics that appalled the people of Napoleon's day - was "ignored as a boy and essentially abandoned by his mother." The boy went to stay with different relatives, including a priest with a library of pornography.]

...‘a local edition of *Hustler*, the magazine happy to be branded “porn for the working guy” – “it tries to be offensive on all levels” – will be available next month.’ By the way,] **girlie magazines are no longer regarded as subversive in Russia, [so] it’s time for the first home-grown centrefold...**

[When we meet her, the first home-grown Russian centrefold, standing] in a simple floral dress... looks like[a] wholesome Belorussian girl... The glistening black hair demurely taken back off her forehead reveals a heart-shaped face, and a pair of large soulful eyes. [The centrefold] must have looked breathtaking... [while standing] in front of the audience, her violin tucked under her chin... as a star pupil at the Moscow Conservatoire... [The centrefold] wears... little... except lashings of lip gloss... in this month’s edition of *Playboy*... Next to the full frontal cover of *Penthouse*, and the array of hard-porn magazines which beckon S & M fans from newspaper kiosks all over Moscow, [the centrefold’s cover picture,] gazing out from under her dark eyelashes looks very demure, not a nipple to be seen, a sort of sultry Princess Di... The “wholesomeness” of *Playboy*’s brand of soft-focus porn, a complete absence of whips, manacles, or even body hair, was a novelty for the Russian punters. But they continue to buy it every month, and now in its first anniversary the magazine sells a steady 100,000 copies. Until now all have used imported Playmates... [because] Russian porn has not produced models endowed with the sanitised Barbie-girl sexuality of the *Playboy* girl... “In Russian erotica there is no healthy sexual centre, and the girls look like frightened animals,”... said... [the] Russian *Playboy*’s editor... THUS the hunt was on to find... a [local Barbie-girl. The winner] was selected out of 300 contestants... The competition yielded a diverse crop of photographs, everything from shots of family vacations in the Crimea to bikini-clad gangster molls in the Canary Islands. “We weeded out the obvious undesirables such as the nude photograph of himself sent in by a 40-year old [guy,” said the editor, who]... candidly admits that as far as [his opinion] is concerned the *Playboy* models could be from outer space. “Their huge breasts defy the laws of gravity. It is not really sexy. They are not like real [people], more like some fairytale object, a geometric formula or a beautiful car. I don’t think the people in American *Playboy* will like that speech very much”... [However, skip] to this month’s centrefold, and it is hard to spot the essential Russianness of the undoubtedly beautiful [model, although the] backdrop of central Moscow in the snow does add some Russian atmosphere. [The model] bravely poses in minus 30 deg C with nothing more than a jaunty fur hat, and a generous dollop of instant bronze suntan. Over the page... [the model] is posing at Revolution Square metro in a Red Army jacket and hat, and suspenders. Anyone in search of erotica will be disappointed – there is something distinctly coy about these pictures... On the subject of her modelling career [the centrefold’s] face looks temporarily blank... “My ambition, my life, is music not modelling.” ...[but the centrefold] is flattered by the attention and likes the money... It is unsurprising in today’s Russia that... the... Playmate could have equally as well been a brain surgeon living on a salary of \$50 a month, or a cosmonaut on hard times... [Nude modelling] finances her penchant for... [designer] clothes and... make-up. More importantly it enables her to send money to her family. Her parents are both engineers, which means they are living on a very small income... “But there is more to life than money, isn’t there?” [the model pleaded while regarding] the Mercedes and BMW’s disgorging Russia’s new rich at the doors of Moscow’s most expensive hotel. “Yes, but what precisely?” “It is the soul,”... The soul crops up a lot in [the centrefold’s] conversation. Her grandmother is also concerned about souls, because [grandma] is praying for her granddaughter’s. “My mother and father are not critical of me posing nude, but my grandmother has not spoken to me since,”... Soul was to be found almost completely lacking in Los Angeles where the latest Playmate was invited to stay as a guest of [*Playboy*’s founder] in his Playboy mansion... Had [the centrefold] been overwhelmed by the luxury, and glamour of Hollywood? “I liked the good service in the shops, and it was very clean, but... it is a plastic city with plastic people. They smile too much, and they have no soul, [whereas] we Russians have a lot of soul.” DESPITE her spiritual bent [the centrefold] sees nothing wrong in shedding her clothes before the camera. In fact it is a public service. “If you have a beautiful body there is nothing wrong in showing it to other people. On the contrary I think it is greedy if you keep it to yourself. Why did so many painters paint naked [gals]? There is no shame in it.” No, but their paintings did not have “Entertainment for [Guys] Only” written on them. So what more does [the centrefold want] from life? “I would like to get married and have a baby... and... I want to leave my footprint on history.” ...All you need is a back room, a couple of girls and a camera and you too can produce a porn magazine[and during]... the past five years the sex industry has taken off in Russia... From being a nation where sex was performed as an act of duty, the Russians are making up for lost time... Sex in its infinite varieties is everywhere...

CYBER SEX... One of the main early uses of electronic communications [wa]s to let [guys] watch and talk to naked... [gals – which has], in the end, le[d] to better things... Many of the main innovations in communications are tried out first – and, in a few cases, even developed – by the adult-entertainment business. Video-conferencing on personal computers is merely the latest in a list of electronic technologies whose chief early colonisation is by the erotic. The cinema, the videocassette, France’s Minitel system, the compact disc and pay-per-view television have all been used, in their early years, partly or mainly for adult entertainment. Some of them still are. Adult entertainment is now a main-stay of pay-per-view television. In American hotels, between \$NZ200 million and \$250 million, or at least half of the revenues for pay-per-view films, usually comes from adult entertainment. NOT surprisingly, as pay-per-view television in the U[S] has become available on cable and satellite channels, the two main companies in the business, Playboy and Spice Entertainment... have rushed to take advantage of it. Between them, their four adult channels account for perhaps \$280 million of the \$845 million American market for pay-per-view television. Now, both have big plans to make money from cybersex... Spice[Entertainment]... has launched Cyberspice, an on-line peep-show... Playboy Entertainment[’s]... internet site, with 5 million “hits” a day, [i]s “potentially our most important revenue-earner.” The company is now experimenting with charging people to peek at a page. But on the internet they will come head-to-head with competitors battle-hardened in an area where the ability to make good use of the latest electronic kit is the key to success. These are the veterans of the telephone sex industry... The service... does not come cheap. Customers pay almost \$8.50 a minute and stay on the line, on average, for 13 minutes, running up a bill of \$110. The girl at the other end receives \$35 an hour... Customers may pay by two methods: through the cost of the call, in which case the bill appears on their ordinary telephone bill (or their employer’s), or by credit card. To escape regulatory constraints, companies using the first method often run their services from faraway places with strange-sounding names, many of them penurious [Last World countries (e.g., Niue – ‘Japanese are making tens of thousands of calls a month to the remote South Pacific island, but it has nothing to do with interest in Polynesian culture: it has everything to do with clever advertisements in X-rated Japanese magazines which promote international phone sex numbers in a way that misleads many into thinking the calls are within Japan, causing big trouble for Japan’s major international telephone supplier as thousands of customers are calling to complain they were billed for calls to countries they have never heard of, let alone tried to call)’].

...Internet addicts roam cyberspace in search of social support or sexual fulfilment rather than information, according to a U[S] study released yesterday... Respondents said they saw “cybersex” – playing out erotic fantasies of novel sexual acts via the Internet – as the ultimate safe sex method to fulfil sexual urges without fear of disease. “Unlike 900 numbers which can be traced... dependents viewed cybersex to be completely anonymous... They feel free to carry out illicit sexual impulses and were able to act in ways that differed from real life conduct without fear of repercussions,” [a]... University of Pittsburgh psychologist... said... at the American Psychological Association convention... in... CHICAGO...

[‘In Florida, a Fort Lauderdale phone sex operator has won a “minimal” workers’ compensation settlement after claiming it was injured after regularly “pleasuring herself” at work. Her lawyer said his client developed carpal tunnel syndrome – a form of OOS – in both hands. “My client was told to do whatever it takes to keep the person on the phone as long as possible.”’]

...AS everyone knows, the main contribution the Internet has made to society is to stem the steady flow to the corner dairy by those in search of mags with pics of nude babes. Now, of course, you can purr over the pin-ups without ever leaving the privacy of your own home. Even super babes... Offer... [the name of a particular] Danish supermodel... to a search machine and you’ll get around 16,300 matches – most of them in the form of tribute pages; many of them salivations to... [her] starkers... form... But before anyone gets over-excited, it pays to remember that it’s more

unusual to see a supermodel on the catwalk actually wearing clothes than it is to see them strutting the stuff they're paid to show off. Venture into sites with names like "The Realms of Magic" (there are 30 of [th]em), or... "Supersite for a Supermodel" and what you'll get is gallery after gallery of vaguely arty shots of [the Dane] wearing wisps of fabric which pass for haute couture, a snake or two or (frequently) a smile and a splash of ocean spray. Then there are sites... [wh]ere you can learn such fascinating stuff as the fact that [the supermodel]'s measurements are 90cm-60cm-90cm, that [the supermodel] was born on Christmas Day in 1968 and... appeared in a "British sexploitation film" (double click for more info), that [the supermodel] never diets or exercises and that [it] is (according to [the supermodel] herself, apparently) "a total Viking when it comes to drinking. I can drink any bloke under the table." There's a quote from ex-accessory Michael Hutchence about how much [the supermodel] eats – a lot, some vital information on how [the supermodel] lost her virginity and... well, a lot of other stuff that obviously interests a lot of people out there in cyber-model space judging by the feed-back page. And the two questions... asked most by visitors to the site? "Is [the supermodel] aware of the tribute?" ([the]... Net-nut who... [created the site] has no idea, and "how can you get hold of a copy of the sexploitation video?"

...["I've faked it with everyone," says a 24-year-old, who's only half bragging. As one of Britain's leading "faker makers" – warped web-heads who submit fake nude shots of celebs to the Internet – the 24-year-old spends half his time dreaming up, and later mocking up, what stars look like without their clothes on. According to the 24-year-old, the *Friends* co-stars are among the most popular subjects of Internet photo-fakery, since none have ever posed for explicit nude shots – let alone hardcore girl-on-girl action. And stripping down any photograph is scarily easy. All fakers need is a decent head shot, a matching snap from a porn mag and a copy of Adobe Photoshop. "However, you better have a pretty thorough knowledge of a gal's body," the 24-year-old confides, failing to explain how someone who spends so long in front of his computer could possibly acquire one. There are good financial reasons why people invest thousands of pounds in Net gear just to fake up phoney honeys. A 20-year-old has one of the largest selections of bogus beauties on the web, and gets £6 for every £10 users pay to access an age verification service – more than enough to cover his site's £600-per-month running costs. The 20-year-old insists that purveyors of pervy pics only do it because they worship the stars. "Fakers spend hours on their work because they adore them, and wish to create a visual fantasy of them. Celebrities should take them with a grain of salt and be humbled by their popularity." Although many of the famous fakes currently circulating the web were originally passed off as genuine, the process has now gone legit. Today, sites are clearly labelled as fakes, which does little to dampen the enthusiasm of browsers bursting to see Buffy The Vampire Slayer in the buff. So what do the subjects of these so-called "cyber-crimes" make of the fakers' efforts? The most-faked actor on the Net, the *X-Files* co-star, seems relatively laid-back about starring in more than 500 fraudulent photos. "It's not her," says her publicist. Still, not many celebrities share the joke. The second most-faked actor recently complained about the fakes sully her girl-next-door image. "But there's absolutely nothing you can do," the star of *The Net* said. "It's uncharted – like the Wild West." Even actors who regularly disrobe for the camera, like the star of *Species*, are unhappy about being digitally touched up. "I hate the Internet. The fact that you take your clothes off in a film makes them think that they can say and do anything." There is very little the "victims" can do about it. In the US, fakers are protected by the First Amendment – unless they sell shots, in which case they may fall foul of copyright laws. Some celebrities pay up to \$2,000 per month to watchdog firms which trawl the Internet issuing writs to those displaying or offering for sale dodgy shots of their clients. One such company, Cyper Trackers, was launched by the mother of an actor after her 12-year-old son accidentally downloaded dodgy shots of his celebrity sister. Ironically, genuinely raunchy shots of the sister are readily available to anyone with a Blockbuster membership, since the sister shed her inhibitions in *Fear and Poison Ivy 2*. But that didn't stop the family filing a lawsuit against two faker-makers. And they're not the only ones. A retired businessperson, better known as the Fake Detective, has been "recovering the sullied reputations of beautiful damsels in distress since 1996." His own website – which some say is just an excuse to publish shots of nude celebrities, although the Fake Detective insists his non-profit service is run "for the public interest" – features an A to Z of naked gal celebrities, but not one solitary naked guy celebrity. "Those guys can take care of themselves," the Fake Detective retorts.

... 'When it comes to painless and effective ways to get your own back on an ex, nothing beats a sly sex session with her best friend. Sadly, the chances of your former girlfriend's lifelong buddy agreeing to this are slim – leaving most spurned blokes exacting pathetic revenge by scribbling their ex's phone number on the toilet wall. But these days, thanks to the Internet, there's a new way to get your own back – guaranteed to impress your mates while deeply traumatising your erstwhile partner. Ex-Girlfriends is one of a growing number of websites devoted to defaming a former lover by publicising stories they'd rather forget. Visitors are free to add libellous stories of their own one-time partners; pick of the bunch is the tale of a Montana hunter whose ex rolled a massive boulder on top of him. But if mere words don't satisfy your hunger for revenge, you could always send a nude picture of an old flame to The Naked Ex-Girlfriend Collection, which has an alarmingly up-to-date "Ex Of The Hour" spot. But don't expect sympathy if you get burned yourself – details of your dastardly behaviour might turn up on The Dick List, where gals from all around the world rant about guys who have made their lives a misery. Worst of all, you could appear in the Ex-Boyfriend Nude Pic Club'...

'When my fiancé broke up with me I was devastated. With tears streaming down my face, I carted his things to the backyard and started to burn them. When I came to the intimate photos we'd taken together, I knew what I would do. I collected the most sexually explicit photos of my ex and phoned a workmate who is a whiz on the Internet. The workmate sent my ex's photos out across the Net, specifically targeting gay sites, and also attached my ex's personal details – name, e-mail address and home telephone number. I heard through mutual friends that the pictures are still available on the chosen sites more than a year later. My ex received e-mail messages and telephone calls from gay guys for months until changing his phone number and e-mail address.'

... 'Scotland Yard's child pornography squad has investigated photographs on display at London's prestigious Saatchi Gallery. Metropolitan Police said they had received three complaints about pictures in the gallery's current exhibition *I Am a Camera*. Police would not identify the pictures, but the gallery said they were images by a London-based American photographer. They depict her young children clad only in masks. The gallery said police threatened to seize the photos if they were not removed. The police had also told the publisher of a book on which the exhibition is based to pull all copies of the volume from bookstores. "They warned me that the book I have published was in contravention of the obscenity acts. This is not child pornography. These are brilliant works of art." In local news, 'police are trying to track down the person who distributed a pirated computer game CD-Rom with direct links to sites distributing child pornography. The CD was offered widely at flea-markets and car-boot sales and through magazine advertisements, according to Ecpat. "The CD has been identified as made and produced in NZ, but that person may have downloaded it unwittingly," said an Ecpat spokesperson, who would not name the game to prevent people from deliberately seeking out the CD-Rom. It was one game in a compilation of games for children. Police knew the city where the disk had been made and were following leads. Local ISPs had been told to deny all access to the site from within NZ.'

... 'An Auckland Internet buff who was caught with up to 30,000 pictures of child sex and rape on his computer has been jailed for four months after a landmark court case. The Internet buff, aged 54, was sentenced yesterday after being convicted of two counts of making copies of objectionable material for supply and two of distributing it for gain. The buff was charged under laws written in 1993, and there was much debate during his trial over the relevance of those laws to Internet crime. Staff at Auckland's electronic crimes unit yesterday applauded the sentence and said it sent a strong message to other paedophiles. They believed it was the first conviction of its type in NZ. Police allege the buff used the nickname Lurker Down Under while a member of an international child pornography ring called Pado University, which was busted after US detectives started a probe in February. Thirteen people were arrested in the US, Canada, Sweden and NZ. The operations manager of the electronic crimes unit was happy that the Auckland Internet buff was being jailed, even though some of his overseas accomplices were imprisoned for years rather than months. "For NZ, under the current legislation, I'm very pleased."

... 'A primary school principal who collected hundreds of child pornography pictures from the Internet was fined \$4400 yesterday in the Whangarei District Court. The offender had been principal of Hora Hora Primary School in Whangarei for six years until being dismissed by the school board

following a raid on his Kamo home by the Department of Internal Affairs and police. The pictures, many of which featured girls as young as 5, were grossly indecent and particularly graphic. 722 images had been downloaded from 27 Internet porn sites, five of which were dedicated to child pornography. When police asked him why a principal would have such pictures, the ex-principal simply replied: "Because I'm stupid." His barrister said its client had no other explanation for the offending, which had started 12 months earlier out of curiosity, but had eventually cost a 35-year teaching career. The ex-principal, who still lives in Whangarei, was now unemployed and had no prospect of working again in the education sector. The judge ordered that the images be destroyed.'

... 'A judge has criticised the limited penalties available to sentence people convicted of possessing pornographic pictures of children. The judge made the comment after fining an unemployed and previously bankrupt 60-year-old \$760, with court costs of \$4940, for possessing more than 250 computer images of girls as young as 3 involved in sexual acts, bestiality and extreme cruelty. Under section 108 of the Films, Videos and Publications Act 1993, the fine was the only type of penalty the judge could give the offender, who pleaded guilty in the Pukekohe District Court to 38 charges of possessing objectionable material. The judge also complained that while it could order the destruction of the material, it did not have the power to confiscate or destroy the offender's computer, which will be returned to him once the offending material is removed. In his sentencing notes, the judge said: "Mr, there are times when the law is a bit of an ass and this is one of them."

... 'A federal judge yesterday imposed a preliminary injunction banning the enforcement of a US law called the Child Online Protection Act, which was aimed at protecting children from sexually explicit material on the Internet. The judge's decision was a victory for the American Civil Liberties Union (ACLU) and a setback for the Administration. In his ruling, the judge expressed sympathy with the law's intent, but said the law threatened the constitutional free-speech rights, adding that "the greater good" would be served by barring enforcement of the law, for which a temporary restraining order that the judge imposed in November had been set to expire last night. The law was passed by the Republican-controlled Congress and signed by the US President in October as a replacement for the Communications Decency Act. Unlike the earlier law, the new one was aimed solely at the operators of commercial Internet sites. It required Web sites to impose electronic proof-of-age barriers, including credit-card registration systems. Violators faced up to 6 months jail and \$50,000 in fines. The ruling stems from a legal challenge mounted against the law by the ACLU and 17 Internet companies, booksellers, homosexual rights groups, medical professionals and the media. The Justice Department defended the law.' In other news from overseas, 'Swedish chambermaids want alarms to protect them from attacks by hotel guests who become "over-excited" after watching pornography on television. They also want to work in pairs. The Hotel Workers' Federation says chambermaid work has become disgusting since hotels began screening hard-core pornography.'

... 'Denmark's most popular place of culture listed in official guidebooks under museums is the Original Scandinavian Erotic Museum. A four-storey monument to Denmark's place in modern history as the first country to liberate pornography (in 1968-69), the Erotic Museum claims to be the first in the world to put the history of eroticism into perspective'. By the way, 'adult erotica is a \$100 million industry in NZ'...

'If AUSNs are as shy about sex as some experts say, a visit to Sydney's Hordern Pavillion over the next few days could cure all. Rarely have so many sex aids been assembled under one roof. 50,000 people are expected to examine the products and services in an adult entertainment industry said to be worth \$A2.5 billion a year. Sexpo is the Royal Easter Show of the sex industry. Some displays may raise eyebrows, but all are legal. Body paint comes in four flavours, as do nipple drops and "orgasmic" love gel. Bondage devotees can choose from all manner of whips, paddles and harnesses. There are dildos and vibrators of every conceivable colour, flavour and size, including a few that wouldn't suffer by comparison with a surface-to-air missile. Some even glow in the dark.'

... 'an American who was pulled off a plane and asked to take a sex toy out of her luggage after it started vibrating is suing the airline for the public humiliation it felt when her name was called out.' In local news, 'three companies involved in sex fashion and toys have been given a helping hand by the Trade Development Board to attend "Sexpo" in Melbourne. Designer Sex Gear was working with two other companies to break into AUS's \$120 million retail market for sex-related products. The group had initially planned to go to the Sydney Sexpo last month, but instead had sent a representative to make contacts'...

Sex shop owners are angry about an Auckland City Council proposal to restrict the spread of the industry. A number of councillors want to use the Resource Management Act to make it harder to set up sex shops, despite planners' warnings against the idea. Councillors are particularly concerned about sex shops near schools or residential areas... [but only] massage parlours, treated as entertainment facilities, need... to obtain resource consent from the council... at present. Escort agencies are treated as offices, and book, video and sex-aid stores as retail premises. They are all permitted as of right in business zones... The deputy mayor... [was amongst the councillors who] favoured restrictions on the setting up of new sex shops. "The more we make this sort of stuff available, the more people will participate. I accept it's been around thousands of years but I don't believe we should have the blatant sex shops that we have got in the city." ...[in reply, the] owner of the Pleasure Chest magazine, video and sex-aids store on Karangahape Rd, said yesterday that... "They're a bunch of hard-core churchies, aren't they, using their position [as councillors] to push their personal views on to the rate-payers." ...The owner of a similar shop, who declined to be named, said the proposal was a vote-catching move and that the council wanted to "clean out the city" for the America's Cup. "There's a need for these shops or they wouldn't survive."

...A new town-planning code which will control N[Z]'s premier patch of real estate comes into effect today. The proposed district plan for central Auckland... may include restrictions on new inner-city sex shops, to complement controls proposed for the rest of the city... Meanwhile, the suburban and gulf plans will from today contain a proposed new definition: "commercial sex premises." These will be deemed "non-complying" activities and force applicants to obtain a council resource consent and submit plans to public objections and hearings. The proposed plan changes will be publicly notified together with the central-area proposal and will also be subject to submissions, hearings and appeals.

...a former Lord Mayor of the southern NSW city of Wollongong, was allegedly associated with... a wealthy real estate agent and another former mayor... who... was involved with paedophile rings supplying local and Philippine boys as young as 13 to fellow deviants, procuring victims from the streets and even from a refuge for the homeless. [The real estate agent's] network was linked to Costellos nightclub in Kings Cross, where the top floor was converted to cubicles rented to [paedophiles] to drug and have sex with young boys. [The real estate agent] was also associated with another pervert who ran a bed and breakfast resort for paedophiles on a farm near Wollongong, whose vices including filming acts of bestiality between boys and farm animals... Girls... as young as 12... [are] offered food, shelter, protection and drugs, [to] strip... in... Kings Cross... clubs. - 1997

...the art of strip tease has become strip sleaze[(another 'sad commentary is that the gal who made the most amount of money ever on film had to strip to do it')]. The glittering strip acts which once drew huge crowds to the Cross and St Kilda have degenerated into squalid live sex shows... [Incidentally, over] 30,000 Australians visit the Philippines every year and few are there just to see the sights... [However, with the] end of the Marcos regime... and emerging Filipino [gal movements, is]... the heyday of this X-rated fantasyland over?

San Francisco could become the first[US] city to license group sex clubs... [In local news, a] paper prepared for an international tourism conference by... Waikato University's education studies department, has called for the promotion of prostitution as a means of shedding the "rugby, racing and beer" and "green and

squeaky clean" images of N[Z]. Sex tourism was already worth \$9.4 million a year in Auckland, and \$5.2 million in the capital, [the paper's author] said. "Ignoring 9000 people working in an industry which generates millions of dollars is absurd." ...[the author, who] is writing a book, *Sex: Learning to Work It*, about mentoring and apprenticeship in the industry... was shocked by interest in her "innocuous little presentation," but admitted that the sex industry was topical because of the murders of three sex workers in Auckland. Her paper, *Sex Tourism in N[Z] – What Do the Kiwi Prostitutes Have to Say About It?* will be delivered to delegates from 17 countries at the Pacific Rim Tourism 2000 Conference in Rotorua today. However, [the Tourism Board's]... deputy chief executive... said the board believed the figures... quoted were suspect and anyway it had no intention of taking up the suggestion... as part of its international marketing strategy... "We feel the suggestion that N[Z]ers should sell their bodies to promote themselves to tourists is ridiculous." ...[the author] spent two years studying the N[Z] sex industry, and talked to 300 workers about their experiences with foreign clients. Her paper suggests that the Karangahape Rd and Fort St areas of Auckland should be valued as tourism attractions, and Cuba St and Vivian St, in Wellington, could be promoted as "the world's smallest red-light district." "They should be cleaned up and equipped with proper lighting to encourage pedestrian traffic and to make it safer for people who work there. No one's interests are being served keeping it out of the public eyes." Foreigners would learn more about the other side of life in N[Z] by spending time talking to sex workers.

...[the] Prostitutes' Collective agrees the sex industry could be used as a successful marketing tool. Kiwis who travelled overseas often cited a visit to a red light district as a highlight... said... [a member of the collective. The NZ] Tourism Board chief executive... declined to comment on sex tourism... [L]ast week... Auckland's mayor said it)... wanted massage parlours forced out of the city after the murders of [3] sex workers in a week.

...prostitution, despite the massage parlour ads that say "No experience necessary," is a skilled job. "In an average one-hour booking, the bonk takes five minutes and you have to talk to the guy for the other 55 minutes[,"] says an author and)... lecturer in Waikato University's department of education studies since July 1994, [although] her accent singles her out as Canadian... What is the academic's response to public comments about her – ...from the polite end of the [social] spectrum – this week? Bemused laughter... The outcry that has brought more than her 15 minutes of infamy started unexpectedly at the Pacific Rim Tourism 2000 conference... There are... reasons [her] views jangle the nerves of everyone from your mum to politicians. Mainstream N[Z] holds two main opinions about prostitutes: they are victims of drug or sexual abuse or both; their work degrades the position of [gals]. The longevity of their profession does not stop prostitution from eliciting a sense of shame and wrong in the most liberal of [NZ households. The author] has heard this before: "There are a lot of feminists who want my jugular. There are [gals] who believe that prostitution is rape. Whenever you talk about prostitution there's such a wide range of opinion and ideas and beliefs. My particular stance is that it's just a job. We should decriminalise the industry so [gals] cannot be charged with soliciting or living off the earnings. We should bring it out into the open and recognise prostitution for the personal service which it is." ...[the author says many guys] in our society depend on prostitutes: the lonely, the ugly, the disabled, who would otherwise find it difficult to find a sexual partner... In [her] ideal world, brothels would be visited in the same way we pop in to see the hairdresser or hire a personal trainer at the gym... [Her] research cannot be done in an office. "I spend my weekends doing research. I live and breathe it. That's one of my sins – I'm having too much fun,"... The interview ends. [The author is] busy. Got papers to mark and then [it's] off to Tauranga. Where to? A brothel called Made in Heaven.

...EUROPE of the late 20th century has the free movement of goods and girls – call-girls, brides, escorts, dancers, hostesses and a range of other euphemisms for [young and old girls] who often end up in prostitution. In Hungary, a trafficker can buy an orphan girl for the price of an old car – around \$1350. [The trafficker] can sell her to a western pimp for \$4000 and [the pimp], in turn, can get his money back several times over by leasing her to brothels in London, Paris or Amsterdam. The trade in [gals] is booming because... [although t]rafficking in drugs makes money... it is increasingly risky and now carries sentences of up to 20 years[, whereas trading in gals] is easy and profitable, especially when you can bring them from eastern Europe in a car or van, saving on the plane fare. A European Commission conference in Vienna on trafficking in [gals] heard that the best-known traffic, in cleaners, sweatshop workers and brides from the Far East, is the tip of the iceberg. An increasing number of the [people] providing sexual services in western European capitals are now single mothers or unemployed [gals] from central and eastern Europe. According to the Brussels-based International Organisation for Migration... the trade affects thousands of [gals] each year. It works like this: through friends or newspaper advertisements, [gals] learn of jobs as dancers or hostesses in western Europe. The jobs demand no language skills and promise high earnings and a work permit... [The] director-general of the IOM, says: "It may seem naive of these [gals] to take up the offers, but they are often very poor... To them, the offer of a work permit in the wealthy west is like a gift of gold." ...The [gals] are charged a fee of up to \$22,000 for being brought to the west. It is reimbursable as they work, but there are other deductions: the pimps' commission, lodging and food. The system ensures that they are constantly in debt and are able to keep only between 10 and 25[%] of what they earn. Vice units throughout Europe agree that, whatever the... country of origin and under whatever pretext they have been brought to the west, they suffer brutal conditions: 12-hour working days, imprisonment, violence and rape... For the police and voluntary groups working with [the victims], the Vienna conference provided a chance to exchange business cards and meagre statistics. Few shared... the European Justice Commissioner's)... optimism that trafficking might move on to the political agenda. [An official] from the Bulgarian Foreign Ministry, was particularly pessimistic: "...let us be realistic... [Eastern gals] will go on... working in the west... until the west does the only thing it knows how to do: put up the walls of Fortress Europe. Then no one will get in, just like during the Cold War." [In related news, a recent UN]... report described prostitution among children as young as seven or eight in Brazil. - 1996

According to unofficial estimates, more than 10,000 girls aged between 10 and 15 are prostitutes in Dhaka and other... Bangladeshi... cities...

CLIMBING FOR MILES THROUGH THE terraced cornfields of the Himalayan foothills, the Nepali porter finally reached his destination: a one-room clinic. [The porter] had been carrying on his back a teenaged girl, scarcely alive, who was so skinny the porter had managed to fold her up inside his wicker basket like a piece of cardboard. "I knew [the girl] wouldn't live," recalls [the clinic's doctor]. "But at the time, I wasn't sure what had caused her illness." The villagers knew. The girl was dying of the "Bombay Disease" – AIDS. It is the custom among the Tamang highlanders of Nepal that when someone dies, the entire village takes part in lovingly washing and burying the corpse. But because the Tamang were afraid of catching the "Bombay Disease," the girl's mother was left to carry out the ritual alone. The girl had contracted the virus as a sex worker in India. [The girl] was hardly the only one: every year around 10,000 Nepali girls, most between the ages of nine and 16, are sold to brothels in Indian cities. According to international social agencies, this flow of Nepali girls into Indian whorehouses is probably the busiest slave traffic of its kind anywhere in the world... Some experts believe that more than 200,000 Nepali girls are involved in the Indian sex trade. A few choose prostitution voluntarily to flee mountain poverty, not knowing [about] the risk of disease and the prison-like confinement of the bordellos, but most are underage girls who are sold or tricked into the flesh trade... As a result, a backlash of AIDS is starting to hit the Himalayas. Kicked out of the brothels after they develop the disease's telltale fevers and skin lesions, legions of forlorn girls are now staggering back to die in their Nepali mountain villages. Rarely are they accepted. The Nepali press, which often reflects the government view, refers to the girls as "India's soiled goods." As... [the] president of ABC Nepal, a social agency in Kathmandu, says angrily, "Nobody wants to speak about it, not even the girls' families. There are parents who have sold their daughters and husbands who've got rid of their young wives." Depending on her beauty, a girl can fetch anywhere from \$200 to \$600 – less than a water buffalo, slightly more than a video recorder... Two Bombay girls, seven and 15 years old, were turned over to Kathmandu police two weeks ago. They are victims of a growing superstition that [guys] suffering from AIDS and venereal diseases can be cured by having sex with a virgin. "The worst part about this myth is that younger girls are extremely vulnerable to AIDS," says...

[the] executive secretary of the group E[cpat]... “Their tissues tear more easily.” Maya (not her real name), a puffy, moon-faced girl, was only eight when her cousin sold her into prostitution. [Maya] had not yet reached puberty. “I was so small. They gave me hormone injections so that I’d grow breasts faster. These injections hurt so, so much. When I tried to struggle, the madame beat me on the chest with a metal kitchen spoon.” Far worse treatment awaited Maya. One day, the madame unlocked her room in Bombay and began dolling her up with lipstick and mascara. “A [guy] came, and they forced me to have sex with him...” Now 13, Maya is HIV positive. Her anger flares briefly... “[Guys]? I’d like to kill them, chop off their penises.” Escape is rare from Bombay’s notorious Kamathipura brothel district. More than 70,000 prostitutes are crammed into dormitory-like rooms, where they have sex with up to three clients a day. Condoms are seldom used... Maya was one of 218 Nepali girls rescued last February in a Bombay police raid. Nearly half, fearing that their families would shun them, refused to return to Nepal... Still, most are happy to be back. Says one: “In India I was like a walking corpse. Here at last I can breathe again.” But for many of these returning girls, now with full-blown AIDS symptoms... [which d]octors in government hospitals at first refused to treat... that breath of Himalayan freedom may soon be their last.

...[“On the Burmese border of northern Thailand, edging the Golden Triangle, money means opium and heroin, and every spring the thatched bamboo huts of the villages are roofed with poppy heads drying in the sun. The only other commodity here is young girls. In Mae Sai town, the flashing red and yellow fairy lights outside a local brothel casts a surreal glow over an 11-year-old as it sits quietly with ten other frilly-dressed girls waiting for customers. At first glance it seems unbelievable that this small child is working as a prostitute. But the 11-year-old is available for sex at \$38 a night. The 11-year-old is owned by “Big Boss Ma”, who controls the trade of girls from Burma, China and Laos into Thailand. Ma doesn’t look the part: a fat middle-aged gal dressed in a red dress, giggling at TV-karaoke. But Ma is one of the most feared and powerful mafia bosses in the country and her network of cronies is armed and deadly. Her cronies do not deal in words – runaway girls get their throats cut. Nobody messes with Ma, not even the police. When I arrived at Big Boss Ma’s brothel, the police were already there. They are regular customers of hers. Working with a Thai interpreter, I posed as a tourist. I told Ma that I wanted a girl no older than 15. The fact that I am a foreign gal didn’t raise suspicion. It seemed acceptable to Ma that I should buy a night of sex with a Thai guy and a child. But Ma warned me that the 11-year-old, her youngest trick, was having a period. This seemed odd since the girl looked too immature, but I put the price up to \$50 and the deal was done. Later, in my guest-house room, it became clear why Ma warns punters about the 11-year-old’s “period”. “I’m burning,” the girl said, pulling at the crotch of her shorts. After her first rape the girl bled for five days but Ma refused to take her to a doctor. Clients think the wound which they reopen through intercourse is just menstruation. “They pity me but they still fuck me,” the girl says. “My father sold me for 2000 baht two months ago, and comes to the brothel every month to collect 3000 baht from Big Ma. I clean Big Ma’s house in the day and then work as a prostitute at night. I don’t get any money at all – just food. I get one client a night but most of the girls go with six or seven a night.” The girl adds that it has never used a condom. The recent boom in the underage sex trade, with an estimated 800,000 children currently working as prostitutes in Thailand, is partly due to the mistaken belief that children are too young to contract AIDS. Officially, there are 80,000 prostitutes currently working in Thailand; but unofficially two million. The Public Health Ministry admits to just 600,000 HIV positives and since 1991 has banned doctors from publishing any AIDS data. However, it is estimated that as many as four million Thais will be HIV positive by the year 2000 and a recent survey shows 70% of adult prostitutes and 50% of child prostitutes to be carrying HIV. Of the 5,136,443 visitors to Thailand last year, an estimated 80% bought sex from prostitutes. The blow-job bars and sex-clubs of Bangkok are filled with boggle-eyed AUSn, English and German guys. At the Queens Castle bar – where girls pull strings of razor blades from their vagina before being hired out to clients – three lads, all 23 and from Newcastle, are holidaying without their girlfriends. Thais also consider it a guy prerogative to buy sex. Last August the deputy finance minister held a “bachelor party” in which Thai government MPs were awarded prostitutes as bonuses for good work performed. When a brothel in Ranong, owned by an ex-police corporal, was raided last year in July, 144 Burmese slaves (40 of them underage) were discovered to be living in a battery-compound of 150 tiny 2.4 by 1.8 metre concrete cubicles resembling prison cells. They had been roped, raped and beaten with wire coathangers by their captors to force them to serve clients. The Centre for the Protection of Children’s Rights (CPCR) based in Bangkok, who organised the Ranong raid, have since been banned by the government from mounting any rescue operations ‘cause they expose embarrassing truths. For this reason the CPCR volunteers are now working underground from secret safe houses, using assumed names. Although fines and jail sentences do exist under Thai law to discourage child prostitution, CPCR’s director says: “It is only written law, and pimps and owners are invariably let off.”]

...French investigators have cracked a ring that sent prostitutes to the Riviera palaces and yachts of wealthy sheikhs, even allegedly hiring [a US] actress for \$US1 million... Though few names have been made public, the widening probe is embarrassing for a French Government reliant on lucrative ties with Gulf oil states that are major customers of French military hardware. A central figure in the investigation is... a former deputy commander of the special forces National Gendarme Intervention Group who was fired for alleged misconduct and formed a private security agency. The former Emir of Qatar... was one of his clients... [as is the] emir’s son... who assumed power in July 1995... The ring allegedly charged from \$US500 to \$US8600, the French daily *Le Monde* reported... Prostitution is legal in France, though pimping is not.

...the original Mata Hari[was] executed by a French firing squad in 1917. But no such sticky end awaits the Mata Hari’s of today. Instead, they can look forward to years of lucrative semi-retirement. In the world of international espionage they’re known as “honey traps”, sex-for-secrets spies who seduce their prey for vital information... The CIA says it is not something they encourage, but then the agency does not work to a set of fixed rules. In the past agents used whatever worked and, given certain [guy] weaknesses, a pretty face can be the most powerful weapon of all... [One agent] dyed her hair blonde for the mission, believing this would increase her chances of snaring her target, a senior French trade official who has not been named. [The agent] was using a false name and carrying forged documents when, in late 1994, [it] met the official several times at dinner parties and began to weave a web of flattery around him... By the time the agent started sleeping with her target, [it] had the tacit approval of her supervisors... However, the flow of information from the agent improved so dramatically that the supervisors became alarmed. [Technically speaking, “honey trap” is just another euphemism for *prostitute*.

...*prostitution* is defined as the ‘offering of sexual services in return for material reward. Prostitutes solicit customers alone, or as inmates of houses of prostitution (brothels), or by making themselves available by telephone (call girls). Some are “managed” by so-called procurers or pimps, who take a commission or wage. Prostitution is known to virtually all advanced societies. Because of the mounting rate of venereal disease in the Middle Ages, prostitution was occasionally outlawed, or put under state control and subjected to periodic medical control. In the 19th cent., registration of prostitutes was introduced in most of Europe. The profitable white-slave traffic became an international concern, and today in many Western countries, prostitution and brothels are illegal. In the U.S., “red-light districts” are now tolerated in few localities, but illegal vice syndicates often operate in association with the underworld and corrupt officialdom. In the period after WW2, three major countries that had long allowed legal prostitution, outlawed it. These were France, Italy and Japan (note: *geishas* – Japanese gals trained to entertain guys, and popular since medieval times – should not be confused with prostitutes’).

...Traditionally, girls began to train as geishas at six years, six months and six days. A geisha costs about \$A15,000 to support. Today there are 4000-5000 geishas. In the 1920s there were about 80,000. “Japanese husbands often can’t converse with their wives and that’s why the geisha system has survived.”]

...GEISHAS have long been regarded by foreigners as the most exotic of Japan’s closed-door traditions. But plans to cash in with a geisha theme park in the heart of Tokyo have divided a society still uneasy with parts of its cultural history... [T]he very idea of promoting this seedy aspect of Japanese culture has raised the hackles of [gal] groups. They point out that many of Yoshiwara’s prostitutes were girls unwillingly sold to brothels by poor farming families... However[the owner of]... a historic restaurant in... Yoshiwara, Tokyo’s historic red-light district... argues that it will

enhance Tokyo's reputation to bring back the atmosphere of old Yoshiwara by using actors in period costume to play the parts of courtesans and their clients. "I want to let people see how life really was in those days." ...[his] restaurant stages re-enactments of the entertainment provided by high-class 18th-century prostitutes in which [gals] with white-painted faces dance to the sound of traditional instruments. It is pretty tame stuff compared to the live sex shows found elsewhere... [The restaurant's owner] is perplexed by the inconsistent attitudes towards sex as [the owner] tries to revive the culture of Yoshiwara[, which was]... designated a brothel district in 1617... Although they refuse [to give] their support to Yoshiwara, Japanese companies still sponsor late-night television shows which feature tawdry sex games, simulated rape and bare bosoms. And just around the corner from [his restaurant], real prostitutes still ply their trade in the bath houses and bars that remain the hidden legacy of Yoshiwara. Tourists come here by the bus-load too – but much more discreetly. Immoral behaviour is seemingly acceptable – as long as no one makes a show of it.

...a pouting 15-year-old with a two-pack-a-day nicotine habit and an even costlier addiction to French and Italian designer labels, skips classes but still wears her prim school uniform. [The uniform is kept] on for the be-suited salary [workers] behind a booming new Japanese industry: sex with schoolgirls. "They really like the uniform. I'm not sure why. It's a kind of mania with these weird old [guys]," says the 15-year-old of the clients who shuffle each day into the Melon Club, a rancid single-room flat in Shibuya, a swirling high-tech carnival of neon-lit desire and desperation in the centre of Tokyo... To satisfy the fetish, [the 15-year-old] keeps one uniform at home and a second at the club. Such work, insists [the 15-year-old] in between drags on a Marlboro menthol, is not prostitution but "enjo kosai" or "compensated dating," a merchandising of mock innocence that, like so many other Japanese innovations, betrays the country's genius for re-inventing the mundane. It sometimes involves no more than holding hands in the park or knee-touching but often leads to far less innocent encounters. Police, nudged into concern by a mounting public outcry, have set up a special hotline, prepared booklets for parents and questioned 5481 teenagers about sex-related offences since the start of the year. In June they arrested a preparatory school headmaster near Tokyo for running a prostitution ring with some 300 girls aged 14 to 17. Arrests, though, are rare. In Tokyo, sex with children over 12 is legal and only when a pimp helps broker the relationship does the sale of sex become prostitution and therefore criminal. WHILE youths in the Philippines and other Asian countries sell sex to escape starvation, teenagers in Japan – where the average annual income is about \$NZ55,000 – turn tricks so they can splurge on Chanel... and... Versace... Like many of the schoolgirls involved in what Japanese police call a national epidemic, [the 15-year-old] comes from a well-heeled middle-class family. Her father... works as a bureaucrat at the finance ministry, the pinnacle of respectability in a country of minutely calibrated and very rigid social hierarchies. [The 15-year-old claims to] earn... nearly \$40,000 a month, a steady income that has allowed her to splash out more than a million yen (about \$12,600) so far this year on Versace, her favourite designer. "If I didn't earn money from [old guys] I'd have to start shoplifting. But everyone is doing that. So boring." [The 15-year-old] started working at the Melon Club more than a year ago after seeing it on television – in a news report about a raid by the Tokyo vice squad: "I thought it looked interesting." Before that, [the 15-year-old] fed an expensive habit for brandnames by servicing one of the more bizarre niche markets of what Japanese call the "water business." [The 15-year-old] sold soiled underwear to dealers specialising in fetishes. "The dirtier the knickers the more they would pay," [the 15-year-old] says, matter-of-factly. Consumerism in Japan has run amok, establishing a tyranny of fads and fashions that has touched off much anguished soul-searching about the country's direction. Girls are not the only victims. The popularity of a new Nike sport shoe has led to a spate of ugly muggings by schoolboys... "A lack of individuality and the desire to be average in every way," commented[a] journalist... "have resulted in a situation where fads tend to turn very quickly into national epidemics." THE obsession of many Japanese [guys] with schoolgirls is not in itself new. It reflects a well documented phenomenon known as "rori-con," the Japanese shorthand for "Lolita Complex." Comic books have long featured sexually explicit images of girls dressed in sailor suits or pleated skirts and white shirts, the standard uniforms in Japanese schools. A cosmetic manufacturer sells Virgin Cream, a potion to turn nipples pink and, the company promises, more schoolgirlish. The arrival of the cellular telephone, however, has helped to turn prurient fantasy into a lucrative reality, fuelling a massive explosion in the number of "telephone clubs," a uniquely Japanese solution to loneliness and boredom. Police and social workers blame such establishments, which now number more than 2000, for accelerating the spread of compensated dating. A survey by a national parents' association found that up to a quarter of [girl] pupils in secondary schools have phoned a telephone club at least once. Most do so out of curiosity. But conversations quickly turn to sex and offers of money. THE number of [guys] arrested for abusive sex with teenage girls met through telephone clubs has more than tripled since 1992, and the clubs are sometimes used by [gals to lure guys] into extortion traps. Keen to avoid such problems, one prefecture has banned the clubs from the vicinity of schools and libraries, while Kyoto has banished them from residential areas. "This is a serious social problem that can no longer be neglected," says a Tokyo police spokes[person]. But unless the law is changed drastically, authorities in the capital can do little against either telephone clubs or dating clubs such as Melon. [The 15-year-old claims to] get... picked up by police at least once a month for questioning. They give her a lecture, phone her parents and send her home. The next day [the 15-year-old] is back to work, waiting for customers behind a smudged two-way mirror. The equivalent of \$67 buys a peek through the mirror at a handful of bored teenagers puffing cigarettes. For a further \$67, clients get an hour-long "date" at a nearby coffee shop. What follows is negotiable. WATCHING over the Melon Club is a young [guy] with dyed red hair... [who] recommends early evening for customers seeking schoolgirls. "They go home before it gets too late to do their homework. They are good girls." The reality is less wholesome. [The 15-year-old], whose mobile phone rings constantly, has no interest in homework: "School is a real hassle. It is so boring it can kill you." Only money excites her... [H]er best "date" was a rich business[person] who gave her the equivalent of \$1300 as a tip. "I'd like to be really rich. I'd like to have an easy life. Then I could get on with it and then I could die."

...Karangahape Rd prostitutes were as entitled to say no as Remuera maidens, a prosecutor told the Natacha Hogan rape trial yesterday... [A Manurewa resident], aged 34... denies a charge of raping the 20-year-old prostitute on August 29 last year. Several weeks later Miss Hogan was killed by [a] triple murderer... who is now serving a life sentence with a minimum of 15 years behind bars. In his closing address in the High Court at Auckland, the crown prosecutor... quoted the words of... an Appeal Court judge, in another prostitute rape case. "No [person], rich or poor, high or low, moral or immoral, deserves what [it] gets when sexually assaulted against her will... All... are entitled to say no." ...The Crown alleges that [the defendant] picked up Miss Hogan in Karangahape Rd, agreed to a price but raped her in a nearby alleyway. [The prosecutor said the defendant] liked to have forced sex because that was "how [the defendant] got his kicks." But... the defence... said what happened was consensual sex... [In addition, the defence] queried how much of Miss Hogan's statement to the police was hers and how much input there was from the interviewing detective. Because Miss Hogan was not available, there was no opportunity to challenge what [Miss Hogan] said in the witness box and for the jury to see how... [Miss Hogan said it. Speaking of prostitutes, rather than scouring the personal columns for a... "...escort",[gals] can now visit... [Australasia's] first brothel for [gals]... and select from an in-house menu of [guys].

...Police threats to prosecute an HIV-positive [guy prostitute if it] does not stop working will hinder Aids education in the industry, say sex workers... [T]he police threats would intimidate prostitutes, who would then not take tests for the virus or seek health advice. The executive director of the Aids Foundation... agreed, saying the police warning posed a public health hazard. [A] Detective Inspector... had told [the] HIV-positive prostitute to quit or face charges of endangering clients' lives. [The detective], who said up to 30 rent boys were infected with the virus, discovered the prostitute's secret during a murder inquiry... [A spokesperson] for the N[Z] Prostitutes Collective, said... the collective would support a prosecution of a worker who knowingly endangered a client, but... disputed police claims that 30 prostitutes had the virus. "The very limited number of HIV-positive sex workers in this country has been achieved through education, not fear." [The spokesperson] said it was not sex

workers who posed a public health risk, but clients who demanded unsafe sex and were prepared to pay for the privilege. "We have kept HIV out of the sex industry by empowering sex workers to say no to unsafe sex, not by threatening them." - 1997

Keeping a promiscuous HIV-positive [guy] isolated from the community[will] cost taxpayers... \$165,000[a] year... but health authorities see no alternative... [as it] cannot be held in jail because [it] needs rehabilitative care... Intellectually impaired... [the 33-year-old f]ormer Christchurch... prostitute has absconded from care four times since [it] was ordered in May last year to be detained in isolation under section 79 of the Health Act.

...A Thai... with HIV has been sent home from N[Z] amid fears that immigrant workers held in virtual sex slavery are contributing to the spread of Aids. An Auckland[er]... has told health authorities [it] contracted HIV from a Thai prostitute in a city brothel. It is not known how many [people]... were exposed to the virus before the [prostitute] was sent back to Thailand. An estimated 500 Thai[s]... work in the Auckland sex industry. Some were enticed here thinking they were coming to legitimate jobs, and have been bonded to pay off travel debts to their employers. The customer infected with HIV was married... The Aids Epidemiology Group in Dunedin confirmed it was notified of a [person who said it] contracted HIV while having sex with an Asian prostitute in Auckland in late 1997. Since then, an Auckland Thai sex worker had also been notified as HIV-positive, said [the group's spokesperson]n... But because his group received only limited, anonymous information, it was impossible to know whether the... [sex workers] had infected anyone else or had developed full-blown Aids... N[Z] sex workers as a group did not have a high HIV infection rate, but his group had been notified of at least two [more cases of] HIV-positive Asian prostitutes from Auckland since it began keeping records in 1996. Auckland Healthcare's medical officer of health... said HIV was not a notifiable disease and his office had not been told of the [latest] sex worker case... Auckland Healthcare's sexual health services refused to comment because it fears that publicity will force [prostitutes] who attend its weekly Thai clinics underground. But the Aids Foundation says it is concerned that [people] who are tricked or forced into prostitution are made to take part in unsafe sexual practices. "Our concerns about sex workers who are not working through their own choice is that they are people who are particularly powerless... That would lead us to believe there is a very strong chance that they may be required to have unsafe sex." ...[●] T]he reported passing of the HIV virus from a [gal] sex worker to a [guy] in Auckland is one of the very few occasions where the potentially deadly disease appears to have been transmitted by a [gal] in this country... The Aids Epidemiology Group... has received notification of only five [guys] being infected through heterosexual sex in N[Z] since it began gathering statistics... In that time, 58 other [guys] have reportedly contracted HIV through having sex with [gals] overseas. Of the 50 N[Z] gals] who reported being infected by [guys], only 12 say it happened here.

...Syphilis cases have... [nearly] doubled in N[Z], with the rare and potentially fatal disease... [- it] killed American gangster Al Capone[-] ...linked to migration and gay sex... and some has been associated with sex work... Health workers are worried that 47 cases... were reported by clinics in [the past 12 months], an increase... from... it[s] previous highest in 1997, w[hen there were] 27 cases... Syphilis is a curable infection caused by a bacteria. The first stage... spontaneously heals but, if it is untreated, secondary syphilis will develop in two to eight weeks. One-third of the cases will progress to tertiary syphilis some years later, where signs and symptoms include inability to co-ordinate muscle movements, paralysis, numbness, gradual blindness and dementia... The infection is treated with a series of antibiotic injections or intravenous treatment, if syphilis has spread to the brain. But if it damages the brain or other parts of the body, the damage cannot be reversed... The median age of people with this infection is 37 years, 60[% were guys]... Almost half of the confirmed cases, 22, had their ethnicity classified as "other", while 12 are Europeans, 12 are Pacific Islanders, and one Maori... [Most] new cases are appearing from... short-term visitors to N[Z] and NZers returning from overseas trips.

...IF ANYONE has a good excuse to hang around the go-go clubs of Bangkok it is [the local] Senior Sergeant Major... While girls dance topless inside the bars of the city's notorious Patpong district, and Thai boxers slug it out for the amusement of ring-side drinkers, [the major] soberly patrols the neon-lit market out on the street. [The major] is one of Thailand's 1000 tourist police, posted to nightspots and popular attractions across the country to keep a helpful watch on foreign visitors. "When tourists having fun get drunk and have a problem, I am here to help them," [the 42-year-old says as it does] his rounds with a colleague, two-way radio at his hip and a .38 calibre handgun in his holster... [F]raudsters, market stall scams and outrageous overcharging for drinks and taxis are some of the problems faced by holidaymakers[, but]... there are also some unusual risks for starry-eyed tourists who get too drunk or stray off the beaten track... [S]mall gangs of katoey (transsexuals) prey... on [foreign guys] lulled by drink into thinking they were cavorting with the [gals] of their dreams. The tourist police have compiled a directory of over 200 katoey tempters, or temptresses, with previous convictions... During the past couple of years, some prostitutes have been known to slip punters a dramatically effective drug called Upjohn 27 that puts a person to sleep for 30 hours within 15 minutes... In a recent case at the seaside resort of Pattaya, an Austrian... was slipped an Upjohn pill during a kiss. [The Austrian] spat it out, only to pick it up off the floor and put it back in his mouth when... persuaded that it was in fact an aphrodisiac. The drug knocked him out and [the Austrian was] robbed of goods worth... more than \$NZ40,000.

...[Christchurch skinhead gang-members appeared in court charged with getting a 14-year-old hooked on homebake then forcing her into prostitution']...

An international prostitution researcher claims to have uncovered an "apartheid" system of prostitution in N[Z] - Pakeha prostitutes]... usually work in massage parlours, while Maori are more likely to... enter... prostitution at a younger age than their Pakeha counterparts, [and]... work the streets. While street prostitutes experience more physical violence than those in massage parlours, there is no difference in the mental affect... most prostitutes exhibit symptoms of... post traumatic stress disorder and most [the researcher] has spoken to want to leave prostitution... [By the way, tonight's late-night movie on TV2 is the f]orgettable TV melodrama... *The Ultimate Lie* (1996 - US)... about a high-class hooker (played by an act[or] from *Sex And The City*) who is as shocked as her next customer to discover her next customer is her father.

...Sex workers losing the right to say no... For 20 years... Jenny... has earned her living providing sexual services to [guys] prepared to pay... During 10 years in licensed massage parlours... [the] sex industry... veteran... was often forced to be with clients for 14-hour stretches, from 6 pm until 8 am, until [it] was utterly exhausted. But refusal to "entertain" any client - even those [it] feared - could have resulted in instant dismissal. "Ninety per cent of parlour owners have never worked as prostitutes themselves, and so don't have any respect for the girls... Every[one] has the right to say no. But the parlour owners don't understand the terminology of no. They are not sympathetic, they don't care." Candy, another sex worker, says one of the most disturbing developments in the sex industry is the erosion of traditional taboos. Girls are sometimes required to kiss clients and forgo the use of condoms for other intimate acts. Kissing increases the risk of workers catching a host of diseases... It was once an industry no-no... An Inland Revenue inquiry this month found the average annual income for a sex worker was between \$15,000 and \$25,000 - debunking the popular myth that the workers can earn a fortune... Th[is is partly because th]ere is... exploitation, the [pair] claim. Jenny says many owners are increasingly operating a system of fines which they impose if workers are late, sick, or break the rules - such as not wearing stockings to work. At up to \$100 each, the fines offer income for the owners while keeping [their workers] dependent on them. Candy says parlour owners have found other ways of taxing their workers. They no longer get a cut from door charges. And shift fees, which didn't exist 10 years ago, have sneaked up from \$10 a week to \$20 or more a day. Many owners have also started charging a bond of around \$200 when new workers start. This is ostensibly to cover any breakages or theft, but most never see the money when they leave. Candy says parlours are also moving towards a system of charging clients an "all-inclusive" price at the door. Workers often pocket less than half of the \$175 or so charged, and owners can hold out or short-change on credit-card payments. Traditionally parlours would charge clients around \$50 at the door for a massage, while "extras" would be negotiated between the workers and the clients in the privacy of the rooms... [A spokesperson]n for the Prostitutes Collective, says the move to all-

inclusive charges is a double-edged sword for the wo[rkers]. While it offers some protection from having to haggle with obnoxious customers, it also increases pressure on workers to have sex because they have been “pre-sold.” “The freedom to say no has been utterly undermined.”

...SOME things should never be said. Examples: anything a [gal] says to a [guy] than involves the word “small”, and anything a [guy] says to a [gal] that involves the word “big”... But on the other hand, there is a need for frankness at times. Frankness, with tact. Especially in intimate matters... You’d think no one would know this better than the professionals, the people we now call “sex workers” on the grounds that “prostitute” sounds too much like selling your soul. The new terminology has obviously been the thin edge of a wedge, because this week the sex workers went a bit strange. Now, it is well known, there is a central necessary mystery about the relationship between sex workers and their clients, the mystery being why they do it. According to [guy] fantasy, they do it because it’s wildly sexy. And since [guys] pay, there has been a considerate silence from the [gals] they hand the money over to. Why shatter [guy] illusions? has been the sensible line taken. The pathetic creeps don’t need to know they’re wearisomely vile. Let them persist in their nutty belief that... sex workers do it because a) they’re studying French philosophy and need pocket money and b) they just happen to love bonking strangers. Let them think it’s pleasure, pleasure, pleasure, all day and night among the balding saddies, gang bullies and wankers in suits. But this week, a couple of Wellington madams snapped. They revealed that their girls... er... *don’t*, as it happens, you know, actually *like* it at all. Rather than adoring their customers, they said, the girls want the dirty deed over and done with as soon as possible. As if it were distasteful, even. The madams were provoked to such frankness by... the... arrival of Viagra among the impotent and ambitious, and thoughts of the impact it might have on their line of business. Were they rejoicing? Far from it. The madams revealed that their girls were greeting Viagra’s marathon possibilities with a collective groan. It’s bad enough when you’ve got drunks going on and on for hours, one of them sighed, without a drug that guarantees an erection for a full nightshift. An Auckland sex worker agrees. “Basically, the girls aren’t enthused about it...” Tactlessly, [the Aucklander] added: “It’s a job, you do your bit, get paid and the sooner it’s over the better.” ...Meanwhile, also this week, a rural [worker] was amazed to be found guilty of raping three under-age girls a decade ago. Like so many idiots, [the paedophile had] chosen to take the stand and give evidence on his own behalf, and it was there that [the paedophile] uttered the words any [gal] jury would have convicted him on without hesitation. [The paedophile] boasted that one girl had asked him when [the paedophile] was “going to let her have it”... It sounds like a punch on the jaw. But isn’t that another cherished [guy] fantasy, that young [gals] are all dying for the opportunity to frolic with boring old farts like themselves? That healthy girls with futures and dreams are begging for it, and that the next dirty old [pervert] on the horizon is doing them a favour? ...in a final blow against [guy] illusions, one sex worker volunteered this week that... her colleagues might need to learn first-aid... [The sex worker] feared... mass karking on the brothel shag-pile if Viagra took off among customers with heart problems. Truly, there is too little tact in this world: madams revealing that their girls don’t really like it; underage girls rounding on bewildered Lotharios who are just trying to help; and now the images of brothel carpets thick with expiring old [guys]. Will resuscitation for the chaps be free, or a negotiated add-on? ...[] T]he country is evenly divided over whether the sex industry laws need liberalising. [A NZ Herald] poll shows that 46.3[%] of people do not want prostitution and soliciting legalised – as against 43.9[%] who believe the law should be more generous to prostitutes and their customers... About 48[% of guys] were in favour of liberalising laws... Only 39[% of gals] want a change... [O]lder, richer people are more likely to want to rewrite the law books... The result comes as politicians ponder alterations to the present laws governing the sex industry. [A]National MP... and [a Labour MP] travelled to Sydney’s red light district in May as part of preparations for a member’s bill they are drafting between them. The pair want the... laws... to be more consistent. At the moment it is illegal for prostitutes to offer sex for sale but not for clients to ask to pay for sex.

...[a Labour MP has introduced a] private member’s bill to legalise prostitution. [The MP] is heading in the right direction;[but]... far too many others – ...[including the] Christian Heritage Party leader... [– still] have their heads in the sand, knees jerking wildly. [Guys] will always pay for sex; [gals] will always offer it. Why do many people try to deny it? In this country, discriminatory and ridiculous laws that allow [guys] to pay for sex but bar [gals] from advertising it are long overdue for reform. We have to take a practical, utilitarian approach to selling sex – the greatest good for the greatest number – and resist the urge to descend into hysteria or switch our brains off because the subject involves dirty bits. Legislation will require brothel-keepers to ensure condoms are used and to provide information on safe sex, and make pimping an offence. Paying for sex with under 18-year-olds will be out... The bill looks like it has wide cross-party support and, if plucked from the ballot, will probably pass. It would be nice to see Parliament agreeing on something for once – and to see the world’s oldest profession encouraged out of the shadows.

...Scientists working on Antarctica’s Ross Island have discovered a courtship ritual among penguins in which the [hen] requires her suitors to pay for having sex. London’s *Daily Telegraph* reported that the [hens] elicit payment in stones, which they need for nest platforms to keep their eggs out of the icy waters. [Hens] have been seen slipping away from their mates and approaching the nest of an unpaired [guy], giving the standard courtship signals of a dip of the head and a coy look from the eye. After mating, the [hen] will grab a stone and take it to her nest. Sometimes, satisfied customers allow them to take more than one, and some [hens] have discovered that heavy flirting is enough to persuade some more gullible [guys] to part with a rock or two... [Incidentally, a] German folk singer has leased out his girlfriend for a year for 500,000 marks... so that [the singer] can pay debts and have a liver transplant. [The singer], aged 56, drew up a contract with[a] 34-year-old millionaire... before telling [his girlfriend]. “I was shocked when I heard about this offer,” [the girlfriend] said. “But I will sleep with [the millionaire] because I love [the folk singer].” ...Asked if [it] was prostituting his girlfriend, [the singer], who has cirrhosis of the liver, said: “I am honourable and just want to pay my debts. [The millionaire] fell in love with [my girlfriend] which I can well understand. I thought this ‘indecent proposal’ was a joke when we first spoke about it. But now [the millionaire] has produced a cheque and a contract. To be honest I could use the money.”

...A... Napier... [police officer] has admitted having sex with prostitutes at massage parlours [it] was responsible for policing... In a letter obtained by the *Sunday Star-Times*, the officer’s boss... said the officer’s behaviour was unwise and an error of judgment but [the officer] had not breached any police regulations or the law. The officer has not been disciplined, but an adverse report will go on his file... The officer’s admission came after... [someone] associated with the Hawke’s Bay sex industry laid a complaint with police about a prostitute who was an intravenous drug user and who had [STDs]. The prostitute was having unprotected sex with unsuspecting clients to earn more money. The officer went to the massage parlour and told the owner who had made the complaint. [The complainant then] complained to... the Police Complaints Authority... [that] the officer had breached her confidence and [added the officer had] had sex with local prostitutes. The officer admitted both charges... The officer’s actions go against ethics instilled in police recruits during their first week of training, when they are told having sex with prostitutes is a no-no... Police College sources told the *Sunday Star-Times*... “Prostitutes are often associated with a criminal element, and if officers are having sex with them, the prostitutes have the potential to hold something over them.”

...The 32-year-old... remembers her attacker’s words... “I’m going to kill you, bitch.” The Auckland prostitute was then subjected to a frenzied attack which has left police amazed [the 32-year-old is still alive. The 32-year-old] was stabbed in the head, face, chest, shoulders, back and arms. Her skull was fractured and hundreds of stitches and staples were used to put her head back together... A prostitute of 15 years, [the 32-year-old] wanted cash to buy Christmas presents; the [client] – a tall, thin Pakeha aged in his 40s with a weathered complexion, number one haircut – agreed to pay \$200 for 15 minutes. [The 32-year-old] got into his brown or caramel-coloured four-door car, possibly a 1970s or ’80s Ford Falcon or Holden and [the client] drove her to an empty house in Napier St, Freeman’s Bay. The [client asked the prostitute] three times if [it] had someone watching out for her. [The prostitute] said no and thought nothing of it. Outside the house, the [client]... came up behind her. “[The client] stabbed me right

through the back of the head. The blood just spurted out,”... The attacker took her black leather bag containing money and personal items and ran off saying, “I’ll get you an ambulance”. [The attacker] lied... With 12 murders in the last month, [the 32-year-old says it] is just happy to be alive. The mother of three has no idea who attacked her. Despite a colourful past, [it] cannot think of anyone who would want her dead. When the attack happened, [the 32-year-old] was only two weeks out of a six-month jail term for fraud for her part in a car ring... [T]he attack had made her fearful of the streets and [the 32-year-old] would never go back. [The 32-year-old] was already aware of the dangers: [the 32-year-old] knew Leah Stephens, a prostitute who was stabbed to death because [it] witnessed the murder of Dean Fuller-Sandys more than a decade ago. [The 32-year-old] now wants an agency, church or health group to help her to run a project talking to school children warning them not to go into prostitution... “I want to tell girls it’s not worth it. If I can stop one girl from doing it then it will be worth it,”... [The 32-year-old] knows a 12-year-old working the streets.

...Police picked up an 11-year-old girl who was working as a prostitute on Auckland’s inner-city streets this week. Earlier, police pulled in an eight-months pregnant 13-year-old, who had been living on the city streets for two years. It was not clear if [the 13-year-old] was also a prostitute... An anti-child prostitution lobby group spokes[person]... said reports of children selling themselves for as little as \$5 or a bag of glue, had increased over the past couple of years. The Auckland barrister... estimated that in summer the number of prostitutes aged between 11 to 13... had swelled to 150... The increase in underage prostitution in the city has alarmed police... and groups dealing with at-risk children... A spokes[person] for the Prostitutes Collective... knew of other cases of very young girls working as prostitutes. “But it is very rare for an 11-year-old to be out there.”

...[the] Social Services Minister... [has] ordered an investigation into child prostitution after Auckland police found an 11-year-old girl soliciting for sex in the city last month... A recent amendment to the Crimes Act means you can be charged for having paid sex with someone under 18 but a client can still get off a charge of having sex with an underage prostitute by claiming ignorance of how old [the prostitute] is.

...CHILD psychologists in A[US] have condemned a colleague’s decision to allow a 15-year-old boy with terminal cancer to have sex with a prostitute before [it] died. The case has sparked an intense ethical debate while arousing considerable public sympathy. The identities of the boy... and the psychologist have not been disclosed as the specialist concedes that what happened was illegal. Details... emerged when the psychologist anonymously contacted a Sydney radio station, days after his patient’s death... last week... Without speaking to his parents, the boy apparently told staff at the... Royal Alexander Children’s Hospital... of his desire to lose his virginity. When... [hi]s psychologist canvassed opinion among colleagues... there was an initial suggestion to organise “a whip-round to pay for a prostitute”. The idea was rejected on legal grounds, but a group of friends were later allowed to escort the boy out of hospital and take him to... King’s Cross... His parents were not consulted... [The specialist] felt no qualms over not informing the[m]... about what was happening, saying that, like most 15-year-old boys, his patient was unwilling to talk to them about sex. The boy had little opportunity to meet girls of his own age, having been in and out of hospital since the age of 12... The specialist said the boy’s greatest wish had been to experience sex with a [gal, adding: “The boy] was very... happy, and only disappointed that it was over so quickly.”

...[the 56-year-old]’s most frightening experience as a prostitute came when [it] was working for a parlour which also sent its staff out as “escorts”. [The prostitute] was driven to a Titirangi house by a [guy]... and his girlfriend and paid to have sex with another [guy the prostitute] suspected of being an escaped prisoner. Later, [the prostitute] learned the client had been shot dead by [the first guy just after the prostitute] left the house. [The 56-year-old] stopped working in the sex industry after [it] started going out with a client. They married but the relationship was a disaster. “It was a bad move... I’ve never known any sex workers who’ve had relationships with clients that have worked out.” [The ex-pro] has since married again... Looking back on her days as a prostitute, [the 56-year-old says it] has no regrets[, and adds that]... most of her clients were fairly nice, “ordinary chaps. Often their wives just weren’t interested in sex anymore. I think it’s better for [such husbands] to see a prostitute than have an affair if they need sexual relief. There are no emotional attachments and nobody gets hurt... I think [being a prostitute] made me a more understanding and tolerant person. It made me think more. Before I was a bit of an airhead... I can honestly say I enjoyed it – it could be fun – and I made some... good friends. [By the way, another NZ version of the happy hooker – “I couldn’t believe that guys were prepared to pay me for what I’d been giving away for free” – who now operates brothels in Perth, AUS, has returned to invest some of her fortune in Awanui, her rundown Northland hometown.]

...Once a month] on Saturdays in a San Francisco suburb, [a middle-aged gal] takes the floor in front of around 70 [guys] and tells the story of her life as an unhappy hooker. It’s not an uncommon story[and – like that of the ‘27-year-old New York prostitute who said, “My mum’s boyfriend started raping me when I was 8; when I was 14 I finally told her, which made her throw me out (she was jealous I guess), and that’s why I got into this at 15” –] it sure ain’t a pretty one... Sexually abused... by drug-addicted, hard-drinking parents... from the age of five... on the streets soliciting from the age of 15... a heroin addict for 10 years... raped... “30 or 40 times,” beaten by both a pimp and clients... time in prison for prostitution and drug offences... [Her story has] an underlying inference that [gals] need rescuing from the grip of prostitution[, an]... argument... unpopular with advocates for sex workers... including the[NZ] Prostitutes Collective. “Unfortunately... the prostitute collectives who argue that prostitution is fine are not helping to get government funding to help [prostitutes out.” The monthly meetings are]... a vigorous public education programme which recognises that “[guys] are part of the problem. If there wasn’t a John out there looking for a prostitute, then there wouldn’t be a [gal] standing on a corner.” The Californian model has been adopted by other States; the first British scheme began late last year... The schools are symptomatic of what many... still working as prostitutes regard as... “re-education” (a term stricken with slightly sinister overtones, say some... who remember 70s discussions on the viability of “re-construction camps” for [guys]) of those who use prostitutes – one in 170 of British [guys] according to recent research.

...[according to an infamous British homosexual and ex-prostitute – who, nowadays, lives off the ‘free meals available at New York parties in exchange for being photographed with other guests – guys use prostitutes “because they don’t need to say they love them”].

...‘THE WORLD ACCORDING TO H, the madam to the stars – *Pearl of wisdom 1*: “I was born with a hooker’s mentality. I believe guys should pay for everything. Girls shouldn’t have to do anything. Girls should have fun, that’s it.” *Pearl of wisdom 2*: “Everyone has their own definition of a prostitute. Even I will say ‘Stick it, whore’ under my breath to a waitress who is taking too long.” Frankly, this madam is one sister we don’t need in the ‘hood.’

...‘Now a caterer, Madam A was the empress of Hollywood whoredom whose client book the ingenue H allegedly coveted and deployed. During her long career, Madam A required that her employees look very low-key, with defined hair, little jewellery and no hangnails. “You must look like you’re going to a garden party, very conservative,” Madam A explains, then adds: “In all creation, all gals are prostitutes. It starts when you are a little girl. You begin with your father and work your way through the other masculine members of the family, and there’s always a tradeoff: The father becomes putty in the little girl’s hands. The more affectionate the girl is, the more loving her father becomes. Putty. And it goes on from there.” The rest concerned the wrapping. “You must never wear suits – guys don’t like suits, only dresses. Guys also like refined hair.” There are other exactions in this little-examined world. “Black patent-leather Italian shoes – a lot of us wear Ferragamo,” explains a prostitute from San Francisco, until quite recently a member of the \$2,000-a-night club. Now it is kept by one guy in a luxurious penthouse apartment flat with a glorious view. “I upped it from many to one,” is how the prostitute puts it. This is her ideal. His maintenance fees the prostitute will not reveal. “No perfume,” a notorious New York madam recalls. “If someone’s got a wife, you don’t want your scent left behind. And no short hair – I don’t care how gorgeous the girl is.” “I find the guy who pays for sex is more gentle, old-fashioned and sweet than guys who don’t pay,” retorts someone who, as a teenager, longed to enter the profession after reading *The Happy Hooker*. “Guys who don’t pay for sex are misogynists – they’re trying to rip gals off.” “Guys don’t pay for sex, they pay us to leave,” declares the San Franciscan.’]

...Strung along the main freight route north from Prague, Dubi has earned an unenvied reputation as a sex playground for Germans from across the frontier 8km away... [The] Czech border town... has a population of 8000 – and 800 prostitutes... Many of the prostitutes are there voluntarily,

police say. But some of the [prostitutes] sitting scantily clad in the windows of the town's 37 brothels or standing in the snow at the roadside, are victims of an illicit, often violent trade in human misery across Eastern Europe to the borders of the rich West... Prostitution existed in Dubei even under communism... But it boomed after... 1989... Statistics are difficult to obtain. Prostitution is not a crime, though pimping is, and many of the foreign[ers]... working on the border do not need visas so are beyond police control. And, says... [the] director of the Czech La Strada group which seeks to help victims of trafficking, many [victims] are too scared to press charges against those who exploit them... The Czech La Strada, which is funded by the E[U] and the Dutch Government, works closely with similar groups in Poland, Bulgaria and Ukraine. Its local representatives in Bulgaria have put the number of Bulgarian [gals] who work abroad at 10,000... But in this chain of misery, Bulgaria is not just a source. An official of the [Gal]'s Alliance for Development said Bulgaria also served as a base for [gals] from Ukraine and other parts of the former Soviet Union.

...[Passport prostitutes is a phrase that refers to gals from the former USSR who, lured by the promise of easy money, risk their lives by flying to Islamic countries every week: the Koran dictates that gals who have extramarital sex are to be stoned to death; single gals caught fornicating receive 100 lashes.]

...in Afghanistan, 2] prostitutes were hanged last week as a crowd of 1000 looked on[, then 2 gals and 10 guys] were publicly lashed [for adultery.

...Three guys] working in a psychiatric hospital in Kazakhstan have been charged with murdering seven prostitutes and eating them. A police investigator said they... made "pelmeni" – Siberian meat ravioli – out of them... [In local news,] Asian health and beauty clinics are offering sex from the middle of shopping centres as the sex industry spreads into suburban Auckland. Police, alarmed by the proliferation of prostitution in unorthodox outlets, are discussing ways of reining in the industry before it gets out of control. There are 18 licensed massage parlours in the inner city and three in outlying suburbs, but industry sources say more than a hundred illegal operations are offering sexual services. It is unlawful for both licensed and unlicensed operations to act as brothels, but police have special powers under the 1978 Massage Parlour Act to control activities in licensed parlours. They have no such rights to monitor illegal centres. Authorities fear that abuses of human rights, use of under-age prostitutes and risky health and safety practices are widespread in illicit operations. Licensed parlour owners are furious that the unlicensed centres are allowed to operate because they say they are driving the sex industry underground. They say sex is also being sold from apartment buildings... motels and suburban homes. The Asian Crime Unit is aware of more than 10 Chinese therapeutic massage businesses in Auckland reportedly selling sexual services... The[y]... advertise haircuts, beauty makeovers and "medicinal" massage. They charge about \$50 for hour-long massage sessions... But there is evidence that once a customer is taken to a room, "extras," including intercourse, can be negotiated with the masseuse.

...Salon 45... in the Panmure shops... and Salon 28 on Ponsonby Rd... advertise traditional Chinese-style therapeutic massage. But there is more on offer. [Yesterday, t]he *Weekend Herald* arranged for... a... volunteer... to visit... Salon 28[, which is]... run by the same Chinese people who operate Salon 45... Our volunteer paid \$55 to get past the front hair salon to a private room. The Chinese masseuse began a rubdown and then offered sex for \$80... [However, the] manager of Salon 45 and Salon 28... denied sex was on offer at her premises... But... [the manager] said... other businesses which offered the same service also sold sex... [W]hen the *Herald* [rang one of the other businesses and] suggested sex was... [being offered, its owner] said... "No, never. Goodbye."

...Moves to get the Auckland sex industry off city streets have upset disabled people wanting equal access to its services... One of three options put before a council planning committee this week would banish the industry from ground-floor retail sites and require it to operate instead from basements, upper floors, or at the back of buildings. But the plan has brought cries of discrimination from disabled people, who argue that... [it would impede their] access to sex-industry premises. The... Prostitutes Collective was also concerned that planning controls would drive the sex industry underground and obstruct Government-paid efforts to educate sex workers about infectious diseases. Support for controls came from Newton Central School, where teachers and parents were horrified to find a massage parlour opening across the road from the school... Auckland Girls' Grammar School... has campaigned for years to get the industry out of neighbouring Karangahape Rd.

...The... Auckland... council decided this week against imposing strict controls on licensed sex premises – they can continue operating in the central city and suburban business zones, as long as they are 250m from schools and houses.

...A PUBLIC meeting will be held to discuss the controversial Prostitution Reform Act, at West Harbour's Marina View School, next Monday... It will look at the implications for west Auckland and the role the Waitakere City Council will play in regulating prostitution. The legislation gives councils power to control the location of brothels through bylaws and district plans. They also control the use of signs advertising sexual services.

...“Prostitutes required...”, trumpets the... ad. “Our very successful group of... all ages, sizes and nationalities will make you feel right at home.” So I ring (legally). The husky-voiced [gal] on the other end... is disarmingly frank when I say I'm a mature law student seeking quick cash. “Well, prostitution's legal now...”, [husky] rasps, with a hint of glee. The phone, [husky] says, has been ringing “off the hook” with inquiries. “We have night and day shifts... The average tip for a girl is about \$100 for an hour and that's for sex and everything...” ...You pay \$30 a shift for laundry costs, otherwise you're on your own. And paying tax and the like? [Husky sound]s a bit nonplussed. “It's gonna take a while for that to kick in. Legality is great.” ...• [Legalised prostitution w]ill... end up costing ratepayers big dollars, [the]Waitakere City Mayor... says. The council has yet to discuss the Prostitution Reform Act but [the mayor] suspects the new law will create more work for staff... Councils must now include provision for brothels in their district plans... [The mayor] says the act is yet another example of central government dumping its responsibilities on to councils.

...As the intellectually disabled were released into the community over the past decade a great deal of attention was paid to where they would live and how they would feed and clothe themselves, but no thought was given to what they would do about sex... Welcome to what one researcher in the field... calls “the hellish area” of managing sexual aggression in the intellectually disabled. In her award-winning thesis on the impact of sex education on this group, [the researcher] concluded they are not oversexed, as many believe, but their “normal” sex drives are more visible because they lack the social sensitivities that keep the rest of us from lifting our skirts over our heads or dropping our trousers in public. Teaching appropriate behaviour can change that. But how often is training being bypassed in favour of sexual release with prostitutes? ...The Waikato Community Living Trust which cares for former Tokanui Hospital patients has quietly ventured into the controversial practice of arranging sex workers for some of its more sexually unsettled clients... [The trust's] chief executive... says it is not routine... In nine years “exceptional circumstances” have persuaded her to grant approval for five clients. “It tends to have only occurred in situations where in our opinion if the person's sexuality is not given an outlet it will cause significant difficulties... the person might seek sexual gratification in unacceptable ways.” ...[the patient] will try to force sex on someone else or they will be abused or exploited by sex workers they approach alone... [The chief executive] says many of these [patients] had access to sex when they were in Tokanui – either with other patients or... staff. Moving them into the community often isolated them from their sexual partners... “Our experience... is that a carefully planned approach involving supporting the person to access a sex worker can lead to the elimination or significant reduction in behaviour that has been of concern, often for considerable periods.” The trust's staff, overseen by a clinical psychologist, will find a suitable establishment, discuss specific needs with a sympathetic sex worker, and, if necessary, stay nearby through the transaction in case there are tears after bedtime... [I]t is the client who pays. But should caregivers, be they privately or publicly funded, be actively involved in arranging sex for the impaired clients? Does it make them pimps? ...Academics and medical professionals are notably quiet on the topic. Many had never heard of it. Some were shocked into silence when told... [A] specialist in ethics in psychiatry... would certainly question the practice[, and] asks who is making the decision to use a sex worker – the client or the caregiver? ...[the] Associate Professor... also wonders if it is the caregiver's values taking precedence. “The whole thing worries me,”... [A] Porirua Hospital psychiatrist... who has extensive experience with the intellectually disabled, says... there are drugs to control sex drive... [U]sing sex workers is unusual and an approach [which people should] be wary of for managing sexual aggression. “Sexuality is not a pressure-cooker you can relieve from time to

time,”... Waikato University’s Professor [of Psychology and] president of the N[Z] Psychological Society, a voluntary organisation of psychologists, did not know about the use of sex workers even though [it] is also a [WCLT] trustee... Yet using sex workers for the intellectually disabled has widespread approval. The Family Planning Association recommends it in some circumstances. For instance... “where it’s unrealistic that they will form a relationship but they still have sexual needs.” The IHC, the largest agency caring for the intellectually disabled, agrees... grounded in the IHC’s belief that people with intellectual disabilities have the same rights and needs as everyone else. But... a psychopaedic nurse and counsellor with Spectrum Care, the agency set up to manage community care for the intellectually disabled from the old Mangere Hospital... would never recommend introducing intellectually disabled [guys] to a sex worker... [because] it is potentially exploitative – the services are expensive and the [patients] are usually beneficiaries. Worse... “it leads to a voracious appetite for more of the same. This group has only a tenuous grasp on appropriate relationships. Suddenly a complete stranger comes in to have sex with and do provocative things with them. It completely destroys any sense of social norms they previously had. And I’m trying to teach these guys what the social norms are.” Nor does [the nurse] accept the argument that if the intellectually normal can have access to prostitutes that the intellectually impaired should also. “You have to recognise their emotional and cognitive levels range between a 3- and 7-year-old’s. They haven’t got the emotional maturity to cope with it. It confuses the world even more for them.”

...Depressed, suicidal or sexually aggressive [guys] with intellectual disabilities are being taken to prostitutes by their state-funded caregivers, as a way of improving their behaviour... One... is a 37-year-old Te Avamutu [resident arrested last] November for exposing himself and yelling abuse in the street outside his flat. His parents... wrote to the Health Funding Authority, which finances the... Waikato Community Living Trust... but it is not commenting on the case. However... the Prostitutes’ Collective... is regularly contacted by relatives and medical professionals caring for disabled [guys] with sexual frustrations... “If the public gets hold of it and sees the sex industry is arranging sex for disabled people, they will jump up and down. They can’t grasp the concept that... [there] is an incredible need for this service.” ...[In related news, there is] a strong possibility the cure is worse than the problem, but scientists now say fish oil can beat manic depression[(it was previously held that ‘manic depression is incurable’)]. The fatty oil... has already been touted for its effectiveness in combating heart disease... Now a study has found the naturally occurring dietary ingredient can affect the brain... The chemicals... believed to be at work... were omega-3 fatty acids, present in... fish such as salmon and cod.

...It is the hidden disease which apparently affects one in five of us, but no-body talks about it. Most celebrities would rather admit to murder than depression – and that is particularly true of [guys]. In the past 20 years, the number of well-known [guys] who have come out about being depressed... can, literally, be counted on the fingers of one hand. It is not just [guys] themselves who are in denial about their depression, but society as a whole. “There is a definite treatment deficit for [guys],” says a member... of the Institute of Psychiatrists, about a healthcare system in which one in four [gals] receive treatment for depression compared with one in 10 [guys]... It is well known that social isolation is a big risk factor in depression. [Guys] are especially at risk because they are reluctant to ask for help from friends, partners or health professionals. So silent are [guys] about their mental health that the Royal College of Psychiatrists says the under-diagnosis of [guy] depression may be as high as 65[%]. This has serious repercussions: each year, three times as many [guys as gals] commit suicide... in Britain. Commentators suggest a “crisis in masculinity” to account for these figures. Whopped by high-achieving girls at school, the theory goes, [guys] struggle to find work and status in a world where feminine skills are valued. Unable to express their frustrations, they get divorced, socially isolated, never see their children. [However, a member] of the consultancy Working With [Guys], thinks the crisis analysis is woefully simplistic. [The consultant says depressed guys] need to be understood as [guys], not just as depressives. “What’s interesting about masculinity is that every single transition point in a [guy]’s life is problematic. [Guys] find change difficult, and if society is changing it will accentuate this problem,”... [The consultant] argues that the way [guys] perceive themselves makes it harder to seek help. “[Gals] are brought up to feel that they’re not good enough, which means they are seeking change and want to improve themselves. For [guys], the message is that they’re meant to be adequate already: they should be competent, able to deal with things. So they resist change until they hit crisis point.” Recent studies have also shown that [guys] experience depression in a different way from [gals]. The most common symptoms for [guys] are anxiety and irritability, feelings of emptiness and fatigue. They may be aggressive and violent, show poor impulse control and lash out, even when this is out of character. [Guys] also hate arguing. To avoid conflict, [guys] withdraw emotionally, then their partners feel ignored and the vicious spiral leads on to relationship breakdown, explains Depression Alliance’s booklet [Guys] Behaving Sadly. What can a [guy] who is suffering from depression do? First, admit it to yourself. Talk to somebody close to you. Secondly, go to a GP. The Department of Health estimates that 80[%] of people with depression can be helped... If that is too difficult, there is Beating the Blues, a computer program that aims to alleviate depression. According to [the program’s creator], progress can be expected after six sessions or so. Fast enough for most [guys]. And anonymous. ■ Of the well-known guys who have admitted to suffering from depression, the most celebrated was ‘Winston Churchill: “When I look back on all these worries, I remember the old guy who said on his deathbed that it had a lot of trouble in life, most of which never happened.”’]

...CHURCHILL called it his “black dog.” ...For every well-known sufferer of depression, there will be thousands of other ordinary people facing up to extraordinary challenges with the illness. Depression – the illness as distinct from a temporary attack of the blues – is becoming so common that some psychiatrists are calling t[oday]... the “age of melancholy.” The state of misery, also termed the “blue plague,” is... a characteristic of the [entire] world. Studies in such disparate places as Puerto Rico, Christchurch... Florence, Taiwan, Beirut and Los Angeles show that more people, and especially more younger people, are seeking help for “major depression.” The W[HO] predicts that in 20 years depression will be the second most significant cause of suffering and disability worldwide. (Heart disease is the first, traffic accidents[will be] the third)... In N[Z] about one in every seven people and one in every five [gals] will, at some time in their life, become clinically depressed... Half of those who have one episode of depression are likely to have another... B[etween 1/4 and 1/2] of people who are seriously depressed attempt suicide and up to 15[%] who need hospital care for the disorder will kill themselves... Children, too, can be seriously depressed, boys equally as often as girls until the age of about 15. What lies behind these disturbing statistics is not well understood... A U[S] study has found children today suffer more anxiety than those of previous generations. The study, which examined surveys of 40,000 college students and 12,000 children between 1952 and 1993, found young people today have more to worry about than their parents did when they were kids. From fitting in with their peers to worrying about crime or finding a job, life can be tough... Was life really less stressful a couple of generations ago? Psychiatrists agree that stress is a major factor in depression. They describe its causes as “multifactorial,” starting with a genetic predisposition or “biological vulnerability” that has to do with chemical substances called neurotransmitters in the brain... Some physical illnesses bring on bouts of major depression – for instance, glandular fever, stroke, fibromyalgia. Stressful events, like a relationship breakup, financial difficulties, dysfunctional parenting in young people, poor social support, trauma such as abuse, can act as triggers in those who are predisposed – in contrast to the remarkable resilience shown by other people when life deals them similarly harsh blows. Deciding whether you yourself, or somebody close to you, is experiencing “normal” unhappiness or whether it is a depressive illness is not always easy. The onset of depression isn’t like getting a virus and it usually occurs over a longer period. Feeling sad is not necessarily a sign of being depressed, according to the Guidelines for the treatment and management of depression by primary healthcare professionals... What distinguishes the two states... are the intensity and the duration of the feelings. “The difference is profound. People experience a... loss of energy and apathy. Everything loses its meaning and colour. Eventually they get ‘biological shift symptoms’ – loss of appetite, weight loss, a characteristic sleep disturbance of waking in the middle of the night, and they have ruminative thoughts that go round and round.”

But you need to be in that state for more than a day to be diagnosed ill. Two weeks, says... a... Professor... of the Auckland Medical School... is the cut-off point. During that time... life can be difficult for those around them as well as for the affected person. "They can be withdrawn and querulous, and seem not to be pulling their weight. It may be difficult for them to do simple tasks. It's important that family or flatmates recognise the condition and don't respond in a critical, punitive or derogatory way. They have to appreciate that the person is unwell and needs support and gentle encouragement. It's difficult for a lay person to judge that they are sick but they should be encouraged to seek professional help." For those who do, the prognosis is encouraging. Between 70 and 80[%] of those who receive treatment respond well, 10 to 20[%] have a mixed response and in only 5 to 10[%] is treatment unsuccessful. Recovery is... a long haul. The Guidelines recommend... a first episode be "actively managed" for at least nine months, and a second or subsequent episodes for three years. Treatment classically consists of two groups of drugs. Those known as tricyclic anti-depressants, such as amitriptyline and nortriptyline, are chemically composed of three linked chains. Their disadvantages are the length of time – two to four weeks – before they begin to have an effect, and certain disagreeable side-effects. Prozac works on the uptake of the neurotransmitter serotonin. It is slightly faster acting and is said to have fewer side effects. Increasingly use is being made of drugs in combination with psychotherapies such as cognitive behavioural therapy. This is based on the premise that a person's negative thoughts lead to a negative appraisal of themselves, the future and the world. As the person becomes depressed, physical symptoms develop which exacerbate the feelings of low morale. It's a little like the chicken and the egg situation... [O]ur thoughts can affect our biochemistry, just as having the flu or some other illness can make us feel gloomy... [The] Associate Professor... of the School of Psychology at Massey University... says... "The mind-body distinction is an artificial one. They work in unison and one influences the other. The ancient Greeks believed that it's not reality that upsets people but our perception that creates the difficulty and cognitive behaviour therapy focuses on people's perception of what's going on around them." ...[at] the Waitemata Health Cognitive Therapy Centre... therapy typically consists of 15 one-hour sessions, with a therapist on a one-to-one basis. If this sounds expensive, [the associate professor] points out that the cost of continuing depression and relapse is much higher... A... fit, able [24-year-old guy] has made serious attempts to end the misery... [of] depression... Sitting in the immaculate lounge of the house [the 24-year-old] rents with friends, [the 24-year-old] appears the epitome of... success... two degrees, selection from 180 applicants for a prestigious job as a managerial trainee (which [the 24-year-old] left), experience as a mountaineer, a circle of supportive friends. The irony of his situation only heightens its poignancy... "No matter how outwardly successful someone is, they can still feel in a mess. It's bizarre [because] we're so lucky here in N[Z]." ...there is no history of depression in his family and until a couple of years ago his life was normal. "One minute I was bumbling along, everything was going all right. I had my ups and downs. Then suddenly I was completely out of my depth. I had just finished university and was in South America climbing a mountain when suddenly – bang, I lost control." [The 24-year-old] doesn't discount the possible effects on his mental state of a climbing accident... on Mt Taranaki two winters ago... when... two of his friends were buried in an avalanche. But [the 24-year-old has] difficulty in accepting that what [his body] has is a mental illness... [On a positive note, d]o you ever picture the worst scenario and imagine what you'd do if that situation ever arose? If so, you're what psychologists call a "defensive pessimist". But they say that's a good thing! Just like positive thinking, imagining the worst also has its health benefits. A defensive pessimist mentally rehearses how things might go wrong, so they come up with reassuring options or solutions to a problem in advance. This process gives them a greater sense of control and calm, plus greater immunity to anxiety and upset.

...Depression is a hidden complication of diabetes, affecting up to [33%] of sufferers... A clinical nurse consultant with Diabetes A[US]... said US research showed that depression in people with diabetes was two to three times greater than in the general population. The treatment of psychological effects from diabetes was underfunded and often overlooked by health practitioners, including GPs and specialists... "Mega-millions of dollars are poured into addressing the physical complications, but even if patients haven't got physical complications they are spending their whole life waiting for them,"... The threat of physical complications, such as blindness or foot amputations, was enough to plunge patients into depression. "Like all chronic illnesses, people feel they will never escape, and in addition there's a lot of negative images there, from amputation to dying,"... [] This information may be of no use to diabetics, but it i]s no coincidence that people talk of being "chocoholics," says [a]British psychology researcher... [H]is research shows... people may seek out chocolate to elevate their mood. [Gals] suffering premenstrual syndrome especially crave it... You may even come to rely on it... Just as the body of a smoker comes to expect... certain cues, the body of a chocoholic may demand satisfaction when [their] mood is down. In a survey... a majority reported eating chocolate when... bored, lonely or depressed... "To that extent the mechanisms with nicotine or other drugs are similar to those of chocolate. I don't want to imply that it is addictive but there is likely to be a psychological dependence."

...German experts have discovered why chocolate is the perfect winter comforter and why a craving for sweets is common during colder months. One reason is that the body breaks down the "happiness messenger" substance serotonin more quickly when there is little sunshine. That is why a quick bar of chocolate... can work wonders for a gloomy mood. But that is no excuse for pigging out on chocolate, say the spoilsports at the Hamburg nutrition advice centre. They say the potato... or a walk in the fresh air... is just as good at helping combat winter blues.

...Research by German scientists shows that author Charles Dickens was on to a good thing when [it] took long, brisk walks to ease periodic bouts of depression... Experts at the Free University in Berlin recommend following in his footsteps. Aerobic exercise such as rapid walking can be more effective at lifting depression than drugs, says... the scientists' leader. Studying 12 people with severe depression that had lasted an average of nine months, the team found that in 10 of the patients, drugs failed to make much difference. The team devised a regime for the group that involved walking on a treadmill for 30 minutes every day. The researchers found that after 10 days of the course, six patients felt "substantially less depressed." Five of them had not found any relief using drug treatment. Two were slightly less depressed, while four others were unchanged.

...Laughter really is the best medicine, and [a]"joyologist"... prescribes it by the bucket load! Having a good chuckle is more important than ever today, [the joyologist] says, with increasing stress in our lives, loneliness, and high rates of depression... Studies show that in the 1950s people used to laugh for 18 minutes a day, but today we only laugh for six minutes a day... In her bright orange hat with a "Miss Positivity" doll on her shoulder, it's pretty obvious this [gal] can see the silver lining in every dark cloud... In fact, [this]... Aussie entrepreneur... guarantees to have you in stitches within 90 seconds when you attend one of her... 20-minute... "infectious therapy" classes!

...Therapy is at least as effective in treating depression as drugs, and its effects last longer, say scientists. Their report is sure to annoy drug companies, which make millions selling antidepressants. The cost of therapy is about the same as drugs in the short term and cheaper in the long term, the researchers told a meeting of the American Psychiatric Association. "This will be a surprising, controversial finding for many psychiatric professionals," said... [the chairperson] of the psychology department at the University of Pennsylvania. "Most believe quite strongly in the efficacy of medication, and psychiatric treatment guidelines call unequivocally for medication in cases of severe depression."

...A leading N[Z] expert on psychiatry says people with personality quirks are being prescribed drugs to treat mental illnesses they don't have. [The]Emeritus Professor of Psychiatry... forced an international psychiatrists' conference in Hamilton to consider the galloping rise in the prescription of "life-style" drugs in a talk called Brave New World. [The p]rofessor... suspects many adults taking anti-depressants did not have a disease, but a personality variation. Such variations sometimes hampered people, but they also gave humankind its diversity. The... prescription of stimulant drugs had risen by more than 1000[%] since 1993. Government spending on mood-controlling drugs had soared to \$36 million from \$13 million... [The professor] believed factors such as the medicalisation of psychiatry, and public demand, were responsible for the increase.

...The tally of [NZers] prescribed antidepressants has ballooned from about 150,000 in 1993 to 241,000 last year. A psychiatrist who developed official guidelines for treating depression says drugs should never make up the entire treatment package... [The] professor of psychological

medicine at the Wellington School of Medicine, says antidepressants play an important role in treating depression... But [the professor] also points out an apparent inequity in other potential remedies, the sort of sessions which helped... the [NZ actor who once]... played Shakespeare's crazed King Lear[, and more recently... put his face to the Like Minds, Like Mine televised campaign, a project aimed at dispelling prejudices about mental illness... While the pills are Government-subsidised, there are few or no subsidies for sessions with psychologists. "It's an issue of social equity and consumer choice,"... says... [the professor. The] Health Minister... says [it] will take advice from officials on the issue but... stops short of promising any action... As a result of Government subsidies on antidepressants, at least some pills are in the financial reach of most, if not all, of those prescribed them. A wage-earning adult prescribed one of the new-generation antidepressants like Aropax or Prozac can pay as little as \$15 a month for the drugs. For those in tougher financial straits the cost is even less, and in some cases they are free.

...N[Z]'s Prozac use has rocketed in the past year. Since the anti-depressant was added to the list by the Government drug-funding agency, Pharmac... doctor's prescriptions for Prozac soared from 111,905... to 273,531 the following year. The just-issued figures show the use of all anti-depressants... rose from under 500,000... prescriptions... five years ago to 1.1 million in the year to last August... The... general manager of Pharmac... said the increased number of Prozac prescriptions indicated that GPs were using the drug to treat moderate depression. GPs were also using it to treat a pool of people with depression who had not been treated properly in the past. [Pharmac's general manager] said the drug's manufacturer, Eli Lilly, had acted responsibly since prescribing rules were relaxed for Prozac by promoting new guidelines for the drug.

...Breast-fed babies might be better off if their depressed mothers take Prozac rather than going without treatment, despite concerns about high levels of the drug being passed on to infants... A Christchurch medical researcher... has questioned whether breast-feeding mothers should be prescribed the popular anti-depressant after his team found residues of it above recommended levels in babies. However, [a]Christchurch psychiatrist... who took part in his research on another anti-depressant, Aropax, now argues that babies might suffer more from severely depressed mothers than from elevated Prozac levels. The research into Prozac... was funded by the maker of Aropax... Adverse reactions to Prozac reported in babies include vomiting, diarrhoea, increased wakefulness, colic and being unsettled.

...Prozac, the world's best-selling antidepressant... is being blamed for turning healthy people violent. It is thought to have led to crimes that include murder. About 250,000 N[Z]ers take antidepressant medication. Of these, 64,000 are on Prozac... Research to be published soon will claim that up to one in 10 adults who take Prozac can become belligerent and pose a risk to others and themselves. The study is the strongest support yet for mental health campaigners who claim that dozens of people have been wrongly imprisoned because of the effects Prozac has had on their behaviour... [The person] who set up the Prozac Survivors Support Group in London, said: "People are going to prison for what amounts to medical negligence. If they're throwing the book at vulnerable individuals, they should be throwing it at doctors who prescribe the medicine." In the... U[S], school shootings have been linked to a number of children given Prozac... The Welsh study is a potentially devastating blow for the US drug company Eli Lilly, which has made millions from Prozac. The company says Prozac, developed in 1972, is one of the world's most studied drugs... Previous studies linking Prozac to violence have been discredited because aggressive behaviour could be caused by patients' personality disorders, not the drug... [T]he University of Wales... study is the first to show that Prozac can affect even healthy individuals.

...Eli Lilly and Co is bracing itself for another round of bad publicity about its famous product... In 1989, while on Prozac and other medicines, [a] 47-year-old... walked into his former printing plant workplace in Louisville and went on a shooting rampage. [The 47-year-old] killed eight people, wounded 12 and then committed suicide. Survivors of the massacre and the victims' families sued Lilly for \$US50 million... alleging that Prozac drives some people to violence. More than 160 similar legal actions followed. Lilly maintains that Prozac is safe... Lilly also contends it has never lost or settled any of the court cases. But a spokes[person]... now admits that just before the end of the [Louisville] trial, "Lilly and the plaintiffs did reach an agreement that included financial terms that would protect both sides." ...Last year... Prozac... sales hit \$US2 billion, 30[%] of Lilly's revenue. [Over '70% of the sales were registered in the US, where some 18 million people suffer from depression in any given year.']

...A proposal to widen the availability of... Prozac... will be discussed by N[Z]'s top health officials today... At present, doctors must consult psychiatrists before prescribing it. They will also consider a proposal from... Eli Lilly, to provide Prozac free if demand goes above certain levels a year. This would ensure the Government's drug budget is not blown. Whatever the decision, it is bound to raise controversy. Psychiatrists are pushing for prescribing restrictions to be lifted on all new anti-depressants, not just Prozac... "The worry we... have is whether what's being set up will end up driving the makers of other products out of the market,"... said [the chairperson] of the Royal A[USn and NZ] College of Psychiatrists... At the same time, mental health groups have called for tougher restrictions so anti-depressants are used only for the most serious disorders.

...[N[Z]'s] General Practitioners Association... said yesterday that the restrictions on Prozac were driven by financial consideration, because it cost much more than conventional anti-depressants which GPs could prescribe... But... Prozac was... more effective and more tolerable... It had none of the side-effects, such as blurred vision, drowsiness, constipation and dryness of the mouth, associated with conventional antidepressants.

...Pharmac[has] struck a deal with... Eli Lilly. Regional health authorities would pay for a set amount of Prozac each year, and any spending above that level would be refunded by the drug company. In the 1996-1997 year the ceiling is \$13.2 million of the drug, before distribution costs. Under the arrangement the amount the R[HA]s will pay will rise each year to \$19.6 million in 2001. The scheme will initially cost R[HA]s more than they would otherwise pay but savings are expected further down the five-year track.

...Patients are the losers in a deal which singles out Prozac from a batch of new antidepressant drugs for easy access, according to a leading psychiatrist. Local doctors should be able to prescribe alternatives to Prozac if patients reacted adversely to it, said... [the] head of Psychological medicine at the Christchurch School of Medicine. [The professor] applauded the lifting of restrictions on Prozac – but... said the same should be done for other similar antidepressant pills. "Personally, I have no difficulty in trying [a patient on] Prozac first, but that won't work for everyone. Sometimes you have got to try two or three to find the one that most suits." ...[two] other antidepressants introduced on to the market about the same time as Prozac – Aropax 20 and Aurorix – remain restricted medicines... [and, therefore, are] available only from specialists... The drug companies which manufacture these pills are also concerned that local doctors can not prescribe alternatives to Prozac. But... Pharmac... dismissed the criticisms from the drug companies as "commercial sour grapes." The general manager... said... Pharmac had tried to come up with a deal lifting restrictions on the other newer antidepressants which had come on the market in the past three to four years. But the drug companies had elected to compete rather than cooperate. "There are always people who do well and others who don't do so well in that situation." ...However, the medical director of [the company that makes Aropax 20]... said the company's offer to Pharmac – a reduced price... – had been turned down. "While the Prozac deal doesn't stop GPs prescribing Aropax 20, the endorsement process provides a barrier which we fear may lead to inappropriate prescribing." The medical and pharmaceutical director of [Aurorix's maker]... said the Pharmac deal had given the... manufacturers of Prozac... an edge over other companies. But... [his company] was negotiating with Pharmac to have Aurorix soon available on prescription from local doctors.

...The Government is wasting money buying more drugs to treat... depression... says a leading psychologist... [The] senior lecturer at Auckland University, said too much emphasis was put on costly drugs... at the expense of alternatives... [By the way, if] the figures on... pimple pills are an indicator, Aucklanders are either spottier or more vain than Wellingtonians. While people in the lower North Island used \$1.99 million worth, those in Auckland and north used \$3.26 million worth. But perhaps it made them happier. Aucklanders' bill for anti-depressants was lower... [at] \$3.71 million, while the bill for Wellington and its neighbours was \$3.92 million[('the prescribing of anti-depressants in Christchurch was twice the national average')].

...The gloominess that grips France has recently found new expression. Two of the nation's darlings... announced plans to move. And they are not alone. In Parisian salons, the atlases lie open as the rich discuss the safest overseas havens for their money, while business[people] whisper of Britain's greener economic pastures. The government's oft-repeated message "Cheer up!" has become a national joke in the face of worsening economic figures. One in eight workers is unemployed, while the social security deficit is, at \$13 billion, three times the size predicted. Also, growth is down, taxes are up and "deflation" crops up on the front pages of the papers with depressing frequency. More specifically, France's celebrated quality of life is under threat... [One of the darlings] cited pollution as her reason for swapping the City of Light for the bracing fresh air on the banks of Lake Geneva. The French Association for Public Health reckons poor air quality is to blame for 350 deaths a year in Paris. Although [France's] Environment Minister... declared "everyone has a right to breathe clean air", her efforts have been foiled by Parisians' love affair with the car... The morning rush hour now lasts from 6.30 to 11 o'clock and in the evening from 5 to 8. Even the half-million parking tickets issued each year have no effect... Marches are the new entertainment. And the street – rather than the restaurant, nightclub or art gallery – is now the place to meet like-minded folk. It's cheaper... Six thousand cafes close each year. And... the French spent 25% less on art this year than last... [Furthermore,] Paris' most high-profile art exhibitions are British... Every day, the French are reminded – by their magazines, shops and cinema screens – of the growing glamour of London... [The] Paris editor of London-based *Time Out* magazine, says: "There's just not the buzz here that there is in London." ..."Gay Paree" has ended. [Ironically, 'I've been to England fifteen times and never liked it once – everyone is so sad.'

...Britain's reputation of being a nation full of whingers has received further backing with a quality of life survey commissioned by the European Union branding it "the saddest place in Europe." Britons had far more cause to grumble than most European countries, according to the survey, which listed overwork, unhealthy living, pollution and crime among the country's weakest points.]

...Britons are depressed about their future and certain they are getting more stupid, less healthy and less well-behaved. A poll of... adults showed that most were gloomy... "There seems to be a powerful fear that, in certain important respects, we are heading downhill,"... In May 1968, 68[%] of those polled thought the nation's health was improving. In 1996, 51[%] thought it was getting worse... In 1968, 66[%] thought overall intelligence was improving; now only 26[%] think so. In 1968, 62[%] thought overall behavioural standards were getting worse – now... 92[%] believe it. - 1996

Fresh research on post-natal depression has cast doubts on the view that delinquent juveniles are the product of bad parenting. The study... [by] the Winnicott Research Unit at Reading University... suggests antisocial behaviour in very young boys may be linked to maternal depression – an illness that strikes 10 to 15[%] of new mothers... "Even very young babies are acutely sensitive and sophisticated communicators. When adults are depressed – withdrawn, irritable, very low, babies will detect this,"... Early detection and support for mothers can reduce problems... [Ironically,] irritable or sensitive babies – those who are easily upset and hard to calm – significantly increase the likelihood of their mothers becoming depressed... [T]he investigation shows that... [by] the age of five, just over one in 10 boys whose mothers had suffered post-natal depression were disrupting classes, challenging teachers and squabbling[, whereas]... the daughters of clinically depressed mothers appear not to be affected... The question is whether the girls' resilience is making them a little too good... [M]ore research is needed to see whether an extreme need-to-please on the part of the girls is masking other problems, or whether it is an early indicator of future difficulties.

...Thousands of [NZ] university and polytechnic students are seeking counselling for depression – and many are on the verge of suicide... The director of student counselling services at Waikato University... said her staff had held meetings to discuss the problem because it was much worse than in 1996... Of the 2000 Auckland University students who are seen each year, the percentage suffering from depression has risen from 15 to 18... The head of counselling at Auckland University... said high fees, pressure to complete assignments through the year because of the two-semester system and uncertainty about jobs exacerbated students' depression... [While on the topic of depression, GPs] should not be able to prescribe... Prozac, says the Auckland coroner, who has linked its use to suicide... [The coroner] presided in four recent suicides in which the victims had been taking the drug... It could be coincidental that the victims were on Prozac or it could be that the drug had a "deleterious" effect on some people. [GPs] have been quick to defend the drug and their role in prescribing it... [by pointing out that it] is... used by more than 30 million people.

...N[Z]'s hunger for Prozac... has thrown [Pharmac's] budget out by more than \$740,000... which will be covered by the drug's manufacturer... [Eli Lilly's NZ] manager... said the... refund was a little more than the company had expected to pay...

N[Z]ers with depression will be able to turn to a new drug fully subsidised by the taxpayer. Health officials have approved subsidy of Serzone, available with a psychiatrist's recommendation... [Incidentally,] the clinical trials which led to official approval of Prozac reportedly tracked the use of the drug for only six weeks – hardly long enough to determine any long term side effects. Perhaps the side effect... of most concern... is the "sudden switch of mood to one of excitement, overactivity, talkativeness and uninhibited behaviour".

...TRIALS are under way in three N[Z] centres to treat extreme shyness with an anti-depression drug. If successful, researchers believe the drug may become the frontline treatment for "social phobia"[, which]... can make people afraid of writing cheques... eating or drinking in front of others, receiving visitors or meeting people in authority... "They are afraid of being nervous and they are also afraid people will notice they are nervous... which compounds the problem." The trials, involving about 36 N[Z]ers, have been funded by Swiss pharmaceutical giant Roche, manufacturer of the drug moclobemide under the brand name of Aurorix. Roche has also instigated similar trials in... A[US], South Africa, Canada... and Europe... [A] Phobic Trust psychiatrist... could see many positives to the use of moclobemide in treating social phobia. "It's a heck of a waste of potentially very talented and creative people because of the crippling shyness,"... [T]he belief that "a good stiff drink" was all shy people needed showed how lightly social phobia was often taken... "A lot of these people are prone to alcoholism." ...[Speaking of which, s]ome people medicate their depression with... alcohol... [This will] eventually worsen the condition... [because] alcohol is a potent depressant.

...People with extreme shyness are being successfully treated with an anti-depressant drug... The N[Z] patients in the trial took up to five Aurorix pills a day, a slightly higher rate than used for depression... [In related news,] a leading expert says... [people] are too readily turning to anti-depressant drugs for a quick-fix remedy[(Prozac has even been 'given to cockatoos'). The US]... clinical psychologist, said depression was becoming the most common disorder worldwide... The world authority on depression[, who] is visiting Auckland to hold treatment workshops sponsored by Massey University and Waitemata Health... said too many drugs were being thrown at people – often in the wrong circumstances... "Despite the great promises of anti-depressant drugs, they can't teach the kinds of skills people need if they are to avoid succumbing to depression,"...

Children and adolescents are being prescribed the anti-depressant Prozac in increasing numbers, although the drug's distributor does not market it for paediatric use... Eli Lilly's manager for N[Z] said... there had not been enough research to show its effect on those aged under 18. "If it was proved that it was safe or effective we would be able to promote it." ...Despite legal action[by hundreds of USers]... who allege it leads some people to violence[, US]... physicians prescribed Prozac and the related drug Zoloft more than 580,000 times to children and adolescents... [last] year... In 1994 it was given 220,000 times to children aged 5 to 10... Pharmac does not record the age of N[Z] patients given Prozac. [However,] doctors say more primary and secondary schoolchildren are being given it... [A]dolescents usually took Prozac for depression, whereas younger children were given it for attention deficit disorder and obsessive compulsive disorder.

...[the] Minister of Health... is concerned about the use of the drug ritalin, prescribed for attention-deficit hyperactivity disorder (ADHD) in children. Prescriptions for ritalin have increased dramatically in recent years... For the year ended August 1996, 24,000 prescriptions had been

dispensed, an increase of 83[%] over the previous 12 months. "This year we spent more than \$1.2 million on Ritalin... Figures like this do concern me. Strict criteria should be followed where powerful drugs are being prescribed, especially for children."

...The controversial drug Ritalin should be prescribed with caution and never be the first resort, says... the lobby group Children's Agenda, [which] was responding to concerns raised by the Minister of Health... [In addition, the] former Commissioner for Children, said most children were better off without Ritalin, or any medication... "It is so easy to just try to zonk them with something without taking into account what the child's personality is, or what their interests are." ...The Labour [Party's health spokesperson] said the lack of special education resources meant Ritalin was the only thing helping children cope. But the Minister of Education... said her claim was nonsense. "The Government has already committed \$134 million of between \$150 million-\$200 million set aside in the budget for Special Education 2000."

...[THE AGE OF RITALIN IS THERE A PARENT TODAY WHO HAS HEARD the talk or read the best sellers about ADHD and the drugs used to treat it without wondering about his or her child – the first time it climbs onto the school bus still wearing its pj's or loses its fifth pair of mittens or finds 400 ways to sit in a chair? The debate goes straight to the heart of our expectations and values. How dreamy is too dreamy? Where is the line between an energetic child and a hyperactive one, between a spirited, risk-taking child and an alarmingly impulsive one, between flexibility and distractibility? What if a little pill makes everything a bit easier, not just for severely impaired kids but for those who teachers say are a little too spacey or jumpy or hard to settle down? Is there something wrong with the kids – or is there something wrong with us? For years Ritalin has been a godsend for children who were so hot-wired they were simply unreachable, and unteachable. In severe cases, the benefits of Ritalin (and the family of related drugs) on these children's ability to function and learn and cope are so direct that advocates say withholding the pills is a form of neglect. But it is not the severe cases so much as the borderline ones – the children who occupy that grey area between clear dysfunction and normal unruliness – who raise the tough ethical issues, both public and private. The pace at which Ritalin use has been growing has alarmed critics for a while now. Some doctors find themselves battling anxious parents who, worried that their child will daydream his future away, demand the drug, and if refused, go off to find a more co-operative physician. Some parents feel pressured to medicate their child just so that his behaviour will conform a bit more to other children's, even if they are quite content with their child's conduct – quirks, tantrums and all. Many doctors won't discuss the matter publicly because the issues are so hot. Production of Ritalin has increased more than sevenfold in the past eight years, and 90% of it is consumed in the US. In AUS – where 2-6% of children are estimated to have ADHD – the prescription of stimulant medication for the disorder has increased 13-fold in the past seven years. Such figures invite the charge that school districts, insurance companies and overstressed families are turning to medication as a quick fix for complicated problems that might be better addressed by smaller classes, psychotherapy or family counselling, or basic changes in the hectic environment that so many children face every day. And the growing availability of the drug raises the fear of abuse: more teenagers try Ritalin by grinding it up and snorting it for \$5 a pill than get it by prescription. "Let's not deny Ritalin works," says a Manhattan Beach, California, family therapist who has written several books on raising children and who lectures extensively around the country. "But why does it work, and what are the consequences of overprescribing? The reality is we don't know." For that matter, even ADHD is still something of a mystery to doctors, who speak of it sometimes as if it were a single condition and sometimes as if it were a broad range of problems. Researchers suspect that the disorder stems from an inadequate supply of dopamine and norepinephrine in the brain – a hypothesis that is supported in part by the fact that Ritalin boosts dopamine levels. But proof of any of this has been tough to come by. So it should be no surprise that the latest research raises more questions than answers."

... "Whatever other shortcomings may be laid at the feet of those who run America's schools, a gift for hiding unpalatable truths behind bureaucratic euphemisms is clearly not one of them. Last week US educrats were adding to the list of opaque official titles that conceal some very strange jobs. Along with "self-esteem enhancement counsellor" and "conflict resolution mediator," no self-respecting school is these days without its "administering nurse." While the name makes her sound like a paper-shuffler, the truth is that this new breed of matrons – the country's fastest growing educational occupation – push pills instead of pens. With more than 12% of America's school-age children now under the influence of mood-altering prescription drugs, somebody has to hand out those daily doses of attitude adjustment. In most schools, public and private alike, "pill time" has become an entirely unremarkable fact of everyday life. The lunch bell rings, a queue forms outside the school sick bay and students, the vast majority of them boys, wait dutifully to toss down their daily hit. Just why so many American children are being medicated is a moot point. Even the First Wife, who has studiously avoided spelling out her positions on scores of other issues as it pursues a seat in the Senate, has joined the chorus of voices calling for "a full and comprehensive clinical review." In the meantime, drugs like Ritalin and Luvox cut across class, race and economic divisions. In some Harlem public schools, where parents are eligible for as much as an additional \$US450 a month in welfare payments if their children are diagnosed with learning disabilities, entire classrooms are on one or other form of medication. "When the American Psychiatric Association declared ADD a recognised disorder in 1987, it started a gold rush," a Citizens Commission on Human Rights spokesperson says. "In a decade, Ritalin production has increased by 655%. The economic incentives for keeping kids high are very potent. Schools, parents, drug companies and the psychiatric community all get something out of keeping kids high."

...Hyperactivity medicine in high demand Prescriptions for the psychiatric drug Ritalin in NZ have jumped 16% in the past year, according to the government's drug-buying agency. Pharmac has released figures showing that 49,239 prescriptions for Ritalin, were issued last year. The Ministry of Health's chief youth adviser said no figures were available to show how many NZ children took Ritalin or how many of the prescriptions were for patients newly diagnosed with ADHD. The adviser is coordinating an advisory group that is drafting a set of guidelines for the diagnosis and management of the disorder, following controversy about the prescribing of Ritalin and its use as a recreational drug. Ritalin has become popular with users of illicit drugs because of its similarities to methamphetamine (speed). The guidelines, which are expected to be released next month, will look at the causes of under and over-prescribing of Ritalin as well as other solutions to the disorder, such as behaviour management and dietary restrictions."

...AUSn 'mothers are sedating unruly children with over-the-counter cough and cold mixtures in a trend which raises important public health issues. A lecturer at the Key Centre for Gal's Health at the University of Melbourne said a pilot study of mothers with under-5s had confirmed anecdotal reports of widespread use of antihistamines to "keep children quiet." "We've now coined the expression 'social medication,' which is using a drug for the sole purpose of controlling behaviour rather than the purpose for which it was intended. Our concern is that parents who are likely to medicate their children like this are maybe the ones which present them later for ADD or ADHD because they believe medication should control children's behaviour. Are we creating a culture of pill-popping to get children to conform to a notion of 'the normal child'?" "● Tonight's INSIDE NZ documentary *Out Of Control Kids – Living With ADHD* (TV3, 8.30pm) looks at the lives of people who have been diagnosed with ADHD, the hardships they face and the problems it causes their families."

... "a 10-year-old runaway Dunedin boy with ADHD and a fascination for heavy machinery may be made to wear an electronic tracking device – worn as a pendant or wrist bracelet – to help authorities locate him quickly. The police plan has been welcomed by the father of the boy, who has run away more than 50 times and has often been found driving heavy vehicles. Late last month the boy was stopped on Dunedin's Main South Rd after driving an excavator about 500m. The tracking unit has a range of up to 4km and would cost \$15,000 – although someone has offered the use of their unit for free. The proposal was put forward after the boy disappeared again last Monday in Mosgiel and was found driving a tractor. The boy's father said his son's penchant for heavy machinery meant it was only a matter of time "before my boy kills himself or someone else."

... "When the Mt Eden mother wants to cook a meal it sometimes ties her 8-year-old son to a chair. The mother has called for police assistance just to get home when her son has tried to climb out the window and on to the roof of the family car in traffic. The son has smashed windows and furniture in their battered villa in tantrums his mother calls diabolical. His wild behaviour is not the worst of it. Epileptic seizures convulse his small body and the boy is asthmatic; even when the boy is quiet, his mother watches him closely for fear it may fit and stop breathing. Diagnosed with ADD and mild retardation, the

boy has driven his mother to near distraction. The mother finds herself identifying with the Palmerston North mother convicted of humanslaughter for strangling her teenage autistic daughter, Casey.'

... 'A mother with no medical or scientific training may have made a dramatic breakthrough in the search for a cure for autism. The English graduate from New Hampshire in the US has discovered a possible treatment, the effects of which are being hailed as "near miraculous." Her findings will be unveiled next month at a conference organised by the Autism Research Institute, which is endorsing them. The mother's research centres on a hormone, secretin, which stimulates the pancreas to produce enzymes. Secretin is also used in the diagnosis of gastrointestinal illnesses, and it was this use that led to her discovery. The hormone was given to her autistic son when it underwent an endoscopic examination. The boy began to show remarkable signs of improvement within days of receiving secretin. "Before my son received secretin it was completely non-verbal, non-responsive and zoned out to concentrate on specified tasks. It also had to wear nappies all the time because we could not potty-train him. We referred to him as being 'zoned out'. After the secretin, we noticed an amazing difference in eye contact. Our son became calmer and started sleeping all night long, something it had virtually never done before. We then realised our son was no longer exhibiting the facial tics it had had for two years. And two weeks after the examination it began speaking for the first time in over two years. By week three it was saying small phrases such as 'I love you,' 'Thank you, Mummy' and 'Good night, Daddy.' It started to dance to music and sing to its favourite videos. Within weeks it was potty trained, almost effortlessly." In the two years since, around 120 children have been treated with the hormone. However, fewer than 20 doctors are willing to administer it, since America's powerful FDA has not approved it. Doctors involved are therefore forced to work covertly. The mother said: "It has been two years since we initially discovered the hope that lies behind this hormone. My son has made incredible progress in the past year, particularly since enlisting the care and treatment of some fine doctors and scientists. But we are left to question whether his gains would have been more magnified if it had had stronger, more frequent doses. This is what propels our efforts for further research." The secretin research is too late for Casey Albury, who became the face of autism in NZ when her mother admitted killing her.'

... 'A Northland couple had to bind their autistic son. Early diagnosis could alleviate such problems, say experts. All babies should be routinely screened for any developmental problems, especially autism, say new US guidelines. Babies diagnosed and treated early for autism usually do better than children who are treated later, according to the American Academy of Neurology. "It sometimes takes years after the first symptoms are noticed for autism to be diagnosed," says a pediatric neurologist at the University of California, who headed the subcommittee that wrote the guidelines. "It should never be assumed that the child will grow out of it or catch up." Autism, which is marked by social withdrawal and behavioural problems, affects one in 500 children, the subcommittee says in its report. The report also says children with autism generally learn better when they are given visual as well as verbal instruction, and when other children are around to help demonstrate language, social and behaviour skills.'

... 'The Phoenix Centre at Riverhills Primary School in Pakuranga is NZ's first class for autistic children to be integrated into a mainstream school. The class started in January but officially opened this week. It is the result of three parents' desire for an autistic class within a mainstream school. The parents found that Riverhills School had a spare classroom and its principal was willing to take the children. They would normally have attended a special education school, or an extension unit at a primary school. Apart from a safety fence, the room appears the same as every other classroom. But its interior has been purpose built for autistic children. Inside are individual work cubicles so pupils are not disrupted by others, "quiet rooms" for time alone and carpet to minimise loud noises which the children cannot tolerate. From the combined funding of nine children, the class receives a full-time and part-time teacher, as well as teacher aids and speech and occupational therapists. Several mainstream classes are held in the Phoenix Centre to include the autistic children, with a buddy system between mainstream and autistic children. There is now a waiting list and parents in other cities are looking to set up similar classes.'

... 'The most widely recognized of the pervasive developmental disorders is *infantile autism*. Children with this disorder were first identified by psychiatrist Leo Kanner (1943), who noted many of the most puzzling and disturbing characteristics of autism. It is difficult to imagine just how disturbed an autistic child is, but once you have observed one of these unfortunate children the memory will last forever. If two autistic children are placed side by side in a room full of toys, chances are they will ignore each other and most of the toys; these children seem to be living in a world much different from our own. In their aloneness, autistic children seem to prefer inanimate objects to human interaction. A failure to use eye contact to modulate social interaction is a frequently observed feature of the disorder, and autistic children often appear to be unaware of people or even of themselves. However, studies using subtle measures of attending, such as heart rate, show that autistic children are aware of the presence of other people although this may not be reflected in their overt behavior. This disruption in social behavior also is found in a lack of attachment behavior and empathy in social relations. Language deficits constitute one of the most incapacitating problems autistic children face. About half of autistic children never develop meaningful, useful speech, and most others have limited and sometimes bizarre means of verbal expression. Many autistic children learn to master only a few of the tasks necessary to function in the world and need constant help with feeding, dressing, toileting and learning. Autistic children spend much of their time engaging in *self-stimulatory behavior* such as repetitively spinning objects, switching lights on and off, or flapping their hands in front of their eyes. Whether autistic children are of normal, below-average, or superior intelligence has been the topic of much discussion. Kanner and others have suggested that autistic children have normal or even super intelligence that is hidden beneath a blanket of psychopathology. Several pieces of circumstantial evidence support this speculation. The parents of autistic children are somewhat more likely to have higher than average IQs, and the normal physical appearance and motor development of the child does distinguish autism from many forms of mental retardation. Furthermore, some autistic children show what is called *idiot savant* capacities: they may have peculiar talents, particularly mathematical ones, such as being able to quickly and accurately predict the day of the week that some future date will fall on. However, despite such indications that the psychological problems of autistic children shroud a superior intelligence, about 70% of all autistic children score as mentally retarded on psychological tests. Currently, it is almost universally accepted that autism has a biological cause that has yet to be specified. To date, autism has proven to be a discouraging behavior disorder to treat. Of the host of treatments that have been tried, operant behavior therapy appears to be most effective, but this is a time-consuming treatment producing change that greatly helps the children in day-to-day functioning but still leaves them performing well out of the range of normal development. While behavior therapy may not be the solution to all of the problems of the autistic child, it does offer these children the opportunity to develop many more skills than they would otherwise acquire. Unfortunately, even what is called a "good" outcome, while a dramatic change, is far from the sort of life that most of us would consider to be ideal. In every classroom in the country, there is a child who has difficulty sitting still, attending to the teacher, finishing school tasks. Drug therapy has been a popular solution to this problem. However, not only may drugs produce undesirable side effects, such as growth suppression and increased blood pressure, but in 30 to 50% of the cases, drug treatments are ineffective. An alternative is the use of operant learning principles to control this type of child. Considerable disagreement can be found in the discussions of childhood depression. It has even been argued that because of immature cognitive and personality development, it is not possible for children to be clinically depressed, or at least it may be impossible for younger children to experience depressive disorders in the same manner as adults do.']

...Magnets may be able to replace more radical treatment such as electro-convulsive shocks for depressed people... [T]he University of Valencia used a method called transcranial magnetic stimulation (TMS) on... patients with severe, drug-resistant depression. A magnetic coil was placed on the patient's scalp and pulses sent to various areas of the brain associated with depression... 11 of the 17 patients showed marked improvement. "TMS... is practically painless, does not require anaesthesia, is not coupled with induction of a seizure, and has fewer risks and cognitive side-effects." But... more study was needed... [□ The] *British Medical Journal* last year reviewed 23 controlled studies of 1,757 depressed patients, and reported that US and German researchers had found the herb St Johns Wort worked nearly three times better than a placebo. In Germany, St Johns Wort is now the leading treatment for depression, with doctors writing 25 times more prescriptions for St Johns Wort than... for Prozac.

...[her] black moods were often accompanied by inexplicable bouts of insomnia, crying and lethargy... [when] the 58-year-old... didn't care... [about staying alive. But the] Toronto accountant... balked when her physician suggested a common depressant: [the 58-year-old] didn't feel comfortable taking drugs. Fortunately, a friend suggested the herb Saint Johnswort[, which]... is available in N[Z]... Within three weeks, her depression had lifted. "I feel restored... [and, apart from continuing] to take two herb capsules daily... I'm my normal self again." In Europe, Saint Johnswort, a yellow-flowered plant with the Latin name of *Hypericum perforatum*, has been popular for about 15 years. In Germany, where it's the leading treatment, physicians write three million prescriptions a year... Thanks to books and articles touting the herb's properties, its popularity is spreading... [T]he Herb Research Foundation calls Saint Johnswort "the premier herb for moderate depression." What's the evidence for this claim? ...One compelling study tracked the herb's effects on 3250 patients battling mostly mild and moderate depression and found that about 80% either felt better or became completely free of symptoms after a month... In spite of the promising studies, researchers know little about the herb's active ingredients or how it works. They also aren't sure whether Saint Johnswort can help the severely depressed or if it's safe and effective long-term[, although]... millions of Germans have used the herb extensively without any reported deaths. In the study of 3250 depressed patients, only 2.4% experienced side effects. Those included restlessness, gastrointestinal irritations and mild allergic reactions... [A]ntidepressants, such as Prozac, cause more common and more serious side effects, such as insomnia, weight loss and sexual dysfunction. "The absence of serious side effects is one of *Hypericum's* biggest selling points,"... [However, experts] note that many of the products in [US] healthfood stores contain overly diluted concentrations that render the herb impotent... [H]ealthfood stores now peddle a panoply of mood-boosting supplements, including... the hormone pregnenolone... the amino acids 5-hydroxytryptophan and L-tryosine... and... kava root...

Health agencies are sounding warnings over kava drinking moving from ceremonial supping to abuse... [Drinking kava, which] is made from the pounded pulp of the piper methysticus plant... had become an activity in its own right: "When it goes 11 to 12 hours, it's not ceremonial." ...But... [a] senior lecturer in Maori and Pacific health at the Auckland Medical School, does not see consumption of the powder and water brew as a public health problem... Kava... made drinkers sedate and lazy but it was preferable to alcohol... [However, a spokesperson for] Alcohol Healthwatch... said... "When I was in Fiji last Christmas, it was a health issue there... [Dads] were going away for three or four days then sleeping the rest of the week – the [mums] were having to provide for their families." ...Last year a Fiji newspaper reported that kava was turning married [guys] off sex, forcing wives to have affairs and breaking up marriages... [T]he doctor in charge of... [Fiji's] only psychiatric hospital... told a medical conference this week that many [Fijians] were so drugged by the drink they were unable to properly satisfy their wives in bed... [The] Nigerian working on a Government contract... said the problem was also experienced in other South Pacific nations... [P]owdered kava... is widely available from shops... in Auckland.

...[the sudden worldwide demand for the narcotic South Pacific plant by Western companies seeking to manufacture it as a health drug – marketed as a no-side-effects cure for stress, depression and symptoms of menopause – has sent the root's price spiralling out of reach of many Fijians. The price has doubled already this year from \$20 to \$40 a kg. Kava exports earned \$20 million in the first six months of this year – the same amount as for the whole of last year. "I'm already projecting that with the investment the Government has promised, we should be making \$200 million a year by the year 2000," said the chairperson of the National Kava Council, which was formed earlier this year by Fijian farmers and traders. One of Fiji's biggest exporters says 50 tonnes of dried kava roots, stuffed into nylon sacks, are shipped out of the country every week. Between 30 and 50 foreign buyers from the US, Europe, China and South-east Asia are in the Fiji Islands at any one time hoping to cash in on "the drug choice of the nineties," according to one of the scores of kava sites on the Web. Kava roots are traded on the Internet by the kg at several times the Fijian price. "Just a few cupfuls and you'll find euphoria, tranquillity, friendliness," promises one ad. Indigenous to the Fiji Islands, Tonga, Vanuatu and Samoa, the root produces a muddy, brown liquid tasting like peppery dishwater. "It makes my body feel loose and it numbs my brain cells. I forget all the things I'm worrying about," says a 27-year-old mechanic. But looking out to sea on the shores of the small, hilly, kava-growing island of Ovalau, a young farmer still waits for money owed by a US agent who took his kava crop and has not returned. "The agent took it to Suva and I don't even know the name of his company. I left the Navy to plant kava when the price went up but now I regret my decision." The Pacific Concerns Resource Centre based in Suva has begun drawing up legislation regarding "the intellectual property of indigenous peoples." Unfortunately: "Kava has already been hijacked," says a spokesperson for the centre, referring to the illegal sale of green plants for mass cultivation on experimental farms in Hawaii, Guatemala and AUS.' By the way, NZ p[atients with depression face paying almost \$300 a year to stay on certain pills as the Government moves to cut drug spending. Health officials have written to the manufacturers of Prozac and Aropax warning that the subsidy will drop in February by about 25[%]. That forces the drug companies to either drop prices or make patients pay a part charge above the subsidy... SmithKline Beecham, the makers of Aropax... said patients on Aropax would have to pay \$24 a month if the company did not drop prices... [The] company has started legal action against Pharmac, claiming that the latest move is unjustified... To cut spending, [Pharmac] has started paying subsidies only to the level of the lowest priced drug within a similar drug group... Eli Lilly... is considering taking legal action but said that would be a last resort. It would decide within four weeks whether to go to court, drop its prices or make patients pay a part charge... Pharmac said yesterday that it could not talk about the planned subsidy drop because of the legal action.

...[the 2500 NZers who take the anti-depressant drug Cipramil will be spared a manufacturer's surcharge when taxpayer subsidies on Prozac and several other anti-depressants are cut in February. Cipramil's supplier will meet the subsidy reduction, which the Government drug-funder has negotiated with the makers of a generic version of Prozac. Pharmac is investigating the possibility of paying manufacturers' surcharges for the 11,500 patients who take the anti-depressants Serzone or Aurorix.' Incidentally, 'top psychologists readily admit that, while it is impossible to overdose on Prozac, the drug can be addictive – although its manufacturer says no studies have been done into its addictiveness'...

'Even "beneficial" activities' when] done to excess can be addictive. The key is to follow the ancient Greek maxim "Nothing to excess." Each person is free to interpret excess, but it is important to know one's limits ("Know thyself")... V[iewing addiction as simply a func]tion of neurotransmitter levels gives people one more excuse not to take responsibility for their actions... "...We can blame God for the dopamine in our brains."

...AS A BIOLOGY WATCHER FOR MANY YEARS and a pain-management professional, I'd like to sound a note of caution regarding the dopamine hypothesis of addiction. What is known is that the relationships between dopamine, brain content and addictive behavior are associative, not causal. Even those of us who are advocates of greater understanding of neurotransmitter mechanics in human behavior do not see the situation as "simpler than anyone has dared imagine." As our attempts at interdiction and control so amply demonstrate, there is a flaw in advocating simple solutions for complex problems: the solutions are usually wrong... [Our attempts reveal] more serious American addictions: the desire to explain complex human psychology in... materialistic terms and the need for a pill to solve every problem... [T]he "dopamine cycle" may reveal the physiological underpinnings of human cravings, but this is not the whole story. Though dopamine pleasure may "take hold" and perpetuate addictive behavior, the source of the need is psychological and relational. People [become addicted] to... whatever... will give them the dopamine rush, either as a misguided way of connecting or to deaden the pain of being disconnected.

...[University of Toronto scientists say they may have found the key to better treatments for addiction. They think the clue to controlling the illness is the interaction of proteins on the surface of brain cells that decide how much dopamine (linked to pleasure and addiction) and other brain chemicals called GABA (associated with learning, memory and emotion) to let into the cell. Too much or too little dopamine and GABA produces symptoms of addiction.]

...AS A RECOVERING SHOPLIFTER, I KNOW THE payoff was not just the high but also the immediate gratification. Shoplifting was a way for me to express anger, reward myself when life seemingly didn't, assuage a feeling of emptiness, and give myself the illusion of control. You can

say all this goes back to dopamine, but haven't we seen many people who, although stabilized chemically, continue to be addicted or switch addictions? There's more to addiction than meets the neuron.

...I [take exception to comments by the] director of the U.S. National Institute on Drug Abuse, that for a recovering person "the occasional relapse is normal." Thanks to the programs of Alcoholics Anonymous and Al-Anon... I learned... that I do not have to accept another person's active alcoholism as normal behavior... My husband has been continually sober in the fellowship of A.A. for eight years. And we've personally known members with... 40 years of sustained sobriety. The fact that there can be recovery from this devastating family illness is the light at the end of the tunnel for so many of us. And the knowledge that our three-year-old son does not have to grow up in alcoholism is the greatest blessing of our lives.

...[learning about the causes of ad]diction was a blessing... I'm a recovering alcoholic and ex-smoker, and it took me a long time to accept addiction as a physical disease, not a characteristic flaw, and to realize... it must be dealt with in the same clinical manner as high blood pressure or cancer.

...W[hile treating addicts on a] daily basis, I... found that a common mechanism underlying addictive behaviors is stinkin' thinkin' (a term coined by A.A. long before cognitive therapy). This refers to beliefs that lead people to engage in addictive behaviors despite their potentially devastating consequences. Some such types of thinking are anticipatory beliefs ("I'm gonna win a fortune... at the casino"), relief-orientated beliefs ("If I smoke a cigarette, I won't be so tense"), and permissive beliefs ("One piece of chocolate won't kill me"). According to cognitive therapy, "recovered" people have replaced their addictive beliefs with more adaptive ones ("I can enjoy life without drinking, drugs, gambling or smoking").

...[People are astonished that 60,000 suicides are committed in Europe each year, but they ought to be surprised there are so few. Every human of our time, if we go deep enough into the contradiction between his conscience and his life, is in a most terrible condition. The contrast between the permanently armed condition of Europe and its profession of Christianity is alone enough to drive anyone to despair, to doubt the sanity of humankind, and to induce him to end his life in this irrational and brutal world. This contradiction – which is a quintessence of all the other contradictions between life and conscience which fill the life of a human of our day – is so terrible that to live participating in it is only possible if one does not think of it and is able to forget it. And this is the only explanation of the terrible intensity with which people of our time strive to stupefy themselves with amusements, or opium, wine, tobacco']...

Gloomy outlook for depressed smokers... A visiting health expert... of Harvard University... said non-communicable diseases were fast replacing traditional ills such as infectious bugs and malnutrition... [The expert] co-edited the first international study in this area, called the Global Burden of Disease, estimating which diseases would inflict the most death and disability... [H]is work, made public a year ago, had prompted many governments to launch specific studies to better plan health services... Two key factors will shape afflictions in 20 years: aging and tobacco... [T]he biggest horrors plaguing humans by the year 2020... will be... heart disease, depression, road accidents, stroke and lung cancer... - 1997

Since 1949 when... a relationship between smoking and cancer... [was] discovered... many investigators have studied the problem. Although there still exists some debate about the degree to which smoking contributes to lung cancer, virtually everyone agrees that there is some relationship... Dentists also find that the action of... nicotine... can stain and injure the porcelain of the teeth, which often must be completely recapped for their protection. Every so often a substitute is put on the market to compete with tobacco; in the U.S. in 1959, for example, a cigarette was sold which was made of combustible vegetable material not containing the nicotine or tars which so often coat the lungs of a smoker. The venture, however, was doomed to failure, as the leading tobacco companies united all their forces to discourage the sale of this new cigarette.

This herb belongs to the potato or Solanaceae family. It is not dangerous to touch like poison ivy, but smoking the leaves may affect the proper functioning of the body... [T]obacco's narcotic property... is used in some insecticides... In 1964 the advisory Committee to the Surgeon General of the Public Health Service in Washington did research on the effect of smoking on the health. Its report produced strong evidence that smoking is a hazard. Unfortunately this report had very little effect upon American smokers. In 1965 government legislation required tobacco industries to print a warning on each package... Since then, millions of dollars are continuing to be spent on further research. The government is putting restrictions on the number of acres that can be planted and the amount of yield per acre. Tobacco was originally an American tropical plant but has been adapted for cultivation in subtropic and temperate regions... It is an unbranched annual, growing three to six feet tall, with large oval leaves.

TOBACCO has been grown as a commercial crop... near Motueka... in... [NZ] for more than 60 years... Most of the tobacco produced here is flue-cured, producing a yellow-leaf tobacco... The policy of the NZ government has been to use locally grown leaf as an import substitute... [50%] of the tobacco used in locally manufactured cigarettes and in cut tobacco was home grown by the early 1960s, and this continued until the beginning of the 1970s since when it has been declining[. By the late 1990s only 'a few small, privately-operated NZ farms were still growing tobacco']...

A Motueka... r[esident]... has been convicted of illegally manufacturing tobacco... Manufacturing tobacco is prohibited under the Customs and Excise Act and carries a maximum penalty of a \$5000 fine. R[esident] was fined \$1000... 52kg of tobacco, manufacturing equipment and a bag containing \$7350 cash was found during a search of a property where R[esident] claimed to live... Defending himself in the Nelson District Court, R[esident said it] was exempt from prosecution because a regulation in the act said it was okay to grow and manufacture tobacco for personal use.

AFTER BEING bothered by a nagging cough with increasing phlegm for some months, [a] 41-year-old Auckland housewife... consulted her doctor, who ordered a chest x-ray and blood tests. When the x-rays revealed a dark shadow on Mary's lungs... Mary... was admitted to hospital for an urgent biopsy. The diagnosis was devastating: inoperable cancer. Mary had smoked 20 cigarettes a day since her teens, rarely worrying about cancer. "I thought only older people got it... and rarely [gals]." Mary delayed treatment for a few weeks to give her husband and two sons time to adjust, then had chemotherapy and radiotherapy. The treatment controlled the tumours for ten months, until secondary growths in her brain caused her to have frequent fits. Despite her desperate will to live, Mary died a year after diagnosis. The [gal] who succumbs to lung cancer in the prime of her life has become an all-too-familiar tragedy in... [NZ. The] acting medical director of the Cancer Society... says it is shocking that so many [people] use tobacco without realizing the dangers. Moreover, smoking costs us \$125 million each year in hospitalization, practitioner care and drugs for heart and lung diseases – and many millions more when you include hidden costs such as lost productivity, insurance and fires. "Every year we lose nearly 5000 years of working life as a result of people aged 15 to 60 dying prematurely because of cigarettes," says... a Hokianga epidemiologist... 1100 of the 4000 who die each year because of smoking are [gals]. At Tauranga Hospital, a study of patients aged 55 or less... showed that of 15 cases of lung cancer diagnosed between 1986 and 1988, 12 of the victims were [gals]. Of these, 11 were smokers and the twelfth lived with a heavy smoker. Most died within a year of diagnosis... Among [NZ guys], the lung cancer death rate has been fairly steady since the late 1970s, but there's been a 252[%] increase in the number of [gals] dying from the disease over the past 30 years. Lung cancer now kills nearly one in 40 [NZ gals] and is likely to replace breast cancer as the leading cause of cancer death among [gals] early in the next decade. "The most devastating thing about lung cancer is that fewer than [5%] of its victims are alive five years after diagnosis, compared with a 70[%] survival rate for those who get breast cancer," says... [a] respiratory specialist... The figures are even more alarming among Maori [gals]... In this community, lung cancer has [already] overtaken breast cancer as the leading cause of cancer death. It is no coincidence that the 1981... census – the

last to question smoking habits – revealed that nearly 60[% of Maori gals] smoked compared with only 26.8[% of gals] from other groups. Smoking is also implicated in other types of cancer, especially of the larynx, mouth, throat, gullet, bladder, pancreas, kidney, cervix and stomach. According to a report by the Toxic Substances Board to the minister of health in May 1989, smoking accounts for nearly a quarter of all cancer deaths in both sexes. But [gals] who smoke run extra risks. Smokers who take the oral contraceptive pill have a dramatically increased risk of coronary heart disease as they get older. Pregnant... [smokers] are much more likely to miscarry or have stillborn children. Their babies are more often below normal weight and susceptible to a variety of diseases during their first year. Smoking during pregnancy and after birth may increase the cot death rate. “Our research shows that severe pre-menstrual symptoms and period pains are more frequent for smokers, and related to the number of cigarettes smoked,” says... the Family Planning Association. “Smokers also have an earlier menopause.” Ironically, most [gal] smokers are in their twenties, the prime child-bearing age. Fortunately, publicity in recent years urging addicts to “kick it in the butt,” may have had some effect among older smokers... But doctors are alarmed that people aged 15 to 24 are *not* heeding the messages, particularly since the risks of lung cancer and other diseases are greater the earlier smoking begins. One [gal] in three in that age group smokes – the same number as in 1983. A study by... the University of Otago Medical School, showed that among 15-year-olds, one in five girls and one in ten boys smoked every day. “Almost as quickly as long-term smokers die or quit, their ranks are replaced....”... So why do so many continue to smoke, and why do so many younger [gals] start? Here are some findings from recent studies of smoking habits: *Ignorance of the dangers... Fear of gaining weight.* Today’s society exerts tremendous pressure on [gals] to be slim, and it is true that many who graduate from stop-smoking programmes report gaining from two to four k[gs]. “However, about] a third who quit... stay the same and a third actually lose weight,” asserts... [the] national director of ASH. If nothing else, food tastes better and many ex-smokers eat more. A craving for sweets also grips some people. But it’s more complicated than that. Nicotine is a stimulant *and* a relaxant. Smoking burns up kilojoules... [A] study published in... 1986... [by] the University of Lausanne in Switzerland found that a pack-a-day [gal smoker expended 10%] more energy when... [smoking than when the smoker] stopped... *Psychological need.* People who suffer from anxiety, low self-confidence, stress or depression often use cigarettes to try to relax. Those... who use cigarettes as an emotional crutch find it difficult to abandon them. A paper prepared for the[NZ] Medical Association says this applies especially to [gals] in lower socioeconomic groups who have less control over their lives. *Advertising enticements.* Tobacco companies portray the [gal] smoker as confident, slim, successful and sexy. This image has a strong appeal for young [gals]. “I bought my first pack of cigarettes, lit one and posed in front of the mirror,” says one 16-year-old girl. “I liked what I saw, just like in the ads, and I’ve been smoking ever since!” Antismoking groups say that advertising expenditure is one of the main factors affecting increased consumption... Studies in other countries have shown that tobacco use decreases when tobacco promotion is banned. The Toxic Substances Board has recommended that tobacco promotion “in all its forms” be eliminated by December this year... “THOUGH IT’S never easy and often takes more than one attempt, half of [gals] and more than half of [guys] over 25 who have ever been smokers *have* managed to give it up,” says... the Department of Health. In 1989, 50,000 smokers became ex-smokers, and ex-smokers now outnumber smokers... To emphasise the blunt warning of our antismoking lobby: Tobacco is more addictive than heroin. Act as if your life depended on quitting. It does.

...at Green Lane Hospital, where long-term smokers go to die from cancer, blockage of the airways and lung failure[, doctors]... watch... people struggle to their last breath... Patients are usually admitted because of breathlessness, their already damaged and constricted airways further blocked by the infection of cold and flu viruses. Some are hypoxic, their lungs so badly damaged they won’t pick up oxygen and pass it on to blood for delivery to other organs... Chronic obstructive respiratory disease (CORD) is the third-most-common reason for admission to Green Lane’s general hospital wards... Hospital staff don’t lay blame. Smokers get the same treatment as anyone else... Treatment is with steroids and dilating agents to increase the size of air passages, and with oxygen. But there’s “not a lot of reversibility” in those wards. The ones who do go home often come back, if the ambulance makes it in time. “They feel like they should die but they hang on for... a long time in a very distressing state... It’s very depressing to watch.” ...Perhaps most disturbing for staff is the increasing number of young [gals], particularly Maori, being diagnosed as having lung cancer. “The youngest was in her early thirties, and that’s a tragedy for her, for her family and friends.” In another part of Green Lane... the coronary care unit... 60[%] of patients have a history of smoking... Drug treatment for cardiac problems often has undesirable side-effects... [Doctors] tell... them the single best thing they can do to help themselves is stop smoking, and 90[%] do. But there can be little clearer indication of addiction than that the remainder continue to smoke after being confronted with their own mortality... 17 out of every 100 [NZers] will die of a smoking-related illness... [L]ast year... 2934 tonnes... of tobacco were consumed in... [NZ, down from] 3758 tonnes... in 1990[, and the cost]... to the country is estimated at \$250 million annually... But that \$250 million cost provides little imperative for politicians to act to discourage smoking. For each of the past eight years governments have taken around \$600 million in tax on tobacco.

...plans [by NZ’s Government] to legalise tobacco advertising are hypocritical and will encourage younger children to start smoking... claims... the Smokefree Coalition... which represents more than 20 health and consumer groups... [T]he organisation would withdraw its support for new smoke-free legislation if the Government persisted with its plans... “We understand the Government is dead set on legalising and sanctioning tobacco advertising within the Smokefree Environments [Amendment] Bill and, to us, that is wrong,” [the coalition’s chairperson] said. “It is a backward step. It is going against [the aim of] the original 1990 act, which was to get rid of advertising.” ...The 1990 act limits advertising to price notices without “any pictorial representation, design or device.” The 1996 bill[, which was introduced last October by]... the Minister of Health[, and is]... now before a select committee, endorses the tobacco industry’s advertising code of practice... including [letting retailers display] posters equal in area to four pages of a newspaper. “The companies exploited a loophole in the [1990] act via the price notices which... [they] blew up into advertisements and now the Government is sanctioning the loophole.” ...[the chairperson] said other aspects of the bill, including raising the legal age for buying tobacco from 16 to 18 and banning the sale of single cigarettes, were aimed at discouraging teenagers from smoking but would be outweighed by the advertising... [The Minister of Health’s] announcement this month of a \$3 million advertising push – part of a five-year... campaign – to cut the number of new smokers demonstrated the hypocrisy of the Government and its mixed messages to youth, [the chairperson said. A spokesperson]... for the Minister of Health said it was inappropriate for [the minister] to comment on a bill before a select committee.

...Young people could soon be hauled before the courts... for buying tobacco. A parliamentary committee has recommended... punishing... people under the age of 18[who] buy tobacco... with \$40 instant fines. If they do not pay the fine or deny the offence, they will find themselves in front of a district court judge facing a maximum fine of \$400. The matter is similar to parking fines or under-age drinking... At present it is only an offence for retailers to sell cigarettes to minors... However, since the Smokefree Environments Act came into force... the Ministry of Health has successfully prosecuted just four retailers... The ministry hopes the number of prosecutions will rise with increased funding for enforcement work... [T]he committee has also proposed that... the size and design of price notices in shops be enforced under the bill and fines introduced of up to \$50,000 against tobacco companies and up to \$10,000 against retailers... Further, the committee wants a law change to replace the present colour price notices with black and white ones. Each price would be limited to the size of a business card and the complete price list could be no bigger than the size of an A4 sheet of paper... Despite promises made in December 1994 to put tight restrictions on brand price lists... the Minister of Health has been slow to take action and [only signed a] voluntary agreement with the industry... [The minister] has also to act on another promise to put stronger health warnings on tobacco packets, similar to those in A[US] which cover a third of the front of the packet... [T]he Auckland Council for

Civil Liberties doubted that moves to punish young people for buying cigarettes would be a success. "The punitive approach is unlikely to work and is certainly impractical because a lot of youngsters won't be able to afford fines at that level."

...A proposed law change that would allow fines of up to \$400 to be imposed on under-age smokers caught buying cigarettes is too harsh and unworkable, the Cancer Society says.

...Porirua in Wellington, the Far North and South Waikato topped the table of deaths due to cigarette smoking between 1989 and 1993[. according to a] Cancer Society report... More than 20[%] of all deaths in... [the three areas] were attributed to cigarette smoking... The lowest death rate... was in the Queenstown-Lakes district (13.5[%]) and the Chatham Islands (13.2[%]). The main cities appeared midway in the table...

The Cancer Society is urging the Government to implement a programme of measures to reduce the death toll from smoking. A request to increase cigarette prices is a key proposal... "Increasing the price is the single most effective measure to reduce smoking, but there has been little change in the real price of cigarettes in the past five years,"... [A]n increase in the price of roll-your-own tobacco in December last year reduced the percentage of N[Z]ers smoking from 27 in 1995 to 25 in the first half of this year... [S]imilar effects resulted from price increases before 1991... Other proposals include the banning of... all tobacco advertising in shops... smoking restrictions and encouraging interest in healthy lifestyles... In addition... the Cancer Society wanted: • ...All schools and educational institutions totally smoke-free. • Smoke-free environments as of right for all workers... Offices were smokefree, but other workplaces such as factories were not... • Lowering the tar in cigarettes to two-thirds of current levels... The society's report, entitled *The Big Kill Continues – The Human Cost of Smoking in N[Z] in the 1990s*, [included] a national and regional analysis of smoking... Another report, *Tobacco Statistics 1996*, published by the Ministry of Health and the Cancer Society, was also released yesterday. One in six deaths in N[Z] is caused by smoking, according to statistics. "These deaths can only be prevented if current smokers quit,"...

['Cigarettes are blamed for a 1/3rd of fatal house fires each year in NZ', which gives credibility to the phrase: 'a fire on one end and a fool on t'other'...

A fool] was fatally burned when his pipe set fire to the chair [it] had fallen asleep in at a Kaikohe rest home yesterday. The Fire Service says that without the sprinkler system the fire would almost certainly have killed four or five others. [By the way, 'smoking may have less impact on your health than you thought – it's the size of your wallet that seems to count. Studies show wealthy heavy smokers still enjoyed better health than poor non-smokers.']

...Non-smokers who live with smokers are 30[%] more likely to have heart attacks than those who do not, says the draft of a report the tobacco industry is trying to muzzle. The report was compiled by a working party from the A[US]n Health and Medical Research Council, but the Tobacco Institute... [and the AUS]n subsidiaries of tobacco giants Philip Morris and Rothmans of Pall Mall... [are] suing the council to stop it publishing the final version... on the grounds that the council acted improperly by failing to comply with the requirements of the federal act under which it operates. "We believe the... draft report is an example of dishonest reporting... It shows only one side of the story – from reading it you wouldn't know there is serious disagreement amongst reputable scientists about the effects of environmental tobacco smoke." The industry claimed the council... breached the requirements of its act by deciding to consider only scientific material published in recognised journals which had subjected the authors' work to a review by other experts in the field. This effectively excluded most of the institute's [material], which had been submitted at the specific invitation of the council... The case is due to come before a federal court in Canberra... Because of the case, [a] [Professor... of the Wellington Medical School, who chairs the health council's working party, was forced to withdraw from a conference last week at which... the final report... was to [be presented]... However, drafts have already been published for consultation. They show: • Based on 24 studies, children exposed to environmental tobacco smoke are about 1.5 times more likely to suffer from asthma. About 50,000 child asthma cases each year in A[US] are attributable to passive smoking. • Based on 21 studies, children exposed to environmental tobacco smoke are 60[%] more likely to suffer bronchitis and pneumonia[, and passive smoke]... contributes significantly to... eye and throat irritations in children... • Based on 31 studies, non-smokers who live with smokers have a 26[%] higher risk of lung cancer... • Passive smoking costs A[US] about \$A20 million... a year in health expenses. A director of Action on Smoking and Health... said passive smoking in N[Z] was believed to cause 20 deaths and 1000 admissions to hospital a year...

That sneaked cigarette... could do you the world of good if only health freaks weren't making you feel so guilty about it... [A] survey carried out in eight countries found that people around the world are plagued with guilt about the small pleasures in life. This doesn't stop people indulging in... cigarettes... but it does stop them from enjoying them... suggesting that they weren't getting the stress-reducing benefits... The survey... [found AUSns] are the world's most guilt-ridden people... Germans... came second... [T]he Dutch were the greatest pleasure-takers and also least remorseful about their indulgences... "People should not feel guilty about pleasure-giving activities, as long as they don't over-indulge or harm others,"...

A British study has found the strongest evidence yet that parents who smoke risk losing their babies to cot death... also known as sudden infant death syndrome (SIDS) or crib death... [T]he Royal Hospital for Sick Children in Bristol... found that 62[%] of the mothers of babies who died smoked, compared with 25[%] of the mothers of babies who lived. Babies of fathers who smoked were also slightly more likely to die... [Mothers] who drank alcohol were also more likely to have cot-death babies, but smoking and drinking were strongly linked and it was hard to tell if alcohol had an independent effect. The researchers, working for the British Foundation of Infant Deaths, also looked at other factors... [and] confirmed earlier findings that babies laid down to sleep on their backs were at least risk of dying from the sudden and mysterious syndrome. They... were... surprised to find that lying a baby on its side seemed to be risky.

...Smoking damages [gal] fertility, reducing the number and quality of eggs they produce, a[n Aucklander's] study... at Oxford University... has revealed... [The] British experience was the result of winning a three-year Nuffield Medical Fellowship... Her research is set to be published in a British journal of obstetrics and gynaecology medicine... [In related news, cancer] researchers have attacked a decision by Cambridge University to accept a controversial £1.5 million... donation from... British American Tobacco Industries... [- which] owns many of the world's leading brands of cigarettes including Benson and Hedges, Silk Cut and Lucky Strike... [-] and use it to set up a professorship in international studies named after a former company chair[person. "We're]... sorry... Cambridge did not have the sense to turn down the tobacco industry money," said... the Imperial Cancer Research Fund. "British American Tobacco kill half their regular customers so they have to spend a lot of money buying goodwill,"...

R[esearchers] are trying to pinpoint whether the nicotine cravings of heavy smokers are related to... genes. The Christchurch School of Medicine is studying pairs of siblings who are addicted to smoking to see if they inherited their vulnerability. "Other addictions like alcohol have been proved to be genetic," said [the] study co-ordinator... "If you look at family trees, you can pick the smokers all the way down through the generations." This does not automatically mean [kids] will have the smoking traits of their parents but it may increase the risk... [I]t is unlikely the study will throw up one gene responsible for nicotine addiction... The information will go to the Medical College of Virginia... which is heading the study. The [US] college had problems recruiting people to talk about smoking but the N[Z] researchers struck little reticence... "N[Z]ers are so co-operative..." ...70 pairs of siblings from throughout the country have signed up and [the co-ordinator] hopes to recruit another 130 by next year.

...A study of more than 10,000 children has found smoking as few as five cigarettes a day can affect their lungs and that teenage girls are particularly vulnerable... Girls who did not smoke tended to develop the strongest lung capacity at the age of 17 or 18. But among girls in that age group who smoked, lung capacity actually declined... The findings did not mean boys who smoke were immune... Smoking slowed development of the lungs in both sexes but "the deficits may be greater in girls,"... Girls might be more likely to wheeze because they tend to be smaller than boys,

so the airways leading to their lungs tended to be narrower... The smoking rate among teenage girls has been rising dramatically, to the point where they have become the major source of new smokers in the U[S].

...*US President* steps up tobacco war... A long-awaited series of restrictions to try to curb the growing use of tobacco by young [USers] is expected to be announced by [the] President this week. Last year... [the President endorsed a FDA] recommendation that nicotine was a drug, paving the way for FDA regulation of tobacco... The... FDA commissioner... says 3000 youths begin smoking each day... The curbs would... [ban:] sales of cigarettes to people under 18 years of age – up to now only loosely enforced local laws have banned such sales... [– and sales] by vending machine or mail order[; packets]... of fewer than 20 cigarettes[; advertising]... within 305m of schools and playgrounds[, and also clothing]... with advertising logos... The... executive director of... [ASH], said of the likely announcement: “I think it’s great,” adding it was something his group had sought for 15 years... But [the executive director] predicted that the issue would end up in court.

...Kansas and Arizona yesterday filed lawsuits against nine tobacco firms, joining a growing list of states seeking to recover hundreds of millions of dollars for the costs of treating smoking-related illnesses. At the same time, sources said two other states, Michigan and Oklahoma, were preparing to file similar suits this week...

Oklahoma has become the 14th state to sue the tobacco industry, seeking to recover more than \$US1 b... in state Medicaid funds... The Attorney General... a Democrat who... accepted... \$32,000 in... campaign contributions from the industry... in his most recent run for office... said the suit alleged... [that “in] the name of profit...” ...tobacco makers misled consumers about the health risks of smoking and manipulated nicotine levels to keep smokers hooked on cigarettes... [F]igures indicate Oklahoma spent... \$70 m... a year in Medicaid contributions since 1980 treating patients with illnesses related to smoking... The suit was filed in a state court in Cleveland County against the nation’s leading tobacco manufacturers, trade groups, public relations and law firms... New Jersey, Hawaii, Utah and Arkansas are also said to be preparing suits against the industry.

...Tobacco companies gave hundreds of thousands of dollars in campaign contributions to members of the U[S] Congress who opposed anti-smoking regulations, according to the Public Interest Research Group. The group said that the 124 House of Representatives members who signed a letter opposing federal regulations to reduce smoking by teenagers received an average of \$US6961... from leading tobacco companies. The 103 representatives who signed a letter supporting the regulations received an average of only \$103 each... During a 10-year period, the 13 tobacco industry political action committees gave a total of \$US10.7 million in contributions to candidates for federal office including \$US1.8 million from January last year to June this year. “This unprecedented flood of tobacco cash buys the industry pro-tobacco action by legislators and long-standing loyalty to this industry,” said the president of Campaign for Tobacco-Free Kids... “We ask citizens across the country to tell their publicly elected officials that our children are not for sale and to stop trading our kids’ lives for tobacco cash.” The campaign is a coalition of groups including the American Medical Association, the American Cancer Society and the National Parent-Teachers Association.

...the U[S]’ most populous city... joined the nationwide battle against the tobacco industry last week by suing to recoup healthcare costs of smokers. The suit – filed [at the]... supreme court in Manhattan – sought restitution and punitive damages to be determined at trial... The Mayor of New York City... who had long supported smoking-control efforts... suspected Philip Morris Co[would] threaten to move its headquarters out of Manhattan because of the suit. In 1994 the world’s largest tobacco company threatened to leave because of a proposed expansion of New York City’s smoking restrictions... “If they want to leave the City of New York, we’ll replace those jobs...” Philip Morris had no immediate comment. R J Reynolds Tobacco Co, however, responded: “It would appear that [the] Mayor... has conferred only with rabid anti-smokers and product-liability lawyers before filing today’s suit. We regret that [the mayor] didn’t ask the tobacco industry at the very least to sit down and discuss the litigation before suing us,”... It said it believed there was a serious question about whether [the mayor] had jurisdiction to bring such a case. “The mayor may garner some political mileage out of this filing but that will be all,”...

The widow of an actor who appeared for years as the “Marlboro [Guy]” and died last year from lung cancer is suing... Phillip Morris, which makes Marlboro cigarettes, along with Liggett Group, R.J. Reynolds, the American Tobacco Company and Brown and Williamson. The... lawsuit[, which]... seeks unspecified damages... claims... David McLean... sometimes smoked five packets of cigarettes while posing for a single commercial.

...Smoking and free trade; now there’s a duo to stir debate. And they have recently... It has not been a great year for the tobacco industry. The recent disturbance[in NZ] over... the annual tobacco price rise... report’s on smoking’s effects and the row from an A[US]n study of passive smoking are nothing compared to what is happening in the U[S, where t]he industry is on the defensive. Who, for instance, sought federal bans on vending machine sales of cigarettes, permanent name-brand advertising at virtually all sports venues, and advertising within 350m of a school or playground including on public transport? Why a cigarette company, of course. That was a pre-emptive strike to counter moves towards Government intervention. Too late. [The US]President... introduced regulations that classify nicotine as a drug... The classification came in the wake of a steady stream of whistle-blowers testifying that during their employment in the industry they were aware that companies knew nicotine was addictive and manipulated its level in cigarettes. It was also the year of state lawsuits... The industry’s defence has been interesting. It claimed states were already compensated for smokers’ health by revenue from hefty excise taxes, that smoking imposed little extra cost on local governments and... health costs could not fairly be separated from tobacco’s overall contribution to the economy. No suggestion there that smoking does not affect health... To cap a bad year, the widow of a Marlboro [Guy] actor has sued tobacco companies over his death from lung cancer... So what has this to do with free trade? Well, while various[US] Governments have been acting, appropriately if slowly, to address the smoking-related health interests of their own citizens, they have also been going to bat overseas for the[US] tobacco industry in its efforts to re-coup home losses... The... industry came under its strongest official attack in the U[S] during the tenure of... [the] surgeon-general in the [40th] Administration. Talk about two-faced. It was not [the surgeon-general’s] fault but while his name is synonymous with the challenge to smoking’s health affects in America, the 1980s decade was also the time when the Government used Section 301 of the[US] Trade Act on behalf of the... industry against Japan, Korea and Taiwan to open up their markets – with no advertising restrictions. This, of course, is the sort of Government intervention that gives free trade a bad name; it was unilateral action to counter perceived unfair trade in the interests of a politically influential industry. And unfair trade tends to be in the eye of the beholder... Washington has taken unilateral action on behalf of any number of[US] products... while showing willingness to protect its own when it is politically convenient. Again that is a bastardisation of free trade... Washington’s playing bully boy on behalf of the tobacco industry in Asia is a salutary reminder that politicians place power-retention at the top of their priorities. Such intervention suggests a health warning would not be out of place on all polling booths: Governments can be a threat to your well-being.

...One by one, the “wonderful virtues of tobacco” (as a 1659 treatise put it) have gone up in, well, smoke. The belief that tobacco soothes the throat, cures colds and quenches thirst has been replaced with evidence that cigarettes instead cause lung cancer, heart disease and early death. But one claimed benefit of tobacco is still standing: that nicotine improves memory. Nicotine, at the levels circulating in a smoker’s bloodstream after only a single cigarette, has long been known to increase recall in psychology tests. But no one knew exactly what nicotine was doing in the brain. Last week... Baylor College of Medicine in Houston claimed to have solved the mystery. Nicotine... strengthens the communication between neurons in the hippocampus, a structure in the brain involved in learning and memory. Nicotine seems to work by increasing the strength of messages zipping around the brain as electrical impulses. As an impulse travels along a neuron, it reaches a gap called a synapse before the next neuron. In order for the message to leap the synapse, it has to send an under-study: molecules that can diffuse across the gap. If enough of these molecules, called neurotransmitters, reach the neuron on the other side, they spark an electrical impulse in it, and the message continues on through the brain circuit... The more messages that get through, the more the neurons in a circuit change, becoming the physical embodiments of a

memory... Nicotine, the Baylor team found, increases the amount of neurotransmitters released... [A] 1991 study found that the risk of Alzheimer's disease is lower in smokers. Another study reported last week found nicotine seems to inhibit, in the test tube, formation of the plaques that gum up the brains of Alzheimer's patients. The problem with using nicotine as a memory aid, of course, is that "the delivery system contains 400 known carcinogens," as [a] biologist... of the University of Chicago puts it... The tobacco industry maintained that nicotine was not addictive... - 1996

Four top tobacco company executives have said under oath that smoking cannot kill despite... current estimates that one in two smokers die from it[, and last week's news story about a]... nicotine addict on horseback... who... shot... an off-duty police officer in central Argentina [because the officer] couldn't give him a light for his cigarette... The depositions were given in response to class-action lawsuits filed by... a Florida lawyer[, one of which]... is a \$US5 billion... lawsuit for flight attendants who say secondhand smoke gave them lung cancer and other diseases... [that] is set for trial on June 2 in Miami... The... president of RJ Reynolds Tobacco... did not believe tobacco is... conclusively linked to any illness[, and] does not believe tobacco is any more addictive than coffee or carrots. "Carrot addiction?" the lawyer asked. "Yes," [the president answered]...

Breaking] the nicotine habit can be a formidable task. But... Quit Now[']s 8]... meetings over a [3]-week period... programme, originally conceived as a [5]-day plan in the late 1950s, has proved highly successful in the fight against nicotine addiction. A range of reformed smokers from varying backgrounds, and as young as 14, can vouch for the positive changes it has made in their lives[- one even swapped]... cigarettes for carrot sticks...

Regional health authorities fund a variety of preventive health treatments but they do not systematically buy stop-smoking treatment and the Government has given them no clear guidance to do so. It is unclear why this basic preventive treatment is not supported more energetically. It would make sense based on the tremendous costs of smoking... [-] the estimated annual cost of smoking to N[Z] is... \$4000 per capita... [-] and the social benefits. Smoking is the chief cause of preventable morbidity and mortality in N[Z]. We are all aware of the major killers to which smoking contributes. However, many people are unaware of some of the other consequences. Smoking is a major cause of failure to recover from surgery, [while the]... children of smokers are more likely to suffer from a host of ailments such as infection of the inner ear... colds and respiratory infection... Moreover, smoking is a great economic drag on business and factories. Data gathered by businesses show that smokers take 30 to 50[%] more sick leave than non-smokers and that smoking rituals (lighting cigarettes, pausing to smoke, securing cigarettes) require about 30 minutes of work time each day. The good news is that smoking can be treated effectively. In 1996, the U[S] Government's agency for health care policy and research convened an expert panel of researchers, statisticians, physicians and others to evaluate treatment... The core findings are that treatments exist that can increase a smoker's chances of quitting four to five-fold... The panel concluded that while... only about 5[%] of smokers achieve long-term abstinence on their own in a given quit attempt... 20 to 25[%] will quit who use the nicotine patch and receive multiple sessions of counselling.

...[the Health] Minister... will soon be asked to approve government funding for a comprehensive stop-smoking programme for... N[Z]ers addicted to nicotine. The first national Smokefree Symposium in Wellington... said anything from nicotine patches to [hypnosis and] counselling should be made available to those struggling to stop smoking[, while the] Health Sponsorship Council director... said the Government needed to take some responsibility for helping smokers to quit... An estimated 675,000 N[Z] adults smoke, with [75%] of those... saying they are addicted to nicotine...

[Japanese lingerie manufacturer Triumph has introduced a cash reward of 30,000 yen (\$NZ530) for employees who promise to give up smoking - and for colleagues who inform on them if they return to the habit. The penalty for employees who declare they will stop smoking but fail to quit would be 60,000 yen']

...[US] smokers trying to kick the habit are getting a new source of help: The... F[DA] has approved the first smokeless nicotine inhaler. The Nicotrol Inhaler, to be sold only by prescription, allows smokers to suck nicotine through a plastic tube, letting the chemical be absorbed through membranes in the mouth. It will be on pharmacy shelves later this year. Currently, would-be quitters can buy nicotine patches or[nicotine-based] chewing gum over the counter, or a nicotine nasal spray with a prescription. Clinical trials showed the inhaler worked about as well as these other products... [- although many smokers already have a secondary habit which is directly related to one of the other products: after smoking a cigarette they chew standard gum in order to freshen their breath!] Each puff of the inhaler contains eight to 10 times less nicotine than a puff of a cigarette - and none of the dangerous tar and other toxins cigarettes deliver. The inhaler also provides a sensation in the back of the throat similar to the feeling of inhaling a cigarette, and the ritual of bringing hand to mouth that many smokers report they miss when they are trying to quit... The inhaler can be used six to 16 times a day at first, tapering off after the first three months... Side-effects include mouth or throat irritation or coughing... About 46 million [USers] smoke and surveys indicated 75[%] of them want to quit but have failed or are afraid to try.

...[a pharmaceutical firm hopes to make suckers out of NZers wanting to quit smoking. The firm yesterday launched a nicotine inhaler developed in Sweden - the first of its kind in the country. It has a plastic inhale tube, inside which is a cartridge containing about 30% of the nicotine found in one cigarette. The capsule is replaced by another after use. The device is already getting the thumbs-up from people who run smoking-cessation programmes. Pharmacia and Upjohn's consumer healthcare manager said six to 12 cartridges were recommended for heavy smokers. This would gradually reduce until people stopped altogether about six months later. A starter pack, which includes the inhaler, costs \$15 to \$17. Eighteen cartridges cost \$25 to \$30.' In comparison, the 'normal price for a pack of 30 NICORETTE gum is \$12.95'...

'The fourth time the supportive Quitline counsellor called, something inside Catherine screamed out for a calming drag. "I'm great thanks. I'm not smoking any more. Thanks for calling." Then Catherine quickly hung up, walked outside and lit a cigarette. Catherine is one of the lucky ones who was able to reach the overstretched stop-smoking service. But Catherine found it takes more than a phone call to stub out that last cigarette. The Quitline phonelines show the numbers calling out for help. The service expected about 10,000 calls last month, but the national manager says it has had more than 40,000. Requests for the Government-subsidised nicotine replacement patches and gum are so high the helpline is recommending people call back in a month. The patches and gum, worth about \$125 for a one-month course, cost smokers \$10. About 6000 subsidy cards, exchanged for gum or patches at pharmacies, have been sent to smokers, and 4000 callers have been put on a waiting list to be rung back by an assessor. The manager agreed the wait might mean lost quitting opportunities. "It's very frustrating from our end that we are not able to deal with everyone." The service is recruiting an extra 17 staff to process the backlog. Quitline now has 23 quit-smoking advisers, compared with 15 before the subsidy programme started. The Ministry of Health is expanding the scheme to include doctors and other health workers. But it cannot say when quitters will be able to swap their vouchers for gum and patches from supermarkets and other retailers. A spokesperson says the idea of having them available from retailers is new, and its development depends on the retailers. It was only recently that nicotine gum and patches had been allowed to be sold through retail outlets such as supermarkets. The Health Minister says no one could have predicted the demand for the subsidised service, and is asking people to be patient. The Government has allocated \$6.18 million a year for the programme for at least four years. It expects that up to 40% of NZ's estimated 750,000 smokers will be interested in it. Catherine's path to Quitline began when her six year habit reached crisis point during a netball game. "I found I just couldn't run around any more. Then on the way home I was having a smoke and thought what the hell am I doing?" But going cold turkey got Catherine the cold shoulder from her workmates. "I was a total pain and everybody got sick of months of me moaning and groaning. Eventually, they forced me to call Quitline and even stood over me as I made the call. It's like everyone is trying to force me to give up and that just makes me more determined to say 'oh no, that won't work on me.' Stupid, I suppose, but then so's smoking."

...[Nearly a fifth of smokers using Government-subsidised gum or nicotine patches have quit tobacco for 3 months or more, Quitline research indicates.]

...Minnesota researchers found that patients suffering from mild to moderate ulcerative colitis, which is an inflammation of the colon, had fewer symptoms when treated with strong doses of nicotine through skin patches. In the study, symptoms improved in 39% of the 31 patients who

received nicotine compared with... 9% of 33 patients treated with fake patches. The treatments did not cure the disease. But [the study] also found... 77% of... patients reported adverse reactions to the nicotine, such as skin ailments, nausea and dizziness, and 13% had to quit treatment because of the side effects. While smokers had a lower rate of ulcerative colitis... they had a higher rate of a similar intestinal ailment called Crohn's disease...

['Smokers trying to wean themselves off cigarettes with the aid of skin patches or nicotine chewing gum could still be putting their health at risk. Laboratory tests have discovered that nicotine on its own can cause cancer and narrow arteries in mice. Previously, nicotine had been seen as a drug that kept smokers addicted to tobacco, but as relatively harmless in itself. However, anti-smoking groups urged smokers trying to give up not to abandon nicotine patches and gums. "It is important to keep a sense of proportion," said ASH. "Taking off the patches is much more likely to kill you than keeping them on."']

... 'Overdoses of the anti-smoking drug Zyban resulted in seizures, hallucinations and such extreme aggression that some patients needed sedation, a study has found. Researchers at the AUSn Health and Medical Congress in Melbourne identified 59 cases of adult and 10 cases of child poisoning with Zyban. Smokers rushed to try the drug when it was released in November last year.' Incidentally, NZ's] **biggest selling cigarettes are about twice as addictive and cancer-causing as the most popular brands in A[US], according to tobacco companies' own figures...** Rothmans' Holiday Extra Mild in N[Z] had 11mg of tar and 0.9mg of nicotine, compared with 6.6mg and 0.64mg respectively for Holiday Super Mild in A[US].

...NZ] smokers are puffing on cigarettes with twice the amount of nicotine of those in Canada and the U[S]... Tests on 16 brands of manufactured, filtered cigarettes showed nicotine levels ranging from 16.5mg to 27.7mg in each cigarette... [while] some manufacturers' mild cigarettes had higher nicotine concentrations than other regular cigarettes... [T]he director of... Ash, said the report had provided evidence... that the industry was trying to attract smokers at a young age by loading their preferred packs of 10 cigarettes with higher nicotine levels... Holiday Special Filter 10s, had easily the highest nicotine content of any filter cigarette in the survey...

The findings looked simple at first... N[Z]'s cigarettes averaged 19.5mg of nicotine each, compared to 9-10mg in Canada and 6-11mg in the... U[S.], which makes them twice as addictive, as their American or Canadian counterparts... [However, NZ's] tobacco industry hit back immediately, accusing the researchers of using the wrong test for nicotine and generally failing to understand the industry. A spokes[person for one manufacturer]... said the only valid test, and the one required by law, was based on a machine which simulated smoking... The smoking machine, used by manufacturers since... [WW2], takes an artificial puff on a cigarette once a minute... Based on this test, N[Z] cigarettes have a nicotine yield of 1.2mg a cigarette, compared to 0.9mg in the U[S]... But one of the authors of the study... said the machine test was inaccurate because [it doesn't replicate the way] real people smoked... [In addition, the spokesperson acknowledged that NZ] cigarettes did have about twice as much nicotine as [US] ones but said this was what N[Z] smokers demanded. "They like what's termed a fuller-flavoured cigarette." ...[the spokesperson also] said the idea that tobacco companies put more nicotine in packs of 10 was "a popular myth." Cigarette factories had machines which made cigarettes and machines which packed them. "The same cigarettes go from the making machine to the 10s packers, the 20s packers and the 25s packers."

...tobacco researchers have modified claims... that N[Z] cigarettes were twice as addictive as [US] ones... The... ESR... said last night that retesting nicotine levels showed that the N[Z] cigarettes were 40[%] more addictive. This figure matched results on international standard tests... [■ Nicotine is an] alkaloid... carried on... tobacco... "tar" droplets in smoke and... [up to 90%] of it... is rapidly absorbed from the lungs... It reaches the brain within seven to 10 seconds where it "excites" the brain cells... [but] is cleared from the body very rapidly requiring regular repeat doses.

...Smokers who switch to low-tar cigarettes are increasingly victims of a different type of cancer... [A]deno-carcinoma, which attacks the tiny outer branches of the lungs, is becoming common... "This is not good news for tobacco producers or for public health," said... [a] professor of epidemiology at the University of Lausanne in Switzerland. In N[Z], less than 20[%] of smokers buy low-tar cigarettes, which are... perceived as [being] healthier than higher-tar equivalents... [Indeed, tobacco] companies have argued that nicotine levels drop with the lower tar, but it is now thought that people take more and deeper puffs to satisfy their cravings.

...Cigarette smokers are getting as much as twice the tar and nicotine they expect when smoking so-called light or ultra-light cigarettes, according to testimony at... [the] Massachusetts Department of Public Health hearings... on cigarette contents... Two-thirds of the cigarettes sold in the U[S] are light or ultra-light and most consumers believe that means less tar and nicotine, said... a Johns Hopkins Medical School researcher... [A] Washington lawyer who represents four major tobacco companies... was not surprised by the findings. "The ratings are not meant to translate intake of nicotine or tar, but allow smokers to distinguish one brand from another,"... [By the way, an AUSn] electrician who chewed electrical cable to ease withdrawal pangs from smoking ended up with lead poisoning instead of lung cancer... For 10 years the patient chewed almost a metre a day of the cable, which contains lead to ensure greater flexibility, while working on building sites which prohibited smoking. The [patient] told doctors the cable had a "sweet and pleasant taste," especially near the centre. Regular treatment lowered... [his] blood lead levels[, which had reached]... three times higher than accepted safety standards... although [the electrician] remains a smoker...

[Guys] who smoke run the risk of fathering children who develop cancer. Researchers believe that as many as one in seven cancers, including leukaemia and brain tumours, might be because of the fathers' smoking habit... The Cancer Research Campaign said... that cigarettes should carry Government health warnings over the risks of "paternal smoking... We already know that most childhood cancers are caused by factors which occur before birth... [but this] new study gives a compelling reason for [guys] who smoke and want to have children to quit." ...Laboratory experiments have shown that chemicals in tobacco smoke can damage DNA in sperm which can lead to cancer... [and the risk of damage increases the more a guy smoked. T]he statistical risk level for low smokers – between one and nine cigarettes a day – was 1.03 ([3%] greater)... and... for heavy smokers – more than 20 a day – was 1.42... There were no extra risks shown with mothers, however much they smoked.

...More than a third of pregnant [NZers] smoke... and nearly 27[%] continue smoking] in late pregnancy... a Canterbury study has revealed... But only 19[%]... admitted smoking in early pregnancy and 16[%] in late pregnancy... For [mothers] aged 18 to 22, 9[%] of those who had miscarried were heavy smokers... compared with 2[%] who had never smoked. [Unfortunately, when it comes to smoking and pregnancy, the media continues to promote mixed messages (e.g., while some people declare that 'babies born to smoking mothers have 2 1/2 times the cancer causing products in comparison to adults', others suggest that it's 'OK to have 7 cigarettes a day while pregnant').]

...Four out of 10 parents of young babies in Northland smoke, despite the increased risk for their children, says a public health study... As a result the report abandons a target of the now disbanded Public Health Commission to cut smoking by... 35[%] in Maori by the year 2000... 45[%] of Northland] Maori smoke – twice the regional average – and there are no signs that general or Maori smoking rates will fall.

...[second-hand cigarette smoke exposes unborn babies to cancer-causing chemicals, delegates to the annual meeting of the American Association of Cancer Research have been told. Several studies add to evidence that cancer-causing agents in the smoke can get through the placenta, which normally protects a foetus from toxins. Newborns in all age groups exposed to any kind of smoke had decreases in forced respiration, a measure of lung capacity. In one study presented at the conference, researchers at the University of Essen made a group of pregnant rats inhale second-hand smoke for five days. They killed the rats before they were due to deliver and looked at the pups. The foetuses had soft bones and three separate changes in their lung tissue. Certain lung cells were hyperplastic, meaning they were starting to divide abnormally and look pre-cancerous. There was also a higher rate of cell death and some retarded tissue development. Baby rats whose mothers were not exposed to smoke showed no such damage. "Exposure (to smoke) in very early years, including in the foetus, could well be more harmful than exposure as an adult," said a researcher from the University of Texas cancer centre in Houston.]

... 'US researchers studying the genetic structure of lung tissue cells from guys and gals found that a gene linked to abnormal growth of lung cells is much more active in gals, which may explain why gal smokers are more than twice as likely to develop lung cancer as guys who smoke.'

...‘a study has found that young NZ gal smokers won’t kick their habit despite research showing they are twice as likely to get lung cancer as young guys. “Almost anything you do can give you cancer now,” said an Auckland marketing representative. “My brother, who never drank or smoked, died of cancer when aged 16. So I think if you’re going to get it, you’re going to get it.” The 27-year-old, who has smoked for 10 years, said the only reason it would quit was when it had children. Meanwhile, Hawke’s Bay has been chosen to pilot a quit-and-win contest because of the high number of young Maori gal smokers in the region. Entrants must stop smoking during next month to be in the draw to win major prizes including a gym membership and flights around NZ.’

...Air NZ] becomes totally smokefree at midnight tonight as flights to or from Japan become the last services to come under the policy.

...[in 1963 NZ was the first country to ban] tobacco advertising on TV and radio... Cigarette advertising[was] banned in cinemas[throughout NZ in 1973. Smoking was] banned on Air NZ domestic flights[in 1988].

...THE world’s most modern cruise liner will be missing one feature when it is launched next year... ashtrays... The... \$300 million MS Paradise... will be... the world’s first smoke-free cruise liner... [In related news, a] cigarette butt thrown from a passing car is believed to have caused the destruction of... 60ha of scrub north of Turangi on Saturday. The fire started near the Desert Rd section of State Highway 1 and quickly spread... as a strong south-westerly wind blew. About 50 firefighters, aided by... helicopters with monsoon buckets, fought the flames for about four hours.

...Taxes up in smoke says lobby group... Millions of taxpayer dollars spent [on advertising to encourage] smokers to give up are wasted because of the numbers who start, says A[SH]... However... a Ministry of Health spokes[person] said 1996 statistics showed a slight reduction in the number of smokers, down 1[%]... But tobacco consumption had also increased 1[%] for the same period.

...Smoking in N[Z] has increased for the first time in the past nine years[, according to] Ministry of Health figures released yesterday... The number of cigarettes available for consumption [also rose – by 2.6% –] in the year... [In international news, ‘with their arresting aromas and frequently lower prices, Bidis (pronounced beedies) have become the latest smoking fad among American teens. The skinny cigarettes that arrived from India in candy-like flavours – chocolate, vanilla and strawberry – are luring thousands of youngsters and worrying public health authorities. It’s legal to smoke them, but since many are unfiltered, they’re hazardous to health. Research shows smoke from bidis has about three times as much nicotine and carbon monoxide and five times as much tar as smoke from regular filtered cigarettes, according to a study by the Massachusetts Department of Health. Bidis have been around for decades, but the new varieties (which closely resemble clove cigarettes, imported from Indonesia) are boosting their popularity. No one knows how many young people are using bidis, but importers see a boom in demand – in the past six months, the number of bidi requests from retailers has increased 500%, says the director of sales and marketing at a California-based importer. 58% of high school students in San Francisco have tried them and 31% smoke them at least once a month, according to a survey. The fad comes as American tobacco companies are facing restrictions on how they market cigarettes, especially to youth. Tobacco billboards have been forced from the nation’s highways, and teen smoking rates have started to dip, although they remain stubbornly high. One-third of high school seniors still smoke at least once a month. Bidis alarm health authorities, who view them as cigarettes with training wheels’...]

‘Modern lolly cigarettes are encouraging new generations to get hooked on smoking, says NZ’s Associate Health Minister. Many adults will remember pretending to puff on cigarette-like candy sticks on the way to school – and those are bad enough. But new ones on the market, mainly from Germany, were worse because they looked much more realistic, from the packet to the cigarette. “They have even got a filter on them.” Anti-smokers want them banned like in other countries. The Ministry of Health is writing to importers of fake cigarette products to discourage them from bringing them into NZ, but the associate minister will try to push through an amendment to the Smokefree Environments Act to prevent the import, production and sale of candy and bubblegum cigarettes. “Anything that imitates tobacco products should be banned as it only encourages children to think smoking is cool when it’s revolting.”

...‘Kids as young as 3 think smoking is “cool” if their parents do it, and 55% plan to smoke themselves when they grow up a study of 504 preschoolers found. Most were black or Hispanic and nearly all came from poor families. Over 2/3rds had a family member who smoked. “I think we expected 20 to 25% at best.” The American Health Foundation in New York said the findings show it is important to start anti-smoking campaigns aimed even at the tiniest kids – and to get their parents to kick the habit. Only 25% of 5-year-olds planned to smoke. “So as they got older and more socialised, they realised that smoking is not a socially acceptable thing to do.” Other studies have borne this out, showing that kids know they are not supposed to want to smoke. When primary school-aged children were surveyed, all said they were not going to smoke. But the researchers suspect they may just be parroting socially acceptable attitudes. “By the time they get older they do experiment.” 1 million US children will start to smoke in the next year.’ □ ‘When shown pictures of Mickey Mouse, Barney, and Joe Camel, 67% of children surveyed knew that Joe Camel smokes, even though Joe Camel didn’t have a cigarette in the picture.’

...Three young Floridians, barely out of their] teens, have just been sentenced to 15 years each for removing a stop sign from an intersection. The defendants sobbed, and even the judge evinced regret, but everyone seems to agree that stealing stop signs is a particularly heinous prank. In this case, three other young people were killed when they drove through the signless intersection into an eight-ton Mack truck. Now, suppose these three miscreants had... removed stop signs at not just one but 133,333 intersections... resulting in three deaths per intersection... annually... Suppose further that they had not only removed the stop signs but also replaced them with GO signs or, better yet, billboards... featuring yellow-slickered cowboys or a suave camel named Joe. Then what do you think the sentence would have been? Well, if the kind of judicial reasoning that applies to tobacco companies also applied to stop-sign cases, then the three witless young vandals would have faced a stiff fine and been forced to downsize the cowboy and put the camel out to pasture. But there would be no talk about prison terms; in fact, Congress would be considering legislation to bar any such vengeance on the part of the courts... the youths... might even find themselves rewarded for their crime with immunity from future class-action suits brought by the relatives of deceased drivers. They would[also] be encouraged to take their act overseas... You don’t have to be a Floridian to find instructive contrasts... In Oklahoma earlier this year, a 38-year-old father of three was sentenced to 93 years for growing marijuana in his basement. (That’s 70 years for possession alone.) ...There is another way the three Florida vandals went wrong: they failed to incorporate before committing their dastardly act. According to a fateful 1886 Supreme Court decision, corporations are persons, entitled like anyone else to freedom of speech, even when they use it to promote the widespread consumption of a poisonous substance. They are not, however, persons who can be lethally injected or attached to a chain gang, no matter how wicked their crimes. In 1996, for example, Rockwell International was found guilty of causing an explosion that killed two company scientists. Pfizer manufactured a defective heart valve that caused 360 deaths worldwide. In[both of] these cases, hefty fines were levied and stern statements were made, but no executive or plant manager spent so much as a night in the slammer. The lesson from these cases... is that that mysterious masked entity known as a corporation is in fact an ingenious device for collectivising responsibility. Even when a corporation is found guilty, no actual individual need take the fall. But if the defence lawyer for a mere biological person attempts a similar diffusion of blame – by, for example, pointing out the defendant’s history of abuse as a child, or the fact that several upstanding citizens had noticed the missing stop sign and failed to report it – said lawyer can expect these days to be laughed out of court. So here’s another tip for anyone contemplating the old stop-sign prank: don’t do the sign removing yourself. Call yourself Superior Sign Relocation Inc., and hire others to do the manual labour so you can always point proudly to your contribution as a pillar of the economy and a creator of jobs.

...[‘Trying to teach schoolchildren that they should not smoke does not work, say researchers who last week reported the failure of a 15-year anti-smoking programme in the US. The researchers tried to persuade children, starting at the age of 9, not to smoke. They helped them practise saying no to

cigarettes, bombarded them with information on how dangerous and addictive smoking is, and even had students re-enact tobacco lawsuits. But about a quarter who completed the programme smoked by the time they were 18 – the same percentage as elsewhere. The Fred Hutchison Cancer Research Centre said the results were disappointing and showed that experts really did not know what made teenagers smoke. But activists urged health officials not to give up.’

...the NZ] Government has decided proposed legislation making it an offence for people under 18 to buy cigarettes is unworkable... Parliament... was... told... this week that... young people who flouted [the proposed law] could be seen as heroes among their peers... [T]he Government was instead focusing on using an education approach to discourage youngsters from smoking... [But the Government] has recognised gamblers’ passion for smoking. Casinos have so far dodged smoking restrictions because they weren’t around when smokefree law was passed in 1990. They now face restrictions but far less stringent than those imposed on restaurants and most other workplaces. Restaurants must keep half their tables smokefree, but casino operators must set aside just 25[%] of their gaming rooms for non-smokers under the amended act.

...A... resthome has defended itself against criticism of its “draconian” smoking policy, which forbids its residents from smoking anywhere within its boundaries... Hillview Eventide Home... has had a total smoking ban since July last year, forcing at least four residents to give up their habits. A former caregiver at the resthome... and Grey Power say it infringes on the rights of the elderly, some of whom have smoked for... 70 years. They can understand restrictions within the home, but see no harm if a patient lights up in the expansive gardens... Residents had come to stay at the home in the belief they could smoke... “To have it and then to take it away from them – it’s discrimination.” ...the daughter of a resident... said it was cruel to deny her 72-year-old mother “her biggest pleasure.” ...her mother... enjoyed sitting in the sun and smoking. “Now when we go... there [mum]’s sitting in the lounge. [Mum]’s got no reason to go outside any more.” ...The president of Waitomo Grey Power... feared the elderly residents, if forced to smoke in secret, could cause a fire... One[had already] burned herself badly with a cigarette[, and rest]... homes now housed more frail and sick people than they had in the past[, therefore]... smoking areas should be set aside in the resthome... However... the Northern King Country Old People’s Home Trust chair[perso]n... said the policy was in residents’ best interests and was not likely to change... The resthome matron... said yesterday the issue has been blown out of proportion[but] refused to let the N[Z] Herald talk to any of the residents, saying they were “confused” and “too old and frail.” ...[Incidentally,] ASH wants tobacco retailers to be licensed in an attempt to crack down on underage smoking.

...A sting operation using children to catch out retailers selling cigarettes to minors has snared 29 shopkeepers. All of the retailers... would be prosecuted, said the Ministry of Health. Crown health enterprises are being funded to run the three-year programme... The crackdown began last year, with Rotorua recording eight offenders and Auckland seven... An Auckland Healthcare manager... said catching seven retailers illegally selling cigarettes from 70 visits to shops “shows that there is a problem out there.” ...Efforts to nab offenders in Nelson fell flat, however, with no dairy owners seen selling to minors... [T]he real test of the programme’s worth would come this year when volunteers made return visits to retailers previously caught offending to see if they had learned their lesson. Before the crackdown, seven shopkeepers were prosecuted for selling cigarettes to... children under 16... resulting in five convictions... 21[%] of Auckland’s 15-year-olds smoked in 1992 with 15[%] of that number getting their cigarettes from shops... Of 899 shops[in Auckland] which sell and may advertise cigarettes, only one was prosecuted between 1992-96...

The Retail Merchants Association, the Retail and Mixed Business Association and... cigarette maker Rothmans... yesterday denounced the sting operation funded by the Ministry of Health... Children should not be used... to catch shopkeepers selling tobacco to minors, [they say because]... the practice is unfair... it is difficult to tell a 15-year-old from someone aged 17... Shopkeepers can ask how old a child is but youngsters can lie... Retailers caught by the young undercover agents should be warned, not prosecuted... said... the... retail and mixed business secretary... Rothmans director of public affairs, said it was his personal view that “only an adult should be asked to set someone up for a prosecution.” ...If a retailer was charged and pleaded not guilty, then the... “undercover agent” would have to give evidence in court... Shopkeepers... face a maximum fine of \$2000.

...[‘After years at the forefront of smoking reduction, NZ is now in reverse gear. Tobacco consumption has increased, something not seen since the early ’60s, and now a Cancer Society survey has shown 42% of 4th form girls and 25% of boys consider themselves smokers – an alarming increase from 30% and 15% in 1991. In the face of these hard facts it is very disturbing to see major opposition to the prosecution of dairy owners for selling cigarettes to underage kids. The judge who threw out the Ministry of Health’s cases in Invercargill last week and slapped \$11,000 costs on the ministry may well have contributed to future rises in kids smoking. The judge ruled the use of 14-year-old volunteers amounted to entrapment of otherwise law-abiding dairy owners. His interpretation of a law that was designed to protect kids, not shop-keepers, was saluted in the editorials of several newspapers. In the Cancer Society survey, only half of 14-year-olds who tried to buy cigarettes were refused and 35% said it was very easy to buy cigarettes. The community has a responsibility to protect these kids against a product that has a 50:50 chance of killing them. Unfortunately, only about \$12m a year of the \$650m in tobacco tax is spent on tobacco control, mostly on smokefree sponsorship. A tiny \$4-5m is spent on health education, media campaigns, and enforcing smokefree environments regulations and laws. If this Government wants to leave a positive mark on the nation’s health it needs to rewrite the plot so the bad guy starts losing.’

...Statistics NZ] says there were 3.66 million cigarettes available for sale in N[Z] in the year ended last December – 9.7[%] more than there had been in the previous year... ● T[he figure may be 3.66 billion – otherwise, statistically, last year every NZer only had 1 cigarette; or every NZ smoker averaged just 5 cigarettes (it is estimated that, worldwide, ‘18 cigarettes per human are made each year’)! By the way]... Labour’s health spokes[perso]n... has challenged... the... Minister of Customs to stop travellers getting the duty-free concession on tobacco products when they enter N[Z].

...CIGARETTE importers are crying foul as the Government moves to crack down on the mail-order trade that sees N[Z]ers ordering thousands of packages of tobacco... from Norfolk Island each week. The Government says it’s losing at least \$2.5 million a year from tax avoidance. Suppliers have been able to send cheap cigarettes through a loophole in Customs regulations, which makes the collection of duty on parcels worth under \$50 discretionary. But the... decision to start collecting that duty from May 15 has prompted allegations of victimisation... “If the Government wants to crack down on this, the \$50 ruling should apply across the board. You name it and it’s being imported under mail-order schemes from all over the place – clothing, printed material, [etc.] – but this ruling is not attacking the major players.” ...Norfolk Island’s outgoing chief minister... said the... decision would drastically impact in the island. “Our economy is finely balanced and this has the potential to hit us hard,”...

A booming trade in overseas mail order cigarettes ends today with the closing of a Customs loophole allowing personal imports of duty-free tobacco... [T]he concession... making the collection of duty on parcels under \$50 discretionary... has been withdrawn after wholesale abuse by entrepreneurs who were shipping hundreds of parcels of cigarettes and tobacco across the Tasman each week. Mail-order businesses on... Norfolk Island... were bringing in the tobacco duty free from A[US], allowing them to charge customers about \$4.50 for a packet of cigarettes which normally cost around \$6 in this country[(although, back in]... 1970 it cost 32 cents for a pack of 20 cigarettes[!])... Pouches of tobacco selling for about \$16 here could be ordered through the post for about \$10 each. A N[Z Customs spokesperso]n... said a large shipment of tobacco parcels which arrived at Auckland Airport from Norfolk Island on Sunday night was expected to be the last of the lucrative trade.

...Not so long ago, you could hear... the Tobacco Institute[’s executive director] before you saw him. The rasping voice and the bronchial wheeze of [NZ’s] Mr Tobacco was as much an industry trademark here as the healthy cleancut image of the Marlboro [Guy] was in the U[S]. And, to the cynical non-smoker at least, a more honest one. We know the grim fate of the Marlboro [Guy. NZ’s Mr Tobacco], on the other hand, gave up

smoking, and it shows... For most publicists, abandoning your masters' fine products – especially one as controversial as this – would have been awkward. But, with the international tobacco wars focused on the addictive nature of... nicotine... [Mr Tobacco] has turned it to good use. "I don't subscribe to the view that it's hard to give up... [because] there's a hell of a lot of people out there who have given up..." The high moral plain is not a place that the cigarette industry has occupied much in recent times. So they are marking their current camp-out there with high indignation and many expensive – and brand-promoting – full-page newspaper ads. [Editor's note: prior to the arrival of Europeans, there was no tobacco industry in NZ. But Maoris had the potential to create such an industry – 'early European settlers used Kotukutuku bark and Tikumu leaves as a substitute for tobacco'...

For the] Tuhoe activist, notorious for a spitting incident involving [a] former governor-general... at Waitangi... giving up smoking was a political act. [It symbolised] snapping his colonial chains, trampling the European weed which helped dope the Maori into submission. Now his famous face, with its dramatic moko, can be seen on anti-smoking posters everywhere... [The activist claims that it was necessary for him] to liberate himself from nicotine and... other foreign drugs... before... [gaining] his moko. Otherwise [the activist] would not be worthy to wear it. "...it's no good us talking about governing ourselves when we can't even deal with our own issues, simple things about our health." [The activist] got hooked when... [aged] 18: "I started smoking just to look... cool." During a three-month visit to China in the early 1970s, [the activist] can remember children putting cigarettes into his mouth and lighting them as an act of hospitality. In Mongolia, on the other hand, [the activist] found a new kind of smoking. "They have a long pipe and a little wee pot down the bottom and you place this horseshit in there. One whiff of that and whoooaaggh. I came back from China quite sick and I stopped smoking..." But it didn't last. After a... [while the activist] was puffing his way through 50 cigarettes a day. When [the activist] started coughing and getting pains in his chest, [the activist] would light up another cigarette and feel better... [The activist finally] adopted a warrior approach to the problem: [the activist] "declared war" on tobacco... During his battle, [the activist] took strength from Maori legend – especially Tu, god of war, and Tane, god of the forest. They and their siblings wanted to separate the sky-father Rangi from the earth-mother Papa. Tu's solution was to kill the parents... while Tane, the god of growth and new beginnings, was opposed... "The pakeha call this a mythical story, but... there's a lot more depth to it. There is a meaning to it." ...[the activist] followed both – by killing the tobacco, [the activist] was giving himself new life... Smoking is an epidemic among Maori... Maori [gals], in particular, are dying in battalions because of tobacco. They... had been smoking longer than others – internationally, smoking among [gals] only started its growth spurt in the '20s – and now had the worst lung cancer rates in the world... [Another] celebrated quitter is [the] Maori Affairs Minister[... who]... took up smoking at 14 because "all my mates did and it appealed to my rebellious nature"[... although his]... approach was more personal than political... His brother-in-law [and fellow NZ First MP] had publicly challenged him to quit, "but don't forget [my cousin] did that to get his name in the paper as well – there is method in his madness." ...But there was a carrot as well... [The deputy PM] bet him a bottle of whisky that [the minister] would not last 58 days without a smoke ([the deputy] is 58 years old). [The minister] has the bottle... [● Three Chinese] provinces and Shanghai city plan to tax tobacco sales in a landmark move to raise significant sums and support [a] cash-strapped anti-smoking campaign[... which receives]... just 200,000 yuan a year from the Government... A 1993 study showed that a tax of 0.1 yuan levied on each pack of cigarettes would raise eight billion yuan... – equivalent to the Government's health budget for a year... About... one in four... people... in China, smoke a total of about 1.7 trillion cigarettes a year... [C]igarette advertising and smoking in public places... [are banned] in 71 cities. However, the bans are usually ignored. Smoking kills about 750,000 people in China each year...

[Countries like China are inviting cancer epidemics by not taking smoking seriously enough, says a leading expert on tobacco-related deaths. The director of the Imperial Cancer Research clinic trials unit at Oxford University in England said the mantle of being the world's heaviest smokers had passed from Britain to the US, then to Russia and now China, where two-thirds of guys smoke and most don't know it can be harmful. China has already overtaken the US as the country with the highest number of smoking deaths at more than 2000 a day. If present patterns persist, at least 100 million of the 340 million Chinese guys below the age of 29 will be killed by tobacco. Tobacco-related deaths account for 20% of cancer deaths each year' around the world]...

THE 10th World Conference on tobacco being held in Beijing reminds us that death by smoking is fast becoming the world's biggest killer of adults. Experts from the W[HO] and Oxford University said more than 10% of all deaths in the world were now due to tobacco... The global marketplace requires global resistance as international trade agreements can sabotage the attempts of nations to legislate against tobacco. Thailand provides a case in point. While 60% of [Thai guys] smoke, for cultural reasons only 6% of Thai [gals] smoke. When Thailand tried to stop [US] cigarette brands entering the country, it was threatened with trade retaliation from the US and censure from Gatt. Supported by overseas anti-smoking activists, Thailand moved to protect itself by passing some of the strictest anti-smoking laws in the world. Gatt ruled that Thailand could not prohibit the importation of cigarettes, but accepted that as smoking was such a serious health risk, the country was entitled to pass such legislation. The new laws effectively made Thailand an unattractive market for Philip Morris and Co... although Philip Morris has sought to get around the... ban by sponsoring concerts and art competitions in Bangkok.

...[A tobacco giant is under fire for claiming the premature deaths of smokers has economic benefits. A report commissioned by Philip Morris saying that the early deaths of smokers saved the Czech Government between 943 million and 1.19 billion crowns (\$NZ56.4 million to \$71.2 million) in health care, pensions and housing for the elderly last year, has sparked a new burst of outrage from tobacco industry opponents. "I think it's pretty egregious," said a Northeast University law professor and chairperson of the Tobacco Products Liability Project. "You don't see other companies doing it. It's not the normal way we think about the lives of citizens, that the Government benefits when they die prematurely." The report was produced as part of "an ongoing debate about the economics of cigarette excise tax policy in the Czech Republic," the company said. "Philip Morris deeply regrets any impression that the premature death of smokers represents a benefit to society. There's no intention by Philip Morris to enter the debate on tobacco and health."

...[A closely divided US Supreme Court has ruled that the FDA lacks power to regulate tobacco products, handing the US President a stinging set-back in the effort to curb youth smoking. The nation's highest court ruled by a 5-4 vote that the federal agency overstepped its authority in 1996 when it issued unprecedented, sweeping regulations for cigarettes and smokeless tobacco. The decision is a major victory for the tobacco industry, which has been hit with a number of civil lawsuits seeking huge damages for smoking-related illnesses. The ruling, which sent the stock prices of Philip Morris and other tobacco companies sharply higher on Wall St, sends the issue back to Congress, and the President immediately urged congressional leaders to approve tobacco legislation. "Even some in the tobacco industry – after fighting the FDA rule in court – now say they support regulation of tobacco," the President said.] In another development, Liggett Group] has indicated it may file for bankruptcy [rather than] face... multi-million dollar legal action.

...Liggett Group [has beco]me the first U[S] tobacco company to admit that cigarette makers concealed the dangers of smoking, officials said in announcing a deal ending lawsuits by 22 American states... [The] Arizona Attorney-General... said that Liggett had acknowledged that cigarette smoking caused lung cancer and heart disease, that nicotine was addictive and that tobacco firms market to children, which is illegal... Liggett had [also] agreed to help prosecute lingering lawsuits against four larger tobacco companies... Liggett, the smallest of the leading U[S] cigarette makers, apparently made the unprecedented agreement because it was having trouble paying its mounting legal bills, according to analysts. Under the terms of the settlement, Liggett... would pay \$US25 million... to the states and give them 25[%] of annual profits for 25 years. In exchange, the states will drop Liggett as a defendant in their lawsuits... Cigarette giant Philip Morris has filed suit, along with R.J. Reynolds, Lorillard and Brown and Williamson, to prevent Liggett from disclosing documents involving what Philip Morris describes in a press release as "legally

privileged discussions with others in the industry.” ...Despite evidence to the contrary, most of it statistical, [the larger tobacco companies continue to deny] any direct link has been established between tobacco and health problems.

...O[ff] all the targets of government wrath in US] industry, none have been scorched more severely or more often than U.S tobacco companies. But despite being hit hard with everything from health-warning labels to smoking bans in buildings... cigarette makers have survived and prospered. The industry’s profits have been healthy for a decade, and in spite of countless lawsuits, no tobacco company has ever paid out a single penny to compensate anyone for damaged health. That is precisely why jubilant anti-smoking forces applauded a remarkable string of confessions by... Liggett... last week as the straw that could finally break Joe Camel’s back... What excited prosecutors most was the prospect of getting their hands on mountains of documents that Liggett agreed to surrender... The attorneys general of the states that won the settlement could hardly contain themselves. “This is the beginning of the end for this conspiracy of lies and deceptions that have been perpetuated on the... public by the tobacco companies,”... They have already seen a slew of Liggett files, the product of other lawsuits... One memo states a new packaging should be used “so as to have more appeal to youth.” ...“Is it morally permissible to develop a safe method for administering a habit-forming drug when, in doing so, the number of addicts will increase?” a... 1978 memo... asked... “It’s basically a drug dealer deciding how they could increase the dependence causing impact of their product without regard to the harm it would cause.” ...Liggett... [also] confessed it targeted ethnic and racial groups in its marketing... Anti-tobacco activists immediately labelled the documents as more damaging than even those admitting nicotine’s addictiveness... But hundreds of thousands more, particularly those pertaining to the group of industry lawyers that met to discuss litigation strategy, may be protected by client-attorney privilege and remain under seal in a state court in Winston-Salem, North Carolina. A judge is expected to hear arguments next week from Philip Morris and other companies that want to keep the papers boxed up... Last year Philip Morris... which controls half the... \$45 b... U.S. tobacco... market... made \$6.3 b... worldwide on revenues of \$96.2 b... [(in comparison,) Liggett had a net loss of \$9.7 m... [through] the first nine months of 1996[), but even]... as some Wall St analysts downplayed the impact of the settlement... the stock of several tobacco companies took a drubbing... Philip Morris... plunged \$17.50 a share... a drop of 13.6% or \$14 b... in market share... The settlement struck a resonant note at the... White House, which... strongly backs new F[DA] rules that require smokers up to the age of 27 to show photo ID when buying cigarettes.

Imperial Tobacco and Gallaher, which has 80% of the British market[, and is one defendant]... in Britain’s first class-action suit against two tobacco companies... [by] 23 lung cancer sufferers... [who are being represented] on a no win, no fee basis... Experts say that now... one tobacco company has admitted the health hazards... it will be difficult for others to continue denying it.

...Tobacco companies... could face legal action in N[Z] by the end of the year... Anti-smoking campaigners, health authorities and the... Minister of Health... have hailed the... Liggett... admission as a landmark... The admission could also help 53 N[Z]ers seeking compensation for smoking-related illnesses through a class action taken by... Ash... The Tobacco Institute said that the Liggett Company did not sell its cigarettes in N[Z] and it was “inappropriate” to comment on the legal activities of individual companies. The Auckland District Law Society litigation spokes[person]... warned that the admission did not create a legal precedent in [NZ and other] cigarette companies were not bound by Liggett’s concession... [T]he situation concerning potential claimants in N[Z] may be different depending on the age of the plaintiff and whether they started smoking before or after Government health warnings printed on[NZ] cigarette packets were introduced in 1974. Legal action in the U[S] to recover medical costs partly relied on the low level of taxation on cigarettes, while in N[Z] smokers pay about \$3.90 to the Government for each \$5.90 packet of 20. [‘The US has a 30% tax rate on cigarettes (Denmark’s smokers pay 85% in tax’).]

...“Big tobacco is on the run and we’re going to keep after them until justice prevails...” said... a lawyer[after] the... Los Angeles County’s suit seeking... to recover nearly \$US400 million... in compensatory damages... from the Big Six tobacco companies [was given the] go ahead... mean[ing] the defendants must answer charges of business fraud, unfair business practices, breach of express warranty and unlawful business practices.

...Major win in tobacco war... [P]lans to sue tobacco companies[in NZ] have been dealt a “big blow” by the acquittal... in Florida yesterday... of a[US] cigarette maker over the death of a... life-long smoker... Six jurors – three of whom once smoked and one who still does – decided that Reynolds’ cigarettes, Winston and Salem, were not dangerous or defective and did not cause Jean Connor’s death... The widely watched wrongful-death trial over Connor’s death in 1995 at the age of 49 was the first liability test for tobacco companies since a case was lost [last] August... So far, in at least 19 other tobacco liability suits, the industry has yet to pay a cent in damages... Brown and Williamson Tobacco was ordered to pay \$NZ1,098,600 for the lung cancer of a former Florida smoker. The company is appealing... The only other monetary award against a tobacco company in a liability case was won in 1988 but was overturned on appeal. In 1990, a Mississippi jury agreed that cigarettes killed Nathan Horton, but awarded no damages because it found the tobacco company and Horton equally at fault... [Yesterday,] the Massachusetts Attorney General... said the... Florida... verdict was not a major setback and that state officials would continue their efforts.

...In a major turning point in tobacco litigation, the U[SS]’ two biggest cigarette makers are having secret talks with plaintiffs over a broad settlement, *The Wall Street Journal* reported yesterday. The sweeping settlement would... [involve] a \$US300 billion... payment... and an agreement to cut back on advertising... immediately eliminate all advertising aimed at youth, eliminate all outdoor ads, stop using Joe Camel or any other human figures in ads, stop sponsoring sports events and eliminate vending machine sales...

Two of America’s biggest cigarette companies are negotiating an end to billion dollar legal battles... “...all of Washington was stopping to watch as the biggest deal ever unfolded.” ...Together the tobacco companies would pay out between \$250 [billion and \$]300 billion over 25 years. The money would be divided between all 50 states and a separate \$500 million fund would be donated for anti-smoking messages... In exchange cigarette makers get legal relief. For starters, the 22 state lawsuits lined up against them will immediately be dropped, and a limitation will be put on all on-going lawsuits by individual smokers... For the tobacco industry, abandoning its all-out legal defences could be a small price for peace. “They are paying lawyers some \$[NZ]882m a year,” said... an industry analyst... and... the... payout... would amount to... about \$26.6b a year for cigarette makers, which had combined revenue of about \$88b last year.

...[the US] tobacco industry, which once vowed it would never settle lawsuits over smoking, is on the verge of reaching a deal in which it could pay as much as \$US370 billion... to do just that... Sources involved in the talks[, which]... have been going on since early April... at a Washington hotel, said a deal would probably be announced today... The companies will not comment on the talks. However, congress[people] and financial advisers warned that any preliminary agreement was a long way from becoming a final deal. [The]Senate Majority Leader... said the Senate could not take up related legislation until at least... October.

...The landmark \$368.5 billion... tobacco industry settlement will have to survive some tough challenges if it is to remain intact. After the celebrations end and the dust settles, the top state legal officers will have to watch their hard-won work[being] picked apart by a White House task force and then by Congress... [Furthermore, the] agreement is being sharply criticised as inadequate by some prominent health figures... [A former] US Surgeon General... called the... settlement “paltry”... warned there were serious flaws in the pact... that tobacco industry lawyers would... exploit[, and said it]... feared the agreement would be watered down on Capitol Hill... In Minnesota, [the attorney general agreed that] the agreement was woefully inadequate and [said it was his intention to still] bring his lawsuit to trial against the industry... In spite of the critics, the agreement marks a severe defeat for the proud and powerful US tobacco industry...

The business landscape for [US] tobacco companies has suddenly become a moonscape... In coming to terms with its role in the health of... [USers], the tobacco industry has allowed outsiders to dictate how it will do business. In exchange, the business of selling tobacco will live with

shackles, but not the threat of extinction... The FDA will now have final approval of all ingredients in tobacco products and will impose standards for reducing harmful components... The FDA will[also] require the tobacco industry to hand over all research it conducts. The new restrictions and lines the industry will have to toe will add significant costs to doing business, analysts said... At the bottom line, retail prices will rise to offset the companies' costs... As a result of the price hike, sales... [are expected to fall by] as much as 12[%]... Still unclear is how volume of sales might be further affected if the Federal Government raises taxes on cigarettes to 44 cents a pack from 24 cents. The Senate Finance Committee approved the measure last Thursday... [Yesterday, US tobacco] shares fell... as investors recoiled from the high price of [the] historic settlement...

Billboard company shares [have fallen because of the agreement between the US] tobacco industry and its opponents... The settlement means Joe Camel and the Marlboro [Guy] will disappear from billboards and displays on bus stops and train stations across the nation. However, profits of outdoor advertising companies will not be badly hurt because tobacco ads made up only about 10[%] of all outdoor ad spending, down from 37[%] a decade ago... Tobacco companies spent about \$160 million on billboard advertising last year. That compared to about \$300 million in entertainment and travel advertising, the Outdoor Advertising Association said... [■ The US President, when asked yesterday] if the G7 should take up regulation of tobacco, said the [US and its] partners in the group... were not the primary places where the tobacco market was growing.

...The Marlboro Cowboy may be riding into the sunset in [First World] countries with anti-smoking campaigners snapping at his heels. But in Africa, with its vast horizon and its young and rapidly expanding population, there is no sign that anyone is looking to run him out of town any time soon... Jeeps emblazoned with Marlboro and other brand names turn up in deep tropical forests, where Coca-Cola Co is rare.

...[US] cigarettes are viewed more as a status symbol than a health risk abroad. With cigarette sales expected to shrink in the... [US, its] cigarette manufacturers are expected to seek a bigger market overseas. [In anticipation of this, anti]-smoking groups in 19 countries, from Austria to Thailand, wrote to... Congress last week, urging international curbs on US tobacco makers... East African tobacco companies face no restrictions beyond health warnings on cigarette boxes, and there are no anti-smoking lobbies. There are some indications that the big tobacco companies consider the region a growth area... One company has sponsored smoking contests in western Kenya, with participants competing over who can smoke the most cigarettes simultaneously... In the world's trouble spots, the... anti-smoking campaign and preoccupation with health draw bewilderment. The residents of former Yugoslavia... have placed little emphasis on the dangers of nicotine. During the hostilities, soldiers were often paid in cigarettes and the Sarajevo tobacco factory is one of only a few companies working at full capacity. The Israeli Government is fighting a losing battle to enforce a smoking ban in the West Bank and Gaza, where doctors and teachers smoke while working. The Voluntary Health Association of India estimates that tobacco co-related illnesses cost the Government \$US11 billion a year. The group fought in vain to have sports teams drop their tobacco company sponsors after receiving findings that 8.6 million teenagers had smoked a cigarette or tried a tobacco product after watching cricket matches. Several Eastern European countries have already passed legislation banning cigarette advertising on television, but manufacturers have found creative ways around the laws. Perhaps the most creative approach comes from the Rovinj tobacco company of Croatia, which airs TV ads of the town that bear the company's name. "A good product remains a good product. However, we have to keep silent about that," says the slogan. In China, the world's biggest cigarette market... [- it consumes] 30% of the world's tobacco, and it's increasing at 2% a year... - ...officials shrugged off the US settlement. "This cannot affect China's market," said an official of the State Tobacco Monopoly... With cigarettes[being] the biggest single source of state revenue - one eighth of the annual total - the Government has little incentive to penalise the industry to save on health costs[, and tariffs of 150%]... acted as an effective barrier to foreign brands reaching its 300 million smokers... In Japan, [where 60% of the guys and 18% of the gals smoke,]foreign cigarette companies... make up more than 20[%] of the... market, and the [US firms'] share is growing... Warnings on cigarette boxes show greater concern over etiquette than over health. "Let's carefully observe smoking manners," one Japanese label gently admonishes... There are half a million cigarette vending machines in Japan - on pavements, in restaurants, even in temples - awake and glowing 24 hours a day, making cigarettes the most easily purchased product in the country... [If *The Social Contract* had been written in Jakarta, Rousseau might have kicked it off by saying, "Humanity is born free and everywhere is in chain-smoking".] British Columbia, meanwhile, became the first Canadian province to follow the US and demand that tobacco companies pay for health costs linked to smoking.

...[a group of US] tobacco industry "whistleblowers" have urged a revision of a \$US368.5 billion... settlement... "I don't feel the agreement is an acceptable one..." a former Philip Morris scientist... said after a meeting... of [the] presidential task force... [reviewing] the... settlement...

COULD you please explain the recent... tobacco settlement? A. Sure! Basically, the tobacco industry has admitted that it is killing people by the millions, and has agreed that from now on it will do this under the strict supervision of the Government... To compensate for the immense suffering caused by its products, the tobacco industry will pay huge sums of money to the group most directly affected... Q. Lawyers? A. Yes... Q. What will happen to all the Tobacco Institute scientists, who, despite decades of dedicated research, were never able to find a single shred of evidence proving that cigarettes cause cancer? A. At the request of the White House, they will be reassigned to the... aliens whose space ship crashed near Roswell... in 1947, and whose bodies are now being kept in top-secret Government freezers... Q. Many people started smoking because they watched classic movies in which glamorous Hollywood stars were always inhaling and exhaling vast clouds of smoke and looking totally cool. What will be done to correct this under the historic tobacco settlement? A. By 1998, all classic movies will be digitally reprocessed by special Government computers so that - to cite one example - in *Casablanca*, when Humphrey Bogart makes his dramatic final speech... [Bogart] will have the voice of Rocky the Flying Squirrel. Q. Whose voice will the late John Wayne have? A. The late Lucille Ball's.

...HOLLYWOOD loves a good smoke. It's hard to picture stars like Humphrey Bogart [- recently voted 'the greatest movie actor of the century' -] ...without a cigarette... A University of California study[found] that half the movies released between 1990 and 1995 had a major character lighting up on screen (up from 30[%] in the 1970s) and that 77[%] of last year's films had smoking scenes... That image, though, will soon pass into film history. [US]tobacco companies have agreed to stop paying to place cigarettes in movies... "If this had happened in the 1940s it would have saved... Bogart's life," an[an]alyst... says of the *Casablanca* star, a heavy smoker who died of lung cancer. It's the end of a beautiful relationship. In the old days cigarette-makers and Hollywood were partners. The companies got publicity and glamour by association with the names in the marquee lights. And the movies got a way to convey sexuality at a time when films were heavily censored. Viewers got the message when [a gal] blew a plume of smoke toward Bogart in *To Have and Have Not*. "Smoking was eroticised," says... [a] professor of film at the California Institute of the Arts. For a time television supplanted movies as the medium of choice for the tobacco companies. Then in 1971 the[US] Government banned cigarette ads from the airwaves. To make up for the loss of time on the small screen, tobacco-companies started paying... to get their brands' roles in movies... [In 1984, American Tobacco supplied more than \$5000 in props to have Lucky Strike appear in *Beverly Hills Cop*. And four years later, Philip Morris and the Liggett Group paid \$350,000 to place Lark cigarettes in the James Bond movie *Licence to Kill*. Philip Morris' also] paid \$US350,000 to have its brand of cigarette appear in the movie *Superman II*... The results weren't always satisfactory. Brown & Williamson Tobacco Corp, for instance, agreed to pay[a] macho actor... \$500,000 to showcase its cigarettes in five of his movies, according to internal company documents leaked to the public. Once the company saw the films, it changed its mind and terminated the contract, disappointed not with the story lines but with the lack of prominent shots of their products. Consider the company's analysis of [the actor]'s action epic *Rambo: First Blood*: "We observed a Kool Light billboard on screen for a couple of seconds. We saw a glimpse of a Raleigh billboard and a Barclay poster." ...Brown & Williamson was no happier with *Body Heat*, a steamy whodunit... that[didn't feature their sponsored actor but] had three shots of a Kool poster. "The first time it was on screen for approximately a minute but it was blurred except for a couple of seconds. We also observed the two lead

characters smoking Marlboro... [made by... a... rival...] ...throughout the movie,"... Hollywood doesn't glamorise cigarettes quite as much anymore. These days it's mostly crooks, killers and psychos who smoke. In the post-apocalypse film *Waterworld*, [the villain] leads a gang of jet-skiing hoodlums called "smokers." The image is hardly more flattering in the thriller *Basic Instinct*, in which a mystery writer and murderer... provocatively pulls on a cigarette. Same for [the actor] who fires up one butt after another in *Broken Arrow*, in which [the actor] plays an Air Force pilot plotting to steal nuclear bombs. "Hollywood is attuned to public attitudes," says [the professor]. "Tobacco is now on the no-no list." The movie studios don't have a lot to lose if tobacco is banned from films. The money to be made by showing cigarettes is puny compared with the \$NZ58 million that it costs to make the average... film.

...a... famous ad for Lucky Strike, which ran in 1925, shows how much our social mores and beliefs have changed over the years. The advert... reads, in part: "These tobaccos are toasted – a costly extra process which develops and improves the flavour. That's why Luckies are a delightful alternative for fattening sweets. That's why there's a real health in Lucky Strike. For years this has been no secret to those... who keep fit and trim. They know that Luckies steady the nerves and do not harm their physical condition. They know that Lucky Strike is the favourite cigarette of many prominent athletes who must keep in good shape. They respect the opinions of 20,679 physicians who maintain that Luckies are less irritating to the throat than other cigarettes." It was when the tobacco industry realised it was losing the medical debate over tobacco, and it started running out of eccentric, semi-retired doctors it could wheel out to endorse smoking as not harmful at all – that it began to change tack. It's now become popular for the industry to claim that its advertising is not designed to bring in new smokers, but instead is intended only to achieve brand switching from existing smokers. The makers of the Lucky ad... had no such problems. Indeed... [the] president of the American Tobacco Company, proudly proclaimed at the time: "Many in marketing today believe that this campaign created more [gal] smokers than any other single promotional effort." In N[Z], of course, tobacco advertising is banned from all media. N[Z] tobacco companies did for years attempt to get their brands promoted through sport and entertainment sponsorship, until this too was clamped down upon. Overseas, however, the advertising debate rages on. In Ottawa, The Supreme Court has just struck down the federal law banning cigarette advertising, saying that it violated freedom of expression. The ruling... [will] eliminate lifestyle adverts featuring attractive young people engaged in exciting activities, or ads aimed at children or youth. But it... [leaves] the way open to allow brand preference advertising or ads that are "purely informational." Even in countries where tobacco ads are allowed, the life of a cigarette advertising copywriter, or art director, has never been harder. This week, the A[US]n Medical Association called on the caucus of the Federal Labour Party to stage a backbench revolt to reverse the decision to allow tobacco advertising at the Melbourne Grand Prix... The... AMA... said that the... 1996 Grand Prix exemption was nothing less than an act of tobacco control vandalism. The AMA has the support of the Caucus Environment, Sport, Tourism and Territories Committee for its 18-month old campaign... It also has the backing of many individual Labour politicians in both the Federal and Victorian parliaments. "We now want them to put their words into action and get this decision stopped... Smoking now kills three million people around the world each year. This is set to rise to 10 million deaths a year by 2025... You only have to look at what advertising people say about the Grand Prix to understand the importance of the event to tobacco companies. An advertisement in the tobacco industry journal, *Tobacco Reporter*, described the Formula One racing car as 'the most powerful advertising space in the world' which will 'carry your brand to 18 billion TV viewers in 102 countries.'...,"... [the] AMA's Federal vice-president... said.

...[Britain's PM] yesterday apologised for his Government's handling of a row over Formula One tobacco sponsorship. "I take full responsibility..." [the PM] said after his Labour Government suffered its worst week since... [its] election victory on May 1... [His] Government had been riding high in opinion polls but has been hit by withering press comment since it announced on November 5 that it would exempt Formula One motor racing from a ban on tobacco sponsorship... The Labour Party then revealed it had received a [pre-election] donation of £1 million... from[the head of] Formula One... Its troubles deepened when Labour acknowledged that [the head –] one of Britain's richest business[people –] had offered the party even more money after the election. The offer was declined... The [PM], eager to draw a line under a lingering row that has dented his reputation, said: "I guess we should learn the lesson... that... when something like this happens again, you deal with it quicker and in a better way... It should not come out in drips and drabs... It looks as if it was a great issue, was the thing the Government was concentrating on – but... I suppose in the six months of Government, I[only] spent about... an hour on Formula One..." ...prompted by a move within the E[U] to make such a ban uniform throughout the area... the new Government[had previously] announced... it would ban all smoking-related sponsorship of sport.

...Tobacco sponsorship will continue to be permitted in... Grand Prix races until... 2006[following a] meeting of European health ministers...

Organisers of the Belgian Grand Prix have threatened legal action against the International Automobile Federation... if they take the Formula One race from them. The Belgian race, although still listed for August 30 at Spa-Francorchamps on next year's calendar, faces the axe because of a Belgian law banning all tobacco advertising and sponsorship from January 1... [In local news,] the Smokefree Coalition... said it stank of double standards for the Minister of Health... to grant an exemption for teams sponsored by cigarette companies to compete in the Smokefree Rally of N[Z]. Although the Smokefree Environments Act 1990 bans any form of tobacco advertising at organised events, it allows the minister to exempt overseas teams if the event is of "international significance." The motor rally receives... \$1 million... from the Health Sponsorship Council, which is under a statutory requirement to replace tobacco company funding. Advertising for this year's event features a pair of squashed possums dying for a fag. The rally used to be sponsored by Rothmans, which now backs teams in the popular event along with 555 and Marlboro. "This means they will have their logos plastered on cars and team uniforms, and the pictures will be beamed around N[Z], through most of Europe and to parts of Asia," said... the National Heart Foundation... "...[the promoters] are getting their cake and eating it too." Meanwhile, rally officials fined three Japanese drivers \$500 after three separate crashes on Waikato roads this week. The drivers were familiarising themselves with the terrain...

[NZ's] Government will try to use a landmark [US] settlement by tobacco companies to push local firms into stronger anti-smoking measures... But... the... Health... Minister... conceded... the Government could face major obstacles if it tried to follow the lead of... [US states. L]egal advice... showed it would be more difficult to establish liability under... [NZ law. Under the US] agreement... companies will face heavy fines if youth smoking does not fall to agreed levels... [T]he recommended drop was... 30% in five years and 60% in 10... [The minister] believed the idea was worth investigating in [NZ], along with making tobacco companies pay for anti-smoking campaigns and phasing all nicotine out of cigarettes by 2009.

...Taiwan may ban tobacco products containing nicotine beginning in 1999, making its already stringent anti-smoking laws even tougher... "Under our motion, which still needs review and legislation, violators will be fined from \$T1 million and \$T10 million... on a daily basis." ...Taiwan last week implemented a draconian anti-smoking law, restricting smokers from puffing in all public areas, including aircraft, hotels, restaurants and financial institutions. Violators can be fined up to \$T3000 and compelled to take courses on the dangers of smoking. The law bans tobacco sales to minors and virtually all forms of promotion, including television, newspaper, movie and video ads, and sponsorship of sports events. Only magazines can run cigarette ads – but under strict limits... Lawmakers said there was a need to quickly revise the law before [US] tobacco suppliers dumped cigarettes in Taiwan... [US] firms, major suppliers for Taiwan's six million smokers, forced open Taiwan's tightly controlled tobacco market in 1987... The [US] Government has signed an agreement to ban all tobacco products with nicotine 12 years from now.

...[the] proposed \$US368.5 billion... settlement in the U[S] between tobacco companies and the health sector would not even cover the damage from smoking in N[Z, says] an Auckland doctor... [T]he settlement should have been more than \$US25 trillion (a trillion is a million million).

...Florida declared victory yesterday in its battle against the U[S] tobacco industry, announcing an \$[US]11.3 billion... settlement in its lawsuit... and the first payment, \$1 billion, is due within the next 12 months... State officials said the industry had also agreed to pay millions to cover Florida's legal costs... The state filed the suit in February 1995 under the Medicaid Third Party Liability Act 1994 which stripped tobacco firms of the traditional defence for cigarette-related health problems... The settlement was the second between a state and the tobacco industry. Mississippi announced in July a \$3.36 billion settlement... The tobacco industry said, however, that a national accord was still needed, and that the so-called global industry deal between the industry and state attorneys... would largely supersede the Florida[and Mississippi] pacts...

A US[Judge has dismissed a class-action lawsuit against the tobacco industry on behalf of more than two million Pennsylvanian smokers, less than a month before it was to go to trial. The... Judge... granted a tobacco-industry motion for dismissal, ruling that Pennsylvania's two-year statute of limitations had expired for five of the six plaintiffs... [Furthermore, the judge said the smokers] had known for years that smoking posed serious and specific health risks for them... [Incidentally, NZ and AUS]n researchers are joining forces to look at passive smoking in public venues, using a ground-breaking technique... They will analyse the hair of bar staff on both sides of the Tasman... A Wellington public health specialist... said hair had proved an accurate measure... because it... had a lifespan of two to three months... and... stored nicotine. Parts of A[US] are about to restrict smoking in restaurants and bars... [T]he Wellington Medical School... is[also] examining hair samples from about 100 children.

...Virtually all[NZ] workers are likely to be told to stub out in future... crackdowns on smoking... The... Health Minister... seems intent on targeting workplaces such as building sites, given that employers must have a policy for office workers. Under new legislation passed last week, the age at which people can be sold cigarettes rose from 16 to 18 years. That change came into effect yesterday... but... several tobacco-related issues needed further work... Health groups... [want] all teaching institutions[to be] smokefree... and for bars and... clubs to set aside smokefree areas...

The Smokefree Coalition yesterday released research published in the *American Journal of Public Health* which showed that making bars and restaurants completely smoke-free did not hurt bar takings... [It] plans to push for laws that ban smoking in all indoor public areas[within NZ]. But the... Hospitality Association... said there was almost always a smoker in social groups, and people would consider that in choosing a venue.

...On New Year's Eve, there will be two "last calls" at most Californian bars: one for drinkers, the other for smokers. "It will be 'Happy New Year, put out your cigarettes['," said the... manager of Plainfield Station, a bar and grill outside Sacramento. On January 1, California will become the first state in the U[S] to ban smoking in most bars and casinos... [T]he only exempt businesses will be casinos and bars on Indian reservations and small family businesses with no employees. - 1997

[The] 29-year-old sporting-goods sales[person]... sipped an orange juice and breathed the unfamiliar smoke-free air of the Bus Stop, a popular bar on Union St in San Francisco. By 10am New Year's Day, on the first day of California's ban on smoking in bars and casinos, the... nonsmoker, and his friends had gathered around some of the Bus Stop's 12 TVs to watch football. "This is great. I like it," said... [the 29-year-old,] who comes in three or four times a week. "I'm tired of going home with my hair and clothes smelling like smoke. After a night here the lungs would kind of tighten up. I'd go for a... run the next day and it always took longer to recover." Outside the Bus Stop... a... [smoker] took a drag from a cigarette and offered an entirely different perspective. The 62-year-old retired merchant marine captain suggested that "the people who want this law ought to suck it into their lungs like cigarette smoke and then" – well, the rest of ...[hi]s proposal probably should be left to the imagination. [The 62-year-old] and a handful of Bus Stop patrons puffed away on the sidewalk... "I come to one bar, and this is it... The law won't affect where I go, just where I smoke when I'm there." Bus Stop... employees began gathering up ashtrays and asking customers to extinguish cigarettes at the stroke of midnight New Year's Eve. Most complied, but a few were escorted outside. Elsewhere in the state, smokers were less accommodating, and some bar owners were openly rebellious. At the trendy Derby Club in Los Angeles, the band struck up *Smoke Gets in Your Eyes* at midnight, as the... smoking continued. Shortly after midnight... after kisses and the hoorays and the clinking of glasses marked the start of 1998... an actor and bouncer at the Liquid Kitty... lit his first cigarette of the New Year. "People don't come to a bar to get healthy... Part of the fun of coming to a bar is to have tobacco with alcohol. It's like popcorn and movies." Already, there is talk... of civil disobedience, of test cases, of last-ditch efforts to force the legislature to reconsider... [The] owner of the BAC Street Lounge in Redondo Beach, southwest of L[A], has started collecting a kitty to pay the fines and legal expenses of the first bar owner – there are 35,000 in the state – who fights a smoking citation. Only 18% of California[n] adults smoke. But [the owner] estimates 70% of his customers are smokers. [The owner] intends to walk the thin line between compliance and defiance... print[ing] up statements... to... hand to smoking patrons, [which] [they will sign, to acknowledge [the owner] has advised them of the smoking ban... [– a ploy it] hopes... will protect him from the complaints of nonsmokers – and from citations. The smoking ban is the result of a 1995 workplace law designed to protect employees from the hazards of secondhand smoke. It prohibited smoking in all enclosed... workplaces, ranging from offices to restaurants. Bars and casinos were exempted for two years, to let the state set safe levels for tobacco smoke exposure. But the state, concluding there were no safe levels... extended the ban to bars and casinos. Supporters heralded the law as the most important assault on tobacco yet, and predicted other states would begin to implement similar measures... But critics called it a Draconian attack that would be difficult to enforce in the last bastion of die-hard smokers. State officials say there will be no smoke police trawling the bars looking for recalcitrant smokers. But they will respond to complaints that bars are still permitting smoking. Bar owners will be liable for fines ranging from \$100 for a first offence to as much as \$7000 for repeat offences... [T]he San Francisco Health Department... will be looking for evidence of smoking during[its] regular, twice-a-year inspections of the city's 1000 bars. The city will give bars plenty of time to comply. Despite dire predictions of the law's economic impact, one study, by the University of California, concluded that the state's restaurants suffered no revenue losses after they were forced to ban smoking two years ago. And... [the owner of a] Santa Monica bar, Father's Office... has seen his business quadruple since... ma[king his bar]... smoke-free seven years ago.

...at Lola's suds joint on Second Ave, the resident barflies don't pay too much attention to great[ness] and the tide of history. But if they were given the chance to elect a new mayor – maybe even a president – then someone in the mould of Count Joseph Radetsky would be a shoo-in. "I will not recognise or tolerate," the Austrian field-marshal declared after a wave of violence swept Milan in 1848, "any society that insults and attacks peaceful smokers". The old fellow would be apoplectic about what has gone on in New York since the country's harshest anti-smoking laws were introduced three weeks ago. Radetsky had only to contend with rebellious Italians protesting tobacco taxes and their country's occupation. In the Big Apple, where bar bouncer Dana "Shazam" Blake was stabbed to death last weekend in the East Village while attempting to enforce the law, emotions are more heated. This latest attempt to wean Americans off nicotine is the most aggressive and, in its own way, the most instructive example since Prohibition of the pitfalls awaiting legislators who attempt to mandate virtue. In theory, banning smoking in nightclubs, bars, company cars, even under sidewalk awnings, is good for everybody. Nicotine fiends will live longer for not being able to indulge their habit so often and innocent bystanders won't be imperiled by secondhand smoke. But look closer at the crusade's consequences and the most obvious lesson – one even non-smokers can't deny – is that tobacco sullies civility and shining principles as readily as it stains teeth... New York[']s... mayor, was unrepentant. The murder was terrible, [the mayor] said, but the smoking ban would do the city good. It was the same line [the mayor] took last year, after adding a \$3... tax to a packet of smokes, which now cost... \$8... While that initiative was supposed to fill the city's coffers, the evidence is that it has achieved little. Police say "butt runners" are doing a roaring trade trucking untaxed cigarettes from Dixie, where Marlboros still go for \$3... a pack. It's been a boon, too, for the Indian reservations that take orders over the internet and mail out thousands of tax-free cartons every day.

City Hall's line is that... Californians have coped... so New York's stoics can just learn to cope... New Yorkers will become used to the new regime, just as they did when smoking was banned in restaurants, and then in betting shops, and at baseball stadiums, and, well, just about everywhere.

...SMOKING will be banned on all scheduled flights out of America from today[, which reminds me of a]... friend whose thriving livelihood runs off her cellphone[. The friend] was recently chastised when her phone lay abandoned on her desk; the endless ringing of lost sales alerted her boss to her absence. [The friend ha]d nipped down to the carpark for a fag. Cellphones don't work well in underground carparks and her need for nicotine outweighed her drive to clinch another deal. That's the cost to employers of banning smoking in the workplace: lost hours of productivity as smokers down tools to light up. And then there's the negative effect on corporate image when arriving clients wade through the huddle of addicts flushed from the building, now smoking outside instead. Despite the world closing ranks on them, smokers plough on, admitting they're addicted and choosing to delay the inevitable. But when it's time to face the music in the doctor's surgery, some feel compelled to shift responsibility back to the tobacco companies. As the[NZ] Government takes time to ponder the possibility of legal action against tobacco companies to recoup smoking-related health costs, let's consider who should be footing the bill: the manufacturer, the smoker or the Government that represents them both? We have always rolled our eyes at the hypocrisy of the litigation-addicted U[S], where it has become socially acceptable for consumers to stop taking responsibility for their own choices and actions. On the one hand they demand freedom and individual rights, and on the other they shift the blame when the inherent risks of freedom of choice leads to disaster. N[Z]ers have always been a bit more sensible and pragmatic about such matters. But now we consider putting responsibility back on the manufacturer for a vice we readily embrace. Imagine the repercussions... Could... the Dairy Board... get it in the neck for blatant promotion of cholesterol-ridden cheese? I look forward to recouping liposuction costs from Cadbury's who seem to be turning a blind eye to my stubborn cellulite... I ask my packet-a-day girlfriend if [it] feels the tobacco companies should front up with compensation for health costs. "Legal action against tobacco companies? Hmm... I'd only sue them if they withdrew the product from the market." ...Recently there was talk of enforcing a nationwide smoking ban in restaurants, another earnest attempt by the Government to quick-fix society. Sounds good, but it would brass almost everyone off – smokers, restaurateurs and broad-minded non-smokers who are big enough to make their own judgment calls regarding the establishments they choose to frequent. Non-smoking vigilantes may think they are triumphing, no longer feeling awkward when they ask guests to smoke outside or smugly witnessing planes and workplaces making a stand. But unfortunately for them it looks as though smoking is here to stay. These days, vice is nice.

...Sunday afternoons are usually quiet at... Te Atatu RSA, just a few members enjoying a snooker, a beer and a smoke. But under proposed anti-smoking legislation that last pleasure will be outlawed, prompting... [NZ]'s 170 RSAs to campaign against what they believe is an infringement of their rights... Smokers made up a minority of Te Atatu RSA's 800 members, but the club could not afford to lose them... The... legislation will ban smoking in... pubs, cafes, restaurants, casinos and RSAs, with smokers facing a \$400 fine for lighting up indoors. It could become law by next year.

...The private members bill banning smoking in bars and restaurants is crawling through Parliament at such a slow pace that the Government may adopt it as its own and pass it under urgency before Christmas.

...I am a non-smoker. I made this choice for myself to lengthen my life and to take the best possible care of my family... However... I took my children to the local Santa parade this year, and... my family were surrounded by three smokers who didn't seem to care that my older daughter was sneezing the entire time and that my baby was wheezing from the fumes... I find inconsiderate people like [those three smokers] sickening.

...DEAR Kicken Butt ('Smokers ruined my kids' Christmas treat...): [I]... you and your kids were receiving second-hand smoke then you should have moved... [E]veryone knows that everyone dies one day and if smokers want to die from something they like doing, then just don't interfere.

...Nicotine addicts lighting up at Waitakere Hospital may be forced off-site for a cigarette as the Waitemata District Health Board puts together its new non-smoking policy. Waitemata is joining other boards around the country implementing tough new policies banning smoking on hospital grounds... The board currently has a smoking ban in Waitakere Hospital buildings, apart from a patient smoking room at the secure Te Atarau mental-health unit. Staff are allowed to smoke in designated areas and patients are offered nicotine patches.

...In 247 days and counting one of the most potent accompaniments to a night out in Ireland will be stubbed out, literally. Dublin smokers are stunned. New York, they argue, might have fallen recent victim to the health fascists... – but Dublin? Surely there was some mistake. Stockholm, Toronto, Gstaad, or somewhere else clean, dull and wholesome, yes – but Dublin, famous the world over for its smoky bars, unbridled hedonism and contempt for authority? ...It's been compared with banning singing in heaven or swearing in hell. Ever since Sir Walter Raleigh brought tobacco to the Irish port of Youghal in 1584, lit a pipe and mused on what a good job god had made of East Cork, smoking has been as much a part of Irish life as black stout, silver charm and white lies... Nevertheless, some 7000 bars and restaurants across the Irish Republic will become smoke-free... Smokers will... face eviction, fines and even arrest. If the reactions of outraged Irish publicans is anything to go by, the ban will halt in its tracks a once-unstoppable business success: the Irish pub, the most-copied type of licensed premises in global history... [■ TODAY] PEOPLE can breath[e] easier in Queensland. Smoking is now banned in most public places after it was found a barmaid's throat cancer was caused by passive smoking.

...*Passive smoke no joke* [THE] AUCKLANDER... remembers how the long flights to Japan left his throat croaky and eyes reddened. [The Air NZ] cabin crew member... suffered as passengers around him smoked[, and] left those flights feeling "three times worse" than if it had been a non-smoking route. [Recently, a 'passive smoker in AUS was awarded \$0.5 million' as compensation for the illnesses it has developed.]Now a major new international study has confirmed what non-smokers feared for years: passive smoking raises your risk of asthma and respiratory problems. Almost 8000 adult non-smokers, including 608 N[Z]ers, were questioned in the... European Community respiratory health survey[, which] found high rates of passive smoking in southern and central Europe, with low rates in... Sweden... USA... A[US and N]Z...

Sniff smoke, risk a stroke... Breathing in tobacco fumes from a relative or workmate increases your chances of having a stroke by up to 82[%], Auckland Medical School research shows... The authors say few studies have looked at the association between smoking and strokes... The latest in a long list of medical conditions to be linked to passive smoking is revealed in... *Tobacco Control*, a publication of the *British Medical Journal*.

...Results from personal air monitors carried by more than 1000 people in cities around Europe revealed that even the most highly exposed passive smoker inhaled the equivalent of only 0.02 of a cigarette each day[, or]... six cigarettes a year... – a tenth of estimates backed by the British Government... [– and] not enough for any real harm, according to a report in the *Sunday Telegraph*... Even those who lived with smokers were typically exposed to [just 0.1%] of the dangerous components of cigarette smoke inhaled by smokers... [T]his suggested that passive smokers faced a tiny excess lung cancer risk over those not exposed to cigarette smoke... The 10-year, seven-country... study[also] says there is no relationship between childhood exposure to second-hand smoke at home and lung cancer.

...Scientists said the study showed a 16 to 17[%] relative risk if you lived with or worked with a smoker – but said the result was non-significant, implying it could have been produced at random.

...*Non-smokers rights a hazy issue*... [N]o other Western democracy is as highly regulated as Germany. Laws dictate what names you may bestow on your children, what kinds of waste you can produce and how much per week, and when you are permitted to wash the car or mow the lawn. But when it comes to public health and safety, German laws can be curiously lax. Foreigners are often amazed by the absence of speed limits on freeways, where a frenzied parade of Porsche, Mercedes-Benz and BMW automobiles roar down the pike at speeds of 240km/h. Smoking has also escaped the constraints of law. In contrast to nearly every other Western nation, the German government has avoided waging an anti-smoking campaign, perhaps because many leading politicians... are... tobacco fans. There are few restrictions on smoking in such public areas as

restaurants, bars and offices, and Germany's cigarette consumption per capita ranks as one of the highest in the Western world. About 90,000 people die every year in Germany from smoking-related diseases. The reluctance to crack down on smoking may have something to do with an aversion by all postwar German governments to embrace policies the Nazis endorsed. The Nazis conducted one of the world's most vigilant anti-smoking campaigns. They imposed severe restrictions on smoking in public and banned pregnant [people] from lighting up as part of their quest for physical purity. But an intensifying barrage of warnings from German health professionals is starting to have an impact... [A] member of parliament from [the Chancellor's]... Christian Democratic party, is promising legislation that would protect the rights of non-smokers... "We are not looking for a general prohibition of smoking... All we want is a law that protects non-smokers in places where they are forced to meet smokers."

...Smokers are four times more likely than the general population to fall prey to *Streptococcus pneumoniae*, the bacterium that causes meningitis, blood poisoning, pneumonia and ear infections. A study in the *New England Journal of Medicine* says the bacterium sends 500,000 Americans to hospital each year, claims more than 40,000 lives and is a leading killer of young children... The research found people exposed to second-hand smoke for as little as an hour a day are two and a half times more likely to develop one of the illnesses, known collectively as invasive pneumococcal disease. An adult vaccine against the bacterium is available but it is usually recommended only for the elderly and people with other health problems that open them up to the disease. A vaccine for infants and toddlers was approved last month by the US FDA. The study, by a team at the Centres for Disease Control and Prevention in Atlanta, raises the question of vaccinating healthy adults, particularly smokers.

...Smoking in later life promotes mental decline, says new research. A team from Britain's Institute of Psychiatry studied the health and lifestyle of more than 650 people aged 65 and over, and tested them for mental sharpness using a technique similar to one used to screen for dementia and Alzheimer's disease. A year later, of the 417 people who could be retested, one in 16 had suffered significant intellectual decline... After taking into account factors known to affect brain function in older people, such as depression, general health, education and alcohol use, the researchers found that smokers were up to four times more likely to be mentally impaired than people who had never smoked. The suspected reason: smoking narrows and hardens the arteries, impairing blood supply to the brain. The authors strongly attacked several previous studies that suggested smoking, through nicotine, might help to prevent the onset of Alzheimer's. In a separate study, reported in *Occupational and Environmental Journal*... doctors found that smoking exacerbated the symptoms of an industrial illness called vibration white finger. This ailment, suffered by workers who frequently use drills, chainsaws and grinders, causes blood pressure in the fingers to drop, making them painfully sensitive to cold.

...Smoking ages the face by an extra 14 years every 20 years, say British researchers. Tobacco triggers a protein that breaks down collagen, the fibrous material that keeps wrinkles at bay. Normally, the enzyme is used during growth to assist tissue remodelling, breaking down certain structures so that they can be rebuilt. In the body, an inhibitor substance called TIMP regulates the effect... Middle age begins in the 30s for smokers, as wrinkles accumulate around the mouth and eyes. "Once the collagen has been destroyed it is gone forever and cannot be restored..."

...[studies by Sydney University have linked smoking to 20% of irreversible blindness in people in their 50s]...

Smoking for as little as five years... damages the lungs, heart, eyes, mouth, throat, digestive organs, genital tract and skin – damage that can only be partly undone by quitting, says the American Council on Science and Health... [However, stopping] smoking at 60 almost completely banishes the risk of developing lung cancer in people who do not already have it, an international conference heard yesterday. The finding surprised researchers who said the trend had emerged only recently as a result of studies that have followed lifetime smokers into old age... [Most] current health prevention strategies... focus on dissuading children from taking up smoking but... older smokers were not told of the advantages of giving up.

...[NZ] tobacco giants are paying shopowners to display multiple rows of cigarette packets in eye-catching units – a measure ...Ash... believes is against the law. The Ministry of Health is seeking a legal opinion... that the payments... breach smokefree legislation. Since December tobacco advertising near cash registers has been forbidden... Now, in a widespread move, rows and rows of cigarette packets are being prominently displayed in new containers near shop counters... Ash had reported only Rothmans to the Ministry of Health because the group had a copy of an agreement worth \$1700 between that company and the owner of a small shop. But it also believed... British American Tobacco... might be in breach of offering similar arrangements... The managing director of... British American Tobacco (formerly Wills)... [confirmed that] his company had similar... arrangements... Rothmans... said Ash had lost the plot... The tobacco companies say their arrangements with retailers, and their displays, are within the law... The... companies... paid a rental to shopowners for the display space. It was a normal commercial practice... [However,] the only difference with the displays since the latest ban was that advertising had been removed... One Auckland dairy owner, who did not want to be named but had a large display of Rothmans products, said Ash had a point. "It's not a small display, it's humungous. If you look at it you can't get better advertising than that." ...[By the way, a] new report from the Imperial Cancer Research Fund... and A[sh]... showed the international tobacco industry had 57 US patents approved for modifications that could have reduced the... toxic cancer-causing compounds in the 4000 chemicals in tobacco smoke... But the tobacco companies never made them because producing better cigarettes would have been expensive and an admission that the existing ones were "unsafe", according to... a 1986 internal memo... [from] a former chief executive of British American Tobacco.

...*"There's more to the tobacco industry than the controversy surrounding our products."* British American Tobacco is the world's most international tobacco group, with active business in 180 countries, employing almost 90,000 people worldwide... Working for us means being part of an instinctively international, multicultural environment where team spirit and professionalism is strong and success is celebrated.

...*Cross-border big business in gun...* For [the cigarette salesperson]... 1993 was an especially good year. A star employee with Northern Brands International (NBI), a tiny, four-person export outfit owned by the tobacco giant RJR Nabisco, [the salesperson] sold an astonishing eight billion cigarettes... reaping about \$US60 million... in profits. Walking the company's halls, [the salesperson] received a standing ovation from executives who had received hefty bonuses as a result... On his wrist [the salesperson] flashed a Rolex, a gift from grateful wholesalers. These days, [his] name is no longer greeted with applause in the tobacco industry. [The salesperson] and other former executives are soon to be quizzed by federal prosecutors about the shady side of the cigarette business... [A] federal grand jury in North Carolina is investigating explosive allegations about global smuggling operations that move vast amounts of cigarettes across borders without paying any taxes. It is a multibillion-dollar-a-year enterprise. The grand jury deliberations spotlight a new round of legal troubles for Big Tobacco. (The proceedings are secret and it could not be learned which companies are under scrutiny. The US Attorney in Raleigh... declined to comment.) Cigarette makers are under attack from Governments around the world that seek to hold them responsible for the costs of smuggling: billions in lost taxes, soaring violence and weakening efforts to prevent kids from smoking. Last week the EU announced that it plans to launch a civil suit against US cigarette makers for their alleged involvement in smuggling. In the last eight months, Canada, Colombia and Ecuador have all filed smuggling suits against US tobacco companies using US anti-racketeering laws. Britain, Italy and China have also mounted intensive investigations. The Canadian and European investigators are cooperating closely with their US counterparts to build a case against the industry. The Feds have even set up a cigarette-smuggling "war room" in the US Federal Building in Raleigh which is now ground zero in the latest battle against Big Tobacco... Though tobacco executives acknowledge that cigarette smuggling is a problem, they vehemently deny any involvement in the illegal shipment or sale of their products. R. J. Reynolds executives say their organisation has been completely reorganised and bears no responsibility for the now-defunct NBI. They also insist they knew nothing about [the salesperson's] illegal operation. [The salesperson] was a rogue smuggler, they say, who fooled them all and brought shame to the industry... In addition[to the smuggling issue], the World Bank and WHO plan to release the results of a three-year investigation

claiming the tobacco industry has deliberately thwarted international efforts to control [i]t... Cigarette makers can ill afford a new volley of legal problems.

...A California jury's record-breaking award of \$US51.5 m... – [over]three times what her lawyer asked for... – ...to a former three-pack-a-day smoker could herald a wave of jaw-dropping verdicts against the tobacco industry... Analysts suggest cigarette makers' willingness to pay billions of dollars to settle state lawsuits has made the industry an easier target. The settlements are perceived as a public admission of guilt and a sign... the industry has lots of money to spend. "When tobacco companies start offering billions of dollars of settlements, juries lose their sense of how much is a lot," said... a law professor at Wake Forest University who specialises in product liability... Philip Morris lawyers said the... company planned to appeal.

...A judge has refused to overturn a... verdict against Philip Morris but has lowered from \$US51.5 million... to \$26.5 million, the total damages the company must pay to a former three-pack-a-day smoker with lung cancer. When [the smoker] won the \$51.5 million in February, it was the largest award ever in a tobacco liability lawsuit filed by an individual smoker. Th[e]... judgment... also denied the company's request for a new trial.

...A lifelong Marlboro smoker who won a record \$US100 million damage award against cigarette maker Philip Morris has died of cancer. Richard Boeken, who began to smoke as a teenager 40 years ago before warning labels were placed on cigarette packets, died on Thursday at his California home[, aged]... 57... Philip Morris is appealing against the award, which had been reduced by a judge from \$US3 billion.

...THE U[S] tobacco industry won a major victory yesterday when a state appeals court ruled damage claims in a landmark smoking case must be considered one smoker at a time. That removes the threat of a single multi-billion dollar verdict. The ruling came on behalf of about 500,000 sick Florida smokers. In July a jury decided in the smokers' favour, ruling the industry produced a deadly product... The class-action lawsuit by smokers was the first to go to trial. The second round will begin on Tuesday, when the jury will determine whether two sick smokers should be compensated. The defendants are the nation's five biggest cigarette makers... and two... associates, the Council for Tobacco Research USA and the Tobacco Institute... "This has essentially devastated the most threatening aspect of the claim to the tobacco industry," said[a] tobacco analyst... The individual claims would produce smaller dollar awards, and the industry would have an opportunity to wipe out the whole case by appealing once one damage award is set, [the analyst] said. In March, a jury in Portland, Oregon, awarded \$US81 m... to the family of a smoker who died of lung cancer. The month before, a [smoker] with inoperable lung cancer won \$US51m in San Francisco. Both awards were reduced by judges. But the industry won another Oregon case as well as lawsuits on behalf of unions in Ohio, three dead smokers in Tennessee and one in Missouri.

...TOBACCO companies have vowed to fight the billions of dollars awarded by a jury to sick Florida smokers. A Miami jury deliberated for just five hours before ruling that America's biggest tobacco companies should pay \$[NZ]319.45 billion in damages... the largest punitive award ever in a personal injury lawsuit... Philip Morris Inc's attorney... called the ruling "an unfair procedure, unheard of in American history" but predicted its effect on the company would be minimal. "This is a verdict in favour of no-one," said [the attorney], whose company was ordered to pay \$146 billion... Other tobacco lawyers said they will spend years appealing the jury's decision and will try negotiating a more modest settlement... The six jurors have been on the case... [for] two years... They already found the companies liable for the... ailments in 500,000 smokers in Florida.

...*Jury punished big tobacco for lying*... After listening to two years of trial, a jury of six... didn't hesitate to tell Big Tobacco to pay \$US145 billion... in punitive damages to ailing Florida smokers. "We all thought we needed to send a strong message based on the evidence," said [the jury foreperson, who]... found the tobacco lawyers insulting, especially when they tried to explain away... [one plaintiff]'s throat cancer by saying it was caused by wood dust the clockmaker had inhaled at work, not cigarettes. "To us, that was unbelievable... I'm not an idiot... It was insulting to me and an incredible level of denial in the face of all the evidence and the earlier verdict." It was the third time the jury had deliberated in the case... "The jury was unwayed by the tobacco companies' threat [that a high damage award] would cause them to go belly up," said[a] Harvard Law Professor... "The verdict should not endanger the settlement payouts to... any state since the companies have the financial capacity to pay us as well as these verdicts in private actions," said[the] Connecticut Attorney-General[, who]... was among Attorney-Generals that helped hammer out the \$US246 billion settlement of state suits brought against the industry. The 1998 landmark accord resolved the states efforts to obtain Medicaid reimbursements for money spent on sick smokers. "We don't feel threatened at all," said[the] Mississippi Attorney-General... who filed the first of the state suits. [The Mississippi Attorney-General] expects the latest award will be tied up in appeals for at least five to 10 years. "Who knows what the end result will be. They will cause every type of delay... It's not like they're going to write a cheque." Lawyers said they expected the award will be reduced on appeal and that the industry would be able to handle the amount by raising the price of cigarettes.

...ONLY in America. The \$[NZ]300 billion award against US tobacco firms to half a million smokers may sound big. But just six people are sharing in a \$10 billion payout by General Motors after an exploding fuel tank hurt them.

...British researchers say they have genetically engineered tobacco plants so they could... break down the... explosives from soil... into harmless substances... The plants could be used to clean up areas around weapons factories and munitions dumps... Some of these sites are literally on the verge of exploding." ...[In related news,] New York has passed a bill making it the first US state requiring the sale of self-extinguishing cigarettes. The law, to take effect by July 2003, aims to reduce fires caused by careless smokers, who account for at least one-third of the fire deaths in New York. The state now has... to come up with the standards for self-extinguishing cigarettes[, which 'tests show are unreliable']...

If death doesn't turn smokers off, what will? ...[smoking] gives you something to do with your hands in public... It means you can squint your eyes in a steely way, as the smoke drifts past. It helps you mark territory, dog-like, with gobs of hoick. It means you leave a subtle odour behind you wherever you travel, for others to savour. It gives cleaners something to do, which is a social service. The inevitable bouts of coughing cover up those embarrassing gaps in chit-chat when you're trying to impress somebody attractive. It makes you taste delicious. It gives you an excuse to leave the office, and hang about with other smokers in alleyways... This, in turn, reminds you of schooldays, the best days of your life, you betcha. But best of all, it's dangerous. Sucking on durries is a mixture of fire-walking, speedway racing, kamikaze piloting and drunk driving. So it'll kill you? Who cares...? We're not here for a long time, we're here for a good time... No wonder kids still take it up, even after the \$44 million the Smoke-Free Act has cost this country since 1989... One solution? Pay them to give up. That's the brainwave of... [a] Tauranga... Judge... who let two [young people] off their outstanding fines recently after they said they'd stop smoking... [A 23-year-old had] told the court [about being] too poor to pay to sit his driver's licence. [The judge told him that giving up smoking would enable him] to pay to sit his oral test in a fortnight, and in a month... have his licence. As an extra incentive, [the judge] airily wiped \$814 of [his] outstanding fines. Still on a roll of good works and joy, the judge offered a similar deal to... [a 22-year-old], also unemployed, of Te Puke, who had \$500 owing. "If you never smoke again you will be richer, healthier, and live longer," the judge piped cheerily, offering him the choice of periodic detention or a clean slate. And so the two... tripped out of court, surely light-headed with disbelief, and hungering a durry. How long before they lit up? One hour? Two? Madness takes many forms, but none more so than in the belief that sweet reason will persuade a smoker of anything... More good news: Cigar smokers, according to a study released last week, face double the risk of dying... from all forms of cancer... than the smoke-free population... – and this from smoking an average of only two cigars a day for 10 years. Talk about sexy! Watch the rush on cigar sales[, and look out for advertisements like: 'When you smoke a cigar you're in heaven'].

...a]s a... presidential candidate [the US President] confessed that, as a student, [it] had smoked marijuana “but never inhaled.” Now [the President] “chews cigars but does not smoke,” says [the]White House... Still, in a country where smokers are social outcasts and cigars in the White House are the butt of sexual innuendo after... the... independent prosecutor[’s]... report on the [intern] scandal... said... the [President] used a cigar as a sex aid... the President does not like to be caught with a cigar in his mouth... But... this week... press photographers... managed to get a perfect shot of the President sucking on a sizable corona... during one of his golf rounds... before [the President] could snatch it out of his mouth.

...WITHIN seconds of ignition, cigar smoke fills the puffer’s mouth and throat with a brown coating containing cancer-causing compounds, setting in motion a tug of war between acquired habit and a genetic instinct for survival. The invading compounds chemically break down the cells in the mouth and throat. The smoker’s body automatically responds by repairing the bombarded cells. But when they enter the system repeatedly, the carcinogens can overwhelm the body’s defences. The cigar smoker, as a result, is four to 10 times more likely than non-smokers to die from laryngeal, oral and oesophageal cancers. The rate of lung cancer among cigar smokers – two to three times higher than among non-smokers – would be even higher if they inhaled. But the chemical makeup of cigars – denser and less acidic than cigarettes – creates a caustic smoke that usually inhibits the smoker from breathing it deep into the lungs... The carcinogens, however, have other ways of attacking the body. They pass through the lining of the mouth and throat into the circulating bloodstream. Tissue throughout the body is exposed... Vaporised by heat moments after the cigar is lighted, nicotine... is a[ls]o a]bsorbed... and set loose in the bloodstream... Experts say the typical cigar delivers more tar to the smoker than does the average cigarette. And a higher level of nicotine... – up to 400 milligrams – than in a cigarette, which on average contains about 10 milligrams.

...[here’s some m]ore loopy laws from the craziest country in the world. In California it’s illegal to set a mousetrap without a hunting license, while in Oklahoma you can get picked up for making ugly faces at a dog. And in Illinois it’s against the law to give lighted cigars to cats and dogs. Keep that in mind next time you invite the neighbour’s dachshund around for a poker game.

...Hollywood lights up cigar sales... ALIENS blow up the White House. The human race teeters on the brink of annihilation. What does a brash young hero need... [when setting] out to save the day? “Oh damn, wait a minute... we got to find some cigars,” exclaims [the]actor... in *Independence Day*. If you were among the... 60 million... who watched the movie... you witnessed a persuasive promotion for cigars. Operating behind the scenes, cigar manufacturers paid Hollywood brokers to feature their product in the movie, a type of stealth marketing that the US Congress thought it had stamped out. The result: The movie industry has fanned a resurgence in cigar smoking. Actors lighted cigars in 51 of 133 movies with a domestic box-office draw of at least \$5 million in a survey by the American Lung Association... Manufacturers want the public to believe that the proliferation of cigars on the silver screen is mere happenstance... “We don’t promote our products through movies,” said... [the chairperson of] one of the nation’s oldest and largest private cigar makers... But the company’s internal documents contradicted him. On June 9, 1995, his son, [the company’s] president... expressed interest in Hollywood in a letter to... [the] president of Feature This!, a Los Angeles product placement company... Almost four months later, the company... took further steps. “Enclosed please find the following cigars to be used in specific movies which we discussed (yesterday),”... the president’s assistant, wrote... on October 3... [The son] was not available for comment, but when asked about the discrepancy, [the chairperson claimed to be unaware] of his son’s efforts to get the company’s cigars into the movies... *Independence Day* and another hit, *The First Wives Club*... “First I’ve heard of it,” [the chairperson] said... At Paramount Pictures... the... executive director of production resources and promotion, said that no cigar product placement was involved in *The First Wives Club*, whose promotional poster featured... [the three gal stars] holding cigars. “That wasn’t a product placement... That was a creative decision.” ...[the president] of Feature This!, [claims to have] supplied Cuesta-Rey cigars to the film after receiving a request from [the person] who was in charge of props. Twentieth Century Fox, which released *Independence Day*, also said that cigar product placement was not used in the film. “None whatsoever...,”... Feature This!, however, said it supplied... Cuesta-Rey cigars at no charge for use in the movie at the request of the filmmaker’s property master in charge of props. General Cigar Holdings also furnished cigars for the movie through another product-placement firm, according to cigar company executives. Asked about the discrepancy, the studio’s public relations firm said Fox executives were not available for further comment... Even though the Cuesta-Rey name was “greeked out” – industry parlance for obscuring product identity – ...[cigars] appeared in about 12 scenes, or once every 12.5 minutes, in *Independence Day*... [T]he exposure was a boon for the industry... Other consumer products[have] made an enduring impression on movie-goers... After [the lead actor] donned a pair of Ray-Bans in *Risky Business* in 1983, sales of the sunglasses jumped 55%. And when... James Bond hopped in a BMW Z3 roadster in *GoldenEye* in 1995, the car’s first-year production was sold out by the time it hit the market... Hollywood lore has it that chocolate-maker Mars turned down the idea of having an extraterrestrial movie character munch its M&M candy, which led... [the] director... to Hershey Foods, maker of Reese’s Pieces. Sales went up 65% within a month of the candy’s cameo appearance. The product-placement industry took off, too.

...Cuba’s world-famous tobacco industry, under pressure to lift output but also to preserve quality, turned out a record 160 million Havana cigars... traditionally viewed as the world’s finest... for export last year. That figure, worth more than \$US380 million... in revenues for the cash-strapped island, was a major leap from the 100 million cigars produced in 1997, and 70 million in 1996... [The] head of Cuba’s state-run group of... 43 factories... the Union of Empresas de Tabaco... paid tribute to an “extraordinary effort” from the industry’s 160,000 workers. Spain, France and England were the principal buyers of Cuba’s... cigar output[which represents]... the island’s third biggest export earner after sugar and tourism... With world demand still outstripping supply, the Caribbean nation hopes to raise output of cigars for export... to 200 million this year.

A jump in fake Cuban cigars coming into N[Z] risks giving the world’s most expensive cigar a bad name... The owners of Havana House Cigars in Auckland... said the number of copy-cat cigars from Mexico and Caribbean countries... had grown in the past few months. Six boxes of fakes had been brought into their wholesale, retail and export business by prospective sellers in the past few weeks, adding to about six others during last year... [O]nly two fake boxes[surfaced] in 1995... counterfeiting was becoming a problem as cigar sales worldwide climbed. “It’s worrying when people get bad cigars because they will smoke them and say: ‘Oh God... I don’t want this’,”... Fakes were often packed in authentic Cuban cigar boxes... But tell-tale signs included uneven cigar sizes and colours, uneven labels and bands, broken seals and odour – some smelled like horse manure... A box of phoney Hoyo De Monterey cigars brought into the shop recently could sell for about \$US50... the real item costs \$US280.

...A COMPLAINT from two [US] cigar smokers has alerted the Royal Canadian Mounted Police to a multi-million dollar scam in smuggled counterfeit Cuban cigars, some containing potentially lethal banana leaves. The cigars... are brought from Cuba by people who have heard of big profits made selling oversized Cuban cigars to US citizens banned from buying them at home.

...[T]HE decadent 1980s are over, but the 1990s have ushered in boom times for a leading symbol of indulgence. Cigar sales soared by 44.3% in the first quarter of 1996 over the same period in 1995 – and last year 170 million premium cigars were sold in the US alone. This represented \$1b worth of cigars sold mostly to 25 to 50-year-old guys. But gals account for 2% of cigar connoisseurs and their ranks could soon double, industry experts say. Tossing aside political correctness about health concerns, for some gals there’s nothing like the hedonistic pleasure of a good cigar. For others, cigars represent glamour appeal. Then there are those who smoke because it’s empowering – they’re crashing one of society’s last traditional guy bastions. *Cigar Aficionado* magazine recently featured a supermodel on the cover. The person who launched the magazine in 1992 isn’t surprised by the growing ranks of gal cigar smokers. “Some have learned a great deal about cigars and will be smoking them for many years. Others are smoking because it’s the ‘in’ thing to do and attracts attention, but I’m not sure they know what they’re doing.” The Dallas-based author of *Cigar Chic: A Gal’s Perspective*, smokes cigars so the

author and her husband have a shared ritual. But “it’s also a real guy-catcher. It gives guys a reason to come and talk to you. And it’s better than having a guy come up and say, ‘I like your pants’.” Consolidated Cigar rolls out a cigar specifically for gals, the Cleopatra, selling in the US for \$5, but most gals are smoking premium, hand-rolled smokes that sell for \$20 each. “Which is still cheaper than taking up golf,” says a psychologist, who also says smoking a cigar offers a way to level the playing field of a guy-orientated world. Gal cigar smokers say sampling different cigars is like tasting different types of coffee.]

...IN the hip cafes of Europe, [the US, AUS and NZ], the politics of troubled East Timor are a more likely topic of discussion than its coffee. But from the hills of this remote and rugged former Portuguese colony there is talk of a new taste – naturally grown and worth savouring... [– and] thousands of small farmers are eagerly signing up to join the new movement... “The response has been exceptional. In our first year, in a trial period, we started with just 700 farmers,” says... the country director of the [US]-based National Cooperative Business Association (NCBA)... [which], together with local cooperatives, runs what is known as the Timor Coffee Project, a programme funded by the US Agency for International Development (USAID). “In the second year, we targeted about 2500 farmers and we had to cut off at 6700. This year we plan to get... 10,000,”... Ironically, the territory’s troubles have played a part in keeping the arabica coffee trees of thousands of small farmers free from pesticide and fertiliser use, making it ideal as a source of organically grown arabica coffee. As in Nicaragua and El Salvador, where the NCBA has also worked, guerrilla activity in the mountains kept government extension officers, who would have promoted pesticide and fertiliser use, far from the coffee-growing districts... Certification as organic farmers allows them to tap into a lucrative market for clean produce... “...Organic coffee in a strong market will pay 15 to 20[%] – and in a weak market 10 to 15[%] – more....”... Timor’s arabica bean, known as Hibrido de Timor... is vying with the already popular boutique arabicas from Indonesia’s main islands... New names could soon enter the coffee drinker’s lexicon... The premium-grade brand, Cafe Timor, gets its special flavour from being grown at higher altitudes... The project, still in an experimental stage, produced only 50 tonnes of premium coffee from the 1995 season... [T]he 1996 season would yield 600 tonnes of high-grade export product. The most recent government statistics show the 25,177 coffee farming families of East Timor’s 13 regencies produced 8450 tonnes of mostly arabica coffee in 1995...

WE all have secrets, some more guilty than others. Mine is a daily escape from my desk to worship at the altar of *Coffea Arabica*, brewed in the serene light of my local Aroma cafe. Caffeine is the most widely used drug in the world. Some diehard members of our health police even argue it is our most popular drug of abuse. It is true that caffeine produces physical dependence. And it can be harmful, causing gastritis, palpitations, anxiety and insomnia though that is not the whole story. The earliest references to it are in 10th-century Arabian literature. The legend goes that a [goat-herder] discovered the stimulant effect of the coffee bush when his goats “pranced excitedly” after chewing on its berries. The berries also kept him awake... The Dutch created the first coffee plantations 200 years ago in Java. The first English coffee house opened in Oxford in 1650. During the next 25 years more than 3000 were founded... Our addiction is certainly enjoyable. And here’s a difficulty. For years smoking was regarded as merely a “bad habit” and alcoholism as a “drinking problem.” Only when bodies began to pile up was it agreed we were facing dangerous addictive drugs. The same pattern of denial surrounds caffeine. It took until 1994 for [US] psychiatrists to prove that a syndrome of caffeine dependence did exist... But there are legitimate reasons to think caffeine may not be all bad... because specific tissues in our bodies respond to our own natural caffeine-like substances. Caffeine has been used to treat weak breathing in premature babies and it seems to improve athletic performance. [Furthermore, the] difference between caffeine and its uglier sisters, nicotine and alcohol, is obvious: it does not kill. Still, we should recognise caffeine as a drug of dependence used by as many as eight out of 10 of us. The importance of this fact is that... [if] we accept our need for coffee and chocolate, then perhaps a little more compassion might be shown to those who smoke or drink, or worse. That these behaviours produce the intolerance they do among the self-righteous is a peculiar and harmful inconsistency.

...Bad news is brewing for caffeine addicts... as soaring world coffee prices push the cost of a fix to near-record heights. Consumers buying roasted and ground coffee beans will bear the brunt of the world shortage, with price hikes of up to 50[%] predicted... if the supply shortage continues... [I]ncreases are likely to filter through to the cafe society... with industry sources saying a \$2.50 cup of coffee could cost up to \$3 in the next few months... The supply crisis has been building during this year, with prices increasing by more than 150[%] in the past five months... Cerebos Greggs Ltd, the largest coffee manufacturer in N[Z], said the market could not go on absorbing the climbing costs... A combination of human and natural disasters... [– civil] war in Central Africa, general strikes in Colombia and leaf and berry disease ravaging crops in South America and Indonesia... – ...has put the heat under the notoriously volatile international coffee market... And the market remains unsettled with the frost season looming in Brazil, the world’s biggest coffee crop producer.

...Coffee prices are expected to fall in coming days after the US Department of Agriculture forecast a larger-than-expected Brazilian harvest... for the year starting July 1 [of a] total 28 million 132-pound bags, the largest in six years[, while a]... Rio de Janeiro-based consultant... estimated Brazil would harvest a... coffee crop of... 35.5 million 60kg bags... [However, one analyst] said... “The USDA report was bearish, even though its estimates tend to be on the high side, just as Brazil’s estimates tend to be on the low side... There’s nothing supportive for coffee at the moment.”

...[‘Low prices bitter latte to swallow in Last World The contrasts are glaring. On the one hand, coffee-producing countries and farmers in the Last World are suffering from the worst-ever slump in prices; on the other, global coffee giants, such as Starbucks, which sells lattes by the billion in the cities of the First World, are profiting as never before. Starbucks can charge £2.70 in Britain for a single coffee; millions are ready to pay. Nestle says its profits (estimated coffee profits last year: \$US1 billion) have increased “thanks to favourable commodity prices.” But Oxfam, in a new report, argues that the failure to reverse current trends will have “devastating consequences” all across the Last World. The author of the report, Bitter Coffee, claims companies portray themselves as socially friendly while shrugging their shoulders at the relentless logic of the market. “It just doesn’t work, if something is destroying people’s livelihoods on an epic scale, to run a few community projects in Central America. That doesn’t solve the problem.” In addition to the destruction of low-grade coffee (with estimated compensation to the farmers of \$US250 million), and in addition to a retention of 20% of world exports, Oxfam proposes the imposition of a windfall tax on major coffee roasters to help fund such compensation schemes. It also suggests long-term reforms which could make the coffee market more sustainable, and calls for the wider use of fair-trade schemes, with guaranteed higher prices, for coffee prices to have a chance of at least sliding back past the \$US1 a pound mark. Coffee prices are now at less than US50c a pound. The downward spiral is especially bad because production consistently outstrips consumption. If production could be cut back, the problem would partly be solved. In practice, dog-eat-dog is a more popular option.’]

...YOU’LL never buy cheap coffee again: As prices of raw coffee have slumped... so has the quality of what we drink. The BBC reports... coffee drinkers may be swallowing... up to 20[%] rogue ingredients, which can include... mouldy... beans... ground-up twigs, dust and floor sweepings...

Coffee drinkers beware: there may be grounds for concern brewing in the bottom of your cup. Unfiltered brews such as espresso and Turkish coffee have higher amounts of a substance known as cafestol, and people who regularly drink unfiltered coffee experienced an increase in their cholesterol levels, a Dutch study has found. Coffee that passes through a paper filter to remove the cafestol may be easier on the heart and blood vessels, researchers said yesterday. To coffee connoisseurs they offer this bit of heresy: Instant is even better, healthwise, if not tastewise, because the cafestol is squeezed out of the crystals at the factory... Numerous studies in recent years have examined coffee, and none has established a meaningful link between drinking it and developing heart disease. But most of those studies were done in the U[S] and involved filtered coffee... [However, more USers] are drinking... espresso and unfiltered coffee... as European-style coffees and French plunger-style pots with metal filters take hold... Even a few tenths of a milligram of cafestol ingested daily can significantly raise bloodstream cholesterol levels, and a single cup of

unfiltered coffee contains three to four milligrams... [A caffeine-addict], savouring a cappuccino at a sidewalk cafe in Amsterdam, was defiant... [T]hey can have his mug of coffee when they pry his cold, dead fingers from around it. "I don't want to hear it," [the addict] said.

...the 72-year-old head of the burgeoning Illycaffe coffee empire... that is now producing more than six million kilograms of coffee each year[... is]... sipping espresso from a tiny Illy cup in Parnell... "We are now present in 55 countries..." ...The secret to Illy's success, the coffee doctor explains, is that it has one brand and one blend so wherever you are... in any of those 55 countries your Illy espresso will taste the same[(excluding additives such as sugar and milk or cream, etc. – which suggest that many coffee drinkers don't like its natural taste!)]... But that's not all. "[50%] of the quality is in the beans and 50[%] in the way the beans are transformed in a cup," says... [the graduate] from the University of Bologna with a chemistry degree... which explains why [the 72-year-old] takes the time to travel the world and check out how his coffee is actually being made. (The correct "extraction" time to be pouring the coffee out of the espresso machine being 25 to 30 seconds.) "We travel a lot because you must understand what makes a consumer smile... From one kilogram of coffee you make 150 espressos so you can have 150 people with big smiles or 150 people making a face. And we want to have all smiles." ...So, how many cups of his beloved espresso does [the coffee-doctor] drink himself? "I drink from a minimum of three cups a day to a maximum of 10... In Naples they have a proverb – no less than three, no more than 33." [The 72-year-old] makes it at home... from an "expensive" French Pony coffee machine but, strangely, it's not an Illy espresso that gets him going every morning. "I have tea with porridge, which is very unusual." [□ The purchase of a \$4440 espresso machine for workers at the Ministry for Economic Development provoked predictable comments from Act's perk-busting MP – and this comment from the Minister for Economic Development: "There is nothing wrong with a good cup of coffee and there is nothing wrong with treating staff well." A similar machine has also been installed for workers at the Treasury Department.]

... "A cuppa" in N[Z] is now more likely to be coffee than tea. Last year N[Z]ers bought 2549 tonnes of coffee, as against 1987 tonnes in 1986 – an increase of 28[%], while... in that time tea sales fell... 20[%]... The one bright spot for tea was that herbal and fruit sales were increasing at a brisk 12.5% a year, but with annual retail sales of just \$5.5 million, it was a tiny part of the market... The total value of the N[Z] coffee market last year was \$95 million, compared with \$40 million for tea. Importers... said... "Consumer research shows that tea is regarded as conservative, whereas coffee is seen as exciting and exotic." [Other research shows that 'drinking 6+ cups of coffee a day protects 50% of guys and 30% of gals from a form of diabetes.']

...*Coffee beans have the smell of money* ANYONE looking for a steaming investment could do a lot worse than put their money into coffee. Whether you are roasting it, distributing it, serving it or drinking it, N[Z]'s coffee market is booming, with plenty more growth tipped to come. Coffee sold through supermarkets and other shops is worth \$89 million a year[... of which]... instant coffee... accounts for... \$71m. On top of that is the coffee sold by the cup in the ubiquitous cafes that are now a feature of the country's urban landscape. In these places, asking for a cup of tea is almost unheard of... [Indeed], the owner of Articus, a bohemian cafe in Auckland, displays a prejudice that relegates tea drinking to the domain of filthy habits. "Drinking tea is something people should do only in the privacy of their own homes – certainly not in public, and never in front of young children." [The owner has] thrown her tea pots away, and on the two or three occasions a week when someone asks for tea, [the owner] dangles them a tea bag in a cup of hot water and charges them \$2 for the privilege. That compares with the 1200 cups of coffee [her establishment] serves each week, with prices up to \$3.50... At anything above that, you'd be expecting more than the coffee for the price... N[Z]ers consume an average of 0.7kg of coffee each year. Compare that with Scandinavians, who quaff 12kg each year... Around 80% of N[Z] homes now have a coffee plunger or filter, but we still have some way to go to match Switzerland, where 87% of households have an espresso machine.

...I had a fairly normal childhood... AT LEAST as far as hot drinks were concerned... In the late '60s my family acquired its first percolator: The coffee tasted like stewed aluminium. We thought it was very stylish, and we'd drink a couple of cups and all lie around laughing randomly while our neurotransmitters went haywire. But then we were always right up with the latest trends. My parents owned a coffee lounge in Auckland called the El d'Oro. The main trade was in cheese toasted sandwiches... My father once chased out some hippies who were hallucinating over their light meals... My father... wasn't prepared to stand by and watch while someone hallucinated in his coffee bar... But to return to coffee. Nowadays it seems that everyone drinks it. Not counting the Mormon Church, I can number the non-coffee-drinkers I know on the fingers of one hand. Everyone else is wild about it. They claim it's a stimulant, that it helps you to work late. But I think the real reason it's so popular is that people like to believe in a force greater than themselves, and in the '90s coffee happens to fill that need... Coffee is... one of those ritual substances that lets us think we have a common vision of a reality that might otherwise be unbearable. - 1997

Coffee, in the Middle East, is one of the first necessities of life... The coffee shrub originated in Abyssinia and the Sudan... Coffee contains alkaloids, volatile aromatic products and various substances belonging to the phenolic series. It stimulates the central nervous system and the cardiac muscle. History, or perhaps legend, tells us that the first [hu]man to drink coffee was the Mufti of Aden, who lived in the beginning of the ninth century. According to another tradition, we owe the discovery of coffee to a certain... Moslem priest... This holy [person], upon finding himself often overcome by sleep in the middle of his prayers, attributed his drowsiness to the half-heartedness of his devotions, and his conscience tormented him. The Prophet, touched by his sorrow, led him to encounter a [herder], who told him that each time his goats ate the berries of a certain shrub, they would remain awake, jumping and gambolling all night. The Mullah... testing these unusual berries, made himself a potent brew, and spent the night in a state of delicious intoxication which, however, in no way affected his intellectual capacities... [The] Mullah... told his Dervishes about his discovery and soon coffee became much in demand among devout Moslems, who looked upon it as a divine gift brought by an angel from heaven to the faithful. The use of coffee spread... Coffee was taken during prayers, in the mosques, even in the Holy Temple at Mecca and before the Tomb of the Prophet... Travellers who had acquired the habit of drinking this beverage in the East imported it at first for their personal use... [until] the ambassador of the Sublime Porte to the Court of Louis XIV in 1669 popularised coffee in France. As laid down by Turkish custom, [the ambassador] offered it to all who came to visit him. The vogue for coffee spread through high society; it was soon in demand and the price was high... When green, coffee keeps for a long time, provided it is protected from damp. It is entirely devoid of smell. To release the aroma, coffee has to be roasted, an operation which many coffee lovers insist on performing themselves... During the industrial roasting process a small quantity of sugar molasses or other product is sometimes added to 'coat' the berries. This is permissible by law. It gives the berries a better colour and more shiny appearance; it prevents the loss of aroma and has the further advantage, for the merchant, of increasing the weight. It also enables him to use inferior quality or damaged grains. After roasting, coffee does not keep its aroma for long... Soluble coffee, more commonly known as instant coffee, was the invention of... an English[person] living in Guatemala. One day while waiting for his wife to join him in the garden for coffee, [the husband] noticed on the spout of the silver coffee-pot fine powder which seemed to be the condensation of the coffee vapours... his product[was] put on the market in 1909... Various grains and roots have been used to replace coffee, or for adulteration... The wild chicory root has been used as a substitute for coffee since 1769. It was first used in Sicily, then in Germany and has given rise to an important industry... Chicory has more food value than coffee, although this is not important as the amount consumed is small. It produces a dark infusion with laxative properties, and prevents caffeine poisoning which occurs when too much real coffee is drunk. Coffee addicts, justifiably, do not allow the addition of any chicory in coffee... Apart from chicory, the most important adulterants include figs, dates, acorns... malt, barley and other roasted cereals, chick-peas and lupins (used a great deal in Brittany). The majority of these adulterants are harmless... Coffee (especially strong black coffee) must not be given to children, adolescents, people of nervous disposition or those suffering from heart conditions; nor should it be given to certain dyspeptics... black

coffee ought never to be drunk on an empty stomach and white coffee is even worse for the system than black... A moderate amount of coffee soothes, eliminates the feeling of tiredness and exhaustion, makes mental work easier...

Caffeine (KAFF-eeen)... a stimulant... derived from PURINE, a nitrogen compound in vegetable matter... supposedly increases one's mental and physical abilities. There is also some variable effect on the digestive system... Two cups of coffee... will increase the rate of blood flow, the depth of respiration and the heat production of the body by 10-20%... Too much caffeine can result in sleeplessness and nervousness. Since children are very active, they do not need the stimulation of caffeine. In adults' diets... coffee often replace[s] milk, a vital food product.

WITH COFFEE BARS proliferating from Seattle to Auckland and specialty brews having turned round a decades-long decline in the consumption of coffee worldwide, the news about coffee and health is surprisingly good. Many scientists believe that research has turned up little solid evidence that a moderate intake of coffee or its caffeine poses significant or even a minor health threat... For the average healthy person, about the most serious charge against caffeine is that it may be addictive... But caffeine is only one of some 500 chemicals in coffee... Sorting out the health effects of coffee, with or without caffeine, is complicated by the fact that coffee drinkers are, on the whole, a different breed...

That innocent-looking cappuccino could one day be as socially reviled as a cigarette. Caffeine has supplanted nicotine as America's socially accepted drug... As much as a decade ago, caffeine outranked nicotine as the most widely consumed drug in the world, according to a 1986 study conducted at the Addiction Research Foundation in Ontario, Canada. But by trading in Camels for Cokes, has society simply substituted one socially accepted addiction for another? ...people are forgetting that, like nicotine, caffeine is a physically addictive drug that could be harmful... notes... a pharmacologist from Johns Hopkins University in Baltimore, Maryland... Like nicotine products used to be, caffeine products today "are actively promoted as containing the drug,"... [A] Seattle-based spokes[person] for the coffee-house chain Starbucks, is unsurprisingly dubious about [the pharmacologist's] claims. "There are good points about caffeine and there are bad points about caffeine... There are so many studies out there now that contradict each other, we don't really pay that much attention." ...In 1980, following an experiment in which pregnant rats fed high doses of coffee produced pups with missing toes, the US FDA warned pregnant humans to avoid even... moderate caffeine consumption. Two years later, a report on 12,000 pregnant [humans] linked four or more cups of coffee daily to premature birth and low birth weight. Smoking turned out to be the chief culprit, but the agency still advises prudence. A Canadian study also linked large doses of caffeine to a rising risk of slow fetal growth... Reviews of caffeine and conception conflict. One study... found no effect of caffeine on... chances of conceiving, while another... linked... three cups of coffee... daily to a delay in conception. Still, enough research suggests that caffeine may... increase the risk of miscarriage. - 1996

Cutting back on coffee and other caffeine-laden drinks during pregnancy or while you're breast-feeding could be a wise idea. There's growing evidence caffeine is associated with spontaneous abortion in the second trimester of pregnancy, as well as low birth weight. Even as little as one or two cups of coffee a day can pose a small risk. Caffeine readily passes through the placenta and into breast milk. The trouble is – newborns and foetuses are unable to detoxify it in the same way we can once we're fully developed.

...[pregnant people] who have regular caffeine fixes are heavily raising the risk of cot death, N[Z] researchers say. High daily intakes of coffee, tea, or cola have been found to boost the risk of cot death by 50[%]. The... research director... expected people to be surprised by the results, published in the latest *British Medical Journal*. High intake was defined as four cups of coffee or 10 of tea or cola a day. The study found that 18[%] of pregnant people were drinking that amount... [W]hen heavy caffeine intake was added... [to smoking, it] boosted the risk... to 5 1/2 fold.

...Evidence is mounting that drinking tea can prevent cell damage that leads to cancer, heart disease and perhaps other ills. Scientists say tea is loaded with phytochemicals – a wide range of molecules that can act as antioxidants... [However, c]offee beats green tea by containing four times the amount of health-boosting antioxidants... says a Nestle-financed study... The antioxidant activities were not affected by the addition of milk... The study was carried out "in vitro" – in test-tubes – and further studies "in viro" – on cells, cultures, animals, healthy humans and eventually humans with diseases – will need to be carried out... Researchers differ over whether a cup of coffee is good or bad for you... [Another] study has found... [that j]ust one cup of coffee can stiffen arteries for more than two hours, which might raise the risk of heart attack and stroke... albeit temporarily.

...Research... shows that long-haul drivers who stop for a cup of coffee to help them keep awake are dreaming. The Royal Bournemouth Hospital has found that caffeine keeps people awake, sure, but impairs their driving ability by... [making] them less alert and... slowing reaction time.

...*Tea party not a mad idea after all...* The humble cuppa not only quenches your thirst, it can also boost your brainpower. A scientist in Wales has discovered that drinking a cup of tea improves concentration and ability to learn. A brew is especially helpful to people who are doing two things at once and also helps them concentrate when they are performing one task after another. The research... demonstrated that caffeine is not the magic ingredient that boosts the grey cells, because those drinking tea outperformed those given a caffeine-only drink... Unilever, which markets Lipton, Choysa, PG Tips and Bushells, said... "Evidence that there is a link between consumption of tea and good health and general wellbeing is definitely good news for our tea industry." ...annual consumption of tea in [NZ is estimated] to be 1.75 billion cups per year... [A self]-confessed tea addict... [who is Auckland's] manager of the Royal New Zealand Ballet... needed a cup of Earl Grey to wake her up in the morning, "and I drink about four cups a day to keep me going. But I would have to say my favourite drink is champagne."

...You won't find it served at your dentist's office yet, but drinking black tea between meals may help reduce cavities and plaque... Studies, financed by the Tea Trade Health Research Association, found that several doses of black tea every day not only reduced plaque build-up but helped to control bacteria... Of course, to help prevent cavities the tea must truly be "black," without sugar, milk, honey or other additives. Researchers also emphasise that drinking black tea should not replace traditional oral hygiene. "Tea will affect the plaque formation but one has to brush their teeth to remove the plaque,"... And while black tea may fight cavities, it does not combat tooth stains. "It is going to stain [people's] teeth, but at least we know it's good for oral health." [● 'Tea contains three useful chemicals – essential oil, tannin and theine. The last one is a stimulant. When tea is brewed too long, the tannin dissolves and is freed, making the tea bitter.']

...Sri Lankan tea company Dilmah wants scientists to test what the Chinese have believed for thousands of years – that a humble cuppa not only aids digestion, relieves headaches and lifts spirits, but can actually stop weight gain... [The] company has given Massey University researchers a \$20,000 grant to establish... whether... [this belief can be proven], among other things... The company said it chose Massey because scientists there had already done research into nutritional antioxidants in plants. Antioxidants are important in maintaining human health and protecting against degenerative disease. Studies have shown that tea is particularly rich in a type of antioxidant called polyphenol. The antioxidant properties in green and black tea, similar to those found in red wine, are thought to be active ingredients against skin cancer[(research has found that 'black tea more than halved the incidence of skin cancer in mice')]. Other... research suggests the fresher the tea, the higher the level of antioxidant qualities... Dilmah is different from other big-label brands because it is the only tea wholly produced and blended in Sri Lanka. This means it is not stored for long periods before being auctioned and blended overseas. "Some teas are up to a year old from the time when they were picked..." ...researchers would compare various brands of tea to establish whether those stored for shorter periods had more antioxidants.

Tea is very delicate and must be kept in airtight containers in a dry place, well away from any food whose odours might contaminate it. The teapot, for the same reason, must be kept exclusively for making tea[, and it]... is very important to rinse the teapot first... with boiling water. When this has been done, the tea is put in, one teaspoon for each person plus one 'for the pot'... Only pure water must be used to make it, and that as free from lime as possible... The water must be absolutely boiling. The infusion is ready at the end of 5 or 6 minutes... [T]he most universally consumed of all beverages, [tea] is made from the leaves of... a tree that in its wild state can reach a height of 10 metres... It is native to Assam, China and Japan. Tea was brought to Europe by the Dutch in 1610... Tea-growing in China and Japan dates back to prehistoric times, but it was not started in India and Ceylon (now called Sri Lanka) until 1865. India and Ceylon are now the largest tea exporters in the world[, although]... China is the largest producer of tea... [where it] is grown both on open fields and on terraced hillsides. It requires a warm climate with a very heavy rainfall... For fine tea, the first one or two tiny leaves which appear at the end of each twig, during 'flushes' or growing periods, are plucked. The third and fourth leaves are used only in course teas. These pickings occur 10 to 25 times a year in Formosa and every 10 to 12 days in Ceylon... [I]n hot countries [tea] constitutes one of the best ways to drink water, since this must necessarily be boiled before it is used.

...tea increases... skin temperature more than coffee or hot water, resulting in the drinker being more relaxed. Tea also helps people to cool faster...

[The author of] *Come Rain or Shine*... doesn't drink tea, which wouldn't normally be a problem except... [that her book is] based around the time-honoured... tradition of having a cup of tea and a chat. Last year [the author], previously editor of *More* magazine and associate editor of *Fashion Quarterly*, left all the glamour of Auckland behind and spent... three months travelling... in a campervan. Her mission: To find [people] who could talk about their "ordinary, yet extraordinary" lives over a cup of tea... "I drank a lot of coffee actually," [the author] says by way of an apology for her dislike of tea. "And in some places I drank herbal tea." Anyway... it wasn't so much about the liquid of choice as the tea-drinking ritual, "because that's how friendships are sustained. Over a cup of tea or coffee you're sharing feelings, ideas and stories about what's happening in your life,"... [Friends can also share time while waiting for the water to boil and the brew to infuse, or while collecting firewood (where electricity isn't available)! Incidentally, drinks] with high acidity and sugar levels should not be sipped continuously, a dental expert says[, because doing so]... was likely to promote tooth decay... A British study has suggested that sports drinks can soften and decay the teeth... But... [the] paediatric dentist... of Otago Medical School, said... the main problem for dental health was how often the drinks were taken. Having a rest period between eating or drinking allowed saliva in the mouth to restore calcium... With rest periods, people could eat "just about anything" without damaging their teeth... The problem with sipping was particularly serious for young children who were given fruit juice in a bottle to take to bed. In Otago alone... 100 children a year were treated under general anaesthetic because their teeth were so badly damaged. The condition had been labelled "baby bottle tooth decay." If first teeth were damaged, it could affect the spacing of permanent teeth and abscesses could cause defects in the developing teeth.

... "Don't let the kids drink it." With these awful words of warning[, the]... managing director of Atlantean Power Products... adds a can of X Blaster to the stash of smart drinks in my car. I felt strangely exuberant driving home with caffeine-laced, non-alcoholic drinks rolling around on the seat beside me. My fingers itch to rip into X Blaster. But, no, it's too late in the day. I must let the X Blaster wait until morning. I would rather slump in front of a pacifying video than be strung out until 2 am. As it turns out, I've forgotten about the glasses of guarana-boosted Breeze and caffeine-enhanced spring water I[had previously] glugged back... There was to be no slouching tonight. I find myself vacuuming the house at 8 pm. At 9 pm I ponder a moonlight jaunt – to Whangarei and back, but sensibly choose to read instead. Next day, I (guiltily) issue the kids with small slugs of chocolate guarana-boosted Viper to see them through the school day and (after some trepidation) open the X Blaster. The label says: "Adult usage recommended. Up to three serves per day." It is described... as "a blend of amino acids which may relieve stress and anxiety and provide a 'pick-me-up' for adults who work and play hard and fast." This may be a figment of my vivid imagination, but I'm soon extremely wide-eyed and conscious of a vague internal vibration. Instead of finding the usual excuses not to sit down at the computer, I am actually working. And my fingers are hitting the right keys instead of vaguely stabbing in their general direction... X Blaster is one of a new generation of drinks known as smart/energy drinks, or New Age sodas, that are beginning to make a small but significant impression on the drink market. They are... quite different from isotonic drinks like Powerade and Gatorade, which pump salts back into flagging athletes. You buy them in bars, cafes, service stations and convenience stores. Except you pay heaps – some cost \$6 a can. They are niche drinks for the X Generation, aged between 14 and 30, who want to clutch a bottle on the dance floor and not feel a nerd or a geek... Atlantean Power Products, began importing smart drinks in 1995... [The company's] managing director... is an avid fan of guarana, an ingredient of many smart drinks. It is a gentle stimulant extracted from the seed of a vine in the Amazon jungle, now cultivated commercially. The difference between guarana-enhanced drinks and a cup of coffee is simply a matter of timing... "Guarana is similar to caffeine chemically, but not identical... A short black will give you a rush within 15 minutes... With guarana, the hit is spread over a longer period. It's a good substitute for people who can't cope with coffee but want an energy lift." [Someone] who... serves the young club crowd until midnight on Fridays... believes smart drinks provide a good alternative to alcohol. "A lot of kids don't drink alcohol: they drink Red Bull. It's cool to be right into health, so they go out dancing on Red Bull and Breeze and Viper and all those things. I'd like to think it's a growing thing. Here at night, the ugly ones are the drunks." The goodies jammed into smart drinks vary considerably. Jolt Cola, which arrived here in February 1996, has simply twice the caffeine of your regular caffeinated soft drink... OTHERS such as Red Eye and Red Bull are also spiked with B vitamins – rather like Berocca tablets... Some, like X Blaster, contain vitamins, amino acids, and taurine (which has an effect on blood sugar levels similar to insulin). This drink also contains something called 1-Phenylalanine, which is reputedly effective against depression and helps control weight... H2ON, a caffeinated bottled water... is becoming big in the U[S]. Meanwhile, my kids are back from school. I ask them if Viper made a difference to their day. The 10-year-old says: "I made me do... things I wouldn't normally do – like jump down steps [and hurt my ankles]." The 12-year-old reports: "It made me talk a lot. I could think of things to say." As for me, I can only say that my day felt strangely different. So what's the catch? Maybe these drinks are addictive – I don't know. They're certainly potent stuff.

...A heated debate is brewing over a range of potent... iceblocks that critics fear is bound for N[Z]. The drinks on a stick, with names such as Spiked Ice (vodka and raspberry), contain between 4.5... and 8[%] alcohol. They sparked an uproar last June when introduced in Britain, where they are sold at off-licences. The... iceblocks have now arrived in A[US]... The Alcoholic Liquor Advisory Council chief executive... said the iceblocks targeted the young... The sale of alcoholic pop drinks – the fastest growing sector of the liquor industry – met similar opposition in N[Z]. But the manufacturers rejected accusations that the drinks were pitched at underage drinkers.

...The former principal youth court judge... yesterday attacked liquor companies for using "alcopop" drinks to entice young people to drink alcohol. The explosion of alcoholic sodas on to the N[Z] market was a blatant attempt to counter the declining consumption of alcohol in this country, [the judge] said... "Most of these products were designed to fill a gap, to encourage a new clientele, particularly young [gals], and to create an image of rebellion and coolness among young people... The products are generally very sweet and brightly coloured, some come in packaging... such as a test tube. A number of brands have used cartoon characters or violent anti-social imagery..." One was packaged in a container resembling a hand grenade... Most of the products have an alcohol content ranging between 4 and 6[%]. Bottled beer tends to range between 4 and 5[%]. While these drinks were clearly targeted at young people... very little was known about which age groups were actually consuming them in N[Z]. However, researchers in Scotland discovered "alcopops" were most popular with young people aged between 13 and 16. A recent study in Britain found 87[%] of girls aged between 15 to 16 had tried alcopops and 84[%] of boys.

...N[Z] has become a dumping ground for a alcoholic drink banned in Great Britain for its inappropriate labelling... Hoopers Hooch... is being sold in... [NZ] for around \$5... in three forms: alcoholic lemonade, alcoholic orange drink and alcoholic blackcurrant drink. All the drinks... contain 4.7[% alcohol and]... have cartoon labels... Some British pubs are now being refused liquor licence renewals if they sell alcopops.

...The Alcohol Advisory Council... admitted yesterday that it was wrong in saying a week ago that the alcoholic drink “Hooper’s Hooch” had been banned in Britain... Alac said: “The product... was not banned in Britain and the labelling was changed voluntarily by the manufacturer.”

...Some liquor companies... voluntarily agreed to tighten controls on the naming, packaging and marketing of “alcopops” after controversy over their appeal to underage drinkers. The[y won’t]... cover “alcopop” drinks already on the N[Z] market, but any new products would have to comply.

...The alcohol industry is working on a voluntary code that will prevent under-age drinkers being bombarded with gimmicky promotions and packaging. The... A[lac] chief executive... said [it] had broad agreement from the industry that something needed to be done... The... Minister of Youth Affairs... was keen to see the industry sign a voluntary code and... urged it to resist the introduction of alcoholic iceblocks. “It is entirely inappropriate and irresponsible to market alcoholic products that deliberately target young people.” The chief executive of the Distilled Spirits Association... said it already had its own code to monitor marketing and packaging and would talk to... [Alac] about a broader voluntary code. The association covers manufacturers and distributors of liquor and spirits. The executive director of the Beer, Wine and Spirits Council... was more cautious, however... sa[ying] products such as alcopops involved a very small section of the industry, and [the director] did not want to see everyone bound by a restrictive code... [By the way, on this day in 1920, prohibition was] introduced in the U[S].

...Today in history... 1933 – Prohibition ends in US, making sale of alcohol legal again.

...A Mexican police[officer] yesterday killed... Sabino Segura Galan, aged 26... who had refused to be arrested for drinking a beer in public... “It was crazy. The police[officer] got angry and shot him in the neck,” said one witness. [In local news, ‘Wellington police are paying two youths an out-of-court settlement after their bottle of vodka and two cans of beer were illegally confiscated, and one was allegedly told to “sit like a dog.” Each youth received a \$200 infringement fee for drinking alcohol in a public place. Police dropped the charges when the youths sought a court hearing.’]

...Wellington police sa[y they are]... investigating one incident involving unruly behaviour in their police bar, but other claims that it regularly played host to violent drinking games were unfounded. The *Evening Post*... reported that some officers had kicked and punched intoxicated colleagues... in a room next to the bar on the fourth floor of the Wellington Central police station after beer-skulling sessions. In some cases they had been left with rib and face injuries... [P]olice were interviewing three constables allegedly involved... If the allegations were found to be true, the officers concerned would face disciplinary action, probably involving suspension from the bar... Three other officers were already suspended from the bar because they had been given a special licence to use it for a function. They had then abused the privilege by continuing to drink after the licence expired and leaving the bar in an untidy state... [In international news, mini-bar] fraudsters who refill gin or vodka bottles with tap water need to move fast in Paris. Spy cameras activated when a drink has been removed for 30 seconds have been installed in top hotels.

...A group of thieves is using young girls to sneak top-shelf spirits out of... liquor outlets while older [people] distract staff by quibbling over prices. At least 20 bottle stores have been hit between south Auckland and the North Shore... [Six adults] enter the store and split up, making it hard for shop assistants to keep tabs on them... while girls... aged between 10-18 transfer bottles between themselves before concealing them in baggy clothing... The problem for retailers is they are often not aware what has gone on until video surveillance footage is analysed.

...A North Shore bottle-store owner who allegedly used his teenage son to look out for police while selling alcohol to minors has had his liquor licence revoked. Police and the North Shore District Licensing Agency opposed the renewal of a licence for the Shakespeare Liquor store in Milford on the grounds that the owner... was an unsuitable operator... [D]uring a surveillance operation, set up after complaints from parents, five underage customers were sold alcohol over a 95-minute period. In the first incident, two 17-year-old girls bought a bottle of whisky and a bottle of vodka... without being asked for identification... [O]ne of the underage customers, an 18-year-old youth, bought three dozen bottles of beer and six alcoholic sodas. Two days later the police found the youth among 150 intoxicated young people at a disorderly party in Glenfield where a vehicle had been damaged, two letterboxes smashed and a phone box set on fire.

...Drunken teenagers from wealthy North Shore families are taxing police resources with ugly weekend brawls. Police chiefs will meet in Auckland today to discuss ways to crack down on what they believe is “rich kid” syndrome. They say teenagers from affluent suburbs have more access to money, alcohol and motor vehicles and are left to run riot on the streets or at parties... On Saturday police donned riot helmets and were pelted with bottles during a brawl by 200 youths in Takapuna... [T]he incident tied up the entire North Shore police... Thirty officers, including reinforcements from Otahuhu, were called in to disperse the crowd about 11 pm... The brawl broke out while an alcohol-free concert was being held in the North Shore City Council buildings. When security guards refused entry to those with alcohol, they drank outside on the pavement. Three teenagers were arrested and held in police cells for several hours before being released to their families... The police in Whangarei, Hamilton, Rotorua and Tauranga say such incidents are not major headaches for them... The Region One commander... [agreed that] the problem was worse on the North Shore than elsewhere and [the commander] would meet police chiefs to look at alcohol-related statutes and bylaws. The Minister of Youth Affairs... called last night for a multi-agency approach, saying schools, families and the police needed to be involved. Drunken youths who escaped criminal charges should be accountable and prepared to give something in return, such as community service, [the minister] said. The regional director of the Police Association... said affluent parents were neglecting their responsibilities and having time out from their children by giving them money to disappear for the night. One of the... 18-year-old... organisers of the function... was disappointed that [some] youths had ruined an event held specifically to give them something to do.

...North Shore police struggling to deal with partying “rich kids” say it is inevitable that innocent bystanders will get caught in the police net. Police faced with a potential riot do not have time to sort the real troublemakers from the crowd... “When there are 10 of us and 200 intoxicated teenagers about to riot, we have to show we are in charge, and quickly.” ...[the] comments followed complaints by a North Shore mother over the way police are dealing with the problem... [H]er eldest sons and their friends had been wrongly arrested numerous times on minor charges. “They’ve been walking past or in a crowd but haven’t done anything wrong, yet they’re arrested for disorderly behaviour.” [The mother], who is organising a meeting on the issue, rejected claims of a “rich kid” syndrome on the North Shore. While there were no doubt some troublemakers, it was wrong to tar all North Shore youths – many from modest homes – with the same brush. “The police would be better to try an old-fashioned approach and take the troublemakers home to face their parents.” [The Acting] Senior Sergeant... understood [her] point of view. “Many of these kids don’t see the full picture of what’s going on around them and their parents are understandably horrified by what they are told.” ...North Shore police were called to two teenage incidents at the weekend. One was outside a concert by the American band Tool at the [alcohol-free] North Shore Events Centre in Glenfield, where some youths were drinking. The other was a party in a cave at North Head. The organisers had set up music and lighting systems but left after being told the reserve was out-of-bounds after 10 pm.

...Frustrated... North Shore police... officers intend to boost the number of arrests at out-of-control... teenage... parties and hand out more tickets for underage drinking. The latest “rich kid” brawl came at a 16th birthday party on Saturday night in Lake Rd, Devonport... 20 police wearing riot helmets and carrying shields were pelted with beer bottles when they arrived at 11.30 pm to break up the party of 400 teenagers. In the melee, a police officer suffered a gash on her leg... [T]wo 14-year-olds, were a[mong four teens a]rrested on a variety of offences... “These kids... have had it too good for too long. We want more apprehensions so they know that it has to stop.” Police were targeting liquor outlets and their teenage clients, sending 30 Sale of Liquor Act infringement notices to minors in the past two months... Breaking up teenage parties was labour-intensive and time

consuming... It took 90 minutes for almost every available officer to bust Saturday's riot. "It is a difficult situation because you simply cannot turn up and ask the kids to move on... If there was anything that happened of equal or greater importance we would... not be able to respond."

...Police desperate to curb drunken riots and parties in affluent North Shore streets are backing the launch of Auckland's first photo ID card. The joint venture with the North Shore City Council will see a voluntary proof-of-age card available [in a month]. For a \$10 fee, applicants will be issued with a plastic tamper-proof card bearing a photograph and date of birth verified by police. The card is designed to replace less reliable forms of identification such as driver licences, and would benefit both youths wanting to prove their age at bars, stores and movie theatres, and liquor licensees wanting secure documentation. [A] Senior Sergeant... hoped the rest of Auckland would follow the lead set by the North Shore...

North Shore[']s Mayor... launched... Auckland's first photo ID card... last night... The \$10 voluntary card, available from today, is a joint initiative of the North Shore City Council, the police and the hospitality industry. It will help bar staff to determine the age of patrons...

When I was 17 and looked 14 I accompanied a few friends of similar age to a pub in Adelaide. We ordered a glass of beer each and sat in the lounge bar sipping our drinks and believing we were grown up. A small tremor of fear passed through us when the door swung open and three plainclothes detectives entered. Their eyes scanned past us, however, and they quickly left. They were after bigger fish than under-age drinkers. Late one Saturday afternoon nine years later I scraped up two shillings and went off for a drink or three at a pub in Otahuhu (beer was 8 pence for an 8oz glass in those days.) However, the bar[worker] refused to serve me, saying I was underage. When I explained to him that I was 26 and married with a child, [the bar worker] told me to prove it. The Oirish on me mudder's side flared up and I stormily strode the mile or so to our flat... dug out my birth certificate, and stormed... back to the pub, only to find that the bar[worker] concerned had finished for the day. His replacement served me without a murmur. So there were checks and balances – at the Adelaide pub I was left alone because I wasn't disturbing anybody, and at Otahuhu was refused a drink because the bar[worker] doubted my age. The recent launching of proof-of age cards [o]n... the... North[Shore] is good news for bar[workers] who now more than ever have to police under-age drinkers because the police have too much other work. But I don't like ID cards. We don't have to prove we are not thieves or vandals and nor should we have to prove we are old enough to drink (unless a police officer or bar[worker]... has just cause to question us). More chillingly, proof-of-age cards could be a foot in the door to having ID cards for everybody... If we are not breaking the law, then who or what we are or what we look like is nobody's business. I could take a not-so-wild guess that there are judges, lawyers, ministers of the Crown, [MPs], police officers, and many others from any cross-section of society who have tipped a beer in a hotel while being underage. [Yet] the adage "don't do as I do – do as I say" is fair enough in this instance. Control has to be exercised over young people's drinking.

...Parents... [of] pupils at eight schools... are the target in a campaign to lower alcohol abuse among North Shore teenagers. A "Parent Pack"... will be launched on Friday by the Northcote MP... The \$10,000 pilot project is sponsored by the Safer Communities Council North Shore, the Community Funding Agency and Al[ac]. North Shore teenagers had the second-highest number of alcohol-related school suspensions in the country during the first quarter of the year. Only Marlborough scored slightly higher. The kit aims to raise awareness about the effects of alcohol on teenagers and arm parents with ways to communicate with young people more effectively. It includes guidelines on how to host "safe" parties.

...Arrests of young people at parties out of control are signs of a worsening problem in Hamilton, says a police youth aid officer... [U]ntil recently police called to parties had been able to control situations without making arrests. That has changed over the past two months... Most young people attending parties were aged about 16, but the number about 13 was rising... [■ A] just-released Safer Community Council report on the... Waikato towns of Matamata, Morrinsville and Te Aroha, shows 83[%] of the... 12 to 20-year-olds surveyed got drunk most weekends.

...Police... had to wait for two teenage girls to sober up before... investigat[ing] alleged indecencies... A Paraparaumu patrol picked up the... 14 and... 15[-year-olds at]... 4am yesterday. They said someone had performed an indecent act against them, but both were too drunk to be interviewed.

...Paraparaumu police may follow the North Shore's lead and introduce an 0800 phone line for early warnings of youth parties. Kapiti-Mana police... were considering ways to prevent trouble after a sergeant had his eye socket fractured by a kick at an unruly teen party on Friday night... The Mayor of Kapiti... would meet police this week and ask for a total crackdown on youths drinking in public on the Kapiti coast[, which would involve]... closure of the area's beaches to youth gatherings... The beaches have been closed in previous years[, but only]... during the... Christmas and... New Year... holiday period... In the latest alcohol-related disorder in the area, Wellington riot police were sent to Raumati, 50km north-east of the capital, to deal with about 100 youths pelting Paraparaumu police with bottles... During the incident an officer, trying to make an arrest, fell to the ground and was kicked in the head... The officer... needed treatment at Hutt Hospital's plastic surgery unit... was on sick leave and would be for some time... [H]is wife and family were not shocked at seeing him coming home with a swollen face... The officer... had been assaulted before in his 10-year career and probably would again... "It's now an occupational hazard, unfortunately." ...Three youths were arrested, but the officer's assailant has not been found. Investigations are continuing.

...Auckland police were busy at the weekend coping with teenage parties... Henderson police called in reinforcements with riot gear after youths threw bottles and kicked police cars... [outside a] party in a hall... About 30 officers spent two hours breaking it up. One officer had a bottle thrown at his face and could have been seriously injured if not for his riot helmet... Twelve people were arrested... Police closed West Coast Rd after bottle throwers attacked passing cars. Bottles were also thrown at police on the North Shore after they were called by a home owner, wanting help after gatecrashers turned up to his party... [North Shore p]olice arrested eight youths after a party got out of control in Torbay, earlier on Saturday night.

...['North Shore police officers had to dodge a barrage of beer bottles on Friday night as they cleared about 250 people – including drunk 14-year-olds – from a party that got out of hand in Target Rd, Glenfield. As the crowd, some of whom had spilled into the grounds of Target Rd Primary School, was dispersing, officers found a guy in his 20s lying in the driveway with a stab wound to the stomach. His injury was not life-threatening. Frustrated police would now reactivate last year's scheme to send undercover officers to parties. Other officers would visit gatherings early in the evening to offer advice'...

'Keeping Waitakere neighbourhoods trouble-free these days takes more than a few baton-wielding police officers. The parties are bigger, the trouble-makers are smarter and the chances for violence are growing. In order to pinpoint those at the centre of the trouble, police are constantly experimenting with new methods of catching them out. In certain situations over the past six months, plainclothes officers have been circulating in the crowd while uniformed police move in, watching individuals closely. Lately, cameras have also been explored along with other new equipment and new directions in staff training. Police have also been working from the other end, trying to prevent parties getting to the stage where force is required. For instance, over the summer there was a spate of organised parties advertised on the radio, which enticed larger crowds than usual. The first method of attack is sending Youth Aid officers to see party organisers and encourage them to call the police early. The police insist they are not trying to stop parties'...

A 'Senior Sergeant of the Henderson police says they want west Auckland party-holders to include them in their plans so they can stamp out loutish behaviour. "We respect the right of young people and everybody else to hold parties but we want to help them be responsible." The senior sergeant has set up a party register and wants organisers to phone in with as much information about their event as possible. If the parties are for youngsters police also want to know if parents are going to be present and if not, how they can be contacted. Organisers can then ask police to drive past the party location and make sure everything is running smoothly. Police were called to disperse a mob of around 300 teenagers who gatecrashed a party in Louise Place, Massey, last weekend. Six people were arrested and the party was closed down. The party-list project is successfully used on the North Shore and overseas.' In related news, 'two towns – Paeroa and Te Kuiti – have introduced curfews for teenagers to stop them wandering the streets at night.'

... 'Retailers, town leaders and the Police Association have rallied against an attempt to curb youth curfews. Their concern follows a Ministry of Youth Affairs approach to the police to develop guidelines for policing unsupervised young people roaming the streets at night. The ministry's national policy analyst said there were fears that the police approach was a "bit heavy-handed and we wanted to clarify the way they were dealing with young people out and about after dark." The guidelines recommend that the police consult widely schools and community groups before sending out patrols to remove youngsters from the streets. The police in Te Kuiti and Paeroa already have programmes that limit the nocturnal activities of their young people. The Auckland Youth Law Project solicitor, whose office was involved in drafting the guidelines, said the curfew in Te Kuiti was an abuse of young people's rights. The YLP wanted to tighten police training on the Bill of Rights, the UN Convention on the Rights of the Child and relevant case law. However, suggestions that the curfews be curbed have met with outrage from townspeople concerned that any changes will lead to an increase in petty crime, street gangs and alcohol abuse. A Te Kuiti dairy owner said the curfew had helped to end harassment by gangs of youths and brought a decrease in crime. "People who were crying foul about the scheme needed to come and live in Te Kuiti to see how vital it was to community crime control."

... 'The PM weighed in yesterday behind small-town leaders battling a bid by civil libertarians to curtail youth curfews. Police-imposed curfews in places such as the PM's home town of Te Kuiti are under attack from the Ministry of Youth Affairs as too heavy-handed, and others have questioned their legality. The Police Association defends them as a vital crimebusting tool but police chiefs will be under pressure next month when given ministry-sponsored guidelines for dealing with youngsters roaming streets at night. The PM has, meanwhile, defended the curfews and declared last night it had no doubt that the police were enforcing them within the law. Police in Paeroa, Nelson and Levin also have programmes limiting the nocturnal activities of youngsters, and Whakatane intends introducing similar controls this week.' ● About '300 cities across the US have teenage curfews.'

... The middle class, if I may speak of class, is an interesting place to grow up in. It has a thousand things you need but nothing you really want, especially when you're a teenager... To young, biased minds, the middle class' chief offerings are an obsession with safety, uniformity, tidy lawns and unhappiness. You'd rather die. Exposed during the 80s and 90s to movies, websites and videos which tell you action, adrenalin and the realisation of your unique personality and dreams are life's only true grails, suburban life strikes you as the end. In fact, it makes you sick. I imagine this is why middle-class teenagers have recently been holding all-night drunken parties and rounding things off with riots. It's inexcusable, but as any ex-teenage wise-ass knows, it's on the cards from the moment you're born. The problems work in fatal combination. To begin with, teenagers today are expected to loathe their parents' lives, preferably in front of them... Boring old everyday life just seems too much to bear. All this is made worse by the simple fact that many senior members of the middle class don't seem to like their lives. Around the place in my teens there was partner-swapping, financial blowouts, uppers, downers and endless visits to the shrink. With our movie-inspired dreams of strength and wit, we were revolted. It's cruel, but it's true. Kids pick up on parental frustrations and freak-outs and regard them as loathsome weaknesses... The middle-class feels terribly guilty about its kids... I'm not really sure why... Discipline is the key, but it needs to come from people who respect themselves. God only knows where you find them... [□ 90%] of 9-year-old Kiwi children have tasted alcohol. For many it was just a sip, but 25[%] reported drinking on their own, according to a 1994 Dunedin study. The most recent national study on drinking habits, carried out in 1995 by the Alcohol and Public Health Research Unit, found that one in ten 14- and 15-year-old... and almost a quarter of 16- and 17-year-old [boy]s drank six or more drinks on a single occasion at least once a week. A third of... [teenage girls] are drunk at least once a month.

... Teenagers are hitting the bottle earlier and harder than ever before... Another worry was that parents seemed to be buckling under growing pressure from their children to provide alcohol at parties... says the chief executive of the Al[ac]... By the council's criteria, one third of 14-to-18-year-olds surveyed are heavy drinkers who "binge" on more than five drinks in one sitting. Nearly a quarter have drunk "rocket fuel" – potent cocktails of several kinds of drinks – although beer is still the most popular drink. Almost half the... youths surveyed nationally have vomited after drinking and more than a third have had memory blackouts. Many reported that drinking sessions led to unhappy sexual encounters, aggressive behaviour and brushes with the law... Overseas research showed that lowering the drinking age simply led to more teenage drinking...

['In the '70s the US lowered its drinking age to 18. It was believed then that if you could fight and die for your country you could drink, but it didn't take long before the drinking age was returned to 21. "When the drinking age was lowered there was a significant increase in alcohol related problems and a significant increase in the total amount of alcohol consumed by young people".]

... The... 26-year-old... Minister of Youth Affairs... yesterday came out in support of lowering the drinking age to 18. "Going through my teens I saw situations where my peers had access to alcohol and were drinking in unsafe environments, on the street and in parks or whatever... It would be much better if young people could drink in a controlled environment." ... In particular, [the minister] supported... her... ministry's view that the drinking age should be fixed at 18 without exemptions; a form of national identification should be introduced, preferably including a photograph; a zero alcohol limit should be set for learner drivers; and any changes in the law should be delayed until a review of driver licensing was done. The minister also supported the ministry's view that 18-year-olds were treated as adults in many aspects of their lives such as voting and joining the armed forces, and should be allowed to make decisions about drinking. With the present drinking exemptions – the law allows for 18 and 19-year-olds to drink in pubs if they have a meal or are with a parent or their spouse aged 20 or over – ... it was hard for hotel workers to enforce the law... An addiction therapist for the Salvation Army's Bridge programme for alcoholics in Auckland... also supported lowering the drinking age... provided young people could produce identification that included their photograph. "Young people who flock together at beach parties or private parties are not really scrutinised by adults. If they go into a more controlled environment their behaviour is more likely to be like those around them,"... The Salvation Army, however, does not support lowering the drinking age. Its submission to the committee... reviewing the liquor laws... calls for a legal minimum age of 20 with no exceptions. The army said young people were more susceptible to the undesirable side-effects of drinking... The police, who maintain that about 80[%] of crime may be alcohol-related, have refused to release their submission.

... The police favour lowering the minimum drinking age on licensed premises to 18... [T]hey argue that it is safer to let young people drink in a controlled environment... The Licensing Trusts Association agrees... In the interests of road safety, however, the Automobile Association favours 20[('in AUS, 9 out of 10 teenage car accidents involve alcohol abuse')]... Other submissions... suggest... youngsters need to be protected from themselves – and if the nation has to adopt a photographic identity card to keep them out, so be it... The Business Roundtable is in favour of making the drinking age as low as 16[– the same age as NZers can 'get married with parental consent (they can get married without consent when 20')]. It believes parents have the prime responsibility for overseeing liquor use... The Minister of Youth Affairs... wants standardised the age at which young people can vote, drink alcohol, buy cigarettes and drive[, etc. Incidentally, the]... minimum age for recruitment into the[NZ] armed forces has been raised from 16 1/2 to 17 [(which is the age NZers can 'get a private pilot's licence' – although they can 'fly solo at 16'). But the]... Government has back-tracked on a decision to raise the school leaving age to 17 next year because the National Qualifications framework will not be ready in time and more work is needed on suitable programmes for students. The... leaving age would remain at 16... Labour's education spokes[person]... said the announcement signalled that the Government was "disorganised, incompetent and completely lacking in the ability to plan properly."

... ['an art tutor at Christchurch girls' school St Margaret's College knows her girls like to party hard, and has come up with a plan to let them do that safely. Students planning a party fill out a form listing the number of guests, where it's held, kick off and finish time. The form is signed by a school representative, police and a guardian. In return, the party organiser gets a pack of goodies – including food and fizzy drink – aimed at keeping boozing to a minimum. The teacher said her idea had been sparked by reports of growing numbers of out-of-control Kelly Brown-style parties. Bored teens with nowhere to go were hooking up by cellphone and gatecrashing parties. Police were being called to break them up, finding kids as young as 14 vomiting on the footpath, houses ransacked and up to 1000 teenagers milling around. The tutor said encouraging kids to "just say no" was naive. "We can't keep telling

kids don't drink. Adults do. What we need to tell teens is that getting rolling drunk every Saturday night is not normal behaviour." Recent surveys showed girls binge drinking was a growing problem. 10% of gals aged 16-24 surveyed drank heavily at least once a week. 4% said they went out weekly aiming to get drunk. "You're young, you're independent, you don't have any responsibilities and you can do what you like," said an 18-year-old Otago university student. "You can handle hangovers better and your body bounces back – it's a big part of socialising too." But alcohol watch groups are warning the growing number of young Kiwi gals taking to the bottle that their binge drinking could cost them their health. "Binge drinking has serious short and long term effects on gals' bodies," the Alac manager said. "It's not sexist, just a fact that gals absorb alcohol faster and it takes longer to get out of their systems." Drunk gals also put themselves at risk of attack or sexual abuse. About 15% of young Kiwi gals say they have been involved in a sexual situation they felt uncomfortable with. "We don't want to alarm young gals, but we do want them to be informed and understand that sometimes heavy drinking has very serious consequences. Lowering the drinking age would probably mean a further increase in underage drinking." Tomorrow is international alcohol abuse awareness day.']

...THE current review of the liquor laws is considering widening access to alcohol. This could be achieved by lowering the drinking age, allowing sale of liquor at supermarkets and off-licences on Sundays (as well as full strength beer in supermarkets), extending the hours licensed premises can operate and allowing Sunday trading in hotels and taverns. Support for these proposals shows a confluence of libertarian views and capitalist self-interest... The Business Roundtable... says youth drinking should be a parental responsibility and paints a rosy picture of parents inducting their offspring into civilised drinking habits. This middle class idyll bears little resemblance to observations from my own childhood. I remember being shocked at seeing a tanked-up family friend teaching his eight-year-old son to drink beer. The boy grew up with a drinking problem[then in] his middle years... blew out his brains. A singularly [guy] way to live and die. Others have questioned why young people shouldn't drink when they can marry, have sex[(plus raise a baby if that is the result of having sex)], and have a drivers' licence. The logic behind this argument evades me. If it is that all social and legal rights should be received when the first one is allowed, then we would confer drinking rights at the age a young person can drive – at 15. It is hard to see the rationale that young people should be able to drink, if they can drive. The late age at which the public purchase of alcohol is allowed is a recognition of the social damage alcohol can cause in the hands of young people who lack the judgment to see the consequences of their actions... Young [NZ guys] are already the heaviest of all drinkers and they are the most likely to have alcohol-related problems. A third of the heaviest drinkers come from the 18-24 age group even though they make up only 9% of the population. A recent survey showed that almost a third of young [guys] said they got drunk at least once a week. It is hard to see the sense in increasing access to alcohol. Changes to the Sale of Liquor Act in 1989 to allow alcohol in supermarkets and 24 hour licences – along with television advertising of products – have led to greater late night drinking and a high proportion of youth drinking in licensed premises and buying alcohol from off-licences. A 1995 national survey found that one-third of under-age youth had managed to buy alcohol to take away and had drunk in pubs. Pubs and bars, far from being the safe drinking environments apologists claim them to be – are a focal point for alcohol related incidents involving the police... The public has shown great concern at the death of a sixteen-year-old athlete... [who] had been drinking at Auckland's Globe Tavern... Despite their liking for beer... a... survey by the Alcohol and Public Health Research Unit showed that 80% of all [guys] and even 75% of young heavy-drinking [guys] did not want alcohol outlets to be increased. A clear majority did not want drinking hours increased. [Gals] were almost universally opposed to it.

...One of the[liquor law review] committee's jobs is to see whether the hospitality industry can make its premises safer drinking places... [P]olice favour cancelling the licence of premises where unsafe drinking practices are promoted or permitted: "bladder busters", "happy hours"... deals which offer two drinks for the price of one... and [cheap or 'free drinks for gals']... The existing law makes it an offence to serve liquor to someone who is intoxicated or – in most cases – even to allow them to remain on the premises. The police say some establishments brush the issue aside "because they suggest it is too difficult to know when someone is drunk." ...Many staff have difficulty deciding what "intoxication" is – the courts have ruled that it is "some degree less than absolute capacity from drunkenness" – and the Government has asked for a definition. The... ALAC... says it varies according to a drinker's gender and genes. Drinking history, nutrition and state of health as well as the circumstances in which the drinking occurs "are all complicating factors." ALAC emphasises what is called "host responsibility" – provision of low-alcohol or non-alcohol alternatives and food... and ensuring there is alternative transport to driving after drinking. [Some licensed premises offer free soft drinks to 'designated drivers']... Getting the safe drinking message across to the liquor industry is one thing; making drinkers listen is quite another. The Government has asked the committee to consider whether health warning labels should be required on liquor containers – even with liquor commercials on radio and television. The message it is getting, particularly from government advisers, is that they will not be heeded. Even ALAC – which is responsible for seeing that millions of dollars of moderation messages are aired – advises that warnings on containers are unlikely to be effective. "Labels which... tell people not to do something they may enjoy do not assist in making informed decisions." The Ministry of Commerce points out that by the time much alcohol reaches eye level it is in a glass, and spirits are usually diluted with mixers. The Salvation Army put the warning label proposal to some of its... more than 800... clients... [who] attend its Bridge programme... for... [people] who have alcohol... problems... More than half said they would drink less if warned about the possible dangers – but 84[%] of them smoked tobacco. "It seems hard to believe that people who do not heed the warning on products which are detrimental to health would pay a great deal of attention to warnings on products which may be detrimental," says the army's submission... Both ALAC and the... Ministry of Health... favour putting what is known as "standard drinks" labelling on liquor containers: each can or bottle would be defined in terms of the number of standard drinks – each of 10gm of pure alcohol – it contained. That has been the law in A[US] since late 1995, where health warnings were rejected. Trans Tasman food labelling is now being harmonised through the A[US NZ] Food Authority, and is therefore inevitable here, anyway. Indeed, many A[US]n liquor containers coming in already declare it as do containers of N[Z]-made liquor being exported to A[US]. Regardless, the Ministry of Transport doubts its usefulness: "Drinkers might find it difficult to make accurate informed judgements about how much alcohol they can actually [safely] consume," it says... The television companies point out that they are required, as part of the liquor commercials, to run without charge moderation messages: \$1.1 million worth by TV3 in the past two years, and \$3.2 million by TVNZ in the [pa]st nine months...

Pedestrians were disconcerted when George Smith... drove his taxi along the pavement before crunching into a shop on Bond St, London. [Smith had] drunk three glasses of beer and was fined £1. That was a truly memorable escapade because it took place 100 years ago, in 1897, and made Smith the world's first convicted drunk driver. Convictions for the offence have soared recently in N[Z] ('of the 11.25 million persons arrested in the US during 1990, the largest number was for driving while intoxicated – 1.391 million; the 3rd largest number – 717,000 – was for drunkenness'). The 1981 total was 12,583 but the latest available, for 1995, was 25,505. Booze featured that year in 36% of fatal road crashes. TV campaigns now seem to be cutting the drink-drive carnage but, even so, official attitudes here are more relaxed than overseas. For instance, anyone... who causes death by dangerous driving, under a law being planned in India, will risk execution. [□ 'A 44-year-old Chinese immigrant who accidentally drove into a teenage boy was attacked by a mob of party gatecrashers who had already turned a birthday celebration into a brawl. The force of the crash threw the boy through the air and into the path of another car, whose driver ran him over then drove off. The first driver stopped to help the boy. The mob then attacked – punching him, kicking him and smashing a bottle over his head. His car was stolen during the beating. "I thought I was going to die. Five more minutes and I could have." One party-goer came to his aid and tried to fight off the mob, but was dragged away so the beating could continue. The driver was saved by the police, responding at 10pm to calls from the host's parents and neighbours concerned by the series of fights that had broken out on Asquith Ave in Mt Albert on Saturday after the party was ended by the schoolgirl's parents half-an-hour before. The boy was last night in a stable condition at Auckland hospital.']

...A Surfers Paradise hotel has been ordered to pay compensation to a patron who jumped in front of a car after the hotel's staff had served him while [the patron] was drunk... The judge found that publicans were negligent if they continued to serve alcohol to a drunk if it was reasonably foreseeable that to do so endangered their safety... [T]he Queensland Supreme Court [estimated that the patron was 45%] responsible for the accident and adjusted the amount... awarded him from \$A504,654... down to \$A277,560. [The court] found the hotel, which is in liquidation, was 25[%] responsible and should pay more than \$A126,000. The driver of the car was ordered to pay the remaining amount... [The patron], who formerly worked as a dredge operator, was left with a permanent brain injury which affects his personality and results in behavioural problems.

...The A[LAC] believes intoxicated boaties should face the same laws as drink-drivers... At present... the... Maritime Safety Authority... could prosecute intoxicated boaties but on the grounds of reckless navigation rather than being drunk... The A[LAC] chief executive... said boaties were not tested for alcohol, even after an accident. "If people are intoxicated on boats and they are putting other people's lives at risk, let alone their own, I think they should expect the same laws to apply,"... [An Aucklander], aged 58... drowned early on Sunday after falling into the Tamaki Estuary while getting into a dinghy from his yacht moored at Panmure. Police said [the deceased] and his wife... had been drinking wine into the early hours of the morning when [the husband] decided to go ashore... [T]he incident illustrated again the dangers of people mixing alcohol with boating... In January, the authority director... called for random breath-testing of boaties. The recommendation followed release of a report blaming alcohol and speed for a crash which killed two teenagers in the Bay of Islands... [last September. The MSA's duty] manager... agreed there was a case for alcohol-testing after accidents... "But we... believe in education not legislation..." ...[By the way, a]n Alcoholics Anonymous member who was found to be nearly three times over the legal drink-drive limit after becoming addicted to an alcoholic mouthwash was yesterday banned from driving for two years. [The AA member], aged 59, escaped a ban in November last year after telling magistrates [about having been unaware that] Listerine contained alcohol, but reappeared yesterday after the High Court ruled the JPs' original decision was "perverse."

...A former undercover police officer had drink-driving and reckless driving charges dropped after his chief argued the offences were committed in the line of duty. The Wellington [officer], who does not want to be named, [said it]... disagreed with the principles of the undercover programme – including the fact that [it] escaped conviction for a... wild chase through city streets... on a Triumph motorbike... "I was going for it. Neither myself nor the pillion passenger on the back of the bike were wearing crash helmets. It's lucky I didn't kill myself or anyone else."

...Two [drunks] who abandoned an injured friend... after a... head-on... [collision between their Mazda] RX7 and a Ford Telstar... are still on the run. The driver and passenger of the... RX7 abused members of the public trying to tend the injured... They tried to rip out the stereo and tear the number plates off their car and also attempted to conceal a large amount of alcohol in the back of the RX7. A keg of beer was rolled into a paddock where the pair also tossed whisky bottles... then jumped into a getaway car to flee the crash scene in South Auckland... The [Telstar's driver] and a passenger from the RX7 were eventually flown to Middlemore Hospital with serious injuries... [■ The show] *Fatal Denial* [screening on TV One, at 8pm on Tuesday...],... examines... three cases of road carnage caused by drunk drivers. The tales of horror are told by survivors, families of victims, eye witnesses and rescue personnel. All Black front-rowers aren't known for being sensitive, but... [the hulking] Hurricane and All Black prop [who co-hosted the 90 minute documentary]... says... *Fatal Denial*... has made him even more concerned for the road safety of his daughter... 9, and sons [aged] 2, and... 11 months... "And it's not just at night. If people have been up late drinking, they can get up early and drive, and still be affected."

...Convicted drunk drivers... in Sweden... [will] have an alcohol sensor fitted to their cars. They have to blow into a mouthpiece before switching on and any trace of booze automatically blocks the ignition.

...[a] Swedish exchange student who died near Methven last month had an alcohol level... [over 5] times the limit for driving... Mr Ejire, aged 23, was found dead in the rear seat of a car... Mr Ejire had been showing off... [at] a party... the night before... bragging about being a Viking... [who] could hold his liquor... About 2 am Mr Ejire fell asleep... A... fellow exchange student... estimated his friend had drunk... a... litre bottle of vodka... Ashburton[']s coroner... found Mr Ejire... died from an asphyxial coma caused by acute alcohol intoxication combined with the inhalation of vomit.

...[Britain is considering lowering the drink-driving limit to the equivalent of one pint of beer. The new limit would cut the permitted level of alcohol from 80mg to 50mg per 100ml of blood, bringing Britain into line with a new Europe-wide limit. The brewing industry said the new limit could force as many as 5000 pubs across the country to close because of insufficient business. But the British Medical Association, the Royal Society for the Prevention of Accidents and the Automobile Association welcomed the move.] In local news,] **Auckland teenagers will be targeted in a drink-drive prevention programme in the next five weeks...** While the overall road toll dropped in 1996, the toll for people aged 15 to 19 increased, from 82 in 1995 to 100... The... "One More for the Road" programme, piloted last year, combines a hard-hitting play with a kit for classrooms. It will tour 25... secondary schools... The project co-ordinator... said... "Teenagers take risks. What we're trying to say to them is beware of the consequences."

...*Writing's on the wall for drinkers...* THERE will be no getting away from the latest anti-drink-driving campaign – hard-hitting posters are being put up on toilet walls in bars, schools and sports clubs... The "convenience advertising" is the brainchild of Auckland's road safety co-ordinator... who adapted overseas research for the campaign. "It showed the proximity of the message to the target had a huge impact – it's a bit like lollies being at the height of children in supermarket trolleys. So, applying a bit of lateral thinking, I realised you can't avoid going to the toilet when you've been drinking... And it's often the last place people might be before they leave a bar or sports club." ...The set of 10 posters... include a poster of a bag of blood which asks the question "Need another pint tonight?", and a map of N[Z] covered in red dots representing road fatalities.

...[a brewery] boss... is under attack for... linking the drink-driving campaign to a fall in his company's profits... The Lion Nathan chief executive made the comments at a news conference to announce a 20.8[%] slump in profit to \$72.2 million for the six months to February, and a 6[%] overall decline in the N[Z] beer market... Young people, [the chief executive (r:p604, ln11)] said, were price conscious and chose to use other things to stimulate themselves as there was no testing for driving under the influence of drugs, other than alcohol... [T]he chief executive of the A[LAC said the]... comments were not supported by the facts. "I find it very hard to believe that there will be sufficient people moving away from alcohol to illicit drugs or other drugs on the grounds that they won't be detected that would cause a drop in consumption in the magnitude of 6[%], which is a very large amount indeed in terms of volume." ...Blaming the reduction on television advertising was... "simplistic"...

Alcohol advertising on television tempts people with alcohol problems to return to drinking, a study shows. Auckland University research recently published in the New York journal *Contemporary Drug Problems* [also] shows that... the liquor industry pitched advertisements at people who over-indulged, such as the young... [R]esearch, by a New York economist, says the banning of all alcohol advertising would save between 5000 and 10,000 lives... each year... in the... [US. However, NZ] police did not support a complete ban on alcohol advertising because there were benefits... The A[LAC] agreed. Alcohol consumption and alcohol-associated road death totals were down [in NZ] while alcohol advertising had increased, it said.

...A stag party advertisement in a liquor trade publication encourages people to drink too much, says the Advertising Standards Complaints Appeal Board. The advertisement... breached the liquor advertising code by suggesting liquor would cause a significant change of mood. The board also said it was not protected because of the type of publication it appeared in. The advertisement included the statement: "Of course you can't have a bloke dropping by without cracking a couple of Lion Browns, so by the end of the evening this guy's a bit emotional... and offending most of your wife's relatives." In its ruling, the board said the advertisement seemed to give special licence for publicans to continue serving people at stag night celebrations, regardless of how much alcohol they had consumed.

...[I'm not in the first flush of youth. But the passage of time doesn't trouble me, for though my hair has fallen, wisdom has sprouted in its place. So when Sam rang this week to invite me to a stag party, it was wisdom which whispered two words in my ear. "No thanks," said wisdom. It's not that I

disapprove of stag parties. In my time I have staggered, and I like to think I staggered well. I can remember a stag party that began in the back of a bus, moved on to the roof of a cathedral and ended in custody. I can also remember several that I can't remember. Besides, a stag party is a ritual and we need rituals. Before a Serengeti guy can become a warrior and take a wife, it has to slay a lion with his bare hands. In our suburban tribe, a guy may not marry until it has done much the same to his liver. But in middle age I've found that the aftermath of a stag party hurts more than it used to, and lasts longer. On the list of preferred lifestyle choices these days, a hangover ranks below death and only marginally above watching breakfast TV. Which is why wisdom said no. "But," said Sam, "this is no ordinary stag party. We're going to do things." "Do things?" "Fun things," said Sam. "Count me in," I said. "Tut," said wisdom in my ear, "you're going to regret this." "I'm old enough to look after myself," I said. Wisdom was proved right, I was proved wrong. Speaking of being wrong, the recent furore over my comments about the Government's drink-driving campaigns failed to focus on the key point. I am not opposed to such campaigns. Lion Nathan has supported them from the outset plus a host of other responsible drinking measures... [But surely] we should concentrate on those who break the law, not terrorise those who don't. The fact is the law does allow you to have a drink and then drive. The law does not allow you to drive when you are over the legal limit. Yet the random breath-testing and advertising campaigns are having such an impact many [NZers] have stopped drinking completely when they are driving... A 1995 study of... 4000 people by the University of Auckland showed a third were drinking less or had stopped altogether compared to the previous year. The prime reason they gave for cutting back was not, as you might expect, health and fitness but the risk of being caught by random breath testing. What does it say about our nation that law-abiding citizens can be so intimidated? ...The... study showed 87[%] of the adult population drink alcohol and their average consumption is nine drinks a week for [guys] and three for [gals] – well below recommended health guidelines. Furthermore, international research shows N[Z]'s per capita alcohol consumption is considerably less than other [First World] countries... Among... the [OECD] we're 23rd. Moderate consumption of alcohol has been shown to be beneficial to health. At least six independent overseas studies conducted in the 1980s and 1990s found that while heavy drinking boosted the risk of death, the lowest risk was among moderate drinkers, not non-drinkers. These studies support my view that... the... problem in N[Z] is not the use of alcohol but its misuse.

...DRINKING... could be good for you... [S]tudies, published in the latest issue of *Annals of Internal Medicine*, found that moderate alcohol consumption can decrease the risk of angina as well as heart attacks... The... studies... also found [that guys] who had two or more drinks per day were more likely to die from cancer, but [guys] who had between two and six drinks per week had a lower total death rate. [■ 'A 17-year study by researchers at the Institute of Preventative Oncology in Tokyo found people who regularly drank alcohol were 4 times at risk than teetotallers of developing cancer of the sigmoid colon, part of the large intestine, and daily beer drinkers were 12 times more likely to develop cancer of the colon than non-drinkers.']

...Germans are slowly abandoning the biergarten and the bar as a desire for healthier living prompts many to turn their backs on strong beers and hard liquor, sales figures show. Brau und Brunnen, Germany's largest maker of beers and soft drinks, said it expects to report its third loss in a row this year. The drinks maker posted a net loss of 228.9 million Deutschmarks... last year. In the five months to the end of May, the company reported a 3[%] decline in beer production to 3.78 million hectolitres... Statistics published by the Ifo Economics Institute show that in 1996 Germans drank 131.7 litres of beer and 6.3 litres of spirits. This translates to a 6 litre drop in beer consumption and a 2 litre decline in spirits intake from a year earlier... Germany's awakened health consciousness has led a boom in softer alcoholic drinks... "In our stores we have seen a definite trend towards light mixed drinks layered with tequila or vodka."

... "The urge to drink is gone – you just don't think of alcohol any more," says... an alcoholic who has been dry for three years. A new drug played a major role in his recovery. Just as methadone can help heroin addicts come off the needle, the new drug acamprosat (trade name Campral) can curb alcoholics' dependence on drink, scientists say. In Germany, where the drug has been on the market for a year and is prescribed by many doctors in their efforts to cure the 2.5 million alcoholics in the country, its therapeutic effects are disputed. Many self-help groups still believe the only way to really overcome alcoholic dependence is without drugs... Treatment with Campral in tablet form may last for up to a year. The manufacturer says the drug... is not addictive in itself, nor does it have any narcotic effects. It is known to have occasional gastro-intestinal side-effects and to interfere slightly with sexual performance. German health insurance companies have no hesitation in covering patients for Campral treatment (the daily dose costs the equivalent of around \$5)... The German economy suffers losses estimated at \$NZ69 billion a year because of alcohol-related problems. "Failing to treat alcoholics costs the health insurances far more in the long run,"...

A Dutch alcoholic... aged 37... has appeared in court on drunkenness and vagrancy charges for the 170th time, setting a new record, police said.

...SEVERE addiction to drink sent rock 'n' roll multi-millionaire Brian Connolly – famed for his wild antics and daringly effete image – slithering to destitution... [and, ultimately, his death when] aged 47... "Booze"... Connolly... readily... admitted, "was my downfall." It destroyed his health – giving him heart problems and the shaking demeanour of a far older [person] – and forced him to live on [the] unemployment benefit in public housing. [Connolly had] already sold his possessions when unable to pay a tax bill of more than \$3 million. His wife [and] mother of his two daughters, divorced him. Yet [Connolly] had enjoyed international adulation as the charismatic... lead singer... of the four-strong Sweet, the outrageously glam and glitter group, which soared to fame in the early 1970s.

...In the 1970s... a... [researcher] from the University of California San Diego School of Medicine's psychiatry department... began a... [study which has] revealed alcoholism runs in families, passed down through a genetic link, much like heart disease or diabetes... [The] study of 450 children of alcoholics, which is still continuing... showed the chances were high – sons had a 40% likelihood of developing alcohol dependence. Daughter's had a 20% chance of following in mum's bleary-eyed footsteps. "Identical twins of alcoholics... adopted children – even if they have been raised in a booze-free environment – all these things points to genetics being involved."

...researchers believe they are on the brink of identifying a group of genes that pass on a hereditary liking for alcohol, offering the ultimate excuse for families such as the Kennedy clan, who claim they cannot help their harmful binges because they were born drunks... [E]ight or nine members of the 28 Kennedy cousins were involved in Alcoholics Anonymous... meetings daily. "It's easier to get an AA meeting together at the family compound than a touch-football team," [one]... son of the late Robert Kennedy... said... The breakthrough has been provided by a strain of mice in laboratories at Pennsylvania State University which prefer to drink 10% alcohol rather than water... [A] behavioural scientist working with the boozy... mice, said: "Whether alcoholics are born or made is a touchy subject. There is certainly a predisposition to develop alcoholism but I think you inherit the predisposition and not the alcoholism." ...The danger of passing on a fondness for alcohol is a big fear for many drinkers... [A former British] footballer who has now combined business with pleasure by opening a wine-exporting business, has expressed concern that his alcoholism might be passed on to his son... [But the 16-year-old son] said, "I'll never drink. Why would you want to kill yourself?"

...Beer bingeing can cause more than a painful hangover, Finnish doctors have found – it can kill... The results of the study suggest that a heavy intake of beer... six or more bottles per session... could increase heart attacks... among middle-aged... [guys] by triggering irregular heart beats or blood clots... [Unfortunately, a] Pacific Island host is considered mean if the guests do not leave drunk, says a report prepared for the A[LAC]. The report... says binge drinking is common in Pacific Island communities because generosity was an important cultural concept... Some communities revealed that there was nothing worse than the alcohol running out... [at] a social function... Binge drinking... has not always been practised and the host's role is a tradition from ritual drinking or kava ceremonies. But a North Health senior clinical adviser and special projects manager... criticised the findings, saying the majority of Pacific Islanders in... [NZ – 53% according to] figures from a 1993 survey... [–] never used alcohol.

...[a gal] died in a police cell and another is in a serious condition... in Nelson Hospital... after a drinking binge in... Nelson yesterday morning... They had been detained after an incident near the Maitai River in the city... The cause of Lesley Moses' death was unknown "at this stage."

...[a youth] was killed by a freight train at the Papakura railway station about 2 am yesterday... Counties-Manukau police, said the [victim], whose name had not been released last night, had been seen drinking earlier with friends... [The victim] was either hooked up by, or fell under, the train. ['Add his name to the list of dozens of young NZers who find death in a bottle each year – such as Jeremy McKenzie, a 17-year-old who shared 2 1/2 casks (approximately 7.5 litres) of wine with a friend. Eventually the friend fell asleep. The friend awoke the next morning to see Jeremy's face was blue and his body was cold. Doctors say the alcohol raced through his bloodstream, reached his brain and shut down the centres that control breathing and heart rate.'

... 'the brain is protected from many chemicals but alcohol molecules are so small that they pass through the protection, switching the brain off by blocking messages passing through it (they also switch off many of the nerves that feel pain). Thousands of years of evolution are dissolved by a few bottles of beer'...

'EVER wondered why people fall over after drinking too much? Research by a leading American cardiologist links falling over to changes in blood pressure. To test the theory, 14 volunteers drank the equivalent of three beers. An hour after each drink, the group was asked to climb into a vacuum chamber that caused the same drop in blood pressure as standing up. Without alcohol, the volunteers' blood pressure corrected itself but after it the pressure didn't recover.' The problem is compounded by the fact that 'alcohol affects the part of our brain that keeps us balanced'...

'How drinking helps the brain An American study has found that moderate drinking may reduce the risk of certain types of stroke and scarring in the core of elderly people's brains. Elderly light drinkers – those who take one to six drinks a week – were found to have less scarring than tee-totalers or moderately heavy drinkers, defined as those who have more than 15 drinks a week. And moderately heavy drinkers were 41% less likely than non-drinkers to have "silent strokes" (lower-level strokes that patients do not notice – they happen when a vessel that delivers blood to the brain becomes blocked, causing brain tissue to die). Much of alcohol's protective effect against strokes is thought to stem from its ability to raise levels of so-called good cholesterol. Alcohol also is known to be a mild blood thinner. That can prevent clots from forming. The bad news is that every drink is associated with greater brain shrinkage – a condition seen in Alzheimer's patients. "It's been clear that alcoholics have shrunken brains," says an instructor at Harvard Medical School. "It was a bit of a surprise that it wasn't just alcoholics." Brain shrinkage, called atrophy, also has been linked to dementia. The instructor said patients should not change their drinking habits based on the study's findings. "More studies have to be done to show if the benefits of alcohol outweigh the risks.""]

...A study of Aussie battlers has thrown doubt on the link between boozing and brain damage... But N[Z] experts have warned that the results from across the Tasman should be treated with caution... [T]he chief executive of the A[LAC], said the study results were at odds with "irrefutable evidence" that brain damage does occur in some people who use alcohol excessively... and... long-term... including a type of alcohol-induced dementia... Researchers from the A[US]n National University in Canberra, and psychiatry colleagues from Sydney, could not find any evidence that life-long consumption of alcohol is related to cognitive functioning... in a group of heavy-drinking [WW2] veterans... The 209[70-year-olds] studied, 178 of whom used alcohol, represented a broad range of alcohol intake. About 40[%]... consumed alcohol amounts recognised as hazardous or harmful, a much higher percentage than has been found among the... population as a whole. The heavier drinkers in the group consumed the equivalent of about 13 drinks a day... [The participants] underwent tests measuring a range of intellectual functions... The participants also had a computerised x-ray scan of their brain, which found there was no difference in brain shrinkage between heavy drinkers and non-drinkers of the same age... [Speaking of shrinkage, a] British chain of pubs yesterday introduced oversized glasses to guarantee drinkers a full pint of beer. The move follows complaints from consumer groups that up to 80[%] of pubs are selling drinkers short by including too much head in a pint measure. The... [new] pint measure... glasses... [are] marked up to a line allowing extra room for the head.

...IN these days of micro-technology, downsizing and diminishing returns, even our bars are shrinking. N[Z], once home to big sprawling bars where big sprawling [guys] consumed big sprawling amounts of draught beer, is now turning into a place full of bars the size of your front room where [guys and gals] with cell phones choose their drinks like they choose their clothes. Well, it's heading that way. The drink-drive laws look like tightening up so much that too much nail polish or aftershave – or both – could push you over the legal line. Great big pubs with great big car parks just don't seem relevant any more in these sophisticated times. Our previous lack of civilisation in drinking can be traced back to the infamous days of the six o'clock swill when drinking on licensed premises was reduced [by 6pm closing legislation ('which was introduced in 1917 as a wartime measure and prevailed until 1967 – when closing time was extended to 10pm, and opening time was changed from 9am to 11am')] [to the primal level of a liquid sprint, necessitating swift service and bars as long as the evening [drinking hours for workers who finished at 5pm] were short. It was a time when drinking was reduced to a physical act and drinking places were no place at all for [the opposite sex], children or sensitive [guys]. Pubs were named after their suburbs or the beer they served and drinking and driving went hand in hand. The six o'clock swill ended, but change was slow in a business where quantity not quality remained the thing. But change has come... The big old boozers are now dinosaurs from an ancient drinking age... It was the 1989 Sale of Liquor Act that catapulted us into the new sophisticated drinking age. Pre-1989, there were about 3500 licences scattered around the country. Now, according to [the executive director of] Dominion Breweries... there might be as many as 13,000... "The old booze barn mentality of people drinking out of jugs has disappeared... People have traded up to better beers, more people are drinking lagers... People are looking to drink a beer that reflects their personality." This last bit, of course, is downright weird. But hardly surprising in a country where we regard television newsreaders as personalities. [The DB executive] seems excited by the new possibilities in... a world where people suddenly see what they swallow as an extension of their personal charisma. The reason, apparently, that the staff don't automatically offer you a glass with your beer or alcoholic soda in the new kind of bars is so you can display your bottle like some sort of name tag. "We call it badging... People want to be seen to be drinking a quality beer in that situation, in contrast to the old booze barn where you had a jug that was unbranded." They've even tried to cover the people who insist on drinking out of glasses by introducing branded glasses. Some brands are in more hands than others. "Sales of Heineken, for instance, are going through the roof in those sorts of places because it's a very aspirational type of beer." It's that sort of talk that makes you realise going out for a beer isn't what it used to be... "Beer consumption continues to decline. There are health pressures... [and drink]-drive laws have[also] hit consumption." But N[Z] puts its own spin on the changes in our drinking ways. For instance, while low-alcohol beers have been a big hit in A[US], they haven't been swallowed as readily here. The movement instead in N[Z] is... towards higher strength beers... Changing N[Z] attitudes to alcohol saw Grey Lynn accept alcohol into the neighbourhood at the last elections. But... it's not that easy to get wet...

The prospects of a lively battle over the Grey Lynn liquor poll emerged yesterday with a supermarket giant and a libertarian residents group declaring they would take on supporters of licensing trust control... The opening shots fired were over campaign donations... Grey Lynn Residents for Freedom of Choice[GLRFC]... had been told the Licensing Trusts Association had given \$12,000 to help the group promoting a Grey Lynn trust... They... saw this as the Portage Licensing Trust of West Auckland coming to Grey Lynn to make money at the expense of locals. The alleged figure was denied by... a spokes[person] for the Residents for a Licensing Trust group[RLT], who said donations from local groups, private individuals and the trusts association amounted to only a few thousand dollars... [T]he association... had helped with advice and costs of printing campaign leaflets, of which 8000 had been delivered to residents in the poll area. [The spokesperson challenged GLRFC's spokesperson] to say where his group was getting its funds and how much... [The GLRFC spokesperson] did not "have a clue" how much was going to be spent. Volunteers

would distribute a newsletter that would be done on a desktop printing operation, with “a few mates” helping to photocopy 17,000 copies. [GLRFC] had spoken to Foodtown but had not received donations from the company... The Foodtown marketing manager... said his company’s campaign would be done with signs, leaflets and by communicating with customers in two Grey Lynn supermarkets. “We will spend enough money to make sure everyone in the area is aware of our view... we don’t want to get political. We just want to sell wine.” Voting papers for the poll are to be sent out to residents on [the 7th] and the poll closes [two weeks later. Incidentally, ‘supermarkets fighting for liquor sales in west Auckland outlets say they have enough signatures to hold a referendum in Portage Licensing Trust-controlled areas. Representatives presented the trust with their petition on Friday, ending a 15-week campaign. “We’ve got about 18,000 signatures,” says the Foodstuffs Auckland managing director. “We needed a little under 10,000.”’

...‘WEST Auckland’s liquor licensing war is likely to cost the Waitakere and Portage licensing trusts more than \$300,000. The Auckland City and Rodney District Council electoral officer confirmed this week that a petition carried out in the Waitakere area has the signatures of 15% of registered voters needed to force a referendum. The poll is likely to be held early next year and will be paid for by West Auckland Trust Services, the organisation administering both trusts. The petition and poll costs are based on estimates, given that it is not yet known if a referendum will be held in the Portage area.’ In the meantime, [t]he Portage Licensing Trust... is embroiled in legal action over being turned down for a liquor licence. The trust is appealing... to renew the licence relating to the Avondale Peninsula Hotel. The trust sold the hotel in the early 1990s and then leased it back. Under a management agreement the business is run by the... Peninsula Hotel. But when the licence came up for renewal the police and the local authority successfully objected... [T]he Liquor Licensing Authority... had refused to renew the licence because it decided that the trust had deliberately chosen not to sell or supply liquor pursuant to the Sale of Liquor Act. “In other words they are saying only the trust can have a licence in this district and in this case the trust has distanced itself from the operation of the premises.” Another objector, [a] liquor retailer... said trusts were probably outdated these days.

...FOR a country that previously based its relationship with alcohol on a six o’clock swill, you can’t say we haven’t made progress. Today, you can sit at a cafe at 2am with your chardonnay, or... load your supermarket trolley with pinot noir instead of groceries. Unless you live in a dry area. Not that there are many of these pockets of alcohol free society left. When Grey Lynn in Auckland voted to go wet... it left only three... areas in the country where bars and bottle stores are banned – Eden and Roskill in Auckland, and Tawa in Wellington. The 17,000 electors in Grey Lynn might have thought voting for greater access to alcohol would be the end of the matter... But... [voters must now declare whether they] want liquor sales in the area to be controlled by a licensing trust or the free market. A trust would be controlled by a board of elected local representatives, and have a monopoly on running bars and liquor outlets in the area. The 26 licensing trusts operating throughout the country tend to run their own establishments, although they sometimes take over franchises of chain stores such as Liquorland, and supply alcohol to supermarkets to sell in return for a percentage of the profits. The alternative... is to... allow any person, group or company to apply to the Liquor Licensing Authority’s local agency, usually the council, to set up a bottle store or bar. (None of the decisions apply to licensed restaurants and clubs, which are already permitted to operate in dry areas and in areas governed by licensing trusts)... Residents’ main worry may be that a bar will open up on the corner of their street and they won’t have any say, but... private operators are still subject to resource management and town planning controls, which provide opportunities for objections to be lodged before licences are granted, and which bar commercial operations from setting up in residential zones... In areas of Ponsonby and Parnell, for example, where outlets are close to homes, their hours and days of operation are restricted. “Ponsonby is an example of what free enterprise can do,” says [GLRFC]. “There you have small, boutique cafes and bars which wouldn’t be viable if their owners didn’t run them day to day. Those are the sorts of outlets that most people in Grey Lynn also want, but there’s no way a big licensing trust could operate venues that small. Instead of building a bar that 20 people could fit into, they’ll build booze barns that fit 200.” The convenor of the... [RLT] denies this would happen as the aim of a trust would be to “be a good neighbour” and consult with its community about the type of establishments wanted. “The new Grey Lynn wet area has a population of 25,000 (covering Grey Lynn, Pt Chevalier, Westmere, Kingsland, Arch Hill and parts of Western Springs and Carrington), which we figure could support about six small bottle shops, one or two larger drive-in facilities located in industrial-commercial areas, and several bars, ideally one in each area so... they would become ‘locals’ and patrons would have a... personal interest in maintaining their standard.” [RLT] also denies that a trust’s monopoly would allow it to push up liquor prices. Competition already exists in the form of sports club bars, licensed cafes and nearby outlets of some of the main bottle store chains. The chief executive of the Hospitality Association... says Grey Lynn residents’ fears about a proliferation of alcohol outlets are unfounded, because operators will only set up if demand makes it economically viable... The president of the Licensing Trusts Association... says two of the main arguments for the Trust system is that they are more accountable than private business to the community they serve, and that they return a substantial percentage of their profits back to the community through donations. [GLRFC] questions the extent to which trusts return money to communities, saying that private enterprise does the same through sponsorship. It was for reasons of community accountability that licensing trusts were set up by the Labour government of the early 1940s. [‘From 1840 to 1881 there was no control on the number of liquor outlets nor on the conditions under which alcohol was consumed’ in NZ. The ‘sale of alcohol was forbidden in the King Country by a 1884 government proclamation. The refuge for Maoris who refused to make peace with the colonial government was not surveyed until the 1880s’, and the prohibition order suggests that the government was paranoid about what drunk Maoris might do to Europeans (although Maoris made their own alcohol from ‘fermented berries’). Nationwide prohibition ‘referenda were held in 1902, 1905, 1908 and 1911. On each occasion over half the votes favoured prohibition, but a three-fifths majority was needed for legislation. Another referendum was held on Apr 10, 1919: this time, only a simple majority was required. Prohibition received 246,104 votes and Continuance 232,208. But soldiers still overseas voted Prohibition 7,723 and Continuance 31,981, defeating prohibition by a small margin.’] From 1893 the Alcoholic Liquor Sales Control Act had given electors the chance to vote for “continuance” of the status quo in their area regarding access to liquor, “reduction” in the number of outlets, or “prohibition”, so making their electorate a dry area.[‘By 1908, 12 of the 76 electorates were no-licence areas.’] But when Invercargill voted to return to being “wet” in 1944 (a close decision that was carried thanks to votes cast by local [military personnel] at war overseas), the Government took another look at how it managed liquor sales. The... liquor licences used to be traded between individuals, local authorities and the Government throughout the country. The licences were seen as gold mines, but the Government recognised that the unruly booze barns set up under them had not served communities well. It decided to try an experiment using a Scottish model of granting licences to companies formed by community members, with the intention that profits would return to the community, and to remove the profit motive from individuals trying to maximise their return. The Invercargill trust was the first to be established... and today is the most successful. Its income totalled \$46.6 million in the 1995-96 financial year, clearing \$7.6 million in tax paid profit, of which it returned \$2.1 million to the community (the 26 trusts combined made \$259 million... clearing \$21.2 million in profit, of which \$7.7 million, or 36.5%, was given back through donations). Most areas changed from dry to wet in the 1950s and 1960s, and before Wellington East in 1994, the last licensing trust vote was in 1972 in the north Canterbury electorate of Hawarden... [Its] trust, which now covers less than 1000 voters... was the only one to return a loss at the end of the 1995-96 financial year, albeit of only \$182. [Since] Wellington East... voted for private enterprise... only a couple of pubs and a couple of bottle stores have sprung up in the district, and the entrance of the free liquor market has not caused the problems... others feared it would. “The local New World supermarket, which sells alcohol, has almost taken the place of a licensing trust anyway...” If Grey Lynn residents choose to go with a trust, their choices don’t stop there. [The] Justice Minister... then decides on whether a new trust or trusts should be set up to focus specifically on the area, or whether the area is adopted by a neighbouring trust. If a new trust is to be found, the community is once

again called on to nominate possible board members, and then to elect a number of them until the next local body elections. If locals find they don't like the way the trust is running things, a petition signed by 15% of voters can force a referendum on whether to continue with a trust monopoly, or open up the area to private enterprise. Six or seven trust areas [are currently] going through this process. A trust can still operate within an opened up area, but must compete for liquor sales... Trusts in Masterton, Balclutha and Oamaru, which lost their monopolies in recent years, are now competing successfully with private enterprise.

...[A BOOZE battle of a different sort will be fought in suburban living rooms this week. The drought was broken in NZ's last dry areas when residents voted to allow pubs and liquor stores into Auckland suburbs Mt Eden and Mt Roskill, and Tawa in Wellington. But now the Auckland householders have to decide whether they want their alcohol outlets controlled by a community trust – putting profits back into playgrounds – or by supermarkets and pub chains, meaning cheaper booze. A postal ballot is being sent to residents this week.]

...[Liberia – now there is a country in which fine democratic traditions are celebrated. Indeed, I thought of Liberia fondly as I cast my vote in the Mt Albert electorate on whether Mt Roskill should remain dry. This was a subject dear to my heart, as few examples of the denial of human rights or assaults on the human spirit raise my hackles faster than the fascist terror that is teetotalitarianism. Few vestiges of wowsersism remain in this country, but we must be vigilant and act when we can against the credo of teetotalitarianism that insists NZers cannot buy a drink in a pub or a bottle shop near the home. So it was with relish that I ticked the wet box. The wetter, the better. This is a great democratic tradition we are honouring. It is the principle of one beer, one vote. Which is why my thoughts turned kindly to the West African republic. Sure, Liberia is a Last World country torn apart by a bloody civil war notable for the inhuman conduct of the warring parties, who displayed viciousness remarkable even by the standards of that troubled continent. But some standards of decency were maintained. At the height of the civil war, when both factions fought for control of the capital, one public amenity kept operating while death and destruction reigned around it. This monolith, this colossus, this exemplar of democracy was the brewery. Unbelievably, both parties agreed that the nation's brewery should continue producing the pale amber brew that is the lifeblood of any civilised society. I shall think of Liberia when booze barns erupt like pimples on the face of Mt Roskill. I shall raise my glass to Liberia when I buy my first drink from a supermarket on a Sunday.]

...The Government will pop the cork on Sunday drinking if it heeds public demand... Many... liquor... review... [submissions] pointed to the unfairness of letting wineries sell wine on Sunday, but not supermarkets; and of being able to drink in a bar in a club, but not in a pub unless with a meal... Submissions emphasised deregulation and fair trade, and called for responsibility over restriction... an attitude reflected by Grey Lynn voters who last month rejected a trust for their newly wet area... Even the Ministry of Transport... could see no sense in prohibiting supermarkets from selling [alcohol]... The police wondered about BYO restaurants. "Why is it necessary to control those [restaurants] which encourage people to bring their own?" ...Several of the 250 submissions asked whether it was necessary to license... small workplace social clubs, sellers of liqueur chocolates or motels with mini-bars... Others asked why an off-licensed wine shop must have an on-licence to allow customers a free sample; or why, say, a [clothing] shop (one in Auckland is licensed) should require an on-licence to open a bottle for a valued customer... The... Hospitality Association... claimed supermarket staff would need more training to deal with problem drinkers. A 15-year-old... check-out operator would not have the... experience to deal with a drunken group of party-goers who ran out of beer and tried to buy more late at night... Many [submissions] did not trust teenagers with alcohol, but others said that if people do not learn how to drink responsibly when they are young, they will not know how to do so in adulthood... The committee is not expected to ignore the potential for drinking and driving if service stations were licensed.

...THE liquor law review committee has recommended that the drinking age be lowered to 18 and supermarket liquor sales extended to Sunday... It is understood that the report does not recommend photographic identification cards, but does require some tightening of the surveillance of under-age drinkers... [T]he committee has also asked the Government that supermarkets be able to sell beer and spirits as well as wine... It is not clear whether the report recommends extending pub opening hours to Sunday... Any change to the laws would be the subject of a conscience vote... But industry leaders do not expect the suggested changes – which will be debated at length in Parliament – to become law until 1999 at the earliest.

...Some MPs are strongly opposed to a suggestion that the drinking age be lowered to 18 without the parallel measure of a national identity card... The committee... said there were five reasons which made the issue of a national card impracticable. They included questions of privacy; the availability of special-purpose cards, such as the "Pub Card," featuring a photo and date of birth; ...and the onus of proof being on the individual.

...In his younger days... the duty manager of Hamilton student pub the Hillcrest Tavern, would walk past his local watering hole in school uniform on his way home from class. And at nights... would be back for a drink. "Everyone knew you and you had to behave yourself or you got your butt kicked,"... Lowering the drinking age would promote similar responsible drinking, but only if pubs could rely on a universal identification system to police it. Managers of student pubs across the country agree with dropping the age of consumption to 18 but say it is already impossible to police thoroughly a drinking age of 20... [F]orged identifications were rife and while bouncers were pretty good at spotting the fakes students would "always find a way around things." Using brothers and sisters' identification was also popular. While some pubs around town catered for the 18 to 20 market by offering dining... the Captain Cook... avoided it because it was near impossible to check that people were using their meal tickets and eating the food... [However, the Cook's] licensee... said the infamous Dunedin student parties accounted for at least 10 times as much drinking as took place in pubs, and that was where a lot of underage people were consuming alcohol... [– although modern] young people appeared to be a lot more responsible than those of years gone by. "There's no such thing as uni 'chunder miles' any more." ...Auckland student drinking holes The Globe and Shadows, the university student association-run bar on the campus, also support the lower age... A Shadows trust board member... said students would find access to alcohol by "fair or foul means" and it was better for them to be drinking in a controlled environment. The Globe owner... said the lowered drinking age would bring more customers his way but it was already a challenge, without a photo identification, to tell whether people were of age. "I defy anyone to tell whether someone is [16.] 18, 19, 20 or 25 – it's... impossible..." ...other publicans... had done away with beer jugs and student focus because the identification was too hard to police and they were "sick of babysitting."

...The extremely liberalising stance of the liquor review advisory committee's recent report came as no surprise to observers of alcohol policy in the past few years. Community concerns expressed to this and previous committees have been ignored in favour of the ideology that legislation is of limited value and that education about dangers of excessive drinking is the key... As I sat writing this, a report from our counterpart research unit in A[US] came in my e-mail. It dealt with the impact of late-night licensing hours... In that research, violent and sexual assaults more than doubled in and near late-night trading hotels and clubs, compared with violence levels at liquor outlets trading normally. Furthermore, late-night trading postponed or delayed alcohol-related violence and road crashes until after midnight when police and emergency services are more expensive and less able to cope with increased demand. It is research like this coming from several parts of the world and covering many aspects of availability... which is encouraging many jurisdictions to increase their restrictions and enforcement. This is in marked contrast to the approach taken by our review committee. The costs to the health system suggest that alcohol licensing is a legitimate interest for the health sector. The review report suggests, however, that the medical officer of health's limited statutory responsibility for monitoring licensed premises be reduced, despite submissions that it needs to be strengthened. Nor are host responsibility issues such as overcrowded pubs and offering free or cheap drinks to be addressed in the act. The report recommends... the reduction of the minimum drinking age (including allowing children of any age to be supplied with alcohol in some premises if accompanied by a parent)... One of the review committee's arguments for a drinking age of 18 is that those under 20 are getting alcohol anyway. There is no doubt that some underage drinkers already buy alcohol due to the lack of enforcement of the present law, but the situation could become worse. In a 1995 national survey one in four 14 to 17-year-olds had purchased alcohol in the previous 12 months. Only 9[%] of all purchase attempts were refused. However, this leaves three out of four 14 to 17-year-olds who had not brought alcohol.

Fear of being caught breaking the law is likely to be a deterrent. Lowering the legal age to 18, without increasing resources to monitor sales to underage customers, is likely to increase illicit access by those under 18. Would this matter? Well, from a public health point of view it would. Alcohol is a drug with the potential to induce dependence, a wide variety of organ damage and social ill-effects. Research shows that those who drink more in their mid-teens suffer more alcohol-related problems in later life. Much has been made in arguments for greater liberalisation of the fact that overall alcohol consumption in N[Z] has been dropping – by about 18[%] between 1986 and 1996. The frequency of drinking has reduced, but the pattern of behaviour remains unchanged... In our surveys, the average 18 and 19-year-old... [guy] drinks seven to eight cans of beer on a typical pub visit. And we know they are underestimating their consumption... This is not a civilised drinking culture... [and to] increase young people's access to [alcohol] will not bring "more young people into controlled drinking environments," as the review report suggests.

...[Three schoolgirls with platinum tastes – one aged 14 and the others 15 – have brought a top Auckland restaurant to its knees. Mikano Restaurant and Bar at Mechanics Bay on the waterfront is closing for 11 days from today after having its liquor licence suspended for serving the girls, who ran up a bill for \$562 – including \$375 for two bottles of champagne – before ordering a limousine and trying to make a getaway without paying. Restaurant staff became suspicious of their ages only after they tried to buy an inordinate number of cigarettes. Police were called. Two of the girls' fathers arrived, one of whom eventually settled the bill after the other objected to paying for the alcohol component. Mikano's owner stands to lose \$100,000 in takings and his 45 staff will have to take unplanned holidays'. By the way, 'MPs are about to decide for the third time in little more than two decades whether to let teenagers buy liquor – which many countries allow. Some parties have already signalled whether they will vote to lower the drinking age from 20 to 18. The Deputy PM has told the Wine and Spirits Merchants Association his NZ First MPs will vote against 18. Countering them are the Alliance's members, who will vote for 18. The leader of Act says his eight MPs are likely to be liberal. The PM also supports lowering the age, but his cabinet colleague, the Health Minister, does not. Liquor industry lobbyists fear the vote will be lost. The drinking age was 18 until prohibitionist sentiment in 1918 lifted it to 21. It didn't drop to 20 until 1969 (bringing NZ in line with Japan, while in Norway and Finland 20 is the limit for sale or consumption of spirits, 18 for beer or wine; the US raised its drinking age to 21 in 1984). MPs voted 38-28 against 18 in 1976. The last review of liquor laws also proposed lowering the age to 18, but it was defeated 38-31 in 1989.'

... 'The drinking age will be lowered from 20 to 18 and shoppers will be able to buy alcohol on Sundays in sweeping changes to liquor laws expected to take effect on October 1. Parliament tempered the changes last night with several measures to tighten enforcement of drinking laws. These will not allow any exceptions on the sale of liquor to under-age drinkers – although parents and guardians will be allowed to buy their under-age children a drink on licensed premises. Under an amendment proposed by the National MP for North Shore, courts will be given the power to close for up to seven days the premises of a licensee convicted of selling or supplying liquor to a minor. MPs rejected a proposal to let premises such as dairies and video stores sell alcohol. The vote to lower the drinking age was debated at length and passed narrowly, 59 votes to 55. The final vote on the drinking age was corrected four times throughout the night, though the result did not change; eight proxy votes cast by National were mistakenly cast on instructions left by absent MPs (including the PM) on another issue. The vote to open up Sunday trading was carried after virtually no debate, and no one called for individual votes to be recorded. MPs voted down a move to let supermarkets and grocery stores sell spirits, but approved letting them sell beer as well as wine. The 11 conscience votes on liquor laws are not yet binding. Yesterday's decisions will now be drafted as legislation, and will be returned to Parliament in about three weeks.'

... 'Alcohol, health and youth lobby groups have reacted with a mixture of surprise and disappointment at Parliament's decision to lower the drinking age to 18. "I'm disappointed, but that's democracy," the Commissioner for Children said last night. The commissioner hoped the road toll would not rise as a result. The Automobile Association's spokesperson said politicians were "flying in the face of overseas evidence that road deaths and injuries increase among young drivers if the drinking age is lowered." And the chairperson of the Medical Health Association said the decision would exacerbate youth alcohol problems. Alcohol Healthwatch described the decision as a disaster. "The health and well-being of young NZers will go backwards because of this decision." But the head of the Hospitality Association said the decision was "one of common sense and practicality." The Hospitality Association head also welcomed the vote to allow Sunday trading in licensed premises and bottle stores. "Again, it's very common sense – we are a seven-day society."

... 'AS of Wednesday we'll all be able to get booze on a Sunday if we're so inclined. 18-year-olds will be able to suck on a cold one legally. And if you're a wouser, Wednesday will also mean the disintegration and moral decay of our young people, our society and western civilisation as we know it. I don't happen to subscribe to that particular view. Nor do I think that the state should impose limitations on the sale of liquor for the good of the nation. One caller I had on talkback radio felt that it was unfair to sell alcohol in supermarkets because it made it very hard for alcoholics. His rationale was that alcoholics can avoid bottle stores but they can't avoid shopping for food, and when confronted with glistening bottles of wine, albies buckled under temptation and popped their corks. Well, sorry and all that, but expecting the state to impose draconian laws simply to protect a tiny minority is ridiculous. I predict the vast majority of us will cope admirably with these new licensing laws – teenagers included. I think the doomsayers' fears will prove unfounded – just as they did when the six o'clock swill was replaced with 10pm closing. We are mature adults capable of deciding what is good for us.'

...In 1987, before we started cutting back, the average N[Z]er put away 121 litres of beer over the course of the year. By last year, the figure was down to 94 litres... [Put another way, last] year... we consumed... 8.5 litres... of pure alcohol per person... a 26% decrease... [since] 1977... The industry needed to attract more [gals] to beer and generate more "excitement" in the market to stem the decline... DB's latest television campaign, involving Clydesdale horses and interaction between a [guy and a gal], reflected a conscious move away from macho images.

...Lion Red beer, long marketed as "the measure of a [guy]'s thirst," is to be "de-bloked." Lion Breweries will tomorrow launch an advertising campaign to position the brand closer to the [guy] of the 90s. The campaign is also expected to be less offensive to [gals]. Recent Lion Red campaigns... which include[d] T-shirts with the slogan "Leave the old trout at home" and "If you want me to spend more time in the kitchen put more beers in the fridge," have... been withdrawn after drawing public criticism for being too blokey, too macho and sexist. Marketing and advertising industry representatives contacted yesterday were surprised to hear that Lion Red would be portrayed as less blokey, and suggested that the brewer risked alienating loyal... customers who drank jugs of the beer in public bars. "If you change their perception of the brand into something else, say Lion Pink, they will switch... and won't be back," said one marketer... "You don't go changing a winner and Lion Red, as a brand, is a winner, right up there with Weetbix and Vegemite." Others said much of the 7[%] decline in beer consumption in the past year was in the tap-beer market, which was dominated by Lion Red, especially in the upper North Island.

...[guys] are to be given the message that there is more to being a good Kiwi bloke than drinking beer with your mates... The... new campaign to sell Lion Red, the nation's most popular brew... will revolve around the copyline, "What it means to be a [guy]." "It used to be the thing to be hard," said... Lion Breweries... "That has changed. Now it's more about being fit and healthy, being responsible and more worldly..." ...the public bar, blokey drinker was Lion Red's core market... "The art with the new campaign is to keep that core market and to get others to like it as well..."

...The launch last week of a new softer marketing campaign for Lion Red is the latest move in a subtle but significant campaign by both major breweries to change the public perception of beer... Lion's research showed there were three major relationships that were important to [NZ guys]. They were, in no particular order, their relationship with their mates, their parents and their partners. The Lion Red advertisements play on those relationships... One, depicting what it means to be a mate shows a mountain rescue while another, showing what it means to be a son, has three generations fishing from a wharf. In the past few months Lion's rival... has also launched a number of softer advertisements for its products. The storylines... show situations with more involvement from... [the opposite sex, such as] the DB Export advertisement showing a mixed flattening situation... There are now about 100 brands of beer on the [NZ] market but the top seven or eight of those hold 50[%] of the market. That is a far

cry from the early 1980s when there were two breweries and... [consumers] either drank DB or Lion and both were extremely loyal to their brand. The approach taken to the new segmented market by the two major breweries is slightly different. Lion has concentrated on the lower alcohol part of the market with the recent successful launch of its low-alcohol Light Ice brand and the introduction of its mid-strength Lion Gold brand. The idea of a mid-strength beer is taken from A[US] where it has been hugely successful. DB has instead concentrated on the higher alcohol end of the market with its very successful Heineken brand and more recently Amstel beer[, which] has been marketed as an upmarket tap beer... Lion subsidiary N[Z] Wines and Spirits has tried to match that with the introduction of English Boddingtons tap beer this week. Lion has responded to the Heineken success by introducing Stella Artois from Belgium... The sale of beer in supermarkets will lead to greater competition at the retail end of the market and may also lead to new packaging of products to appeal to [gals].

...With strong beer brands such as Heineken and DB Export Gold taking some sting out of a declining beer market, DB Group reported... [that its net] profits for the six months... were \$17.2 million, up 7.5[%] from a year earlier on sales down slightly at \$351.0 million from \$351.4 million... DB Export Gold volume, up “between 5 and 10[%],” had overtaken arch-rival Lion Nathan’s Steinlager in the domestic market... But analysts pointed out the two were not strict competitors. Steinlager was stronger and more expensive... Better advertising and marketing support was a key factor in DB’s brand strength... “In the past, we’d screwed up on brand positioning but we’ve now been consistent for the third year in a row.” Shifting money from sponsorship into direct advertising had helped to support the brands and the trend would continue... The switch would not immediately affect the DB Warriors rugby league team because two years were left of DB’s five-year sponsorship. But DB signalled its unhappiness with the team’s losing streak. “We think the Warriors could have done a lot of good for the brand but that’s not happening... We’ll be loyal to the bitter end,” but [don’t like our product to be associated with losers, so] if the club was sold beforehand “we may have discussions with the new owner.” Group operating profits rose 8.4[%] to \$29.5 million with Corbans wine and the group’s spirits division contributing to the upturn.

...Threatening to turn off the tap to a Papakura tavern manager who offered cheap beer cost DB Breweries \$115,000 in the High Court at Auckland yesterday. DB admitted breaching the Commerce Act, by trying to stop the... Whitehouse Tavern... discounting 16-can packs of DB Draught beer by \$1... [T]he Commerce Commission... accepted DB had stopped doing it and if it were not for its co-operation, the penalty could have been even higher... The chief executive of DB... regretted that “one of his company’s sales reps had attempted to prevent a tavern owner from selling promotion packs at less than the recommended retail price.” ...Manufacturers or suppliers are allowed to recommend a retail price for their product, but [aren’t allowed to] try to enforce it... The chief executive of the Consumers Institute... was delighted at the conviction and the size of the fine. The penalty was a good warning to other businesses, large and small... [In related news, selling] beer at 5c a bottle is likely to guarantee further embarrassment for Lion Breweries, already struggling to keep up with demand for its mid-strength Lion Gold beer. Supplies of Lion Gold were running short after 240,000 bottles of the 3.5[%] alcohol beer were sold during its first week on the market. That shortage is likely to be compounded by a marketing campaign in which 300,000 households throughout the country have been offered the chance to buy a bottle of Lion Gold for just 5c... [The] national marketing and sales manager for Lion Breweries, said “we got caught with our pants down...”

...The inclusion of an undisclosed severance package gave... [the] former chief operating officer for Lion Nathan, a total pay packet of \$1,594,166 in the year to August 31, the largest yet disclosed for a N[Z] public company director. The previous largest was \$1,501,787 for [the] Telecom chief executive... [The former chief operating officer], who is now the New York-based head of advertising agency Saatchi and Saatchi, resigned from Lion Nathan on January 31... The next highest paid Lion executive was [its] chief executive... who received \$1,219,090 in the August year... [and] recently announced his move upstairs to [be chairperson] at... Auckland’s other business dynasty... Challenge... The Lion Nathan annual report also shows four executives earned more than \$1 million in the August year, while 214 of Lion Nathan’s 3741 staff earned more than \$100,000.

...[Lion Nathan has outgrown NZ and is heading to AUS. The company’s long-time executive and present chairperson expressed a sense of sadness to the Business Herald following the release of the company’s interim results yesterday, when the move was announced. “I am a NZer and always will be. I feel a loss. But this is part of growing and being part of the world,” said the chairperson (r:p1350, ln53), adding that it would continue to live here. It was certainly a decision the chairperson endorsed and one that was made many years ago when, under his stewardship, the company decided to go international. AUS (where Lion has 42.1% of the market) now made up 70% of the company’s assets and the NZ shareholding in the company had slowly declined from 85% to 15%. Lion’s chief executive said the decision to go had nothing to do with the environment in NZ. “We have \$1 billion of assets here. We have 1000 employees that we have to look after. We pay over \$200 million in tax a year. This year we spent \$11 million renewing our business with capital expenditure. We spend over \$5 million a year in sponsorship. Those numbers are not going down, they are going up.” □ ‘Closing its Hastings and NSW factories cost almost \$33 million’, but] Lion Nathan’s 200 million litre brewery at Suzhou, near Shanghai has been completed two months early and \$20 million under its \$200 million budget. The savings would be used to expand distribution and develop the Rheineck and Taihushua brands.

...Interbrew SA, a Belgian brewer, has bought an 80[%] stake in a second brewery in China. The Nanjing Brewery... sold 650,000 hectolitres of beer last year and employs 655 people. Interbrew said it would reinforce the local brands, introduce its Stella Artois beer and increase capacity.

...Brewing companies are focusing on emerging markets to drive their future growth as sales in the [First W]orld peak... Market liberalisation, rising disposable incomes and youthful populations all pointed to more beer drinkers in Asia, Latin America, Africa and Eastern Europe, according to... a... report... [by a] British investment banker... In 1990, China’s beer market was just 54[%] that of the U[S]. But if current growth rates continue, China is set to become the world’s biggest consumer of beer by 2000. The average Chinese now consumes just 12 litres of beer a year, a fraction of the average 160 litres downed by the Czechs, who hold the world record for beer drinking... [Second place goes to the ‘Irish (141.3 litres), and third to the Germans. In 1994, the total world beer production was 1,200,000,000 hectolitres.’ The] world’s largest breweries were hunting for opportunities in emerging markets through acquisitions or joint ventures...

The merger, the biggest in British corporate history... and... [based] on the value of the “junior partner” in the deal – Guinness in this case – the... 10th largest in history... will form the world’s seventh-largest food and drinks company... [T]he combined group [will] be called BMG Brands...

The \$US37.3 billion... merger... has been cleared by the European Commission after... Grand Metropolitan and Guinness... agreed to give up some scotch whisky brands in Europe... [The] British drinks giants... [had previously] knocked back a de-merger proposed by [a] rebel shareholder... saying it would result in tax costs of £1.5 billion... [The chairperson] of French luxury-goods and drinks company LVMH Moët Hennessy Louis Vuitton, has vigorously opposed the... merger since its announcement... and is pressing for a de-merger of GrandMet’s Pillsbury and Burger King food interests from Guinness’ brewing business... However... the GrandMet chair[perso]n... described the problem as “a bit like the old tail wagging the dog.” ...IDV – GrandMet’s spirits arm – was already the world’s largest spirits company, and United Distillers – Guinness’ drinks division – was number two, whereas... the... ...Coca Cola Co will buy the sparkling orange drink Orangina from France’s Pernod-Ricard for five billion French francs... The deal includes four bottling plants in France. Pernod-Ricard will use the proceeds to finance the international expansion of alcoholic anise products and Wild Turkey bourbon. [By the way, ‘the wines of the rolling chalklands of the Beaujolais region have graced tables for centuries, a symbol of France’s good cheer and fine agricultural traditions. This, though, will not be a year that local winegrowers will want to remember. Instead of being bottled and corked,

much of the Beaujolais production will be turned into vinegar, ending up in salads, fish and chips and, who knows, even household cleaners. Some 10 million litres of lesser-quality wine, around 13 million bottles, which has been lying around in storage vats, will take this sad route. Growers will receive \$NZ140 per 100 litres, just a fraction of their production costs but still better than nothing. For the planet is awash with this grade of wine, and most of the competition is far cheaper. "The market can't absorb this sort of amount at this time," said a spokesperson for the Union Interprofessionnelle des Vins du Beaujolais (UIVB), representing the 3169 local growers. "We are only three months away from the next harvest. We wanted to be proactive so that the situation does not get any worse. There's no shame in taking 10 million litres off the market." The UIVB is also calling for a halt to new vine plantings and smaller harvests. Beaujolais is losing out in the world wine war, pumelled by "New World" wines from California, Chile, South Africa, AUS and NZ.'

...NZ]'s grape-growing area will rise 17.6[%] over the next three years to more than 8700ha, according to a new national vineyard survey.

...N[Z]'s wine] exports in the past year almost covered the cost of imports for the first time. Nearly \$75.9 million worth went out of the country, while \$76.3 million (\$6.6 million of it champagne) came in. The Wine Institute believes that the annual value of exports will exceed imports for the first time by mid-1999. A decade ago, exports were worth only \$4.5 million annually, and the institute predicts that they will... reach \$125 million a year by the turn of the century. Exports already represent 25[%] of total production, compared with 2[%] a decade ago. However, it expects export growth to slow and imports to rise... next year because this year's harvest was relatively light – an estimated 60,000 tonnes compared with about 75,000 tonnes in each of the past two years... [M]ore than 51 million litres of local wine was sold... 16 million of... [the] 22 million litres of imports... [came from AUS]. Wine consumption, per capita per annum, which was 13.7 litres a decade ago and fell to 8.7 litres by 1995, increased for the second successive year, to 10.7 litres... The institute's annual report reflects the move to planting premium varieties: the area producing muller thurgau, used mainly for bag-in-the-box white wine, has halved in the decade to 600ha, while chardonnay has increased more than threefold to 1700ha and savignon blanc fourfold to 1400ha. Among the red varieties the area producing merlot has increased by more than fourfold to 367ha and pinot noir almost fourfold to 524ha.

...A new disease is threatening the multimillion-dollar wine industry. Symptoms of "A[US]n grapevine yellows" – the disease damaging A[US]n vines – are present in North Island vineyards but scientists are still trying to establish whether it has gained a foothold in N[Z] wine-growing areas... Caused by organisms called phytoplasmas, the disease had already decimated boysenberries growing in Auckland and spread to Nelson and Motueka, seriously threatening export orders worth between \$5 million and \$10 million... Many broad-leaved weeds common in N[Z] vineyards as cover crop between rows might host the disease and growers might need to eradicate those plants to stop the spread... But a Wine Institute viticulturist... said [it] had seen symptoms of grapevine yellows in N[Z] vineyards only two or three times in his 25 years in the business. Scientists needed to establish whether there was an insect, called a vector, spreading the disease. "If there is no vector, there is no threat." ...Treatment for infected vines included hot water and heat. [While on the topic of wine – which 'provides the body with calories, a large number of mineral salts, iron, tannin and a considerable quantity of B vitamins' – 'total world production was less than 260,000,000 hectolitres in 1994, down from nearly 380,000,000 hectolitres in 1989. The world's greatest wine drinkers per capital consumption in 1995 were the French (63.5lts) and Italians (60.4lts).']

...Scientists at Liverpool's John Moores University have confirmed that wine consumption protects against disease... Unlike other studies, the researchers claim white wine is as beneficial as red and, contrary to medical orthodoxy, say [gals] can drink as much as [guys] – provided they do not exceed 17 glasses a week... [Another] discovery... is... that... the... beneficial effects of wine... increase with age... The good news does not stop at the wine counter. There is no link between increased blood pressure and spirits consumption... [However, the scientists also] discovered that beer drinkers may be at greater risk of heart attack or stroke... They believe beer, even in small quantities, raises the blood pressure...

A beer at the bar[in NZ] could cost less if a Hospitality Association proposal to buy bulk supplies on behalf of its members goes ahead... A handle of draught beer in Auckland costs from \$2 to \$4.20. Government tax on beer [– which costs about '20c/litre to make' –]is levied at 76c per litre... [In international news, 'New Delhi police say drunken rats are creating a unique problem at most city police stations where scores of emboldened rodents frequently "riot" after draining moonshine from plastic sachets. Brewing illegal liquor is rampant in and around Delhi, especially along the border with neighbouring Haryana state where prohibition was introduced two years ago but lifted last year. This moonshine is cheaper and stronger than regular alcohol sold in liquor stores and is favoured by labourers and farm workers. The inebriated rats also create a credibility problem for the police, who are frequently unable to produce samples of the seized moonshine in court as evidence. "If we tell the judge it has been consumed by rats, the judge laughs at us and holds us in contempt," said an officer at a East Delhi station plagued by rats. There'd been instances where the officer in charge of the evidence room had been suspended for consuming or selling the moonshine, but in most cases the officer was the innocent victim of a "frame up" by drunken rats. Police have tried various techniques to tackle the tipping but to little effect. A West Delhi station acquired a fierce cat but after a few active months it got bored with chasing and killing rats. Now it either ignores them or at times even frolics with them, mostly when they are drunk and willing to take on the cat. Rodents aren't the only off-the-record imbibers. Alcoholic monkeys also create havoc in the Excise Department lab in Delhi, guzzling liquor samples brought in for testing and going berserk when denied their daily quota of drink. Despite security, the pack of seven monkeys who have lived around the lab for years manage to enter it. Elaborate plans to catch the tipsy monkeys have been futile as the simians, even inebriated, are too cunning an adversary. Efforts to catch the animals when sober have also failed as India's Hindu community hold monkeys in reverence and there are few animal trappers who want to risk divine wrath.'

...Hindu religious sentiment associates monkeys with Hanuman, the mythical monkey god, and every Tuesday is reserved for his worship. Monkeys also hold sway in New Delhi's corridors of power. Government officials walk warily down passageways in North and South Blocks, looking apprehensively over their shoulders for fear of being set upon by marauding monkeys craftily concealed in niches in the building. At the nearby All India Institute of Medical Studies, India's flag-ship research institute, ward windows are kept locked against gangs of monkeys, descendants of those who escaped from the institute's laboratories in the 1970s. Institute doctors said that years of experience and familiarity had enhanced simian ingenuity. They said patients in post-operative wards sometimes surfaced from the mists of anaesthesia to be greeted by a grinning, red-bottomed monkey sharing their bed or casually playing with their glucose or blood transfusion drip. Monkeys "arrested" for harassing people in the northern town of Patiala, 300km north of New Delhi, are locked up in a special jail for varying periods before being declared "fit" enough to be "released" back into society. Wildlife officials running the "monkey jail" said they were inundated with complaints about ruffian monkeys from across the state of Punjab but did not have enough personnel to make arrests. There are around 50,000 monkeys in Punjab, almost all wild, with the largest number in Patiala district. Their numbers have increased after monkey exports were banned in the late 1980s. Controlled by ringleaders, usually the biggest and most vicious of the pack, the monkey gangs chalk out fiefdoms in crowded neighbourhoods across the state and terrorise everyone around.' In further news from India, a]n elephant addicted to illegally brewed liquor has been on a rampage in [the]north-eastern state of Bihar, destroying houses in the villages where the hooch is being fermented... [T]he animal is lured out of the forest by fumes billowing into its habitat from the bootleg operations. It then smashes the stills, drinks the concoctions and goes on rampages looking for more. The villagers have nicknamed the drunken marauder "the excise commissioner" and have appealed to authorities to capture it. People in many Indian villages brew alcoholic beverages by using tree leaves and locally grown herbs because they cannot afford commercial liquor.

Drink up, we need cash, says [Russia's president.] RUSSIANS are likely to continue drinking themselves to death until they have a reason to live, says... [the] president, whose own drinking habits have been the subject of considerable speculation, [although the president] urged his vodka-loving

[comrades] at least to choose legal booze, which is healthier for both the drinker and the federal budget... “The state must do everything so that the people do not get poisoned by fake alcohol. And if the people spend their money on vodka, the money should go to the treasury, not to swindlers... We are resolved to turn off the tap of alcohol smuggling,” said [the president], whose government in recent days has blocked more than 1500 trucks carrying unlicensed alcohol from entering Russia through Georgia... Up to 50% of all alcoholic drinks checked by food inspectors in Russian stores and kiosks turned out to be unfit for consumption, “and we’re only checking a small portion”... The number of deaths from alcohol poisoning had tripled over the past five years... In some towns and villages the entire population is alcoholic... [The president]’s own health is widely rumoured to have suffered deeply from heavy drinking. In a recent memoir, the president’s former chief bodyguard... claimed [to have] routinely watered down [his] vodka to save the president from drinking himself to total ruin. Last December, the Russian government announced a major crackdown on the country’s huge alcohol industry and introduced a stricter system of controls in a bid to stem tax evasion... Those measures, which bring in more than 500 billion roubles... a month from alcohol taxes, would be intensified.

...The cost of alcohol and tobacco misuse in N[Z] is \$39 billion a year, says a health economist... [who] calls for tougher penalties for those who drink and commit crimes, greater liability for those who provide alcohol at social functions and an end to the transtasman liquor allowance... [But the] executive director of the Beer, Wine and Spirits Council... said the sums were “extraordinary numbers.” “...the approach is so theoretical as to be meaningless really... [T]he figure... makes no sense in our economy and I think we need to keep it in perspective. [The health economist] has essentially said if there was no misuse of alcohol, 30,000 people would still be alive and the economy would be better off by \$16 billion.” ...Treasury had carried out a similar study and arrived at \$500 million for the cost of alcohol misuse alone and “we don’t even agree with the Treasury figure.”

...In some sobering figures to add weight to the classic New Year resolution of giving up smoking and drinking[. doing so]... and investing the money for 30 years would add up to a \$250,000 nest egg, an Auckland investment adviser says.

...Festive season liquor bans used by authorities to control public drunkenness are probably illegal, say the police. The force’s legal advisers are warning police chiefs not to support such bans[during *THE SILLY SEASON*] because they are unlikely to withstand a legal challenge. Every year, authorities impose liquor bans on beaches and holiday resorts round the country during celebrations such as New Year’s Eve, Christmas, Guy Fawkes and Easter. Whangamata and Mt Maunganui are traditional trouble-spots where liquor bans are regularly imposed... [Last season] Mt Maunganui police had a calmer night than their colleagues in Whangamata, with most physical attacks coming from teenage girls seeking kisses from constables at midnight... Between Boxing Day and the[next] weekend 300 people were arrested in Whangamata – 106 alone on New Year’s Eve during the riot in which six police were injured. Two official complaints... [were] made to the Police Complaints Authority... [that police] control at Whangamata over the New Year was overzealous... [and] the officer in charge of the operation... received several calls from parents complaining about the treatment of their children by police during the riot. An Auckland[er]... who was at his holiday home near where the crowds rioted, [spoke of seeing] several incidents in which police took “excessive and unnecessary force, to say the least,” in controlling the crowd. [The Auckland] went outside his house about 1.30 am after hearing noise “associated with happy, partying people. They [the police] were using expletives to address the crowd, not telling them to go home or anything, just swearing at them and attacking with batons,”... [The Auckland] also saw one police officer approach a girl sitting on a fence and “belt her with a baton” before “charging off down the road to deal to someone else. It was disgusting. I was not there for the initial rioting but the incidents I saw were certainly not instigated by the crowd.” An Auckland [mother] said her son, who was arrested on the night of January 1 – the night after the riot – was told by police that it was payback time. The [mother], who did not want to be named... was concerned that[such] “unnecessary... police behaviour” caused the youths to rebel against police, despite the efforts... parents made to teach their children to respect the law. But... [the] Detective Inspector... defended the police action and said that if officers had not dispelled the 3000-strong crowd as they did, someone might have been killed... Police feared for their lives during the riot, which lasted longer than an hour... About 120 rioters went on a rampage in the town centre where they smashed bottles, tried to break into shops, and armed themselves with road signs, fence posts, metal standards, and the remains of a destroyed telephone box. Seven police vehicles had their tyres slashed and windcreens smashed, and a real estate business had its windows broken. Finally, the angry crowd vented its anger at the break-up of their “celebrations” by throwing bottles at the police station at the other end of town... [The commander] acknowledged that some bystanders, “other than those being targeted” may have been “on the receiving end” of police batons but said they would have been warned by police... first. “Once the decision is made to have a baton charge the people in the area are told to get off the street. People living in the area have assured us they heard that command before police moved in... Some people have said they stood their ground because they were doing no wrong, but... [we] cannot be blamed. It’s common that young persons give an account of the situation to their parents that differs markedly from the police account of events,”... Most of the 300 arrested[. some of whom]... came from as far away as Christchurch ...though “a good 90[%]” were from Auckland... signed forms admitting their guilt... And in Auckland – the boredom finally got to everyone as shortly after midnight the inevitable fight broke out in Aotea Square... The police moved in and the square cleared... [Things have] changed... much in Auckland since... [an] ill-fated concert in the square a[number of] years’ ago... Round Auckland, police impose liquor bans at Takapuna Beach on the North Shore, Mission Bay in the eastern suburbs or Piha in West Auckland. Anywhere that large numbers of young people drink and cause trouble can and have been subjected to a liquor ban. The legal opinion has widespread repercussions for local authorities attempting to control crowds drinking and causing trouble. Although liquor bans failed to deter people drinking in public at holiday spots last New Year, [and a ‘fulltime ban on alcohol in outdoor places in Gore – to counter young “hoons” (or boggins) who get drunk and cruise the streets in their cars – didn’t stop out-door drinking by teens’ (or a ‘mother buying a large volume of alcohol for her 16-year-old son and mates, who later lost control of their vehicle, crashed through a fence and killed a young boy playing in the front yard of his home’)], [police said afterwards that they were an effective tool if there were enough officers to enforce them. The legal opinion hinged on whether the festive season was a public event. Under local government legislation, bans can be imposed only on public events, functions or gatherings. The... Criminal Bar Association... said it was ironic that the police were raising the issue when civil libertarians seemed unconcerned about the legality of the bans... [Lawyer]s had raised the issue with clients charged in connection with the bans, but challenging the prohibition would be costly for such a minor offence. A group of Hamilton hoteliers yesterday failed to have a liquor ban imposed on inner-city streets from December 19 to January 1. A Hamilton City Council committee decided it had no legal power to implement it. The Hamilton Hospitality Group had argued that people gathering in the central city to celebrate constituted a public gathering. [But] a police regional legal adviser... said the council had correctly interpreted the legislation. “No application for such a ban should be made other than for one-off events... Obviously the end result if the bans are tested and shown to be illegal could reflect badly on police... [who], as upholders of the law, must be seen to be acting within it.” The... committee recommended that the ban apply to Christmas Eve and Christmas Day, and on New Year’s Eve and New Year’s Day. However, the police national legal adviser... said it was debatable whether all of these days qualified as “events.” Police would not be able to enforce blanket bans, such as the December 13 to January 6 ban imposed by... Rotorua District Council last year... Hamilton[’s] council is likely to approach the Local Government Association to gauge members’ support for lobbying for a legislative change to... give councils... [more] power... to control drinking in public places.

...[Politicians and local bodies are seeking a law change after a court ruled that councils do not have the power to impose long-term liquor bans. Gore’s attempt to keep its main street free of drunks received a set back after a 23-year-old challenged a bylaw that permanently banned alcohol consumption in the area. The 23-year-old had been charged with consuming liquor in public. Two years ago, Parliament passed a law allowing councils to ban drinking in public places for up to 24 hours during the holiday periods or for specific events. Nelson’s National MP said the current law was a “recipe for drunken

riots” and together with Southland’s National MP – the Minister of Health – was proposing a law change to give police and councils more power to control the problem, by reinstating drinking bylaws. “We don’t dispute the court’s ruling. We think the law is wrong. We think the right of people to live in a civilised town is more important than the right to drink in a public place.” The MPs hoped to introduce the legislation to Parliament next month. The Auckland City Council is also seeking the power to impose long-term liquor bans. Last October, its regulatory committee adopted a recommendation to permanently ban the consumption of alcohol in selected public places, but recognised that changes to legislation would be needed. Tauranga’s mayor said the present legislation was wrong and Gore should be congratulated for its stance. Tauranga was also seeking the power to impose long-term liquor bans. The mayor said it would be a tool in helping to prevent the hooliganism and drunkenness that had marred previous New Year celebrations at Mt Maunganui. “I can’t act the goat waiting around. We need to get on with it.” The Gore District Council chief executive was very disappointed with the judge’s decision. The main street had quietened down since the bylaw. “The bylaw served a good purpose.” The council had not fought the legal challenge because it knew the bylaw was on “shaky ground.” Gore would seek support from other councils to lobby for a change to the law. The Local Government NZ acting chief executive said Gore had erred by making its ban too extensive. “They tried to deal with an issue that was upsetting the community and passed a bylaw that was invalid.” Wanganui has had a liquor ban on its main street for six months which the district council environmental services manager said had helped to reduce the amount of drunken crime in the town. The manager said Wanganui’s ban would have to be reassessed in the wake of the Gore District Court decision.’]

...Police patrolling the beach resort of Whangamata this New Year may be backed by the Army. A hardline strategy targeting hoons and underage drinkers, and featuring a civilian support network... [plus] the possibility of Army personnel staffing first aid stations... was unveiled yesterday. Road blocks will be set up on all routes into town... and local volunteers will be used as eyes and ears to report potential trouble to the police[... who]... promise “zero-tolerance”... Police would use whatever means they could to turn away city youths bent on causing trouble in the town... “We want the decent people... to have a good time, and we don’t want the undesirable scumbags ruining it for everyone else,”... [declared the] Hamilton Senior Sergeant... responsible for the festive season operation on the Coromandel Peninsula, [who also] said the strategy should prevent a repeat of last year’s riot. “We will plan for the worst, but we don’t expect it to happen... The idea is to have a high and visible police presence...” ...A proposal to ban liquor in all public places from December 28 until New Year’s Day will be considered by the Thames-Coromandel District Council this month. Until now the ban has covered just some reserves.

...A police plan to have the Army help at holiday troublespot Whangamata at New Year may fail – soldiers will be on holiday themselves... [Furthermore], yesterday... the Auckland Council for Civil Liberties... warned Whangamata police that their plan for road-blocks may result in “scruffy-looking kids... having a good time” being singled out... All of Whangamata will be under a liquor ban between December 28 and 31... The unprecedented sweeping prohibition – which excludes licensed premises – ...[includes the installation of security] floodlights... at Williamson Park, where last year’s riot began... [O]ther centres would watch the full-scale liquor ban to see if it worked... At Mt Maunganui... the seasonal liquor ban will start on Boxing Day and... lift... on the morning of January 5. It... [only applies] to specific streets and beach areas between 3 pm and 3 am.

...Undercover police... will mingle with crowds to identify and remove troublemakers from traditional New Year party spots this week... People found with alcohol on the streets... [of] Whangamata... could be arrested, though it was likely a more passive approach would be taken at first... Police at Mt Maunganui would also use the tactic. The Mount had been[relatively] trouble-free for three years, but police said there was always potential for drunk people to turn nasty... Police have also enlisted the co-operation of hoteliers and Dominion Breweries. On New Year’s Eve hotels will only sell beer in plastic bottles and DB is encouraging people to buy beer in plastic bottles by selling it at special rates. Nelson police hope the peaceful festivities of recent years will continue. Special operations[will be] set up for Nelson city, Takaka... and[other] traditional holiday spots. The Gathering, an annual dance party[for ‘8000 people’], will again be held at Takaka... [I]t had become [an alcohol-free,] family oriented event in recent years and no trouble was expected. Queenstown and nearby Wanaka, where riots were once an annual event, were also expecting... [a] reasonably trouble-free New Year’s Eve party. Sixty-four officers, up from the standard 30, would be on duty in Queenstown[where]... 6000-odd... young people... [congregated last] New Year... Hotels now had to close [at] 2.30am and have their patrons out by 3am which would help police keep control... [■ A] search is on for a concert venue in the Bay of Islands to deter New Year’s Eve mayhem in Paihia, rumoured to be this year’s party hotspot for young Aucklanders. The Mayor of the Far North... was disappointed that the Waitangi National Trust Board had turned down a request for a concert to be held in the Bledisloe Domain at Haruru Falls, 4km west of Paihia... [T]he trust had “categorically” refused allowing the domain... used as sportsfields, to be the site of a rock concert with alcohol consumption permitted. [The mayor] said... the... community should provide a controlled venue for youth, and... would do her best to find an alternative.

...Auckland police will help... to maintain law and order in Northland on New Year’s Eve... Additional police have already started arriving in the Bay of Islands... [L]iquor bans would be in force in some places and the police would deal with any breaches... The organiser of the Buzz 98 concert... said thousands of tickets had been sold. Free shuttle buses will run between the concert and Paihia, security guards will patrol the... site.

...Police expect a crowd of up to 15,000 to attend the Rotorua New Year’s Eve Mardi Gras tonight, and they warn that an alcohol ban will be tightly enforced... Experience had shown that strict enforcement of the liquor ban prevented problems later in the night... By yesterday, police had arrested more than 30 people for breaching the ban... [at] Mt Maunganui, where another 15,000 people are expected for New Year’s Eve celebrations... most of those charged were out-of-towners, but ignorance was no excuse... [Incidentally, young gals] are more at risk of being raped in the festive season... Parties, alcohol and teenage miscommunication all increased the risk of sexual assault... “In the U[S] it’s called ‘date rape,’ but here... we most often see ‘party rape,’ where [gals] aged between 14 and 24 are sexually assaulted at parties by young [guys] they know in a social situation. More than 50[%] of teenage... victims are raped in that kind of circumstance... It is also important that [young gals] know they have the right to set sexual limits, and to communicate those limits assertively.” ...A recent survey showed that one in three [young guys] thought it permissible to force a girl to have sex... Rape Crisis says alcohol is involved in many situations where sexual assault occurs, and warns young people to stay sober. “Nobody can give informed consent about sexual activity if they are very drunk. And if informed consent isn’t present, then it’s rape.”

...Stirring from sleep after the... celebrations, perspiring profusely with head hammering, you could be forgiven for praying that flu has struck. You went, you danced... you drank, you drank some more and now you are about to experience The Hangover From Hell. According to... [a] psychologist... who conducted test studies on a group of university students, as long as 16 hours can elapse before complete recovery... Will there ever be an end to the timeless quest for the holy grail of hangover cures? ...The biblical book of Genesis indicates that Noah [(who allegedly ‘introduced grape growing’)] may have been an early sufferer... It’s not recorded if... Noah... was the first to wear thinner the time-honoured cliché of “never, ever, ever again.” A hangover is particularly well described in the German word katzenjammer, literally translated as “wailing of cats”. Sweden’s hont i haret (or pain in the roots of the hair) and Norway’s Jeg har tommermen (carpenters in my head) sound horribly familiar. With most people happy to brag about their tried and tested cures, the Internet has become a haven for boffins, geeks, and freaks. For anybody sober enough to surf and seek highly dubious cures and concoctions, this is the place for you. The Haitian voodoo cure of sticking 13 black-headed pins in the cork of the bottle that gave you the hangover is an interesting one. Or how about the ancient Egyptian cure of drinking a couple of pints of cabbage water or the Chinese recommendation of a small serving of horse brain the next morning. The Romans tried powdered pumice stone, roasted boar’s lung and screech owl eggs which may cure a hangover but must play havoc with one’s digestion. The Japanese have been known to wear gauze surgical masks soaked in sake and in the Netherlands, sheep’s trotters, cow’s livers and oatmeal boiled for six hours, strained and

drunk as a soup is apparently popular. Many hangover cures have origins in transference magic... For example, if you rubbed a snail or slug over your forehead nine times, then threw it as far as possible, the hangover would disappear. Similarly it was believed that if you threw up over a frog and then threw the frog as far away as possible, your hangover went with it... A survey conducted by US-based researchers this year showed 75[%] of the adult population regularly consumed alcohol, with half of those surveyed admitting to regular over-indulgence giving the average adult a hangover every 12 days... Bayer's Consumer Care Division... discovered 52[%] of sufferers purchase packaged remedies. Further research resulted in the production of Alka-Seltzer XS, launched in Britain last [year]... The product still uses the famous "plink plink fizz" formula of the original Alka-Seltzer invented almost 70 years ago, but with the addition of old standards such as caffeine and paracetamol for extra effect... A [TV] and poster campaign aimed at reaching casualties of... New Year over-indulgence features a languid, green around the gills, cartoon-like worm slumped at the bottom of a tequila bottle. The bottle is situated next to an effervescent glass of water containing the product and ends with the caption, "Akla-Seltzer XS. When you've had one too many." ...[Incidentally, the] Apple and Pear Marketing Board has told [TV] stations not to broadcast its Fresh-up fruit juice advertisement following the deaths of two [people] who jumped from waterfalls last Friday. The ad... features rugby league players-cum-[TV] show hosts... jumping off the Hunua Falls, east of Papakura, in pursuit of a can of fruit juice. Both emerge unscathed[and one says: 'It's gotta be good for you'], but a sign at the falls warns that 13 have died attempting the jump, and another life was claimed on Boxing Day. A spokes[person for TVNZ]... said about 15 viewers had called at the weekend suggesting the ad... be stopped out of respect for the families of the dead and staff had passed that information on to the advertiser. Residents near Hunua Falls had also started a petition to take the... ad... off air.

...A 22-year-old... who was killed jumping 30m from the top of Hunua Falls... ignored a sign that said 13 people had been killed doing the same thing, say South Auckland police... [The 22-year-old] failed to resurface after... jump[ing] fully clothed and hand-in-hand with a girlfriend. [The 22-year-old] was named as *Justin Kevin Cunningham*, of Waiuku. The [girlfriend] resurfaced but hurt her back striking the water... The pair were part of a group of four day-trippers, all in their early 20s, who were visiting the popular... picnic spot when the accident happened about 4 pm. Police were informed of the accident about 4.40 pm... The two jumpers were inspired after watching a boy leap from the top... One of their friends... tried to talk them out of it... The [22-year-old] was one of two people killed in waterfall jumps [on Boxing Day]... The other waterfall death occurred when a 28-year-old Ngaruawahai [resident] jumped 55m from the top of Bridal Veil Falls, just south of Raglan. His name ha[s still] not been released...

A European tourist couple captured on video-tape... the fatal plunge... down Bridal Veil Falls... *Aranui Shane Herangi*... leapt... to his death about midday on Friday from the top of the falls, a popular tourist attraction... Police seized the footage which will be presented at the coroner's inquest into the death.

...*Lemmings flock to waterfall for leap of lifetime* Daredevils are continuing to leap over the Hunua Falls, despite the loss of 14 lives there already. Yesterday a 21-year-old... laughed in the face of death and hurled himself over the waterfalls... to the cheers of a crowd of picnickers... [It] had made the jump for... "fun" and... the... "challenge"... On Boxing Day, a Waiuku [resident]... was killed jumping from the same spot... Two other [guys] were fatally injured in waterfall dives over the past five days, at... Maraetotara Falls near Havelock North... and... Bridal Veil Falls... - 1997

A Hamilton [resident] fell 55m to his death at up to 200 km/h yesterday when [it] jumped off a viewing platform at Bridal Veil Falls... Four friends watched in horror from below as the 25-year-old climbed on to the platform's hand-rail and leaped. They pulled him from the 3m-deep water and called police and a rescue helicopter but could not revive him. [A Senior Constable... of Raglan, said the [25-year-old] had been drinking and left his friends without explanation minutes before jumping. [The 25-year-old] was the second to jump from the platform and die in a week. On Boxing Day, Aranui Shane Herangi... who had also been drinking, stood on the rail for about a minute before jumping. [The Senior Sergeant... said there were no confirmed reports of anyone surviving the Bridal Veil Falls jump. "It's two down and two dead. If people jump off there, they're obviously wanting to commit suicide." Fourteen people have died jumping off the Hunua Falls...

The Hunua Falls may become off-limits to the public because of the "crazy" leaps over the waterfall. The Auckland Regional Council is considering closing the picturesque falls... to stop daredevils leaping over the 30m drop... The regional parks manager... said a full-time ranger was now patrolling the area to prevent people jumping. However, if the warnings were ignored, the council would have to consider closing the tracks leading to the falls... [The regional parks manager] was disturbed to hear from rangers that "people were almost sitting there waiting for someone to jump." "We're not going to sit back and allow this to develop into a activity." • An Auckland[er]... *David Zulkarnain Zakaria*, aged 24... drowned at Okere Falls, near Rotorua, [after it]... apparently jumped from a 2m bank into the water below the falls about 2 pm... on New Year's Eve.

...A total of 147 people died in New Year's Eve celebrations across Colombia, most of them young people who drank too much... In El Salvador, 38 people died and 295 were injured in festivities. But in Brazil, where nearly 1.5 million people crowded on to Rio de Janeiro's Copacabana beach to ring in the new year, there were no serious injuries, although in Buenos Aires 72 people were treated for eye injuries after being hit with firecrackers or champagne corks... A fire... ripped through a disco packed with... some 1000... rich young partygoers in the Peruvian capital, killing up to 26 people a... caged lion... and a Bengal tiger... At least 50 [people] were injured and some were in hospital in critical condition... [The] head of Peru's volunteer firefighting force, said the blaze that devastated the Utopia disco appeared to have been sparked by... an apparent miscalculation by the bar[tender, who] set the ceiling on fire... [while] "doing demonstrations with fire and pyrotechnics" that... got out of hand... Police earlier said a plume of flames from a fire-eater set the curtains on fire and spread. One witness... said the blaze may have been started by the staff's trick of dousing ashtrays on the bar with gasoline and setting them aflame. Although Utopia was in Lima's premier shopping centre, favoured by the wealthy elite, [Lima's Mayor... said it had no building or operating licence... [T]he dark club... was a disaster waiting to happen... it... had no signs to emergency exits and no fire extinguishers... Tearful relatives, some clutching photographs of their loved ones, went to the Lima morgue desperate for news. The scenes were a painful reminder of a devastating blaze in December when more than 300 people died... [The mayor] said Peru, a poor Andean nation where more than half the population lives on US\$1.25... a day or less, appeared to be deaf to fire safety precautions. December's fire – Peru's worst blaze – started with an explosion at a shop where fireworks popular at New Year's parties were on sale.

...Last month 24 drunks died from frostbite, while in November the figure was 66, a threefold increase over the same period [of the previous year]. Victims were too drunk to feel the onset of frostbite... "In winter we turn into a rescue service," said... the head of Moscow's Detoxification Tank 6, one of 28 in Moscow... The detoxification tanks... maintain order by clearing public places of drunks, and also ensure the drunk is prevented from harm... Tonight's latest edition – an unemployed [person] in his 30s with scars all over his torso – ...was sleeping without a coat, hat or gloves, but, fortified by vodka, was oblivious to the cold... If all goes to plan, the [drunk] and his cell mates will emerge sober, repentant and 83 roubles... poorer the next morning. Nobody is let out before a doctor signs official papers confirming the client's sobriety... [In local news, a youth] is facing a life sentence for being in the wrong place at the wrong time on New Year's Eve. The Katikati resident, who played Jesus in a recent church production, lost four teeth in a police baton attack at Waihi Beach... Months of work are ahead, beginning with removal of nerves in the gums and the stumps of the damaged teeth. Eventually a plate will replace the missing teeth... [Jesus] had gone to the beach with a group of friends from the Katikati Baptist Church Youth Group. "We were sitting on the beach taking no part in what was going on. When we realised the riot was moving our way, some of my friends left and I went looking for another guy who had come with us. I saw him caught up in the riot and went across in front of police to get him out. That was when I heard someone yell 'run' so I started to run. I looked around and two police[officers] were springing

towards me... One hit me in the face and they kicked me enough to make me fall down. I saw them a bit later and said they had broken my teeth and could I have their numbers so I could make a complaint,”... They used an obscene colloquialism to tell him to go away. “I always thought the police were there for our protection. I can understand they thought I was part of the riot, but there was no reason to hit me in the face.”

...Litres of alcohol were poured down Tauranga and Mt Maunganui drains at the weekend as year-round liquor bans came into force... The bans previously applied o[nly o]ver the Christmas and New Year period... Several dozen [youths] were caught drinking in liquor-free areas... Their alcohol was confiscated and most were given a warning rather than a \$500 fine. “...from here on in there won’t be the same sort of leniency...”

...Taking risks is an inherent part of growing up, but young people are now taking higher risks, [the]... Minister of Youth Affairs... told youth councillors in Auckland yesterday... [I]t was unclear whether this was a result of added pressure on young N[Z]ers or media influence. It was most likely a combination of many factors... [The minister] was... particularly... concerned about the level of risk-taking behaviour... by young [guys], and was interested in ways to reduce the harm they did to themselves and others... “We need to recognize and support the normal rites of passage... but not when it translates into damaging, anti-social behaviour which hurts everyone else.” ...Statistics were sobering on the consequences: •... Young [guys] were twice as likely to be killed or injured as young [gals. • Guys] aged 18 to 24 were overrepresented among heavy drinkers.

...As a... hilarious after-dinner speech impresario... once quipped: “I’m a member of Alcoholics Anonymous – I still drink, but under a different name!” ...But... the unavoidable truth is that heavy drinking is no laughing matter. For although boozing improves conversation and makes even an awayday to Mansfield palatable, it also destroys lives, families and careers, leaving otherwise sane people’s reputations in tatters. One only has to look at the celebrities who choose to tread the lonely road of the alcoholic for confirmation... But of course, it’s not only overpaid celebrities who turn to the demon drink for solace... [O]ne in 60 Brits are alcohol-dependent... – ...incapable of performing normal everyday functions without turning to the... grog for assistance... – that’s a million loser drunks... [Brits] spent £28 billion on grog... last year... We also lost 14 million working days nursing hangovers, costing business over £964 million. A quarter of all UK [guy] hospital admissions are booze-related. They cost the NHS £164 million a year, and 33,000 die. Here’s how their bodies cry “last orders!” ...Alcohol is a diuretic, and prolonged, heavy drinking causes kidney failure... Treatable only by removal, and only one in four sufferers lives more than five years... Occasional pains in your upper right abdomen might indicate an enlarged, fatty liver. One in three sufferers go on to develop cirrhosis: there are 4,000 reported incidents and 3,000 UK deaths per year. Worryingly, a mere two pints of beer a day can prompt cirrhosis... Heavily abused livers show bands of gnarled, functionless scar tissue... [Gout is caused] because the body can no longer metabolise uric acid, which is deposited as “tophi” in the joints. As well as causing arthritic agony, urates are eventually deposited in the skin and ears, rendering victims as attractive as old onion bags... Alcoholic hepatitis and metastatic liver cancer typically develop after 5 to 15 years of dedicated heavy drinking. Both promote accumulation of yellow-brown pigment in the blood. This gives the skin and eye-whites a grim yellow tinge, plus tiny, red spider “naevi” marks... Increased blood pressure – hypertension – affects nearly all alcoholics. Like a flesh balloon, the hooter becomes inflated with pressurised clarat, peeling open the pores. Bloating capillaries also promote the trademark deep purple complexion of the alcoholic and “grog blossom” acne. Then there’s oedema, where the face swells through fluid retention... The irritant effect of alcohol causes gastritis and ulcers, which affect 13[%] of all Brits. Intense stomach pain is made worse by eating, and excruciating if aspirin is taken to quash pain... Aspirin[also] increases alcohol’s effect... Pain in the upper abdomen, loss of appetite and weight loss could mark you out as one of the 7,000 annual UK pancreatitis victims. By then, it will be too late for 90[%] of sufferers, as tumours will have already spread into the liver and lungs... [‘Heavy drinkers may experience damage to the central nervous system, while the body’s ability to use vitamins and produce disease-fighting white blood cells is impaired.’ A]lcoholics often suffer from three grim vitamin B1 deficiencies: beriberi, Wernicke’s encephalopathy and Wernicke-Korsakoff syndrome... Confabulation – invention of stories – regularly occurs to make up for tragic gaps in short-term memory... [A] hefty... *drinking bout [destroys] 10,000 brain cells* Considering a human brain consists of around 100 billion nerve cells, it’s tempting to think that such a piffling amount won’t be missed. Don’t be fooled: prolonged and severe exposure to alcohol’s neurotoxic effects will cause serious degeneration... [In comparison, being punched is thought to destroy] *7,000 brain cells... The Physician And Sports Medicine* concluded that almost half of... 42 boxers... analysed had borderline brain atrophy. More immediate fatalities occur, however, from blood clots under the membrane around the brain. This increases pressure and eventually forces the brain down onto the brain stem, shutting down all... vital functions. [Another interesting comparison is that *h]eading a football[destroys] 4,000 brain cells* After a two-year study, [a]Dutch neurologist... drew the predictable conclusion that footballers suffer from impaired memory and poor recognition skills, when compared to elite swimmers and athletes. Heading around 1,500 times a season, defenders are hardest hit. “It’s like taking a 175lb battering,”... [Returning to the topic of] alcohol... some 70[%] of all homicides are associated in some way with [it], as are 70[%] of all beatings, stabbings, and half of all assaults in the home... According to Alcohol Concern, 65[%] of all suicide victims had been on the grog when they finally reached for the noose, not to mention half of all those who drowned, 39[%] who burned to death and 15[%] of road fatalities... [USers] in the Twenties demanded quantity, not quality, of booze. “Mean whiskey” often incorporated rubbing alcohol, kerosine, paint thinner, bleach, embalming fluid, chemical fertilisers and manure for colour. By the thirties, blindness, palsy and partial paralysis had afflicted thousands. Despite this, ten million gallons were being downed every year... A[US]n aborigines cope with the soul-sapping openness of the outback by drinking bitter formic acid from the abdomen of dead red ants. When mixed with pulped gum-tree bark, “Ubo Gobo” induces seizures, and helps rookies achieve Dreamtime status... [However, modern aborigines are more likely to *cope* by drinking alcohol. Prior to 1967, ‘aborigines had no vote and were forbidden alcohol. But with citizenship came entitlement to the national minimum wage. Graziers pared their workforce by the tens of thousands. Aboriginal people were left in a cultural no-person’s-land, unable to adapt to the white person’s ways and unable to return to their own. Many drifted to squalid “camps” in outback towns like Alice Springs. Chronically unemployed, anchored to social welfare, they fought off boredom with boozing and brawling. In three decades, a once-proud people has been nearly destroyed by drunken dissipation.’] Alarmingly, alcohol suppresses testosterone... [(reducing sexual desire...)], yet increases oestrogen production – thus encouraging [guys] to lay down fat in feminine places. Many boozy [guys] are cruelly afflicted with gynaecomastia... meaning they grow[gal-like] tits... Although gurgling convinces [guys] that they are sexual Tyrannosauruses, constant alcohol intake actually shrinks testicles. A 1997 *Aceology Medical Journal* report found that 39[%] of alcoholics had decreased sperm count, while half had altered sperm motility... increasing the chances of fathering a child with birth defects... [Furthermore, ‘a hormonal imbalance can cause impotence’.] Rather like the sex act, drinking is shrouded in mystique, half-truths and just plain old bullshit... ■ Milk “lines the stomach” – FALSE... ■ Brandy [(which ‘takes 10 times as many grapes to make as for normal wine’)] “warms your cockles” – FALSE Spirits have no warming properties whatsoever; they actually increase blood flow to the skin, thus losing body heat... ■ Drinking gin prompts miscarriage – TRUE Long before the days of the back-street abortionist, [unwilling mothers] would hop in a steaming tub with a bottle of gin in the hope they would lose their unborn sprog. “Mother’s ruin” worked sometimes...

Being a father ‘harder than being a Prime Minister’... [A]fter his 16-year-old son... was arrested for being drunk and incapable[, an emotional PM] went ahead with a speech to black church leaders in Brighton... [The PM] made clear that his religious faith had kept him strong during family and political crises... [His son, who] had been out with friends celebrating the end of their GCSE exams[, was]... found by police lying on a pavement in London’s Leicester Square just before 11 pm on Wednesday local time. They were sufficiently worried about him to call an ambulance... The news travelled fast, some newspapers were tipped off and Downing St was telephoned about the incident in the early hours... The disclosure threatened to embarrass [the PM], coming only days after [it had] proposed tough new measures to allow the police to take action against drunken louts.

...Britain will seek to emulate Europe's cafe culture after the Government unveiled plans for the biggest shake-up of pub laws since the First World War[... when]... strict opening hours were imposed on bars across the nation to prevent factory workers getting drunk instead of furthering the war effort. Now the Labour Government is proposing much laxer licensing laws – allowing round the clock opening in some cases – for the new millennium as well as measures to tackle under-age drinking and antisocial drunks... Last year alone, Britons drank £12.3 billion... worth of beer on licensed premises and police then had to cope with 676,000 violent incidents on the streets outside... [P]olice will get tough new powers to be able to close premises which have become a focus for alcohol-related violence and disorder and locals will be consulted in advance.

...A 1.54m (5ft 1in) tall [gal] throwing a wobbly over getting the wrong drink is all it takes now to put the wind up [one bar-tender]. The 29-year-old from Wellington has been left shaken and unable to sleep since two [people] burst into the London pub where [the NZer] works and sprayed drinkers in the face with acid. [The]... assistant manager of the Cabbage Patch pub in Twickenham, approached the [offenders] and was punched to his knees... Talking to the *Weekend Herald* a week after the attack, [the NZer said it] could not forget what happened. "It was worse than a horror movie. Two guys... enjoying a birthday celebration... copped [acid] in the face full-on. Their skin was falling off. It... ate through the cloth. Their wounds were going green and bubbling." ...T[he victims] needed skin grafts and plastic surgery... Like thousands of other young N[Zers], the 29-year-old] sees London as a "brilliant place to earn money" and had planned to stay for another six months. But... £6... a hour was not enough to risk your life for, and his only wish was to come home... [The 29-year-old] and his fiancée ...f[rom] Tauranga, who was there during the attack, had been working in the bar for six weeks. They left jobs in the Barbican, a haunt for high-flying city workers, because they wanted a safer environment.

...['are drinking, violence and destruction of property the things we think of when we think of the Irish or St Patrick's Day?']

...There was green hair, leprechaun hats and shamrock face painting, but the most celebrated St Patrick's Day accessory was a frothy white moustache. It was a day for spinning tall tales, toasting Irish bloodlines (perceived or real) and meeting old friends... Ireland's honorary consul-general in Auckland... said the foot-tapping music, traditional dancing and inviting pubs made St Patrick's Day "good craic" – that is good times, friendship and enjoyment to the rest of us. Around 20[% of NZers claimed Irish ancestry... "Indeed, N[Z]ers are the new Irish." In recognition of the vast spread of Irish around the world, Irish Ministers of State go overseas to celebrate the day with immigrants. N[Z] was this year's destination... At the Muddy Farmer Irish Pub in central Auckland around 40 "Patricks" attempted to start a world record for the most Patricks in one place on St Patricks Day... [One] Patricia... was out with friends celebrating not just St Patrick's Day but her "41st" birthday... "We are very proud to be full Irish. It's like Christmas Day to us... and it just keeps getting bigger and bigger." Across the road St Patrick's Catholic Cathedral sported the green, white and orange ribbons of Ireland... It was a bonus day for the city's publicans, with the Irish bars bursting at the seams, while the student pub crawl organised to coincide with the celebrations visited other bars around town.

...*Drinking and students traditionally go together like bourbon and coke...* [A]s *annual Capping Week festivities rage*, [the NZ Herald]... *reports on efforts to battle booze on campus...* [A]n Alcohol Health Promotion officer for HealthCare Otago, is... involved in the North Dunedin Project, a community initiative urging binge drinkers to "Say Forget It" when challenged to a jug scull... And it will take some effort, for as [the officer] admits: "Otago has a reputation as a place to learn to drink." Its university's motto is A Degree in Distinction. Ironically... Distinction is also an ale made by Speights, an iconic brewery for the young southern [guy and gal] who might not make the distinction between working like a dog and drinking like a fish. However, the project, which started last June and also involves representatives from police, the district liquor licensing agency and Otago's student health unit, made some progress in March when new students got their first taste of orientation. One hall runs a mystery bus trip where the final destination is no surprise, a beer tent of circus proportions. "Last year they had 300 students and an astronomical 40 kegs of beer. This year we met the executive. They feared the trip might be cancelled but we talked about host responsibility and this year they only had 25 kegs,"... recording a minor victory[a keg holds 50 litres]. The]... Otago student health educator... concedes a percentage of students will continue to be binge drinkers. "These issues have to filter through before they get to university. When we go to secondary schools and ask leavers what their expectations are of orientation they say 'get pissed and get laid',"... Therefore the project team often attends seventh form "after ball" parties to try to explain the dangers... Dunedin publicans largely support the project... although "there is still the odd one that offers six doubles for \$10". The A[LAC] says it has ongoing problems in Waikato with pubs trying to lure new students with cheap deals... At Waikato, first year students in the halls are told "...Kegs are banned... because the implication is you have to finish it before you return it." ...[one ex-student] didn't quite find God... [while attending] the University of Canterbury in 1986, but... was a regular at Religion 101 lectures. It was assumed first year students would frequently appear at the gatherings described as "Sunday School" – Sunday's all-day drinking sessions. "...we drank every day but Tuesday." [Another ex-student] also has the occasionally vague memory of time at Ilam. "In my day we all drank heaps. I remember once a Japanese tour party went through the university during a massive session. They must have thought we were putting on some exhibition or play then all the blokes started chundering and dropping their pants. The bus took off pretty quick." Canterbury's student activities co-ordinator... says orientation is still massive "but it's a festival rather than a piss-up. We also have a re-orientation festival which promotes healthy lifestyles." Canterbury's capping ceremonies passed without incident last week, although it was held during term break when there were fewer students around. The [co-ordinator] says the... media continue to inquire about legendary campus drinking exploits but are generally disappointed... At Massey, once notorious for its Tour De Coma bicycle pub crawl and Soak Days (where unlucky students were covered in vomit and urine)[– and where students]... downed a 1500 litre non-alcoholic cocktail to make the record books... [– the] student social activities officer... added: "Our first-years don't drink as much as they used to..." ...Continuing research by Auckland University's Alcohol and Public Health Research Unit showed a greater proportion of young people were abstaining from alcohol although there is a hard core who are drinking more than four years ago... A change in student attitude was further illustrated by the Easter Tournament, an inter-varsity competition where in recent years sporting endeavours often took second place to the after match. In 1990 at Dunedin 1500 students rioted when a party turned ugly after the competitions. Victoria hosted – and won – the tournament this year and no arrests were made. "Since 1990 our mission has been to modify behaviour. Drinking games were outlawed and the competitors had to sign a code of behaviour," said[the NZ] Universities Sports Union event manager... "Social players are unwelcome. Auckland's contingent was down 130 – they're the ones that wanted only to drink beer." ...Auckland held its traditional inner city pub crawl last Thursday but the [students'] association social activities officer... said demand was steadily declining. "I'd have liked to have changed it to a cafe crawl but that would never have worked,"... The very thought of a cafe crawl grates with [a]former association president... "The student's association has become PC. They don't make a provision for drinking,"... [It] responded by establishing the Drinking Horn, Wild Parties, Quad Pyramids, Silly Games, Roger (Metaphorically) Anyone Who Gets In The Way Club two years ago... The club boasts 750 members... Campus drinking is a worldwide culture. A survey finds binge drinking among students is an issue in many countries... [However], drink-till-you-drop partying is practically unheard of in China. College students drink – and sometimes get drunk – but usually only on special occasions. Dorm rooms are jammed – people often sleep seven to a room – so dorm parties seem gratuitous. Says... a junior at Beijing University, the Harvard of China: "People here would say, 'Let's go to dinner, let's go to a movie, let's go roller skating.' For most people, drinking would not be their first choice for entertainment." Bars are geared more toward Westerners and affluent Chinese and are too expensive for most students. At the Hot Spot, a large Beijing disco with a mirrored ball and cage dancers, a bottle of Heineken costs \$7... China does not have a drinking age. Parents warn their children not to drink before a certain age. In a society where obedience of authority is heavily emphasised, many comply... Drinking always has been such a natural part of... Russian culture that for hundreds of years police officers gently guided drunk students home on St Tatyana's Day, a day dedicated to students... [An 18-year-old],

who studies economics at the Institute of Culture in Levanaberezhnoe... says beer and vodka are the drinks of choice, and are often drunk together. Theoretically, one must be at least 18 to buy alcohol, in reality, anyone can buy anything. But [a 22-year-old], who studies art history at the Institute of Culture, contends heavy drinking is more of a problem among older people. "Young people have hope for the future... Older people don't."

...Two thirds of Russian [guys] die drunk, often after a weekend of drinking. Commenting on a three-year study in Moscow, the Kommersant newspaper said: "Everyone is drunk: murderers and their victims, drownings, suicides and heart attack and ulcer victims."

...MORE Russians are drinking themselves to death than ever before... 20,000[have] died of alcohol poisoning... [so far] this year, up 50[%]...

The 26-year-old Czar of Russia, who would later be known as Peter the Great, went to England to learn how to Westernize his nation. The Czar was ensconced at a grand country home near the Deptford shipyards, where Peter performed manual labour in an effort to gain first-hand experience of the British genius for shipbuilding. The Czar had hoped to spend time with Isaac Newton, but Newton sent Edmund Halley in his stead. By all accounts, the English astronomer and the Czar became best friends, sharing passions both for knowledge and for brandy. For the duration of Peter's stay in England, Halley remained his scientific adviser and drinking partner. One disputed, although contemporary, account depicts Halley raucously pushing the Czar in a wheelbarrow in the dead of night. It was said that the two of them were inebriated, and that the escapade caused grave damage to the topiary hedges'...

Despite, or perhaps because of, Russia's economic crisis[vodka]... sales climbed more than 10[%]... in the first quarter... [S]ales of vodka and other hard liquor nationwide reached 495 million litres while Russians guzzled 815 million litres of beer... up 19[%] over the same period last year.

...[Siberians have been] told... to bring gifts of vodka for their gods to a big gathering today, but leave local moonshine at home... More than 150 people died in Buryatia, on the Mongolian border, from drinking Katanka – the local hooch – ...last year... [Incidentally,] Montana Wines has recalled three products from its sparkling wine range after glass particles were found in bottles at its Glen Innes winery in Auckland... The recall is a precaution... Only one in 10,000 bottles was likely to be affected... Consumers should check batch numbers... Batch numbers are 2 for the Millennium magnum, B09L12J9N and B09L13J9 for the Special Reserve 750ml batch and B02L11J9N, B02L12J9 and B02L12J9N for Bernadino.

...a [US] professor is erring on the side of caution when... [warning] that mixing alcohol and paracetamol can damage the liver... A[n A]uckland Hospital... liver specialist... said that while there was a theoretical risk in mixing the [2, alcohol]... drinkers who stuck to the prescribed dose of up to 4g of paracetamol a day were unlikely to develop liver disease... Other hangover cures also won approval. Aspirin is handled differently by the body to paracetamol, so the alcohol does not have a toxic effect. Codeine does not interact much with liquor, and anti-inflammatories are unlikely to do harm... [● USers] will soon see a message touting the health benefits of drinking wine alongside label warnings about possible hazards.

...Researchers in North Carolina believe they have unlocked the mystery of how an antioxidant found in grapes and red wine fights cancer. Their findings... conclude that the compound resveratrol, which acts like an antibiotic to protect grapes from fungus, may turn off a protein that guards cancer cells from cancer-fighting therapies such as chemotherapy. The finding might allow the compound itself to be used in cancer prevention and treatment... The benefits of drinking a glass of red wine have been touted over the past decade after the discovery of the "French paradox"...

A renowned French chateau is cashing in on studies showing the beneficial effects of wine by launching the world's first alcoholic health spa. Visitors... will be able to bathe in red grape juice, enjoy massages with grape pip oil and plaster their faces with wine-based creams. Above all, they can consume large quantities of food and wine safe in the knowledge – according to the owners – that they will become thinner and less prone to a range of fatal diseases... [Research shows that drinking] wine during a meal helps digestion and prevents food turning into fat... Tourists are already lining up to pay \$1240 for a two-day stay as soon as the wine spa opens next May. The so-called French paradox – people from the south-west of France live longer and suffer fewer heart attacks than almost anyone else, despite their celebrated appetite for alcohol – has played a key role in promoting wine. But [the chateau's owner] has taken the promotion a step further. In 1994, her daughter... launched a company that produces wine-based creams after academics at Bordeaux University discovered the fruit can prevent wrinkles in the same way that it keeps arteries supple... The firm's turnover has grown from \$880,000 in 1996 to a likely \$150 million this year.

...French politicians tried to shower their secret service agents with gifts of cognac and fine wine just weeks after they had been sentenced for the Rainbow Warrior bombing, newly released documents reveal. A previously top-secret dossier shows that a diplomatic spat broke out when N[Z] prison officials refused to give... [the agents] the Christmas gifts sent from Paris... [T]he French External Relations Minister, [who]... sent the agents a case of Bordeaux region wine... was upset when [it] found out... His complaint, sent via the NZ Embassy in Paris in January 1986, was knocked back with a terse response informing him that the pair would not be given special treatment. "Alcoholic beverages are under no circumstances allowed into N[Z] prisons," said a cable to Paris. "Our authorities could not permit an exception in a matter which is so sensitive in N[Z]."

...It should not surprise the French that we prefer the taste of plums and figs to dirt and mould. But their winemakers, Gallic noses well out of joint and pointing straight to the sky, claim to be abandoning their treasured traditions to compete with our exports to Britain. The French say they are "dumbing down" their wines in an attempt to win back market share because on the other side of the English Channel soft and fruity A[ustralas]ian... varieties are flying off shelves. The *Herald* asked three knowledgeable wine buffs to rate four wines from N[Z] and France. The local ones, with their complex, clean and fruity flavours, won the day. The French wine was compared to medicine, soil and that stuff left on the bottom of your shoes after walking through a farmyard. But the experts agreed that the finest French wine, which can cost four to five times as much as those they sampled yesterday, would stand up favourably against anything produced in N[Z]... The panel said N[Z] winemakers took advantage of modern technology[(for example, they have begun to introduce plastic corks – in Germany alone, 'losses due to "corked" bottles is put at 5 billion marks a year')], while in France, winemakers tended to cling to the methods used for generations. Here, wine is stored in stainless steel vats. In France, it sometimes sits in old wooden tubs lined with mould. While N[Z]ers and Britons find the almost-rotten flavour unappealing, the French love its earthy character... Americans prefer an oilier sauvignon blanc than the crisp variety produced here. A[US]ns like bold, jammy reds... French wines had terrior, a personality resulting from the combination of soil, climate and exposure. While N[Z] produced some great wines, it did not yet produce fine wines, the rare finds that were as unforgettable as your first kiss.

... "Wine is a constant proof that god loves us and likes to see us happy," said Benjamin Franklin... This amusing quotation[– which contradicts the one which goes: 'People drink less when they're having fun' –] adorns the cover of the wine list at the new *Partingtons Winery*...

The surrendering of a gold medal and trophy by [a NZ estate] because of inconsistent bottlings of its 1997 Shiraz raises the question of how trustworthy medals are as a guide for wine drinkers. First, we should recognise that a hint of trouble should not call all wine companies into question. Even in the Lintz case, no rules were broken nor was the wine labelled illegally. Yet the disappointment of finding that a gold-medal wine is not the same as one being sold with the same label highlights the issue of batch variation. The larger companies bottle popular labels more than once a year. It is not possible to blend hundreds of thousands of litres to make one huge batch for consistency. Batches are bottled as required. Tank One may have come from a separate vineyard from Tank Two but they may both be 1998 Marlborough Sauvignon Blanc. By definition they are the same... but Tank One may have won a medal while Tank Two never got near a judge. This is inevitable with big companies. In the much smaller Lintz case the batches could have been blended and one consistent brew bottled. Gold medals are, of course, the opinion of a set of judges – usually three – who assess one bottle of the wine on one day of its life. Judges with international wine-tasting experience should be able to assess wines consistently. Yet one competition may give a wine a gold medal and another set of judges a few weeks later may award a bronze – or nothing. The people are different, the bottle of wine is different and the judging environment and time are different. The variations in results are not necessarily to do with batches or the ability or integrity of the judges. Wine is a living and changing product, or award variations may lie in

something as simple as the place of the wine in the line-up. One wine may do better as a powerful statement when it follows a light, elegant sample. Coming after another big, mouth-filling wine may not show it off as well... Entry conditions in wine competitions should minimise abuse... Quantities are randomly audited in the Air N[Z] Wine Awards. But the minimum entry requirement is just 50 cases, which will not go far among thousands of wine outlets and restaurants for a gold-medal winner. The Liquorland Royal Easter Wine Show now requires a minimum of 500 cases to be available for any entry selling at less than \$15 a bottle... and above \$25 at least 100 cases... As drinkers we have to accept that gold medals are just a guide... The gold-medal bottle we buy may have been bounced on a truck for days and stood in the sun for a few weeks in a wine shop, while the bottle that went to the judges had white-glove handling... Many a popular wine selling tens of thousands of bottles can manage no more than a bronze medal. Conversely, gold-medal wines are not liked by everyone. So we accept the medal lists with a grain of salt and remind ourselves that wine is a personal taste anyway and serving it with different foods can make a difference to how well it shows.

...Winemakers face random testing of their vintages and expulsion from wine shows for five years if the product is not the same as one entered in awards. A new rule in this year's Royal Easter Wine Show has spelled out that vintners must ensure that the wines they enter in the awards are the same as those for sale. The condition follows cases in the past three years in which two wineries, Coopers Creek and the Lintz Estate, were found to have won awards for wines that differed from those sold in shops. The Royal Easter Wine Show director... said yesterday that... nothing in the previous rules had stipulated award wines had to be the same as those for sale. "Wine is all about integrity and therefore the industry and its competitions must similarly be based on integrity and keeping faith with consumers." The rule was developed with the help of the Wine Institute, which plans to bring in tougher auditing and record-keeping standards... this year... Despite problems with certain wines, the industry has not suffered from negative publicity. Figures released yesterday showed that in the six months to December, N[Z] wine exports grew 15[%] in volume, to 9 million litres, worth \$67.7 million – a 40[%] jump in value. "With every dollar of sale overseas it becomes more important because if we don't get the right systems in place then everything can be placed at risk." ...Judging for the competition will be conducted this weekend.

...Wine a 'win-win-win' for brewer... Brewing giant Foster's \$A2.6 billion... acquisition of Napa Valley-based Beringer Wine Estates is part of a plan to protect the company from slowing growth in its traditional beer market. [Foster's c]hief executive... said on A[US]n television yesterday the purchase was not a gamble. "Now wine, especially premium wine, is in growth mode all around the world, and we've got a great premium company with Mildara here in A[US],"... Foster's bought Mildara Blass winery about six years ago in its first foray into wine... [The chief executive] said the move into the U[S]... gave Foster's an entry to a market with huge scope for growth, expanding its presence in the wine industry, and created the first truly global alcoholic beverage company... "Together they [Mildara and Beringer] will form the new growth engine of Foster's, so this is not a [move to] better-the-company at all. This is a make-the-company[move]... When I look at the US market as a whole, with 8 litres [of wine consumption] per capita, A[US] at 19 litres per capita, and France at 50 litres, the prospects are outstanding." ...the company did not pay too much for Beringer... Foster's bought the opportunity to spread its risk. "Foster's lessens its dependence on... A[US]... this economy, and... on... beer..."

...IN Great South Rd, Otahuhu, there's a world-class example of Art Deco industrial design still in working order. It is the Ziemann Brewhaus, a hall of soaring ceilings, Bauhaus windows and terrazzo floors and walls which is the heart of Dominion Breweries' Waitemata Brewery and which has been in constant use for almost 70 years. Installed in 1934, it was so well maintained that in 1965, [the manufacturer] offered to buy it back. It was used for the first brews of Heineken before demand forced DB to build bigger facilities, and on most days you will still see trial batches of beer settling in one of the four grand copper tuns (brewing vats)... But for the computer control desk in one corner, the brewhaus is largely as it was when... [DB's] head brewer and technical director, oversaw its opening four years after DB was incorporated in 1930... His legacy is the continuous fermentation process... patented in 1956, an internationally acclaimed brewing system which allows... continuous production and eliminates the great risk to beer of oxidation... [The head brewer] amassed pages of correspondence between DB and Ziemann of Germany after they were introduced by an English supplier of industrial equipment, and the brewery was commissioned with specific modifications to suit DB's brewing style. With Hitler on the rise in Europe and a trading conservatism at home born of the Depression just past, buying a brewery from Germany was not easy. "Our chair[perso]n made a deal with [the [PM]]... to obtain a licence for barter – foreign exchange had to be earned before imported goods could be paid for. We sent a boatload of good... apples to New York, where Hitler had appointed a chap who knew the tricks to turn apples into dollars with which to pay the Germans,"... The copper tuns arrived in thirds through the... windows, and their installation was supervised by a German engineer... Assembly work was done by master crafts-[people] short of work post-Depression... The methods were meticulous and confirmed the stereotypical Prussian efficiency. "Hammers were covered with cloth to avoid scratching the copper. Rivets had to be cut from the same sheet of copper that they were to fasten. We'd never operated a brewery like this before, but I specified that the brewhaus be set up so that, with a turn of a few valves, we could change the style of brewing from English to American to German." ...Once it was built [DB] stuck with the infusion method of brewing... – adding hot water to the malt. "It suited... N[Z] barley." A needle-and-paper contraption... records the temperature, which is raised and held progressively during the brew. [The head brewer] suggested the roll, instead of being changed each day, be left as a template to follow, and the skill of the brewers was such that over a week's brewing the needle never deviated from the map of the previous brew.

...[archaeologists have unearthed a four-vat operation that may be the oldest brewery in the world. Built in the ancient city of Hierakonpolis, it was active about 5400 years ago, before the construction of the pyramids, and brewed a beer from Nile water, half-baked bread, wheat malt and date juice.]

...*Papyri* of the period 1300BC refer to the regulation of beer shops to prevent people over-indulging in beer.' By the way, 'an American anthropologist believes that the process of brewing beer helped prehistoric hunter-gatherers band together and learn to develop agriculture and create civilizations.')

...Finding a job in today's fast-moving society may be complicated but when [a]Blockhouse Bay resident... left school, it was only a matter of filling in a few forms... Mr Smith joined N[Z]'s customs service... and his 45 years of service was rewarded last month with a long service award. [Mr Smith] was among 115 of his colleagues nationwide who had worked there for between 10 and 45 years. During his career Mr Smith has worked in virtually every department of customs including passenger processing at Auckland Airport, import licensing, sales tax, distillers and excise. While supervising the old distillery in Te Atatu, [Mr Smith] had to stay on the premises and keep an eye on the tanks, taking a whiff before the gin was bottled to make sure it was the right strength and had been mixed properly... [Mr Smith] and his colleagues... also have to check for hazards like deteriorated liquor. "If liquor goes off or is not mixed properly it is not fit for consumption and we have to destroy it. We dispose of liquids on the premises, for instance pouring them down drains, and other goods are taken to the tip and run over with the bulldozer."

...West Aucklanders running unlicensed bars from their basements risk a \$40,000 fine if caught... [They] also risk a maximum of three months' imprisonment... [A]liquor licensing officer... says people caught selling alcohol, or running unlicensed premises, can expect to be charged. "We will prosecute, and they do risk losing everything related with running an unlicensed premises,"... His warning comes after police seized \$650 worth of alcohol from a Massey house. The haul[, which has been]... donated to a sports club... included 362 bottles of beer, three casks of wine and a variety of spirits. Police also confiscated a till... [T]he basement was set up as a bar, with full facilities. [Incidentally, 'children are watching hundreds of television commercials for alcohol each year despite a restriction limiting brand advertising to after 9 pm, an Auckland University study suggests. The average child in the 5 to 14 age group saw almost 300 such advertisements a year. Researchers used viewer information from "people-meter" surveys of 440 homes. They found that the average 5 to 14-year-old watched 107 hours of television after 9 pm a year. The study concluded that there had been an increase in the number of alcohol commercials young people were exposed to, and the 9 pm restriction was only partially effective. The executive director

of the Beer Wine and Spirits Council said: "If society has a problem with advertising after 9 pm, why are they letting their children watch TV after 9 pm?""]

...We are awash with images and associations that promote alcohol. In recent years alcohol promotion has intensified, leading to an uneasy tension between those promoting alcohol and those attempting to control it. Alcohol images reach into our children's lives. For example, half of all G-rated American cartoon feature films in one analysis show alcohol use, while none suggested any long-term... risk. A recent survey of the most popular rental movies in the U[S] showed that 76[%] of those rated G or PG (Parental Guidance[recommended]) showed alcohol being used. Alcohol appeared on average every 16 minutes during these movies, and 22[%] of the major characters who looked under 18 used alcohol. More than 70[% of NZ] children aged 5 to 14 see an alcohol ad on television at least once a week and the average child of that age group sees more than five such ads a week. During the 1990s alcohol advertisements on N[Z] television have far outnumbered those for alcohol moderation... Alcohol-industry logos are seen at art and cultural events and on fun rides at school galas... The line between television programmes and alcohol commercials blurs with sports sponsorship. We see the same brewery logos in sports programmes during "non-advertising" programme time as we see after 9 pm, when alcohol product brand advertising is allowed... The use of sporting settings for alcohol sponsorship advertising reinforces the link between alcohol and sport. A... [sports] sociologist... says that nowadays there is a growing acceptance of players who do not wish to drink. This is good for individual players but pressure on young [players] to drink remains... Alcohol ads associate drinking with strength, courage, success in sex and sport, toughness, good company and mateship. The use of sports-related alcohol promotion, and other advertising to attract young people, may help recruit the next generation of heavy drinkers. About half the alcohol in N[Z] is drunk by about 10[%] of the drinkers, according to the Ministry of Health... [Therefore, c]ontinued heavy drinking by young people maintains alcohol-industry profits... Our culture tries to balance the positive associations of alcohol with pleasure, relaxation and celebrations, against our knowledge of the risks...

Pregnant [people] can have up to 15 alcoholic drinks a week, according to controversial guidelines from medical experts. The landmark advice from the Royal N[Z] College of Obstetricians and Gynaecologists has drawn immediate flak from health groups demanding abstinence to guard against tragic foetal deformities... But the college says an abstinence policy would only create unnecessary anxiety, guilt and requests for abortions from concerned [expectant mothers], especially those who had unwittingly drunk alcohol before pregnancy was diagnosed... "There is no conclusive evidence of adverse effects in either growth or IQ levels of consumption below 15 units per week," the[college's] advice states. The college's secretary... said specialists were divided on the... issue. The guidelines tried to strike a middle ground between the British college's relatively liberal view[(the 'British government recommends no more than four glasses of alcohol per week', although 'Irish research shows that any alcohol will affect the development of the fetus' brain')] and the U[S] college's zero tolerance... The... [secretary] said it was frustrating that clinical research had yet to determine whether there was a safe drinking level for pregnant or conceiving [people]. A leading child health researcher... labelled the guidelines irresponsible when rates of foetal alcohol syndrome were unknown in N[Z]. "It's like saying, 'because the dead bodies haven't turned up yet, it doesn't exist.' That's the wrong way of going about dealing with a known neurotoxin... Everybody in this field knows that if you say it's okay to have a couple of drinks, people will have four." ...the health promotion adviser for Alcohol Healthwatch, said cutting all alcohol was vital as associated problems in children could take years to show up. "It's admirable the college has [mothers'] best interests at heart, but if you try and tread the middle ground you end up having a mixed message which isn't good for anybody." ...[FAS s]ymptoms include retarded growth, intellectual impairment, brain malformation and facial deformity... [It 'may be a cause of ADD and behavioural problems.' A] study, which had looked at FAS sufferers in Canada, has already revealed 90[%] of sufferers have mental health problems, 60[%] have disruptive school experiences, 60[%] are involved with the justice system, 50[%] show inappropriate sexual behaviour, 50[%] have been confined to residential or correctional centres and 35[%] have drug and alcohol problems... The syndrome affects 1.7 per 1000 Swedish births, a rate estimated to be similar to N[Z]. The ALAC] will spend about \$100,000 this year on television commercials pushing for abstinence during pregnancy.

"If you must go out with your friends, fine. But just remember, no matter what they're getting up to, I'm not even old enough to be born, never mind drink! I... don't want to spoil your fun, but there are things you should know. A few drinks can do me some serious damage. And I don't mean a bit of a headache in the morning, either. We're talking about the kind of hangover that can affect me for life. Like I could be a real slow learner. And if I make a mess of school, it won't do my career prospects much good, will it? If you don't want both of us to have to live with problems for the rest of our lives... remember[, wherever]... you're invited... I'll be coming too. So stick to a few soft drinks instead. And lay off the alcohol until well after I'm out of here." Contact your GP for more information... [or] ALAC... - 1996

Work is under way to better understand and treat [FAS], a condition that can irreversibly retard a child's development. The A[LAC] is planning a conference on the subject next year... [I]t was not known how many children were affected by the syndrome... [but it] is considered one of the most common causes of mental retardation in the Western world. N[Z] has about 100 registered cases, but anecdotal evidence suggests thousands of children could have the syndrome... [T]oo often children with the condition were written off as suffering [ADD], or as difficult kids. Another problem facing health professionals was that no clear evidence existed on how much alcohol during pregnancy was too much. However, it was known that just one drinking binge could be enough to affect the foetus, with the danger time being the first three months of pregnancy.

...SMALL babies. It has become a national trend, accompanied by the heightened risk of sickness or death. Rates of babies classified as low birth-weight – below 2500g – have jumped since 1979, prompting officials to label what's happening "one of the greatest challenges to obstetric and paediatric services." In 1979 there were 44.9 such babies in every 1000 live births. Latest statistics show that the 1994 rate had climbed to 59.6... Nobody knows why more babies are born small but N[Z] is not the only country confronted with the problem... A number of factors have been linked to low birth-weight... Young mothers had the highest rate when ages were compared... Some, such as the height of the mother, cannot be controlled, but N[Z]ers have more say over the others – smoking, drinking[('82% of teenage mothers and 36% of adult mothers continue to drink alcohol while pregnant')], drugs, and sometimes nutrition... But even before a Kiwi baby is conceived, at least part of the blueprint for his or her health could already be decided by previous generations... [F]actors in the grandmother's background may also count. - 1997

It is estimated that over 80[% of pregnant USers]... drink alcohol and 57[%] smoke. Although many pregnant [USers] might avoid using hallucinogens, others would be reluctant to consider giving up their evening cocktails... for the sake of their unborn child. How wise is this? ...Reports of abnormalities in the growth of children of alcoholic mothers can be found as early as 1800, when concern was expressed that the high consumption of gin, euphemistically known as "mother's ruin," in English [mothers] was leading to increased rates of dwarfism in their offspring. More recently, a malformation syndrome called... [FAS] has been discovered in one-third of infants of alcoholic mothers. These infants have a high incidence of facial, heart and limb defects, are 20[%] shorter than average, and are often mentally retarded... The mental retardation may be related to *apneic* periods, that is, periods where breathing movements cease in the fetus. It has been demonstrated that the intake of only an ounce of 80-proof vodka by [pregnant people] who were not heavy drinkers results in cessation of fetal breathing movements for over half an hour of many fetuses in the last trimester of pregnancy... In addition, many children with... [FAS] exhibit abnormal behaviors such as excessive irritability, hyperactivity, distractibility, tremulousness, and stereotyped motor behaviours such as head banging or body rocking... The shaking, vomiting, and extreme irascibility of babies born to alcoholic mothers is caused by the withdrawal of alcohol from the addicted infant and is similar to the

symptoms of delirium tremens found in adult alcoholics. It has also been suggested that heavy drinking in [fathers] may result in genetic damage that leads to birth defects in their offspring... [Although a lot of sex is performed while couples are under the influence of alcohol, the relevant point is whether there was any alcohol in the father's system over the period when the sperm ejaculated during that sexual liaison was produced! However, the] fetal damage from alcohol appears to be greatest in the last trimester of pregnancy. If pregnant [people] who are heavy drinkers can cease drinking in this period, their babies are longer, weigh more, and have a larger head circumference than those of [mothers] who continue their heavy drinking... It should be noted that no long-term data are available on the effects on older children of mild to moderate maternal drinking during pregnancy[, but]... abnormal behavior patterns have... been found in the infants of moderate drinkers... Alcohol readily crosses the placental barrier, and soon after the mother drinks alcohol the alcohol level in the blood of the fetus is similar to that of the mother... Infants whose mothers used both alcohol and tobacco show greater prenatal growth deficiencies than do infants whose mothers used only alcohol or only tobacco...

With our increasing sexual, social and financial freedom, more young [gals] are drinking – around 73[%] of us according to recent government figures. Of this figure, 32[%] drink occasionally... and 9[%] drink too much... Why do we drink? Mostly because we enjoy it... I'll admit it – I think drinking can be sexy. If a couple of glasses of wine at a party can make you feel more confident and more likely to talk to that gorgeous guy, then surely that's not such a bad thing? ...it helps us wind down after a nightmare day at the office or relax at dinner... [– though it also makes us] talk... too loudly, laugh... too long, confess... too much... and evidence is showing that heavy drinking can lead to breast cancer... and... early menopause...

PUT IT down to courage or blind faith, but [the actor] took a huge risk before shooting her latest film, *28 Days*. Her character, Gwen, is a New York writer and out-of-control party gal who crashes her sister's wedding limo while under the influence. That earns her a court-ordered 28 days in rehabilitation for her drinking problem. [The actor] quips that the title might get it mistaken for a menstrual-cycle film, "a bunch of [gals] getting really angry once a month." The star has had friends who have been in rehab, but... felt the need to get some first-hand experience so checked in at the Sierra Tucson rehab centre in Arizona. Her four days there gave her a life-changing jolt... One thing [the actor] has done since her rehab experience is to cut out alcohol. When [the actor] told the others in therapy that [it] didn't drink much, they asked her whether [it]'d ever been on a date and had a glass or two of wine. [The actor agreed that it] had. When they asked why, [the actor] replied, slightly sheepishly, that it helped to break the ice. "As soon as I said it I thought, 'That's exactly what they're talking about.' Just observe why you use alcohol. It forces you to connect with people without the crutch, and I did it, but it's not easy."

Points to ponder... We drink for sociability and become argumentative. We drink for sophistication and become obnoxious. We drink to help us sleep and awake exhausted. We drink for exhilaration... [or] for joy... and end up depressed... and... miserable... We drink to gain confidence and become afraid. We drink to make conversation flow and become incoherent. We drink to diminish our problems and see them multiply.

...alcohol[– t]he cause of, and solution to, all of life's problems.

alcoholism... habitual heavy drinking of alcohol; a diseased condition caused by this... *habitual...* done constantly or as a habit... *habit-forming...* causing addiction.

People can become addicted to tobacco, as it contains nicotine, but standard alcohol doesn't contain addictive substances, which means alcoholics are addicted to being DRUNK ('lacking proper control of oneself from the effects of alcohol'). An alcoholic's body can become so accustomed to containing alcohol that it shows withdrawal symptoms when denied the substance, but the addiction is *psychological* – the alcoholic thinks that its drunk personality is superior to its sober personality (i.e., its out-of-control state has more personality than its in-control state); or that being drunk makes life more bearable.

YOU GET DRUNK EVERY NIGHT YOU CAN'T GET DRUNK ON LIFE... HEAVEN KICKED YOU OUT... - THERAPY?

...it is not for kings to drink wine; nor for princes strong drink: Lest they drink, and forget the law, and pervert the judgment of any of the afflicted. Give strong drink unto him that is ready to perish, and wine unto those that be of heavy hearts. Let him drink, and forget his poverty, and remember his misery no more. - Proverbs 31:4-7

While the Bible infers that kings (i.e., leaders) shouldn't get drunk, it permits 'physically or mentally distressed people' to do so – even though drunkenness can induce a state of physical or mental distress! It is possible to drink alcohol and not get drunk (commonly referred to as 'drinking in moderation'). However, if someone wants to avoid getting drunk, the obvious solution is to drink water (or any other non-alcoholic drink). Few alcoholic drinks taste nicer or cost less than the majority of non-alcoholic drinks, so the majority of people who choose to drink alcohol in moderation must do so because they feel socially obligated to (i.e., they don't want to look uncool – by being seen with a non-alcoholic drink in their hand, or by giving the impression that they 'can't hold their alcohol'). Unfortunately, whereas an observer can identify no obvious difference between someone who, for example, smokes two cigarettes during a 2 hour session and someone who smokes 20 cigarettes, in most instances the difference between someone who has consumed 2 alcoholic drinks in 2 hours and someone who has consumed 20 alcoholic drinks in the same period are blatantly obvious! Furthermore, a smoker will feel the effects of nicotine almost instantaneously, but the effects also disappear rapidly, whereas it takes longer for alcohol to affect the body and leave the body. This means that a person might need to have 3 drinks before there is enough alcohol in its body for the effects to be noticeable, by which time it could've consumed 4 or more drinks. If the person chooses to stop drinking alcohol as soon as it starts to feel 'tipsy' (slightly intoxicated), it should remain happy for a while, thereby achieving nothing more than the desired effect; but if the person continues to drink alcohol, the effects of the 4th and 5th drink won't hit the person until it is on the 6th or 7th drink, and the effects of those drinks will compound the effects of the previous drinks. This subtle process usually succeeds in taking the person past the tipsy phase into the *lacking proper control* phase, which often includes being unable to stop further drinking, performing uncool (or highly embarrassing) actions, having black-outs, losing control of one's stomach, bladder or bowels. Most people only need to achieve this phase of intoxication once, or several times, before deciding that they should either drink alcohol in moderation or not at all.

The people who prefer to habitually reach the last phase of intoxication may have good reason to avoid being sober, but they don't have good reason to hurt innocent people – as is sometimes the result of severe intoxication (e.g., one USer confessed on the Internet to 'setting his house on fire, while "wickedly drunk", in order to listen to his little girl die'). For this reason, some teetotallers have sought to prevent such results by creating a state of prohibition. However, prohibition usually fails to work. One reason for this is because prohibition turns *otherwise law-abiding citizens* into criminals and creates a market that can be exploited by genuine criminals. Another reason is because alcohol is extremely easy to produce ('almost any water solution of a sugary or starchy food can be fermented by certain ENZYMES and by YEAST cells to form alcohol'). Anyone who has water, yeast and honey in their house can make an alcoholic beverage called mead, and – in spite of protests by the liquor and taxation industries – anyone who isn't underage can purchase equipment which enables them to make more sophisticated brews at home.

An amateur distiller has accused the [NZ] liquor industry of exaggerating the cost of legalising homemade spirits. Proposed regulations under the Customs and Excise Act 1996 would allow home distilling for personal use under the same exemptions as for home-produced wine, beer and tobacco. A leading supplier of distilling equipment... said the proposal would cost the Government less than \$7 million a year in potential excise tax, not \$20 million as claimed by the liquor lobby. Industry sources estimated a maximum of 10,000 stills in the country, half of them homemade... Present regulations allow the sale of home-distilling equipment but prohibit their use for making liquor. The volume of ingredients sold for making alcohol indicated that the average moonshiner produced about one litre of untaxed 40[%] alcohol a week... Sales statistics... showed that 57[%] of customers were aged over 40, and 34[%] over 60. "It is definitely a mature adult's hobby – the younger drinkers make beer."

...[The emergence of a marijuana wine has prompted police to issue a warning that anyone found making it could face 14 years in prison. A recipe for the potent home-brew was published this month in *Norml News*, the 20,000-circulation free magazine put out by Norml, the National Organisation for the Reform of Marijuana Laws. The recipe – an explosive concoction of 4oz of marijuana leaf, sultanas, white wine yeast, sugar and lemons fermented for three months – promises 25 litres of passionfruit-flavoured wine. But because the wine is a byproduct of marijuana, police say it could fall into the category of a class B drug. Marijuana leaf is class C, but if the oil or resin is extracted it becomes class B. An Auckland drug squad detective said police had no knowledge of people brewing the wine, but intended to watch the matter. "We know people make cakes, muffins and so on, but we have not heard of wine. We have enough problems with wine and students let alone putting cannabis in it." The detective said the police were interested in sending a sample to scientists. The editor of *Norml News* said the recipe had been sent to the magazine by a "keen reader." The editor warned potential imbibers that the brew combines the narcotic property of cannabis and alcohol. "It is obviously illegal, so we would not advise anyone to do anything illegal. But for those who try it, caution is advised. You should always go easy when combining alcohol and cannabis and moderation is the key." The editor said marijuana and alcohol had been combined in many cultures for centuries. In India, for example, bhang drinks or sweetmeats were used by many Hindu families and holy people.]

...[A Lower Hutt resident who uses cannabis leaf in a Japanese tea ceremony has appealed against his conviction. The 58-year-old was convicted by a judge in the Lower Hutt District Court and fined \$300 for possessing cannabis and sentenced to 50 hours community service for cultivation]...

Invest in HYPERGROW – supplied by EASY GROW GREENERIES LTD from \$88 deposit (or \$1199 retail) – and harvest herbs or flowers all year round in the comfort of your own home: • The growing lights will shrink stems so 4 plants can be grown together and still produce abundantly • Doubles the growth rate • Increases the potency • Self watering • Suitable for all plants', but mostly used to grow marijuana (cannabis; ganja; dak; pot; weed; dope)]...

Dope grows well here, [be it]indoors... in a Mt Eden house[or] outdoors... in a central North Island forest... MOST N[Z] teenagers know someone who smokes cannabis – often their parents – or have smoked it themselves. Dope is relatively cheap, accessible, easy to use and because it's illegal, the perfect tool for rebellion. A study into the use of cannabis in the Far North, undertaken... last year, reports that cannabis use has reached "epidemic proportions" in the communities studied, with a general acceptance by most people... Sports and social clubs are often offered as alternatives to bored kids smoking dope, yet research shows young people are most likely to get access to drugs through involvement in sports and associated social functions. Methods of addressing drug use are ineffective and under-resourced... Schools play a major role but, by necessity, take a disciplinary approach... The number of students expelled for smoking marijuana in recent years indicates how widespread cannabis use is in schools... Unlike alcohol it doesn't contribute to liver damage or countless acts of violence... Cannabis can temporarily soothe overwhelming feelings of anger, stress and depression commonly experienced in adolescence... Any well-informed teenager will say that alcohol and tobacco kill thousands every year[, whereas] no one is known to have died from the effects of cannabis[(or to have caused a forest fire by throwing away a 'roach' – the butt of a cannabis cigarette or joint; a roach collection can be used to make more joints or DOOBIES!)]... But its gentle image, cultivated in a climate of love and peace in the 1960s is starting to wear a few dents. The idea that cannabis is non-addictive has been disproved. Researchers now say it's psychologically addictive and may be physically addictive... [However, parents] need accurate information to discuss the use of cannabis with their kids. • Marijuana contains more than 420 known chemicals, the most dangerous of which is THC (delta 9 tetrahydrocannabinol). THC accumulates and is stored in fatty tissues, especially the brain and reproductive organs. THC from one joint may stay in the body for up to 30 days... Drink half a bottle of wine and your body excretes the alcohol in a few hours... • Use of marijuana increases the risk of bronchitis, lung cancer and other lung diseases. Marijuana smoke has twice as much tar as tobacco. • Long-term or frequent smoking of cannabis can affect the ability to study and learn. THC makes it harder to remember, thinking becomes slower and concentration more difficult... The drug slows reactions, affects co-ordination and the sense of speed, making it dangerous to perform some jobs... But... [these effects] are subtle... and... probably reversible when a person quits... "We're not talking about brain damage and it's probably less severe than the effect of alcohol abuse on the brain,"... • Marijuana can lead to feelings of anxiety, panic, depression and behavioural problems. Heavy use can also confuse thinking. While cannabis doesn't create schizophrenia, it can unmask the condition in people already predisposed. • Marijuana use is linked to a decreased sperm count... Menstrual cycles can become irregular... and cannabis can harm the unborn child and increase the risk of birth abnormalities... • Quitting cannabis can sometimes cause withdrawal symptoms such as cramps, night sweats, nausea and mood swings... [One person], aged 30 and still hiding her bong (water pipe) from her mum, is a veterinary nurse and mother of a five-year-old... What was fun at 19 was now a habit [the nurse] could do without. A parent with a fulltime job, [the nurse] didn't want her son seeing her stoned... was sick of using eye-drops every day to banish the red eyes that came with smoking dope... and... was worried that 13 years of cannabis use had dimmed her memory. "I was having to concentrate so hard at work to remember things... Whenever someone asked me to do something, I'd have to write it down in case I forgot. Mentally I was ready to quit pot but it was hard to do..." THEN last year [the nurse] turned on her radio to hear that the National Drug and Alcohol Research Centre at the University of NSW (NDARC) needed research "guinea pigs" to find ways to help cannabis smokers to quit. [The nurse] volunteered and became part of the world's first individual treatment programme for marijuana addiction. Also tuning in to the radio and smarting from a row with his girlfriend was a 28-year-old horticulturalist... Like most fights the couple had, this one was about the four or five "cones" [the horticulturalist] smoked each day (a small metal cone is packed with marijuana and smoked in a pipe or through water in a bong; four or five cones equals between one and two joints). A pot smoker since Form II, the horticulturalist... volunteered for NDARC'S programme and, along with [the nurse] and most of the programme's first graduates... has quit cannabis... The volunteers... [included] one who'd smoked as many as 75 cones a day... [Another] who smoked 62 cones daily for 12 years... cut down to nine... When NDARC first advertised in April last year, the stampede of volunteers reflected what researchers suspected – a lot of people want to give up cannabis and can't... "OFTEN people were – and still are – going to drug treatment centres and are being turned away because cannabis hasn't been recognised as a major problem." ...however... much of the pot now available is far stronger than before. It can be the difference between drinking a pint of beer and drinking a pint of Scotch, say... experts. Hybrid varieties such as Skunk and hydroponically-grown cannabis can contain as much as 18[%] THC... In contrast, normal cannabis contains only 1-2[%] THC. "This means a lot of people are smoking a much stronger drug and it may be more addictive,"... BUT... [as with all drugs,] the effect... of... [cannabis] is different... for different people. □ 'Police in Opatiki believe they have stumbled on a new strain of cannabis. "At first glance it looks like mint, but it certainly smells like cannabis," said a Senior Sergeant after his staff uncovered an elaborate indoor operation where 23 plants of the alleged new variety were flourishing. The shed had been set up with \$12,000 worth of lighting. 7 arrests have been made. The grower claimed clones of the new variety were worth \$15 a seedling. Samples were being sent to Auckland to determine its origins and potency. The discovery came during a blitz by Opatiki police

against drug dealers. The community had been challenged to do in cannabis growers instead of “moaning” about people making a good living out of the crop.’

...‘The smell gave it away: strong wafts of marijuana that kept drifting past the noses of the police search team. It seemed they had searched everywhere, but all they had found was enough dope for a few joints. As they stood in the garden of the holiday retreat, they noticed the smell coming out of a vent, hidden beneath a flax bush, releasing air from an underground bunker. Inside was the most potent marijuana ever tested in NZ. This week, Auckland’s High Court heard scientists found the crop contained levels of THC up to 19%. Previously, NZ’s most potent hydroponically grown cannabis was 8.8%.’]

...Avondale police have busted what they say is one of the biggest non-hydroponic cannabis growing operations of its kind... [A]bout 500 maturing plants with a street value of more than \$500,000 were seized from a disused factory... Three [people] were later arrested.

...Sparkies who wire up marijuana factories could end up in court alongside the growers, say police. The caution to electricians comes after the discovery of a string of sophisticated “cannabis factories” in Auckland... [S]uch a prosecution would be a first as far as... [a criminal] law expert... of Auckland University... knew. While the police could bring a test case, it would be a tough charge to prove. “The electrician could [claim to have] had no idea and, unless... shaken under cross-examination by some astute crown lawyer, it would be hard to sink that evidence,”... But a person found guilty of aiding and abetting cannabis cultivation could receive the same penalty as the growers. One electrician said the police warning was “not really an issue.” “I think there are very few cannabis factories. One dope-head sparky is probably doing the lot,”... [and a businessperson], whose Auckland company, Switched on Gardener, supplies indoor growing equipment, said cannabis growers were unlikely to hire an electrician. Anyone growing dope for a living would ensure that as few people as possible knew that. Five people were arrested recently after raids on four small factories uncovered more than 3000 potent “skunk weed” cannabis plants. Police suspect the electrical installations were the work of one of the people sentenced, a refrigeration technician... [By the way, in] an annual cannabis recovery operation that suffered from budget cutbacks Northland police recovered a record 70,478 plants in the last growing season.

...The overturning on appeal of a jail sentence for a first-time offender convicted of growing 70 cannabis plants has disappointed Northland police and highlighted different sentencing philosophies. When... the Kaitiaki District Court... sentenced... [the offender], aged 19... to nine months’ jail to be followed by six months’ supervision... the... police in a number of Northland stations... were obviously delighted with the tougher line[, which sent]... a clear message to the community that cultivation and possession of cannabis for supply were offences that would not be tolerated in the Far North... But in the High Court at Whangarei last week, [a judge replaced the original] jail sentence with a sentence of nine months’ periodic detention to be followed by 12 months’ supervision... [T]he Kaitiaki court... judge... is one of the Auckland-based judges helping out in Northland courts while... [two Whangarei judges] are on leave [because] their expenses claims are being investigated. [The offender’s lawyer said one of the suspended judges] had sentenced a [Northland person] who grew 316 plants to nine months’ imprisonment and [the other suspended judge had sentenced someone] with two previous cannabis convictions to seven months’ jail for a crop of 240 plants.

...An Auckland warehouse[worker] who lost his job after twice testing positive for marijuana use has failed to be reinstated by the Employment Court. The [worker], who worked for Air N[Z]’s cargo operations at Auckland Airport, sought an interim injunction for reinstatement. [The worker claimed to have] tested positive for marijuana because [the worker] had accidentally eaten cake laced with the drug at a party. His employment was subject to his passing a medical examination, including a drug test. The letter of appointment, signed by the [worker], said that if [an employee] failed the examination his employment would be terminated... The court acknowledged that the worker would not have been tested if [the worker] had applied for a position other than in a “safety sensitive” area[, but]... there was no alternative position to which the worker could be appointed[, therefore] it was not in the interests of justice to order interim reinstatement... [In related news, an] Oamaru shop displaying a poster with a marijuana leaf has removed it after the local police youth education officer complained. The... constable... was disturbed by the message such a poster[, which]... promoted “hemp” jeans... would convey to young people... [and] said... Hallensteins was profiting from the notoriety of cannabis.

...[the Brit who was] imprisoned for writing a book on cultivating marijuana, spent his first full day of freedom in a dilapidated London cinema lobbying for legalisation of the drug. The “annual conference on cannabis” brought together several hundred enthusiasts, professional and amateur, who smoked and inhaled throughout a day celebrating cannabis and its uses in industry, food, medicine and, of course, relaxation. Veggie burgers containing hemp seeds, clothing made from hemp, and smoking paraphernalia were on sale. Raw and roasted marijuana seeds – legal as long as they aren’t germinated – were available for sampling. Raffle tickets offered the chance to win a 1.6m water pipe... The question of legalisation was on everyone’s lips, along with hefty joints... Possession of cannabis remains illegal in Britain and growing it can attract heavy prison sentences... [Another Brit, this one] just released from a seven-year jail term in the U[S] for drug smuggling, told the meeting the quality of pot had deteriorated because today’s smugglers aren’t users. [This lobbyist] wants to see high-quality marijuana sold legally in police stations, chemists and “head” shops across Britain... [A 3rd lobbyist] advocated a system not unlike that in the Netherlands where marijuana is illegal but tolerated in small quantities. Legalising cannabis... would commercialise the product just like tobacco. “It shouldn’t be in the hands of those who don’t smoke it,”... declared... [the 3rd lobbyist. A] clean-cut Oxford graduate, extolled the virtues of marijuana’s medical properties. [The graduate] and his wife founded the Medical Marijuana Foundation and were developing a marijuana “vitamin” until they were busted... “If... [legalisation of cannabis] in Britain... doesn’t happen this year, it’s bound to happen next year,” [the graduate] said... “It’s like the Berlin Wall. People are not going to live with these restrictions any longer.” ...[the graduate] would consider becoming a candidate for Britain’s Cannabis Party if it remained committed to the single issue of legalising marijuana. The Cannabis Party plans to put up a handful of candidates at the next election to push its legalisation campaign. “The need to get political is paramount,” one party member told the gathering... [In local news,] National’s Tasman MP... yesterday attacked N[Z] First for “making a populist sop to disadvantaged youth” by suggesting a referendum on legalising cannabis.

...Supporters of legalising cannabis turned out in their thousands to publicly smoke the drug in Auckland on Saturday... [T]he “J Day” rally[was] organised by the Aotearoa Legalise Cannabis Party... The generally young crowd was aided by a “joint scramble” in the traditions of a lolly scramble. Many of those who attended held banners calling for the Government to “free the weed.” Others covered themselves and their children in stickers calling for cannabis to be legalised. Police in uniform and plainclothes attended the rally, and said they were generally pleased with the behaviour of the crowd. [However, an] Inspector... said that just because no arrests were made at the time did not mean police could not use information gained to make arrests at a later date... [P]olice had to weigh up arresting people for committing unlawful acts with the possibility of inflaming a crowd... Those at the hour-long rally observed a minute of silence for the two hundred thousand [NZers who have been] arrested under cannabis prohibition. The... crowd then moved on to Albert Park for a free concert and entertainment. The... activities were designed to correspond with similar events in other centres across the country... A[LCP] established itself as Triton among the minnows in[NZ’s parliamentary election]...

Almost any publicity involving cannabis attracts calls for decriminalising its use; claims are made that in the Netherlands, for example, teenage cannabis use has dropped in the decade since decriminalisation... The... Ministry of Health... report on public health issues surrounding cannabis... concedes that “overall, the relative risk of occasional cannabis use appears to be minor,” [but] its principal points are surely that frequent cannabis use has significant health risks... The supply of alcohol and tobacco to young [NZers] is limited by laws which, mostly, reasonably restrict their accessibility. It is surely absolutely uncertain that decriminalising marijuana would assist in keeping it from young people, particularly... [since it] grows so easily in our climate... Cannabis is not the health problem in this country that alcohol and tobacco are, simply because access to it is restricted. The last thing we can afford is another problem of similar size. Alongside such costs the present effective police efforts to restrict

cultivation and supply seem cheap enough. And if that produces a scarcity that stops young people from using enough of a drug to harm their brains... just when adequate schooling becomes an increasingly critical component of... [their lives,] the nation should be thankful.

...Teaching kids to “say no” to drug use and to peer pressure is the focus of most curriculum-based drug education programmes and those designed by the myriad of outside agencies which offer services to schools... [However,] the police national co-ordinator of the Youth Education Service, says the big debate among those involved in drug education in the 90s is how to find some evidence that it works... [T]he only way to be certain drug education works is “to show in some way that the children you deal with don’t take drugs... and that’s virtually impossible.” ...Ask those who are directly affected – today’s students at Tomorrow’s Schools – and you find that most are perfectly clear about two aspects of drug use: cigarette smokers are losers and kids who smoke cannabis at school are stupid, if only because they face suspension.

...The Commissioner for Children... has modified his call for an inquiry into drug-related school suspensions and expulsions... Since the present debate started... [the commissioner’s] had reports of between 25... and 30[%] of students in some schools using cannabis. A range of drug education programmes existed, but... they did not seem to be working. While indefinite suspension might sometimes be appropriate[– suspension is inappropriate if it enables a student to get *wasted* more often –] there were far too many suspensions... Good practices needed to be identified and encouraged. In a reference to Cambridge High School, which last month suspended 14 students for drug use, [the commissioner] said some schools were paying more attention to their reputations, particularly [if they’re] marketing themselves as “a safe haven for Asian students.” ...The School Trustees Association has backed the need for a forum to examine drug use and the provision of alternative education, but is opposed to restricting trustees’ ability to suspend and expel. The president of the Secondary Principals Association... said an inquiry into disciplinary procedures was not needed, but the lack of alternative education should be examined... The Cambridge community is split over the school’s actions. A group formed to fight the decision has been deluged with phone calls, running five to one opposing the school. A public meeting is being organised.

...Our 14-year-old son is one of the 14 suspended from Cambridge High School... [Our son] is not in this situation as a result of my husband and I being modern-day parents who have never taken a “firm line.” ...my husband and I have always been actively involved in all our children’s lives in areas from schooling through to sporting activities. We have always taken a hard line in punishment but with a firm and fair sense of justice. Our children have grown up with the knowledge that if they break the rules then there is a consequence for their actions: a punishment must fit the crime... Our son is a kind, loving, caring boy who has shied away from trouble until now. [Our son] has never been... exposed to marijuana in our home and we thought that we had educated him on drugs as much as we needed to at his age. In this case we have certainly been remiss as parents; we never realised that this was a major problem in our secondary school and take responsibility for not making sure we were aware... [– even though] we... are always on a learning curve ourselves; we do not have the luxury of a degree in parenting... Our son realises that [his behaviour] deserves punishment and that [such actions have] not only broken the school rules but the law. What [our son] and us his parents, along with the others involved, cannot comprehend is why the school cannot see that its way of punishing is not effective. It is causing irrevocable harm to entire families and to the community at large by dumping these teens out into the streets and then saying it has solved the drug problem in the school.

...AT LEAST seven [NZ] cricketers have reportedly done it. So have some of the most famous names in the game. A former National backbencher was notable for doing it in Parliament Buildings. In some parts of N[Z] one third of secondary school pupils are supposedly doing it regularly. Even the President of the U[S] has done it... “It” comprises a significant part of the Northland economy. I am referring to the smoking of marijuana – a drug not harmless but relatively innocuous if taken in moderate quantities... Certainly marijuana smoking is far less dangerous than cigarette smoking, which kills people by the score. Yet it is marijuana that is illegal. Can this be justified? Surely we go to the trouble and expense of having a criminal justice system to discourage those people who abuse their freedom by doing harm to innocent third parties. We punish murderers, burglars, rapists, fraudsters, drunken drivers and people who cheat on their income tax, because these crimes have victims. We should not be punishing people who merely have a lifestyle of which we disapprove. So long as they are not harming us, we have no business making them criminals. After all, most of us have lifestyles of which some people might disapprove. Making people criminals is also expensive. An absurdly large amount of police and court time is spent policing the drug laws. At no time this century has there been more genuine crime, yet we still throw taxpayers’ money at persecuting crimes of our own invention. Many – perhaps most – N[Z]ers have had the experience of coming home to a burgled house, yet finding the police too busy to even call around. The police... might as well say, “Sorry, tied up policing the drug laws.” The case for legalising soft drugs... is strong. We should bring marijuana under the GST net so it becomes a source of income to the Government rather than a drain on taxpayer resources. If the side-effects of marijuana add significantly to the public health bill, we should recoup these costs with a specific extra tax, just as we tax alcohol and tobacco for this reason... There is also a case for legalising hard and truly dangerous drugs. For there is little sign the war on drugs is being won. Victimless crimes like drug-taking almost inevitably bring in their wake organised crime and corruption. We saw it in the prohibition era in America. When a normal trade is made impossible, the gangsters step in. This is certainly the case with hard drugs in N[Z] today. Supplying them is a brutal, high-risk, high-return business. The price of the final product is steep, leading to desperate addicts, additional crime and unhygienic drug-taking methods. We can all feel sorry for the addict... His weakness of will has led him down a slope that exists somewhere within all of us but which most people manage to keep firmly fenced off. Making him a criminal may not be the answer... [● In] 1994, according to... the FBI, 481,098 [USers] were arrested for marijuana offences – that’s one... every 66 seconds – and 80[%] of those were for possession... Marijuana prohibition costs[US] taxpayers... \$8 billion annually... [including] \$1.2 billion to keep... 40,000... marijuana[users in prison]...

In the US yesterday, the] Speaker of the House of Representatives, admitted... [to smoking] marijuana in college, then promptly urged the White House to fire any staff member found to have smoked... drugs in the past three years... [L]ast week... the... White House spokes[person] admitted that some members of the White House staff, including himself, had used drugs before joining the White House staff, and [the President] knew it.

...a drug dealer, sits in the front room of his bungalow below the bleached hills and saguaro cacti on the outskirts of Phoenix... opens the plastic margarine tub and tips a little of the sweet-smelling marijuana on to the portable scales. When the platform registers an ounce, [the dealer] places the dry green leaves into a plastic bag and rolls it into a fat sausage... Then... seals the bag with the official cannabis duty stamps... bought from the State of Arizona... [The] licensed marijuana dealer... has a laminated certificate, marked with an official seal[, which]... cost him \$100... to prove it... The revenue stamps required by the Arizona authorities come in sheets... For each \$80 ounce... [bag sold], local taxpayers benefit by \$10. “This year, I have bought \$2800-worth of stamps,” says [the dealer], who complains that the duty is eating into his profits. Others are also unhappy at this unexpected taxpayers’ windfall, but for different reasons. America’s war on drugs is one of the defining issues in the presidential election. Arizona’s decision to confer legitimacy to the cannabis trade threatens to seriously embarrass both Republicans and Democrats. Despite its reputation as one of the most conservative states in the union, [the] President... has high hopes of winning Arizona. But [the President], who famously did not inhale as a student, will not want to be associated with those who do, quite legally it would seem, in Arizona. Nor will [the Republican candidate] wish to contrast his tough “Just say no” campaign slogan with the state’s growing reputation as a haven for liberal thinking on soft drugs – particularly as the state legislature is controlled by the Republicans. Privately, many Arizona law-makers admit that its cannabis laws are a disastrous mistake. The licensing laws were passed in 1983, and were intended to serve as an ingenious method of confiscating convicted drug dealers’ profits. One senator even predicted that the proceeds from the duty might eventually make all other local taxes unnecessary. At least 150 cannabis licenses have been issued in Arizona, many after a local judge ruled that the certificate effectively gave [drug dealers] immunity from prosecution. The law has raised nearly \$350,000 to date... [However, Arizona] law enforcement officers continue to insist that the sale of cannabis

there is illegal, despite the revenue stamps... Recently, three dealers in other parts of the state were arrested. What happens to them may determine if the drug becomes effectively decriminalised in Arizona... Next month the people of Arizona will be asked to vote in a referendum, Proposition 200, which proposes that the use of cannabis be decriminalised for medical reasons. A similar ballot is to be held in California.

...California ballot initiative No 215... would allow people with Aids, cancer and other illnesses to cultivate and smoke pot to ease their discomfort. "...it sounds like Prop 215 could change everything for us!" said... [a] comic strip's... goateed slacker hero. That's what worries... the button-down... state Attorney-General... "...These strips contribute to the national wink-and-nod attitude toward drug use," [the Attorney-General] said at a news conference... called to ask California newspapers to yank the pro-pot strips. None of them did. [The Attorney-General] may have failed to purge the comic pages, but... managed to draw attention to a little-noticed initiative with national implications – an issue the anti-drug warriors seem to be losing... Proposition 215 does not limit the amount of marijuana an individual can grow or smoke and requires only oral permission from a doctor to obtain the narcotic... "Every pothead in America will want to move... [to California," say opponents]. But proponents say that marijuana provides precious relief from the nausea and pain of chemotherapy and potent Aids drugs and is worth the risk that people will abuse the law. "It's like denying penicillin," says... [someone] who used to buy marijuana for her cancer-ridden son at the Cannabis Buyers' Club, an underground San Francisco group. In August, [the Attorney-General] closed it down. That kind of get-tough manoeuvre is not very popular in California. In a recent poll voters favoured the initiative by a two-to-one margin. That is not surprising since the state legislature twice passed bills similar to Proposition 215, only to have [the]Governor... veto them. The proposition's backers, which include the California Academy of Family Physicians and the 25,000-member California Nurses Association, also have hefty financial support. Led by a handful of millionaires... pro-pot forces have raked in \$1 million. The proposition's foes... raised \$30,000. If it passes, Proposition 215 will almost certainly become a national model. Several states have already passed nonbinding resolutions supporting the medicinal use of marijuana; Washington state has funded a \$70,000 study of the issue. Though federal drug laws would still make marijuana illegal regardless of state statutes, the Drug Enforcement Administration cannot police small-scale abuse... [The President's] former... drug czar... believes... the... proposition is a ruse to legalise pot for one slice of the population, then decriminalise it entirely. As it is... the initiative is so full of loopholes that it would make pot available to practically anyone. The proposition says that patients suffering from "any" condition "for which marijuana provides relief" could qualify... This is one fight that is likely to smoulder well past the election.

...Californians voted yesterday to legalise the use of marijuana by the sick... The measure had the support of about 56[%] of voters... and nearly 60[%] of electoral precincts, said state election officials... The chair[person of NZ's] Medical Association... said yesterday that there was no reason marijuana should not be allowed for medicinal use like morphine, which is a controlled drug. There were medical conditions for which marijuana could be prescribed... the only thing stopping doctors from prescribing marijuana was its illegal status. The deputy chair[person] of the General Practitioners' Association... said because it was a drug with the potential to be abused, marijuana should be approved only with tight controls on its use. [However, a] former Medical Association chair[person]... was more cautious and said there was no evidence to show that marijuana could control pain. The issue was complex and it was not known whether patients with chronic pain were using marijuana for pain relief or to help them to get through the day... A Ministry of Health spokes[person] said the ministry was following the Californian situation "with interest."

...A youth who believed [his body] had divine powers[, and]... subjected his mother to two hours of terror, causing horrific injuries, was yesterday ordered to be held... indefinitely... in a psychiatric hospital. A [Melbourne] Supreme Court judge... said the 17-year-old youth suffered from schizophrenia "brought to the fore" by heavy use of marijuana in the past two years... [T]he youth believed... his mother was Satan... and... had... [tried to kill her. T]he... mother had been found covered in blood in the front garden of the family home... Her throat had been cut... The youth... had also assaulted his father with a knife about a month earlier... [Incidentally, a]fter attending Marijuana Anonymous, a programme run by the Salvation Army, [a local mother] broke her dependency, and counselling has been invaluable in helping [her relationship with]... her eldest child...

A SOLO m[um] is to appear in court after three children... were found experimenting with cannabis. Police visited ...he[r] house... after the... m[um] had left an abusive message on the Hastings Income Support Service answerphone. Officers smelled cannabis smoke and found the children, aged 12, 10 and [8], with a cannabis cigarette. There were no adults in the house... More cannabis was found in the house. The children told police the[ir] mother had not been home for about a week, apart from "popping in and out to give the oldest child instructions to cook for the younger ones"... The children were now being looked after by relatives and... [their mum] was to appear in Hastings District Court this week on various charges.

...The paternal grandparents of a baby girl poisoned with cannabis oil have lashed out at Social Welfare for sending her back to live with her mother. The Auckland couple have also called for a law change to allow grandparents more rights in getting[access] to their grandchildren. The child was nine months old in April when... [it ended] up in Middlemore Hospital... [The baby] was discharged a few days later back into her mother's care. Now, at the age of 16 months, [the girl] and her younger sister have been taken to live in another town. Her grandparents say her whereabouts are a mystery and they are worried sick... They said they had not applied for full custody, but wanted to be allowed access to the child in their own right. As the law stood now they could get access only through their son, they said. But they now have no contact with their son... They do not want to be named for fear of identifying their granddaughter but yesterday... criticised the C[YPS] for allowing the child to return to her mother before the completion of an in-depth at-risk report... [A CYPS] manager... understood a guardianship report had been completed and was still to be put to the Family Court. [The manager] said if a child was believed to be in immediate danger, action would always be taken. "The fact is children end up in hospital with accidental poisoning and we don't remove them from the care of who is looking after them on that basis. The courts don't remove children from every home where you know illegal substances are being consumed."

...[a Samoan] is sitting in an upstairs room at the Wellington City Mission's Youth and Recreation Centre – a place designed for kids like him, who have done drugs and got into trouble... [This 16-year-old started] smoking dope when... [aged] only 11... and... learned the hard way... [F]or example... sometimes skinheads coat the dak with flyspray... or horse tranquilliser... before they sell it to black kids. "It trips you out real bad." ...The young Samoan used to buy from [skinheads who lived in] the House of Joy in Christchurch[, but doesn't]... know why they called it that... Next time [the Samoan] bought from them, [it got revenge for the flyspray episode by ripping] them off. The seller put two \$50 bags through the slot in the door, and [the Samoan] held the money in the slot too. Normally buyer and seller each hold the dak and the dollars, and both let go at once. This time, [the Samoan] grabbed the drugs and kept the cash and ran... Another time, [the Samoan] went to a new dealer, and "I packed myself up with clothes to look big. I was going, Oh, it better be good stuff", and I opened it right in front of him and [saw the dealer] had ripped me off... [by rolling] up heaps of foil just to make it look big, and I unfolded it and said, 'I want another one or... my money back.' The guy also tried to sell him cabbage – leaves only, not the buds which give you the best buzz... When [the Samoan's] cousin knocked on the door, the dealer got nervous and offered better stuff... [The Samoan] would smoke every second day or so, and then all weekend[, and] used... his lunch and bus money to buy the dak. [Cunningly, the Samoan] would get lunch money from his dad... then ask his mother for some... And[also] told them... the bus fare was much dearer than it was. [The Samoan and a]mate would team up with a couple of... younger schoolkids who would contribute \$5 each towards a \$20 tinny. The[older boys] would only let the[younger boys] have a couple of puffs... the[n]... hog the rest... Later[, the Samoan]... started stealing to fund his habit. "My cousins taught me how to use a fork on a car, as a key. Old Escorts and minis... they're like the only cars you can do." [The Samoan] would steal money or the car stereo... then sell it to second-hand dealers... [by telling them it was being sold on behalf of] his uncle, and...

[supplying] a false address... Sometimes they would trip him up by asking him to repeat the story, [which the Samoan] would get... wrong. "So I would just go, 'Oh, I'll go somewhere else'..." ...when threatened... [in this manner] they would change their tune and buy it off him. "They'd rip me off but as long as you got over \$20 for the stereo it was sweet." ...[the Samoan] has some regrets. Dak "stuffed up my schooling... and I let my parents down and that."

...The number of undercover officers planning to sue the police is growing, opening the Police Department to a potentially huge damages bill... [L]ast month... about 20 former undercover agents... [lodged] claims, through the Police Association, against the department for physical and psychological abuse they say they suffered in the field. The association's president... said last night that the number could now exceed 30... [T]he claims would be lodged in the High Court and the Employment Court at Wellington... [The president] said the court action was the culmination of an awareness that had built up over the past couple of years of the problems experienced by undercover agents, particularly in the areas of cannabis use and readjusting to society... [T]he association was confident of a successful outcome. "We wouldn't be going through this process if we didn't think the agents had a good case." The former agents are members of the 55-strong Undercover Seriously Affected by Drugs group (USED), which includes a number of serving members of the police... Dollar amounts had yet to be finalised, but in a private case now before the High Court at Auckland a former undercover officer is suing the police for \$750,000 for allegedly revealing his identity to the press... Two former officers supporting their colleague in the High Court at Auckland this week claimed that to avoid further court proceedings the police hierarchy was now making recruits sign waivers saying they would not sue the department. The former agents say N[Z] is the only country in the civilised world which still uses long-term undercover operatives. "We really don't think that the long-term undercover programme is necessary," one said.

...A former undercover officer's claim that the police breached a duty of confidentiality by disclosing his identity to the press was something of a test case, a judge said yesterday... Reserving his decision... [the judge] said the issue of confidence regarding undercover officers had probably never been as exhaustively analysed by anyone before the three days the court had spent on it... The former agent... was named in an article in the *Auckland Star* in October 1990 as having been in the unique position of having witnessed a murder carried out by an underworld associate while working undercover 10 years earlier. [The agent] did not, in fact, witness the killing, but was a principal crown witness in the murder trial, which resulted in a conviction of his erstwhile gangland colleague... The former officer is claiming that a police contact of the *Auckland Star* crime reporter... released certain details linking him with the homicide, publication of which put his life and the lives of his family in danger. Under cross-examination, the... contact accepted that information supplied by him might have linked the former agent and the homicide... [T]he Crown, said... it was accepted that there was a reciprocal and life-long duty of confidence between the police and undercover agents. However, that duty ceased where there was prior publication of secret information. In this case the information said to have been supplied was "already in the domain of the relevant public" – his former gangland associates. When the... agent gave evidence at the murder trial... [it had used] his real name in open court [knowing] that that information would be available to the press and the accused. But [the lawyer who was] representing the agent, described as unconscionable the Crown's suggestion that by being summonsed to give evidence in his own name, that information was then in the public domain. His client accepted that [it was necessary for him] to give evidence using his real name, but did not accept that after... [giving] his evidence there was no longer any confidentiality... (The law has been changed to allow undercover officers to use their assumed names in giving evidence.)

...[in] December 1990, Detective Anthony Harrod (43) died after plunging from a helicopter while taking part in a drugs recovery operation...

Police often face deadly obstacles when they identify... jealously guarded cannabis... plantations so another tactic in the aerial warfare against growers will be tested near Rotorua. Police have studied a helicopter-based ploy used successfully in Hawaii where cannabis crops are sprayed with poison from above and left to rot. Moves to emulate the tactic have been investigated for two years... Scientists at the Rotorua-based Forest Research Institute have developed a... deadly cocktail of products already available on the market, to wipe out the popular drug... The poison kills off plants in about two hours by chemically sapping up the water supply. A herbicide component then works on the roots. "It has a quick rapid scorching effect," according to an FRI spokes[person, who] said the spray was innocuous for humans and smelt like rancid butter. It would affect surrounding vegetation but the applicator mechanism allowed cannabis plants to be targeted precisely... However, cannabis growing threatened both flora and fauna... [as bush] areas were cleared to plant cannabis and traps set for possums often killed kiwis... The poison has had a dye added so growers are aware the plants have been sprayed and police know which areas have already been treated. [The]Assistant Commissioner... said the poison had been extensively tested. "There were so many environmental groups we had to satisfy. Some... had visions of poison flowing down the rivers. We're quite satisfied there is no danger to the environment or health side effects,"... FRI will not reveal the makeup of the potion, because... "We may be able to make... money out of it." And scientists working on the project would not be identified for fear of retribution by drug growers and dealers... The project is scheduled for... late in December or early 1997. It is expected to run until April when its effectiveness will be assessed... Police are still calculating the cost of the pilot scheme. Meanwhile, police are expected to unveil details and costings of the 1996-97 drugs snaring strategy in a fortnight. Last year, Operation Jo, a nationwide operation spanning five months, netted 216,000 cannabis plants and led to 339 arrests. - 1996

N[Z] green is turning bright blue in a new police assault on cannabis growers... Since Monday an estimated 35,000 young plants... in the forests of Rotorua and Tokoroa... have been poisoned by a bright blue herbicide dropped by a specially equipped helicopter and sprayed by 10 ground staff with knapsack equipment... It meant police could destroy five times as many plants as they could by the old method of pulling them up and burning them. The forests of Rotorua and Tokoroa were a good place for the pilot programme because police had found a quarter of last year's cannabis haul there... Damage to other flora was minimal... [S]cientific analysis showed the[sprayed cannabis] plants would not be harmful to smoke.

...POLICE may have to reassess a pioneering programme to eradicate cannabis crops with a secret herbicide after revelations that the high inducing component of the drug could survive an aerial poison assault... Cannabis leaves wither away almost immediately after being doused with the blue-tinted spray but the stem takes between five to seven days to decompose[during which time]... traces of... THC... may be salvageable... Police are concerned growers could attempt to retrieve the stems and produce cannabis oil... Samples taken from an initial spraying operation near Rotorua last month will be analysed... the spray could be modified if tests revealed enough THC was able to be extracted from the affected plants.

...the Neurosciences Institute of San Diego says chocolate contains anandamide, a substance that occurs naturally in the brain and acts like THC. Researchers say you'd have to eat 11kg in one go to get stoned... [By the way, twelve guys] were arrested in Poland for digging up a road after hearing a rumour that the asphalt was hashphalt. The story going around was that not all of the 15 tonnes of hash taken to be burnt and sold as ash for road construction was actually destroyed. Of course it was just a rumour – and anyway, they got the wrong road.

...The NORML bus is off the road after being smashed by a car. After six years of spreading the word... the big green Budford has fallen victim to mindless stupidity. The crash happened as a result of someone stealing a car and letting it go from the top of Liverpool Street (the steepest street in Auckland). The bus, parked outside the Liverpool St NORML office, took the runaway vehicle in the drivers side corner... It has been estimated that the repairs will cost thousands of dollars... Finances – simply put, we don't have any! This is the main reason why NORML... now [has]... new premises... between Fort St and QE2 square... [O]ur Liverpool St offices... h[ad meant] that [our costs went up but our income went down... One way of helping out is to make a regular direct credit contribution to NORML's bank account. Even a couple of dollars a week would help.

...Want to help save the planet when you go shopping? Buy hemp products! Hemp is one of the most *environmentally friendly* crops around. It can be *grown*... without chemical fertilisers and pesticides, in rotation with other crops, on the same patch of ground year after year... Hemp is one of

the world's most versatile of crops. It can be used to make... thousands of other products... It's also one of the *most efficient* in terms of the amount of fibre that can be produced on a given area of land... A hectare of hemp yields 2 1/2 times as much fibre as an acre of cotton[... which]... is actually one of the most chemically-dependent crops in the world... Hemp cloth is stronger and longer lasting than cotton – in fact, the first Levi jeans were made from hemp. It has been used for fabrics for thousands of years. Hemp fibres have been found in tombs nearly 10,000 years old – that's how long it lasts! ...Making paper from hemp can be done without using the toxic chemicals needed for wood pulp paper. Hemp paper is naturally acid free and lasts longer than paper from trees... And more trees could be left alone to get on with making oxygen so we can all keep breathing. Someday, in a world that's saner than the one we live in today, you could fill your car with hemp fuel. The pulp of the hemp plant can be distilled into ethanol, a clean burning fuel that causes far less air pollution than petrol or diesel. Ethanol can be made from virtually any plant, but in terms of yield per hectare, hemp is way ahead. The same process that turns hemp into fuel can be used to make environmentally friendly plastics. Henry Ford made car bumpers out of bio-plastic hemp in the 1930s – before the US government brought in prohibition and began leaning on the rest of the world to follow suit. Hungry? How about a hempburger? Hemp seed contains the highest percentage of edible protein of any plant, as well as essential oils that keep you healthy. It can be cooked like porridge, turned into a spread like peanut butter, baked in bread, used in casseroles – the possibilities are endless... [H]emp seed oil... can also [be used to make] soap, shampoo, conditioner, massage oil, and other body care products... Cannabis chipboard? Placemakers don't stock it yet, but it could be the building material of the future. Hemp's long, tough fibres are much stronger than wood fibres and can be pressed into durable, versatile boards – the house that hemp built. The technology exists to make all these products – all that's missing is a government with enough sense to realise their value and encourage a... [NZ hemp industry to rival those of AUS], Canada... and... Great Britain... Hemp is slowly but surely finding its way into the[NZ] marketplace... Two years ago, if you wanted to buy anything derived from the cannabis plant legally, you could forget it. Now you can find hemp jeans in your local shopping mall... [made by AUS]'s Hemp Inc. and N[Z]'s own Bakoff and the... Tasman Hemp Corporation... Most of the hemp gear is imported from the USA, where a crop of hemp clothing makers have sprouted up in recent years... The hemp is... processed into fabric in its country of origin, [then is] shipped to the USA... China is the world's leading producer of hemp fibre. It has large areas under cultivation and has built new factories with the latest processing technology. Hungarian hemp, although the best quality, is currently prohibitively expensive... Research commissioned by the NZ Hemp Industries Council found that our farmers could earn NZ\$860 per acre per year, on marginal land. This compares to what they earn now; \$332 for wheat, \$300 for sheep and \$250 for cattle!

...[an actor] famous for his roles in *Cheers* and *Natural Born Killers*, has vowed to go to jail if necessary after admitting to planting four cannabis hemp seeds. [The actor] faces a possible three months after planting the seeds to promote hemp as an alternative to tobacco for [US farmers].

...hemp] marketers... are seeking political backing to legally grow non-drug cultivars of cannabis as a renewable resource crop... The Deputy P[M]... had been supportive, as had the Northland MP... and the Labour leader... “And the Minister of Health... is quite positive... Interestingly, the Minister of Agriculture... was not very supportive and said it would be years before the issues were worked through... It looks as though hemp is continuing to suffer from decades of bad publicity, false information and association with the drug underworld.” Unlike its better-known cousin, industrial hemp contained negligible amounts of the psychoactive substance [THC. The chair]... of the Hemp Industries Marketing Board... said industrial hemp... could become a “multibillion-dollar industry” in N[Z], capable of providing huge growth in rural areas suffering from depressed prices for traditional products. There had already been approaches from Japanese companies wanting to grow hemp in N[Z] for paper-making.

...[‘Cultivation of trial plots of industrial hemp will be allowed under strict Government guidelines. The Health Minister said the decision followed a year-long investigation into growing hemp for industrial uses. Regardless of how it was used, it still fell under the Misuse of Drugs Act, the minister said. The trial would run for two seasons, and licences would be issued for one year’]...

A detective's unsupported contention that the word “things” in an intercepted telephone call meant cannabis was not sufficient for a search warrant for drugs to be issued... ruled... the Court of Appeal... Police applying for search warrants should set their grounds in reasonable detail...

THE Privy Council's judicial committee will be asked by [an]Auckland barrister... in London on Tuesday to rule police searches without a warrant are a breach of the Bill of Rights Act. If the committee supports the argument it will go before the Privy Council for a hearing. [The barrister]'s action follows a Court of Appeal decision in November which... set “a disturbing precedent to citizens' rights”. [The barrister] said the case had significant repercussions for the law of search and seizure in N[Z]. “It's about the rights of N[Z]ers to be free from illegal police practices involving the search of the person, property, correspondence or anything else.” In the case under appeal, children told an adult they had seen cannabis plants growing in a Tauranga kiwifruit orchard. The adult then told police. Police admitted they had insufficient information to apply for a search under the Misuse of Drugs Act to enter the property on December 12, 1994, the Court of Appeal said. The Bill of Rights protects N[Z]ers from “unreasonable search and seizure”. [The barrister] attempted to have the evidence thrown out, but[a] Tauranga District Court Judge... ruled the search, though unlawful (police had technically trespassed going on to the property), was not unreasonable. The Court of Appeal upheld the decision. Police were on the property for only five minutes' observation. Search warrants were later granted on February 3, 1995, 1650 cannabis plants seized and two [people] charged with cannabis cultivation on the property.

...A Sydney judge yesterday confirmed the old adage that possession is nine-tenths of the law when [the judge] ruled that a [mother] was entitled to keep a briefcase containing \$A433,000... even though [the mother] had no idea where it had come from... [P]olice had found... the money... hidden in a cupboard in her home during a search for cannabis in 1994... The police search was related to... [her son. The mother] had never seen the briefcase before and did not know who owned it... The police handed the money over to the National Crime Authority but as it had laid no charges [the mother] sued to get the money back... [C]ounsel for the authority had conceded at the hearing that there was “No current operational necessity to retain the money” but had argued that it could keep it because [the mother] had not established title to it... [However, the judge] said the owner or occupier of a private house had control not only over the property but over everything in it. “It [is] irrelevant that the owner/occupier is aware of the existence of the article in or on the property,”... The judge said it could hardly be suggested that the real owner of the money was in possession of it rather than [the mother, because the real owner] “could at any time at the whim of [the mother] be excluded from access to the premises.” ...[In further news from across the ditch, AUSn] Customs and Federal Police[have] claimed their biggest ever drugs haul after examining 10 tonnes of cannabis resin, worth an estimated \$A77... million, seized from a fishing vessel at Port Stephens on the N[SW] coast last weekend.

...Four countries co-operated to bust the world's largest cannabis smuggling operation, worth more than \$A500... million, say the A[US]n Federal Police. As a result of the efforts of authorities in the U[S, AUS], Canada and Mexico the ship used for transporting tonnes of cannabis resin across the Pacific Ocean had been detained in Los Angeles... [Incidentally, a US] federal judge ruled yesterday that the right to free speech allows doctors to recommend cannabis for seriously ill patients... A preliminary injunction issued by [the]Judge... bars police and courts from taking action against doctors who recommend cannabis... But [the judge] warned doctors not to help patients to obtain the drug... Unless appealed, the injunction will remain in effect until a case filed by two San Francisco doctors goes to trial... [The person] who heads the Los Angeles-based Americans for Medical Rights, said that with the judge's decision there was little the U[S] Government could do to stop patients from using the drug. But... “we're reasonably certain the federal Government will appeal the decision.” [The person] who runs the Cannabis Buyer's Club in San Francisco... expressed exasperation with the Government refusal to drop its opposition. “What a stupid game. Why don't [Government officials] just give it up and let them sell marijuana... along with other medicine?” In San Francisco and Los Angeles, marijuana clubs... have virtually been off limits to police after city officials repeatedly voiced their support for allowing the clubs to operate.

...The menu at... the Cannabis Club... runs from AAA-rates California Green, allegedly the best marijuana in the world, to the cheapest B-grade Mexican. The happy leaf will be served as joints, as tincture soaked in alcohol in “Merry Pills”, or baked in “brownies”. The Cannabis Club is illegal under federal law... but is now permitted in California... All that is needed to join the club is a recommendation from a doctor, hardly a problem in [a state] which abounds with New Age physicians vaunting the therapeutic benefits of pot. If Proposition 215 is allowed to run its course unchallenged, it is only a matter of time before a joint of Mendocina green leaf will be consumed in California as openly as a glass of Napa chardonnay. And what starts on the West Coast usually spreads to the rest of the U[S]. “The whole house of cards is coming down,” said... [the] founder of the Cannabis Club... Government reaction has been a mixture of outrage and disbelief. In the past 30 years, the “war on drugs” has escalated to the point where it has become the chief activity of the criminal justice machine – and the prison-industrial complex that accommodates it. Drug prohibition is why the US has 1.6 million people incarcerated, more per capita than any other country. Of all inmates in federal prisons, 63% are drug offenders. Most have never committed a violent crime but under “mandatory minimum sentences” passed by Congress in 1986, their average sentence is longer than those convicted of murder and rape. Incarceration for drug offences is now the biggest single cause of fatherlessness and family break-ups among blacks. There is little to show for this policy of “zero tolerance”. Drug use is higher now than it was in the 1960s and marijuana consumption among teenagers has doubled in four years. But the habit of draconian repression is now so firmly rooted that the federal government seems incapable of thinking in any other terms. Denouncing Proposition 215 as an intolerable step... the White House drug czar... (or director of the White House drug control policy office)... has warned [that it is his intention to] do whatever it takes to invalidate the popular vote in California – including the prosecution of doctors who prescribe marijuana and veiled threats of withholding federal funds from states encouraging “dysfunctional behaviour”. It sets the stage for a spectacular clash between Washington and California, a hazardous venture. The days are long gone when Washington could run roughshod over the states. The mantra of the 1990s is the 10th Amendment, which stipulates that all powers are reserved to the states unless specifically allocated to Washington – very few are and drug policy is not one of them.

...the U[S] President... is making heavy weather of frustrating the will of the electorate, by insisting that the voters of California and Arizona had no right to authorise the prescription of marijuana for medical purposes... One curious feature of this row is that the federal Government accepts that THC... can be a useful medicine. Doctors may prescribe a drug, Marinol, approved by the F[DA], which is THC suspended in sesame oil.

...[as] cracks in the dam of prohibition have appeared with the legalisation of cannabis for medical use in California... a... herb used by people in the northern Brazilian town of Cruzeta to cure all their ills has turned out to be cannabis... [and a] Canadian judge has ruled that a Toronto [resident] could grow and use marijuana to control his severe epilepsy, saying the law banning the medicinal use of the drug was unconstitutional... N[Z] law already has a provision to allow medical use of cannabis for specific individuals. The Government so far refuses to acknowledge that law].

...I am not the sort of person you'd expect to smoke marijuana. I'm 56 years old and the mother of two grown-up sons. I do use this illegal drug but I do it for very good reason – I need it for pain relief. For the past six years I have suffered from chronic leg ulcers, a side effect of diabetes and poor circulation. Four years ago one ulcer flared up, causing incredible pain and leaving me crippled. I would lie in bed at night crying. The pain was so intense, sleep was impossible. I tried everything. I went to hospital but they couldn't help me. I was living on pain killers and taking more and more pills. My doctor put me on pethidine, which is a serious drug, but even that didn't help... [Then a] friend suggested marijuana, and it worked marvellously. It was the only way I could get relief. I was really scared at first because I'd heard things about what it does to your brain. But... I've had no ill effects at all. I think pethidine is far worse than marijuana. When my ulcer was really bad, I lit up a joint once or twice a day, taking three or four puffs at a time. Now, however, I only use it about once every six months. My ulcers aren't so bad so I don't need it as much. [However,] I'm nervous about using it because it's illegal. Many people in my local community don't know I smoke marijuana. I'm scared of what they will think of me. I told my doctor and I don't think [my doctor] was very happy, but [my doctor] couldn't give me anything to ease the pain. A couple of years ago I was busted for growing cannabis. Someone must have told the police and they came round. I only had one 40cm high plant but I felt like a real criminal. I was going to defend the charge but in the end it just got me down so much I pleaded guilty. I was convicted and discharged. Now I won't have cannabis in my house. I don't want to get caught again. But I can get it if I need it... again [for my ulcers...]

An Aucklander, who is dying of cancer, his wife... and nephew... said they sold 2430mg of... [his] morphine to buy cannabis to ease his pain, because side-effects of the prescription drug were turning him into a “vegetable.” ...[the terminally ill Aucklander] was receiving \$2000 of morphine sulphate tablets a week. Police charged the three after visiting and searching their home during an eight-month South Auckland undercover operation which began in August last year. They found a stockpile of 4380mg of morphine. [The] Judge... sentenced... the... [Aucklander] to supervision for a year on the grounds... [of his] short life expectancy and that his health would be impaired by a prison term. [His wife and nephew] were given nine-month jail terms, suspended for a year, and six months' periodic detention.

...[a] computer contractor – whose wife... is an American citizen – ...is looking forward to meeting his... in-laws after an Auckland District Court judge quashed a cannabis conviction [the Aucklander] collected as a teenager 12 years ago. U[S] immigration authorities refused entry to the 30-year-old... because [it] had two convictions for possessing cannabis in 1985 as an 18-year-old labourer. However, his lawyers... successfully sought a discharge without conviction on the second charge after having the case reheard yesterday... [One of his lawyers] told the judge the conviction had “disastrous consequences” for [the Aucklander], who at the time had been unaware of the ramifications of pleading guilty... [The Aucklander told the retrial] judge that a very small quantity of cannabis was found in the pocket of a jacket [the Aucklander] was wearing when the... drug squad raided his shared flat in November 1985... [The 18-year-old] had planned to defend the charge but decided it was not worth the cost... [The Aucklander] had not met his wife's elderly parents, who could not afford to come to N[Z]. Under the U[S] Immigration and Nationality Act, the authorities could waive one minor cannabis conviction, but not two. There was no police opposition to the application for a rehearing, but the court was told that police records relating to the charge were destroyed after seven years... Outside the court, [the elated Aucklander]... said people convicted on minor drug charges faced harsher penalties than the gravity of the offence warranted, particularly in immigration matters. [His wife said it] had not realised the significance of her husband's convictions. “M[y husband] told me about his record and said ‘Do you think that will be a problem?’ I said, ‘Oh, I don't think so, that would be ridiculous.’” They learned differently a week before [the Aucklander] was due to join his wife in the U[S].

...*The Economist's Pocket World in Figures*... says that NZ... is second only to the U[S] for the number of cannabis arrests per capita each year [‘23,000 annually – 1/2 for low-level possession’]... This claim has upset... the... head of the National Drug Intelligence Bureau (sic)[, who] says it is ridiculous to publish such a statistic, because though accurate it gives a misleading impression! “NZ has one of the most drug-free societies in the world”... the... Det. Insp... claims, adding that the country could be drug free within 10 to 16 years if police keep up the pressure.

...A Papakura [resident, whose wrist was] handcuffed... to his ankle... by armed intruders[, who then]... made off with cannabis plants growing in the garage... was rescued by police... officers... They took him to the local fire station to cut him free and then arrested him for growing cannabis.

...the singer and actor who wrote the lyrics “No, no, no, I don't smoke it no more,” has been charged in Montana with possessing cannabis and drug paraphernalia. [The singer] was an honorary sheriff's deputy who spoke against drug use to school children.

...FIVE third-graders were suspended from school after they were caught smoking marijuana cigarettes rolled with their homework paper during morning recess... “Earlier this year we caught this same group smoking a cigarette, and... even... that was... a first for me,” said [the] Principal... in Eaton, Colorado... The students'... will not face criminal charges because state law bans prosecution of children that... are under 10.

...TWO 12-year-old children nabbed chewing cannabis leaves have been suspended from a west Auckland intermediate school... The shock find followed claims by researchers that one in 10 N[Z]ers are hooked on cannabis by the age of 21... It is understood up to [9] children were suspended

from the school on March 7. They are expected to return to classes tomorrow if they agree to sign a good behaviour contract and undergo drug counselling... Ironically, the school runs a Drug Abuse Resistance Education (DARE) programme to discourage children flirting with drugs.

...Two boys aged 9 and 10 were suspended from a Lower Hutt school after they brought drugs for "show and tell."

...Police are lighting up cannabis in schools to help teachers to sniff out students using drugs... The demonstration involved burning a small amount of cannabis in a dish... Nationally, 335 school students have been suspended for drug offences... – barely two months into the first term.

...*Sniffer dogs for use in school bus searches*... Buses taking students to the two Whakatane secondary schools will be stopped on occasions in the next two months and searched for drugs. Whakatane police are supporting Whakatane and Trident High Schools in their fight against drugs and have agreed to a joint anti-drug initiative... The principal of Whakatane High School... wrote to the police six weeks ago expressing concern that marijuana was being brought into school on the buses and asking if they would search them. The buses, which carry students from Taneatua, Ruatoki, Waimana, Paroa and Poroporo, will be stopped at least once during term... Drug dogs could also be brought into the school grounds during term... The dogs would identify the school bags containing drugs and the police would deal with the students to whom they belonged.

...[Whakatane High School has] suspended 9 students and expelled 2 for drug use in the past month. "I've heard of students swapping a reefer of marijuana for a meat pie." ...Education Ministry figures show other schools are cracking down too. In the second half of last year 153 Auckland students were suspended or expelled for drug... and alcohol use. 81 in Hamilton were sent home, there were... 114 in Lower Hutt, 45 in Christchurch and 19 in Dunedin. The Commissioner for Children... says "...there is a significant problem."

...Cannabis use may be a bigger... problem than we think. A Dunedin survey of a thousand 21-year-olds has found that more than 60% have used the drug... "...61.9% have used cannabis at some time; 52.4% in the previous year..." ...The Otago researchers say their results were probably the first true indication of the use of cannabis in N[Z] society because of the special nature of their research project... The study members, now aged between 23 and 24, have been closely monitored by researchers since they were born... Other research is not directly comparable... but the latest figures are significantly higher than those revealed in similar projects. A 1990 study in Auckland found almost 40[% of guys] and just over 25[% of gals] aged from 18 to 19 reported using cannabis... [T]he British co-founder of a rehabilitation centre in Germany who has been speaking to N[Z] secondary school pupils about the dangers of drug use, said yesterday that... [if] young people were not given the opportunity to express their emotions and give in to their feelings, they were likely to turn to substances such as cannabis and alcohol, which helped to put them in touch with their feelings and their sensations.

...[while 3%] of 14-year-olds in N[Z] admit to having tried cannabis, in A[US] the figure is 27.6[%], but... by adulthood the picture is similar on both sides of the Tasman... The A[US]n Household Survey of 1995 shows that just over half the population have tried it and 12.3[%] use it weekly.

...when cannabis laws have been relaxed in... Holland and A[US], consumption has remained steady – or, in the case of teenage use, declined.

...In the late 1970s the potheads of A[US] talked in awed tones of Canberra, the eldorado in their midst where the cafes were paved with Colombian Gold and the police looked on with gentle tolerance. If they had ever got it together to make it to the national capital, they would have found the myth to be as dangerously ephemeral as the conquistadors' dreams: cannabis, even with decriminalisation of small amounts in 1993, is illegal. The same applies in South A[US], which is in the process of reducing... from 10 to four... the number of cannabis plants users can grow under the on-the-spot fine system that has been in place now for a decade. In fact, according to [the]Alcohol and Other Drugs of A[US] chief executive... cannabis smokers are better off in Victoria – where possession and use of even tiny amounts is still a criminal offence – than they are in Adelaide[, where]... fines range up to \$A150... for possession of less than 100g of cannabis or 20g of cannabis resin... Since the on-the-spot system was introduced by S[A] in 1987 the number of people given "dope tickets" has soared to 20,000 a year – almost three times the level of possession charges laid in Victoria, which has four times the population. And, while... half the people issued with on-the-spot fines eventually wind up convicted in court of failing to pay the fines, in Victoria first-time offenders are usually placed on bond without a conviction being recorded. But there has been a change in A[US] over the past decade, with an increasing body of support for decriminalisation of cannabis. Last year a Victorian Government report urged the legalisation of marijuana, permitting dope-smoking in public places and the expunging of all recorded convictions for possession and personal use. Despite backing from the State Premier... his cabinet refused to implement the report's recommendations. As in other states, politics remain the main barrier to reform of marijuana laws. Public opinion polls, however, have generally favoured decriminalisation, and surveys by such august bodies as the National Drug and Alcohol Research Centre have found that one-third of A[US]ns, between a quarter and one-third of the nation's under-16s, and more than a half of its 20 to 24-year-olds had puffed on a joint. There are other arguments. According to the A[US]n Institute of Criminology, the cost of enforcing cannabis laws is well over \$A300 million... a year, three-quarters of the total costs of drug law enforcement, and overwhelmingly involving minor cases. And because cannabis is illegal, the estimated \$A1.9 billion... annual turnover of the dope industry is pumped into a tax-free black market.

...One of the first studies of long-term marijuana use in A[US] has found the health of such users is on par with the general population. The study [was] conducted in the['feral'] subculture of the North Coast of N[SW], in which cannabis use is an integral part of everyday life and social relationships... [However, the] rate of respiratory problems among the marijuana users was higher than the general population, although 86[%] were current or former tobacco smokers. More than 33[%] drank alcohol at hazardous levels... [In local news,] Cambridge High was criticised last year when it took no action over a member of its board of trustees convicted for drink-driving.

...Seven Cambridge High... students caught drinking in school time this week have been treated rather more leniently than the pupils who were expelled last year for trying cannabis... Of the seven, six received punishments ranging from three-day suspensions to detentions. Only one was suspended indefinitely... None of the... 14... expelled... students, all under 16 at the time, have been allowed back into the school, despite many attempts. Six are now studying by correspondence. The principal... refused to discuss the[alcohol-drinking] students' punishment and said it was "not a matter for the media." But one parent, who did not want to be named... was "pleasantly surprised" at the level of punishment her son received... [because,] during the publicity surrounding last year's expulsions, [the mother] had "made it very clear that offences involving drugs and alcohol were in the same league. So, of course, I was fully expecting my son to be expelled..." The [mother] said that instead, her son was given a fair punishment and a second chance to "right the wrongs" by working hard on his return to the school... [The mother] was unsure why the school had chosen to give the students a second chance, but was certain the bad publicity surrounding the expulsions last year was a deciding factor. "My heart goes out to those kids, and it's a shame their wrong-doing could not have... been treated [in a similar] way." The spokes[perso]n for the parents of the 14 expelled... was also pleased with the way the high school handled the students caught drinking... [and] would give the school "the benefit of the doubt" that its punishment policy had been amended... "But it is unfortunate that the other children did not have the same kind of response from the school."

...Four Cambridge High School fifth formers have been suspended indefinitely this week for smoking cannabis. Police were called to the school after students told senior staff other pupils were smoking cannabis on the playing fields at lunchtime. The incident comes just a week after more lenient treatment of seven pupils caught drinking sparked speculation that the school's hard-line policy on drugs and alcohol had been amended... [A spokesperson] for the parents of the... group of [14 students expelled last year]... said the school was fostering double standards... [However, the] school's hard-line policy has won the support of the Hamilton regional police commander... [who admired the principal's] stand "despite what other... so-called enlightened people... might think." ...the principal... was very surprised more students had been found smoking... [cannabis but] was pleased to see other students supporting the policy and were prepared to have it enforced.

...[the four] Cambridge High School students indefinitely suspended last week for smoking cannabis can apply for re-enrolment in a couple of months, says the principal... The school board's disciplinary committee met on Monday and decided that the students would be suspended until they were 16 years old. But [the principal] said the 16-years designation was applied merely to meet a legal requirement. Students under 16 could not be expelled so this was the only way to have them excluded from the school roll.

...the principal of Trident High School in Whakatane... says... [students who have been suspended for smoking] marijuana should be drug-tested before being allowed to return to classes... Industries could drug-test workers if they were considered a potential risk, and schools should be allowed to do the same... [The principal] admits the move – which the Law Society says would be illegal without consent – is deliberately provocative, but... believes schools have to force the issue... Other pupils had a right to know their school was a drug-free, safe environment... A drug test by a medical professional would cost the student about \$150... On Wednesday Trident High suspended its first students this year – three fourth-formers – for smoking marijuana... Meanwhile, the town's other secondary school, Whakatane High, is continuing its strong stand against drugs, with five fifth-formers suspended this week for smoking marijuana.

...Nationally, 443 students... have been suspended this year for drug offences... The principal of... Northland College in Kaikohe... is calling for a specialised police taskforce to investigate cannabis consumption in the region following a record number of student suspensions for drug use at the college... Drug searches were being stepped up at the 518-pupil school... and... the school's board had resolved early last month to toughen its stand by increasing the terms of suspension for students caught using cannabis... Trident meanwhile is pressing ahead with plans to drug-test students suspended for using marijuana before allowing them back to school... Trident's board has asked a Whakatane law firm... to look into whether students can be legally required to return a negative drugs test before returning to school. The... requirement would mean young offenders effectively suspended themselves for three weeks – the estimated time it took for marijuana to leave the system. At present, many schools suspended students for three days for a first offence. "How do we know they don't go home and smoke pot for that time and come back to school more doped than before? We are not trying to be vindictive, we are trying to get these kids off the drugs." The president of the School Trustees Association... said yesterday that her organisation would back the move if it could be done legally and with parental support.

...A Bay of Plenty... mother-of-four... is lobbying to have security guards placed in schools to help curb teenage drug use... [The] former security guard... will put the proposal to colleges and intermediates in the Western Bay of Plenty over the next week... The aim was to set up a scheme sponsored by the community. Schools would pay about \$100 a week for five security workers to police the school grounds. The balance would be funded by donations and sponsorship from local businesses... [The mother] would also write to the Ministry of Youth Affairs and the Tauranga MP... to ask about Government funding... The Minister of Education... has promised more money in the budget to combat drugs in schools... 862 children have so far been suspended for drug use [during the first half of] this year compared with about 900 for all of 1996.

...Schools planning to drug-test students have dismissed as hogwash a report... commissioned by the Youth Law Project and written by a American Yale Law School graduate... [plus three NZ] solicitors... which finds the process illegal... in most circumstances. It infringed students' rights under the Bill of Rights, the Privacy Act and the U[N] convention on the Rights of the Child. But... [the] principal of Trident High School, Whakatane – the first to announce plans to drug-test students suspended for cannabis – condemned aspects of the report as "absolute codswallop." ...Trident was still waiting for a legal opinion. "I'm quite certain that we will bring it in, like other schools." The... principal of Te Aroha College... and the... chair[person] of the Tauranga Boys' College board... were also dismissive.

...Students at Tauranga Boys' College yesterday joined the ranks of N[Z]ers who face drug testing... The school is the country's first to introduce testing of students... The school... had sought legal opinion and was confident the testing procedure was sound. Parents or caregivers would be present during the test and the student had to consent to the test. The student would not be suspended for refusing, although the school would still have to consider the evidence of drug use in each case. The saliva test for alcohol and urine test for cannabis would be carried out using medical strips supplied by a pharmaceutical firm. Only students showing obvious signs of drug or alcohol use would be asked to take a test... [T]he Youth Law Project, described the move as very serious because it involved fundamental laws of personal privacy. Students' actions outside of school were the responsibility of parents, yet the school was in the position of regulating that behaviour because cannabis could stay in the bloodstream for some weeks... [However, the] assistant principal... said... [students] who used drugs outside of school hours brought the effects into the classroom...

THE P[ost] Primary Teachers Association is likely to advise teachers at Tauranga Boys College not to take part in the school's decision to drug test students. [The] PPTA president... said the association's executive had yet to discuss the issue, but... believed that was the advice it would give. Saliva and urine testing students went "way beyond what has ever been done in N[Z] schools before"... The Tauranga board of trustees decision seemed more of a marketing ploy aimed at parents, than a serious attempt to address the problem. "Is... [it] about helping kids or is it about finding them out and punishing them? This is entirely the wrong way to go about it." ...The Government has said it will commit \$1 million towards the school drug problem in the Budget. [However, the NZ] Principals Federation Council president... said that money wasn't enough. The... School Trustee Association president... was pleased some money had been allocated to the problem. "But will it be enough?" The lack of specialised facilities for students made it difficult to bring them back into schools if their problems hadn't been addressed.

...Debate on... the new principal... of Fraser High School[']s... proposal, testing students for drugs, was deferred [by the school's]... board... Thirteen opponents... [of the board's decision to okay his other proposal attended the meeting to] present... a petition with 211 signatures from [student]s opposing... security cameras... Whakatane High School, where [the principal] last worked, has a camera watching bags outside the library.

...A student protest at a Hamilton school, which led to 34 suspensions[(r:p1236, ln53)], was over teacher behaviour not security cameras and drug testing, as the school principal reported, says its organisers. The principal of Fraser High School... suspended all students who disrupted classes with their protests on Wednesday. Two organisers said teachers had called them useless and stupid. On Monday they had complained to [the principal], saying they would protest if [the] principal did not act... [By the way, marijuana] testing kits are being made available to parents of students at [the principal's previous school –]Whakatane High School. The school has bought urine-testing kits from an Auckland company and is offering them to parents for \$7 each... The kits... came with easy-to-follow instructions and were as simple and accurate as a urine pregnancy test.

...Drug testing of students at Trident High School in Whakatane will start next year. The principal... announced yesterday that the board of trustees had given him the power to require any student suspected of using cannabis to undergo a urine test.

...a... military police[officer] yesterday denied threatening to urine-test a soldier who was later charged with cannabis offences...

Three soldiers based at Hobsonville near Auckland will face cannabis charges at court-martial hearings at the base next week. Two of the defendants are lance-corporals... [A]n Army Land Force Command spokes[person] said it was uncommon for soldiers to face drug or alcohol-related charges, but the Army took a serious view of such offending. However, [the spokesperson] denied that soldiers found guilty would automatically face discharges. [The spokesperson] was confident cannabis use was not widespread in the Army. [Editor's note: Soldiers and drugs have had a long association. 'Some of the Assassin (Arabic *hashshashin*, "hashish addicts") sect's members were exclusively devoted to the task of assassination, which they fulfilled while under the influence of hashish' (but a different source says the group 'notorious for a series of killings of political and religious opponents were so called because they acted as if crazed by hashish'). Drug use is also linked to the Japanese *samurai* and kamakazis, and – for completely different reasons – with US soldiers when they were fighting in Vietnam!]

...Two lance corporals], both aged 31, deny charges of smoking... cannabis... at Hobsonville and Whenuapai on November and December last year... At a court martial in Auckland... [it] was alleged they bought... the class C drug... in \$20 tinfoil “bullets” in partnership with two other soldiers who have since been disciplined... [One of them, a] Lance Corporal... was demoted to private and fined \$500... under the Armed Forces Discipline Act 1971... and[the other, a] Private... spent 14 days in a military prison after admitting smoking the drug... [The private said the accused] had turned their back on him after the drug incidents came to light... Both accused have been in the Army for 11 years... [An] MP Sergeant Major... told the court yesterday that... a urine test... might have[been] mentioned... during the course of an interview, but [the military police officer] could not recall... The... Sergeant Major... said urine tests for cannabis were generally [performed] at the request of commanding officers, who received the results after analysis at Middlemore Hospital[, and then alleged that] positive results had been encountered among the troops.

...One soldier was dismissed from the Army and another demoted to private and fined \$400 after being found guilty of cannabis offences by a court martial in Auckland yesterday... Their lawyer... told the court the offences were not committed while the pair were on duty... [The] Lance Corporal... who was found guilty on cannabis smoking charges after an internal Army inquiry in 1987... had been due to be discharged on medical grounds last December after injuring her knee but had been held back until the charges against her were resolved... Another soldier who allegedly smoked cannabis with the pair will be tried by court-martial today.

...A third Auckland soldier convicted over the past week of smoking cannabis has been fined... \$250 and... censured... [In related news, cannabis] growers have destroyed native bush to plant [their crop on NZ]’s premier nature reserve, Little Barrier Island. More than 2700 cannabis plants and a campsite have been discovered in the Hauraki Gulf sanctuary, home to numerous endangered species... Police said the... largest of... [the] 27 individual plots... was about the size of half a football field. Kauri trees were trimmed to allow sunlight to reach the illegal crop, and soil was brought from the mainland, resulting in the introduction of exotic weeds. Conservationists said the growers’ actions threatened rare native flora and fauna, including the fragile kakapo recovery programme. If one rat reached shore it could have wiped out the entire kakapo population... Police believe the growers chose... the last sanctuary for a large number of species... because it is free of predators, such as possums, who feast on the lucrative crop... Police and Department of Conservation staff are now monitoring other islands such as the Poor Knights and the Hen and Chicken group. Yesterday, police raided four Northland properties...

This week two [people] were sentenced in the Warkworth District Court to... 12 months’ imprisonment after a police officer investigating their cannabis patch stumbled on to a booby trap and was peppered with pellets from a home-made pipe-gun... punctur[ing] his leg in 27 places... With a well-tended plant priced at up to \$3000, growing dope had become big business and was now the territory of gangs and “serious criminals,”... the Police Association president... said. “...There is real money in it and it’s no accident that people are prepared to take risks to grow and protect it. It started with a few nails on trees and razor-blades hanging down and now... [the] ingenuity involved in protecting these crops knows no bounds...”

...Dope growers threatening workers have forced a major security operation in... Challenge forests. The company... [which has just told its 1400 forestry employees that they] have to submit to drug tests or lose their jobs... will spend “a significant six-figure sum” on the new security measures... [but] would not say exactly what measures [were planned – although it is believed they involve ‘employing three security groups to patrol’ the company’s forests]... In the last marijuana growing season, from October 1996 to April 1997, police recovered 53,000 plants from [Challenge]’s forests worth an estimated \$160 million... The huge haul was a “considerable stake” which the growers wanted to protect and were “less than co-operative” when stumbled on by forestry staff... In addition to the threats, dope-growers also cause damage to property and vehicles, and cut down trees...

[‘Dope rife in forestry industry By noon each day, thousands of NZ forestry workers have each scaled more than 50 pine trees and dragged ladders, harnesses and metre-long pruning shears through dense gorse and blackberry bush. But instead of putting their feet up and taking it easy, many eat on the run while they go in search of a different kind of relaxation. A recent survey on cannabis use in the forestry industry showed 77% of silvicultural workers, who plant, prune and thin trees, had smoked marijuana in the previous year. Furthermore, the Canterbury University forestry student who conducted the survey found that 27% had used the drug at work. The figures come as no surprise to those in the industry. One former forestry worker, who does not want to be named, said many workers ate their lunch in five minutes and spent the rest of their break searching for the drug in forestry plots. “Pruners and planters come across cannabis all the time because they know where it’s more likely to grow,” the former worker said. “And if they find it, they use it because it’s free. For a lot of them it gives them an incentive to go to work because the money isn’t that great.” The Murupara resident, who worked in logging and milling around the central North Island for 12 years, said forestry workers smoking marijuana would rather be sacked than give up the habit. “People know there’s a shortage of forestry workers. If they’re going to sack 75% of the industry, who’s going to fill those spots? Until those odds turn around, the workers aren’t going to be too worried about getting fired.” In some rural communities, forestry companies admit they are hard pressed to find a drug-free labour market. CHH’s remanufacturing group manager said young guys with low qualifications tended to do the physically demanding silvicultural work. “We’re dealing with a labour pool who pretty much live day to day. Habitual drug use is a fact of life with silvicultural groups. It’s just part of the scene. If you picked another industry which employed people from that group, I wouldn’t be surprised if cannabis was an issue for them too.” The Challenge Forests executive who chairs the health and safety committee of the NZ Forest Industries Council said companies discovered that cannabis was being widely used while trying to improve workplace safety records in recent years. Many companies administered pre-employment drug tests’.]

...the Engineering, Printing and Manufacturing Union... says... Challenge Forests’ proposed drug testing of employees is illegal, [a]s... the policy... impinge[s] on employees’ out-of-work activities... “The employer is... exercis[ing] power it does not have,”... [I]t was legitimate for employers to be concerned about the state of employees at work, but if an employee chose to drink alcohol outside work and was not rendered unfit for work on the next working day “it is no business of the employer.” ...The union also believed urine testing breached the Privacy Act, which protects against collection of unnecessary information, and the Bill of Rights, which protects against being subjected to scientific or medical experimentation.

...Drug testing in the workplace [i]s... a growth industry in N[Z]... More... companies are calling on the services of urine samples... seeking profiles of potential employees’ drug use. In the U[S] similar set-ups have created a multi-billion dollar industry... It’s legal for companies to drug test workers in N[Z] under the Health and Safety Act but just what a company should do with a drug positive employee is a subject of debate. “In A[US] we believe that it will be used as a weeding out process... of [employees] who might be troublesome in other ways...” “In the U[S] we take a much more blanket approach and are willing to test a lot more people, and it’s just been taken out of the privacy, civil liberties debate.” Mandatory testings[have] been tried here. Mercury Energy tried to sack workers who refused drug tests but threw the idea away when unions protested... Air N[Z]... conducts pre-employment drug testing of pilots and other staff working in areas considered “safety critical” but... not... random testing...

[‘Almost 1/4 of staff randomly tested in about 50 firms have been found with drugs such as cannabis in their urine, the Employment Court in Auckland heard from a forensic toxicologist and client manager at the Government’s Institute of Environmental Science and Research (ESR). But the toxicologist disclosed that just 2% of 480 samples taken in the past 5 months from applicants to Air NZ showed drugs from any of the 5 targeted classes. That was under a pre-employment screening contract which the airline now wants extended to random and other forms of drug and alcohol testing for its 10,000-strong workforce, against a legal challenge by 6 unions. The airline’s chief executive testified earlier that drugs or alcohol were endemic problems at Air NZ’]...

Drug-affected workers may be getting through their employers’ drug tests undetected because of flawed drug-testing procedures, according to the [ESR]. The institute, which provides N[Z]’s largest workplace drug-testing programme, says most other organisations which offer commercial

testing and analysis do not meet the international standards it complies with. As a result... positive test results may not stand up under legal challenge... Challenge Forests told its 1400 employees last month that they would have to submit to drug tests or risk being sacked.

...[NZ] motorists could face breath tests for cannabis within three years. A British company that makes alcohol sniffers is developing a similar instrument to test for cannabis use... [I]t is still about two years away. Asked if N[Z]'s police would consider introducing the sniffer... the head of traffic safety at police headquarters... said yesterday: "We certainly will if such a device comes available." But[an] Auckland lawyer... who specialises in civil liberties, said the introduction of such devices had wide-ranging implications. Not only was there no evidence to link cannabis use to bad driving, but sniffer tests could seriously erode people's rights to avoid self-incrimination... People could refuse to undergo a test but at present refusal was treated just as harshly in the courts as failing the test... Driving vehicles under the influence of alcohol or drugs was already covered in the statutes, [the lawyer] said, and there had been many cases where people had been convicted after agreeing to undergo blood tests for cannabis... [The head of traffic safety] last night agreed that the issue of self-incrimination had to be looked at... [but declared:] "If you think cannabis doesn't affect complex tasks, would you mind your surgeon having a joint and then operating on you?" [The head then] said road deaths surged in the Far North and East Coast-Gisborne area during marijuana cropping season. A leading road accident researcher... is working on a study of whether cannabis is linked to road accidents. His report will be out in September... [Someone] who specialises in toxicology at the Auckland School of Medicine, said much work still needed to be done to determine how much cannabis a person could ingest before becoming incapacitated.

...A coroner has warned about the effect of cannabis on the judgment and reaction of drivers after a motorcycle was hit by a train, killing two young people in Feilding last year. The youth who rode the motorcycle in front of a freight train had been using cannabis, the Coroner's Court in Palmerston North was told. The drug diazepam was also found in a blood sample.

...['New Orleans police have blamed a bus driver's use of marijuana for a Mother's Day crash that killed 22 people. A blood test showed the driver, aged 46, who died of a heart attack on Monday, had taken marijuana between two and six hours before his bus, full of mostly elderly citizens, veered off a highway in the city and crashed into a concrete abutment on May 9.' In local news, millions] of dollars of cannabis, semi-automatic weapons... [a] helicopter... and a high-tech growing system have been seized in what police say is the largest drugs seizure in N[Z]. The raid, meticulously planned for more than three months, hit the huge plots deep in dense bush in the Whanganui National Park. At least 7000 fully grown cannabis plants... camouflaged with netting... [and irrigated by a petrol]-driven... mist-spray... system from water supplied by dams... were found surrounding two drying sheds and an accommodation camp... [powered by] solar panels and a generator... [I]t would take several days to remove all the cannabis[, which included about]... 200kg of dried cannabis... in wool sacks... 120 police from as far away as Auckland and Christchurch took part in the operation, codenamed Operation Ragwort. Four [people] were arrested at the scene... [They were] armed... but no shots were fired. Two of the four... tried to run away but were caught and mauled by police dogs... Eight others from the Waiouru area and Northland were taken into custody... Detectives suspect gangs are involved in the cannabis plantation and say further arrests are likely.

...The... police chief... in charge of the country's biggest cannabis seizure... says [his department] is aware of "three or four" other plots each holding several thousand plants... but [the department is] forced to let them grow... to maturity and be harvested... because they have neither the money nor the staff to deal with them... "We also know of farmers who have been offered big money to keep out of an area of their farm bush for six months. Some were offered more than \$200,000." Three years ago the Wanganui district commander... decided his patch would not take part in the annual national drug-recovery programme because of what was termed "prioritised funding."

...Last week's raid by armed police on a cannabis plantation in the upper reaches of the Whanganui River showed how wrong we are to insist, in the face of reputable evidence, on driving this harmless narcotic into the hands of drug barons who make millions from its scarcity value. The raid was enormously expensive and highly dangerous. It could easily have led to a shootout with the cannabis farmers' patrols, who were armed with... AK47 automatic rifles... [Helicopter pilots have already been] shot at while flying over Whanganui National Park... Police helicopters hovering above bush on the Coromandel during annual cannabis recovery programmes had also been shot at. Pilots and companies hired by the D[OC] to drop 1080 poison in Northland were also threatened with being shot down if they flew over bush suspected of containing cannabis plots... [Furthermore, there] are far more important things for 130 police to spend their time on – like patrolling the streets to curb rapist gangs...

[Far North] police say more Northlanders are prepared to do in cannabis growers as they fight to take back their communities. For areas such as South Hokianga the new attitude has seen former "hot spots" virtually clean of cannabis-growing.

...AN ESCALATING cocktail of drugs, guns and money is concerning residents of the Far North... [and local] police are obviously concerned about a trend for drug users and dealers to arm themselves. A little over a week before [a Far North resident] shot and fatally wounded one of the armed [drug]-robbers who had assaulted and threatened his partner... at their farm house... Kaitia police arrested a [person] at gunpoint after the routine stopping of a car. Their decision to draw weapons was made after the [driver] placed his hand across his chest towards a bulge in his jacket which turned out to be a small bottle of beer. [The] Kaitia police district boss... said officers had no option but to take seriously every incident.

...A High Court judge yesterday... remarked that people who wanted to legalise the use of marijuana should take a look at the way it had affected the lives of the three offenders... involved in a sword attack on a young couple in their... home. The incident... started when [the offenders] burgled a Papakura house. After returning home and drinking more alcohol, they went back to burgle a neighbouring home, expecting it to be unoccupied... The couple who lived in the home were attacked and... [one defendant] sexually assaulted the... 17-year-old girlfriend... with his tongue... They then left, but [the defendant] decided to put on a condom and return to rape the... [girlfriend. F]ortunately the police were on the scene by that time.

...[THE] ASSOCIATE Treasurer... has spoken out in favour of decriminalising possession of marijuana, saying it is no more harmful than alcohol... But [the minister] said his views were formed long before... his son was... convicted for possession of marijuana and... fined \$350 in the Whakatane District Court... The impact on a young person of a criminal conviction for possession could be far-reaching and was out of all proportion to the seriousness of the offence, [the minister] said. For example, many countries denied entry to anyone with a drug conviction... [The minister's view] is not shared by his N[Z] First colleagues. The Minister of Maori Affairs... the Associate Health Minister... and... the Minister of Youth Affairs... all have strong anti-drug views[, although]... the Minister of Youth Affairs... had tried marijuana[, as has the Associate Treasurer. A spokesperson for the]... Police Minister... said the issue was not under consideration by the Government.

...the Minister of Police... says people with minor marijuana convictions should have their criminal records wiped. But the same should go for other minor offences such as minor assault or property offences... "I do have some considerable sympathy with the view that convictions of this sort tend to hang around the necks of otherwise law-abiding citizens... As a member of the Government I would strongly support suitable legislation." The... Minister of Justice... [also] favours such an approach... [The Minister of Police] does not support decriminalisation but says... [that more] than \$17 million of police time (on the basis of \$70 an hour) was spent last year in enforcing marijuana laws... Eleven more MPs have come clean and admitted smoking cannabis... [The Minister of Police] would not say if [marijuana had ever entered his body, adding that] it was an offensive and prying question. A[n A]ct list MP... also said it was nobody's business, but... supported decriminalisation... [pointing out that] there was "a complete failure in the history of [hu]mankind to control any drug." Making it illegal had created a whole culture of violence and terrorising neighbourhoods.

...Sometimes a law is valuable even when it is honoured in the breach, perhaps especially when it is breached. It is hard to believe that many youngsters smoke marijuana for its own sake. I dimly recall an awful lot of sucking and gasping and soreness in the throat for a few minutes of

giggling while the world slowed down. It is hard to credit that anybody pays or risks prosecution for a drug so dull... Something other than soporific experience has to explain the drug's attraction to them. Probably it is the simple mischief of it; the daring-do of flouting a law... That is... a reason why some say legalise it. Remove the element of defiance, they say, and young folk will lose interest. Maybe, but what then will they challenge? There are, as the legalisation lobby insists, far worse narcotics than cannabis. Some of those concoctions are said to be rife in schools in certain cities of the U[S]. We are lucky to be drawing the line on a soft drug.

...When it comes to cannabis, MPs are all talk and no action... [A]mong MPs who favour a law change, no one is coming forward to... bring a bill to Parliament. That produced a huge sigh of relief in National ranks yesterday. The last thing the Nats want is to be seen going soft on drugs.

...The National MP for Tamaki ...[i]... in favour of decriminalising cannabis and wiping criminal offences from the public record after a period of time... [The] lawyer and former police[officer]... sees no good reason for people who... possess... cannabis... for their own use to be dealt with under the criminal law. "It's a... waste of police time... clogs up the courts and gives young people a criminal conviction they don't really need. The way to deal with cannabis is education, example and encouragement not to use it." ...most offenders were aged... 15 [to] 25 and did not re-offend.

...After nearly six years in the political wilderness, the Misuse of Drugs (Drug Paraphernalia) Amendment Bill is due to be reported back to Parliament. Originally introduced in 1992, the watered-down bill empowers the Minister of Customs to ban bongs, water pipes and other paraphernalia used to smoke drugs. But the proprietor of an Auckland pipe shop said the proposed law would drive her out of business while having no impact on drug use. About 50[%] of sales at her Karangahape Rd shop were pipes, mostly imported... The proprietor... could no longer afford her central city rent if [ordered to] not sell pipes. Drug users would make their own at home... [The chairperson] of the parliamentary commerce committee, agreed that the bill would have little impact on drug use but said it addressed concern about drug paraphernalia being sold openly. The original bill would have outlawed tobacco pipes and common kitchen implements which could be put to illegal use.

...I FIRST smoked dope at 17. I'd been looking forward to it for months, ever since I'd escaped parental scrutiny in the provincial town where I'd grown up and come to university in the big city. The smoking evening, arranged by a flatmate who knew "someone who actually had some," was keenly anticipated by the whole household, so I was alarmed to feel no perceptible effect (though not as alarmed as the generous supplier; [who was] watching some expensive Afghani hashish go up in smoke and I was reporting nothing). Experienced smokers told me later that there was no cause for concern. It was common not to feel any effect from the first few smokes and they were proved correct within a few months. Some would say that that evening around the kitchen table of a student flat in Ponsonby was the first step down a path to perdition, but whether or not you agree with them rather depends on your view of heaven. Certainly in the ensuing quarter century, I have tasted most of the fruit forbidden by statute and a bit more besides. That is not to say that I spent the rest of my student days in a drug-induced haze. I finished a degree of moderate academic distinction and... have never had any trouble holding down a job. My OE was considerably enlivened by the consumption of stimulant... substances which were either ludicrously cheap in the countries where they were bought or, best of all, growing wild and refreshingly legal. It's one way to spend your 20s and those indignant of my lack of remorse might reflect that I never engaged in the young [guys'] preferred pursuits of the day: getting drunk, driving fast cars and beating up other young [guys] (preferably all three at once) and impregnating young [gals] whose names they barely knew. I wondered then at society's apparent indulgence of those young [guys], who were fondly regarded as "sowing their wild oats" while I and my peers were reviled as "druggies." And I wonder now as my teenage son confronts a 90s version of the same confusion... Yet when [a current affairs programme] was tossing around the issue of decriminalisation on television this week and my son asked me what I thought about the matter, I froze, momentarily unsure of how to reply... If my answer seemed to minimise the potential danger of drugs, I would be failing in my protective duty as a parent. But if I backed a law I genuinely believed to[be] wrong, I would be betraying my principles – a bad habit for any parent under adolescent scrutiny... THEY say you're getting old when cops and politicians start looking young. Here's another measure: you're getting old when you have to hide your dope-smoking from your kids the way you used to hide it from your parents... HERE'S why I remain uneasy about my children's chances of negotiating the drug-strewn path of adolescence even though I have emerged sufficiently unscathed to pass inspection. First, I'd left school and home by the time I first saw dope; my children were hearing about the dangers of drugs before they gave up sleeping with their teddy bears and fourth-formers, red-eyed and obviously ripped, are to be seen on the way home from school in any part of the country. Second, dope, like everything else, has improved out of sight since I was a kid. We smoked joints the size of penlight torches full of leafy green matter that growers these days wouldn't use for compost... [M]y children are in danger that I never dreamed of. Third (and this one's the kicker), my kids are navigating the treacherous waters between childhood and adulthood in days more stormy than we, the children of the 50s, ever experienced. The world into which they will set sail is infinitely more hostile than the one we inherited. When we were young, life seemed like a game in which we all held winning hands. Too many modern kids stare at a future of joblessness, crime (much of it connected with the dope trade which wouldn't exist if the drug were legal), deceit, dysfunction, dishonesty and despair. The epidemic of dope-smoking in schools may look like a problem, but it's simply a sign of a deeper malaise... [I]f some kids would rather get stoned than get educated, that's not a drug problem, that's a social problem. We need to ask ourselves what kind of world we're offering our kids if they'd rather burn their brains out than take it from us. It's all very well telling our kids not to take drugs, but we need to make sure that we are giving them a reason not to.

...A highly regarded survey using members of the Multidisciplinary Health and Development Unit of the University of Otago has... [found] significant co-relationships between cannabis use among young people on the one hand, and unemployment and violent behaviour among the same group on the other. That's... [just] what the opponents of legalising cannabis, or making its use non-criminal, want to hear. See, they cry, not only does cannabis rot your brain, shrink your testicles and turn your teeth green, it also makes you violent and stops you getting or keeping a job! Now that's what I recognise as a coincidence – just like the coincidence between the piece I wrote calling for cannabis to be legalised and the start of the current furore. I take no credit for prompting such unlikely figures as... assorted junior cabinet ministers and MPs, the outgoing president of the Law Society... and the august Criminal Bar Association itself, to burst suddenly from cover like startled stags and agree that the stuff does so little harm it should not be a criminal offence to use it. Of course it's a coincidence [that guys] of a high cannabis-using age, between 18 and 21, are not too hot at holding down jobs. Of course [guys] of this age are more inclined to violent behaviour than other groups in the community. And of course [guys] of this age, for reasons strongly associated with the desire to give the fingers to prohibitions of every sort, are more likely than any other group to use cannabis. [However, there] is no possible justification... to say that using cannabis leads to violence and unemployment than to argue... that the figures prove beyond a doubt that violent behaviour and unemployment lead to cannabis use. Just a flaming coincidence! It is rather sad that the best reasonable people can hope for is decriminalisation... The sensible thing would be to take a deep breath and legalise it, a move which would drive the gangs to the wall. I allowed myself a hollow laugh when I read the crassly stupid comment by Labour's police spokes[person]... who said proposals to legalise cannabis would be greeted with delight by criminals. Even a Labour MP should be able to see that the last thing the gangs want is to have their warehouse stocks made virtually worthless... Another sad thing is the continued bandying about, by people who should know better, of the word "addicted", which means clinical withdrawal trauma when supplies are withheld. Cannabis is not addictive, any more than... sex. People squeal when they are deprived, but there are no medically recognised withdrawal symptoms if they have to go without.

...Recent investigations show... marijuana is addictive, causing drug dependency by reducing the body's production of endorphines... It is ironic that at a time when society is moving to halt the harm... tobacco and alcohol... causes, we are having marijuana promoted instead. Alcohol and tobacco are too thoroughly ingrained in our society to contemplate having them removed by prohibition. We must stop abuse of them by other methods. [But] we still have the opportunity to keep marijuana from becoming a more widely socially accepted drug... If we permit marijuana to be

harvested and smoked legally in N[Z] we will truly reap what we have sown... [and, as] a law student[, it would remove a source for my future income!]

...A... lawyer... was re-elected unopposed... as party leader... [and a psychologist] as party president... at... the... A[LCP] conference in Levin at the weekend... [while a] roving mayor and one-time N[Z] First parliamentary candidate, has popped into politics again – this time as deputy leader of... the... party, which gained 1.6[%] of the vote at the last election... The party announced this yesterday, expressing great pleasure at its latest acquisition. “[Our new deputy leader] is a great communicator, with years of experience in public speaking and campaigning... Our job will be to get the message across that N[Z]’s prohibition policies breed crime, corrupt the police and do not have majority public support except from older age groups who have never tried cannabis.”

...Outlawing cannabis is wrong... a high-powered group of N[Z] doctors and scientists says. The Drug Policy Forum Trust has issued a discussion paper[, which]... says freeing the use of cannabis would have little adverse impact on public health. It could even be “mildly positive” because alcohol and tobacco use would fall... The leader of the A[LCP]... was delighted with the paper[, which]... concluded that cannabis appeared to be harmless for about 90[%] of the people who used it (however, ‘chronic cannabis users experienced impaired frontal brain functioning, which interfered with attention, memory and concentration and was similar to some symptoms of schizophrenia, said a senior registrar of psychiatry in Newcastle, AUS’)...

The adverse effects of cannabis... on schizophrenics should be widely publicised, a coroner’s inquest into the... fatal... shooting of... [an] Invercargill... sickness beneficiary... on September 27, 1995... by... police... has recommended... Mr Gellatly... had broken into a sports shop... fired numerous weapons at random and was shot... in the heart... while trying to escape with a .22-calibre rifle... [P]sychiatric evidence... showed... heavy use of cannabis “impacted very badly on his schizophrenia.” The hearing heard that... [it] was recognised that cannabis use among schizophrenics produced more symptoms and relapses and they were less likely to take appropriate treatment... Mr Gellatly’s condition had deteriorated significantly in the months before his death but this was undetected by Southern Health mental health staff... [where] too few psychiatrists were carrying too many cases... While mental health services had improved in Southland since 1995, Mr Gellatly’s death had speeded up the reforms...

Young people who suffer from schizophrenia and are drug users have “dual diagnosis,” says [a] Professor... of Auckland Medical School... [The p]rofessor... says that the Schizophrenia Fellowship is disturbed by the association between the disorder and cannabis use, and does not know what to do about it. A[n A]uckland Schizophrenia Fellowship liaison officer... says... over half the young people (under 40) with schizophrenia that her organisation is in contact with “would be smoking dope.” ...Some schizophreni[cs]... find... cannabis... reduces their anxiety, at least in the short term... [A]necdotal reports indicate... cannabis can neutralise the distressing anti-psychotic medication side-effect of akathisia (restlessness of the legs and a feeling of inner restlessness)... In the U[S] they may well be using cocaine instead of cannabis because it is cheaper and more available... [said the professor, who] was responding to a warning this week by the Christchurch coroner in his report on the fatal shooting of... Eric Gellatly... [But an AUSn] drugs researcher... takes a more cautious line on the link between dope... and schizophrenia. [The AUSn] recently reviewed cannabis studies, looking at both the research findings and how well the studies were conducted. Some were so poorly done they had to be discredited.

...[an] Associate Professor... has a lot to do this summer. That, one senses, is usual for Fellows of the Academy of the Royal Society of N[Z]. Her election to the elite among elite of the country’s scientists was recognition of the enormous reputation [the scientist] has achieved internationally for her research into the implications for Government policies of alcohol and drug use. On her desk is a fax from Washington telling her that her work was recently quoted in the... [US Senate. The associate p]rofessor... has been the key figure in alcohol and drug research since her appointment in 1980 as executive director of the newly established alcohol research unit at the Auckland University School of Medicine. That appointment also saw the beginning of her long association with the W[HO] and her work on its panel of experts studying alcohol and drug dependency. [The scientist] came here in 1970 as a raw 21-year-old psychology graduate from Sheffield, England, to a teaching job at Otago University and to her PhD on the acute effects of cannabis intoxication... [The scientist was, in her own words], the first and only N[Z] recipient of a licence to administer cannabis to human subjects... [The associate p]rofessor... is looking forward to work next year which will follow up a national drug use survey done in 1990.

...the latest... polls reveals that 70.6[%] of the country believe N[Z]ers should not be able to grow or buy cannabis for their own use... Aucklanders were more inclined to be in favour of a change to the law. Nearly one in three people in Greater Auckland said people should be able to cultivate cannabis... More [guys than gals] were prepared to let people light up... [Incidentally,] South Auckland police are sending letters to landlords, telling them their tenants are selling cannabis. The letters also warn property owners that if drug dealing continues they could be prosecuted for allowing their premises to be used for an offence under the Misuse of Drugs Act... An Otara house that police raided four times in the past six months suffered major damage at the hands of... police on Monday, prompting[a local] Labour MP... to claim police went “on the rampage” smashing doors, windows, floors and walls... [In response,] the... police... said the damage... could serve as a lesson to landlords not to let their properties be used for dealing drugs. An Insurance Council spokes[person]... said damage caused by police in a search would not necessarily be covered... If the home owner could show they had no idea their property was being used for such illegal activities, an insurance company could pay out.

...Two cannabis joints wrapped together in tinfoil explain the origin of the name commonly given to suburban houses where the drug is sold. Tinnie houses are more common in some areas than others – Glenfield on Auckland’s North Shore, for example... is one such area where the police will[regularly] swoop with a search warrant hoping to find drugs... [Tinnie houses are the end of the cannabis supply line. Police often target them in the hope that people working at the bottom of the line will provide the names of those higher up it in order to gain a reduced charge for themselves. Growers generally sell in bulk (e.g., oz or lb lots) to dealers, who then split the cannabis into tinnie-sized lots. The cost of an oz is related to the fact that marijuana is illegal – growers’ overheads are minimal (even people who buy hypergrow systems can recoup their overheads by selling just one plant, and they can produce at least 4 harvests – or 16 plants – per year!). It is more economical for cannabis users to buy an oz than the equivalent weight in tinnies, but many can’t afford to pay around \$300 in one go so they have to buy tinnies at regular intervals. Furthermore, many users are scared to possess larger quantities of cannabis because of the threat that it might be stolen by associates or found by the police.] The tinnie houses often contain nothing more than a table and chairs and a television... for the temporary inhabitants to watch... Characteristically: • They open while the cannabis is in supply, and close when the supply dries up. • Some will open only on certain days, others for as little as three hours a day. • One drug dealer will service a number of tinnie houses, run by a trusted associate who is often younger than 17... Sometimes they are gang prospects, in other instances solo mothers. The associate[often] takes... stolen property in exchange for the drugs, then on-sells the property... [T]here are some in the police ranks who do not believe the hierarchy pays enough attention to... tinnie houses... In a recent successful raid of a suspected tinnie house in Takanini, the police found the house and garage full of stolen property... [A] criminologist... who served time in the 1970s for dealing heroin... remembers how the stolen property network opened to him as soon as [the budding-criminologist] began dealing drugs... [The criminologist] believes everyone involved in drugs is a receiver of stolen property... If a drug dealer had a watch or a boat it would have been stolen...

[‘Gangs and drug dealers are increasingly using rented properties to avoid having houses seized under the Proceeds of Crime Act. Police have taken \$11.6 million worth of cash, houses, boats and motorcycles in the past eight years under the act. They say it is hurting criminals, but admit the use of rented properties for “tinny houses” has increased. Rented properties can’t be forfeited under the act. The largest overall seizure is \$1.5 million of property and assets taken from an Auckland drug partnership last year. Other big hauls include a \$495,000 South Canterbury farm last year. Most of the money goes into the Government coffers, although mortgages on seized properties are paid.’]

...A house in Eastbourne was forfeited to the Crown yesterday because one of the owners was growing 228 cannabis plants in its basement. In the Wellington District Court, [the]Judge... ordered that the home... be sold... [and said the grower's] de facto wife... was entitled to 50[%] of the proceeds after the ANZ Bank had covered a mortgage against the house because [the de facto wife] had known nothing about the hydroponic cannabis operation. The judge also granted her compensation of \$1200 for a tax bill. The house has a 1996 government valuation of \$285,000. [The judge also sentenced the grower], aged 43, a cleaner, to two years' jail... [The grower] was growing two to three good-quality crops a year and passing some to an associate for selling. The associate helped meet power costs and had paid \$20,000 for the basement to be built.

...A Lower Hutt [cleaner] jailed and forced to forfeit his house after his elaborate cannabis operation was uncovered... has been hit with a "barbaric" penalty, says his brother. "It's almost unbelievable that a person that grew marijuana in his own home for his own use gets two years' imprisonment and fined a couple of hundred thousand dollars,"... It is the first time a home in the Wellington region has been forfeited for a drugs conviction... Commenting on the court-ordered forfeiture... the Hutt police area controller, said: "That's justice..." The research officer for A[LCP] Wellington... described the sentence as "double jeopardy." ...[the accused] should have been [jail]ed or had his property forfeited, but not both.

...*FLYING HIGH* Courier pigeons are being used to smuggle drugs into a jail in southwestern Colombia. The "narco-pigeon" scandal was uncovered when a pigeon... weighed down by packets of marijuana... crashed into a wall near the municipal jail in Buga, in Valle de Cauca.

...Commuters smoke so much marijuana on South African trains that the urban railway company, Metrorail, is worried about the effects of passive marijuana smoking on its conductors. Even though it is outlawed, marijuana, or dagga as it is known in South Africa, is openly smoked on suburban trains carrying millions of commuters between the country's cities and satellite black townships... [In local news, c]laims by former undercover police officers that they lied under oath are evidence of moral corruption within the force, says a Victoria University senior law lecturer... [28] agents, including a serving Auckland officer, have made statements to the Police Association saying they have been psychologically damaged by covert operations. Many... say they lied under oath by telling judges that evidence used to convict criminals was not gathered while they were under the influence of drugs... [T]he former officers had highlighted a problem in the police force. "To nail someone they believe is guilty, they break the law quite regularly... It is not for monetary gain, but it is a form of corruption and strikes at fundamental N[Z] justice... However... I imagine police officers all over the world do that." A former agent... supported [the lecturer]'s comments... "Our whole programme is based on drug use. How can anyone say there is no corruption?" The... officer[, who] testified in 1988 during a drug-dealing case in the Whangarei District Court that [it] was not intoxicated, nor was his memory impaired wh[ile buying]... cannabis from a dealer... [- but now admitted to being stoned and that] his recall must have been affected... [-] had evidence of drug supply, insurance fraud, forgery and perjury within the police.

...AN INVERCARGILL-born A[US]n cop is to sue the Queensland Police Force for more than \$500,000 after [the cop] was set up on a drug bust and arrested following a personality clash with his boss. [The former]Senior Constable... who... has worked in the Hong Kong and A[US]n police forces over 20 years, receiving bravery commendations and community awards... was acquitted after a two-day trial in Queensland's Sunshine Coast but says his life has become an "unbelievable hell" in the eight months since his arrest. "I've separated from my wife... and my three kids and lost my career and my health over this. I can't believe Queensland police are now advertising... for Kiwi recruits after the way they treated me." ...a Queensland magistrate threw the case... out of court[, saying]... the circumstances of the alleged offence of supplying marijuana to a [person] who worked for the constable's immediate boss... was... "outrageous, bizarre and incredible."

...An internal inquiry into claims that Gisborne police supplied underworld contacts with drugs in exchange for information will take at least 10 days to complete. The head of the investigation... said a uniformed branch constable had been stood down from duty pending the outcome of the inquiry, but no charges had been laid... [C]omplaints had come from both the public and within the police.

...Four Gisborne police officers and a former detective have appeared in court charged with supplying... or offering to supply... drugs to informants in what could be N[Z]'s biggest case of alleged police conspiracy. After a five-month inquiry involving up to 15 investigators from outside Gisborne, the [officers] were arrested at the city police station yesterday morning... Several of the informants are linked to the Mongrel Mob. Other charges involve conspiracy and aggravated robbery. "I wouldn't for a minute say we have a N[SW]-size problem on our hands, but having said that, it is alleged corruption," said the Midland region commander[, who also]... said the long inquiry and subsequent arrests had had a devastating effect on the morale of Gisborne police... The Police Association yesterday stood behind the accused officers. Its president... said: "I would ask people to wait until the full facts come out before they make up their minds on this." There was no suggestion of personal gain involved in the charges... The NZ First MP... who was commander of Gisborne police at the time the alleged offences took place, said... that... the officers involved... were "extremely industrious catchers of criminals." ...The [accused] were... suspended from duty.

...The public gallery of the Gisborne District Court was packed with police officers yesterday morning when four of their colleagues and a former detective made appearances on drug-related charges. Three officers... have been remanded on bail to appear for the hearing of depositions... on... August 25, and... September 1... [The other two defendants], both facing more serious charges, were remanded until August 11, pending an application to have their depositions heard in Hamilton... [T]he Crown believed it was appropriate to have [their] case moved to another centre... [The officers] consented to the continued suppression of the complainant's details.

...A POLICE Complaints Authority investigation has been launched into fresh allegations of misconduct by Gisborne police. In the latest incident, a Mongrel Mob gang member... [claims to have been] assaulted by officers... this month... [after the] gang member... was arrested for assault... During the arrest, a scuffle between the gang member and police broke out, during which a police[officer] was allegedly kicked in the head. The... assault... by police officers [allegedly occurred later on] in the cells at the Gisborne police station... The officers accused are still at work. Gisborne police officers... believe Mongrel Mob gang members were engaged in an orchestrated campaign to target police and get them removed from duty... The... Police Assistant Commissioner... from police national headquarters in Wellington, would not comment on the likelihood of an organised gang movement against police, but did not think there was any proof of widespread police misconduct in Gisborne.

...A CHARGE against one of five Gisborne police officers accused of supplying informants with cannabis will be withdrawn next month.[The] Crown prosecutor... confirmed no evidence would be offered... when... [the] constable... appears in the Gisborne District Court on November 5... A more serious charge of offering to sell cannabis was withdrawn in August because of lack of evidence... [Speaking of which, cannabis] with a street value of \$8000 was stolen during a weekend break-in at the Blenheim courthouse. Thieves apparently forced a door at the back of the courthouse, taking 1.3kg of cannabis that had been used as an exhibit in a trial. [A]Detective Sergeant... said the break-in would prompt a revision of security[, although]... exhibits would normally be kept elsewhere... [A] "unique set of circumstances" led to it being held at the court... "It won't happen again. The thief was very lucky..." ...Six search warrants had been executed in a bid to find the stolen cannabis[, which]... was not recovered... [but] several unrelated drug arrests were made.

...Allegations that two Gisborne police[officers] engaged in corrupt activity to elicit information from informants was rubbished in court yesterday by [an]Auckland QC... a depositions hearing in Gisborne District Court[heard] that the prosecution's three key witnesses each had a "monumental" list of previous convictions... [and] were also associated with the Mongrel Mob. Earlier, [the] prosecutor said that corruption was able to "flourish" among members of the Gisborne police because of a "lax way" of dealing with informants... [A] former detective sergeant[, who is]... now a company director, faces one charge of supplying morphine, four of selling cannabis and one of attempting to obstruct the course of justice... [A serving] Detective Sergeant... faces... [similar charges and one charge of arranging] for the Elgin PostBank to be robbed in January 1994. A street youth was "recruited" by a police informant to commit the robbery. The robber took \$11,000 but was caught by [the accused, who's

alleged] intention had been to obtain a good result for his service record... Nine new charges of stealing cannabis owned by the police were also laid... The hearing... is... expected to take two weeks.

...A police informant, who is now a key prosecution witness... claims [to have been] given drugs about 30 times by [the accused Gisborne] Detective Sergeant. The [witness], called witness A, said that to get drugs [the witness] had only to ring and ask. Witness A, a prison inmate whose identity cannot be revealed[, allegedly]... was “committing crimes all over town” during his time as a police informant[but] was left alone because of [his relationship with the accused]... Members of the public were asked to leave the courtroom before the informant... was called to give evidence.

...In the witness stand, a Mongrel Mob member turned police informant was describing how much the gang hated the... Detective Sergeant... Hated him so much, in fact, a “hit” was being planned on the head of the crime control unit which had so successfully hindered the mob’s crime... It would be hard to find a clearer explanation for the 10 months of anguish [the detective sergeant and 4] colleagues have endured... “It was revenge, payback time. These career criminals wanted us out of action. We got into this mess because we were doing our jobs. If we’d been [8]-hour-day cops this would never have happened,”... The mob doesn’t scare him but [the detective sergeant] does worry about the threat to his family... [after it and a former colleague] were yesterday cleared of... [all charges, 3 constables] were last month cleared of [similar] charges... While the [accused] are relieved their ordeal is over, they’re angry the inquiry, dubbed Operation Vine, ever got off the ground. It began in May 1996, but it wasn’t until just before... Christmas [that the detective sergeant] became aware of it. Ironically, it was one of his informants who tipped him off. It was the start of what would become known as... “the biggest form of police corruption ever seen in N[Z]”. And on the face of it, that seemed so. But as details of the case unfolded over the past two weeks... it seemed more like the plot of a seedy B-grade cop movie... There were allegations the pair had given away thousands of dollars worth of cannabis – which they’d stolen from the Gisborne police station drug safe – to informants they’d already paid money, in return for information on the whereabouts of Terrence Thompson, on the loose last year after fatally shooting Flaxmere Constable Glenn McKibbin; [and for] the killer of Mongrel Mob prospect Stuart Te Wano, murdered in 1995... There were also allegations the [accused] arranged for cannabis to be supplied to prisoners, but the most farcical charge of all... was the allegation [the detective sergeant] set up an armed bank hold-up so [it] could “catch a bank robber”... At various times, witnesses admitted lying in an attempt to “destabilise the Gisborne police”, and one was “saying anything to keep the Hamilton police happy”... In his closing address to the court... the... defence counsel... said the witnesses’ determination to destabilise the police was helped by “an inquiry team all too ready to accept a pack of lies”. And that’s what hurts [the accused] the most. They say they were treated as guilty from the outset and can’t believe “the administration was ready to believe those scumbags over us”... Now they... are considering suing their police bosses for malicious prosecution... The... Assistant Police Commissioner... yesterday defended the decision to bring the charges against the officers, saying the action was necessary if the public was to maintain confidence in the police.

...[the police] spent more than \$500,000 and 6000 hours investigating [the] five Gisborne officers accused of supplying informants with cannabis... [The] Police commissioner has defended the costs, saying allegations of impropriety against police officers were treated “very seriously” and demanded “extensive inquiries”... The final cost of the investigation and prosecution of the officers is likely to be much higher...

THREE Gisborne police constables cleared of charges they supplied informants with cannabis may be off work on full pay until next year... The *Sunday Star-Times* understands they could be on stress leave for the rest of the year, while deciding on their futures. The [constables] are bitter at their treatment, but want to return to the force... The officers have not been at work since February, when they were stood down...

THE first of three Gisborne police officers... returns to work tomorrow – but getting back in uniform has been harder than [the former] Constable... thought. It’s not the 10 months spent clearing his name that have made it so difficult – it’s because the easy-going cop has been out of uniform so long [it] doesn’t own a full regulation set... [The cop] hasn’t been in uniform since early 1995, when [it] joined Gisborne’s Crime Control Unit, which works in plainclothes... While [the cop]’s apprehensive about setting foot inside the Gisborne Police Station again, [the cop] knows it’s time to get his life back on track... [The cop] returns to uniformed section work, and while [the cop is annoyed it]’s not returning to the Crime Control Unit, [it] hopes to get back on the elite crime-fighting squad. “I’ll have to learn a few new things. There have been some new regulations and laws introduced in the last year,” said [the cop], who passed his sergeant’s exams while... suspended.

...Frontline police officers and lawyers are condemning as dangerous the suggestion of paying... cannabis to police informants. The view has come from the... former Gisborne police district commander and now chair[perso]n of the parliamentary justice and law reform committee... [The NZ] First MP... said that in some cases cannabis could be used to pay off informants. Police would sometimes... pay “thousands” of dollars for good information, [the MP] said on *National Radio* yesterday... Cannabis could also be used in limited circumstances. “Say someone was threatening to kill someone... like a hostage situation or a kidnapping situation... and we had the chance to do something about it... or if you are looking for firearms that you really need to find...” ...The Police Association rejected [hi]s suggestion... The association president... agreed with the use of cash... to... buy information... but said no to drugs. “Police would never use that, even in the extreme circumstances, because police would find themselves on a slippery slope. The integrity of the police... [has] to be protected for the good of N[Z].”

...Undercover police officers have supplied cannabis to criminals, the Police Assistant Commissioner... has confirmed. Two undercover agents claimed this week that covert agents commonly provided informants with cannabis for information. This followed a statement from the N[Z] First MP and former Gisborne police chief... that police officers could resort to swapping cannabis for tips on serious crime. [The assistant commissioner] said a technical supply might be unavoidable, particularly if an agent’s cover or life was in jeopardy. But such situations were rare, and the circumstances were “reported and scrutinised internally. They are also subjected to the scrutiny of the court process.” But [the assistant commissioner] said the cannabis was not given in return for information. “Our policy on informants is quite clear... The supply of cannabis is an ‘earn’ to an informant and is actually promoted in the undercover programme,”... Another former undercover officer... said [it] had regularly carried an ounce of cannabis – provided by his undercover operator – to smoke with criminals. Officers did this to “blatantly get inside the criminal fraternity.” The Police Association president... said... “Supplying cannabis to criminals is not really a goer... Once you fall into that trap, you are setting yourself up and making yourself vulnerable to criminals. You are breaking the law by supplying cannabis.” [The president adde]d that if police supplied cannabis to informants, they would then have the dilemma of whether to prosecute the person for possession of drugs... [In international news, t]he *Independent on Sunday*... has become the first British national newspaper to call for the legalisation of cannabis... A quarter of disabled people in Britain questioned in a survey are taking cannabis with their doctors’ approval. The survey, in the journal *Disability Now*, also found 195 of the 200 disabled people questioned believed that cannabis should be legalised.

...The British [PM]... and his Labour Government faced acute embarrassment yesterday after the 17-year-old son of an unnamed cabinet minister was arrested for selling cannabis... Several members of... [the] 22-member cabinet... have sons... The case was revealed... over five pages... in the *Daily Mirror*... whose reporter... had bought the drug from the youth in a London public house. The newspaper... told the minister, who confronted the son and went with him to a police station... [after which the son] was released on bail... The boy was not named as defendants under 18 remain anonymous until formally charged with an offence... Government lawyers will now decide if the minister’s son will face charges. British law lays down a maximum sentence of 14 years’ jail for supplying cannabis but offenders are normally fined if the quantity is small[(although ‘statistics show that 45% of British police give people a verbal warning for possession of cannabis or hashish’). The]... Government has followed an ultra-hard line on drugs. It said a campaign by the liberal *Independent on Sunday*... to have cannabis legalised was irresponsible.

...an article called “Family Values,” written... for the *Independent*... mined the opinion polls to provide a unique portrait of human behaviour in post-modern Britain... It is a picture that is relevant... because... it... [shows that 20%] of the British population has smoked marijuana.

...[a former Beatle (r:p811, ln27 + 1050, ln11), who was] promoted to the British establishment this year with a knighthood, says cannabis should be legalised... [since] it was pointless to fill jails with people who smoked cannabis because this was likely to turn them into criminals. [However, his] comments angered anti-drugs campaigners[, while a spokesperson]... for the British Home Office said... [his] comments were “unhelpful.” Citing his own experience of being arrested for possessing marijuana in Japan in 1980, [the ex-Beatle claimed to have] learned nothing from it.

...[a] Rolling Stone... says his first experience with marijuana did not come courtesy of [a knighted Beatle], contrary to what the former Beatle is claiming. [The Beatle] told his official biographer that in 1966 [it introduced the Stones' singer] to pot in London. “How would [it know?]” the singer said, when asked if this was true. The 54-year-old... [claimed to have] first smoked marijuana “somewhere in California” during the Stones' first [US] tour in 1964, and that [the Beatle] was nowhere near. [The singer also] noted that marijuana was hard to come by in England in the early 60s.

...[a] campaigner for the legalisation of cannabis was arrested yesterday after opening Britain's first Dutch-style cafe openly selling the drug. The multiple sclerosis sufferer, who uses cannabis to ease his symptoms, was involved in a scuffle with police soon after opening The Dutch Experience in Stockport'.

...want a] whiff of Skunk? Some dazzling Northern Lights? How about a Great White Shark bite? Different tokes for different folks competed yesterday for the attention of high rollers judging the 10th annual Cannabis Cup... 2000 marijuana lovers... are in the drug-tolerant Dutch capital for their yearly blowout, a five-day “harvest festival” organised by the [US]-based *High Times* magazine. Judges puffed their way through bags of home-grown weed as paying guests took a special bus tour of Amsterdam's famous marijuana-selling “coffee shops.” “You have to pace yourself,” said... the event's publicist[, who does]... not smoke – not that it mattered. Sitting in the corner of a room thick with sweet-smelling smoke, [the publicist] confessed to being high for... days on the secondhand fumes. More than a five-day marijuana binge, the festival is an attempt to show the world what cannabis users can achieve... There are seminars on religion... medicinal use of marijuana, as well as a presentation promoting hemp... This year's heady mix is completed by a hemp cloth fashion show, a... trade exhibition... and... a... ceremony honouring the late... Bob Marley...

Reggae great Bob Marley made no secret of his passion for marijuana, singing an album in tribute to the drug that is regarded as a religious sacrament by his Rastafarian faith. No surprise then that Marley will be the first inductee into the High Times Cannabis Hall of Fame, the latest addition to the annual Cannabis Cup festival, which runs until Friday in Amsterdam.

...They tell a story about UB40, the Birmingham reggae band which took its name for satirical effect from the official number of England's dole application form. In Auckland for a series of concerts in the late 80s, the eight-strong ensemble and assorted support staff piled into the mini-bus the promoter had hired, complete with driver, to ferry them to the concert venue. Before the motor had even fired, the air inside the van was filled with such thick clouds of marijuana smoke that it was impossible to see outside. The driver, unprepared to work in such conditions, exited the van and resigned on the spot. Stories like that grow in the telling, so when I read our report yesterday about [a US] blues trio... being busted at the airport for possession of marijuana... and remembered the UB40 yarn, I decided to check the facts with someone who was there at the time. Sure enough, it was exaggerated. The driver didn't quit; [but] turned round and gave the boys from Birmingham a piece of his mind. Unless and until they put their “cigarettes” out... the bus was going nowhere. History does not record where the visitors obtained their smoking requisites, but it's a fairly safe bet they didn't bring them from home. If they had, the dogs that sniffed out the aromatic contents of the [US blues trio's] pockets would surely have noticed. UB40 would have known that their widely professed passion for the demon weed assured them of the most minute attention from the Customs Service. So it seemed astonishing that the band's trombonist and one of its roadies were done for possession of cannabis on a 1993 visit. The promoters who negotiate with rock stars' management to set up tours routinely warn them of the dangers of trying to import drugs. “We send them a fact sheet,” explained one yesterday... No one's saying that all rock stars do drugs, but there is an association at least as strong as that between used car sales[people] and gold chains. For all that, no promoter I spoke to had ever seen a demand for drugs in the contract “rider” – in which bands spell out to the last bottle of Evian and reel of dental floss what they expect in their dressing rooms. “If they want them, they can get them,” said one. “It's not as if it's hard to get. No promoter I know would ever get drugs for an act. But [we] might suggest they talk to the electrician or the driver or something.” Another hardened observer of rock tours suggests that the performers who bring drugs in are doing so absent-mindedly rather than deliberately, having failed to check their pockets after the party a few nights ago. And the tiny quantities involved... bear out that view... in most cases... It seems unlikely, to put it mildly, that a highly paid entertainer employing up to 40 people in a multi-million-dollar, trans-global enterprise would imperil it all for the sake of a few dollars worth of dope.

...researchers[have] identified two main influences on Maori communities in recent years that have compounded... [their] cannabis... problem. The first was the settlement of alternative lifestyles promoting cannabis use. The second and more significant influence was the introduction of Rastafarianism from Jamaica, with a religious and musical message encouraging young people to smoke cannabis all the time.

...[The first in a series of documentaries made by “up-and-coming” Maori directors and producers is *Jah*, a look at Rasta in Godzone. Four Maori who have embraced Rasta talk about their religion. Why has Rasta found a faithful Maori following? Good question. Rasta is a religion of rejection: of Orthodox Christianity, of colonialism as a weapon of oppression, of meat and alcohol. What Rasta does embrace are dreadlocks and dope. Its scripture is reggae music. Our own favourite Rasta is the dreadlocked, hemp suit wearer trying to make it to Parliament who talks about smoking dope as a tool for meditation. *Jah* is almost coyly quiet on the position – because for the four Maori interviewed Rasta is “so much more than good beats and high times”. One likes the freedom of the religion: no one dictates what being Rasta means. His mother was an early convert, a member of the 12 Tribes of Israel who set up house in Ponsonby in the early 80s and held notoriously great parties. If *Jah* never quite gets to grips with the contradictions inherent in the cultural embrace that is Rasta and Maori, well, its subject is religion, a slippery and personal topic. The attraction appears in part to have been the adaptability. As the mum says, it's all about interpretation. The mum went looking to reconcile the connection and discovered “many similarities between Rasta religion and early Maori religion”.]

...The... 12 Tribes of Israel community celebrates a significant day in the Rastafarian calendar tomorrow – the 67th anniversary of the coronation of... Haile Selassie. The... former Ethiopian... emperor, who died in 1975, a year after [being] deposed in a Marxist coup, remains a figurehead for Rastafarians. The local community... founded in... 1983, [that now has]... 300 “active members, double that on the books,”... believes Selassie to be the 225th in succession in the Solomonic Dynasty (a lineage it traces back to Solomon and... Sheba) and was “the second advent” of Christ. - 1997

“Look to Africa for the crowning of a Black king; [who] shall be the Redeemer.” ...[so said] Marcus Mosiah Garvey... in... 1916[, the same year that an Ethiopian ‘Prince led a revolution against Lij Yasu and became regent and heir to the throne’]... On November 2, 1930, Ras Tafari Makonnen, great-grandson of King Saheka Selassie of Shoa, was crowned Negas of Ethiopia. [Ras] took the new name of Haile Selassie (Power of the Trinity), to which [Ras] added the titles “King of Kings,” “Lord of Lords” and “Conquering Lion of the Tribe of Judah.” Selassie claimed to be the 225th in line of Ethiopian kings which could be traced all the way to Menelik, the son of Solomon and Sheba... To a handful of Jamaicans (mostly Garveyites[– who believe ‘that Blacks are the chosen people’]), this was prophesy fulfilled. Thus, the visionary Garvey had prophesied the coming of the Messiah just as John the Baptist had prophesied the coming of Christ... [Ras ‘settled in England after the Italian conquest of Abyssinia (1935-6), but in 1941 was restored after the liberation by British forces. Opposition to his reign had existed since 1960, and the disastrous famine of 1973 led to economic chaos, industrial strikes and mutiny among the armed forces, and the emperor was deposed in 1974 in favour of the Crown Prince’.] Haile Selassie... was the world's oldest and longest ruling monarch when... deposed... Often called a “medieval autocrat”, [Ras] was renowned as an international states[person], and his reign is particularly noted for the modernisation of... Ethiopia... beg[u]n... before his coronation... In 1923, [Ras] succeeded

in having Ethiopia accepted into the League of Nations. In 1924, [Ras] abolished slavery... established schools throughout the country and set up a program for Ethiopian students to study abroad... Selassie convoked the first meeting of the Organization of African Unity and supervised its charter... was also responsible for the establishment of the UN Economic Commission for Africa and was renowned... for his almost magical skill of acquiring foreign economic aid... Selassie's reign was responsible for "leading a largely illiterate, rural and feudal country with 2,000 languages and dialects into the 19th, if not the 20th century," according to an obituary in the *New York Times*... [However, 'as an insult, Selassie was buried under a lavatory', and it] is difficult to find any description of Selassie's reign that doesn't criticize him on a number of points. [Ras] was said to have "lost touch with his subjects in later years, showing more affection for his pet cheetahs and dogs than for his human entourage." ...[Ras was also] alleged to have secretly sent vast sums into private Swiss bank accounts... [Ras] died at the age of 83 – the last emperor in the 3,000-year-old monarchy... Many Rastas still insist that reports of his death in 1975 were mere propaganda... [T]he orthodox Rastafarians do not see [Ras] as *any* ruler or *any* human being... *messenger* of the Lord or an immaculate son... Rather, they claim Haile Selassie is God Almighty... Looking at the early Rastafarian movement, we see the crucial significance of Jamaica's (and Garvey's) Christian roots for its ideology. [90%] of the Rastas are ex-Christians, and the Bible provides the foundation on which they form their beliefs... Rastas reject orthodox Christianity... They see it as a colonial weapon to oppress the powerless and disenfranchised, and view the church as death-worshipping (the crucifix, graveyards, funerals). They also reject the syncretistic, Christian-African cults (Kumina, Pocomania) and Jamaican folk beliefs (Obeah, duppies). These are considered superstitious, unscientific and backward. They are seen as "unreal in the presence of formidable sociopolitical forces." Thus the Rastafarian belief system is a rich and complex theology of liberation. The Rastas redefine and reinterpret the Bible. This is necessary because they feel it has been corrupted throughout its many translations from the original Amharic language of Ethiopia[(the country Rastas 'view as being the promised land')]. But, when read carefully and selectively, the Old and New Testaments provide meaningful answers to life's fundamental questions... ['Rastafarians follow strict taboos governing what they may eat (eg no pork, milk, coffee); they usually wear their hair in long dreadlocks and they cultivate a distinctive form of speech.'] Marijuana is used in some form (smoked, drunk, eaten), by approximately two-thirds of Jamaica's population[, including]... children... This is possibly the highest percentage of national marijuana use in the world. But, marijuana smoking is not merely a way to pass time or a form of entertainment for the Rastas. They believe that it was given to [humans] by Jah in order to aid [their] meditations and open... consciousness to a higher reality. To them[– and the 'Nihangs (militant Sikhs whose religious life includes sustained periods of hymn singing and the "sacramental" eating of *bhang*, a form of cannabis') –] it is a sacred herb and smoking it can be a form of religious worship, supported by many biblical quotations[(note that 'dreadlocks can be traced as far back as biblical times and the book of Judges, where Nazarite Samson – whose hair, described as having "seven locks", wasn't cut from birth – vanquishes the Philistines thanks to superior strength from his hair')]. Some Rastas believe that marijuana first grew on the grave of King Solomon[, thus explaining why]... it is dubbed the... "wisdom weed" (although the... [beliefs of Rastas – e.g., *Selassie is God Almighty* – appear to contradict that title!]). N[ot] all Rastas smoke ganja... [but for] many... growing it is a career... Although... ganja is a valuable Jamaican export... [it has been] illegal in Jamaica since 1913... and... ever since the inception of the movement... Rastas have been consistently arrested and harassed in connection with it... "The menacing devils with snake nests for hair." "Cult that worships old newspaper clippings of Haile Selassie." ..."No good Jamaican bums." "Rastafarian Link Seen in Shootout." Believe it or not, those descriptions actually reflect popular opinion about the Rastafarian movement in Jamaica. Even with reggae music's recent popularity, it is amazing how little the public knows about the movement... Marijuana is said to have first appeared in Jamaica with the arrival of East Indian indentured servants in 1845. Other studies claim it arrived in 1545, carried by the Spanish from Asia... Some say it has always existed in Jamaica and was used by the original Arawak inhabitants of the island. Its East Indian roots would explain why it is most commonly known by the Hindi word "ganja." Kali (the most potent form of marijuana) is also a Hindi word referring to the Black Goddess of Strength. - Reggae International

If God had meant us to eat health food [God woul]d have given us health buds...

Cannabis... a stout, aromatic, erect, annual herb that originated in Central Asia... [and] is now cultivated widely in the Northern Temperate Zone... The genus... is... [used] as a fibre... [and] as a drug... Marijuana varies in potency, depending on where and how it is grown, prepared for use, or stored... [The gal] plant... is prized as the more abundant source of a mildly hallucinogenic drug present in... all parts... but... most concentrated in the resin (cannabin) in the flowering tops[(heads or *buds*). Guy cannabis 'plants produce pollen, or *staminate*, flowers, and gal plants produce ova and *ovulate* flowers', which – due to the presence of resin – catch the wind-blown pollen, thereby causing the ova to produce fertile seeds]... A more powerful form of the drug, hashish... is made by collecting and drying this resin. Mentioned in a Chinese herbal dating from 2700 BC, the drug has long been used as a sedative or analgesic. The effects of marijuana vary, depending upon the strength and amount consumed, the setting in which it is taken, and the experience of the user. Psychological effects tend to be predominant; the user commonly experiences a mild euphoria. Alterations in vision and judgment result in distortions of time and space. Acute intoxication may occasionally induce visual hallucinations... and psychoses lasting from four to six hours. Physical effects include reddening of the eyes, dryness of the mouth and throat, moderate increase in the rapidity of the heartbeat, tightness of the chest... drowsiness, unsteadiness, and muscular incoordination. Chronic use[causes the body to *build up tolerance* for THC (thereby reducing its effectiveness – which means the user has to consume larger quantities to get wasted) but] does not establish physical dependence nor, upon withdrawal, does the regular user suffer extreme physical discomfort (such as that associated with narcotics); but its use may be psychologically habituating. The worldwide use of marijuana and hashish as intoxicants has raised various medical and social questions... International trade in marijuana and hashish was first placed under controls during the International Opium Convention of 1925. In the U[S], the use of these drugs in the 1930s prompted passage (1937) of federal restrictions on the botanical substances; these were extended to THC in 1968... [after] THC was first isolated and produced synthetically... By the late 1960s most countries had enforced restrictions on trafficking and using marijuana and hashish and had imposed generally severe penalties for their illegal possessions, sale, or supply. Since the 1970s, however... medical research revealed the therapeutic effects of marijuana and THC. They found it to be useful in lowering internal eye pressure in persons suffering from glaucoma and in alleviating nausea and vomiting caused by chemotherapeutic drugs... and[, since the]... 1980s... some countries... have reduced the penalty for possession of small quantities. - *ENCYCLOPEDIA BRITANNICA*

Britain's largest tobacco firm is embarrassed that it discussed lacing its product with... "subliminal" levels of marijuana to boost sales. The plans, set out in internal British American Tobacco documents, show that the cigarette firm considered "exploiting" cannabis if the drug were legalised... It concludes that "nicotine and marijuana are not direct competitors"... The news has shocked drug-awareness groups, and anti-smoking campaigners have labelled the plans as sinister. "This is a ploy by the tobacco companies to make even more money," said... a director of Action for Drugs Awareness... Cigarette firms anticipating legalisation have already registered brand names with links to marijuana. In 1993 Philip Morris filed a trademark application in France for[a cigarette called] Marley... The tobacco firm later denied the... drug-related... connection.

...A senior bishop who provoked widespread criticism after admitting [it] had smoked cannabis, yesterday called for a debate on the legalisation of cannabis. The... Bishop of Edinburgh... made the comments as [it] launched his new book, *Godless Morality*.

...The challenge to Britain's drug laws has received a powerful boost with a call by a senior Anglican bishop for cannabis to be made freely available for medicinal purposes. In a lecture paper, the Bishop of Edinburgh[, who recently declared his intention to]... leave the Church and stand

for the Scottish Parliament... argues that cannabis is less dangerous than alcohol or tobacco and... banning drugs has left organised crime in control... In a thinly veiled attack on the Government's heavily promoted "war on drugs," [the]bishop... warns: "The purely prohibitionist approach does not seem to work. In open societies, prohibitions that do not have the overwhelming consent of the people are almost impossible to police and end up corrupting the very system that is there to enforce them." ...[By the way, c]annabis may affect vision by plugging into tailor-made receptors in the eye. Researchers have discovered the receptors – which are chemical doorways into cells – in animals ranging from chicks to salamanders to monkeys. This suggests chemicals similar to the cannabinoids in cannabis, known to occur naturally in the human body, are ancient and highly important in eye function... Some research suggests [cannabis] can affect vision and may also help to relieve symptoms of... glaucoma.

...Pregnant [people] who smoke cannabis are likely to cause much greater harm to the brain of their unborn baby than their own, says the head of the Auckland University anatomy department... [A] study by his department showed the brains of fetuses and babies had many more marijuana receptors than adult brains... [The findings were] revealed to a parliamentary select committee inquiring into the mental health effects of the drug... which met in Auckland yesterday... "These findings highlight the dangers of making marijuana freely available by legalising the drug,"... Research [also] shows that sperm swim much more slowly... and [are] less likely to penetrate the egg... when heavily exposed to the drug's active ingredient... [But a] small amount of... THC... makes sperm more alert and increases the chance of the egg being fertilised.

...Extracts of the marijuana plant might one day be prescribed to stroke victims to prevent brain damage, if new findings by [US] scientists are converted into medical practice... Stroke victims suffer a blood clot which starves brain cells of glucose and oxygen and sets off a cascade of chemical reactions which destroy cells. The... US National Institute for Mental Health in Maryland... found that marijuana compounds THC and cannabidiol blocked this destructive process... [In further news from the US, the FDA] has approved testing of a painkiller and anti-inflammatory drug that is a synthetic derivative of the active ingredient of marijuana. The... president... [of the] manufacturer, Atlantic Technology Ventures, said... "Our animal studies have strongly demonstrated CT-3's likelihood for successful administration in people." Aster clinical research centre in Paris will start scientific testing of CT-3 in Europe this month, using human volunteers.

...A[US]n doctors have applauded the N[SW] Government's plan to consider using cannabis to relieve pain in seriously ill people and urged other states to follow suit... [NSW] is considering the recommendations of a controversial report into the legal use of cannabis... The trial would help people who needed relief for... pain... not relieved by traditional painkillers, relief from nausea caused by chemotherapy that was not being relieved by medication and for patients who had other distressing symptoms such as wasting syndrome from HIV/Aids. "Those sorts of patients can possibly benefit and should not have to face criminal prosecution for trying to get relief of their symptoms,"... [the AUSn] Medical Association... president... said... [Meanwhile, a] British company is a step closer to launching cannabis-based medicine for patients suffering multiple sclerosis and other forms of severe pain. GW Pharmaceuticals said results from the latest phase of clinical trials were encouraging and it was now into Phase III trials. These will involve a wider range of patients in new locations and are the last hurdle before approval is granted... [The] private company, set up in 1997... operates under licences issued by the British Home Office (interior ministry) to cultivate, possess and supply cannabis for medical research. The company has been growing cannabis in secure, computer-controlled glasshouses in southern England. The plants are the same as those grown for recreational use but trials are designed to maximise the drug's analgesic... effect rather than to make subjects so high they do not care about the pain... GW has invested £12 million... in its research and hopes to market the first prescription cannabis-based medicine in 2003.

...GW Pharmaceuticals... aims to raise £16 million... in an initial share sale so it can boost its production of... cannabis... to 100 tonnes in two years from the 15 tonnes it now grew at an undisclosed location in England... UK law classifies cannabis as a Class B drug under the Misuse of Drugs Act 1971, which banned its employment for medicinal use... [However,] GW held a special licence from the Government to grow cannabis. The plant contains... a substance that may be used to treat multiple sclerosis... "We are carrying out a programme of clinical research to provide scientific truth that these methods have medical benefit,"... The company said it had also obtained regulatory approval for clinical trials in Canada.

...A Canadian senator who admits to having smoked cannabis has called for the legalisation of soft drugs, saying a committee should study the negative effects of Canada's war on drugs... Canada's Liberal Government has become more tolerant of cannabis, seeking domestically grown pot to be tested as a pain reliever in medical trials and allowing sick individuals to grow and use the drug. The... Progressive Conservative Senator... aged 48... marshalled the help of the Canadian Foundation for Drug Policy, which has long advocated decriminalisation... The idea of using cannabis at least for medicinal purposes clearly has the support of [the] Health Minister... who spent his formative years in the 1960s and who helped to arrange for John Lennon to attend a peace conference in Ottawa in 1969. [The minister], who approved the clinical trials, was asked if [it] had used the weed. [The minister] replied with a twinkle in his eye that [the minister] had not smoked it "for medical purposes."

...BOY, who needs Semtex to blow up National's political future when the senior Tories can do it all by themselves? First, [one accused a] Green candidate... of posting how to make a bomb information on the Green's website, and accusing him of being a dangerous oddball. [The accuser] was unable to come up with any emphatic proof that [the candidate (r:p1382, ln49)] was actually a terrorist in training, but hey, [the candidate]'s got dreadlocks... [i]s young and... owns a hemp shop, so near enough is good enough. Then [the PM] attacked the Green's policy to legalise the possession of cannabis for personal use as extremist. But it's common knowledge that a number of National MPs support the decriminalisation of cannabis, so [the PM] ended up with egg on [its] face. And to round off the week, [another senior Tory] was forced to apologise for comments... made during an interview with [the] Greens co-leader... One... was that his local hospital's psych ward was full of patients suffering from drug induced psychosis... Whakatane hospital pointed out that the ward had seven people in it, none of whom were suffering from the ill effects of cannabis.

...For me, J-Day... the... international day of protest against cannabis prohibition, was like being allowed to have a glass of wine in the park. Although, because I don't do drinking (except perhaps the odd glass of champagne), I had to make use of the opportunity and take a stroll through the grass, adding myself to the numbers supporting changes in legislation. Sadly, to many people the word "drug" has such negative connotations that it's hard to engage in rational debate... I suspect that many of you reading this will just think, "what a silly girl." You'll have that knee-jerk reaction that drugs are *bad* and never for a moment think there's anything wrong with your beer, your sherry or your gin, your Valium or Viagra, even in light of the fact that no one has died as a direct and immediate consequence of recreational or medicinal use of marijuana. In fact, animal tests suggest that a fatal overdose would take 40,000 times the amount needed to get high. Since the beginning of time humans have looked for ways to alter their state of consciousness and still the only legitimate choice in N[Z] is booze and you'd have to look hard to find a more damaging mood-alterer... It's well known that I'm no stranger to a good time. I've been drunk and behaved inappropriately... But... I've been sober and behaved inappropriately... [too! W]e've most of us been a little worse for wear. It's okay to get inebriated, to slur our words and stumble into taxi cabs – its legal, encouraged even, a rite of passage. But what about choice and the free market? ...As a poor drinker I'd like the right to choose an alternative drug... I'd even like to grow a little pot myself so I wouldn't be at the mercy of unscrupulous growers who doctor their plants or have had their plants poisoned by the police... I wouldn't be surprised if the big liquor [– not to mention the tobacco and synthetic pharmaceutical –]companies were behind a lot of the scaremongering and "drugs are bad" hysteria peppering our papers. Increased access to drugs must surely be felt in their market share... Our cannabis legislation is an infringement of my personal freedom and because of that I'd like to stand up and be the poster girl for pot. As a well-balanced, good person who makes a valuable contribution to society, I'd like to vote that we repeal our laws enforcing prohibition, improve our drug education programmes and take a more rational and humanitarian approach to drug use.

...Ruling out decriminalising cannabis has been dubbed irrational and cheap electioneering by experts who advised the Government on the drug. Parliament's health select committee held an inquiry last year into the mental health effects of cannabis and recommended that the Government

review the legal status of the drug. Health, drug and education specialists told the panel that cannabis use caused no significant harm and that the criminal status of the drug made the health consequences worse. But the Government this week ruled against decriminalising the drug.

...THE Swiss government's legalised marijuana and hashish and will allow dope shops. [1-in-4] 15 to 24-year-olds uses the drug in Switzerland...

[“]IT’S MOVING further towards decriminalisation than any other country in the world,” warned... the former police[officer] who was the British “drugs tsar” until the Labour Government belatedly realised that his job was as ridiculous as his title. [The former cop] was responding to[the] British Home Secretary[’s]... announcement last week that being caught with marijuana will in future be treated no more seriously than illegally possessing other Class C controlled drugs such as sleeping pills and steroids. [The former cop] was technically wrong, but in terms of its political impact [the former cop was right. The former cop] was technically wrong because Britain is not leading the parade of European countries who have broken away from the prohibitionist U[S] approach. Even after [the Home Secretary]’s changes, Britain will lag behind... countries such as Switzerland... and... Belgium... in its laws on recreational use... The main engine of the war on drugs is the US, which managed to enshrine its prohibitionist views in international laws during the Cold War by a series of treaties that make it impossible for national legislatures to legalise the commonly used recreational drugs. All that other countries can do without Washington’s agreement is to decriminalise the possession and use of at least some of the banned drugs. Numbers of smaller European countries have already decriminalised various drugs, but what the Portuguese or the Dutch do will never have an impact in the US. Britain is one of the very few countries whose example will ever be seen as relevant in the country that is the real home of the drug war. Britain’s decriminalisation of marijuana... could finally open the door to a real debate in the US. The actual changes in British law are rather timid. In future British police will generally confiscate marijuana and issue warnings to users, rather than arresting them, but “disturb public order” by blowing marijuana smoke in a police[officer]’s face and you’re in jail.

...British prisoners get marijuana from heaven... Inmates in Britain’s Stafford Prison have found a new use for origami – using paper aeroplanes to get marijuana... from outside the jail walls... [A] damning report on the Midlands prison... described how the prison authorities had strung up “snagging lines” to try to stop them but with little success... Last week, newspapers reported that inmates in one of Scotland’s toughest jails had been using postage stamps to sneak in... LSD... The tedium of prison life has made Britain’s jails hotbeds of narcotics.

...Walking is never dull in Amsterdam... And... if you are into iniquity there is plenty available... [in] the city’s red-light district... Prostitutes in all states of dress preen, pout, fix their hair, chat to friends on cell-phones in the garish, Martian-red glow of shop-front windows... Drawn blinds indicate the occupants are busy. Interspersed with the live window displays are all manner of sex-shop exhibits... The only things prohibited are photographs... Other types of culture abound in Amsterdam... there’s the dining culture, headed by the ubiquitous ancient brown cafes, so named after their smoke-darkened interiors. A few Dutch beers later, and... you are ready to venture into the subculture. Battling through the heavy smoke... and nonchalantly asking for the menu sounds easier than it is. “What menu?” the scowling West Indian bar[tender] asks. “Ah, um, you know, the drugs one.” Very in-the-know. [The bartender] hands over a plastic-covered list with an array of exotic sounding substances from Morocco, Thailand and Col[o]mbia. The marijuana[costs] about \$15 for 3g... A pre-rolled joint is \$7.50, the same as a slice of innocent-sounding chocolate space cake... The[cafes] are... gradually dwindling in number as the authorities... do not renew their licences once they close... A number of Amsterdammers say such cafes are now largely for the tourists, having long lost any trendiness among locals.

...A British travel documentary which featured Northland’s cannabis industry as a tourism attraction has left some N[Z]ers in Britain fuming. The proud Kiwis rang the Tourism Board in London and Wellington alarmed that the British programme, *A Rough Guide to [NZ]*, which... screened on BBC2 about three weeks ago... gave an unfair portrayal of their country. The board’s N[Z] staff had not seen the programme, but it was understood to show balaclava-clad Northland marijuana growers giving a reporter a tour of their cannabis plot... A Paihia-based Maori tourism operator... said the film crew had not been interested in the standard tours.

...The social and economic fabric of Northland was under a marijuana cloud last night after one of Maoridom’s top figures[– inspired, perhaps, by the recent news article about a]... Dutch local authority [that i]s... subsidising work experience for the unemployed in coffee shops selling marijuana... [–] challenged the Government to create jobs or legalise the drug... The Tai Tokerau Maori Trust Board chair[perso]n and National Party stalwart... was concerned that 86 people from his Ngati Kahu tribe had been arrested on marijuana-related charges in the past year, with 24 of them jailed... [His] claim that growing marijuana was a reasonable way for unemployed people to earn a crust drew some support – and a storm of protest... [A spokesperson for] the Ruakura Hauora O Tainui Trust, a tribal health authority serving 40,000 Maori... was alarmed by... the... comments. “The war over marijuana is over and marijuana has won if... [people] are going to take that attitude,”... Decriminalisation of cannabis... would all but “destroy” the Maori race, said... the manager of Maori health... [The manager pointed out that] an estimated 60[%] of Maori used cannabis... [The] Whangarei MP... said the veteran leader’s comments were a bankrupt response to Northland’s social and economic malaise... “Marijuana use in Northland is the single biggest cause of a region in moral and social collapse.” The debate came a day after a prominent Northland farmer... was jailed for 3 1/2 years after a 4000-plant marijuana plot was discovered on his property... The National Drug Investigation Bureau said the nearly 46,000 plants police discovered in Northland last season dwarfed recovery operations elsewhere.

...With the cannabis growing season in full bloom, police are right behind the spraying of crops from the air with a blue herbicide... Manual recovery requires a minimum police team of 14; aerial spraying requires just four... Research[conducted by the police] had shown that sprayed cannabis would be no more toxic than smoking cannabis itself[, but a spokesperson]... for Norml... told of users who experienced headaches, nausea and had even coughed up blood after smoking the poisoned dope. “Growers are not always ethical and the dye used in the spray is not obvious when plants are dried...” ...Police claims that the spray is essentially harmless are further backed by their own belief that spraying falls outside requirements of the Resource Management Act. [However, the]Northland Regional Council monitoring manager... said police would have to obey act provisions like any other agri-chemical users, including notifying property owners in advance of any intention to spray on their land. [A]Senior Sergeant... denied that the police were bound by the act – the herbicide was harmless and did not contaminate the soil... [although the senior sergeant] declined to name the harmless chemicals used in the spray. Police feared they could be swamped by false spray-drift damage claims from food growers if the ingredients were widely known... But... one ingredient was Roundup and another a common desiccant spray... Spray experts doubt a herbicide that... wilted plants within two or three hours and killed them within 48 hours... is harmless. [A]Massey University weed scientist... said the only desiccant herbicides with such rapid results are paraquat and diquat. These were far from harmless and would make people very sick if ingested... [Incidentally, police] have seized the largest marijuana plantation ever found in California, uprooting and confiscating more than 21,000 plants worth about \$US84 million... [from] land owned by the San Francisco Water Department...

RUSSIAN police in the region of Primoriye detained more than 300 people after discovering 120 cannabis fields covering close to 100 hectares.

...[a w]oodcutter... was working in an isolated gully on his family’s Paengaroa farm when [it] saw two trespassers tending a cannabis plot they had secretly planted there. Minutes later, one of those [trespassers] was dead, shot in the back with a .308 hunting rifle. [The woodcutter] has never denied killing Grant Bourne, aged 36. But [the woodcutter] has maintained since the shooting on January 14... that [it] had not meant to hurt the... [trespasser], just warn him. This week, in the High Court at Rotorua, a jury... deliberated for just 3 1/2 hours before finding the shy 27-year-old guilty of [hu]manslaughter, but not murder. [The woodcutter] will be sentenced next month. [His p]arents... were delighted by the decision, which they said was the best possible outcome for their son... People in the tiny, close-knit community... 11km southeast of Te Puke, are also pleased. They have been ripping cleverly hidden cannabis plots out of their land for years, often fearing retaliation from the growers. “The [so]n did bloody right,” said[the] Paengaroa Motor Lodge owner... “There are too many dopey idiots who can do what they like on your property and get away

with it. If there was a lighter sentence, [the son] should have got it.” ...Two warning shots were fired and [the woodcutter] shouted at the two fleeing [growers] to stop, as Mr Bourne ran in front of [him] and jumped over a fence into a neighbouring property. Just as [Mr Bourne] was disappearing into thick scrub, [the woodcutter] shot in his direction. “I wanted him to stop and come back, not die...,” [the woodcutter] told police later that day.

...A woodcutter who shot and killed a cannabis grower after finding him secretly tending plants on the family farm has been sentenced to three years’ jail – to the outrage of his neighbours... The judge said Mr Bourne had no right to be on the property. [Mr Bourne] was a trespasser and was committing a criminal offence. But [the woodcutter] had no legal justification for shooting him... the proper course of action would have been to call police. But people who live [along] the same road... – and have long complained about... stumbling upon booby traps and electric fences protecting cannabis plots in quiet corners of their properties... – said... that it took Te Puke police 30 minutes to reach farms in Maniatutu Rd, by which time the growers were long gone... “Nothing’s changed and giving sentences like this doesn’t do anything for us as a community,” said a [neighbour]...

The billionaire business[person] who escaped conviction on drug charges in an Auckland court on Friday made a donation to charity – and the court knew it. [The billionaire] is understood to have made a financial donation to Odyssey House drug rehabilitation centre... Section 19 of the Criminal Justice Act enables offenders to be discharged without conviction if a judge decides that the consequences of their conviction outweighs the gravity of the crime. Under the law, offenders who admit their crimes may be allowed to walk free because a conviction could affect their employment, health or rehabilitation. Donations to charities can be part of the deal. The American billionaire... had admitted three charges of importing drugs after customs officials at Auckland Airport and elsewhere found more than 100g of cannabis resin and leaf. A [N] Auckland barrister... said judges were using their discretion under Section 19 more often. It was not uncommon for donations to be part of the “matrix of submissions” made by a lawyer on a client’s behalf. But in the billionaire’s case, wealth seemed to have put him in a more privileged position... “Is that a test under the Criminal Justice Act – that you can pay your way out?” Last night... the [billionaire]’s lawyer... said offenders donating to charity occurred on a daily basis in the courts... The American billionaire... has given more than \$142 million to charities.

...The billionaire who walked free from an Auckland court on Friday was the second American let off drug charges in the court that day... [The same] Judge... entered no conviction against the earlier defendant on the grounds that it could have jeopardised his job as a safety officer and ordered him to contribute \$250 towards the cost of prosecution. That [defendant], whose name was not available from the court yesterday, was caught with a much smaller quantity of cannabis than his wealthy fellow-country[person]. Unlike the billionaire, [the safety officer] did not have his own lawyer... The court’s leniency to the billionaire, whose name was suppressed... made news around the world after it was disclosed in the *Weekend Herald*. The tycoon’s identity was published in newspapers outside the jurisdiction of N[Z] courts and posted on the Internet. Lawyers for the *Herald* will file papers in the Otahuhu District Court today seeking leave to appeal to the High Court against... [the] suppression order. The billionaire... will have little time left to enjoy the... [country] as the Immigration Service has slapped a limited-purpose permit on him requiring him to leave the country by Wednesday. The immigration permit gave him... stay... solely to attend court. There was no room for appeal.

...The police have stepped into the case of the drugs-smuggling billionaire. They may appeal against his discharge without conviction. The... move came as the *Herald* won the first round of its battle to name the [billionaire]... The billionaire’s lawyer... was confident of defeating any... appeal.

...A prominent citizen is caught urinating on an Auckland footpath and the legal system goes to extraordinary trouble to protect his reputation. Why? The offence may be minor; the question is not. It is being asked widely in the community since the *Herald* reported the suppression of the name of a visiting billionaire in the Otahuhu District Court. The response, not only in letters to the editor but in telephone calls coming in daily, suggests the N[Z] courts should seriously review their whole practice of giving special protection to people of high status... Name suppression is available in law to protect the innocent. Nobody, for example, wants victims of incest or rape to be named. And if that means the guilty also benefit from the name suppression in such cases, it cannot be helped. But courts have long taken it upon themselves to protect the names of the guilty, particularly if they are big names. The practice is completely out of step with the view of the community that judges serve. It should cease... Meanwhile, a Spanish journalist... has been convicted and ordered out of N[Z] for possessing 7g of cannabis – 93g less than the billionaire.

...A Spanish lawyer on a \$15,000 South Pacific holiday that was to include nights at some of N[Z]’s best hotels received taxpayer-funded legal aid after... [being] caught bringing drugs into the country... [The Spaniard], aged 42, was granted legal aid – supposedly reserved for those who cannot afford lawyers – even though [it] gave his occupation and had cash and credit cards on him... [The Spaniard] paid a fine before flying to Fiji for three nights. The *Weekend Herald* understands that it is common for foreigners caught with drugs at Auckland Airport to receive legal aid. The... [Spaniard] was charged with importing a class B drug... after... 11.4g of hashish, also known as cannabis resin, in his pocket... was sniffed out by a dog in the airport customs hall last week... [The lawyer], whose English is poor, [said]... it... did not realise the drug was illegal in N[Z].

...An unexpected walk through Customs ended in court for an Auckland[er] who flew home from Christchurch... The 27-year-old... made the journey between the cities as a domestic passenger in an Air N[Z] jet. Unfortunately for him, the plane was on the last leg of a flight from Japan, which meant [the 27-year-old] had to undergo customs scrutiny, with his fellow passengers, on arrival in Auckland. A customs drug dog gave the hapless traveller a noisy welcome and... [the 27-year-old] cabotage passenger... was strip-searched by customs officers, who found... 14g of cannabis and three used cannabis pipes... The [27-year-old] appeared in Otahuhu District Court the next day and was fined \$150 for possession of the drug.

...Anxious parents who call in sniffer dogs to search for drugs in their children’s bedrooms in their absence should not fear legal problems under the Privacy Act. [A lawyer] who works for Youth Law providing free legal advice to under-25s, said that as owners of the house, parents needed only give permission for a search... N[Z] was a signatory to the U[N] Convention on the Rights of the Child, which says children should not be subjected to “arbitrary” infringements of their privacy. “But the convention is not written into law in N[Z]. It’s really only a guide... What would concern me more is the breach of trust involved. Parents would have to consider how they might repair any damage done in their relationship with their children, especially if they’ve gone behind their backs.” [An e]x-police dog handler... has been steadily building a customer base over the past two years, hiring out three teams of handler and dog for between \$300 and \$700 to search companies, schools and private homes... the only private drug dog search service in the country. In the past year [the handler] has searched up to 40 private homes for drugs, usually while children were at school, and about half the searches yielded drugs... If “dealable” quantities of drugs were found, police must be notified, [but it] had not had any parents who tried to stop that happening. Some wanted the police involved if drugs for personal use were found and “that’s [the parents’] choice”.

...\$10 marijuana detecting kits are being sold over the counter at the police station in Greymouth... so... parents... can bust their dope-smoking kids... And the scheme may become national... But youth groups are outraged and fear parents will force their children to submit to the tests.

...Concerns have been raised about the accuracy of \$10 home drug-testing kits being sold over the counter at a South Island police station. The kits, similar to a home pregnancy test, [require a urine sample which]... shows a negative or positive result within five minutes. But... Norml... says the kits are dangerous because they often return a false result. “They are unfortunately not reliable and often return a false negative or false positive result.” ...a more accurate test for cannabis was to send a urine sample to the Institute of Environmental Science and Research... at a cost of more than \$100. However, the test was so sensitive that someone who had not smoked – but just stood next to someone who had – could return a positive result. [Norml] supports the controlled drug testing of young people but only when the effects of marijuana become problematic... [Norml] said a national guideline was needed for drug testing in schools... Greymouth... schools had been told about the kits but had so far not bought any.

...Five Long Bay College students were made to strip naked from the waist down as part of a police drug search in a school office. The family of at least one of the boys are considering laying a complaint with the Police Complaints Authority and taking legal action against the school on the grounds the search was unreasonable and breached his rights. The school has confirmed the strip search happened and say police had the legal

authority for it. The... students, aged 14 to 17, are understood to have been suspended after they were allegedly found smoking cannabis outside the school grounds by police last Wednesday morning. [A c]onstable... and a member of the youth aid section were on their way to the school to talk to fifth formers about drugs, the law and their rights, when they caught the students. [The d]eputy principal... said the students were taken to his office, where they were questioned and individually... asked to turn away and remove [their] trousers and underwear. No cannabis was found.

...[WEST AUCKLAND] POLICE say they're prepared to strip search Waitakere youngsters if needed in a bid to beat drug use in schools. But... the force is happy to discuss concerns raised by a search of five pupils at a North Shore college last week... [The] Waitakere City Council children's advocate... [ha]s concerns about the search. "I guess schools do need to have stringent procedures in place to ensure that there isn't drug use in schools but we also need to make sure we deal with young people in the same way as adults,"... [However, Waitakere's] Detective Superintendent... says that adults and children usually get the same treatment... Kelston Boys High School[']s principal... says... "I wouldn't be adverse in supporting the police in that course of action... I haven't got a problem with keeping drugs out of schools and society." ...[■ Three under 7-year-olds were among the] 1770 students... suspended... [throughout NZ] last year... for using drugs.

...Long Bay College is reeling from the suspension of 22 students after a lonely girl tried to swap cannabis for friendship. The third-former, who took cannabis from her home to give away, was one of five children suspended indefinitely this week. A further 17 were sent home for three days... Teachers were alerted when some students were found smoking cannabis at the school. One student had tried to sell it, while others had simply kept hold of it. None of them had told a teacher... [□ The latest NZ] *Herald-DigiPoll* survey shows... [that a] total of 53.3[% of NZers]... had never used the drug and never would; 3.3[%]... had never used it but would try if it was not illegal (whereas '6% of people who stop using cannabis do so because of the law'); 23.8[%]... had used it occasionally (two or three times); 8.7[%]... used it from time to time; and 2.7[%] used it regularly.

...A[US] is one of the worst nations in the world for cannabis abuse and... the rate of... use – particularly among the young – was soaring... More efficient growing techniques are slashing prices... [a]n ounce in Sydney in 1990 would have cost A\$438 but by... the date of the research, it had fallen to A\$275[)]... and pushing up consumption.

...[A] CONVOY of... pro-cannabis activists bearing a 12-metre joint will leave... northern N[SW]... today looking to create a stir at next week's... drug summit in Sydney. Led by the Nimbin Hemp Embassy, the activists will co-host a five-day People's Drug Summit at the Domain next to parliament house where the... summit will be staged... Hemp Embassy[']s spokesperson... said the... Drug Summit was about peace and healing.

...WHAT'S the perfect present for the guy who has everything, including cancer? Dope, apparently, if some of my e-mail is to be believed. I could be described, I suppose, as belonging to the cognac rather than the marijuana generation. But... I've been forced to consider dope in its medicinal sense, because several proponents of the Dope-As-A-Shamefully-Neglected-Medication school have been urging it on me as a course of treatment. Cannabis, they write, numbs the pain/relieves the fear/quells the nausea/eases the chemo/helps focus the mind on the inner essential you, thereby strengthening the immune thingummies and so on and so forth... One correspondent stoutly maintains that Queen Victoria took hash to ease her menstrual cramps, and would go reeling back to her apartments late at night with the aid of special fixtures on the walls to hang on to. Whatever the truth of this whimsical anecdote, I shall leave dope to the royals and stick with my own special blend of tea which contains nothing more narcotic than camellia leaves. For I have an instructive illustration of the effects of marijuana practically on my own doorstep – it is the cautionary tale of the Cat Who Smoked Dope. Toffee was born in a caravan up north, one of a liquorice-allsorts litter of kittens whose owners were of herbal tendencies to such a degree that Toffee was brought up in a permanent dense blue haze of dope smoke... Reclaimed from the sinful environment into which [it] had so innocently been born, and travelling in an old baseball cap, Toffee was brought to Ponsonby for rehabilitation. Maybe if it had been another suburb – ...say... Mt Roskill... – all would have been well. But Ponsonby well, I suppose it was asking for trouble. Anyway, too late now for vain regrets. As soon as Toffee was old enough to go out, [it] did, and naturally... sought out those places which most reminded him of his misspent kittenhood. Frantic searches from Three Lamps to Freeman's Bay revealed [Toffee] was seeking out the low life... [Toffee] became an expert gatecrasher, rolling up to the door of a certain kind of party and, yes, inhaling... Nor did it have to be dope smoke. As far as Toffee was concerned, even ordinary cigarette smoke was better than no smoke at all. [Toffee] started sleeping around – anywhere [it] hung his hat was his home. When [Toffee] got the munchies [it] would just help himself – [Toffee] learned how to open the pantry door and steal cat bikkies one by one from the bag, a neat trick when you don't have an opposable thumb. An elegant cat-collar with his name and phone number was added to his ensemble, but then the phone started to go late at night. Calls from restaurants on Ponsonby Rd, saying: "Excuse me, but is this your cat having a drink on our bar?" "Honestly," said [Toffee]'s mum, "I didn't think I'd have this sort of problem until the boys hit their teens..." But Toffee continues to do his own thing. Some might say [Toffee] is a cool cat. It only goes to show how insidious dope can get. For it all started with just a sprig of catnip, and look at Toffee now. I intend to take heed of his tragic example, the medicinal qualities of dope notwithstanding.

...*Drug of nuns, queens and criminals...* In 1883, when the French nun Mother Mary Joseph Aubert clambered up the banks of the Whanganui River to found the mission outpost of Jerusalem, a bag of marijuana seeds was in her luggage. Legend has it that [Mary] grew cannabis for medicinal purposes, using it to make a tea to ease the nuns' menstrual cramps. The earliest known reference to cannabis is in Assyrian tablets of the seventh century BC, and it has been widely used as a medicine – and an intoxicant – throughout Asia, the Middle East and Europe. It was popularised in Victorian England by returned Indian Army surgeon Dr W. O'Shaughnessy and was widely used for a variety of ailments... – Queen Victoria was reputedly a user... [However, c]annabis was first cultivated in England in 400 AD... Researchers are investigating whether the secret of the Bard's creativity was his dope-smoking... Pipes found at Shakespeare's home in Stratford-upon-Avon... were being tested for traces of the drug... [The] head of palaeontology at the Transvaal Museum in Pretoria, believed Shakespeare's use of complex imagery of darkness and of mental journeys were evidence of drug-induced visions... [Cannabis generally] was taken by mouth, usually in an alcohol-based tincture. Readily available in colonial N[Z], it was also sold in cigarette form to treat asthma. By the 1920s, however, cannabis had lost its acceptable medicinal face. It was increasingly seen in Western societies as an evil recreational drug used in conjunction with opium by no-good foreigners. In 1927, N[Z] legislation responded by banning cannabis – which few in N[Z] had seen or used... The demonisation of cannabis for nearly a century has meant little funding for scientific research into its effects. Political and social prejudice has often clouded commentary on what research there has been. As the US National Academy of Sciences' Institute of Medicine observed last year... "Scientific data on controversial subjects are commonly misinterpreted, over-interpreted and misrepresented, and the medical marijuana debate is no exception." Other recent surveys on the effects of cannabis include a British House of Lords report... which led to a recommendation that doctors be allowed to prescribe it for medical use, and surveys by the A[US]n Task Force on Cannabis, the W[HO] and the Auckland University Alcohol and Public Health Research Unit. The consensus seems to be that smoking the drug can be harmful, but in terms of lasting effects, the healthy individual has little to fear from occasional... use.

...*DOOBIE, OR NOT DOOBIE...* Shakespeare may have been one of the first overworked authors to seek inspiration from drugs, a study suggests... The study, carried out by South African researchers, was partly inspired by a rereading of some sonnets in the search for drug references. Sonnet 76, for instance, refers to a "noted weed" and "compounds strange," while in Sonnet 27, Shakespeare talks of "a journey in his head." ...Yesterday, Shakespeare experts dismissed the suggestions that the author's genius was fuelled by drugs... [However, a] chemical analysis of clay pipes from the 17th Century, including some found near the Bard's home... have shown traces of... compounds created by burning cannabis.

...Drug-smoking paraphernalia will be banned by next year under a Government plan to crack down on cannabis and other drugs. But there are few other specific changes in an "action plan" released yesterday by the Minister of Health... The plan, prepared by the Ministry of Health, says

the visibility and availability of drug paraphernalia, particularly pipes and bongs, could give young people conflicting messages about taking drugs... The penalty for possession... [of] pipes or bongs... would be three months' jail or a \$1500 fine or both, the same as for cannabis.

...a new health action plan will harm rather than help cannabis smokers, say pro-drug lobbyists. Sellers of the paraphernalia... doubted yesterday that the legislation would cut cannabis use and said banning bongs, or water pipes, would be harmful because they took toxins out of the smoke.

...Smoking cannabis five times a week does as much lung damage as 20 cigarettes a day... That is the verdict of... researchers who studied the lungs of 943 people aged 21... The Otago University respiratory research group looked at symptoms such as wheezing, shortness of breath, early morning coughing and sputum production. It found that 36[%] of cannabis-dependent smokers had those symptoms, followed by smokers of 21-plus cigarettes a day (29[%]), 10-20 cigarettes a day (24[%]), and up to 10 cigarettes a day (17[%]). 20[%] of non-smokers had the symptoms, some of them from asthma... [An] Asthma and Respiratory Foundation... "fact sheet" warn[s] that the drug was dangerous. Its medical director... said... "Marijuana smoke – like tobacco smoke – can trigger asthma symptoms... when inhaled either directly or in the form of secondhand smoke."

...*Marijuana smokers 'passive dreamers'* THE recent storyline on *Home and Away* (TV2, 5.30pm weekdays) involving the teenage surfer, Sam, smoking marijuana is yet again a fine example of how scriptwriters have got their heads in the clouds. They have gone about portraying Sam's behaviour under the influence of marijuana as being violent and aggressive. These are traits more likely to be associated with excess alcohol consumption. All the people I've come across who smoke marijuana tend to be passive dreamers who definitely don't go around constantly threatening to smash people's heads in every five minutes as Sam has been shown to do.

...Mentally ill Ian Hope used cannabis in the days before... kill[ing] his daughter on a command from God, the Christchurch Coroner's Court heard yesterday. A psychiatrist... told the coroner... that Hope, aged 34, gave a very high cannabis reading when... admitted to Sunnyside Hospital the day [it] stabbed his daughter to death... In later interviews Hope told staff [it] was using cannabis every day and was certainly abusing it... [The psychiatrist] was giving evidence at a joint inquest into the deaths of 8-year-old Lisa Hope on December 17 last year, and Hope, who died from a self-inflicted injury on January 5. Hope suffered from manic depression and believed [it] was the third son of God with a grand mission on Earth. [Hope] was an outpatient of Sunnyside Hospital when [the 34-year-old] killed his daughter... It was also revealed... that a child custody report ordered by the Family Court from the Children, Young Persons and Their Families Agency was over a month late. The court gave the report a 28-day urgency rating on August 13 last year after the children's mother... had applied for custody. The report did not arrive at the Family Court until October 22. A service leader at the agency... had not had any immediate concerns about the children's care after... visit[ing] them.

...A westie is in... Middlemore Hospital with serious burns... after an explosion ripped through a Henderson home in what police describe as a bungled cannabis cook-up. The roof of the Moselle Ave unit was blown out, doors torn from their hinges and cars damaged in the blast at 11.30pm on Monday... Henderson [police]... say... it's lucky someone wasn't killed... A [gal] and 10-year-old child also in the unit escaped injury. The centre of the explosion was a bathroom where police say they found cooking pots and electric hob rings... [P]olice believe they were being used for cooking cannabis plants with the chemical iso-propyl to create cannabis oil. Cannabis oil is used by heating it and inhaling the fumes and is a class B drug.

...A POLICE officer has been pulled off an inquiry in which [it] was investigating his own staff in a... bungled drugs case. [A] Police Complaints Authority Judge... said the decision to appoint [the] Auckland Detective Senior Sergeant... to head the inquiry was inappropriate. The *Sunday Star-Times* revealed last week... [that a citizen had] spent... \$100,000... defending cannabis charges. The charges, which involved a \$1 million cannabis plot on [the citizen]'s Great Barrier Island property, were thrown out of court... because of what [the] Judge... called a poor police case... [In related news, t]hree of the country's most senior detectives have been put in charge of investigating allegations against police following the flawed Gisborne corruption inquiry. [The judge criticised the original] investigators for not interviewing enough witnesses, and... for [forming] a mind-set that the officers were guilty... [T]he Minister of Police... said [the commissioner] had taken steps to change police practice in future investigations.

...A public apology to a group of Gisborne officers cleared of corruption charges has been followed up with a... compensation pay-out... The group... will reportedly share \$200,000, but in return must give up the right to take further action against the police.

...Former undercover police should not be getting ACC payments for marijuana addiction... says [Labour's justice spokesperson]... But ACC says everyone is entitled to compensation for injuries suffered from workplace accidents and it will keep paying... [However, the] ACC Minister... would seek a briefing from ACC officials tomorrow on the payouts... [because] the issue had been highlighted and was clearly of public interest. An ACC spokes[person] said that... only police could legitimately claim for drug addiction. There was no time-limit on how long people could receive compensation, although the goal was for clients to return to work or independence as quickly as possible... On Saturday the *Weekend Herald* revealed a[n addicted] former undercover detective, who [claims to] still smoke... 10 to 15 joints a day, has been receiving ACC for nine years...

['Marijuana could be a "gateway drug" that primes the brain for dependence on harder drugs, scientists say. Two groups of researchers write in the American journal *Science* that the active ingredient in cannabis does its work in the same region of the brain and uses the same triggers as heroin. This region, known as the limbic system, is where the addictive drugs nicotine, cocaine and the amphetamines are most active. The research is bound to provoke controversy. Many campaigners argue that cannabis could safely be made legal. But a Spanish-Californian team and an Italian group tell a different story. The Madrid-La Jolla group gave rats daily doses of a synthetic cannabinoid, then made them go into withdrawal. During this time the animals showed a sharp jump in a brain chemical in the limbic system called "corticotrophin-releasing factor." This is what makes alcohol, cocaine and opiate addicts suffer when they undergo a "cold turkey" cure. It may also be why 100,000 people in the US each year seek treatment for marijuana dependence.' Editor's note: The White House claims to be anti-cannabis because, according to one of its spokespeople, 'cannabis makes people move on to harder drugs' (NZ's PM also doesn't want to decriminalise cannabis because, 'going on advice from the FBI, criminals will merely move on to another drug'). However, 'based on the National Drug and Alcoholism Treatment Unit Survey – a census of all known drug abuse and alcoholism treatment facilities in the US – in 1974, 52.7% of 18 to 25 year olds had ever used cannabis, but only 25.2% were current users, while the percentages who had ever used cocaine, hallucinogens and heroin, were 12.7, 16.6 and 4.5 respectively. In the 26 years and over group, the corresponding percentages were 9.9, 2.0, 0.9, 1.3 and 0.5 respectively. In comparison, the corresponding percentages for 1994 were 43.4, 12.2, 9.6, 11.7 and 0.2 for 18-25 year olds; 35.0, 3.0, 10.9, 8.0 and 1.3 for people over 25']

...The much-vaunted cannabis economy in the Far North is in the doldrums. Customers on the Auckland market are turning away from "bush dak" to more sophisticated urban... hydroponics... products and... "designer" drugs... particularly in Auckland's nightclub scene... sending demand for the Far North's finest plummeting... It is also cheaper to come by: buyers with contacts can get good-quality Far North cannabis for between \$160 and \$200 an ounce, about 75[%] down on last season's prices. Those without contacts can expect to pay up to \$300 an ounce... It is a glut which police say partly explains the upsurge in drug-related incidents among Northland school children... [G]rowers and dealers who normally sell in bulk [have been forced] to break their crops into small lots for local use, often as a form of currency[(i.e., green dollars)] in barter transactions...

Glen: 24, single, Auckland urban professional, likes golf, dancing and class A and class C drugs. Police believe Glen and his ilk are driving a change in the market for illegal drugs in this country. "They're the ones who are supplying most of the demand for the new party drugs – young Aucklanders with disposable income who want to dance all weekend," says the head of the Auckland drug squad... Cannabis is waning in popularity. Says Glen: "I don't even think of it as a drug any more. It's there if you want it [but] there are more interesting things to take the edge off a stressful week." In place of cannabis are methamphetamine – also known as speed or "poor [hu]man's cocaine" because of its similar high –

and Ecstasy... An Ecstasy raid by the Customs Service two weeks ago yielded 25,000 tablets hidden inside a BMW car gearbox. It shows how much of the drug is consumed here, says [a] customs... investigations manager... Obviously, there are no figures that show how much of any illegal drug is being consumed here. A survey by the University of Auckland Alcohol and Public Health Research Unit comparing rates of use in 1998 with 1990 showed that the percentage of people who had used... Ecstasy... had increased from 0.4 to 2.1[%]. The... attraction for criminals to supply the drug... is obvious... Ecstasy... can be bought in Europe for as little as \$2 a tablet and sold here for \$100... [A spokesperson] for the N[Z] Drugs Foundation, whose mission is to minimise drug-related harm, says there is little doubt that... Ecstasy use will lead to further deaths... Aucklander Ngaire O'Neill's death] in 1998... has] been attributed to Ecstasy use... "But let's get things into perspective first. There are 500 alcohol-related deaths and 4500 tobacco related deaths in N[Z] every year,"... A... Detective Senior Sergeant... says... "It doesn't matter how many times you tell people that taking drugs can kill them, they all adopt the drink driver's [mentality]: I know 500 people kill themselves on the roads by smashing up their car, but it won't happen to me." That... is an attitude that will take more drug education programmes and probably two generations to change. Until that change happens the use of... Ecstasy will increase in line with trends in Europe and there is little police can do to stop it, says [the] Detective Senior Sergeant... "If you ask me whether we are losing the battle, I would have to say yes, yes we are."

...The white powder that put four... 15-year-old... South Auckland schoolgirls in hospital – one in intensive care – was the drug Ecstasy... Police, concerned about the girls' access to the class-B drug, believe this is the first time it has been found inside a N[Z] schoolyard... Another 15-year-old girl, understood to have brought the substance to Mangere College, had been referred to the police youth aid section... A... Detective Sergeant... of the National Drug Intelligence Bureau, said last night that Ecstasy was an expensive drug – selling for between \$60 and \$120 a tablet – normally associated with the club and dance scene... A... Mangere Detective Sergeant... said... [the girl] had found the drug on the floor at a party. Ecstasy claimed its first N[Z] fatality last October with the death of Aucklander Ngaire O'Neill. The 27-year-old... died after taking the drug while at a dance party at The Kase nightclub in Karangahape Rd. Overseas medical research has found that Ecstasy can produce severe health problems including overheating, irreversible damage to brain cells, irregular heartbeats, high blood pressure, anxiety and depression. Institute of Environmental Science and Research tests... confirmed the drug the girls took was MDMA. Ecstasy is one of its nick-names, as is the love-drug.

...The apparent Ecstasy-related death of Ngaire O'Neill has revealed a new range of love drugs hitting the N[Z] dance party scene. And it is the combination – or polydrug use – with other substances such as alcohol which is causing concern in N[Z] and deaths overseas. Gamma-hydroxybutyrate – known as Fantasy or GHB – is just one of a host of substances which dancers are consuming to make the party last all night... [Others include] *Speed*... and... Liquid Ketamine (horse tranquilliser) [or *Special K* – which is sold in \$50 'ampoules' (vials), the same as GHB. GHB]... is called a love drug because it reportedly increases sexual awareness, lowers inhibitions, enhances erections and strengthens orgasms... [N]ightclub bouncers report that... [vials] of clear liquid are being sold or shared, with no indication of the amount of GHB in each vial. [It is not unusual for people to "just drop dead" then have to be resuscitated, according to a former dance party bouncer on the Gold Coast, where 10 people collapsed in a mass overdose last weekend. "It's hot, they overheat and go into cardiac arrest because their heart is pumping so fast."]The problem with GHB, as with most illegal drugs, is that the correct dosage is notoriously difficult to determine – and can prove fatal, especially if taken with alcohol... Proponents of the drug say half a gram is safe for a 55kg person, while more can cause... vomiting, diarrhoea, headaches, confusion and dizziness... GHB, a neurotransmitter which occurs naturally in the body, has been used in Europe to treat sleep disorders for 30 years. First manufactured by a French chemist in the 1960s, it has also been used as an anaesthetic in some countries and has been popular among bodybuilders as a nutritional supplement... Possession of GHB is not illegal in N[Z] – primarily 'because legislation hasn't caught up with it' – though it is illegal either to sell it or use it for therapeutic purposes, say authorities. It is illegal in the U[S, where it]... has been linked to date rape... but not in Britain... In the harsh language of number-crunchers, GHB-related deaths are statistically inconclusive, while the consumption of other drugs and alcohol in combination further muddles conclusions. Even the controversy surrounding Ecstasy – with users dying through either dehydration or "drowning" when more water is consumed than perspired, causing the brain to shut down – should be put into perspective. Opiates kill 1.9[%] of British users, reports the *Economist*. Ecstasy claims the lives of 0.0002[%] of users. Viagra... is also proving popular with dancers...

University of Manchester researchers say a survey of clubbers in the north-west of England has shown 3[%]... had admitted to taking Viagra on a night out... [Both guys and gals], aged between 19 and 34, [are paying] £10... per tablet... Most admitted they had taken it with other drugs commonly thought to hamper sexual performance, such as Ecstasy... [● Researchers] at Johns Hopkins University in Maryland [have found that Ecstasy damages] nerve endings in the brain that release serotonin, a chemical that regulates mood, memory, pain, sleep and sex. Scientists knew from earlier studies that Ecstasy... caused nerve damage in baboons... "This is the first time we've been able to examine the actual serotonin-producing nerve cells directly in the brain,"... Experiments on monkeys showed that as little as four days of using Ecstasy... twice a day... can cause damage lasting six to seven years... [T]he drug appears to destroy a part of the human brain cells called axons which transmit nerve signals.

...POLICE are targeting a dangerous sex drug that has hit N[Z]. The drug called yaa baa, which means "crazy drug", is causing havoc in Thailand's sex industry. A consignment arrived in Auckland last month. The small pink pills, which... are made in Burma laboratories for about 10c each and sell in Bangkok for \$5[, but]... sell for \$100 each [in NZ], can be swallowed or crushed and smoked. They increase sexual stamina and give a high lasting up to 16 hours. "We've heard it's stronger than anything comparable," said [a] detective senior sergeant... [Incidentally, d]rug rape is on the rise in N[Z], with agencies reporting an alarming trend of sexual predators spiking drinks... Auckland Sexual Abuse Help, said that during the past five months the centre had received about 20 calls from [people] who said they had been drugged and raped. Previously, it had received about one such call a year... It was possible that the increase was a result of predators becoming more aware of the practice, which is widespread overseas... Counselling services and police say that although [gals] out partying have been the main targets, [guys and] children... have also been victims. In one instance, a seven-year-old South Auckland boy was lured into a fast-food outlet, abducted and sexually abused after his fizzy drink was drugged... [T]races of the drugs often remained in the bloodstream for more than 48 hours after the victim regained consciousness and could be detected in a blood or urine test[, but]... by the time [many victims suspect they] had been drugged it [i]s too late to be tested... The most common drugs being used are sedatives, tranquillisers and antihistamines... While the most common method... of... [delivery] is spiked drinks, sexual abuse counsellors are now seeing cases of recreational drugs also laced with sedatives... A spokesperson for Auckland Rape Crisis... said the drugs were fast-acting and induced a blackout which could last six to 12 hours... Last weekend, one [victim] contacted the centre after sharing drinks with her workmates. The next morning [the victim] discovered bruising in her genital area and had "had the feeling that something awful had happened," but could remember nothing about the previous night. In another instance, a [victim] went to an inner-city nightclub, had a drink and woke up in a park with her pants around her ankles... "We tell [gals]: buy your own drinks and don't take your eyes off them..." [A] Detective Senior Sergeant... of Waitakere police said two [guys] were due in court next month in connection with the alleged drug rape of a [gal] after her drink was spiked at a West Auckland nightclub... Drug rape campaigners in A[US] and England have called for a ban on the drug Rohypnol, which is banned in America, but its local distributors, Roche Products, say they have not heard of it being used in rapes here.

...A new type of beer coaster that can tell people whether their drink has been spiked has been invented in Britain. But it may not make it into N[Z] bars and restaurants because our drug rape experts say the mat may be unreliable. The... cardboard... mats... [that] cost around 60p... each... change colour... on the sensitive areas... to show whether a drink contains the so-called drug rape substances rohypnol and temazepam.

...The controversial “date rape pill” Rohypnol will be replaced on the A[US]n market with a lower dose substitute containing a blue dye to make it detectable in drinks... [By the way, o]ne of the Mangere College students who was taken to hospital after sipping a soft drink spiked with Ecstasy has told of her shock at watching her friends fall ill one by one... The student, who will return to school tomorrow... and her friends had no idea that Ecstasy had been put in the bottle of Sprite... The 15-year-old who supplied the bag of powdered Ecstasy... did not take it herself...

Police are re-examining the South Auckland schoolgirl Ecstasy scare after admitting they made some wrong assumptions in their investigation. They said yesterday that new evidence about the purity of the Ecstasy had changed the focus of the inquiry, and raised the possibility the drug came direct from a manufacturer or importer... The N[Z] *Herald* revealed this week that the scientist who analysed the Ecstasy found it to be in an almost pure powder form not seen before in this country... [There was] no evidence of the binding agents used to hold tablets together... Police had assumed until now that the Ecstasy was in a powder form because someone had ground up tablets, and that it was a street-level supply.

...“We... are not going to stand aside and allow people to destroy the lives of many N[Z]ers...”... Ecstasy sellers will face life imprisonment if moves by the... Government to get tough on drug dealers become law. The... [PM] would push Parliament to reclassify Ecstasy from a class B drug to a class A... put[ting it] in the same class as heroin, cocaine and LSD... At present, Ecstasy users face a \$500 fine or [3] months’ jail or both. That would increase to \$1000 or [6] months jail... But... Youth Law Auckland... said changing Ecstasy’s legal status would have little impact on young users because they were ignorant about its class or any penalties it carried. “It comes as a surprise after they have been arrested and charged.”

...Promises of higher penalties for Ecstasy demonstrate inconsistencies in drug laws and cheap electioneering, claim opponents of the move... The Canterbury University... criminologist... believes sensational reports about the effects... have created an irrational fear... [The] lecturer... knew of no research which showed that Ecstasy was anywhere near as dangerous as heroin or more dangerous than morphine and opium[, which]... are almost identical to heroin, [yet]were class-B drugs. But[an] Auckland drug squad head... said yesterday... that amphetamines, of which Ecstasy was a derivative, were originally placed in a lower category because previously people knew little about them and they had only recently been abused on a large scale... [Complicating the issue is the fact that] MDA was already a class-A drug, MDMA was class B and MDEA was class C – yet all three were Ecstasy... “It is a complex definitional issue, which we realise we have to get a solution for which is quite clear to people,”... said... [the] Director of Public Health... [Strange as it may sound, if NZ] police believed a person possessed class-A drugs, or cannabis... then they could search premises, vehicles and people without a search warrant. However, they had to obtain a search warrant for Ecstasy and speed... New Scotland Yard police... said Ecstasy was a class-A drug in... Britain[, where it]... has been linked to at least 60 deaths... since the late 1980s.

...It was a clear, starry night at the biggest dance party of the year when the 19-year-old student decided to pop her first Ecstasy pill. [The student] paid \$80 to a drug dealer at The Gathering, swallowed the little white pill with the big E on it and waited for its effects to hit. The Nelson [student], who does not want to be identified, is one of an increasing number of people using designer drugs such as Ecstasy... [The student] was a friend of 32-year-old Dai Bowden, who died in a Nelson car park on March 19 from what is known as “drowning,”... The [student] had been planning to have her third Ecstasy pill the week Mr Bowden died but put those plans on hold. [The student] said his death, the third Ecstasy-related in this country, had sent a chill through Nelson’s burgeoning designer drugs scene but it would not stop people using the drug... Within about 30 minutes of taking the drug [the student had] felt a surge of confidence caused by the pill releasing a flood of serotonin... into her system. “I just started charging around feeling... confident and talking to people. You just feel really good.” [The student] also had an overwhelming feeling of love for everyone around her and found it difficult to stop smiling. “I[t]... makes you feel like the world is really good and people are really beautiful... [I]’m sure I freaked out a few people telling them how beautiful they were. You just want to touch people...” After about four hours, the effects started to wear off. [The student said it] suffered no obvious side-effects apart from feeling very tired and having a sore jaw from smiling too much.

...Even light weekend use of the party drug Ecstasy can harm intelligence, a new study suggests. German scientists report that weeks after partying, those who used Ecstasy along with marijuana performed worse on intelligence tests than people who smoked pot or took no drugs at all... “Because almost every Ecstasy user smokes cannabis, it was impossible to recruit a reasonable number of exclusive Ecstasy users,” the study said... Those who smoked marijuana performed no differently than those who were drug free... [■ NZ p]olice are preparing to crack down on the dance-drug Fantasy, after the Government yesterday outlawed its recreational use. The Ministry of Health, fearing users will die, has now classified the drug as a prescription medicine as a “stop-gap measure” ahead of expected changes to drug-abuse laws. The... listing under the Medicines Act means people possessing the drug without a prescription face maximum sentences of three months’ jail or a \$500 fine. Those selling or dealing in it unlicensed risk up to six months’ prison or a \$1000 fine. The ministry said Fantasy had never been registered here as a medicine and it would now be virtually impossible to get it legally. Police have been stockpiling intelligence about people using and obtaining Fantasy but have been frustrated by its being legal... It is sold in clubs and in gyms, as some body builders take it to promote “slow-wave sleep” during which a growth hormone is secreted... The depressant drug, which surfaced in the dance club scene last year, is commonly a colourless and odourless liquid sold in small bottles for about \$35 a “hit.” The so-called joy drug can induce euphoria and lift confidence but its dark side is linked with convulsions, coma and death... Auckland and Christchurch hospitals have reported an influx of people suffering its effects in recent weeks.

...Two... [guys], aged 23 and 27... who collapsed in a Te Awamutu bar are thought to be victims of the newly banned party drug Fantasy... Both were taken to Waikato Hospital and kept in intensive care overnight. One... was discharged yesterday and the other is in a stable condition... [P]olice had spoken to one of the [victims] but charges were unlikely... The Government outlawed its recreational use and supply... after Auckland and Christchurch hospitals reported 14 overdoses in a few weeks. Fantasy has been linked to several deaths overseas.

...A student has died and his girlfriend almost stopped breathing after taking the illegal drug Fantasy in what is thought to be the first fatal case involving the drug in N[Z] or AUS]. Shawn Jacob Brenner, 22, fell into a coma on Friday night and was declared brain-dead in Auckland Hospital at 3.30 pm on Saturday... Mr Brenner’s brain had been badly damaged from lack of oxygen... Mr Brenner, a University of Auckland engineering student, is the son of [an] Auckland gynaecologist... Police are investigating his death... in a house in Richmond Rd, Ponsonby... which comes after years of concern by the medical profession and police over the use of Fantasy – also known as ...GHB... GBH (grievous bodily harm) and Liquid Green. The drug... achieved notoriety in 1993 when it was identified as a drug which contributed to the death of Hollywood actor River Phoenix.

...Doctors who treated two club patrons taken unconscious to hospital want a legal party drug banned before it kills someone... [The two patrons] were admitted... to... Auckland Hospital intensive care... early on Saturday suffering breathing problems and seizures. They had collapsed in the Auckland nightclub Jones after taking One4b, a dietary supplement that is not illegal – its makers compare it to “the elixir of youth” – but it is a version of the banned drug Fantasy. In a strongly worded letter to the *Herald*, the doctors said they wanted the community warned of the dangers of the drug... described... as a “time-release version of GHB.” ...The clear liquid is packaged in 10ml and 5ml sachets, and a set of 15ml costs \$20... The dangers of taking One4b in conjunction with any other stimulants – alcohol, caffeine or other drugs – are marked on the sachet... Police are looking at charging whoever sold the substance to the [two patrons] with causing harm or injury. [A]Senior Sergeant... said the [patrons] said they had followed the instructions and had not taken alcohol or other drugs... [However,] the company that markets One4b says... the comatose state of the [two people] taken to hospital was a natural effect of the drug. It could produce a three-to-five-hour deep sleep from which users were “unwakeable.” “The problem may have been that no one knew what they had taken and when they were in the deep REM sleep some people thought they were gravely ill.” The... Minister of Health... was unavailable for comment last night.

...Thousands of sachets of... One4b were recalled last night as yet another overdose victim was taken to hospital in a coma... Medical experts fear someone will die from One4b, and the Ministry of Health yesterday issued a rare public warning urging people not to take it. The ministry also

ordered the distributor, Outerspace, to withdraw One4b from sale. In last night's case, Auckland Hospital staff were told the victim[, who is]... in his 20s... took several sachets of the drug at Piha Beach. Three other people were admitted to Auckland Hospital over the weekend, saying they had taken One4b... All were discharged within hours of arrival. In yesterday's *Herald*, intensive care specialists... urged that One4b be banned... Last night [one of the specialists said it] was pleased "and surprised" at the speed with which the Ministry of Health had acted.

...*'Speed' manufacture labelled 'new social evil'* Tough sentences have been imposed on an Auckland drug quartet by a judge wanting to set a deterrent against what the Crown termed a "new social evil." In the High Court at Auckland yesterday, [the ringleader], aged 54, was sent to prison for 10 years after admitting manufacturing, possessing and supplying methamphetamine... In what was claimed to be the biggest drug-making operation in [NZ history, the ringleader] and his accomplices used the Highway 61 motorcycle gang to distribute drugs made in secret laboratories in Avondale and New Lynn... [The prosecutor] for the Crown, said [the ringleader] had spent years trying to perfect manufacturing techniques[, and] had ordered a book from the U[S] in 1995 detailing how to make it. More than... \$1.3 million of drugs... were [thought to be involved, from which] more than... \$200,000 had been deposited in a trust account... [The ringleader had also paid cash] for cars, properties, travel and home renovations...

[First we heard about the] Customs officer... caught working for an international drug syndicate... [Now comes news that two] dealers walked free and another escaped serious charges after a CourierPost driver stole crucial evidence that had been mailed from regional police stations... to forensic experts at the... E[SR] in Auckland... A fourth suspect... is believed to have pleaded guilty before... f[indin]g out the evidence against him had been stolen... The 18-year-old [courier] admitted that... it... threw away most of the drugs, including cannabis, morphine sulphate and methamphetamine.

...**DRUG COOKS** caught making methamphetamine are reoffending on bail because of a two-year wait for trial. The Police Association says the delay is due to a huge backlog in scientific evidence tests... The backlog made a mockery of a supposed war on methamphetamine... The backlog is due to a big increase in speed and "P" lab discoveries – [including some found set up in motel rooms.] ESR has budgeted for 20 labs a year but this year the number is expected to top 200. Police... said ESR was recruiting qualified scientists and funding was not the reason for delays... It takes two years to train scientists and technicians but [ESR is] looking to fast-track more staff... Lab tests cost police close to \$300,000 in the last financial year... The government announced \$6.6 million over three years in this year's budget for two more police teams to clean up speed labs.

...*Acid trip finally up to speed...* [I]n 1964... Merry Pranksters drove their psychedelic bus across the U[S], introducing the world to LSD and gave a whole new meaning to the term "tripping." Now... it is all available on video. The journey, as all good hippies know, was exhaustively chronicled by... [the] book *The Electric Kool-Aid Acid Test*, a landmark of 60s counter-culture literature. What the hippies may not have realised was that... [the Pranksters] also had film cameras running throughout and intended to release their chronicle of the trip as a movie. There was, however, a snag. The sound system was powered by the bus generator, which had the unfortunate effect of slowing down and accelerating the tape recorder in sync with the speed of the bus. For years [the film-makers] tried to match the sound with the pictures but could not crack it until the advent of digital technology. Now everything has been matched, re-edited and converted to video – hours and hours of acid-dropping, philosophical musing and pranks... The excuse for the trip was a visit to the World's Fair in New York and a launch party for... the author of *One Flew Over The Cuckoo's Nest*'s... second novel, *Sometimes A Great Notion*. But the true motivation was the journey itself. A 25-year-old bus was daubed in psychedelic paint and nicknamed "Furthur." The driver... hired was... the inspiration behind the central character in... *On The Road*, and the fuel that kept the Pranksters rolling was not petrol as much as LSD. The Pranksters crashed a Unitarian Church conference, partied with the Hell's Angels and, at one point, even staged [the author]'s death. The video tracks the first part of the journey, in which the bus gets painted, becomes stuck in Arizona's Big Muddy River, and cruises into Houston where one of the Pranksters dies as a result of a bad acid trip. All along we see [the person] at the wheel spouting a non-stop, barely intelligible monologue in which [it] talks a lot about gonads... Cultural historians are divided on whether the trip defined the 60s or whether the real landmark was [the written] account of it. The video will no doubt fuel that debate further.

...A middle-aged Auckland couple found... [\$0.5m] worth of LSD and cannabis in a rubbish bag on their doorstep... Drug squad detectives now fear for the... couple's safety and want the criminal world to know police are holding... the drugs. They believe the 12,500 LSD tabs... and 3kg of high-quality cannabis heads... were smuggled into N[Z] and delivered to the wrong address. They suspect the smugglers are gang-related and say the person who delivered the drugs to the wrong address could suffer retribution... [I]t was the first time [NZ police] had heard of such a large quantity of drugs being misdirected... The haul is equal to more than half the entire national LSD seizures last year. The tabs feature pictures of Bolivian revolutionary Che Guevara, cartoon character Bart Simpson, comic book hero Fat Freddy's Cat and two futuristic figures in an embrace... [Authorities admit that 'a drug which can be made in the kitchen sink is hard to stop.' The] drug was usually manufactured in liquid form in clandestine laboratories in California, then shipped to Europe, where it was sprayed on to perforated, patterned paper for international distribution.

...The International Narcotics Control Board, a U[N] organisation based in Vienna, has released a report that paints a grim picture of N[Z]'s increasing involvement in a global narcotics industry that is almost out of control... Ecstasy, LSD and amphetamine abuse in N[Z] is rising, along with a developing black market for... Ritalin[, which – much like the 'legalised hallucinogenic drug DXM (the drug of choice for Christchurch skinheads') –] is increasingly being abused for recreational purposes... N[Z] was among the leaders in[the] alarming international swing that had seen the use of the... drug... used to treat... ADHD... increase a "staggering" 100[%] in more than 50 countries... [(At the age of eight, my son... changed from a well-behaved little boy into a "whirling dervish"... We saw a specialist, who diagnosed a new drug – Ritalin... The... medication seemed to calm [him down. But my son] wasn't happy taking drugs every day and I often had to force him... At 15,[my son] rebelled and moved out to live with friends for three months. When [my son] returned, I learnt [it]d swapped Ritalin for marijuana. I couldn't stop him and one day [my son] confessed: 'Mum, I'm in trouble. Last night I had heroin and cocaine.' I immediately booked him into a drug rehabilitation centre. After three months, [my son] came out drug-free, but a few years later I was cleaning his room when I found a needle and spoon. We had a fierce argument and [my] son moved out again... Because of my experience with my son... my house became a kind of informal hostel for those no-one else wanted. I learnt that many of the drug addicts had been diagnosed with ADD or ADHD as kids. They'd been given prescribed drugs like Ritalin or Dexamphetamine, and used them as stepping stones to drugs like coke, speed and heroin. I did... research and found both Ritalin and Dexamphetamine are highly addictive... 'It's my fault [my son] is a drug addict,' I blamed myself. 'I made him take those pills.'). Illicit... drugs other than marijuana... were used by 9[% of NZ]ers aged 18 to 45 in the past year... LSD use was reported by 4[% , magic] mushrooms by 2[%] and Ecstasy by 1[%]... The increase was greater in Auckland... LSD use in the city increased from 2[% to 5%]. Nationally, the... use of cocaine, heroin, or homebake showed no increase over the past 12 months, remaining at 1[%] or less... The bust[rate] of... amphetamine lab[s in NZ] since 1995 matched the growth in illicit "speed" manufacturing in A[US], where a trend towards portable laboratories had emerged... The[NZ] Customs Service last year estimated that drug traffickers were smuggling more than half a million LSD tabs into the country[and] about 648,000 doses... of Ecstasy... each year.

...Customs is concerned at the amount of high-quality Ecstasy flooding into N[Z] from Asia and the difficulties of detecting the drug... [– although, during the past 15 months,] Customs has intercepted more than 12,000 tabs of Ecstasy... "LSD is the biggest concern in that it is odourless, colourless and tasteless, and the mail system is obviously a huge worry... [However,] MDMA is really no different – it's the same sort of situation." ...Customs is also concerned at the enormously varying potencies of Ecstasy, which ranged from tablets containing very high levels of MDMA to fake Ecstasy tablets... [Consequently,] people often had no idea what they were taking... Most supplies were from Europe, but A[US]n intelligence

showed that large amounts[now] came from... Indonesia and Thailand, where a clampdown on heroin production has turned drug barons to Ecstasy.

...A[US]n federal police have seized 23,000 Ecstasy tablets in Adelaide, estimated to be worth more than \$A1 million...

[The AUSn PM]’s bid to push the nation towards zero-tolerance crime policies as part of his “war on drugs” campaign will run against tough opposition... Two key states and the A[CT] have already rejected the plan ahead of the meeting [the PM] will hold tomorrow with the head of America’s F[B]I... The proposal, under which police would blanket targeted areas for even minor offences, was raised after talks with [NZ]’s PM]...

People have been taking drugs for no good medical reason since the dawn of history. For just as long, other people have raged against that. The official attitude to drugs can seem mysterious at first glance. For example, numerous drugs are illegal while tobacco... is distributed legally... Leaving a 13-year-old alone at home is an offence but poisoning infants by smoking in confined spaces is not. The full range of social thought is illustrated in the drug debate. At one end of the spectrum libertarians say... jails have been filled, police corrupted, civil liberties lost and [Last] World peasants propelled into... [illicit-drug] production, all to stop people doing something they should be free to do. They also say illegality creates high prices and addicted people become criminals to pay inflated prices... In the purest form they say the state has no role in protecting people from themselves. At the other end of the spectrum are the prohibitionists, who say that addictive drugs entrap human personalities so that arguments about human liberty are spurious. Prohibitionists say there are some human activities that are so socially destructive that even when the perpetrator is the victim they cannot be permitted. The... [NZ] Drug Foundation favours a middle path. If all drugs were legal, human greed would see new products developed with the intent of maximising addiction through the population. On the other hand... prohibition... of alcohol in the 1930s is proof enough... [that a] war on drugs is a hard one to win... Even in [NZ prisons 35%] of inmates test positive for drug use... Meanwhile, [300]... new assessments for alcohol and drug treatment are made monthly in the Auckland region alone. These people may represent just the tip of the iceberg... [While on the topic of drug control,] with the tacit approval of the Victorian Premier, [the]... youth welfare agency Open Family intends to open safe drug injection rooms for addicts in Sydney and Melbourne... in defiance of the law and in the hope that police will turn a blind eye...

How do you control drugs without creating new victims? Yesterday five state and territory leaders met in Melbourne at the drug summit called by Victoria’s Liberal Premier... in a bid to find some consensus on the question... [The Premier and ACT]’s Chief Minister... support trials of safe injecting rooms for registered addicts as a half-way house between the streets and rehabilitation. [The trials, which would have seen ‘addicts buying pharmaceutical heroin for about \$A15, was supported by state, territory and federal health ministers at their annual meeting’ last year.]To other powerful figures, most notably... [AUS]’s PM], the idea is abhorrent. [The PM]’s favoured policy, for the moment at least, is zero tolerance... But zero tolerance has its own fervent opponents... and drawbacks... [M]ore often than not [it] simply sweeps crime from one precinct into another. There is also objection which will ring alarm bells in N[Z]: the impact of zero tolerance on racial and ethnic groups whose members already experience high levels of arrest, and claim victimisation and harassment... “Let’s face it,” said[the] Aboriginal and Torres Strait Islander Commissioner... “past and present law and order policies have created a high level of suspicion and resentment between indigenous A[US]ns and the police. Zero tolerance will only worsen this situation.” ...an Atsic-commissioned study by... the Institute of Criminology at Sydney University... says that because almost one in three Aborigines are taken into custody because of intoxication in public, and almost half of the A[US]ns arrested for other public order offences are indigenous, zero-tolerance policing will have a “dramatic and discriminatory effect” on Aborigines and Torres Strait Islanders. More arrests will mean more indigenous deaths in custody, and will undermine successful community policies providing alternatives to arrest, custody and criminalisation... The blow would fall even harder in the Northern Territory, where 81[%] of people sentenced to imprisonment are indigenous... And [the institute] warns of wider problems. “International experience strongly suggests zero-tolerance policing leads to an increase in the incidence of police misconduct, including violence...” Policymakers will need to be sure zero tolerance does not mean zero gain.

...safe injecting rooms... have been rejected by [AUS]’s PM], and in NSW, Queensland and Western A[US], blocking a Swiss-style trial proposed in the... [ACT, as drugs and crime are] thrust to the front of A[US]’s political agenda... [There are estimated to be] 15,000 addicts in A[US].

...Swiss voters headed to the polls overnight to decide on a sweeping proposal to legalise narcotics. The proposal is widely expected to fail.

...No one was admitting responsibility yesterday after a triple murderer stole into N[Z]... for two weeks... Embarrassed police and immigration officials had no idea the [53-year-old] who slaughtered three innocent people in a drug-entured “revenge” for his baby son’s accidental death in 1973 had come here, apparently under his own name. Alarm bells rang when his wife... arrived legally from A[US] a few days ago. Her visit triggered Interpol inquiries that tracked... “Mad Dog”... to... where... the... [wife] had joined him... [The guy] once considered among the most violent prisoners the A[US]n penal system had ever seen... was removed quietly by police from a Kawarau house on Friday night, after his entry to the country went unchallenged this month. The Scot... who spent most of his life in A[US], was to have appeared in court on immigration charges but agreed instead to be repatriated to Britain... [Incidentally, v]igilante groups in Dublin [have] put up posters of drug dealers who are to be shot...

Two or three nights a week, the menacing clatter of... police helicopter... blades wakes residents of the newly developed apartment blocks near the Grand Canal in... the Liberties area of... Dublin... That noise, together with the relentless wail of car alarms, is a reminder of the drugs-and-crime problem that is blighting one of Europe’s most successful cities... In prosperous commercial areas, every shop has security staff on the doors... After two decades of an escalating drugs problem, the tactics of Dublin’s anti-drug vigilante groups are uncompromising. In the Sundrive area late last year they put up posters listing names of drug dealers to be shot. As if this were not enough, there are savage internecine “turf wars” between dealers... [A]n alleged Ecstasy dealer, is accused of the torture and murder of [another] dealer... in... 1996. Similar levels of violence surrounded the operations of... a criminal... who tried to take over Dublin’s cannabis market... PJ “the Psycho” Judge... who was shot dead two years ago, was suspected of killing five rivals. [The body of one] of his suspected victims... was never found... William “Jock” Corbally... reportedly had his teeth pulled out, was beaten with a shovel before having his throat cut, then thrown into a lime pit in County Kildare. But dealers are willing to risk such violence for a share of a burgeoning market. Dublin has around 13,000 regular heroin users, up from 8000... two years ago. Officers based at the Garda headquarters, in Dublin’s Phoenix Park, believe that heroin is behind 80[%] of the city’s crime... The Irish Government has tried to deal with Dublin’s heroin problem. In the early 80s it used undercover officers whose efforts, accompanied by community action, were effective in tackling dealers... And after drug dealers killed journalist Veronica Guerin in 1996, a murder which prompted an international outcry, the Government poured more funds into anti-drugs measures, and set up a Criminal Assets Bureau to target major dealers. But as fast as the Garda act, so[me] new dealers move in... and... the estates built with short-sightedness in the 60s continue to be littered with syringes...

A half-full syringe lay next to her arm. Salonika’s coroner and police force insisted that... Eva Fotiadou... was another victim of the heroin scourge now sweeping Greece. But [Eva’s mum], who has been separated since 1995, would have none of it. [Mum] might have lived on the wrong side of town and money might have been scarce, but [mum] was sure her shy daughter, a marketing student... who had just turned 20... was not a drug addict... When [Eva’s body] was found... behind a derelict building outside the centre of Salonika... chunks of her long, raven-black hair were discovered entwined in the wheels of a cement-mixer behind her – incriminating evidence that later vanished inexplicably... [– and Eva] had been “hit across the forehead, hit across the eyes and bashed in the gums and teeth.” ...“When I saw that, I died myself. The whole village started to scream, ‘What wild dogs have done this? Murder. Murder’... [But the] police were totally indifferent. They hadn’t taken fingerprints or conducted toxicological tests, or even examined her clothes which showed clearly that [Eva] had been raped...” It was then that [mum] vowed to contest the

official view... Thus began her extraordinary journey into an underworld of prostitution, addiction, cruelty, corruption and death... [- not to mention doing things mum previously] would never have imagined. The worst was to sleep with the [guy] who is now accused of killing her daughter and have him confess. "I wanted to rip him to shreds, but the whole time the tape-recorder was rolling." On the basis of a thick dossier of evidence [mum] garnered with the help of a private detective, eight people... have been charged with gang rape and premeditated murder... Not for nothing is [mum] now being branded the new "Mother Courage." ...Greeks[even] say that in... [her] they have found a modern-day Demeter, the mother goddess who searched for her daughter Persephone after Hades carried her off to the Underworld... But [mum] says that now, more than at any other time... Mother Courage... is scared. The threatening telephone calls are increasing and [mum] fears for her life and that of her only other daughter. "The underworld, you know, is very powerful and it has no limits. Since none of the accused has been arrested, I'm obviously very afraid." There are[also] worries that, with police credibility on the line, the investigating magistrate will come up against even more obstacles... With growing numbers speaking of a police coverup, her quest for the truth has touched a nerve in a nation sickened by official incompetence and corruption. This year a score of police officers have been arrested for alleged involvement in protection, prostitution and drug rackets.

...It is a business to dream about. Its gross margins are 100[% and it] does not need to advertise... [B]ut... it pays tax at a rate of about 30[% which]... comes in the shape of seizures by customs officers or police, a cost the industry is easily able to absorb... The product is heroin, whose rampant growth as the drug of choice has been the subject of crisis talks by European ministers. The \$135 per kilo paid to farmers on the Pakistan-Afghanistan border for opium gum becomes up to \$48,000 when it reaches Britain as heroin... Ministers of 13 European countries have agreed on a paltry \$2.4m programme that has little chance of slowing what is becoming an epidemic... Government control over opium-producing areas is often non-existent and widespread corruption hinders law enforcement efforts... ['For most of the 1980s, USers - who constitute 5% of the world's population - were using 50% of its illegal drugs.'] This year the [US] Government will spend \$16 b... on the war against drugs - a 400[% increase since 1986. But... [in] US-dollar terms the total revenue of the international [illicit] drug business is put at \$300-\$500 b... At \$400 b... it would amount to 8[%] of total international trade... State Department officials suggest as much as 10[%] of world opium production could now be situated in South America - primarily Colombia. But the main source for European heroin remains the Golden Crescent of South-West Asia... Most heroin arrives in the [UK] by car or lorry, via the Balkan route. As a result, smugglers require few skills other than the ability to drive and are easily replaced if arrested... Previously investigators regarded a 10kg heroin find as a major triumph. Now recoveries of more than 100kg are not uncommon... Nevertheless, drug profits are so high that gangs are barely dented by seizures of the product on its way to the market. A [UN] drug control program... report conservatively estimates... at least 75[%] of international drug shipments would need to be intercepted in order to reduce substantially the profitability of the drug business... Turkish gangs who dominate British supplies are aggressively building their market. "There are more sales pitches and discount shopping than ever before," said... [a] Customs National Investigations Services... chief investigation officer... Special deals include giving heroin away as testers or as part of a "buy one, get one free" package or in return for introducing friends. In cities such as Bradford... dealers sell teenagers "pocket-money" wraps for £2... Once hooked, they are then sold bags for... £5 and £10... On the streets the average price of a gram of heroin has dropped from \$150 to \$120 as supply drives down price and widens the customer base... Heroin is still scarce... in... [NZ, where the] street price of imported "smack"... has remained constant for a few years at about \$1000 a gram - [or] 10 intravenous "tastes." ...Sources say... our geographical isolation, lack of land borders and limited drug scene puts us a decade behind drug crazes overseas.

...Life has become infinitely worse for the world's law-enforcement agencies in the 90 years since the first international conference on drugs was held in the opium-riddled Chinese city of Shanghai. The opium dens that spread across turn-of-the-century Europe have been replaced by a vast global industry with an [annual] turnover of hundreds of billions of dollars and countless thousands of lives. Yesterday, the latest annual report from the International Narcotics Control Board warned of even greater problems... For [NZ], the portents are grim. There are now sophisticated... drug... trade and communication [systems operating]... Such factors allow rapid access to new drugs and trends... in this country... and there is a huge and expanding drug production centre in nearby Asia. War and political turmoil have raised the stakes. While Pakistan has repeated its pledge to eliminate illegal poppy fields by 2000, war-torn Afghanistan appears to have filled the void created by the loss of Pakistani opium. The narcotics board fears that export stockpiles are mounting along the Tajik border in northern Afghanistan. New opium routes have been opened through the former Soviet republics of central Asia, which have also become alternative sources of the chemicals used in illicit production of heroin... The board warns of computer-made drugs... and the penetration of the Internet by the illegal narcotics industry. Dealers can now learn how to make drugs, then sell them, through the worldwide Web... and [have] created a new trend towards smoking [heroin among USers]... Elsewhere, purer and cheaper heroin has moved on to the market, causing a spate of overdose deaths in... [AUS. The AUS]n National Drug and Alcohol Research Centre says deaths from heroin overdose have been steadily rising since 1991, peaking last year at 600...

On Wednesday night alone, [AUSn] paramedics attended 17 heroin overdoses - two of them fatal - adding to a total that has increased steadily...

But [Toni] died on a sofa in suburban Melbourne... where... the... 25-year-old... had... injected heroin for the first and last time... one of hundreds of young people being killed by the cheap, pure heroin readily accessible in [AUS]n cities. Now customs officers here are warning that the tide could start washing up in [NZ] as enterprising dealers look to expand their operations... [AUSn overdose] deaths, up 40[%] since 1994, are predicted to top 800... this year. Street prices for heroin have dropped from \$A150 a hit to \$A30 in Sydney; in some rural areas it sells for \$A12 - less than cannabis - as Vietnamese gangs... have seized control of the trade... Toni's mother... says: "I'm sure [Toni] didn't suffer. I think [Toni] was having a good time in her last hours. But it was just such a senseless and careless waste of life." ...[] Yesterday... customs officials... made the biggest heroin haul ever in Germany, seizing more than 300kg of heroin at the Polish border. The... heroin, with a street value of \$US15 million... was found during a routine check of a Turkish truck...

A[US]'s largest-ever drug haul - \$A400 million... worth of high-grade heroin - went up in flames yesterday. The destruction by federal police of about 400kg of the narcotic follows its seizure in a pre-dawn raid on the [NSW] coast two months ago.

...Crime and violence on Sydney streets will jump as a result of A[US]'s record heroin haul, a welfare worker predicted yesterday... [A]nother immediate effect would be a downgrading in the purity of the drug. "The present supply is going to be cut and diluted with other substances to make it stretch further, which will make it more impure and much more dangerous to users."

...It started with the biggest heroin bust in [US] history - and ended nine years later at the doorstep of a short, balding Auckland business[person]n. The case against [the businessperson] has all the elements of a classic crime novel, with huge drug shipments, bugged phone calls, secret witnesses and millions of dollars in laundered cash. But even a crime novelist would have been proud to invent the name Mad Six, the nom-de-plume of the drug lord said to have drawn [the businessperson] into his inner circle. Yesterday the US failed in its five-month bid to have [the businessperson] extradited on charges of supplying and possessing heroin, which the 37-year-old denied. Now Hong Kong authorities want him extradited there. According to US legal and media files, [the businessperson]'s story started in earnest... at the port of Oakland, California. Among freight being unloaded from the ship President Truman that day were more than 2500 cartons of plastic bags. Working on a hunch, customs officials found that 59 of the cartons held a total of 486kg of heroin - the second-biggest shipment ever recorded. Officers seized some of the shipment and followed the rest to a warehouse in Hayward, California. Seventy officers packing guns and combat armour launched a five-week stakeout. Eventually they videotaped two members of a wealthy Taiwanese family looking for the missing drugs... Police busted the family and broke the story to the media as law officials leapt in to claim credit. The head of the Drug Enforcement Administration in San Francisco... said: "Law enforcement has ripped the heart out of a very significant organisation. We've cut the head of the dragon off." But officers soon suspected

that the dragon had merely lost its tail. They found that the family had received 12 shipments of furniture, plastic bags and porcelain from Asia since 1989 and uncovered evidence of up to \$500,000 at a time moving between bank accounts. They decided they had busted only the shipping “cell” of a drug cartel where most of the players knew little about the rest of the operation. [The businessperson]’s alleged role started to emerge in 1995, when police uncovered [a] New York heroin dealer... [who said it] was recruited into the drug trade by a childhood friend of an important Thai dealer... – whom authorities claim was actually [the businessperson]... Exactly how US authorities tracked [the businessperson to NZ] is unclear, but last December Auckland police were watching a [suspect] involved with a Queen St business who matched their description. An Auckland detective said [the businessperson] had lived in N[Z]... on a Thai passport... and... [had] used eight aliases while on the run. [The businessperson] was jailed – but not for long. Within days [it] had obtained cash from associates overseas and hired [a] top defence lawyer... who got [the businessperson] freed on what may be the strictest bail conditions ever seen in N[Z]. The businessperson had to live in a secret city apartment, pay \$100,000 for a security anklet and two guards to watch him 24 hours a day, was denied access to a cellphone, and had to meet a host of other conditions... [The] Judge... found that there would have been enough evidence to extradite [the businessperson] had the US properly authenticated its papers. The US had initially sought extradition on three heroin charges, but dropped the third for lack of evidence. [The] Judge... dismissed the first charge for various reasons and the second because only two of about 10 affidavits had been properly certified by a US government official. [The businessperson]’s future in N[Z] (which has a ‘largest heroin haul of 10kg’) is uncertain. It faces the Hong Kong extradition hearings in October, and the US may yet appeal yesterday’s decision.

...US heroin population[estimates], which have remained constant at... 500,000 for... 20 years, [are] being revised upward... The most encouraging sign [last year] had been a continued cut in coca production in the Andean countries... [But according to a] State Department report... the U[S] “faces another potentially serious drug threat from heroin,” which... South American drug barons... are trying to develop as... [they seek] to diversify from a saturated [US] cocaine market... It said a disturbing trend of multiple drug use suggested... more of America’s 2.1 million hardcore cocaine addicts were using heroin to cushion the ‘crash’ that follows the euphoria of crack... use... [The report also] had dire predictions on Russia, where it quoted... authorities as saying there were two million heroin addicts... Afghanistan[, whose]... crop was at an all-time high... and... Burma... remained the overwhelming opium producers, although unfavourable growing conditions in the Golden Triangle saw Burma’s crop fall by 16%.

...Helicopter gunships swoop in over the mountains and touch down in a jungle clearing, disgorging an elite team of Royal Thai Army drug enforcers armed with M16s and crop cutters... Just as one helicopter takes off another swoops in... The... [soldiers] are... on their latest mission to destroy the opium fields of the notoriously lawless Golden Triangle, bordering northern Thailand, Laos and Burma... Armed with satellite pictures supplied by the U[S], on-the-ground intelligence and information from spotter planes, the Army has just a few weeks to destroy the crops... before they can be harvested... The red-and-white opium poppies swaying in the gentle wind on the remote 1000m hillside plantation look innocent enough. But the heroin refined from the poppies is said to be the best in the world... “This is an ideal place to grow opium because it is cool and the soil is so good... There are four hill-tribe villages around here and we do not know which one planted this crop. They plant the poppies among vegetables to make them harder to spot and then deny planting opium...” ...Thailand’s Office of the Narcotics Control Board says... in 1984 there were... 55,000 rai of poppy fields. Now there are roughly 11,000... Each rai can produce 1.6kg of opium sap, worth up to \$US2700... – a fortune to the hill-tribe villagers who otherwise barely eke out an existence with subsistence farming... Hill-tribe planters are getting wise to the Army’s search-and-destroy missions... [– planting] crops in smaller and more remote spots[, or]... growing outside the cool season, using fertilisers and... sophisticated sprinkling systems... Village chiefs are also keen to tap into tourism and the money it brings by showing off their culture to foreign visitors... [But the] Government is determined to wipe out production altogether and has recently stepped up efforts... [In the last three months] 391,310g of heroin... have been seized and 970 people arrested.

...[the son] was just 17 years old when his father made the mistake that would change his and his family’s life forever. In 1991 [the father] was caught at Bangkok airport with 425 grams of heroin. [The father] began a 30-year sentence in Klong Prem, one of the world’s toughest prisons, also known as the Bangkok Hilton. To begin with, [the son] was bewildered and angry, but as the years went on [it] learned of his father’s secret pain, of the trauma [his father] still suffered from his time as a soldier in Vietnam... [A]n award-winning current affairs journalist and now associate director of news for TV3, lives with [the son]. They have a five-year-old child. [Three years ago the couple] began a desperate quest to save [the father] from dying in the Thai prison. At great personal risk they smuggled a still and video camera into the Thai jail to film an emotional meeting with... [the] poet and former prison officer. Their story is told in *In The Name Of The Father*, the *Inside NZ* documentary on TV3 at 8.30pm, Wednesday. Filming took place over the three years... [the couple] have been trying to get [the father] released. Most people thought it an impossible task. In Asia more people die in these prisons than ever see the light of freedom. Couple that with the fact that N[Z] is one of the only countries in the western world that does not have a prisoner transfer treaty (where prisoners are repatriated to serve their sentences at home). It doesn’t look good.

...What’s the matter with the press when they give hero status to Kiwi drug runners who get caught? After two other celebrated cases involving N[Z]ers, we now have... [a third] getting coverage on TV3... My heart bleeds... I feel no remorse for the [prisoner’s] family. To blame the Vietnam War for the trauma does not hold water as hundreds of Kiwis went and they have not followed this road.

...[of the 194 AUS]ns currently serving time in various jails throughout the world... 160 [were imprisoned]... for drug related offences. The highest lock-up rates being 17 in the US, followed by Thailand with 11...

[The AUSn] had been caught red handed... attempting to smuggle 24 bags of grade-four heroin out of Thailand... but the Thais beat a confession out of him anyway. And that was just the start of... [his] 12 years of suffering... [T]he arresting officer... [told him:] “Nobody... can help you. Forget your embassy! Forget about a lawyer!” ...[the officer] (known as Mad Dog) was true to his word. For the next month, [the AUSn] and his accomplice, rugby league player Paul Hayward, were questioned for 14 hours a day. They were charged under Article 37, which permitted execution by the military without trial. [Mad Dog] twice petitioned the... government to have [the AUSns] summarily shot, but after consideration, the [Thai PM] insisted that the case should go to trial. “Mad Dog was my first encounter with the Thai justice system... [Mad Dog would] hold guns to our heads... beat us, attach batteries to our nipples and genitals. One day [Mad Dog] just kept kicking me repeatedly under the table... hour after hour, until I couldn’t walk... [Mad Dog] told us we’d die or rot in a Thai prison, and... was pretty much right...” Several times Mad Dog convinced [them] that they were about to die. On one occasion... a caucasian... claiming to be from the [AUSn embassy was] brought in to see them. Instead of asking after their well-being, the [caucasian] sombrely informed them they were to be shot that day, and asked if they’d like a priest to visit. For 37 days the relentless physical and mental torture continued. By the end of it, [they were] prepared to sign anything put in front of... [them]. When] finally told they were to be taken to jail to await trial, they were simply relieved... the interrogation was over... until they heard the jeers of one of the guards who came to take them away. “Ha ha ha... You go monkey house.” Monkey house was Bumbub prison, a “rehabilitation jail” for drug users. On arrival, a blacksmith hammered heavy chains around... [their] feet. “I was in chains for three years... I’ve still got marks on my legs. But we were lucky. If you were unpopular with the guards, they’d bribe the blacksmith to smash a prisoner’s ankle...” Next, the new inmates were presented with what was to become their standard diet for the next 12 years – bowls of red, steamy rice crawling with maggots, plus a fish skeleton soaked in dirty water. [The AUSn] shared a cell with 30 prisoners. The stench of faeces from the open toilet in the corner made it difficult to breathe. Added to that was the threat of indiscriminate violence. “...Some of the guards believed that the only way to get through to a prisoner was

to beat him into submission or to death..." After a few weeks, [the pair] were told they were being transferred to Maha Chai prison – a place... Thai prisoners talk[ed] about in frightened tones. One of them... [described] a game... popular among the guards there. A prisoner would be placed in a tiny, spherical bamboo cage and kicked around the yard by the guards. After this, an elephant would be given the "ball" to play with, while the guards laughed at the screams of the terrified prisoner. Before long, the beast became bored with the game and would impatiently bring it to an end by stamping on the cage, crushing its occupant into a mangled heap of blood and bone. "Maha Chai really was a terrible prison... apart from anything else, it had the darkrooms." According to Thai officials, darkrooms – underground cells in which prisoners were confined without light for months at a time – no longer existed in the country's jails. But it was not long before [the AUSn] was accused of plotting an escape attempt and led into the depths of Building One... There, along with 20 other inmates, [the AUSn] was chained and flung into a tiny, stinking, cockroach-infested pit. The darkroom was [his] home for the next three months... Many prisoners died in the darkrooms. While [the AUSn] was incarcerated there, one Thai prisoner bludgeoned another to death with a sharpened rock, splattering every other occupant in the room with blood. "The [victim] was murdered at 10pm, and the guards didn't even open the door until four the next afternoon. By that time the stench was abominable. We were all vomiting constantly." The rice fed to darkroom prisoners was disgusting, but unless they ate, they died. The Thai inmates' solution to this dilemma was ingenious, but [also] unpalatable. One morning... [the AUSn] spied another prisoner scooping the rice out of his bowl and into his sarong... [then] lifted a loose board in a corner of the cell. [The AUSn] could just make out a teeming mass of cockroaches. The [prisoner] poured the rice into the throng of insects and watched them devour every grain... Then, one of the other prisoners... reached down and lifted a handful of the squirming bugs. Placing them in to a plastic bag, [the prisoner] crushed them with an empty can until they were pure pulp. Seeing his interest, the Thai offered [the AUSn] a portion of the mash. At first, [the AUSn] refused. But the Thai insisted, explaining that the reason so many foreigners died in the darkroom was that they wouldn't swallow this vital source of protein. Amazingly, [the AUSn's] worst experience in Maha Chai occurred outside his time in the darkroom. [The AUSn] was among a group of inmates caught playing dice in their cells. Gambling was forbidden, and each player was led up to the prison sewer tank, in which all the excrement from the prison was held before being drained away. The offenders were forced to climb in the tank and stand for... hours up to their necks in faeces... It was around this time that [the AUSn] took to heroin. Although a convicted smuggler, until... [being] sent to prison [the AUSn] had never used the drug himself. But in Maha Chai, the conditions were so soul-destroying that anything which could lift the all-pervading gloom, however temporarily, had to be worth trying. Nearly all the foreigners holed up in Thai prisons used heroin, and sometimes it was even sold to them by the guards... After three years in Maha Chai, [the two AUSns] were finally sentenced, receiving life and 30 year sentences respectively. After their conviction, they were moved again, this time to Bang Kwang jail... known by its inmates as "Big Tiger"... "By this time, I'd reached the point where I had to accept that this place was to be my home for years. A lot of foreigners kill themselves because they can't bear it. Suicide is an easy way out." [The AUSn] only seriously attempted suicide once... [by tying] one end of this sarong to a pipe above his head and the other end around his neck... but the sarong ripped and [the AUSn] went crashing to the floor. For the rest of his sentence, [the AUSn] tried to comfort himself with the knowledge that although... [his was] a serious crime, [the AUSn] had never become as brutal and heartless as his captors. "The objective of the Thai prison system is to make you completely subservient. In there you are worthless. Your life means nothing. But whatever you've done, I don't believe people should be treated like that..." Big Tiger was no better than Maha Chai. Nine thousand prisoners were squashed into its tiny cells, a hundred of them foreign nationals. They could sometimes count on receiving less severe treatment than the Thais, but the threat of beatings and murder was ever-present. On one occasion... guards repeatedly [dragged] a chained American up and down a stone staircase, smashing his head against every step until [the USer] was dead. When the US embassy came to collect the body, they were told [the deceased] had overdosed and fallen down the steps. Equally perilous was the constant risk of death from disease. For several months, [the AUSn] was laid out with hepatitis. "You could get every disease under the sun in there – typhoid, leprosy, cholera. There was hardly any medication. I remember one French guy... [whose screaming woke me." The AUSn] had lost count of the number of times [his sleep had been disturbed] by the bawling of sick, tortured or suicidal inmates. But this time it was different... As the night dragged on, the screeching grew louder and ever more inhuman. In response, [the AUSn] began screaming himself, imploring someone to come and investigate. Fortunately the duty guard... that night was friendly, and, after a brief search, led him into the cell next door. Inside was [the] young French prisoner, curled into a ball and wailing uncontrollably. So intense was his suffering that [the French prisoner] appeared to not even notice the people standing over him... [The AUSn] quickly discovered the source of his anguish. On the French[prisoner's] neck was a lump the size of an avocado – and whatever was inside, it appeared to be moving. Horrified, [the AUSn] rushed back to his cell to fetch... an American prisoner with first aid experience in the US army. While [the AUSn] and the guard held the French[prisoner] down, the USer] lanced the lump with a razor blade. Out of the wound oozed hundreds of tiny, wriggling worms... In the morning the French[prisoner] was taken to the prison hospital. According to the Thai doctors, a cockroach had burrowed into his neck and laid its eggs. The larvae were working their way up towards the brain when [the AUSn and USer] intervened... "I have dreams about it now. Despite everything, I'd never seen anyone suffer like... that." ...[the two AUSns] and the other inmates did their best to recreate some semblance of a normal existence... but inevitably those attempts were twisted by the reality of the conditions. The prisoners given the privilege of looking after the Bang Kwang pig farm developed a lucrative sideline prostituting their charges to inmates desperate for sex... [The AUSns] spent almost all the '80s in Bang Kwang... [They witnessed] the infamous riots in August 1985, when the army killed hundreds of prisoners... Finally, on Christmas Day, 1989, and without warning, [the AUSns were] released. "They just told me to get my things. It wasn't until I arrived back in [AUS] that I realised it was over." [But they found] it impossible to readjust to society... "I... get panic attacks. I don't know how to get into a conversation anymore. There are... plenty of days when I wish I'd died in there." ...Paul Hayward... died of a heroin overdose in 1992... [The other AUSn had given] up heroin when... still... [in prison after the AUSn] saw another prisoner – [who also was] a good friend – die after shooting up drugs contaminated with pig's entrails. The heroin had been smuggled in inside the pig, but the bags burst before they reached their destination. The prisoner... injected it anyway.

...The flight must have terrified her... As the flight attendant moved towards her down the aisle, Maria* breathed deeply, keeping her expression impassive. Was the stewardess looking at her strangely? [Maria] knew... attendants on the four-hour flight from Colombia to Miami were trained to notice passengers who seemed dazed or ill, or neglected to eat or use the bathroom. If [Maria] pressed on her stomach hard enough, Maria might feel the... heroin inside her, a latex-enclosed time-bomb. [Maria] knew if her mission were delayed as much as three hours, her gastrointestinal acids would dissolve the rubber and send the drug surging through her blood stream, triggering sweating, convulsions and death. Even if [Maria] made it safely off the plane, [Maria] could still be caught at customs. But perhaps a[US] jail would be better than the home [Maria] had left. Maria was a "mule" – cynical drug parlance for a human beast of burden whose cargo is cocaine or heroin. Last year, Miami International Airport rounded up 791 mules, 367 of them "swallowers". Many more made it through undetected, carrying an estimated three tonnes of drugs every week. Maria obviously hoped to be one of these and to start a new life on her own, with cash in her pockets and – so much more importantly – her independence. The fate of a drug mule rarely makes the news. Yet every day, [guys and gals] wretched enough to swallow half a kilo... of heroin or to endure hack surgery to hide drug parcels inside their bodies attempt to enter the U[S]. Though the dealers in... Colombia like to boast that "it takes balls to do this job", the preferred mule has none – [gals] are less likely to arouse suspicion. Many are poor mothers whose husbands have died or deserted them. Destitute and alone, with few options for survival, they... use various methods to conceal the contraband – in jacket linings, shaving-cream cans, even artificial limbs – but their bosses know that nothing beats the human stomach when it comes to hiding their deadly cargo. Maria's path

to the mule trail began years ago in the ghettos of Pereira... Maria remembers nothing of her father, who abandoned the family[, condemning]... his wife and five [kids] to life in a squalid two-room apartment in the midst of gang territory. Maria's older brother joined the "killer kids" who roam the streets as low-level security guards and hit[-guys] for the *narcotraficantes*... [Maria] dropped out of school at eight and helped her mother pick coffee beans... At 16, [Maria] met Reynaldo, a self-crowned ghetto king[, who] was 22 and... had earned notoriety in the neighbourhood by making two trips to New York with half a kilo of heroin in his stomach and returning each time with \$AUD15,000 – a few years' income earned in a weekend. For Maria, Reynaldo's arrogant, outlaw swagger was hard to resist and [Reynaldo], in turn, was attracted to her. After two years, though, the allure of a criminal boyfriend began to lose its gloss. Reynaldo could be terrifyingly violent and beat her every night... Crime offered an escape from both poverty and her boyfriend's brutality, so... Maria... contacted the neighbourhood mule recruiter. They're known as "loaders" and many slums in Colombia have one... The loader explained that [Maria] would have to swallow chalk-sized pellets made from the fingers of latex surgical gloves. Because the pellets have to be airtight – or they will expand in the stomach and burst – they are rock hard and agony on the throat. Maria was told to practise by swallowing grapes, olives or small sausages without chewing. The loader also put her on a special diet to ensure that her bowel movements would be regular. Once in Miami, Maria would excrete the drugs in a hotel room, clean them and hand them over to her contact. The loader provided her with an airline ticket and \$3000 in "vacation money" – enough carrying cash to allay suspicions of customs officials. Like most first-time mules, Maria's arrest record was clean, as was her new passport... The night before her flight... in a farmhouse in the desolate countryside, the loader brought out the first bowl of pellets, almost 30 of them, some wrapped in carbon paper. "To prevent detection by X-ray," the loader explained... Next to the bowl the loader placed dishes of butter and cooking oil to lubricate them. [Maria] was expected to swallow 60... Her painful trial would last all night... Maria kept gagging, forcing the... pellets... back up. The loader was angry... [15] was the minimum t[o]... provide a profit for the cartel. For that [Maria] would make \$4500, not the \$15,000... Reynaldo had earned. Maria was frantic[but] tried again. The eleventh pellet slid down. Painfully [Maria] accepted another. And another... Harrowing as it was, Maria was better prepared than many mules... A major Colombian cartel can reap up to \$120,000 in profits per half kilo of heroin, so it trains its couriers with a sophistication unknown among smaller, independent operations, where bottom-of-the-barrel mules rent out their stomach for as little as \$3000. Irrespective of the size of the enterprise, the bottom line is that humans are dispensable; they can die at any point in the process and the cartel just builds their loss into its marketing plan. Ward D at Jackson Memorial Hospital in Miami is devoted solely to mules. Its central feature is a bank of toilets in the middle of the stark room, where a customs agent has the unpleasant duty of monitoring the smugglers as they excrete the drugs. At New York's JFK International Airport, people suspected of ingesting drugs are asked to submit to an x-ray. If they refuse, they are taken out to special vans or a local hospital and kept under surveillance until they go to the toilet. On the plane, Maria must have considered the consequences of being caught. Loaders often tell mules they'll simply be deported. But the 15 pellets Maria carried weighed at least 28 grams, enough to bring an automatic [4 1/2]-year minimum sentence in a Florida state prison... For a young girl from Pereira on her first trip away from home, Miami International Airport must have been startling. As many as 4000 travellers arrive in an hour... [Maria] proceeded to customs, where "rovers", plain-clothes detectives trained to spot likely smugglers, mingled in the queue. The loader had briefed her on what questions officials may ask. [Maria] answered them all satisfactorily and was waved through. It may be profitable, but a drug mule's "career" will be short, probably only two years, before ending in prison or death. Low-level drug offenders make up 60[%] of the inmates in US jails, most of them non-violent, first-time offenders. Human Rights Watch has called this "cruelly excessive" punishment. But in America, where about 14,000 people are killed every year by drug crime, overdoses or drug-related illness, there's little sympathy for narcotics smugglers who wind up behind bars. And mules will keep arriving as long as [USers] keep consuming six tonnes of heroin and 60 tonnes of cocaine a year. "...As in all wars, the most heart-rending casualties are [gals] and children." Maria stayed in Miami until her money ran out, a little less than two months, then reluctantly returned to Pereria... Maria may have managed to evade America's sophisticated, multibillion-dollar anti-drug network, but... Reynaldo was furious that his girlfriend had dared to approach the cartel behind his back... [Maria]'d been home less than a week, when her lover hunted her down and stabbed her to death. *Names have been changed... • A[US]n customs officers have carried out 194 internal searches of suspected drug carriers in the past year. They found 18 people had concealed heroin, cocaine, cannabis or other drugs in their bodies... Under A[US]n law, a customs or police officer can perform an internal body search only if they have grounds to suspect someone is a drug carrier. Random or routine frisking or body searches are illegal.

...Six young Christchurch people are suing the police for up to \$1.5 million over an armed offenders squad raid the group says targeted the wrong house... [T]he High Court yesterday... heard that on September 7, 1995, the house, divided into two flats, was surrounded by police... carrying firearms... Police were seeking an armed robber with a history of violence and drug-related offending, after a tip-off indicating [the robber] was staying in one of the flats and had parked a stolen car out the back. [The lawyer for the young people] said two members of the group were pounced on by armed, masked police when they left their flat next door... A police dog barked aggressively next to their heads. The pair said they were... told that if they moved they would be shot... [T]he rest were ordered to leave the flat at gunpoint... The... [four] teenagers, and two... in their early 20s... claim human rights breaches – that they were unlawfully searched and detained – and that their property was unreasonably searched, that they were assaulted, and that police were trespassing... Police acknowledged that they handcuffed... and pointed firearms at them, but denied... the firearms were placed against... heads, or that they were searched or threatened... Police were given names and descriptions of the two [offenders] they were after... [but] had obtained a search warrant that covered the whole house and did not specify a flat, despite their knowing there were two flats.

...One of the beneficiaries of ACC's \$3 million and rising payout to drug-addicted police is a convicted heroin importer. [The former] undercover detective... had been receiving ACC payments for two years at \$600-\$700 a week – 80[%] of his former police wage... [T]he bill to the taxpayer could climb higher, with 25 former undercover detectives now preparing a \$5 million class action against the Crown. This includes [the addict] and some of the other... 12 former police[officers]... already getting compensation... The group had been forced to sue to make a stand after being ignored for years by the police... [The addict] believed the police, not ACC, should foot the bill because [the addict] became hooked during two years under cover. [The addict] was convicted of importing heroin in the mid-1980s and sentenced to 16 years jail. The term was cut to eight years on appeal, and [the addict] served 4 1/2... [H]is life since had been an uphill battle. These days [the addict] was "more or less" drug-free, and off hard drugs, but had been unable to get a private investigator's licence and his travel had been restricted.

...High on the catwalk The fashion industry insists it has cleaned up its act... But frightening tales keep emerging of young models abusing drugs... Like how Supermodel N's cocaine tab is now running between £2000 and £3000 a week. And how K won't get out of bed unless there's Bolly on the breakfast trolley. And how Super A has grown careless about being seen fixing heroin at photo sessions. But hey, don't worry, [Super A] shoots up between her toes, so the track marks won't show and spoil the picture... It's not surprising the fashion industry goes silent as the grave at the mere mention of models and drugs. It's still bruised from the public mauling – by all from [the US] President... downwards – for its promotion of "heroin chic," a trend for stick-thin zombies with dead eyes. Yet it continues to be strafed by real-life stories of death or near-death of its most beautiful and glamorous children as a result of drug abuse. The air resounds with the thud of fashion's finest falling off wagons, strung out by addiction to heroin, cocaine, amphetamines and alcohol, having lost friends, fortunes, advertising contracts and even their minds in the process.

...[researchers have discovered that cocaine – which 'is used as a local anaesthetic and to dilate the pupil of the eye (and, taken internally, blunts hunger') –]causes blood vessels in the brain to shut, making it look like Swiss cheese... [The researchers also] force-fed Ecstasy to squirrel monkeys [to find] that the drug destroys the brain stem... [and then found out that] poppers burst thousands of capillaries, resulting in cerebral Armageddon.

...Researchers say they found molecular abnormalities in the respiratory tracts of heavy smokers of... crack [(a 'derivative of cocaine which is less pure and, therefore cheaper – but is also more addictive')] that for the first time suggest... users are at increased risk of developing lung cancer... Crack cocaine smokers were [studied] if they had smoked one gram or more a week for nine months or longer. [In related news, 'the original lead singer of the Village People, the 1970s disco group that made fun of macho guys, has been arrested in Nevada on robbery and drug charges. The former lead singer, 45, of San Francisco, was arrested in his Flamingo Hilton room, where officers say they found about 45g of crack.']

...THE new drugs craze in the UK is called "foke", or fake coke. It costs £5... and has no effect at all, but those who are buying it are doing so purely for the "glamour" of chopping lines and sniffing them... [Incidentally, a]n English aristocrat... who had been quoted in 1984 as describing heroin as "evil"... "wicked["]... and... "I've always been against narcotics and always will be["]... was jailed for ten months in December 1993 for possession of heroin and cocaine. It emerged during the London trial that... [the] Marquess of Bristol... cost his family about £7 million during a 10-year period through his drug addiction[. However, the Marquess isn't the only Brit to squander a fortune on drugs. Another aristocrat admits: 'The first time I took a class A drug was cocaine. I was 14 years old. Amongst my friends cocaine was acceptable, but heroin was considered a no-no, so I started taking heroin. I learnt about my inheritance while I was in a drug rehabilitation centre. I certainly didn't plan to go out and spend 90% of it on drugs.']

...Paying through the nose for COCAINE Cocaine is the rich person's drug of choice. Chopped up with a credit card, snorted through a banknote, the white powder literally reeks of money. In Britain, cocaine is taken at show-business parties and by the young aristocrats who surround... the future king. It's snorted too, it seems, by top sportspeople including our own successful equestrian... So it's no wonder cocaine has taken on an aura of glamour in certain circles. [However, one] shocking and horrifying photo... is just about all it takes to smash the glamour myth. It is the most graphic evidence imaginable of the terrible damage cocaine can do. It shows [a] former *EastEnders* star... (26), who's had an addiction to cocaine for more than five years. During that time, [the actor]'s frequently spoken of her problem and her attempts to give up the drug – yet it has always reclaimed her. Last month, [the actor] attended the British Soap Awards. As [the actor] turned to make a typically cheeky gesture at photographers, [the actor] tipped her head back and the dreadful truth was revealed. Her nose, through which [the actor] has habitually snorted cocaine, appeared to have no septum – the membrane which separates the nostrils. Where there were two nostrils, there is now only one. Poignantly, photographs of [the actor] taken only a few years ago show a bright, vital and lovely young girl. But cocaine is a greedy consumer of youth and beauty. Since this photo was first published by Britain's *Daily Mail* newspaper, it has been turned into a poster and distributed to schools all over the UK... It wouldn't be an exaggeration to say cocaine has destroyed [the actor]'s life. At her very worst, in 1996, [the actor] blew about \$300,000 on the drug in a single year. Her erratic behaviour led to her losing her job on *EastEnders*... Last month, [her] family and friends finally convinced [the actor] that it needed help and [it] checked into rehab at the famed Priory Clinic. "Being on the TV really young and going clubbing a lot got me into trouble at such an early age," [the actor] says. "Drugs twist a person and, once they get their claws into you, it's tough to turn back." Still, [the actor] is hardly the first person to be seriously addicted to cocaine or to have it destroy her looks... [A]lso at a branch of the Priory Clinic at the moment – this time to be counselled for alcohol abuse... [– is a musician], who has now kicked his cocaine habit... Twenty-five years ago, [the] Rolling Stone... was waiting backstage before a performance at New York's Madison Square Garden when [the musician] noticed the tip of his nose had fallen off and [people] could see through the hole. Dumbfounded, [the musician] tried to stick it back on with tape. Eventually [the musician] had a plastic septum inserted... According to an estimate by British drugs research charity Action On Addiction... a staggering 50,000 children in Britain aged under 16 will use cocaine this year... In the US, cocaine is even more prevalent... [An AUSn] study released last November reported a six-fold increase in cocaine use in Sydney, with the price of one-hit caps... tumbling from \$80... three years ago... to \$50 last year... Here in N[Z], police don't identify cocaine as... causing... problems... The reality is cocaine is expensive, hard to come by and often bad quality when it's bought here.

...An American business[perso]n whose family control a billion-dollar banana empire has been thrown out of N[Z] for importing cocaine and cannabis. [The USer], aged 48, pleaded guilty to importing drugs, was fined \$12,500 and flew straight back to the U[S. After sentencing him]... in the High Court at Auckland, [the judge admitted to having] some misgivings about imposing only a fine. "We send to prison people who import drugs,"... But in [this] case the quantity of drugs was small... 11g of cocaine and 8g of cannabis... and was for his own use, [plus the USer] had no criminal record... If [the USer] had been a N[Zer, the judge] would have ordered him to undertake drug counselling, but rather than having him become a drain on our community, [the USer] should address his drug problem in the U[S. The USer]... was held in custody overnight, got bail from the High Court, and was still able to spend time fishing at [the prestigious] Huka Lodge near Taupo before his final court appearance... [His] arrest is expected to cause shockwaves in the Cincinnati community... [The USer], described in court as an "up-standing pillar of his community," is president of a chain of more than 200 convenience stores that sell ice cream and yoghurt[, and] was previously executive vice-president of a large Ohio bank... The Ohio-based... family... [who] like publicity only when giving money to charity... own Chiquita Bananas and donate millions of dollars to the Republican Party. They have entertained former... [US and French presidents]. Family investments include part-ownership of the Cincinnati Reds baseball team, an oil company, insurance, hotels, real estate, resorts and [the entertainment company] which makes TV shows such as *Melrose Place* and *Beverly Hills 90210*... The High Court was told that [his] wife and two children had no knowledge of his drug addiction until... [hi]s arrest... at the airport... A customs dog sniffed out the drugs on his body... [as the USer was] arriving with his family on a flight from A[US.

...Two NZers are in custody after police intercepted the biggest shipment of cocaine seized in A[US]. Yesterday's seizure of 500kg of Colombian cocaine came after an 18-month, multinational, multi-agency operation including satellite tracking of a yacht as it sailed from N[Z]. The value of the drugs was put as high as \$286 million... Yesterday's seizure was more than twice the size of the previous record haul of 225kg... in December...

PORTUGUESE police have seized 1400kg of cocaine – valued at \$473 million.

...Spanish police have seized... 10 tonnes of cocaine on a Russian-crewed ship 900km off the Canary Islands, the biggest haul of the drug by a European police force... [By the way, f]or 16 years, [an undercover agent] was the most successful informant [US] anti-drug authorities ever had. With a kind of streetwise quixotic brilliance [the agent] managed to persuade dealer after dealer across the country that [it] was one of them, luring them into major sales of cocaine or heroin while hidden surveillance cameras captured their every move. In a career that took him from coast to coast, [the agent] made it possible for federal officials to make... 400 arrests, seize 1.5 tonnes of cocaine and recover... \$US6 m... in assets... That golden period, for him and for the Drug Enforcement Administration, is now over, however. [The agent] has been discredited and dropped by the Government like a hot potato. No, [the agent] did not steal money, or deal drugs on the side, or play double agent. Rather than own up in court to a handful of misdemeanours unrelated to his activities as an informant, [the agent] lied about his past almost every time [it] took the witness stand in a drugs case and thereby jeopardised every strand of evidence [it] ever collected. Police records show that [the agent] was charged... with misdemeanours ranging from domestic assault (hitting the [perso]n who is now his wife) to forging a relative's signature on a loan application. Twice [the agent]... got himself arrested for soliciting prostitutes. And twice... [it] was accused by the Internal Revenue Service of cheating on his taxes. In the inflexible context of the [US] legal system, where lawyers eagerly jump on any irregularity by their adversaries to bolster their clients' cases, [the agent's] refusal to confess to his misdeeds has triggered a full-blown Government scandal. Did the DEA know [the agent] was lying on the witness stand, and, if so, why did it not try to stop him? Were taxes and prostitutes the only things th[e agent] lied about, or was there something inherently suspicious about his extraordinary ability to nail drug dealers in whichever city [the agent] set foot? Was it appropriate for the Government to pay him... \$US4 m... as his cut of the recovered assets and drugs? "What I worry [about] is that it is the tip of the iceberg," said... an

ethics professor at Santa Clara Law School... “How many other [lying agents] are there?” ...the Attorney-General, has pressed for an internal investigation and a number of prominent drugs cases are now being reopened and convictions thrown out... 12 defendants in Florida ha[ve ha]d their cases dismissed, followed by three others in South Carolina. Another 11 appeals have been lodged around the country and are yet to be heard.

...Old habits, like a taste for cocaine, are hard to kick – and none know that better than the unfortunate citizens of Colombia, who have recently learned that America’s passion for meddling in their affairs will shortly put them back on the front lines of the latest war on drugs. The news came three weeks ago, when[the US] President... paid a flying visit... and informed his Colombian counterpart... that the US would shortly be spending all of \$US1.3 billion... on a massive offensive aimed at ending the cocaine trade once and for all. And this time, [its President] promised, the US was really taking off the gloves. Squadrons of helicopters were on the way to spray the... coca crop with herbicides. And while US military advisers trained Colombian troops in search-and-destroy techniques, agricultural consultants in US Army uniforms would make the peasants see the wisdom of growing wholesome vegetables rather than coca. A compliant sort of chap, [Colombia’s] President... nodded and smiled, even giving [his US counterpart] a farewell embrace for the cameras before Air Force One climbed back into the skies. What else could [Colombia’s President] do but get with the programme? As a [guy] well versed in Colombia’s history, [its President must’ve] known there has never been any point in telling his domineering northern neighbour to mind its own business; even less in urging it to set its own house in order by reducing the demand for cocaine in [US] cities... As every Colombian schoolchild knows: in this part of the world, America gets what America wants. Meddling in Colombian affairs has been something of a passion among US leaders for... 100 years – certainly since President Teddy Roosevelt engineered a revolt in what was then Colombia’s northernmost province of Panama so... [Teddy] could build his famous canal. Back in Washington, however, a few voices have questioned the wisdom of such a massive spending spree... One of the most cogent is... a foreign policy analyst at the Cato Institute think-tank. “The last time the US put Colombia through this, it wasn’t pretty,” [the analyst] recalled. That was... 10 years ago, when Washington threatened to slap tariffs on Colombia’s exports unless the Bogota Government put the infamous drug cartels out of business. Colombia set out to do just that – and the cartels responded by declaring an unconditional war of their own. A car containing 500kg of dynamite exploded outside the national police academy... killed 80 people... [Over] 50 judges and journalists were murdered. A passenger jet was blown out of the sky in a terror attack that claimed 107 more lives. Meanwhile, state security forces were given free rein to protect Colombia’s access to the vital [US] export market. According to one estimate, a modest one, 5700 people were murdered in 1989 alone by the police, the military and officially sanctioned death squads. “There were no more good guys... Bloodshed and mayhem were endemic. And when the Medellin and Cali cartels were finally broken, drug warriors in this country and Colombia loudly proclaimed victory. They said: ‘The back of the drug trade has been broken!’ It wasn’t – it was just reorganising itself. But those victorious statements always get swallowed by the Orwellian memory hole whenever we set out to make the same mistakes all over again.” According to another think-tanker, [a] former Princeton Professor... the “victory” over the cartels actually worsened Colombia’s woes. Instead of just two gangs presiding over a relatively peaceful web of corruption, the trafficking industry is now so fragmented it is impossible for even the participants to know who controls what, or which faction just opened fire on the next. “And, in addition to cocaine, Colombian gangs are now producing opium, refining it and shipping that north as well. The leftist guerrillas are using cocaine to finance their operations, and the landowners’ vigilante groups are using it to fund their private war against the guerrillas. When the US pours all these additional dollars into what is a very chaotic situation, Colombia’s agony will grow... Nobody in their right mind can be happy about this.” Actually, that’s not quite true. The Lockheed Martin Corporation and Occidental Petroleum will be delighted to see the first US s[oldiers] heading south. Lockheed because it paid for and publicised the... poll that seems to have prodded the [US] Administration to open its purse – a poll that showed [USer]s held Democrats responsible for the rising incidence of drug use among [US] teenagers. Now, with most of that \$US1.3 billion destined for military operations and equipment, Lockheed will get a slice of the action. And Occidental? Well, the oil company’s main Colombian pipeline was blown up 79 times in 1998. Now US taxpayers will be footing the bill to keep the oil – and the profits – flowing. As for the supply of drugs reaching the US, cokeheads need not worry. In 1980, a gram of cocaine cost \$US120 in New York. Today, the same gram goes for \$US40. Some way to win a war.

...on February 24, at 3 am, 500 Colombian police officers, plus agents from the ...[US] DEA... raided several homes and arrested 19 Niche members. Anti-narcotics officials said the gang was using Internet connections and satellite phones to coordinate cocaine shipments from Colombia through half a dozen countries to the US and Europe. The gang’s take: \$US100 million... a year. The bust came just two days before the US fully “certified” Colombia as a partner in the war on drugs for the first time since 1995. Colombia’s relationship with the US soured during the [previous Colombian] presidency... whose campaign allegedly accepted \$US6 million from the notorious Cali cartel... [Nowadays,] drug seizures are up and Washington has earmarked [large amounts of money] for helicopters, weapons and other wares for Colombia’s drug war... But the drug war in Colombia has never been harder to fight. How else to explain the fact that Colombia is still the source of 80[%] of the world’s cocaine, an estimated 62[%] of the heroin seized in the US and more coca-leaf production than Peru and Bolivia combined? ...one reason... officials say... [is that with] the destruction of the Cali and Medellin cartels over the past five years... more than 100 new and elusive trafficking groups have emerged... [T]hese new groups... [are largely composed] of university-trained professionals... [who] are... savvier and much... more likely to carry laptop computers... than pistols... Rather than trying to control every aspect of the drug trade, as their predecessors did, the newcomers focus on specific facets of the trade and link up with other groups for a few shipments only. That makes relationships among traffickers extremely fluid and difficult to trace. And because they keep their money in offshore accounts, there are few traces of their presence in Colombia.

...Police in Colombia have captured a [person who] they describe as a major drug trafficker who set up huge cocaine-processing laboratories in eastern Colombia and ran his own private army... [The] alleged chieftain of the so-called Eastern Plains Cartel, is suspected of being involved in the killing of 11 officials, including members of the Chief Prosecutor’s Office and soldiers, in October... Dozens of Colombian [soldiers,] pilots and police have been killed on fumigation and anti-drug operations in guerilla territory. In the north, right-wing paramilitary forces patrol drug plantations and laboratories and allow drugs to flow through the Gulf of Uraba toward the US and Europe... In Southern Colombia, Marxist guerrillas protect coca fields and laboratories in exchange for a 10[%] tax on coca sales.

...Colombia... has decided to include income from illegal drugs in official calculations of its... GDP... [The] Finance Minister... said the move... “...doesn’t mean the[industry is] being validated or given some kind of blessing.” The calculation... [that] could increase... reported economic growth... by a full percentage point... [won’t] include the value of processed heroin and cocaine – ...estimate[d] at up to \$US7 billion a year.

...[the actor] could never have imagined [it] would one day become a sounding-board for everything that is wrong with the [US] criminal justice system. For a while, [it] was content to be hailed as one of the finest film actors of his generation: the precocious Oscar-winner (for *Chaplin*) and reliable stock player for every[top director]... But as his drug addictions have spiralled out of control and [the actor] has had to interrupt his shooting schedule to shuttle from courtroom to rehab clinic to jail cell and back again, survival has been his main concern. This week has been no exception, what with his arrest last Saturday on drugs charges in a hotel in Palm Springs. For much of the mid-90s [the actor] was so out of it that there are whole films [it] has no recollection of making. [The actor] has pleaded with judges to keep him out of prison to allow him to clean up, only to respond by skipping drug tests, dropping out of treatment programmes and failing to show any sign of overcoming his addiction. On one occasion [the actor] discharged himself from rehab by climbing through a window and hitch-hiking back to Malibu... Nobody looking at this record of misadventure, self-destructive behaviour and repeat violations of the law could argue that [the actor] has suffered some gross abuse of his civil rights. But his case has shed some light on a murky legal process. [A few] years ago, California passed some of the most draconian criminal justice

laws in the U[S], notably a so-called “three strikes” law that mandates a minimum sentence of 25 years for anyone convicted of three crimes in a row. Addicts who committed petty thefts to fuel their habits were put away in their tens of thousands – some had stolen no more than a slice of pizza – while some first-degree murderers qualified for parole after six to eight years. The attitude of the populist media was that drug addicts were scum. Race and class prejudice had more than a little to do with this attitude, since most addicts were Latinos or African Americans. [The actor] has hardly tasted the worst of the system, since [it] was offered just about every rehabilitation programme in the book. But... [h]is judicial travails have contributed to a changing tide in public opinion that increasingly believes prison criminalises addicts without addressing the root cause... Californians [have now] voted overwhelmingly for a ballot initiative that will keep almost all first- and second-time drug offenders out of jail and offer them court-ordered treatment programmes. The logic is seemingly impeccable: the state is wasting billions of dollars on prisons so drug addicts, who now make up 30[%] of the prison population, can be squeezed into more cells. Instead of spending \$US25,000... on each prisoner a year, the state could be spending just \$US4000... a person on rehab. The irony is that for all the public sympathy [the actor] might have generated for the plight of his fellow-addicts, [it] is hardly a poster-child for the effectiveness of treatment. That might help to explain why the battle over the drug treatment initiative (known as Proposition 36) attracted the attention of [a father], who stood full-square on the opposite side of the argument. [The father] gave up booze 11 years ago, but his son[’s]... problems with hard drugs two years ago fired his zeal. When [his son] failed to follow a rehab course, his father shopped him back to the courts in the belief that only the threat of jail would make him wise up. The strategy worked... [for the son (who, like is father, is also an actor), but hasn’t worked for the other actor – who, when it] was first locked up... was beaten so badly that [it] lost consciousness and woke “in a pool of my own blood.” [The actor] spent... much of the past year in one of California’s nastiest state prisons, an institution notorious for gladiator fights between inmates, orchestrated gang rapes and guards firing live ammunition at the prisoners. Just three months after his release [the actor] was arrested again with a stash of cocaine...

Of course, Freud... experimented with... cocaine, and so did many others... Drugs have generally been associated with New Age enthusiasms... The mushroom drugs used by the American Indians [and ‘Aztec Indians in religious ceremonies (Vikings chewed poisonous mushrooms before battle to gather courage or to drive themselves *berserk*’)] played an especially important part in the last two New Ages... It was rumored among Jungians that the great [psychologist] had secretly taken peyote [(‘a hallucinogenic drug prepared from a Mexican cactus of the genus *lophophora*’)] in the 1920s; and the same rumor was spread about D. H. Lawrence... [A] “karmic connection” between Jung’s peyote and the later discovery of LSD and its alarming effects... in Switzerland... [has been] suggested... In the 1960s LSD seemed like a major threat to official American culture – a dissolvent of officialdom. Some radicals talked of “turning on” a whole city by tampering with the municipal water supply... The... 1775-1805 period was a time when hallucinogenic drugs became a prominent fact in the intellectual life of England, famous cases being Coleridge and, later, de Quincey. One of the popular favorites in the treasuries of English verse in the [19]th century, Coleridge’s “Xanadu,” was popularly supposed to be drug-inspired.

Alice looked all round her... and... found a little bottle... with the words “DRINK ME” beautifully printed on it... It was all very well to say “drink me,” but the wise little Alice was not going to do *that* in a hurry. “No, I’ll look first... and see whether it’s marked ‘poison’ or not;”... However, this bottle was *not* marked “poison,” so Alice ventured to taste it and finding it very nice... finished it off... Soon her eye fell on a... very small cake, on which the words “EAT ME” were beautifully marked... Alice... ate... [T]hen her eye fell upon [another] little bottle... There was no label... but nevertheless... Alice... uncorked it and put it to her lips. “I know something interesting is sure to happen... whenever I eat or drink anything; so I’ll just see what this... does...” ...There was a large mushroom growing near her, about the same height as herself; and... sitting on... top with its arms folded, quietly smoking a long hookah, and taking not the smallest notice of her or of anything else... was... a... blue caterpillar... [After] a minute... the Caterpillar took the hookah out of its mouth... yawned... and shook itself. Then it got off the mushroom, and crawled away into the grass, merely remarking as it went, “One side will make you grow taller, and the other side will make you grow shorter.” - ALICE IN WONDERLAND

...one pill makes you tall and one pill makes you small and... the ones that mother gives you don’t do anything at all [so] go ask Alice... [for] some kind of mushroom...

The mushroom which is named *A. muscaria* – popularly ‘Fly agaric’ – has now been proved by... detailed examination of the Vedic hymns to have been the food of the gods. It is there named ‘soma’. That it is also ‘ambrosia’ and ‘nectar’ (both these words mean ‘immortal’), famous as food and drink of the Greek Olympian gods, had been shown some 12 years previously... October was the mushroom season. The effect of the *A. muscaria* taken without other intoxicants is to give the taker the most delightful hallucinations, if [the taker] is in a state of grace, but horrible nightmares otherwise... Why mushrooms were called ‘toad’s bread’ or ‘toadstools’ by mycophobes can readily be explained. When the toad is attacked or scared the warts on its back exude *bufonenin*, the same poison that is secreted in the white hallucinogenic warts of the *A. muscaria*. In ancient Greece the toad was the emblem of Argolis, the leading state of the Peloponnese. The capital city was Mycene (‘mushroom city’) said to have been built by the legendary king Phoroneus’s successor Perseus... who had found a mushroom growing on the site beside a spring of water. The toad was also the emblem of Tlaloc, the Mexican god of inspiration, and appears surrounded by mushrooms in an Aztec... painting of Tlalocan, his paradise.

In religion... *ecstasy*... signifies the state of being outside the body or transcending oneself, a condition, often excited and frenzied or blissful, known in varying forms to nearly all religions. Typical is the state of the *shaman* or inspired priest of preliterate societies... Ecstasy is also a feature of prophetic experience (eg... Samuel 10.1-16), in which the prophet receives messages from God... The ecstatic state is almost always temporary... Different religions offer different techniques for achieving ecstatic states: yoga (Hinduism)... orgiastic dancing (cult of Dionysos), and also flagellation, self-hypnosis, and deep-breathing. It can also be induced by drugs, as in the Peyote religion of Mexico... Some commentators see the excitement and frenzy of large crowds, for example at football matches, as a secular expression of ecstasy... Smoking as a means of prayer and of communion is widespread across North America. Some have derived it from the shaman’s sucking pipe, which is the source both of the inhalations that assisted ecstatic vision and the means of withdrawal of dangerous alien substances from the sufferer’s body.

By his own testimony, we know that Halley used opium... Halley... gave a discourse on his personal experience of the drug at a meeting of the Royal Society, and does not seem to have suffered much from the ‘amotivational syndrome’ sometimes associated with opium and other euphorics.

It has been said that opium has brought more relief to the world through its legal uses and more unhappiness through its illegal uses than anything else known to [humanity]... Opium is a mixture of chemicals called *alkaloids*. Chief among these are *morphine* and *codeine*... Morphine is a wondrous drug which has relieved the pain of countless millions of persons suffering from CANCER or other agonising diseases... [Ironically,] *heroin*... a very powerful narcotic... which... is derived from morphine... causes a... person [to suffer] much pain when deprived of [it]...

In Leeds, and throughout Britain, drugs are changing the nature of crime and creating a parasitic new economic sub-culture... In 1976 there were just five people registered as heroin users in West Yorkshire[, where unemployment]... is 14% and [most people live in] low income estates... Now

there are about 2000, but that almost certainly understates the real number... [This] helps to explain why robberies in West Yorkshire have risen... fourfold in ten years and burglaries have almost doubled... All those who see the problem first-hand blame one thing. "...if they're stealing to feed a habit then they steal... buy the drugs... take the drugs; 12 [to] 24 hours later they need more drugs, [so] they steal again... It's... not like stealing a television because you want one at home... it's... a consumable... you need to replace... day after day... and the more you take the more your habit escalates, and the more it escalates the more offending you need to do." ...An unpublished survey by West Yorkshire police suggests at least half [of] persistent shoplifters have a drugs problem... Serial crime has serial victims. "How many times have you been burgled?" "In the last year, 17 times." ...Throughout West Yorkshire police and traders complain ordinary people are effectively supporting the drugs economy, some even ordering cheap goods from the local drug addict, the ultimate discount retailer... In the last 10 years violent crime in West Yorkshire has risen by... 40%... The national figures are even worse... The victims of violent crime may... be those taking the drugs themselves. If bills are unpaid dealers are unforgiving. In the drug economy contracts have to be enforced and you can't go to court to do it... It's the early hours of the morning and... a local GP arrives in the custody suite of Wakefield Police Station... 5 years ago about 1-in-10 of the people [the GP] saw would be on drugs, the rest would be drunk or suffering some minor trauma. Now the vast majority of his work, up to 9 cases out of 10, involves drugs. Elsewhere in the country it's the same story... "This is a product, I think, of unemployment, of nowhere to go for these people. They often are poorly educated, they have no qualifications, they see no future, they have no money, they have nothing to protect, nothing that they can have taken away except their freedom... so they take something to make them feel better." With the drug economy so deeply embedded in the life of local communities, stopping the growth in drug crime is a daunting task. The police have traditionally tried to control the problem by stopping the supply of drugs by arresting the dealers. But... finding sufficient evidence to convict them is often well nigh impossible, even though everyone may know who they are... If the police find street dealers hard to catch, those further up the chain are even more elusive. Often they are so removed from the street trade they can seem like respectable citizens... The drugs trade is increasingly controlled by... shadowy figures who pose as legitimate business[people]... While the dealers may get clean away the custody suites are full of addicts... But few professionals... believe that... prison is an effective deterrent. "Prison has no effect whatsoever. We had someone last week in court who [claimed to be able to] get heroin in... prison more readily than [someone] could get it on the streets of Leeds... [S]ending them to prison... punishes them, it takes them out of society for a limited period, but at the end of that period they're going to come back out and without addressing the difficulties they're... going to reoffend." ...[some people have complained about local programmes that only 'enable their drug-addicted teenager to receive publicly-funded treatment if the teenager manages to be convicted of a crime and sent to jail', but] the current focus on punishment means there is no national programme to seize what may be the best chance to do something about drug crime – offering addicts help at the moment they're most likely to benefit... "...There are break points. Coming to a police station, being arrested, is still traumatic, and at that stage... a drug addict feels: 'Okay, I want to do something about it.' Unless we can give them immediate attention, unless we've got the network and structure to provide that support... then the system that we try and operate will fail." - PANORAMA

There are journalists, judges and academics who say that the... antidrug war... is pointless... We should cure drug addicts, they say, not prosecute them. But these exponents of legalization underestimate the profoundly disturbing effects of drugs on the brain-cell genes that program behaviour, and... they overestimate the effectiveness of treatment for drug addiction, for which no real cures are known, merely therapeutic methods that may or may not work. These people also underestimate the cost to... [the public and ignore evidence that wherever legalization] has been applied in the past... drug use [has increased] in proportion to its availability... Let's not forget what happened in the mid-nineteenth century, when the British forced the Chinese to legalize the opium traffic: 50 years later the drug had an iron grip on millions of Chinese.

...the... *Opium War*... between Britain and China (1839-42) and later (1856-60) Britain and France against China, [followed] China's attempt to prohibit the (illegal) importation of opium from British India into China, and Chinese restrictions on foreign trade. Defeat of the Chinese resulted in the ceding of Hong Kong to Britain and the opening of five 'treaty ports'...

In the war against Latin American drug dealers, American customs agents are armed with radar-reconnaissance planes, long-range pursuit aircraft, high-speed helicopters, assault rifles, and radar balloons that can scan hundreds of kilometres of border in good weather. But weather is capricious, the border more than 3000 kilometres long, and air-interdiction efforts costly – averaging over \$9 million a week in 1990. Can the battle be won?

PERU's air force [has] shot down a plane carrying missionaries... It thought the plane was carrying drug smugglers.

...American missionaries shot down by Peruvian Air Force jets over the Amazon jungle were on their way back to the U[S] overnight, taking with them the bodies of a mother and her baby killed in the incident. The US admitted yesterday that its own anti-drug surveillance plane had located the missionaries' aircraft for the Peruvian jets, saying they were mistaken for drug smugglers. The White House called the incident a "tragic accident," while an embassy official in Lima said the US had suspended such "interdiction" surveillance flights. Roni Bowers, aged 35, of the Harrisburg, Pennsylvania-based Association of Baptists for World Evangelism, and her 7-month-old daughter Charity were killed when the floatplane was riddled with bullets on Saturday and it ditched into the Amazon River about 200km from the Colombian border. Bowers' husband... and their son... escaped unhurt. The Michigan couple had worked in Peru since 1993. The pilot of the Cessna 185... also survived, but was hit by a bullet in the leg... The three survivors floated on the aircraft's pontoons for 30 minutes before villagers rescued them... [A] Peruvian Air Force colonel investigating the incident... described a hellish scene in which two or three light-attack planes swooped in, making no effort to communicate before opening fire and setting the Cessna ablaze. "It happened very fast,"... said... [the husband's] brother... who... sat in as [the colonel] relayed the harrowing account... "The planes flew by first, did some swooping, and then came in from behind and started shooting. At some point one of the bullets had gone through Roni's head, right into the baby's head, from behind. They died instantly, which was a blessing." The... US statement that it helped the Peruvians came after it had carefully avoided admitting any role in the incident for much of yesterday. "The U[S] is certainly upset by the fact that two American citizens lost their lives," [the US] President... said at the Summit of the Americas in Quebec, Canada. Military activity and drug trafficking are rife in the jungle area of northern Peru where the missionaries went down.

Peru will suspend all commercial operations by its Navy and Air Force to stem the use of military ships and aircraft in drug trafficking,[its] President... said yesterday. The decision, which takes effect next week, follows a string of drug hauls that confirmed widespread suspicions the security forces were involved in the illegal trade... Peru, like many Latin American countries, allows its armed forces to rent out ships and aircraft and hire out personnel for commercial purposes. The income helps support the Army, Navy and Air Force. In May the Peruvian Air Force arrested four officers, including one of [the President's] pilots, after 174kg of cocaine was found on a military plane... Two police[officers], including a former anti-narcotics agent, were among 25 members of a major Peruvian drug ring arrested last weekend. Despite these high-profile incidents, [the President] stressed his Government's efforts to combat drug trafficking. More cocaine has been confiscated in the last year – 41 tonnes – than in the whole of the 1980s... In the first six months of 1996, police... arrested 5883[drug] traffickers and consumers.

...at the Port of Miami... yesterday... [US] Customs agents... shovelled their way through a shipment of coffee beans and seized... 2700kg of... cocaine... [A]gents became suspicious while inspecting... the vessel Rengo. The ship had picked up cargo in Chile, Peru, Ecuador and Colombia...

Almost 3kg of heroin was discovered aboard [the Colombian President's] jet yesterday, just hours before [the President] was due to take off for an official visit to U[N] headquarters in New York... [The President], whose 1994 election campaign received millions of dollars from the Cali drug cartel, was stripped of his U[S] travel visa on July 11 because of what Washington described as his known ties to the narcotics trade. The travel restriction generally does not affect heads of state visiting U[N] headquarters, however, and a State Department spokes[person] confirmed last week that no limitations had been placed on [the Colombian President]'s movements during his four-day stay in New York.

...Nowadays, everyone professes a love of autonomy. But the term autonomy no longer means that we have a right to, and a responsibility for, our bodies, minds and selves. Instead, it means that we have "constitutional rights" the framers never dreamt of, such as the right to abortion, affirmative action, health care and physician-assisted suicide. Although the right to drugs, and to suicide... are two of the most basic human rights, few [USers] now support them... Because we have a free market in food, we can buy all the bacon, eggs and ice cream we want and can afford. If we had a free market in drugs, we could similarly buy all the barbiturates, chloral hydrate and morphine we wanted and could afford. We would then be free to die – easily, comfortable and surely – without any need for recourse to death doctors or violent means of suicide. Our drug control policies are emblematic of the principle that pharmacological self-determination is a form of mental illness ("substance abuse") and that free trade in plants and chemicals the government labels as "drugs" is inimical to the health of the body politic... We cannot come to grips with the issues associated with the use of legally forbidden (so-called recreational) drugs without also addressing the issue associated with the use of medically permitted (so-called prescription) drugs. To buy a chain saw, we do not need permission from a state-licensed tree-removal expert. It is enough that we know how to operate the instrument and assume responsibility for its use. By the same token, we do not need prescription laws... The person who does not know what drug [it] needs or wants could still consult a physician. That is all the self-protection a competent adult needs for dealing with drugs. After all, drugs are just one class among many dangerous artefacts in our environment. Fire, electricity, cars, household appliances and countless other products of human inventiveness are also dangerous... Failure to appreciate that, in a free society, the government's foremost duty is to protect individuals from others who might harm them – indeed, replacing it with the duty to protect individuals from harming themselves – makes the prospect of repealing our drug laws a mirage. This misranking of the proper function of the state... has undermined [the US] attachment to limited government... I doubt we shall be able or willing to re-embrace a free market in drugs until the drug war causes us a great deal more suffering and until we are willing to attribute that suffering to drug laws rather[than] to drugs.

...we need to reallocate the money the federal government spends on the war on drugs, which some estimates put at \$15 billion a year... [and others put at] roughly \$35 billion... Currently, two thirds of these funds are spent on criminal justice and interdiction, and only one third on treatment and prevention... But for thousands of [USers], prevention comes too late... We must significantly increase the number of treatment slots for those addicts who have made the decision to seek help or who have been ordered into treatment by courts... Studies have found that treatment is cost-effective and that those who are in treatment or who complete treatment are much less likely to commit crimes or engage in high-risk behaviour. They are also more likely to become productive members of society than their drug-using counterparts... Essentially, I am suggesting a federally funded managed care system for drug addicts... For every \$100 spent maintaining prisons, \$15 spent on treatment would do commensurate good... Maintenance for hard-core addicts would provide other compelling benefits to society. Most important: If addicts have legal access to drugs, they won't have to turn to crime to support their habits. And... drug dealers would be forced out of business.

...Curiously the mandatory penalties for crack[dealing and use in the US] are 100 times more severe than... for using powdered cocaine. That may be because crack is more dangerous but critics point out that blacks habitually use crack while whites use cocaine in powdered form. And some allege deliberate discrimination... [When BBC World News] looked into this in Georgia the Department of Correction produced an astonishing statistic. Out of 423... [people] serving life for drug offences, 419 were black... "It was pretty clear to those of us who deal regularly and professionally in the field of crime and punishment that there is discrimination by[US] law enforcement officials. That is to say, twice as many blacks go to prison for robbery as are arrested for robbery in comparison to whites... for the same crime; the same prior criminal record... I have little doubt... that the disproportionate number of blacks who are sentenced to death is a result of racial discrimination in our whole judicial process..." ...Last year saw the largest increase in prison population in [US] history – 1725 new convicts every week... Pleading guilty invites a mandatory minimum so most [accused] choose a jury trial which clogs up the courts and the[remand] jails. Time on remand used to be 20 days, now it's 140... "[Previously]... first-time offenders would have been given probation, [or]... sentences of less than a year. As it is now there are people who are doing 5, 10 or 15 years even as first-time offenders... Drugs provide the life-line... of the gangs – money. They're making so much money,[and] the size of the gangs is steadily growing... [that,] to be realistic, I see [the situation] getting much worse before it gets better..." ...School offers... ghetto children virtually the only chance they'll have of making something of their lives and yet education budgets have been cut at a time of vast spending on building more prisons... In... Georgia... the... [attorney-general] has responded to public concern about drugs by passing one of the most stringent drug laws in the country. Anyone convicted a second time of selling any quantity of an illicit drug can be charged under a state law that carries an automatic sentence of life imprisonment... "I[, your attorney-general,] can guarantee safe streets if you'll do one thing... [-] give me enough prison space and I'll give you safe streets. It's just that simple..." ..."...I[, a 19-year-old 2nd-offender given three life sentences for three counts of selling \$30 of crack to support my own habit, think sending] me to... a rehab would have been more appropriate..." ...In her first year in prison... [the 19-year-old passed her GCE equivalent and was] studying for a degree in business communications using a federal government grant. Recently the Republican Congress... abolished the grant and with it higher education in prison... leaving [her] only vocational training in domestic subjects and hairdressing. "[As your attorney-general] I don't think it's right for a prisoner to have the opportunity to gain a college education when many people on the street... who are keeping that prisoner in prison with their tax money... aren't getting it... [P]rison is for punishment. They should be... kept off the streets to protect the public..." ...If the prevailing attitude to crime and punishment is ever to change it is unlikely to be due to widespread concern about individual cases of injustice. What does worry [USers] is the huge expense of imprisonment... In the last fifteen years the number of elderly inmates has doubled and doubled again. "You're going to have the prison system filled with... tired... old... [people] who are not a danger to society [but] who become increasingly more expensive to keep and take care of. Locking people up for the rest of their lives... makes no economic sense..."

...In 1982, armed with... hundreds of billions of our... tax dollars, [the 40th US] President... reignited our 80-year-old "war on drugs." Here we are, 14 years after the beginning of this... protracted and expensive war, with many casualties and still no treaty signed... Uncle Sam is the world's fattest jailer... We imprison a higher percentage of our citizens than Russia did under communism, more than South Africa did under apartheid.

...About 1000 armed South African Muslims yesterday warned Cape Town's drug dealers to stop dealing or risk the same fate as [the] gang leader... who was burned alive on Sunday. Chanting... "Kill the merchants," supporters of the militant movement, People Against Gangsterism and Drugs (Pagad), paraded through the silent early morning streets of the mixed-race Silvertown district to the home of an alleged drug dealer. [They were w]atched by police in six armoured riot-control vehicles and a fleet of trucks... with a helicopter hovering overhead shining a spotlight...

Sporadic clashes broke out yesterday in Cape Town's impoverished, crime-infested areas... [as members] of... Pagad... roamed their neighbourhoods hunting for gang members, and there were numerous reports of shootings. Violence first broke out when gang members and vigilantes exchanged fire after a rally by Pagad. Police fired tear gas, stun grenades and rubber bullets in an attempt to break up the fight, but the two sides only dispersed after a clergy[person] pleaded with Pagad members to go to their prayers.

...[South Africa] is moving to quell rising violence in the townships outside Cape Town... between local drug lords and vigilante groups... The vast profits from drug dealing that put... the criminals... in luxury cars are now being spent on protection. Many of the drug dealers under constant fire have armour-plated their homes. Every week, stories of PAGAD's retribution dominate the headlines, forcing the army and police to stage regular displays of power, only with little effect. "...we know... many of the police are actually inexplicably linked to the drug trade." Admirable though their cause may be, there is a growing concern that PAGAD's methods are dangerously close to those of the gangsters they are trying to eliminate.

...Police yesterday arrested a leader of the Muslim vigilante group that has declared a holy war against Cape Town's drug-dealing gangs, charging him with sedition and a role in the murder of a drug baron.

...[In South Africa, the world's most crime-ridden country, the 54-year-old vigilante leader is safe and, therefore, powerful. The leader has two bodyguards and carries a 9mm pistol. But what makes him untouchable are the 40,000 people who have joined his group. Three years old, it is growing so fast that soon its members could out-number South Africa's 90,000 police. The regional court at Groblersdal, 300km from Johannesburg, is hearing claims that last year the leader and eleven members – all on \$NZ600 bail – spearheaded a 28-hour mob attack on eight people they suspected of burglary, two of whom died. There are at least 75 similar charges pending against members of the group at courts around the country. However, the group is bigger than the law and its leader, a member of the Northern Province Parliament, has cast himself as South Africa's hand of God. "I'm doing a job which God loves, for the poor people of South Africa, who are victims of police making a business out of crime and of the law, which is on the side of the criminals." His disciples – guys and gals of all ages and races – worship him. "Our leader cares about us and South Africa in a way that none of the politicians do, because our leader understands how to make life better for us by ending crime," says one. Latest to join the growing army of those disillusioned with the faltering criminal justice system is a shadowy formation called Die Vuis (Afrikaans for The Fist). Formed in the Cape Town area last month by a former police officer, Die Vuis already claims a membership of 7000, most of them white former police officers and soldiers. The organised crime unit's director said the group appeared to be "somewhat fanatical" and they were watching it like a hawk. The *Cape Argus* newspaper said the group had launched its anti-crime campaign by warning prostitutes in Cape Town's working-class northern suburbs "to stop operating or else." Prostitutes were quoted as saying that members of Die Vuis rode around "Mafia-style," clad in black and always armed, threatening them. Die Vuis' leader, who is facing a murder charge after shooting an alleged mugger, said his group is serious about fighting crime and drug-trafficking – but declined to detail his plans. The director of the centre for the study of crime at Rhodes University said the rise of vigilantism was an indication of "public frustration at what is seen to be major failure in the criminal justice system. But the problem with any crime vigilante group is that the principles of democracy become sacrificed for quick solutions. Paradoxically, they contribute to the crime problem because enormous police resources have to be invested in monitoring their activities." In further news from Africa,] Mauritanian police have seized 6.75 tonnes of heroin valued at \$235 million on a Danish-flagged container ship in sacks addressed to the Agriculture Ministry in military-ruled Gambia.

...[800g of] heroin... with a street value of about \$4 million was seized on Thursday after a raid on a Wellington address. The drug probably came from Asia... The bust was the biggest heroin haul in Wellington and the fourth-biggest haul in N[Z] in the past 20 years.

...Police seized \$4 million worth of heroin at a Wellington address this month – the biggest N[Z] haul in 20 years... [The haul confirms] that the drug is making a resurgence... THE packet of heroin was bought in a seedy corner of Manhattan's East Village... "the heroin capital of the city, if not the world"... and arrived at the swank Recency Hotel on Park Avenue that evening. When ambulance[officers] arrived in the early hours of the morning, one young rock star was dead and the life of another lay in ruins. [The death of] Jonathan Melvoin, a keyboard player with the band Smashing Pumpkins... and the arrest on possession charges of[the band's] drummer... have exposed the extent to which heroin has become the fashion drug among young New Yorkers – upstaging the deadly kudos of cocaine... [A spokesperson] for the Partnership for a Drug-Free America, says: "In music, film and fashion, heroin is being positioned as the drug of the '90s... It is being marketed to a new generation of young people who don't have the same history as people over the age of 30." ...A 1994 study by the National Institute of Drug Abuse showed nearly 90% of people over 35 believed it was dangerous to use heroin, compared with only half the respondents aged 12 to 17. The last wave of high-profile deaths from drug abuse was in the 1970s... At the time, few... knew of the problem... So severe has the problem of hard drug abuse come that it is believed some record companies require groups to be tested as a condition of their recording contracts. Smashing Pumpkins, whose latest record went to No 1 in the U[S] charts, had to cancel sellout concerts at Madison Square Garden. [The band immediately 'sacked their drummer.']The tragedy comes as the British film *Trainspotting* opens in the US. The film, which follows a group of Edinburgh drug addicts, has received widespread critical acclaim but has also been accused of glamorising heroin despite its uncompromising realism. [While the] magazine *Time Out New York* quotes one of the characters on the cover of its latest edition: "Take the best orgasm you ever had, multiply it by a thousand, and you're still nowhere near it", a]... *New York Post* columnist... accused the makers of... gross irresponsibility. More and more celebrities have been associated with heroin abuse in recent months. They include... the [actor that played the] title role of *Chaplin*, who was arrested last month for possession of heroin and crack[; the] Depeche Mode singer[, who was] charged after overdosing on cocaine and heroin on May 28[; and the]... lead singer with the up-and-coming band Blind Melon, [who] was found dead of a cocaine overdose last October, ironically while attempting to kick heroin.

...Drugs in films might date back to the 1936 original *Just Say No* flick *Reefer Madness*, through much LSD-fried unwatchables of the mid-'60s to the early '70s, to the coke-frenzied likes of *Scarface*... in the early '80s and beyond. But... for drugs in movies these days, read: heroin. Unless it involves an Afro-American neighbourhood, then substitute: crack cocaine... *Plup Fiction* tells [the audience]: "Coke is dead as... dead. Heroin is coming back in a big way." ...*Trainspotting*... would spectacularly fail the big-screen equivalent of a urine test from the first reel.

...Heroin is fast overtaking amphetamines as Perth's most popular recreational drug with teenagers, according to the Alcohol and Drug Authority and city youth agencies... "It's no longer the coolest thing to be connected with speed... There's a sense that heroin is seen as the next challenge, breaking the next set of adult boundaries." The authority revealed that 84 deaths in Western A[US] over the past 18 months were linked to heroin. There had been a 24[%] increase in the number of heroin addicts seeking detoxification, bringing the number of people on the methadone programme to more than 1000.

...A new report... pushes for easier access to methadone treatment[, joining] a growing call across the country... The report, written by... the National Centre for Treatment Development, suggests [GPs] directly prescribe methadone. This will remove often lengthy waiting lists for assessment and treatment at specialist clinics... The Ministry of Health will call for submissions over the next month before giving policy advice to the Government... In the past 18 months, almost 70 [GPs] in Auckland and Northland have been trained to directly manage methadone patients... But the Auckland Regional Alcohol and Drug Service says such a bold move would merely welcome widespread abuse and failure... "All GPs will do is prescribe and every month people will go back for their prescription... In N[SW] there are about 8000 people on methadone and it's quite out of control. Everybody is prescribing and people who didn't even have a methadone habit have now got one... [We're] very interested in making more people get methadone, but that's not a safe way." ...The service's regional manager... says addicts going onto methadone first need the help of a specialist clinic to get stabilised. This can take from six months to a year... But... the Ministry of Health... assessment of the Victorian system is that specialist clinics are often not needed. [Furthermore, many] people are put off by specialist clinics and avoid getting much-needed help, [the assessment's author] says... "People seem to go for help if they can get methadone from GPs rather than congregate in a specialist clinic. GP surgeries are more anonymous, more private and more normal to having a major health problem." ...At a rough estimate there are... 13,500 to... 33,000 opium-based drug-users in N[Z], while only about 2500 are on methadone treatment... Not all addicts want help, but probably up to 6000 do... North Health... says about 900 people in... Auckland and Northland... are in methadone programmes to stabilise their addictions. Based on

population guidelines, however, that number should be 1500 people, but the limited Government money does not allow for that... [A spokesperson] from the Methadone Consumers' Committee says methadone is often the only thing to pull people's lives together... "A lot of us have good jobs and families. All we are saying is, let us help them by giving us methadone. It means people don't have to rob houses or work as prostitutes [– or 'force their 8-year-old boy to sell himself – to support their] habit. Isn't that a good thing?" ...the cost of methadone [is] \$4400 per patient annually.

...["Have a good look at me," the mother tells her teenage daughter, who it suspects may be smoking dope. The mother was just 14 or 15 when it started popping Valium and smoking dope. Her life became ever more fixed on drugs and securing the likes of heroin, home-bake and prescription pills. "You name it, I've been on it. It's like a best friend – that's what my heroin used to be like to me." And at times the mother resorted to crime and prostitution to pay for the comfort the friend brought. What broke the cycle was the methadone programme and what allowed her to get immediate treatment was being pregnant with her youngest child. Pregnancy is one of two conditions to get priority, the other being people who are HIV-positive. Replacing opiates with methadone can reduce stress on the unborn. While the opiates can cause highs and lows for the baby as well as the mother, the methadone smooths the process, reducing the chance of miscarriage or growth retardation." Her baby, now a toddler, was fine. "Methadone really changed my life – I don't know where I'd be today if I wasn't on it – probably still using hard drugs." Now in her thirties, the mother wants a career and to eventually come off the methadone.'

... 'There's been a great controversy in past decades over the use of methadone as a less deleterious substitute for heroin. It's been found that the use of methadone during pregnancy leads to withdrawal symptoms in infants that are believed by some experts to be more severe than those resulting from heroin.'

... 'A Torbay resident's death at the Taupo police station from a drug overdose is a warning of the dangers of drugs, says the Taupo coroner. Clifton Fane Oxborough died after ingesting methadone, a synthetic drug used for pain relief or for stabilising drug addicts. Witnesses told police Mr Oxborough had been drinking before his arrival at a massage parlour in a sleepy state. Within a few hours Mr Oxborough had lost consciousness and staff and clients carried him out of the club, left him alone at the bottom of a flight of stairs and called the police, who took him to the Taupo police station, but Mr Oxborough died before an ambulance officer arrived. Mr Oxborough's reaction to the drug was exacerbated because the 24-year-old labourer had no food in his stomach and was probably tired after working all day. There was no evidence of any history of drug use, and there was no reliable evidence of when, where or how the methadone was ingested. However, a doctor said Mr Oxborough would have to have drunk methadone, which was usually inhaled, for it to reach the quantities found in his stomach. A Taupo resident has already admitted a charge of supplying and offering to supply methadone to Mr Oxborough and was sentenced to two years in prison.' ■] The Corrections Department has begun a drugs swoop at Mt Eden Prison. The department's communications adviser... confirmed that... drug dog team... searches would continue for the rest of the week as part of the department's policy to crack down on drug use at penal institutions. Statistics show about 70[%] of inmates use or have used drugs[, which]... were usually smuggled in by visitors, although on occasion packages had been hurled over the prison wall... [Y]esterday's search uncovered some cannabis.

... Customs officers at the International Mail Centre in Auckland have intercepted nearly 6000 LSD "tickets" four times over the past 10 days. The drugs came in mail from A[US], England and Holland... A customs drug dog led officers to one of the packages... Small quantities of methamphetamine and hashish were also found. Several people around the country have been charged in relation to the seizures after police drug squad officers and customs investigators made controlled deliveries of the narcotics... [to] addresses in Auckland, Hamilton and Wellington.

... An 11-year-old boy excluded from his school after being branded a drugs peddler has been cleared. Detailed forensic tests have shown the white powder the youngster was sharing with friends at Thornaby Village Primary School on Teesside was not amphetamine sulphate but sherbet. Now the angry parents of the unnamed boy are considering legal action against the police and the local education authority over the mistake, which arose after teachers saw him passing around white powder in tin foil. The family's solicitor... said the boy had told teaching staff it was sherbet.

... Herbal Ecstasy is back on the market after a short-lived ban by the Ministry of Health but is no longer allowed to be advertised as promising sensual euphoria. [The] ministry... said... that the product had been tested and found to be harmless. It contained a combination of herbal material containing stimulants... notably, caffeine. But... the price of \$39.95 for 10 tablets was steep – especially as a cup of coffee w[as]... more stimulating.

... A Life Education Trust officer... said the Nature's Kingdom promotion of herbal ecstasy in the teenage magazine *Rip It Up* was a gateway... [that] could entice teenagers to take... harder drugs. The... advertisement claimed the herbal version provided the world's only "organic ecstasy experience." ...the tablets would deliver the sensation of "euphoria" with no side effects... "We're against drugs,"... said... [a] Nature's Kingdom spokes[person, who added that]... more than 10 million packets had been sold worldwide... The... tablets [are] made of nine "botanical ingredients,"...

['IMMIGRANTS are being targeted in a war against a new drug. Khat – pronounced kot – is a narcotic plant commonly used in Somalia and other East African nations. But it's a class C illegal drug in NZ and customs authorities are warning immigrant communities they risk prosecution if the shipments don't stop. The NZ customs service's drugs and prohibited goods investigations manager said the plant, which produces a high that makes people cheerful and heightens the senses, was being sent here through the mail. A fist-sized package is worth about \$50. Most of the khat stopped by customs was destined for Auckland, Hamilton and Christchurch. The manager said many immigrants didn't know khat was illegal, so customs was working to spread the word.'

... [the Auckland] hardly fits the stereotypical image of a drug supplier, but... feels like one because of what grows in her garden. Outside the back door of her Avondale home stands a khat tree – known scientifically as *Catha edulis* but better known to some as a source of a hallucinogenic drug. Properties of the tree have come under the scrutiny of the law – possessing its leaves is outlawed under the Misuse of Drugs Act – with the arrival of Somali immigrants who use it as a common social stimulant. They chew the tips of the leaves or brew leaves into a tea to get intoxicated. [The Avondale resident has] had regular contact lately with a couple of Somali boys who had noticed the tree from the footpath. The boys came at least once a month to collect the tips of the leaves for what, they explained to her, were religious or ritual purposes. [The] retired dancer... had let the boys take the leaves but became concerned two weeks ago when other Somalis arrived and stripped the tree of its leaves... With the latest publicity, though, [the dancer] decided to cut down the tree... [as per] police advice... "I'm very indignant to think I'm a de facto drug supplier and we don't want that sort of person hanging around here." [The dancer] bought the tree five years ago for \$1.95 from a local garden centre "because it was on special,"... Among all the fuss, [the dancer] has a tiny secret: "I chewed one of the leaves once but it didn't have an effect on me[, although] I didn't want to be flying high as a kite." - 1996

[The NZ] *Herald* foreign editor... reports on the... [p]roblem that drives Taiwanese b-nutty... [The merchant] makes a good living for her extended family of four children, her husband and her in-laws by selling betel nuts from a small cubicle in the Shilin district of northern Taipei. Her husband describes the betel-nut store as a supplementary source of income but the figures tell a different story. [The husband] makes 30,000 New Taiwan dollars a month (\$[NZ]1500) as a driver for a private company. The betel-nut shop returns \$NT5000... a day, tax-free. However, the... family's nice little earner may soon be hit by taxes and a Government publicity campaign against betel nuts. The Government has decided to try to break the Taiwanese people of a habit which it blames for undermining the social fabric by encouraging licentiousness, [and for] causing... environmental catastrophes... The Premier... has ordered officials to find a solution and among the options they are considering is the regulation and taxation of the betel nut-trade. So far the Government is losing the battle to discourage betel-nut chewing... Betel nuts used to be known as the traditional chewing gum of the native Taiwanese aborigines and of working class people like truck drivers, but... [now their c]onsumption is expanding across age, class and ethnic barriers... "In the old days only old people would chew betel nuts but now the tendency is that even junior

high school... and elementary school students chew them, too. Chewing betel nuts is a unique cultural phenomenon in our society. It has become a necessity like smoking. You get addicted.” With the growing popularity of the nuts comes the social... problems that the Government is so worried about. Competition among sellers is so tough that some are using scantily-clad teenage girls to attract customers and there is a real concern that this may lead some into prostitution. The girls can make \$NT50,000 a month compared to a graduate just out of university who gets \$NT28,000 to \$NT30,000... There is also growing evidence to link betel nuts to cancer of the mouth, the death rate from which is four times higher than in Japan and 2.6 times higher than in the US. [80%] of those dying from mouth cancer in Taiwan are betel-nut chewers. Then there are [the] environmental problems. Chewers make a disgusting mess when they spit blood-red juice on the pavement. But there is an even more serious environmental problem... Taiwan is a small island with a narrow coastal plain and high mountains in the middle. “If you want to raise b-nuts you have to cut down many native trees and plant b-nut trees on the slopes,”... a senior legislator... says. “...b-nut trees have very short roots and... won’t hold the soil very firmly. So when you have heavy rainstorms, it seeps off the soil and damages the land, sometimes causing serious disasters to the coastal plain area.” Betel-nut trees were blamed for much of the damage when Typhoon Herb struck... last August... Despite the gravity of the allegations raised against betel nuts, [the merchant]’s husband is unfazed... While [talking, his wife] and her mother-in-law sit behind him preparing the betel nuts for sale by slitting them open with sharp knives and packing them with a red lime paste... Meanwhile, [the]... father-in-law, his teeth as black as coal from a lifetime of chewing the nuts, sits next to the cubicle and hops up every few minutes to sell a packet at \$NT100 for 20. The[y]... are a mild stimulant with a taste like aniseed. If you are unused to them, they will make you lightheaded... Despite the determination of the Government to clamp down, [the merchant]’s husband is confident that betel-nut chewing is so deeply ingrained in the culture of Taiwan that it will continue to flourish. Like the stains on his father’s teeth, it is here to stay... [In local news, t]he Health Ministry is reserving judgment on a “mystical, magical journey in a pill” about to go on sale. The product... is being launched by Nature’s Kingdom, the Auckland-based distributor of Herbal Ecstasy 2... [The company] said Magic Mushrooms were a dietary supplement and had nothing to do with the hallucinogenic class A drug of the same name.

...[‘Herbal Ecstasy cigarettes are being sold in AUS.’ Incidentally, a] new designer drug often passed off as ecstasy has killed six South A[US]ns in 15 months... It is paramethoxyamphetamine, known as PMA, similar in effects and appearance to ecstasy but made with different chemicals. Its most recent victim was Carolyn Webb, aged 26, who took a quantity at a New Year’s Eve party and died the next day. Her death prompted the South A[US]n coroner... to hold a press conference yesterday with the director of Drug and Alcohol Services... to warn of the drug. “Although [PMA] is similar to ecstasy in its effect, it is much more lethal,”... said... [the coroner, who added] that it was made in S[A] by people who might not even know they were making PMA instead of ecstasy. “They may think they are making ecstasy, but they have no way of verifying this... The user does not know if they are getting one drug or the other and the dealer has the same lack of knowledge.”

...[NSW police] with drug and alcohol problems will escape prosecution and disciplinary action if they come forward during a six-month amnesty and seek rehabilitation, according to a memo circulated to officers... “Those who do not seek help, however, and subsequently test positive, must expect to be treated more formally.” The circular said random drug and alcohol testing would begin in September.

...Police across the Tasman are studying the link between drugs and road deaths... [after] a national road safety summit in Sydney[predicted] that drugs will soon overtake alcohol as a major road killer... “In a study of dead drivers about a quarter of them have alcohol in their systems,[and] about a quarter of them have drugs other than alcohol in their systems... They know that if they get pulled up by police they’ll be given a breathalyser for alcohol and they’ll pass that but they’ll still be stoned out of their minds.” ...That raises the question of screening drivers for drugs... but progress on that could be two years[away] at least...

The police in Britain have come up with new ways of testing for drug abuse... In one... the officer wipes a motorist’s neck with a special tissue. The sweat absorbed... is then analysed for drug byproducts. Another test involves a lookalike lollipop. The driver sucks it, the coppers stick it in a monitor, and... know if the driver has inhaled more than fresh air... [In related news, the defective] gene, known as the dopamine D2 receptor A1 allele[which may]... explain... compulsive personalities that lead to alcoholism and drug abuse... can be identified by a simple blood test that should soon be available... [D]octors think the test will enable them to concentrate more on prevention rather than cure by targeting those most vulnerable.

...Doctors are to give the drug ecstasy to volunteers in Britain’s first human trials of the illegal drug... [M]edical authorities have approved the test to find out what damage the drug does to users’ brains. The tests also require the approval of the Home Office, which... is expected in time for them to begin next year... Volunteers will be carefully selected to exclude anyone who might suffer an allergic reaction... but researchers said tests will be safe... The research is being funded by a private [US] medical foundation... similar trials in the U[S] showed small doses led to increased flows of blood to the brain and improved memory. But when higher doses were given repeatedly to animals they suffered brain damage.

...Something strange has happened to youth literature in Britain during the past year – books have started moving from the shelves of bookshops to dance clubs up and down the country. Instead of signing books in the high street, authors now read their wares in between sets by top DJs at leading clubs such as Ministry of Sound... It all started with... [the] 1993 novel, *Trainspotting*, which became the classic text of the ’90s. Written in a hard-to-decipher Scottish vernacular and not featuring anything resembling a linear plot, *Trainspotting* was composed of a rambling series of short stories, centred around the seedy exploits of a bunch of no-hope heroin addicts living in Edinburgh’s run-down housing estates. Hardly uplifting, feel-good material but it struck a chord... The novel was followed by the play and then the acclaimed film. The soundtrack bridged the gap between American guitar, indie and dance music... It was a decade ago when British DJs... first travelled to the Spanish resort of Ibiza, discovering the drug ecstasy and the ground-breaking way in which local DJs were mixing American house music with balearic holiday tunes – before shipping both the drug and music back to transform London’s clubland. The music has grown at a phenomenal rate – conquering the charts, turning DJs into pop stars, ranging from illegal warehouse parties to exclusive, up-market clubs with their own brandname merchandise, spawning a myriad of off-shoot musical forms such as ambient, jungle and trance, and spreading all over the world... Meanwhile, the flood of ecstasy reached epidemic proportions, capturing media headlines... and entering the nation’s popular psyche – as can be seen in *Disco Biscuits*[, a novel available in NZ]... this month... which takes its name from one of the many slang terms for the drug. However, [its journalist author] wasn’t interested in listing facts and figures – [the author only] wanted to celebrate the personal experience of the average punter “off their faces and with their hands in the air on the dance floor”, subscribing to a “if you remember the name of the record, you weren’t there” philosophy. (In an ideal piece of serendipity, Serpent’s Tail has just published what is probably the best history of dance culture so far in... *Altered State: The History of Ecstasy Culture and Acid House*.) [Disco Biscuits’ author] believed that fiction would make the perfect vehicle. In her introduction to the book[the]... first 15,000 print run[of which] has completely sold out – no mean feat considering selling short story collections is traditionally an uphill struggle[– the journalist]... cites how jazz and psychedelic music inspired such important ’50s and ’60s tomes as... *On The Road... Howl* and... *Kool Aid Acid Test*. In the ’90s... the... influence of dance culture on literature ranges from crime fiction such as in... *Acid Casuals*, set against Manchester’s brutal, gang dominated clubland, to science fiction as in... *Vurt*, which saw kids trying to escape the cold reality of a futuristic but equally desolate Manchester through transcendental “vurt” feathers... The author of the pivotal social commentary *Cyberia*... will late this year publish his first novel, *The Ecstasy Club* – a cyberthriller about a San Francisco rave collective... In the face of *Trainspotting*’s tidal wave of publicity, [its author] moved to Amsterdam... His last book, *Ecstasy*, was launched last May... [By the way, an] heir to the richest member of the Rothschild banking family has been fined £400... for possession of 8.9g of heroin... [The] registered drug addict... aged 33... is [an] only child... and will inherit more than £1 billion on his father’s death.

...[a musical super]star... escaped with a police caution yesterday for possessing cocaine... [The singer] was held by police in Oxford Street after a night of drinking and celebrating Oasis' victory at the *Q* magazine Awards. The... [singer] refused to comment but the decision clears the way for Oasis to tour the U[S] unhindered by that country's strict immigration laws. A Scotland Yard spokes[person] said: "...It is common practice for first time offenders arrested for possession of small quantities of drugs for personal use, and who admit the offence, to be cautioned in the Marlebone division..." [The singer] has made no secret of spending up to £300... a day on the drug... [and once said] on *BBC Radio*... "[Taking] drugs is like getting up and having a cup of tea in the morning." ...At the *Q* Awards in London's Park Lane Hotel [the singer] had jokingly threatened to run amok saying: "I was about to smash the gaff up if you didn't vote for us."

...[the] Oasis rock star... hasn't forgiven his father's violence... "If [Dad] died tomorrow, I wouldn't go to his funeral," [the singer] was quoted as telling the *Daily Telegraph*... "I stopped believing in God because of what happened to me mam... Her husband, who unfortunately is my dad, started knocking her about but [mam] stayed in the relationship because of us..." [H]is mother moved him and his two brothers to another apartment and started a new life... [when the] 24-year-old... was 11... His father's apologies were not welcome... Oasis... topped the charts last year with their second album... They are due to launch a new album this week.

...[the AUSn PM] yesterday launched his Government's response to the drugs menace – an \$A87.5 million... strategy the Opposition described as one step forward, two steps back. The three-year campaign – Tough on Drugs – aims to halt the tide of narcotics flooding the country... [a]uthorities were now believed to be stopping only about 10[%] of the estimated 1700kg of heroin coming into A[US annually]... but also earmarks funding for education, research and the reintegration of drug users into the community.

...In some media and political circles... heroin is an enemy, on which war must be waged. In the recent words of the Victorian Premier... it's a "scourge on modern society... No compassionate society can ignore or avoid the responsibility of trying under special supervision to reduce [heroin] abuse, death and hurt..." ...How far his Government is prepared to go, though, will be tested by a proposal by the Greater Dandenong Council in Melbourne's outer east to set up A[US]'s first heroin "shooting gallery" at a health centre where long-term users can inject the drug, using their own heroin and needles... [The Premier, who] urged his federal colleagues to support the controversial... [but] since torpedoed... ACT plan to give heroin to a small group of addicts in supervised trials... has said that the galleries, which are also being considered by the Melbourne City Council, "sound revolting." Disappointed that the ACT trial was thwarted, [the Premier]... said Victoria will now focus on its own trials to test the effectiveness of [4] drugs in reducing heroin craving, stopping withdrawal symptoms and blocking the effects of heroin... The state Government has committed \$2 million over three years for the alternative drug trials, due to start in November... The council reported that heroin deaths comprised half the drug-related deaths in Victoria in 1995 and that the number of A[US]ns using heroin jumped from 109,000 in 1986 to... 300,000...

[Local] border security is being tightened... [because NZ] is poised to become an attractive alternative market for [drug] traffickers after the A[US]n Government announced a \$[NZ]99.5 million campaign to combat the scourge... [- which, in AUS,] had reached alarming proportions, with drug dealers approaching young people on the streets. Ironically, one of their recent targets was the 14-year-old son of a N[Z] customs liaison officer based in Sydney who was offered heroin for less than \$20 while walking to school... A[US]n federal police estimate that up to 3000kg of heroin has been smuggled into A[US] in the past year, compared with 135kg in 1987.

...The incidence of hepatitis C may soar [in NZ] following a massive increase in the number of N[Z]ers injecting illegal drugs. The liver disease is already rife among older intravenous drug users but is now taking hold of a growing breed of young users... Health officials are concerned that young users are sharing drug preparation equipment and needles, oblivious to the high risk of contracting hepatitis C... The... Needle Exchange Programme... said... [over] 600,000 needles are expected to be sold [in NZ] this year, compared with 283,000 in 1994... [But despite] the existence of the exchange service, only a quarter of the needles were returned... The popularity of injecting steroids was another reason for the huge increase.

...A decision on the future of a Lower Hutt police[officer] who yesterday pleaded guilty to possessing anabolic steroids is in the hands of... [the Police Commissioner. The officer], aged 27, was fined \$1400 on seven charges of possessing prescription medicines... The Wellington district police manager... said the... officer... has been on paid leave for the past 17 months... [● The] cost of policing and prosecuting offenders under the Misuse of Drugs Act is more than \$40 million a year with the health agencies paying out at least another \$30 million annually on education and treatment for people with drug dependency. These are the latest available estimates from the Ministry of Health. The costs cover all drugs and alcohol.

...The Ministry of Health has backed moves to open methadone access to drug addicts despite grave predictions from key players... The GPs Association chief executive... said doctors preferred an extension of the existing system – so long as funding was boosted. Doctors felt that only up to 50[%] of patients could be referred to GPs as many remained intermittently unstable and needed ongoing specialist care. Many GPs would not want the patients as they were time-consuming, disruptive, demanding and often did not pay their fees... The Auckland Regional Alcohol and Drug Service says... Melbourne[']s... methadone programme... had high suicide rates among patients who were getting minimal support from their GPs...

A how-to guide to drug use has landed the Auckland University student magazine *Craccum* in trouble again. Earlier this year the magazine caused a storm with an article on how to cheat the student allowance scheme. The guide, "How to take drugs and minimise the risk," was compiled by *Craccum* staff in conjunction with... NORML... The magazine's editor... said the "just say no" motto of anti-drug groups was ineffectual and it was time helpful information was given to the growing number of young people using drugs. The magazine was not advocating the use of drugs but sought to allow students to make informed choices... People experimenting with drugs needed information on how to protect themselves... However, the director of the Life Education Trust and an anti-drugs campaigner... said the article was "lunatic" and would only encourage teenagers to take drugs. The article provides information on soft and hard drugs including... cocaine and heroin. It says how much they cost, what effects they have, the best way to take them, the penalty for possession, and in some cases where to find them. Under the section on ecstasy it says someone would have to be carrying at least 56 grams before they could be charged with supply – "then again, they can't get what you've already popped." ...The vice-chancellor... described the article as irresponsible and said the university in no way condoned the statements made by *Craccum*...

A dose of heroin which killed a "novice" drug-taker was twice as strong as most hardened addicts use, the Crown told a drugs trial in the High Court at Auckland... The Crown... says Mr Williams had been recruited as a courier, but curiosity got the better of him... with fatal consequences... [The defendant], aged 42... denies supplying Mr Williams with a bag containing nine syringes filled with heroin, one of which was found empty after Mr Williams' death. It is the crown case that Mr Williams was to courier the syringes to a user who had ordered them from Stockholm. Yesterday the Crown called a former drug squad officer... [who] said that on the street, addicts using liquid heroin would use a syringe with about 1ml of liquid with a heroin content of 15mg to 25mg per millilitre. However, scientific analysis [showed] the drug found at Mr Williams' Mangere home had a strength of 50mg per millilitre... "This heroin is very pure... it is extremely unusual to find heroin of this purity in a syringe," said... [the officer, who also] said it was extremely unusual for heroin to be supplied with needles and syringes. It indicated that the heroin was either for immediate use or for delivery either to a prison inmate or someone on a drug rehabilitation programme.

...A four-year prison sentence handed down to... [a defendant] convicted of supplying heroin was a clear message that drug trafficking would not be tolerated, a court heard yesterday... [The defendant] was last month found guilty of supplying a bag containing nine syringes of heroin to Mack Williams on December 8, 199[6]. The Crown... said the drug was... destined to be smuggled into prison for use by an inmate... who was given a life sentence in October 1996 for importing \$20 million worth of uncut Thai heroin. [The defendant] was... related to... [t]he inmate... by marriage.

...Inmates will be strip-searched by prison guards and watched while providing urine samples under new anti-drug legislation expected to be passed... today. The Penal Institutions Amendment Bill empowers... authorities to randomly test inmates... \$1.5 m... would be... spent each year on

testing... Guards are not allowed to conduct cavity searches but can force inmates to bend over and squat in such a way that internally concealed drugs fall out. But a... lawyer... warned that prisoners find strip-searches abhorrent and the expected increase in the practice could cause trouble.

...Prison authorities are reviewing methadone treatment for drug-addicted inmates after criticism that the policy breaches prisoners' rights. But the Department of Corrections says the review is not linked to the criticism, as its treatment programme was a trial and was due to be assessed after one year. The Health and Disability Commissioner... said prisons were withdrawing prisoners from methadone too quickly... Between 100 and 140 inmates who were receiving methadone treatment before imprisonment have undergone withdrawal from the drug since the policy was implemented... Previously, policy for methadone treatment was implemented independently by prisons on medical advice... Now inmates are weaned off methadone over 21 days, or 42 days for inmates who are pregnant, HIV positive or are being treated for hepatitis C... [Their] treatment is funded by health authorities... The department spends about \$400,000 treating other addicts who were not on the methadone treatment before imprisonment... [M]edical authorities questioned the worth of methadone treatment, and the department was concerned about the drug being smuggled to other prisoners. [While on the topic of drug treatment programmes, the 'Institute of the Human Brain in St Petersburg is claiming an 80% success rate at curing heroin addiction by removing a part of the brain from addicts. However, if the patients try drugs again, they could relapse.']

...Drug treatment programmes do work to stop drug abuse, says the U[S] National Institute on Drug Abuse. It studied 100 programmes... and found four... [that definitely worked. Of those, methadone] treatment reduced heroin use by 70[%].

...a panel of... experts... called together by the National Institutes of Health... [estimated] that there are 600,000 addicts in the U[S]. However... the panel is... only aware that 115,000... are currently in treatment... [In further news from the US, c]ocaine abusers may have trouble seeing blue and yellow, even for months after withdrawal... Researchers found that all 31 of the cocaine withdrawal patients at a Washington hospital suffered from colour loss, which they believe is caused by the loss of dopamine...

[The Queen Mary Centre's] chief executive... said cocaine could be "the next big plague" to hit N[Z]. Up to 15[%] of... his... patients... had a cocaine problem... Three years ago, none of the clinic's patients had the problem. The head of the Wellington drug squad... said cocaine was readily available for the limited number of users in Wellington... [There] was "big demand" for the drug... Police had received warnings from health experts about amphetamines shortly before the drug... became popular in Wellington a year ago... Raids on houses in the area last week netted cannabis and what is believed to be a sizeable quantity of cocaine. Four people arrested on a combination of drugs charges have appeared in... Court and have been given bail... Although none of those arrested were gang members, [a]Detective Sergeant... said a recent upsurge in the use and distribution of class A drugs, such as cocaine, could be pinned on gangs. "In the background, gangs are up to their necks in the circulation of controlled class A and B drugs... – they certainly do have their fingers in the pie."

...It's an ironic situation for a drug and alcohol rehabilitation centre to be in: touting for business offshore. The Queen Mary Centre at Hamner Springs... is in the business of cleaning up addicts, yet it needs cash generated by treating addictions to keep its core services afloat. Its latest initiative is to sell employee-assistance packages to companies across the Tasman... that need to put a "helping hand in place to identify problems that interfere with somebody's job satisfaction and performance." Put it to... Queen Mary's chief executive... that it seems strange that the A[US]ns don't have comparable programmes and [the CEO] points out that half of the 70 residential beds available to private patients are filled by addicts from A[US]... "As far as I know, we're the only one in the Southern Hemisphere which offers 24-hour medical nursing and medical coverage, seven days a week." It's an option which... "is more expensive than the outpatient model, but we believe that the problem exists in a continuum – and so does the solution." And initiatives like the development of the A[US]n programmes – intended to pick up problems before they demand residential care – represent... the only hope the unit has of continuing to supply the remaining 40 beds for publicly funded patients... Hamner's addiction-treatment programmes have long been under the threat of closure. In 1989, when the clinic was faced with closure by what was then the Canterbury Area Health board, former patients and their families held rallies around the country. The question for the health board then was: how could it justify treating patients to the tune of \$3.6 million when 80[%] of the referrals came from outside Canterbury? The debate went on... [until a] reprieve... announced in 1993... [meant] those suffering from addictions[from outside] the... catchment area were eligible for a free bed at... Queen Mary... at a cost to the [addict's regional health] authority of (in 1993)... \$38,000 a patient... [I]ts private-pay residential programme is a good earner (you pay a daily rate of \$235 plus GST for the first 35 days of treatment... [– whereas AUSn] rates start around \$NZ420 a day)... Four years later, the clinic may have broken even for the first time, but, much like the recovering addicts it treats, it is far from pronouncing itself cured. In August the centre[... which]... has its own web site... takes its wares... out throughout the Pacific Rim... "There are 100 million English-speaking people around the Pacific Rim." Paying patients have [already] come to Hamner from Hong Kong, Indonesia... Thailand... and... the U[S]...

The US anti-drug czar... said his life was threatened by Mexican drug cartels during his tour last week of Mexican border cities... [A]n unnamed source, said officials intercepted a telephone call on Wednesday in which [the US President's drug adviser]'s assassination was ordered "with a missile"... The... retired general, said US and Mexican authorities were investigating.

...Forensic scientists and relatives have identified a body that was found stuffed in an oil drum as that of... Dr Jaime Godoy Singh... an eye, ear, nose and throat specialist... On Sunday, police found... Dr Godoy... [and two other] bodies on the side of the Mexico City-Acapulco highway. They were handcuffed, burned, blindfolded and had cables hung from their necks. The drums were partially filled with cement... The identification... may solve the mystery surrounding the disappearance of doctors who participated in an operation that resulted in the death of Amado Carrillo Fuentes[... who]... died... at the age of 41 of a mix of anaesthetics and other drugs administered after [the drug lord] underwent... an apparent bid to change his appearance. Investigators said they don't know whether the death was accidental or intentional, nor have they been able to locate the surgeons who performed the operation at a Mexico City maternity hospital.

...A witness... has identified the [2nd of 3] bodies... stuffed into oil drums as one of the doctors who botched an operation [that] killed a drug lord...

MEXICO'S ruthless [drug]barons are hiring former members of the... Green Berets and other elite units... to help them spirit their cargo undetected across the border, says a senior former drug enforcement official... His claim has provoked uproar, and the U[S] government has denied it. But few people know more than [the former DEA official] about the war against drugs being fought on the Mexican border. For years [the former DEA official] was the top border patrol agent in El Paso... the main drug entry point. His success in that post carried him into Congress... [and] the House national security committee... The well-paid mercenaries had done immeasurable damage to the war... [the congressperson] said... His accusations are the latest embarrassment in the American battle to halt the creeping influence of the Mexican drug cartels[... and follow accusations that, in order 'to finance their war against the Sandinistas, Contra rebels smuggled crack into US cities with CIA help. The head of CIA has promised that a thoroughly independent commission will be set up to investigate the claims.' The US] government had been buoyed by the capture, extradition, trial and conviction last year of... the... former head of the Gulf cartel of northeastern Mexico. It also welcomed the demise of Amado Carrillo Fuentes... But there is bad news on the way. A trial in Mexico threatens to reveal the full extent of America's inability to stop the flow of drugs. [A general who was] once Mexico's top drug enforcement official... and who received a plaque from the D[EA]... citing him for "Outstanding Contribution in the field of Drug Law Enforcement," is... accused of being on the payroll of... Fuentes... [The general] was arrested after it was discovered [that the general] lived in a flat owned by Fuentes. The general, who claims... [to have been] targeted by the government to protect other corrupt officials, is threatening to name members of Mexico's elite who are in the pockets of the drug lords.

...a hood, or a Robin Hood? ...In Mexico's rugged north-west, the heroes are the bad guys. The cult of crime is epitomised by a shrine... to Jesus Malverde, a local... who has become Mexico's patron saint of criminals. His shrine was popular with Mexico's most notorious drug lord, Amado

Carrillo Fuentes, who died... after undergoing plastic surgery and liposuction in a Mexico City hospital. “Amado... was a good [person because Amado] always helped the poor,” said... a homeless youth living on the railway tracks behind the shrine. “[Amado] used to come here to see Malverde and one of his ‘pistoleros’... gave me 200 pesos...” ...authorities finally confirmed his death[when] they... received the result of DNA tests. They had been deeply suspicious that the body in the morgue was not really the drug baron known as the Lord of the Skies. Gun-toting police guarded the morgue, opening the lid of each coffin carried out to ensure the drug lord who evaded capture during his life did not elude them in death as well. But in Culiacan, the capital of his home state... where most of Mexico’s major drug bandits were born... [– and] a city with a tradition of defying the law to help the underdog... [–] the legends about Amado... were already being written... [There] is a saying here: “The gringos sell us guns so we can kill each other. We sell them drugs so they can drive themselves crazy.” ...His double standards also irked the parish priest in his home village... “Amado is the modern-style Robin Hood[– a person] who sold poisonous drugs to the young to give money to others,” ... At the family ranch there were signs everywhere of the loyalty money can buy. After... [hi]s death was announced last weekend, a stream of mourners entered the heavily guarded gateway... The last big family gathering was the wedding of... Fuentes’ sister in January, when invitations were handed out like winning lottery tickets to locals in nearby villages... The party turned ugly when it was invaded by the military and Carrillo... only just managed to slip away in time after receiving a tip off... US and Mexican authorities said Carrillo... made billions flying Colombian cocaine to the U[S].

...More than 560,000ha of Colombian tropical rain forests are being razed every year by drug traffickers and poor farmers to plant illegal coca and poppy crops... [The] head of the anti-narcotics division of the National Police, told reporters that “We have to put a definitive end to this, once and for all, because a natural disaster is occurring...” [The head] stressed that many of the forest areas cleared for use as drug farms never reach the planting stage because authorities often spot the clearing from the air, and intervene.

...W[hat a different the] death of an empire can make. Thanks to the post-Soviet whirlwind of conflict, crime and porous borders, the legendary Silk Road, once traversed by caravans bearing the riches of the East and the West, [and which locals]... call... “the Road of Life,”... has turned into an opium highway... Last year, Afghanistan became the world’s leading opium producer. But a crackdown in neighboring Pakistan and Iran, the traditional exit routes for Afghan opium, has forced smugglers to head north. The result: a rising sea of drugs in each of the five Central Asian “stans” – ...Turkmenistan, Uzbekistan, Kazakhstan, Tajikistan and Kyrgyzstan. Marijuana and hashish have long been common contraband in these far-off lands, but... [today opium rivals] cotton as... Central Asia’s... top cash crop... In the hands of the burgeoning generation of local users, some of it will be boiled into tea and some... injected intravenously. But most of it will mature into heroin and hit Russia’s street corners, or, via the new direct flights from the former Soviet states, reach its most profitable destination: the West... Farmers in the opium heartland of Afghanistan’s southern Helmand Valley report earning \$30 per kg. But at the bazaar in Osh, where a few nods can lead to drugs stashed beneath tables of fruit, the same k[g] sells for \$800... [then] goes for \$6,000 in Moscow... Russia’s 201st Division, stationed in Tajikistan ostensibly to keep the peace and mind the 1450-km border with Afghanistan, is nick-named “Shop Number One.” The 201st, it is said, beats the local pharmacy for its range of drugs... In recent years, drugs have also turned up... on Russian military aircraft. Moscow’s troops, of course, are not the only ones seduced by drug profits. “Everyone has a hand in the opium pie,” claims a retired Russian military intelligence officer who knows the terrain well. “Whether it be the Russian border guard, the Tajik police[officer] or the Kyrgyz customs officer – they’re all taking a slice.” ...In Tashkent, scientists are secretly devising opium-killing bacteria. The early results – seen by the DEA and Scotland Yard – are said to be promising... The cancer of narcotics trafficking, however, is quick to metastasize. In Ashgabat, delux hotels and casinos rising out of the Turkmen desert are used to launder drug money. In Dushanbe, the tally of drug-related murders is rising. And in Afghanistan warlords spin opium into weapons needed to fuel the country’s unending civil conflict. [The country has seen a ‘50% rise in the number of poppy producers. The Taliban, which claims it is not involved in the trade, says it will stop drug trafficking if the West invests in their people by building hospitals and funding projects to get people to grow wheat instead. “If no one is concerned about us why should we be concerned about them? Our people are poor and poppies are most profitable.”] Given the obstacles to interdiction and the immense rewards, Central Asia’s ancient Silk Road is turning into a highway of death for Russia and the rest of the world.

...Asian drug syndicates are using the Pacific islands to funnel drugs to [AUS and the US], says... the... head of prosecutions for Hong Kong Customs... [while] in Wellington for the Asia-Pacific regional customs conference... One consignment of heroin organised by a Hong Kong drug syndicate was transported from China to Vanuatu, and then stored in a refrigerated container bound for... [AUS. Furthermore.] Tongan criminals have forged links with South American cocaine dealers and are muscling in on the... Sydney cocaine market[, which is currently shared between]... Lebanese syndicates and homegrown... dealers...

Singapore[’s] Minister of Home Affairs... has defended the caning of a N[Z]er found guilty of overstaying and drug consumption... “The N[Z] High Commission... expressed to the Singapore Government N[Z]’s concern at the inclusion of the rotan [cane] punishment as part of the sentence,” said... a spokes[person for the NZ] Ministry of Foreign Affairs. [The spokesperson] stressed, however, that no request had been submitted to change the sentence as N[Z] has a policy not to interfere in the judicial processes of other countries. [□ Another NZer who has received a rotan punishment for drugs charges, and was imprisoned along with his mother, has, together with his mother, ‘been charged with importing, possessing and supplying drugs – but the search warrant police used to gather evidence may be invalid. The warrant, which was issued for 30 days, expired on Wednesday. Police raided their Blockhouse Bay home on Thursday morning and charged the pair with offences involving heroin, morphine, methamphetamine, methadone and cannabis. Five other people have been charged with similar offences. Both the mother, aged 57, and her 34-year-old son were refused bail, but another bail hearing will be held next week for the mother, who contracted breast cancer while in jail in Malaysia.’]

...AN elderly couple whose house was secretly used for N[Z]’s largest illegal drug laboratory have been told they must pay \$21,000 to have the property cleared of toxic substances. [But they are] already financially sunk, [and]say they have no way of paying... They had... the Cheviot house... on the market for two years, during which time it was rented, but last July thought they had finally sold it when an investment company offered \$40,000 for it. It was \$30,000 below... valuation but the [couple] needed the money and decided to sell. They had agreed to a 90-day settlement, but during that time the police raided the property. The investment company then pulled out of the sale. Two weeks ago, the [couple] were awarded a summary judgment of \$5000 from the investment company, the deposit agreed to but never paid... If the[couple] refuse to pay, or can’t, Hurunui District Council... said legal action could be taken against them. “This is our worst nightmare. We haven’t got that sort of money...,” said [the husband] (60), a sickness beneficiary. The[ir] only hope... is their insurance company, which is looking at the situation to see if their policy covers cleaning up contamination. [The couple said ideally they’d like to see the house bulldozed because of the toxic substances. A health report shows... there is a potential risk from radioactive thorium material in the house. As part of the clean-up, linings, carpets and furnishings will be removed, cleaned and some destroyed... The house has been closed off since the... multi-million dollar amphetamine... laboratory was... raided by police.

...Police are battling silent crime... in the underground world of drug-dealing... People are routinely tolerating bashings, burglaries and aggravated robberies but not reporting them to police because of their own involvement with drugs and their fear of further attacks. “Unless they end up seriously injured or dead... we... often... don’t hear about it on an official basis.” ...Th[e recent] revelation by West Auckland police that they have begun investigating a drug-related death which has remained secret for eight years demonstrates the extent to which people involved in the drug scene will keep mum. The victim was believed to have been murdered in 1989 after a drug deal turned sour. The death brings to three the tally of unsolved drug-linked homicides in West Auckland over the past 10 years... [Whangarei’s] drug squad head... said... [that during a recent] high-profile murder trial... one of the witnesses... told the High Court... how [it and the person who was] killed, went to [the defendant’s] Far North

house armed and looking for drugs[(r:p1377, ln45). The defendant], aged 35, denied murdering Mr Rogers[– but doesn't deny shooting him as the would-be drug-robber was trying to run away –] and was facing a retrial until... the charge was dismissed... Since the incident people had come forward with tales of similar attacks involving guns... the... Detective Sergeant... said... Earlier this year two youths stumbled on a cannabis plot and removed some of the plants. The grower teamed up with his neighbour and hunted down the teenagers... They took the youths to a beach, assaulted them and repeatedly held their heads under water until they told where the plants were... “There was one[other] example when a couple of boys came up from Auckland and one of them ended up getting shot in the foot as part of a drug rip-off, but we only heard about it because the guy ended up in hospital.”

...People in agony may face delays in getting pain relief after a string of violent robberies has forced pharmacists to cut down on stocks of narcotics... mainly morphine... Chemists were reluctant to reduce what was seen as a valuable public service but if the violence continued to escalate they might be forced to refuse to stock the drugs... Stores in rural areas, often sole charge, were becoming prime targets because it took police longer to respond. These were also the areas where people faced the longest delays if pharmacists decided not to stock the drugs and they had to be supplied from bigger centres... N[Z] Pharmacy magazine reported that three small-town pharmacies had been robbed at gunpoint in the past month. One of the victims... had spent \$25,000 on security following the holdup, which was effectively protecting a product which would make him \$100 to \$200 in a good year. [The pharmacist] said the more pharmacists spent securing their stores the greater the personal danger as addicts and criminals would try other ways of obtaining drugs. “Next thing – and this has already started – they come around and get you at night and bring you back at the point of a gun.”

...hundreds of wounded [Vietnam] veterans were addicted to... morphine... [after] the war... “The idea of finding an anti-drug addiction medicine came into my mind during the time I lived in a neighbourhood of drug addicts in Saigon[.]” says a physician whose[... father was an opium addict, [and whose] brother died of an overdose... [The physician] sold his home[and] travelled to live among tribal groups in northern Vietnam where [the physician] sought an answer to addiction in traditional herbal remedies among communities where opium had been grown for decades. Fifteen years after that quest began, the 55-year-old may have found a cure, with potential implications for addicts worldwide. In June this year the U[N] Development Programme announced it was stepping up testing of the medicine... a fiery-tasting brown syrup named Heantos... [T]he programme's Washington director, said... that the medicine had already been tested on 3000 Vietnamese addicts... [T]rials had shown a high degree of success and reported extraordinary results, with only about a 30[%] rate of recidivism... and minimal side-effects. Full tests would require two more years... [D]octors say the medicine is delivered in two doses. The first eliminates withdrawal symptoms and within a week leaves patients able to abstain. The second course is taken a month later to prevent re-addiction... In Vietnam, the costs of treatment are typically around \$30 per person, about a third of the cost of existing alternatives. The medicine is non-addictive... It's said to have a quick effect on addicts to heroin, cocaine and some addictive medicines. For opium users the process is slower... [F]or thousands of people across the thinly policed and ancient world of northern Indochina [opium use i]s a... 19th century... reality that remains today... [I]n... a poor village near the Laos border, [a] 63-year-old... scoops opium paste into a pipe, holds it over an oil-lamp flame in a dimly lit room, inhales and lays back in ecstasy.

...It's 3.15 am on a rainy morning and hundreds are dancing under the strobe lights at Atlanta, a “discotek” in Kota, Jakarta's old Dutch quarter. Patrons groove frantically to the beat... Wander into the toilets and three guys are hanging over the vanity basin, popping pills. Love is in the air – you can sense it – but it's a new kind of love. Ecstasy, the recreational drug most widely used by young, affluent Indonesians, has become as common as marijuana in Auckland... According to official figures, more than 300,000 pills were seized by the authorities in 1996. But... the real number of pills in circulation probably reaches millions, according to a Jakarta-based narcotics expert... [Among the seizures were] more than 29,000 pills [found at the] Jakarta home... of... a small-time television personality... [– who] had overnight become a national figure... [after being] caught hiding behind a clothes rack in a Houston, Texas, department store... by Indonesian detectives working in co-operation with the FBI... [– and] 70,000 pills... two Singaporeans [were attempting] to smuggle into Indonesia through Soekarno-Hatta International Airport in Jakarta... Until recently, authorities had problems trying to convict dealers because ecstasy was not classified under the 1976 Anti-Narcotics Law... [However,] late last month... [t]he House of Representatives... passed a “psychotropics bill” allowing courts to deliver the death penalty, life imprisonment, or a maximum of 20 years in prison and a fine of 750 million rupiah... to members of syndicates dealing in ecstasy... In [the TV personality's] case... sentence will not involve gallows or electric chairs because until[the] President... officially signs the new law those caught on ecstasy offences will be tried under the old, more lenient legislation... It is widely accepted that if you are caught on Jakarta streets with less than 20 ecstasy pills in your possession, the police will confiscate the drugs and charge you 100,000 rupiah a pill... before letting you go. The average street value of ecstasy in Jakarta is about 50,000 to 100,000 (\$30-\$60) rupiah a pill. According to regular users, fines paid to police on the street invariably end up in the officers' pockets, and the drugs are often resold... Late last year a pilot flying for the national airline, Garuda, was caught with 8000 pills strapped to his waist at Schiphol Airport in Amsterdam... The Dutch are being blamed as the source for much of the ecstasy that finds its way to Indonesia.

...A[US]n customs officers have found 27,000 ecstasy tablets in an air-cargo crate of wooden tulips from Amsterdam... On Monday, customs officers at Auckland International Airport found 1000 ecstasy pills after searching a... 22[-year-old]... who had arrived on a flight from Europe.

...Police and customs officers are alarmed at the growing popularity of the drug ecstasy among young... [NZers, and a] Detective Sergeant... of the Auckland Drug Squad, said... suppliers were trying to make the drug more attractive by lowering the price... [R]ave parties in A[US] were attracting thousands of young people, with between 30... and 60[%] of patrons using the drug... but evidence from A[US] indicated it was also popular in the gym and body building communities... “It also seems to be very popular in the gay community.” The general manager of the Odyssey House drug rehabilitation programme... said the organisation had little contact with ecstasy users because it was not considered a physically addictive drug. [But the manager] said that British reports indicated long-term users built up a tolerance to the drug... “People over time need more to get the same buzz, and there have been some attempts to market a cheaper version of it... [But] people need a lot more of that as well.”

...[THE] UNLUCKIEST smuggler of the year[award must go to a British resident]. An airport security scanner was triggered by a surgical pin in his leg. Customs officers searched [the Brit] and found... 2000 tablets of the drug Ecstasy... [In local news, an] actor... aged 22... has been sentenced to 3 1/2 years' jail for importing... 1000 ecstasy tablets... [which the actor] claimed were to pay off her \$20,000 student loan... A psychiatrist report said that [the actor] brought the drugs into N[Z] while in a state of mental illness.

...A survey of 469 frequent users of... ecstasy... found nearly three-quarters suffered some form of long-term health problems. Mental health problems were the commonest, especially depression and loss of concentration. But despite these worries, only one in 20 of th[os]e... surveyed said they would not take the drug again. The BBC Radio 5 survey is thought to be the biggest of its kind... A separate BBC survey of 36 doctors from accident and emergency departments found... ecstasy was the second most common illegal drug to cause adverse reactions in patients... But... the... report's author... of the Maudsley Hospital, London, said... “There have been about 62 deaths from ecstasy in this country in the last 10 years. In the same period, there were 1070 deaths from solvents, 2395 from opiates and 200,000-400,000 alcohol-related deaths.” ...Almost all those interviewed... at some point... had taken ecstasy with another drug... [60%] said they always did so, the most common other drugs being speed, cannabis, alcohol and LSD.

...People taking prescription medicines should avoid... recreational... drugs like... LSD... and ecstasy. That advice comes in a *New Scientist* article which asks whether pharmaceutical companies should be warning patients about the dangers of mixing some medicines with illicit drugs... When a 32-year-old tax inspector died after taking ecstasy at a London night club last November, levels of the drug in his blood were equivalent to his

having swallowed 22 tablets. His friends insist [the tax inspector] took only two, but that those two pills interacted lethally with another drug [the tax inspector] was also taking... the newly approved anti-HIV drug Ritonavir – which interferes with a liver enzyme which metabolises ecstasy. Someone taking both drugs could have problems clearing ecstasy from their bloodstream... The magazine says the... major class of antidepressant drugs, monoamine oxidase inhibitors (MAOI), can trigger a dangerous surge in blood pressure when mixed with ecstasy... and... that... antidepressants... also... increase the brain's response to LSD, resulting in unpleasant trips... Most medicines come with safety notes which warn about potentially hazardous interactions with other prescribed drugs. But interactions with illicit substances are rarely mentioned. The drug companies are not required to issue warnings about them and most want to keep it that way... [T]hey do not want to be seen as “condoning drug abuse.” “We can hardly say in our literature that our drug may be taken safely with heroin, cocaine or whatever but not with ecstasy,” said... [the] head of clinical development for... the company that makes Ritonavir. Given the growing popularity of ecstasy among young N[Z]ers, that delicacy could prove unfortunate... But... [not] everyone is susceptible. What little research has been done on this suggests that only 3 to 8[%] of the population possess the genetic defect that makes them especially poor at metabolising certain drugs.

...A NEW book by a Californian chemist... is being awaited eagerly by the rave generation – and with trepidation by police and drug enforcement agencies. Police expect... [the] manual for making illegal drugs to be published in America in September. [The chemist], aged 72, brought Ecstasy to public attention in the early 90s when... his original collection... detailing recipes for more than 300 psychedelic drug compounds... [was] published... *Pihkal: A Chemical Love Story* won instant cult status... Pihkal is an acronym for “Phenethylamines I Have Known And Loved.” ...Ecstasy... was invented before... [WW1] but became popular with the rave generation after the release of [the chemist]'s... book... *Pihkal* recipes... were popularised across continents via the Internet. Now the Web is buzzing with users looking for information on... *Tihkal* (“Tryptamines I Have Known And Loved”), which concentrates on LSD and other plant-derived hallucinogens, such as magic mushrooms... [The chemist] used to be part of the establishment, even having a DEA... licence to analyse drugs seized by the authorities and [giving] expert evidence at trials. His earlier book, *Controlled Substances: A Chemical & Legal Guide to Federal Drug Laws*, is on hundreds of [US] drug officers' bookshelves. But now [the chemist] has changed sides and... argues in his new book for the legalisation of psychedelic drugs and discusses traditional uses for drugs such as belladonna, mandrake, datura, nutmeg and khat in both the old and new worlds... [■ Police in] Auckland... have... seized about 3000 Ecstasy tablets... [– NZ's] largest single haul of the drug... – and a small amount of LSD. The find follows a nine-month investigation, Operation Politik, which focused on drug transactions at the city's bars, cafes and nightclubs.

...It was 30 years ago today [when the] so-called ‘psychedelic revolution’ flamed into the Summer Of Love... WATCH out, kids! If your parents were teens or 20-something in 1967, they may be keeping some dark secrets from you – tales of rampant drug use, free sex orgies and running wild. Then again, they may just be normal, run-of-the-mill parents who, like all but the lucky few, weren't even aware of the psychedelic revolution when it was in full flower. Despite its persistent hold over the imaginations of successive generations, the original exponents of the psychedelic revolution were a subculture tiny in number and covert in lifestyle, one of the reasons... [why the writer who] has contributed a lucid account of the psychedelic era for a coffee-table book, subtly titled *I Want To Take You Higher* [prefers]... to describe the '60s phenomenon as the “underground movement”... Originally [attempting] an essay commissioned to tie in with a psychedelic exhibition at the Rock And Roll Hall Of Fame And Museum... in Cleveland, Ohio, [the writer] ended up providing the London perspective of the book, which together with... [a] San Francisco slant, gives the reader a fascinating chronological insight on the years 1965-69. Invaded as we are by the fat hand of America, San Francisco has become synonymous with the birth of the psychedelic revolution, but [the writer] knows better: It began on the streets of London. [The writer] was one of the organisers of the original event, the Poets of the World/Poets of Our Time reading at London's Royal Albert Hall in June, 1965. Long before there was a musical style to reflect the new mindset, this event signalled the new scene... “As the audience arrived, they were handed flowers by prototypical flower children who had their faces painted with paisley patterns. Incense and pot smoke wafted. A dozen bemused schizophrenics brought along by [a] psychiatrist... blew bubbles and danced to music heard only in their own heads... At one point [a] Dutch poet... high on acid, snatched the microphone and ran round the hall screaming, ‘Love, love, love...’ ...Despite participation from big stars like [a former Beatle (r:p1382, ln1)], the scene was without a voice... “The regular press didn't cover rock'n'roll. The Beatles might get covered, or the more spectacular outrages of the Rolling Stones, but you didn't get the regular coverage of popular culture. That's why we had to start the underground press... These days MTV and endless hype has reduced the value of the work, but back then a new album was a really big thing, people listened really carefully. The underground... *International Times*... was really IT, the source of communication in our [particular] community...” ...In *I Want To Take You Higher*, [the writer] notes that Pink Floyd's enigmatic leader... lived for a year in a flat with a glass that was constantly spiked with LSD. “Yes it's true, and it's probably why [the ex-Pink Floyd leader is] still a vegetable... I suppose nobody was aware of that at the time, because there hadn't been any acid casualties at that point. But I think John Lennon was heading in that direction too. [John] took a tremendous amount of acid, and there was one point where [John] called a meeting of the Beatles at Apple headquarters and announced [himself to be] Jesus Christ. ‘Well right you are John, we'll bear that in mind!’ ...You've got to get rid of your ego, right? So [John] smashed his to pieces... Had [his new lover] not turned him on to heroin, [John] would have probably turned into an acid casualty...” ...[the writer] states baldly that it was [the other main Beatle] – not Lennon – who explored the psychedelic landscape. It was [that member] who turned to LSD first, and whose musical experiments resulted in the classic psychedelic albums *Revolver* and *Sgt Pepper*... and, “for the last five years I've been working on a book with [that member] about the '60s. It should finally be out in October...” ...The writer's own drug use is fairly obvious on his liner notes for a 1969 album by hallucinogenic hippy band Caravan: “The flute playing Sahara bird-flight solos hovering over the camel-train, earth magic, soft machine and sky...” Etc. “They don't make any sense... I don't know what I was on when I wrote that!” [Despite his own drug-induced ramblings, the writer] is far from “down” on drugs, crediting LSD experimentation with a good deal of the creative brilliance and exploration of the psychedelic era. “It's a pity it turned into such a bete noir. It could have been much more use to society instead of just a recreational drug, which is what it turned into. That was partly to do with its popularisation on the [US] west coast... People were constantly spiking each other, and it became quite an unpleasant thing. There was tremendous one-upmanship about how much they'd taken and how much they could deal with... ridiculous posturing.” ...[● C]ustoms dogs at Auckland Airport are defying conventional wisdom... Border authorities have long considered... LSD... to be odourless, making it undetectable even to canine noses. But recently three dogs have scored “hits” on consignments passing through the international mail centre... The customs officer in charge of the... dog section... said there had been previous isolated cases where sniffer dogs indicated parcels containing LSD... The labradors were not trained to find LSD... but nor had they been trained to seek amphetamines until handlers realised they seemed to be sniffing out that drug.

...Crown prosecutors have failed to have LSD dealers treated the same as heroin dealers in court. In the High Court at Hamilton on Friday, [while sentencing two people]... to eight years' jail on 10 counts... [of] manufacturing and selling LSD [a judge]... ruled that heroin was more dangerous than LSD... [A third person] received a sentence of four and a half years on six counts... The... convictions followed police operations using telephone surveillance and an undercover... [agent. However, the judge] said LSD sentences had been too lenient.

...Judges need to consider whether the lack of addictive potential is still any justification for lighter sentences where LSD and other Class A hallucinogens are involved, says the Court of Appeal.

...The son of wealthy [US] doctors has been sentenced to 11 years' jail for drug importing [in Auckland's] High Court... The judge... did not know why the 26-year-old... from a privileged background... had become involved in drug importing although the motivation was clearly commercial

gain... The... self-employed film-maker of Illinois, was found guilty... of importing... 10,000 LSD tabs... The judge said... sentences of nine years had been imposed in similar cases where there had been guilty pleas – [whereas the son] continued to maintain his innocence. And [the judge] noted... the Court of Appeal had said that sentences landed down for LSD offending were “too lenient.” ...[the son had sent] a parcel of drugs from Los Angeles which [the son] tried to pick up from Air N[Z] Cargo in Mangere. When told it was to be inspected by Customs [the son] hurriedly left, but a couple of days later tried to have it delivered to a city hotel by courier. The judge said that although it was not a professional exercise, it was a “cheeky” importation and... the message had to be reinforced to people from overseas that N[Z] was... not a “Noddyland when it comes to narcotics.”

...Nelson police have only today to continue detaining a [person] suspected of concealing drugs in her body. [The suspect] has been held at a city hotel for 20 days. The law limits such a detention to 21 days... [In international news, undercover] drug-squad cops from Fort Lauderdale, Florida, were delighted when strangers offered them cocaine – until they realised the strangers were undercover cops from nearby Pompano Beach.

...[a 49-year-old], of Portland, Oregon, w[ho]... prosecutors called one of the most successful drug smugglers in the western U[S.] faces a possible life sentence after pleading guilty to... delivering 10 cardboard boxes stuffed with more than \$US7 million... in \$20 bills to federal undercover agents posing as drug middle[people] for an Asian marijuana supplier.

...International schools in other cities may see their students look to softer drugs like alcohol and marijuana to ease the boredom[, but a]... Beijing school for the children of... expatriate westerners is considering random drug testing of its students as it deals with a growing heroin problem. The use of the drug by students at the Beijing International School – run under the auspices of the... Canadian, [AUSn, NZ and US] embassies – reflects the flipside of the often exotic life of those growing up as children of diplomats and business people sent abroad... The ready availability of heroin, however, has added another dimension to the problem in China’s capital... An A[US]n student studying at the 350-pupil school... estimated 20[%] of the school’s secondary school students were regular heroin users. The NZ Government]... contributed \$15,000 to help establish the school in 1980, but it has been financed by fees since then.

...THE past year has been bountiful for the Golden Triangle: more than 3000 tonnes of opium has been processed into heroin by mobile refineries... then poured into the West along routes that have now spread through China.

...Earlier this month Guangdong, the mainland province adjacent to Hong Kong, was outraged that[the] Chief Judge... had jailed drug dealer Xie Chuliang for life and his accomplice... for seven years after they were arrested with 21kg of heroin. [The Chief] Judge... was sacked, Xie was executed and [his accomplice]’s sentence was increased to 15 years... sending a clear message to others. “The stand we take is clear-cut...” Bitter colonial memories of the opium war and France’s empire in Indo-China fuel the anger against drug traders. “China still has a very fresh memory of 150 years ago when some foreign countries opened the door to China to drug traffickers,”... says... the Yunnan Vice-Governor... “That was a very miserable time... I don’t think we will repeat that period of history.” ...In addition to tough enforcement policies... Yunnan has begun a major education and awareness campaign, and introduced a rehabilitation programme for addicts. The province is also working with Laos and Burma to develop crop-substitution programmes in the Golden Triangle... “China will spare no effort in helping other Governments to eliminate drugs,”...

[The Shenzhen executive ‘was given a half-day off to watch seven drug dealers sentenced to death. “It’s good education for us,” said the executive, one of 3000 people attending a rally for the sentencing. “We can come and see by ourselves the fate of being bad guys. I’ll go home and tell my kids.” The Higher People’s Court of Guangdong province turned down the appeals of 10 defendants in the country’s largest drug case since the Communist take-over in 1949, sentencing four Hong Kong residents and three Chinese mainland residents to death. Of the remaining three Chinese mainlanders, one was given a suspended death sentence, one was sentenced to seven years in prison, and one was given life. The 10 appealed after they were convicted two weeks ago of trafficking 600kg of heroin from Burma into south China. The public rallies are part of Government efforts to stem the growing drug trade in China. Drugs were effectively eradicated after 1949, but returned after economic reforms were launched in the 1980s. The 50-year-old executive found the rally exciting. The stadium was half-packed with spectators, many of them in army and police uniforms. As soon as the sentencing was over, the condemned prisoners were marched out of the stadium and put on trucks en route to their execution in a remote place. Grieving relatives chased after the trucks for a short distance.’

...‘Authorities in western China have executed eight people and jailed 14 from the same family. A 60-year-old farmer, his wife, three sons and three grandsons were executed in Hezheng county in Gansu province for murder, robbery, arson, drug trafficking and theft. The farmer in January led 23 members of his family in an attack on five police officers who came to Zhongzhuang village to arrest one of his sons for stealing cattle. The family hacked one officer to death with an axe and seriously injured three other officers. They then turned on neighbours who had called the police. Seven villagers were killed, 10 injured and 14 houses set on fire. The court sentenced two other family members to death, suspended for two years.’]

...The Ministry of Foreign Affairs last night named a Chinese [person] holding a N[Z] passport who was killed in an attack in China nearly 18 months ago... although the ministry had no knowledge of his connection with N[Z]... News of Mr Lin’s death surfaced in reports from China of the execution of nine killers responsible for his death and those of 16 others between October 1994 and August 1996... On Saturday a Guangdong provincial court upheld death sentences against... Zhang Zhicheng, a homicid[al] maniac... and his gang... Zhang... [had] pleaded guilty and did not appeal. The rest of his gang appealed... Sentence was carried out immediately after the verdict... China imposed more than 6100 death sentences and carried out 4367 confirmed executions in 1996... China has executed more people in the 1990s than the rest of the world put together... and the number of capital crimes is soaring. Chinese now face the death penalty for offences from tax fraud to cattle rustling... Executions in China are done with a single bullet in the heart or back of the head.

...*Revolution in style of execution...* OVER the past six months... [the] director of the Kunming Court Hospital in southwest China, has pursued an unusual medical vocation: ...testing the most reliable method of putting people to death. In a series of hitherto secret experiments, [the director] has personally killed several convicted criminals by lethal injection. The authorities in Kunming are so pleased with the results that after 22 such executions they are likely to do away with China’s traditional firing squads. [The] experiments are being studied by Chinese medical and legal experts, who are interested in taking organs from executed criminals for transplantation. There is an unresolved and unusually frank debate in official journals about whether lethal injections could damage the organs to be extracted. The government states organs are removed only with the prior consent of the victim. But human rights groups have said Chinese officials “harvested” kidneys and corneas without consent and sold them to wealthy patients... including [USer]s... At least two military hospitals, in Nanjing and Beijing, have been identified as providing kidneys to patients in Hong Kong for up to \$40,000], and ‘two people who allegedly plotted to sell the body parts of executed Chinese prisoners in the US have been indicted on conspiracy charges’]. The... director’s zeal in dispatching the condemned has been revealed in detail... In March... his team of doctors tried two mixtures of drugs... [A] convict... administered the first cocktail... took... [22]5 seconds to die, his face contorted in pain... [The] second mixture... killed... in less than a minute and... the... victim... did not seem to suffer. After that the Kunming authorities decided to... approve... the use of “mixture No 2”... [and] call on the hospital director more regularly to speed up the queue of those waiting to die... International legal experts have strongly criticised the Chinese judicial system, saying the death penalty was often applied to poor, illiterate people guilty of minor offences. In one notorious case, a Beijing court sentenced Lu Qigang to death for sticking thorns or pins into the buttocks of [gal] cyclists passing the horticultural farm where [Lu] worked – an offence the court defined as “hooliganism”. One legal nicety has not yet been resolved. The normal custom is for the families of those executed to be presented with a bill for the bullet that killed them. It is not known whether the relatives of [the director’s] victims have been handed the bill for the expensive lethal drugs – but no doubt the correct bureaucratic procedure will soon be established.

...China has dismissed as a fabrication a U[S] television report which alleged People's Liberation Army hospitals were selling the organs of condemned prisoners to foreigners. [The f]oreign ministry... denied that Chinese hospitals had ever sold the organs of convicts sentenced to death.

...[Chinese doctors have removed organs from executed prisoners who were not yet clinically dead, to make money from foreign transplant patients, a doctor who fled China a year ago told the US Congress yesterday. "My work required me to remove the skin and corneas from the corpses of over 100 executed prisoners, and on a couple of occasions, victims of intentionally botched executions. It is with deep regret and remorse that I stand here today testifying against the practices of organ and tissue sales from death row prisoners." The doctor described coordinated procedures Chinese Government and health officials developed to extract organs from inmates after their executions, in some cases before the prisoners' hearts stopped beating, so they could be transplanted. The doctor became tormented by the practice after it followed orders to remove the skin of a still-living prisoner in October 1995. The incident prompted him to alert the international community to organ harvesting in China. "Whatever impact I have made in the lives of burn victims and transplant patients does not excuse the unethical and immoral manner of extracting organs." A Chinese Foreign Ministry spokesperson last night accused the doctor of lying. "Any clear-sighted person can see that this is a vicious slander against China. I believe for personal purposes, they have created sensational lies."

...China has executed 1781 people in the past three months, more than the rest of the world has executed in the last three years, says Amnesty International. Another 2960 have been sentenced to death since April, when China's Strike Hard campaign against crime was launched. But the figures, based on public reports monitored by Amnesty, fell far below the actual number of executions in China, said the human rights group. "Only a fraction of death sentences and executions carried out in China are publicly reported, with information selectively released by the relevant authorities. National statistics on the use of the death penalty remain a state secret." The Strike Hard campaign, like others before it, was unlikely to have a lasting impact on China's growing crime problem. "The campaign is nothing short of an execution frenzy – a huge waste of human life." Executions had been recorded across the country for crimes as diverse as bribery, pimping, tax fraud, petrol theft and selling harmful foodstuffs. Hundreds of people had also been executed for drug offences under the slogan "Treasure life, reject drugs," said Amnesty. It appealed to the Chinese Government to "end its spiralling use of the death penalty and to replace this callous and counterproductive policy with more effective and humane criminal punishments, in line with global trends."

...If the Pope really seeks to penetrate the peculiar cultural oddities of the American cult of death, [the Pope] might go beyond his unusual decision... to ask the Governor of Virginia for clemency for... [a prisoner on] Death Row... and visit the state of Utah, where the local custom of execution by firing squad never lacks for volunteers. "We had a whole platoon from Fort Bragg that... wanted to come in. And a former CIA... sharpshooter... called...." recalls... the state's Department of Corrections, which recruited a five-[strong] firing team this year to shoot a [person] who had raped and murdered an 11-year-old girl. As these grisly things go, [last year was] not... too bad a year for capital punishment[!] in the US]. After 56 executions in 1995 – the highest since 1957 – there were only 45 last year, but this is an artificially low number because various state and federal laws which were passed to accelerate executions and curtail the appeals process are themselves being challenged in the courts. This process should soon be complete and the experts at the Death Penalty Information Centre tell me gloomily that they expect a bumper crop... this... year. Texas alone, which executed 19 people in 1995, only managed three [last] year because of these legal hurdles. This bottleneck in the pipeline from Death Row, where about 3000 [guys and 50 gals] now await the rope, the bullet, the sizzle of the cyanide pill dropping into the bowl of acid, the electric chair or the final needle, will soon be cleared. The[?] 'US is the one remaining western power which retains' it, but the[?] death penalty has never lived up to the claims of its supporters. ['From 1968 to 1976 no one was executed in the US. The steep rise in homicides in that decade led to a clamour for the restoration of the death penalty', but it] does not deter killers. Texas, the state with the highest rate of executions, is in that unenviable band of nine states with the highest rate of homicides. Each of the other eight states with a homicide rate higher than 10 per 100,000 population also enforces the death penalty. By contrast, North Dakota, with the lowest homicide rate, has no death penalty. The other claim made for the death penalty is financial – that it saves the taxpayer money, obviating the need to feed and house and guard a prisoner facing a life sentence. This is a popular argument among conservative politicians. But the evidence is all the other way... Two professors of public policy at Duke University last year published an illuminating study of the costs of... summary justice... based on the experience of North Carolina. Beginning at the beginning, [the]Professors... found that it cost the state \$329,000 more to prosecute, try and convict for the death penalty than it did to get a first-degree murder conviction carrying 20 years to life. The length and complexity and the higher legal fees of a capital trial, along with the further extra costs of maintaining a Death Row, explained the difference. It costs \$16,600 a year to keep a high-security prisoner in North Carolina, so 20 years in prison would just about balance the higher costs of a death trial. But that does not account for the further costs of the appeal process for those sentenced to death. "It certainly is an expensive process," comments... [a judge] of the California Supreme Court. "It has to be, to make it fair." California spends \$90 million a year enforcing its death penalty. Supreme Court justices... reckon they spend half their time reviewing appeals. The state's attorneys, whose time is charged to taxpayers at \$90 per hour, claimed 57,000 hours on death appeals. The state also pays \$8 million a year for a special division of the Office of Public Defender to handle Death Row cases but is overwhelmed by the caseload, and sub-contracts the appeals to private lawyers at a minimum fee of \$75,000. "It is always more expensive to have and to use the death penalty than it is not to have it, for the very simple reason that lawyers are more expensive than prison guards," notes... the... Legal Institute at Berkeley. The Duke University study found that the extra cost of the death penalty meant that each such sentence cost the taxpayer \$2.6 million more than keeping a convicted killer in prison for the usual alternative of 20 years to life... [T]hat suggests the 72[% of USers] who tell pollsters they support the death penalty are condemning themselves to pay an extra execution tax of \$7.8 billion.

...Coleman Wayne Gray was put to death by lethal injection in Virginia yesterday for murdering a grocery store manager... in May 1985... His case had wound its way through the legal system for... 11 years. The final ruling of the Supreme Court came only 10 minutes before the execution[, which]... took six minutes... The... director of the Virginia Department of Corrections, said injection was the preferred method... "This process does not aim to dehumanize the person being executed, but it's not designed to provide them with dignity either. It's done without emotion." ...An all-white jury convicted Gray, who was black, of robbing and abducting [Richard]McClelland, a white, and shooting him six times in the back of the head... Gray... was found guilty largely on the testimony of his accomplice[, who]... Gray... insisted was the [one who pulled the] trigger...

Forty years ago Jim Bolton had nothing to say when asked by the sheriff of Auckland if [Jim] had any last words. Moments later [Jim] was dead, hanged in a little high stone-walled yard open to the sky at Auckland Prison, the last [hu]man executed in N[Z]. Today Bolton might have had a lot more to say, given the much easier access to the media, and certainly there would have been a greater public clamour to save him. [Jim] was a Wanganui farmer, convicted of poisoning his wife on evidence of traces of arsenic found in her body, which may well have accumulated from the drinking water on the farm contaminated by arsenical weed killers. Throughout, 68-year-old Bolton [claimed to be] innocent, but in the 1950s there wasn't the forensic science available to support his defence. So did an innocent [person] hang? To this day some of his family say yes –[although 'Jim was having an affair with his wife's sister prior to her death' –] as do the family of James Hanratty, the last [hu]man executed in Britain, 35 years ago. The Home Office is now considering a post-humous pardon for Hanratty and doubts about his conviction led to Britain abolishing capital punishment... [in 1969 – just as doubts about Bolton's conviction, and the conviction of the 2nd-to-last person to hang in NZ (a '20-year-old Irish immigrant who stabbed someone once in the neck – the fatal blow allegedly occurred when the victim's body fell to the floor, causing his spine to snap'), led to capital punishment being abolished in NZ in 1961 (capital punishment had also been 'abolished in 1941, but was reintroduced in 1950'). But 'treason remains punishable by death in NZ.' In 1992, the Maori chief Mokomoko (hanged for allegedly killing a missionary; another Maori, whose wife

and kids were killed, had taken revenge upon the missionary, and was eventually hanged as well) was pardoned by the Government, whose predecessors allegedly arranged for his execution in order to confiscate a large area of land.' (By the way, 'Maketu, a Maori chief, was hanged for the murder of a European, her two children and a half-caste servant in 1842. The trial was the first criminal sitting of the NZ Supreme Court. It attempted to address the problem of making the trial process understandable to Maoris and to demonstrate the sanctity of human life. However, Maoris were excluded from all jury service, except for the very narrow function of Maori juries in criminal cases where both defendants and victims were Maoris. There was provision for a mixed jury in civil cases where either party was a Maori. A 1908 Act reinforced these provisions which were not abolished until 1962.')

Misgivings and the conflicting nature of evidence are problems facing many a jury and they sometimes get it wrong. Two juries did just that, as did the Court of Appeal on four occasions and the Privy Council, in the case of the... Pukekawa... [farmer] who was eventually pardoned of the murders of Harvey and Jeanette Crewe... [The farmer] would have long been dead if the advocates of capital punishment had their way. Yet most N[Z]ers consistently say they want a return of the death penalty. After Constable Glen McKibben was murdered last year, 58[%] of those polled said they supported hanging to 36[%] against (the figures were 52 for and 44 against in a similar poll in 1992). When questioned further some were more selective in who should get the rope – 89[%] wanted it for the murder of children, 85[%] for the murder of a police officer, 75[%] for the murder of public figures and 62[%] for the murder of spouses or partners... South Africans hardened by spiralling crime[also] are increasingly demanding the return of state hangings for violent criminals, with a new poll showing 80[%] support among urban residents. However, the... South African President... yesterday called the death penalty barbaric and blamed the country's violent crime wave on police and judicial corruption... [The] president of the Howard League for Penal Reform which is opposed to capital punishment, says what concerns him is that Western society seems to be becoming more aggressive and wanting the vengeance usually meted out by dictatorships. "That sort of ethos can lead to the reintroduction of capital punishment as in the U[S, where] 26 states... have so far resumed executions... yet... [most] murders are spur-of-the-moment acts..." [The president claims to] understand the emotions of people whose loved ones have been killed, and there are few crimes worse than those involving children, but often such murders are committed by the criminally insane. "In British law it's long been the practice that the insane don't hang even though you could say they're the very people who should because they're psychopaths, and perhaps are still dangerous when they are eventually released, much more so than those who are sane. But we only execute the healthy and in one case in [NZ the condemned person] had an operation for appendicitis and his execution was delayed until [the prisoner] was well enough to die... People say only hang those where it's definitely clear the individual is guilty. But where do you draw the line? How do you make a legal definition for those cases?" The Minister of Justice... who led the parliamentary debate to abolish capital punishment in N[Z], spoke of the "agonising" in cabinet over who should hang and who should be reprieved because, as the executive council, it told the Governor-General whose execution warrant to sign or commute. There was also the harrowing effect on those carrying out the sentence. In the 1950s, when hanging was resumed under the National Government, the hang[person's] only duty was to release the trapdoor. [The hangperson] was a shadowy figure apart, wearing a long coat, a scarf wrapped around his lower face, and a hat jammed down over his eyes to hide his identity. Watching over the condemned [guy (gals) had their sentences commuted) and the grim task of strapping, capping and then cutting down the body was done by prison staff[('public hangings had been abolished in 1858')]. The process was directed by the sheriff (one of whom had a nervous collapse as a result) and observed by a handful of senior prison staff, often a justice of the peace who was the only known volunteer present, the police officer who led the investigation, a doctor, chaplain and a few journalists. An inquest was held that night (executions took place at 6.30 pm) and it was a subdued bunch who waited... for the body to hang and then sign an official notice for publication in the N[Z] Gazette that so-and-so had been executed according to law. There were no descriptive reports of how the condemned behaved, although they were remarkably calm given the circumstances. One young Maori asked the prison superintendent "will I go to heaven?" [then] waved his bound hands and wished everybody "merry Christmas." It is hard to reconcile the scene in Auckland Prison in the 1950s with the jubilation shown by some witnesses at... executions today[in the US.

... 'The ringleader of a Texas prison break that touched off a huge hunt across the southwest of the US was sentenced to death yesterday for killing a police officer during a Christmas Eve robbery while on the run. The ringleader, 31, got the punishment it asked for. The only other option under Texas law was a sentence of life in prison. The ringleader said it did not want a life term. "What you call the death penalty, I call freedom."

... '*Freedom feels good* After 17 years, eight months and one day on death row, the 50-year-old Puerto Rican said it didn't want to talk about negative things on his first day of freedom. The Puerto Rican was convicted on witness testimony for the killing of cosmetology school owner Delbert Baker, even though there was no physical evidence linking him to the slaying. During his years in prison, the Puerto Rican lost several rounds of appeals and had his death sentence upheld by the Florida Supreme Court before the transcript of another person's confession to the slaying was discovered three years ago. The Puerto Rican was freed after prosecutors in central Florida's Polk County announced last week that they would not go ahead with a court-ordered retrial because they no longer had enough evidence. The administrative assistant state attorney said one of the two witnesses against the Puerto Rican had recanted and the other had died. Defence lawyers said the true killer, the now-deceased Vernon James, confessed to at least four investigators or lawyers, but none of those admissions was allowed in court. The 50-year-old planned to return to his native Puerto Rico and live with his 73-year-old mother. "Without hope, I probably would have committed suicide." The 50-year-old has not decided whether it will sue. The executive director of the Death Penalty Information Centre in Washington said the Puerto Rican was the 99th US death-row inmate freed after being cleared by new evidence.'

... an inmate 'walked through the Louisiana State Penitentiary gates a free person yesterday after the murder conviction that put him on death row for 13 years was dismissed. The state attorney-general's office dismissed charges that the inmate and a co-defendant murdered an elderly couple in 1986. A new investigation of the case was launched when a state district attorney judge threw out their convictions after defence lawyers cited questionable testimony and a lack of physical evidence. The co-defendant is also expected to be released.'

... 'John Wilkes Booth broke his leg in a fall after shooting President Abraham Lincoln on the balcony of Washington's Ford (Henry's granddad) Theatre in 1865. Booth fled on horseback but his injury slowed him. So Booth banged on a doctor's door in a village along the trail and spun a story about falling from his horse. The good doctor strapped the leg and allowed Booth to rest in a barn on the property. A posse in pursuit of Booth, knowing that Booth was hurt and likely to need help, also stopped at the doctor's. Booth was either shot or shot himself. But such was the confusion surrounding the assassination of Lincoln in post-Civil War America that the doctor's claim of being an innocent party was dismissed. Ultimately, all the jury needed to hear was that the doctor had tried to help Booth to escape. The doctor was hanged as a co-conspirator and his name quickly became a byword for treachery. But historians and his descendants uncovered the truth and, in 1976, the US President granted Dr Samuel Mudd a posthumous pardon.'

... 'an American death-row inmate who died of cancer 11 months ago has been cleared of the crime it was said to have committed. DNA tests revealed Frank Lee Smith did not rape and murder Shandra Whitehead, eight, in Florida in 1985. Mr Smith was on death row for 14 years.'

... 'Declaring that it was being lynched and proclaiming his innocence, convicted killer Gary Graham was executed on Thursday night for murder in a case that sparked national debate on a presidential hopeful's support for capital punishment. The 36-year-old fought the guards who took him to the execution chamber at the state prison about 130km north of Houston and his final words before a lethal injection took effect were defiant: "They are killing me tonight. They are murdering me tonight." In an angry, rambling, six-minute statement that called on black Americans to resist "genocide" by the state of Texas, Graham, an African-American, maintained his innocence in the 1981 murder of 53-year-old Bobby Lambert outside a Houston supermarket. Graham was convicted largely on the testimony of a single witness and no physical evidence linked him to the crime. Graham's case galvanised death penalty opponents who called for a new trial on grounds Graham had poor legal counsel and could be exonerated by witnesses who were never called to testify in his 1981 trial. Outside the looming walls of the prison where Graham's legal battle ended, several hundred demonstrators gathered to support him

and shout angry slogans at the state governor. A small army of police kept them in line and well separated from about 20 Ku Klux Klan members who said Graham should die. The governor backed Graham's execution and believed Graham was guilty. "After considering all of the facts I am confident justice is being done. May God bless the victims and the families of the victims and may God bless Mr Graham," the governor said. The governor, who under Texas law could not intervene in the execution, said the Board of Pardons and Paroles "thoroughly reviewed" the case before giving it its stamp of approval. The governor noted Graham admitted to "at least 10 armed robberies of 13 victims," two of them shot and one kidnapped and raped at gunpoint, and had brought his case before 33 judges before his execution. Graham's last-minute flurry of appeals ended when two courts, including the US Supreme Court, refused his final bid for a stay of execution. The Supreme Court, by a 5-4 vote, turned down Graham's request and a federal judge in Austin, Texas, later rejected defence lawyers' attempts to sue the state's parole board on grounds that it had violated Graham's civil rights. At that point, Graham's lawyers gave up their legal fight.' ■ 'Texas is the only US state where prisoners can't appeal directly to the governor because a previous governor accepted bribes in return for clemency.'

... 'A SMALL Texan town has turned executions into big business. Huntsville, population 35,000, is the venue for one-third of America's executions. Prisons and corporal punishment contribute \$NZ180 million a year to the local economy.'

...The rate of execution in Texas nearly rivals that in Iran, Iraq [- which, incidentally]... is branding the foreheads of criminals who have had limbs amputated so they cannot be mistaken for war veterans... [-] and Saudi Arabia, Amnesty International said yesterday as the state carried out its seventh execution of this month... Patrick Rogers, who killed a police officer in Texas during a 1985 crime spree... [will be] the first of a record 11 executions set for [next month] in Texas, prison officials said.

...Jessel Turner, a 37-year-old... Houston... truck driver... [who was] convicted of killing a taxi driver during a 1986 crime spree has been... put to death in a record 27th execution in Texas this year.

...Texas prison officials have carried out their 29th execution of the year, putting John Cockrum to death by lethal injection for murdering elderly Eva May during a robbery of her DeKalb shop in 1986.

...A drifter convicted of murders in three states yesterday became the 37th person to be executed... in Texas this year... The Catholic Church, shocked by [the] unprecedented number of executions... urged the state yesterday to abandon the death penalty. All 21 of the state's... bishops said Texas was "usurping the sovereign dominion of God over human life"... Meanwhile, a sharply divided Florida Supreme Court ruled yesterday that the state's use of the electric chair was not cruel and unusual punishment, clearing the way for a new round of executions. The 4-3 decision upheld the constitutionality of the 74-year-old chair, dubbed "Old Sparky." But a majority of justices also urged state law-makers to strongly consider adopting lethal injection as an alternative for the condemned. The chair was last used in March to execute... Pedro Medina. Blue and orange flames shot from the right side of the mask covering Medina's head and flickered for six to 10 seconds, while smoke filled the death chamber.

...Convicted hit [guy] Alan Bannister was put to death by lethal injection yesterday at a Missouri prison, despite an international campaign... to stay the execution... Hollywood stars... and... the police officer who arrested him, all made appeals on his behalf... The execution ended a 14-year battle to have his death sentence overturned by supporters who claimed that a bungled defence led to a wrongful conviction of premeditated murder... Bannister, aged 39, was sentenced to death for... killing... Darrel Ruestman after prosecutors argued that [Bannister] had been promised \$US5500... by the jealous husband of a [wife] who had run off with Ruestman. [Bannister] admitted to the killing, but said the shooting was accidental so... second-degree murder, which is not punishable by death... should have been [his] charge... at most... In his final words, Bannister strongly condemned the state for committing "as premeditated a murder as possible, far more heinous and deliberate than my crime."

...when you get down to it, vengeance is just another way of saying: "[That guy] did bad, let's do worse to him." ...that line of reasoning... [imposes] a crazy arithmetic which says that every death has to be balanced by a second death... the state... [matches] the violence of every murder in the hope that by doubling the number of killings the state might lead the way to calm, secure and peaceful lives for every citizen... I doubt it... I guess, though, that the... [people who support capital punishment] think that prison is a softer option than death.

...Murder is the most horrible of crimes... Yet the mere horror of the crime does not prevent its commission. Every age, therefore, has guarded against it with moral commandment and with a penalty as dreadful as it is just; that of taking from the murderer that same precious gift... [stolen] from his victim. There is in our decadent age widespread reluctance to stand the consequences of one's own actions. The sentimental easily regard criminals as decent people deserving sympathy and forget to sympathise with their victims... The only appropriate penalty for murder is in many cases the time-hallowed and final one. It is simple justice. The fashionable tendency is to dismiss this as unworthy 'revenge.' But justice - rendering to someone that which is his due - is as good a name; and, call it justice or revenge, no society can survive without a horror of wickedness and the fulfilled desire to see fitting punishment for the wicked. No one is forced to murder. If murderers dislike the penalty, let them refrain from the crime... Much hypocrisy surrounds this debate. No one seems to worry when unpleasant criminals are killed in prison... Many consider taking innocent human life by abortion and euthanasia positively desirable. How can such people object to the execution of murderers? The death penalty's opponents object to the state cold-bloodedly killing citizens. They believe it should set an example of tolerance and humanity. But one cannot tolerate murder. In accepting prisons we accept in principle that some unpleasantness is necessary. Why are unpleasant years of imprisonment acceptable but a swift humane end is not? The strongest objection to the death penalty is that innocent people may be wrongly executed. This would indeed be dreadful. Yet... [if] a conviction were doubtful, that would be an appropriate reason for commuting the sentence. Moreover, murder itself involves taking innocent life. If the death penalty did reduce the number of murders, then, even if an innocent citizen were occasionally regrettably convicted, there would still be a net reduction in the number of innocent lives lost. It is not that murderers are simply the product of an environment of cruelty and deprivation. Such a claim insults the many from less than perfect backgrounds who become decent citizens. Well brought-up people murder just as easily. We always have a choice. I do not enjoy killing possums. A possum cannot help being what it is. In an ideal world one might not perhaps kill anything... Life is the ideal, and death is always turning away from it. Nevertheless, I do kill possums, swiftly and humanely, because they must be killed. Likewise, there is nothing inherently sadistic in answering the voice of innocent blood that cries out from the ground. By a dreadful paradox, the lesson of life's preciousness can only be learnt by taking it away from those who have, in justice, forfeited it already by their actions... [● Since] the US resumed executions in 1976, there have been 391 executions...

The trial of... the Oklahoma City bomb[er]... has ignited a rare debate over capital punishment in a country that takes it for granted. Opponents of the death penalty, whose voices are usually drowned out by overwhelming public sentiment favouring capital punishment, have suddenly found a new opportunity to make themselves heard. The result has been a serious moral discussion on editorial pages and television shows. Prominent among those who oppose death... [has] been the National Conference of Catholic Bishops... "We see, in our modern day, a tremendous need to break the cycle of violence. Execution does not do that..." ...If the jury in Denver decides against the death penalty... opponents of capital punishment are likely to... say... that if [the Oklahoma City bomber] was not condemned to death, nobody should be... [because] if there is one person truly deserving of the death penalty, it is... [him. A prominent civil] rights leader... who believes society is demeaned when it takes the lives of murderers, acknowledged that [the bomber's] apparent lack of remorse made it hard to argue that his life should be preserved... "But I can't help but think that when it was time to kill Jesus by capital punishment, the people cheered, 'Kill him...' And yet, they were wrong." ...To many opponents, a major problem with capital punishment is the inconsistency with which it is applied, not so much in high-profile cases... but in the many anonymous trials that take place around the country every year. Recent cases demonstrate that not all violent crimes end with the death sentence. Two white Marines convicted of murdering blacks in pursuit of their neo-nazi beliefs were sentenced to life imprisonment although it was

unclear what mitigating circumstances applied. And a [mother] convicted of drowning her two infant sons in her car, ignoring their pleas for help, received life imprisonment after the state of South Carolina decided not to seek the death penalty, apparently because [of the offender's sex. In another notable case, before a sports personality (r:p1251, ln40)] went to trial and successfully beat murder charges, the prosecution decided not to seek the death penalty in his case because the public celebrity and financial resources of the defendant might make it difficult to get the execution carried out... [● The] bill to reinstate the death penalty in Massachusetts failed in the state House of Representatives by a single vote which changed because of the British nanny case... [A] Democrat... switched his vote from “yes” to “no”... after talking to constituents about... the British au pair convicted... of murder in the death of an infant in her care... Massachusetts appeared ready to join the 38 other states with capital punishment when House members, many spurred by a month of grisly crimes that left mothers and children slain, passed a death penalty bill 81-79 [last month]... The bill was then sent to committee to be reconciled with a similar Senate measure approved earlier this month. [The]Acting Governor... had vowed to sign it. The Senate has passed a death penalty bill three times this decade, but it always died by a narrow margin in the House. It did again on Thursday, 80-80. The bill called for allowing the death penalty in... 15 types of... murder cases... Massachusetts, long considered a liberal bastion, held its last executions in 1947. The state Supreme Judicial Court threw out the most recent capital punishment law in 1984.

...[there are only '35 countries where the death penalty is abolished for all crimes, of which the first was Venezuela in 1863. In another 18 countries (including Canada, Italy, Spain, the UK and Israel) the death penalty is abolished except for certain crimes under military law or crimes committed in exceptional circumstances such as wartime. The laws of the remaining countries and territories provide for the death penalty for ordinary crimes.'

...*'Move to kill death penalty* THE UN will consider a petition calling for an end to the death penalty around the world. A Rome-based peace group will present the petition with more than three million signatures to the secretary-general tomorrow. The organisers said the signatories were from 146 countries. They included the Dalai Lama, the archbishop of Canterbury and the world Methodist council president. Amnesty International also worked on the campaign. Although many countries have abolished capital punishment, executions remain legal in 90 countries and about 30 nations carry them out each year. Meanwhile, 'als attorneys for... the... **Oklahoma City bomber...** prepared more testimony aimed at avoiding his execution, a new poll showed that two-thirds of [USers think the bomber] should be put to death... and even among those who said they were opposed to the death penalty, 32[% said that, in this case, the offender] should die... Defence attorneys said [the bomber] set the bomb... that killed 168 people... in response to the Government's 1993 attack at the Branch Davidian compound in Waco, Texas, where some 80 people died. [The bomber] thought the Government was at war with the American people... [The bomber was] someone “who you will not be able to dismiss as a monster or a demon, but who could be your son, your brother... We believe... you will come to the conclusion that the right response is a life sentence,”... the jury... was... told...

Now that the Oklahoma City bomber... has been sentenced to death, it's time to ask the obvious, but distasteful question: should his execution be televised? ...“I'm all for it,” says [a]60 Minutes veteran... “I would watch it. I would broadcast it. I find it difficult to understand why this should not be televised.” In fact, [the veteran] recently pitched the possibility of 60 Minutes broadcasting another execution to his boss... [following] “a dialogue”... with someone from an unnamed state about the revolutionary idea. The revolution will not be televised, sa[id his boss]. “That hungry for ratings, I'm not... I wouldn't watch it. I wouldn't put it on the air... We're not in the business of bad taste...” ...[a co-host of American ABC's *This Week*, agrees... “Society is barbarous enough, thank you very much... I can't imagine... we would do anything that medieval. Some of it would encourage voyeurism. ‘Let's watch the guy fry.’ Besides, I'm a good Catholic girl, and I don't believe in the death penalty.” [The]CNN legal analyst[, who is]... also a Catholic, has fought against the death penalty as a lawyer but is re-examining her stance because of the [Oklahoma City bomber's] case. When it comes to televising his execution, however, [the analyst] is unequivocal. “We shouldn't impose punishment behind closed doors... We need to be confronted by the sentence we impose. It's a barbaric procedure. We shouldn't hide it and pretend it doesn't exist.” If the U[S] only had one TV network and [the analyst owned it, the analyst] “would feel obligated” to air [the] execution. “The American people should see it, instead of just reading about it. It may change their views on the death penalty. It might go out of existence.” But if too many executions made the nightly listings, viewers “would get sick of them... It would get to the point where people would say on Thursdays at 9 pm, ‘Do you want to watch *Seinfeld* or another execution?’ ...But... I wouldn't watch the actual execution... I'd turn it off... To witness someone die is more than I'm prepared to do.”

...[‘When Timothy McVeigh is put to sleep next month, the concept of the execution of criminals as an act of justice will have taken another insidious step forward. His death will be watched by at least a few hundred people and perhaps even by millions – depending on whether the first amendment to the US constitution can be stretched to further absurdities. Freedom of speech has already accommodated the notion that obscene thoughts should be publicly lanced like boils for the benefit of all of us through the lyrics of entertainers. Consequently, it might seem reasonable to accept the idea that vile deeds should be matched by equally vile public deeds. And it will all seem so easy, so hygienic. McVeigh will be strapped to the “gurney” (a friendly word that), say a few self-important words and take a permanent nap. Just a guy going gently to sleep like the ageing cat with cancer we reluctantly had put down a few years ago as gently and painlessly as possible. The lethal injection is without fuss, without apparent violence, without the unseemliness of gore and of bodies behaving badly, without even a true sense of death – more a kind of moral cleansing. Perhaps one day soon these gentle public judicial murders will have their own pay channel and become a kind of soft porn for psychopaths. No one – not even in Texas, the capital punishment capital of the US – seems to be urging a return to the lash or the cane as instruments of justice. Is this because it's impossible to administer it without the victim revealing agony, without the ugly sight of tearing flesh offending the sensibilities of the just and forcing them to examine their consciences? I have tried to climb into the minds of those Americans who want to watch McVeigh die to see “justice” done. Is their justice that kind of elemental revenge of the Old Testament, a book so revered as a literal code of conduct by so many of them? Or is it a hangover from the Old West with its recurring myth that order is imposed on anarchy only by good guys killing bad guys? If you've ever been to Texas you'll have noticed that many guys there affect a kind of masculine swank and hubris. I used to think all people in any community that legislated for capital punishment should be forced to watch it, but I fear too many Americans might enjoy the experience, especially now that it's without havoc. And what about McVeigh? Does McVeigh fit the comforting (for capital punishment fans) image of the reckless, blood-lusting monster? I'd say the opposite is true – that McVeigh's an insensate psychopath, an emotional cripple incapable of compassion for himself or anyone else, without anything like the normal range of human feelings. McVeigh's shown no remorse for even the children it so casually killed and wants to die, too. I'd say it wasn't extreme hate that drove McVeigh but the lack of any feeling, the cold, warped, self-obsessed rationality of the fanatic. If you examine his beliefs you'll find they're not all that different from the philosophy of a substantial minority of right-wing Americans who believe the Government, although democratic, is the enemy against whom they should be ready to bear arms in defence of some deluded sense of freedom. If you listen carefully you'll find it has much to do with the freedom to oppress those who disagree. McVeigh just reduces these beliefs to his own horrendous banality. There is gathering opposition to executions in the US among the many millions of intelligent and compassionate American people because of the number of victims who have been inadequately represented in court, who have been severely intellectually handicapped, and because of the proportion of the white and well-off who escape the death penalty compared with those who are black and poor. All this is giving executions a bad name again. In the meantime, I would like to ask the grief-stricken (to whom my heart goes out): why do you want to assuage your anguish at all those murders with yet another? I would like to ask the voyeurs, the “just” and those who, despite all the evidence think this is a deterrent: will some Great Truth be honoured by this killing of McVeigh, will the anger of your Old Testament God be propitiated by the sacrifice? Will we be bigger, better people for this revenge, or will we all be diminished?]

...‘By tomorrow morning two concerns pressing the people of Terre Haute, Indiana, will be settled: the winner of the state’s beauty pageant will be known, and Timothy McVeigh, the most famous resident of this Midwestern town, will be dead. The accidental convergence of the two events is an inconvenience to this farming town. As the town began to fill up on Saturday with reporters, residents expressed weariness at the mention of McVeigh. The notoriety McVeigh has heaped upon Terre Haute has become an inescapable fact of life. “We have no control over it,” said the president of the Greater Terre Haute Chamber of Commerce, who conceded it would rather be talking about the state’s corn-fed daughters than discussing someone who, according to recent reports, has starved himself to make his appearance more dramatic when the curtains are drawn back on the window of the execution chamber to reveal him strapped down and ready to go. “Frankly, there is never going to be a good time for an event of this kind.” On a large, closely mown field between the muddy Wabash River and the penitentiary itself, a vast media encampment has been rebuilt a month after the last one was demolished when McVeigh’s execution was delayed by the FBI’s disclosure that it had found 4000 pieces of evidence not disclosed to the defence. With all the activity, the city of tents, portable toilets and carefully demarcated protest pens could be mistaken for a county fair. The prison has rented a wedding marquee for press briefings; military tents housing barracked “special forces” ring the perimeter in the unlikely event of trouble; and kilometres of cable run between satellite trucks and the grand stages from which the world’s newscasters will report with gravity. Still, an air of purposelessness hangs over the media encampment. Besides the red-brick walls of the prison, razor wire and guard towers, there is little to view. The attention of the world’s media will be trained on a small building it cannot see, reporting on an event it cannot witness. McVeigh’s execution may be a strangely muted denouement to a saga that began with a bomb blast. To prevent any embarrassing hitch in the first federal execution in 38 years, executioners have been doing mock exercises last week. The decorated Gulf War veteran who, aged just 26, built the fertiliser and fuel bomb that destroyed the Alfred P. Murrah Building on 19 April, 1995, and damaged 300 buildings over 1.5ha, will remain an impenetrable figure of evil to most Americans. But the FBI’s incompetence in the case and still unanswered questions over alleged accomplices have only strengthened McVeigh’s hand and threaten to confuse his legacy as a mass murderer. “I think McVeigh’d rather go out as a martyr, and if McVeigh is killed, I think McVeigh will, in the mind of a small number of people,” said the coordinator of a militia watchdog group in North Carolina. At election hour doubts about the death penalty will be apparent in Oklahoma City itself. “People are starting to realise it doesn’t accomplish anything,” said someone who had 40 bones broken in the blast. “You start to think, death doesn’t deserve one more death.” But McVeigh will certainly die, and be given the opportunity to deliver a few last words before the executioners open the taps. According to McVeigh’s biographers, those words will be selected from William Ernest Henley’s stunningly defiant 19th-century poem *Invictus*: “I am the master of my fate/I am the captain of my soul.”

...the ‘US Attorney-General has authorised federal prosecutors to seek the death penalty against a Tanzanian citizen charged with preparing the explosives used during the near-simultaneous bombings of 2 US embassies in Africa in August that killed 224 people, including 12 US citizens, and wounded 4000’.

...‘The European Court of Human Rights has asked Turkey to delay the Kurdish rebel leader’s execution until it has ruled on his plea that the death penalty breaches European law. In Ankara, the Turkish PM delayed stating any firm position on the case, which is central to Turkey’s hopes of winning EU candidacy this month. The PM must juggle Turkey’s EU aspirations with the wishes of his hardline nationalist coalition partners. Neither want to be seen to be bowing to European pressure.’ In related news, ‘four convicted Pakistani murderers who tried to escape hanging by selling their daughters – including a five-year-old – into marriage to the elderly relatives of their victims, are due to be executed today. The attempted deals were met by a storm of protest’]...

The family of a N[Z] pilot murdered in a shooting rampage in Indonesia last year say the death sentence handed down to the offender is “a bit barbaric.” Michael Findlay was one of 16 people slain by a second-lieutenant of the Kopassus elite forces at the Irian Jaya airport during a two-hour massacre. Irian Jaya’s Jayapura military court rejected lawyers’ arguments that the officer was mentally deranged and did not know what [it] was doing. Mr Findlay’s wife... said from Brisbane that the verdict was beyond the family’s control. “...None of us desperately want this soldier to die. I would rather have seen him get life imprisonment... – [the soldier] did kill 16 people and injure numerous others.” Mrs Findlay... [and] the couple’s five children were relieved the trial had finally been held. “It’s been a struggle for 12 months, it’s still a struggle. We’ll never get over it.”

...[‘the mother of 23-year-old Katherine Sheffield knew it did not have all the answers to her daughter’s killing, but never knew what was missing. “I was surprised by the compassion I felt for the person convicted for the killing and how easily I forgave him. It was not a feeling I or Katherine’s father expected to feel.” A Northland resident was convicted in 1995 and jailed for 11 years after his girlfriend was discovered buried in a shallow grave behind his house. The boyfriend admitted slashing Sheffield’s throat and stabbing her in the chest under provocation, but also said it couldn’t remember committing the killing. Two weeks ago police announced they were re-investigating the case after another person confessed to the crime in a letter sent to the boyfriend’s sister. The letter was passed on to the police and the boyfriend’s lawyer. Katherine’s mum had been contacted by police to investigate some rumours about the case but it wasn’t until the mum saw the television news that the mum found out about the admission. The mum had had an “uneasy” feeling that the boyfriend had been made a scapegoat for a crime it did not commit. “This would not be the first instance of a person confessing to a murder it had not committed.”

...‘The first person executed by guillotine in France was a highway robber, decapitated in April 1792. Hamida Djandoubi, a Tunisian immigrant convicted of murder, was the last, in 1977. The guillotine, named after Joseph-Ignace Guillotin, gained fame during the French Revolution, when more than 10,000 people, including Louis XVI and Marie Antoinette, lost their heads. Use of the guillotine and capital punishment was outlawed in France in 1981.’]

...Saudi Arabia yesterday beheaded [5 guys] convicted of raping a boy while... drunk... rais[ing] to 101 the number of... execut[ions]... this year.

...Saudi Arabia has executed more than 100 people this year, most[ly]... drug traffickers, but the drug trade continues unabated... [O]nce considered virtually crime-free... Saudi Arabia is a conservative kingdom which clings to ancient traditions while securing the trappings of modern life with its vast oil wealth. Under its strict reading of Islam, convicted murderers, rapists and drug smugglers are[publicly] beheaded. Some 68 people were beheaded in 1996 and 192 in 1995. In recent weeks, executions have averaged one a day, raising the year’s tally so far to 107... Witnesses say the beheadings attract large crowds... [However, with the notable exception of their Government, most Saudis] agree... that beheadings do not deter drug smugglers... “The people who get beheaded in Saudi Arabia are not drug barons. They are couriers, poor people... who... agree to smuggle the drugs for a few hundred dollars... They take the risk because for them a few hundred dollars is like winning the lottery. The drug lords brutally take advantage of these people.” Saudi officials, contacted repeatedly, offered no comment[, but diplomats] in the... capital said the drug runners were often duped into believing their employers knew “special tricks” to avoid getting caught... “Many are used by big drug traffickers who... offer them a free umra [pilgrimage] to Saudi Arabia[then] load them with drugs without their knowledge,”... said... a... senior Asian diplomat... Most of the condemned drug smugglers this year were Pakistanis... Two [gals], both Nigerians convicted of drug smuggling, were also beheaded.

...the British nurse charged with murdering [her AUSn] colleague Yvonne Gilford, will go through lengthy legal manoeuvring before any death sentence could be carried out. Capital cases... automatically go through an elaborate appeals system and must finally be ratified by... the... King... before execution can take place, lawyers in Saudi Arabia said yesterday... “The appeals process can take from a few weeks – in cases, for example, where the individual has terrorised the society and there is a public outcry – to months in an ordinary case. In one case it took 14 years,”... Up until the last minute, the victim’s family can intervene and spare the life of the condemned... “...Nothing is irreversible except for death,” one lawyer said... Under Saudi law, the family of the victim has the right to decide whether a death sentence should be carried out or commuted on payment of “diah,” or blood money... A legal expert in Riyadh said the level of required “diah” for a non-Muslim [gal] was 30,000 riyals (\$[NZ]12,712). The

rate was significantly higher for Muslims and [guys]... Yvonne Gilford's brother... had not waived his right to demand the death sentence, despite statements from defence lawyers... Despite the brother's strong views, lawyers in Saudi Arabia said it was unlikely the [British nurse] would be executed in the event of a guilty verdict... "As far as we know, no Western [gal] has ever been executed in the kingdom,"...

The desert kingdom is a place of wild extremes... Saudi Arabia's temperature hits a blinding 50 deg C during the day, and plummets towards freezing at night... alcohol, drugs and the mixing of the sexes are utterly forbidden in public and yet... parties rage privately through the night. For the 30,000 British workers living there, including hundreds of young single nurses... lured ...by the prospect of high, tax-free salaries... Saudi Arabia is alternately a place of grim oppression and... illicit excitement. But at times it can all go horribly wrong, as... [some] found to their cost on Christmas Eve last year. Thirteen days earlier... the body of Yvonne Gilford was found in the closed expatriate compound of... [the] medical centre in Dhahran... Less than a week after... the... murder... Saudi police identified her killers as two British nurses... Outside the compound... the... Committee for Encouraging Virtue and Preventing Vice, and the Mutawwah, the feared religious police... enforce... some of the harshest... social behaviour... codes in the world... On the inside of the complex's high-security gates, ex-pats were pretty much allowed to let their hair down... Dhahran airbase is famous among ex-pats. Until recently the Saudi authorities turned a blind eye to its 15 pubs and discos. Most have now been closed. Drinking alcohol remains the source of most problems between ex-pats and the Saudi authorities: bottles of Johnny Walker Black Label whiskey change hands for \$US112 and some smuggle wine-making kits into the country... Both... [of the British nurses] were earning \$US25,600 working in the hospital at the time of their arrest. Their rooms had telephone and television, they had drivers... [- guys, of course (gals) are forbidden to drive... [in Saudi Arabia) -] laundry facilities, swimming pools and tennis courts. But the existence is a claustrophobic one, in which tensions often arise. "It is an unreal and unhealthy existence," one former nurse said... According to the well-leaked Saudi account, a quarrel had broken out at... Gilford's flat after [the two British nurses] had described her as "old" and claimed [Gilford] was about to lose her job... In the ensuing argument, the story goes, one of the [Brits] hit her with a teapot... Gilford fell, then took out a kitchen knife to defend herself... was relieved of it and stabbed in the face, back and chest... Saudi police claim they... discovered an automatic cash card receipt which was to lead them to make their arrests... 5000 riyals... - the maximum allowed - had been withdrawn after the savage murder. Detectives placed the bank complex under surveillance. A week after the killing, the British [nurses]... made for the cash dispenser with Miss Gilford's cash card. Security officers then detained them. There was only one problem with this seemingly open-and-shut case... Both [of the Brits], who were said by Saudi police to have confessed, withdrew their "confessions" in January. They had only confessed after being promised they would be sent home without prosecution, their lawyers said. They had also been sexually abused by their interrogators and threatened with rape. The case was rapidly proving a diplomatic nightmare for both the British and Saudi authorities, anxious not to jeopardise the kingdom's huge defence contracts with Britain and to avoid the embarrassing and unprecedented spectacle of a British [gal] being publicly executed in what the Saudis blackly dub Chop Square. Meanwhile, in Jamestown, A[US.] a 59-year-old postal worker was doing everything [in his power to ensure the British nurses] were indeed decapitated... As media interest grew, [the British nurses] were getting used to the grim realities of Damman prison, where they... shared a cell with six other inmates. Seventy prisoners shared four lavatories... In March... [their] lawyer... made a direct approach to the [victim's] family, asking them to waive their right to insist on the death penalty[, but] was rebuffed... Two months later [the British nurses], wearing long black robes and in chains, appeared for the first time before the Supreme Court in Al Khobar for the start of their trial. For the first time in Saudi history, defence lawyers were allowed to be present. But the trial was adjourned repeatedly. In June, [the British nurses'] families called a news conference in Glasgow, casting doubt on the police's version of events. They pointed out the two [suspects] supposedly used... Gilford's cash card after they had been interviewed by the authorities, a highly unlikely move. And they provide alternative suspects: five security guards who worked at the complex and were involved in a money-lending scheme. They took exception, it was claimed, to... Gilford's willingness to lend money interest-free. All were fired after the murder, and one disappeared, a Saudi source maintains. Confusion remains.

...Lawyers for [the brother of Yvonne] Gilford yesterday opened the door for a deal to spare the lives of two British nurses... after claims that [the brother] would accept... \$1.8 million... in "blood" money... [T]he nurses' Saudi lawyer... said [the brother] would keep \$1.1 million and give [the remainder] to a children's hospital in... [AUS. One of the nurses has already] been found guilty of being an accessory to murder and faces 500 lashes and eight years in prison, while the Saudi courts are yet to pass a verdict on... [the other nurse. In another development,] the British media warned [the British PM]... to proceed with caution in his attempts to persuade Saudi Arabia not to carry out the sentence of 500 lashes... saying angry condemnations of Islamic law could backfire... Under Islamic law, her 500 lashes should be administered with a bent elbow, not bruise or break the skin and normally would be doled out over the course of her sentence.

...SAUDI ARABIA'S King... and his advisers face a dilemma... The case... of... the... two British nurses... has set in motion outraged demands in Britain for diplomatic action to spare the nurses, culminating in an extraordinary meeting in New York between[the] British Foreign Secretary... and[the] Saudi Foreign Minister... to discuss the issue. If... [one of the nurses] is led to a public square in a black cloak and decapitated... the... event would have shattering repercussions in Saudi Arabia's relationship with Britain and the kingdom's desire to be seen as a civilised, modern state would undoubtedly suffer in Europe and the U[S] also. Yet Saudi authorities believe in their system and intend to stand by it. They say they are not alone in the use of capital punishment, and see beheading as a quick and humane death compared to hanging, electrocution or poison gas... From the beginning, the Yvonne Gilford murder case has been a hot potato. Saudi officials knew their system would be put under a microscope by the West, which they regard as ignorant of and biased against their Islamic beliefs. The case has been so sensitive the verdict is still under wraps.

...[the] brother of... Yvonne Gilford yesterday would not confirm or deny whether more than \$A1.6 million... had been paid into a trust fund as part of a "blood money" deal.

... "I have agreed to waive the death penalty in consideration of sources, other than the nurses and their families, providing \$1.7 million," [the brother of Yvonne] Gilford told a news conference[yesterday]. "I would like to make it clear I have not accepted any 'blood money' as that is a specified sum under Saudi Arabian law... [I] have accepted compensation which is an alternative to 'blood money' under Saudi Arabian law..." [His] lawyer said the money would be donated by British companies which... had no connection with the nurses... [M]ost of the compensation money [would] be donated to charity, with \$A1 million going to the... construction of a day surgery ward... in Adelaide... in honour of his sister. [The brother] would receive a nominal sum of \$A50,000 for "pain and suffering" and the rest would go to pay lawyers in Saudi Arabia and A[US].

...an A[US]n's decision to spare the life of a British nurse... accused of murdering his sister improves the chances that a second nurse will escape flogging, [the] British Foreign secretary... said yesterday... "It would be unusual in Saudi law if the nurse who had been convicted of the lesser offence got the heavier sentence..." ...[Incidentally, the] hospital which is set to receive a \$A1 million... "blood money" donation... meets this week to decide whether to accept the offer... [Its] chief executive officer... conceded the hospital had been put in an awkward position. But [the CEO hinted that it was his intention to] recommend the windfall be accepted because it was legally obtained and therefore morally acceptable.

...Adelaide [Gal]'s and Children's Hospital has accepted a \$A1 m... donation offered by... [the] brother of murdered nurse Yvonne Gilford and will name a children's day surgery after her... [In another development, the] sentence of eight years' jail and 500 lashes imposed... on... [one of the British nurses] for her part in the murder... has been reduced... [The nurse] will instead get a four-year term and be spared the lashes, Scotland's *Daily Record*... said, citing an unnamed Saudi source. The newspaper also reported that... [the 2nd British nurse], who has yet to be sentenced by the Islamic court... also would serve four years in jail... Relatives of the nurses were surprised by the report. [The 2nd nurse's] brother-in-law, said: "We have not heard anything either here or from our lawyers in Saudi Arabia. I am somewhat surprised that this information is flying around."

...The Adelaide [Gal]'s and Children's Hospital was still undecided at the weekend how to respond to a letter from the lawyer representing the nurses accused of murdering... Yvonne Gilford... asking them to reconsider the decision to accept a \$A1 million... blood money offer... [□ Yvonne's brother]'s lawyers had set a deadline of 5 pm on Friday for the payment of \$A1.7 million... The deadline passed without any payment being made.

...Lawyers for [Yvonne Gilford's brother] yesterday applied to the... Adelaide Supreme Court... for dismissal of legal action taken against him by two British nurses... As wrangling continued over the[agreed] payment of \$A1.7[m, the brother's]... lawyer... said... his client... would argue that the ongoing action against... [him] was an abuse of process... Before the agreement was reached, the nurses... had taken action in the... Supreme Court... to sue [him] for acting in a manner to cause them damage... [In further news from across the ditch, a] painful traditional punishment imposed in an Aboriginal community in Northern Territory has met a familiar obstacle – the white view of things. The Lajamanu community near Katherine... wants to spear [a]28-year-old... five times in his thighs for killing his 23-year-old nephew in a fight... That is after they have thrown large, heavy wooden boomerangs at him and beaten him with their fists. But they cannot carry out their... punishment, even though [the offender] wants them to. A N[T] Supreme Court judge has stepped in... [and refused the offender's] application to be bailed... [The offender] even threatened to commit suicide if [the judge prevented him from suffering] the punishment, but [the judge] denied his plea saying the punishment would “more likely than not” cause him “grievous bodily harm.” ...legally a person could not consent to being “grievously” harmed and therefore the punishment would be a crime and the court could not facilitate a crime. The question of Aboriginal law has vexed A[US]'s British-based law courts since colonisation. In one 1981 court case – a judge... allow[ed] a murder accused to be punished in the traditional... way. In that case, the judge granted bail saying it was almost certain that until the spearing had taken place the matter would be unresolved and the community would be ill at ease and serious trouble might flare up at any time. But [in this case the judge] was given a detailed description of the... punishment... An Aboriginal law specialist at the N[T] University... said... “It's always going to be a tough one [as] courts cannot be seen to be sanctioning assaults outside the law, but then again they must take into account that some A[US]ns face two kinds of punishment.” ...A tribal elder... told the court that in his experience victims of these types of punishments could normally walk in about two weeks... [O]ther members of the community would monitor the punishment to make sure [the offender wasn't] permanently injured... [H]owever... mistakes had been made in the past and spearings had fatally punctured arteries.

...[‘following Islamic law in Somalia means people have had a hand cut off – often leading to death by blood poisoning – for stealing goods worth £1.30.’

...‘A POTENTIALLY lethal ritual will be imposed on fellow villagers of the person who admitted killing a Samoan MP. The 34-year-old was sentenced to death yesterday for killing Samoan Public Works Minister Luagalau Levaula Kamu, who was shot in the back at a social function on July 17. The 34-year-old's father, the recently dismissed Gal's Affairs Minister, and another government politician are also in custody facing murder and conspiracy to murder charges over the same killing. Since gaining independence in 1962, Samoa has never carried out the death sentence which is routinely commuted to life. But by tradition, the 34-year-old's conviction means his village of Malie must make a traditional apology or ifoga to Kamu's village. In an ifoga, the matia or chiefs of the offending family gather before dawn outside the home of the offended family, where they sit on the ground and cover themselves with fine, hand-woven mats. They must stay there and deal with whatever indignity is inflicted upon them until forgiven by the offended family. Deaths have been known to occur during ifoga. The *Samoa Times*, published before the guilty plea, said the 34-year-old had struck a deal which would see him transferred to police custody on the island of Savai'i while his wife and three children would be escorted to NZ. Samoan police are understood to be making investigations into some of the wider allegations against the 34-year-old's father and the other government politician as they build cases against them before their next Supreme Court appearances, on Thursday and Friday this week. American Samoan media yesterday reported other alleged accomplices were also being sought, and Samoan community leaders in NZ said there were rumours a second gun-holder had failed to assassinate the Samoan PM.’

...‘The assassination of a cabinet minister, the arrest of two leading politicians and the imposition of the death penalty on the son of one of them is turning into a seismic event for Samoa. Whether the death sentence will be carried out is still in contention. Samoa has not hanged anybody since independence. But one day after the son had been sentenced to death, Samoa's PM said the death sentence would be retained for murder; keeping the penalty would make those contemplating murder think twice. A deep strain of high-level political corruption is revealed in the drama.’

...‘Samoa needs to have a South African-style truth commission after its political assassination trials are completed, says the country's Opposition leader. Speaking in Auckland yesterday, the leader said that a wider inquiry was needed to reveal the extent of corruption in Government departments. The leader blames a culture of state corruption as a trigger in the murder of Mr Kamu. However, the leader was not optimistic that such a commission would be established under the present Administration. It had failed to act on a critical 1994 report from the Controller and the Chief Auditor that high-lighted widespread misuse and lack of accountability of public funds. “Unless we address that political, economic environment it will spawn even more violence.”

...‘A death sentence imposed on the son of the Samoan Gals' Affairs Minister for his role in the assassination of Public Works Minister Luagalau Levaula Kamu has been commuted to life imprisonment, officials in Samoa confirmed yesterday.’

...‘Illinois' Governor yesterday emptied the state's death row by commuting the sentences of 156 inmates, in an unprecedented move as concern grows about the fairness of executions. The governor, whose term comes to an end tomorrow, hastily dispatched letters to the prisoners' families, explaining that it was commuting death sentences to life imprisonment. “I thought about it night and day. I finally came to the conclusion that this was the right decision.”

...‘the US Supreme Court made a landmark decision on Thursday when it ruled that the execution of the mentally retarded was unconstitutional. Its decision that the punishment was “cruel and unusual” will have a huge and immediate effect in states that still put to death prisoners with an IQ of less than 70. The move followed a similar decision in Illinois, which halted executions after 13 death-row inmates were exonerated, including one who had ordered his last meal. The Supreme Court's 6-3 decision overturns one of the court's previous rulings from 1989 that a prisoner's mental state was not an issue. Opponents of the death penalty say that, since the Supreme Court reinstated the death penalty in 1976, 35 of the more than 775 executed prisoners showed evidence of mental retardation. While the ruling has no direct effect on the execution of non-retarded prisoners, it does reflect a growing public concern about the fairness of the death penalty’ (e.g., ‘a death sentence is 4 times more likely for the killing of a white USer than for the killing of a black USer’)...

‘In its second major capital punishment ruling in four days, the US Supreme Court said juries and not judges must decide facts warranting a death sentence, a ruling that may affect nearly 800 death-row inmates in nine states. Reversing itself, the court overturned by a 7-2 vote its 1990 decision that upheld an Arizona capital sentencing law giving sole responsibility to the judge to make factual findings necessary to sentence a convicted murderer to death.’

...‘a Texas jury has sentenced a 46-year-old to death by lethal injection, rejecting defence claims that their client is so mentally retarded that it believes in Santa. The 46-year-old had twice before received a death sentence for raping Pamela Carpenter, 22, and killing her with a pair of scissors, but both times the US Supreme Court threw it out in a case that became a lightning rod for the national debate on whether the retarded should face capital punishment.’

...‘A US federal appeals court has ruled that a mentally ill death row inmate can be forcibly treated with anti-psychotic drugs to make him sane enough to be legally executed. In a 6-5 vote, the Eighth Circuit court in St Louis found that “involuntary medication followed by execution” was “a better choice” than withholding drugs, followed by psychosis and imprisonment. The ruling is likely to be appealed to the Supreme Court.’

...‘A freed former death row inmate, experts and prosecutors – including a prosecutor in the Oklahoma City bombing trial – told a Senate judiciary committee yesterday of incompetent defence lawyers appointed in death penalty cases. The former inmate, who spent 14 years on Louisiana's Death Row until being exonerated, told the committee that his defence team consisted of a lawyer fresh from law school and another who had never tried a death

penalty case. "My trial only lasted a few days. When the jury convicted me of capital murder, I was stunned. So was my inexperienced lawyer, who disappeared." In the sentencing phase of his trial, the recent graduate was left to represent him. "During my 14 wasted years on death row, I always hoped that my nightmare would count for something. That's why I'm here today. Mistakes like my nightmare are real." The committee is chaired by the Vermont Senator who, along with other senators, this year introduced a bill called the Innocence Protection Act, which proposes reforms for death penalty cases including DNA testing and minimum standards for defence lawyers. The chairperson said that while the bill had been awaiting action in Congress, six people had been freed from death row and exonerated of crimes they did not commit. Critics of the bill say it plays into the hands of those who would like to see the death penalty abolished. But a leading death penalty lawyer who is also the director of the Southern Centre for Human Rights, citing examples, said an Alabama lawyer was so drunk that the trial had to be suspended for a day. "There have been far too many cases in which defence lawyers defending capital cases were impaired by alcohol, drugs or infirmity." In Houston, a defence lawyer slept through a trial where his client was sentenced to death and later said it found the case "boring." The director said: "For poor people facing the death penalty, this is what it means to be represented by the 'dream team'.""]

...JUDGES are perfectly entitled to snooze during criminal trials. And it's also permissible if, after awaking, they decide to dish out prison sentences. That's been decided by a British Court of Appeal – after a complaint by[a] convicted fraudster... because the judge had been slumbering during the hearing at Liverpool Crown Court. Three Appeal Judges disagreed because, they argued, [the fraudster] had failed to specify when the judge had been dozing – and, therefore, could not say what evidence [the judge] might have missed. Meanwhile, [another convicted person] is hoping for a more sympathetic response from appeal judges in California. [The convict is] facing execution for the 1981 murder of his wife, but claims a juror was unduly influenced against him. [The juror is a 79-year-old who feels the convict] probably was guilty because [the 79-year-old had] been advised by her long-dead Uncle Frank. It's perfectly normal, [the 79-year-old] insists, for people to accept the guidance of dead relatives. But a dangerous precedent is set... lawyers protest, if a juror is swayed by the opinionated chatter of[the] dead... - 1997

A jury in Texas sent a [hu]man to jail by mistake... The jurors in Plainview intended to give Jesus... of Roswell, New Mexico, 10 years on probation for a 1978 aggravated assault. But they signed the wrong verdict form, giving [Jesus] 10 years in jail [for the 20-year-old crime]instead. They realised their mistake only after reading an account of the case in the Plainview Daily Herald. "We couldn't figure it out,"... [the jury foreperson] said. "We wondered if the judge changed our decision, or did the newspaper make a mistake? It wasn't until we spoke with the judge that we realised what we had done." The court was hastily reconvened and [Jesus] was freed.

What if Jesus of Nazareth was to come back with his lawyer (r:p1146, ln60)? If we assume that Jesus is someone who has nothing to hide and is capable of speaking for himself, Jesus wouldn't need to have a lawyer (although, if Jesus was arrested – e.g., for cultivating the burning bush – in NZ, a counsel would be recommended to him, or one would be appointed by the court, to offer him 'free legal advice' if Jesus should require it). [Note that if Jesus of Nazareth had been arrested in NZ for marijuana cultivation, it might've pointed out to the court that although buggery is legal in NZ, sexual assault – including sticking you fingers up someone's arsehole against their will – isn't, yet police officers are allowed to 'anally penetrate' citizens with gloved fingers if they suspect cannabis has been hidden up a rectum (cavity searches aren't regarded as sexual assault because, presumably, the officers don't get sexual satisfaction out of the act; it is, however, an assault on a citizen's dignity) even though their suspicions invariably prove to be false (few people would carry cannabis in their rectum at any time, or have enough time to insert some while a police raid is in progress; and, anyway, a person who is suspected of hiding drugs inside its body should be taken to a hospital to be x-rayed, then – if the x-ray appears to confirm police suspicions – an internal examination can be conducted by qualified medical staff).] Regardless of what the charges are, Jesus' court appearance could be expected to proceed as follows:

JUDGE: "How do you plead to the charges made against you?" JESUS: "I enter no plea on the basis that I don't recognise your authority to judge me on this or any other matter." JUDGE: "Really? And on what basis do you found this lack of recognition?" JESUS: "On the basis that you took an Oath of Allegiance ('I swear that I will be faithful and bear true allegiance to Her Majesty[the Queen of England], Her heirs and successors, according to law, so help me God') plus the Judicial Oath ('I swear that I will well and truly serve Her Majesty, Her heirs and successors, according to law, in the office of [District Court Judge, Judge of the High Court, etc] and I will do right to all manner of people after the laws and usages of NZ without fear or favour, affection or ill will, so help me God') upon being admitted to the Bench – and when admitted to the Bar swore 'by Almighty God that you would truly and honestly conduct yourself in the practice of a Barrister and Solicitor according to the best of your knowledge and ability' (in addition, 'every session of NZ's legislative body opens with an Anglican prayer'; and court 'witnesses are asked to swear with their right hand on the Bible to tell "the truth, the whole truth, and nothing but the truth"' – although they can now object to swearing on the Bible [which ought to be considered a positive step considering how the Bible is full of untruths!]) – yet, according to the Bible, on the Day of Judgment the Almighty God you refer to will judge the life of *each and every person who ever lived, including unbaptized infants*, then eternally punish or reward them accordingly. Therefore, you have no mandate to judge and punish me in this life – as is clearly stated in Revelation 22:11 (r:p1125, ln71 to p1126 ln1). Your pleas for God's help will become more relevant when the time comes that you don't get a chance to explain why YOU shouldn't be punished for either pre-empting God's judgment or doubting the Day of Judgment will occur!"

Although an event 'may be attributed to an Act of God, and no one can be held liable for it', either no one has ever used belief in the Day of Judgment as a line of defence for alleged criminal activities in a Christian-based court or every judge and jury has failed to accept the use of such a defence (and have also denied God's absolute control of the Universe as a defence?). After all, doing so would make themselves redundant! There is, however, another scenario: lawyers and judges (plus everyone else who supports the judicial system) know that their actions are *usurping the sovereign dominion of God over human life*, but they don't care – because they believe that God is responsible for evil (r:p1212, ln45) and accept their role in helping to create it.

...behold, the devil shall cast *some* of you into prison, that ye may be tried... - Revelation 2:10

The conclusion that Christian judges, lawyers, etc., are DEVILS can also be reached if they are ignorant of what the Bible says (r:p945, ln40-1).

If Jesus was the Christ, and a judge and prosecution was to oppose his desire to do something (e.g., to grow one of God's botanical creations), would the judge and prosecution qualify to be called ANTI-CHRISTS?

Antichrist[means] an enemy of Christ...

antichrist, in Christian theology, [refers to]a mighty ruler who will appear at the end of time to conquer or seduce the wicked and the unbelieving (thereby revealing them) and persecute the righteous; in turn [the antichrist] will be conquered and destroyed, together with his followers, at the second coming of Christ. In the N[ew Testament] the word appears only in the Epistles of St John, but the... idea derives scripturally from the prophecies of Daniel, vii-xi, and ultimately from the Ahriman of Zoroaster... Apocalyptic literature, both Jewish and Christian, is largely concerned with false or antimessiahs and antichrists and is as much political as eschatological. The antichrist was identified by various writers with Arianism and other heresies, with the Roman empire or emperors – especially Nero, with Islam and Mohammed. In the Middle Ages popes

bestowed the title upon emperors and emperors upon popes... During the Reformation, most Protestants were convinced that the pope was antichrist and the Roman church the “whore of Babylon.”

If the Christ was ever to come to Earth, everyone else could be regarded as a non-Christ – which would be akin to being an anti-Christ. Certainly, anyone who opposed the beliefs of the Christ would be one (if Jesus was the Christ, then most modern Christians are one!). However, a more precise definition of *anti-Christ* might be: anyone who attempts to divert attention away from the Christ, or who makes people look at (or think about) itself instead of Christ.

If you were God and you wanted to protect (or hide) your Christ until a designated time, how would you do so? A simple solution could be to create a substitute or imposter (i.e., someone who everyone will see instead of Christ). It might be hard for one imposter to continuously divert the attention of every other human, but what if there were two or more imposters (or attention-diverters)?

Little children... ye have heard that antichrist shall come, even now are there many antichrists; whereby we know that it is the last time. - The First Epistle of John 2:18

ANTICHRIST SUPERSTAR

In NZ, the most obvious example of *attention-diverters* – superstars or antichrists – would be the *All Blacks*.

ALL BLACKS was the name given to the NZ touring... rugby union... team in Britain in 1905 and it stuck... **RUGBY UNION** was first played in NZ on 14 May 1870... [and became] an intense national preoccupation with a breadth of interest through the community that raised it, as was often said, to the status of a religion... The first NZ team to go overseas (to N[SW] in 1884) wore dark-blue jerseys with a gold fernleaf on the left breast, dark-coloured knickerbockers and stockings... [The team achieved] a spectacular record of eight wins from eight matches... From 1893 to the end of the century NZ teams wore black jerseys with a silver fernleaf but white shorts. From 1901 the playing uniform was all black with a silver fernleaf... The inspiration for the soubriquet would seem to be self-evident, but according to one member of the... 1905... team... the name is derived from a printer's error. [‘It appears that R. J. Seddon, then Premier of NZ, had arranged with London's *Daily Mail* to cover the tour, with the result that a reporter, Buttery, travelled everywhere with the team. After the match against Hartlepool Clubs on 11 October 1905, which NZ won 63-0, Buttery reported that the whole team, backs and forwards alike, had played with speed and precision as if they were “all backs”. This comment was repeated after the Northumberland game on 14 October (31-0) and the Gloucester City Club match on 19 October (44-0). But when the NZ team arrived at Taunton to play Somerset County (21 October), they found the whole town placarded with posters welcoming the “All Blacks”. Buttery inquired into the matter and reported to the team's management committee that the printer had in error inserted an “l” in “Backs”. The name appealed and from then on gradually won acceptance, so much so that by early November, following the match with Surrey (1 November), the *Daily Mail* made direct mention of the All Black team “that everybody is talking about”. It is also interesting to note that on 15 November 1905 the term “Blacks” had even appeared in the pages of *Punch* which printed a number of stanzas dealing with the shortcomings of Seddon, the last running as follows: Can it be your head is turned/By your team of Rugby “Blacks”?/Has the glory they have earned/Set you trotting in their tracks? Although the new name “caught on” so quickly in Britain, its acceptance in NZ was much slower. On 5 March 1906, the day of the team's arrival at Auckland, the *Herald* editorially acclaimed the “New Zealand Footballers”, but on the following day it headed its report on the official function of welcome with a bold double-column caption – “Return of the All Blacks”. Meanwhile, throughout the country special shop window displays and feature advertisements “to mark the return of the All Blacks” suddenly appeared. The “All Blacks” had indeed arrived’]... **INVINCIBLES** is the name given to the 1924 All Black... team, which became the first to tour Great Britain without losing a match... Over the following... years, NZ's ALL BLACK sides have established an international record second only to that of South Africa.

[A] LEADING Kiwi rugby writer... and[a] South African broadcaster... have captured the spirit of the rivalry between the All Blacks and South Africa in their new book, *Toughest of Them All*. The revealing book... features both N[Z] and South African views on the... clashes between the two sides. The... insightful book, which goes on sale on Wednesday for \$39.95, also reveals controversy surrounding the 1921 clash between the Springboks and N[Z] Maori. A South African reporter sent the following telegram back to the republic. “Most unfortunate match ever played. Bad enough having to play a team officially designated as NZ Natives, but spectacle of thousands of Europeans frantically cheering on a band of coloured[s]... to defeat members of own race was too much for the Springboks who were frankly disgusted.”

...The great rivalry that is All Black and Springbok rugby opened at Carisbrook... on August 13, 1921. It began a sporting battle, which... has involved epic and sometimes bitter contests, endured the stench of apartheid, brought respect between hardened foes, and linked two countries who might otherwise have regarded each other as just another name on the map... The All Blacks wore letters rather than numbers on the jerseys of that first encounter[, which NZ won 13-5]... The opening try went to... a future Olympic athlete... As with the first series[, which included a 9-5 win to South Africa and a 0-0 draw], the second in South Africa[– consisting of four matches –] was also drawn[(2-2)]... South Africa edged ahead with a series win in N[Z] in 1937... But it is the 1949 series which will be remembered as a landmark in the contests between the two countries. As in 1928, South Africa would not allow non-European players to tour their country and, to our shame, the All Blacks agreed to tour under those conditions. So the All Blacks departed without their genius centre... the country's best halfback... and others... South Africa won the... series 4-0, with their marauding number eight... leading the way... N[Z] had trouble dealing with the crushing defeat[, blaming]... poor... refereeing... and especially [the South African No 8]'s tactics, which they believed were illegal. [The No 8] crushed the All Blacks' inside backs and critics claimed [the player] was offside and destroying the game by concentrating on spoiling tactics... The truth just might have been that [the No 8], whose stooped figure was said to have come from the gold mines, where [the No 8] carried mercury buckets weighing up to 65 kg on his shoulders, was too fast and too good... N[Z] had to wait seven years for payback... [The] series loss to the All Blacks... was [the Springbok's] first series defeat this century... [and] the final test at Eden Park[was played] in front of a record 61,000 crowd... The Springboks won at home in 1960, and the All Blacks triumphed[at home] in 1965, a year when the Springboks won just one of eight tests. It was a golden period for the All Blacks... The 1967 tour was cancelled because of apartheid, and 1970 saw the All Blacks lose another series in South Africa... [However, the] tour announced the arrival of [the current Manu Samoa coach. The winger – then] just 19, with thighs like barrels and a side-step which left opponents tackling thin air... [– and another three All Blacks.] were allowed to tour, despite being “non-Europeans.” ...[ironically,] there was at least two people with Maori blood... in the... [1928] team... while in the 1949 team there were at least three and[again] in the 1960 team... [‘The decision of the NZ Rugby Union in 1959 to (officially) exclude Maoris from the representative team due to visit South Africa demonstrated that many people, Maori and Pakeha, still equated racial equality with cultural uniformity. In 1968 South Africa reversed an earlier decision, stating it would accept Maoris in an All Black team invited to tour in 1970. Many Maoris welcomed the decision; others said no Maori could tour South Africa with a clear conscience because of apartheid.’] 1970 also uncovered an All Black protester... [in a] superb Wellington prop, [who] refused to be considered for the tour... urged the Government to cancel it, and called for trade sanctions and the breaking of diplomatic relations because of South Africa's apartheid system... Another series defeat in South Africa [occurred in 1976. Unlike the 1970 version, this All Black] team was probably not good enough to win the series, but they came desperately close to drawing it, and there were some very dodgy refereeing decisions. The most notable came in the final test... lost 14-15... when a penalty try seemed

in order after [an All Black] was blocked as [the player] chased a ball behind the... [Springbok line. Even the South African] rugby boss... reckoned a penalty try[was] due... For the first time, a series in South Africa was televised live to N[Z]. That brought the images of an injury-plagued [but tiny All Black winger] running miles to belt a Springbok forward... [a giant All Black lock]'s match-saving tackle... [the same player] having his ear stomped to pieces and [a Springbok] goalkicking the All Blacks to pieces (the All Blacks outscored the Boks five tries to four in the series.)... [Unfortunately, t]he series was overshadowed by... [s]everal All Blacks who were caught in the middle of a riot in Cape Town need[ing] treatment after being tear gassed[, and the]... decision to tour led to the boycott of the Montreal Olympics by 28 countries... [I]n spite of the Gleneagles Agreement[, 'on July 19, 1981, the Springboks flew into Auckland, sparking off a sustained and violent protest against South Africa's apartheid policy. The first game at Gisborne was played amidst battles between police, demonstrators and rugby supporters, and the game against Waikato was cancelled after demonstrators invaded the ground. Although the tour continued, the protests escalated. The worst violence occurred outside Eden Park, Auckland, during the final test on Sept 12. Hundreds of demonstrators were arrested, including the pilot of a plane that buzzed the ground.' (By the way, 'on the eve of attending the inauguration of the first black person as President of South Africa in 1994, NZ's incumbent PM called the divisive 1981 Springbok tour a "mistake." The PM, who was a senior minister in the Muldoon Government which allowed the Springboks to tour NZ, said the visit demonstrated "very graphically" that attempts by the Government to separate sport from politics were not possible. The tour preceded the 1981 elections, which Muldoon won with a one-seat majority with backing from rugby-mad provincial electorates.') NZ's first-choice No 8, who was]... one of the finest of All Black captains, did not play because of his opposition to the tour, [that]... left images of barbed wire, violence and the flour bomb, from [the] protester's plane, which landed on [an All Black prop] during the third test at Eden Park... [In the years since the tour,] footage of the protest action and police reaction, [or]the clashes between rugby supporters and protesters, retain[s] the power to shock. What N[Z]ers saw on television news and on the front pages of the newspapers each weekend had the same impact as footage of the carnage of the Vietnam War had had on Americans. The political issues that lay at the tour's heart could not be ignored, though paradoxically they often had to be for the sake of family and workplace peace. The police[, who saw their]... responsibility as being to enforce the law – [which meant]allowing the tour to proceed[–]...would never retain their position of trust in the community. That other institution, rugby union, found its place at the forefront of the national consciousness crumbling fast. The Muldoon Government would topple, and in its place grew a widespread sense of cynicism towards politicians. The media, not for the first time, but more strongly than before, found itself blamed for the message. Ordinary N[Z]ers were forced to shed their customary polite reticence and address a political issue that would have repercussions for our own state of race relations. But perhaps, most troubling of all, the tour tapped a seam of latent violence that lay only lightly buried in far too many of us... The chaos and division the 1981 Springbok tour to N[Z] caused is a landmark in this country's history. It would be nice to think it made a difference in South Africa and maybe it helped N[Z] mature as a country... [Afterwards, South Africa entered] a period of isolation, and [– excluding the unofficial NZ Cavaliers tour of 1986 –]it was another 11 years before the rivalry resumed... N[Z] has held the upper hand since...

...after the torrid 15-11 win against the Springboks[, a]... battered All Black side left yesterday for the return Bledisloe Cup test[against AUS] in Brisbane, a match [the coach] predicts will be their toughest yet... with the Wallabies coming off a fortnight's rest and also a victory against the Springboks... [The All Black coach] was adamant the Wallabies would be much stronger now than they were when thrashed 43-6 by the All Blacks at Athletic Park... on... July 6[– that]... date should be writ large when historians pin-point red-letter days of All Black rugby[, because it's when]... the All Blacks tackled a highly proficient A[US]n side in appalling conditions and tore them apart... [(t]he search for the perfect game is meaningless, but qualify it as the perfect wet-weather game and you need look no further than Athletic Park that day[)] – ...and no team had won a tri-nations test away from home... There would be a public preoccupation about the All Blacks' matches... in South Africa[after the Wallaby game], but the message for the All Blacks had been about Brisbane, with no thoughts of the republic until Sunday... [The coach] always had a personal ambition for the All Blacks to take the tri-series, to win the inaugural competition against two of the best sides in world rugby. The All Blacks will play at a new venue for rugby in Brisbane – SunCorp Stadium, which is the old Lang Park of rugby league days. It might be useful, [the All Black coach] joked, to get [a former AUSn rugby league captain] out to explain some of the old tricks and vagaries of his famous State of Origin stamping ground, just as[the] Wallaby coach... had used another league legend... to help his side with their tackling after the Athletic Park massacre. On a more serious note, [the All Black coach] has asked to meet[Saturday's] referee... today to avoid "the fiasco" of last week, when the All Blacks had to change their entire lineout the day before the Springboks test after receiving new interpretations [of lineout rules from last week's]... referee... • ...The All Blacks will turn out in a mixed collection of boots on Saturday after a further six weeks of negotiation between rival Mizuno and Nike sponsors ended yesterday in another impasse... [Two players] had Nike boots on at training yesterday, showing they believed they had personal exemptions from the team boot sponsorship in their contracts with the N[Z Rugby Football] Union. The third player involved in the boot wrangle... was at a gym in Auckland rather than Eden Park because of a strain behind his knee. [The]NZRFU chief executive... said there was no chance the trio would be banned from Saturday's return tri-nations test against the Wallabies because of the problem... At one stage there were threats from the NZRFU that the Nike trio would be dropped. Then the warring parties agreed to a moratorium until yesterday... There was no solution by yesterday and the boot row now seems as though it will go to mediation. "The union finds itself in a really difficult position. On the one hand we have an exclusive boot contract with Mizuno and we accept that and on the other hand we have three players who contend they have the right to wear Nike football boots... [W]hen the players come back from South Africa, we will be invoking the mediation clause in their contract."

...Sky[TV (NZ's pay-to-view channel)] last night opened the door to negotiating its rugby contract to allow T[TVNZ – the state-owned, free-to-view channel that, previous to this year, screened All Black tests live –] to screen the next three tests on Sunday morning. The backlash from... fans after last Saturday's test was not screened on TVNZ until 4 pm the next day[(fans were also 'outraged at the incessant commercial interruptions')] seems to have persuaded both companies to reconsider, although neither had contacted the other when approached by the N[Z] Herald yesterday... Sky[']s publicity officer... said the ball was in TVNZ's court... Sky had always regarded the terms of the contract which was agreed in February as open to discussion... But... T[TVNZ's] corporate affairs manager... said... if Sky was prepared to be "flexible" it was a new development as the delays – one hour for a match played in N[Z], 4 for matches in AUS] and 12 for [matches in]South Africa – had been "imposed" on TVNZ in the original negotiations. The... Labour Party spokes[perso]n on sport... suggested 9 am... as a possible... replay... slot but said that would cost TVNZ money as it was not allowed to run advertisements between 6 am and noon on Sunday. It would also have to pay more to Sky for the rights to an earlier screening.

...The Police Complaints Authority is dealing with an official complaint over the divulging by a police officer of a rugby test score to a Christchurch rugby fan who did not want to know the result... [T]he officer's indiscretion... occurred when [the fan] was stopped at a police checkpoint on his way home to watch the video replay of the[first] Bledisloe Cup game... last month... [The complainant] had not been able to watch live the July 6 game between A[US and NZ], so had taped it to watch seven hours later when [the chef] finished work – warning his workmates not to tell him the score or the result. The... [chef struck the] police checkpoint... about 11.25 pm... [T]he officer asked whether [the chef] had been drinking. "I told [the officer] that I hadn't and that I had just finished work. I then said I was going home to watch the rugby, so don't tell me the score,"... [The chef] emphasised twice that [it] did not want to know the 43-6 score... [The chef] did not know whether the officer was trying to be smart or acted out of spite... [The PCA] imagined the complaint would be resolved quickly, but declined to give details of how this might be done.

...Jabbing fingers became fisticuffs when drunken former pupils turned the annual rugby match between Christchurch's most prestigious boys' high schools into a brawl yesterday – apparently a hangover from scrapping among spectators at the Christ's College v Christchurch Boys' High School game last year... [Yesterday's] game was disrupted several times because bottles and cans were thrown and fights broke out... [But CBHS's] principal... said the incident should be kept in perspective. "The game always involves friendly rivalry... It has been played for 104 years and is an occasion for both schools." His... counterpart... said the fighting lasted only a few seconds. "What is more important is that the two teams played a wonderful game of rugby." Christ's College won the match 20-7... [Speaking of rugby groupies, 2000 NZ]ers are paying... \$6000 [to] \$15,000 to follow the All Blacks in South Africa... So why do they go when the matches will be televised...? ...[a] 74-year-old... is going... to watch... the All Blacks play live... and to see South Africa... [The former soccer fan also] hopes to meet up with two of his... four sons... while in South Africa[, one of whom is the All Blacks']... doctor... Atmosphere is a key attraction for those who travel with the All Blacks. Sure, it's fun to watch games on television and to have the option of getting a cup of tea (or something stronger) at half-time. But nothing replaces the feeling of being there, says... [an Aucklander, who claims meeting] people was one of the highlights of... [his] trip to the World Cup in South Africa last year. The... business[person] and a group of colleagues have attended all three [Rugby Union] World Cups... At the 1991 World Cup in the Northern Hemisphere [their] bus was termed the U[N] coach because it had... [fan]s from 10 countries aboard... Rugby has a way of bringing people together, no matter where they are from... Business commitments prevent [him] from travelling to... [watch this year's] test series in South Africa... [but it] fondly recalls last year's World Cup matches there. At the All Black semifinal against England [the Aucklander claims to have] had the best feeling ever at a sporting event... England supporters painted their faces... and kept singing *Swing Low, Sweet Chariot*... [T]he chariot stopped... [when] the All Blacks started winning... "The euphoria after that was just incredible." ...Eight of the group are already planning itineraries for the next World Cup in Wales in 1999. "We tend to follow our rugby quite passionately,"... [However, the Aucklander] was surprised at the fanaticism South Africans have for rugby. "It's almost a religion and it was almost frightening to be over there." ...And if you've ever wondered where All Blacks go when the black jersey is tucked in a drawer for the last time[and their boots thrown in the bin], it's probably away on... an organised tour ...as tour leader... [● Sportswear] manufacturers Mizuno have filed legal action in [Wellington's] High Court... to force the N[ZRFU] to honour its sponsorship agreement... Mizuno's barrister... claimed that yesterday was "probably the saddest day in the... company's near-100-year history." ...The action includes a claim for damages which have yet to be advised... [Three] All Blacks... have personal contracts with... Nike and have declined to wear Mizuno boots for fear of jeopardising their own deals.

...Mizuno... claim they provided [the All Black's most marketable winger] with the right footwear for his midweek game and say [it] wore... partially blacked-out Reebok boots... instead as a publicity stunt... [However, the] All Black manager... said that... Mizuno had not delivered the requested studded pair for the wing. His old pair of Mizuno boots had broken and [the winger] asked for a replacement pair with studs, but when they arrived they had moulded soles... [But t]he Mizuno representative in South Africa [maintained the No 11] had never asked for a new pair of studded boots and th[e manager hadn't] mentioned there were any boot problems on the morning of the game... Meanwhile, the... [returning] All Black first five-eighths... has been so frustrated after his knee operation, and by South African rugby supporters, that [the No 10] is praying... for a final-test victory tomorrow at Ellis Park. The 23-year-old... is usually a very chirpy character, but his recent inactivity and the constant heckling and demands from Springbok fanatics have left him rather bitter... "I... have been pretty angry in the last few days, sick of the people, really quite grumpy. I abused three people at Kimberley, quite loudly and viciously because they were obnoxious, though I shouldn't have... South Africans are very welcoming but the ones that give them a bad name are shocking and I am sick of running into them..." ...the All Black... [No 10] wants to return to test rugby with a vengeance so [it] can enjoy the trip back to N[Z]. "Otherwise it will be a long, depressing trip even if we have won the series,"... Coming back to Ellis Park for the first time since the World Cup final loss was no bogey now the All Blacks had won four straight tests this season against the ...[B]oks. "Hopefully the Boks will be feeling 'here we go again.' With [three losses in three] weekends their confidence must be down..." ...[regardless of tomorrow's result], the... All Blacks... [are sure to receive a rousing welcome at] the Eden Park reception planned for them on Monday afternoon and the street parade through Auckland the day after... [But the] 'Unconquerables' tag... is... there for... the... All Blacks to grab...

Cheers and tears as All Blacks end Bok dominance THERE are many wonderful images to take away from the All Black tour of South Africa. It might be [their No 8] dropping the goal that sealed the series. Or... seeing a boyhood hero, [a] former All Black fullback... looking red-eyed 10 minutes after the victory in Pretoria, and reading later that [the former fullback and the] 1949 captain... had fallen into each other's arms at the final whistle. But the memory that will linger longest for me was the scene in the All Black changing room... 30 minutes after the test had finished. N[Z] media... had been given full access, an unusual privilege, and one that usually I would rather avoid. A sports locker room is where most of us would feel most like an outsider. Even if there are players you know well, an ounce of sensitivity should alert you to the fact that you're moving among an exclusive club... you can admire but never join. But last weekend in Pretoria was something different. History had been made, and if you're a 49-year-old N[Z]er who has been mad about rugby since childhood any part of the event is worth a little awkwardness. So, armed with no more than a fierce look, and the words, "I'm a N[Z] journalist", it was past the security guards, into the dark, red-brick corridors of Loftus Versfeld... Inside... the changing room... you knew... you were looking at the most exhausted group of footballers you had ever seen. Many had yet to drag themselves to the showers... The only All Black who could hardly restrain his excitement was [the No 8]. But who else could it have been? [The No 8] still plays his rugby with a boyish fervour which prompts him to do crazy things at times, like deciding [a forward is] better suited to dropping a goal [from near the half-way line] than some flashy back. Pretty cheeky stuff wasn't it? "Nah... It was never in doubt"... laughs [the No 8] with sheer pleasure at attempting the kick, and... succeeding, and the All Blacks winning the series. It certainly wasn't done without pain and suffering, but no matter how long they live no other rugby players can ever be the first All Blacks to beat [the Boks] in a series in South Africa. [□ The Boks won the last game of the series 32-22, meaning each team had now beaten the other 22 times; while the series' record stood at '5 wins each, 2 draws.'

...the current All Black] manager... believes international rugby must devise a scheme to financially reward touring teams. Under present rules the touring team gets nothing from the host country's gate... The just completed tour of South Africa... is a classic example. N[Z] will take virtually nothing away from the month-long visit other than a treasured first series win... But the S[ARFU] will have its coffers overflowing... [Due to the tests being] sold out and the four midweek matches all producing solid crowds, SARFU could earn more than \$6 million from the All Blacks' visit. [The manager] rightly claims the All Blacks to be the game's most marketable product and wants N[Z] to get a slice of the profits... N[Z]'s expenses on the tour... were considerable, with its monthly wage bill for the... squad running close to \$500,000. [While on the topic of paying players, although rugby union officially turned professional at the end of last year, it was semi-professional for a number of years (e.g., money was collected from spectators at important matches; the 'Auckland Rugby Union has had at least one full-time office employee since about 1981'; touring rugby players received token remuneration – during a 'four-month All Black tour of Britain in 1973, the players were paid \$2/day'), and the 'All Black great who organised the 1986 Cavaliers tour of South Africa has come clean on player payments, saying the rugby rebels received \$50,000 each for the trip which ripped apart Kiwi rugby. The average family income in NZ that year was \$27,000. The All Black great makes his revelations in *Legends of the All Blacks*'...

"Financially it was well worth the players going on the trip. I got exactly the same as every other player. That's one of the anomalies today, where some players are paid exorbitantly larger amounts than others, and in many cases don't deserve to be. It's incorrect to say the players received \$100,000, but there was certainly a payment made to players. It was not run along the lines of previous All Black tours. This time it was better than a subsistence relationship. The South Africans had got us a sponsor and we got far more match tickets to on-sell for the team fund than ever before." While rugby would

go professional nine years later, the Cavaliers were clearly the catalyst for big money sums coming into the NZ game. They were banned for touring but many returned to the All Black fold and lifted the inaugural World Cup in 1987. Yet a former SARFU boss, who was president of the Transvaal union which was heavily involved in organising the tour, still refuses to acknowledge player payments which were clearly worked from an elaborate team fund system. "There was no payment from us. We invited auditors to come in and investigate and they couldn't find anything. We didn't pay them. That's my word of honour."

...[a] kitchenhand... was paid to poison the All Black[s]... on the eve of last year's World Cup final... [The team's former coach] said in a television interview last night that... two sources [claimed] the team's tea and coffee had been spiked in the lead-up to the final, which the All Blacks lost 15-12 to hosts South Africa... The team's [former manager, and arguably NZ's all-time greatest player, told the NZ] *Herald*... that the All Blacks should have pulled out of the final and asked that it be played later. [The former manager] was unsurprised at [the former coach's] account. "You don't have that many people going down crook and violently ill... without something happening." ...A handful of players were unaffected... They had arrived late for a meal and... dr[a]nk freshly made tea or coffee... [The former coach] believes English book-makers facing hefty payouts if the All Blacks won the match were behind the poisoning... [By the way, the current coach] wants some All Black contracts renegotiated so the future of [his] outstanding young talent... can be secured through to the next World Cup. Most of the leading player contracts, signed in the mad rush of last year, expire in 1998... In persuading the N[ZRFU] to allow him to take a 36-[strong touring party to South Africa the coach] was clearly covering his test team for injuries. But, at the same time... was also planning ahead to 1999... [In addition,] some players have enhanced their reputations through the tour... and perhaps deserve better remuneration... [The coach] doesn't see league as the real danger to his players but believes the Japanese rugby market remains a threat as does the burgeoning scene in the U[K] where clubs are handing out lucrative deals to star names. "There is still a vulnerability with the sort of money that is around... [But most] of the guys love playing for the All Blacks so the money would have to be astronomical to attract them away." Ironically, at a time when some All Blacks may be in line for better deals, the beleaguered Springboks face heavy pressure to take... pay cuts. The successful Springbok World Cup players are on massive money but the S[ARFU] is apparently seeking to introduce some performance clauses and has promised that the money that was handed out last year won't be a guideline for future negotiations.

...[a former All Black wing has just signed] a three-year deal with NEC in Japan believed to be worth around \$1m... [In another development, free]-spending English clubs are ready to wave checkbooks at the Wallabies who arrive in Europe this month. Relaxation of the 180-day residency rule has made the A[US]ns eligible to play in the Courage League soon after their seven-week tour of Italy and Britain finishes in early December... [The AUSn] captain... could command \$A400,000... a season.

...[the All Black No 5 – whose input] earlier this year... helped the N[Z gal's] rugby team to a 28-5 win over A[US] in their annual test in Sydney... [-] is the latest target as speculation of British raids on N[Z] rugby stocks grows. Reports out of Britain say glamour English club Bath is prepared to pay [the No 5] around \$300,000 a year to bolster its scrum. Bath, whose title defence is faltering, is apparently desperate to add some uncompromising play to its forward effort and sees the hard-nosed [No 5] as the perfect player. Reports also suggest [the lock] rejected a \$200,000 offer from Northampton last month, claiming [himself to be] worth more. And it seems London club Harlequins is still interested in [the lock's brother, the All Black No 8 and their No 7]... All Black... and... Auckland... team-mate...

It is too late to do anything about it now, but Taranaki used an illegal move at the start of their final tryscoring move which defeated Auckland 42-39 in the Ranfurly Shield challenge last Saturday... "The law says that for a quick throw-in the player must retrieve the ball himself, and the same player must throw it in. In this case the player did not retrieve the ball, and another player threw it in. The referee... made a mistake, simple as that." ...a similar event has been occurring in South Africa when the home teams, at test and representative level, have been binding together for tapkicks near the All Blacks' goal-line. "That 'flying-wedge' has been banned for years. Yet the South Africans are getting away with it, and scoring points." Taranaki might be advised not to try their matchwinning trick today. The referee for North Harbour's challenge... was a touch judge at Eden Park last Saturday. [Editor's note: 'The inter-provincial *Ranfurly Shield* has been the bedrock of NZ rugby since the turn of the century but because it is a challenge trophy to be played on the holder's home ground (unless the holder volunteers to tour with it), and because the number of challenges which can be accepted in any season is limited, it was felt that the shield was not a true reflection of inter-provincial supremacy. As a result, the early 1980s saw the evolution of a national competition to find the top province each winter.']

...Rugby fans are expected to pour into Eden Park for this Sunday's National Provincial Championship final despite tickets going up by 40[%] since the round-robin games... The Auckland Rugby Union... said the decision to increase... prices was because of the quality of the match. That was standard practice and "happens year after year." ...For the final between Auckland and Counties-Manukau... covered seats... will be \$35... uncovered seats... \$25 and \$15... for the terraces... Tickets for [kids] have gone up to \$17, \$15 and \$7. Family passes for the game are \$30... - 1996

Aucklanders are being invited to "take ownership" of their champion rugby team by joining the players for a photo call behind Eden Park today. Five hundred fans are wanted for the 2 pm poster shoot... with Auckland's A squad... [In related news, the] Auckland Rugby Union will have to spend about \$1.2 million to allow it to manage the Blackheath club in England... The Blackheath club and property was independently assessed and valued at about \$4.8m. If Auckland gets involved it will own 25.5[%], Blackheath supporters will own about an equal amount, and 49[%] will be sold to private investors who may include the N[ZRFU]. The ARFU chief executive... said Blackheath was chosen because the club... was in the bottom half of the second division, was within 100km of London, was a club with a healthy tradition and had a huge player catchment area in the south-west... [The] Auckland coach... would liaise with the club's coach, [who is a] former All Black... and[the club's] captain... another former All Black... who [left NZ to become a professional league player, then switched back to union when the sport went professional]... "We would also like to be able to send three or four young players from N[Z] each year to the club, provided they meet the restrictive criteria."

...[the ARFU] chief executive... yesterday confirmed... that Auckland had purchased 25% of Blackheath – formed in 1858 and considered to be the oldest open independent club in the world – at a cost of £500,000... [The chief executive] said the benefits for Auckland from the deal were multi-faceted. It gives young players an opportunity to expand their rugby experience... [- one] young Auckland hooker... has[already] headed to the club as part of an inter-change of resources and... more would follow... [-] it makes use of fulltime employees in the Auckland organisation at a time when there is no rugby in this country and it utilises capital invested in financial and marketing systems by the ARFU... [I]t is anticipated that, with Auckland's input, the club will be able to regain its place in the top echelon of the game. The Canterbury union, never one to lag behind for too long, is also investigating the possibility of following in Auckland's footsteps. Its chief executive... leaves this month to undertake talks with several British clubs... [Incidentally,] England... RFU... bosses have named a squad of 77 to train next week, but have so far failed to name a coach... [A former Waikato and NZ] No 8... is being considered as a potential forward coach for England, but is in France with his club side Sale... [T]he... Bath co-coach... remains favourite to be coach.

...English rugby's bank balance will increase by more than £10 million... when the international team's new kit sponsor – believed to be Nike – sign with the R[FU] today. The contract means that Twickenham will have completed [three sponsorship] deals... in the past two months. Allied Dunbar paid £12 million to underwrite the top two leagues and Tetley's Cup commitment is estimated at £7 million...

The Five Nations championship will be sponsored by the Lloyds TSB banking group in a three-year deal worth £20 million... The deal with Britain's largest retail banking group also covers European qualifying tournaments for the 1999 World Cup and rights to banking facilities at the World Cup tournament in Britain... [In local news,] listing the All Blacks on the stock exchange is not yet on the... [NZRFU's agenda, but the union's

chairperson acknowledges that it] could happen in the next few years. "The reality is that if we float the All Blacks the public could buy into the scheme, [although] they might think they own them already, with the NZRFU acting as custodian,"...

Sports giant Nike is ready to sponsor the All Blacks in a... deal which will see the side taking the rugby gospel to places like Japan and the U[S]. The All Blacks' clothing contract expires next year and while the N[ZRFU] has been mulling over several tenders, it is understood the Nike deal will get the go-ahead. The deal will... be similar to the recent partnership between Nike and the Brazilian soccer side, a 10-year deal estimated at \$US200 m... in which the groups agree to promote the sport as well as the brand. The All Blacks signed a 10-year contract with Canterbury in 1989, a deal understood to deliver the NZRFU \$500,000 a season. Sources suggest Nike has offered \$US70 m... for a similar [7]-year contract... that will kick off at the start of the next World Cup season... Some All Blacks are already on individual contracts with Nike while [a] wing... is employed by the company. Signs of a change came last year when [the Nike-sponsored players]... began wearing Nike rather than the accepted Mizuno boots.

...Lane Walker Rudkin's boss... is not about to throw in the towel when the contract to supply the All Blacks' rugby jerseys next comes up for grabs... [The boss] is fully aware that the \$12 million or so paid by its subsidiary Canterbury to secure the exclusive worldwide supply contract in 1994 will not even get near the play next time. But whether it would be able to foot it with the likes of Nike (which is reportedly willing to pay \$100 million-plus to tie up the sponsorship rights to the All Blacks for 7 years) is another question for the little South Island company. Such an amount easily exceeds LWR's market capitalisation. However, as [the LWR boss] said, the \$100 million would not just be for the apparel rights. The kind of contracts being talked about also include footwear, naming rights and three exclusive games a year in other parts of the world. "At the end of the day it is the apparel rights that we are interested in." [The boss] is not willing to speculate just what those rights might be worth, but analysts point to a figure of about \$25 million... LWR did have first right of refusal on the "apparel" contract... The current contract is for the right to supply all the NZRFU teams, which includes the All Blacks, the N[Z] colts and the five local Super 12 sides. It also gave an exclusive right to internationally market the replica products for that merchandise, as well as put out other ranges of All Black apparel. [The boss] would not say what portion of Canterbury's \$100 million of sales came from the All Black contract. But while the contract was important for the company, it would not be the end of the world if it was lost. Canterbury still had a very strong involvement with teamware and rugby at grass roots... [which has seen it become] the largest maker of rugby jerseys in the world, [including making] jerseys... for Natal... on behalf of... clothing manufacturer Reebok... [which, ironically, won] sponsorship rights... to the A[US]n rugby strip... this year... ahead of the former sponsor... Canterbury.

...The A[USn] Rugby Union has bowed to pressure from new sponsor Reebok to change the [Wallaby] jersey from plain gold and green to what [a] former Wallaby lock... called "volcano vomit on a rag." The change was designed to make the jersey more marketable and is worth a minimum of \$A6 million... to the ARU over the next three years... [The NZRFU chairperson] was contacted by a Sydney radio station to comment on whether the All Black jersey would ever be as radically reformed... [The chairperson] said the All Black jersey was unlikely to change because it would need the consent of all provincial unions and that it was quite marketable the way it was. The century-old, No 1-selling All Black jersey has been the favourite point-scoring weapon of those opposed to the dramatic facelift of the Wallaby outfit. The *Sydney Morning Herald* yesterday devoted almost a full page to the debate, under the headline "Are the All Blacks white?" A telephone poll which attracted 758 callers showed 91[%] of respondents opposed the new design. "People protested that such a major change would never be allowed in rugby strongholds like N[Z] and South Africa. Would the All Blacks go white? Would the Springboks turn brown? Never! There'd be riots in the streets, even civil war," was the summary of the responses.

...The Wallabies sold out to Reebok, allowing them to redesign the national jersey... [(which the AUSn Football Union has so far] sold \$A1.5m worth of... compared to \$A400,000 sales for the old green and gold in 1996...); Nike have... Auckland... and... the Springboks; Adidas have France and Argentina and soon they'll probably have the All Blacks. Few were aware the German-based sports clothing and equipment manufacturer was in the running to sponsor the All Blacks until their bid was revealed as the first-post winner after the N[ZRFU] board met in Wellington yesterday... Canterbury, which has supplied All Black gear since 1924... and... has... an option on another five years' sponsorship if they meet the highest bid, will be urgently seeking details of the newcomers' proposal today and have until the end of the year to move against it. Adidas - the name [is] a conglomeration of... [its founder's] first and surname, and nothing to do with the oft-quoted "all day I dream about sport" - are trying to reclaim their position as number one globally in their market. Nike turned over \$US7.8 billion last year; Adidas had \$US2.67b but an ongoing merger with French sports outfitter Salomon promises to put them into number two, ahead of Reebok at \$US2.9b. To win market share Adidas is prepared to do what Nike has done - buy winners... "The All Blacks have the greatest strike rate of wins of any team in the world," said [Adidas' NZ] managing director... yesterday. "They're part of our vision." ...[the managing director] refused to say what Adidas was prepared to pay to buy in, but agreed the World Cup would be a huge leg-up for Adidas in making ground against Reebok and Nike. "We're going to pay a lot of money for that." ...Adidas wants its identifying tags on the All Black jersey, shorts and boots when the team run out in front of an audience of more than 500 million... Adidas will provide playing and training gear... including hand-made boots for the top side... [although this raises again the issue of] players who have long-term personal footwear contracts with rival companies... Adidas would [also] market and distribute the All Black brand overseas, a great opportunity to help develop the game... [The] NZRFU key negotiator... said the Adidas logo would be on the chest opposite the Silver Fern, replacing the Steinlager logo which has been there three years. Steinlager would continue their 11-year sponsorship of the All Blacks... but yesterday it was not clear how. The deal was news to most rugby people yesterday. [The] All Black captain... rang the N[Z] *Herald* last evening asking for details... ■... Founded in 1920 by Adi Dassler, the inventor of the first shoes designed especially for sports, the company enjoyed a near monopoly in athletic shoes until an upstart called Nike appeared in the 1970s and rode the running fad to riches. By the early 1990s Adidas had come under the control of [a French businessperson]... who was later jailed for bribing three French soccer players. Although the company tried to spruce up its staid image with a team of American designers, Adidas lost more than \$[US]100 million in 1992, prompting the French banks that had acquired control of the company... to begin a desperate search for a new owner... [T]he 50-year-old... learned... late last year... that after years of declining market share, the company had sprinted past U.S. archrival Reebok International to take second place behind Nike in the race for worldwide sales. But... the rumbled... [new owner] didn't even stop for one of his trademark Havana cigars in celebration, worried that the company would grow complacent. Instead, [the new owner] and a group of friends bought French soccer club Olympique de Marseille... Not only has [the new owner] turned Adidas into a global company with market capitalization of \$4 billion ([his stock is] worth \$250 million), but [the new owner] also has endorsement contracts with a host of sports heroes... and considers it part of the job to watch his star athletes perform on the field... A sports addict[, the new owner says it] hasn't missed... the Olympic Games since 1968... or... attending a soccer World Cup since the 1970s...

THE N[ZRFU] will push to have sponsors logos on jerseys at the 1999 World Cup. Under existing rules only the crest and a Rugby World Cup badge are allowed on the jerseys of teams participating in the finals. Jersey suppliers like Canterbury... or... Nike... have to remove their logos. But [the] NZRFU chief executive... feels the game's biggest spectacle needs to come in line with the commercial realities of the new professional environment... "We're not comfortable with the World Cup arrangement and... [you] can be 100% sure that the apparel suppliers for England, South Africa... A[US] and all the leading countries would be of the same view. These guys are putting huge amounts of money into these teams and this is the third most watched event on TV now, so no one is happy about not having their partner on the jersey..." ...While the [Adidas] sponsorship is massive [- the 5-year contract is]... reportedly worth \$70-100 million... [- the CEO] was quick to point out the running costs of the union, now... the game has gone professional. The NZRFU's costs for the year are tipped to be \$41m... Meanwhile... the fate of correspondence sent

to the Education Minister... by the [NZRFU is missing], presumed lost... The union requested a meeting to discuss the possibility of Government assisting secondary schools to pay the union's compulsory \$240 levy per team for accident cover. Schools throughout the country have told the NZRFU they won't be authorising payment – due at the end of this month – which will leave the union... \$240,000 out of pocket. [The]NZRFU... was, “quite astounded we haven't got a reply.” After searching the minister's files without success... the Ministry... spokes[person] confirmed the minister was unaware of the issue. [However,]Ministry sources told the *Sunday Star-Times* that given the pressure on the education budget, the matter was not a high priority.

...The bosses of the All Blacks and... other professional players, have been penalised for high injury rates... Accident compensation premiums for professional players have shot up by the maximum 25[%] in a bid to tackle spiralling claims. The increase flies in the face of falling... levies in many other sectors, including meat processing... and... house construction... This news did not come as a surprise to the [NZRFU's]chief executive... the physical knocks that were unavoidable in contact sports... meant... there would always be injuries among players... However, the [NZRFU] was working hard to reduce the rate of injuries to bring down the cost of premiums... [that] have gone up from \$2.99... for every \$100 of payroll... to \$3.74.

...THE physical demands of one year of professional rugby are clearly being felt as the second season gets under way. N[Z] got off lightly in terms of injuries last year and that was a major factor in our international success with the All Blacks and the Super 12. But the warning signs are there that virtually continuous play and training is catching up with the leading players. Just look at the high profile players absent from the opening round of the Super 12... [The All Black No 8 (pelvis), No 7 (knee), No 15 (knee and virus), No 10 (hamstring) and four more All Black squad members] are all out... Add in... [the No 11 ('debilitating kidney illness')] and you've got the makings of a pretty useful side. We're not alone either. Natal[has lost one Springbok, Transvaal two and Queensland's Wallaby centre is] also sidelined this weekend... When [the]All Black coach... and his fellow selectors sit down to nut out their sides for the national trial and opening tests in June, they will be hoping the situation will have eased. But reality suggests it may have worsened. How much can a body take? The intensity of the rugby played in the Super 12 is certain to take it[s] toll. It's virtually test match football and it's continuous for three months. That's before a black jersey is pulled on for an 11-test international programme that runs all the way to early December with the NPC in between. The durability of players... during last year's hectic international season could only be marvelled at. It was a tribute to their fitness regimens that they managed to endure everything thrown at them. But it seems good luck may be as important as good management when it comes to preserving our top players and enabling them to stay on the field... There were concerns last year that some high profile rugby players continued while injured, that fringe players played on to enhance their chances of higher honours when they should have been resting niggles. It's a problem common with professional sports. High wages demand high performances and there is pressure from employers to extract everything they can from their assets, even at the risk of long-term damage. But success often comes at a price and sooner or later someone will have to take stock and realise that these players are human and not instantly repairable robots... [● The] 25-year-old... Welsh rugby skipper... was being treated by neurosurgeons yesterday after suffering a serious neck injury.

...[the Welsh] captain... has suffered a “significant” spinal cord injury but did not break his neck... The injury left him with a “major weakness” in his arms and legs, but it was impossible to predict the long-term consequences... [his doctors said. Incidentally, the] number of serious spinal injuries among rugby players has not diminished in the past 20 years despite rule changes in the 1980s, a study by medical researchers has found. Instead, admissions to the Burwood and Otara spinal units rose steadily between 1976 and 1995... the researchers examined the records of 141 patients admitted to the units [during that period. 22] of them were injured in rugby league. At the time the report was compiled, a third of the patients were in wheelchairs, one had died, the fate of two was unknown and the rest were walking but[many] with serious residual disabilities... The authors... knew of a further [5]... players who died before getting to a spinal unit. International research suggested a death rate for spinal cord injuries of between 5 and 10[%]. The study did not include “near-misses” – where players had sustained significant damage to the vertebral column without spinal cord injury – as [ACC] records were not in a form to be incorporated. However, it had been suggested there were 10 significant neck injuries for every one spinal cord injury, the researchers said. They found the riskiest position was hooker, the riskiest grade senior club and the riskiest month April. The front row accounted for 56[%] of all injuries, loose forwards 18[%] and locks 9[%]... Rugby spinal injuries were most often from scrums... Most league spinal injuries were from tackles... Last year... the... [NZRFU] instituted compulsory nationwide safety seminars for coaches of all grades, reinforced by an ACC campaign. Since then there had been no spinal cord injuries from scrums, although one player sustained tetraplegia from a tackle[(which now means that '72 NZ tetraplegics were injured playing rugby')]. But there have been several near-misses.

...[the] Welsh rugby captain... [who] won his 13th cap when... [leading] Wales for the fifth time... earlier this month... has been forced to quit... after being trapped in a ruck 13 minutes into the game... between his club... Cardiff... and... league leaders... Swansea last weekend... [The player, who] has been in hospital since being carried off unconscious... is comfortable... and has slight movement in his limbs, but it will be some time before doctors can tell if [the player] will make a full recovery... [In local news, one] promising player's rugby career ended this season as a result of an eye-gouging attack, and a league player was blinded last season. Auckland Hospital treats an average of three players with serious eye injuries each week. Not all of those are caused by illegal assault. But rugby and league players need to be aware of the damage they can cause through either deliberate or careless action around the eye, according to[a] retinal surgeon... The eye is a robust organ, [the surgeon] said: “To blind someone you have to have a really good go. Sharp objects might penetrate the eyeball itself, but a blunt injury such as that caused by a finger will not easily cause rupture.” More likely such pressure will deform the eyeball, causing a blurring of vision that will persist in proportion to the amount of force used. Straight pressure into the eye socket can push the eyeball into the skull but more serious damage is caused if the eyeball is squeezed against the side of the socket, as might happen if a thumb was deliberately used... The player put out this season was first injured on an overseas tour with a [NZ squad, then] received a blow to the same area soon after.

...Violent players causing on-field injuries that result in loss of income can be prosecuted or sued, says a Wellington sports lawyer... Clubs and unions employing violent players could also be taken to court, as lawyers sought to make civil court action worthwhile... [The lawyer cited an AUSn] rugby league case from the mid-1980s where [a player] was badly injured by a violent act and missed a Kangaroo's tour to Britain as a result. [The player sued the offender] and his club, alleging the club condoned his behaviour. In Britain[– where 'the future of amateur sport looks uncertain after a Welsh rugby player became the first non-professional sportsperson to win a claim for damages against a referee who had failed to protect him from being paralysed for life when a scrum collapsed (the case could cost governing bodies hundreds of millions of pounds in insurance and put refereeing on a permanent professional footing') – 2] rugby players are in jail for violent on-field behaviour in the past 12 months... [The lawyer was] approached for comment after the suspension of the Waikato Chiefs prop... for three weeks for punching two opponents in Saturday's Super 12 game against the Auckland Blues... [The lawyer] said sport was “no longer a bit of fun.” N[Z] was catching up with overseas trends, in which players were protecting their sporting talents... Players were employing lawyers and taking out loss of income, medical and disability insurance to protect their futures.

...N[Z] is fighting a twin flank attack from A[US] and South Africa as they push to extend the Super 12 rugby competition to 14 teams next season... N[Z] started with five sides... South Africa with four, and A[US] with three. However, when AUS[US]... learned it would have a bigger cut of the... extra \$US11m due... from News Corporation's \$US43m... funding for the second season of Super 12, it put a case for having an extra team in the competition... perhaps based in Melbourne.

...[the NZRFU] chief executive... compares his job... with that of a top referee. If things go well the match controller gets little recognition while all the attention is centred on the game or the occasion... It is not his job to seek the limelight. [The chief executive] has been given the task of moving

N[Z] rugby through the minefields into the new era of professional and amateur mix. It is a big job but [the chief executive] is so confident there will be a turnaround this year that [the chief executive] may have to wear a new title of the Six Million Dollar [Hum]an. The tag will sit uncomfortably... [because] during his time with the troubled N[SWRU the chief executive] inherited a staff of 12 and a \$6m debt at the union's Concorde Oval headquarters. In three years [the chief executive] turned that around to a debt-free union running a staff of 32... [Ironically, after its first full year of professionalism] the NZRFU showed an operating loss of \$6m. "I am budgeting for a one million dollar profit this next year and barring unforeseen results I think we will achieve that... The first moves to professional rugby were very tricky and now I think we are better equipped..." ...his involvement with the NSWRU led to his stint running Sanzar, the group hastily convened in 1995 to run the Super 12 and tri-series as [another group, the World Rugby Council,] fought with the establishment for the world's best players... "With Sanzar we had to do a deal before the end of the [1995] World Cup and with the mess we now see rugby league in with their split, I am very thankful we have rugby where it is at the moment... The three crucial elements were that we did a deal with News Ltd for \$US550m to pay the players... [which enabled us to] sign... the Springboks and the volume of the N[Z] players... The one mistake we made was that we should never have underestimated the power of the players who signed with WRC and could do a similar thing again." [The chief executive] prefers to think they won't and while England, Japan and Italy can offer a lot more money... coming sponsorship deals... [such as the soon-to-be] signed... three-year contract... [for] Coca-Cola... to be the official softdrink supplier to the All Blacks... and the powerful All Black brand will hold most of the players in N[Z]. The All Blacks were not yet a superbrand like the Chicago Bulls [basketball team] or the Brazilian soccer team but they [are] getting close... Progress would not be totally dollar-driven or by corporate officialdom. "For instance the A[RU] wanted to stage three Bledisloe Cups every year but while we have agreed for this year and next, after that we will accept only two matches annually..." ...[Incidentally, the] International Rugby Board will be asked to rule on the status of the All Black trial teams, with its decision having major repercussions for players with dual nationality. Western Samoa's coach... is annoyed that the trial teams... have been deemed to be N[Z]'s top two teams. A new IRB ruling says that players picked for a country's top two sides are bound to play for that country. Therefore, Western Samoans or players from other Pacific island countries who play in trial teams or even make the reserves bench but then miss selection for the All Blacks, would not be able to play for another nation... The... NZRFU... interpretation means this country's player base will be extended at the expense of struggling Pacific countries[, but Western Samoa's coach]... argues the IRB regulations [only] apply to games between nations... [and] would appear to have a strong case... "We have a powerbase of five top teams in the world – A[US, NZ], South Africa, England and France – and everyone else is being left to languish... The world wants to see the best players on the field. If you have a situation where six or... [more] guys can't make the All Blacks but are stopped from playing for other nations and therefore making international rugby more attractive, then I think someone needs their head read." If the decision goes against the island nations, [the coach] didn't rule out legal action.

...N[Z] rugby knew no finer, fiercer or more faithful hero than... the great All Black winger of the 1970s... so [as coach of Manu Samoa, the ex-All Black] draws on a ready store of sympathy when... [championing] the cause of Western Samoan rugby... Manu Samoa competed with distinction at two World Cups and were regarded as credible opponents on many of the great grounds of the world. They were admitted to the private club of competition with South Africa, N[Z] and AUS in the old] Super 10. Then, like many other rugby countries whose population and financial resources did not quite [match] their skill and enthusiasm, the Western Samoans ran smack-bang into the high brick wall of professionalism. Rugby, especially in the Southern Hemisphere, became entangled in the multi-millions of pay-television. The pity was that A[US, NZ] and South Africa were so busy holding on with both hands that they let slip sentiment and the old amateur brotherhood of rugby... Being a rugby realist, [the coach] realised one key factor: in rugby, especially now[it is] the plaything of the television tycoons, you either get better, or your standards drop... [I]f his team are not in regular and strong competition... [its] better players will move towards the golden calves of N[Z] or other television-friendly countries... The second part of that proposition is that the rich get richer and the poor get poorer... Ideally the I[RB] should take a stronger role in developing the game in the places of urgent need... [T]he IRB relies for funds on World Cup takings and franchises, and it now has no fewer than 76 countries under its wing. Last year about \$7 million was distributed, much of it aimed at grassroots development in places hard to find on the map. In contrast, the Pacific Rim tournament planned last year for Western Samoa, Tonga, Fiji, Argentina, Canada, the U[S], Hong Kong and Japan probably only needed \$1.3 million to become a very useful fact – and perhaps another enterprise to come under the pay-television umbrella. The battle plans were drawn, but the IRB could not, or would not, bankroll the enterprise. These days \$1.3 million, while not exactly loose change, is not some mythical amount at the end of the rainbow... After the Super 12 final... the Auckland Rugby Union chief executive, was... looking at the low side... [while declaring that] the Super 12 bonus could have the [union post a profit] over \$1m this year.

...[a] former All Black... is poised to become... rugby's first £1 m... player in a deal with English club Newcastle. [The 27-year-old] has returned to rugby... with London club Wasps... [after] a... stint with... league club Wigan... [– during which it] also represented Samoa in league's 1995 World Cup[–] ...with his reputation enhanced, in a season which also saw him return to international rugby with Western Samoa. [The 27-year-old is still] contracted to both Wigan and European Super League, but Newcastle's offer is so high the cash-strapped... club can not afford to say no... Newcastle have agreed a transfer fee with Wigan in excess of £500,000 and, with contracts and compensation payments, they will complete rugby's world record transfer... [T]he 27-year-old... who was contracted to Wigan until 1999, was signed [3] years ago after touring... with the All Blacks.

...rugby's first £1 million player inspired Newcastle to a 20-13 victory at former champions Bath on their debut in the top flight of English rugby yesterday. [In local news, using the slogan 'get out and get behind your team', Air NZ, the principal sponsor of the National Provincial Championship, plans to promote air travel packages to rugby fans. Supporters groups will be able to obtain a 'match ticket and economy class return airline ticket for' less than the normal price when the NPC starts after the completion of the Tri-nations, which begins next month.]

...Auckland promoters of air charters to A[US] have admitted being unable to obtain an aircraft in time for flights due to start on Saturday. Central Pacific Airlines... said yesterday that it had cancelled eight proposed flights and was either helping to rebook hundreds of passengers on alternative services... although they were having to pay the extra price above Central Pacific's \$399 return fare... or refunding their money. The chief executive... insisted that their money was safe and easily refundable from a trust account... [The chief executive] had been let down by an [AUSn businessperson] who had failed to deliver a Boeing 747-100... but was optimistic that the aircraft could begin services on July 19... [The chief executive] was negotiating options with two [US] leasing companies for an alternative aircraft should [his company] be let down again... A Commerce Commission manager... said this might be a breach of the Fair Trading Act but her staff needed to find out more details.

...Rugby fans stung by a package airline deal that went sour are still anxiously waiting for refunds and may seek an injunction to secure their money. Up to 2000 people booked cheap charter flights to... [AUS] to support the All Blacks' bid for the Bledisloe Cup... A Papatoetoe company set up the charter flights after recognising that regular airline services would be swamped by sports fans crossing the Tasman. They asked an A[US]n company, Seaboard Airlines, to provide planes for at least four chartered flights over the weekend of July 26. Four operators then put together package deals... Up to 25... travel agents could be... [involved. A] lawyer representing five tour operators, said Seaboard Airlines had refunded their cut of about \$300,000 yesterday. But a request made to Central Pacific's lawyer for an immediate refund of the balance of the money went unanswered... [The tour operators' lawyer] was... considering laying a complaint with the police and the Serious Fraud Office.

...Compensation for [fan]s caught out over the failure of Central Pacific's... Bledisloe Cup... packages is still up in the air. A lawyer representing a group of tour operators says people should be covered by the Travel Agents Association's fidelity fund, but another says this is not guaranteed.

...Central Pacific Airlines... is winding itself up... It went into voluntary liquidation yesterday, leaving a trail of debts and about 2000 angry rugby fans... About 750 rugby fans who bought cheap seats would get to the... Bledisloe Cup match in Melbourne... on other flights, including a Qantas 747-400 making a special trip to Melbourne early on the morning of the game. Tour operators had to buy the extra seats. Air N[Z] revealed last night that it was also putting on extra flights and might have up to 3000 more seats to Melbourne next week... Liquidators would divide the \$100,000 still held by the... company, which is being investigated by the... Commerce Commission... and... [the SFO,] among tour operators... [– although one] Auckland-based travel company... is refunding clients out of its own pocket... Central Pacific is the second cut-price trans-tasman flights company to collapse in the last year... • Central Pacific Finance Ltd, a finance company with branches in Otahuhu and the Wellington region, has no connection with Central Pacific Airlines.

...[a former Wallaby] captain... believes next Saturday's history-making Bledisloe Cup showdown... will live up to the billing... [of AUS's] biggest sporting event of 1997... [The former captain], who is in comeback mode... after battling injury for much of the last two seasons, believes the gruelling schedule facing the All Blacks makes the Saturday night match the ideal chance for the [Wallabies] to claim the scalp they prize the most. "The main advantage the[y]... have is that six days before the All Blacks would have just played [the Boks] on Ellis Park. After a huge confrontation like that, and then the flight back to A[US], they will only have two or three days to prepare... That's a big ask and will be incredibly tough for the All Blacks. I'd say next weekend is A[US]'s biggest chance to knock them over." [The former captain] knows all about the magic of the Bledisloe Cup... having played in every one between 1989 and last year, when [the captain] was ruled out with recurring Achilles heel and knee injuries. "It's become just huge in A[US] now. Up until the mid- to late-'80s it wasn't really seen as anything special..." While [the former captain] believes the All Blacks are vulnerable, [the hooker] also confessed to being an unabashed admirer of... [the] team and what it had achieved in recent seasons. "...South Africa has got some great points, especially on defence, but... [for] the last three years... the All Blacks have clearly been the best and most competitive side in the world." ...the former test hooker[was speaking] while on a visit to Auckland... [to promote] his latest project – a limited edition print montage... tribute to the 94-year history of Bledisloe Cup matches... signed by All Black... and Aussie legends... Only 500 of the prints have been made. They detail every fixture from 1903 and include memorabilia covering the many battles, which at present count are scored 88 for the All Blacks, 33 for [the Wallabies and 5] drawn. There have been 37 cup series contested, with N[Z] having won 28, A[US] 7 and two drawn... [The hooker and] his business partner... presented print No 001 to the N[ZRFU]. For anyone else the special piece of history will set you back \$695.

...[secure a piece of history – a "very special", "very limited" (600 copies only) All Black signature series jersey – for 10 payments of \$119.90 + \$50p&p'.]

...THE All Blacks have set up a crunch date in world rugby, with their Wembley showdown with Wales... being confirmed for the same day as England play the Springboks at Twickenham. The double-header in London on November 29 will test the pulling power of rugby's super nations... The Welsh believe the lure of the black jersey could see as many as 65,000 trek to Wembley, a necessity with Cardiff Arms Park being rebuilt, while England and [the Boks]... try to fill the 78,000 capacity at Twickenham. In what is a major victory off the field, N[ZRFU] officials have finally got satisfactory test dates for the end-of-season tour to Britain... [and, in another first, the NZRFU] negotiated a tour financial package with Wales and Ireland that gives [the All Blacks] a percentage of the gate takings... [The NZRFU chief executive] hopes to negotiate a similar deal with English officials when [it] meets them in London on Tuesday. Frustrated by the lack of communication from British officials during the past few months, [the chief executive] believes his decision to join [the NZRFU chairperson] on the trip north has been vindicated by the success of his visit. [The]All Black manager... can now head north on his reconnaissance mission to sort out team hotels and internal travel for the five-week tour... With the All Blacks selling out the 100,000-seater Melbourne Cricket Ground for next Saturday's Bledisloe Cup test... [being] proof of their pulling power, the bumper crowds expected at Wembley and Twickenham mean [the All Blacks] can start to reap some financial rewards from costly overseas tours.

...*"I think this next (Bledisloe Cup) match will be a lot closer, and it could go A[US]'s way. There's going to be... 100,000 A[US]ns there, and most of them sober... [T]hat's just a joke... But the crowd should help [the Wallabies] enormously."* – England rugby coach... adds his... prediction, for what it's worth... [AUS's selectors have] made two changes to their squad [that had a] 25-6 win over... [an English team weakened by players being involved with the British Lions' – the English, Scottish, Welsh and Irish rugby unions (or 'home unions') combined team – successful pre-Tri-nations tour of South Africa.]

...*"All we need is for the Brits to say: 'We've beaten the Boks, the Boks have beaten the All Blacks, so now we're world champions'. We can't let that happen,"* the All Black No 11 offers as] ample motivation for an All Black win over [the Springboks this weekend.

...the All Black No 11] has changed tack in his sickness claim against his insurance company. Lawyers acting for the rugby superstar yesterday withdrew an application for summary judgment against GIO Insurance... GIO's manager... said last night that the withdrawal represented a vindication for his company... But far from the matter being at an end, it will simply proceed by another route, probably towards the end of the year... [Lawyers] would not disclose how much is involved in the claim but... acknowledged it is substantial. "[The No 11] is not a lowly paid football player." ...[the player is currently in South Africa preparing for the opening Tri-nations match between the All Blacks and Springboks. Incidentally, a US] sports gear giant is to sponsor the Springbok rugby team to the tune of \$US5 million... [The SARFU] president... confirmed that a new sponsor would take over from South African Breweries but declined to name the company. [However, the] Johannesburg *Sunday Times* said the sports gear giant was Nike, and added [that the SARFU president]'s son... stood to earn around \$US400,000... for acting as an agent in clinching the deal.

...[South Africa's] rugby boss... is under attack on a number of fronts again, battling major outbreaks of antagonism rather than minor disagreements. [The Sarfu president] stands accused of nepotism after it was revealed that his son would receive a huge, 2 million rand commission for organising a new sponsorship for the Springboks. [The president] is also at war with four major provinces, who object to the scheme to introduce [NZ-style] regional squads for next year's Super 12 competition... The latest attacks... come as his family's influence on South African rugby is being investigated by a Government-appointed task-force inquiring into Sarfu and the Central Guatang Lions Union, both of which are controlled by [the president. By the way, the]... All Black coach... says his side will not be affected by Sarfu's decision to switch [this year's Tri-nations] test from Pretoria's Loftus Versfield to Johannesburg's Ellis Park... The All Blacks have lost their last two matches at Ellis Park.

...76-year 'war' on field... On August 13, 1921, at Carisbrook in Dunedin, George Aitken, the captain of N[Z], kicked off in the first test between the All Blacks and Springboks. Both sides were nervous, an understandable reaction given that the series was labelled a contest to find "The World Champions Of Rugby." In the 76 years since, virtually every series has been a world championship. Tomorrow's test... at Ellis Park... continues this tradition. Kicking rather than running was the tactic used by both sides at Dunedin in 1921. As a consequence there were 114 lineouts. The Springboks scored first from a dominating scrum... The scrum since that day remains the powerhouse of the South African game.

...In the team talk before yesterday's match against [the Springboks, the] All Black coach... told his team to expect a journey into an Ellis Park stadium which would resemble the Coliseum. "And I think it was every bit of that," [the coach] said after the All Blacks' dramatic 35-32 come-from-behind win against the Springboks to open their tri-series campaign... It was like Daniel in the lions' den before the test and at halftime as a crowd of 59,737 scorned the visitors and willed their Rainbow Nation heroes to slay the invaders. Before the battle was joined there was great drama, with[the] referee... wanting a number of All Blacks to remove vests holding taped shoulder padding[, citing]... IRB laws... Eventually there was no change and both sides played with similar vests covering the padding under their jerseys... There was a rattled edge to the All Blacks'

work... They wanted to play a pacy game but they neglected to engage the Springboks properly or enough in the opening stages... The All Black backs looked overhyped... and... the... Springboks forced early turnovers and mistakes to get out to a 23-7 lead... "The team are down a bit, but let's savour the five [tri-nations points gained from the 4 tries to 2 victory (4 points for the win, plus a bonus point for scoring 4 or more tries; the Springboks also received one bonus point for losing by 7 points or less)]. There is a special quality about a team that can do this," [the All Black coach] said. "I was really worried at 23-7... more worried than the 18-6 we were down at Cape Town last year." ...It was something the rugby diehards of yesteryear would have thought impossible. Yet as the crowd drifted away, it was impossible to deny that a defeat to N[Z] was being regarded as some kind of victory. Everywhere people spoke sadly of missed tackles and missed opportunities. But they also spoke animatedly of how well their team had done. The Springboks had gone down by just three points, a result far less depressing than that which had been envisaged. At the post-match reception it was hard to distinguish the victors from the losers. The All Blacks wore long faces. Some Springboks looked almost euphoric. "Now we know these guys can be beaten," said one of the home players... Perhaps it had something to do with the recent series defeat to the Lions. Everyone said during those bleak times that losing to a good team like N[Z] was at least acceptable while a defeat to the British side was intolerable... But the All Blacks cannot play so poorly again, and... [some Springbok fans are] shuddering at the prospect of what might happen in Auckland in three weeks... Both teams now fly to A[US], but the All Blacks have the first task of meeting the Wallabies in Melbourne on Saturday.

...[THE] VICTORIAN Premier... has described... [this weekend's] Bledisloe Cup match at... the Melbourne Cricket Ground... as Melbourne's biggest sporting event since the 1956 Olympics... About 90 day and night events each year attract huge crowds to this landmark complex within a roar of the... sports-mad... city's central business district. It occupies 7.2ha of Crown land and... [such] is its magnetism that visitors from overseas have been known to go direct from the airport to the MCG before booking their hotels... Visitors... find much more than a famous sporting arena... The MCG library has an outstanding – and extremely valuable – collection of sporting books and magazines. And since 1986 the MCG has been the site of one of the finest multi-sport collections in the world: The A[US]n Gallery of Sport and Olympic Museum... Despite its Coliseum-like appearance, the ground provides what has been described as "theatrical intimacy" between players and spectators. Vast cantilevered stands... are the sounding boards for the partisan tribes who turn out in their scarves, beanies and other regalia for major sporting events... The city was just three years old when the Melbourne Cricket Club was formed in 1838 and 15 years later occupied the present site... MEMBERSHIP of the MCG is so valuable to Melburnians that children's names are often registered with the club at birth. Full Membership of the M[CG] is just over 46,000... But the registered waiting list – this is a democratic club, no queue jumping allowed – is 132,000. The club estimates the 1997 waiting time for full membership is about 30 years... [Gals] were first admitted as members in 1984... MOST Victorians have never seen a game of rugby (union or league) but the Bledisloe Cup has been a sellout for weeks... [– although about] a third of the spectators [this] weekend will be from [outside Victoria]... An attendance of 98,000... would double the existing A[US]n crowd record for a game of rugby union... [A] crowd of 87,000 turned out in 1994 to a rugby league State of Origin [match, while a US]... evangelist... holds the MCG attendance record of 130,000 (some of them on the arena itself) at his Melbourne crusade in 1959. [Apart from cricket, the game normally associated with the MCG is Australian Rules (the 'AUSn version of football, developed in Melbourne about 1858 by H.C.A. Harrison; played by teams of 18 who mostly kick or punch the ball – players may run with the ball no more than 9.1m without bouncing it on the ground – it has been described as a mixture of soccer, rugby and Gaelic football; distinctive to Aussie rules football are the four posts 6.09m high set up in a straight line 6.4m apart at each end of an oval field with a greatest width of 110-155m and a length of 135-185m – any punt, placekick or dropgoal that goes between the two inner posts without being touched by a defender scores a goal worth six points, whereas any kick that goes between the inner and outer posts or between the inner posts after being touched scores a "behind" worth one point.)

... 'They called him God. Not Champ. Not even Legend. Just God – plain and simple. The athlete cut an unlikely Messiah with his craggy face, big chin, receding blond locks and bushy moustache. Below, one of those notoriously tight-fitting, sleeveless Aussie Rules Football outfits wrapped like cling-film round a pale, muscular torso. In the famous stripes of the Geelong Cats, the athlete looked less the pin-up superstar, more a zebra on speed. Yet the athlete possessed style. It kicked goals from anywhere and outpaced opponents at leisure. Most of all, this guy could fly. Critics have never quite understood the charms of the game they dub aerial ping-pong, but in football-mad Victoria, nothing beats the wonder of an athlete leaping high to collect a catch as chaos reigns all around. Others could only dream of levels which saw him soar past 1000 goals in a 15-year career. "The guy could do anything," recalls a former team-mate. "It made a habit of making something out of nothing." No one had better hands than this athlete, the only player who could induce a sharp intake of 100,000 breaths every time the ball went near him at the MCG. And no one could crash back to earth with anything approaching such supreme poise. How the mighty are fallen. The paddock was always where the athlete felt at home, but the outside world seemed an alien arena which the athlete failed miserably to master. And then those two worlds collided in the most tragic of circumstances. The athlete awoke in his hotel room to find a besotted young fan slumped on the floor. Alisha Horan was a barmaid who had been seduced by her hero only a few days earlier. They had partied together ever since, and now Alisha was dead after overdosing on a cocktail of drugs. Footie fans were left numb with shock. Former team-mates and acquaintances reacted with less surprise, almost as if such a sad outcome had been inevitable. When the athlete walked away from the game earlier this year, it had long been a troubled soul trying to deal with the consequence of fame, yet it now faced a future without the game which had sustained most of his life. The athlete simply disappeared from the public eye, but after-dark sightings became common in the goldfish-bowl atmosphere of Melbourne. Rumour and innuendo – centring on persistent stories of him being drunk, and perhaps worse – trailed him through the shadows. But such was his standing in Geelong that many footie fans seem prepared to forgive and forget. The same cannot be said of Alisha's family, who have maintained a public silence. After Alisha died, the athlete checked into a depression-and-drugs clinic run by, ironically, the Assembly of God, about 200km north of Melbourne. Today the athlete, a born-again Christian who never liked his ultimate nick-name, is believed to be there again. Perhaps the athlete's pondering whether it really has found God.' ■ The violent interlude in the Sydney Swans-West Coast Aussie Rules game... last weekend had its sequel before the disciplinary tribunal [yesterday], with verbal wrestling replacing the physical stuff. West Coast's... 195cm tall and 100kg... [player] told the tribunal [it] had "an altercation" with [one Sydney player] then was grabbed by [another Swan. The 100kg player]... said the 191cm, 110kg [Swan] put his hand on his chest to hold him down and said, "Don't make me angry." ...[the 100kg player] was the only combatant to escape punishment. The tribunal fined [two players from] West Coast... and [three]Swans'... one week's wages. In [the 110kg player]'s case that's \$10-15,000, depending on whether the Swans win or lose.

...Melburnians have been bombarded with footy stories all week – in their newspapers and on television and radio. Nothing unusual about that in Melbourne, except this footy is a different shape and size to the Aussie Rules one they're used to. The locals have been trying to get used to the idea of a rugby union match between A[US] and N[Z] being played on their hallowed M[CG]. A Melbourne newspaper this week tried to help its readers with a two-page spread of a "mug's guide" to rugby. Highlights included: Remember these three simple laws – a player cannot pass the ball forward [but it can kick the ball forward – as long as the receiving player was behind the kicker when the kick was made)], you don't laugh when [the All Blacks] do the haka, and the All Blacks invariably win. This is not rugby league. This is something more aesthetic, more operatic, more hands-on, more international. This is a barbaric sport played by [civilised people], unlike rugby league, which is a barbaric sport played by barbarians.

...[a Wallaby flanker said this week:] "Even if we beat [the All Blacks on Saturday] it... doesn't mean we are the better side. We've got to, and want to, do it consistently. But at least until that starts to happen we are still beating the rest."

...All Blacks hit 'em for six... THERE had been a war of rugby union words raging around [the] Victorian capital all week, but last night the [guys] in black let their impressive games do all the talking they needed as they ensured the Bledisloe Cup would spend another summer in N[Z].

...The Bledisloe Cup rugby extravaganza has been valued as being worth as much as \$70 million to Melbourne. And much of it flowed from Kiwi wallets as... [NZers swamped Melbourne. The chairperson] of the Melbourne Major Events Committee which helps run the A[US]n Grand Prix and the Melbourne Cup, is ecstatic... adding his[inexperienced] description of the encounter as “the greatest rugby match in the world”. And the hoteliers were delighted. The... bed shortage was so severe that the Brazilian dance company Oba Oba, which had its Melbourne season extended by five weeks, was thrown out of its hotel and was forced to sleep on stretcher beds on its dressing-room floor. And tickets to the match were about as scarce as Wallaby tries in Wellington last year. Scalpers were asking \$500... Restaurants and bars were overflowing, taxis were working around the clock and there were chaotic scenes at Melbourne airport... over the past two days as the Kiwis flocked to the city. Air N[Z] and Qantas put on 27 extra flights to cope... Despite claims of the M[CG] holding 100,000, the capacity last night was 95,000. And that’s not a record for an attendance at a rugby match. That honour lies with Edinburgh’s Murrayfield stadium which housed 104,000 in 1975 for a match between Scotland and Wales.

...[the] NZRFU wants... a share of the gate takings from future Bledisloe Cup matches played in A[US]. The drawcard All Blacks helped fill the... [MCG but the ARU] waltzed away with the profits, believed to be more than \$4 million... There is already talk that a Bledisloe Cup clash would return to Melbourne next year... A[US], meantime, is considering reviewing its ticketing arrangements for Bledisloe Cup matches. For years the ARU has passed cup tickets to the NZRFU which sold them as tour packages for a profit of around \$200,000. But A[US] is looking to package its own tours with Qantas and to sell directly to the Kiwi market. [Ironically, as the NZRFU starts to get serious about its earning potential, some Maoris have said that they ‘want \$1.5 million from rugby bosses for using traditional imagery – including the All Blacks haka. NZRFU officials will meet Maori rugby administrators in New Plymouth on Friday to discuss the request. Maori rugby heads want the money to promote the game among their people.’ Editor’s note: ‘Maori traditions used the term “haka” to cover a whole group of dances, whereas today it refers almost exclusively to the war-dance type. It is usually performed by a team of guys, with a leader, working in unison, and involves energetic, usually aggressive, postures, with rhythmical chants of defiance, accompanied by movements of hands and feet. The haka is a form of literature to the Maori who follows the unity of words and action. Because it is vigorous and visually dramatic, however, it has appealed to the Pakeha and been taken up by rugby teams for performance on the field immediately before a match since the haka performed by the 1888-89 Maori rugby team in Britain delighted crowds. Although this new use of the haka is a degeneration from a range of dances with words that are pre-European in origin, it has had the beneficial effect of making the form popular with modern Maoris and thus encouraging at least some continued composition. What is certain is that, for good or ill, it is the most widely known Maori performing art form’]...

FROM the moment the ...[B]oks refused to face the... haka every South African at Eden Park feared the worst. Not to take up the challenge was an insult. It was, however, in keeping with the arrogance and attitude of a Bok management which is out of its depth and an embarrassment to the proud history of South African rugby. The Boks, their arrogance personified by the belief that they could jet into Auckland on Thursday, have a run... the next day and beat a side of the All Blacks pedigree, were humiliated for the second successive weekend. The All Blacks were good yesterday. No, at times they were sensational. But there were periods in which the mean machine coasted. [The Boks], despite this, w[ere] never in the game. Two gifted tries flattered the Boks at the break. Two late tries only added to the illusion. The... record 55-35... [fulltime scoreline suggests the] All Blacks... are a 20-point better side... [but, conservatively, the guys] in black were 35 points better. To deny this is to deny the parlous state of the game in South Africa... [The new Bok coach] is a nice guy... [but doesn’t] belong on the international scene... Appointing [someone who hasn’t got] any coaching experience at any level, was a moment of madness and not one of inspiration. Yesterday vindicated this belief even if the Lions and [Wallabies] had previously laboured the point. The Bok rot starts at the top and the smell has filtered through to a squad lacking in skill, physical presence and mental fortitude. The Boks are ordinary. The All Blacks are on another planet. Still, given the tradition of the contest, even the All Blacks must have expected more from the Boks. To call the Boks performance planless, gutless... and... spineless... would be stretching poetic license. It would, however, not be inaccurate... THREE hours before kickoff in the test at Eden Park a former All Black summed up the ...[B]oks. “They’re a bunch of overpaid prima donnas. There’s no backbone in the side. Once every [Bok] team had at least four or five real mongrels in it. Now most of them just lie down and die. If the All Blacks cut loose they’ll tear them to bits.” Watching the crumbling remnants of ...[B]ok glory yesterday the astonishing thought kept getting stronger and stronger, that South African rugby is tumbling down the same slope that Welsh rugby did... The All Blacks can look to a fascinating game at Carisbrook next Saturday against the reborn Wallabies. All that’s ahead for South African rugby may be a long spell recalling a glorious past... It would be astonishing if South Africa can raise itself to 1995 World Cup level again, although in a country where a handover to black rule could be accomplished without civil war, miracles must be possible... [□ The Bok flanker who was sent] off... for stomping on [the] All Black skipper... 10 minutes into the second half... faces the judicial committee today... [A Bok] lock... was lucky to escape punishment for another attack on the prone [All Black skipper]... The... ill-tempered... match was [also] marred by... several dust-ups and [the] Bok... team’s most experienced test player... was yellow-carded for a blatant foot-trip on [the] All Black fullback...

The latest All Black-Springbok duel offered the perfect discussion platform about rugby style... “It makes you long for a 3-3 draw in a grim and pitched battle,”... [an] acerbic English rugby critic... has written of the rugby played in the Southern Hemisphere. While there were many mistakes from both sides, which drew exasperation at Eden Park, the exhilaration of movement and endeavour which produced 12 tries was a knockout winner for this viewer... It would have been magic to have gathered [the English critic and the] All Black coach... together... to discuss the merits of the modern game... “What do you want to see?” [the coach] asked after the All Blacks’... victory... “Do you want a team that are really going to express themselves and have a crack, and that means every now and then they are going to throw the bad pass and make mistakes? I am a great believer in encouraging them to be positive... I am sure it is the best outcome for the game. I am sure the spectators have gone away feeling happy...” Amen. Exasperated but happy. Exasperated because like any N[Z] rugby addict I wanted a few more passes and tackles to stick so the All Blacks would really bury the old enemy. But putting a 20-point margin on the Boks and seeing them squirm... was some recompense for the harrowing 1949 tour to the republic, the refereeing injustices of the 1970s and anyone raised on tales of ‘we wuz robbed by the Boks.’

...A shame of two halves... The All Blacks put up one of the more bizarre performances in their long and illustrious history to beat [the Wallabies] 36-24 at Carisbrook in Dunedin yesterday. The All Blacks had the tri-nations trophy sitting alongside the Bledisloe Cup in the dressing room... But the atmosphere resembled more of a morgue... as frustration took over jubilation. For the second week in a row, the All Blacks had failed to cash in on a chance to really humiliate top flight opposition. After playing some sublime rugby[with the advantage of a strong wind] in the first half to lead 36-0 at the break[– during which there was a ‘\$50,000 goal-kicking competition to be won’ by a spectator –] the All Blacks never looked like scoring again in the second spell and allowed [the Wallabies] to make them look ordinary... [The Wallabies also achieved] a four-try burst that [compared favourably to the All Blacks’ three tries and] would have done wonders for the team’s morale, not to mention belief that it can beat the All Black bogey... “I don’t think what this team has achieved this year should be remembered by that second half,” said... [the All Black coach, although it] conceded the ability of both [the Springboks and the Wallabies] to edge back at his team with some stirring rallies was “probably good for rugby overall”... [The Wallaby No 10] said his side was “shell-shocked” when it gathered at halftime... “Words like humiliation were used... We had... to get it together and I suppose we can say that for 40 minutes... [we did].” ...The... Wallabies Coach... said: “...this is a great All Black team. They’ve lost one test in two years and in 1995 they were the best team at the World Cup...” ...There has been much talk about this being a great All Black team, but yesterday’s performance showed they are still some way off achieving perfection. Their effort allowed every rugby cliché. If ever there was a game of two halves, this was it... Having disposed of the leading southern hemisphere nations, [the All Black coach] can start his planning to

conquer Europe. Two tests against England and clashes with Ireland and Wales in November and December await. So does the 80-minute effort... [which, at least, the 'Gal Blacks' looked able to produce. They crushed their AUSn counterparts 40-0 in] the curtainraiser to the All Blacks-Wallaby tri-series test... after beating England 67-0 midweek... [However, the team has only] been seeded fourth for next year's World Cup in the Netherlands. England, the U[S] and France are seeded No 1, 2, and 3 in the 16-team event... N[Z] did not compete in the 1994 event.

...A WHISTLE-HAPPY performance from[the] French referee... was a major factor in yesterday's Jekyll and Hyde test. [The ref], who blew 42 penalties and free kicks in the match... played as big a part in it as any of the players. In the second spell alone [the ref] blew 26 penalties.[The] Wallaby coach... would not comment on the [ref's display, but agreed with hi's] decision to only give[the] All Black No 8... a yellow card for a late charge on... [the Wallaby No 10. The No 8] was not overly perturbed by the high penalty count or the referee's performance. "[The]... ref... blows the whistle quite well... actually,"... A few... of[the] 42,000... Dunedinites who paid big money to attend yesterday's match would probably disagree.

...SUPER 12 rugby coaches will be on an increased pay scale when the five [NZ] appointments are announced this week... For the past two years the[y]... have been earning about \$65,000 a season. That will improve in the new packages, where there will also be significant bonuses available, based on performance... South Africa is still to finalise its new regional concept and the coaching and selection ramifications that will go with it in a rugby environment notorious for its infighting. Across the Tasman... [all three] have been reappointed, despite being in charge of largely disappointing Super 12 campaigns this year... NZRFU[and ARU] officials... also met in Dunedin yesterday to discuss the joint bid for the 2003 World Cup.

...The Dunedin City Council [has given] the go-ahead... for four 48m-high... [floodlight pylons to be] installed at Carisbrook... providing up to 2000 lux of light for night sporting events and concerts...

Floodlights could be lighting up[a] new era of night sport at Eden Park by March 1999 following Environment Court approval for the park's \$30 million redevelopment plans. Following a 15-day appeal hearing... the court has approved up to 16 floodlit night matches a year and three daytime non-sporting events... The court decision followed the appeal by the neighbours association against the Auckland City Council's approval of the floodlights and night sport... They believe night matches will attract hordes of rowdy, drunken sports fans[, which would]... threaten the residents' peace and security... and harm property values. But the Environment Court accepted evidence given for the... Eden Park Trust Board... that night games would not affect property values in the long term... The court's 81-page decision... contains 45 conditions on traffic, alcohol, light spill, maximum noise levels, a community liaison group and other matters... The E[PTB] intends installing four giant lighting towers – 47m above the pitch – on the north and south stands. The lights and new north stand are part of a 20-year, \$100 million overhaul of the 97-year-old park. The Eden Park chief executive... said work on the lights and north stand would begin next July... "It's the Genesis Project," [the chief executive] said, referring to the name of the park's upgrading scheme, "and the first stage is: 'Let there be light.'" ...Auckland sport officials hailed the [court's] decision, saying it secured the future of the historic ground... [which was built on a 'swamp' and "has] already lost games [to other venues]..." ...The chief executive of the Auckland Rugby Union... said it was a big day... for Aucklanders. Night sport was the way of the future and[, according to him,] what the market wanted... Representatives of the Eden Park Neighbours Association [EPNA] were studying the decision last night and were not willing to comment, although one said the outcome was not unexpected... [and they] have vowed to keep fighting the... decision... "We haven't spent the last two years trying to hold on to our peaceful night-times, spending \$100,000 plus, just to give up at this stage,"... The Mt Albert City Council[had] opened the way for limited night sport at Eden Park[in 1982]. But anyone planning to stage sports fixtures at night [had to] apply to the council, overcome objections at a public meeting and agree to a range of conditions the council... imposed.

...The last legal hurdle to erecting floodlights at Eden Park fell yesterday as residents opposed to the scheme said they would not appeal. The E[PN], already \$13,000 in debt after losing its... legal battle, said it could not afford a fresh fight... [Meanwhile, t]he \$41 million North Harbour Stadium, in Albany, is in a financial crisis – only three months after it opened. Needing \$150,000 a month just to repay interest on a \$20 million loan, stadium managers believe there must be urgent measures to rescue the upmarket venue... The... loan [is] owed by the North Harbour Stadium Trust, a group of seven people who could have personal liability should its financial standing fail to improve. The trust has a long-term lease from the... North Shore City Council... for the land but owns the stadium. Since it opened on March 8, the stadium has been plagued with problems. Queues and traffic congestion have marred various events, most recently the soccer international between N[Z and AUS] last Saturday.

...The North Harbour Stadium has a more secure future after restructuring its \$20 million debt. The Albany stadium had needed \$150,000 a month to cover interest on the loan, but its main banker, ASB Bank, has agreed to refinance \$12 million of short and medium-term funding over a longer term of up to 15 years... The deal between the stadium trust, ASB Bank and the... North Shore City Council... includes a \$6 million bridging loan from the bank, to be repaid from the proceeds of naming rights and new seat sales... Since it opened... the \$41 million stadium has attracted \$8.1 million of seat sales, commercial packages and grants.

...The financially pinched North Harbour Stadium received a \$2.4 million donation from the ASB Trusts yesterday. No naming or sponsorship rights are involved. The stadium trust chair[perso]n... was thrilled that the hospitality areas of the stadium could be finished... [In related news, when] the great stadium debate began raging in Wellington, the Paekakariki Express – aka [the All Black No 15] – was still at school. But the decade-long debate... hot up... as the Wellington Hurricanes thundered into th[e]... Super 12 semi-final, taking rugby's popularity in the capital to an all-time high... [The] clash between the Hurricanes and the ACT Brumbies at Athletic Park was the first non-test match to sell out the 39,500-capacity ground. And that sellout crowd indicates the problem, according to a detractor of the \$115 million WestpacTrust Stadium, proposed for the city's former railyards... [The detractor] has proposed a \$93 million version with an extra 10,000 seats. But the Wellington Stadium Development Trust has said the dollars don't add up for a bigger stadium and the seats would rarely be filled. But even before the bums-on-seats argument, many other issues had to be resolved before the first clod of earth could be turned on the railyards site later this year. The stadium concept arose from the recognition, in the late '80s, that the city could not afford to spend millions on sorely-needed upgrades for rugby's Athletic Park and cricket's Basin Reserve, and that one facility was needed. Then came wrangles over the stadium site (Wellington or Aotea, north of Porirua), the cost, opposition from residents, and resource consent – two applications were needed before it was approved last month.

...[Challenge] Construction has won the job of building Wellington's \$121 million stadium, creating about 500 jobs. Construction should begin in March and is expected to pump... \$40 million into Wellington's economy and be completed by May 1999.

...Wellington City Council has approved a \$10 million underwrite for the... \$122 million Wellington railyards sports stadium, bringing its funding and underwriting contribution to \$25 million. However, this is conditional on the regional council giving \$25 million, which is yet to be debated. [By the way, 'ratepayers in Hamilton should foot a third of the \$30 million cost of the proposed Waikato sports stadium, the Hamilton City Council has decided. Councillors voted 11 to 2 in favour of a \$6 million contribution to the outdoor stadium, and \$3 million for an indoor complex.']

...Waikato's proposed... super stadium is now officially not quite so super... Plans for the \$34.2 million stadium... at Hamilton's Rugby Park... have been mooted for more than a year... But... [its] backer, the Waikato Regional Sports and Events Centre Trust... has so far secured only \$12.1 million in funding... Now... what was to have been a... 30,000-seat facility... has been scaled back to 22,000 seats... [Meanwhile, t]he Rugby Hall of Fame... founders... have again staved off bankruptcy... [The Hamilton businesspeople] who had guaranteed a \$1.8 million loan from the Bank of N[Z] to set up the \$9.5 million hall in Auckland, were to have been made bankrupt on Monday. The hall closed in October 1996, 15 months after it opened.

...The Auckland Secondary Schools' Heads Association has adopted a tough set of rules aimed at curbing player recruitment and covering eligibility of foreign students, transfers and a host of other contentious sporting issues... The influx of Pacific Island students to bolster teams, predominantly 1st XV rugby sides, and help a school win is covered in section 9... It says, in part, "schools be limited to two overseas or non-resident students competing in a premier, open A or first grade sports team." After simmering for years, the issue of foreign students reached crisis proportions late last year when Manu Samoa Rugby Limited offered schools talented players from Samoa for this school year. Following an outcry the scheme was modified, but it put the spotlight on schools recruiting independently in the Pacific. The transfer of students within the school year for purely sporting reasons has, in the past, caused friction between principals... [T]he bylaws reflect a similar approach to those at high schools in North America. They make it clear any school caught seriously breaching the new rules runs the risk of watching, rather than competing... [Incidentally, a] rugby match in Tonga turned into a riot in which one of the kingdom's colleges was destroyed, leading to the arrest of 154 schoolboys... The riot arose out of bitter rugby rivalry on July 3 when... Tupou College... defeated... Tonga College... 8-6... [O]n July 8... Tupou College students attacked... [the] state-owned... Tonga College... [causing] \$1.1 million... damage... Tupou is owned by the Free Wesleyan Church.

...Otahuhu College, which serves the deepest working-class suburbs of South Auckland, has snatched a glittering prize... from a far more exclusive institution. On Saturday the state school ended the two-year reign in the national schoolboy rugby competition of its posh neighbour, King's College, when its First XV won the Moascar Cup 32-17 in front of... 1500 people. King's had... last week beaten another elite private school, Wanganui Collegiate, to set a record 19 straight defences of what is schoolboy rugby's equivalent of the Ranfurly Shield. It has been 20 years since Otahuhu last beat King's, and... has never before won the 77-year-old trophy, even though [a couple of past pupils] played together for it on the way to becoming revered All Blacks. The cup did not have far to go after the match, as the two schools back on to each other off the same street... One who crosses the divide daily is [the gal] who teaches at Otahuhu but lives at King's as wife of a housemaster there. [The teacher] said her husband and others at King's knew they could not keep the cup forever, and they were delighted that the neighbouring school should be the one to take it.

...31 pupils from Aranui High School's sports academy in Christchurch are each being paid weekly training grants of \$121 and \$97... The payments have angered the city's regional schools sports director who wants Aranui teams banned from inter-school competitions. [The director] will ask the N[Z] Secondary Schools Sports Council tomorrow to consider the situation. [The director] believes payment of the benefits has made Aranui sports teams virtually professional, giving them an unfair advantage over other schools. [The director] also said Aranui High School denied the payments were being made when [the director] questioned them about it earlier this year. However, the Income Support Service has defended the payments. [The area] manager... said the academy qualified for training funding... Aranui High School was in one of the most depressed suburbs in... [the city and a] number of Aranui pupils have been enticed back to school after being unemployed, while others have stayed on at school and joined the academy instead of leaving and going on to the dole... Pupils spend their time in class, at sports practice, and learning life skills with the aim that when they leave they will be able to join the workforce or pursue a professional sports career... Other schools are looking at similar initiatives... [(e.g., Mt Albert Grammar in Auckland is setting up a soccer academy; a Waikato HS is setting up a surfing academy) and the] Social Welfare Minister... yesterday applauded the initiative. [The minister] had no problem with the money being paid to school pupils. But [the director] said if students were receiving benefits to which secondary school pupils were not entitled, "then as far as I'm concerned they're not secondary school pupils,"... The Aranui academy has received national recognition since its inception earlier this year. Its rugby team played the curtain raiser to [this season's] Bledisloe Cup rugby test at Lancaster Park. That side will be safe from a sports ban because it plays in a Canterbury Rugby Union Saturday competition... But... the... school's rugby league team[- which 'includes many of the union team's members' -] is scheduled to play in the Canterbury final on Wednesday. It is expected to win the match and progress to the national finals. That now is likely to be... [in] jeopardy.

...Last week I discussed the reasons why rugby union has become a much better spectacle in recent years and cited a number of law changes which have encouraged running play and kept the ball in play for more of the match... A LETTER from... Christchurch this week... had no argument that rugby union had improved as a spectacle, but being a rugby league supporter, [the correspondent] was disappointed I did not acknowledge that virtually all the law changes had been borrowed from rugby league... [And the correspondent is] right. It seems to me, until recently, rugby league has always had a much greater emphasis on the need for the game to be an attractive spectacle. This no doubt because the professional game puts a high priority on income from sponsors and spectators to pay players and officials. Rugby union on the other hand has until recently regarded itself as something of a purists' pastime... [R]ugby officials believed the traditional game was the thing. Some of this thinking persists today. [A critic] writing in the *Sunday Times* of London earlier this year, lamented the free-scoring, wide open rugby of the Super-12. [The critic] claimed to prefer a 12-9 nail-biter to a 44-32 free for all... [Fortunately,] union lawmakers... have seen... the need... [to] copy the best from rugby league. In fact union players have learned from elements of rugby league in recent years too. When I played seven-a-side for N[Z] we watched a lot of rugby league videos as part of our training. We particularly watched the great... Kangaroo teams that completed two consecutive unbeaten tours of Great Britain. We learned from them a great deal, including how to "pop" a pass to put a player in a gap, how to pass around a tackler, how to slow before passing to achieve a "whiplash" effect for the player hitting the ball at pace, how to support on both sides of a runner to give him options and pressure defence. The two games are coming closer together but will not, I believe, ever merge... [However,] league has been severely hampered by the split in the game... [and] I think the game has lost ground to rugby union as a spectacle. The spectator numbers for the Super 12... compare more favourably to the Super League and ARL numbers. The chief difference between the two games for a spectator is continuity. Every two seconds or so in league a player is tackled and the game stops for a brief moment as [the tackled person] plays the ball. In union the stops are longer as a scrum or lineout is formed but the periods of free-flowing running and passing are more frequent and longer.

...[an AUSn player] gambled a small fortune on his ability yesterday when [the player] accepted incentives in a deal with the A[US]n Rugby Union and decided against switching to rugby league. But tensions between the Queensland and A[US]n Rugby Unions were simmering after [the player] agreed to a three-year deal and rejected a \$A1.2 million offer from Super League club the Sydney Bulldogs. The QRU is said to be disappointed with the amount of "guaranteed" financial help that the ARU has offered [the player]. The QRU had scraped together a rescue package, including a \$A100,000 salary with the Bank of Queensland, to keep the 20-year-old in the code.

...[the former Wallaby] coach... is pushing for compensation from the A[US]n union, threatening otherwise to sue for \$A500,000... for unfair dismissal following his resignation[. The former] Wallaby coach... is believed to be seeking \$A200,000 for 16 months salary and a further \$A300,000 in damages claims in legal action against the ARU initiated through... [his Sydney solicitor. The former coach] had been contracted until the end of the season for tours of Argentina... Scotland... and... England... [- who face AUS, NZ twice and] South Africa on four consecutive weekends... in a programme originally designed to replicate what they might face in the 1999 World Cup... [However,] English rugby... officials say the... schedule... imposed on the national side is a case of overkill and will not be repeated.

...As a group of 10 All Blacks face varying injury layoffs after a gruelling test programme, [their] team doctor... has called for some mandatory breaks for the sport's leading players... "I think we are expecting too much of the players,"... [The doctor] has written to the N[Z]RFU with that personal view, but there has been no directive from officialdom, which means the issue is left to an arrangement between N[PC] team coaches and players... The lack of direction from the NZRFU... [seems] strange, especially as it is understood[an All Black] flanker... received a critical letter from the union after his recent surfing accident. While the union apparently wants to protect the players from themselves, it does not want to carry

the issue any further. However[, the All Black]... and Wallaby team doctor[s]... intend taking the matter further, suggesting players have a fortnight's break after the Super 12 series and another similar layoff after the Tri-Nations tournament next year.

...THOSE poor tired All Blacks. It's been such a rough, tough season. All those tests. All that travel. Can't we just give the poor chums a compulsory rest somehow, now, before they take part in the NPC... What a load of rot. These guys are professionals. Highly paid pros earning upwards of \$250,000 a year and more. That is huge money by any standards, so why do they deserve a vacation mid-way between pursuing what happens to be this country's finest employment opportunity? Why don't they just get on with playing rugby and stop bleating? ...Coaches in the American NFL don't require some compulsory stand-down period mid-way through their season. They deliberately under-utilise their top players in the pre-season so that when crunch time comes, the players are ready. Quarterbacks are given only 15 minutes or so play in early games, top linebacks might miss an entire game. Certain running backs... mightn't even play the first two or three season fixtures. Why is it All Blacks can't operate in a similar fashion? ...Take this year. All Blacks played in the Super 12. Fine. So they should. Then they competed in an eight-test programme. Not so fine, some will have us believe. But was there the need for all or any of our leading players to: • Be involved in a trial match before the test[s] started. • Have fronted against... Fiji. • Make a busy test season unnecessarily cluttered by playing Argentina.

...THE All Black tour to Argentina in 1999 has been cancelled... The decision was taken with the best interests of the South American country in mind. It follows Argentina's dismal tour of N[Z] earlier this season, when the Pumas were annihilated by the All Blacks in both tests, losing 93-8 in Wellington and 62-10 in Hamilton[– results that elicited the following comment from their coach: 'NZ hit you, they tire you and they keep at it until they break you. And then they score the points. And it's impossible to reach their level of speed']. "Argentina has had a real shock and sensibly they are looking to rebuild," said... the... NZRFU chair[person, who] heads to Europe this week with a proposal [the chairperson] hopes will result in the I[RB] helping fund a Pan Pacific tournament... to involve... struggling... [rugby nations like] Western Samoa, Fiji and... Argentina... [The chairperson] is adamant rugby needs to increase its level of competitiveness as the sport looks to globalise. "The Five Nations is well catered for and Sanzar looks after A[US], South Africa and N[Z]... But what we have to do is look at what can be done on a more regular basis for other countries... We're all conscious that the gap... [between the top 8 rugby countries and] what you could term the [remainder of the] top 20... is getting bigger. The best way to bridge that gap is regular competition between countries of approximately equal standards."

...WHEN promoting my book, *Black and Blue*, I[– the All Black captain who lifted the 1st Rugby Union World Cup after defeating France in the 1987 final –] visited 15 of N[Z]'s 27 provincial unions, many of them second and third division. I met many people, made a lot of speeches and was asked a lot of questions. In the smaller unions one question dominated: "What is the future for smaller unions in the professional era?" ...In Manawatu and Hawke's Bay they didn't... ask... the question... But then... they... believe they have the answer – mergers... What the smaller unions want is to retain local talent, to have a decent rugby competition and a top provincial team. South Canterbury wants to get back to the days when it held the Ranfurly Shield and Bay of Plenty wants to win the NPC first division again. The locals realise this sort of ambition is probably not practical, but they can't accept that what is happening is sustainable either. What is happening – all the good players leaving as the gap between rich and poor, top and bottom widens – cannot be in the best interests of the game, they rightly argue... The professional era allows the rich to establish a virtuous circle of financial muscle, player purchases, a winning team, more sponsorship and higher gates, more money, better players, more success and so on. The little provinces are trapped in the minor image of a vicious circle of no money, players [– most of whom are only 'part-timers' –]leaving, poor results, low gates, less money, more players leaving and worse results. Money causes these spirals. It can also break them. The money needs to come from the N[ZRFU, which]... has... to... distribute... more money... to the smaller provinces... Five... teams... seems about right for the Super 12, but 27 is almost certainly too many for the NPC. I wish this wasn't the case... [but NZ] is too small for 27... The future is uncertain for many smaller unions and it cries out for leadership... from the centre. Meanwhile we continue full steam ahead into the fog.

...N[Z] rugby needed a "redistribution of wealth" to direct revenue from the professional area to the 98[%] of the game that remained amateur[, the]... NZRFU... chief executive... said yesterday... [But it then turned politician by saying:] "The first thing the N[ZRFU] has to do is create some wealth. We have been [operating at a loss] in the last two years and this year we will show only a small profit..." ...[furthermore, international] player fees must be introduced... There has been an alarming leap in players moving to England this year, with rich contracts offered to second and third-tier players... [The IRB] had to take action or wealthy countries... with a shallow pool of quality players, would destroy N[Z]'s depth. "We will become the nursery ground for world rugby." England, in particular, has become a who's who of international faces... with 80 non-English players from 14 countries in the 12-club premier competition... Many of these players are Kiwis and [the chief executive] said the NZRFU should be compensated for their loss. But [it] also predicted the big contracts on offer in Britain would soon dry up as several major clubs had reported huge deficits from last year. Leicester lost... \$750,000, Harlequins \$1.24 m... and Sale... \$1.86 m... [Yet,] despite these losses, English clubs would always be able to lure N[Z] talent as the NZRFU could afford to pay only the elite... [T]he NZRFU would increase Super 12 contracts, but the players realised pay rises had to be rational... "..."some of the money being paid [in England] to players outside this group... [is] bizarre and unsustainable."

...Auckland[']s captain will retire from all rugby in N[Z] after this season to take up an overseas contract with the Harlequins club... a two-year... deal... under[stoo]d... to be worth... [over] \$1m... The 32-year-old No 8 told his... teammates about his decision at an emotional meeting on the eve of his side's 31-29 loss in the Ranfurly Shield challenge against Waikato on Saturday... his 139th match for his province... The 54-test veteran with 17 test tries to his name – more than any other All Black forward – has spoken about the arduous demands of top-level rugby... The tough forward... named in a newspaper "rich list" this year as a millionaire, has been negotiating with the N[ZRFU] to try to sort out some compromise allowing him to either reduce his commitments or to be released from his... contract, which runs until the end of next year... [The No 8] has flirted in the past with overseas offers – nearly moving to Manly in the Sydney league competition in the late 1980s, and then being tempted to play rugby in Japan.

...[the r]ugby colossus... staged his farewell to the All Black jersey in the suburban Auckland club that gave him his first big chance. The 32-year-old All Black No 8 held court in the Jubilee Lounge of the Marist Rugby Club for whom [the colossus] played his first game in his new province, in 1983 – initially as a prop. Yesterday his front-row support was the All Black coach... and the [NZRFU] chief executive... The Auckland captain confirmed to a media pack – some of whom have followed him around the world since his international debut in 1987 – that [it] would quit N[Z] rugby this year... When his N[Z] contract ends in August next year [the player] will head to the Harlequins club in London... Both [the All Black coach and the NZRFU chief executive] said they had tried – and failed – to persuade [the No 8] to change his mind during the past six months... [The All Black coach] was saddened by [his No 8]'s decision but... believed it was right for him... It was the selectors' "strong wish" that [the No 8] make the All Blacks end of year tour to Britain... His loss next year would leave a "horrendous" gap in the game... [The No 8] modestly said his departure would not leave a gap in any side. Instead it would create "an opportunity for someone to stand up and say the No 8 jersey now belongs to them."

...NO SMOKE issues forth from the chimney, but the NZRFU cardinals have recently met, so the rumours tell us, to discuss the pros and cons of reducing the N[PC] to two divisions. This would of course increase the number of teams in each division... [and] would require a season that was too long if club rugby is to be accommodated... The top of the provincial tree is occupied by Auckland and Canterbury. There is a certain historical consistency to this... Auckland has dominated... [in recent times but] Canterbury is re-emerging. Thoughtful and committed administration and a structural change in the way we play provincial rugby have been behind Canterbury's[recent] rise... Canterbury has been the architect of its own success. The province serves as a great example to some others who remain mired in petty squabbles and personal agendas. It has also however been very much helped by the arrival of the Super 12 competition. Canterbury and Auckland are the only two provinces in N[Z] which field very nearly the same players in the Super 12 and the NPC. This has obvious advantages. The players are playing together all the time. They are

professionals who can afford to train fulltime. The players gain experience in the world's toughest provincial competitions... If the top of the provincial tree has a familiar look about it the bottom is not so predictable... Winning a division and gaining promotion can be something of a poisoned chalice... Spectators want to watch quality rugby [but they also] want to watch their team win. These two come into conflict when a top team in one division gets promoted to the next and finds itself out of its depth... The same crowds who turn up to watch the local boys run over the best in the third division get a bit tired of watching them get slaughtered in the second division... [■ Now] that Canterbury has again emerged as a top team in... [NZ, the] Auckland-Canterbury rivalry is back and it is back to stay[, resulting]... in signs like I Hate Auckland.

...LOVE it or hate it, the intense rivalry between Canterbury and Auckland is not just child's play. But some rugby-mad youngsters from Panmure Bridge Primary School have shown maturity beyond their years... The children in room six... were so appalled by a young Canterbury fan's publicised expression of hate for Auckland at Lancaster Park... last Friday they put provincial allegiance aside to exemplify fair play... [One pupil] said the Canterbury supporter was stupid and not fair to be so scathing on Auckland. "[The fan] should have said 'I love Canterbury'..." His classmates spent [this] week penning more appropriate expressions of support – and they certainly did their homework. The Cantabrian boy's view from the stands attracted criticism, even from the Canterbury Rugby Union, which said the photograph of the lad published in last week's *Sunday Star-Times* was not an accurate reflection of the atmosphere when the home side beat Auckland for the first time in 14 years. [The union's chief] executive... said: "We had 32,000 people there, including 4000 on family tickets, and there was only one family who thought it was all right to have a sign like that. I don't condone it and I don't condone the bank singing '[Auckland's No 10] is a wanker' when [the No 10] takes a goal kick either. But you can imagine how the crowd felt – it was a milestone." ...The Hillary Commission, supporters of a Fair Play campaign, said the boy's sign was "over the top and took provincial rivalry a bit too far." But... [the commission] doubted if the sign constituted a massive breach of sporting morals... Meanwhile... a senior lecturer in psychiatry and behaviour science at Auckland University, said the sign represented "a nasty element of N[Z]'s sporting support". "Instead of saying 'Go Canterbury' we are getting detestable about the opposition. It's like war-time propaganda."

...THE picture... published last week of the young Canterbury fan holding a placard reading "I hate you Auckland" has attracted a lot of comment. I make none, other than to suggest that if the child – who may be a little angel, but who may rip heads off pet mice for a hobby for all I know – produced a placard by himself, then [the child is] a budding Picasso. But the point is the poster epitomised the fanaticism Canterbury supporters have for their team. A dear friend of many years standing is among that band, and whenever... asked which province [the friend supports the friend] quickly raises one hand to cover an eye. Point immediately made. Hate is a strong word, but in the realms of baseball, for example, the New York Yankees are cordially hated – if one can cordially hate a team – by fans of every other club. It may not be surprising that a musical involving them was titled *Damn Yankees*. In the annals of fandom, Philadelphia is considered a hotbed of frenzy that would make even the most rabid Canterbury supporter look wussy. It could well be the city is a very boring place, so the only thing to while away the time is to boo visiting sports teams. It used to be so boring, that WC Fields, musing on his epitaph, considered having it read: "On the whole, I'd rather be in Philadelphia." A baseball player... once criticised Philadelphians with these words: "Not only would they boo at a funeral there, but they might even throw bottles at the hearse." The game that attracts real madness, though, has to be soccer. It is probably at its most fanatical in Liverpool where... [someone] once famously said, there are only two teams – Liverpool and Liverpool reserves... In a... [literary] piece called *Koppite*, after the Liverpool fans who crowded the famous Kop terrace, an interviewer is informed that the answer to the graffiti "What would you do if Christ came to Liverpool?" is: "Play St John at inside right." ...When Liverpool reached the European Cup final in the infamous Heysel Stadium disaster, and 40 fans died in the rioting, the match went ahead. An awful thought, with so many lying dead, but the alternative might have been even more chaotic. The match was decided by a penalty for [Italian club] Juventus in the closing stages of the match. As soon as it was over – it was shown live on television here – I called a mate who is a Liverpool nut. "Wasn't that awful?" I said. "You're not bloody kidding... It was never a penalty – that Juve bastard was at least a yard outside the box when we brought him down."

...The N[ZRFU] had all season to sort out the N[PC] semifinal arrangements – and then they come up with a mess this weekend. Competition broadcaster Sky television has been keen to have coverage of the games this season drip-fed over three days or nights from Friday[, which is] probably called maximising your commercial opportunities, or some other business jargon. Fans – those groups who go to watch matches live or on television – like it too. There is less conflict of interest. But now... [in] its semifinal wisdom, the NZRFU has ignored the chance of a Friday night game and has squashed four games, three of them televised, into Saturday and two on Sunday. Both first-division matches are on Saturday, split by... [one of the second-division games]. Who can get a leave pass to watch three consecutive games on television and who wants to sit down for that length of time anyway? ...Now Sky is committed to screening live the World Cup Challenge rugby league final this Friday night, even though it is a match between two A[US]n Super League sides... Some strange boffin at the NZRFU has not been thinking too well.

...It was a rugby playoff to match the absorbing ferocity of the 1995 World Cup final. It could also have headed into extra time until two late Auckland errors allowed... successful penalties to edge Canterbury to a 21-15 win and the prize of a Lancaster Park final next Sunday against Counties Manukau. The result signalled the end of a superb four-year reign as NPC champions by Auckland and the finish of [the All Black No 8]'s gifted career in N[Z]... provincial rugby. [The All Black No 8] tarnished his departure, though, with his verbal battle against [the] referee...

It was as furious as [the All Black No 8] has been during his time as Auckland rugby captain. Whenever [the] referee... blew his whistle against Auckland in their 15-21... semifinal loss to Canterbury on Saturday, it seemed [the Auckland captain] blew his top... In the end, [the Auckland captain] may have been fortunate not to have been sinbinned for his conduct. [The referee]'s work obviously rattled Auckland, a team ironically known as the unofficial kings of the professional fouls. "The referee had a major influence on the game. It is disappointing that had to happen," said [the] Auckland coach... However, [the coach backed his captain]'s right to question calls.

...It was hard... watching Auckland's exit from the N[PC] on Saturday... But I was disappointed less at... their loss than at the manner of their going. It was sad and shameful to watch the display of graceless petulance by Auckland[']s skipper... playing what is almost certainly his final game on N[Z] soil. I have every sympathy with the anguish top sports[people] must feel when the calls of match officials go against them. But to understand is not to excuse... I hope that time will change my abiding memory of [the No 8]. It should be of those blazing runs from the back of the scrum, of the field-width gridiron-style passes, of the long-range... drop goal which surprised no one more than him. Instead, I can only see his scowling face filling the [TV screen as it] barks: "This is a [expletive deleted] joke." ...I couldn't see the funny side. It looked more like a tragedy...

[The All Black No 8] apologised to the nation last night for swearing on live television at [the] referee... during Auckland's highly charged NPC semifinal defeat by Canterbury. But the Auckland captain refused to apologise for actually questioning the referee's decisions... [The No 8] said of the infamous televised profanities: "I was swearing to myself. When you're in a tight battle it's not a game of monopoly or... tiddlywinks." [The No 8] wanted to apologise, however, "to the young kids... for a couple of things I might have said" and to tell them "I definitely do not agree that you should take that frustration out on the referee."

...Auckland may have lost the two major prizes on offer in N[Z] domestic rugby but... netted... \$1,045,988... for the year ending October 31... the highest surplus for a N[Z] provincial union and... more than double any previous recorded profit... The union showed a \$269,323 profit last year.

...the NZRFU has... changed the 1998 NPC... [1]st division... to 10 teams. The [2nd and 3rd] divisions will compete with [8] teams each next year.

...The Hong Kong Sevens – traditionally a gloriously relaxed event on the rugby calendar – is turning professional. A... \$US500,000... cash bounty... is being put up for grabs from next year, making it the richest invitation sevens event in rugby. The winner of the annual[3-day, 24-team] tournament will get \$US120,000... The cash carrot is aimed at convincing the top teams... to keep Hong Kong in their increasingly crowded diaries,

even if the tournament's future at grassroots level may seem a little less secure after the British colony returned to Chinese rule... [However, the] Hong Kong bank Peregrine Investment Holdings is the new sponsor... [Regular winners Fiji will have an eye on the cash as their 15-a-side squad's recent] economy-style tour... cost them about \$100,000... [Unfortunately, diehard 7]s fans... complain that the event's boozy, party-like atmosphere is being transformed into a boozy, hard-sell marketing event... Tickets are increasingly difficult to acquire and the best seats go to corporate sponsors.

...THE first real battle in N[Z] rugby since professionalism was introduced in 1995 is... be[ing] fought over how often our All Blacks play. In other professional sports there is virtually no rest during a season... [A NZ] softball player now attempting to play his way into the Atlanta Braves baseball team... [currently] plays in a lower grade team run by the Braves... Their schedule is fierce, 160 games, with barely a day off over summer... That sort of relentless competition is also the lot of basketball teams in America. It's a schedule that professional tennis players and golfers might also relate to. British soccer teams can sometimes play three games a week when cup competitions are involved. So why should the All Blacks have it any different? A key element, of course, is the physical nature of the sport. In boxing, at the top end of the body contact scale, taking months off between fights is nothing unusual. There's good reason for that... Rugby might not make quite the same demands on the body, but it's not far behind. Over the 10 games of the... NPC season, [for example, one Canterbury loose forward]... made 146 tackles. As [an] All Black great... said at a recent school fundraiser in Auckland, "in the game now the number of times players impact is a lot higher than it used to be. They're smashing into each other more often, and at higher speeds. Loose forwards will wear out a lot quicker than in the past".

...THE All Blacks will miss the... 1999 N[PC] rugby season as [their] coach... concentrates on the team's build-up to the World Cup... When asked if this would not raise the ire of... [people who want] to keep international rugby away from the successful NPC competition... [because, otherwise, you] don't get the [top tiers] of players rubbing shoulders, passing information... [etc., hi]s reply was emphatic. "Well, it all comes down to whether they want to win the World Cup... If they do, then there's no way we can have our players in there playing NPC right up until we leave." [The coach] believes the All Blacks have been taxed too heavily over the past couple of years and believes the ideal game load for a season to be... 25 to 30... "...To play 36 games in a year is crazy..." ...Many of the All Blacks will be well into the mid to high 30s by the end of the tour to Britain.

...AS THE All Blacks leave today for their first tour of Britain in four years, [their] coach... has called for a globalisation of rugby, bringing together the top international sides from both hemispheres... In his new book *Change of Heart*, which is released tomorrow, [the coach says]... "The real worry that I have about professionalism now is that we in N[Z] have got it organised pretty well – some by accident, some by design – but it is lurching around the world. We can't do it on our own, it needs cohesion... The challenge facing the IRB is to integrate the Super 12 and tri nations with their counterpart competitions in Europe and think laterally about ways to make rugby a genuinely global game. That may involve looking at a global season at the top level... It's a new game now with new opportunities..."

...Six weeks ago... [a] former All Black now based in Llanelli, in Wales, approached the club bosses with a request that his two sons be the match mascots for Sunday's All Black tour opener at Stradey Park... His eldest son... will be clad in the All Black colours, while [his] four-and-a-half-year-old... will be dressed in the scarlet of Llanelli. [Their dad] was due to wear the Llanelli jersey on the field against his old team-mates, but a shoulder injury has now made him a doubtful starter. The last of [his] 27 games for the All Blacks was in Ulster in 1989, before [the No 10] embarked on a rugby league career with Wigan, the Warriors, and Castleford, before rejoining the union ranks last year... [The No 10] was good enough to win the player-of-the-year award for... Llanelli... and has also reignited his international rugby career, playing for Croatia in the World Cup qualifiers. "That's a bit of a laugh, but I had a mate ask me over. We beat Russia but we have to play Italy in June so we need another 10 Kiwis... with the right bloodlines... to pop their heads up for us,"... [says the player who] arrived in Llanelli on a contract reputed to be worth about \$500,000 for a couple of years, too much lucre for him to ignore. When [the player] turned pro in 1990, his initial three-year deal with Wigan earned him just a steady income... [but the player] was not insured when... his leg... broke... [while] with the Warriors... and... though on loan from Wigan... spent the next six months with a busted leg and no income. [The player] went as a bargain buy to Castleford and ran into more woes in Wales... A local caravan-park entrepreneur had promised \$8 million to bankroll Llanelli. The deal went belly-up. The club had to sell Stradey Park for \$3 million this year to help the financial problems. But the 34-year-old [ex-All Black] is still there... There is one bugbear though: October 31, 1972. It was the greatest day in the club's rich rugby history, when they beat the All Blacks 9-3. [The ex-All Black claims to have been] regaled weekly with the match details when [first joining] Llanelli... "I am getting sick of it now though, because I am reminded of it every day. They've re-enacted the match on TV, the score is always on the board at Stradey Park, it's everywhere and getting worse as this game approaches."

...The All Blacks have gained some relief from the threat of a northern hemisphere refereeing nightmare with A[US]ns controlling two of their tests in Ireland and the U[K]... The issue resurfaced last weekend when the whistle of [an Irish referee dominated the Wallabies'] hard fought win over Argentina. A[US]n officials were so incensed with [the referee], who dished out 47 penalties in a stop-start affair[, that they]... want southern hemisphere referees in charge of southern hemisphere tests[in future]. They were unhappy some of the northern hemisphere referees used were well down the rankings in their own country... [By the way, since] the All Blacks arrived in London last Monday, the British media has lauded [the 36 guys] in black as the undoubted kings of world rugby and if you were to believe half the words written by the Fleet St scribes over the past week, they only have to turn up to sweep the four tests. However, [a]... fleetfooted All Black fullback of the '80s, warned [the team] to ignore the fawning tones of its welcome and concentrate on combating an English side which still possesses all the strengths of its 1993 and 1983 models. On both those occasions England emerged from Twickenham tests on the right side of 15-9 margins. [The ex-All Black, who is] now playing his rugby... at the Blackheath club... does not discount a similar shock this time. "If you're a betting [person] the All Blacks have got to be favourites to win the game at Old Trafford (November 22)... It's just another away fixture for them, albeit a very important one, but for England it's practically an away game too. They've never played at Old Trafford before. But at Twickenham (December 6) they've got a huge advantage and... [will] be very competitive there at least... On top of that, when you consider it's just the start of the northern hemisphere season and the players are very fresh, compared to N[Z]'s players who have been going since March, and you've got the prospects of a very close encounter. At the moment the English press is building up the All Blacks and writing off their own side. That's dangerous – I've seen it before." Precisely. In 1983 the British Lions were swept 4-0 in a test series in N[Z] and the All Blacks were expected to make short work of England at Twickenham later in the year. [The ex-All Black said] to heed the lessons of that year, and one decade later when the All Blacks came off a big win over Scotland only to fall at Twickenham.

...AMONG all the turgid prose portraying the All Blacks as the biggest thing since someone worked out how to divide a loaf of flour and yeast... is some good old pro-England chest-thumping... "Now's the time to smash them off their pedestal,"... [said a] rugby writer for the *Daily Telegraph*... [while] urging his boys "to get to know the enemy... to watch them, learn from them, read every feature, every match report... and study the videos six or seven times until you know them as well as... your own team-mates." ...[the] former England second rower... goes on to tell England to understand the All Blacks method, talk them up at every opportunity, lure them into a false sense of security and then call on every ounce of character you've got, intimidate them and, most of all, be aware how privileged you are. "There are thousands, maybe millions, of people who would like to swap places with you, who dream about the chance you are getting,"... [Incidentally, English] rugby is in the midst of gulping a severe dose of financial reality... Saracens last week brought into stark [focus] the unrealistic situation facing English clubs. The first division club, backed by [a] philanthropic millionaire... announced a \$5.2 m... loss for the year to April. The forecast isn't much better for this term. [The backer], who has poured... \$9 m... into the club, has expressed misgivings about... [it]s precarious financial state... [A former All Black who is now the] director of

rugby at West Hartlepool... said salary cutbacks were the only answer... [C]lubs with big money backers set salary precedents other aspiring organisations followed. The result was financial expenditure unable to be sustained by income... "In business [backers] can all be winners with the right people in the right place, but in sport there's always only one winner..." ...Signs the English game is retrenching are around. Saracens spent \$4.3 m... on salaries for 61 players in the previous financial year. This year commitments were trimmed to 32 fulltime players and five coaches. Newcastle, another of the big spenders, has transfer-listed its star international fullback... rather than meet his \$500,000 contract demands.

...THE All Blacks feel they have been duped by England's R[FU] over their midweek tour opposition... [I]t seems certain [the] team will play three successive midweek matches against what is, to all intents and purposes, an English A side[, which goes]... against the spirit of the tour agreement... [England's] coach... will run the non-test element of his 40-strong squad in three matches... "The N[ZRFU] has written (to the RFU), complaining and asking the tour to be restored... It's... better to have a variety of opponents..." ...[but the original tour schedule is even less likely to be restored than the] Shrine of Rugby Remembrance, the spot where Bob Deans had his try disallowed during the 1905 All Blacks' test against Wales at Cardiff Arms Park... That piece of historic turf in the north-east corner of the famous ground has gone... as developers build a third-generation stadium... All that was left yesterday when we visited was... a portion of the North Stand... In place of the old ground will rise a new 73,500-seat complex, a stadium with the only retractable roof in Britain, a multisport and recreational arena at a cost of £120 million... The National Lottery will fund half the cost... Demolition of the ground, which received its last facelift in the 1980s, began after the Welsh Cup final in May because the capacity of 50,000 was considered too small, corporate facilities were non-existent and other facilities were substandard... [M]ost of the old ground facilities which could be uplifted were sold at a public auction. Pieces of the turf, memorabilia and even the seat from which Princess Di... used to watch games, were all sold... [However, there] were massive objections to the new complex, one of nine projects earmarked throughout Britain for the new millennium. Locals howled about extravagance, unnecessary waste and the destruction of history.

...It was billed as the Carwyn James memorial match... James coached the Lions to their historic series win in N[Z] in 1971 and a year later orchestrated the... famous... Llanelli... win... Now gone to the playing fields on high, James would have beamed down on yesterday's massive 81-3 All Black win... and approved... The All Blacks produced the running game and consequent enjoyment which James espoused... [According to the] *London Daily Mail*... "The rugby with which they tore Llanelli to shreds came not from the other end of the world, but from a different planet."

...WHEN you start getting thrust into the same sentence as the big guy upstairs, it's enough to get the head spinning... If... the All Blacks' 21-year-old fullback with speed, skills and strength to make you salivate... wasn't such a level-headed young [guy] with a personality rounded in the provinces and ego kept in check by a sensible family, [the No 15] might indeed believe [the press articles which say the player] has the gifts of a god... Never before has a once-proud Welsh club been humbled by such a margin against the All Blacks. And never before have they seen such a display by a fullback... "[The No 15 is] even better than we expected," was the general tenor... [in] the press section of the main stand... [A former] Welsh great... who was known to possess some slick skills himself in his day, was amazed... "I have never seen anyone like him," [the Welsh great] said after the game, the memory of Llanelli's famous 1972 9-3 win, in which [the Welsh great] played, finally dispatched. "The mind boggles at the sort of damage [the No 15]'s going to do in the internationals coming up. From one to 15 this is the best [All Blacks] team I've seen." Phew! But wait, there's more. [A former] England first five... referred to [the No 15] as "the gilded, gliding assassin" and it was [a] *London Daily Telegraph* rugby correspondent... who came up with the most divine praise. "It is said that [the uncapped reserve No 15 is pushing the 1st-string No 15] hard for the fullback spot... On this evidence, [the reserve] must be a celestial talent himself for [the 1st-string No 15] truly plays the rugby of the gods..." ...On, and on, it went... What [the No 15] produced against Llanelli... should not be a surprise. That his abilities have so excited the Brits probably has more to do with the fact that unless they see it with thine own eyes, they don't tend to regard it so reverentially... [The No 15] has averaged a try a game in 18 tests, the only player in international rugby to have achieved such a feat. His four touchdowns against Llanelli took his tally to 74 in 75 first-class matches, which compares favourably with a couple of other scoring supremos, [the All Black No 11] (59 in 68) and [No 14] (92 in 133).

...Wrinkly rockers the Rolling Stones are ready to paint it black for the [guys] in black. But there'll be no sympathy for the devil... Stones stars... asked for autographed... team jerseys as part-payment for rights to use Paint it Black in a Steinlager ad... campaign featuring N[Z]'s finest... beginning tomorrow. Payment includes a six-figure sum... and a supply of Steinlager... But it is understood they are trying to secure tickets to matches on the team's tour... said... Lion Breweries spokes[person]... "It turns out they were quite big fans of the All Blacks." As are a convention of priests in the All Black's Dublin hotel as the players prepare for tomorrow's test match in Ireland... [Like Scotland, Ireland (which is represented by one rugby team – unlike in soccer, where the island is represented by the Republic of Ireland and Northern Ireland) has 'been trying to beat the All Blacks for 90 years'. ● The] All Blacks will net the N[ZRFU] around \$4 million from their tour of Britain and Ireland, prompting[the] team manager... to issue a warning that the world's most successful rugby team not be regarded as a cash cow. The Irish test... it is believed, [will earn]... the national union... around £200,000 and already it has been agreed that the All Blacks receive a \$US1m payout from the sellout Twickenham gate. Add in a sold out Old Trafford test against England and a Wembley international against Wales... and the N[ZRFU] coffers will be significantly enhanced.

...[the] England rugby coach... yesterday doubted the All Blacks would be losing any sleep at the prospect of playing his young charges at Old Trafford in a week... [after] his... team snatched a 15-15 injury-time draw with A[US] at Twickenham... The match failed to inspire any enthusiasm from the capacity crowd... who treated the players to a dose of slow-handclapping after the match descended into a display of loose kicking, spilled passes and unimaginative attacks. The mediocre contest, which A[US] dominated and should have won, contrasted dramatically with the All Blacks'... seven tries to two... demolition of Ireland in Dublin... Irish newspapers yesterday mourned... [their] team's... record 63-15 defeat... [but the] *Sunday World*... said of [the All Blacks'] five-try second half: "This was total rugby with no discernible difference between backs and forwards, a constantly moving mass of black-clad players producing the nearest thing to perpetual motion it's possible to achieve on a rugby field..." ...It had the crowd of 53,000 buzzing about the visitors entering a new time zone of sport...

THE[*unsmiling giants* 'intimidating aura prompted a journalist to write that NZ wears black "cause they're in mourning for their opponents"' ■ The] first win was scored by N[Z] over England... overnight... The England-A[US] match, carried live on BSkyB TV in Britain, attracted... 500,000 viewers, reaching... 20% of homes capable of receiving satellite t[v]. The Ireland-N[Z] match, screened live on free-to-air BBC1, was watched by 3.5 million... No doubt these... figures will rekindle all the arguments which erupted 18 months ago when Sky outbid the Beeb for the rugby rights.

...GET SKY INSTALLED FOR JUST \$25 AND SEE THE BRITISH BOW DOWN BEFORE ROYALTY. It's the crowning glory in this year's scintillating All Black season, exclusively live on SKY. England and Wales take on our Tri-Nations champions, plus there's exclusive coverage of the Wallaby and Springbok tours of the UK. So make that call and get set for a battle royale to round off the rugby year... Special conditions apply. Offer includes standard UHF installation and use of aerial and decoder. Offer excludes satellite areas. First month's subscription is payable in advance. SKY may not be available in all areas. Offer expires 8.30pm Friday[. ● Local rugby fans who don't take advantage of this offer – or don't already have pay-TV – can watch delayed coverage the following afternoon of each test (8.30am for midweek games), or listen to live radio commentary]...

After a remarkable recovery from illness, the world's most feared wing... has been recalled to the All Blacks for Sunday's test against England. Sidelined until October with a rare and serious kidney complaint, [the No 11] has made such progress in only seven matches since then that [it] forced the selectors to... [give him a] start... The choice will deliver a host of bad memories for England supporters. They are still trying to deal with their second-best side being thrashed yesterday 59-22 by the midweek All Blacks, while [his] reintroduction will remind them of the destruction

[the No 11] inflicted on England at the World Cup semifinal in 1995... [Unfortunately, only] an emergency will have [the All Black captain] stripped for rugby action on this All Black tour but [the hooker] has not yet discounted a record fourth World Cup in 1999. After aggravating his right knee injury during training for the first game, [the No 2] battled through one further session and is now struggling to complete his gym work. That will eliminate him from selection for Sunday's test... There is unlikely to be a call for a replacement hooker; if need be [the No 2] could act as a reserve for the mid-week squad... [In the meantime,] his role has shifted to a quasi-managerial, coaching and motivational portfolio[(perhaps it should include minding the team's gear – some)... people... cleared off with souvenir All Black training gear [after the Irish test]...]

After the late night end to the midweek match... [– the start of which] was delayed 20 minutes because of traffic problems... [–] the food ran out at the aftermatch function and a check with the team hotel found no joy there either. Even McDonalds across the road was shut but some persuasion... had the fastfood outlet opened again after midnight where the famished squad filled their stomachs and the tills... [The No 11 – who has made TV advertisements for the fastfood chain –] told Channel 9's *Wide World of Sports* that... "I spent \$44 at McDonald's and the guys thought I was ordering for everybody." But no, the order was for the big fella himself. It allegedly included seven cheeseburgers and six Big Macs.

...Will the world's most feared wing return to the international arena with the same venom [the No 11] had at the last World Cup? His story is remarkable already and [the No 11] has only just gone past his 22nd birthday. From being the youngest All Black in history through... to... [refusing] \$6.5 million to play for an English rugby league team... [and, finally,] this year's recovery from a severe kidney problem. No wonder the English public can't get enough of him off the field, while the England rugby side waits with some trepidation to find out if [it] will steamroller them... again... His opponent on Sunday... trots out the standard replies about giving it his best shot and hoping [the Tongan] doesn't get too much ball in open territory. At 1.75m and 82kg, [the opponent] is giving away 38kg in weight and is 20cm shorter than the All Black colossus... though [the Tongan] will be nervous, too, about stepping back into the test cauldron... [The Tongan claims to have been] stunned... when... his name... [was] read... out at the team selection meeting... It had crossed his mind... [while] undergoing... drug treatment for his ailing kidneys... that[his All Black career could be over.

...the NZRFU] chief executive... returned from a meeting with his equivalent at the famous Manchester United soccer club optimistic that one of the world's more unlikely liaisons could reap rewards for the oval ball half of the partnership... [The chief executive] believed soccer's most popular club had a lot to offer rugby's most popular team. "I wanted to take a opportunity to have a closer look at one of the great sporting brands in the world... In certain areas, such as sponsorship, we're on a par with... United. But in other areas we're well off the pace." ...[the chief executive was especially] interested in the way Manchester United had extended its empire to the point where it produced its own merchandising – "they had £5million... worth of gear in the warehouse that I visited"... [The NZRFU's annual] merchandising revenue is... around \$2m... [His meeting with the] United CEO... – just a day after the world's biggest soccer club announced a record £27.6 m... profit – completed a cross-code axis. A day earlier [the]All Black coach... had had a lengthy discussion with [the Manchester United manager...

The guys in black are in] town, but soccer-mad Manchester d[oes] not know them from a successful England rugby goalkicker. The *Manchester Evening News* splashed [a] scoop of rugby's finest "taking a break from training" at a strip club after two canny Kiwis enlivened their stopover by conning locals into thinking they were All Blacks... [The photographer] said they were "big... very, very big" and "popular with the [gals]." An indignant All Black camp cannot see the funny side and want an apology from the paper... [Ironically, murmurings] are that the All Blacks are being locked up so tight that their enjoyment factor on this trip is minimal. They are kept to a very strictly regimented diet of meetings, trainings and appointments. [Will] the lack of enjoyment be... reflected in... lacklustre All Black displays?

...To win tomorrow the All Blacks need only continue their concentration. Were England to find victory it would compare with producing a genie from a bottle. In skill the All Blacks are way in front... Complacency would be the only All Black enemy... and perhaps the weather, which does not promise great things... [By the way,] *Spectator* magazine... has invented an awfully funny, jolly joke about N[Z]ers in order to cope with the fact that the All Blacks are, with brains and flair, beating the hell out of the prancing English upper classes at their favourite game... 'How many N[Z]ers does it take to change a light bulb?' Answer: 'I'm sorry, Jim, I don't really understand what you're saying. It only ever really takes one person to change a light bulb. You just take out the old one and throw it away, then you get the new one.' ...I was at a writers' conference in Britain earlier this year and, after listening to the Pommy delegates constantly demurring, I invented the English joke: 'How many English people does it take to change a light bulb?' Answer: 'Change it? You colonial simpleton, that's one of the oldest light bulbs in the world. It was glowing when Queen Victoria was alive. It's part of our glorious past. We don't change our light bulbs, we prefer to live in the dark.' ...[the *Spectator*] says the English play rugby with confused notions of... fun and character-building while the All Blacks play with a hard, cold purpose: a methodical game plan clearly thought out and put into practice without flinching or grudging... [The *Spectator*] also... says the N[Z]er faces the world as defensive, plonking, half-aware that something is going on but unable to see quite what, and when the Kiwi visits places which pride themselves on their sophistication, [it] feels second-rate. Now I happen to... be a tad more analytical in my defensive, plonking way. The English rugby players certainly know what's going on but they don't know why. They've lost the plot... The unsophisticated All Blacks score tries and win and the English delude themselves it's someone else's stupidity. When I was a kid, we were told over and over again of the great English virtues: they always muddled through and could laugh at themselves. Well, now they just muddle and we laugh at them.

...[England's] rugby coach... has delivered a stern warning that the game in his country must change dramatically or risk being trampled into the ground by N[Z]. The coach] has even gone so far as to hint that revolutionary change could be in the wind. It was bold talk from the new England coach on the eve of the test against the All Blacks at Old Trafford, but [the coach] clearly believed that it was time for strong words as rugby reached crisis point in this part of the world... [The coach] is dismayed that England does not have a level of play between club and international rugby, such as the Super 12 competition[, and] is... equally dismayed that so few England players feature in elite club play. "...our 12 top clubs... have... over half the places filled by non-English players. It's what rugby league did up here and[British] rugby league is an absolute disaster at the moment because of the influx of overseas players..." ...[the coach] used the example of Harlequins' signing of... the All Black No 8. "We've got a situation where the... RFU pays... out money to clubs... [It gives] Harlequins £500,000 which is a lot of money, and then they sign an overseas player. Back in N[Z] the headlines are '[No 8] retires'. So instead of spending our money generating young players we're spending it on [an All Black]'s retirement. We're now paying his pension." ...[the coach] estimates that out of 250,000[English] rugby players... only 70-80[are] competing at the top level... [The coach] would like to see a European-wide competition where England had, say, four teams and thus had its top 60 players on the field week-in, week-out against the best from the northern hemisphere. The logical progression from that, [the coach] said, would be for the winner of the European competition to meet the winner of the Super 12 to find an unofficial world champion. Likewise, [the coach] can see considerable merit in pitting the winner of the tri-series against the Five Nations champion in an annual fixture which would not only provide huge interest, but would be a big money-spinner. "I can see all these things taking place. It's all part of the globalisation of this game. It's what the people want and I think it's what the players want... That's what I love about... [the All Blacks' coach. Their coach] wants a strong England team... [and] a strong northern hemisphere. [Their coach] doesn't want to see the All Blacks just belt everybody, [but] wants to see full-on international competition..."

...There are several reasons why England have not been able to compete consistently on a level footing with the All Blacks – some are changeable, others are set in concrete. Rugby is not the No 1 sport here; soccer is a religion, top professionals are paid in telephone numbers, and young [boys]

want to play soccer for England. Rugby is seldom played in the state schools so the majority of schoolboys and perhaps those with the greatest hunger to play pro-sport have little opportunity to be involved in rugby... Finally, and perhaps most critically, is the difference in players' and coaches' attitudes about how to play the game. Those attitudes are created by how the game is refereed and by the weather... [Northern hemisphere referees] give greater leeway to the team not in possession at lineouts and at the tackle, so continuity of possession is decreased. Add to that playing conditions and you have a more physical, less structured game – a game where ball retention is difficult. This results in more kicking, both for touch and position, and constrictive back play. The development of athletic attacking ball players is diminished. In time there will be positive change. With 30 times more players in England than in N[Z], the worm may turn.

...A half-way square-off during the haka when[the] England hooker... eyeballed [his opposite number]... set the tone for a scrappy forward confrontation in the... test at Old Trafford yesterday. "I thought it was totally disrespectful and I am disappointed the match officials didn't keep the[English players] back... That sort of thing doesn't have any place. To have some respect for our traditions and culture is all we ask,"... [the All Blacks'] coach... said afterwards... There was niggles from both packs throughout; the seventh-minute punch that flattened... [the All Blacks' No 9] and nearly removed the All Blacks'[new] captain from the game was close to drawing an historic first citing last night from [the coach]... At one stage, there were thoughts of substituting [the No 9] because of fears [that the player] had a broken jaw. Later x-rays uncovered bruising but no fracture... Late last night... rugby politics appeared to have entered the fray, with... [the coach indicating a desire to] hold off on an official citing if England took sufficiently strong disciplinary measures against their lock... While [the coach] did not condone his centre... punching[an English] flanker... late in the test, that had been in retaliation, and[the] referee... had dealt with it. Until the... [7th-minute] punch there was little evidence that the powderkeg beginning had seeped into the match. But England[– who play in an all-white strip –] did bring a physical power lacking from their recent play. "We had to take [th]em out at the front office and play them in the backstreets," was... [the appraisal of England's] centre... England also ended the test in bizarre circumstances when, to the bemusement of the All Blacks, they did a lap of honour of the stadium... They claimed they were saluting the crowd support, but you had to feel they found some satisfaction with the margin of their 8-25 defeat despite the raft of disappointed comments later... The contrasting reactions gave a clearer image than any words. The All Blacks stalked away from Old Trafford... unhappy with many things, staggered by the English insult to the haka, [the] king hit on [their No 9 from the] Lions skipper... and their inability to bring enough composure to their play... If the attack was a little astray, the All Black defensive pattern was secure save for one late hopeful infield pass which several defenders overran... [allowing England in] for a try... Inquisition will be the All Black task for the return test... [However, had] the All Blacks won well[yesterday] there might have been the danger of a letdown at Twickenham.

...The All Blacks enjoyed dainty sandwiches and delicate cream cakes but refused more fat-packed snacks when they took tea [yesterday with the] Queen. Buck House chefs laid on platefuls of rich treats that were left untouched... [Incidentally, an English] lock... was last night suspended for one match over a punch that floored... [the All Black No 9. There's] a real dichotomy in rugby over the issue of punching. The public face is that it's outrageous and deserves punishment. The private face is that biffos become legend, and aren't often presented in a bad light. What saved the All Black outrage... from hypocrisy was that [the English lock] blindsided the All Black halfback, hitting him from behind when [the No 9] was in no position to defend himself in any way. That's the reason [why the All Black centre whacking an] English forward... wasn't in the same league... [Both players] were face to face. It wasn't right, but it wasn't reprehensible... [However, when] you discover that the usual punishment for punching in English rugby is a 30 day suspension... [it looks like the English lock got off almost] completely scot-free.

...The first real broadside from the English press brought some sizzling retorts yesterday from the All Blacks. There has been the occasional tame flick from the racier tabloids but a column from a former England lock and now *Daily Telegraph* writer... accusing the tourists of systematic cheating at the breakdowns at Old Trafford hit the mark. [The All Black manager] led the charge, declaring... [that to] suggest the All Blacks killed the ball on the ground or gave away penalties rather than possession was an insult to the style of rugby the side aspired to... [The All Black coach] said the great disappointment was being accused of achieving what they had through cheating... Meanwhile, demand for tickets to the Wembley test is so feverish an extra 5500 have been put on sale, taking the crowd to 78,000.

...As the All Blacks prime their arsenal for the Twickenham finale this Sunday, their worries will be about [one] of the big guns in the pack... [The No 1] damaged his neck when a scrum collapsed... in the 42-7 cleanout of Wales yesterday... and... appears... [a] doubtful starter for what would be his 50th test[, thereby making him]... the first All Black prop to play 50 tests... As many as five tries were missed[yesterday], but it looked like the All Blacks were saving the real execution for next Sunday... [when they attempt] to compete the perfect 12-from-12[test] season... This test[(the start of which was 'delayed due to a traffic jam')] always had the feel of being just an interlude before the chance of putting on a top-drawer performance against England... [– who, on] the other side of London... were sliding to defeat against the Springboks... The test XV certainly want to ram home their superiority... [in what will be their No 8's] 100th and last game for the All Blacks... The worry will be that they peaked too early.

...A CLOUD hangs over television coverage of next weekend's rugby test... due to a row between rugby bosses and Sky TV... [The RFU chairperson] said it would meet its obligations under the \$NZ240m deal with BSkyB. However, [the chairperson] confirmed the RFU was seeking urgent talks with BSkyB over the package which gives Sky the exclusive rights to screen all England's tests for the next five years. Under the agreement, England must play two pre-Christmas tests each year against either N[Z], South Africa or A[US]. This year, England will be playing four tests and the RFU now believes it should receive extra fees for the additional two tests... [The chairperson] has estimated the extra revenue for BSkyB from the two additional tests would be \$5.4m... [N]ewspaper reports yesterday said the fourth test... might not be screened... [at all if the RFU doesn't back down. In further news from the UK, British bookmakers have] installed... the... All Blacks... as 28-point favourites.

...The midas touch deserted the All Blacks yesterday at Twickenham... [as] England blew out the candles on [the All Black coach]'s birthday cake... though the[All Blacks] did scramble a 26-26 draw after trailing [3-17 after 16 minutes and] 9-23 at the interval... [The All Blacks] made the near-fatal mistake of buying into all that "omnipotent" talk and England cashed in... The tourists went too wide too quickly... but... lacked up and at 'em grunt... and were... smacked with three unanswered tries... [However,] the All Blacks will look back on an afternoon when... [they missed] about half a dozen tries which they would normally have scored. That they could salvage a draw was some reward for a tour of pulsating style and athleticism where the greatest compliment came from England, who knew they had to emulate the All Blacks to reach a new level in the sport... England were everything [the All Blacks] had been in their eight previous matches... They played the game at wondrous pace of thought and deed. While the All Black machine spluttered and misfired, England threw off the shackles of Northern Hemisphere conservatism and played with a freedom which had[their] coach... and 75,000 others, pinching themselves to confirm they were not dreaming... All square... [with] 10 minutes left, both sides were out on their feet. They still attacked but with a carelessness brought on by fatigue... Anything but a draw yesterday would have been an injustice to a match where both sides put adventure ahead of safety... A nation reared on a diet of penalties and opportunist tries is heartily grateful to... an All Blacks squad who have both inspired and educated during their month-long stay...

THE 1998 N[Z] Barbarians rugby team that will follow in the footsteps of this year's All Black conquerors of Britain and Ireland is set to reap a multi-million dollar payout. The N[Z]RFU is still negotiating a tour schedule and match fees for next year's visitors, who will come for around six matches, including two against full international opposition... And although the Barbarians will not be an official N[Z] representative side, it will still be close to test strength and viewed thus by the British. Given that this All Black tour has reaped the NZRFU a gross [of]... around \$3 million, it could be accepted the Barbarians would be worth about \$1.5m... After two loss-making years, the... NZRFU... will post a \$1m-plus profit...

An approach has been made to the N[ZRFU] to have the All Blacks play a test match against the Wallabies in Japan next season. The offer is from a Japanese consortium which said it is interested in putting up \$8 million. [The]All Blacks team manager... said the programme (of seven tests) was already set for next year. "...But we have a responsibility to maximise our income." ...[By the way, as far] as the All Blacks have come in the past two years – and[their] coach... believes it has been further than... his wildest dreams – there is a menacing shadow about to cast itself over the world's most popular... rugby team. It is called... [the Springboks, who] tore up the record books as they completed a hugely successful European tour with a 68-10 demolition of Scotland at Murrayfield yesterday. They ran in 10 tries, making it 35 in five tests, and inflicted on Scotland their heaviest defeat ever. It came a week after the Springboks scored a record 29 points against England and a fortnight after they savaged France by a record 52-10... [An] international rugby panel has rated the Springboks to beat the All Blacks if they played a rugby test tomorrow on neutral ground... [However, a] former Wallaby coach... [says]: "I wish they had played a match between N[Z] and South Africa to complete the 1997 international programme. I would take the All Blacks to win because they combine better than the South Africans. The Springboks are playing a game of great speed now but without much subtlety or control of the ball. Under the sternest of pressure, N[Z] can still control the game, whereas South Africa don't seem to be able to transfer the ball with that much security in tight situations.[" The former Wallaby coach]... refused to let his thinking be clouded by that 26-all draw, reasoning that N[Z] had their worst day for years against England in ball control... The All Blacks' disappointing tour-ender... did not deter four of the world's leading rugby writers from stacking their 1997 World XV with nine All Blacks. There was no argument as to the best fullback, first five-eighth, No 8, hooker and tighthead prop – all... incumbent All Blacks.

...Where to in 1998 for the All Blacks? ...Planning has started already for next season and beyond and the form of players in the Super 12 will have an impact on any changes against a promising England and a resurgent Springbok side... With [the No 8 retiring, only the] captain... seems in doubt for another go at the world's best... The captaincy will be an issue if [the hooker] does not front up.

...I was hanging a poster... on my five-year-old's bedroom wall... last week... and [despite his rugby career being over]the little fella was pretty excited about having the All Black captain look down on him. Then in walks my wife and spoils the party. [My wife] was unhappy with... the piece of art. The poster has only a handful of words, written as though sewn into the label inside the jersey. It read – Care Instructions: Care about nothing but winning. My wife thought that was hardly an appropriate message to be getting across to our children. I felt that was a bit much coming from her, especially considering [my wife is] South African. The Springboks hardly have lesser ideals when it comes to rugby. Maybe it was the fact that... one of the most reviled [people] in the republic, was going to be hanging almost life like in her home in Godzone. I'm all for the fair play charter and the fact that our youngsters should be simply playing some form of sport rather than worrying about the result. But when it comes to serious sporting business... then the ideals of the All Blacks are the very reason why they stand alone as our dominant team in terms of world sport... Can you imagine a satisfied All Black after a six-point loss to the Wallabies or ...[B]oks? Chances are [it] wouldn't be an All Black too much longer... They simply won't accept second best when it comes to preparation, performance and results. It's part of their whole psyche. They have confidence bordering on arrogance... If a few more of our top teams and sportspeople could adopt a similar attitude, there would be... more champions coming from a country that already over-achieves for its small population base. For too long the "nice guy" image... associated with... Kiwi sportspeople has translated into minor placings. Sometimes, it seems, we are too nice. Sure we'd like to be remembered as nice people. But heck, let's not forget why we play sport at the highest level. That is to perform up to and beyond our ability and, ultimately, to win. Few people remember second placings. Who... came runnerup at... Wimbledon? Which team lost the World Series...? Can't recall? It's not surprising... We should never condemn the All Blacks for their lofty thoughts and attitudes. We should only try and emulate them. That's why the poster is still hanging in the little fella's room... [The fella] might never be an All Black, but... can still learn a thing or two from them, no matter what mum says!

...HEAVEN knows we could do with some humour in N[Z] sport every now and then. The All Blacks in particular have been accused of being p-faced and too serious by commentators for years. "Unsmiling giants" is the nick-name some British journalists gave the All Blacks so long ago I can't remember. The nickname is usually trotted out at the beginning of every British tour. As the bleary-eyed team disembarks at Heathrow, the five seconds of air time the BBC 6 O'clock News devotes to the arrival usually contains some variation on the theme of "unsmiling giants, here to win, known for their rucking, hopefully the referees will sort them out." Rugby is of course a serious thing in N[Z]... This is one of the main reasons why we are a consistently successful rugby playing nation... From the aspiring schoolboy to the hardened All Black our players know that to succeed takes lots of time and lots of hard work. The match itself is of course a terribly serious thing. Eighty minutes of blood, sweat and toil. Eighty minutes of smashing over the advantage line and setting the ball up properly. Eighty minutes of perfectly accurate passing and kicking. Eighty minutes and not one missed tackle. Pressure, pressure, pressure. We also take rugby very seriously in N[Z] because we have a lot at stake. Our long tradition of winning has given us a lot to lose. The players play to live up to the standards that they have been set by previous teams. The public require victory to confirm their belief in our national superiority. "Only three million people and the best in the world," we say to ourselves.

...160,000 Kiwis play the game. By contrast, South Africa, with over ten times the population, has just under twice the number of players... - 1997

The American[Eagle]s'... match against Ireland scored an unprecedented page four lead in the sports section of that influential journal of record, the New York Times, spread over three columns plus a photo. For US rugby it was... "...a huge deal... It's never happened before, or at least not since I've been here,"... said... a N[Zer who's been the] New York Rugby Club coach for four years... [and] has worked in the States since the early 1980s... Rugby in America has struggled for a profile despite appearing in the first world cup in 1987[. but the]... coach... believes the US will have a professional league up and running within two years, and that will be bolstered with the recruitment of athletically-gifted grid-iron players who can't make the NRL... America will then become a force in international rugby... America... already has more adult rugby players than N[Z].

...The official 1995 Rugby World Cup Anthems Album booklet lists the following: N[Z]: 1000 rugby clubs, 182,500 players. England: 2405 rugby clubs, 375,000 players... [Incidentally, the] 1924 All Blacks have been voted the best team ever to tour Britain by *Rugby World*, England's chief rugby magazine... It... rated the 1997 All Blacks as the fourth best to tour behind the 1984 Wallabies and the 1951 Springboks.

...N[Z] is clearly the top rugby... country in the world, according to an international ranking list released... yesterday. Since January 1, 1996, the All Blacks have won 20 out of their 22 tests... [and] scored 912 points, almost twice as many as England who are ranked fifth. The... [All Blacks' 93.18%] success rate... is miles ahead of... nearest rival France, with a 65[% winning rate. AUS]... is third on 63[%], just ahead of South Africa.

...France have played more tests than any other nation. They've won 307 of their 572 matches, a 54[%] success rate. N[Z] are well down on the list of tests played, with 369, but their winning ratio of 72[%] is by far the best. South Africa, who have played 292 tests, have the next best win ratio of 63[%]. ■... Pierre de Coubertin brought the game to France after the humiliating defeat in the Franco-Prussian war, and... was convinced it could stiffen the sinews of a demoralised ruling class... French rugby union was virtually saved in 1941 when the... Vichy Government... banned the booming sport of league... and... seized... League assets... (Union was in decline, and the national team banned from the Five Nations for violence.)

...France, once regarded as the most flamboyant team in European rugby, were given a lesson in flair... yesterday when Wales scored only their second triumph in Paris in 26 years with a 43-35 win. The French, who began the [Five Nations]tournament keen to prove they were the Northern Hemisphere's best team, suffered their second defeat after a late drop goal and try from [the Welsh]first five-eighth... Wales came back from an early French try... [and o]n a day perfect for rugby, it was the Welsh who were throwing the dummies, producing the clever switch-passes and

using their speed to exploit the open spaces of the Stade de France pitch... Wales[’ NZ-born] coach... was full of praise for... [his first five-eighth, who scored a total of] 28 points... bec[oming] the first player to surpass 1000 points for his country.

...Wales and Scotland get down to the relatively uncomplicated business of playing rugby tomorrow after a week of controversy about who should be allowed to pull on their national jerseys. Wales’ preparations for the... clash have been dominated by eligibility doubts over their N[Z]-born players... both of whom will miss the game... More importantly, the Welsh go into the game without their influential first five-eighth... who misses the game because of a shoulder injury... Scotland, who have 11 players in their top squads who qualify through the nationality of a grandparent, including their N[Z]-born captain... announced this week that they plan to fight proposals to scrap the grandparent rule. The Welsh will be looking to restore some pride with a victory and take the pressure off... [their coach – the] former Kelston Boys High School principal... [who] left teaching to devote himself to rugby... in the nascent professional age[, a decision which, following a successful stint]... with the Auckland Rugby Union[, led to him taking]... on the task of reviving the rugby fortunes of a proud nation[(s)uccess came swiftly, with landmark victories over South Africa, France and England giving H[im] the tag of the “Messiah”... and... his coaching tenure with... the British Lions...]. The team’s NZ-born f[ullback]... who has been dropped pending the outcome of an inquiry, has played a key role in attack and defence this season. His place has been taken by another N[Z]er... the latest Kiwi recruited by [the]former Auckland coach. More controversy surrounded [the replacement player]’s eligibility but his grandmother’s birth certificate confirmed his qualifications during the week.

...*Wales fiasco creates leak that needs plugging* Someone ought to make a movie out of this. Perhaps the title could be *Plugging a Leak in the Family Tree*. [A rubber-faced US comedian] would naturally play the lead as... the Kiwi hero who ransacks the upper valleys of Wales for evidence of the long-lost grand-daddy. The pronouncement by the Welsh Rugby Union that [the fullback] and his co-conspirator... are guilty of illicitly masquerading as Welsh... until proven innocent by the production of a grandparent’s birth certificate, is worthy material for high farce. It reveals, as if further evidence was needed, the blundering nature of the I[RB], which has decreed all this. Listening to... the Welsh chair[person] of the IRB, trying to put a rational gloss on it is like listening to someone from Winz telling us how to administer student loans. Surely the IRB can come up with something a bit more cooperative than requiring anybody who opts for one country over that of his birth to produce hard-copy evidence of his ancestry? Like asking a Maori for written evidence of his or her whakapapa, it often just can’t be done. Is the IRB asking [another NZer] for a piece of paper that testifies to his Japanese ancestry? [That player’s famous All Black fullback] dad... might have a bit of a problem with that one. Stand by for an international incident. The whole business of who gets to play for what country needs to be sorted out... At the moment we have a more or less open season for mercenaries. There is heavy traffic in players heading in all directions. Pacific Islanders are fleeing the impoverishment of their own unions in search of riches in A[US and NZ] and opting for local eligibility. Needless to say, this serves N[Z and AUS] rather well but it permanently cripples the game in Samoa, Tonga and Fiji. Legions of players from just about everywhere are beating a path to the doors of the cash-rich Japanese companies who run rugby[in that country], and much the same thing is happening in Italy, who rushed an Argentine into their national team with indelicate haste. What to do? The simplest solution is to restrict eligibility to one’s country of birth, as the Home Unions in Britain used to do... In that way there can be no confusion. We will not witness the ridiculous spectacle of players tracing a fanciful ancestry through the files of some distant register of births, deaths and marriages in a country with which they have no emotional or material affliction. It is, after all, a bit easier to produce your own birth certificate than that of the mythical grand-daddy... [□ The] fullback... has said his maternal grandfather was a... Thomas Williams who was born in Cardiff. The Maori register, however, shows his grandfather was a full-blooded Maori called Hare Matenga Popata, from Oturu, north of Kaitiaki... [But] in a Welsh newspaper interview on Saturday... [the fullback insisted:] “I am Welsh. I have never had any doubts about that.” [The f]ormer All Black... said the family had a secret which hid his true claim to play for Wales[but the player] was reluctant to go public with all the details because it would mean humiliating his mother.

...BOOK NOW AT TICKETEK... [for the NZ] PREMIERE SEASON OF THE HILARIOUS AWARD WINNING COMEDY... *ALONE IT STANDS*... [a play about the scoreline] MUNSTER 12 ALL BLACKS 0... THE GREATEST UNDERDOG VICTORY IN SPORTING HISTORY!

...Had the rugby folk of 47 years ago been projected by some freak of time into the winter of 1997, they would have fallen about the place laughing. What on this orderly strait-laced earth were those rugby players doing, wearing those gaudy, technicoloured jerseys, pants and socks with logos...? Was this some circus act? Did the players even hug each other as consenting adults were not supposed to do when a try was scored? Rugby in the early 1950s contained some brilliant players... a few... still find themselves picked in the “best-of” selections which still abound... It matters not that if the time warp could be extended to play a game between, say a team of the 1950-60s and another of the 1980-90s, the fitter, faster, stronger modern marvels would win. But if the stars of the last two decades could be transported back to play in, say, 1956, they would find a very strange, difficult and different rugby environment. In those days, for example, fullbacks wore No 1, hookers No 14... You could kick the ball into touch on the full from anywhere. Occasionally games could contain 100 lineouts – and lifting the jumpers was illegal. Shoulder pads, any padding was banned unless you had a doctor’s certificate saying the padding was necessary. The wings threw the ball into the lineout... Time-and-motion experts used to work out that in a game there might be 18 to 20 minutes of action in each half. [Half-time breaks were once a few minutes long (modern first-class games have at least 10 minutes rest). Tries were worth 3 points and conversions were worth 2 (nowadays tries are worth 5 points, conversions 2, penalty and drop-kicked ‘field goals’ – which once were worth 4 points – 3; in comparison, tries are worth 4 points, conversions and penalty goals 2 points, and field goals 1 point in rugby league). Editor’s note: The value of penalties and drop-kicks in rugby union enable weak attacking teams (e.g., England) to accumulate points from long-range rather than attempting to cross the try-line of a strong defence.]

...You know the feeling. A couple of minutes to play, “your” team a few points down, hot on attack. Desperate for one last charge. A lineout conceded, the forwards ready, but wait, the opposing hooker calls for a committee meeting, precious seconds... lost... and... the game[is over]... Calls for a penalty for time wasting falls on the referee’s deaf ear and the vanquished turn and trudge off. In these days of professional sport, time wasting has become an art form, one the public and opposing teams should not have to tolerate... Tardy throw-ins... the preoccupation of halfbacks... in delaying the put-in at scrum time and players who hold the ball or kick it away when a free kick/penalty has been awarded, should be jumped on... Analysis of... matches a season or two back showed there was less than 20 minutes of actual play in each half of a game. Boring.

...AS THE turnstiles click [while NZ]’s wavering rugby patrons enter grounds these days, they might be issued with a bottle of NoDoze and a set of ear plugs. Boring rugby and the shrill sound of the referee’s whistle are... [killing] our national game. The final straw came at North Harbour Stadium last Saturday night. It was the fourth week of the Super 12 and, with one or two exceptions[, it]... made watching the grass grow a pleasant diversion. What the Auckland Blues and Queensland Reds served up that warm night was the nadir of this season of shame. As in, shame about the rugby. The... tired old penalty-ridden game[had lurched] from one set piece to another and[was] decided (or in the case of the Blues, not decided) by goalkicking and infringements. That no tries were scored was the only fitting aspect of the whole shambolic evening. As the teams trudged off the field, the crowd booed. Vociferously. They weren’t just booing the players. They were booing the game of rugby... [with its new] rules, new interpretations, [and]new approaches to refereeing... And to make matters worse, a casual glance above the equator finds the Five Nations humming along merrily, with the rugby, on the whole, expansive and enjoyable. Supposedly we’re all playing under the same rules and interpretations these days, so who in heaven’s name flipped the world on its head? There are a few theories. One has that grumpy, anorak-clad, pasty-faced lot from the northern hemisphere as villains. They’re the ones who have taken the fun out of rugby. They’ve made us play by their rules, and they’re a lot better at it... [AUS’s ‘world record test try-scoring wing’ is among those who] blame... the Brits. “Who else would dream up such a brilliant scheme to take continuity out of the game?” ...Another... school of thought blames administrators... [and, in particular, the

contentious IRB] meeting in Vancouver last year... The southern hemisphere fishheads, they say... sold out to the penalty-obsessed, running rugby-detesting rulers of the north... The... Crusaders skipper... believes the tackled ball law is to blame... [but the Crusaders coach], who was at the IRB meeting in Vancouver, said bridging at the breakdown was outlawed to create more contesting of the ball. "It is very difficult for referees, because if players play in a certain way it is possible to blow up every breakdown. It is quite a complex issue, and will take a while to sort out." On that [the coach] is right... the best approach seems to be one that is often given to rugby players. Put your head down, your bum up and get stuck in. The rest will take care of itself... [A former] test prop and rugby analyst... believes the problems go beyond rules... [although] rugby's complicated laws may have finally overstepped the mark... "Defences have gotten a lot better. They've copied off rugby league to an extent, and it's harder now to break tackles. That, coupled with what's happened with the rules, has made it very hard to get [the ball] through the backline... I'm just a normal Joe Blow watching it on TV and I don't know what's going on in the rucks any more. I honestly haven't bothered trying to figure out the rules, and it looks like some players have given up too. Every time the whistle blows it's a lottery... [However, if] rules are being put in place to make the game less predictable, it's a good idea. One of the things I didn't think was good was the business of winning 12 rucks in... a... row." ...the... [former] All Black skipper... now the NZRFU's roving rugby ambassador, has no doubt players, coaches and referees are having trouble adapting to new rules. But [the skipper is also] not sure tinkering with regulations was the wrong thing to do. "Look at the Five Nations... Who would have said a year ago they'd rather watch... [that] than Super 12. I hope it will correct itself, because I'm not enjoying watching it any more than anyone else... Maybe we need to work out why they're playing so well, what they're doing that we're not..."

...I HAVE had plenty of feedback on last week's column, all agreeing with my view that rugby at the top level has become boring. I made the point that the only two points of attack in the modern game were on the pass away from the ruck or, if the team with the ball was feeling particularly adventurous, two passes away. I put a lot of the blame for the repetitive crash ball game we now see on the new tackled ball law... that... encourages... three or four forwards never to commit to the ruck, and instead stand out amongst the backs filling all the space that a talented backline would otherwise use to develop running attacks. Better defensive patterns and more athletic defenders also have contributed to a modern game in which defence dominates attack. To understand just how far the game has moved in the direction of muscular full-frontal confrontation, consider who gets to play in the backs these days[e.g., the All Black No 11]. Gone are the... lithe... masters of the deft touch, players with vision and grace... Rugby Union[had] been, above all other footballs, the game for all shapes and sizes. It is no more. In keeping with its showbiz overtones today it is a game for Tarzans, Rockys and Rambos... I don't like this trend at all. It removes a whole class of player... who brought skills rather than athleticism... A couple of knowledgeable rugby friends pointed out another major, although more subtle contributor to the full-on confrontational game rugby has become. This is the advent of protective clothing... To continue down this route we may as well go the whole hog and become the regional variant of American football we seem to be aiming for. Let's introduce the forward pass – that would make defences hang back and open up space on the field. Let's have offensive and defensive teams – we more or less do it now with "impact players". And let's sub on the best kicker for all the goal kicks... Only don't expect me to watch it.

...N[Z]ers had long watched delayed telecasts of South Africa's Currie Cup and seen something different. Big [athletes], upright in the mauls, prodigious kickers, lifting in the lineouts... and high scoring games... The moment it was born the Super 12 was something different... [However, today the] Super 12 seems... to have passed from blooming youth to clapped out pensioner. The South Africans have made no bones about the fact that they consider the event nothing more than a prelude to the Tri-Series... [– although that might be related to their lack of success in the competition! The Natal] Sharks were smashed the first year in the Eden Park final... Last year it was, if anything, even more of a N[Z] benefit, with three NZ] teams in the semifinals and a final on Eden Park between the Canterbury Crusaders and the Auckland Blues. [That] time it was the Crusaders who got there... Rugby is a manifestation of what it means to be a... [NZer]. More that this, at provincial levels, it is a manifestation of what it means to be a Cantabrian or... an Aucklander... We want to belong to our teams and we want our teams to belong to us. They don't... Three... teams in the Super 12 are made up of one overwhelmingly strong province with a number of minor feeders... The other two are not. The Chiefs and the Wellington Hurricanes are hotchpotches and they don't work. They have no heart and they play that way... EXCLUDING the Island nations from the Super 12 has had a huge effect on the N[Z] sides. Many Samoans, unsurprisingly, opted to play for N[Z] provincial teams and to focus on the All Blacks where the big money was. Their physical presence in all of the N[Z] teams has changed the style and approach... Big hits, big steps, direct running... Injuries abound – the inevitable consequence of ferocious weight training and a style of play that mandates high velocity collisions as often as possible. It is ironic that by excluding them from[the] Super 12, the organisers have created conditions which have seen the Pacific Island approach to rugby dominate the competition. The other influence which has created the unique style of the Super 12 has been the rule changes. Many have worked well, keeping the ball in play longer and preventing stoppages for minor injuries or infringements. But one rule change has come to bedevil the game. The requirement for an ultra-quick release of the ball in the tackle... No longer are forwards required to commit to rucks and mauls. They spread out in the backs, looking to take a pass... or tackle. The result is a cluttered field and points of attack concentrated close to the tackle. In [NZ our play is now] dominated by "one-off running" and "pick and go". The moves are increasingly predictable: ox makes his metre and leaves the ball for buffalo. Buffalo scoops up the ball and slams forward his half metre before leaving the ball for rhino. Rhino roars ahead a couple of centimetres and releases the ball into hippo's charging path. Unfortunately hippo, being the... least agile... knocks it on. The exquisite ballet of "pick and go" comes to a temporary end.

...The Super 12, as it lumbers towards a climax, has thrown up a variety of intriguing questions. Will... the spectacularly abject Bulls consider it worthwhile turning up for their remaining two matches at Loftus? Come to think of it, will anyone else turn up? Can the Chiefs pluck something from the wreckage of yet another calamitous season? Will... the Hurricanes finish up with as many tries as yellow cards? ...These questions might be interesting but they are idle compared with the only one of any remaining importance: how to stop the Brumbies? As the season has unfolded everyone who has watched them has begun to realise that the game has been shifted up a notch organisationally and tactically. I call it a formula because that is essentially what it is. There is nothing particularly complicated about the Brumbies' game-plan. It is the execution that counts and that is built around meticulous attention to getting the basic skills right, to getting the right bodies in the right place at the right time, and infinite patience and composure. The Brumbies just keep probing away, constantly changing the direction of the attack. They are always content to cut their losses, go to ground and start again. The secret is, of course, ball retention. If you wrap up possession for long enough and don't rush things, then eventually the holes will begin to appear in the defensive screen in front of you. A few weeks ago I was convinced that the Brumbies' success was due essentially to the exceptional vision and dexterity of [the team's half-back and No 10]. It is now obvious that it is the whole team who deliver at the same extraordinary level of consistency. The Brumbies are collectively better at playing hide-the-ball than any other team in the game.

...If ever there was a lesson in how not to play the Brumbies, it was given by the Hurricanes last week. [The Wellington] side continually allowed the Brumbies to crash through and over tackles, creating the momentum for the home side to cruise to victory in Canberra. You can get away with that grasping tackling style sometimes – as the Hurricanes did against the Cats in Palmerston North in the fifth week of Super 12. But anyone giving the Brumbies that latitude will be crushed... The Brumbies have almost reinvented how to play rugby union, taking many lessons from the rugby league code which has flourished in Canberra with the exciting Raiders. One of the main objectives of league teams is for ball runners to go over the top of tacklers to create momentum. Ditto the Brumbies. As in rugby league, the Brumbies' ball players – primarily [the No 10] – advance on the defensive line with runners at their side and the ball held tantalisingly in front of them, to create confusion in the minds of defenders. [The No 10] will use that confusion to glide through gaps with his distinctive but extraordinary running ability, or... will use up the powerful runners

next to him if [it] feels the gap is not available... Another favourite Brumbies tactic also has league origins, where it is called a second-[perso]n play. Runners come from sharp angles behind the ball carrier, with the shadow backline in front of them acting as a decoy, leading to claims from some... that they are running illegal blocks. But... [the critics] are clutching at straws because they are being out-thought by an innovative coaching team with superb athletes able to carry out the moves. The Brumbies are playing almost the perfect fusion of rugby union and league – they are a team from what was a rugby union outpost who are not trapped by playing traditions and, instead, find inventive ways to entertain spectators and destroy opponents. The Blues won in Canberra in round one, when the Brumbies' patterns were still being fine-tuned and the Auckland-based side targeted [the No 10] with aggressive tackles. The Waratahs managed a win in Sydney, where the Brumbies continually fail, relying on instinctive defence and [their fullback]'s goalkicking. But the Brumbies still scored three tries to two and you suspect that nine times out of ten those Waratah tactics would fail. Perhaps the key is to stop the Brumbies' momentum... Confronting the Brumbies' ground-makers must be uppermost in the minds of the Chiefs forwards as they take on the Super 12 leaders at Rugby Park in Hamilton today... Otherwise, the Chiefs will become just another canvas on which the leaders in rugby innovation paint more of their brilliant colours... ■ The NSW Waratahs have re-signed[their] Wallaby fullback... until the end of the 2003 Super 12 rugby season... A[US]'s most capped fullback... is his country's second-highest points-scorer.

...If we can't beat them, then at least let's get a few of them on our side. That may have been behind the N[ZRFU]'s signing of [the t]alented Suburbs and Blues fullback... The 23-year-old, born in N[SW], was in the A[US]n under-21 and the N[SW] sides before coming to N[Z], where it... played for the Auckland NPC side... and cemented a place in the Blues Super 12 team... [The 23-year-old i]s happy to make N[Z] his home and has no immediate desire to return to A[US]. "There... is no NPC competition over there. Players just go from club rugby to the Super 12 which is tough for the younger kids because there's not another level in between... Also there... are only three Super 12 teams [in A[US]] and you really have to be one of the top halfbacks in the country to get a spot,"...

AUS[n] officials will consider quitting the Super 12 if they don't get a fourth team. The A[RU] general manager... will call for a fourth side at the expense of one of N[Z]'s five teams – most likely the Chiefs – at the[next] SANZAR meeting. Previous attempts earlier this year fell on deaf ears. "I'm not being threatening or aggressive, but if any one country continues to use its power of a veto on a proposal then maybe there has to be a complete re-examination of the future of the joint venture... It's incongruous that the future of A[US]n rugby can be stifled by N[Z]... The 4-4-4 option is in the interests of equity and fairness... The ACT are in the final for the second time, and we do have the depth of playing talent."

...the... Chiefs chief executive... says... "I think it is inevitable that the Super 12 will grow because it is such an exciting competition... I've got no doubt that the Super 12 will become a Super 16, and that it will lead to some involvement from the Northern Hemisphere..."

...It is [late-autumn], but could just as easily be spring, for the events of the last week suggest it is the season for growth... The... bosses of Sanzar did what everyone expected they would and announced, shock/horror, that the Super 12 will become the Fab 14 in two years... Watch out for any rugby officials who try to tell you with a straight face that 14 teams will improve the quality of the competition... Fourteen teams means two extra rounds of ho-hum games for those franchises out of semifinal contention, and it's a sure bet... half a dozen will be going through the motions come the final stages of round robin play... [What t]wo more teams mean[s i]s greater playing opportunities, [it]gives the national coaches a wider spread of players with experience at the level immediately below test rugby from whom to choose, and more games will likely mean more money coming in.

...LATER this year it will be three years since rugby union turned fully professional. The fight for control of the game in the Southern Hemisphere with the rebel World Rugby Corporation left one legacy... – huge player salaries. South Africa and A[US] paid more for their players three years ago than N[Z], although N[Z]... paid more players... [The Springbok ex-captain – now playing in England –] was rumoured to have received \$1 million to lead his players back to the fold. [One AUSn back] was reportedly paid A\$450,000 a year. [Most]All Blacks received... \$250,000 and... Super 12 players \$60,000... [(whereas m]ost players in the [NPC]second division... received weekly payments of \$100 from their provinces to cover expenses[– s]ome received bonus payments of \$50 for a win...; p]layer payments drop to just \$60 for many third division players[)]... A few exceptions, notably [the No 11], received a great deal more. The NZRFU signed most players up for two years; A[US] and South Africa signed theirs for three... On the whole, the second round of contracting has gone well in N[Z]. Few players have been lost and, as last year showed, the NZRFU can, at this stage, afford to pay its salary and still make a profit[, which it]... needs... to enable it to reinvest in other parts of the game[, such as club] rugby, referees, small provinces and schools coaching... We have reached some sort of equilibrium. This is not the case in South Africa and A[US]. The second round of contracting is under way now and the signs are there will be some problems. It is hard to cut people's pay and have them feel good about it, but this is what needs to happen. Also at stake will be the form of contract. The players will probably press for a large guaranteed payment whether or not they play, particularly if... they be injured. The unions will want to pay for performance. The solution to this difference of opinion is insurance. The players can turn an uncertain future payment into a certain one by insuring themselves. The problem is, this will likely be quite expensive... While \$250,000 is a great deal of money to most people, compared with other major professional sports it is not a particularly high salary. This does not, however, mean we should be paying our best rugby players more than this. In the end salaries have to be affordable and... [our] players are unfortunate to be the best in the world and living in... a small country. This limits sponsorship, ground capacities and ticket prices... If they were in England they would receive a good deal more. If they were American and rugby was [popular] there, they would be very wealthy indeed. But even in the US there is a limit. The franchise owner of the Miami Dolphins... recently [threatened to pack up, claiming]... American Football... has reached the stage where "excellence is just too expensive". For players this is the point at which they have priced themselves out of a job.

...Rugby's move to professionalism has been the big story of N[Z] sport in the past decade. Predictions about its evolution in the new millennium have a common theme. Teams will be less about provinces and more of an entity of their own... We are already seeing the beginning of it in Super 12 with the Chiefs and the Hurricanes whose teams are only nominally to do with Waikato and Wellington. If we look to the US as a cue to the future, we see examples of teams leaving a city if it isn't doing them any favours, be it tax breaks, or providing a suitable stadium. "They'll just piss off," says... [a] Wellington sports author... "The LA Dodgers was the Brooklyn Dodgers. A pile of football teams have done it, a couple of NBA (basketball) teams[and] ice hockey teams." ...There is nothing new in rugby players heading to Japan or Europe to cash in. Usually they are near the end of their careers or have missed All Black selection but the current trend some see coming is for current All Blacks to play for overseas clubs, returning for internationals. Rugby League does it and... most of the Brazilian soccer team, play for rich sides in Europe, and go into camp for their country before tournaments... "You can't stop free market forces. If you have high demand in one part of the world and high supply in another, basic economics says where demand is strong there is likely to be a fair bit of money." That boils down to a drift north from countries which produce good rugby stock: N[Z], AUS], South Africa... and... the Pacific Islands... [The former] All Black captain... supports overseas-based players being considered for the All Blacks. In his book *Turning Point*[, the ex-hooker] argues it makes sense for a younger player who misses selection for rugby's World Cup to take a contract overseas, make some money, then return in two years to try again for the All Blacks.

...Amid all the wailing and gnashing of teeth over the drain of rugby playing and coaching talent from N[Z] we seem to have forgotten one key consideration... imports. Having created the next best thing to a free market in rugby skills, the administrators have set about restricting that market by setting up a range of non-tariff barriers. The most obvious of these is the shutting out of foreign players in the Super 12 and NPC competitions... a closed market[is also operating in AUS and South Africa (where, in addition, Super 12 squads must 'maintain a quota of non-white members')].... This is short-sighted, fortress-economy stuff. If the game is going to be truly globalised then there is no room for restrictive trade

practices... The French have for decades welcomed... others into their domestic competition. Having been the first N[Z]er to play in the French national championship, in 1971, I can recall clearly the debate that began in French rugby circles over the prospect of a foreign invasion. Within a year or two the French had established a limit on the number of aliens who could play for any club. It was a sensible, rational policy that has worked well ever since... By all means have a quota limit on foreigners if that makes us feel more secure. But let's not complain about the ravages of the marketplace eroding the resources of N[Z] rugby. It was us, after all, who led the charge towards the free-market nirvana.

...[the NZRFU chairperson] has urged caution from Tri Nations partners South Africa and A[US] over a major "face-off" reported to be looming at this month's IRB meeting in Argentina... [The chairperson] is in an invidious position... [chairing] not only his own national union but also Sanzar... and is deputy chair[person of the IRB]. And as dissatisfaction grows in A[US] and South Africa over the new "global" style of game, [the chairperson] is stuck between loyalties to his own region and to the world body's desire to have all countries playing to the same interpretations... [The ARU] general manager... told the *Australian* newspaper the ARU and the S[ARFU] will question the validity of the Vancouver charter that referees appear to have taken as their bible... [However, the NZRFU chairperson is using this year's] Super 12 statistics... to... [support his request]. "What they show is... a marked drop in the average number of scrum penalties per game over the last couple of rounds... There[was] also... a slight downward trend in the number of penalties around tackles, rucks and mauls and, interestingly, the average number of penalties in that area is slightly less than last year. There have been fewer tries scored this year, but it's only marginally less than last year and there were something like twice the average number of tries in the last round compared to the first round." But the N[Z] rugby chief has a clear mission for the Argentina meeting. "One thing I will be expressing very strongly is that I believe law 8 (the advantage law) is the law the referees need to pay most attention to."

...The I[RB] yesterday defended referees criticised over their performance in international matches. Referees have particularly come under attack for allowing teams to obstruct their opponents in order to secure the ball. A[US]'s... win over France last year is a typical example of how defensive play triumphed over free-flowing action. An IRB statement... call[ed] for players and coaches alike to make the game more open, and for referees to stick by the rule-book... [M]eetings will be held over coming months to discuss the matter with... experts from all areas of the game.

...*Licence for leniency might help referees* Some time back, there were moves to install Esperanto as a universal language. For whatever reasons, the idea failed. When people of different nationalities meet and have no linguistic link, they generally get by with some universal sign language. It has worked [in the past] for the All Blacks and supporters... who might not have any grasp of French. But in the rugby arena, connections between players, match officials and the public are becoming more unstable. Referees worldwide are under consistent decree to control matches to the letter of the lawbook and are being assessed stringently. In N[Z], it is common during the NPC to find assessors with their pages of checklists, ticking or crossing points about the refereeing in those games. The wonder is how these assessors qualify for their jobs and what allowances are made for referees bringing some warmth and feeling to a game. Out in the middle, the match officials are very aware that they are being rated by grandstand panels. They might feel that a match would benefit from a little leniency, but know that if they want to get ahead they have to keep rigidly to the rules... Of equal concern must be the signals from match officials. They vary from dramatic sweeping gestures, arm flailings, to timid movements. In... [a recent international] game... the... Scottish referee... looked as if [it] was opening and shutting a car door several times with one decision. What [the referee] was trying to tell the crowd was uncertain. There lies a problem. Rugby has to be more interactive and signals have to be easily understood. The game is getting messier with the latest rule changes and crowds do not understand what rulings are being applied. In this professional era, rules and refereeing have a long way to go to be more effective, sympathetic and understood.

...[the standard of refereeing these days shouldn't] be excused. Much of it has been diabolical. Most... has been invasive, dictatorial and... lacking in any feel or understanding for the spirit or passion of the game. Too many... referees have based their rulings on what they hope will give them the inside running for key World Cup matches. Any coach of junior rugby will assure you that the day the marking panel comes to grade a ref... is the day the kids will get the rule book thrown at them by a ref desperate to make an impression. Inevitably the game is stuffed up. All we are seeing is the same thing happening at a higher level. Not all the blame should be lodged at the referees. It was our administrators who dropped the ball first. It seems inconceivable that in October last year at Vancouver they agreed to major changes in the interpretation of the rules of rugby, particularly those that apply to the scrum and the tackle... [T]he NZRFU... has been quick to say this week... [its] delegates at that meeting were outvoted and it is time for us to stop whingeing and get on with adapting to these new interpretations. What absolute rubbish... [O]ur administrators... went to that meeting after [two] years of... superb Super 12 football that had drawn huge crowds, rave reviews and unprecedented support... Why didn't our administrators say at Vancouver, "Our game is in good nick. We are not changing the rules nor will we allow them to be interpreted differently. If you don't like it you can have a World Cup without us." Such a statement would have received overwhelming national support.

...*Referee whistled up Hawkes Bay's...* 35[year-old] ref, who's controlled 38 first-class games... has become N[Z]'s fifth fulltime rugby referee...

In 1984 Auckland had racked up 18 straight NPC victories before they met Wellington. And they fully expected to make it 19. But it was not to be as Wellington ran in three tries to run out eventual winners by 22-18. The [third] try was scored by [Wellington's No 8] All Black... and the crowd, already ecstatic with the prospect of victory over their old foes, reacted wildly. One youth, feeling that [the referee] needed support, ran onto the pitch and hugged the referee... T[h]is was the moment... [the referee realised it] was the darling of Wellington's Athletic Park... [The referee]d never been hugged by a fan before and it's never happened since... The same wild reaction of joy today would be rewarded by the youth being escorted from the ground and, as was the case in this season's Super 12 at Rotorua, a lengthy ground ban to accompany a red card.

...For [the]avid Springbok fan... it was a momentous day out in more ways than one. It was the first time... the 43-year-old father of three, who lives in Potchefstroom, about 100km south-west of Johannesburg... had been to Durban's Kings Park... It will also be the last rugby game [the 43-year-old] will see. Midway through the test, in front of the 52,000-strong crowd and hundreds of thousands of television viewers, the heavy-set [43-year-old] appeared from nowhere to attack the... Irish... referee... dislocating his shoulder... before two plainclothes security officers marched him away. KwaZulu-Natal police arrested the... own[er of] a mining supply business[who] had played rugby when... younger. "The whole of the stadium was mal [angry] with him [the referee]. It's just that I decided to do something about it," [the 43-year-old] told the South African *Sunday Times* from the back of a police van. "Referees around the world think they are bigger than the game and they're not. Fans like me is what rugby is about." ...[the referee, who is 'considering suing the fan'] was... last night... feeling "not too bad, a bit shook". The S[ARFU] has banned the 43-year-old from any rugby game for life. Late last night [the 43-year-old] was freed on bail... after appearing in the Durban Magistrate's Court... charged with assault, grievous bodily harm and trespass... Asked about the incident following his appearance [the 43-year-old] told the *Herald*: "Of course I regret it." But... his lawyer... had... advised... [him] not to talk to reporters. Durban police said [the 43-year-old] was "moderately drunk" at the time of the attack but knew what [it was doing]. The 43-year-old was a "compulsive" person... [but] realised the gravity of what... it... had done and knew [the assault] would tarnish the reputation of South Africa... [The 43-year-old]'s sister, who would not reveal her first name, said [her brother] was usually "a very calm guy and wouldn't hurt a fly". The incident was labelled the "ugliest moment in South African rugby history" by South African media. The *Sunday Tribune's* front page banner read: "You Scumbag". The *Sunday Times* said: "No amount of sanction, lip service or spin can disguise the utter embarrassment faced by South African rugby this morning. Why was the [guy] allowed to enter the field and why was the security cordon so lax?" ...[the] chief executive of S[ARFU], said there was a security presence of 419 people at the ground, and it was hard to imagine what other protective measures could be taken... [The] Kings Park stadium manager... was furious. "This bloody visitor behaved in such an irresponsible and barbaric fashion. [The visitor] told security personnel and police... [it] was tired of the way referees were treating S[outh

African] players generally.” But some Springbok fans were not perturbed. On[e]... said referees had made a pact to screw South Africa. “Yesterday a heroic South African spoke for us all. I bet [that ref] won’t mess with South Africa again.” Another... said: “I felt ashamed when I saw that guy go on the field and assault the referee. I mean, what’s wrong with the guy? But then again, the refs from all across the world will remember this and won’t penalise the Springboks for nothing... right? Unless they want their shoulder dislocated as well.” The attack was the latest in a series of incidents which have disrupted rugby games, and has sparked further calls for a review of security at international matches. In Rotorua three months ago a schoolboy tackled [the ACT Brumbies’] half-back... during a Super 12 match. Two streakers disrupted play... [during a] match in Sydney this month.

...The South African rugby spectator who attacked and injured [an] Irish referee... last Saturday... is unrepentant and may defy a pledge by officials to ban him from matches... [The 43-year-old said it] had tickets to [this] Sunday morning’s game [in Johannesburg]... and was deciding whether to attend... The chief executive of the S[arfu]... said after the assault: “I guarantee that the person who committed the attack will never again attend a rugby match in South Africa.” If [the person] did turn up at any of the union’s boxes “[it] will be removed”... But [the 43-year-old]... said: “Remember, there is no court order against me. I am a taxpaying citizen. Look, I don’t want to cross swords with Sarfu or any of its officials. But any attempts to ban me from rugby fields, trust me, will be opposed very strongly by my attorney... Don’t forget that the incident happened when the referee closed his one eye and ceased to see the Springboks. I am therefore not sorry that I did what I did...” [The 43-year-old hoped his actions] would lead to an initiative “where referees and match officials will be evaluated according to their performance”. Asked whether [it] would do the same again, [the 43-year-old] replied: “Look, if you put me in the same situation, with the same referee again, I can’t say exactly what I will do.” Meanwhile, a second Springbok fan has been banned for life from attending matches at one of South Africa’s leading grounds. The [fan] was... banned... on Tuesday... after invading the pitch to plant a South African flag in the in-goal area during the... match[last Saturday].

...There was a time when the entry of a spectator on to a playing field at cricket, rugby or tennis was regarded with mild amusement. In the more carefree days of the ’70s, a few wags with several lagers under their belts would run on to the cricket field and streak down to the bowlers’ end, perhaps hurdling the stumps with flair if not grace. The players would have a brief laugh and the showboat (for want of a better term) would disappear into a jovial crowd to receive more banter and the return of his clothes. Of course, not all the players saw the funny side of the situation. In 1977, [one cricketer] collared a scantily clad, sunburnt streaker and proceeded to launch a few cut shots at his posterior. This broke the A[USn] batter]’s concentration to such an extent that [the player] was dismissed soon after. I doubt whether [a Wallaby No 10] was distracted by the two topless young [gals] at Eden Park in 1991. But [the No 10] did miss six from seven goals and allow the All Blacks to retain the Bledisloe Cup. However, recent public tolerance of these streakers and pitch intruders has been wearing thin. And in the TV age, one suspects the pitch invasions have been motivated by a desire to appear on the box and promote a product or cause. This year we have seen three pitch invasions in major rugby matches – two of which went beyond drunken self-indulgent antics. The teenager who crash-tackled [the Wallaby halfback] at the Chiefs-Brumbies Super 12 match at Rotorua sparked an outrage over the Tasman about our supposed lax ground security. I suspect this was more an act of arrant stupidity and was more about unsettling [rather] than hurting the A[USn] captain. Still, it was unacceptable. [The halfback] was copping enough from the Chiefs forwards without having to protect his flank from someone who had given security the slip. The two streakers who landed themselves and a certain telecommunications company in hot water at Aussie Stadium merely highlighted flaws in ground security and the ugly side of commercialism. [But t]he suggestion that they cost the [Wallabies’ opponents] victory is utter nonsense... The darker side of illegal entry on to the playing arena comes when a spectator actually interferes with the players and referee, or worse, influences the result. A numbskull tackled a player [two years ago] in the... Horowhenua club final to ensure a 13-all draw and another lout put a copybook tackle on a player in a Currie Cup final some years ago to stop a try. On both occasions, referees were stymied as there was nothing in the rules to adapt to such a rare situation. But the actions of [a 43-year-old businessperson] at King’s Park, Durban, represented the nadir of pitch invasions. The bulging Afrikaner, having the temerity to wear a Springbok jersey (it barely covered his girth) assaulted [the] referee... then had the audacity to claim [it] was acting in the interests of all South Africans for an appalling display of officiating. Granted, [the referee] had a shocker but it is inconceivable to think that [the referee deserved what the referee] got from the hefty [43-year-old], who was apparently too slippery for the security presence of 419. Most disappointingly of all is the level of support [the 43-year-old] has received in South Africa – a bit rich when one considers the blatant cheating of their referees in All Black-Springbok tests between 1928 and 1976[(including once ‘awarding points for a shot at goal that had clearly missed’!).

...England lost yesterday’s] rugby test to the All Blacks 22-64 at Carisbrook and[their] coach... lost his cool... [England’s coach] was angry and suspicious to find [the All Black coach at the referee]’s door at the break and demanded it be stopped in future... [However, the All Black coach] defended his actions, saying that with the England scrum down to seven [members] after the sending off of [an English] lock... for stomping after 30 minutes, the All Blacks had decided to de-power their own scrum for the second half in the interests of safety[, and] merely wanted to relay that to... [the ref. “Anyway, t]here’s no rule to say you can’t talk to the referee at half time...” ...[England’s coach] also described the A[USn] referee’s performance as “appalling”... But it had the taste of sour grapes... [England’s coach is] under pressure after... a second record defeat in as many tests... [England received a] 76-0 hiding from... [the Wallabies] a fortnight ago... [The Carisbrook score was a record for NZ] against England, a record winning margin and a record nine tries[(England scored three). In related news, the]... England hooker... and All Black[reserve] hooker... are reported to have traded punches outside a Dunedin hotel early yesterday... but an England team spokes[person] dismissed the incident as a play fight. However, team management will probably speak to [England’s hooker] about such behaviour in a public place, said the English media liaison officer... His All Blacks counterpart... confirmed that there had been a fight but said the two hookers had gone back to the All Blacks’ hotel together. “There were no hard feelings.” According to witnesses who had seen the pair earlier at a different hotel, [England’s hooker] was slapping his thighs and chest saying, “Show me how to do the haka... I can smack my legs.” ...At Old Trafford last year, the haka led to an on-field confrontation between [the two hookers] when the Briton ended up toe-to-toe with [his opposite number as the All Black hooker (who was replacing the injured All Black captain) and the replacement All Black captain] were leading the war cry... [The English hooker also asked the All Black hooker], who did not play in the test match at Carisbrook[, if the hooker]... had splinters in his backside from sitting on the bench... [Other witnesses] saw the pair in a taxi with at least one other English player early in the morning... [T]he hookers had “a couple of cracks” in the back of the cab. They then got out of the taxi but started throwing punches again for about a minute. No one was knocked to the ground... [T]he fight finished with a flurry of punches from [the All Black]. “It was probably the best five-punch combo I’ve ever seen in my life.” Bystanders then intervened and stopped the pair. [England’s media liaison officer said the All Black had telephoned the English hooker] later in the day. They had chatted about it and had a good laugh.

...[the chairperson of the RFU’s] National Playing Committee... has promised rugby’s Southern Hemisphere superpowers [that it was his intention to] fight to ensure England’s disastrous summer tour was a one-off – after... Sanzar... warned they would reject tours from weakened British teams in future... Sanzar stressed it was committed to globalising the sport and if the Home Unions continued to send under-strength squads on tour it would look to the likes of the U[S], Western Samoa and Argentina for opposition... England, missing a host of regulars, suffered record... defeats by A[US] and NZ] respectively before losing 18-0 to South Africa. Scotland crashed 45-3 and 33-11 to A[US], Wales were humbled 96-13 by South Africa – the heaviest defeat for a Five Nations team – and Ireland slumped 37-13 and 33-0 to South Africa... [By the way,] the Springbok and Northern Bulls No 9... [says, “This year’s] is going to be THE Tri-Nations tournament and we’re going to see the best rugby played... All our

spectators just expect us to win all the time and now... I think... that A[US] and South Africa have caught up with N[Z so] we're all on the same level..." ...[the Springbok coach agreed, saying, "AUS] have improved 20[%], South Africa have improved 20[%], and NZ] have lost a couple of key players... this... [third] Tri-Nations series... really is the toughest. I think this is the World Cup to be honest."

...*Wallabies complete blackwash*... An 11-0... halftime lead[was] eroded as the Wallabies... wore down an inexperienced All Black side to triumph 19-14 in the last major rugby test to be played at... the Sydney Football Stadium on Saturday night. Five successive defeats for the All Blacks, [including two to the Springboks – this year's Tri-Nations competition winners – and] the first 0-3 series loss to the Wallabies in almost 70 years, [makes this year] an annus horribilis to match or even overshadow the horror season of 1949... [and has generated jokes like: 'What's the difference between an All Black and an arsonist? An arsonist wouldn't lose its last five matches!'] AUS]'s Bledisloe Cup clean sweep... was hailed as a miracle by one Sydney newspaper. *The Sunday Telegraph*... said [the Wallabies'] 73rd-minute matchwinning try provided a sellout... crowd with some late delight after a night otherwise soured by the refereeing... "The first half provided evidence that Northern Hemisphere referees should be kept away from such matches at all costs," the paper said... The *Sun-Herald* used the winter's favoured headline of "Blackout" on its back page. On the inside pages the win was described as [the Wallabies'] most critical since the 1991 World Cup[final triumph in England (over England – and following the Wallabies' semifinal defeat of the All Blacks)] because the team were able to overcome numerous setbacks in the week leading up to the match... In contrast, the loss would "gut N[Z], as they have never experienced such despair, or such a long losing sequence involving their most important commodity." [A former]Wallaby flanker... described the win as incredible, especially as the All Blacks "just had to win this game, no matter what." [AUS's world] record test try-scoring wing... said the turning point of the match was when[an] All Blacks speedster... was held up near the tryline... [The No 14] looked to have the tryline at his mercy but checked back inside and was wrapped up[preventing]... the All Blacks from stretching their lead to 18-0. That might have been too big a hurdle for [the Wallabies] to overcome. In a televised panel discussion on Channel Seven, [the former flanker questioned the All Blacks' No 10]'s propensity to kick away possession, while another former... [Wallaby suggested that the No 10] was no longer playing by instinct because [the player] had been given too many conflicting instructions from the coaching staff.

...[the] All Black coach... walked away from an exhaustive meeting of the... NZRFU... board... yesterday... with his... job, as well as his head, intact. It was an emotional time for the... [person] who has faced intense media and public scrutiny in the wake of his side's five consecutive losses... [The coach] looked relieved and tired after... the... seven-hour meeting... during which his job was reviewed and three lengthy reports on the national team and its direction were presented. The reports came from[the] All Black manager... [the coach] himself and... the... NZRFU rugby services manager... The... coach confirmed... [that] the fallout from the All Blacks' horror season had taken a personal toll... [and the coach] came close to resigning as the pressure... for... a public execution... mounted...

The contractual pantomime being played out between [the All Blacks] and their employer, the N[ZRFU], has become a farce. It transpires that half the All Blacks team have not been able to reach agreement with the union on their contracts for next year's World Cup season and some of the newer stars... don't even have contracts... The price of opening up rugby to the free market is turning out to be a high one and it is getting higher all the time as the top players squeeze the union for the very last pip. Less than a decade ago the players were the exploited party... [Now lucrative] offers are on the table for contracts in Europe and many, perhaps the majority of the All Blacks, have had their heads turned by these... Is it unreasonable to draw a link between a preoccupation with salary negotiations and a string of indifferent performances on the field? ...The[new] captain... whose first task one would have thought is to set a patriotic example, has, it seems, had his agent negotiating most of this year and things are still unsettled... There are already ominous rumblings of public discontent over All Black salary levels. That could quickly break into open resentment, as it has with top corporate salaries. Corporates can live with that. The All Blacks can't. But it gets worse. Such is the drain on the game's resources that we are now treated to the insulting spectacle of a television commercial featuring [the All Black No 9], who urges us, the public, to provide donations to keep poor old clapped-out rugby on the road... It is what a cynical economist would call trickle-up. On the one hand we have the professional players bleeding the system dry by their apparently unquenchable appetite for more money, and on the other, one of them with hand on bleeding heart pleading the cause of the game at the grassroots which is steadily dying.

...[HAMILTON – Someone] knows only too well the pressures faced by young rugby players trying to break into the professional scene. The [person] who wears the Chiefs No 6 rugby jersey so coveted by Ryan Wheeler, the player who took his life in Sydney this week, also suffered depression after failing to live up to his and others' expectations... Another player who suffered depression, [a]former All Black star... [winger], who is part of a television campaign on mental illness, said the key for players who were struggling was to talk to someone... Friends say... Wheeler, aged 27, was... devastated when [it] did not make the Chiefs squad[, and]... suffered from depression, blackouts and mood swings after being concussed last year... SYDNEY – The A[RU] has expressed its sympathy following the death of a player in a country match in northern N[SW]. Kempsey Rugby Club centre Kullen Beathe died following a tackle in a grand final. "Our hearts go out to Kullen's family," [the]ARU managing director... said. "We are all struggling to understand this..." Another Mid-North Coast player... suffered a serious spinal injury during a separate grand final match on Saturday. [The player], a hooker from Coffs Harbour... in his early 30s... who was playing for Southern Cross University, was injured in a scrum and was airlifted to Sydney's Royal North Shore Hospital. [The]Mid-North chief executive... said Beathe... was aged in his early 20s.

...When [Barney]Armit died on November 15, 1899, [the]... 25-year-old Otago [resident]... became the first player to die in an organised game of rugby in N[Z]... Alexander "Barney" Armit had played senior rugby for the Kaikorai club since 1892 and scored more tries than any other Dunedin player of his time. [Barney] played for Otago 19 times and toured A[US] with the 1897 N[Z] team. But in the Otago-Taranaki game of August 1899 his rugby career was shattered in a tackle by Taranaki captain Alf Bayly who had captained the 1897 N[Z] team. Armit's trademark "hurdle" which [the player] adopted to avoid being tackled was to be his downfall. Running close to the sideline, Armit turned infield and attempted to "hurdle" past Bayly who tackled him low. The Otago player fell back on to his neck... Three doctors at the Caledonian Ground venue at once had Armit taken to hospital where [the player] was found to have a dislocated spine and badly crushed spinal cord. An operation mended the misplaced vertebrae but "little hope was held for his survival". But in a two-month battle which the whole country followed Armit clung to life against the odds. When [Armit finally] died... there was national mourning as Armit was a popular athlete and death by rugby was a new experience for followers of the game. While Armit's widowed mother received telegrams of sympathy from all parts of the country and was given the benefit fund which had been subscribed for her son, an inquest sought to establish how such a tragedy would happen. With a real possibility of facing criminal charges, Bayly engaged famous criminal lawyer Alf Hanlon, while the Otago Rugby Union was represented by another illustrious law[er], William Sim. During the hearing it was suggested North Island rugby was rough and Bayly had been over-vigorous... but... the players themselves were reluctant to give evidence against Bayly to avoid "the stigma of informer". Some... witness[es]... defended Bayly, saying the tackle was vigorous but lawful, while others said they saw Armit lifted over Bayly's shoulder and "then flung to the ground at an angle of 45 degrees, head foremost, with the same violent action that one would impel a bayonet into an enemy". What did most to save Bayly, though were the comments made by Armit from his hospital bed. "Bayly played the game. I don't think Alf would do it intentionally. I sincerely believe it was an accident." The jury decided it was an accident and that no blame attached to anyone. All that remained was for Dunedin to give Armit the funeral such a popular athlete deserved. Armit had been a fire brigade member and the coffin was carried on the Roslyn Fire Brigade's hose reel wagon attended by brigade members. It left his mother's Kaikorai Valley home and the procession included Foresters' Lodge members, six bands, family members, rugby players, members of six fire brigades and the public. The procession, watched by thousands, covered the long miles from Kaikorai,

over the hill to the Octagon and along Princes St to the Southern Cemetery. Although it was [almost] 100 years ago Armit's death is a reminder that rugby has always been a tough, physical game in which laws preventing dangerous play have an important part to play.

...Clubs stunned as try-saving tackle takes a life... [Whilst] playing on the right wing for his Central Hawkes Bay Rugby Club in their premier-level local clash with neighbouring Otane on Saturday afternoon... Tino Amato was... racing for the tryline when hit by a tackle... The high-speed tackle from the Otane fullback was a try-saver – it forced Mr Amato, who had been heading for the corner, out over the sideline. Mr Amato had beaten a couple of players and was hit at a right-angle by the fullback, who was coming across for what spectators say was a “full-on collision”. [Tino] lay there without moving. Then... started to have a fit. The local ambulance service and a doctor tried to resuscitate the father of one before a rescue helicopter flew him to Hawkes Bay hospital in Hastings. Mr Amato, a 34-year-old butcher at the Takapau freezing works, was dead on arrival. An autopsy found that [Tino] died of internal injuries suffered in the tackle, [which]... happened just before half-time. Central Hawkes Bay[’s] president... said the game was then shifted to the back paddock of the club’s grounds in Waipukurau. Otane went on to win 10-8. B[ut]... “The guts had fallen out of both teams, especially the Central players... They knew how critically ill Tino was, and every time they turned around they could see him being worked on.” ...the club would not be citing the player. There was no penalty at the time... [However,] Waipukurau police are investigating and there will be an inquest... It is understood that the tackler has talked about quitting rugby for good.

...THE rugby star investigated over the death of a rival player in a tackle has quit for the season – costing him an NPC spot. [The fullback], 23, had been selected for Hawke’s Bay and played a warm-up match against Wellington last weekend. But [the fullback] was penalised for his first tackle of the game... Last month... Tino Amato... died after being tackled by [the fullback]... Police said criminal charges would not follow. A fortnight later, playing for his Otane club, [the] star back... was sinbinned and rivals Hastings awarded a penalty try after [the fullback] felled their centre in a tackle. Hawke’s Bay[’s] NPC coach... talked to [the fullback] about his technique... Otane[’s] manager... said... the... [fullback] – who received counselling after Amato’s death – was struggling to deal with the tragedy... [The fullback] – a dad of three – ...and Amato worked together at the Richmond Takapau meat plant. “[The fullback] remains deeply remorseful, and like everyone else has the deepest sympathy for Tino’s family... It has been a terrible and unreal situation for all those involved and there are many people trying to cope...” ...ACC figures show there have been crippling injuries to 17 rugby players in the past three years, as well as the deaths of 48-year-old Ponsonby player Pita Fuafiva last year and 25-year-old Joe Fitita in Christchurch the year before – both spine related.

...PROFESSIONAL rugby players have claimed a huge increase in ACC payouts in the two years since the sport turned pro. In [the first year], 35 players claimed \$89,218 but last year, that rose to a staggering \$832,307 from 96 players. The payouts do not cost taxpayers, because the claims – which are mainly for income replacement, home help and specialist equipment – are met from premiums paid by employers.

...YOUR rugby heroes may soon have to cough up an extra \$25,000 a year to the tax[department], with top players looking at hefty six-figure tax bills. Under a tough new IRD policy, All Blacks and star Super 12 players will have to carve off a bigger slice of their hard-earned cash to swell the [country’s] coffers. Star players like [the All Black No 11] could get hit by up to \$100,000-a-year. “It’s going to cost more and players aren’t going to be happy about it,” said... [the No 11’s accountant. Because 80%] of their income [comes] from one source the... IRD is to reclassify all rugby players as NZRFU employees. That means no more individual contracts for star players. And no more “writing off” the cost of the managers’ 20[%] fee, cars, clothing or other business expenses... [T]he tax hike could spell the end of managers for a number of players... The NZRFU is keen to support players looking for ways to get around having to pay more tax... One way of reducing tax is to class a player as being owned by a trust... [In another development,] the NZRFU... chief executive... is concerned about the financial viability of some provincial unions... [Yesterday the chief executive said p]rovincial unions trying to gain promotion or avoid relegation have spent up to \$1.5 million in the past 12 months on players alone.

...The country’s 27 provincial rugby unions have been handed \$2.7 million by the five Super 12 franchises... [C]ash injections... to individual unions vary from \$15,000 up to more than half a million... [Incidentally, as] the first N[PC] unwound its novel way during 1976, the supporters of Bay of Plenty could see a double prize looming. As their match against Auckland loomed, there was the prospect of leaving Eden Park with both championship points and the Ranfurly Shield. Alas for the Bay the shield was whisked away by Manawatu. But the Auckland match still figured as a crucial step along the way towards the Bay becoming the inaugural first division champions. The first NPC was played without the All Blacks, who were in South Africa. The Bay were without their captain... Auckland did not have a great representation in the All Blacks that year, though their absentees were keys – fullback... wing... lock... and prop... Where Auckland came unstuck was with the laudable plan by [their] coach... to play an expansive game. It broke down because of handling and option errors and staunch Bay of Plenty defence. Auckland were also hampered by losing, at a crucial time, [another] prop... with a broken leg. [This prop] was one of the rarities of N[Z] rugby – a player who twice turned down the chance to become an All Black. One of those times was just a week before the Bay match when [the prop] resisted the All Black selectors’ request for him to go to South Africa as a replacement for the injured [Auckland prop who was already there]. Auckland were rocked early and trailed 9-19 but they... got back up to 19-all and then again 22-all and seemed headed for victory. But... the Bay... edged... back into the lead... and... eventually... won... 31-22... Three weeks later, they beat Hawke’s Bay 10-7 in Rotorua to secure their [first and last] championship win.

...Bay of Plenty went to Auckland for their third-round [Gals’] NPC match without six... leading players, but bolstered by a second-round victory over Otago. But by the end of an entertaining match they had been beaten 70-0, despite playing a good deal better than the scoreline indicated. Auckland have not been beaten since falling to Wellington in 1994, and with their latest victory have recorded 49 successive provincial wins.

...In just five years, King Country have gone from being the cinderella province of N[Z] domestic rugby to being one of the ugly sisters. Having boxed above their weight in the NPC first division from 1992 to 1996, they... [are now playing] with the lightweights of the third division... Their demise has saddened King Country’s greatest rugby figure... “It’s tragic. It’s a sign of the times, we just haven’t got the depth in our rugby,”... said[the former All Black nick-named *Pinetree*]. It was no coincidence that King Country’s demotion from the first division to the second in 1996 marked the start of professionalism. “King Country do not have the resources to keep players, and promising schoolboys lured to big centres on scholarships do not return... Our club competition is terrible[and we’ve] lost four representative players to first division unions [for] this season...”

...A Taranaki rugby fan sent [the team’s] coach... a magazine cutting with a phrase which has become a motto for one of the underdogs in the NPC first division... “Remember, the Titanic was built by professionals, the ark was built by amateurs.” It is a catch cry which might give some hope to a number of first division coaches around the country... [Three of them] have all claimed recently that their sides are amateur outfits pitted against the professionals from Super 12 bases. While teams like Auckland and Canterbury train fulltime during the day and lure players through the promise of Super 12 places – though the big city sides often deny they hold such an advantage – ...Taranaki still only train on two nights a week because the players work. That means cramming in such vital aspects as video analysis rather than having the time to do it properly. And while [Taranaki’s coach] preferred to steer clear of too many provocative comments, [it] said: “I’m sure the N[ZRFU] knows the problems and are looking at some changes. We still think that even if we are amateurs we can still act like professionals and the Taranaki union has done as well as it has because we have always had visionary people. But... I spend 50[%] of my time on keeping and finding players. Our players are getting approached all the time – sometimes they tell you and sometimes they don’t. I’m continually worried about losing them, although we never begrudge them going. They always go with our blessing...” [This season’s] Taranaki side have struggled to match last season’s achievements, when they made the semifinals... Taranaki and Counties-Manukau face each other in a do-or-die clash tomorrow, although don’t expect a dour battle for the points. Their faint hope of making the semifinals lies in taking maximum points, which means both will be after the four-try bonus.

...Superstition shouldn't really play a part in rugby, but you could easily forgive Otago players if they hung garlic round their necks and avoided black cats on their way to Eden Park. The last time they won there... was... in 1976... Auckland weren't having a flash year in '76, and the loss to Otago was the third in a row at Eden Park, after a draw with Southland, a loss to Manawatu that saw the Ranfurly Shield go, and a loss to Bay of Plenty. But since that... afternoon 22 years ago, going to Eden Park has been a horror story for Otago that makes... *Heart Of Darkness* read like a pleasant bedtime story for the kiddies. Some were big losses, and some were losses that they'll still argue about in Dunedin, like the 1995 N[PC] final, which Auckland won when[the] referee... awarded a penalty try. But the most frustrating loss ever may have been in 1988... The one thing [about] 10 years ago... [is] that "it was just go, go, go from the Otago players. They ran everything. It was like modern rugby is now, but they were playing it back then"... and now... it's turned dog yet again for Otago, and it'll be 2000 before there's another chance to win in Auckland. How to change it? If anyone out there knows, fly to Dunedin, where the freedom of the city for the rest of your life awaits.

...a transformation is under way that will take N[Z]'s major sporting venues into the new millennium and bring them closer to the modern stadiums Kiwis have only been able to observe or experience with envy overseas... It started with Dunedin where Carisbrook now boasts an impressive curved stand at the railway end... It continues with the upgrade of Auckland's Eden Park which will be floodlit... and have a... new grandstand... with seating for 12,312 – ...the... largest... [seating capacity for a single stand at a NZ] sportsground... In Christchurch, the southern end of [Lancaster Park] is now barren but work will start [next] year on a redevelopment sweeping through the embankment, enclosing the ground into an all-seated... 40,631[-capacity]... venue... The redevelopment will cost \$35m... But the biggest project is in Wellington. It will make Athletic Park, the home of N[Z] rugby, redundant... The Westpac Trust Stadium, built on the foreshore and within goalkicking range of the [CBD], is a state of the art facility that is on target and, importantly, within budget, for completion in December. The oval shape of this \$122 million facility already dominates the downtown area. Its location is unrivalled in the country. Standing 600m from the Wellington Railway station and a stroll from... 8000 carparks... [means] transport to the ground won't be a problem... With another 5000 seats being added subject to resource consent, the Wellington stadium will seat 40,000... And 24,000 of those seats will be fully covered. There will also be 69 corporate boxes and an 1100-seat dining room, the biggest facility of its kind in the capital. Funding is coming from several areas. The Wellington Regional Council put in \$25m and the Wellington City Council \$15m. Corporate boxes will raise \$15m, there's a commercial loan of \$20m, an undisclosed amount for the naming rights and signage plus... 15-year memberships which are selling for \$13,500 each and are limited to 2500. They offer a seat and right of entry to every major sporting event at the ground, excluding Commonwealth Games and World Cup rugby, but members have priority for those events.

...The Mayor of Christchurch... is confident [of being able to] sell the idea of Lancaster Park being named after an Auckland-based bank. Confirming negotiations with the ASB Bank over naming rights to the upgraded Lancaster Park, [it was claimed that the mayor] would be "amazed" if Cantabrians felt concerned about the park's new name being linked to the province's greatest sporting foe. "I welcome any businesses looking for opportunities that work for them here... There are not many organisations falling over themselves to invest in Christchurch[and, anyway, this is a NZ] bank owned by A[US]ns." The potential deal is understood to be worth about \$4 million over 10 years towards the \$35 million upgrade.
